Q.—And eighteen hours coming back? A.—No; we would hardly be that coming back; there would not be quite so much business and we could make it quicker.

Q.—In icy or sleety weather are orders given to run slow and carefully, so that brakemen need not run on the top of the trains to brake up? A.—I have never seen such an order, but I have heard there are such orders.

Q.—None ever came to you? A.—No; I never heard of any order being issued of that kind to conductors on local freights.

Q.—When running eighteen hours from here to Windsor aren't you lying by sidetracked part of the time? A.—Yes.

Q.—Can you sleep during that time? A.—No; we are supposed to be on the lookout all the while, carrying freight and doing switching. If you get through work and the dispatcher sees fit to let you go, he will; if not, he will hold you for an hour or two and you are not supposed to go to sleep at all.

By Mr. HEAKES:—

Q.—If air brakes were applied to freight trains would they be as serviceable as they are on passenger trains? A.—I should think so.

Q.—Do you think an air brake system could be applied to a train, say of forty-five cars? A.—As for that I could not say; I am not posted on air brakes and can hardly say how many cars it will work.

\* \* \* St. Thomas, called and sworn.

By Mr. HEAKES:—

Q.—Just proceed with your evidence without questioning? A.—The last witness spoke about the running board, and that is my object in offering my evidence. As practical railway men, and after considerable enquiry last spring, we concluded that 2 inches from the end of the draw-bar—that is, that the running board should extend over to within 2 inches of the end of the drawbar—would be what would be required. Take, for instance, the D. L. & W.; they have deadwoods which extend some distance out past the end of the cars. Well, if there was the regular distance that the running board extends over the box it would not run satisfactory in that case, or in the case of the West Shore or New York Central with a Michigan Central car. But having the running board to extend within 2 inches of the draw-bar it would meet the requirements of all these I have named, for the reasons I have partly stated—that the draw-bar extends beyond the deadwoods, which extend a considerable distance past the D. L. & W. boxes. When they come within two inches of the end of the draw-bar it would suit the case of the D. L. & W. When coupling with another, the D. L. & W. may be 4 feet apart, in some cases more, and in some less, but generally about 4 feet, and both running boards would almost meet; they would be within 4 to 6 inches of each other. The same rule would apply in all box cars. The Bill of last Session, introduced by Mr. Dalton McCarthy, in the Dominion Parliament, is one I think would meet the requirements, as far as running boards are concerned, and that Bill is framed as I have described in that respect.

Q.—You take into consideration, of course, the elasticity of the spring in making that calculation? A.—Certainly, that would have to be considered. When a car is standing in the shop the draw-bar has not been pulled out and the spring has not been extended. And for that reason, the carpenter building the car is in a position to know exactly what spring the car is supposed to have. Now, with regard to bell cords, as far as I understand—and I believe I know correctly—the Michigan Central don't use bell cords on ordinary freight trains, but on the Grand Trunk they do; on all trains they are supposed to carry a bell cord, with the exception, I believe, of gravel trains.

(A person present in the room here stated that the Grand Trunk didn't use the bell cord on way freight trains).

The WITNESS.—The bell cord does not prevent a train parting in two, and supposing the conductor is in the caboose and wishes to warn the engineer, there is not one case in a hundred in which he can do so by pulling the bell cord—not with the usual freight train on the air line, which is twenty-eight cars to the train. In case the train breaks in two, if the gongs on the engine are in proper condition, the engineer might be warned, but in my experience on the Grand Trunk there are no gongs on the engines that will work sufficiently satisfactorily to warn the engineer that the train has parted.

By the CHAIRMAN:—

Q.—Why is that? A.—Because the gong connecting with the bell cord is not in proper condition. The brakemen frequently don't have time to properly splice their bell cords; they make knots on them, and if you have two or three knots on the cord it is impossible for it to work freely on top of the train, because there are

some running boards composed of three narrow pieces, and the cord may get caught between them, and not go round the ratchet or dog. As far as the conductors and brakemen are concerned, the company's rules give them to understand that they shall string the bell cord while the train is standing; but unfortunately, like others they are desirous to get on the road as soon as possible, and they often string the bell cord while the train is in motion. For instance, in London yard about two years ago a young man was stringing the bell cord on a train running perhaps not more than four miles an hour; the cord caught by some means on the deck of the train, and in turning round to pull it it gave way suddenly, giving him a jerk, throwing him off on a flat car loaded with stone, and he was killed. The same thing occurred in Windsor, and frequent risks of the same kind are run here. As long as the bell cord is in use my opinion is that there will be a great many lives lost while stringing in that way, and at the same time very little is accomplished by using it. When the air line was connected with the Great Western the men on this division ran their trains without using the bell cord and they ran them to the entire satisfaction of their superintendents; since the bell cord has come in use I don't see that accidents have lessened one iota. Further, I think they are an unnecessary bill of expense and accomplish very little good.

By Mr. HEAKES:—

Q.—Are brakemen taught to splice a rope? A.—No; they are not.

Q.—They have no other resource than to tie it if it breaks? A.—If they have common sense enough they can learn in a few minutes.

Q.—They are not obliged to learn? A.—They are furnished with wire for the purpose of doing so.

THOMAS JONES.—I would ask the previous witness if he thinks from his experience that if a brakeman were not to knot the bell cord, but to splice it as well as possible, if there were thirty cars in the train, and even if the gong was working all right and in good condition, could it be rung from the caboose once in ten times?

The WITNESS.—Not once in fifty times. I may say that I would like to have it distinctly understood by the Commission that when I spoke of bell cords and their use I referred to freight trains only. I approve of them on all trains carrying passengers. I should also have mentioned that when a bell cord breaks on a train it frequently occurs that where the splice is in the bell cord it may be caught in the running board, and in cases of that kind it has frequently been known that the engineers are not warned by it.

THOMAS JONES.—I contend that the bell cord is practically useless on long freight trains, as it is impossible to use it as a means of communication between the conductor and the engineer.

\* \* \* recalled.

I desire to say a few words in regard to the licensing of conductors. We expect by having licenses to have our occupation made a steady one. At present we are at the will and pleasure of the superintendent, who may, the moment he comes here to assume the position of superintendent, discharge all the conductors, although they may have worked up from the position of brakemen, and bring a new staff entirely with him. We believe by our Bill, or by something similar to it, if it became law, it would be impossible for him to take away the work entirely from Government employes, for men holding a Government license would be, to a certain extent, Government employes. Another point is plain to anyone who has had anything to do with the railway, that incompetent individuals have been put in charge of trains. When out on the road an incompetent man is running the risk of sacrificing not only his own life and the lives of the public, but of every man who works on the train with him. We believe in a man passing a strict examination, and afterwards obtaining a

license based on it. It is not unusual for the superintendent of a railway to be a man who has been trained entirely in an office, and we claim, as practical railway men, who have followed the business in a practical way from brakemen to conductors, that the man trained in an office does not know the work practically, but theoretically, and that he should not have the power to fine a conductor, or keep back ten days' pay, or lay him off for a month, when he does not know the facts of the case. If we had a board of examiners, as is provided in the Bill, we would have a safeguard against the superintendent, who is not always well able to judge of the capabilities of the men.

By Mr. FREED :—

Q.—Would the company, in that case, have sufficient control over its employés if, to a certain extent, the men were guaranteed positions by holding a Government certificate? A.—I think the company would have; for the appointment to positions would always remain in the hands of the superintendent. No law can be made to say that a superintendent shall hire certain men and not hire others. That is the last thing we would attempt to derive any benefit from, but it would give the man a right to go before that board in case the superintendent discharged him. There was an accident near St. Thomas a little while ago of which we all heard. The conductor of the train was entirely blameless, and the company was at fault, that is from our standpoint. Had we had some tribunal to whom we could have taken the case, above the superintendent, who judged the man guilty and discharged him, which was the highest penalty he could inflict, the man would, no doubt, have been declared innocent. That same man was, however, laid off for three months, and was afterwards discharged, and did not get any papers of character. The black-listing question comes in here, and without a letter from his old superintendent it is pretty hard for a man to get a train to run, and even difficult to get a position as brakeman. If we had a license system it would work in this way: Having the recommendation of his superintendent, a conductor or brakeman could go before the board of examiners and get his papers, and they would state that he was a practical man, and fully able to run a train; and so long as the certificate was not revoked by the board he would be qualified to hold the position set out in the certificate.

\* \* \* Brakeman, M. C. R., St. Thomas, called and sworn.

By Mr. HEAKES :—

Q.—You heard the evidence of the witness with regard to a brakeman's life and work. Do you agree with it? A.—Yes.

Q.—Can you add anything to it? A.—No; I cannot, except to say that we had a train out of St. Thomas last Thursday morning, and I don't think two men could pull the slack on the bell cord; we had fifty cars; and if a man can do it on ten coaches he is a pretty good man.

By Mr. GIBSON :—

Q.—Supposing you had it slack, say on a train of thirty cars, how much would you have to pull? A.—You wouldn't have over, I should say, 6 to 10 feet.

Q.—It would not be less than 10 feet? A.—No; I don't think so.

By Mr. McLEAN :—

Q.—What kind of oil do you use in your lamps? A.—Signal oil.

Q.—What is it made of? A.—I think it is made of lard oil and kerosene.

Q.—Does anybody give it out? A.—Yes.

Q.—Is it the same with other oil and other articles you use—axes, &c.?

A.—Yes.

Q.—That is on the Grand Trunk? A.—No; the Michigan Central.

\* \* \* M. C. R., St. Thomas, called and sworn.

By Mr. HEAKES:—

Q.—What is your occupation? A.—A brakeman.

Q.—You have heard the evidence of the previous witnesses? A.—Yes.

Q.—Do you agree with them? A.—Yes.

Q.—Can you give any information which we have not received? A.—As to the risk that the brakeman runs, I think something should be done in the way of brakes, that is, in the number of brakes that a man has to set to hold the train.

Q.—How many brakes can a brakeman control properly when the train is in motion? A.—That depends a great deal on the grade.

Q.—Take an average trip, and the engineer whistles for brakes, how many can a man put on on loaded cars? A.—On this road we pull thirty-five to forty loaded cars, and when you stop a train one man has to set up from seven to eight brakes.

Q.—Then you put the brakes on a little more than one-third of the whole train? A.—Yes.

Q.—If there were a larger crew carried on freight trains would it lessen the danger? A.—Well, it would in one way; of course, there would be another man to help to do the work.

Q.—If there were, say, three brakemen and a conductor on the train, and the engineer whistled for brakes, wouldn't three men be able to stop the train in a much shorter distance than two? A.—That depends upon whether they have the brakes to work with. A great many of these cars have not got brakes which will hold them.

Q.—The cars are sent out in an improper condition? A.—Yes; I have gone through seventeen cars to get three good brakes to hold the train.

Q.—Where would you find the principal defect? A.—In the brake rods or chain, the chain being too long; the top rod would come up to the brake mast.

Q.—Do you ever find that the shoe of the brake is worn so it will not go? A.—Yes; very often, and in other cases we find the dogs and ratchets broken or worn out.

Q.—Whose duty is it to report the condition of the car? A.—On the Michigan Central at present I believe it is the conductor's duty to report the condition of the car if they can tell what is the matter with the brake.

Q.—Are cars sent out when the authorities know that the brakes are not in working order? A.—I would not say as to that, but at the same time there is nobody to look after the brakes.

Q.—Is there anyone here to inspect the cars before the train is made up? A.—They inspect the cars as far as their running is concerned, but not the brakes.

Q.—Have brakemen ever asked that somebody shall inspect the brakes before trains shall go out? A.—I do not know as they have.

Q.—Wouldn't it be largely the fault of the brakemen themselves, then, if these brakes are not in good condition? A.—Well, no; because they will not stop the car here if it happens to be loaded with perishable property; they will not stop it to fix it.

Q.—If it is reported? A.—No, sir; not in St. Thomas.

Q.—Do brakemen always report bad brakes to the conductor? A.—I think they do; I always have.

Q.—Do you know if the conductor reports the state of affairs to the proper officer? A.—Yes, I have known them to do it, and I have known that car to go out without being fixed.

Q.—Is there anything else you could suggest to us? A.—No; I don't think there is.

Q.—Do you know anything about the action of air brakes? A.—Not a great deal.

Q.—You could not speak as to whether they would be workable on long freight trains? A.—I do not think it would work on a whole train.

Q.—Would it be any benefit on part of the train? A.—Yes; I think it would.

Q.—Wouldn't it be a great expense to have cars only partially fitted up with air brakes. A.—Well, if all cars were fitted up it could be used on so many at the head end.

By Mr. ARMSTRONG:—

Q.—Are these bad brakes often reported and not fixed? A.—Yes; quite often to my own knowledge.

Q.—Whose fault is it, then? A.—That I don't know; those who could fix them tell me they couldn't stop the car; it must go through.

Q.—Were you ever concerned in a case of investigation? A.—I was pulled off myself once for breaking a draw-bar.

Q.—Do the parties investigating the charge show courtesy towards the men in the trial? A.—They didn't show any towards me.

The Commission then adjourned until 10 o'clock the following day.

\* \* \* St Thomas, called and sworn.

By Mr. FREED:—

Q.—What is your business? A.—I have been employed upon the Grand Trunk as a section man.

Q.—What wages are paid to section men? A.—One dollar a day.

Q.—What hours do you work? A.—From seven o'clock to six.

Q.—How frequently are you paid? A.—Once a month.

Q.—Do you get a full month's pay then? A.—Well, we get paid about the 15th up to the end of last month.

Q.—Are you employed the year round? A.—Yes.

Q.—The same wages the year round? A.—Yes.

Q.—Are you ever called on to work at night? A.—Sometimes; in case of fires or accidents.

Q.—Do you get extra pay for that? A.—Yes; the same rate that you would for day work.

Q.—The same rate per hour? A.—Yes.

Q.—Are men kept for long periods in these positions? A.—O, yes.

Q.—Are they frequently discharged? A.—No; I had to leave in consequence of weakness, after I was on the section over seven and a-half years.

Q.—You left of your own accord? A.—Yes.

Q.—Was the work very severe? A.—Yes; we often get wet.

Q.—Are the section men in danger of accidents of any kind? A.—No; I think not.

Q.—Not more than other ordinary laborers? A.—No.

Q.—Have you any suggestions to make as to anything that would improve the conditions of these men? A.—No; I don't think that I have; I think they should have a little more money.

By Mr. HEAKES.

Q.—Did you belong to the providence society of the Grand Trunk Railway? A.—Yes; I did.

Q.—Will you state anything you know in connection with that society which you think is not in the interests of the men? A.—Well, there is one thing I didn't like; when I left in consequence of weakness I supposed they would give me another job of some kind after being on so long, but instead of that I was ordered to give up my certificate that would entitle my family to \$250 if I died. I asked if they could give me another job and they said the whole engineering work was the same, and that was all they could do. Some time afterwards Mr. Stewart, the station agent, called me in and said he could give me a steady job in the freight house; but when he asked me my age, and I told him, he said he could not give me the job because I was over forty-five years.

By the CHAIRMAN:—

Q.—What age were you when you went into the service of the company?  
A.—I was about thirty-six.

By Mr. HEAKES:—

Q.—Was there any reason, that you know of, why they asked you to give up your certificate, other than that you had left the company? A.—No; none that I know of.

Q.—Your assessments were all paid up? A.—Yes; everything.

By the CHAIRMAN:—

Q.—And you are not entitled to anything? A.—No.

Q.—What you paid in was lost to you? A.—Yes.

Q.—Is it not a fact, that when an employé of the Grand Trunk railway becomes a member of the benefit society he may remain a member after he leaves the railway? A.—Yes; I believe he may.

Q.—Isn't it an understood thing that he can do so? A.—He can do so, but there is a great deal of bother about it, and I didn't want to be put to that bother.

Q.—Did you object to giving up your certificate? A.—No; I did not.

Q.—You gave it up on demand? A.—Yes; at once.

Q.—Did they pay you a sick allowance during the time you were ill? A.—Yes.

Q.—The rate up to date? A.—Yes.

By Mr. ARMSTRONG:—

Q.—You say that section men are paid once a month? A.—Yes.

Q.—Would they prefer being paid oftener? A.—No; it doesn't matter to me.

Q.—For a small amount of money, I presume, you think that once a month is too long? A.—Yes, I think it is too long, but still we have to put up with it.

Q.—Do you think if you were paid in a shorter time it would be more beneficial to your family? A.—Yes; I do.

Q.—Is \$1 a day the average salary a section man receives? A.—Yes; a section foreman get \$1.50.

By the CHAIRMAN:—

Q.—All the year round? A.—Yes; when the Western had the road we got \$1.10 for two or three years, when Mr. Broughton was manager.

By Mr. ARMSTRONG:—

Q.—You work for 10 cents an hour? A.—Yes.

JOHN WADDELL, St. Thomas, re-called.

By Mr. FREED:—

Q.—I am told you can give us some information respecting the operation of the mechanics' lien law? A.—Well, as far as we have it on the Statute-book now it is a dead letter, as far as I can get at it.

Q.—For what reason? A.—For the reason that men when they have a job with an employer, and perhaps to all intents and purposes a steady job, and perhaps can not get their money out of it, are not going to apply the lien law. The first thing they know the man gets into difficulty, and the lien law is too late. He is all paid up on the contract he has taken, and therefore the workmen and the hardwaremen furnish him—the millmen and the glassmen, and the paintmen and the hardwaremen, and so on—have all to suffer if he has a bogus contract. The lien law in the shape it is in at present is no benefit to the mechanic.

Q.—Can you suggest any change which would protect the mechanic? A.—The suggestion I would make would be for the law to ignore the contractor, and let the

building which is put up be good for all that goes into it. In that case we would get responsible contractors; and every Tom, Dick and Harry who is no mechanic, and has no foundation, or anything else, could not go out and tender for contracts.

Q.—Wouldn't that injure, say the journeyman, who has saved a few hundred dollars, by preventing him from getting a contract? A.—No; because a good journeyman, a man who knows his business, can at any time get backing, as far as my experience has gone. Such a man is never denied backing if he is required to put up a deposit on a contract—if he is known to be a fair, honest man, and has taken his contract at a fair figure. The reason for low wages in many instances in this town is the fact that so many saw-and-hatchet carpenters, as you would call them, go round and take jobs, and the first thing you hear of them they beat the millmen and the hardwaremen, and others. When the millman loses his money he must, in order to get profits, curtail his wages, and the men cannot get higher wages on account of the risk. If there was no risk, and profits were sure mechanics would be better paid, and a better class would be employed.

Q.—If a person intended to build, and a substantial contractor were to put in a tender, and a journeyman, or a few journeymen, were to put in a tender also, wouldn't the capitalist prefer the substantial contractor to the others, for the very reason that he might be afraid they would get into difficulties and cause him loss and annoyance? A.—Not unless they had security. It doesn't make any difference to him in that case, but it would make people who were able to get security, if the building had to be good for everything which went into it.

Q.—You think the respectable mechanic, who was a good workman, could get security if he was well known, and would be on a footing of equality with the large contractor in that respect? A.—Yes.

By Mr. ARMSTRONG :—

Q.—With reference to the lien law, doesn't it allow the owner to hold back 10 per cent. for thirty days, so that the mechanic can be paid in the mean time? Can not he procure his wages within thirty days? A.—Yes; if the 10 per cent. covers it, and if there is not another in ahead of him, and if the lawyers do not eat it all up.

Q.—Isn't the lien the prior claim? A.—Yes; if my lien against my next neighbor is in ahead of his.

Q.—For wages, you mean? A.—Yes. Supposing there were twelve men working on a building and I put in my lien first, three or four men's liens will eat up all that there is. You take it as a general thing men don't care about putting on these liens; they get to be marked men if they go to a lawyer's office; if it happens to be a good man who gets into one he will not get a job again.

Q.—Are there many journeymen carpenters in this city settling in that way? A.—Yes.

By Mr. HEAKES :—

Q.—The lien law affords no protection to the mechanic? A.—No; not in my estimation; it is too much of a roundabout to get at it. If a man puts in ten days' work on a building, let the building be responsible for a certain length of time and then the man who is going to put up the building will make the contract or furnish security to cover all this, and this will bring the mechanics into a higher state of respectability. They will be better paid; the man will be sure of his profits when he knows that somebody is not going to take the job who cannot make anything out of it, because such a man cannot get security to hold him up.

LONDON, January 10th, 1888.

C. T. CAMPBELL, M. D., called and sworn.

By Mr. FREED :—

Q.—You have some knowledge of workmen's benefit associations? A.—Yes, sir; I have considerable knowledge of what are called benefit societies, and of course the majority of the members of these societies are workingmen, people of the wage-earning class.

Q.—Are those local or general organizations to which you refer? A.—General organizations, of course with subordinate branches. Some of them are very large; some have a membership of over half a million, and some only probably a thousand or so.

Q.—How long does your experience of these bodies extend? A.—My personal experience extends over twenty years.

Q.—How many organizations of the class to which you refer have lived for twenty years? A.—Let me understand just exactly how you mean. There are different kinds of associations; some of them have lasted for a century—that is, associations whose object is to afford pecuniary benefits to their members. Then there is another class of associations whose main object is to provide what is called assessment assurance and benefit to the family of a member at his death. Those are much more modern; the oldest of them would not go back probably more than thirty years. It is within the last thirty years that societies of that particular kind have been established. Many of them have failed, though others have not.

Q.—The organizations whose life has extended over a century would include only the Masonic body and the Oddfellows? A.—Yes; and I think the Foresters, as far as the English body is concerned.

Q.—Is the primary object of the existence of these bodies benefit, or ordinary charity and benevolence? A.—The Masonic body is, of course, charitable; it gives no direct benefits, that is the organization itself, though there are auxiliary bodies, formed of the parts of that body itself, which give benefits. But the body itself gives no pecuniary benefit except as a matter of charity. Others of these are the Oddfellows, the Foresters, the Druids, in England, the Knights of Pythias, the Red Men, and the Ancient Order of Workmen, and others which give benefit as a matter of business.

Q.—Is that the primary object of their existence, or is it a secondary object? A.—Well, I look upon it as being really the primary object of their existence. Nearly all of them claim in one sense that it is not; that their great object is to teach virtue, truth, morality, charity and benevolence, and they do so. It is the essential part of their work, but I assume that without the benefit system connected with them these organizations would not last very long. That is the practical part of their operations.

Q.—Is it possible in these bodies or any of them to separate the cost of what we may call the insurance which is given in them from the cost of maintenance? A.—Yes; in some of them. A good many of them do not enter into details of that kind in sending their reports to the main body, but others do.

Q.—Where it is possible to separate the cost of insurance from the other expenses, is it found that the cost of insurance is greater or less than that given by the ordinary insurance companies? A.—That is life insurance, or health insurance? Some of them give mostly sick benefits, which would be health insurance, and others give life insurance.

Q.—I mean those giving life insurance? A.—Yes; as far as my examination of the returns as given in all those cases, and I think in the great majority of companies of that kind which give life insurance, if they take the cost of insurance separate from the cost of maintenance it is found to be, speaking roughly, less than half the ordinary cost of insurance—that is the old time life insurance companies.

Q.—What are the expenses of maintaining the insurance branch of these societies, over and above the amount of money returned to the other? A.—Well, I could not answer that, of course, on the spur of the moment without going into an examination

of the statistics &c.; but the expenses are comparatively slight, for this reason: in all those bodies there is very little paid for the expense of maintenance; salaried officials are comparatively few; their salaries are moderate in amount, and there is only a small sum paid by individual members towards keeping up the general running expenses of the institution. The great mass of the money they pay—I should suppose, though I would not like to say for certain, probably 90 to 95 per cent. of it would—goes towards the insurance.

Q.—Have you informed yourself as to the amount of the premiums in ordinary life insurance companies which are returned to the insured and the amount which is swallowed up for expense, and which goes to the profits of the companies? A.—To some extent I have looked into the matter. The amount that is returned in the regular life insurance companies to the holder is an uncertain amount.

Q.—Yes; but there is an average struck. Do you know what it is? A.—No; I could not tell you.

Q.—You think, then, that of the sums paid into those benefit organizations to which you refer 90 to 95 per cent. would be returned to the insured on the average?

A.—Yes; I think so, though I would not like to be held as speaking definitely on that point, as I have not looked it up closely.

By Mr. HEAKES :—

Q.—Does that apply to all these benevolent societies? A.—No; I would not say that, but to the great mass. There are so many that it is almost impossible for any man to know the details of all of them, unless he was making a special study of it.

By Mr. FREED :—

Q.—Do these societies continue to exist for long periods, or do they pass away from time to time? A.—It is only within a very comparatively short period that these societies have been in existence at all, and no doubt many of the first ones organized did fail. They were started probably in rather a hap-hazard manner, some of them by men who did not have much understanding of the laws of vital statistics, and not being conducted in a good business manner, many of them failed. There are some in existence to-day to my personal knowledge which are over twenty years old—how many I could not say. The majority of those which have been organized of late years, so far as I have been able to learn, are established with much better prospects of permanency. They are taking into consideration the varying laws of life and health, and they have founded their business on more scientific principles, and therefore they are more likely to last.

Q.—Are the payments in these societies based on the average probabilities of life, or are they required as the members die? A.—That varies. Some of them require definite payments from each member every time there is a death; others make their calls as the treasury become exhausted, and then the assessments vary in this manner—that in some the assessment is called from the members, irrespective of their age, when they join—that is, a man joining at twenty-one or at fifty pays the same. In others, and I think in most of those organizations established lately, the assessment is according to the age of the man when he joins, so that those joining at an advanced age pay higher.

Q.—Do you consider it safe insurance where a man of twenty-one pays the same assessment as a man of fifty. A.—I should not consider it fair; I suppose it is safe.

Q.—Do you know whether it is or is not a fact that after these societies have been organized for some years the calls on the members increase rapidly in amount and frequency? A.—No doubt they will, because when a society is first organized its members are all either young or have recently passed a medical examination, and they are in comparatively good health, and the mortality rate will be low, but in time the rate will run up to the general average rate.

By Mr. HEAKES :—

Q.—Would not an increased number of members counterbalance the difference between the extra number of calls made and the amount paid? A.—Not fully; of

course it will to some extent. In fact, if there was no increase of members I presume the assessment organizations and the insurance companies alike would come to a speedy termination. It is by the new blood coming in that they are enabled to work along, and of course by new members coming in the rate is kept down lower than if only the old members were there.

By Mr. FREED :—

Q.—Do you know if the membership has increased? A.—In the great majority of cases the members increase. In some few of them, of course, the members drop out, especially those of a purely local character, and a great many failures of organizations of this kind have been purely local. The membership has never been large—perhaps running from 500 to 1,000, and after a few years the calls becoming rather frequent the membership drops and they become extinct.

Q.—And those who have made payments find themselves without any insurance? A.—Yes; certainly; they were supposed to understand that when they joined the insurance it was as long as the society held together; there is nothing invested.

Q.—Taking the average of these societies, and taking the average of the regular original life insurance companies, do you think the chances of permanency as great in these societies to which you refer as in the insurance companies? A.—I think so. So far as membership and things of that kind are concerned, the advantage of the life insurance companies would be in this, that drawing from policy-holders probably twice the amount necessary to pay insurance they are enabled to invest a large sum to provide for the future.

Q.—And to re-insure? A.—Yes; if it is found necessary. Of course, there are a great many of those societies who put by a reserve fund to a moderate amount. Some of them have no reserve fund. Some take the position that there should be no reserve fund; that the members should keep all the reserve fund in their own pockets. There are differences of opinion among members of these organizations as to which is the wiser policy.

Q.—You would not consider one of these companies safe unless it had a large membership extending over a large area? A.—I would not have so much confidence in its permanency. If it was a purely local society its sphere of operation would necessarily be limited and I should have my doubts about it. If it started out locally at the origin, as all of them must necessarily do, but with the intention of extending itself and not confining itself to the locality, but spreading as far as its merits would enable it, then of course its prospects would be all right.

Q.—Have you anything to volunteer in addition to what you have said? A.—No; I cannot say I have. Of course, I had no idea what would be the particular scope and prepared nothing special to offer to you. I just came with the intention of answering any questions you might have to ask; but I did not know whether the object of your enquiry was more as to assessment associations providing life insurance, or benefit societies providing simply health assurance or sick benefit. I see now it is more in regard to assessment associations. I think, in general terms, all these organizations are beneficial to the workingmen. They have a good educational effect. The majority of the assessment associations are more or less social and fraternal associations as well as business organizations. They have all something of an initiatory ceremony, and their rituals, as far as I have learned, are all calculated to teach good lessons to their members, and in that way they have a beneficial effect. Then, in addition to that, I think another beneficial effect they have is the cultivation of the principle of mutual help and self help. Members join these organizations having a well-founded business basis and for practical purposes, yet, at the same time, they understand that it is done, not through some special business company, but as a mutual work, each assisting the other, and they put their money into these organizations, pay in their dues and assessments, with the idea that they are helping one another and at the same time helping themselves, and they are thus led to cultivate habits of providing for the future and habits of independence. In this way benefit societies of all kinds, I think, are eminently calculated to prevent

pauperism. Largely their membership is drawn from the wage-earning class; while there are many of the professional class and employers of labor, yet the majority, I think, are drawn from the wage earning class, and when the wage-earner takes sick, of course his means of revenue are cut short, and unless he gets help he is thrown upon public charity. Now, these organizations enable many workingmen who have no income beyond their daily or weekly wages to get along weeks and months without being thrown on the community as paupers. In this way a city or municipality is protected from a large expenditure for charitable purposes, for which it would otherwise necessarily be called upon. So I think these organizations have all a good effect. The one bad feature about any of them is, that there is a tendency to promise more than they can really fulfil.

Q.—There is that tendency on the part of the societies? A.—Yes; there is a great deal of competition amongst them; there are a great many organizations, and although there is no ill-will bred among them, each one wants as many members as it can get. In this way the feeling on the part of many members, who do not look into the solid business part of an organization of that kind, is to make large promises; thus they are promised much larger sick benefits, for example, than the facts would justify. Of course, there is danger to that effect, and I am sure that the older and better organizations are going out of that. When they originally started their benefit system was on a purely hap-hazard basis, but of late it has been conducted much more soundly, and prominent men in these societies have been endeavoring, by studying vital statistics, to fix some definite basis by which there may be a proper scientific proportion between the dues paid into the societies and the benefits to be received by members. And I think the tendency now amongst the older and better societies is to have their benefit systems on a sound financial basis. The only evil about them is the danger of some of them promising more than they can fulfil, and the result is, of course, that they fail after a time, and those putting dependence in them will suffer. In Great Britain the matter is under parliamentary supervision to some extent. Returns are made to the Registrar-General, and a fixed plan of fees and dues has been provided by legislation, to which they have to conform. I do not suppose that could be carried out here, so far as Government control is concerned, although Government supervision might be had to some extent, that is, receiving from these societies proper reports of their operations, and fixing the proper dues of admission by the Government, and requiring all societies who come up to the proper requirements to be duly registered. Then, of course, those societies which did not register would lack nominal endorsement to that effect. They would stand before the world as having a system which was not approved, and people would go into them with their eyes open.

Q.—Do you think it would be possible for the Government to require from these societies the same security that they require from the ordinary insurance companies? A.—No; I do not think so; I don't think that would work at all. In fact, it would be a very difficult thing to do, because these societies have, as a rule, no money to put up for purposes of that kind. They call the money from the members for the immediate purpose of the society, and they have not large funds which they could pay to the Government as security.

By Mr. HEAKES:—

Q.—Would it be possible to limit the liabilities of the companies? A.—I do not think of any way just now. Do you mean not to allow them to promise?

Q.—Not to allow them to speculate with their money? A.—Yes; a supervision of that kind I think could be made.

Q.—And limit their liabilities so far as insurance is concerned? A.—Yes; not to allow them to give a larger amount than say \$1,000 or \$500. I do not think they could be compelled altogether in this matter, but if placed under a certain amount of Government supervision and they failed to come up to the requirements that the authorities laid down as constituting a proper basis, they would necessarily stand

before the public as failing to come up to those requirements which good authority required and they would suffer accordingly.

Q.—Wouldn't it be better for the Government to have some supervision over these societies, to supervise that part of their business? A.—I think it would be, to that extent only. I do not think it would be a good thing for any Government on this continent to undertake the matter of controlling those organizations, but just a general supervision. There could be no harm to anybody in that, and I think every society properly conducted would be willing for anything of that kind, as long as it did not involve serious expense.

Q.—It would establish a constituency for the cautious of these societies? A.—Yes.

Q.—Do you know if these societies have a surplus of any kind? A.—Compared with the surpluses of insurance companies operated with the same number of members, of course the surpluses are small.

Q.—Is there any one which has a very large surplus, one of those you mentioned as among the English societies—the Ancient Order of Foresters? A.—I cannot say for certain as to that.

Q.—I was going to ask you if the members of the societies participate in any benefit from these surplus funds? A.—In regard to the Foresters, I cannot tell you.

Q.—Is it possible for a member of these societies to will the amount of his insurance to any body? A.—None that I can call to mind, though there may be some. In most of them the member is required to give the name of the party to whom he wishes his benefit paid, and there must be some relationship—it must be some one more or less depending on him.

Q.—He cannot will the amount? A.—No; not for the payment of his creditors, or anything of that kind.

By the CHAIRMAN :—

Q.—Can it go to a stranger? A.—No; not in most cases. He must select some person, either a member of the family or some person to a reasonable extent depending on him; that is, in most of them.

By Mr. GIBSON :—

Q.—In case that the beneficiary should die the amount would fall to somebody else? A.—As far as I remember, all the members are directed that if the beneficiary dies they must have the certificate changed.

By the CHAIRMAN :—

Q.—There would be no objection to a man naming two or three in succession in his certificate? A.—No; a great many name several members of a family—say the wife and children of one of the members.

By Mr. GIBSON :—

Q.—You believe, in general, that a man insured receives the full benefit, because it is carried at a low rate? A.—Yes; and it is insurance as long as it continues. Of course, for many people they would have either to have insurance of that kind or none at all, because they could not afford to pay the fixed charges by regular insurance companies.

Q.—You are generally in favor of them? A.—Yes; if properly conducted and supervised—the arrangements being based on something like stock principles of fixed statistics.

By Mr. ARMSTRONG :—

Q.—Do the parties who have the custody of the money have it secured? A.—Yes; I think so, without exception. I think the rule is to give security far in excess of any amount they are required to have in their hands.

Q.—It that the general rule? A.—I think it is, as far as I can call to mind. I know in some of them they give security to the extent of \$100,000—the security of

guarantee associations, or some other responsible parties. The security I should be personally more inclined to depend upon is the security which any official of an insurance company gives of the same character—that is, for all the larger and more prominent ones; some small ones might be different.

By Mr. HEAKES:—

Q.—I understand that you have been connected with the Public School Board here for some years. Possibly you could give us some information on the subject of technical education. Have you ever given the subject of technical education in primary schools any thought? A.—To some extent, but not largely, for the reason that we have had so much to do, and the course in the primary schools is so extended that we have never been able to see how we could work much more in. The advisability of having technical education I think there can be no question about, if it could be managed.

By the CHAIRMAN:—

Q.—They have been making a change in New York. Do you know anything specially about it? A.—No; nothing but what there was in the press.

By Mr. HEAKES:—

Q.—Don't you think that the present system of education tends to professionalism? A.—Yes; I have no hesitation in saying that the State—I mean the State in Canada and the United States—provides too much education; that is the general tendency on this continent. I think if the State provided a practical education, which every man, woman and child is likely to need, or can find serviceable, it would be better. No doubt, the education necessary for professional study would be provided sufficiently cheap for those who wished it.

Q.—Taking into consideration the large number of boys attending school who develop into mechanics, don't you think that some of the present course of instruction might be dropped and the elements of science as applied to mechanics introduced in their place? A.—I think so; I think it would be an advantage if that could be done.

Q.—Do you think it might be engrafted on the public school system? A.—I think it could, though I would not undertake to say how. Of course, one necessary element would be, that you would have to drop out some of the present course.

Q.—Do you think it would be an advantage to the population if boys could be educated in that direction? A.—Yes; I think as a simple question of fairness, and also for the benefit of the community, that there should be the same choice offered to those who are going to fill mechanical occupations as are offered to those who are going to fill professional occupations, that is if it is advisable at all that a man should get any further assistance from the State than is necessary to enable him to read, write and spell. If he is to get something to fit him for a future calling, as all professional men do to some extent, the wage-earning class should have the same assistance.

Q.—Do you know anything of the kindergarten system? A.—A little.

Q.—Do you think if it was extended it would be of benefit to the older students as well as the younger children. For instance, if they had the different kinds of wood and were taught the uses to which they might be applied, strength, durability and so on, with models of steam engines and things of that kind? A.—Whether that could be worked in as part of the kindergarten system I do not know. The Kindergarten system properly is an educational nursery. It takes children before they are fitted for a course of the public schools and gives them a certain amount of training which, while it does not give them much information, fits them for learning better, so that when they take up the regular course in the public schools they could observe better, reason better and make better use of the instruction given. I think that is the chief advantage of the kindergarten system. The amount of information the child gets by it is not very great; I think the advantage is more in the training.

By Mr. GIBSON :—

Q.—Don't you think that that would be a very good education for extending to the children of a larger growth? A.—Yes; as children become larger the same principle could be carried out to cultivate the reasoning faculties, but of course you have to pile in more information.

By Mr. HEAKES :—

Q.—I am told that in the kindergarten schools there are over one hundred different articles which they make out of paper, clay, &c. Could not that system be extended, and instead of paper, clay, &c., have models of steam engines, and so on? A.—That would, of course, be shaping it into a system of technical education; it would be primary technical education.

Q.—Do you think that might be developed in the public school system without injury to the average scholar? A.—I think so, but of course it would be a matter of a great amount of study to know exactly how to arrange it, but I think it might be done, and if it could be done I have no doubt of its beneficial character.

By Mr. GIBSON :—

Q.—As a matter of fact, the children of mechanics and laborers are taught fifty things in schools which they never require, and the people who are engaged to teach them these subjects are paid higher salaries than one could be got to teach for in technical education, just because he has a higher education himself? A.—Yes.

By the CHAIRMAN :—

Q.—Do you mean to say that the teacher who gives technical education would have a smaller salary? A.—I would not undertake to say that. I do not know what salaries are given for that purpose.

By Mr. GIBSON :—

Q.—It would depend on how for it was going? A.—Yes; if you were teaching a boy to shove a jack-plane, and so on, an ordinary carpenter at \$1.50 to \$2 a day could teach him that. But if you went farther than that and taught him the practical part of his work, I think he would demand and claim a higher salary.

Q.—Has he not to have a certain amount of education? If he hadn't would he understand the planning and be able to follow it out? A.—Of course he certainly requires to have a certain amount of education and the more he has the better for himself.

Q.—And he does not get anything like the salary the teacher gets? A.—No.

By Mr. HEAKES :—

Q.—Do you think that after a child has left the public school and gone to learn a trade it would be better to teach him the technical part of his trade through night schools? A.—I have never thought on that point.

Q.—I mean a school where nothing else would be taught but the technical branches of mechanics as applied to trades? A.—It would be better I think, of course, if he could get the technical education along with his trade, that is if there were instructors in the establishment where he was learning his trade who were competent to give him the necessary amount of education there. If he is taking a night school training at all it would be better to be a training bearing on the occupation he was going to follow.

Q.—He would learn the practical part in the shop, but there is the theoretical part of all trades which you must understand about in order to excel in them. For instance, there is drawing. He must know something about that. Do you think that would be better acquired after a boy has finished his course at the public school? A.—A good deal of that can be learned while he is in the public school. Drawing is now an important part of the curriculum, though not always taught as it should be, but the idea in teaching it is to supply that particular branch of education.

Q.—I am afraid it is a failure? A.—In some places. The fault is, in some places

boards of education will select a teacher because he is a very fine artist, when they should select a mechanical draughtsman.

Q.—And the curriculum of the public schools is now so large that they have very little time? A.—Yes; that is the evil.

By Mr. GIBSON:—

Q.—The reason I asked you the question is, that a boy gets a distaste for anything in the shape of labor in the public schools. I have a boy just now who should be able to go to a trade who has an absolute distaste for anything in the shape of work. All boys should be taught the love of labor of some kind or other; his mind should be led that way? A.—No doubt.

Q.—Because there is more room for mechanics now in the country than for professional men or clerks? A.—And to effect that there should be some technical education of some kind, you think?

By Mr. McLEAN:—

Q.—How are the salaries of teachers arranged? Isn't there a graded scale? A.—Nominally there is, but it is not on a very correct basis; of course, the younger the teacher the lower the class of certificate he holds, and the lower the class he can teach the smaller the salary. As they get older they are apt to get higher salaries; they teach more advanced classes and they get better paid.

Q.—Does a lady who teaches as high a class as a gentleman get as high a salary? A.—No.

Q.—Why? A.—I suppose because the question of supply and demand enters into the matter.

By Mr. ARMSTRONG:—

Q.—Don't you think that a lady having as high a certificate as a gentleman should get as high a salary? A.—On general principles, yes.

Q.—And it is not done? A.—No.

Q.—Do you know the reason? A.—The only reason is, I suppose, because ladies are susceptible to the public touch very readily. If they should pay out more money than the ratepayers thought advisable they would be turned out, and many of them are anxious to be economical, and they find that ladies can be got to teach for considerably less than gentlemen of the same standing, and they get them, not because they are ladies but because they are found to work for less money.

Q.—Don't you think that a lady who has spent a large portion of her time educating herself and coming off with as high honors as a gentleman should have the same salary? A.—Yes; I say so; I say that on general principles there should be no question about that.

Q.—Don't you think that if the books of the pupils were free it would be a relief to the parents in many instances? A.—No doubt it would be a relief.

By the CHAIRMAN:—

Q.—Have you seen it stated that where they get their books for nothing they don't take care of them? A.—Yes; it is true that if you get a thing for nothing you are not so likely to take care of it. When I said it would be a relief to the parents I did not say it would be advisable; of course there are poor parents who cannot afford to pay for books, but I think that in most of such cases the boards of education avail themselves of their privilege to supply them. I know in this city we have on two or three occasions; in cases, say of a widow who was the mother of a number of children, they have been supplied.

Q.—You supply them to those who really cannot afford to buy them. A.—Yes.

Q.—But not to those who can? A.—No; the rule is that the parents should supply the books.

By Mr. ARMSTRONG:—

Q.—In those cases where the parents got the schoolbooks for nothing were they not given in the light of charity? A.—Certainly.

Q.—If the books were free don't you think the children would be kept longer at school? Don't you think the children are taken away from school because the parents have not sufficient means to keep them there and supply them with books? A.—I should hardly like to say so.

By the CHAIRMAN:—

Q.—In cases where they require them they are supplied them? A.—Yes; we do in some cases, but it is the exception altogether.

By Mr. GIBSON:—

Q.—Is it not a fact that the reason ladies are paid less salaries than gentlemen is that they don't choose teaching as a life work, but as a temporary occupation? A.—That may be one element in the general principle, that they merely choose it as a temporary employment and of course are willing to take employment at any figure they can get, or many of them are. There is no doubt that ladies are eminently calculated for teachers, that is subordinate teachers, and as principals they will compare favorably with men. Because a woman is paid less than a man it does not follow that the teaching is of inferior quality, and there is no doubt about the justice of their being paid the same salary, but as long as they are willing to work for less they will get less.

By Mr. McLEAN:—

Q.—Do you know of cases where children have been sent from school because they had not books? A.—I cannot call to mind such a case, though I presume there might be such a case.

Q.—Do you think that the ratepayers of this city would object to paying as high a salary to a female teacher as to a male, provided she was competent? A.—A good many would.

Q.—Do you think a majority would? A.—I have no idea of that. If they would make it an issue at the elections they would find out, but I know there is a great deal of complaint made by the ratepayers about the high salaries paid to teachers, and they object to any advance generally, so I presume they would to advances made in that, unless they were friends of particular teachers.

By Mr. ARMSTRONG:—

Q.—Are you acquainted with the Ontario Association of Teachers? A.—No; not to any extent; it is confined to teachers alone.

Q.—Don't you think it would be possible for that organization to strike a scale of salaries, as mechanics do, and to keep up their wages? A.—I don't see how they could keep them up, though they could strike a scale and recommend it.

Q.—Do you think it is impossible? A.—I think so.

Q.—For what reason? A.—There are so many in the teaching profession who hold on to it as a stepping-stone to something else. Young men take it up and follow it for a time until they are able to take a course in the professions. Ladies take it up to pay their expenses until they are married, and as long as there is a class in any trade or calling of that description you cannot expect them to live up to a particular tariff of wages. They will take anything they can get rather than nothing.

By Mr. McLEAN:—

Q.—Are there any lady teachers in this city who are married? A.—Yes. I don't mean to say that all ladies take it up in that way, but I say there are some ladies make it a temporary employment, just as there are some men.

By Mr. ARMSTRONG:—

Q.—Do you think that any person teaching for a temporary purpose like that

would make the best kind of a teacher? A.—No; the best one is the one who devotes himself right to the work.

Q.—Then if teachers do not do that the pupils must be taught very badly? A.—I would not say that. They do the work pretty fairly, but there is no doubt that the teacher who holds to teaching as a life work makes the best teacher, as a rule.

By Mr. FREED:—

Q.—Are any fees paid by the pupils in the common schools of London? A.—No; except that there is a small fee for outsiders coming to the public school, but there are very few coming.

By Mr. GIBSON:—

Q.—Is there not a fee for supplying stationery? A.—Yes.

Q.—That is not actually a fee for attendance? A.—No.

By Mr. FREED:—

Q.—What is that fee? A.—I could not call it to mind. It is a trifle. I would not like to say for certain that we do charge for it, for I think stationery, such as pens and ink, is supplied without charge. I would not like to say, however, but it is a trifle if it is charged.

By Mr. McLEAN:—

Q.—Is there anything else you would like to say? A.—No; there is nothing else I can think of.

By Mr. ARMSTRONG:—

Q.—Do you know the system under which the school books of Ontario are printed and issued? A.—Nothing but what has appeared in the public press and as a matter of general knowledge. I know nothing personally.

Q.—Don't you think if there was no monopoly in existence, as there is at the present time, the books would be cheaper? A.—I could not say.

Q.—You know that there is a royalty paid to two firms and they get a monopoly? A.—I am not sufficiently acquainted with the details of that matter to form an opinion.

By Mr. GIBSON:—

Q.—Do you think there are Jay Goulds in publishing as well as in other matters? A.—Yes; I suppose it is possible, though I am not acquainted with the publishing business.

WM. BELL, Relief and Health Inspector, London, called and sworn.

By Mr. HEAKES:—

Q.—What is the general sanitary condition of London? A.—Pretty good at present.

Q.—Have you a good system of sewerage? A.—I do not know that; it is a matter of opinion.

Q.—Do you think sufficient attention is paid to sanitary measures by your municipal government? A.—I think so; I think there has been a great improvement during the last few years.

Q.—You are also relief officer here? A.—Yes.

Q.—Are there many exceedingly poor people in London who require relief from the corporation? A.—There are quite a few, but not quite so many as there were some years ago.

Q.—The position is getting better? A.—If you want the items I can give you the numbers last month. I had 124 applications for relief last month.

Q.—Would that number be different families? A.—Yes; 124 families got relief last month; that was for the month of October. In the corresponding month last year the number was 140.

Q.—What class of people would that be who get relief? A.—They are widows and orphans, in the first place. We have always a lot of old women who go around and get what work they can, who do a day's work when they can; and these get a little wood and provisions from us. Some of them, of course, get groceries. Not many workmen have come on as yet. We have probably, out of the 124, about thirty workmen. Of course, there will be more apply this month than there were last month, as work is not very plentiful at present.

Q.—Out of the 124 applications, how many do you suppose have brought their position upon themselves by bad habits? A.—There are some of them, no doubt, who do drink, and some of the women may have had drunken husbands, but you cannot let the family starve on that account. There are not so very many cases from that account on the books at present.

By the CHAIRMAN:—

Q.—Some of the people are there, I suppose, through misfortune? A.—Yes; certainly. There are not so many on the books from drunkenness now; I am very particular about drunkards getting relief.

By Mr. HEAKES:—

Q.—Then their position arises, in most cases, not from any fault of the people themselves? A.—All the relief going out is to pretty necessitous cases. We investigate every case in which application is made. Sometimes we find cases in which we are imposed upon, and the parties get half a cord of wood or so in the first instance; but in every case, when we find it is one deserving charity, the parties get relief. When we find the party is a drunkard he does not get any relief, I assure you.

Q.—Do you find many immigrants applying for relief? A.—No; not many. Three or four families are on our books now who landed this summer; they are pretty hard up. As a general rule, they do well out in this country, but among them there are a class of people who are too old to come here, and who would not be likely to do well anywhere.

Q.—Under ordinary circumstances, would they be able to earn their living? A.—Yes; that would be just about all they could do.

Q.—You do not suffer from much pauper immigration coming here? A.—I think less this year than other years, but some come every year; not very many.

Q.—What is the general condition of the working people here, speaking from your own knowledge? A.—I think it is better than their condition has been in the past. I can show you that, I think, by making comparison with 1882, and to do so, I have just looked over the books a little. In 1882 our expenses for relief for the four wards in the city in the former year, and now we have five wards, and a much larger population, and we expended \$800 less in relief than in 1883. You are aware that London East has come in since that time. Those figures, I think, do not speak badly for London.

Q.—Do many working people own their own homes here? A.—They do in the fifth ward more than in any other. The fifth ward is a very good ward, and does not make a heavy drain on the relief funds.

Q.—Is it possible for a workingman to obtain a home of his own easily in London? A.—Yes; such, however, is not of much benefit to him, I think, owing to our taxes being pretty heavy, unless, indeed, he can go and pay the money down at once. It is in my opinion a very bad system for a workingman to pay for a house by instalments, especially if work is not very sure. If work is very good such a system may be all right, but on the whole it is not a very good system.

Q.—What is the average rent of a mechanic's house in London? A.—From \$5 to \$7 a month. There is not enough of those houses put up in the city.

Q.—What kind of a house will a mechanic get for \$5 a month? A.—Not very much of a house; he might obtain one of four rooms.

Q.—What kind of a one for \$7 a month? A.—He would not get a very extra house for that rent. It depends on the locality a great deal. Of course, he would have to go out into the suburbs, anyway, to get a house at that figure.

By Mr. McLEAN :—

Q.—I believe that every year you make a house-to-house inspection? A.—Yes.

Q.—How did you find the sanitary condition of the city this year? A.—I will give you a few facts: Last summer we started our house-to-house inspection in April. We inspected 5,606 houses, and we found as follows: Closets, reported dirty 1,167—all have been cleaned since; dirty yards, 310—all have been cleaned since; house cesspools and tanks dirty, about forty, or a little over; closets connected with sewers, 341; dry-earth closets, now in use, 151. That was the result of our last inspection. To-day I was very happy to state to the board that we had got rid of our last case of fever; none had been reported during the week, and the disease was not likely to cause any more trouble. The outbreak of fever that occurred has been stamped out, and the condition of London, at present, will compare with that of any other city in Canada.

Q.—You put up placards on houses in which there are infectious diseases? A.—Yes.

Q.—Have you put up many? A.—Yes; there has been a good many put up.

Q.—Have you put up many for typhoid fever? A.—Yes; but nothing like the number compared with other diseases.

Q.—Can you tell me what was the cause of the typhoid fever in the neighborhood where it broke out? A.—I think myself, and of course this is only my own opinion, that it is due to bad drainage and sewerage, and bad water. Bad water, of course, is the main thing. I have tested several wells and found the water bad, and the people have been drinking it. I think the disease has come from bad water, if it has come from anything, for bad water will undoubtedly cause it. That is my opinion, at all events, although some persons may differ from it. I visited one place this morning where they had typhoid fever, and of course they attributed it to the closets being too near the well. I have undertaken to make a test of the water, but I cannot tell you what the result will be until to-morrow. That is the opinion of the family as to the cause of the outbreak and, I suppose it is the opinion of the doctor attending the case. The closet is 21 feet from the well, and no doubt drains into it.

Q.—Do you find, in your house-to-house inspection, that the water-closets and the wells are too close together? A.—A good many of them are.

Q.—That would probably be in the heart of the city? A.—Yes; in the heart of the city they are pretty much all taking city water.

By Mr. HEAKES :—

Q.—What is the nature of the soil generally? A.—Sandy.

Q.—Do you know how far the liquid matter of cesspools will travel through sand? A.—There are various opinions in regard to that matter, but some say it will travel 100 feet. It is a matter of opinion. I have no doubt it will drain a very long distance through sand.

Q.—That is in course of time? A.—Yes.

Q.—I suppose it will contaminate the water when there has been a rainy season? A.—Yes. It will take, of course, some time to get that long distance mentioned, but when the closet is 20 or 30 feet from the well it is very likely to drain into it.

Q.—What is the sanitary condition of the Public Schools? A.—Very good.

Q.—Have they good water? A.—Yes.

By Mr. ARMSTRONG :—

Q.—How is the sanitary condition of the factories and workshops here? A.—It is very good. We get them cleaned up as fast as we get time to do so. I have an assistant going round all the time.

Q.—Are there separate conveniences in the factories where there are both sexes employed? A.—We have not many such factories here.

Q.—In those you have, is such the case? A.—Yes.

By Mr. McLEAN:—

Q.—Were you ever requested by any person who worked at the factories to examine into the sanitary condition of any of them? A.—Not unless it was in regard to the closet, and in that case it has been attended to right away.

Q.—Have you had complaints made to you by people working there? A.—Yes; that it was not quite right; and in those cases I have had it attended to right away.

By Mr. HEAKES:—

Q.—How long is it since you have established the dry-earth closet system here? A.—I do not think much of the dry-earth closet system, unless we obtain a better method of scavenging. They fill up directly, and unless we have a proper system of going around and making collections frequently, I do not think the system can be satisfactorily worked. However, if we got in a sufficient number of dry closets, there would be a better chance of organizing a system for taking products away. Of course, they may be properly disinfected. We have the Hick's patent in one of the schools, which works very well.

Q.—They require to be looked after every day, I believe. A.—Yes; in the winter time. They are very clean and nice when the refuse is taken away regularly.

W. A. CLARKE, London, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a printer? A.—I am.

Q.—How long have you been in London? A.—Most of my life, except two or three years.

Q.—Are you a member of the Typographical Union? A.—I am.

Q.—Have you got any benefits in connection with your organization? A.—Yes; we have local benefits, health benefits, and I believe there are insurance benefits in connection with the international organization. I am not very much acquainted with the international part of it—that is the insurance part of it—but the local benefit is \$3 a week to members in good standing for a period of five weeks, and it rests with the union whether they continue it thereafter or not.

Q.—Is there any death benefit? A.—Yes; they make an assessment of \$1 per member—a special assessment.

Q.—The sick benefits are taken out of the dues? A.—Yes; they lay aside 20 per cent. of the dues for that purpose.

Q.—You are best acquainted with morning newspaper work? A.—Yes.

Q.—What is the scale of wages in London? A.—Twenty-eight cents a thousand on morning papers and 25 cents for evening papers, and taking job work, 20 cents.

Q.—How much per week day work? A.—Nine dollars per week.

Q.—For how many hours? A.—Well, they do not lay down the hours, but I believe they work 56 hours. In summer they get four hours on the afternoon of Saturday, and in winter time they start at 7:30 in the morning.

Q.—What is the average number of hours a morning newspaper man works in London? A.—Fourteen hours per day.

Q.—What time does he leave off in the morning? A.—About 3:30 o'clock.

Q.—What time does he begin composition? A.—They have hours for the afternoon and hours for the night. They begin at 1:15 in the day and leave off at 3:45 or 4 o'clock. In the night they start at 8 o'clock and leave off at 3 o'clock or 3:30

Q.—Tell us the average bill a morning newspaper hand would make? A.—Take the average throughout the city, about \$2.50 per day.

Q.—That would be \$15 a week? A.—Yes; if he works six days.

Q.—Do they generally work six days? A.—No; four days on the average. That is considered a week's work.

Q.—Are they compelled to leave off two days in the week? A.—No; if they choose they can work six days in the office I work in.

Q.—That is the *Free Press*? A.—No, the *Advertiser*. In the other offices I think they make four days a week's work, and arrange it so that three men will take two frames, but in our office they do it another way; they have subs. to put on.

Q.—It is supposed that if they work six days at fourteen hours a day they make about \$15 a week. A.—Yes.

Q.—As regards fat matter, such as advertisements, does it go to the men on piece work? A.—No; they are set by the week.

Q.—By boys or men? A.—Partly by boys and partly by men. It is set by the office.

Q.—Does the craft, as a general thing, consider that a fair deal? A.—They do not.

Q.—Is it the universal custom with printers on morning newspapers that men are entitled to fat matter, such as advertisements, tabular work, and so on? A.—Yes; they get it in the majority of places.

Q.—Why don't they receive it in London? A.—They are not in a position to do so; they have more apprentices to the men, and if the men demand it they can tell the men to go, and the apprentices can do the work.

Q.—Do the rules of your union state how many apprentices per man will be employed? A.—The international body does not state distinctly.

Q.—Does your union? A.—Yes; there is a local law that two boys shall be allowed to five men.

Q.—Is there more than that proportion employed? A.—Yes; considerably more; more than one to each man.

Q.—Is it two men to five boys? A.—Well, it is hardly as low as that, but I think there are one-third more boys than men; I have the statistics in my pocket. The total number of journeymen in the city is forty-eight, apprentices fifty-nine; that is taking all offices together. In the newspaper offices there are twenty-eight apprentices and twenty-seven journeymen.

Q.—Are the apprentices indentured? A.—They are in the office I work in, but I don't think they are in the others.

Q.—Do the men prefer an indenture system? A.—They do.

Q.—Are the employers in favor of indenturing apprentices? A.—If it was universal, and they were all indentured.

Q.—How many years has a boy to serve before being recognized as a journeyman? A.—The union provides for five years, but the offices have been indenturing for four, and I believe the offices give them the option of being indentured for five, if they choose.

Q.—Have you had any labor troubles recently? A.—Not for the last five years.

Q.—Are the men, as an organized body, in favor of settling labor troubles that may arise by arbitration? A.—They have done so during the last three years with any little troubles that came up. When you asked me before, I understood you to mean whether we had any strikes or not, but we have waited on the proprietors and arranged things satisfactorily in the office in which I am employed.

Q.—As a body, you believe in arbitration, instead of resorting to strikes? A.—Yes; strikes are the last resort in our organization.

Q.—Is that law with you a local idea amongst yourselves? A.—It is the law throughout the international body.

Q.—In a case of arbitration, or a social coming together of employers and employes—what is your opinion about the Government having an arbitration board? Do you think it would be a step in the right direction? A.—If the Government

were to have an arbitration board which could step in and settle matters to suit themselves I don't think it would be satisfactory to every one. But if it was one to which they could appeal, in case they wished to arbitrate, I think it would be a good thing, if both parties were agreeable.

Q.—That is for the Government to step in? A.—Yes.

Q.—Is there any plate matter used in the newspapers in London? A.—During the last couple of weeks I have noticed that on Saturdays they issue large papers, and in one of the papers they issued two pages of plates. In one only they use them once in a great while, but they pay for them like other composition.

By Mr. McLEAN :—

Q.—They allow the men the difference? A.—No; they allow just the same as if they were set up by them—that is the full price. They use plates on the weekly edition, and they don't pay anything for them.

By Mr. ARMSTRONG :—

Q.—If the plates were not used at all would they employ more printers? A.—Yes; of course.

Q.—Where do these plates come from? A.—I think from Buffalo, the ones that I know of.

Q.—It has a bad effect on the printing business? A.—Well, of course it has, but on the other hand it has a good effect in several ways. For instance, in places such as Stratford and Woodstock, and towns like that, they would not issue daily papers unless they got the plates from Toronto, so that if it has a bad effect in one way it has a good effect in another, because if they did not get the plates they would not use the daily papers.

By Mr. McLEAN :—

Q.—Set in the large cities, is it departmentally? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Provided plates are used in Canada, don't you think it right that the plates should be made in Canada? A.—I think it would be a good thing. I think they should raise the duty and prevent them coming in on any pretext, and in the event of doing that the plates would be set in some central city and the Canadian printer would get the benefit.

Q.—In morning newspaper work do the men remain idle for want of copy on account of the carelessness of editors and reporters? A.—Sometimes, though I don't know whether it was from carelessness.

Q.—It was for the want of copy? A.—Yes.

Q.—Are the men paid for that idle time? A.—No.

Q.—Do the union think they should be paid for idle time? A.—We do.

By Mr. McLEAN :—

Q.—Are you ever sent home at night as not being needed? A.—Very seldom—once in a great while.

Q.—Do the men set all the type on the paper you are on? A.—No; it is set by boys as well as men.

Q.—Do boys get fat matter on it? A.—They get the same run as the men.

Q.—Do they often get such things as poems to set up? A.—Well, if they happen to "strike" them, as we call it, they get them.

Q.—They have the run of the hook the same as the men? A.—Yes.

By Mr. HEAKES :—

Q.—Are there any female compositers in London? A.—Yes; there are ten girls employed in the city.

Q.—At the same wages as the men? A.—No; at 15 cents a thousand, or a wage of \$3 a week.

Q.—Don't the union demand equal wages for equal work? A.—Yes; but these

girls employed in the *Record* office do not belong to the union.

Q.—Would it not be in the interests of the union to see that they got the same?

A.—Yes, but until they join, the union could not affect them. They work in an office in which there are no union men employed, and they cannot very well fix the matter.

Q.—Would a bureau of labor statistics be of benefit to the workingmen?

A.—I don't see how it would, and I hardly think it would, but I haven't given the matter any study.

Q.—Do you think that if statistics of labor were published it would be of any benefit to the rates of wages, the hours of work, and the general condition of the workingmen? A.—It might be some benefit, but I could not say in what way.

Q.—You haven't given the subject any thought? A.—No.

By Mr. McLEAN :—

Q.—What is the sanitary condition of your workroom? A.—Of course, you cannot call it bad, but it is not in any way good. There are a great many draughts, and the ventilation is very poor in some cases; I speak with regard to the city.

Q.—I am speaking of your own workshop? A.—It is about as good as can be expected; there is nothing to complain of particularly. The only trouble is that sometimes it gets overheated and there is no way of regulating the temperature.

Q.—Do you know of the existence of any iron-clad contracts? A.—There are none.

By Mr. ARMSTRONG :—

Q.—Are the men paid in cash? A.—Yes; unless they otherwise desire.

Q.—Are there any men who desire otherwise? A.—Yes; there are some men in our office who get orders once in awhile.

Q.—Are they asked to take them? A.—No.

Q.—Are the men paid weekly or fortnightly? A.—Weekly.

Q.—On what day? A.—Friday.

Q.—Do they prefer Friday to any other day? A.—Yes.

By Mr. McLEAN :—

Q.—Why? A.—Of course to a single man it does not make much difference, but it enables the wives of those who are married to go on the market if they choose on Saturday. I believe that is the argument generally used.

Q.—What are the wages in Canada compared with Great Britain and the United States? A.—Well, they are low. I will give you an idea from the book I have here. In Indianapolis they pay 35 cents; Philadelphia, 46; Cincinnati, 40; Columbus, 35; Brooklyn, 46. They don't give New York.

By Mr. FREED :—

Q.—Take Binghamton, or a town in central New York about the same sized places as London, or take Oswego? A.—I don't think those are given.

Q.—Take Poughkeepsie, N. Y.? A.—I have no record of that either.

Q.—Take Harrisburg, Pa.? A.—I have it here, but it is not given in figures.

Q.—Take New Haven, Conn.? A.—Forty cents for night work and 35 cents for day work.

Q.—Take Springfield, Mass.? A.—I have a Springfield, but it does not give the State. In that place they pay 33½.

Q.—You cannot find a place like London? A.—Well, here is South Bend, Indiana, which I guess is about the same size. It does not give the night scale, but it gives 30 cents for the day scale. In Wilmington they pay 30 to 35 cents.

Q.—You see it is not a fair comparison to take places like Chicago and New York and compare it with London? A.—Certainly not, but there are many places here about the same as London, and I think they are all a little higher paid.

Q.—Can you give comparisons with the rates of wages in the old country?

A.—No, they work on a different system there; they work by the “N” and they pay for distribution.

By Mr. McLEAN :—

Q.—Have you any idea of what a printer can make in the old country? A.—I have not.

Q.—How much are the ladies working at the printing business paid here?  
A.—Fifteen cents a thousand or \$3 a week.

By Mr. FREED :—

Q.—How long have they worked at the trade? A.—Some three years, some five, and others ever since I can remember. They all get the same price, excepting when they first start, and they never raise them. The proprietor says he likes to have girls because they never ask for a raise of wages, and he can get rid of them some day when he does not need them. They get married.

By Mr. HEAKES :—

Q.—Are they skilled compositors? A.—I suppose they are. They seem to do as well as any compositors I know of.

By Mr. ARMSTRONG :—

Q.—You have known young women to leave this office? A.—Yes.

Q.—When they do happen to leave or get married are they replaced by men?  
A.—No; by other young women.

Q.—And they work for a long time without anything? A.—No; not without anything, but they work for what they can make.

Q.—Do they get 15 cents a thousand at first? A.—No.

Q.—But that is the standard? A.—Yes.

Q.—Are these young women competent to work on piece-work equal to the men on morning papers? A.—I could not say, because I have not worked in that office with them.

Q.—You would imagine they are if they have worked over five years? A.—I should think so; I have seen young women as competent as men.

Q.—There is a difference of 13 cents a thousand? A.—Yes.

Q.—Would you like to make any suggestion that we have not touched upon?  
A.—Yes; I think the Government should take the matter in hand with regard to apprentices. We have more apprentices in the city than men by quite a number, comparatively speaking, and I think the Government should take in hand some way in which they could restrain the number of apprentices to the number of men; also in regard to indenturing, that they should be qualified before entering upon their trade. We have incompetent printers amongst us, and the reason is because they never had any education; of course, they always will be incompetent, because they never had the education to start with and they cannot learn anything now. When they have their trade you cannot put anything into them. They don't consider very much about their education when they take them on as apprentices. When a boy is put into the office, if he learns to be a good compositor or pressman he does it on his own responsibility; they don't offer to teach him anything particularly. They are put in, and they come out in four or five years, and what they have learned in that time they have learned by asking the men around them, or picking it up themselves.

By Mr. FREED :—

Q.—Do you think the Government should fix the qualifications of apprentices?  
A.—I think they should make them go to school for a certain number of years before allowing them to take up anything else.

Q.—Do you think the Government should restrict the number of apprentices?  
A.—Well, I don't know hardly how they could do that, but I think they should compel them to stay at school longer than they do at present.

Q.—Up to what age would you ask the Government to compel children to remain

at school? A.—I think fifteen is quite early enough for any one to go to a trade, and at that age they would be nineteen or twenty when they came out of the trade, and I don't think that would be any too old for them to start out.

Q.—Do you think that parents, in all cases, are able to maintain their children until they are fifteen without doing anything towards their own support? A.—Of course that is another matter. I don't know whether they could or not, but I suppose they could not in some cases.

By Mr. McLEAN :—

Q.—When apprentices are out of their time in your office are they, as a general thing, kept on? A.—No; they generally have to go to make room for new ones.

By Mr. GIBSON :—

Q.—In cases where parents are not able to keep their children at school until they are fifteen years of age, how would an industrial school, supported by Government, strike you? A.—Do you mean for teaching them their trade?

Q.—Well, the rudiments, any way? A.—It might be a very good thing, but I think when a boy goes to school it will take him all his time to learn the intellectual part of education without teaching him the industrial.

Q.—In case parents are not able to keep their children at school to a certain age? A.—It would be hard to draw the line as to where they are able and where they are not; it would have to be cut down pretty low.

By the CHAIRMAN :—

Q.—I know of a boy who was thirteen and a-half years of age—he is now a man of thirty-five—and he insisted on going into an office when he was thirteen and a-half years old, though his parents could keep him and wanted to keep him. He has been making his living more or less successfully since that time. What would you do in that case? A.—I know from my own experience that boys are anxious to go to work early.

Q.—What would you do in such a case? Would you have the Government interfere and say he should go to school until he was fifteen years old? A.—I think it would be advisable in that case.

By Mr. FREED :—

Q.—Do you know what the requirements of the Ontario law are as to children attending school? A.—I do not.

By Mr. McLEAN :—

Q.—At what age are boys generally taken on at your office? A.—I don't know; it is pretty hard to tell. Some call themselves fourteen, but judging by their looks they are ten, or eleven or twelve, and others are large for their age.

Q.—Do these boys work at night? A.—Yes; they take turns of three or four months at a time, and then they change them round to day work.

Q.—They work by the piece, do they? A.—After the first year some of them do. Some of them work by the piece on night work.

Q.—What do they pay boys a thousand by the piece? A.—They have a graded scale, and I am not sure what it is. At first they pay them  $12\frac{1}{2}$  cents, and then raise them to 15 cents, and their last year I think they pay them  $17\frac{1}{2}$  cents—that is in the fourth year.

Q.—In his fourth year he is as good as any? A.—As good as he ever will be, if he ever will be any good.

Q.—Has the factory inspector been to your office? A.—Not that we have seen; he might have been when every one was away, but not to our knowledge. I heard Dr. Campbell discussing industrial schools, but from my standpoint I would think differently. I think when a boy goes to school it will take him all his time to learn the intellectual part, without putting him to any mechanical part of the business.

By Mr. HEAKES :—

Q.—You are speaking in regard to your own trade? A.—Yes.

Q.—But as to other trades? A.—If they were to give him any information in the way you speak of in regard to it, the chances are we would have a lot who would never have an idea of what they had to do; they would go out to work without having acquired any one trade; they would be jacks-of-all-trades and masters of none.

Q.—You think that the theoretical knowledge of trades would hinder boys from getting a trade? A.—Yes; there are lots of boys who, if they got the theory in regard to a trade and a little information, would not bother themselves about the practical part.

Q.—Do you think that they would turn out a fair blacksmith or carpenter to go out and compete with others in these trades? A.—He might not compete, but he would do in a pinch.

Q.—If he got a job and spoiled it, would he not be sent to the right-about quickly? A.—Well, in the case of a blacksmith he would go and work under a helper for a while.

Q.—In that case he would not be a blacksmith to start with? A.—No; perhaps not.

By Mr. ARMSTRONG :—

Q.—He would be a blacksmith in a printing office? A.—Yes.

By Mr. HEAKES :—

Q.—Supposing he were taught the properties and qualities, say of pine boards, at such an institution, would he be able to do the practical work of the carpenter? A.—Perhaps he would not, but if he learned the case in a printing office he would learn the practical part, and would soon be able to pass as a printer.

Q.—Supposing you taught him the nature of type metal, its properties and so on, wouldn't it help him? A.—It might help him in some trade, but it would not in the printing business, because it does not make much difference to the printer what metal his type is made of.

The Commission then adjourned until 8 o'clock p. m.

Upon resuming, JAMES McKENNA, Moulder, London, was called and sworn.

By Mr. HEAKES :—

Q.—How long have you worked at the business? A.—Twelve years.

Q.—What branch of the moulding do you work at? A.—Stove-plate moulding and agricultural work, though I have not worked very much at the agricultural; stove-plating is what I follow.

Q.—In the moulding business do you have any apprentices? A.—Yes; where the shops are not strictly union there is an over-run of apprentices.

Q.—Is proper care taken to teach the apprentices their trade? A.—No, sir.

Q.—Is there anything, to your knowledge, to compel an employer to teach an apprentice the trade? A.—Not to my knowledge. In a union shop the men are supposed to instruct the apprentices if they run the right number. Outside of that they are not.

Q.—The union takes them on themselves. A.—Yes.

Q.—Would it be better for all concerned if there was a proper apprentice system? A.—Yes; undoubtedly.

Q.—What age should you think a boy should be before going to the business? A.—Moulding being a heavy work, my opinion is that a boy should be sixteen years of age.

Q.—How long would he serve? A.—Four years.

Q.—As a matter of fact, what would be the average age of boys going to the business here? A.—From sixteen to seventeen, up to as high as thirty, and some over thirty.

Q.—No very young boys? A.—No.

Q.—Have you had any disturbance in connection with the moulding trade in London lately—strikes, or anything of that kind? A.—Yes, we had a strike six years ago this coming March.

Q.—How was it settled? A.—We left the shop and it was run by men from the other side—Detroit and elsewhere—they filled the shop with boys and those men.

Q.—When a labor difficulty occurs between the employers and men how would you prefer to have it settled? A.—Well, if the employers and men could not come to a settlement I would prefer arbitration.

Q.—Would you favor a law placed on the Statute-book of Canada compelling a settlement in these disputes by arbitration? A.—Yes, sir.

Q.—What wages do moulders earn in London? A.—Well, the way they are divided in London—they only serve a time of three years to it and the shop is over-run by apprentices, and they don't get a chance to learn. If a boy is smart he will get a better chance than a man or boy who is a little backward. Sometimes men of thirty years of age are not smart, but any person really smart gets a good show.

Q.—What wages will a moulder earn in a year? A.—Some of them will earn as high as \$2.75 and \$3 a day on some jobs.

Q.—What would be the average? A.—The average in Mr. McCleary's shop, where I am working, would not be over \$10 a week.

Q.—What hours do you work? A.—We worked last summer about eleven hours a day.

Q.—Could that time be shortened without injuring the business of the employer?

A.—Yes; we used to work all the noon hour, just taking time to eat a lunch. We went around the shop and asked the men who did not belong to the organization if they did not think they were injuring themselves and others also, and we got them to stop, except one man.

Q.—It was piece-work, I suppose? A.—Yes; it is nearly all piece-work in stove work.

Q.—You have not tried to shorten the hours here? A.—Only the once when we shortened the noon hour. We start about 6 to get ready to mould, but those running big jobs don't get through until an hour after the usual time.

Q.—It depends a good deal upon the time you are ready to run off? A.—We have a certain time to commence—3:30 or 4 o'clock.

Q.—Should you have a union here? A.—Yes.

Q.—What is the general effect of organization amongst workmen? Is it a benefit? A.—Yes; I claim that it is a large benefit.

Q.—In what way? A.—In regard to keeping up prices and to the right number of apprentices in the shop, and not having the trade over-run by men; because where a shop is over-run with apprentices you cannot turn out competent workmen.

By Mr. McLEAN:—

Q.—Do you derive any benefits from connection with the union? A.—Yes.

Q.—What is it? A.—One hundred dollars of death benefit.

Q.—No sick benefit? A.—No; not in this union; in the other union we have.

By Mr. HEAKES:—

Q.—Is there any such thing as fining employés in your business here? A.—Not to my knowledge.

Q.—Do immigrants interfere with your business to any extent? A.—Not to a large extent. We have had some, but it is a little heavy work for them.

Q.—Do many moulders come here from other countries? A.—Yes, we have quite a number coming from the United States and England, but those coming from England are mostly machinery moulders, and those from the United States stove-plate

and hollow-ware moulders. We have two now from New York State who have been in Elmira prison.

Q.—Did they learn their trade in the prison? A.—Yes.

Q.—Does prison labor come in competition with you at all? A.—It used to, but not the last few years.

Q.—There are no prison-made goods in your line in this part of the country now? A.—Not to my knowledge in the last two or three years.

Q.—What is the general condition of the moulding shops here? Are they comfortable, dry, &c.? A.—Well, they could be better drained. In real damp weather the floors are very wet, and a man working among the steam, and so on, is liable to get rheumatism, and especially sciatic rheumatism.

Q.—After a man has done his day's work it is necessary to change his clothing? A.—Yes.

Q.—Do they provide any place for that? A.—Not in Canada.

Q.—Would it be an advantage to provide a room for changing and washing in? A.—Yes; I worked in one shop in Massachusetts where they had a bath room upstairs and a place to change your clothes. The men could go and get in good comfortable clothes.

Q.—I suppose when there are no rooms for such a purpose they are exposed to the drafts of the whole shop? A.—Yes; a great many change their shirts, and it and the inside drawers are wet, and often the stockings, and going out in the cold weather they catch cold.

Q.—Are there many accidents in connection with your trade? A.—No; not at moulding, unless it is men getting burnt.

Q.—That is in case of the metal getting spilled? A.—Yes.

Q.—Not skilled labor? A.—No.

Q.—Are there any workingmen's co-operative societies in London? A.—None.

Q.—Have you ever known the system of distribution of profits to exist in the moulding trade anywhere? A.—Not to my knowledge.

Q.—Have you ever know the moulders start a co-operative foundry? A.—Yes; there is one in Canada started that way—Burrows, Stewart & Milne, Hamilton.

Q.—Was it a success? A.—Yes.

Q.—Is it still carried on? A.—Yes; it is a large firm now.

Q.—There is nothing of the kind in London? A.—No.

Q.—You have worked in the United States? A.—Yes.

Q.—How do wages in the United States compare with those in Canada in your line? A.—Well, they are quite a bit higher than the wages in Canada. Still, there are some places where they are generally the same as in Canada, but not as a whole.

Q.—Taking into consideration the difference in wages, has money the same purchasing power here that it has there, do you think? A.—I would not like to say.

By the CHAIRMAN :—

Q.—You have lived in the States? A.—Yes.

Q.—Where? A.—In Detroit and several other cities in the United States, but Detroit is the only city I had my family in. Rent is the only thing that I saw higher in the United States than it is in Canada. There living is as cheap if not cheaper.

By Mr. McLEAN :—

Q.—In what condition are the water-closets in the factory you work in? A.—They are out-door closets.

Q.—Are they clean? A.—They are cleaned twice or three times a year. They are cleaned out early in the fall and again as soon as soft weather comes.

By Mr. HEAKES :—

Q.—Are the men paid in cash? A.—Yes.

Q.—Are they paid every week? A.—Yes; on Saturday night.

Q.—Is that the proper night to pay them? A.—Yes; I have been paid on Friday, but I would as soon be paid on Saturday.

Q.—Is that the opinion of the others? A.—I could not say; some prefer Friday, so as to get to market.

Q.—About what rent on an average would a workingman pay for a house here? A.—About \$6 or \$6.50 a month.

Q.—A good house? A.—Yes; very comfortable for workingmen, for \$6.50 to \$7 a month.

Q.—How many rooms? A.—It is according to where it is located in the city. The house I am in has two bedrooms, a front room, a dining room, a pantry, summer kitchen and woodshed.

By Mr. KERWIN :—

Q.—Have you ever known any of your trade black-listed for engaging in strikes? A.—Yes; I was black-listed. McCleary sent a black-list to Toronto and asked Gurney to discharge all the men who had been in his employment.

Q.—Did they keep you from employment for any length of time? A.—Gurney did not take any action upon it.

Q.—Is that a regular thing, or is it exceptional? A.—That is the only case I have seen in this city.

Q.—Do you ever have to sign any contracts, contracting to work for any length of time for a certain figure, or do you merely go to work by the week? A.—We merely go to work by the week.

By Mr. McLEAN :—

Q.—You don't know of such a thing as an iron-clad contract? A.—No.

By Mr. FREED :—

Q.—For how large a part of the year are you employed? A.—Since the apprentices have commenced to run down from the old trouble I have been employed I might say twelve months in the year, except two weeks at Christmas—that is this year.

Q.—It is usually longer than that that you are idle? A.—Yes; I have been out five to six months in the year.

Q.—How long ago was that? A.—Three years ago this winter. The shop was run altogether by apprentices, two journeymen and the apprentices.

Q.—As a usual thing, you are laid off a little time at the holidays? A.—Yes; to take stock.

Q.—You were only laid off two weeks this year? A.—Yes; all the married men were kept on this year.

By Mr. McLEAN :—

Q.—In taking castings out of the mould it is pretty hard work? You run a stream of gas upon it? A.—Yes.

Q.—Have you ever known of any moulders having the blind staggers for an hour or so? A.—Yes; I have taken it myself, and have seen others.

Q.—Do you know of anything which would stop that? A.—A high roof to the foundry is about the only thing, so as to give the steam and gas a chance to rise.

Q.—Is there such a thing as suction conveniences in these moulding shops? A.—No; not in any that I have worked in.

By Mr. KERWIN :—

Q.—Have you any other suggestion? A.—Is there any law in Canada to stop manufacturers from bringing convicts to labor here, such as those men from Elmira prison?

Q.—What is your reason for thinking those men are from Elmira prison? A.—I have their word for it. One of them told me he was sentenced for life. One of them told me he was sentenced for six years for shooting a man, and I asked how long he had served, and he said two years. I asked how he got his liberty, and he said that he had a ticket handed to him; the first week or month they did a quarter

day's work, and it rose gradually up to a full day's work, and as soon as they got the requisite number of points required and as soon as they got a person to go guardian for them they were liberated. Last year they brought six or eight over from this Elmira prison to this McCleary's shop to work there. Four of them were in the habit of getting drunk, so they had to discharge them, but these two men have conducted themselves like gentlemen since they have been here. Both have got married since they came here.

By Mr. HEAKES :—

Q.—Do they go over and bring these men? A.—I could not say that they came from there direct to McCleary's shop.

By Mr. ARMSTRONG :—

Q.—Did they come during the time of the late troubles? A.—No; it was not at that time.

Q.—It is a mixed shop? A.—Yes.

Q.—Could you substantiate these statements by other gentlemen? A.—Yes; by twenty; these men don't deny it themselves. They admit it themselves, and I understand they have a brand on them, and they are traced up by this brand.

LONDON, January 11th, 1888.

J. B. BOYLE, Inspector of Public Schools, called and sworn.

By Mr. FREED :—

Q.—How long have you held the position of inspector of public schools here. A.—Since 1871.

Q.—How large a percentage of children of school age are attending the public schools in London? A.—That is a matter that I could not state decidedly. I have no authority over Roman Catholic schools. They do not report to me, but they report immediately to the Government. I can tell you about the number we have of all other denominations except the Roman Catholic. We have in our schools at the present time a little over four thousand pupils.

Q.—That is the whole population of school age, excluding supporters of separate schools? A.—This is the number who attend the schools, with the exception of the Roman Catholics.

Q.—Those who attend the separate schools? A.—The Roman Catholics do not all attend the separate schools, but a number attend the public schools.

Q.—Are they entered as public school supporters? A.—They very often are marked in the voter's lists as Roman Catholics, and they have to pay the taxes, unless the parents have made an appeal to be put on the common school list.

Q.—At what age do you find parents disposed to send children to school? A.—Some of them at a later and some of them at an earlier period; it depends on the circumstances of the parents. If they are able to keep them they will allow them to remain at school till they are sixteen or seventeen, and after they pass into the high school from seventeen to nineteen.

Q.—Those who need the services of their children at what age do they take them away from school? A.—The children sometimes leave at twelve and from that up to fourteen; very few below twelve.

Q.—Do they go to work then? A.—Yes; at something. They do some work as a contribution towards the income. Sometimes they become errand boys in shops, or they sell papers, or they do what they can.

Q.—Do you think any children below fourteen years go to work in factories? A.—I do not think many of them are in factories; there may be a very small percentage of the whole.

Q.—Have you any kindergarten system of education in London? A.—Not yet.

Q.—Do you think the present system of education is that which is best suited to

the boys who wish to become mechanics? A.—I think it is very well suited for the education of those who intend to pursue mechanical pursuits in every way, in so far as intellectual training is considered, as giving proper education, that is intellectual development. In some places they have a technical training as well; but we have nothing of that kind here.

Q.—Do you think technical training could be added to purely intellectual training? A.—It would require considerable expenditure of our accommodation. We have all our classes pretty well filled at the present time; therefore to add accommodation for technical training would require more class rooms, but it would not cost a great deal to do that, and it would amply repay any community for doing it.

By Mr. HEAKES :—

Q.—Are you of the opinion that technical education might be engrafted on the public school system? A.—I think it might be very well.

Q.—Without any detriment to the schools? A.—If you look upon education solely as an educational matter, then you cannot take away attention from that and at same time have progress made. That is clear enough.

Q.—Is there not a great deal in the present curriculum that is positively useless to mechanics? A.—That depends on the view you take of it. I consider no education worth anything that will not train the intellect, and I do not think there is any branch in the teaching in the public schools in which you do not obtain that to a greater or less extent. There is very little training of the intellect in learning history, grammar, and things of that kind; it is a matter of memory, merely, or, at least, to a very great extent.

Q.—Would not a boy be much more likely to take an interest in a trade if his eye and hand were trained at the same time that his mind was trained? A.—No doubt, if a boy has made up his mind to follow some certain mechanical pursuit the sooner he becomes acquainted with tools the better for him, and the more likely he will be to take an interest in everything that bears on his pursuit.

Q.—Do you think it would be better to continue the system of education as it is and add night schools for technical training? A.—We have tried night schools here. In some places, no doubt, they have succeeded very well. We got our central school equipped with gas and the necessary apparatus, but we could not make the experiment work, even when the classes were made free.

Q.—Was that technical education? A.—No; there was no technical education ever tried.

Q.—What I mean is this: Do you think the present system of education should be continued and technical education taught in the evenings? A.—I have never thought of that; I do not know how it would work.

Q.—Have you ever noticed any tendency under the present system that would unfit boys for mechanical trades, or lead them away from such trades? A.—I do not know how to answer that question. I have heard and read a good deal about our youth of Canada being over-educated, and that they will not take to trades, but seek the professions, if that is what you mean.

Q.—It has been said that the present system tends to professionalism. A.—I think it is filling up the professions to the loss of those entering them.

Q.—The present system leads in that direction? A.—Certainly it does.

By Mr. GIBSON :—

Q.—Have you a library here? A.—We had a very fine library in connection with the public school, but we gave away part of it to a sister institution, the colligate institute, because we did not feel ourselves in a position at the time to buy more books; we gave away perhaps 300 or 400 volumes.

Q.—You have no library now? A.—Yes; we have a pretty good library yet, but we want a renewal of books for juniors to read.

Q.—Is the library free to the public? A.—Yes; they have a right to go there

and get books, but very few have troubled us. I have given out a few books to people, but they have not come to us for years back; they have not troubled us.

Q.—Do you know any reason for the falling off? A.—None, except one, and that is because the books of a higher order were given away to the collegiate institute.

By Mr. McLEAN:—

Q.—Do you think the people would object to paying female teachers as high salaries as are paid to male teachers, provided they are of equal capacity? A.—The very fact that such is not done is an answer you cannot misunderstand, because the school board, which has the whole matter of salaries in its hands, ought to be a representation of public sentiment. The members are elected, to a large extent, by the people. Still, there are a large number of members of the board, who consider that female teachers are underpaid, and very materially underpaid, and I agree with them.

By Mr. HEAKES:—

Q.—Do you place female teachers in the positions of principals of the schools here? A.—We have two female principals only; one of them has five rooms and four assistant teachers, and another four rooms and three assistant teachers.

Q.—Is there any embargo on the female teachers in that respect? A.—They have staid at the head for the last ten years. They pass more scholars almost every examination than male teachers who are receiving nearly twice their salaries. I have no doubt you will meet people who will tell you that in the matter of school government, and in the maintenance of order a female teacher will be inferior. Such is not my experience. Of course, I only speak for myself.

Q.—Do you grade the salaries of the teachers? A.—Yes; they are graded.

Q.—Are there regular increases of salary? A.—They are increased in proportion to their certificates, their standing and their success. By standing, I mean the length of time they have taught.

Q.—There is not any yearly increase? A.—There is now before the board a scheme for such increase, but I do not think it will pass.

Q.—Do you know if that system has been adopted in any other city? A.—Yes; in Toronto.

Q.—Length of service counts for something? A.—Length of service counts in increase of salary.

By Mr. McLEAN:—

Q.—What are the sanitary conditions of the school? A.—I consider they are in about as healthy a state, so far as their sanitary arrangements go, as any other schools I know of in Ontario.

Q.—Are they much crowded for room? A.—Some of the junior classes are crowded a little in two schools. Another school containing twelve rooms will be finished in midsummer, and then there will be abundance of room for every class.

By Mr. ARMSTRONG:—

Q.—Do lady teachers holding the same grade of certificates as a male teacher, and teaching the same grade, receive the same salary as a male teacher? A.—I can show you how that is. In the central school we have the old pupils graded, in regard to sex. We have plenty of room there, and we have in every case two classes of exactly the same grade. The head teacher of the male department receives \$900, and the female teacher, teaching exactly the same grade of girls, receives \$500 there being \$400 difference in the salaries.

Q.—The same teacher holding the same grade certificate? A.—They hold the same certificate, both first-class.

By Mr. GIBSON:—

Q.—Do they charge fees in your school? A.—No; we furnish everything, except the books, which the parents of the pupils have to buy. We furnish pens, ink and paper, and colored crayons, free.

Q.—I believe many schools in Canada charge for stationery, which is counted a hardship. A.—I know they do.

By Mr. ARMSTRONG :—

Q.—Are you aware there is a strong competition in the publication of school books? A.—There is danger in my giving an opinion in regard to school books. There is only one thing, I need say, with free competition the books could be obtained by the parents of the children a great deal cheaper than they are now.

Q.—We will have to wait, I believe, ten years before there is a chance of that? A.—It will be a good while yet before they have it.

JOHN WOLFE, of the London Furniture Company, London, called and sworn.

By Mr. FREED :—

Q.—Does your firm employ a considerable number of hands? A.—Yes.

Q.—What hours per day do they work? A.—Ten hours generally, fifty-nine and a half hours a week, there being half an hour off on Saturday.

Q.—Are they employed pretty constantly throughout the year? A.—Yes.

Q.—Taking the average of your hands, what length of time do they work during the year? A.—They can work about fifty-one weeks, six days a week. We have done that right along. Sometimes we have to shut down for a few days for repairs, but that is the only stop we have.

Q.—About what rates of wages do you pay to skilled workmen? A.—From \$1.50 to \$2 a day.

Q.—Do you employ many unskilled workmen? A.—No.

Q.—Do you employ any? A.—We have to employ some laborers.

Q.—What do you pay them? A.—One dollar and twenty-five cents a day.

By the CHAIRMAN :—

Q.—Do you employ them constantly? A.—Yes; constantly. Sometimes we have to pay an odd man a little more if we employ him for a week or so.

By Mr. FREED :—

Q.—Do you employ many boys? A.—No.

Q.—Have you any at all. A.—Yes; I think we have about five boys.

Q.—Are they apprentices? A.—Yes.

Q.—Are they indentured? A.—Yes.

Q.—Do you like the indenture system? A.—We adopted that and we have followed it up. I do not know of anything better.

Q.—Do the boys remain with you for the period for which they are indentured? A.—Yes; we have never had one leave us.

Q.—Do you think that under the indenture system boys are trained better as mechanics than they would be if they were not indentured? A.—Yes; very much so; that is my opinion.

Q.—Do you believe it is to the advantage of the boys to be indentured? A.—Yes.

Q.—Is it your opinion that in that way more pains are taken in instructing them in the trade? A.—I think so.

Q.—Do you think they become more settled than they would if they were not indentured? A.—Yes; I think so.

Q.—It is within your knowledge that any of your men save money out of their wagen? A.—Most of our men buy themselves homes. I do not know whether they save money or not; but, at all events, I know that many of our men have houses.

Q.—Are they paid for, or are they being paid for? A.—Some are being paid for; some were paid for some time ago.

Q.—Do you know whether your men are satisfied with the experiment of buying their own houses? A.—I think they are. They have expressed themselves that way when I have heard them say anything about it.

Q.—How are your machines protected—well or otherwise? A.—We consider them well protected.

Q.—When the factory inspector was around was he satisfied with the way in which they were protected? A.—Yes; he was very well satisfied; at all events, he seemed to be.

Q.—What is the sanitary condition of your establishment? A.—We are connected with the sewers.

Q.—Was any fault found respecting ventilation, and so on? A.—None whatever.

Q.—Is there any arrangement for protecting men from dust from the sand-papery machine? A.—Yes; we have two very large blowers.

Q.—Have you had any accident from machinery in your shop? A.—Sometimes we have had a man have his finger cut in the machinery, but never any accident of any consequence.

Q.—Have you ever had any difference with your men? A.—None whatever.

Q.—I presume there have been changes in the rates of wages paid during your time? A.—Yes. The former occupant of the place failed just eleven years ago, and when we commenced business it was at lower wages than we pay now. Wages have risen considerably since that time.

Q.—When wages were raised was it done on an application made by the men, or was it voluntary? A.—We generally do it when we find a man is worth more than he is getting, but often when we are asked by the men themselves to increase the wages we consent to do so, if we think they were not receiving what they were worth.

Q.—Then it was an understanding with individual workmen rather than with the men as a class? A.—Yes; we could not raise the men as a class right through without doing some injustice.

Q.—Are they satisfied with the system? A.—They appear to be satisfied. I think we do not change a man once in five years; we have had men right along. We employ 120 or 125 hands. As many as eighty have been with us ten years. We very seldom change a man. Of course, we change laborers or those not constantly employed, but I mean regular men.

By Mr. ARMSTRONG :—

Q.—When the inspector came around and visited your shop, from whom did he make his inquiries? A.—He went right through the shop and examined for himself. He had seen me and got permission to go through.

Q.—I suppose it was open to him to make inquiries from the men? A.—He had an opportunity of going through the shop and doing as he liked. I was not with him. I saw him after he had gone through the shop.

Q.—You have a good deal of machinery in your establishment, I believe? A.—Yes.

Q.—Can you teach a boy in five years the whole of the cabinet business, or only one branch? A.—We only pretend to teach any one man one branch.

Q.—How many branches are there? A.—Four; we run four branches.

Q.—So he would have to remain twenty years to become a thorough cabinetmaker? A.—No; he could not learn it in that time. No man needs it; if he had the knowledge he could not compete with other men who learn branches only. An upholsterer would not be a finisher; a finisher would not be a turner, under any circumstances. These are two distinct branches. A turner is by himself, and a finisher is by himself, and a cabinetmaker by himself.

Q.—Are there not men who know the whole branches of the business? A.—They would not be so good at any one branch.

Q.—Such knowledge is not required now, I suppose on account, of the machinery used? A.—No; it is not requisite on that account. A man who has a general knowledge of every branch will not be able to do so well as another man whose knowledge is confined to a certain branch. A man, of course, might get a general knowledge of every branch, so as to conduct a business.

Q.—Then an apprentice becomes a journeyman at one branch of the trade, and

he has got to remain at that branch, and if he leaves your shop he has to hunt up another position in that same branch. Is that so? A.—Yes.

Q.—He cannot, I suppose, take up any other branch and earn journeymen's wages?  
A.—No; he could not earn journeymen's wages with men who had learned that one branch.

Q.—What is the highest rate of wages paid to your journeymen? A.—About \$2 a day.

Q.—You say you have about 125 men employed all the year round? A.—Yes.

Q.—Of these men, how many do you pay \$2 a day? A.—Perhaps twenty; and then there are some who work by the piece who earn that amount and more.

By Mr. HEAKES:—

Q.—In regard to men who work by the piece: do they take a contract for a certain class of furniture? A.—They work at so much a piece.

Q.—Do they hire their own help? A.—In some cases they do.

Q.—In what branch is that principally done? A.—In furniture, not in turning, upholstering or finishing.

Q.—In the manufacture of furniture, men take their contracts and hire their own help? A.—They take what we call piece-work. They do not contract in any way; they can drop it at any time they wish.

Q.—They hire their own help to do that work? A.—They generally hire one with themselves; some of our men do so. There are four or five who hire that way; they get a man to help them and do the work themselves.

Q.—Do these men who take piece-work hire boys? A.—Yes; the boy they generally take with them.

Q.—They are not considered apprentices to your shop? A.—No.

Q.—How many boys have you in your factory who are thus employed by men?  
A.—Perhaps four or five.

Q.—Are these boys taught the trade? A.—Yes.

Q.—Are they taught it thoroughly? A.—They are taught the part of it in which they work.

Q.—For instance, is a boy taught chairmaking and general cabinetwork? A.—No.

Q.—Do you consider chairmaking a distinct branch? A.—We consider chair-makers are not in the cabinet line; less skilled men can work at that.

Q.—You divide the work up in that manner? A.—Yes. There are chairmakers as well as others; but a chairmaker will not make furniture of any other description. They prefer that arrangement themselves. If a man asks for work he asks for it as a chairmaker, as a turner, or as an upholsterer or a finisher.

Q.—What wages do these boys receive that the men employ? A.—From \$2 to \$4 a week. The first year they receive about \$2 a week.

By Mr. GIBSON:—

Q.—Has the use of machinery lowered wages? A.—I do not think so. Wages have advanced since I can remember, and machinery since I was a boy has very much increased.

Q.—Has the production of goods been cheapened by the use of machinery?  
A.—Yes; production has been cheapened by it.

Q.—Has the workingman received a share of benefit from the machinery?  
A.—I think he has received very much benefit from it. Machinery does all the hard work that the men formerly had to do; that is now done by machinery.

Q.—Has the introduction of machinery been a benefit to workingmen? A.—Yes; I think they have been very greatly benefited by it.

Q.—Is there any profit-sharing in your business? A.—No; none.

By the CHAIRMAN:—

Q.—Are you aware that there is any in London? A.—I do not know of any here.

By Mr. GIBSON :—

Q.—Do you pay your wages in cash? A.—Yes; we never paid in anything but cash.

Q.—Do you pay your wages weekly or fortnightly? A.—We pay every fortnight. We pay every Friday, fortnightly.

By the CHAIRMAN :—

Q.—Are you aware of any truck system in this city? A.—I do not know that there is any—not much. There was in some of the small shops, but I do not think it is a general thing.

By Mr. GIBSON :—

Q.—What is the purchasing power of one dollar now as compared with its purchasing power one year ago? A.—Do you mean in the way of furniture?

Q.—In the way of cost of living? A.—I never buy any provisions, and so I cannot tell you.

By Mr. HEAKES :—

Q.—You have stated that your men work fifty-one weeks; would they be full weeks? A.—Yes, six days in the week.

Q.—Would they work ten hours a day in winter? A.—Yes.

Q.—Then you light up your shop with gas? A.—Yes; morning and evening with gas.

Q.—So all the time they would lose is stock-taking and the holidays? A.—Yes; there are the holidays; I do not count them in. This year we have stopped since New Year's, because we had to repair the engine, but we do not generally do that. Sometimes at the time of the fairs and such events we shut down for one day, and sometimes two days, but we do so as much to accommodate the men as to suit ourselves.

By Mr. ARMSTRONG :—

Q.—Where do you get your wood from—is it domestic wood? A.—We use a good deal of walnut, which we get from the other side. We cannot get here the quality we use.

By Mr. HEAKES :—

Q.—Is there any walnut here? A.—Not very much.

By Mr. CARSON :—

Q.—In what way? A.—In boards and planks.

Q.—Have you ever gone into importing it into the shape of what is known as moulded out? A.—We have got certain stuff in that way.

Q.—Do you find you can get it cheaper? A.—I think we can buy it a little cheaper that way.

Q.—Where do you chiefly find a market for your goods? A.—We send our goods east to Halifax, and also to Montreal and Ottawa, Toronto, Kingston and large centres east. Those are our principal markets. We do not send much west. We send a little sometimes to Winnipeg, but not much.

Q.—How do you find the prices of furniture now as compared with ten or twelve years ago, generally speaking? A.—I should say the price has been reduced 20 per cent. in the last ten years. Competition and machinery have done that.

Q.—Competition within our own market? A.—Yes.

Q.—Do you know of very much furniture being imported from the other side? A.—I think there is very little imported, except it is imported for patterns or something of that kind. We are sometimes guilty of that ourselves.

Q.—Speaking of apprentices, are you of the opinion, with the conditions or opportunities they have of learning the trade with you, that they are able to earn their living as cabinetmakers after remaining three years in your shop? A.—Yes.

Q.—Do you consider that if he was a smart boy he would turn out a good

mechanic in three years? A.—Yes; in three or four years. We have had men learn their trade with us who have gone to other places where they have been thought well of, and where they have been able to take their stand in the business.

Q.—Do you make it a point to give your apprentices every opportunity to learn the trade? A.—Yes; we do.

Q.—I understood you to say something about classifying men—that if he was a good man you would pay him as such. Please explain what you said? A.—Yes; our men are not all of the same ability. Some men are worth very much more than others.

By the CHAIRMAN:—

Q.—You do not believe all men are born equal in capacity? A.—No; not intellectually equal.

By Mr. CARSON:—

Q.—You believe in paying a man for what he does, and for all he does? A.—Yes; some men are worth very much more than others.

Q.—Do you find the prices of lumber have increased or decreased in the last ten or twelve years? A.—They have increased within the last three years a very great deal. We are paying more than we did formerly.

By the CHAIRMAN:—

Q.—Is there any planting of walnut being done here in this neighborhood? A.—I do not know of any attempt being made at walnut planting in this section.

Q.—Is not this a walnut country? A.—Yes; some of the finest walnut grew in this section, and there is a little yet, but it is very little. I have seen within thirty miles of London walnut trees with logs 6 feet across. I could not look over the log on the ground; and the timber is straight as can be. We have got planks that were cut in this section, within thirty or forty miles from here, 35 inches wide; it is very nice wood.

By Mr. FREED:—

Q.—Have you made any investigation as to the age of those trees? A.—No; I have not.

Q.—Do you know how long it would take to grow marketable walnut? A.—No; I do not. I have no idea of the growth of walnut. I would say that it would take fifty years to get a tree that would make marketable timber.

By Mr. GIBSON:—

Q.—Can you tell anything as to the difference between the manufacturer's price of furniture and the cost to the consumer? A.—Do you mean as to the cost of production and consumer's price?

Q.—I mean the difference between the manufacturing cost and the cost to the actual consumer? A.—I would put it from 20 to 25 per cent., to the best of my knowledge. I think furniture is sold low, considering the bulkiness of the article and the liability to damage. I think it is sold very low, as between the cost of production and the retail price.

By Mr. ARMSTRONG:—

Q.—Have you any boys employed at the machinery? A.—No; we never put a boy at machinery.

By Mr. HEAKES:—

Q.—Taking furniture, and the average furniture made before the introduction of machinery, do you think the furniture to-day is as good and as strongly built as that formerly made? A.—Yes; I think so; it is where there is equal pains taken with the work, and it is even better under such circumstances, but the difficulty in making up material now, as compared with formerly, is that the temptation is too great to use

unseasoned lumber, and the furniture will, therefore, shrink and warp perhaps more quickly than it formerly did. Some years ago it took almost three months to make furniture, and in that time the wood had time to dry, and there was no warping.

By Mr. CARSON :—

Q.—What comparison would there exist between a bedroom suite made to-day in your factory, and such a suite made twenty-five or thirty years ago in London? A.—Take a suite worth \$100 to-day, a bedroom suite of three pieces; such a suite could not have been made twenty-five or thirty years ago, certainly thirty years ago, for \$200.

Q.—Would that suite made thirty years ago be a better article than that you are making to-day? A.—No; it would not.

Q.—Consequently, it would be impossible to manufacture without the use of machinery? A.—Yes; you could not possibly supply the demand without machinery?

Q.—Where is your machinery principally made? A.—About half of our machinery is made in the United States and the other half in Canada, at Galt.

Q.—Do you find the machinery made in Canada is as good as that made in the United States? A.—I think for the last two or three years it is fully as good, but formerly it was not so good. As our manufacturers have obtained more experience they make better machinery. The first machinery we obtained in Canada was not liked, but that we have obtained since is very much better. There is no reason why we should not make as good machinery here as they do in the United States, after our manufacturers have obtained the necessary experience.

Q.—How do the prices of furniture, such as you manufacture, compare with the prices on the other side? A.—They work more in specialities on the other side. They will run a shop with fifty men, more or less, on one special article. I know of a shop in Jackson, Mich., which makes only one kind of chairs—they do not make all kinds of chairs, only one. In that factory, of course, they can run the price down very close. An ordinary shop that makes one hundred articles cannot compete with them in chairs, because their machinery is not very well adapted to making them. For that reason the Americans can more than compete with us.

Q.—Are the designs in workmanship as good on this side as on the other? A.—I think so. We follow their patterns a good deal, and so never have any hesitation in adopting any new styles. I think they do the same thing throughout Europe. The Americans cater to so much larger a trade than we do that they adopt new styles before we can.

JOHN McCLARY, Iron Founder and Tinware Manufacturer, London, called and sworn.

By Mr. HEAKES :—

Q.—Do you do general foundry work? A.—I am engaged in stove manufacturing largely.

Q.—And hollowware? A.—Yes, and furnacework.

Q.—How many hands do you employ? A.—About three hundred hands; not in the furnace business altogether, but in the foundry and tin business we keep about that number.

Q.—In the foundry business what are the rates of wages prevailing for moulders? A.—Our work is mostly done by the piece; we employ very few day hands. Day men, I suppose, average from \$1.75 to \$3 a day.

Q.—What would be the average, without counting the men on piece-work? A.—Good men, I think, average about \$15.

Q.—Are they employed steadily all the year round? A.—Yes; they are pretty much so. We close down about ten days at this season of the year for stock-taking.

Q.—Do you employ apprentices in your moulding shops? A.—Yes.

Q.—How many apprentices would you consider it necessary to run a shop in proportion to the number of moulders? A.—As to their being necessary I could not say, for it might be possible to run a shop without any apprentices at all.

Q.—Are your apprentices indentured? A.—Yes.

Q.—How long do they generally serve? A.—Three years.

Q.—Do you prefer the apprentice indenture system to any other? A.—We only indenture our apprentices in the moulding department; I think in the other departments they are not indentured at all.

Q.—What system do you think works best all round in regard to employing apprentices? A.—I think it is the proper thing to indenture them.

Q.—Do you employ any female labor in your tin department? A.—We do.

Q.—Do they work in the same room with the men? A.—No; only with the foremen; we have a separate shop, and in addition to the females one or two small boys are employed there for running about doing certain work that is more suitable for them to do than for women.

Q.—At what class of work is female labor employed? A.—At soldering, chiefly.

Q.—At japanning? A.—At japanning also.

Q.—What wages will be generally earned by them at soldering? A.—I can hardly tell you the average wages; I think from \$3 to \$5 a week.

Q.—Are they as good at the business as men? A.—Some of them might be so if they had been as long at it.

Q.—Do they do as clean work? A.—I presume they might.

Q.—What wages does a good tinsmith earn here at your class of work? A.—They work largely by the piece; about \$1.50 a day; I think a tinsmith averages about \$1.50 a day.

Q.—That is \$9 a week? A.—Yes.

Q.—Do you provide separate conveniences for the male and female help? A.—Yes.

Q.—Is there any communication between those places? A.—No.

Q.—Have you not at the present time convicts in your employ from Elmira prison? A.—That is a question I could not answer from my personal knowledge.

By the CHAIRMAN:—

Q.—Have you engaged men, knowing them to be such? A.—No; I think not. There are one or two men I have reason to believe are such.

By Mr. HEAKES:—

Q.—Is it true that within the last two years some member of your firm has brought several convicts from Elmira prison here, and put them to work at your shop? A.—I cannot answer that question. If it is so, it is out of my department.

Q.—You have never known it to be done yourself? A.—I have never done it.

Q.—Which department do you superintend? A.—I am generally supposed to be on hand to advise in anything in regard to money.

Q.—You do not engage the men? A.—Not usually.

Q.—Such a thing might have occurred without you knowing it? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Have you got the contract system in any department of your works? A.—We work largely by the day, but we do give out piece-work.

Q.—Do the men employ their own help? A.—No; they do their own work. We might give a man a job to make a certain number of articles by the piece at a certain season of the year, and when he has done that he might get a job on something else, or we might put him on work by the day. Ours is largely day work.

Q.—You stated that wages generally run from \$3 to \$5 per week? A.—Yes.

Q.—Are you aware that you have any girls at your works who receive only \$1.50 a week? A.—No.

Q.—They are there, I suppose, without your knowledge? A.—There might be such; I am satisfied, however, that there are not. There might possibly be a small girl there—there might be such a thing.

Q.—Have you ever had any labor troubles? A.—Yes.

Q.—How long is it since the last occurred? A.—About five years.

Q.—Could you state to the Commission the cause of the trouble? A.—I had an idea of what the cause was; I had an idea that the men wanted us to turn out the apprentices. We had at the time recently made a voluntary advance of 10 per cent. to our men, and within ten days or two weeks there was a demand made on us to turn out our apprentices, or bind ourselves not to take any more, and the men also demanded 25 per cent. advance.

Q.—Do you consider a boy can learn the stove moulding business in three years? A.—Yes.

Q.—Is there any standard of apprenticeship among moulders? A.—Not that I am aware of. I think the term used to be four years, and most of the stove moulders take the boys for that time.

Q.—Do you know the standard of Messrs. Gurney, in Toronto and Hamilton? A.—I do not; I presume it is four years.

By Mr. FREED :—

Q.—You spoke of the demand upon your firm to turn away their apprentices, and at the same time increase the wages of the men 25 per cent. Now, what was the result of the demand? A.—The result of the demand was that we declined to accede to it, and through the vote of the union, or, as it was said to have been, of the outside shops, our men were ordered to strike. Our own men, as I have always understood, would have remained at work, but they were ordered to strike, and they did strike, and we struck also.

Q.—How long did the strike last? A.—It commenced early in the spring and lasted all summer, until we got independent of it, and then it dropped.

Q.—Did the same men return to your shop, to your employ, or did you get other men? A.—We got other men.

Q.—Did you give any increased rate of wages? A.—Yes; we did give an increased rate of wages.

Q.—Did you turn away your apprentices? A.—No.

Q.—You retained your apprentices? A.—Yes; our apprentices, however, were largely enticed away and quite a number of them left.

Q.—Was any attempt at arbitration made during that strike? A.—Not any.

Q.—Were any overtures looking towards arbitration made? A.—I think not.

Q.—On either side? A.—No.

Q.—Do you consider that in such cases arbitration could be effectually employed? A.—It might be, sometimes.

Q.—Would you favor a uniform system of arbitration—compulsory arbitration? A.—No; I would not. I do not think it would be possible. I do not see how compulsory arbitration could be worked; I do not see how you could force men to work against their will, or force an employer to employ men at such prices as he did not think his business would warrant.

Q.—Would you favor the establishment of a court of arbitration by the Government? A.—If it were not compulsory I think it would be a very good thing.

Q.—Would arbitration be of any value unless it were compulsory? A.—I do not think you could enforce compulsory arbitration. My idea is, that it should not be compulsory. You might compel a man to close up his business.

Q.—Would arbitration be of any value unless the parties were obliged to abide by the result? A.—Yes; it might have a certain influence. It might have a valuable effect on public opinion, which has a good deal to do with these matters. In regard to arbitration, I consider that men like county judges in the different districts would be the most suitable men to appoint, for they would possess influence in their localities, and would also have considerable influence on public opinion.

By Mr. ARMSTRONG:—

Q.—Do you consider that when the labor difficulty happened in your shop the union was arbitrary in its action? A.—I do not consider that a union is arbitrary that provides that its members shall not work for less than a certain rate of wages; I think it is a very proper thing, but at the same time I think it is very arbitrary to insist on keeping anyone else from working or taking the place of the men who have struck. It is their duty and privilege to get all the money they can for their labor, but it is not a proper thing for them to endeavor to force idleness on other men who are willing to work.

Q.—At the time of the difficulty, did you increase the number of your apprentices? A.—We did, decidedly; it became necessary to do that.

Q.—Are you a member of the Manufacturers' Association? A.—Yes; I think I am, nominally. I never attend their meetings.

Q.—Still, you abide by their rules and regulations, I suppose? A.—Do you refer to the Iron Founders' Association.

Q.—I refer to the Stove Manufacturers' Association. You are a member of that association, I believe? A.—Yes.

Q.—Have you any rules and regulations that manufacturers must not sell stoves under a certain price? A.—I believe there is something of that kind.

Q.—Is any punishment inflicted, supposing a man does sell a stove at a less price? A.—I do not think it is proper for me to answer that question.

By Mr. McLEAN:—

Q.—How far do you send the goods that you manufacture? A.—To every part of the Dominion, more or less.

Q.—Do you send any to the old country? A.—A little, not very much. Simply some odd things.

By the CHAIRMAN:—

Q.—Would you employ any escaped convicts from a prison? A.—Not knowing him to be such. I would not for a moment object to employ a man because he had been a convict, because there are a great many convicts who are better than men who have not been in prison.

By Mr. FREED:—

Q.—Is it a settled policy of your firm to employ such ex-convicts? A.—Oh, no; not at all. Occasionally, perhaps once a year, we might require to send a distance to get a moulder for a special article—that is, say, for moulding an iron tea-kettle. I presume that would be the man referred to. We might strike a man of that kind who has learned his trade in the prison.

Q.—In such a case, would you give him the same rate of wages as other moulders were receiving? A.—Yes.

By the CHAIRMAN:—

Q.—You make no difference in the rate of wages paid to the men for the same class of work once they are in your employ? A.—No.

By Mr. HEAKES:—

Q.—You never brought a man direct from the prison to do that work? A.—Not that I know of; a man might come down from the prison without my knowing it.

JOSEPH L. GOODBURNE, Printer, London, called and sworn.

By Mr. ARMSTRONG:—

Q.—To what branch of the trade do you belong? A.—I am employed on a newspaper.

Q.—Have you been in the business for a long time in London? A.—A little over three years.

Q.—What is the number of hours per week a morning printer works? A.—On an average, I work fourteen hours a day and four days in the week; that is the system.

Q.—Is that the system enforced by the office? A.—Yes; it was at the instance of the men in the first place that such hours were regulated. The men did not wish to work six days in the week, for they thought it too long; they could not get substitutes at the time, and so it was arranged to work four days a weeks.

Q.—How long ago was that system devised? A.—About three years ago.

Q.—Are the men still in favor of that system? A.—Yes; I think so.

Q.—Is there much idle time? A.—There is very little just now; in fact, there has been very little all last summer and winter. There had been before then a good deal of idle time.

Q.—Do the men get any of the fat matter or all of the fat matter? A.—We do not get any advertisements, or very few, except on Friday night, when there is generally a rush.

Q.—That is when the week hands cannot do it all? A.—Yes.

Q.—Are those who get the fat matter boys or men? A.—There is one man and two or three boys.

Q.—They are paid by the week? A.—Yes.

Q.—How much does the man get per week? A.—The man who was last on died last week; I think he got \$12 a week.

Q.—What might be the average earnings of a man working, as you have said, four days a week? A.—I should say about \$9 or \$9.50 a week.

Q.—Suppose everything was given to the men, how much would a man then earn on piece-work? A.—One dollar a day I should say.

Q.—Do you know that it is the universal custom when men work on piece-work for a newspaper for them to get everything coming into the newspaper? A.—Yes.

Q.—That system is not carried out in London, then? A.—No.

Q.—Do you know the reason? A.—I cannot tell you; I suppose it is because the masters think the men would earn too much.

Q.—What, in your opinion, would be the best course to pursue if labor troubles should arise; would you favor arbitration as a means of settlement? A.—Yes.

Q.—Is that the opinion of your organization? A.—Yes; I think so.

Q.—Would the men prefer that the boys would be apprenticed? A.—Yes; they would rather they were working in that way.

Q.—In your opinion, the system of indenturing would be preferred by the men to the present system? A.—Yes.

By Mr. FREED:—

Q.—At what hour do you take copy for the afternoon edition? A.—Half-past one.

Q.—When does that close? A.—The rule is 4:30 at present; the chapel rule was 4 o'clock.

Q.—At what time do you take copy at night? A.—At 8 o'clock.

Q.—About what time do you get through? A.—The paper is supposed to be on the press at 4:30. We get through before 4 o'clock; half-past three is the average.

Q.—You have at night some time for supper? A.—Yes; we can take what time we like for that.

Q.—Take the average compositor: how many ems would he set during those eleven hours of composition? A.—I should think the average number would be from 9,000 to 10,000.

Q.—How long would it take a man to distribute 10,000 ems? A.—Two and a half or three hours would be about the average time for distribution.

Q.—Then an average compositor ought to set about 40,000 ems a week? A.—Yes.

Q.—How much do you receive per 1,000? A.—Twenty-eight cents.

Q.—And yet you think you earn about \$9 per week? A.—That is the average; sometimes we do not get that.

Q.—Suppose you multiply 40 by 28 cents what is the result? A.—Eleven dollars and twenty cents.

By Mr. ARMSTRONG :—

Q.—Do you generally obtain eleven hours' composition? A.—Yes; except when there is no copy ready, when we have to stand around and wait. For a long time, however, we have had as much in fact, and more in fact, than we could do.

Q.—How has it been in slack seasons? A.—Sometimes we do not get more than nine hours—hardly that, sometimes.

Q.—Have you experienced some days when you have not received six hours' composition? A.—I never took notice.

By Mr. McLEAN :—

Q.—In regard to the matter in the Saturday edition of your paper: is it set up by the men? A.—The supplement, you mean? It has been set up by the men, except for the last two weeks.

Q.—Do the men get the cuts included? A.—No; except when the matter run down the side of the column.

Q.—If these twelve pages were set up by the men would your composition be improved? A.—There has been no standing around. Even within the last two weeks, when we have used plates, there has been no standing time at all.

By Mr. ARMSTRONG :—

Q.—What is the sanitary condition of the office? A.—Very good, except during the rainy season, when the roof is not of the best.

JOHN A. ROSE, Cigar Manufacturer, London, called and sworn.

By Mr. HEAKES :—

Q.—Do you manufacture cigars here? A.—Yes.

Q.—What tobacco do you use? A.—Imported altogether.

Q.—Is there any domestic tobacco grown in this neighborhood? A.—None that I know of. There is some west.

Q.—Have you ever used it? A.—No; it requires a different license. We take out a license to manufacture imported tobacco. You must understand there are two licenses, one for domestic and one for imported.

Q.—Do you know whether domestic tobacco is suitable for cigar manufacturing? A.—I do not know it; I have never seen any that was fit for it.

Q.—Have they succeeded to any extent in improving the quality of the tobacco grown in Canada? A.—I do not know; I cannot tell you anything about that. I think they have. Mr. Walker has taken a great interest in the industry. He ships tobacco down to Quebec.

Q.—What wages will a cigarmaker earn? A.—We do not employ any cigarmaker now; we employ girls and boys.

Q.—You have, then, no journeymen, only women and boys? A.—Yes.

Q.—Do the women learn their business with you? A.—Yes; they go in, and in time learn the different branches. We take a girl and teach her to make the inside of a cigar, what is called the bunch, and we teach another girl to roll them up.

Q.—What wages do girls get at the business? A.—It depends on how expert they are. When they first come to learn it they get \$2.50 per week. We have girls who earn \$6, \$7 and \$8 per week.

Q.—At what age do you take them? A.—We do not take them under the age prescribed by the factory law, I think fourteen years. You cannot, however, tell the age of a girl very well.

Q.—Do you consider female help more profitable than male? A.—I do now, at the rate of profits the cigarmakers are making. It is more profitable to us or we would not employ them.

Q.—Are there any cigarmakers employed in London? A.—Very few; I do not think there are ten journeymen employed in London.

Q.—And how many women are employed here? A.—There may be three hundred women and boys, apprentices. Understand me: there may be in some of the shops—I have a few—apprentices. As soon as they are out of their time they demand journeymen's wages, and then we have no more use for them.

Q.—Does a woman become as expert in making cigars as a man does? A.—No.

Q.—They are not so good? A.—They are not so good. A woman rolls a cigar with her fingers; a man with his hand. Some women do it that way, but as a class they do not. As between a man and a woman, a woman can never make as good a cigar as a man, that is taking ten men and ten women.

Q.—Are cigars made by men considered superior cigars? A.—They are.

Q.—Has it got something to do with the selling? A.—No. A man will take a pride in getting up an article nicely where a woman will not.

Q.—Does a cigar made by a man command a better price? A.—No.

Q.—Then it is an advantage to you to employ women all round? A.—Yes; it certainly is.

Q.—I suppose there are separate conveniences for women and men? A.—Yes.

Q.—Any communication? A.—No; that is inspected by the Ontario Government. We have an inspector who comes and inspects all these matters. We have lots of inspectors.

Q.—Do you know the average earnings of a man in the cigar business? A.—I cannot tell you his earnings now. A year and a-half ago I employed forty men. Then they were working eight hours a day, and they were earning, on an average, \$9 per week.

Q.—What hours do women work? A.—They work till 6 o'clock. At this time of the year they do not work so late, because we would have to light gas, and the cigar business is not brisk enough to warrant us in working the whole time. In the summer time we start working at 7:30 and work till 6.

Q.—That is nine hours and a-half a day? A.—Yes; it takes, perhaps, half an hour to clean up; so half-past five will be the time for work.

Q.—Do the boys in your employment learn the trade thoroughly? A.—Some of them do.

Q.—Are they indentured? A.—Yes; they are indentured.

Q.—And as soon as they have learned the trade do you let them go and take other positions? A.—Yes; we did not do that formerly, but we have to do it now, in order to make any money out of the business.

Q.—What is the reason you discharge men as soon as they have learned the business and resort to child labor so much? A.—Because the men, as soon as they are out of their time, join the Cigarmakers' Union, and the union will not allow them to work except at certain prices, at so much per 100 or 1,000 cigars.

Q.—Does prison labor come into competition with your industry? A.—No.

By Mr. ARMSTRONG :—

Q.—Is there any depression in your trade? A.—Yes, there is.

Q.—What is the cause of it? A.—The Scott Act and the high rate of duty on cigars.

By Mr. McLEAN :—

Q.—What has the Scott Act to do with smoking cigars? A.—By enacting the Scott Act they take away our customers. This is not a cigar-smoking country; the people are pipe-smokers in this country. A man with his friends would go into an hotel, and perhaps two or three of them would each call for a glass of beer. Some man, however, would say that he would not take beer, but he would take a cigar, and some men would even go out with half a dozen cigars in their pockets. When the Scott Act is in force the men do not go into the hotels in the same way, and if we do sell cigars to hotels, they buy the commonest and cheapest kind they can get, because

they sell them at 5 cents, and their custom is limited. It must be remembered that we paid the same duty on the \$20 cigar as we do on a \$50 one. We pay \$6 a thousand, irrespective of quality.

By Mr. FREED :—

Q.—Is that the opinion of your trade throughout the Province? A.—I cannot tell you, but I should think so.

By the CHAIRMAN :—

Q.—The Scott Act is not to prevent smoking? A.—It does prevent the smoking of cigars; men smoke tobacco instead.

Q.—But the Act is not to prevent the consumption of tobacco? A.—No; but it prevents the consumption of cigars. A man, where the Scott Act is in force, will go in and drink all he can get. He will not say "I will take a cigar," nowadays, because he does not get a chance to drink very often.

By Mr. ARMSTRONG :—

Q.—Surely he cannot drink in a Scott Act town? A.—Yes; he can.

Q.—Are all your cigars hand-made? A.—Yes; they are all hand-made. The bunches are made by hand, and they are placed in a mould to give them their shape, and then they are taken out and rolled by hand. They are all hand-made, this mould being used merely to work them into shape.

Q.—Does a hand-made cigar command as high a price as a mould-made cigar? A.—There are several kinds of mould-made cigars; one cigarmaker will have six moulds; another cigarmaker will have only one mould. No person can tell the difference between a hand-made cigar and a moulded cigar.

Q.—Is there an inferior brand of foreign-made cigars coming into the country? A.—No; not now.

Q.—How long ago is it since it has been stopped? A.—Since the last session of Parliament; since they raised the duty on imported cigars. There used to be cigars of that kind coming in here. They would have the import stamp on them, and they have been sold for \$50 a thousand in this city, made by farmers in the State of Pennsylvania, and those same cigars have been bought in quantities on the other side at \$9 a thousand. They are got up nicely, and they look well. You will occasionally see some of them in the auction room in London. They are, I say, beautifully got up, but any one acquainted with the business knows them on seeing them by the white veins.

By Mr. McLEAN :—

Q.—You used, I believe, to employ forty union hands? A.—Yes.

Q.—Is there any other reason why you have changed the manner of running your business? A.—I cannot in any way compete with other factories.

Q.—Did any of the men in your employment cause you trouble? A.—Yes.

Q.—Please state in what way they caused you trouble? A.—By shirking their work, by plugging their cigars—which means by stuffing them, so that they would not smoke.

By Mr. ARMSTRONG :—

Q.—Were they union men who did that? A.—Yes; and I fired them bodily.

Q.—And I believe, you have never had union men in your employ since? A.—No; and I never will have one.

Q.—Could you employ men if the Scott Act was not in force in your vicinity? A.—Yes; I could.

By Mr. KERWIN :—

Q.—What is the average price of your cigars per thousand? A.—From \$20 to \$50.

Q.—Do you sell many \$20 a thousand lots? A.—A good many.

Q.—More than the \$50 a thousand lots? A.—Yes.

Q.—Would the \$20 a thousand lots retail at 5 cents? A.—Cigars at from \$20 to \$30 a thousand are all retailed at 5 cents. Those at from \$40 to \$50 a thousand are all retailed at 10 cents.

Q.—So, I suppose you sell more at from \$20 or \$30 a thousand than at \$40? A.—A good deal more at from \$22 to \$25 than any other kind.

By Mr. McLEAN :—

Q.—Do you make any 10 cent cigars since the duty was raised? A.—I make a few more than I did.

Q.—If the duty on cigars was raised a little higher would it not be better for the manufacturer and the workingman? A.—If the import duty was higher it would keep the imported cigar out effectually.

Q.—I suppose you can make just as good a cigar in this country as in the United States? A.—Just as good.

By Mr. KERWIN :—

Q.—Which is your best market? A.—The best market I have for 10 cent cigars is Manitoba and British Columbia.

Q.—And for the others, what? A.—In Ontario. Ontario is our only market outside of those we have named. We could not sell a cigar in Quebec; we could not steal the tobacco and make them so as to pay.

By Mr. McLEAN.

Q.—How is that? A.—In Quebec they are made by cheaper labor, and they are made from our cuttings. Our cuttings are all shipped to Quebec and there made into cheap cigars. There are, no doubt, some good cigars made in Montreal, and more cigars of any kind than are made in all the rest of Canada put together, but there are a good many of those cheaper kinds made in Sherbrooke, and also in Montreal. They sell cigars there at \$14 a thousand. I have bought some of them.

Q.—Is it a fact that Mr. Davis can sell cigars cheaper here than you can make them? A.—I do not think so; but he would make cigars in order to get into the track of any one, if he thought he could do so.

By Mr. KERWIN :—

Q.—Out of the entire number of cigarmakers employed in London, how many women are there? A.—I could not tell you the exact number; I am only speaking about my own establishment.

Q.—How many are in your establishment? A.—Twenty.

Q.—And how many boys? A.—Seven or eight; sometimes more, and some times there are more women there than I have mentioned.

By Mr. McLEAN :—

Q.—Do you know of any iron-clad contract existing now, or ever existing, between the bosses and the men? A.—No. The cigar manufacturers here had, at one time, a union to fight the Cigarmakers' Union. They had a quarrel, and the employers banded themselves together to protect themselves.

Q.—Could the masters hire any of the men belonging to the union? A.—No; not without getting a permit from the man who locked them out.

Q.—That was during the time of the strike? A.—Yes.

By Mr. ARMSTRONG :—

Q.—And is that rule still in existence? A.—No; I cannot tell you that. I never belonged to the organization. The man for whom I was book-keeper did that; I have never done it.

By Mr. McLEAN :—

Q.—Did you ever know of a cigarmaker who was black-listed? A.—Yes; lots of them, and they deserved it. I have a lot black-listed now.

By Mr. HEAKES :—

Q.—Are there any women black-listed? A.—No; women do not go on strike and do not get drunk.

By Mr. ARMSTRONG :—

Q.—Do you not think women will stand up for their wages as much as men? A.—It is not the man's fault, but it is the union's fault, in regard to strikes. Women will stand up for their wages and will claim what is right, but they generally come out right, while a man will not. If a man is left to himself he will listen to reason, but the union will not let him do so.

Q.—Do you not think organization among workingmen is a benefit to them? A.—Yes; I do think so. But I think every society should frame its own laws. For instance, if there was a Cigarmaker's Union among the trade in London it should be allowed to run things to suit itself, and it should not allow itself to be run by another union at the other end of the country, because what will suit one part of the country will not suit another.

By Mr. McLEAN :—

Q.—What is the scale of prices in the working hours for union men? A.—When I was employing union cigarmakers they would not make a cigar for me for less than \$6 a thousand, no matter what kind it was, and from that as much as \$10 a thousand. I know that other men were working in another shop in the city, and were making some cigars at \$4 a thousand, and these men still belonged to the union.

By Mr. HEAKES :—

Q.—If the same rates of pay were given to women as are paid to men would you still prefer to employ women? A.—I think I would prefer to employ the women.

Q.—If the same pay were given them? A.—Yes; because they are cleaner. They do not get drunk, and they are not so abusive, and they do not put up jobs.

Q.—Do cigar makers get drunk? A.—Cigarmakers always get drunk.

By Mr. McLEAN :—

Q.—That is your experience? A.—It is in their blood? they cannot help getting drunk.

By Mr. ARMSTRONG :—

Q.—Have you had experience outside of London? A.—No; but we have had lots of experience in London. We got cigarmakers all over.

Q.—Do you not think low wages have a tendency to make a man get drunk and careless? A.—I do not know. I have seen them that way when we were paying high wages, when we have paid all the way from \$3 a thousand to \$10 a thousand for making.

Q.—Do you not think the manufacturers in London could afford to pay the same rates as are paid by manufacturers in St. Catharines? A.—I do not think it. St. Catharines has a trade of its own, and no outsider can sell there. Every person comes into London and sells. Again, no manufacturer in London can sell in Hamilton. He cannot sell a cigar there; they have a wall around it.

Q.—Do you know the number of journeymen cigarmakers employed in St. Catharines? A.—I do not know; there are a good many less than there were a little while ago. The manufacturers there sell their cigars a great deal in Hamilton.

By the CHAIRMAN :—

Q.—Do they not sell a great number of cigars along the canal? A.—I suppose so. I have never been able to sell cigars in Hamilton or St. Catharines, or any where down that line.

By Mr. ARMSTRONG :—

Q.—Do you not think that in some places your cigars are objected to because they have not on the box the blue union label? A.—Yes; but in Hamilton even if

we had the stamp we could not sell them. Our cigars are objected to on account of not being union-made cigars in any town where a good many mechanics are employed.

Q.—That is where there is organized labor? A.—Yes.

By Mr. KERWIN :—

Q.—They are only objected to, I suppose, by union men? A.—No.

Q.—You have said that women never struck but always mind their own business?  
A.—I mean that that is the case as far as my experience goes. I have seen our cigars objected to for not having the union label on them, and I have seen cigars objected to because they had the union label.

By Mr. ARMSTRONG :—

Q.—The knife cuts both ways? A.—Yes. There are thousands of people who do not know anything about the labels and do not care, and among these there is a big crowd of farmers.

JOHN DAVIDSON, Agricultural Wood-worker, London, called and sworn.

By Mr. McLEAN :—

Q.—How many hours a day do you work at the agricultural implement establishment where you are employed? A.—Ten hours.

Q.—What wages are paid to your trade? A.—The highest is 15 cents per hour—\$9 a week.

Q.—How do you get paid? A.—We get \$10 every two weeks, and the rest is kept back on the books.

By the CHAIRMAN :—

Q.—For how long a time? A.—They do not like you to draw it till the amount runs up to \$25 at least. You are expected to have money there, and even some have as high as \$100 in the hands of the firm. If you get \$9 per week you will draw every alternate week \$5.

By Mr. ARMSTRONG :—

Q.—Do the firm pay any interest on this money kept back from the men? A.—No; not a cent.

Q.—Is the rate of wages you have earned the rate of wages for a highly-skilled mechanic? A.—Yes.

Q.—Are there men who receive less wages? A.—Yes.

Q.—You are speaking of the factory in which you are now employed? A.—Yes.

Q.—How many men are employed at your business in the factory? A.—Twenty-four.

Q.—Is it a rule that this portion of a man's wages should be kept back by the firm? A.—Yes.

Q.—Is it compulsory, or is it optional? A.—You can draw the money when it runs up to about \$25; you can go to the office and draw a check for that; but if you want that money, and another man leaves \$100 or even as high as \$200 in the hands of the firm, while you draw your money to a close margin, you will be the first man laid off when a slack time comes.

Q.—Is your factory the only one of the kind in the city? A.—No.

Q.—How many men at your business are there in the city? A.—There will be 200, anyway.

Q.—Is your trade organized? A.—Yes.

Q.—Do you find organization a benefit? A.—Yes; we do.

Q.—In what respect? A.—It is a help to us in getting our money, to an extent, because we always used to have to wait on Friday night. We used to have to go to the office and wait while each man of a hundred men was paid, and that would keep you, perhaps, till 7 o'clock at night. Last season the men used to have the money

carried round, and that was the first step done in organized labor. We get \$10 every alternate Friday. We only work nine hours on Saturday now, but before we worked ten hours.

Q.—Has organization increased your wages? A.—No; it has not.

Q.—Has your establishment any objection to employing union men? A.—They would rather not do so if they found it out.

Q.—Is there any iron-clad document which the men have got to sign? A.—No.

Q.—Are there any apprentices? A.—Yes.

Q.—Does your society regulate the number of apprentices in proportion to the number of men employed? A.—No.

Q.—How long do the apprentices have to serve before they become journeymen?

A.—That is the trouble—they do not serve their time out. They are there for a while, and they leave and go to some other shop and get another job there. They do not put in their full four years.

Q.—I take it, then, that there is no indenture system in your establishment?

A.—No.

Q.—Do you think such a system would be a benefit to your trade? A.—It would be a great benefit.

By Mr. McLEAN :—

Q.—Are there any boys running machinery in your shop? A.—Yes.

Q.—What kind of machinery do they run? A.—They work on the planer, the rip-saw, the cross-cut saw, sand-papering machines and jointers; in fact, there are boys who can run almost any machine. Every week or two an accident happens.

Q.—The boys get hurt? A.—Yes; their fingers are cut off.

Q.—What becomes of the boys when they get their fingers cut off? A.—I saw a case of an apprentice to the woodworking business. After he had been working four weeks he had been put to running a machine; probably he had never seen a machine before, and four of his fingers were cut off. The boys in this town, and the firm kept him about a month and then discharged him, and this boy is now working at painting.

By Mr. HEAKES :—

Q.—What machine was it? A.—It was a Universal.

Q.—How old was the boy? A.—Not over sixteen at the time.

By Mr. ARMSTRONG :—

Q.—Is the machinery protected—the shafting and belting? A.—No; none of it.

Q.—Has the factory inspector visited your establishment? A.—Not that I am aware of.

Q.—You think if he did that there was good ground for complaint? A.—Yes; I do.

Q.—Do other establishments in town keep back wages the same as is done in your establishment? A.—I know other firms in this town which do it.

Q.—In your trade? A.—Yes, in woodworking.

Q.—Do they all do it? A.—I would not say that all do it.

Q.—Is a boy put to these dangerous saws and machines when he first enters the employment? A.—He may work around a week or two, but I have known a boy not there a month before he was put on a very dangerous machine.

Q.—You do not think that at that time he knows sufficient to be familiar with the working of the machine? A.—No; he would not.

By Mr. McLEAN :—

Q.—Does he get a chance to learn other branches of the business? A.—No.

Q.—He is always kept on that saw or machine? A.—Yes; always on that machine.

By Mr. HEAKES :—

Q.—Have you heard a reason given why a portion of the wages of the men is retained? A.—Yes; I have; because it is on the books drawing interest, at 7

per cent., probably, or some other rate; I do not know what. I know that when the firm sell a machine they sell it at 7 per cent. interest, and if it is not paid in six months it is raised to 10 per cent. I happened to strike on one of their notes, and that is how it reads.

By Mr. ARMSTRONG:—

Q.—How is the sanitary condition of your shop? A.—I do not think we have any complaints in that direction.

By Mr. McLEAN:—

Q.—Do you find any dust rising from the sand-papering wheel? A.—Yes; there is a certain amount of dust from it.

Q.—Does it have an injurious effect on the men working it? A.—I have had no experience on it. They generally put a laborer or a boy on the sand-papering machine.

By Mr. HEAKES:—

Q.—They have a suction pipe to the machine? A.—Not on the sand-papering machine.

By Mr. CARSON:—

Q.—What kind of apparatus is it? A.—It is a drum.

By Mr. ARMSTRONG:—

Q.—Do many of the men of your firm save money and buy their own little homes? A.—Some of them do.

By Mr. CARSON:—

Q.—The boy you spoke of as being on the machine and as being hurt—was he hired to run that particular machine? Is that the practice? A.—Not when they hire; they generally hire with the intention of learning the trade.

Q.—What about the boy who was injured by the Universal? Was he put on the machine by the firm, or by the foreman, or for his own amusement? A.—He was there under the foreman's instruction.

Q.—How long had he been working at machinery in the shop before he was put on that machine? A.—Not over three weeks before he was put on that machine.

Q.—What kind of stuff was he running? A.—Hickory.

Q.—Long or short stuff? A.—Short stuff.

By Mr. ARMSTRONG:—

Q.—Has the use of machinery in your trade lowered wages? A.—Yes.

Q.—Do you know the difference in the wages paid in your trade here and those paid in the trade in England and the United States? A.—Yes; I do in regard to the United States. I do not in regard to the old country.

Q.—You can speak from experience in the United States? A.—In the State of New York I received \$2.25 a day.

Q.—What part of New York? A.—Syracuse.

Q.—Are you a married man? A.—Yes.

Q.—Were you married when you were there? A.—No.

Q.—In regard to the cost of living for a married man: would it be higher in proportion than what you paid here, comparing wages in London and Syracuse? A.—No.

Q.—You think you would be better off in Syracuse? A.—I know I would.

By Mr. FREED:—

Q.—Why did you leave Syracuse? A.—I was a single man, and I came home to be married.

By the CHAIRMAN:—

Q.—Why do you not return there, if you can do better there than here? A.—All my friends are here.

Q.—Then you would rather be poor with your friends than rich in Syracuse?  
A.—I do not know about that. Once you get here you have to stay here. I would have to beg my way there, on the cars, if I wanted to go.

By Mr. McLEAN:—

Q.—Is there any fining of employés in your factory? A.—No.

Q.—Have you any knowledge of industrial schools? A.—No; I have not.

Q.—Does immigration interfere with your trade? A.—Yes; we see the effects of that every day. People come into the city and hire themselves at a cheaper rate than the employers can regularly get men here.

Q.—At what rates do these men hire themselves? A.—I have known them to hire here at 90 cents a day. They work in the chipping room.

Q.—Do you know anything about men's co-operative benefit societies? A.—Yes.

Q.—Tell us anything you know about them? A.—I have been in two co-operative societies, and I can buy my groceries and all my provisions a great deal cheaper by co-operating with others than otherwise.

Q.—How much cheaper. A.—The mistress told me two weeks ago that the \$2.50 worth of provisions I bought at the co-operative store could not have been bought for less than \$3.50 in an ordinary store.

Q.—Then you think workingmen's co-operative societies are a benefit to a workingman? A.—I do.

Q.—Do you know anything in regard to establishing a bureau of labor statistics?  
A.—No; I cannot say that I do.

Q.—Do you think it would be a benefit to workingmen if there was a bureau of labor statistics? A.—I think it would be.

Q.—Does convict labor in any way interfere with your work? A.—Not here.

By Mr. ARMSTRONG:—

Q.—Is the wood you use generally Canadian wood? A.—Yes.

Q.—All of it? A.—Yes.

Q.—In case of labor troubles, what kind of arbitration would you like to see for their settlement; would you prefer one appointed by the employers and employed, or one appointed by the Government? A.—One appointed by the Government. I have seen the effects of endeavoring to settle matters by the men; I have seen deputations go from the men, and have noticed that the men who have gone have been discharged in a short time. I have seen it once in this city where three men went to settle a dispute with the master, and two out of those three were discharged within two months.

Q.—Would you like to see a compulsory board of arbitration formed by the Government? A.—I would.

By Mr. FREED:—

Q.—Those co-operative societies of which you have spoken, are they still in existence? A.—They are.

Q.—You deal with them? A.—I do.

Q.—How long have they been in existence? A.—They have been running in this city, I should say, about three years.

Q.—Are they successful? A.—Yes.

Q.—How many of them are there? A.—There are two at the present time.

Q.—Both groceries? A.—Yes.

Q.—Has the system been applied to any other branch of trade? A.—It has to coal oil.

Q.—Did it reduce the price of coal oil? A.—It did.

Q.—Does that exist now? A.—Yes.

Q.—Have you known of any co-operative manufacturing establishment in London? A.—Not in London.

Q.—Have you had anything to do with any such establishment elsewhere? A.—Yes; I was a shareholder in the Woodstock co-operative company.

Q.—Was that successful? A.—No; I cannot say that it was.

Q.—Do you know what were the causes of failure? A.—Yes.

Q.—What were they? A.—I know them according to my own mind.

Q.—What were the causes, in your opinion? A.—I think there were certain parties who wanted to get the control of the running of things, and they ran it to the ground.

Q.—Had you sufficient capital in the concern? A.—We had when we started.

Q.—Was the failure, then, due to want of proper management? A.—That was it; at all events, in my opinion.

Q.—What industry was it? A.—A match factory.

Q.—Is that still in existence? A.—We hold the plant, but we are not manufacturing any matches.

By Mr. CARSON :—

Q.—How many members were in the factory who ran it? A.—I think about fifteen.

Q.—What amount of capital was invested? A.—I could not answer that question.

By Mr. McLEAN :—

Q.—At what price can you buy coal oil under the co-operative system to which you referred? A.—I can save 5 cents on every gallon.

By Mr. FREED :—

Q.—Were all those interested in the match factory workingmen? A.—Yes.

By Mr. WALSH :—

Q.—Do you know if any of those men receiving as much as you do, and working for establishments that will hold a portion of wages, lost any money at any time? A.—No; I cannot say that I do.

Q.—To your knowledge, every one who had money held back by the firm received it? A.—Yes.

Q.—Is it a general rule in your establishment to put boys so young as you have mentioned at dangerous machinery? A.—Yes.

Q.—Has there ever been any accident to any of these boys, except the one of which you have spoken? A.—Several, but not so sad an accident as that.

Q.—Was there ever any action taken by the boy's parents or others regarding the accident? A.—The boy is an orphan.

Q.—Then there was no one to look after his interests or make any representation? A.—He has a brother, but he is not in the city now.

Q.—How many men are employed altogether at the establishment where you work? A.—Not over fifty now.

Q.—Have you had more employed? A.—Yes.

Q.—Is the business working successfully now? A.—Yes; it is working, but they only work about seven months—never over seven months a year.

Q.—Do any other establishments of the kind pay any higher wages than you speak of as being paid at your establishment? A.—Not that I am aware of.

Q.—Do you know that that is the rate of wages they pay? A.—Yes; I think that is the rate of wages they pay.

Q.—Did you ever make any remonstrance with the masters with respect to an increase of wages, not yourself individually, but the men generally? A.—Yes.

Q.—What answer did you get? A.—We could not get an increase; that is all he would pay.

Q.—Do you know of an industry in any other place in this neighborhood that pays more than that rate, or is that the usual scale of wages, so far as you know? A.—That is about the usual wage.

By Mr. HEAKES :—

Q.—Can you tell us if any of the accidents you spoke of have occurred since the Factory Act went into force, on the 1st of October last? A.—No; I do not think so; no great accident, at all events.

JOHN ALLENBY, Tailor, London, called and sworn.

By Mr. ARMSTRONG :—

Q.—How long have you been in London at the tailoring business? A.—About seven years.

Q.—At custom work? A.—Yes.

Q.—What is the weekly wages paid to a tailor? A.—The wages average from \$9 to \$10 for a weekly man.

Q.—That is in the busy season, I suppose? A.—Take a weekly man: they give him about \$10 all the year round.

Q.—Are there many apprentices at the business? A.—Very few male apprentices.

Q.—Any women? A.—Quite a lot.

Q.—What part of a garment do the women work at generally? A.—They generally commence on pants and vests, and work their way into making coats.

Q.—Do you think a woman at the business for some time can make a vest as good as a man? A.—She might manage to make one that would pass as well, and a man not as experienced as a tailor would not know the difference.

Q.—But practically speaking, how would it be? A.—A practical tailor could tell the difference.

Q.—Is there a difference in the cost of a vest made by a woman and one made by a man? A.—Yes.

Q.—Have you ever heard that a woman can make a vest as well as a man? A.—Yes; I have heard it a score of times.

Q.—By a practical tailor? A.—Yes; a man who runs a tailor shop in this city will say so; but they are not practical tailors; they are men who sell clothing.

Q.—How much does a woman get for making a tweed vest? A.—It depends on what shop it is, for the shops vary in price. Some shops pay 30, some 50 and some as high as 75 cents.

Q.—It depends, I suppose, on the kind of cloth? A.—It depends, principally, on the shop; the cloth has not so much to do with it as has the shop.

By the CHAIRMAN :—

Q.—It depends on the employer? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Take a good hand at the business: how many vests would such a hand make in a day? A.—I served seven years at my trade, and one vest I consider a day's work.

Q.—How many will a woman make? A.—She will make two or three.

Q.—And what are the average wages she would receive? A.—That would depend on the kind of vests, and where she worked. There are some who would call themselves practical vestmakers, who would not be allowed to touch a vest in some other shop.

Q.—Is there a log? A.—There is a log, but neither party is bound by it. The bosses will pay more at one time than another. There is no regular tariff.

Q.—Does the price depend on the particular part of the city where the shop is? A.—It depends on the man who runs the shop; it depends on the employer entirely.

There are employers who pay \$4.50 for a coat, and others who will only pay \$2.50 for exactly a similar coat.

Q.—What are the average wages of a woman per week employed at making vests? A.—I could not say; but I could give you the average wages of a man who is a good tailor. He will make about \$6 a week.

Q.—At piece-work? A.—Yes.

Q.—How many hours per week would he have to work to earn that sum? A.—About ten hours a day, perhaps eleven.

Q.—Will they take work home with them after shop hours? A.—Some of them do.

Q.—Then a woman who works ten hours a day will make \$6 a week? A.—Yes; if a good hand.

Q.—And a woman who takes work home with her will earn, I suppose, so much more? A.—Probably so. That is the average wages of a good, practical tailoress.

Q.—What are the sanitary conditions of the tailors' shops? A.—I can scarcely tell you that; I have not been through many of them. I have only worked in one or two of the shops.

Q.—Do you work in a shop now? A.—No; I am not working at all now.

By Mr. McLEAN:—

Q.—What was the sanitary condition of the shop in which you worked last? A.—It was what I call a fair average tailor shop; the sanitary condition was splendid and the light was good.

Q.—Were there separate conveniences for men and women? A.—That I could not say.

By Mr. ARMSTRONG:—

Q.—During the summer, have you ever been in a room where the men and women worked together? Do they work in the same room where the stove is to heat the irons? A.—Yes. You cannot go into any shop where both men and women are not employed, except one shop, the principal shop in the city, which will not employ any women.

By Mr. WALSH:—

Q.—Tell us something more about having ironing done in the same room where the people are at work. A.—That is the rule whenever they keep back shops. Tailors are, however, beginning to dispense with workshops and are allowing tailors to take the work home.

By the CHAIRMAN:—

Q.—Then the work is being done outside? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Are there any Italians doing laboring work? A.—They take the work home, and they run what are known as sweating shops. They are making quite a pile of money, and have a few slaves under them, in the shape of women.

Q.—Do they work cheaper than regular men? A.—They do the work cheaper, and they get women to do the work cheaper still.

Q.—Are there many of them in London? A.—There are quite a few.

By Mr. HEAKES:—

Q.—What class of work do the Italians do? A.—We call it second-class work.

Q.—That is ready-made clothing? A.—They do not do so much ready-made clothing as ordinary work. Some shops will pay only \$2.50, no matter whether it is a fine coat or a tweed coat, while the ordinary price would be \$4 or \$4.50, or at the least \$3.75.

By Mr. McLEAN:—

Q.—Is there much child labor in connection with your trade? A.—No; not unless it is done by women.

By Mr. HEAKES:—

Q.—Have you any knowledge of the over-all trade? A.—Yes; I have a slight knowledge of it. I have been cutting in a wholesale house.

Q.—Is there any of that trade done in London? A.—Yes; quite a little of it is done, I believe.

Q.—What is the price per dozen for making over-alls in London? A.—I could not say what the price is here.

By Mr. McLEAN :—

Q.—What are the wages paid here as compared with those paid in Great Britain and the United States? First, let me ask you if you have worked in Great Britain?  
A.—I have worked on the board in Great Britain and here. The prices are just about the same; perhaps eight years ago they were a little better, but they are just about the same.

Q.—Is that where you had experience in making over-alls? A.—No; that was at Hamilton.

Q.—Do you know what they paid women there for making them? A.—They average about 4 or 5 cents per pair—about 60 cents a dozen.

By Mr. ARMSTRONG :—

Q.—Are the men's wages paid in cash here? A.—Yes.

Q.—Are they paid weekly, fortnightly or monthly? A.—I have been paid weekly. I have been paid on Monday my wages up to the Saturday night.

Q.—Do you prefer Monday as pay day? A.—No.

Q.—What day in the week would you prefer? A.—Where I am working we are paid every Saturday at noon, when we quit work.

Q.—You prefer Saturday, I suppose? A.—It suits me well enough where I have been working last.

Q.—Do you know anything about workingmen's co-operative societies?  
A.—Very little.

Q.—Do you belong to any? A.—No.

Q.—Do you think it would be a benefit to your trade if it were organized?  
A.—It would be a great benefit.

Q.—In what respect? A.—There would be a standard log, which would be a guide for the masters as regards pay. I can give you an instance; I go to one job, and after I have done it the employer throws me down \$2.50 or \$3. If I go to work for a man next door he perhaps gives me a dollar less, and I must either take it or lump it. A journeyman does not know what he is going to receive till the Saturday night comes.

By Mr. McLEAN :—

Q.—Do you not generally make an arrangement with regard to wages before you engage with a man? A.—There is very seldom any arrangement made. You go in and you ask a master if he can give you a job, and he perhaps says, "Yes." If there is a man on the board you perhaps ask him what he pays, but nothing more. Let a man once work, and once he gets a job he takes it until he can strike something better.

Q.—Does convict labor interfere with your trade? A.—I have not heard that does.

By Mr. ARMSTRONG :—

Q.—In a respectable part of the city, what would a mechanic pay for house rent? A.—About \$10 a month, I presume, in this city.

Q.—About how many rooms would there be in a house at that rent? A.—About six rooms, and the house would be centrally located.

Q.—Has house rent gone up during the last four or five years in London?  
A.—Yes; I believe it has.

Q.—As a general thing, have wages increased? A.—No; they have lowered.

Q.—Is the purchasing power of a dollar as great to-day as it was ten years ago?  
A.—The purchasing power of a dollar is not so much by half as it was eight years ago. That is from my personal knowledge and experience.

By Mr. FREED :—

Q.—What things are dearer than they were eight years ago? A.—Eggs, butter and meat are dearer.

Q.—Is clothing dearer? A.—As to clothing, I cannot say.

Q.—What would you pay for one dozen of eggs eight years ago? A.—About 10 or 12 cents at this time of year.

Q.—And what are they worth now? A.—About 25 cents.

Q.—What would you pay for butter eight years ago? A.—About 12 cents a pound, I think. Now it is 22 cents.

Q.—What would you pay for sugar eight years ago? A.—I do not know.

Q.—What do you pay for it now? A.—Fine sugar is 9 cents a pound, that is granulated.

Q.—How many pounds do you get for \$1? I do not know, but the average price is 9 cents per pound.

Q.—What do you pay for roast beef now? A.—Roast beef is about a York shilling a pound.

Q.—What was it eight years ago? A.—About 9 cents. What makes me so well posted in regard to prices is that I sent them to a friend eight years ago, and now they are much higher. At that time I was getting \$15 a week, and I have \$10 now, and yet I am just as good a mechanic, ; in fact I am a little better than I was.

By Mr. ARMSTRONG :—

Q.—Is fuel cheaper or dearer than it was ten years ago? A.—I do not know. I think wood is about the same as it has been for quite a while. I never burn coal.

Q.—Is coal in London cheaper this year than it was last year? A.—I do not know.

By Mr. FREED :—

Q.—Those over-alls of which you spoke : were they made by women? A.—Yes ; by women.

Q.—How many pairs would a woman make in a day? A.—They were taken away by the dozen and they were brought back made. I do not know how many a woman did in a day. I saw them cut by the machine ; I was then cutting cloth suits for the firm of Sanford, Bail & Buckley.

By Mr. ARMSTRONG :—

Q.—When these over-alls were returned by the women were they examined by the foremen? A.—The man who gave them out took them in and examined them.

Q.—Provided they were not properly made, would they be returned? A.—They would be given back to the women to fix again.

Q.—Do you know anything about making shirts? A.—They make shirts at the same factory, but I do not know anything about it.

Q.—Does immigration affect your trade? A.—Yes.

Q.—What kind of immigration is it? A.—As a rule, tailors who come here in the fall will take a job at much less than the one who has been here all summer.

By Mr. HEAKES :—

Q.—What proportion of immigrants who come to London are tailors? A.—I only experienced this in Toronto, when I was working there. I have had to vacate my seat for them.

Q.—How many years ago was that? A.—About eight years ago.

Q.—Was there any organization among the tailors at that time in Toronto? A.—No ; we tried to organize, but we could not get a meeting. I endeavored to organize a society among old society men belonging to the old country.

Q.—Were you working in a King street or a Yonge street shop? A.—I was working for the Golden Griffin at the time I was on the board. There were old society men working on the board.

Q.—Do you know there has been a society in Toronto for thirty years? A.—The men did not know it ; I wanted them to get up a club.

RICHARD MATHEWS, jr., Printer, London, called and sworn.

By Mr. ARMSTRONG :—

Q.—Are you a job printer or a compositor? A.—I am a book compositor.

Q.—How long have you worked in London? A.—I have worked about three and a-half years here lately.

Q.—Are you paid by the week or by the piece? A.—I am paid by the week.

Q.—How much per week? A.—Nine dollars for fifty-six hours.

Q.—Is that the standard rate of wages? A.—Yes; that is all the union requires; you may get more if you can?

Q.—Do you think it is a benefit for one doing book-work to work by the piece?

A.—Yes; if you can get enough to do; in some offices it would be a benefit to work by the piece. Of course, in a small office they do not get enough to do to keep them going all the time.

Q.—Are all the books that are to be set up any time given out to them on piece work? A.—No; it depends on what kind of a job it is. If it is a solid job you can get it by the piece; if it is a fat job it would be given out by the week's work.

Q.—Do you work in an office where there are week hands and piece hands employed in the same room? A.—No; they are all week hands. It is a small office, and both the proprietors are printers. Any man who comes in is always a union man. There are four there altogether, counting the bosses.

Q.—Are there any job offices in this city where the week hands and piece hands are employed in one room? A.—Yes; they are in one room, in different ends of it.

Q.—Where the piece hands and the week hands are employed in the same room, do the piece hands get their proportion of the fat matter? A.—The proprietor, as a general rule, knows if the job is going to be fat matter or not, and if it is he gives it to men working by the week.

Q.—Is it with the object of saving money? A.—Yes.

Q.—Are there many apprentices at the job-printing trade? A.—Yes; more than there are men.

SAMUEL PEDDLE, Cabinetmaker, London, called and sworn.

By Mr. McLEAN :—

Q.—You work, I believe, for the London Furniture Company? A.—Yes; I have worked there for nine years.

Q.—What wages are paid by that company? A.—They vary; a day hand will get from \$8 to \$10 a week; a piece hand, I suppose, will make from \$9 to \$15, that is a good mechanic.

Q.—Are there any men in your factory who get less than \$8 a week who take the place of skilled workmen? A.—Yes; an apprentice just out of his time receives less than \$8.

By Mr. HEAKES :—

Q.—Have you given a good deal of attention to labor matters? A.—I did some time ago, but I have not much of late, for my time has been occupied with domestic matters more than it was formerly. I gave a little more attention to labor matters, probably, than I should have done, considering my position.

Q.—Have you ever given the subject of profit-sharing any consideration? A.—Not practically, but in reading I have given it considerable attention.

Q.—Do you know if anything of the kind exists in this country? A.—No; not in Canada.

By the CHAIRMAN :—

Q.—Do you include co-operative societies? A.—No; profit-sharing. That is where the men are paid in accordance with the profit made by the employer, apart from the co-operative principle. In profit-sharing, if an employer made a large return he would give some of it to his men.

By MR. HEAKES:—

Q.—Do you think if profit-sharing were adopted as a principle it would lessen difficulties between employers and employed? A.—Yes; it would lessen difficulties, and influence a man to be more careful in the use of raw material, and they would work into each other's hands better than they do now.

Q.—In your opinion, would it be practicable to introduce profit-sharing as a factor in business? A.—It is practicable, because it is done in England. It is done, I believe, in the publication of some of the best books in London at the present time.

Q.—Do you know if the workingmen in Canada have ever attempted to have profit-sharing brought into practice? A.—I have never known the subject to be broached to any employer in Canada, nothing more than the co-operative plan; not in regard to profit-sharing.

Q.—In regard to apprentices as employed in your business: is the present system of taking apprentices a satisfactory one? A.—In our business in this city the present system of taking apprentices is a bad one. There are a great many who commence to learn the trade who never properly learn it, and who cannot be termed *bona fide* apprentices. A *bona fide* apprentice who is bound by an indenture does pretty well, as a rule.

Q.—Those that are indentured? A.—Yes; those that are properly indentured.

Q.—Should not all apprentices be indentured? A.—I do not know. There are a great many boys who come to help mechanics and learn a certain portion of the work, and when they have got so far they can get no further. They learn just enough to be useful to the man who employs them, and he keeps them there. Some boys of extra ability get to be mechanics in time through their being obedient, faithful and intelligent, and industrious at their work, and when a crisis happens they get pushed into a place and become mechanics, without having been properly indentured as apprentices.

Q.—They are hired by the men and not by the employer? A.—They are hired by the men, irrespective of the employers. A man hires them for himself; they pay the wages agreed upon, and the boy can leave when he likes.

Q.—Do you know if there is any desire among workingmen for the establishment of a bureau of labor statistics? A.—Generally speaking, the more intelligent workingmen think it would be a great help to us, inasmuch as we would be able to see a uniform rate of wages prevailing, and generally the condition of the labor market, and in this way such a scheme, if adopted, would be a benefit, both financially and educationally.

Q.—From your knowledge of the workingmen of London, do you think they favor the establishment of such a bureau? A.—Yes; the more intelligent portion of them do.

Q.—In regard to the question of settling disputes between capital and labor: have you given the subject of arbitration any thought? A.—Yes; considerable.

Q.—Would you give us your view of the question? A.—My view, and the view of the men in the shop, with whom I have talked it over, is that we think that an arbitration board of good, solid business men and of workingmen combined, would be the best means of investigation and settling labor troubles.

Q.—How would you propose to constitute such a board? A.—I think I would select good business men, and a few intelligent mechanics, and constitute a permanent board for the settlement of all labor troubles, and make their report decisive.

Q.—Would you make that compulsory? A.—Yes; the board having the power to consider both sides of the case, both the wages received by the men and the amount earned by their labor.

Q.—Is there not an Act on the Ontario statutes providing for arbitration? A.—Yes; but I do not think it has ever been put to any practical use.

Q.—Do you know why? A.—I do not.

Q.—Was it because there was not sufficient power contained in the provisions in

the Act? A.—I do not know why it has not been put in force; I simply know there is such a law.

Q.—In regard to employers' liability for accidents: is there any law in existence that protects employes from neglect on the part of employers? A.—There is a law for protecting him, but it does not do it.

Q.—Can you tell us why the law does not protect him? A.—The factory inspector went through our factory. He never spoke to any one; he simply walked right through. I did not even know that he was a factory inspector. I say that he just walked right through the factory, Mr. Wolfe walking in front. I understand that he was not in the whole building five minutes. He never looked at the machinery, or at the closets. Those who saw him said he walked right through the shop. We would never have known he visited the shop, except from noticing his name in the paper.

By Mr. HEAKES :—

Q.—Are the workshops in London, generally, pretty well ventilated and drained? A.—I can speak from practical experience in regard to the London Furniture Company. It is about the best shop in the city to work in, so far as good health and warm and comfortable shops are concerned, and the men are properly treated. The only thing we have to complain of is a little in sanitary matters, although, perhaps, that has not altogether to do with the manager; it may be due to the construction of the place.

Q.—Have you any knowledge of the operation of the Mechanics' Lien Law? A.—No; I have no particular knowledge. I have just read it, and nothing more. We never have any trouble about our wages; they are paid when we have earned them.

Q.—Have you any knowledge of the proportion of the profits as between capital and labor? A.—Not directly.

By Mr. CARSON :—

Q.—Where are the tools used in your establishment generally manufactured? A.—Our tools are principally manufactured in Sheffield.

Q.—Do you know if any of your tools are manufactured in Canada? A.—I believe some of the tools we use in connection with the machinery are made in Canada, in Montreal.

Q.—Have you any knowledge as to where the tools used in machines, such as knives and cutters, are obtained? A.—No; I think they get some of them in the United States and some in Canada; I know that some come from the United States.

Q.—How do those manufactured in Canada compare with those manufactured in the United States? A.—I cannot tell you.

By Mr. ARMSTRONG :—

Q.—Do you know anything in connection with co-operative building societies? A.—Yes; I have had a little experience in one—more experience than I desired.

Q.—Was it an actual benefit to you? A.—No, I lost \$60 by it.

By Mr. McLEAN :—

Q.—Do you know of any co-operative society in existence at present? A.—Yes.

Q.—Please tell us what benefit it is to workingmen? A.—On the last two purchases I made I spent \$8.50, on which I saved \$1.25. We buy at wholesale rates, in a retail way, in the co-operative store to which I belong.

By Mr. WALSH :—

Q.—How long has it been run on that system? A.—This society is not more than four or six months old. I have belonged to it six or seven weeks; I have been a shareholder during that time.

Q.—Is there a fair chance of obtaining success under such circumstances? A.—Yes; I think so. There is a better chance, in my opinion, than there has ever been before. I think they are treading in the same path as the society that has been so successful in England.

Q.—Is it very well patronized at the present time? A.—Yes; fairly well. I think on the last roll we have some fifty members.

By Mr. FREED :—

Q.—Do you sell to others besides members? A.—No; not outside of trades unions.

Q.—What I mean is, do you sell to those who are not stockholders in the concern? A.—No. You pay for your share, and when you take your share, you are a *bona fide* member. You can give an order, and that order will be sent to a wholesale house and it will be filed in a retail way. You pay your cash beforehand, and your goods are sent home to you, and any money not required is refunded. In all cases the cash is paid before the order is put up. We get wholesale prices and 3 per cent. discount, which goes to pay for our reading-room and other expenses.

Q.—This wholesale house would not like it to be known that you get your goods from it? A.—Perhaps not.

Q.—It is not generally known, I suppose? A.—It is not generally known; but the cash fetches them all the time.

Q.—There would be no difficulty, I suppose, in finding wholesale houses that would deal with you? A.—No; we have only to ask for their lists and we obtain them; and one house will compete with another for the fall trade.

Q.—You carry no stock, I understand? A.—No; nothing except \$50 or \$100 we have lying there.

PATRICK BURNS, Laborer, London, called and sworn.

By Mr. ARMSTRONG :—

Q.—Will you please state to the Commission the kind of labor you do? A.—I am employed in the tannery at the present.

Q.—What are the weekly wages of a laborer in London? A.—I have \$7 a week; the wages generally run from \$1 to \$1.25 a day.

Q.—Do you know what are the wages of an employé in the employ of the corporation here? A.—One dollar and twenty-five cents a day for nine hours.

Q.—Are there any working under that rate for the corporation? A.—No; not at the present time.

Q.—Do laborers employed by contractors at excavating, and work of that kind, and work on drains, receive more than the corporation laborers, or do they receive less? A.—One dollar and twenty-five cents a day is the standard.

Q.—Are the corporation laborers employed all the year round? A.—No; generally in the spring and fall.

Q.—Are they paid fortnightly or weekly? A.—I do not know; weekly, I believe.

Q.—Are you employed the year round? A.—Yes.

Q.—What money can a married man in your business save, taking a man with three or four of a family, and one who exercises ordinary economy? A.—Do you mean a man on \$7 a week?

Q.—Yes; what would such a man save? A.—I should say about \$25 or \$30 in the year.

Q.—That is if he is employed all the year around? A.—Yes; a man having three or four of a family.

Q.—And could he live pretty comfortably? A.—Yes; he could live pretty comfortably.

Q.—Are laboring men in this city organized? A.—The hod-carriers are organized.

Q.—Are any others organized? A.—That is the only laboring union. I belong to the Knights of Labor.

Q.—Are there any workingmen living in tenement houses here? A.—Yes; there are a few, but there are not many.

Q.—Are those houses in a good sanitary condition? A.—Yes; generally speaking they are.

Q.—Have you ever had any labor difficulty in your trade? A.—No; no difficulty with the firm for which I work.

Q.—Does immigration affect your business? A.—Yes; I believe immigration has a tendency to pull down the prices of wages to the laboring men. The majority of immigrants coming out are naturally laboring men, and some of them are induced to leave the old country by advertisements. In fact, that was one of the inducements that led me to leave the old country. I saw an advertisement of the Allen Line, saying that there was plenty of land here, and that laborers were wanted in every part of Canada. When I got out I found there were already too many here.

Q.—Did you come out as an agricultural laborer? A.—No; I paid my passage out here; and that was one of the things that induced me to come out.

Q.—Are you acquainted with the circumstances of many who come out in that way? A.—I have been speaking to several of them, and many of them wish they were back home again.

By Mr. FREED:—

Q.—What rent would you pay for a comfortable cottage in London? A.—I live in London west, and pay \$4,50 a month.

Q.—How many rooms are there in such a cottage? A.—Five rooms and a kitchen.

Q.—Is it a warm and comfortable house? A.—Yes; it is a good, comfortable house.

J. W. THORPE, Job Printer, London, called and sworn.

By Mr. ARMSTRONG:—

Q.—I suppose you receive the standard wages—\$9 per week? A.—I get more than the scale.

Q.—Did you hear the evidence of the last printer who was called? A.—Yes.

Q.—Have you anything to add to his evidence? A.—I am willing to answer any questions put to me by the members of the Commission.

Q.—What is the sanitary condition of your office? A.—The sanitary condition is very good, I think. It is about as good as the average printing office, and probably better.

Q.—Can you give the Commission any information in connection with the prices of job printing in London? Is it cheaper or dearer here than in another city of similar size and importance? A.—I think the prices of work are about the same all over. The firms here have to tender against firms in London, Hamilton or other places, and sometimes they get ahead of those firms, and sometimes they come out second best.

Q.—What is the state of trade at the present time? A.—Pretty fair.

Q.—Is it in a more prosperous condition than it was at the corresponding period last year? A.—I think it is about the same; we are always busy at this season of the year.

Q.—Are there many men idle? A.—Not at the present time—a few.

Q.—Does the craft prefer an apprentice system? A.—They do.

Q.—Do they think it would benefit a boy in his future life if he were to be properly indentured and taught the trade thoroughly? A.—I think if a boy were indentured, and the master was compelled to teach him the trade thoroughly, it would be a great benefit to the apprentice. The way they teach a boy the business now is a detriment; in fact, they only employ him till he gets some knowledge of the business, and then he goes somewhere else in order to obtain journeyman's wages.

Q.—Are any women or boys employed at the trade in this city? A.—I believe there are ten females employed at the printing business.

Q.—Do you know what wages they earn? A.—I have been informed that they average about \$3 a week.

Q.—You say you receive over the scale? A.—Yes.

Q.—Are there many men in London who receive over the scale in wages—that is, journeymen? A.—Yes; the wages all over the city average a little over 50 cents over the scale. The wages vary from \$9 to \$13 for journeymen—these are printers who do not occupy positions as foremen.

LONDON, January 12th, 1888.

JOHN HAYMAN, Builder and Contractor, London, called and sworn.

By Mr. HEAKES :—

Q.—Will you kindly tell the Commission what is the general condition of the men working in your business? A.—We have not any special conditions; we simply work away in the ordinary mode.

By the CHAIRMAN :—

Q.—How many men do you employ? A.—This time of the year only two or three, sometimes twenty-five or thirty.

By Mr. HEAKES :—

Q.—What I meant by the general condition of the trade was as to how long your men are employed, and what are their average earnings? A.—The average earnings of a bricklayer may run at the present rate of wages from \$400 to \$500 a year. Some will come about \$400, and others will make up as high as \$500.

Q.—This \$400 will be about the average? A.—Yes; I believe so.

Q.—How many days' work would that represent? A.—We pay 33½ cents per hour. In the winter time we can do but very little, especially in a city like London. The buildings are light here, and work is almost shut down in winter time.

Q.—I suppose the demand for labor is very light for four or five months in the year? A.—Yes; for four months anyway.

Q.—Is there any other employment to which the men can turn in the slack season? A.—Not for bricklayers; they must live out of their own business, or it is no good to them, for there is a supply of laboring men, who do not receive so much wages.

Q.—Are the men generally satisfied with the state of the trade? A.—I believe our bricklayers are very well satisfied at the present time. We had a strike, but I believe they are well satisfied on the whole; I have had no complaints.

Q.—How long is it since that strike occurred? A.—It was in June last; I believe it was on the 1st of June the strike occurred.

Q.—Can you tell us just how that strike was terminated? A.—By paying the money.

Q.—Was there any arbitration? A.—There was no arbitration; the parties would not have any.

By the CHAIRMAN :—

Q.—Who would not have any? A.—The bosses offered to meet the men, but they would not arbitrate at all.

By Mr. HEAKES :—

Q.—In your opinion, what is the fairest mode of settling trade disputes? A.—By arbitration; all disputes, I believe, should be settled in that way.

Q.—Would you favor a law compelling parties to disputes to go to arbitration? A.—I do not know that; I think I would hardly enforce a thing of that kind.

Q.—For instance, we will suppose that you are very busy here, and that the men take advantage of the busy season to strike. Would it be for the benefit of the employers if they could compel the men to arbitrate? A.—It would be; but their

rules will not allow them to do so without giving due notice. We got notice two or three months ahead last spring that when the time came the men would demand the pay. I, for one, thought we had better pay it. We held out for a few weeks, and I was one of the first to pay the increased rate. We could not stop our building, anyway.

By Mr. McLEAN:—

Q.—The laborers were also out on strike? A.—Yes; at the same time.

Q.—How was their difficulty settled? A.—We gave a slight advance to the best men and the rest worked about the same as before.

Q.—Did they offer to arbitrate? A.—There was no arbitration offered, I believe, on either side; I do not remember any. We were decided that we could not pay the demands of the bricklayers' laborers on account of other laboring men asking much lower, and because there were lots of men; and so it would not be satisfactory to the public in any way to give a general advance.

Q.—What wages do you pay to laboring men in your trade? A.—Eighteen cents per hour.

Q.—For nine hours? A.—Yes; for nine hours.

Q.—Are there any laborers who are employed in your trade who are getting more than that rate? A.—Yes, there are a few odd men who get 20 cents, but they are almost mechanics; they are good for other purposes and are handy men.

Q.—Have you ever given the subject of profit-sharing any consideration? A.—I have worked with a couple of other men, and have shared the profits; that was several years ago.

Q.—Do you think the system is one that can be carried out successfully? A.—No; I do not think much of it.

Q.—Do you not think that if the men were given an insight into the business of their employer they would be more careful in regard to their work? A.—Some would be; others have no business qualities to guide them. There is so much difference in men that you cannot regulate that matter very well.

Q.—About apprentices in the bricklaying business: do you take many of them on? A.—We are only allowed one at the time, that is, one to the whole number of men you employ. There is no boss in London who will be hiring a number of men for whom he will be allowed more than one apprentice. Our building trade is very light.

Q.—Are the apprentices indentured to the trade? A.—Yes; they have to be indentured. Where you have a son at work you are not allowed an apprentice. I am not allowed one, because I have a son employed.

Q.—Do you know anything about co-operative societies? A.—No.

Q.—Have you had any experience in them? A.—No experience.

Q.—Have you ever given the subject of technical education any consideration? A.—No. We just take the best man we can get and pay him his wage. That is about all we look after in the building trade.

By Mr. CLARKE:—

Q.—Why do you say the boys have to be indentured as apprentices? A.—It is necessary both for the boy, and to meet the rules of the bricklayers' union. They have to be indentured and to go up to the union, or they will not be allowed to work.

By Mr. FREED:—

Q.—Will you explain a little further, if you please, what are those laws that will not allow the men to arbitrate without notice having been given? A.—I am not acquainted with that.

Q.—I think you said the men would not or could not arbitrate without notice having been given? A.—They could not strike without notice. They could not strike last spring without giving notice, and notice was given.

Q.—There was no reason, then, why there was no arbitration, except that the men considered they had an absolute right or power on their side in that strike? A.—They considered they had given the builders due notice. I think that was the idea.

Q.—And after having given that notice they declined to arbitrate? A.—Yes.  
 Q.—Were you desirous to arbitrate? A.—The bosses were; we had meetings and appointed members to arbitrate. I do not know the reason why the members would not do it. Some of the men would not do it; perhaps their laws were such that they could not do it. I do not know what their laws are.

Q.—How many men must a master employ before he is permitted, to have a second apprentice? A.—I do not know.

Q.—How many men are allowed to one apprentice? A.—I do not know their laws. I only know that I have a son, and that they will not let me have an apprentice.

By Mr. ARMSTRONG:—

Q.—How long a notice is supposed to be given by the men for a rise in wages before they demand it? A.—I do not know that there is any special time.

Q.—You know there is a time? A.—There seems to be a time for that, because the men claimed at the time that they had given due notice and they had to stand by it.

Q.—Are the bosses organized? A.—Yes, some of them; quite a few.

Q.—As regards giving notice: is there a mutual understanding between employers and employes that each party shall give notice, either for a rise of wages or a reduction of wages? Is there an understanding between the men and the bosses to that effect? A.—There has been something of that kind. It may work around that way another year, in the future.

Q.—The men gave notice that at a certain time they would strike for a certain rate of wages? A.—Yes; they were receiving 25 cents an hour, and they claimed 33 cents an hour for nine hours.

Q.—Previous to giving notice, were they promised by the bosses a rise of wages at a certain time? A.—I think not; I do not know of any promises. The idea was to go on at the same wages.

Q.—Is there a building branch of the board of trade in this city? A.—Yes; there is.

Q.—Are the employers of bricklayers connected with that branch? A.—Yes.

Q.—In taking contracts is there any understanding at the building branch of board of trade between the bosses, so far as tendering for certain classes of work is concerned? A.—No; you tender as you like.

Q.—There is no understanding by the bosses that there shall be a uniform tendering on some things? A.—There may be on some things, but as a rule you tender openly.

Q.—You have a knowledge that an understanding has taken place on some things between the bosses? A.—Yes; that is, to discuss how to tender and how you would figure.

Q.—And compare figures? A.—Yes; and compare figures, and put in your tenders, but not to alter your tenders. If you open your tender you simply do so as you would in an architect's office. You see then who has bid and who has not; that is the only object of that.

Q.—Has there been an understanding that certain bosses would tender for certain works and certain bosses would not? A.—No; it is not to keep any one from tendering.

Q.—Has there been an understanding? A.—You can use your own judgment; you are not bound.

Q.—Has there been an understanding to that effect? A.—No.

Q.—An unwritten law? A.—No. You can figure at the time or any where. The only difference I have known would be that on a certain job you may meet and open tenders, the same as you would on this table, but the lowest man would take the job all the same. It is simply a protection to your branch that you are dealt with squarely. Sometimes your tender might be thrown out for some unjust cause.

Q.—Do I understand by that that when employers make up tenders they open them and show them to one another before they put in the tenders to the architect? A.—Yes; you can see them on the table. I have tabled my figures.

A.—And they have tabled theirs? A.—That is, in certain cases. If it was a heavy job, and we were to put a tender in the architect's office, and we were the lowest and had made a mistake, we would get the contract, and it might be the means of ruining any one in the trade, because if the contract were signed we must carry it out. There is no way of getting out of it.

Q.—There is no way of getting out of it? A.—Certainly, if a person had made a mistake—and no man will give up a job if he can carry it out at all—and the contract was signed, he would have to abide by it. He has the privilege of increasing his tender.

Q.—Or withdrawing it? A.—Yes, or withdrawing; that is the only benefit in meeting.

Q.—In a word, I understand they compare tenders before they are put in to the architect? A.—In some few cases they do.

By Mr. FREED:—

Q.—But after this comparison is made no figures are altered? A.—No.

Q.—Only a man may withdraw his tender if he has made a mistake? A.—Yes; it is for mutual protection.

By Mr. McLEAN:—

Q.—The society to which you belong is called Builders' Exchange? A.—Yes.

Q.—You are secretary, I believe? A.—No.

Q.—Were you secretary? A.—No.

Q.—Do members of the Builders' Exchange take in mechanics? A.—Yes; any one.

Q.—Hardware merchants? A.—Yes; any one who likes to join.

Q.—Coal men and men who sell lumber? A.—Yes.

Q.—How are the members elected to this society—by ballot? A.—Yes; by ballot.

Q.—Do the members of this society discriminate against other employers in this city? A.—No.

Q.—They do not make them pay for goods? For instance, I am a carpenter, and am taking a job, and I go to a planing mill or a lumber yard to get material: would I be asked to pay more for lumber than would the members of the Builders' Exchange? A.—I do not think you would be asked to pay more.

Q.—Would I be asked to pay more for laths? A.—No; I do not think you would. In fact, I have heard outside merchants say that they have bought for less; I do not know what they pay.

By the CHAIRMAN:—

Q.—Then, I understand you to say that there is no distinction made between union and non-union members of the exchange, or outside men? A.—No; there is no distinction.

By Mr. McLEAN:—

Q.—What is the idea of having hardware merchants belonging to an exchange connected with the building trade? A.—I do not know; it is for general business all through.

By Mr. FREED:—

Q.—In order to put this matter into a nut shell, I would ask you this question: Is there any rule or any understanding on the part of members of your association that they will not work in connection with persons who are not members of your association? A.—No.

Q.—There is no rule, and there is no understanding to that effect? A.—No; we work any where and at any time when we can get work to do, and we can get our money from responsible men.

By Mr. WALSH:—

Q.—Or from any one? A.—Yes; or from any one. The only difference is, you

can please yourself where you will get work, but that is the case whether you are a member of the union or not. Of course, if you do not choose to build you need not put in tenders.

Q.—Does it frequently happen that a man who is a carpenter takes a whole job in connection with a building, and goes to a bricklayer for a tender, and a plasterer for a tender, and a painter and plumber for tenders, the carpenter taking the whole job himself and being responsible for the entire work? A.—Yes.

Q.—Then the only point you have is, that if you do not find a man to be responsible you do not care to give him figures? A.—Yes; in such a case I do not care to give him figures.

Q.—Have you any advantage in being a member of the builders' exchange in buying material, as compared with an ordinary employer? A.—No; all the builders buy in the cheapest market. The only advantage we have is, that if we buy a large quantity at one time we can make a better bargain than if we buy in small quantities.

By Mr. ARMSTRONG :—

Q.—Is that the only advantage? A.—It is the only advantage I have ever seen.

By Mr. McLEAN :—

Q.—Are there any fines imposed on any of the members for doing anything in violation of the rules? A.—I suppose there may be.

By Mr. WALSH :—

Q.—Have you any rules for the imposition of fines? A.—I believe there is a rule that if you do not act the same as any other member you will be fined.

By Mr. ARMSTRONG :—

Q.—What would constitute an act that would cause a fine to be imposed? A.—By acting mean to any member, trying to beat him, or doing anything dishonest.

By Mr. WALSH :—

Q.—Your rules, I suppose, do not dictate in any shape or form how you should work tenders, or with whom you should tender, but that is left entirely to yourself? A.—There are no rules at all regulating your prices for bids. There is no written contract in that respect; you are a free agent to tender and do as you like, so long as you can get your pay.

Q.—Did not the lumber dealers belonging to the builders' exchange have some trouble with the city council on account of a contract for lumber for sidewalks? A.—Yes; lumbermen may do anything themselves, it must be remembered.

Q.—And you would not know anything about what they did? A.—Yes; no one in the exchange (I want this to be distinctly understood) acknowledges any transactions in the exchange. With respect to raising the price of a tender, or with drawing a tender and putting anything in it, in cases of that kind, I have heard statements often made about this matter—I want it to be distinctly understood that the exchange acknowledges nothing of that kind.

By Mr. WALSH :—

Q.—The exchange is no party to it? A.—Yes.

By Mr. ARMSTRONG :—

Q.—You mean square dealing among members of the exchange? A.—Suppose a number of bricklayers or plasterers met together, they would do things outside of the exchange. There would be nothing to prevent them from doing matters at their own trade, but the exchange acknowledges nothing of the kind. The reason the exchange was started was to talk over the best means to adopt towards men during a strike.

By Mr. McLEAN :—

Q.—When members of the exchange belonging to the bricklaying trade bring contracts into the exchange, do they pay 10 per cent, on those contracts? A.—There

are no contracts taken into any building exchange. I have known tenders shown in the exchange. You may talk about those matters yourselves. Half a dozen may meet together and show their prices for particular work. I have heard of a case where they have been increased. In one or two cases I have been present where the tender has been too low, and it has been raised to meet the requirements. There is a difference between a committee meeting or such a thing being done on the exchange. The exchange is clear on such matters.

Dr. OROHYATEKHA, London, called and sworn.

By Mr. FREED:—

Q.—You are connected with various benevolent and benefit societies, I believe?  
A.—Yes.

Q.—Have you had a pretty large knowledge of the working of these societies?  
A.—Yes; with both.

Q.—I mean the outside working? A.—With some I have had an intimate knowledge as to their working.

Q.—Are they both benevolent and benefit societies or are they either benevolent or benefit? A.—I think that with nearly all the societies with which I am associated the two purposes are combined. There are some, however, that are not so. They may partake of a benevolent character, but such is not part of their constitutional requirement. Most of the societies now combine both benevolence and benefit in their working.

Q.—Do the fees paid into these societies cover all the expenses of working the societies, including benevolences and payments which are obligatory, or are they separated—is the insurance branch separated from the ordinary workings of the society? A.—With the Independent Order of Foresters the insurance and the sick benefit and the other benefits are a part of the system. With the Oddfellows the insurance is a separate institution. What I mean is that an Oddfellow may be an Oddfellow and not be insured, partaking only of the sick benefit.

Q.—I suppose the sick benefit is an insurance to the extent of being a sick insurance? A.—Certainly.

Q.—I mean the payments are those which he may demand? A.—Yes.

Q.—As distinct from those which may be given to necessitous persons? A.—Yes.

Q.—How are the funds of this society invested? A.—Perhaps I had better speak of the society with which I am more intimately associated, the Independent Order of Foresters, because I know that society, and it is a type of the other institutions. The funds of the Independent Order of Foresters are, in the first place, deposited in the bank, subject to the check of the three officers, for the benefits and expenses in connection with the running of the order. The surplus funds, which are now very large, or which are getting large, are deposited in certain institutions which are selected by the Supreme Court, and some \$11,000, I think, are in the post office savings bank; \$25,000 in the Dominion savings bank here; \$55,000 in the Canadian Permanent; \$20,000 in the Ontario Investment Company debentures—not the Taylor Ontario Institution, but another loan society here; and \$4,000 in school debentures. These are called permanent deposits. They can be withdrawn only on the check of the whole seven members of the executive council, and only for the purpose of paying benefits. They are laid away in case of accident or an epidemic attacking the order, when, in such an event, the surplus funds would be available to pay the extra demands without calling for any extra assessment from the membership.

Q.—So that when those moneys are once invested as distinct from being deposited they cannot be withdrawn to meet any expense, except by this board of seven directors? A.—Except by order of the Supreme Court, which represents the body; but until such an order was passed the money could not be withdrawn for any purpose, except to pay benefits.

Q.—Are any large sums of money retained in the bank and not invested?  
A.—We generally aim to keep, from one month to another, about \$10,000 to enable us to pay death claims promptly.

Q.—On what authority may this money be drawn? A.—By the check of the three principal officers—the Supreme Chief Ranger, the Supreme Treasurer and the Secretary.

Q.—What security do they give to the body? A.—Guarantee bonds are given by the Supreme Treasurer and the Supreme Secretary.

Q.—Those bonds, of course, are considered ample to protect the body against any possible misuse of the funds? A.—Yes; and while the Order has an Indian for its Supreme Agent that is an additional protection. We have, we think, ample bonds to cover any deposits which are in what we call the open bank account.

Q.—Are the funds of the other bodies of which you have knowledge secured with equal care? A.—As a rule, the institutions take very great care in protecting the funds of the Order. All with which I am connected are, I believe, well protected.

Q.—Do the companies which do an insurance business, either in insuring the health of members or their lives, charge according to the probability of sickness or death, or a fixed rate, irrespective of age or probability of death? A.—In the Independent Order of Foresters the rate is based upon actuarial tables entirely.

Q.—So that really it is an insurance business, based on the principles which govern ordinary insurance companies? A.—Yes; there is this difference, however, that the expenses of management are with us less than 5 per cent. of the gross receipts, and as we have lodges extending everywhere, and thereby possess machinery by which we can collect from our membership over the whole Dominion, at little or no cost, our expenses are very small. An insurance company could never do the business upon the same basis of economy, and our salaries are not large. In this way we are enabled to lay by a reserve fund, without collecting, especially as insurance companies do, part of the premium for the purpose of creating a reserve fund, a part of such premium being to pay for the cost of risk and part for the management and expenses, and nearly one-half of the premium going to a reserve fund. We are accumulating a reserve fund, and in six and a-half years we have accumulated over \$18,000.

Q.—Does this reserve fund constitute a reserve fund in case, for example, the membership of the order should decline? Would it guarantee to those who had paid in their money that they would receive benefits? A.—Yes; I think so.

Q.—You have heard of societies in which the membership has fallen away, and those who have paid in have not been able to get anything? A.—I think our system is perfectly sound, financially speaking, and, at all events, our expenses in six and a half years' administration show that our estimates were pretty nearly correct, and instead of our membership being called upon in future to pay more, we expect, probably, by the next session of the Supreme Court, to declare a dividend. What I mean by that is, that we will return a part of the reserve fund to the members, so as to lessen the cost of the insurance during the particular year in which the dividend may be declared, our object being simply to accumulate so much of a reserve fund as will insure the stability of the order, and insure its safety in the event of an epidemic; and when we have accomplished that the surplus will be returned to the membership.

Q.—Have you a very large membership? A.—Not so very large; only 7,700, I think, on the 1st of January.

Q.—In what territory? A.—In the Dominion. We have a few members in the United States who have attached themselves to our order.

Q.—Are your money affairs connected with those of the United States? A.—Rather theirs are connected with ours. The Supreme Court is located here, and our constitution is so constructed that it can never be taken out of Canada, it making the Supreme Chief Ranger, the Supreme Secretary and the Treasurer, residents of Canada, as part of their qualification.

Q.—Are Canadian funds responsible for payment to United States members?  
A.—Yes; they send all their money over to us, and we pay their claims, the same as those of the members here.

Q.—Is there any of the body in the old country? A.—No; we expect, however, to extend our body to all civilized parts in the course of time. A.—We are growing slowly, but growing surely.

By Mr. CLARKE:—

Q.—Do you mean that the order in Canada is responsible for payments to members in the United States? A.—Yes; they send their contributions to us, and they are under our constitution.

By Mr. ARMSTRONG:—

Q.—Do you know anything about the sanitary condition of London? A.—I think it is about as good as that of any city on the continent.

Q.—Could there be improvements made in it? A.—Of course, there might be.

Q.—In what respect? A.—By the introduction of earth-closets, or the compulsory use of the city water as against well water, because you understand that the soil here is very porous and there is probably greater danger here than in any other city of the sewage contaminating the drinking water. Either the earth-closet system should be adopted—and it ought to be made compulsory by the Government in every city—or the city water should be used, and the wells used at present for drinking purposes should be close up. In that way there would be less typhoid fever and kindred diseases.

Q.—Would you prefer earth-closets to water-closets running into the sewers? A.—Yes.

Q.—Is that on account of sewer gas? A.—Yes; on account of the sewer gas. Defective plumbing is not an uncommon thing, even in London; but in earth-closets, with the use of certain disinfectants, you can make them absolutely safe from producing any injurious effect on health.

By Mr. FREED:—

Q.—As to the actual practice in this regard, is it within your knowledge that disinfectants are used, and are satisfactory? A.—No; I could not answer that question, because the earth-closet system is in its infancy as yet. Of course, there are dangers on the part of uneducated people, from having filthy earth-closets.

Q.—I suppose the theory of the earth-closet is perfect, and the theory of the water-closet is perfect, but the question is, which gives the best results in actual practice—is that so? A.—I am not conversant with any city which possesses a sufficient number of earth-closets, in use, to answer that question definitely. I am principally acquainted with earth-closets in use among educated people, and how it would act among the masses I do not yet know. Of course, there would have to be a system of inspection on the part of the authorities, so as to keep the earth-closets disinfected and clean.

Q.—The earth-closets, I understand, have been used at one of the schools here? A.—Yes.

Q.—Do you know how they have worked? A.—I do not know.

By Mr. ARMSTRONG:—

Q.—How is the ventilation of the public schools? A.—I have not given much attention to that, except in a general way, and I may say, as a rule, that it is exceedingly defective.

Q.—Are the rooms over-crowded? A.—Yes.

Q.—Do you mean there is not sufficient school accommodation? A.—Yes; in almost every school in the city there are 25 per cent. too many pupils in attendance for the accommodation.

Q.—Do you know anything about the taxes in London? A.—Yes; I have some knowledge of it.

Q.—How many mills on the dollar are collected? A.—I think the taxes are up to nearly 22 mills on the dollar.

By Mr. FREED :—

Q.—Does that cover the school taxes? A.—Yes.

Q.—Have you any more statements to make to the Commission? A.—I would like to call attention to the question of the Government providing some means for investigating the funds of these societies. With us, it is getting to be a matter of embarrassment, because it is of very great importance that these funds, which belong, as a rule, to workingmen, which are funds accumulated to pay benefits to workingmen, should be safely invested. It has seemed to me that it would greatly benefit the working classes, the industrial classes, if the Government would receive the funds of those societies, and allow a certain rate of interest, making some general law or rule by which any society of this character having surplus funds could deposit such in the Post-Office Savings Bank.

Q.—Could not that be accomplished by the purchase of Government bonds? A.—Not with the same facility. Of course, you can sell the bonds, but you remember they have from fifteen to twenty years to run, and there is a premium upon them. I do not see why some such rule could not be established for receiving the funds of these societies. Take the Independent Order of Foresters, and you will have noticed that we divide our investments so that if any institution in which we have money goes to the ground we will lose only a small sum; but even such a system causes constant anxiety on the part of the executive.

By the CHAIRMAN :—

Q.—How about the Government Savings Bank receiving funds at the present time? A.—They will not accept more than a small sum. We tried to increase it.

By Mr. ARMSTRONG :—

Q.—What is your opinion with regard to Government supervision for benefit societies in Canada, as is done in England? A.—I think it would be a capital thing. It would certainly make the officers more careful; if it did not do so it would certainly not make them less careful, when they knew they would be called upon at the end of the year to render an account of their management under oath, and that the books would be opened to Government inspection. I think such would be a great benefit. Our Order has always expressed itself ready to accept Government supervision and to submit our work to the review and inspection of Government officers. We have nothing to conceal, and perhaps that is the reason we have been so successful.

By Mr. FREED :—

Q.—In regard to funds placed in the hands of the Government, as you suggest, would it be necessary to call such notes in on short notice? A.—No; these permanent funds are deposits that we are not likely to require, except in case of emergency, and therefore they could be well invested with the Government, and could lie there until needed, the interest from them going to the benefit of our membership.

Q.—Have you prepared any scheme, or thought out any scheme, by which that would be made practicable? A.—I think an amendment to the General Insurance Act, giving authority to benefit societies to deposit funds with the insurance department of the Government, would cover the ground. All we require is that the Government should accept from us our funds, and keep them until needed.

Q.—You need absolute security rather than a high rate of interest? A.—Yes; we are now getting on some of our deposits  $4\frac{1}{2}$  per cent.; on others 4 per cent. We would very much rather give all our funds to the Government and accept 4 per cent.

Q.—Of course, you are aware that the Government can borrow money at less than 4 per cent. now? A.—When you take into consideration the payments of commission to agents,  $3\frac{1}{2}$  per cent. will amount to nearly 4 per cent. This would be an extension of the National Policy—investing our money with the Government here and receiving interest for our members, instead of sending our money to the old country. It would be keeping our capital in the country and our interest also. The Dominion Government, I think, could well afford to pay  $\frac{1}{2}$  per cent. more for

such money. The workingmen, I repeat, get the principal advantages from such a society, and members who never think of saving a dollar are compelled, under our rules, to do so. The fraternal feature keeps them in the Order, even perhaps when they find it pretty hard to spare a dollar. When they are taken ill the Order takes care of them.

By Mr. FREED :—

Q.—Have you any other suggestions to volunteer? A.—Nothing, except that point with respect to the deposits. I am sure it would be regarded as a great boon by the members of the benevolent and benefit societies.

THOMAS GREEN, Carpenter and Builder, London, called and sworn.

By Mr. HEAKES :—

Q.—Are you a journeyman? A.—No; I am an employer.

Q.—What wages do carpenters earn in London? A.—From \$1.75 to \$2 a day.

Q.—What are the hours of labor here? A.—Nine hours a day.

Q.—Do the men work six days in the week? A.—Yes; on Saturday we quit at five o'clock, so they only work eight and a-half hours that day, that is, except in winter time, when we work only eight hours. The men are working eight hours now.

Q.—What will be the average time during the year when the men can work in London? A.—It depends on the quality of the workingmen. Good men work the year round; poor ones work less.

Q.—What would be the utmost a man would earn in the year at \$2 a day, allowing for short time in the winter, and holidays? A.—Some \$400 or \$500. We have had men make only \$300 in the year, but that is very seldom.

Q.—Do you mean 300 days of ten hours? A.—Three hundred days, at \$1.50 a day, would be \$450.

Q.—I want to get at the utmost a man could earn, working every day in the year lawful to work, and deducting short time in winter. Could a man work more than forty-two weeks? A.—As I have said, the best workmen will work the year round—say, fifty weeks in the year. For, say a couple of weeks or a week and a-half at Christmas, we do not work in the shop. Of course, an inferior class of workmen has to lay off in a dull time. Any kind of a man can get \$1.50 a day now. I would say that on an average men receive \$1.75 a day of nine hours—18½ cents or 20 cents an hour—and some get a great deal more—\$2 a day.

Q.—As a rule, are journeymen carpenters here prosperous? A.—As a rule journeymen are not very badly off—that is the best of them; there are some badly enough off.

Q.—Do they manage to make both ends meet and pay their way? A.—They do, but it takes a long series of years to lay by much money. If a man gets a family about him and rents a house it is pretty up-hill work. He has got to live very economically. We have men who have been working twenty years and have never been worth any thing, while others have got homes of their own.

Q.—Are carpenters in this city organized at all? A.—Yes; they have an organization.

Q.—Does their organization interfere with employers to any extent? A.—No; except in the case of strikes.

Q.—Have they been out on strike here lately? A.—Yes; a year or two ago they were.

Q.—What in your opinion, would be the best means to settle disputes between employers and their men? A.—I do not know; that is rather a difficult question to answer.

Q.—Have you ever given the subject of arbitration any attention? A.—No; I have heard of it being adopted in other places, but it has not been done here. Disputes here have generally been settled by deputations from each party.

Q.—Do you think it is practicable to settle disputes by means of arbitration?  
A.—I should think it would be.

Q.—Do you know anything of the operation of the Mechanics' Lien Law? A.—I have not had much to do with it, very little. There is a lien law here, but it has not been much used. I think there is a lien that builders can put on, but I do not think I have ever put a lien on a building. I have threatened them.

Q.—Then you cannot tell us whether, in your opinion, a lien law is a sufficient protection to a man or not? A.—I could not; I do not know anything about the merits of it.

By Mr. FREED :—

Q.—Do you know whether, if journeymen carpenters were unable to get their wages they could apply that law? A.—I do not know.

Q.—Do you know of any journeymen carpenters who have been unable to get their wages? A.—Except by the lien law. This fall there have been failures, and through the lien law the men have been able to get their wages. Their claim, however, can only go back thirty days; some claims have run over that time and they have lost the balance.

Q.—Do you know if the law gives them sufficient protection if they are vigilant?  
A.—The fact is, it is the rule to pay a man up every week, and it is the best way, but some employers, of course, get behind and do not do it.

By the CHAIRMAN :—

Q.—When a laboring man's wages get two weeks behind, I suppose he can make use of the lien law? A.—Yes; that might be done, but the man would, no doubt, lose his situation. It is not always advisable to do so.

By Mr. FREED :—

Q.—When your men work short time do they get their wages? A.—They are paid by the hour now.

Q.—I believe the rates range from 18½ cents to 20 cents an hour? A.—Some get as high as 25 cents per hour; 19 and 20 cents is about the average.

By Mr. ARMSTRONG :—

Q.—Have the employers in this city a standard scales of wages to go by?  
A.—No more than what is recognized by the trade.

Q.—What do they make as a standard? A.—Say, 19 or 20 cents.

By Mr. McLEAN :—

Q.—What was the cause of the strike of the carpenters this summer? A.—A year or two ago they wanted an advance and said they would work nine hours for the same pay as they were getting for ten hours. They struck for that and it was granted.

Q.—Did they get what they struck for? A.—Yes; I consider the carpenters about the worst paid mechanics in the place; bricklayers get a great deal better wages, and plasterers are better paid.

Q.—What do you think is the reason? A.—The trade is run down, and the men have not the organization the other trades possess. Bricklayers get as high as 30 cents or 33 cents per hour.

By Mr. FREED :—

Q.—They cannot work so long during the year? A.—Certainly; but they do not require any tools.

By Mr. HEAKES :—

Q.—Have you ever calculated how much a kit of tools costs a carpenter, and how much it costs him to keep his tools in order? A.—When I was a journeyman, myself, it cost me \$20 a year. Some men will have kits worth \$100, while other men will have kits not worth \$20, and perhaps the man with the \$100 kit gets 5 cents per hour more than the poor hand.

Q.—He can do better work with his tools, I suppose? A.—Yes; and he will be a better workman.

By Mr. GIBSON:—

Q.—How is it that the carpenters are so poorly paid? Is it because the labor market is overstocked? A.—It is not overstocked with good men, but there are a great many poor carpenters.

By Mr. ARMSTRONG:—

Q.—What are known as saw-and-hatchet mechanics? A.—Yes; perhaps you come to my shop and do not want to pay much to have a job done, and in such a case I send a poor man. The other trades, I say, have strong organizations. You cannot get a bricklayer or plasterer without paying well. They have got their societies, and they stick together better than the carpenters do.

By Mr. GIBSON:—

Q.—Do you believe organization is a benefit to workingmen? A.—I think so. Sometimes it is good for other people, too.

By Mr. ARMSTRONG:—

Q.—Are apprentices to the carpentering business legally bound to remain with their employer for a certain number of years? A.—No.

Q.—Would not the indenturing of apprentices have the tendency of turning them out better mechanics at the end of their term? A.—I should think so. We have been in business here a little over thirty years and we have not had any boy apprenticed for over twenty years.

Q.—Are the men in favor of the indenturing of apprentices to employers? A.—They are not indentured. You cannot control them, and things have become kind of loose in that respect, all edges and points. It would be better for the boy to be indentured to his employer, because it would compel him to stay and learn the trade.

By Mr. CARSON:—

Q.—Do you never ask boys if they desire to be indentured to you as apprentices? A.—I would not have a boy; sometimes we take one under instructions for a year or two at the business, but we have not got one boy in the place now.

By the CHAIRMAN:—

Q.—A previous witness has stated that there was a difficulty about indenturing boys, because they would often run away. Do you find that to be the case? A.—We had some run away; they went to Detroit on an excursion and remained there. If they were indentured we could arrest them, of course, if they returned.

By Mr. ARMSTRONG:—

Q.—Does not the increase of machinery in the carpentering trade prevent, to a great extent, young men from learning it thoroughly? A.—I suppose it does; I have no doubt it does. Learning the trade now is different to learning it when I was indentured.

Q.—For what reason? A.—On account of the machinery. When I went to the trade, everything was done by hand.

Q.—Is there more stability in carpentering work done by hand than when it is done by machinery? A.—No; I think it is just as strong when made by machinery as when made by hand, if men take the time to do it. You can even make it better by machinery, unless you are very particular in working by hand.

By Mr. CARSON:—

Q.—Has not the introduction of machinery in the carpentering trade made the work much less laborious? A.—Yes; very much so.

By Mr. ARMSTRONG:—

Q.—Has it not, at the same time, decreased wages? A.—No; because wages have risen all over the country. It formerly took a good man to get over \$1 a day.

By the CHAIRMAN:—

Q.—When did that state of things exist? A.—About thirty or forty years ago.

By Mr. FRED:—

Q.—Those poor mechanics of whom you spoke: are they Canadians or immigrants? A.—They are Canadians as a rule.

Q.—Are they poor mechanics because they have not received sufficient instruction in their trade? A.—Very often because they have not received sufficient instruction; sometimes they are not as intelligent as they might be, but generally the difficulty arises from lack of instruction. You get some very poor Englishmen coming here as mechanics. As a rule, we get better mechanics from Scotland than England as immigrants. We also get some very poor men from Ireland.

By Mr. McLEAN:—

Q.—Do you belong to the Builders' Exchange? A.—Yes.

Q.—Do members belonging to the exchange refuse to do work for builders who are not members? A.—I do not think so.

Q.—If I was a building carpenter, and wanted some doors run through, and I took them to your place to be done, would you do the work? A.—Yes.

Q.—You would do the work as cheaply as you would for members of the Builders' Exchange? A.—We have never discriminated yet; I have never done so: but I hold this: if you do not belong to the Builders' Exchange you have not the right to favoritism as members would have, if I was dealing with you; one belongs to the exchange and the other does not; I would make it a point to deal with the man who supports my institution. You call that boycotting, I believe. I will work, however, for any man who brings stuff to me.

Q.—Can people outside of the exchange buy lumber as cheaply as members? A.—It is in this way: we have an agreement among ourselves to this effect: by an arrangement with the lumbermen our ordinary accounts are monthly, and the builders who are members of the exchange get 3 per cent. off, and 2 per cent. for cash. They are, I say, monthly accounts, and if you bring in your bill to me at the end of the month for, say, \$100, and I pay you cash, I expect you to take 5 per cent. off. I suppose you can do the same in any store in town, and obtain even more than 5 per cent. off for monthly payments.

Q.—Do you compare contracts before you hand them into the architects? A.—No.

Q.—Or to lumber dealers? A.—I do not think so.

By Mr. ARMSTRONG:—

Q.—Do you think it has been done by any builders? A.—I think it has been done in the bricklaying trade. It has been done, so far as I understand the matter. Suppose we are all contracting for bricklaying work, and we have made up our tenders; we afterwards meet here and show our hands. If there is a man whose tender is very much too low we raise him up. He still, perhaps, gets the job. The amount we raise him up is paid into a general fund, and at the expiration of the season it is divided. The contractor does his job for the same amount as he contracted.

By Mr. CLARKE:—

Q.—He does not get the benefit of the rise? A.—No.

By Mr. GIBSON:—

Q.—It is the consumer that saves it? A.—The man who is getting the job done. The general trouble is, that the man takes a job too low, and some people get the better of the builders in that way. For instance, a man is building a house, and he gets a tender 20 per cent. lower than the work can be done, and the builder is induced to go ahead and put up the house, and he only gets the benefit of it. Some make a practice of that work, and we, as builders, think there is too much sharp practice going on.

By Mr. McLEAN:—

Q.—If I were a carpenter and took a contract to build a house, and wanted the plastering done, and I was not a member of the Builders' Exchange, could I get the plastering done by a member of the exchange if I was not a member? A.—That has been blocked.

Q.—Why is that? A.—It is not for me to say why it is.

Q.—Is there any fine in connection with the matter? A.—That belongs to another trade; I am not a plasterer.

Q.—Would the Builders' Exchange sanction such a thing? A.—The exchange has nothing to do with it. The exchange is not supposed to know what is done by the different members; it has nothing to do with it.

By Mr. ARMSTRONG:—

Q.—You have stated that when a contractor tenders at a low price and the majority of those in the trade consider it too low they raise it up to what they think the work is worth? A.—As high as it will stand. Suppose there are three tenders, and one is too low. They raise you to the amount of the tender above you and the difference is paid into a general fund.

Q.—And the owner of the property is compelled to pay the price to which it is raised? A.—Yes; but he does not get the tender until after it is raised.

Q.—You do this before you put the tenders into the architect's hands? A.—Yes; we raise it before it is put in.

Q.—And the difference is divided? A.—Yes; at the end of the season; that is as I understand it.

By Mr. McLEAN:—

Q.—Has the factory inspector been through your establishment? A.—Not that I know of; I have not heard of anyone coming there.

Q.—I suppose your machinery is all properly protected? A.—So far as we know; but it is no more protected than we thought necessary. I know no particular law about the matter.

Q.—Are there any boys or unskilled workmen running machines with you? A.—No; I have not got any boys. We sometimes have a young fellow carrying away boards from the planer, but he does not run the machine.

Q.—Do I understand you to say there are no fines in connection with the Builders' Exchange? A.—There are no fines.

Q.—Will contractors put 20 per cent. on the contract prices after they have figured up the amount? A.—Some have different methods of doing. Each makes his tender up according to his own judgment; you may make it up to be on a certain percentage and others will have their own method of doing it. There is no showing up prices among carpenters and making comparisons.

S. M. HODGINS, Cigarmaker, Stratford, called and sworn.

By Mr. McLEAN:—

Q.—How long did you live in London? A.—I was residing here some time ago.

Q.—How long ago is that? A.—I have now been in London for thirty years.

Q.—Have you worked in London all that time? A.—No; not all the time. I served my apprenticeship here, and I have been away and back again.

Q.—How long have you worked at your trade here? A.—I have worked at the trade for twenty years.

Q.—What do cigarmakers receive in this town? A.—There is no bill of prices here.

Q.—They get just whatever they can? A.—Whatever they can get. We had a bill of prices, but there is nobody working on it; in fact, the masters would not employ any men belonging to our society.

Q.—Why will they not employ anybody belonging to your society? A.—We were black-listed some years ago; I am not certain of the date, but I think it was in September, 1882. At that time each shop was paying a different price, and the boys were all complaining that some other employer was getting his cigars made cheaper, and they were arguing that something must be done in the matter. We appointed a committee to wait on each employer, and when they went to arbitrate with them in the morning the men found the doors locked and their tools out in the hall. The masters might call it a strike, but it was a lock-out. Our intention was not to strike at all.

Q.—You have spoken about a black list? A.—Yes; I will give you information about that.

Q.—Is that the reason you are not working in London now? A.—Yes; some time after that, I think a week or so, the bosses caused a paragraph to be inserted in the London papers, stating that those people who had been working for them were a lot of robbers, and so forth, and I believe they pledged themselves under a bond—I do not know the amount exactly—not to employ those men for a term of three years. There were then some seventy or eighty men scattered from Maine to Oregon, and I do not suppose there are three in London to-day.

By Mr. CLARKE:—

Q.—Did those seventy or eighty men belong here at that time? A.—Yes; the majority of them were citizens; a few were from other places.

By Mr. McLEAN:—

Q.—Did you ever work for Mr. Rose? A.—Yes.

Q.—Did he put the men out? A.—Mr. Rose undertook to run a union shop in this city. I was working away from home, and I came here to see my family, and he offered me a job. He said he was running a strictly union shop and he was going to see how it would work. He ran it for a while and then came to the conclusion one day that there was no money in it. He came to the shop and asked a portion of the men if they would work at a reduced rate. Our bill was lower at that time than that of any other city in Canada, and still he asked a portion of the men to make cigars for \$1 a thousand less than they were then receiving.

Q.—Were cigars being made at any other shop in the town at less money than he was paying? A.—Yes; by child labor and by the aid of moulds. There was a cigar made that might appear to those not posted in the business to be equal in quality to the cigar we were making, but it certainly was not. He claimed that he could not compete with that class of cigars, and he wanted cigars made cheaper. There was no living in it for the men. We had no strike, as I have said. I will put the matter a little plainer. Our work is protected by a trade-mark, a blue label, and any manufacturer who complies with the requirements of our society is entitled to use that trade-mark to protect his goods from all inferior grades of cigars. Mr. Rose was doing first-rate when he was using our label; I do not think he can say so to-day. The principal object of the manufacturers in this city is to excel each other in cheapness, and it has been so for three or four years, until they have got it down to that pitch that there is no living in it for any one. I was talking to one of the manufacturers yesterday, and he told me he had lost more in bad debts, and so forth, last year, than he had made; or, in other words, more than the profits amounted to on the goods.

Q. Has the Scott Act done any harm to the cigar trade? A.—He claimed that the class of goods being made in London and, in fact, I know it to be the case, is the class of goods that were used in the towns where the Scott Act is now in force. He used to keep that cheap class of goods for those back country hotels. Certainly the Scott Act has shut that class of goods out, and that is why there is so much cheap trash on the market to-day, and this town is absolutely glutted with it. In all the cities where the Scott Act is in force there is a better class of goods demanded; the demand is, in fact, for a superior class of goods. You could not sell the cheap

trash to any respectable hotel in the city, but the country hotels formerly used them up in great shape, but they do not want them now.

By Mr. KERWIN :—

Q.—Is it true that Mr. Rose sends all his cuttings down to Quebec? A.—I think Mr. Rose uses as good a grade of tobacco for his cigars as any other manufacturer in the city. In every factory there is a certain amount of cuttings, and I believe they are generally exported to Germany.

By Mr. MCLEAN :—

Q.—Do you believe labor is cheaper in the Province of Quebec than it is here? A.—In Montreal the prices are higher than they pay in London. There is a place called Three Rivers where they make a cheap grade of cigars, and they are swamping the country with them.

Q.—Are the cigars made cheaper in Quebec than in this city? A.—No; they are not; not to my knowledge.

By the CHAIRMAN :—

Q.—Do you know the price paid in Quebec? A.—I am not clear on that matter. I think the manufacturers can get a cigar as cheap in this city, so far as labor is concerned; with respect to material, I am not prepared to say. I do not know what kind of material they handle in Three Rivers.

By Mr. MCLEAN :—

Q.—Do you know if the cuttings from wrappers are sent down to Quebec from here? A.—I have shipped cuttings myself to a man by the name of Isaacs, in Montreal, from Tilsonburg—fifteen cases of cuttings. What he does with them I do not know.

Q.—How many children are employed in this town in cigarmaking? A.—When they are working in full blast 150 people are sitting at cigar tables in this city. Out of that number there are only thirteen men.

Q.—How many women? A.—The balance are young women and children, boys and girls. A great many of them should be at school. Their wages run from \$1.50 up to \$6 or \$7 per week.

Q.—What is the age of the youngest of these children? A.—They run from twelve years up; about eleven or twelve is the youngest. They are secured by indenture, the majority of them are bound, and when their time is up they, of course, demand a little more pay, and then their day of usefulness is gone. They have got to skip. They go to Detroit, Chicago, and all over the country; some get work; some wind up in prison; more turn out prostitutes, and so forth.

By Mr. ARMSTRONG :—

Q.—At the time of the difficulty between the employers and the men you say there was a lock-out and not a strike? A.—Yes.

Q.—That the employers locked you out before you pushed your demand? A.—Yes.

Q.—In every shop in this town? A.—They would not interview the committee or hear them at all.

Q.—Did the men attempt to interview the masters? A.—Yes; we formed committees to wait on our employers,

Q.—They refused an interview? A.—Yes.

Q.—Did any men in your shop destroy material by plugging cigars? A.—There were two men, I believe—Mr. Rose blames two men for plugging. What they mean by that is making cigars so that they will not smoke. The men claimed that the stock was too wet to make into cigars, and they plugged a few of them. Of course, Mr. Rose had the privilege of sacking the men, provided they did not work properly.

Q.—If a complaint was made to your organization that some of its members did that thing, would the society take action against those men? A.—Yes; if it could be

proved, and it could be ascertained for a fact that they had wilfully destroyed material the society would take action upon it.

Q.—Was that complaint of the gentleman you mentioned ever brought formally before the union? A.—Yes.

Q.—Was there any investigation made? A.—There was.

Q.—What was the result of that investigation? A.—The result was that the men claimed that the stock was not in a fit condition to make into cigars; that it was too wet. It was to make a common cigar, and when the material is too wet it is liable to clog.

By Mr. McLEAN :—

Q.—Is it not very difficult to find out, when five or six men are working on a brand, who commits the action spoken of? A.—He had different men employed and he had, of course, the privilege of discharging them.

By Mr. ARMSTRONG :—

Q.—Did the men know of this complaint, that they had been charged with plugging cigars? A.—I do not suppose they could get out of it. It was shown to them. Each man's work is put on a separate rack, on which the man's name is placed, and so the names of the men were known.

Q.—That only happened with two men? A.—Yes.

Q.—If it had happened with more men he would have known of it? A.—Yes.

By Mr. McLEAN :—

Q.—Did any of those cigars go out of the factory? A.—I believe they did.

Q.—Were any sent back when they were sold? A.—I could not say. I was not in the shipping department, and I do not know anything about it.

By Mr. FREED :—

Q.—What object would the men have in spoiling work? A.—No object at all.

Q.—Had any dispute at that time broken out in regard to wages? A.—I admit it was on account of an insufficient training or knowledge of the business; but they are the kind into whose hands the manufacturers are turning the trade. They serve their trade with those manufacturers in the city who are turning them out by the car load.

Q.—Was any dispute in progress between the men and their employers at that time? A.—There was not.

Q.—Had any demand for increased wages been made? A.—No.

Q.—Had any demand been made by the employer for a reduction in wages? A.—Yes; there had been.

By Mr. McLEAN :—

Q.—Previous to the plugging of the cigars? A.—No.

Q.—Or at the time? A.—No.

By Mr. FREED :—

Q.—It was not made till after that? A.—It was not made till the boys refused the reduction. I suppose Mr. Rose is telling the truth, probably, when he says the goods were plugged. The complaint was not made till after he had found the men would not accede to his demand for a reduction. He immediately denounced the union and every body connected with it, and he said he was going to do the same as the rest of those people.

By Mr. McLEAN :—

Q.—Do you know anything about an iron-clad contract? A.—I do not think I am quite clear as to the meaning of that term.

Q.—That men employed should not belong to the union? A.—I am slightly acquainted with that sort of thing.

Q.—Tell us something about it? A.—After the trouble of 1883, a year or two, two or three of our men went and applied for work, and the bosses told them they would give them employment if they would get a permit signed by the last boss for whom they had worked. Then they had another scheme, so that if a child wanted to leave one shop and go to another—if he was discharged even—he would have to get a paper signed by his last employer before he could obtain employment in any other factory in the city. I suppose that is what you call iron-clad contracts.

Q.—That is black-listing? A.—Then I do not know what you mean by iron-clad contracts.

Q.—Did you ever sign an iron-clad or other contract, that you would not strike? A.—Two gentlemen offered me a job provided I should renounce the union.

Q.—Had you to sign anything? A.—I would have had to sign an agreement.

Q.—What did the agreement read like? A.—That I would never have anything more to do with a union and would never try to work up the union again, or build it up again, or do anything on behalf of it.

Q.—With respect to these girls of whom you were speaking: if they left their employer could they get a situation without stating where they worked last and obtaining a permit from their last employer? A.—No; they would have to have a paper from the last boss they worked with.—“You may give the bearer work if you need him,” and so forth; and the boss' name would be signed to it. I have seen two or three of those papers myself.

Q.—Does your union give any benefits? A.—Yes.

Q.—What are they? A.—If a man is sick he receives \$5 per week.

Q.—For how long? A.—For sixteen weeks.

Q.—Does his family get anything at death? A.—After that he receives \$3, and then it comes down to \$2 per week. At death the amount is according to the length of time he belonged to the institution; it runs from \$200 to \$500.

Q.—Do any females belong to your union? A.—Yes.

Q.—Do they get the same wages as the men? A.—Yes; but not in this city. We tried to get the females to join the union in this city. One or two joined and they were discharged immediately; they are in Detroit at the present time. That intimidated the balance and they would not come into the union.

Q.—In the factories in this city, are the water-closets for males and females separate? A.—No; not in the factory in which I work. Of course, I have not been in all of them, only in two or three.

Q.—Do you know anything about the truck system? A.—Yes.

Q.—Tell us what you know about it? A.—They ran the truck system for about three years in this city, but it is done away with now. Of course, all the men are gone, and I do not know what they are doing with the children. They used to compel men to board at certain houses and buy their goods at certain places, and they gave orders, and so on, but that has been done away with.

Q.—Has foreign contract labor ever been brought into competition with your labor? A.—Yes; at the time of the strike a car load of Pennsylvanian Germans was brought over here. They were landed at the station and marched up the street under police protection, not that we were going to hurt them.

Q.—Will you please tell us about this black-list; how did they black-list you? A.—It came out in the daily papers here. The bosses signed an agreement, a contract, under bonds, I think it was for \$300 or \$500, (I do not speak with certainty of the amount), that they would not employ for a term of three years any of the people locked out.

Q.—Did you ever try to get employment since? A.—My name is on the list, simply because I happened to belong to the union at the time.

Q.—After you were locked out from the shop did you try to get employment in the city? A.—Yes; I was offered work provided I would throw up the union and have nothing more to do with it, but I had paid my fees into the union for some years, and I was entitled to benefits, and I did not feel like going out.

Q.—Is there such a thing as fining employés where you work? A.—Yes.

Y.—For what do they fine them? A.—We have certain restrictions with respect to the use of the blue label. We have an apprenticeship system. It works something like this: There is one apprentice allowed to every factory and to every five men, and one for every additional five men. That is the way we run it, and if a master complies with these rules he is entitled to use the blue label for all work made in the factory.

Q.—I want to know for what employés are fined? A.—If the master complies with these rules we give him all the protection of the label; if he does not comply with them we do not give him the use of the label. There is a man in this city who got hold of some blue labels and who, at the same time, was not employing union men, but was employing children. He stole those labels or they came in to his possession. He used them upon a very inferior cigar. They got about in the retail business and that was an injury to our skill and our trade. We fined that man \$50. Sometime afterwards he wanted to start a union shop. We told him there was an old charge against him, that he had improperly used our labels and that this fine had been imposed on him. He said he would come up to the meeting and see us. He failed shortly afterwards and he did not amount to anything. That is the only man who was ever fined in this city.

Q.—Do you think if the duty on foreign cigars was raised it would greatly benefit the cigarmakers in this country? A.—I do not see any foreign cigars coming in. I believe the duty was raised lately.

Q.—Has it not been a benefit to the cigar business? A.—It has been a benefit to the cigar business, but the manufacturers claim that the internal revenue or excise duty is altogether too high. They claim they cannot get a raise on the goods they produce corresponding to the increase in the excise duty. It was formerly \$3 per thousand; it has been doubled, and is now \$6 per thousand.

By Mr. KERWIN:—

Q.—There was an assertion made here yesterday that all cigarmakers were inveterate drunkards. Is there any truth in that statement; do you know anything to the contrary? A.—I do. I know quite a number of sober, very good men, who are not inebriates or drunkards. Some take a glass of beer, some do not. There are quite a number of hard nuts running through the country, the same as there is in any other trade, and it is an easy matter to condemn all the men on that account. The masters always had the influence of the press in this city and we could never have a word to say. That statement to which you refer is false.

Q.—He said they were all inveterate drunkards? A.—It is not so.

By Mr. McLEAN:—

Q.—Was it on account of the black-list that you had to leave the city? A.—Yes.

Q.—Excepting for that you would be living here? A.—Yes. After we were locked out I got employment with a man named Clarke, now in Chicago. He started in a small way and used the blue label, and he had capital to employ nine men. He got all the hotels at the back of him. I was not there very long before two of the bosses wanted to call him into their meeting and get him to black-list me; they wanted him to discharge me. One gentleman went so far as to offer him a case of tobacco if he would discharge me and get me out of the city. Mr. Clarke went out of business and went to Chicago. I then received employment from Mr. Reynard, now dead. His son is in the city and he can corroborate what I say. I was one week as foreman when some of the men came there and said I was a dangerous person, an agitator, and so forth, which was false. They tried to get me discharged. I went away to Tilsonburg. I held a position as foreman, and we were running along very nicely when suddenly one day a telegram came from Ottawa stating that the duty on cigars was doubled from that day forward. We had a contract for 150,000 cigars, on which we would lose \$3 per thousand. The Government gave us the change too suddenly. We would not have lost anything except for the suddenness of the change, and it left us a very small margin on the contract. Of course, that was the reason

for closing the place down. The boss said the internal revenue was too high and he would close. That threw me out again. I come back to London, where my family were all the time. I went to three or four different establishments seeking work, believing that as the three years had expired the matter would be all right. But I found the same old thing. Several others came back and tried to get jobs, but the bosses said, "We cannot give you work if you belong to the union." They told us this straight and plump.

Q.—Does tenement-house work interfere with the work here? A.—No; not in Canada.

Q.—What are the sanitary arrangements of the factories in this city? A.—They are very good in all the factories in which I have worked.

By Mr. FREED :—

Q.—How long has the blue label been in use? A.—Quite a few years; about fifteen years, twelve years anyway.

Q.—What was the object of introducing the blue label? A.—To protect our work against inferior and cheaper goods.

Q.—I suppose that label is only given to manufacturers who employ union men? A.—Exactly; to manufacturers who will pay the prices of the union.

Q.—And the object is to discriminate and to influence the public to discriminate against the use of cigars which do not bear the blue label? A.—Yes.

Q.—Do union men work with non-union men in cigar shops? A.—Yes; in what they call open shops.

Q.—And in those open shops where union men are employed do they have the blue label? A.—No; union labels are only allowed in shops that employ union men and comply with the union requirements with respect to the apprentice system, and comply with the laws of the union. I may say that we are not allowed to strike except we are guaranteed the protection of the International Board of the International Union. No local union and no shop can strike unless their grievances are submitted to the board of arbitration, that is the executive board of the International union. They consider the grievance and the prices of living, and the wages paid, and whatever they decide is what we have to abide by, but if they say our case is not just to strike we have to go to work; if we do not do so they send members to take our place.

By Mr. FREED :—

Q.—Can the executive board order a strike if the local board is opposed to it? A.—Yes; but it is not customary to do so.

Q.—Has it ever been done? A.—Each local union has a perfect right to make its own by-laws to govern its own work, provided it does not infringe on the international constitution.

By Mr. McLEAN :—

Q.—Do you take a vote in the case before you go on a strike? A.—Yes.

Q.—What vote do you require; what has the vote to be—a two-thirds vote? A.—The local union cannot strike, no matter whether it takes a vote or not. They can move for a bill to strike, and if the majority of the meeting is in favor of a strike against a reduction or a lock-out, or anything of that kind, they send their grievance to the executive board, which considers them and sends them the results of the meeting, whether they stand by us or order us back to work.

Q.—Was that done in the case of the difficulties here? A.—Yes.

Q.—Your grievances were sent to the executive board and approved by them? A.—Yes; as soon as the doors were locked. In case of a strike the men have to submit to that line of action; in case of a lock-out, I believe, it is generally understood that the men are placed on the list for benefit.

Q.—What benefit do you get? A.—In case of a lock-out, \$5 per week.

Q.—For how many weeks? A.—Till the strike is through, but it does not generally last long. Our motto is to settle by arbitration; we do not approve of strikes. I am sorry I did not bring one of our constitutions with me; we are opposed to strikes; we do not strike unless we are pushed right to it; it is our last resort.

Q.—What kind of arbitration do you believe in? A.—In forming committees to act with the bosses—that is, to have interviews with the bosses.

Q.—That is local arbitration? A.—Yes; I think if the Government wish to help our trade the best thing they could do—that is, if they want to do it—is to reduce the excise duty to \$3 per thousand, and to look well into the Factory Act and enforce it. Also, to place the regulation with respect to apprentices and make the bosses teach them the trade thoroughly, and not send them out botches. There are a number of young men driving waggons and horses through the city who served their time at the cigar trade, and when their time was out they had to go at something else or leave town.

HENRY NICHOLS, G. T. R. Car Works, London, called and sworn.

By Mr. McLEAN:—

Q.—Do you work in the Grand Trunk car works? A.—Yes.

Q.—How long have you worked there? A.—Three years last April.

Q.—What wages does the company pay you? A.—At first I worked at 12 cents an hour as a laborer in the yard. When I had been there fourteen months they sent me to work in the upholsterers' shop; after I had been there nine months they raised me to 14 cents per hour.

Q.—How many hours a day do you work? A.—I have worked nine hours, and do so now. Before that we were working short time—five hours a day, all through the month of December.

Q.—Is that a general thing, to work five hours a day in winter? A.—No; but we have had to lose a portion of time every winter. Sometimes it has been that we have stopped work altogether about Christmas, and as a general thing we lose two weeks' time in June. Last June it was ordered that all hands were to lose two weeks' time, and the men were to arrange among themselves who were to go off the first week and who the second week.

Q.—Do you belong to the provident and insurance society of the company? A.—I do.

Q.—Was that compulsory on you? A.—It was.

Q.—Is it compulsory now? A.—I believe it is. Men who are fit to pass a medical examination must do so, according to the printed rules; otherwise they cannot be employed as a regular man.

Q.—Then if a man is not perfectly fit he cannot work in the shop? A.—I believe not. The company will not give him a permanent position, or if he is too old, over forty-five years. He is then too old to join the provident society, and in consequence of that he is not employed permanently.

Q.—Do the men object to belonging to that provident society? A.—Some do and some do not.

Q.—Do you object to belonging to it? A.—In one way I do, and in another way I do not. If you will allow me to give a reason I will state it. The reason is this: I think a man should be compelled to join the provident society, because I know that some men will not join any sick benefit or provident society unless they are compelled to do so; they will not join anything of that kind when they are well, so when they become sick they do not receive any benefit. It is that class of men for whom subscriptions are taken up by their fellow-workmen. That is the reason why I think that the joining should be compulsory, because the men then have to join and

that does away with the contribution and subscription list. There is a printed rule in the workshops that no subscriptions will be allowed to be taken up there. Formerly there was a subscription once a month, and it was found that some men imposed on their fellow workmen, and the company put a stop to it. For that reason I approve of the provident society being compulsory.

By Mr. HEAKES :—

Q.—What benefit do you derive from the provident society? A.—Three dollars per week and a doctor and medicine free.

Q.—And what is the amount of the insurance? A.—If I belong to class F it is \$250.

Q.—Class F is the lowest class? A.—Yes; it is what is called the 5 cent class. We pay 40 cents a month for the contribution and the remainder is for the insurance. We get a pay ticket once a month when we draw our wages, and it states the amount of insurance and sick pay deducted.

Q.—The company retains a certain amount? A.—Yes; out of \$19.95, 75 cents are deducted.

Q.—Does that include death benefit? A.—It includes both; 40 cents is our contribution to the sick benefit. That was the amount for December—the month when we were working five hours a day.

Q.—Can you tell us if there is much dissatisfaction among the men about the working of the provident society? A.—There is much dissatisfaction. Some men think they have not sufficient voice in the matter. So I have heard them express themselves.

Q.—How are the fees of the society managed? A.—They are managed entirely by the authorities at Montreal.

Q.—Have the men no voice in appointing directors? A.—Yes; we have—but not being a representative of the men in that matter, I cannot properly explain it; but we are allowed a director as representing the men.

By the CHAIRMAN :—

Q.—I suppose the constitution of the society explains everything? A.—Yes; and we have a book of rules.

By Mr. HEAKES :—

Q.—Would the men, so far as your knowledge goes, prefer to have this provident society optional with them, so that they could join it or not as they pleased? A.—So far as I know, I think they would prefer to have it optional, and still if they were all asked the question they might say different; but I have heard several express themselves that they would prefer to have it optional.

Q.—Do you know what reason they give for holding that opinion? A.—One reason was that two men were sick, and while they were sick they were discharged.

By the CHAIRMAN :—

Q.—Where was that? A.—At London East. One is living now; the other is dead. Those men were discharged while under medical treatment for certain complaints, and the rules distinctly said that if a man is pronounced by the doctor incurable he shall receive \$100. Then it states again in the rules that if you are discharged from the company's employ you are no longer a member of the provident society, that is to say, you will not be entitled to a sick benefit; but we can remain in the insurance branch, provided we pay the monthly contribution, with \$1.50 per year added. At the time those two men were discharged they were under medical treatment.

By Mr. HEAKES :—

Q.—Was their sickness caused by accident or simply by disease? A.—One was an ailment of the body; I think it was called by the doctor ulceration of the lungs; that was William Kingsworth; and the other, I think, was affected with paralysis on one side. Whether he has quite recovered or not I do not know.

Q.—Do you know what reasons were given for discharging those men—that is to say, for dismissing them with \$100 instead of allowing them to continue on the insurance society? A.—They were allowed to remain on the insurance society, because Kingsworth's widow received \$250 insurance from the society. But this \$100 I am speaking of is a separate affair.

Q.—They got that in lieu of sick benefit? A.—Yes; in lieu of sick benefit. When a man is found to be incurable, instead of keeping him on the sick-list they give him \$100, and he has no more claim on the fund.

Q.—He still has a claim on the insurance? A.—Yes.

Q.—Is there any complaint that money paid in for insurance purposes, and for benefit purposes, is in any way misapplied or improperly distributed? A.—I have not heard of any persons not getting their sick payments when they were honestly entitled to them. They had been paid all right. If they have any complaints to make they have their representative, James McGowen, to speak on the matter, and if he takes any writing he will do his duty to them. He is a machine-minder.

By Mr. HEAKES:—

Q.—Does the provident society supply you with free medical attendance and medicine? A.—It does.

Q.—Is it all included in the 40 cents a month? A.—Yes.

Q.—Is there anything you would like to tell the Commission that would be of interest in this enquiry? A.—There is one question that I think it right to speak of; it is the trouble that garnishees give sometimes. Certainly, it is some times owing to the men's own fault that garnishees are brought against them, but I think a good deal of that would be done away with if the wages were paid more frequently than once a month. I believe, however, the last case of garnisheeing I heard of was the man's own fault, for if he had tried he could have come to terms with those with whom he was dealing, and they would have given him a chance to pay the amount. But I repeat, that if we were paid more frequently than once a month a great deal of that would be stopped. I am glad to say, that I have not heard of any garnishees where I work; but, of course, the men do not tell me their business; I have heard of some. There was one man discharged a little while ago; he had many garnishees, and he would not try to come to terms; so it was his own fault.

Q.—Those garnishees would be by creditors of the men employed? A.—Yes.

Q.—When a garnishee is served on the company how much money belonging to the men will the company have on hand? A.—They have always in their possession ten days' wages or more, because, as you see by this ticket, the money I will draw to-morrow is due to me for a month of 1887. They make up their pay-sheet to the end of the month, and this pay, therefore, is to the end of December. What I am earning at the present day I will not receive till the 13th of February. The company pay on the 13th of each month, and they make up their books to the end of the month, so they always have, as I have said, ten days or more of our money in their possession from the time we join their service.

Q.—If the men were paid every two weeks the garnisheeing law would not affect them so much? A.—Not so much.

Q.—Have the railway men ever made any effort to get the day changed? A.—Some time ago papers were brought around by some of the men, asking the others to sign them, praying the company to grant fortnightly pays instead of monthly pays. We signed the papers and I believe the General Manager sent a very polite reply, stating that he would be quite willing to do it if he could oblige the men, but in the interests of the company he could not do so.

Q.—If a man is leaving the employment of the railway can he draw his money on the day he leaves? A.—I think not. There was one man, I remember, who left of his own accord, and he did not give notice that he was going to leave, or I presume he could have had his money. He did not get his money till some weeks afterwards, and then his wife received it by his order.

Q.—What notice is a man required to give on leaving the company's service in

order to enable him to draw his pay? A.—I do not know, for I have never heard it stated, and I never read any rules to that effect.

By the CHAIRMAN:—

Q.—He would not be paid before the regular pay day? A.—Yes.

By Mr. KERWIN:—

Q.—Do you belong to any co-operative association? A.—I do not.

Q.—Is there one in connection with the Grand Trunk Railway—such as the coal association? A.—In that respect there has been none. A committee was formed in the Grand Trunk shops, and it was arranged that anyone would be supplied with coal at so much per ton.

Q.—At how much per ton cheaper was the coal furnished than it would be supplied by ordinary dealers? A.—I paid \$16 odd for three tons; that included deliveries.

By the CHAIRMAN:—

Q.—What would that have cost you to buy it elsewhere? At that time, \$6.50 or \$6.75 a ton; it was \$6.50 when they took the order.

By Mr. McLEAN:—

Q.—Was it good coal? A.—Middling good coal; some seemed to get better coal than others. Others again complained that they did not get as much coal as they expected, and that there was too much dust with it. Others again complained that they got the coal, but it was not weighed, and that that was not exactly the thing; but this year, I believe, tickets are given out with the coal. I did not become a purchaser of coal this year. That is how they did last year, and the men said some years ago that they must have tickets with the coal. I heard one man complain that two men's coal was in one waggon, and nothing between the coal, and they asked each other how could the driver of the waggon tell what quantity to leave at the first man's place and what at the second man's place, but they did not get any answer.

Q.—Is wood the same way? A.—I have never bought any from the co-operative society.

Q.—Do they sell wood also? A.—Some of the men grumbled that the measure was short, and I believe the committee rectified that. I do not know of anything wrong in the wood dealing.

ROBERT SYMONS, Shoemaker, London, called and sworn.

By Mr. HEAKES:—

Q.—In what branch of the shoemaking trade are you employed? A.—I am not working in any particular branch just now. Recently I started to do a little business on my own account.

Q.—You are what they call a custom shoemaker, I believe? A.—Yes. When I was a journeyman I worked at custom work; I have also worked at factory work, and I am thoroughly acquainted with the shoemaking business in most of its departments.

Q.—Is there any custom work used in the Dominion? A.—Not very much.

Q.—It is principally factory work? A.—Yes; it is principally factory work that is sold, but there is not much factory work made here.

Q.—Comparing factory work with hand work, do you think the consumer obtains as good an article for his money in the former case? A.—No; he gets better value from custom work than he does from factory work.

Q.—Is that in proportion to the price paid? A.—Yes.

Q.—About what wages will a shoemaker earn in London? A.—The best wages I now pay to a week hand is \$9, that is for a journeyman, and very few get that. I do not know more than half a dozen, to my knowledge, in this city.

Q.—Have the wages of shoemakers increased during the last few years here?  
A.—The wages have steadily increased, but the work has decreased.

Q.—There is less work now, in your opinion? A.—Yes; in both departments, both factory and custom.

Q.—That is just speaking for London? A.—Yes; I am only acquainted with London.

Q.—Are there many women employed in the shoe factories here? A.—There are a few women; we have only one factory of any dimensions in this city.

Q.—Do you know anything of the working of the shoe factory here—that is, of the place were the women work? A.—I am not acquainted with it.

By Mr. McLEAN:—

Q.—Is the shoe work made in London sold in London? A.—Not very much.

Q.—How is that? A.—Because they cannot or do not produce as good an article for the same price as is produced in other towns. I mean that Toronto and Hamilton can produce a better article for the same money, or at all events they do so; the most of the work sold in London comes from the Lower Provinces, from Quebec and Montreal. Fully three-quarters of the work sold in London comes from Montreal and Quebec.

Q.—Why do the dealers purchase from Montreal and Quebec when they can obtain goods much nearer, at Hamilton or Toronto? A.—Because the goods can be produced so much cheaper at Quebec.

Q.—Cheaper in Montreal? A.—Yes.

Q.—Is that after the freight is paid? A.—Yes.

Q.—Do you know what wages are paid in Montreal to factory hands as compared with the factory here? A.—I do not, but I am acquainted with the reason why the goods can be produced cheaper.

Q.—State it? A.—The reason is, because the manufacturers use largely female and child labor.

By the CHAIRMAN:—

Q.—Where? in Quebec? A.—Yes; We all understand the system of working that prevails there, even although we have never been there. The system largely in vogue is this: a man or a boy will go to a factory with a cart and will bring away a load of work, and he will have his family, including his wife and children, all who are able to handle a tool, do some part of the work; in fact, it takes the whole family to make a man's wages. That is the reason why they can produce work so much cheaper than it can be produced in London.

Q.—Do you know what will be the earnings of a factory hand here in a week?  
A.—The average earnings of a shoemaker in the factory would not exceed \$7.50 per week; that is for journeymen, leaving out foremen, and for sewers; I mean a practical man, those who work. For such a man, I think, \$7.50 per week is a high average.

By Mr. FREED:—

Q.—Is that for men alone? A.—Yes.

By Mr. HEAKES:—

Q.—Have you any knowledge of the average that females earn? A.—I have not.

By Mr. McLEAN:—

Q.—Do you think it is largely the case that a manufacturer here can send down to Quebec and obtain boots and shoes cheaper than they can be produced here? A.—I have heard remarks to that effect, but I am not acquainted with the facts. Most of the retail merchants here buy direct and they use the factory here as a jobbing house, to fill up lines, and so on.

Q.—There is a smaller factory that does nothing but manufacture and does not buy?  
A.—There are about a dozen hands in that factory; they make a good class of work.

Q.—Does the larger factory close down for any length of time during the year?  
A.—Yes; generally twice a year, particularly about this time of year.

Q.—Are there any other causes for closing down other than taking stock? A.—That is their excuse; I think it is want of work. It is understood to be want of work, but their excuse is to take stock.

Q.—They close down in the summer time also? A.—Yes; for two weeks or a month in summer.

Q.—Do you belong to any workmen's co-operative society? A.—Yes; I am a member of the co-operative society.

Q.—Have you derived any benefit from it? A.—Only slightly, because, as I am situated now, it is not an advantage to do business in that direction, for I have to do very much by way of trade and barter. Otherwise, it would be a benefit to me.

Q.—You mean that that is owing to being a merchant in business? A.—Yes; it alters the circumstances; but I may say that the society is of considerable advantage to those who get their goods from it. I know that, because I am in a position to know it.

Q.—How much would a purchaser save on \$1 in buying goods? A.—He would save about 15 per cent.

Q.—And how much would he save on coal oil? A.—I have not figured up the percentage, but when coal oil was selling at 18 cents a gallon you could buy it from the co-operative store for 13 cents.

Q.—How much would he save on soap? A.—I am not in a position to say. I know in regard to coal oil, because I got our coal oil for the house from the store.

Q.—Does the co-operative society derive any benefit by buying boots and shoes? A.—Yes; and we allow every member 10 per cent. who deal with us.

By Mr. ARMSTRONG:—

Q.—Are there many first-class operatives in London on hand-work? A.—I am not in a position to know; there are some. One foreman employs three or four first-class hands; there are five with whom I am acquainted.

Q.—What kind of work in the Montreal and Quebec factories are the boys and girls engaged at? A.—The women can work at almost any kind of work; they can do some parts of it.

By Mr. McLEAN:—

Q.—Is there any practical journeyman shoemaker employed in any of the factories in this city? A.—Yes; there are quite a few of them.

Q.—Do they, as a general rule, when the factories take on any person as a shoemaker, ask him if he is a practical man, or has he to be a practical shoemaker to get employment in a factory? A.—No; it is not necessary. If he can work at any part of the business he can get a job if one is open; it is not required that he should be able to make a shoe. I desire to say a word or two in regard to school books. I read a statement made by the school inspector, or by the chairman of the school board, to the effect that he never knew a child to be sent home because he had not the necessary school books. I am in a position to state the contrary to be the case. I have known children, my own included, to be sent home from school because they had not the necessary school books, and I could produce numerous persons, if necessary, who have been so situated. It very often arises in this way: when a child is promoted to a higher class the parent is not always in a position to get a new set of books. Under such circumstances my children have more than once been sent home from school, and when we have sent a note, or request, to be allowed to get the books in a few days, and said that we would get them as soon as we were able to do so, the children have been threatened with punishment if they came again without the books, and they have been sent home. I do not know that this is largely the case, but I could enumerate several instances within my knowledge.

By Mr. ARMSTRONG:—

Q.—Do you think if the books were free the children would be kept longer at school by their parents? A.—Yes; I am positive of it. It is the purchasing of

books that is a heavy item, and, moreover, it happens so often that the books have to be changed. In my case it happened more than once, that as soon as we have bought a new book, costing, perhaps, 50 cents or 25 cents the child has been promoted. You are not aware that the child was to be promoted, and you must get new books. I believe it would be a great advantage to the working community to have the books for the schools provided free.

By Mr. FREED :—

Q.—Can you form any idea of the actual cost of books per annum for one child?  
A.—No; I have never thought the matter out in that way.

Q.—Would you rather have the books supplied to your children and pay a monthly fee, say 15 or 20 cents, than have the present condition continued? A.—I am not prepared to answer that question, because I do not know the actual cost. I am strongly of the opinion that it would be a great boon to the working people to have the books provided and paid for out of the school taxes.

Q.—Do you think the children would be as careful of their books under that system as they are at present? A.—More so, because the teachers would see to them.

Q.—Do the teachers now see that the children care for their books? A.—I do not think they do, from the way the books are treated. I do not know the exact cost of books; but it is quite an item.

Q.—How would you do if the child lost a book or destroyed it? Would the teacher have to supply it? A.—I could not say as to that; I should say they would have to make it good, because if the children were allowed to destroy the books they might do so to a considerable extent.

By Mr. ARMSTRONG :—

Q.—Would it not be possible to give the children books free for a certain time and compel the parents to replace them if destroyed? A.—I should think such a system would work well. The books could be supplied for at least a certain amount of time, and if they were destroyed or lost they could be made good by the parents. I think that would be fair and reasonable.

By Mr. McLEAN :—

Q.—Do you believe a female teacher should receive as high a salary as a male teacher; provided she is equally qualified? A.—Yes; and in all other branches of labor where a female does the same amount of work as a male she should receive the same remuneration. I see the question of drainage has been talked about before the Commission. There is one great difficulty in London in regard to drainage, and that is in the east end. I refer to the open sewer, which is known as Carling's creek.

By the CHAIRMAN :—

Q.—That is going into municipal affairs? A.—That is the cause of a great deal of sickness.

Q.—Have you complained to the mayor and common council? A.—Yes.

Q.—Have the mayor and council done anything? A.—Not that I am aware of.

Q.—Your council declined to attend to it? A.—I think their attention has been called to it.

Q.—We are here representing the Dominion Government, and you think the Dominion Government should be called upon to deal with the matter? A.—This city is not in a proper state of sanitation. The sewage runs into the creek, and it has a serious effect upon the people living along its course.

By Mr. FREED :—

Q.—What makes you think that this is a matter for the attention of the Dominion Government? A.—The question was put to a witness before the Commissions to the state of the drainage and sewerage of the city, and the reply was

given that it was satisfactory, whereas it is not. If it should go to the country that London is perfectly drained, which it is not, you give one phase of the story, making it appear that it is well drained, when it is not.

Q.—Have you a board of health in London? A.—I understand so.

Q.—Have these representations been made to the board of health? A.—Yes; frequently.

By the CHAIRMAN:—

Q.—Then, neither the board of health nor the mayor nor the local government will attend to it? A.—It remains open. I would not have mentioned the matter only it is not fair for a statement to be made before the Commission that is not true and correct, for such is the fact when officials come here and say the sewerage of the city is satisfactory. Another statement has been made in regard to the wages of laborers in the city. I observe that laborers have been represented as earning \$1.25 a day, as an average wage.

By Mr. HEAKES:—

Q.—The statement of the witness was, that the wages of corporation laborers was \$1.25 a day. A.—There are a good many men working for \$1 a day when they are employed; a large number have no work to do at all. I know quite a few who subsist on what grocers and provisions dealers will let them have.

By Mr. ARMSTRONG:—

Q.—Have you known any men in that position? A.—Yes.

Q.—Are they aware that there is a Commission in town to take that kind of evidence? A.—They are; there are, however, lots of men who are too timid to come up and give evidence, and there are others who are afraid they might lose something by doing so, and there are others again who have not much faith in the Commission. There are lots of causes which will keep men from coming here. I say there are men living on what grocers choose to let them have; and, of course, they will have to pay, if they ever pay for it, a big price for what they have obtained under such circumstances. They are getting goods with the hope of being able to earn sufficient money next summer to pay for them.

JAMES O'DONNELL, Carder and Spindler, London, called and sworn.

By Mr. HEAKES:—

Q.—You are engaged, I believe, in the manufacture of woollen goods? A.—I am assistant at that business.

Q.—How many men are engaged at that business here? A.—There is not a man at the present time. I am the only man at present employed in the city as a workman.

Q.—Is there not a great quantity of woollen goods manufactured here? A.—There is only one factory in the city.

Q.—What class of goods does that firm manufacture? A.—I have not been there for some time and I cannot say. I have a pretty good idea of the qualities of stocking yarns and blankets.

Q.—Do they get their wool in this neighborhood? A.—Principally; that is their coarse wool.

Q.—Do they go into fingering yarns? A.—They cannot do it.

Q.—Do they do a local trade? A.—Yes; a little wholesale, but the margin is so fine on the wholesale trade that they cannot do it.

Q.—Can you tell us anything of interest that would be useful to the Commission? A.—It is very difficult to say what the cause of the depression in the trade is; in my opinion it is over-production and the employment of cheap or child labor. That labor will scarcely go under what the Government might call child labor, for it is labor by

young people between the ages of sixteen and seventeen who work for child wages, and therefore I would call it child labor. One thing we want is a change in the system, so that no person from twelve to fourteen years should be allowed, either male or female, to be employed, to compete against men's labor.

Q.—Are many of those children employed? A.—I have not been in any of the large factories so as to be able to know; some time ago I saw an example of it. I worked at Wilby & Co.'s mill, near Toronto; they are in the woollen and shoddy business. With the machinery they have imported they can manufacture all kinds of shoddy, which, of course, hurts the honest manufacturer. Lots of children are employed in such occupations.

Q.—Injury is done, I suppose, by putting these boys and girls at working machines? A.—Yes; they will get good men to look after two or three machines, and they will employ boys to do the rest of the work. Not children, but boys—that is, young men.

Q.—What will be the earnings of a man in your business in the year? A.—I do not know. It is so long since I got work a year that I cannot tell you. If I work eight or nine months in the year I am doing well. We will average from \$7.50 to \$9 per week.

Q.—Will that be for nine months in the year? A.—Some get \$7.50 and some \$9. Instead of nine months the mill is more likely to run six months.

Q.—Is there any Sunday labor in connection with the woollen factory? A.—There is no Sunday labor, except in the shape of filling up the boilers.

By Mr. ARMSTRONG :—

Q.—Do you know the age at which children can go to work, according to the provincial Act? A.—At twelve, I think. I may state as a Knight of Labor that I want that law revised; I speak as a Knight of Labor when I say that.

Q.—The age at present is thirteen? A.—I think it should be more like seventeen; I will say fifteen years. At thirteen a boy is only a child, and has not half his senses.

Q.—What is the sanitary condition of your factory? A.—Not good.

Q.—Has it been visited by the Ontario inspector? A.—I do not know; I suppose so. A sub-inspector has been there. It is situated at an out-of-the-way place, and I do not suppose the inspector would come round personally.

Q.—Are you aware that he is sub-inspector? A.—Well, I think so; as there are three of them there must be a sub-inspector. There is a doctor appointed; he will act in one sense and will notify the inspector. They generally report to the general inspector.

Q.—Have you known the inspector to be in London? A.—Not to my knowledge.

Q.—Do you know who he is? A.—I do not; I know that a man came and inspected the place and I know that he was not the regular inspector but a medical man.

By Mr. HEAKES :—

Q.—Do you represent the workmen of London here to-night? A.—Not as a representative, only as a workman.

Q.—Can you give us the opinion of the workmen of this city on the question of arbitration? A.—It is favorable, I think.

Q.—Do you know in what shape they would prefer this arbitration? A.—I suppose by men being chosen by each party, each party thus having its own arbitrator.

Q.—Do you know if the men of this city would be favorable to a law compelling the settlement of disputes by arbitration in that way? A.—I believe they would be in favor of it. The workmen want the assisted immigration stopped.

Q.—How many immigrants do you have in London in the year? A.—I cannot tell you.

Q.—Are there many? A.—I could not give you figures.

Q.—Have you any idea whether there are a great many? A.—There are more or less at times.

Q.—Do they interfere materially with your business? A.—I could not say

directly that they do, but they do interfere with labor, for if I were out of work and wanted it they would certainly interfere with my chance.

By Mr. FREED :—

Q.—In that work? A.—They work at all lines, I suppose.

Q.—Do you know that immigrants are assisted. A.—I do not; I am aware that they were assisted. They should not receive any assistance, because there are too many men here now. Another matter is with respect to orphan children being brought out to Canada. We are against that, too.

By the CHAIRMAN :—

Q.—Where were you born? A.—Here.

Q.—Where did your ancestors come from—from Ireland? A.—Yes.

Q.—You do not want their successors to come out here? A.—No; I do not want any Irishmen here. With respect to those children: they may be nits, but they breed lice for us workingmen, and they make us scratch in course of time.

By Mr. ARMSTRONG :—

Q.—Do men come to this city who have received assisted passages as mechanics? A.—I do not say as mechanics.

Q.—Have those artisans received assisted passages to the best of your knowledge? A.—I am under the impression that they were assisted.

Q.—You cannot speak with certainty? A.—I thought the Commissioners might be aware of it. I claim that in the large shops girls are liable to become immoral; they hear immoral words.

Q.—Would you stop factories, and thereby stop immorality? A.—I would stop child labor in them.

Q.—Until they were sixteen or seventeen years old? A.—Yes; and then they would have a little judgment.

Q.—Are there such cases to your knowledge? A.—Not to my knowledge in London. They have two or three girls, but they are over fifteen.

By Mr. KERWIN :—

Q.—How many hours do the children work? A.—As many hours as the rest of us; ten hours is a day's work.

Q.—How much a day do those children receive? A.—Those I speak of are good-sized boys, and they receive from \$2.50 to \$3 per week.

Q.—Do they get paid every week? A.—Yes; some of them. In speaking of this, they do not get paid every week, that is, all hands.

Q.—Is that the highest rate of wages paid to boys, or is it the lowest? A.—It is about the highest.

Q.—Now, with respect to girls: do they get as much as boys for the same work? A.—Just about the same. It is generally piece-work they do. The young women are on piece-work.

By Mr. ARMSTRONG :—

Q.—Do you know the number of hours the children are allowed under the provincial Act to work in a factory? A.—I do not know how many children of the age of thirteen are working at present. I have only worked in small mills, and cannot speak of large ones.

Q.—Did you ever study the provincial Act? A.—I never saw it.

LONDON, January 13th, 1888.

A. W. PORTER, McCormick Manufacturing Co., London, called and sworn.

By Mr. ARMSTRONG:—

Q.—You manufacture crackers, biscuits, confectionery and everything in that line, I believe? A.—Yes.

Q.—How long have you been connected with the establishment of the McCormick Manufacturing Company in London; have you been connected with it since its organization? A.—Yes; before the organization of the company. I have been twenty-one years in this one concern.

Q.—Where do you find your market? A.—All over Canada.

Q.—Do you export any goods? A.—We do not export at all. I do not think any houses in our line do export.

Q.—How many hands do you employ? A.—We vary with the season; in busy times we increase the number of our hands to over 150, and then they run down, probably, to 125.

Q.—Is that both in the cracker and candy department? A.—That variation occurs principally in the candy department; the cracker department is much more uniform.

Q.—How many journeymen confectioners have you in your employ, on an average, the year round? A.—Really, I do not remember.

Q.—For what you would call a first-class man, what wages would you pay him per week? A.—A first-class confectioner is worth from \$15 to \$20 per week.

Q.—Have you got any journeymen who receive under \$15 a week? A.—Yes.

Q.—What is the lowest wages you give to skilled confectioners? A.—We have not any mechanics here, I think, under \$1.50 a day—that would be \$9 a week.

Q.—How many hours do those men work? A.—Nine and a-half hours a day, or a little more. We have a peculiar arrangement at our works; all the hands take only half an hour for dinner, and by that means they make three hours, and the company gives them the other two hours, and in that way we close at half-past twelve on Saturday. The real working hours should be ten hours, but we give them two hours out of the week.

Q.—During your busy season have you night work? A.—Yes.

Q.—How long do they work at night? A.—Till ten o'clock, with about twenty minutes for supper immediately after six.

Q.—Is it understood when the men receive only one-half an hour for dinner that they take their meals in the factory? A.—Yes; there is a good dining-room provided for them.

Q.—There is a dining-room for the purpose? A.—Yes; and also one for the girls separate; they are well heated by steam.

Q.—What is the highest rate of wages you pay your women? A.—A woman's wages run from \$2 to \$3 per week; little girls get the lowest amount.

Q.—Do you pay any of your girls under \$2 a week? A.—No; we do occasionally start a girl for less for two or three weeks, but we never pay any of our regular hands less. In fact, we do not pay any of them under \$2.

Q.—Do the girls work the same hours as the men? A.—Yes; the same hours.

Q.—Do they also come back in the busy season and work overtime? A.—Some of them do; we do not require all of them to stay.

Q.—At what branch of the confectionery business do you employ girls; are they employed in boxing? A.—A great many are employed in boxing, and a great deal of our confectionery is wrapped in wax papers. They do that work, and they roll chocolate drops, and so on. It is all light work.

Q.—Do you make your own paper boxes? A.—Not on the premises.

Q.—Do you get them in London? A.—Yes; there is a man who runs a box factory in London East, but we supply most of it.

Q.—Are any of your confectioners employed by piece-work? A.—None now; we have had them employed in that way.

Q.—Are the men paid weekly, fortnightly or monthly? A.—They are paid weekly—every Friday evening.

Q.—Do they prefer Friday evening to any other day in the week? A.—I think so. We did that in deference to the wishes of a good many of our work people; we changed the time from half-past twelve on Saturday to six o'clock on Friday evening.

Q.—In the confectionery department where the women work, are there separate conveniences for them? A.—Every convenience separate.

Q.—Distinct and separate? A.—Yes; distinct and separate, although they work together in common in the rooms.

Q.—In the cracker and cake department, what do you pay your baker per week? A.—The bakers run up pretty high at times. We have paid them as high as \$30 a week.

Q.—That is to a fancy cake baker, I suppose? A.—Not fancy, particularly, but to good men; and they will run in the neighborhood of from \$15 to \$20 per week.

Q.—For how many hours will they run—twenty hours? A.—Ten and a-half hours a day, but we shorten the number of hours in the week by the two we give them.

Q.—Do you pay your present baker \$30 per week? A.—We are not giving that now; the wages of bakers run from \$17 to \$18 per week to the best men now.

Q.—That is during the season you have work for them? A.—They work pretty steadily. In the past season they were not so steadily employed as in other seasons, but as a rule we have pretty steady work in our establishment.

Q.—Can you tell us the average number of bakers you employ? A.—We have about forty all told in our bake shop. There are about eighteen girls, and that would leave twenty-two men and boys.

Q.—What would be the average wages of the girls and boys in the baking department? A.—We take in boys in the bake shop at \$3.50 a week. They run from \$3.50 to \$4.50 and \$5.50 in three years.

By the CHAIRMAN:—

Q.—How old are they when you take them? A.—Seventeen or eighteen.

By Mr. ARMSTRONG:—

Q.—What is the average wages of the girls? A.—They make about \$2.50 a week. They work on piece-work, packing biscuits, and so on.

Q.—Have your bakers got night work? A.—No; they have not had any lately; we have not been sufficiently busy. They do not run nights at all in the factory, except during the exceedingly busy season. As a regular thing it is all day work.

Q.—Do they set up the sponge in the day time? A.—Yes; everything is done at day time.

Q.—Do you indenture your apprentices? A.—We do not.

Q.—Do you consider, at either branches of the business, a boy can become a competent journeyman in three years? A.—No; we do not.

Q.—What number of years is required for a boy to become a competent journeyman? A.—As a rule, we cannot get them competent in three years, but we cannot get them for a longer time; they really are not first-class journeymen in that time.

Q.—When they are out of their apprenticeship do you keep them as journeyman? A.—Frequently; but some of them go away.

Q.—Do you think, so far as your knowledge goes, that your men save money? A.—Yes; our men as a rule have been very successful; the men we have now have remained with us for a long time.

Q.—Have any of them got their own homes? A.—Yes; six or eight, ten or twelve of our own journeymen, live all in homes of their own, and a few have a little more.

Q.—Have you had any labor difficulty with your employés? A.—No; we never had.

Q.—Do they remain with you for any length of time? A.—Our foreman has been with us twenty-two years; other men seventeen and sixteen years, and so on like that. Our foreman candyman has been twenty years with us.

Q.—Is there any profit-sharing in your establishment with your men? A.—No; not outside of the company.

Q.—Is the sanitary condition of your whole establishment good? A.—Exceedingly so, I think.

Q.—Has the Ontario inspector been there? A.—Yes; he inspected the works very closely not a great while ago.

Q.—Did he speak to the men in connection with the business? A.—Yes; he spoke to quite a few as he was passing through; he spent a couple of hours going through the works; he was in twice, in fact.

Q.—Did he find every thing correct according to the Act? A.—Yes; he seemed to be very well pleased.

By Mr. FREED:—

Q.—Where do you buy your sugar—in Canada? A.—Yes; altogether.

Q.—Is it Canadian sugar or foreign sugar? A.—All Canadian.

Q.—Have you used foreign sugar? A.—Not for a good many years.

Q.—Why do you get Canadian sugar in preference to foreign sugar? A.—We cannot get foreign sugar at the same price, you might say. I understand there is some foreign sugar imported here, but we have not tried it. I cannot speak from a personal knowledge of it, but I do not think it would suit us, from what I have heard.

Q.—Do you know anything about the quality? A.—Not personally; I have not seen the samples. We are now expecting a line of samples from the old country.

Q.—Have you formerly used foreign sugar? A.—We used a good deal of foreign sugar in the past.

Q.—From what country did it come? A.—A great deal of the granulated came from the United States. We formerly used Dutch sugar, and got it from Liverpool.

Q.—Was it cane or beet sugar? A.—Cane sugar.

Q.—Did you ever use beet sugar? A.—Not knowing it to be beet sugar.

Q.—Would it suit your purpose? A.—I cannot answer that question for the reason that I indicate.

Q.—What flour do you use? A.—Principally Canadian flour; we also import flour.

Q.—If you import flour for what reason do you do so? A.—We like imported flour, and use a little of it. We can get a higher class of flour in the United States, as a rule, than we have in Canada.

Q.—Is it better than Manitoba flour? A.—Yes; Manitoba flour is not in our line. We do not use Manitoba flour.

Q.—You do not require as strong a flour? A.—No.

Q.—The strong flour is required only for bread, I believe? A.—Yes; only for bread.

Q.—What are the ages of the young girls in your employ? A.—We do not take any body under sixteen years.

Q.—Either a girl or boy? A.—Yes; I have made that a point for the past two years. I always ask them their ages, and I will not accept any one under sixteen.

Q.—Do they try to deceive you in regard to their ages? A.—Yes; I have found a few instances of that.

Q.—You require considerable strength in your employés of both sexes? A.—It very light work that the girls do; there is nothing hard about it.

Q.—At any rate, if you set up a standard of sixteen, you will hardly be so much deceived as to take any one under fourteen? A.—No; I should think not.

By Mr. ARMSTRONG :—

Q.—Are any crackers or biscuits imported? A.—Yes; I believe a small quantity is imported.

Q.—Of both? A.—Of both crackers and biscuits; they call them all crackers on the other side, in the United States.

Q.—Is confectionery imported, too? A.—Not to any extent.

Q.—Those goods imported in your line, could they be made in Canada? A.—Yes; in our establishment.

Q.—And of as good quality? A.—Yes; we think it is pretty good.

Q.—Does the imported article command as high a price as the domestic? A.—Yes.

Q.—Higher? A.—No; I do not think it is higher. They have to pay for some lines a little more; of course, some people have an idea that the imported article is better than the domestic?

Q.—Is it only a fancy on their part? A.—That is what we try to persuade them.

Q.—Do you export any of your goods to the North-West Territory? A.—Yes.

Q.—And to British Columbia? A.—Yes; we send some right through to Victoria and Nanaimo.

Q.—Is that trade increasing? A.—Yes; we have given more attention to it in the past years than ever before.

Q.—And I suppose you also send goods to the older Provinces? A.—Yes; and to the Maritime Provinces; we keep a traveller going through the Maritime Provinces.

Q.—Have you much competition in Ontario? A.—Yes; the competition is very high in our line now. We never had such competition as we had during the last year and we never had such low prices.

Q.—Do you use much machinery in your business? A.—Yes; we use a great deal of machinery.

Q.—Does the use of machinery decrease the demand for labor? A.—It has not with us. Our business has been growing, and when we were running without power we had not anything like the establishment or the business we have now.

By the CHAIRMAN :—

Q.—Machinery has enabled you to do a larger business? A.—Yes.

Q.—Do you think that without that you could possibly do it? A.—Without machinery we could not do the business we now do with machinery.

By Mr. ARMSTRONG :—

Q.—That is with the same number of hands? A.—I question whether we could do it at all.

By Mr. FREED :—

Q.—Could you compete with your rivals? A.—No.

By the CHAIRMAN :—

Q.—Nor with the United States? A.—No; nor with the manufacturers in Canada.

By Mr. ARMSTRONG :—

Q.—Has the use of machinery decreased the price of labor? A.—Not with us.

By Mr. FREED :—

Q.—How do the rates of wages now paid compare with the wages of former years? A.—They are rather higher in our trade than they were years ago; that prevails all through the different departments.

Q.—Is there a free library in London? A.—No.

Q.—Have you a mechanics' institute? A.—Yes.

Q.—Is there a good library attached to it? A.—There is a very good library.

Q.—Are there night schools in connection with it? A.—Yes; there is an art school in connection with it.

Q.—Is there any technical education given there? A.—I think so. I have heard a great deal about the mechanics' institute and the night classes.

Q.—You have given some attention to these subjects, I understand? A.—Not to the mechanics' institute. I have been more interested in exhibition matters for the last year or so.

By Mr. KERWIN :—

Q.—In the busy season, when you work at night, do you pay your employés extra? A.—Yes; we pay a good deal more for night work. They work three hours and forty minutes, instead of five hours, for a half day's pay.

Q.—Did they demand that, or did you give it to them voluntarily? A.—We gave it to them voluntarily.

Q.—Did you ever have any Sunday labor? A.—No; never in the works on Sunday. We do not run biscuit on Monday—that is hard biscuit; we turn out small stuff, on account of not working on Sunday.

Q.—What kind of goods are imported from the other side? A.—Sweet goods principally; goods that have to pay high duty, too.

Q.—I mean in the cracker line? A.—Yes; what we term sweet goods. It is our impression, and it is the impression of the trade generally, that those goods are sacrificed for this market. They are certainly entered at our custom houses at prices below the prices at which they are sold in the United States.

Q.—You have said in your evidence that those goods could be manufactured in Canada of as high quality. Is that correct? A.—I think so.

Q.—What, in your opinion, would be a preventive measure of the importation of those goods? A.—If they had to pay duty, the higher price would keep them out.

By Mr. CLARKE :—

Q.—Is there any detective service? A.—I do not know.

By Mr. FREED :—

Q.—Have you ever made any attempt to ascertain whether those goods are being appraised at their full value on being imported into Canada? A.—We have not made any definite enquiry into the matter, although we were thinking of doing so. If all those goods were entered at their regular values it would be impossible, with the present duties, to sell them in competition with our goods.

By Mr. ARMSTRONG :—

Q.—Do you sell any of your goods in New Brunswick? A.—Yes.

Q.—Are you able to compete with Rankins? A.—We have to do so. We send our goods right down to the Maritime Provinces and through to Prince Edward Island.

Q.—Did you make one of the large displays made by biscuit houses at the exhibition at St. John? A.—No; we never exhibited down there.

Q.—Do those exhibits do any good in advertising your products? A.—We have no means of knowing as to what kind of advertising medium such an exhibit really is. We have an idea that it is beneficial, but we have not any means of getting at it exactly.

JAMES BURNS, Manufacturer of Engines and Mill-work, London, called and sworn.

By Mr. ARMSTRONG :—

Q.—How many hands do you employ? A.—From sixty to seventy-five, and in some seasons one hundred.

Q.—Do you find your market all in Canada? A.—So far, we have done so.

Q.—Are engines the only product of your manufactory? A.—As well as engines we manufacture saw-mill machinery, shingle-mill machinery and a general line of engineering work.

Q.—How steadily are your men employed through the year? A.—We keep from fifty to sixty running all the year round.

Q.—Are all those skilled mechanics? A.—Mostly so.

Q.—What would be the wages of a skilled mechanic? A.—Our wages run from \$9 to \$10 or \$11 per week.

Q.—How many hours per week do the men work? A.—When on full time they work ten hours a day, sixty hours per week, except on Saturday, when we have one hour short, making fifty-nine hours a week.

Q.—Have you any apprentices at your work? A.—A very few.

Q.—At what age do you take them as apprentices? A.—We do not take them at less than eighteen years.

Q.—The work is heavy work, I believe? A.—Some of our work is heavy; our engine work is heavy work. We run in connection with our engine works a brass foundry and finishing workshop, where we employ ten or twelve hands.

Q.—Do the men in the brass foundry work by the piece or by the week? A.—By the week.

Q.—Are they paid weekly, fortnightly or monthly? A.—Fortnightly.

Q.—Do the men prefer any particular day of the week on which to be paid?

A.—I do not know that I am prepared to say what they prefer; we have always adopted Monday as pay day, that is Monday every two weeks, and we find it very satisfactory to the men.

Q.—At any time when a man wishes to leave, do you pay him in full at the end of two weeks? A.—Yes; we pay on Monday night for the previous week's work.

Q.—Has the market for your goods been increasing in the past five years, in your opinion? A.—In some lines it has been increasing; in some lines it has not been increasing, so far as we are concerned. We are not pushing some parts of our business as much as others.

Q.—Have the wages increased in the past ten years in your line of business, so far as your knowledge goes? A.—I do not think they have.

Q.—They have decreased? A.—No; I think they are just about the average standard wages.

Q.—Do you use much machinery? A.—A good deal, both wood-working machinery as well as brass-working machinery.

Q.—Who attend to those machines, men or boys? A.—Men have always charge of the machines.

Q.—Do you consider your machinery is properly guarded in order to prevent accidents? A.—Yes.

By the CHAIRMAN :—

Q.—Have you had the factory inspector here? A.—Yes.

Q.—What did he say? A.—We have never had any complaints made by the inspector, either insurance or otherwise.

Q.—Was your factory satisfactory to the inspector? A.—He expressed himself satisfied with us.

By Mr. ARMSTRONG :—

Q.—Do you find keen competition in your branch of business? A.—In some lines we do.

Q.—In what line do you find it most keen? A.—It has been most keen in threshing machines and portable engines.

Q.—Has there come into existence within the past few years improved machinery into your business? A.—Yes; very much so.

Q.—So far as your information goes, has the use of this improved machinery decreased or increased wages? A.—I do not know that it has changed the amount of wages at all, one way or the other. They seem to remain at about a standard.

Q.—Has the use of machinery decreased the demand for labor? A.—I cannot say that it has. There has been an increase in demand for the goods, so that the men

get just as much work to do with the improved machinery as they formerly had with the less improved machinery.

Q.—Are there any goods in your line imported from the United States? A.—Yes; some brass-work in certain lines.

Q.—Does any brass-work come up from the Maritime provinces? A.—I believe so, from McVieitty, of St. John. I understand he is canvassing this western part for his brass goods.

Q.—Could the brass goods imported be made in Canada? A.—Yes; I know of scarcely anything imported that could not be made here—some few articles, but very few, some of the higher grades of engines, indicators, perhaps, or something of that kind. They could all be made here, nevertheless.

Q.—Do you import any of the raw material? A.—We have imported our copper and tin.

Q.—Do you import any of your iron? A.—No; we have never ordered any importations of iron; we have bought through commission men here, except our boiler-plates and such work as that.

Q.—Do you import that from the United States? A.—No; from England.

Q.—From what part of the Dominion do you obtain most of the iron? A.—Our pig iron comes from Londonderry mostly; we have used almost exclusively Londonderry during the past two years.

Q.—Do you find that best suited for your purposes? A.—It suits our purpose as well as the best imported pig we can get. It makes a very fine casting; that is to say, the better qualities of Londonderry iron do.

Q.—To the best of your knowledge, do your men save money? A.—I think they do.

Q.—Have many of them their own homesteads? A.—Nearly all of our married men have their own homesteads.

Q.—So far as you know, they seem to live comfortably? A.—Yes; they do better than we do, sometimes.

Q.—Have you ever had any labor trouble with your men? A.—No; we never had any to speak of.

Q.—What happened, was it settled amicably between yourself and your employés? A.—Yes; we never had any trouble.

Q.—Are engines of the same class cheaper than they were a few years ago? A.—No; they seem to hold their prices fairly well as regards portable engines: Stationary engines are cheaper and there is a good deal of competition in that line, but we are not competing. In our portable engines we find prices hold up pretty well.

Q.—Do the employés in your establishment belong to any labor organization? A.—I believe they do—that is, many of them; I do not think all do—some do.

Q.—Some do and some do not, I suppose. Do they all work together? A.—It seems to be a rule with our men that they submit to our rules and ask no questions, go on and do their work, or, otherwise, quit. We have no troubles on that account.

Q.—You have never made any objection to that? A.—No; we have never made any objection. We have never made any point as to whether the men were union or non-union, and consequently we have been free from trouble.

Q.—Are manufacturers in your line organized with a view to look after their own interests? A.—No; we have no organization—it is each one for himself, as the saying is.

By Mr. KERWIN:—

Q.—Do all your workmen belong to London? A.—Some have come from other towns here, last year. Almost all our men live here, and some of our young men have been apprenticed with us some years ago, and have now become journey-men. The majority of our men are citizens here.

Q.—Did you ever send to another country for men? A.—No.

Q.—You always got what you wanted here? A.—Yes.

Q.—Have you ever asked any of your men to sign any contract binding them? A.—No; never our men; no one, except our apprentices. We have them enter into contract to stay with us for a certain number of years; it is a regular indenture.

Q.—Do you believe in the system of indenturing apprentices? A.—Yes; I do.

By Mr. CLARKE :—

Q.—What do you use for fuel? A.—Coal.

Q.—What kind of coal do you use? A.—All kinds. We have anthracite for our brass foundry; steam-coal for our boilers, and what we call egg-coal for our blast furnaces; also, coke.

Q.—Where does your bituminous coal come from? A.—All from the United States.

Q.—At what price can that be obtained here? A.—We pay for steam-coal, now, \$4.50; for egg-coal, \$6; for coke, \$6.

Q.—Did you ever make any enquiry about steam-coal from New Brunswick or Nova Scotia? A.—No; we have not.

Q.—Do you know at what price it can be laid down here? A.—I could not say. We have always taken it for granted that it was impossible to get it here on account of the cost of freight.

Q.—Are you aware that it can be obtained in Nova Scotia for \$1.40 a ton? A.—No.

By the CHAIRMAN :—

Q.—Could you run your shop without the improved machinery you use? A.—No; manufacturers have to get the most improved machinery.

Q.—Is it a matter of necessity to get it? A.—Yes; otherwise you could not turn out the quantity of work required.

Q.—Could you compete with the United States if you did everything by hand? A.—There would be no competition; we would not be doing anything.

Q.—You mean it would shut up your factory? A.—Yes; we would have to shut up our shop; the stuff would be imported, even with all our high duties.

Q.—It has been suggested by a witness who appeared before the Commission that no new machinery should be made for thirty years. What do you think of that proposition? A.—We would simply go back about 100 years if that were the case.

Thirty years from now we would be away back 100 years ago, so far as the progress of the country is concerned.

By Mr. CLARKE :—

Q.—Could you give the Commission an idea of your yearly output? A.—It is not so much as it ought to be; that is the only objection I have to giving it. I suppose we turn out perhaps on an average \$100,000 worth. We could turn out twice that much.

By Mr. ARMSTRONG :—

Q.—With a view to the increase in machinery, do you think the shortening of hours should follow, so that the men would be constantly employed? A.—That would not follow at all, because the increased demand gives a much larger purchasing power than the increased power of the imported machinery.

Q.—I mean, as regards the employment of surplus labor? A.—I understand you thoroughly. I cannot see that that would follow at all.

By the CHAIRMAN :—

Q.—You believe that improved machinery gives increased work? A.—Yes; and we must have the improved machinery in order to produce the quantity of goods required by the country.

Q.—And that improved machinery enables people to buy things they would not be able to buy otherwise? A.—Yes; lots of things that they could not buy to-day, except for the improved machinery applied to different processes. We might as well try to stop printing and go back to hand writing.

By Mr. GIBSON :—

Q.—Is it not true that as improved machinery decreases the cost to the consumer it must take away labor from the workingman? A.—That does not follow at all in

such a case. You might as well say that printing would drive hundreds of people from employment in printing bibles and books.

Q.—Does the workingman receive a fair share of the benefit arising from improved machinery? A.—I think he receives fully a fair share, if not more than a fair share.

Q.—How does he do that, if he gets no higher wages? A.—He gets as high wages as he ever got, so far as we are concerned. I do not know any business in Canada to-day in which the men are not paid higher than, or equally as high as, they have been during the last ten years. Certainly, that is the case in mechanical work.

By Mr. ARMSTRONG :—

Q.—Take ten years ago: were there many imported machines at that time coming into the country? A.—Nearly all our machinery was imported at that time; we were importing threshing machines and other machines.

By the CHAIRMAN :—

Q.—How many years ago is it since engines were brought from the other side? A.—I do not know.

By Mr. ARMSTRONG :—

Q.—You think the present high rates of duty prevent machinery from coming in from the other side? A.—Most decidedly so. They have factories on the other side where they can complete one hundred machines where we can complete ten.

Q.—Then on account of this duty your trade is increasing? A.—Yes.

By the CHAIRMAN :—

Q.—The larger a shop is the cheaper it can complete machines, I suppose? A.—Yes. The only thing working against us is that we have not quite enough people in Canada to let us run into specialties.

Q.—But we have had witnesses before the Commission who have endeavored to prove that we have too many people in Canada, and they want to stop immigration? A.—That man wants to go to the other side.

WILLIAM ELLIOTT, of John Elliott & Sons, Iron-founders, London, called and sworn.

By Mr. ARMSTRONG :—

Q.—Are you an employer of labor? A.—I am.

Q.—How many men do you employ? A.—We employ on an average from 150 to 175 men.

Q.—Do you manufacture stoves? A.—No; agricultural implements, reapers, mowers and binders.

Q.—What are the wages you pay your men per week? A.—According to the work they do; our wages run from \$1 to \$2 and \$2.25.

Q.—Two dollars and twenty-five cents is the highest rate of wages you pay? A.—Except to our foreman; we pay him more than that.

Q.—How many men in your employ receive \$2.25 a day? A.—Two, I think.

Q.—The remainder are under that sum? A.—Yes.

Q.—One-dollar-a-day men are laborers? A.—Yes.

Q.—Have you got any apprentices in your employ? A.—We do not keep a great many; we have five or six in our employ.

Q.—Are your apprentices indentured? A.—No.

Q.—How long has a boy to serve as an apprentice before he becomes a journeyman? A.—We take them for five years, with the privilege, if they are not satisfied, of leaving at any time.

By the CHAIRMAN :—

Q.—How old do you take them? A.—About fifteen or sixteen years. Our shop is not a good shop for apprentices; we force our work too much; we get it out too quickly.

By Mr. ARMSTRONG:—

Q.—Can you teach an apprentice thoroughly the trade in that time? A.—We do not think apprentices can learn the trade good in an agricultural implement factory, except in the moulding shop.

Q.—Are your men constantly employed? A.—Yes.

Q.—How are they paid, weekly, fortnightly or monthly? A.—Fortnightly.

Q.—On what day? A.—On Friday.

Q.—Do men prefer Friday as pay day? A.—They requested us to pay them on Friday.

Q.—Where do you find a market for your goods? A.—We find a market chiefly in Ontario and the North-West.

Q.—Are there any goods in your line imported from the other side of the line? A.—No; very few. Some ploughs go into the North West-Territory and Manitoba.

Q.—Do you think Canadian-made goods in your line are as good as foreign-made goods? A.—American manufacturers say that our goods are better made and are of better material than theirs.

Q.—Where do you get your iron that you use in your factory? A.—Our pig iron is chiefly American and Nova Scotian—Londonderry.

Q.—Do you find an increasing demand for your goods in the North-West Territory? A.—Of course, as population goes on the demand increases.

Q.—Do you send any of your goods out to the Pacific coast? A.—Yes; we do so; we have an agency in Victoria, British Columbia.

Q.—Do you find that trade increasing? A.—Last summer was our first year on the Pacific coast; it is the first year we have had our agency established out there.

Q.—Is competition in your business keen in Ontario? A.—Yes; we have too many manufacturers for the country.

Q.—Do you carry stock? A.—No; but we almost give our machines away.

Q.—Have you any definite reason why you do not carry stock? A.—Because we are sold out, I suppose. The prices of our machines have been reduced from \$300 in 1881-82 to \$135 and \$150, and that might account for the fact that we do not carry stock. A man who has fifty acres now will buy a binder, when he would not at former prices, when he, perhaps, had 300 acres.

Q.—Have wages increased or decreased in your trade during the last five years? A.—They have increased with us.

Q.—I believe the cost of the products to the consumer has decreased? A.—That is, you mean in the manufacture of our machines?

Q.—Yes? A.—Yes; our machinery is better adapted for turning out our work.

Q.—Could you give the Commission the number of self-binders you manufactured last year? A.—Some 1,350.

Q.—Is that an increase over former years? A.—We were burned out two years ago, and had not been making our full out-put since, until last year.

Q.—Can you report the same prosperity with respect to reapers? A.—The reaper trade is done altogether; we made no reapers at all last year.

Q.—Did you make any other agricultural implements? A.—Yes; ploughs, harrows, mowers—in fact, we make everything, almost, except a threshing-machine. We have two factories.

Q.—Do I understand you to say that there are not so many foreign goods imported now as was the case heretofore? A.—There are none at all imported into Ontario; there are some few imported into the Maritime Provinces, and some into the North-West, but only ploughs, and so on.

By Mr. CLARKE:—

Q.—What kind of fuel do you use in your factory? A.—Coal, altogether.

Q.—Do you use soft coal or hard coal? A.—We use both kinds.

By the CHAIRMAN:—

Q.—What will be the value of the agricultural implements on the average farm here? A.—It will be a hard matter to give the amount.

Q.—Say, on an average? A.—A farmer would have a binder, mower, harrows, a couple of ploughs, and other small tools—probably \$300 or \$350 worth; that is not counting waggons, and so on.

Q.—What sized farm would that be? A.—I should say that would be a 100 acre farm.

By Mr. ARMSTRONG:—

Q.—How many men's labor do a self-binder do away with on a farm? A.—That is a hard question to answer. We have had binders cut as high as twenty-four acres in a day; it will take a pretty good man to cradle three acres in a day.

By Mr. McLEAN:—

Q.—How many men with a reaper would it take to cut, say, twelve acres? A.—An ordinary day's work is eight or nine acres, and probably two men with a boy to shock up, would do it, that is, with a self-raking reaper.

Q.—What with a self-binder? A.—An ordinary day's work is from ten to twelve acres, that is, with two men in the field, besides a driver and three horses.

Q.—Then a self-binder does away with a certain number of farm hands? A.—Yes.

Q.—And the farmers do not have to employ as much manual labor as formerly? A.—I have heard of a farmer and his wife taking the grain off sixty or seventy acres; she did the driving and he did the shocking up.

By Mr. ARMSTRONG:—

Q.—How many hours per day do your men work? A.—Ten.

By the CHAIRMAN:—

Q.—How many hours a day does a farmer work here? A.—One farmer told me last Saturday that he got up at three o'clock in the morning to feed his stock.

Q.—Do you think that some of the farmers work about fifteen hours a day during the summer? A.—I think so. He said he got up at about three o'clock in the morning and went to bed at nine o'clock at night.

By Mr. ARMSTRONG:—

Q.—If a man employed sixty hours per week in your establishment wants to leave off work for a time, can he do so? A.—We quit on Saturday at five o'clock.

Q.—Provided he wants to get a day off can he get it? A.—All he has to do is to tell us. If a man is not there he does not get his check, and his time does not go on.

Q.—The time he is absent is deducted from his wages? A.—Yes; for the time his check remains in the rack he does not receive any pay.

By the CHAIRMAN:—

Q.—What kind of farming would it be without any machinery, without binders and reapers? A.—I do not know; probably something like it was thirty or forty years ago; but you could answer that better than I could.

Q.—Do you think a man could farm now without machinery? A.—Not very well.

Q.—If we did away with machinery, would not the price of grain have to be raised? A.—I do not think you could work farms now at all without machinery.

By Mr. McLEAN:—

Q.—Do self-binders do away with farm labor? A.—Yes; and if we had only farm labor now we could not farm at all. I do not think a man who works 100 acres now could work eighty acres then with hired help.

By Mr. ARMSTRONG:—

Q.—How did it occur that in former days, before there was any machinery introduced, there was any farming done? A.—It was done on a very small scale. Thirty or forty years ago a man had five or six acres cleared.

By the CHAIRMAN :—

Q.—And prices were high accordingly, I suppose? A.—Yes; but we cannot farm now as then.

Q.—Could a Canadian farmer without agricultural implements and machinery of the most improved kind, compete with farmers in the United States with improved implements and machinery? A.—No.

By Mr. ARMSTRONG :—

Q.—Do you use much machinery in your establishment? A.—Yes; we use all we require and can find it advantageous to use.

Q.—Has the factory inspector been round to examine your establishment? A.—Yes; he was around about three months ago.

Q.—Was he satisfied with what he saw at your factory? A.—He expressed himself so.

By Mr. CLARKE :—

Q.—What kind of coal do you use in your forges? A.—Blossburg.

Q.—That is American coal? A.—Yes.

Q.—Did you ever make any enquiries as to the cost of laying down Maritime Province coal here? A.—I have always been told that they have no coal suitable for forges.

By Mr. ARMSTRONG :—

Q.—When the increased use of machinery takes place does it not do away with manual labor, and is it not a fact that the demand for labor is not so great? A.—We employ more men than we did five or six years ago; we employ double the number we did six years ago.

Q.—That may be in some industries, but taking the general principle, so far as your knowledge goes, has not the demand for labor decreased? A.—Do you mean when you get in proper machinery?

Q.—Yes? A.—I think so.

Q.—In order to have this surplus labor employed, do you not think it is right to have the shortening of the hours of labor? A.—I do not know. We are willing to do whatever the rest do and what our men want, in reason.

By Mr. CLARKE :—

Q.—The more machinery you put in the more men are required? A.—Yes.

Q.—Have you found that you have to obtain the very latest improvements in machinery in order to be able to compete with other people? A.—Yes; in order to make any profits on our business we have to obtain the very latest improvements in machinery.

By Mr. ARMSTRONG :—

Q.—Have you had any labor troubles with your employés? A.—Never.

Q.—Are your men members of any labor organization? A.—Yes; some of them are members of the Knights of Labor. I believe we had in our employ the head man at one time.

Q.—I suppose your firm have no objection to the men belonging to the labor organization? A.—No. He was our foreman.

By Mr. McLEAN :—

Q.—They now do? A.—Yes.

By Mr. CLARKE :—

Q.—Have you ever had any strikes? A.—No; never.

By Mr. ARMSTRONG :—

Q.—Do your men remain long with you? A.—Some of our men have been with us twenty-five years—two or three of them.

Q.—Can you give any suggestion to the Commission that would be a benefit in connection with your line of business? A.—I do not know of any.

Q.—Of course, the manufacture of agricultural machinery has increased in Ontario during the past eight or ten years? A.—Yes.

Q.—Can you give us any definite reason why that is the case? Is it because the people are taking up more land? A.—It is, no doubt, because their lands are getting into better shape all the time; the clearings are getting larger and machinery is required to work them.

By the CHAIRMAN :—

Q.—And I suppose it is also because there are no importations of agricultural machinery? A.—Yes; no importations.

By Mr. KERWIN :—

Q.—In case of trouble in your establishment, would you be in favor of arbitration? A.—We never had any trouble; of course, we would desire to settle them as easily as possible.

Q.—Would you be in favor of a Government board of arbitration to settle disputes in case you could not come to an understanding with your men? A.—I would be willing to leave the matter with arbitrators, but I do not think we will have any trouble with our men; we have never had any disputes or disagreements.

Q.—Are all your men natives of the city? A.—No; they are living here now.

By Mr. McLEAN :—

Q.—Do many own their houses? A.—Several of them do.

By Mr. ARMSTRONG :—

Q.—So far as your knowledge goes, do you think your men are living comfortably? A.—I do not know of any who are not.

Q.—Have you got any American mechanics in your employ? A.—Yes.

Q.—In the manufacture of Canadian implements, do you find Canadian mechanics as well up in the business as Americans or foreigners? A.—Yes; after a Canadian gets into it. Of course, binders were new things to Canadians five years ago; they had to be educated in regard to their manufacture; now they are as good makers as are Americans.

By Mr. CLARKE :—

Q.—Are you in favor of a Government duty on agricultural implements imported into this country, or would you as soon have American competition? A.—It would be better if we had a little protection yet, at all events, until we get stronger. The American manufacturers are a pretty strong force and they swamp us out.

By Mr. ARMSTRONG :—

Q.—You said the American article does not come into Ontario to a great extent? A.—No; not into Ontario; some go into the North-West Territories and some into the Maritime Provinces.

By Mr. CLARKE :—

Q.—Do any of your goods go down to Nova Scotia and New Brunswick? A.—We have sent them down to Prince Edward Island; we have an agency there.

By Mr. McLEAN :—

Q.—Do you send any to foreign countries? A.—We send some to England, New Zealand and Australia.

Q.—Do you send any to France? A.—Only a few; we formerly did business with France—six or eight years ago.

Q.—What class of goods do you send abroad? A.—Binders.

Q.—Do you do your own brass work? A.—We do not use any.

JOHN SULLIVAN, Bricklayer, London, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you been working in the bricklaying business in London?  
A.—About fifteen years, if a day.

Q.—What are the weekly wages of a journeyman bricklayer? A.—Eighteen dollars per week.

Q.—You are paid by the hour, I believe? A.—Yes; we receive 33½ cents per hour.

Q.—How many months in the year are you employed? A.—We hardly get six months' work; we get a little over five months—that is, constant work.

Q.—Do the bricklayers remain idle during the time they are not employed or do they engage in some other business? A.—Some engage themselves at other things if they can get work, but most of them are unemployed; there is nothing for them to do around here anywhere.

Q.—For the twelve months, at the standard rate of wages which bricklayers are receiving, how much do you think a bricklayer can save in the year? A.—I really could not say how much he could save, but his wages would amount to about \$400; if he got work he would be doing very well. If he has a large family he could not save very much money out of that wage.

Q.—Are there many bricklayers owning their own homes in London? A.—Yes; a good many.

Q.—I suppose those who have houses here have been here many years? A.—Yes; they have been here a good many years; there are some strangers.

Q.—How many bricklayers are employed in London during the working season? A.—There are about sixty-six bricklayers in London; about thirty-six were employed around London; the rest had to go to other places for work.

Q.—Has house rent increased in London during the past five years? A.—No; I do not think so; it is rather lower now than it has been.

Q.—What would a mechanic pay for a respectable house for his family in an agreeable and comfortable neighborhood? A.—About \$8 or \$10 a month, I would say, but as I have never rented myself I cannot be certain. That is, so far as I know, the rent for which you could get a nice cottage here.

Q.—Are the bricklayers organized in London? A.—Yes.

Q.—Do the men consider they obtain benefits from organization? A.—Yes.

Q.—Will you please state some of the benefits derived from organization in your trade? A.—The benefits derived from organization are that the men get better wages and they help each other to get work.

Q.—Are there any benefit allowances to bricklayers made by the organization? A.—No; not at present.

Q.—Are you a branch of the International Bricklayers? A.—Yes.

Q.—According to the rules of your society, do they countenance strikes? A.—They make strikes the last resort; they do not like strikes at all.

Q.—Do they prefer arbitration? A.—They prefer arbitration, so far as I know.

Q.—Is that a local matter among themselves or is it a conclusion in accordance with the laws of your International body? A.—There is no law attaching to it.

Q.—Have you had any labor difficulties lately? A.—There was a strike this year.

Q.—You mean last summer? A.—Yes.

Q.—Will you state the cause of that difficulty? A.—The men asked for 3½ or 3¾ cents more per hour, and the bosses would not give it to them, and the bosses at the same time made an organization of their own, or combination of their own, and they raised the price of everything.

Q.—How do you mean? A.—They raised the price of material. They got the manufacturers to join them on the exchange, and I guess they raised the price of material from 10 to 20 per cent.

Q.—Do you know that as a fact? A.—Yes.

Q.—How? A.—Because when I am not working by the day I take jobs myself. I found that out when I went to get material.

Q.—Is there an understanding in your organization that when you ask for a raise in wages you give notice before you make the demand? A.—I believe there is such a rule, but I never heard of it.

Q.—Do you know if there is an understanding among the employers that if they ask for a decrease in the ruling rate of wages they must give notice; or do they give any notice before they endeavor to enforce the reduction? A.—No; they would not give any notice.

Q.—Is there any law governing them in that matter? A.—No.

Q.—Is there any understanding? A.—No; there is no understanding.

Q.—Are there any apprentices at your trade? A.—Yes; one is allowed to every firm in the trade.

Q.—To every employer? A.—Yes.

Q.—Irrespective of the number of men he employs? A.—Yes. Every employer is, by the rules of the union, supposed to have one apprentice and no more,

Q.—Do you mean one apprentice in each establishment? A.—Yes.

Q.—That is, irrespective of the number of employes the shop has? A.—Yes.

Q.—Are those apprentices indentured? A.—Yes; they are all indentured.

Q.—Do you approve of the indenture system? A.—I do.

A.—Yes; I know it is a combination; I call it a ring, and they want to keep everything in their own hands. About a year or so ago the builders got the dealers in building material and the manufacturers of brick to join them, and they have endeavored to run everything their own way. The arrangement did not stand very well.

Q.—If, during the existence of the labor troubles, half a dozen strikers had undertaken to take job on the co-operative plan, would they have found that this arrangement made by the bosses would have had an injurious effect in preventing them from obtaining material from those who had material to sell? A.—Yes.

Q.—In what respect? A.—They would have charged more to us than to the bosses.

Q.—Are you sure of that? A.—Yes; I had a bill charged to me, and so I can speak for myself. I paid 10 cents a barrel more for lime than the boss did.

Q.—Are the lime manufacturers in the exchange? A.—Yes; they got them to join with them.

Q.—In the event of labor troubles and in the event of employe and employer not coming together in arbitration, would you approve of a Government board of arbitration, which would have power to step in and settle the dispute? A.—I would approve of any arbitration, I do not care whether by Government or not, so long as it was fair to both sides.

Q.—Would you prefer that arbitration to be compulsory? A.—I should prefer arbitration to be compulsory.

Q.—Do you speak in that respect the sentiments of your union? A.—I believe so.

Q.—Have you given any thought to the question as to the establishment of a bureau of labor statistics; do you think the formation of such a bureau would be beneficial to the working classes? A.—I have never given any thought to that subject.

Q.—That is, a project for the establishment of a bureau for the purpose of giving any information and making annual representations in regard to the state of trade in the different parts of the Dominion? A.—Yes; I think that would be a very good idea. That is one of the benefits we have from the union; we get to know the state of trade all over.

By Mr. McLEAN:—

Q.—Does the Builders' Exchange discriminate against any builder who is not a member of the exchange? A.—Yes; I know they have been black-listed, but I would not swear to it.

Q.—You say you have taken jobs on your own responsibility. If you were to

build a brick house and you wanted the work done by one of the carpenters who is a member of the Builders' Exchange, would he do the carpentering work for you? A.—Not fair and openly. He might if he wanted a job very much, but if the exchange knew it he would be fined. They have told me so. I have heard it. They have told me they could not give me a price or they would be fined.

Q.—Members of the, Builders' Exchange have told you that? A.—They have told me that.

Q.—Have they tried to keep you from buying brick from members of the exchange? A.—They have raised the price of brick, so as to make it harder for me to put in a tender for a job.

Q.—Do you know anything about the lien laws? A.—No; not much. I was going to put on a lien, but I found it would be no good. They said the lien would stand there, but it would be no good to me.

Q.—Do you think a good lien law would be a benefit to the workingmen? A.—Yes; I think it would be.

Q.—Do you know of any profit-sharing with bosses in London? A.—No; I do not know of any.

Q.—Do you know of any iron-clad contract or black-list here? A.—There was a contract on one job in this town last season, but it was not carried out; they stopped the job.

Q.—How do the wages in Canada compare with those paid in Great Britain and the United States? A.—Just as you cross the borders at Detroit, and also at other cities, the wages run from \$3.50 to \$6 a day; in Canada \$3 is the highest rate.

Q.—Do you know how the pay is in Great Britain? A.—About 6 shillings and 8 pence a day there; 10 pence per hour.

Q.—How is the cost of living in the United States as compared with the cost of living in Canada? A.—A family could live nearly as cheap in the States, but if a man has to board it is a great deal dearer for him.

By Mr. ARMSTRONG :—

Q.—How is it if a man wants to live in the same class of house as here? A.—If a man had a family and had got his house he could get his provisions quite as cheap, but a man has to pay much more for his board.

By Mr. McLEAN :—

Q.—How would it be if a man had a family and rented a house? A.—I think he could live as cheaply there.

Q.—How is it in regard to Great Britain? A.—The wages go as far there as our wages do here.

Q.—Do you think a man working at your trade is as comfortable in the United States as he is in Canada? A.—Yes; I have been in different parts of the United States, but I like Canada very well.

Q.—Do you know anything about the fining of employés at your trade? A.—No; I do not.

Q.—Do you belong to any workingmen's co-operative society? A.—I do not know whether I do or not. I paid a share into one, but I have not been connected with it since. They were going to start, and they, perhaps, have started.

By Mr. ARMSTRONG :—

Q.—Does immigration affect your trade? A.—I do not think much in this town. Formerly some bricklayers used to come into this town, but not many have come in lately.

Q.—How was the labor difficulty you had with the bosses this summer settled? A.—The bosses gave in.

Q.—Did you ask for arbitration with a view to settle the difficulty? A.—The men asked for arbitration, but the bosses did not want it; but they were obliged to give the wages in the long run.

Q.—How are the men paid—weekly, fortnightly or monthly? A.—They are supposed to be paid weekly.

Q.—Are they actually paid weekly? A.—Yes.

Q.—On what day are they paid? A.—On Saturday.

Q.—Do they prefer Saturday, as a general rule, as pay-day? A.—They do.

ALFRED SHORT, Bricklayer, London, called and sworn.

By Mr. ARMSTRONG:—

Q.—You have heard the evidence of the last witness? A.—Yes.

Q.—Have you anything to add to it? A.—No; I may say, however, that immigration hurts our trade here.

Q.—What kind of immigration? A.—Bricklayers coming in here. There is not enough employment for those who reside here.

Q.—Do they come from the United States? A.—No; most of them come from the old country; hardly any come here from the United States.

Q.—Do those bricklayers who come here from the old country belong to labor organizations? A.—I do not know, but they have to join the order when they get here.

Q.—Are there many bricklayers from the old country here who came here during the past year? A.—Not a great many, but there has been a good many come in other years. We are filled here with old country men.

Q.—Have you found any bricklayers coming from the country districts of Ontario into the cities? A.—A few.

Q.—Have you had any conversation with any of the bricklayers who come from the old country? A.—I have worked with some of them here. They say they were better off there than they are here. They often say that they have wished they were back there as soon as they get here.

Q.—Have you anything further to add? A.—Nothing more.

C. A. PASSMORE, Painter and Decorator, London, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you worked in London as a journeyman painter and decorator? A.—I have been here for the last eight years.

Q.—How many painters and decorators are employed on an average in London? A.—You cannot count them that way as painters and decorators, for there are three or four different grades. There are brush-hands, paper-hangers, decorators and grainers.

Q.—For a first-class grainer, what weekly wages would he receive? A.—The way things are now, I think he would receive \$2.25 a day—that is, on the nine hour system.

Q.—You count fifty-four hours as a week's work? A.—Yes.

Q.—What are the average wages of a first-class all-round painter, a brush-hand? A.—One dollar and seventy-five cents a day.

Q.—Are there any apprentices at the trade? A.—Yes; quite a few.

Q.—Are the painters organized in this city? A.—Yes; they are organized.

Q.—Have they been long organized? A.—No; only since last March; that is the International organization.

Q.—You are a branch of that body? A.—Yes.

Q.—Do you find it is a benefit to painters to belong to organized labor? A.—I find this is more so than the former ones.

Q.—Are there any benefits in your organization? A.—We have a benefit attached to our organization, which has not been the case hitherto.

Q.—Are those benefits paid by special assessment or by general dues and levies? A.—They come out of the general fund, and if necessary by special assessment.

Q.—Will you tell us the nature of those benefits? A.—The benefits are for death or for disability—that is to say, disabled for life.

Q.—Are the officers holding your money—such officers as your treasurer or board of trustees—called upon to give security for their honesty? A.—They are; I happen to be one myself.

Q.—Are the men paid weekly? A.—Yes; they are paid weekly.

Q.—On what day are they paid? A.—As a general thing on Saturday, but some are paid on Monday.

Q.—What day does the majority of the men prefer as pay-day? A.—I think the majority of the men would like to be paid on Friday. I suggested that in Toronto some years ago and it was adopted, and it proved a great benefit to the workingmen.

Q.—For what reason is it a benefit? A.—It gives the wife of the workingman a chance to go to market.

Q.—Do many painters in this city save money? A.—A few of them do.

Q.—Have many of them their own homesteads? A.—Quite a few of them have.

Q.—And are they living quite comfortably? A.—Yes; they are.

Q.—Have you had any labor troubles in your trade? A.—Last spring there was one here.

Q.—What was the nature of it? A.—It was in consequence of asking for an increase in wages; the hours were shortened from ten hours to nine, but wages were left just about the same.

Q.—How was the trouble settled—by arbitration? A.—There was a proposition made to the employers, and they, of course, acceded to the workingmen's wishes, because it was compulsory on them, in fact.

Q.—Does your organization believe in arbitration in the settlement of labor troubles? A.—Yes.

Q.—In case of a rise of wages being demanded at the commencement of spring work, do the men notify the employers beforehand that a rise in wages will take place at such-and-such a time? A.—Yes; if such is the case.

Q.—The rule is the way you state? A.—Yes.

Q.—Is there a similar rule on the part of the employers, that if they desire to make a decrease in the rate of wages they must give notice to the men? A.—Not that I am aware of.

Q.—What kind of arbitration would you prefer in the settlement of labor troubles, an arbitration board, formed by the Government, or one appointed mutually between the parties? A.—One mutually appointed by the employers and employes.

Q.—Provided those parties could not agree, what would you suggest? A.—The calling in of a third party—a disinterested party altogether.

Q.—Would you prefer compulsory arbitration? A.—Not altogether.

Q.—Have you given any study to the formation of a bureau of labor statistics in Canada? A.—We have one of our own, so that we always keep pretty well posted.

Q.—That is, so far as your International body is concerned? A.—Yes.

Q.—Have you ever given the subject of technical education any thought? A.—Yes; a little.

Q.—Do you think it would be of any assistance to apprentices? A.—Yes; I think it would be in every way.

Q.—Do you think, taking such subjects as drawing, designing and moulding, it would be a benefit to apprentices by receiving instruction in them? A.—Yes; it would be a great benefit to them.

Q.—Do many mechanics in London take books out of the public library? A.—That is a question I cannot answer.

Q.—Do you believe the shortening of the hours of labor has a tendency to make a man more intelligent, stricter in his habits, and do you think he would use the spare hours for his own benefit and for the benefit of his family? A.—I do in some respects; but when we advocate the shortening of the hours we do not always consider our own

benefit but the benefit of others. So far as the shortening of hours is concerned it must be remembered that with shorter hours more men have to be employed to do the same amount of labor.

Q.—Do you look upon that as a benefit? A.—It would be a benefit derived from it.

Q.—Did you ever give the subject of co-operation any thought? A.—No; I have never had much to do with that.

Q.—Did you ever consider the Employers' Liability Act, so far as accidents from defective scaffolding is concerned? A.—Yes.

Q.—Since that Act came into operation has there been more care taken by men in the erection of scaffolding? A.—The Act has had the effect of making the men more cautious themselves. But so far as the Act is concerned, I do not think the workmen, from what I can make out from the Act, would get any benefit from it.

Q.—How does it compel men to be more cautious? Do you mean it compels the employers to be more cautious? A.—Both the employers and the employés, because if a man meets with an accident it will not be compulsory on the part of the employer to pay him damages.

Q.—Not according to the Act? A.—So far as I know it.

Q.—Have you read over the Act? A.—I have not seen it lately.

Q.—According to the Act, in case of defective scaffolding, which might be the fault of the employer, if a man fell from the scaffolding, could he not come down on the employer for damages? A.—In our business we do not erect, as a usual thing, our own scaffolding. It is erected by the carpenters, and if the scaffolding is insecure we come on the carpenters or builder of the scaffold for damages.

Q.—Not on the employer who has the contract? A.—That would be the contractor.

Q.—You have a claim against the contractor? A.—Yes.

Q.—Do you know if there is any truck system in London—that is, if any working-men are paid by store orders or anything of that kind? A.—No; I do not know of any.

Q.—Do you think the purchasing power of a dollar is as great now as it was five years ago? A.—I think it would be at present.

Q.—Have the wages increased or decreased during the last five or ten years, to your knowledge? A.—They have remained about the same.

Q.—The volume of business, I suppose, has increased? A.—Yes.

Q.—Is there any fining of employés in case of their being late coming to work? A.—No; there is only a deduction made in the amounts of their wages.

By Mr. KERWIN :—

Q.—Have you ever worked at your trade in the United States? A.—Yes.

Q.—In what part? A.—Pretty nearly all through the States. I have worked in New York.

Q.—What is the general rate of wages in the American cities? A.—While I was there it was \$3 a day.

Q.—Does immigration affect your business to any extent? A.—Not so much as it has done in former years.

Q.—Where do the immigrants come from, as a rule? A.—From the old country.

Q.—None come over from the United States? A.—No; as a general rule the workmen who come from the other side are good workmen, who are up to every branch of the business; but those coming from the old country are not up to every class of work, and those who come out here are not qualified. They have, as a rule, never served a proper apprenticeship; they are not *bona fide* workmen.

By Mr. ARMSTRONG :—

Q.—The class of work there is not the same as it is here? A.—No; they cannot do it.

J. B. MURPHY, Moulder, London, called and sworn.

By Mr. ARMSTRONG:—

- Q.—You are a journeyman moulder? A.—Yes.
- Q.—Are there many moulders employed in London? A.—Yes; quite a few.
- Q.—Can you give us the average number employed here? A.—About seventy five or eighty, I should judge.
- Q.—What are the weekly wages of a stove-moulder? A.—They are on piece-work.
- Q.—We would like to have both. Stove moulding, I believe, is generally done by piece-work? A.—Yes; sometimes. The rate of wages for a day-hand runs from \$1.50 to \$1.75. I do not know any stove hands getting \$2 a day; the rate may be stated as \$1.98 a day.
- Q.—Do the piece-hands receive as steady employment as day-hands. A.—I do not think so; some of them do and some do not.
- Q.—The wages of a piece-hand, I presume, range according to the different patterns he has to work? A.—Yes; some pieces of stove will pay more than others; it depends on the size of the plates.
- Q.—How many months in the year is a stove-moulder engaged, on an average, on piece-work? A.—I should think about ten months; some of the masters employ them about nine months and then slack up and discharge them.
- Q.—What is the cause of slacking up the work? A.—They have a considerable number of apprentices employed and they take the journeymen's work. Of course, if piece-work was not so much in force there would be work the year round.
- Q.—Do your apprentices work piece-work? A.—Yes.
- Q.—Do you think piece-work with apprentices is a proper way to conduct your business? A.—No; I do not. My reason is this: In doing piece-work a man never tries to remedy his mistakes; he just goes right along, and if the work will pass he thinks it is all right. He will not take time to use his judgment in trying the different ways of making work properly and in adopting a proper way of making a piece. He gets a job and he runs it for all he is worth, early and late; and, besides, he has not served a proper length of time at the trade in the first place.
- Q.—What is the time laid down in your organization as that which an apprentice should serve? A.—Four years.
- Q.—That is the universal rule, is it not? A.—Yes; it has become the universal rule by our organization; the apprentices are to serve four years and are to be indentured, and our organization is to assist employers in regard to carrying out these terms.
- Q.—How long do apprentices serve here? A.—Three years is what they call the time here.
- Q.—From a practical point of view, is that a sufficient time for a boy to learn a trade thoroughly so as to become a thorough journeyman in after-life? A.—They do not become so here; several who have served three years are not capable of holding a job in any shop; in fact, they do not hold them.
- Q.—Are the moulders in this city organized? A.—Yes; to a certain extent.
- Q.—Do you know of any foundries in this city which employ ex-convict labor? A.—Yes; there are, I understand; I could not swear positively, because I have not seen the men come out of the prison. From what I have heard them say, and from what has been told to me by other men, they said they came out of the prison direct to London to work in the shops here. I was speaking to one to-day, an ex-convict, and he told me he came direct from prison, except for a short time when he went to see his friends, and then he came direct here.
- Q.—Was that during the time of the labor troubles? A.—I could not say whether he came then or not; it was since the labor troubles, so far as I remember.
- Q.—Was that man discharged by the Governor of the prison? A.—I understand he was allowed out on ticket-of-leave and that he and the others have to report to Mr. Gartchose, and he has to report back to headquarters at Elmira.

Q.—In the case of labor troubles, do you prefer a system of arbitration in the settlement of such troubles? A.—Do you mean rather than to fight it out?

Q.—Rather than to strike—in order to prevent a strike taking place? A.—Certainly. I believe in settling that trouble by arbitration, or in the most legitimate way it can be done, in order to save trouble.

Q.—Are the manufacturers in London organized with the other stove manufacturers? A.—Throughout Ontario, I think they are.

Q.—Do you know of any black-listing taking place in London in your trade? A.—Do you mean black-listing the members of the organization.

Q.—I mean black-listing members because they are union men? A.—Yes; I think so.

Q.—Do you say so? A.—Yes.

Q.—Do you know it as a fact? A.—They did not tell me so, and of course I did not ask my employer, for I am pretty sure he would not have told me. I saw one man, and no doubt there were others.

By Mr. KERWIN :—

Q.—At what particular branch of your trade are those men, whom you say are ex-convicts, employed? A.—They are hollow-ware moulders.

Q.—Do they make that work a speciality in Elmira prison? A.—I cannot say.

Q.—Perhaps you know whether that particular branch is done in that prison? A.—I think that was what they were working at, and they were sent for, to come here to make hollow-ware. I know one man here who is employed as a hollow-ware moulder; there was some dispute in regard to prices, and he quit work, or was discharged. That was one of our men here.

By the CHAIRMAN :—

Q.—How long have you been living here? A.—Since the 24th of March, 1881. Since that time I have been absent about nine months.

Q.—How old are you now? A.—Thirty-one, next birthday.

By Mr. GIBSON :—

Q.—Can hollow-ware workers be got here? A.—Yes; if the bosses will pay the prices.

Q.—Is the reason for bringing men from the other side because they get them cheaper? A.—I think it is. I really think we have got hollow-ware moulders in Ontario who have served their time at the trade, and who understand the work thoroughly, and my opinion is that they employ these men, of whom I have spoken, because they are cheaper.

Q.—Then it is a matter of prices? A.—Yes.

By Mr. ARMSTRONG :—

Q.—In regard to day work: is there a difference in the wages paid to stove moulders, agricultural implement moulders, and hollow-ware moulders; are there different rates of wages in these different branches? A.—Some of them get \$1.50 or \$1.75 a day.

Q.—To which branch of the moulding trade does the \$2 a day rate belong? A.—To machinery moulders.

Q.—Does stove moulding come next in price in day work? A.—For agricultural work and stove work there is about the same paid. In the car-shop they pay about \$1.50; I understand that they do not pay more than that.

By Mr. KERWIN :—

Q.—Do the hollow-ware moulders refuse to work for those figures? A.—Which figures?

Q.—You said that because the hollow-ware moulders would not work for certain figures they employed ex-convicts? A.—One of those stove-building moulders is in Hamilton.

Q.—I suppose they were competent men? A.—I think so.

By Mr. GIBSON :—

Q.—What is the condition of the shop in which you work? A.—It is a little cold in winter; it is not properly secured for winter use.

Q.—Is it high enough to allow the steam to rise? A.—It is ventilated sufficiently; it is very free in the line of ventilation. The greatest fault I have to find with moulding shops is that they are not protected in the winter time. Some of them are not fit for a man to strip in. Everything is damp, the sand is wet and cold, and everything a man touches is cold. Moulders' shops should be heated in winter, and steam pipes should run around the wall. This is done in some shops on the other side, and it is done in one shop in this city.

Q.—You mean, heated up similar to machine shops? A.—In fact, it is even more necessary in the moulding shops that this should be done, because everything is damp and cold. Men are not able to work—their hands are sometimes benumbed with cold.

Q.—Have you ever made any representation to the bosses to that effect? A.—It would be useless for the men to say anything about it.

Q.—They think they are good shops in winter? A.—They are very good in summer, but not fit for winter, where the men have to strip where it is cold, and work in damp sand, and their fingers become so cold they are not capable of using them, and almost all of the body is the same,

Q.—Are moulders much troubled with colds? A.—Sometimes they have bad colds in winter.

Q.—Not unusually so? A.—No; they wrap themselves up pretty well. The shops in other departments are kept warm, and steam is put through them. The moulding shop, as I have said, is not so; it may have a stove, but it is not sufficient to keep it warm.

By Mr. ARMSTRONG :—

Q.—Was there any difficulty in regard to the apprenticeship question in any of the moulding shops last spring? A.—No; not that I am aware of.

HENRY RYMILL, Bricklayer, London, called and sworn.

By Mr. ARMSTRONG :—

Q.—Have you heard the evidence of the last bricklayer, Alfred Short? A.—Yes; part of it.

Q.—Have you anything to add to that part you heard? A.—No; I do not think I have.

Q.—I believe there is a standard rate of wages in the city for bricklayers? A.—Yes.

Q.—Do you know what that is? A.—Thirty-three and a-half cents per hour, \$17.50 per week.

Q.—Do you know any bricklayers working under that rate? A.—There have been bricklayers working under it; I do not think there have been any lately.

Q.—When was your last labor difficulty? A.—We had the last difficulty in May.

Q.—What was the cause of it? A.—We asked the bosses for an increase of wages from 30 to 33½ cents, and they refused, I believe.

Q.—Taking the average season's work, how much do you think you could earn during twelve months? A.—It would depend a great deal on the work. I suppose last year in this town a bricklayer would not work four months during the whole year; there were not four months here all last year.

Q.—How many months would you consider an average season's work? A.—About five months.

Q.—How much do you think a good journeyman bricklayer would earn during those five months? A.—Not much over \$500, about \$500; I have earned \$500.

Q.—They are paid by piece-work, I believe? A.—No; by the hour.

Q.—How many hours do they work? A.—Nine hours a day for five days in the week, and eight hours for the sixth day, making fifty-three hours per week.

Q.—In case of labor trouble would you prefer arbitration, and if so, what would be the nature of the arbitration you would prefer? A.—Arbitration that would be satisfactory to both parties.

Q.—Do you believe in compulsory arbitration? A.—I do not know.

Q.—That is, arbitration framed by the Government, compelling both sides to agree to the terms arrived at; would you prefer that system? A.—Yes; provided it was fair to both sides. Our international laws call for arbitration in preference to strikes every time.

Q.—Are there any benefits connected with your organization? A.—No more than obtaining news or information in regard to work.

Q.—There are no more benefits? A.—No; we talked of having a sick benefit and a death benefit, but there are none in existence here as there are in some other places. I worked in Toronto most of last summer, as I could not get work here, and there was a death benefit there.

JOHN NORFOLK, Moulder, London, called and sworn.

By Mr. ARMSTRONG :—

Q.—You have heard the evidence given by Mr. Murphy regarding ex-convict labor? A.—Yes.

Q.—Do you agree with what has been said by him? A.—Yes.

John McGowan, John Paekham, Thomas Walton, having been sworn respectively, declared that they had heard the evidence of the witness Murphy, and confirmed it.

ROBERT SYMONS, re-called.

I wish to say that the Government have issued a report this year showing the amount of money expended by them on immigration; but I am not prepared to state what the exact amounts are, and we know also from Government reports that they do expend money in bringing immigrants here to compete with our workingmen, many of whom are already out of employment. There are more men here than we can find work for. The labor market in Canada is overcrowded, and we, as workingmen, protest against the Government using the money of the country in bringing men out to compete with us in trying to earn a living. That is our contention. We are opposed to the system of assisted immigration.

By Mr. HEAKES :—

Q.—Do you know who gives assisted passages to immigrants from Quebec to Ontario and London? A.—I do not know.

Q.—Do you know if they get any assistance? A.—I do not know. All I know is from Government reports, that there is much money expended annually in bringing immigrants out here.

Q.—Do you know how much is expended on assisted passages? A.—I understand that a large amount is expended through agents.

Q.—Do you know how much is expended on assisted passage tickets? A.—I do not; I do not remember the amounts. Our contention is, that while the Government taxes everything that is imported, which our workingmen have to consume, and make them pay high prices in consequence of that, they, at the same time, import labor to compete with our workingmen, and thus place us at a great disadvantage. We are opposed to the whole system of assisted immigration on these grounds; we are opposed to immigration as workingmen, but we are especially opposed to the system of assisted immigration.

SAMUEL PEDDLE, re-called.

By Mr. McLEAN :—

Q.—Can you tell us anything about the wages in Canada as compared with those in the United States and Great Britain? A.—In our particular trade I can tell you a little. The wages in London, England, in my trade are from £2 to £2.5s. a week. In Canada, as I have told you, we get from \$9 to \$10 or \$11; there are machine hands who receive \$12. I am a bench hand. I received in London £2 and £2 5s. on piece work. I get in Canada \$10 a week. Previous to that I did not get quite so much. In the United States I got \$2 a day, that was \$12 per week, and I had no lost time. I was paid for days that were holidays; that was in New York.

Q.—How are hours and the cost of living as compared with the other countries you have named? A.—The cost of living in this country for a mechanic who has something over and above the necessary expenses of life, compared with England, is just about the same. That is to say, that living is much cheaper here, or rather the necessary food is much cheaper, but when you get to take the little things you buy outside of food it comes to pretty much the same thing. A present here that would cost you \$2 you would get in England for \$1, and a thing that costs a penny in England costs 5 or 10 cents here; so that outside of a laboring man's mere living I consider London, England, is just about as good as Canada. Friends of mine who were apprenticed with me have done as well in London as I have done here. They have houses and lots, and they are better off, as a rule, than I am.

Q.—How long have you been here? A.—Ten years.

Q.—Do you own the place you live in? A.—Yes; but I think you ought to ask me how I got it?

Q.—What is the condition of the workingmen's houses in the old country as compared with this country? A.—In country places, in the suburbs, they are fitted up quite as nicely as other houses. They have not so much garden, but the houses are as attractive. In London the sanitary conditions are better than anywhere in the world I know of.

Q.—Do the working people live in flats? A.—In London you live in flats, what we call rooms; you take two or three rooms with the use of the wash-house. Of course, the rents there are high. You have to pay 7 shillings a week for two rooms with the use of the wash-house. I paid that sum. I took the rooms, and divided them between myself and another man, and my share was 7 shillings a week.

By Mr. FREED :—

Q.—When you received \$2 a day in New York did you consider yourself as well paid as you are here? A.—Yes; I was just about as well paid, although there I was living without my family. The necessaries of life were very cheap.

Q.—When was that? A.—Some five or six years ago. It was at a time when we were a little dull here, and I went there and afterwards came back.

Q.—What did you pay for your board? A.—Four dollars and a-half. I lived at restaurants, and I paid \$1.50 for my room.

Q.—What would you have had to pay for rent if you had been there with your family? A.—I would have had to pay from \$2 to \$3 a week for two rooms, and have furnished them myself; the one I had was a very nice room.

Q.—Where did you get a room for \$1.50 a week? A.—In a street just off the Bowery; I forget the name of it.

By Mr. McLEAN :—

Q.—Have there been any accidents to boys in your factory through machinery? A.—Yes; several.

Q.—What was the nature of the accidents? A.—The last one I know anything of was an accident to a boy who came there, and which occurred the first day he was at work. He came to me, thinking that he had to work for me. I told him to remain there till the foreman came, and when he came I spoke to him about the boy. He said the boy had to go down to the planer. He was a very neatly-dressed and

tidy boy of about fourteen years of age. He went down to the planer, and about 2 o'clock in the afternoon the top of one of his fingers was brought in on a piece of wood. We said it was a shame for such a nice boy to meet with such an accident. He was paid a week's wages and went away. Previous to that there was an accident in the next shop, where a number of boys are employed by one man who makes cabinet-work. He cut his hand at the rip-saw. Those boys were about fourteen years old. One I saw was thirteen and a half, for I asked him his age. Previous to that there was a boy lost three of his fingers on the planer.

Q.—Was the boy running the planer himself? A.—No; he was standing behind the planer, and he got his finger on one of the knives.

Q.—That was not through any fault or neglect on the part of the employer? A.—No; it was simply from the boy being too young to have sense enough to keep away from the dangerous part of the machine.

Q.—Was that not the case in the accident of the boy having his finger cut in the shaper? A.—Yes; it was done very much in the same way. He got his fingers underneath the plank. In the other case the boy was put on a cross-cut saw.

Q.—Are the machines properly protected in your establishment? A.—From my standpoint they are not properly protected; I do not know where they are protected.

Q.—Is there anything to protect the machinery? A.—No; there are no safe-guards. There is not the least attempt at protection.

By Mr. GIBSON :—

Q.—How is your labor market; is it overstocked? A.—So far as good mechanics go, they are not too plentiful; but so far as laboring classes are concerned, I think there are too many, and there are many laborers who are coming for such work and cannot get it.

Q.—Does immigration interfere with your work? A.—Yes; it does considerably. We have Italians who come out and work at prices which we will not accept; I know of two smart mechanics laid off for three months in this city on that account, although they had been working in this city for many years. At the same time, there were immigrants here who were green, and who could not speak the language, at work, because they would take a job for a little less money.

By the CHAIRMAN :—

Q.—Did those men come here direct? A.—They came here direct.

By Mr. McLEAN :—

Q.—What were they? A.—They were the same as I am, assisted immigrants, and I do not thank you for it.

By Mr. FREED :—

Q.—How long is it since you were assisted to come out here? A.—Ten years ago.

By Mr. ARMSTRONG :—

Q.—By which Government were you assisted? A.—I cannot tell you who it was. I know I received a cheap passage rate, and that is all I know about it. When I got to Liverpool I had to go to the agent before we got on board. The man who went with me from the hotel to the office gave the agent a wink, and he said to me: "Are you in a position to pay the full rate of passage?" I said: "Perhaps I am, but if I did so, I would not have much when I got there." I told him that I did not come there on those conditions, and that I was not to pay full fare, because I had bought my ticket in St. Paul's Churchyard. He wanted full fare from Liverpool. Let me say that you have to make a deposit when you get your ticket, and the balance when you get to Liverpool. I came out here to take up land, and I went to Muskoka for the purpose.

Q.—Was that one of the inducements that led you to come out here? A.—Yes; I hired myself out as an agricultural laborer for a time, resolving to take up land. Things

were not, however, as I expected them to be. I understood any one could get work at once at decent wages. I found I could not do as I expected. I got \$17 a month. They very soon employed me in making doors, and hanging doors, and fixing up barns, and so on. I could not see any chance to settle down on a farm and so I gradually drifted back to my old trade and got work as a carpenter.

Q.—How many men are employed at your factory? A.—I should think about seventy; there used to be one hundred.

Q.—You say the highest wages paid is \$12 a week? A.—I cannot speak positively; that is piece-work.

Q.—Have you anything to say in regard to the sub-contract system? A.—I say it is nothing more than a contract system. A man takes a job to make 1,000 chairs, and in doing the work he can hire whom he likes. In one case a man had four boys, and he has now three boys, and he sets them test work. They have to do so much work in so much time. If they get that work done they work for him again, and that time counts for overtime.

Q.—Suppose that middleman's business was done away with, would there not be either a rise in the wages or more profit to the proprietor of the work? A.—It seems to me that if that was done away with there would be work given for two workmen having families in place of four boys. More wages would have to be paid for the work, and at all events the wages would be divided up between those two men, and two families would be kept out of the wages paid. A few weeks ago a man got 600 chair seats to make and he got five boys to make them. For the making of those seats, for which \$12 should be paid, \$9 was paid, which would be 1½ instead of 2 cents per seat. That man paid to the best of the boys \$3 per week, and to the second best \$2.50. He gave them five days in which to do the work. They did the work in three days and one hour. The balance of the time up to the five days they put in at work and were paid overtime. That man who was doing the contract works close to me.

Q.—Do the men employed by the sub-contractor work harder, and are they looked after more closely than they otherwise would be? A.—They have more privileges than day-hands. They do work harder when they are at it. Of course, they adopt all kinds of means to get over the work as rapidly as possible. If the work does not pay they get through with it quickly. If a dip in the glue pot will do for a job that will suffice; they act so as to make both ends meet.

Q.—You look at it as a kind of scamp work? A.—It must be so. Piece-work is detrimental to the trade, as far as it goes, although it is better for men of good ability and who are quick. I have worked at both.

By Mr. KERWIN:—

Q.—Are you sure the Italians you refer to do not come from the United States? A.—I do not know.

Q.—I understand there have been people of that description brought into Toronto? A.—I do not think those people would be brought over from New York. They are pretty respectable, but they work a great many hours for very little money.

Q.—When you say people have been induced to come here it will be taken for granted that they have come here direct? A.—I think the one I was speaking of came direct—that is the one I work with on the bench. We have three there. I was working on the bench at that time; I am not now.

By Mr. McLEAN:—

Q.—Is there not a very dangerous hoist in your factory? A.—Not more than any other factory; it is unprotected; there are four flats, and there is no protection; no safeguard in any way.

By Mr. FREED:—

Q.—Do you know whether the inspector's attention was called to it? A.—I know it was not; he walked right past it. I would not have known it was the

inspector, but a man said, "Did your notice that man; he is the inspector." I said he could not be, as he walked right past and back again. I pass the hoist hundreds of times a day, for I mark all the stuff that is sawn. I am not saying this to the detriment of my employer, because I think he is a first-class man and a gentleman; he has to compete, of course, with others.

By Mr. ARMSTRONG.—

Q.—Does much American furniture come into Canada, to your knowledge? A.—Not much; what does is to supply patterns.

Q.—Is the wood you use domestic wood? A.—Yes; with the exception of walnut, which comes from Indiana. Of course, the mahogany we get through New York. Our maples, elm, birch and beech we get in Canada.

PETROLIA, 14th January, 1888.

DAVID MILLS, Oil Producer, Petrolia, called and sworn.

By Mr. HEAKES :—

Q.—Will you kindly give the Commission any information you possess bearing on the oil industry? A.—I have often wondered that the oil producers have no way of selling their products, and ascertaining whether they are getting acknowledgement of the quantity of oil they take to the tanking companies here. We have no way of finding out whether these companies are doing business right or not, and I have often wondered that the Government do not appoint an inspector to see that we get our right measure. In the mercantile business any person handling fluids of any description cannot sell a quart without having the Government stamp on his measure, nor can he sell a pound of anything without having his weights inspected.

By the CHAIRMAN :—

Q.—Is that by the Provincial or the Dominion law? A.—It is by the Dominion Act; and here we are selling our products, and the tank companies can use any measure they see fit; there is no one to say whether they are doing right or wrong. I have had a measure from Toronto, a Government inspection measure, a tank, and I know that it has been measured wrongly by the tank companies. I have tried to get parties who have influence with the Government to ask them to appoint an inspector here to inspect the tanks.

By Mr. HEAKES :—

Q.—Do I understand that you want the Government to fix a standard to measure them? A.—Yes.

Q.—You wish the Government to appoint an inspector to see that that standard is carried out? A.—Yes; I think it is nothing more than right.

Q.—Do you think that all the oil producers would be willing to submit to any expense in connection with paying for that work? A.—I think so.

Q.—You think they would not object to an inspector being appointed and so paid? A.—I think it would pay them in the long run. I, as one oil producer, would be perfectly willing to pay my quota towards the expense.

Q.—Do you know if the different oil producers have different measures? In other words, do you know that the measures differ? A.—I do not know it; but I have heard it from one tanking company.

By the CHAIRMAN :—

Q.—Have you reason to believe it is so? A.—I have reason to believe it. A friend told me that he had a tank measured by one tanking company, and he took it to another company and the variation was between two and three gallons on a tank.

Q.—Are there many people engaged in the oil-producing business here?  
A.—Yes; quite a few.

Q.—Are there a large number of companies? A.—Yes; a large number of companies and also of individuals. I do not know the exact number.

Q.—In regard to the men employed in this oil business: I suppose there are a great number of them here? A.—Yes; all the oil business is not here, but it is also at Oil Springs, where there are a large number of people.

Q.—What is the general rate of wages for workingmen here? A.—That I cannot tell you. A great many of the engineers get \$1.50 a day; they are engine drivers.

Q.—And about what does a laboring man get? A.—I cannot say what laboring men receive.

Q.—Are the men engaged in the oil business generally able to live comfortably—I mean the workingmen? A.—I do not think they have got very fat these last five or six years—that is, any men in the oil business.

Q.—Are you speaking of laboring men now? A.—I have reference to the laboring men and to producers both, because the producer cannot pay a man the amount of wages he naturally feels inclined to pay, on account of his production being hampered by the market, by the small price paid for crude.

Q.—Can you account in any way for those small prices? A.—I cannot account for it in any legitimate way. I think it is due to parties not working their business rightly, or it is due to parties getting their heads together and agreeing that they will give you so much for your production and nothing more. That is my impression.

Q.—What are the prices of crude now? A.—Seventy-four cents. The refiners are receiving very small profits as well as the producers.

Q.—You think profits are small? A.—I do, according to the best authority I can get.

Q.—You refer to all classes? A.—Yes.

By Mr. HEAKES:—

Q.—Do you think over-production has anything to do with low prices? A.—No; I think if we had our market to ourselves our production would fall very far short of the consumption.

By Mr. McLEAN:—

Q.—What do you mean by having the market all to yourselves? A.—A great deal of American oil is imported into the country—that is what I referred to—and our manufacturers, in my opinion, go to extremes. They either charge too much for it or too little, and by doing so they take it out of the producers; that is where it comes from.

Q.—Do you think the duty on imported oil should be raised? A.—I am not going to say that either. I think we have as good protection by our Government, probably, as they can well afford to give us, but if they were to give us a little more on the crude end, and not charge a little more on the refined end, we would have a better price.

By Mr. HEAKES:—

Q.—What is the difference in price between American and Canadian oil? A.—I do not know; it must be pretty large—quite a difference.

Q.—What is the price of Canadian refined oil in bulk here? A.—From all the information I can get it is sold for 10 cents by car lots.

Q.—Is that on board or in bulk? A.—In barrels.

Q.—Do you know the difference in cost between oil in barrels and in bulk? A.—Not more than what I hear them say. They say it costs about 3 or 3½ cents.

Q.—Do you know what the cost of pumping a barrel of oil is, that is, the average cost? A.—Do you mean of producing crude?

Q.—Yes? A.—That depends a great deal on the well you have. Some men can produce oil at probably 50 cents, where other men cannot produce it for 75 or 80 cents.

Q.—Would that be on account of water in the well? A.—No; on account of the quantity pumped. Some wells produce four or five barrels, while others will not pump more than a quarter of a barrel a day.

Q.—What becomes of the refuse of the oil after it is refined? A.—There is coke produced from it, and wax, and tar, and gas oil.

Q.—I suppose, if it were not that all which is waste was worked up it would not pay to pump oil? A.—That is where the refiner has the producer. I have been credibly informed that the refiner gets as much for his refuse as we get for our crude. I do not know whether it is true or not.

By the CHAIRMAN:—

Q.—What is done with the refuse? A.—It is sold.

Q.—It is sent to where? A.—The tar and coke are sold around the town to producers for fuel.

By Mr. McLEAN:—

Q.—The refuse is mixed with sawdust, I believe? A.—Yes; and the tar is put on the boiler.

By Mr. HEAKES:—

Q.—Do they manufacture paraffine oil from this refuse? A.—Yes; I am told they do; of course, I do not know it as a fact.

Q.—At what stage of the refining process is the benzine taken off the oil? A.—I am not a refiner.

Q.—You do not understand the business? A.—I have quite a knowledge of it, but I am not a refiner.

Q.—Have you anything in connection with the business that you want specially to say in addition to what you have said? A.—I would advise the inspection of the crude oil, and the measurement of it, by the Government.

By Mr. CLARKE:—

Q.—How many men are connected with a well producing, say, five barrels a day? A.—I am running fourteen wells, and there are two men required to do the work, counting myself one.

Q.—Is steam power used? A.—Yes; I suppose there are some people running more than that number with two men, sometimes three men, just as circumstances occur.

By Mr. HEAKES:—

Q.—I suppose there is a good supply of oil? A.—I think there is a good supply of oil here if they would use the territory they have for putting down wells, but it does not pay at present prices. I think the production could be enlarged a good deal.

By Mr. CLARKE:—

Q.—How deep are those wells bored? A.—Mine average 468 feet.

By Mr. HEAKES:—

Q.—There are some, I believe, a great deal deeper? A.—I believe in the north territory they can go a little deeper, not a great deal; I think 470 feet.

Q.—I heard some one say that he had gone 700 feet down, and expected to go 500 more. A.—That would be in the other territory—that is where they are "wild catting."

Q.—You mean prospecting? A.—Yes.

By Mr. CLARKE:—

Q.—Is it expensive boring in this vicinity? What will be the cost of sinking a well? A.—I could not exactly tell you; I have not put one down lately. They are cheaper now; the first one cost me \$4,225 for boring.

Q.—Was that done by the diamond borer? A.—No; with a drill.

By Mr. HEAKES:—

Q.—Are the men pretty constantly employed all the year round in the oil business? A.—Yes; as a general thing.

Q.—Do you require men specially versed in the business? A.—You do for everything at your wells.

Q.—Then, would a stranger coming in here be comparatively useless? A.—Yes; he would be, so far as regards taking care of wells; he would know nothing about it.

Q.—Have you a surplus of labor in this vicinity? A.—I could not tell you as to that.

Q.—Do you know of many idle men around here? A.—I do not.

Q.—Do men leave here in large numbers to go to other oil regions? A.—We have a great many drillers go from this section to other countries. They are all over the continent. They are both in the United States and in Europe.

Q.—It is a practice of men to leave here and go into other countries to drill oil wells? Yes; a great many have gone.

By Mr. ARMSTRONG:—

Q.—What does a laboring man here pay for house rent? A.—I could not tell you. Rents are considered to be dear here, but what they are I could not say.

Q.—Are laboring men here paid their wages by the week? A.—I think they are paid by the month. My man pays \$6 a month for his house, but it is a quiet part of the town, where the rents are not so high. They are dearer at this end of the town.

Q.—Are there many laboring men living in houses belonging to the companies? A.—That question I could not answer.

THOMAS MCKETRICK, Oil Producer, Petrolia, called and sworn.

By Mr. HEAKES:—

Q.—Will you kindly tell the Commission something in connection with the oil business and any disadvantage from which you are suffering here? A.—The greatest disadvantage under which we are working here is low prices.

Q.—Can you give any reason for prices of oil being so low? A.—I suppose the reason is one in obedience to the law of supply and demand. About five years ago we commenced to accumulate a surplus of oil. New territory was struck in the oil-producing district and new wells in the territory here. After that the surplus increased, until a couple of years ago, when it began to decrease again, and on that account oil is getting to be a little better price, although it is very low yet; somewhere about 75 cents is about what it is worth to-day.

Q.—You think over-production was the cause of the fall in price? A.—I think so. We had to dig tanks and take care of the oil, which is a very expensive thing to do.

Q.—Do you store large quantities of oil in those tanks? A.—Yes.

Q.—And you keep it there all the year around? A.—Yes; it costs 1 cent a barrel a month the year around.

Q.—Are those tanks excavated out of the ground? A.—Yes.

Q.—What would be the average earnings of a laboring man in the oil business? A.—An engineer gets about \$1.50 a day—some perhaps, \$1.25; \$1.25 or \$1.50 is about what an engineer gets. Drillers who work in drilling wells get more than that; they receive from \$2 to \$3 a day, but they generally take the work by the job. A driller will say that he will take his chance as to how long it will take him for \$20.

By Mr. McLEAN :—

Q.—Is there any Sunday labor here? A.—There is.

Q.—Are any extra wages paid for it? A.—No; the same wages are paid.

By the CHAIRMAN :—

Q.—Has any effort been made to stop Sunday labor? A.—There has been an effort made to stop it. I am not sure whether there is any done now or not.

Q.—Are you speaking of unnecessary Sunday labor? A.—Some say it is unnecessary and some say it is necessary.

Q.—What is it? A.—There are some wells in which there is considerable water, and the companies or parties owning them say that it does not pay them to shut down on Saturday and start on Monday, because the water accumulates to such an extent, that they cannot make the wells pay unless they run them every day of the week, Sunday included.

Q.—Then, it is a question of larger or smaller profits whether they violate the Sunday law or not? A.—That is it.

By Mr. McLEAN :—

Q.—How are the men paid? A.—Some are paid by the week, and some by the month. The companies, as a rule, pay by the month.

Q.—Do they pay in cash? A.—Principally cash.

Q.—Are there any store orders? A.—There may be some, I do not know.

By the CHAIRMAN :—

Q.—Do you know of any so-called truck system? A.—I do not know of any. I am informed that there is some. We pay our men in cash once a month.

By Mr. HEAKES :—

Q.—Is there a standard measure for crude oil? A.—Yes; 35 imperial gallons is a barrel.

Q.—Is there any standard measure for the measuring of oil in tanks? A.—We have tanks in which we draw oil; they are measured, I understand, by the tanking companies; that measure is supposed to be right.

Q.—Do you know if the measurement of the same tanks will vary? A.—These are wooden tanks, and the tanking companies will call them im promiscuously and measure them, because when they drive the hoops the tank is supposed to shrink, and it will vary.

Q.—Is there any desire among producers to have those measures inspected? A.—I think there is.

Q.—Do you think they would prefer a Government inspection of the tanks? A.—I think they would. I have often heard that advocated strongly.

Q.—Do you know of any provision in the Government Weights and Measures Act that would permit it? A.—I do not know.

Q.—Do the laboring men in Petrolia generally own the houses in which they live? A.—I do not know that they do; a great many rent the houses here; although a good many do not; I do not know what proportion.

Q.—As a rule, do the workingmen in Petrolia earn sufficient to keep them the year through? A.—I think so. That is when they get steady employment.

Q.—Can an industrious man live comfortably on his earnings here? A.—I think that with a little economy he can; living is not a great deal higher here than it is elsewhere.

Q.—Have you any other information that you could offer in connection with matters that occur to you? A.—I do not know that I have. I may say that I have been in the business for about twenty years.

By Mr. CLARKE :—

Q.—Can you give us the average cost of refining a barrel of oil? A.—I am not a refiner, and I could not answer that question.

By Mr. ARMSTRONG :—

Q.—Can you tell us what a laboring man will pay for rent per month? A.—They pay different prices, depending very much upon the locality and the house; some pay \$6 per month, and from that figure up.

Q.—What would a workingman pay for a house of eight rooms in a pretty good locality? A.—Pretty high rent?

Q.—How high? A.—I could not say.

Q.—Would he pay \$10 per month? A.—I think so.

Q.—Would he pay \$12? A.—I have heard of houses being rented at \$12 per month.

Q.—That is by workingmen? A.—They could not afford to pay that much; I think laboring men do not pay that, because they cannot afford it.

Q.—Is it the choice of the laboring men to have their wages paid to them once a month? A.—I do not suppose it is; every company makes its own rules. For instance, we decided to pay our hands once a month, and they get their money at the end of every month.

Q.—Do you not think it is a hardship to a mechanic's family, when a mechanic is earning only \$1.25 a day, that he should have to wait for a month for his earnings? A.—I do not know that it is; of course, some may get it weekly.

Q.—In the meantime, have not mechanics in some cases to go on trust for the necessities of life? A.—Very likely they have, to the end of the month.

Q.—Have you, to the best of your knowledge, ever heard that some workingmen are paid by store orders in this locality? A.—I do not know it. I have heard of such a thing having been done some time ago, but I do not know whether it is done now at all. I know that it is objected to; that workingmen do not like it.

Q.—Has the house rent of workingmen increased in Petrolia during the last five years? A.—I do not know that it has. I could not answer that question definitely.

Q.—Have their wages increased? A.—I think not.

Q.—Has the cost of living increased? A.—I think not.

Q.—How much is beefsteak per pound in Petrolia, good beefsteak? A.—From 7 cents to 12 cents;—about 10 cents, it depending on the kind you want. You can buy it on the street for from 4½ cents to 5 cents,—that is, beef by the quarter.

Q.—Do workingmen generally buy their meat by the quarter? A.—I could not say; I do not know.

By the CHAIRMAN :—

Q.—Could they not co-operate and buy beef by the quarter? A.—Yes.

By Mr. HEAKES :—

Q.—Did you ever hear of any overture made by the men to their employers with a view to having the pay days weekly or fortnightly? A.—I have not heard of any.

Q.—You never heard of any effort being made to change the system? A.—Not that I know of.

Q.—Have you ever had any labor difficulties here? A.—Nothing special, that I know of.

Q.—You have had no strikes? A.—No; no strikes.

Q.—Have you ever given the subject of disputes between employers and employes any consideration, with a view to arriving at the best modes of settling them? A.—I think they ought to settle them among themselves, as a rule. Have you reference to organizations here or Knights of Labor?

Q.—I have no reference to organization, but I am supposing that a strike takes place between some men and their employers, and I ask you what would you recommend as the best means of settling it? A.—I suppose the only way would be to settle it among themselves, that is, between the employer and the employed.

Q.—Do you mean by appointing representatives to discuss the matters involved? A.—I have no recommendation to make upon that point.

Q.—You have never given the question of arbitration any thought? A.—I do

not know that it has ever come to arbitrating here. I think, as a rule, we have had no practical distinction in that way here.

By the CHAIRMAN:—

Q.—You have had no strikes here, and therefore you have not considered the question? A.—Yes.

By Mr. HEAKES:—

Q.—Would a bureau of statistics for the whole Dominion be a benefit to the oil trade, if they were gathered and published annually? A.—I cannot answer that question, for I do not know.

ANDREW SMITH, Carpenter, Petrolia, called and sworn.

By Mr. HEAKES:—

Q.—Will you tell the Commission what wages carpenters earn here? A.—They earn from \$1.50 to \$2 a day.

Q.—Do they find pretty general employment? A.—Yes; I think so. Some times when men come in from other places, pretty thickly, we find business dull, but employment is middling steady; at least, I find it steady.

Q.—As a rule, men are pretty generally employed here? A.—Yes.

Q.—How are the men situated, as regards being comfortable in their homes—speaking generally. A.—They are moderately comfortable. I do not think they are more so than they require.

Q.—Do you think the average man can live comfortably with his earnings here? A.—He can live; as regards comfort, of course, if he could earn more he could become a good deal more comfortable.

Q.—Do many of them own their own houses? A.—Yes; quite a number.

Q.—What percentage do you think own their own houses here? A.—I could hardly say; probably 25 per cent.

Q.—Can you give us any information as to the working of the Ontario lien law? A.—No; I cannot. I think we have had very little experience in regard to it.

Q.—You cannot tell us whether it protects men in their wages or not? A.—No.

Q.—Are the men in Petrolia paid in cash always? A.—Not always.

Q.—When they are not paid in cash, how do they get their pay? A.—They get it in orders; still, it is principally cash—not always cash.

Q.—Do the men raise any objection to these orders? A.—Sometimes.

Q.—Would it not be more beneficial to the men if they were always paid in cash? A.—Yes.

Q.—Have you ever given the subject of arbitration in the settlement of disputes between capital and labor any thought? A.—I have not given it a great deal; I have thought somewhat about it.

Q.—Can you suggest anything to the Commission in regard to the establishment of a system of arbitration in the settlement of disputes? A.—No; I do not think I can. We have had no labor troubles here.

Q.—You have never had the necessity to think about it? A.—That is the idea.

Q.—Have you ever given the subject of technical education for mechanics' children any thought? A.—Yes; I have. I think such education would be a great deal better than a good deal they learn now.

Q.—Do you think that boys going to school should be taught the rudimentary principles of science? A.—Yes; I do.

Q.—Do you think the present system of education has a tendency to develop a dislike to labor in the minds of the pupils? A.—I have no doubt of it; that is my opinion.

Q.—Have you any building societies here? A.—No.

Q.—If a man purchased a lot and wanted to build a house, could he obtain money easily? A.—I really could not say exactly. Contractors here often build houses and take mortgages on them, and so on.

Q.—Do you know what rate of interest a workingman would pay for money borrowed in that way? A.—I think he would pay about 8 per cent.

Q.—There is no difficulty, I suppose, in getting houses put up? A.—Not so far as I know.

Q.—Is there anything in connection with the trade here you would like to bring before the Commission? A.—I do not think there is anything particularly.

By Mr. CLARKE:—

Q.—What are your hours of labor here? A.—Ten hours.

Q.—Do you mean ten hours six days in the week? A.—Yes; six days.

By Mr. ARMSTRONG:—

Q.—Do you know, as a fact, that some workingmen are paid by store orders? A.—I know for a fact that they have told me so.

Q.—The men who get those orders? A.—Yes.

Q.—Did they ever inform you that they were not satisfied with that system, and it was not as satisfactory as if they were paid in cash? A.—Yes; they would complain a little of it. It has not been the custom, however.

Q.—Not a general custom? A.—No.

Q.—Those store orders would be given as part of their monthly wages? A.—Yes; or weekly; the companies generally pay weekly.

Q.—Do you refer to laboring men employed in the oil industry? A.—They are mostly paid weekly, I think. I do not know, however, very much about that part of it.

Q.—Do you know whether there are workmen living in houses owned by the companies and constructed by the companies? A.—I do not know of any at present.

Q.—Can you give us the rate of house rent in Petrolia? A.—It runs all the way from \$4 to \$12 per month.

Q.—What kind of a house could a man get for \$4 a month? How many rooms would it contain? A.—There might be quite a number of rooms, but all the same it would be a very poor house.

Q.—In what respect would it be a poor house? A.—It might simply be a board and batted house, and while it might be large enough, would be very cold.

Q.—It would not be lathed or plastered? A.—No.

Q.—There would be no bath-room in it? A.—I think not.

Q.—What kind of a house, in a respectable locality, would a workingman get for \$12 a month? A.—He could get a very good house.

Q.—How many rooms? A.—A house with six or eight rooms.

Q.—What you would call a good house? A.—A very fair, comfortable house.

Q.—In a suitable locality? A.—Yes.

Q.—Have the wages of carpenters increased during the past five years? A.—No; I think not—that is, on an average; sometimes they are a little better; sometimes they are not so good.

Q.—Could you give us an estimate of the number of carpenters generally employed all the year round in Petrolia? A.—No.

Q.—There is no standard scale of wages here? A.—No.

Q.—Has the price of land increased recently in Petrolia—that is, in regard to building lots? A.—In certain localities it has; but, I think, in a general way it has not very much increased.

Q.—What would be the percentage of increase during the last five years, for example? A.—I really do not know; as the town extends, of course the land gets a little more valuable.

Q.—Are there any real estate agents in Petrolia? A.—That is, in the town proper?

Q.—Yes? A.—I do not think there are; there are some, no doubt, but I do not think there are a great many.

Q.—Could you tell us in regard to the other industries, outside of carpentering and the oil industry, that are thriving? A.—I do not think that I could; I am not very well posted in regard to other industries.

JOHN SCOTT, Livery-stable Keeper, Petrolia, called and sworn.

By Mr. McLEAN :—

Q.—Do you know anything about the condition of the working classes in Petrolia? A.—I do. I consider that the workingmen in Petrolia are paid about the same as any other place in Canada.

By the CHAIRMAN :—

Q.—Do you know anything about house rents? A.—Yes.

Q.—What is the rent of a workingman's house? A.—House rent here is pretty high compared with other places.

By Mr. GIBSON :—

Q.—What is a reasonable price for a workingman's house? A.—It seems that no one takes an interest in building tenement houses here; they are talking about doing it all the time, but it is never accomplished.

By the CHAIRMAN :—

Q.—Are the people afraid the town will not increase? A.—They were afraid, but they have all the encouragement they require.

By Mr. GIBSON :—

Q.—Are building lots high? A.—No; not unreasonably high.

Q.—What would be the cost of an ordinary lot? A.—You can get a good lot for \$200.

Q.—What would be its dimensions? A.—It would be 50 by 80 or 50 by 100.

By the CHAIRMAN :—

Q.—Compared with other places, you think building lots are a reasonable price here? A.—Yes; of course, there are lots in the business part of the town for which you would have to pay more, but for house-building purposes they are cheaper.

By Mr. CLARKE :—

Q.—Why was it the people had not confidence to invest their money in property here? A.—The oil business is one that fluctuates a great deal, and the people get scared occasionally. We have better hopes at the present time than we ever had before.

Q.—And still the people here think the price of oil is very low? A.—That is on account of the surplus on hand, but that is certainly decreasing now.

By the CHAIRMAN :—

Q.—Was that low price due to over-production? A.—Yes; to over-production.

By Mr. CLARKE :—

Q.—How long have you been in Petrolia? A.—Sixteen years.

By Mr. McLEAN :—

Q.—How long have you carried on a livery-stable business? A.—I have been eight years in the livery business.

By the CHAIRMAN :—

Q.—Are the prices of provisions about the same now as they have been during the last few years? A.—They are just about the same, so far as I know. I make it my business to enquire after matters of that kind, and I see no difference between here and a good many other places.

Q.—With what towns did you make the comparison? A.—From Strathroy, Watford and Sarnia, and even from London I made it my business to get quotations. The quotations I got were about the same as those given by our merchants here.

Q.—What kind of fuel do you use here? A.—Coal, wood and coke.

Q.—Coke from the refiners? A.—Yes.

Q.—Are the prices about the same as they have been during the last four or five years? A.—Yes; first-class hardwood can be obtained here at \$3 a cord.

Q.—And are other things in proportion? A.—Yes; you can buy this coke for 10 cents a bushel.

Q.—Is it cheaper than hardwood? A.—Yes; it costs me in my stable about 10 cents a day for coke.

Q.—What would it cost for wood? A.—More than that.

Q.—You buy coke at 10 cents a bushel, and you find that cheaper than the best hardwood at \$3 a cord. A.—Yes; I know that for a fact.

By Mr. CLARKE:—

Q.—How old is Petrolia? A.—About twenty-two or twenty-three years. There were people living here before that, but that is the period since the oil industry commenced.

Q.—Do you know any corporation that pays its men by the truck system, that is, by orders? A.—There is only one company or party in the town which does that.

Q.—Is that a company or a party? A.—I think it is a company.

Q.—There is one company that has the name of paying by orders? A.—Yes

By Mr. McLEAN:—

Q.—An oil company? A.—Yes.

By the CHAIRMAN:—

Q.—Does no other company but an oil company? A.—No; that is the general talk. This party I mean, is in another business.

By Mr. McLEAN:—

Q.—What other business is he in? A.—I do not know that it is necessary for me to answer that question.

JOHN W. CROSBY, Builder, Petrolia, called and sworn.

By Mr. HEAKES:—

Q.—On what particular subject would you like to give the Commission information? A.—I am a Canadian by birth, and I have a little knowledge of a great many things.

Q.—In regard to the agricultural districts around here, how are they? A.—They are very good, I consider.

By the CHAIRMAN:—

Q.—How are the farmers doing? A.—I think they are doing very well, as a general thing; those who are willing to work are doing well.

By Mr. HEAKES:—

Q.—What are the principal grain crops raised here in this district? A.—They raise a variety of grain. I do not think they run to any one kind of grain. A man may grow ten, fifteen, twenty-five, or even up to sixty acres of fall wheat; he may grow, probably, thirty, twenty-five, or ten acres of oats; he may grow some peas, a quantity of barley, from fifteen to twenty-five acres, and a little corn, sometimes ten acres, sometimes five, and sometimes one acre.

Q.—Where do they find their principal market for the barley? A.—They sell it here to grain buyers, as a rule.

Q.—Is it manufactured here or shipped? A.—It is shipped generally; some of it is manufactured here, but it is generally shipped.

Q.—Do they raise corn for food or for sale? A.—They feed what they require, and if they have a surplus they sell it.

Q.—Where does that go, as a rule? A.—Parties who do ship generally ship it

to Kingston. We sometimes import a good deal of corn here from the west, and we have it crushed in the mill to feed cattle and hogs.

Q.—Do farmers in this neighborhood go into stock-raising to any extent?  
A.—They do.

Q.—Have you any knowledge as to what good cattle are worth on the hoof?  
A.—I have no further knowledge than what I obtain from my friends selling their cattle. Animals from three to four years old bring from \$40 to \$60.

Q.—Have you ever given any thought to this question: what does it cost per pound to feed cattle? A.—No; I have never fattened any cattle, and I cannot answer your question.

Q.—Do you know, if farmers make a profit by feeding cattle? A.—They all claim that that is what they make a profit on.

Q.—They claim that there is more profit in that than in raising grain? A.—Yes; and they have less trouble with it. There are men in this locality who have in the year 100 head, and some forty or fifty large steers, which they export from here to Montreal, and some go right direct to England with their cattle.

Q.—Do you know what they principally use for food when they are preparing cattle for market? A.—To prepare them for the domestic market they feed them with chop stuff, oats and barley ground together, and sometimes corn meal and bran mixed.

Q.—And do they use different food when preparing them for the foreign market?  
A.—They are generally taken off the grass along in August and September, and even right up to October they can take them right off the grass. They have a large area here to run over, and they can keep them in good condition for shipment to the old country. This is a good grazing country for cattle.

Q.—Do you find in this neighborhood any great demand for agricultural laborers? A.—Very fair.

Q.—Is the supply equal to the demand? A.—I think it is.

Q.—Do the farmers, as a rule, keep their men all the year round? A.—No; as a rule, they do not. They hire them for the summer season, and some keep them the year round.

Q.—What wages would an agricultural laborer get for the summer season?  
A.—He would get from \$18 to \$23 a month and his board and washing.

Q.—Would that be for six months? A.—Yes.

Q.—What would a man receive who was in his employment all the year round?  
A.—About \$16 a month. Some men are hired for a little more than that and some for a little less. Of course, some men are worth double what other men are.

Q.—Has the introduction of machinery in farming lessened the demand for labor? A.—Decidedly it has.

Q.—Do you think under any circumstances agricultural laborers, to any extent, could find employment all the year round with farmers? A.—Yes; at fair wages.

Q.—Many of them? A.—It depends on the kind of laborer he would be. If a man was able to chop and log, and understand a little about such matters, he could obtain such employment. A foreign laborer would not be much in demand, but a Canadian laborer, who knew something about the different branches, could get any amount of work. I suppose south of here in the forests there are not less than from 1,000 to 2,500 men now engaged in lumbering.

Q.—What class of timber do they get out in this neighborhood? A.—Hickory; elm, oak, white ash, black ash,—pretty much all kinds of timber, what we would call hardwood.

Q.—Is Canadian hickory as good as American hickory for manufacturing purposes? A.—Yes; in this section of the country it is.

Q.—Do carriage-makers use Canadian hickory in preference to American hickory? A.—Of course there are two kinds of hickory in this country. There is first the shell-bark hickory, and also the second-growth hickory, a white hickory. The small hickory makes posts and bearing stuff for carriages; that is generally cut

out of the white timber. They take often the first logs,  $2\frac{1}{4}$  or  $2\frac{1}{2}$  inches through and take the butt for bending purposes for carriages, and they will put two or three logs into something else for a similar purpose in connection with carriage work. They also take a lot of this timber and ship it from here to Germany and England in logs. I have done something of that myself. They make gun carriages of it in Germany and France, and they also use a lot of white ash grown in this section of the country, which goes to Liverpool for agricultural work, such as reapers and machines used in England. This locality was, I suppose, at one time the best locality in western Ontario for oak and other timber. Of course, the country was new when I came here. I have a brother who has been living here forty years, and he pioneered the woods, and at that time wood was sent from here to Quebec.

Q.—Has walnut pretty well disappeared from here? A.—It has been pretty well cleared out.

Q.—Have you ever given the subject of tree-planting any thought? A.—No; I have never grown a forest for timber.

Q.—Have you any idea of the length of time it would take a walnut tree to come to maturity? A.—Yes; I have. Do you mean to grow large enough to make saw-logs?

Q.—I mean to make merchantable timber. A.—From twenty-five to thirty years.

By the CHAIRMAN :—

Q.—What size would that timber be? A.—About  $1\frac{1}{2}$  feet in diameter. I have cut down a walnut tree that was thirty years old, which was given to me by a man who planted it; It was 2 feet through at the stump, and tapered a little, giving about 14 feet of solid butt, and the rest was smaller timber. Timber grown in an open clearing generally grows with a larger top and makes a wider tree, whereas in the forest it generally runs straighter up.

By Mr. HEAKES :—

Q.—Then walnut lumber would grow about 1 inch every year? A.—Yes; in good soil adapted for it.

Q.—Do you think it would pay farmers as an investment to plant trees of that description? A.—I hardly think it would. It certainly would not pay the farmer who puts them in, for life is short, but it would pay his sons or some one else.

By the CHAIRMAN :—

Q.—It is like money invested at interest? A.—Yes; it would return interest.

By Mr. HEAKES :—

Q.—If a Dominion bureau of statistics were established, would it be of use to the manufacturers and the people generally? A.—It certainly would be.

Q.—In what way do you think it would be beneficial; do you think it would be beneficial to have the statistics of trade published? A.—Those who read such reports would get some knowledge of what they should grow, and of what they could turn into money, for a great many people go along without much thought, so long as they make both ends meet, and the people in this way would be able to turn their attention to different channels.

Q.—You think the people would be able to learn the condition of the various markets and the prices of products? A.—Yes.

By Mr. McLEAN :—

Q.—Are you in the building trade now? A.—Yes.

Q.—Do you employ any men? A.—Yes.

Q.—How many hands do you employ? A.—From five to twenty-five men.

Q.—What are the wages paid in the trade? A.—From \$1.50 to \$2.25 are about the wages my men get when I have work for them. Of course, if I were putting men into the woods at this time of the year to cut lumber I would give them \$1 a day and their board, and if they boarded themselves I would pay them \$1.50 a day.

By Mr. CLARKE:—

Q.—Is that for logging? A.—Yes; for cutting timber. I get out a good deal of timber at this season of the year.

By Mr. HEAKES:—

Q.—In regard to your remark as to wages running from \$1.50 to \$2.50 a day: are there a great many men in this section of the country who are handy men? A.—Yes.

Q.—A good general mechanic would command more than \$1.50 a day, I suppose? A.—Yes; in the summer time. I do a good deal of contracting for bridge building, and I pay some of my men \$2; \$2.50 a day being the highest pay, because I generally have a shanty where I board these men. Sometimes I give what would be called as high as \$3 a day to men, because I board some of the men, because they are extra good men, and are able to do work in my absence. As a rule, \$1.75 is what my men will average the year round, that is where they board themselves; of course, when I board them, I charge them for their board in many instances.

Q.—As a rule, are workmen comfortable in this section of the country? A.—They are not very.

Q.—Are they pretty generally employed? A.—Yes; a good man need not be idle one hour.

Q.—Have you any knowledge of the percentage among them who own their own houses? A.—Not unless I were to take the case of the men who work for myself. I would say, however, that in this section of the country one-half of the workmen own their houses, that is, of those who are not transients, but men who are living here constantly.

Q.—Do you think it is possible, with reasonable economy, for workmen to obtain their own houses? A.—Yes; they are often a great deal better off than the men who employ them.

Q.—Do you know of any disadvantage under which a workman is, in regard to selling his labor? A.—I do not know.

Q.—Do you think he stands on a perfectly equal footing with the purchaser of labor? A.—I think he does, and he is very often ahead.

By the CHAIRMAN:—

Q.—You think the employer often wants work as well as the employé? A.—Yes.

By Mr. McLEAN:—

Q.—How does the employé get ahead of the employer? A.—I am a contractor. I will compete with other contractors all around in taking contracts. I obtain one, and it does not come out as well as I expected. Perhaps the men were not so competent as those I had employed at some other work, and did not earn their wages; but, at the same time, I would not sack them, because they had been with me for a long time, and I looked upon them as good men and willing to do all they could, but for lack of knowledge they had not been able to earn their wages on this particular contract. At the end, therefore, they would have the money and I would have the experience.

By Mr. ARMSTRONG:—

Q.—How long would it take you to ascertain whether a mechanic was competent or not? A.—One day.

Q.—You would discharge him if he were not competent? A.—No; I would not in all cases. If a tramp came along, or a man from a distance, and recommended himself to be a mechanic in want of work, and told me what he could do, and after I had given him work I found he could not perform what he had undertaken to accomplish, I would give him his money and let him go. But, if I had a man working who had been working for me for two or three months, perhaps for a year, and I knew well enough that he was not a perfect hand on certain classes of work, I would keep him on, because he would be a faithful hand, his only fault being that

he did not know enough always to carry out the work I set him to do, and he might be a steady man, having a large family, and be doing the very best he could to get along—I say, I would not pay that man off.

Q.—And still you knew that that man was not earning his wages on the work?  
A.—Certainly.

Q.—In the case of Petrolia, when there is not a sufficient supply of labor are wages increased? A.—Not at the present day. We have put down business to a pretty fine point. We have seen the time here when we have paid almost any price for labor.

Q.—On account of its scarcity? A.—Yes; and on account of rush of business. This was a new town and there were new enterprises going on, and, of course, every body was going to do the best he could to get rich. We were bound to carry on as much work as our neighbors.

By Mr. McLEAN:—

Q.—Is it not a fact that contractors sometimes lose a great deal of money, because they do not know how to tender for a job, and tender too low? A.—There are very few men who have had experience who do not know how to tender for a job, but they do sometimes stretch a point, with the expectation of coming out clear, in order to keep their hold upon their amount of business and with a view to obtain other jobs.

By Mr. ARMSTRONG:—

Q.—Have you known, when there was a surplus of labor that workingmen were asked to receive less wages? A.—I never did. Of course, there have been a few individuals in our town who have cut down wages. They thought they could get the men to work for less, but they did not stand and they did not accomplish anything by it. In a word, it did not succeed.

Q.—Did it cause labor troubles? A.—Not to amount to anything. It might cause a little talk, and it might be that some parties waited upon the men and had the thing talked over—it did not amount to any trouble. We never had any appearance of a strike in our town.

By the CHAIRMAN:—

Q.—There is a good feeling all around? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Is second-growth hickory plentiful in this section? A.—It is not very plentiful now. We are rapidly clearing up the forests to the south of us. When I came here twenty years ago we had plenty of good second-growth hickory and good oak, but we have been manufacturing and shipping it pretty rapidly. It was pretty much of a forest for 20 miles to the south of us twenty years ago, with an odd gap here and there.

Q.—Is the sanitary condition of Petrolia good? A.—Yes; I think so. I may say that we have over 1,000 pupils going to school here.

Q.—Is the school accommodation sufficient here? A.—We are getting good schools here, and I do not think you can boast in Ontario of any better teachers, and the school accommodation here is very good. We pay out a great deal of money for the education of the young.

By Mr. HEAKES:—

Q.—Do they attend school here up to sixteen years of age? A.—Yes; some up to twenty years. We have a high school here which pupils attend after they have passed the common school, and who are there fitting themselves for business. There are over 150 scholars at the high school.

Q.—Would it be possible to give technical education in the public schools to the children and sons of mechanics? A.—Yes.

Q.—Do you think it would be a benefit to them if such instruction were given? A.—I am of the opinion that a boy with a common school education is fit to go through the world in any line of business he chooses to attach himself to. If we would give boys more labor and less schooling we would have a better class of men.

JOHN KERR, Builder, Petrolia, called and sworn.

By Mr. HEAKES :—

Q.—Are you engaged in any other business besides the building trade? A.—In the lumber business, and hardware and all building material.

Q.—Where do you get your lumber, principally? A.—Our pine lumber comes from the north of Georgian Bay of late years, from Spanish River and the Serpent River district, and along the east shore as well.

Q.—How do you bring that from there to Petrolia? A.—The lumber from the north shore comes down by vessel to Point Edward or Sarnia mostly; that from the south shore has come mostly by rail of late years.

Q.—Do you know anything about hardwood? A.—Yes; we get that in the vicinity here.

Q.—Do you know whether there is a great demand for Canadian hickory in the carriage shops? A.—I have understood so. Hickory is a wood we do not use much of; we have been exporting a little lately.

Q.—You cannot tell us, I suppose, whether carriage builders prefer Canadian to American hickory? A.—No; it is a line in which I am not interested.

Q.—I noticed yesterday the number of hardwood logs being shipped on the cars. Can you say anything in regard to them? A.—That was a shipment we were making for a firm in New York. They were drill poles, to be sent to the continent of Europe, principally Germany or Austria. Those we sell to a New York firm.

Q.—Do you do much of an export trade in manufactured goods? A.—As much as we require for boring and drilling.

Q.—Those which are intended for drilling purposes, I suppose? A.—Our export business has been in a moderate way for the past ten years, and it has embraced most of the countries in the world. Considerable has gone from here to India, and we have sent considerable this last year to Australia and to Germany, Austria and Bulgaria. We made one shipment, probably two, to Bulgaria.

Q.—Do you know if there is any dissatisfaction here as regards the inspection of oil measures? A.—There has been a great deal of talk in regard to the measurement of oil here. The principal dissatisfaction has been in regard to the absence of a Government inspection of the measurement of waggon tanks. We could not get inspection done, because there is no authority to measure less than two or five gallons, and the inspection has been made by the tank companies. The question, I think, has been drawn to the attention of the Government, but I do not know to what extent.

By Mr. CLARKE :—

Q.—Do you think it would be beneficial to the oil business if the Government would appoint an inspector to test the burning qualities of the oil as well as the measurement, too? A.—I do not know whether it would be well for the trade to be hampered any further by Government inspection than what it is hampered to day.

Q.—Do you think refined oil here compares favorably with American oil? A.—No; I do not think it is as good, but I think they are doing all they can.

Q.—So you do not think inspection would bring up the quality? A.—It might, but I think it would do more harm than good. The refiners are doing all they can, but the trouble is with the crude material. I was in the refining business a couple of years, ending last year, and I am of the opinion that we do not want any more Government interference along that line.

By Mr. HEAKES :—

Q.—Is there any system by which the boilers in which the refining is done are inspected? A.—Yes; we try the effects of getting up steam in them. Accidents to steam boilers form a very low percentage here to the number of boilers used, and our experience is that we suffer with men who have not received what we consider practical experience in that line, except the experience they get here. We have very few accidents.

Q.—Speaking of engineers in charge: are they all skilled engineers? A.—They

would not be considered so. They are skilled, however; but they would not be considered so, in the ordinary sense of the term. We do not, however, want Government inspection of engines and boilers here; we are very positive about that. The question was put a year ago and that was the universal opinion, and I can say without hesitation, therefore, that we do not want any such inspection. Accidents, I repeat, are few here, and those that have occurred have not been in connection with boilers that we consider poor, but more frequently in connection with boilers that we considered good. If a boiler is very poor an explosion may blow a hole out, and do no damage either to property or life. The accidents that have happened here in twenty years could be counted on the fingers of one hand, and they have been more among the boilers in charge of engineers who would be considered well up in their business. We run four, five or six boilers all the time ourselves.

Q.—Are the men here generally paid by the week? A.—They are generally paid by the day. Our practice is to pay our men every Saturday night—to pay them whatever money they want. We do not make a habit of paying all the money that is coming. He is asked what he wants and he gets a check on the bank for that amount.

Q.—Are the men generally paid by check? A.—Speaking for myself, we always have made it a rule to pay by check on our bank. I have always set myself against the ordinary system.

Q.—You have never had any difficulty with your men here? A.—No.

Q.—About how many men do you employ on an average? A.—This last season, something over 100. Last Saturday night we had forty or fifty. The number has been reduced on account of the season.

Q.—Are workmen in the building business pretty generally employed all the year round? A.—Yes; we have men in our employ who have been twelve, thirteen, fourteen and fifteen years with us.

Q.—Do you consider a workingman in Petrolia is on an equal footing with his employer in regard to the sale of his labor: in other words, do you think a workingman is under any disadvantage in that regard? A.—No. Speaking personally, I can say that there is the very best feeling between the two classes here.

Q.—Do you know anything of the savings of workingmen in this neighborhood? A.—Some men are saving very nicely.

Q.—You think it is possible for them to do so? A.—Yes; they are getting houses of their own, and so on.

Q.—Has co-operation in the production and distribution of products ever been tried here? A.—Not that I am aware of.

Q.—Have you ever given the subject of distribution of profits any consideration? A.—No; it will be a difficult matter to manage here, for it would be difficult to say just where the profits are to be divided.

ROBERT E. MENZIS, Manager of the Producers' Oil Refining Company, Petrolia, called and sworn.

By Mr. HEAKES:—

Q.—Will you kindly tell the Commission what rates of wages men earn in the refining business—take the average man? A.—We have a great many men employed as laborers who work for \$1.50 a day; our coopers get \$2 a day. We have other men receiving \$1.75 a day. I would strike the average rate at about \$2 a day or \$1.90.

Q.—Is that the prevailing rate throughout the refineries? A.—It is at the producers' refinery. There are, however, refiners who pay less wages than we do—a few refiners with a different class of labor.

Q.—Are those men employed throughout the whole year? A.—No.

Q.—What length of time are they employed? A.—I should say that two-thirds of the men work seven months in the year, not longer.

Q.—Have you ever made an estimate of what a man will earn in a year? A.—I never have. The movable portion of laborers is that of coopers. They know the season as it comes along and they come here and go to work, and they go away again; some go to Cleveland and the American oil fields.

Q.—They go to the American oil fields when the season is through here? A.—Yes.

By the CHAIRMAN:—

Q.—Does the season here last seven months continuously? A.—Yes; about that time.

Q.—What time of the year do you start work? A.—When we begin to make the oil we employ a certain class of labor, that is in May and June, depending on the circumstances. We manufacture oil at that time, but our shipping season, commencing in August, extends through September, October, November, December, January and February. It is falling off from November onwards, and by March business is flat again.

Q.—Can you tell us the class of men you require to run the engines here; tell us what class of engineers they are? A.—A great number of our engineers are local men, men who have come in here and have run an engine for a short time and get to know the steam gauge, and after they know that and the water gauge they are full-fledged engineers.

Q.—That is the class of men who receive \$1.50 a day? A.—Yes.

Q.—You would not consider them skilled engineers? A.—No; that is, many of them.

Q.—Do you think an engineer should have a knowledge of the construction of a boiler before he is placed in charge of one? A.—He should have a knowledge of the strength of iron, to some extent, the ability of a boiler to carry pressure, and the effect of heat on a boiler-plate.

Q.—I suppose you test your boilers here? A.—No; we never test our boilers.

Q.—Are they not inspected? A.—No; not to my knowledge, and I have owned a good many.

By Mr. McLEAN:—

Q.—Who are the parties in Petrolia who do not wish any Government inspection of the boilers and engines? A.—I am not aware of any. They may be all against it, so far as I know, but I consider personally that it should be done; I consider it a necessity.

By Mr. HEAKES:—

Q.—You believe that all boilers should be inspected. How frequently do you think this should be done? A.—Say, at least, once a year if in use.

Q.—How about the men in charge of the boilers: do you consider the present system a proper one? A.—I do not think so. I think a man intrusted with a boiler, especially when there are persons in the vicinity, should know something about the nature of a boiler and something of his charge.

Q.—Would you recommend any system of granting certificates to provide for the efficiency of engineers? A.—It would be very hard to get such a system adopted. In the case of steamboat engineers they are graded into different classes, and the third or fourth class would be quite good enough for here. Men holding steamboat certificates require to possess certain information in regard to boilers and certain special information in regard to steamboat boilers; you could do away with part of that and continue only such part as would apply to boilers and engines such as we have here.

Q.—All steamboat engineers, I suppose, carry certificates? A.—They all do.

Q.—Should stationary engineers be protected in the same way? A.—I think they could be.

Q.—Can you tell us some of the principal causes of accidents with boilers? A.—There are a great many different reasons why accidents occur. One reason, and about the first reason that may be given for accidents, is want of water. In many cases it is

not really want of water, but want of cleaning out the boilers, which become incrustated by lime from the water and salt which is in it here. These deposits form a crust which eventually breaks and allows the water to drop on the sheets, and they become overheated and the explosion of the boilers occurs. You, of course, weaken a boiler by over-heating it.

Q.—Are accidents to boilers frequent here? A.—Not so much so as they were years ago.

Q.—Are the men getting more careful as they are coming to have better knowledge? A.—There are not so many boilers running in proportion to the number of men, or the number of men of that class I have referred to. We had at one time a drilling rig, a boiler and engine at every well, whereas to day we have a boiler and engine for perhaps twenty-five wells.

Q.—I suppose the risk in proportion to the number of boilers is as great but you do not use as many boilers? A.—We have also more men who know more about the business than we had previously.

Q.—Is it possible for an inexperienced engineer to so strain a boiler with pressure as to weaken it, and thereby run the danger of causing an explosion? A.—It is possible for an engineer to over-strain a boiler.

Q.—Would it be more probable to occur with inexperienced men? For instance, if a boiler had 100 or 120 pounds pressure, would it injure the boiler? A.—Certainly, if a boiler was not built to stand that pressure. An ordinary boiler is made to stand a strain of about eighty pounds pressure, and if a pressure of 120 pounds is put on the boiler may stand it once or twice, but at some later time it may explode with a pressure of seventy-five or eighty pounds.

Q.—Would it be due to excessive expansion? A.—To the expansion and contraction of the iron.

Q.—Speaking of the business of an engineer: do you think it is possible to teach the ordinary principles of engineering in the public schools? A.—I think it is possible to teach a great many of them.

Q.—Would it benefit the children of mechanics if they were taught such principles? A.—I think it would. There are a few simple things, such as vacuum, expansion and contraction of iron, and the action of a pump, and rudimentary subjects of that kind, that would be a benefit to any one to know.

Q.—Do you think it is possible to introduce that instruction into the public school system without injuring our present educational facilities? A.—Just as easy to introduce it as it was to introduce the teaching on the syphon which was introduced long ago into the schools.

Q.—Have you ever had any labor troubles here? A.—Personally, I have been very fortunate in that direction; I have never had any trouble with the men.

Q.—Have you ever given the subject of arbitration in regard to trade disputes any thought? A.—Very little. Labor seems to be regulated by the laws of supply and demand; one man would be worth \$3.50 a day while another man is not worth more than 75 cents.

Q.—Would the establishment of a bureau of statistics for the whole Dominion be a benefit to the oil industry? A.—I believe it would be.

Q.—Have you any idea what benefit would accrue from the establishment of such a bureau? A.—I have never given the matter any study; this, indeed, is the first time I ever heard of it.

Q.—Such a bureau, of course, would give you information in regard to the various markets and the prices ruling. A.—Yes; I think it would be a benefit.

By Mr. ARMSTRONG:—

Q.—Who started the agitation as to the appointment of a Government inspector? A.—I have not any idea.

Q.—Was there not such an agitation started some time ago in Petrolia? A.—I have heard a little about it, but who the instigators were I do not know.

By Mr. HEAKES :—

Q.—Would Government inspection of boilers be generally acceptable? A.—I think it would be. It would have the effect of displacing very few men at present employed, and it would also have the effect of compelling the employers of the men to furnish boilers that are not dangerous. Many times boilers are owned by parties who do not risk their own lives in connection with them, while the men whom they employ to run them must do so or lose a job, and even if a man loses a job it will be taken by some one more ignorant, and the risk will be continued.

Q.—Have you ever known instances of boilers exploding with eighty pounds of steam pressure after they had been strained? A.—Yes; for instance, a Slack boiler. On that boiler a pressure of from 120 to 125 pounds had been applied. I knew Mr. Slack very well, and he told me about the pressure that had been put on the boiler and how well it stood it, and how sound it was. I made the remark that a boiler might carry the pressure for a time very well, but that it might explode subsequently at a very much less pressure. He thought it would stand 120 pounds pressure for ever. Shortly afterwards the boiler exploded, and from the best evidence I could get the pressure on it at the time was not greater than eighty pounds, the explosion killing a boy and maiming another person for life.

Q.—Is there a general desire here to have the oil measured by Government inspection? A.—Yes; I have heard something about that, and there is quite a stir among producers in this regard, and I think they are right. They want a standard measure, whereby they can test the measure the tanking companies give them.

Q.—Have you no Government standard now? A.—We have what we call the imperial measure. How we got it I do not quite understand; I think there will be an effort made to get the standard here for the future.

By Mr. CLARKE :—

Q.—Do you not use the Ontario Government standard? A.—I do not know. I know we find a difference in the measurement between the ordinary measure and the measure the tanking companies give for the tanks. They call the tanks in and measure them over to suit themselves. I do not say that their measure is wrong, but there is great dissatisfaction in regard to it.

By Mr. HEAKES :—

Q.—If the tank were measured by an inspector would it give confidence to the oil trade? A.—Yes; people would know that their tanks were measured and that they were all the same.

By Mr. CLARKE :—

Q.—I suppose they would be willing to pay for the inspection? A.—You could compel them to pay for the inspection of the tanks. They, in fact, pay for the inspection now, \$1 for each tank.

By Mr. HEAKES :—

Q.—Speaking of the supply of labor here, is it always equal to the demand? A.—Skilled labor is sometimes a little hard to get here. We export about as much labor as any other place in the community. It is in the shape of skilled labor for drilling in foreign countries. Men from here have gone to Germany, Austria, Australia, India and all parts of the world.

By the CHAIRMAN :—

Q.—Have they learned their business here? A.—Yes.

By Mr. CLARKE :—

Q.—Do they go there seeking work? A.—They are employed here and taken out there.

By Mr. HEAKES :—

Q.—I suppose unskilled labor coming in here would find much difficulty in

obtaining employment? A.—Yes; some difficulty; the same as if a man wanted a job in a carpentering shop—he would have to know something about the business.

Q.—Then immigration would not interfere with your business to any extent?

A.—Immigration interferes with labor in any business, because if an employer can hire a man for 75 cents a day he will make it his business to educate him.

Q.—How frequently do the companies pay their men—weekly or fortnightly?

A.—Some one; some the other.

Q.—Do many pay only monthly? A.—I could not say as to that; our method is to pay every two weeks.

Q.—Are your men paid in cash? A.—Vouchers, which are the same.

By Mr. CLARKE :—

Q.—What is your idea in regard to Government inspection of the burning quality of oil?

A.—That is a question which has been discussed a great deal. We have a sort of standard for a burning test, and it is a very good one. I could not give you any more definite answer as to that.

Q.—Would not the adoption of such a test bring up standard quality? A.—It would be a good thing to show people buying the exact quality of oil they are getting.

Q.—There is ten times as much Canadian oil used in the Maritime Provinces as there formerly was, but there is a lack of confidence in regard to it. It is supposed that if there was a Government inspection of the burning test it would inspire confidence. What is your opinion on that question? A.—The oil exchange established a burning test, and we sent out with our bills of lading a certificate of inspection, and it had a good effect and continued for some little time; but without certificates a man who would sell the oil for 10 cents similar to that sold by a rival at 10½ cents, no matter what the quality is, has the advantage.

Q.—Has there ever been, to your knowledge, a very low grade of oil exported from Petrolia? A.—Yes.

Q.—Of course, such oils would not compare favorably with American oils? A.—Very low grades have been made; they are occasionally turned out now.

Q.—Does the consumer who obtains such oil think he is burning the best oil?

A.—He would very soon be able to find it out by burning it. He cannot, however, know it until he has used it.

By the CHAIRMAN :—

Q.—Is this bad oil used for any other purpose than burning? A.—No; I think not.

Q.—Then there must be a demand for this impure oil? A.—Its quality is not known until it has been tried.

Q.—It is sold? A.—Yes; but I will not say there is a demand for it.

Q.—You think those who buy it do not know the quality of it? A.—Yes.

By Mr. HEAKES :—

Q.—Do you think it is possible to bring the Canadian up to the standard of the American oil? A.—In some ways it is; in other ways it is not.

Q.—Do you think it can be so manufactured as to sell with a profit compared with American oil? A.—You have got me there. At the present time we can compete with the American oil, but it is with the protection we enjoy, which is not any too much. We could not possibly compete with American oil without the protection we have got.

Q.—You think American oil is a better oil than Canadian: is it purer? A.—It depends on what you consider better. The Canadian oil is a better oil in some respects; its capillary action is better. You can burn the lamp drier than you can with American oil and it will last longer, while, at the same time, if you desire a light for five or six hours, a brilliant, nice, white light, the very best American oil will beat our Canadian oil. But the ordinary grade of American oil is very much inferior to our present grades. The New York test, for instance, is for a very low grade of oil.

By Mr. CLARKE :—

Q.—If there was a Government burning test would it be possible to export that very low grade of oil to which you referred? A.—No.

Q.—Does the oil that the companies refine belong to themselves or to the producers; or can the producers have their oil refined by the refiners? A.—That has never been tried. No doubt, the producers could get the oil refined if they engaged a refiner to do it for them, but it has never been done.

Q.—It is a distinct branch of the business, I suppose? A.—It has never been done in that way.

Q.—What is the extent of this oil territory? A.—Seventeen or eighteen miles long. There is the Oil Springs territory; there are different territories, partially cut off from each other.

Q.—Would this oil territory be twenty miles long? A.—It depends altogether on what you call oil territory. There are showings of oil for a distance of over twenty-five miles in length.

By the CHAIRMAN :—

Q.—From the nearest to the furthest point, what is the distance covered by the territory? A.—If you include Comber, it will include sixty miles. It may be placed at fifteen miles by sixty; there are showings of oil through that district.

By Mr. ARMSTRONG :—

Q.—You have an oil exchange in Petrolia? A.—Yes.

Q.—How long has it been in existence here? A.—I think three years.

Q.—Do they deal in both crude and refined oil? A.—Yes.

Q.—What is their object? A.—To buy and sell oil.

Q.—Do they attempt to make a corner in oil? A.—Yes; sometimes they do, if there are plenty of bulls.

Q.—Does the producer receive more for his oil than he did when there was no oil exchange in existence? A.—He has received just as much, and just as little. I do not think the oil exchange has any effect upon the price of crude oil.

Q.—You think it has no effect on oil, one way or the other? A.—Very little.

Q.—What benefit does it do the refiner or the producer? A.—It is something like having a little game of poker.

Q.—Has the exchange a tendency to raise and lower the price of oil? A.—It depends altogether in whose hands the market is. If the majority of the men have agreed that the price of oil shall go up, and they are stronger than the parties opposed to them, it will go up for a time, but the price will gradually come down again.

Q.—To the best of your knowledge do you think that this exchange has endeavored or does endeavor to control the market? A.—They have endeavored to make the price. Their price has been recognized as the price of crude oil. It has been the price of crude and recognized as such. I believe, however, that more or as much oil changes hands off the exchange than changes hands on the exchange.

Q.—Still, the exchange has only been in existence three years. I suppose there has not been time to control the whole of the produce? A.—I cannot say; it is growing very rapidly.

Q.—You have spoken about your men being paid by vouchers. What do you mean by that; is a voucher received at the bank for its face value in cash? A.—Yes; it is a check.

Q.—Is there any discount on it? A.—No; no discount.

By Mr. HEAKES :—

Q.—Since the establishment of the oil exchange, has the producer received less for his oil? A.—I would have to go back to dates for that information. I have sold my oil for less before there was an exchange than I have since there has been one. But at that time there was a great quantity thrown on the market at once. Supply

and demand control this business, to some extent, and want of confidence and lack of money has an effect on the price. If the Government can send us lots of money in here the price will undoubtedly go up.

By the CHAIRMAN:—

Q.—Does the price in Petrolia govern the price throughout the Dominion?  
A.—Yes.

BLAKE LANCEY, Dry-goods Merchant, Petrolia, called and sworn.

By Mr. ARMSTRONG:—

- Q.—Are you a member of the firm of Lancey & Company? A.—Yes.  
Q.—Are you book-keeper in the firm? A.—No.  
Q.—Can you tell us the price of boots, and such goods, in Petrolia? A.—No; I am not in the boot business; I have nothing to do with that department.  
Q.—What department do you control? A.—Dry goods.  
Q.—Is there any difference between the price of goods in Petrolia and Sarnia?  
A.—I do not know; there may be some.  
Q.—In which town is there an advantage, as regards the purchasing of dry-goods? A.—I do not know that there is any.  
Q.—Are dry-goods ordinarily as cheap in Petrolia as in any other town in Ontario of the same size? A.—I think so.  
Q.—Is your firm connected with any other industry besides dry-goods? A.—We have dry-goods, boots and shoes, groceries, hats and caps, and so on.  
Q.—Do you invest capital in any other industry? A.—No.  
Q.—Do you receive, in the course of trade, orders on your store? A.—In what way?  
Q.—Store orders instead of cash? A.—No.

By the CHAIRMAN:—

Q.—Have you any arrangement with any person or corporation by which you pay their men in goods instead of the men being paid in cash? A.—No.

By Mr. ARMSTRONG:—

- Q.—You do not receive orders from any other employer of labor in Petrolia in part payment of wages to men? A.—There are several ways of putting that, I should think.  
Q.—Is there any truck system transacted in Petrolia to your knowledge? A.—We take farmers' produce in exchange.  
Q.—Do the customers come to your establishment with orders, instead of cash, for the purchase of goods? A.—Sometimes.  
Q.—It is not prevalent to any extent? A.—No.

By the CHAIRMAN:—

Q.—I suppose some one may give a man an order, and if you are satisfied with regard to the liability of the man you let the individual have the goods? A.—Yes.

By Mr. HEAKES:—

- Q.—As a rule, are the men paid in cash for their work in Petrolia? A.—Yes; most of them are.  
Q.—Are the orders you get an exception to the rule? When a man gets an order on a store, instead of pay, is it not an exception to the general rule with respect to pay? A.—No; I do not think that it is.  
Q.—You think it is part of the system? A.—It is a general rule.

By the CHAIRMAN:—

Q.—What is the general rule? A.—If a man sends an order to our store to give a man so many goods we give it to him.

By Mr. HEAKES:—

Q.—That is not what I meant. Is it a general rule to pay men partly in cash and partly in orders, or is it a general rule to pay in cash and the exception to give orders? A.—No firm, so far as I know, oblige their men to accept orders instead of cash. It is a matter of accommodation.

By the CHAIRMAN:—

Q.—What is the salary generally paid by mercantile establishments here to clerks? A.—From \$5 to \$12 per week.

Q.—Without board, of course? A.—Yes.

By Mr. HEAKES:—

Q.—Do females serve behind counters here to any extent? A.—Not to any extent. We have a female book-keeper and cashier.

ALEC. SIMPSON, Shoe-maker, Petrolia, called and sworn.

By Mr. HEAKES:

Q.—You have given some attention to labor matters, I understand? A.—I have done a little in that line.

Q.—Can you give us any information in regard to the best method of settling disputes between capital and labor? A.—The way I could approve of is arbitration.

Q.—Do you know if there is a general feeling among workingmen in favor of that system? A.—I think if it were put to the vote the majority would vote for arbitration.

Q.—Would you make arbitration compulsory in all labor difficulties? A.—I would make it compulsory, as far as it was practical.

Q.—What effect have labor combinations, so far as your knowledge goes, on the condition of the working people? A.—They have had an effect for good, so far as I have seen the working of them—that is to say, if they are properly organized and carried out. The working classes want to be organized in order to understand their position towards capital.

Q.—Do these trade organizations afford facilities for discussing these questions? A.—They do.

Q.—Can you give us a comparison of the workingmen to-day and workingmen before organizations were effected to any extent? A.—I do not know that I could draw a very accurate comparison. I know that since labor organizations have started there has been more of labor discussion than has taken place during the previous ten years. The only resort labor had before these organizations were established was to strike. Organization tends to teach the workingman not to strike.

Q.—Do you think labor organization of recent years has, in comparison with former years, benefited workingmen morally? A.—I think they have benefited workingmen, or, at least, the majority of them. There are some instances in which organization has not benefited them, because the men have been led by those who were not capable of leading them, by men who were too rabid on the question to take time to see where they were going to jump; in other words, they arrived at conclusions too quickly.

Q.—Are labor organizations, so far as your knowledge goes, antagonistic to the interests of employers? A.—No.

Q.—You think it is beneficial to employers if the workingmen are well organized? A.—I do; a man will look to his own and his employer's interests also.

Q.—Do labor organizations educate their members to take an interest in their employers? A.—So far as regards any organization to which I have been attached, I may say that they have made that a special question, to look at their employers' interest.

Q.—Do you know anything about the lien laws in Ontario? A.—I am not very

well posted on that matter, not being employed in a branch of industry which uses lien laws.

Q.—Have you ever given the question of profit-sharing any study. A.—Yes; a little.

Q.—Do you think the principles of profit-sharing could be introduced with safety into business. A.—I think so.

Q.—If profit-sharing were introduced, what effect would it have on workingmen? A.—It would have a beneficial effect. It would make them more industrious and more careful, because their interest would be involved in the matter. Wherever it has been introduced it has been a success, so far as I know. I know several firms that give their employés an interest in the business.

Q.—Do you not think profit-sharing, if it were introduced generally, would, to a certain extent, do away with labor troubles? A.—It is my opinion it would. It would make the men more careful in the trade; they would have more at stake.

Q.—Are workingmen according to your knowledge, generally paid in cash here? A.—If you call a check cash, they are. It is quite a question whether a check is cash or not; it is not a legal tender.

Q.—I suppose the banks cash the checks? A.—Yes; but they cause a good deal of difficulty to business men and storekeepers to cash the checks on Saturday evening. They have to cash them or lose custom.

Q.—Does the truck system prevail here? A.—I do not know; reports are such, but as to facts I cannot say.

Q.—Have you any knowledge of co-operative societies? A.—I have never been attached to any co-operative institution. I have studied a little in regard to the matter.

Q.—Has it ever been introduced into Petrolia? A.—Not to my knowledge. It cannot be successfully carried out in Canada under the present laws, and there would have to be a change in legislation.

Q.—In what direction? A.—To make it legal.

Q.—Cannot a co-operative company be incorporated now? A.—As a joint stock company, but not on co-operative principles. They will give you a charter as a joint stock company.

Q.—Cannot you become incorporated as a limited liability company? I do not know.

Q.—Do you not think if a bureau of labor statistics was established by the Government it would be a benefit to the working classes? A.—I do.

Q.—In what way? A.—Workingmen would see at a glance the rates of wages, prices of living, and so on, at the different centres of trade, and a man would not have to travel all over the country if he wanted to benefit himself. They would see exactly what was doing in Hamilton, Toronto, Montreal or in any other part of the Dominion. I believe such a system would be a benefit to the working classes and to the masses at large.

Q.—From your knowledge of the working people in this district, do you think they would generally favor such a bureau? A.—So far as I know, I think they would.

By Mr. ARMSTRONG :—

Q.—Did you ever work in a boot and shoe factory? A.—Yes.

Q.—Is there a great deal of machinery employed in such a factory? A.—There is.

Q.—Do you think that a boy going to work at the shoe trade in a factory can learn the business properly, so as to be able to start for himself without machinery? A.—No; he cannot.

Q.—Does he go round from one branch to another until he has learned the whole business through? A.—No; unless he is favored. He would have to be the son of the boss or the manager to get that privilege.

Q.—He is kept at one particular branch? A.—Yes; at that branch where his labor is most profitable to his employer.

By Mr. CLARKE:—

Q.—Is that in the United States or Canada? A.—In both countries.

Q.—Have you worked at a factory in Canada? A.—I have worked in two or three factories in Canada.

By Mr. ARMSTRONG:—

Q.—Did you work at the factory in London? A.—I was eight years in the factory there.

Q.—How many departments are there in the making of a top boot in a factory? A.—Five.

Q.—And a boy does not exchange from one department to another so as become acquainted with the departments? A.—No.

Q.—What are the wages of a journeyman shoemaker in Petrolia? A.—That varies, according to the class of work he does.

Q.—I mean custom work? A.—It varies from \$1.75 to \$2 and \$2.50 a pair.

Q.—That is by piece-work? A.—Yes; that is the way we work.

Q.—How many pair would a passably good workman make in a week? A.—That is a question.

Q.—How many pair of hand-sewed boots you call a fair week's work? A.—Four pair; but a man does not get them to do.

Q.—Did you ever work in the United States? A.—Yes.

Q.—What is the comparison between the position of a shoemaker in the United States and Canada? A.—The comparison made now would not correspond, because I worked there at the time of the war.

Q.—Do you know anything about tenement houses in Petrolia? What would a mechanic pay for a respectable house, say of six rooms, in a convenient locality—a house fit to live in? A.—About \$10 a month.

Q.—Do you know any companies in Petrolia which construct houses for their employes? A.—No; there may be some, but I do not know them.

Q.—How long is it since you worked in London? A.—A little over three years.

Q.—Are wages higher in London in your branch of business than in Petrolia? A.—They are about the same.

Q.—Is house rent higher or lower here? A.—House rent is cheaper in London than here.

Q.—How are the necessaries of life, as regards price? A.—They are cheaper in London.

Q.—To the best of your knowledge, does the purchasing power of a dollar go as far as it did five years ago? A.—I do not think so.

Q.—Have the wages in your line of business increased during those years? A.—Not during the last ten years.

Q.—Has house rent on the whole, increased or decreased? A.—I think it is about the same in London.

Q.—I mean in Petrolia? A.—My experience in Petrolia is confined to three years; it has been the same during that time.

Q.—Is the value of building lots increasing, to your knowledge? A.—Yes.

Q.—Do you know anything about public schools? A.—I have a boy going there twelve years old.

Q.—Is the school accommodation in Petrolia sufficient? A.—They are doing very well in that line.

Q.—Are they keeping up with the population? A.—I think so; at all events they are making arrangements to do so. I have nothing to say as regards the school question.

Q.—How do the people here obtain their drinking water? A.—It is taken around to them, to those who have no wells. It is taken around every morning and delivered at the houses.

Q.—Is it taken around gratis? A.—No.

Q.—Who pays for it—the corporation? A.—No; you pay for what you consume at the rate of 1 cent a pail.

Q.—Where does the water come from? A.—From a well on the flats, and another one at a different place, and another one on the twelfth line.

Q.—Are there good water wells in Petrolia? A.—There are some.

Q.—Why are there not sufficient of them to furnish a sufficient supply, instead of the water having to be carried around to the houses? A.—Because the gas from the oil wells affects the water; it makes water salt. There are salt deposits here besides oil deposits.

Q.—Are good water wells scarce on that account? A.—Yes.

JAMES KERR, Secretary of the Petrolia Oil Exchange, Petrolia, called and sworn.

By Mr. FREED:—

Q.—Are you engaged in the manufacture of oil? A.—Very indirectly.

Q.—Can you tell us if the present system of testing oil is satisfactory? A.—I do not understand your question.

Q.—Do you think the present system of testing oil is a guarantee to the consumer? A.—Do you mean the Government system?

Q.—Have you a Government system of inspection? A.—Yes; there is one in Canada.

Q.—For safety? A.—Yes.

Q.—Do you think that is satisfactory? A.—Yes; it is, so far as it goes.

Q.—Is it a fact that at different times an inferior class of oil is shipped to the market? A.—There can be no doubt about that. There are various qualities of oil that go into the market, and some are inferior.

Q.—Would that inferior grade of oil have the mark of the inspector on it? A.—Yes.

Q.—The same mark? A.—Yes; the official inspection of oil in Canada has no reference to the quality of the oil as such; it only has reference—that is, within certain bounds—to the safety.

Q.—It has only reference to the fire test? A.—Yes.

Q.—Then, under the Government inspection there is no guarantee to the consumer of the quality of the oil? A.—No.

Q.—Do you think it advisable that such a guarantee should be given? A.—Yes.

Q.—Would it be in the interests of the refiners to have such a guarantee? A.—I think it would be in the interests of the whole of Canada, the producer of the raw product, the manufacturer and the consumer. There can be no doubt whatever about it.

Q.—If you had such a standard fixed by the Government would it not give you a much larger market for the oil? A.—It would increase the market about 50 per cent.

Q.—Have any overtures ever been made to the Government for an inspection of that kind? A.—Yes; it was suggested a year ago.

Q.—By the refiners? A.—No; not as such particularly. There was a deputation appointed by the Refiners' Oil Company and the Petrolia Oil Exchange last year. It was sent to Ottawa to wait on the Government in that regard. Members of the deputation did so, and represented to the Department of Inland Revenue some of the points in connection with the matter. Mr. Costigan and Mr. Miall were seen.

Q.—Generally speaking, do members of the oil exchange favor a standard of that class? A.—Yes; so much so that they have adopted rules of their own in that regard to inspection, providing a mode of inspection, and they have exerted themselves to a considerable extent to have them generally adopted. It was adopted and put in force for about a year and a half, but through changes in the trade it ceased to be followed. The authority of the exchange is not sufficient to enforce the rules connected with the system to which I have referred.

Q.—That was not a guarantee, I suppose? A.—It would be a guarantee if adopted. In fact, so far as adopted by manufacturers it was a guarantee. A certi-

ificate of the oil exchange inspection would be a guarantee, so far as it goes. There was another difficulty in connection with the matter. The Dominion statute in regard to the inspection prohibited the placing of any other mark except the Government stamp on the end of the barrel, and, of course, we were debarred from placing our stamp there, and it was rather inconvenient to place the stamp in any other part. So we adopted a system of certificates rather than that of stamping the barrels.

Q.—Since the adoption of the system of certificates has the demand for your oil increased? A.—I rather think so. I think I would be safe in saying this: that during the last two or three years the demand for Canadian oil has improved, especially during the last two years. Of course, there are other reasons for that as well; it does not depend wholly on the certificates; it depends on the improvements in refining as well.

Q.—You mean improvements in the manufacture? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Has the oil exchange in Petrolia anything to do with American coal oil? A.—No; we are completely cut off from it.

Q.—Is there only the one exchange here? A.—Yes.

Q.—Does the coal oil exchange have a tendency to control the prices of foreign oil? A.—No.

Q.—Does it control the price of the outside oil—that is, American oil? A.—No.

Q.—Does it control, commercially speaking, the price of Petrolia oil? A.—It depends on how you look at it. The oil exchange is simply a market place where people who wish to buy or wish to sell, if they have the *entré*, go, every day if they choose, either for themselves or for people who are not members of the exchange. It is simply a public market. That is all the Petrolia exchange is, barring this: they have a board of management which, from time to time, makes rules for the management and sales, and settling of them, and generally in regard to other matters of a like character.

By the CHAIRMAN:—

Q.—I suppose, just as corn exchanges have in some cities? A.—I presume so. It is simply a public market, not a general stock company to control anything, and it cannot control anything as an exchange, and it does not.

By Mr. ARMSTRONG:—

Q.—Can any one buy or sell oil there except members? A.—Any one can through a member.

Q.—We all know that on stock and gold exchanges there are bulls and bears; I presume it might be the same with the oil exchange here. A.—It may be so; we do not make them.

Q.—Do they sometimes attempt to corner oil? A.—That I have never heard.

By the CHAIRMAN:—

Q.—As an exchange, you have nothing to do with that? A.—Not as an exchange.

Q.—Individual members may, of course? A.—Certainly.

Q.—But not the exchange, as such? A.—No.

By Mr. ARMSTRONG:—

Q.—What benefit accrues to the producers of oil from the exchange? A.—There is this that accrues: there is a market every day where his oil can be sold for cash, and every day he knows the ruling price, without going around and making enquiries of various purchasers or other parties.

Q.—Are there many producers members of the oil exchange? A.—Not many, when you consider there are only thirty members connected with the exchange, and perhaps there may be one hundred or two hundred producers altogether round here.

Q.—How are the members admitted to the exchange? A.—They are admitted by paying a fee of \$10, handing in their names and being admitted.

Q.—Are they accepted by ballot? A.—Yes; by ballot.

Q.—Is it by the wish of the majority of the producers of oil in Petrolia that this oil exchange is in existence? A.—I could not tell you; that is outside of my knowledge. It would not surprise me to know that it was the fact.

By Mr. HEAKES :—

Q.—Does the exchange place an embargo on people who do not belong to it, so far as doing business with it is concerned? A.—I do not know why it should.

Q.—Does it not interfere with trade by other people? A.—I do not know why.

By Mr. ARMSTRONG —

Q.—Before the exchange was in existence were the producers and refiners hampered by want of a market? A.—Sometimes they were. Immediately before the establishment of the Petrolia Oil Exchange they were very much hampered, very much indeed. The price of crude was down to 60 cents. A public meeting of the producers and others was called to consider the situation, and a resolution was passed providing for the establishment of an exchange, and the exchange was thus the result of a public meeting.

Q.—At any time previous to the formation of this exchange, say during the last four years, was more oil produced then than now, taking one year as an example? A.—I could not say from my own knowledge, but I think, probably, three or four years ago there was more oil produced than there is to-day. Probably about 1881 and 1882 there was the largest product—in fact, it was immense in those years.

Q.—More was produced then than there is to-day? A.—Yes; perhaps double.

Q.—In 1882 there was no oil exchange? A.—In 1882 we started the oil exchange, in the autumn.

Q.—There was no exchange in existence until within the last three years, that is, practically? A.—Practically, no.

Q.—And you say that at that time more oil was produced than is produced now? A.—Yes.

Q.—Is it not a natural conclusion to arrive at that there must have been a large surplus of oil produced and stored? A.—Yes.

Q.—Do you know what became of that oil? A.—Yes; I have a very good idea.

Q.—Was it shipped away? A.—I think so; a great part of it was. Part of it was exported to parts of the United States for fuel. I think part of it went to Chicago, and was used in connection with their waterworks for fuel. We subscribed a certain sum and sent it out of the country.

By the CHAIRMAN :—

Q.—That was trying to slaughter the American market? A.—No; they were not using crude oil in the United States at the time, but they took a fancy that they could use our Canadian crude oil for that purpose, and I think they did so to the extent of 30,000 or 40,000 barrels, if my recollection is correct. This was before the Ohio field was struck.

By Mr. HEAKES :—

Q.—Is there not, to-day, over-production in oil? A.—No.

By Mr. CLARKE :—

Q.—Will you give us some information in regard to the flash and burning test of oil and the discoloration of oil? A.—With regard to the flash test: I am strongly of the opinion that the Government requirement in this country for flash test is too high—that it is much higher than it needs to be. The requirement of the State of New York, of England, and, I think, of the major part of the continent of Europe, is about 73 degrees by our method of testing. Some of the Eastern States, if I am correct—New Jersey and others, I think—have a test as low as 63 degrees. Some

of the States further west run as high as 80 and a fraction; some further west run higher for particular reasons. Our test is 95. Our oil is of that character that in order to be equally safe with the American test it does not require as high a flash; perhaps 10 or 15 degrees less would make it equally safe with the American oil. Some years ago—in 1879, I think, or subsequently—the Government of Canada placed a requirement of gravity on oil, to prevent our refineries from making our oil too heavy—that is, from taking too much out of the crude. The reason at that time why we asked the Government to do that was, among other reasons, to prevent quantities of paraffine wax from being distributed into the burning oil. We asked the Government at that time (1879) to lower our flash test in comparison with American oil or the flash required on imported oil; and in order to justify us in asking this we requested the Government to insert the gravity clause. As I said before, the reason we did that was to prevent paraffine wax being run into our burning oil. In the American oil there is a great deal of paraffine wax distributed over such as are of light gravity; but such is not the case with our oil. Take an oil of 8 degrees or of 5 degrees in this country: we can make it perfectly free from paraffine wax, so that if it is exposed at a temperature above zero of 20 degrees, or 20 degrees below zero, our oil would not show that paraffine wax floating in it. An ordinary American oil will show paraffine in it in considerable quantities at 20 degrees above zero, and at zero, or below zero, it will show it immensely. That is the key-note of the different characteristics, as between American and Canadian oil, that necessitate the requirement of a higher flash test on American oil than on Canadian oil. Experience has proved in the western States—for example, in Minnesota and several others of those States—that an oil of a low flash test, equal to that which obtains in the Eastern States, is not suitable for their climate, where they have exceedingly low temperatures long continued. You will draw off a light oil by itself, and perhaps an oil of an average 95 degrees flash will show, when separated, light oil not more than 90 degrees. In the spring, when the oil completely thaws out, you will get paraffine wax and heavy oil. That is always dangerous if the flash is high, because it does not travel up the wick of the lamp. The oil should keep the wick saturated; it should keep the burner clean and prevent the lamp from heating. When the lamp-wick is well supplied with oil and burning is going on freely the lamp does not become heated to anything like the same extent it does when the lamp is not properly supplied. There is not that evaporation going on which corresponds with the cooling process. I refer you to the report of Henry A. Castle, Oil Inspector for the State of Minnesota, in proof of these statements. I sent a communication to the Minister of Inland Revenue last winter, and if you think it of any advantage I will give you a copy of it, for perhaps it is too long to read. It contains a statement of what I suggested the Government should do in respect of further legislation.

By Mr. HEAKES:—

Q.—Tell us what you require in the shape of Government protection or legislation for the benefit of the oil industry. A.—In the first place, the Government should lower the flash on Canadian oil to about 85 degrees, and amend the law in that particular. In the second place, I think they should embody in the Oil Inspection Act a clause similar to the clause contained in the Gas Inspection Act, 36 Victoria, chapter 48, section 28; and we should have a clause similar to this: That after the coming into force of the provisions of this Act any person who sells oil shall exhibit no excess of sulphur when tested in accordance with the rule provided in that behalf, unless such seller has expressly undertaken to furnish oil of some other quality than as prescribed. My reason for desiring a change of the law is this: that the chief difficulty in connection with our business to-day is the fact that our oils contain a great amount of sulphur. I find that a considerable quantity of our oil going through the country contains at least 120 grains of sulphur to the gallon. That is injurious; it is certainly noisome to the people who use it. Our oil can be made as free from sulphur as the American oil, and our oil when it is purified is a better oil than any American oil that comes into this country. The

difficulty, generally, of supplying that quality of oil to the people of Canada consists in the difficulty that the dealer or consumer finds in recognizing the quality of the oil when he sees it. He cannot tell whether the oil is comparatively pure or not until he has burned it, and unless we have an enactment to properly compel the manufacturer to purify his oil it is going to be a difficult matter to have improved systems introduced. I suggest that the Government simply embody in the Inspection Act a clause similar to this clause I have quoted. We have a precedent laid down here; the Government inspector in the various towns will be the judge in case of dispute, and I think it would be a practical remedy for all the evils we suffer from here.

By Mr. HEAKES :—

Q.—You think it would protect the producer and consumer? A.—Yes; and it would protect one refiner against another.

By Mr. McLEAN :—

Q.—How many barrels a day are produced in Petrolia? A.—I do not know.

Q.—Have you any idea? A.—Yes.

Q.—What is your idea? A.—About 45,000 or 46,000 barrels a month, including the whole region, but I have no means of making an exact calculation.

By Mr. ARMSTRONG :—

Q.—Do you think it would be a benefit to the producers of oil and the refiners if a higher duty were placed on American oil? A.—I think not.

Q.—Please state your reason for holding that opinion? A.—I think such a change would probably drive us into carelessness in our business to such an extent that instead of improving our business we would kill it. I think our duty is high enough.

By Mr. HEAKES :—

Q.—Do you find the demand for higher grades of oil increasing, even of the highest grades? A.—I rather think so, but I have no direct knowledge of that, not being in a refinery.

By Mr. CLARKE :—

Q.—In the Maritime Provinces we find, or we think we find, Canadian oil smells more and discolors the lamp-glass more than the American oil? A.—It does the same here, and the suggestion I have made would, I think, remedy that. If oil containing those foreign matters was either prohibited from being sent out, or it was assumed that when a sale of oil was made it was free from those matters, then, in case of a dispute with the dealer and seller in regard to the oil, all that would be necessary would be to go to the gas inspector and have that oil condemned, and it would be thrown back on the hands of the seller. I presume that this would impel him to pay attention to the business and ship pure oil in future. In Nova Scotia a dealer can get pure oil if he wants it, and is willing to pay for it what it is worth. I fancy it might cost him a fraction of a cent more than it does to get the worst oil. I am safe in saying that it would not cost more than a fraction of a cent per gallon extra; but, unfortunately, dealers do not know how to do this thing, and, so far as my opinion goes, they are prepared to take any kind of stuff that is offered to them if there is a difference of a fraction of a cent in the price.

Q.—What can that oil you speak of be bought for here by the car load? A.—You can get oil here that would be satisfactory to the people of the Maritime Provinces, and which is equal to the oil they obtain from the United States, for about 10½ cents a gallon. I think there would be no difficulty in making contracts here to-day at 10½ cents for an oil which is as good an oil as the oils which the people of the Maritime Provinces burned twelve months ago.

Q.—We have had lots of American oil sent back? A.—Yes; some of the American oil that goes down there is extremely poor stuff.

Q.—I am of the opinion that American oil is generally sold down there at 23 cents per gallon by the barrel. A.—Yes.

By Mr. GIBSON :—

Q.—There must be a great difference between the manufacturer's price of the oil and the cost to the consumer. How is that? A.—Of course, I cannot tell you what that is. I do not know what the consumer pays.

By Mr. HEAKES :—

Q.—The consumer pays 20 cents a gallon in Toronto? A.—I suppose there is perhaps some reason for that. I suppose the parties who retail it like to have a pretty good profit.

By Mr. CLARKE :—

Q.—What does it cost to transport a barrel of oil from here to New Brunswick and Nova Scotia? A.—I do not know; I understand it will cost about 3 cents a gallon.

JOHN FRASER, Real Estate Agent, Petrolia, called and sworn.

By Mr. HEAKES :—

Q.—Will you tell the Commission, please, if the workingmen of Petrolia and this neighborhood can save much money, or do save much money, from their earnings, according to your knowledge of them? A.—I really have not got any data on which to express an opinion. From my knowledge of the people here I think the wages are fairly good, but the expenses of living here are tolerably high. I hear working people frequently complain of the high cost of living here; rents, for instance, are pretty high, and taking the cost of living generally it is a fraction higher here than in the average Canadian town.

Q.—Do the men not get constant employment here? A.—Yes; I am inclined to think they do. I think there is a very small percentage of the people who are out of employment; as a rule, the working people here are pretty constantly employed.

Q.—Have you any idea of the proportion who own their own dwellings—that is to say, who own them or are paying for them? A.—It would be a mere guess on my part to express any opinion in regard to that matter. I think you could get that information more correctly, probably, from the assessment roll than from any other source. If I referred to the assessment roll and went through the names I could come at it with tolerable accuracy.

Q.—I suppose a good many of the working people do own the dwellings in which they live? A.—A good many here own their premises; there are quite a number within my knowledge who own their premises, which they have purchased on easy terms of payment. They have purchased them by monthly instalments, interest, or in some other way.

Q.—Do you think the people here, generally speaking, are prosperous? A.—Yes; I am happy to state that the people here are in a tolerably prosperous condition.

Q.—Can you give the Commission any information on the subject of profit-sharing in business? A.—I do not know that the system has been introduced here at all; I am not aware that the system is in operation in connection with any manufacturing establishment here.

Q.—As a business man, do you think the establishment of a bureau of labor statistics would be a benefit to the working people of the Dominion? A.—Yes; I have no hesitation in saying that I believe it would be a benefit.

Q.—Will you mention some of the benefits which you think would accrue from the establishment of such a system? A.—Of course, speaking in a general way, it would insure, I think, accuracy of information in all question vital to the working people; and, of course, accurate information cannot be got in any other way than through some official source of that kind. The other classes, the manufacturing

classes, the capitalists and the employers of labor, have, through Government regulations, or through themselves, furnished themselves with accurate information of that kind, while the working people are devoid of anything of the sort. If the working people were so organized that they could secure that information for themselves it would, perhaps, be quite as efficient as if it were secured through the Government; but in a business of that kind I think it would be a benefit to the working people to have a bureau of labor statistics established.

Q.—Do you think it would be a benefit to the merchants and manufacturers in giving the ruling price prevailing in the various markets, prices of manufactured goods and prices of labor? A.—To have that published?

Q.—Yes? A.—Yes; I think so.

Q.—Of course, a bureau of statistics would be intended to include all these points? A.—Yes; I think that would be highly beneficial to employer and employed combined. One thing I think it would do, and that is to remove misunderstandings between employers of labor and employed, and do away with a good deal of friction, perhaps. A great many troubles in this world arise from insufficient information on points of interest.

Q.—Have you any information in regard to the lien laws and in regard to the garnisheeing of wages? A.—No; I have no personal experience of anything of that kind.

Q.—Have you any special information of interest, in your judgment, which you could furnish to the Commission? A.—Nothing occurs to my mind at present.

By Mr. ARMSTRONG:—

Q.—Suppose a man desired to build a house, what interest would you ask him on a thousand dollar loan? A.—The rate my company charges on loans in the town just now is 8 per cent.; but our company was organized to do business with farmers exclusively. It is only recently that we have begun to make loans in town. Our capital is restricted, compared with the large loan companies, and recently we have not had so much money at our disposal as we would wish in order to accommodate town borrowers as well as farmers.

Q.—At what rate of interest is your company prepared to lend money to farmers on good security? A.—Our present rate is 7 per cent. We have a large amount of money out as loans at 6 and 6½ per cent., money that we loaned last year. Our present rate is 7 per cent. Money is somewhat higher than it was six months ago.

Q.—You deal principally with farmers? A.—Yes; I think 90 per cent. of our business is on farm security.

Q.—Do you do any business in the town? A.—Yes; a small percentage.

Q.—Do you rent any houses in the absence of owners, acting as agents for the individual or company? A.—No; but I have done it individually.

Q.—Do companies purchase vacant lots here and hold them for a raise in value? A.—No; we have never done it.

By the CHAIRMAN:—

Q.—Your company buys, I suppose, only when it is necessary? A.—Yes; our company was organized only in 1882, and it has never done that yet.

By Mr. ARMSTRONG:—

Q.—Do you not think that when a man buys a lot in the town, and builds on that lot and improves it, he should pay more taxes on it than a person who holds a vacant lot for speculative purposes, and one which does no possible good? A.—No; on the contrary, my opinion is to make it easier for them, if possible. I do not like the system of encouraging the holding of land for speculative purposes.

Q.—I believe that opinion is not generally indulged in by real estate agents? A.—It is probable; I am an agent, but an owner.

Q.—Do you think in that case it is handicapping individuals in the minor industry? A.—The policy of our company is entirely in the direction of improving the lands.

CHARLES JENKINS, Oil Producer, Petrolia, called and sworn.

By Mr. HEAKES :—

Q.—Will you tell the Commission any disadvantages that oil producers are laboring under here—the disabilities that you would like to have removed by legislation? A.—I do not know of any specific object that could be effected by legislation at present, except in one direction: I think the test imposed on the oil is unnecessarily high and takes away from the good burning quality of the manufactured article.

Q.—If the test were modified would it advance the interests of the consumer? A.—No; I think that as the knowledge as to how to test oil has come to be so well understood there would be no danger whatever in that direction.

Q.—If a Government inspection were generally adopted would it guarantee the security of consumers? A.—The Government inspection is generally adopted. It is generally adopted at the point now called 95 flash test; that might be reduced to 90, possibly to 85; the exact point to which it could be reduced with safety could be left to experience. I would have no hesitation in making the flash test at 90.

Q.—Is it possible, under the present system of inspection, for an inferior grade of oil to be placed on the market? A.—It is possible under the present system of manufacture. It is necessitated by this system of inspection, by which the full burning value of our oil does not get brought out.

Q.—An inferior article might be substituted for a superior article under the present system? A.—According to the way we have in regard to our manufacture just now, the full elementary value of our oil is not available.

Q.—Does all the oil that is shipped come up to the Government standard? A.—Yes; it is supposed to do so. Some mistake may occasionally occur, but I think, as a rule, it is all up to the Government standard.

Q.—How, then, do you account for the difference in the quality of the oil? A.—So far as I know, there is no place in the world where a proper test of a burning oil is made—that is, a test as to how it burns; they take the color, the gravity or the smell, anything except as to how it goes up the wick. I have not seen it formulated anywhere except here, and we have not been able to introduce it into our practice; but that it must come to it some day or other is very palpable to me—that is, the test as regards its burning quality.

Q.—Would such a test as regards the safety of the oil make it safe as regards the question of explosion? A.—Not alone. Of course, there would require to be another test; the oil may be in a perfectly safe condition for use, and it must be remembered that while such may be the case it may, at the same time, have a bad capillary action, and I may say that the capillary action of the oil is a matter that must be recognized in the future in the oil business more than it has been in the past.

Q.—Has the demand for the finer grades of oil increased? A.—It is increasing very much, and that is the reason why this particular relaxation would be to our interest. It would enable us to supply a larger portion of the market than we do at present. We do not supply more than two-thirds of the Canadian market.

By the CHAIRMAN :—

Q.—Is the test used fixed by Act of Parliament? A.—Yes.

Q.—Then, it would require an Act of Parliament to change it? A.—Yes.

Q.—Do you think you supply two thirds of the whole demand now? A.—That is the case, so far as we can get at the figures. There is one disadvantage under which we labor, but I do not see how any legal act could affect it, that is, the competition we meet from the American oil. You know the very long front here, and the geographical position of Canada, by which the American refiner is able very easily to send in oil to this country. The oil business in the United States is virtually one gigantic monopoly. One of the privileges of that corporation is low railway rates; they are able to handle the whole oil product of the country, and they give certain

dealers here the power of handling their products, guaranteeing them a particular profit. So when the Canadian refiner goes to try to push his goods he will find the dealer say: "I have a 3 cents guarantee on American oil, and I make 1½ per cent. on your oil, and it does not pay me to handle yours."

By the CHAIRMAN :—

Q. How is the question of freight rates, which you have mentioned affected by the Interstate Railway law? A.—I think there were no preferential rates. They are fighting that question all the time; but taking all the manufacturers in Buffalo and Cleveland, there is not much inter-state trouble. The effect is that this oil monopoly on the other side has very great power over every railway system—I refer to the Standard Oil Company; and it is a most serious thing, so far as we are concerned.

By Mr. HEAKES :—

Q.—Are you laboring under any disadvantage here in regard to railway freights?  
A.—In the past we have been; I do not know exactly the state of matters to-day.

By the CHAIRMAN :—

Q.—You have competition, at all events? A.—We have competition. There may be some errors in regard to rates at present, but I have not a direct knowledge of the subject to speak with authority on it.

By Mr. HEAKES :—

Q.—Do you think that if a higher grade of oil were manufactured you could compete with American oil coming into this country? A.—If a high grade were allowed to be made by relaxation of the law it would increase the amount of high class oil we would take out of our crude oil, and it would enable us to go further with it, and by that means it would be obviously beneficial to the whole business. The producer will be naturally inclined to think that anything that is going to increase, even by a trifle, would be against his interest, but under the circumstances to-day it would be the very best thing that could occur, considering the large amount of American oil imported.

Q.—Is there much crude oil used for fuel outside Petrolia? A.—Not much crude oil used for fuel anywhere; but the demand for the products of Petrolia as fuel is increasing. It does not pay us to use crude oil as fuel; we want to take the burning oil out to supply the country.

Q.—And the refuse? A.—We waste the refuse, although it is a very valuable product. It is the heavy qualities that are generally used for fuel.

Q.—Does it come into much use? A.—The business is increasing all the time, and the adoption of it is likewise increasing. We have used it for twenty years around here.

By Mr. CLARKE :—

Q.—Is all the fuel used in the liquid state? A.—Yes; it is got into a proper state of fineness of particles by the forcible union of it by steam, and when this is done it is divided into very fine particles, so that no smoke is produced. There is room, in that respect, for further improvement, but, at the same time, at present it does pretty well.

By Mr. HEAKES :—

Q.—Do you make lubricating oils also? A.—We do nothing in that direction. I have no particular experience in that way to speak of, at least in regard to some points of it.

Q.—Are there any such oils made here? A.—A great deal. The lubricating oil business is sub-divided. There is what we call black oils, being oils made without any special preparation, and I have had a good deal to do in connection with the making of such. Then there is the distilled oil, which is mixed with other animal and vegetable oils, and is manufactured according to requirements. That becomes, of course, a special business of its own.

By Mr. ARMSTRONG :—

Q.—Have you any difficulties arising between the producers and the refiners with respect to the measurement of the tanks—I mean, any misunderstanding? A.—I do not know that there has been any misunderstanding about that point.

Q.—Is there no misunderstanding existing? A.—The producer, as a rule, gets a vessel in which to deliver his oil; that vessel is of all sizes, ranging from four barrels to ten; it is made of material that shrinks, pine wood. In the business of using that tank-waggon he will take fluids of various degrees of temperature, sometimes, from the refiners, it having a temperature of from 200 to 300 degrees. He will next use the tank for carrying oil at 60 or 70 degrees, and the consequence is that the vessel that will measure nine barrels to day will, in two months, not hold that quantity. The vessel shrinks, and there is a perpetual change going on. Of course, if the producer would go to the trouble and expense of having a proper tank made, capable of holding an exact quantity, there would not be any difference of opinion in regard to the matter of measurement; but at the present time such measurement requires to be very frequently revised.

Q.—You are talking now in regard to the measurement of crude oil? A.—Yes.

Q.—After the oil is refined how is it measured? Is it measured by a Government standard measure? A.—The oil that leaves here in barrels is weighed, and the specific gravity of it is taken, and a Government officer converts the weight into the number of gallons divided by the specific gravity; so that in regard to all the oil that leaves here the quantity in gallons is arrived at by weight—that is all that leaves in barrels. A good deal leaves in bulk, and those cars have been measured usually by some one, and if the receiver of the oil at the other end is content to take the measurement of the cars no one else has anything to say. It is for the merchant in Toronto, who receives the tank-cars of oil, say 100 barrels, to see that he gets 3,500 gallons, and not 3,400 gallons.

By Mr. CLARKE :—

Q.—Do the refining companies own those portable cars that haul the oil? A.—No; they are owned by producers, or by teamsters generally.

Q.—They are called in and the measurement revised by the refining companies? A.—As a rule, some one has measured them, and put a brand on them; people will not take the oil unless they are branded. There are one or two places here that have specially laid themselves out for this, and they are compelled to do it, because they are constantly handling the stuff. Often these tanks have not been revised for some time. This revision is necessary, and if you were checking the exact measurement to day, the average would be one gallon or two gallons in favor of the producer. That is, taking the entire average tanks. There are individual exceptions, of course, that will arise.

By Mr. ARMSTRONG :—

Q.—These tanks are supposed to hold certain quantities, I suppose? A.—They are supposed to hold whatever is marked on them as being their measurement; one tank may be nine barrels, another eight barrels and thirty-three gallons, another seven barrels and twenty-four gallons.

Q.—Are the measurements stamped on these tanks? A.—Yes; at the time they are measured.

Q.—Who stamps those tanks? Is it by Government authority? A.—No; it is not by Government authority.

Q.—By whose authority is it? A.—The measurements have been put there by some of the people who have measured them in order to be a guide to themselves in receiving oil.

Q.—What guarantee is this to the public or to the producer that this is a correct measurement? A.—The guarantee is that he can name and check the thing at any time; it is thrown open to him.

Q.—Would it not be right to have an Excise officer appointed to measure, just as

is now done in the Weights and Measures Department? A.—I do not think that an Excise officer's certificate would be good for one week. I would like very much to see a central authority to do this business in some way or other, because it is one of those little trade snarls that are constantly going on, although, upon the whole, I think that substantially justice is done all around.

Q.—Do you think that in this way correct measurements would be secured?  
A.—I think it might be done if such a system were carried out, but when you take pine tanks and use them in all kinds of ways and in all sorts of weather they will not remain the same size.

Q.—But, so far as measurement is concerned, could that not be obviated by having the tanks manufactured of metal? A.—That could be done. If you got the vessels made according to a fixed pattern and the capacity was fixed by the proper officers when the vessel was used that quantity would continue to be the measurement till it was worn out.

Q.—Even in the absence of a metal vessel, could not a gauger supervise the measurement, and thus have it placed under Government control? A.—Yes; but it would require to be done somewhat frequently.

Q.—You think, then, this could be done, even with wooden vessels? A.—Yes; provided the measurement was done somewhat frequently and the vessels were taken to be measured. I have known tanks not measured for ten years.

Q.—The gauger would take the measurement and allow for the shrinkage in the wooden tanks? A.—That could be done if they were frequently re-measured and re-marked.

By Mr. HEAKES:—

Q.—I understand you to say that these tanks are owned by people who make a living at the business? A.—They are owned by teamsters, and by producers, and sometimes by refiners.

Q.—Have you any idea as to what the difference in cost would be between a wooden and an iron tank for that purpose? A.—I have an idea, for I have paid for them both. The cost of a metal tank would be about twice that of a wooden one.

Q.—Do you think that if a standard were laid down for these vessels, and they were required to be constructed of iron, so as to insure a stated capacity, it would have the effect of driving the poorer men out of the business? A.—I do not think it.

Q.—Would such a man be able to purchase an iron tank? A.—Yes.

By Mr. CLARKE:—

Q.—What would be the cost of an iron tank and a wooden tank? A.—The cost is about \$25 for a wooden tank and for an iron tank about \$50. Wood is used because it is the most handy thing, because wooden tanks have been used for a long time, and it is only of late the necessity of having some better system has been felt. On the whole, I think the producers have the advantage.

By Mr. ARMSTRONG:—

Q.—Could you inform us what processes you go through to measure those tanks?  
A.—We have an approved five-gallon measure stamped by the Government, and we have other vessels of measurement, of course. That vessel is filled with water, and it is scaled off with every five gallons. We fill the vessel that is to be measured in that way, and we again test it by drawing it off in the five-gallon measure. We thus apply two tests. It is possible that a mistake may occur, but in regard to the re-checking of measurements we have not yet found any difference, although people interested have gone over them. We tell the people: "You can check the measure whenever you like." I have asked the trade over and over again to go in for some standard for general measurement in these vessels, but we have not been able to get to that point.

By Mr. CLARKE:—

Q.—Then you would favor a standard measurement? A.—Yes; I do not think there is any actual grievance—it is more a sentiment than an actual grievance—but, at the same time, a remedy would save friction.

JAMES PERKINS, Collector of Taxes, Petrolia, called and sworn.

By Mr. HEAKES:—

Q.—Have you looked over the assessment roll in order to find the number of proprietors and tenants in the town? A.—I have taken the first three hundred names on the assessment roll, and I find there are out of that number one hundred and sixteen tenants.

By Mr. McLEAN:—

Q.—What is the population of the town? A.—I think it is about four thousand.

By Mr. ARMSTRONG:—

Q.—What is the rate of taxes here? A.—Twenty-eight mills on the dollar. There is also a frontage tax in a certain portion of the town.

Q.—Do you know anything about the assessment here? A.—The town is assessed up pretty well.

Q.—Do you consider the income of working people is assessed, according to law, equitably? A.—The classes are not assessed for income at all—that is, with very few exceptions; some bookkeepers and officials.

Q.—You know, of course, that there is \$400 exemption? A.—There is \$700 exemption now.

By Mr. McLEAN:—

Q.—Are there many artisans assessed for income—that is, do they receive a sufficient amount to be assessed? A.—I do not recollect seeing one on the roll.

By the CHAIRMAN:—

Q.—Do you take any means of finding out the men's income, or do you generally take their word? A.—When I was assessor I would ask the amount, and sometimes he would not tell me, and then I would put him down at so much and let him rip at that.

Q.—But if he answered you, what would you do? A.—If he gave me any kind of a statement I would take it. Sometimes he would not give me a statement, and then I would put him down for anything I thought about right.

By Mr. McLEAN:—

Q.—Did you make any enquiries from employers? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Do you sometimes take the word of the employer without going to the individual? A.—I always speak to the employé before I go to the employer. If the former gives me anything like a definite satisfaction I do not say anything more about it.

Q.—Did you ever find men of large incomes, that is, running up into three figures, making attempts to put down their incomes at as small an amount as possible? A.—Yes; they generally all try to do that. They are all tarred with one stick.

Q.—Have you found that to be the case with people of incomes of from \$1,500 to \$2,000? A.—Some will not tell exactly what they get, while some men will tell you right off.

Q.—How do you know that they are speaking the truth? A.—I am satisfied they are, because I have probably enquired already. Some men, again, will give you no satisfaction whatever.

Q.—Do you not think it would be a benefit to all if the assessment roll were published every year? A.—Every body here has access to the assessment roll if he chooses to come and look at it.

Q.—Would it not be a benefit to the masses if the assessment roll were published every year in a pamphlet or newspaper? A.—It would give the people assessed a better chance of looking to see how they stood.

By the CHAIRMAN :—

Q.—How much would it cost if this were done in Petrolia? A.—You would have to get the printer to tell you the cost.

Q.—You think it would be an advantage to the printer? A.—Every man assessed has access to the assessment roll, and he can come here and look at it.

Q.—How long a time has he to examine it? A.—Four or five weeks.

By Mr. ARMSTRONG :—

Q.—Do you not think the cost of printing the roll would be more than amply offset by the results that would follow? A.—No; because I do not think the people would take the trouble to look at it. In regard to the audit of the town, for example, every body can come and get a copy of it, and yet they remain here stacked up.

By Mr. HEAKES :—

Q.—Do you think the assessment of income is a satisfactory principle to follow? A.—I would rather they would do away with the present system of taxes on income and assess private property wherever they find it.

By the CHAIRMAN :—

Q.—From what you know of income tax you are opposed to it? A.—I think the assessment law should be amended so that you could assess wherever you find goods. A man who has a store, on being questioned in regard to assessment, will tell you that he does not own the goods, but that they are owned by a man in Toronto. In this way they do not pay any taxes. On the other hand, the man who says that he owns the goods in the store, amounting to \$400, or \$500, or \$600, is assessed, while his competitor, who has, probably, four times as much, is not assessed.

Q.—Do you think all kinds of property should pay taxes? A.—Yes.

Q.—Do you think that people with bank stock should be assessed? A.—Yes; I believe they should pay double taxes.

Q.—Is there much of that class of property exempt in Petrolia? A.—I could not tell you about that; bankers say it is not exempt.

By Mr. CLARKE :—

Q.—Do you tax religious institutions? A.—Yes. There has been some evidence given here about the measurement of tanks, and I would like to say a word in that regard. I think the Government ought to appoint some man who can inspect vessels larger than four gallons measurement. We are producing a great deal of oil here, in the neighborhood of 40,000 or 50,000 barrels a month, and under the way it is measured now the man who receives the oil will receive it if you will take it at his measurement. I have known a good many tanks—I have had my own tanks—to be measured. When you are ordered up you have to go up, or your tanks are objected to and you cannot deliver oil. Some of us sent to Hamilton and got a four-gallon measure stamped by the Government inspector, and we measured our tanks, and we found that our tanks contained a larger measurement than was marked on them. But it is no use talking about that, for our tanks have got to go up for measurement to the company or they will not receive our oil.

By Mr. HEAKES :—

Q.—Who fixes the measurement? A.—The tanking companies. They receive the oil and they establish the measurement. They say: "If you let us measure your oil to our satisfaction we will take it; if not, we will not take it, and we will not accept any other measurement than our own."

By Mr. CLARKE :—

Q.—Is there an inspector of weights and measures here? A.—There is one who comes here once or twice a year. These inspectors, however, do not inspect the tanks measuring from four to ten gallons, or a few gallons over that. One of my tanks was stamped at one time, and I ran it for about three months and was then ordered up. It costs \$1 every time it is ordered up for measurement; and after it

was ordered up the measure was cut down two gallons. There had been no hot oil or anything of that kind carried in it. It ran for three months more and was then ordered up for to be re-measured, and it was then cut down one gallon; that made three gallons. I could not say whether the second time they had set the hoops or not, but the first time they had not set them. Most of my neighbors say that the tanks generally shrink. I have always argued that if the hoops have not been set or if the tanks have not held hot tar they can be no smaller. In the winter time they steam them out and thoroughly clean them before they are measured, and that, of course, is all right. We had a big tank that held 300 or 400 gallons. My boys went to work and got an inspected measure and measured the tank as accurately as they could; but it would not tally with the tank company's measurement, their measure being one barrel short.

By Mr. CLARKE :—

Q.—Do you think there should be some Government inspection? A.—The Government should give the inspector here power to inspect the tanks. A great many people deliver oil in waggon-tanks, and, in my opinion, the Government inspector should have power to inspect and brand them, and this could be done once in a while. If these tanks are made out of green wood they will undoubtedly shrink a little if the hoops are driven. The Government should do something to relieve us in this way, so that the man who buys and receives the oil should not have the sole control of measuring it.

By Mr. ARMSTRONG :—

Q.—Do you think the grievance would be overcome by having an internal revenue gauger to gauge the tanks every time they are delivered, whether they were old tanks or not? A.—It does not need all that to be done. If they were gauged twice a year it would meet the point. The people would then be more satisfied, as I would be, although, at the same time, I am not dissatisfied now. Take a man who is selling 100 or 200 tanks a month, and if he loses a gallon on a tank it amounts to quite a quantity, whereas the tanking companies take care they do not lose any. Of course, I would not want them to lose any, even if the tanks were inspected by the Government.

JAMES JOYCE, Blacksmith and Oil Producer, Petrolia, called and sworn.

By Mr. HEAKES :—

Q.—On what particular subject do you wish to give the Commission information? Is it in regard to blacksmithing or to oil producing? A.—Blacksmithing has not, as a general thing, got to be quite a common subject, although we manufacture quite a number of tools here for foreign countries. I export quite a lot of tools.

Q.—Of what classes? A.—Oil-well tools. The manufacture and exportation of such tools has become quite a business in this country. We send them to Austria, Germany, Australia, California, and different parts of the world.

Q.—Is that industry very busy here? A.—It is quite busy. I sometimes think it is only in its infancy here—if we only had our own market for our own product.

Q.—What competition have you in drill tools here? A.—What I mean by that is this: our market here is supplied, probably to the extent of one-third, by American oil. That stops the manufacture of drill tools.

Q.—If the American oil were shut out there would be more demand for Canadian oil and more wells would be needed? A.—If there were a better class of Canadian oil made it would shut out American oil, and there would be more call for tools, and that would give us a chance to employ more labor.

Q.—What wages do blacksmiths get here? A.—A blacksmith here gets from \$1.75 to \$2 a day.

Q.—Are they generally employed all the year round? A.—Generally, but during

the last three years there has been quite a depression in the oil business and we have not been able to run so steadily.

By Mr. GIBSON :—

Q.—Is that rate you have given the rate of general wages, or only of wages in tool-making? A.—It is about the general wages here, that is from, \$1.75 to \$2 a day for a good, average blacksmith. The tool business is a specialty; there is no place in the Dominion where it is done except here.

Q.—Would those tools do for phosphate mining? A.—No; they are not for anything, except for boring for oil wells, salt and water. We sometimes use them for prospecting for coal, but in all cases they have not been a success. There is no drill so good in prospecting for coal as the diamond drill. It is more costly, but you see the core of each piece you bring out, and you can tell exactly through what you are going. You can tell that pretty accurately with this drill.

Q.—You refer to the different strata through which you pass as you drill? A.—Yes; with these drills we have drilled as deep as 2,700 or 2,800 feet.

By Mr. McLEAN :—

Q.—What do the drills cost? A.—A set of tools for drilling 2,000 feet, a complete rig, costs, probably, from \$3,000 to \$3,500.

Q.—Do you ship those all over the world? A.—Yes; I sent this year and last year alone \$2,600 or \$2,700 worth to Australia, that is of drill tools, not counting engines and boilers and other things necessary—just the drill, with its connections.

Q.—Does this \$3,000 worth of tools to drill a well 2,000 feet deep include engine and boiler? A.—It would include engine, boiler and tools, and the whole connections for going a distance of 2,000 feet.

Q.—What would the tools cost for going that distance? A.—Probably from \$1,000 to \$1,200—that is just the naked tools hanging on the derrick.

By Mr. HEAKES :—

Q.—Are there many men employed in that line of business? A.—Yes; there may be perhaps eight, ten or twelve. The business is up and down like any other business.

Q.—Is there anything of special interest which you desire to bring before the Commission? A.—The only thing I would like to say—is that there has been a special grievance here, for some years, connected with the measurement of tanks; that is quite a grievance to men who pump a little oil.

By Mr. McLEAN :—

Q.—You have heard the evidence of other witnesses as to that matter. Is there anything you would like to add? A.—I think it is very necessary that there should be some way found out by which we would have a Government measure. There is no Government measure for the measurement of oil tanks. To the best of my opinion the Government is only allowed to measure a bushel; that is what I am informed by the general inspector of weights and measures, I think, at Windsor.

By the CHAIRMAN :—

Q.—You are of the opinion that there should be a Government inspector? A.—I am certainly of that opinion. There should be some way by which he would be able to tell whether there is a right measurement or not.

By Mr. ARMSTRONG :—

Q.—Are there any drilling outfits imported from the other side? A.—There are considerable, but not to any great extent.

Q.—Could those outfits be manufactured in Canada? A.—Yes; they could be; they are now.

Q.—Is the American preferable to the Canadian-made? A.—Not in this country. They drill there with rope or cable.

Q.—Why is an American drilling outfit preferred to a Canadian-made? A.—Men differ in opinion in that regard. One man will say he can do better with a cable; another will say he can do better with poles. Occasionally an American comes over here and puts down a well or two and goes back again. I am informed that in Manitoba there are one or two American sets.

Q.—As a practical man, do you believe a Canadian-made outfit is just as durable as an American? A.—Taking the whole thing through, it is more durable.

By Mr. GIBSON:—

Q.—Are there hands employed exclusively on manufacturing tools? A.—There are shops that do nothing else. I do nothing but manufacture tools and repair; but there are small shops that do a little other work.

Q.—What hours do your men work here? A.—Ten hours a day; sometimes in winter they come down to nine hours, but I have never done so.

Q.—Is there any surplus labor in the town? A.—Not a great deal. Laboring men here get very good wages.

Q.—Are they employed the year round? A.—Yes.

ROBERT BROCK, Farmer, Township of Enniskillen, called and sworn.

By Mr. HEAKES:—

Q.—How long have you been in this neighborhood? A.—About thirty years.

Q.—What kind of a farming country is it around here? A.—I think it is very good; for a new country it is very fine.

Q.—Can you tell us about how many bushels of wheat on an average are grown in this township? A.—Of fall wheat it would average probably from twenty-three to twenty-four bushels to the acre, taking the whole township through. I have run as high as thirty-three and thirty-four bushels; but in some sections of the township it will be down as low as fourteen bushels.

Q.—Have you ever calculated the cost of raising a bushel of wheat here? A.—No; I am not prepared to say that I have; I have never gone into the business exclusively. I do mixed farming, and do not make a speciality of wheat growing, so I have not given any attention to what it really costs to grow it.

By the CHAIRMAN:—

Q.—Like most of the farmers, you do not keep any account as to what any particular crop costs? A.—No; I have not done so.

By Mr. McLEAN:—

Q.—Do you raise any live stock? A.—Yes.

Q.—Any hogs? A.—Yes.

Q.—Do you sell hogs? A.—No; I raise none to sell. I find that branch of farming industry will not pay here.

Q.—Do you raise cattle? A.—Yes.

By the CHAIRMAN:—

Q.—Did you open up your land and commence with a bush farm? A.—I commenced in the solid woods, about four miles south-west of this town.

Q.—On an average, how many hours a day do you work? A.—I have worked as much as eighteen hours sometimes in the harvest.

By Mr. HEAKES:—

Q.—Then, again, in winter you would not work half of that time, I suppose? A.—No; I have never made that an average, not since I have been able to work.

By Mr. McLEAN:—

Q.—Do you make ten hours on an average? A.—Not less than ten hours on an average.

By Mr. HEAKES:—

Q.—Do you think farming pays? A.—Yes; I think it pays when gone into systematically.

By the CHAIRMAN:—

Q.—I suppose, like every other business, it depends on the man himself? A.—Yes; there are failures in it, like there are in other callings.

By Mr. HEAKES:—

Q.—Will the condition of the farmer to-day compare favorably with his condition ten years ago? A.—I think so.

Q.—He is generally prosperous? A.—He is generally prosperous. Of course, prices are not equal to what they were ten years ago, but the farmers appear to be very prosperous in this part of the country. For a new country, I consider they have nothing to complain of.

By Mr. CLARKE:—

Q.—Do you mean that you cannot get the prices for your products now that you could ten years ago? A.—I mean to say that during the last three years grain has been very low, as compared with the prices fifteen or twenty-five years ago.

By Mr. HEAKES:—

Q.—Are there any butter and cheese factories in this neighborhood. A.—Not in this immediate neighborhood, but eight or ten miles away there is both a butter and a cheese factory.

Q.—Do you know anything of the operation of the butter factories? A.—No; I have very little knowledge in regard to it.

Q.—Do you know whether it pays better for a farmer to manufacture his butter or to sell his milk to a butter factory? A.—I have had no experience. Opinions on that subject seem to be very conflicting. They make more by using their own milk into butter, and some others again claim that where there is a factory established there is more money to be made by sending the milk to the factory. That, of course, does away with a great amount of labor that would naturally have to be done by manual labor.

By Mr. CLARKE:—

Q.—What would be the prices of milk on which the conclusion was made? A.—I think they allow about  $4\frac{1}{2}$  cents a quart for the milk put into the factory.

Q.—How many acres have you in your farm? A.—I own about 340 acres.

Q.—Have you that many acres in cultivation? A.—No.

Q.—How much have you under cultivation? A.—About 100 acres.

By Mr. HEAKES:—

Q.—You say you raise cattle for the market? A.—Yes.

Q.—Can you tell us, from your own experience, whether cattle raising is more profitable than grain raising? A.—Cattle raising is the most profitable branch of the farming industry in this part of the country.

Q.—Do you feed cattle for market? A.—I have done so.

Q.—Have you any idea what it costs to feed beef per pound? A.—I have not kept a diary of the cost; in fact, I have done very little of winter feeding. I have generally fattened them on the grass.

By the CHAIRMAN:—

Q.—How long can your cattle generally run on the grass profitably? When do you put them on? A.—About the middle of May—that is, cattle for market.

Q.—You mean cattle you intend to feed for market? A.—Yes; I put them out about the middle of May. We generally have them fit for market about the middle of June or the 1st of August. We sell them between those two dates, as a rule.

By Mr. CLARKE :—

Q.—What do you get for beef? A.—For good quality we get about 4 cents live weight.

By Mr. HEAKES :—

Q.—Are farmers paying any attention to improving the breeds of cattle? A.—Yes; during the last eight or ten years they have given considerable attention to that question. They have been importing higher grades of cattle, well-bred cattle.

Q.—What breed of cattle do you consider makes the best beef cattle? A.—In this part we use the Durham, the Short Horn. It appears to suit the climate here better than any other.

By the CHAIRMAN :—

Q.—Is that from their large size? A.—Yes; and they are more profitable.

By Mr. HEAKES :—

Q.—Are they profitable for dairy purposes? A.—The graded cattle, I believe, are more profitable for dairy purposes.

By Mr. CLARKE :—

Q.—Is there any Jersey stock used here for dairy purposes? A.—Not here; they are used east. I do not know of any in this township.

Q.—I suppose that is largely because they are not suited for beef cattle? A.—Yes; they are not so suitable for beef.

Q.—But I suppose they make it up in the quantity and quality of the milk? A.—Their milking qualities are better than those of the Durhams.

By Mr. HEAKES :—

Q.—Do you raise any other stock for market? A.—Yes; sheep and horses.

Q.—What grade of sheep do you consider best adapted for that purpose? A.—Leicester are the best sheep in my opinion.

Q.—Do they make the best mutton? A.—They are the most profitable; they are the best breed of sheep.

By the CHAIRMAN :—

Q.—Have you any woollen mills about here? A.—Yes.

Q.—I suppose the raising of sheep depends on the kind of wool they use at the mills? A.—That has to do with it. A good many of the farmers have been going into the finer breeds lately, and they are now getting to think that they are not so profitable as Leicesters in this country.

By Mr. HEAKES :—

Q.—What is a good horse worth here, say a three or four years old—a general purpose horse, such as you use for the market? A.—A good general purpose horse is worth from \$150 to \$175. There has been a great number of them sold in Petrolia at that figure.

Q.—Have you any difficulty in disposing of your stock? A.—Not any.

Q.—Have you always found the demand for it is equal to the supply? A.—So far as horses are concerned, the demand has been more than equal to the supply.

Q.—Generally speaking, do you think if the farmers paid more attention to that than to grain-growing they would be more prosperous? A.—They do.

Q.—Of course, all the lands would not be suitable for stock-raising? A.—This section is well adapted to stock-raising; there is as good pasture and hay land as can be had.

Q.—What crops do you find most profitable here? A.—I find of late years that oats is the most profitable crop.

D.—Do you get a good price for them? A.—Yes; we have always found a ready sale for oats for a number of years past in this town. There is a good deal of feeding done, and consequently there is a good demand for them.

Q.—When you stall-feed what do you use? A.—We use barley and oats, as a rule, for grain feed with hay.

Q.—What feed do you consider the best for putting beef on cattle? A.—I believe, as a rule, that corn will put on more fat than oats or barley.

Q.—Do you think it makes as good beef? A.—Yes; I think it does.

By Mr. GIBSON :—

Q.—Do you find the cattle shows, which occasionally take place throughout the Province, beneficial to stock-raising? A.—I do.

Q.—In what respect? A.—In the first place, competition has a good effect upon a community.

By the CHAIRMAN :—

Q.—And I suppose it gives you an opportunity of seeing what is being done by others? A.—The exhibitions are to show what the country can produce in the way of stock, and the improvements that have been made.

By Mr. CLARKE :—

Q.—How often do you break up your meadows? A.—About once in three years at the furthest. About every second crop is the most profitable.

By Mr. HEAKES :—

Q.—Is there any general demand for farm labor in this section of the country? A.—It is very good.

Q.—Have you any difficulty in obtaining a sufficient number of hands? A.—No; I have had no difficulty lately, but some years ago I had some little difficulty.

Q.—Has not the introduction of machinery greatly lessened the need of labor on the farm? A.—Yes; undoubtedly it has. There are not half the number of hands required on a farm of the same given space as we needed ten or twelve years ago.

By Mr. CLARKE :—

Q.—Could you to-day cultivate your farm to as great an advantage as you do at present? A.—Not very well; I do not see how I could do it at present prices. I could not make it up.

Q.—I suppose the more machinery you use the more men are required to run it? A.—A very small boy or girl could drive a good deal of our machinery at the present day, who would be of no use in the harvest field fifteen or twenty years ago.

By Mr. ARMSTRONG :—

Q.—Do you find many agricultural laborers from the old country coming to this section? A.—Quite a few have come here the last two or three years.

Q.—Have they all got work? A.—Yes; I am quite satisfied they all got work as soon as they arrived.

Q.—Do they settle down and become permanent settlers? A.—I do not know of any in the neighborhood in which I live, but I have reason to believe that they do.

Q.—Do they become good settlers? A.—Yes; they become good settlers.

By Mr. CLARKE :—

Q.—What nationality are they? A.—English, Scotch and Irish.

By Mr. ARMSTRONG :—

Q.—There is not a surplus in this section? A.—No; not to my knowledge.

By the CHAIRMAN :—

Q.—I suppose you know farmers who came here as agricultural laborers? A.—Yes; plenty of them.

Q.—And are they well off to day? A.—Yes; I have known some to work on a farm until they subsequently were able to own a farm.

Q.—You think it is the general way in this neighborhood as well as almost everywhere else? A.—I think so.

Q.—Is there anything else you wish to mention? A.—I do not know of anything I consider a grievance, except this law that gives a man a title to his neighbor's property, provided he is out of it for ten years. I think that should be remedied in some way.

Q.—The feeling just now is contrary; the feeling is, that if a man neglects his property for ten years he should lose it? A.—A man may lose his farm if he is absent from it for ten years, even if he has fenced it. I think some change in legislation is necessary in regard to this matter. I also think there might be some changes made with good effect in the assessment law. For instance, if I go upon a piece of land and improve it, and spend my last dollar in building a house on it, my neighbor who owns the adjoining lot for speculative purposes derives an advantage from what I have done. I am assessed for the improvements I have made, by which, I have increased the value of my neighbor's property; I am assessed so many dollars an acre more than his property is assessed, although he has not made one dollar of investment.

Q.—Is not your neighbor's land assessed to its full value? A.—No; not if it is in its natural state. If it is a bush lot it might be held for speculative purposes.

Q.—You refer merely to what is called a bush lot? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Then you consider when you are improving your own land you are enhancing the value of your neighbor's land? A.—I do.

Q.—You believe he is not entitled to partake of that increased value when he does not do anything himself? A.—No; what I mean is, that I should not be rated for the improvements I make on my land.

By Mr. HEAKES :—

Q.—You think, I suppose, that assessment should be levied on land whether it is wild land or not? A.—Yes; in the same neighborhood.

By Mr. GIBSON :—

Q.—Is it not the fault of the assessor that this is not done? A.—No.

By Mr. ARMSTRONG :—

Q.—It is the fault of the system? A.—It is the fault of the assessment law.

By Mr. GIBSON :—

Q.—Has he a right to value the land? A.—There is a certain scale laid down and he cannot go beyond it.

By Mr. ARMSTRONG :—

Q.—You believe that a man who holds land is not entitled to the value of it? A.—I do not believe that.

By Mr. GIBSON :—

Q.—If the law limits the power of the assessor to assess the land it is an injustice? A.—I think so.

POST OFFICE BUILDING,  
HAMILTON, 16th January, 1888.

WILLIAM AUGUSTUS STUDDART, Hamilton, called and sworn.

By Mr. FREED :—

Q.—You are secretary of the Hamilton Homestead Loan and Building Society? A.—Yes.

Q.—How long have you been in that position? A.—Since March, 1883.

Q.—When was the association organized? A.—Between January and March of 1883; we issued the first series in 1883.

Q.—How frequently is stock issued? A.—Every six months. The first issue was in March, and there were three or four months between the first and second.

Q.—You issue a fresh series every six months? A.—Yes.

Q.—What is the amount of each share? A.—The stock represents \$200, and we pay for it at the rate of \$1 per month.

Q.—How many series of stock have been issued up to the present time? A.—Eleven.

Q.—How many shares? A.—I could not tell you; 1,347½ shares are in existence?

Q.—What proportion of them has been paid up? A.—None had been paid up in full.

Q.—What proportion? A.—On the first series 59 payments have been made of \$1 each; 58 to the close of the year.

Q.—An so on down until the last series was issued—when? A.—In January.

Q.—And on that only one payment has been made? A.—Yes.

Q.—What class of people have subscribed for this stock? A.—The principal class are all mechanics.

Q.—How many shares are held by mechanics? A.—There are 649½ shares held by mechanics now.

Q.—How many by sewing girls and servants? A.—One hundred and thirty and a half. The are 33 held by lawyers and doctors; I am talking now of the first series. We began with 649½ shares held by working people—mechanics, working people, laborers, &c.; 233 were held by clerks—men who earned their bread as clerks; 130½ were held by women who earned their bread as sewing girls and servants, and 33 by lawyers and doctors.

Q.—How is this money loaned? A.—It is only loaned to the members.

Q.—By what arrangement is the loan effected? A.—They have to come to the meeting and the money is put up at auction, and a man has to say how much he is willing to discount his share for.

Q.—How many loans have been made. A.—One hundred and fifteen.

Q.—Does each represent a house built. A.—Oh, no; some of them represent two or three houses in one family. They will borrow to build, and the loan will represent two or three houses.

Q.—Can you tell us how many houses have been built? A.—One hundred and twenty-eight.

Q.—What class of people have built houses? A.—They have been all built by the working classes, except lawyers, and one other person, who is a clerk. There is another which has been built by a clergyman.

Q.—And with these exceptions? A.—With these exceptions, 123 houses have been built by mechanics.

Q.—In how long a time is it calculated the loans will be paid off. A.—In eight years.

Q.—What interest do borrowers pay on their loans? A.—Taking a borrower who will borrow in this month, or who went in in January, taking the last series of stock, paying 33 per cent. bonus, it will cost him less than 4½ per cent.

Q.—That is, he will make monthly payments and interest, and then the loan will come to how much? A.—Less than 4½ per cent.

Q.—Now, if the man pays 33 per cent. bonus on his money, how is it that his interest comes so low? A.—A man pays 33 per cent. bonus. Take an amount with \$1,000, for instance. He gives us a mortgage for \$1,000 and he gives us a discount of \$333.33, leaving him a net loan of \$666.67 that he gets from us in cash. He pays us back \$955 in dues, and taking the \$666.67 from the \$955 it leaves towards paying us interest \$288.33 that we get back from him more than we pay him.

Q.—You spoke of dues—what do you mean? A.—It means dues and interest.

Q.—So that if he pays a bonus he receives a benefit of all the other bonuses? A.—Yes; he is actually credited on our books with his proportion of the bonuses.

Q.—In other words, he participates in the profits? A.—Yes; in everything.

Q.—Have any speculators borrowed money for the purpose of speculation?  
 A.—No. The first question I put to them when they come is, what they want with the money, and they will say they want to live on it, or pay a mortgage, or that he has lots and would like to build a house and sell it again, and then I tell him that we don't loan money on speculation, that it was not intended for that purpose.

Q.—How is the society secured? A.—On first mortgage assignments of the stock; that is the only security accepted.

Q.—Within what territories does the society make its loan. A.—Just in Wentworth county.

Q.—Do you accept a second mortgage? A.—No.

Q.—You must have first? A.—No; we will not even loan him by a second mortgage ourselves.

Q.—What security do the officers of the society give? A.—Mr. Grant, the only one who handles money, gives bonds.

Q.—Who is Mr. Grant? A.—The treasurer.

Q.—When the money is ordered to be paid, on what names can it be paid out?  
 A.—Only by the secretary and treasurer, countersigned by me, on a warrant stating upon what authority it is to be paid.

Q.—On what authority is a loan authorized? A.—When a man makes application for a loan it is inspected by the property committee; then there is a report of the assessed valuation of the property, and the whole matter comes before the board, on the written report of the property committee, with the statement of how much it is assessed for, and what is on the property in the way of a house, or if it is a vacant lot, and then it is put to the vote if the loan is to be granted. If the margin between the loan and the value of the property is too small, then we insist on the man giving us a bond, signed by one or two solvent securities, that he will pay the dues for a sufficient time, so as to give the mortgage between 35 and 30 per cent. more than the amount.

Q.—What amount of money has the society lost between the time of its organization and now? A.—Not a cent.

Q.—How many mortgages have they foreclosed? A.—None.

Q.—The society has met with no losses, direct or indirect? A.—No.

Q.—If the borrower gets into arrears from any cause how do you deal with him?  
 A.—We then change him. We take his loan and credit him with what he has paid, and make him give a mortgage for the amount owing to us, which will refund our balance. There have been two or three cases in which we have had to do that. That starts a man back at the last monthly payment after any arrearage on our books.

Q.—That is for the security of the society? A.—Yes; and for the benefit of the man, and stop him having penalties to pay for default.

Q.—The society is perfectly secured? A.—Yes.

Q.—Supposing a stockholder who has not borrowed desires to sell out, what can he do? A.—The by-laws require him to give us \$50 dues, though we have not required it. We always give him money without the thirty days' notice, and then we give him what he actually paid us, and 8 per cent. for his stock—that is in the first series. For the last year it is 8 per cent. for stock four years old, and if it is one of the other series we give him 6 per cent.

Q.—So that in any case the stockholder who withdraws and has not borrowed money from the society gets 6 per cent. for his money? A.—Yes; for the average time they have it.

Q.—Any stockholders who have borrowed, if they desire to sell the property and transfer the stock, how do they manage? A.—They can do it without any notice whatever to us. We always know when there is a sale, because people come in. They transfer it by a deed, and the purchaser steps in the other man's shoes, and the property continues to be held under the other man's mortgage.

Q.—Can the members borrow on their stock without giving real estate security?  
 A.—No; if a man holds ten shares on the first series, that is \$595, and if he wanted to borrow \$90, he could not get it without real estate security.

Q.—What is the cost of managing the society? A.—The cost of managing the society since it started—four years and ten months ago—was \$5,790.52, for everything. That includes the original cost of outfit, books, supplies.

Q.—What would this average, per year, on the amount of stock out? A.—About 2 per cent. on the dues.

Q.—On the money received? A.—For instance, the money we have received is \$150,734.91, and the cost of managing that amount has been only \$5,795.52.

Q.—That is more than 2 per cent.? A.—I don't think so.

Q.—Do you think it exceeded 2 per cent. last year? A.—No; I do not; it was just about 2 per cent. If you like, I can tell you how much was paid in during the time and withdrawn.

Q.—Perhaps it would be hardly necessary. Are the shareholders permitted to know what the directors are doing? A.—Yes; the money is loaned at a meeting of the shareholders, and can be loaned in no other way. The minutes of the directors' meeting, at which the final action is taken, are read afterwards, at the next meeting of the shareholders, so that they know all about what is done.

Q.—Supposing a man borrows, let us say, five shares, or \$1,000, on a house, what will the house cost him when it is all paid for and what will it be worth? A.—Say his lot is \$250, which is about the average; he pays back to the society in dues and interest \$955, making \$1,175—ninety-five months' rent, at \$8 a month, which I find is the rent he would have to pay; in that case he would have to pay \$10 a month for that, and that is equal to \$760, leaving the property, at the end of eight years, costing \$450, or rather \$515. Adding \$250 to the \$955 makes it equal to \$1,205; so that \$450 would be the cost to him of his house, over and above his rent.

Q.—And the house would be worth how much? A.—After taking into consideration the value of real estate, it should be worth \$1,175.

Q.—How are the assets of the society invested? A.—The assets of the society, as they stood on the last day of December, were: \$82,416.66 in mortgages; \$1,768.60 in the bank; and there was due for arrears of dues and interest, \$960.92, the greater part of which has been paid in at the last meeting; value of the fixtures in the office, &c., \$390; making in all \$85,536.18.

Q.—What class of property is represented in these mortgages? A.—Those mortgages all represent real estate and dwelling houses of working people.

Q.—On which loans have been made? A.—Yes.

Q.—Has the society any money to invest besides what it loans to members? A.—No; we do not take any savings bank deposits.

Q.—Has the society been able to loan to members substantially the whole of its income, or has any large amount remained in hand? A.—No; this year was the largest year we have had; we closed everything we had, except the \$1,768 in the bank this year.

By Mr. WALSH:—

Q.—This time you have \$1,768 in the bank to your credit; other times you are indebted to the treasurer \$20. Now, what is the fact that you have \$1,768 in the bank an indication of? Is that an indication that not so much money was required last year? A.—No; less money was required this year, with the exception that we had a loan paid off after a meeting of the stockholders, and that has been deposited.

Q.—That is only an accident, then? A.—Yes.

By Mr. FRED:—

Q.—Has the business of the society increased or decreased from year to year, or has it remained stationary? A.—It has increased steadily.

Q.—How do money-lenders look upon this society? A.—We have got all the opposition that money-lenders can give. They cried it down, and there has been up-hill work all the time. They did everything they could to try and run it down, and when we began business 7 or 8 per cent. was the rate on those small loans of \$400, or \$500, or \$600, but now we make these small loans at even 6 per cent.

By Mr. HEAKES:—

Q.—Could the same member obtain two loans? A.—If he could get real estate security sufficient; but he cannot obtain the second loan for the purpose of speculating.

Q.—Could the same member obtain two loans when others were applying for loans? A.—It is all open competing; but we will not give a second loan at all if it is for speculative purposes. For instance, if it is to build a house to rent or sell again, or to speculate upon, he cannot get it.

Q.—Is it possible for any member of the society to obtain a loan if he desires to do so? A.—Yes; for each member in the series.

Q.—How are the loans paid? A.—Monthly.

Q.—What amount each month? A.—A man paying \$200 will pay us \$2 a month, and \$1,000 will be \$10 a month; that includes principal and interest.

Q.—He still has his stock to pay for? A.—No; that pays everything; he is reducing his stock by that much. Take a man beginning in January on the last series: he has nothing in the society but \$5; he discounts the stock due to him eight years hence, and says how much he is willing to give. So, if he gives 33 $\frac{1}{3}$ , the advance would be \$666.67 on real estate security, and at the end of the time his stock is cancelled and his dues and interest are paid up.

Q.—What is the average discount paid for loans? A.—I should think about 20 per cent.

Q.—How long has a member to be in the society before obtaining such a loan? A.—A man who joined on the 9th of this month made a loan. He paid \$3 and obtained \$600. He obtained it in this way: it is guaranteed to him; he is putting up the house and the contractor is paid as the work progresses, we paying the contractor. Every fortnight I go and measure up the work and pay the contractor as he is entitled to it.

By Mr. CLARKE:—

Q.—Do you loan money on other security than real estate? A.—Not any other security than the first mortgage on real estate.

By Mr. HEAKES:—

Q.—How are the directors elected? A.—By the stockholders once a year.

Q.—They may elect any body? A.—Any body who owns five shares of stock.

Q.—The members have absolute security for their money? A.—Yes.

Q.—If a member so desired, would he be allowed to pay his loan before the time expired? A.—Yes. I was talking to you about this bonus business. We keep 1-96 part of the bonus. Suppose a man borrowed, and four years from the time he borrowed he gave us \$333.33, we would keep one-half of that and credit him with the unearned half, he receiving credit for his dues and interest or share of profits.

Q.—If a member paid his loan before the whole was due he would have a rebate? A.—I will figure it out for you. Suppose a man gets \$96 of a bonus, and at the end of the year he comes and says, I want to pay off that loan. He gets \$200, for which we take a mortgage. We divide it in this way: we credit him with back dues, say \$12, return premiums \$84, interest, \$1.30, or whatever share of the profits it may pay, he will pay us \$103 back and we discharge the mortgage. That bonus is not ours until it is earned. We earn the 1-96 part every month.

Q.—Supposing a man obtained a loan from you, and built a house, and paid for it, and sold it, could he obtain another loan? Yes; he can cancel his mortgage in another way if he likes. He could pay back the \$666.60, for instance, that we gave him, and continue his stock.

Q.—Supposing a man obtained a loan and built a house and sold it at an advance figure, could he come back and borrow money to build another house? A.—Yes.

Q.—That would not be considered speculation? A.—No.

THOMAS PARTRIDGE, President of the Canadian Association of Stationary Engineers, Hamilton, called and sworn.

By Mr. HEAKES :—

Q.—Have the stationary engineers of Hamilton an organization? A.—Yes; they are incorporated and they have a constitution.

Q.—Can you state some of the principal objects of the society? A.—I may state that we are voluntarily here; we have not been called by any person. Our object has been, for some time, to get a law passed, if possible, to have stationary engineers examined, so that they can get a certificate of ability. We have formed a society in Canada—in this place, in Montreal and Toronto—and what we wish for now is, if possible, to get a law to that effect, so that incompetent persons, or intemperate persons, should not be allowed to take charge of these establishments.

Q.—You would propose, then, that this certificate of competence should be granted. How would you propose to have it granted? A.—By examination.

Q.—By a Government board? A.—Yes; by a Government board or any board they like to appoint.

Q.—Is it the rule or the exception for unskilled men to be put in charge of engines? A.—It is the exception for unskilled men to be put in charge.

Q.—Then, there are more skilled men in charge than unskilled? A.—Well, as far as that goes, I will tell you: When they get an unskilled man to look after it he will run it for a while and then they think they can do with somebody cheaper, and here is where the trouble comes in. They may put a lad in charge of it who has had no experience. That has been the case in Hamilton within the last few weeks. I would draw the line. A man may be running that engine to-day and next week a boy may be running it.

Q.—What I want to get at is whether there are more practical engineers in charge than men who are not practical engineers? A.—I think, if I take the majority, there are more practical engineers in charge—decidedly so.

Q.—Do the engineers have control of the boilers as well as the engines? A.—Yes; and that is where I wish to draw the line. We wish to create competent engineers, so that if you gentlemen should go to-night, for instance, to your hotel, you could sleep there with perfect safety; it is the boiler that does all the mischief. If the engine breaks down the man will go no further, but the boiler is different. We propose to grade them: for instance, a man may be capable of taking care of a boiler for steam-heating purposes; some may be capable of taking care of an engine and boiler for all practical purposes; and we grade them, on the principle of safety. We think that a man should understand the properties of steam and what is to be done in connection with boilers and engines, according to the grade of work he performs. For instance, in the hotel there is a large boiler, and you may go to sleep with a feeling of perfect safety, but in the middle of the night you may all be blown to pieces.

Q.—If a man has no knowledge of the expansion of steam would he be considered a competent engineer? A.—No, sir.

Q.—Is it possible for a man in charge of a boiler to so strain it that afterwards it will not bear the strain it is gauged for? For instance, if a man has a boiler guaranteed to run at 100 pounds of steam, and supposing he ran it at that rate, would it be possible for him to so strain it that it would not to be able to stand a pressure of eighty pounds? A.—Yes; it is.

Q.—Do you think that is a source of danger? A.—Yes; I have known it to be tested and destroyed by tests, for I would not expect it to carry the same amount of steam it was tested for.

Q.—You would not consider it safe to keep a boiler up to its test? A.—No; I would not consider it safe to put the safety-valve back 24 inches when she should be only 14.

Q.—Would it be safe to run a boiler at the full pressure of the test? A.—No; it would not.

Q.—What are some of the chief causes of the explosion of boilers? A.—That is something that nobody has been able to answer yet. There are many causes—so many that it is almost impossible to tell; but I believe over-pressure has been the cause, principally.

Q.—Do not boilers frequently get encrusted inside from the ignorance of those in charge of them? A.—Yes.

Q.—And when the boiler is so encrusted is it more liable to explode? A.—Yes.

Q.—Is it possible for a boiler encrusted in that way to burn? A.—Yes; it burns the plate, and the incompetent engineer would not understand it.

Q.—You would have engineers in charge of boilers to carry certificates? A.—Yes; that is our object.

Q.—I want to ask a question on another subject. Would it be any benefit to engineers if technical education were taught in the schools? A.—Yes; decidedly so.

Q.—Would you tell us, please, how it would be a benefit? A.—It would make them half-engineers before they got through. I know boys who want to be engineers, and they say we would like to get into your shop, but they are no more use to be engineers than my dog is, and yet they get into the shops and in positions, too, by some means or other, though they are not capable of filling them.

Q.—Is it possible, after teaching a boy the practical part of the trade, that he may know little of the theory? A.—You cannot do much without a theory; you cannot do anything without the practice.

Q.—And if the theory were taught in the schools do you think it would be useful? A.—Yes.

Q.—They would be better skilled mechanics when their trade was learned? A.—Yes; decidedly so.

Q.—Would you propose to grade stationary engineers, first, second and third, like steamboat engineers? A.—Yes; we have our grades, though I have not the papers here.

Q.—How many stationary engineers are there in Hamilton? A.—I could not tell you; we have sixty-two in our association.

Q.—Have you any idea how many engines and boilers are in the hands of incompetent men? A.—I know of seven; one I read of two weeks ago.

RICHARD PARTRIDGE, Stationary Engineer, Hamilton, called and sworn.

By the CHAIRMAN:—

Q.—Do you corroborate the evidence of the previous witness? A.—Yes; I corroborate what he said. I would advocate a board of examiners for stationary engineers.

By Mr. HEAKES:—

Q.—You would want something more, would you not. You would want a law to make it compulsory that certificated engineers should be employed? A.—Yes; we include them.

By Mr. McLEAN:—

Q.—What wages are stationary engineers paid in Hamilton? A.—From \$1.12½ to \$1.75 a day.

Q.—Are competent stationary engineers paid \$1.12½ a day? A.—Yes; that is the regular rate.

Q.—Do you consider that enough? A.—Well, we have eight hours a day on an average of twelve months in the year, and our whole wages would come to about \$1 per day, for competent men.

Q.—Do you consider that enough? A.—No; I do not.

GEO. T. TUCKETT, Tobacco Manufacturer, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are a member of the firm of G. E. Tuckett & Son? A.—Yes; the junior member.

Q.—What is your business? A.—Tobacco manufacturing.

Q.—How long has the business been established in Hamilton? A.—Since 1867.

Q.—Do you employ many hands? A.—About 300.

Q.—What class of people do you employ? A.—Well, we employ white and colored, male and female.

Q.—Of what ages? A.—From fourteen up to about forty.

Q.—Have you a considerable number of young persons working for you? A.—I should say about 120 to 150, boys and girls; they are changed from time to time. Of course we have more in winter time than in summer time.

Q.—Do you think any of them are under fourteen? A.—Well, we have a rule that firms have to be guided by, that no one shall be employed less than fourteen. We had some factory inspectors going through the factory, and I told them we had a great deal of trouble in finding out the age, and they told me they were going to get out certificates which parents would sign.

Q.—What rates of wages can these people earn? A.—They average about \$1.25 a day; that is what we pay ourselves. The children are paid by the “rollers,” and when I said 300 hands I was counting only the grown up people—those we pay ourselves.

Q.—How many are employed altogether? A.—The average would be from 400 to 425. It depends on the season.

Q.—Are they at liberty to work if they wish to? A.—Yes; we cannot get them in summer time.

Q.—How long in the year is the factory closed down? A.—Six weeks to two months.

Q.—What part of the year? A.—During Christmas and New Years, and generally in summer time, according to the heat. If it is hot we shut down longer, but generally it is about four weeks. Last summer we shut down for six weeks, on account of the heat.

Q.—Is it necessary to employ young persons in this business? A.—Yes; in order to strip the tobacco; the older hands would not be so nimble.

Q.—Are these children living with their parents generally? A.—Generally they are mechanics' families and poor people. Some are the children of widows.

Q.—Would it not be better for them to go to school than to work for you? A.—Well, the mothers come to me and say that their children will not go to school, and in order to keep them off the streets, they send them to me.

Q.—Have you reason to know that many of them are the children of such mothers? A.—I could not say. At times we have children of that sort. As a rule, we have the parents come to the factory, and have a bargain made between the “roller” and the mother or father, in our presence, the first time, and we see that the children go with the proper man and get properly paid for their work. The wages of a child from fourteen to sixteen are from \$3 to \$4.50 a week.

Q.—How long a time do they serve before being able to earn \$3 a week? A.—The first week, as a rule, they get about \$1.50 to \$2; the second week perhaps \$2.25, and afterwards it depends upon the child, but generally in three weeks they get \$3.25 to \$4. If the child can take the stem out without tearing the leaf too much they get \$4 to \$4.50.

Q.—Can children from fourteen to fifteen years old earn those wages? A.—Yes; if they are smart.

Q.—Is the work in your factory a trade, so that those who have learned it will be called mechanics? A.—Yes. If the stemmer goes along and gets to be smart he gets to be a “roller”; then he gets on to be a wrapper, and then the foreman mentions it to us, and when they are at eighteen or nineteen, and fit to become apprentices,

they are given benches. He serves for three years, for the first two years at ordinary work and the last year in fine work, and after the last year they become journeymen, and get journeymen's wages.

Q.—Do you use much machinery? A.—Considerable.

Q.—Do accidents ever occur? A.—We have guarded against them in every way possible.

Q.—What are the sanitary conditions of the factory? A.—We have had three generations working in the factory until lately. The grandfather was there, and the father, and we have two sons there now, grown-up men.

Q.—When the factory inspector was around did he find any fault with the sanitary conditions of the factory? A.—None whatever.

Q.—Or with unprotected machinery? A.—None whatever.

Q.—Did this inspector make a particular and close inspection? A.—Yes; there were two of them. I went with them myself, and they examined the boilers, and engines and belting, &c., and saw that they were protected.

Q.—Have you separate conveniences for the male and female employes? A.—Yes; all emptying into the sewer.

Q.—What class of tobacco do you make? A.—What we call "bright goods"—bright smoking tobacco.

Q.—Where do you find your market? A.—Well, we find our market all over the world.

Q.—In what countries? A.—The United States, England, Australia, and we have sent some to Ceylon and Japan.

Q.—How wide a market have you in Canada? A.—Well, we have the whole of Canada; we have sent goods to British Columbia, the North-West, Ontario, Nova Scotia and New Brunswick.

Q.—How do the prices of tobacco, at the present, compare with those of former years? A.—The last two or three years they have been lower, on account of the internal competition.

Q.—Lower than ever before? A.—Well, just about as low as we have had. Of course, when we started prices were low, in order to get into the market, and we have come back to those prices again.

Q.—Where do you get your tobacco? A.—From Virginia, North Carolina and Kentucky.

Q.—Do you use any Canadian tobacco? A.—No.

Q.—Why? A.—Well, Canadian tobacco, at the present time, is a very common grade of tobacco, and the class of tobacco we use, which is grown in the South, cannot be grown in Canada; Canadian tobacco will not suit the people's taste. If we bring the seed from Virginia and plant it here it becomes common or nondescript tobacco, the same as if you bring the sweet potatoe here and plant it it will become the common Irish potatoe, and get insipid.

Q.—You try to keep your tobacco uniform? A.—Yes; we do. We have a brand which has proved itself a good many years, and our particular attention is paid to that brand.

Q.—What wages do your skilled employes make? A.—One dollar and twenty-five cents a day, on the average.

Q.—What hours do they work? A.—Nine hours a day, and in the winter time we start at 7.30.

Q.—Can you tell us anything about the experiment made a few years ago in your factory in reducing the hours of labor? A.—We found that by starting in the summer time at 7 o'clock and working until 6, and giving them a half holiday on Saturday, so that they could get off and enjoy themselves, they worked steadier and with more vigor. In the winter time we start at 7:30 in the morning and work until 6 o'clock, allowing them one hour at dinner, and giving them from 4 o'clock. This allows the mothers to do the marketing in the daylight, and we find that they

can do the same amount of work in the nine hours, and then they appear more healthy and strong than when working the longer hours.

Q.—Practically, then, you reduce the hours from ten to nine, without any reduction in the product? A.—Yes.

Q.—Are you satisfied, as employers, with that reduction? A.—Yes; or we would not have kept on with it.

Q.—How were you induced to make this reduction? A.—By my father's own free will; by reading and observing.

Q.—He is the head of the firm? A.—Yes.

Q.—How frequently do you pay your hands? A.—Every Saturday.

Q.—Do you find Saturday to be a satisfactory pay-day? A.—Yes; always.

Q.—Has any request been made to you for a change of pay-day? A.—None at all.

By Mr. HEAKES :—

Q.—Have you any knowledge of the profit-sharing in manufacturing, or in the system of bonusing? A.—No; as a rule, we mean to reward merit in the factory. Of course, they get their wages every Saturday, as we promised to pay them, and at the end of the year, when we see that they take an interest in us, we give them purses according to merit.

Q.—Is it not on the principle of profit-sharing? A.—No.

Q.—Do you find, under the system you pursue in that respect, that your people take a better interest in your business? A.—Yes; we do, because they notice that we are watching their interests and rewarding merit, and therefore they watch our interests.

Q.—Do you think it possible to introduce profit-sharing generally in manufacturing? A.—No; I do not think it possible.

Q.—Will you give us some reasons for thinking so? A.—Well, in the first place a man has to stand the chances of great losses, and besides it would cause discord, because if the man is a large buyer prices might drop, and the employés are not going to lose that themselves.

Q.—They would be willing to share the profits but not the losses? A.—Certainly.

Q.—Have you ever had any labor troubles in your factory? A.—Never, sir.

Q.—Have you ever given the subject of arbitration any thought? A.—No; we have had no reason.

By Mr. McLEAN :—

Q.—Before you granted the nine hours did they ask for it? A.—Not with regard to time. We have had a few coming and asking if we did not think they were worth \$1.25 or \$1 more a week.

Q.—What amounts have you given to your people at holiday time? A.—Well, we have distributed from \$1,500 to \$2,000.

Q.—And those presents are based on their record during the year? A.—Certainly. We have given \$50 and \$100, the same amount, because they have saved us perhaps more than that by their careful manipulation of the tobacco.

By Mr. GIBSON :—

Q.—Having found the nine-hour movement profitable and satisfactory could not you reduce it still more, with the same result? A.—It might be the last straw which sometimes breaks the camel's back.

Q.—You think that nine hours is a fair limit? A.—I think so; from what I have seen and heard I think it has proven to be about the limit.

Q.—You have not tried any other? A.—Of course, I am only speaking of what I have read in the papers on the United States; I find that the jumping into the eight hours has caused a great deal of trouble; it is going too far the other way. There is always a happy medium.

Q.—When you reduced the hours from ten to nine did you reduce the men's wages at all? A.—None at all.

By Mr. CLARKE:—

Q.—Do you fine your employés for neglect? A.—No; if they repeat a thing two or three times we generally let them go.

By Mr. HEAKES:—

Q.—Is the tobacco business generally considered a healthy business? A.—Well, we have had three generations in our factory, so I don't think it is very unhealthy.

Q.—It does not seem to have a bad effect on the young people? A.—No; when we expected the cholera here I passed a remark to several of the doctors, and they said that it was not only a good disinfectant, but that it would keep the people at work.

GEORGE HARPER, Compositor, Hamilton, called and sworn.

By Mr. FREED:—

Q.—What are the compositors paid on the morning papers? A.—Do you mean the average wages?

Q.—What is the rate fixed by the union? A.—Thirty-two cents a thousand on the morning and 30 cents on the evening papers.

Q.—What amount of matter or what part of matter goes on the "hook" and is distributed amongst the compositors, generally? A.—All general matter, except advertisements.

Q.—The advertisements are set by whom? A.—By the week hands.

Q.—That is the rule with all the newspaper offices in Hamilton? A.—Yes.

Q.—What wages are paid the weekly hands on the morning papers, not including the foremen? A.—I do not know of any weekly hands engaged on the morning papers, except the foremen and the pressmen.

Q.—What wages are paid the weekly hands on the evening papers? A.—Twelve dollars.

Q.—What are the wages of weekly hands in job offices? A.—Eleven dollars is the scale.

Q.—Do any, except the foremen, get \$12? A.—Yes; I believe there are exceptions to this rule; I find that there is one or two who get \$12.

Q.—In the newspapers, how many boys are allowed by the union to any particular number of men? A.—One apprentice is allowed to every four men in the newsrooms.

Q.—What are the hours of work in the job offices? A.—Ten hours a day.

Q.—On the evening papers do you know how many hours are worked?  
A.—No.

A.—And by the weekly hands? A.—About nine hours.

Q.—On the morning papers what hours are worked by the weekly hands? A.—I think they would run about nine hours.

Q.—Do you know how many journeymen printers in Hamilton own the houses in which they live? A.—Yes; I think there are about eight; that is those working by the piece, and not including foremen.

Q.—Do you know how many journeymen printers have established themselves in business in Hamilton within your time? A.—I think there are four, and one who went into partnership.

Q.—How many of the job offices in Hamilton are owned by the men who were formerly journeymen printers in Hamilton? A.—Five, I believe.

Q.—How many are there in Hamilton owned by other persons not connected with the daily newspapers? A.—I don't know but one, and he came up from Ottawa. He was a journeyman printer, and worked here for a short time.

Q.—Practically, all the job offices in Hamilton, outside of the daily newspapers, have been established by journeymen printers? A.—Yes.

By Mr. McLEAN :—

Q.—What paper do you work on? A.—The *Times*.

Q.—Do you know how many branches there are altogether working in the newspaper offices? A.—I think there are ten altogether.

Q.—How many journeymen? A.—About twenty; that is piece hands, exclusive of foremen. There would be, perhaps, four others besides them, making about twenty-two or twenty-three.

Q.—Do you use any plate-matter? A.—No plate-matter.

Q.—What time do they begin composition on the morning papers? A.—About one o'clock in the afternoon, and work for about two hours, waiting their cases after that, and then back in the evening at eight o'clock, and work there until three next morning, making about nine hours.

Q.—How much longer will it take them to distribute their cases? A.—The cases are distributed in the afternoon; that is over and above the nine hours.

Q.—Will it take three hours to distribute? A.—No; about two hours; they do some distributing at night in the time they are waiting.

Q.—Do they get paid for standing time? A.—No.

Q.—Is there much waiting for copy? A.—I believe there is considerable waiting. There is some on the morning papers, but of late we have been pretty busy.

Q.—Do you derive any benefit from the organization to which you belong? A.—No, except the benefit which is derived from keeping together. There is a death benefit of \$75.

By Mr. HEAKES :—

Q.—Are there any printing offices in Hamilton where they object to the hiring of non-union men? A.—No; there are two mixed offices where they consider they are interfered with.

Q.—Has there ever been any black-listing of men in Hamilton? A.—No.

By Mr. McLEAN :—

Q.—How do wages compare in Hamilton with cities of the same size in Great Britain or the United States? A.—I could not speak as to Great Britain, but they are paid a better rate of wages in the United States.

Q.—How are the men paid here? A.—On the papers they are paid by the piece—weekly.

Q.—What day of the week? A.—On Saturdays.

Q.—What day do you prefer? A.—I prefer Friday, as it allows Saturday for shopping, buying provisions, &c.

By Mr. HEAKES :—

Q.—Would a bureau of statistics be acceptable to the workmen, do you know? A.—Yes; I think it would be a benefit.

Q.—Do you think as a body they would generally favor it? A.—I think they would.

Q.—You spoke of some printers owning their own houses: how long would they be working at their occupations before being able to purchase those houses? A.—No; some of them I spoke of are old men, and some had money loaned to them; the majority of them are old men. Two or three young men have property of their own, but, of course, I can't say if it is cleared property.

Q.—What I want to find out is, whether they purchased this property from the amount of wages they earned by their trade, and if so, how long it took them to do it? A.—To answer that I would have to take individual cases.

Q.—Do you know of any individual cases? A.—I could refer you to my own case. Of course, I have been working at the business for twelve or thirteen years, and I

own the house I live in. I suppose it will take a man about ten years to secure a house of his own, and perhaps longer.

By Mr. McLEAN:—

Q.—What do artisans' houses rent for in Hamilton? A.—Six dollars to \$10.

Q.—Are there any of the men paid by orders? A.—None are accepted and none are offered.

By Mr. GIBSON:—

Q.—Have there been any labor troubles in your office? A.—None for some time.

Q.—When you have had troubles what system do you take for settling them? A.—The matter is discussed in our union, and an endeavor is made to settle it by arbitration, and sending a committee to the employers.

Q.—If conciliatory means failed what would you prefer? A.—We have generally been able to settle matters of this kind ourselves. If it comes to a matter that cannot be settled it comes to a strike, I suppose, as a last resort. We have what we call an organizer in connection with the International Union, and he is sent for in the event of a strike, and he endeavors to settle the matter before it comes to a strike.

Q.—You try every means in your power before coming to a strike? A.—Yes; I remember only one strike in my time.

Q.—You have never thought of the matter of enforced arbitration? A.—No; I never looked at it in that light.

By Mr. HEAKES:—

Q.—Are there any female compositors in Hamilton? A.—Not to my knowledge.

By Mr. McLEAN:—

Q.—Is \$11 the union scale for day work? A.—Yes.

HAMILTON, 16th January, 1888.

WILLIAM J. McANDREWS, Foreman Printer, called and sworn.

By Mr. FREED:—

Q.—You are president of the Typographical Union of Hamilton? A.—I was elected last Saturday evening.

Q.—The last witness was president last year? A.—Yes.

Q.—You have heard the evidence of the last witness? A.—Yes.

Q.—Do you corroborate what he has said? A.—Not in some particulars. He said that in ten years he would get a house and lot in the city, and I think the ordinary printer working at the case would find it pretty hard work.

Q.—How long have you been working at printing—since you have been a journeyman? A.—I have been eighteen years at the business, and I served five years, so it would be thirteen years that I have worked as a journeyman.

Q.—How long has it been since you paid for your house? A.—I have not got it paid for yet.

By Mr. GIBSON:—

Q.—How long is it since the idea possessed you to own a house of your own? A.—I never had any great idea of it; I never was much inclined towards workingmen owning property, unless they have a permanent position, or have some money saved up. As I had some money saved up I bought a house, and I could realize it any day. I bought in a central part of the city, whereas, if I had gone outside I could not have realized as well.

By Mr. FREED:—

Q.—Why don't you approve of workingmen owning their own houses? A.—I

don't disapprove of it, still I don't know that I would own one if I were working at the case all my life.

Q.—Don't you think that owning property anchors a man down and prevents him from becoming a rolling stone? A.—That is the cause why workingmen don't amount to anything who shut themselves away from the world.

Q.—Are not those printers better off who remained in Hamilton than those who have been going to the United States and other places? A.—Yes; they have a little money of their own, but they are not better off in health or money gained, or anything picked up to the advantage of their trade, or anything like that. I know men who have gone away and have come back a great deal better off than they went from this town.

Q.—Is that your experience with the Hamilton printers who have travelled? A.—A good many of them—not in money matters, but in the knowledge picked up with regard to their trade; all these men who have gone away medium good printers, come back good printers.

Q.—What do you think of the system in vogue of getting tenders from printers for job work, &c.? A.—Well, for small work, or for any job, I don't believe outside of my own trade in this tendering system. I was a member of the Trades and Labor Congress which sat in this city, and I was opposed to the tendering system for job work, or work of any kind, unless it was a very large job. I know that in our trade the tendering system causes workingmen, I believe, to be hindered from getting advances of wages, because the bosses or foremen are very strict in regard to keeping five or ten minutes out of your wages, if you lose that time, and it causes a great deal of inconvenience in that way. For instance, if a man wants 1,000 note circulars, I suppose \$3 or \$3.50 should buy them in any printing office. There are many small printing offices where they sell them for \$2.75 or \$2.50, and eventually it goes down to such an extent that the proprietor has not sufficient profit to pay the men fair wages.

Q.—You think that keen competition produced by the tendering system induces employers to pay smaller wages than they should pay? A.—I should not say that, but I think that if the general public were to pay better prices employers would willingly pay the men more wages, because they would be more able to pay them.

Q.—You think that higher prices would result in them paying higher wages? A.—I do.

Q.—You think that if there were high prices and high wages all round it would benefit the working classes? A.—Yes; because if a workingman gets a fair wage he gets ahead better, buys better goods and gets more of them than if he gets a small wage; he buys goods on which there is a larger margin of profit.

Q.—Do you act on that principle yourself? A.—I do, in one way. In building my house I had a plan drawn, and I thought to myself that I would get a man to build it, and I got a Scotchman named \_\_\_\_\_, thinking that a Scotchman would be an honest man, and I asked him what he would build my house for. He built it for me and I gave him his price. Another time I had it painted and I gave it to a man to do for \$30, but I was sorry that I had not given it to another man for \$40, just on account of the character of the work. For example, I would sooner pay \$3.25 for some articles of cloth than \$3, provided the sewing woman got a share of the extra 25 cents, because it would come back to me in the long run. There would be more money coming back, the printer would have his bills printed on better paper, instead of common paper and so on, in other trades, all paying good prices.

By Mr. HEAKES:—

Q.—Do you know anything of the operation of the lien laws? A.—We never have had any occasion to apply them, but from what I heard at the Labor Congress they are not perfect. There were parties who put liens on buildings here, but they were not of any use, though I don't know the reason.

Q.—It did not protect the workingmen in their wages? A.—No.

Q.—Have you ever given any thought to the question of profit-sharing in business?  
 A.—Yes; I have often thought of it. I have read in the newspapers where men have shared with their employers, and I believe it would be a good thing if bosses were to do it.

Q.—Do you think if bosses shared with their men that there would be as many labor troubles? A.—Do you mean generally?

Q.—Yes? A.—It would lessen the amount of labor troubles; but no doubt there would be other troubles about dividends and other things which would counter-balance it.

Q.—You think the cure would be as bad as the evil? A.—I think so, because I believe I saw a statement in the papers the other day where it had been tried and the men had turned kickers.

By Mr. FREED:—

Q.—Do you think the men would be willing to receive the profits when there were profits? A.—Yes.

Q.—But would they be willing to accept a share of the losses? A.—No; because the moment the business begins to run out, and there were losses instead of profits, they would shut up shop.

By Mr. GIBSON:—

Q.—What is your opinion with regard to arbitration in cases of labor troubles?  
 A.—I believe in arbitration, but I believe it should be by people who understand it. For instance, if there was a trouble among the printers I believe printers should be arbitrators, and not outside persons.

Q.—When they have each done so, and have each picked a party, how would you have the third party chosen? A.—If I was president of our union I would insist on the third party being a printer, although I would not care where he was from. I have known of cases where people who did not understand the trade were arbitrators in disputes in it, and I don't think it is right.

Q.—You mean that the original two arbitrators would be people who understand the business, but failing to agree as to the third party, you mean? A.—I don't know who the third party should be, but I would say that he should be a person who understands the business. If moulders were on strike we should not send a printer to arbitrate in their business, and I would not be in favor of arbitration if it was done that way.

By Mr. HEAKES:—

Q.—You are in favor of the parties appointing their own arbitrators? A.—I would say that printers should appoint their arbitrators and the employers should appoint theirs, but they should be people who understand the printing business. Let them go across the ocean, if necessary, to get an independent man, but he should be a man that when you spoke to him about "ems" and "slugs," and so on, he would understand it, without having it all explained to him.

By Mr. GIBSON:—

Q.—Your answer would be, then, that in that case, you would not go for Government arbitration, or enforced arbitration? A.—No; I would not employ enforced arbitration, though I am not in favor of strikes. I never saw any trouble in our trade that could not be settled amongst ourselves without bringing other people in, and if the men and the bosses can't agree disinterested people would not agree very well. Of course, in our business in this city we are not like that strike on the other side the other day on the railway, where the bosses would not receive the men or listen to them. I suppose, in such a case, outsiders would be the right ones to settle the strike, but I believe that when the bosses talk the matter over with their hands they can come to a better and more lasting settlement than any outside arbitrators. I would like to say, with regard to the apprentice system, that I am not

in favor of indenturing. I believe that if proprietors and foremen interested themselves in the boys working for them they would be only too glad to work for them and not run away.

By Mr. HEAKES:—

Q.—Do they do that? A.—Not in this town.

Q.—And it is only in case they do that that you would favor it? A.—I may say that our union is very strict. We register every apprentice in the union and name the day we sent him to the trade, and we don't let any boy go before he is fifteen, although we allow them to go as message boys at any age; but he is not to learn his trade until he is fifteen, and when he is twenty he is a journeyman.

Q.—Supposing a boy after he was fifteen went to another office, would that count on the time? A.—Yes; if he served for five years. I understand by the indenturing system that if I want to learn the printing I have to sign an agreement that I will serve a certain time; I may have to take all sorts of abuse, but I can't leave without resorting to law and breaking the indenture.

By Mr. GIBSON:—

Q.—Does indenturing necessarily give the bosses the power to abuse the apprentices? Is not the boss bound as well as the apprentice? A.—Certainly he is. Sometimes a good boy is very valuable, and if he wants to go he may pull the latch. For instance: in this city an apprentice to a foundry man did that, and he was brought before the police court and fined for breaking his indenture.

Q.—Do you think a boy should leave his employer if he has special need of his services? A.—No; I don't think so, but I don't think that any employer who treats his men properly would find boys doing so. I think they would see that their services are required, but when boys see that their services are slack it is a different thing.

Q.—That only goes to condemn the apprentice system? A.—All my life I never was bound. I learned my trade here, and I never knew a boy to run away. Another reason is, because a boy may have served two years at the business, and he is bound, and his foreman can see that he will not make a printer, and that the best thing he could do would be to discharge him, but if he is indentured he will try to make the best of him.

Q.—Supposing the men could see that he would not answer, could they not separate by mutual consent? A.—I believe in freedom; I believe that boys will stay if they are used right. The idea is that they are not good workmen, or very few, just because of the want of an indenture system.

Q.—Do boys work around too much from one shop to another. A.—I don't think they do in our trade; and I consider it does a boy good to move around. Working at one class of work results in a boy not knowing anything of the other branches of his trade. If I was working in a foundry and making stove-lids all the time they would be very apt to keep me at it.

Q.—If he is kept at that he would not learn the trade, whereas if he is bound by indenture they are bound to keep him at the trade and teach him? A.—Well, as I said before I believe in freedom, and if I had fifty boys I would not bind one of them to a trade. With regard to immigration, I say it is wrong that the Government should assist them to this country.

Q.—Do you know that they do so? A.—Yes; they assist persons to come to this country.

Q.—When? A.—All the time.

Q.—In this last year? Can you state that this last year the assisted passage system has been continued? A.—Well, they have their passage paid on the Allan Steamship Company, and they are brought out cheap.

By the CHAIRMAN :—

Q.—Do you know what you have just said, that the Government pays the Allan steamship line, to bring them out? A.—Yes; I believe so on my oath.

Q.—Do you know so? A.—Yes.

Q.—How? A.—From general knowledge that one gets; I believe there are people in Hamilton who never paid their way across the ocean.

Q.—Do you know of a single one within the last twelve or eighteen months who came to Hamilton without paying a cent? A.—I said “assisted.”

Q.—You begun by saying “assisted,” but you said at last that people came to Hamilton without paying a cent. A.—I know they assisted people out to this country.

Q.—Do you know of any person who came to Hamilton without paying a cent—answer, “yes” or “no”, within the last twelve or eighteen months, if you know of any person coming to Hamilton without paying his passage? A.—I don't know any person in that way, but I know of people who have come and were assisted out. There are people walking in Hamilton, wanting work and can't get it. We have deaf and dumb printers who came to Hamilton and came with assistance.

Q.—Can you give us the name of them? A.—There were deaf and dumb printers who came to Hamilton and applied to the mayor for charity, but I don't know their names. They went to Montreal, and went there by our money, but they came out by other people's money; they came out cheap.

By Mr. HEAKES :—

Q.—Do you know who brought them out? A.—No; I do not.

Q.—Do you know if the Dominion Government paid their passage, or part of it? A.—I believe they came out in that way.

By the CHAIRMAN :—

Q.—That means it is a fact, if you believe so. When I say I believe such a thing I mean I believe it is so? A.—I believe it is so, to the best of my judgment, I believe those printers came out here by cheap fares.

HAMILTON, 16th January, 1888.

JOHN SMITH, Hamilton, called and sworn.

By Mr. FREED :—

Q.—You are the immigration agent at Hamilton? A.—Yes.

Q.—How large a district is in your charge? A.—The counties of Halton, Welland, Monck, Lincoln, Norfolk, Oxford, Brant, Waterloo, Wellington, Bruce, a large portion of Huron, a portion of Grey, and Haldimand, and a portion of Perth.

Q.—How many immigrants have settled in your district during the year just closed? A.—Seven thousand nine hundred and nineteen.

Q.—Can you tell us from what countries they have come? A.—3,421 were English; 796 Irish; 1,434 Scotch; 790 Germans and 1,297 American citizens.

Q.—That is in the calendar year 1887? A.—Yes.

Q.—Do you know how many of these came on assisted passages? A.—I could not say; I have no means of knowing.

By the CHAIRMAN :—

Q.—When they come to Hamilton, if any were assisted you would not know it? A.—Well, no; unless we questioned them.

Q.—You cannot say? A.—No; I have no evidence of the transaction at all.

By Mr. FREED :—

Q.—Do you know what are the rules of the department now as to the Government giving assistance to emigrants? A.—Yes.

Q.—Can you tell us? A.—Yes.

Q.—Do, if you please? A.—Immigrants assisted into Canada comprise agricultural laborers and female domestic servants.

Q.—What does this assistance amount to—any abatement of their passage-money? A.—Assisted passages originated and still continue. By an arrangement which was made with the conference of steamboat companies of New York, Boston, Philadelphia and the St. Lawrence ports, fixed rates were established. The New York steamship company lines had the advantage over Canadian lines, and the assisted rate rose in consequence of cutting the rates on the New-York lines. The New York lines hearing of the assisted passage rate made an application to the department to know what proportion they paid, and the department referred them to the steamboat companies. It remained that way for two or three years, and now the assisted passage consists in the Government assisting agricultural laborers and female domestic servants to the extent of \$2.50.

Q.—How can the Government know whether the immigrant is an agricultural laborer or a mechanic, or whatever he may be? A.—Only by the declarations made. Before the assisted passage can be granted to an emigrant the emigrant applying for the assisted passage has to make a declaration on a printed form. He has also to have the declaration signed by a clergyman, or a magistrate, before he can obtain it—that he is *bona fide* an agricultural laborer.

Q.—Must the magistrate or the clergyman reside in the district from which the agricultural laborer comes? A.—Yes; and must know him, or rather he must declare that he knows him, and can vouch for him.

Q.—How many mechanics have settled within your district within the last year, immigrant mechanics? A.—Fifty-nine.

Q.—Out of how many immigrants? A.—Seven thousand, nine hundred and nineteen.

Q.—Taking all the emigrants that have come into your district within the past year, have they created more work for mechanics than the mechanics among them have taken from the Canadian mechanics already here? A.—You could only ascertain an answer to that question by the law of induction. For instance, opinions may vary, but I answer in the affirmative. Then you might ask me upon what ground I base my affirmation. I will take the number just settled in the Hamilton districts, 7,919. Now, in making a per cent. of the population—for instance, take this city or any other city—if you find the population at Hamilton 40,000 or 50,000 in round numbers, without knowing the actual number of families, the computation would be that five should form a family, in round numbers. Now, taking 7,919 and divide that by five: there would be 1,583 cooking stoves which could not be possibly done without. Now, out of that number there is not one person engaged in stove-making. I take another computation. Say there are 7,919 who require 7,919 suits of clothes.

Q.—They are not naked when they come here? A.—That is quite evident. Now, what do you mean by that question?

Q.—They don't want clothes immediately on their arrival? A.—Possibly not; sometimes they do. But answering your question in that way, supposing they had clothing to last them twelve months and did not require to purchase anything the first year, they certainly would the second year, so that the rotation of reformations goes on and the same law of progression would go on.

By the CHAIRMAN:—

Q.—That is—the immigrants of last year would require clothing this year? A.—Yes; out of that 7,919 that arrived there would not be 5 per cent. engaged in the business of tailoring. Very well; then take boots and shoes, you would not have 2 per cent. engaged in that business, and you would require two pairs for each individual. If you add it, in stoves there are 1,583; there are 7,919 suits of clothes, and over 15,000 pairs of boots and shoes. I merely mention these trades,

and as the community is made up of different trades and occupations each one must participate in the general prosperity produced by these transactions.

By Mr. McLEAN :—

Q.—Are all these immigrants people with families ? A.—No ; not all.

Q.—What are they ? A.—The great bulk of them are agricultural laborers and common laborers.

Q.—They don't require stoves ? A.—I think I would convince you that they do. I would draw your attention to the fact that the agricultural laborer has a need which is being provided for by these different portions of the community, and that he is a consumer of goods in his proportion to the whole.

Q.—That is an argument ? A.—You have raised the question of the man who does not need a stove.

By Mr. FREED :—

Q.—Are many of these agricultural laborers married men ? A.—As a rule, the great bulk of the married men come out single at first, and after working and earning sufficient they send for their wives.

By the CHAIRMAN :—

Q.—That is a fact, to your knowledge ? A.—Yes ; after eleven years' experience.

By Mr. FREED :—

Q.—Do they for the most part bring their own furniture with them ? A.—No ; nothing but clothing and wearing apparel. The whole effort of parties engaged in immigration in past years has been to discountenance the bringing of anything into this country excepting wearing apparel.

Q.—Are there many agents in Great Britain and Ireland, or other countries, encouraging emigrants to come to Canada ? A.—Yes.

Q.—Are they Government agents ? A.—No.

Q.—What agents are they ? A.—Well, there are the agents of the steamship companies. The old country agents are on a different footing from what they are here. Before the party can be engaged in shipping persons he must have a license from the Board of Trade. On obtaining that license he is allowed to engage in the general business of shipping to any part of the world by any steamship company.

Q.—You think that these steamship agents are, as a rule, men who are active in inducing people to come to Canada ? A.—Yes ; then there is another class, and that is philanthropic societies, so-called, who help people to come out to this country, or to the United States, Australia and other places. A large amount of money is subscribed in England for this purpose. Now, in the case of those deaf and dumb printers referred to by Mr. McAndrews, they did not cost the Government a cent. The Government did not know anything about it, but I take the ground that these people sent out here were not in a position to earn a livelihood for themselves, and I think that in such cases the steamboats should be compelled to return them. The arrangement was made so that they could be returned. The circumstances were these : there is a lady in London, England, named Miss Gordon, who devoted the whole of her life to this work. She has private funds of her own, but lives on the bare necessities of life, and confines herself mainly to the unfortunate class of the deaf and dumb. She had been out here several times, and she called on the Messrs. Dougall, of the Montreal *Witness*, who are very philanthropic people, as the paper would lead you to suppose. When they came out these gentlemen had no occupation for them, and they were sent from Montreal by money raised in the city. When they came here, one of them being a printer, some people interested themselves in the printing offices to get this man in, but he was a non-union man, and I believe in addition to that it was not so easy to communicate with him as with other printers ; and the result was that the mayor contributed \$5, and other men interested themselves, and a subscription was raised and he was sent back home.

By Mr. McLEAN:—

Q.—Does Miss Rye bring out many small children to Canada? A.—Miss Rye brought out last year 125.

Q.—Does she receive any remuneration from the Government? A.—No.

Q.—She is just a philanthropist of that kind? A.—Well, she goes by that name. Formerly she used to get \$2 a head; this year she gets nothing.

Q.—Previous to this year she got \$2 a head? A.—Yes; two years ago, but it has been discontinued.

Q.—Assisted immigration has ceased as far as the Dominion Government is concerned? A.—Yes.

Q.—From what you know of these small children brought out here, do you think it is advisable to bring them from the old country to this country. Don't you think there are enough children to relieve in our asylums, &c.? A.—I can only answer by the results, that we have not been able to supply the applications made for them.

By Mr. HEAKES:—

Q.—Do you know whether inmates of these asylums, homes, &c., have increased in number while these children have been brought out here? A.—I don't know; but the great difficulty we have had in institutions such as the Hamilton Home is this: these children have relatives living, the majority of them probably a mother or a sister, and the objection made to them by the farming community is that as soon as they have educated them so that they become useful to them they are taken away by their relatives and put into service, and that is the reason they prefer emigrant children—from the fact that there is no one to trouble about them, so that they become a portion of the household.

Q.—Does any body keep supervision of these children until they grow up? A.—I will give you the working of one institution, and I think that may be the best and most intelligent answer to your question, and it will apply generally. Here is the report to the Government for the year ending 31st December, 1887:—

“The Childrens' or the Stephenson's Home, situated in East Hamilton, has been very successful in its work, being presided over by the late Rev. Mr. Evans, a gentleman remarkably adapted for this class of work. A strong feature of this home, consists of the sympathy and assistance extended to the children placed out by them, who are encouraged to keep up their connection with the society, whose home is ever open to them, and Christmas time all are welcome to join at the annual dinner. The lads sent out, as a rule, have been successful, the majority of them having deposits in the savings bank. The home is now presided over by Mrs. Evans the coadjutor of her late husband, who has yearly visited the boys under their charge, and which has resulted largely in the success of the boys and to the credit of the institution.”

By Mr. FREED:—

Q.—Have you made any visits to those boys who have been placed out? A.—Yes.

Q.—What was the result of your enquiry? A.—As to the general results, you mean?

Q.—What is your opinion as to what you saw? A.—Favorable, with the exception of only one class.

Q.—And that class? A.—Are from the reformatories and industrial schools in the old country.

Q.—You found that that class was not suited to Canada? A.—I found that that class of children, having been committed to the industrial schools or reformatories either for vagrancy or crime, are apt to lapse back to-day under temptation here or elsewhere.

Q.—What proportion of the boys sent to Canada are of that vagrant or criminal class in your district? About 4 per cent.

Q.—About 4 per cent. are taken from the reformatories, &c., in the old country? A.—Yes; I am speaking of what I know of my own district.

Q.—Apart from these, what do you find the character of the boys who are to be placed out? A.—Good.

Q.—Among what class are they generally placed? A.—Among farmers.

Q.—Exclusively? A.—Ninety-five per cent.

Q.—How many of those boys have found their way to the Penetanguishene Reformatory? A.—Four boys in seven years.

Q.—Of the class to which you refer? A.—Altogether juvenile emigrants.

Q.—Do you know anything of the girls assisted by charitable societies or individuals? A.—Yes.

Q.—Is the report in their case as favorable as that of the boys? A.—More so.

Q.—How are they generally disposed of? A.—In the way in which I have alluded with reference to the childrens' home.

By Mr. WALSH:—

Q.—They are sent to farmers, also? A.—Yes; the rule is not to put them in cities; that is the rule with all those societies, not to put them out in cities, except under exceptional circumstances. I have not only sanctioned this, but I have asked that it should be done from the homes. Where I have known a lady that wanted one of these children, who was of a motherly or kind disposition, and who would look after the child and make it her own, it might be done, but under no other circumstances would it be tolerated.

By Mr. McLEAN:—

Q.—How is this home kept up? A.—By subscription; it does not cost Canada one cent. They are subscriptions from those purporting to be philanthropic people.

Q.—Charitable people? A.—They don't go under that denomination. There are charitable institutions at home, such as our orphans' home, and there are people engaged in the work, like Miss Rye and others, who get subscriptions and bring the children out to those places.

By Mr. FREED:—

Q.—What inspection of these people is done when they arrive in Canada to see that they are in physical health? A.—There is no inspection, excepting the quarantine inspection.

Q.—And that amounts to what? A.—That is after passing quarantine at the point of embarkation. They were officially inspected before getting on shore.

Q.—Is that inspection sufficiently rigid to give reasonable guarantees that they are in sound health? A.—It is generally, but not so rigid as I would insist upon. If the law is carried out it is all right. The provision for the inspection is complete in itself, and sometimes I am afraid there is a little laxity.

By Mr. WALSH:—

Q.—What proportion of them turned out to be anything but healthy? A.—Speaking from my personal knowledge, having visited those children for eleven years, I should say not over 2 per cent.

By Mr. FREED:—

Q.—What has been the early life of those children—boys and girls? Have they been reared amongst vice, so that they have the taint of vice when they come here? A.—There are two classes. If you take Miss Rye's work or Mr. Middlemore's work, in London—I don't class Dr. Barnardo's in the same category—the people who contribute to Miss McPherson, and others of that class, generally look for some orphan child in the district, and those children are comprised in that class. Dr. Barnardo's are picked up on the streets of London or anywhere else. He states that if a child has a claim on his sympathy he takes it.

By Mr. HEAKES:—

Q.—How long are they under his care before he takes them out? What would be the average time? A.—I think some are sent out without being kept there at all,

and others are kept two or three years. He may strike an average, but speaking from a practical point of view, I don't believe in any such work. If he sends out the 95 that he has at his training establishment in the old country in, say three years, until he has had a knowledge of the character of those boys, and they have attained that status which would warrant him giving a guarantee as far as human probability is concerned, that would be a benefit. You would be receiving those who would grow up into respectable citizenship.

Q.—Do you think that boys gathered out of the gutters of London are calculated to make good citizens? A.—I would prefer taking them from somewhere else. I am not going to argue in favor of one class of immigrant or another, although I might have an argument with my department did you want facts. I make a distinction between what I have already told you of the reformatories and industrial class and workhouse children. The workhouses are under the supervision of a board of guardians; children having lost their parents, they become wards of the State, and not by being tainted through crime. They have also the advantage of scholastic education, and are subject to discipline and industry, and I make that distinction between the two classes.

By Mr. McLEAN:—

Q.—The Dominion Government only assists by means of steamboat passages?  
A.—Yes.

Q.—Is it not a fact that there are immigrants assisted from Quebec to ports in Ontario? A.—It has been the case.

By the CHAIRMAN:—

Q.—Since when? A.—I got a letter the other day rapping me over the knuckles a little for having recommended a family arriving out of Quebec to be sent up. We have been gradually discontinuing it, and trying to get it done away with. Formerly there was an agreement between the Ontario and the Dominion Governments that the Ontario Government should pay two-thirds of the assistance from Quebec and the Dominion Government one-third. The Ontario Government having withdrawn from the agreement the Dominion Government has now given it up.

Q.—Do you act in the same capacity to the Ontario Government as to the Dominion? Are you the agent of the Provincial as well as of the Dominion Government? A.—Yes.

Q.—Do you know as a fact that railway fares are paid from other parts of Canada to parts of Ontario this year? A.—Yes; I think there are.

Q.—Do you know of any appropriation made for that purpose? A.—No; there is no special appropriation, it is only under the general appropriation; there is an appropriation made for general purposes.

Q.—There is an appropriation also made for assisted railroad passages? A.—No special appropriation.

Q.—I think there is? A.—No.

By Mr. HEAKES:—

Q.—Out of the whole number of immigrants settling in your district the past twelve months, what proportion would you consider pauper or useless immigrants?  
A.—Probably 1 per cent—I am just speaking roughly.

Q.—It is not true that a large number of pauper immigrants are sent to this country? A.—No; it is not. I think I might draw your attention to this, that some three or four years ago, during the time the British Government were assisting pauper emigrants from the congested districts of the west of Ireland there were a large number of pauper immigrants sent out by an arrangement made by the Ontario Government.

Q.—With whom? A.—Through Mr. Hardy by a committee. This money was out of a fund guaranteed by the British Government and placed in the hands of Mr. Tuke and others. They came to Toronto and we had conferences with them, and

they agreed to send out bread-winners sufficient to keep the families, but they did not do so.

Q.—What eventually became of these immigrants? Did they remain in that same destitute condition? A.—Eighty per cent. are now earning their livelihood, but the parents of the family will never earn their own livelihood; they will not work, or rather they are incapable.

Q.—Many of them are old people? A.—Old men, some married, and some were young men. They were the worst class of paupers that you could get—that is, the old men were incapable of working; but although it was a great evil at the time, still their children are becoming a useful class to the community.

By the CHAIRMAN :—

Q.—You do not think the community has lost anything? A.—No; they save in one way what was lost in another, and I think the result has been a gain.

By Mr. HEAKES :—

Q.—Do you think that immigrants coming to this country displace our own working people to any extent? A.—I don't think so.

Q.—What class of immigrants do you have most applications for? A.—Agricultural laborers and common laborers.

Q.—Speaking of the agricultural class, do you know if many of them find employment the year round? A.—That is becoming more general.

Q.—Can you give us any special reason for its becoming more general? A.—Yes; We have applications in harvest time, which will include July, August and September, at from \$30 to \$35 a month. Now, taking it at \$30 there is \$90 for the three months, with board. Now, they will get the same labor for twelve months for \$150, and farmers are beginning to realize that it is more economical to employ the year round than to employ them specially for a few months. There are fifty men employed the year round now to one that was employed when I took charge of the agency here eleven years ago.

Q.—It is claimed by some that agricultural laborers only find employment during the haying and harvest, and then drift back to the cities. Do you find that to be the case? A.—Not as a general rule. They do drift back, but they are generally the class I have alluded to as forming an undesirable class.

By the CHAIRMAN :—

Q.—You put the population of Hamilton at 40,000? A.—Yes; in round numbers.

Q.—What is the population? A.—Forty-three to forty-four thousand.

By Mr. FREED :—

Q.—That is within the city limits? A.—Yes.

By the CHAIRMAN :—

Q.—What is the proportion of those people who are the sons and grandsons of immigrants? A.—I should say 80 per cent.

Q.—Of those fathers and grandfathers, how many were poor people, would you say? How many came here without any money in their pockets? A.—There is a certain class of the population that we lose sight of, but taking the permanent part, 95 per cent of the whole wealth of Hamilton is owned by men who have made it.

Q.—From your observations is it not found the case that sons and grandsons of rich people become poor, while the sons and grandsons of the poorer class become rich? A.—Yes; I find that the best immigrants that can come into this country are the men who have been mostly independent of capital.

By Mr. McLEAN :—

Q.—How long would it take a man to acquire considerable wealth coming to this country just now? A.—I will give you an instance out of my own office. We

have six men here, once poor people, who are now worth millions, all out of my own office.

Q.—If people came now in the same way as they did thirty or forty years ago would they find the same chances in this Province to-day as they did then? A.—I don't believe the opportunities in Ontario to-day are as great as they are in the North-West for poor men, for the simple reason that there is unearned increment in the North-West, which we have not here.

Q.—The chances in the North-West are better than they are here? A.—Yes.

Q.—How much better? A.—Fifty per cent.

By Mr. FREED:—

Q.—Just fix in your mind some wealthy man of Hamilton who started without considerable capital, and then say if men of equal ability, exercising industry and economy, would have as good chances of success to-day as ever these men had in Hamilton? A.—No, sir.

Q.—Why? A.—For the simple reason that capital has become more concentrated, and poor men have not the same chance to enter into competition with capitalists.

Q.—Is all the money appropriated by the Dominion Government under the head of immigration spent on immigration? A.—No, sir.

Q.—To what is it applied? A.—To quarantine and for protecting the health of the country.

Q.—Now, can you give us some information as to the expenditure on quarantine? A.—It is for the purpose of keeping out epidemics; for instance, as a press man, Mr. Freed, that some articles we have read—

By the CHAIRMAN:—

Q.—Please speak to the Commission with regard to the quarantine, and do not make personal allusions, please? What is your answer to the question? A.—Nothing.

By Mr. FREED:—

Q.—How is the money spent which is appropriated by the Ontario Government under the head of immigration? A.—About 90 per cent. in salaries and expenses and 10 per cent. to immigration.

Q.—Considerable of this money is spent for assisting immigrants from Quebec to parts of Ontario? A.—No; not a cent for the assistance of immigrants from Quebec to Ontario.

---

WILLIAM McANDREWS, re-called.

By Mr. McLEAN:—

Q.—With regard to the assertion made by Mr. Smith, the last witness, respecting a deaf and dumb printer, he stated that he would not be allowed to work because he was a non-union man. I understand you want to contradict that.

A.—I wish to say that the deaf and dumb printers never applied to the union for work; though it is a rule of the union not to give employment to non-union men, we do not want the statement to go abroad that we deprived a deaf and dumb man from working because he was a non-union man. He may have been a fair man; I had a conversation with him in the deaf and dumb alphabet, but he never asked for work, and he received help from the printer's union.

The Commission then adjourned until Tuesday at two o'clock.

---

BENJAMIN M. DANFORTH, Hamilton, called and sworn.

By Mr. FREED :—

Q.—You are employed in the Ontario rolling mill? A.—In the nail works.

Q.—How long have you been employed there? A.—Four years and ten months.

Q.—Is there a large number of men employed there? A.—Fifty hands.

Q.—Do they get pretty constant employment? A.—Yes.

Q.—During what portion of the year are they laid off? A.—We run steadily; we don't lay off, unless we are compelled to do so by a break down.

Q.—You have work which keeps men constantly employed, excepting in case of an accident? A.—Yes.

Q.—How many hours a day do you work? A.—Ten.

Q.—Do you work by the day, the week or the piece? A.—Most of the men are on piece-work.

Q.—How do the rates of wages in Hamilton in the nail works compare with the rates paid, say in Pittsburg? A.—They are a little higher at present in Hamilton.

Q.—Who makes the scale of wages? A.—We are working on what is called the Pittsburg prices at present. They are taken from the Pittsburg scale; we were working before they reduced over there at 12 per cent. They have been reduced and ours is still the same.

Q.—So that you get now a little better than they get there? A.—Yes.

Q.—Can men do pretty well at those prices? A.—Yes.

Q.—Do you care to say what a man can make? A.—A nailer running four machines makes \$3.50 to \$4 per day.

Q.—It is pretty hard work, is it not? A.—No; it is not.

Q.—Is the shop fairly comfortable? A.—Fairly.

Q.—How is its sanitary condition? A.—Very good.

Q.—How frequently are you paid? A.—Once every two weeks.

Q.—On what day of the week? A.—Saturday.

Q.—Are you satisfied with that pay day? A.—Yes.

Q.—Have you had any labor troubles lately? A.—None during four years and ten months.

Q.—How many boys are working at the trade? A.—Twenty.

Q.—Do the rules of your union provide any specific number of boys to any number of journeymen? A.—They do not mention boys at all.

Q.—There is no limit? A.—No.

Q.—Are those boys apprentices? A.—Well, they are not apprentices.

Q.—Are they learning the trade? A.—Well, yes; they can learn the trade; there is a good chance for them, the same as in other shops.

Q.—In course of time they become—what? A.—In course of time they become nailers.

Q.—Will they then be competent workmen? A.—Yes.

Q.—Are those receiving such instruction as to make them good workmen? A.—Yes.

Q.—Do you know where your nail-plates come from? A.—From our rolling mill alongside of the factory; they are all one concern.

Q.—What iron is used in the rolling mill? A.—Scrap-iron.

Q.—Where is it obtained? A.—In Ontario; all over Canada, wherever we can get it.

By Mr. HEAKES :—

Q.—How do the rates of wages in your business compare with Montreal? A.—They are better.

Q.—Are the Montreal employers able to undersell you in consequence of that? A.—A.—That you will have to ask the manufacturers.

By Mr. CLARKE:—

Q.—Has your factory ever been visited by the Ontario factory inspector?  
A.—Yes.

Q.—When? A.—Last fall.

Q.—How often does he visit the factory? A.—I think, if I am not mistaken, this was his first visit.

Q.—Was everything satisfactory; did he make a pretty critical examination?  
A.—Yes.

Q.—I suppose you manufacture all kinds and sizes of nails? A.—Yes.

Q.—And tacks? A.—No.

Q.—Do you have any competition from the Lower Provinces? A.—Yes.

Q.—How do the prices compare with yours? A.—I cannot speak as to that.

Q.—You spoke with reference to Pittsburg and Montreal? A.—You are speaking of the manufacturers' prices, and I was speaking of wages.

By Mr. HEAKES:—

Q.—Are the boys in the nail factory employed by the men or by the firm?  
A.—By the men.

Q.—Do the employers have nothing to say in the regulating of the wages of those boys? A.—No.

Q.—The whole work is done by the piece? A.—Yes.

Q.—And the men have their helpers. A.—Yes.

Q.—What is the principal work those boys do? A.—Sitting down and turning a rod in the machine.

Q.—What wages do the boys get? A.—Well, they make from \$1 to \$1.25 a day.

By Mr. FREED:—

Q.—Those will be pretty good sized boys? A.—Over fifteen years of age.

By Mr. ARMSTRONG:—

Q.—Is your association connected with the Nailers' Association of the other side? A.—Yes.

Q.—Do you find that organized labor is a benefit to your trade? A.—Well, it is a benefit if a nailer goes to the other side. If he goes from here to there he can get work, and if he is not he has considerable difficulty.

Q.—Has it a tendency to keep up wages? A.—Well, yes; we keep up the wages through the Western States by holding together.

Q.—Do you think if there was no organization the wages would be as high as they are? A.—I do not think so.

Q.—Have you any sick benefits in connection with your organization? A.—Well, the sick benefit runs in this way: a man holds four machines, and if he is laid off the men will take the machines and run them for him, so as to keep them running.

By Mr. McLEAN:—

Q.—And he draws the pay? A.—Yes.

By Mr. CLARKE:—

Q.—How do the wages compare in your factory with those in the Maritime Provinces, so far as you have had experience? A.—They compare better.

Q.—Are there as many boys employed in the New Brunswick factories as there are here? A.—Just about the same.

By Mr. ARMSTRONG:—

Q.—Do you know if there is any marketed goods coming in from the other side?  
A.—None.

By Mr. CLARKE:—

Q.—Do you make steel nails? A.—Yes.

Q.—Have you ever used Londonderry iron? A.—No; not here.

By Mr. KERWIN :—

Q.—Do boys get \$1 to \$1.25 a day the first year they go to work? A.—Yes; if they turn out to be good feeders; some learn quickly, and others not.

Q.—How long does it take to learn? A.—Sometimes three or six months, and some require one to two years.

Q.—How do they start them? A.—So much a keg; about \$1 to \$1.25 is all they make when they become good nailers.

By Mr. HEAKES :—

Q.—Do those boys displace men? A.—I cannot say they do. When they grow up to be quite large, heavy fellows, they put them on larger machines, and it would not look very well to see a big man feeding lath nails.

Q.—Are not there many men in Hamilton who would be glad to have \$1.25 a day? A.—No doubt there are; but it is skilled labor making these nails.

Q.—There is not much skilled labor about it, is there? A.—I think there is, and I have been twenty-eight years at the business, and should know something about it.

By Mr. ARMSTRONG :—

Q.—In the event of labor troubles, does your organization prefer the principles of arbitration? A.—Yes.

Q.—And a strike is about the last resort? A.—Yes.

By the CHAIRMAN :—

Q.—Do you know any organization that objects to arbitration? A.—No; I do not.

By Mr. KERWIN :—

Q.—I don't suppose you can speak for any trade but your own in that respect? A.—No.

By Mr. ARMSTRONG :—

Q.—What kind of arbitration would you prefer in case of a labor trouble—one appointed by the Government or by the parties interested? A.—By the parties interested.

By Mr. HEAKES :—

Q.—Do you know if the men in your business are in favor of a bureau of labor statistics? A.—I could not say as to that.

By Mr. FREED :—

Q.—How are your nail-plates heated? A.—For what purpose? Do you mean for making nails?

Q.—Yes? A.—With oil.

Q.—What is called a carbon burner? A.—Yes.

Q.—Is that as satisfactory to the men as the old fashioned furnace? A.—Yes.

Q.—Is it any better? A.—Yes; there is not so much dust or sulphur arising from it.

Q.—Do the men remain with the company pretty constantly or are there frequent changes? A.—When the firm started there were a good many changes, but now men are very steady; there has not been much change for a long time.

Q.—Have you had any strikes or other labor troubles? A.—Not for a long time.

Q.—How frequently are men paid? A.—Every two weeks.

Q.—How many hours will each man work per day? A.—It just depends on the amount of heat the quantity we turn out.

Q.—What is a fair day's work? A.—Eight or nine hours, if everything goes right, but sometimes accidents occur; if that happens we cannot work as fast as at other times.

Q.—What classes of iron do you turn out? A.—All grades and sizes which are

manufactured—squared, bar-iron and rods. We do not work plates or angles; we work machine iron, from  $\frac{1}{2}$  up to 4 inches round, and from  $\frac{1}{4}$  square up to  $2\frac{1}{2}$  and  $2\frac{3}{8}$ , and plate to 7, 8 and 12-inch sizes.

Q.—Do you make shafting? A.—Yes; 4-inch shafting, not any larger.

Q.—Do you turn out any steel at all? A.—We make some steel occasionally.

Q.—Steel shafting? A.—No; just steel sleigh-shoes and so forth, but very little of that.

Q.—What steel do you use? A.—We use some old rails, and blooms imported from the United States.

Q.—Are you able to tell us how United States blooms compare with those you get from England? A.—No; I am not.

By Mr. KERWIN:—

Q.—Has not the system of piece-work a tendency to lower your standard rate of day wages? A.—Well, I do not know; I never did work by day work; always piece-work.

Q.—Do you know any system by which work in your mill could be regulated so that the men could have it efficiently laid out as day's work? A.—No; I do not.

Q.—You think piece-work is the only resource in your business? A.—Yes; I think so.

Q.—Do you manufacture any other articles except those you have spoken of? A.—Just nails and merchandize of all sizes.

By Mr. FREED:—

Q.—When the factory inspector visited the mill was he satisfied with the arrangements? A.—I believe he was.

Q.—Did he make a pretty thorough inspection? A.—Yes; a pretty thorough inspection. We got a few guards put up after he was there.

Q.—Have you had any accident to life or limb? A.—We had one four or five years ago and one death; that is the only one since the mill was started.

By the CHAIRMAN:—

Q.—Have you done anything to prevent such accidents from recurring? A.—Yes; it is very hard to see how any occur. I do not see how this one happened. There was a little opening and a man was sleeping near the machinery; he woke up, and by some means in his stupor fell into the machinery.

Q.—That could not occur again? A.—No; it could not.

By Mr. McLEAN:—

Q.—How did the man come to be sleeping? A.—He was waiting for his turn to come on; he was lying near the machinery, and when the whistle blew and called on the men to wake up he fell right in.

Q.—Had he been working at all? A.—Yes; this occurred between three and four in the morning, when his work was nearly over.

By Mr. KERWIN:—

Q.—How long has the mill been in operation? A.—Nine years.

Q.—Where do the proprietors come from? A.—They are Americans.

Q.—Is it a branch of an American establishment? A.—They are an American firm but not the branch of an American firm. They are Americans principally.

Q.—Was there a rolling mill or anything of the kind in Hamilton previous to their coming here? A.—Yes; they used to roll rails for the Great Western railway.

By Mr. McLEAN:—

Q.—Rolling mill work is very hot work, and the hands cannot stay at it very long? A.—Yes; they have to get holidays in summer.

Q.—What kind of work is it? A.—They get a piece of iron and have to reduce it down by rolls.

Q.—How long at a time? A.—Three-quarters of an hour, perhaps more, and then they get half an hour's rest.

By Mr. FREED:—

Q.—Are rails made in the mill? A.—No; they are cast at Gartshore's.

Q.—Are rails made in Hamilton as good as those made on the other side? A.—Well, we get all chilled rails from the other side and soft ones are made here.

By Mr. KERWIN:—

Q.—Have some men attempted to manufacture wire of any sort? A.—No; we have not.

THOMAS MACKAY, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are a retail grocer, Mr. Mackay? A.—Yes.

Q.—How long have you been in the business in Hamilton altogether? A.—Over twenty-eight years.

Q.—Are you able to speak as to the price of groceries during this period of twenty-eight years? A.—Well, I do not remember much about the first two or three years when I was just starting, but I think after that I could.

Q.—How do prices of ordinary groceries at the present times compare with the prices in former years? A.—Teas just now are about the same as when I first went to work twenty-seven or twenty-eight years ago. I had been working only two years when teas began to go up.

Q.—When they began to go up how high did they go? A.—As high as \$1.25 a pound. They went up from 30 to 37½ cents, and 63 to 75 for the best, up to \$1.25. Gunpowder and even Young Hyson went up to \$1.20 and \$1.25.

Q.—How long did tea remain at those prices? A.—Until about fifteen years ago.

Q.—Has the fall been gradual during the past fifteen years? A.—Yes.

Q.—What would that 75-cent tea sell at now? A.—I do not think we could to-day equal the teas we used to get fifteen years ago,

Q.—Well, as near as could be? A.—It would sell for about 75 cents now. Fine Gunpowder is worth about 70 cents to-day if you could get it, but it is hard to get.

Q.—About sugar—what would good brown family sugar be worth twenty-five years ago? A.—In former times there were only four or five grades of sugar, Nos. 2, 2½, 3 and 4; No. 4 was the lightest.

Q.—When you began business what was it worth? A.—Eight and nine pounds for the dollar.

Q.—Did it rise or fall? A.—It kept at that price for years.

Q.—What would that sugar sell for now? A.—We have been selling it as low as sixteen pounds for the dollar until the last three months.

Q.—What do you sell it for now? A.—Thirteen pounds to the dollar.

Q.—Was there any granulated sugar when you first went into business? A.—Yes.

Q.—What was the price? A.—Seven and eight pounds to the dollar.

Q.—What is it now? A.—We sell it as high as sixteen; sometimes it would be fifteen pounds to the dollar.

Q.—Has it fluctuated a great deal since you first went into the business? A.—During the last six years it has got much cheaper. When I started for myself it was eleven or twelve pounds to the dollar.

Q.—What has caused that fall in the price of sugar? A.—I could not say.

By the CHAIRMAN:—

Q.—Beet-root sugar? A.—Yes; I suppose that and glucose would affect it.

By Mr. FREED:—

Q.—Do you know what kind of sugar the granulated is, now sold? A.—No; I do not.

Q.—Is it beet-root sugar? A.—No; I think it is cane sugar.

Q.—Can you speak as to other classes of groceries? A.—Well, coffees were cheaper until this fall. They were as low as 15 cents last summer.

Q.—What were they five years ago? A.—The cheapest we could sell would be 25 cents.

Q.—Ten years ago what was the price? A.—Twenty-five to thirty-five cents.

Q.—Fifteen years ago? A.—The same; Java was worth 35 cents, Mocha 40 to 55; Ceylon 35; Rio is cheap, about 25 cents.

Q.—What will those classes sell for now? A.—The cheapest we could buy would be not less than 23 or 24 cents. We lost about 15 per cent. in Rios.

By the CHAIRMAN:—

Q.—There has been a boom in coffee? A.—Yes; since last summer it has been going up gradually.

By Mr. FREED:—

Q.—How has the price of butter ranged? A.—In winter I think it keeps pretty much the same; in summer we have paid as low as 6 and 8 cents a pound.

Q.—Lately? A.—In 1868 and 1869; but then we could not buy it regularly for that; it was just a chance.

Q.—What would you sell good table butter for, say twenty-five years ago, in winter? A.—Twenty-five cents a pound.

Q.—What would that same butter be worth now? A.—About the same—25 to 30 cents.

Q.—Has it been dearer or cheaper during the interval? A.—I think in winter it runs about the same, and in summer from 8 to 12½ cents, depending on the season.

Q.—Take pepper, spice and goods of that class: how have prices ranged? How do retail prices now and then compare? A.—Black pepper is now much higher than last year; we used to buy it for 10 cents per pound and now it would be worth 20 and 22—that is, whole pepper. Cloves are much higher now than two years ago; I think speculation does that.

Q.—Taking the whole quantity of groceries an ordinary family would require, do you think a man can supply himself now as cheaply as he could five years ago? A.—I think he could, more cheaply.

Q.—Ten years ago? A.—Cheaper.

Q.—Fifteen? A.—Yes.

Q.—Twenty years ago? A.—Yes; cheaper.

Q.—Twenty-five years ago? As near as I can recollect, I think he could. I did not look back so far to see; I did not go back twenty-five years.

Q.—You have looked back in your books to refresh your memory? A.—Yes; I did as far as 1872.

Q.—Are there any other articles of groceries of which you can speak? A.—Flour is cheaper.

Q.—What do you sell good family flour for to-day? A.—The best roller flour for \$2.50 and \$2.25 per hundred pounds.

Q.—What would that sell for five years ago? A.—Three times that.

Q.—Ten years ago? A.—That flour was not made then. There was no roller flour, but what they called the best flour was sold at \$3.50.

Q.—Fifteen years ago? A.—About the same.

Q.—Where do you get your sugar? Is it manufactured here? A.—No; we bring it from Montreal and Halifax; I buy from the wholesale trade here.

Q.—Which of the factories do you think makes the better article of sugar? A.—I like Redpath's best, though Halifax granulated sugar is good.

Q.—Are there any raw sugars now used, such as imported family Muscovado?

A.—No; very little; you hardly ever see Porto Rico sugar or Demerara now. It was principally these raw sugars we sold formerly, and the three or four grades of yellows; but now every lot of sugar you get has a different number.

Q.—What teas are in greatest use now? A.—Young Hyson and blacks.

Q.—What class of black teas? A.—Finest, cheapest and medium.

Q.—Congou? A.—Yes, and Souchong. I sell very little Japan or Oolong; it is hard to sell. Perhaps others sell it.

Q.—Is Young Hyson as much used as formerly? A.—Yes; I think just as much as formerly. Take the Americans, they want Oolong tea; they will not use anything else; old country people want black tea; farmers, as a general thing, want green tea, but of late most have used it more mixed.

Q.—What class of tea do you sell here mostly? A.—Fifty-cent tea.

Q.—What do you call the green tea you sell? A.—Young Hyson, first, second and third.

By the CHAIRMAN:—

Q.—At what age do boys go into the grocery business? A.—About fifteen, sixteen and seventeen, along there; just when they are leaving school.

Q.—You prefer to get them at that time? A.—Yes.

Q.—What salaries are paid to them? A.—Two dollars a week to begin with to \$10 a month.

Q.—For how long a time? A.—It depends on the employer.

Q.—What is the general thing? A.—I could not tell you.

Q.—When they come to be twenty or twenty-one what salary do they get? A.—About \$400 a year; it depends on how long they have been at the business and their fitness for the work.

Q.—That would be about as good a salary as a young man of that age could expect to get? A.—I think \$500 is about the average now. The most I got was \$10 a week.

By Mr. FREED:—

Q.—That was a good many years ago? A.—Yes.

By the CHAIRMAN:—

Q.—Is it about the same now? A.—Yes.

By Mr. HEAKES:—

Q.—What hours are they engaged in business? A.—From 7:30 to 7; in summer from 7 to 7 and down to 10 or 11 o'clock on Saturday night; they have an hour for tea and dinner out of that.

By the CHAIRMAN:—

Q.—On Saturdays they have a day of fifteen hours? A.—Yes.

By Mr. KERWIN:—

Q.—To what do you attribute the increased price of sugar at the present time? A.—I would say its scarcity.

Q.—Not through any monopoly? A.—No; not from what I know; sugars have gone up on the other side and the old country as well as here.

By Mr. ARMSTRONG:—

Q.—Is there any truck system carried on in Hamilton in connection with the purchase of groceries and the necessaries of life? Are men paid by store orders? A.—I do not know of any. It used to be done when I first started. I do not know of any now, unless a man just makes a bargain for something and wants to trade it out. I never get orders; I have not seen any for years.

By Mr. FREED:—

Q.—How do the present prices of brooms and woodenware compare with those of former years? A.—About the same.

Q.—Molasses? A.—They have been cheaper, according to the difference in the measures. I think you get more for your money by the imperial measure; the price would be the same per gallon. Of course, the sugar market would affect the molasses market.

Q.—How do the prices of liquors compare—say whiskey? A.—Whiskey is about five times as dear.

Q.—That is due to what? A.—Increase of duty.

By Mr. ARMSTRONG :—

Q.—Is it as pure? A.—I think so.

By Mr. KERWIN :—

Q.—Do you know how our sugars here compare with those in the United States? A.—No; not just now. Last summer I was in Rochester and Buffalo and saw that they were selling sugars about the same as we were here; that was last August; I could not say now.

Q.—How were other groceries over there? A.—I could not say.

Q.—In your line of business is there not a good deal of the credit system? A.—Quite a bit.

Q.—Don't you think if people were paid weekly instead of fortnightly and monthly it would do away with a good deal of that? A.—No; I do not think so.

Q.—They would have credit just the same? A.—Yes; if they were paid every day. If a person runs a monthly account I consider it cash just the same as if they paid every day. I make no difference; I do not know how others do. We give the same quantities and prices, as I consider a man's money who pays every month or two weeks is just as good as if I got it every day; I do not see why he should be charged more.

By Mr. GIBSON :—

Q.—Practically, in your business thirty days is cash? A.—Yes; very few ever ask longer credit than a month.

By Mr. FREED :—

Q.—Do you not sometimes make bad accounts? A.—Yes; sometimes. It depends on the amount of credit you give; if you are careful you will not do much of it.

By Mr. KERWIN :—

Q.—If people were paid weekly they could buy with better advantage to themselves? A.—Not in groceries; they might on the market. Prices do not change very much.

By Mr. HEAKES :—

Q.—Do not cash customers get better terms than credit ones? A.—No; I do not think so—if you mean by credit customers, those who pay monthly. Thirty days is considered cash in retail. Many people pay as they go, some every week, some two weeks and others monthly. I have monthly customers who pay me promptly.

By Mr. ARMSTRONG :—

Q.—Are there any who do not pay at all? A.—Yes; you come across such occasionally.

Q.—Is not that generally in the slack season of business? A.—Generally. You will find people who have paid accounts promptly for years turn out bad; I do not see why it should be so.

Q.—Have grocers an association in Hamilton? A.—Well, they tried to form one but they have never done anything with it; they have never been able to agree among themselves. They do not seem to have confidence in one another.

Q.—They went on strike once, did they not? A.—No; this fall they formed an

association and that was all they did. They tried to regulate prices and report bad-paying customers, but they were never able to do anything.

By Mr. GIBSON:—

Q.—Competition is too sharp in the business? A.—One is afraid of the other; I have joined four since I started here. The one they have now has meetings once a month; they had a meeting last week but I did not go.

By Mr. ARMSTRONG:—

Q.—Do they publish amongst the members what is called a black-list? A.—No; but they say it is their intention to do so. If they could get all to join and work it up it would be a good thing.

By the CHAIRMAN:—

Q.—By black-list you mean a list of those who will not pay? A.—Yes; that was one of the things they talked about.

Q.—That is equal to the Dun-Wiman system? A.—It would be a good thing for grocers if we had an idea who were bad customers. If their names were reported to the association and a list printed and distributed amongst the members, and a man whose name was on the list went to you asking for credit you would turn up the list and would not let him have it. It would save the grocers a good many dollars if they would carry the idea out.

By Mr. ARMSTRONG:—

Q.—Have they ever made an attempt to raise the price of sugar or tea? A.—No; not here. I talked it over with several but they would not do it unless all did. When sugars go down they talk about it, and they say: So-and-so will not do it and I will not.

JOHN HALL, Foreman at the Locomotive Works at the Grand Trunk Railway, Hamilton, called and sworn.

By Mr. FREED:—

Q.—I believe you are in charge of the locomotive power on the Great Western Division of the Grand Trunk Railway? A.—Yes; at Hamilton. I have only charge of the locomotives that are assigned to this station.

Q.—Not of the whole of the Great Western Division? A.—No.

Q.—The drivers and firemen report to you? A.—Yes.

Q.—How long have you been in the employ of the Great Western and Grand Trunk since the Great Western was transferred to it? A.—Thirty-four years and three months.

Q.—Have you occupied your present position during the whole of that time? A.—No.

Q.—For what length of time have you occupied your present position? A.—Thirty-two years on the 12th of March next.

Q.—You had had railway experience before you came to Canada? A.—Yes.

Q.—Will you please state briefly what it was? A.—I was firing on the North Eastern Railway and on the North Western, and I was driving for two years and a-half out of the city of Madrid, in Spain, before I came here.

Q.—The North Eastern and the North Western Railways are separate corporations in England, I believe? A.—Yes.

Q.—How long will an engine-driver and fireman, under ordinary circumstances, be employed in one day? A.—Nine hours.

Q.—Under exceptional circumstances is that length of time usually increased? A.—Yes; after nine hours, additional pay is granted to them. The trip is usually ended in nine hours of regular work, and for any time occupied in the journey beyond this a fixed rate per hour is allowed until the trip is completed.

Q.—Then, I understand you to say that if a man has been running, let us say from Niagara Falls to London, if his trip extended over nine hours he would be paid additional? A.—Yes; additional, at the rate of 20 cents per hour to the driver and 13 cents per hour to the fireman.

Q.—Is the trip considered a day's work, whatever it may be? A.—Yes.

Q.—Are detentions frequent on the road? A.—At this season of the year they are more frequent than in the summer time; we have comparatively little detention in the summer time; it is only in the event of some accident or some unforeseen occurrence delaying the train that such is at all possible.

Q.—For how many hours of continuous service does a man's work extend sometimes, under exceptional circumstances? A.—In the event of a break-down on the road, a storm, or anything of that kind, I have seen it run up to forty hours.

Q.—Of continuous service? A.—Yes.

Q.—Are the men required to keep awake during the whole of the forty hours? A.—Yes.

Q.—Is it possible for a man to give that attention to his duties under such extraordinary circumstances that is necessary to the safety of life and limb and the preservation of property? A.—He is not engaged in anything active; he simply has to keep the engine safe from freezing. A train is delayed on a side-track and an engineer is expected to keep awake and see that the boiler is kept right, and that he takes down the numbers of the trains that pass him; so we expect him to be alert and on duty for all the time to look after that work.

Q.—After this extraordinary number of hours, is he required to proceed on his way and carry his train through? A.—No; he is relieved at the first locomotive station he comes to. For instance, if he started from London he would be relieved here; if he started from Niagara Falls he would be relieved here, and if he started from here he would be relieved at London. He would be relieved at the first place he came to where there is any person capable of taking charge of the engine which he gives up.

Q.—If a man completes his trip in the ordinary, or nearly in the ordinary, number of hours—nine hours—how long a rest is he permitted to take under your rules? A.—Whatever he wishes.

Q.—What is the usual amount of rest he does take? A.—From ten to twelve hours.

Q.—Is it usual for a man to abridge his term of rest in order to get increased pay? A.—Yes; the way we do is this: We keep a book, and when the man comes in he signs off duty. Suppose he comes in at 8 o'clock and he desires to rest for ten hours, he would not be called till 6 o'clock the next morning; if he desired twelve hours he would not be called till 8 o'clock next morning. If he desired one or two days off, after anything special, he simply says: "I will report when I am ready for duty."

Q.—Is a man ever required to return to work without having obtained sufficient rest? A.—No; never under any circumstances.

Q.—Does the company encourage men to return to duty without having sufficient time to get properly rested? A.—No; on the contrary. The company is not benefited in any way whatever by a man coming in an unfit condition to his work, and our orders are peremptory that no man shall come except he is thoroughly capable and in a fit condition to do his work. I have not known a case in the thirty years that I have been here that a man was ever asked to come to work when he was in an unfit condition. He is largely a judge himself as to his condition.

Q.—If a man is called to duty, but being in ill health, or for any other reason unfit for work, how do you treat him; do you compel him to come to work? A.—No; we call him at whatever hour in the day or night we require him, and if he says: "I am ill and cannot come to work," then the caller comes and reports to me, and I tell him whom to call to take his place, and the caller keeps going from one to another, sometimes to three or four, perhaps, before we get a man that is capable of going.

That, of course, is an unusual thing to do, because the regulation says that he is to give us timely notice, so that a man can be provided in his place; but, whenever a man is taken ill, or his illness in his family, all he has to do is to tell us, and we make ample preparations to have his place supplied by some one who is capable of taking charge of an engine.

Q.—Of course, at certain times a great many more men are employed than at others? A.—Yes.

Q.—Have you a number of men sufficiently large so that in active times the men are not required to work beyond their strength? A.—The way we arrange matters is this: we always have a number of firemen who have had six or seven years' experience, and are familiar with and are capable of taking charge of an engine. We move those men away from firing to take the engines of those who are not required to work under the circumstance stated, and then we supply the places of those men who ordinarily fire with cleaners out of the shop. We have quite a number of these, ten or twelve, and it is not a very important matter whether the engines are cleaned or not for a few trips. So we have possibly 25 per cent. of men for doing additional work, with another number of not less than 10 per cent. we can fall back upon in the way I have indicated; so that in all cases we are prepared to meet any emergency that is likely to arise.

Q.—Have you known men to be broken down in health by severe work? A.—No.

Q.—I am speaking of train men, of course? A.—Certainly.

Q.—Do you know anything about the width of running-boards on freight cars? A.—Yes; I know by seeing them.

Q.—What would you consider to be a proper width for these running-boards? A.—About 3 feet.

Q.—Do you know what the width of the boards on freight cars on the Grand Trunk is? A.—I should judge somewhere in the neighborhood of 16 or 18 inches, but I could not speak positively as to that matter. I doubt that when a train is in rapid motion and is going round a curve whether it is safe for any one to be standing on the top of the cars. I have seen men take their boots off when the cars were going down hill. The roofs become slippery in winter and the men have only the width of, say, sixteen inches to stand upon.

By Mr. HEAKES:—

Q.—Do not the regulations say that the width is not to be less than 16 inches? A.—I think somewhere about that width.

By Mr. FREED:—

Q.—Are accidents in consequence of men falling from freight cars frequent? A.—They are a little more frequent than they should be.

Q.—When sleet is falling do the roofs of cars become exceedingly dangerous? A.—Yes.

Q.—In your opinion, would it be possible to place guards along the running-boards to give the men additional protection? A.—I think it would be better if the running-boards were placed on the sides of the cars. I think it would be a dangerous matter in a dark night to step from one car to another, having only 16 inches to step upon, and a guard upon each side of this narrow width; a man's foot might strike against the guard protection and throw him between the cars. As a protection I should judge it would be far better to have the guards on the sides of the car, so that if a man slipped he might be caught before he fell off the car—I mean a railing along the side. That should be strong enough, so that the man who slipped might be caught by it before he fell over. That is a protection that, I think, would probably meet the case.

Q.—Could such a protection be applied to the cars without any serious expense? A.—I think so.

By Mr. HEAKES:—

Q.—Do you not think there would be danger from snow lodging against that and doing away with the usefulness of it? A.—It could be arranged if erected so that the poles would stand at a distance from each other of 3 or 4 feet, and the railing would simply be one to protect the men from falling off the cars.

By Mr. CARSON:—

Q.—What height would you propose? A.—About 2 feet; just sufficient to catch a man in the event of his slipping.

By Mr. FREED:—

Q.—Do you think it possible to apply air-brakes to freight cars, so that the necessity of running along running-boards would be obviated largely, or almost wholly removed? A.—Yes.

Q.—Could you apply the Westinghouse air-brake or some other air-brake? A.—Almost any air-brake. During the session of the Ontario Legislature in 1880 the question was considered by a committee of the body, and I had thought for twenty years previous to that time that an economical method might be adopted whereby a hitherto unused power could be utilized to attain the object the Legislature had in view, in attempting to stop men getting on the tops of cars to control them down grades and stop them where necessary. I intimated by letter bearing date the 10th February, 1880, through my superintendent and to Manager Broughton, the plan I had in view. I am not prepared to say whether this information was communicated by the committee; I did not see it in their report. My plan, briefly stated, was to use the ordinary pistons and valves of the locomotive as air-pumps under certain conditions to retard and stop a train. I was aware of the three objections that were urged against reversing the valve motion of an engine when running, and especially at a high speed, the first of which was: The drawing of impurities in the smoke-box through the exhaust orifices into the cylinder and steam chests and thereby injuring them. 2nd. Having been drawn in, no mode is provided except by forcing this impure air through the regulator valve into the boiler and unduly increasing the pressure. 3rd. When desirable to change the reversed lever the dry and heavy weighted valves cannot be controlled, and the reserve force in the steam pipes and check are liable to damage the car couplings. The first objection I overcame by closing the blast orifice, and arranging for the admission of pure air through an independent channel opening and closing. If those are done simultaneously this pure air is lubricated, so that no injury can result to valves or pistons. The second is accomplished by placing a valve in the steam pipe or chest, and regulated by the driver between the fixed boiler pressure and the atmosphere, so that no pressure beyond that allowed in ordinary work will be present when running reversed to cause undue strain upon the machinery, and as this valve can be used to reduce the pressure to any desirable point the reversing lever can be changed without injury to the couplings, removing all the objections that have any force in the construction of the ordinary engine. And this retarding force when applied against the moving pistons will depend upon the engine's power to resist, but when any of this stored-up air is used in a brake cylinder you attain what no other brake attains, the power to stop a train by the force of its own motion, and this air is gathered so rapidly when running only a moderate rate of speed, say a joint piston speed of 800 feet per minute, that a reasonable computation can be reached when each piston is drawing air, should that be desired, through 75 per cent. of their pathway, and exhausting it through the valve referred to, and which can be set at any desired pressure and released at each pulsation of the stroke, or carried back if desired to stop cars almost without limit by the three way-cocks assigned for this particular duty. It is very similar to the Westing-house method, except we entirely dispense with air-pumping machinery for the purpose of stopping a train. I was led to think this matter out largely owing to the fact that men of vast railroad knowledge, such as Mr. Brydges, were recommending the putting of weighted cars on freight trains

for braking purposes, and as this could not be effected without increasing the load one-twelfth and deriving no revenue from this additional load it appeared to me to be a plan, if endorsed by the Legislature, that would be extremely harassing to the company, and although nothing came of my suggestion it has been demonstrated that a cheap and effective method of largely preventing men from following this hazardous method of stopping a train can be dispensed with by united and concerted action on the part of all the railroad companies using our Canadian lines.

Q.—I have forgotten whether you mentioned what would be the expense of attaching this air brake to a freight car? A.—From \$16 to \$18.

Q.—Do you think that an improvement could be made in the coupling, so that accidents from coupling would be partially or wholly avoided? A.—I think so. There should not be any difficulty in the case of freight cars when it has been successfully carried out in respect to passenger cars. A coupler of that kind, the Miller coupler, has been applied to passenger trains, and I see no difficulty in applying it, or some other similar device, to freight trains.

By Mr. HEAKES :—

Q.—Would you not have to provide a Miller platform on freight cars, so as to provide a Miller coupler? A.—I think not; I think deadwoods would answer the purposes for coupling.

Q.—You think a Miller coupler could be attached to an ordinary deadwood? A.—Yes; I think with a Miller coupler there would be no difficulty in doing that. There have been a great number; I counted somewhere in the neighborhood of 1,600 different kinds of couplings patented in the United States, and it would be very difficult to get the railway companies to agree upon any certain one as the best. Of course, there are a great number of cars belonging to other companies passing through here, and it might be difficult to settle upon one particular coupler that would answer all purposes.

Q.—If we had legislation looking to the adoption of improvements in this or in other respects, would it be necessary for this legislation to cover the United States as well as Canada? A.—I think so. Unless you could apply it to all trains coming here it would not be effective. Of course, it would have to be applied to every road, and each company would have to put in that particular appliance recommended before the system could be effective. It would not do, for instance, to have two or three kinds of couplings attached to freight cars coming here, because we would not be able to get along with them.

Q.—Do you think the railway companies would feel inclined, if they could once decide on which was the best coupling and the best brake, to adopt those improvements, apart from considerations of expense? A.—I think so.

Q.—You have mentioned the Miller coupler: do you think it is as good as the Jancy coupler, or the Ames coupler? A.—The Miller coupler answers very well here; I have no experience in regard to the other couplers you have mentioned, and, of course I cannot tell you anything about them. The Miller coupler answers very well with our passenger cars, and that or any other coupler, would, no doubt, cover the ground.

Q.—Are accidents at all frequent on the road, within your knowledge, from men getting their feet fastened in frogs, or between guard-rails and main rails, while coupling cars or working in the yard? A.—They are not very frequent. Of course, I have known cases to have occurred here where men have got their feet fastened in that way.

Q.—I believe the law now requires those frogs to be blocked with wood to some extent. Is that not the case? A.—Yes.

Q.—Is that done on the Grand Trunk line? A.—It is on some parts of it.

Q.—Does it prevent those accidents? A.—I should not think it would do so. I am of the opinion that there ought not to be any switching done, and that men should not couple or uncouple cars where there are either switches, or frogs, or guard-rails. Work of this kind should not be done in the immediate neighborhood where these are.

Q.—Could the cars in all cases be run beyond the switches or frogs, so that the men could work at them? A.—Yes; in nearly all cases; I scarcely know a case which would be likely to occur where it could not be done.

Q.—If so, would the men be likely to be found fault with for being slow about the work? A.—I cannot see it. It is only a matter of doing work as it might be done at one end of this room or at the other. There is no difference in the work itself.

Q.—You could not uncouple a car at a dangerous place so rapidly as you could do it if you were in a position of perfect safety, and when you had not to watch all the time where your feet were going? A.—The distance involved would be very small; there is not more than 52 yards between the extreme end of the frog and switch, and I think a man should in all cases avoid doing any kind of work in that neighborhood unless everything was entirely at rest.

By Mr. McLEAN:—

Q.—Do you know of any person other than an employé who has had his foot caught in a frog? A.—No. Of course, a man might be caught in a frog, and if he was he would take his foot out of his boot as quickly as he could get it. There might have been such a thing occur, but I do not think I ever saw a man working where his foot was likely to get caught. I, myself, have passed them a great many thousands of times and I never got caught by them.

By Mr. HEAKES:—

Q.—Do you know anything of the system of signals on the line? A.—Yes; I am acquainted with those in use on the Grand Trunk.

Q.—In your opinion, is the present system of signal lights a satisfactory one? A.—In what way do you mean? To what signals do you refer—to engine signals?

Q.—To lights, signals used in the yards at night to signal the engines, semaphores and all the lights that are used in the yards? A.—Yes; I think they are very satisfactory lights.

Q.—Are the same signals used now on the Grand Trunk as were in use on the Great Western? A.—No.

Q.—Do you consider the signals in use on the Great Western were a better system than those now in use on the Grand Trunk? A.—In some respects they were and in other respects they were not. For instance: in switching we used to have two red lights. If you were starting for the switch you never could tell on looking at night whether the switch was for the north or south track? You started with this one light, and it was a red one, and you might run off the track. Now we have a uniform system and different colors, a purple and a green light, and the one is for one side and the other is for the other side, and a third light is for the main track. The purple light is not seen as great a distance as either the red, white or the green light. You have to get within, probably, 100 yards to be sure as to what it is, but usually when moving about a switch you do so continuously, and there is not much trouble in knowing exactly where you are. The system has a further advantage that the drivers can always tell, whereas under the old system they could not tell as accurately, and further, they avoid running past danger lights, a very desirable consideration.

Q.—Have you ever heard any complaints by engineers of the present system of signals? A.—No.

Q.—What examinations do locomotive engineers undergo before being appointed to engines? A.—I hardly know, for I have never examined myself. The examination, however, covers chiefly questions relating to lights on the road and a familiarity with the rules, and matters of that kind. The engineers are very properly expected to have some knowledge of such matters, especially in regard to the lights and the rules of the road, because they are very often without conductors and have to act both as engine-driver and conductor in the absence of the latter—that is when they are running an empty engine over part of the road, and the engineer has joint responsibility with the conductor for any infringement of the rules in any case.

They are examined on this matter, and I dare say they are also examined further, although I have never been at an examination to know what technical knowledge is required from an engineer in regard to his work. He is, however, expected to be able to ascertain what is the matter with his engine when it breaks down while at work. If a piston or valve is broken or machinery disabled he is expected to know on what side it is, and to be able to adopt measures to take the engine out of the way.

Q.—Is there any test for color blindness among engine-drivers? A.—Yes.

Q.—Does it frequently occur that engineers on the Grand Trunk are affected with color blindness? A.—I have never known any cases.

Q.—Are the men tested in regard to that matter? A.—They are always tested when they start work, although I do not know whether you would call it a scientific test or not. We have a board and several colors on it, red, blue, green and yellow. These colors are marked, and the men are required to stand a distance away and are tested, and we always make this test before we take them into the service. We chiefly confine ourselves to the green and white lights, lights something like those which are on the road, and if they can pass that test we do not go any further.

By Mr. McLEAN:—

Q.—Is there a certain order in existence by the company that a man has to be a certain size before he can become a fireman or engineer? A.—I am not aware of any such order. I have heard some joking about this matter, and a little man came to me the other day to ask me whether such was the case. He said he would not be nearly big enough to be a fireman if there was any such rule. I have never heard of it before or since.

By Mr. HEAKES:—

Q.—Can you tell us how many freight cars an air-brake could control, or how many brakes a man could control? A.—Which kind, automatic or straight?

Q.—Any kind? A.—You could control an unlimited quantity if you had air with which to do it.

Q.—How many brakes could an engineer control, either automatic or straight brakes? A.—The Westinghouse brake works very well up to thirteen or fourteen cars. When all the triple valves and other things are in order of course they are working automatically and storing a quantity of air under each vehicle—that is by the Westinghouse automatic brake. You pump into the main pipe to keep the triple valves up. When you lower the pressure in the main pipe below the pressure in the reservoir this valve falls, and when it falls it opens an orifice and lets the stored air out into the brake cylinder, and this sets on the brake. In order to take the brake off it is necessary that this pressure be increased by the pumping of the air engine, until such time as there is brought upon it a pressure in excess of that which is in the reservoir. For example: you are running with sixty pounds pressure in the main reservoir; the difference between what is in the reservoir in the engine and the reservoir in the cars is five pounds. There must be five pounds in excess in the main pipe over the pressure in the reservoir to keep it clear by lowering it in the pipe below the pressure of fifty-five pounds, which is automatically set on, and it will take from the gauge something like two and a-half pounds of this pressure to set a brake. This is supposing you allow the piston to travel only one-third or one-half of the stroke, not to let it run the full extent of its length; if you do not take up the slack it will probably take the five pounds, but usually they are kept up reasonably tightly, and they simply pump them clear and let the brake off, or change the valve and the brake comes on again. If these valves are in good order you can work thirteen or fourteen cars without much difficulty. When you get beyond that number you have quite a trouble in getting the ordinary engine to pump sufficient to release them with any kind of rapidity. You have to pump the whole length of the pipe running under all the vehicles to equalize the pressure. In order to pump you have to charge them all directly from the engine or main reservoir, by attaching a reservoir under each carriage; the amount of air taken to charge the brake cylinders is the

same in the aggregate and reduces the pressure on the main reservoir as if only one had been supplied instead of, say ten, on the train; but it will readily be seen to recover the original pressure in the ten will require the same amount of air as if it had been supplied from one only—in other words, it draws from ten instead of one; but with the advantage that the high pressure upon the whole is not reduced to be ineffective, as it would in the case of drawing only from one reservoir. I think the automatic is a very quick brake, because as soon as it is applied it is felt by each vehicle. The disconnecting of a pipe or the opening of a check at the end of the car by the conductor, or any device of that kind, would enable him to set the brake, and if the air engine is not at work from any cause, of course he would have to let the train stand until such time as there has been what we call bleeding, that is, to let the pressure out of the air cylinders and keep it out. We let it out by the process of turning a cock; that, of course, would be a very serious disadvantage in the event of any misfortune occurring, or in the event of one train being followed closely or rapidly by another. If there is a train of ten or twelve cars, and the connection with the engine cannot be quickly released, there is danger of the following train running into it. That is the most serious difficulty in the automatic brake; it is only automatic in setting, but not releasing the brake.

Q.—Do you think an air-brake could be applied and used satisfactorily on freight cars? A.—Yes; I thoroughly do.

Q.—Do you think a brake would have sufficient power to pull up a train going down a heavy grade? A.—I guarantee with my brake to control fifty cars going down a 1 per cent. grade without difficulty. I can pump an unlimited quantity of air, and it is only a question of making a disposition of it; I have so much air I do not know what to do with it; the trouble is to control it. I could control, say, fifty cars, and could give as much pressure as 140 pounds, and there is no car that will stand that pressure. It would pull a truck from underneath. There is no difficulty whatever in controlling a train and, in fact, I have no doubt they are working air-brakes on freight trains all over the United States to-day, and from what I hear from the north-west States, and in the neighborhood of the Rocky Mountains, they could not descend many of the grades without an appliance of that kind.

By Mr. CLARKE:—

Q.—Do you say you could control a train on any grade? A.—I can control cars on any grade, and to the number of fifty.

Q.—Are you aware of any grades on the Canadian Pacific Railway that are so steep that the cars cannot be controlled? A.—I am not aware of any grades where cars cannot be controlled. If a grade is 1 in 40 I can control the cars. We have no grades here in excess of 1 in 80.

Q.—Do you know what the grade is through Kicking Horse Pass? A.—I could not tell you. I simply know that if stopping wheels will hold the car I can do it. We can stop the wheels under any condition, and put on a pressure of 140 pounds, and there is no car that will stand a pressure of that kind.

Q.—Do you know of any grade on any railway that is so great that the stopping of the wheels will not stop the cars? A.—No. You want to begin to control the train, however, in good time. You do not want to let the cars get away too rapidly before applying the brakes. The great secret is never to let them get away more than at the rate of a few miles per hour. With the use of sand we can hold them under any condition. If there are forty cars, and you do not begin to check them early, then I can understand the difficulty there is in controlling them; but wherever we apply this power, of which I have spoken, we can hold the cars, because we can stop every wheel, and that will hold anything that can be held with the use of appliances.

By Mr. WALSH:—

Q.—Do you think its own gravity will stop it? A.—Yes; I think so. We,

however, also use the power of the engine. If I can pull three cars up a hill I can hold three cars going down a hill, because the pistons are moving in their pathway against an air pressure equal to the fixed boiler pressure that propels them up. We have had this system applied to an engine for a couple of years, and it has been under severe tests, and I do not know of a case where it has failed. I think in the ordinary Westinghouse brake, when used with straight air, the air engine does not pump enough to control more than ten or eleven cars, because if five pounds are taken out of the reservoir to fill one of the cylinders, and you are running with sixty pounds, you have practically nothing remaining. That is one of the reasons why they have placed additional reservoirs on the cars, so as to be able to control a larger number. They are obliged to do that because they cannot recover pressure sufficient, and if the air is taken out it takes a long time for the appliance to recover itself.

Q.—It loses pressure, I suppose, as it goes along? A.—Yes; as the air is removed the pressure decreases.

Q.—With regard to color tests: at what time did you make those tests with respect to color-blindness? Was it night or day? A.—In day time; also at night, if we have any doubt.

Q.—Do you think it is a satisfactory test to place colors on a board, as you have stated? Are you aware that the reflection at night and the reflection in the day time, with regard to colors, is very different? A.—I am not prepared to say as to that.

Q.—What do you think, with respect to that question—the reflection of colors at night and in day time? A.—I have generally understood that a color red in the day time is red at night; that is what we understand it to be when we look at it. I did not know there was any difference between a red color at night and at day.

Q.—When the reflection of a color comes through glass at day time or at night, do you think those colors, even to a man of pretty keen eye-sight, is the same as the color is on the board in the day time? A.—I could not say as to that. If I have had any doubt as to men's eye-sight I have got a man to stand with one of the lanterns that will change from green to red, and then to white, a revolving signal, and I have sent a man, say five-eighths of a mile down the track, and have instructed him as to the method of turning the lights, and then I would examine an individual in regard to that. If a man answered correctly then I concluded that the test was a reasonably sufficient one for any practical use.

Q.—A man of your intelligence, from practical investigation, must certainly know that whilst the sun is up the reflection of light is very different from what it is when the sun is down. A.—I suppose so.

Q.—And that a man who might be keenly alive to special colors in the day time might not be keenly alive to special colors at night time? A.—I have had no experience as to that matter; I cannot tell you whether there is any difference. I suppose if you lighted a lamp and exposed it some distance away in the sunlight I would not be able to tell the color, but if it was dark I would be able.

Q.—That is the reason why I asked you whether the tests were made in the day time or at night. Do I understand you to say that you have made tests at both times? A.—Yes; when there has been any doubt of the ability of any one in this regard we would use several colors and probably would test the man in the way I have said. If we had any doubt as to whether a man was color blind or not we would not allow him to have an engine. There have been cases of that kind occurring.

Q.—Are you not aware that there is a difference in color at night and at day? A.—I know this much, that it is a very difficult thing for a man to locate the whereabouts of a light. I have had experience in that following trains. I remember one night when the thermometer was 15 below zero I followed a train from Chatham to within fifteen miles of London. I thought from the tail lights I was not more than from 800 to 1,000 yards from the train I was following, and yet I found out by the time this train had passed several stations I was never nearer than seven miles; this illustrated to me the difficulty of locating a light at night. There was a case that

occurred at Beamsville, the explanation of which I am not prepared to offer. A conductor by the name of McKay and one of our experienced engineers were standing consulting at the station as to whether an engine along the road was standing at Jordan, five miles away, or not, and they all concluded—the station master, the engineer and the conductor—that it was five miles away from them. They started and their train collided with the former train not 500 yards distant from where they started, and the conductor was killed by the cars telescoping. I am quite aware that this is one of the difficulties encountered, and I have sometimes thought that we might obviate it, especially when following a train at night. You come upon a straight road like ours for a distance of fifty or sixty miles, and you see one of the corrugated lights, and it has the appearance of a locomotive head-light when at a distance. Now the difficulty is that there is nothing to indicate its position, whether it is one mile or ten miles away from you. I saw in Chicago some years ago what I thought was a very valuable kind of light; it was a light facing front and rear of a caboose, and it was the property of Mr. McMullen, president of the Chicago and Alton Railway. There were two lights set about 2 feet apart from each other, and the reflectors were so set that when you were one mile away the two lights merged into one, and as you approached them they began to open out until they became 2 feet apart, and each quite visible. This would answer a double purpose, one to indicate the position of a train when followed, that if two lights were visible you would be too near and speed should be checked; the other would indicate when the train parted by links or pins breaking and would prevent the rear part colliding with the front, by showing the exact position of the rear part and the speed it was approaching.

Q.—That is, if you were aware that they had a light of that kind? A.—Certainly. I have seen a light of that kind, but I have not seen it in practice. I can imagine no reasonable doubt why such a light is not practicable, and if it proves so it will prove a very valuable acquisition to the trains that are running in the way I have indicated. We have a system of utilizing the ordinary head-lights in front of the engines into cautionary or dangerous lights, by drawing shades over them, and I think it gives confidence in approaching an engine that nothing else gives. In order to see the position of a train when approaching to pass you must get down to look past the side of your own engine, and yet you have a difficulty in judging whether the engine is on a disc track or not, owing to the brilliancy of the light which is spread over three or four tracks. We now use a green shade, which we draw across the light when a train is clear and on the siding, and when he comes out and fouls the main line he sets a white light, which then practically becomes a “danger” light. Our people here rather like the idea of having a white light in front of the engine, but it has always appeared to me from my railway training in England that such a light upon a single line of railway is in violation of all railways rules. The white light indicates “all right” to railway men, and two engines may approach and collide, showing “all right” light, and yet it is all wrong. We used in the old country a red light in front, because it indicated danger, and when we went upon a side track we showed a white light, to indicate that it was all right for a train to pass, which was carrying out the letter as well as the spirit of the rule. However, we overcame this difficulty by using a third light; now we have green, red and white lights. As soon as a man comes to the main line a white light practically indicates danger, because the light on the siding is green. When you are on a siding you indicate a green light, and a man a long distance away and approaching, consequently knows that the switches are all right, train clear and ready for him to run past. The number of the train is carried in front of the head-light to prevent stopping to know what train is passed. If any emergency occurs, a red light is used, and this system is probably the best for safety as well as for despatch.

By Mr. McLEAN :—

Q.—How many freight cars is a locomotive capable of pulling over your road?  
A.—A locomotive can pull about 340 tons up a grade of 1 per cent. on an ordinarily decent day. Of course, there is much difference in the cars that are hauled; some

cars will contain 50,000 or 60,000 pounds, and other cars carrying ordinary merchandise will represent about twenty tons gross. So, we may say that a locomotive could haul about 340 tons on a good day, and on the level about 600 tons.

Q.—How far would such a train run after you had applied your air-brake of which you have spoken? A.—At what speed would the train be running?

Q.—Say thirty miles per hour? A.—A train of thirty cars, each containing twenty tons, and running at, say thirty miles an hour, would be stopped in about seven-eighths of a mile.

Q.—How long does it take to stop such a train now? A.—If a train was going at a pretty good speed it would take them five or six miles. It always takes a good while for brakemen to get over and set the brakes, and when there is ice about the dogs it is difficult to get them set so as to hold.

By Mr. ARMSTRONG :—

Q.—In case of an accident occurring and the signal was given for down brakes, how many brakes could a brakeman control? A.—About eight. We carry one brakeman on the tender, and usually a conductor and one or two brakemen behind. That is for local freight. For through freight we have two brakemen and conductors. They generally meet each other in the middle of the train, some setting brakes in the front and some in the rear. When going down a heavy grade they generally set four or five brakes, so that they can descend the hill without allowing the speed to become excessive.

Q.—Do you know anything about benefit societies connected with the Grand Trunk Railway? A.—Yes.

Q.—Is the membership understood to be compulsory among the employés? A.—It was not compulsory when it began. It is supposed to be compulsory now, but I do not think that anybody particularly enforces it. We have employed quite a number of men recently, and I know it is supposed that everybody in the service should join the provident society. We have not, however, as I say, been very particular in carrying out that particular part of our duty. When a man enters the company's employ he is sent to a doctor to be examined, the idea being that he should pass a doctor before he is employed by the company.

Q.—I suppose you are aware of the action of the Local Legislature in sending notices to employés, asking them which they would prefer, the benevolent society of the Grand Trunk or the application of the Employers' Liability Act? A.—Yes; I received a circular of that kind. I know we got that notification.

Q.—It was understood, I believe, at that time, that the names and addresses of the employés were to be sent in to the Government? A.—Yes.

Q.—Were those addresses sent to the company's shops or to the private residences of the men? A.—I think a great many were sent to the shops; many were addressed to the Grand Trunk shops, and I saw quite a number of those.

Q.—Have you ever heard any complaints from any of the men that they never received any of those notices from the Government? A.—No.

Q.—Whose duty was it to send them? A.—I could not say whose duty it was to send them. It appears to me that a large number of the men received them, and some of the men may have got them at their own addresses. The way it was done was this: they were put up into racks, and each man got what belonged to him. I got mine, and I know several others received their's. I believe the questions referred to were asked, but I have always had my own opinion as to the authority of the Provincial Government in this matter. I have always doubted the competency of the Provincial Government, under the terms of the British North America Act, to deal with these questions. I am willing to have the provident society, of which I am a member; but, at the same time, I have seen a great many things which, no doubt, might be improved upon in connection with it. Against that the complaint

is, that the men have not been promptly paid, but the rules of the society are very stringent and a great many forms have to be complied with, although only for small amounts, to carry out those matters, such as sending documents to Montreal and receiving them back again, and, moreover, men do not pay as much attention to the matter as they might.

FERGUS ARMSTRONG, Hamilton, called and sworn.

By Mr. FREED :—

Q.—What is your position? A.—I am station master at the Grand Trunk.

Q.—Do any of the men employed by the Grand Trunk Railway report to you?

A.—Yes, sir.

Q.—What men report to you? A.—Well, all the men that work in the yards, such as making up trains, turning switches, tending to the baggage and numbering the cars that run on the road.

Q.—Have you much knowledge of the running of trains? A.—Well, I don't exactly comprehend what you say. I have to know about the trains going out and coming in.

Q.—Are accidents frequent in the yard in making up trains? A.—Not very frequent; we have had some.

Q.—From what causes were they received? A.—The majority of the accidents we have had in the yard are from making up trains and coupling them.

Q.—Did you hear the testimony of Mr. Hall respecting couplings? A.—I heard part of it.

Q.—Do you think it possible to change the couplings so that accidents would be obviated? A.—As far as any patent couplings I have seen are concerned, my idea is that none of them have been a success.

Q.—Have you had practical knowledge of any of them? A.—Well, I am amongst them every day. My objection to the majority of them is that there is too much machinery about them, and they are liable to give out; some part of the coupling is liable to give out and render it useless. In fact, I do not know of any coupling that I would recommend, as far as my acquaintance goes with it.

Q.—Is there any more danger of these couplings proving inefficient in freight or in passenger cars? Is there any reason why they should prove efficient on passenger cars and non-efficient on freight cars? A.—Well, the couplings we have on passenger cars now are very good; the Miller and the Janey coupling are very good on passenger cars, but my own impression is that that sort would never work well on freight trains.

Q.—Why? A.—When a freight train is made up part of the train is composed of empty cars and part is loaded. We will have 50,000 or 60,000 pounds in one car and the next car may be empty, and the difference in the weight would bring one of the couplers so much below the other that it would not be at all useful. I have never seen a coupler of that sort which I thought would be a proper thing to put on freight cars. When a car is unloaded it stands up high and when it is loaded it is below.

Q.—Does that objection, apply to some extent, to the link coupling? A.—Yes; it does, but there is something about the draw-bar and link that there is not about the Miller coupling. For instance, the ordinary goose-neck, as we call it on the road, lies in the hanger. There is play there, and if it is too low you can put in a stick and stand below and raise it up, so as to meet the other car.

Q.—The present law requires the blocking up of frogs? A.—Yes.

Q.—Have accidents been as frequent since the blocking up as they were before? A.—Well, I could not exactly say whether they have or not.

By Mr. McLEAN :—

Q.—Are all frogs on the Grand Trunk Railway blocked? A.—Yes; but my impression is that the blocking does not amount to a row of pins, inasmuch as the

frog has to be below the flange of the wheel, and a man's heel is liable to be caught in just the same place as before.

By the CHAIRMAN:—

Q.—Have you had any practical reason to believe that? A.—Well, no; I don't know that I have ever seen any one hurt through that.

By Mr. FREED:—

Q.—Do you know of men being frequently hurt or killed by being thrown or blown from the top of freight cars? A.—Occasionally I have heard of them.

Q.—Did you hear Mr. Hall's testimony respecting the possibility of placing guards along side of freight cars? A.—No; I did not.

Q.—Mr. Hall has told us that he thought such accidents would be rendered less frequent and largely prevented if rails were placed along the sides of cars, extending along the sides, so that if a man fell he would roll against the car. What is your opinion? A.—I think it would be a good thing and that it would save a good many accidents.

Q.—Have you much knowledge of brakes? A.—Mechanically I have not.

Q.—Did you hear Mr. Hall's testimony respecting a brake of his own invention? A.—Yes.

Q.—Have you seen it tried? A.—I have.

Q.—What was the actual work of it? A.—My impression was that it was a very good thing. I went down on the trial train. We gave it four or five trials between here and Stony Creek; several gentlemen were there. I was timekeeper; I had a stop-watch which acted to a charm. We were running, I should say, about forty miles an hour when the signal was given to stop. The engine driver did not know when it was coming, and on the first trial it stopped dead in twenty-two seconds.

Q.—How many cars were there? A.—We had five or six passenger coaches. We tried it several times, and at last, I think, we got it down to sixteen seconds from the time the signal was given.

Q.—About what distance would you cover from the time the signal was given until you were at a dead stop? A.—I can hardly tell you. We frequently count by the distance between telegraph poles, and I think five telegraph poles was the distance.

Q.—That would be between 250 and 300 yards? A.—I don't know.

Q.—Are not they about 50 yards apart?

Mr. HALL—They are about 40 yards apart.

A.—The last time we tried it we were running about thirty-six to forty miles an hour, and we stopped in eighteen seconds, with either five or six coaches.

Q.—Have you any knowledge of the rates of wages paid to men in the shops here in Hamilton? A.—No; I could not speak on that subject. I am principally connected with the men in the yard and on the road; there are about twenty-one trains running out of here that I have to do with.

By Mr. McLEAN:—

Q.—What do the crossing-men get? A.—They vary. One class gets \$1.40 and another \$1.30.

Q.—Are there any men getting as low as 90 cents? A.—No; not in this yard or any other on the road as far as I know of. Our yardsmen get the first year \$1.50 and they grade up to \$2. We have five men in the yard now making up trains and getting \$2 a day.

By Mr. CARSON:—

Q.—Are there many cars on the Grand Trunk with the old-fashioned dead-weights? A.—Yes; a good many.

Q.—They are very dangerous to couple, are not they? A.—Not so dangerous as new cars. There is a dead-weight introduced by the American roads which is much more dangerous to couple. There is a dead-weight on each side of the draw-bar,

and they are just simply on a level with the draw-bar. There is a dead-weight on the other car, and it is almost impossible to couple these cars. You have to couple them from the top or from below. The brakemen all complain of them.

Q.—Have you known men to be killed or have their arms taken off by being caught? A.—I have known one man killed, and lots have had their arms taken off. The old-fashioned simple dead-weights, where there is a space between them, are preferable to these later ones. I think any brakeman on the road will agree with that.

By Mr. HEAKES :—

Q.—Was the single dead-weight you speak of on the end of the car above the draw-bar? A.—They are generally level or even with the draw-bar in either direction.

Q.—But the American one you are speaking of now? A.—Yes.

Q.—But I am speaking of the old style on the Grand Trunk? A.—The dead-weight was even with the coupler, and the coupler projected out, so that a man had a chance to couple it before the dead-weight came together. Of course, there was spring enough, and a man had a chance to couple the cars and get out of the way. With these American cars, such as the Baltimore & Ohio, W. L. & W., and the Lehigh Valley, all of them have this new sort of dead-weight, and it is next to impossible—I have seen men try two or three times, men who are careful, before they could get them coupled.

By Mr. CARSON :—

Q.—Are they put on new cars to-day? A.—Not in Canada, but they are in the United States.

By the CHAIRMAN :—

Q.—So you have to take these cars for your road? A.—Yes; certainly. We think our old fashioned couplers are far superior and safer to brakemen than the American ones. Of course, it is perhaps a little more economical on the draw-bars, but I think it is more unsafe for the brakemen.

By Mr. McLEAN :—

Q.—Does your company give your brakemen any sticks to use? A.—They can use them if they like, but it is not the system on our road, though it is on some roads. Our rules do not require them, though they are useful on foreign cars.

By Mr. CARSON :—

Q.—That coupling is most dangerous? A.—Yes; they complain of it very much. We have a number of them here, and I have often heard them objecting to it.

By Mr. HEAKES :—

Q.—Have you ever heard any engine-drivers and conductors on the Grand Trunk complain of the present system of signals? A.—No; I don't think so.

Q.—Or express a preference for the old system which was in use on the Western? A.—Well, you can understand when our system was changed it was a new thing, and we were satisfied with the old system and liked it best, but after a few years' experience now we think we like the present system as well as we did our own. We have heard expressions against it when the change was made, and you can understand how that would be.

Q.—If there was any great dissatisfaction with the present system you would be likely to know it? A.—Yes; I would.

Q.—The men all report to you? A.—Yes; they generally speak to me about anything which is wrong.

By the CHAIRMAN :—

Q.—As regards Sunday travelling have the Grand Trunk and C. P. R. practically abolished Sunday and made seven working days in the week? A.—We have our Sundays; we don't do any local work on Sundays.

Q.—I am speaking of the passenger traffic? A.—Our passenger traffic is not abolished that day. We do not abolish Sundays altogether.

Q.—How many hours apart have you trains running on Sundays? How many trains are run on Sunday? A.—We have three west on the main line, and the same number east—that is passenger trains.

Q.—Does the Grand Trunk make a practice of selling tickets at way-stations by these trains? A.—Wherever the train stops.

Q.—How do the men get a Sunday for themselves? A.—It only requires half of the staff to do the work on Sundays, so each of us has a Sunday every two week.

Q.—So, as regards the men, they have twenty-six Sundays in the year? A.—That is about it.

Q.—Are you aware of any particular business being done on Sundays, either on the C. P. R. or the Grand Trunk? A.—There is no local freight, but the freight which is on the road goes to its destination.

Q.—Don't you think there might be a partial stoppage of the trains, or even all passenger trains? A.—Well, as far as our road is concerned——

Q.—Well, I am speaking generally, not making a special thing of your road? A.—Well, I think the demand from the travelling public would almost prohibit any stoppage at the present time.

By Mr. HEAKES:—

Q.—Do you know anything of the yard at Suspension Bridge? A.—Yes; a little of it.

Q.—Are not trains made up there all day Sunday? A.—Yes; but only for through traffic.

Q.—How many hours per day are they employed on Sunday at Suspension Bridge? A.—Twelve hours.

By Mr. CARSON:—

Q.—In the case of the garnisheeing of wages on the Grand Trunk, what is the result to employes—does the company discharge them? A.—Not in every case.

Q.—In some cases? A.—If a man is garnisheed two or three times; I think if he is garnisheed the second time he is discharged.

Q.—Is it possible if a man is discharged from the company under those circumstances to get a job on another road? A.—It is a rule on our road that he cannot be re-employed after he is discharged. I will not say that he cannot, but it is the rule that he should not.

Q.—Do you think that is fair treatment of men on the road? A.—Well, I am not prepared to answer that question.

By Mr. ARMSTRONG:—

Q.—Will another company employ that man who has been discharged from the Grand Trunk without a recommendation from the Grand Trunk Company? —A. Frequently we have applications. A man says he has been working on the Grand Trunk. Our rules at the present time require a man to get a certificate from his last employer to testify to his good character.

Q.—And if he has not that certificate he is not employed? A.—Well, if he cannot get one we have a printed form that requires to be filled up and signed by his last employer.

Q.—That is an understood thing between the different companies? A.—I could not say it is an understood thing, but I know it is the practice. For instance, when my men left and went west a few days ago I got a note from the Assistant-Superintendent of the Chicago & Alton, saying that a man named McKenna had turned up wanting employment, and stating that he would be glad to know what I had to say about him. I told him that he left on his own account, and that he was entirely satisfactory to me. That sort of thing is practised all over.

Q.—Don't you look upon that as a species of black-listing? A.—No; I would not.

I think as regards that railway company they should know whom they are employing. If you were employing a man you would want to know whether he has a good character or not.

RODERICK CHISNELL, called and sworn.

By Mr. FREED:—

Q.—You are employed by the Hart Emery-wheel Company? A.—Yes.

Q.—How long have you been there? A.—Eight years ago on the 26th of this month, when they started here.

Q.—Is it an independent company or a branch of a company established in the United States? A.—I think it is an independent company, although of course they manufacture the same wheels as they do in Detroit. I think they have bought the right for Canada, but I would not be positive.

Q.—Do you know what was the occasion of establishing this business in Canada? A.—We had to manufacture our wheels here or lose the patent.

Q.—Why could not they import them from the United States? A.—Well, they could, I suppose, although there is a heavy duty upon them now.

Q.—Was it the duty which induced them to establish the business here? A.—No; I don't think so; I think it would have been here independent of the duty. I think it was established here to save the patent.

Q.—Are many men employed in the factory? A.—I suppose there are about fifteen or sixteen, all told.

Q.—Do you know where they sell their goods? A.—All over the world—Australia, England, France—any where, with the exception of the United States, and they don't sell any there.

Q.—Is the number of men employed in the business increasing, decreasing, or is it remaining stationary? A.—It is increasing every day; we started with myself alone eight years ago.

Q.—Have they increased their plant and machinery since that time? A.—They increase it steadily every year.

Q.—Do you consider yourself a practical judge of emery-wheels, and that you know the quality of them? A.—In that one particular wheel I do.

Q.—Are these wheels made in Canada as good as those made in the United States? A.—I think they are.

Q.—Do you know anything about the prices? A.—I do not.

Q.—Do you know whether the sale of these wheels in Canada is increasing or not? A.—Yes; it is increasing.

Q.—Do you know whether any particular company or any man employed by the company was in England to introduce these wheels? A.—Yes; Mr. Briggs, at the time of the Centennial Exhibition.

Q.—Did he meet with any success? A.—Certainly. We are shipping quantities of goods there every month.

Q.—Are skilled mechanics required in making these wheels? A.—Yes.

Q.—Can you tell us about what wages they receive? A.—They average from \$2.50 to, I think, \$1.50, that is men. There are two or three boys, and I don't know what they get.

Q.—Are the men getting \$1.50 skilled workmen or unskilled? A.—They are men who can be replaced at any time.

Q.—What hours do you work? A.—We are supposed to work ten hours a day.

Q.—Sixty hours a week? A.—Yes.

Q.—Do you work altogether by the time or by the piece? A.—By the time. It would be rather a hard matter to work by the piece there, because the changes in the atmosphere are such that what you might make in one hour to-day would require two hours and a-half to make to-morrow.

Q.—Where do you get the raw material of these wheels? A.—I think it comes from the other side.

Do you use common emery or corundum? A.—Both.

By Mr. HEAKES :—

Q.—What proportion of men are paid \$1.50 and what proportion \$2.50? A.—They are about equal.

By Mr. ARMSTRONG :—

Q.—How are the men paid? A.—Weekly.

By Mr. CARSON :—

Q.—Do you employ much machinery? A.—Not a great deal.

By Mr. ARMSTRONG :—

Q.—Do you make other articles outside of wheels? A.—Yes; common emery stones and saw-filing machinery.

Q.—You require a great deal of machinery? A.—Two or three lathes, two iron turning lathes and, I think, three emery lathes, and a couple of drills.

Q.—Have you any boys working at the business? A.—Yes; there are some boys there—three, I think.

Q.—You are teaching them the business? A.—No; a boy is no use in the moulding department at all.

DAVID CASHION, Moulder, Hamilton, called and sworn.

By Mr. FREED :—

Q.—Where do you work? A.—For the Grand Trunk.

Q.—The Moulders' Union of Hamilton is a very strong one, I think? A.—Well, yes; pretty strong.

Q.—Can you give us a list of the foundries and shops in which moulders are employed? A.—There are about twelve, I think, mostly stove shops.

Q.—What would be the number of men employed in the largest of these—you need not mention names unless you like? A.—I think Mr. \_\_\_\_\_'s is the largest when running full blast.

Q.—How many would be employed there? A.—I should think about sixty.

Q.—That is moulders? A.—Yes.

Q.—And how many other men? A.—Well, I suppose there would be twenty-five more.

Q.—Has the Moulders' Union adopted a scale of prices? A.—Yes; they have a scale of prices in stove shops.

Q.—Do you work by the day or piece? A.—We work by the day.

Q.—Do all moulders work by the day? A.—All do in job shops; it is mostly by the day, but in stove shops by the piece.

Q.—What are the ordinary day rates for those working by the day? A.—It varies. In the Western it is 22, 24 and 25 cents an hour.

Q.—How many hours constitute a day's work? A.—Nine and a-half hours in the Western for five days, and six and a-half hours on Saturday, making an average of about nine hours for six days.

Q.—And in the other shops? A.—I think it is ten hours a day in the other shops.

Q.—During what part of the year are you employed? A. Well, the Western runs pretty steadily, except June and December. They have a week or two's holidays the latter part of June and in December.

Q.—Do the men desire these holidays or would they prefer working the year through? A.—I think they would prefer working the year through. I think, for my part, half a day on Saturday is sufficient rest.

Q.—Do you know what length of time they work in the stove foundries? A.—Well, the stove foundries don't run very steadily.

Q.—Are you able to tell us how many months in the year they run? A.—Well, they open up, as a general thing, about the 1st of March, and sometimes in February; they run briskly until about Christmas or December.

Q.—Do these men get as good wages as you get? A.—Of course, they work by the piece.

Q.—Do you know what they can make? A.—Well, they make from \$2.50 to \$3 a day, and if they work pretty hard they may get \$3.

Q.—It is pretty hard work in any case? A.—Yes; it is pretty hard work.

Q.—Are the foundries generally comfortable to work in throughout the city? A.—Well, I guess they are.

Q.—How is your own? A.—It is not too warm. They can't keep it warm; there is a door open all day to let the iron in, and we can't seem to work there and keep it shut.

Q.—Is the services of the Grand Trunk considered very desirable? Would men rather work there than in the other foundries? A.—It is counted about the steadiest shop in this city.

Q.—Do you have many boys learning the trade? A.—There are three or four in our shop.

Q.—Is there any rule of the union fixing the number of boys to be employed? A.—They have a rule of one boy to eight men.

Q.—How long do boys serve before becoming journeymen? A.—About four years.

Q.—Are these boys indentured? A.—No; just by word of mouth.

Q.—Is anybody particularly interested in teaching them their trade? A.—As far as I can see, the men are very good in teaching them what they can, if they are not too saucy.

Q.—Do the boys generally turn out to be good workmen at the end of four years? A.—I have seen some turned out who are not very good, in my opinion.

Q.—Do union moulders consent to work in the same shop with non-union moulders? A.—Well, there are cases of it down in the Western shops, but they don't like it. Well, there are one or two who don't belong to the union, and some don't like it.

Q.—Have you had any strikes or lock-outs in your trade? A.—I have never been on strike in my life except on my own shoulders in St. Catharines.

By the CHAIRMAN:—

Q.—That was yourself alone? A.—Yes; I never came out as one of a body.

By Mr. FREED:—

Q.—Have there been any strikes in this city? A.—There was one this summer. I don't believe in strikes myself.

Q.—How did it end? A.—I believe they gained their point, to a certain extent.

Q.—Was there arbitration or did the men and the employers come together? A.—Yes; they just met.

Q.—After the strike lasted some time they agreed on terms? A.—Yes; they struck for 10 per cent and they got 5 with 5 per cent. more in March.

Q.—On that understanding the men went to work? A.—Yes.

Q.—Then you consider that practically they made their point? A.—Yes.

Q.—Were the negotiations between the men and the employers pretty good natured or was there much hard feeling? A.—Well, I don't know. They seem to say that they are closing down a little this winter on account of the strike, but I don't know whether there is any truth in it or not.

Q.—Is the closing down this winter any longer in duration than other winters? A.—No; I don't think so.

Q.—Are all the foundries closing down? A.—All the stove shops are.

Q.—It is usual to close down about the holidays? A.—Yes; about Christmas.

Q.—So you cannot tell whether the closing down this winter will be of longer or shorter duration than other years? A.—No; I could not say.

By Mr. ARMSTRONG:—

Q.—You had only one difficulty with the founders last year? A.—I was not on strike; the Western was not on strike.

Q.—Is it a principle of your union to resort to all conciliatory measures before a strike takes place—to take any course to settle the matter without going to strike? A.—Yes; they always prefer to do so; they give notice of about three weeks.

HAMILTON, Wednesday, 18th January, 1888.

GEORGE I. STURGES, called and sworn.

By Mr. FREED:—

Q.—You are connected with the Hamilton Rolling Mill? A.—Yes; the Iron Forging Company.

Q.—In what capacity? A.—As a roller.

Q.—How long have you been employed there? A.—Since June last.

Q.—How long has the forge been opened? A.—I believe it has been in existence fifteen years, but the rolling mill only for the last two years, I think.

Q.—Do you distinguish between the men in the forge and those employed in the rolling mill? A.—They are under the one firm—one employment.

Q.—You are employed in the forging department? A.—No; in the mill.

Q.—How many hours a day is the mill in operation? A.—About ten.

Q.—Do you work single or double shift? A.—Double.

Q.—How many hours a day will each man be employed during one day in the mill? A.—As regards the work, we work about probably seven hours.

Q.—Do they work by the day, the week or the piece? A.—Mostly by the ton.

Q.—What would be a fair day's earnings for a heater? A.—About \$6 per day.

Q.—And for a roller? A.—Seven dollars.

Q.—For a helper to a heater? A.—He would make about \$2.50.

Q.—And a helper to a roller? Well, we don't have in our trade helpers to rollers; the next would be rougher, making \$3 to \$3.50

Q.—Are they skilled workmen? A.—Yes; but a heater's helper is not.

Q.—What would unskilled workmen employed in the mill earn? A.—Of those who work for me one gets \$1.50, one \$1.25 and three boys get \$1 per day.

Q.—How old would the boys be? A.—About eighteen years old.

Q.—They have to be pretty strong, hardy boys? A.—Yes.

Q.—The work is pretty hard, is it not? A.—Yes.

Q.—Is it trying to the constitution of those who work at it? A.—Not when they are accustomed to it; I don't find it so.

Q.—Do they live as long as ordinary mechanics? A.—I believe so.

Q.—Are they laid off a greater time through illness? A.—I never had a day's sickness in my life.

Q.—Have you worked in other cities besides Hamilton? A.—I worked in England until I was twenty-three years, and in Philadelphia and Troy, and through the State of Ohio—in Cincinnati and Toledo.

Q.—How do wages in Hamilton compare with wages in England for a like service? A.—They are about double.

Q.—How do they compare with Philadelphia? A.—They are just about the same as Philadelphia.

Q.—And Troy? A.—Just about the same.

Q.—And with western cities—Pittsburg, for instance? A.—They are a little lower in Hamilton.

Q.—Are you aware of any recent reduction in wages in Pittsburg and other western cities? A.—No: not in the western; but in the eastern cities in the rolling mills reductions are taking place.

Q.—A witness yesterday told us of a reduction, I think of 12 per cent., in wages at Pittsburg. Have you any knowledge of that? A.—None at all. During the summer they had an advance of 10 per cent.

Q.—Is your union connected with the union in the United States? A.—We have not any union.

Q.—Is the scale on which you work similar to that prevailing in the United States? A.—Yes.

Q.—In what part of the United States? A.—In the Amalgamated Association Districts, Pittsburg and throughout Ohio; we work on a similar sliding scale.

Q.—If the price is so much per ton you receive so much per ton for your work? A.—Yes; we are not governed by any scale in the States at all.

Q.—Do you know how your prices compare with prices in the eastern parts of Canada? A.—I never was in the eastern part of Canada at all.

Q.—How frequently are you paid? A.—Every two weeks.

Q.—Are you paid up to pay-day? A.—We work two weeks, and we are paid on Tuesday for the past two weeks, so that Monday and Tuesday would be considered not paid for.

Q.—Is this pay-day satisfactory to the men? A.—Yes.

Q.—Have they ever asked for a different arrangement? A.—Not that I know of.

Q.—Have you heard any complaints as to the pay-day not being frequent enough? A.—Never.

Q.—Is the day of the week upon which you are paid satisfactory to you? A.—As far as I am concerned I never heard anything different.

Q.—Are you paid in cash? A.—Yes.

Q.—Have you ever received orders or pay in anything but cash? A.—Never.

Q.—Do the men who work at night or on the night shift receive pay at the same rate of wages as those on the day shift? A.—Yes.

Q.—Is there any advantage in working in the day over working in the night? A.—Yes.

Q.—The men prefer to be on the day shift? A.—Yes.

Q.—Is the mill a pretty comfortable place to work in? A.—Yes; it is fairly comfortable compared with other rolling mills, but rolling mills generally are not very comfortable places. It is up to the average that I have been in.

Q.—During how large a part of the year are you able to work? A.—The mill is in constant operation, except from accidents or holidays.

Q.—And the men may work every lawful day in the year if they wish? A.—Yes; so far as I have seen. It has been in operation ever since I was here.

By Mr. McLEAN:—

Q.—Are there many boys working at your business? A.—No; we have not any, excepting, as I said before, three young men eighteen years of age.

Q.—Are there any working for the company in which you are employed? A.—No.

By Mr. HEAKES:—

Q.—Do the heaters employ their own helpers? A.—No; the company employ them.

By Mr. WALSH:—

Q.—Do the men in the shops remain on the same time constantly? A.—No; we change, one week days, and one week nights.

By Mr. ARMSTRONG:—

Q.—What is the lowest rate paid in unskilled wages? A.—For men, \$1.25. We have three young men working for \$1 a day.

Q.—Can these young men do the work of journeymen? A.—No; it is boy's work. In the States the same work is only paid 65 cents a day and we are paying \$1 for it. I never paid more than 65 cents until I paid it here.

Q.—What is the lowest rate paid for skilled workmen? A.—The lowest wages for skilled workmen in my department is \$3 to \$3.50, and those are roughers.

Q.—Those men work ten hours a day? A.—They are there about that time; their actual work is not more than seven.

Q.—How many full weeks can a man put in in your department in a year? A.—We could put in every week, excepting in case of accidents; we don't need to lay idle any.

Q.—All the departments are of that kind? A.—In our concern, yes.

Q.—Is your trade connected in any way with any labor organization on the other side? A.—The trade is connected with organization on the other side, but this side is not connected with the other.

Q.—Still, they recognize the men of this side when they go over there to work? A.—Yes; they recognize them.

Q.—Have you the travelling card system? A.—No.

Q.—Is there any kind of benefit society among the men? A.—Not that I am aware of.

By Mr. CARSON:—

Q.—You say that wages are a little higher in western cities than here. Comparing the cost of living with the increase of wages, is it higher? A.—I think it would bring it about on a level.

Q.—You would be just about as well off? A.—In fact, I can save more money than I could in western cities. I may say that those boys I spoke of getting \$1 a day are paid 15 cents a day out of the office in addition to that, making \$1.15 per day for them.

By Mr. CLARKE:—

Q.—What is the heaviest iron you make? A.—About 400 pounds per bar.

Q.—What is the size of it? A.—Two and a-half inch rounds and 2½-inch squares, 4-inch plates, or 4-inch by 1 inch or 1¼ inches.

By Mr. McLEAN:—

Q.—What age do you consider a boy should be before learning your business? A.—I went in when I was eight years old. I would not put a boy there so early as that, but in small mills where boys are able to perform the work they may be employed when thirteen years old. I think it would be to the advantage of the boy if he followed that employment all his life.

By Mr. ARMSTRONG:—

Q.—To go young? A.—Yes; I went when I was eight years old and I held the same position I now hold when I was twenty.

Q.—If a boy went to your business at eight, or nine, or ten years old, at what time of life would he be supposed to have his schooling? A.—Well, I don't know; I got my schooling at nights and at home.

By Mr. McLEAN:—

Q.—Where did you get your schooling? A.—In England.

Q.—Are there night schools in this city? A.—I believe there are.

Q.—Are they pretty well attended? A.—I don't know; I have never been privileged to attend one of them. I believe there is one somewhere in this vicinity.

Q.—You don't know anything about the working of them? A.—No; I do not.

SETH J. WHITEHEAD, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are the mechanical superintendent of the Forge Company and the rolling mill? A.—I am general superintendent.

Q.—How long have you been in that position? A.—Since we commenced rolling there. I was in the Ontario Mill for four years, and I went over and started the mill after they were forging.

Q.—The forging works had been in existence before that, and when the rolling mill was started you went over and became general superintendent? A.—I induced them to go into the rolling in addition to their forging department.

Q.—And you thought there was plenty of room for an additional rolling mill in Hamilton? A.—Yes.

Q.—Has the event justified your opinion? A.—It has.

Q.—Has the mill been busy since it started? A.—We have never been a minute idle.

Q.—What iron do you use? A.—All scrap iron.

Q.—Where do you get scrap iron? A.—A great deal of it has been picked up around the country. It is brought to us; but we have been importing some from England this last summer.

Q.—You do not get an ample supply in Canada? A.—Well, we were rather afraid we should not, and we laid down quite a lot. Still, we had to refuse quite a lot of it, which we could have bought here.

Q.—Where do you find your market for your iron? A.—In Ontario.

Q.—Altogether? A.—Yes; all over Ontario.

Q.—You find a very active opposition in importing iron of like qualities with that which you make? A.—Well, we have found a good deal in the beginning, but we are making an extra quality of iron. We went into the business of making hammered bar and it took some time to get it into the market and to get it known to consumers. We have never had, with the exception of one or two months when Mr. Beddoe went out canvassing, any one out since, for we have not felt any serious trouble from competition.

Q.—You claim that your iron is superior iron and used for a superior class of work? A.—Yes.

Q.—How do the prices in this class of iron compare with the prices in former years? A.—Well, they are higher. Of course, the alteration of the duties has given us a little advantage. Before the change was made we had to compete with England, and we had to keep them pretty well down, and we could scarcely live at the price we were working for when we started. We found iron laid down here just as cheap as we could make it, and sometimes cheaper. We were making a good quality of iron, and some of these agricultural implement men having got used to it preferred it to the English iron. There was also another advantage, which was that we did not have to carry so large a stock, or wait so long after giving orders.

Q.—About how many men are employed in the works altogether? A.—I think we have on the pay-roll from seventy to eighty; I could not say positively, but it is about that. I could say seventy-five.

Q.—Does that number increase, decrease or remain stationary? A.—They are rather on the increase now. We are extending our works, and we have just started on Tuesday another branch, and that will take about ten men to run it night and day of two turns.

Q.—Is there any advantage to Canadians of any class in being able to sell their scrap iron to the rolling mills in Canada rather than to export it to the United States? A.—Yes; as a general thing we pay a higher price for scrap than they were able to give in the States, with the exception of occasionally when they get pinched a little over there. They came when there was a good quantity on the market and bought it from us, and they paid a little more than we could.

Q.—Do any rolling mills in the United States use scrap iron exclusively? A.—I think some do, but I don't know of many. There is one at Lockport which does.

Q.—As a rule, they use puddled iron in their rolling mills? A.—Yes.

Q.—Are there any mills in Canada using puddled iron? A.—Yes; I think some of them in Montreal import some puddled iron and get some also from Londonderry. We have a little from Londonderry. They asked us to try it. We thought under certain conditions and circumstances we could perhaps work it as well as scrap iron, and when we were pinched for scrap we could use puddled, but we found it was not so good as our hammered scrap blooms.

Q.—Have you imported any blooms from the old country? A.—No; nothing but scrap.

Q.—You heard Mr. Sturges' testimony? A.—Yes.

Q.—Is it correct? A.—Yes; he has given exact figures, I think. There is very little difference in the amount earned by the heaters in the forge department and those in the mill. They do not earn quite so much in the forge from the fact that they cannot get out quite so much iron. I suppose their average is from \$4.50 to perhaps \$5 a day.

Q.—How many hours would they work to earn that? A.—Just about the same. They have to work two shifts, and they get out of one another's way—probably eight to ten hours a day.

Q.—Are they actively employed during all these hours? A.—No; between the heats they have considerable time that they can sit down or go away—say a half an hour or twenty minutes between each heat.

By Mr. HEAKES :—

Q.—Do the men work piece-work or day work? A.—All-piece work, except our common laboring men.

By Mr. CARSON :—

Q.—You said that you cannot put iron on this market as cheap as the English people can? A.—I have always supposed it to be from the fact that they do not pay more than 50 per cent. of our wages, and then they have facilities which we have not got in their coal and ore company so close to their works.

By Mr. CLARKE :—

Q.—Do you have any trouble with strikes? A.—No.

Q.—None? A.—We had in the Ontario Rolling Mill. We had a union in connection with the Amalgamated Association in the United States, but it became necessary to upset it. The management bore it as long as they could, but the men acted very foolishly; we thought they began to dominate, and the gentlemen who run the place concluded that they would be better off without it, and they just sat upon it and squelched it out.

By Mr. ARMSTRONG :—

Q.—What was the nature of the difficulty? A.—It would take some time to describe it all. I don't think our men on this side acted as wisely as they did on the other side; I think they were a little elated on account of obtaining a charter, and they probably got an idea that they could run things to suit themselves. I don't think, as far as I have seen—and I have seen all their by-laws and constitution—that there is anything wrong in them. I think they are perfectly right in having their own laws and regulations.

Q.—You say the firm found it necessary to drop them out as a body? A.—From that mill.

Q.—Was that any benefit to the men or to the firm? A.—It has been a benefit for both. I have no doubt that the men will tell you themselves that it has been a good thing to them. I know it is for our men, because they get better wages and they have no trouble. We employ the best men we can get and pay them the highest

scale of wages, and we have no trouble. We have better work and we have peace and harmony there.

Q.—Did any of these men tell you that it was much better to be without organization? A.—Yes; a good many of them. I have several of them working for me now, and they all claim that they are far better off without it. The gentleman who gave evidence before me was president of the association over there before coming to this city, and he has told me repeatedly that he is far better off and that he is far more comfortable. Of course, these are simply matters in my own mind which I am making to you.

By Mr. HEAKES :—

Q.—Did any of the men object to the association being wiped out? A.—Well, they did and they didn't. There is a sort of terrorism in connection with that thing that a man does not dare to speak.

Q.—Do you speak from experience? A.—Yes; from what I have seen and known. We had years of it there.

By Mr. ARMSTRONG :—

Q.—Were you ever connected with one of these associations? A.—Oh! no; I am speaking simply of facts in our mill during that time.

Q.—Are the managers and manufacturers throughout the country organized, and have they an understanding amongst themselves in some shape or other? A.—None that I know of; we have no understanding.

Q.—Is there such a thing among the manufacturers in the United States? A.—I believe there is, but I simply speak from what I see in the papers. I do not personally know that there is.

By Mr. CLARKE :—

Q.—You think that organized labor has an evil effect on the working classes? A.—I think that particular association had from the way they acted.

By Mr. ARMSTRONG :—

Q.—Was the difficulty for an increase of wages or shortening of hours? A.—No; it was not. It was for matters that didn't amount to anything. In fact, a great part of the trouble was that they would get drunk and try to run things their own way, and shut us down and go on just as it suited them.

Q.—How many hours do those men work? A.—About ten—the regular shift night and day.

Q.—Those ten hours represent ten hours of constant labor? A.—Oh, no; between heats they have from twenty minutes to half an hour in which they can sit down and rest or go where they have a mind.

Q.—They cannot go very far in twenty minutes? A.—They can go and get their glass of beer or have a smoke.

Q.—You say they would become intoxicated, and yet the firm recognized their going out and getting a glass of beer. A.—We don't recognize it, but we don't prevent their going out to get a glass of beer.

Q.—Don't you think that hard work and long hours have a tendency for men to become intoxicated, and under the circumstances are they not more liable to drink? A.—I don't hardly know how to answer that. We have men who sometimes get intoxicated, and we have men like Mr. Sturges who never taste it; but, as a class, we have I think the steadiest lot of men that ever was in a mill; and I have been connected with several.

By Mr. CARSON :—

Q.—Do you find those who are temperate in their habits the steadiest? A.—Yes; and the best men and the most reliable.

By Mr. FREED :—

Q.—What hour on Saturday do the men quit work? A.—Generally about 3

o'clock. They generally quit a little earlier if they manage to get out about the same quantity of work.

By Mr. WALSH:—

Q.—You spoke about having a forge in connection with your place: do you still continue it? A.—Yes.

Q.—What is the nature of the work you produce in your forge? A.—The principal part of our work now is making blooms in our rolling mill department. We hammer the scrap into blooms, but we make quite a quantity of shafting, connecting-rods, crank-rods, &c.

Q.—Any ship work or anything of that kind? A.—Yes.

Q.—Are you open to contracts of any kind for forging work? A.—Yes; we are doing it all the time.

Q.—Do you get the iron which you use in your forging work entirely from scrap iron? A.—Yes; every bit; it is all hammered into slabs, and the slabs are put in and re-heated.

Q.—Do you ever import any pig iron at all? A.—No; we don't use it in any shape.

Q.—What is your forge capable of producing? What size of matter can you forge there? A.—I think the heaviest shafting we have ever turned out since I have been there was about 10 inches in diameter. The largest shafts we made were for a flouring mill out in Manitoba, or somewhere out there. We also forged shaftings for the new pumps here and they were pretty heavy.

Q.—Have you much of that kind of work? A.—Yes; we have sometimes more than we really care to take, because it puts us back in our mill work.

By Mr. CLARKE:—

Q.—You are not particularly calculated for that work? A.—Oh, yes; we commenced in that business and from making car-axles, but as business became slack we went into the making of bar iron in connection with it.

By Mr. WALSH:—

Q.—You do make car-axles? A.—Yes; we do yet.

Q.—Where were they for? A.—Latterly they were made for the Grand Trunk, and some for other roads.

Q.—Have you all the plant on hand necessary for that kind of matter? A. Yes.

Q.—What is your fixed capacity for the steam hammer? A.—I think it is about 3,000 tons with the steam back it.

Q.—Are you continually engaged in the forging business? A.—Yes; we are running night and day.

Q.—Your forging business? A.—Yes; and the hammers are running night and day.

By Mr. CLARKE:—

Q.—Have any of your employes houses of their own? A.—Quite a number.

Q.—How long does it take your workmen to accumulate money enough to purchase one for themselves? A.—That is a question I can scarcely answer; I have not been connected with them long enough.

By Mr. ARMSTRONG:—

Q.—As far as you know? A.—I know we have quite a number who are paying for houses, but how much they have paid on them I don't know. They seem to be getting along nicely and comfortably.

Q.—How long would it take one of your men at \$1.25 a day, a married man with a family, to purchase a house of his own? A.—It would take him a long time.

Q.—Have you any men working at \$1.25? A.—Yes; laboring men who do wheeling and work like that; that is the simplest kind of work.

By Mr. McLEAN:—

Q.—If the men turn out as much on Saturdays as any other day would the firm have any objections to stopping work at three o'clock? A.—We let them do as they like in that respect. If they get along in the early part of the day they will make probably the same number of heats, and if they don't they will probably lose a heat, and they are paid for what they do. The company would lose the benefit of that heat as well as the men.

By Mr. ARMSTRONG:—

Q.—Do they often lose a heat on Saturday? A.—Very seldom.

Q.—That almost goes to prove that the men would put in as much work in nine hours as in ten? A.—They do when they make a push and want to get through early.

By Mr. WALSH:—

Q.—That would not establish that the men are not overworked at any time? A.—I don't think our men are overworked; I have never heard them complain. Our men are just as anxious to get out the work as we are to have them do it. We have a class of men anxious to earn all they can earn.

T. D. BEDDO, called and sworn.

By Mr. FREED:—

Q.—Have you anything to add to the evidence of the last witness? A.—I have nothing to add to what Mr. Whitehead has said. I think he has covered the ground very fairly and truthfully. I don't think anything has been exaggerated at all.

Q.—What is your official position? A.—I am manager of the steamboat company. I would like to state one thing.

Q.—What is your statement? A.—I would like to make a statement in regard to some of the men having purchased their own houses. I have always spoken to them in that line, and endeavored to influence them as far as I could to be saving. I know of two cases in particular during the last three years of men who have paid between \$600 and \$700 on account of houses which they have bought for, possibly, \$1,800, showing that they are thrifty and saving.

Q.—The forging company, as such, was in operation fifteen years ago? A.—

A.—Yes; in 1874 we commenced.

Q.—And the rolling mill has been added to them after the present rates of duties on imported iron? A.—It might have been, and it was, as a matter of fact, added before, but we were in a very difficult position. Well, we had to compete against England laying down iron at a low rate; still again we had to pay the higher rate of wages fixed in Pittsburg, so that we were handicapped.

Q.—When was the rolling mill established? A.—About two and a-half years ago.

Q.—What was the rate of duty on imported iron then? A.—Seventeen and a-half per cent.

Q.—What was it previous to 1879? A.—It was still 17½ per cent.

Q.—You were handicapped by that? A.—Yes; certainly.

Q.—When was the Ontario Rolling Mill started first? A.—About nine years ago—1879.

Q.—When was it first built? A.—I don't know when it was first built; it was built by the Grand Trunk for the purpose of rolling iron.

Q.—And it lay idle for some time? A.—Yes; for a number of years, when it was re-opened by the present company in 1879.

By Mr. ARMSTRONG:—

Q.—What salaries were those men receiving who saved \$600 in those few years?

A.—They are averaging now about \$35 to \$40 every two weeks, and the last three

years they have not lost a day. For instance, during the whole of last summer in the heat we never lost a day, except holidays, and on some holidays they worked.

By Mr. HEAKES :—

Q.—These are not the men earning \$6 a day? A.—These are the heaters in the forge; they have special rates, making from \$4 to \$4.50 per day.

Q.—That would be \$48 every two weeks? A.—It runs about from \$35 to \$40; I am putting it at the lowest average.

Q.—How many men in the mill earn \$6 a day? A.—Our heaters; there are two of them. Then there are four heaters in the forge department earning \$4 to \$4.50 a day.

FRED. WALTER, Moulder, Hamilton, called and sworn.

By Mr. FREED :—

Q.—You are a moulder, I believe? A.—Yes.

Q.—About how many moulders are employed in Hamilton? A.—I am here as a representative of the union, in which there are from 350 to 400 members. There are about fourteen or fifteen moulders in the city who are not in the union; that is the number within a few.

Q.—Are the moulders belonging to the union willing to work in the same shop with non-union moulders? A.—The whole of the men in the city, with the exception of those in one shop, are union men. There is one shop where non-union men are working, and there are also some Union men there.

Q.—About how many hours in the day will a moulder work? A.—Of course, it is somewhat difficult to say that, because there are so many different branches. Some workshops will work ten hours a day, others nine hours, and some even more than ten or eleven a day.

Q.—Is it within the control of the moulders as to how many hours they will work? A.—No; sometimes they are kept late because they cannot get the iron when they want it.

Q.—Have they to work after the casting is done? A.—Yes; till it is all poured off, taking the castings out of the sand and fixing the sand for the next day. In large shops for stove-plating and machinery this is left till the next day.

Q.—There is very much of it, I believe, hard and laborious work? A.—Yes.

Q.—In even the best shops the work is so hard that I suppose the men are covered with perspiration? A.—Yes; in the stove-plating shops you can generally take your under-shirt off and wring it out at any time of the year, even when the temperature is below zero outside.

Q.—Is there any way to make this work less laborious? A.—No; they have tried to do so often; they have tried to introduce different kinds of machinery, that has been intended to try and facilitate moulding, but it does not alter the character of the work, which seems laborious. It has never been successful, so far.

Q.—Can anything be done in the way of shortening the hours, so that the men will be less fatigued at the end of a day's work? A.—We have tried to do something in that way, but the business appears to be run in seasons. We have seasons when there is nothing to do, and then when there is work we must do all we can. There is no disposition on the part of the employers, I think, to spread the work over the year. The business runs in the way I have said, and we have no power to control it.

Q.—Could employers extend the work over a greater portion of the year than they do at present, and thus shorten the day's labor? A.—They used to do so years ago, but of late years, and especially in the stove business, they calculate that there have been a great many changes, in the patterns, from new designs being introduced, and the difficulty is to know exactly what they are going to sell.

Q.—It is necessary, I believe, to shut down for sometime to sort up and get ready for the season's operations, is it not? A.—No; nothing more than to take stock. They are changing their styles all the time, even when we are working. It is not necessary to shut down more than a few days.

Q.—It is the custom to shut down? A.—Sometimes it is necessary to shut down for a few days to repair the engines, or something of that kind.

Q.—How long have you been employed in Hamilton as a moulder? A.—Eighteen or nineteen years.

Q.—What is the average term the shops are closed, taking not one year but a series of years—taking such a series of years, what time would they be shut down in the stove foundries? A.—We have appointed a committee of the union to figure this up, and the result arrived at was, that taking all the moulders together that we are not employed more than 60 per cent. of the time.

By Mr. HEAKES:—

Q.—Would those be engaged all the year round? A.—According to the calculation made they do not work more than six out of every ten days. Some do not work over five or six months at a time, for they have nothing to do.

By Mr. FREED:—

Q.—When the moulders are at work what would be a fair average wage for a moulder to earn per week—do not take the very best men nor the poorest men, but take an average man, so as to give us a fair statement? A.—We place the average, taking a series of two or three, at about \$1.35 a day. Hardly two men will make the same pay.

Q.—You have gone into a calculation in this matter in your union? A.—Yes; a committee was appointed by the union, which met and went into the question minutely, and they have agreed, at about that amount.

Q.—You think, then, that an average day's earnings for a moulder in Hamilton would be \$1.35? A.—That is taking the body; we were figuring for the whole body.

Q.—Did you count 200 days for the year? A.—We counted the number of days we work, the individual time, because that would come to very much more.

Q.—The rate of \$1.35 per day would come to a little over \$400 a year as the average earnings of a moulder in Hamilton. Am I correct in that statement? A.—We did not figure it up for the year. I don't think it comes as high as that; that was the estimate we arrived at, however—\$1.35 per day.

Q.—Do many of the moulders save money? A.—Yes; quite a number of them; that is to say that some of them are able to put up houses of their own.

Q.—Have you been able to buy a house? A.—I did own a house, but I sold it again.

Q.—In order to save money I suppose the men must be very economical, temperate and prudent? A.—Yes.

Q.—Have you had any serious labor difficulties of late? A.—We had some difficulty last summer.

Q.—What did it grow out of? A.—In order to understand the nature of the difficulty I will endeavor to explain it: Some six or seven years ago we received a rise of wages; times were pretty good here then. It was a rise on the rate prevailing at that time of 10 per cent., and afterwards of 20 per cent. It continued for about two years, and it was taken off five years ago this winter. When it was taken off we insisted that when times became sufficiently good to warrant its payment it would be put on again. Years went on, and times appeared to be pretty good again last summer. The men had been waiting for the increase to be again put on, and it appeared as though it would not be given them; the men then asked for it, and the men then decided that they would refuse to work unless some settlement was arrived at. They were out

of work eight or nine weeks, and then an agreement was entered into between the employers and the men.

Q.—How was the compromise or agreement reached? Was it by a conference between the men and the employers? A.—Yes; a committee waited upon the employers and stated their grievances, and the employers sent the committee to the Moulders Union; and those two bodies met, until finally an agreement was arrived at.

Q.—Was the conference conducted in a friendly spirit as between the men negotiating, or was there any hard feeling displayed? A.—It was very friendly. I was on the committee at the time.

Q.—A good spirit was displayed on both sides? A.—A very good spirit was displayed on both sides.

Q.—Have you any special statement to make to the Commission; I gather you have? A.—I have a statement to make. There were ten men appointed on this committee, six of whom were to give evidence. We took up those papers you sent to us and looked over them and considered the different subjects.

Q.—You are president of the union I believe? A.—I am secretary of the union.

By Mr. ARMSTRONG :—

Q.—In regard to the difficulty you had last summer, was it a strike of the men or was it a lock-out on the part of the employers? A.—It was a strike.

Q.—What was the compromise? A.—The men asked 10 per cent. advance, and the compromise arrived at was that we should receive 5 per cent. for six months and that the 10 per cent. should be granted for twelve months, commencing on March next.

Q.—Have those promises been carried out? A.—So far the 5 per cent. has been given and we expect the additional 5 per cent. in March for the next twelve months.

Q.—Was not the promise made that steadier work should be given besides the 5 per cent.? A.—No; the men were asked whether they demanded an increase on account of the rise of prices; but the reason we gave was that last year it was understood that we would be given work for so many months the men had to live whether they were working or not, and that was the reason we felt we should have more wages when we were working in order to be able to live during those portions of the year when there was nothing to do.

Q.—Did not the difficulty in St. Louis about supplying the patterns to outside shops have something to do with the strike in Canada? A.—No; they did not send any of their patterns across the line; it did not affect us here whatever.

Q.—Are there any benefit branches in connection with your organization? A.—Yes; we have a sick benefit in connection with it. There is also a provision so that if a man is injured he will receive \$4 a week so long as he is unable to work. We have also a fund to bury our members.

Q.—Is it a fact that in your union one of its principles is to resort to arbitration before you resort to the extreme measure of a strike in labor troubles? A.—Yes; we do not believe in resorting to a strike except as an extreme measure; we believe in endeavoring to do away with that as much as possible, and never fall back on that only as a last resort.

By Mr. HEAKES :—

Q.—Are the workmen in your trade in favor of the establishment of a bureau of labor statistics at Ottawa? A.—We are favorably disposed to that, and we believe it would be a benefit to all classes concerned.

Q.—Another object for which the Commission was appointed was to ascertain, if possible, from the workmen themselves, some method of avoiding these continued strikes, by adopting some method of conciliation, or arbitration or some other means in the settlement of disputes; and the evidence taken now will have a very large bearing on that subject. What is your opinion in regard to it? A.—The settlement arrived at in our trade appears to be a very good one. We have entered into an agreement on the part of the union with our employers not to ask for a rise

of wages for eighteen months; we did that when the settlement was made. They agreed to give that advance and not to reduce the wages during that time. By the agreement arrived at the employers will be able to figure on the wages they will have to pay, and this will be beneficial both to the union and to the employers. They have an association and we have a union, and representatives of the two met together and entered into this agreement.

By Mr. McLEAN:—

Q.—Has foreign contract labor interfered with your business? A.—It has done so in the past. We have had some difficulty with that, but not of late.

JAMES STEPHENSON, Moulder, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You have a statement to make to the Commission, I believe. Please make it?  
A.—A committee of our union considered the questions sent by the Commission, and the feeling of our body is expressed briefly in the statement I am prepared to make. The answers we give are as follows:—

1. Regarding iron-clad contracts.—We have suffered much in the past, but have overcome the evil by organization.
2. Regarding child labor.—We have no children in our trade. The work is too laborious; we believe there are a great many children under fourteen years of age working in the city, and think it wrong. We condemn the practice of pauper children being imported into this country, and look upon it as being no better than a mild form of slave trade, when we take into consideration the treatment that many of them are subjected to. We know by experience that there is no scarcity of children in this country, finding it difficult to place our own.
3. Regarding the Employers' Liability Act.—We approve of the Ontario Act and would like a Dominion Act of a similar nature.
4. Regarding the truck system.—We disapprove of it.
5. Regarding foreign contracts.—We endorse the Ontario Act and ask for a Dominion Act.
6. Regarding rents.—There is no great change. Rents are slightly higher, but there is better accommodation for the money.
7. Regarding weekly payments, and pay days.—We approve of weekly payments, and think Friday the best day.
8. Regarding apprentices.—We think they should be legally bound, and would like a Dominion Indenture Act.
9. Regarding hours of labor and wages.—We believe eight hours should constitute a day's work. At present \$2.25 a day is the rate of wages. Taking into consideration the loss of time, over which we have no control, the average wages in our body does not exceed \$1.35 a day by the year.
10. Regarding the purchasing power of wages.—Not much change, but less to purchase with.
11. Regarding wages in Canada as compared with Great Britain and the United States.—Not much difference between Canada and the United States; not as well paid for amount produced as in some parts of England.
12. Regarding arbitration.—We have no experience; can see no good in it.
13. Regarding the effects of organized labor.—Through organization we are enabled to care for our sick, bury our dead and get compensation for our labor, which we could not get without it.
14. Regarding strikes.—Though our last resort, still we believe that all labor agitation tends to benefit all classes of toilers, even though those directly engaged in the strike might fail.
15. Regarding trusts.—Think trusts needful, as your living is made so precarious

that most men would find it difficult to live without trust—if that is the meaning of the word “trust” there.

By Mr. FREED :—

Q.—What is meant by the word “trust” there is a combination or ring. Does such exist in Hamilton? A.—Yes; we know where it does exist.

16. Regarding the fining of employés.—Don't approve of it.

By Mr. ARMSTRONG :—

Q.—Does it exist? A.—I could not tell you; I don't think it exists in our business to-day. I have seen employés fined in our business for the breaking of an article. You would be fined so much, and if you didn't like it you could quit.

Q.—The men don't have anything to say in regard to the reduction of the fines? A.—No; fining was the case in dry-goods stores in the city.

17. Regarding Sunday labor.—Think all Sunday labor should be abolished.

18. Regarding industrial schools.—Don't see the need of them, as children would have to serve an apprenticeship at any trade they might work at afterwards. We especially object to industrial schools for the foreign element.

19. Regarding tenement houses.—We have none; don't want any.

20. Regarding immigration.—We are opposed to assisted immigration.

21. Regarding sanitary arrangements.—In dwellings, generally fair; in shops and factories, room for great improvement.

22. Regarding conspiracy laws and black-listing.—Don't believe in either; think both should come under the power of law.

23. Regarding workingmen's co-operative and benefit societies.—Believe in them; Iron Moulders' Union is one.

24. Regarding convict labor.—Think convicts should be employed at something that would least compete with free labor; condemn the practice of letting prison labor to contractors; what they produce should be sold at the same price as the product of free labor.

By the CHAIRMAN :—

Q.—With regard to convict labor, I am aware there is only one contract now existing, that with the Ontario Government; that has been stated will very shortly expire, and will not be renewed? A.—Yes; I believe so. That is very simply an expression of the feeling of the body.

By Mr. FREED :—

Q.—You have referred to the matter of employers' liability and to foreign contracts: are you aware that the question of property and civil rights comes wholly within the province of the Provincial Legislatures, and that the Dominion Parliament has no control over that subject? A.—No; I was not aware of it. I thought it was proper that there should be a Dominion Act. We look to the Dominion Government in this matter. If such an Act cannot be applied to all the Provinces it is not fair. For instance, a manufacturer in Ontario is brought under the Employer's Liability Act, whereas a manufacturer in Quebec who is turning out the same work is not. The Ontario manufacturer is thus at a disadvantage. Either the Quebec Legislature should pass a similar Act to the Ontario Act or the Act should be passed by the Dominion Parliament, controlling the matter. We think it is unjust that the Ontario manufacturer should be placed under a special Act while a manufacturer in Quebec or in any of the other Provinces goes free.

By Mr. McLEAN :—

Q.—How many contracts are there existing at present for prison labor? A.—We don't know at present.

By the CHAIRMAN :—

Q.—We have been told by officials that there was only one contract that would not be renewed? A.—The members of this body object to such contracts.

Q.—Did you give the question of factory laws any consideration? A.—The factory law does not really come into our business; I don't think we did.

Q.—I understood you to say that the shops could be made a great deal more comfortable: would not the Factory Act cover that? A.—I don't know.

Q.—Have you seen the factory inspector at your premises? A.—I have seen him; he was in our shop.

Q.—Did he condemn anything? A.—He did not speak to any of the men I know of. He went around with the master mechanic.

By Mr. ARMSTRONG :—

Q.—Did he speak to the men? A.—No; not that I know of.

By the CHAIRMAN :—

Q.—Did he condemn anything that you are aware of? A.—Everything was right, so far as I have ever heard.

By Mr. HEAKES :—

Q.—I have heard it stated that in such shops as yours there is not an opportunity given for the escaping of steam, through lack of space, and that the shop is therefore unhealthy: have you found it so? A.—I find it a very unhealthy business at best. You can build a high and lofty shop and still it does not seem to clear the steam away, because the more cold air that comes into the shop in the winter the more the heat is condensed into steam and thrown down on you. I believe that fans would make the shop more free from dust, which is a bad thing on a man's lungs at any time, and especially when you are in it very long; but I do not see how in our business we can get rid of the steam, and heat, and dust to the full extent. We have to contend with those matters, and have to risk our bodies against them.

By Mr. GIBSON :—

Q.—Could not the ventilating pipe be so arranged as to carry off the steam? A.—I have never seen it applied.

By Mr. McLEAN :—

Q.—Is there a suction fan? A.—There is a little one in Gurney's. They have a mill there for making a particular kind of sand castings, which gives a better finish than can be obtained by castings made in the ordinary way. A great deal of dust is caused by it, and the suction fan is applied that carries it off. It acts very well, and I think that large suction fans could be made to take away the dust.

By the CHAIRMAN :—

Q.—Has your association ever considered as to what work convicts should be made to do; or, in your opinion, should they be allowed to remain idle? A.—That is a knotty question that should be determined by our legislators in Parliament. We send them there for such purposes.

Q.—And they will turn around and ask the opinion of such an association as yours as to what kind of labor the convicts should be employed at? A.—Our body thinks they should be employed on such labor as would least interfere with free labor, and if the Government sells the products of their labor they should be sold at an equal price with the products of free labor. We see no reason why, if there are competent men in prisons, that they cannot produce certain articles just as well as free labor, that is if there are proper appliances as regards machinery, and so on; and if so, the government might as well sell their products just as high as those of free labor are sold.

By Mr. HEAKES :—

Q.—Do you not think that all the goods manufactured in prisons and sold in competition with the products of free labor should be stamped as convict labor? A.—It would be a good idea.

By the CHAIRMAN :—

Q.—Do you not think that such a system would prevent people from buying them? A.—Yes; there are people who would be prejudiced against them.

Q.—Then, in that case, the work would not be done? A.—It would be done to a certain extent.

Q.—We all agree, I suppose, that the men must be employed at something? A.—Yes; we don't believe that the convicts should be kept in idleness.

By Mr. ARMSTRONG :—

Q.—Did your body ever give a thought to the manner in which the wealth produced by these convicts in prison should be distributed? A.—Yes.

Q.—What are your ideas? A.—We believe that these men producing goods should have part of their wealth so produced for the benefit of their families. If a man is in prison his family has to be supported by some one, and in fact the rate-payers have to support the men in jail. We believe that a portion of the profit on the goods turned out by the man should go to himself or his family for their support.

Q.—You believe he should be paid the full rate of wages given for the article when manufactured by free labor? A.—We don't believe that, because the convict is kept free of expense. He is kept, I say, by the Government, and he has no board to pay, and we don't consider he should get the full rate.

By Mr. McLEAN :—

Q.—If there are 100 convicts in the Central Prison manufacturing stoves, who has to pay the taxes for their support? A.—We have.

Q.—The moulders have? A.—We, the people, have; this city or this community which sends them there, and at the same time has to sustain their families while the men are laboring there.

Q.—Would not the moulders have to pay more than any one else? A.—Certainly, on account of the competition that would be thrown into their trade.

By Mr. HEAKES :—

Q.—When you were discussing the question of industrial schools, to what class of schools did you refer? A.—We have no sample that I know of to go by. The way we looked at it was as regards schools for taking children who are orphans or had been deserted.

Q.—I refer to technical education of boys to learn the trades—a school where the elementary portions of science as applied to mechanics would be taught? A.—Would they be taught elementary subjects that would be applicable for doctors of medicine and masters of law?

Q.—No; the elementary principles of mechanics would be taught in the schools. While it would not teach a boy a trade, would it not give him a knowledge of the theory? A.—We don't think the Government ought to expend money in that way, because in any event the boy would have to go and serve a certain time under competent men. It is want of time, I mean.

Q.—Would not the adoption of such a system make better mechanics of our boys? A.—Where I served my time, in England, the period of apprenticeship was seven years. In this country, where the time is only four years, we turn out smarter men than under the seven years' apprenticeship. In the old country boys are taken about fourteen years of age, but here they come in when they are eighteen or nineteen, learn the trade and come out men. That is the advantage we have here, according to my experience. That is the reason we see no good in industrial schools.

By Mr. ARMSTRONG :—

Q.—Referring to fines for breakages: do you refer to the breakage of a pattern or of a mould? A.—I had reference to the breakage of a pattern from which you make a mould. For instance, you take a part of a stove or machine, and you are making that; suppose you break that piece you will be fined. You may not break it wilfully, but the pattern may become broken in some way. If you break it entirely you pay for the loss, or you have to pay for the repairs; that is the system. I should mention, however, that it is not enforced now; it has been done, but it is not done now.

JOHN MILLER, Moulder, Hamilton, called and sworn.

By Mr. FREED :—

Q.—Do you corroborate the statement of the previous witness, John Stephenson?

A.—Yes.

JAMES BARTHOLOMEW, Moulder, Hamilton, called and sworn.

By Mr. FREED :—

Q.—Do you corroborate the statement of the previous witness, John Stephenson?

A.—Yes.

MICHAEL BASKWILL, Moulder, Hamilton, called and sworn.

I desire to correct the statement which a witness made this morning in regard to the price paid Grand Trunk moulders.

By Mr. FREED :—

Q.—What part of his statement do you object to? A.—I object to the prices stated to have been paid Grand Trunk moulders.

Q.—What are the rates of wages paid in the moulding shops of the Grand Trunk? A.—Twenty-one cents to twenty-five cents per hour; there is only about one man who gets 25 cents.

Q.—The average would be about how much? A.—The lowest is about 21 cents; the average is about 22 cents.

Q.—Have you heard the statement as regards wages made by the previous witness; is he about correct? A.—Yes; he is about correct. That gentleman has only worked in the city about ten months, and never worked in a stove-shop, and yet he assumes to tell this Commission what wages stove-moulders make. I don't believe he ever was in a stove foundry in the city; he says there are only twelve foundries here, whereas there are fifteen.

JAMES RIPLEY, Moulder, Hamilton, called and sworn.

I wish to make a remark with regard to the statement made by Mr. Stephenson in reply to Mr. Armstrong's question of whether there was a lockout. It was a strike here in the city, but it was a lock-out in Toronto. The men asked for an advance in Toronto and they went to work, but we did not go to work, and it amounted to a lock-out in Toronto.

By Mr. FREED :—

Q.—You are the representative of your body in the Central Labor Union? A.—I was, but we have withdrawn. With reference to sanitary arrangements, I can state one thing which I think would be to the advantage of moulders, and I have had an experience of seven years. In Pennsylvania and in most parts in the east they have bath-rooms, and when you are done work you can use them. The bath-rooms are there, and a boiler with hot and cold water, with racks for clothes. You change your clothes and wash all over, so that you take none of the dirt home, and you are entirely dry. It is a great saving of clothes, as well as of your constitution.

Q.—Are not they used in some foundries in Hamilton? A.—I don't think I have seen any.

By Mr. HEAKES :—

A.—Where do the men change their clothes in the foundries? A.—They change them at home. You can generally tell moulders on the street, because they are so dirty. In Pennsylvania you could not tell them from any other mechanic. They

go dressed to the shop, and there they change their clothes. Another thing: there we got home three-quarters of an hour earlier and got washed and dressed by six o'clock, whereas here it is in the neighborhood of seven when we get there.

By Mr. ARMSTRONG :—

Q.—Is there much difference in the wages paid in stove moulding between here and Pittsburg? A.—Yes; there is quite a little difference, and it is really to us a disadvantage. Some of it can be accounted for in this way: that here the manufacturers have to make a great variety of work and there is a constant change of patterns, while there they do more in specialities.

Q.—Is plate-work done by the day or by the piece? A.—By the piece.

Q.—And agricultural implement work? A.—Mostly by the piece. Pretty nearly all set work, that is, regular day's work, is by the piece.

Q.—Does your body prefer piece-work? A.—Well, we have not got it settled; some are strong on day-work and others like piece-work.

Q.—Can you add anything to the ideas of the previous witness as to fining for breakage? A.—We have what we call discounts. We suffer a great deal in this city in loss from the iron we get, on account of the slag, which we do not have in the American iron.

Q.—Where do you get your iron from here? A.—I think most of it is from Scotland; I would not be sure, but it is an ore which has this slag in it.

Q.—What length of time has a boy to serve to become a journeyman? A.—Four years.

Q.—We heard in London otherwise. Can a boy learn his trade as a stove-moulder properly in three years? A.—No; I do not think he has experience enough in that time to be a competent man, changing from one shop to another. He may be qualified for that one firm, but a great deal of changing is customary with them, and I don't think that four years would be enough.

Q.—You think four years is the best all round, for the good of the boys and the good of the firm? A.—Yes, our association has been a benefit to the employers in one case here. There were some apprentices that they would not take back unless they gave a bond, and it appears that some of the boys were not in a position to do so. They applied to us for cards, and we appointed a committee to see the firm and ask them to take the men back, and they agreed to do so; so that in that case the institution was a benefit. We have a rule in our union not to grant any run-away apprentices their cards, but to make them go back and serve their time. Speaking of the yellow slag, the American iron does not have it, and take first-class stoves, where they are very important, it is discounted. The price we get is taken off and the casting is moulded over again, so that there is considerable loss in that direction.

Q.—You do not get paid for imperfect castings? A.—No; in the stove-plate trade it passes the foreman, and it is checked in the gangway. There it is mounted and if the moulder mounts it the inspector goes over it again, and if he objects it is taken down and the men, of course, lose the amount of work which is condemned.

Q.—That is work paid by the piece? A.—Yes; we are paid for castings that are supposed to be as near perfect as possible, but the difficulty is in the iron.

By Mr. WALSH :—

Q.—You are speaking a while ago of the lock-out in Toronto. What lock-out had you reference to? A.—In Toronto they made a demand for 10 per cent. advance; it was refused and they went to work. We made a demand somewhere about the same time, and we didn't go to work, and consequently the firm shut down there until the difficulty was settled here.

Q.—Did the employers in Toronto state no reason why they shut down, besides the reason with regard to giving what you required? A.—I can only tell from hearsay.

Q.—You did not know anything about it yourself? A.—No.

Q.—Do you know that they were short of coal in Toronto in that establishment? A.—The statement I have made was made to me by a moulder.

Q.—You do not know anything about the lock-out in Toronto? A.—Yes; I know something of it.

Q.—Do you know whether it was a lockout or not? A.—In my opinion it was.

Q.—What do you ground your opinion upon—the statement of some one else?

A.—A statement was made that they would not open until the affair was settled in Toronto.

By the CHAIRMAN :—

Q.—That was the same firm? A.—Yes.

ALEX. MCKAY, M. P., Hamilton, called and sworn.

By Mr. FREED :—

Q.—You are a member of Parliament for Hamilton? A.—Yes.

Q.—You have been mayor for two years? A.—Yes.

Q.—Your term has just now ended? A.—It ended last Monday.

Q.—Before you were mayor you were an alderman for some time? A.—Yes; for seven years previously.

Q.—So that you have a pretty good knowledge of public affairs in Hamilton? A.—A moderate amount of knowledge.

Q.—Are you able to give us any idea of the amount of destitution in Hamilton? A.—I cannot tell you the exact amount. I can tell you that there is a certain amount in Hamilton, and I presume there is in all cities of the size of Hamilton.

Q.—Are those persons who are chronic applicants such because they are unable to get employment? A.—There are a great number who are not chronic applicants. There are several classes of applicants. There are chronic applicants, as in other cities, who apply every winter, and not only during the winter but throughout the year. They have to have a certain amount of relief. All applicants are not chronic; they change.

Q.—Are those who are chronic applicants such through illness, or physical disability, or mental disability or old age, or are they able-bodied people? A.—Of those that go by the term "chronic applicants" a large proportion are old women and old men, and who apply on account of old age, poverty, and so on.

By the CHAIRMAN :—

Q.—They are unable to work? A.—Yes.

By Mr. FREED :—

Q.—As to occasional applicants: what class do they represent? A.—Occasional applicants are people who come into the city and have not been successful in getting work.

By Mr. McLEAN :—

Q.—Are there any immigrants? A.—I have had applications for relief from people who have come into the city, and from immigrants.

By Mr. HEAKES :—

Q.—Can you form an idea about what proportion of the applicants would be immigrants? A.—A very small proportion.

By Mr. FREED :—

Q.—In what periods of the year are these applicants for relief most numerous? A.—During the winter season; the extremely cold weather brings them out.

Q.—Are many of them permanent residents of the city? A.—A great number of them are.

Q.—To what do you attribute the fact that they are compelled to ask for relief? A.—A great many permanent or continual applicants are widows with families to support—a greater or less number of children.

Q.—Are there any class of working people in the city, who work during the summer and are idle during the winter or portions of it? A.—There are some cases of that kind.

Q.—Bricklayers? A.—Not many of them.

Q.—Brick-makers? A.—Not many.

Q.—Day laborers? A.—Quite a number of day laborers, who have not succeeded in laying up anything in the busy season of summer to keep them and their families during the winter.

Q.—What would be the nature of the relief granted to those? A.—The city does not grant much besides fuel, and in exceptional cases groceries and flour. They work in conjunction with the benevolent societies connected with the different church organizations and the national societies.

By Mr. CARSON :—

Q.—Are many of the cases brought to destitution by strong drink? A.—There are cases brought to that condition by strong drink.

Q.—Many of them? A.—Quite a few.

Q.—Are they mostly young, or the older class of laboring men? A.—It takes in all classes, but I think poverty is not altogether caused by strong drink.

By the CHAIRMAN :—

Q.—Not more than elsewhere? A.—I think we have here as sober and steady a lot as you can find in any city. There are certainly cases brought to poverty by strong drink. A great many cases of destitution arise from the loss of husbands—many widows are left with small families, and of course this is not due to any fault of theirs; it is simply a misfortune for them.

By Mr. FREED :—

Q.—Are corporation laborers employed during the winter as well as during the summer? A.—Not as steadily during the winter as during the summer.

Q.—Do any of them become destitute during the winter? A.—We have had applications from some who have worked for the corporation during the summer season.

Q.—Are extra exertions made by the civic authorities to provide work for those of them who are destitute? A.—We have on several occasions during the winter provided work to give employment to people out of work. We have started civic works. Some years it takes the form of stone-breaking, and at other times opening up of new streets; quite a number of years ago they used to build sewers during the winter.

Q.—Has that been necessary of late years? A.—We have not done any of that of late years.

Q.—What rates of wages do corporation employes receive? A.—During the summer \$1.37½ a day for ten hours' work.

Q.—And in the winter? A.—I think on the 1st of November it is lowered to \$1.25, and they work nine hours in the winter. The light does not continue long enough, and I think 12½ cents a day is cut off during November.

By Mr. HEAKES :—

Q.—And that is the reason, is it? A.—I think so, though I am not on any of the committees. That would be regulated by the sewer committee and the board of works.

Q.—Are you aware that in any other city the same practice prevails of cutting the wages during the winter? A.—I could not say.

Q.—Do you know that in Toronto they receive the same wages the year round? A.—I don't know whether they do or not.

Q.—And work nine hours a day all the year round? A.—I don't know that.

Q.—State the proportion of cases from strong drink and from pure misfortune? A.—I can by referring to the books I have kept for the last two years, but I could

not at the present moment. There are quite a number of cases of destitution caused by strong drink, but I think a very large proportion are caused by misfortune or circumstances which the people themselves could not obviate.

Q.—Quite a number of cases is caused by misfortune? A.—Yes; a considerable number, or something which could not be prevented.

By Mr. ARMSTRONG:—

Q.—Is there a large amount of corporation work in Hamilton done by contract?

A.—Last year a good deal of the public work was done by daily labor, such as building sewers. The contract system was abolished and the sewers were built by daily labor, but we still put down the block-paving by contract.

By Mr. HEAKES:—

Q.—Do you find in constructing sewers on the principle of daily labor that you do as good a class of work? A.—I believe we get equally as good a job done, if not better; I am satisfied it don't suffer by being built by daily labor.

Q.—Was it as economical? A.—I could not give you the figures at present.

By Mr. ARMSTRONG:—

Q.—Don't you think that if corporation work is done immediately under the supervision of the engineer and the board of works that the work would be better done, and spread over the winter to a greater extent than now, under the partial contract system, and that it would be better for the poorer classes? A.—I believe it would be better done; I would not say it would be as cheaply done, but there is no doubt it might be spread over a longer time and continued during the winter; that is, if the intention was to do that, it could be done.

Q.—And if it had the effect of preventing people from losing their manhood or womanhood by begging, through no fault of their own, it would be a benefit? A.—If it could be done, by keeping up a person's self-respect.

Q.—Exactly: that is to say, that these people by begging and living on charity lose their manhood or womanhood to a certain extent? A.—Certainly. There will be people who will beg or who will not work at any rate—people who will not save anything.

By Mr. FREED:—

Q.—Has much stone breaking been provided by the corporation of late for persons who could not get work? A.—Almost every winter. There was some done last winter and some the previous winter.

Q.—How do those men break stones—by the cord or by the bushel? A.—By the cord.

Q.—What rates are paid, do you know? A.—I think \$1.75 was paid last winter. There are two classes of stone, one soft and one hard, and they paid different prices; for the hard stone they pay more, but I could not tell you the difference in the prices. There are two qualities in the mountain where we get the stone.

By Mr. ARMSTRONG:—

Q.—Are laboring men immediately under the employment of the corporation paid weekly, monthly, or how? A.—Fortnightly.

Q.—Do the workingmen prefer that? A.—We have not had much grumbling about it; they are all glad to get corporation work under that system.

Q.—Did they ever make a request to be paid weekly? A.—I think a change was made two years ago, but for some reason or other it has been changed again. The system of paying was changed from fortnightly to weekly. I could not tell how long it continued, but for some reason which I could not give it was changed again to the fortnightly system.

By Mr. FREED:—

Q.—Do any men who work for the corporation save any money? A.—Well,

that is a pretty hard question. I know of men who have been working for the corporation who now have money and who own their own houses.

By Mr. McLEAN:—

Q.—Are there any pensioners working on the corporation? A.—Yes; there are some.

Q.—Those are the men most likely to have homes? A.—Well, I was not thinking of pensioners; the people who present themselves to my mind are not pensioners.

By Mr. HEAKES:—

Q.—Have they families grown up and earning money as well as themselves? A.—You are going into matters now as to which I can only give you general impressions. I know there are men who have worked on the corporation who have their little homes now.

By Mr. ARMSTRONG:—

Q.—Did they acquire homes immediately out of their wages in the corporation? A.—Well, it is pretty hard for a man to raise a family and save much on the wages he gets from the corporation. Some live more economically than others, and live probably as none of us would like to live, for the purpose of accumulating these properties. Take a man with two, three, four or five children, and it is pretty hard for him to make both ends meet and besides to accumulate money.

By Mr. FREED:—

Q.—Do many of the daily laborers in Hamilton own the houses in which they live? A.—I can think of several—quite a number.

Q.—Have you examined at all the voters' list of the city of Hamilton? A.—I looked over it since I have been in the room.

Q.—Do you find very many persons who are owners of houses and who are marked as laborers in the list? A.—I see some.

Q.—Considerable numbers? A.—Quite a few.

By Mr. HEAKES:—

Q.—Can you tell us whether those people have been left property by their parents or acquired it by daily labor? Can you tell us by looking over the assessment roll? A.—Well, the parents of some of them hadn't much money. I could not tell when a man is marked as an owner anything about how he came to be an owner.

By Mr. McLEAN:—

Q.—Do you know any laboring men who get \$1.50 per day? A.—There are laboring men who get \$1.70; they belong to the Laborers' Union, and they work at buildings, and so on.

Q.—Those men would have their names on the voters' lists as laborers? A.—Certainly; they are laborers.

By Mr. ARMSTRONG:—

Q.—Is the assessment roll in your city printed yearly for the criticism and comments of the mass of the people? A.—We have had it printed twice in two years.

By the CHAIRMAN:—

Q.—What does it cost? A.—The last time we had it printed it cost between \$400 and \$500.

By Mr. ARMSTRONG:—

Q.—Were there any good results from it, as regards a more equitable assessment? A.—I didn't notice any results, one way or the other. A large number of the lists were printed and left in the city clerk's office for distribution, and they were not circulated; they were not called for. They were there for anyone who wished to see them.

By Mr. FREED:—

Q.—Do you know of many mechanics who own their own houses in Hamilton?  
A.—Yes; I know of quite a number.

Q.—Would you be able to form any estimate of the proportion of property owners in Hamilton who are working people, mechanics or daily laborers, men of the working class? A.—I could not give you any proportion at present.

Q.—The numbers are considerable? A.—I have a great many friends among the workmen, and I may intimate that quite a number do own their own houses, but whether they are entirely paid for I don't know. I know some are, but probably quite a number are not; they pay for them as they work. No. 7 ward, in the north-eastern part of the city, is populated by mechanics, a large number of whom own their own places, but whether many of them are paid for I could not say.

Q.—Do you know of many working people in Hamilton who are able to accumulate means for their own support in old age? A.—I know instances of people who have worked, and are now living comfortably without working.

Q.—Any of those common laborers? A.—I think among the common laborers it is rare, though there are exceptional cases where men seem to accumulate property. I don't know how it is done, but it is done.

Q.—Is the state of comfort of the people in Hamilton as great as it has been in former years, or less great, or has it remained stationary, as to the working people?

A.—I should certainly say that it was greater. I have been in Hamilton all my life and have mixed with all kinds of people, and I think the state of comfort at present is fully as great as it has been during any previous time in the history of Hamilton, since I have been able to take any choice or form a judgment.

JAMES SHARKEY, of Hamilton, called and sworn.

By Mr. FREED:—

Q.—You work for Messrs. Tuckett & Son? A.—Yes.

Q.—How old are you? A.—I will be fifteen next April.

Q.—What do you do there? A.—Stem tobacco.

Q.—How many hours a day do you work? A.—Ten hours a day.

Q.—What time do you go to work in the morning? A.—Half-past seven.

Q.—When do you get through at night? A.—Six.

Q.—How long a time have you for dinner? A.—One hour.

Q.—It is nine and a-half hours from the time you begin till you quit? A.—

Yes. Q.—Are you paid by the week, or by what you do? A.—By the week.

and \$5. Q.—How much can you earn there? A.—Wages run from about \$2.50 to \$4.50

Q.—Do you make that much? A.—I make \$3.50.

Q.—Do you live with your parents? A.—Yes.

Q.—Do you take your money home to them? A.—Yes.

Q.—How old were you when you quit school? A.—I can hardly tell.

Q.—Were you fourteen? A.—No.

Q.—Thirteen? A.—No; I was about ten or eleven.

Q.—How did you come to quit school at so early an age? A.—I went to work with a tailor on James street as a message boy.

years. Q.—How long have you been working with Mr. Tuckett? A.—Nearly two

Q.—Were you fourteen when you went there? A.—Not quite; very nearly.

Q.—Do you take your money home to your father? A.—Yes.

Q.—What does your father do? A.—He is a laborer.

Q.—Are you very tired when you go home at night? A.—Not very; it is not very tiresome work.

Q.—Are you learning the trade, so that you will be able to earn more money?  
A.—Yes.

Q.—Do the men around you try to teach you anything, so as to help you on?  
A.—Yes; they try to teach you how to roll.

Q.—Is there much bad language used there? A.—Not very much.

Q.—Do you like the work? A.—Yes; very well.

By Mr. GARDINER:—

Q.—Did Mr. Tuckett give you any presents at Christmas time, or any time?  
A.—Yes; the Christmas before last he did.

Q.—How much was it? A.—He gave 25 cents to all the stemmers.

By Mr. HEAKES:—

Q.—Are there many boys working there? A.—Yes; a good few.

Q.—Are there many younger than you? A.—I hardly know any.

Q.—You are the youngest? A.—There may be one that is about as young.

Q.—Are there any little girls there? A.—Yes; girls of fourteen or fifteen.

Q.—Do they sit down at their work all day? A.—Not all day; they can sit or stand, just as they like.

WILLIAM HOBDEN, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are employed at Mr. Tuckett's also? A.—Yes.

Q.—What do you do? A.—I am a stemmer.

Q.—How long have you been there? A.—About three years and a-half.

Q.—How old are you? A.—Eighteen next month.

Q.—What can boys earn who have been there as long as you have? A.—About \$4.50 a week.

Q.—Are you constantly employed the year through? A.—We have holidays in summer time.

Q.—Do you live with your parents? A.—Yes.

Q.—Do you take your money home to them on Saturday night? A.—Yes.

Q.—What does your father do? A.—He is a tailor.

Q.—Do you expect to remain long at stemming; or have you promotion in your mind? A.—I think I will learn the trade.

Q.—Do you consider you are learning the trade now? A.—I consider they will put me in another year at making lumps for plugs.

Q.—You think then you can earn more wages? A.—Yes; I think so.

Q.—At what age did you leave school? A.—I hardly know—about thirteen, I think.

Q.—Did you think it was necessary to go to work when you were thirteen?  
A.—I would sooner work than go to school.

By Mr. GARDINER:—

Q.—Do you expect to get more wages when you are more advanced? A.—I expect to get a little more.

Q.—You are just working there now as an ordinary hand? A.—Yes.

Q.—Is it customary in that concern to give you more as one of the rules of your apprenticeship? A.—I do not know.

By Mr. HEAKES:—

Q.—Do you know what boys generally get when they first go to learn as apprentices? A.—I do not.

Q.—Are the rooms nice and comfortable to work in? A.—Yes.

Q.—Plenty of light and heat? A.—Yes.

By Mr. FREED :—

- A.—Are they ever too warm for comfort? A.—Not that I know of.  
 Q.—Are you learning the trade as you go along? A.—No; I am stemming.  
 Q.—Do you not get odd chances? A.—Yes.  
 Q.—It gives you a little help? A.—Yes.  
 Q.—So that when you come to serve an apprenticeship you are not a green hand,  
 —you know something about the business? A.—Yes.  
 Q.—Do they ever take on apprentices who have not worked at stemming? A.—  
 They never take them on unless they have worked there a long time.

JAMES BOWEN, Hamilton, called and sworn.

By Mr. FREED :—

- Q.—You are employed by Messrs. Tuckett? A.—Yes.  
 Q.—What department? A.—In the rolling department.  
 Q.—Is that rolling the leaves together to form plugs? A.—Making up what we  
 call the navies before they are pressed.  
 Q.—How long have you worked at the business? A.—About twenty years.  
 Q.—Do you consider yourself a skilled hand? A.—I do  
 Q.—What do skilled men earn at such a work as you are doing? A.—From \$12  
 to \$15 a week.  
 Q.—How frequently are you paid? A.—Every Saturday at four o'clock.  
 Q.—Cash? A.—Cash.  
 Q.—When you are paid on Saturday up to what time are you paid? A.—  
 Thursday night.  
 Q.—Would you rather be paid on Saturday than on other days? A.—I believe  
 if I had my way I would rather be paid on Friday.  
 Q.—Why? A.—Oh, because we would have a chance to attend the market.  
 A.—Are there many men working there who can earn as much as you do?  
 A.—Quite a number; I dare say half the skilled laborers.  
 Q.—What are the lowest wages paid to skilled men? A.—I should say nothing  
 less than \$2 a day.  
 Q.—There are a considerable number of unskilled hands employed—laborers, and  
 so on. What do they earn? A.—One dollar and forty cents a day, up to \$10 or \$11  
 a week, would be the average.  
 Q.—Were you there when the hours of labor were reduced? A.—I was.  
 Q.—Were you working by the piece? A.—Yes.  
 Q.—Did you approve of the shortening of the hours? A.—I did.  
 Q.—Can you earn as much since the shortening as before? A.—I do.  
 Q.—How is it you can do as much in nine hours as formerly you did in ten?  
 A.—We never worked ten hours.  
 Q.—You were required to be there ten hours before? A.—Yes.  
 Q.—Now you are required to be there only nine hours? A.—Nine hours is a  
 day's work in our factory for all hands. The question you asked me was, how we make  
 as much now in nine hours as we did before in ten, and my answer is that we do it by  
 a little more activity.  
 Q.—Do you feel you have more strength to last you during nine hours than  
 during ten? A.—Yes; I do I believe I could do as much in eight hours as in nine  
 if we were limited to that. A man feels more like working.

By Mr. McLEAN :—

- Q.—How many skilled men are employed at piece-work at present? A.—Fifty-  
 four; they are all skilled men that work at piece-work.  
 Q.—Do any of the boys work piece-work? A.—Only those that work on the  
 machine, stemming and for fine cut.

Q.—How many? A.—From twelve to fifteen, girls and boys altogether.

Q.—Do the majority of the hands in your place work piece work? A.—Yes; all in the flat I work in.

Q.—Mr. Tuckett did not lose anything by giving the men nine hours a day if they are paid by piece-work? A.—There are quite a lot of day hands; he might lose by them.

Q.—They are all boys or girls and unskilled laborers? A.—No; the best have to get wages from \$1.40 a day up to \$10 a week.

By Mr. HEAKES :—

Q.—Are there any female rollers? A.—No; we do not allow any.

Q.—In what class are they chiefly employed? A.—Shaking out or handling tobacco before it comes to us.

Q.—Are there any men employed at that? A.—No; there are only three or four men working on that flat.

Q.—How much do women earn? A.—I think, at shaking out women earn from \$3.50 to \$5 a week.

Q.—Is female labor considered to be worth less than male labor? A.—For the work they do.

Q.—Cannot a man do that same work? A.—Yes; most decidedly.

Q.—They would have to pay the man more? A.—I suppose so; a man's labor is worth more than a woman's, I should think.

Q.—Can a woman get the same pay as a man for an equal amount of work? A.—Yes; but a man could do more of it.

By Mr. ARMSTRONG :—

Q.—Is \$3 a week the lowest wages that girls receive? A.—No; the labor that we hire ranges from \$2.50 up to \$4.50 and \$5 a week; there are one or two stemmers in the factory who get \$5, but they are extraordinary good stemmers. We generally pay them all they are worth.

By Mr. HEAKES :—

Q.—Do rollers hire their own help? A.—Yes.

Q.—Has the firm anything to say as to the rates of wages stemmers are paid? A.—No; only just the stemmers who work the machines I mentioned a while ago; they work piece-work and get pretty good wages, \$5 and \$6 a week; we do not have anything to do with them; they work downstairs; we don't see them once a month.

Q.—The firm has no control over your stemmers? A.—No.

Q.—Do you think that is more satisfactory than if the firm employed them? A.—I do.

By Mr. MCLEAN :—

Q.—Do you ever receive Christmas boxes? A.—Yes; at various times.

Q.—What was the amount? A.—Twenty dollars one time. I believe as high as \$10 two or three times.

By Mr. FREED :—

Q.—Were these presents at Christmas time based somewhat upon work done by the hands, according to merit, as it were? A.—Yes; they just distributed amongst skilled laborers, the tradesmen; it was pretty well distributed to the men who earned it according to their merits.

By Mr. ARMSTRONG :—

Q.—Are the men who work in the factory organized? A.—Yes.

Q.—All? A.—Every man.

Q.—Do you feel it beneficial to belong to the organization? A.—Yes.

Q.—Can you name one or two of the benefits derived from organization in your

business? A.—I could give you one of the benefits since we have been organized : everything we have asked Mr. Tuckett for, and for which we went to him in a legitimate way, he has always granted, but we have not the least doubt he would have done it before had we been organized ; but we had not the back-bone ; we were rather scared to make the break.

By Mr. HEAKES :—

Q.—Everything you asked for he gave you? A.—Yes ; he gave us everything we asked for ; that is recently. He is a very good man to work for.

By Mr. ARMSTRONG :—

Q.—You work in harmony with your employers? A.—Yes ; we join hands, you may say.

By Mr. KERWIN :—

Q.—How long has the establishment been in existence? A.—I think it was established in 1857 ; I have been working there for fourteen years.

Q.—Do you know how many men were employed there twelve or fifteen years ago? A.—When I came here I think there were thirty-two.

Q.—Have they increased hands and facilities since? A.—Yes.

By Mr. GIBSON :—

Q.—Thirty-two were skilled laborers? A.—Yes ; but we have more of the other labor ; if we put on one skilled hand he has to have two to help him.

Q.—In stating the amount of wages you receive is it inclusive of the amount you pay your help? A.—Yes. We generally draw \$21 to \$22 a week, and pay our help out of that. Some pay \$7.50, some \$8, some \$9, according to what kind of skilled man he is. A good skilled man, by pitching in and helping his stemmer to work a little, could save some.

By Mr. ARMSTRONG :—

Q.—Do you know the age of the youngest girl employed in the factory? A.—No ; I could not say as to that. I do not know exactly.

Q.—Are there any under twelve, to the best of your belief? A.—No ; not to the best of my belief. I have in my pocket a few notes from the foreman of the factory to show that it is our aim to enforce the Factory Act and keep out all children under age. Here is a lot sent to the foreman of the factory ; they cannot get there themselves, but these are from their parents ; they are certificates that the children are over fourteen. We are supposed to inform the parents of the law.

By Mr. KERWIN :—

Q.—You look after that very particularly? A.—Yes ; if we have any doubt that they are not of age. Sometimes parents come with them.

By Mr. FREED :—

Q.—Did the inspector come and see the factory? A.—Yes.

Q.—Did he make a thorough inspection? A.—Yes ; he went up and down and looked at every child in the room.

Q.—Did he examine the machinery? A.—There is none in my room, but he examined the fire-escape and sanitary arrangements where I was.

Q.—Did he find any fault? A.—Not that I know of. I would like to make a statement, if it is in order. In reading the papers last night I saw that Mr. Tuckett made a great mistake in regard to workmen making \$1.25 a day on an average. There is not a man in our factory that is paid less than \$1.40. I have got statistics of my own which show that I earned \$600 last year myself, and several others had more.

Q.—Don't you think his statement was that the whole of his hands, big and little, made \$1.25 a day? A.—He might have meant that, and if he did it was all right enough. Taking the men, they will average over \$1.50.

WILLIAM JOHN VALE, called and sworn.

By Mr. ARMSTRONG:—

Q.—Do you know anything in connection with prison labor? You being a representative man of Hamilton, will you give us some information about that? A.—Have you reference to contracting prison labor out?

Q.—Yes? A.—I think prison labor is one of the most difficult problems of the labor question. There are so many phases of it and different ways of looking at it. Personally, I believe that the contract system should be abolished in every instance.

By the CHAIRMAN:—

Q.—Are you aware it is practically abolished—because there is only one contract in Toronto, as we are told, and it is now re-called? A.—I am aware of that fact. My idea of a system of prison labor would be to confine all prisoners to two or three grades of work, and then to have the Government sell the product of their labor only at its proper market value, so as not to come in competition with free labor.

Q.—You do not believe in the principle of keeping our prisoners idle? A.—No; because that would be against their health—moral and physical. I have lately read a report of one institution where prison labor was abolished, and there was an increase of 5 per cent. in insanity amongst the prisoners.

Q.—What institution is that? A.—It is in Pennsylvania.

Q.—You do not know what county? A.—No; it is mentioned in the report of the bureau of statistics of that State.

By Mr. ARMSTRONG:—

Q.—Would you approve of prison goods being stamped as such? A.—Most decidedly, in every instance. The greatest trouble we have to-day with prison goods competing with free labor arises from the fact that they are not stamped. If people knew they were the product of prison labor those who are in favor of labor and social reform in certain matters would not purchase the goods.

By Mr. GIBSON:—

Q.—Do you not think that if the authorities would insist on a first-class article being produced, no matter in what particular line, that would not interfere so much with outside labor as at present? A.—Not if it was put at market value. The trouble has been with inferior classes of goods; the competition in them has been greater, because prison goods could be sold at a much cheaper rate.

By the CHAIRMAN:—

Q.—Would any one pay the real market value for those goods with the prison stamp upon them? A.—Yes; lots of people would purchase them.

Q.—You would not like to have a chair with a prison stamp upon it? A.—I would not object if it was inside.

By Mr. ARMSTRONG:—

Y.—Have you ever thought how money acquired by prison work should be distributed? A.—Yes; I have. One of the greatest troubles in connection with prison reform to-day is when you take a criminal and place him in prison his family all become paupers, and I think the only proper way would be to allow the criminal a *per diem* wage, and let a percentage go to the family for their support.

By the CHAIRMAN:—

Q.—Is not that done in some prisons in the United States? A.—I think it is done in California, and in a prison in Lansing, Michigan. I think it is also done in Albany.

By Mr. HEAKES:—

Q.—Your plan would be that the Government should allow all prisoners' earnings over cost of living to go towards supporting their families? A.—Yes.

By the CHAIRMAN :—

Q.—At all events, the Government should give them something to encourage them? A.—Yes. As it is now, when a prisoner comes out he has not a cent; people have suspicion of him, and he has no chance. If he had money he could go somewhere else.

By Mr. ARMSTRONG :—

Q.—Has it come to your knowledge that immigration has affected the mechanical industries of Hamilton? A.—In several instances it has been reported to me that assisted immigration has hurt certain classes.

Q.—Do you know that mechanics have been assisted to immigrate here as such? A.—No; not as mechanics; they come under false pretences. I have known of mechanics being assisted out here.

Q.—How long ago? About a year ago. I know a case where two bricklayers were brought out, and there were two cotton spinners and several machinists reported as having been assisted, and I think there were some printers also. They so stated, but I have no proof of it.

Q.—Do you know whether the Government has appropriated any sums for assisted immigration? A.—Not according to the estimates; I think it was lumped. Whether any amount was for assisted immigration or not I do not know, but I have seen advertisements in English papers offering inducements to immigrants to come to this country.

Q.—Did you examine the Estimates? A.—I did at that time.

Q.—Did you examine the Votes and Proceedings which specified the amounts? A.—No; not to remember at the present moment.

Q.—Taking into consideration the wages that are paid other skilled mechanics in Hamilton, do you think the day printer is as well paid as other trades? A.—About the same. A statement was made the other night to the effect that a printer might in ten years own his own house. The gentleman who made that statement never went into the figures.

Q.—On morning newspaper work, does it require a man with a strong constitution to work for weeks exclusively on morning work? A.—Yes; it does; I would hate to do it myself. Five days a week is sufficient for a man on a morning paper to work. I would be strongly in favor of curtailing the hours of labor; I think it would be beneficial to the men and the employers, too.

Q.—Have you any suggestions to make as regards the craft to which you belong that we may lay before the Government? A.—I am cordially in favor of the Government doing their own printing. I think it will be beneficial to the country; it is in other places, and I think it will be in Canada. Another thing is, I think we should have an Act passed by the Dominion Government with regard to friendly and benevolent societies. This is the only Government in the British Empire which has not got one; these societies are bearing directly on the labor movement. It has already been promised by Sir Leonard Tilley, but the difficulty has been that we have different Provinces. It has also been promised by Sir Charles Tupper.

Q.—Do you think it would be beneficial to those benevolent societies if they were supervised by the Government? A.—Most decidedly it would be.

Q.—What kind of membership constitutes those societies? A.—Working classes—nine-tenths of them.

By Mr. GIBSON :—

Q.—Can you give us your reason for stating that shortening the hours of labor would benefit workman as well as employer? A.—It would benefit the workingman because he would not be so tired, and he would have more time for study and to devote to his family. He would be fresher for his work, too.

Q.—Would he not be very apt to misuse his leisure time? A.—Does he misuse it to-day, when he is on shorter time? If so, he would do so if he was permanently upon it.

Q.—Your belief is, he would not misuse any extra time he would get? A.—Yes; there is not sufficient evidence to prove he does misuse it.

Q.—He would make good use of it? A.—Certainly he would.

By Mr. ARMSTRONG:—

Q.—Have you a Mechanics' Institute here? A.—I am sorry to say we have not got that benefit to the working classes of Hamilton—not even a night-school.

Q.—Do you think if they had one the working classes would make good use of it? A.—Yes; there are hundreds of young mechanics in Hamilton to-day who would attend a night-school if they had the opportunity.

Q.—Have you ever thought what effect shortening the hours of labor would have on the labor market? A.—Yes; it would be an improvement; it would give more work.

Q.—Absorb the surplus? A.—Yes; to a great extent.

Q.—What effect would that have on the number of people who are dependent on charitable institutions? A.—It would have this effect, they would have work to do and would have money to support themselves.

Q.—Do you think it would remove the tax from citizens at large, who at present pay it in the shape of aid? A.—To a certain extent.

By Mr. FREED:—

Q.—Which do you think is the most likely to drink—the man who is tired out after a long day's work or the man who leaves off comparatively fresh at the end of eight hours or so? A.—The man who is tired out, most decidedly.

Q.—Twenty-five years ago, we will say, people had enough to eat, and drink, and wear in Canada. There was enough produced in the country to support everybody, so that there was no suffering. Since that time production has been greatly facilitated by the invention of machinery? A.—Yes; and competition has also increased in the labor market.

Q.—Now, if so, and greater production is taking place, consequent upon the invention of machinery, would it not be possible to work shorter hours and still have enough for all? A.—Yes; I believe so.

Q.—Then it is possible to shorten the hours of labor and still have no want for the people who live in the country? A.—Yes; I think shortening the hours of labor would not diminish the production. The improvement in machinery has been so great, I think reducing the hours of labor would be very beneficial to all concerned.

By Mr. HEAKES:—

Q.—You think the hours of labor could be considerably shortened? A.—If the mechanic had his equivalent for improvement in machinery they would have to take off three hours.

By Mr. ARMSTRONG:—

Q.—How long have you been in Hamilton? A.—I came first in 1869.

Q.—Take the past ten years: is the purchasing power of a dollar as great now as it was ten years ago? A.—No.

Q.—Do you know the percentage? A.—I could not say the exact percentage. My family has increased but my rate of living has gone up about \$150.

Q.—From your acquaintance with the working classes in Hamilton, do you think wages have increased during the past five years? A.—In some branches of trade they have, principally due to organization.

Q.—Has the cost of living increased or decreased or is it at a stand-still? A.—It has increased.

By Mr. CLARKE:—

Q.—You spoke of shortening the hours of labor: would you have the same rate of wages *per diem* for the reduced time as before? A.—It will have to come to that. They will give them work to do and the price would regulate itself.

By Mr. KERWIN :—

Q.—What effect would that have on manufacturers ? A.—Shortening the hours would increase the amount of production, because the purchasing power of money would be greater and there would be more people to purchase.

Q.—Would it not require manufacturers to increase their facilities. A.—There are few manufacturers who have enough room to employ a greater number than they do to-day.

By Mr. GIBSON :—

Q.—You think the increased demand for goods would pay him for the increased amount he would have to pay ? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Have you known any trade that received a shortening of the hours of labor to get their wages increased above what they were receiving for the long hours ? A.—Yes; bricklayers and carpenters. Carpenters do not work Saturday afternoons. Builders' laborers—their pay has increased.

Q.—Does the organization to which you belong approve of the principles of arbitration in labor difficulties ? A.—Yes; we are always opposed to strikes if they can be avoided; sometimes a strike is necessary; it is forced upon the men. I think a great deal of trouble would be saved if men and employers would come together and talk over matters, if they met on a proper footing.

By Mr. GIBSON :—

Q.—You stated the cost of living had increased greatly the last few years : do you not live better now than you did ten years ago ? A.—No.

Q.—Do you live as economically ? A.—Just as economically as I possibly can.

Q.—But your chances for purchasing luxuries are greater now than they were ten years ago ? A.—Chances are greater but opportunities are fewer.

Q.—Wages have increased during that time ? A.—Wages have not increased in our trade to any great extent in that time.

Q.—In other trades they have increased ? A.—Yes; they have in other trades.

Q.—You think you live just as economically now as ten years ago ? A.—Just as economically as I can, so as to make both ends meet.

By Mr. ARMSTRONG :—

Q.—So far as your observation goes, do you think those working men of Hamilton who have received the shortened hours of labor have taken advantage of them to improve their condition ? A.—Yes; I have known a number of instances where men have met together to talk over different matters pertaining to trade, and such affairs, which they would not have had opportunity to do had they been working the long hours.

Q.—Presuming facilities were provided for that purpose, do you think they would embrace them ? A.—I do.

By Mr. KERWIN :—

Q.—Talking about arbitration, do you not think parties who go as spokesmen for employes in matters of this sort lose caste among the people they work for ? A.—No; I do not think so. We have had only three or four cases of arbitration.

Q.—Do you not think they are looked upon with suspicion ? A.—Yes; they are.

Q.—If they do not go as spokesmen do you think they get on better ? A.—Yes.

Q.—Do you not think the best thing would be compulsory arbitration, where the employer and employée would not meet, but where the law would step in ? A.—I think that has been very favorably spoken of in France, where it is in operation.

By Mr. GIBSON :—

Q.—Have you thought anything about technical schools and the benefit they would confer on the rising youth and those intended for mechanics ? A.—Yes; they

are very beneficial. I received a letter from a young Canadian now in Boston attending a technical school there; he says he would not have lost the opportunity for any consideration. He attends the classes at night.

Q.—From his knowledge and your information you think they would be a great benefit? A.—Yes. The trouble has been, there are certain schools of that class established by private individuals, but the fees are so high that mechanics cannot attend them.

Q.—I have reference to public schools sustained by public funds? A.—I think they would be very beneficial.

Q.—A gentleman stated the other night they would be of no use? A.—I think any instruction in the mechanical line is valuable to a mechanic and beneficial to a young lad just leaving school and starting his apprenticeship; he could always gain a great deal of knowledge.

Q.—Theory helps him to obtain practical knowledge? A.—Yes; he is able to use tools to better advantage, and so becomes a skilled artisan and gets higher wages.

By Mr. HEAKES:—

Q.—Is it not a fact that men with technical education will get higher wages than those without it? A.—Yes; They become more skilled in their trade and demand higher wages.

By Mr. GIBSON:—

Q.—In other words they are in greater demand? A.—Yes; on account of their skill.

J. B. KING, Compress Tobacco Maker, Hamilton, called and sworn.

By Mr. FREED:—

Q.—How many men are employed in your department of the factory in which you work? A.—About twenty.

Q.—Are they all skilled men? A.—No; as they can do the work after they have been there a few months.

Q.—What do skilled men receive who are employed in that department? A.—Eight dollars and fifty cents per week.

Q.—And what do the unskilled receive? A.—That is what they get from the start.

Q.—You do not get any more after you have been some time at the business? A.—No; not if you remain in that department.

Q.—How long does it take you to learn that part of the business? A.—A day or a couple of days.

Q.—Do you require any special training to be able to do it? A.—No.

Q.—Do they work the same number of hours as the other men in the factory? A.—Yes.

Q.—Are they all paid by the day? A.—Yes.

Q.—Are any presents given to those men at Christmas time? A.—To some of them.

Q.—Does that depend on the character of the work they do or is it according to the good will of the employer? A.—It depends on the good will of the employer and a good deal on the merits of the men.

Q.—Is the tobacco all pressed? —Yes.

Q.—Does it require great skill to learn to manage that process? A.—It has to be learned.

Q.—Does one manage the process or do all the men learn it? A.—One man runs the machine and the rest assist.

Q.—Does the man who runs the machine get better pay than the others? A.—Yes; he gets \$9.

By Mr. GIBSON:—

Q.—Do you work nine hours a day? A.—Yes.

Q.—Do you think it is possible to do the same amount of work in eight hours as you do in nine? A.—I do not; I do the same amount now as I did in ten hours.

Q.—Have you ever found men give as a reason for not doing more work that they were out of orders? A.—We have our regular hours and we don't get out of orders.

Q.—You never thought you might do the same work in eight hours as you now do in nine? A.—No; not exactly.

Q.—One man depends on the work done by another in order to get through, I suppose? A.—Yes.

Q.—So that if one man worked extra hard he would not get through until all were through? A.—They all go hand-in-hand together.

THOMAS BRICK, Carter, Hamilton, called and sworn.

By Mr. FREED:—

Q.—What is the usual pay of a carter in Hamilton? A.—Fifty cents per hour.

Q.—How many hours per day can a man work one day with another all the year round? A.—A good, healthy man can work from eight to ten hours a day all the year round.

Q.—Have you anything of which you wish to complain in regard to your business? A.—Yes.

Q.—What is it? A.—It is in regard to monopolies. We have a great complaint to make in regard to the Sheddon Company and the Hendry Company, and those railway monopolies, whose waggons in the season of the year when the moving of households goods is going on turn in and take goods for the same rate of wages as we get. They will take loads of goods in Grand Trunk waggons for you or any other gentlemen for 50 cents an hour, and we don't think it is right.

Q.—How would you prevent that? A.—The only way we see of preventing it is to give us the chance to compete with those companies as regards railways. There are lots of private individuals who send their goods by freight on the Grand Trunk and the Northern & North-Western and delivered by the Hendry and Sheddon companies, while at the same time they would be very glad to give the work to carters such as we are. They would, however, have to pay double cartage if they did so.

Q.—If the railway companies choose to make those arrangements with the Hendry and Sheddon companies how can we interfere to prevent them? A.—I don't know whether the law or the Government could interfere. The Government, as a general thing, always favors monopolies of any kind.

Q.—Has the Government favored these monopolies? A.—I believe so.

Q.—In what way? A.—They give the general trunk railway business and everything else to the Hendry Company.

Q.—How did they give it to the Hendry Company? A.—The Hendry Company gets a share of the Government money that is distributed around for the railways.

Q.—In what way does the Hendry Company get Government money? A.—I don't know whether I am right or wrong, but if William Hendry goes before the Railway Committee of Parliament he will get privileges that Thomas Brick would not get. I went once as a deputation from Hamilton to the Railway Committee, and I had the pleasure of having William Hendry and some other gentleman along with me, and I found that the Government always fears such men.

By the CHAIRMAN:—

Q.—Is it not a singular thing that Mr. Hendry should get from the Government grants without any consideration? A.—I could not tell you; I don't know.

By Mr. ARMSTRONG:—

Q.—Did individual carters in Hamilton do a larger volume of business previous to the introduction of the Hendry and Sheddon companies? A.—Yes.

By Mr. HEAKES :—

Q.—Will the railway companies accept freight delivered by carters other than their own? A.—They receive it, but we have a great deal of trouble. If a private carter goes with a load of merchandise he has to wait till a man comes down and makes out shipping bills, and everything like that; in fact, they will not take it from our waggons unless we run over to the freight department.

Q.—Do they object in any way to private carters delivering freight? A.—They throw those obstacles in the way and they will hardly receive it.

Q.—Can the Sheddon Company deliver the freight at a cheaper rate than ordinary carters get? A.—I don't think they can; I think we can handle freight at as cheap a rate as they can. Of course, we have not the capacity to carry it—they have larger and better conveyances; but as regards furniture moving, or anything of that kind, I think we are superior to them, for we understand the handling of it better and we can handle it more carefully.

By Mr. GIBSON :—

Q.—Would not that be more of a local than a Dominion matter—that is, merchants preferring local carters to those companies? A.—At present it would put people to a disadvantage if they had to pay the same rate for their freight, whether they employ us or not.

By the CHAIRMAN :—

Q.—The railway companies, I suppose, take freight from the premises at the same rate as they would take it from the railway stations? A.—They take it from the houses at the same rate as from the station.

By Mr. FREED :—

Q.—And they deliver it on arrival without extra charge? A.—Yes.

Q.—And if the shipper or merchant were to employ you he would be paying you and also the same railway freight? A.—Yes.

By Mr. HEAKES :—

Q.—You are an alderman of Hamilton, I believe? A.—Yes.

Q.—What is the general condition of the working people in Hamilton? A.—Very poor. In fact, to-day the mayor sent the chairman of the board of works around to me asking me in regard to providing work for some able-bodied men seeking assistance in order to keep them from starving.

Q.—What does it cost the city of Hamilton to meet such cases? A.—I have no idea; it is something enormous. There are from fifty to sixty applications made to the mayor every day.

Q.—Please state some of the principal causes of this distress? A.—The only thing I can mention is the system of immigration. Lots of men arrive in this country and have not a dollar, and their families are destitute, and they have to live on the rest of the people.

Q.—Are those classes of the people assisted by the city here? A.—That is the class that is always at the mayor's office. There are no men who have been in the country any length of time who are so hard up in the winter that they cannot make a living.

Q.—You think there are no people seeking assistance but immigrants? A.—There are a few, but they are exceptions; but the system of immigration brings agricultural laborers to this country, and they work on the farms and afterwards flock into the towns. Where one man is now employed on a farm there used to be twenty-five, and I think the sooner they stop the present system of immigration, by which men are imported into this country, the better. As regards bringing in children to the country, I see Mr. Smith was before the Commission. All I have got to say is that we can raise all the children in this country we require.

By Mr. FREED :—

Q.—How many have you raised? A.—I have a family of six.

By Mr. HEAKES :—

Q.—Do you have some people coming here year after year for relief. A.—Yes.

Q.—Are they the same faces? A.—As a rule, there is a new class every year. Some of them go back, if they can possibly get back, to the old country—they seem to make a living in that way somehow; they don't seem to intend to remain here or to work. I have known cases in which the mayor has given orders for wood in which they would not saw cordwood, but they wanted the wood split and ready to go into the stoves.

Q.—Do you think that is the only cause of distress here? A.—And lack of work.

Q.—Due to over-crowding by immigrants? A.—I think one of the great difficulties is overcrowding by immigrants. I know hundreds of men who have been raised in Hamilton and who have emigrated to the United States, and are making a good living there. I have two brothers in the United States who would not live in Canada now.

Q.—Do you know the number of applicants every day, say on an average, for the last week? A.—No; I could hardly state that; not less than fifty a day.

By the CHAIRMAN :—

Q.—From what you say it appears that Hamilton is about the worst place in the world in which a man can live? A.—I don't think so.

Q.—Do I come to a correct conclusion when I think that according to your own statement Hamilton is about the worst place in which a man can live? A.—You can come to the conclusion that there are hundreds of families starving in this city of Hamilton to-day. In fact, you can find able-bodied men who are going around wanting to get 5 cents to get a bowl of soup.

By Mr. WALSH :—

Q.—Is there a soup kitchen in Hamilton? A.—No; but there are coffee taverns.

By Mr. CARSON :—

Q.—Where are those in Hamilton? A.—There are several around the market and on some of the streets.

Q.—For the convenience of the poor people? A.—Yes; and the general public.

Q.—Are they not kept more for the convenience of those who own them? A.—Yes; there is a company that owns the coffee taverns; it is a company of gentlemen.

By Mr. FREED :—

Q.—And the intention is to make it pay, I suppose? A.—Yes; to make money out of it.

Q.—Have you followed carting all your life? A.—I worked at the broom-making before I went to carting.

Q.—You have worked at one or the other, then? A.—Yes; I was at laboring work before that—blacksmithing.

Q.—What is the property qualification of an alderman in Hamilton? A.—One thousand five hundred dollars, I believe.

By Mr. HEAKES :—

Q.—Are there many broom-makers employed in Hamilton? A.—I guess about twelve or fourteen now altogether.

Q.—Is broom-making as good a trade as it was twenty years ago? A.—No.

Q.—What is the cause of that? A.—Prison labor.

Q.—Has prison labor almost destroyed the trade? A.—Yes; it has destroyed the broom-making business; you cannot compete with them at all.

By Mr. ARMSTRONG :—

Q.—How many years have you been in the city council? A.—This is my third year.

Q.—Did the question of a public library ever come before the corporation of Hamilton? A.—Yes.

Q.—And what became of the question? They voted it down; it was submitted to the people.

Q.—It was voted down by the people? A.—Yes; men who called themselves moral reformers and men whom one would think would help to improve the working classes voted it down.

Q.—What kind of qualified voters voted on that question? Were they property holders? A.—Property holders and men who held leases for a certain number of years.

Q.—Are you sure that was the case? A.—I beg pardon; I think the last time it was submitted to the rate-payers every one who was entitled to vote at municipal and parliamentary elections voted on it.

Q.—And it was defeated? A.—Yes.

---

W. J. SCOTT, Heater, Hamilton, called and sworn.

By Mr. FREED :—

Q.—How long have you been working with the Hamilton Forging Company? A.—About two years and a-half.

Q.—What wages can a heater earn? A.—He can average \$6 a day.

Q.—How many days in the year would you consider to be pretty constant employment for a man? A.—We are working steadily here, almost more so than we did in any place in the United States.

Q.—Did you ever work in the United States? A.—Yes; I am from the United States.

Q.—Where did you work there? A.—Pittsburg, and other cities in the iron region.

Q.—How do the wages paid in Hamilton compare with the wages paid in Pittsburg? A.—In my business they compare very favorably.

Q.—Have you a union here? A.—No.

Q.—Do you work according to Pittsburg scale? A.—There is some difference. We have no scale here. The Amalgamated Association has no authority in this country.

Q.—What do the helpers earn? A.—My helpers average about \$2.50 a day.

Q.—Are there any boys working in the forge? A.—No; not in the forge. The forge and mill are all under one roof; I am in the mill department. There are about four boys employed.

Q.—Do you know what the boys earn? A.—They earn, I think, \$1.25 or \$1 a day.

Q.—How old are those boys? A.—They are about seventeen or eighteen years of age—none of them are small boys.

Q.—Are there any day laborers working there? A.—Yes; I don't know exactly how many.

Q.—Do you know what they get? A.—One dollar and twenty-five cents a day.

---

CHAS. WILSON, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are employed by the Forge Company? A.—Yes.

Q.—What position do you hold? A.—I am shipper.

Q.—How long have you been employed there? A.—One year and nine months.

Q.—Did you ever work in iron works before? A.—Yes; but not in this country; I did in England.

Q.—What position there? A.—I was a laborer there.

Q.—Did you begin at your present position when you entered the service of the company? A.—No; I was a laborer.

Q.—You have been advanced to your present position? A.—Yes.

Q.—When you began as a laborer what did you receive? A.—One dollar and twenty-five cents.

Q.—Then there are opportunities for day laborers to be advanced so they can improve their position? A.—Yes.

Q.—You have heard the testimony of the last witness? A.—I could not hear all of it; I heard part of it.

Q.—Do you corroborate what you heard? A.—Yes.

Q.—Is the output of the mill increasing, decreasing, or remaining stationary? A.—It is increasing now.

Q.—The quantity of iron you are shipping from day to day is increasing? A.—Yes; we have increased lately.

Q.—Do you know how wages here compare with wages in the same trade in England? A.—I do not know. I never was in a rolling mill there, although I have worked among iron for the last twenty years.

Q.—Would you be willing to return to England and assume your old position? A.—No.

Q.—You are satisfied with Canada? A.—I am satisfied here.

By Mr. HEAKES:—

Q.—To what points do you principally ship manufactured goods? A.—The greater portion goes to Toronto, some to Guelph, Galt, St. Catharines, London and Paris.

Q.—Do you know what class of goods are most in demand? A.—The Masseys take a great deal from us.

Q.—Agricultural machinery? A.—Yes; I think the greater part of it is used in that.

THOMAS PUMFREY, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are a moulder? A.—Yes.

Q.—Where employed? A.—At the Grand Trunk,

Q.—What wages do moulders at the Grand Trunk receive? A.—There are about forty employed there, and about thirty receive 22 cents an hour, about eight 24 cents, and the other two 25 cents.

Q.—How many hours a day do you work? A.—From 7 in the morning to 5:30 at night, and 12 o'clock on Saturday, making about fifty hours up to fifty-four.

Q.—Do you work pretty constantly throughout the year? A.—The railway works are generally the most constant works there are.

Q.—Do you like it pretty well there? A.—Yes; I like it pretty well.

Q.—Would you rather work there than in one of the stove foundries? A.—Yes, a great deal, because I do not care much about piece-work; I would rather have day work. Again, I like Saturday afternoon off. The greatest evils the workingmen

down there complain of are assisted immigration and long pay. If you start at the beginning of a month you have to work until the 11th before you get any pay.

Q.—Would you rather be paid more frequently? A.—Yes; weekly or fortnightly would be better. If the men could get their wages weekly or fortnightly they would do better with them.

Q.—Where did you work in the old country? A.—The Great Western works at Sunderland for ten years.

Q.—How do wages here compare with wages there? A.—A man getting 30 shillings in the week in the old country is as well off as a man getting \$2.20 or \$2.40 a day here.

Q.—Was 30 shillings what you got there? A.—Yes.

By Mr. McLEAN:—

Q.—Do you believe in piece-work? A.—No; I do not.

Q.—Why not? A.—Because I think it is the wrong way to work. A man will be covetous and work himself right out to try to earn a few cents more than his day's pay. A man should try to put in a fair day's work for a fair day's pay, but instead a great many wish to earn a little more.

By Mr. ARMSTRONG:—

Q.—If the men in your shop are garnisheed, what will be the result with the company? A.—I have seen men have their wages garnisheed down there, and the second time they have been told not to let it occur again.

Q.—If the men were paid weekly or fortnightly would not that reduce the number of garnishees? A.—Yes; because they would not be able to garnishee their wages.

Q.—The men would be better able to pay their debts? A.—A great deal.

By Mr. HEAKES:—

Q.—How much does the Grand Trunk retain from their hands on pay day? A.—They keep a fortnight on hand and then pay; so it will be twelve days.

Q.—If a man wished to leave the Grand Trunk how long notice must he give? A.—He could go on an hour's notice if he likes.

Q.—Could he draw his money? A.—Yes; he could draw his money at once.

Q.—Was it always so? A.—Always so, as far as I have seen, and I have worked there for five years.

By Mr. GIBSON:—

Q.—If a man should leave of his own accord would he be used in the same way as a man discharged—could he draw his pay just the same? A.—Yes; they make no distinction. If he chooses to leave he can leave any time. All the men want is to be paid weekly or fortnightly.

THOMAS ALLAN, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are a telegraph operator? A.—I am.

Q.—In the employ of the Great North-Western Telegraph Company? A.—Yes.

Q.—How long have you been employed? A.—For about eleven years.

Q.—In Hamilton? A.—Yes; not all that time as operator; I started as messenger.

Q.—What hours do telegraph operators work? A.—They average nine hours a day for day-work and eight hours for night-work.

Q.—Do some men continue at night-work or do you change? A.—Some men continue.

Q.—What rates of wages are paid to day operators? A.—First-class men receive from \$40 to \$55 a month; second-class men from \$30 to \$40.

Q.—How are they graded—by length of service or actual merit? A.—By actual merit—by what they can do. A man may work at the business for ten years and then not be first-class: another may work five and be strictly first-class.

Q.—A first-class operator is one who can take commercial work? A.—Yes; all kinds of commercial work.

By the CHAIRMAN:—

Q.—You say operators work eight and nine hours—what becomes of the other hours? A.—Ordinary offices are not open at all then.

By Mr. FREED:—

Q.—What wages do night operators receive? A.—The same as day.

Q.—But shorter hours constitute a day's work? A.—Yes.

Q.—Have you had any difficulties or troubles with the company of late? A.—Yes; we had in 1883, when we struck for an advance of wages and shorter hours.

Q.—How did it terminate? A.—It was a failure for the operators.

Q.—Were any attempts at conciliation made during that strike? A.—I believe there were.

Q.—What territory did the strike cover? A.—The whole of the United States and Canada.

Q.—Some men returned to work in Hamilton, I think? A.—Yes; all but one; he would not return at all. He did not get a situation—he was supposed to be chief among the strikers.

Q.—They refused to take him back because he had been a leader of the strike? A.—Yes.

Q.—Was that understood or was it expressed by the officers of the company?

A.—It was understood. The leaders in other places got back, and that was the only reason we could conceive.

Q.—How do young men learn the telegraphing business? A.—As a rule they start as messengers, then get to be office boys and then operators. Some men are smarter than others; perhaps you could be a first-class operator inside of three years if you worked constantly and were brought up in large offices. You require to be in large offices to do every kind of commercial work.

Q.—You cannot learn the business thoroughly at all in small offices? A.—No.

By Mr. ARMSTRONG:—

Q.—Do you think these schools that teach telegraphing can teach it efficiently? A.—My experience has been, they cannot; the operators they turn out are only able to fill second-class situations.

Q.—Do you know that they guarantee to get situations if paid so much money and a certain length of time served? A.—I believe some of them advertise in that way.

Q.—Do you believe they are capable of fulfilling these promises? A.—No; they certainly are not.

Q.—The only place to learn telegraphing is in practical business? A.—Yes.

Q.—Previous to that big strike in 1883 were the men paid for over-time? A.—Yes; the company pay for over-time now.

Q.—Shortly after that difficulty were they paid for over-time? A.—Yes; they were always paid for over-time.

Q.—Did the men who went back receive the same wages after the strike as before? A.—Yes; they did, as a rule.

By Mr. HEAKES:—

Q.—Are there any female operators in Hamilton? A.—None in Hamilton; there are several in Toronto. As a rule, female operators are not paid so well as men, and of course they never attain the same degree of proficiency as men.

Q.—Is it not possible for female operators to attain to as high a standard as the

men? A.—Hardly possible. They cannot do heavy press work; their fingers are smaller, and sometimes an operator has to make half a dozen copies through tissue.

By Mr. GIBSON :—

Q.—You mean physically incapable? A.—Yes.

By Mr. McLEAN :—

Q.—What wages do first-class female operators receive? A.—\$35 and \$40 a month.

Q.—Would a first-class female operator be just as good as a first-class man, only she could not do press work? A.—They mostly work in country offices or small offices where the work is not hard. A first-class operator has to work very hard.

By Mr. ARMSTRONG :—

Q.—Women are generally kept at commercial work? A.—Yes; I do not know of any case where they do railway work.

By Mr. KERWIN :—

Q.—Are they paid at the end of every month? A.—There is no stated pay day. At present in Canada we are paid on the 8th or 9th of the month up to the end of the preceding month.

Q.—If you wanted money in the mean time could you draw it out? A.—No.

Q.—No matter how pressing the emergency? A.—No.

By Mr. ARMSTRONG :—

Q.—Have operators ever requested that the company should pay them more frequently? A.—Yes; they made that request two months ago, but they have received no reply, got no satisfaction whatever.

Q.—Of course they would have to go to headquarters in New York? A.—No; to headquarters in Canada, to the general manager in Canada.

Q.—Mr. Dwight? A.—Yes.

Q.—It is solely under his control? A.—Yes.

By Mr. KERWIN :—

Q.—Is the rate of wages the same in all cities in Canada? A.—In all large offices in Ontario. In Montreal wages are lower. In Winnipeg first-class operators are paid from \$70 to \$75 a month. The rate of wages all over the United States is higher than in Canada and higher in western than in eastern offices, except New York.

Q.—I suppose the reason they are higher in Winnipeg is the scarcity of operators? A.—I do not know why it is. I think it would be a benefit to the operators and the public in general if the Government controlled the telegraphs.

By Mr. ARMSTRONG :—

Q.—You believe so? A.—Yes; any incorporated company struggles to pay a dividend. The Great North-Western Company has to pay 8 per cent. to the Montreal directors and 6 per cent. to the Dominion directors, equal to 7 per cent. on the Great North-Western.

Q.—Outside of the question of wages, you believe if the Government controlled the wires they would be more easily approached in a settlement of grievances than a company. Would that be one of the benefits? A.—Yes; I believe the tariff would be lower and the operators would work shorter hours.

By Mr. KERWIN :—

Q.—Do you think that if the telegraph business were in the hands of the Government that it would be used as a political machine? A.—I do not think so.

The Commission adjourned until Thursday, 19th instant at 2 p. m.

HAMILTON, 19th January, 1888.

WILLIAM COLLINS, Engineer and Machinist, Burlington, County of Halton, called and sworn.

By Mr. FREED:—

Q.—I believe you are not now actively engaged in any business? A.—No; not at present.

Q.—How long is it since you ceased to work at your trade? A.—Fifteen years; it was in 1872 when I ceased active business.

Q.—You have worked both in the old country and in Canada, I believe? A.—Yes.

Q.—For a number of years? A.—Yes.

Q.—Did you work in any other country besides England and Canada? A.—England and Canada were the only two countries in which I worked.

Q.—In what employment were you in England? A.—I was an apprentice to the firm of Benjamin Gott & Sons. I learned my trade with them.

Q.—As a machinist? A.—As a mill-wright; I learned my trade as a mill-wright.

Q.—When you came to Canada did you at once become employed by the Great Western Railway Company? A.—Yes; within about three weeks.

Q.—And you remained in their employ? A.—Yes; for fifteen years or a little more. I came out in 1857 and I retired in 1872.

Q.—Your position was, I understand, a little more favorable than that of an ordinary mechanic? A.—Decidedly so, in more than one way.

Q.—You had no large family to support? A.—I had no family but my wife.

Q.—And your position was that of a foreman in the shops? A.—No; just an ordinary workman while I was in the employ of the Great Western Railway.

Q.—Did you find it possible to live in comfort and save money while you were at work? A.—Undoubtedly I did.

Q.—I do not want to pry too closely into your private affairs, but I may ask you this question, I think: Did you find it possible to lay by so much money out of your earnings that at any time you were able to retire and live without working? A.—I had acquired what I considered a sufficient competency, and then retired at the age of fifty years. It had been my purpose for years if I was blessed with health and strength to cease at that time from active work, and I rigidly carried out my purpose, for which I am thankful to-day, fifteen years having elapsed since it was done. I retired in the full vigor of all my faculties. I was at that time, when I retired, able to enjoy life, and I am satisfied since of the wisdom of that step.

Q.—While you were at work earning that competency did you deny yourself any of the necessaries of life? A.—No; not at all.

Q.—Did you deny yourself any of the ordinary comforts of life? A.—Not of the ordinary comforts.

Q.—Those you considered necessary to well-being and ordinary comfort, I mean? A.—For their assistance or well-being. I was exceedingly fortunate in my matrimonial adventure, and it was our united purpose to purchase the best that consistently with our circumstances, we could obtain, and to make use of that purchase economically. It is in economy, as you know, and as we all know, where the race is won.

Q.—But this economy, as you understand it, did not involve denial of the ordinary comforts of life? A.—Not at all; but at the same time I am prepared to admit that to a fairly cultivated taste a man who has to live on the earnings of a mere mechanic has to practise denial; that follows of necessity.

Q.—You have told us that you have had no children to support: do you consider that a man with children who was working when you worked, and who was receiving like wages with you and living under like conditions, except in that regard, could save money, although, perhaps, less than you were able to save?

A.—That is a question I could scarcely answer. Perhaps, from my acquaintance with the subject, I can say that a man with a family of two children, a son and a

daughter, will find his earnings, if an ordinary workman, readily absorbed in the education of these two children, if he is so disposed. Whether it would be proper to do so or not is an open question; it is a question I would dissent from. But the moment you have any children, if even an only child, it seems to me that the earnings of an ordinary mechanic would count for very little.

Q.—You were, of course, pretty familiar with a great many of the other workmen employed by the Great Western Railway at that time: would many of them buy the houses in which they lived? A.—There are some who did, but the majority of them, I think, were like myself, mere tenants.

Q.—What were the wages ordinarily paid to mechanics in the shop at that time? A.—I suppose from \$1.50 to \$2 per day. That was the average wage, more or less, according to the capacity of the man.

Q.—How many hours a day did you work? A.—Ten hours when I first went there, and afterwards there was an arrangement made by which nine hours were made a day's work.

Q.—Are you able to say what the wages are now? A.—No; not now. That, of course, is the weak part of my evidence, as I have been so long away from work. My evidence will, of course, be historical evidence, evidence in regard to the past.

Q.—You consider it wise for a man in his early life to practise self-denial and economy in order that he may lay by something for his declining years? A.—Yes.

Q.—You think that cannot be done without self-denial and rigid economy? A.—I think it cannot.

By Mr. HEAKES:—

Q.—Were you a wood-working mechanic? A.—I learned the whole art or mystery of mechanics—that is, so far as human skill, I suppose, could accomplish it, either wood, iron, brass, blacksmithing, or anything; I am one of the old school.

Q.—You are a general mechanic? A.—I was a general workingman.

Q.—Can you tell us the difference in the wages fifteen years ago and to-day? A.—No; I cannot.

Q.—You do not know what machinists earn to-day? A.—No.

Q.—You are aware, no doubt, that machinery has been very much improved since then? A.—Yes; not to the advantage of employes, I think.

Q.—I was going to ask you if the employe receives his share of the benefit accruing from machinery? A.—Not by any means. You see the effect of the introduction of machinery by the manufacturers is to abridge labor and cheapen everything. That must necessarily be against the interests of the man who has his labor to sell, because an unskilled kind of labor can be introduced by the application of mechanism, whereas it is by skill that the skilled artisan lives.

By the CHAIRMAN:—

Q.—Then you would apply that remark more particularly to the skilled artisan? A.—Yes.

By Mr. HEAKES:—

Q.—You think the introduction of machinery, while it has made more work, has not materially benefited the skilled mechanic? A.—I hold that the employes to day have not participated in the advantages that have been attained by the inventive idea. There is no doubt that we have enjoyed certain advantages, but I think, as regards the employes, that their outlook and possibilities of remaining employed are more precarious, and will continue to be so. That is my impression.

By Mr. FREED:—

Q.—Is it not a fact that the introduction of machinery by multiplying processes causes a greater use of products? A.—Undoubtedly.

Q.—Have you also thought that a great deal of employment is created by the manufacture of those machines? A.—I believe that is the case. But you see, unfortunately for the employe, that the object of the manufacture of those machines is to

reduce manual labor. Now it would be all right if the whole community equally benefited—I do not go in for the laboring classes enjoying all the benefits—but I want the working people to enjoy their portion. I am prepared to assert here or any where that the working people as a class do not enjoy those rights.

Q.—Do you think the working people to-day—we will take the skilled artisans to-day—receive any lower wages than they received fifteen, or twenty, or twenty-five years ago? A.—I am not prepared to say they do. I do not think they do. But it must be remembered that the possibilities of labor, as I have said, are more precarious now than formerly; that is, there is less demand for labor now than there was twenty years ago. This comes of necessity, because there is a larger quantity of steam power used, and the power of multiplying in the arts or in ordinary mercantile transactions has been enormously increased, so as to make the outlook for the men very critical; and not only that, but it will become more so, in my opinion.

Q.—Let us take an illustration bearing to some extent upon your trade or calling: Before the introduction of railways large numbers of people were employed as carters or waggoners? A.—Yes.

Q.—Do you think that by the introduction of machinery the number of carters has been increased or decreased? A.—I should think the number has been increased; comparatively, I should think the number has been increased. I am speaking of work such as cartage, not of stage coaches, of course.

Q.—All transportation? A.—No doubt there are more horses used to day than there ever were before. I should certainly think that was the case.

By the CHAIRMAN:—

Q.—Is not the result exactly the contrary to what was supposed to be likely to follow at the time of the introduction of railways? A.—Yes; I believe so. The stage coach, however, as an institution, has been driven to the wall.

By Mr. HEAKES:—

Q.—Do you think carters, even though so many more are employed now, are better off to-day than they were then? A.—I do not believe any man who has to live by his labor is to-day any better off than he was twenty-five years ago; in other words, I believe that labor to-day is not sufficiently remunerated; in fact, a laborer does not get his share of the benefits.

By the CHAIRMAN:—

Q.—What about farmers? A.—He is in a worse predicament still, in my opinion.

Q.—He has to pay the increased price for everything? A.—Yes.

Q.—And he is receiving decreased prices? A.—Yes; the prices are decreasing, and will continue to decrease until a certain period, and then things will take another turn.

Q.—What is the remedy for him? A.—A wider market.

Q.—I am speaking of things as they are? A.—There is no help for the farmer unless the market is extended.

Q.—Ought he to enter into combination to sell his products? A.—I am opposed to combinations of any kind—to combinations of workmen or any other people.

By Mr. FREED:—

Q.—If the number of people employed in transportation has been increased in consequence of the introduction of machinery and locomotives, is it not true that the number of people employed in making locomotive cars and railway iron, and building railways, has been immeasurably increased over the number of people formerly employed in making stage coaches and waggons? A.—That is true.

Q.—Is it not possible to carry out this line of reasoning, and say that this rule has been applied to almost all branches of industry in which machinery has been introduced? A.—No; and I will show you why. In my opinion, the introduction of machinery has been detrimental to the interests of the employé, inasmuch as the

introduction of machinery reduced the labor required. The planing-machine, the lathe, the slotting-machine and others were novelties in my day. When I first went to the trade we had a casting from the foundry. An ordinary mechanic like myself would take and lay the work out. Then he would chip it with the hammer and chisel, and after that chiseling process he would file it to make it true, square and clear of twist. Since the introduction of the planer has become universal, an unskilled man starts a planing-machine, which moves back and forth, and does the work silently and cheaply, and to a certain extent only does it better, but it may be at one-fourth of the cost, and in one-third of the time.

Q.—Is it not true that a great deal of this iron work is in use which could not possibly have been brought into use under the old system? A.—Undoubtedly.

Q.—What I am getting at is this: Is it not true that these improvements in machinery create a consumption? A.—No doubt; unquestionably so.

Q.—Are there in proportion to the population fewer or as many, or more mechanics now, than there were a quarter of a century ago? A.—Yes; no doubt there are more mechanics employed to-day, but I hold that they have not kept pace with the rest of the population, that is as mechanics. There is some hocus-pocus about this that I cannot exactly get at the bottom of myself. I feel somehow or other that the employé is run out in this question—he is not considered. He is just a pawn in the game, and there is where the trouble lies, and until the employé awakens he will lie there. There is no hope for a man who has nothing but his bare labor to do, unless he will think rapidly, and practise those virtues of which I have spoken now and so often before. These he must keep constantly before him.

Q.—Are those virtues industry, perseverance and economy? A.—Yes.

Q.—Can you suggest anything that would improve the condition of the working-men except by allowing matters to be controlled by the old law of supply and demand? A.—I think so.

Q.—Please give us your views on that point? A.—I have given this subject considerable thought and attention. Five years ago I became acquainted with our friend Henry George, a gentleman of whom you doubtless all have heard. Since that time I have been a very diligent reader of George, and I think to-day—in fact, I would almost be prepared to argue it with any one—that the ideas that Henry George advocates seem to me to be logically certain as being the only remedy that has ever been proposed. I have read Smith, Ricardo, Carey, Mill, Spencer and all the others, and I merely mention this fact to give you an idea that I am fully posted in what has been said up to the present time. No doubt Henry George is to day a person who is deeply railed against by interested persons.

The CHAIRMAN :—The witness cannot be allowed to go into an essay on the matter.

By Mr. HEAKES :—

Q.—Setting aside the land question altogether; do you not think that if the producer and consumer were brought closer together to a large extent the present difficulty could be obviated? A.—Yes; that would be the panacea that must eventually come. What we want to day when things are out of joint is to get them into working order. Many leading thinkers see pretty plainly what is going to come, and there will have to be a revolution in the tariff by-and-bye, and many of the interests will be paralyzed, both here and on the other side. There is no help for it.

Q.—Supposing you could introduce a system whereby the employés would share in the profits of industry with the employers, would that be a benefit to the working classes? A.—I formerly thought so. It has been tried in France, but it seems to me that is not the true remedy. While the remedy is being applied it is just as well to go to the cancer at once and be done with it.

Q.—Who receives the most beneficial returns from the manufactured goods—the manufacturer, the employé or the trader? A.—I should think the trader, as a rule; of course, there are exceptions to that, but it seems to me that the middle man—the

merchant, for instance—invests less and profits more than any other, that is, if he buys with wisdom and sells with the same discretion.

Q.—Do you not think that a very large part, almost the whole of the trouble, is that the working classes are inseparably bound up with trade and commerce, that you cannot separate the one without striking at the other? A.—No doubt they are inseparable. With respect to the interest of the manufacturer, I hold that he cannot have any interest without the employé's labor—labor being the source of profit; but to have labor, do what he will, he must have intelligent labor, whether he will or not. The first element is labor, or after land, labor. There you have everything. There has been a great deal said about what capital will do and what it will not do, in this country; given the land, what you want is labor.

By Mr. FREED :—

Q.—Would it be possible for the consumer to deal directly with the manufacturer? A.—Yes; we have an evidence of that in my dealing directly with the miller at Burlington. I purchase our flour direct from the miller. That is one illustration. Another is, that I purchase my boots direct from the boot-maker.

Q.—Suppose you wanted cotton goods, would you like to be compelled to come into Hamilton and buy them from the manufacturer? A.—No; I believe in the interposition of middle men. I was formerly pretty narrow in that matter; and I thought that the middle man was an unproductive consumer, but I have got beyond that. I look upon the middle man as being as necessary as the merchant or the manufacturer for public convenience. Each of these men earns his quota, but sometimes it is a pretty heavy item.

JAMES MUNRO, Foreman Tailor, Hamilton, called and sworn.

By Mr. FREED :—

Q.—How long have you been in the employ of Messrs. Sandford & Co., or of Mr. Sandford? A.—Somewhere about six years.

Q.—How many persons, as a rule, are employed by that company? A.—It is not easy to give exactly the figure. Altogether there are working at clothing and sewing in the neighborhood of 2,000.

Q.—Some of these are employed in the establishment? A.—No; the work is all done outside.

Q.—Are there not a large number of people employed in the establishment here? A.—Yes; that is preparing the work for going outside.

Q.—Are those in addition to the 2,000 of whom you have spoken? A.—Yes; that is the number of outside hands.

Q.—The outside hands number about 2,000? A.—Yes.

Q.—And those employed in the establishment form a large number also? A.—Yes; I do not exactly know the number altogether; I may say there are about sixty, but the others I am not conversant with. I should think there are about 120 or 160 in the building altogether.

Q.—Are the persons who do the sewing all women? A.—No.

Q.—Women and men? A.—Yes; they are women and men.

Q.—How do they work: by the day, or by the piece, or altogether by the piece? A.—By the piece.

Q.—Are you able to give us an idea of the earnings of these people? A.—Not exactly. They run in teams; a man will get out so many goods and he will employ from three or four to twenty people.

Q.—Did not some of the women take work out on their own account? Are you able to form any opinion as to what they earn? A.—Those who take out the work, that is those who are competent to do it, work on the same system as the men do; they employ others and make very good wages.

Q.—Are you able to give us any idea of the wages they earn? A.—I have known a good hand to make as much as \$15 per week.

Q.—By their own work? A.—That is what came to them after paying the help they had.

Q.—Are you able to give us any idea of the wages they pay to their help? A.—Not outside—and they take a good many apprentices and pay them from about \$2.50 to \$7 a week.

By Mr. CARSON:—

Q.—Is this male or female labor? A.—I am not speaking of female labor.

By Mr. FREED:—

Q.—As to the persons employed in the establishment itself: what are they? Are they cutters mostly? A.—Cutters and trimmers.

Q.—What would be the wages received by a fair average cutter? A.—From \$8 to \$15 per week.

Q.—And what would a trimmer be paid? A.—He would be paid about the same; I think some trimmers are paid even more than that.

Q.—Are there any porters and unskilled persons employed in the house? A.—Yes; there are porters.

Q.—Do you know what they are paid? A.—No; I do not know what they receive.

Q.—Where is the cloth mostly purchased? A.—I should say there is very nearly an equal quantity of Canadian and English; probably English has the advantage.

Q.—Which is the cheaper, quality being considered, native or foreign cloth? A.—There is not very much difference, I should think.

Q.—Which would be the more durable goods? A.—Canadian would be probably the more durable for the money, but they do not get the cloth quite as nice as the English.

Q.—There is not quite the style and finish about it? A.—No; as in the coloring.

Q.—As a rule, is it your opinion that there is as much shoddy in Canadian tweeds as in foreign tweeds? A.—No.

Q.—You think there is not so much? Y.—I think there is not. I do not think they know enough about it yet, but they will get to know all about it by-and-bye.

Q.—You think it is better for the Canadian manufacturers to remain in ignorance on that point? A.—Yes.

Q.—Do you think it is possible for a woman who works on ordinary clothing in a reasonable number of hours, say ten hours per day, to earn \$1 a day? A.—Yes.

Q.—Is it within your knowledge that any one who does not employ assistants earns that sum? A.—Yes; I have not the least doubt of it. I do not know that anything presents itself to my mind at present in regard to the matter, but I am satisfied they can earn that sum—that would be a good hand.

Q.—You are satisfied they can earn over \$1 a day? A.—A good, competent hand can earn over \$1 per day. If they could not there would be no necessity to bother to drag the stuff in and out when they can get those wages outside.

A.—Can they get those wages outside? A.—Yes; I have already said that they are paid from \$2.50 to \$7 per week.

By Mr. McLEAN:—

Q.—How many hours must a woman work to earn \$7 per week? A.—From 7 in the morning until 6 at night; but it is an exception when they get \$7. They must be good hands when outside persons pay them \$7.

By Mr. FREED:—

Q.—Take the case of those persons who receive \$2.50 per week: How long must they have worked at the business before they will earn that amount? A.—

If they are handy at sewing persons will take them for a few weeks and give them little or nothing, and after that time they start, very probably, at \$2.50 per week.

Q.—Are there many persons who take work out of those shops where there are employed large numbers of sewing women? A.—Yes; some of them employ as many as twenty hands.

Q.—They provide the sewing machines, and pay the rent, and so on? A.—Yes.

Q.—Do those women who work at this ready-made clothing quit it and get other positions as rapidly as they can, or do they remain at it? A.—They hold on to it after they have got into it.

Q.—Do you hear complaints that they cannot make reasonable wages out of it? A.—Yes.

Q.—What is the nature of those complaints? A.—A great many are made by those who would complain wherever they were. It is all from lack of energy or skill to go through the work.

Q.—What is the class of women who do this sewing? Are they widows or young women without family connection, or who are they? A.—There are a great many widows and a great many who might as well be widows, as they provide for the whole house, and whose husbands do not care whether they care or not; and they are making a decent living, too.

Q.—Have you been in any of the homes of any of these people who sew for the company? A.—Yes.

Q.—What is the character of the homes? A.—They are well appointed homes, well furnished and comfortable in every way.

Q.—Can you tell us something about the homes of such women; can you fix in your mind the average home of the sewing women making ready-made clothing and no. employing any help? A.—No; I do not visit their houses very much. I have been in several of the tailors' houses, but I have not been in any of the women's houses.

Q.—Do you think the women live in comfort—that is, have they all the absolute necessities of life? A.—Yes; both in food and clothing.

Q.—Is that a matter of opinion or a matter of fact? A.—It is no opinion at all, it is a fact.

Q.—It is what you know of your own knowledge? A.—If you are married, as I presume you are, your wife does not appear on the street better dressed than do these women who come and take out work.

Q.—Their clothing indicates that they are in comfort? A.—Yes.

Q.—Are these women who come to take out the work the actual sewing women, or are they those who employ others? A.—There are none of those who take out work and do not superintend it; that is, to see that it is done properly and help with it.

By Mr. HEAKES :—

Q.—Contractors always take the work? A.—One takes the work and employs others; that one is responsible for the work.

By Mr. McLEAN :—

Q.—If any one expressed himself to your concern as willing to continue to take out work would you continue to supply it, or do you discriminate, and allow certain parties to obtain a considerable share of the work? A.—That depends upon the stress of business. If we are very busy we like to take on new hands. If the hands have been working for a time at the business we will give them a chance, before we increase the number of hands and the supply of labor.

Q.—Where does the company find its market for this clothing? A.—All the way from the Pacific to the Atlantic.

Q.—Do you export any clothing? A.—We send clothing to British Columbia and Manitoba.

Q.—Do you send any outside of Canada? A.—I do not think so. The company did send a little to Australia, but I do not think they continue to do so.

Q.—Do you send any to the Maritime Provinces? A.—Yes; a great deal, and a great deal to British Columbia.

Q.—Do you find any competition in your trade? A.—There is no foreign competition.

Q.—Where is your principal domestic competition? A.—The only competition we have is from Montreal and Toronto; very little at Toronto.

Q.—Can you compete with Montreal houses? A.—Yes; easily.

Q.—Do you pay as high wages as they do in Montreal? A.—Yes.

Q.—Do you pay any higher wages? A.—The cry has always been raised that we have paid too much here to compete with the Montreal houses, but I think it is pretty nearly an equality now as regards the Maritime Provinces and Ontario, both being about the same. I think we probably give a little more than they do.

By Mr. HEAKES:—

Q.—Are you giving less wages now than you did formerly? A.—The wages are lower now than they were a few years ago, and yet, at the same time, I think the men with the appliances and machinery they have are making fully as high wages as they have done at any time.

Q.—You have lowered wages to meet the competition with Lower Canada? A.—Yes.

By Mr. FREED:—

Q.—If a woman who owned a sewing machine were to take a fair average amount of work and employ no one, what do you think she could earn? A.—That would depend altogether on her ability and the kind of work she got to do.

Q.—Take a fair, average sample of work and a good, fair-working woman: what do you think she ought to be able to earn? A.—She could make \$1 a day if a good hand.

By Mr. HEAKES:—

Q.—In giving out work to these hands is it given out by the dozen garments? A.—Yes; sometimes by the hundred.

Q.—How much per dozen would a woman receive for making coats? A.—We do not give them out by the dozen, but by the coat.

Q.—How much for a coat? A.—I have paid some women as much as \$1.25.

Q.—What kind of a coat would that be? A.—A child's coat.

Q.—And how much would you pay for making a vest? A.—We pay from 12 cents to 25 cents, sometimes 30 cents or 35 cents.

Q.—How much do you pay for pants? A.—Children's or men's?

Q.—I am speaking of the pants you make there? A.—We make both kinds.

Q.—Let us take men's pants: what do you pay the women? A.—We pay from 12 cents or 15 cents to 50 cents per pair.

Q.—Do you make overalls? A.—Yes.

Q.—How much do you pay per dozen? A.—That I do not know exactly.

Q.—How much do you pay per pair? A.—I do not know.

Q.—Do you make shirts in your establishment? A.—Yes.

Q.—How much do you pay per dozen shirts? A.—I could not tell you; that is out of my line.

Q.—Have you any knowledge of what the average earnings of a woman on overalls would be? A.—No.

Q.—Have you any idea of what her earnings would be on shirts? A.—I have not the slightest idea.

Q.—Do you think that a woman who makes coats at \$1.25 each can earn \$1 a day? A.—Yes; and more. That is an extra quality of coat, you will understand, and an extra price.

Q.—What are the wages paid a man in a tailor's shop for making a coat? A.—You cannot get one made in a custom shop for less than from \$4 to \$12 or \$13.

Q.—Would the coat you make compare favorably with the coat in the custom

shop, the cost of making which was \$4? A.—Yes; they would. I do not say they are equal to those made in the very best shops.

Q.—Take an average shop? A.—I would say not in a first-class shop, but in an ordinary shop our work will compare very favorably with that turned out there, and it is sometimes a good deal better than work I have seen in such shops.

Q.—How many coats can a tailor make in a week in a custom shop? A.—About three.

Q.—For making that number would he earn about \$12? A.—Ordinarily more than that.

Q.—Is it not generally supposed that a man will do more work at tailoring than a woman? A.—It may be supposed that way, but I do not think it is in accordance with the facts of the case.

Q.—Can a woman do more work than a man? A.—No; I do not think so.

Q.—If a man makes three coats in a week how many would a woman make? A.—In custom shops coats are not made by women, so far as I know.

Q.—Why could not women obtain the same price for their work as men if they do the work equally well? A.—I do not see any reason why they should not.

Q.—Do the men in your establishment get more money for their work than the women? A.—No; not a bit. If we give work to men instead of women we give them the same price.

By Mr. FREED:—

Q.—You do employ men and women on the same class of work and pay them at the same rate, I believe? A.—Yes; we have work the women do which the men would not and could not do.

By Mr. McLEAN:—

Q.—What work is that? A.—Children's clothing.

By Mr. FREED:—

Q.—When work is done in large quantities can more garments be made in the same time than if they were made singly, as in the custom shops? A.—Yes; far more. The hands get them cut in fours generally, and the fitting up takes considerable time; they could fit up four in the same time as they could fit up one, it giving about the same trouble.

Q.—Is any work done for the women which the custom tailors would have to do for themselves? A.—Yes; we have matters more particularly arranged than they have. They have to get it cut off the length to trim, and we have the garments all properly shaped.

Q.—Does that save any considerable work? A.—Yes; it does.

Q.—Do you supply the thread? A.—No.

Q.—Do you supply the trimmings and buttons? A.—Yes; everything but the thread.

By Mr. McLEAN:—

Q.—How much would thread for a suit cost? A.—A few cents; 5 cents would cover it all, including the twist. None of the outsiders make button-holes; we have a department for button-hole making.

By Mr. FREED:—

Q.—Are those hands you have mentioned given the work independent of making the buttonholes? A.—Yes.

On the Commission resuming at 8 p.m. :—

JOHN MILNE was called and sworn.

By MR. FREED :—

Q.—You are a member of the firm of Burrowes, Stewart & Milne, founders ?  
A.—Yes.

Q.—What is the nature of the business you conduct ? A.—It may be divided into three parts: First, we manufacture stoves; second, scales; and third, malleable iron castings and saddlery hardware.

Q.—How many foundries are there in Hamilton ? A.—I believe there are fifteen, but two or three are small.

Q.—Can you give us anything like an idea of the total number of hands employed in all of them ? A.—To the best of my belief there must be something like 350 to 375.

Q.—In all the foundries ? A.—I mean moulders only.

Q.—Can you give us an idea of the total number of hands employed in all the foundries ? A.—I should say there would be nearly 2,000 hands; that is a rough estimate.

Q.—Skilled and unskilled ? A.—Yes.

Q.—Into what classes would you divide your skilled labor ? A.—We would divide them into moulders, machinists, pattern-makers and scale-makers.

Q.—What would be the fair average earnings of a moulder ? A.—Our best moulders average from \$2.50 to \$3.25 per day; \$3.25 is the outside mark; probably \$3 would be nearer, but I believe there is a rule in the union that a man is not allowed to make more than \$3 a day. Day workers make from \$2.25 to \$2.50 per day, according to their skill.

Q.—Are machinists employed by the piece or week ? A.—We run both day and piece-work, and our average men get from \$1.75 to \$2.25.

Q.—What would pattern-makers earn ? A.—From \$1.75 to \$2.50.

Q.—And scale-makers ? A.—Their wages do not go so high. They are not, generally speaking, as high as those of a first-class mechanic, but some get pretty good wages. They average from \$1.50 to \$2, except a foreman, who will get a good deal more.

Q.—Taking one year with another, what portion of the year will your establishment be closed ? A.—In our establishment we generally run all the year round, except a while at Christmas, when we shut down for repairs and to take stock. The last two or three years we have shut down about six weeks for that, from Christmas to, say, some time in February.

Q.—Are the men able to work all the rest of the year if they so choose ? A.—They are, in our establishment, if they choose.

Q.—How many hours a day do they work on the average ? A.—Moulders about nine hours a day. Piece-workers do not work the dinner hour, as they used to, but they are generally through at five o'clock or a little after, some of them at four. They average about nine hours a day.

Q.—Week hands ? A.—They work ten hours a day, and on Saturday they work nine. We give them one hour on Saturday ?

Q.—That is fifty-nine hours a week ? A.—Yes.

Q.—Would it be possible, without any very great charge upon the firm, to provide wash-rooms and conveniences, so men could wash up and put on good clothes before leaving the shops at night ? A.—It might be possible, but so far as I know I do not think the men would avail themselves of them, except probably one or two. I do not think it would be much use, even if we felt inclined to do it.

Q.—Have any steps ever been taken among the workers in foundries to shorten the hours of labor ? A.—Yes; I believe some years ago the nine-hour movement was in vogue. Latterly there has not been much done about it.

Q.—How did employers look upon that movement ? A.—We, as employers, looked at it in this light: at one time we were pretty well pushed; we could not get enough work and we had a lot of machinery in plant which would have to lie idle;

we considered they might as well work ten hours as eight or nine hours. We would have to have that plant lying unemployed all that time.

Q.—Do you not think that ten hours' hard work per day is rather more than a man can do? A.—I do not think so. Of course, some branches of the trade are a good deal harder than others. For instance, I think moulders have about the hardest work, but other mechanics do not have such laborious work. Probably it would be all right enough from the men's standpoint, but I do not think it would hurt our men to work ten hours a day. We work more than that ourselves.

Q.—How long have you been engaged in the foundry trade in Hamilton as employer and employé? A.—For the last thirty years. I have been an employer of labor for the last twenty-five years.

Q.—Can you tell us how many of the foundries in Hamilton were started by men who had been mechanics or workingmen? A.—I think nearly all of them were, with the exception, perhaps, of one or two. Sawyer is a moulder; Gartshore is not; Moore is a tinsmith; Gurneys are moulders; we are moulders; Stewarts—the old gentlemen—were pattern-makers.

Q.—Nearly all of them were started by men who were themselves at one time workingmen? A.—Yes.

Q.—In your own case each of the partners was a workingman? A.—Yes.

Q.—All or nearly all were started in a small way? A.—Yes.

Q.—And worked up to their present position? A.—Yes.

Q.—Now, if the proprietors of those foundries had spent all their earnings and lived up to their income how many, do you think, would have establishments in existence to-day? A.—Not very many. I do not think there would be many of them in existence to-day.

Q.—Suppose the men who started them had not been possessed of pretty good business ability where would they have been to-day? A.—I do not think they would have been there to-day.

Q.—Do you think that a mechanic in your line of business to-day has the same opportunities, or that a number of them joined together have the same opportunities, for establishing a business as existed when you established yours? A.—I think there is hardly the same chance to-day as there was twenty-five years ago.

Q.—You think the opportunities have decreased? A.—I do not say there are none, but there is not the same opportunity to make a successful start.

Q.—Do you apply that answer to Hamilton alone or to the country generally? A.—To the country generally, I should say.

Q.—Can you tell us why you think the opportunity is not so good now for establishing a business as it was twenty-five years ago? A.—Well, in my estimation, and as far as I know, business is a good deal overdone in Canada to-day; I think it is fully attended to. There is not the demand for new industries there was fifteen or twenty years ago.

Q.—Would the men working in a small way be able to compete with the large foundries? A.—No; I do not think so.

Q.—When you started you had a special industry—you took up that of malleable iron? A.—Yes.

Q.—And then you went into other branches? A.—Yes.

By Mr. HEAKES:—

Q.—Taking into consideration the advantages you derive from invention and improved machinery, don't you think the hours could be reduced without decreasing the output? A.—I don't think so, speaking for myself.

Q.—Machinery is of no advantage to your business? A.—Certainly it is of advantage; but still, if a man works a machine he can do more in ten hours than he can in eight.

Q.—That is not the question; but do the men derive the benefit from the invention of those machines they have created? A.—In one way they might. It might lessen the labor, the hard labor, and make it easier for them.

Q.—It also displaces men in your business? A.—I do not think so, very much.

Q.—Isn't there a difference in the cost of cleaning castings now from what it was when done by hand? A.—That is a long time ago, before I understood much about it.

Q.—You say there is not the same demand now for protection to industries as there was twenty years ago? A.—I did not say so. I said the country was fully supplied, though there is more demand, but there are more manufacturers engaged in the business.

Q.—Do you think the manufacturers have increased faster than the population? A.—Well, of course the last three or four years we have not been having what you may call as good times as formerly. Formerly we were pushed, all the manufacturers were pushed, and in several years there has not been such a demand for manufactured goods as there was a few years ago. This has a little to do with it: for instance, when the North-West boom was on all the manufacturers of the country were pushed to their utmost capacity. Of course, it was not a stable thing. Thousands and thousands of dollars went up there without finding a market, and that only rebounded back on the manufacturers here, and that was one cause. There are several other causes why there is not just the demand there was a few years ago, but I do not mean to say times are not good. We have had fair average years all through, though we have not had such good times as in 1882, when we had a larger output of our manufactures than since.

Q.—What are your reasons for supposing workingmen would not take advantage of wash-rooms? A.—When I say workingmen—I worked one time in a factory where there was wash-rooms and everything convenient for them, and I do not think there was more than one or two ever felt the advantages of those rooms. They would not be bothered, would not take time.

Q.—Do you know if in many large factories on the other side bath-rooms are put in for the convenience of moulders? A.—I never saw any in all my travelling—except one or two, and I have been in nearly all the large foundries on the other side. I speak of stove-plate foundries and machinery foundries.

By Mr. KERWIN:—

Q.—I understood you to say the foundry owners of this city nearly all commenced as workingmen? A.—Yes.

Q.—When you started out your establishment did you start out with money received for work, which you had saved? A.—Yes; that is the way we started our business. We had no capital only what we worked for.

Q.—What were wages in those days? A.—About \$2 for a moulder. If a moulder made \$12 a week he was doing pretty well, and day men made \$1.50 to \$1.75. Wages were not so good twenty-five years ago as to-day.

Q.—It seems strange that moulders in those days receiving those wages were able to start foundries when they cannot attempt to start them now? A.—Well, it takes capital or money to start a foundry, but if a man is very careful and very saving, and works a good many years, he can get enough money to make a start. It will takes \$2,000 to \$3,000 to start in a small way. You cannot start without a steam engine, and big iron patterns, &c., and that all costs money.

Q.—I understood you to say, also, in speaking about ten hours a day, which you thought enough for a day's work, that you worked more than that? A.—Yes; I have.

Q.—Was it the same kind of work those men are working at to-day? A.—At the same kind of work they are working at to-day. I have worked at moulding not later than last summer. When they were on strike, myself and partners worked on the floor, and ran the shop, to a certain extent, in a small way.

By Mr. CLARKE:—

Q.—What kind of iron do you use? A.—Three or four different brands. Our work is different from other shops. We use No. 1 Scotch, two or three brands, and also Londonderry mixed with that, and for the malleable iron parts we use Welsh iron.

Q.—Do you constantly use Londonderry? A.—Yes; all the time.

Q.—You only use it as a mixture? A.—We also use it alone.

Q.—How does it compare with the other? A.—Well, it is rather hard to use alone for certain classes, though for other classes it is all right. It is probably the best iron we have to handle for certain goods. It makes very nice work, very clean in the grain. It is better than Scotch for general purposes, but we use Scotch to soften it down, to tone it down a little.

Q.—Where do you get your coal? A.—We use mostly coke, excepting engine coal for firing up, when we use soft coal.

Q.—Do you use lower Province coal? A.—It has never been offered here. It has never been offered further west than Toronto.

Q.—Never made any enquiries? A.—I think, from enquiries, it costs a little too much to bring it up this far. We have not taken much trouble to find out.

Q.—What does other soft coal cost to lay it down here? A.—About \$4.75, I think, speaking from memory; it depends on the quality. Fairmount is probably the best.

Q.—Are you aware you can buy Springhill coal, of the lower Provinces, for \$1.25 a ton for steam purposes? A.—I am not aware of the exact figure, but I know it can be bought cheap; but it costs so much to bring it here it will bring it up to the other. We have always understood so, though we have not inquired minutely into it.

Q.—You never had any? A.—No; I do not know any body who ever had any.

J. S. ANTHES, Berlin, called and sworn.

By Mr. FREED :—

Q.—You live in Berlin? A.—Yes.

Q.—What is your business there? A.—Manufacturer of children's carriages and buggies.

Q.—Of what are children's carriages made? A.—Well, the bodies are principally of reed at present.

Q.—Can you tell us precisely what this reed is? A.—There is quite a difference of opinion as regards reed. Some call it rattan. It is rattan pith, or inside. The enamel or bark is taken off, which is the stuff used in cane-seated chairs. The inside is called the reed.

Q.—How many factories, within your knowledge, are there in Canada using this reed for furniture? A.—Six, I think, in Ontario.

Q.—You don't know whether there are any others in other Provinces? A.—No; I do not. There was one in Quebec, but it came to Toronto last season.

Q.—Do you know how long any of them have been in existence? A.—It is only four or five years probably.

Q.—Do you know why they did not exist before? A.—Well I suppose there was a demand for those goods at that time, and especially for carriages. The reed bodies have not been in existence in this country until the last few years, and now they are nearly all made of it.

Q.—Are many men employed in this industry? A.—Yes; there would be quite a number employed.

Q.—Are they skilled workmen? A.—Well, of course it varies very much. The work is divided into different classes. For instance, a man who makes the frame work has to be a skilled workman, but different parts are done by cheap labor.

Q.—Are those men, or boys? A.—Boys and girls are often employed on them for the cheap work.

Q.—What wages can these boys and girls earn? A.—Probably \$4 or \$5 a week. It depends how long they have been at it. After they have been at it a certain time they can do it very quickly.

Q.—Is this trade increasing, decreasing, or stationary? A.—Well, it has been increasing this last number of years. I suppose it has probably reached its highest point.

Q.—From what countries do the reeds come? A.—Principally from Hamburg, Germany. It comes to New York and I buy it there. It comes in as ballast for vessels, and comes to New York in that way from Hamburg.

Q.—Where is it grown? A.—Well I don't know, but I suppose in some tropical countries.

Q.—You have said reeds are the central parts of rattan? Is there a full supply of that in the country? A.—Yes; I have no difficulty in getting it. I cannot get it in this country, but I have always got it in New York.

Q.—The supply of reed left after the rattans have been taken off cannot all be used by manufacturers? A.—No; you see there is not sufficient cane used, or it comes in rather more than is used in the country, and there is a surplus of it.

Q.—You are compelled to import the reeds as they are? A.—Yes.

Q.—What is the duty on the cane? A.—20 or 25 per cent.

Q.—That is for the ordinary cane? A.—No; rattan is free when it is combined, but when it is separated it is not.

Q.—When the outside is taken off to make cane-seated chairs the reed is left? A.—Yes.

Q.—If you import it, what is the duty? A.—There is a difference of opinion. Some say it is free, and it has been imported as free, but of late nearly all of it pays 25 per cent. Even the round reeds have to be manufactured for winding, and of course some look at it in that way. In fact, it is not reed until the cane is taken off, and they look upon that as not manufactured, but when it is split up it is manufactured.

Q.—Do you think more hands are employed in making furniture from reed and rattan than would be employed in making like furniture of wood? A.—I don't know about that; likely there would be far more. They cannot apply machinery, whereas if you made it of wood you could apply a number of machines. Take these carriages and make the body of wood—they could make six while we are making one of reed.

Q.—Where do you find your market? A.—Principally in the towns and cities of Ontario, and some of the Maritime Provinces.

Q.—Are reed chairs coming into general use? A.—Yes; but they are rather dying out. They have got rather overdone, and the better class of people don't buy them so much.

Q.—Are baby carriages of reed coming into general use? A.—Yes; very general, almost exclusively.

By Mr. CLARKE :—

Q.—How will the prices of reed-ware or rattan-ware compare with the prices before these factories started in Ontario? A.—Well, before that I had not had experience. The first year or two I imported my bodies and did not buy my chairs, but the duty was raised so much I was compelled to manufacture. If it had not been for the duty I could have imported them as cheap as making them.

Q.—Has it stopped importation of these goods? A.—Yes; to a certain extent.

Q.—How many hands are employed in your establishment? A.—Of course in the reed department we have only four to five. Of course, in the wood department we employ more.

Q.—Can you give us any idea of the value of the goods manufactured in your line in Canada? A.—No; I don't believe I can. There would be 200 hands employed, I should think. It would be hard to give any idea.

By Mr. McLEAN :—

Q.—Do you make any hand-sleds? A.—Yes; I make them, but there is no money in them, on account of prison labor coming into competition.

By Mr. HEAKES :—

Q.—Where does it come in ? A.—In Toronto.

Q.—If those sleighs were not made by prison labor, or if they were put on the market at market value, could you manufacture to compete with them ? A.—No ; I could not compete with them in such a thing as a sleigh. In carriages we could. It does not require any skilled labor to make a hand-sleigh.

Q.—Supposing this work was put out at market value, at the same value as free labor would produce them, could you compete with them ? A.—Yes ; but they could not sell their goods.

Q.—That does not necessarily follow, does it ? A.—Yes ; it follows. Any dealer will give the manufacturer and employer of free labor the preference over prison labor.

By the CHAIRMAN :—

Q.—What kind of work do you think prison labor should be applied to ? A.—It is hard to say. I said when asked that once before, that manufacturers should know what kind they are making and stay out of those lines.

By Mr. HEAKES :—

Q.—Should the labor of prisons be let out by contract ? A.—I don't know as that would make very much difference. As long as they manufacture a certain line of goods let people know it. Of course, when they began making hand-sleighs I just dropped that line except a few.

Q.—Do you think it would be a good system for the Government to manufacture on their own account and the surplus between the cost of production and the manufactured value be given to the families of prisoners ? A.—I never gave any thought to that, but it may be feasible.

Q.—Do you think such a system would create as much dissatisfaction as the present system of letting the labor out cheaply to the manufacturer and letting him make all the profit ? A.—No ; probably it would be a very good idea, though of course I have not thought much of it. I think they should do work, and if they will work they will clash with somebody certainly.

By Mr. ARMSTRONG :—

Q.—What might be the ages of the young girls who go into your business ? A.—From fourteen years upwards. Of course, we cannot employ them under fourteen.

Q.—Are they employed by piece work ? A.—As a rule they are.

Q.—What will be the average which a young girl will make ? A.—It depends on how fast she can work. She may earn 50 to 75 cents a day after being at it a couple of weeks. It is easy work and easily learned. I think a girl should earn 75 cents in a short time.

Q.—How long do they work ? A.—My hands all work ten hours.

Q.—Sixty hours a week ? A.—Yes.

Q.—Are there any of these factories in Ontario exempt from taxation ? A.—I do not hardly think it, unless it is Hay, of Woodstock, who has been exempt : I don't know whether he is now.

Q.—Have firms received bonuses from the people for starting that line ? A.—No ; I don't think so. It is generally in connection with other work—for instance, with the making of carriages. Reed work is generally bought, and the same with chairs. In Woodstock, for instance, they have a large furniture factory.

Q.—Is rattan work coming into vogue in Ontario ? A.—It is going out a good deal now, simply because it is getting into auction rooms.

By Mr. CLARKE :—

Q.—Is it to that or to the inferior quality of goods it is owing ? A.—No ; I think we manufacture a class of goods equal to American goods. At the first start it was of inferior quality, and probably that was the cause why it was run into the auction rooms.

SAMUEL GREENING, Hamilton, called and sworn.

By Mr. FREED:—

Q.—What is the title of your firm? A.—B. Greening & Co.

Q.—In what business are you engaged? A.—Wire ropes, wire cloth, wire-work and general permeated metals.

Q.—Your business is in Hamilton? A.—Yes.

Q.—How long have you been engaged in the business? A.—About twenty-nine years—and my father before me. I succeeded to the business about ten years ago.

Q.—Does it grow, decrease or remain stationary? A.—We are increasing.

Q.—In what form do you import your wire? A.—We use raw material.

Q.—Just as you use it? A.—Yes.

Q.—You simply weave it or fashion it? A.—Yes.

Q.—Are many hands employed in this industry? A.—We employ about 110.

Q.—Are they skilled or unskilled? A.—I think 60 per cent. would be skilled labor.

Q.—What wages can skilled men earn? A.—It depends on what they are—machinists \$2 a day, carpenters \$2, wire-workers \$1.75, and weavers are mostly the best paid. The regular average is about \$2.

Q.—Is it possible to make this wire in Canada? A.—Well, there is wire drawn in Montreal of certain sizes only,

Q.—Is it possible to make all the sizes you use in Canada? A.—It is possible; but I don't think it would pay to do it. There is not a sufficient quantity required, not sufficient demand. There are a great variety of wires required in Canada.

Q.—What kind of wire do you use here mostly? A.—Cast steel, Bessemer steel, charcoal iron, ordinary iron, and the same galvanized and tinned—almost every kind which is made, excepting special brands, such as piano wire.

Q.—Do you employ many boys? A.—Yes.

Q.—What can those boys earn? A.—It depends upon their age, and the time they are with us. They usually commence with \$2.50 a week and increase 50 cents every six months.

Q.—Are they learning the trade in this time? A.—They leave us at times. Most of our journeymen we educated ourselves.

Q.—How many years are required to make a skilled workman in this? A.—Four to six years.

Q.—When they have finished their time and become skilled workmen do you retain them in your employ? A.—Yes.

Q.—You have plenty of work for them, as a rule? A.—Yes.

Q.—Where do you find your market? A.—In Canada.

Q.—Do you export any? A.—No; none.

Q.—Is your Canadian market mostly in Ontario or throughout the Dominion? A.—Throughout the Dominion.

Q.—Do you sell much in the North-West? A.—Yes.

Q.—As far as British Columbia? A.—Yes.

Q.—Do you employ much machinery? A.—Yes; we have all machine work, except the wire-working branch.

Q.—Are the machines properly protected against accident? A.—Yes; we take out an accident policy for our men. The inspector had to make very few suggestions, which were carried out.

Q.—Is that the provincial inspector? A.—No; for the Citizens' Insurance Company.

Q.—You took out those accident policies at your own cost? A.—Yes; it is a manufacturer's indemnity against claims for accident. We have never had an accident from any fault of the machinery since we have been in business.

Q.—You simply transfer your liability back to the company? A.—Yes.

Q.—Was the provincial inspector satisfied with the protection of those machines? A.—I believe so, though I did not see him personally.

By the CHAIRMAN :—

Q.—You would have heard if he had made any complaints? A.—Yes; there was not a complaint, I believe.

Q.—Have you heard of any establishment where the factory inspector was not satisfied? A.—No; I have not.

By Mr. HEAKES :—

Q.—You have never had any accidents? A.—Not through any fault of the machinery or appliances.

Q.—In case of accident in your factory do you or the employes receive the benefit of the insurance? A.—Our insurance is only to protect us against an action at law.

Q.—Simply to protect yourselves? A.—Yes.

Q.—They would have to sue the insurance company? A.—Yes.

Q.—Or rather they would sue you, and the insurance company would have to bear the expenses? A.—Yes.

By Mr. CLARKE :—

Q.—What line of goods do you lean heaviest on? A.—Wire cloth and wire rope.

Q.—What is wire rope used for? A.—Vessel rigging, passenger elevators, and for public works, in derricks.

Q.—And the cloth is used for? A.—Fanning mills, sieving machines, tops of locomotives, smoke stacks, window screens, &c.

Q.—Do you make any for funnels? A.—No; we import it.

By Mr. HEAKES :—

Q.—What size of steel wire do you manufacture? A.—We don't manufacture wire. Wire is our raw material.

Q.—Don't you manufacture steel wire rope? A.—Yes.

Q.—What sizes do you make? A.—From  $\frac{1}{4}$  inch to  $1\frac{1}{2}$  inches

Q.—And all sizes between? A.—Yes.

Q.—You manufacture the same sizes of the iron? A.—Yes.

By Mr. CLARKE :—

Q.—You speak of shipping to the North-West. Do you find any market in the Maritime Provinces? A.—We have a large number of customers in Montreal; it is one of our best points.

By Mr. ARMSTRONG :—

Q.—Have any accidents happened in your establishment? A.—Yes; but not through the fault of the machinery. A man working a saw had his fingers badly cut one time, and lately a boy lost three fingers by falling over a saw and his hand coming in contact with it.

Q.—Do many boys run saws? A.—No; we have men on purpose for it.

By Mr. GIBSON :—

Q.—Are your boys indentured? A.—No.

Q.—Don't you think it would be a good plan to indenture them? A.—It will not do, for if they want to go they will go, and if dissatisfied it would be little use to keep them. We never let good boys go, if it is possible to keep them.

By Mr. McLEAN :—

Q.—Any females employed in your establishment? A.—Yes; we have eighteen.

Q.—What age is the youngest? A.—Fourteen or fifteen.

Q.—What are they working at? A.—They run a very light automatic machine.

Q.—What wages do they receive? A.—\$3 to \$6 a week: They all have the same chance. We have one hand who can make \$7; another finds it difficult to make \$4. There is one thing I might say: we have only been employing girls about six months, and they are just becoming accustomed to it. The one making \$7 formerly worked on the other side.

By Mr. ARMSTRONG :—

Q.—What is the average wages of those girls? A.—About \$4 a week.

Q.—Do the larger of them live with their parents, or board out? A.—I think the larger live with their parents.

J. S. ANTHES, re-called.

By Mr. FREED :—

Q.—Have you given the subject of profit-sharing any thought? A.—Yes; I have.

Q.—Do you think it can be done? A.—Yes; it can be done in a certain way: for instance, we ourselves for a number of years, are converted into a joint stock company, and by that means, of course, we give our employes a chance to buy stock.

Q.—Do any of them avail themselves of that opportunity? A.—Of course, we are just trying the experiment now. We have not a charter; we have just applied for it.

Q.—In your opinion, that is the best solution of the problem of how to divide the profits of the manufacturers with the workmen? A.—It is the only solution I can see, and I shall certainly give my employes a chance to get the stock.

BENJAMIN CAMERON, Moulder, Hamilton, called and sworn.

By Mr. FREED :—

Q.—You are a machinery moulder, I believe? A.—I am.

Q.—How long have you worked in Hamilton? A.—For five years.

Q.—What are your hours of labor? A.—Fifty-four hours a week.

Q.—Do you believe in shortening the hours of labor? A.—Yes.

Q.—For what cause? A.—I think it would reduce the production and, so doing, you would increase the wages, because when we have an over-supply of labor on the market labor is always cheaper; and for that reason I think the hours of labor should be reduced.

Q.—Provided a system of shortening the hours of labor was in existence, and there was a public library established here, do you think, to the best of your knowledge, the men would take advantage of that library? A.—Provided the hours were shortened, I believe they would. Speaking my own views, I think it would be of great advantage. I was in Hamilton when the vote was taken on the free library question, and I worked hard in favor of it; and I found there were a good many men opposed to it on account of the expense that would be involved, and there were a great many who would like to have it, except for the expense.

Q.—Have you anything to add to the evidence already given in your branch of trade? A.—I don't think I have; I think it has been very well ventilated. There was a big strike last summer, and a great many moulders were under the impression that if they accepted the advance of 5 per cent. they would get steady employment. They thought it would give more steady employment, and therefore they would accept the terms of the bosses; but it has proved that the men have got no more work, as some of them expected they would do. The shops have been shut down—some for a week and others for a longer time, and in fact, some for nearly a month; and I don't know when they will start up again. The masters gave us no definite answer on that point. It would be an advantage to the employé if he knew that the shop was going to be closed for a length of time, because it would give him a

chance of getting out of the city and finding work elsewhere for the time being; but this the masters do not do. They just lay the men off, and when they are ready to work they send for the men. The men are here with their families and they don't like to move out of the city, and although they want to better their condition they don't know whether the works will start up soon or not. That is the position in which they are placed.

Q.—Do you know if at the time of the 5 per cent. compromise the men were promised steady work for a certain period if they would accept those terms?

A.—Not that I am aware of; it was not so; but I think it was the general conclusion that that would be the eventual outcome of it—that being closed so long last summer the manufacturers would have got behind with their stock. It seems now that the work has been decreasing this winter. The men who have been in Hamilton many years say that the foundries used to run steadily all the year round, while now they shut down at Christmas and keep idle two or three months. There is one great evil I see in connection with the strike last summer: so soon as the shops got started again the masters got new hands, in addition to taking back all their old hands. They did this in order to be able to turn out as much work as possible, and therefore the men are left idle now; whereas, if they had continued with the old hands and kept the shop running steadily the men would have been better off, because they would now be at work instead of being idle. Lots of men came here from the other side.

Q.—Is the moulding trade troubled with immigration? A.—Yes; as I think all other trades are. We had a case of that in Toronto some few years ago. When there was a strike at Gurney's the firm imported some men from the old country.

Q.—Were you at work at Gurney's at the time? A.—No; I was in the country at the time.

Q.—Do you know it as a fact? A.—Yes.

By the CHAIRMAN:—

Q.—It was some years ago? A.—It was some time about the nine-hour movement; but it is generally understood by the moulders that they imported these men from the old country.

By Mr. GIBSON:—

Q.—Do you advocate the shortening of hours for the purpose of the men obtaining recreation, or with a view to employing the surplus labor of your branch of business? A.—Both; I think there are two good points to be obtained by that. I think if I work less time I will feel in better shape for study, if I wish to devote my time to that.

Q.—Do you mean study as recreation? A.—That is recreation to me. To sit down and read a book or a newspaper is recreation.

Q.—Could the men earn fair wages in eight hours? A.—If it was adopted I think they could. We have countries that are more prosperous than Canada where the eight-hour system is in force—such a country as Australia. The wages are higher; and that is a proof that when the hours are reduced the wages become higher. All those to whom I have spoken on the question seem to think so.

Q.—If the hours of labor were shortened you think the manufacturers and the employes would not suffer? A.—I think so, because the wages would only increase as the demand for labor increased; and, therefore, since the demand for labor increases the prices go up with the price of labor.

Q.—The price of the article would go up corresponding with the rates? A.—Yes; but you will find that when the wages are cut down the price of the article is not cut down in proportion. The rate of wages will go down first, but the price of articles will rise before the wages do.

Q.—This shows that as soon as wages tend to advance the manufacturers begin to raise the prices of the articles. The advance commences at the wrong end? A.—Yes.

Q.—You think that if the wages increased in your business the prices obtained by the manufacturers would go up correspondingly? A.—Yes.

By Mr. HEAKES:—

Q.—Do you think moulders would take advantage of wash-rooms if they were provided in the foundries? A.—I do.

Q.—Have you ever heard moulders express a desire to have such rooms? A.—I have repeatedly; but I have heard some moulders say that they would not bother with washing; that is the majority of moulders. Such rooms have never been established here, and of course the men do not know the benefit of them. They have them at the foundry of the Baldwin Locomotive Works at Philadelphia. There is a man in charge of the wash-room, and each workman has a wash-basin to himself, and there is a bath. It was found to be very useful to the men.

Q.—Did the men generally take advantage of it? A.—As far as I could hear they did. I was very much pleased with it, and on speaking to several of the men I found they seemed to be very well satisfied with it.

Q.—Is it true that the men in your business take cold very frequently from changing their clothes? A.—Yes; by not having an opportunity to change their clothes. You are liable at present to take a chill if you do change them; of course, they would not be so liable if there was a proper room provided, properly warmed at this time of the year. A mechanic who is at work gets warmed up and when he goes out and has a long distance to walk he is very liable to get chilled through. I fortunately do not live far away. I don't think, with the exception of rolling mill men, there are any men who get more heated up than moulders and laborers in the foundry.

By Mr. GIBSON:—

Q.—What is your idea of the indenture system? A.—I think it would be a good idea.

Q.—Do you think it would be a benefit to the apprentices, and to all parties? A.—I think it would be a benefit to the three parties—the boss, the men and the apprentice.

Q.—Do you think technical schools would be an advantage to boys who were intending to go into the moulding business? A.—I don't think it would help them. Moulding is a particular trade to itself. A man wants actual work to make a moulder.

By Mr. HEAKES:—

Q.—Do you think it would be more beneficial to pattern-makers than to moulders? A.—Yes.

Q.—How long would you have a boy serve at a trade if he were indentured? A.—It would depend on the branch of business he was to follow.

Q.—Take the machinery moulding? A.—I think four or five years—four years at the least.

FRIDAY, 20th January, 2 p.m.

J. R. PETTITT, Grimsby, called and sworn.

By Mr. FREED:—

Q.—You are a farmer? A.—Yes.

Q.—Have farmed nearly all your life? A.—Yes.

Q.—In the neighborhood of Grimsby? A.—Always.

Q.—Have you employed many men lately? A.—Not just for three or four years back. I have rather retired from farming and the boys have taken it up.

Q.—Do you know what good farm hands receive now? A.—Yes; I think so.

Q.—Suppose a man is employed the year around, with board, what would be a fair wage? A.—I know some men getting as high as \$175 a year with board.

- Q.—Wouldn't that be considered high? A.—That is about as high as is paid.
- Q.—It would be above the average? A.—I think it would; from \$1.50 to \$1.75.
- Q.—A farm hand who boards or lives with his family, what would he receive?
- A.—The farm hands who are employed in that way usually have a house on the farm, and are found house, and perhaps wood, or something of that kind. They have \$220 to \$240, and house, &c.
- Q.—They would have their wood off the farm? A.—Yes.
- Q.—Is the supply of farm hands equal to the demand? A.—Well, I think so, or nearly so.
- Q.—You had no difficulty in getting hands when you wanted them? A.—Sometimes in the summer season there is a scarcity.
- Q.—Are many additional hands taken on in the summer season? A.—Yes.
- Q.—What would these receive by the month? A.—For six or seven months, probably from \$15 to \$17 per month and board.
- Q.—The conditions of farm labor have changed very much within the past quarter of a century? A.—Yes.
- Q.—During that time farm machinery has been introduced? A.—Yes; largely.
- Q.—In consequence of having this machinery farmers don't need to employ so many hands as they used to? A.—Not for harvesting; and on such work we used to require more labor than it does now, or a greater number of hands.
- Q.—Do you remember about what would be the wages paid to occasional hands in the press of harvest time before the introduction of machinery? A.—I remember when \$1 a day was paid to harvest hands in my time. Now it is more.
- Q.—If you employed a man by the year round at that time what would you pay him? A.—May be about \$110 to \$125, twenty-five years ago. Perhaps there might be exceptional times, like the Russian war, when it was higher.
- Q.—Did you ever make a calculation as to what the farm implements would cost a farmer farming, say 100 acres, taking one year with another? A.—Well, I could not say as to that exactly, because some years he might buy a good many implements, which would do him for a number of years, but for an average year I could not speak.
- Q.—About what would be the cost of a good equipment of farm implements for, say 100 acres of land, for an average farm, including farm waggons, sleighs, &c? A.—I should think for a farm of 100 acres perhaps \$500.
- Q.—That would not include threshers, which go from farm to farm? A.—No; they are usually owned by people who follow it for a living. Very few farmers own a thresher.
- Q.—Does it cost more or less, calculating the value of farm implements, to raise grain than it did before the introduction of machinery? A.—I don't think it costs any less, but I don't know that it does any more.
- Q.—Isn't there an advantage to the farmer in having machinery? A.—Yes; they can probably do more work, but there is more expense with a great deal of machinery—the extra cost of the machinery.
- Q.—If there was not an advantage to him in having machines he would not buy them? A.—No; he would not buy them.

By the CHAIRMAN:—

- Q.—Wouldn't there be much less use of machinery if your time was not so short in harvest time? A.—Yes.
- Q.—That is one reason why machinery is used? A.—Yes.

By Mr. FREED:—

- Q.—Have farmers in your neighborhood made money? Can they be called fairly well off, good men and industrious? A.—I think so; I know so.
- Q.—The class of farmers, taking them throughout the Niagara peninsula, have they, as a rule, been able to live in comfort? A.—I think so.
- Q.—And pay for their places? A.—I know some men who have bought land and paid for it and are living very comfortable. I know others who are not so care-

ful and economical who lost their farms. But it is more through negligence, because they did not work and take care of it.

Q.—Don't some of them try to put on a little more style than they can afford?  
A.—Yes.

By the CHAIRMAN :—

Q.—Haven't some of them got expensive sons? A.—Yes. In the vicinity I live in farming has changed very much from grain-growing to fruit-growing in the last fifteen to twenty-five years. While I farmed I did not follow fruit-growing so much as the last few years.

By Mr. FREED :—

Q.—You have practically retired from farming? A.—Nearly so. I live on the farm, but my son wanted the farm, and having got to that age—I had a small family—I gave the farm virtually up to him. I just keep a few acres for fruit-growing.

Q.—You haven't the appearance of being a worn-out or broken-down man?  
A.—No; I haven't. My age is sixty-two and I live in the house, and I generally turn in and farm the farm my father farmed all his life. It is 100 years this last summer since he came to Grimsby.

By the CHAIRMAN :—

Q.—How many hours a day have you worked in summer? A.—In my younger days we worked long hours.

Q.—How much? A.—From sunrise to sundown.

Q.—A little after? A.—Sometimes. I have worked longer than that. My father was one of the old men who worked all day.

Q.—Even now don't they work about fifteen hours a day? A.—Seldom; ten hours a day. If you hire a man he expects to work ten hours for you. That is the usual thing now.

By Mr. ARMSTRONG :—

Q.—Is that the number of hours which these hands in the harvest season work?  
A.—That is supposed to be so.

Q.—For \$17 a month? A.—Yes.

Q.—When harvest is over what becomes of these hands? A.—A good many are hired by the year, though there are odd men working by the day the year around. There are a good many who work on fruit farming by the day.

Q.—But in agricultural farming, what becomes of them after the busy season is over? A.—Often times they are men engaged on other work, and in the summer season perhaps a man may turn in and help on the farm. There are not so many extra hands hired in farming now as before we got machinery, and principally self-binders. Farmers don't hire so much help through the summer as formerly.

Q.—These men generally belong to the cities and towns? A.—Sometimes to the villages; and there are men who work about the village who, in summer time, usually go to work on the farm through haying and harvesting?

Q.—Those men who go out for casual work on the farm don't earn enough to keep them all the year around? A.—They often work about the village throughout the winter, getting whatever work they can.

Q.—Have you heard of many immigrants coming out as farm hands? A.—Not many in this vicinity.

By Mr. CLARKE :—

Q.—How much more land are you able now to handle with the use of machinery than before its introduction? A.—Well, you could handle a good deal more land with the same number of men, but I could not tell how much. Before I had reapers and mowers, when I was farming, I often had six to eight men through harvest time, but now if I was farming I would not require nearly so many. With the assistance of the self-binder, perhaps three men might do the same.

By Mr. CARSON :—

Q.—You require to keep your land in a great deal better shape when you use machinery? A.—Yes; but there are few farms now which are not entirely cleared of stumps, &c., so that all the land can be utilized and farm machinery used upon it.

By Mr. CLARKE :—

Q.—More acreage and more machinery? A.—Yes.

By the CHAIRMAN :—

Q.—Are there any combinations amongst farmers to raise the price of produce? A.—Not that I know of.

Q.—No combinations to raise the price of produce of any kind? A.—Not that I am aware of.

By Mr. CLARKE :—

Q.—Have you raised stock? A.—When I farmed I was stock farming principally That was my stronghold.

Q.—How do prices compare to-day with ten or fifteen years ago? Any improvement? A.—In the price of young stock I think it has been better for the last five years than it was fifteen years ago. For a number of years I bred thoroughbred Durhams, which are not higher in price to-day than they were fifteen years ago. That class of stock, when times are hard, shrinks more than beef cattle in price, because they are a class which farmers can do without, and if crops of grain are a little light and poor they rather hold off from buying. I have found that from experience; when times are good, the price of grain good, prices of stock are better.

Q.—Do you find it pays better to raise stock than grain? A.—I do, although I have seen times when grain-growing was very profitable—for instance, during the American war and the Russian war, when they were getting \$2 a bushel for wheat. As a general thing I think stock-raising pays better than grain-growing.

A. H. PETTIT, Grimsby, called and sworn.

By Mr. FREED :—

Q.—You have been engaged in fruit farming? A.—Yes.

Q.—What classes of fruits are raised in the Niagara peninsula? A.—Peaches, grapes, apples, pears and other small fruits, berries, &c.

Q.—This constitutes the industry very much in your section of country? A.—Yes; it does.

Q.—You have thought fruit-raising pays better in that part of the country than general farming? A.—Yes; I think so.

Q.—Of these fruits, which do you consider most profitable? A.—Peaches, I think, are acknowledged the most profitable.

Q.—Can peach-growers find a good market for all their fruit? A.—Generally. There are times when the supply would appear to be almost more than the demand, but that would be only for a few days.

Q.—Do you sell the bulk of your fruit in the natural state or can it or otherwise treat it? A.—We ship it principally in its natural state.

Q.—Where do you find the principal markets? A.—Toronto, Montreal, and in fact, all the cities in Ontario of importance.

Q.—Do you export any green fruit? A.—Well, a small shipment was made to Glasgow this year of grapes. These are about the only varieties except apples, which were exported.

Q.—Was that experiment with grapes a success? A.—Not altogether. They arrived in good order, but prices were not sufficiently satisfactory.

Q.—Do Canadian grapes seem to be appreciated in the old country? A.—Some varieties were spoken highly of.

Q.—Where do you sell your apples principally? A.—Either in Montreal or in the old country.

Q.—Do apples generally ship to the old country in good condition? A.—Not always.

Q.—If they don't, what would be the cause of the failure? A.—I could scarcely account for it, unless there is too great heat on board ship.

Q.—Are they ever badly packed? A.—I have no doubt they are, in some instances.

Q.—If they arrive in poor condition are they worth much? A.—No; prices are not very satisfactory.

Q.—If they arrive in good condition are prices satisfactory? A.—Generally so.

Q.—How much of a market is there in the old country for apples. A.—Well, I could scarcely answer that. I suppose there is a limit to it, but it is almost unlimited, from the quantities which go forward.

Q.—Where do you find a market for small fruits? A.—In all our Ontario cities and Montreal.

Q.—Do those pay pretty well? A.—Some seasons they do.

Q.—What kind of help do you require in the fruit industry? A.—Men and women mostly.

Q.—Any children? A.—At certain seasons, at strawberry picking or raspberries, or something of that kind.

Q.—For how long periods of the year do you employ the men? A.—Well, probably the greatest number about three months or three months and a-half.

Q.—Do they have any skill, or will common laborers do? A.—Common laborers will do, though some are much more useful than others.

Q.—Some knowledge is of benefit to them? A.—Yes.

Q.—What would you pay those men? A.—I generally pay them \$1 a day, and they board themselves.

Q.—The women whom you employ, how long do you employ them? A.—Just during the season of peaches and grapes generally. They are useful in picking and packing peaches and grapes.

Q.—Do they board themselves? A.—Yes.

Q.—Do they generally live in the neighborhood? A.—Yes.

Q.—What would you pay those women? A.—Seventy-five cents to one dollar.

Q.—How do you pay the children for picking berries? A.—By the quart, generally.

Q.—What can they earn? A.—Fifty to seventy-five cents a day.

Q.—Do many earn over 50 cents a day? A.—Some of them do.

Q.—How long does their work last? A.—It lasts a short period, about three weeks.

Q.—Is the supply ample? A.—Not always.

Q.—Is this a growing industry? A.—Yes; the acreage is increasing throughout this peninsula.

Q.—Is much fruit canned in your neighborhood? A.—Yes; there is quite a quantity. We have one canning establishment doing a large business.

Q.—Do you supply any canning factories in Canada—I mean, your section of the country? A.—I think they do to a limited extent.

Q.—Do you get as good prices from canning factories as from others? A.—Well, I could not say; I have never supplied them.

Q.—Are many of your fruits dried? A.—Nothing but apples, I think.

Q.—By what process are they dried? A.—By an evaporator.

Q.—That is your substitute for the old fashion of drying in the air? A.—Yes.

Q.—It makes better fruit? A.—Yes; much better.

Q.—What comparison is there between the Delaware peaches and the Canadian peaches? A.—I should think they would be very much the same. They may not appear so fine here, on account of the long distance they have been brought and the time they have been on the way. I should judge they were equal to ours.

By Mr. CLARKE :—

Q.—And ours equal to them ? A.—Yes.

By Mr. FREED :—

Q.—In what kind of barrels do you generally pack apples for export ? A.—In flour barrel size.

Q.—Is it necessary to have them open for the circulation of air ? A.—No.

Q.—Don't you require some circulation of air ? A.—No.

By Mr. CLARKE :—

Q.—Flour barrel size ? A.—Yes.

Q.—What kind of wood do you use ? A.—Generally elm for the sides, ash hoops, and almost any kind of timber for the heads. One head needs to be hard to prevent them pressing in.

Q.—It would not do to have pine or resinous wood ? A.—Basswood is used for the end you leave in the barrel, and some hardwood for the other end.

Q.—Where are those barrels made ? A.—Almost every locality has shops for manufacturing them.

Q.—Did you ever use an ash stave ? A.—No ; I don't think we ever did. Elm would be cheaper.

Q.—Do you know what kind of barrel they use in Nova Scotia ? A.—No ; I do not.

By Mr. ARMSTRONG :—

Q.—Fifty cents a day for children—is that the rule or the exception as regards their wages ? A.—A good many of them would earn that, they would pick 50 quarts.

Q.—How many earn less than that ? A.—Probably one-half of them.

Q.—How many would that be ? A.—Well, it is very hard to explain. Strawberries are grown by many people, some in large quantities and some in small.

Q.—How old would those children be ? A.—Six or eight years old.

Q.—They work out in the patches ? A.—Yes.

Q.—Have you known those who work on the patches afterwards to go into those canning factories ? A.—I have no doubt some of them do.

Q.—At six and eight years ? A.—No ; probably not so young. I think our factory employs them at eight and twelve, in fact, all ages.

Q.—Do you know what wages these girls, eight and ten years, get at those factories ? A.—No ; I do not.

Q.—Is there as much pains taken in making an apple barrel as a flour barrel ? A.—You can use a coarser stave, not so well jointed.

Q.—How are they bought ? A.—By the hundred generally.

Q.—What are they worth ? A.—Apple barrels are worth 30 cents.

By Mr. McLEAN :—

Q.—Is that wholesale or retail price ? A.—Wholesale. We manufacture what we require.

By Mr. CLARKE :—

Q.—Hand or steam ? A.—By hand.

By Mr. ARMSTRONG :—

Q.—You have a cooperage ? A.—Yes ; a small one.

Q.—Do you make any tight work ? A.—No ; just apple barrels for our own use and some to sell.

Q.—How many do you produce ? A.—Six thousand barrels last year.

Q.—Of apples ? A.—No ; of barrels themselves.

Q.—How many barrels of apples do you produce on your own place ? A.—Well, we have had rather poor crops for the last two or three years.

Q.—The average crop ? A.—One hundred to three hundred barrels.

Q.—How many crates of peaches ? A.—We ship them in 12-quart baskets. I had over 3,000 baskets last year.

Q.—How much did you produce of other fruits? A.—I think I had eight and a-half tons of grapes this year of different varieties.

By Mr. CARSON :—

Q.—Are the barrels made by the piece or day? A.—By piece.

Q.—What can a man make a day making these barrels? A.—Our man makes \$2, and some days more. We pay him 8 cents for making them, and he can make thirty to thirty-five.

By Mr. McLEAN :—

Q.—How many hours would he work to make thirty-five? A.—I could not tell you.

By Mr. ARMSTRONG :—

Q.—They work over-time, don't they? A.—Just as it suits him.

Q.—Do they begin at 4 o'clock in the morning? A.—No; just as it suits. He may turn out forty barrels a day if he likes.

By Mr. CARSON :—

Q.—In ten hours? A.—No; not in ten hours.

Q.—Would he make thirty in ten hours? A.—I think so.

Q.—Would that be hard work? A.—No; I don't think so.

By Mr. CLARKE :—

Q.—You have staves and hoops, &c., manufactured ready for him? —A. Yes.

By Mr. McLEAN :—

Q.—Turning out forty barrels, would it be necessary to work from daylight to dark? A.—I am not sure about that. This fall we ran out of barrels. We had not sufficient to turn out our fruit. I asked him how many we could count on and he said we could count on forty a day.

Q.—You pay him pretty liberally? A.—Yes.

By Mr. FREED :—

Q.—Did you ever try the experiment of shipping apples to the old country in boxes? A.—No.

Q.—Would not the danger of spoiling be lessened if shipped in boxes, something like oranges, rather than barrels? A.—No; I would not think so. Barrels are handled much more easily and readily than boxes, and the handling must be done as carefully as possible.

By the CHAIRMAN :—

Q.—Freight would be less with barrels? A.—Yes; I think so.

By Mr. FREED :—

Q.—Are not apples injured a good deal by pressing? A.—No; they should not be.

Q.—Do you press them with a screw? A.—They may in many instances be injured by too much pressing. Our plan is to take the barrel on a plank, and as each basket goes in shake the barrel well. They will carry much better than when pressed too hard. Shaking is better than pressing.

THOMAS A. GREEN, Hamilton, called and sworn.

By Mr. FREED :—

Q.—You have been captain of a lake vessel? A.—Yes.

Q.—What vessel was that? A.—I have commanded quite a few; I have been master for twelve years.

Q.—Are you master now? A.—I have classed for the last season with the "Lake Michigan."

Q.—How long have you sailed the lakes? A.—Since 1864 or 1865.

Q.—Is the "Lake Michigan" a Canadian vessel? A.—Yes; she belongs to this port.

Q.—Have you commanded sailing vessels as well as steam vessels? A.—Yes.

Q.—What rates of wages are generally paid to sailors? A.—When I first came on the lakes, the time of the American war, they got big wages on the other side.

Q.—But now, what would be fair average wages of sailors? A.—They only take payment by the day; they don't get proper wages. They are paid by the day whenever they touch port.

Q.—What would be a fair day's wages? A.—From \$1.50 to \$3 through the season.

By Mr. CLARKE:—

Q.—For ordinary seamen? A.—No; for able seamen.

Q.—These sailors are shipped with the vessel leaving port and discharged at the end of the trip? A.—Yes.

Q.—How long a time would elapse before they could, in the natural order of things, get on another vessel or back on the same vessel? A.—A vessel is generally from two to three days unloading. In the grain trade it is only a few hours and you go right to an elevator.

Q.—How many days in the year does an ordinary sailor expect to be employed, taking an average case? A.—Our insurance is from the 1st of May to the 30th November.

Q.—But a sailor cannot be employed all this time? A.—If he is not discharged. When I first came on the lakes we had no discharge, and when they had the union they made big wages. Owners paid up the men every trip.

By the CHAIRMAN:—

Q.—Do you think that is an advantage for the shipping trade? A.—No; I do not think so. I think the other plan was better. Freight rates were so low owners had to compete with the men, because wages were so high.

Q.—Do you think it is better or not, for the vessel and the management of vessels, that sailors should understand they are engaged from the spring to the fall? A.—Yes; that is the best way.

Q.—This old sailor used to form a connection with the ship? A.—Yes; and get used to one another.

Q.—And have some pride in the vessel? A.—Yes.

Q.—Now they have none? A.—Yes.

The CHAIRMAN—And that is one of the causes of disaster.

By Mr. FREED:—

Q.—What do you think would be a fair season's wages for a sailor—a fair average one? A.—The way things are now I should think \$35 a month would be good wages for able seamen.

Q.—That would extend over seven or eight months? A.—Seven months.

By the CHAIRMAN:—

Q.—You give him board, too? A.—Yes.

By Mr. FREED:—

Q.—This average salary in cash would run less than \$250 a year? A.—They would make that before the mast.

Q.—Are the hands on propellers paid for every trip? A.—No; we generally get a tariff from the owners what to pay. They pay so much a month.

Q.—They remain during the season? A.—Yes; and get lower wages if they leave.

Q.—Who are the highest paid men? A.—Captains and engineers.

Q.—Do you employ many sailors on propellers? A.—If they are good wheelmen we take two or three.

Q.—How do the wages of these men compare with those on sailing vessels?  
 A.—They are not so large. I paid \$25 last year.

Q.—The "Lake Michigan" is a propeller? A.—Yes.

Q.—Do propellers keep afloat longer than sailing vessels? A.—Yes; they run as long as they can.

Q.—Are sailors on propellers able to earn as much money as those on schooners?  
 A.—Where they have been brought up on propellers they will hardly go on schooners unless to take lessons.

Q.—How is the food on lake vessels? A.—Very good.

Q.—What about the sleeping apartments? A.—Some are good and others not so good.

By the CHAIRMAN :—

Q.—Are vessels, as a rule, as fully manned as they should be? A.—Yes; when they have a full crew on board.

Q.—Are they generally supplied with as many hands as they need?  
 A.—Generally they are.

Q.—Are the sailing vessels as well manned as they should be? A.—Very seldom they are short-handed, except in the fall.

Q.—Are those men on sailing vessels generally competent men? A.—Yes; they hand, reef and steer. There is little else to be done, except keeping the ship in order.

Q.—Are not men shipped sometimes who cannot hand, reef and steer. A.—Well, any man who can handle the tackle.

Q.—On barges have they generally a sufficient supply of hands? A.—I cannot say, only from what I read; I was not in the business. Vessels I have towed have always a full crew and are able to take care of themselves after we let them go.

Q.—How large sailing power ought a barge or other vessel which is towed to have? A.—They should run six to eight miles an hour before the wind in good weather.

Q.—How many spars have they? A.—Generally two, though some have only one; they should have two. A barge with one mast cannot haul up to the wind.

Q.—Are there many which have only one? A.—Some of those old ones in the lumber trade, but most of them have two; they are generally two. They are generally in the short trade and big barges on the lakes are generally well looked after in their canvas, though there are some which are not.

Q.—In case one of those barges should get adrift would there be a sufficient crew on board to handle her and get her into port? A.—They should if they have four men.

Q.—Are they generally supplied with four men? A.—One we had towing had four men on board, besides the captain and mate. I am now speaking of a steam barge.

Q.—What inspection of the hull is there in Canada? A.—Clifford Lloyds.

Q.—Is it thorough? A.—They bore into the bottoms every year where they think they are most apt to rot.

Q.—Do you think there is a very practical and satisfactory inspection of the hulls every year? A.—Well, if they wish they can cut pieces out.

Q.—Do they ever do so? A.—Yes; I saw them do so last year.

Q.—Do the same inspectors inspect the hulls and rigging? A.—No; they are different.

Q.—Is the inspection of the rigging as thorough as it should be? A.—Not in all cases.

Q.—Do vessels ever go to sea with improper rigging? A.—Often, I am sorry to say.

Q.—And that leads, doubtless, to the possibility of disaster in the case of the owner? A.—Yes; you cannot always replace them when once carried away. You cannot get on another vessel most of the canvas.

Q.—Is the inspection of boilers and machinery as it should be? A.—Yes.

Q.—You think it is very careful? A.—I think they are very careful about boilers. I do not know whether there is any inspection for machinery.

Q.—Don't you think it is necessary to have the engines inspected as well as the boilers? A.—Engineers all have to pass an examination for that, and so they are under his care, and I do not think anything but the boilers is inspected by the Government.

Q.—What qualification is required of engineers? A.—They must understand the pressure on the boiler and gauges.

Q.—Do they have to pass a rigid examination before getting a certificate? A.—Yes.

Q.—If an engineer loses his vessel, or if the vessel is lost through his fault, is his certificate taken from him? A.—I believe it is, though I would not be certain. I know they are very particular about taking care of all these things.

By Mr. ARMSTRONG :—

Q.—To your certain knowledge, are there many bottoms leaving Canadian ports which, if inspected properly and with a consideration to the safety of the crew, would be condemned? A.—Well, I am not in a position to say, because they have so many classes.

Q.—Take any of those classes? A.—I have heard of some condemned, but they have been running since.

Q.—Have you known many of that kind? A.—Not many.

Q.—Which went out with bad bottoms? A.—I have only known one in particular.

Q.—Is the law as strictly enforced as the sailors' organization would have it, to your knowledge?

The CHAIRMAN.—There is no law about the sailors' organization.

Mr. ARMSTRONG.—There is a law about bottoms. Is the inspection as thorough as sailors as a body, would like to have it? A.—Sometimes they go to sea not altogether in ship-shape order.

Q.—Would that be frequent? A.—Not generally. In hard times owners like to make them run another trip, and in some cases the gear is in bad shape.

By the CHAIRMAN :—

Q.—Where is the inspector of hulls at that time? A.—They generally come round in winter.

Q.—They don't come near the vessel all summer? A.—I have seen them sometimes in Kingston.

Q.—The inspector lives in Kingston? A.—Yes; one of them, and another in St. Catharines.

Q.—Do you know of any of them inspecting the hulls of vessels during the summer? You say they make an inspection in the winter? A.—They take a look around sometimes when you are in Kingston.

Q.—Have you seen them outside of Kingston or St. Catharines? A.—Yes; I have seen them when a vessel was on the dock at Port Dalhousie.

By Mr. ARMSTRONG :—

Q.—The mate is the principal hand on board? A.—Yes; he is second in charge, and is in charge when the captain is below.

Q.—The law compels the mate to have a certificate showing his qualification? A.—Yes.

Q.—Did you ever know that law to be violated? A.—Not to my knowledge.

Q.—The captain is also required to have a certificate? A.—Yes.

Q.—Have you known masters occupying such a position on board without a certificate? A.—No, sir.

Q.—Have you known masters, according to your experience in the case, take charge who were incompetent? A.—I never was with one.

Q.—You cannot speak from facts? A.—No.

By the CHAIRMAN :—

Q.—We have heard evidence to the effect that the forecastles and sleeping berths are very bad? A.—It is their own fault; they will not keep them clean; it is hard to keep them clean. They get a clean bed.

Q.—I am speaking of sailing vessels? A.—Yes.

Q.—On the barges, are the decks always water-tight? A.—On some of them that carry lumber I will not say always; they are supposed to be.

Q.—As a matter of fact are not many of those lumber vessels unseaworthy, and should not be allowed to run sail. A.—There may be some of the old ones which may be unfit to sail.

By Mr. CARSON :—

Q.—Isn't it more the fault of the sailors than the fault of the inspectors if a vessel goes to sea unseaworthy? If he is in a position to know the vessel is unseaworthy wouldn't it be right to make a complaint to the authorities? A.—Yes; but like every body else there are too many ready to take his place if a man wants to "kick." I think there is some fault of the Government with regard to fogs and fog-horns that we find a danger on the lakes.

By Mr. FREED :—

Q.—Just tell us about that? A.—We have three courses on Lake Ontario from here to Kingston, and we have to change two courses before we get to the third one.

Q.—That is in sailing from Port Dalhousie? A.—No; from Hamilton. There should be a long fog-whistle at Long Point. It is very necessary.

Q.—At any other point? A.—We have a little bell, but when the wind is from the westward we cannot hear it. It is at Nine-mile Point, Simcoe Island.

Q.—What would you suggest? A.—A fog-whistle which we could hear, especially on Lake Erie, coming from Long Point to the Dummy, where so many disasters have been. We have no fog-whistle. It is a bad place, and there is ample ground between that and Pelee Island. There should be a fog-whistle there. But we have to go to the bottom with our leads. They don't show any bottom on the Canadian side, though they give the soundings on the American side. From Point Alpena, on Lake Erie, to Point Pelee, we have no soundings. We have to throw in our leads. We get bottom, but we cannot tell where we are.

Q.—In a fog you determine your position by soundings, and your chart shows it again. A.—Yes; that should tell, if we know how fast we are running. It is the same on Lake Erie. I think the shore has soundings after passing the Ducks along the north shore back of Port Dalhousie, and then you go along down on the American side.

Q.—Would it be a matter of great difficulty or expense to lay down those soundings? A.—I think Canadians and Americans should pay for it together when they sound the lakes.

Q.—Do you think it would be a difficult or expensive job to do so? A.—They are at it now on Georgian Bay. I do not know what it costs. It costs quite a bit to survey.

Q.—Surveying in Georgian Bay is more difficult than in other waters? A.—Yes; on account of the rocks.

Q.—Have you anything more to suggest? A.—I do not know of anything more.

Q.—I mean with reference to the signals and lighthouses wanted? A.—It would be a good thing to have one at Burlington Pier, because we cannot pass it right; we are apt to get right upon it. We should have something there, especially in a north-east gale. Port Dalhousie has nothing at all at the entrance to the Welland Canal.

Q.—In foggy weather how close will you be to Burlington Pier before seeing the light? A.—I have been right close to it, and though I knew I was close to it, I could not see the light.

Q.—In a north-east storm if the weather was foggy you might run on to the piers before you knew you were near them? A.—Yes.

Q.—What is the law regarding deck loads? A.—I never heard of any in particular.

Q.—Do many vessels carry deck loads? A.—Yes; I have carried many heavy ones.

Q.—Is the danger of disaster increased by carrying them? A.—I never found it so—that is, in carrying coal or stone. I did not find any danger. I have the vessel always level. Sometimes, if you carry too big a deck load of lumber it will slide off.

Q.—Slide the vessel over, too? A.—No; I never knew a vessel capsizing with a deck load of lumber, though I have heard of them capsizing with wheat.

Q.—It is customary to carry deck loads? A.—Yes.

Q.—What tonnage will those vessels carry? A.—Some 500 and some 4,500.

Q.—What draught of water would a 500-ton one have? A.—About 11 feet; 14½ or 15 feet for the larger draught vessels.

By the CHAIRMAN:—

Q.—What is the qualification for a sailor? A.—To hand, reef, steer, and put in long and short splices.

Q.—Don't men ship as sailors who have been land lubbers all their lives? A.—If they can manage to steer.

Q.—Men who make their first trip? A.—We don't ship them as men, but as ordinary seamen; they have to learn. They don't go so young to sea as when we were on salt water.

Q.—You say that you will ship them as seamen though it is their first trip? A.—As ordinary seamen, not as able seamen.

Q.—You said the lowest crew should be composed of four men? A.—Yes.

Q.—Suppose one of those men should be one of that kind, would that be right in a storm? Supposing the hawser breaks and the vessel is left to herself, wouldn't you require four men? A.—It should be, but as long as a man is strong and can pull or hold he will do.

Q.—You are willing to trust a good deal to Providence?

By Mr. ARMSTRONG:—

Q.—The mate of a vessel is responsible for the proper performance of their duties by the sailors? A.—Yes.

Q.—And is it his place to see the hands out on duty? A.—Yes.

Q.—First starting, is he as competent to do that? A.—Yes.

Q.—What are the duties of the mate? A.—To look after the ship in general; to see that every thing is in good order aloft, so that nothing is chafing, so that nothing is carried away. Of late years wire rigging and iron bound blocks have come in, and there is not so much chafing.

Q.—The mate must be a thoroughly practical man? A.—Yes.

Q.—And I presume so must the master? A.—It is expected so.

By Mr. GIBSON:—

Q.—Is there any law requiring vessels to carry yawls or life-boats? A.—Yes; they are all carried and looked after.

Q.—Are some of them improperly hung, so that they cannot ship them? A.—On propellers they are always hung to the tackle; on schooners to the davits. They should have life-preservers on board.

Q.—Are they hung in such a way to the davits that they can be lowered into the water? A.—Yes; with a man who is any way smart they can unhang them quickly.

Q.—Have you known vessels to go out when the tackle was out of order? A.—Generally you will always see them have good tackle for the boats.

JOHN BERTRAM, Machinists' Tools Manufacturer, Dundas, called and sworn.

By Mr. FREED :—

Q.—You are head of the firm of John Bertram & Sons, of Dundas? A.—Yes.

Q.—You manufacture iron-working machines and tools? A.—Yes.

Q.—How long has your business been in existence? A.—A little over thirty years.

Q.—It was started by yourself and Mr. Macheeran? A.—Yes.

Q.—You were mechanics yourselves when you started the business? A.—Yes.

Q.—You started, I believe, in a small way? A.—Yes; we worked in the foundry a long time ago.

Q.—And you built up the business to its present proportions? A.—Yes.

Q.—About how many men do you employ at present? A.—One hundred and fifty just now, fully more than we ever had previously.

Q.—About what wages do skilled workmen earn in your establishment? A.—Machinists and machine hands average from \$1.75 to \$2 a day; a few go above \$2, up to \$2.25

Q.—Do you employ any other class of skilled labor? A.—No; just machinists.

Q.—Do you employ pattern-makers? A.—Yes.

Q.—What do they earn? A.—From \$1.80 to \$2.25 a day in the pattern shop; there is one at \$2.25 a day.

Q.—Now, as to your laborers: what do they earn? A.—I think the highest is \$1.50 a day; they run from \$1.25 to \$1.50.

Q.—You spoke of boys: have you many boys in your employ? A.—We always keep a proportion of apprentices so as to keep the firm supplied because there are so many coming and going.

Q.—At what age do those boys begin work with you, as a rule? A.—We have them from sixteen, but latterly we do not care about having them before seventeen. We like them to have some strength and stability.

Q.—It requires some strength to do your work? A.—They are steadier when they have got up to about seventeen years, and then we have them on a four years' apprenticeship.

Q.—Do you indenture them? A.—Yes; they are all indentured with a bond.

Q.—What is the nature of that bond? A.—The bond is given by a reliable party, either the father or guardian. He engages, under a penalty of \$200, to see that the lad carries out the conditions of the usual apprenticeship agreement.

Q.—Are you equally bound on your side? A.—We are both bound. There is a clause binding us to fulfil certain conditions.

Q.—Are you bound to teach the boy his trade? A.—Yes.

Q.—Do the boys, as a rule, stay with you and fulfil the conditions? A.—Yes, generally; there have been some cases where they have left our employ.

Q.—When they have left, has it been a matter of understanding between you that the indentures should be broken, or have the boys run away? A.—We have had one or two cases in which the boys have run away. In some cases they were arrested and compelled to find further security to work out the term. If he could not find further security we informed the bondsman.

Q.—You enforce the penalty of the bond? A.—We have never had to enforce it; but it has generally brought them to time.

Q.—When those boys who remain with you have finished their term do you consider them good workmen? A.—Yes.

Q.—Do you consider them as good as those who come to you from other shops? A.—We like them better. We like to keep them in our employ.

Q.—How do Canadian workmen compare with foreign workmen as regards ability and willingness? A.—We regard the foreign workmen, that is the Scotch and English, as having to learn something when they come here about our style of work, which they have not had from that to which they have been accustomed. We find them generally good workmen, that is those who are regular workmen.

Q.—How are those coming from the United States? A.—I could not say; we have not had many from the United States, except our own coming back again.

Q.—Your hands who have left you and gone to the United States do come back at times? A.—Yes; several have done so. We had some men go down to near Cincinnati last summer and they came back again, and they are good hands, too. They received higher wages there but they preferred to stay here.

Q.—They express themselves as better satisfied in Canada, after all? A.—When they went there malaria and the heat and some other things bothered them, and they seemed to prefer to work here for us.

Q.—How promptly do you pay your men? A.—Every two weeks, on Friday evening.

Q.—Have there been any requests made for more frequent payments? A.—No.

Q.—Would it not be to the advantage of the men if they were paid weekly?

A.—I do not think it; the question was never asked us by the men. We formerly paid on Saturday, and we changed it to Friday because the paying on Saturday prevented the wives of the men from purchasing their supplies on Saturday morning. We made it Friday on that account. While speaking on wages I did not mention the moulders.

Q.—You have a moulding shop also? A.—Yes; we pay them higher wages.

Q.—Do they work by the piece or by the week? A.—They work by the day.

Q.—What do they earn? A.—They earn \$2.50 a day; a few earn \$2.25, but all the good hands earn \$3 a day. We never had a demand for an increase of wages that I remember; we have always kept the wages up to the maximum given.

Q.—Have you ever increased the wages voluntarily? A.—We always do that if possible. We never care about the men asking for an increase.

Q.—Have you ever had a strike? A.—No; never.

Q.—Have you ever had any negotiations or conferences with your men over trade matters? A.—Yes; we did. Some of the men asked us our opinion about the apprentice system. There was one man who was apprenticed to machinery. We were pushed for hands at the time and we allowed him to work on the floor for a while; the men thought that was a grievance and not in accordance with our rules. I told them the facts of the case and they were quite satisfied. Since then we have had that man on what he was brought up to—machines. I told them the rule was in all places a four years' apprenticeship.

Q.—Do you consider it a good plan for employer and employes to come together in conferences to discuss matters? A.—If any misunderstanding arises I think it is right.

Q.—Do you think strikes may be avoided in that way if there is a mutual interchange of views? A.—Yes; if there is any grievance we, of course, endeavor to remove it, if it is a fair one; but we have never had any complaints. This is the only case in which we have had any difficulty.

Q.—Where do you get the iron and steel you use in your establishment? A.—The iron we have now in the yard is Canadian—Nova Scotia iron—and the balance is Scotch scrap such as car wheels, that we buy from parties who negotiate with railways for their old metal.

Q.—Does the Canadian iron give you satisfaction? A.—Generally. It has given satisfaction when we get the proper brand. Of course, this we have now we had to supplement with a large allowance of other iron. It was a harder grade—too hard; the general Canadian iron is good.

Q.—Where do you find the market for your products? A.—Our market is from Halifax to Vancouver.

Q.—Do you export any goods? A.—We have not exported much. We have exported only in a few instances. We sent some few machines to the old country and sold them at the Colonial Exhibition.

Q.—You sent them to the Colonial Exhibition? A.—Yes; we had a full list of our machines there.

Q.—How do they compare with English tools shown there? A.—At that exhibition there were no English products, they were all Colonial products, and of course we could not make any comparison with English machines. While in England I examined a great many of the English shops, such as Whitworths and the Manchester shops, and I think our tools, which are based to a great extent on American styles, are more handy than the English; in fact, the English are introducing American styles.

By Mr. ARMSTRONG :—

Q.—Have the wages of your men ever been garnisheed? A.—I think in one instance, if I remember rightly.

Q.—Do you not think on general principles that the payment of wages weekly would decrease garnisheeing? A.—I could not say, because we never had that difficulty to contend with very much, except in that one case. There may, perhaps, have been one or two cases, but I do not remember of any other than the one.

Q.—Those boys who ran away, and whom you had arrested: did you ever hear from them the reasons why they ran away? A.—There is one case I remember and he ran away by the advice of some of the hands, I think. He admitted that. It was simply because there was a man working on a machine who had not served his time. That was a long time ago, and the boy thought he was not bound to carry out his agreement. But this man had worked machinery for a long time and had been for a number of years on machines so as to know all about them. He had worked more than four years, and if he has done so in a regular shop that stands for learning the trade. For instance, if we take on an apprentice who has been unable to fulfil his agreement with another shop we allow him the time he made in the other shop. The man in question had worked four years at the trade.

Q.—You never heard it stated by any of the boys who went away that they did so from being over-worked or from a little ill-treatment? A.—No; in fact there has been so little of that with us that just two cases of boys running away have happened with us.

Q.—Do you think your men live comfortably? A.—Yes.

Q.—How many of them have houses of their own? A.—A great many. We get a better class of men in Dundas than they do in the cities; we get better skilled labor at the same money, for they are able to live cheaper in Dundas.

Q.—Is house rent cheaper in Dundas than in Hamilton? A.—Yes; and they can buy their own properties here. A great many of our men have houses of their own.

By Mr. CARSON :—

Do you do any thing in the tool line? A.—Our business is machinists' tools—lathes, planing machines and so on, not hand tools.

By Mr. ARMSTRONG :—

Q.—Do you believe in a compulsory indenture system? A.—Yes; we think it is the right way to make workmen. In the United States they have dropped that system to a great extent and it is doing injury to the trade; in fact, the mechanical journals speak about it as an evil. They have to draw their men from other countries and consequently Canadian workmen going over there are considered better than workmen who have learned their business in a make-shift way.

Q.—Are the apprentices placed at one part of the business and afterwards at another part, or do you keep them continually at one class of work? A.—When a boy is apprenticed for four years his time is divided into two classes of work; he begins with one and goes to another. If he agrees to learn vice-work and fitting we give him one year afterwards, which makes five years, if he is satisfied to do it.

Q.—Do these three branches complete your entire business? A.—Yes.

SAMUEL LENNARD, Hosiery Manufacturer, Dundas, called and sworn.

By Mr. FREED:—

- Q.—Your place of business is in Dundas, I believe? A.—Yes.
- Q.—What is the name of your firm? A.—Lennard, Sons & Bickford.
- Q.—Do you make cotton and woollen goods? A.—Yes.
- Q.—Underware and hosiery, and that class of goods? A.—No; we do not make shirts or drawers, but ladies' goods—mits, ladies' hosiery, boys' suits, and goods of that character.
- Q.—What class of labor is employed by you? A.—We employ a great deal of female labor.
- Q.—Do you employ young men? A.—We have about fifteen men, fifteen boys and sixty girls.
- Q.—Are those all employed in the factory or do they take work to their homes? A.—These we employ in the factory. We give a certain amount of work outside.
- Q.—The men who work for you, are they skilled workmen? A.—We have educated them since we commenced.
- Q.—They had no particular skill in this work before they began to work for you? A.—No.
- Q.—What wages are they able to earn, on an average? A.—Young men and those who are older will get \$1.50 to \$2 a day.
- Q.—Do the boys who work for you learn any particular business with you? A.—Yes; we educate them in the art of knitting.
- Q.—What are they able to earn? A.—When they commence they generally earn \$3 per week; we usually give them that sum.
- Q.—Are they indentured? A.—No.
- Q.—How long do they work before they become skilled workmen? A.—That depends upon the individuals themselves. Some are much more apt than others. There are some who have been more or less familiar with the machine; others have never seen one before.
- Q.—Women and girls both work for you, I suppose? A.—Yes.
- Q.—How long experience do they require before they become fairly skilled? A.—It depends upon the class of work upon which they are engaged. As sewers they will learn to be good operators in six months, but efficient in two years.
- Q.—After two years, what wages will they earn? A.—Eight dollars per week.
- Q.—Are many of them able to earn as much as \$8 per week? A.—Yes.
- Q.—What do the young girls that just begin earn? A.—About \$3 per week.
- Q.—What hours do they work? A.—We make sixty hours in the week. We commence at a quarter before seven in the morning and discontinue at 6.30 in the evening, taking one hour for dinner.
- Q.—Are those hours not rather long for young girls to work? A.—They never complain: they seem all healthy and lively.
- Q.—Do many of them become ill or lie off on account of want of strength? A.—No; it is not the amount of bodily labor they have to perform; the machines are all self-acting.
- Q.—It is not hard work, then? A.—No; not at all; it is merely the application.
- Q.—Do the girls mostly live with their parents? A.—Yes.
- Q.—Do you know, as a rule, whether they have their own money to spend or do they take it home to their parents? A.—That is a question into which I have never inquired.
- Q.—What kind of wool do you use? A.—All kinds.
- Q.—Do you use Canadian wools? A.—Yes; and foreign wools also.
- Q.—Do you use Cape wools and imported wools, for example? A.—Yes; of course. Southdown is the best grown here for our purpose.
- Q.—Do you use that for the finer hosiery and grades of the better class? A.—It is the finest Canadian wool and is the most useful in our business. But there is a finer wool which is imported, which we use to a great extent.

Q.—Is that merino? A.—It would be perhaps as fine as Australian wool, and these come under the same class with regard to fibre; one may be as fine as another, but it is not as suitable for our purpose.

Q.—You require high grades of wool in your business? A.—We use from the very lowest up to the most expensive—the very best.

Q.—Where do you find the market for your goods? A.—From the Maritime Provinces all through to British Columbia.

Q.—Do you export any goods? A.—We do not export any.

Q.—Are your establishments warmed in cold weather? A.—Yes; we always keep the steam running through the pipes and the engineer is supposed to be there three-quarters of an hour at least before we commence work, and my son will be there at least twenty minutes before they commence. Every thing is in running order before we think of starting.

Q.—Have you separate conveniences for males and females? A.—Yes.

Q.—Are the machines at all dangerous to life and limb? A.—Not at all. The hands can run into danger, of course, with the most simple machinery, but ours are so well protected that we never have an accident.

Q.—When the factory inspector visited your factory did he find fault with any of the machinery, as regards want of protection, and so on? A.—Not the slightest.

By Mr. CARSON:—

Q.—Did he visit your factory? A.—He did.

By the CHAIRMAN:—

Q.—Have you heard whether he found fault anywhere? A.—No; I have not heard.

By Mr. ARMSTRONG:—

Q.—How many hands have you in your establishment? A.—About one hundred.

Q.—How many of those one hundred receive \$2 per day? A.—There might be twenty.

Q.—What are the wages of the youngest child on going to the business? A.—It depends a great deal on the capacity. Some will take to it very quickly as compared with others.

Q.—Those whose capacity enables them to take it up quickly, what do they earn when they go to work? A.—We will put them down at \$5 per week.

Q.—Do you pay any under \$3 per week? A.—They are just there for sweeping.

Q.—How much per week do you give them? A.—Two dollars per week.

Q.—Then \$2 per week is the lowest rate of wages you give to young girls? A.—Yes. There may be as many boys as girls engaged in that capacity.

Q.—Do those all work sixty hours per week? A.—They are all supposed to work sixty hours per week.

Q.—And a young woman, a good hand, what wages would she get—take one there for two years? A.—They are mostly employed on piece-work, and the more skilled they become the more money they can earn.

Q.—Taking such a girl on piece-work, what would be her average wages? A.—We have girls who can earn \$8 or \$9 per week, quite a few of them.

Q.—Are any of your hands connected with any labor organization in Dundas? A.—We never enquire into that; we allow them to please themselves.

Q.—You never interfere in that matter? A.—No; not at all.

Q.—Are there many young women who can earn \$4 per week? A.—There will be some, of course. If they had any ambition it would lead them to earn more; and they are naturally anxious to do as much work as those beside them, and the more work they can do the better we like them.

Q.—Did you ever hear them complain about working too long on Saturday, and that they would like to have Saturday afternoon? A.—They always get Saturday afternoon. That is the reason why they work till 6:30 in the evening; it is to close on Saturday at 1 o'clock.

By Mr. CLARKE :—

Q.—That gives you the five hours? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Do those young girls eat their dinners in the factory, or do they all go home? A.—They all go home, except one or two who stay there.

By Mr. CARSON :—

Q.—Was it at your suggestion that the hours were changed, or was it the desire of the hands? A.—I have been accustomed to run a factory, and it was our suggestion. We would rather that they have a half-day.

By Mr. ARMSTRONG :—

Q.—Are any of your hands fined if they are late in the morning? A.—If they are five minutes late we would not take any notice of it, but if it is more than that, and it is continued, it would not do to have it occurring frequently, because we require the production of the mill in all its departments.

Q.—Have you ever fined them? A.—If they are working on time and they are away for so long they expect to be fined; if they lose one hour it is deducted from them.

Q.—Do you deduct only one hour? A.—Yes.

Q.—Do the piece-workers go under the same rule? A.—No; we keep a time-book for all time-hands. We are supposed to know when they come to work and when they leave.

Q.—I suppose they are fined the same amount in proportion to what they earn per hour? A.—Yes; in the same proportion.

Q.—Do you think the working people spend Saturday afternoon for their benefit and improvement by having a little exercise, and so on? A.—Yes; we have a very respectable class of hands and we are very particular with them.

EDWIN S. GILBERT, Book-keeper, Hamilton, called and sworn.

By Mr. FREED :—

Q.—You have a statement to make to the Commission, I understand? A.—Yes; I, with two other gentlemen, represent the Hamilton Land Tax Club.

Q.—Will you make your statement, and we shall feel obliged if you will make it as brief as possible? A.—The club has been in existence here for only a few months. It has been organized as a protest against the existing system of taxation. We think the present system of taxation is responsible for a great deal of the poverty that exists, and although we have no fault to find with the way in which riches are accumulated in certain hands, yet we have a great complaint to make against the way in which opportunities for acquiring wealth are afforded.

By the CHAIRMAN :—

Q.—Tell us the principles of your association—what you seek? A.—We seek to have the present system of taxation entirely abolished.

Q.—How do you propose to do it? A.—We wish to have the present taxation gradually shifted from the products of labor to land, so that eventually the whole tax will rest on land. This, in fact, is the substance of our claim.

Q.—How do you mean to carry out those principles? A.—We simply propose to carry them out by legislation.

Q.—You say that taxes should be put upon land. Do you mean to say that all the revenue required for the Government is to be obtained from taxes on land? A.—Yes.

By Mr. CLARKE :—

Q.—Do you believe a single tax would accomplish all necessary purposes?

A.—We believe that it would. Of course, it is impossible to give figures. It is impossible to go to any country where this system has been adopted and give figures from the experience there. It is simply a theory at present.

The CHAIRMAN.—Yes; and therefore it is beyond our authority to hear anything on that point.

By Mr. FREED:—

Q.—Do you know whether the taxes in Hamilton are placed mostly on the buildings or on the land? A.—No; I do not.

Q.—You have not been able to separate that portion of the taxes? A.—No.

Q.—Do you know what the increased taxes on land would be under your system? A.—It would be impossible to give a direct answer to that question now, I think.

Q.—Do you know whether a man occupying an average residence, worth \$1,000, would pay more taxes or less than he now pays? Have you studied the matter out so as to be able to give facts? A.—I could not give figures.

Q.—Would you levy this tax so as finally to take from the present owner the whole of his individual interest in the land? A.—Yes.

Q.—Would you reimburse him for that? A.—Not at all.

Q.—Would you simply take from him the property of which he is now possessed? A.—No; we do not propose to take away his property; we would leave him in possession.

Q.—You would leave him in possession, but you would tax him to the full value? A.—We would tax him up to the full annual value.

Q.—How would you ascertain the value that would remain in the property? How much taxes would be imposed on any particular lot? A.—In much the same way as the landlord would find out at the present time how much he could calculate on obtaining.

Q.—Does he not find that out by the saleable value of the property? A.—No; I think by the amount of land he can get for it.

Q.—Then you would put up the land, from time to time, to the highest bidder?

By the CHAIRMAN:—

Q.—Do you know that that Henry George says that would be the practical effect of his plan? A.—What?

Q.—That the land would be put up to public auction? A.—Yes; I am aware that he claims that would be the effect in regard to vacant land.

Q.—Are you aware that Henry George says that the practical effect of his plan, which you have given, would be that the owners of property would, without distinction, put their properties up to auction in order to get rid of them? A.—No; I do not exactly understand the question.

Q.—He says that if taxes are imposed which a property owner cannot pay he will put up his property to auction. A.—That is, so far as a house is concerned.

Q.—But you cannot sell a house without selling the land. If the land belongs to you and the house to me, I do not see that I can have very much use of the house? A.—The holder of a piece of land might offer it for sale, but under the system we advocate it would not be worth any thing more than the value of the improvements on it, that is, when the system was in full operation.

Q.—How would it be worth the improvements if I am not the holder of the land? A.—We would leave you the holder of the land.

Q.—And I would have to pay all the taxes on it? A.—Yes.

Q.—Then what would the improvements be worth to me? A.—The community would be benefited rather than individuals.

Q.—Then there would be really no change? A.—No; the fact that the land in the neighborhood, which may be now held vacant, would be thrown into the market, would make it impossible for you to retain it.

Q.—But where there is no vacant land, such as in the large towns, your rule would not apply? A.—It would apply, I think, in most of the cities.

Q.—There are very few vacant lots in large cities? A.—If this city extends further it might apply.

Q.—But in many streets it would not apply? A.—No; in the streets, certainly.

By Mr. FREED:—

Q.—Have not the owners of vacant property been taxed in this city? A.—Yes.

Q.—For what purpose have they been taxed? A.—I presume, for the purpose of raising revenue.

Q.—They have been taxed for the construction of streets? A.—Yes.

Q.—Also for the building of sewers? A.—I presume so.

Q.—Also for the construction of public buildings? A.—Yes.

Q.—Also for the construction of waterworks? A.—Yes.

Q.—Do you think it is just to ask those men to pay taxes, and then to take away from the value which those taxes have created? A.—We would not propose to take away the value of them.

Q.—What would you leave them? A.—As members of the community they would have the same benefit in regard to those public buildings and sewers, as they had before.

Q.—What value would a man have in a sewer if he had no property? A.—If that mistake has been made in the past we see no reason why it should be continued.

Q.—Assuming it to be a mistake, was it made with the consent and approbation of the whole community and the law? A.—I believe it has been so made. The people who own this land and have been paying taxes on this vacant land have had a voice in making the laws.

Q.—Has not the whole community been a party to this mistake, if it be a mistake? A.—No.

Q.—Who has dissented from it? A.—Perhaps none have dissented, but there are always people coming into the country and being born into the country.

Q.—But I ask, who have dissented from the existing order of things under which the people have been taxed for local improvements on vacant property? A.—Those people I have mentioned have not had an opportunity to dissent.

Q.—They have not had an opportunity to dissent? A.—Yes; because they were not here.

Q.—The community which has been here has been a party to this taxation, has it not? A.—Yes.

Q.—Without having been a party to this taxation has it not? A.—Yes.

Q.—Do you consider it just, the whole community having been a party to this state of things, to take away values created by that taxation and those payments without compensation? A.—Yes.

JOHN PEEBLES, Shoe-maker, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are another member of this deputation, I believe? A.—I come from the Hamilton Land Tax Club.

By the CHAIRMAN:—

Q.—What have you to say more as to facts. We cannot go into discussions on theories; we leave that to books and pamphlets? A.—The land tax is one which has not had a practical demonstration, and you cannot give a practical demonstration of it until it is tried.

Q.—If it is a mere essay you wish to deliver you can read that in a book, and its publication will cost nothing to the Government. Have you any facts? A.—What we propose telling you is what we wish to see done.

Q.—What is that? A.—We wish to see, in the first place, the taxes collected on the land values because we believe the land belongs to the people. Another reason is, that we believe that the income tax and personal property tax is a tax which it is almost impossible to fairly collect, because it is impossible to get the exact income of every individual or the proper amount of his personal property. We therefore claim that this would be more a just system of taxation, because a land value is a value always there and one which cannot be altered; it is always outside and cannot be seen. The value of personal property and of merchants' stock is always a matter of doubt, and the question of its value entirely rests with the owner himself, and depends upon whether he is an honest man or not. As a rule, he does not give an honest value.

The CHAIRMAN.—What you are telling us has been published. We have not come here to listen to extracts from Henry George's book.

Mr. FREED.—I desire to remind the witness of the object of the Commission. (A circular stating the objects of the Commission read). I grant that theories respecting land have a certain connection with the condition of the working classes. As one member of this Commission I am perfectly willing to hear facts bearing upon the contention of the witness, but I submit that theoretical essays ought hardly to be received by the Commission.

By Mr. ARMSTRONG :—

Q.—Where it is known that lands in cities are held for speculative purposes you think large taxes should be placed on such lands? A.—I do not know that large taxation should be placed on those lands or on particular lands in certain localities; but we hold that the value of the land, without including any improvements, should be taxed to its full annual value. This would result in making it unprofitable for any one to hold land for speculative purposes.

Q.—And you think the result would be that house rent would be cheaper? A.—Yes; it would have the result of cheapening the rents.

Q.—Do you believe a single land tax would serve all purposes, without any other special tax being levied for Government? A.—Yes; a single land tax. The value of the land in New York city is estimated at ten times the taxes at present raised by the revenue of that city. That is an estimate made by Henry George.

Q.—You believe in taking off taxation from improved property? A.—Yes; and placing it on the value of the land without improvements; a value is added to it by the community.

The CHAIRMAN.—We can find all that in Henry George's book. Please tell us some facts connected with Hamilton.

WITNESS.—A number of years ago, when this city was scarcely a city at all, a portion of land on the corner of James and King streets was sold for a barrel of whiskey. The other day, one of the two stores on that lot was sold for \$25,000. The building is undoubtedly not worth more than from \$5,000 to \$7,000, so that the balance is the increased value of the land. We claim that the value of the land belongs to the community, and the community should reap the advantage by levying a tax equal to its full annual value.

By Mr. FREED :—

Q.—What store was sold for \$25,000? A.—The one Treble is in, I understand.

By the CHAIRMAN :—

Q.—Did it belong to the same owner, or did it belong to the man who bought it for a barrel of whiskey? A.—No; I suppose it has changed hands.

Q.—Supposing the man who held it paid \$25,000 for it and sold it for \$25,000, what is the harm? Supposing I bought a house for \$25,000 last year and sold it for \$25,000 this year on credit, do you think I should lose the \$25,000? A.—We think if the land value belongs to the community it matters not in whose hands the property should be, but it should be taken from him.

By Mr. FREED :—

Q.—Is it within your knowledge that the land was sold for a barrel of whiskey?  
A.—I can give as an authority Mr. Brieley, a druggist, who is an old resident.

Q.—Is the fact within his knowledge? A.—I believe so.

Q.—How long has Mr. Brieley lived in Hamilton? A.—A great many years.

Q.—Is it within your knowledge that the property was sold for \$25,000? A.—I received that knowledge from the same source.

Q.—Then what you are telling us about this property is mere hearsay? A.—Yes; it is what Mr. Brieley told me.

Q.—If a wealthy man owns a lot of land and builds an expensive house upon it, and if a comparatively poor man owns a lot of land adjoining and puts up a small house on it, would you have them, in proportion to the size of the land, pay equal taxes? A.—Yes.

Q.—Would not that make the position of the workingman or the comparatively poor man worse instead of better? A.—No; I think not, because the tax upon improvements is a tax upon industry and the building of smaller houses, and the benefit that would result to the poorer man on account of the application of such a tax all over the city would more than compensate him for what he might have to pay additional in taxation.

Q.—You believe the taking away of a man's property would be for the public good? A.—We do not consider it so. We do not consider it as wronging a man to put taxes on his property for the benefit of the people at large.

Q.—In that way the taxes would amount to the value of the property? A.—In time, no doubt, we propose to bring it to the annual value of the property: that is the regular value minus the improvements, together with the value added to it by the community.

The CHAIRMAN.—We cannot republish Henry George's book in our evidence.

WITNESS.—We understood the Commission was in Hamilton to hear evidence of the material and intellectual prosperity of the working classes. We consider Henry George's theories are sound.

The CHAIRMAN.—If every man comes here with a pamphlet, we cannot be expected to publish it.

WITNESS.—I suppose it remains with you to say what shall be heard—we do not question that right. If you do not wish to receive any more evidence, or theory, as you call it, we cannot help it.

Mr. FREED.—That is what we wish to receive—evidence, not theory. If you come here with facts we will hear them. All I object to is listening to mere theory, which cannot be demonstrated.

WITNESS.—The great difficulty in a matter of this kind is to draw the line where facts stop.

Mr. FREED.—I am sure we will be pleased to hear any member of the deputation, all of whom are respectable or influential citizens of Canada, if they have facts to tell us. I think they will see we cannot receive mere essays here, because our time is valuable on the one hand, and printing is expensive on the other, and the Government will certainly hold us to a responsible account for the expenses we incur.

GEORGE METCALFE, Painter, Hamilton, called and sworn.

I am here on behalf of the Brotherhood of Painters and Decorators to give information in regard to the painting trade in Hamilton. The wages in the city at the present time are from \$1.50 to \$2.50 a day.

By Mr. FREED :—

Q.—How many hours constitute a day's work? A.—Ten hours in summer; in the winter time, about eight hours here.

Q.—And how much do you receive per hour? A.—From 15 cents to 22½ cents per hour.

Q.—According to the ability of the man? A.—That was the agreement we entered into last February with the bosses in the city.

Q.—Does that hold good still? A.—Yes.

Q.—During how long a portion of the year can a man work at painting? A.—A man could work the year round provided he got the right kind of work—provided he got inside work during the winter time; but as a general thing the average time put in by men amounts to about eight months in the year.

Q.—Do you not think the average painter will work longer than eight months in the year? A.—No; we have averaged it up, and the average amount received by a man who receives 20 cents per hour was about \$360 for last summer. There are some who have earned more; some have made \$500; there are others who have not made over \$300, but the average is about \$360.

Q.—Is painting very hard work? A.—In the spring time it is, that is in the house cleaning time, when there is much harder work than the rest of the year.

Q.—Are the men much exposed to heat and cold while they are doing outside work? A.—Yes.

Q.—Is there danger to the painters in regard to the scaffolds? A.—Yes; there is danger from the breaking of scaffolds or ladders. In fact, as a rule, painters have worse scaffolds and ladders to work on than any other mechanics.

Q.—Is that to any extent their own fault? A.—The scaffolding is always put up for them. In the case of scaffolds and of ladders they have to work on whatever the bosses give them.

Q.—Is the trade unhealthy? A.—Some men appear to think so, but there are men I have known who have worked at the trade up to seventy years of age. Of course, they had very strong constitutions.

Q.—Are painters very subject to lead poisoning? A.—It depends on the class of work. If it is inside work, what we call flatting, they are likely to get lead poisoning, provided they are kept at it for any length of time, as the turpentine carrying the fumes of the lead goes into the lungs with every breath they draw.

Q.—A witness in another town told us that if the men were careful to wash their hands, and not put their hands to their mouth they would not be subject to lead poisoning. What do you think as to that? A.—Of course, I have not had experience to say whether such would be the case or not; but from what I have heard and from what I think myself, I believe that a man working on flatting will be liable to get lead poisoning in the course of a few years, as there is always a certain amount of odor arising from poisonous material, and lead and some-greens are very poisonous. Of course, at the present time the paints used are not so poisonous as they were in the past.

Q.—Why? A.—Because the manufacturers make up the paints by a quicker process and without using so many poisons.

By the CHAIRMAN:—

Q.—They dry sooner? A.—I cannot answer that question, as it all depends on the oil used.

By Mr. FREED:—

Q.—Is it not to some extent because barytes is used instead of lead? A.—Yes; but there has been more lead used in the city now during the past three years than during the past twenty years.

Q.—Have you a trades union? A.—Yes.

Q.—Do most of the painters belong to it? A.—We have only been organized since May last into a new organization called the Brotherhood of Painters and Decorators. Before that we were attached to the Knights of Labor, but we did not think we could have an organization on as satisfactory a basis in that way as if we were by ourselves, as in the case of arbitration we would have men to arbitrate for us who did not know anything about the business.

Q.—Are the rates of wages fixed by compromise between the men and the employers? A.—They were last winter. Most of us wished to have a basis of 20 cents per hour all round for good and bad, as it has been know to be a fact that where there was a graded scale of wages a poorer class of men received more work than the better class did; and as in the winter time, when there is mostly ordinary painting to be done, men receiving 15 cents per hour would be kept on in preference to men receiving 20 or 22 cents per hour, for one could do that class of work as well as the other.

Q.—If employers send men out to do work do they charge by the hour for the men's time or do they charge by the job? A.—In some cases they charge by the hour and in other cases they take the job by the lump.

Q.—If they send out men whose time they charge by the hour will they send the highest priced man or a cheap man? A.—It depends on how busy they are, I suppose, and the ability of the men to do the work required.

Q.—If they send a low-priced man out to do the work will they charge the same rate per hour as if they sent a high priced man? A.—I have reason to believe they would.

Q.—Do you know it as a fact? A.—I am not sure.

Q.—Are there many apprentices taken to your trade? A.—Last spring, in February, when we had a meeting with the bosses we had an understanding that no shop should have more than two apprentices at the trade, and that all the apprentices should be bound for four years.

Q.—Did the employers agree to that? A.—Yes; at least their deputation did.

Q.—They have carried out that agreement, I suppose? A.—They have not.

Q.—In what respect have they voided the agreement? A.—Some shops have taken on more apprentices than that number, and none of the shops have, so far as I know, bound any apprentices.

Q.—Is it not reasonable that employers having a larger number of men should have more apprentices than those who employ a smaller number of men? A.—It is reasonable in one way, but it is desirable to look at both sides of the question. We do not wish to have the trade over-run with young men who have put in a couple of years at the business, and who then start out as journeymen painters, which is the case at present.

Q.—How long do you think a boy should work at the trade before he becomes sufficiently skilled to become a good journeyman painter? A.—Four years.

Q.—You think he cannot acquire the requisite skill and training before that time, taking a boy of fair average ability? A.—Some boys learn quicker than others. While one would be a good painter in three years another boy would take five years to learn the trade, and there are a great many who never learn what some others do.

By Mr. CARSON:—

Q.—Suppose you were going to learn the trade to-morrow, would you be willing to serve four years? A.—I cannot hardly put myself in that position.

Q.—But supposing you were placed in that position? A.—It would depend on circumstances.

Q.—If you were seventeen years old, would you like to apprentice yourself to serve four years? A.—Yes; with a good man.

By Mr. ARMSTRONG:—

Q.—What class of hands receive \$2.25 per day? A.—Men who can do first-class paper-hanging, and graining and sign-writing.

Q.—Are all those apprentices in one trade or are they distinct trades? A.—They are all in the one trade. Some men are better than others at certain branches and have had, perhaps, better advantages.

Q.—You are a branch of the International Body formed last year, I believe? A.

—Yes.

Q.—Can you tell us some benefits of organization? A.—There is a sick benefit; each separate union pays a certain amount for sick benefit, according to their dues. The sick benefit is \$3 a week, with doctor and attendance if required. There is a wife's death benefit of \$25 to three months' members and \$50 to one year's members. Then there is a death benefit of \$50 on a six months' membership and after one year's membership \$100. Those are the benefits derived.

Q.—Are those benefits derived out of the ordinary fees? A.—Yes.

Q.—How much is that fee? A.—Forty cents per month.

Q.—Since May last, when you were organized, have you received any benefit in Hamilton through organized trade? A.—I am sorry to say that one of our members lost his wife the day before yesterday and he will receive a benefit of \$25.

Q.—I refer to trade matters? A.—No; we do not wish to put our members to the test of asking anything at the present time from our employers, although we have not been dealt with justly in the past. Our membership is not large enough to admit of our asking for anything at present.

Q.—Do you think the painting business, as a special skilled industry, is paid as well as other highly-skilled industries are in this country? A.—I do not. It is not so much in regard to the rate of wages as to the amount of time we lose during the year. A great many members of the trade do not receive sufficient to keep them on anything more than the bare necessities of life all the year round. A man has got to put by all he can during the summer to keep him during the winter.

Q.—In case of labor troubles, have you any rules that compel the members to resort to arbitration before they go to the extreme measure of a strike? A.—Yes; our rules lay down that there should be arbitration before anything else.

Q.—In the case of a demand for a raise of wages, is it the rule to give notice for any length of time before hand? A.—We have done so always.

Q.—Do you believe in that?—Yes; six years ago when we first formed an organization here, a painters' union, we sent notice to the bosses three months in advance that we would ask for a raise. That worked hard on us at the time, because the bosses picked out the weak ones, and when the men went out the weak ones staid in. We did not understand unionism then, or a great number of us did not, as some of us were too young to understand the workings of unionism, which you have to learn by experience. I do not think there are any painters in the union who would resort to violence or do anything to the bosses but what they would think was right, both as regards themselves and the bosses.

Q.—At present I believe there is a harmonious feeling existing between the employers and the employés? A.—Amongst some of them; there is not amongst the lot, on account of the way in which some of the men have been used by the bosses and on account of the violation of the apprentice system and the hiring of cheap men, who do not know the business.

Q.—Do you find any immigrants in your trade coming to Hamilton? A.—No; I do not know of any—yes; I know of immigrants, in one sense of the word.

Q.—Do they belong to your trade? A.—Yes; there are some few, but they do not come directly here.

Q.—Do they come to other parts of Canada? A.—Yes; they come from the old country and different parts of Europe to the United States and then they strike here and sometimes stop here. There are some few at present here who have been immigrants.

Q.—Have you in Hamilton a federation building trade? A.—We have not, but the different organizations are made for that purpose.

Q.—Do you think it would be best for all concerned? A.—I do.

Q.—Is there a federation of trade among employers of labor in the building trade in Hamilton? A.—No; not unless the Central Labor Union could be called so.

Q.—I mean of employers? A.—No; not that I know of.

Q.—There is no connection with the board of trade? A.—I cannot say; there is an association, but I do not know one boss belonging to it, so I cannot say that it can be claimed as such.

GEORGE METCALF, the previous witness, was re-called, and said :—I think I gave a wrong impression about the highest wages. I merely gave the highest and lowest wages received. I did not say how many or how few received them. I did not wish to give any wrong impression.

The Commission then adjourned till 8 o'clock.

J. HOLMES, Painter, Hamilton, called and sworn.

By Mr. ARMSTRONG :—

Q.—You have heard the evidence of other witnesses in your trade—do you confirm their evidence? A.—I approve of everything, except in regard to the high rate of wages paid. I don't believe men are receiving \$2.25 a day here, except perhaps about four.

Q.—What will be the average amount earned by an ordinary journeyman the year round? A.—The average for the year round will be \$1.20 or \$1.25 a day for a first-class painter.

Q.—What would be the average for an inferior hand? A.—Sometimes they get as much as the first-class hands—that is, so far as my opinion goes. I believe there are times in winter when the bosses put inferior hands on the outside jobs. They will cover more ground and are not so particular in doing the work in good style.

Q.—Those are men who only know how to paint a barn? A.—Yes. I served my apprenticeship here; I did not quite fill out my time; I served two years and nine months, and three years afterwards I became a practical man. I do not want to take the bread out of any man's mouth who understands his business.

Q.—Do you say you served your time here. A.—Yes; in Hamilton.

Q.—Have you ever worked in your business outside of Canada, in the United States? A.—Yes.

Q.—What is the difference between the wages here and the wages paid in a similar city in the United States? A.—Twenty-five or thirty per cent. difference.

Q.—Is that difference in favor of the United States? A.—Yes.

Q.—Take the same class of house in an American city of the same size as compared with a house here: what would be the difference in rent? A.—That is a difficult question to answer. There are different parts of the United States where the provisions may be a little higher.

Q.—I have reference to house rent? A.—That depends on where you are located.

Q.—In an ordinary locality, I am supposing? A.—I have travelled through the United States single a good deal, and I have also kept house there. When I kept house in Brooklyn I paid \$14 a month rent. My wages then were \$3.25 a day.

Q.—Can you get a superior house in Hamilton to that you were occupying in Brooklyn for \$14 a month? A.—No; I could not. I was in a tenement house in Brooklyn.

Q.—Can you get a better house in Hamilton for that money? A.—Yes; I could not begin to hire a house for \$14 a month out of my wages here.

Q.—Do you know if there is a material difference in the cost of the necessaries of life in Brooklyn, as between Brooklyn and here, to a married man? A.—There are some things cheaper and some things dearer. I would say that in Brooklyn I would pay 25 per cent. over and above what I pay in Hamilton.

Q.—Did you work in New York? A.—No; I worked in Brooklyn.

By Mr. CARSON :—

Q.—On what articles would you pay 25 per cent. more? A.—Mostly on meat and potatoes, and everything like that.

Q.—How about flour? A.—I find it pretty nearly the same in Hamilton.

Q.—How about butter? A.—That is a little dearer.

Q.—On the whole, you think the difference is about 25 per cent.? A.—Yes; taking everything together—and I was 50 per cent. better paid there.

Q.—How do you come to that conclusion? A.—I managed to save about \$75 inside of eight months there, and I was a married man.

By Mr. CLARKE:—

Q.—Do you not think you were more economical there? A.—No.

Q.—You spent just as much there as here? A.—Just as much.

By Mr. FREED:—

Q.—Would you get a house as near your work in Brooklyn as in Hamilton. A.—No.

Q.—You would have to pay street car fares? A.—Yes; but I lived right in a neighborhood where a 5-cent car fare would take me to any part of Brooklyn; that would amount to 10 cents a day. I could have got a house probably a little cheaper in the outskirts, probably \$3 a month less; but of course you do not get any house to yourself there; you are in a tenement. A man of this country naturally cannot make a home there, as regards comfort and everything of that kind.

By Mr. ARMSTRONG:—

Q.—In this tenement house how many rooms would a man get for \$14? Would he get a whole flat? A.—My flat was on the third story, and consisted of four rooms.

The Commission resumed at 8 p.m.

THOMAS TOWERS, Hamilton, called and sworn.

By Mr. FREED:—

Q.—What is your occupation? A.—Carpenter.

Q.—You are the District Master of the Knights of Labor for Hamilton? A.—Yes.

Q.—Will you state the principles of the Knights of Labor?

By the CHAIRMAN:—

Q.—Have you a printed declaration that you call a charter? A.—Yes.

Q.—Can you leave the book? A.—Yes. (Put in). The declaration of principles of the Knights of Labor of America is as follow:—

*To the Public.*

The alarming development and aggressiveness of great capitalists and corporations, unless checked, will inevitably lead to the pauperization and hopeless degradation of the toiling masses.

It is imperative, if we desire to enjoy the full blessings of life, that a check be placed upon unjust accumulation and the power of evil of aggregated wealth.

This much desired object can be accomplished only by the united efforts of those who obey the Divine injunction, "In the sweat of thy face shalt thou eat bread."

Therefore we have formed the Order of Knights of Labor, for the purpose of organizing and directing the power of the masses, not as a political party, for it is more—in it are crystalized sentiments and measures for the benefit of the whole people; but it should be borne in mind, when exercising the right of suffrage, that most of the objects herein set forth can only be obtained through legislation, and that it is the duty of all to assist in nominating and supporting, with their votes, only such candidates as will pledge themselves to vote for those measures, regardless of party. But no one shall be compelled to vote with the majority. And calling upon all who believe in securing "the greatest good to the greatest number" to join and assist us, we declare to the world that our aims are:

1. To make industrial and moral worth, not wealth, the true standard of individual and national greatness.

2. To secure to the workers the full enjoyment of the wealth they create, sufficient leisure in which to develop their intellectual, moral and social faculties; all of the benefits, recreations and pleasures of association—in a word, to enable them to share in the gains and honors of advancing civilization.

In order to secure these results, we demand at the hands of the State:

3. The establishment of bureaus of labor statistics, that we may arrive at a correct knowledge of the educational, moral and financial condition of the laboring masses.

4. That the public lands, the heritage of the people, be reserved for actual settlers, not another acre for railroads or speculators, and that all lands now held for speculative purposes be taxed to their full value.

5. The abrogation of all laws that do not bear equally upon capital and labor, and the removal of unjust technicalities, delays and discriminations in the administration of justice.

6. The adoption of measures providing for the health and safety of those engaged in mining, manufacturing and building industries, and for indemnification of those engaged therein for injuries received through lack of necessary safeguards.

7. The recognition, by incorporation, of trades' unions, orders and such other associations as may be organized by the working masses to improve their condition and protect their rights.

8. The enactment of laws to compel corporations to pay their employes weekly, in lawful money, for the labor of the preceding week, and giving mechanics and laborers a first lien upon the product of their labor to the extent of their full wages.

9. The abolition of the contract system on national, State and municipal works.

10. The enactment of laws providing for arbitration between employers and employed, and to enforce the decision of the arbitrators.

11. The prohibition by law of the employment of children, under fifteen years of age in workshops, mines and factories.

12. To prohibit the hiring out of convict labor.

13. That a graduated income tax be levied.

And we demand at the hands of Congress (in Canada, of the Federal Government):

14. The establishment of a national monetary system, in which a circulating medium in necessary quantity shall issue direct to the people, without the intervention of banks; that all the national issue shall be full legal tender in payment of all debts, public and private, and that the Government shall not guarantee or recognize any private banks, or create any banking corporations.

15. That interest-bearing bonds, bills of credit or notes, shall never be issued by the Government, but that, when need arises, the emergency shall be met by issue of legal tender, non-interest-bearing money.

16. That the importation of foreign labor under contract be prohibited.

17. That in connection with the post office, the Government shall organize financial exchanges, safe deposits and facilities for deposit of the savings of the people in small sums. (Secured in Canada).

18. That the Government shall obtain possession, by purchase under the right of eminent domain, of all telegraphs, telephones and railroads, and that hereafter no charter or license be issued to any corporation for construction or operation of any means of transporting intelligence, passengers or freight. And while making the foregoing demands upon the State and National Government, we will endeavor to associate our own labor.

19. To establish co-operative institutions such as will tend to supersede the wage system, by the introduction of a co-operative industrial system.

20. To secure for both sexes equal pay for equal work.

21. To shorten the hours of labor by a general refusal to work for more than eight hours.

22. To persuade employers to agree to arbitrate all differences which may arise

between them and their employés, in order that the bonds of sympathy between them may be strengthened and that strikes may be rendered unnecessary.

Q.—Your association is a secret association? A.—Not necessarily what you would call a secret association.

Q.—Do you admit the public to your meetings? A.—No.

Q.—Do you make known to the public what transpires at your private meetings? A.—It depends entirely upon the nature of the business.

Q.—You have business which you keep entirely to yourselves? A.—Of course; we have a ritual merely for our own protection.

Q.—You don't admit the public to witness the working of this ritual at all? A.—No.

Q.—Are you affiliated with the body in the United States? A.—Yes.

Q.—The General Master Workman lives in the United States? A.—Yes.

Q.—Are you governed or controlled by the laws of the body in the United States? A.—Well, the body does not belong to the United States. The principle upon which it works is that it recognizes no national boundary; it is intended to unite workers of all countries. A Knight of Labor is supposed to be loyal to the institutions of his country, and to try to obtain all reforms through constitutional methods.

Q.—The question is, whether you, as a Knight of Labor, are not bound by your duties as a British subject, or by the laws of other countries? A.—We help to make those laws.

Q.—Do you help to make those laws—I mean, the laws of the association, not the laws of the United States? A.—We are bound to obey the laws of our association.

Q.—When an order is given in the United States, supposing the Hamilton association were against it, would you obey it for all that? A.—Well, I don't know; it would depend to a great extent on the order.

Q.—In some cases you would and in some cases you would not? A.—Yes; if it was constitutional we would obey it.

Q.—Constitutional with your constitution? A.—Yes.

By Mr. FREED:—

Q.—I see the 11th article calls for the prohibition by law of the employment of children under fifteen years of age. Are you aware what the Ontario law is at present in that respect? A.—No; I am not.

Q.—It calls for the prohibition of the employment of children under fourteen years of age. Would you still ask for the extension of the law to the age of fifteen? A.—Yes.

Q.—You ask for the prohibition of the hiring out of convict labor. Do you hold that prisoners should be kept idle? A.—No, sir; I do not.

Q.—How would you manage the employment of them? You are giving us views of the Knights of Labor now, not your own individual views? A.—Well, there is great diversity upon that question, the same as many legislators hold as to that question—convict labor.

By the CHAIRMAN:—

Q.—What are your own views? What are you going to do with convicts? You will admit they cannot be kept idle? A.—I should think if they were employed—

Q.—Do you say they could be kept idle? A.—No.

Q.—Mention your own views? A.—I believe the State should provide the necessary work for those convicts, and that the surplus that they would create over and above their keep should go towards maintaining their families.

By Mr. FREED:—

Q.—Would you have the products of their labor sold in open market in Canada? A.—No, sir; we should object against that. I think that the products of convict

labor should be labelled as such, in order that those who want to buy anything may know what they are buying.

By the CHAIRMAN:—

Q.—Might it not have a bad effect? Might not some of those who wanted to help the convicts be encouraged to buy their goods? A.—That may be.

Q.—It might pay any one to buy them? A.—Yes; but not in the present state of the labor market. I think they would rather purchase those manufactured by respectable industries. The state of the labor market would not warrant members of labor organizations purchasing outside their own circle, in order to keep up our strength, respectability and industries.

By Mr. FREED:—

Q.—I see the 16th article says that the importation of foreign labor under contract should be prohibited. Are you aware of the present state of the Ontario law on that subject? A.—I believe it is against foreign labor.

Q.—It declares that contracts made for labor in foreign countries shall not be binding in Ontario, as far as regards the men themselves. Is that satisfactory to the Knights of Labor? A.—No; we wish a Dominion Act on that question, because foreign labor under contract can be brought into Quebec, and competition with Quebec has a very injurious effect on Ontario markets.

Q.—Is it your opinion the Dominion Parliament has power to make such a law under the British North America Act? A.—Well, I fear——

Q.—Have you ever considered that several rights are held under the control of the provincial authorities? A.—Well, the line seems to be pretty finely drawn sometimes.

Q.—I see the 17th article says that in connection with the post office the Government shall organize financial exchanges, safe deposits and facilities for deposits of savings of the people in small sums. You are aware that has been done by the Dominion Government? A.—Yes; that affects the United States.

By Mr. McLEAN:—

Q.—There is not anything more secret about your organization than there is about trades' unions? A.—No.

By Mr. ARMSTRONG:—

Q.—Are you aware that the Federal Government has placed an embargo on the importation of Chinese into this country? A.—Yes.

Q.—You believe, too, on that principle, that it is within the power of the Federal Government to place an embargo on foreign truck labor? A.—Well, they have got some power; I know that; I cannot see where there is a difference.

The CHAIRMAN.—We are discussing a question of law, which requires a pretty strong man to decide. Perhaps it may have to go to the Privy Council. I know we asked for an opinion, but if an opinion is given by the Supreme Court, it will go to England, so we need not decide it here.

Mr. ARMSTRONG.—The law is drawn, as far as Chinese labor is concerned.

The CHAIRMAN.—It is quite a different thing for us considering main wants.

Mr. FREED.—It is not Chinese labor but Chinese comparisons.

WITNESS.—Of course, the difficulty is the prohibition of the nationality.

By Mr. McLEAN:—

Q.—You are not bound by anything or afraid of any order from the heads of the organization to which you belong falling injuriously on your country in any way? A.—No; on the contrary, we are bound to uphold the institutions of that country.

Q.—Are not the clergy admitted into your order, the same as any person else? A.—Yes.

Q.—Do you know of any combination of manufacturers where everything they

do is done in secret? A.—Of course, I have never been admitted. I could not swear to it, or be positive as to that fact, but I know that the Ontario Iron Founders' Association is something of that nature. It is a secret association, just as much as the organization to which I belong.

By the CHAIRMAN:—

Q.—Have they a ritual? A.—I don't suppose it is necessary. Identity of interests holds them fast.

By Mr. McLEAN:—

Q.—Is there a combination of builders' trades? A.—Yes; there is the Master Carpenters, the Master Builders (bricklayers and stonemasons). In fact, in almost every branch employers have combined as well as workmen.

Q.—Could any one get in there who is a workingman? A.—I don't think so; I have never tried. Even the corner grocers have their association. Lawyers have theirs, and doctors have theirs.

By Mr. ARMSTRONG:—

Q.—Lawyers and doctors are incorporated by Act of Parliament? A.—Well, the District Assembly to-day, I believe, is incorporated.

Q.—Legal incorporation under the Ontario Act? A.—Yes.

Q.—Do you find any benefit accruing from that incorporation? A.—Not much. We could own property but the law is not defined very well to suit our case. I think it would require some amendments before it would be of any service to us. We got into difficulty once with a storekeeper we had in a co-operative grocery, and before we got through with the case there was no grocery.

By Mr. McLEAN:—

Q.—Are you trying to make the Order in Canada a national association? A.—There are some members in favor of that, but there are others who are not. Those who are in favor of it run more into politics, while those who are not are more of the intellectual reformers. They would rather work on an industrial basis, getting co-operation and working on that line, and waiting for the intelligence of the people to assert their rights—waiting for the development of intelligence.

By Mr. ARMSTRONG:—

Q.—Do you think it would start industrial co-operation, provided there was a national organization of the Knights of Labor for the Dominion? A.—It would, to a certain extent.

Q.—How, please? A.—You will understand there is a good deal of feeling exists between people of different nationalities. Now, I have been working in the United States for a couple of years, and I found over there that just because I was a Canadian there was a great deal of harshness used towards me which would not have been used if I had been an American, or if I had kept my views to myself. But the Order of the Knights of Labor is trying to do away with that feeling, which, I think, does no good, as it keeps working people apart, when they should be united, upon questions of vital importance to themselves, as working people in both countries. Their interests are identical, and I cannot see where a doubt should be created; and in the matter of co-operation it requires such an immense amount of capital for the development of the scheme, and the Knights of Labor think if we were to form a General Assembly for Canada it would remain an Order to a large extent composed of men who would go into this movement in Canada, but they would not understand the real principles of the organization so thoroughly as men who have worked in the Order from its inception. I think it would be best to maintain the connection between the Order in Canada and the Order in the United States. As it is to-day, we have power to form provincial assemblies, and govern ourselves—as you will see in our constitution—and the different States have the same power, and we are merely governed by the General Assembly, just the same as the Supreme Grand Lodge of

Oddfellows govern their body. The General Assembly has certain essential features that these smaller bodies have not, and we look to the superior body entirely for these benefits.

Q.—You need not answer this question unless you like: Have you ever known money to come from the other side to assist co-operation in Canada? A.—Yes; I believe there was money went to Montreal. I would like to make a reference to some points about my own work and the shops where I work.

Q.—Certainly? A.—I work for the Grand Trunk Railroad. We are paid monthly. The employés would rather have their pay weekly, because it would make them financially more independent. We find that in a great many instances workmen have to run monthly accounts, and that puts them entirely at the mercy of the corner grocers. You feel under obligation to the man; you have to take what he has got and you cannot go any where else; you are obliged to stay there. A man who once begins to run credit like that gets into financial difficulties and cannot get out of them. He is in deep water all the time. If a man could get his wages weekly he could run his business more on a cash basis and go where he pleased.

By Mr. CARSON:—

Q.—Do you think you are expressing the views of the larger portion of your fellow-workmen? A.—I am pretty certain I am.

By Mr. ARMSTRONG:—

Q.—Have the employés petitioned the Grand Trunk Company to make payment more frequently? A.—Yes.

Q.—What answer did you get? A.—Mr. Hickson answered that he would be only too glad to do anything in his power to help the employes, but present circumstances would not warrant it.

Q.—It would not suit the Company? A.—No, it would tack too much expense into the work of the clerical help.

Q.—Are men's wages ever garnisheed? A.—Yes; every time the pay boss comes down he has a list of young men before the cash boss. The men to be garnisheed have all to pass by so that he can see them.

Q.—Do you think if the men were paid weekly or fortnightly it would have a tendency to decrease this garnisheeing? A.—Yes.

By Mr. CARSON:—

Q.—What is the result of that garnisheeing? Is it carried any further? A.—Well, if you get garnisheed more than once you are discharged.

Q.—Do they give you to understand that when you are garnisheed the first time? A.—I have never been garnisheed, but I know men who have been discharged.

Q.—Is that the rule on the road? A.—I could not say positively, but I know they will discharge you for that. Of course, it may make a difference in the case of the old employés.

By Mr. ARMSTRONG:—

Q.—It may not be a written rule, but is it the unwritten law of the company? A.—I think it is.

Q.—Supposing a man is discharged by the Grand Trunk for that or any other offence, and he applies to be employed by another railroad, is it the case that he must get recognition from his last employer before he is accepted? A.—That is the rule amongst railroad men.

Q.—You mean railroad companies? A.—Yes; railroad men—of course, I do not mean a shop hand, but a road hand. If he has been discharged by the company and is seeking employment elsewhere he must produce a certificate of recognition from his last employer.

Q.—Is that carried out to any extent in connection with the Grand Trunk? A.—Yes; I think it is.

By the CHAIRMAN :—

Q.—Do you think that the superintendent in Hamilton would refuse recognition to a man who deserved it? A.—No; I do not. Our present mechanical superintendent I do not believe would. I think he is a very fair man.

By Mr. GIBSON :—

Q.—Is a workingman running a monthly account for groceries more apt to buy things he does not need or could do without than a man paid weekly? A.—Yes; he is. I find from those men who run monthly accounts that they are all pretty well ashamed to acknowledge exactly how much they are in debt, and when you go round for statistics, asking about these things—of course it is necessary in our organization to get these things—we cannot get any statement on that item from them. I might say also, in relation to shorter hours, that there was a movement on foot to establish Saturday afternoon as a half-holiday, but I find amongst a great many workingmen they would rather have the hours of labor shortened each day than have the half-holiday, because their employment is so tedious and irksome it becomes unhealthy from long confinement and other causes. It is more so especially to female labor in the large milling establishments in the city.

Q.—How many hours do you think would constitute a fair day's work? A.—I have been educated to the idea that eight would.

Q.—Now, as a workingman, working from day to day from the beginning to the end of the year, do you think you could do sufficient in eight hours to constitute a fair day's work? A.—To give you my own individual opinion, I think it should be done in much less time. I think six hours or five hours would be plenty, because with the machinery we have at present I think it is almost unnecessary to employ men longer than five hours.

Q.—Do you think you, as a working man, have a fair share of the product of your labor, taking into consideration the lessening of the cost of production by the use of machinery? A.—No; I do not think I have.

Q.—Then the manufacturer gets rather too much—he gets more than a fair share? A.—I do not say the manufacturer gets it, but somebody does. The employer is not alone to blame. He is under obligation to other people. I know lots of people in this city who are merely agents of banking corporations. They have to meet their payments. If they cannot, they go under.

Q.—That is coming back to the credit system again. He is in the same fix as the man working by the month. The credit system needs to be done away with entirely? A.—I believe it should. The only credits we should have in this country should be based on actual value.

By Mr. CARSON :—

Q.—Supposing you were getting \$2 a day in your work, and for five hours you got \$1, could you support your family on that? A.—Well, of course we don't take into consideration the many other things that you might say hinge on that question also. There would be a great many more workmen employed.

Q.—It is your own actual case I mean? A.—I think I could.

Q.—You could not save any money, could you? A.—Yes; I could, because bread is 11 cents now, but if I could only earn a dollar probably I could buy a loaf of bread for 5 cents. The actual amount received by the individual don't constitute the basis of value.

By Mr. ARMSTRONG :—

Q.—Has it come to your knowledge in some instances that the shortening of the hours of labor had a tendency to raise wages? A.—Yes; I could tell you on the Grand Trunk it has a tendency to raise wages, I believe, with all the outside competition we have.

Q.—From your knowledge of the working classes in Hamilton, if there had been a public library established here do you think if the men had Saturday

afternoon they would take advantage of that public library? A.—I think so. Of course, they might not do so at first, but with the educational influences that are at work now-a-days I think it would be only a short time before it would be well supported; and in fact we as an organization supported a by-law to get a public library. It was defeated by the large property-owners, on the score that it would raise taxation.

Q.—Were the parties who voted for this by-law property-holders and lease holders, or those who had votes for municipal elections? A.—Property owners and lease-holders, because they are the only ones who can vote on a by-law of that nature affecting the financial affairs of the city.

JOHN BELL, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are connected with the Ontario Cotton Mill? A.—Yes.

Q.—In what capacity? A.—I am secretary-treasurer.

Q.—You employ a large number of hands in the mill? A.—Yes.

Q.—Into what classes generally would you divide those hands? A.—Boys, youths and men, and girls and women.

Q.—As to the work which they follow, how would you divide them? A.—They are distributed all over.

Q.—Weavers and spinners? A.—Carders, spinners, weavers, dyers and finishers.

Q.—At which of these do boys or girls work? Are there any carders? A.—Yes.

Q.—Spinning? A.—Yes.

Q.—Dyeing? A.—No; not any dyeing.

Q.—Finishers? A.—Yes.

Q.—And weavers? A.—Yes.

Q.—At what age do boys and girls begin to work in the mill—the youngest age at which you take them? A.—None under fourteen.

Q.—How do you determine they are not under fourteen? A.—We require a certificate from their parents, if we have any doubt about it.

Q.—Is that a rigid rule with you? A.—By law it is.

Q.—About what wages can a skilled adult (a man) earn in the mill, taking an average case? A.—A man would earn from \$8 to \$10 a week.

Q.—These are skilled workmen? A.—Yes; good workmen.

Q.—An adult woman who is skilled, what would she be able to earn? A.—\$6 to \$8.

Q.—At what distribution of work would the women be employed who earn from \$6 to \$8? A.—Weaving and drawing in. These are the two highest paid departments of work.

Q.—And girls from fourteen to sixteen, how much would they earn? A.—They would earn from \$2 to \$4 per week.

Q.—And they would earn more as they continue? A.—Yes.

Q.—The youngest boys, from fourteen to sixteen, what would they get? A.—Just the same as the girls.

Q.—How many looms does one adult weaver have charge of? A.—A good weaver takes charge of four looms.

Q.—Is that more or less than is the custom in the United States? A.—I think it is the same, but I am not quite sure.

Q.—Is it more or less than is the custom in the old country? A.—I don't know as to that.

Q.—Is the work in cotton mills considered unhealthy? A.—No; I do not think so; I never heard so.

Q.—Is the temperature very high? A.—It is comparatively warm.

Q.—Not uncomfortably warm? A.—I think not.

Q.—Do you keep the air moist with steam to keep the cotton pliable? A.—We do in some rooms.

Q.—Do you think alliance is more frequent with operatives in cotton mills than operatives in other callings? A.—I don't think so; I am not aware that it is.

Q.—Do you employ any hand weavers? A.—Yes.

Q.—What do you pay them? A.—One dollar and ten cents per day.

Q.—What are the hours of labor in the mill? A.—Sixty hours per week.

Q.—You lengthen five days and shorten the sixth? A.—Five days, eleven hours; each Saturday has five hours.

Q.—How frequently do you pay? A.—Every two weeks, on Friday evening.

Q.—Have there been any requests to make the pay-day more frequent? A.—No.

Q.—Would the labor of paying weekly be much greater than the labor of preparing the lists now? A.—Yes; it would be a little more—not a great deal.

Q.—How long have you been connected with the mill? A.—For six years.

Q.—During that time have your wages increased or decreased, or remained stationary? A.—There was a decrease made between two and three years ago.

Q.—And that decrease remains? A.—Not entirely; it has been to some extent removed.

Q.—I am not going to ask you what price you receive for your goods, but can you tell me in general terms whether cotton goods have increased, decreased or remained stationary in price? A.—The price just now is rather better than it was two years ago.

Q.—How would it compare with the prices when the mill was established? A.—I think they are a little higher, but very little.

Q.—Before you were connected with the mill you were in mercantile business? A.—Yes; in the wholesale dry-goods business.

Q.—Can you tell me how prices of cotton range now compared with similar cotton ten years ago? A.—I think they are lower than they were ten years ago.

Q.—How would they compare with prices fifteen years ago, taking the lower grades of cotton? A.—I could not go back so far.

Q.—How do Canadian cottons compare for purity of material with imported goods? A.—They are very much like American cottons, and are purer than English cottons.

Q.—Are Canadian cotton goods loaded down with China glue, and starch, &c.? Not at all.

Q.—They are pure cotton? A.—Yes.

Q.—Is it true of foreign cottons? A.—Not at all, generally.

Q.—So, if a man buys cottons by weight, the goods being similar in other respects, he gets better value for his money in Canadian cottons than he would in imported cottons? A.—Yes; excepting American, which are much the same kind of goods. He gets better value than in English imported goods.

Q.—Can you tell me whether the margins of profits between the mill prices and the retail price ordinarily are greater or less than the margins of profits between the importers' prices and the retail prices on the other hand? A.—The mills sell to the wholesale houses, not to the retail.

Q.—Are you familiar with retail prices at all? A.—Yes. I don't quite understand your question.

Q.—Does the middleman make a greater profit on domestic goods than he does on imported goods? A.—Meaning the wholesaler?

Q.—Either or both—say the wholesaler? A.—His profits as a rule on home-made goods is smaller than on imported goods.

Q.—Can you say how the retailer does? A.—The retailer, I think, gets as good a profit on the home-made goods as on the imported.

By Mr. McLEAN:—

Q.—You spoke about a reduction of wages in your mill? How much was the reduction? A.—Ten per cent.

Q.—Men who run four looms, what are their average wages? A.—He will make from \$8 to \$10 a week on an average.

Q.—How much for women? A.—\$6 to \$8.

Q.—Is there any piece-work in your mill? A.—It is nearly all piece-work.

Q.—You pay so much a piece? A.—Yes.

Q.—Do your company object to employ any person belonging to a labor organization? A.—No; we employ a number who belong to those organizations.

By Mr. FREED:—

Q.—What are the sanitary arrangements of the mill, generally? A.—The mill is heated with steam. There are in each floor of the main mill two sets of water closets, one for males and one for females, and drinking water and washing places on each floor.

Q.—When the factory inspector was around did he find any fault with the sanitary condition of the mill? A.—No; he did not.

Q.—What means are provided for escape in case of fire? A.—There are three towers in the main building, one at each end and one in the centre, with stairways by which the hands could escape.

Q.—Is your machinery recently protected against accident as well as it is in the best mills? A.—Yes; it is provided with all safeguards, according to the requirements of the Canadian Factory Act.

Q.—Did the Inspector make a careful inspection of these when he visited the mill? A.—He went all over the mill, and made no objection or suggestion contrary to what existed.

By Mr. CARSON:—

Q.—Did he make any remark while he was going through your establishment about any other places which were not up to the standard? A.—I don't know that he did. I did not go with him; it was the manager, and his visit was more a formal one than will be another, which he said he would make later on.

By Mr. ARMSTRONG:—

Q.—He went around with the manager? A.—Yes.

Q.—Those girls from fourteen to sixteen, do they get \$2 to \$4 when they enter the mill? A.—They get about \$2 to begin with.

Q.—What would a young woman pay for her board per week in Hamilton? A.—I could hardly tell you. The younger women, I fancy, mostly stay with their parents. It is only the older that live in boarding houses I think.

Q.—I suppose you don't know any of their affairs in their homes? A.—I do not.

Q.—You don't know whether they pay their parents for their board? A.—I could not say.

Q.—Is the temperature in the mill the same heat in winter as at the present time? Is that the temperature for the whole year? A.—It is kept uniform as nearly as possible.

Q.—Then isn't it much warmer in July than it would be in winter? A.—Well, a hot day it would be hotter.

Q.—You have some rooms warmer than others? A.—The bulk of the rooms are about the same.

Q.—How long have they for dinner? A.—One hour.

Q.—Do many of them eat their lunch in the factory? A.—Not many.

Q.—There are some? A.—There are some.

Q.—Is there any fining in your establishment when employés are late in the morning or at noon? A.—No,

Q.—You understand what I mean by fining? A.—Yes; there are only fines for bad work.

Q.—Are they charged full value for work they spoil? A.—They are fined if work is very bad—a moderate fine and paid nothing for doing it.

By Mr. McLEAN:—

Q.—Are they allowed to keep the work? A.—No; it is merely that their labor is lost upon it.

By Mr. ARMSTRONG:—

Q.—Is work ever spoiled and sold to the wholesale men at a lower rate? A.—Yes.

Q.—Is there any association of manufacturers in your business to keep up prices? A.—There is a Cotton Manufacturers' Association for the Dominion.

Q.—Do they hold secret meetings, to which the general public are not admitted? A.—They hold meetings, and the public generally get hold of what passes at them.

Q.—Does that embrace all cotton manufacturers in the Dominion? A.—Except Mr. Gibson's in New Brunswick.

By Mr. CARSON:—

Q.—Do these meetings arrange any prices of cottons, and agree that one shall not sell lower than another, and fix prices at a certain figure? A.—Manufacturers' prices are fixed.

By Mr. ARMSTRONG:—

Q.—Do they meet annually? A.—They meet as often as is necessary.

Q.—You have rules and regulations to govern the association? A.—Yes.

Q.—You fix the minimum rate? A.—Yes.

Q.—If a manufacturer sold under this rate would he be fined? A.—Yes.

By Mr. GIBSON:—

Q.—Don't you think it is pretty hard on the consumer that he should pay three prices on value for his labor before receiving the benefit of it? A workman or workwoman in your mill wanting any of your goods has to pay three prices before he or she can get that article? A.—With the work people, work, that they make themselves, we sell to them.

By the CHAIRMAN:—

Q.—You pay more than three prices? You have to pay plunder in the United States, and haven't you to pay transport of the cotton? A.—Yes.

JOSEPH JAMES WHITELEY, Machinist, Hamilton, called and sworn.

By Mr. GIBSON:—

Q.—At what trade do you work? A.—At the machinist trade.

Q.—What particular kind of work do you do? A.—I served my time in the old country at turning, but I am on the planing machine at present at Beckett's.

Q.—You work machinery? A.—Yes.

Q.—Have you been long at the business? A.—Thirty-two years.

Q.—What wages do you receive? A.—We will average \$1.50 all through the shop in the year.

Q.—How many hours a day do you work? A.—We work ten hours, but they work only nine hours, taking the year through—they drop us off one hour.

Q.—You work fifty-four hours? A.—Sixty hours we have to work to make it a full week. In England they work fifty-four hours.

By Mr. McLEAN:—

Q.—Does it take a skilled mechanic to run one of those planers? A.—I can give you a little experience about that; I have been thirty-two years at the business, and before I came here they had had a man four years at it, but they could not run it satisfactorily till I came. He spoiled work which had to be done over again.

Q.—Does the shop close down during the year? A.—No; they put us on short time.

Q.—Do they keep you employed all the time? A.—Yes; so they can keep their hands on.

By Mr. GIBSON:—

Q.—You said the man was unable to run the machine after four years' experience? A.—There is no man who can run a machine properly after three years' apprenticeship. I served my time seven years at Whitworth's, of Manchester, the finest shop in the world, and I then found I had something else to learn.

Q.—Do you believe in an indenture system for apprentices? A.—I do.

Q.—It is not common in this country now, I believe? A.—No; that is what surprises me.

Q.—Does it tend, in your opinion, to improve workmen or to deteriorate them?

A.—An apprentice system tends to improve them.

Q.—Under it, the master is bound to instruct the apprentice, and the apprentice is also bound to learn his trade, I suppose? A.—From what I have seen, and I have been only a few years in this country, it appears that the masters leave it all to the foreman, and he does not so much as know the apprentice.

Q.—Do you consider that a good system? A.—It is one of the worst systems that could be imagined. A boy, after he has served three years in that foundry, knows as much as he did when he commenced.

Q.—Are the skilled mechanics increasing or decreasing in the country? A.—I think they are decreasing. In our firm we have four apprentices to ten men, and half of the men are only half skilled, what I call handy men.

Q.—Then skilled workmen are decreasing, although the number of workmen is increasing? A.—Yes.

Q.—Have you any idea of what would change that irregular style of doing business? A.—Yes.

Q.—What would do it? A.—I think what would improve it would be to have apprentices serve seven years, as is done in England.

By Mr. ARMSTRONG:—

Q.—Would you have the employers compelled to teach the boys their trade? A.—Yes; and there should be a regular indenture system drawn out, as was done in my case.

Q.—How do the wages in Hamilton, and in Canada generally, compare with the wages paid in England in your trade? A.—I will give you the wages I received myself. I worked at the *Times* office, in England, and received £3 per week. I came out here to see a son and daughter of my own. I got the enormous sum of \$1.75 a day here, because I have grey whiskers, and they do not want to employ old men. But I find that when they get me into the establishment they do not want me out again. They want young men, who know nothing, but men with grey hair they do not care much about. I have experienced that at two shops in Hamilton.

Q.—Do you mean that the employe's wages are higher in London than here? A.—I do; I mean as regards the amount of money paid. If you get 38 shillings or 36 shillings a week in England it is worth more than \$12 or \$14 here.

Q.—That is, when you take into consideration the difference in the price of house rent, I suppose? A.—Yes; house rent, coal and provisions. I could get bread at 2 cents per pound in England when I came away, and I have been here only three years.

By Mr. GIBSON:—

Q.—How can you get the bread cheaper in England, when the flour comes from here? A.—How can you get your own cheese cheaper there?

Q.—Can you buy Canadian cheese in England cheaper than here? A.—Yes; on the market in Manchester I can get the best Canadian cheese at 5 pence per pound (10 cents), and they charge me here 12 cents for the same.

Q.—At that time was not cheese cheaper? A.—No; Cheshire was selling at something like 1 shilling per pound (24 cents).

Q.—Have you any theory to account for that? A.—I forgot it, or I would have brought here a catalogue of Deer Brothers' wholesale list of prices. Lump sugar is 6 cents per pound, ready cut, and they will charge me much more here. I have to pay here 28 and 30 cents for butter per pound.

By Mr. ARMSTRONG:—

Q.—Is your trade organized? A.—I belong to the Amalgamated Society of Engineers.

Q.—Is there a branch in Hamilton? A.—Yes.

Q.—Do all the journeymen of your trade belong to it? A.—No.

Q.—The headquarters are in England? A.—Yes; as I have said, I came out here only to see a son and daughter.

Q.—Suppose you were taken ill and your dues were paid up, would you receive any benefit from headquarters? A.—Yes; I am a Forester as well. Yes; they would look after me the same as if I was in England, because I pay in and the money is sent to the head office.

Q.—Is there any fund to assist men who are idle through no fault of their own? A.—There is.

Q.—Can you give us the estimated strength of your organization? A.—I can, but I would have to go into millions, for it is spread over all parts of the world.

Q.—In regard to fines accruing with the branch in Canada: are they dispensed by the branch in Canada or are they sent home? A.—Each pays their own money.

Q.—They make a statement for headquarters? A.—Yes; and they send the amount to headquarters.

By Mr. FREED:—

Q.—You have said that the average wages throughout the shop would not be more than \$1.50 a day: does that include the wages of skilled and unskilled men? A.—Yes; we put in one with the other.

Q.—What are the highest wages paid to the skilled men in your shop? A.—Two dollars a day. There is another point to which I would like to refer. I think it would be the best thing in every way if they would adopt the English system of fifty-four hours a week's work. If a man will take and use a hammer nine hours a day that hammer must strike lighter towards night, and if the time was limited to nine hours, instead of ten hours, it would go a little quicker.

R. R. MORGAN, Miller and Whip Manufacturer, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You are a member of the firm of Morgan Bros., I believe? A.—Yes.

Q.—Are many men in your employ? A.—We employ in the mill about ten hands.

Q.—Are those skilled hands, or are they both skilled and unskilled men? A.—About two-thirds of them are skilled men.

Q.—Do your millers work night and day? A.—Part of the season, during the fall and during navigation, we run night and day; two gangs of men are on then.

Q.—How many hours constitute a day's work in your mill? A.—When running night and day they go off and on at twelve o'clock day and night. They change round every other week—that is, the gangs do.

Q.—Each runs during twelve hours? A.—Yes; during the season.

Q.—Are they actually at work during the whole of those twelve hours? A.—No; they are just looking after the machinery. During six hours they are pretty actively engaged at work. During the night they do nothing, except keep the feeds going. In the day time they are shovelling and doing such like work.

Q.—What do skilled millers receive? A.—We pay from \$8 to \$10 per week. The head miller gets a little higher wages, but my brother takes charge in the mill.

Q.—What do you pay unskilled men at your mill? A.—Seven dollars and a-half per week.

Q.—What wheat do you use principally? A.—We principally grind Ontario wheat. We have been grinding a little Manitoba wheat this season.

Q.—Mixed? A.—No.

Q.—Do you not mix the wheat, in order to produce certain brands of flour? A.—Yes; we mix our wheat. We use red and white winter wheat; we get very little spring wheat.

Q.—Where do you find your market for your flour? A.—About half our stock is sold locally; the balance goes to the Maritime Provinces. We have shipped some to Scotland, but we have not done so this last two or three years. We have sent some to Newfoundland.

Q.—Did you ever pay a higher price for grain than shippers pay? A.—Yes; we generally pay a little more, because we select our wheat. We like to take the best of it, and so we pay a little more for it.

Q.—Is that only at certain seasons of the year? A.—No; all the year round we calculate to pay a little more. We do not pay more in proportion to the quality; probably we would be 1 or 2 cents more.

Q.—How does the price of flour compare now with prices in former years? A.—The prices are, I think, about 5 per cent. higher than during the last two years.

Q.—How do the prices compare with prices ten years ago? A.—A barrel of flour that was sold for \$5.50 ten years ago will bring only \$3.70 to-day, and it will be a better article to-day than it was then, for now it is roller flour; then it was stone flour.

Q.—Do you employ many hands in your whip factory? A.—From fifteen to twenty, but we have generally about fifteen.

Q.—Are they skilled or unskilled hands? A.—About half of them are skilled hands.

Q.—Are they men, women or boys? A.—There are some women. The skilled hands are all men.

Q.—How much can they earn? A.—From \$9 to \$15 per week.

Q.—How many hours a day do they work? A.—Ten hours a day.

Q.—Sixty hours a week? A.—During the summer and winter we only run from eight to five for three months.

Q.—You reduce the wages accordingly? A.—We pay the hands accordingly.

Q.—Do you employ many young persons? A.—Five or six girls, sometimes; perhaps a dozen; I don't know any very young girls—none under sixteen.

Q.—How much can they earn? A.—They can earn from \$2.50 to \$5 per week.

Q.—I suppose it would range according to the skill they possess? A.—Yes.

Q.—Do they work by the week or by the piece? A.—They work by the week.

Q.—Where do you find your market for your goods? A.—All over Ontario and Quebec; we send a good many whips down to Quebec and Montreal.

Q.—Has your whip factory been long in existence? A.—We have been running it now about twelve or thirteen years.

By Mr. ARMSTRONG:—

Q.—In your flour mill: how many hours a day do the miller's work? A.—In the day time we only run twelve hours. If we run day and night they are put on full time; we put in twenty-four hours.

Q.—Do you change hands? A.—Yes; at 12 o'clock every day and night.

Q.—In your busy time, does a man working at night work twelve hours? A.—Yes. The day hands go on at 12 in the day and the night hands at 12 at night, and every other week we change hands.

Q.—Do you pay extra for night work? A.—When we hire a man he knows that we only run three or four months that way.

Q.—Do you do any Sunday work? A.—No; if it is done one of the bosses has to do it. We have to do it once in a while, but my brother does it himself, and a man does not care to take that part of the work.

ALFRED MILLER, Shoemaker, Hamilton, called and sworn.

By Mr. ARMSTRONG :—

Q.—You are working at a shoe factory in Hamilton, I understand? A.—I am at present.

Q.—How long have you been working at that trade in this city? A.—On and off, going on eighteen years.

Q.—What is the branch of business at which you work? A.—At the trimming.

Q.—What are the average wages of a trimmer in this city? A.—I suppose from \$10 to \$15 per week; we work piece-work.

Q.—Do the men prefer to work by piece-work? A.—Yes; they do.

Q.—Did you ever calculate the number of days in a year a man works at that business in your factory? A.—The factory generally shuts down during the year about two or three weeks for stock-taking. Of course, piece-hands are not employed steadily all the time—there are slack seasons in the trade.

Q.—How many hours per day do the men work piece-work? A.—They work piece-work ten hours a day.

Q.—I presume when one branch of the business is going they all must go? A.—Yes.

Q.—Are there many boys employed in the factory? A.—No; not many; altogether, about seven or eight.

Q.—When a boy comes into the factory does he go into the factory under the impression that he is going to learn the shoemaking trade? A.—No; they could not learn it.

Q.—Why could they not? A.—There is no way of learning it.

Q.—When a boy goes in and is put on a machine is he kept on that machine until his apprenticeship is over? A.—They do not put boys on machines.

Q.—How do new-comers learn the business? A.—Whenever there is a new machine put into the shop they generally take a man who will be most likely to learn the machine.

Q.—As a general rule can one man work all the machines employed in making a perfect boot? A.—I have only known one man who can learn the machines. As a rule, a man can run only one machine.

Q.—They remain at that so long as they are at the business? A.—Yes.

By Mr. McLEAN :—

Q.—What wages can that man earn who is able to run all the machines? A.—He is guaranteed \$15 per week for fifty weeks in the year.

By Mr. ARMSTRONG :—

Q.—Does he occupy a position higher than that of a journeyman? A.—No; that man who gets \$15 a week is the only man in this city who can run the kind of machines we run—that is the Goodyear machine. It is a new machine, and there are not many who understand its working.

Q.—Do the wholesale manufacturers in Hamilton make all their own goods? A.—No.

Q.—Do they import any? A.—Yes; they import some from the Maritime Provinces.

Q.—And from the other side? A.—I don't think so.

By Mr. McLEAN :—

Q.—Can the manufacturers make their boots and shoes here as cheaply as they can import them from the Maritime Provinces? A.—No; there are nine-tenths of the boots and shoes worn in Canada which are made in the Maritime Provinces.

Q.—Both men's and women's wear? A.—Yes.

Q.—Have you any knowledge of the business that female operatives do? A.—No.

Q.—Have you any knowledge in connection with custom work? A.—Yes.

Q.—Is there much custom work made here now? A.—No; there is not.

Q.—Does a factory hand or a custom hand earn the largest wages in this city?  
 A.—I have made just about the same wages at the custom trade as I have in the factory. In the custom trade I made larger wages than the majority of men.

Q.—How do the prices in Hamilton compare with the prices paid in Toronto, so far as men and women's work is concerned? A.—On men's work we are working on the Toronto list of prices. It is the same throughout the Province.

Q.—Do you speak in that way of London? A.—Yes; I think it is so in London.

By Mr. ARMSTRONG:—

Q.—Can you tell us, as a matter of fact, the difference between the bill of prices throughout Ontario and the bill of prices in Montreal? A.—I don't think they have a bill of prices in Montreal.

Q.—Is your trade organized? A.—Yes; it is.

Q.—Do you think it has been a means of keeping up the prices of wages paid to employés? A.—Yes.

Q.—How has it been in that regard with respect to women's work? A.—I think it is the same.

Q.—It is kept up from the same source? A.—Yes.

Q.—Have you had any difficulty in the shoemaking trade in Montreal? A.—They had a little difficulty in one of the firms.

Q.—How was that difficulty settled? A.—It was settled by arbitration.

Q.—By the men and their employers coming together? A.—Yes; by the employers and the District Assemblies of the Knights of Labor.

Q.—What is the feeling existing between the employers in your trade and their men? Is that feeling harmonious? A.—Yes.

Q.—There is a good feeling existing between the men and their employers in Hamilton, then? A.—Yes.

By Mr. McLEAN:—

Q.—What wages do men get who run the pegging machines? A.—Twelve dollars a week.

Q.—And those who run the sewing machines—machines to sew soles on?  
 A.—They receive \$12 per week.

Q.—What do the lasters get per week? A.—They work by piece-work.

Q.—What is their average wages? A.—From \$10 to \$15 per week—that is, in the busy season. Of course, I will not say that they average that much the year round, because there are dull seasons in their trade, as in every trade.

Q.—Is there any stamp that the men allow the firms to use on their goods?  
 A.—We have a stamp, but it is not used.

By Mr. ARMSTRONG:—

Q.—Is there much kid work made in Hamilton? A.—Yes; a good deal.

Q.—What would be the wages of a first-class female operator on women's kid uppers, working by the piece, taking, of course, an average hand? A.—I was asking the foreman that question this morning and he told me the earnings were from \$5 to \$9 per week.

Q.—Are there many who make wages to that amount? A.—I could not say.

Q.—You cannot tell us the wages a young girl would earn at what they call pasting? A.—No; I could not.

By Mr. FREED:—

Q.—Whose factory do you work in? A.—There is only one factory, McPherson's.

Q.—What is the sanitary condition of that factory? A.—The sanitary condition is first-class.

Q.—Where are the stair-cases located? A.—Outside of the main building. The stair-cases are separate, and shut off from the main building altogether.

Q.—Are they exposed to the weather? A.—No.

Q.—Where are the water-closets situated? A.—They are off from the main building, too.

Q.—Will you describe briefly the manner in which the stair-cases and water closets are located? A.—The water-closets and wash-room are in connection with the stair-case.

Q.—That part forms really an addition do the main building? A.—Yes.

Q.—What kind of doors are between this addition between which the stair-cases are located and the main building? A.—Sliding doors, covered with tin.

Q.—If a fire were to take place in any floor, how would the people in the building escape? A.—Down the stair-way.

Q.—They can go from each floor to the stair-case? A.—Yes.

Q.—Could the fire pass through those doors to the outside? A.—Yes; there is hose in connection with every flat.

By the CHAIRMAN :—

Q.—Do I understand you to say that the doors are sliding doors? A.—Yes; they are sliding doors.

Q.—If the doors were shut in case of fire, how could they be opened? A.—They could be opened on either side. The main door at the bottom of the stair-case opens outward; above, the doors slide on pulleys.

By Mr. ARMSTRONG :—

Q.—Have you ever known the doors of the establishment to be locked, so as to prevent those who came late from entering? A.—Yes; it is so in almost every shop. The doors are locked at eight o'clock in the morning, but when they are locked you can go in by the front door.

Q.—Is it a regular custom for the young women to go into the establishment through the main counting room? A.—If they come later than eight o'clock they do.

Q.—And they do that as a general thing? A.—Yes.

Q.—Who carries the key after the door is locked? A.—The man who runs the engine.

Q.—Have you ever worked in Toronto? A.—No.

By Mr. FREED :—

Q.—Does the buffing machine make a great deal of dust? A.—No; not now.

Q.—How does it make less dust than it did formerly? A.—They have pipes connected with all those machines running into the chimney.

Q.—And the dust is carried up the chimney now? A.—Yes; it is.

Q.—How does the dust enter these pipes—does it enter by fans, or how? A.—No; the draught of the chimney is sufficient to draw it up.

Q.—Is any of the machinery dangerous to life or limb? A.—Yes.

Q.—Do accidents frequently occur? A.—No; not frequently.

Q.—Do you know anything about the factory inspector's opinion with regard to the condition of the establishment? A.—No; I do not. I do not know whether he has been around this new building or not.

Q.—How does this factory compare with others in which you have worked, as regards comfort or convenience? A.—I never worked in any factory outside of this city, but of those I have seen it is the best.

Q.—How frequently are you paid? A.—We are paid once a week.

Q.—Are you paid in cash? A.—Yes.

By Mr. McLEAN :—

Q.—On what day are you paid? A.—We are paid on Saturday.

Q.—Would you prefer any other day as pay-day? A.—I don't know. There would be an advantage, perhaps, in being paid on Friday.

ROBERT COULTER, Shoemaker, Hamilton, called and sworn.

By Mr. ARMSTRONG :—

Q.—You have heard the evidence of the last witness (Miller) ? A.—Yes ; it is correct in the main.

Q.—Have you anything to add to it ? A.—So far as regards prices paid in Quebec, I may say that while we get 40 cents a case for taking lasts out of boots they get 10 cents, and the wages are about in that proportion as between the Provinces of Quebec and Ontario. In Hamilton, at one time, this was growing to be an important industry, but for some cause we have only one factory left out of five or six factories. The firm for whom I have been working this last year have gone to Toronto, and the reasons they gave for going were because they had greater facilities in Toronto, and the freight is less, and this was a sufficient object to cause them to go there. There might be something in that.

By Mr. McLEAN :—

Q.—Is not this factory in Hamilton considered the best factory in Ontario ? A.—It is the only one here. It is the best built and the best adapted for boot and shoe manufacturing. Of course, there are only 300 shoemakers in Hamilton, and this firm employs about 150. Some time ago, as I have said, we had six shops in this city, but they have dwindled down to one factory.

Q.—Are there any machines used in the factory on which there is a royalty paid ? A.—I don't know whether the royalty is paid now or not, but it used to be paid.

Q.—Where do the machines come from ? A.—The Goodyear machines come from Boston.

Q.—Has the patent been extended to Great Britain ? A.—I could not say as regards that. I know they have an index on their machines to indicate every stitch put in.

Q.—Have you heard the statement of the last witness in regard to the wages of young women ? What do you know in regard to that statement ? A.—That statement is about correct. I know in other factories in which I have worked that the girls earn from \$9 to \$7 per week.

Q.—Are those Toronto prices ? A.—Toronto manufacturers pay on some lines perhaps a little less.

Q.—But on the whole, you think the Hamilton prices are less ? A.—On the whole, Hamilton is a little bit ahead in regard to the bill of prices.

HAMILTON, 21st January, 1888.

EDWARD H. HANCOCK, Carpenter, Hamilton, called and sworn.

By Mr. FREED :—

Q.—How long have you worked at your trade in Hamilton ? A.—I have worked at my trade, more or less, for the last ten years.

Q.—About what are fair wages for a carpenter in this city ? A.—That is a question I am not prepared to answer, for there are such a variety of prices that I am not in a position to do so. Unfortunately, we have a lot of foreigners at work in our trade, and that is what does not suit us.

Q.—You are not able to give us an idea of what a fair day's wages for a carpenter would be in this city ? A.—I can give you a fair day's wages for a good carpenter—it would be \$2.25 or \$2.75 a day ; but they are not all paid that.

Q.—What are they paid ? A.—Some of them \$2.25 a day.

Q.—During what part of the year are you employed ? A.—That is according to a man's abilities.

Q.—What would be the average, do you think ? Could a man work the year through ? A.—No.

Q.—Do you think he would work ten months ? A.—No ; I cannot work ten months myself.

Q.—Are there many apprentices working in the carpentering business in this city? A.—There is no apprentice system at all; that is one of the drawbacks to our branch of the business.

Q.—Are there many boys learning the trade? A.—That I could not say, as I am not very well posted in the business.

Q.—How many hours constitute a day's work in your trade? A.—Ten hours a day, but I believe the organization in our trade has been laboring very hard to reduce the hours; whether they will accomplish it or not I cannot say.

By Mr. GIBSON:—

Q.—How many hours would you consider a fair day's work? A.—Eight hours; that number I have been taught from my infancy to consider as a day's work.

Q.—From your experience, do you find eight hours sufficiently long? A.—Yes; when I have worked thirty years out of thirty-eight.

Q.—Did you go to work at eight years of age? A.—Yes; I never had any schooling.

Q.—Then, you ought to know something about labor? A.—Yes; that is what I came here to talk about.

Q.—Do you think a workingman receives a fair share of the product of his labor? A.—I do not.

Q.—Do you know any reason why he should not receive a fair proportion? A.—I have a good reason right here.

Q.—Give us that reason? A.—That is what I came to give you, and I will proceed with it. You will look over this paper and you will see that \$578 wages were stolen from the working girls of Hamilton, and there is no law in this fair Dominion of ours by which to collect the amount. There is the document. (Document handed in).

Copy of Claims for Wages, made by these parties on the Hamilton Knitting Co. (limited), which failed in June, 1883,—Jas. Parks, President; Oliver C. Sircee, Manager:—

The firm was that of James Khells, and the case was carried up to the highest court in the Dominion. I wish this Commission would make a report, so that in Ontario, as well as in the rest of the Dominion, no claim should have preference to claims of employés for wages. You will find my name in that list, I believe.

Q.—Will you explain this list? A.—You will understand that when we started out the lawyer told us distinctly that we could get no wages, and fully and faithfully has that word been kept up to the present time.

By Mr. CLARKE:—

Q.—What is that document? A.—It is a list of stolen wages. What I wish to impress on this Commission is, that there is no law in this Dominion to collect these wages under these circumstances. I would like to say that some arrangement should be made that wages of every description due to employés, whether it be by an incorporated establishment of any kind or any company whatever, should be collected from the assets, previous to any sheriff taking charge of the estate and having it sold under an auctioneer's hammer; that the heavy creditors must either see the wages paid or must pay them themselves before they dispose of the plant of the establishment and other assets.

By Mr. GIBSON:—

Q.—What you want is that wages shall be the first lien? A.—Yes; on everything, and before any action whatever can be begun the wages must be paid. I think in Great Britain before an auctioneer can raise his hammer the wages must be satisfied.

By Mr. ARMSTRONG:—

Q.—Those amounts stated in this document are wages due to employés in Hamilton? A.—By a Hamilton company that failed in June, 1883.

Q.—Are those names of the employés of the company? A.—Yes.

Q.—Do you know anything about the provincial lien law? Do you think it is operative, and have you had any trial of it? A.—You mean the lien law in the building trade? The lien law I never tested, either on this side or on the other side of the line.

Q.—Did you ever give any thought to the formation of a lien law for the Province? A.—I believe the building trade is pretty fairly protected, but a stock company or an incorporated establishment, or anything of that kind, is very shaky under the present law. Laws may be good enough, but they are most difficult often to carry out.

Q.—Do you think an amendment to the present lien law, which covers the building trade, should be extended so as to cover all branches of industry? A.—Yes. Protection of the wages of the laborer must come first, so that no sheriff, no auctioneer, and no one whatever shall be able to dispose of the property without first paying the employés' wages.

Q.—You believe that the lien for wages should be the first claim? A.—Certainly. Two-thirds of those employés have left this country. I can give you the addresses of three or four of them.

Q.—You are of the opinion that a lien law should not only cover the building trade, but all other branches of industry, and be arranged so that claims for wages would be the first claim? A.—I am. Why should those girls be wronged out of the amount of wages due to them?

Q.—What is the lowest rate of wages paid in Hamilton to what you would call a carpenter? A.—The lowest wages paid to a man that I would call a carpenter is \$2.25 a day, but the amount paid to some of the men who work as carpenters is about \$1.25 a day. That is a fact—that is where the apprentice system fails.

Q.—Do you believe in the apprentice system? A.—I do.

Q.—What benefit would it be to apprentices, and journeymen and employers? A.—It would keep men on the farm. It would make men skilled mechanics, and not butchers.

By the CHAIRMAN :—

Q.—Do you think that grocers and provision merchants who have supplied employés and laborers, and kept them alive, should not be paid before the men employed? A.—I think about the time this thing occurred I owed \$25 for a grocery bill, and I since have paid it.

Q.—If the grocer has furnished one of those laborers with food and the means of living, should he not be paid before the laborer? A.—Please explain yourself?

Q.—If the grocer has sold you provisions, should he not be paid before you? A.—I do not think it, because if you rob me of my earnings I cannot pay the grocer.

Q.—Is there a large quantity of intoxicating liquor drunk in Hamilton? A.—I do not know anything about that.

Q.—Do you think a strict law of prohibition would benefit those employés and employers—would it benefit all classes? A.—My idea is that the claims for wages should come first; then a man would be able to pay his debts.

Q.—I am asking you if you consider the law of prohibition would benefit all classes? A.—I have nothing to do with prohibition. I do not believe in tying a man for nothing.

B. R. NELLES, Fruit and Vegetable Canner, Grimsby, called and sworn.

By Mr. FREED :—

Q.—During what portion of the year is the canning industry active? A.—From June till December and January.

Q.—What class of fruit do you can? A.—Strawberries, raspberries, peaches, apples, plums and, in fact, all classes of fruit.

Q.—Do you pay higher or lower, or the same prices, for fruit that growers would get if they put the fruit on the general market? A.—We pay the same price usually, less the freight and commission.

Q.—What class of labor do you employ in the canning of fruit in a factory? A.—Women and girls principally; some men and boys also.

Q.—Where do you get the help? does it come from the neighborhood? A.—From the neighboring villages and neighborhood.

Q.—Can you get an ample supply of labor? A.—Some years we have had difficulty in getting what labor we require, while other years we get all we require.

Q.—What can grown women earn during the season? A.—From 50 cents to 75 cents a day. A great deal of the work is done by piece-work and what they earn depends on how fast they can work. Those who work by the hour we pay 6 cents per hour.

Q.—They board themselves? A.—Yes.

Q.—What can the girls and children earn? A.—They earn from 40 cents to 60 cents a day. We find some young girls who will earn as much as grown women on piece-work.

Q.—Do they get paid at the same rate as journeymen for the work they do? A.—Yes; on piece-work.

Q.—When are your cans made? A.—In the winter season.

Q.—Do you make those or do you buy them? A.—We make them ourselves; we have can-makers.

Q.—You do not employ many hands in making the cans? A.—We employ four on an average.

Q.—What do those men earn? A.—They earn about \$1.50 a day making cans.

Q.—Where do you find your market for your goods? A.—We find our market in Canada.

Q.—Do you find your market throughout the whole of the country? A.—Yes; some of our goods go to Winnipeg, some to the lower Province. They are sold principally in Toronto and Montreal.

Q.—Have there been any changes in this trade within the past six, eight or ten years? A.—Yes; there has been a great change in it.

Q.—What is the nature of the change? A.—Factories are fitted up to give greater capacity, and we turn out goods cheaper than we did in 1879 and 1880.

Q.—Are there more or less of these goods imported than formerly? A.—There are less imported, I think. I think there are very few canned goods imported, with the exception of peaches, which is due to the failure of our peach crop some years.

Q.—Can Canadian canners compete with foreign fruit? A.—Not without a protection.

Q.—With the protection they can? A.—Yes.

Q.—Is it an advantage to fruit growers to have fruit canned in Canada? A.—Yes; I think it is a great advantage. It gives them a larger market for their fruit. One year I had about 3,000 baskets of peaches, and certainly if they had been on the market they must have made quite a difference in the price of peaches sold.

Q.—Do the people who work for you get employment for the rest of the year at any other occupation? A.—Most of them have their homes, and they will not go out to work at any place else. The women and girls are willing to work at the factory who would not be willing to go to service.

Q.—Were they daughters of farmers or mechanics? A.—They are daughters of mechanics and laboring men.

Q.—Farmers are getting so well off that their daughters will not do any such work, I suppose? A.—In our section they will not.

Q.—Can you sell all the fruit you can can? A.—I have always done so, up to the present time.

Q.—What is the character of the fruit canned in Canada as compared with the canned fruit imported—is it as good an article in every respect? A.—I think, taking the average run of canned fruit, the quality is better than a good deal that was formerly imported into this country.

By Mr. ARMSTRONG :—

Q.—Those young girls, you say, earn from 40 cents to 60 cents a day. Do they work six days per week? A.—Yes; they actually work more hours in the week than would form six days, because sometimes they work till 10 o'clock at night.

Q.—Do they receive extra pay for over-time? A.—They get so much per hour, and if they work till 10 they earn more money, but they earn at the rate of 40 cents or 60 cents for ten hours work.

Q.—The over-time is paid at the same rate as day work? A.—Yes.

Q.—Do young girls work over-time? Not many of them, they are mostly women; occasionally the oldest ones will.

Q.—Have you any young girls who earn only \$2 a week? A.—There may be a few; there may be an odd one.

Q.—How old would those girls be? A.—They are twelve to eighteen years.

Q.—You are sure they will not be girls of twelve? A.—I do not think we have them under twelve.

Q.—Is it a very healthy occupation in those factories? A.—Yes; so far as I know. I have never known any one to be sick in my factory.

Q.—Do you use much machinery? A.—Yes; we are using a great deal more now than formerly.

Q.—At that branch of the business are the men employed? A.—In capping and handling cans, taking them out and stowing them away, boxing, and so on.

Q.—You have found your business to be on the increase during the past year or two? A.—Yes; it is on the increase.

MARK LIMEMBECK, Cotton Spinner, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You work in the Ontario Cotton Mill, I believe? A.—Yes.

Q.—How long have you been employed there? A.—About seventeen months.

Q.—What hours a day do you work? A.—We work eleven hours a day for five days a week and five hours on Saturday, averaging ten hours a day for six days.

Q.—Do you work by the day or by the week? A.—I work by the week.

Q.—Do all the spinners get the same rate of wages? A.—I could not say as to that; I know what I get.

Q.—About what will be the wages of a good spinner in your trade? A.—They get paid by the day.

Q.—About what amount do they receive? A.—I could not state what the rest of the spinners get; I get \$1.50 a day.

Q.—How long will a boy have to be employed before he becomes expert as a spinner? A.—He will have to start when a boy and work until he gets to be a man.

Q.—He does not get a journeyman's wages before he is grown up? A.—Not until he gets to be a spinner.

Q.—Are there any female spinners? A.—No; not in the mules; there are spinners on the frames.

Q.—Is the work on the mules so hard that only men can do it? A.—It is men's work.

Q.—Take the women who work on the frames; what do they earn? A.—I do not know; I do not know anything about that branch of the work.

Q.—Are the people in good health who work at spinning? A.—Yes; usually so.

Q.—Is the mill a comfortable one in which to work? A.—Yes; it is.

Q.—Do you know how the rate of wages are in this neighborhood compared with other mills in Ontario? A.—I do not.

Q.—Have you any association? A.—No.

Q.—You just take the rate of wages going at the mill? A.—I do not belong to any association; I do not know what the rest do.

Q.—Are any spinners members of a union? A.—I could not say.

Q.—Do you know of any spinners' union or cotton mill operatives' union? A.—Not in Canada.

By Mr. ARMSTRONG:—

Q.—You have met with young girls coming out of the mill? A.—Yes; I have.

Q.—What might their age be—take the youngest of them? A.—I do not think any of them are under fourteen years.

Q.—Do you know the wages a young girl will receive coming into a mill? A.—No; I could not say—not the young girls, for I have never worked where they are.

Q.—Some of those rooms are quite warm in summer? A.—Yes; of course they are warm.

Q.—Some of the rooms are warmer than others? A.—Yes.

Q.—The rooms where the young women work are considered very warm in July and August, I believe? A.—Yes; very warm.

Q.—Do they eat their dinner in the factory or do they go home? A.—Some of them eat their meals in the mill.

Q.—Both young girls and young women? A.—I think they do.

Q.—Is there any fining system in the mills in Hamilton, fining for being late in the morning or at noon? A.—I never knew of a case in our mill, although there may be for all that, but I never knew of it.

Q.—For any work that might be spoiled in the estimation of the manager, are there fines imposed? A.—Sometimes they are fined.

Q.—Could you estimate what their fines might amount to in a month? A.—I have never been fined and I do not know.

JOHN VANCE, Cotton Weaver, Hamilton, called and sworn.

By Mr. FREED :—

Q.—How many looms will one weaver manage? A.—Four looms.

Q.—Is that universal throughout the mill? A.—Yes; they do not get any more to look after.

Q.—Have you worked in cotton mills in any other country than in Canada? A.—No; I have not.

Q.—You are not able to tell us how many looms a weaver in England would manage? A.—No; but when I worked in Dundas on white cloth I knew them to run six looms, but on check work only four.

Q.—Check work is more difficult than white work? A.—Yes; it is more particular.

Q.—What wages does a weaver receive? A.—It depends on the number of looms they run; some run four and some three, but all around they would average \$1 a day the year round.

Q.—A man who runs four looms, how much would he receive? A.—One dollar and fifty cents a day the year round.

Q.—And a man who runs three looms, how much would he receive? A.—Not many run three looms—generally girls do that.

Q.—What proportion of hands are men and what women? A.—There are more women than men.

Q.—What will be the average earnings of a woman weaver? A.—Some can earn just as much as men; it depends on how they work.

Q.—Is it very hard work in the weaving room? A.—Not very hard, but it is tiresome.

Q.—Have you to keep close watch? A.—Yes; your eyes have to be wide open.

Q.—Not much muscular exercise is required? A.—No; if you do not watch you will have a piece to pick out about a yard long.

Is there any reason why women's work should not be as good on weaving as men's? A.—There is no reason whatever.

Q.—Are watchfulness and care required throughout the day up to the time you leave at night? A.—Yes; you are on your feet all the time, and watching, and that makes you tired. It is not hard work, but it is tiresome being on your feet all the time.

Q.—Are you required to be in a standing position? A.—You have to stand all the time.

Q.—Can you sit down at all? A.—If the work is running good you can sit down occasionally.

Q.—What would be the youngest age at which a boy or girl would be in the weaving room? A.—The youngest there will be about fifteen years.

Q.—What are the wages they receive when they go to weaving? A.—They get nothing when they begin. It depends on how rapidly they pick it up. Some will pick it up in two days; others will not pick it up in three weeks.

Q.—Will they pick it up in three or four months? A.—You cannot run three looms in three months unless you are very smart in picking it up.

By Mr. ARMSTRONG :—

Q.—Do you think an ordinarily intelligent person could pick it up in a year? A.—I should think so.

Q.—How long do you think it will take a man to tell whether a girl or boy is fit for the business? A.—It is the foreman who does that.

Q.—How long do you think it would take the foreman to ascertain? A.—He does not put them on to run looms until he sees fit—sometimes it will be in six months.

Q.—Will they get paid for those six months? A.—No.

Q.—If they ask for a loom will a loom be given them? A.—He will give them a loom, provided they can run it.

Q.—If they are judged not competent to run a loom, and leave, are they paid for the time they have spent in the mill? A.—I could not say whether they receive

any money for the time they remain in the mill at work or not. They will learn within six weeks at all events, and then they will probably get looms. But they are not put on piece-work at first, and they give them stated wages, and it is only when they are able to run three looms that they are put on piece-work.

Q.—What will be the lowest wages a girl will receive? A.—Four dollars a week.

Q.—How many hours a day will she work? A.—She will work from half-past six in the morning till half-past six at night, eleven hours a day, and on Saturday short time, making in all sixty hours.

Q.—Do they go home to their meals? A.—Yes; unless there is a good deal of work, and then they bring their meals.

By Mr. CARSON :—

Q.—Do you think the hours of labor excessive? A.—Yes; I think they are too long; they are too many hours for work.

Q.—How many hours would you consider sufficient for a fair day's work. A.—Ten hours a day is plenty; it is just as long as any one can work. After getting out at half-past six at night you must get your supper, and go to bed for your full time of sleeping.

Q.—Do you think that laboring men can get any proper recreation? A.—Yes; after a man has been closely engaged all day he wants some recreation.

Q.—Do you consider it is a proper time to take it after night-fall? A.—I do not know. Married men do not find much time for recreation, but they should get a little.

Q.—That is your honest belief—that a workingman should receive some recreation. A.—Yes.

By Mr. ARMSTRONG :—

Q.—Does your mill shut down any time during the year for the purpose of taking stock, or for any other purpose? A.—They do sometimes for half-a-day, that is on Saturday, and they have stock-taking, and the mill is ready to start again Monday morning.

Q.—Is that the system all the year round? A.—When they take stock they shut down the mill.

Q.—For how long do they shut down then? A.—Just for half-a-day.

Q.—With this slight exception is the mill running all the year round? A.—Yes; barring the general holidays.

Q.—Do you know if that is the general system of cotton mills throughout Canada? A.—No; I think not.

DOMINIC WINN, Dyer, Hamilton, called and sworn.

By Mr. FREED :—

Q.—Are there many men employed at dyeing in this city? A.—There are sometimes more and sometimes less; there are sometimes eighty and sometimes twenty four.

Q.—Are they all men? A.—Yes.

Q.—There are no boys employed? A.—No.

Q.—Are there any women employed? A.—No.

Q.—What wages would a good dyer receive? A.—A boss dyer receives different wages from the men who are regularly at work. Some boss dyers receive as high as \$7 a day; others receive \$4.

Q.—Take an average workman who is not a foreman: what does he receive? A.—Some receive only \$1.25 a day and some \$1.15 a day.

Q.—Does a good man, who is not a foreman, working a number of years, not receive more than that? A.—He will probably receive \$1.25 a day.

Q.—How long must a man work at dyeing before he becomes skilled at it?  
 A.—It depends whether he is a yarn hand or a raw cotton hand.

Q.—Which is the most difficult work? A.—That of a yarn dyer.

Q.—What would a yarn dyer receive? A.—One dollar and twenty-five cents a day.

Q.—And those dyeing the raw cotton, how much would they receive?  
 A.—One dollar and fifteen cents a day.

Q.—How long do they work at this before they receive such wages? A.—They get it right away.

Q.—Then it does not require any great length of time to learn it? A.—Not raw cotton dyeing. At the other work they must have a little experience at it before they can do it; they can do it in a short time—a few days.

Q.—Is the dyeing room very warm? A.—No; it is cold enough—sometimes too cold. We do not have any hot air in there.

Q.—Are there any fumes from the dyeing baths? A.—No; not in any way injurious.

By Mr. ARMSTRONG:—

Q.—Could you tell us the duties of a boss dyer who receives the large amount of wages you have stated? A.—He must have great experience in colors and he must be able to take a section of yarn of any color and match it. He must be a man who can do that or he is no use there.

Q.—Do the dyers work the same hours as the other hands in the mill? A.—No.

Q.—How long do they work? A.—They work ten hours a day, but if the work only keeps them nine hours they get through it and go home.

Q.—Then they have what you call a stint? A.—There are so many lots to do, and when they are done they can go home, or else there is so much raw cotton and, as soon as that is done they can go home. Sometimes they go home at 5:30.

Q.—What will be considered a day's work for them? A.—It is not in that way. They have so much to do, and the sooner they get it done the better it is for them.

Q.—Do you feel very much fatigued when the work is done? A.—There are some men there who work black goods who have very hard work indeed. They work a little time and then they get a rest.

Q.—Have you worked in any other country besides Canada? A.—I have worked in Ireland.

Q.—What are the wages in Ireland in your business as compared with the wages paid here? A.—I never worked at this business in Ireland.

Q.—Do you know the rate of wages prevailing as between the two countries?  
 A.—No; I do not know anything about that subject.

Q.—Do hands working around vats and other appliances find it a healthy occupation? A.—I never heard any of them complain. They will not take any but healthy men there, and they all seem to be so. They will be no use unless they are good men;—they must be good men or they would have no use for them.

HAMILTON, 23rd January, 1888.

WILLIAM BIRKETT, Secretary-Treasurer of the Dundas Cotton Mills Company,  
 Hamilton, called and sworn.

By Mr. FREED:—

Q.—How are the wages generally in the Dundas cotton mills as compared with those in the mills in Hamilton? A.—They are much about the same.

Q.—I do not suppose, then, it is necessary to go into particulars of all the classes of employes in the Dundas mills, as we have had those particulars in regard to the Ontario mills? A.—I would not be able to give you that information; the rates are very much about the same, however.

Q.—What is the youngest age at which boys or girls are received at the Dundas mills? A.—We are acting strictly in accordance with the requirements of the

Ontario Act. I think, speaking from memory—I have not looked at the Act for some time—the age is fourteen years.

Q.—How do you satisfy yourself that the children are of the full age required by the Act? A.—If there is any doubt about it we require a certificate from the parents or from a teacher.

Q.—How long have you been connected with the mill? A.—I have been connected with it ever since it was incorporated, five years ago.

Q.—Do you know whether children younger than fourteen years were employed in the mill before the Ontario Act went into operation? A.—I think they were.

Q.—What number of hours do you work in the factory? A.—We work sixty hours a week.

Q.—Is that ten hours per day, or is the time shortened on Saturday? A.—We shorten the hours on Saturday, and we perhaps are a little different from the other mills. We commence at a quarter to seven in the morning.

Q.—Are those hours not too long for children of fourteen years? A.—I do not think, looking at the labor they do, they are too long.

Q.—Is the work very difficult? A.—No; it is not very difficult; it is simple. The children are simply employed in the spinning room, or almost altogether in looking after the bobbins, and that kind of thing. In fact, it would be a great grievance to some parents if we refused to employ their children. Their work is a great assistance to them.

Q.—Do many of those children live with their parents? A.—I think in all cases they do, so far as I know.

Q.—You think the parents are in such a position that the wages of the children are important to them? A.—They make it a matter of importance to them, whether it is or not.

Q.—Did you ever give the subject of technical instruction any thought? A.—I have, but I have not been able to go into it so closely as I would have liked to.

Q.—Would it be an advantage to the mill or an advantage to the children themselves if they had some general technical instruction before entering the mill? A.—Most unquestionably so.

Q.—In what way would it benefit the children? A.—It would enable them at once to enter upon a higher class of work. They would have a practical knowledge, to a certain extent, as to what they were doing.

Q.—In what way would it benefit the company? A.—You would by that means have placed in your employés the power to get out with the same machinery a much larger amount of work.

Q.—Would it be possible, do you think, to impart to children technical instruction while they were going on with their ordinary English education? A.—I think so—undoubtedly.

Q.—What would be the character of the technical instruction which you think would be valuable to those children? A.—Whatever would enter into the process of manufacture in which they were employed, principally carding, spinning and weaving.

Q.—Would it be possible to teach them anything in the way of designing and drawing? A.—Unquestionably.

Q.—That would be of importance in cotton mills? A.—Yes; it is an instruction we want very much.

Q.—If some portion of their English education were neglected in order to obtain this technical instruction, do you think those children, at the age of fourteen years, would be as well equipped for the battle of their life as they are under the present system? A.—I think there can be no doubt about it.

Q.—Do you think the same subjects that are taught in schools to children under fourteen years of age are not valuable to them if they become mechanics? A.—I think so.

Q.—How do the prices of cotton goods compare with the prices, say ten years

ago? A.—Do you mean any particular goods, or the average of such goods as are manufactured in Canada?

Q.—Such goods as are manufactured in Canada? A.—On an average we get 20 per cent. less than we got nine years ago.

Q.—How did the prices nine years ago compare with the prices before that time? A.—They were about the same, and had been about the same for some time. Of course, many branches of the cotton manufacture are comparatively new and were only then beginning to be introduced.

Q.—Were not cottons very cheap about the years 1873 or 1874? A.—I do not know. I have not gone back quite so far as that, but I question very much whether there were many cottons made in Canada at that time. Certainly there were some classes of goods, which I have in mind now, that were not then made here at all, that is in 1872-1873.

Q.—If cotton is cheaper to-day is that not largely due to the fact that raw cotton is cheaper than it was nine years ago? A.—No. In December 1878 and January 1879 the average price of raw cotton, as bought by our company, was then five points of what we bought in December, 1887.

Q.—What do you mean by five points? A.—One-twentieth part of a cent.

Q.—Before you were actively connected with the cotton mill you were in the wholesale dry-goods trade, I believe? A.—I have been connected with that trade as a buyer for twenty-five years—in fact, longer than that.

Q.—Can you tell us whether the profit between the mill and the producer on the one hand is greater or less than the profit between the importer of foreign goods on the other hand? A.—You mean the mill and the consumer on the one hand and the importer and the consumer on the other?

Q.—Yes? A.—That does not need a moment's consideration. The prices are about half on domestics as compared with imported goods. In fact, we could go even further than that, because some lines of both staple and cotton goods are sold, you may say, without any profit whatever. This fact struck me on Saturday evening when walking down James street, where I saw a lot of checks at some retail store marked down to 11 cents. In 1879 or 1880 we could not have bought those goods under 14 or 15 cents, and then the goods would not have been of such good quality.

Q.—What is the character of Canadian cottons, taking all our goods manufactured right through, compared with like goods imported from abroad? A.—They are very much better adapted to the people of the country and they give more satisfaction to the wearer.

Q.—Is there any difference in regard to their being pure cotton? A.—Unquestionably.

Q.—Which is the purer cotton? A.—We have not arrived yet at the use of materials such as are used for domestics in England, or the use of a very large quantity of China clay; at all events, to a very slight extent as yet. Generally speaking, Canadian goods are as pure as it is possible for them to be.

Q.—Is it an advantage, as regards the wearing quality of the goods, not to use those filling materials? A.—Yes; there is great destruction caused by them.

Q.—Owing to the injury to the goods? A.—Yes; and the stuff is soon washed out, and what is there left?

Q.—What is the effect of a manufactory, such as the cotton mills, upon the morals of the community? A.—That is a wide question. So far as I am aware, I think I can safely say, without fear of contradiction, that the morals of the people employed in the factories are quite as good as those of any other class.

Q.—Supposing the same number of mechanics and work people were employed in a town, are they better off or worse off by the introduction of a manufacture like the cotton mill, where there are a large number of young people employed? A.—I do not precisely see the drift of your question.

Q.—Are the people already at work better off or worse off by reason of the

opportunity afforded them to get their children into a cotton mill? A.—I think they are better off.

Q.—Are you able to tell us how wages in cotton mills in Canada compare with wages paid in cotton mills in Great Britain? A.—I looked into that question some time ago, and, speaking from memory, I think wages here are better.

Q.—Do you know whether they are materially better or slightly better? A.—I should say that there is quite a percentage of difference. I am speaking subject to correction, but my strong impression is, from figures I had before me some time ago, that the wages here are from  $7\frac{1}{2}$  to 10 per cent. better.

Q.—Can you tell us how wages in cotton mills in Canada compare with wages in cotton mills in the United States? A.—I think they are very much the same.

Q.—Have you had any labor trouble in the mill? A.—Yes; once.

Q.—How was it settled? A.—By allowing people to go who did not choose to work.

Q.—Was it a demand on their part for higher wages? A.—No; we were paying for certain classes of work higher rates than were paid in other mills.

Q.—And you desired to reduce the rates? A.—Yes; to bring them to the same level as were paid in other mills.

Q.—And not lower? A.—Not lower.

Q.—Did any of your hands go? A.—Only three or four, I think.

Q.—Were any efforts in the direction of arbitration made? A.—No; none at all. Our company would not have cared for anything of the sort, with the state of things then existing.

Q.—Are there any of your people organized into labor unions? A.—Not that I am aware of. I believe a considerable number of them belong to the Knights of Labor; I have been told so, but whether it is a fact or not I do not know.

Q.—You have not come into direct relations with it as such? A.—No.

Q.—Before those mills were established, where were the young people employed and what did the children do? A.—I am not aware that they did anything. I think they were running about the town.

Q.—Were they not able to get better education than they obtain now? A.—No.

Q.—How were the parents of those children able to live before their children had an opportunity to earn anything? A.—I do not think they were as well off as they are to-day.

Q.—Do you think they are better off by the wages their children earn? A.—I think so. That is proved by the anxiety of the people to get the children employed.

Q.—Where do the children live mostly—where do they come from? A.—They live with their parents, in Dundas.

Q.—Have you an ample supply of labor? A.—All we want; in fact, we have applications from a great many more than we can take on.

Q.—But when they grow up and have obtained some skill in connection with factory work, do they continue, as a rule, in your mill? A.—Some of the people have been employed there ten or fifteen years. They advance from one department to another, just as they are qualified.

Q.—I am not going to ask you anything concerning the private affairs of the mill, but generally, are cotton mills making much returns now? A.—I should say not; the competition is too keen altogether to permit of it.

By Mr. GIBSON :—

Q.—Has not the employment of children at such an early age a tendency to deteriorate the individual physically? A.—No; if you were to see some of the young people who come out of the Dundas mills you would not think so.

Q.—Do you think early employment is a benefit? A.—Take, for instance, the winter time, when they are working in a well-warmed place, they are better off than they would be in their own houses.

Q.—Do you not think your mill is a little too warm sometimes? A.—No; it is kept at a proper temperature, so as to enable the hands to work with ease and comfort.

By Mr. FREED :—

Q.—Is there not a tendency for the hands to catch cold on leaving a warm mill?  
A.—They wrap up well. You see the girls leaving there with their ulster cloaks and their wraps drawn about them.

Q.—Are many hands laid up with illness of any kind and is there a larger percentage of sickness among cotton mill operatives than there is amongst other classes? A.—I do not think it.

Q.—Have you kept any percentage of the hands idle from sickness? A.—No; we have not kept any record of that kind.

Q.—Is it so large as to attract attention? A.—No.

JOHN FOTHERGILL, Farmer, Burlington, called and sworn.

By Mr. FREED :—

Q.—How long have you been farming in the neighborhood of Burlington? A.—I was born in that neighborhood fifty years ago, and I have lived there ever since.

Q.—Are the farmers able to live at the present prices they receive for their products? A.—It is pretty hard work, owing to the low price we have to accept for our products, and the increased cost of producing those products leaves us very little profit.

Q.—Do you think the farmers among your acquaintance, as a rule, are getting into debt, or are they holding their own? A.—They are, I think, going the wrong way; I think they are getting into debt, the majority of them—that is where they have to employ labor. Those who are able to keep clear of debt are those who have a family of their own and have not to hire labor.

Q.—What wages do you pay a farm laborer? A.—On an average, about \$150 a year.

Q.—With board? A.—Yes.

Q.—Are there married men employed? A.—Yes; a great many are.

Q.—What would they receive? A.—There is very little difference. Of course, there is a little item in the shape of house rent, but the majority of those who are married are those who have been with the same employer probably two or three years, who are looked upon as more valuable than strangers, and these get very nearly as much wages as single men, with the house thrown in. I have done that way with married men myself, and my neighbors have done it also. There is not more than \$10 or \$15 difference.

Q.—If a married farm laborer is working for you on a farm, what does he get in addition to his house rent? A.—In the majority of cases they get firewood; that is thrown in. They have to take their own time for cutting it, but they get the wood for cutting.

Q.—Do they get any garden patch? A.—Yes; a quarter of an acre, on which a man can grow potatoes for the need of himself and his family, together with other vegetables. If a man has not the privilege of a garden in addition to his house he will receive the privilege of planting a couple of bags of potatoes with his employer's potatoes in the summer time.

Q.—Are the men largely employed the year round? A.—Yes; in the majority of cases. There is a scarcity of help of that description. The trouble with too many of them in Canada is that they want to work a few months during the summer at as high wages as they can obtain and do nothing in the winter—there is too much of that altogether in this country.

Q.—Why do they not want to remain on the farm all the year? A.—They like to go to the city and do nothing in the winter.

Q.—Could not farmers employ them during the winter? A.—Yes; a great many will not engage in that way. They will obtain \$17 or \$18 a month for seven

or eight months—that was about the amount paid last year. Farmers are compelled to pay this high price in consequence of the scarcity of labor during the summer season.

Q.—Did you ever make any calculation as to the cost of keeping your farm machinery up to the standard? A.—No; of course, we have always taken good care of our machinery. I think the average lifetime of a machine on my farm is about seven years; that is about as long as it will pay to have them repaired. We have run machinery almost that length of time with very little repairs.

Q.—Will ploughs and harrows last longer? A.—Yes; but we do not consider them machinery.

Q.—With the improved machinery, can you raise grain for less money than you could formerly, considering the cost of the machinery? A.—Yes; owing to the present rate of wages. Wages were not so high when we had not those machines as they have been of late years, and the price of grain was higher.

By Mr. GIBSON :—

Q.—You raised a great deal less grain in those days, did you not? A.—Yes; there is more raised on the whole.

Q.—Is it a great advantage to the farmer to have a city near in which he can sell his dairy products, and so on? A.—Yes; I consider that to be a great advantage.

Q.—Is there more profit in that sort of farming than in grain farming? A.—Yes; there is.

Q.—Have you done dairy farming at all? A.—Yes.

Q.—How does that pay? A.—We have been dairy farming, but not on the same scale as I am into it now. We always keep a certain number of cows and come to Hamilton market every week with butter. This last year I went into keeping cows to sell their milk. I have had, unfortunately, a bad season to contend with, so far.

Q.—That was owing to what? A.—It was owing to the drought.

Q.—It destroyed the grass? A.—Yes.

Q.—In an ordinary season would a farmer be better off selling his milk to a cheese factory or a butter factory than he would by working it up himself? A.—I think it would be more to his profit to sell it to some factory.

Q.—Have you considered whether there is more profit in selling your milk to a cheese factory or a butter factory? A.—No; I have not considered that.

Q.—If you were to sell your milk to a butter factory you would get the skim milk back? A.—Yes.

Q.—Could you not put that to good use on the farm? A.—I do not know, I get the benefit of the skim milk from the party who gets my milk. I can get that milk after the butter is extracted for 2½ cents a gallon. I do not know whether it would be better if it was taken to a factory.

Q.—Does not the party to whom you sell your milk run the butter factory? A.—He is making cheese as well.

Q.—If he is making cheese you cannot get the skimmed milk back? A.—Yes. This year we have as nice a lot of pigs as I ever had, and I never gave them any milk, except the refuse of the house, which does not amount to much. They take a lot more of other stuff, like shorts, and I do not think a great deal of feeding them on skimmed milk. I do not think much of skimmed milk, except for rearing calves. It is all right then.

Q.—Do you raise much fruit in your section? A.—Yes.

Q.—Is there much money in fruit? A.—I could not say, I do not do much in that myself.

THOMAS BLANCHARD, Farmer, Appleby, County of Halton, called and sworn.

By Mr. FREED :—

Q.—You have heard the testimony given by Mr. Fothergill: do you corroborate that generally? A.—Yes; I do.

Q.—Are you able to tell us whether a man can rent a farm and make money

our of it and buy a farm of his own? A.—Quite a number have done that since I have known Canada.

Q.—That has been done within your knowledge? A.—Yes; and many a one has done it.

Q.—In order to do that they must be pretty economical, I suppose? A.—Yes.

Q.—What is the state of comfort in which farmers live now compared with the condition in which they lived twenty or twenty-five years ago? A.—As a general thing farmers get better off in the world; they generally get more comforts, such as improved buildings, for instance, and they live in better houses. I recollect when I first came to Canada there were log houses; then the farmers got into frame houses, and now they have brick houses, as a rule.

Q.—Do they wear as good clothes as they formerly did? A.—Yes; when I first came to Canada everything was home-spun and home-made.

Q.—How are they fed now as compared with formerly? A.—I do not think there is much difference.

Q.—Are they able to buy as many luxuries now? A.—I suppose so. There are quite a number of luxuries obtained now such as we had to do without when I first came to Canada, and of course now-a-days people have all the luxuries that people can have in any country. I lived in the county of Peel many years ago, and hundreds came there from the old country, and many of them have farms now. There was nothing to prevent a man getting a farm if he was steady and industrious.

By Mr. GIBSON :—

Q.—Did you come out from England as a farmer? A.—No; I came out in 1814, and when I got to Toronto and had paid my bill I had £5 in my pocket, and that was all the money I had in the world. To-day I have between four and five hundred acres of land of my own.

Q.—Have you been remarkably successful? A.—Yes. I do not know of any man who came out from my part of the country in Great Britain who has not been successful if he was an industrious and steady man.

Q.—What kind of farming do you do? A.—Mixed farming. I never went extensively into any one kind of farming. I never believed in it, and I do not believe in it to-day.

Q.—Not even on a large scale? A.—I do not think so. I like to see good stock and nice crops, and it is good stock that makes good crops. I like a variety, so that if one misses another will hit.

Q.—Do you do anything in the way of stock-raising for the market? A.—Yes; and for the improvement of stock. I like to have a little better stock than any of the other farmers around; I generally raise stock for breeding purposes, and have pursued that through life.

Q.—You found it better to feed grain on the farm than to sell it? A.—Yes; I never have been in the habit of selling a bushel of grain, but have generally consumed it on the farm. I thus improve the farm and have my eye on it, and I like to have good cows, sheep and horses. The only grievous drawback we have to contend with is the lack of farm laborers, and it is a great drawback and misfortune. When I came here thirty or forty years ago I was only a young man and I had to hire with my employer; but we never knew such a thing as having bad men; they were all good hands, as good as you would find in the country. Unfortunately, I am sorry to say, we have poor men to-day, and it is impossible to hire a good man to-day; there are exceptions, of course. Some years ago I never had a bad man in my employ, and they were all men who knew well how to work on a farm and who could plow. I am sorry to say the men we now get are, as a rule, poor men.

Q.—Have you ever thought what was the reason for that? A.—I understand

that wages in England have risen to such an extent that the farm laborers can do as well there as they can in Canada.

By Mr. FREED :—

Q.—That is an advantage to the men ? A.—Yes.

R. B. OSBORNE, Secretary of the Osborne-Killey Manufacturing Company, Hamilton, called and sworn.

By Mr. FREED :—

Q.—What does your firm manufacture, principally ? A.—Engines and boilers, principally.

Q.—Do you employ a large number of hands ? A.—We employ on an average in one shop about fifty-five hands and in our other shops about fifteen hands.

Q.—Are they men or boys, or both ? A.—They are both.

Q.—Do you employ many boys ? A.—Not many boys ; we employ in the machine shop, on tools, some apprentices.

Q.—Are those apprentices indentured to your firm ? A.—We have gone out of that lately ; we do not do it any more.

Q.—Why do you not indenture them now ? A.—Because it was not satisfactory. Boys, after they had served a year or two, thought they were full-fledged machinists, and they could do better elsewhere, and they wanted to go away. They wanted to break their indentures and rather than have any trouble we would always let them go. Now we retain a certain percentage of their wages and they can go at any time.

Q.—Are the men skilled or unskilled mechanics ? A.—We have very few unskilled ; we have a few laborers, for instance, around the foundry.

Q.—What wages do you pay a first-class mechanic ? A.—We pay a first-class mechanic from \$2 to \$2.50 a day.

Q.—What wages do you pay an unskilled laborer ? A.—We pay an unskilled laborer from \$1.15 to \$1.50 a day.

Q.—Do you get as many men as you require ? A.—Yes ; we get quite as many.

Q.—You have a good supply of men ? A.—Yes.

Q.—How frequently do you pay their wages ? A.—We pay their wages every two weeks.

Q.—On what day do you pay them ? A.—On Friday night, for they prefer Friday night.

Q.—Would not the men rather be paid weekly ? A.—We have never been asked to pay them weekly.

Q.—Would it be a great deal of trouble to make weekly payments ? A.—Yes ; it would be about twice as much trouble as at present.

Q.—The work of making up the pay-rolls for seventy or eighty men would not be very great ? A.—It makes twice the work, whatever that labor may be.

Q.—Would not the advantage to the men more than compensate for the trouble in making up the pay-roll ? A.—I think it would not.

Q.—Do you know whether any of your men save money ? A.—They do—that is to say, our regular hands do.

Q.—What evidence have you that they are saving money ? A.—I know some of them who have bought property here.

Q.—Do you think many of them own the houses in which they live ? A.—Yes ; a great many of them do. I know some of our laborers own the houses in which they live.

Q.—Do you mean that some of your day laborers own the houses in which they live ? A.—They are what we call steady laborers ; they do laborers' work.

Q.—Where do you find the market for your machinery ? A.—All over Canada.

Q.—How far west have you sold your goods ? A.—We sell our scales clear west

to British Columbia. We have sold engines in various parts of Manitoba, and east as far as New Brunswick. We shipped a pair of engines to Chatham, N.B., the other day.

By Mr. CLARKE:—

Q.—For the pulp mill? A.—Yes.

By Mr. FREED:—

Q.—What size of engine can you build? A.—Any size of engine required.

Q.—What is the largest you have built? A.—About 700 horse-power. The wages in our machine shop will average about \$9.70 a week, taking the foremen and apprentices all through the shops, boys and all.

By Mr. GIBSON:—

Q.—Do you say that is the average wages of the hands? A.—Yes. I understand that in machine shops and car shops in New York the average is about \$10.

By Mr. McLEAN:—

Q.—What wages do you pay in the scale factory? A.—We do a good deal of piece-work there.

Q.—About what will those men earn? Do they do as well as the machine department? A.—Yes; they do as well.

Q.—What hours do they work? A.—They work nine and a-half hours per day at present; ten hours in summer.

Q.—Are the wages correspondingly reduced in winter? A.—Yes; we pay at the rate of so much per hour, except in the foundry, where they shorten the noon hour in winter so as to get the full time in.

Q.—Is your business increasing, decreasing or stationary? A.—Our business is increasing steadily every year.

Q.—What class of iron do you use? A.—We use Canadian iron and Scotch iron, for pig-iron.

By Mr. CLARKE:—

Q.—That is Londonderry iron? A.—Yes; we find it very good indeed, for our work.

By Mr. FREED:—

Q.—Do you use much special iron for boilers? A.—We use steel for boilers.

Q.—You do not make any iron boilers? A.—No; there are none made now.

Q.—Where do you get the steel? A.—It is imported from Scotland.

Q.—Your bar-iron: where does that come from? A.—It is Canadian.

Q.—Do you consider that equal to English or Scotch iron? A.—Yes; superior. We get bar-iron made in this city as good as any we can possibly obtain.

Q.—Is it made from scrap? A.—Yes.

Q.—Do you get any Londonderry bar-iron? A.—No; I do not use it.

By Mr. WALSH:—

Q.—Is that Londonderry, Nova Scotia? A.—Yes.

By Mr. FREED:—

Q.—Where do you get your coal? A.—We import it through dealers.

Q.—From what country? A.—From the United States. We asked for prices of Canadian coal, but the figures on freight prevented our using it. The prices of the coal were all right.

By Mr. CLARKE:—

Q.—How much more does it cost to land Nova Scotia coal here than it does American? A.—On the quality of coal on which we got the quotation the cost was about \$2 a ton more.

Q.—Then it would cost \$5 or \$6 a ton laid down here, I presume? A.—It would be according to the quality of the coal. We wanted steam coal.

By Mr. FREED:—

Q.—For what can you get the same quality of American coal laid down here?

A.—The cost varies from \$2.50 to \$2.70 a ton.

By Mr. WALSH:—

Q.—Where did you get the quotations in regard to Nova Scotia coal—from what mines? A.—I do not distinctly remember the name of the mines, but they are not far from the iron mines at Londonderry.

Q.—That would be at Spring Hill. How long is it since you got those quotations?

A.—It is about six months.

Q.—Do you recollect the figures? A.—No; not the exact figure. I can supply you with the exact quotations.

By Mr. FREED:—

Q.—Does your coal come by rail or water? A.—By rail.

Q.—Does any coal come to Hamilton from Cleveland through the Canal? A.—In boat loads?

Q.—Yes. A.—I do not know. It principally arrives here, so far as I know, in schooner loads.

Q.—That would be all anthracite coal, would it not? A.—I could not say. The kind of coal I mentioned was anthracite screenings; we use it for steam purposes.

By Mr. CLARKE:—

Q.—You mentioned the figure as \$2.75 a ton? A.—Yes.

Q.—How about bituminous coal? A.—That costs us about \$4 delivered here.

J. H. KILLEY, of the Osborne-Killey Manufacturing Company, Hamilton, called and sworn.

By Mr. FREED —

Q.—Have you heard the testimony given by Mr. Osborne, your partner? A.—Yes.

Q.—Do you corroborate it? A.—I do. Two years ago I made a set of drawings for the pumping engine of this city. I worked every night for three or four months to finish the work. I prepared the drawings and the newspapers got to know I had done so.

Mr. FREED.—I do not know that we should go into this matter.

WITNESS.—I am not going into politics; I am only going into a matter entirely connected with myself.

Mr. FREED. I do not think we can go into a private matter.

The CHAIRMAN (Mr. CLARKE).—I do not think we can take evidence of that kind.

WITNESS.—It is only in regard to a matter of interest to the workmen of this city and to myself. In fact, the whole matter has been enough to ruin us; it has ruined my health already.

The CHAIRMAN.—We will be glad to hear any evidence that may be offered bearing on subjects within the scope of this Commission, but I do not see that we can take any evidence of that kind.

Mr. WALSH.—The gentleman had better ventilate the matter through the press.

WITNESS.—I have done that already, I have done everything I could with the press; but they do not leave me alone; they go for me at every opportunity.

JOHN MCKENNA, Broom-maker, Hamilton, called and sworn.

By Mr. FREED :—

Q.—Are many persons employed at broom-making? A.—There may be about fifty in Hamilton, boys included.

Q.—What proportion of those are men, and what are boys? A.—About a little more than half are journeymen.

Q.—Are any women employed at the business? A.—No.

Q.—Just men and boys? A.—Yes; just men and boys.

Q.—Does it require a great deal of skill to work at the trade? A.—No.

Q.—How long does a boy work at it before he is considered a good broom-maker? A.—Some of them are never skilled broom-makers.

Q.—I mean an ordinary broom-maker? A.—It requires certain adaptability.

Q.—About how long do they serve at the trade before they become ordinarily proficient? A.—They serve two years.

Q.—What wages do the skilled broom-makers earn? A.—From \$10 to \$12 a week.

Q.—Do they get that amount here in Hamilton? A.—When they are working full time they can get that amount.

Q.—Do they not make full time? A.—They have not made full time for some time past.

Q.—Are more people employed now than formerly at the business? A.—There is a much smaller number.

Q.—What is the reason for that? A.—The state of the trade, but largely it is due to convict and prison labor employed at the trade.

Q.—Are many brooms made in prison? A.—The product is not less than 60 dozen a day.

Q.—In what prison are they made? A.—They are made in the Central Prison, Toronto.

Q.—What class of people in the prison make brooms? A.—Any one whom the authorities think smart enough; it depends a great deal on the state of trade as to who are employed. If the business is pretty brisk they will put more hands on the broom trade; if it is not brisk they will employ them on something else.

Q.—Do those prisoners work for the Government or for a contractor? A.—The Government, I think, farms out the labor to Nelson & Sons. They contract for so much a dozen.

By Mr. HELBRONNER :—

Q.—Do you refer to the Nelsons of Montreal? A.—Yes.

By Mr. FREED :—

Q.—Do you know what price the employers pay the Government for the labor? A.—I understand they pay 25 cents a dozen.

Q.—What will be paid in Hamilton to a free broom-maker a dozen for brooms? This 25 cents a dozen includes all the labor required? A.—It takes another 25 cents a dozen to prepare the material before the men get it.

Q.—Is that the case in Hamilton? A.—Yes.

Q.—Then what would the broom-makers get? A.—A journeyman broom-maker would get from 45 cents to 72 cents a dozen; the amount depends on the quality.

Q.—Do you know what is paid to the apprentices by the day? A.—The average is in the neighborhood of 32 cents a day.

Q.—How did you get that knowledge? A.—The last return that I could get was in 1884.

Q.—Those returns show about 32 cents a day, you say? A.—Yes; in that neighborhood.

By Mr. McLEAN :—

Q.—Does it state in the contract what shall be paid to the Government for

the labor of those men? A.—The contract states that. My information I got from a broom-maker, who went down to see about obtaining a situation as guard at the prison. That was what he informed me at the time. The effect of Messrs. Nelson & Sons getting that contract has been to close their factory at Montreal; they had a very large shop there. They also had a shop in Toronto, but they closed that up.

By Mr. FREED:—

Q.—How long have Messrs. Nelson had that contract? A.—I think the first contract was for five years; the second for four years. I understand it has yet to run a year from next May.

By Mr. McLEAN:—

Q.—Do the Government supply the broom-makers with all the necessary accommodation, a building and rent free? A.—Yes; I believe so.

Q.—Is there any machinery in connection with the industry and trade there? A.—I think Nelson & Sons find the machinery. They have got to keep the tools in good order, and every thing with which they are supplied.

Q.—Do the Government include all that in 32 cents a day? A.—I think the Government gave what they had. They undertook to run it themselves, if I mistake not, at first, and they had this plant on hand; you might say that they are fixtures belonging to the place. The tools, knives, and every thing with which the men work, are furnished by the Nelsons, and they have to keep them good.

Q.—If that broom contract was not in force how many more men would be employed than what are employed now? A.—Of course, the work would be distributed over the country, more or less. We would probably employ not quite as many as the prison employs, but about two-thirds of that number. Of course, men working under compulsion do not work so hard as men working piece-work—they do not make as many brooms. They have a certain number to make, and they will not make any more.

Q.—Would it have a tendency to raise the wages of broom-makers if the prison contract was done away with? A.—Yes; it would give us steady work, for one thing. Now, if there is a good market the prison will flood it right away and throw all the rest of the broom-makers of the country out of work, for the ordinary employer cannot compete with the contractors. There is a difference of 60 cents a dozen in favor of the contractors over what the other employers pay, without considering the rent of the place and the other extras.

Q.—I understand from what you say that the contractors have the building without rent and have the engines and machinery all supplied? A.—So far as I know they have the advantages of which I have spoken, which an ordinary man in business has to supply himself.

By Mr. WALSH:—

Q.—Suppose this work was not done by prison labor and men were allowed to employ the full amount of hands here, what would be the difference per dozen brooms as between the cost to the employer and that to the contractor—in other words, what would Messrs. Nelson get by their contract? A.—They have an average of 60 cents a dozen.

Q.—Is that the price at which they sell them? A.—That is what they cost the contractors—or rather that much less than any one else.

Q.—Do you know at what the contractors profess to supply brooms by that labor? A.—They can undersell any makers here at any price they like.

By Mr. McLEAN:—

Q.—How much cheaper can they be bought from the contractors? A.—From 25 cents to 50 cents less.

Q.—That would make 2 cents or 3 cents per broom? A.—Yes.

Q.—Does the retailer get any of that benefit? A.—Certainly.

Q.—Is it a boon for the retail dealers? A.—I do not think so; I do not think, at all events, the consumer gets the advantage.

By Mr. WALSH:—

Q.—You think the consumer does not get the advantage? A.—No.

By Mr. FREED:—

Q.—Suppose those brooms are marked “Central Prison” or “Prison-made” what would be the effect? A.—They would not sell so many. If people knew they were made in the Central Prison they would not buy them.

By the CHAIRMAN:—

Q.—You think the people would not buy them if they were so stamped? A.—They would not buy them; they would hardly take them home for nothing. They know the effect it would have on them.

Q.—Is there any distinguishing mark now by which you can tell brooms made by prison labor? A.—They use letters, I think. Only those connected with the trade get to know them; the public at large do not know them. Some large dealers will furnish their own labels and have them put on the brooms.

GEORGE SWANTON, Broom-maker, Hamilton, called and sworn.

By Mr. FREED:—

Q.—You have heard the testimony given by Mr. McKenna: do you corroborate it? A.—Yes; I think it would be a very good thing if the Central Prison, or Messrs. Nelson, were compelled to put a special mark on their brooms.

WELLAND HOUSE, St. CATHARINES, 23rd January, 1888.

The Commission met at 9:30 a.m., present: the Chairman, Mr. Heakes and Mr. Kerwin.

WILLIAM McILWAIN, called and sworn.

By the CHAIRMAN:—

Q.—You are Inspector of Hulls? A.—Yes; I inspect for the Canadian Lloyds. I am employed by the Government to examine masters and mates of any vessels.

Q.—Who examines hulls of steam vessels? Aren't you employed—appointed—by the Government to examine hulls? A.—No.

Q.—Who examines them? A.—Captains Harbottle and Dick, of Toronto.

By Mr. HEAKES:—

Q.—What do you consider the proper test in examining a vessel's hull? A.—Boring, sounding, and if listing, taking out a plank at each end, outside and in.

Q.—Is it always done? A.—No; very seldom done here.

Q.—Is it possible to tell the condition of a vessel without opening her up in some place? A.—Well, yes; where you bore you can tell. In inspecting we bore between wind and water so many frames.

By the CHAIRMAN:—

Q.—Are there many sailing vessels which you refuse to class? A.—Yes; there are several Canadian vessels which have no class.

Q.—There are several vessels now sailing on Canadian waters you would not insure? A.—We don't recommend them any class, and therefore the companies will not take any risk on them.

By Mr. HEAKES:—

Q.—When you inspect sailing vessels do you examine the standing and running gear, canvas and ground tackle, and everything about the vessel? A.—Yes.

Q.—And everything has to be in proper condition before the insurance companies will take a risk? A.—Well, there are different ways of grading them—A 1 with a star, is highest; A 1 next; A 2 and A 2½ are next.

The CHAIRMAN.—This is American Lloyd's.

By Mr. HEAKES:—

Q.—What is the lowest class you insure—B 1½? A.—She will only be insured against total loss.

Q.—When a vessel goes down to B 1½, how long will she be fit for service? A.—Not very long. She is only fit to carry something which will not sink.

Q.—What I want to get at is how long will a vessel be classed as fit for insurance after going down to B 1½? A.—She will go that season for which she is recommended. We cannot recommend longer, because even a new vessel might fall through an accident. We inspect every year.

Q.—Can you tell us if there are any vessels sailing on inland lakes which have been refused insurance? A.—Yes; there are.

Q.—Would you consider a vessel not fit to be classed B 1½ safe? A.—No; not seaworthy.

Q.—Can you fix in your mind any vessels during past seasons which have been lost which were not up to the standard of B 1½? A.—Yes; there are two I could mention which were lost which were below B 1½.

Q.—Did you know those vessels? A.—Yes.

Q.—You know of them? A.—Yes; I inspected one of them last year.

Q.—And in your opinion they were not sea-worthy? A.—Yes.

Q.—Were there any lives lost? A.—On the one I inspected there was not; on the other there was.

Q.—Did you ever know anything of a vessel that lay sunk in the canal for two or three years and was raised last year? A.—Yes; there was one lay on the bottom. She was seated on mud the last three or four years and went away from here last fall.

Q.—What would be her general condition? A.—Unseaworthy.

Q.—Is she back here? A.—No; she is in Detroit. She was sold to some parties in Detroit. They patched her up with canvas and tar and towed her up the lake.

Q.—You don't know what became of her? A.—She is some place on the American side.

By the CHAIRMAN:—

Q.—Do you know vessels you have examined which had not proper gearing that went to sea, although you would not insure them? A.—No; there are not many of them. The general outfit of the vessel, her appearance, bearings and rigging, are all taken into consideration to make her class.

Q.—By you—and are there vessels which sail which are not properly fitted in that way? A.—There are.

By Mr. HEAKES:—

Q.—You have been an old captain yourself? A.—I sailed thirty-four years—twelve years on the ocean and the balance on the lakes.

Q.—Do you consider that the inland vessels are sufficiently manned? A.—They are not.

Q.—Is there difficulty in getting skilled sailors to go on vessels here? A.—Well, sometimes there is; sometimes there is not. Sailors are difficult material to handle, sometimes.

Q.—Taking an old canal-sized single vessel, what would you consider would be a proper crew for her? A.—Ten men all told—the captain and two mates, the cook and six of a crew before the mast—five men and a boy.

Q.—What about those barges? A.—I claim they should have as good men as if they were sailing.

Q.—As many men? A.—Yes; just as many.

Q.—How is that? A.—All they take for is the handling of the gaff, topsails and jibs. There is no climbing to be done. They do their sail-raising on deck.

Q.—Does it frequently happen when a vessel is in tow she breaks away? A.—Yes.

Q.—When she has not sufficient crew on board to handle her, what chance has she? A.—Not much.

Q.—Do you think there is a sufficient number of unseaworthy vessels afloat to warrant the Government in prohibiting the use of this class of vessels? A.—Yes. There are a great many of the vessels which are afloat now made unseaworthy by over-loading. They are seaworthy enough to carry what they were built for, or to carry down to 10 feet of water, but when they load to 12 and 14 feet they drown them.

Q.—Taking a vessel of 375 tons, that would be about the old canal size? A.—Yes. Some go 400 and 410.

Q.—Say 400 tons. How much space over and above her cargo should that vessel have in her hold? A.—I like to have them full. Shift the bulk-heads and shorten the length of the hold and put in a safe cargo from end to end and load as high as the rail. If it is grain, the whole carrying space wants to be filled to keep it from shifting. If I understand the drift of the question, it is how much more should a vessel carry than her registered tonnage.

Q.—Yes? A.—About one-third more. When they go to carry double it is too much.

Q.—Some people claim a vessel of that kind should have space for 100 tons of water and still float? A.—Well, I would not like to be in her with 100 tons of water.

By Mr. KERWIN:—

Q.—Do they load as deep in October and November as other months? A.—Just the same. Owners say, when freights are low, "Put on all you can; freights are low." When they are high, "Put as much on as possible; freights are high."

Q.—Don't they have a larger crew in those months? A.—No; just the same.

Q.—To what do you attribute the loss of the vessels you spoke of? A.—Over-loading.

By Mr. HEAKES:—

Q.—What would you suggest as a remedy for over-loading, or to guard against it? A.—You have heard of the Plimsoll load line. They used to drown them on salt water until the Government took hold of it and passed an Act, and the same principle should apply to the lakes, especially from the last of September until the close of navigation.

Q.—How does this system regulate the loading? A.—According to the depth of hold, breadth of beam and length of the vessel, and there are so many inches to the foot of the depth.

Q.—How many inches should there be to a foot on these barges? A.—They should have 3 inches to the foot of the depth of hold.

Q.—What sail do you consider it is necessary for a barge to carry? A.—If she has two masts she should have mainsail, foresail, staysail and one jib. If she has a bowsprit outside she can only carry three.

By Mr. KERWIN:—

Q.—Mates and captains have all certificates? A.—They are supposed to have. The law claims they shall, but they have not. The law came in force the 26th May, 1883.

By Mr. HEAKES:—

Q.—Who is the proper officer to enforce the law? A.—Collectors of Customs have the order to do so, but many of them don't do it. I know cases in which uncertificated officers have borrowed certificates of regular qualified mates, for the purpose of getting a clearance at the Customs office.

Q.—Is there anything we have not asked you which would be of importance to us? A.—I think, in the first place, that this masters' and mates' law should be strictly enforced—that all masters and mates that the law requires to have certificates on a certain class of vessels should have them.

By the CHAIRMAN:—

Q.—You think that every vessel sailing should have certificated officers?  
A.—From 100 tons upwards they should carry certified officers.

Q.—Every vessel having a certificated mate and captain should be examined by the hull inspector? A.—Yes; all vessels, large and small, should be examined by the Government inspector. I claim the Government should do all inspection of vessels, sail and steam. It should be done when the vessels are running, when they could see every thing. The Welland Canal is a good place to examine them, as every thing can be seen. They should carry so many men to each 100 tons register. On salt water it is three men and a boy to the 100 tons, but here they need not force them to carry so many, but they should have enough to handle the vessel.

By Mr. HEAKES:—

Q.—Who would be the proper person to examine the vessels to see if they carry competent crews and officers having certificates? A.—I say a man outside of the Custom officers.

Q.—A port warden, or some such officer? A.—Well, they might call him what they liked. It should be a practical and independent man; it should be a practical sailor to inspect vessels and say whether they are over-loaded. We will soon be able to tell whether sailors or cowboys are aboard of her.

Q.—Do the average vessels carry a yawl boat sufficiently large for the crew in case of shipwreck? A.—Yes; the boats are big enough. It is not the size; it is the state they are in; it is the condition of the boat.

Q.—In the inspection for insurance is the yawl included? A.—Yes; every thing.

Q.—It has to be in good condition? A.—It is supposed to be. With regard to the forecastles of many of the barges, they are not fit for human beings to live in. Some of them are so bad that temporary forecastles or “dog-houses,” as sailors call them, have to be put up on the deck for sleeping in; it is impossible for a man to live below.

The Commission resumed at 2 p.m. in the Welland Canal Office.

ROBERT DONNELLY, called and sworn.

By Mr. HEAKES:—

Q.—What is your occupation? A.—A ship carpenter.

Q.—Employed on the Welland Canal? A.—Yes.

Q.—Are there many ship carpenters in St. Catharines? A.—Quite a few.

Q.—What wages do they earn here? A.—Two dollars a day.

Q.—Do they have constant employment? A.—Not all the time.

Q.—What class of work are you principally engaged on here? A.—Mostly all repairing work now.

Q.—Not many new vessels? A.—No; we are not building anything new for three years this winter.

Q.—Are there many vessels repaired during the season here? A.—Very few; we do a great deal more in Port Dalhousie in that line.

Q.—Have you a general knowledge of the condition of the vessels passing through the canal? A.—Well, no; not altogether. Some I know pretty well; others I do not.

Q.—Do you know if there are many vessels passing through the canal you would consider unseaworthy? A.—There have been some; but a good many have been done away with this fall.

Q.—How? A.—Lost in the winds and storms last fall.

Q.—Can you tell us some, without mentioning names, of vessels, that you know to have been lost which were not in a seaworthy condition? Do you know of any such?  
A.—One especially I know of; that is the——

Q.—Have you seen any vessels leaving the canal during the past season which

were not fit for trading purposes? A.—Well, yes; there are some I consider were not fit—one of captain Norris. That is about all around this part, and he did not bother much about the lower end of the canal.

Q.—Is there any system of inspection of vessels? A.—Captain McIlwain is our inspector here for insurance companies.

Q.—When a vessel is not classed I suppose the insurance companies will not cover her? A.—No; they will not have anything to do with her, as far as I know. She is supposed to be classed before she is entered on the books.

Q.—Do you know of vessels that have not been classed which are trading on the lakes? A.—No; I do not.

Q.—When are these vessels generally inspected? A.—When laid up in winter, in the month of January, or later on in the spring.

Q.—What is the course generally pursued in inspecting vessels? A.—They are supposed to bore them, try them and see if they are sound and good.

Q.—Do they ever open them up? A.—They don't, that I am aware of. I never saw them do it.

Q.—Do you think the present system of inspection is a satisfactory test? A.—I do not.

Q.—Is the standing and running gear of a vessel inspected? A.—Certainly it ought to be.

Q.—Is it done? A.—Very seldom, to my knowledge.

Q.—Do you know if the canvas is always inspected? A.—No, sir; I don't think so.

Q.—Among the craft you have been in the habit of working upon, how many do you think are unfit for service at present afloat? A.—None that I have worked upon. They are all fit for service that I have worked upon the last year or two, except the one I mentioned.

JOHN T. CAREY, Secretary of the Seamen's Assembly of Canada, called and sworn.

By Mr. HEAKES :—

Q.—You are chief of the Executive in Canada? A.—Yes.

Q.—Are there many sailors having their headquarters in St. Catharines and Port Dalhousie? A.—Quite a few. The Welland Canal is, at the present time, the headquarters for Canada.

Q.—During the season of navigation do all sailors report to you? A.—All sailors, members of our organization.

Q.—Are there many sailors outside of your organization passing through the canal? A.—Not competent men. There are a great many outside, but we don't consider them capable to go aboard a vessel and do the work required of seamen.

Q.—What is the standard for membership in your assembly? A.—A man must be able to reef, steer, splice, wind and unwind canvas, and shape a boom or spar if necessary.

Q.—Are there any benefits in the society? A.—A sick benefit of \$4 a week during a man's illness, and a death benefit of \$50 to bury him, or to give his friends, as the case may be.

Q.—Has the organization been of benefit to the sailors? A.—Yes.

Q.—In what way? A.—In raising the standard of morality among them, in bettering their condition financially, and, in fact, giving them a better acquaintance with each other and their wants.

Q.—Speaking of the wants of sailors, would you tell us what in particular sailors are desirous of getting by way of improvement to their present condition? A.—In the first place they want a better inspection of vessels, so that they will be more seaworthy, and the danger of their losing their lives less. Vessels at the present time, as a rule, are over-loaded and under-manned.

Q.—What would you consider a full complement for a vessel, say 400 tons, old canal-size? A.—Five men before the mast, a captain, one or two mates and a cook. In times gone by, ten or twelve years ago, vessels which are now carrying three men before the mast, a boy and one mate, at that time carried five or six men and two mates, and also a boy.

By the CHAIRMAN:—

Q.—Is there always a man cook? A.—No; we don't include the cook as one of the crew, and it may be a woman.

By Mr. HEAKES:—

Q.—Do sailors prefer a man to a woman cook? A.—Yes.

Q.—Are there many vessels lost, to your knowledge, through not carrying a full crew? A.—Well, I have no certain knowledge, that is, I could not prove it, but I feel satisfied, from reports of crews on board some of the vessels, that there are not men enough on board capable of handling a vessel in time of need.

Q.—In your opinion, had these vessels had a full complement of men would it have been possible to save them? A.—My opinion is, the chances would have been two to one of their being saved.

Q.—Is there any law regulating the number of men which shall be carried on board? A.—None that I know of. I have looked the law over; I find there is none. (Book sent for.)

Q.—Do you know if there are many vessels afloat which have not been classed by the Canadian Lloyds? A.—Yes; you will find in the book I own—Polks' Marine Directory, 1884.

Q.—When a vessel is refused classification, what is the general condition of her? A.—Bad.

By the CHAIRMAN:—

Q.—Supposing a vessel did not ask to be inspected, it would not appear in this book? A.—Whether they asked or not insurance companies put them in, in case they should come during the summer to insure the cargo of the vessel.

Q.—Can you fix in your mind any of these vessels which have been refused classification which have been lost within the last season or two? A.—Yes; the— is one, with all hands.

Q.—Do you know of any others? A.—No Canadian vessels this last season.

Q.—Do you know if the system of inspection on the American side for insurance is the same as the Canadian? A.—I think it is, but I am not positive.

Q.—If a law were placed on the Statute Book making it compulsory to examine all vessels, irrespective of insurance, would it be a benefit to the sailors? A.—It would. I also firmly believe it would benefit the owners. My reason for that is, that those vessels which have not class and cannot insure will cut freights on vessels which are classed. They carry a poorer class of men; consequently the running expenses for keeping the vessel in trim, and the wages, are less, and it gives a man who owns a poor vessel a better chance to cut rates than a man who owns a good one.

Q.—Do you think it would be better to inspect a vessel, say, while she is passing through the canal, after being fitted out, than in the winter season? A.—For canvas and rigging, I believe it would. For the hull and frames and inside ceilings, &c., they could not very well get into the vessel's hull, though I believe it would be best to examine vessels and class them after being fitted out than it would before it.

Q.—In your experience of inspection under the Lloyds system, do they examine the standing rigging thoroughly? A.—I never knew them to do it.

Q.—The running rigging and canvas? A.—I never knew them to do it.

Q.—The ground tackle? A.—Well, I don't know that I could say I ever saw that done.

Q.—Don't you think it is necessary the ground tackle should be examined as well as the hull? A.—I think so.

Q.—Have you ever known of a vessel going ashore from a defect in the ground tackle? A.—Yes; I was in one myself.

Q.—What was the matter with her? A.—The bolts in the chain-plates on the starboard side were carried away, and she drifted ashore at White Lake, on Lake Michigan. Eleven were drowned and only two of us were saved.

Q.—You consider the present system of inspection is altogether unsatisfactory? A.—I am positive of it, that is, from a life-saving point of view.

Q.—Have you seen vessels leave the Welland Canal you knew to be unseaworthy? A.—Yes.

Q.—When you ascertain a vessel is not fit to go to sea what course do you take? A.—We never take any course, only if we had any men on board, and we had their lives insured in our organization, and they were in our sick benefit arrangement, the only thing we could do that we know of at the present time is to order them ashore, and if they did not go we would cancel their insurance. They know that is our law if a vessel is unseaworthy.

Q.—Have you ever refused to allow men belonging to your organization to go on board a vessel from unseaworthiness? A.—Yes; last summer.

Q.—Have you ever seen a vessel leaving St. Catharines with her seams covered with canvas? A.—Yes; one of them left the dry dock last summer.

Q.—Can you tell why they put canvas upon her? A.—It must be to cover up seams which they could not caulk. The seams were so rotten they would not hold the oakum, and they tacked canvas on with shingle nails, I think, and covered the hull underneath the canvas with paint and painted the canvas on the outside. She had several strips, one reaching from the starboard to the aft-plate of the fore-rigging. On the starboard bow there were four or five patches on the bow. I saw only the one side. When I went aboard she had no hatches, but pine hatches made of rough pine boards, and in pumping her out they had a trough running over the sides, so the water would not go on the deck and go into the hold again. She went from here, I think to Detroit. I understood she was going to Cleveland to load coal. Some of the members of our organization were working at her in the dry-dock, and when I went aboard to see her, in climbing over the rail I was afraid it would fall into the dry-dock; the stanchions were so rotten I could have shoved them over. I could move it 6 or 8 inches without any effort, just by pushing it. I believe some of our men went on her, although I told them if they did sick and insurance benefits would be refused.

By the CHAIRMAN:—

Q.—She got to the American ports? A.—I could not say for certain where she went.

By Mr. HEAKES:—

Q.—She never came back here again? A.—Not to my knowledge.

Q.—Masters and mates of all vessels are supposed to pass an examination? A.—Yes.

Q.—Is a vessel allowed to leave port without officers holding certificates? A.—By law they are not, but they have done it, though. The law up to the present time, to my certain knowledge, has been broken, and last fall in a great many cases. I hear a vessel which was lost last fall with all hands was reported for breaking the law last September to the Custom house officers in Toronto, but still was allowed to clear after being reported.

Q.—Have you known many instances of vessels passing through the canal without proper officers on board? A.—Yes.

Q.—Have you ever known a case in which the captain of a vessel borrowed the certificate of the mate in order to get a clearance? A.—I could not prove it, although I am satisfied it has been done. Instances of that kind have come to our notice, but that is something I could not say positively, although I am satisfied it has been done often. In the case of one, where the vessel was lost last fall, I believe

it was done nearly all last summer. It was reported to me by one of the men holding a certificate.

Q.—Is every facility given to sailors to qualify as captains and mates? A.—Well, the way vessels towing now are getting, in a short time there will be no sailors at all on the waters. There is not one in five, at least, which carry competent men on board those vessels towing. They are green men, whom we call boys, not knowing the trade. Not more than half could tell the port from the starboard, or one point from another of the compass.

Q.—Have you ever made any representations to the insurance companies to the effect that vessels were under-manned? A.—No. Our reason for that is, that the insurance companies are, to a great extent, composed of vessel owners, and it would be useless.

Q.—What remedy would you propose for vessels going to sea without competent officers and a proper crew? A.—Well, that is something I have not stated. I think the part of the law at present concerning officers, if it was enforced by the officers already appointed, would work all right.

By the CHAIRMAN:—

Q.—You don't complain of the law, but its administration? A.—Yes. The under-manning of vessels is what we complain of. There is no law respecting the number or quality of a steamboat's crew.

Q.—How about loading vessels—aren't they frequently over-loaded? A.—Yes; especially those old canal-sized vessels.

Q.—Why do we hear so much of that kind of vessels being over-loaded when they were considered safe a few years ago? A.—My belief is this: that when they were built they were built to go through the canal drawing 10 feet. Since the canal was made they had 2 feet more, and consequently they loaded them down that distance, if possible, so a vessel built to draw 10 feet, when she was loaded to 11, 11½ or 12, was overloaded, and consequently had not the buoyancy she was intended to have when built.

Q.—How much free board should a vessel of 400 tons have, when loaded, to be safe? A.—One inch or 2½ inches over water to every foot under water would not be too much. It would be as little as it would be possible to have and have a vessel safe in any kind of bad weather.

Q.—What remedy can you suggest to prevent over-loading? A.—The only way to do it, I think, would be to appoint some inspector from the Government, and lay down a basis, a sort of Plimsoll mark. We count from amidships; we don't count from the end of the vessel, because some are built with more sheer than others. That mark once made would stand good for all time.

Q.—Are vessels over-loaded as frequently after as before the 1st of September? A.—Yes. In the case of the vessel which was lost I saw by the published reports at the time she had 700 tons. If that is so it was more than she should carry when she was a new vessel. We have no reason to doubt that, as it is the statement of the purser.

By Mr. KERWIN:—

Q.—What kind of compartment is the fore-castle on these craft as a general thing? A.—Twelve to fourteen years ago they were very good. At the present time they are very good in a great many cases. There are exceptional cases where they are still good, but as a rule they are bad—leaky and not fit to live in.

By the CHAIRMAN:—

Q.—Are they worse on vessels which are towed than on others? A.—Yes. As a rule, those which are towed at the present time are those which were sailing ten, twelve, and some over twenty-five years ago.

Q.—They are more liable to leakage from the strain put on them? A.—Yes; and by coming in contact with each other at docks and piers, or in coming through the

looks at the canal. It weakens them at the bows, where the fore-castle is, and they rot quicker by getting slivered.

By Mr. KERWIN :—

Q.—How many men are employed in this business at St. Catharines? A.—Well, on the Welland Canal altogether, probably not less than 1,000.

Q.—How many men do you think are employed at this kind of work, say from Kingston up, in Canada? A.—I should say 15,000 to 20,000—that is Canadians and Americans—including the different harbors on Georgian Bay, Lakes Huron, Erie and Ontario.

Q.—You have not got a constant rate of wages? A.—No; we make wages according to the freights which vessels are getting. When freights go up wages go up, and so on.

Q.—For the two months, October and November? A.—Freights are up then and wages go up.

Q.—You don't have any extra hands on in those months—the same number of men as in June, July and August? A.—Yes; the same number of men as in the summer months will have to man them all fall.

Q.—Have crews any difficulty in receiving money? A.—Sometimes they do, but since the law was enacted by which the man can stop a vessel anywhere for wages it makes it easier to collect.

Q.—You get paid by the day and are paid at the end of the trip? A.—Yes; so much a day for the trip—10, 12 or 14 York shillings a day.

Q.—How many hour's work in the twenty-four would you have to do for those wages? A.—A great many times you work all twenty-four; you always work at least sixteen. I think you average sixteen, if no more, during the season. You get no rest at all in the canal.

Q.—Do you know of any body who has been black-listed in your business for being too prominent in matters of this sort? A.—Yes; I do.

Q.—Can you state the circumstances, and why? A.—Well, it was for taking too active a part in labor organizing, and asking for wages and demanding them.

Q.—Have you ever been black-listed? A.—I was.

Q.—How long did it last? A.—I don't know but what it lasts yet.

Q.—How long ago was it? A.—Nine or ten years ago. I am satisfied if I went to look for a "sit" on board a vessel to-morrow morning, a great many vessels which know me would not ship me.

By Mr. HEAKES :—

Q.—What provision is there made for saving the life of a crew in case of wreck, other than the yawl boat? A.—None that I know of.

Q.—No life-buoy? A.—I never saw one on board a sailing vessel, and the yawls, in a great many cases, are not fit to carry the number of men which are on board of them, in bad weather. It would be all that some of them would do would be to carry a crew on smooth water, without being in rough water. Some of them would not even do that, on account of the rottenness of the boat and unseaworthiness, all being dried up with the sun.

Q.—Have you any suggestions to make with regard to the seaworthiness of ships, &c.? A.—Well, I feel satisfied if a law was enacted compelling vessels to be seaworthy, and not load above a certain mark, and to carry a certain number of men, it would benefit not only the sailors but the men who employ them, as property would be safe in the hands of men when there were enough of them to handle it in case of danger. I might state, also, that the steamboats are manned just as badly as the vessels are. They have a larger number of men, but the quality is not there. I don't believe one-half of the men on steamboats this year—I don't believe one-third of them—outside of the captains and mates, are capable of lowering and launching a life-boat or yawl-boat.

Q.—Engineers have certificates? A.—Yes; for a certain class of work, but they

are not capable of handling a yawl any more than the men, because it takes practice to make perfect.

Q.—Do mates commence in your trade as sailors and work themselves up?

A.—Yes; pretty much.

Q.—Do you know of cases where they have not done so? A.—I know of a man who went from engineer to captain. There are instance of men who have gone from the purser's desk to the pilot-house. They have not had experience, and consequently in bad weather they are not capable of using the good judgment required.

Q.—They had certificates? A.—Yes; they have got them, but I don't know how they have got them, as we have had men we were satisfied were capable of taking charge of them who could not obtain them.

Q.—A certificate of service is different from a certificate of competency? A.—Some of them hold certificates of competency. I also know the case of a man holding a mate's certificate, who, when he was asked, did not know whether it was for river or lake. He was mate of a large passenger steamboat. He did not know the number of the certificate, or whether it was for river or for the great lakes.

PETER NELSON, St. Catharines, called and sworn.

By Mr. HEAKES :—

Q.—What is your occupation? A.—A sailor.

Q.—You have heard the testimony of Mr. Carey? A.—Yes.

Q.—Do you approve of all he said? A.—As far as I can see, I can approve of it, and I believe there are a great many things about which he was very easy.

Q.—Can you add anything which will be of use? A.—One thing, I think, should be looked into, as far as I have experience, and that is the testing and classing of vessels. They generally do it in the spring, boring three or four holes fore and aft, but they don't look at the rigging, canvas or gear. We start out in the spring—if we have sail or running gear aboard it is all right, and there is no inspector to look upon it. I think that should be inspected as well as anything else. I don't see any use in building a house without windows, or anything, and so with a schooner.

Q.—Have you known instances where either the standing or running gear of a vessel has given out? A.—Yes; I have. There are more of our men sailing in American than Canadian vessels, on account of wages being higher, and, as a rule, sailing vessels being in better condition.

The CHAIRMAN.—Just tell us about Canadian vessels.

By Mr. HEAKES :—

Q.—Do you know of any Canadian vessels which have been upset in a storm through defective gear? A.—I do; it is a few years ago. Lately, any employ I have been in I cannot complain, because they have kept them in good shape. I have seen schooners, but not belonging to them; I did not take a great deal of notice, remarking in passing that "That will be a coffin for some man or another."

Q.—Do you think there are many vessels in an unsatisfactory condition? A.—I think there are, if they were looked at properly, taking it all through—over-loading and everything else, their bad forecastles, not cubic feet enough to give air for the crew, and such things as that. Of course, a good many of them, as far as I hear and have seen, have shifted the fore-castle down forward. The hold was not big enough and they shifted the fore-castle to give more room.

Q.—What is the average size of a fore-castle in a steamer of 400 tons? A.—About 16 feet. Then they have to take away the chain locker. They keep them about 4 feet wide from the side to the fore-castle ladder. Before that they used to have them below in the fore peak, so it is now in the fore-castle, and it takes some room off.

By Mr. KERWIN:—

Q.—Have these craft got strong chains and anchors? A.—Yes; I cannot complain; as far as I have seen, I have confidence in them.

Q.—How many anchors do they carry? A.—Two. I think Canadian vessels carry more chains than American, on account of loading more timber, &c., carrying perhaps 20 to 45 fathoms more chain than the American vessels.

Q.—The anchors, and chains, and windlass on deck are all right, but the rigging aloft is in bad condition? A.—They don't look after them. I have been on Canadian schooners where the rigging would come down on the cross-trees where a man was taking his rest, and it came down on his head about two minutes after landing on the cross-trees.

By Mr. HEAKES:—

Q.—Is it often the case that a vessel's gear is kept in bad condition through the captain's desire to keep down expenses? A.—I could not answer that question exactly, because generally they say the owner don't allow it. That is his excuse: "I have to run it cheap, because the owner will not allow it." It might be the captain's fault, but it would be a hard question for me to answer.

Q.—You have never known a case where the captain was at fault? A.—I know one instance where a leg was broken in the canal on account of the owner not allowing a line.

By Mr. KERWIN:—

Q.—Can you tell me the average earnings of a sailor in St. Catharines on Canadian vessels? A.—Well, for a sailor before the mast it is a hard thing to say, because generally they lose more or less time through the summer, but the general pay now for a mate is \$3.50 to \$3.75.

Q.—How many months? A.—About seven months; you cannot figure any more; and \$50 to \$55 a month.

PATRICK GALLAGHER, St. Catharines, called and sworn.

By Mr. HEAKES:—

Q.—What is your business? A.—Sailing.

Q.—You have heard the evidence given by Mr. Carey and the last witness. Do you agree with what they have stated? A.—Yes; I do.

Q.—Have you anything new in regard to the business of sailing that you could tell us which would be of interest in this enquiry? A.—Nothing; only I don't suppose there is a vessel going out of the canal which is seaworthy. There may be one or two, but any more I don't believe there are.

Q.—Are there any vessels leaving the canal that are classed A1, A2? A.—I don't think so.

Q.—What would be the principal defects of the vessels here which you consider unseaworthy? A.—Well, their hulls, and gears, and canvas are all defective, and spars also. I have seen lots of vessels here you could not fasten a plank to the frames of, because they would not hold it.

Q.—Have you know vessels going out of the canal where they had to pull timbers right through to fasten it to? A.—I have.

Q.—Are there many vessels in the canal in that condition? A.—Yes.

Q.—They use them every season? A.—Every season.

Q.—What proportion of the number of wrecks which take place every fall would be attributable to that cause? A.—Well, I suppose three or four out of the whole number; that is, if they are caught out in any kind of bad weather.

Q.—As a rule, vessels which have been converted into barges, what is their condition? A.—Some of them are bad; some are good, but not so good as they should be.

Q.—Isn't it a rule to keep a vessel under canvas as long as she is classed? A.—

Well, I don't know as to that; I don't think so. I think they can make barges of them if they want to.

Q.—But what is the practice? Are they converting good vessels into barges?  
A.—The way I look at it is, there is more money in it that way; they get men cheaper. They pick up farmers, who will go for little or nothing, and deprive men who have followed up this occupation all their life.

By Mr. KERWIN:—

Q.—This is in summer time, when the water is like a mill pond. They don't hanker after it in fall, in bad weather? A.—Not many of them.

By Mr. HEAKES:—

Q.—Do you know what was the general condition of the barges which were towed last fall? A.—Yes; I would call them bad.

Q.—Do you think if there was a person appointed to inspect the hulls and rigging of vessels coming in and leaving the port you could do away with that class of vessels? A.—I think so; I am satisfied you could make it a great deal better, anyhow, than it is at the present time.

Q.—What canvas would you consider it absolutely necessary for a barge in tow to carry, in order to be perfectly safe? A.—I would consider fore-and-aft sails, with two or three jibs, would be safe.

Q.—What canvas, as a rule, do they carry? A.—Some of them carry what they call fore-and-aft sails, but they are not, some of them, bigger than a dish-towel. They take on canvas of old worked-out vessels.

Q.—Is it necessary for a barge towed by a steamboat to carry a full complement of a crew? A.—Yes; just as much as it is when she is sailing, for you cannot tell the minute when she will go, and when you will want competent men.

Q.—Do you know the case of a vessel in tow which has been lost through not having a competent crew on board? A.—Well, I don't know as I do, unless it is the  
—— last fall. I do of American vessels.

Q.—Not Canadian vessels? A.—No.

Q.—Is there any information you could give us in addition—tell us in your own way. A.—Well, I know, taking this class of vessels, they run them as cheap as possible—run them for little or nothing. They will run them without gear until something drops overboard and kills somebody. I have been in a few Canadian vessels. I happened to be caught on a lee shore, when they did not expect a blow. It started to blow. We lost our canvas; we had good canvas. We came near going ashore, but one of our anchors was good enough to hold us; we happened to drop anchor and struck anchorage, which would only be once in a hundred times.

Q.—Do you agree with what Mr. Carey said about over-loading vessels? A.—Yes.

Q.—Do you think there should be a difference in the amount of cargo a vessel carries up to the 15th September and that she carries to the end of October?  
A.—Yes; she should carry less, but they don't generally do it.

By Mr. KERWIN:—

Q.—How much a day do you receive, on an average, in the season, before the mast? A.—Average, from 10 to 12 York shillings.

Q.—How many hours do you have to work? A.—On an average, about sixteen hours a day.

Q.—About how many dollars do you earn during the season, on an average, for seven months? A.—I should judge about \$200 to \$250. Of course, we don't work every day.

Q.—If you go to some port you are paid at the end of the trip? A.—Yes.

Q.—They don't keep you on for the remainder of the season? A.—No.

ROBERT JAMES MILLS, Cigar Maker, St. Catharines, called and sworn.

By Mr. KERWIN :—

- Q.—How long have you been working at your trade? A.—Eleven years, I think.
- Q.—What wages do you receive now weekly? A.—On an average, about \$10 a week.
- Q.—Do you get paid every week? A.—Yes.
- Q.—How many hours a day do you work? A.—Eight hours.
- Q.—Didn't you formerly work ten hours a day? A.—Yes.
- Q.—How many apprentices are there to each man? A.—One apprentice to five men.
- Q.—Are they all union men in your shop? A.—Yes.
- Q.—Isn't it a fact that you almost do as much work now in eight hours as you formerly did in ten? A.—Very nearly.
- Q.—Do you know of any body getting paid in store orders? A.—No; I cannot say I do.
- Q.—Has that been the practice around this place? A.—Not of late years; the truck system used to be at one time.
- Q.—How is it now? A.—There is none in my business. Some three years ago it used to be the case.
- Q.—There is a law in the union against the truck system? A.—Yes.
- Q.—What led to the adoption of that law? A.—Really I could not tell you. I presume it was for the benefit of the manufacturer. He was not the one who introduced it; it was, for his gain, I presume.
- Q.—Do you know any members of your trade who have been black-listed by manufacturers around this place? A.—Yes.
- Q.—How long have they been black-listed? A.—Well, I have reason to believe they were. I could not positively swear to it, because I did not hear it from the men themselves. I have good reason to believe there are men who used to be employed here at one time who could not now get a job if they wanted it, all through their standing up for their rights.
- Q.—How many men are working in your establishment? A.—Three men and one apprentice.
- Q.—Are there many cigar-makers in this place? A.—Ten.
- Q.—Isn't there some establishment where they make cigars by female or child labor? A.—None in this city.

By Mr. HEAKES :—

- Q.—What tobacco do you generally use for manufacturing? A.—All imported tobacco—New York State, Pennsylvania, Connecticut—no Canadian.
- Q.—Has Canadian tobacco ever been tried for cigar-making? A.—I believe it has in the Lower Provinces, but I don't think it has here.
- Q.—What becomes of the waste from cigar-making? A.—It is bought by leaf dealers and shipped to the old country.
- Q.—Do you know of any place where female cigar-makers have taken the place of men? A.—It has never been coming under my observation.
- Q.—Is it a standing rule of your organization that female labor, where it is employed, shall be paid equal wages with the men for the same work? A.—They should, be but they are not.
- Q.—Does your organization try to make that a rule? A.—Yes.
- Q.—Is it possible for a female to become as proficient a cigar-maker as a man? A.—Yes.
- Q.—Can you give a reason? A.—I have worked with some; I have always found it so.
- Q.—Do you know if cigar-makers would generally favor the establishment of a bureau of statistics? A.—I think they would.

Q.—Is there any such thing as iron-clad documents in your business? A.—Well, I don't thoroughly understand your meaning.

Q.—Are men required, in any place in St. Catharines, to sign a contract that they will not belong to any labor organization before they are employed? A.—Not in my business.

Q.—Do you know if prison labor comes in contact with cigar-making? A.—Not in Canada, at the present time, I believe.

By Mr. KERWIN:—

Q.—Where do you find a market for cigars? A.—In the city, principally, and some in the country.

Q.—I suppose the reason they are sold here is on account of having a blue label on the back? A.—Certainly.

Q.—If they had not a blue label they would not buy them? A.—I don't know where they would sell them, only to men who did not know anything.

By Mr. HEAKES:—

Q.—Has the cigar-making business decreased through the adoption of the Scott Act? A.—I rather think it has in the country. You see we have not had much experience of it in this part of the country. In the county, I believe, it has decreased some.

Q.—Do you know if there is an inferior grade of cigars in demand now since the Scott Act has been adopted? A.—I could not say.

JAMES ROBINSON, Cigar Manufacturer, St. Catharines, called and sworn.

By Mr. KERWIN:—

Q.—Do you employ union or non-union men? A.—Union men.

Q.—How many? A.—Three.

Q.—How many hours do they work? A.—Eight hours a day.

Q.—What is the rate of wages for eight hours? A.—I should judge they would average the year round about \$9 or \$10 a week.

Q.—They are always paid in cash at the end of the week? A.—Yes.

Q.—On what day? A.—Saturday afternoon.

Q.—Are union men more reliable workmen than non-union men? A.—Yes.

Q.—More sober and industrious? A.—I have always found them so, and better workmen.

Q.—What is your opinion of apprentice labor? A.—My opinion is, it is very poor; I would not have them around me.

Q.—Have you had any personal experience of the system known as the truck system? A.—Yes; not in this city, but in the city of London.

Q.—How long ago? A.—About 1881; I was on strike there against the truck system.

Q.—How long did the strike last? A.—I left town after three weeks; I don't think they gained it. One man who had a widow and two sisters to support had to go to a hotel to board or else lose his job, so we struck.

Q.—You find a ready market for your cigars around here? A.—Yes; in the city, but outside it is pretty hard to compete against cheap labor.

By Mr. HEAKES:—

Q.—Who are your principal competitors in the cigar trade here, outside St. Catharines? A.—London and Montreal undermine us a good deal in selling cheap.

Q.—Why can they sell cheaper than you can? A.—Labor is a good deal cheaper.

Q.—What is the difference in wages between London and St. Catharines? A.—I should judge it would be \$3 to \$4 a thousand cheaper.

Q.—How do you account for that difference in the price of labor? A.—I blame it on the men for allowing it.

Q.—Do you know how many hands are employed making cigars in London?  
 A.—There must be along about seventy, or probably more, with girls and boys. Very few journeymen cigar-makers work there.

Q.—You find that the labor of girls and boys brought into competition with men enables the employer to undersell you in the market? A.—Yes.

Q.—Do you know why there are so few men employed in London in the cigar business? A.—Well, I worked there twice, and I always found them the meanest lot to work for I ever saw. They either let you off for a week, or would not give you a steady job. When they ran journeymen they would let them off three or four days in a week, saying they had no stock.

Q.—Do you know the difference in wages between St. Catharines and Montreal?  
 A.—Union wages, I believe, are about \$2 a thousand. I have not seen the Montreal bill of prices for some time. Hamilton comes nearest to St. Catharines' prices of any place that I know of, for union shops.

Q.—Speaking of strikes, what system would you recommend for the settlement of disputes between capital and labor? A.—A labor bureau would be a good thing.

Q.—That would cover the ground, and the strikers would not have any power to settle the difficulty? A.—I think the Cigarmakers' Union has about the best plan of any for gaining a strike.

Q.—Tell us what it is? A.—If a union wants to go on strike the different grievances are sent into the International President, who lays it before the Executive Board. If they don't see fit to sustain the strike the men then have a chance to appeal to all local unions, so the cigar-makers in Canada and the United States have a chance to vote; but if they sustain them they strike. They take bills of all labor towns, and if it is lower than other towns they sustain it. They always sustain it in the case of the truck system.

Q.—Do you think a system of arbitration would give satisfaction? A.—I don't know about that. Men may think that cigar-makers working piece should do day work; other men might not understand the matter so well as they would. Probably there are thirty or forty different kinds of cigars to make. One would make something of one class, but not of another.

CHARLES TANSEY, Cigar-maker, St. Catharines, called and sworn.

By Mr. KERWIN:—

Q.—You heard the evidence of Robinson and Mills in regard to your business?  
 A.—Yes.

Q.—Can you substantiate all they said with regard to it? A.—I do.

Q.—Is there anything you would wish to say in regard to the business? A.—No; I worked under the truck system, and got discharged because the landlord and I had some words. He complained to the boss and he discharged me.

Q.—Do you know any place in this city where the truck system is in vogue?  
 A.—No; I do not.

Q.—Is it a thing of the past here? A.—Yes.

Q.—There are laws in your union against the truck system? A.—Yes; we have a system to govern. In a great many places where a cigar maker has not enough money to pay his board the Union advances that and he deposits his card, and he cannot get it back without getting a receipt from his landlord.

Q.—What led to the adoption of those rules? A.—The truck system was all over. At the time they tried to introduce it here we shut down on it.

By Mr. HEAKES:—

Q.—Have you any complaints to make of the condition of your trade? A.—Not in this city.

By Mr. KERWIN :—

Q.—How about apprentices? A.—There is one to the shop, two to every five men, three to ten and one for each additional fifteen.

Q.—Any Sunday labor? A.—No.

Q.—Those who work at the cigar business all belong to St. Catharines? A.—Yes.

EDWARD SMILLIE, Port Dalhousie, Sub-marine Diver, called and sworn.

By Mr. HEAKES :—

Q.—Where do you find your chief employment? A.—From the Government, up to the 25th day of last month.

Q.—Were you ever engaged in diving where vessels have been lost? A.—Yes.

Q.—Can you tell us, from the general appearance of vessels you have examined, what has been the most frequent cause of founder or some of the causes—I do not mean those that struck on a rock after you examined them? A.—I examined the—.

Q.—In what condition did you find her? A.—Pretty bad.

Q.—Do you think, under any circumstances, vessels like her would be fit to go to sea? A.—No; I do not. That is my opinion.

Q.—Have you found, in your experience as diver, many others? A.—I have found others classed in A 2 class, and when we came to raise them we would find weak points in them; we could not tell until we came to raise them. No matter how good a vessel may be, if she is in a certain depth of water and you want to raise her, something will give, unless she has stanchions to keep up her deck.

Q.—So you cannot tell what her general condition is? A.—I can tell the condition of the timber, what state it is in, what was gone, and every thing like that.

Q.—Are you frequently engaged in examining vessels which are foundered? A.—Foundering is caught by a sea. If a vessel strikes a pier or rock, what would you call that?

Q.—I mean vessels which have been lost in the open, where there are no rocks? A.—I have never examined only three.

Q.—Of the others you examined, were they in any better condition? A.—They were a better class of vessels.

Q.—Would you consider them seaworthy? A.—Yes.

By Mr. KERWIN :—

Q.—You were talking about the loss of a vessel you saw. You say she was in bad condition. I don't consider that any kind of an answer. Was the rail gone, or the deck stove in, or what? A.—You want me to tell the whole thing. I went down and put a ladder down from the deck. I found 22 feet of water on the deck, as near as I could judge. There were no hatches on. I came along and found her decks were good, and three or four planks gone here and there. The clamps and combings were gone, leaving a space of about 6 feet. I travelled along, walking on the covering board, or on the rail, until I got to where the cabin was. There was nothing but combings of the cabin all around. We got the aft taffrail, but everything above deck was gone, except the wheel, which was standing.

Q.—In what condition did you find the woodwork? A.—I did not notice that. Her bulwarks were gone—I will not say all were gone, but the biggest part of them were.

By Mr. HEAKES :—

Q.—To what would you attribute the loss of that vessel—what cause would you give for her foundering? A.—I don't know. She was not a fit vessel to sail in that time of year.

By Mr. KERWIN :—

Q.—Do you judge that by the look of the vessel on the bottom—did you know her before? A.—I knew her before.

By Mr. HEAKES:—

Q.—It did not surprise you to hear she had gone down? A.—Not a particle, in that gale of wind.

Q.—Are there many divers engaged around the lakes? A.—I only know of three or four.

Q.—Do you find pretty constant employment? A.—I don't know about general work.

Q.—I mean general. If a man is a diver, does he generally obtain steady employment? A.—He has sometimes to turn his attention to something else, unless he is with the Government, and then, of course, he has steady.

Q.—What wages do divers generally get? A.—It is all owing to the diving; it depends on the depth. You hire for a deep-water diver and get probably \$200 a month; if you want a job very bad you get \$150. Then you get men for \$5 a day for four or five days in the week.

J. E. CUFF, Mayor, St. Catharines, called and sworn.

By Mr. KERWIN:—

Q.—You are Mayor of the city? A.—Yes.

Q.—We want to enquire about the sanitary condition of the city generally? A.—Well, it is in a fair way of being exceedingly good. Extensive drainage operations have been commenced, and will be continued the next three or four years, then we will be in very good shape. We have a very fine system of waterworks, probably the purest water and best supply in the country, so far as I know. Analysis recently made shows it to be almost without trace of impurity.

By Mr. HEAKES:—

Q.—Where do you bring water from? A.—From near Decew Falls, about three miles west of St. Catharines. The water comes by gravitation.

By Mr. KERWIN:—

Q.—What is the condition of trade? A.—Trade has been very fair this year. There has been a manifest improvement in nearly all branches of manufacturing business during the past year.

By Mr. HEAKES:—

Q.—What are those falls from which you get your water fed from? A.—From rainfall, and by direct communication with Lake Erie.

Q.—It is a small inland lake? A.—No; it is an artificial pond.

By Mr. KERWIN:—

Q.—Has the condition of working people improved in this locality? A.—I think so; I have not heard any complaints in that direction.

Q.—Has labor organization anything to do with their improvement? A.—I think it has improved the labor people themselves. I think the various organizations they had have been beneficial to them as a class.

By Mr. HEAKES:—

Q.—What is the general condition of the working people here—their circumstances? A.—They are very fair.

Q.—Do they appear to be comfortable in their homes? A.—Yes.

Q.—Have you many cases of application for assistance? A.—Not more than what would be the average in an ordinary place of this size.

Q.—Do you find that those people who apply for assistance from the city are a class who would bring that distress on themselves? A.—Some of them are, and some of them from being out of work through sickness, &c.

Q.—Are they principally men or women? A.—Principally women who make applications for relief.

Q.—Some of them widows, with families? A.—Yes; and some with intemperate husbands.

Q.—There is no very great extent of poverty existing amongst the people here? A.—No.

Q.—Do you notice, in the case of immigrants coming to the city and this district, many people who would be called paupers, or who would become a charge on the county or city? A.—There have been a few, but very few.

Q.—Do you have many immigrants settle in this neighborhood? A.—This last year or two not a great many that I know of. There may have been quite a number go out through the country, but not in the city, that I know of, though they might be here without my knowledge.

Q.—They have not come before you, to any extent, as applicants for assistance? A.—No.

Q.—Don't you think labor unions act wisely in restricting the number of apprentices to every trade? A.—Well, I think it is essential to any craft to have fewer apprentices and have them properly taught. The position has been heretofore, for quite a while, that young people have gone into learning trades, spent a year at the business, think they are worth journeymen's wages, and gone off some where else. This has been bad for the young men and bad for the occupation or trade, because they don't become efficient workmen. That is my experience.

Q.—Do you believe in having apprentices indentured? A.—Yes; for a term of years, having conditions attached which will insure good service on one side and a beneficial result in learning a trade on the other.

Q.—As a newspaper man, what is your opinion of those stereotyped plates they bring from the United States? A.—Well, I have not used any of them in my business.

Q.—There are places all around the country which use them? A.—Yes; they are coming into very general use all over the country, owing to the cheapness with which they can be produced. There is a difference, probably, on a rough estimate, of about 75 per cent. in favor of the publisher using them. Of course, it is bad for the workmen. It takes away from him that much more employment he would otherwise have.

Q.—Isn't it a fact there is sometimes something in this plate reading matter not fit for the eyes of some people? A.—It has not come within my observation, though there is a good deal of matter which is not of much value to the general reader.

Q.—It helps to fill up the paper? A.—Yes.

Q.—Have you ever given the question of profit-sharing with employes any thought? A.—No, sir. It has been done in some places, but wherever profits are small, and in small establishments, I don't think it has had much consideration. It is more confined to large manufacturers.

Q.—In the case of disagreement between employers and employees what in your mind do you consider the most satisfactory mode of settlement? A.—I think the most satisfactory mode would be by arbitration.

Q.—Do you think if a bureau of statistics were established in Ottawa it would meet with general acceptance by the people? A.—To what end?

Q.—Giving labor statistics, mercantile statistics collected by the Government, and published annually? A.—You mean for the Dominion?

Q.—Yes? A.—Because there is such an organization in Ontario.

Q.—Yes; but it only covers Ontario? A.—I could not say as to that. I should think it would depend a good deal on the accuracy of the statistics at first.

Q.—Do you find in St. Catharines many of the working people go and hang around bars? A.—Yes; quite a large number, but I find also, as far as this locality is concerned, a general increase in sobriety.

Q.—Can you attribute that to any particular cause? A.—Well, I don't know what cause it is due to. It may be due somewhat to the labor organizations, which

endeavor to promote temperance. I think it is a leading platform in their societies that they shall be strictly temperate, and that would only produce good results.

Q.—Did you ever notice a tendency amongst workmen to waste time they have to themselves, speaking generally of the whole class? A.—They have so little time to themselves, excepting Sundays, I don't see how they could.

Q.—Do you think, then, if workmen had more leisure they would be inclined to waste it or employ it usefully? A.—I don't see why they should not, if means were provided. I think, for instance, the establishment of a free library in a place is quite an inducement to people to spend their time profitably.

Q.—You have no library here? A.—Yes; we have a good library. We have just made it free.

Q.—Do the people of St. Catharines take general advantage of it? A.—A great many do. It has not been free in the past, but we are now organizing it.

Q.—Have you any idea of what proportion of the readers are workmen or their families? A.—I think there are a large number of them.

ANDREW J. CARROLL, Printer, St. Catharines, called and sworn.

By Mr. KERWIN:—

Q.—Are you a member of the Typographical Union? A.—Yes.

Q.—What is the wages per day you receive? A.—The weekly rate of wages is \$10 a week; piece-work 28 cents per thousand ems.

Q.—Do you get paid on Saturdays? A.—Yes; in the establishment I am employed in.

Q.—In cash? A.—Yes.

Q.—Are there many apprentices in your trade? A.—There are more than there should be. Having recently organized the Typographical Union we have endeavored, and will continue, to limit them to a certain number. The apprentice system has been very much abused in this city, in our trade, up to the present time. Some offices have been run entirely by apprentices. Our experience is that they would serve sometimes two years at their trade, then wander away either to another office or to outside towns.

Q.—What is the law of the union with regard to apprentices? A.—Subordinate unions are enjoined by the International Union to limit the number of apprentices, and it recommends the plan of indenturing them wherever it can be introduced.

Q.—About how many hours per day do you work? A.—In the office I work in I would average it at eight and a-half hours a day.

Q.—Is that the case in the other offices? A.—I could not speak positively, but from what I observe in a general way it is not the case; ten hours and over is the time there. Week hands in the office I am employed in are supposed to work ten hours, except Saturdays, when they work until four.

Q.—Are there any female printers in St. Catharines? A.—Not in the town itself, but in what we consider is in our jurisdiction there are three employed—that is in Thorold, which is considered within the jurisdiction of our union.

Q.—Have there been any strikes in your business within the last few years? A.—We have had what might be termed a strike. The principal cause was an attempt to prohibit the use of stereotyped plates in the newspapers of the city. They were introduced some eighteen months ago by one paper. We made some effort then to prohibit their use, but it was not successful owing to an agreement we had entered into with the then proprietors of a certain paper not being carried out. About a year ago this time another paper entered the fight, and some two or three months after it was started it introduced them to a small extent.

By Mr. HEAKES:—

Q.—Where do they come from? A.—From Buffalo and Toronto.

Q.—Where do most of them come from? A.—I believe there is a claim of

holding a monopoly to the plates produced in Buffalo by a certain newspaper in town, I think, which likewise gets plates from Toronto. I notice in one paper the plate matter it uses is Buffalo and other days Toronto.

Q.—What remedy do printers propose to remove this objectionable matter?  
A.—The remedy which has occurred to us is a duty high enough to exclude it from the country altogether.

Q.—Wasn't there an increased duty put on last Session? A.—There was some correspondence between a member of our union and the Minister of Customs. It was stated there had been a slight increase, but it was a mere nothing. It would in no wise tend to keep them out.

Q.—If the duty were raised to prohibit the introduction of American plate what benefit would it be to the Canadian compositor? A.—It would be doubtful in my own particular line, because I think they should be prohibited from manufacturing as well as importing, and if they were prohibited from importing there would be more engaged in manufacturing than at present.

Q.—Do you know under the present system of publishing, if this plate matter would be excluded would they be able to get out many of the country papers that are now published? A.—They would not be able to get out as many, but they would be able to get out a better class.

Q.—Would the cost be materially increased? A.—The cost of publishing a paper without the use of plates?

Q.—Yes? A.—It would.

Q.—Have you given any thought to the matter of the lien laws existing in this country? A.—To a slight extent.

Q.—Do the present lien laws meet the requirements of the working people?  
A.—I don't think they are satisfactory.

Q.—Do you know of instances where mechanics or laborers have failed to recover wages under the lien law? A.—That I cannot say. I think that a claim for wages should come in ahead of every other matter.

Q.—Would you favor the extending of the lien law to every branch of business; at present it applies only to the building trade? A.—Certainly. Any person who is working for a living and depending on wages to be received, if he is in any danger of losing them I think should have some safeguard so he could recover the amount coming to him.

Q.—Would not that come under the insolvency law rather than the lien laws?  
A.—It would be better for working people if it was all under the lien law.

Q.—Are printers in this district paid in cash always? A.—In the office I am employed in they are, but in another office I believe they are not, from what those employed there formerly say. Whether it is compulsory on them or not I don't know, but I have been given to understand that they have taken orders on certain establishments, and that, of course, was on wages account.

Q.—Has that been recently? A.—Yes; quite recently.

Q.—Do you know if that system prevails to any extent in St. Catharines? A.—I don't think it prevails to any great extent. There are no cases come under my own observation. Of this particular case I refer to it is hearsay only, as I don't know it actually to be the case.

Q.—Do you know if your organization would favor the establishment of a bureau of labor statistics? A.—It would.

Q.—Do you know if they are in favor of arbitration for the settlement of disputes between capital and labor? A.—In the Knights of Labor it is one of their principal planks. It is also recommended to subordinate unions by the International Typographical Union.

Q.—Can you tell us what system of arbitration would be most acceptable? A.—I think the system of arbitration which would meet any case of difficulty should be a compulsory system on both parties to the arbitration.

Q.—And how would you proceed in selecting arbitrators? A.—Let both parties to the difficulty select one and the Government appoint another.

- Q.—Would you make the Government appoint a permanent one? A.—I think so.
- Q.—You have no profit-sharing in St. Catharines? A.—None.
- Q.—Any workmen's co-operative societies? A.—No; not immediately here.
- Q.—Are there what might be termed building societies here for working people?  
A.—No.
- Q.—Are there any points of interest to the workmen of St. Catharines we have not touched upon? Perhaps you could give us information you desire to be placed on record? A.—From what I have heard here this afternoon you have covered the ground very thoroughly. I know, in one case you were taking evidence upon, that is with regard to the complaints of sailors, there is undoubtedly a great deal of foundation for the complaints they make. It is common talk with people even knowing nothing of the business of sailing, that vessels go out of this canal which are not fit for people to sail on. Labor organizations have done a great deal for this city. I think every trade of any consequence in this Niagara district is thoroughly organized. Members have been benefited by such organization, and their connection therewith has tended to make them better citizens. In the mayor's evidence before the Commission he referred to the remarkable increase of sobriety among the working people, and I claim it is due almost entirely to their connection with the Knights of Labor, as it recommends and advocates the practice of sobriety.
- Q.—Isn't it one of the qualifications of a person joining a labor organization that he must be a sober man? A.—I don't find it exactly that, but his standing in any labor organization is better on account of that. Those concerned in the cause of labor, from being persons of sober habits—I don't say total abstainers—are looked upon with more favor by persons belonging to the Knights of Labor and trades unions. I have one more suggestion, and that is in regard to the factories—I do not think the present law is as thoroughly enforced as it should be. In this district it is undoubtedly violated.
- Q.—Is that the fault of the law? A.—No; it is the fault of the law not being enforced. The law is good enough, as nearly all laws are, if only administered properly.
- Q.—Do you know of cases where men and women are working all together in this town, in the same rooms? A.—Yes.
- Q.—Do you know if they have separate conveniences? A.—I don't know that. My opinion, from the general run of such establishments, is they have not.
- Q.—Where men and women work together in the same rooms do you consider it is conducive to morality on the part of those working there? A.—That is rather a hard question to answer, as it would depend more on the parties themselves than on any incidental circumstance of that nature.

JOSEPH KEEFER, Compositor, called and sworn.

By Mr. KERWIN:—

- Q.—You have heard the testimony and remarks of Mr. Carroll just now? A.—  
Yes.
- Q.—Do you corroborate his statement right through? A.—I agree with his statement.
- Q.—Is there anything else that you would wish to suggest that he might have omitted? A.—Not that I can recollect. I think that he went over it very thoroughly as to the general condition of the working people; also with regard to printers.

By Mr. HEAKES:—

- Q.—Are there any questions which have been agitated by workmen upon which you would like to give testimony which we have not mentioned? A.—There are so many agitated here and so few settled, that it would be a long story.
- Q.—Have you given the inspection of boilers in factories any thought? A.—  
I have given considerable thought to it. I think there should be an inspection for

stationary engines also, but I believe that is a provincial matter. There have been cases in this vicinity (for instance at Jordan) where, through neglect, or something being wrong, a boiler accident occurred. Also another: a man lost his life through the same thing at Decent's.

Q.—Does child labor prevail here to any extent? A.—Not to any extent here, but it does at Merriton.

By Mr. KERWIN :—

Q.—Is it according to the law we have? A.—It has been brought to the notice of the union. The inspector has not been around to this district yet. In this immigration question I should think the Government should settle that immediately. It is a very important one in this connection. I might state that last fall work was good in this city, and the men made a demand for the old rate, but they were forced to accept a reduction, on the threat that he would send for immigrants to the sheds in Toronto and bring in men to fill their places.

Q.—Were there immigrants in the sheds at the time? A.—As far as I know, there were some.

By Mr. HEAKES :—

Q.—Do you find, when immigrants come to this country, they are more willing to take the places of men on strike than men living in the country? A.—It depends on the country they come from. Some of them are better men than those who are born and raised here, as regards the labor question and how to settle it.

The Commission then adjourned till 8 p.m.

The Commission resumed at 8 p.m.

WILLIAM NESBITT, Pressman, St. Catharines, called and sworn.

By Mr. KERWIN :—

Q.—You are employed as pressman on a newspaper in this city? A.—Yes.

Q.—How much a week do you receive? A.—Ten dollars.

Q.—What day do you generally get paid? A.—Saturdays.

Q.—Do you do any night work? A.—Only once in a great while.

Q.—Do you get paid for it? A.—As a general thing, we take it off in the mornings. We are expected to work fifty-eight hours a week. We quit at 4 on Saturdays, and don't generally go to the shop until 7.30.

Q.—Does the office you work in use plate matter? A.—Yes.

Q.—Do you know where it is brought from? A.—From Buffalo.

Q.—How many apprentices work in your office? A.—Two.

Q.—Are you always paid in cash at the end of the week? A.—Yes.

Q.—Has that been the rule right along? A.—Yes; as far as I know.

Q.—You don't know if any of the employes in that office receive payment in store orders? A.—No, sir.

Q.—There are no union men employed in your office? A.—Yes; I am a union man.

By Mr. HEAKES :—

Q.—Are there any objections to the employment of union men in the office? A.—No; union men are preferred.

Q.—Do they pay the scale of wages asked for by the Typographical Union? A.—They pay a weekly scale.

Q.—Do you consider your wages of \$10 per week enough to meet all your expenses? A.—Well, I have to make it meet all expenses at the present time. Printers have got an increase of \$1 per week. We have short time—that is weekly hands.

Q.—Was it voluntary on the part of the proprietors? A.—No; the scale was presented to them and they pay a weekly scale.

- Q.—Do you have any female labor as printers in this city. A.—No.
- Q.—Are there any working on presses? A.—No.
- Q.—Have you had any strikes in connection with the printing business in St. Catharines? A.—Well, I believe there was some trouble, but I believe it is pointing to a settlement now.
- Q.—Do you know of any printers or pressmen in St. Catharines who have saved money enough to buy their own houses? A.—No, sir.
- Q.—There are none? A.—No.
- Q.—Are there many pressmen employed in St. Catharines? A.—I think I am the only one following that branch of business entirely.
- Q.—You are a member of the Typographical Union? A.—Yes.
- Q.—Do the union here confer on the benefits of their principles. A.—Well, the union is not long started, so it would be hard for me to say.
- Q.—Now, in the matter of apprentices, what is the rule in your business? What is the number of apprentices allowed to the number of men? A.—Well, I forget at present. There has never been a constitution or by-laws printed.
- Q.—You are not aware what is the practice in other cities? A.—No.
- Q.—Have you heard of dissatisfaction amongst printers in consequence of this plate matter being brought in? A.—Yes.
- Q.—Do you receive plate matter from any other cities except Buffalo? A.—Not that I know of.
- Q.—What objection do printers raise to handling this Buffalo plate? A.—That it is an injury to printers.
- Q.—Does it displace men? A.—It has never displaced any in the office I am working at. In that office it has been a benefit instead of injury; they don't have to work so hard. I am certain that the laws of the Typographical Union state that there should be no strike when plate matter is used, unless somebody is discharged by the use of it, and that has never been done in the office I am in.
- Q.—Do you think the paper you are engaged on could be printed as cheaply without the use of this plate? A.—Well, if they were to allow "dead ads" to run on in the paper they could if they were to use the "dead ads" instead of the "stereo" for publishing.
- Q.—Do you know anything of black-listing in St. Catharines? A.—I have heard of it.
- Q.—Do you know of any being done in St. Catharines? A.—Yes.
- Q.—In connection with the printing trade? A.—Yes.
- Q.—Is there any black-listing to-day? A.—Yes; there is by the Typographical Union.
- Q.—Have you ever known employers of labor in St. Catharines to object to the employment of men because they belonged to trades organizations? A.—No, sir; I have heard of some.
- Q.—When a pressman or printer offers himself for work, does he stand on an equality with the employer in the transaction? A.—When he applies for a situation?
- Q.—Yes. Or do you think the employer has any advantage? A.—I don't think my employer does; I think I am just as good a man as he is.
- Q.—You stand on an equal footing? A.—Yes.

By Mr. KERWIN :—

- Q.—You say you are as good a man as he is? A.—Yes; I mean it in that way.
- Q.—Do you think he thinks so? A.—That would be hard to say, I never heard him find any fault with my work.

By Mr. HEAKES :—

- Q.—What are the hours of work? A.—Fifty-eight hours a week is the time set by the Typographical Union.
- Q.—Is that rule generally carried out in the business? A.—As far as I am

concerned it is not. It is very seldom I am there at 7 in the morning, and I quit at 4 on Saturday.

Q.—Do you get paid for time you are not working? A.—I have never lost any time.

Q.—You are paid for a full week's work if you put in fifty-eight hours? A.—Yes.

Q.—You say the Typographical Union have black-listed men in this town? Would you tell us the reason? A.—I could not go into the details of that fully as I am not a compositor myself.

Q.—You don't know, then, what the particulars were? A.—The particulars were they were called out and the men didn't go.

Q.—And they were black-listed for remaining in. Is that it? A.—Yes.

Q.—You have no females working at the business? A.—No.

Q.—Have you any children working at it? A.—No.

Q.—Do you know anything of the operation of the Mechanics' Lien Law? A.—No, sir.

W. R. JAMES, Printer, St. Catharines, called and sworn.

By Mr. HEAKES:—

Q.—You have taken some interest in trade matters in this town? A.—Yes; I have.

Q.—Have you anything to offer in connection with the printing trade? A.—No.

By Mr. KERWIN:—

Q.—I would like to hear your opinion with regard to this plate matter. Just give us your opinion with regard to the importation of it into those offices. Does it keep a certain amount of work out of the hands of the men? A.—I think so; I think without plate more compositors would be employed.

By Mr. HEAKES:—

P.—Has the introduction of plate matter decreased the wages of compositors? A.—Full wages were never paid in St. Catharines, except by the *Journal Printing Company*, until the *Star* started; but, to the best of my knowledge, they have been paying union wages. Other shops don't pay union wages.

Q.—You don't know that the plate matter has worked injuriously, except by taking a certain amount of work from the men? A.—No, sir.

Q.—Do you know of any black-listing in the printing business? A.—No.

Q.—You are a member of the Typographical Union? A.—Yes.

Q.—You know of no black-listing? A.—No.

Q.—Do you know anything of the factory laws which now exist? A.—I have not paid much attention to that; I have a little.

Q.—Do you think those laws are sufficiently stringent to protect working people? A.—I think if the law was enforced at the present time it would answer the purpose pretty well; they have hardly had time to get it in working order.

Q.—Do you know anything of the lien laws? A.—I have paid no attention to that.

Q.—They don't cover your business? A.—No.

Q.—Are there such things as iron-clad contracts in St. Catharines? A.—I think it is pretty well done away with in St. Catharines.

Q.—Do you know whether workmen in St. Catharines, at times, have to take orders on stores, instead of cash? A.—I find they do; they do it in the printing business.

Q.—Do you know if it preys to any extent? A.—Not to a great extent.

Q.—Have the men ever protested against it? A.—Well, I don't know whether the men working in those places have protested against it. They protest against it in the union.

Q.—Are these orders paid to the men at the request of the men at any time?  
 A.—I think not; men would prefer getting cash.

Q.—You don't know whether the men who receive those orders go to their employers and ask them to accommodate them in that way? A.—No; I do not.

By Mr. KERWIN:—

Q.—Have those men who get orders just to take what the order asks them?  
 A.—Yes.

Q.—They will go and take an article they really don't want? A.—They have had to do that, but not of late years.

Q.—They may buy an article which they don't like? A.—Yes; they may take it at a certain store.

Q.—But if they had cash they might buy it cheaper? A.—Yes; and buy a better article.

Q.—Does the truck system prevail in St. Catharines to-day? A.—No; it does not prevail; it is the exception.

By Mr. HEAKES:—

Q.—Have you any child labor in St. Catharines? A.—Very little; there is some in large factories, but it does not amount to a great deal.

Q.—Do you think many of the children who are employed are under thirteen years of age? A.—I cannot answer that.

Q.—Now, about female labor—do you know if there are any large numbers of females employed in shops? A.—No; excepting the tailoring business.

Q.—Have you any knowledge of the prices which are paid women in the tailoring business? A.—Well, I cannot call over the figures for sure. I was mixed up with the matter of submitting a price-list to the bosses lately; but female labor is away below that of men.

Q.—Do you know the average weekly earnings of the women? A.—You could not average very well, because they do not work steadily. Some girls will earn \$10, \$11 and \$12 a week, but have to take work home and work to ten or eleven o'clock at night. Other weeks they will not earn anything. Some will probably earn only a few dollars a week, while those working as high as sixteen hours a day will get \$10, or \$11 or \$12. A sister of mine, by working eighteen or twenty hours, has earned \$16. They have to do the work at a certain time; they are just told that, and they have to do it.

Q.—Do they make shop goods here? A.—Not a great deal.

Q.—Have you any over-alls? A.—While the Welland Canal work was going on, and there were many laborers, we had a good deal, but not lately.

Q.—What prices did women get for making them? A.—I don't know; it was a hard competitive price. There was a man who got the work done and he employed the girls. It was a sort of sub-contract. There was a good deal of grumbling at the time, but as trade was not organized we took no interest in it specially.

Q.—Are there no women employed as shirt makers? A.—Only a few.

Q.—Do you know anything about prices? A.—No; I don't. The great trouble is we can't get women organized. If you ask one what she is getting she will tell you far astray; one will tell you one thing and another another. Each one wants to make out she is getting as much as another, and she tells you more than she is actually getting; so it is impossible to get at the price.

Q.—During the time that you have been connected with labor organization have you ever given the subject of the settlement of disputes between capital and labor any thought? A.—I have given it a great deal of thought.

Q.—What do you think would be the best means to adopt to avert strikes? A.—I think if the Government were to appoint arbitrators, and refer all cases to them, it would be best, because men would be appointed who were not interested and supposed to know the business, and would give a just decision.

By Mr. KERWIN :—

Q.—It would be hard to get a man to understand all the trades? A.—I suppose the Government would appoint three or four, or a dozen—enough to let the parties decide who would take hold of it.

By Mr. HEAKES :—

Q.—Would you prefer the Government to nominate the members of the board, or leave the selection to the parties to the dispute? A.—I think when the parties nominate, one they each nominate a partisan, and it is really left to one man; so I think it would be better the other way.

Q.—Do you know of any law at present providing for arbitration? A.—I believe there is a law in some of the old countries, but I am not acquainted with how it works.

Q.—You have seen the Ontario Act? A.—No.

Q.—Do you think that an Act which would not give arbitrators power to decide the rate of wages and hours of labor would be of any use? A.—No, sir.

Q.—What are the chief causes of disputes between capital and labor? A.—Well, disputes arise from different causes. They arise sometimes from bosses trying to grind men, to force too much work from them—more than they are able to stand. Other times they arise through not paying sufficient money. There are different causes.

Q.—Frequently the wage question is connected with the dispute? A.—Yes; that is generally the question it arises from.

Q.—You have been for some time in the ranks of organized labor. What is the effect of organized labor on the working people? A.—The effect of it throughout this section has been to increase wages and reduce the hours of labor.

Q.—Have they conferred any other benefits on the people? A.—I don't know if there are any other benefits. Morally, I think we have improved the working people. We have brought into our organizations, wherever we have had an opportunity, temperance and morality, and I think it is carried out to a great extent.

Q.—You have never seen anything in those organizations which would tend to demoralize the people? A.—No.

Q.—Have you ever found in them a spirit of antagonism to employers? A.—No, sir. In answering that question, there are a number of people who are antagonistic to employers at all times, but I mean the general mass of the people.

Q.—I mean of the principles of the organization? A.—No, sir.

Q.—You have no workmen's co-operative societies here? A.—No.

Q.—Do you know if fining of employes prevails in St. Catharines? A.—I never heard of one being fined yet.

Q.—Any Sunday labor? A.—Not to any extent.

By Mr. KERWIN :—

Q.—What is it principally confined to? A.—Any factories doing repairing, cleaning boilers, &c.

Q.—And the railroad business? A.—That is what we call a necessity, though it could be done without. We have found it convenient sometimes.

Q.—If you could not get in on Sunday, you would get in on Saturday? A.—Yes.

Q.—Now that you know you can come on Sunday you don't come on Saturday? A.—Yes.

Q.—Have you ever given the subject of technical education in the public schools any consideration? A.—No.

Q.—Have you any opinion on the subject which you would like to express? A.—No; not on that subject.

Q.—There are no building societies on the mutual plan in St. Catharines? A.—No.

Q.—Do you know if immigration has displaced many working people in St. Catharines? A.—It has displaced a few.

Q.—To any extent? A.—Well, I cannot say to any extent, because it lowered wages, and when they found wages were lowered they took steps to prevent them introducing more of them. It has been the means of lowering wages in that way.

Q.—What particular class of work do you refer to? A.—The laboring class.

Q.—Was that during the construction of the canal? A.—Yes.

Q.—Leaving the construction of the canal out, are you of the opinion that immigration is injurious to the interests of the working classes? A.—Immigration of the laboring classes is injurious to the working classes. Immigration of mechanics, especially aided immigration, is injurious.

Q.—You have no knowledge of how many immigrants came in here last year? A.—I have read, but I don't remember the figures.

By Mr. KERWIN :—

Q.—What percentage of them have remained here? A.—There are a number brought to this country who go to the other side, because they cannot find work, and a great many are aided here.

By Mr. HEAKES :—

Q.—What class do they belong to? A.—The labor class especially.

Q.—Do you know if labor organizations in this section are favorable to the establishment of a bureau of statistics? A.—No resolutions have been passed, but from discussing it with men who take a leading part, I think they are favorable to it.

Q.—Do you not think it would confer a benefit on the working classes if statistics were published annually? A.—I think it would be a benefit. The great trouble with bureaus of that kind is if they take up a political idea they would be an injury instead of a benefit.

Q.—Have you any knowledge of the working of those bureaus in the United States? A.—No; I have read a little of them, but not to any great extent.

Q.—On the question of prison labor, can you give us any suggestions as to the best mode of dealing with that? A.—I have heard it discussed, and have discussed it very often, but never could come to a satisfactory conclusion.

Q.—If a system was encouraged whereby the Government was to do all manufacturing, and place the goods on the market at market prices, and any profit which would accrue from the sale of goods to be given to the families of convicts, do you think it would be a satisfactory solution? A.—That is a hard one. Sometimes the families of the convicts are as bad as the convicts. Wouldn't it be better to give the surplus to our charitable institutions?

Q.—That is just a question, of course. I want to get your idea upon it? A.—I would not be in favor of that. Sometimes the parents of those convicts would be the people who would receive the benefit, and they are sometimes the cause actually of the prisoners' punishment, in being brought up in that way.

Q.—Leaving out of the question the disposal of profits, do you think that a system such as I have outlined—that the Government should do the manufacturing and sell the goods at market prices—would be the solution of the prison labor question? A.—No; I don't think they should sell the goods at market prices, because they would come in competition with free labor. The profit would be larger, because the goods are manufactured cheaper.

By the CHAIRMAN :—

Q.—Can you tell us what should be done? A.—I have discussed it for some time, but I never could arrive at a satisfactory solution.

By Mr. HEAKES :—

Q.—On the question of prison contract labor? A.—I am opposed to it.

Q.—Is there anything else of interest to the trade you would like to put on record? A.—There are some of our factories employing boys. Of course, they

are not under the age. They employ them to run machinery, which is injurious, and in a very little while we find a boy with a finger cut off, sometimes a boy killed, and in my opinion I think it is a shame. It is caused by neglect of the employer.

By the CHAIRMAN :—

Q.—Was that boy killed since the Factory Act came in force? A.—No; not that one, but several have had hands and fingers taken off.

Q.—Has there been any complaint to the Government? A.—No; I think not. The great trouble is that when they meet with an accident, while many are willing to lend assistance and bring it before the Government those who are injured are not willing, for some reason or other.

Q.—What class of machinery are those boys put to work at? A.—Running different kinds of mills.

Q.—Planing mills? A.—Yes.

Q.—Shapers? A.—I don't know such machines.

Q.—Principally wood-working? A.—Wood and iron workers.

Q.—What age would those boys be? A.—Fifteen and sixteen, thereabout.

By Mr. KERWIN :—

Q.—How long would they be working there before being allowed to take charge? A.—I could not say positively; I could only say from hearsay.

Q.—They are asked to do so by employers? A.—Yes; they are compelled to work to support a family. The first job which turns up they are obliged to take it. After they have run a machine for a little while they think they are master of it, but after a while the machine masters them.

By Mr. HEAKES :—

Q.—Do you think co-operation could be successfully introduced in business? A.—It might in larger cities; I don't think it could in smaller places.

W. B. BURGOYNE, St. Catharines, printer, manager of the *Star*, called and sworn:—  
In regard to the use of plates principally—I differ from some of the statements made here to-day, as I read them in evidence, although I was not here. Of course, I do not approve altogether of the use of plates, and yet I think sometimes they can be used with advantage to the trade and without injury to the printers employed in the business. In our case—our paper is the one referred to by one of the witnesses this afternoon, where he stated a paper was started a year ago, and after three or four months began to use plate matter—we had it as a matter of convenience at that time, and afterwards, when the Typographical Union introduced a clause in their scale of prices which, in effect was intended to prohibit the use of plate, we dropped it for a time, and afterwards introduced it again on Saturdays, and Saturdays only, making a supplement to our paper. We used it in the supplement only, for some time, until the Typographical Union called out the men in our employ, and only one man left the composing room because of that difficulty, and while his place remained vacant we used an extra quantity of plate matter. We would have used it only on Saturdays had he been left at his case and his employment not interfered with. Very little plate would be used in our place to-day if he had been left at his place. Plate can be used as a benefit. Perhaps you have come across it in your investigations. There is a class of advertisements offered to printers at different seasons of the year, and particularly at this season of the year, from patent medicine houses and other houses, at a rate of advertising perhaps 75 per cent. of that asked by local men; and publishers, when advertising is slack, are tempted to take this class and continue them on during the year. I have in my office to-day a letter from a house offering an advertisement for eighteen months, which I refused, on account of its low price. I prefer to use plate matter for the benefit of the readers rather than take advertising matter at this low rate. In that sense I consider I am not injuring printers.

By the CHAIRMAN :—

Q.—You mean, if you did not get this plate matter you would publish advertisements? A.—Almost necessarily. We would probably do as 90 per cent. of the publishers in towns of this size do, where rates are not maintained firmly. So I have refused quite a number of these patent medicine advertisements because of the rates which we are offered, preferring to fill the columns up with plate matter. Of course this is cost to the office. The offered advertising would pay a revenue, even if a small one, while plates are actually an expense. We never reduced the number of compositors or expense in the composing room because of the plate matter.

Q.—Now you use it only as a weekly supplement? A.—That is the way we used it after the men were called out, but now we are using it every day, because a number of advertisements run out on the 1st of January, and until business improves we are using more than we otherwise would.

Q.—New advertisements are much scarcer now than they are during the holidays? A.—Yes; every publisher finds that.

Q.—In summer time you have more new advertisements than in winter? A.—Yes; but from the 1st of March there will be an increase in the number.

By Mr. KERWIN :—

Q.—Isn't there a large profit on that plate matter to you? A.—There is profit in the matter, if we were to pay the regular price of composition, yet there is a just limit to which the employer can go in his composing room and make profit to himself. We have employed as large a number of compositors in our office when there was no trouble in it as any other office in town, and we felt that in doing this we were inflicting no injury upon the employés. We have given employment there to a number of printers at the going rate of wages, and of course wages were increased at the request of the men.

By Mr. HEAKES :—

Q.—Previous to the introduction of this plate, didn't newspapers in small towns have one side of the paper printed in cities? A.—Yes; in many cases; but not daily papers. Prior to the manufacture of plate matter there was a great business done by the manufacturers of what was called patent insides or outsides, and one side of the paper would be supplied to the publisher completely printed at small cost, comparative to the actual cost of the paper; but of course the publisher had control of only two pages out of four. I consider that the privilege of the publisher to obtain plate matter in columns, just as he wants it, is a benefit to the publisher in a place where he was using patent matter.

Q.—If the introduction of plate matter became general wouldn't it, to a large extent, displace composition? A.—I do not think it will ever become so general as really to displace any considerable number of printers; I doubt if it will displace any. I believe it is a fact to-day there are more printers employed in the country because of the introduction of plate matter than there were previous, or than there would have been if plate matter had not been introduced.

By Mr. KERWIN :—

Q.—What kind of literature is in this plate matter? A.—General literature, as a rule, but there is also general news, such as the Central News Company, Toronto, gives, which furnishes six columns a day of news.

Q.—Where do you generally get those plates from? A.—We get ours from Buffalo.

Q.—Sometimes aren't there stories of a rather small, trashy sort in it? A.—No; I don't think so.

Q.—I have heard of such things with regard to the plates in Buffalo? A.—I don't know that in our experience we have come across any literature of that sort.

By the CHAIRMAN :—

Q.—No immoral literature? A.—No; I have not come across anything of that kind.

Q.—Nothing is objectionable about it on the ground of immorality? A.—No; we have never heard any objection of that nature.

By Mr. KERWIN:—

Q.—You consider plate matter a benefit to you and no disadvantage to the printers employed? A.—Yes.

Q.—And it will not eventually do away with any printers? A.—No; I think not. There is another feature of this plate matter. I think it will probably have a tendency to decrease the number of apprentices in the printing business. There are a large number of apprentices in the country. A number of offices turn out men who are not efficient compositors. It is easy to learn the case, and in a few months a boy can attain quite a speed, and goes off, because he thinks he can get more wages.

The Commission then adjourned, to meet at 2 o'clock on Tuesday in Toronto.

KINGSTON, 30th January, 1888.

JAMES VOLUME, Shoemaker, Kingston:—Has been twenty-one years in Kingston, and one year in Toronto. Wages are from \$6 to \$10 a week, almost all piece-work. All custom and no factory work; ten hours constitute a day's labor. Know of only two females at sewing machines at \$3 per week who work ten hours per day. There are apprentices who have some kind of agreement, and who are required to serve four years. Wages are paid every Saturday; thinks that Saturday should be pay-day. There is no truck system in Kingston. Mechanics with family of three pay rent of \$5 to \$8 a month for a comfortable house. Quite a few shoemakers own their own houses; some have made money in California. Cannot say how long it would take a mechanic to buy his house at \$8 a week wages. He would have to live economically to save \$2 per week; it would take ten years. Shoemakers are steadily engaged, except in January and February, when they work part of the time. Cost of living about the same the last five years; house rent a little dearer; wages about same during that time. I think purchasing power of a dollar to be the same, except from Boston and Rochester, where they can be bought cheaper. The shoemaking trade is partly organized; I don't know that the trade has benefited by it, and it has been organized for a year.

JOHN DODS, Steamboat Engineer and Machinist, Kingston.—I have been nineteen years a machinist, and thirteen years of that in steamboats and in propellers. The tariff of wages is \$65 per month, and \$70 if all season, and travelling expenses to places where boat is fitted up. My own wages are higher, and I work by the year. All passenger boats, and all freight boats over 150-tons, require certificated engineers. The inspector of boilers is bound to see that engineers have certificates. I rather think the inspector here is too particular. Steamers are inspected every twelve months, usually before the opening of navigation. I went out in November on a new boat; it was inspected; the certificate will be good for twelve months. I believe hulls of steam vessels are well examined. There are no organized engineers here. If the men require it they will be paid every month; I could get money as fast as earned. When owners of vessels have failed the seamen have generally lost their wages. I am satisfied with my wages; I have no grievance, matters being fair and times good. I work by the year and receive higher wages than \$70 per month.

WARDEN LAVELL, of the Kingston Penitentiary:—I have been warden for the last three years, and for thirteen years before that was surgeon. The following is the distribution of the convicts:—

Carpenter gangs.....	45
Blacksmith shop.....	25
Stone-cutters.....	61
Mason gangs.....	32
Quarrying gang.....	36
Tailor shop.....	42
Shoe shop.....	24
Bakery.....	6
Farm and gardens.....	31
Engineer's gang.....	16
Laborers, stone-breakers, orderlies, domestic work, such as washing, cleaning, &c.....	174
Hospital.....	8
Insane ward.....	30
Women.....	23
	553

Many are employed in domestic service. There are thirty in the criminal asylum, and nineteen are used as orderlies, while thirty are occupied in the wash house. When men come in, if I find a skilled man, I generally apply him to the kind of work in which he was engaged. I should say that two-thirds of the men are of the laboring class, without any previous trade. Up to date, this month, we have received thirteen men, nine of whom are laborers, one a farmer, one baker, one carpenter and one painter. For the previous six months, 1st July to 1st January, of eighty-one men only seventeen were mechanics, and of these seventeen mechanics I question if one was a skilled workman, in the sense we talk of skilled labor. About two-thirds of the men are under thirty years. I think 11 to 12 per cent. of criminals are sent back to us. Of the thirteen men above mentioned one is over thirty and four under twenty. I believe we send out men worse than when they came in, unless they are taught intelligent labor, fitting them for future usefulness. Confirmed criminals are not those trained to some useful occupation. There is no contract system. About a year ago the system came to an end; it was in force then owing to a five years' contract. That was the only contract, and it was for block-making. The work done is for our own use, except, on rare occasions, for other men. We make no work but such as we require. We could do more work. A few months ago I received an order for twenty-five convict suits for the North-West. I think the percentage of work done in the penitentiary is so small that it would not perceptibly affect free labor. The compensating advantages in having men prepared to work is much greater than any loss arising from competition. We have no machinery, except that absolutely necessary. We make our own machinery, and boilers when we have men fit to do so, &c. Manual labor should be used when possible. I think it has advantages, as it gives more work and there is less competition. We use very few agricultural implements. The farm contains 120 acres. We use ploughs and harrows; our roots are put in with manual labor. We only use implements that we cannot dispense with. We have a mower, but no reaper. I am of opinion that all efforts should be made to reform. We have a planing machine, circular saw, and things of that kind. We have trade instructors who employ men at machinery who have not been accustomed to it. Accidents are exceedingly rare. If a man were to lose a hand at machinery we put him in hospital and give him work. When I was surgeon, and when there was more machinery used than now, I do not remember a case where a man was seriously injured by work on machinery. It would be a matter for the Government to decide whether compensation should be given in the case of an

accident. In some instances a given portion of work is given to prisoners. No remuneration is given to prisoners. When put out of jail men are sent back to the place where they were tried, travelling expenses are paid, and the warden is authorized to give money up to \$20—it is seldom I give \$20—a complete, respectable suit of clothing and under-clothing; a complete outfit is also given the man. I am not partial to the contract system; it is all for the contractor; prisoners now come less in competition with free labor. I am now employing prisoners outside to keep them at work. If I had work inside it would be less expensive and better for prisoners. I think remunerative labor for the Government is the best. I prefer that to labor bringing competition with free labor. There are 1,800 convicts in Joliette, Illinois; calculations there, brought down mathematically, show one-half per cent. of the prisoners come into competition with free labor. I believe the country would be in a worse condition from maintaining prisoners idle than allowing competition; I can hardly find words to express what I think of keeping prisoners in idleness. The general opinion of all wardens whom I met in the United States is in favor of intelligent labor. In Sing-Sing, after convict labor was abolished, there were 700 in absolute idleness, and about the same number in Auburn. The prison authorities were crying out against breaches of discipline. I think it unjust that prison authorities should be expected to maintain discipline when prisoners are idle; no moral authority can be used, and they leave the prison worse and more vicious. The prisoners now work in these jails on what is called "State Account"—that is, the men work at various trades and the product is sold on State account. It seems fair that prison goods should be labelled as such. I think that a portion of the profits should go to prisoners, as it would have a tendency to encourage them in hopefulness. It has been suggested that these earnings should go towards restitution, but I don't think that could be successfully carried out. I am not aware of any convict product being sold in this city. The great difficulty in not coming into competition is to find Government work. I believe that prisoners should be employed working for the penitentiary. We have several prisoners under seventeen; one of eighteen came in this morning; under sixteen, in Ontario, they are sent to the reformatory. If I had 100 convicts more than I have I would not know what to do with them. I don't approve of any plan by which any part of the Dominion would be made a penal colony. I would not place prisoners where they could be black-balled by any community. I know several who learned trades in the penitentiary who have done well. I meet them often—carpenters, moulders, and others of various trades. I believe they are as competent as the average man. I met a man at Niagara Falls who had been seven years in the penitentiary; he was doing well, working as a joiner. He had a family, and spoke in grateful terms of his treatment here. The man had told his employer of his former conduct, and I saw the employer, who stated that he was hard-working, and one to be trusted. He was one of those who became criminal by accident (by drink). *i. e.*, one of those who have been made tools of and misled. The confirmed criminal does not touch liquor; he never reforms. Prison work is at this season of about eight hours a day. Prisoners are locked up at a quarter past five; they have to be all in before any are locked up. The women do domestic work, and sewing and knitting for prisoners, and also make their shirts and drawers. I think that we could successfully manufacture blankets for the mounted police. The Government might give us all the work we can do, such as militia clothing, &c.

HENRY BAUDIN, Farmer, of Pittsburgh:—I grow hay and barley. Barley opened at 55 cents and rose to 72 and 73; there is a great difference in the local market, owing to want of competition; I sell every thing in the local market. Apples are my principal fruit; I have sold some for export. I have nine acres in orchard—about 1,000 trees; it is a young orchard. Fruit-growing is on the increase. Farmers in this vicinity sell in Kingston. I am three miles from the city. There is a scarcity

of fit men for agricultural purposes. I use what machinery is necessary—mowers and reapers; I have no binder. Every spring there is a number of farmers who apply to the immigration agent. We have not had a good class of laborers for some years; for the last ten years the majority has not been of a good class. The majority of agricultural laborers drift to the city; they very seldom come back to the farm. I know a few who have gone to the free-grant lands; they were invariably good men, who had no trouble to keep their places, because farmers wanted them; they are making a comfortable living from their own farm, and working in the bush in winter. The monthly wages of a good farm hand is \$16, with board; and without board, with wooden house, vegetables and milk, \$200 to \$250 per year. There is no limit for work; I have worked eighteen hours per day, and worked cheerfully.

By Mr. ARMSTRONG:—

Q.—Suppose a man has got six hours to rest, what can he do to improve his intellect? A.—He has a long winter to study in. Harvest is a busy time; we work eighteen hours. The men are compensated. Work generally is from sunrise to sunset. Machinery has displaced labor to a large extent on well-cleared farms. The self-binder has not done away with many men in this section, but where binding has been used it displaces four men in the field. I have conversed with immigrants. On 2nd January I overtook a young man lightly clad; he had just come out of Kingston hospital. He came out last spring from Dublin. He said he had a good situation in Dublin, and was advised by an immigration agent to come to Canada. He was deceived. If I had no machinery I could not raise produce so cheap. The tendency here is to enlarge the farms, so as to make a cheap use of machinery. Hay is my most profitable crop for the outlay.

ROBERT BAIRD, Carpenter, Kingston:—I have worked as journeyman for fourteen years. The wages are \$1.75 per day for carpenter and joiner, one man in fifty may get \$2 for ten hours. We have to contend against men from the country; they get \$1.25 a day. The average number of working days is, from 1st April to 1st November, ten hours per day; and from November to April, shorter hours; we are paid by the hour; we work in summer fifty-nine hours and are paid for sixty hours. Carpenters are not organized to a great extent, and not organized enough to make labor trouble. I cannot say that where labor is organized there is less trouble. I have known wages to be cut down in the fall, when hours are shorter. Organized labor would likely have prevented this. I know an average man to be out of work. Union men are better informed as to wages. There was a carpenters' society; it never got very strong. There is not much machinery in the shops; the contractors do not use much; they get their supply from mills. Laborers are sometimes put on to work on planers, but there is generally a foreman in charge of machinery. Planers are not as dangerous as others. A carpenter's shop is generally cold in winter. As a general thing, wages are higher in the United States and cost of living about the same. In Watertown \$8 would be paid, instead of \$6 here, per month. The wages of a carpenter there would be \$2 to \$2.25, as I have heard. There are very few apprentices here; boys will go from one employer to another; the introduction of machinery has a good deal to do with that. Quite a few journeymen carpenters own their own houses. Many of them built their own homes after work hours. It would require one quite a while to build a house out of his earnings; and I believe convicts should be employed on Government work. Wages are lower now than they were six years ago; rent is higher.

JOSEPH WILD, Painter, Kingston :—A brush hand gets from \$1.25 to \$1.50 per day; the last is standard wages for fifty-nine hours per week. There is employment for seven months. I started out about the end of April and worked to within two weeks of Christmas. I have worked since then on odd jobs. I am fifty-two years old; my wages have been reduced on account of my age. I have been nine years in Toronto. I think that Kingston is about the worst place for painters. The painters are not an organized body as such; they are connected with other building societies. I believe that the organizations of laboring men are beneficial and necessary, but I believe that if left to themselves the employed and employers would go together better. Canadian workmen are not so united as the English. I only know of two or three painters who have come from the old country; immigration has not interfered with us. Apprenticeships are not common here. I don't think four years is sufficient for an apprentice; it ought to be seven years, as in England. Canadians will employ a boy who can merely use the brush. As a rule, the Canadian is not equal to the English painter. Canada is a better place than England for any kind of workman. I don't believe that painters get a fair share of wages for their work. Rent and fuel are very serious matters in Kingston.

W. G. KIDD, Inspector of Schools, Kingston :—I have been inspector for twelve years. There is not sufficient accommodation for schools; a large building was erected last year. All the schools are occupied; we have not refused admission to any child. A teacher above the third class should not have more than forty scholars. We have not established a kindergarten; we may have one this year. The school laws say that children of three years may be admitted; I think that four years is quite young enough. We do not give technical instruction, but we are giving more practical education, and more fitting for those who have to work, and more useful in every-day life. The children are taught what they ought to know. There is a good deal of work, which, although considered unnecessary, is useful in training the mind. I think that anything which will teach the child to observe will do him good. From what I have read, the teaching of the Hebrew Technical Institute of New York would do good here and would not interfere with the ordinary education. In some school buildings the rooms are rather small; in the new buildings they are larger, and proper attention is paid to ventilation and heating. The smaller rooms are occupied by younger children, and they ought not to have more than thirty-five occupants; they sometimes have more. The average attendance is about 1,800, and we have about 2,000 attending at times. I speak of the public schools only. The whole school population is 5,065, from five to twenty-one years; this includes all schools, collegiate and otherwise. The head schoolmaster gets \$1,000; others, \$600; females, from \$225 to \$600. The head master trains young teachers for three months. The female teacher gets a first-class certificate, B; the headmaster, A. Male teachers get a higher salary; they are all principals. Females do not get as high a salary as the men; the latter have more work to do. One female teacher gets \$450; another \$475. I think they will get higher salaries if they succeed. Our school board supplies children who appear to want books. It would be an advantage for the schools if books were supplied by the board, and I think in some cases the children would remain longer at school, and particularly those in the higher classes. I remember one or two telling me last year that they were taking away their children on account of the price of books. We have no night schools—we had them two years ago and found them useless; there are private night schools; the working class did not take advantage of the night schools. A class of girls, taught by women, was successful for one year. We have a mechanics' institute and a free library in Kingston; the latter is successful. I do not approve of the class of books generally read. The library connected with the public school is free to all public-school rate-payers. I believe that there is a good deal of light reading taken out of the mechanics' institute; I think a Saturday afternoon holiday would give more time for reading. The school library is open from 10 to 11 every day, and on Tuesday and Saturday afternoons.

A. P. KNIGHT, Rector of Collegiate Institute:—The number of subjects now taught in the common and secondary schools of the Province might be lessened, and in place of these more prominence might be given to free mechanical drawing, to modelling in clay, working in wood and sewing for girls. I mean that these studies might be made the means of mental training as well as having a practical value—in other words, the education should be two-fold—the education of the mind as well as of the senses—the training of the hand and of the eye chiefly, and sense of touch also. The kindergarten does give prominence to these in a limited degree, but I think the training of the senses in our public high schools should be greater. Drawing and writing do this partly now. In the secondary schools more prominence should be given to science, physics, chemistry and other kindred sciences. The women ought to be taught cookery, sewing, &c. The teaching of history and geography might be curtailed. I think it would be a good thing to supply the children with school books. Very few children of mechanics go to the institute, on account of the fees and expense of the books. The institute gets a Government grant. I prefer the school books to be bought by the municipality rather than they should be supplied by the Province. There is not a uniform fee for the collegiate institute. In the New England States and in New York the board supplies books to the public schools. I suppose that the difference of fees in the institute is owing to a difference of opinion in the several localities.

KINGSTON, 30th January 1888.

GILBERT JOHNSTON, Engineer, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you worked as an engineer in Kingston? A.—It is fifteen or sixteen years since I first started steamboating here.

Q.—Is it in connection with steamboat engineering that you wish to give evidence? A.—No; I am at present foreman of the Transportation Company in Kingston.

Q.—How many men have you got under your control? A.—About ten.

Q.—What wages do you pay to the first-class men? A.—About \$2 a day; they range from \$1.75 to \$2 a day.

Q.—Are they constantly employed? A.—Yes.

Q.—What are the number of hours a week they work? A.—About fifty-nine hours.

Q.—Is their work paid by the week or by the piece? A.—They are paid by the day—by the hour.

Q.—I presume a single hour lost is deducted from the wages earned during the week? A.—No; it is not; they are paid for sixty hours during the week.

Q.—Have you any apprentices in your business? A.—Yes.

Q.—How long do they serve before they become competent journeymen? A.—Four or five years.

Q.—Are the apprentices indentured? A.—No.

Q.—Is it the wish of the men that the apprentices should be indentured? A.—I would not like to express the opinion of the majority of the men on that matter.

By Mr. CARSON:—

Q.—Is that your opinion? A.—I don't see that it would be a very great advantage.

By Mr. ARMSTRONG:—

Q.—Would not the indenturing of an apprentice, for, say, a period of five years, have a tendency to make a young man more steady in his habits and ultimately turn him out a better journeyman? A.—I don't believe it would; I don't think the fact of a boy being indentured would alter his position, so far as that is concerned. I believe it lies altogether with the young man himself.

Q.—Under the indenture system is not the employer compelled to teach a boy the trade? A.—I expect he would be compelled.

Q.—He would not consider himself compelled, I suppose, if the boy was not indentured? A.—Yes; but it lies with the young man altogether whether he gets a proper trade or not; if he is able to learn it he gets it, as a rule.

Q.—Is it not the place of the foreman to see that a young man who has intellect and talents enough to learn the trade should become familiar with it? A.—Yes; he should see to it.

Q.—Do you not find that some boys are much more apt at the business than others? A.—Yes.

Q.—What do you pay indentured apprentices to the business first? A.—About \$1.50 a week.

Q.—How old might they be when they can learn the trade? A.—They run all the way from fourteen to eighteen years.

Q.—Do you take any under fourteen? A.—No; I don't think that we have any as young as fourteen.

Q.—After the boy serves his time do you keep him on as a journeyman? A.—Yes; as a rule.

Q.—Do many of your men stay with you for a length of time? A.—I am not in a position to speak, so far as that is concerned, as I have only been foreman since last July; but I may say that a great many of the men have been there fourteen or fifteen years, while others have been seven, eight or nine years.

Q.—Are the men paid weekly, fortnightly or monthly? A.—Weekly.

Q.—In cash? A.—Yes; in cash.

Q.—Is there any day of the week upon which they prefer to be paid? A.—They are paid on Friday night, which they consider the most desirable for them to be paid.

Q.—Have you given the question of profit-sharing any thought? A.—No; I have not. Do you mean a co-operative system?

Q.—No; not exactly the co-operative system. I mean the payment to a man of his wages and also a profit made by the firm, by which a man will become more saving and take a greater interest in the business? A.—It depends not on the number of years but on a man's own industry and carefulness as to what salary he gets.

Q.—Have the wages in your business increased during the past few years, or have they decreased, or are they stationary? A.—The rate of wages has not increased in my estimation.

Q.—Can you tell us if the cost of the necessaries of life has increased during the past few years? A.—From my own experience. the cost of living has been increased.

By Mr. McLEAN:—

Q.—In what way? A.—By higher tariff.

Q.—How do you mean by higher tariffs? A.—Well, the revenue has to be got in some manner or other.

Q.—Does it cost any more for house rent than it did two or three years ago? A.—I don't know; I have not paid house rent in ten years.

Q.—You are not a married man? A.—Yes; I am.

Q.—Do you board? A.—I happen to own the house I live in.

Q.—Does it cost any more for board than it did two or three years ago? A.—Well—

Q.—Say five years ago? A.—On the whole, I believe it does cost more.

Q.—Why does it cost more to board. How much did you pay for board five years ago? A.—I did not pay anything for board; I have always been unfortunate enough to have to board others for the last ten years.

Q.—Do you pay more for groceries than you did five years ago? A.—Yes; I believe so.

Q.—What goods are higher? A.—Tea will be higher.

Q.—How much higher—what would you give for tea? A.—The number of

brands is so great that I cannot tell you; but this I know, that in our house we know one year after another what things cost, and of late years it has been a little higher. Whether we have been more healthy and have eaten more or not I am not prepared to say. As regards the exact cost of dry-goods, I am not in a position to give it.

Q.—Did you pay more for a pound of beef five years ago than you do now?  
A.—I don't believe so.

Q.—Do you pay more for a pound of sugar now? A.—I think the line is drawn very finely there. The grades are so far apart that I am not able to tell you what a particular grade was five years ago.

Q.—Is clothing dearer now than it was five years ago? A.—Yes; I believe so.

Q.—What would a suit, take a good tweed suit, cost five years ago? A.—You could get a good tweed suit for about \$15.

Q.—What would you pay now for a good tweed suit of clothes? A.—I am not here to say my views as to what the cost of silks, and cottons and teas is.

By Mr. ARMSTRONG:—

Q.—Do any of your men belong to labor organizations? A.—I believe they do; a great many of them do.

Q.—Does your establishment make any difference between unorganized or organized labor? A.—Not any.

Q.—Do you think organized labor is a benefit to the engineers? A.—The engineers are not organized; if they were the case should be different with them.

Q.—How—to their benefit? A.—Yes; I think it would be so.

Q.—Have you had any labor strikes here lately? A.—No.

Q.—Suppose that a difficulty should occur in your establishment, how would you like to have it settled? Do you approve of the principle of arbitration? A.—Yes.

Q.—To the best of your knowledge, do you think that a bureau of labor statistics for the Dominion would be beneficial to the laboring classes? A.—I believe it would be.

Q.—What, to the best of your judgment, is the sanitary condition of your shop?  
A.—It is in a fair condition.

Q.—There are no complaints about it? A.—Not that I know of.

Q.—Has the factory inspector visited your shop? A.—Yes.

Q.—Is there any Sunday labor down there? A.—None.

Q.—Is there any fining of employés in case they are late to work? A.—If they are late one hour they lose one hour's pay; if they are late half an hour they lose half an-hour. They are paid for the work they do.

By Mr. McLEAN:—

Q.—How are they paid for over-time? A.—They sometimes work from seven to ten o'clock; there is half an hour for supper. They get half a day for working to ten o'clock.

By Mr. CARSON:—

Q.—Have you ever worked on the other side of the river, in the United States?  
A.—No; most of my time has been spent in steamboating, until last year or so.

By Mr. McLEAN:—

Q.—Do you know anything about workingmen's co-operative societies? A.—I do not.

Q.—Do you know anything about convict labor—does it interfere with your business in any way? A.—I think convicts should be obliged to earn their bread; in what way it should be done I am not able to tell you.

Q.—What should they do? A.—Convicts should not be kept in idleness, I think, but I am not prepared to say what they should do.

Q.—Do you believe in work being given out on the contract system, or do you believe in the Government taking hold of it? A.—I think the Government should handle it.

Q.—You have not given very serious consideration to the matter, I suppose?  
A.—No.

By Mr. ARMSTRONG :—

Q.—Has immigration affected the engineering industry in Kingston? A.—Not in any way.

Q.—Do any of your men own the houses in which they live? A.—Some of them do; I think the majority of them do.

Q.—Have they earned money with which they bought the houses by their own wages? A.—Yes.

Q.—As to the prices of property, have lots, such as workingmen would like to buy on which to put up houses increased in price during the past few years. A.—They have.

Q.—Have your men paid for their houses? A.—I expect they have; I don't know exactly in what position they are in the matter. I own my own house.

By Mr. McLEAN :—

Q.—How long would it take a workingman before he would be able to buy a lot and put up a house? A.—I think a great deal depends on his own habits and the helpmate he has.

By the CHAIRMAN :—

Q.—Particularly the latter, I suppose? A.—Yes; most likely.

By Mr. CARSON :—

Q.—Can you give us any information on this point: provided a mechanic in Kingston had his own lot, and wanted to borrow \$1,000 with which to put up a house, what interest would he have to pay for the loan of that amount. A.—I consider he could get the money for 6 per cent.

By Mr. CLARKE :—

Q.—When you held the position of engineer on the steamboat I suppose you were obliged to take out a certificate? A.—Yes.

Q.—What is your idea as to the desirability of having examinations for stationary engineers? A.—They should be examined, I think; that is my opinion.

By Mr. ARMSTRONG :—

Q.—You think they should hold certificates from the Government? A.—I think so.

By Mr. McLEAN :—

Q.—Is the man who runs the engine in your shop a skilled engineer? A.—No.

Q.—Is he a boy, or what? A.—He is a young man.

By Mr. ARMSTRONG :—

Q.—You believe, then, that stationary engineers should be just as competent as steamboat engineers? A.—No; I don't think that they should go as strong as that; but such a system would help to raise the standard of the men, and would enable them to help themselves, as it were.

By Mr. CARSON :—

Q.—While you were engineering on a steamboat did you ever hear any complaints from the men engaged on those boats about the boats being unseaworthy—in other words, did you ever consider that the boat on which you were was unseaworthy? A.—That is a rather peculiar question. I have often been out on a steamboat when I would rather have been on shore.

By the CHAIRMAN :—

Q.—The question was, whether the boat was fit to go to sea or not? A.—It is just for that reason, because I think that sometimes a more seaworthy boat would have been a little more safe just then.

Q.—Do you know anything about sailing vessels? A.—No; not very much.

By Mr. ARMSTRONG:—

Q.—Have you any information to give the Commission that will be a benefit to the Government in connection with your line of business? A.—No; nothing particular. In connection with steamboat engineering, I may say that the Government a short time ago passed a law to the effect that any man might run a tug of any size. I think they made a mistake in that case; it helps to put inferior men in these positions, and there are some very large tug boats on the lakes. If the men were subject to an examination it would help to keep up the standard.

By the CHAIRMAN:—

Q.—You think that tugs of a certain size should have certificated engineers?  
A.—Yes; a tug of any size should have a certificated engineer.

SAMUEL ANGROVE, Pattern-maker, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are employed as a pattern-maker in the foundry here, I believe? A.—I am in the locomotive works at the present time.

Q.—Do you receive steady employment? A.—Latterly we have.

Q.—Generally speaking, are you employed throughout the year? A.—Yes.

Q.—What are the weekly wages of a pattern-maker? A.—About \$2 a day for a good man.

Q.—Is \$2 the outside limit? A.—At present.

Q.—And what is the lowest rate of wages? A.—About \$1.75 a day.

Q.—Are there many pattern-makers employed at the locomotive works? A.—I have four men working there at the present time. I don't suppose they served their time as pattern-makers, but we are using them as such.

Q.—How are the men in your establishment paid—weekly, fortnightly or monthly? A.—Fortnightly.

Q.—Are they paid in cash? A.—Yes; they are paid in cash.

Q.—Are the men, or any of them, ever garnisheed for debt? A.—Sometimes they are.

Q.—Do you think that if the men were paid weekly it would do away with the garnisheeing, to a great extent? A.—I don't think it.

Q.—Will you give us your reasons for holding that opinion? A.—My reason for saying so is this: I believe if a man wishes to pay his debts he can pay them fortnightly as well as he could weekly.

Q.—Do you not think it would be more convenient for a man and his family if he were paid weekly, so far as marketing is concerned? A.—So far as our men are concerned, no doubt we would do so if they wished.

Q.—You would do so if the men desired such a change? A.—Yes; if they wished it.

Q.—Have any of your men desired to be paid weekly? A.—They applied to be paid fortnightly—they used to be paid monthly—and they got what they wished.

Q.—And they consider it is an improvement to be paid fortnightly instead of monthly, which was the old system? A.—They consider so.

Q.—Are the men ever discharged because they are garnisheed? A.—Not that I am aware of; I never knew a case of it.

Q.—When a man is discharged from the locomotive works of Kingston is he required to get a certificate of good conduct and good workmanship from the works before he can take his next place? A.—There have been applications for that, and the men have got certificates. I don't think it is a usual thing with us for men to make application.

Q.—Will your company employ men without asking for a certificate of character and workmanship from the last locomotive works where they worked? A.—Yes.

Q.—Has there been any labor difficulty lately in the locomotive works? A.—There was during the last summer.

Q.—What was the nature of the difficulties? A.—I think it was a difference about wages.

Q.—Did the men apply for a raise in wages? A.—I think so.

Q.—What was the action of the company in that respect? A.—The company did not think they would pay it at the time.

Q.—Did the men strike? A.—They went on strike.

Q.—Before they took that extreme measure did they propose to arbitrate in the matter? A.—I cannot answer that question; I don't know.

Q.—That is to say, you don't know? A.—I am not thoroughly posted in regard to it.

Q.—What was the result of that strike—how did it end? A.—It did not amount to a great deal, I think, in the long run.

Q.—Did the men get what they desired? A.—In some cases I think they did; not all through.

Q.—Were the men who went out on strike taken back to work again? A.—I think some of them were; others got employment at other places and did not come back.

Q.—Did the company refuse to take back any of those who were leaders in the difficulty? A.—I think not; matters were settled so that every thing was arranged all right.

Q.—Is the company opposed to employing men who belong to labor organizations? A.—I think not.

Q.—It is not a question whether a man belongs to a labor organization or not? A.—No questions are put of any kind.

Q.—It is simply a question of competency? A.—Yes.

By Mr. McLEAN :—

Q.—Was foreign labor brought here at the time of the difficulty? A.—No.

Q.—Are locomotives, as a general thing, manufactured here for Canada? A.—I think so.

Q.—Are there many locomotives manufactured here? A.—I think there is one business besides our shop.

Q.—Are there many locomotives manufactured here? A.—Quite a number.

Q.—How many would you turn out a year? A.—We have turned out fifty-two.

Q.—I suppose the trade fluctuates, and is not steady all the time? A.—It is not steady.

By Mr. CARSON :—

Q.—How long have the locomotive works been in operation here? A.—I have been here since 1870; the works were in operation a good many years before I came here.

Q.—Since the time you have been employed here have the works been extended and have the company taken on more men? A.—They have.

Q.—Has the establishment been greatly extended? A.—It has.

By Mr. McLEAN :—

Q.—Did you ever work in the United States? A.—I never did.

Q.—Did you ever work in England? A.—I never worked outside of Kingston.

By Mr. CARSON :—

Q.—You were always satisfied with Canada? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Are there any pieces of locomotives imported? A.—Not manufactured pieces. There used to be some brass work, such as mountings, but I think they are all manufactured in Canada now.

By Mr. CARSON :—

Q.—Are you a married man ? A.—I am.

Q.—Do you hold the same views with respect to the cost of living as were held by the last witness—do you think you can live cheaper or dearer now than you could formerly ? A.—It does not cost me any more to live now than it did five years ago, any way.

Q.—Do you think you can live just as well, or better ? A.—Just as well.

Q.—Are your wages higher than they were ? A.—Yes.

Q.—How much higher ? A.—Twenty per cent.

By Mr. CARSON :—

Q.—From your knowledge, are the working classes in Kingston on as good a footing as they are in any place else of which you are aware ? A.—I think they are, so far as Kingston is concerned.

By Mr. McLEAN :—

Q.—You do not know what wages are paid outside of the city ? A.—Just from hearsay.

By Mr. ARMSTRONG :—

Q.—Have you any further information you could impart that would be of benefit to the Commission ? A.—No; I don't think I have.

RICHARD McMILLAN, Piano-maker, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—Has your business as a piano-maker increased in volume during these past ten years ? A.—No; in Kingston it has not. It has in the country all through.

Q.—Do you mean in the Province ? A.—Yes.

Q.—Are there as many pianos imported into Kingston now as there were some years ago ? A.—No.

Q.—Can you speak in that regard for the entire Province ? A.—I could not speak for the entire Province, but I know that for Kingston there are not.

Q.—Are there more men employed at the piano business to-day than there were five years ago ? A.—No; not in our shop, there are about the same number.

Q.—Do you know the reason ? A.—The reason, I think, is that competition is greater in the country. There are now about seven shops in Toronto where there was only one at that time, and in other places shops have been established.

Q.—What are the wages of a first-class polisher in Kingston ? A.—I do not know exactly what they pay here; I think about \$2 a day, or something about that figure.

By Mr. McLEAN :—

Q.—Can you give us the average earnings of a man in the piano factory, taking all the hands through ? A.—That would be a hard matter to do, because the largest part of the men work piece-work, and you cannot average men on piece-work. A man might make twice as much in one fortnight as he would in another. His earnings are in accordance with the quantity of work he has to do, and sometimes the factory is not run at full blast.

Q.—Do any women work at the business ? A.—No.

Q.—Do any boys ? A.—A few boys; I could not say how many. They are not boys exactly, for they are fifteen, sixteen, seventeen or eighteen years of age.

Q.—Is there much machinery employed in your factory ? A.—Yes.

Q.—Has it a tendency to lower wages ? A.—No; it lowers the quantity of work, but not the wages, according to the work you do.

Q.—Has the factory inspector been through your factory ? A.—I think there

was an inspector through it about a year ago, a Government inspector of some description.

Q.—Did he find everything satisfactory? A.—It seemed so at the time.

Q.—In your estimation, is the machinery in the factory properly protected? A.—I think so; if a man is careful I don't think there is any danger in it.

Q.—There have not been any accidents? A.—There has been a slight accident happened, but it was through carelessness. It did not amount to much.

By Mr. ARMSTRONG:—

Q.—When the factory inspector was passing through your factory had he any conversation with the men? A.—No; I think not; only with the foreman.

Q.—Did he go through in company with the employer or foreman? A.—Yes.

Q.—Did the men know that he was the factory inspector? A.—Some knew it, those to whom the foreman imparted the information.

Q.—After he went out? A.—Yes.

By Mr. CARSON:—

Q.—When he was passing through your factory did he closely examine the different machines as if he was taking an interest in them? A.—Yes; I have been told so.

Q.—Would you be willing to work nine hours a day for nine hours' pay? A.—I work ten hours.

Q.—Supposing your hours were cut down to nine, would you be willing to accept nine hours' pay? A.—No.

Q.—You would rather work ten hours for ten hours' pay? A.—Yes.

Q.—Have you ever worked in any other country besides Canada? A.—Yes; in the old country.

Q.—How do you think the working classes in this country compare with the working classes in the country where you were formerly employed? A.—They are a long way ahead of them as regards comfort, and as regards everything else.

Q.—You are in a good deal better circumstances here than in the old country? A.—Yes; certainly.

By Mr. McLEAN:—

Q.—How do the wages compare? A.—The wages are nearly double, that is for a good man. Of course, there are some rates of wages which go down as low as they did there.

By Mr. ARMSTRONG:—

Q.—You believe the shortening of the hours of labor has a tendency to elevate the intellectual standing and social condition of the workingman? A.—I believe it would. The workingman would have more time to himself, and if he were fond of reading he could improve himself.

Q.—Do you believe the workingmen in Kingston, so far as your knowledge goes, would appreciate a shortening of hours, and would use the time for their own benefit? A.—No; I don't think they would, not the generality of them. I think they would put it to a very poor advantage, a great many of them.

Q.—Do you believe that a man, putting in a long, arduous day's work, is more liable to get intoxicated in the evening going home than if he had a few hours more in the evening, from his time of work being shortened? A.—I don't know; that is a question that would be very hard to answer.

By the CHAIRMAN:—

Q.—He need not become intoxicated at all, I suppose? A.—He need not. But I think if you will allow men to go out and run around the streets one or two hours before the regular time for stopping work had come they would be very apt to fall in with friends and get a little off, which he would not do if he had his regular full day's work to attend to. That is my idea of it.

Q.—You believe it would be a benefit to the working classes if they just went from bed to work and from work to bed? A.—No; I can find time enough from 7 o'clock in the evening till 9 o'clock to do all I require, and then I can go to bed. I can read the newspaper, I can read a book, I can go out and walk around a while, if I wish to do so, and so on, and that is all I require. I consider the money I can earn in that extra hour is more useful to me than an extra hour would be.

By Mr. CARSON :—

Q.—Do you think the moral standing of the working classes will compare favorably with that of any other class of society? A.—I do.

By Mr. ARMSTRONG :—

Q.—Do you mean to say that when a man leaves off work at 6 o'clock he can go home and have his supper and clean himself up and have plenty of time? What time do you think it would be when he had got cleaned up? A.—He can go home, if it is not too far, he can get his paper and be cleaned up by 7:30 o'clock. He can afterwards go out and walk around for an hour or an hour and a-half, if he wishes, or if he has any other business to attend to, and he can go in and sit down and read his newspaper to 9 or 9:30 or 10 o'clock, and then he can go to bed; and he has lots of time.

JOHN MCNEIL, Iron Moulder, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—You are a stove moulder, I believe? A.—No.

Q.—Are you a machine moulder? A.—Yes.

Q.—Is it by piece-work or by day-work that machine moulders are employed in Kingston? A.—By day-work.

Q.—How many hours per week do they work? A.—About fifty-nine hours per week.

Q.—What would be the average rate of wages of a machine moulder? A.—The average rate of wages would be about \$2 a day.

Q.—Can you give us the average rate of wages of an agricultural implement moulder? A.—No; I don't think I could; they generally work at piece-work.

Q.—Are stove moulders employed on piece-work in Kingston? A.—Pretty much so.

Q.—How are plate moulders employed? A.—On piece-work a little; some time ago they used to work day-work.

Q.—Will you tell us the average number of weeks in the year a machinery mill works? A.—So far as our establishment is concerned, they work pretty steadily all the year round; sometimes the men lose a day some weeks.

By Mr. CARSON :—

Q.—If so, they do it voluntarily, I suppose? A.—Certainly.

By Mr. MCLEAN :—

Q.—There is no shutting down of the works? A.—No; not unless there is a panic or slackness of trade.

Q.—Did you shut down any this last year? A.—No.

By Mr. ARMSTRONG :—

Q.—Has machinery moulding increased in volume during the past few years? A.—No; I don't know that it has; it stands about the same.

Q.—Are there any apprentices at the trade? A.—Yes.

Q.—What might be the age at which apprentices go to learn machinery moulding? A.—Fifteen or sixteen years.

Q.—What is the length of service you consider that a boy should serve in order

to become a proficient journeyman? A.—I think it necessary that a boy should serve five years in order to get an insight into the trade.

Q.—Is five years the standard? A.—No; not here.

Q.—In what manner are the men paid? A.—They are paid fortnightly.

Q.—Are they paid in cash? A.—Yes.

By Mr. McLEAN:—

Q.—Are they paid the full amount of their wages? A.—Yes; the full amount.

By Mr. ARMSTRONG:—

Q.—Have you ever heard any talk about the men preferring to be paid more frequently? A.—No; I have not; they seem to be satisfied.

Q.—Do they work over-time? A.—No; not in our department. Some may work an hour or two during the busy season.

Q.—Do you know anything about their social condition, whether they live comfortably? A.—I believe they do.

Q.—Have you worked in any place outside of Kingston? A.—Yes.

Q.—Where? A.—I have worked in a good many different places throughout Canada and the United States.

Q.—What is the difference between the wages paid in Kingston at the present time and the wages paid in a city of the same population on the other side? A.—I am not prepared to answer that question, for I do not know the rate of pay in other cities. There are higher wages paid in other cities than here—that is, to some men.

Q.—Do you think the moulder in Kingston receives a proportionate share of the products of his labor? A.—I think they do, that is if the standard of wages of other mechanics in the city be compared with the standard paid to the moulders.

Q.—That is in comparison with other trades in the city? A.—Yes; with other trades.

Q.—Do you consider that the moulders are as well off to-day as they were five years ago, as regards living and every thing else? A.—I think they are; there may be a very slight difference.

Q.—What is the sanitary condition of the shops in which the men work? A.—They are pretty fair.

Q.—Are the shops not comfortable in the winter? A.—I cannot say that they are very comfortable.

Q.—Have you known the men to be laid up with throat and lung diseases on account of the heat and cold in the shops? A.—No; I don't know much about men being laid up through cold.

Q.—Do you think the men would appreciate baths if they were introduced into the factory? A.—I am not sure; I could not answer that question. It would greatly depend on the men themselves. If the men wish to have a bath it would be very convenient; some would wish it and others would not.

By Mr. McLEAN:—

Q.—Do you think, as a general rule, they would take advantage of a bath-room if there was one there? A.—In the summer season they might, but I don't think they would in the winter, because moulders are generally warm when they get through their work and their clothes are damp from the extreme heat, and so on. If the men took a bath and put on the same clothes it would not be an advantage; of course if they had a change of clothes it would make the men a little more comfortable.

Q.—Don't the moulders suffer a great deal from steam that arises when they take castings out? A.—In the winter season they do, especially if the shop is not ventilated properly.

Q.—Do they suffer much from what they call blind staggers? A.—No; not in our department. It has occurred in some shops in which I have worked; but where I am working at present it is a well ventilated shop.

Q.—Have they suction fans? A.—No; we have fans, but we don't use them for that purpose.

By Mr. ARMSTRONG :—

Q.—For what are the fans used? A.—They are used as blasts for the furnaces.

Q.—They are used for the benefit of the employer and not for the comfort of the men? A.—It is necessary to have those fans in order to get through the work.

Q.—Do you not think it necessary to have fans to take away the dust when the men are working? A.—I think the proper ventilation of the shop is necessary for that purpose. If it was a low, dark shop a fan would be a benefit.

By Mr. CARSON :—

Q.—What class of machinery does your concern turn out—wood-working or iron-working machinery? A.—Iron-working machinery, locomotive castings principally, and general work.

By Mr. McLEAN :—

Q.—Have you ever given the subject of convict labor any thought? A.—Yes; I have. I think it is something that should be abolished out of the country.

Q.—What would you do with the convicts? A.—I would have them applied to the best advantage for the benefit of the Government. I would rather pay the equivalent to keep the convicts idle than see their labor compete with outside contractors.

Q.—Do you think the prisoners should be kept in idleness? A.—No; I don't think so.

Q.—You only object to their work coming into competition with free labor? A.—Yes.

Q.—Do you think they should be kept employed? A.—Yes; they should be kept employed.

Q.—At what should they be kept employed? A.—At any work that could be brought conveniently to them. For instance, if there were smelting works. For the present it would be a great advantage to keep the convicts employed there, and such would not interfere with outside labor to any account, for I don't think we have in Canada any smelting works, except one.

By Mr. ARMSTRONG :—

Q.—Do you think if there were smelting works in connection with the prison it would give more work to skilled industry in the iron trade? A.—Yes; I believe it would.

Q.—Have you any further information to give the Commission? A.—No; I have not.

EDWARD PERRY, Moulder, called and sworn.

By Mr. ARMSTRONG :—

Q.—What is your business? A.—I am a stove moulder and bench worker.

Q.—On piece-work, what would be the average rate of wages a moulder would receive? A.—I don't work piece-work, but day-work. Our wages every day of the week run from \$1.60 to \$1.85.

Q.—Are men in your shop employed throughout the year? A.—No.

Q.—Suppose that your wages were divided by, say 360 days, how much would they amount to per day? A.—I could not say exactly, because we have so much lost time at the beginning of the year; we only worked three or four days a week at the beginning of last year.

Q.—How many weeks in the year are the moulders employed on an average, to the best of your knowledge? A.—To the best of my knowledge, I should say about forty or forty-five weeks.

Q.—How many hours per week do they work? A.—When we get through <sup>we</sup> go home—may be nine hours, eight and three-quarter hours, or eight and a-half hours, as it happens.

By Mr. CARSON :—

Q.—When you get your blast off you go home? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Are there any apprentices at the stove moulding business? A.—Yes.

Q.—What may be the age of an apprentice going to the stove moulding? A.—  
There have been no apprentices taken on there lately; I should judge sixteen; <sup>some</sup> may be up to eighteen or twenty.

Q.—Is there a uniform time for an apprentice to serve at the stove moulding?  
A.—They are supposed to serve four years.

Q.—Are stove moulders organised in Kingston? A.—They are.

Q.—Do you belong to the International body? A.—No; to the national union.

Q.—Has immigration affected the stove moulding business in Kingston, to the  
best of your knowledge? A.—No; it has not, to any extent, in Kingston.

Q.—Can you speak for any other places in that respect? A.—No.

Q.—How are the men paid? A.—The men are paid weekly?

Q.—Do they prefer weekly payments? A.—Yes.

By Mr. CARSON :—

Q.—On what day are they paid? A.—They are paid on Saturday.

Q.—Would they not prefer Friday? A.—Not particularly myself.

By Mr. McLEAN :—

Q.—Are you a married man? A.—I am.

Q.—How does the cost of living now compare with the cost of living five years  
ago? A.—Five years ago I was on the other side.

Q.—How do the wages in your trade compare with the wages in the United  
States? A.—They are lower.

Q.—Take the wages in a city of the same size—take Oshawa, Galt, Guelph?  
A.—The wages in Kingston are lower than the wages there.

Q.—Are the wages in a city in the United States of the same size as Kingston  
higher or lower? A.—I never worked in a city in the United States of the same  
size as Kingston.

Q.—Do you own the house you live in? A.—I do not.

Q.—What rent do you pay? A.—Five dollars per month.

Q.—Do you know anything about the sanitary condition of the workingmen's  
houses in Kingston? A.—I do not.

Q.—What kind of a house would a man get for \$5 a month? A.—He can get a  
first-rate house here for \$5 a month; that is, he cannot get every thing, I suppose.

Q.—What kind of a house could he get for \$8 a month? A.—He could get a  
better one.

Q.—How many rooms? A.—I could not say.

By Mr. ARMSTRONG :—

Q.—How far from this place would a house be renting at \$5 per month? A.—  
I am living over one mile from here, or about one mile, I should judge.

Q.—Do you think stove moulders are receiving a fair proportion of the profit of  
the product of their labor? A.—Not the same as compared with other places.

Q.—With the same sized cities in Canada? A.—No; even taking larger cities.

Q.—Do you think the fact of the moulders being organized has a beneficial effect  
in keeping up wages in Kingston? A.—It has.

Q.—Do you think the wages would not be as high were it not for organization?  
A.—Yes.

- Q.—Are the employers of Kingston favorable to organization among workingmen?  
 A.—They don't say anything against it.
- Q.—Does your organization believe in the principle of arbitration? A.—No.
- Q.—In any kind of arbitration? A.—We can settle it among ourselves.
- Q.—You mean between the men and their employers? A.—Yes.
- Q.—Would your organization resort to arbitration before ordering a strike?  
 A.—They would.
- Q.—Is that one of the principles of the union? A.—Yes.
- Q.—Have you any knowledge of co-operative benefit societies? A.—Nothing whatever.
- Q.—Are there any other benefits connected with your organization? A.—There are.
- Q.—Please state what benefits there are? A.—Death and sick benefits.
- Q.—Is that a special branch of your organization, or is it a general rule that all members participate in these benefits? A.—All local unions have a sick benefit and a death benefit.
- Q.—Those benefits are derived just from the payment of the simple dues? A.—Yes.

By Mr. CARSON:—

- Q.—Are the men employed in your shop generally satisfied with their position?  
 A.—They are satisfied as workingmen.

GEORGE BONNY, Foreman Blacksmith, Kingston, called and sworn.

By Mr. ARMSTRONG:—

- Q.—At what branch of the blacksmithing trade are you employed? A.—At the locomotive works here.
- Q.—What is the average rate of wages blacksmiths receive in the locomotive works? A.—We run from \$1.50 to \$2.20 per day.
- Q.—Is that the standard rate of wages? A.—Yes.
- Q.—How many hours per day do they work? A.—Fifty-nine hours per week.
- Q.—Are they paid weekly, fortnightly or monthly? A.—Fortnightly.
- Q.—Do the men prefer that system? A.—They seem to like the fortnightly paying very well.
- Q.—Had they been paid monthly previous to that? A.—Yes; previously.
- Q.—The men's request for fortnightly paying was complied with by the company, I understand? A.—Yes.
- Q.—Have you worked at other places outside of Kingston? A.—Yes.
- Q.—Have you worked on the other side? A.—Yes; I worked on the other side for a short time; I have also worked in England.
- Q.—What is the difference between the wages paid blacksmiths in Kingston and the wages paid in a city of about the same size on the other side? A.—They are much about the same in cities of the same population—that is, where I was working on the other side, at Battle Creek, Michigan.
- Q.—Wages were about the same there, you say? A.—Yes.
- Q.—Is there any difference in the cost of living in the two places? A.—Things are cheaper in Kingston than they were there.

By Mr. McLEAN:—

- Q.—Is house rent cheaper? A.—Yes; and groceries are cheaper than at Battle Creek, where I was.
- Q.—How does the cost of living here compare with the cost of living in the old country? A.—It is cheaper in the old country.
- Q.—Do you get as good accommodation in the old country as you get here?  
 A.—Yes; I think so; a little better accommodation.

Q.—Are the wages higher there than here? A.—No; they are lower.

Q.—How much lower than here? A.—About 10 or 15 per cent.

By Mr. ARMSTRONG :—

Q.—You consider, then, that a blacksmith in Kingston is as well off as a blacksmith in the United States or the old country? A.—Yes; they are better off than what they are in the old country.

Q.—And how about the United States? A.—It is so in regard to the one place where I was working. I could not say in regard to other places.

By Mr. McLEAN :—

Q.—Was that a locomotive shop? A.—It was a repairing shop.

By Mr. ARMSTRONG :—

Q.—Can you tell us the wages of a blacksmith's helper? A.—The average wages here, I think, are from \$1.10 to \$1.15—some of them more and some of them less.

Q.—Are the helpers paid by the company or by the blacksmith? A.—By the company.

Q.—To your knowledge, can a man live comfortably in Kingston, pay his house rent and support his family on \$1.15 a day? A.—I could not say.

Q.—You have no knowledge as to that matter? A.—No; so far as regards their average, I think it would be about \$1.18 or \$1.19.

Q.—Do you think he would have to exercise very strict economy in order to be able to support his family on that pay? A.—Yes; I do.

Q.—Are there any apprentices at the business? A.—One.

Q.—What was his age when he first went to work? A.—Sixteen.

Q.—Is the work laborious work? A.—Not over laborious work.

Q.—What would an apprentice receive the first year? A.—Three and a-half cents per hour, 35 cents per day.

Q.—I suppose apprentices generally board at home? A.—Generally.

Q.—What would be the rate of rise in his wages from year to year until he had completed his time and become a journeyman? A.—His wages would rise 20 cents a day for every year.

Q.—How many years would he have to serve before he would be recognized as a journeyman? A.—Four or five years—four years.

Q.—Have you got any further information that would be a benefit to the Commission? A.—None that I know of.

RODGER GREER, Laborer, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—What kind of a laborer are you—do you work for the corporation or for the contractors? A.—I have worked for masonry contractors, for the last five years.

Q.—You are, in fact, a builders' laborer? A.—Yes.

Q.—Do you work by the hour or by the week? A.—We work by the hour from the 1st of January to the 1st of May, and from the 1st of November to the last of December.

Q.—How much per hour does a laborer receive? A.—The highest rate is 12½ cents per hour.

Q.—And what is the lowest rate? A.—The lowest is 10 cents per hour.

Q.—Then there are two grades? A.—Yes.

Q.—Can you give us the rate of wages paid to laborers who do corporation work? A.—I think they run from 65 cents to a \$1 a day. There are a few at \$1.25.

Q.—Do they receive that, as a general rule? A.—Yes.

Q.—Do you know that for a fact? A.—Yes.

Q.—How are the corporation laborers paid, weekly or fortnightly? A.—I think they are paid once a fortnight, to the best of my knowledge?

Q.—Did they ever petition the Board of Works in this city to be paid more frequently? A.—Yes; they have asked them, but they did not get it.

Q.—They were refused? A.—Yes.

Q.—What is the condition of the laborers? A.—Nominally poor.

Q.—Are the builders' laborers organized in this city? A.—A good part of them are at the present time.

Q.—Do they find it a benefit to themselves to be organized? A.—Yes.

Q.—Do many of them own homes? A.—Not many.

Q.—Can you give us a general idea of the comforts of their homes? A.—It is very easy to estimate the buildings when you consider the amount of money they receive.

Q.—I suppose they have no bath-room? A.—Not likely.

Q.—Are the builders' laborers and the skilled artisans in the building trade as socially connected with each other here as they are in other cities? A.—Yes.

Q.—Do you find immigration affecting the laboring classes in Kingston, such as builders' laborers? A.—Yes.

By Mr. McLEAN:—

Q.—How does it affect them? A.—By over-glutting the market.

By Mr. ARMSTRONG:—

Q.—Do they offer their services at a less rate per day than the men who are here already? A.—Yes; or at least contractors pay them less, because they are, as a general rule, not competent men to do their work.

Q.—In connection with the building trade—take your branch: who erects the scaffolding for the buildings? A.—Generally, if it is a building of any extent, there is one man appointed for that purpose.

Q.—Is he appointed by his fellow workmen or by the contractor? A.—By the contractor.

Q.—Does he receive more wages than builders' laborers? A.—Yes.

Q.—On general principles, how do you find the scaffolding, is it secure and safe? A.—It is generally secure, so far as I have seen it.

Q.—Have you ever known an accident to take place in Kingston through defective scaffolding? A.—Yes.

Q.—Did the laborer who was injured apply for damages under the "Employer's Liability Act"? A.—No; I think the man injured was the man who erected the scaffolding.

Q.—That was the man who erected the scaffolding? A.—Yes.

Q.—Have the laborers ever lost any wages through the failure of a contractor, or from his leaving town? A.—Yes.

Q.—Do you say there have been laboring men who have lost their wages in that way? A.—Not many; there may be some half a dozen here one summer.

Q.—Have the laborers ever taken advantage of the Lien Act to recover their wages? A.—Once, that I know of.

Q.—How did they find the Act to operate? A.—On that occasion it did not go to court.

Q.—Was the amount paid to prevent it going to court? A.—It was a sort of a special contract job, and the owner paid the money rather than have his name appear in print.

Q.—And the lien was taken out? A.—Yes.

Q.—Did the laborer apply for a lien within thirty days? A.—Yes.

Q.—Have you any information that would be a benefit to the Commission in regard to your calling? A.—Yes; there might be a great deal done to benefit the condition of the working classes. There could be better sanitary conditions provided for working men's houses. There could be a better system in connection with the lien

law, because at the present time it is pretty much a dead letter, because workmen's claims under the lien law come under the general garnishee Act.

Q.—Then you believe the lien law is not satisfactory? A.—As it stands now.

Q.—In regard to the sanitary condition of which you have spoken: is that in connection with the tenement houses in Kingston? A.—Yes; that is in regard to the lower class of houses.

Q.—You believe they are not in a proper sanitary condition? A.—I do.

Q.—Is there a health officer in connection with the corporation of Kingston? A.—Yes.

Q.—You consider that officer does not do his duty in that respect? A.—He does his duty.

Q.—You consider there can be improvements made in these two matters, the Lien Act and the sanitary condition of the houses of the poorer class? A.—Yes; the lien law I consider a dead letter.

Q.—Do you speak the opinions of others besides yourself in this regard? A.—Yes; I speak from facts.

JOHN LITTON, Driller, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Tell us the nature of your business? A.—Well, sir, I am an iron driller in the locomotive works.

Q.—Are many drillers employed in the locomotive works? A.—Eighteen.

Q.—What wages do they earn? A.—From \$1.20 to \$1.30 a day.

Q.—How many hours a week do they work? A.—Fifty-nine hours.

Q.—Do many of the drillers save money—have many of them got their own homes? A.—So far as my knowledge leads me, there is only one who has his own home. He is a man without a family—that is, he has only his wife.

Q.—Did he earn what paid for that home out of his own wages as a driller? A.—I believe not.

Q.—Have you any knowledge of profit-sharing? A.—No.

Q.—Have you worked in other places besides Kingston? A.—Not at that business.

Q.—What business have you worked at in other places? A.—I was working as a general laborer before I was drilling.

Q.—In Kingston? A.—In the locomotive works.

Q.—What are the wages of a general laborer in the locomotive works? A.—They average \$1.10 a day.

Q.—Do you find that the cost of living in Kingston is greater to-day than it was five years ago? A.—Decidedly.

Q.—Could you tell us those necessaries of life that are dearer? A.—Meat, for one, butter and provisions that constitute the material for breakfast.

Q.—Has house rent increased? A.—Yes.

Q.—How much per cent. has house rent increased during the past five years? A.—About 20 per cent.

Q.—Have you known immigrants to affect the laborers in Kingston? A.—I believe not; the laborers are constantly coming and going.

Q.—Could you give us any information regarding the condition of laborers here as compared with the condition of laborers in the old country? A.—It is a decided improvement.

Q.—It is to the advantage of Kingston? A.—Intellectually and morally.

Q.—How is it financially? A.—And financially, too; that is, for those who are steady.

Q.—Do you find any intellectual improvement in the past few years in connection with the laboring classes in Kingston—I refer now to unskilled labor? A.—There is a little improvement.

Q.—Do you think that improvement would increase if the men worked shorter hours? A.—I believe it would.

Q.—Do you think that a decrease in wages would follow the shortening of hours of labor? A.—I believe not; I hope not, any way.

Q.—Do you believe that matters would be equalized in that respect? A.—Yes.

Q.—Have you any information that would be a benefit to the Commission with regard to the workingmen? A.—No.

By Mr. McLEAN:—

Q.—At what kind of laboring work were you engaged when you were in the old country? A.—I was a steam sawyer, what we call a lumber manufacturer here. The sawing in the old country is vastly different to the work in the lumber mill here. All the sawing there takes place by steam and is prepared for joiner work. There is less joiner work there made by machinery and more by hand.

Q.—What might a laborer get there in a saw mill? A.—I was not a laborer, but a steam sawyer. My wages there were 5 shillings a day.

ROBERT B. MCPHADDEEN, Boiler-maker, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Have you worked long at your business in Kingston? A.—Latterly, between nine or ten weeks.

Q.—What is the average wages of a boiler-maker in this city? A.—From \$1.50 to \$2 a day.

Q.—How many hours a week do they work? A.—Fifty-nine.

By Mr. CARSON:—

Q.—Is that in summer and winter? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Do they receive constant employment? A.—No; some do.

Q.—Take it as an average—how many weeks in the year are they employed? A.—The works have been shut down here for some time; they have only lately started up again, and how they are going to run now we don't know.

Q.—Does the work depend upon the number of orders the firm receive? A.—Yes; undoubtedly.

Q.—Are there any apprentices employed at the business? A.—I don't know of any in Kingston—that is, indentured apprentices.

Q.—Do you think that a boy having a technical education relating to mechanics would become, at the end of his apprenticeship, a better journeyman? A.—It depends entirely on the foreman as to what kind of a hand he is going to be. If he is an unscrupulous and overbearing foreman he will do more towards over-riding the boy than making him a good mechanic.

Q.—It depends, then, upon the foreman as to whether the boy turns out a good hand or not? A.—Entirely so.

Q.—Does it depend on the foreman to teach the boy his business? A.—Yes; it depends entirely on the foreman.

Q.—Are the apprentices indentured? A.—No.

Q.—How many years is a boy supposed to work before he gets to be a journeyman? A.—A boy who serves on an average four years becomes proficient.

Q.—What is the social condition of the boiler-makers in Kingston? A.—On the average, pretty fair. They compare pretty favorable with any other class of mechanics.

Q.—Have you worked on the other side of the line? A.—Yes.

Q.—What is the difference in the condition of a boiler-maker in the United States as compared with Canada? A.—There is a difference of about 20 per cent.

Q.—Do you mean an increase? A.—Yes.

Q.—In behalf of which country? A.—In behalf of the United States.

Q.—Do you speak from knowledge—comparing the cost of living with the difference in wages? A.—It depends entirely on where they are working. The expense is greater in a large than in a small city; for instance, the expenses in New York are greater than in Oswego.

Q.—Is there any difference in the wages received? A.—There is a slight difference.

Q.—Have you any knowledge of the condition of the boiler-makers in the old country? A.—No; I never was in the old country; but I am led to understand that a boiler-maker in the old country, who is a boiler-maker, can live as well as he can here.

Q.—Can you speak of the fact that immigration has affected boiler-makers? A.—Yes; I can, from personal experience.

Q.—Tell us in what respect? A.—Over-crowding the market.

Q.—Is that the only objection? A.—That is about all.

Q.—Do you find boiler-makers in the old country to work at lower wages than they do; a man, however, is generally paid according to his abilities.

Q.—Who is the judge of a man's abilities? A.—The representative between the employer and the workingman—the foreman.

Q.—There is no standard rate of wages paid boiler-makers among themselves? A.—No.

By the CHAIRMAN:—

Q.—I suppose among yourselves you know whether a man is a competent mechanic or not? A.—Yes; a man knows himself.

Q.—His fellow-workmen can soon tell whether he is competent, I suppose? A.—They can generally tell by a man's work whether he is a qualified mechanic or not.

By Mr. ARMSTRONG:—

Q.—Do the men generally know what each one receives? A.—Yes.

Q.—Have the men ever come to the conclusion that a new man, if he is a good hand, should receive larger wages than he received before? A.—I don't know that they did.

Q.—It has never come to the knowledge of the men that a certain man was working under wages, and that he should receive larger wages on account of his ability and efficiency? A.—I don't think it has.

Q.—Do you know if there is any truck system in Kingston? A.—No; not that I know of.

Q.—You understand what I mean—store orders, and so on? A.—Yes; I understand; paying by store orders instead of cash.

By Mr. CARSON:—

Q.—They pay you every week in full, I believe? A.—Yes; every two weeks.

By Mr. ARMSTRONG:—

Q.—Have you had any labor troubles here? A.—Not since I have been here.

GEORGE LEE, Piano-maker, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You have heard the evidence of the piano-maker a little while ago—Richard McMillan. A.—Yes.

Q.—Do you corroborate his evidence? A.—I corroborate most of his evidence.

Q.—Have you anything to add to it? A.—Nothing.

Q.—Can you give us the rate of wages for a polisher in Kingston? A.—I think in our factory it is from \$1.50 to \$2 a day.

Q.—Are there many polishers employed in Kingston? A.—I can speak for the factory where I am working; there are one or two.

Q.—What is the lowest rate of wages for a piano-maker? A.—We principally work on piece-work, and it is hard to judge what the average would be.

Q.—Have you any information to add to what has already been given? A.—None in particular.

Q.—Have you any information that would be of benefit to the Commission in regard to your branch of industry? A.—None, that I am aware of.

ALFRED PERRY, Machinist, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Are there many machinists in Kingston? A.—Yes; quite a few; I suppose some 180.

Q.—Do they find constant work? A.—No; one of the largest firms has been shut down for three years, and during that time the machinists, as a rule, had to seek work elsewhere.

Q.—How many hours per week does a machinist work? A.—Fifty-nine hours per week.

Q.—What is the average rate of wages paid machinists in Kingston? A.—The average rate of wages is about \$1.60 per day.

Q.—Is there any Sunday work? A.—Yes; for repairs.

Q.—Do men receive extra wages for that time? A.—A time and a-quarter.

Q.—Have you got any apprentice system of trade? A.—There is a kind of loose apprentice system; they are not indentured by the present system.

Q.—Do you think it would be a benefit to the boy, the journeyman and the employer, if the apprentice was indentured? A.—I do.

Q.—Will you tell us in what respect? A.—The principal reason is this: when a boy goes to learn the machinist business he works at it, probably, six or eight months or a year, and then there is some difficulty in the shop, or something of that kind happens, and he leaves his work; he loses the time he has been at it and he loses his trade also.

Q.—Are the men favorable to having the apprentices indentured? A.—I think so.

Q.—Did they ever request the employers to indenture the apprentices. A.—No; not to my knowledge. I may say that five years ago it was the regular system in the locomotive works to indenture the apprentices. Since they have opened up again they have not indentured them, so far as my knowledge goes.

By Mr. CARSON:—

Q.—Whose fault was it—was it the fault of the parents or the employers? A.—A.—I don't know whether it was the fault of the parents or the firm.

By Mr. ARMSTRONG:—

Q.—Are the machinists in Kingston organized? A.—Yes.

Q.—Are they organized as a distinct body by themselves? A.—They are in a distinct body by themselves.

Q.—Do they find any benefit from organization? A.—Certainly.

Q.—In what respect? A.—In the increase of wages, and also helping one another generally; it brings a more harmonious feeling among the men.

Q.—With respect to the apprentice system, do you think that a knowledge of mechanical drawing and a knowledge of all kindred subjects would be a benefit to apprentices going to the machinists' trade? A.—I should certainly say so.

Q.—Do you think there should be schools for imparting that knowledge, schools in which mechanics could be taught? A.—I do.

Q.—Do you think that it would be a benefit if such teaching were introduced into the common schools, to a certain extent? A.—I do. I think it would increase the

usefulness of the boy as a man. As it is, a boy goes into a shop to learn the trade and is as green as grass. If he had a knowledge of freehand drawing it would be a great benefit to him individually, or if he possessed a technical knowledge of any kind, or a knowledge of mechanical drawing.

Q.—Have you any knowledge of the wages received by machinists in the United States or the old country? A.—Yes.

Q.—Could you tell us the difference between the wages paid in these places and in Canada? A.—I should say that in the United States a man earns, on an average, 20 per cent. more wages than he does here. I can only speak for the large cities in the United States where I have worked. I have not worked in any city with a similar population to Kingston. I may add that the price of the necessaries of life are higher in the United States; rent and fuel are higher.

By Mr. CARSON:—

Q.—Take the condition of both: take the wages, and the comparative cost of living in both countries, and in which country would a man be on the better footing? A.—For a married man, I would say they are about equal; for a single man the conditions are considerably better in the United States.

Q.—Were you a married man when you were there? A.—No; I was a single man.

By Mr. ARMSTRONG:—

Q.—What are the conditions of a machinist in Canada and a machinist in the old country? A.—The condition of a machinist in the old country is, to my mind, quite equal to the condition of a machinist here. I differ from the previous witness in that respect. I have earned, and have had just as good wages in the northern part of England as I have had here. The cost of living is cheaper there in some respects than it is here; in other respects it is dearer; but on the whole I should say that the condition of a machinist in England is at least equal to that of a machinist in Kingston.

By Mr. CLARKE:—

Q.—You say you work fifty-nine hours per week: are you paid for fifty-nine hours? A.—We are paid for fifty-nine hours. We were paid for sixty hours, but some five years ago, during the stagnation in trade, that hour was taken from us. The other shops in the city pay for sixty hours and work fifty-nine.

Q.—They quit at five on Saturday? A.—Yes; and they are paid that hour in the other shops.

By Mr. ARMSTRONG:—

Q.—Do the men take advantage of their spare time to improve themselves? A.—Yes; I think so. There is a class of men, of course, who will get drunk, no matter what time they quit work, but as a rule the men seem to take some intellectual enjoyment if they can possibly get the opportunity of doing so.

Q.—Do you believe, on general principles, so far as your knowledge of the working class in Kingston goes, that if they had shorter hours they would take advantage of them for their own improvement, and for the benefit and improvement of their families? A.—I do. I believe it would be an advantage to workingmen physically and financially.

By Mr. CARSON:—

Q.—Would you be willing to work nine hours a day for nine hours' pay, or would you want the employer to pay for ten hours and you work only nine hours? A.—I would be very happy if he would do so; but still I would be willing to work nine hours, and receive nine hours' pay.

By Mr. ARMSTRONG:—

Q.—You consider that shorter hours would give employment to surplus labor? A.—I do. We have a number of men at the present time out of employment who would find employment if shorter hours were adopted.

Q.—And when all the men were employed you believe, as a consequence, the wages would rise? A.—I do. From my own experience in that regard, I have known that to be the case.

Q.—Things find their own level? A.—I have found that things find their level. I know places where I worked when shorter hours were adopted—for instance, the adoption of the nine-hour system in England; we soon had our pay the same for nine hours as we previously had received for ten hours. The statistics of the Post Office Savings Bank and all other banks proved that the people were a little more economical than they had hitherto been when they were working long hours.

Q.—Do you know if the mechanics of Kingston take advantage of the library of the Mechanics' Institute? A.—They don't to the extent they should do.

Q.—Do you think would it give a greater advantage if it was completely free? A.—I do; and I believe they would take greater advantage if the knowledge that there was such a library were widely diffused. There are a great many workmen in this city who do not know there is a mechanics' institute here at this present time.

Q.—Is there any mechanical teaching in connection with it, such as mechanical drawing classes? A.—Yes.

Q.—Are the lessons free? A.—No.

Q.—Do you think that the cost of going to these classes is beyond the means of mechanics here? A.—I certainly think it is beyond the means of apprentices; I don't think it is beyond the means of skilled mechanics, of journeymen. If there were better facilities for the apprentices getting a knowledge of drawing, and so forth, they would be more able to avail themselves of it.

Q.—Are there many mechanics who take advantage of the public school library? A.—No; that is the first knowledge I had of such a thing being in existence.

Q.—What is the nature of the literature that is read by the working classes in connection with the Mechanics' Institute library? A.—I could scarcely give you any idea as to that.

Q.—If you have any information that would be a benefit to the Commission or the Government, perhaps you will furnish it? A.—I am strongly in favor of arbitration; I know of no better way of settling a difficulty between the employer and the employé.

By Mr. CARSON:—

Q.—What system of arbitration would you like to see adopted? A.—A local system of arbitration. I certainly would not favor a board of arbitrators, because I don't think anyone outside of those interested in the grievances would have a full knowledge of the facts and be in a position to settle the difficulty.

Q.—Are you in favor of compulsory arbitration between the two parties interested? A.—Yes.

Q.—That they should be compelled to arbitrate by law? A.—Yes; I am in favor of arbitration in that way; but I am not in favor of a board of arbitrators appointed and sitting, we will suppose, in Ottawa, and sent from there here to settle disputes.

Q.—Are you in favor of the formation of a bureau of labor statistics for the entire Dominion? A.—Yes.

Q.—What benefits, in your opinion, would be derived from such a bureau? A.—It would diffuse knowledge among the workmen generally of the run of trade and condition of the people generally. I have read the reports of the bureau of statistics with great interest, and I may say that in the assembly rooms and elsewhere the men take advantage of these statistics. I have received information from them that I could not have obtained from any other sources.

By Mr. CLARKE:—

Q.—What bureau was that? A.—The Bureau of Labor Statistics for the Province of Ontario.

By Mr. ARMSTRONG:—

Q.—Have you any other information to furnish the Commission? A.—I have none

ROBERT CHARLTON, Foreman Boiler-maker, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You have heard the evidence of the last boiler-maker? A.—Yes.

Q.—Do you corroborate his evidence? A.—Partially so.

Q.—In what respect do you disagree with it? A.—Where he speaks about apprentices not receiving good training. I have been foreman boiler-maker in the locomotive works here for upwards of ten years, and I have been employed over twenty-two years, and I have turned out as good boiler-makers as you can get in Canada. Those who were apprentices with me are holding good positions throughout this country.

Q.—You disagree with the witness when he said that it lies entirely with the foreman to teach the apprentice his trade? A.—It lies a good deal with the boy himself.

Q.—How long would it take a foreman, knowing that a boy is competent to learn the trade, to teach him? A.—Probably six months.

Q.—When the foreman, sees that he is not fit for the business, and that it is likely not to be his calling, would he discharge the boy? A.—Not always.

Q.—What is your opinion in that respect? A.—The general rule in our branch of business is, that a boy will not learn the branch of trade unless he has some aptitude for it, unless he has some technical education.

Q.—You believe, then, that technical education would be an advantage to him? A.—Decidedly.

Q.—Have you any information to add to the evidence of the last boiler-maker? A.—No.

Q.—Have you any information to give the Commission in considering your trade? A.—No; not beyond what has already been given.

KINGSTON, 31st January, 1888.

SIMON OBERNDORFER, Cigar Manufacturer, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—How many factories manufacture cigars in Kingston? A.—There are two.

Q.—How many are there employed? A.—I don't know what the other factory employs; I employ from twenty to twenty-five hands.

Q.—How many men do you employ? A.—I employ six men, that is, over twenty years of age.

Q.—Are those the journeymen of your factory? A.—Yes

Q.—How many boys do you employ? A.—I employ five or six boys.

Q.—How many girls do you employ? A.—About ten.

Q.—What is the age of the youngest girl in your employ? A.—Past fourteen years of age.

By the CHAIRMAN:—

Q.—What is the age of the youngest boy? A.—The boys are from sixteen years up.

By Mr. ARMSTRONG:—

Q.—At what kind of work are the young girls employed? A.—They are employed at stripping tobacco.

Q.—How much wages do they receive at that branch of business? A.—The lowest wages paid is about \$2 a week. They are paid by the week.

Q.—Do you have any young women making cigars? A.—Yes.

Q.—Do they make as good cigars as are made by the men? A.—They make a cheaper class of work; I don't give them the same work that the men have.

Q.—Do they make the cheap class as well as the men could make them? A.—I don't depend much on the girls working—not so much as on the men's work.

Q.—Do you pay those young women by the thousand or by the week? A.—We pay them by the thousand.

Q.—How much do you pay them by the thousand cigars? A.—They only make a certain part of the cigar. One girl will make the bunches and another girl will roll them in. They will make from \$4 to \$5 per week, those who roll them in. They don't work so hard as the men do; they are not so ambitious; they could make much more than they do, but there is too much nonsense about them.

Q.—Do those young girls make cigars by the mould? A.—It is all mould work.

Q.—What are the wages made by your journeymen per week? A.—They can make from \$12 to \$15 per week.

Q.—How many weeks in the year are they generally employed in your factory?

A.—They are always employed, except during the two weeks in the year I close up for stock-taking, one week before January and one week before 1st of July. I have to give a strict account to the Government, and I have to wind up my business so that the Government can take stock on 1st July. I therefore take stock on 1st January to see how I come out with the Government.

Q.—Are the men employed fifty weeks in the year? A.—Yes; they are.

Q.—Are your men connected with organized labor, so far as you know. A.—No.

Q.—Have you got the blue label on your cigar boxes? A.—No.

Q.—Where do you generally find a market for your goods? A.—All over the country, between here and Ottawa, and then back to North Bay; I go as far as Hamilton and Port Perry, and all that section. I have two men on the road taking orders all the time.

Q.—Do you find any difficulty in selling your cigars at certain places, such as Toronto and other labor centres, because the blue label is not on the boxes? A.—I don't go as far as Toronto.

Q.—How many hours do the girls work in the week? A.—They usually begin at 7 and work to 6. They really work to 5:30, and then we clean up, so that they can get home at 6 o'clock. On Saturday afternoon, in the summer time, we close at 3 o'clock, so as to give them a chance to get out.

Q.—Do the girls and the men work in the one room? A.—The girls are in one part and the men in another.

Q.—Have you separate conveniences for both sexes? A.—Yes; certainly. I could not start without them; I find it necessary for my own satisfaction.

Q.—Do you take any young boys to learn the trade? A.—Yes.

Q.—Are those boys indentured? A.—Yes; for three years or four years, according to circumstances.

Q.—Do you think a boy can learn the cigar-making business in three years? A.—Yes.

Q.—You take it upon yourself to teach a boy his business properly? A.—Yes; I am bound by indenture to do so, and I always turn out good workmen.

Q.—What is the sanitary condition of your factory? A.—It is first-class.

Q.—Has the factory inspector visited it? A.—Yes; I have got plenty of ventilation and three large rooms.

Q.—When the factory inspector went through your factory did he speak to any of the men? A.—Yes; he made enquiries of them.

Q.—Was it in your company when he went through? A.—He was in company of my foreman.

Q.—He was well satisfied with what he saw? A.—He was well satisfied.

Q.—He expressed himself in that sense? A.—Yes.

By Mr. McLEAN:—

Q.—Has your business improved during the last five years? A.—Yes.

Q.—Has it improved in the last year? A.—I don't know; it is about the same; I sell as much as I did. I have to keep a tally for the Government to see how much I sell each month. I have gone back, and I see it is about the same amount this year as I sold last year.

Q.—Has the duty that has been placed on cigars helped you? A.—It improved the business; It has done away with imported cigars, from which we had a great deal to contend. I have been in the business twenty-five years, and I can say that we had a great deal to do when the duty was only \$1 per thousand—we could not compete with those cheap cigars. I could then buy cigars for \$4 a thousand and I could not manufacture them for that price.

By Mr. ARMSTRONG:—

Q.—What are the prices of your cigars per thousand, taking the different grades? A.—My price is, by the case, from \$17.50 to \$50, according to the different grades.

Q.—Do you find a good market for your cigars at \$50 a thousand? A.—We find a very good market; of course, I don't expect to sell so many of them as of the other cigars. It has been very fair, however, considering.

Q.—Of what grade do you sell the greatest quantity? A.—All the grades running from \$25 to \$30; that is a good quality of a 5-cent cigar by retail.

By Mr. McLEAN:—

Q.—Has the Scott Act interfered with your business to any extent? A.—It has hurt the business considerably. I must say that if they keep it on it will ruin the cigar business.

Q.—How is that? A.—The people do not use so many cigars. If they cannot get whiskey it appears that they will not smoke cigars.

By Mr. ARMSTRONG:—

Q.—You think that one stands in with the other? A.—I have first-class customers who buy a few, but business is not as satisfactory in this place as formerly. If the Scott Act had not been enforced in certain sections I could have sold 50 per cent. more goods than I now sell.

By Mr. McLEAN:—

Q.—How many more hands could you employ under such circumstances? A.—I could employ double the number I have at present. The condition of affairs is very much disturbed now. The men get fined, and they get discouraged and close up for a few weeks, and then they begin again; and this hurts the business.

By Mr. ARMSTRONG:—

Q.—Where do you get the tobacco you use in your factory? A.—From the United States.

Q.—Do you get all your tobacco from there? A.—There is another line, the finest, I get from Holland, Amsterdam. That is Sumatra, the finest leaf for wrappers.

By Mr. McLEAN:—

Q.—Do you ship your cuttings? A.—No.

Q.—What do you do with them? A.—I keep them. The older they are the better they are.

By Mr. ARMSTRONG:—

Q.—Have you had any labor troubles with your men? A.—No; never.

Q.—Are you opposed to employing men who belong to labor organizations? A.—No; so long as they work under the same rules. I want to be boss of my shop, and I intend to be so. I will dictate to my men, and tell them what I desire them to do and what I can afford to pay them, and I may say that my men have always been satisfied. The men who have worked with me have always been glad to stay with me.

Q.—Have the cigar-makers in this city a standard rate of wages? A.—No. I don't know anything about the other factory. I mind my own business.

Q.—You would have no objection to employing men connected with labor organizations if they applied to you? A.—No; not the least, so long as they did not interfere with my interests.

By Mr. CARSON :—

Q.—Do you not think if we had total prohibition both of the liquor traffic and the use of tobacco that it would be a benefit to the country? A.—I don't think it would be a benefit to me. If beer and wine were allowed to be sold, it would be a benefit to the cigar-makers in general. I suppose I am not the only cigar manufacturer who holds this opinion, but that you gentlemen have heard others tell the same story.

JOHN GASKIN, Forwarder, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—What position do you occupy in the Montreal Transportation and Forwarding Company? A.—I am outside manager.

By the CHAIRMAN :—

Q.—Where do the vessels sail from or go to? A.—They run from here to Montreal, sometimes Quebec, and to Lake Superior.

Q.—They run from Quebec to Lake Superior? A.—Yes; and most of the time from Montreal. Sometimes they go to Chicago and the upper lakes.

By Mr. ARMSTRONG :—

Q.—Do you employ many men? A.—The company with which I am connected employ in the summer season in the neighborhood of five hundred men—that is, men employed on the boats, and in the shipyards, and grain shovellers, and all that kind of work.

Q.—What wages do you pay grain shovellers? A.—Last summer grain shovellers were paid in the neighborhood of \$15 a week. Sometimes within my recollection they have made as high as \$40 in a week.

Q.—How many weeks would they find employment at that rate of wages? A.—The grain trade lasts probably in the neighborhood of seven months.

Q.—How many hours per day do they work? A.—Grain shovellers have no particular time. When there is a fleet of vessels in they work till the vessels are loaded. Sometimes they work twenty or twenty-four hours without stopping, and afterwards they don't work at all for another twenty-four hours. They work when the grain is here and when the company has barges to load, and we endeavor to prevent the boats being delayed. Sometimes they work even thirty-six hours.

Q.—I suppose they are not paid for the time they remain idle between the loads? A.—They are paid according to the amount of work they do; they are paid by the thousand bushels; the more they do the more they get paid. On the average they make from \$15 to \$20 a week, and to do that they have to work half the time. When they are shovelling grain on vessels they calculate to make from 60 to 65 cents per hour.

By Mr. KERWIN :—

Q.—Who makes the scale for them? A.—They make it themselves; there is a standard wage for discharging vessels.

Q.—Have the men ever asked for an increase in the rates? A.—No; there is an agreement made in the winter season, and they agree to shovel the grain for the following season at a certain price. They soon take to that fact. Of course, some vessels discharge more than others; the price is stated in the agreement. Generally in February or March the agreement is made for the following season. They agree to shovel the grain from the vessels going to our vessels.

Q.—Do the people employed belong to Kingston? A.—Yes; they are Kingstonsians; we generally give them the preference.

Q.—Have you any objection to employing a man who belongs to an organized labor society? A.—We have not felt much of those societies yet. I have not made any objection up to the present time; but if they commence to interfere and make a

demand I would not hire a man who belongs to those Societies and I would certainly kick.

Q.—Have you ever had any labor troubles? A.—We had one last spring, but it did not amount to anything.

Q.—Have the company imported men on that or other occasions? A.—No; we have always got smoothly along with our men.

By Mr. CLARKE :—

Q.—Do you ship men for your vessels, captains, mates and seamen—I mean in connection with the company's boats—masters, mates and second mates? A.—I ship the masters and the mates.

Q.—Have those certificates for serving in your vessels? A.—That is for vessels going through canal; we must have certificated masters and mates in those case.

Q.—Are those vessels inspected? A.—Yes.

Q.—All of them? A.—Yes; our boats are inspected here.

By the CHAIRMAN :—

Q.—Not the sailing vessels? A.—No; they are inspected by the man who represents the underwriters—Capt. Taylor.

By Mr. KERWIN :—

Q.—He only inspects the hull, I believe? A.—Yes; and there is a Government man who inspects the machinery, and if we have a boat carrying passengers she is inspected by, I think, Capt. Dick, in Toronto.

By the CHAIRMAN :—

Q.—Talking of sailing vessels: are not those only inspected by Lloyds' agent? A.—Yes.

By Mr. KERWIN :—

Q.—The spars and rigging of the vessel are never inspected, I understand? A.—Yes.

Q.—Who inspects them? A.—A marine inspector.

Q.—How often does he inspect them? A.—He can go aboard at any time; he inspects them in the winter season.

Q.—Do you think that is a proper time to inspect the spars and rigging of a ship? A.—I cannot say; they are open to inspection at any time. A vessel may meet with an accident in the summer, and he would go aboard and he might make an objection to spars or sails.

Q.—Do you think the summer is the proper time to inspect spars and rigging? A.—He goes round in the fall, and in the spring again. I think the summer is the proper time.

By Mr. CLARKE :—

Q.—He can see the hull to better advantage in the winter? A.—Yes; he goes round in the fall, and then he examines the vessel and notifies us if he wants any repairs, and he gives us an opportunity to make them. He goes round after the close of navigation. I got a notice last fall saying that if certain work was not done to certain vessels he would not be able to class them in the spring. We invariably follow his instructions, and make the repairs mentioned. So I think the winter season is the proper time.

By Mr. McLEAN :—

Q.—Are they inspected after the repairs have been made? A.—Yes; if he finds fault with a vessel in the fall of the year, and if she is to be repaired, we have to pay him for inspection again. We do that.

By the CHAIRMAN :—

Q.—Do you know as to the seaworthiness or unseaworthiness of vessels outside

of those belonging to your company? A.—No; I have about all I can attend to with our boats; we have fifty-five boats, and they are enough for one man to look after.

By Mr. CLARKE :—

Q.—Are they all covered by insurance? A.—No; some of our lake vessels are insured, but our river barges are not.

By the CHAIRMAN :—

Q.—What do you call river barges? A.—Those going between Montreal and Kingston. We have about forty. We do the principal carrying trade down the St. Lawrence River, and we do it by barges.

Q.—Do you know if uncertificated masters run vessels sailing on the lakes? A.—No. There was an objection raised some time ago to them.

Q.—I am not speaking of your vessels? A.—I do not.

By Mr. KERWIN :—

Q.—Did you ever hear of a mate borrowing a certificate? A.—No; I never did.

Q.—Has such been the case? A.—It might have been the case, but I have never done so.

Q.—It is easier to borrow one than to earn one, I suppose? A.—Yes; I suppose it is.

By Mr. ARMSTRONG :—

Q.—Have you ever known masters and mates to take cargoes without holding certificates? A.—We have done that, I think, ourselves. A year ago we sent a vessel through the canal without an officer holding certificate, but we were notified, and had to stop, and we conformed to the law. A year or two years ago I think this provision was not enforced.

Q.—When the inspector has ordered repairs or alterations to be made with a view to securing the safety of the vessel and the crew, are you aware that such vessel has left port without those alterations having been made? A.—Not with my knowledge.

Q.—Could they leave without your knowledge? A.—No; our captains could not. If the Inspector notifies me that certain things have to be done to such and such vessels to fit her for sea I do it; I carry out his instructions.

Q.—Have your vessels ever carried too heavy deck loads? A.—Not in my own opinion; not to my knowledge.

Q.—Do you think an over deck load is dangerous in stormy weather? A.—How do you mean? Do you mean the vessel is too deep in the water?

Q.—Do you know of cases when a vessel had too much cargo on deck? A.—Our vessels very seldom carry deck loads. They are in the grain trade principally, carrying grain from Lake Superior, and they carry their cargoes in the hold. The time when they carry a deck load is when they are taking lumber, and they very seldom do that.

By Mr. KERWIN :—

Q.—Have you ever known of man being taken from the engine room or from the purser's office and placed in charge of a propeller? A.—I have.

Q.—Do you think such would be a proper person to handle a craft in all weather? A.—If they qualified themselves for that position. Young men go on board as pursers and make up their minds that they will be captains before they finish. They go to learn, and they handle a boat whenever they have an opportunity of doing so.

By the CHAIRMAN :—

Q.—Do you think they can learn it in that way? A.—They have a better education than an ordinary hand, because in order to be a purser a man requires to have an education. They make up their minds to learn the navigation of a boat,

and they can do so more rapidly than men who have had no education. Sometimes they have gone from the purser's office to be captain and they have been a success.

By Mr. ARMSTRONG :—

Q.—Have you ever known of a steamer with a captain of that sort to be wrecked on account of the master not knowing how to handle her? A.—I never did.

Q.—Was not that the case with a vessel very recently? A.—No; I don't think so. To what boat have you reference?

Q.—Was not that the case with the "Oriental"? A.—The captain, in that case, was, so far as I know, an old sailor.

By the CHAIRMAN :—

Q.—The captain had a wooden leg? A.—He can give a good many orders with a wooden leg, although he has a wooden leg; true, he cannot get round as quickly, but he is supposed to have the work done by other men principally. He sailed a great many years—Captain Stewart—and should be qualified. He may not be as smart as he was a number of years ago.

By Mr. ARMSTRONG :—

Q.—For the safety of the public and traffic, don't you think the captain should learn his trade as a sailor, and rise from that to be second mate and first mate, and up to the position of captain? A.—That does not always apply.

Q.—Would that system make better captains, having men coming up from the ranks? A.—No; I have a man in our employ who went from the engine room, and we consider him one of our best men. Captain McMaugh, captain of the steam barge "Glengarry," I consider as good a man as ever was in charge of a barge, and he went from the engine room to be captain. Then there is the captain on the "Sir Leonard Tilley"; he is a brother of Captain McMaugh, and is one of the best men in the company's employ, and he went from the engine room to be captain. He is considered one of the best men we have.

By Mr. McLEAN :—

Q.—Did all these men have to pass an examination? A.—No; they didn't; it was not necessary. The law provided that if a man had sailed a boat before 1853 it was not necessary for him to pass an examination afterwards, and this man sailed a boat before that year.

By Mr. KERWIN :—

Q.—How many men would constitute a crew on a propeller? A.—When I sailed we used to carry about five deck hands—that was a freight boat—two firemen, two engineers, two wheelmen, a captain, a mate, a cook and a boy.

Q.—There is no law established to regulate the number? A.—No. They do not carry as many hands now, because they do not handle so much freight as they did then, and in a great many cases they carry only two deck hands, just a sufficient number of men to handle the lines.

By Mr. McLEAN :—

Q.—How many men do you think are necessary to handle a boat properly? A.—A captain, mate, two engineers and two firemen.

Q.—Do they not have two skilled seamen on propellers? A.—No. So long as the wheelman can steer by compass the course is given him; the captain and the mate know how to navigate the boat.

By Mr. KERWIN :—

Q.—In what condition are the forecandle of barges and propellers kept? A.—They are kept all right. Steamboats that we run on the lakes have not got fore-castles. The sailors bunk on deck, in the same house as the captain and mate live in. Several of the boats have not forecastles.

Q.—You would have no objection to employing men belonging to organized

labor, I suppose? A.—My own opinion is this: that it is not necessary to have an organized body to place every man on a par. Some men are better than others, and I believe in every man according to his merits, according to what a man is worth. If a company employs a man and he does not receive good wages, or wages he is worth, he should not work for the company any longer.

Q.—If a man connected with organized societies came to you for employment would you give him work. A.—I am not prepared to answer a question of that kind.

By Mr. ARMSTRONG:—

Q.—You seem to believe in paying a man according to his abilities? A.—I believe a man should be paid according to his merits.

Q.—You are judge of the men's merits I suppose. A.—Yes. A short time ago, in the spring, there was going to be a strike, and I went up to the men and told them it was reported that there was to be a strike. I said it was not necessary to have a strike in this yard, as I am prepared to pay any man according to the work done. If you go and do any more work than you are doing now I will pay you for it. Some are getting too much and some, perhaps, too little.

Q.—Did the company fix your salary or did you fix it yourself? A.—It has been increased several times without my asking for it.

Q.—Do you not think a man has a right to pocket the value of his own labor? A.—Yes; and I believe if he has placed a price on it that you need not purchase it, unless you please. A man is master of his actions in that respect, and we are also master of ours. Up to the present time I have had no trouble with the men; I do as nearly right as I know how. We have during the last two years increased the men's wages, when there was work for it, 50 or 60 cents.

Q.—Did you anticipate any strike on the part of the men that caused you to give higher wages? A.—No; I found they had risen in other places a little. The men in our yard generally make up their minds to stay with us, and I think it right to increase their wages whenever we can.

By the CHAIRMAN:—

Q.—You make it an object for them to remain? A.—I want the men to feel that they can do as well with us as they can do elsewhere, and stop with us.

By Mr. McLEAN:—

Q.—Have you any trouble to get men? A.—No; not now.

Q.—Have you any trouble in the summer time, when you are busy? A.—At this time of the year we can get men to any extent. From December to March we employ more than any other firm at the ship carpentering and ship joinering trade.

Q.—How is it during the navigation season? A.—There are sufficient men. Sometimes some of our captains and engineers say they are short of a man, but we generally find one. The men stay pretty steadily with us. The company has been in existence for a long time, and we generally try and raise our own men as much as we can, and that is encouragement to the men to remain in our employ.

By Mr. ARMSTRONG:—

Q.—Have you any other information to give the Commission that would be useful to it? A.—No.

Miss MACHAR, Secretary of the Relief Association, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are secretary of the Poor Relief Association? A.—Yes; it is a society of ladies, and it is chiefly to help those women and families where there is no bread-winner. We have also, within the last two or three years, been called upon to relieve families in which there were bread-winners, and we only do that in times of great emergency. We have to make very particular enquiries in every case, and that is done by the committee of the society.

Q.—Have you had much demand on the resources of the society during the past winter? A.—We had larger demands last winter than any winter before. I don't know how it will be this winter. The expenditure last winter was the largest reached yet.

Q.—Could you give us an estimate of the expenses of the society last winter? A.—About \$800; but there is another society, the Society of St. Vincent de Paul, belonging to the Roman Catholics, and their expenditure was additional to ours.

Q.—What kind of applicants were they? Were they people who reside here? A.—The families without a head or a bread-winner are nearly all residents; but a good many of the families where there are men are families who have recently immigrated—families who arrived a month or two before the winter began.

Q.—In the case of the men, what is their condition? Were they idle through no fault of their own? A.—Yes; they could not get work. They even arrive in August, September and October, and perhaps they get a little work before the winter sets in—before the idle season sets in—hardly enough to enable them to get a little furniture, and when the winter comes they can hardly get any work at all.

Q.—Do you have many applications from the immigrant class? A.—The last year we had about six families; this year we have about the same number.

By Mr. McLEAN:—

Q.—Six out of how many? A.—We don't have many families with men—perhaps there are about sixty families altogether. A large proportion consists of widows and old people who cannot support themselves, and I think half the number of the others is composed of immigrants.

Q.—Were the applicants belonging to the immigrant class recent arrivals? A.—Yes; they had arrived late in the summer. We had hardly any of those who came the season before this winter; those this winter are nearly all new arrivals.

By Mr. ARMSTRONG:—

Q.—They were both male and female, I suppose? A.—I am only speaking of females where there are men. We found a family in great need, with hardly any covering, and the father had been a coachman in Cornwall, receiving £20 a quarter and a free house; yet he had been induced to come out here, where he had not been able to get a coachman's position, and had been out of work till his family was nearly starved. Some have assisted passages given them, and some are helped by their friends, and some of them are helped by people who are kind to them at home. One woman told us that £16 were given her to send her out, and if her friends had only started her in a little business at home it would have been much better for them.

Q.—Can you inform the Commission whether the demands on the charitable societies are on the increase or on the decrease since its formation, and how long it has been in existence? A.—It has been in existence about twenty-five years.

Q.—Say during the past five years? A.—During the last year we had our largest expenditure I know of since I have been secretary.

Q.—What are the prospects this year? A.—The prospects are that we will use about as much as last year, I am afraid. Of course, it will depend on the severity and length of the winter, but there are a great many on the fund.

Q.—Could you tell us, in the instance of the coachman from Cornwall, who were the parties who induced him to come out to this country? A.—No, sir; I cannot. I went to try and find out, but I did not find them at home. I know that two men who came last year told us that they had Government assisted passages. One of the men said he was certified as an agricultural laborer and he had never worked at that.

By the CHAIRMAN:—

Q.—Then he committed an actual fraud? A.—He said he never told them so.

Q.—He got his certificate and was brought out to this country as an agricultural laborer, and he committed a fraud? A.—I suppose so.

Mr. ARMSTRONG.—The man did not say he was an agricultural laborer.

The CHAIRMAN.—The man committed a fraud, and should be prosecuted for having obtained money under false pretences.

By Mr. McLEAN :—

Q.—Did he get a certificate from the steamboat agent or from a Government agent? A.—From an agent, I understand, from a steamboat company's office; he expressly told us he was not an agricultural laborer. He said they give him the certificate as an agricultural laborer without him asking for it.

By Mr. ARMSTRONG :—

Q.—Was he able to read and write? A.—Yes; because he said he had read a book giving a glowing account of the wages paid here, 6 shillings a day, and that for common laboring men, and he found it very different when he got here.

Q.—Are there many small children in those families that have come out? A.—Each had about four or five children with them. Last year there was three or four children in each family.

By the CHAIRMAN :—

Q.—Do you know what amount the Government gives for assisted passages? A.—I do not. I understand they give half the passage money, but I am not positive.

By Mr. CLARKE :—

Q.—How much of this poverty and misery is attributable, in your opinion, to strong drink? A.—I could not say; some men seem to be quite sober men and others are not; I suppose just as much so as it is with the residents here. Some are sober and some have evidently been accustomed to drink a good deal.

WILLIAM WILLSON, Manager of the Kingston Cotton Company, Kingston, called and sworn.

I desire to make a brief statement to the Commission. Our company employs 208 helpers, of whom seventy are men, and 138 females; including thirty-six men, thirty-four boys, ninety women and forty-eight girls. The wages paid by the company for the full two weeks' work is about \$1,200. Twenty men's wages range from \$20 to \$10 a week, average \$12.50; sixteen men's wages average \$7.29 per week. The boys' wages from \$5.70 to \$1.90 per week. The women will average \$5.70 per week. About twenty boys average over \$6 per week. The girls' wages range from \$5 to \$1.90 per week. With regard to ventilation and over-glutting: the part of our mill in which we have the largest number of help is the weaving room. It is 190 feet long, 72 feet wide, and 13 feet high, or in other words, it has 170,800 cubic feet of air space, in which there are seventy-two persons employed, which gives an air space to each individual of 2,470 cubic feet, less than one-quarter of the space being occupied by the machinery. In a cotton mill there is a source of ventilation which is not very often noticed—that is, we have large pulleys and straps working at perhaps a speed of 2,000 feet a minute, and they give good circulation to air, and whether the windows are open or not you have ventilation from that source. Our sanitary arrangements are very fair. We have seven good water-closets, four appropriated entirely for the use of females, but separate and apart from the others; three to the males, in addition to three urinals. I may just say a word with regard to morality of our helpers. I am proud to say that there is not a single individual, during the four years of my servitude there, who has been hauled up for any act committed at the cotton mill. D. unken characters we do not keep about the place—habitual drinkers. If we cannot cure them we discharge them. One reason why I have made this statement is on account of insinuations that are thrown out now and then, which have a tendency to create an unpleasant feeling between the employers and the employés, and I am rather sorry to say that our local papers are sometimes guilty of publishing

such insinuations, and it would be well if they were stopped. I received a note from the Commission the other day, requesting me to attend here and bring certificates with regard to certain individuals. For some of those children mentioned we have not got certificates, and I must explain how that came about. Until November I did not know anything about the Factory Act being in existence—we had never received any official information. My first intimation was the visit from the factory inspector. He made his business known to me, and I went round the mill and showed him all the help, and more especially the children. At that interview there were only two whom he requested us to discharge; one was a very small boy under age, and another was a girl—a very large girl for her age—but he found out it was not a matter of necessity for her to be at work, that her parents were able to keep her, and probably that was why he requested us to discharge her. He requested us in future to get certificates of age from all the employes, and I believe we have complied with his instructions to the letter—to which these certificates I now have will testify. These are the certificates we have received from all the children we have employed since we got instructions to do so from the inspector. I believe we have not a boy now under twelve years in the mill. We have some girls under fourteen, but they were employed before the inspector visited there, and he did not tell us to discharge them. In fact, he hinted that we need not do so, but that in future we must comply with the Act.

By Mr. ARMSTRONG :—

Q.—Have you any boys under thirteen years of age? A.—Yes.

Q.—Is that in compliance with the Act? A.—I understand the boys must not be under twelve.

Q.—How many girls have you under fourteen? A.—I don't think there are more than six under fourteen years, and they have worked at the mill a long time.

Q.—Did the company, a few days ago, send home several young girls who were under age, knowing that the Royal Commission of Labor was going to visit this city? A.—No.

Q.—Have you got certificates of the age of all the girls in your establishment? A.—No; I have certificates of those we have employed since the inspector was there.

Q.—How long ago was that? A.—Last November. That was the first intimation we had that there was a Factory Act in existence.

Q.—Could there be any girls whom you employed before last November, and who were under age then, who are under age now? A.—I dare say there are a few of them who were employed then, and who are still under age at the present time.

Q.—Have you got any certificates for them? A.—No.

Q.—You still keep them in your employ, and they are under the age required by the Act? A.—Yes.

Q.—How many times did the factory inspector visit your mill last year? A.—Once.

Q.—Did he make a thorough inspection? A.—Yes.

Q.—Did he make any suggestion that you should make alterations, or anything of that kind? A.—No; I don't know that there was anything he instructed us to do very particularly. We had a general conversation after he had been around the mill. I told him about what we had done, and he seemed to be satisfied. He spoke about the sanitary arrangements. I showed him our system, which appeared to be satisfactory to him, and on the whole, I think, he made a very general inspection.

Q.—What facilities have you for escaping from the upper floors of the mill in case of fire? A.—Our mill is a three story mill. Our bottom story extends about 40 feet further than the two stories above. Out of the second flat you can step on to the roof of the flat beneath, and we have ladders, in addition, so as to reach the upper story. In other words, we have exits at each end. If the staircase was blocked after an alarm of fire we have an exit at the other end.

Q.—Do the doors open outward or inward? A.—They open inward.

Q.—Are you aware that that is contrary to the law? A.—Yes.

Q.—Did the inspector inform you of that fact? A.—I am not aware. He left me a copy of the Act, and I saw it mentioned there.

Q.—Are they still in the same condition? A.—Yes.

Q.—Why do you have your doors arranged that way when it is contrary to the Act? A.—The doors are never fastened; they are always open. They are large, folding doors, and they are always open.

Q.—Are they open in the winter? A.—No.

Q.—Are they closed in the winter? A.—No; they are never locked.

Q.—Are you aware that accidents have been in factories like yours? A.—I discovered it by reading the Act.

Q.—Have you not got some rooms where young girls work where the temperature is higher than in others? What is the highest temperature of any of the rooms?

A.—About 80; but let me tell you that very recently we have arranged that without knowing that question would be put by the Commission here. I find the upper room to be sometimes unpleasantly hot. We closed the mill a fortnight at Christmas on account of dullness in trade, and we made alterations to regulate the heat during the time the mill was closed, about three weeks ago.

Q.—At this season of the year is it uncomfortably warm? A.—No.

Q.—Do you consider it is uncomfortably warm in July and August? A.—No; not on account of the excessive amount of ventilation they get. We are surrounded by the lake. Again, the temperature best adapted for working on cotton is the temperature best adapted to our system. If we get a room over-heated it makes the cotton tender; if it is too cold it always places it out of condition. If we regulate the temperature according to our own bodies the work goes on better.

Q.—No doubt the product goes on better for the producer? A.—Yes.

Q.—How does the health of the young girls go on—the health of the operatives? A.—I am pleased to say there is very little sickness with us; I dare say there is less than in any other factory employing the same number of hands.

Q.—Have you ever known the temperature of those rooms to rise over 90?

A.—No.

Q.—Is there a thermometer in the room? A.—Yes; in the room that gets hot now and then.

Q.—How many hours do those young girls work per week? A.—Sixty.

Q.—Do they all work sixty? A.—Yes; except the few who are on piece-work, who leave when they have finished their work. Those who are on daily wages work sixty hours per week.

Q.—Have you any girls employed on piece-work? A.—The weavers are on piece-work; the winders are on piece-work. Sometimes they get ahead with their work and then they are allowed to go home.

Q.—You have stated that some of them receive from \$1.90 to \$5 per week?

A.—Yes.

Q.—What would be the age of a girl who receives \$1.90 per week? A.—They are small girls. When they are first put to learn we give them about \$1.90, and as soon as ever they are fit to work they are advanced.

Q.—How long would it take a young, intelligent girl, with an aptitude for the business, to be promoted from \$1.90—how long would she work at \$1.90 before she got an advance? A.—Not more than two weeks, if there was a vacancy.

Q.—When there is no vacancy, how long would she have to work? A.—That would be left to her own discretion—they can leave if they like. It is, of course, to our interest to put them on higher wages and piece-work as soon as possible.

Q.—Do you know of any of those young girls who have to pay their own board out of \$1.90 per week? A.—I do not. They are generally girls belonging to families.

Q.—Do you not think that their assistance towards their families would be very meagre when they have paid for their eatables, and their clothing, and their boots and shoes, out of \$1.90 per week? A.—That is a thing with which we have nothing to do.

Q.—I am only asking your opinion in regard to it? A.—My opinion is that \$1.90 will not maintain a young girl; but where there are three or four of a family, and one who is receiving \$1.90, and another \$3, and another \$4, then it all comes in.

Q.—Would it do for the whole family to be employed at the mill? A.—No; certainly not.

Q.—In cases where young girls are late in the morning, are they fined, or is the door closed upon them? A.—Neither; I am glad to say they are very good attenders; I don't think they are three or five minutes late in the week, on the average. I am there always, and see them in. We don't allow habitual late-comers. If they cannot cure themselves of that habit we discharge them.

Q.—Are they paid their wages in cash? A.—Yes. I don't wish you to understand that we discharge them for coming once or twice late; if they are habitually late we tell them that we cannot allow it, and if we cannot cure them by plain talking we discharge them.

Q.—Is the output of your factory increasing? A.—Not much; I am hoping it will do so. We are about to make some improvements which, I think, will have a tendency to increase our output.

Q.—Where do you generally find a market for your goods? A.—All over Canada.

Q.—Is there any understanding between the cotton mill owners in Canada? A.—In what respect?

Q.—Such as the formation of an association? A.—There is.

Q.—That is in the formation of a cotton company, I believe? A.—Yes.

Q.—Does the association regulate the prices of cotton? A.—Yes.

Q.—You need not answer this question unless you like, but I would like you: If a member of that association sells cotton under the price is he fined or punished by the association in any way, or does he cease to be a member. A.—He is subject to a fine. But I would not mind stating a word or two in regard to this matter. Two years ago the price of grade cloth got down very low indeed, so that the mills were losing all their capital. At that time it was absolutely necessary that a combination should be formed, or some of the mills, in my opinion, would have had to cease work altogether. I am sorry to say that one mill was compelled to do so; I now refer to the St. John, New Brunswick, mill. It is pretty well known that in consequence of the state of trade the whole stock, something upwards of \$270,000 worth, was sacrificed. I believe there was a mortgage on the mill for \$70,000. The directors tried to raise the money from the stockholders, but the stockholders would not subscribe it, and they were obliged to close the mill. After that they tried to sell it, and they could not get a buyer, and then it was handed over to the mortgagee for \$70,000. Since then it has been started under a new company, and it now stands, I believe, with a capital of about \$90,000.

By the CHAIRMAN:—

Q.—The stockholders lost all their money? A.—Every cent, and that was in consequence of the bad trade. I believe the combination is a very reasonable one, and the price of cloth is put at such a limit that a mill will have to be very careful to make both ends meet. What I mean by this is: paying a reasonable interest on capital invested, not less than 15 per cent. outlay of the stock will do that. In this country, where the mills are most numerous, they allow for depreciation on machinery at the rate of  $7\frac{1}{2}$  per cent., and on boilers and steam engines, shafting and belting,  $2\frac{1}{2}$  per cent., or you might say all round 6 per cent. for depreciation. If you take 7 per cent. for interest, that necessitates 13 or 14 per cent. to make ends meet.

By Mr. ARMSTRONG:—

Q.—Do you think there is a cotton mill in Ontario that should run ten hours a day for one year? A.—I don't know what your question refers to.

Q.—In regard to the demand, I ask you whether any cotton mill in Ontario could continue running ten hours a day for a year? A.—My opinion is that we are

not suffering now from over-production. My opinion is that the bad harvest and open winter in the country have somewhat retarded purchasers. I believe the dry goods men have got it into their heads that the combination is likely to break up, and be followed by a reduction of prices. I believe that is the cause of the present stagnation, but I don't think it is over-production. That will rectify itself as soon as all the parties get satisfied that our mill owners intend to hold on to their combination.

Q.—Do you not think that if the cotton mills in Ontario could run at, say eight hours per day, would they be as well, and at the same time keep their employés more steadily employed, by spreading the work over the year? A.—They could not afford to do it.

Q.—For what reason? A.—Competition, and competition from England. They can beat us now in our production. I will explain why they can do so as well as I can. In the first place, the outlay of our company is over 60 per cent. more than with English mills; about 30 per cent. of that goes to the Government. If we import our appliances from England we have to pay 25 to 30 per cent. duty in addition to freight. Then, again our climate is not as well adapted for cotton manufacturing as the Lancashire climate; neither are the adaptabilities of the working people quite as good as the Lancashire people, and if we hadn't a slight advantage over the English mills by way of running longer hours I believe they could beat us, notwithstanding our present production. They are cutting irons to day in England at about 15 cents per pound, and I can tell you that some manufacturers in England pay more especially in Lancashire, to-day, are selling their goods for less money than they do for their yarns. That is caused by adulteration. Of course, it cannot be detected by people who are not accustomed to it; few people in Canada could detect it for a moment. If they get in here their low priced cloth they would sweep us out, and we could not exist.

Q.—What would you call it—shoddy? A.—I cannot tell you; they call it domestic cloth. I received this through a circular from the agent, who wanted to sell me materials by which we could adulterate cloth to the extent of 80 per cent. They can do it at home. We cannot do it here. It is not necessary to do it here; and there is no need to do it at the present prices. If we can maintain our cotton goods at the same prices, working the same number of hours in the mills, we will be able to make both ends meet. I am sorry to be able to express my opinion that the cotton mills in Canada during the last four years—I am speaking generally now—have not returned, on an average, 2 per cent. on the capital invested. That is unreasonable to the stockholders. Some mills have done much better; some have gone behind. I can give you a case in point, and I saw in print a few days ago. It is the case of the cotton mill in Windsor, Nova Scotia. I saw that last year they made \$15,000, but they could not declare a dividend, for they had to appropriate it to the payment of debts which they had incurred when trade was very bad. The Moncton mill has been in existence five or six years, and I believe has only once paid a dividend of 2½ per cent. You know very well, I think, that the cotton mill at Cornwall has not paid any dividend, and is not likely to pay any. And the mills at Stormont, Brampton, Dundas and Merriton have all not paid dividends; and unless we can keep cottons at the present price and find a market for them we cannot pay dividends. I believe the Gibson mill is not in the combination, but they have promised, I believe, and so far have been faithful, to adhere to the rules of the combination. Another mill, the Chambly mill, is not in the combination. They also promised to adhere to the rules of the combination, but I am afraid that they have not done so.

Q.—Have you ever known a mill to receive a large bonus from the municipality and when the bonus was exhausted the mill failed? A.—I have not.

Q.—What was the history of the mill in the neighborhood of Galt? A.—I am not familiar with it. I have only been here three or four years.

Q.—But that mill failed a few years ago? A.—I don't know anything about it.

Q.—Do you know the number of cotton mills that received bonuses from municipalities when they first started? A.—No.

Q.—Do you know any mill that has been exempted from taxation for a number of years as an inducement to commence operations? A.—I know only one, and that is in Kingston.

Q.—Have you any objection to employing hands that belong to labor organizations? A.—We never make any enquiries.

SAMUEL ROWCROFT, Mill Overseer, Kingston, called and sworn.

By Mr. McLEAN :—

Q.—You have heard the evidence of the last witness : do you corroborate it? A.—Yes.

Q.—Have you anything to add? A.—No.

Q.—Do you work in the same factory? A.—Yes; I work under the last witness.

By Mr. ARMSTRONG :—

Q.—Have you the girls under your charge in the cotton mill? A.—I have quite a few.

Q.—Do you know that girls under fourteen years of age have been sent home recently, during the last seven or eight days? A.—Not one.

Q.—Could they have been sent home without your knowledge? A.—No. There was a girl sent home last week, but went on account of a lot of girls getting in the hallway and making a noise at noon-hour. I sent for her to come back in two days. She was sent home as a correction.

Q.—Are there girls in other departments who are not under you? A.—Some few.

Q.—You are only speaking of your own department? A.—Of the spinning and weaving.

By Mr. CARSON :—

Q.—Do you know of any dissatisfaction existing in the factory among the hands? A.—No; I do not know of any.

Q.—Or complaints of unjust treatment on the part of their employers? A.—No; I do not know of any.

Q.—From your position you would know it if there was any discontent? A.—I think I would.

Q.—You think you would know if those girls had been sent away? A.—Ys.

By Mr. KERWIN :—

Q.—Are you in the habit of sending girls home for playing during dinner hour, during time for which you do not pay them? A.—We are not in the habit of doing it; we have only sent one home, only one, and I took her back a few days afterwards. The manager sent her home, and he came to me and told me to send for her again.

Q.—Are there any fines inflicted on those girls for a little laxity such as you mention? A.—No; I have never seen it done since I have been there.

By Mr. ARMSTRONG :—

Q.—How many girls under fourteen are employed in the factory? A.—I think six or eight; I could not be positive about the number, but they were all working there when the inspector came.

By the CHAIRMAN :—

Q.—Did not the inspector tell you it was contrary to law? A.—He did not want hard and fast lines with respect to help that he saw there. He said if it was a family that was poor that it was unreasonable to send the girls away.

By Mr. ARMSTRONG :—

Q.—Did the inspector speak to any of the hands? A.—Yes; he spoke to quite a few.

Q.—In whose company was he when he was going through the factory? A.—I believe he was with the manager or the manager's son; I could not be positive just now.

Q.—You have girls there who have not got certificates of their age? A.—The girls who worked there before the inspector came.

Q.—And the last witness has stated that they work there still, and even at this time they are under age? A.—Yes.

Q.—How long do the girls have for dinner hour? A.—One hour.

Q.—Do they all go home to their dinner? A.—No; some of them live quite a distance off, and they bring their dinner with them.

Q.—All those girls have to take their dinner where they work? A.—They can please themselves; they can do it if they want to do so.

Q.—Outside of their own room; can they get some other place to take their dinner? A.—They can go into any of the other rooms; they are not prevented from doing so.

Q.—They have to take their meal in one of the rooms in the factory, where there is dust, and so on? A.—When the machinery has stopped you would not notice any dust.

By Mr. CLARKE:—

Q.—There is no dining room prepared for them in the mill? A.—No; there is a place to warm their tins; we have coils of stove-pipe on purpose.

By Mr. ARMSTRONG:—

Q.—Are they charged for that privilege? A.—No.

By Mr. McLEAN:—

Q.—Suppose your engine or any part of your machinery broke down, and work was stopped for an hour or two, would you pay the hands while they were there even if they were not at work, or would they have to work over-time? A.—We don't, as a general rule.

Q.—But do you? A.—They have worked some over-time; it was when the mill was stopped, three or four days, or something like that.

Q.—You always keep the hands around there three or four hours? A.—When there they have been paid if they have not worked. The wages have not been deducted.

By Mr. ARMSTRONG:—

Q.—The piece hands have not been paid anything, I suppose? A.—The piece hands do not receive pay.

By Mr. McLEAN:—

Q.—Do you stop the wages of the hands for breakages, or anything of that kind? A.—No.

Q.—Is the water drank by the hands good? A.—We get all the water from the outside, from wells around.

Q.—Is it good water? A.—Yes.

Q.—How far are you from the lake? A.—We are right on the edge of the lake.

By Mr. ARMSTRONG:—

Q.—Have the hands to go out for water, or is it brought to them for drinking purposes? A.—We send out boys or girls who have not much to do to bring in water.

Q.—Are those hands employed by piece-work or by the week? A.—By the week.

PETER MONCRIEF, Tinsmith, Kingston, called and sworn.

By Mr. ARMSTRONG —

Q.—Are you a journeyman tinsmith? A.—Yes.

Q.—How long have you worked in Kingston? A.—I have worked ever since I started, when I was about nine years of age. I served my time here.

Q.—What are the average wages paid to journeymen tinsmiths in Kingston? A.—I should think the average would be \$1.50 a day—\$9 a week. Some get as low as \$1.25 a day and some get over \$10 a week. You might strike an average at about \$1.50 a day.

Q.—How constantly are you employed throughout the year—how many weeks would you be employed on an average during the year? A.—Some are employed the year round and others are not. The foremen of shops are kept on all the year round, but the majority of journeymen lose two or three months every winter; some of them lose even more, even four months.

Q.—Are there many apprentices going to learn the trade? A.—Yes; there are too many; there are five apprentices to one man in some cases.

Q.—Are there any shops in Kingston where there are regulations as to the number of apprentices to be employed in accordance with the number of men employed? A.—No; there are not, but there should be.

Q.—What is the average term a boy would serve as an apprentice? A.—Some serve four years, some five years, according to the agreement—the agreement they make with the boss. The majority serve five years.

Q.—Are they indentured? A.—No.

Q.—Do journeymen tinsmiths prefer the indenturing system to the way things are conducted now? A.—Yes; because a great number of the men who are around now have served two or three years at one shop, and have skipped to another institution, and they have kept wages down.

Q.—Is the trade in Kingston affected by immigration? A.—No; I don't see that it is.

Q.—Are the men organized? A.—Some of them are; they belong to the labor organization. It is too bad they all do not.

Q.—Do you know the condition of tinsmiths in the United States or Great Britain in comparison with their condition in this locality? A.—Yes. My brother mechanics now who are on the other side are making very nearly treble the wages we are making here. I speak of New York and Chicago. At Rochester they are making almost double, and the city is pretty nearly the same size as Kingston.

Q.—Do you know the difference in the wages paid in Rochester and in Kingston? A.—They pay from \$2.50 a day up in Rochester, as a friend of mine wrote me. It is according to the class of work they are employed at, whether it is inside or outside.

Q.—Do any of the shops in Kingston object to employing men belonging to labor organizations? A.—I don't think they do.

By Mr. McLEAN:—

Q.—Is there any truck system existing here? A.—I don't know of any.

Q.—Does convict labor interfere with your work, or has it done so in the past? A.—No; not to my knowledge.

Q.—Did you ever give the subject of convict labor any study? A.—No; I am not prepared to answer in regard to it at present.

Q.—Do you know anything about workmen's co-operative or benefit societies? A.—I think they would be a great benefit to workmen.

Q.—Are you conversant with them? A.—No.

Q.—What are the sanitary arrangements of the shops in Kingston? A.—I can not say that they are altogether bad; they are not bad, yet they are not extra good.

Q.—How are the water-closets in connection with the shops? A.—In some cases you can almost step into them from the shop window; in other cases they are almost right in the shop—they are bad places.

Q.—Are they connected with the sewers? A.—They are supposed to be.

By the CHAIRMAN :—

Q.—You have a health officer in the city? A.—Yes.

By Mr. CARSON :—

Q.—Have you directed his attention to the defective sanitary matters? A.—No; I have never done so.

By Mr. ARMSTRONG :—

Q.—Have you any information that would be a benefit to the Commission in connection with the tin-smithing trade in Kingston? A.—Yes; I think there should be something done in regard to boys being sent out carrying heavy loads—such as stoves. A small boy, a boy of fourteen, is not fit to carry a stove weighing three or four hundred pounds.

By Mr. CARSON :—

Q.—You say that a man gets higher wages in Chicago and New York. Have you any idea of the cost of living there and the cost of living here? A.—The young man with whom I served my time lived at the rate of \$5 per week in Chicago.

Q.—Have you any idea what a suit of clothes would cost them there? A.—Yes. A suit of clothes for which you would pay \$20 here would cost about \$35 there.

Q.—And a pair of boots, I suppose, would be correspondingly high? A.—Yes. Woollen cloth is dearer and cotton cloth is cheaper.

Q.—Coming down to facts, what is the difference between the position of the men there and here, taking everything into consideration? A.—I could not say; the advantage, I would say, would be with them there.

JOHN HEWTON, Manager of the Kingston Hosiery Company, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—How long have you been manager of the Hosiery Company? A.—About five years; since the mill was started.

Q.—How many employés have you in your establishment? A.—Between 130 and 140.

Q.—How many males? A.—I should say, perhaps about half that number.

Q.—And the balance females? A.—Yes.

Q.—What would be the age of the youngest girl in your employ? A.—The inspector asked her her age, and she said she was going on fifteen; in fact, he asked two girls, and both of them said they would be fifteen next birthday.

Q.—How many hours per day do they work? A.—Ten hours per day—sixty hours per week.

Q.—For what portion of the year do they work ten hours a day? A.—Last year they worked all but one week.

Q.—Do they ever work eleven hours per day? A.—If you take the days singly they do, for we shut at noon on Saturday, and they work eleven hours a day for five days. We have not worked that length of time this year so far; we don't know what we will do for the balance of the year. They prefer to work in this way, so as to have the Saturday afternoon.

Q.—How is the ventilation of the mill? A.—The ventilation is good.

Q.—How are the sanitary arrangements? A.—The inspector was fairly satisfied with them.

Q.—In case of fire at the mill, what escapes are there for the hands? A.—We have three roads to the main door from the other flats in case of fire. There are two other ways. There is the main door on the west side of it, and we have an entrance out towards the lake and another one towards the yard.

By the CHAIRMAN :—

Q.—How do the doors open? A.—Outwards—that is the main door opens outwards. The doors open into the wings of the main building.

By Mr. ARMSTRONG :—

Q.—The doors that open into the street, how do they open? A.—Outwards; that is the door at the end. The door which is at the office end opens inwards. The doors the employés use open outwards.

Q.—Is your drinking water good? A.—I never heard any complaints about it.

Q.—Is the drinking water on the premises? A.—No; it is across the road, we get it from a well. We have given an order for a filter, and we are going to pump it, but we have not got the filter yet.

Q.—Have the operatives to go outside to get a drink? A.—No; a boy brings the water in.

Q.—Has there been any reduction in the wages lately? A.—Not a general reduction—no. There has been a little change; we have increased in some places, and made some changes. Take the men all through, the average amount of wages paid per dozen for goods will be higher to-day than this time last year.

Q.—What departments of the mill have been affected by the change? A.—There has not been a reduction. We generally, at this time of the year, revise the tariff. If we saw a certain class is not getting enough we advance, but if we see that some other class, by means of improvements in machinery, are receiving too much, we make a reduction. We have put in improved machinery in connection with the different processes.

Q.—Has there been a reduction lately in the hemming department? A.—Yes.

Q.—Has there been a reduction lately in the seaming department? A.—Yes.

Q.—Has there been a reduction in the looping department? A.—I don't think there has; I am not certain about the looping department.

Q.—How about the mending department—has there been a reduction there? A.—Yes.

Q.—Has there been a reduction in the buttoning department? A.—Yes.

Q.—There have, then, been positive reductions in four of the departments, with one department doubtful? A.—We will take the hemming department for a moment. In fact, the change made is not a reduction. We used to do the work with one machine, and divided it up. The machinery has been improved; they put in an attachment which does better work. It used to be 1½ cents, and we put it up to 2 cents; it is really an advance on the old system. In the same department we used to sew with the old Grover & Baker machine, which cost about \$5 apiece. We have put in an improved Chicago machine, costing about \$200, and in the place of about eight or nine girls doing the work about four girls do it all, in consequence of the improved machine. So we made a reduction there.

Q.—What does the reduction amount to in the hemming department? A.—In what way?

Q.—Would the reduction in the hemming department amount to 20 per cent? A.—On what we were paying just before?

Q.—Yes? A.—No; I do not think it would.

Q.—How much would it amount to? A.—I could hardly say.

Q.—Would it amount to 15 per cent? A.—It might—no; I don't think it would. I forget exactly what the reduction was—what the original price was. Perhaps it would be 10 per cent., or something like that.

Q.—What would be the amount per cent. of the reduction in the buttoning department? A.—I could not tell you; I forget the tariff on that. The buttoning department had too many hands in it. They didn't work enough, and we thought we had better, as they were working only a few hours a day, make a change.

Q.—Would the reduction in the buttoning department amount to between 30 and 40 per cent? A.—No.

By the CHAIRMAN :—

Q.—Do you mean that the daily wages were reduced that amount? A.—They would not be reduced anything like 50 per cent. I cannot tell you; I cannot answer that question.

Q.—What did you pay last year to persons working in that department? A.—I cannot remember the tariff in that part.

By Mr. ARMSTRONG :—

Q.—You cannot tell the percentage of reduction in any department of the establishment? A.—No; I don't look into the figures.

Q.—Has there been any increase in wages? A.—Yes.

Q.—In what department did the increase take place? A.—I could not tell you that just from memory; we increased the cutters, and there have been increases in several departments.

Q.—How many cutters have you employed? A.—There are two cutters.

Q.—You increased their wages? A.—Yes.

Q.—What was the percentage of the increase? A.—I am not positive as to the figures, as I am only speaking from memory. I did not prepare myself by looking over the price list. I think we are paying somewhere about 40 cents per dozen more than before, but I am not positive.

Q.—In addition to those two cutters in that department, what other departments have you increased in wages? A.—You were speaking about that.

Q.—I am speaking about lately? A.—Those prices you are talking about have not been cut even yet—they have not come into force. In the last year we increased in several departments.

Q.—I mean lately? A.—This year, 1888.

Q.—Yes? A.—I don't think there is any change in the departments in 1888, that is, except the one you were referring to.

Q.—Have you heard of any grievances on the part of operatives? A.—I sent for one of the girls to come into the office, and I asked her if she had any grievances; she said she was perfectly satisfied.

Q.—Have you heard complaints from shirt and drawer finishers? A.—No; they are not cut. I think we increased some of them. I think there is a change in some of them that will be better. But I sent for one of the girls who cut. She had been drawing very heavy pay, and there was some change in that class of work. She said she was perfectly satisfied with the pay for the work.

Q.—Have any of the hands petitioned the company in any shape or form? A.—I have seen no petition from any of our hands.

Q.—Have you heard there was such a petition? A.—No; not from our hands.

Q.—Do the doors swing outward? A.—Yes; that is, the main door.

Q.—Is there any dangerous machinery or belting in the building? A.—I think not.

Q.—Would you consider the finishing machines and belting dangerous? A.—We have boxes for any portion of the shafting that we consider dangerous.

By the CHAIRMAN :—

Q.—Has the factory inspector been through your factory? A.—Yes; he was through it.

By Mr. ARMSTRONG :—

Q.—Did he suggest any changes to be made? A.—No.

By the CHAIRMAN :—

Q.—Would you make any changes yourself if you saw they were necessary to prevent the machinery from being dangerous? A.—We always make changes ourselves if we think there is danger.

By Mr. ARMSTRONG:—

Q.—Does the putting in of new machinery reduce the number of hands or the wages paid? A.—The putting in of new machinery, of course, tends to reduce the number of hands. For instance, we have machinery in the department that would require a certain number of hands to do the work, and by putting in new machinery it would cause some of them to leave. One machine may do the work of seven or eight hands, sometimes, and thereby might throw six hands out.

Q.—In regard to those hands who would remain, would their wages remain the same as they were getting previous to the introduction of the new machinery? A.—Yes.

By Mr. KERWIN:—

Q.—Referring to your hemming department I heard the other day, quite accidentally, that one of the girls worked in the morning and worked all the forenoon until dinner time, and earned only 40 cents? A.—I don't think it.

Q.—Could it happen and you not know of it? A.—It might and I not know of it. The matter was not called to my attention.

By the CHAIRMAN:—

Q.—Do you think if she had been there and worked steadily she would have earned more than 40 cents? A.—Yes; she may, however, stay at the machine all day and do little.

Q.—Do you say that if she had worked during those hours steadily that she would have earned more than 40 cents? A.—She would, if she was a smart girl. I took an average for three months out of the pay-list, and found the average in the seven departments to run as high as \$1.30 a day.

Q.—Have you discharged any of your operatives lately? A.—No; I don't think we have, but I don't remember any going away lately. I have not given instructions to discharge any.

By Mr. ARMSTRONG:—

Q.—How is the door leading from the tower to the street fastened? A.—That door will be locked three-quarters of an hour after we start work.

Q.—Is it held by a bolt and staple? A.—Yes; there is a bolt and staple at the top and bottom. It is locked at the centre; it is a double door.

Q.—Can the bolts be opened easily in case of fire? A.—Yes; they pull down and the door would go out.

Q.—The doors remain bolted in time of working hours? A.—Yes.

Q.—In case of fire, how would the door be opened if there was a rush? A.—They do not need to go out by that door; all the other ways to get out are open all the time.

Q.—Are the doors locked? A.—That is the door I am speaking of. There is only one door locked; the lower door between the building and the street is not locked.

By Mr. McLEAN:—

Q.—What is the idea of keeping the door locked? A.—To prevent people coming in who have no business there.

Q.—Do all the hands work piece-work? A.—Not all.

Q.—Do all have time-checks? A.—No; only those who are on piece-work are checked.

Q.—They have to have a time-check? A.—Yes; when they are on piece-work.

Q.—The day hands don't? A.—Yes; their time is kept by the foreman of the room.

Q.—If there are hands who come in late, what is the consequence? A.—She would not be able to get a day's work unless she was required. I don't suppose the foreman is very strict; that part of the business is in his charge. If he gets the work out it suits us, and he can do as he likes.

Q.—Is there any sub-contract system in your factory? A.—No.

Q.—If the piece hands are not there in time they lose their pay, I suppose?  
A.—I should say so.

Q.—What is the idea of having a check on them? A.—That is to show what to pay them if they are working by the dozen.

Q.—There is no time-check? A.—No.

By Mr. KERWIN:—

Q.—In the event of any of your operatives being connected with labor organizations, would you object to employing them? A.—No; not if they would attend to business.

Q.—Not if you knew it? A.—No; we don't make any enquiries.

By Mr. McLEAN:—

Q.—Has your business increased in the past five years? A.—Yes.

Q.—How much? A.—It has increased.

By Mr. ARMSTRONG:—

Q.—Where do you generally find your market for your products? A.—In the Dominion.

Q.—Regarding the machinery employed by you: is there any royalty paid on it? A.—No; we are not running under any royalty just now. The seaming machine has a royalty connected with it, but we have the privilege of paying so much money down instead of a royalty.

Q.—That is an American-made machine? A.—Yes; it is a Chicago make, and the girls are able to make more money with it than they were under the old tariff under which we ran before.

Q.—Is there any fining of the employés in the mill for any causes? A.—No.

By the CHAIRMAN:—

Q.—Is your business so satisfactory that you have been obliged to employ new machinery? A.—In order to meet the competition we now have we are obliged to get the newest machinery, and any appliances that will enable us to turn out the work as cheaply as possible.

Q.—It is a necessity on your part? A.—Yes; we could not live if we had not it.

Q.—It is necessary, on your part, to get the newest machinery for carrying on your business? A.—Yes.

By Mr. CLARKE:—

Q.—Is there any other factory like yours in the Dominion? A.—Yes; there are other knitting mills.

Q.—Has the duty benefited you? A.—The National Policy?

Q.—Yes? A.—I would say that it is very important that we should continue the tariff. We could hardly exist at the present time with the competition of the United States, if we did not have it.

Q.—Is the factory a Kingston, or English, or American investment? A.—The larger number of the stockholders are Kingstonians.

Q.—Is there any knitting factory in the Maritime Provinces, to your knowledge?  
A.—I think there are three down there now.

Q.—Are they in Nova Scotia? A.—No; I don't think there are any down that far. I think there is one down at Coaticooke. Then there are a couple at St. Hyacinthe, and another place.

Capt. THOMAS DONNELLY, Mariner, Kingston, called and sworn.

By Mr. KERWIN:—

Q.—How long have you been in the occupation of a mariner? A.—I have been master of vessels for eleven years, and when I say vessels I mean of all classes of vessels on the lakes. I have been master of passenger boats, of tug boats, of sailing vessels and freight boats.

Q.—If it is not an impertinent question, I would like to ask you if you got your certificate through competency, commencing as a sailor and going up in the scale? A.—I started work at the lowest rung of the ladder, before the mast, as a boy. I worked up till I became master of a vessel in fresh waters. I then went across the salt water in winter time till I put in service enough over there to take a master's certificate of competency before the British Board of Trade, which I hold at present. That was taken out at Bristol, Eng., under their regulations.

Q.—How many months in the year do you work? A.—Do you mean as master?

A.—I presume you are a master? A.—For the past two years I have been sailing my own vessel.

Q.—What is the average time that a captain is employed during the year? A.—They average about eight months.

Q.—They have eight months' work? A.—Yes.

Q.—How much per month do they receive on an average as wages? A.—Their wages differ a good deal in the different class of boats. On the barges, that is to say, barges employed on the lakes and towed after steam craft, they are paid \$70 per month; from \$70 up to \$90, perhaps, would be the outside figure. The sailing vessel masters will get from \$80 a month to \$750, perhaps, for the season. In regard to masters of some of the steamboats, the best wages paid are about \$1,000 a year. I know of several private concerns that pay \$1,000 a year, and the C. P. R. pays that rate to their captains.

Q.—Are you able to give us the per cent. of wages paid here, at St. Catharines and Detroit? A.—Yes; as master I can. I know the wages paid at every port on the lake. The masters' wages at Kingston and St. Catharines are about the same; if anything, the masters' wages here are more than at St. Catharines. When I say that I know that there are very few sailing vessels going out of St. Catharines; they are mostly all barges, and they have reduced the rate of wages within a couple of years there.

Q.—Do you know anything about the rates of wages paid sailors? A.—Yes; I have paid them so long.

Q.—Give us the list, please, of the Kingston rates? A.—Last year, when I started employing sailors, I paid \$1.25 a day. I paid that for about the first two months. The wages then advanced to \$1.50, then to \$1.75 and then to \$2. Before I came to the Commission I took my wages' book and took an average rate of wages for the last year of my vessel, and I found I paid \$52 a month to the men before the mast.

By Mr. CLARKE:—

Q.—How do the wages on the lake compare with those paid to seamen on the Atlantic coast? A.—They are a good deal higher on the lakes; they are even higher than those out of New York in the winter, where a man is employed a very few months at what they call very high wages.

By Mr. KERWIN:—

Q.—Have you any idea of the number of sailors living around Kingston at the present time? A.—I suppose there are about 300, between Kingston, Garden Island and Wolfe Island, all of whom ship out of this port. Of course, we have a large body of men who sail and call themselves sailors; they are men employed on the barges—they don't leave Kingston, or very few of them do.

Q.—There is a good deal of talk just now about the condition of the craft sailing

in the lake waters. Can you give us any idea of what kind of craft is going out—barges, for instance, and propellers likewise? A.—I try to keep pretty well informed about the different classes of craft, and I find there is a good deal of complaint, but I must say that I know of no sailing vessel or propeller on these lakes that is not staunch enough for the business.

Q.—Do you know of any barges? A.—Yes; I know of some barges.

Q.—What is the matter with the barges? A.—The matter is this: it is very hard to get barge-owners to agree with me in my opinion on those things. My opinion differs from theirs. I have made enemies by my present opinion on this point, but at the same time I have never altered it. Practically I know the difference.

By the CHAIRMAN:—

Q.—Are vessels that are too old to be run as sailing vessels used as barges? A.—Yes.

Q.—There is where the trouble is, I suppose? A.—Yes.

By Mr. McLEAN:—

Q.—What is the matter with those vessels that they are not fit to run? A.—It is not so much the fault of the hold as of the outfit; they don't put enough sail on to them, and they don't man them sufficiently.

By Mr. CARSON:—

Q.—Have you not heard that the forecastles of vessels were not fit for sailors to sleep in? A.—I have sailed on all classes of vessels on the lakes. I have been on small and on large vessels and I think the only unfitness I have found, generally speaking—I have found one or two exceptions—was caused by the sailors themselves. If the forecastle is cold and it is mentioned to the captain that the men want more blankets he will supply them as soon as possible. On the salt water if the men have not sufficient blanketing the blame rests with them and the captain has nothing to do with it.

By the CHAIRMAN:—

Q.—We have been told that on some of the vessels there are forecastles that are not fit for dog cabins? A.—It is not the case on the lakes. You could not get men to go on vessels if they were in such a condition as that.

Q.—We have had that evidence? A.—I will stake my certificate if that can be proved on any lake vessel, and I know every vessel on the lakes. That may be a very broad opinion to give, but I have tried to make a study of navigation and usage on the lakes.

By Mr. McLEAN:—

Q.—How are the forecastles in regard to ventilation? A.—I think they have enough of that.

By Mr. ARMSTRONG:—

Q.—Have you known sailing vessels to leave Kingston with bad rigging? A.—Not, that I know of.

By Mr. KERWIN:—

Q.—I believe there is no one to inspect the rigging and spars on a vessel. The navigation of a vessel depends very much, I guess, on the masts and sails? A.—She is navigated entirely by the rigging and sails, and her speed depends on whether the rigging and sails are all right. So there is very little fear of the masts and rigging of a vessel not being kept pretty well fitted. When you take hold of a barge it is different. So long as the tow-line holds she is all right, but when the tow-line breaks she is in a position of a vessel, and then there is found a necessity for proper rigging and sails, and she has not got them.

Q.—What sails is it necessary for a barge to have? A.—Four mainsails and, at least, three jibs.

Q.—In regard to the over-loading of propellers, have you given the subject any study? How many inches above water should there be for the number of feet under water? A.—Two would be the limit for the lakes. In regard to vessels navigating salt water, the Plimsoll line is 3 inches above water for every foot draft below; and I would like to call your attention to the fact that in the case of some of the evidence given before the Commission that provision appears to have been stated wrongly. The proper rule is 3 inches above water for every foot draft; some of the witnesses appear to have stated that it was 3 inches above for every foot depth of hold; and it is entirely different.

By Mr. CLARKE :—

Q.—How many men do the barges carry? A.—Some of them carry very few; that is a hard question to answer; some more and some less. If you ask how many they should carry, I should say that they should, at least, have four men, a mate and a master.

By Mr. McLEAN :—

Q.—Should they be skilled seamen? A.—They should be just as competent men as if they were on a sailing vessel.

Q.—Are they generally so? A.—No.

By the CHAIRMAN :—

Q.—In the number of men do you include the cook? A.—She is extra; and if a man, he is extra.

By Mr. KERWIN :—

Q.—Have you any knowledge of vessels foundering or striking a rock, or being wrecked through having a crew of incompetent men, and cheap men? A.—I cannot say that I have. There are some enquiries by the Government now going on, and perhaps it would not be proper on my part to express an opinion at this time.

Q.—Have you any knowledge of mates borrowing certificates for passing the Customs? A.—I have heard of it being done frequently; I never knew it done.

By the CHAIRMAN :—

Q.—Who is to blame for that? A.—I have known it done in Bristol. I knew a man who got seven months' imprisonment and a fine for doing that.

Q.—It would be more easy, I suppose, to do that in Bristol than in Kingston? A.—Yes; because the men would not be known at the Custom-house there as they are generally known here.

By Mr. ARMSTRONG :—

Q.—Whose duty is it to see that that is not done here? A.—The Act says that the Customs shall not clear out vessels until proper certificates are produced, or information furnished that the master and mate are certified.

By the CHAIRMAN :—

Q.—The Collector of Customs cannot, of course, know everybody? A.—I don't suppose he can ask, in all cases.

By Mr. ARMSTRONG :—

Q.—Is there much danger attending the carrying of excessive deck loads? A.—Not on the lakes.

By the CHAIRMAN :—

Q.—Not in October or November? A.—There is not very much of it done. The lumber trade is about the only trade in which deck loads are carried.

Q.—How about the lumber trade in October or November? A.—Deck loads will be carried during those months, but not to a great extent. They are carried to some extent.

By Mr. ARMSTRONG :—

Q.—Have you ever heard complaints of seamen in that matter? A.—I have been on lumbering vessels, but we have never carried more than three or four deck loads of lumber.

By the CHAIRMAN :—

Q.—From your experience, are you aware that any sailors have complained of vessels not being seaworthy? A.—If a sailor wants to leave he will complain of the "Parisian;" if he does not want to leave he will go on and not complain; if he wants to leave he can find complaints easily enough.

Q.—As a general rule, are not sailors disposed to go on board vessels, even if they are not seaworthy? A.—I am sorry to say that no matter what kind of a vessel you run you can generally get hands to run her. I think the Government will have to take some action in this matter, and not drive at individuals.

By Mr. KERWIN :—

Q.—Speaking of navigating the lakes in October and November: do you carry any extra number of hands during those months? A.—Some vessels do and some do not.

By Mr. ARMSTRONG :—

Q.—During those months I suppose really competent men are required on board? A.—I think that in navigation on the lakes it is necessary to have good men at any season of the year.

By the CHAIRMAN :—

Q.—Are there storms often in September? A.—Yes; very often.

By Mr. ARMSTRONG :—

Q.—Do the wages increase about that time of the year? A.—Yes.

Q.—Although masters have to pay higher wages at that particular time they have to have more men than in the mild season? A.—A captain would sooner go with poor men in the summer than in the fall.

Q.—And he would not like to go without good men in the fall? A.—Yes.

By the CHAIRMAN :—

Q.—You were mentioning that there were enquiries being made by the Government board in regard to certain vessels—I suppose you refer to the "Oriental"? A.—Yes.

Q.—Are enquiries being made in regard to the loss of any other vessels? A.—I understand there is one about the "California."

By Mr. CLARKE :—

Q.—Is there any shipping master here? A.—No; but in my opinion it would be a good thing if there was one.

By Mr. KERWIN :—

Q.—Do you consider craft belonging to this port well fixed in the matter of anchors, chains, and so on? A.—Most of them are.

Q.—What about life-buoys and preservers: are the vessels deficient in that respect or are they well supplied? A.—There are no life-buoys carried, as a rule, on sailing vessels. In regard to the vessel I own, the gentleman who owned her before fitted her up with those appliances. In my opinion they are very necessary to have on board of vessels, for there are many cases when the crew could have been saved if they had been on board. Take the case of the schooner "G. M. Case," that was sunk going into Port Colborne harbor. A tug got among the wreckage five minutes after it happened and picked up a couple of men, but three or four were drowned. I think there had been life-buoys they could have drifted around and been picked up. I think it very necessary that sailing vessels should have them.

By the CHAIRMAN :—

Q.—Are the sailors engaged by the trip or by the month? A.—By the day, generally, on the lakes.

Q.—Do you think, as a matter of safety to vessels, it would be better, or other wise, that they should be employed by the season? A.—Yes; I think so, and I have thought over the matter a good deal. I would prefer the shipping of men by the month, and I think the general run of the vessel owners prefer to do so, because you would get to know more about the quality of your men than you do by paying them off whenever they touch port. We have, in times past, shipped men in that way; we did it until the union was established. I am not against any union, and I have never suffered any bad effects from union organizations, but it has had that bad effect against vessels, that they compel men to go ashore whenever they strike port—that is one of the standing orders of the organization. A vessel cannot unload its cargo with its men, that is, at present.

By the CHAIRMAN :—

Q.—It is not long since the sailor was almost considered to form part of the ship? A.—Yes; and that is done away with a great deal now. It does not seem to exist at all. The men are shipped simply from port to port. If a captain wants them to work two days more, sometimes he gets them and sometimes not. I have a man who shipped with me on the 20th March last and I kept him on till the 10th December.

Q.—Are you acquainted with the sailors and crews of Norwegian and Jersey vessels? A.—I have been among them a good deal.

Q.—Is it not a fact that they stick to their vessels all the year? A.—Yes.

Q.—And they do well on board those vessels? A.—Yes; we have a class of small vessels on the north shore and in the Bay of Quinté that pick up their crews in the neighborhood, and the men stay with the captains all the year, and they give better satisfaction than do the men they can pick up at the largest ports, and fewer expenses are incurred.

By Mr. ARMSTRONG :—

Q.—Why does the union desire men to go ashore after each trip? A.—Because it is so hard for one part of the union to agree as to the work of another. Stevedores do one part; so we must do all the grain shovelling and the lumber handling, and do all the work connected with handling the cargo. If I have men on my vessel I cannot get them to touch the cargo—I don't want them to go over the side of the vessel—although part of the work could be easily done by them and they could earn the money that is paid out to other organizations that do it. On reaching Toronto my men are paid off directly we strike the port, and they will not do anything around the dock and not do anything in port. The dock laborers, in fact, do all the work, and so soon as the cargo is all on board they will come aboard.

Q.—Does that work properly belong to the duty of a seaman? A.—There is a great deal of it that could be done just as well by those men as the men on shore. As we now ship a seaman on the lakes, it is not his duty to do it, and as we know he will not do it we don't figure on his doing it.

By the CHAIRMAN :—

Q.—How long has this system been in operation? A.—It did not come into force until we had a union organization on the lakes.

Q.—How long ago was that? A.—About ten years.

By Mr. ARMSTRONG :—

Q.—It is the custom not to do that now, I believe? A.—Yes.

By Mr. CLARKE :—

Q.—Can you suggest anything that would forward and protect the interests of seamen and the shipping interests generally? A.—Yes; I think the men should be shipped and paid off at a shipping office. It would be better for the men and

better for the vessel owners, and better for the captains, and would cause less trouble. There would be no such thing as beating men out of their wages, which may possibly be done, and it would settle all disputes to ship the men at the shipping agency, and pay them off at such an agency, the same as is done at Atlantic ports.

By Mr. ARMSTRONG:—

Q.—Do you mean, then, engaging them all the season? A.—On the coast of Great Britain they engage them by the month or for the run.

By Mr. CLARKE:—

Q.—How would you say that men's wages would be paid by the year compared with the way the men are now paid and discharged? A.—I think that a man could earn almost ten times as much as he does when he is paid off at every port. It simply means that he makes a short run and then spends two or three days in the saloon, and when he gets out he has very little money.

By the CHAIRMAN:—

Q.—You think the Canadian sailor is a good bit like the English sailor? A.—They are a good deal like that all the world over.

By Mr. ARMSTRONG:—

Q.—While that might be desirable, would it not be interfering with the liberty of the seaman? A.—I am speaking of the benefit it would be to the sailor.

By the CHAIRMAN:—

Q.—You do not mean to say that the Government should force men to stay on board the vessel? A.—No; this is a free country, and he could do as he pleased.

By Mr. ARMSTRONG:—

Q.—Suppose he was engaged by the season, or by the month, would it be at a uniform rate of wages for all the season round? A.—Do you mean, would it be better for them to do so? There is no such thing as it being done, because we cannot regulate the rate of wages; that depends on the supply and demand.

By the CHAIRMAN:—

Q.—Is one man better than another as a sailor, and do you give him more than you give another? A.—It has never been done on the lakes; they all get the same rate of wages. There is a difference between the sailing business and any other class of business, in regard to labor organization. When you leave port you, perhaps, have only four men on board. Now, if you had a certain number of men on shore and a difficulty occurred you could discharge them. In the case of a sailor, however, it is different; half an hour after you have gone out of port, you might require the best work out of your men; of the men, perhaps, there are only four in all, and if one or two turn out to be inferior hands there is great danger both for themselves and the vessel; for, of course, these men cannot be replaced. In that respect it is quite different from any other business on shore.

By Mr. ARMSTRONG:—

Q.—Do you not think that a good man is worth more during the dangerous season than in the summer, when there are not any gales? A.—I think a good sailor is worth all the money he can get for his wages. I think a poor sailor ought not to be aboard a vessel at all. I know I have been in places where it was the crew's work that got the vessel out of danger.

By Mr. CARSON:—

Q.—You are always anxious to get a good sailor, and to keep him? A.—I have always been satisfied to get him and keep him. I find this, that legislation in the shipping interests in Canada has been nothing, since I can remember—there has not been proper legislation in the shipping interests.

By the CHAIRMAN :—

Q.—Is that not a great deal the fault of the seamen in not making proper representations? A.—I don't know of any representations made in regard to this labor organization, yet here we find a large Labor Commission, and not a sailor on it, though we have a very large shipping interest in Canada. Another remark I may make is that the Acts passed of late years have not been properly constructed; there should be several changes in the last Seaman's Act—the Marine Act.

Q.—Have any representations been made by any one to the Government in that regard? A.—If I, or some one else, who was a little better informed than the general run of sailors, make any representation, I find that there are a great many capitalists who run barges, and men interested in the fitting out of boats, who have different opinions compared with us, and I could give the names of them right off. I want to be able to speak and to prove my case, and yet these men are ready to jump on my neck right away.

Q.—Why not go to the newspapers? A.—I have done so. The large marine association that met in Toronto last year wanted to petition the Government that the masters and mates should be done away with on barges. I was elected a delegate by the sailors of Canada to go to Ottawa and mention the matter to Mr. Foster, and through the position he gave it there the vessel owners did not succeed.

Q.—How were they going to man their vessels? A.—By men engaged for \$8 per month; by anybody they could get hold of; that was the idea.

By Mr. KERWIN :—

Q.—Do you not think the Government should appoint a sailor as inspector of Hulls, rigging and all the standing gear of a vessel? A.—I do; and when they do appoint an inspector they will not appoint a man by competitive examination, but some fellow who has a good deal of political influence, and who will not be in a position to speak for us, as he should do in the matter. I think I can prove that by the positions that are held on the lakes at present by similar men.

By Mr. ARMSTRONG :—

Q.—You think the duty is not honestly performed? A.—I do think it is not honestly performed.

Q.—You want a Plimsoll at headquarters? A.—You might call him what you like, but we want a man who is not afraid to do his duty.

By the CHAIRMAN :—

Q.—Is the Lloyds' agent here a sailor? A.—He is a sailor, but Lloyds' only inspect the vessel for their own purposes.

Q.—Lloyds' agents are capable men, I suppose? A.—Yes; they are capable men.

By Mr. ARMSTRONG :—

Q.—Have you ever known masters and mates to accept positions on vessels not having certificates? A.—I have known of several cases where they have been stopped on the lakes, and I have heard of other cases, but that is almost stopped by the Government.

Q.—Do you not think the inspector should stop at once any one if the case was made known to him? A.—Yes. In saying that I will add that it seems very easy, during the past year, for a man to slip down to Ottawa and get a certificate for a man to whom he wants to give a position, and then, of course, the inspector could not take any action.

By Mr. CLARKE :—

Q.—Is it within your knowledge that vessels that have been refused certificates by the Kingston Lloyds are carrying grain cargoes, or have been carrying grain cargoes since that time?

By the CHAIRMAN :—

Q.—That is to say that vessels that were pronounced not fit to be insured have afterwards carried grain cargoes? A.—When Lloyds' inspector refuses to

give a vessel a certificate that vessel would be afterwards employed in carrying grain cargoes by the owner of the vessel giving an extra insurance; but if they cannot carry grain the vessel will be put in the coal trade, and the insurance companies will then have no control over them; Lloyds' inspector has then nothing more to do with the vessel.

Q.—You think as good a vessel is required to carry coal as to carry grain?  
A.—Yes.

By Mr. ARMSTRONG :—

Q.—Have you ever known vessels ordered in for repairs by Lloyds' inspector to leave port without such repairs being made? A.—He has to examine them again, for which he has to be paid, before they can get a classification on his books. They can go when they like, but if they do so they have no classification. Lloyds' inspectors are very particular.

Q.—Do you not think that if the vessels can go when they like that the crew is in danger when the necessary repairs to the vessel have not been made? A.—Yes.

Q.—You think the Government should step in in a case of that kind? A.—Yes.

By the CHAIRMAN :—

Q.—Do you think there should be a regular inspection of the hull of sailing vessels, as there is of steam vessels? A.—I think so. They go to work and put me on a steamboat of 150 tons and thirty horse-power with a crew of perhaps fifteen men, and the most incompetent men in the world could blow me sky-high, but as soon as one passenger is on the boat it has to have a certificated engineer. Is there any justice in that?

By Mr. CLARKE :—

Q.—Is it not just the same on the Atlantic coast, that vessels are running there without certificates? A.—No; it is not. No vessel can clear or get cleared at the Custom house that has not properly certificated men on her.

Q.—Are there not a number of vessels in the Atlantic service to-day, sailing without certificates from Lloyds? A.—Carrying cargoes of freight that Lloyds did not insure?—Yes. Those certificates they have to get as regards their offices, however.

By the CHAIRMAN :—

Q.—Do you mean to say that vessels will pass inspection in England that are not fit for insurance? A.—No; they are well looked after in England—they are very well looked after there.

By Mr. CLARKE :—

Q.—There are vessels that carry timber from our ports to England, and come back in ballast, that are not insured? A.—That may be. There is one question that I would like to call the attention of the Commission to, and it is in connection with the wrecking laws of this country. I think it is very important that our vessels should be placed in a proper position in regard to this work. On 19th July, 1878, the United States passed an Act, which they called "An Act to aid vessels wrecked and disabled," which reads as follows :—

*"An Act to aid vessels wrecked or disabled in the waters conterminous to the United States and the Dominion of Canada."*

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that Canadian vessels of all description may under aid or assistance to Canadian or other vessels wrecked or disabled in the waters of the United States, contiguous to the Dominion of Canada; provided, that this Act shall not take effect until proclamation by the President, declaring that the privilege of aiding American or other vessels wrecked or disabled in Canadian waters, contiguous to the United States, has been extended by the Government of the

Dominion of Canada, and declaring this Act to be in force: and provided further, that this Act shall cease to be in force from and after the date of proclamation by the President to the effect that said reciprocal privilege has been withdrawn or revoked by the said Government of the Dominion of Canada. Approved 19th June, 1878."

I think the master of a vessel who is present when she goes ashore or the owner to whom he can telegraph should be the best judge as to the necessity of obtaining quick relief for that vessel, and very often valuable property is lost by there not being proper means of relief at hand. If half a dozen Canadian tugs were in the neighborhood, and a Canadian vessel should get wrecked on the American side, they cannot touch her, because the Dominion of Canada has not met this United States Act in the proper spirit.

By the CHAIRMAN:—

Q.—I thought they had done something? A.—They have done nothing at all. The bill proposed met with opposition from interested members in committee, and it is a dead letter, and nothing has been done, with regard to the matter. I speak this way because those members have not the same interest now, and they will not give it opposition.

Q.—You had better renew the agitation at the present Session of Parliament? A.—I thought the Labor Commission would take some action in the matter.

By Mr. ARMSTRONG:—

Q.—Do you consider that those members of Parliament who were interested in giving opposition in this matter bucked against it and were the means of stopping the measure being passed? A.—Two representatives were sent from here to support the matter, one of whom said: "I will take off my coat and lick the whole committee before I will have this thing go through."

Q.—There must have been considerable lobbying, too? A.—That is the objection we met with. If I am captain of a vessel on the American side, and I get ashore, and there is a Canadian tug near at hand, they would pass right by us. I think some action should be taken by the Government to give effect to this Act, and I could never see any objection to it. It is a somewhat curious statement I have to make with regard to the late Marine Act. It says that a vessel that has sails and rigging must carry a certified master and mate. Now, I have a vessel in dock, and under that law she has to have a certified master and mate aboard. Perhaps the master and mate want a little higher wages than I care to pay, or perhaps I cannot get them at the time. My vessel is quite seaworthy with her rigging on. Now, what do I do to get over the law, and what does the law allow me to do? By taking the sails and rigging off the barge I can send my vessels all over the lakes with the crew on board of them in an unseaworthy condition, and there is nothing to prevent me doing it. The more unsafe the vessel is the easier the Government allows it to go. I should like the Commission to take some notice of this matter.

DAVID ROGERS, Farmer, Kingston, called and sworn.

One the greatest drawbacks we have as farmers is the lack of help in the farm and agricultural laborers. One of the principal suggestions I have to make to this Commission is that the Government should see that some farmers' exchange and association with respect to help between employer and employed should be established. This is as necessary for the cities as it is for the agriculturists. For instance, when a farmer wants help there is no place he can go to look for it, except around the taverns. Every person knows that the position of the farmer is an isolated one, they having no chance of meeting any farm laborer, out of employment.

By Mr. ARMSTRONG:—

Q.—In the busy season do the farmers employ extra help? A.—They do.  
Q.—How long does that busy season last? A.—About four months in the year, spring and harvest.

Q.—When the busy season is over what does the farmer do with his men? A.—All the farmers retain a certain number of their men all the year round. At the extra busy time they give extra wages, enough to compensate the men for the lack of constant employment.

Q.—What do the men who constitute the extra help do when the busy season is over? A.—In some instances, many instances, they are discharged or kept on? A.—In some instances, many instances, they are discharged. At the present time there is so much machinery used that we do not employ so many extra hands as we did formerly.

Q.—Still, farmers do employ some? A.—Yes.

Q.—And when the extra work is over I suppose they are discharged? A.—Yes.

By the CHAIRMAN :—

Q.—Where do the men work afterwards? A.—Some go into the city after they have got bigger wages for the summer.

By Mr. ARMSTRONG :—

Q.—Do the farmers keep them at lower wages during the balance of the year until the busy season comes around the following year? A.—They have help all the year round, which they employ.

By Mr. McLEAN :—

Q.—Do you know any laboring men who work as such in the city, but who leave the city during the busy farm season and go into the harvest field, because there are higher wages paid then? A.—Yes; many.

Q.—And they go back into the city again to their old jobs? A.—I do not know that. Many leave and come to the city and walk the streets and say: "These hard times." I can give you four instances of men who have been in my employ and I can state the wages—they were good men, good fellows to work, and I have nothing against them. I gave them \$220 a year, a free house, free wood and garden.

By the CHAIRMAN :—

Q.—How many hours a day do you work? A.—On an average, just as many as they do in the city.

Q.—During seven months in the year how many hours do you work? A.—From twelve to fourteen hours.

Q.—You, yourself, do that? A.—I have to do it. If we did not do it we could not run the farm.

Q.—You have done it for a great many years, I suppose? A.—Yes.

By Mr. ARMSTRONG :—

Q.—You do that as owner of the farm? A.—Yes; I could not own the farm and run it if I did not also lead in the work. I have been employing men for twenty-two years.

Q.—In regard to the laborers you employ during the busy season: after the busy season is over and they are discharged, what can they do, except to go to the city to seek for employment? A.—These men to whom I have referred are employed by the year. They are living in the city now, and I know four of them who have not been doing anything for two months. They were paid wages by me all the year round. They say there is no work in town.

By the CHAIRMAN :—

Q.—Have the generality of men got on pretty well after they have left you? A.—They have not done as well as they did with me in the country.

Q.—I am speaking of those who have gone to open new lands, and so on? A.—In many instances they have; in many cases I employ immigrants who come to me with nothing. They have come out themselves at first, and have afterwards sent for their families. I can quote five or six instances.

Q.—How are they doing? A.—They are doing for themselves now; I think four or five are living in the cities.

Q.—They are helping on the wealth of the country, and I suppose they are increasing their own wealth by coming into it? A.—Yes.

Q.—And they are giving employment to laborers themselves? A.—Yes; in some instances.

Q.—They buy goods in the store, I suppose? A.—Yes.

Q.—They buy clothes and provisions? A.—Yes.

Q.—So you think some of the immigrants who come here are not nuisances?  
A.—I do not know what the farming community would do except for the immigrants that come in.

Q.—You think, then, that we should not prevent any one from coming into the country? A.—There may be plenty of people in the cities, but there are plenty of avenues for labor in the country.

By Mr. ARMSTRONG :—

Q.—You have read the report of the Bureau of Labor Statistics of the Provincial Government in regard to agricultural labor? A.—Yes.

Q.—Is it correct, to your knowledge? A.—Yes; so much as I can remember of it.

Q.—It states that there is a scarcity of farm laborers? A.—Yes.

Q.—Do you believe that? A.—Yes; I am sure of it.

Q.—Those farm hands who come into the towns and cities, you say, are not so well off as they were formerly in the country. Is that your opinion? A.—It is my firm opinion. I know farm laborers well, and I have asked them if they could do better; they have answered that the hours were shorter. I have asked them if their hours in the country during the twelve months were as long as they are in the city, and they have replied that they could not say they were. That is, they were not so long, taking the twelve months through.

Q.—But there is not as much work on the farm in winter as in summer time?  
A.—There would be a great deal more work done if the men were willing to stay at a reduced rate of wages, but they demand such wages that the farmer is not able to pay them from the returns he has.

Q.—Is it not possible for the farmer to spread over the entire year the work he now endeavors to do in nine or ten months? A.—It is impossible.

By the CHAIRMAN :—

Q.—You do not think that you could raise root crops by working so many hours a day? A.—No.

Q.—During the summer time I suppose the farmer has to do almost everything connected with raising crops? A.—Yes.

By Mr. McLEAN :—

Q.—Did the farm laborers to whom you have referred leave the farm voluntarily?  
A.—Voluntarily in all instances, except one. I never had any man, except one, in my twenty years' experience, who did not leave voluntarily; we have always got along together on the best of terms, and they left simply because they thought they could do better.

Q.—Are those farm laborers who come in from the country the men who stand around idle in the streets? A.—In many instances they are; I could mention hundreds of cases in my experience. Four or five men I have employed have gone to Toronto.

Q.—Then the workingmen in the city have to suffer? A.—Yes.

Q.—By those men coming in? A.—Yes.

By Mr. ARMSTRONG :—

Q.—How can the workingmen in the city suffer when those men remain idle?  
A.—They compete with them when they are in the cities.

Q.—Then they must be employed in the cities? A.—Only for the summer; that is the trouble.

Q.—It is a natural consequence that they either must not approve of farm life

or that it must be excessively laborious when they prefer city life to that in the country? A.—I think the work is more laborious. But they do not look upon living in the city the same as they do in the country.

By Mr. McLEAN :—

Q.—What crops do you principally raise? A.—I do mixed farming.

By Mr. ARMSTRONG :—

Q.—What crop do you raise that pays you best with the least outlay? A.—Hay.

Q.—Did you ever give the raising of stock any thought? A.—Yes; I raise quite a number all the time.

Q.—Do you indulge in that industry? A.—Yes.

Q.—Do you make it pay? A.—No; not during the last few years—with the exception of cheese only.

Q.—Do you think that cattle raising is on the increase with farmers? A.—During the last two years it has not been.

By the CHAIRMAN :—

Q.—Do you think farmers have not enough burdens to bear in this country without being called upon to pay any additional one? A.—He would not be able to stand any more, I assure you. There are many farmers now living in this city who have sold out their farms for the reason that they cannot get help.

Q.—And consequently cannot manage their farms as well as they desire? A.—Yes; and cannot make them pay.

By Mr. ARMSTRONG :—

Q.—Have you ever noticed that the help that has come out to you and other farmers in the busy season has returned in the following year to the same position? A.—Yes; in many instances.

By the CHAIRMAN :—

Q.—And have some gone to work themselves? A.—Yes; they have started and worked themselves.

By Mr. ARMSTRONG :—

Q.—Is there a scarcity of farm domestic help? A.—There is a great want. It is one of the reason why farmers sell their farms and leave, because the female portion of the house cannot do the work and keep the house going, which is owing to the fact that they cannot get hired help.

By the CHAIRMAN :—

Q.—You think if there was more help of different kinds you could manage your farm more profitably than you can do now? A.—Much more so. If there was some place of interchange between employers and employes there would be much more work done in the country, especially if the farmers know where to go to obtain the men. Farmers have to pick up men who are walking about the road as tramps. He is compelled to ask a neighbor if he knows of any one, or he has to go to an hotel and ask around if there are any men wanting work; there is no other way for the farmer otherwise to obtain help. There is plenty of extra work that could be done and much more labor could be employed.

By Mr. ARMSTRONG :—

Q.—Are the wages of a servant girl as high in the country as in the city? A.—They are not paid as much.

Q.—What does an average good girl receive per month in the country? A.—Six dollars.

Q.—Do you know the average rate of wages in the city? A.—Probably about \$7.

Mr. ARMSTRONG.—About \$10.

By the CHAIRMAN :—

Q.—The fact is, I suppose, that girls prefer to live in cities? A.—That is the case.

By Mr. ARMSTRONG :—

Q.—Do you think the farmers would get a better class of hands and more competent hands if they paid higher wages? A.—Yes; if they could afford to pay higher wages.

By the CHAIRMAN :—

Q.—You pay as much, I suppose, as you could reasonable be called upon to pay? A.—Yes; and more. No farmer in this section of the country can make farming pay unless he leads his men. The trouble with regard to men coming into this country is this: good men command good wages, but men are not all equally good, and some new comers do not understand or will not understand that they cannot expect to receive as much as if they were qualified men and had experience. Then, of course, they cry out that they cannot get wages. If you pay some men \$10 a month it will be more than \$18 or \$20 to others. Farming is the hardest kind of work to learn. Let a green hand go into business in the city and they would have to get a training before they would practically receive anything; whereas a farmer has to impart the information and show the man how every thing has to be done—in fact, teach him, and have to pay him as well. That is the trouble. The difference is that there is no union to represent the case of the farmers to the Government in that light. I really think one of the practical points for the Commission would be to get some place appointed by the Government where there could be an interchange as regards labor between employers and employes.

ALEXANDER BENNETT, Baker, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—How long have you worked at the bread and biscuit business? A.—Twenty-two years on the 24th of November. I landed here in 1866, and I have been working at the business ever since.

Q.—Is the trade divided into two classes? A.—I don't know how I can answer that question in order to give you a proper idea of the matter. In all branches of business there are some men better than others, and of course that is the case in our business; and we have two classes into which we generally divide men—the first and second-class hands.

Q.—What are the weekly wages of a foreman? A.—Ten dollars.

Q.—What are the wages of a second-class man? A.—Nine dollars; but there are some of our foremen getting \$12 a week, and so on; our lowest wage is \$10 for foremen.

Q.—How many hours do you work per week? A.—Bakers can hardly measure their hours. They may get through their work in eight or nine hours, or ten hours, or it may last ten, twelve or fourteen hours; they have to work according to the fomentation.

Q.—They have to get ready for the sponge? A.—They have to allow the fomentation to take its own course.

Q.—What will be the average number of hours that they work? A.—About sixty hours.

Q.—At what time do they commence work in the morning? A.—In Kingston we only commence very early one day in the week; and that is owing to the privilege being given to the bakers here to have Saturday afternoon. On that morning, of which I speak, they commence at 3 o'clock in the morning; other mornings they commence at 5 o'clock.

Q.—What is the sanitary condition of the bake-shops in Kingston. A.—I think you had better put that question to the health officer.

Q.—As a practical baker, what is the sanitary condition of the shops? A.—Honestly, they are very poor.

Q.—Does the health inspector come around and inspect them? A.—I never saw the health inspector in my bake-house since there was one appointed.

Q.—Is there much machinery used in the bake-shops in Kingston? A.—There is none of any extent, except in two shops.

Q.—Is the machinery dangerous? A.—The whole of the machinery is dangerous.

Q.—Have any accidents happened through that dangerous machinery recently? A.—There are a number of them happening regularly every year.

Q.—Do you know that the factory inspector has visited the bake-shops in regard to the protection of this machinery? A.—No; not in my time.

Q.—Has he ever visited Kingston, to your knowledge? A.—No; I have heard of his being here, but I don't know of my own knowledge.

Q.—Do you consider that the machinery should be better protected than it is? A.—Surely, and it is very simple to do it.

Q.—You are acquainted with the running of machinery, to some extent? A.—Surely, I am.

Q.—Is there as much machinery used in making bread as in making crackers? A.—We don't use machinery in making the bread, only in making biscuits. In some other towns they do use it for bread-making, but it is not done in Kingston; here we do it all by hand.

Q.—Do you think that this dangerous machinery could be protected by a small outlay of money? A.—Yes; and a very small one, too. I can give the idea if it is required.

Q.—Are the engineers who run the machinery competent men to be in charge of it? A.—I have seen some engineers who have run engines in Kingston who knew as much about engines as I know about taking a ship from here to Norway, and I don't think that I could do that very handily.

Q.—Are the boilers to your engine in a dangerous condition? A.—I cannot say that; I believe there are two boilers here at the biscuit works, and they are both pretty good boilers, so far as I understand.

Q.—Do the bakers in Kingston belong to organized labor? A.—Yes; they do.

Q.—Has the condition of the bakers improved since they connected themselves with organized labor? A.—Greatly.

Q.—In what respect? A.—Financially.

Q.—Have they ever attempted to make the hours they work in the twenty-four more convenient? A.—We have just been organized a few months, and we have not got things as well fixed as we might have. We have not got so much done in that way to our advantage.

Q.—Have there been any labor troubles between employers and employes? A.—Quite the reverse. The master bakers have been all well pleased with what we have done.

Q.—And there has been good feeling existing between both parties? A.—The very best; I have not heard any one complain.

Q.—Has the price of bread risen since the rise of wages? A.—No; it is just the same as it was before we got the small rise.

Q.—Are the masters organized? A.—Not to my knowledge.

ISAAC OLIVER, Shipwright, Kingston, called and sworn.  
By Mr. ARMSTRONG:—

Q.—Is there much demand for shipwrights in Kingston? A.—The demand is pretty fair.

Q.—How long are they employed during the year? A.—On an average, I guess about ten months.

Q.—Do they work by the day or by the job? A.—By the day.

Q.—What will be the wages for a first-class shipwright? A.—One dollar and seventy-five cents a day.

Q.—Is that the standard rate of wages? A.—In some cases they get a little more.

Q.—Do any of them receive less than \$1.75 a day? A.—Oh, yes. Some of them get down to \$1.10. The rate is just according to the demand for men; at a particular time it may be paid to a first-class man or to a poor man.

Q.—Does it require apprenticeship to the trade? A.—Yes; it should be so, by all means.

Q.—Have those men who receive \$1.10 served an apprenticeship to the trade? A.—Some very few have.

Q.—In what part, in repairing a vessel, are shipwrights generally engaged? A.—On various parts of vessels, more particularly at the two ends.

Q.—To your knowledge, have you met with vessels that were in a very bad condition? A.—We have run across an odd one or two.

Q.—Would that bad condition be in connection with the hull of the vessel? A.—Sometimes; just according to how the age is.

Q.—Have you ever found the deck of vessels getting into a rotten state? A.—In some cases, but very few. Generally speaking, they have to keep up the deck in the best state.

Q.—When they are found in such a state, what is the nature of the repairs? Do you put in new planking or do you caulk? A.—Sometimes we strip it all off completely; sometimes we caulk; it depends on how far it has gone.

By the CHAIRMAN :—

Q.—It depends, I suppose, on the state of the deck itself, whether it will stand caulking or not? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Have you ever known a vessel to leave this port that required repairing in your line of business? A.—No; not unless there was no convenience for taking her out, or something like that; I mean for docking her after hauling her out.

Q.—Have you been on board of a vessel which, from a practical point of view, required repairing and which, nevertheless, went out of this port?

By the CHAIRMAN :—

Q.—In other words, was she unseaworthy? Do you know of any vessel leaving this port in an unseaworthy condition? A.—I don't know of any going out of this port at the present unseaworthy—that is, so far as regards their condition in our line, which is all I speak of.

Q.—If particular repairs are required are there proper facilities in this port for having them done? A.—No; we have not proper facilities for repairing?

Q.—What would you call proper facilities for repairing? A.—A dry dock—a marine railway for taking out large vessels.

Q.—You think the construction of a dry dock would be a great benefit? A.—I do.

By Mr. KERWIN :—

Q.—What do you know about the inspection of vessels that leave this port? A.—I don't know whether there is a Government inspector, but I know there is an insurance inspector.

Q.—Do you not think a better inspection would be conducive to the safety of vessel and steamship, and to the safety of the crew handling such vessel? A.—I think it would be.

Q.—What proportion of carpenters are skilled mechanics in this city? A.—There are not very many of them.

Q.—Where do you get your supply of men when there is a rush of work during the busy season? A.—We generally get them out of the bush.

Q.—Those are the \$1.10 a day men? A.—Yes.

By Mr. CLARKE:—

Q.—Where is the repairing done for the lake vessels? A.—Very few come here.

Q.—Is the repairing done here limited to vessels owned here? A.—That is all. There are no facilities here for it, nothing except for parties who own the vessels here.

By Mr. ARMSTRONG:—

Q.—Has there been any movement on foot for the construction of a dry dock at Kingston? A.—There was at one time.

Q.—Have you got any information to give to the Commission that would be of benefit to your trade? A.—So far as I am personally concerned, I think there should be some protection for shipwrights in the line of apprentices; that is my particular point.

Q.—You think there should be an indenturing system introduced? A.—Yes; I think so. I know I had to serve my time at the trade.

Q.—How long do you think the apprentice should serve with a shipwright before he would become a competent workman? A.—He should be, at the lowest calculation five years.

Q.—Do you think he could learn his trade properly in this port? A.—I rather think, he could, if he was any way active or smart. I don't think he could go into a better place.

JOHN DWYER, Laborer, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Where are you employed? A.—I am a laborer at the locomotive works here.

Q.—Are there many laborers employed in the locomotive works? A.—I don't know what you class as laborers there.

Q.—Are there many men who follow the same calling as you do there? A.—There are none at the present time, but myself.

Q.—You call yourself a laborer? A.—That is what I am.

Q.—What is the nature of your work? A.—I clean up the shop I work in.

Q.—What would be the average wages per day of a laborer in the locomotive works? A.—The average wages would be in the fortnight—we get paid every two

weeks—that is, I get paid for the twelve days' work \$11.80, which would be 98½ cents a day.

Q.—How many hours per week constitute a week's work? A.—Fifty-nine.

Q.—Do you think it would be more convenient to the laborers if they were paid weekly? A.—I don't think it would.

Q.—Are you a married man? A.—Yes.

Q.—Do you feel that you have to pursue a course of strict economy to support a family on 98½ cents a day? A.—Undoubtedly so.

Q.—What kind of a house, and what will be the rent of it per month, will a man have who has 98½ cents a day, in order that he may live within his means? A.—I don't believe he would want any house at all at that wage.

Q.—Have the laborers in the locomotive works ever applied for an increase of wages? A.—Yes.

Q.—What was the answer they received? A.—I have as one; I have applied three times for an advance of pay inside of three years.

By the CHAIRMAN:—

Q.—When was the last time you applied? A.—I think it was about last Christmas.

By Mr. ARMSTRONG:—

Q.—Will you tell us the answer that was given you? A.—The foreman told me I was worth more money than I was asking, but at the same time he had not the power to give it to me. That was the answer I got.

Q.—Did the laborers apply to higher authority than the foreman? A.—The superintendent was a man who would not listen to common laboring men, and he would not speak to me. As a consequence, I thought it was no use in speaking to him, as I would get no answer, and I think the foreman was the man to judge what a man was worth.

Q.—Is it within the power of the foreman to employ and discharge men under him? A.—I believe those are the conditions.

Q.—Do you consider that it is within the power of the foreman to increase wages? A.—I do.

Q.—Are there any apprentices, young boys, working at the same business as you are at? A.—No; there are not any apprentices, because it is very easily learned.

Q.—Do the laborers remain long in the employ of the locomotive works? A.—I cannot say that they do, because the wages are so small that they cannot live on them. As soon as there is an opening for them they leave, unless they are tied down by a big family and cannot help staying, as I am.

Q.—Has the volume of work increased in the locomotive works during the past few years? A.—I think it has.

Q.—The output of the products of the company is greater? A.—Yes; than when it first started.

Q.—Do any laboring men receive less wages than 98½ cents per day? A.—No.

Q.—You consider, then, that when the volume of work has increased that the wages should increase? A.—Yes; I think so.

Q.—Did the company pay the laborers less frequently than they do now, at the rate of 98½ cents per day? A.—Not that I am aware of.

Q.—Did they ever pay once a month? A.—Not since I have been there.

By the CHAIRMAN:—

Q.—Were not these works shut down for some time? Do you remember when that was? A.—Yes. I remember when they opened; I don't remember when they were shut down.

Q.—They were shut down for some time? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Can you tell us the reason why they were shut down? A.—No; you must go to a higher authority than I am to get that information.

Q.—Do you consider that the works were shut down for want of orders? A.—I don't think so. As well as I could hear, and as far as I could judge, they had plenty of orders, but they had been accustomed to getting big prices for engines and they did not like to come down lower. That was the principal reason.

By the CHAIRMAN:—

Q.—So they refused to make money? A.—Yes; or the works would not have been closed up.

SAMUEL ROBINSON, Baker, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Did you hear the evidence of the last witness, Alexander Bennett? A.—I did.

Q.—Do you corroborate it? A.—I do, except in regard to the wages. At the time we got the advance it was understood between the bosses and the men that they were to raise the bread if we were to get the wages—if we got the wages they

would raise the bread. It was through the labor organization that we got it in that way.

Q.—What is your knowledge in connection with the sanitary condition of the bake-shops? A.—It is very poor.

Q.—Do you think there is good room for improvement? A.—Plenty of it.

Q.—Are there any women employed in any capacity in connection with the baking of crackers? A.—Yes, there are girls employed.

Q.—What wages do they generally receive? A.—One dollar and fifty cents or \$1.25, which is according to how long they have been there, and their smartness.

Q.—Do you mean \$1.25 a week? A.—Yes.

Q.—Do any of them receive less than \$1.25 a week? A.—I think they do when they first go there. I don't know what they first get.

Q.—What might be the age of those who are receiving \$1.25 a week? A.—About fourteen or fifteen.

Q.—How many hours per week do they work for that amount of wages? A.—Ten hours a day.

Q.—Have the bakers or cracker-makers ever asked from their employers shorter hours, or hours more convenient to work? A.—Not to my knowledge.

Q.—Do the men eat their meals in the workshop? A.—Not the cracker-bakers; they have their hour for dinner.

Q.—Do they go home to their meals? A.—Yes.

Q.—Did you hear the evidence of a previous witness in regard to the condition of the boilers in the bake-houses? A.—Yes.

Q.—Do you agree with that evidence? A.—Yes; so far as I know about the boilers, and that is not very much.

Q.—Have you any further information connected with your business that would be of interest to the Commission? A.—No; I think it is very satisfactory now. I think, however, the bake-shops should be seen to; they are not fit for a man to work in—that is, the majority of them.

Q.—Your health officer is a corporation official? A.—Yes; I believe so.

Q.—Have you always worked in Kingston? A.—No.

Q.—Have you worked on the other side? A.—I have worked in Toronto.

Q.—What is the difference in the wages of a cracker-maker in Kingston compared with the wages of a cracker-maker in Toronto? A.—I never worked on crackers in Toronto.

Q.—Well, take the wages of a baker? A.—They get \$10 or \$12 there, while we only get \$9 and \$10 here.

Q.—What is the difference in the hours? A.—They work nine hours a day; they are ten hours in the bake-shops, and there is half an hour allowed for each meal.

Q.—Do you consider the condition of bakers in Toronto preferable to the condition of bakers in Kingston? A.—Yes; I think so.

Q.—You think so, taking everything into consideration? A.—Yes.

THOMAS BARLOW, Machinist, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are, I believe, a machinist in the locomotive works here? A.—Yes.

Q.—Are you a journeyman machinist? A.—Yes.

Q.—What are the highest wages paid to the machinists in your shop? A.—Two dollars and twenty-five cents a day.

Q.—What is the lowest? A.—I cannot tell you that, for I don't go round asking men their wages.

Q.—Do the majority of machinists receive \$2.25 a day? A.—Oh, no; there are only a very few receiving that.

Q.—How many machinists are employed at your works? A.—I could not tell you that.

Q.—Is any portion of the wages of a machinist kept back from them? A.—No; we are paid fortnightly, on Friday, up to the end of the previous week; there are only five days kept back.

Q.—Would the men prefer to be paid up fully at each pay day? A.—I never heard them express an opinion. It is done that way for convenience in keeping the books.

Q.—At what age is an apprentice taken on at the locomotive works? A.—They are from fifteen up to twenty.

Q.—Does he serve a stated time? A.—I think he does; I think it is three years. I am not positive about it, but I think so.

Q.—Do you believe three years is a sufficient time to make a competent machinist? A.—No; I do not.

Q.—Is it the wish of the boy that he should only remain three years, or is it the wish of the company? A.—I expect it is the company—I could not say.

Q.—When the boy is out of his time, that is, at the end of the three years, is he retained as a journeyman at the works? A.—Generally.

Q.—Do you know the wages a boy would receive on going to the trade in the first instance? A.—I think 50 cents a day—either 40 or 50 cents; I am not sure.

Q.—Have you got any information for the benefit of your trade that would be of interest to the Commission? A.—No.

R. MEEK, Journalist, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are considered in Kingston to be a representative of organized labor? A.—Yes.

Q.—Could you give us your experience in regard to matters between capital and labor in connection with employers and employes in Kingston? A.—You mean in regard to difficulties between employers and employes. The policy of the Knights of Labor, with which I am identified, has been to advocate in all cases a policy of peace and conciliation. We also advocate concessions, when such are necessary.

By the CHAIRMAN:—

Q.—I may tell you that we had a representative of the Knights of Labor before us in Toronto or Hamilton, and the principles of the order were incorporated in our evidence? A.—That has been our policy here.

By Mr. ARMSTRONG:—

Q.—Have any employers of labor in Kingston refused conciliation or arbitration in cases of difficulties? A.—We have only had one case within my recollection in which a reference was made to arbitration, and that case never reached a head. We appointed an arbitrator on behalf of the Knights of Labor, and the employers appointed an arbitrator; there were two or three meetings of an unimportant character. As to that, the arbitrator of the company did not show any inclination to pursue the case to the finish, and the arbitrator on behalf of the Knights of Labor reported to the Knights that his mission had been a failure, and he was released from duty.

Q.—Do you know that a portion of the operatives in the hosiery mill in this city have petitioned their employers to rectify their grievances? A.—Yes.

Q.—What was the result? A.—The employes of the hosiery mill had what they claimed to be very serious grievances, and these grievances were referred to the executive committee, of which I am a member, and the committee in that case, as in all cases coming before it, advised a respectful appeal to the president of the company. We at first thought the employes themselves should sign the document, but as there had been some expression of ill-feeling towards the Knights of Labor as

we understood it, on the part of the management, the case was referred to the executive committee, and the chairman and the secretary of the committee signed the appeal to the president on behalf of the whole employés.

Q.—Have you given any thought to the training of youths in technical education, and of young boys, in connection with the kindergarten system? A.—Yes. I may say that the Knights of Labor deem it a part of their duty to encourage educational matters as far as possible; but some time ago last year they discussed the advisability of urging upon the school board the introduction of the kindergarten system. After satisfying ourselves as to the advisability of this system, of its utility generally, we appointed a deputation to wait upon the committee of school management, and after explaining our views at some length, after, in fact, giving some information in regard to what we meant by the system of kindergarten instruction, the committee assured us that they would take it into their respectful consideration; and at a subsequent meeting, and since, from conversation, we have learned they are so favorably disposed to it that in all probability it will be introduced this year. It is simply a question of ways and means, of dollars and cents, and we have urged the school board to take the time necessary to ascertain all the facts, to make the best calculation possible, and by all means to secure a good teacher, so as to give the system a proper trial, and only until they are in a position to do this they should be kind enough to defer action.

Q.—You speak, then, on authority, that the working classes of Kingston are in favor of the introduction of such a system? A.—Most decidedly so. We have submitted a motion at our meetings and carried the vote by hundreds.

Q.—Has it come to your knowledge that a reduction of wages has taken place in establishments when there was no necessity for it? A.—In the case of the hosiery mill we did so. At first sight the reduction seemed to be a blow made at our organization, for the reason that the larger number, nine out of twelve, of those effected by the reduction were connected with our body. We did not desire to take that view of it, however, and on looking into it again, and thinking it might be simply by accident that the reduction had effected so many organized and so few unorganized, we made a comparison of figures, which seemed to indicate that the reduction was not fair all round.

Q.—Taking it all round, what was the percentage of the reduction? A.—I have not got the figures with me now, but the percentages ran from 20 to 50 per cent., according to the different classes of work.

Q.—Have you ever given the subject of public libraries any thought? A.—Yes; I think the workmen of this city should take advantage of our public library to a greater extent than they do. Our Public Library is open to everybody who can get a certificate of respectable treatment of books, and our mechanics' institute is open to all who can pay a small fee—it is a very small fee, and it should be taken advantage of by a large number. Our public library is open to every family in the city, and a larger number of the workmen's families should take advantage of it.

Q.—What is the fee for the mechanics' institute library? A.—I think it is \$2 a year for adults and \$1 a year for apprentices.

Q.—From your knowledge and acquaintance with organized labor, do you believe those libraries would be taken more advantage of if there was a shortening of the hours of labor? A.—I should hope that would be the result. The labor party in this city has been advocating for some years shorter hours of employment, in the belief that if the men had more leisure than they have now they would take advantage of our public library and improve themselves, mentally as well as socially and physically. That is a reasonable deduction.

By Mr. KERWIN:—

Q.—Can you give us some information with regard to child labor and female labor in this city, because it is impossible to get children to come here before us and you, as a representative of organized labor, are doubtless in a position to give us the facts? A.—You have had to-day two managers before you, one of whom has admitted,

as I see by the evidence published, that there have been a certain number of girls employed under age at the cotton mill. We have had the same information before us, and we have been looking to this Commission to make enquiries into those facts in order that there may be some rectification of it. There is an evil there which we desire to have rectified.

Q.—Can you give us any information with regard to the black-listing of employes in this city? A.—I don't believe it exists in the city; I have had no information on the matter at all.

Q.—Do you know if men are made to sign what is called an iron-clad contract? A.—I have had no case of it brought before me; there may have been an occasional case, but it has not been reported to me.

Q.—As a representative of labor, what is your opinion in regard to arbitration? A.—We desire it by all means, and we will prefer it, if we can get a local man who understands our case and our grievances. We have thought the cost of arbitration makes it cumbersome, and perhaps not easily available in all cases; but if arbitrators can be got in our city, local men, who understand all the points of the case, we would prefer that they should arbitrate; and we prefer arbitration always.

By Mr. ARMSTRONG:—

Q.—Do you know the arbitration system in New York State? A.—I believe they have an arbitration system in effect there, with a board of arbitrators, of whom an eminent journalist is a member. I have been watching their proceedings with some interest, but such difficulties as we have had to deal with as an executive committee—and I may say that we decided many such difficulties amicably—would be beneath the notice of a court of arbitration; they are matters involving a few hundred dollars, or a matter of a few cents on a day's work. We can arbitrate in regard to them in a local way, and we could never hope to get them decided by a regular board of arbitration.

Q.—In New York the Government bears all the expense of the arbitration? A.—In that case I should be in favor of Government arbitration; but in all cases the workingmen should be relieved from the responsibility of costs in connection with it.

By Mr. McLEAN:—

Q.—Is Sunday labor carried on to any extent in the city? A.—I do hear of some Sunday labor here, but it is only done, as I understand it, as a matter of necessity—such as break-downs in machinery, necessary repairs, and so on.

By the CHAIRMAN:—

Q.—There is no regular Sunday work? A.—We have the steamboats and railways running on Sundays, but they are run as a work of necessity. Our steamboats do not run, except for public convenience.

By Mr. KERWIN:—

Q.—What is the effect of organized labor on the working classes in Kingston? A.—When properly understood it is a real benefit. We have a number of employers who, I am satisfied, are fighting the Knights of Labor, and they are doing so under a mistaken sense of duty. They seem to think the organization is fighting them under cover of the order. I can assure this Commission that in every case brought before the Knights of Labor we have urged conciliation and peace; we have taken employes who have left themselves out of the order, who would probably create trouble, who would have left their employers and done something desperate. We have talked with those men, and talked them into good common sense, and in a great many cases we have prevented disturbances in that way. I think the effect of organized labor on the community has been beneficial.

By Mr. McLEAN:—

Q.—As a representative of labor, have you ever given the subject of convict labor any thought? A.—I have.

Q.—At what do you think the convicts should be employed? A.—I certainly advocate the employment of convicts on Government work, as far as possible, so far as it can be done by convicts without interfering with free labor. I have discussed this matter with the warden of the penitentiary and he coincides with me in the opinion that there is some work that the convicts should do for the Government that would not interfere very much with free labor.

By the CHAIRMAN :—

Q.—Have you had occasion to read the summary of the warden's evidence? A.—I have. I have also had occasion to think of convict labor as a workingman in regard to public works, such as a dock in the harbor here, and so far as it would interfere with free labor I am opposed to it. That is my own private feeling; I am not speaking on this point on behalf of the labor party.

By Mr. McLEAN :—

Q.—Do you know if there are any prison-made goods coming into Kingston? A.—I have not heard any complaints; there is no convict work turned out at the prison now.

Q.—Is there any prison work coming into Kingston from outside? A.—Not that I am aware of; it is quite possible that such may be the case, but no complaints have been made to me.

Q.—You have never heard of it? A.—No; I would have heard if there had been anything of that sort interfering with trade.

By Mr. ARMSTRONG :—

Q.—Has it come to your knowledge that there is any truck system in Kingston? A.—I don't think there is; I have not heard of it.

By Mr. McLEAN :—

Q.—Do many workingmen in Kingston own their own homes? A.—Quite a good many; I don't know the proportion; I know a good many workingmen who have got their little homes. I think it is a great struggle for a man to obtain a home, and he must make a great many sacrifices before he accomplishes it. The wages are not very high, as a rule, especially the wages of the common laboring man, and the men cannot save a great deal out of \$1 or \$1.25 a day. It takes a good while for a man to obtain a home on wages of that amount.

Q.—Do you think the workingmen's condition is better now than it was five years ago? A.—I think it is a little better, and I think that has been very largely brought about through the Knights of Labor organizations. I think they have corrected grievances that would never have been corrected, in my opinion, except through them.

By Mr. ARMSTRONG :—

Q.—Do you know anything about the sanitary condition of the workingmen's houses here? A.—The sanitary condition might be improved. Sanitation is a matter that has not been as deeply thought out by the workingman as it should be.

By the CHAIRMAN :—

Q.—According to the doctors, we have not good sanitation? A.—Some of the doctors do not know much about it themselves, as I have had occasion to learn before now. This is a particularly healthy city, and if the houses are constructed with any regard to health they are in pretty good shape. The city lies on high ground; it has good water and good drainage.

By Mr. ARMSTRONG :—

Q.—Have you a health inspector here? A.—Yes.

Q.—Is he constantly employed in that occupation? A.—No; he is not entirely employed at it. He has certain duties to perform.

Q.—Is he a doctor? A.—Yes. I can say that he performs his work efficiently. He is the only medical man who could give the time to it.

Q.—Then you think that if complaints were made to him he would remedy them, so far as lay in his power? A.—I believe so.

By Mr. KERWIN:—

Q.—How many hours, in your opinion, constitute a day's work? A.—We are most seriously advocating the nine-hour system. We have, in fact, voted on it in some of our assemblies, and have decided in favor of it, and it will be adopted, I have no doubt in connection with some of our local industries. It seems to be the desire of the proprietors that this should be done. The men are anxious to take advantage of it.

By Mr. MCLEAN:—

Q.—Do you think the workingmen would be willing to take one hour less pay in the day by working nine hours instead of ten? A.—There are some who are not willing—there are some who are most reluctant to lose 40 or 50 cents, which the change would mean; but we have great hope that in a short time the lessening of the hours of work will have a tendency to even up the wages, and so with this in view they are disposed to make a sacrifice for the future; there are some who are not, however, very willing to give up that small amount.

By Mr. ARMSTRONG:—

Q.—Do you know of instances of a shortening of hours of labor being followed by an increase in wages? A.—Not in this city. We have had advices to the effect that it has had that effect in other places, and we hope it will have that effect here.

By Mr. MCLEAN:—

Q.—Do you know instances of the sub-contracting system in this city? A.—Not of which we would complain. There is some small contracting done in many trades, but I don't think it interferes with labor in any respect.

By Mr. ARMSTRONG:—

Q.—As a representative of labor, have you ever given the subject of lien laws or the garnisheing of wages any thought? A.—Yes. Generally the lien law gives satisfaction. We had last year, in this city, in connection with one of our public institutions, evidence of its beneficial character, whereby the workingmen were protected from loss in a manner they could not have been protected in any other circumstances. The lien law stepped in and saved their wages after they had performed their work, the contractor himself not being very good pay.

By Mr. KERWIN:—

Q.—Do you think the law respecting the protection of machinery is stringent enough at the present time to prevent accident? A.—I have made some enquiries in this matter. I have heard this question discussed in our meeting, and I have had the assurance that with the exception of one or two cases the machinery of our workshops is pretty safe; so that, with reasonable care, there is no danger of accident. Of course, machinery is dangerous at any time, when it is carelessly handled.

Q.—What day, in your opinion, is the best day for paying employés? A.—That is a moot question. There are some who want their pay on Saturday, and there are some who like Friday. Generally, I think if the matter was put to a vote Friday would carry, that being deemed the best day for domestic purposes. I may add, that so far as the foreign contract labor is concerned I have been instructed—I take it to be an instruction from the labor party—to prevent that as far as I can, and to advocate such a law in Canada as is now before the United States Congress, and demand it in such manner as Mr. Powderly suggests.

By Mr. ARMSTRONG:—

Q.—Have you ever given the subject of immigration any thought? A.—Yes; I have had drawn to my attention two or three cases of very indiscreet immigration;

that is, cases of men being sent to this country without means or aims and perfectly penniless. Those people, in my opinion, as a workingman, should not be sent here to add to the glut of labor in our market.

Q.—You mean mechanics? A.—Yes; and laboring men, too.

By Mr. McLEAN:—

Q.—You are not opposed to immigration? A.—Not to the immigration of good men. We want in Canada good farm laborers and good mechanics; we don't want the country full up with unskilled labor, which simply adds to the burdens of the workingmen. There is, of course, our great North-West open to all.

By Mr. ARMSTRONG:—

Q.—What is your opinion in regard to the establishment of a Federal bureau of labor statistics. Do you think that it would be beneficial to the working classes? A.—I decidedly think so. We are unanimously of the opinion that that is one of the best things that could be provided by the Government. We have had a great deal of experience with the publications of the Ontario Government in regard to their bureau of statistics, and just now we have to look at the reports published by the bureau for what information we can get in regard to wages, and so on. We want a similar bureau, or a better bureau, if we can get it, at Ottawa.

Q.—Have you given the subject of co-operative benefit societies any thought? A.—We have discussed that at some length, and if this Commission had not come here quite so soon we might have been able to tell the Commissioners what we thought of its practical effects here, because I think it is only a question of a short time until, acting on the advice of the leaders of the Knights of Labor, we would have given it a trial here. You must bear in mind, always, that the Knights of Labor is a comparatively new organization. Although we have been in operation only a short time we have already done more than many older organizations in Canada. This question of co-operation has been before the labor party, and they are determined to try what benefits there are in it, and that before very long. They have had a good deal of testimony before them, and they have obtained a good deal of information in regard to the matter.

Q.—Have you given the subject of profit-sharing any thought? A.—That is a question we have not discussed. I have my own views in regard to it, and they are decidedly in favor of profit-sharing, but we have to live a long time in such a community as this, and talk a long time, and advocate questions a long time, before we can make our employers and others believe, as we believe, in the profit-sharing system.

Q.—Do you think that if the leading factories in the city, and the employers of labor, would try this system, that the employes, the workingmen, would be better off than under the present system? A.—Decidedly so. If we had the profit-sharing system in Kingston employers would not be suspicious, and when a man asked for a job he would not consider whether he was a union man or whether he was simply a workingman without any union connections. If he took his men into his confidence and gave them a share, no matter how small that share might be of his profits, his establishment would, in my opinion, be more productive.

By Mr. McLEAN:—

Q.—Do you think if there was a loss that the workingmen would be willing to stand their share of it? A.—I, for one, would be; I would take my risk with my employer. I cannot, of course, speak for the party generally, because as I have said, this is a question that has not been discussed by the party. Personally, I would take my risk with my employer every time.

By Mr. ARMSTRONG:—

Q.—So far as the banking system of the country is concerned and its effects on the working classes, have you given the monetary system any thought? A.—Yes; but it is a little in advance of our time yet. I will not venture to speak on behalf of

the party on that question. Banking is a question that is not very well understood by the workingmen. They have not got much of it to do, and they have not studied it up. If they were banking they would understand more about it.

By Mr. McLEAN:—

Q.—Those who do banking, do they put their money mostly into the Post Office Savings' Bank? A.—Yes; and into the building societies we have here. They put it into the Post Office Savings' Bank out of a sense of security. A Government savings' bank seems to be safe, and although the percentage of interest is smaller than might be obtained in other quarters, still they deposit it there for safety and convenience.

By the CHAIRMAN:—

Q.—Would the two other institutions you have mentioned pay interest? A.—Yes; they pay about the same interest as the Post Office Savings' Bank. We have had considerable dealings with the building societies as laboring men.

Q.—As a representative of the working classes, would you advise a workingman to put his money into the Post Office Savings' Bank? A.—I don't know; I have advised all who have consulted me to put their money into the building societies. They get such courteous treatment there and such liberal terms, quite as liberal as the Post Office Savings' Bank. I rather have encouraged them to go there, although, of course, the Post Office Savings' Bank is a good and safe institution.

By Mr. ARMSTRONG:—

Q.—What is the rate of interest given on deposits in those building societies? A.—We had a small sum of money there last year; I think we got 4 per cent.

Q.—Does the Post Office Savings' Bank give that rate? A.—It may; but we had a special arrangement by which we drew and deposited money quite freely, and it was a great convenience, for it could be done after the Post Office Savings' Bank had closed.

Q.—You say that 4 per cent. interest is given by the building societies. Now I desire to ask you this question: provided a mechanic had a lot clear of debt and had good security, and wanted a thousand dollars to improve his property, at what rate of interest could he borrow that money? A.—I think the rate is now 6 per cent.

By Mr. CLARKE:—

Q.—You said that the labor party decided by a large majority to work for nine hours instead of ten hours? A.—Yes; at the meeting at which it was discussed.

Q.—What prompted them to ask for nine hours? Was it a desire to obtain time for recreation, or was it merely to get rid of one hour's work? A.—Originally—and I scarcely think I am breaking any confidence in making this statement—they had decided to work for payment for time that had been taken from them, and while this matter was under discussion it was suggested by the employers of one institution that if the workingmen desired Saturday afternoon they would be perfectly willing to let them have it. The matter then came up, and it was discussed and carried, that the majority of the working people would prefer Saturday afternoons, believing the wages would, in the course of time, even up.

Q.—Do you know anything about the wages given to clerks in dry-goods stores and the hours of labor they are employed? A.—The hours, I think, are better now than they were.

Q.—What are they now? A.—From eight to six, except Saturday night, and then up to ten or eleven, or whatever time business closes. The wages run from about \$5 to \$12 a week. There are some junior clerks getting small wages and there are good clerks getting very good salaries.

Q.—What would be the average wages of a good clerk with some experience in a retail store? A.—I think \$400 a year. I have not made an average, but I should think that would be about it.

Q.—Could you give us the average rate of wages that a female clerk in a dry-goods store—millinery or dry-goods—would receive? A.—Millinery stores are

institutions I don't know much about just now. We have had the wages of nearly every other kind of institutions, except millinery departments.

Q.—What is the wages of young women in stores? A.—They run from \$3 up to \$5, \$6 and \$7 a week.

Q.—Are there many in the city who get \$6 a week? A.—There are quite a number, I think; the number I could not approximate, but it is not a very large number. The dressmakers probably fare the best in this city—that is, among the working girls; a good dressmaker will make 75 cents a day and her board.

Q.—That is those that work out? A.—Yes; a good experienced hand. They are better off, in my opinion, than those who work in the stores.

Q.—You mean they are employed on their own responsibility? A.—Yes.

Q.—About what would be the wages of a dressmaker who would work in the store and also in the work-room? A.—Probably \$4 or \$5 a week.

Q.—Is that the outside figure? A.—I have not got the figures by me just now.

Q.—How many hours would a young lady work behind the counter? A.—The girls in the stores, I think, have the same hours as the clerks; perhaps they come half an hour later in the morning, but they continue in the store as late as the clerks do. There are not a great many female clerks in the city.

Q.—Are they allowed to sit down when there are no customers in the store requiring to be attended to? A.—I think they are, although I am not positive on the point. Of course, there is not much time to sit, because, as a rule, the employers keep a limited number of hands, and when they are not actually serving over the counter they are engaged in fixing up.

Q.—Do you think some young women have more customers than they can readily serve? A.—I have heard nothing to the effect that they have.

Q.—Did it ever come to your knowledge that these young women behind the counter, if they could reconcile their minds to it, would prefer to be domestic servants rather than clerks? A.—I should think so. They would be far better off as domestic servants; but some of them are physically so light that I am afraid they would not stand domestic service, such as some people give them, especially if they go with an employer who expects them to work from daylight to dark, and even all night, too.

Q.—Do you think it is as trying on the constitution of a young woman to stand on her feet in a store eight or ten hours a day as is ordinary domestic service? A.—Yes; but you cannot convince a young woman of that fact. A great many would be better off in domestic service; they would be more healthy; there would be more change in their occupation, and they would be better fed; but you cannot make them believe it.

Q.—Is there any kind of antipathy on the part of young women to becoming domestic servants? A.—I cannot say that there is, except that their training is all the other way; I think it is just a matter of taste in training.

Q.—Do you think one of the reasons is that domestic service is looked on as a menial occupation? A.—I think there is, probably, something in it. Some girls, who are not in very good circumstances, would prefer even a little harder service in a store than domestic service.

Q.—And do you also think that another cause why they do not desire domestic service is because they cannot have all their evenings to themselves? A.—That is a strong case, too. Those employed in stores, of course, have their evenings to themselves, except probably Saturday evening, and they are, therefore, in a position to make any engagements they like without constantly consulting with their employer, as they are obliged to do if they are domestic servants.

Q.—Is there any other information you would like to give the Commission? A.—I did intend to speak on the apprentice system. We have had that matter under consideration, and I think the impression of most skilled men is that the decline of the apprentice system has been an injury to mechanics. I don't know whether an indenture system is a good system, that is the system in all its branches; but I do think that if there was some sort of an understanding between the employers

that the boy should put in a certain time at the trade, it would be a great deal better for the trade itself and for those engaged at it.

Q.—Would it have a tendency to elevate the trade itself if a compulsory indenturing system were introduced by the Government? A.—I may have doubts as to how far we should adopt the indenturing system, although it seems to bind a certain young man to a trade for a certain length of time.

Q.—Which of the parties seems more favorable to the indenturing system, the employers or employés? A.—I don't think the question of entering into indentures has been really proposed by either party latterly. It seems to be the tendency of the age that boys going to trades should, if they are steady and amenable, remain there and learn something of the trade, and if they are not good and amenable they have been got rid of as soon as possible. There is nothing binding on either side. Some people advocate that system, and think it is a good one to be continued.

Q.—Has it ever come to your knowledge that employers of labor object to the indenturing system because under it they would be obliged to teach a boy his trade? A.—I have not heard any employers say so, but I believe some are of that opinion. I had to-day a declaration on the part of a mechanic that the only way to make a man efficient was to bind him an apprentice by indenture.

Q.—Do you think that the system of indenturing apprentices would have a tendency to make boys and young men more steady in their habits? A.—I do know, from my early recollection of the printing business, that those who were indentured when I was a boy became good mechanics, while a good many men are not mechanics.

Q.—Are you in a position to give us information in connection with the printing trade of the city? A.—I have been for a long time in connection with it.

Q.—Is there much plate matter used in newspapers in Kingston? A.—Considerable.

Q.—Has it a tendency to keep work from the men? A.—So far as the office with which I am connected is concerned, it has not that effect.

Q.—When those stereotyped columns are introduced into the paper do the men remain idle to any extent? A.—The calculation is not to do so. We have been temporarily using telegraphic plates, but we have endeavored, as much as possible, to keep the men occupied, by using matter for the columns that we formerly filled with advertisements.

By the CHAIRMAN :—

Q.—Would not the space in many case have been filled by advertisements? A.—Yes; that is what the space would have been filled with. We have, since the enlargement of the paper, placed all the advertisements on the first page, and are now using some stereotyped matter. If the stereotype plates were not there the matter would not be set; they are not intended to do any injury to the men.

By Mr. ARMSTRONG :—

Q.—Do the printers prefer stereotyped plates to the advertisements standing in the paper? A.—When the paper was enlarged it was with the wish to arrange the reading matter in its present form. It is no great secret that if all the columns now filled with reading matter were set by hands there would not be so many printing offices here and not so many printers.

Q.—The setting of the advertisements, and what is technically called fat matter, is that done by boys or men? A.—There is a man paid for that, so far as the newspaper is concerned.

Q.—It is set, as it were, by the piece? A.—By a man on day work.

Q.—The men on piece-work have no benefit from that work? A.—They set all, except the advertisements.

By Mr. McLEAN :—

Q.—Where do you get the stereotyped matter? A.—Most of it now from Toronto.

- Q.—Have you got any from Buffalo? A.—Yes.
- Q.—Would it not be better for Canadian printers if the duty was raised on stereotyped plates coming into the country? A.—Yes; though we could make nothing like as good plates as the Buffalo plates. We can scarcely use Toronto plates now; but we endeavor to use them from force of circumstances.

By Mr. CARSON:—

- Q.—What is the reason you cannot make as good plates? A.—Because our mechanism has not reached that perfection it has in Buffalo.
- Q.—Could stereotyped plates not be made in Kingston? A.—The industry could not be made to pay here. The men who started out here would go up "Salt Creek" within a month.

By Mr. ARMSTRONG:—

- Q.—There are no stereotyped plates here? A.—No. So far as using stereotyped telegraphic matter is concerned, that is simply an emergency, which we expect to overcome in a short time.

Q.—The newspapers of Kingston have imported plate matter from the other side? A.—Yes; they have done that for years.

Q.—Did you ever observe that some reading plate matter has an immoral tendency? A.—We have had matter from Buffalo that we could not use and which we did not use. We had it sent back.

Q.—Are you aware of any matrix coming over here? A.—Not to Kingston. I understand that some came to Toronto some time ago. I don't know whether they have come here or not.

Q.—Has the organization of printers in this city proved a benefit to them? A.—Yes; I should think so. I think it will benefit them more when they are longer organized and have a more perfect understanding of what organization means. Like all new institutions, there is a little friction in regard to it. I have encouraged organization among printers, and I think it has proved decidedly beneficial to them.

Q.—What is the feeling between employers and employés in the printing trade here? A.—It is very good, so far as I know. The feeling is such that when the printers sometimes ask for an advance of wages in the office with which I am connected they don't have to haggle five minutes over it.

JAMES D. THOMPSON, Mayor of the City of Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Is there much corporation work of this city given out by contract? A.—No; the only portion that is given out by contract—that is immediate contract—is that portion for re-laying, paving or planking the sidewalks.

Q.—With respect to unskilled labor: is there much of it unemployed during the winter months? A.—At the present moment there is.

Q.—Do you think that if contract work for the corporation was done away with, and the work was carried out under the immediate supervision of the city engineer, it could be spread over the slack months of the year, and men thereby constantly employed? A.—That portion which is now done under contract could not be done during the winter season; it is the laying of plank sidewalks and crossings. That work ceases the moment the frost sets in.

Q.—How is it about the matter of draining? A.—In regard to work on drains that has taken place, I may say that previous to my holding the position I now hold in the city I was chairman of drains for the best part of three years, and when I came into office—a new engineer came into office the same time, owing to the death of the previous engineer—all work connected with the building of drains was done by contract. After discussing the matter with the engineer and going into details—and here I might state that the city engineer is a practical builder and a man of

considerable attainments—we decided to test the question as to the relative cost of contract work and day labor, and the experiment which was made on the first street confirmed us in the opinion that while the cost might be a little greater the increased value of the work was of much greater importance to the city. I think, if you will allow me a moment, I have some figures here in regard to the difference between contract and day work. I may just state, however, that the work that had been previously performed under the contract system was of a very unsatisfactory character to the city, namely, that portion relating to the construction of drains. For reasons which are not necessary here to mention, the work was slighted and was not of a durable character. I found from figures which were prepared for me by the present engineer that the relative cost, comparing the contract work and the day labor, would be in the neighborhood of about 10 cents a yard difference in the construction of drains. These drains would average  $2\frac{1}{2}$  by 4 feet—stone drain, dry masonry.

Q.—You believe, then, that if the work was done by day labor there would be less scamping of work? A.—I have no doubt whatever about it, because from the time I took charge of the streets' department as chairman of streets, I used every effort possible to abolish the contract system. I argued on this basis—that first, from a knowledge of a large contract that was given here in connection with the money obtained from the divisional municipal loan funds by the Provincial Government, a contract for a drain that was built in the city at an expenditure of some \$13,000, while our own men and tax-payers were at that time in distress and looking for work around the city; still it was found that in a great many cases foreigners, American tramps, were employed, while our own people were left idle. Now, under the day system a perfect control of the employment of the men can be kept. You cannot dictate to a contractor, and the fact is evident that if a contractor takes a contract he takes it with a view to making money, not to lose it. It is much better to divide that profit between the men living in the city, and at the same time you will have the service much better performed.

By Mr. McLEAN:—

Q.—What do you pay your laborers? A.—The lowest wages we have paid laboring men—and there are few exceptions to this—was about 90 cents a day. I might say, for the information of the Commission, that these men were given employment to prevent them applying for charity, to create a spirit of independence among them—it was with that view entirely that they were kept on. We have paid as high as \$1.75 to \$2 a day to men on corporation work. The statement made by a witness, which I observed in the papers, that the corporation paid 65 cents a day, is incorrect. No such wages have been paid by the corporation. It is an untrue statement, if that statement was made.

Q.—With regard to the rates of \$1.50 to \$2 a day—is that for unskilled labor? A.—We have had a man in the corporation employed who started at 10 cents an hour (\$1 a day), and that man, owing to his ability, has worked himself up until he receives \$2 a day. He was cunning in his work—he would put his brains in his work.

Q.—What is about the average wages made by corporation laborers? A.—About \$1.12 $\frac{1}{2}$  a day.

Q.—Have you a relief officer in connection with the corporation? A.—For the relief of distress—no. The work of relief that is carried on in this city is in the way of grants for different institutions; for example, the House of Industry, which last year received in the neighborhood of \$700; and also to the hospital, of \$300, which gives the city permission to send cases of sickness and distress there. The city actually erected the building belonging to the House of Industry, and it gives it a grant of \$300, which gives the mayor, as representing the council, power to send people there in case of sickness and distress, or requiring medical treatment.

Q.—How do you act in the case of a family wanting relief? A.—In the case of a family it would depend entirely on circumstances. I presume the charity would

partake of a religious work. A man would come to me, perhaps, for relief. It is necessary, I may say, to use considerable discretion in dealing in such cases, so as to see there is no imposition. If I find he belongs to the church to which I do there is a provision made by the endowment of the church for the relief of distress, to a certain extent, and similar provision is made by other religious denominations in the city. The moment there is a case of actual distress here, Kingston has the character of immediately relieving it.

Q.—Still you have not a regular system of relief? A.—Yes; there are poor societies.

Q.—I mean in connection with the corporation? A.—No.

By the CHAIRMAN:—

Q.—In point of fact, relief is given? A.—There are relief societies existing. There is one called the St. Vincent de Paul Society, in connection with the Roman Catholics, and it relieves distress—not only among the members of that church, but among people belonging to other religious bodies. Then there is a Ladies' Poor Relief, which meets here once a week, and there is a City Missionary, who does not belong to any church, but goes around among the poor people and reports to that society, and immediate relief is furnished. However, if a distinct case of distress occurred, and it was brought to my notice, relief would be immediately afforded. The Commission need not have any anxiety about that matter.

By Mr. ARMSTRONG:—

Q.—Could you give us some idea of the work connected with the corporation given out by contract that could not be done by day labor? A.—It is possible to build plank-walks by day labor, but it would require skilled labor, which is not very available during the season the work is to be done.

Q.—Where do the contractors get the skilled labor? A.—They procure it themselves, and they are directly responsible to the engineer.

Q.—What are the works required to be done by skilled labor, except the laying down of side-walks? A.—Crossings. There are drains also requiring skilled labor, in connection with the masonry, and that is under the direct supervision of the city engineer.

Q.—Are there any young men employed by contractors for doing this work? A.—Not any.

Q.—Are they all men? A.—They are all men.

Q.—Did you ever give it a thought that as tax-payers pay for this work a contractor should not be given corporation work, unless he paid the prevailing rate of wages that the trade called for? A.—I cannot say that that view ever struck me, but I would have confidence in the intelligence of the skilled laborer working for the contractor to see that he gets the rate of wages prevailing while he was at work.

By the CHAIRMAN:—

Q.—As a general rule, do not the rate-payers want the work done as cheaply as possible? A.—That is their desire, but I may say now that there was considerable objection in certain quarters against work being done by contract labor. The question was discussed at the council board, and contract and day work were respectively advocated, both sides being here. This took place immediately before the election, and the decision was sufficiently gratifying to those who advocated the day labor. The people of Kingston feel satisfied if they get the value of the money expended.

By Mr. ARMSTRONG:—

Q.—They are satisfied with the work done if it is equivalent to the value of the money, and they don't consider the religions, or the nationalities, of the parties who do the work? A.—Not at all.

Q.—Would they be satisfied, provided the work was satisfactorily done, if it was done by Chinese labor? A.—No difficulty in the question of residence would come up.

By Mr. McLEAN :—

Q.—Do you give others than citizens or rate-payers work under the corporation? A.—As a secondary condition only. Provision has been made during the last three winters, whereby work in connection with the construction of drains was given first to men who were married men or those who had fathers or mothers or sisters to support; next to young men who belonged to the city, the sons of rate-payers; and next to those who did not belong to the city and were looking for work.

By the CHAIRMAN :—

Q.—Work was given to outsiders only when the others had been supplied?  
A.—Yes; when there was a surplus of work.

By Mr. ARMSTRONG :—

Q.—Do you know anything in connection with the assessment of the city?  
A.—I have a slight acquaintance with it.

Q.—Do you consider that the system of levying assessment is equitable? A.—As to what portion of the assessment? That is a large question.

Q.—A man's income may be \$2,000, and he may put his income down for taxable purposes at \$800. Is not that so? A.—He would be a dishonest man who would do that, and provision is made under the Assessment Act that a statutory declaration shall be furnished by each rate-payer.

Q.—Is it furnished? A.—It is not, but the assessor, if he wishes to take severe measures, could make it compulsory. The law provides the means to have that furnished.

Q.—Does he often take severe measures? A.—No.

Q.—Has it ever come to your notice, as mayor, that the income tax of certain persons was lower than it should be? A.—My knowledge as mayor only extends over a week.

Q.—Has it ever come to your knowledge as an alderman that the income tax is much lower in some instances than it should be? A.—I think the income tax is evaded as much as possible; at the same time I think it is a wrong tax, any way.

By the CHAIRMAN :—

Q.—Are you aware in the State of New York there is a great objection to the income tax? A.—I think it is the wrong principle of taxation.

By Mr. ARMSTRONG :—

Q.—As the system exists, in your opinion it should be made equitable? A.—Yes; as nearly equitable as possible.

Q.—Do you think the publication of the assessment lists every year would obviate the trouble? A.—The publication of the assessment roll was introduced here about four years ago, and no doubt it had a beneficial effect, as it increased the assessment. I think if there was an interval of one or two years between the publication of the lists it would have a better effect, as the publication every year makes it almost common place, the subject becomes threadbare; whereas if the list is published every other year or so the rate-payers will be anxiously looking for it.

By the CHAIRMAN :—

Q.—Do you think that some people are taxed for larger incomes than they really have? A.—I would not be surprised to learn that people—I may state now that my opinion is formed entirely from my position as a member of the court of revision—I say that I would not be at all surprised if there were certain people in town who would not appeal against a wrong assessment, owing to the fact that they would not wish their credit reduced.

Q.—I suppose a merchant would not like to say that he had lost money, say \$10,000, during the last year? A.—He would not like to have his credit reduced.

By Mr. ARMSTRONG :—

Q.—Which class is the more numerous? Are there more over-assessed than

there are under-assessed? A.—My opinion is that the city now has got pretty nearly to an equitable assessment. I think we have got in the neighborhood of half a million of the assessment of the city. The rate of taxation for income tax is limited by law, but the assessment is not.

By the CHAIRMAN:—

Q.—You can tax any amount of income? A.—No; there are certain amounts that are not taxable.

Q.—What amounts? A.—It was \$400; now it is \$700.

Q.—So it is those who do not pay income tax that place the tax on others. Are they the majority? A.—A man who earns wages which run up to \$700 would be exempt. Up to last year the amount was \$400.

Q.—Then up to \$700 he pays no income tax? A.—No; he pays no income tax.

Q.—Is there a majority in Kingston who can earn more than \$700? A.—I could not say as to the number. A large reduction is taking place.

Q.—There are a large number who are not paying income tax? A.—Yes.

Q.—And those persons fix the amount that those who earn more than \$700 shall pay? A.—No.

Q.—They vote the aldermen in? A.—Yes; but the aldermen have nothing to do with it. They are simply guided by the requirements of the statute.

Q.—Can you tax to any amount? A.—Up to 2 cents.

A.—A majority of voters are those who do not pay anything at all? A.—No; because, although they may pay no income they may pay on realty. I cannot tell you the number who escape on income; there may be a large number, but I would not like to say there is a majority. The new law came into force on the 1st of January, and we assess a year in advance.

By Mr. ARMSTRONG:—

Q.—You say that the assessment is getting more equitable. That is scarcely an answer to my question, which is, whether in the majority of cases the people are over-assessed or under-assessed. How is that, to the best of your knowledge? A.—I could not answer you that question. According to that statement you would think some people were laboring under hardships and others were escaping.

Q.—Yes? A.—I don't think so. I think the assessment is nearly as equitable as possible now. I don't think most of the city is taxed up to what it should be taxed.

Q.—Is the assessment increasing every year? A.—The assessment has increased nearly a quarter of a million dollars from 1885 to 1886. It has increased from \$4,250,000, in 1870, to \$6,500,000, in 1886.

Q.—From your knowledge, has the volume of all kinds of industry increased during the past twelve months in Kingston? A.—I think so, during the past twelve months. The cotton mill, no doubt, is doing a larger business; for what reason they are the best judge, whether it is from the combination, or from additional orders or not. Then there are the locomotive works, the knitting mill and the tanneries.

Q.—Have you observed any improvement in the condition of the working classes? A.—For nearly twenty years I have associated a good deal with the workmen, being in the forwarding and shipping business up to three years ago, and I was in a position to judge pretty clearly as to any improvement. It is gratifying to be able to say that from 1865 to the present time the improvement among workingmen has been simply wonderful.

Q.—What is the sanitary condition of Kingston, as a whole? A.—It is second in Canada.

By the CHAIRMAN:—

Q.—Which is the first? A.—A place named Chatham, and I think it is so by accident. We used to be second in the British possessions as a military station. We

held that position for years and years; there was one place in Scotland that was more healthy than Kingston.

By Mr. ARMSTRONG :—

Q.—Is your estimation of that obtained from the death rate? A.—That is the way it is got at. I may quote now, from the last Dominion Report, which stated that Kingston was the second healthiest city in Canada.

By Mr. CLARKE :—

Q.—How do you explain that? A.—I think Providence has done a good deal for us in the location of the city, and the intelligence of the rate-payers has done a good deal towards improving it during the last three or four years.

Q.—By the expenditure of much money? A.—There has been considerable money expended. We have good water and good air here, and the disposition of the people is to be kindly and contented.

By Mr. ARMSTRONG :—

Q.—What is the sanitary condition of the public schools, to your knowledge? A.—I might state that since my residence in Kingston I have only been in two schools—that is, since I came here in 1865. My experience had not been of a very favorable character up to two years ago, for the schools suffered from over-crowding, which caused sickness among the children. In my own case I had two or three children laid up with colds, which superinduced low fevers, and after two years' agitation in the council I secured the passage of a by-law, which granted us the new central school, which has relieved the congestion in the other schools, by providing for 300 or 400 pupils.

Q.—What is the rate of taxation? A.—Sixteen and a-half mills on the dollar.

Q.—Out of that, what is the school rate? A.—I could tell you the aggregate, but not the details, because that is established by the school board, which has nothing to do with the council.

Q.—It is not levied on the assessment? A.—Yes; it is included in the 16½ mills.

Q.—Is the assessment paper itemized? A.—Yes; it is itemized on the assessment roll, but not in the assessor's report. There is one rate for a separate class and another for public schools. There are many items which go to make up the aggregate, such as the consolidated debt, the floating debt, and different items which go to make up the total amount.

By Mr. CLARKE :—

Q.—What is the total debt of the city? A.—Three hundred and sixty thousand dollars—that is approximately the debt.

Q.—Has the city given any bonuses to factories or exempted any from taxation? A.—The city has given a bonus to the Kingston and Pembroke Railway of \$300,000, and \$18,000 interest, making altogether \$318,000. It has exempted, I think, about ten institutions from taxes, some of which by-laws are about to expire, and will not be renewed, as a vote was taken two years ago last January on the question as to whether the people were in favor or whether they objected to further exemptions, and the people emphatically declared that they were against the exemption system.

By Mr. ARMSTRONG :—

Q.—What is the nature of these institutions? A.—They are manufacturing institutions; their names are all published on the assessment rolls.

Q.—Did the city grant those exemptions under certain conditions, such as that the company was to employ a certain number of hands? A.—The provisions for exemptions are covered by a by-law. They have been taken from one or two institutions, owing to their not having carried out the provisions of the by-law in regard to the employment of men, and one has become a close corporation.

KINGSTON, 1st February, 1888.

FREDERICK JAMES LEIGH, Engineer, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—You are superintendent of the locomotive works here, I believe ? A.—I am.

Q.—How many men do you employ ? A.—About 300 men at present.

Q.—What are the wages paid to engineers in the locomotive works ? A.—I am hardly prepared to answer that question ; I have just come here, and have not had an opportunity of getting up those matters. I have only been here a month. I have a general idea, of course.

Q.—Where do you come from ? A.—From Glasgow.

Q.—Can you give the Commission a relative idea of the wages paid here and in Glasgow ? A.—No ; I have no experience in wages paid out at home. My evidence would not be at all reliable on that point ; I have a general idea, of course.

Q.—Will you please give us your general idea ? A.—I am afraid it will be very unreliable, for I have had nothing to do with wages. I have a general idea, of course.

By the CHAIRMAN :—

Q.—It is no use taking evidence that is unreliable ? A.—My evidence would be unreliable, for I have no figures, or anything of that kind, to go by.

By Mr. ARMSTRONG :—

Q.—Do you know if the orders for work are increasing in the locomotive works here ? A.—We have only had one order since I have been here.

Q.—Does the company expect an increase in their orders during the coming year ? A.—I do not know what the company expect. I think it is a question I cannot answer. Of course, we hope we will get an increase of work.

By the CHAIRMAN :—

Q.—Have you plenty of work just now ? A.—We have twenty-four engines just now in the course of construction.

Q.—Do you consider that plenty of work—sufficient, at any rate ? A.—It is a fair amount of work ; it will last us six months. Some engines are nearly completed.

Q.—There has been a change in the company, in the proprietors, or in part of them, I believe ? A.—There has been a change in part, a change in shareholders.

Q.—Some Scotch people have taken a share in the concern ? A.—Yes ; they have taken a certain number of shares.

Q.—That is within a short time ? A.—About three months.

Q.—And when did they take possession, or when did you come out here ? A.—I came out a month ago to take charge, to take the management.

By Mr. CLARKE :—

Q.—Are those engines in the course of construction intended for the American market, the Canadian market, the Australian or the South American market ?

A.—Five are not sold ; the remainder are for the Canadian market.

By Mr. ARMSTRONG :—

Q.—Could you give us any ideas that would be of interest to the Commission ?

A.—On what subject ?

Q.—On your business ?

By the CHAIRMAN :—

Q.—Have you been here long enough to recommend anything to be done on behalf of your industry ? A.—No.

Q.—You could not undertake to say anything on that point ? A.—No.

By Mr. ARMSTRONG :—

Q.—Have you entered fully into your position ? A.—Yes.

Q.—What do you do there ? A.—I am manager—superintendent.

By Mr. McLEAN :—

Q.—Are you a practical engineer? A.—I am.

Q.—Are engines made in your establishment as good as are those made where you worked in Glasgow? A.—I have not seen an engine built here right through from the beginning yet. I could not answer that question until I have done so.

By Mr. ARMSTRONG :—

Q.—Have you many foremen under your control? A.—Yes; there is the works foreman, the foreman of the machine shop, the foreman of the boiler shop, the foreman of the pattern shop, the foreman of the smithy shop and the foreman moulder.

Q.—Could you give us the salaries paid to those heads of the departments? A.—No; I could not—that is, from memory.

Q.—You are not aware of the cause which led the company to close down some time ago? A.—I have no knowledge whatever of it.

By Mr. McLEAN :—

Q.—Did you serve your time as an engineer? A.—I did.

Q.—How long did you serve? A.—Seven or eight years.

Q.—As an apprentice? A.—In the usual way—as a pupil.

Q.—Cannot you tell us what a journeyman engineer would get in the old country. A.—I have no knowledge of wages in the old country.

CAPT. PARSONS, Mariner, Kingston, called and sworn.

By Mr. KERWIN :—

Q.—Capt. Donnelly was here yesterday and gave us some information in regard to navigation on the lakes, and it is hardly worth while to go over the ground again. If you can give us some information that will be of benefit to the shipping interests we shall be very glad to receive it? A.—I do not know that I can give you much information that is going to help it any.

By Mr. CARSON :—

Q.—Did you hear Capt. Donnelly give his evidence? A.—No.

Q.—Did you read it? A.—No.

By the CHAIRMAN :—

Q.—What is the state of sailing vessels on the lake, so far as seaworthiness is concerned? A.—I think the class of vessels we have here is very fair; very fair indeed much better than it was two or three years ago.

Q.—We understand that they are inspected by Lloyds' agents when they apply for insurance? A.—Yes; they are inspected by a marine agent who is here.

Q.—And any vessel that would not pass the insurance agent, what would you think of it? A.—I should think if the agent would not class her she should be condemned, and not allowed to sail again.

Q.—Are you aware that such vessels are sailing on the lakes? A.—Yes; I think there are.

Q.—We are now speaking of the Canadian side? A.—Yes; exactly.

Q.—Do you know that there are such? A.—I do not know them.

Q.—What about the certificates of mates of sailing vessels? A.—Those got certificates—that is, captains and mates on board of sailing vessels? A.—Those vessels are supposed to carry certificated masters and mates the last two years; sometimes it is very difficult to get a certificated mate, and occasionally we have had a great deal of trouble in that way. For instance, a master comes in here and his mate does not suit him; or, perhaps, the vessel and the captain does not suit the mate, and he determines to leave, or the captain does not want him any longer. There may be one mate or two mates ashore, but the company may know that those men

are not fit to fill the position of mate, though they hold a certificate, and yet the vessel is compelled to take one of these men in order to leave port, or lie over and wait till some one else comes along. That is a great wrong we have had to put up with. They have no such restrictions as that on the other side of the lakes. They have certificates, but they apply them to steam only at the American side.

Q.—Do you not think it better to apply the rule to sailing vessels? A.—It would be, if it could be justly done, but a great many men holding certificates are not fit to hold them.

Q.—Whose fault is that? A.—I could not say.

Q.—Is it the examiners who do not do their duty? A.—I could not say. If I came here with a recommendation to you, or somebody else, that I am a sober man, and one who can be mate of a vessel——

The CHAIRMAN.—I would not give you a certificate.

WITNESS.—There are many who get certificates in that way.

By Mr. ARMSTRONG :—

Q.—Do you know of masters who have received certificates without passing an examination? A.—They were not supposed to pass an examination till comparatively recently.

By the CHAIRMAN :—

Q.—That is, if they had been in service before the law came into force? A.—They get certificates if they were in the service up to that time; but after the passing of the Act they have had to pass an examination.

By Mr. ARMSTRONG :—

Q.—Have you any knowledge of sailing vessels leaving Kingston in an unseaworthy condition? A.—No; I have not.

Q.—Have you known sailors to complain of the condition of vessels in which they were employed? A.—No; I cannot say that I have.

Q.—Do you think it is necessary that the Government should appoint an inspector of hulls and sailing vessels? A.—No; I do not think it is necessary. We have a very competent man at the present time.

Q.—I mean a Government inspector? A.—I do not think it is necessary.

Q.—You are speaking for Kingston? A.—No; I am speaking for the Canadian side.

Q.—You have said that there are vessels that are unseaworthy? A.—Yes.

Q.—Would not an inspector, who was a proper man, prevent that? A.—This man does not class those vessels that are running; therefore they run at the risk of their owners.

Q.—And at the risk of the lives of the crew on board? A.—Of course, if there was a Government inspector, and he had instructions to condemn those vessels and not allow them to run, he would not allow them to run. This man has not that authority.

Q.—Do you consider this necessary for the safety of the crew that the last should be done? A.—I do not know that it is. I do not see why Canada should want that any more than any other country; they have not got it on the other side; nor have they it in Europe on the coast.

The CHAIRMAN.—I think they have it in England?

By Mr. ARMSTRONG :—

Q.—Two wrongs do not make one right. Has the question not been raised as to the desirability of having such a law passed for the safety of the seamen? A.—Yes; I have heard of it. I have heard a good many complaints among seamen.

Q.—I mean complaints in that respect—of the want of inspection? A.—Yes; I heard a complaint through the paper that the seamen wanted lounges in the fore-castle and wanted boys or women to take care of them. It is very hard to please sailors.

By the CHAIRMAN :—

Q.—Do you think it would be proper for the Government to appoint an inspector of hulls, so as to prevent sailors going on board unseaworthy vessels? A.—Yes; if you want to prevent men doing so it would be well to have that, because I do not care what kind of a vessel it is, so long as she will float, you can always get a crew for her.

By Mr. KERWIN :—

Q.—How often are the spars and riggings looked after by an inspector—there is no inspector, of course, but I mean by the persons who have to look after them? A.—On the lakes it is mostly all wire riggings that is used, and the inspector looks after the spars every time he inspects, to see that the spars, booms, and so on, were sound. I was with the inspector who inspected a vessel lying along side of my vessel. He bored her masts to see if they were sound and he found them all right. Of course, he does not bore every vessel's mast, for he probably knows that she had a new mast last year, or the year before, and in such case it is not necessary to look at them.

Q.—Does he look to see if she has a proper amount of canvas, and if it is in good order? A.—He takes the statement of the owner, or the captain who sailed the vessel last year, as to the condition of the sails and the age of them.

Q.—The inspector, then, never sees them, but the captain says they are here, and that is all the inspector knows about it? A.—Yes.

By Mr. ARMSTRONG :—

Q.—The inspector is satisfied with the statement of the captain? A.—Yes; because many of the sails are stored in the sail-loft, and some are put away in the vessel's hold.

Q.—Did you ever know of a case where the inspector ordered repairs to be made and the vessel left port without this being done? A.—I have not.

By the CHAIRMAN :—

Q.—What about the condition of the barges? Do you know anything in regard to the barges used on the upper lakes? A.—Yes.

Q.—What about them? A.—I could not say in regard to the barges. Of course, I know a number of barges, but I could not tell you anything about their being over-loaded or their condition.

By Mr. McLEAN :—

Q.—Did you ever use a barge that you consider was over-loaded? A.—No; I do not think I ever did on this side. On the American side I have seen many a one that I considered over-loaded; not on this side.

By Mr. KERWIN :—

Q.—Do you not think there should be some law regulating the loading of barges, that they should be only allowed to be loaded up to a certain depth, and no more? A.—It would be right if there was such a law.

Q.—How many inches above water would you have for feet under water? A.—I should say 3 inches to the foot would be satisfactory.

Q.—Of course it would be easy in the summer months for a barge to go along even when deeply loaded? A.—Yes.

Q.—But they do the same thing in October and November, I understand? A.—Yes; very often, particularly if the freight is any way high.

Q.—I understand they do not carry any more of a crew in those months? A.—Sometimes they cannot very well get a crew. A steam barge may be ready to go out in tow of two or three barges, and perhaps she is one man short, and yet she has to remain to hunt up a man.

Q.—Is that through scarcity of men? A.—Sometimes. Sometimes there will be twenty men around, and not a sober man who would want to go.

Q.—Is it not often a question of wages? A.—No; because I have known men full of liquor who would hardly go out of port on any terms.

By the CHAIRMAN :—

Q.—How are the men engaged—by the season, by the day, or by the month?  
A.—Sometimes by the month, but most of them are engaged by the day, from port to port.

Q.—Formerly, I understand, they were engaged by the season? A.—When I first commenced to sail on the lakes, just about twenty-eight years ago, we generally engaged a crew in the spring, and it staid with the vessel, but since then it has got to be from port to port.

Q.—Is it better to change your sailors? A.—No; I think it is better to keep sailors by the month; I always like a crew to keep by me.

Q.—Do you prefer to have a crew remain with you all through the season?  
A.—Yes.

Q.—You think you can thereby manage your vessel more safely? A.—Yes; and with less trouble. You ship a crew and go outside, and perhaps when you get outside you cannot do anything with them. Some of them are not sober—that is the way it is most of the time. Sometimes you ship a crew and there is scarcely one man among them who is able to steer the vessel.

Q.—Have you ever been on the Atlantic? A.—Yes; I did my first sailing from Newfoundland.

Q.—When you were there did you meet with dangerous vessels? A.—I did the first of my sailing there, but I was very young, only eleven years old, and I have not much recollection of it.

By Mr. CLARKE :—

Q.—You have no shipping master in Kingston, I understand? A.—No.

Q.—Would you support the appointment of such an officer here? A.—Yes; I think it would be a great benefit if there was a shipping office established in such ports as Toronto and Kingston, the Welland Canal.

Q.—Have you any fault to find with the system of lights on the lakes? A.—No; I think our lakes are very well lighted.

By Mr. ARMSTRONG :—

Q.—Do you generally find trouble with men here you want to ship? A.—Yes.

Q.—Is that the rule or is it the exception on their part? A.—A sailor on the lakes who has a family to support cannot support his family and be paid off at the end of each trip from Kingston to Toronto. Immediately a vessel arrives there he is paid off. The sailors will not ship any other way now. It is true that sometimes you meet with a man who wants to do something for his family, and he will ship that way rather than any other way; but the majority will ship from port only; they will then get their money and go ashore and spend it. That is a great trouble with us.

By Mr. CLARKE :—

Q.—There is no law, I suppose, concerning the shipment of men by the month or by the voyage, as there is on the Atlantic coast? A.—No; if there was it would be a great deal better for the men.

Q.—You would like that? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Will you tell us the reason why the men prefer to make engagements from port to port? A.—I do not know anything more than they like to get ashore to spend their money. The majority of the men are young men, and all they want is money to go ashore and spend.

Q.—Do you not think if they were employed from month to month, and they were engaged on the understanding that they would do other things outside of their present duty, something would be gained? A.—I do not know what you mean them to do, outside of handing the vessels.

Q.—For instance, shovelling grain? A.—I consider a sailor's duty is to do every thing and any thing for the good of the vessel and the men.

By the CHAIRMAN :—

Q.—When you were a young man, I suppose you did everything? A.—Yes.

Q.—I suppose you thought you were a sailor all the time? A.—Yes; I have handled stone, lumber and grain.

By Mr. ARMSTRONG :—

Q.—Do you not think if the seamen did the work they would be encroaching on the work of the longshoremen? A.—Perhaps they would be; of course, while the sailor was doing that work he would be throwing some one else out of employment, but when he was not doing something he was throwing himself out of employment.

By the CHAIRMAN :—

Q.—When the vessel is at the wharf, and there is no one to handle the cargo, is that a benefit to the community at large? A.—No; I do not think so.

Q.—You think it would be better that the sailor should do his part, and that the vessel should be loaded and go away on another trip, especially considering our short season. A.—Yes; my idea about the seamen is that they are better off when they ship for the month and they keep aboard their vessel. Of course, if the vessel does not suit them at the end of the month they can get their money and leave.

By Mr. CARSON :—

Q.—Do the men generally prefer to ship in the way you have mentioned? A.—Yes.

Q.—Do they invariably refuse to ship any other way? A.—Yes; they invariably refuse to ship in the way I have just mentioned.

By Mr. ARMSTRONG :—

Q.—Should you engage men from month to month, would you give them a uniform rate of wages the season through? A.—I would.

Q.—Do you not think that seamen's wages should be more in the latter months of the season? A.—Yes; I suppose so.

Q.—Do not the wages generally rise in those months? A.—Yes; in the fall of the year.

Q.—But you would like to pay them uniform wages? A.—Yes; but I would pay them more in the fall or I would employ them at certain terms for the season.

By Mr. KERWIN :—

Q.—Have you ever known cases in the fall where wages have gone up, and masters have taken incompetent men, for the sake of saving money, and at the same time the vessel has been lost? A.—I have not, from taking incompetent men.

Q.—You were speaking of the luxuries desired by sailors, in the way of couches, and so forth, in the forecabin: have you been through the forecabin of all the crafts around here? A.—No; I have not. I spoke of this, because I saw it in the paper this winter; I think it came from Detroit. Some sailors, speaking about the condition of the forecabin, allowed that they were kept very dirty; it is the men's fault, I think, if they are kept dirty, for they would not want the master, or the mate, or the cook, to go and clean them out.

Q.—The forecabin may have been dirty when the men went there? A.—Then the men who were there before left it dirty.

Q.—It might have been dirty for years? A.—Yes; that is a fact.

Q.—Is it not a fact that in warm weather on barges the crew have to come up on deck to get rid of the unhealthy smell, and so on, that is down below? A.—Yes; I have been on board a vessel when I have had to do so. It is very close under the deck, especially when you get a load of grain on board. I have been on board such vessels.

Q.—The sailors evidently have some grievances? A.—Yes; of course, sailors have their grievances as well as any body else.

By Mr. ARMSTRONG:—

Q.—Have you ever known a case in which, at the commencement of the season, the masters have met and arranged wages? A.—No; I never did.

Q.—They meet and arrange freight rates, I believe? A.—No; I have never seen them accomplish anything. I have seen a few captains get together with the intention of doing something, but I never saw anything accomplished. Some one of them always jumps over the traces; it is very hard to get them to do anything.

Q.—Have you known masters and mates to be in charge of vessels without holding certificates? A.—I have had mates on board my vessels without certificates.

By the CHAIRMAN:—

Q.—Since the law was enforced? A.—I have had masters and mates on board my vessels without certificates since the law was in force.

By Mr. ARMSTRONG:—

Q.—Did they rise to their positions before the mast? A.—Yes. I have been in a position where I could not get a certificated mate, and I have taken a man from the fore-castle, a good, steady man, and have made him acting mate.

By Mr. CLARKE:—

Q.—Is there not a penalty for vessels going to sea without having a properly certificated mate? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Then you consider the law was violated? A.—Yes; I consider it was.

By the CHAIRMAN:—

Q.—You have violated the law? A.—Yes. Last summer I was at Hamilton, and was reported as having a mate on board without a certificate. The Collector of Customs sent word to the running waiter, and he came to me. I had to go and see the collector. He instructed me to get a certificated mate, but I went out without such. There was not such a man to be got in Hamilton. I offered a man who was not sailing then \$5 if he would go with me as far as Toronto and I would pay his way back, but he would not do so; I went to the collector and told him I could not get a certificated mate and he gave me a permit to go on. I went on, and coming to Kingston I got a certificated mate here. Is it very hard, sometimes, when you come into a port, and cannot get a certificated mate, or perhaps there is no one, except a drunken, worthless man, whom you are obliged to take.

By Mr. ARMSTRONG:—

Q.—Have you any information to volunteer that would be of benefit to the Commission, in regard to shipping interests? A.—I do not know that I could say anything that would benefit our occupation. I would like to say something to raise the freights, but I suppose that cannot be done, unless we can do something with the railways.

WILLIAM HARTY, Managing Director of the Canadian Locomotive and Engine Company, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are manager of the Locomotive Company Works? A.—I am managing director.

Q.—Have you foremen of various departments under your control? A.—Yes.

Q.—What are their duties? A.—To superintend the work being done.

By the CHAIRMAN:—

Q.—Each in his own department? A.—Yes.

By Mr. ARMSTRONG:—

Q.—They are all practical men? A.—Yes.

Q.—Could you give us the average wages they would earn per week? A.—Two dollars and fifty cents and \$3 a day, or I would say from \$2.25 to \$3 a day.

Q.—Those men have under their control engineers? A.—They have under their control all the employes in each department. Each foreman of a department is the head of the department.

Q.—Is it within their province to employ and discharge men? A.—It is.

Q.—To increase or decrease wages? A.—Yes; I could not say that it is within their province to increase or decrease wages of the men, but it is so conditionally, upon the superintendent allowing it.

Q.—What are the wages paid to engineers? A.—What do you mean by engineers?

Q.—To the practical men who work in the shops? A.—We have them under different headings. I would understand what you mean if you would designate them as fitters, moulders, carpenters, laborers, and so on. I presumed you would ask such a question, and I have prepared a list accordingly. The rates of pay are as follows: Fitters from 15 cents to 22½ cents per hour; that is \$1.50 to \$2.25 a day; fitters' assistants, \$1.10 to \$1.25; turners, \$1.50 to \$2.50 per day; Planers, \$1.50 to \$1.75 per day; drillers, \$1 to \$2 per day. I might qualify that by saying that \$1 is what will be paid to a young hand in the department. General pattern-makers receive \$2 per day, that is to say good pattern-makers. Blacksmiths, \$1.20 to \$2.50 per day; boiler-makers, \$1.50 to \$2 per day; boiler-makers' assistants, \$1 to \$1.25 per day; moulders, \$1.40 to \$2 per day; carpenters, about \$1.35 per day; and laborers about \$1 per day.

Q.—Do you pay any laborer under \$1 per day? A.—I think not.

By the CHAIRMAN:—

Q.—There was a witness before us who stated that he was in your employ and received \$11.80 cents for twelve days' work, which would be at the rate of 98½ cents per day? A.—In all probability he had been docked some lost time; he arrived late, or something of that kind. I am speaking from personal knowledge and I say that I never knew a man engaged at that rate. If they were given to me in writing I would take an opportunity to investigate the matter and to know the exact results. Of course, I am quite sure that time has been docked or that time has been lost; I do not remember of any man who has been in our employ at less than \$1 since I was here.

By Mr. ARMSTRONG:—

Q.—How do you dock a man if he is late? Do you dock him the actual time lost or, say a quarter of a day? A.—I could not tell you what the regulations now are, because my connection with the company practically ceased since the 15th of December and I am not acquainted with the regulations that may govern the work now.

Q.—What was the system in force under your control? A.—If they were not in their places when the whistle blew for seven o'clock they were docked a quarter of an hour, and after a quarter of an hour they were docked half an hour, and after that for a full hour.

Q.—The men are supposed to be right on time—there are no minutes of grace given? A.—They are supposed to be in their places and prepared to commence work when the whistle blows. They are not to be coming in the gate when the whistle blows.

Q.—Have laborers in your employ ever requested the company to increase their wages? A.—I think so.

Q.—What became of their request? A.—When you refer to laborers, do you refer to employes, or to the particular class known as laborers?

Q.—To the laborers? A.—Yes; the laborers we had last summer asked for an increase of pay. The superintendent, to whom those matters were referred, considered that the men who were asking for an increase of pay were getting all they were worth, and he refused to give any more. He told them that if they did not like it they could go and do better where they liked.

Q.—What kind of men were they? Were they old and infirm men? A.—Some of them were pretty well up in years.

Q.—What was the average age of the laborers? A.—I could not tell you that. Some are old and some are young; some are past sixty, perhaps up to seventy, and some are young.

Q.—All were getting a uniform rate of wages of 98½ cents per day? A.—All were receiving a uniform rate of \$1 per day—that is, all the laborers; there are not more than eight or nine of them. What we call a laborer is a man who is liable to be called to any particular department to assist in any work.

Q.—Did you ever enquire into the home comforts of this class of your employés, as to how they were doing—I mean those men who earn \$1 a day? A.—I cannot say that I have, unless enquiring from the gentleman who prepares statistics for the department in Ontario—Mr. Blue's department.

Q.—Are they family men? A.—Yes; some of them.

Q.—Have you ever had any labor difficulties in your establishment? A.—The only thing that amounted to anything was last summer.

Q.—Will you tell us the nature of that? A.—There was more or less of a demand for a rise of wages—I mean in all the departments. The superintendent was instructed to raise the pay, or rather to see if there were any cases in which the men were working for less wages than the work was considered to be worth, or less wages than we were able to ascertain were being paid at other places, and if so, to increase the pay up to that level. He did so, and in every case the result was satisfactory, except as regards the lowest class we employ—that is, the laboring gang. There were four or five of those who were in receipt of \$1 a day who demanded an extra 10 cents. The superintendent would not pay it, considering that they were getting all they were worth, and he advised the company not to assent to the demand.

Q.—With the exception of that class of unskilled labor, were the men entirely satisfied? A.—With one other exception I was going to make, that is the moulders. The moulders walked out last summer upon us on one occasion making a demand for increased wages. I think myself they were somewhat hasty; perhaps there was a little haste on both sides; a little hastiness perhaps on the part of the superintendent, in the way he asked them, and a little haste on their part in the way they made the demand. The matter could have been very easily arranged and settled if there had been better understanding between the two parties, when they came together, as to their rights. It was settled satisfactorily to the men within a fortnight, and we had no trouble since.

Q.—Did those men who were dissatisfied offer to settle the matter by arbitration? A.—Yes.

Q.—Did they appoint their arbitrator? A.—They appointed an arbitrator and we appointed another. That is the last I have heard of it since.

Q.—Did they come together? A.—The arbitrators came together and called on me in my office to ask some questions. I gave them the information, and I have never heard anything more of it to this day.

By the CHAIRMAN :—

Q.—You settled the matter without them? A.—The men went back to work at just the same pay as they struck against.

By Mr. ARMSTRONG :—

Q.—Did they go to work on the understanding that the arbitrators would report on the matter? A.—Yes.

Q.—Did the arbitrators ever report? A.—Never; they never summoned any body, to my knowledge, to appear before them.

Q.—Was the understanding between the moulders and the management this: that if they would go to work a report of the arbitrators would be laid before them?  
A.—No.

By the CHAIRMAN :—

Q.—Not to your knowledge? A.—Not to my knowledge. The settlement was made through me. The superintendent, properly speaking, was the man they should have dealt with, but for some reason they objected to go to the superintendent who was there at that time, and they came to me, and I arranged the matter with them.

By Mr. ARMSTRONG :—

Q.—The moulders to whom you referred are machinery moulders, I believe?  
A.—Yes.

Q.—What is the difference in the rate of pay here as compared with the rate in Toronto or Hamilton paid to machinery moulders? A.—I am not aware of the rate paid in Toronto, I think we are paying the same rate of wages as is paid by any body else for the same class of work. I have repeatedly had to write and ask other moulders thorough out the country their rate of wages, and I know that on comparing them I have almost invariably found that we were giving just about the same as they were.

Q.—Are you aware that machinery moulders in Toronto do not work as long hours as the machinery moulders in connection with the locomotive works here?  
A.—No; I have no personal knowledge of the number of hours they work at Toronto. When our men have finished they can go out. It is not with them a question of waiting till 6 o'clock; they go away when they are through with their casts for the day.

Q.—Do they work by the day or by the piece? A.—They work by the day; still their day's work is considered to be finished when they get through with their day's casts.

Q.—How many hours do they generally put in for a week's work? A.—Fifty-nine hours; ten hours every day, except Saturday, when they put in nine hours.

Q.—Has there lately been any change in that system? A.—Not to my knowledge. The gentleman who gave evidence just before me could have informed you on that matter, because he is now superintendent.

Q.—He did not seem to understand anything about the business? A.—He has been here only one month and is not fairly in harness yet.

Q.—Have any officials of the company objected to employ men who belong to labor organizations? A.—No; it never was questioned, to my knowledge. They are just as welcome as any body else, so long as they do their work and obey the rules.

Q.—Do you fine the employés for any other cause than being late in the morning?  
A.—I think not.

Q.—Are any men garnisheed for debt? A.—I do not think there have been more than three or four cases of that kind within the last seven years.

Q.—Have they never been discharged on account of their wages having been garnisheed? A.—No; I do not think so. I cannot remember anything of that kind.

Q.—Do you think the men would be in a better condition financially, and be able to look after their comforts better and the wants and necessities of life if they were paid once a week instead of once a fortnight? We are paying them just as they asked for it. They were formerly paid only once a month, and they made a request to be paid fortnightly, and that has been done.

Q.—I suppose you did not wish to come down to once a week all at once? A.—I suppose, so far as trouble is concerned, it would not matter to the company whether the men were paid weekly or fortnightly.

Q.—Have the men, when they have any grievances, a right to petition the company? A.—Yes; they have the fullest access to the heads of the company, to the directors and officials, at all times.

By Mr. CARSON :—

Q.—In case of the men having grievances you are always approachable, I suppose?  
A.—Yes; I think they will all tell you so. I consider the man who works just as good a man as I am, and that he is just as much entitled to be spoken to and to be respectfully received by me.

By Mr. CLARKE:—

Q.—How is the condition of the men? Have they comfortable homes of their own, or not? A.—I think the bulk of them have their own little homes. It is one consideration that weighed with us in deciding to allow the works to remain in Kingston, instead of removing from here when we bought them, that the employés in the establishment have all their own little homesteads, and that anchors them here; and so long as they receive the same reasonable consideration as the same class of labor gets in other place there is not much difficulty in keeping them. There have not been many removals during the long time the company has been in existence.

Q.—How long would it take a mechanic with a family of three to purchase a home for himself on the wages of one \$1 a day? A.—I could not answer that question. We have a notable instance here, however, of a man working at \$1 a day and accumulating property in this city.

Q.—Out of his wages? A.—Yes. I can show you a carter who has twenty or twenty-five houses—he is now carting, and I knew him when he was a porter in a store for many years. He now owns twenty comfortable homesteads in this city.

By Mr. McLEAN:—

Q.—Is property dearer now than when he bought them? A.—He is every year building more or less.

By Mr. ARMSTRONG—

Q.—How long is it since he purchased that property? A.—He is building every year, generally.

By the CHAIRMAN:—

Q.—This is not a very exceptional case of a poor man getting rich is it? A.—No.

Q.—And you also hear of rich men getting poor? A.—Yes; we have cases every day. I say I knew that man thirty years ago as a porter in a store at \$1 a day—I question whether he was getting even that much.

By Mr. McLEAN:—

Q.—Did any body die and leave him money? A.—Not to my knowledge.

By Mr. ARMSTRONG:—

Q.—Can you tell us the rate of increase in property in Kingston within the last thirty years? A.—No; I do not think there has been much increase in property in thirty years; there probably has been within the last six or seven years.

Q.—In purchasing the necessaries of life is \$1 as valuable now as it was thirty years ago? A.—I do not think so. That is, however, getting into economic questions; that would hardly come in the scope of the enquiry, I suppose, and they would be liable to lead to too much discussion.

Q.—That is one of the important questions we want to enquire into, the purchasing power of \$1. A.—I am not able to speak from personal experience of the value of \$1 thirty years ago, as I was only ten years old at that time and had very little knowledge of the purchasing power of money; but judging from what I have read and what I have heard of the prices of the commodities forming the necessaries of life at that time, the purchasing power of \$1 would be greater than it is now.

Q.—Could you tell us about the rate of the increase of house rent in Kingston among the working classes? A.—No; I could not.

By Mr. CLARKE:—

Q.—Where have your company sent their locomotives? A.—All over Canada.

Q.—Has it made any for the Dominion Government? A.—Yes; for the Inter-colonial and Prince Edward Island Railways.

By Mr. ARMSTRONG:—

Q.—Have you shipped to the colonies? A.—We have never exported any engines.

By Mr. CLARKE :—

Q.—Where do you get your iron? A.—During the last year, since the change in the tariff, our pig-iron and bar-iron have all been bought in Canada.

Q.—What part of Canada? A.—Nova Scotia for pig-iron and sometimes for bar-iron; sometimes Hamilton for bar-iron. Our boiler-plate has all come from Great Britain, Scotland.

Q.—How does Londonderry pig compare with other pig-iron? A.—During 1881–82–83, when we were working to the full extent of our capacity, we, for some reason, could not get our moulders to be satisfied with working Londonderry iron. We bought sample car-loads several times—two or three car-loads at a time on three or four different occasions—to induce our workmen to take hold of it, as we would rather purchase from the home industry, because as a home industry we wanted to be patronized for the same cause. But invariably the report of our foreman was that the iron was not satisfactory, that it would not work as satisfactorily as Scotch pig-iron. I made that report to Mr. Patterson, manager of the steel company in Canada, last winter, at Ottawa, and he sent a man here to investigate, and after having made enquiries of our foreman as to the nature of iron we wanted, he has made a brand of iron especially for us, as I understand him, and since that time we have been able to use it, and it has given great satisfaction.

Q.—You do not mix it with other iron? A.—No; not with Scotch.

Q.—Where do you get your coal? A.—This year from Cape Breton. Prior to that time, with the exception of 1881, we have got it every year from the United States.

Q.—Does it compare favorably with American coal? A.—I cannot say that it does. The report to me from the engineer in charge is that if he forces his fires at all it runs on the bars. We have had to throw it out altogether from the scrap in the smelting department, and we use the best quality of American coal.

Q.—You are able to lay down the Nova Scotia coal cheaper here than the American coal? A.—Yes; cheaper this season, which is the first time we have been able to do so.

By Mr. McLEAN :—

Q.—Do the men in your employ, and who are good, skilled mechanics and belong to organized labor, ask that men of the lowest ability shall be paid the same wages as they are, because they are organized? A.—I do not know how to answer that question.

Q.—Is there any arrangement of that kind? A.—Of course, every man is paid according to his merits. They are not paid all the same wages; they are paid according to their ability.

By Mr. ARMSTRONG :—

Q.—Who is the judge as to their ability? A.—The manager.

By the CHAIRMAN :—

Q.—Not some stranger to your establishment? A.—No.

Q.—You want to manage your own business? A.—Yes.

Q.—In your own way? A.—Yes. So far as I am concerned, you may always be satisfied that we will do that so long as I am there.

By Mr. ARMSTRONG :—

Q.—Has not the workman a right to put a price on his own labor? A.—Yes. I have nothing to say against organized labor. They have a right to do everything to improve their condition, the same as capitalists have a right to do everything to improve theirs. But, speaking on that question, I may say that I simply draw the line at a body of men undertaking to dictate to their employers what wages they shall pay any body.

Q.—Certainly. But do you not believe in a body of men stating that they will not work under a certain scale of wages? A.—Yes; certainly. What I have in

mind is the strike last summer, the walking out of 230 men who were formerly satisfied with their wages, every man saying he was quite content, except those four or five men who wanted 10 cents a day more, and because the company would not concede this 10 cents to each of the four men, 230 men walked out.

Q.—I suppose it was not on financial grounds, but on a matter of principle?  
A.—The company took the stand on their rights, and I presume it was a matter of principle with them.

Q.—Before they walked out, did they interview the company in regard to the matter? A.—They did.

Q.—Did they offer in any way to settle the matter before the strike was resorted to? A.—No. It was: pay the 10 cents extra or we walk out.

Q.—To four men? A.—To either four or five men. It was rather a mistaken policy, and I think they found it out after a little while.

Q.—How long were the men out? A.—Two weeks, I think.

By Mr. CARSON:—

Q.—The men did not get the 10 cents extra? A.—No.  
Q.—Did the strikers go back? A.—I think other men took their places—I think they disappeared. They went sailing, or something of that sort. All of the other men went back. I am happy to say that we have not had any trouble with them in seven years, and that is the only little bit of friction we have ever had during that time, which I think we may call a fair average.

By Mr. CLARKE:—

Q.—Do you manufacture your own brass goods? A.—Yes; not the brass mountings; we generally buy them.

Q.—Are they made in Canada? A.—Yes; in Montreal and Toronto.

By Mr. ARMSTRONG:—

Q.—When the factory shut down three years ago were many men thrown out of work? A.—We had at that time, and had at a short time before closing down, about 400 hands.

Q.—Those hands were all thrown out of work? A.—Yes.

Q.—Could you state to us the cause of shutting down? A.—Want of orders. If you take the trade and navigation returns of the country for those two years during which we were closed down you will find that only ten engines were brought into Canada.

By the CHAIRMAN:—

Q.—Did that involve a loss to the company? A.—Yes; the company was, of course, losing interest on its investment.

By Mr. ARMSTRONG:—

Q.—Was that the main cause of closing down? A.—Yes.

Q.—The reason I ask you this is, because several members of the Commission have been informed otherwise? A.—I have given you the reason, to the best of my experience, and I think I have some little knowledge about it. It was almost impossible to get orders at that time for our class of manufactures. The evidence of that is afforded by the trade and navigation returns and an examination of the quantity of that class of goods that were imported into this country.

By the CHAIRMAN:—

Q.—Of course, it would have been to your interest to continue work? A.—Yes.  
Q.—You were deprived of the services of experienced and skilled men by being obliged to shut down? A.—Yes; we lost the services of our trained men.

Q.—And, of course, many of the men went away? A.—Yes. We started again at prices we had never paid before for the sake of getting our old men, many of whom were driving carts around the streets and carrying the hod.

By Mr. CARSON:—

Q.—Do you feel capable of competing with goods manufactured outside of Canada? A.—We have no fear of anything on this continent in our own class of manufacture.

By Mr. ARMSTRONG:—

Q.—Do American goods in your line come into this country? A.—Nothing to speak of. If American goods do come in it is because they are wanted so quickly we cannot make the delivery.

Q.—This is not a profitable market just now for American goods, I suppose? A.—No; not in our class of manufactures. We are safely shut against them, as they are against us.

WILLARD STEPHENS, Sailor, Kingston, called and sworn.

By Mr. KERWIN:—

Q.—How long have you been employed as a sailor? A.—I have been sailing, I guess, about sixteen years.

Q.—Did you hear the evidence given by the sailor yesterday? A.—I did not.

Q.—What kind of craft are you accustomed to? A.—Sailing vessels.

Q.—Can you tell us the wages of sailors during the summer months? A.—They range from \$25 a month, I think, to \$1.50 or \$1.75 a day. Sailing vessels pay more than barges, as a rule.

By the CHAIRMAN:—

Q.—More than steamers, too? A.—Yes.

By Mr. KERWIN:—

Q.—At the end of the month, do you get paid? A.—In sailing vessels we generally ship by the day.

Q.—And you get paid at the termination of the trip, I suppose? A.—At the end of the trip. If we go from here to Chicago we leave the vessel there and get our money.

Q.—How many hours per day does a sailor work? A.—When he is outside he is there when he is wanted all the twenty-four hours. Of course, in fine weather, and four hours on deck, you have four hours below

Q.—Can you give us any idea in regard to the hulls of those barges you have been on lately in the upper lakes? A.—As a general thing, the American class of barges is better than the Canadian. Some of the Canadian barges are kind of poor, especially as regards their hulls; they are mostly vessels that have been sailing vessels and could not be classed as sailing vessels, and now the owners have made barges of them.

Q.—Have you ever known cases where sailors have refused to go in such craft because they were unseaworthy? A.—No; I cannot say I have.

Q.—Do you know anything about the forecastles of those vessels? A.—Yes; a little.

By the CHAIRMAN:—

Q.—Give us your opinion in regard to them—you are speaking of barges? A.—Yes; barges are a class of boat I have been very little on. Barges, and sailing craft's forecastles are pretty much all alike; some of them are good and some of them are not fit for men to be in.

By Mr. ARMSTRONG:—

Q.—Which is the rule and which is the exception? A.—Both on vessels and barges, because the fore-castle between decks is in the fore part of the boat, and coming through the Welland Canal there is always such snubbing that there are generally

leaks in the fore-castle deck. There are, however, few vessels that have perfectly tight decks, and when they get into the sea-way or into dirty water they ship water more or less. Of course, in fine water it is all right.

By Mr. KERWIN :—

Q.—Are the owners of vessels very particular as to the class of sailors they employ? A.—Some are and some are not.

Q.—In the fine months of the summer, I suppose they have an inferior class of sailors on board? A.—Some of them do; as a rule, the captain of a vessel will get a man as cheap as he can. But mostly in sailing vessels now the wages are fixed according to a rule of the seamen's union.

Q.—How many sailors do you consider it necessary to have on a barge in tow? A.—It is supposed to carry four men, a mate and a captain.

Q.—Do they carry that number always? A.—I could not say; as a rule I think they do.

Q.—How many sails would they carry? A.—They are supposed to have enough sails to handle themselves if they are let go.

Q.—How many do you think are necessary? A.—That is according to the size of the vessel. A vessel is supposed—that is, a boat which is at the mercy of the winds and waves—to have enough canvas to enable the crew to handle her; if not, she is not seaworthy; she is not in a fit condition for a crew to be on board of.

Q.—Have you ever known those vessels to leave port loaded improperly? A.—I have seen them outside when I thought they were over-loaded; I thought they were over-loaded as we passed them.

By Mr. ARMSTRONG :—

Q.—Do you think it would be a benefit, as regards the safety of the crew, if the Government appointed an inspector of hulls? A.—Yes; I do.

Q.—You think it is a need? A.—It is a need in a way; a vessel should just be loaded down to a certain depth so that there will be enough out of water to float her.

Q.—Have you ever known deck loads to be dangerous? A.—I have.

Q.—Over-loaded? A.—Yes.

Q.—When the sleeping apartment of the men is in such a bad condition as you state, whose duty is it to make repairs? A.—It is the duty of the master of the vessel; when a master complains he is supposed to remedy the complaint.

Q.—What would you think if the master of a vessel said it was the duty of the men to see that their quarters were clean, and in good order and repair? A.—It is the duty of the men to keep themselves clean.

Q.—But as regards their sleeping apartment? A.—Yes; their sleeping apartment. Of course, there are lots of men who never think about sweeping up and washing up, or anything of that kind; I think it is the duty of a captain or a mate to see that their place is kept clean.

Q.—Have you ever noticed a vessel with its rigging in a dangerous condition? A.—I have often known of boats leaving here with bad gear, sails, and so on.

Q.—Have you ever known of vessels that have been ordered to be repaired by insurance inspectors which have left port without the repairs being done? A.—No.

Q.—What time of the year is the best to make an inspection of a vessel? A.—They inspect in the spring time, generally in the winter months, but of course I could not form an opinion as to when it ought to be done. I would not want to do so. I think when a vessel is fitted out ready for use that is the time to inspect her, for she then has got the whole of her fittings.

By the CHAIRMAN :—

Q.—That is when she is ready to leave port? A.—Before she leaves for her season's work.

Q.—When she is fitted and ready to leave port, that, you think, is the time to inspect her? A.—Yes; and see if she is seaworthy. Of course, if a boat requires repairs, that has got to be done during the winter.

By Mr. ARMSTRONG :—

Q.—With regard to sailors : is it not the general practice to ship from port to port ? A.—Yes ; it is the general system.

Q.—Could you give any definite reason why they prefer that way ? A.—No ; I could not. It is the rule of the organization to ship that way.

Q.—Do you think that masters prefer to ship men from month to month ? A.—Some do, and some do not.

Q.—What advantage would it be to a master to engage that way, and what disadvantage would it be to the men ? A.—If the men got wages enough it would be better for them to engage by the month ; it would be better for the masters, because they would get just what kind of men they wanted. When men make a short trip the master cannot tell what kind of men they are before they are paid and off again.

Q.—Is it the duty of the seamen, when the vessel is in port, to assist in unloading her ? A.—Not as a rule. No ; it is not compulsory.

Q.—Do you think that, properly speaking, it is the duty of the seamen or the longshoremen ? A.—I think it is the duty of the longshoremen to load and unload a vessel.

Q.—Have you known masters of vessels to ask sailors to do this kind of work ? A.—I cannot say that I have ; not lately.

Q.—Do the wages generally rise at the approach of the end of the season ? A.—Yes ; they generally do.

Q.—It is the general custom to do so ? A.—It is the custom in the fall to give them more than in the summer time.

Q.—Do you think that this rise at the latter end of the year would take place, as a general rule, if the men were employed by the month or by the season ? A.—I do not think it would, not unless it was specified to that effect.

By the CHAIRMAN :—

Q.—If you were engaged on the 1st of October do you not think that you would ask more for October and November ? A.—I would.

Q.—You would have a right to do so ? A.—Yes ; because the weather is rougher and there is more hardship to put up with.

Q.—If the men get a certain price to sail up to September, I suppose there is no reason why you should not ask for the same money afterwards ? A.—No.

By Mr. ARMSTRONG :—

Q.—It requires, in that rough weather, to have good seamen on board ? A.—It does.

Q.—And have you known masters to employ, during that season, inferior men for the purpose of saving money ? A.—That is a question I would not want to answer. I have known men to be on a vessel who were not good men—not proper sailors for the fall of the year.

By Mr. CARSON :—

Q.—Do you consider life-buoys and life-preservers on vessels to be requisite for the safety of sailors ? A.—No ; I do not.

Q.—You have none on board of sailing vessels ? A.—No ; very few vessels I ever was on had a life-preserver on board. A life-preserver on board a sailing vessel is a very rare thing.

By Mr. CLARKE :—

Q.—Those men you speak of as being incompetent men : do you suppose they were shipped by the masters or the owner knowing they were incompetent, or do you suppose they were deceived by the men ? A.—There are times when they ship them and the masters know them ; it is just according to where a man is acquainted.

Q.—Would the sailors, as a body, prefer to have a shipping master's office established in the different ports? A.—That I could not say. Of course, the men belonging to the union do not want any master.

By Mr. KERWIN :—

Q.—Are you a member of the Seamen's Union? A.—I am.

Q.—What financial benefits are attached to that union? A.—We can get more wages on a sailing vessel, as a rule, and we are entitled to a sick benefit; and if we happen to get drowned there is \$50 towards our funeral.

Q.—What was the rate of wages before the union was formed? A.—They were pretty poor. Wages were down low and we had to do something to get enough on which to exist.

By Mr. CLARKE :—

Q.—How much higher wages have been paid since your union was established? A.—They have come up, and they are a great deal better since the union.

Q.—How high—from \$1 to \$2? A.—One dollar and fifty cents to two dollars. Before the union was in existence some of us were sailing for \$25 a month, and \$22 a month one summer.

Q.—What wages can a sailor now command when he ships by the month? A.—That I cannot say.

Q.—Not many ship that way? A.—No; not on sailing vessels. On barges they generally ship by the month.

Q.—Do you know any masters or mates who have left ports without passing certificates? A.—No; I do not.

Q.—Do you consider it is a good law to have masters and mates pass a certificate? A.—It is, in a way, if it is properly carried out.

By Mr. KERWIN :—

Q.—Have you any idea of the number of sailors who are living in this vicinity? A.—I have not; I could not say.

Q.—Did you ever hear of a case where the sailors on a barge when they got into difficulty launched the boat and did not know how to apply the oars? A.—I never did.

By Mr. ARMSTRONG :—

Q.—Is it customary, or has it happened frequently, that when the master would go to ship men he would find them all in a state of intoxication? A.—I do not think so; as a rule—no. I do not think the sailors in the community are that much given to liquor. There are exceptions where you will find men around a boarding house or a saloon drunk, but they are not supposed to take those men.

Q.—What would you think of the evidence of a man who had to leave port short handed—

The CHAIRMAN.—You are asking a witness to run the risk of perjuring himself.

By Mr. CARSON :—

Q.—Has it come to your knowledge that a sailing master had to leave port short-handed owing to his inability to obtain necessary help? A.—Yes; I have left in vessels when they have not got all their men, when they have been one man or two men short.

Q.—Was that through any dissatisfaction? A.—Not between the master and the sailors. That has happened when a master could not get men.

Q.—Was it because the men could not be got? A.—Yes; because the men could not be got.

By Mr. ARMSTRONG :—

Q.—As a class, are seamen of intemperate habits? A.—That is a question I would not like to answer. Some are and some are not. As a general thing, they like to have a glass of beer once in a while as well as any body else.

Q.—Would you consider it a rare occasion that a vessel would go out of port short-handed on account of there not being sufficient men on board, such insufficiency being due to the intemperate habits of the men? Would it be a frequent case or a rare case? A.—I think it would be rare.

Q.—A rare case? A.—I think it would be.

LEWIS W. SHANNON, Newspaper Proprietor, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Do you know the rate of wages paid in a news office? A.—Yes.

Q.—How much per thousand is paid? A.—Twenty-five cents.

Q.—Have the men lately received an increase? A.—Yes.

Q.—Does the copy of advertisements or of tabular work go to the piece hands or to men employed by the office? A.—The advertisements are set by an advertisement man—a man paid by the week.

Q.—Have you a special man for that work? A.—Yes.

Q.—Do you know if it is the universal custom throughout the craft that where men are employed by piece-work on newspapers all the matter that comes into the paper is given to the men? A.—Including advertisements?

Q.—Yes? A.—I do not know that; it has never been the custom here.

Q.—Do you use any plate matter in your paper? A.—I do.

Q.—Is the plate matter manufactured in Canada? A.—Some of it is and some of it is not.

Q.—Is there any difference in the quality of the plates, between American plate and Canadian plate? A.—There is; the American plate is, I think, the best.

Q.—Have you ever met, in those American plates, literature of a light nature, immoral, tending that way? A.—I have never bought any of it.

Q.—When those plates were used in the paper, does such fact keep the men out of employment? A.—I do not think so.

Q.—I suppose your foreman would be in a better position to give evidence on that matter? A.—I do not think he would; I know pretty well what goes on in the office.

Q.—The men are not idle any time the plates are used? A.—No; they are not idle.

Q.—Could you tell us the number of columns of matter you use per day? A.—At present we are using more than we usually do, because just after the new year there is a lull in the advertising patronage; but we use, on an average, I suppose, about seven or eight columns, probably ten.

Q.—Do you issue a weekly in connection with your daily paper? A.—Yes.

Q.—I presume the matter that goes into the weekly is culled from the daily? A.—Yes; it is.

Q.—Do any of your men work after hours? A.—No; except in the very busy season.

Q.—How many boys do you employ? A.—In what way do you mean?

Q.—As apprentices on the paper? A.—Three.

Q.—How many men do you employ? A.—We have eight men; we have eight journeymen; there is one in his fourth year. There are two boys—one in his first year and one in his second year.

Q.—What is the rate of wages you pay job hands? A.—Nine dollars a week.

Q.—How many hours per week do they work? A.—They are supposed to work ten hours a day; on Saturdays they get off when the paper gets out.

Q.—At what time does the paper get out on Saturday? A.—Half-past four or four o'clock.

Q.—At the time of the rise of wages, in what manner were the proprietors approached—was there any difficulty? A.—There was a difficulty. The men sent a petition to us asking for an increase.

Q.—Was it then complied with? A.—Yes; there was no trade difficulty over the rise. There was no strike; the matter was amicably settled between employer and employed.

Q.—Do you find the volume of job work increasing in Kingston? A.—Since I have been in business I think it has increased; I could not say how much. We do about a steady trade.

Q.—Is the style of job work getting more artistic—is it of a dearer nature? A.—I do not think it is getting dearer, it is getting cheaper; but it is more artistic.

Q.—It is increasing in taste? A.—Yes; we have better appliances now than there used to be—we have more artistic styles of type.

Q.—Is much ornamental work being done here? A.—Very little.

Q.—Are your apprentices indentured? A.—No.

Q.—Would you prefer an indenture system to the slip-shod manner in which boys go to the trade at the present time? A.—I never gave it much thought; I do not know how it would work.

Q.—When a boy goes to the business, do you ascertain from him his qualifications, so far as regards his common school education? A.—Yes; always.

Q.—Do you think that is requisite in boys going to the printing business? A.—I do. I may say there has never been a strike in my office.

HUGH DOUGLAS, Stone-mason and Bricklayer, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Are there many stone-masons employed in Kingston? A.—Yes; there are quite a number. Of course, in Kingston they work also at bricklaying; the general rule is that they are masons and bricklayers both.

Q.—Do they work also at stone-cutting? A.—Yes; some of them work at stone-cutting, but not many; I do not think there are very many who are both first-class stone-cutters and builders, although there are a few.

Q.—A man having the knowledge of a stone-mason and a bricklayer, what wages would he receive? A.—Last summer, wages were from \$2.50 to \$3 per day. I think there are one or two who earn more than \$3, but I do not know more than two.

Q.—How constantly do the men in your trade work during the year—in other words, how many weeks in the year do they work? A.—I do not think they work more than eight months in the year; I am certain they do not work more than nine, any way, that is, taking the majority of them; there are a few who work more.

Q.—If you spread the wages that a stone-mason would earn over the entire year, how much per week or per day would it amount to? Have you ever thought of it in that regard? A.—I think for the year round I would be doing pretty well if I earned \$500; some of them may get pretty close to \$600, but I do not think the majority of them do. I do not think the majority would earn over \$500.

Q.—Do they generally engage with contractors, or do they take jobs of their own? A.—They generally engage with contractors.

Q.—Is there much corporation work in the line of stone-mason and bricklayer? A.—No; I do not think very much. Only lately they have been building dry drains, dry walls, etc.

Q.—Are the stone masons in Kingston organized? A.—No.

Q.—Are there many apprentices in the business? A.—Yes; there are quite a number. In fact, I know of one employer who has three apprentices, and he does not employ two journeymen on an average. So I think that is pretty good.

Q.—That employer has more apprentices than he has journeymen? A.—Yes.

Q.—At what kind of work are those apprentices employed? A.—They are employed at all kinds of work they can do. You can imagine the kind of work they were out.

Q.—And an employer of that kind of hand, does he ever get contracts for

corporation work? A.—There have been no corporation contracts given out during the past year or past two years.

Q.—Is such a hand ever good, to your knowledge? A.—No.

Q.—In the bricklaying part of the trade, do you find scaffolding good—is it generally secure? A.—Yes; I have never been on a building where there have been any accidents through defective scaffolding.

Q.—Do the men put up their own scaffolding, or is there a man especially selected by the contractor to do that work? A.—The men generally erect their own scaffolding on small jobs; if it is a large job there are generally one or two men told off to erect the scaffolding.

Q.—Could you tell us the wages a bricklayer's laborer would receive, one who would carry the hod and brick? A.—The average wages would be \$1.25 a day in the summer time.

Q.—Do the wages decrease towards the fall? A.—Generally they do.

Q.—Will you tell us the reason? A.—I suppose the reason is that there are more men to be had.

Q.—Then it is on account of the supply of labor, not on account of inferior work? A.—No; I think they do quite as good work; there are some men out of work and that runs the wages down.

Q.—It is in that way the contractor takes advantage of the surplus labor? A.—Most of them do.

By Mr. McLEAN:—

Q.—On the other hand, do wages rise when men are scarce? A.—Yes; if a man wants men, and must have them, he will offer them more.

By the CHAIRMAN:—

Q.—It is according to the law of supply and demand? A.—Yes.

By Mr. McLEAN:—

Q.—In that case, the man takes the advantage? A.—A man will not refuse to go if a boss offers him a quarter more than he is getting—not as a general rule.

By Mr. ARMSTRONG:—

Q.—You are a member of the labor organization in connection with the building trade, I believe? A.—Yes.

Q.—Does that body rate all men on the same equal footing as regards wages? A.—I do not know that there has ever been any rate struck.

Q.—They generally make their bargains separately themselves? A.—Yes; so far.

CHARLES M. MORRICE, Blacksmith, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—At what branch of the trade do you work? A.—I work at the locomotive works; I have worked at another branch, the ship-building branch.

Q.—Have you worked at horse-shoeing? A.—Not very lately; just a month or two one summer.

Q.—How many blacksmiths are employed at the locomotive works? A.—I should say about twenty.

Q.—What are the average wages the men receive there? A.—About \$1.70 a day.

Q.—How many hours constitute a week's work for blacksmiths? A.—Fifty-nine hours.

Q.—What are the wages of a blacksmith's helper? A.—We have some of them at 90 cents, some \$1, \$1.10, \$1.15 and \$1.20.

Q.—You have some at 90 cents? A.—We have one.

Q.—Do they require to be skilled, more than that of ordinary laboring workmen, to be a blacksmith's helper? A.—Yes; they do, but apparently not down there; they do not apparently care what sort of a helper they get.

- Q.—Has each blacksmith one helper? A.—Yes; some of them have two.
- Q.—How many laborers are there at 90 cents a day, the lowest wages?  
A.—There is one I know of.
- Q.—Are there any apprentices at the blacksmithing? A.—There is one.
- Q.—What age was that apprentice when he came to work first? A.—I think he was about sixteen.
- Q.—Is the blacksmithing work in the locomotive works more severe and fatiguing than is ordinary blacksmithing work, such as horse-shoeing—is it severe work? A.—Some parts of it are severe, but I consider horse-shoeing the hardest work.
- Q.—Have blacksmiths, to your knowledge, received an increase of wages at the locomotive works? A.—I believe some have received an increase.
- Q.—Who employs the blacksmiths at the works? A.—The foreman employs some, I believe, and the rest are employed by the company; the manager or superintendent employs some, I believe.
- Q.—Did you ever calculate the amount of money a blacksmith would receive in a year at the average wages, provided he worked every available day he could possibly get work? A.—It would be according to the pay he got. If he got \$1.70 a day I suppose he would earn between \$400 and \$500. Of course, I never calculated it up; that is what I would judge to be the amount.
- Q.—When the men have any grievances are they allowed by the foreman or manager to have the right of petitioning the company and laying their grievances before them? A.—Yes; they can lay their grievances before them, but they may lie there, for all the notice they will give them. They do not take much notice of them, I think.
- Q.—Have ever any grievances, to your knowledge, been laid before the manager or superintendent and those grievances were not looked after? A.—There were some last summer. There were letters for an advance of wages put before Mr. Harty, and we never heard of them at all.
- Q.—Were you in the employ of the locomotive company at the time of the difficulty last summer? A.—Yes.
- Q.—When the difficulty was over, how many men went back to work? A.—There were two-thirds who went back; some went away and got work elsewhere.
- Q.—Did any of the men who went out on strike make application to return to work and were refused work? A.—I do not think so.

By Mr. McLEAN:—

- Q.—You work nine hours a day on Saturday, I believe? A.—Yes.
- Q.—Do you get paid for ten hours' work? A.—No.
- Q.—Just for nine hours? A.—Yes.

By Mr. ARMSTRONG:—

- Q.—Have you worked at blacksmithing in any other place besides Kingston?  
A.—Yes; I have worked in the old country. I have also worked in Hamilton.
- Q.—Can you tell us the difference between the wages of a blacksmith in Scotland, and the wages of a blacksmith in Kingston? A.—There is a great deal of difference. The wages in Scotland range at about 25 shillings a week for an ordinary blacksmith; 30 shillings for a good blacksmith.
- Q.—Do you consider that the condition of a blacksmith in the old country is better than his condition here? A.—I do not consider he is better off, but if he can get as steady work he is as well off. I would not say he is better off, but he is as well off, that is, if he can get steady work.
- Q.—If he could get as steady work as you receive at the locomotive works, how would his position be then? A.—It would be as good.
- Q.—That is considering the cost of living and house rent? A.—Yes.
- Q.—Have you worked in the United States? A.—No.
- Q.—You said you worked in Hamilton—is that so? A.—Yes.

Q.—Are the wages for a blacksmith higher in Hamilton than in Kingston?  
A.—Yes; about 8 per cent. higher.

Q.—Do they work the same number of hours as they do here? A.—I worked in the bridge works in Hamilton; we get two hours off on Saturday; we stopped at 4 o'clock.

Q.—There is an advantage, then, you believe, of one hour in Hamilton? A.—Yes.

Q.—Did you ever give any thought as to the cost of living in Hamilton, and the cost of living in Kingston? A.—Of course, I was only boarding in Hamilton. There is no difference in board between the two cities; you can get board for the same price here as there.

Q.—In regard to a family man, what is your belief? A.—I consider you can get a house as cheap in Hamilton as you can here; but I have not had experience in that.

By Mr. CARSON:—

Q.—Did you get paid for the two hours in Hamilton? A.—No; I believe in the Western shops they get paid for the hour they have off; they work nine hours per day or fifty-four hours per week.

By Mr. ARMSTRONG:—

Q.—With the two hours off in Hamilton, wages are still higher there than in Kingston. Did I understand you to say that? A.—Yes.

Q.—Even working fifty-five hours here? A.—Yes; they will average higher.

Q.—Have you any information in connection with your trade that would be of benefit to the Commission? A.—No.

Q.—Do you think, on the whole, that a blacksmith receives a fair day's wage for a fair day's work? A.—I am not prepared to answer that question, because I have not had much experience in blacksmithing, for I am a young man yet.

JOHN WILKINS, Grocer, called and sworn.

I appear to give evidence to the Commission in connection with the order to which I belong—the Knights of Labor.

By Mr. ARMSTRONG:—

Q.—Did you hear the evidence of Mr. Meek last evening? A.—I did.

Q.—Do you corroborate that evidence? A.—I agree with everything he said in connection with the order, as to their action and the course they have pursued in regard to any matters brought before them.

Q.—Have you anything to add to his evidence in connection with organized labor? A.—In connection with organized labor I would like to say that I believe it is of great benefit to the workmen, not only by raising their wages but by raising their moral tone. I have noticed, since the order has been established in Kingston, a great improvement in this respect.

By Mr. CLARKE:—

Q.—How long is it since the society was organized? A.—Just a year ago the 17th of December. Of course, in the beginning they were a little hasty and there were some strikes and troubles entered into rather hastily, before the members really knew the rules of the order; but with the exception of those few mistakes I think everything else has been conducted satisfactorily. I have, owing to my official position on the executive, our statistician's reports of wages in the various industries in the city, if the Commission would like to hear them.

Q.—Have they decreased or increased since the order was organized? A.—I have the reports for the last two or three months. Of course, wages always advance with the approach of winter.

The CHAIRMAN.—We have heard evidence in regard to wages.

By Mr. ARMSTRONG :—

Q.—Could you give us the wages that are paid in the knitting mills to all classes of operatives? A.—I have the wages as presented by our statistician, that is previous to the reductions that have been made since the new year.

Q.—Have you got the rate of wages after the reduction? A.—No; I have not got the rate since the reduction.

Q.—Do you know the amount of the reduction? A.—Only according to the reports sent in to the executive. It ranges, I believe, from 20 to 50 per cent. At present the wages paid there are very small; in fact, I know personally of some girls who have to board themselves and who are making 25 cents a day—that is according to my personal knowledge.

Q.—How old might those girls be? A.—I guess they are all of eighteen. They have to board themselves. Their parents live in the country and they have to pay their board in town. I know of some days that they only earn 25 cents a day; some days they will make a little more.

Q.—Those figures you have got are authoritative? A.—They are officially obtained from employés of the institution and given to our officer, and I think they will be information to the Commission.

Mr. CLARKE.—If the witness can swear to them; at present they are only hearsay evidence.

The CHAIRMAN.—Let it go on the record for all it is worth.

By Mr. ARMSTRONG :—

Q.—Can you give us the prices, to the best of your knowledge and belief? A.—It is information given to the parties interested. Of course, there is one thing that should be understood, and that is, that a week's work at both the knitting and cotton mills previous to this year was sixty-one and a half hours. That is a point I would like to impress on the Commission. I have heard it stated that they work sixty hours a week; that is not true. I live just a short distance from the knitting mill and I know the time they go to work, and employés in the mill, who are present, know that such is the case. They work eleven hours a day, and on Saturday from half past six to one. This makes sixty-one and a-half hours. They are only paid at the rate of sixty hours per week.

By Mr. KERWIN :—

Q.—At what hour do they start in the morning? A.—They are working short time now and go at seven o'clock. Previously they started at half past six and quit at half past six, except on Saturday, when they work till one o'clock.

By Mr. ARMSTRONG :—

Q.—Do those girls who only earn 25 cents a day do so during the long and short time? A.—At present.

Q.—How much would be earned when the mill was going the full number of hours? A.—I guess they will average about \$3 a week—from \$2 to \$3. As they work on piece-work, it varies.

Q.—At what class of work are those young girls employed who earn that amount? A.—I believe they are in what is called the finishing department.

Q.—Have those young women informed you that such was the rate of wages they were receiving? A.—I have had it from the party they board with; they board just a few doors from where I live, and I have it from the party they board with, and who works in the establishment along with them.

Q.—Can you tell us, as a fact, the age of the youngest girl employed in that knitting mill? A.—The youngest girls are between fourteen and fifteen. I know them personally. I have it from their mothers that they will be fifteen next birthday.

Q.—How long are they allowed to eat their dinner? A.—One hour.

Q.—Are there any who eat their dinner in the mill? A.—Yes; I believe there are quite a few, who have a long distance to go.

Q.—That is through necessity? A.—Yes.

Q.—Do you know that they eat their dinner in the room where they work, or is there a room set apart for that purpose? A.—I understand there is no such room set apart for that purpose. I have been given to understand that by the employés of the mill.

Q.—As a representative of labor in Kingston, what is your opinion in regard to the shortening of the hours of labor? A.—I think the shortening of the hours of labor would be a great advantage to many. I also have my opinion that it would be a disadvantage to many. Of course, there is no opportunity of judging. A working-man's time is his own when he is not employed and he can do what he likes with it. I have not observed in those establishments that have given the Saturday half-holiday that the people employed have derived any great benefit from it. It gives the boys, in the summer time, an opportunity of playing base ball on Saturday afternoons; that is about the greatest benefit I have seen from it. Of course, there are a number of girls employed in the mills who board themselves, and they take Saturday afternoons for doing up their house work.

Q.—What do you mean by boarding themselves—do you mean living on the European plan? A.—No; they engage a room and cook their own provisions in their room; they cook enough of an evening to do them the next day, and on Saturday afternoons they get time to clean up and put things in order. That is the only advantage I see derived from that half-holiday.

Q.—The girls do that from a point of economy? A.—Yes; they have got to economize, because they cannot afford to pay board. They cannot afford to pay for having it done. As I have heard a number of mechanics express a strong opinion in regard to the apprentice system, I desire to go on record as decidedly opposed to it—that is, the indenturing of any men or boys to learn trades. My experience, and I have known a few who have been indentured in that way, is that it has not been successful in this country.

By the CHAIRMAN:—

Q.—Have you been long in this country? A.—I am a native of Canada. Another way I would look at the matter is this: I do not believe in any organization having the power to close up any avenue for earning a livelihood to any body. If you give the members of the union the authority to have apprentices indentured, the next step will be to compel boys to pay a bonus, as is done in the old country.

By Mr. ARMSTRONG:—

Q.—Have you ever seen parents of boys, having their children taught, pay for that under the apprentice system? A.—No; not in Canada, but I know it is done in the old country. I know the parents of my father had to pay a premium to have him taught a trade. He worked for a short time at it and then he skipped out.

Q.—How many years ago was that? A.—It was about thirty years ago.

Q.—Do you believe that system will be adopted in this country? A.—That is my impression.

Q.—Do you not think that by the indenture system a boy will better learn the trade than he otherwise would? A.—In the small shops he would; in the large shops he would not. In a large shop, such as the locomotive works, he would not. You put a boy in a small shop, where he is working with his employer all the time, and he will learn a good trade; but put him in a large shop, where the machinery does all the work, and he will not learn the trade. I have been informed by mechanics that the men who are now receiving mechanics' highest wages are men who did not serve an apprenticeship, but who went in as laboring men, and got a show from the foreman to learn the trade. Of course, it is well known that a boy cannot learn a trade in a place where there is much machinery—as, for instance, in a boot and shoe factory.

Q.—But you have not exactly answered my question. It is this: does the fact

of a boy being indentured not give him a better chance to learn the trade than a boy who is not indentured? You are aware that under the indenture system the employer is compelled to teach the trade?

The CHAIRMAN.—Where is the law?

Mr. ARMSTRONG.—He is bound under law.

The CHAIRMAN.—Just as he chooses to do it.

Mr. ARMSTRONG.—There have been cases decided to that effect before the courts.

The CHAIRMAN.—Yes; according to agreement.

WITNESS.—I have known cases where the boys have been indentured, and after they have worked a short time the establishment has shut down and there has been nothing to do. It is an advantage that when the establishment shuts down they will have to keep the apprentices on doing something.

By Mr. ARMSTRONG :—

Q.—Do you know whether, in that case the parents got damages from the proprietor? A.—They did not.

Q.—Do you know, according to law, if they could have secured damages if they had sought to? A.—I do not know how that is; I do not swear to that. I have heard parties complain that those contracts were one-sided; that they bound the company to nothing.

By the CHAIRMAN :—

Q.—Apart from that, you say you are a native of Canada? A.—Yes.

Q.—Do you think there are many mothers or parents who would bind their children four or seven years? A.—No; I do not know of any one. Every one to whom I have spoken condemns the system, and would not consent to follow it. I know of men who have been bound to trades who would not bind their sons, because, as a rule, they have received such treatment themselves that they would not subject their children to the same.

By Mr. ARMSTRONG :—

Q.—Have you ever known of a case where the parents would not allow their sons to go to a trade unless they were indentured? A.—No; I have not. In fact the indenture system is received with very little favor here. I believe, myself, that the advocates of the indenture system are simply trades union men, who wish to restrict the number of workmen in their particular line.

FRED. EDWARD, Blacksmith, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—Where do you work? A.—At the locomotive works.

Q.—Have you heard the evidence of the witness who gave evidence before the last? A.—Only during a few minutes.

Q.—Do you agree with the evidence you heard? A.—Yes; I believe something about the same.

Q.—Have you anything to add to his evidence? A.—Nothing more to what I heard.

Q.—What, to your knowledge, are the wages paid to a blacksmith's helper? A.—They are paid from \$1 to \$1.25 a day.

Q.—Do any of them receive 90 cents? A.—Yes.

Q.—How many? A.—There is only one case I know of.

Q.—Have you any information in your line of business that would be of benefit to the Commission? A.—No; I do not think I have any.

Q.—Do you think a blacksmith receives sufficient wages for his labor in comparison with the wages received by other skilled mechanics in Kingston? A.—In some cases he might.

Q.—But does he? A.—Some do.

By Mr. CLARKE :—

Q.—On the whole, then, you think that blacksmiths are paid a good, fair day's wages for a good, fair day's work? A.—Some are and some are not; some are kept down quite a bit; they cannot get the chance to keep ahead.

Q.—How is it in your own case? A.—It is something like that in my own case.

By Mr. ARMSTRONG :—

Q.—Will you explain what you mean by being kept down? A.—Other men getting better chances over those who have been in the company's employ probably longer, a great deal longer, perhaps.

Q.—Have those who have received a low rate of wages ever asked for an increase? A.—Yes; they have, but they have been put off time and time again, till the thing has died out among them.

By Mr. CARSON :—

Q.—Did you ever ask Mr. Harty himself for an increase of pay? A.—No; I never did.

Q.—Have you ever known a man to ask Mr. Harty himself? A.—Yes; I have.

Q.—In what way did he receive their application? A.—The answer was something like this: that he would see into his case.

Q.—And he never saw into it? A.—Yes; I believe he did, as far as my knowledge goes; it occurred some time ago.

Q.—Did he get an increase? A.—Yes; I think it was granted in that case.

Q.—Did Mr. Harty receive the application with the courtesy that was due to the man? A.—Well yes; he did.

ROBERT MARSHALL, Marine Engineer and Boiler-maker, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—Is there much work in the winter time at boiler-making in Kingston? A.—I have always got work during the last five or six years here and other places.

Q.—What are the wages paid in Kingston to a good boiler-maker? A.—About \$2 a day.

Q.—Are they constantly employed during the year? A.—No; I follow steam-boat engineering in the summer time.

Q.—What are the wages of an engineer in the busy season? A.—It depends a great deal on what class of boats you are on. On the larger class they average from \$65 to \$70, while they get less for the barge class, which does not require a qualified man to run a boat up to 150 tons burden. The owners got the law changed some years ago, and they can employ who they like.

Q.—A certificate is required for an engineer on a steamer? A.—Yes; on passenger steamers and freight steamers, up to 150 tons.

Q.—Is the law properly carried out? A.—I think the lives of the men on boats are just as much liable to be sacrificed as those of passengers. The law, as it is, is carried out.

Q.—Do you think the law should cover barges as well? A.—Yes.

Q.—Did the law ever cover tugs? A.—Yes; some four or five years ago.

Q.—At whose instance was the law altered? A.—It was altered by a certain class of steamboat owners petitioning the Government to change it.

By the CHAIRMAN :—

Q.—Were there a good many engineers in the employ of the owners, who at the time objected to doing away with the certificates? A.—They objected to it. They sent a deputation to Ottawa to that effect.

Q.—They did not want to lose their employment? A.—Certainly not. Americans can come in here and run a boat, and there is no objections raised, but we cannot go over there unless we are American citizens.

Q.—How is that? A.—I say an engineer from Canada cannot run an American boat unless he is an American citizen, but engineers can come here and be employed on our boats—that is, on our tugs.

Q.—That is, when no certificate is required they can be employed? A.—Yes.

By Mr. ARMSTRONG:—

Q.—What is the rate of wages an engineer would receive on a first-class steamer or propeller? A.—On the larger crafts between \$65 and \$70; that is what they call the tariff rate. They have a tariff for the tugs that runs from \$40 to \$45, and \$50 and \$60.

Q.—Who makes that tariff? A.—It is prepared by parties in Toronto and Hamilton—steamboat owners.

Q.—Are the marine engineers organized in any form? A.—I think there is a branch of the organization in Toronto, but it does not come down this far; it takes in Toronto, Hamilton and St. Catharines.

Q.—Do you think that a complete organization among the marine engineers would be a benefit to them? A.—Yes; I believe it would be.

By Mr. CLARKE:—

Q.—Do the engineers think the inspection of boilers and hulls necessary? A.—Yes; they believe so; it gives satisfaction.

By the CHAIRMAN:—

Q.—Do you know anything of the condition of hulls used on the upper lakes? A.—Some of them are of a very poor class.

Q.—You say some of them are of a very poor class. Do you mean they are unseaworthy? A.—There are some of them that are just holding together. They were condemned years ago.

Q.—Those barges are generally vessels worn out in service? A.—They are worn out vessels that will not qualify for inspection.

Q.—And they run them in the dangerous season, even in October and November so long as they will float, I suppose? A.—They run them so long as navigation is open.

By Mr. ARMSTRONG:—

Q.—Have you any information in connection with marine engineering you wish to impart to the Commission? A.—I think it would be a good idea if the Government would bring all tugs under qualified engineers. There are some people who try to have engineers run twenty-four or forty-eight hours on a stretch. If they will not do that the masters put in incompetent men to do the work, if the law does not prevent them.

Q.—Provided an engineer works an extraordinary time without sleep, do you think his vessel is placed in a dangerous condition? A.—It would be better if they had what we call regular watches. Of course, when a man has been on duty twenty-four hours—he is unable to get sleep,

Q.—Have you ever known any mishap to take place on vessels on account of the negligence of engineers, that carelessness or negligence being on account of want of sleep? A.—No; I do not know that I have.

Q.—Have you ever known when an inspector of vessels would visit a steamer and order repairs to be done that the steamer would leave port without such being done? A.—No. You generally report in the fall any deficiencies to the owner and inspector. You are obliged to do it; you are supposed to do it, any way.

Q.—Do you consider inspection is satisfactory once a year? A.—Yes.

Q.—In your opinion, what is the best time to make an inspection? A.—I think the fall of the year would be the best, for if there is any defective part to be repaired there is the winter in which to fix it.

JOSEPH SHAW, Laborer, Kingston, called and sworn.

By Mr. ARMSTRONG :—

Q.—Are you a corporation laborer or a contractor's laborer? A.—I work in the locomotive works.

Q.—Did you hear the evidence of parties from the locomotive works in regard to the wages paid to laborers? A.—Some get \$1; some \$1.20 a day. All get about \$1 a day; the wages run about \$5.90 a week for the most of us.

Q.—How often are the men paid? A.—Every fortnight.

Q.—Would the men prefer weekly payments? A.—I cannot say that, I am sure; I never heard them grumble about fortnightly pay.

Q.—What is your opinion in that respect? A.—It would be very good, I think, to have it every week.

Q.—You personally prefer weekly payments? A.—I do not know; weekly would be very good.

Q.—Are there many laborers owning their own homes in Kingston? A.—I could not say; that question is more than I could answer.

By Mr. CLARKE :—

Q.—Do you know any one working in the same branch as you who owns his own home? A.—I own one, but I have not paid for it—for the whole of it.

By Mr. ARMSTRONG :—

Q.—Have you a family? A.—No.

By Mr. CARSON :—

Q.—After supporting yourself out of your own wages that you earn at the locomotive works, how long would it take you to pay for your home. A.—Twenty years.

Q.—You have no other income besides your pay? A.—Yes.

By Mr. KERWIN :—

Q.—Twenty years from now? A.—I have been twenty years in Kingston now, and I have been all that time saving to pay for a house.

By Mr. CARSON :—

Q.—What other income have you besides your daily pay at the works? A.—I have a pension from the Government.

Q.—What does that pension amount to? A.—Eighty dollars a year, and a few cents over.

Q.—Under those circumstances, how long would it take you to pay for your own house? A.—I guess it will take me twenty years altogether; it might take less.

By Mr. KERWIN :—

Q.—What is the value of the house you are trying to pay up on? A.—About \$800.

JAMES RUSHFORD, Laborer, Kingston, called and sworn.

By Mr. McLEAN :—

Q.—Where are you employed? A.—At the locomotive works.

Q.—Have you heard the evidence of the other witnesses? A.—Yes.

Q.—Do you corroborate it? A.—In what way?

Q.—In regard to all they have said. A.—I have not heard one laborer speak.

By Mr. ARMSTRONG :—

Q.—What is the rate of wages paid to laborers? A.—They will average, in the locomotive works, hardly \$1.05 a day.

Q.—Are there any who receive under \$1? A.—Yes; there are. All the laborers in the locomotive works, at the shops, do not receive \$1 a day. They receive between 98 and 99 cents; they only get \$5.90 a week.

By Mr. CLARKE :—

Q.—Are they paid by the week or by the day? A.—They get \$1 a day, and on Saturday they only get paid for nine hours.

By Mr. ARMSTRONG .—

Q.—Do many laborers own their own houses? A.—I do not know many who do. I know one who owns his home, but I think of only one. I know of a few others, but they do not own, and I don't know how long it will be before they own them. It is very difficult for a mere laborer, who is not employed on any but common labor, to get a house; there are several laborers here who are handy men and make over \$1 a day.

Q.—Do the men, according to your view, prefer to be paid fortnightly rather than weekly? A.—I could not exactly say that; but I know a few who would rather be paid weekly than fortnightly, simply because many of the laborers have to draw before the fortnight's pay come—they cannot wait that long.

Q.—You think, then, that if they were paid weekly this drawing would be done away with? A.—Yes; I think so.

Q.—Do you think the laborers are well paid at \$1 a day? A.—No; I am sure they are not, because a laborer who gets only \$1 a day and has two or three small children cannot half support his children and clothe them the way he should, and he cannot pay school taxes to give them an education. There are hundreds of them that way.

Q.—Have you any other information that would be of any benefit to the Commission? A.—The only thing I want to say is that I would prefer shorter hours. I think it would be a great benefit to men to have shorter hours, for they could make good use of the time. To a great many men, one extra hour in the evening would be a good thing.

By Mr. CLARKE :—

Q.—Do you think your labor is too laborious to work at it ten hours a day? A.—I think so. I think if there was one hour shorter in the day more men would get employment.

Q.—What makes you think that? A.—A man will not do so much work in nine hours as in ten hours, and I think that would employ more men.

By Mr. McLEAN :—

Q.—Would you be willing to work nine hours at less wages than you get now? A.—I would.

Q.—You would take the reduction? A.—Yes; I would rather take the reduction, for all it would amount to in my pay.

JAMES FLEMING, Sailor, Kingston, called and sworn.

By Mr. KERWIN :—

Q.—You have been president of the Sailors' Union, I believe? A.—I have.

Q.—Will you tell us about what the rate of wages is here for a sailor in the shipping season? A.—A man would make perhaps \$1 a day, provided he sailed the whole summer.

Q.—From May to December? A.—Yes; of course, it requires a little explanation on that account. A man who ships here goes perhaps to Chicago or Duluth, or some other place, and gets paid off there. There will be three or four days during which he will be idle, and he will not be getting wages, therefore the wages will not amount to so much as will appear on the surface.

Q.—Then you think he would average about \$1 a day? A.—If he did that in the summer he would be doing well.

Q.—Tell us what the wages are of a crew leaving this port on barges? A.—From \$10 a month to \$1 per day.

Q.—Do you ever have any difficulty in obtaining the money due you at the expiration of the time? A.—Very little. Sometimes there is a case that occurs when it is hard to get your wages, but since the new law has come into effect the case has been altered considerably, and a sailor can generally get his wages. There has been a law that a mortgage was payable before sailors' wages, but lately it has been decided that the sailors' wages must be paid before the mortgage, and therefore the sailor can always get his pay now.

Q.—Do you think a craft should leave this port without having a proper mate on board who has a certificate? A.—No; I do not.

Q.—Have you ever known of any vessel to be lost through improper loading, or through the grain shifting? A.—No.

By Mr. ARMSTRONG :—

Q.—Have you ever known a vessel to be lost through the mismanagement of a mate or master, they not knowing their business properly? A.—Yes; not from a mate and master; perhaps from one—either one.

By the CHAIRMAN :—

Q.—Does not that happen all over the world? A.—I suppose it does; perhaps it does; not to my knowledge.

Q.—I suppose some captains of foreign vessels are not competent commanders? A.—No; I do not think so.

By Mr. KERWIN :—

Q.—Do you know of any vessels in the service now that are not classed? A.—Not vessels, exactly. I do not know whether you mean barges or not.

Q.—Barges? A.—Yes; there are barges sailing now that are not classed.

Q.—What time do you think the barges should be inspected—in the spring, or at any other time? A.—I should say that they should be inspected in the fall of the year, when they are laid up; that is the only time you can tell whether there is anything wrong with them or not. In the spring the inspector would not be able to tell the difference, unless he bored them, and then he would hardly be able to decide. There has been one barge lost this last summer, on which the Government have appointed a commission of enquiry; that was not in a seaworthy condition, and there are several other barges of which I am aware that are not seaworthy.

By the CHAIRMAN :—

Q.—Are you talking about barges going to the upper lakes? A.—Yes; I am speaking of the lakes; I know nothing about the river barges.

By Mr. KERWIN :—

Q.—In regard to the inspection of tackle and running gear: would you have it take place in the spring, when the vessel is ready for sailing? A.—Yes; that would be the correct way, I think; but so far as the hull is concerned, I do not think that would be right. I think there is a little too much latitude allowed to vessel owners, so that they can put vessels on the lakes that are not seaworthy.

By Mr. CLARKE :—

Q.—You say you are president of the Seamen's Union? A.—Yes.

Q.—You say a man would average about \$1 a day? A.—Yes; throughout the season.

Q.—And that is owing to their losing so much time at the end of each run? A.—Yes.

Q.—Why does the Sailors' Union, of which you are president, discountenance the employment of sailors by the month? A.—Because they would get less wages, and be just as liable, if they were shipped by the month, to be paid off, as if they shipped by the day.

By the CHAIRMAN :—

Q.—How is that? If a man engages by the month, starting from Kingston to

go to Chicago, he will be in the same position as a man engaged by the trip? A.—  
Because the articles are not worth the paper on which they are written.

Q.—Why? A.—I do not know the reason.

Q.—Is not that very strange? A.—Yes.

Q.—Is this the only part of the English dominions where such is the case. A.—  
The articles can be broken in any port they go.

By Mr. ARMSTRONG :—

Q.—Is that one of the reasons? A.—The articles can be broken. Take the  
case of a man shipping from Chicago to Kingston: if the vessel is detained in  
Chicago for two weeks the man is liable to be paid off, just as much as if he had been  
shipped by the day, and therefore the union has decided in favor of the present  
system. Further, the men always get more wages by the day than by the month.

By the CHAIRMAN :—

Q.—You believe that if a sailor is engaged in Kingston by the month a master  
can pay him off in a week or ten days? A.—Yes; I have had my experience in  
this matter, for I have been paid off myself.

By Mr. ARMSTRONG :—

Q.—You know it as a fact? A.—Yes.

By Mr. CLARKE :—

Q.—Did you ever go to court about it? A.—The courts where?

Q.—In Kingston, where the agreement was made? A.—I have never gone  
there, because I do not think it would be worth my while, and after I got paid off  
at foreign ports I could ship there as well as here.

Q.—Did you ever know of a case tried? A.—Yes.

By the CHAIRMAN :—

Q.—Do you believe the man could not recover from the owner of the vessel who  
engaged him here? A.—No. It has been a law made—not a law by the Government  
—it has been a law between the sailors and captains of vessels that you can be paid off.

Q.—Of course, it is a different thing if you make an agreement. A.—There is  
no agreement, but there is an understanding.

By Mr. ARMSTRONG :—

Q.—Among the masters and seamen? A.—Yes; that you can get paid off at any  
place. A man engaging by the month is not more safe than if he engaged by the day.

Q.—Do the masters prefer to ship their men by the month, or simply from port  
to port? A.—Most generally they want to ship them by the day, so that if they  
happen to be detained for any time at a port they can pay them off.

By Mr. CLARKE :—

Q.—You are sure of that? A.—Yes; I am sure of it.

By Mr. CARSON :—

Q.—If you went to the captain of a vessel, and offered to ship with that captain  
by the month, and you said to the captain: "I want a written agreement," and that  
written agreement was drawn up in good faith and signed, do you mean it could be  
broken? A.—Yes; I do not say that just from my own knowledge, but I know it for  
a fact, although the two parties would have made an agreement in that way.

By Mr. ARMSTRONG :—

Q.—Do you think it is a necessity for the Government to appoint an inspector  
of hulls and sailing vessels? A.—Yes; of course.

Q.—With respect to the inspection that is done now: is it a thorough inspection,  
considering what is done? A.—There is an inspector appointed in Kingston and I  
think he does his duty, so far as vessels and hulls are concerned; but there are some  
vessels allowed to go out that I do not consider as seaworthy.

Q.—Generally speaking, is the forecandle in a proper condition? A.—That is a very hard question to answer. I have not been in all the forecandles, but there are some that are not fit to live in, for the simple reason that whenever there is a sea breaking over forward it is deluged with water, and you cannot sleep there; neither can the men rest or keep a dry shirt in the forecandle. I think I could say safely that there are two-thirds of the vessels on the lakes that are in a bad state as regards the forecandle. When they are going through the Welland Canal there is so much bumping against the locks that the vessels become strained forward, and that makes them leak when they come out of the canal, and I can therefore say that two-thirds of the vessels that go through the Welland Canal are not fit to live in, because you cannot keep a dry stitch of clothing in them.

Q.—When a vessel arrives at a port, is it the duty of the seamen to handle the lumber or cargo? A.—No; not generally. They do not handle the cargo at all, with the exception of the lumber trade; in the lumber trade they do.

By the CHAIRMAN :—

Q.—How long has the custom been changed—was it not always done at one time?

A.—Yes; it was done formerly, but of late years it has not been done.

Q.—Do you know how many favor that change? A.—I could not say. The only vessels where the crew handle their own cargo are lumber vessels, and on them the crews are supposed to handle their own cargoes.

Q.—Is that the understanding, according to the rule of the Seamen's Union?

A.—Yes; The Seamen's Union is merged into the Knights of Labor at the present time, and that is why there is no seamen's union here now. It is an organization, but there is no seamen's union here now. I repeat that the only branch of the cargo trade in which the sailors handle the cargo is in the lumber trade.

Q.—The handling of the cargo in the other trades you would consider belonged to the work of the longshoremen? A.—Yes; all other work of that kind belongs to the longshoremen, with the exception of the lumber trade, and then it is not unloading but loading, because when a vessel goes to Georgian Bay they cannot get a hired man to do the work, and therefore they use the crew for that purpose. That is the understanding before the crew leave—they are supposed to handle the lumber on leaving.

By the CHAIRMAN :—

Q.—And the Seamen's Union allows them to do so? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Have you ever known vessels in danger on account of an over deck load of lumber? A.—Yes. There is a class of vessels that is built—I was on one last summer—that when they are loaded to 9 feet 6 inches of lumber, and loaded to 13 feet of timber they would roll with no swell on—these are barges—and their covering board would be under water. I do not think they are capable of being handled, unless a steam barge was ahead of them all the time. If the tug let go of them in the gale of wind it would be altogether impossible to be on board of them.

By Mr. KERWIN :—

Q.—Is there any other information respecting your union that would be of any benefit to the Commission? A.—There is only one thing I would like to say, and that is that the Government should enforce the law—if there is a law in force; I do not know whether there is or not—by which barges would not be allowed to go out of port except they are properly managed and equipped. They should be not only properly managed and equipped, but they should have on board certified masters and mates, and a crew capable of handling them in case a tug had to let go of them—they should be equipped and have a sufficient crew to handle them.

ROBERT MEEK, re-called.

Some of the witnesses who have appeared before this Commission in the interests of employers have stated that labor organizations were not well thought of by employers, because they demand that equal wages shall be paid to all men belonging to them. I desire to say that the labor organizations of the city do not make any demands of that kind on the employers. The organizations believe in the classification of labor, as they believe in the classification of everything else, and we have had notable instances in which the employes have been classified, with their own consent and by arrangement with the employers.

Q.—You mean grades? A.—Yes; graded, classified. We have had, no later than December, just before Christmas last, an instance before us in which a large number of men employed by one firm asked for an increase of wages. The employer said he was perfectly willing to grant it, but the matter of classification seemed to be difficult. They stated to him: you make this classification to suit yourself, and when you have made submit it to the men, and they will see what they think of it. I am glad to say that the classification was prepared and submitted to the men, was endorsed unanimously, and it provided for class No. 1 and class No. 2, and laborers, unskilled. This little document which I have here has the concluding sentence or paragraph of the petition sent to the employers asking for a readjustment of wages. It reads:—

“And now, sir, will you please give to these points your serious consideration. We believe that you are a just man and that you will see that justice is done. We request that you will not, in disposing of the matter, be influenced by any prejudiced opinion; ascertain what the employes made under the old tariff—not in the busiest week of the year only, but in the dullest as well, and in dealing with this wage-test be good enough to ascertain what service, in detail, each one has had to render, in order to earn the money that has been paid to her.

“In conclusion, the success of the mill is the desire of every employé for their own selves, and in the promotion of their welfare they would not have it otherwise. They seek to be content, but conceive, as a necessary condition of contentment, that they should be paid a wage calculated to make them more appreciated.”

Such is the manner in which they have been dictating to their employers in this city. Then as to arbitration in a certain case referred to: I have only to add that that arbitration was not completed because the workingmen's arbitrator reported to the workingmen of the city that he had ran after the other arbitrator until he was totally tired, and asked, as a favor, to be released from the agreement, which was granted. That is the reason why arbitration failed. For that arbitration failing a reason is wanted, and that is the reason.

CHARLES MOORE, Shoemaker, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Do you work at store work or custom work? A.—I am carrying on business for myself at present.

Q.—How many men do you employ? A.—Sometimes four; at present only one.

Q.—Do you employ them on custom work. A.—Yes.

Q.—Do you employ them fully throughout the year? A.—There are few men who stay a year with the same employer. There are some who stay a number of years, and so on.

Q.—Do those men who work for you work by the week or by the piece? A.—It is all piece-work at our trade.

Q.—What would be the weekly wages of a good hand on piece-work? A.—As Mr. Meek has just explained, the whole trouble is classification. We have men working at our trade who are experienced, and who earn exceedingly good wages,

and there are some men who earn very poor wages, as much as \$4 and \$4.50 per week. I know a certain shop in this city where a man has taken his \$12 a week, and I know shops in this city where men have had to work hard to get \$4.50 or \$5. In the spring of the year the trade increases, and in the fall it is very busy. At this time of year trade is very slack, and there is scarcely a shoemaker who is getting full employment. It is the same in the middle of the summer, unless the employer wishes to make up work for fall, which some do and some do not.

Q.—You believe, then, in classification? A.—Most decidedly. That is the great object of our society; that is what we wish to promote as between employer and employé. I hold the second highest position in the Knights of Labor, and I can give a fair statement in regard to all matters connected with them, and I can say that that is the difficulty under which we labor at the present time.

Q.—There may be two classes of classification, a classification made by the men themselves, and a classification made by the employers. Which do you think is most beneficial to the men? A.—A practical workman carrying on business is a better judge of the classification of work than a man who works at it. Every man is most concerned in his own work, and if he was told it was not such a good job as another man had made, of course he would differ from him, for it is his duty to speak up for himself as much as possible. I wish to state, further, that there is a great encouragement, a great advance to be made in mechanical science in regard to this classification, and it is simply this: There is No. 1, and there is No. 2. No. 2 will struggle as much as possible to become No. 1, and No. 1 will also meet under the same head. If he sees a second-rate workman trying to make a job as good as he can make, he will certainly endeavor to cultivate his own mechanical ideas and bring out a still better job than he is doing. Therefore, it is an advancement to both, and to progressive mechanical science.

Q.—Do you think if a classification of that kind were made in Kingston the employers, as a rule, would act fairly by it? A.—I have nothing to say against any employer in the city of Kingston. They are always willing to get their work done as well as they can, I believe for the benefit of themselves and their customers; but this work will not pay the employé without he gets an advance of wages. There are different rates of wages in Kingston. There are at present about four shops where people can get a first-class article in our trade. There are other shops where the public consider that if they go into them they cannot get a first-class article; and, therefore, they patronize those shops with the best men.

Q.—Can you speak of any bad effect on your trade? A.—Yes. I wish also to mention in regard to pauper immigration, and also to speak upon indentures to trades. I shall confine myself to my own trade; I can speak truthfully in regard to it in every respect. I do not hold with the system of indentures, simply for this reason: a boy is put along with a man to learn his trade; he is a well-disposed man, and the boy is a good, intelligent lad—his own common sense teaches him to benefit his master or his employer. The employer certainly takes an interest in the lad, seeing he is a good boy, and he will teach him. There are other ways a boy is affected when he becomes an apprentice, and one of these ways is this: a man carrying on business in our trade has a boy apprenticed to him. There are some men in this city carrying on business that if they only have a boy for a short time they will demand him to be bound, and in many instances the boys have skipped to the other side. Now, for instance, if a man takes a boy, and his business is so arranged that it takes him the whole of his time to cut out and measure and do certain things in the front shop, and the apprentice is all the time in the back shop. The men are working piece-work; the boy wishes to be instructed in his trade; it is no interest to the men, unless they are well-disposed men, to teach that boy, and, therefore, at the conclusion of his term he is not a journeyman, and after he leaves his employer's shop, in ninety-nine cases out of one hundred, he has to go under instructions to some man who works on the bench. But it is a good thing for a boy not to learn to be a practical workman in shoemaking, because there are factories and custom shops. If a boy

only knows how to put an upper on a last and last it, and he goes to Rochester, it is possible for a boy to earn \$20 a week. If a workman works here all night and all day, he could not earn that much. I have heard a good deal spoken here about shorter hours. It is impossible for a shoemaker to work shorter hours. They commence at seven o'clock in the morning and work till nine or ten o'clock, in the fall; and I have known them to work up till twelve o'clock, and all on purpose to earn a miserable livelihood. It is one of the most oppressed trades under the sun, unless the man is an experienced and quick workman, and then he can get along very nicely.

By Mr. CARSON:—

Q.—Why do you point to Rochester as the place where a factory hand can do better? Are there not factories in Canada where he could go? A.—Because there are sixty-two factories in Rochester and one in Kingston.

Q.—Are there not some factories in Canada where a man could better himself? A.—The shoe factories of the United States are conducted on different principles from what they are here. I was connected with factories there, and was foreman cutter in a factory for a number of years. I worked at the trade in England, Scotland, Ireland, France and Germany. I have a thorough knowledge of the trade in all its branches.

By Mr. ARMSTRONG:—

Q.—You say that a boy who only knows how to fit an upper on a last could make \$20 in Rochester, which would be more than a man who can make a full boot could make here in Kingston? A.—Yes; double as much.

Q.—Then you think it is now no use for a man to learn to be a practical shoemaker—that is, to be able to manufacture a complete shoe? A.—The man who works on the bench learns to be a practical workman, and that is not the way the trade is conducted now-a-days.

Q.—You are not, then, in favor of the indenture system? A.—No; certainly not.

Q.—Is not the indenture system one of the platforms of the declaration of the principles of the Knights of Labor? A.—It is not.

Q.—It is not laid down as a rule? A.—No.

By the CHAIRMAN:—

Q.—Your opinion, at all events, is formed from experience? A.—Yes.

Q.—And it is according to your own view of the case? A.—Yes; I never was apprenticed in my life, and I do not wish to praise myself, but at the same time I am a practical workman. The only branch of our business that is profitable is that of an experienced cutter. He can demand wages wherever he goes. There are cutters who are practical men also, but it is a gift; designing and cutting in our trade is certainly a gift.

Q.—When he has got that gift he had better stick to it, I suppose? A.—Yes.

By Mr. ARMSTRONG:—

Q.—You consider that in those factories where there is so much machinery it is a matter of impossibility to learn the trade thoroughly, on account of the manner in which the trade is cut up? A.—No boy ever learned his trade thoroughly in a factory—there never was one yet; there are so many apprentices. There is a foreman cutter, who sorts the stock, a man who cuts out; there are fitters, lasters, stitchers, trimmers and bottom finishers, and every one of those processes is distinct and separate from the other.

By the CHAIRMAN:—

Q.—And each of those hands ought to be perfect at every part of the business? A.—Yes; that is what makes the work come through so uniformly as it does. It is the same on the other side in the moulding of stoves. If there are nine pieces there

are nine branches. I wish to say a few words on the subject of pauper immigration, from personal knowledge. In London and other parts of England there are placards posted up in every convenient spot, stating that hundreds of mechanics are required and dozens of laborers are wanted for Canada. The wages are stated to be 20 shillings a day and 15 shillings a day, and all kinds of inducements are held out. The people have no funds to come out here with and they apply to the emigration office, and so forth, and they are sent out. This country is taxed for the purpose of bringing out mechanics who are not perfect in their business to compete with us, and I can safely say, further, that all the poor law guardians of London, all the benevolent institutions of London, and those who come round trying to assist and relieve the poor, are constantly annoyed by this class of individuals. They try to get all they can from charitable people, and in regard to those who cannot obtain home employment they make it up in this way, to a certain extent. The benevolent people get so annoyed that they say: "Would you like to go to Canada, where you can earn good wages?"

Q.—Are you going to prevent that? A.—Yes.

Q.—How? A.—The only way is for those agents to thoroughly question them, and find out whether they are practical workmen before they send them out here.

Q.—You want the people in England to examine everybody who is coming out here? A.—No; I do not want that, but there should be a proper paper filled out, on the principle of an affidavit.

Q.—An affidavit of what? A.—Of their capacity.

Q.—Do you know how much an assisted immigrant gets from the Government? A.—I do not exactly.

By Mr. McLEAN:—

Q.—Do you know what class of immigrants the Government assists? A.—They are supposed to assist all classes that are recommended.

By the CHAIRMAN:—

Q.—What is your authority for that? A.—There is Countess DeGrey.

Q.—We are not talking about Countess DeGrey. You say the Government assists all classes. Where is your authority for that statement? A.—Because I came out here along with a great number of others, and they nearly all come out by charitable institutions.

Q.—That is not the point. You say the Government assists all classes: what is your authority for that statement? A.—The ladies there make enquiries and recommend them. I have no authentic proof of how the Government ascertains its knowledge.

Q.—You have just been saying that the Government assists all classes, and I ask you what is your authority? A.—I will tell you: the ladies are appointed by the Government.

Q.—By the Canadian Government? A.—No; at home—I am speaking of England.

Q.—We cannot prevent the British Government and ladies from assisting people? A.—I can say that all the immigrants coming out are received by this Government and forwarded to their respective places.

Q.—That is your opinion. What is your authority for that? A.—My authority for that is by seeing them passed along. The immigrant agent at Quebec sees them and calls their names.

Q.—Let us come to facts? A.—The facts are there.

Q.—What is your authority for saying that the Government passes these people to their respective places? Even if the immigration agent assists them, that surely is no proof that the Government assists them? A.—He has names, and he calls out their names; he knows who are coming there, I should think.

By Mr. ARMSTRONG:—

Q.—Do you know whether the Dominion Government put up those placards in the old country, or the steamboat companies? A.—I am laying no charge whatever

against the Dominion Government; only I am telling you how people are sent out here by charitable institutions.

By the CHAIRMAN:—

Q.—We can read such statements in the newspapers—have you any facts? A.—There are Countess DeGrey, Lady Gladstone and Lady DeBathe all sitting in a room. There are also a number of applicants who have to be examined.

Q.—We really do not care what Countess DeGrey does in England. Have you any facts? A.—They are sent out here for farm work. They are asked their trade, and they distinctly tell their trade. I say mechanics come out here who have given their names and their trades distinctly.

By Mr. ARMSTRONG:—

Q.—Do they get assisted passages from the Government as mechanics? A.—No.

By Mr. McLEAN:—

Q.—How can the Dominion Government prevent those charitable people from sending out those people? A.—I am protesting against unqualified workmen being sent out; that is what I am protesting against.

By the CHAIRMAN:—

Q.—Please inform the Commission how you are going to prevent British subjects from coming out to Canada? A.—I cannot tell you that; but still, at the same time, I think it a great pity to have this country crowded with such men. I think the evil should be put a stop to.

By Mr. McLEAN:—

Q.—How can you stop it. You cannot prevent British subjects from coming here? A.—Certainly not.

Q.—Then how can you stop it? A.—I do not think the Canadian Government should take action in the way of receiving them, because they give them land and money when they come.

By Mr. ARMSTRONG:—

Q.—Who is the agent at Quebec who receives them when they land? A.—I forget the gentleman who is there.

Q.—Whose agent is he? A.—He is the Canadian agent, certainly.

By the CHAIRMAN:—

Q.—How many years ago was that? A.—Seventeen years ago.

Q.—There have been a great many changes in the world since that? A.—No doubt of it; but the Government has given land and money when they have come here; and, no doubt, it is paid out of the taxes.

JOSEPH THORNE, Carpenter, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you worked in Kingston as a carpenter? A.—I am not working as a carpenter. I have charge of a saw mill and other machinery in connection with the Montreal Transportation Company's yard. I have only been about two and a-half years in the city.

Q.—Are you a journeyman? A.—Yes. At present I am engaged as foreman of the mill and machinery, and the men employed there.

Q.—What wages does a carpenter receive? A.—From \$1.25 to \$1.75 at present.

Q.—What is the average? A.—About \$1.50.

By Mr. McLEAN:—

Q.—What kind of carpenters do you get for \$1.25 a day? A.—I am speaking of the place where I am working. That would be the amount received, perhaps, by

a first-class house carpenter and joiner. They are not so good at the business as a millwright. In the winter season there are a great many of them idle and we employ them there, and of course they would not obtain the wages there they would at their own trade. They get about \$1.25 a day. They would be first-class men at their own trade, no doubt.

Q.—How many men do you employ there? A.—I do not know just the number. I think, between laborers and mechanics, there are about seventy.

Q.—Any boys? A.—None very small. I do not think there are any under seventeen or eighteen.

Q.—Does any unskilled labor run the machines? A.—Yes.

By the CHAIRMAN :—

Q.—Any boys? A.—No.

By Mr. McLEAN :—

Q.—What kind of machinery does that unskilled labor run? A.—There are machines in connection with iron work, and drilling holes in iron, and for threading bolts. At present the man who is running it is a skilled man—there is only one man employed at it. At times there is unskilled labor employed at this machine.

Q.—Is unskilled labor employed at saws or planers? A.—No; all skilled mechanics.

Q.—Has the factory inspector been through the premises? A.—No; I have not seen him.

By Mr. ARMSTRONG :—

Q.—Is the machinery dangerous, for want of proper protection? A.—All machinery is dangerous, but we have taken every precaution to protect it. We have protected it as much as possible.

Q.—Have any accidents happened there? A.—Not for about a year. I think about a year ago a man lost his arm by a jig-saw.

Q.—Was he working at it when he lost his arm? A.—He was helper at sawing; he had been there some time. At the time he was hurt he was under the saw, where he had no business to go. He had to crawl in under a piece of timber to get there.

By Mr. CARSON :—

Q.—What was he doing down there? A.—The sawdust drops down there and he was forbidden to go there. That place is not cleaned out, except once a month, when the mill is idle.

Q.—It is generally considered a very dangerous place? A.—It is not a proper place to go when the machinery is running.

By Mr. ARMSTRONG :—

A.—Are belts generally put on and changed when the machinery is running? A.—No.

Q.—He was a helper who had his arm taken off? A.—Yes.

Q.—Was he taking the place of the sawyer at the time? A.—No; the sawyer was there.

Q.—Have any other accidents happened in addition to that? A.—No; that is the only one I can think of.

By Mr. McLEAN :—

Q.—Is the business increasing down there? A.—I think it is.

Q.—Do any of the hands belong to labor organizations? A.—Some of them do. There is only one of the men working under me who belongs to the Knights of Labor.

Q.—Are there any objections in that respect with the company—to their object to employing men who belong to labor organizations? A.—Not to my knowledge.

WILLIAM DUFFY, Moulder, Kingston, called and sworn.

By Mr. McLEAN:—

Q.—Have you heard the evidence of any previous witness in your branch of business? A.—Yes; on Monday night.

Q.—Do you corroborate what they stated? A.—I do.

Q.—Have you anything to add? A.—No; nothing that I think of. I did not hear the whole of the evidence, exactly.

By Mr. CLARKE:—

Q.—Are you a machinery moulder? A.—A machinery moulder.

By Mr. ARMSTRONG:—

Q.—Do machinery moulders receive as high wages in Kingston as moulders receive in Toronto? A.—In some places they receive more. The way we have been guided in regard to wages is to get a scale of wages from different places and compare them with our wages here. We consider we are not paid according to that scale.

Q.—Are you paid under it? A.—We were out on strike last summer and we got part of what we went out for. The rest we will look for in future. They take the advantage of us when they are slack and run us to a pretty low point.

Q.—Before you went out on strike did you approach the manager for a settlement? A.—The mechanical superintendent did.

Q.—What was the result of the interview you had? A.—Short and snappish.

Q.—And the men considered that the only resort left to them was to strike? A.—That is what they gave us to understand—to get out.

Q.—After the difficulty was over were any of the men refused work because they took part in the labor trouble? A.—Not in our department.

Q.—Do you know for a fact that that took place in other departments? A.—I could not say. I do not wish to speak for any other shop or department except where I work.

Q.—What would a machinery moulder earn, spreading his wages over the entire year? A.—On an average, a moulder in our department will not lose much time; the general run of them will work pretty steadily the year round, that is at piece-work. The establishment for the last twelve years has been up and down pretty often. It has been closed down for one year, two years, three years, and so on; so to estimate what a man actually makes there in the year is a difficult matter, but the general run of men work pretty steadily.

Q.—To your knowledge, were the works shut down for lack of orders? A.—That was the principal thing, the depression in the trade. At the time it was supposed that the locomotive works were so well equipped with machinery and had been so long established that the Government would have given them orders and kept them going. We supposed there were any amount of locomotives coming into the country that could have been made here just as well. We got credit for turning out as good castings and machinery in our line as is turned out in any part of Canada, and there is nothing superior turned out in the United States.

Q.—Have you worked outside of Canada, in the old country? A.—No; I am a Canadian.

Q.—Take a term of say, ten years: has the condition of the mechanic materially declined during the past ten years? A.—Take it on an average, it has improved slightly. During those ten years a certain class of men, I suppose they were superior to the others, had the same wages as they have to-day, but there might be only one of them at that time.

Q.—Do you think, from your practical knowledge, that machinery moulding in your trade is on the increase? A.—I think it is.

Q.—Do you think the output is increasing yearly by the company? A.—It is. When the new company took hold five or six years ago they did a rushing business

for about three years. Then they shut down for two or three years for want of orders.

Q.—Does the company receive any patterns from the United States? A.—Not that I know of.

Q.—Have you any further information that would be of benefit to the Commission? A.—Not any.

JAMES AINSLIE, Shipwright, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—Did you hear the evidence of the shipwright who was up here? A.—I did.

Q.—Did you agree with that evidence? A.—Not altogether.

Q.—In what respect do you disagree from it? A.—About apprentices, and about shipwrights.

Q.—In what respect? A.—I do not believe in binding a boy down as an apprentice; and I disagree with the remark that there are only four shipwrights in this town, for I can name sixteen.

Q.—Do they get constant work? A.—They do, if they like to work at it.

Q.—What are the wages of a good shipwright? A.—Two dollars a day, that is for a first-class shipwright.

Q.—Do they work by the day? A.—Yes; by the day.

By Mr. McLEAN:—

Q.—Do you have constant employment all the year round? A.—Yes.

Q.—Are those the only points you wish to contradict? A.—And about the nine-hour system.

Q.—Do you believe in the nine-hour system? A.—I do not. I believe in men getting paid for every hour they work; if a man works ten hours he should get paid for it.

By the CHAIRMAN:—

Q.—That is, if he chooses to work more? A.—Let him get paid for the number of hours he works. If a man chooses to work nine hours his pay should be deducted.

Q.—And if a man chooses to work eleven hours he should get paid for it? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Do you believe in the principle of shortening the hours of labor? A.—No; I do not—nothing less than ten hours a day.

Q.—How many hours a day should a man rest to give his employer the following day a good day's work? A.—Six hours' sleep; that is what I call rest.

Q.—Do you think all mechanics could put in an honest day's work for their employer a week in and out on six hours' rest each night? A.—Yes; I do on six hours' sleep.

Q.—After working a full day's work of ten hours, what time would a man have to enjoy himself with his family? A.—On an evening like this he would have two hours to enjoy himself around the city, and that would be long enough.

Q.—Provided he had some clothing to purchase for himself: would he not have to do that kind of thing at night? A.—He could do that between six and eight o'clock, and I call that only in the evening.

Q.—Provided there was a statute compelling men to work ten hours per day, would that have a tendency to raise the moral standing and intellectual standing of the working classes? A.—I do not know; I could not answer that question.

By Mr. CARSON:—

Q.—You would not be satisfied to improve your mental condition at the expense of your family? A.—I could not answer that question.

EDWARD PENSE, Newspaper Proprietor, Kingston, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are proprietor of the *Whig* printing office, I believe? A.—Yes.

Q.—Are you a printer yourself? A.—No.

Q.—How much per thousand do you pay your men employed on the newspaper?  
A.—Twenty-five cents per thousand.

Q.—Do they receive anything for their idle time when in the office? A.—No; if claims are made they are very small; I have never known a claim to be disputed. I have had no wage complaint made to me for a year.

Q.—Is it to your knowledge that the plate matter that enters your paper has a tendency to decrease the quantity of matter given to the men? A.—I think not, practically, with us.

By Mr. McLEAN:—

Q.—What would you do if you did not have the plate-matter? A.—We would have to do without it.

Q.—How would you fill your paper? A.—We would not put so much in it. We have not decreased the quantity of matter set up since we got the plate. As a matter of fact, wages in our composing room have increased \$18 to \$20 since we introduced plate.

By Mr. ARMSTRONG:—

Q.—You mean to say that the men receive from \$18 to \$20 a week? A.—No; I say that take the year's average, the total expenses in our composing room are \$18 to \$20 a week more than formerly.

By Mr. McLEAN:—

Q.—What would journeymen printers average on piece-work? A.—Three or four make over \$10. If one is off half a day his pay will run down to \$9. Our week hands are paid \$9.

By Mr. ARMSTRONG:—

Q.—How many apprentices are working on the paper? A.—I cannot say; seven, at most.

By Mr. McLEAN:—

Q.—How many journeymen? A.—I have seven up stairs; three or four in the job-room; four is my proper number in the job-room. I have only one small boy in the job-room as an apprentice.

Q.—There are seven apprentices to seven journeymen? A.—Some are two-thirds. Practically, I have eleven journeymen to seven apprentices, as the job boy is a mere helper.

By Mr. ARMSTRONG:—

Q.—What would you call two-thirds? A.—A boy who had probably served three out of five years.

Q.—But still he is an apprentice until he has served his five years? A.—We consider him so; there are no bound apprentices.

Q.—Does the Typographical Union of Kingston recognize two-thirds as working at the trade? A.—There is no official recognition; but the union has never made any objection. In anything my printers have asked me I have met them.

Q.—Have you ever had any labor trouble? A.—I had one little difficulty in the job-room two or three years ago.

Q.—How was it settled? A.—The men were wrong, and they admitted it; it is a matter you can easily understand. I found something wrong, and I asked the foreman to make a return.

By the CHAIRMAN:—

Q.—Did he refuse? A.—He worked in with the men and they refused to do it; I locked them out.

By Mr. ARMSTRONG:—

Q.—Who does the work of setting the advertisements, and the tables, and the markets? A.—The advertisements are set by an office hand.

Q.—He does not set that kind of matter by the piece? A.—No.

Q.—By the week? A.—Yes.

Q.—Is it only the advertisements? A.—I think he corrects the markets; we have very few markets here—not many are required.

Q.—What is the sanitary condition of your office? A.—I believe it is very good. The composing-room, I think, is as fine as any in Canada, except that of the *Mail*.

Q.—How is the press-room? A.—It is a little dark, but there is nothing wrong with the sanitary condition of it.

Q.—Is the drainage good? A.—Yes; the office is one of the finest buildings in Kingston.

Q.—Is there sufficient light in the job-room without the aid of gas? A.—There is on ordinary days; it is only on rare occasions we have to use a little gas.

Q.—What is the feeling existing between the proprietors of newspapers in the city and their men? A.—I never have any difficulty with my men; I have always conceded everything they asked. I must say they have not asked anything but what is fair.

CORNWALL, 3rd May, 1888.

ARCHIE GAULT, Secretary of the Stormont Cotton Mills Company, Cornwall, called and sworn.

By the CHAIRMAN:—

Q.—How many people have you employed in the Stormont mill? A.—Four hundred and ninety.

Q.—How many of those would be women? A.—There are 228 females, and 262 male.

Q.—Would the children be included in that list? A.—Then there are fifteen children besides,—that is, fifteen under fourteen years of age. All the others are included in the numbers that I have mentioned.

Q.—About what would be the age of the youngest employed? A.—The youngest would be between thirteen and fourteen, in the whole mill. We have got thirteen boys under fourteen, and no girls.

Q.—What hours does the mill run? A.—We start at half-past six in the morning and knock off at half-past six in the evening. An hour is allowed for dinner; and on Saturday the working hours are from half-past six to twelve.

Q.—Are you able to tell us what the earnings of the various operatives are—the highest to the lowest or the lowest to the highest? A.—We average 93½ cents per day over the whole mill; that is, without the management, and without the office expenses.

Q.—That is including the overseers? A.—Including the whole mill.

Q.—Not the superintendent? A.—It is without him.

Q.—Ninety-three and a half cents all over? A.—Yes; it rather averages 94 cents a day. The average of mill hands, all round, is 93½ cents. The lowest pay in the mill, for the boys, is 35 cents per day.

Q.—Just give the highest you pay? A.—We pay the highest to our designer, for instance—\$4.25 per day; and we pay \$3.50, \$2.50 and \$2, and so on; that is to the overseers of each flat.

By Mr. HEAKES:—

Q.—Do the weavers work by the piece or by the day? A.—All by the piece.

Q.—How much per cut do they get? A.—We sell a very large class of goods. We pay different amounts of wages. We paid last year \$123,662 in wages; and the amount of fines last year was \$545.44.

Q.—Was any amount of the operatives' wages confiscated during last year for leaving without giving proper notice? A.—Not one dollar, sir.

Q.—Are you able to tell us what treatment your operatives receive from the overseers of the various flats—the various departments? A.—Well, I never saw any harsh treatment in any way; I naturally suppose they treat the hands remarkably well. I never heard any complaints; there have never been any complaints lodged in the office by operatives of ill-treatment, during the past nine years.

Q.—Was there any trouble in the month of April last, occasioned by ill-treatment by overseers? A.—I am not aware of it.

By the CHAIRMAN:—

Q.—Would you readily receive any complaint? A.—Oh, yes; decidedly.

Q.—You think it is your duty to receive any? A.—Decidedly; if any operative made a complaint against an overseer we are bound to look into it.

By Mr. HEAKES:—

Y.—If an overseer grossly insulted female operatives would you take steps to prevent its recurrence? A.—It would not be allowed for any of the overseers to do that; I would look into it right off. I do not think it reached my ears. I heard that some young women did not do what the overseer told them—that they refused to do it—and were paid their wages and went away quietly, without any hubbub or noise.

Q.—Do you know if the male and female operatives in your mill use the same closet? A.—There are two on each flat, one for the males and one for the females, with a continuous stream of water running. I do not think it would be possible for them to do that.

Q.—How are these closets separated. A.—One on the one side is for the males, and the other, at the extreme end, is for the females.

Q.—Are there any closets in your mill divided by a board partition only? A.—No; none. There are only two on each flat.

Q.—Is there a sufficiency of water provided for the employés? A.—I think so.

Q.—Do you know if the company furnishes cups, or do they drink out of the pail? A.—I do not know, as a fact; I would not swear to that. I think there is a cup by the water; I never heard any complaints.

Q.—You never heard any complaints? A.—Not the slightest; if they wanted any of these tins they could get them.

Q.—Did you have some trouble in your mill with the operatives during the past winter? A.—There was a little hubbub in the beginning of the year, during the winter. The only trouble we had was by the reducing of the wages a shade. In fact, it was not so much a reduction as an equalizing of the wages. Some of the weavers got more than others, and we equalized it. Some were reduced a little, and they caused a strike by having got theirs reduced.

Q.—How are they paid—at what rate? A.—Different prices. They are not all on the same class of goods.

Q.—Some are paid more and some less? A.—Oh, decidedly. Some attend to two looms, some five, some four, and so on.

Q.—In reducing the wages of operatives, did you try to equalize the wages of those running five looms and those running less? A.—We did. We thought the ones running three looms should not be put at the same as the ones running four.

Q.—You considered that the men running four or five looms were entitled to more than the men running three? A.—Yes; and we equalized it in proportion. The men running three looms would not make as much as the man running five looms; the more he does—the more he should get.

Q.—Was the cut the same? A.—Yes.

Q.—Could you tell us how the difficulty was settled? A.—It was settled amongst them-selves. They saw the justice of our action, and we said "Come in on Monday morning."

Q.—Was there any settlement by arbitration? A.—Not that year.

Q.—Did you during that time, or have you since the strike, increased the number of yards of their cut? A.—No.

Q.—The operatives do no more work now than they did before? A.—No.

Q.—You are not able to tell us as to the language used by the overseers to the operatives? A.—I do not know the language used, but if bad language was used I should certainly hear of it, and would enquire into it; but I do not think I ever remember hearing of any harsh language used by overseers.

Q.—If there was you think you would hear of it? A.—Yes; if the operatives made complaints I would inquire into it. In fact, the overseers we have we have had for many years.

Q.—Could you tell us if operatives are fined for anything but bad work—spoiled work? A.—Nothing but bad work—spoiled work.

Q.—Is every one furnished with a copy of the rules when they are engaged? A.—Well, each one is not, but it is hung up in the rooms, both in French and in English.

Q.—Do the operatives sign an agreement when they go to work? A.—No; they do not. The chief rules are printed on the pay envelopes—the conditions in both languages—so that they see how they stand in connection with the rules of the company.

Q.—Has your company any objection to employ operatives who are Knights of Labor? A.—We would consider that question when it came up.

Q.—No one has ever been discharged from your mills for being a member of that organization? A.—No.

By Mr. ARMSTRONG:—

Q.—In equalizing the different departments as regards wages, did you decrease or increase the wages of the employes? A.—It decreased them a very shade, quite a very trifle, so much so that I did not see that there was any difference in the pay sheets to what it was before.

Q.—What means did you take to ascertain the ages of the children working for you? A.—We asked the ages, and we got a certificate from the parents that they were under fourteen.

Q.—Do these children work eleven hours a day? A.—Yes; and Saturdays until 12 o'clock.

Q.—Do you work at night time? A.—We have not had it to do lately.

Q.—Those who work at night time, do they work by the piece? A.—Those that are on piece-work work by the piece, and those who are working by the day work by the day; but we have had no night work for more than two years. Those working until nine o'clock get a day allowed them in a week, but we have not worked overtime for a long time.

Q.—Are many of the children employed in your mill able to read and write? A.—Yes; a good many of the youngsters are able to read and write.

Q.—Is your mill well ventilated? A.—Yes; in our weaving room and in the other departments there is good ventilation. The mill stands by itself, and it is open all round.

By the CHAIRMAN:—

Q.—Is your mill on the canal or on the river? A.—On the canal.

Q.—Do all your doors open outwards? A.—There may be one or two which do not, but we have got two insurance inspectors, and they keep us up to that.

Q.—Have you a factory inspector? A.—We have; we received a visit from him two or three months ago.

Q.—What facilities have you for leaving the building in case of fire? A.—We have a stairway 7 to 8 feet wide, winding all the way around. There are two flights of stairs, one at each end of the building.

Q.—They form a part of the building? A.—Yes.

By Mr. HEAKES :—

- Q.—Do all the hands leave in the evening at the same time? A.—Yes.  
 Q.—And do they go down the same stairs? A.—Yes.  
 Q.—How often do you pay them? A.—We pay them every fortnight.  
 Q.—In cash? A.—In cash and in full.  
 Q.—Can you tell us in what condition the water-closets are? A.—Yes.  
 Q.—You have a picker-room attached to your mill? A.—Yes.  
 Q.—Have you any females employed there? A.—There are no females employed in the picker-room; they are all men.

By Mr. McLEAN :—

- Q.—What do you do as regards the rules, in the case of a person who cannot read or write? A.—They generally get some one to explain them to them.  
 Q.—Do you keep any of the wages of the operatives back? A.—Certainly not. We always keep a fortnight's wages back in our hands.  
 Q.—What is the reason for that? A.—That has been the custom in mills ever since I know anything about it.  
 Q.—How long a notice do you require from your operatives? A.—Fourteen days.  
 Q.—And you give them the same? A.—Yes.  
 Q.—If they left without giving the fourteen days' notice would you pay them? A.—We would pay them.  
 Q.—If you discharged them before the notice was up? A.—We would give them their pay.  
 Q.—In the carding room, can you say if the males and females use the same closet? A.—They are not obliged to.  
 Q.—Do the doors open inwards or outwards? A.—Well, I am not sure; the doors leading from the towers—I am not sure, but I rather think the doors leading from the towers open inwards; from the other rooms they open outwards.  
 Q.—Can you tell us if the wages of the employes are garnisheed at any time? A.—Yes; we have had some.  
 Q.—What is the rule as regards garnishment? A.—A debtor cannot be garnisheed for a less wages amount than \$25.  
 Q.—What are your own rules? A.—We maintain them. There are plenty of good men garnisheed.  
 Q.—If the operatives were paid weekly, do not you think there would be less garnishments? A.—I do not think so, I question but that it is a bad plan even to pay fortnightly.  
 Q.—For what reason? A.—I think that when they got their month's pay they were quite as well off as they are now they get it every fortnight.  
 Q.—Why did you change the time of paying your hands to once a fortnight? A.—Well, the feeling was that we should pay fortnightly, and for that reason we paid them fortnightly.

By Mr. ARMSTRONG :—

- Q.—If they wanted it oftener would you give it to them before the fortnight came round? A.—Well, in any sickness we would give it to them.

By Mr. HEAKES :—

- Q.—Have you had any accidents in the mill? A.—We have.  
 Q.—Would you state the nature of the accidents? A.—Well, the only thing that I remember was a man falling into the vat; that was on account of a staging of his own putting-up falling into the vat.  
 Q.—He lost his life? A.—He died a few days afterwards.  
 Q.—Is any provision made by the company to aid the families of operatives who are injured or lose their lives—was any recompense made to the widow of this man? A.—Yes; we recompensed her considerably.  
 Q.—Have you any objection to state the recompense? A.—We gave her eno

month's pay, and paid the funeral expenses—in fact, I believe, we gave her \$100—paid the doctor's bill; paid everything of that sort—the grocer's bill, even.

By Mr. ARMSTRONG:—

Q.—During the working hours, does the machinery get out of order?  
A.—Very rarely.

Q.—Have you know such to be the case? A.—I have know some of the gear to give way—I have know some of the gearing below to give way.

Q.—Have you ever know any of the operatives to give in work during the day?  
A.—That is very rarely the case.

Q.—If such was the case, would they be compelled to work overtime. A.—Oh, no; we would pay them if the machinery broke down. I am very sorry to say that trade is so bad that we do not require to work extra time now.

Q.—How many months steady work is there in your factory. A.—Nine to ten months regularly. The only time we lose is during the spring floods, and back water and so on.

Q.—You do not stop through any fault of your own. A.—Never; unless forced into stopping.

Q.—If any complaints were made to you of bad treatment or foul language on the part of the overseer you would rectify it at once. A.—Invariably; and if it was the fault of the overseer he would go at once—immediately.

By Mr. McLEAN:—

Q.—Has your business increase. A.—Yes; it has increased. Since five years ago—four and a-half years ago—we have doubled our mill.

By the CHAIRMAN:—

Q.—Did the Ontario factory inspector approve of every thing he saw in the mill?  
A.—He gave a very good report—that he was thoroughly satisfied.

Q.—Have you known the factory inspectors of Ontario object to any mill. A.—I have no means of knowing what he thought of any mill, except our own mill.

Q.—Did your manager or one of your firm go with the inspectors? A.—It is a matter of necessity that some one should go with him. Decidedly. We would never let them go by themselves. I think it was one of the overseers that went with him.

By Mr. McLEAN:—

Q.—Is your company connected with the Cotton Manufacturers' Association?  
A.—Yes.

By Mr. HEAKES:—

Q.—Does that association fix the rate of wages to be paid to operatives. A.—It fixes the price of the manufactured goods.

Q.—Those mills that do not and will not belong to the association, are they placed at a disadvantage in any way? A.—I think there is only one mill in the Dominion that does not belong to the association.

ALEXANDER G. WATSON, Cornwall, Secretary of the Canada Cotton Manufacturing Company, called and sworn.

By Mr. HEAKES:—

Q.—How many employes are there in the Canada Cotton Company? A.—Seven hundred, in round numbers.

Q.—How would these be divided, as to males and females? A.—Well, I did not know exactly what you wanted of me, but I have a few statistics here; it is a list that I made out in 1886 for the Ontario Government, for the bureau of statistics in Toronto. It is made up to October, 1886. The figures have not varied much since then. The total number was 671 at that time, so that it would be about the same thing

now. Males over sixteen, 285; males under sixteen, 61; total males, 346. Females over sixteen, 298; females under sixteen, 27; total, 325.

By Mr. McLEAN:—

Q.—Are there any of those children under fourteen? A.—I would not like to say there are any under fourteen.

Q.—What hours do the operatives work? A.—From 6.30 in the morning till 12, and from 1 to 6.30. An hour is allowed for dinner, with the exception of Saturday, when the operatives leave at 12 o'clock noon. Sixty and a-half hours a week they are required to work.

Q.—Do they keep the holidays? A.—Yes; they observe the Dominion holidays, such as Dominion Day, Good Friday, and so on—those holidays that are recognized as Dominion holidays.

Q.—Is there anything deducted from their wages for these holidays? A.—Yes; of course, when they do not work they do not get paid.

Q.—Have you a fire service in connection with the mill? A.—Yes.

Q.—Are there many required to work on Saturday afternoon in connection with the private fire brigade? A.—Well, they have not yet; but it is the intention to try the pumps, and that is the reason why the males stop over.

Q.—Are they to be allowed extra for practising? A.—They are to be allowed something.

Q.—How many wash-rooms have you in your mill? A.—One on every flat.

Q.—How much time are the operatives allowed before leaving the mill for washing? A.—I think it is five minutes—that belongs to the superintendent's department.

Q.—Do you know how many operatives are allowed to be in the wash-room at one time? A.—There can not be very many, because it is not very large—it would hold about a dozen or so.

Q.—Supposing there was a room of fifty operatives, would you consider five minutes sufficient time to allow them before leaving? A.—I would suppose the others would wait. But they do not all wish to wash themselves in the mill before leaving.

Q.—Is there any rule by which an operative can be fined or punished for going into the wash-room before five minutes of the hour for leaving? A.—Five minutes is allowed; I do not know of any such rule.

Q.—Has there been a reduction of wages in your mill recently, within a few months? A.—Yes.

Q.—Did you have any difficulty with your employes over that reduction, or strike? A.—Yes; a strike.

Q.—Please state the nature of the difficulty? A.—The superintendent will give evidence before you: he has got all the particulars.

Q.—Are you able to tell us how that difficulty was finally settled? A.—By arbitration; the report I have not seen yet.

Q.—Can you tell us how the arbitrators were appointed? A.—One was appointed by the mill and one by the operatives.

Q.—And their decision was final? A.—Yes; without a third.

Q.—Did you have more than one difficulty with the operatives during that past season? A.—Since New Year.

Q.—How was the first difficulty arranged? A.—I must again refer you to the superintendent.

Q.—Was there an arbitrator appointed? A.—A committee of citizens arranged that.

Q.—Do you know that at the close of the first difficulty there were some communications between the towns-people and the superintendents of the mills, and that they wished that the agreement should be carried out by the company? A.—The committee told the superintendent to sign the paper brought down, and nothing

more. He knew nothing more about it, and he signed it. That I had nothing to do with; he will explain that.

Q.—You cannot say whether a breach of that agreement caused the second strike? A.—I could not say, at the present time.

Q.—At the present time there is an understanding between you and the operatives? A.—Yes.

Q.—And that was arrived at by arbitration? A.—Yes.

Q.—Do you think the principle of arbitration the best for the settlement of disputes of employers and employés? A.—I think it is the best thing.

Q.—Do you think if arbitration was generally adopted for the settlement of disputes between capital and labor it would remove the difficulty, to a large extent? A.—I think it would.

Q.—Do you know if, when the people returned to work after the first difficulty, the cut of cloth was increased in length? A.—No.

Q.—Are you able to tell us whether the closets for the men and women are separate in your factory? A.—In the new factory they are quite separate.

Q.—And in the old one? A.—Well, there is one entrance; But the one is marked "females" and the other "males" entrance. The both are marked.

Q.—Is it just a board partition between the two closets? A.—Yes.

Q.—Have you ever examined these closets? A.—I never have, it is not my province.

Q.—Would you be surprised to hear that there are holes made in the partition, so that the males can look in upon the females? A.—I know that they were lined with tin.

Q.—And that even then a number of holes were cut through with knives? A.—I heard of that.

By the CHAIRMAN:—

Q.—I suppose that no one but the operatives would do that? A.—No.

By Mr. HEAKES:—

Q.—Have you ever heard that men climb up the partition and look over at the women? A.—No; I have been there very little.

Q.—Well, I have been no time in the town and I have found that out. Do you know if men throw bobbins over at the women? A.—No.

Q.—Do you not think, in the interests of morality, that it would be better if these closets were separated, and that the closets for males were placed a respectable distance from those of the females, so as to prevent the possibility of any young women being indecently annoyed in this manner? A.—I suppose it would.

By the CHAIRMAN:—

Q.—Have you ever received any complaints of this nature? A.—As I said before, no complaints were ever made to me.

By Mr. HEAKES:—

Q.—Still, I think the company is to blame when such a condition of things exist? A.—They have all proper conveniences in the new mill.

Q.—Have you ever received any complaints from operatives as to the language used towards them by overseers? A.—No; I must say I know nothing of that.

By the CHAIRMAN:—

Q.—And if you did hear it you would consider it your duty to report to the superintendent? A.—Yes; if I heard anything about it I would draw his attention to it.

By Mr. McLEAN:—

Q.—During these labor troubles, did the managers and superintendents of the several mills consider it their duty to confer with one another? A.—Yes.

Q.—Were any of the leaders in the strike discharged on account of the promise they took in these labor matters? A.—Not that I know of.

Q.—Do you not think it would be better if the operatives were paid every week? A.—No.

Q.—Have any of the operatives asked to be paid more frequently? A.—No. Up to 1886 they were paid monthly; since then they have been paid every fortnight.

Q.—What do the boys earn a day? A.—Some of the boys earn 30 cents a day.

Q.—What means are taken to ascertain the wages of the operatives? A.—The overseers of the rooms do that.

Q.—Do you not consider the family of a man earning \$5 or \$6 dollars a week would be in straitened circumstances, and that a fortnight is rather a long time to wait? A.—Well, once a month is rather long to wait, but once in two weeks is not very long. I think they can manage very well.

Q.—Can you tell us whether your married people get trust at the stores? A.—Yes; I understand so, and it was to do away with that system that we paid once a fortnight.

Q.—Do you not think that it would do away with that system altogether if you paid weekly? A.—I do not think it would do that.

Q.—Have you a rule in your mill, that any employé should be dismissed who has his wages garnisheed? A.—No; there is something to the effect that operatives who have their wages garnisheed would be warned the first time, and warned the second time, and if it occurred the third time they would be discharged. We have been sometimes put to a great deal of trouble in this way.

By Mr. ARMSTRONG:—

Q.—Do you not think if the employés were paid weekly it would do away with the system of garnisheeing their wages? A.—I do not think it would. You cannot garnishee men's wages for a less amount than \$25 and very few would incur a debt of \$25 in two weeks.

Q.—And I suppose very few could pay \$25 in two weeks? A.—No.

Q.—Can you say if wages have increased much during the last four or five years? A.—Yes.

Q.—And has the number of operatives increased, too? A.—Yes; I find in 1883 there were 648 hands, with a pay-roll of \$183,000; in 1884, 490 hands, with a pay-roll of \$129,000; in 1885, 537 hands, with a pay-roll of \$149,000; in 1886, 655 hands, with a pay-roll of \$190,000; in 1887, 696 hands, with a pay-roll of \$208,000.

Q.—Are your operatives principally Canadians, or are they foreigners, or persons from countries outside of Canada. A.—I should say, in round numbers, they are half-and-half that is, they are about half French-speaking and half English speaking.

Q.—Do you find many operatives in your line of business coming from the old Country? Not very many; very few indeed.

By the CHAIRMAN:—

Q.—Do you ever engage your overseers or handy men from the old country? A.—No.

Q.—They are all Canadian? A.—Yes. They are of English origin, of course, but we did not bring them from England.

Q.—Do you raise your foreman and overseers from the men in the mills? A.—Oh, yes; when possible.

By Mr. McLEAN:—

Q.—How many overseers and foreman have you in the factory who have been raised from ordinary workmen? A.—I think just now we have three that used to be hands with us.

Q.—About how many? A.—Ten, I think, altogether.

By Mr. ARMSTRONG :—

Q.—You say that all your young people, boys and girls, cannot read and write?  
A.—Yes. I refer more particularly to the French; I refer to them particularly.

Q.—Can most all the English children write and read? A.—Yes.

Q.—Have you any night schools in the town? A.—No.

Q.—Those of your operatives who cannot read and write get others to read the rules for them? A.—Yes; they are posted in every room; I suppose the overseers do that for them.

Q.—Do you know for what reason fines are imposed? A.—Very few are imposed with us, but we impose fines for bad weaving: that is the principal thing.

Q.—Is not cloth spoiled sometimes through no fault of the weaver? A.—If the machine did it—if it was done through some mistake or breaking in the machine we would not impose a fine; we would not be so cruel as that.

Q.—As regards these fines, are different amounts levied for different errors; or is it left to the discretion of the overseer? A.—I think that the superintendent will explain all that.

By Mr. HEAKES :—

Q.—Do you know if operatives' wages have ever been cut down a few days before they had a knowledge of it? A.—Not to my knowledge.

CORNWALL, 3rd May 1888.

ALBERT T. KNIGHT, Cornwall, Manager of the Mill of the Canada Cotton Company, called and sworn.

By Mr. HEAKES :—

Q.—Were you superintendent of the mill of the Canada Cotton Company during the recent labor troubles? A.—Yes; I had just come to the establishment.

Q.—Can you tell the cause of the first strike? A.—The cause of the strike was a reduction of wages.

Q.—How was that first difficulty between you and the operatives settled? A.—Well, it was not settled.

Q.—Was there not some understanding arrived at? A.—Yes; this reduction is something that I had nothing to do with. It was instigated and brought into effect before I came to the mill.

Q.—How was it settled? A.—A letter was signed by the general manager of the Stormont Mill to the effect, that he would pay as high wages as other mills in Canada, and I endorsed it.

Q.—And the operatives returned to work upon the understanding that they would receive those wages? A.—Yes; as high as any paid in Canada.

Q.—Do you consider that that agreement was carried out by the company? A.—Yes.

Q.—What was the cause of the second strike? A.—I think it was a misunderstanding.

Q.—Did all your people go out the second time? A.—No.

By the CHAIRMAN :—

Q.—What proportion went out? A.—A large proportion.

By Mr. HEAKES :—

Q.—How long was this difficulty dragging along before it was settled—the second one? A.—About a month.

Q.—Did the operatives make any offer to the company with the view to effect a settlement during that time? A.—Yes.

Q.—What was the nature of the offer? A.—The operatives met and said that they wanted to go to work in the meantime, and that they would present a schedule that they would work on.

Q.—Did they bring you that list of prices? A.—No; we would not let them go to work until the matter was settled.

Q.—That difficulty was finally settled by arbitration? A.—Yes.

Q.—Satisfactorily? A.—Yes; I think so.

Q.—You have never heard of any trouble since? A.—No.

Q.—Did you have any agreement signed with the employés when that difficulty was settled? A.—No.

Q.—You had no mutual agreement between you? A.—No.

Q.—There was no mutual contract signed? A.—Well, there was a form of contract signed by the president of our company and the chairman of the citizens' committee.

Q.—There was a definite understanding between the operatives and the company? A.—I do not know how much of an understanding—that would be an agreement.

Q.—At all events, an agreement was signed by the representatives of the different parties? A.—Yes.

Q.—Are you aware of any man being discharged because he was a Knight of Labor? A.—I do not know, sir.

By the CHAIRMAN :—

Q.—Could there be, without your knowledge? A.—I am but a new-comer in the town; I am not aware of any.

Q.—No overseer reported to you that he had discharged a man because he was a Knight of Labor? A.—No.

By Mr. HEAKES :—

Q.—Do you know of any objection on the part of your company to employ men who belong to labor organizations? A.—No.

By Mr. McLEAN :—

Q.—Have the overseers full control? A.—Yes; they have full control over their department.

By the CHAIRMAN :—

Q.—They are subject to you? A.—Yes; and I would not interfere, except for cause.

Q.—You mean to say you would not interfere in certain cases? A.—Certainly; I make it a point not to interfere with the overseers in the administration of their departments; at the same time, I would have nothing go wrong.

By Mr. HEAKES :—

Q.—Is it a part of your duty to fix the wages? A.—Yes.

Q.—Have you ever known an operative's wages to be reduced three days before he was told of it? A.—No. What you refer to was done before I came to the mill, and it came into effect after I came here.

Q.—Do you know of any fines being imposed upon the operatives? A.—That it came into effect before I went there—no.

Q.—Do you know of any rule binding them not to go into the wash-room until five minutes before the hour of closing the mill? A.—I know of a rule restricting the number that is to occupy the room at any one time.

Q.—Have you any knowledge of the number? A.—Four or five; I am not certain.

Q.—Do you consider that that allows sufficient time for them to go into the wash-room and tidy themselves before leaving for home? A.—I could not say; in the weaving room it is hardly sufficient. But there are different arrangements there; each weaver there has a little wooden tub provided; I saw very few go in there.

Q.—Can you tell how drinking water is provided? A.—Yes; it is connected with the city waterworks, and is properly supplied for use.

Q.—Do you know if the water-closets are kept clean? A.—Yes.

By Mr. ARMSTRONG :—

Q.—What company stated that they paid the highest wages in the Dominion, do you know; have you taken any steps to ascertain? A.—Yes; they sent a committee (the operatives).

Q.—Did they present the name of any mill giving higher wages? A.—Yes.

Q.—Did they present a schedule? A.—Well, we sent for the schedule which was signed by the secretary of the Merriton mills.

Q.—And they gave another? A.—Yes; there was a difference of opinion as to whether the wages paid by our mills were as high as those paid in the Merriton mills, we knew that we paid more for some classes of work and less in others, and we did not see how we could reduce those getting higher rates than were paid in the Merriton mill, and they put up this list; that is how the difficulty arose. As a matter of fact, our list is higher, taking the average *en bloc*; I mean the average *per capita*, or the average class of cuts.

By Mr. HEAKES :—

Q.—Do you know if, after the difficulty was settled, whether the cut of cloth was increased in length? A.—Yes; I know it was not.

By the CHAIRMAN :—

Q.—Has the Ontario Factory Inspector been through your mill? A.—Not since I have been there; I came here on the 1st of January.

By Mr. McLEAN :—

Q.—Are the doors of your factory locked? A.—No.

By Mr. ARMSTRONG :—

Q.—Are they not locked after certain hours? A.—What doors do you mean?

Q.—The doors which the operatives are supposed to use? A.—The gate is locked, and the door leading into the office is locked; but the door leading into the yard is open, and everyone can have egress from the building.

Q.—If they are late, are their wages docked? A.—We have no rule of that kind. Of course, if an operative is habitually late we would impose some penalty as a punishment—something of that kind, at the discretion of the overseer.

By Mr. McLEAN :—

Q.—But if unavoidably late, you would not reduce them anything? A.—No.

JAMES P. WATSON, Secretary and Manager of the Cornwall Manufacturing Company,  
Cornwall, called and sworn.

By Mr. ARMSTRONG :—

Q.—How many hands do you employ? A.—Two hundred and twenty-five altogether.

Q.—How many of these are men and boys? A.—Say, sixty men.

Q.—How many women? A.—About 120, or double the number; and then, under eighteen, say there are forty-five girls and boys, about equally divided as to sex.

Q.—Are there any girls under fourteen? A.—Not that I am aware of; I cannot speak definitely on that subject. But the superintendent can inform you.

Q.—What do you pay weavers by the piece—how much do they get? A.—They are paid by the yard.

Q.—How much do they get by the yard? A.—It depends altogether upon the number of "picks"—how many there is in a yard—so much per inch.

A.—What would be the average earnings of a weaver per day? A.—Ninety cents a day—\$5.50 per week. It depends altogether upon the skill of the operator.

Q.—The average wages are \$5 per week? A.—Yes; and they can earn up to \$7.50 or more.

Q.—Have they steady employment? A.—Not at present; our weavers are running three-quarter time. Our orders are small, but we do not expect that to last long.

Q.—Where do you get your raw material from? A.—From Australia and South America.

Q.—Do you use much Canadian wool? A.—Not much. We are making fine goods, and it is not suitable for fine goods.

Q.—You import your merino? A.—Yes.

Q.—How often do your hands get paid? A.—Every two weeks.

Q.—Are any wages kept back? A.—Two weeks'.

Q.—What is the reason of that? A.—Two weeks' wages we kept back in case they leave without notice.

Q.—Is that the understanding? A.—Oh, yes.

Q.—Suppose you discharge an operator, do you give him notice? A.—Yes; unless he is discharged for improper conduct, or leaves before he is dismissed.

Q.—You pay them up to the time? A.—Yes.

Q.—Are they paid any other way than in cash? A.—No.

Q.—What would be the wages earned by boys and girls—the average wages? A.—Forty-five cents a day.

Q.—Are there any fines imposed in your mill? A.—In the weaving-room we have for incompetent work—certain amounts stated for certain imperfections.

Q.—If a weaver is fined and feels himself aggrieved, has he the right to appeal? A.—Yes; to the superintendent.

Q.—Is that recognized by the superintendent? A.—Yes. In the first place, a fine could not be unjustly imposed, because there is a table to govern the imposition of fines. This is all governed by the rules of the weaving-room.

Q.—Are there separate conveniences for both sexes? A.—Yes; there are separate conveniences and separate doors, with a partition between them.

Q.—That separation or partition does not go up past the doors? A.—There are separate doors.

Q.—Each can see the other enter? A.—Yes; it is in a public place. But the partition does not reach the ceiling; the ceiling is very high. It does not reach the ceiling of the room, but it is sufficiently high that no person can attempt to get up.

Q.—Are your operatives generally Canadians? A.—The skilled labor is imported; that is from the old country; but the unskilled labor we get here. A good deal of it is native and a good deal imported.

Q.—How much do you pay the unskilled labor? A.—From \$1 to \$1.20 a day.

Q.—Can you state the nature of the work? A.—It is what you call laborers' work; there is no skill required. Of course, after they have worked a little while they get used to it.

Q.—This skilled labor from the old country, do you import it? A.—When I say old country people I mean they originally came from the old country. Some skilled labor we import direct.

Q.—Do you give them to understand what they are going to receive? A.—Yes.

Q.—Are your married people pretty well circumstanced? A.—Yes; they have a good reputation in the town, some have houses of their own.

Q.—How do you mean? A.—By the tradespeople—storekeepers.

Q.—Are any of the youngsters able to read and write? A.—That is a point I did not go into much.

Q.—In the room where the fines are imposed, are the fines read to them? A.—The rules are posted up in the mill; we call that sufficient.

By the CHAIRMAN :—

Q.—Do you believe that any of the operatives who work by the week do not know what the rules are? A.—No.

Q.—Those parties procured in the old country—do they remain with you any length of time? A.—No; not a great length of time.

Q.—Where do they generally go to? A.—Well, some go to the States and some to other parts of Canada.

Q.—Can you tell us the reason why they leave you? A.—Possibly to better their condition.

Q.—You know of no other reason for it? A.—No.

Q.—Has your factory been inspected by the Ontario Factory Inspector? A.—Yes; last year.

Q.—Was it satisfactory? A.—It was quite satisfactory, so far as I know.

Q.—Did he make any inquiries as to the ages of the younger children? A.—I think he did.

By Mr. HEAKES:—

Q.—Did he make any inquiries himself or look about him when was in the mill? A.—I cannot tell you; our superintendent is here, and he accompanies them around the mill.

Q.—Have you heard anything as to whether the inspector found anything to complain of? A.—I have not—no.

THEWLIS DAY, Cornwall, Superintendent of the Mill of the Cornwall Manufacturing Company, called and sworn.

By Mr. HEAKES:—

Q.—Can you tell us what the condition of the mill is, generally, to work in? A.—It is very healthy.

Q.—Is it comfortable? A.—Yes.

Q.—Have you ever had any trouble with the employés in the mill? A.—In what way?

Q.—Any strike? A.—Yes.

Q.—Tell us the nature of the strike, if you please, and how it was settled? A.—They had a strike in the weaving-room last fall. We changed our overseer, and the weavers objected to it, and after three days it was settled.

Q.—Was it settled by conciliation or arbitration? A.—No; we took no outside steps at all. We waited until they were ready, and they came back of their own accord and submitted to our arrangement.

Q.—Were there any operatives discharged? A.—No operatives were discharged.

Q.—Has the Cornwall manufacturing company any objection to the employment of men belonging to labor organizations? A.—None, so far. Sometimes we are apt to feel that way, that it would be for their own good if they did not.

Q.—Can you tell us what the earnings of the weavers are, the average earnings? A.—I cannot tell you on the spur of the moment; I would have to refer to the books.

Q.—When fines are imposed, have the overseers of the different departments authority to impose them, without reference to the management? A.—In the weaving-rooms the fines are imposed by the overseer according to a table or schedule of fines printed, and posted up by the overseers for the information of the weavers. The weavers have access to it, and when there is any damaged work the weaver is brought up to look at it, and he or she sees that work, and they are told that they can see from the table how much they will be fined, and they can refer to the book and see the amount of their fines before pay day.

Q.—Are employés fined for any other cause than bad work? A.—Yes; sometimes they are.

Q.—What for? A.—For destroying property, or neglect of work, going out without due notice, and being absent.

Q.—Are they fined for being late in the morning? A.—No.

- Q.—Have they never been fined for that? A.—No; we may take off the time.
- Q.—If an operative leaves without giving notice to the company are his wages confiscated? A.—No; they are kept until such time as he works out the notice.
- Q.—They have to work out their notice? A.—They work out their notice and get their money.
- Q.—Would the company have any objection to an operative leaving without giving the full notice in a case where the operative wanted to get away? A.—It all depends on the circumstances. If an operative wished to leave and we wanted to keep him, we would not let him go.
- Q.—Even if it was to his benefit? A.—Yes; the business of the company would be studied first. We would have no objection to an operative leaving, provided it did not conflict with the interests of the company.
- Q.—Then, if you could fill his place you would allow him to go? A.—Certainly; we would look to the interest of the company first.
- Q.—Do operatives sign an agreement to that effect? A.—No.
- Q.—Do they work at piece-work or at day-work? A.—Piece-work.
- Q.—When an operative has completed the piece of work he is on, would you not consider the work finished? A.—No; it does not matter what state the work is in, we require two weeks' notice to be given.
- Q.—Do you not consider that an operator on piece-work is at liberty to leave without notice when his piece is finished? A.—No.
- Q.—Do you know that when a person is working on piece-work, and his piece is finished, that his contract is finished also—on the completion of the piece? A.—No.
- Q.—How many months in the year do your operatives work? A.—They work every day. They have constant employment, with the exception of such days as the 24th of May, the 1st of July, Christmas Day, New Year's Day and Good Friday.
- Q.—Otherwise, there is no short time? A.—Well, we are not running full time at the present; we are on three-quarter time, and have been for some six weeks or two months.
- Q.—The holidays are not paid for? A.—Certainly not.
- Q.—Do the weavers or operatives lose time waiting for material? A.—Well, sometimes.
- Q.—Does it occur frequently? A.—No; no more than at other mills. When we have plenty of work they are kept busy and when we have not any work they have to wait; it just depends upon the state of the orders. Taking one week with another, I consider they are kept pretty constantly at work.
- Q.—Has there been any accidents with the machinery at all? A.—No; nothing that I remember.
- Q.—Have you any children working in the picker-room? A.—No.
- By Mr. McLEAN:—
- Q.—Did you go through the factory with the Ontario Factory Inspector? A.—Yes.
- Q.—Did he ask the ages of any of the children there? A.—No; none of them; he saw through the mill and expressed satisfaction.
- By Mr. ARMSTRONG:—
- Q.—Did he consult with any of the operatives? A.—No.
- Q.—Did he examine the machinery? A.—Yes; he took a general oversight of the mill.
- Q.—Can you tell us, from the time he commenced his duty to inspect the mill until the time that he finished, how long it took him? A.—I guess it was twenty-five or thirty minutes. I went with him all through the mill.
- Q.—How many departments are there in the mill? A.—About a dozen of rooms.
- Q.—Did he go into them all? A.—Yes; with the exception of the wheel-house; he was not in there, nor the warehouse; but in the mill proper he was through every room.

Q.—And he declared himself well satisfied with what he had seen? A.—Yes.  
 Q.—Did you ever hear that he was dissatisfied with any mill? A.—No; I never heard that he was ever dissatisfied with any mill. He expressed himself satisfied with our mill.

By Mr. BOIVIN :—

Q.—Did the inspector give you notice that he would inspect the mill? A.—I think he did.

By Mr. ARMSTRONG :—

Q.—Did he intimate to you that he would be around at such-and-such a time? A.—Yes; that he would be back again.

Q.—Can you find a copy of that letter or notice? A.—I have a copy of it, but I would not say that I can furnish it now.

By Mr. HEAKES :—

Q.—Have you received a printed bill from the inspector, to be posted up in your factory, since his visit? A.—No.

Q.—That is, the Factory Act? A.—You mean the Factory Act printed on the bill.

Q.—Yes—printed in large type and posted up in the factory? A.—No.

GEORGE MACDONALD, Cornwall, Gentleman, called and sworn.

By Mr. HEAKES :—

Q.—You are the Postmaster of this town, I believe? A.—Yes.

Q.—You have been Mayor of Cornwall for some time, have you not? A.—Yes; I was Mayor last year.

Q.—Have you, in the course of your experience, gained any knowledge as to the condition of the working classes of Cornwall? A.—Well, that is out of my line. I am not an employer of labor, but I suppose that last winter there was a good deal of suffering, on account of one of the mills being closed down.

Q.—As a rule, I believe the men do not receive reasonable compensation for their labor? A.—I am not an employer of labor; I am the postmaster, and have not much mixed up in that line.

Q.—Are there many belonging to the working classes who own their own houses? A.—Yes.

Q.—Would it be a large proportion of them? A.—I think the largest number of them are without houses.

Q.—Tenants? A.—Yes.

Q.—What system of assessment have you here in Cornwall? A.—Well, the assessment is high enough; I think it is 2 mills on the dollar; I think that is the rate.

Q.—You mean 2 cents on the dollar? A.—Yes.

Q.—Is there any statute-labor tax? A.—No; that includes all the taxes.

Q.—Are the assessments all on the property? A.—Yes.

By the CHAIRMAN :—

Q.—On personal property and real estate, also? A.—On both.

Q.—Are you able to tell us what proportion of the people are depending on the town for relief? A.—I could not really say as to the exact number, but I do not think there are very many that are destitute. Of course, those that are able to labor are, I think, generally employed. The latter part of the winter season is the hardest time for laborers about here.

Q.—How much do the laborers for the corporation earn here? A.—I think they are paid \$1.25 a day.

Q.—They keep them employed all the year round? A.—They do some, perhaps;

but still in winter, when not employed, it is because the corporation has no employment for many hands.

Q.—Are you able to tell whether facilities for drainage are adopted by the corporation? A.—Well, I should say that that improvement is in its infancy. We made a start last fall, but there was not much done in the shape of drainage.

Q.—Do you know if the basements and cellars of many of the houses in the lower portion of the town are flooded in spring, and are full of water, for the want of drainage? A.—I am not prepared to say that; I think there would be some, at any rate. I am not much down that way.

Q.—You say that house drainage is in its infancy in Cornwall? A.—Yes.

Q.—Does the city own the waterworks? A.—It does not.

Q.—Does the city own and control the electric light? A.—No; water, gas, and the electric light are owned and served by private companies.

Q.—About how much are you charged for the electric light per light? A.—I do not know; it was but recently put up; some others can give you that. There is no contract at all; they are building it on their own responsibility, and they get as many as they can to take it.

Q.—The corporation is not, then, bound to take the light and cannot compel them to put up lights? A.—No; I am not aware that they are bound.

By Mr. ARMSTRONG :—

Q.—Does the corporation pay for their labor weekly? A.—Monthly, I think.

Q.—Is \$1.25 the lowest rate paid to a workingman in Cornwall—I have reference to the pick and shovel? A.—I think it is about the highest and lowest. There is no other grade under that. I think they are all paid the same rate by the corporation.

Q.—They have only the one rate? A.—They have only the one rate for the laboring man.

Q.—Do the men complain about being paid monthly? A.—Well, no; I think not.

Q.—Is such work controlled by the board of works, or is it merely under the superintendence of the town engineer? A.—I may say, generally, that it is under the supervision of the chairman of the road committee.

Q.—I suppose their wages and the length of time they are at work depends upon the amount of appropriation set apart for that work? A.—Yes.

Q.—Has not the town recently issued debentures? A.—What for—for what purpose?

Q.—For any purpose? A.—Some time ago they issued debentures for giving bonuses to factories.

Q.—Could you tell how many factories have been given bonuses during the past ten years? A.—I think three.

Q.—Could you tell the amount of the bonus? A.—No.

Q.—Are not stipulations required from those factories before getting the bonus? A.—Well, the stipulations were that they were to employ a certain number of hands. I think in one of the mills they were to put in a certain number of spindles; I think that was the condition upon which they received bonuses. It was the number of spindles; I do not know the number of hands.

Q.—Could you tell us the average number of debentures, and what they were issued for? A.—I do not know the number, but the corporation can give you all these facts in detail.

Q.—Do you consider 2 cents on the dollar rather heavy? A.—Well, the people find it heavy enough—at least they say so.

Q.—Have you any free library in this town? A.—No.

Q.—Have you any night schools? A.—No; there may be private schools.

Q.—But no public evening schools? A.—No.

By Mr. BOIVIN :—

Q.—Is property assessed to its full value? A.—I do not suppose it is. I do not think it is valued at its full value.

EDWARD KING, Cornwall, Mill Operative, called and sworn.  
I am a boss-carder in the Stormont Cotton Mills.

By Mr. HEAKES:—

Q.—How many operatives have you in your department? A.—Between eighty and eighty-five.

Q.—How many of them are females? A.—I guess half only.

Q.—Are there any children in the room? A.—Yes.

Q.—What are their ages? A.—From twelve to fourteen; that is the youngest I have got.

Q.—What number of them would be under fourteen years of age? A.—Two.

Q.—What wages do these children receive when they first go into the factory? A.—Well, they are supposed to be in the mill a couple of weeks to learn before they get wages.

Q.—And in two weeks, what do they get? A.—Forty cents is the lowest a day.

Q.—Do they increase gradually? A.—Yes.

Q.—Are any fines imposed on the children? A.—Yes.

Q.—Are any fines imposed in your room at all? A.—Yes.

Q.—What for? A.—Bad work.

Q.—Who is the judge of this bad work? A.—Myself.

Q.—Are there any other reasons for imposing fines? A.—Yes; negligence or breakages.

Q.—Are any fines imposed for absence from work? A.—No; none.

Q.—In what condition are the closets in your department? A.—Well, I cannot say what they ought to be; I have seen better and I have seen worse.

Q.—Are they sufficiently separated, one from the other—how are they divided? A.—There is one in the old building and one in the new building for boys, and one for girls.

Q.—And they are not permitted to enter any other closet except those marked for their own sex? A.—No.

Q.—About the drinking water: how is it arranged? A.—I believe it is pretty good water—in the tanks.

Q.—Are any cups provided? A.—No.

Q.—Do you have to drink without cups? A.—There is a tank, and a pipe coming from it, and they drink; and there are dippers.

Q.—Have you had any trouble in that factory? A.—Yes.

Q.—Can you state the reason for this trouble? A.—I have had trouble because I would not let them run the room as they liked; that is the reason why I had trouble with them.

Q.—Have you had trouble with female operatives during this month? A.—Yes; I paid a man to look after the room, during the dinner hour, to see that order was kept and that they did not damage the company's property, and he went around and told them to sit down quietly. They talked and laughed, and made some noise, and he told them that if they did not stop they would have to take their dinner outside. After he said this they were worse. The next day I stayed there myself and told this man, in their absence, not to speak to them any more, and that I would watch them. I did so the next day. When they commenced during the dinner hour I told them I did not want to make any difficulty, and that if they could not behave themselves and keep quiet during the dinner hour they would have to take their dinner at home or out of doors, and that it was time for them to see who was boss, whether they were or I was, and thereupon they got up and went out.

Q.—Did you threaten to throw any of these young women through the door? A.—No; I did not.

Q.—Did you call them names? A.—No.

Q.—You did not use any bad language towards them? A.—I acknowledged, and I told them that if I did so I was willing to take it back, but that I did not remember it?

- Q.—Did these young women return to their employ? A.—Yes.
- Q.—Did you send for them? A.—I sent for them on Friday night. I said that if they did not come in the morning I would fill their places.
- Q.—Did you apologize? A.—Yes; on Friday at noon when they went out and were waiting for their money.
- Q.—Can you remember the words that you used? A.—They say that I called them "bitches," and I am not in the habit of using that language to them.
- Q.—When you came there, during this trouble at dinner time, do you not remember what language you used towards them? A.—I was angry, and I spoke sharply to them; I do not remember the exact words. When you are annoyed you do not always think of what you are saying.
- Q.—Is that the only occasion on which you had trouble? A.—No.
- Q.—You say that this was during the dinner hour? A.—Yes.
- Q.—Is there anything in the rules of the company to the effect that young people shall sit still during the dinner hour? A.—Well, there is a difference between sitting still and in talking and laughing and clapping hands when the foreman is in the room and speaks to them. If that was not stopped they would soon begin to throw things at one another, and the result might be damage to the company's property, for the security of which the foreman is responsible during work hours. They are supposed to conduct themselves quietly during working hours.
- Q.—What are the ages of these young women? A.—Eighteen to twenty-three.
- Q.—Do not you think it a good thing for young people to laugh and have a good time when not at work, if they pay attention to their work when they are engaged? A.—I do not see any harm in their laughing and talking, but I think it wrong of them to laugh and clap their hands when the foreman speaks to them.

SAMUEL SHOEFELT, Cornwall, Cotton Carder, called and sworn :

By Mr. HEAKES :—

- Q.—What mill are you employed in? A.—The Canada Cotton Mill.
- Q.—That is not the same mill as the last witness is engaged in? A.—No; I think he is in the Stormont Cotton Mill.
- Q.—How many operatives are there in your room? A.—About twenty-three, I think, including two females, an old woman and a girl that does the sweeping.
- Q.—Of the rest of the boys and girls, are any of them under fourteen? A.—Not to my knowledge; they say they are not.
- Q.—What are the wages paid the hands in your room? A.—The boys get 15 cents a day; the men get 90 cents, \$1 and \$1.25 a day.
- Q.—A dollar and a-quarter is the highest? A.—\$1.25 to \$1.50; some get 90 cents and some \$1.
- Q.—Do you have constant employment? A.—As a general thing, we are employed the year round, and we would have been this year only for the difficulty we had—that is, a strike.
- Q.—Do you ever have any lost time waiting for material? A.—Not very often. Sometimes we lose probably Saturdays, probably five hours and a-half.
- Q.—How are the closets arranged in your department? A.—There is the one entry where you go in, but there is a partition between the closets. There is one way for the men to enter and another way for the women to enter, and then there is a partition between the two closets.
- Q.—The two doors are side by side? A.—Yes; one for the men folks and one for the women folks.
- Q.—What women come in there? A.—They come in from another room that I have not charge of.
- Q.—What is the height of the partition? A.—I could not say exactly the height.

By the CHAIRMAN:—

Q.—Higher than a man? A.—Yes; I should say probably over seven feet.

Q.—Is this the partition spoken of this afternoon through which holes have been cut? A.—I did not know that holes were cut through it; I did not take any notice.

Q.—Do you know that the men sometimes climb up and look at the girls? A.—I could not say.

Q.—Do you know anything about the men throwing things over at the women? A.—I do not know; that is, of course, but a natural consequence.

Q.—Now, do not you think it possible to have those closets so entirely separated as to have no connection at all? A.—Yes.

Q.—Do not you think, in the interests of morality and decency, it would be better? A.—Yes.

Q.—Do you think it proper that young women should sacrifice their modesty to the necessities of nature? A.—I should think it would be better to have them separate—placed at a distance from one another.

Q.—What time are the operatives allowed for washing previous to leaving the mill? A.—They are supposed to have ten minutes to wash up in.

Q.—Is there a printed rule? A.—There is no set time. If a man goes and washes, and there is something for him to do afterwards he does it.

Q.—People are not fined for going in earlier than the rules state? A.—No.

Q.—Do you fine any of the employés in your room? A.—Only just for breaking window glass; that is the only fine. If it is shown to be an exception it is let pass.

Q.—Do you consider your employés fairly paid for what they do? A.—I would suppose they are; I do not know that I am a person to judge of that.

Q.—Did any of those who went out on strike go out on strike because they were not fairly treated? A.—I treat them as well as I would like to be treated myself.

Q.—Do you know if there is any objection on the part of your company to employ people who belong to labor organizations—the Knights of Labor or any other labor organization? A.—No; none whatever.

Q.—Have you ever been told to discharge men who took part in any labor demonstration or organization. A.—No.

Q.—You have not been told to discharge any one? A.—No.

Q.—Have you known of any one being discharged on that account? A.—No.

By Mr. ARMSTRONG:—

Q.—How many men are there in your department? A.—I have twenty-three hands altogether—five boys and two females, out of that. The rest are all men,—that is, young men and middle aged men.

Q.—How many have you who receive \$1.50 a day? A.—Only one.

Q.—How many men earn from \$7 to \$8 a week? A.—There are four that earn \$7.50 a week; there is another one that earns \$1 a day—that is, \$6 a week.

Q.—Are there any men earning under \$1 a day? A.—Yes; there are four earning 90 cents a day.

By the CHAIRMAN:—

Q.—The year round? A.—Well, about all the time the mill runs.

Q.—Are these married and have families? A.—That work for 90 cents a day?

Q.—Yes? A.—One of them is.

Q.—Can you tell us what a workingman has to pay for a house of from five to six rooms? A.—Well; the house I have, has five rooms in it, and I pay \$7 a month.

Q.—Are there any working men in this town that live in tenement houses? A.—I think the majority of working people live in tenement houses in this town.

Q.—I have reference to houses that would accommodate more than one family.— what we would call double houses? A.—There may be some.

Q.—Has the company any houses that they rent to work people? A.—I do not know all of them, but I know of some, because I live in one myself.

- Q.—What accommodation do these houses afford? A.—There are four rooms, two down-stairs and two up-stairs, and a back place for the stove in summer.
- Q.—And what is the rent? A.—That is \$5 a month.
- Q.—Has any of the company's houses less rooms than four? A.—I think not.
- Q.—If a person is discharged from the mill, has he to leave this house? A.—I think it likely. There is one of my help living in one of these cottages at the present time.
- Q.—Is it compulsory for employes to rent those houses? A.—No; there is nothing compulsory.
- Q.—Have you any over-work in the mill? A.—Sometimes.
- Q.—How late do they work in your department? A.—Well, we have had to work of nights for a week up to nine o'clock—not later.
- Q.—Do they work of an evening up to that time without supper? A.—Yes; the company furnishes them with coffee.
- Q.—What time are you told in the day that your services will be required in the evening? Would it be the day before? A.—No; sometimes we get orders in the forenoon that they will run till nine o'clock; that would give them an opportunity to bring something with them.
- Q.—Do not the hands generally go home to supper? A.—No; they do not go home. They take their supper in the factory, and then work till nine o'clock. Some live so far away that they could not go home to supper.
- Q.—Are they compelled to remain and work at night? A.—No; there is nothing compulsory about it.
- Q.—Did you get anything extra? A.—No; I got the same rate as day work.
- Q.—Did you ever hear them express a desire to be paid more frequently than once a fortnight? A.—No; I have not.
- Q.—When the fining took place in your room, when the damage would be done, as it were, would you inform them of the fact that a fine would be imposed, or were they only informed at the time of being paid? A.—No; that is all the fining there is—just for breaking window glass.
- Q.—Do these fines occur often for the breaking of glass? A.—Very seldom.
- Q.—Is there good ventilation? A.—Yes; it is right on the river side, and we can let the windows down on top.

ANGUS BARNHART, Cornwall, called and sworn.

By Mr. HEAKES:—

- Q.—What is your business? A.—Running an engine and firing in the Cornwall Spinning Mill.
- Q.—Are you a practical engineer? A.—Well, no; not extra. I know enough to run one.
- Q.—What wages do you receive? A.—A dollar and a-quarter a day.
- Q.—How many hours do you work a day? A.—Eleven hours.
- Q.—Every day in the week? A.—No; we get off on Saturday, generally, at twelve o'clock.
- Q.—Who fires up in the morning before you get to work? A.—Myself.
- Q.—What time do you go there to fire up? A.—About five or half-past five.
- Q.—What time do you quit work at night? A.—About seven o'clock.
- Q.—That would be twelve and a-half hours a day? A.—Well, some days; most of the time.
- Q.—What is the condition of the boiler? A.—Good condition.
- Q.—Is the engine, also, in good condition. A.—Yes.
- Q.—How many pounds of steam do you carry on your boiler? A.—From eighty to ninety-five pounds.
- Q.—Did you ever plug the valve? A.—No; it is a thing I do not do.

Q.—Did you ever weigh it down with bricks, or anything—you need not answer unless you like? A.—I do not answer.

Q.—If the valve was regulated so as to blow off at eighty pounds, and it was weighted down with bricks, how many pounds of steam extra would it require to blow her off? A.—I do not know; I did not have the right ball on her.

Q.—Did you ever tell anyone around that mill that the engine was dangerous, and that you had a loose pin? A.—No.

Q.—Did you ever tell any one that you were afraid that you would blow off the cylinder-head out of the engine on account of the looseness of the pin? A.—Well, if it was to break it might.

Q.—Did you ever tell any one around that mill that it was unsafe? A.—Well, no; I might have said something similar to it.

Q.—Did you ever have a brother working in that mill? A.—No.

Q.—Did you ever tell any one around the mill, or any one that went to the mill, that it would be likely to blow up? A.—There is no danger of the boiler blowing up if we take care of it.

Q.—Then, if that valve was weighted down with bricks would that be taking care of it? A.—Well, we had not the right ball on it when I put it on. It was not bricks; it was one brick.

JAMES C. JOHNSTONE, Cornwall, Contractor, called and Sworn.

By Mr. HEAKES:—

Q.—What is your business? A.—I am a joiner by trade? I am a general builder.

Q.—Are you able to tell us what wages the stone-masons, bricklayers and carpenters of the town of Cornwall receive? A.—Yes.

Q.—Will you be kind enough to do so? A.—Well, masons during the last two or three years have been paid \$1.50 to \$3 a day; bricklayers about the same; carpenters from \$1.50 up to \$2 a day generally. There are exceptions; some get \$2.50.

Q.—Carpenters always get the lowest wages? A.—Yes.

Q.—And find their own tools? A.—Yes.

Q.—Do these men in the carpentering business obtain constant employment all the year round? A.—Not generally here.

Q.—How many months do they get altogether? A.—From seven to nine months.

Q.—And the bricklayers? A.—From seven to eight months.

Q.—I suppose stone-masons have even less constant work than that? A.—Yes.

A.—As a rule, do bricklayers lay both stone and brick? A.—There are some; some lay brick and stone and some stone only; I know I had several—perhaps three, four, as high as six, do both.

Q.—Do you employ plasterers? A.—Yes.

Q.—What is their pay, generally? A.—The same—\$2.50 to \$3 a day—the same as the bricklayers. Of course, some work by contract and some work by day work. Contract work is paid for every two weeks.

Q.—Are they paid up to the date of pay. A.—Yes. Time-work is paid for every Friday night; one day is kept back.

Q.—Is there any organization among the carpenters here—any association? A.—No.

Q.—Do you know of any inclination on the part of the employers to refuse to employ members of labor organizations? A.—No; not that I am aware of.

Q.—You did not hear of that among employers? A.—No.

Q.—Do you know if any workmen were refused work on account of the strike in the Stormont Mill recently? A.—Not that I am aware of. Since the strike in the Stormont Mill there has been very little done in the stone line here; and, in fact, it is just opening up now.

Q.—Were any men, during the last season, refused work on account of the difficulty in the mills? A.—No; I am not aware of any. Last year, masons were very scarce in these parts.

Q.—Do you ask men looking for work whether they belong to labor organizations or not? A.—No.

By Mr. ARMSTRONG:—

Q.—Are any carpenters employed in town at less than \$1 a day? A.—No; I could not employ any man who attempts to handle tools—what we call a handy man—we never employ them for less than \$1.25, to \$1.50 a day.

Q.—What are the average wages paid to carpenters? A.—I should say the average would be \$1.75 a day.

Q.—What wages are paid to builders' laborers? A.—Last year I paid, at the first of the season, \$1 a day, and later I paid \$1.25 a day.

Q.—Did you ever hear of any accidents during the past year in the building trade in Cornwall? A.—No.

Q.—Do any men in the building trade lose their earnings on account of the dishonesty of employers? A.—Not to my knowledge.

Q.—What are the laborers paid? A.—They are paid generally by the week.

Q.—What did they receive last year? A.—Twelve and a-half cents an hour.

\* \* \* \* , of Cornwall, Mill Operative, called and sworn.

I am a mill operative in the lap-room of the Stormont Mill.

By Mr. HEAKES:—

Q.—How many hands are employed in that room? A.—Four.

Q.—How are the hands generally treated? A.—Well, sometimes they are treated good and more times middling.

Q.—Are they at any time treated bad? A.—Yes.

Q.—This treatment would be at the hands of the overseers, would it not? A.—Yes.

Q.—What would you consider bad treatment? A.—Well, fining them for spitting on the floor.

Q.—Anything else? A.—Yes.

Q.—Is it in the printed rules that they should not spit on the floor? A.—Not that I know of.

Q.—How are the closets arranged in that mill? A.—Well, sometimes they are in a good sanitary state and more times they are not.

Q.—They are not always kept in a good condition? A.—Sometimes they are not.

By the CHAIRMAN:—

Q.—Who dirtied them? A.—The hands, I suppose. They get choked up.

Q.—Do the men and women use the same closets? A.—No.

Q.—Did you ever see the men try and get into the females' closets when the females were in there? A.—No.

Q.—Do you think every precaution is taken to prevent that? A.—Yes; there is.

Q.—What wages do you earn? A.—Ninety cents a day.

Q.—Is that the general pay of the people in your room? Yes; that is the general pay.

Q.—Have there been any accidents in that room? A.—Yes.

Q.—What was the nature of the accidents? A.—Men got their hands caught around the rollers and lapper.

Q.—Is that the room the pickers are in? A.—No; the pickers are underneath. It is something of the same nature as a picker—the lapper is.

Q.—Could such accidents be prevented? A.—Not that I know of. It is sometimes caused through carelessness.

Q.—You do not know of any way that it could be prevented? A.—No; the gear is covered.

By Mr. HEAKES :—

Q.—It is just through the carelessness of the men, you mean to say? A.—Yes.

By Mr. ARMSTRONG :—

Q.—How long have you been there? A.—Four and a-half years.

Q.—What did you get when you began? A.—Sixty cents a day; I then received 85 cents a day, and then \$1 a day, and now I get 90 cents.

Q.—So you have got a reduction down to 90 cents? A.—Yes.

THOMAS DENNERY, Cornwall, Mill Operative, called and sworn.

By Mr. HEAKES :—

Q.—What is your occupation? A.—I run the colored slasher in the mill of the Canada Cotton Company.

Q.—How long have you had charge of it? A.—For about nine years.

Q.—Has there been any reduction in the pay of that department? A.—Yes.

Q.—Can you tell us if there has been an additional length made to the cut? A.—No; no additional length.

Q.—Have you any complaints that the cuts are longer now than before the pay was reduced? A.—No.

Q.—Are you sure the cuts have not been increased? A.—Yes.

Q.—How many people have you employed in that room? A.—There are five men.

Q.—Are they all engaged in the same kind of work as yourself? A.—Four, and two helpers—slasher-tenders.

Q.—What pay do they receive? A.—From \$1.10 a day to \$2.

Q.—What would be the average? A.—About \$1.80, would it not.

Q.—How many get \$1.10? A.—Two of them.

Q.—Has there been a reduction of wages in your department? A.—Yes; a reduction of 5 and 10 cents per day.

By Mr. ARMSTRONG :—

Q.—Will you please tell us if the reduction throughout the factory was only a slight reduction, for the purpose of equalizing the charges? A.—I do not know.

Q.—Do you consider that the reduction all round was a considerable amount or only a trifling amount? A.—I do not know how the other departments fared at all.

DAVID FLACK, called and sworn.

By Mr. HEAKES :—

Q.—Are you a coal merchant? A.—Yes.

Q.—Are you able to tell us what the present price of coal is? A.—Yes.

Q.—Will you kindly do so? A.—It is \$7 a ton for anthracite.

Q.—Have you a coal dealers' association? A.—No.

Q.—Have you no understanding amongst the coal dealers about prices? A.—Well, there might be in this way: if I sell for \$7 another dealer cannot sell for \$7.50.

Q.—Is he allowed to sell for \$6.50? A.—Yes; if he likes.

Q.—Can you tell us if the coal dealers of Cornwall used their influence to prevent workingmen from getting coal from Montreal dealers? A.—I do not propose to answer any such a question.

Q.—Do you know if the coal merchants of Cornwall used their influence with the coal transportation companies of Ogdensburg to prevent the people of Cornwall, or the workingmen of Cornwall, from getting a consignment of coal through to

Cornwall? A.—Am I obliged to answer these questions? Is there no lawyer here to protect a witness?

By the CHAIRMAN :—

Q.—You can please yourself about answering? A.—Well, I decline to answer any such questions.

By Mr. ARMSTRONG :—

Q.—Is coal cheaper since the 50 cents duty a ton was taken off? A.—No; I think coal started off 55 or 60 cents higher than it was before.

Q.—So that really coal costs 5 or 10 per cent. more since the duty has been taken off than it did last year when the duty was on? A.—(No reply.)

Q.—Are you a retail or a wholesale merchant? A.—Retail.

Q.—Is coal always weighed before it is delivered to the consumer. A.—Yes.

Q.—On the public scales? A.—Yes.

Q.—Have you ever heard of any losses occurring from dropping on the streets? A.—I never heard any complaints.

Q.—Does the retail merchant get it from the merchants by the long ton? A.—He gets it by the long ton at the quotations—so much net and so much gross.

Q.—You cannot tell if there is an understanding with the merchants here and the coal exchange in New York in regard to the price of coal here, and elsewhere in Canada? A.—No.

Q.—Do you deal in wood? A.—No.

JOSEPH MOYES, Cornwall, Manufacturer, called and sworn.

By Mr. HEAKES :—

Q.—What mill are you proprietor of? A.—I am a manufacturer of yarns—the Cornwall Spinning Mills.

Q.—How many hands do you employ? A.—Eighteen, male and female.

Q.—What are the earnings of the females? A.—The earnings of the females range from 40 cents to 75 cents a day.

Q.—What do the males earn? A.—The males earn from 50 cents to \$1.25 a day.

Q.—How many hours do they work? A.—Eleven hours a day, five days in the week and half-a-day on Saturday—sixty and a-half hours a week.

Q.—How often do you pay your hands? A.—We pay them once a month—we pay them every 10th—up to the last of the month.

Q.—Do you retain a portion of the wages? A.—We retain ten days' back pay.

Q.—Are there any rules in the factory imposing fines? A.—No.

Q.—When an operative wishes to leave your employ, does he have to give notice? A.—Yes.

Q.—How much notice do they require to give? A.—Two weeks.

Q.—Supposing they left without notice? A.—We would forward the wages.

Q.—In case an operative wishes to go away, and was to tell you he wanted to go, would you retain their wages? A.—Oh, no; not if he had to go, and could supply another hand in his place. We always let them go under those circumstances.

By Mr. ARMSTRONG :—

Q.—Have you ever discharged any for cause? A.—No; I never had any trouble with my hands.

Q.—Have you ever discharged any? A.—Yes; a couple or three.

Q.—Did you give them notice? A.—No; not always.

Q.—Did you pay the men when you discharged them? A.—Yes.

Q.—Did you pay them at once? A.—Well, according to the amount of money on hand. If we did not have it in they would have to wait a day or two.

- Q.—Did you have a man name John James Bickley in your employ. A.—Yes  
 Q.—Did you discharge him. A.—Yes.  
 Q.—Have you any objection to say why you discharged him? A.—I did not need him any more—that was all.  
 Q.—Did you ever tell Mr. Bickley that he was discharged on account of certain merchants or employers of labor in Cornwall coming to you and asking you to discharge him A.—No; I did not.  
 Q.—Did you ever tell this man Bickley that certain people in town were determined to drive him out of town? A.—No.  
 Q.—Did you ever tell him that they intended to boycott him all over Ontario, on account of his belonging to the Knights of Labor? A.—No; I did not tell him that.

JOHN ANDERSON, Cornwall, Weaver, called and sworn.

- Q.—Are you a weaver in the woollen mills or cotton mills? A.—In the Canada Cotton Mills.  
 Q.—How many looms do you run? A.—I used to run three. I now run four.  
 Q.—Do you make more money on the four than you did on the three? A.—Well; I cannot rightly tell, for I have only got four this week.  
 Q.—Do you work by the day or by the piece? A.—By the piece.  
 Q.—What would be your average wages? A.—Five dollars a week some weeks, and some weeks it might be six dollars, according to the work.  
 Q.—Would \$5.50 be the average? A.—I do not know.  
 Q.—Would this be fair average wages? A.—Yes; I think so.  
 Q.—Are you constantly employed? A.—Yes.  
 Q.—Do you work at night? A.—No.  
 Q.—Is there much dust in the weaving room? A.—Not very much—may be there is a little.  
 Q.—Is the atmosphere good in the summer time? A.—Yes.  
 Q.—Well ventilated? A.—Yes.  
 Q.—Are the windows such that they may be taken down? A.—Yes, the windows are allowed to be open; they open at the top.  
 Q.—It is not looked upon by the company as injuriously affecting the cloth?  
 A.—Not that I understand; I did not hear any complaints.  
 Q.—Have you ever been fined? A.—Once—about five years ago.  
 Q.—Are there conveniences for both sexes? A.—Yes.  
 Q.—Separate and distinct? A.—Oh, yes.  
 Q.—Is it separated by a partition? A.—Yes; there is a partition, and it is zinc on both sides.  
 Q.—Have you ever known the weavers express a desire to be paid more promptly than once a fortnight? A.—Yes.  
 Q.—You have heard them? A.—Yes.  
 Q.—You have heard them express a desire to be paid weekly? A.—Yes; all would like that.  
 Q.—You think by paying the employés weekly it would be a matter of convenience to the employés? A.—To some it might be; to others it might not.

By the CHAIRMAN :—

- Q.—Have they ever asked the company to pay oftener than once a fortnight?  
 A.—Not that I am aware of.

(Translation).

EVENING SESSION—CORNWALL, Thursday, 3rd May, 1888.

ISAIE RATELLE, Barber, being sworn, deposeth as follows:—

By Mr. BOIVIN:—

Q.—Have you men employed under you, or are you yourself engaged? A.—I have men employed under me.

Q.—Do you take in apprentices? A.—No; not at the present time.

Q.—Would you tell us how much a barber's hand makes? A.—That varies very much, according to the skill of the man—from \$7 to \$9 a week, or thereabouts.

Q.—Have they steady work the year round? A.—Yes, sir; the whole year round.

Q.—Are you allowed here to work on Sunday in your shops? A.—No, sir.

Q.—Are you pretty well acquainted with the French population of this place?

A.—Yes, sir; passably.

Q.—Have you French schools here for children? A.—Not that I know of, except, perhaps, the Sisters' school—at least, so I have been told.

By the CHAIRMAN:—

Q.—English must be taught here in all the schools? A.—Yes, sir.

(Translation).

EVENING SESSION—CORNWALL, Thursday, 8th May, 1888.

ALBERT LALIBERTÉ, Tailor, Cornwall, being sworn, deposeth as follows:—

By Mr. BOIVIN:—

Q.—What do you do? A.—I am a merchant tailor.

Q.—Have you men under you? A.—Yes, sir.

Q.—Have you men and women? A.—Yes, sir.

Q.—Will you tell us how much a woman earns working in tailors' shops? A.—About \$3 or \$3.50 a week.

Q.—And able men, how much do they make? A.—One dollar and fifty cents a day, or nine dollars a week.

Q.—Are there men working at a cheaper rate than that? A.—Oh, yes.

Q.—What wages might they earn? A.—\$5, \$6 and \$7 a week.

Q.—Do you employ children in your shop? A.—No.

Q.—Does your tailor and your foreman know his geometry, and are the tailors able to reduce and increase their patterns? A.—Yes.

Q.—You have no school of art, trades or design here? A.—No.

JOHN J. BICKLEY, Cornwall, called and sworn.

I have for some years followed the occupation of an overseer in the spinning mills. I am not doing anything at present.

By Mr. HEAKES:—

Q.—You are a spinner by trade? A.—Yes.

Q.—Are you acquainted—connected—with any organization of workingmen? A.—I am now and have been for some years a member of the Knights of Labor.

Q.—Do you know if there is any feeling on the part of employers in Cornwall not to employ members of that order? A.—I have heard at different times, from different men, that there was. I could not positively state that such was the case, although I have frequently heard from the men that employers refused to employ them because they were Knights of Labor.

Q.—Did anybody say anything to you about being a member? A.—Yes.

Q.—Would you tell us the circumstances, please? A.—I was dismissed from my situation, and I was given to understand that I was dismissed because I was a Knight of Labor, and because I took an active part in labor matters.

Q.—Since you have been a member of this organization have you ever seen anything in its principles that would be an injury to the workingman? A.—I have not. If the teachings of the order were lived up to, nothing but good could come to the workingman; the result would be good.

Q.—Do you know if they have any principle laid down for the settlement of disputes between capital and labor? A.—Yes; that is one of the twenty-two articles of the preamble, to try and bring about a settlement of strikes and difficulties by arbitration.

Q.—That is a fixed rule of the order? A.—Yes.

By Mr. McLEAN:—

Q.—What do you do when out on strike? Do you take any means of deciding how to go back, or whether you are to go back to work? A.—All local assemblies have an executive board. That executive board tries to bring about a settlement of the difficulty. They try to meet the manager or employer, and try and effect a settlement, and that is one of the things that the executive board at all times tries to do—to have the case settled by arbitration.

By Mr. HEAKES:—

Q.—Do you know whether strikes are more frequent in towns that are not organized or towns that are organized? A.—I know that strikes are less frequent in towns where they are organized than where they are not. My experience has led me to believe that if labor is properly and thoroughly organized strikes will seldom occur. For instance, if the hands employed at one of these mills were Knights of Labor the Knights of Labor would have control over them and could keep them at work, but as they are partly organized and partly disorganized we can exercise no control over those that are not organized.

Q.—Is there any "boycotting" or "black-listing" in this town? A.—I know of one case; that is my own. I was given to understand that I would be "black-listed" all over Canada.

Q.—For what reason? A.—For being a Knight of Labor and taking part in labor matters.

Q.—Did you have anything to do with the settlement of labor disputes? A.—I had considerable to do with it, and took an active part all through, and finally acted as arbitrator for the help.

Q.—Can you state if the agreement entered into after the first difficulty was carried out? A.—It was not. Mr. Knight, of the Canada Cotton Mills, refused to live up to that agreement when waited upon with the price-list of the Merriton Mills. It was a true list of the wages of the employés, to which was attached the signature of every overseer of that mill. He refused to recognize it, and refused to agree to the terms already agreed to.

Q.—Would the second strike have taken place if they had lived up to the first agreement? A.—I feel safe in saying it would not.

Q.—How much of a reduction in the prices paid to weavers took place? A.—As I understand it, it ran from 28 to 33 per cent.

Q.—Are you able to tell us what wages they earned previous to the reduction? A.—I cannot say the whole. I can give it just as I heard it, just as I heard others state. I heard weavers state that they could not make more than \$4.50, and they set up the claim that they were first-class weavers. I know that there are weavers in the town who made \$9, and others who made \$8.50, and some \$7. Some do fairly well, and others are poorly paid.

Q.—Over what part or department were you overseer? A.—Spooling, spinning and warping.

Q.—What were your average wages? A.—The last I had to do with was a small mill, and could not be taken to set prices from. In that mill, for spooling, spinning and twisting, the average wages were 90 cents a day, taking the whole mill, superintendent and all. There were about twenty hands employed.

Q.—Was the agreement, finally, between yourself and the mill, a satisfactory one? A.—When I made the statement to the operatives I can say that I heard but very few complain. There are among the men a few that were dissatisfied, but very few, when you take into consideration the number engaged in that strike.

Q.—If the mill owners had resorted to arbitration previous to forcing the people out on a strike, would there have been a necessity for a strike? A.—I do not think there would be; I do not think the strike would have occurred.

Q.—Were the mill owners furnished with a copy of the arbitrators' award? A.—Yes. When I refer to the usefulness of labor organizations, as an instrument for promoting peace in the times of excitement—for instance, I might say: I have known cases where certain persons who are in authority in the mills, would have been severely dealt with had it not been for members of the order of the Knights of Labor. I know one particular case where the Knights of Labor were instrumental in preventing a visit to the house of an overseer for the purpose of molesting him. I know of people being very outspoken as to what they would do to men in the mills, and I know that the Knights of Labor went in and prevented much difficulty; that the Knights of Labor, down at Cornwall, met and prevented that it was conducted so and people, in talking about the late strike, were surprised that it was conducted so quietly. There was no trouble, and they claimed that it was due to the Knights, in a very great measure, that there was no trouble—no difficulty. Without having access to the books at the present moment, I feel safe in stating that since the formation of the organization in Cornwall, now bordering on three years, upwards of \$500 has been paid out in relieving distress and furnishing sustenance to individual citizens of the town. I know of many cases where the Knights relieved this distress. Had it not have been so, the town of Cornwall would have very likely have had to do it through its treasurer.

By Mr. McLEAN:—

Q.—When your society are out on strike do they have any ability to decide and say whether they will go back or not? A.—To answer that, I will give you the plan laid down by the Knights, and what they follow: We will take, for instance, the Stormont Mill. We will say, for the sake of argument, that it is thoroughly organized, and that there are grievances. Grievances are sometimes imaginary and sometimes real. If there are any grievances the Knights state the case to the executive board of the local assembly. They investigate the matter, and if the grievance was found to be real they would try and effect a settlement with the manager. They would then lay the case before the executive board of the district and bring about a settlement, if possible. If they found they could not, and that the manager would not agree to anything, the executive board could call the help out. From the time the executive board calls the help out they are entitled to the support of the order and always receive it, but they cannot receive any support until they are so called out; so that you see, if a place is organized they cannot jump up at the spur of the moment and leave the company's service. If they did so, they would do it at their peril, because the order would give them no support.

\* \* \* , Cotton Spinner, called and sworn.

By Mr. HEAKES:—

Q.—How many hours a day do you work? A.—Eleven hours.

Q.—Will you kindly tell us how much you earn in a week? A.—I get 80 cents a day.

Q.—Do you get 90 cents a day on Saturday? A.—Yes; our working day is

supposed to be ten hours every day, but we work eleven, in order to get off half a day on Saturday. It counts the same.

Q.—Are there any children working in the room you are in? A.—Yes; there are a lot.

Q.—Can you tell me what the ages of the youngest are? A.—About twelve, I think.

Q.—These children have to work the same hours? A.—Yes.

Q.—Are the operatives in your room well treated? A.—Yes.

Q.—Is there any bad language used towards the children or operatives? A.—Well, there is some. There are the second hands. The head overseers do not, but the under overseers do.

By Mr. BOIVIN:—

Q.—The children under twelve years of age, are they worked by the day or by the piece? A.—By the day.

Q.—Is your work hard work? A.—Yes; it is "Dorfing" frames.

Q.—Do you notice some of them getting tired or fatigued? A.—No; I did not.

Q.—Are the conveniences in your room for the sexes separate? A.—Yes.

Q.—Are they satisfactory? A.—Yes; they are satisfactory.

Q.—The general treatment of the operatives is good? A.—Yes.

Q.—You have no complaints to make? A.—No.

CORNWALL, 4th May, 1888.

ANNIE MARTIN, Cornwall, Cotton Spinner, called and sworn.

By Mr. HEAKES:—

Q.—Where are you employed? A.—I work in the spinning room of the Canada Cotton Mills.

Q.—Do you work by the day or by the piece? A.—By the piece.

Q.—What are your average earnings by the piece—about? A.—Five, six or seven dollars; some weeks I make seven dollars; that comes pretty good.

Q.—Have you constant work there? A.—Yes.

Q.—How many months' work do you have during the year? A.—I work about ten or eleven months.

Q.—When they stop the mills, is it because there is no work, or because of some other reason? A.—They never stop, unless it is just a day or so—when something is wrong.

Q.—Have you any complaint to make about the treatment you receive in the factory? A.—We are well treated.

Q.—Do they use any bad language towards you? A.—None that I hear of.

Q.—Are the arrangements for providing drinking water all right? A.—Yes.

Q.—Are drinking cups furnished? A.—Yes.

Q.—Supposing a fire took place, how would you all get out? A.—By the door.

Q.—Yes. But what way would you take to go out? A.—I am on the first story.

Q.—That is the top story? A.—Yes.

Q.—How many stairways are there leading to the top story? A.—Two.

Q.—Are there any fire-escapes leading from the building? A.—None that I know of.

Q.—Is the room much crowded with machinery? A.—The one that I am in is filled up.

Q.—In the case of fire breaking out, would it be difficult getting down stairs from the top? A.—No; I do not think it would.

JENNIE MORRELL, Weaver, Cornwall, wife of William Arkwright, of the same place, Laborer, called and sworn

By Mr. BOIVIN :—

- Q.—What is your occupation? A.—I am a weaver in the Stormont Cotton Mill.  
 Q.—How long have you worked in that mill? A.—The most of four years.  
 Q.—What are your wages there? A.—I get about \$1 a day now.  
 Q.—Are there any children working there? A.—Not in the room I am in.  
 Q.—Is your work constant? A.—Yes.  
 Q.—Do you see any employé there having too much work to do? A.—I think we all have too much work, once in a while.  
 Q.—Do you work by the piece? A.—Yes.  
 Q.—And you take a little rest when working by the piece—you do not object to take a little rest when working by the piece? A.—Yes; but if we do not do the work we do not get the money, that is all.

By Mr. HEAKES :—

- Q.—I suppose prices are not so good that you can afford to take a rest?  
 A.—No; it is only \$1 a day.  
 Q.—Do you get as much now as before the strike? A.—Well, I have got back again now.  
 Q.—Is it true that the length of the cut has been increased? A.—Not that I know of.  
 Q.—Is every thing satisfactory in the room where you are now? A.—Every thing that I know of.  
 Q.—Is the treatment of the hands fairly good? A.—Well, he always used me well.

By Mr. McLEAN :—

- Q.—Did any of the overseers ever use obscene or bad language towards you?  
 A.—No; he never used bad language to me.

MICHAEL QUINLAN, Cornwall, Electrician, called and sworn.

By Mr. HEAKES :—

- Q.—By whom are you employed? A.—I am employed by the Electric Light Company. I am at present engaged by the Canada Cotton Company.  
 Q.—Can you tell us what the rules of the factory of the Canada Cotton company are?  
 A.—Not as a whole; there are a few rules that I may remember.  
 Q.—Do you know anything regarding the wages of the people? A.—Yes; there is a rule that if a man's wages are garnisheed he is dismissed from the employ of the company.  
 Q.—Have you ever known that to be done? A.—Yes.  
 Q.—When a man is dismissed for having his wages garnisheed can he obtain employment in any other mill in Cornwall? A.—Well, I have known it to be very difficult for him.  
 Q.—Once dismissed, always dismissed? A.—Yes; in a few cases I have known it to be a fact.  
 Q.—Are the wages of employés frequently garnisheed? A.—I have known three or four cases in the Canada Cotton Company's mill since I have been there.  
 Q.—If the men were paid more frequently would it not prevent this sort of thing?  
 A.—In my opinion, it would.  
 Q.—Have the operatives expressed any desire to be paid more frequently?  
 A.—When I came to the Canada Cotton Company's mill first we were paid every month, and occasionally once in five weeks. Two years ago we made application to be paid every two weeks, and we so received it; but there has not been any application made for weekly payment, that I know of.

By Mr. McLEAN :—

Q.—Do you think if you made application for weekly payment you would get it, the same as every two weeks? A.—I do not know,

Q.—How many hours a day are you engaged? A.—Eleven hours, five days a week, and five and a-half hours on a Saturday.

By Mr. HEAKES :—

Q.—Do you have to return on any part of a Saturday afternoon for any purpose? A.—Very seldom. During the winter I do, if I should have to make any repairs.

Q.—And in summer? A.—In summer I very seldom have to work.

Q.—How is the water in the Canada Cotton Company's mills? A.—The water is good.

Q.—Where do you take the water from? A.—We take it from the St. Lawrence water-works.

Q.—Did you ever hear of any complaints made by the operatives as to the treatment they received in the Canada Cotton Mill? A.—Very seldom.

Q.—Do you think every thing is done that might be done to make them comfortable? A.—As comfortable as other mills, I think. I think the Canada Cotton Mill compares very favorably with any mill in Canada.

Q.—Did you ever know any man to be "black-listed"? A.—Not to my knowledge.

Q.—Have you known of any man being objected to by employers of labor in Cornwall on account of his belonging to labor organizations? A.—No.

Q.—Have you known of any employers objecting to hiring a man for that reason? A.—Not with the managers; I have not heard of objections being raised by them, but I have, on the part of one overseer, who has the employment of the hands in his room in the department.

Q.—Have you ever known any employé to be dismissed on account of his connection with any labor organization? A.—I have heard this man say that he would get rid of every Knight of Labor working for him, and since then he has discharged four or five.

Q.—Do you know of any other reason why any have been discharged—have you known any to be discharged on account of bad work? A.—Well, I understood that some were discharged on account of bad work, through carelessness, but others say that this man simply seized the chance to discharge them.

Q.—He was bound to find a reason any way? A.—It seems so, some way.

Q.—Have not the employés any chance of redress from his decision? A.—Some of the employés that were discharged by this man went to the manager and told him how this cloth was destroyed, and the manager would not listen to them. He said the overseer had charge of his department, and that he should uphold the overseer.

By Mr. McLEAN :—

Q.—So that they did not get much good by appealing to the manager in that instance? A.—It seems like it.

Q.—Do you know of any other appeals to the Manager that were not listened to? A.—Not in that mill.

GEORGE WHITE, Cornwall, Stone-mason, called and sworn.

By Mr. BOIVIN :—

Q.—Do you reside here? A.—Yes.

Q.—Are you in constant employment? A.—I am out of work just now.

Q.—How long is it since you quit work? A.—I have only done five days' work since Christmas.

Q.—What is the cause? Is there no work? A.—Well, there are lots of work, and I am not particular; but some of the employers in town here—because I belong to the Knights of Labor—would not give me work.

Q.—What are your wages? A.—My wages would be \$3 a day when working.

By Mr. HEAKES:—

Q.—Are you a bricklayer as well as a stone-mason? A.—I do not mind brick-work when I can get it, but I do not get a chance here.

Q.—Have the stone-masons been on strike here? A.—Not that I know of. In this work—in the town here—when there was a job doing in town here we were not employed on that job, because we were Knights of Labor.

Q.—Did the men strike on that job, then? A.—No.

Q.—What is the reason, then, that employers will not take Knights of Labor? A.—Well, the reason I say is: they are trying to keep down labor, and we try to get a fair day's wages for a fair day's work. Certain men think that \$2.75 a day is too much; they think you are to put in good, substantial work, and not get paid for it. They think we should take \$2.50, and less, if they can get us to do it; we want every man that is fit for it—that is able to earn it—to get at least \$2.50 a day.

Q.—Did you ever know a stone-mason to be refused work during the strike in the cotton mills? A.—Yes.

Q.—Why? A.—Because they were trying to have a settlement between the help and the employers; they knew we were Knights of Labor, and so we could not get employment.

By Mr. BOIVIN:—

Q.—You say you get \$2.75 a day for men who are able to earn it. What would you do with the men who are not so able to do it? A.—I mean, if a man was able to get it.

Q.—If a man could not earn \$2.75 a day? A.—He should be able to earn \$2.75 a day if he is a good stone-mason and knows his business.

Q.—Well, he might do his work very well, but not so fast as the other men, and for that reason he would be obliged to take less? A.—For a man who is able to do a day's work he should get a day's pay. How is a contractor to know when he is to have a contract completed if he takes on men who cannot do a regular day's work. Those that are not able to do the work, they call themselves masons, but they are not able to work.

By Mr. HEAKES:—

Q.—You mean to say that these incompetent men that you speak of have never served a proper term of apprenticeship? A.—Yes; if a man does the same work he should get the same pay.

By Mr. BOIVIN:—

Q.—If a man who is not worth \$2.75 a day is working with you, what do you do with him? He may be a good man to do his work slow? A.—Well, we would have to give him a show; we would help him, and see what he could do.

Q.—But in other businesses they pay a man according what he is able to earn? A.—Well, if he was put on we would have to give him a show.

Q.—But I want you to say what you are to do with him if he could not do what you call a full day's work. If he is good to earn only 75 cents a day that might be enough for him, and quite enough pay for the work he does? A.—It is cutting down prices, and good men would soon be put on the same level.

Q.—But his work would be worth that price and no more? A.—If he built 2½ porches, and I built 4, I am supposed to give him an opportunity for keeping equal with me.

By Mr. HEAKES:—

Q.—Do you understand that the teachings or principles of the Knights of Labor is that a poor mechanic should have equal pay with a good mechanic? A.—I understand that he should get a fair day's wages for what he is able to do.

JOSEPH GRAY, Cornwall, Dyer, called and sworn.

By Mr. HEAKES :—

Q.—In what mill are you employed, and in what capacity? A.—I am a dyer in the Canada Cotton Mill.

Q.—Are you able to tell us if the business you are engaged in is a healthy one? A.—Well, it has proved healthy to me, so far.

Q.—What hours in the day do you have to work at it? A.—Ten and a-half hours; we work fifty-seven and a-half hours a week.

Q.—Are the hands in the room in which you work properly protected? A.—Yes; I think so.

Q.—You think that all risks against accidents are reasonably provided against? A.—Yes.

Q.—What are you able to earn as a dyer? A.—Well, all along, up to the cut-down, \$1.50 a day.

Q.—The wages have been reduced, have they? A.—Yes.

Q.—What are you able to earn now? A.—One dollar and twenty-five cents a day; that is at the reduced rate.

Q.—What position do you occupy? A.—I am a foreman.

Q.—What do the help receive if the foreman only gets \$1.25 a day? A.—The foremen get \$1.50 a day. I think I should make a little explanation about that. About one year ago I met with an accident, and of course during my time of absence there was another man put on in my place, but I received the same pay—not exactly the same work.

Q.—Have you any objection to state the nature of the accident you met with? A.—No.

Q.—Was it while you were at work that it took place? A.—It was after we had that flood in the town, and we were replacing the tubs—dye boxes, as we call them—and one of them, more heavy than the rest, needed to be moved. I took hold of it on the top, to prevent it from going so heavy, and the box came down on my foot and took off four of my toes. I was hurt on the Wednesday and I received my pay for the balance of that week.

Q.—You received no compensation from the company? A.—No.

Q.—The only compensation that you received was to have your wages cut down? A.—Yes.

Q.—Is there no provision made by the company for employes when sick? A.—No.

Q.—When did you return to work? A.—I went back in March, and was reduced last fall.

Q.—Did the company pay the doctor? A.—No.

Q.—Is the water-closet accomodation all right? A.—Yes.

Q.—Have you any drinking water? A.—Yes.

By Mr. BOIVIN :—

Q.—Is the water good? A.—Yes.

Q.—Do any of your friends who receive the same salary as you receive, save anything? Are they proprietors of property? A.—No; they do not all receive the same salary exactly.

Q.—Do you think that a man with \$1.25 a day can live quite comfortable on a small salary? A.—If he is single; not with a family. I know I am not making money on it. It takes all that I can get.

Q.—Are you able to state the general wages that dyers earn? A.—A dollar and a-quarter a day.

Q.—And the overseers of the mill? A.—About \$2 to \$2.50, and some get more; some get as high as from \$3 to \$5.

JAMES DALEY, Cornwall, Dyer, called and sworn.

By Mr. HEAKES:—

Q.—In what mill are you employed? A.—In the Stormont Cotton Mill.

Q.—Did you hear the testimony of the last witness about the wages? A.—Yes.

Q.—Do the wages in your mill differ at all from them? A.—Well, you were speaking about overseers' wages being from \$2.50 to \$5; I cannot say about that.

Q.—Tell us the average? A.—The men in the mill, the dyers, get from 80 cents to \$1.25 a day.

Q.—What is the general average? A.—The average is \$1.05.

By Mr. BOIVIN:—

Q.—What is the age of those who receive 80 cents? A.—Between seventeen and eighteen years of age. I have only three young men at that age, the rest are all men.

Q.—How long do they work in the year? Q.—Ten months.

Q.—And how long have those young men worked at dyeing? A.—Only seven or eight months; previous to that they were all men.

Q.—Do you consider the work too heavy for these boys? A.—No; it is very light; not heavy at all.

By Mr. HEAKES:—

Q.—Have you ever known employés to be discharged on account of their wages being garnisheed? A.—Well, I think there have been men discharged on account of the office being bothered too much through their wages being garnisheed, but at this mill up here they are not so strict. At the mill below, as I understand, they are discharged, but not so up here. Men are sometimes garnisheed five or six times.

Q.—Do you not think that there is considerable hardship in that rule of discharging the men? A.—Yes; I do.

Q.—It is not always possible to keep free of debt? A.—No; a man may have a very large family and very small pay, and if you lose two weeks' work, as we sometimes do when the mill is shut down, you have to make it up after you get to work again, and consequently you have to run into debt.

Q.—Besides that, I suppose you have to work a month when you first start at the mill before you are paid, and then you only receive a fortnight's pay—one fortnight being kept back as security against your leaving without notice? A.—Yes; that is it, sir.

Q.—Have the wages in your mill been reduced? A.—No; because it was all put back a few days after the trouble.

Q.—There was no reduction in your mill at all? A.—No; not that I am aware of.

Q.—Is the drinking water good? A.—Yes.

Q.—Is the closet accommodation all right? A.—Yes.

Q.—Did you ever hear any of the employés complain of bad treatment in the mill? A.—No; I have not. I do not go much around the other parts; I go more around that part that concerns my business.

Q.—Are the vats reasonably protected? A.—Yes; as well as they can be protected.

Q.—And the men that work on them? A.—Yes.

Q.—Were you there when the man that we were told of yesterday lost his life?

A.—Yes; I raised him out of the vat.

Q.—Was that through any fault or carelessness on the part of the company or himself, or was it accidental—was the accident unavoidable? A.—It was through his own fault, in one way, and in other ways it was unavoidable. He might have fixed the staging.

Q.—Do you think he was a steady man, and fully capable of fixing a staging?

A.—I think he was a man of good, sound judgment, although not a first-class mechanic.

Q.—Do you think he knew enough about mechanics to construct a proper staging? A.—I think he did.

By Mr. ARMSTRONG:—

Q.—Did you have any trouble with your workmen last season? A.—Yes; a year ago next month.

Q.—Tell us what the difficulty was? A.—Yes; they made a demand for one hour a day less work and 10 per cent. of a rise.

Q.—How was the difficulty settled? A.—They struck. A combination of the Knights of Labor caused them to strike.

Q.—And did they succeed? A.—No; they did not.

Q.—Did they go back to work? A.—No; they did not.

Q.—Did you refuse to give them work again? A.—I did.

Q.—What was the reason? A.—Because a "burnt child dreads the fire," and we did not want them again.

Q.—Have you any objection to employ men who are Knights of Labor? A.—I have hired a number of men the last four or five months.

Q.—You will not stand in their way, then? No.

Q.—Not at all? A.—Not at all. There was a time when I refused; that was one time when there was a strike.

Q.—Did you ever offer men work if they left the Knights of Labor? A.—I advised them to leave it.

Q.—Why did you ask them to leave it? A.—I told them as quick as they were through with the order I would hire them, but since then I have not asked the men whether they belonged to it or not.

Q.—When these men asked for an increase of 10 per cent. all round do you consider that that was a fair demand? A.—I do not consider that as my business; my business is to run the mill.

Q.—Do you not consider that sixty odd hours is rather a long week's work? Is that not more work than is put in in other mills? A.—Yes.

Q.—Is it possible to do the same work in a less number of hours? A.—Yes.

Q.—They work five and a-half hours more than they do in other mills. Then, the reason for the men putting in for shorter hours was a reasonable one? A.—Well, the men do not work as hard here as in some other dye-houses.

Q.—Still, it is reasonable for them to suppose that they might get away earlier? A.—They have the same hours in other places; and they had worked two years already in this mill without making any demand for more wages or less time.

By Mr. McLEAN:—

Q.—You are a foreman dyer? A.—Yes.

Q.—If a man applied to you for employment, and you knew him to be a prominent Knight of Labor, would you give him a situation? A.—I should be a little afraid of him.

GEORGE AUTY, Cornwall, Warp-dresser, called and sworn.

By Mr. HEAKES:—

Q.—In what mill are you employed? A.—In the Stormont Cotton Mill. I am a foreman cotton-warp dresser.

Q.—How many hands are in your department? A.—There are about three, besides myself.

Q.—Are these males or females? A.—Males.

Q.—What wages are they able to earn? A.—I have two men at \$1.75 and one help at \$1 a day.

Q.—Is that about the average wages paid for that class of work in other mills? A.—It is about the highest, with one or two exceptions. It is considered good wages for the business.

Q.—Do you measure the cloth? A.—The woof is measured as it goes through my hands? it is done by machinery.

Q.—Are you able to tell us if there has been any difference made in the length of the cut within the last year or so? A.—No; no difference whatever; none at all.

Q.—There is no truth in the statement that the cut has been altered? A.—The cut has not been lengthened or made shorter. They run by the same gear—the gear for measuring? so many teeth in the revolution of the rule.

Q.—Have you been long in that mill? A.—Four years.

By Mr. BOIVIN:—

Q.—How long have you been staying here in Cornwall? A.—Sixteen years next June.

Q.—Do you know the mechanics generally? Do you know lots of mechanics here? A.—Yes; I know pretty much all of them.

Q.—What is their condition? A.—Generally speaking, their condition is fair.

Q.—Do you think they could save anything from their wages? Do you not think that they could save something? Do you think they are spending a little too much in luxury, or do you think that they are very careful, and do as much as they honestly can with the money they receive? A.—Well, there are a great many imprudent people round here, just the same as in other places.

Q.—Is there any misery here—are there any in want? A.—I would not think there was any real misery. May be there is some misery caused by sickness, but I never knew of any real misery, on account of the inability of any person to get work.

By Mr. HEAKES:—

Q.—You are always in constant work yourself? A.—Yes.

By Mr. BOIVIN:—

Q.—Do you think that more education would be better for the workingmen? A.—I think that the standing of a people is based upon their intelligence; the more intelligent the people are the better their standing, and the more careful they become. I suppose it is on account of intelligence that some people get on much better than others. Of course, education is of great assistance.

Q.—Are the arrangements of the mill satisfactory? A.—Yes.

Q.—Is the closet accommodation good? A.—Yes.

Q.—Is there plenty of good drinking water? A.—Yes; I cannot complain about that. There does not seem to be any lack of facilities, and there are separate tanks for males and females, in separate parts of the building.

Q.—That is in your department or in the other departments? A.—It is in all the departments throughout the establishment. There are separate conveniences, and notices over them, respectively, stating which are for males and which are for females.

Q.—Are there separate entrances? A.—Yes.

By Mr. McLEAN:—

Q.—Are they in the building? A.—They are not in the building; they are separate from the mill itself.

Q.—Are they away from one another? A.—They are not away from one another; they are all together.

By Mr. HEAKES:—

Q.—How are they in your department? A.—In our department there is the mill of the mill between them.

By Mr. McLEAN:—

Q.—Where do you get the water from for the Stormont Mill? A.—There is a well for the purpose outside the building, and a pump put into the well, and help obtained in each department to go for water when required. In the spring, sometimes it is a little discolored, as though from surface water, but it seems the general impression that the drinking water is canal water.

By Mr. BOIVIN :—

Q.—Is water supplied in every department for drinking? A.—Yes; there is a man outside for that effect. Every overseer appoints a man, who is charged to see that the water pails are constantly kept filled.

Q.—Do you not believe that every man going to the same place or pail could get ill because of the impurity of the water? There must be some cause where there is so much complaints? A.—It appears that one goes to one place and one goes to another, and naturally they go to the water instead of to the well sunk for the purpose. It is a perfect well, and was properly dug. Before this well was dug there was another well on a different property, where people used to go for their water.

Q.—Do you think the river water is better than the well water? A.—No; it has not the same taste. They are held pretty strictly to the premises.

Q.—How deep is the well? A.—I could not say.

PAUL DANE, Cornwall, Weaver, called and sworn.

By Mr. BOIVIN :—

Q.—In what mill are you employed? A.—In the Stormont Cotton Mill.

Q.—Have you been there long? A.—This last time I went there the day before Christmas; I worked there before about six years. This is the second time I have been working there.

Q.—Do you work by the piece or by the day? A.—By the piece.

Q.—What are your earnings? A.—My earnings average about \$8 a week.

Q.—Can the men working in the mills here in Cornwall save something on \$8 a week? A.—I do not think a man earning that money can save anything, if he has a family and has to take care of a house.

Q.—What rent do you have to pay for a house? A.—You can get a house for \$6 a month.

Q.—Have you any taxes to pay besides that? A.—No.

Q.—How many rooms do you have in your house? A.—Five rooms.

Q.—And how many children have you got? A.—Seven.

Q.—Are they old enough to go to school? A.—Yes; one is working and two are going to school.

Q.—What age is the one that works? A.—Eighteen years of age.

Q.—How much have you got to pay for water? A.—We have no water in the house.

Q.—How do you get your water? A.—We get it from the well, and the washing water we get out of the canal.

Q.—Is that cheaper than getting it from the waterworks? A.—We have to pay a man so much a month for getting it, if we get it from the waterworks.

Q.—Are the houses generally occupied by mechanics in good condition as to health, generally? A.—Yes; as long as you keep the house all right.

Q.—What is the distance from your house to the factory? A.—Well, going around it is fifteen minutes to walk there.

Q.—Do you not think that women leaving their houses at six in the morning to go to the factory start a little too early for the good of their health? Do you not think they start a little too soon? A.—It is too soon.

Q.—And in summer, do you not think it too soon? A.—It would not make much difference, but I suppose in winter those that live in the west part of the town, where I live, can cut across the canal on the ice, but in summer time they have to go round by the bridge.

Q.—Have you anything to complain of in the factory? A.—Yes; we have bad water and bad light, and the water-closet is not in a suitable place. The place is about 3 feet square, and you can hardly get into it.

Q.—Where is the females' water-closet? A.—The females' is in another room.

Q.—Where do they get the drinking water? A.—The drinking water is taken out of the canal.

Q.—Is it filtered? A.—It is pretty muddy.

Q.—Do they provide anything to drink out of? A.—No; we have some pans, but they went and painted the pans with brown paint and the last three or four days the water has been very bad in consequence.

Q.—Have you heard any of the operatives complain of being ill on account of the water? A.—Well, they did not complain of being ill, but some seemed not very well.

Q.—Did they keep on with their work? A.—Yes.

Q.—Do some of the operatives drink out of the pail? A.—All the pails in our part are the same; it makes no difference which you take; you take the first you come to.

OTTAWA, FRIDAY, 4th May, 1888.

ALDERMAN WILLIAM HUTCHISON, called and sworn.

By Mr. CARSON :—

Q.—You are a member of the firm of Thomas McKay & Co., millers? A.—Yes.

Q.—How long have you been engaged in the present business? A.—Do you mean, how long I have been working as a miller or how long I have been a partner?

Q.—How long have you been a partner? A.—About fourteen years.

Q.—Can you give us about the number of men you are employing at the present time—the average number, I mean? A.—Seventy-five.

Q.—Can you classify these men and give us about their average earnings? A.—The laborers, including teamsters, get about \$7 a week the year round.

Q.—Does that include the millers? A.—No; the millers receive \$10 a week.

Q.—You say about \$7 a week for laborers? A.—Yes; that includes shovellers.

Q.—Have you a summer and winter rate of wages? A.—I had not until two years ago, when I was forced to make a change. On the average, they get more in summer than in winter, but not through any difficulty I had with them.

Q.—For what reason were you forced to make the change? A.—In the summer a great many changes were going on. Many men would go into the saw-mills. I found where I hired men at \$7 a week the year round it worked first-rate for one year, but the second year they would not stay. Sometimes bigger wages were paid in the mills in summer, and the men would leave me and go into the mills. I had therefore to protect myself by making the change I have spoken of.

Q.—You found it was necessary to give a set price in the summer time and in winter time you could get men for less money? A.—Yes; but I never went less than \$1 a day on any man.

Q.—Do you employ any boys round the mill? A.—I think there is only one there now. Sometimes there are two.

Q.—He is an apprentice? A.—Just as an apprentice, and then he works up. We put him on to learn the business.

Q.—In taking on boys, you offer to teach them the business? A.—Yes; if they desire to learn the trade they get that advantage.

By the CHAIRMAN :—

Q.—What age is this boy? A.—The boy that we have on just now is about sixteen years of age. He came on last week.

By Mr. CARSON :—

Q.—When these boys are learning the trade what do you give them a week? A.—We give him about 50 cents a day for the summer, and we advance him along as he is able to do the work. He has to sweep and dust just now.

Q.—When you take them on as apprentices about what do you pay them? A.—  
—We make no arrangement; we never have any agreement with the boys at all. If a boy is strong—say a young man of eighteen or nineteen—if he can do all the work he gets laborers' pay—that is if he is able to handle the bags.

Q.—When you take those boys on do you indenture them—bind them? A.—No.

Q.—It is just a verbal agreement? A.—There is no agreement. We say, there are the wages, if you like them, take them.

Q.—Have you ever had any trouble with your boys or men? A.—No.

Q.—You have never had any strikes or agitation for higher pay? A.—No.

Q.—If a man is worth more, and asked for it you generally gave it to him, if you felt he was worth it? A.—If he was worth it, of course. We never had any trouble with the men. We never had them asking for a raise, as we calculate to pay the best wages.

Q.—What number of hours do the men work? A.—The laborers work from seven to six.

By the CHAIRMAN:—

Q.—Ten hours a day? A.—Yes.

By Mr. CARSON:—

Q.—Do you compel your men to work on the French-Canadian holidays—the statutory holidays? A.—Yes.

Q.—Do they ever object to that? A.—No; I give them Christmas and New Year's Day and the 1st of July as holidays, and they get their pay—that is, their pay runs on.

By Mr. ARMSTRONG:—

Q.—The pay runs on for the holidays? A.—Yes.

By Mr. CARSON:—

Q.—If a man in your employ gets hurt round the mills do you generally pay the doctor's bill? A.—We generally pay him for the time he is off; we have done so all along, so far.

Q.—Can you give the Commission any idea of the condition of your men, financially? Do you know if any of your men own their own property? A.—I think fully two-thirds own property of their own.

Q.—Have they gained this property out of their own savings? A.—Yes; by their own savings.

Q.—Those that are not possessors of property, have you any reason to believe that they have money deposited? A.—I could not answer that question; I do not know.

By Mr. ARMSTRONG:—

Q.—What are the lowest wages you pay a miller? A.—The lowest is \$9.

Q.—How many hours does that man work? A.—Well, the \$9-men are mostly on from seven to six.

Q.—What are the highest wages you pay a miller? A.—Ten dollars a week.

Q.—Would he be a foreman? A.—No, sir; he would be in charge of the watch—what I mean by that is the grinder. There is the second hand, who attends to the upstairs part—the bolting.

Q.—How many millers have you in your employ? A.—Our business is an extensive one; we have two flour mills and two oatmeal mills.

Q.—Take the flour mills: how many millers have you in them? A.—Seven.

Q.—To how many of those seven do you pay \$10 a week? A.—Five.

Q.—How many hours do they work? A.—One week they work all night; next week in the day time. They change about.

Q.—The wages are the same for night work as day work? A.—The same.

Q.—What would be the length of hours they work? A.—About eleven hours. They have no laborious work, though.

By Mr. CARSON:—

Q.—It is simply walking round watching the machinery? A.—There are two men on the watch; they have little to do.

By Mr. ARMSTRONG:—

Q.—When you take an apprentice do you take him to teach him the milling business? A.—If he will learn it of his own free will.

Q.—Have you any boys go on with that object in view? A.—Very often.

Q.—From the time a boy would commence with you until you made him a good miller, how many years would it be? A.—We have had boys on four years that were millers. Others would never make millers if they stayed a lifetime.

Q.—When one becomes a miller do you give him \$9 or \$10 a week? A.—Nine dollars.

Q.—Do those boys, after they consider themselves practical millers, remain with you a length of time? A.—A great many go to the States.

Q.—Do you happen with many accidents around your mills? A.—I do not know of an accident in fourteen years. We are very careful.

Q.—From your experience in the milling business, do you notice improvement in the quality of the wheat during the last five or ten years? A.—Do you mean in the home-ground wheat, or the wheat brought from Manitoba or the States?

Q.—I mean Dominion wheat? A.—Of course, Manitoba wheat is a great improvement on what we have had here—that is this year, but not last.

Q.—Is the highest quality of wheat, that which ranged as the highest quality five or ten years ago, as good as the highest range of wheat to-day? A.—I cannot answer that question put that way.

Q.—Well, take flour, for instance: what you would call first-class quality of flour, is it of a superior quality than first-class flour was five or ten years ago? A.—It is for the baker, but it is not any better for family use. It is stronger, and suits the bakers' trade better.

Q.—Is the demand for Manitoba wheat on the increase? A.—Yes.

Q.—Both for domestic and bakers' purposes? A.—Yes.

Q.—Where do you find the market for your flour? A.—Local.

Q.—It is a local market? A.—Yes.

Q.—Can you tell us whether the price of first-class flour to-day is cheaper or dearer than it was five years ago, giving it to us, say in 1877, 1882 and 1887, the same time in the year? A.—We have had lower prices in the last three years than I have known for ten years previous.

Q.—Can you give us the actual figures? A.—Oh, yes; I could do that.

Q.—Is \$9 and \$10 a week the prevailing rate of wages paid millers in Ottawa? A.—Yes.

Q.—Are your men constantly employed, the year round? A.—Yes.

Q.—What class of your employés own their own houses? A.—Millers and laborers.

Q.—You say you pay, on an average, \$7 a week to your laborers. Do those men own property out of wages at \$7 a week? A.—Yes.

Q.—And support a family? A.—I suppose so.

Q.—How much would a laboring man pay for a house of five rooms in Ottawa? A.—I could not answer that.

Q.—Do you know the price of provisions in Ottawa? A.—No; I know the price of flour, but nothing else.

Q.—You cannot tell us what is the rent of houses occupied by the working classes? A.—No.

By Mr. CARSON:—

Q.—Have you had the factory inspector through your establishment? A.—The Ontario Inspector—no.

Q.—You never saw him there? A.—No; I have seen any amount of insurance inspectors. The factory inspector might have been there, but I don't think so.

Q.—If he had been there, in all probability, you would have known? A.—I think so.

By Mr. ARMSTRONG:—

Q.—Do you employ a practical engineer? A.—We run by water; we employ a first-class millwright, and two assistant millwrights, to keep the mills in order.

Q.—What would be the wages of a millwright in Ottawa? A.—Two dollars and seventy-five cents a day.

Q.—You constantly employ one? A.—Yes.

MELTON W. MERRALL, called and sworn.

By Mr. CARSON:—

Q.—What is your business, Mr. Merrall? A.—Foundryman and machinist.

Q.—How long have you been engaged as proprietor in this business? A.—About eight years as proprietor.

Y.—Can you give us an idea of the number of men you employ? A.—Between twenty and thirty—twenty-five on an average.

Q.—About what would be the average earnings of the machinists? A.—We pay \$2 a day.

Q.—And for moulders? A.—The same.

Q.—Do you take any apprentice moulders? A.—Sometimes; we have not had any for a number of years now.

Q.—How often do you pay your men? A.—Every two weeks.

Q.—On what day? A.—Saturday.

Q.—The men prefer that day? A.—It is not a matter of preference. We have always paid them on Saturday, and I have never heard the day questioned by any of them.

Q.—Have you ever had any trouble with your men in any way? A.—No, sir.

Q.—They are always contented? A.—Seemingly so.

Q.—Do you know if any of your men belong to any labor organizations? A.—Not that I know of.

Q.—Do you dictate to them? A.—No; so long as they do their work that is all I ask of them.

Q.—What would be the number of hours that your men are generally supposed to work? A.—Ten hours a day.

Q.—Do they do night work? A.—Occasionally.

Q.—When working at night are they paid extra? A.—They work an hour less, that is the difference—four hours constituting half a day.

Q.—Have you had the Ontario Factory Inspector through your place? A.—No.

Q.—Have you ever had any accidents in your establishment? A.—We did have one accident a good while ago; one of our men got hurt.

Q.—From what cause did that accident occur? A.—He was putting a belt on the pulley and his coat got caught in the pulley, which drew him on the shaft. His arm was broken and his back was hurt a little. That is the only accident of any account that I remember during my time.

Q.—Did that accident occur from any carelessness, or by exposed machinery? A.—It would never have occurred if the man had taken any precautions at all. It was away up towards the ceiling where he was caught; if he had taken a ladder he would not have been caught at all.

Q.—Have you any boys employed in your foundry? A.—Not in the foundry; we have one in the machine shop.

By the CHAIRMAN :—

Q.—What age is he? A.—About sixteen.

By Mr. CARSON :—

Q.—Is he an apprentice? A.—Yes.

Q.—What pay do you give apprentices for the first year? A.—Fifty cents a day.

Q.—And the second year? A.—It depends altogether upon the boy.

Q.—You have no bargain with them—they are not indentured? A.—No; they are not indentured. If the boy does not suit he goes, or we discharge him.

Q.—Do you give an apprentice every opportunity to learn a trade? A.—More in our trade than in most of the shops, because they do not do any sweeping of floors, or anything of that kind; the watchman does it.

Q.—Do you pay the blacksmith the same rate of wages as the moulders and machinists? A.—Yes.

Q.—Have you any knowledge of the condition of the men in your employ? A.—Most of our men own their own properties.

Q.—Those men that own their property, are they mechanics? A.—Mechanics—moulders and blacksmiths—or, rather we call them machinists.

Q.—What would be the value of the property some of them own? A.—I cannot tell you that; it depends on the location of the property. One man, Doherty, has five or six properties. He has one double tenement house, one single house, and two other houses in Rochesterville.

Q.—He acquired this property from his own earnings? A.—He and his sons—he has two sons with us.

By the CHAIRMAN :—

Q.—Have they done any other business? A.—No.

Q.—They have had no help except from their own family? A.—That is all.

By Mr. ARMSTRONG :—

Q.—How many of the family work? A.—Two, besides the man.

By Mr. CARSON :—

Q.—Are your men constantly employed the whole year? A.—In the winter season we have more than we can fairly do. In the summer time we sometimes work three-quarter time.

Q.—You run short-time occasionally in summer? A.—Sometimes we are not able to employ them for ten hours a day.

By Mr. ARMSTRONG :—

Q.—What class of moulding do you do? A.—No class particularly; we do all kinds of moulding, but mill work principally.

Q.—What would be the wages of a first-class moulder in machinery? A.—Two dollars a day.

Q.—The year round? A.—That is what we pay them.

Q.—When you take on an apprentice do you teach him all the branches of moulding or keep him at one? A.—In our place they are taught every thing they can learn in connection with the business. We have no speciality of any work at all; we let them work at anything and every thing.

Q.—Have you any pattern-makers in your establishment? A.—One.

Q.—How much a week does he receive? A.—Nine dollars.

Q.—How many hours a day do the moulders work? A.—Ten; all our men work ten hours a day.

Q.—Have you got a milling room? A.—No, sir.

Q.—How do you clean the mouldings? A.—You mean the castings. In the small castings we have a rumbler. We place them in that and clean them, but the heavy castings are cleaned by hand.

Q.—Where the rumbler is, what kind of ventilation have you? A.—It is on the outside of the building altogether. There is a coal shed over it, but the men do not work in it at all. There is a space of 12 feet and a wall between that and the foundry.

Q.—What is the sanitary condition of the moulding shop? A.—It is about as good as any in the city; there is no stagnant water, or anything of that kind, around.

Q.—Is the water-closet within the moulding shop? A.—It is outside of the flume altogether, right into the stream.

By the CHAIRMAN :—

Q.—Is there a health inspector in the city? A.—Yes.

Q.—Does he go about? A.—Yes; if he does his duty.

Q.—Has he been to your place? A.—I have not seen him.

By Mr. ARMSTRONG :—

Q.—What do you pay your blacksmith? A.—Two dollars a day.

Q.—And a blacksmith's helper? A.—One dollar and one dollar and a quarter.

Q.—How often do you pay them? A.—Every two weeks.

Q.—In full? A.—We pay them in full.

Q.—You never hold anything back? A.—We pay them in full every time.

Q.—Have you ever known the wages of your employés to be garnisheed? A.—Not lately; we have not had any for a good while.

Q.—Have you ever heard a desire on the part of your men expressed to be paid more frequently than fortnightly? A.—I have never heard a word from any man on the subject.

Q.—What do you pay for unskilled labor? A.—We only have three laborers; we pay them \$1.25 a day. One of them gets \$1.50, but he attends to the firing up in winter, besides his other work; in the summer time he has not quite so much to do.

J. F. Wood, called and sworn.

By Mr. CARSON :—

Q.—You are manager for E. H. Barnes? A.—Yes, sir.

Q.—How long has your business been established here? A.—Since the 1st of March?

Q.—What is your business? A.—We are manufacturers of box shooks.

Q.—About what number of hands do you employ in your business. A.—At present we have about eighty.

Q.—And of that eighty, how many are boys? A.—About one-third.

Q.—What would be about the average earnings of the men—take, for instance, the filers, sawyers, and men who run saws? A.—It will be hard to strike an average; there are only a few filers.

Q.—Well, class them into about three classes. What would a man who is able to look after planers and re-sawing machines be worth, on the average? A.—One dollar and twenty-five cents a day.

Q.—What are the ages of the youngest boys employed by you? A.—If I were to answer that it would be but guess work. I only asked the age of one boy, I thought he was so young. He told me he was fifteen, some are younger than that.

Q.—What would be the earnings of those boys who are about fifteen years of age? A.—Fifty cents a day.

Q.—Have you been paying this rate of wages since you started? A.—Yes, sir.

Q.—You are at present putting in machinery, with the expectation of increasing your business? A.—Yes, sir.

Q.—About what number of hands do you expect to employ? A.—About double what we have now.

Q.—I believe your firm, Mr. Wood, also owns mills in the United States? A.—Yes.

Q.—In what part of the States are those mills situated? A.—Two of them are in the Adirondack Mountains; one in St. Regis, the other in Castorland.

Q.—Could you give us about the wages the same class of men employed in those factories receive as compared with those who are employed here? A.—I could hardly give you that; I could give you a pretty good idea in two places—that is, at Oswego and Tonawanda.

Q.—How would the wages there compare with what you are paying here? A.—Where we pay \$7 a week here, in Oswego we pay about \$7.50 a week.

Q.—How does the cost of living compare here with Oswego? A.—That I know nothing about.

Q.—Are you a married man? A.—Yes; but I am boarding at the hotel here.

Q.—Are you aware of a law in the Province of Ontario called the Ontario Factory Act? A.—For accidents?

Q.—Yes; as well as the employment of children in factories? A.—I never heard anything about children being affected by it.

By the CHAIRMAN:—

Q.—You know the law? A.—No, sir.

By Mr. CARSON:—

Q.—Have you a boy in your employment named George Allen, ten years old? A.—I have not.

Q.—Do you know the names of any of your boys? A.—I am hardly familiar with any of them.

Q.—As far as you know, you are not able to state whether or no, workingmen are in a better position here than in the United States—that is, those who are in the same line of business? A.—You will have to divide the workingmen up; common laborers—I do not think they are paid as much here as in the States, but skilled laborers we pay just the same; I mean, such as filers, engineers and machine men.

Q.—Have you had any accidents in your establishment since you started? A.—One.

Q.—What was the extent of it? A.—A boy had his finger cut off.

Q.—Was he injured by a machine? A.—It was a sliding-top saw-table.

Q.—Was it his business to run it? A.—Yes.

Q.—How old was he? A.—About eighteen.

By Mr. ARMSTRONG:—

Q.—How long has he been in the factory? A.—Since we first started.

Q.—How long ago is that? A.—First of March.

Q.—How many weeks had he been in the factory until the accident happened? A.—Six weeks—all the time we had been running.

Q.—Did you put him to the machine the moment he went into the factory? A.—No, sir.

By Mr. CARSON:—

Q.—What would be the earnings of a practical engineer capable of running such an engine as you are running your factory with? A.—We pay \$10.50 a week all the year round; it is a steady job.

Q.—How many hours a day do your men and boys have to work? A.—Eleven.

Q.—You start at 6 in the morning and quit at 6 in the evening? A.—Yes; except on Saturdays, when we take 50 minutes at noon and quit at 5 o'clock.

Q.—How often do you pay them? A.—Every two weeks. We pay on Monday.

Q.—When you pay on Monday is that up to the Saturday night? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Is your engineer a practical man? A.—I believe he is.

Q.—Has he a certificate to that effect? A.—I do not know.

Q.—How long has he been acting in the capacity of engineer? A.—I could not

say; he has been with us since we started; I believe he ran on the boats here. He came to us recommended; that is all I know of him.

Q.—What age is the youngest boy in your employ? A.—There may be some as young as thirteen, but I hardly think there are any younger.

Q.—Do you take them on to learn any particular business as skilled mechanics? A.—They commence as boys in taking away from the machines, and as they grow older they learn to handle the machines and feed them.

Q.—How many boys at thirteen have you in your employ? A.—Half a dozen.

Q.—What wages do they receive when they first commence? A.—Fifty cents a day.

Q.—Do you know if those boys can read and write? A.—I guess most of them can write; they have to sign for their wages.

Q.—Have you any rules in your shop for the guidance of the employés? A.—Yes, sir.

Q.—Do you impose any fines? A.—No.

Q.—What is the nature of those rules? A.—Instructing them to be careful with the machines; to prohibit skylarking and smoking on the premises.

Q.—Provided they were late in the morning in arriving at work, what would be the consequence—would the door be locked on them? A.—No; if a man is late once in a while we say nothing about it, but if he made a business of it we should have to give him warning or discharge him. We have not done any fining at all.

Q.—Have you any fanning machines to take away the dust? A.—Yes.

Q.—Has the factory inspector visited your workshop to your knowledge? A.—No.

Q.—You are sure about that? A.—I have not heard of it.

Q.—If he had been there you would have known? A.—I should probably have heard of it.

Q.—Do you pay your men in cash? A.—Yes, sir.

Q.—Where do you find a market for your milling work? A.—In the United States.

Q.—You send everything to the United States? A.—Everything.

Q.—Is it a Canadian wood that you use? A.—Yes sir.

Q.—Is your business or output increasing? A.—We have more business than we can do. I do not know what it would be if we did more. Our trade is more extensive than we can fill.

Q.—Has the volume of the business increased during the past five or ten years? A.—Oh, yes.

By Mr. CARSON:—

Q.—In fitting up your machinery, do you use every precaution to prevent accidents? A.—Certainly.

Q.—Have you a suction fan to each machine? A.—Yes.

Q.—So that you generally use every precaution to protect life and limb? A.—Yes; we have the saws boxed up wherever we can.

WILLIAM GIBSON, called and sworn.

By Mr. CARSON:—

Q.—What is your business, Mr. Gibson? A.—I am a biscuit manufacturer.

Q.—How long have you been engaged in Ottawa as a biscuit manufacturer? A.—About eight years.

Q.—What is the average number of men that you employ? A.—We have a foreman and several men at different priced wages. Then we have girls and boys; we do not employ all men.

Q.—Take a first class biscuit maker: what is his average pay? A.—We have been paying our foreman \$20 a week.

Q.—But the journeymen, what do you pay on an average—I do not mean to a single individual? A.—From \$7.50 to \$9.

Q.—They are employed the year round at that pay? A.—Yes.

Q.—What would be the age of the boys? A.—Fifteen to seventeen.

Q.—Are they there as apprentices? A.—No; we just give them so much a week.

Q.—About what is the average wages those boys from fourteen to seventeen get? A.—Some boys get \$6 a week—some \$4.

Q.—About how many boys have you there? A.—Generally five or six.

Q.—You have an engineer? A.—Yes.

Q.—About what would be his average pay? A.—He gets about \$7.50 per week.

Q.—Is he a practical engineer? A.—I think so.

H.—Has he a certificate as an engineer? A.—I cannot say whether he has or not. He has been a long time at the business; he is a good man.

Q.—What number of hours does your men work? A.—Ten hours a day.

Q.—Do they work over-time? A.—Very seldom.

Q.—Their's is day-work? A.—Yes.

Q.—Have you ever had any trouble with your men—strikes, or anything of that kind? A.—I cannot say that I have.

Q.—Have you in your business any dangerous machines? A.—If they put their hands in the rollers it would be serious. We never had any accidents happen. We take care, when a new hand comes in, to show him how to run things, so that there will be no accidents.

Q.—Do the boys run the machines? A.—Some of the biggest boys do.

Q.—Has the factory inspector ever visited your factory? A.—I do not think he has.

Q.—You would have known it if he had been there? A.—Yes.

Q.—How often do you pay your hands? A.—Every Saturday night.

Q.—In cash, and in full? A.—Yes.

Q.—Do you know any concern in Ottawa, or around Ottawa, that does not pay the men in cash? A.—I do not know of any.

By Mr. ARMSTRONG :—

Q.—Have you got any boys that you pay less than \$4 a week to? A.—We did pay \$3 a week to some of the boys; we pay them all \$4 now.

Q.—When boys go on to learn the cracker-making, how much do they receive? A.—Different prices, according to the size of the boy, and what they can do. We would not give them all \$4 a week.

Q.—What is the average amount you give the boys per week when they go on first? A.—We have not any now less than \$4 a week.

Q.—Do you give them \$4 a week when they go on first. A.—Sometimes we get them less than that at first. One boy, who commenced five years ago at \$2, is getting \$6 a week now.

Q.—How long does it take a boy to learn cracker-baking? A.—About four years; but none of them stay that length of time. They get their trade sooner, and obtain bigger wages some place else.

Q.—After serving their apprenticeship they do not stay with you? A.—I have not taken any apprentices. I just give them so much a week, and they do what they are told.

Q.—How many journeymen have you in your employ? A.—Four or five.

Q.—And they receive from \$7 to \$9 a week? A.—I cannot pay \$9 a week—the general price is from \$7 to \$9. I do not know whether there are any now, but they got \$7.50 a week all winter.

Q.—What did you pay those five men? A.—A dollar and a quarter a day—\$7.50 a week.

Q.—When they work over-time do they receive extra for it? A.—Yes; but they do not work over-time; they generally receive the same rate of wages for over-

time; but we do not like to work at nights. We are satisfied if we can keep the factory running for ten hours a day.

Q.—What kind of employment are the girls engaged in? A.—Packing biscuits.

Q.—What age is the youngest? A.—The girls are of different ages—from sixteen to twenty.

Q.—What would be the pay of these girls? A.—They get \$3 and \$4 a week.

Q.—Have you any girls younger than sixteen or eighteen? A.—I never asked one their age, but I suppose they will be sixteen or eighteen—somewhere about that.

Q.—Are they engaged in lifting the boxes when they are packed? A.—Yes; they generally lift the boxes weighing fifteen pounds and set them down.

Q.—Are the boxes which they lift only fifteen pounds in weight? A.—Generally about that—some of them are thirteen or fourteen pounds.

Q.—Do you consider that light work? A.—They all like it very well; they prefer it to working in the house.

Q.—Do any of them work at night? A.—No.

Q.—Are they allowed a full hour for dinner? A.—Yes, sir.

Q.—Do they generally go home to their dinners? A.—Not all; those who live near by do.

Q.—The others stay in the factory. Have you a separate room for lunch? A.—No; they generally eat their lunches in the packing-room.

Q.—Are there any young men and young women in the same room? A.—No; the young men and women are on different flats.

Q.—Are there conveniences for both sex? A.—Yes.

Q.—What is the sanitary condition of the bake-shop? A.—Fair.

Q.—About what is the height of the ceiling? A.—Between 11 and 12 feet.

Q.—How many windows are there in the shop? A.—Eight or ten in each flat.

Q.—Is the engine in the same room where the hands knead the dough? A.—It is where the mixing machines are—but not on the same flat where it is run through the machines.

Q.—Is the factory warm in the summer time? A.—No; it is just about comfortable.

W. ANDERSON, called and sworn.

By Mr. CARSON:—

Q.—You are book-keeper for Mr. J. R. Booth? A.—Yes.

Q.—Can you give the Commission an idea as to the total number of men that Mr. Booth employs? A.—I never could tell that exactly, but it is somewhere between 600 and 700.

Q.—You mean in Ottawa? A.—Yes.

Q.—Taking that number of men, and dividing them up in this way—first, those up the river—what do the men who go up to the shanties as axe-men average per month? A.—At the present time log-makers get about \$21 a month and board.

Q.—When they are in the shanties do they draw any money, or can they draw any of their pay if they wish? A.—Oh, yes; just as they want it. The wives of the married men draw at the office monthly. They arrange for this before they leave. Those who are not married often get orders and money to send home.

Q.—Do the men whom you generally employ in the bush in winter work for you in the summer time? A.—No; they are a different class of men: When the mills shut down we send a good many men to fill up gangs, but it is necessary to have men in the bush before the mills shut down, so we have different men.

Q.—What do men on the booms average? A.—About \$7.50 a week.

Q.—And those on the platform? A.—Those handling deal get about \$9 a week; those handling boards from \$7 to \$7.50 a week.

Q.—What number of hours do they work a day? A.—I think they work from 6 to 6.

- Q.—With an hour for dinner? A.—Yes.
- Q.—That is eleven hours a day? A.—Yes; we shorten some when we are running at night.
- Q.—Do the night gang run the same as the day gang? A.—I think it is an hour shorter. Probably it may be the same, because they only get half an hour at midnight, but I am not positive about that.
- Q.—What would men who run a gang be worth? A.—The slabbermen \$9 and the gang-men \$10.
- Q.—And the men we call the tail-men? A.—The men who do the wheeling away, \$7.50 a week.
- Q.—Does your concern employ boys in the mill? A.—Yes; a lot of boys. I do not know what they do, but I think they are about the shingle and lath business.
- Q.—Can you tell us the age of the youngest of those boys? A.—I can only tell them by seeing them come into the office—twelve or fourteen, I imagine—perhaps there are boys as young as twelve.
- Q.—Do you know if there are any younger than twelve? A.—I do not think so.
- Q.—Those boys at twelve years of age working there—are they engaged by the concern or by persons who have contracts? A.—Principally by the men who have the contracts for cutting the shingles and laths. We may have a few ourselves doing light work in the re-sawing shop.
- Q.—Does your concern pay the same price for pilers as for platform-men? A.—I think they range the same for deal.
- Q.—Is there a general understanding among the mill owners in the spring as to the rate of wages they will pay? A.—I never heard of them consulting at all.
- Q.—Each employer sets his own price? A.—Yes; the different foremen may regulate it in some manner.
- Q.—The teamsters get about the same as the platform-men? A.—I think the teamsters get about \$7.
- Q.—Are the teamsters employed the year round? A.—Yes; they generally go to the bush with the teams after the mills shut down.
- Q.—Have you ever considered as to what the men who work in the mills and in the bush would average a year? A.—I have not given it much thought.
- Q.—Could you, by any record you may have, give what is about the yearly income of the men who are supposed to work by the week the year round? A.—We have men here who work continuously through the year—married men, whom it is necessary to keep about the mill. Do you mean the average of the whole?
- Q.—Supposing a man works in the mill in summer time and then goes to the bush in winter—if he works every day, what would his average pay be? A.—About \$8 a week for thirty weeks, and the balance of the time \$21 a month and board.
- By Mr. ARMSTRONG :—
- Q.—About \$7.50 a week the year round? A.—Yes; or probably it would represent \$8 a week all the year round.
- Q.—Say \$400, on an average? A.—I suppose so.
- By Mr. CARSON :—
- Q.—Can you give the Commission an idea of the cost of supplies in 1877–82 and 1887? A.—I could give it, say in 1877–8, 1884–5 and 1887–8.
- Q.—Will you please give us the figures? A.—Poik, 1877–8, \$16 a barrel; 1884–5, \$15.50; 1887–8, \$18. Flour, first period, \$5.50 a barrel; second period, \$4.30 a barrel; this year, \$4 a barrel. Beans, first period, \$1.25 a bushel; 1884–5, the same; this year \$2.12. Tea, 1877–8, 27½ cents per lb.; 1884–5, 20 cents; this year 18 cents per lb. Sugar, first period, 7½ cents per lb.; second period, 5½ cents; this year 6¾ cents per lb. Syrup, first period, 55 cents a gallon; second period, 35 cents; this year, 50 cents per lb. Rice—I have not the figures for 1877–8; in 1884–5 we paid \$3.65, a hundred pounds; this year \$3.50. Dried apples, in 1884–5, cost 5¾ cents per lb.; and this year 6¾ cents. These would be the average prices for the year. Of course during the winter season we send other stuff up to the woods.

Q.—During the time you have been in the employ of the firm have there been any labor troubles? A.—I do not know that we have ever had any.

Q.—No more than the general go-and-come of the men? A.—There may have been a little dissatisfaction among a few men, but the mills never shut down on account of the men.

Q.—Have you ever had any accidents about the mill? A.—Yes; there have been a few.

Q.—Did they occur from the carelessness of the hands or from carelessly erected machinery? A.—I think largely from carelessness of the men.

Q.—Is it the desire of your concern to use every precaution to protect life and limb in the mill? A.—Mr. Booth is particularly careful in matters of that kind.

Q.—Have you had the factory inspector through the mills? A.—Not that I am aware of.

By Mr. ARMSTRONG:—

Q.—You would know if he had been there? A.—It is likely he would have called at the office.

By the CHAIRMAN:—

Q.—Do you know if there has been any inspection of the mill? A.—I do not think so.

Q.—Do you know if the inspector has been in any other factory in Ottawa? A.—Not that I am aware of.

By Mr. ARMSTRONG:—

Q.—Have you a copy of the Factory Act in your establishment? A.—No.

Q.—It is not hanging on the walls of the mill? A.—I do not think it is there.

By the CHAIRMAN:—

Q.—So far as your mill is concerned, the Ontario factory law is a dead letter? A.—So far as I know.

Q.—It is a dead letter? A.—I am not prepared to say it is a dead letter; it may be all right—the inspector may have been there.

Q.—But you do not know anything about his being there? A.—No.

By Mr. ARMSTRONG:—

Q.—If the men in the woods require any means to assist their families, do you give them orders on stores? A.—No; usually before going up the married men bring their wives to the office, and it is arranged that we pay them a certain sum, giving their wives, say \$15 a month if the husband gets \$20 a month; the wife draws that.

Q.—You give it to them in cash? A.—Oh, yes.

Q.—Do you supply the men with outfit? A.—Yes; we keep some real necessaries, such as socks and mitts.

By the CHAIRMAN:—

Q.—That is up in the shanties? A.—Yes; simply because it is necessary for the men.

Q.—Where they are wanted? A.—Exactly.

By Mr. ARMSTRONG:—

Q.—Is it optional with the men to buy them? A.—Yes; but they have no alternative in some cases; perhaps there are no stores within a distance of 25 miles. The goods are sent up for the convenience of the men, and not for the purpose of making any profit.

Q.—Can you tell us, since you have been in the industry, if the wages of the men have increased all round? A.—I have been with Mr. Booth twenty years, and I think wages are better now than they were twenty years ago.

A.—What percentage have they increased within the past ten years? A.—Of

course, in 1878 wages were pretty low. I have no doubt they are 20 per cent. better now than then—probably 25 per cent.

Q.—From 20 per cent. to 25 per cent. better? A.—I guess they are that now.

Q.—Do any men who go to the stump for timber own their own houses?

A.—The men are very largely farmer's sons or countrymen. They come in just when they get their crops saved. Of course, there are a good many Frenchmen who do nothing else but lumber. They go up in the fall, follow the drive, and board in town the rest of the time, doing nothing.

Q.—Where do you generally find a market for your timber? A.—More than one-third goes to the English market.

Q.—Do you ship it yourselves? A.—No; we send it to Quebec.

Q.—Where does the remainder of your output go? A.—Probably 20 per cent. goes to the home trade; the balance to the United States.

R. E. JAMIESON, called and sworn.

By Mr. CARSON:—

Q.—You are a member of the firm of R. E. & J. C. Jamieson? A.—Yes.

Q.—What is your business? A.—Baker and grocer.

Q.—How many men do you employ in the bake-shop? A.—There are three men in the bakery all the time; and we have a confectionery, besides, where we employ two women.

Q.—Do you employ any boys in the bakery? A.—No.

Q.—What is the average earnings of the bakers? A.—The foreman has \$10 a week all the year round and the others \$8.50 each.

Q.—And the women? A.—One is an apprentice, the other gets \$1 a day.

Q.—Do you employ any clerks in your store? A.—One besides ourselves.

Q.—What are the earnings of that clerk? A.—Thirty-five dollars a month.

Q.—What number of hours do the bakers work? A.—Now, from five in the morning to half-past three in the afternoon.

Q.—Do they work night work? A.—Not now.

Q.—How long is it since they ceased night work? A.—Six weeks ago.

Q.—Did you voluntarily give them the day work? A.—They asked for it and I granted it.

Q.—Do you find it any inconvenience to yourselves or your customers in having the men work day work? A.—It is an inconvenience to those who have to be supplied early in the morning. The rest of the day there is no inconvenience, although the drivers are a little later in the evening getting through.

Q.—Can you give them just as good bread by the men working in the day time as at night? A.—I do not see any difference.

By Mr. ARMSTRONG:—

Q.—Is it just as fresh as they want it? A.—The first bread is out by 10:30 in the morning, but from 7 to 10:30 those customers that have to be supplied then have to take the bread of the day before. Some complain considerably about that.

Q.—How is the ventilation of your bake-shop? A.—It is good.

Q.—Do you use machinery? A.—Yes.

Q.—Have you had the factory inspector there? A.—No.

Q.—Is there a separate water-closet for the women and men? A.—The water closets are outside.

Q.—Are they separate? A.—No; they are not separate.

Q.—When your men asked you to allow them to work day work, did they simply come to you and make application, and talk the matter over with you, and you granted them day work, or did they threaten to go on strike? A.—They did not threaten anything. They spoke to my son about it, and he had not any great objections to their trying it, so he told them they could do it. They did not come to me at all.

Q.—How often do you pay your men? A.—Once a week.

Q.—In cash? A.—Yes.

Q.—And in full? A.—In full.

Q.—Do you know any concern paying its men in due bills? A.—I do not.

Q.—How many women have you in your employ? A.—Two.

Q.—What might their ages be? A.—I could not tell you that. I suppose one is about twenty and the other probably twenty-eight.

Q.—What wages do you pay the women at the confectionery business? A.—One gets \$1 a day. The confectionery business is in a department altogether separate from the bakery. The bread-baking is in an upper room and the confectionery down stairs.

Q.—The oven is up stairs? A.—There are two ovens. There is a separate one for the confectionery down stairs as well; there is no connection between the two places.

WILLIAM STUART, Jr., called and sworn.

By Mr. CARSON :—

Q.—You are a contractor, Mr. Stuart? A.—Yes.

Q.—How many men do you employ on an average during the season? A.—That is a hard question to answer. Sometimes we have a lot; sometimes not so many. All winter I have had an average of nine or ten. Last summer I had twenty-five to forty; at the present time I have only seven or eight.

Q.—What class of mechanics are they? A.—I have had stone-cutters, bricklayers, masons, and carpenters and laborers.

Q.—Will you give us the average earnings of the stone-cutters? A.—Yes; I can give you what they get a day and an approximate average for the year's work. Stone-cutters for the present time get 30 cents an hour and work ten hours a day. I suppose a stone-cutter averages about eight months' work in the year. In fact, a good many of them have been working all winter, and all the year round, on and off; but when they lost time I suppose eight months would be about the average.

Q.—What do laborers earn? A.—Laborers in the building trade—I mean bricklayers' and masons' laborers—average, the present time, \$1.25 to \$1.40. Some hod-carriers get \$1.40; ordinary laborers not of any particular branch, \$1.25, \$1.30 and \$1.35; \$1.40 is the highest now.

Q.—What do bricklayers earn? A.—Bricklayers, masons and stone-cutters have been at 30 cents for the last two or three years; that has been the average per hour. Some have got more. They have been paid \$3.25 a day, but the standard wages is \$3 for the last two or three seasons.

Q.—Do you know any men working for contractors who have lost their wages through the contractor or sub-contractor? A.—Yes; in years gone by, and at the present time the men working on a church near here never got paid.

Q.—Have you known anything like that to occur lately? A.—I know last summer some of the men did not get their wages, and at the present time some men have not got their wages. They talk about putting a lien on the building.

Q.—As an employer of labor, do you think a workingman's claim for wages should come in prior to a chattel mortgage? A.—I do. I saw an instance of that in Ottawa about three months ago. A neighbor of mine, a workingman, worked for a concern in Ottawa which failed. The man asked my opinion as to what was best to be done in order to get his wages. I told him his wages came in first, but reading up the law I found a chattel mortgage came in first. I would advocate that a workingman's wages should come in before a chattel mortgage.

By Mr. ARMSTRONG :—

Q.—You refer to the lien law? A.—Yes; the law in Ontario, as I understand it, gives a chattel mortgage priority before wages. In case a man fails and assigns under chattel mortgage, the workman cannot get his wages.

- Q.—How often do you pay your men? A.—Every two weeks.
- Q.—In cash? A.—Yes.
- Q.—Do you know of any concern in or around Ottawa that does not pay its men in cash? A.—Not within the city of Ottawa or 30 miles of it. I have seen scrip belonging to a certain concern, but I do not know of any business in Ottawa where the proprietors do not pay their men in cash.
- Q.—Do you know, of your own knowledge, that the workingmen are losers through being paid that way? A.—I could not answer that question.
- Q.—Have you ever given the matter of the establishment of a bureau of labor statistics any consideration? A.—I have thought the matter over, and I think it would be a good idea if we want men. I had a large contract two years ago and I could not get men for a month or two. I had to go to Montreal, and rode all over the country to secure men. It would be a good idea to have a bureau of labor statistics, where bosses requiring laborers could write and secure all the labor they want.
- Q.—You come into contact a great deal with the workingmen? A.—I do.
- Q.—Do you know the condition of the working classes in Ottawa? A.—Yes; I am pretty familiar with it. I have worked journeyman for a number of years, and have been connected with the workingmen for the last twenty years or more.
- Q.—What is that condition, as you know it to be? A.—I should say the condition of the working classes in Ottawa, at the present time, is very fair; most mechanics, probably two-thirds, own their houses and the property they live on. Of the laboring class, a few own their own houses; but the mechanics, as a general rule, have all pretty fair homes, and I do not hear any complaints—we have got along very well in Ottawa. We have not had any strikes in the building trade for a long time; there is a kind of mutual understanding between the bosses and the men. There is no regular standard of wages; it goes by competition—it never goes below \$3 a day; sometimes it goes higher; we generally range the men.
- Q.—Is it the practice of the employer to pay a man what he is worth—if he is worth \$2 a day, to pay him that? A.—That is about the experience in Ottawa. Last year and this year I have paid stone-cutters, masons and bricklayers from \$2 to \$3 a day, and have never objected to pay them; it all depends on the quality of the men.
- Q.—About what would be the average value of the dwellings of the mechanics of which you spoke? A.—From \$1,000 to \$2,000; a good many mechanics do not live in the city, but round the outskirts.
- Q.—About how far from the post office? A.—Those that live in the city are probably within the radius of a mile; a good many living outside the city limits are in the suburbs immediately adjoining.
- Q.—Would the average be ten minutes' walk from their work? A.—I should say from ten to fifteen minutes.
- Q.—How much do you pay carpenters—say, good bench hands? A.—I have carpenters in my employment; within the last six months I have had twenty odd carpenters working for me. Their wages range from \$1.65 to \$2 a day; \$1.65 was the lowest and \$2 the highest.
- Q.—What would be the average wages paid carpenters in Ottawa? A.—The average wages is about \$1.75—that is, taking it all the year round. At the present time, 20 cents an hour or \$2 a day is the average for good men.
- Q.—Is there any difference in the wages of the outside carpenter and the man employed on the bench continually? A.—No; some of the outside carpenters get as much as the men at the bench. Generally, however, the men at the bench will get a little more than the outside carpenters.
- Q.—Do you ever employ any plasterers? A.—Sometimes.
- Q.—Are they paid by the day or by the piece? A.—By the day.
- Q.—What are the wages paid a plasterer? A.—His average wages are from \$1.75 to \$2 a day.
- Q.—For ten hours' work? A.—Ten hours is the regular time we work, except that the bricklayers, masons and stone-cutters quit at 5 o'clock on Saturday. The carpenters

have also done that within the last year or two. Bricklayers and masons have been in the habit of doing that within the last five years; we established a masons', bricklayers' and stone-cutters' union about eight or nine years ago, and that was one of the things they got done, namely, that they should quit at 5 o'clock on Saturday. There is an agitation now among the men to quit at 1 o'clock on Saturday.

Q.—Is there any difference in wages between the plasterers' laborers and the builders' laborers? A.—Yes.

Q.—Who receives the highest? A.—The plasterers' laborer receives a little the highest. He gets \$1.40 to \$1.50 per day, and has a little more regular employment. There is considerable work done here in the winter time, and the plasterers' laborers have consequently more regular employment than the builders' laborers.

Q.—Do the men who go on the scaffold to work erect it? A.—Among the bricklayers it is generally the laborers who make the scaffold, and sometimes the bricklayers help them, but generally the contractor keeps some handy men specially for that purpose.

Q.—Do you know of any accidents to happen through defective scaffolding? A.—Yes; I have known some accidents to happen. I have had one or two instances myself, but they are not very often.

Q.—Do you think it would be advisable to appoint a building inspector here? A.—Certainly.

Q.—Whose duties should include the inspecting of scaffolding? A.—Yes.

Q.—If men get injured from falling off scaffolds, do they, as a general thing, receive anything from the contractor? A.—Some of them do, but some of the contractors are not able to pay them anything. Generally, the contractor pays them something, and sometimes a subscription is taken up amongst the men. Unfortunately for the contractors around Ottawa, however, there is so much competition that they are not very rich, and necessarily they are not able to pay a man if he gets hurt.

Q.—Is it the very dishonest contractor or dishonest sub-contractor that the workingman loses most from? A.—We have never had a great deal of wages lost that way. If there has been any, it has been both from sub-contractor and principal contractor, but more, I should say—a little more—through the sub-contractor.

Q.—Supposing before the building is completed the contractor fails, and the workingmen are not paid two or three weeks' wages, can they obtain their wages through the lien law? A.—I will answer that to the best of my ability. I was on a building two years ago when a case like that happened. The contractor failed, and the foreman of the men put a lien on the building; and, as I understand it, the lien law works thirty days' back from the time the lien is put on. Whatever was done before that time they did not get paid for, so that if a man is working on a building, and wants his wages for more than a month, he could not get more than the thirty days.

Q.—The lien law is defective in that way. A.—Yes; defective, because it only works back thirty days from the day it was put on.

Q.—You consider, then, the lien law is defective as regards its pecuniary effect on the working classes? A.—It is a little defective.

Q.—What wages are paid lathers in the building trade? A.—They are generally paid by the bundle.

Q.—How much per bundle? A.—From 10 to 15 cents; 12½ cents would be the average.

Q.—Do the plasterers work by the day? A.—Principally; there is an awful lot of small bosses in Ottawa, and whatever men they have working for them work by the day.

STEPHEN ROBITAILLE, called and sworn.

By Mr. CARSON :—

Q.—What business do you follow? A.—I am a kind of general man round Mr. McKay's establishment.

Q.—Have you any idea of the earnings of a man who works round the concern? A.—It depends on the work they are doing. The laboring men get, on an average, about \$7 a week, I suppose.

By Mr. ARMSTRONG :—

Q.—Is there any skill required in your work? A.—Some parts of the work require it. I attend to the stone-work and brick-work.

Q.—What may your wages be? A.—In summer time \$2 a day, and in the winter \$1.50; about \$1.75 on an average.

Q.—Why are the wages decreased in winter time? A.—Because I do not work at the same work. In the winter time I generally attend to the furnace and boiler.

Q.—Do you work the same hours in winter as in summer? A.—Yes.

Q.—And your wages are decreased 50 cents a day? A.—Yes.

Q.—Is it day work? A.—Yes.

Q.—Do you ever work at night? A.—No, sir; except if it be necessary, but that is very seldom.

Q.—Do you inspect boilers? A.—No, sir.

Q.—Are you constantly employed during the year? A.—Yes.

Q.—What would be the average wages of unskilled labor? A.—About \$7 a week, I should think.

Q.—Can you speak definitely as regard the wages of millers? A.—No, sir.

Q.—Can you tell us what workmen usually pay for a house, say of five rooms, in an ordinary locality, with ordinary conveniences? A.—It depends a good deal on the locality in which the house is situated.

By Mr. CARSON :—

Q.—Say, within ten minutes walk? A.—For a five-roomed house, from \$6 to \$8 a month. That would be in Rochesterville. Coming further this way, towards the centre of the city, you would pay \$10 for such a house—that would be about the Chaudière.

Q.—Has house rent increased in Ottawa during the past five years? A.—It has.

Q.—Could you give us the rate of increase? A.—Five years ago I was renting a house for \$5 a month and now the same house is renting for \$8

Q.—Do you think you are receiving sufficient remuneration for your labor?

A.—I cannot complain; I am perfectly satisfied.

THOMAS STODDARD, called and sworn.

By Mr. CARSON :—

Q.—What is your business? A.—Pattern-maker and machinist.

Q.—What kind of work? A.—Foundry work, generally.

Q.—You are a competent man in many other mechanical lines, are you not?

A.—Yes.

Q.—You are in a position, I believe, to give us the number of men employed in W. H. Baldwin & Co.'s? A.—Yes.

Q.—About how many machinists are employed in the concern? A.—Eight.

Q.—And foundrymen—moulders? A.—Five, besides laborers.

Q.—What would be the average earnings of those machinists? A.—They mostly earn \$2 a day. The average is \$1.85 for machinists.

Q.—And for moulders? A.—One dollar and eighty cents a day.

Q.—And for blacksmiths? A.—We have only one blacksmith; we pay him \$2 a day.

Q.—What number of hours do your men work? A.—The number of hours varies according to the requirements, but usually ten hours a day and sixty hours a week.

Q.—Do they work night work? A.—Often, when they are required.

Q.—What number of hours do they work at night to complete a day—or, in other words, how much per hour is added for night work? A.—One-half their wages is added; for every hour they work they receive an hour and a-half's pay.

Q.—How often are they paid? A.—Every second week.

Q.—Can you give us an idea as to the earnings of the men in the sash factory? A.—I do not know how they pay the men in the sash factory; I have nothing to do with that.

By Mr. ARMSTRONG:—

Q.—Do you think it would be a benefit to a pattern-maker if he knew how to design? A.—Oh, yes.

Q.—Have you given any thought to technical education in connection with mechanics? A.—Yes; I have taken every occasion to improve myself in that direction.

Q.—Do you believe it would have a tendency to make apprentices at the various trades more apt if they had a training in, say, free-hand drawing, moulding, designing and modelling? A.—Modelling, moulding and practical work?

Q.—Not practical work, but mere theoretical? A.—Yes; it would be profitable for all mechanics in our branch of trade; that is, it would be very profitable for machinists to know mechanics. I do not know of any institution where they teach moulding and modelling. Not many of our class of people have attained to that degree of perfection.

Q.—Do you think that these subjects could be taught in our public schools without any injury to the present branches taught there, or could they be substituted for some now taught which are not quite as useful? A.—It would be profitable to mechanics, but I do not know whether it would be of general benefit for all pupils entering school to follow out mechanical trade.

Q.—Would you prefer to see them taught in separate institutions or in connection with the public schools? A.—I should prefer them taught in a separate institution.

Q.—Can you speak from a knowledge of how technical teaching is done in the old country? A.—Yes.

Q.—Will you give the Commission some information on that point? A.—I attended the Watt Institution, in Edinburgh. Mechanics, natural philosophy, chemistry and mathematics were taught there, with some other subjects, including mechanical drawing. I have derived great benefit in all my trade experience from the knowledge I acquired there. Mechanical teaching—not exactly mechanics proper, but physics, the laws governing air and water, and so on—a mechanic having that knowledge is more apt to be quick in discerning whether there is anything the matter with steam-engines, boilers, water-wheels, or any part of the machinery.

Q.—What is your opinion as regards the kindergarten system? Do you think it has a beneficial effect in training the hand and the eye of the young? A.—I do not think I would derive much benefit from that; I do not think I would wish to have my children taught that until they could appreciate it.

Q.—What about mathematics: Do you think Euclid should be taught. A.—Yes, sir.

Q.—In fact, every pupil in the common schools should get an outline of that study? A.—Yes; to get a smattering—but the more the better.

Q.—Are there any night schools in connection with the public schools in Ottawa? A.—I am not aware of any night classes in connection with the public schools.

Q.—Is there a free library? A.—None that I know of. There is no library, except the Parliamentary library; but nearly all the churches have libraries.

Q.—Have you any other information that would be a benefit to the Commission in regard to your trade? A.—Not that I know of—beyond what I have said.

Q.—Do you know if wages in your trade have increased during the past five years? A.—I do not think that our wages have increased any during the past five years.

Q.—Do you believe in the indenture system? A.—No.

Q.—Why not? A.—I was an indentured apprentice myself and I had not my trade taught me; but I was bound, nevertheless, to fulfil my term, and when I had finished my apprenticeship I had still to begin to learn my trade.

Q.—Was it the fault of a system, or of the boss, in not carrying out the writings of the indenture? A.—The fault, I considered, lay chiefly in my not being able to go to a public work. When I had finished my time I learned to do, as much work as they required, but it was not done, and it would have necessitated my staying in that line of business or learning to do something else.

By the CHAIRMAN :—

Q.—What do you think is the feeling of parents about here relative to indenturing their children for a term of years? A.—Not many care to indenture their children.

Q.—Is it a prevailing custom in the old country? A.—I think the custom has changed considerably within the past fifteen years. When I was an apprentice there were about as many one way as another. I do not think there are many indentures now in the old country, but I have not been well acquainted there for the last ten years.

S. SLINN, called and sworn.

By Mr. ARMSTRONG :—

Q.—What is your business? A.—Baker and confectioner.

Q.—Are you an employer of labor? A.—Yes.

Q.—How many bread-bakers do you employ? A.—Three bread-bakers and two cake-bakers.

Q.—What wages do you pay them? A.—Twelve dollars for the first hand and \$10 for the others.

Q.—How many hours do they work? A.—They have to make one batch of bread each; three men, three batches. They work about ten hours.

Q.—What time do they commence and leave? A.—They have to make a batch; when it is done they quit.

Q.—What time do they go to work? A.—This week, at six or half-past.

Q.—Is ten hours the ordinary day's work? A.—I have worked myself and got through the batch in less time.

Q.—What wages are paid cake-bakers? A.—They get \$10 and \$11.

Q.—Eleven dollars to the foreman? A.—Yes.

Q.—Do they work day work? A.—Yes; the bread-bakers want to work day work; they are about striking.

Q.—Would it make any difference to the public? A.—I think so.

Q.—Are there any bakers in Ottawa who work day work? A.—Yes; they have just started it two weeks ago.

Q.—Has it made any difference to the public? A.—Yes; we cannot sell the hotels what they want at all.

Q.—Do the people want fresh bread? A.—If they can get it.

Q.—Have the men asked for more convenient hours to work? A.—Yes; they want to work in the day time, all of them. They have given me a length of time to make my shop convenient to let them work in the day time; it has caused me to spend some money to arrange that.

Q.—Have you any apprentices? A.—I had one started two weeks ago.

Q.—Who runs the rolling machines? A.—I have not one at present.

Q.—Do you use coal in the furnace? A.—No; wood.

Q.—What is the sanitary condition of the bake-shop? A.—I think it is first-class; it is a new one.

Q.—Is the ventilation good? A.—Yes; we have all the ventilation we want.

Q.—Have the wages of bakers increased during the last five years? A.—They get \$4 a week more than I did ten years ago.

Q.—Is the price of bread higher than it was ten years ago? A.—The price of bread depends on the price of flour, but the profits on bread at present are not as good as ten years ago. The profits of bread vary according to the price of flour.

By the CHAIRMAN:—

Q.—Why do the hotels complain of the proposed arrangement with the men? A.—Because they want rolls for breakfast.

Q.—And they have to do without now? A.—They make them themselves, I suppose.

By Mr. CARSON:—

Q.—Is it your intention, Mr. Slinn, if you make the improvements, to allow the men to work day work? A.—I guess I will have to. The men are running the bosses now. I had an apprentice who should have been working with me to the 1st of May, but he has been in business for nine months now. It is no use trying to keep them if they want to go. If you do they will spoil the stuff on you.

By Mr. ARMSTRONG:—

Q.—Have the men ever spoiled any baking on you? A.—Yes.

Q.—Intentionally or accidentally? A.—It is pretty hard to prove either. They may put in a bad egg in a batch of cakes, and the whole is gone.

W. H. PENNOCK, called and sworn.

By Mr. CARSON:—

Q.—What is your occupation? A.—I am Savings Bank clerk in the Ottawa Post Office.

Q.—How long have you been engaged in your present occupation? A.—About ten years.

Q.—Are you in a position to tell the Commission what class of people are depositors in the Post Office Savings Bank? A.—Only from my own observation. We do not keep any records in our office; the records are at the head office.

Q.—You can tell us the class of people? A.—Yes; I can tell pretty much. Farmers are the most numerous class of depositors.

Q.—What next? A.—Mechanics come next; then general laborers.

By the CHAIRMAN:—

Q.—What percentage of farmers, mechanics and laborers are depositors? A.—I could not tell that, but I can tell the average amount deposited by each class.

Q.—Well, give us the proportion of deposits? A.—The farmers have \$300 each, on an average, to their credit.

Q.—In a year? A.—No; that is a total deposit.

By Mr. HELBRONNER:—

Q.—And the mechanics? A.—About \$150.

Q.—And laborers? A.—Less than that—\$100, or so.

By Mr. CARSON:—

Q.—Do you mean a year? A.—No; that is the total average to their credit.

Q.—Do these classes make regular deposits? A.—The farmers, as a rule, deposit their money in the summer and fall, and draw it out in the spring sometimes.

Q.—What is the limit of the yearly deposit? A.—Three hundred dollars is the yearly limit.

By Mr. ARMSTRONG :—

Q.—Up to how much? A.—One thousand dollars.

By Mr. CARSON :—

Q.—Do many run up to \$300 in the year? A.—Yes; as a rule, they like to deposit that.

Q.—In what season of the year are the deposits most frequent, and when are the largest deposits made? A.—The fall and early winter, I think, is the busiest season.

Q.—Is there any season of the year more than another when these deposits are withdrawn? A.—Yes; I think the spring.

Q.—Have you any knowledge as to the purposes for which these deposits are withdrawn? A.—No; except that the farmers require money in the spring for seeding and general purposes.

Q.—Do mechanics draw their deposits in the spring? A.—Not so much as the farmers. I do not think mechanics have any stated time when they draw their deposits; there is not any certain time of the year for them.

Q.—Do you find deposits in the local savings bank on the increase or decrease? A.—They are certainly on the increase. They say that last year the withdrawals from the Ottawa office were more than deposits; that was, to a great extent, from cross-checks, the withdrawals from other parts of the Dominion having gone through our office; being sent to different parts of Canada—Manitoba, and the North-West, and some to the States—in that way they largely increase the withdrawals.

Q.—Are you in a position to give us the amount of deposits made last year by mechanics and the working classes generally? A.—I cannot.

Q.—Could you furnish them? A.—I could, if the superintendent would get up a statement.

Q.—Could you obtain his permission and furnish the amount deposited in the Ottawa Post Office by mechanics and workmen generally last year? A.—A statement of that kind is not public, but I might endeavor to secure it.

By Mr. ARMSTRONG :—

Q.—Do you believe that the deposits from the working classes would be greater were there no limit as to the amount? A.—The farmers certainly would deposit more; we have to refuse their money, sometimes.

Q.—With regard to the working classes in the cities: how do they stand?

A.—The average of their deposits is not so large at present.

By Mr. CARSON :—

Q.—Do they often come up to the \$300 a year limit? A.—The average does not.

Q.—What is the lowest amount that can be deposited in the Post Office Savings Bank? A.—One dollar.

The Commission then adjourned until the evening.

#### —

#### EVENING SESSION.

The Commission resumed its enquiry in the the City Hall, Ottawa, 8 at p.m.

W. J. CAMPBELL, called and sworn.

By Mr. CARSON :—

Q.—What is your business? A.—Boiler-maker.

Q.—How long have you been engaged in the business? A.—In Ottawa, about eighteen years.

Q.—How many men do you employ in your trade? A.—On an average, we have about twenty.

- Q.—Do you employ any boys? A.—Yes.
- Q.—What is the age of the youngest of the boys? A.—Fourteen, I think, is the youngest we have now.
- Q.—Are the boys taken on as apprentices? A.—Yes.
- Q.—What wages do you give them? A.—We generally start them at \$3 a week.
- Q.—And the next year? A.—They increase \$1 a year after that.
- Q.—Are they indentured? A.—No.
- Q.—Do you approve of the indenture system? A.—I tried it, but it did not work satisfactorily.
- Q.—What is the average wages of a first-class boiler-maker in Ottawa? A.—About \$2.25 a day.
- Q.—Would that be about the average? A.—For a good man.
- Q.—Have you any men in your employ not earning that? A.—Yes.
- Q.—About how many are earning that? A.—Three or four of them.
- Q.—About how many are not earning that, and what do they earn? A.—The rest earn \$1.75 a day down to \$1.25.
- Q.—Do you employ any unskilled labor in your business? A.—Yes.
- Q.—What would unskilled laborers earn? A.—One dollar and twenty-five cents a day.
- Q.—How often do you pay your men? A.—Every fortnight.
- Q.—Do you pay them in cash? A.—Yes.
- Q.—Do you know of any concern in or around Ottawa which does not pay its men cash? A.—I cannot say I do.
- Q.—Do you use machinery in your business? A.—Yes.
- Q.—Are any of those machines considered dangerous? A.—Not particularly so.
- Q.—When you take the boys on as apprentices are they given every opportunity of learning the trade in all its branches? A.—They are given every facility in the world.
- Q.—What number of hours do your men work a day? A.—Ten.

By Mr. ARMSTRONG:—

- Q.—How long do the boys serve an apprenticeship? A.—As a rule, we ask them to serve four years. They generally do that.
- Q.—After they serve four years do they receive journeymen's wages? A.—Not directly; It scales up, according to their ability. If a boy is extraordinarily smart we do not keep him at the low scale for four years. Some of the boys, during the last year, have been getting \$1 a day, where they are all only entitled to \$4.50 a week.
- Q.—Do you think four years is a sufficient time to learn the business? A.—I do not think it is—that is, not to make a good man of him.
- Q.—Is four years a generally recognized term? A.—It seems to me to be so in Canada; I have never heard anything to the contrary.
- Q.—Do the boys remain any length of time with you after they have served four years? A.—Yes; I have men with me who have been in my employ eleven years.
- Q.—Do you follow any industry other than boiler-making? A.—Not just now. We used to do machine work and foundry work, but not at present.
- Q.—Has boiler-making a tendency to deafness? A.—Yes; a little.
- Q.—I suppose that is inevitable? A.—One cannot avoid it very well.
- Q.—Do any of your men work over-time? A.—Yes.
- Q.—Do you pay them extra for that? A.—Time-and-a-quarter and time-and-a-half.
- Q.—Have you any rules posted up in your shop? A.—Not now; we used to have rules, but they were nothing more than prohibiting smoking, or anything of that kind.
- Q.—What is the sanitary condition of the shop? A.—I think it is very good; we try to keep it good for our own sakes.

Q.—Is it well ventilated. Is there much dust and smoke? A.—Not a great deal, for an ordinary boiler-shop.

Q.—Have you patent ventilators? A.—We have ventilators in the roof.

Q.—Have you ever known your men to be desirous of receiving their pay more than once a fortnight? A.—In rare cases; some would like to be paid every day.

By Mr. CARSON:—

Q.—How many men have you in your employ who own their own property?

A.—I could not tell you that.

Q.—Have you any? A.—I do not know whether there are any or not just now; I could not say.

JAMES OLIVER, called and sworn.

By Mr. CARSON:—

Q.—You are a member of the firm of Oliver & Son, furniture manufacturers?

A.—Yes.

Q.—How long has your concern been in business? A.—Twenty-five years—not under the same name, though. The senior partner has been in the business for that length of time.

Q.—How many men do you generally employ in your business? A.—Men and boys, we have twenty-seven on our pay list.

Q.—How old are the boys? A.—I never asked any of them their ages; they are old enough to do the work; I should judge they are over fifteen.

Q.—Classing your men up, for instance, as benchmen, what would cabinet-makers average a day? A.—One dollar and seventy-five cents a day.

Q.—And machine hands, on an average? A.—About \$8 a week.

Q.—What class of furniture do you manufacture? A.—Principally of the commoner classes. We do some good work, but it is principally of a cheaper class.

Q.—Is every precaution taken in your factory to protect the men from accident? A.—As far as we can possibly do so.

Q.—How often do you pay your men? A.—Once a week.

Q.—What day have you selected as pay day? A.—Wednesday.

Q.—Do you find it more convenient for yourselves, or for the men, to pay on that day? A.—It suits our own convenience. We pay up to the Saturday night previous, so that we are not taken at a disadvantage if a man wants to leave us, having three days' pay in hand.

Q.—Have you ever had any labor troubles in your factory? A.—No; we generally get along all right.

Q.—What do first-class furniture finishers receive? A.—About \$9 a week.

Q.—Do you know anything about the financial condition of your men? A.—None of them are very well off.

Q.—Do you know if any own property? A.—There are instances of men who have been in our employ that do own their own property, but I do not know of any such cases at present.

Q.—Could you form a rough estimate as to the value of that property? A.—No; I would not care about estimating it.

Q.—How does the class of furniture your firm manufactures now compare with what you manufactured, say, ten years ago? A.—How do you mean?

Q.—In quality? A.—It is up to the standard, as far as quality is concerned, and the style is good. I think purchasers get more value for their money. That is accounted for by the increased facilities we have for turning the furniture out.

Q.—Your output is greater to-day than ten years ago? A.—Yes; one-half more, in consequence of improved machinery and the men being able to turn it out faster.

By Mr. ARMSTRONG :—

Q.—Has this machinery cheapened the article? A.—Yes.

Q.—Has it increased wages? A.—It has. The wages of ten years ago were not so good as they are at the present time. Men were working for a great deal less wages than they are to-day, as Mr. Carson can tell you.

By Mr. CARSON :—

Q.—How do wages compare to-day with ten years ago? A.—They are about one-quarter more.

By Mr. ARMSTRONG :—

Q.—Have you had any accidents in your factory lately? A.—No.

Q.—To what kind of work do you put the boys when they commence at cabinet-making? A.—Carrying stuff round the shop, making it up and cleaning up around.

Q.—Do they learn one branch of the business, or do they acquire the whole business? A.—They learn the whole of it, as a rule. Of course, when you say they learn the whole of cabinet-making they learn cabinet-making. Chair-making is a different branch.

Q.—How long do they serve an apprenticeship? A.—We do not apprentice any of them; we expect them to serve about three years.

Q.—At what branch of the business? A.—At any of it. Three years is supposed to be the time when they should be able to command journeymen's wages.

Q.—Can a boy become a good cabinet-maker in three years' time? A.—I do not say he can; I have seen men who would not make good cabinet-makers in ten years.

Q.—What are the ages of the boys you employ? A.—We never ask a boy that question; we want to get them as big as we can for the price we pay them.

Q.—Has the factory inspector visited your establishment? A.—Not that I know of.

By Mr. CARSON :—

Q.—He could not have visited the factory without your knowledge? A.—He might have; a stranger might go there, and I not know it.

By Mr. ARMSTRONG :—

Q.—Are they all Canadian woods that you use? A.—If you class black walnut as Canadian woods. It grows in Canada, but we import it from the States.

Q.—Do you import any of your veneering? A.—Yes.

Q.—These are the only two kinds you do import? A.—Yes.

Q.—Is it a man or a boy who runs the shaper? A.—It is a man.

Q.—Do you consider that a dangerous machine? A.—It is dangerous, certainly.

Q.—Does one man run it all the time? A.—Yes.

Q.—No boy is allowed to run it? A.—No.

HENRY BARRELL, called and sworn.

By Mr. CARSON :—

Q.—What is your business? A.—Baker.

Q.—Bread baker? A.—Yes.

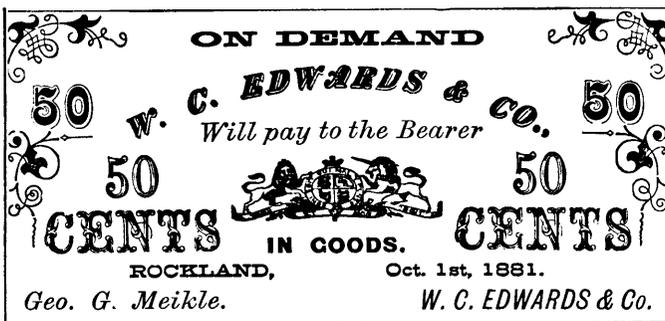

Q.—What do first-class bread bakers earn in Ottawa? A.—A foreman generally earns from \$10 to \$12 a week.

Q.—What number of hours do they work? A.—We have no particular time. We have so much work to do, and when we are through it we are finished.

Q.—Is that work done at night? A.—The majority of the men are working day work now.

Q.—How long have you been working day work? A.—Since last Monday morning.

- Q.—What brought that change about? A.—The bakers organized a union.
- Q.—Did the men strike, or did they simply make a request on the master bakers? A.—They simply made a request.
- Q.—Was it granted? A.—It was, by most of the bosses.
- Q.—The most of them. Have some not granted the request? A.—Yes; two, I think.
- Q.—Do you know if the bakers are generally paid in cash? A.—They are generally paid in cash.
- Q.—Do you know of any concern around Ottawa where the men are not paid in cash? A.—Around Ottawa?
- Q.—In the Ottawa district? A.—Yes; I do.
- Q.—How are they paid? A.—They are paid in what is called “store pay”.
- Q.—Is this store pay scrip, orders, or what? A.—Orders.
- By Mr. ARMSTRONG:—
- Q.—Did you ever see any? A.—Yes; I have one here.
- WITNESS handed in sample of shinplaster, which bore the following inscription:—

- By Mr. CARSON:—
- Q.—When these orders are issued by this concern are they accepted only in their own stores? A.—In some others.
- Q.—On what conditions are they accepted? A.—For goods.
- Q.—You cannot get cash for them? A.—No.
- Q.—Are there not shops which will cash them at a discount? A.—No.
- Q.—Have you known men who refused this scrip as payment for their wages who were unable to get what goods they wanted? A.—No.
- Q.—In the locality where this scrip or orders are given have you ever heard any complaint about that system of payment? A.—I have—a good deal.
- Q.—What were the objections to that system of payment? A.—That they were unable to go elsewhere and get goods.
- Q.—How long has that system been in vogue, to your knowledge? A.—I have known it to be in vogue for nine months, but people have told me it has been in vogue for four years.
- By Mr. ARMSTRONG:—
- Q.—Do you consider the men prefer to work day work rather than night work? A.—Yes.
- Q.—You think the baking business can be done by day without any injury to the public? A.—I think so.
- Q.—What is the sanitary condition of the bake-shops in Ottawa? A.—Not good.
- Q.—Is the atmosphere close in the summer time? A.—No; not in the summer time; the windows are open.

- Q.—Is wood or coal used in the furnaces? A.—Wood.
- Q.—Has there been an increase in wages during the past five years? A.—I believe there has.
- Q.—Is there a bread inspector in Ottawa? A.—Not to my knowledge.
- Q.—How long does a boy serve at the baking? A.—Some of them sign agreements for three years; but very few stay that length of time, though.
- Q.—Who works the rollers—the men or the boys? A.—There are no rollers used in the baking.
- Q.—You have not been through the cake-baking business? A.—No.
- Q.—You have had no connection with the cake or cracker baking? A.—No.
- Q.—Do you think the organization of bakers is a benefit to the men? A.—I think it is.
- Q.—Do you think they have got more advantages by being organized than if they were not organized? A.—I think so.

By Mr. HELBRONNER :—

- Q.—This order is dated 1881. Is this firm still issuing these orders? A.—Not these.

By Mr. CARSON :—

- Q.—Have they similar orders? A.—Yes.

By Mr. HELBRONNER :—

- Q.—Does the firm always pay in this scrip? A.—Not always.
- Q.—When a man asks to be paid in money is he paid in cash? A.—That I cannot say.

R. CLEMENTS, called and sworn.

By Mr. CARSON :—

- Q.—What is your business? A.—Carpenter.
- Q.—Are you at present engaged as a carpenter? A.—Yes.
- Q.—As a boss or a journeyman? A.—Journeyman.
- Q.—You are at present employed as a machine hand? A.—Yes.
- Q.—On the machines which you run, what is the average wages paid the men? A.—About \$2 a day.
- Q.—Is every precaution used in your establishment to avoid accidents? A.—Yes, sir.
- Q.—Has the place been inspected by the factory inspector? A.—I think so.
- Q.—How long ago? A.—About two months ago, I guess it was, since he went down there.
- Q.—Who was the inspector? A.—Mr. Rocque.
- Q.—When he inspected the factory was there any body with him? A.—Yes, sir.
- Q.—Who was the person with him? A.—I do not know him; he was an old gentleman.
- Q.—He was not a member of the firm you are employed by? A.—No.
- Q.—When passing through the factory did he examine the machines closely? A.—Not particularly.

By Mr. ARMSTRONG :—

- Q.—What is the standard rate of wages paid to wood-working machinists? A.—I cannot say.
- Q.—Have they a scale of wages? A.—Not that I am aware of. I have been in the employ of one firm for twenty-five years, and cannot speak outside our establishment.
- Q.—Of your own knowledge, can you speak with regard to house carpenters? A.—I could not say exactly.
- Q.—Can you tell us the wages of a good bench hand? A.—About \$2 a day.

Q.—Can you tell us the average wages paid *bona fide* carpenters? A.—Not the outside men.

Q.—Are there a good many men working at the carpentering business who have never served their apprenticeship? A.—Not that I am aware of; at any rate, not where I am employed.

Q.—Have the carpenters organized, or any branch of the trade? A.—Not to my knowledge.

Q.—How many months in the year are carpenters employed? A.—Where?

Q.—On the work throughout the city? A.—I cannot say definitely.

Q.—Well, about the average? A.—I suppose nine or ten months.

Q.—Do any carpenters lose their wages through the dishonesty of contractors or sub-contractors? A.—I cannot tell, of my own knowledge.

Q.—How long does an apprentice serve? A.—We do not take in apprentices where I am.

Q.—You can only speak in connection with your own shop? A.—Yes.

By Mr. CARSON:—

Q.—You are familiar with the working classes in the locality in which you live. Can you tell how many men who are in your position own their own houses? A.—That is pretty hard for me to tell.

Q.—What would be the average of those who own their own houses in the locality in which you live? A.—I suppose half.

By Mr. ARMSTRONG:—

Q.—Are they tradesmen? A.—Mostly.

By Mr. CARSON:—

Q.—Have they built these houses from their savings? A.—I could not say, but I suppose most of them have.

Q.—Do you think a man who has \$1.75 a day can support his family comfortably if he is sober, and industrious, and intelligent? A.—It would depend upon the size of his family. If he had a small family, of course he could do it by being economical.

By the CHAIRMAN:—

Q.—Does it not depend a great deal upon the wife? A.—Exactly.

By Mr. CARSON:—

Q.—Have you had any accidents in the place where you are employed? A.—No; except, perhaps, a finger cut, which did not amount to anything.

MICHAEL SHIELDS, called and sworn.

By Mr. ARMSTRONG:—

Q.—What is your business? A.—Marble-cutter.

Q.—What is the average rate of wages of marble-cutters? A.—Two dollars a day.

Q.—How many hours a day do they work? A.—Ten.

Q.—What is the rate of wages paid to polishers? A.—One dollar and twenty-five cents a day.

Q.—Are there any women employed at that business? A.—Not in this town.

Q.—Are the shops kept dry? A.—It is pretty hard to do that in the marble shop.

Q.—Do the men ever get ill on account of the water on the floor? A.—Not that I know of. I am not aware of any cases where there is any sickness that can be traced to it.

Q.—Where do you obtain the marble that is generally used here? A.—From the States, principally.

Q.—Is there much Italian marble used in Ottawa? A.—Yes; for furniture work there is a great deal of Italian used.

Q.—Is it a distinct industry from ordinary marble-cutting? A.—No.

Q.—Can you speak definitely as regards stone-cutting? A.—Yes.

Q.—What is the rate of wages paid a stone-cutter? A.—I suppose his average wages would be \$2.50 a day, although they range higher in the summer.

Q.—Is there a difference between summer work and winter work? A.—Generally, work is very flat in the winter.

Q.—Do they turn out poorer work in winter than in summer, consequent upon the decreased wages? A.—I do not think so.

Q.—The reason of the decrease, I suppose, is because the employers take advantage of the unemployed? A.—I think so.

Q.—How many months in the year, on an average, are stone-cutters employed? A.—I should judge about six months.

Q.—Do they turn their hand to any other industry? A.—I do not think many of them do.

Q.—Do any stone-cutters receive under \$2.50 a day? A.—Yes; I believe they do.

Q.—What would be the average? A.—I should judge \$2.50 a day would be the average.

Q.—Are there any stone-cutters that do brick-laying? A.—There may be an odd one here and there, but they are two distinct branches in the building trade in Ottawa.

Q.—Is there more Canadian stone than American used here? A.—Yes; the most that is used is Canadian stone.

Q.—Where does it generally come from? A.—Mostly from Hull.

Q.—Does any Pelee Island or Credit Valley stone come here? A.—Not much.

Q.—Is there much Ohio stone imported into Canada? A.—There may be up west, but not here. Of course, they have superseded it.

Q.—Have the wages of stone-cutters increased during the last few years? A.—Well, I think they are a little higher this last year than they have been for some time, but ten years ago they were higher than they are now.

Q.—What kind of stone do stone-cutters prefer to work at? A.—It all depends on the kind of stone the cutter learns his trade at; he prefers that, generally.

Q.—Do many stone-cutters in dull times leave the city? A.—Yes; a great number of them.

Q.—When a boy is taken on as an apprentice, how many years does he serve? A.—I think the apprenticeship system is not adhered to very strictly here.

Q.—Do the stone-cutters, as a body, prefer the apprentices to be indentured? A.—Yes.

Q.—Could you tell us the reason why? A.—One of the principal reasons is, they are supposed to be made better mechanics if they serve longer at the business.

Q.—When boys become journeymen do they remain any length of time in Ottawa? A.—Not many.

By the CHAIRMAN:—

Q.—What proportion of apprentices ought there to be employed? A.—I should say, probably one to five.

Q.—And in other trades would that answer the same purpose? A.—I should think so.

Q.—What is the number of apprentices now to the number of employed? A.—I could not tell you, in the stone line.

Q.—Nor in the general line? A.—They are over one to five.

Q.—What would you do with those over one in five? A.—I do not know how I would dispose of them.

Q.—But that is a serious matter—what are you going to do with the young men? A.—We should try and have the boys apprenticed for a certain term of years.

Q.—But you say a greater number are apprenticed now. Supposing there are

two in five apprenticed, what would you do with the second one? A.—I do not know what we could do with the surplus apprentices at present.

Q.—Until what age should they be kept at school? A.—Fifteen years, I should say.

Q.—You do not know what should be done with the extra number of boys above one in five? A.—No.

Q.—If a law was passed to-day we should have to decide to-morrow what to do with the extra boys? A.—If they were indentured I should allow them to put in their time.

Q.—And in five years' time, what would you do with the boys then? A.—Organized labor would have to do something to prevent the passing of the law.

Q.—Have you ever thought of any plan by which the number of apprentices would be limited? A.—I do not know what you could do with them. The majority of employers are, I suppose, in favor of getting as many apprentices as they can.

Q.—I am not speaking of that. You say the apprentices should be as one in five, and there will be a greater portion available as the world grows older—what are we to do with them? A.—That is a hard problem to answer.

JOHN LANE, called and sworn.

By Mr. CARSON:—

Q.—You have just heard the evidence given by Mr. Shields? A.—Yes.

Q.—You are a stone-cutter also? A.—Yes.

Q.—Do you agree with Mr. Shields' evidence? A.—To what part of it?

Q.—With regard to your trade? Is there anything you have to add to it? A.—No; I did not hear his evidence very distinctly.

By Mr. ARMSTRONG:—

Q.—What are stone-cutters paid a day in Ottawa? A.—They are getting from \$2 to \$2.75 at present.

Q.—Would you call \$2.50 the average rate of wages? A.—Yes.

Q.—How many months in the year are they employed? A.—They generally work while they have it.

Q.—Take one year with another? A.—About six months would be the average.

Q.—What is your opinion of the apprentice question? Do you approve of apprentices being indentured? A.—Yes, sir.

Q.—Did you hear the reasons given by the other witnesses on that point? A.—No.

Q.—What is your reason? A.—My reason is this: it gives a boy a better opportunity of learning his trade, because, being indentured, both parties enter into an obligation. The master is bound to teach his apprentice all he knows and all he does not know, or he causes it to be taught by somebody who can; my indenture is that way. The boy, in his turn, is bound to study the interests of his employer to the best of his ability. You see, therefore, there is an agreement on the part of both parties to serve the other, which would not be the case if the boy were not indentured. If he is not indentured he can leave when he wants, or if the employer desires to get rid of him he can let him go.

Q.—Has it the tendency to make a boy steady in his habits? A.—Yes.

Q.—How many years do apprentices generally serve? A.—From three to four.

Q.—Do you consider that sufficiently long to enable a boy to thoroughly acquire a business to which he is apprenticed? A.—That depends on the intelligence of the boy and the class of work he gets where he is serving his time. Some boys would never learn.

Q.—Is there more Canadian stone used than formerly? A.—Yes.

Q.—Have you any further information which would be of benefit to the Commission in connection with your trade? A.—I do not know, except I would like to

refer to the system of sub-contracting and piece-work. It would be a benefit to us if it were abolished.

Q.—What grievances do the stone-cutters experience through sub-contracting?  
A.—A sub-contractor receiving a smaller amount for the work which he undertakes than the original contractor gets for it, is compelled thereby to pay less money to his hands than the original contractor would pay.

Q.—Has it also a tendency to make the men work harder? A.—Yes.

Q.—To get more out of them? A.—Yes; and get less pay for it.

Q.—Do stone-cutters ever lose their wages through the non-fulfilment of the engagement of contractors and sub-contractors? A.—Sometimes they do.

Q.—Does it often happen? A.—Not very often.

Q.—You consider the sub-contract system a failure? A.—I do.

Q.—Do you consider the trade could be carried on just as efficiently if there were no sub-contract system? A.—I consider it could be done better.

By the CHAIRMAN:—

Q.—How long is it since boys fit to be apprentices behaved worse than they used to do? A.—I am not speaking of the boys' behavior; I am going into the merits of the case.

Q.—You cannot speak, in fact, from your own knowledge? A.—No.

Q.—How long is it since you were apprenticed? A.—Thirty-four or thirty-five years ago.

HUGH NESBITT, called and sworn.

By Mr. CARSON:—

Q.—What is your occupation? A.—Boiler-making.

Q.—What are the wages of boiler-makers in Ottawa? A.—So far as I know, \$2 a day.

Q.—Are there any boys employed in your trade? A.—There are.

Q.—Do you know if every opportunity is offered to a boy to learn his trade thoroughly when he commences? A.—It is.

Q.—How often are you paid? A.—Once a fortnight.

Q.—On what day? A.—Monday.

Q.—Do you prefer that day as pay-day? A.—For my part I do.

Q.—How is the ventilation of the shops in Ottawa, so far as you know? A.—The ventilation of the shop I work in is good.

Q.—Do you know of any concerns in Ottawa, or in the Ottawa district, who do not pay their men in cash? A.—I have heard of one from the men working for the firm, and they have told me that they did not get paid in cash.

Q.—In what locality is that? A.—It is on the Canada Atlantic Railway.

Q.—What is the name of the place? A.—Castleman.

Q.—What system of payment have they? A.—Scrip.

Q.—What is it like? A.—I could not say; I have not seen it.

Q.—Would you know the scrip if you saw it? A.—No.

Q.—Have you been in Castleman? A.—I have been there.

Q.—What was the complaint made by these men? A.—The complaint they made to me was that when they wanted cash they were obliged to give \$1 worth of this scrip for 90 cents in money.

Q.—To whom did they take the scrip? A.—To any person.

Q.—And they lost 10 cents on every \$1? A.—Yes.

By the CHAIRMAN:—

Q.—When they wanted 90 cents cash they gave \$1 scrip for it? A.—Exactly.

By Mr. CARSON:—

Q.—If this concern has to pay \$1 they give scrip for it? A.—Yes.

Q.—Have the men objected to take the scrip, and asked that they should be paid in cash? A.—I could not say.

Q.—If they got this scrip, could they take it to any other store in Castleman and get \$1 worth of goods for it? A.—I do not know.

Q.—Do you know how long the system has been in vogue? A.—The first I heard of it was eighteen months ago.

Q.—Do you know, from hearsay, how long it had been in vogue before that? A.—I do not know.

Q.—Was it a general complaint among the men who are in the employ of this concern? A.—It was general.

Q.—And was it the prevailing custom to discount the scrip 10 per cent. and get cash for it? A.—It was.

Q.—Have you any knowledge of the concern, to know whether the employes could get as good value for \$1 of that scrip as they could get in Ottawa for \$1?

A.—You must consider that in a country village you do not generally get things as cheap as in a big city, they are usually a little more expensive.

HENRY BARRELL, re-called.

By Mr. CARSON :—

Q.—In what district is this truck system, to which you have referred, in vogue? A.—Rockland, county of Russell.

Q.—Is it in more than one concern? A.—No; that is the only one I know.

Q.—Has the company got stores? A.—One; they have one general store there.

By Mr. ARMSTRONG :—

Q.—Supposing a man goes to the store with a store order, and they have not got the article in stock, do they get it for him? A.—No.

JOSEPH SHERWOOD, called and sworn.

By Mr. CARSON :—

Q.—What is your business? A.—Sawyer.

Q.—In a saw-mill? A.—Yes.

Q.—At what—circular or gang-saw? A.—I work on what is termed the turns.

Q.—What number of hours a day do you work? A.—Eleven.

Q.—Do all the men in the same business work the same number of hours? A.—Only in the mill. Those who drive the horses in the yard work the same number of hours.

Q.—The men in the gangs work the same number of hours? A.—Yes; all work the eleven hours.

Q.—What is the average earnings of gang-men? A.—I could not tell you that positively.

Q.—Have you knowledge of any of the earnings of the men in the mill? A.—I think they get as high as \$9 and \$10 a week, but I am not positive of that.

Q.—What would be the average earnings of a man in your position? A.—A man in my position would get \$2 a day.

Q.—Would that be the average for Ottawa? A.—I do not know; probably some of them would get more than that in the same business.

Q.—That is the head sawyers? A.—Yes.

Q.—You have not any? A.—I think some of the filers get \$2 a day, too.

Q.—What length of time do the men work, chiefly? A.—Ten hours a day.

Q.—Will you allow me to explain about our mill? We do not run a double watch, or night work, except occasionally. Last year they did run a double watch for only a

short period. The day watch went on at six in the morning, and came off at six at night; the night watch went on at seven and were off at five in the morning. They were working on the circular double watch.

Q.—How often are you paid? A.—Fortnightly.

Q.—On what day? A.—Thursday.

Q.—Have you had any accidents in your mill lately? A.—No; not lately.

Q.—Did you have any last year? A.—I do not know but what one or two got cut.

Q.—Do you know if the factory inspector has been through your mill? A.—I cannot say he has.

Q.—Do you know if there are any workmen in your locality in the same position as yourself who own their own houses? A.—Yes; several who work in the mill own their own houses in the city of Ottawa.

Q.—Taking a rough estimate, about what average would own their own houses? A.—I would not like to say anything on that, because they are mixed up.

Q.—Have wages increased within the last seven years? A.—I think they have a percentage, but I think it is a very small one.

Q.—What would a man pay in New Edinburgh ward for a house such as a man in your position would live in—say a house of six rooms? A.—I presume he would have to pay \$10 a month.

By Mr. BOIVIN:—

Q.—What would be the taxes on such a house? A.—I cannot give information on that point. I have five rooms in my house, three bed rooms and two general rooms; the house is insured for \$1,250, including lot.

By the CHAIRMAN:—

Q.—What taxes do you pay for it? A.—We have only been assessed this past year.

THOMAS EVANS, called and sworn.

By Mr. HEAKES:—

Q.—What is your business? A.—Carpenter.

Q.—What are the earnings of good bench hands in Ottawa? A.—Two dollars a day.

Q.—Do they get constant employment at that? A.—No.

Q.—About how many months in the year, on an average, will carpenters get employment here? A.—Ten months.

Q.—Would that apply to outside men as well as to the inside? A.—I average the whole.

Q.—What would be the wages of good outside men? A.—One dollar and seventy-five cents.

Q.—Is the same rate of wages paid in winter as well as in summer? A.—Rather less.

Q.—Is it on account of the surplus labor on the market? A.—No.

Q.—How many hours a day do you work here? A.—Ten hours.

Q.—Are you much troubled with men in Ottawa, who are not mechanics, working at the business? A.—There is a considerable number of them.

Q.—Do they, to any extent, displace good men? A.—No; not good men.

Q.—Good men always get employment? A.—Yes.

Q.—Poor men have a tendency to keep the wages of good men down? A.—They have, to a slight extent.

Q.—Do you know if it is the practice, in selecting hands, for the shop to place a first-class man with an inferior hand on the same bench? A.—I do not know that it is a practice, altogether; I do not know if it is studied.

Q.—Do the wages of the good men ever have to come down to those of the inferior men on the same bench? A.—Not that I am aware of.

Q.—Have you any regulations as to apprentices in Ottawa? A.—I do not know anything about apprentices.

Q.—You never had anything to do with any of them? A.—No.

J. D. SHERWOOD, called and sworn.

By Mr. ARMSTRONG :—

Q.—What is your business? A.—Circular Sawyer.

Q.—What are circular sawyers paid in Ottawa? A.—I do not know what they are paid in Ottawa; I know what I am paid myself.

Q.—Did you hear the evidence of the last Sawyer? A.—Yes.

Q.—Do you agree with it in all particulars? A.—Yes; only in the length of hours we have to work.

Q.—What is your evidence in that respect? A.—That eleven hours a day is too long to work.

Q.—Do they work that? A.—That is what he said, and I have to work eleven hours.

Q.—How many hours do you think a workingman should work? A.—Ten hours is a reasonable length of time, I think.

Q.—Do you think a man can do as much in ten hours as in eleven? A.—It depends whether there is a man shoving or whether he is shoving himself.

Q.—Do you think a man would have more vitality in him by only working ten hours a day? A.—I think so.

A.—And would be better able to do a day's work the following day? A.—Yes.

Q.—Have you anything to add to the evidence already given by the previous Sawyer examined? A.—I have not.

Q.—Have the sawyers any grievances? A.—That is the only grievance—about the length of hours—bothering me at the present time, and that is, having to work eleven hours a day.

By Mr. CARSON :—

Q.—Have you ever worked outside of Ottawa? A.—For a short time.

Q.—Where? A.—In the State of Ohio.

Q.—At the milling business? A.—No.

Q.—Are you aware of the number of hours men work outside of Ottawa, in the Province of Ontario? A.—No; only from hearsay.

GEORGE F. STALKER, called and sworn.

By Mr. HEAKES :—

Q.—I believe you have give some attention to the question of technical education of mechanics and apprentices? A.—Yes.

Q.—Will you kindly give us the benefit of your experience on that matter?  
A.—All my experience has been confined chiefly to teaching them drawing, as applied to their particular trades. I have had a great many apprentices and journeymen of different trades with me, during the last four years, and they have come year after year with an almost universal expression of their having been benefited in their particular line of business by that kind of instruction. I have taught them practical mechanical drawing, if they are machinists, and construction if they are carpenters or masons; and also I have taught them the elements of industrial design. This last year I have had over eighty pupils, including twenty-three or twenty-four ladies. I think I can tell the number of the trades: there were ten carpenters, two

cabinet-makers, four electricians, nine machinists, three masons, two plasterers, two jewellers and twelve of other trades; one or two dry-goods men and others of that class.

By the CHAIRMAN :—

Q.—Do you include the ladies amongst these? A.—No; there were twenty-three or twenty-four ladies in addition to them.

Q.—What were they? A.—They had no profession. There were fifteen students among them, some belonging to the Collegiate Institute and others to business colleges. I had eighty-four pupils altogether.

Q.—What was the object of the ladies in seeking this instruction? A.—Simply to learn to draw and color. Some learn for industrial purposes; I have some designs by ladies for the industrial work—designs for wall papers, tapestries, &c.—they learn that kind of drawing for the purpose of being designers.

By Mr. HEAKES :—

Q.—Are you able to tell us if the course these people have taken with you has materially benefited them in their trades? A.—I have been informed by a great many of them that they have received positive benefit and advancement in their occupations through their knowledge in that way.

By the CHAIRMAN :—

Q.—You are satisfied that it is so? A.—I am perfectly satisfied that it is so.

By Mr. HEAKES :—

Q.—At what age would you consider it best to impart this technical instruction for boys or men? A.—I should say it ought to begin with boys, in an elementary form, while they were at school—say, about ten years of age—and they should carry it on all through their apprenticeship. They should never give it up.

Q.—Do you advocate the establishment of evening classes for apprentices and mechanics, &c., where this class of instruction could be given? A.—I do. I think the Government should establish a thorough system of technical education in all large centres, at all events.

Q.—Have you any knowledge of the benefit of an industrial training to young people? A.—I have no direct knowledge of that, but I have read a great deal about it.

Q.—Do you express an opinion as to the desirability of imparting such instruction? A.—I think it is very advisable, in connection with all these technical schools, that there should be industrial schools, so that the technical knowledge could be brought to a practical test, the two going hand-in-hand, as it were.

Q.—They should have elementary training before going to a trade? A.—Yes.

Q.—When a boy goes to a trade say, at thirteen, how long would it take him to learn the technical portion of his trade in a technical school? A.—It depends on the brightness of the boy himself; but I should say, by ordinary application in evening classes for three or four years he could get a good technical drilling into his business.

Q.—You think a boy could become a good practical draughtsman? A.—He would be able to draw intelligibly, anyhow. He might not be a first-class draughtsman, but he could explain by drawings what he meant.

Q.—Would he be able to scale work off? A.—Yes.

WILLIAM GARVOCK, called and sworn.

By Mr. HEAKES :—

Q.—What is your business? A.—Carpenter.

Q.—Did you hear the evidence of the last carpenter who was examined as to the wages paid in Ottawa? A.—Yes.

Q.—Can you corroborate his statement in that respect? A.—Yes.

Q.—Are you able to tell us anything of the benefits of technical training to

yourself or others? A.—I can testify that it has been of benefit to me, and I think it has been a benefit to others.

Q.—Can you tell us how many men engaged in your business can take a plan to an eighth-scale, check their own work off and get it out? A.—I suppose one in every ten.

Q.—Have you ever known good skilful men who were enabled to take a plan and get the work out in that way? A.—Many.

Q.—Is not that one reason why so many good men who are not able to do this receive less wages than their more fortunate brethren? A.—It may be a reason; I think it is a reason, too.

Q.—If technical training were imparted to all branches of trade would it not, to a large degree, remove the inequalities amongst workingmen? A.—I think it would.

Q.—Do you know if there is any general desire on the part of young people to take this course of training? A.—I think there is such a desire; at any rate, here in Ottawa.

Q.—If this course of technical training were made free, and part of the course of public instruction in our public schools, do you think the young men would avail themselves of it? A.—I do not know, if it were made free.

Q.—Would you favor a Government system of education, or by private means? A.—I think it would be better if the Government took hold of it.

Q.—And directed it? A.—Yes; and directed it.

Q.—From your experience, are you of the opinion that this instruction can best be imparted by evening classes? A.—Yes.

Q.—Do you think that any part of technical instruction can be taught a boy while attending school. A.—Part of it can, but a very limited part.

Q.—Are you able to state what other branches, beside drawing, would be necessary for a thorough technical education in the trade? A.—It would depend altogether on the trade the boy was going to.

Q.—Well, speak of your own trade? A.—I think mechanics, practical geometry and industrial design.

Q.—Mensuration? A.—Yes; but not so much as the others. I think practical geometry, as such, is the basis of all trades. Of course, it is necessary, in learning practical geometry, to learn drawing. I would like to say a few words in connection with the Art School here. Technical education is being partly taught in Ottawa at present. I believe the Ontario Government gave instructions to start technical classes, but those classes are not taught as a benefit to the workingmen, for the simple reason, that incompetent teachers are placed at the head of them in some branches. Practical geometry has not been properly taught, and if any instruction is necessary to be taught it should be by a man who has both theory and practice, as is the case in England.

Q.—Do you know anything of the system in England? A.—Yes; the teachers are men taken from the trades, and are taught in that way.

Q.—You think it is absolutely necessary that teachers should have a practical as well as theoretical knowledge of the subject? A.—Certainly. I think, also, before we get competent mechanics it is necessary that they should be taught theory and practice both. According to the present way mechanics are taught, the men get the practice without the theory, and little attention is paid by the masters to impart the theory. That has been my experience.

Q.—Too little attention is paid to the apprentices by those who teach them? A.—Yes; they try to get all the work out of them possible and, when through with them, discharge them.

Q.—Would an indentured-apprentice system be a benefit to boys going into trades? A.—I think it would be.

Q.—In what way would it benefit the apprentices? A.—It would make him feel his responsibility, and if his master did not train him as he ought to do he would have some reason to complain.

By Mr. BOIVIN :—

Q.—If he wants a guarantee from the boss the boy would give a guarantee himself? A.—Certainly.

Q.—How would a poor man guarantee that his son would keep his engagement?  
A.—I do not know, unless he got some one to go security, as they do in some parts of the old country.

JOHN PEER, called and sworn.

By Mr. HEAKES :—

Q.—What is your business? A.—Moulder.

Q.—How long have you been engaged in the moulding busines in Ottawa?  
A.—Ten years.

Q.—Do you work on stove-plate or machinery? A.—On machinery.

Q.—Day-work or piece-work? A.—Day-work.

Q.—What are the average wages of machinery moulders? A.—Two dollars and twenty-five cents a day.

Q.—Is that the average for journeymen? A.—Yes.

A.—About how many months in the year do they find employment? A.—Twelve months.

Q.—How many hours in the day do you work? A.—Ten.

A.—Are you able to tell us what is the general condition of the moulding shops in Ottawa? A.—I do not know that I can tell you.

Q.—Can you tell us what the earnings of plate moulders are—stove-plate moulders are? A.—They work piece-work.

Q.—Yes; but what do they make? A.—They average \$2.50 a day.

Q.—Do they get as constant employment as machinery moulders? A.—No.

Q.—Are there many apprentices taken on here at Ottawa? A.—Not very many.

Q.—How long do they generally serve in learning their trade? A.—They generally serve about three years.

Q.—Is it possible to make a good, skilled moulder in three years? A.—No. You cannot make as good a man in three years as you would in ten.

Q.—Do you know if there is any difficulty in keeping the boys in the shops when they go to learn a trade—that is to finish their time out? A.—Some stop and some do not; if they do not like it they quit it.

Q.—When boys go to learn moulding here in Ottawa are they taught all the branches of machinery moulding? A.—They learn the whole thing; they work at every thing that comes along.

Q.—Is it the practice, to any extent, to put laborers on plate work? A.—No.

Q.—How frequently are you paid? A.—Once a fortnight.

By Mr. McLEAN :—

Q.—Do you hear any complaints from moulders, when they take the castings out of the moulds, about gas or smoke. A.—Not if there is any ventilation.

Q.—How are the shops ventilated? A.—By the roof.

Q.—Have you any suction fans in the roof? A.—No; it is not necessary if we have good ventilation.

Q.—You are not troubled with any smoke? A.—No.

Q.—Is the roof high? A.—Yes.

Q.—Have you heard any of the men complaining of what is known as "blind staggers"? A.—We are not troubled with "blind staggers," generally.

JAMES BALHARIE, called and sworn.

By Mr. CARSON :—

Q.—What is your business? A.—Baker.

Q.—Have you heard the evidence given this evening by the other bakers? A.—  
Not very well.

Q.—What is the average rate of wages of a baker in Ottawa? A.—I think it  
must be from \$8 to \$10 a week. I do not know what it will be since the union was  
formed; it was that before.

Q.—What hours have you to work now? A.—Ten or eleven hours a day.

Q.—What hours did you work before? A.—In the summer time we work about  
an hour longer; we have more work in summer than in winter. It averages from  
ten to eleven hours.

Q.—Last year? A.—Yes, and now.

Q.—Is your work in the day time now? A.—We commence at five o'clock in  
the morning, with the exception that on Sunday night we commence at midnight.

Q.—Do you work on Sunday? A.—No; we commence at twelve on Monday  
morning, if you like to call it.

Q.—Did you work Sunday work last year? A.—No.

Q.—Do you know of any shops in Ottawa where the men work on Sunday?  
A.—I knew shops where they commenced work on Sunday afternoon, and I believe  
in some of the shops it is done yet.

Q.—Have the men protested against that? A.—I think most of the men are  
against it. I do not know, however, whether they have succeeded in getting it stopped.

By the CHAIRMAN :—

Q.—Do you consider Sunday work is necessary? A.—It is unnecessary.

By Mr. CARSON :—

Q.—The men, as a rule, protest against working on Sunday? A.—I am sure  
they do not like it.

Q.—How is the ventilation of the shop in which you work? A.—It is well  
ventilated.

J. T. HARVEY, called and sworn.

By Mr. CARSON :—

Q.—What is your business? A.—Blacksmith.

Q.—You do plumbing as well? A.—Not the practical part of it; I do some little  
repairing, putting in a little odd work.

Q.—What are the average wages of a good blacksmith in Ottawa? A.—Nine  
or ten dollars a week.

Q.—Would that apply to plumbers as well? A.—I think the plumbers are a  
little in advance of the blacksmiths.

Q.—What number of hours do they have to work? A.—Ten hours a day.

Q.—Sixty hours a week? A.—No; ten hours, except Saturday; they work  
nine on Saturday.

Q.—When you work nine hours on Saturday do you lose an hour? A.—No; in  
two or three other shops I know they pay sixty hours for the week.

Q.—Do you know if a man earning \$10 a week, and with an ordinary family, can  
save money if he is temperate, industrious and active? A.—The price of provisions  
and living in Ottawa at present is such that he cannot save any money, unless he is  
very, very saving.

Q.—How often are you paid? A.—Once a week.

The Commission then adjourned.

(Translation.)

EVENING SESSION—FRIDAY, 4th May, 1888.

LOUIS GARON, Baker, Ottawa, being sworn, deposeth as follows:—

By Mr. HELBRONNER:—

Q.—How many bakers are employed in the establishment where you work?  
A.—Two; sometimes we are three, but at present we are only two. I am the first, and we have two helps, and sometimes only one, as at the present time.

Q.—What are the wages you usually pay first-class bakers? A.—At certain times our first foreman gets \$9—sometimes \$10 a week—and others get only \$8.

Q.—What makes the difference in these wages—is it ability, or the difference in the establishments? A.—The difference is, that one cannot get more from the bosses.

Q.—A man that makes \$10 in one establishment, can it be that this same man will earn \$6 in another house? A.—Oh, yes, sir.

Q.—How are the helps generally paid? A.—The one who worked with me this winter—at least, one of those who worked with me this winter—had \$3 and his board; then a change was made, and there came another, who got \$6.

Q.—With his board, also? A.—I beg pardon; only \$6, without board.

Q.—At what hour do you begin to work? A. At present you must know that things have changed; we work in the day now, but before this week we sometimes commenced at 5 o'clock in the evening, and at other times at 6.

Q.—At what time do you begin now? A.—Now we begin at 5 o'clock in the morning.

Q.—At what hour do you pull up—do you finish in a regular way? A.—Sometimes we finish at 5 o'clock in the evening, but I cannot say precisely, as I am not working this week. Since things have changed I have lost my place—the boss would not give me any work; he, himself, still works at night.

Q.—The boss with whom you worked last week continues to work by night?  
A.—Yes.

Q.—You did not want to work at night? A.—No, sir; on account of my health.

Q.—Do you find that night-work, in general, is unhealthy? A.—Yes, sir; and that is the reason we have given up working at night; it is too harmful to our health.

Q.—Who is the man that splits wood in the bakeries at Ottawa—is it a special man or a working baker? A.—That work is done among ourselves, the bakers—that is the second men.

Q.—Do you do the splitting outside of your working hours or during your working hours? A.—During our working hours.

Q.—Are you bound to go out of the room where the ovens stand, when you are very hot, to go and split wood outside? A.—Yes, sir; outside.

Q.—Is it within your knowledge that workmen have been taken sick in consequence of this difference of temperature? A.—Yes, sir; I have caught big colds myself.

Q.—How many bakers have exchanged night-work for day-work; or, rather, how many were there who did not want to change? A.—Only in the shop where I worked; before that there were two shops, but there is another which will begin next week to work during the day, and that will make only one working at night.

Q.—Do you know, yourself, whether there are young children working in certain bakeries? A.—Yes, sir.

Q.—Do you know how old these children may be? A.—I cannot say just exactly; but I think one whom I know is not more than twelve—or, say, between twelve and thirteen years old.

Q.—Do you know whether his work is fatiguing, or if he goes there only to give a hand? A.—His work is partly fatiguing.

Q.—Has that boy been working long in a bakery? A.—I cannot exactly say.

Q.—Did he work when there was work at night? A.—Yes, sir.

(Translation.)

AFTERNOON SESSION—SATURDAY, 5th May, 1888.

ALEXANDRE COUSINEAU, Baker, Ottawa, being sworn, deposeseth as follows :—

By Mr. BOIVIN :—

Q.—Are you working on your own hook or working for another? A.—I am working on my own account.

Q.—Have you hands under your orders? A.—Yes, sir.

Q.—How many? A.—At the present time I have four.

Q.—How much do these men—the best among them—receive a week? A.—My foreman gets \$12 a week.

Q.—And the men under him? A.—The men under him get \$10 a week.

Q.—Are there children employed in your factory? A.—No, sir.

Q.—Those who make \$10 a week, are those the men who make the bread? A.—They are the bakers of the second-class.

Q.—What is the price of a six-pound loaf? A.—We make no six-pound loaves; our loaves are four pounds, and they sell at from 10 to 11 cents.

Q.—Have you bread inspectors here? A.—Here the police are the inspectors.

Q.—Do they know anything about the quality of bread, aside from the weight? A.—No, sir. In the nineteen years that I am in the trade I have never seen the man come to weigh and inspect the bread who knew anything about it. He knew only how much the loaf weighed, and was ignorant of all the rest.

Q.—Do you know whether there are bakers here who make use of bad flour, or of foul water, which would be injurious to health? A.—No; I think not. They do not all use good flour, but still it is not a quality of flour injurious to the health. It is only common flour.

Q.—Have you any idea of the six-pound loaf here at Ottawa? A.—I have been to Montreal, and they sell the common bread of six pounds at 16 cents. Here we do not make six-pound loaves.

Q.—When you sell your bread at 10 to 11 cents, is it 10 cents at the grocery and 11 cents to customers? A.—Yes, sir.

Q.—Do you exact cash from your customers, or do you give credit? A.—We always require cash, but do not always get it.

Q.—Do you sell much to the working classes? A.—As for me, my custom is almost wholly with the working class. I have, of course, some customers who are not workingmen, who are in business or employed by the Government; but in part they are workingmen.

Q.—Then the working class here eats nothing—almost nothing—but white bread? A.—Oh, I beg pardon.

Q.—I understand you to say that you made only a white loaf of four pounds? A.—We have it of four pounds, but brown bread. We made white, and have made bread of four pounds.

Q.—What are the hours of work in your establishment? A.—There are no fixed hours.

Q.—They are obliged to make the bread? A.—Yes; the bread which I require, sometimes they will work eight hours, sometimes ten hours, eleven hours, twelve hours.

Q.—Do you think that these are about the prices, as a rule, of bakeries here in Ottawa? A.—At the present time I am not positive; I fancy that some work at cheaper rates than these.

Q.—Do you take your men as apprentices, or do you engage men who already know their trade? A.—They are men who know their trade. We take apprentices, sometimes, but very seldom. In the nineteen years that I have been baking I have had only three apprentices who learned their trade with me.

Q.—Generally speaking, are the bakers' shops in a good condition of cleanliness and health? A.—I do not go into all the shops, but I have been in several shops, some of which are kept pretty clean, and others only so-and-so.

Q.—Have the building inspectors passed your way—to examine your building?  
A.—Not yet.

Q.—Have you anything to say to the Commission? A.—I would say a word about the men's wages. Some people hold that the men get too much and others say that they do not. As for me, I consider that they do not get too much to live and pay their debts; but I add that, in a business centre, the men belonging to the union of the Knights of Labor get more than other working men; for there are many laborers not belonging to the Knights of Labor, and their wages are not sufficient to keep their families going. They buy at the butchers and at the grocers and then they cannot pay.

By Mr. ARMSTRONG:—

Q.—Those who receive small wages complain of those who get big salaries. Why have they not also big salaries? A.—A number of my customers who are working-men make \$1.25 or 90 cents, and they say that we have increased the price of bread, and that they cannot pay the loaf, on account of the small wages which they receive; and then I tell them we are obliged to pay more at present, on account of the men belonging to the union of the Knights of Labor. We are obliged to pay them \$10 and \$12 a week.

By the CHAIRMAN:—

Q.—Those to whom you give the highest wages are the ones who complain that the bread is dearer? A.—No; it is our customers to whom we deliver bread.

By Mr. ARMSTRONG:—

Q.—Did you raise the price of bread because of the rise of wages? A.—Yes; and the price of flour has risen and the wages of men have risen, also.

Q.—Did you raise the price of bread in proportion to the increase of salaries and the increase of the price of flour? A.—Yes.

Q.—Then it all comes back to the same thing? A.—Yes.

JOHN GALE, Ottawa, called and sworn.

By Mr. CARSON:—

Q.—What is your age? A.—I am seventeen.

Q.—Where have you been working? A.—I was working in the Dominion Telegraph Office for a little while.

Q.—I see that you have lost one of your arms? A.—Yes; my right arm.

Q.—How did that occur? A.—It was an accident in the saw-mill.

Q.—How old were you then? A.—Between eleven and twelve years of age.

Q.—Were there any other boys working there, at the time you met with this accident, about your age? A.—Yes.

Q.—What were you getting at the time you worked there? A.—I was only getting 25 cents a day.

Q.—What were you engaged at when you lost your arm? A.—Taking blocks away from the circular saw.

Q.—These were large saws? A.—Yes.

Q.—Were they not butting-saws? A.—Yes.

Q.—How large were they? A.—About 2-feet in diameter.

Q.—Two feet through? A.—Yes.

Q.—These other small boys, were they engaged in the same business as you were when you lost your arm? A.—Yes.

By Mr. HEAKES:—

Q.—Did you fall against the saw, or was it taking the planks away that you got your arm cut? A.—It was not at the saw where I got hurt; it was at the cog-wheel behind the butting-table, the morning before the mill started.

By the CHAIRMAN :—

Q.—Your employer did not do anything at all for you? A.—No.

By Mr. HEAKES :—

Q.—Was this in Ottawa or in Hull? A.—No; it was in New Edinburgh.

By Mr. CARSON :—

Q.—As you are now, can you earn your living? A.—No; not unless I learn something—not unless I get an education.

Q.—Did you go back to your employer after your arm got well—did you go back to the mill again. A.—No.

Q.—You never went back? A.—No.

By Mr. ARMSTRONG :—

Q.—Do you know of any other boys having received accidents? A.—Yes; about two months after a boy was working in the mill, where I was, and he got both his legs and arms taken off.

By Mr. HELBRONNER :—

Q.—Where does he live? A.—He lives in Ottawa; he lives in Chaudière street.

Q.—Could you get him here this evening? A.—Yes; I could bring him here in a cab.

Q.—Will you please do so? A.—Yes.

Q.—How old was the boy when he met with the accident? A.—He was the same age as I was.

Q.—Were you working for the foreman, or a man employed by the foreman?

A.—I was working for a man who was working for the foreman.

Q.—You were working for a sub-contractor? A.—Yes.

T  
NOW

---

HEL LOUIS LEVERT, Ottawa, Laborer, called and sworn.

By Mr. HELBRONNER :—

Q.—Do you know the last witness, John Gale? A.—Yes.

Q.—Do you work in a mill at New Edinburgh? A.—I did work there.

Q.—Do you know if some other boys were employed in the mill? A.—I am not certain about whether there are any now; I have not been down there this summer; I dare say there is; I know that there used to be.

(Translation.)

JOSEPH LEFEBVRE, Invalid, formerly in the Mills at Ottawa, being sworn, deposesh as follows :—

By Mr. HELBRONNER :—

Q.—Did you lose your arm and leg in the same accident? A.—Yes, sir; I fell in a hole, and the axle of the wheel crushed my arm and leg.

Q.—How old were you? A.—Twelve years—going on thirteen.

Q.—How old are you now? A.—I am going on nineteen years.

By the CHAIRMAN :—

Q.—What is your business now? A.—I have none at all.

By Mr. HELBRONNER :—

Q.—Where was this hole that you fell into? A.—It was against the axle of the wheel which turned the machinery. It was over against a stone step, on a level with the axle, about a foot between the axle and the wall.

Q.—How did you fall into the hole? A.—I was working. I was drawing pickets; the pickets stuck in my stomach, and during that time the other pickets pushed on-and-on too fast.

Q.—The hole was behind you? A.—Yes; behind me; a big hole to give light to the millwright who worked below. My foot slipped on a piece of bark and I fell in.

Q.—It was while you were working that this accident happened? A.—Yes; about half-past nine o'clock in the forenoon.

Q.—This was the same mill in which the young man who appeared a moment ago before the Commission was likewise the victim of an accident? A.—Yes.

Q.—Did your boss do anything for you? A.—Well, he gave me \$10 over and above the wages he owed me, and then they got up a collection and raised \$25 for me.

Q.—Was the subscription made up among the workingmen? A.—Yes, sir.

Q.—Did you go back to the mill after being cured? A.—Yes, sir.

Q.—Did you ask for work? A.—Yes, sir.

Q.—What did he tell you? A.—He said that he could give me none just then, but he would see later on.

Q.—Has he engaged you since? A.—A.—No, sir.

Q.—Did you go back to him again? A.—Yes; two or three times. Even last spring; he told me that he had no need for me then.

Q.—Are there any kinds of work that you could do, although maimed? A.—Yes; I think so. He told me that he meant to give me the job of drawing the tickets of 4-foot lumber when they sell that wood.

Q.—Who paid for the medicines and the doctor's fees? A.—I did, sir, but I rather think that the boss paid the hospital dues for the time that I was there. I was sixteen days in hospital.

Q.—When you say that you paid for medicines, did you pay for these medicines outside of the hospital? A.—When once I got back home I was obliged to pay for the medicines. Dr. Prevost came to see me at home and told me what remedies to take, and I paid for them.

Q.—Have you your father and mother? A.—Only my mother; I have a step-father.

Q.—You do not work for a living just now? A.—No, sir; I should be very glad if I could find some work.

Q.—You returned to the mill. Is it long since you went to the mill? A.—I was there only to-day, fetching my step-father's dinner.

Q.—Are there young children employed in that mill at present? A.—Yes, sir.

Q.—What age might they be? A.—A dozen of years, or thirteen and fourteen years.

Q.—Have you had occasion to see the hole into which you fell? A.—I went down there and saw the shaft, but to-day it is closed.

Q.—The same accident cannot happen again? A.—Oh, no.

Q.—Do you know whether other accidents have happened in this mill, to your own knowledge? Are you aware of any? A.—I cannot say. Well, yes; two or three years ago two men were killed—a man named Cadieux was caught around the wheel and was gnawed by the wheel, betwixt the wheel and the posts, and the other fell down the dock.

Q.—But you have not heard of other accidents to children? A.—No, sir.

By Mr. HELBRONNER:—

Q.—Do you think that the children working there work too hard? Do you find that they work too hard for their age? A.—I rather think not. The first year that I worked there I was about nine and a-half years old, and I did not work too hard.

Q.—Do you know whether there are children nine years of age working there still? A.—I do not think so.

By Mr. BOIVIN:—

Q.—Do you think that the children are ill-treated by the foremen, or something of the kind? A.—No; I think not. It is Mr. Macdonald who is foreman for the children, and he is very gentle with them. When they are hard pushed with work the foreman helps them out.

Q.—Had the children any schooling? Do they attend school before going to work? A.—Yes, sir; they go to school in the winter and in the summer they work.

By Mr. HELBRONNER:—

Q.—Can you read and write? A.—A little.

Q.—Could you read and write before you went there? A.—Yes, sir.

JOHN HENDERSON, Manager for J. McLaren & Company, Lumber Merchants, Ottawa, called and sworn.

By Mr. CARSON:—

Q.—How long have you been manager for Messrs. J. McLaren & Company? A.—For about twenty years.

Q.—About how many men do you employ in the New Edinburgh mills? A.—I think, in the neighborhood of 300 men.

Q.—Classing these mill-men and platform-men, about what would be their average wages—for instance, take a gang of men? A.—Well, there is a very great variation in the wages of mill-men, owing to the great diversity of work they perform; and even men who are gang-men, there is a very great variation in the wages; all according to the character of the machines they attend. We have gang-men, head-sawyers, men running gang-saws and circular-saws, receiving from \$8 to \$10 a week, up to \$10.50.

Q.—The men who run the double-edged saws, what do they get? A.—Ten dollars to twelve dollars a week.

Q.—Then, men on the platform—pilers—what do they average? A.—There is another great variation there, too. To a very large extent, they will average from \$1.15 to \$2 a day; the men who are piling are paid according to the nature of their work; they get about \$2 a day. Common hands get \$1.15 to \$1.25 a day.

Q.—About how many get \$2 a day? A.—We have none at all. We give it out to a jobber, who employs his own men; we have nothing to do—nothing to say in the control of them; they vary from \$1.20 to \$2 a day.

Q.—How many hours do they work? A.—In the saw-mill and lumber yard, from six in the morning till six at night, with an hour for dinner. The men in the factory, or mill, work from seven till six at night—ten hours a day.

Q.—Have you ever had any trouble with your men—that is, general trouble? A.—No; we never had any trouble with our men.

Q.—For men going to the shanties—about what are the earnings of these men? A.—Well, they will average, probably, about \$16 a month, and of course they get their board.

Q.—Can you state about the number of months that these men are employed in the saw-mill? A.—Yes; from the 1st of May until about the 1st of December.

Q.—Those men employed in the mills—do they generally go to the shanties in winter? A.—Well, a good many do. There is a number that do object, and prefer keeping around here all the winter.

Q.—The best class of men do not care about going? A.—There is a certain class who do not care about going.

Q.—Are any arrangements made for the families of the men who are away in the shanties? A.—Yes; arrangements are made so that the wives or mothers can draw so much per month while the men are away in the woods.

Q.—In the shanties, do you supply them with what they need? A.—We provision them, and we supply them with what they need, but we prefer that they

should take up what little they need from home, and many of them do so. *If they require anything they can purchase it from us, but there is no compulsion.*

Q.—Do you furnish these supplies for the convenience of the men or for profit?  
A.—What supplies we furnish are solely for the convenience of the men; there is no profit in the concern, not any more than any store-keeper; they can be provided just as cheap as at the store.

Q.—In other words, they can buy just as cheap there as they can in the store in Ottawa? A.—Yes; they can buy just as cheap as in the store.

Q.—You are also a member of the school board of the city of Ottawa? A.—Yes; I have been for some time.

Q.—You have also given more or less attention to night schools and technical education? A.—I have to night schools but not to technical education. I have not thought the time ripe for it in Ottawa.

Q.—Can you give us any idea as to the movement at present before the school board with regard to the establishment of night schools? A.—Well, it is only in its first stage as yet. I brought the subject up myself. We found a large class of lads and young men who were very defective in education taken away about the age of fourteen and set to work. Their education was very imperfect, and they have an opportunity allowed them of attending school at night for four months in the year. It would be a very great advantage, and if they (the school board) can carry it out by establishing one or more schools at night during this winter, it would be of great advantage to both sexes—for we intend to offer the same privileges to girls and young women as to men and boys. We intend to commence with the mere elements of a primary education—reading, writing, arithmetic, book-keeping and spelling. We do not know if it will be a success or not, but it has been in Toronto. There they have succeeded in raising a valuable institution in connection with our common schools, and it will be done here under our present public school system. We intend to do this if we can get the necessary encouragement.

By Mr. HEAKES :—

Q.—Do you ship any lumber? A.—Yes.

Q.—Do you employ any stevedores? A.—No; we ship all ourselves, by our own yard-men.

Q.—How do you pay them? A.—We ship by the day's work.

Q.—Do you know if any of the other companies ship by the job? A.—I do not think so, in this city. I think there is enough of ordinary men to do it under a foreman. We ship by the barge for the American ports in summer and by rail in winter, and by rail and barge to home ports, and in other directions exclusively by rail.

Q.—You do not manufacture deals at all? A.—Yes; we find a market for them in the States; we do not dispose of them at home in Canada.

By Mr. ARMSTRONG :—

Q.—Have there been any accidents in the mill? A.—Very rarely. I have been connected with this firm for the last twenty years and I do not remember any.

Q.—How long ago is it since the last accident happened? A.—It is so long ago that I have no recollection.

By Mr. HEAKES :—

Q.—Can you state how much it costs to ship this lumber—the handling of it?  
A.—Well, I presume 10 or 15 cents the thousand feet. It is a very simple matter; we are favorably situated; we have a high bank and deep water, and we simply slide them from the top of the pile down the slide on to the boat. A child can ship lumber.

By Mr. CARSON :—

Q.—Do you employ any boys in your factory or mill? A.—Yes.

Q.—What age would the youngest be? A.—I think some of them employed in the lath and shingle mill are fourteen years of age.

By the CHAIRMAN :—

Q.—Have you any under that age? A.—No.

Q.—I suppose you are acquainted with the provisions of the Factory Act? A.—My attention was drawn to it, and I gave notice that no boys were to be employed under fourteen years of age, and I am not aware that there are any employed under that age; but last summer the inspector was down, and he has been down twice since, I think, and I was made acquainted with the provisions of the Act.

Q.—Has he ordered you to put up railings? A.—No.

Q.—He has not ordered you to do anything? A.—No; he called my attention to that one point about the lads, and left me a copy of the Act.

Q.—Are you aware if he found any complaints against the mill? A.—No; I am not. I believe he was satisfied with what he saw in the mill.

By Mr. ARMSTRONG :—

Q.—Was he shown over the mill? A.—Yes.

Q.—Who showed him over? A.—I do not know; I was passing, and I was informed that he called and left it for me.

By Mr. HEAKES :—

Q.—Was it in pamphlet form? A.—Yes.

Later on in the day the witness re-appears and states as follows :—

In my examination I stated that I did not recollect of any accident having taken place on our works. I wish to say that there was an accident last summer, at which a little boy lost his life. He was not in our employ. It happened in this way: A great many boys come around picking up shavings and chips, and particularly at the mill, during the absence of the men at dinner and other times. This lad had been gathering shavings. He went into the mill and played with the machinery, and came to his death by it, through nobody's fault but his own.

PATRICK GEORGE NASH, Ottawa, Managing Proprietor of the Canadian Granite Company, called and sworn.

By Mr. HEAKES :—

Q.—How many men do you employ? A.—I think, on the average, about fifty at our factory in Ottawa. We employ other men at the quarries, but they are not in the city.

Q.—How many men do you employ in the quarries? A.—I should think about thirty-five.

Q.—How far is the quarry from the city? A.—There is one in Kingston; another about eighteen miles down the Ottawa.

Q.—Are you able to give the rate of wages paid to the men at Kingston and down the Ottawa? A.—We pay the laborers and men who handle the hammer and drill from \$1.25 to \$1.50 a day. Then we pay other men who work at making paving blocks by piece-work.

Q.—Are these men employed steadily the year round? A.—With the exception of perhaps, two months in the winter time, and that has only been the case one year—last year—and I don't think they were idle; we kept them working piece-work the whole time. Then the rest would be employed in our works in Ottawa.

Q.—How many men do you employ in the factory? A.—From fifty to sixty-five men in the factory.

Q.—Of that number, how many would be laborers, or unskilled labor? A.—Well, I suppose about twelve.

Q.—Would they get the same as the men in the quarry? A.—We pay them \$1.25 a day.

Q.—What would the cutters earn a day? A.—We pay the granite-cutters from \$2.35 to \$2.65 a day.

Q.—What number of hours do these men work? A.—They work ten hours a day, with the exception of Saturday, when they leave at noon.

Q.—How often do you pay your men? A.—Every second Saturday.

Q.—Do the men complain about not getting paid frequent enough? A.—No; I never heard any complaints; they seem altogether satisfied.

Q.—Has the factory inspector inspected your place? A.—Yes; I think we had two of them there last summer.

Q.—What would the average wages of polishers be? A.—Well, we have had to pay for granite-polishers \$1.50 a day, and we have paid as high as \$2.50 a day. Then we have marble-polishers besides.

Q.—Do you know if there are any men in your employ who own their own property? A.—Yes; there are some.

Q.—How many? A.—Well, that I could not say; I am not positive; I know there are some.

By Mr. BOIVIN :—

Q.—Do you work the white marble as well as the granite? A.—We work white marble, fancy marble, all the American marbles (not all the Italian marbles), and the Canadian marbles.

Q.—Where do you get your Canadian marbles? A.—We own a quarry in Renfrew and one eighteen miles down the Ottawa river. It is back from the Ottawa six or seven miles; it is about eighteen miles from here.

Q.—Do you find that marble more compact than American marble? A.—It is altogether a different marble; we call it Serpentine; it is a green marble. I never saw any American marble like it. There is very little quarried in Canada, except by ourselves.

Q.—Do you work any white marble in Canada? A.—No; I do not think it. At Renfrew it is not white marble; it is mottled.

Q.—Have you any young boys working there? A.—Yes.

Q.—What is the age of the youngest? A.—I do not think we have any under sixteen; there was one who was under sixteen, but he is not under sixteen now.

By Mr. ARMSTRONG :—

Q.—Do you pay all your men in cash? A.—Yes.

Q.—Do you employ any women in any part of your business? A.—Not at present. We did employ some women; they worked at piece-work.

Q.—How much did they earn a week? A.—We never paid them more than \$4 a week. Their hours were very irregular, and they did not come at the same hours as the men; they did not work regularly.

Q.—Do you employ any polishers? A.—Yes.

Q.—Is there any illness or rheumatism on account of the dampness? A.—I never heard of any. There is good drainage all through the building.

Q.—Have the wages of the quarry-men increased during the past five or seven years? A.—I am not prepared to answer; I do not know.

Q.—Could you speak with reference to the marble quarry-men? A.—I cannot answer; I am not in a position to do so.

Q.—Do you polish by machinery? A.—Yes.

Q.—Is there any dampness? A.—Where one man is it is damp, but there is no illness, and I have never heard of any complaints.

WILLIAM McMAHON, Bookkeeper, Ottawa, called and sworn.

By Mr. ARMSTRONG:—

Q.—By whom are you employed? A.—I am book-keeper to the firm of MacLean Roger & Company, Parliamentary Printers.

Q.—How many journeymen printers do you employ? A.—About 150.

Q.—Are they kept constantly employed throughout the year? A.—Constantly.

Q.—Do you employ extra men at the coming on of the Session? A.—Yes.

Q.—What would their wages be? A.—Eleven dollars a week.

Q.—For how many hours? A.—For fifty-four hours.

Q.—Do many of them work at night? A.—We have during the Session night men employed to do night work.

Q.—Are they employed by the hour, week, or piece? A.—By the week.

Q.—How much do they receive? A.—The night men?

Q.—Yes? A.—Twelve dollars and twenty-five cents a week.

Q.—That is in two weeks—100 hours? A.—Yes.

Q.—That is an average of 25 cents an hour? A.—Yes; that is their working price.

Q.—They work 100 hours in the two weeks? A.—Yes.

Q.—Are there any piece-hands? A.—No.

Q.—What do you pay your press-men? A.—They get \$11 a week for fifty-four hours, the same price as the printers. Those who work at night, if they work by the week, get 25 cents an hour; if our press-men work over-time they receive 25 cents an hour.

Q.—Have you any women who are looked upon as feeders? A.—We have.

Q.—How much do you pay them? A.—They get from \$3 to \$4 a week.

Q.—Do they work at night? A.—Sometimes they do.

Q.—How much per hour do they receive? A.—It is in accordance with the weekly allowance they receive. All over \$3 receive 10 cents an hour over-time; all receiving \$3 and under a week receive 5 cents an hour for over-time.

Q.—How many hours in the night do those receiving 5 cents an hour work? A.—Well, sometimes they come back and sometimes they do not.

Q.—And if they do not come back, what becomes of them—are they discharged or fined? A.—No.

Q.—Do you impose any fines? A.—None whatever.

Q.—Do you know about the working of the bindery? A.—Yes.

Q.—What do you pay for book-binders? A.—We have no book binders; we do not do any binding.

Q.—What do you pay to book-folders? A.—From \$2 to \$3.75 a week.

Q.—For how many hours? A.—Fifty-four hours.

Q.—Don't they work at night? A.—Sometimes.

Q.—What do they receive per hour at night? A.—Proportionately to what they earn in the day—5 and 10 cents per hour, as stated.

Q.—What are their hours? A.—That would all depend upon the circumstances—the nature of the work upon which they are employed and the urgency for its completion. They work from seven until ten o'clock, if they work over-time at all; that would be the standard; they never go beyond that.

Q.—Have you got any rules in connection with the department where the women are working? A.—With respect to what?

Q.—With respect to fining—your regulations? A.—The greatest of leniency is shown to the girls; if they live at a distance, although they are required to work at night, we let them go.

Q.—Have you a foreman or a forewoman over these girls? A.—A foreman.

Q.—Do you know of his using any bad language in connection with these girls? A.—Not to my knowledge.

Q.—How is the sanitary condition of the office? A.—Good.

Q.—Have you got separate conveniences for both sexes? A.—Yes; one is set apart for girls in the top story.

Q.—For the women working in the press-room, is there a separate place for them?  
A.—They go up-stairs.

Q.—How is the ventilation in the composing-room? A.—In the composing-room and press-room it is very fair.

Q.—Are the water-closets for the men in good condition? A.—It is never reported to be otherwise; if there is anything wrong, and it is reported, the defect is always rectified, and any suggestion made by the health inspector, anything that is reported by him to us to do, is done.

Q.—How many times a year is your establishment inspected? A.—Once; I think once or twice a year.

Q.—Are there doors to all the water-closets? A.—There are.

Q.—Is there a water-closet on each flat? A.—No.

Q.—Would you tell us on which flats the water-closets are? A.—The press room is the lowest; that is the first flat. The second is the parliamentary room; there is one on that flat. There is one in the press-room. There is none in the departmental room. On the flat above that there is one; that is the one that the women go to.

Q.—Is that exclusively set apart for them? A.—Yes; that is the one on the top flat.

By Mr. McLEAN:—

Q.—How many presses does a man have to attend to for \$11 a week? A.—One. He can do it on any one particular press, but he is only called upon to do work on one at a time. The departmental feeders receive \$12 to \$14 a week; and the man at the composing stone \$11 a week.

Q.—He receives the same as a compositor? A.—Yes.

Q.—Does a compositor who sets up both languages receive more? A.—No.

Q.—Have you got any copy-holders? A.—Yes.

Q.—What do they receive? A.—\$5.50 to \$6 a week.

Q.—Are they boys or men? A.—Boys.

By the CHAIRMAN:—

Q.—Has there been any attempt to drive away your women printers? A.—None that I am aware of.

By Mr. ARMSTRONG:—

Q.—Have you had any labor troubles in your establishment? A.—No.

Q.—Do not you think that printing by women ought to be encouraged? A.—No; I do not.

Q.—Do you think that they should be excluded altogether? A.—Well, no; not altogether, but to a very great extent.

By Mr. HEAKES:—

Q.—Do the women do as good as the men? A.—Apparently she might, but practically she would not.

Q.—How long do your women remain with you? A.—We do not make changes very often.

Q.—Is the work very severe on a woman? A.—Well, there is a good deal of standing; they stand all the time, and that is pretty severe on a woman.

Q.—Are the men allowed to sit down? A.—Well, they may have a stool for the purpose, but it is not a recognized thing; they seem to prefer to stand.

Q.—The women need rest, so long standing? A.—Yes; a woman needs more rest than a man. I think the men set more type when standing.

Q.—Have you ever heard practical compositors say anything about that? A.—I have had a good deal of experience for fifteen years, and I think they set quicker standing.

Q.—Can you tell us if the females who feed the presses clean them up and wash them up? A.—A man takes charge of the presses. They are employed because

they are much more cleanly. Then, a man would have to wash the rollers. We do not wish them to take charge of the presses, we wish them simply to feed the presses—simply on account of its being a more cleanly way of doing the work.

Q.—Do I understand that the press-man washes up the rollers? A.—We have a man on purpose. He gets the composition ready, washes the rollers, and gets everything ready, and keeps everything in running order.

Q.—Has the factory inspector been around your premises? A.—He might have been, but not to my knowledge.

Q.—You have not been furnished with a copy of the Factory Act? A.—No.

By the CHAIRMAN :—

Q.—Do the doors open outwards or inwards. A.—They open inwards.

Q.—Are you aware that by law they ought to open outwards? A.—No; I was not aware of it.

Q.—You know that the Factory Act says so? A.—I have not seen it.

By Mr. CARSON :—

Q.—Have you more than one entrance to the premises? A.—Only one.

By Mr. ARMSTRONG :—

Q.—Have you any fire-escapes? A.—None.

Q.—How many flights of stairs have you? A.—Three.

By the CHAIRMAN :—

Q.—How many stories are there to the building? A.—Four stories, and then there is the fifth—it might be. It is a small place on top of the fourth story.

Q.—Are you aware that by the law of Ontario, on such stairways iron doors shall be provided, with a sufficient number of fire escapes! Have you read that law? A.—I never read the Bill; that has not been furnished to us.

Q.—That does not matter. That law was passed on the 20th of March, 1884—that is four years ago, and enforced in 1886. At all events, it has been passed four years, and strange to say, no employer seems to know anything about it.

By Mr. HEAKES :—

Q.—Not even the parliamentary printers. A.—It has not come under my notice.

By Mr. CARSON :—

Q.—Have you ever had any accidents? A.—In my experience of fourteen years I think we have had two.

Q.—What was the nature of these accidents? A.—Fingers caught in the presses by the carelessness of those feeding them.

Q.—As they become familiar with the machines they are sometimes apt to become careless? A.—Yes; but I think I may say we are free from accidents, as a rule.

Q.—Have you had any other accidents besides those you have mentioned? A.—There is one other that I recollect—a man got his arm broken.

By Mr. ARMSTRONG :—

Q.—Is yours a union office? A.—Yes.

Q.—Do the men and the employers work harmoniously together? A.—Yes.

Q.—There is a good feeling existing between employers and employed? A.—Yes.

By the CHAIRMAN :—

Q.—Would a non-union man be allowed to work in the office? A.—No.

Q.—Do you think it just. A.—That is one of the things I do not understand.

ALBERT FRENCH, Woollen Manufacturer, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—You are proprietor of the New Edinburgh mills. A.—Yes.

Q.—How long have you been running them? A.—Five years.

Q.—How many hands have you employed in your establishment? A.—  
Seventy-five.

Q.—Of these, how many would be women and girls? A.—I think about half.

Q.—What would be about the age of the youngest person employed—that is, of the girls? A.—I do not think I have any under sixteen.

Q.—Have you any boys younger than that? A.—I have one boy about fourteen.

Q.—Do you consider that the men employed by you are skilled hands? A.—  
Yes; they are skilled enough. We have what we call “bosses” in each room, and there are also men and girls.

Q.—Leaving out the “bosses,” what would be the average wages of these men, classing them up—we will commence with the spinners? A.—Well; spinners make \$1.50 a day.

Q.—And the others? A.—The others average from \$1.50.

Q.—What would be the earnings of these girls who work for you as spinners? A.—The men are spinners also.

Q.—The young girls you have employed by you, what do they earn daily? A.—  
From 45 to 60 cents a day.

Q.—And the weavers? A.—The weavers make from \$16 to \$24 a month.

Q.—Are they female weavers? A.—Yes; I have only one male weaver.

Q.—Have you any accidents? A.—No; none.

Q.—Do you ever fine your employés? A.—We have to fine the weavers some times for bad cloth; we have promised to fine them; we have a notice up to that effect.

Q.—Do you know of any fines being kept back from them without notification? A.—Oh, no.

Q.—You have a notice that they would be fined? A.—Yes.

Q.—Do you have much goods damaged? A.—No; we have a good deal of trouble with new weavers, and then they make so little wages that we could not fine them.

Q.—What do the young girls earn who are also weavers? A.—Forty-five to sixty cents a day.

Q.—What do the hands in the “picker room” get. A.—90 cents to \$1 a day.

Q.—And in the carding room? A.—Forty-five cents the girls get. There are boys who get 90 cents and \$1—that is running on cards.

Q.—What do your men get who have charge of the “filling-room”? A.—Our men working in the filling-room get \$1.25 a day.

Q.—There is another room for “French napping,” is there not? A.—“Napping” and “filling” it is the same thing.

Q.—How many hours a day do they work? A.—Ten hours a day—sixty hours a week.

Q.—How often do you pay your hands? A.—We pay on the second Saturday of every month; we pay them up to the first of every month, retaining in our hands two weeks' wages.

Q.—Is there any rule in your factory compelling employés to give you a fortnight's notice? A.—We ask two week's notice.

Q.—In the event of their not giving you notice, are their wages retained? A.—I have never done so.

Q.—Are your employés only fined for bad work? A.—That is all.

Q.—Do you know how many spinners there are in the spinning-room? A.—  
There are jack spinners, and we spin by mules. We have men to look after them.

By Mr. HEAKES :—

Q.—What is the highest and the lowest wages you pay to spinners ? A.—The lowest is 45 cents a day and the head spinner gets \$2 a day.

Q.—Do you work at night ? A.—We have not worked at night for one or two years.

By Mr. ARMSTRONG :—

Q.—Are there separate conveniences for the sexes ? A.—There are separate conveniences for both sexes in each room.

By Mr. BOIVIN :—

Q.—Where do you get your raw material from ? A.—We get the raw material from foreign countries; we import it; a large portion we get in from Liverpool; we use some Canadian.

Q.—Do you think if we had a mixed race of sheep it would result in your importing less wool ? A.—It is not because we have not got wool in the country, but the fact is, our wool is too coarse, if we grew finer wool we would import less. This climate does not seem adapted for finer wools. Merino is the finest wool.

By Mr. HEAKES :—

Q.—The wool you get in Canada is not so fine as that which you get from England and other countries ? A.—No; English Southdown is a good, soft wool; and then there is Cape wool (from the Cape of Good Hope); we use that as well. We use some Canadian wool which we obtain from the farmers.

WILLIAM GIBBONS, Ottawa, Manager of "The Citizen Printing and Publishing Company," called and sworn.

By Mr. ARMSTRONG :—

Q.—Are you a practical printer ? A.—Well, yes; I suppose I may call myself a practical printer. I never learned the trade, but I understand it thoroughly. I am not what you would call a practical printer, but I understand the trade sufficiently for all intents and purposes.

Q.—How many compositors do you employ at the present time ? A.—I suppose about eighteen.

Q.—They work principally at night ? A.—Well, twelve of them do, and the balance work in the day time, jobbing.

Q.—What are the wages paid to book and job hands ? A.—Eleven dollars a week.

Q.—How many hours do they work a week ? A.—Fifty-four.

Q.—Do the printers working on the newspaper work by the piece ? A.—Yes; by the piece.

Q.—What are they paid per 1,000 ems ? A.—Thirty-six and a-half cents.

Q.—Do the advertisements go to the office ? A.—The advertisements go to the office; that is an understood thing with the men of the firm—between the men and the firm.

Q.—And commercial matter, which is particular work ? A.—At the present time it goes to the men.

Q.—How long are the men engaged in composition—the night men ? A.—You mean to say up to what time ?

Q.—Yes ? A.—I suppose, on the average, 4.30. That would be the time they would leave the office. Actually, composition, I should say, stops about 4.

Q.—Do the men have much idle time in waiting for copy ? A.—No.

Q.—There have been no complaints on that score ? A.—No complaints at all.

Q.—Do they charge for this idle time ? A.—No.

Q.—In what state are the water-closets ? A.—The closets in the old building are outside. We are just moving into our new building.

Q.—Are they in good condition? A.—They are in very fair condition.

Q.—Are there any women employed around the building? A.—Only one at present.

Q.—What do your proof-readers make? A.—Our proof-reader at the present time makes about \$12 a week. Part of the time he reads proofs; he also sets type.

Q.—Do you take on apprentices? A.—Yes.

Q.—How long do apprentices generally serve in Ottawa? A.—Five years.

Q.—How much do they receive the first year? A.—In the book and job room \$1.50 for the first six months.

Q.—Are they indentured? A.—Well, no; we do not indenture them.

Q.—Do they generally work out the five years? A.—Yes; we have very little trouble with them.

Q.—Do they generally remain with the office? A.—In most cases; quite a number of those who were apprentices and served their time with the firm are with us now.

Q.—Have you experienced any labor troubles? A.—No.

Q.—There is good feeling between employers and men? A.—Yes.

By Mr. HEAKES :—

Q.—How many hours do the compositors on day-work work? A.—Fifty-four hours a week—nine hours a day.

Q.—Do the compositors go back in the day time to distribute their type? A.—Yes.

Q.—How long does that take them? A.—A couple of hours.

Q.—That would make eleven hours in the twenty-four? A.—Yes.

Q.—What are the average earning in these days? A.—On a morning paper?

Q.—Yes? A.—They vary; they run from \$9.50 to \$17 for a man who is most expert—per week.

Q.—That is the average—from \$9.50 to \$17 per week? A.—Yes; that is the general average.

Q.—Would they average from \$9.50 to \$17 a week all the year round? A.—Yes. There are only a couple of men that get \$17 a week.

JOHN T. BYRNE, Printer, Ottawa, called and sworn.

By Mr. ARMSTRONG :—

Q.—Where are you employed? A.—I am foreman in the departmental room of the firm of MacLean, Roger & Company.

Q.—Did you hear the evidence of the book-keeper of that firm recently given? A.—No; I have just come into the room.

Q.—Do you know anything in connection with the folding-room? A.—I have just charge of the departmental room. I have seventeen hands and a couple of boys under me—nineteen hands altogether.

Q.—How much do the men receive at night in your department? A.—We have no night work at all. We have only worked nine hours a day for the last two years. We pay them 25 cents an hour when they do work over-time.

Q.—Do you pay the union schedule? A.—Yes; the office is run according to the union principles and schedules.

Q.—What is the condition of the water-closets in your department? A.—They are cleaned out every day.

Q.—Are they all in good condition? A.—They are all in good condition; they seem to be.

Q.—How are the men paid? A.—Fortnightly.

Q.—Is there any part kept back? A.—There is nothing kept back, the fortnight is made up to the Friday night. The week commences on Saturday.

Q.—Is there any piece-work? A.—No.

By Mr. BOIVIN:—

Q.—You say that only Union men are employed. Can you tell the reason why?  
A.—Simply because all the other men would walk out if a non-union man was employed. The proprietors run the establishment according to the union principles, and the proprietors are union men themselves. One of our proprietors used to be vice-president of the union.

Q.—So that he was a prominent union man once? A.—Yes; Mr. J. C. Roger.

By Mr. HEAKES:—

Q.—Have you ever had any trouble in your office? A.—No.

By Mr. ARMSTRONG:—

Q.—Do you pay the stone-men more than you do the compositors? A.—No; they are all paid the same rates.

Q.—You keep the same men at the stone all the time? A.—Yes; there is one man we keep at the stone all the time, and there are other men that, according as a job is in a hurry, we take for the work.

MOSES C. EDEY, Carpenter and Builder, Ottawa, called and sworn.

By Mr. HEAKES:—

Q.—How many men do you employ? A.—That is a difficult question to answer. I employ men according to the amount of work which I have on hand; the average is about ten, sometimes as high as fifteen.

Q.—What is the average wages of a good bench hand? A.—One dollar and seventy five cents a day is the average for outside hands, and we pay the same inside; we pay according to the work a man can do. One dollar and seventy five cents a day is about the average pay.

Q.—How do you find mechanics to-day compare as to skill in the trade to what they were when you learned the business? A.—Very moderately.

Q.—What percentage of what you consider to be skilled men can copy and take off the work from plans and drawings of an eighth scale? A.—Not one in six.

Q.—Do you take on apprentices? A.—Well, in fact we do not take on one in three years.

Q.—Do you experience some difficulty in Ottawa in getting an apprentice to serve out his time? We have learned that that is the great difficulty experienced by employers in other parts of the Dominion? A.—Yes; we do.

Q.—Do you think it possible for a boy to become a good mechanic unless he learns the theoretical and practical parts of his trade? A.—No; he would be better skilled if he learned his trade properly; but a great many do not have a practical man to teach them; they learn one thing in practice and another thing in theory.

Q.—Do you think if a system of technical education was introduced into Ottawa it would be taken advantage of by mechanics? A.—Yes; I believe it would, generally. Of course, if you take men who are inclined to climb to the top of the ladder they will always improve their opportunities, while others are satisfied with less.

Q.—What effect would a technical education have on the work? A.—It would have a desirable effect: for instance, if a man understands drawing you will find more symmetry about his work, as a rule, than you will find in the work of one who does not. A man who understands drawing, or is fond of drawing, has some head, and shows his knowledge by his work; we pay for head as well as body. A man may be a very good workman and have a very poor head.

Q.—Which would you think best: to impart this knowledge before or after they go to learn a trade? A.—Certainly, before they go.

Q.—How far do you think a training of that kind should be introduced into the public schools and imparted to scholars? A.—Of course, perhaps, my ideas would

not correspond with the ideas of others, but I believe we would find that it would pay to give such a training—as far as it can be applied—that is the great trouble with mechanics in particular. Before putting a boy to a trade his parents and friends should carefully consider what he is best fitted for. Otherwise, if he is put to learn a trade, say that of a carpenter, he may have learned things that are of no practical use to him; and the same may be the case if he is going to learn to be an engineer. Their object should be, first, to find out what a boy is best fitted for before he goes to learn it.

Q.—Do you think teachers are capable of teaching the theory? A.—We have had examples in our art schools. They can teach the theory, but the application of the theory they know nothing about.

Q.—Would you suggest the teaching of this course at night schools, or as a part of the curriculum of public schools? A.—I would be in favor of teaching it in the public schools, and then if we had night schools we could take in the night schools also. In the public schools it would be compulsory, of course—in the others, optional. Those who desired to embrace the opportunity could take in the night schools as well as the day schools.

Q.—On what subjects would you teach in these schools? A.—Practical geometry, as applied to mechanics; mechanics for those who are going to learn mechanical trades. Free-hand drawing in particular should be taught as the foundation of all; and then you want mechanical drawing and building construction. A thorough knowledge of these branches would be very advantageous to a practical man. Those having mastered these branches they might take an interest in other subjects.

Q.—Have you had any men in your employ who have taken this course? A.—None—with the exception of one.

Q.—Do you know whether those who have taken the course have been able to command better positions? A.—Yes; they get them in this way. When others are walking the streets they will get work, and will get from 30 to 40 cents a day more.

Q.—If all workmen took this course, would it not have a tendency to equalize the skill of work? A.—Yes.

Q.—It would make them skilled workmen? A.—Yes.

Q.—Do you think it would do away with the system of grading, at present in vogue? A.—Yes; to some extent. But you must recollect that there are some men who will never make mechanics.

By the CHAIRMAN :—

Q.—You mean to say that to those who have talent, and a desire to develop that talent, these art and technical schools are a benefit; and at the same time there are other men who will never be good mechanics, from a general lack of application? A.—Yes.

By Mr. HEAKES :—

Q.—Have you ever visited any of the technical schools in the United States? A.—No; I never had the opportunity.

Q.—Did you ever have any technical schools in Ottawa? A.—No; we have an art school, but the standard is too high for mechanics and tradesmen. Mechanical and art drawing is taught, but nothing of a technical nature. That has been the great trouble in all our schools; the standard has been rather too high.

(Translation.)

EVENING SESSION—Saturday, 5th May, 1888.

\* \* \* , engaged in a Match Factory of Ottawa, being sworn, deposesh as follows:—

By Mr. BOIVIN:—

Q.—What are you doing? A.—I am working at the match-shop.

Q.—How old are you? A.—I am thirteen years old.

Q.—How long have you been working there? A.—It will be fourteen days to-night.

Q.—How much do you make? A.—Forty-five cents.

Q.—When do you commence in the morning and when do you finish at night?  
A.—We commence at 6 o'clock and let off at noon; in the evening we finish at 6 o'clock, and on Saturdays we finish at 5 o'clock in the evening.

Q.—Does the foreman ill-treat you in any way? A.—No.

By Mr. HEAKES:—

Q.—Did you work anywhere else before? A.—Yes; I have driven horses and worked in a mill.

Q.—How long since you first worked in a mill, at Booth's? A.—Only half-a-day.

By Mr. BOIVIN:—

Q.—How old were you when you commenced? A.—I could not say.

Q.—Is it long ago? A.—From the day that I commenced to work this year; it is the first year that I worked.

Q.—Are you able to read and write? A.—I can write a little.

By the CHAIRMAN:—

Q.—Can you write? A.—Yes; I can write in the books.

By Mr. BOIVIN:—

Q.—Is your hand maimed? A.—Yes.

Q.—How did you come to get hurt? A.—At Booth's, when I worked a half-day there.

By Mr. HEAKES:—

Q.—How comes it that you had your fingers cut? A.—I was drawing a big piece of plank and I fell with one leg in a hole, and I cut one finger there; I went to make a grab, and I grabbed on to the saw.

By Mr. ARMSTRONG:—

Q.—Do the boys change places often in these manufactories? A.—Yes, sir.

Q.—Do you know why they change often? A.—Because some places are better than others; that is the reason they change.

Q.—But where you work at present, do they change boys often? A.—Yes.

Q.—That means that the boys leave? A.—Yes; and others take their place.

Q.—But when they are with you, do they remain there or do they go elsewhere?  
A.—They remain there then, but they change places among the little boys in the same factory.

By Mr. HELBRONNER:—

Q.—What kind of a hole was that that you fell into—is it in the shop? A.—No; it is a little slide of water where scrapings are thrown.

(Translation.)

\* \* \* , engaged in a Box Factory at Ottawa, being sworn, deposes as follows:—

By Mr. BOUVIN:—

- Q.—How old are you? A.—I do not know.  
 Q.—Have you made your First Communion? A.—No, sir.  
 Q.—Can you read? A.—No, sir.  
 Q.—Have you been in this place long? A.—Yes, sir.  
 Q.—Have you got your father and mother? A.—Yes.  
 Q.—What does your father do? A.—He is a mechanic.  
 Q.—Have you been working long in the mill? A.—No, sir; not long.  
 Q.—How long? A.—About a week.  
 Q.—Have you worked anywhere else before? A.—Yes, sir; with farmers.  
 Q.—How long did you work elsewhere? A.—About three months.  
 Q.—How much do you make a day, at present? A.—I do not know; I have not been told.  
 Q.—Have you any little brothers working with you? A.—No.  
 Q.—What do you do at the box factory? A.—I load up and carry little planks that are cut.  
 Q.—Do you go near the machinery? A.—Yes, sir; I work near a saw, with a man.  
 Q.—Do the boys get caught sometimes in the saw? A.—Yes, sir.  
 Q.—Do you like that kind of work? A.—Yes, sir.  
 Q.—Wouldn't you like better to go to school? A.—It's all the same to me.

(Translation.)

\* \* \* , employed in Mills at Ottawa, being sworn, deposes as follows:—

By Mr. HELBRONNER:—

- Q.—How old are you? A.—Thirteen years.  
 Q.—How long have you been working in the shop where you are now? A.—Fourteen days this evening.  
 Q.—How much do you make? A.—Forty-five cents.  
 Q.—Have you ever worked anywhere else before this? A.—No, sir.  
 Q.—It is the first time that you work in a shop? A.—Yes.  
 Q.—What do you do? A.—I carry the cull of timber and planks.  
 Q.—Are you over thirteen or not yet thirteen? A.—I am just thirteen.  
 Q.—Can you read and write? A.—Yes.  
 Q.—At what time do you go to work in the morning? A.—At 6 o'clock, up to 6 o'clock in the evening.  
 Q.—With an hour for dinner? A.—Yes.

\* \* \* , Ottawa, called and sworn.

By Mr. CARSON:—

- Q.—What is your age? A.—I am thirteen years past.  
 Q.—Where do you work? A.—Down at the box factory at the Chaudière.  
 Q.—What do you work at? A.—At the board machine for making boxes.  
 Q.—Is it a machine where there are saws on it? A.—Yes; there are ten saws on it.  
 Q.—Are those saws covered over? A.—Yes.  
 Q.—How close do your hands go to the saws? A.—About 1 foot.  
 Q.—Is there anything to prevent your hands from being thrown on to these saws? A.—No.  
 Q.—Nothing at all? A.—No.

Q.—Have you known any accident to happen in that factory since you came there? A.—No.

Q.—Have any boys been caught in the saws, to your knowledge? A.—Not that I know of.

Q.—Was not a boy caught in those saws there some little time ago? A.—Not that I know of.

Q.—How long have you been there? A.—Two weeks next Monday.

Q.—What are your wages per day? A.—Forty-five cents.

Q.—Has it been that since you started? A.—Yes.

By Mr. BOIVIN :—

Q.—What time do you go to work? A.—Six o'clock in the morning.

Q.—What time do you go to dinner? A.—Twelve o'clock.

Q.—When do you start work again? A.—At ten minutes to one.

Q.—When do you quit work? A.—At six at night.

Q.—Do you work all day on Saturday? A.—No; we quit work at five o'clock on Saturdays.

Q.—Do you feel tired sometimes at that work? A.—Yes.

Q.—Are there any boys younger than you are at work there? A.—Yes.

Q.—What is the age of the youngest? A.—I do not know.

\* \* \* , Ottawa, called and sworn.

Q.—What is your age, past? A.—I am twelve years past.

Q.—Do you work at the Chaudière? A.—Yes; in the box factory.

Q.—How long have you been working there? A.—Four weeks on Tuesday.

Q.—What kind of a machine is it that you work at? A.—I do not work at a machine at all; I just carry the blocks and another man puts it on the machine.

Q.—The machine you take these blocks from is it a sawing machine? A.—Yes; the boys carry the blocks and pile them on the bench, and I carry them from the bench.

Q.—What hours do you work? A.—From six o'clock in the morning till six o'clock at night.

Q.—How long are you allowed for dinner? A.—One hour, all but ten minutes.

Q.—What wages do you receive? A.—Twenty-five cents a day.

Q.—Have you known any little boys to get cut in the place where you are working? A.—No little boys. There is a man who got his finger cut off.

Q.—Where this man got his finger cut off, could you get yours cut off too? A.—Working around the saw.

Q.—Yes? A.—He was working the edger; it is not the same kind of a machine that I carry the blocks to.

By Mr. BOIVIN :—

Q.—What size are the blocks? Are they heavy pieces of wood? A.—The blocks are not heavy, they are thin ones.

By Mr. HEAKES :—

Q.—Can you read and write, my little boy? A.—Yes, sir.

\* \* \* , of Ottawa, called and sworn.

By Mr. CARSON :—

Q.—What age are you? A.—I am fourteen in August.

Q.—Where do you work? A.—I work at Mr. Booth's mill at the Chaudière.

Q.—How long have you been working in the box factory? A.—Since the 25th of April I have been working in the mill.

Q.—What were you working at last year in the box factory? A.—I was working on the butting-saw last year.

Q.—What age would you be in August last? A.—Thirteen.

Q.—What age were you when you commenced to work? A.—I was twelve and a-half years old when I began this work.

Q.—What hours do you work? A.—From six to twelve; then we have an hour for dinner—not quite an hour, because we start work again at five or ten minutes to one, and then we work until half-past six at night. We quit work at six o'clock on Saturday.

Q.—Are there any boys working there younger than you are? A.—Yes.

Q.—What ages are they? A.—Eleven and twelve years of age.

By the CHAIRMAN :—

Q.—What mill do you work in? A.—Mr. Booth's. I work at the butting-table.

By Mr. HEAKES :—

Q.—Did you work the same hours that you do this last year? A.—A little longer.

Q.—How long did you work there last year of a day? A.—Just the same hours.

Q.—You worked for more than six weeks, did you? A.—Yes.

Q.—Did you start when the mill started? A.—Yes.

A.—And you stopped when the mill closed in the fall? A.—Yes.

By Mr. CARSON :—

Q.—Do these little boys who work there work at night? A.—Yes; two or three of the little small fellows.

Q.—Are any of them under eleven years of age? A.—Yes.

Q.—Are some of them under ten years of age? A.—I do not know.

Q.—Do you know a boy named Brady who works in the mill? A.—Yes.

Q.—Do you know his age? A.—No.

By Mr. HEAKES :—

Q.—How long do they work in the mill at night? A.—They begin at seven at night and leave at five in the morning.

Q.—What do they do? A.—They work at the butting-table—they carry blocks away from the saw.

By Mr. BOIVIN :—

Q.—How much do you make a day? A.—I made 60 cents a day last year; I do not know how much I will make this year.

Q.—Do you know what the little ones get? A.—No.

FRANCIS J. FARRELL, Printer, Ottawa, called and sworn.

By Mr. ARMSTRONG :—

Q.—Have you worked long in Ottawa as a printer? A.—Fourteen years.

Q.—What are the sanitary conditions of the printing offices in Ottawa? A.—I cannot speak of any but the office I am working in. I am working for Messrs. MacLean, Roger & Company, Parliamentary Printers. I have been working for them ever since I came here, on the 16th of September, 1874.

Q.—What is the sanitary condition of that office, both as regards ventilation and private conveniences? A.—Well, in summer it is well enough, because you can keep the place open, but in winter it is a very close place, almost hermetically sealed. There are no double windows, and they paste them up to keep out the draughts, so that makes it a very close place in winter.

Q.—Are there conveniences on each flat? A.—No; not on each flat.

Q.—Are there separate conveniences for both sexes? A.—Yes; but they have to pass two flats. The women have to go up stairs.

Q.—The men are generally engaged in their work—and the women pass up?  
A.—Yes.

Q.—Is there any dangerous machinery? A.—Well, machinery, as a rule, is dangerous if not protected. There is a great deal of machinery in the press-room not in a protected state. I would not like to pass through them—that is, between them.

Q.—Have any accidents happened to persons passing the presses? A.—Accidents have happened, perhaps on account of the persons themselves.

Q.—Is the drinking water easy of access? A.—It is easy of access, but it is not always available. We feed the engines from where we take our drinking water, and at times we are delayed.

Q.—Are there water-closets where the hands work? A.—There is one on the flat where I am working.

Q.—How many have access to that water-closet? A.—About one hundred.

Q.—Is there any objectionable smell in the summer time from it? A.—Yes.

Q.—Have you known men to be sick and to go home on account of it? A.—I have heard that some men go home on account of it; I do not know personally—that is, those who work close to it.

Q.—How far is it from the frames? A.—I would say 2 feet.

Q.—Have you ever known any men leave the office on account of it—leave the building—the establishment? A.—I believe they have; I could not recall the name of any individual.

Q.—Are you acquainted with the class of houses that workingmen live in?  
A.—Yes.

Q.—In what condition are these houses? A.—As far as I am acquainted with them, they are in a healthy condition. This is a small city; it is different from large cities; the houses here are not the same as in larger cities. The tenant has the complete control of his house. The rents were raised with the prosperity of the times, and are high; and there are some houses in some parts of the town where several families congregate together, so as to lessen the rent.

Q.—You say that house rents have increased? A.—Yes; house rent has increased in Ottawa every year for the last five years.

Q.—What would a man pay for a house of six rooms, ten or fifteen minutes' walk from the post office? A.—Well, ten or fifteen minutes' walk from the post office, \$9—perhaps \$10—\$9 is the average.

Q.—Are they very convenient houses? A.—Not always; some have been constructed in a hasty manner, and are kind of damp; others have been remodelled, but have not been improved in the process, so far as health is concerned. They were built at a time when Ottawa was only a village and are not suitable for a growing city.

By the CHAIRMAN:—

Q.—Are they as convenient as an ordinary farmer's house? Do they contain the same conveniences as an ordinary farmer's house? A.—They are not so convenient as an ordinary farmer's house, for the reason that the conditions are different.

Q.—Have you not very few houses in the city of Ottawa that are not as convenient as a farmer's house? A.—I should think they would not be.

By Mr. ARMSTRONG:—

Q.—Have you any further information that you consider would be important for the Commission to know, with reference to the workingmen of Ottawa? A.—Yes; the workingmen of Ottawa might have their condition improved. A great deal might be done towards ameliorating their condition. Outside my business I have little to do with them, on account of having nothing to do outside the printing business; but I find in cases where men do not combine a sort of tyranny is practised by employers, one way or another—if not actual slavery.

By the CHAIRMAN:—

Q.—What do you mean by actual slavery—I thought we lived in a free country?  
A.—By compelling a man to work more than ten hours a day, and to pay him only sufficient for a very bare subsistence at that, where he does not combine.

Q.—That is your definition of slavery? A.—Yes; because some men have no conscience and——

Q.—That will do; I merely asked you your definition of the term “acts of slavery and tyranny.” You consider that a man who voluntarily works fourteen or fifteen hours a day subjects himself to tyranny and acts of slavery? A.—Yes; I consider that he is a voluntary slave.

Q.—You have a sanitary inspector in Ottawa? A.—Yes.

Q.—Have you ever complained to him of the state of the place? A.—He has been there.

Q.—Now, you have spoken of the tyranny practised by employers. A.—Yes; I used the word “tyranny.”

Q.—At this season of the year, do you think it would be tyranny to make a man pay higher wages than he expected to pay when he entered upon a contract—that is, supposing he had a considerable contract to fill? A.—I think that if labor was organized they should demand a fair day’s pay for a good day’s work; the employers well know what wages the men should receive. Some of them have been working men themselves.

Q.—You have not answered my question. Supposing a contractor has entered into a contract to perform certain work, and he bases his figures upon the current rate of wages, do you not think it would be tyranny on the part of the men to insist upon higher wages than the current rate? A.—If the men were not receiving a proper rate of wages I would not.

By Mr. ARMSTRONG:—

Q.—The office that you work in, has it always been considered a safe building?  
A.—No.

Q.—You consider it as unsafe to work in? A.—I do not consider it so now; it was at one time. You asked me if I always considered it so.

Q.—Yes; there have been some supports put to the building. If there had not, been serious consequences might have ensued. There was a considerable scare there one time. There are heavy things stored there—heavy machinery, stones and type.

ALEXANDER SHORT, Printer, Ottawa, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you been at the business in Ottawa? A.—About twelve years.

Q.—What is your experience as to the sanitary condition of the printing offices in Ottawa? A.—Taken as a whole, I think they are in a very unsatisfactory condition; I have never met with worse.

Q.—Are there any dangerous elevators in these buildings? A.—Yes; they fall very fast. I have seen, during the last two years, two men nearly killed by them. One saved his head by catching the rail; if his head had been 1 or 2 inches more forward he would have snapped his neck.

Q.—How long is that ago? A.—About a year and a-half ago.

Q.—Is that elevator properly regulated? A.—No; forty miles an hour is about the rate it falls. No one would hardly conceive the danger.

By the CHAIRMAN:—

Q.—That is very rapid, indeed? A.—Yes; it is very rapid; it breaks and falls, and is very dangerous to any one using it.

By Mr. ARMSTRONG:—

Q.—Do you know any printing offices in this town who pay their men by store orders? A.—No; I do not. I know some who have issued orders to men who have asked for their pay in advance. They wanted their clothing, furniture, and so on, and obtained an order for \$20 or \$30, and paid back the proprietor so much a week.

Q.—This firm that you speak of now: do they pay their wages regularly? A.—Not always on pay-day.

Q.—Have you known any firm in this city keep back men's wages two or three weeks and then pay them by instalments. A.—Yes.

Q.—Does that establishment do it at the present day? A.—Yes; they do, but they promise to do better in future.

Q.—Can you give us any opinion—taking the working classes—the skilled working classes of Ottawa: have their wages increased to any extent during the past five years and has their condition improved in any way? A.—I think the earnings of the printers have increased in one way; but when you take the rise in rents into consideration that lowers it; the rise in wages has not been equal to the rise in rents. I am paying rent for a house now. I am paying \$8 a month for a house which, when I first came to Ottawa, I could have got for about \$4.

Q.—How many years ago? A.—Well, eight years ago, I believe. It was \$4 a month; and of course they are getting worse every year, if anything. These houses are of very small value and are in a very poor condition. As far as workingmen's houses are concerned in this city, I do not think I have seen worse. I have lived in Kingston, Toronto, Port Hope and Napanee, and in other places, and I never met with worse—that is, the houses rented by the working classes. I really think it would be beneficial to have some of the Irish landlords imported to Canada.

Q.—Have you anything further to say that might be of interest to the Commission, in your opinion? A.—I think the premises could be made better for the workmen by better ventilation, and the sanitary conditions of the offices could be improved.

Q.—Have you known the sanitary inspector to go around the printing offices? A.—I never saw the inspector; I never heard anything of him.

By Mr. BOIVIN:—

Q.—I suppose if he went around he would not have failed for something to do? A.—He would have found plenty, but I have never seen him around.

By Mr. ARMSTRONG:—

Q.—What is the minimum wages that a printer earns in the city of Ottawa? A.—Eleven dollars a week.

Q.—How many hours does he work a day? A.—Nine hours a day.

Q.—That is what is earned? A.—Yes; by the week.

Q.—Are there any printers receiving less than that? A.—Yes; they are in non-union offices. All union men receive \$11 a week—some over that.

By Mr. BOIVIN:—

Q.—Do the men have to pass any inspection before they are permitted to join your society? A.—They have to be printers.

Q.—But do you take into your society men who are incompetent printers? A.—We have had to take incompetent men from the employers, and in the long run they have created trouble, on leaving the city and going elsewhere. That is through the avarice of proprietors.

By Mr. ARMSTRONG:—

Q.—What are the average earnings on an evening paper? A.—Twelve dollars per week.

Q.—And on a morning paper? A.—\$14.00, or \$14.50 per week.

By Mr. BOIVIN:—

Q.—Do these men whom you say you are forced to take in, through the avarice of the proprietor, receive the same salary as you do? A.—Yes; if they are competent.

Q.—How is that? A.—Influence often does that.

Q.—Where does the influence come from? A.—That is behind the scenes.

Q.—We would like you to explain how that is, that a man not competent is received into your society and receives the same salary as a competent man? We are a Commission duly appointed to make enquiry into all questions for the benefit of labor, and so we should like to find out where the influence comes from? A.—I will state the case this way: Supposing a young man comes from the country—he comes from a country place, and gets into a printing office through the influence of a member of Parliament, we will say.

Q.—He will have to join the union? A.—Yes.

Q.—And then he is taken? A.—Yes; if that young man goes to another place he cannot call himself a journeyman. He has to wait until he becomes a thoroughly competent man. He has to pass an examination before the foreman of the office, and the word of the foreman is always taken first. It does not matter whether the office belongs to the union or not, the foreman is supposed to be the judge.

Q.—And if the foreman said he was not competent, would you take his word? A.—Yes.

Q.—If the foreman said he was not competent you would take his word and not give him work? A.—The foreman's word would be taken; he is the competent judge.

Q.—But take a man who may not be a very good workman, and the employer wishes to give him work—suppose he does not wish to join the union and the foreman will not take him—what is to become of that man? A.—He will not be taken on.

By Mr. ARMSTRONG:—

Q.—Have you ever know employers in this town not to employ union men even no matter how good they were? A.—Yes; I have known them to refuse union men and keep the inferior men; they have done it for years.

By the CHAIRMAN:—

Q.—Outside the city of Ottawa, what do you think a printer can make in a week at union prices by the job? A.—I do not quite understand your question. Do you mean by the piece—by piece work or by the week?

Q.—What is the highest amount, out of the city of Ottawa, that a man can make by union prices? A.—There is too much in that word. A man might strain himself and do a big amount.

Q.—What is reasonable? A.—A man could make \$12 in a week's work—that is reasonable.

Q.—By working fifty-four hours a week? A.—Yes.

Q.—That is the most? A.—Not the most.

Q.—I asked you what was the highest amount, outside the city of Ottawa, that a printer can earn by working a week of fifty-four hours? A.—That is, supposing he has the work before him?

Q.—That is the question. Supposing he has as much work as a man can do in fifty-four hours by the week? A.—A very rapid compositor may make \$14, but it is only a few that can do it.

By Mr. McLEAN:—

Q.—Would that be on a morning or an evening paper? A.—On a morning paper; but that is not to be obtained week after week.

By Mr. BOIVIN:—

Q.—We had evidence a short time ago. A gentleman, in giving his evidence here, stated that he paid some men \$1.75 a day and others \$2.50 a day. I said to him: "How is it that one man is only capable of earning \$1.50 a day or \$1.75 a day and another can earn \$2.50," and he said he paid them according to their ability, and that among mechanics, as in some other things, the more education a man had in sympathy with his work, such as technical schools, and so forth, the higher the wages he could command. Now, what I want to make out is, is one man better

than another in your business? Are there not some men who are worth more money than others to the employer, not only in ability, but in intelligence and knowledge of the business? A.—There are few men in the world but what consider: they know a little more than another.

Q.—I suppose you find among your fellow-workmen some of greater and some of less ability. Do not you think that those who are more able should get more money? A.—Well, allow me; I beg pardon, but you do not understand the printing business. You speak as though a man was working at some of these fancy trades.

By the CHAIRMAN :—

Q.—But if the men are working by the day one man might do much more than another, might he not? A.—Well, you will find a man working by the day do what he thinks is a fair day's work.

Q.—Mr. Boivin asks you if, in your trade, there are not some men who work much better than others, and consequently are deserving of better pay than others? A.—I believe in our business, taking one day with another, one man's work would average the same as another's for a week's work. One man might do more to-day and another might do more to-morrow, but taking it the week through, one man is about as good as another.

By Mr. ARMSTRONG :—

Q.—Have you anything to suggest with regard to the apprenticeship system? A.—Yes; we are injured a great deal in this city by boys. It is one of the greatest injuries to the printing business that I know of. Boys are taken into the city printing offices without any regard to fitness to learn the trade. Every boy who is about to learn the printing trade should know the general rudiments of an English education—reading, writing, and a certain amount of arithmetic, and English grammar. We find boys come into a printing office who cannot do so much as to spell simple words correctly. They are first employed in sweeping out the offices and running of errands. They receive what education they get in the printing office, and at the end of their five years' apprenticeship we find them to be incompetent workmen. It is an injustice to the employer and to them.

By Mr. BOIVIN :—

Q.—What would you recommend for that? A.—As a remedy for that, I would recommend the indenture system. Now, if the bosses gave a guarantee, and the parents gave a guarantee that the boy would fulfil his apprenticeship, and the boy, on commencing his apprenticeship, proved on examination that he was properly qualified as to education, he could not but make a good printer.

Q.—We have had the experience of a large numbers in different trades, and they stated before this Commission that the great difficulty was the boys would run away to the States, or some place, and the bosses would lose money by them. How would you remedy that? A.—That is why I would recommend the indenture system. The parents or guardians would have to give a guarantee to the employers. I recommend the same system as the English system. It protects both the apprentice and the employer.

DAVID TASSÉ, Printer, Ottawa, called and sworn.

By Mr. ARMSTRONG :—

Q.—You are a printer? A.—Yes.

Q.—You have heard the evidence of Mr. Short and Mr. Farrell? A.—Yes; I have.

Q.—Do you corroborate what they said? A.—Well, not in every instance.

Q.—In what respect do you disagree with them? A.—Well, I do not agree with Mr. Short in all that he said about the houses in the city of Ottawa. Though not a landlord, I find the houses of the working people of the city of Ottawa pretty

fair. I have lived in Montreal, and I know the condition of the two places, and the fact is, I would rather live here than in Montreal, as far as the houses are concerned.

Q.—Do you agree with the witnesses as regards the sanitary condition of the printing offices? A.—I do.

Q.—Do you consider that they are in a bad state? A.—They might be a great deal better.

Q.—What is your opinion of what they said with regard to the apprentice question? A.—Well, that is a great trouble. Neither the bosses nor the parents wish to indenture them in our trade.

Q.—Can you tell why? A.—It seems to be a kind of agreement between the parents and the bosses—neither are willing that the apprentices should be indentured.

Q.—Can you tell why? Do you think that one reason why the boy's friends do not wish him to be indentured is because they are anxious to get him on piece-work, so that he should earn as much as possible without learning a perfect trade? A.—Yes; because they come to our place. We have known them to claim to have served four years when they have only served one and a-half years; and by the time they have served two and a-half or three years and a-half they assert they have served five years at the trade.

\* \* \* , Laborer, called and sworn.

By Mr. ARMSTRONG:—

Q.—What are you employed at? A.—I work on the locks.

Q.—Have you been working long on the locks? A.—Twenty years the 9th of next month.

Q.—What is the average number of hours you put in out of the twenty-four? A.—The lock-men of the city of Ottawa, during 1887, worked from six at night until seven in the morning—that is to say, we were on duty all the time. For instance, during the month of May we worked 108 hours; in the month of June we worked 119; in the month of July we worked 126; in the month of August we worked 104 hours; in the month of September we worked 96 hours; in the month of October we worked 84 hours; in the month of November we worked 32 hours—being a total of 667 hours, which is equal to sixty-six days and nine hours for the season of 1887, at night.

Q.—How many hours do you put in in the day time? A.—All the time, besides the night time. I commenced to work on the 1st day of May, perhaps on the 2nd, and I lived there at the locks until the last day of November. There may be days when I would get a few hours' rest during the day, and nights when I would get a few hours during the night, but there is pretty near as much work at night as there is in the day time.

Q.—What number of hours have you worked without having any sleep? A.—I have worked from twelve o'clock on Sunday night until half-past one o'clock on Wednesday night with two hours' sleep; that was last spring.

Q.—Are you paid by the month, or by the week, or by the day? A.—By the day.

Q.—How much per day do you receive? A.—A dollar and a-quarter.

By the CHAIRMAN:—

Q.—You are not paid in the winter? A.—No.

Q.—How much do you receive for night work? A.—Nothing; I get \$1.25 a day, and that includes the night. Night and day are both alike to us fellows.

Q.—Do they pay you for Sunday work? A.—Yes.

Q.—Is there any lost time? A.—It is all right, as far as the wages go, but the wages are not sufficient for the work.

Q.—Has more attention to be paid to some locks than to others? A.—Sometimes.

By Mr. HEAKES:—

Q.—You think you ought to be paid something extra for night work? A.—Yes. I would like to give you a statement. There are certain grievances amongst the men. The Government, last year, put the whole of the men on the canal from Ottawa to Kingston on a standing wage of \$1.25 a day. We had \$1.20 a day, and that was given by the other Government in 1872 in lieu of house rent (the 20 cents), during the season of navigation. Now, the men up along the line to Kingston Mills have houses from the Government and a garden, and they can grow potatoes and get a great deal of fuel free, and so on. We at this end of the canal think that this is a grievance. Our expenses are greater, but we simply have our day's pay, no more; and we would like the Minister of Canals to receive our petition. We sent in a petition, and were told that it was received, and that is all we have heard of it.

Q.—What pay do the lock-men receive at the other end of the canal? A.—They receive the same pay and the extra privileges. We get \$1.25 a day and the people up there get the same.

By the CHAIRMAN:—

Q.—So you think you are entitled to get house rent free or more salary? A.—

Yes.

\* \* \* , Laborer, Ottawa, called and sworn.

By Mr. ARMSTRONG:—

Q.—I understand you also work on the canal, as lock-man, the same as the last witness? A.—Yes.

Q.—You heard him giving his evidence and you understood all that he said? A.—Yes, sir.

Q.—Do you approve of it? A.—I do.

Q.—Have you anything to add to what he has said? A.—Yes; I would like to say a little more. I think the hours we work too long for any man to stand it. We work without sleep at all hours, and without meals, sometimes. We may commence at 12 o'clock on Sunday night, and work all night and we have got to stay out until we have done our work for the time, which is generally 9 or 10 o'clock on Monday morning, before we go to breakfast. Sometimes we take breakfast and dinner together, and at other times we take dinner and supper together, and I think it is a very hard thing, after working all night, to have to turn out again and get no rest and get nothing extra for it. I know on the Lachine Canal there is only one lock, and there is a gang of eight men. Here there is a whole string of locks, and there are only eight men for the eight locks, while on the Lachine Canal there are eight men for every lock. Their lock is a little larger; it is a three-boats lock, but at the same time they are boats that are pulled through by horses, whereas here, up in Ottawa, with eight locks, one after the other in succession, they are put through by hand.

(Translation.)

EVENING SESSION—OTTAWA, Saturday, 5th May, 1888.

LOUIS GRATTON, Cabinet-maker and Joiner, Ottawa, being sworn, deposeseth as follows:—

By Mr. BOIVIN:—

Q.—Are you working for yourself or for other persons? A.—I am working on my own account.

Q.—Have you men engaged in your service? A.—Yes.

Q.—How many have you? A.—At the present time I have five.

Q.—Have you children working for you? A.—No; but I have five men working for me.

Q.—What are the working hours in your factory? A.—Ten hours a day and nine on Saturday.

Q.—Can you tell us, thereabouts, the wages which these men make a week? A.—Ten dollars and fifty cents.

Q.—Have these men continuous work? A.—Yes; the whole year round.

Q.—Are there any of your men who have made savings or laid aside anything? A.—That's more than I can tell you.

Q.—Have you any trouble with your men? A.—No, sir; not at all.

Q.—Do you feel that you have opposition in your trade from goods coming from other quarters? A.—No.

Q.—You have nothing serious to complain of? A.—No, sir; not at all.

(Translation.)

OCTAVE LABELLE, Sub-foreman for Charlebois & Co., Contractors, of Ottawa, being sworn, deposesh as follows:—

By Mr. BOIVIN:—

Q.—Will you tell us how many men you have employed in your service? A.—That depends; at the present time we have about forty. Sometimes we have as many as 250 and 300.

Q.—Do the workmen that you have at present do the same job, or do they work at different jobs? A.—At different jobs; we have them from journeymen up to artists.

Q.—Will you tell us, thereabouts, how much journeymen make a week? A.—We have some who make \$7 and others \$9.

Q.—The joiners: how much do they make? A.—We have them of different grades, and all depends on their skill. We have some who make \$1.75; others \$1.25 and \$2.

Q.—Do the joiners that make \$1.75 and up to \$2 a day work at the same job? A.—They do the same work as the others.

Q.—Why do you pay some \$2 and the others \$1.75? A.—Because the one who makes \$2 does more work than the others, and when we have a harder piece of work to do we give it to the one who is best able to do it.

Q.—There are some who do a greater quantity of work than others? A.—Yes; there are some men who are exceedingly slow, and to whom I should give no work at all.

Q.—Do you believe that if the workmen had more schooling it would improve their position? A.—Certainly; that would give them many advantages in understanding the plans and working them out for themselves.

Q.—As a rule, do you find the number of able workmen greater than that of common workmen? A.—I find more common workmen than able ones.

By Mr. HEAKES:—

Q.—Are not the men obliged to sign the contracts? A.—Never.

Q.—How often are they paid? A.—Every fortnight; they come to the office and their money is given them in an envelope.

By Mr. BOIVIN:—

Q.—Have you had any trouble with your men? A.—The first year we had a strike that lasted half a day.

By the CHAIRMAN:—

Q.—How long is that ago? A.—It was not the first year; it was two years ago. The trouble was about an increase of wages, and among the stone-cutters only; they demanded 25 cents a day more. They said nothing about it; they stopped working without saying anything. They came to the office all together, and I sent them back to work; I gave them their 25 cents. As to the bricklayers: they stopped work one whole day, about two years ago; they struck for an increase of wages, which was not reasonable. I would not give it to them, and they went back to work.

By Mr. HELBRONNER :—

Q.—You are obliged to follow the plans laid down by the architect? A.—Yes.

Q.—When the artist makes a mistake, is there any responsibility whatever incurred? A.—Not at all; all depends on circumstances. If the architect makes a mistake it has to be repaired, and we charge more.

Q.—But it is the client who pays, and not the architect? A.—It is the client, certainly; the architect is never responsible.

Q.—Whether the plan is good or bad, the architect gets his commission? A.—Yes; even for the extras that are made to correct the plan.

By the CHAIRMAN :—

Q.—Then, he has an interest in making bad plans?

By Mr. HELBRONNER :—

Q.—Are you aware that at Ottawa, or in other towns of the Province, workmen have lost their wages through the fault of the contractor or the sub-contractor? A.—Oh, yes; very often; but I cannot enter into details.

Q.—Does not this happen especially when the contractor or sub-contractor has not the money needful to do the job? A.—That is always the case.

Q.—Or that he has put his contract too low? A.—Yes; that's it.

Q.—Do you think that a law rendering the owner responsible for the materials and the handiwork would be of advantage to the workman and the contractor? A.—Yes; advantageous for the workman and the contractor, only it would be necessary that the owner should have guarantees from the architect, because it is the architect who has to build, and if his plans must be altered, and if the contractor brings on extras, the owner is obliged to pay; but if he is obliged to pay the men over and above this he has a great deal of responsibility. On the other hand, as far as the contractor is concerned, there is another thing which does not look to me right. This is the of way of it: If a piece of land is not good, and you put up a house on it, the house is built and the architect is not liable; it is the contractor who is liable.

Q.—The architect does not point out the nature of the ground? A.—Not at all; you, yourself, are obliged to see that the ground is right, and you are held responsible for all damages which may befall the property; or, again, if there are flaws in the plans, if there are portions of the plans that are weak—something that will give way—the workman is responsible for this and the architect is not.

Q.—Do you know cases in which the architect forced the contractor to follow his plans when the contractor declared that the plan was not good? A.—Oh, yes; that happens almost every year. In that event, you file a protest before the notary, and if the owner, after consulting his architect, tells you to go ahead, then it is the owner that is responsible.

Miss \* \* \* , Folder in a Printing Office, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—Where are you employed? A.—In the Parliamentary Printing Office.

Q.—What do you do? A.—I am employed in the folding department.

Q.—How many hours do you work per day? A.—Nine hours.

Q.—Have you ever worked for a longer time than nine hours in the day? A.—Yes; I have work over-time, from 7 o'clock until 10 o'clock at night.

Q.—How are you paid—by the day or by the week? A.—I am paid by the day—I receive \$2.50 a week.

Q.—Are you paid anything for over-time—any extra pay for over-time? A.—I am paid 5 cents an hour for over-time—15 cents for three hours.

Q.—You say you work from 7 in the morning until 9 at night? A.—I say I have worked from 7 in the morning until 6 o'clock at night, and then I have gone

to my supper and returned at 7 o'clock at night and have worked until 10 o'clock at night. We work from 8 o'clock in the morning until 6 o'clock at night now—at the present time.

Q.—It is optional for you to work over-time? A.—Yes.

Q.—Do you go home to dinner? A.—Yes; I go home to dinner at 12 o'clock and I return at 1, and I work from 1 until 6.

Q.—Do any of the young ladies in your department bring their dinner? A.—Yes.

Q.—If you are late a quarter of an hour do you have an hour taken off of your time? A.—Yes.

Q.—When they bring their tea where do they make it? A.—Down on the boiler.

Q.—And whereabouts is the boiler? A.—In the press-room, down stairs.

Q.—Are there men around the boiler? A.—Well, no; not around the boiler.

Q.—It is just down stairs? A.—It is in a back, out-of-the-way place; not exactly in the press-room.

Q.—During the time that you have been there have you ever been fined? A.—No; if I lost an hour, or anything like that, they took it off of my work for the time, and I did not get anything for it.

Q.—But if you came in a quarter of an hour late it was taken off? A.—Yes.

Q.—Do you know if any girl had anything taken off of her wages for playing? A.—No; I did not hear of any.

Q.—Do you know what amount that fine was? A.—I could not tell you.

Q.—Do you know that she was fined? A.—Yes.

Q.—By whom? A.—By the foreman.

Q.—Do you know that afterwards it was brought to the notice of Mr. Roger? A.—I do not know.

Q.—You have no idea of the amount of that fine? A.—No.

Q.—Do you know what it was for? A.—No; I do not know. It was for fixing her hair, or something of that kind.

Q.—Has the foreman used bad language towards the girls, such as cursing and swearing? A.—Yes; I have know him to curse and swear.

Q.—Did you ever know him to be very violent in his language? A.—No; just cursing; that is all.

Q.—Have you known him to strike any one? A.—No.

By Mr. ARMSTRONG :—

Q.—How long does it take girls to learn the folding? A.—About two weeks.

Q.—What do they get? A.—One dollar and fifty cents a week, and their salary is afterwards raised. Some get as high as \$4 a week; that is in the press room—\$2.50 a week they generally get.

Q.—What is the age of the youngest girl? A.—I could not tell you; there is one here.

Q.—Do you know any younger than she is to be working there? A.—I don't think so; I could not tell you, I am sure.

Q.—Do you know, a couple of years ago, of a very young girl working there? A.—Yes.

Q.—What is her name? A.—I do not know her name.

Miss \* \* \*, Paper-folder, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—What is your age? A.—I am fourteen.

Q.—You heard the statements made by the other witness, did you? A.—Yes.

Q.—Do you corroborate what she says? A.—Yes.

Q.—Have you any additional statement to make to what she has already said? A.—No.

- Q.—Have you ever been fined—that is, have you ever been docked in your pay for anything you have done, for instance, if you displease the foreman would he keep something off your pay? A.—Yes.
- Q.—Has he ever used bad language—towards you, such as swearing at you? A.—Yes.
- Q.—Has he used abusive language towards you? A.—Yes.
- Q.—Did you ever speak to Mr. Roger about it? A.—No.
- Q.—Do you know any of the little girls who did? A.—No.
- Q.—Do you carry your dinner with you to work? A.—No.
- Q.—You go home for your dinner? A.—Yes.
- Q.—About what are your earnings a week? A.—Two dollars.
- Q.—What are the number of hours that you work a day for these two dollars? A.—Nine hours.
- Q.—Did you ever work until ten o'clock at night? A.—Yes.
- Q.—Do you sit down at your work? A.—Yes.
- Q.—How long have you been at the folding? A.—A year and six months.
- Q.—And you only get \$2 a week now? A.—Yes.
- Q.—Your age was twelve and a-half years when you started at the work? A.—Yes.

Miss \* \* \*, Ottawa, Folder, called and sworn.

By Mr. ARMSTRONG:—

- Q.—How long have you been working in the establishment of Messrs MacLean, Roger & Co? A.—Very nearly three years.
- Q.—What is your age? A.—I am seventeen.
- Q.—You heard the statement made by the other girls? A.—Yes.
- Q.—Do you corroborate what they have said? A.—Yes.
- Q.—Have you ever been fined? A.—Yes.
- Q.—What were you fined for? Was it for coming in late? A.—Yes.
- Q.—What did the foreman dock you for that? A.—Three or four cents.
- Q.—How much time would that be? A.—About an hour.
- Q.—Would you be an hour late or just a few minutes late when he would dock you an hour? A.—Sometimes I would only be a few minutes late.
- Q.—Have you ever known any little girls to be ill-treated in any way? A.—I do not know of any.
- Q.—Do you know of any being slapped? A.—No.

OTTAWA, 8th May, 1888.

CHARLES BRYSON, Dry-goods Merchant, Ottawa, called and sworn.

By Mr. CARSON:—

- Q.—You are a member of the firm of Bryson, Graham & Co.? A.—Yes.
- Q.—How many clerks do you employ in your establishment? A.—We have thirty salesmen at present; we have in all fifty-six—that is, hands about the place. We have thirty salesmen now.
- Q.—Of these hands that you employ, how many would be females? A.—Four sales-ladies.
- Q.—What would be the age of the youngest of these? A.—I think thirteen or fourteen years of age—about thirteen; possibly fourteen.
- Q.—What are these girls of fourteen years of age employed at? A.—Ticketing goods, sewing tickets on clothes, and so forth.
- Q.—Are they situated so that they can sit down when disposed? A.—They sit all the time at their work.

Q.—What would be the average wages of a dry-goods salesman? A.—I think ours would average \$10 a week.

Q.—And these female saleswomen? A.—Well, two of them have \$6, one \$3 and one \$2 a week. The little girl ticketing goods has \$2.

Q.—What hours do they have to work per day, the salesmen and saleswomen? A.—The salesmen work ten hours a day and the saleswomen, I think, less than nine hours.

Q.—Those that would be on as late as eleven o'clock at night on Saturdays, what time would they start in the morning? A.—They would start at ten o'clock; one at nine o'clock.

Q.—Have you any system of fines in your establishment? A.—No.

Q.—How are the conveniences—water-closets, and the like of that? A.—We have but one.

Q.—In use for both sexes? A.—Yes; we have a second, but they do not seem to use it.

Q.—Is it inside the building? A.—Yes; the young ladies might use the second, but they do not use it; they all use the same one. I do not think the ladies were ever inside the closet down stairs.

By Mr. HEAKES:—

Q.—What is the reason they do not use the other closet? A.—I do not know.

Q.—Is it in an out-of-the-way place? A.—No.

Q.—Is it just as convenient as the other one. A.—Yes.

Q.—How often do you pay your hands? A.—Every Saturday evening.

Q.—Do you employ any milliners and dressmakers? A.—No.

By Mr. CARSON:—

Q.—Are both water-closets in the cellar? A.—Yes.

Q.—Do you think if these water-closets were in a more convenient place—for instance, not in the cellar—the girls would be more apt to use them. A.—Yes.

Q.—Do you not think that is the reason they do not use them. A.—Well, I could not say, I am sure. Our girls have all very short hours—that is, they go out very often. They come in at ten and leave at twelve, and come back at one and leave at five. They are out a good deal; the day is broken up.

Q.—Do any of your clerks eat their meals in the shop. A.—Those that live at a distance do.

Q.—Do you make up or manufacture anything? A.—We manufacture nothing on the premises.

By Mr. HEAKES:—

Q.—Do any people work for you outside? A.—Yes; in manufacturing ready-made clothing.

Q.—How many? A.—Thirty or forty persons.

Q.—Are you able to tell us the wages women earn on clothing. A.—We pay 25 cents for a pair of pants; the same for a vest; 65 cents for a coat; overcoats, \$1. We manufacture shirts outside; we pay \$1.50 per dozen, without collars, and \$1.80 with. We pay the same for cotton; we only make the coarser cotton, not the finer.

Q.—Do your hands have to find cotton, or anything. A.—No; we find everything.

Q.—Do you impose any fines? A.—There are no fines imposed on those people who manufacture for me.

Q.—Are you able to tell us how many coats a woman would make in a week? A.—I could not. I think they are made by women who do their own housework, and make them in their spare time. Any time they have got to themselves they sit down and do that work.

Q.—Can you tell us if many people are employed in dry-goods stores in Ottawa? A.—There are a good deal.

Q.—Could you tell us anything of their general condition, and treatment, or hours? A.—No; I could not.

Q.—Have you heard any complaint as to the long hours and the inconveniences they suffer? A.—No.

By Mr. ARMSTRONG :—

Q.—How late do your clerks have to work of an evening? A.—The clerks come back again, half of them, until nine o'clock every evening.

Q.—Do they get any extra pay for that? A.—No; nothing extra.

Q.—Supposing clothing is imperfectly made, what do you do then? A.—If a garment is imperfectly made we stop giving them work. We change hands. However, I may say that we have had the same hands a good many years. I think I remember in one or two instances we sent the piece back to be done over again.

Q.—You have an inspector to look over the work when it comes in? A.—Yes; I have seen them returned for pressing more than anything else.

Q.—Do the women outside do the pressing? A.—Yes.

Q.—And you do not fine them for bad work? A.—No; we simply stop giving them any, and try some one else.

By Mr. CARSON :—

Q.—Do any of your girls stay until eleven o'clock at night? A.—No; they go at nine; they are not on every night until nine o'clock. The girls that remain until nine o'clock at night come at eleven in the morning, and those that remain on until nine at night have two hours in the day, between ten o'clock and nine at night, for dinner and supper. They work till nine in turn—alternate weeks. Those that leave at six at night come on at nine in the morning.

Q.—Does a clerk who speaks two languages obtain more pay than a clerk who speaks only one language? A.—They earn more. Our clerk's wages are not by salary alone, as his salary is earned when he has sold \$200 worth of goods; if he sells another \$100 worth during that week he has on Saturday night \$15—not \$10, so that they are all interested in making sales. I think our salaries are as large as any. We have men who earn \$22 and \$25 a week.

Q.—They speak both languages—English and French? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Is it more expensive for a young woman to live in the position of clerk or saleswoman than for her to live if she worked in a factory? A.—She is supposed to dress better; I do not know how much it costs.

Q.—She has to wear more collars and cuffs? A.—Yes.

Q.—She is not under more expense, is she? A.—I believe she would be.

SAMUEL CARSLY, Dry-goods Merchant, Montreal, called and sworn.

By Mr. HEAKES :—

Q.—In stores where salesmen and saleswomen are employed what supervision is generally made in the way of lavatories and water-closets—do you prefer to make a general statement? A.—Well, I will answer that question, and will then continue and make a statement. Generally, the only water-closets are in the cellar. I will speak now not only of Montreal, but from my experience in other places as well—Brockville, Ottawa and Toronto, particularly—where we have had occasion to examine dry-goods premises during the last twelve months' with a view to taking them. We have known both salesmen and saleswomen, dressmakers and milliners, all to be in the same house, all in the same employ, and in every case, without exception, we found there was only one water-closet, and that was in the cellar. These collars, although not dark in every case, were so for the most part.

Q.—Do you know what provision is made to prevent the sexes meeting at all, at such places, or if there is any such provision? A.—No; none whatever; and in every case there is only one entrance to the cellar.

Q.—Where? A.—By a door under the stairway. We found that particularly to be the case in Toronto. They are all equally bad. Toronto was as bad as, if not worse than, any other place; it was as bad there as it could possibly be. In a certain house there there was a water-closet with only one seat for all the employés; in other places they have two seats, with only a thin board partition between them, and the only provision afforded the young people for washing their hands—which has to be done very often, on account of handling very delicate material—is down past where these men go in the cellar, and usually there are no urinals for the men, except they use the seats (water-closets).

Q.—Can you tell us what conveniences there are for the girls in dry-goods stores where milliners and dressmakers are employed. A.—There are none that I saw. In one case—there was one building occupied by three tenants—a dry-goods man and salesman; a dressmaker, with a staff of young people, and a milliner with her staff; and for the whole building there was one closet in a dark cellar.

Q.—How are the milliners' and dressmakers' apprentices treated in Montreal? A.—In some cases I believe they are treated well, and in many cases they are made to work very late, and without any extra pay, and from some stores you will see them delivering parcels on a Saturday night in the middle of the night.

Q.—What time have they to commence work in the morning? A.—Eight o'clock in the morning is the standard in our business.

Q.—And as a rule what hour do they go away? A.—You see there are two classes of milliners and dressmakers, one employed by dry-goods foremen, and there are private establishments conducted by ladies. I cannot speak so much of these private places; but I think the shops, as a whole, now let them off at pretty good hours where they do the better class of trade; where the shops are smaller they keep them till sometimes eight, nine, ten and eleven o'clock on Saturday nights.

Q.—Can you tell us anything about the condition of girls employed in shirt factories and clothing firms? A.—Their condition is as bad as the others I have complained of. The complaint we hear from these people is irregularity of pay. The reason I know is this: When they come to my store to buy they cannot pay for the goods, and want us to put them on one side until they can pay for them. They sometimes show us "due bills" from these factories and firms, and say they cannot get their pay, and ask us to take them.

Q.—Do all these factories you have mentioned or referred to adopt this system? A.—I would not say all, but some of them.

Q.—Do you think there is much hardship suffered by this class of people by that system of paying in due bills? A.—My opinion is the greatest hardship any of our working people can suffer and do suffer is the irregularity in the payment of their wages.

Q.—Does this practice of paying wages by due bills also apply to the city of Toronto? A.—I do not know anything about the Toronto trade in that respect, but when a person works at his or her own house—when they take the work home and do it, and are paid in this way, it is a great hardship. They are forced to buy on credit and are compelled to pay more than what the stuff is worth, because they do not get paid themselves weekly.

Q.—Would you agree to the extension of the provisions of the Factory Act to dry-goods stores and other businesses, such as wholesale clothiers, shirt factories, and so on? A.—Yes; I think it is quite as necessary to regulate them as the factories. I think the suffering endured by the operatives or employés in such places is just as great as the suffering endured by the operatives in factories; and I think the smaller the town—the smaller the stores—the more hardship there is to endure.

Q.—What would you suggest as the best means of remedying these evils, with regard to the treatment of women and children and the employment of children? A.—I think the employers themselves will never remedy it in any way, and the only way that I can see of mending it is legislating so as to compel employers to dismiss them at certain hours, and have the water-closets and other places so that women and

children will not be compelled to go down into the cellar, or use the same conveniences as the opposite sex.

Q.—You would have the conveniences for males located in a different part of the building? A.—I would.

Q.—You believe that the helpless classes—women and children—shall be the wards of the Government, and the Government shall be responsible for them? A.—Yes; and from what I have seen, the employers will never do it until so compelled—at least, that is my opinion.

By Mr. BOIVIN :—

Q.—Do you find that Canadian goods are increasing in sales? A.—I think that the sale of Canadian goods for the low and cheap trade is increasing, but not for the better trade.

Q.—Do you manufacture anything yourself? A.—Well, we have dressmaking; we don't call that manufacturing.

Q.—Have you heard that some stores get their work done—some stores and some factories get their work done and pay their people in little coupons? A.—That is what I have just had reference to.

Q.—Do you know if in some dry-goods or milliners' shops they pay their working girls in goods, and that they—the working girls—are bound to take so much goods for the amount of their wages? A.—Not that I know of.

Q.—We found such to be the case in Quebec? A.—Well, it is very likely; I think that is just what is likely to be done.

Q.—Have you a knowledge of the provisions of the Ontario Act regulating the hours and the conditions of women in stores? A.—No; the Factory Act—you are not speaking of that?

Q.—No; this is an Act passed at the last Session of the Ontario Parliament, regulating the hours of women and children in stores.

By Mr. HELBRONNER :—

Q.—Do you think the Factory Act applies to your store, where there are so many girls employed in sewing—in the sewing room? A.—No; but I think it should apply to our stores.

Q.—Well, if you make clothes or dresses it might be a factory? A.—In that case you could only make it apply to dressmakers. In my opinion, the Act should be made to apply in such establishments as mine as much to the clerk, and salesmen and saleswomen, as to the milliner, dressmaker, seamstress or child, as they are liable to be equally as much abused.

Q.—Do you think the Factory Act should apply to small working shops where they employ under twenty people? A.—I think it should apply; but the Factory Act, as I understand it, does not interfere with dry-goods stores. My idea is it should.

By Mr. HEAKES :—

Q.—The Factory Act applies to places where more than twenty hands are employed, where the article or part of the article is manufactured; it does not apply to stores. A separate Act was passed this last winter by the Ontario Government which applies to stores? A.—I think it should apply. The employes in dry-goods stores and other stores need to be as much protected as the operatives in factories.

By Mr. BOIVIN :—

Q.—When you want employes do you find them in stores dressmaking, and so forth, in Montreal? Do you find women applying to do the work you want them to do? A.—Not until we have had them a while, but I think you will find sewing girls in Montreal as able as any where in Canada.

Q.—Would a clerk in Montreal speaking the two languages be worth more than a man speaking only the one language? A.—I do not know that the one would be worth more than the other. If we want a man to speak French we employ him for

that. Of course, it is an advantage to be able to speak and understand more than one language.

Q.—But in a smaller store—where a man has got a small store you think it is an advantage? A.—Yes; it certainly is an advantage.

By Mr. ARMSTRONG :—

Q.—A saleswomen: is she necessarily under more expense than if she worked in a factory or a workshop? A.—Well, I think so.

Q.—You could not tell us the difference—about? A.—She has to dress better.

Q.—She is under more expense? A.—Yes; she has to dress better and has to board with a better class of people; they are certainly under more expense than a factory girl.

Q.—Can you give any comparison between a shop girl and a factory girl? A.—Well, one very important thing is, a saleswoman loses no time, whereas a factory girl receives higher pay for the time she works but she does not have work the whole year through.

Q.—Is it a practice with dry-goods firms to employ female clerks during a season of the year and then dismiss them when the season is over? A.—No; but salesmen and saleswomen are not used so well in Canada as they are in England in that particular. There they have holidays, and considerations shown them of different kinds; they are not used so well here as they are in England—particularly saleswomen.

Q.—Have you ever noticed a firm that would take a number of beginners on without salary and dismiss those that are on salary—saleswomen—when they have learned—the beginners have learned? A.—I have no means of knowing; we have not any.

Q.—At certain seasons of the year there are extra milliners taken on—these are not permanent milliners. Do you know what becomes of them when they are idle? A.—No; I do not know; that is a disadvantage of the business. There would very likely be on hand a little work that they could do at home—but I know that is the case with all firms.

Q.—Are there many children employed in Montreal—boys under fourteen years of age? A.—As cash boys—that is, with ourselves.

Q.—What is your opinion with regard to the employment of children? A.—Better not at all.

Q.—What are the ages of the cash boys employed by you? A.—Our cash boys vary from ten and a-half years of age to twelve and a-half years of age.

Q.—All of them? A.—Yes.

Q.—Do you not think that is too young? A.—Well, I think they would be better at school.

By the CHAIRMAN :—

Q.—Under the Factory Act they could not be employed under twelve years of age? A.—So much the better for the children.

By Mr. McLEAN :—

Q.—Do you find those cash boys of ten and a-half and eleven years of age pretty well educated? A.—Well, as a general rule they are educated as well as the ordinary boy. They can read and write, and I think they are sent by their parents to get money to help keep the house; but it would be better for them if they were at school and not employed.

By Mr. HEAKES :—

Q.—Would an Act similar to the Ontario Act, regulating the hours of women and children employed in stores, be generally accepted—would an Act closing the stores at a certain hour at night be generally accepted? Our Ontario Act can be enforced on petition by a majority of the trade? A.—Who would sign the petition asking for the enforcement of such an Act?

Q.—The merchants themselves? A.—I would not object. I would just mention one thing particularly that strikes me: "Closing the store" is not the term which

should be used; "dismissing the hands" is the term that should be used, as well as "closing the store," because the hands are sometimes kept three hours after the store is closed. Does it refer to all businesses?

Q.—Any particular business? A.—This "closing the stores" means very little.

Q.—Have you any further facts to state before this Commission? A.—About the provisions for the young people: I do not know that the landlord should be held responsible; I think the people who employ the hands should place the conveniences on the different floors, as the last witness said he had got two in his cellar and the young women would not go down. One of the hard things in Montreal is seizing the poor peoples' wages. There are a lot of people there who make it a business to buy up debts. No sooner are a lot of men's wages paid than they are seized by this class of men, who go around and buy these debts from tradespeople. When the tradespeople themselves will not do it they come and do it.

By Mr. ARMSTRONG:—

Q.—And then they garnishee the wages of the parties? A.—Yes.

Q.—But, if employers paid their hands every week it would be better? A.—Yes; few people would then know the hardship. We pay four times a month, and we never pay on the same day of the month as the month previous, so that those people shall not know.

Q.—Do not you think if all employés were paid weekly it would be better for them than if they were paid fortnightly or monthly? A.—They would be better off—15 per cent.

By Mr. HELBRONNER:—

Q.—You pay four times a month, at different times in the week? A.—Yes; the 7th, 15th, 21st and so on.

Q.—Do not you think you would find a certain day better for the family of the employé? A.—We do not pay on the same day, but on the same date.

ROBERT RANKIN, Printer, Ottawa, called and sworn.

By Mr. ARMSTRONG:—

Q.—Where are you employed, and in what capacity? A.—I am foreman in the job department of Messrs A. S. Woodburn & Co.

Q.—How many men are there in your department? A.—There are twenty men.

Q.—Are there any girls? A.—No; there are no girls employed in my department; I have two boys.

Q.—What are their ages? A.—The youngest is about twelve. He is just a message boy; he does not work around the printing machines; he just takes proofs, and such as that. I will leave some one else to tell you of the printing part of the business of the establishment.

Q.—You have an engineer employed in your establishment? A.—Yes.

Q.—Is that engineer a practical engineer? A.—I cannot say; I have not the slightest knowledge of his ability; I only know he runs the engine, but I do not know anything about him, whether he has a certificate or not. I do not know anything about him, because my business does not take me to him.

Q.—Is there any machinery in your department? A.—There is no machinery in my department.

Q.—Have you, in your department; had any accidents? A.—No; nothing extensive; nothing serious.

Q.—What was the nature of the accidents? A.—A "form" was put on the elevator or hoist, and by some means the hoist fell and cut his face—the face of the man in charge of the form. He was working the next day.

Q.—Do you know the cause of the rapid falling of the elevator? A.—I do not. I do not know anything about the elevator; I know of nothing outside my department.

Q.—Have the women in your department a separate water-closet? A.—There are no women in my department.

Q.—Are there separate conveniences for the women in the other departments? A.—I cannot say anything about the other departments; my duties do not take me out of my department. I believe there are three closets in the establishment, but I can only speak of one in my department.

Q.—Do you know if, in your establishment, there is a system of issuing orders for the payment of the men? A.—Not that I know of. I do not think there is a man of my department who received an order of any kind.

Q.—You are paid how often? A.—Every two weeks.

Q.—In cash? A.—In cash.

Q.—What department are you employed in? A.—The job department.

Q.—How many compositors have you? A.—Well, I have about eighteen altogether.

Q.—Do you work by the day? A.—By the day.

Q.—What are the wages? A.—The wages for journeymen run from \$11 to \$13.

Q.—How many are journeymen out of the eighteen? A.—Eleven or twelve; I think about twelve in the job department.

Q.—How many hours a day do you work? A.—Nine hours a day.

Q.—What is the condition of the water-closets in Messrs. Woodburn & Co.'s establishment? A.—It is in good condition in the job department.

Q.—What is the condition of the water-closets in the other departments? A.—I do not know.

Q.—How long do apprentices serve? A.—I have only been there a short time; I would not guarantee a certificate to any apprentice unless he satisfied me.

Q.—Do you think five years enough time for the boy to learn the business properly? A.—That is my experience.

Q.—Which department, after your experience, would you put your son in to learn the business—a newspaper printing office or a job printing office? A.—A job printing office. It is very easy to learn the business of a newspaper printing office; that is much handier to learn than a job printing office.

Q.—You are of opinion that he could not learn the business in five years? A.—Yes; I would take him in, and give him to understand that he could not learn it in five years, and that he could not get a certificate from the firm until he could take a certificate as a journeyman.

Q.—Do you think it a good thing to examine boys before taking them on as apprentices? A.—I believe so; I believe a good common school education should be received by every boy who aspires to be a printer.

Q.—Do you think it would be desirable to indenture them? A.—It might do with some boys of superior character; but, otherwise, I do not think it would do much good.

Q.—How often are the men in your department paid? A.—Every two weeks.

Q.—In full? A.—Yes.

RICHARD J. DAWSON, Stationary Engineer, Ottawa, called and sworn.

By Mr. CARSON:—

Q.—Have you many stationary engineers in the city of Ottawa? A.—Well, there are, of a kind.

Q.—Are there many skilled engineers? A.—Yes; there is quite a number.

Q.—What would be the average wages of a good skilled engineer? A.—Well, it is hard for a skilled engineer to get what he is actually worth; there are so many incompetent men to take these situations. The engineers employed here are, generally, ones that are taken in preference to skilled workmen.

Q.—Do you know if there is any feeling among stationary engineers now to have certificates granted to competent men? A.—That is one point that ought to be taken

into consideration. If competent men were granted certificates there would not be so many accidents, such as there are at the present time, through incompetent persons taking charge of engines and boilers.

Q.—Do you consider that it is as necessary for an engineer in a factory to pass an examination as for an engineer on a steamboat to pass an examination, before he can obtain his certificate? A.—Yes; I do.

Q.—As a rule, in such large places as Ottawa, are the men in charge of engines capable men? A.—Well, as far as I know—and I am an old resident here of twenty-four years' standing—I think incompetent men are in the majority.

Q.—Do you know any boilers in factories and workshops in Ottawa in an unsafe condition? A.—I do not at the present time.

Q.—Do you think it necessary to have an inspector of boilers appointed for the city of Ottawa? A.—Yes; it is absolutely necessary.

Q.—How frequently should inspections be made by an inspector? A.—Once a year, as in the majority of places where steam is used here they are run in the summer time, and run night and day as a rule, so that the boilers require looking at every spring.

Q.—When incompetent men are in charge of boilers is there any danger of the boilers burning? A.—The tubes—yes.

Q.—Will you tell us how that burning takes place? A.—Well, the style used here is the tubular boiler, and the men in charge of these boilers do not understand the pump, and they let the water down and so burn the tubes.

Q.—Will not a boiler burn through being dirty inside? A.—Yes; it will burn the sheet and bulge the plates—well, the bulging will be caused through the burning.

Q.—Will you give us an idea of what branches an engineer should pass an examination in before he should obtain a certificate? A.—Well, what would be necessary for a stationary engineer to understand would be the inspirator or injector of steam pumps.

By Mr. BOIVIN :—

Q.—What do you use for these boilers—wood or coal? A.—Wood, as a rule. In the steam mills they use the refuse sawdust. I believe you get that for just the price of cartage. In the mills it is carried from the saws and fed under the boilers.

Q.—Are there shops here where they make boilers? A.—Yes; there are two or more.

By Mr. HEAKES :—

Q.—Can you tell what the earnings of a stationary engineer are in and around Ottawa? A.—They run from \$7 a week, and in some cases they receive \$2 a day.

Miss \* \* \* , Folder and Sewer, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—Where are you employed? A.—In Messrs. Woodburn & Co.'s printing offices.

Q.—What business do you do? A.—Folding and stitching; I am the forewoman.

Q.—How many young women are engaged in that business? A.—In the summer time about twenty-four or twenty-five; I think there are only ten now.

Q.—How old might the youngest girl be that is employed there? A.—Sixteen.

Q.—Does it require experience to fold quickly? A.—Yes.

Q.—How long would it take a young woman to become a competent folder? A.—Pretty nearly a year.

Q.—How much per week do they get when they go to the folding first? A.—

One dollar and fifty cents a week.

Q.—When extra competent how much do they get? A.—From \$2.50 to \$3.50 a week.

Q.—How many hours do they work? A.—From seven o'clock in the morning until six at night; a foreman is allowed half an hour in the morning—from half-past seven until six at night; seven o'clock is the hour we should be there.

Q.—How long are you allowed for dinner? A.—We are allowed an hour for dinner; some take their dinner with them.

Q.—Is the room in which you work a healthy room to work in? A.—Yes.

Q.—It is a comfortable room to work in in the winter time? A.—Very comfortable.

Q.—Is the foreman generally in the room? A.—Yes.

Q.—Do any of the foremen around there use bad language, at any time, to the young women? A.—Oh, no.

Q.—Have the young ladies separate conveniences to themselves? A.—Yes.

Q.—Are they in good order? A.—Yes.

Q.—How often are these young women paid? A.—They are paid once a week.

Q.—Are they paid regularly and in full? A.—Yes; the girls are.

Q.—Of course, you only speak for the young girls in your room? A.—Yes; that is all.

Q.—Is the drinking water good and readily got at? A.—Yes.

Q.—Do these young ladies do piece-work? A.—No.

Q.—It is all day work? A.—Yes.

Q.—Do the young women remain long in the establishment that go there to work? A.—Well, some of them have been working there five or six years.

Q.—Do they have to work over time at night? A.—Yes; except in the summer time.

Q.—When they are busy are they paid extra? A.—Yes; 10 cents an hour.

Q.—How late might they be kept? A.—Nearly three hours—from seven o'clock until ten.

Q.—When asked to work at night are they informed to that effect? A.—Yes; they are.

Miss \* \* \* , Folder and Stitcher, Ottawa, called and sworn.

By Mr. CARSON:—

Q.—Have you heard the evidence given by the other witness? A.—Yes.

Q.—Can you corroborate all that she has said? A.—Yes.

Q.—Do you wish to add anything to what she has said? A.—Only that we get half a day on Saturday.

Q.—Are you paid for that half a day? A.—Yes; we are allowed the Saturday afternoon.

Q.—And you are paid for it? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Have you been residing long in Ottawa? A.—Yes; quite a number of years, nearly all my life.

Q.—Do you think it would be appreciated by the working young women of Ottawa if they received the Saturday afternoon as a holiday to themselves? A.—Yes.

Q.—Do you think it would be conducive to their health? A.—Yes; they would be decidedly better.

Q.—And you think that if a young man received the Saturday half holiday he would be able to work just as well the following week as if he had put sixty or more hours' work in the week before? A.—I should think he would be a great deal more fit to do his work.

Q.—Have the wages in your branch of work increased? A.—I cannot say; I am engaged on the perforating machine.

Q.—Has the foreman always acted and spoken in a gentlemanly manner? A.—Yes.

Q.—Are the young women paid regularly and in cash? A.—Yes.

Q.—Are there any sums held back? A.—No.

Q.—You can speak from your own experience as regards the boon it would be to the young women of Ottawa if they received Saturday afternoon as a holiday?

A.—Yes.

By Mr. BOIVIN :—

Q.—Do you think that you would not wish for anything more? A.—I think we would wish for a great many more things that we do not get.

FREDERICK ROGER, Foreman, Ottawa, called and sworn.

By Mr. ARMSTRONG :—

Q.—Where are you employed? A.—I am foreman in the bindery department of the firm of MacLean, Roger & Co.

Q.—How many young women do you employ? A.—The number runs from thirty-two to fifty.

Q.—They do the stitching and folding? A.—Yes; and covering, and all that.

Q.—Have you any book-binders? A.—No; we have some paper-rulers.

Q.—What is the standard of a paper-ruler in Ottawa? A.—Eleven and twelve dollars a week.

Q.—What are the average wages paid to the young women who are competent folders? A.—From \$3 to \$3.75 and \$4 per week.

Q.—How many months in the year would they be employed? A.—Well, with us it is a little peculiar. Of course, during the Session we want a good many extra hands, but we keep the good workers the whole year round. Still, we do not let them off until we have tried to find something for them to do. If we cannot find something for them to do we let them go.

Q.—What do you pay young girls—apprentices? A.—A dollar and a half a week.

Q.—How long does it take a young woman to become a competent folder? A.—It depends a great deal upon the young woman. We generally keep them the first Session at \$1.50 and the next Session we raise them 50 cents. It takes them some time to get into the business. Collators and competent folders we pay \$2.50 to \$3 a week.

Q.—Is the room where the young women are employed well ventilated? A.—Well, in the summer it is all right, but in winter the house is pretty well closed up. For our own sakes we try to get all the ventilation we can; we open the ventilators in winter. In the summer, of course, we can have the windows open all the time. Some of the rooms are well ventilated; the others are ventilated as much as possible without discomfort. The folding is done in the same room as the press is.

Q.—Do the girls go to the press and take off the work to be folded? A.—They are forbidden to do that. We have a regular system. There is a press-man who is supposed to bring the work off the press to be counted, and the young women have no right to go near it. They go there but very seldom. The only time they went there was when it was a little late at night, when they wanted to get away, anything like that; but they need not go themselves. They are instructed to ask the press-man; they should never go themselves.

Q.—How much space is there for them to pass between the presses? A.—Well, that is a question I could not decidedly answer.

Q.—If the girls ran around them on their own responsibility, and they got caught, it would be their own fault, but I do not think for working purposes they should ask the girls to go near them? A.—Yes; but they have no right to go round the press; they are told not to go there. In connection with the other question you asked me, all presses have but a little space between them. We have to economize our space.

Q.—Is it not dangerous—particularly for young girls—to go around the presses?  
A.—Well, my own opinion is that all machinery should be boxed in; I do not say anything about this machinery in particular; I speak generally.

Q.—Do you not think a good deal of machinery could be boxed in without inconvenience? A.—Yes; the same as in the old country.

Q.—Have the factory inspectors visited your premises? A.—No.

Q.—He generally visits the head of the departments? A.—Yes.

Q.—He never came to you? A.—No.

Q.—Are the water-closets in good condition? A.—Yes.

Q.—How are they as regards cleanliness? A.—Good. The girls' water-closet is the cleanest in the whole establishment. It is as clean as I would wish for in my own house; I inspect it occasionally. During the Session I occasionally go there myself. They might say something about that, but I go there just to see that the thing is properly kept, and I assure you the place is very clean. Should anything go wrong with it—for it will sometimes get choked up—I get it cleaned up. I may say it is on the top flat in the rear, and there is no one in that room.

Q.—That would be the fourth story? A.—The fifth story.

Q.—The intervening room is occupied by men? A.—Yes.

Q.—Have these young women to go through the room where these men are?  
A.—I suppose they would have to pass through the room where the men are—if the men were there at the time, I suppose.

Q.—Are there water-closets for men up these stairs? A.—There are no water-closets for men up these stairs; they are on the first flat.

Q.—Do not the water-closets get stopped up, and is there not then a bad smell coming from them? A.—No.

Q.—Are there any complaints made of them? A.—Well, if I did not happen to be going they would ask me if I would see to that closet, as it would not act, and I would see to it. Sometimes I would find it choked up. In fact, the engineer had to take up the pipe once, owing to paper boxes being thrown into it and choking it; but as a rule it is not choked up at all.

Q.—Do you use any bad words towards the girls—such as swearing at them?  
A.—Well, it is a rare occurrence. I am no angel, and I will admit that, occasionally, I might swear; I do not want to tell any lies about it.

Q.—Have you got any system of fines? A.—No; not as a system. In connection with that I would like the Commission to give me liberty to explain. It was said here that we fined them for being late of a morning. There is no system of fines in the establishment, and we never had any. At one time the men were out on the sidewalk smoking and talking in front of the building after the dinner hour. Mr. Roger or Mr. MacLean came along and said he would dock the men an hour if they were out again after the whistle blew. I considered, being foreman of the men myself, that that was not a cast-iron rule. Now, if a girl is late in the morning, and it is only one morning now and again, I would not think of taking it off her, but if she made it a practice I would certainly take an hour off her.

Q.—Does that occur very often? A.—No; I have got a little book that I jot it down in of a morning. They know the book, and they know when I take it out that I am going to take the time off them.

Q.—Have any other persons the right to impose a fine in your department?  
A.—No. Another case was where I set a fine for playing, and certainly the money was taken off them. I happened to be out about an hour. When I returned I found all of them pulling each other's hair, and running about the floor; and as I came in and saw all this, I said: "You will lose an hour."

Q.—How do you know that they were an hour about it? A.—Well, I was an hour away, and I naturally suppose that they kept it up the whole time I was away.

Q.—Did you see them commence when you were going away? A.—No.

Q.—How do you know they were playing for an hour in your absence? A.—Well; I took it for granted.

Q.—Has the office an authorized system of fining? A.—The office has no authorized system of fining, but something has to be done to keep order in establishments of this kind. Then, in addition to allowing them ten minutes in the morning, I may say that if they work ten minutes after the hour at night—ten minutes or a quarter of an hour—they are allowed an hour for that.

Q.—Are the girls often ten minutes and a quarter of an hour late? A.—No; it happened twice during the last fortnight. I would just like to explain that I made the statement about the fines in order to clear the book-keeper, who had stated that no fines were allowed to be imposed.

GEORGE LANG CHITTY, Book-keeper to Messrs. Gilmour & Co., Lumber Merchants, Ottawa, called and sworn.

By Mr. CARSON:—

Q.—You are manager for Messrs. Gilmour & Co. at their mills, are you not? A.—I am the book-keeper; they have no manager; my position is that of book-keeper. I am a sort of manager.

Q.—Can you tell us how many men your concern employ? A.—Do you mean altogether, in the woods and mills.

Q.—Yes? A.—I think about 1,200.

Q.—What are the yearly earnings of the men who work in the bush—as well as you are able to tell us? A.—That is the average, you mean?

Q.—Yes? A.—Owing to the way the thing is, it is rather a difficult matter to tell. Do you mean by that question, in the woods and in the mills?

Q.—No; take the woods first? A.—Do you wish me to state board included?

Q.—Just as you hire them? A.—Yes; we hire the men to board them, and give them so much besides for themselves; we consider their board worth \$10. They would average about \$30 a month; that is rating their board at \$10.

Q.—For how many months in the year? A.—The winter operations usually occupy about six months, and then the drive operations about three months more—say about eight or nine months.

Q.—Those men that work in the bush—do they generally run down the drive? A.—Some of them.

Q.—Those men on the drive and those who come down from the bush—do they go right into the mill—do they lose much time? A.—The mill hands usually leave when the shanties break up; those who remain for the drive are hired for that work.

Q.—Will you please tell us how these men live in the shanties? What food do they get? A.—They are fed on bread, pork, beef, potatoes, molasses, dried apples, tea, and they consume a great deal, of late years, of beans and peas. Beans enter very largely into the food of lumberers.

Q.—Has it come to your knowledge that any inferior flour or pork has been sent to the shanties to these men? A.—We always endeavor to get the best articles possible and under the most favorable circumstances. It is quite possible that a small portion might not be so good as we would wish—particularly pork. Pork will spoil—a small proportion; perhaps as much as 5 per cent—I would say that that would be an excessive estimate. A quantity might possibly go astray—be left over, possibly, from the previous winter, and the brine might get off of it partly; and possibly it might have a little taint. If any salted meat was left over it might be left there till the next winter.

Q.—Then, in your concern, should anything like that occur it would be accidental? A.—Positively; and besides that, we do not ask the men to take it. We would bring it down and render it into grease. We would sometimes return it, but that is costly.

Q.—Do you have depots at all your stations where the men can purchase articles of clothing, or anything they may need? A.—Yes; we have depots at all our stations.

Q.—Are these men able to buy goods as cheap at these depots as they can buy anywhere else? A.—They buy them at the same price as we buy them ourselves, with carriage added. There is a small margin allowed for that.

Q.—Then, you do not buy them as a matter of profit? A.—It is a matter of necessity. They are away from the stores, and can buy articles that are necessary to their health and comfort; nothing more.

Q.—The wages that you refer to apply to all engaged in the bush—the men cutting roads, and all that sort of thing? A.—Yes.

Q.—Coming down to the mills—what are the earnings of the gang-men? A.—That is a peculiar way to put it. Gang-men? We do not hire our men that way.

Q.—Tell us the way you do hire them? A.—I have not got the pay-sheets with me. Our pay-day is to-morrow. The ordinary workingman last year averaged, in the mills, \$1.10 a day.

Q.—Is that average per year or for the season? A.—That is during the dealing and shipping season. Our deal-mill is running from the end of April to the end of October. The men in the yard there average \$1.10 a day. I thought that you wanted something of that kind, and so I brought up this statement of last year. It is a statement of the wages paid to the men in the mills, and around the booms and works in connection with it, and piling lumber. At the mills our average was \$1.05 to \$1.12.

By Mr. BOIVIN :—

Q.—You employ no boys there? A.—There are boys; may be the boys are twelve and thirteen years of age; they are very often as good as a man.

Q.—How many boys at the age of twelve and thirteen may you have? A.—We have very few.

Q.—What are these boys generally employed at? A.—Work in the small mill in connection with the larger one, re-splitting deals.

Q.—Is it laborious work? A.—No.

By Mr. CARSON :—

Q.—Have you had any accidents on your works? A.—No; I have heard of no accidents for years.

Q.—Your works are in the Province of Quebec? A.—Yes.

Q.—Are you aware that there is an Act called the Factory Act in the Province of Quebec? A.—I do not know that I am aware of it; I never looked into it.

Q.—How often do you pay the men? A.—Every two weeks. Those men that are in the lumber shanties, I do not pay them until they come down.

Q.—The men at the mills are paid every two weeks in full? A.—Yes; we pay them on a Wednesday up to the preceding Saturday night. It takes us two or three days to get everything in readiness (I might explain)—everything in connection with it. If any of the families of these men want anything we give it to them, and take it from them on paying them. If any of them want an advance of \$2 or \$3 they are given it.

Q.—Do you give them any orders on the store? A.—We give them no orders on the store; they go into the store and say: "I want two or three dollars' worth of goods," or may be it is only thirty or forty cents, worth; and the amount is deducted from the amount coming to them on pay-day. In such cases their account would read, "Cash, so much; so many days' work, so much." So that each man sees what he has worked and what he has drawn. In cases of particular urgency we give them money earlier than pay-day. When they obtain an advance at the store the goods are marked down, and the amount is carried over to the balance; the office has nothing to do with the store.

Q.—As a rule, the men cannot get money earlier than pay day? A.—If a man wants money, in a case of emergency, he can get it; but it is only in cases of necessity.

Q.—There are other stores besides yours at Chelsea, are there not? A.—We

have another at Gatineau Mills—a much larger place than at Chelsea. There are four stores in Chelsea. The people go up with their money and trade at these stores; we do not mind that. When I was asked to attend here, at such short notice, in such a hurried manner, I was not quite prepared, as I did not know what you wanted; I did not know that you would want the wages of mechanics, so I took a little information in case you would want it. A flier's average wages is \$47.93 cents a month. I took the wages of our mechanics, and I find them average \$1.65 cents a day; that includes carpenters, millwrights and blacksmiths. I also took the payroll that we are making out. I went over a number of them, and I find the average pretty much the same as last year—so that last year's figures are pretty correct.

Q.—What hours do your men work? A.—Eleven hours and a quarter a day.

Q.—In case of accident in the bush as well as in the mill, do you generally, as a rule, allow your men anything for it—that is, allow the time to go on? A.—We do not always, but we have a man now who met with an accident—which I had entirely forgotten—and his time is going on; we are keeping it on. He is a high-priced man. His time is going on, and it is likely to go on till July.

Q.—How did the accident occur? A.—It occurred by a belt giving way. He was standing on the wharf, and the belt broke and struck him on the calf of the leg. Mr. Gilmour stood a moment before just where he stood.

By Mr. HEAKES:—

Q.—Do the boys work at night? A.—We do not run at night very often, as the water is low.

Q.—What time do you commence work in the morning? A.—We commence at six and leave off at one; we begin again at a quarter to one and leave off for the day at a quarter past six.

Q.—Are you aware that the Factory Act of the Province of Quebec prevents the employment of children for more than sixty hours a week? A.—Well, we have hardly any children twelve years old.

Q.—The mill runs more than sixty hours a week? A.—Yes; certainly.

Q.—Have you anything to add to what you have already said—anything that we have not touched upon? A.—I have taken the average of six of our hands, and find that it comes to \$26.96 for the month; and I have taken the average of eight others and find that it comes to \$31 for the month.

ALEXANDER S. WOODBURN, Book-binder, Printer and Publisher, Ottawa, senior member of the firm of A. S. Woodburn & Co., called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a book-binder? A.—Well, I carry on book-binding; I am not a practical book-binder.

Q.—How many hands do you employ in the book-binding business? A.—About thirty-eight or forty. I think altogether there are 132 around the premises. There must be about sixty altogether connected with the bindery.

Q.—Have you had the factory inspector visit your place? A.—I never knew him to come.

Q.—Could he have been there without your knowledge? A.—Oh, yes; but it is not likely that he would have been there without my knowledge. I would have heard of it, I think.

Q.—What is the sanitary condition of your establishment? A.—Well, I think it is very fair—the printing office, I think, is particularly good; but it is not well constructed for a printing office. Every regard is paid to the health of the employés, and I never knew of any one to be sick through the unsanitary condition of the building. The ceilings are low, and it is not what you would call a good building by any means.

Q.—How are the water-closets situated in the offices? A.—There are three or four different offices. I have the girls of the bindery divided into two sections, and there is a closet in each end of each building.

Q.—Are the closets inside or outside the building? A.—In one it is on the outside of the building, and connected with the main building; in the other it is at the extreme end of the building, connected also with the water-works, and so situated that you would notice any smell from them. I do not think there can be any smell, as the water is running all the time. We had one water-closet in the basement some time ago; I noticed the smell and shut it up.

Q.—Is it a rule in your firm to pay men with orders? A.—It is not.

Q.—If you knew it would you allow it to be done? A.—The only orders that I have known of has been when the hands have wanted to get things in advance of earning their pay. They would say that they wanted to go to Mr. So-and-So to get certain things, and wanted, say \$28, or an order in advance, and we would give them the order, so that they would never run in arrears that much. We would give it to them for convenience sake.

Q.—If an employé gets an order under these circumstances does he get them paid on pay-day in full? A.—Yes; I may say that the orders are not worth while speaking of. I do not think three orders were given this spring in advance, and that was to men for clothing or furniture.

Q.—Is that an accommodation to the men or to you? A.—It is an accommodation to the men. We never ask them to take an order.

Q.—The reason why we ask you is because we have found it a very injurious system of paying wages to the employés in other places? A.—I think I may have tried years ago to get some one to do it, but not lately—some one to take it on account.

Q.—Did you have an elevator on the premises? A.—We had the celebrated elevator you have heard of.

Q.—You had an accident by that elevator, had you not? A.—At the time it broke down? I never heard of it until to-day. A person got a slight cut. That is all that I knew about it. I was told to-day by the foreman the man got a slight cut and came to work the next day. So far as the elevator goes, it was constructed by good mechanics. I got another one named Perrin to re-arrange it, and when it did not suit we allowed it to remain there. As to the building, there is nothing that I can add to make it more comfortable. The printing office is first-class, and the ceiling is high, but I think the bindery is not first-class.

Q.—How many doors have you got to the building? A.—I do not know. That is one of the faults—there are too many. I think we must have six different entrances to the different departments. The building is cruciform in one place and angular in another, and so we arranged the best way we could when I got the contract for binding.

By the CHAIRMAN:—

Q.—Do you say your doors open inwards? A.—Yes.

Q.—Do you not know that by law you are liable to be fined? A.—I always understood, until now, that that applied to factories. With reference to the orders to the girls, I would like to say that we give them half an hour's grace in the morning, as some of them have to come a considerable distance, so that they are allowed to come in half an hour later than the men.

JOHN R. BOOTH, Manufacturer of Fine Lumber, Ottawa, called and sworn.

By Mr. HEAKES:—

Q.—You have a number of boys in your employ, have you not? A.—Yes; we have some.

Q.—Is it true that these boys work from half-past six in the morning until six o'clock at night? A.—Yes.

Q.—Have you boys in your employ who also work from seven o'clock at night until half-past five or six the next morning? A.—Yes; I think so.

Q.—Do you know, sir, if any of these boys in your employ are under the age of twelve years? A.—Not that I am aware of.

Q.—Are you aware, Mr. Booth, that the Factory Act of Ontario says that boys under a certain age are not to work more than sixty hours a week? A.—No; I cannot say that I do; I never paid any attention to it.

Q.—Do you know if the factory inspector has ever inspected your mill? A.—No; not that I am aware of.

Q.—He never gave you a copy of the Ontario Inspection Act? A.—No.

By the CHAIRMAN :—

Q.—He has not given you notice that your factory is to be conducted in a certain way? A.—No.

By Mr. ARMSTRONG :—

Q.—He has done nothing in that direction? A.—No.

Q.—If the factory inspector had been around you would have known of it, would you not? A.—Well, he might come around and I not know it. If he came around without asking me questions I would not know.

By the CHAIRMAN :—

Q.—If he had made himself known you would have known it? A.—Yes.

Q.—I would advise you to get a copy of the Factory Act and carefully peruse it. It can be enforced any day? A.—I am not aware that I have done anything contrary to law.

JOHN PEARCE, Printer, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—You have worked in the *Free Press* office, have you not? A.—Yes.

Q.—What is the sanitary condition of that office? A.—I should call it good.

Q.—How are the water-closets? A.—There is a urinary in one of the rooms.

Q.—Where is that? A.—In the same room in which I worked.

Q.—Is the water-closet down under the reporters' window? A.—There is one in the yard.

Q.—Is that generally used by the employés? A.—Yes.

Q.—What condition is that in? A.—It is in very bad shape.

Q.—Is there a door on it? A.—Yes; without hinges.

Q.—Is it what you would call in a filthy condition? A.—I should say it was.

Q.—Is the closet up stairs in a better condition? A.—Oh, yes.

Q.—Is it in a good condition? A.—Yes.

Q.—Is there one or two up stairs? A.—There is one in the room I was in.

Q.—Do males and females have to use it, alike? A.—There is only one there.

Q.—The two sexes have to use it, alike? A.—Yes.

By the CHAIRMAN :—

Q.—How many are there in that room? A.—Eight or ten, probably twelve.

By Mr. CARSON :—

Q.—How many girls are employed there? A.—Two all the time I was there; sometimes four—not in that department.

Q.—You do not belong to the paper now? A.—No; I left seven weeks ago.

Q.—Have you any idea of the number of hands employed there altogether? A.—No; I could not tell exactly.

By the CHAIRMAN :—

Q.—Did the sanitary inspector ever visit the place while you were there? A.—  
Not to my knowledge.

Q.—Did you ever hear of the factory inspector being there? A.—No.

Q.—You have not a copy of the Factory Act put up in the building? A.—No.

By Mr. CARSON :—

Q.—Do you know the factory inspector? A.—I do not.

By Mr. ARMSTRONG :—

Q.—The closet below, is it in the building or outside? A.—It is outside.

EDWIN ELLIOTT, Iron Moulder, Ottawa, called and sworn.

By Mr. HEAKES :—

Q.—You are employed as a journeyman moulder here? A.—I am foreman  
moulder.

Q.—How many men are employed in the shop of which you are foreman? A.—  
Eight—two are apprentices.

Q.—What wages are you paid? A.—One dollar and eighty-five cents; \$2 a day  
for the men and \$2.50 a day for the foreman moulder at machinery moulding.

Q.—What are the usual hours? A.—Our working day is from seven to six.

Q.—Did the men ever ask for lighter hours than these? A.—No; not in the  
foundry.

Q.—How is the shop protected from drafts? A.—Well, it is well protected in  
the winter time.

Q.—Is the ceiling high? A.—Yes.

Q.—You are in no way inconvenienced by smoke and steam? A.—No; it is  
well ventilated in the roof, and we can open the ventilators and let out the smoke and  
steam.

Q.—Are the facilities good for carrying on your occupation? A.—Yes.

Q.—Do you employ laborers? A.—Yes.

Q.—What do they receive? A.—\$1, \$1.10 and \$1.25 a day.

Q.—One dollar and twenty-five cents a day would be the furnace men? A.—They  
receive more than that. They receive \$1.35 a day, the furnace men.

Q.—Do you mill any of your castings? A.—Yes.

Q.—Where is your mill? Is it inside or outside the foundry? A.—It is outside  
the foundry.

Q.—So that no dust goes into the foundry? A.—No.

By Mr. CARSON :—

Q.—Do you know if the factory inspector has been through the foundry in  
which you are employed? A.—No; he has never been through it, to my knowledge.

Q.—Could he have been there without your knowledge or the knowledge of the  
concern? A.—I do not think it.

Q.—Are you in a position to speak for the concern? A.—Yes.

Q.—The inspector has not been there? A.—No; not to our knowledge.

Q.—You have not been provided with a copy of the Factory Act to post up in  
the shop? A.—No.

JOHN P. PURCELL, Engineer, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—You are an engineer in a newspaper office, are you not? A.—Yes.

Q.—Have you got a certificate as such? A.—Yes; I have.

Q.—Do you know if it is the desire of the engineers to have a law for the inspection of engines and boilers? A.—Yes; it is.

Q.—And for engineers to pass an examination? A.—Yes; it is; that is, if they put them in the same category as the marine service on the rivers and lakes you cannot practise as an engineer before you obtain a certificate proving your qualifications.

Q.—Do you think it as necessary to have a competent engineer in charge of a stationary engine, where a great many men, women and children are employed, as on a steamboat? A.—Yes; I do. I have just as many men over the *Free Press* engine and boilers as there are on a passenger steamboat. The whole of their lives depend upon me.

Q.—Do you know, if in this locality, it is the custom to employ incompetent men, that is to say, men who are not engineers? A.—Yes.

Q.—Are you aware that there are men running engines in Ottawa and around Ottawa for \$1.25 a day? A.—Yes; they are running engines for \$1.50 a day.

Q.—Can you get a practical man for \$1.50 a day as an engineer—a man that is capable of taking care of a good engine and running her properly and safely? A.—Sometimes you can; in slack times you might.

Q.—But can you do so, as a rule? A.—I do not know that we can, as a rule.

Q.—What is the sanitary condition of the department where your engine is located? A.—Well, it is not bad.

Q.—How far is your engine from the water-closet? A.—About 15 feet.

Q.—In what condition is that water-closet? A.—It is not in a very good condition.

Q.—Have you ever heard people complaining about the stench coming from it? A.—I think I have heard that the people at the Russell House hotel complained.

Q.—Is there a door to that water-closet? A.—There used to be, but it is down.

By the CHAIRMAN :—

Q.—How many stationary engines are there in and about Ottawa? A.—I could not tell you.

Q.—How many accidents occurred during the past year through uncertificated engineers? A.—I have not heard of any. I have not much time to go around, I can assure you.

By Mr. HEAKES :—

Q.—Have you any general knowledge of the condition of boilers here in Ottawa?

A.—Not any more than the one I am on.

WILLIAM C. TEAGUE, Printer, Ottawa, called and sworn.

By Mr. ARMSTRONG :—

Q.—How many years have you lived in Ottawa? A.—About fifteen years.

Q.—Have you worked at the printing business all the time? A.—With the exception of the time that I was “boycotted.”

Q.—You have taken quite an interest in organized labor in Ottawa? A.—I have.

Q.—Do you consider that organized labour among the working classes has been a direct benefit to the working classes in Ottawa? A.—It has.

Q.—What is your opinion on the question as to the shortening of the hours of labor? A.—My opinion is that a man can do as much in nine hours' continuous work

as he can in ten hours' continuous work. I believe that if a man works from seven o'clock in the morning until six o'clock at night, and has half a day on Saturday to spend with his family and friends, that the employer would be benefited as well as the man by the half day. I have found that to be the case from experience.

Q.—Do you believe that if the working classes had Saturday afternoons free from labor that they would make good use of that time? A.—From what I know of the working classes in this section of the country I feel confident that it would have a most beneficial effect. I have seen it having a similar effect in the old country—very beneficial for the working classes to have a little time on Saturday to brace up the system, and give the working classes a chance to get a little fresh air, when a man with his family could go to the seaside on a Saturday half-holiday. It would do them a world of good; it is very beneficial.

Q.—You have had some experience in connection with labor organizations and the settlement of difficulties between employers and employed in this city. What is your opinion as to the advisability of resorting to arbitration in all cases of dispute between employers and employed, when disputes cannot be settled amicably otherwise? A.—I have a firm belief in arbitration in the settlement of all labor difficulties. I know we have had labor troubles, and the employers have point blank refused to meet us. I think arbitration the best means to arrive at a satisfactory conclusion. Of course, if employers will not come to terms with the men, then the men take it into their own hands and endeavor to get their rights by strikes.

Q.—What is your opinion about employers and employed in settling disputes? What do you think of the Government stepping in and settling the dispute by arbitration? A.—I could not favor a permanent board of arbitration. If the persons on that board knew the merits of the case, or were qualified to act on that case, then I am of opinion that some good might come out of it; otherwise, I am not in favor of a permanent board.

Q.—What would you think of the appointment of an official board of conciliation, whose duty it should be to try and bring both parties together to settle the difficulties themselves? A.—I am of the opinion that the employers will not do that, unless compelled by an official board. There would not be much likelihood of coming to a successful issue; if we had one formed according to law, I, of course, suppose if it was made compulsory they would have to come to some terms; but it would be merely an arbitrary power, and would simply result in further difficulty.

Q.—What is your opinion about the formation of a labor bureau of statistics, for the purpose of giving information to the working classes and all concerned? A.—I think a bureau of labor statistics should be organized by the Government, and bulletins should be issued from the various fields of labor weekly; that was the question that was discussed in an organization with which I am connected, and I believe it would be beneficial to the working classes, and would be the means of saving them a considerable amount of money in travelling, if they knew the state of the labor market; and also, such information as might be obtained—for instance, as regarding the value of money; I think it would prove of great value to the working classes.

Q.—What is your opinion about insurance companies for workingmen, controlled by Government? A.—I believe in insurance; I believe the working classes, controlled that is the majority of them, are afraid to risk their money in the insurance companies at present in existence. Sometimes a company which is considered the strongest turns out to be the weakest; and, of course, the working classes, with no money to sacrifice, would not want to run the risk of losing their hard-earned savings; but if a system of insurance similar to the post office bank could be inaugurated the working classes would show their appreciation of it; and if the Government could give insurance on a similar scale to that on which the Post Office Savings Bank is carried on it would encourage the working classes and be of great benefit to them. When a man dies he leaves nothing to his family; but if this insurance was carried by the State the workingman and his family would be greatly benefited, as it would cause workingmen to be more thrifty and anxious to secure something for their families; and if their

means were reduced, and poverty stared them in the face, the Government might purchase the policy at a consideration—the same as some insurance companies do at the present time; but the Government could do it more advantageously than they do to the workingman.

Q.—Are you a believer in the apprenticeship system, and if so, state what you think on that subject? A.—I believe all apprentices should be properly indentured in the printing business for at least five years, and previous to being indentured—in the interest of the employer as well as of the apprentice—I consider the employer or his foreman should ascertain if the boy was sufficiently educated to make a practical employé. He should, in fact, be examined, with the view to ascertain his qualifications and fitness to learn the trade. He should be indentured and placed under the control of a practical man to teach him his business. Then, if an apprentice did not turn out to be a good worker it would not be the fault of the employer. At the present time, the apprentice system is very bad. A boy comes into an office scarcely able to read or write, and is taken on to sweep the room and go on messages, and when he takes up with the business he is not taught it, but picks it up the best way he can, and to a right-thinking man that is totally wrong. In that branch of labor there are many points on which a boy needs to be instructed, and if he is not taught by competent men the apprentice cannot turn out to be a proper journeyman.

Q.—Are there any public night schools in Ottawa? A.—I think there is one in the evening, but then it depends on the nationality if you wish to get into the school; it is conducted by the St. Patrick's Literary Association; that is the only one. Our public school board at one meeting discussed the subject of having night schools open in this city, but took no further action in the matter.

Q.—Do you think if there were such schools the public of the city would take advantage of it? A.—I am not prepared to say whether they would or not; we would have no need to have much of the night school business if a proper compulsory educational Act was in force; boys or children would rather be in school, if the schools were carefully conducted. In England and Germany they are made to attend school up to a certain age, say fourteen or fifteen years of age, and in those countries night schools, as we understand them to be, are not now needed. If we had a factory Act enforced by the Dominion Government, which I believe could be made suitable for the Dominion—a proper factory Act and a proper school Act—it would be a great benefit to the working classes.

By the CHAIRMAN:—

Q.—Do you mean to say that the factory laws should be enforced by the Dominion Government. A.—Of course, by the British North America Act I understand that such could not be the case.

Q.—Do you find that by the British North America Act the Government could enforce a Dominion Factory Act? A.—I believe it could.

By Mr. HEAKES:—

Q.—Do you believe if there was a uniform factory Act throughout the Dominion, under the auspices of the Dominion Government, it would be much better than the various provincial Acts? A.—Yes.

Q.—Is there a free public library in Ottawa? A.—There is the library for Parliament; there is something public about that. Persons can have tickets of admission, allowing them to take books during the recess, but the working classes cannot embrace the opportunity to take a book from the library, because the library is only opened from 9 to 4.

Q.—Do you believe if there was a free public library the working classes would take advantage of it? A.—Yes.

Q.—When you spoke of a Government scheme of insurance, do you speak of yourself or for the workingmen of Ottawa? A.—Yes.

Q.—You speak for the workingmen of Ottawa, with whom you are associated? A.—Yes.

Q.—That is their desire? A.—The working classes would like to have one established of a stable character and under Government control.

By Mr. ARMSTRONG :—

Q.—Have you got anything to say further of interest to the working classes? A.—I do not know that I have. I notice, in glancing over the papers in connection with the business of this Commission, that many of those giving evidence are connected with organized labor, and as I have taken great interest in labor matters I would like to see more unorganized labor, such as sewing girls, milliners, tailors, painters and various other callings, represented in this city, come and give evidence before the Commission. I think if you had some information from them it would enlighten the members of this Commission.

By Mr. CARSON :—

Q.—I think you are mistaken. A large number of the witnesses examined here in Ottawa before this Commission are persons belonging to no labor organization? A.—I am glad to hear it.

By the CHAIRMAN :—

Q.—And supposing we were to examine further witnesses on these subject do you think they would prove themselves to know more than the same classes of people in Toronto, Quebec, St. John and Halifax? A.—I do not know; I have not seen the evidence.

By Mr. HEAKES :—

Q.—Do you mean to say that unorganized trades are not as well paid as organized trades? A.—They are not, and if we had some of them here and questioned them it would show the difference; it would show the benefit that is to be derived by being organized. That is my belief.

Q.—Has the condition of the working classes in Ottawa improved during the last ten years, to your personal knowledge? A.—I believe so.

Q.—Has their social condition also improved? A.—I believe it has; I believe their condition has improved in every respect.

CRAWFORD ROSS, Merchant, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—How many clerks have you in your employ? A.—About thirty-five, males and females.

Q.—How many of these would be females? A.—About ten.

Q.—What would be the age of the youngest one? A.—About twenty years—in the sales department.

Q.—What is the sanitary condition of the lower apartments of your shop? A.—It is very good.

Q.—Have you a water-closet in connection with it? A.—Oh, yes; several—three.

Q.—Are they up-stairs or down-stairs? A.—There is one for the operatives on the third flat, where sixty or seventy are employed, and two down-stairs in the basement.

Q.—Who generally uses the basement? A.—The males.

Q.—And the closets up-stairs, are they only used by females? A.—Yes; only by the females.

Q.—Are these closets connected with the water-works? A.—Yes; all of them.

Q.—What is the average earnings of a female clerk? A.—We have them graded—\$4 in one department; \$5 in another.

Q.—What number of hours do they have to work? A.—From half-past eight

in the morning until six o'clock at night. A portion work until nine o'clock, but they have one and a-half hours in the day for it. We employ a great many others beside the clerks in the same building.

By Mr. ARMSTRONG :—

Q.—The water-closet in your cellar, is it set apart particularly for men, or have women the use of it? A.—There were two, and the women had to go to one of them, but at the present time they are separate.

Q.—Do you mean two seats, with a slight partition between them? A.—No; two separate places.

Q.—Are they next to each other—are the two doors next to each other, with a slight partition between them? A.—Yes; it was so.

Q.—How long ago since it was changed? A.—About a month ago.

Q.—Have you known many young women refuse to go down into that cellar on account of the darkness? A.—No; it is not dark; it is just as light as on the first flat.

Q.—Have you heard any young women complain of going down there? A.—Yes.

Q.—Very recently complain? A.—I have heard them complain.

Q.—Are your women clerks allowed to sit down when waiting on customers? A.—Yes.

Q.—They have got seats for that purpose? A.—Yes; seats behind the counter.

Q.—And do the operatives always sit down? A.—Yes.

Q.—Have you any milliners and dress-makers? A.—Yes; over sixty of them.

Q.—What are the wages of a first-class milliner? A.—Eight hundred dollars a year.

Q.—Would that be the forewoman? A.—Yes.

Q.—How many get \$800 a year in your establishment? A.—Only one.

Q.—Those who work at the table, how much do they earn? A.—Milliners do not work at the table; dress-makers do.

Q.—Are there any milliners engaged by you for the season only? A.—No.

Q.—You employ them permanently all the year round? A.—Yes; except when they wish to go, in the heat of the summer.

Q.—What do they earn? A.—Well, a first-class operator, \$8 to \$10 a week, and I could keep them all the year round, but they prefer going away for a couple of months in the summer.

Q.—What do you pay your apprentices? A.—The first year they get \$4 and \$5 a week.

Q.—Do I understand you to say that they get that the first year? A.—No; \$100 for the first year we allow apprentices.

Q.—How many years do they serve? A.—We do not require them to serve more than six months in every year.

Q.—What do they get? A.—No settled rate; they are paid according to merit.

Q.—What do your dress-makers get? A.—The heads of the dressmaking department gets \$7 to \$16 a week; the operatives get \$4.50 a week.

Q.—Are they paid weekly, or fortnightly, or monthly? A.—They are paid weekly.

Q.—In cash and in full? A.—In cash.

Q.—Have you any system of fining in your department in your establishment? A.—We had for salesmen, but it was never put into force.

Q.—It has never been put into force? A.—No.

By Mr. HEAKES :—

Q.—Would \$4 a week be a good average wage for dress-makers? A.—It is all they are worth; we would pay more if they had the ability.

Q.—How many get less than \$4 a week? A.—Well, in my employ very few; I do not think there are any.

Q.—Can they find constant employment all the year round for \$4 a week? A.—Well, we can find a certain number of them employment all the year round. They

are very scarce sometimes, and can get \$1 and \$1.25 a day. Sometimes we cannot get them; we cannot get all we want now.

Q.—What hours do they work? A.—From half-past eight till six.

Q.—How late do they work? A.—Never past seven, except the heads of the departments, who remain later to get up their work and be ready for the next day.

Q.—Do they receive anything for over-time? A.—They receive nothing for over time, except for piece-work.

Q.—Then they may remain from seven until nine o'clock at night and receive nothing more than if they left at six o'clock? A.—They might, but it is not compulsory.

JOHN DAVIS, Wood-dealer, called and sworn.

By Mr. CARSON:—

Q.—You are familiar with the workingmen of Ottawa, are you? A.—I am, sir.

Q.—What are the average wages of the men who work by the day? A.—Mechanics or laborers;

Q.—Laborers? A.—I had one or two laborers, and I paid them \$1.50 a day; that is from six in the morning to six at night.

Q.—What are these men doing? A.—They go to the mill to get blocks of wood.

Q.—That is what a man is worth per day? A.—Yes; I believe most of them are.

By Mr. HEAKES:—

Q.—Are you aware that the men that we see about the streets, most of them, get \$1.25 a day? A.—I have given them \$1 a day, and I give my men now \$1.50 a day, because I find that they do more for me for that sum than they did for \$1 a day.

Q.—How long after six are they kept doing up the horses? A.—Not at all.

Q.—Do you keep a stable-man? A.—No; I feed my horses myself.

By Mr. ARMSTRONG:—

Q.—Do you deal in wood? A.—Yes.

Q.—Retail? A.—Yes.

Q.—What is the price of good beech and maple? A.—Four dollars and fifty cents to five dollars a cord.

Q.—What was the price of it five years ago? A.—I was not in the business then.

Q.—Do you deal in coal? A.—No.

Q.—Are there many wood merchants in Ottawa? A.—I believe there are several wood merchants; of course, I am not well acquainted with them.

Q.—Is there an understanding among the retail merchants as to what price they shall ask for their wood? A.—I do not understand you properly.

Q.—In other words, is there a combine among wood merchants? A.—I do not know; I have nothing to do with that.

Q.—You know nothing of that? A.—No.

Q.—Do the mills furnish a good deal of wood served in Ottawa? A.—Yes; slabs, and so on.

Q.—Do you sell a good deal of hard wood? A.—Yes.

By Mr. CARSON:—

Q.—How long have you been in this country? A.—Seven years.

Q.—You were familiar with the working classes in the old country? A.—Yes.

Q.—Are the working classes in this country in as good a condition as the same classes in the old country, or are they in a worse condition? A.—There are some who better their condition and there are others who do not.

Q.—As a rule, do they better themselves? A.—They do.

By the CHAIRMAN:—

Q.—And you are one of them? A.—Yes.

By Mr. CARSON:—

Q.—Do not you think the children of the working classes are better off than the children of the working classes in the old country? A.—Yes; I know five families who came from England, all doing well.

Q.—And do you know men who are at present well off in this country whose fathers were very poor? A.—No; I cannot say that I do; I have only been here seven years.

PIERRE CHABOT, Dry-goods Merchant, called and sworn.

By Mr. CARSON:—

Q.—Do you employ any tailors in your business? A.—Yes.

Q.—How many? A.—Tailors about three, and tailoresses about twelve or fifteen.

Q.—What would be the average wages of a cutter in Ottawa? A.—The average price?

Q.—Yes! A.—Between twelve dollars and twenty dollars a week.

Q.—What would be the average? Would \$15 be the average or \$12 be the average? A.—Sixteen dollars would be the average.

Q.—And the earnings of tailors? A.—They work by the piece the most part.

Q.—Are you familiar with the class of people who go to the shanties in winter? A.—Yes; a little.

Q.—Will you state the condition of these people and their mode of living?

A.—Yes; those men are working from early morning, as soon as it is daylight, until it is dark.

Q.—About what hours would that be? A.—During the winter they work, I suppose, between eight and nine hours a day. During the spring—the drive—they work between sixteen and eighteen hours a day.

By the CHAIRMAN:—

Q.—Do they stand it? A.—They have to stand it, but it is hard on them.

By Mr. CARSON:—

Q.—What kind of food is generally supplied to these men in the winter? A.—Well, what I know is some give them pretty good food and some give them bad food.

Q.—Have you heard general complaints from them about that, or are not complaints not general? A.—Yes, there are some very hard complaints about the way they are fed.

Q.—When these men are coming down from the shanties in the spring, is it not a rule for parties to meet them on the road up as far as Carleton Place, and get them under the influence of liquor and sell to them jewellery, and the like, of inferior quality? A.—They meet them, but not for the purpose of selling them jewellery of inferior quality.

Q.—Are there not some that do that? Are there not some people that meet them on their way down and sell them articles of inferior quality, and that, too, at a high price? A.—Not that I know of.

By the CHAIRMAN:—

Q.—Is that not done all over the world? A.—No; I do not think it is done here; not that I know of.

By Mr. CARSON:—

Q.—Is there anything you would like to say to this Commission? A.—Well, I

think those men's condition should be ameliorated a little, because in the shanties I do not see how they stand it, and in the drive also I do not see how they stand it; and I know this, that some men have to come in in the winter, being unable to stand the work, on account of the bad board, and by being pushed so hard at the work."

Q.—Have you ever heard complaints by the men of being paid with "scrip" ?  
A.—Yes; sometimes they are paid with what are called "due bills."

Q.—Will the merchants of Ottawa or other merchants take these due bills at their face value? A.—Some will and some will not.

Q.—Do you know any firm who pay their men in that kind of scrip? A.—I know some that were paid in that way, who never came so far as here; we do not see them here; they are kept down below.

By Mr. HEAKES:—

Q.—What is the usual face discount to a man of these due bills for wages? A.—Some offer 15, some 25 per cent. and some as much as 50 per cent. reduction.

Q.—Have you any knowledge of men losing any portion of their wages in that way? A.—Sometimes they do lose their wages, and in other ways.

Q.—What other ways? A.—Well, sometimes a man is hired to go with a contractor, and if the contractor is not enterprising he loses his wages pretty often.

By Mr. ARMSTRONG:—

Q.—Do you know of men going up the country, going out to the woods, and to the engaged camps with them, for the purpose of getting their money? A.—No; I do not know anything about that.

Q.—Have you ever dealt with these men in dry-goods? A.—Yes; often.

Q.—Have you ever sent runners to sell to them? A.—Yes; I have.

Q.—Have they complained of not getting good bargains? A.—No; they cannot complain, because there is too much competition.

Q.—Do these shanty men always pay in cash? A.—They always pay in cash, except when they go up in the fall. In the fall they get it on credit.

Q.—Do their employers give them orders on your store, or any other store?  
A.—Not since many years.

By Mr. CARSON:—

Q.—Have you anything to add to what you have already said? A.—No; not for the present, that I can remember.

PAUL MINER, Shanty-man, Ottawa, called and sworn.

By Mr. CARSON:—

Q.—How many years have you been engaged in the shanties? A.—Between thirty-six and thirty-seven years.

Q.—The work that the men are engaged in in the shanties, is it heavy, laborious work? A.—Yes; it is heavy, and we are badly boarded; that is sometimes we are badly fed—grubbed.

Q.—Is that the rule or the exception? A.—Well, it is the rule in some places—some shanties; we get bad board in some shanties and good board in others.

Q.—It is generally the rule that in job shanties (small shanties) the men do not get such good board as in the larger concerns? A.—In the biggest part of the larger concerns they do not board the men so well as in the small concerns, on the average.

Q.—How many hours a day do you think these men average during the winter?  
A.—Well, during they winter generally, they work as long as the can see in the bush.

Q.—Do you think that they work nine or ten hours? A.—Yes; nine or ten hours. They work as long as they can see.

Q.—How far do they have to walk? A.—They have to walk back of the shanties—sometimes 1 mile and sometimes 2 or 3 miles.

Q.—Well, would they make twelve hours a day? A.—Sometimes they do before they get back to the shanties again, and other times it would not take that—it just depends how far they have to go.

Q.—Are any precautions taken by these men or their employers while they are in the shanties in case of accident? Suppose a man is cut—supposing he receives a severe cut, is anybody there to attend to his wounds? A.—Yes; it is done this way. One man has to dress the other, and the man that is cut or is sick is charged for his time and he loses his pay.

Q.—Supposing you are injured, supposing you receive a severe cut in the middle of the month, is your time stopped at once? A.—Yes; the moment that you are wounded your time is stopped.

Q.—Is it the rule of the firm not to pay your railway fare down? A.—They never do.

By Mr. BOIVIN:—

Q.—At what rate are you charged for your board? A.—One dollar a day. They let your time go on and they charge you \$1 a day.

Q.—Has there ever been any complaint? Has there ever been any complaint made to the foreman of the shanty? A.—There was a complaint made to the foreman and to the agents of the condition of the food, but we could not get any alteration made, and they kept on that way until that pork and flour that they had was used up, and at that time there was a deal of people in the shanty—men got sick and we calculated that it was on account of this food, giving us bad board. The men got sick of what was called “black legs,” that is, they got their legs swelled up so bad and so far that many had to come down from the shanties on that account. I do not see what could cause this but the bad board that they gave them, because with good board, good victuals, they would keep well and work well.

Q.—They have supply depots, have they not? A.—Yes.

Q.—And they furnish supplies at these depots? A.—Yes.

Q.—Can you buy goods as cheap there as you can buy them at Renfrew, for instance? A.—No.

Q.—How much dearer would you have to pay? A.—It is just according to what river you are on; sometimes, for instance, you are on the Dore River, and other times on the river Petawawi; at other times you are at the Trout Lake depot. At some places it goes to 50 cents and at other places it goes to \$1 (50 to 100 per cent.) more than city prices.

Q.—Would you buy a pair of pants or moccasins as cheap there as in Pembroke? A.—No; you cannot buy it as cheap, and it does not cost as much as they charge you, because a pair of working pants, if you go to buy them here in Ottawa, will cost you \$2.25 to \$2.50, and they will charge you up there for just the same pants \$3.25 to \$3.50, and in some concerns we are charged \$5. Then, in some places plug, strip tobacco—it takes twelve plugs to the pound—they give you only ten to the pound, and for that they charge you \$1.25.

Q.—Now, would that be an exception but not the rule? A.—It is not the rule, because the rule I saw in the shanty was they used to charge 60 to 75 cents.

Q.—Do these men in going there, if taken sick in the shanty, are they charged for their board? A.—Yes; they charge \$1 a day.

Q.—And they lose their time? A.—Yes; if a man gets cut or gets sick his time goes on, but he is charged \$1 a day for one or two days, or fifteen days, or a month.

Q.—Those men go down to the drive? A.—Some are hired to clear in the spring, and some are hired to come down with the drive.

Q.—Do they get more pay to come down with the drive? A.—They generally get a little more wages, when a man is hired for the winter and the drive.

Q.—Is not following the drive considered a very dangerous work? A.—Yes.

Q.—Have you known men to be ordered to clear a jam away when the foreman has refused to go? A.—No; the reason I say that I never saw that is, because I

was foreman myself, and whenever I did not like to go myself I would never think of sending a man to fill my place; I would never send a man to do what I was afraid to do myself.

Q.—Have you known men in the shanties to lose their pay by sub-contracting—by shippers? A.—I have known men that have lost their wages—and I have lost wages myself by sub-contractors.

Q.—Did you make any representation to the party for whom these logs were cut? A.—No; I never did.

Q.—Do you know of any now who lose their wages through that? A.—Well, very few; there are not so many as there used to be.

Q.—How much is board in these shanties, and what is its quality? A.—Well, board in some of these places is 30 cents a meal—35, 40 and 50 cents. It is just according to what river you are on.

Q.—What would constitute the board at 50 cents a meal? A.—Well, they calculate to give us one meal, just 50 cents a day for a man on some rivers; on others it is 35 cents, and in other places 30 and 40 cents.

Q.—What would one meal consist of? A.—Beef and pork, and beans, and pea-soup, and bread and tea; sometimes they have potatoes and at other times they have not.

By Mr. ARMSTRONG :—

Q.—They do not use any table napkins out there? A.—No; nor tables either, for a man has to make his own table on his knee or on the floor.

By the CHAIRMAN :—

Q.—Do I understand you to say that you eat off the floor? A.—Some of them do sit there, right on the floor, and take their meals.

By Mr. CARSON :—

Q.—Have you known any man paid in the shanty in “scrip” or “due bills”? A.—Yes; I have known some of them.

By the CHAIRMAN :—

Q.—Have you ever seen them paid with these bills? A.—I have never seen them paid, but I was shown the bills.

Q.—What kind of bills? A.—Just a “due bill” written with the pencil.

Q.—You were paid by due bills, but you would have to wait until the timber was down to be paid? A.—Yes.

By Mr. HEAKES :—

Q.—If a man goes out into the woods in the fall and does not remain the whole winter, is any portion of his wages charged against him? A.—If a man is hired in the fall to go to the woods, and if he wants to leave the concern, and won't work his time, they will charge him for the passage fee of another man to bring up in his place and let him go, and I have seen some concerns not pay him at all. If he wants to go he goes without any payment.

Q.—What kind of beds do you have? A.—Balsam or bay branches, and two pairs of blankets.

Q.—Just the branches cut down? A.—Just the branches cut; they are the feathers.

Q.—Do any of the firms furnish straw beds? A.—Sometimes they do, when the snow is deep; at other times it is too far away, and you cannot get it.

Q.—Do you know any firms now who pay in scrip or by order? A.—I do not know any men who are paid in scrip or by order, only as I said a while ago; when a man is stuck on a river he is given a “due bill,” to be paid next year, when the timber arrives at Quebec or is out in the stream.

By the CHAIRMAN :—

Q.—For the last forty years a great number of people—French Canadians—have

left the parish of Sorel, at the entrance of Lake St. Peter, in the Province of Quebec, to go into the woods as shanty-men, for Ottawa firms, and to drive the lumber down the rivers. Have these men any preferences shown them, so that they should return year after year? A.—I do not see any that they should have.

By Mr. BOIVIN :—

Q.—Have the salaries of the men been raised during five or ten years past?

A.—They have been raised since ten years.

By Mr. CARSON :—

Q.—How much more do they get now than they did ten years ago? A.—Well, they get, I suppose, the same amount of work—the same kind of work. They get \$3 and \$4, I think, and some of them \$5 and \$6 more a month. Ten years ago the wages of shanty-men were pretty low.

Q.—What were the wages of shanty-men ten years ago? A.—Some of them, \$12.

Q.—What was the average ten years ago? A.—I mind that a man worked for me making logs at \$12 a month. A good many men have gone to the States lumbering. Last winter, on the Petawawi, men got \$18, \$19, \$20, \$24, and some \$26.

Q.—What would the \$26-man have got ten years ago? A.—I suppose he would have got \$12.

THOMAS STEWART, Machinist, Ottawa, called and sworn.

By Mr. CARSON :—

Q.—You are a member of the firm of Stewart and Fleck, machinists, of this city? A.—Yes.

Q.—You have, I understand, given a great deal of consideration to the question of the establishment of an intelligence bureau, or bureau of labor statistics, for the information of the workingmen. If so, please give your opinion thereon. I am not going to ask you any questions, but I wish you to state your views on that subject to this Commission? A.—I might say, as you know, being the late president of the association here in this city, that I have had more or less to do with the matter when it was brought up first. I very much regret the absence of one member of the Royal Commission here to-night. I had expected to see my friend Mr. Gibson here to-night—one of the representatives of the city of Ottawa on this Commission, as he and I are both familiar with this subject. The idea of establishing a bureau of labor statistics was one of the greatest points that our association had in view; in fact, I might say the greatest point. Our idea was to establish it in such a way that each country post office all over the Dominion would be, practically speaking, an intelligence office for the benefit of the workingmen in general, not only for mechanics but for laboring men, or any person out of employment, and not only for their benefit, but for the benefit of the employers also. The idea we represented to the Minister at that time was, that when any number of men or any person—man or woman—was out of employment, by going to the post office and registering his or her name and occupation or intended occupation, they would be informed where such persons or workmen was or were required. We also intended or proposed that employers should know of this arrangement at the post offices throughout the whole country, so that they might register their wants, and so that each day the returns as they would be made by the agent of the bureau of labor statistics (who would be the postmaster for the time being), would be forwarded to the secretary of the bureau of labor statistics, Ottawa, who would cause the information to be duly circulated throughout the country. I am not aware that I have made my views quite clear to you. Supposing they wanted men in Winnipeg, and we wanted more here than were really required in Winnipeg, the postmasters of the respective cities would be informed by the general office in Ottawa that a certain number of men were required of a specific class; that they had information that so many men of that particular class were

required, and that by applying at the post office they could go on there. It would save them the expense of travelling and looking for work on speculation; they would know that men were wanted, and the information would come so cheaply through this process—there would be no extra expense to the Government, and at the same time it would be a great deal of benefit to the working classes in the whole Dominion, because what would happen between Winnipeg and Ottawa might happen between Halifax and Ottawa, or through the whole country; so that the superintendent of the labor bureau in Ottawa, as head-centre, would be able to inform the whole country; I mean the postmasters all over the country would be able to inform the Postmaster General, or rather the secretary of the bureau of labor statistics, where these men were wanted—that is to say, where men could obtain employment, and to what extent. I know myself, as a practical mechanic, I have many times travelled hundreds of miles looking for work, and at the end of my journey was sometimes worse off than when I started; and if I had known of the condition of my trade in that particular place I would have gone in another direction. I am talking according to my experience, and the experience of others; and having thought the matter over in our association we have all come to the conclusion that if the workmen could have a central bureau of statistics, established here in Ottawa as the capital, where all reports of labor statistics could come in, the same as mail reports come in, they could go and apply for information to the postmaster, or some person or persons appointed for the purpose. That is my opinion and the opinion of all our friends in the association. We came to the conclusion that it would do away with the necessity for strikes, disturbances between employers and employes, for the simple reason that it would equalize the labor over the country, and when a particular part would be supplied there would not be any danger of over-doing the supply in any particular part. In our opinion, most of these strikes have been caused by the importation of foreign labor.

By the CHAIRMAN :—

Q.—What do you mean by foreign labor? A.—Laborers imported into Canada from foreign countries.

Q.—Do you call England a foreign country? A.—I refer to laborers imported from foreign countries—that is to say, countries outside of Canada—who come here and are willing to work at lower wages than Canadians. Some of them do not have an existence in our country, and work here only in the summer time. These people come here and work in the summer time for less wages than Canadians, and not having had any experience of a winter in Canada, work for less wages than we Canadians can do, who have to remain here through the long and hard winter. The result is that Canadians are asked to work for less wages than they can live upon, and the result has been dissatisfaction and strikes in various parts of the country, and there always will be, as long as the same principle of supporting foreign labor exists.

Q.—Is this a British colony? A.—I will submit to you whether it is or not; if you will say it is not, I will admit it.

Q.—And then, how do you propose to prevent Englishmen from coming here? A.—I would not.

Q.—You do not understand my question. In view of what you have already stated I ask you this: How are you going to prevent the English workman from coming to this country? A.—I will explain what I mean. I do not propose to prevent people from coming into the country.

Q.—Then, how are you going to remedy that of which you complain? A.—When foreigners—Englishmen, Scotchmen and Irishmen, and others—come to this country to interfere with the rights of the workmen of this country—

Q.—I am asking your opinion now. You made a complaint against a certain portion of the people of this country. You deny them the right to exist here, when they have as much right as any one to be here, as long as they obey the law? A.—I never made that complaint. I said we did not complain of Canadians, but we com-

plain of foreigners outside of Canada. Understand me: I said and I say now, so that there shall be no mistake about it, and His Honor, probably, will understand me better in this way—as a Canadian workingman I object to having the workingmen of foreign countries brought here, and assisted to come here, when there is not sufficient employment for those who are resident in the country.

Q.—Will you say what are foreign countries? A.—Any country outside of Canada is a foreign country, in my opinion. I say anything outside of Canada. I object to these people being brought into this country—assisted into this country to compete against us. That is what I mean. Unfortunately, I am interrupted and prevented from giving free expression to my thoughts. Then, as I said before, not having had the experience of a Canadian winter they work at lower wages during the summer than we, as Canadians, with a practical knowledge of what the winter is, can possibly do. In some trades in this country it is only practicable to work during the summer months. A great many of these men, such as stone-masons, bricklayers, plasterers, and so forth, are idle, practically speaking, during the winter; and if they cannot make enough money during the summer they have to go and work at some other business, some as common laborers in a shop, and thereby enter into competition with our laborers for the winter.

By Mr. HEAKES:—

Q.—Do I understand you to say that these statistics would be supplied to immigration agents, amongst others? A.—Certainly.

Q.—You believe if these labor statistics were disseminated it would show the true condition of the country, so far as regards the demand for labor of all kinds?

A.—That is it. If this bureau of labor statistics were established in Ottawa, and it has been for years one of the greatest objects that I have ever had in hand—in fact, it has been the only object that I ever had to do with in Canada, the establishment of a bureau of labor statistics together with my confrères and friends in the association I belong to; and as I said before, I deeply regret the absence of my confrère and friend Mr. Gibson, who is absent from the city as a member of this Commission. I think if we had a bureau of labor statistics, and these returns were published regularly, we would not be flooded, as we are to-day, by mechanics in districts where we can find no work for them. That is about all that I have got to say on that particular subject. If there is anything else on which you would like to question me I would have pleasure in answering you.

By Mr. BOIVIN:—

Q.—Did you ever make any figures or enter into figures as to the cost of a bureau of labor statistics? I would not like to create such expense without knowing the cost, so if you have ever made any figures I would like you to say what it would cost? A.—Well, we did not make the figures, for the simple reason that we did not know what the usual price was for men engaged in that description of work, we being but poor mechanics.

By the CHAIRMAN:—

Q.—You thought it was one of the expenses the Dominion should bear? A.—We thought so. The way we put it was, we thought the Post Office Department should do it. A great many of the country post offices had practically little or nothing to do, and we thought this additional business should be put on these post offices.

Q.—How many post offices are there in the country (Dominion)? A.—About seven thousand.

Q.—Do you expect to receive, then, seven thousand letters a day at the head office in Ottawa? A.—Well, we propose to take Ottawa as the head office; it will be possibly necessary to hire one man to attend to that there, and the same thing could be done in any other city of the same size. Of course, we only just talked this over amongst ourselves; we did not enter into any figures.

Q.—Then, you have no experience as to the cost of this undertaking? A.—We

will have the advantage of getting that in practice; unfortunately, you put me under oath, and I can only talk as far as I know.

Q.—Well, we are obliged to put you under oath, and you can talk the same as any one else. In the meantime, it is but natural to suppose that you have taken into consideration what the cost would be? A.—I could not tell the cost, or the price of men outside my own business, in a city like Ottawa; we consider it expedient to have at least one man in a city like this. In smaller places the postmaster ought to be able to do it himself; he might, perhaps, be given a slight additional remuneration, and in Ottawa we concluded in the building to have a central bureau, presided over by a deputy, or a gentleman equal to a Deputy Minister.

Q.—I would like very much if you had some statement to give us, showing the probable cost of this bureau and its agencies; because, you see when we make suggestions and send them to the Government we must be prepared to show the cost or estimated cost of the scheme, and that is the reason myself and these other gentlemen forming this Commission are here. For instance, shoemakers or manufacturers, like myself, for instance, may make so many suggestions, and in putting them into practice may create so much expense that the Government would not be able to adopt our suggestions; so that is the reason why I always ask what the probable cost will be to the Government.

By Mr. HEAKES :—

Q.—There is not a great deal of money expended on the workingman by the Government, or the country, is there? A.—Well, as far as I am concerned—I am a practical workingman—I do not know of a cent. The only money that I know of their spending for the workingman has been the assisted passages from the old country, to compete against us.

By Mr. ARMSTRONG :—

Q.—Have you known that as a fact, or is it only a rumor? A.—That is well known. If you examine the papers you will see that it is so. I can tell you, as a matter of fact, that men have come to me in my shop here, in Ottawa city, and have told me when they came and asked me for a job as a machinist; and I asked them when they came, and they said they had only just arrived. I said: "How was it you came out," and they said: "We came out by means of the immigration agent." I asked: "How came you there," and they said: "We came out cheap; we came out as assisted immigrants." These men that asked me for a situation, I said: "There is no assisted passages for mechanics," and they said that was made all right.

Q.—Did those men come out as mechanics or in the capacity of agricultural laborers? A.—I was just coming to that. They said they went to the agent and asked for an assisted passage. He said: "Are you farm laborers," and they answered: "No; we are machinists." He said: "Can you work on a farm," and they said: "Oh, yes;" and he said: "That is all right," and gave them an assisted passage. They said: "We told him we were machinists, but the agent asked if we could work on a farm, and we said that we could, and he said: "That is all right," and gave us assisted passages."

By the CHAIRMAN :—

Q.—Are you aware that each application must be accompanied by the certificate of the clergyman or priest? A.—No; I am not.

Q.—Have you anything further you would like to say before the Commission? A.—Well, I should like to have touched on several other things.

Q.—Well, do not you think it would be as well for you to reduce your further views to writing and send it on to the Commission? A.—Well, that is just what I was going to propose. But perhaps you would like to ask me a few other questions. There are a few other things—one or two other things—I would like to have spoken to you about.

Q.—Well, you can embody them, and send it in as a supplement to your present evidence? A.—I will do so. When shall I send it in?

Q.—As soon as you like, so that it can be communicated to the members of the Commission, before they make their report? A.—I shall be very glad to do so, and will take care to embody every thing. In fact, I would prefer to write it; for I have such a cold, as you can doubtless see, that I am totally unable to speak to you to-night.

By Mr. CARSON:—

Q.—You employ about how many hands? A.—Forty-five.

Q.—What number of hours do you consider, as an employer of labor, would be a proper day's work. A.—Well, always since I was a workman myself my idea was eight hours a day. That is enough for any mechanic to work.

Q.—And would you be satisfied to give a mechanic eight hours' work for ten hours' pay? A.—If others would do the same; but, unfortunately, competition is so strong that we cannot afford to do it and keep the business.

By Mr. McLEAN:—

Q.—You could not run eight hours if your neighbors ran ten? A.—No. In my opinion eight is enough.

# ANALYTICAL INDEX

ARRANGED IN THE ALPHABETICAL ORDER OF THE NAMES OF  
WITNESSES.

AINSLIE, JAMES, *Shipwright, Kingston*, - - - - - **1056**

Apprentices. Wages. Constancy of employment. Shortening of the hours of labor the nine-hour system, 1053.

ALLAN, THOMAS, *Hamilton* - - - - - **S22-S24**

Is a telegraph operator in the employ of the G. N. W. Telegraph Co. Commenced eleven years ago as a messenger. Hours of labor of operators and their wages. Night work, 8:2. How operators are graded. Strike of 1883. How young men learn to be operators. Schools that teach telegraphing. Overtime. Female operators, 823. Wages of female operators. The class of work they generally do. Pay days. Rate of wages in Ontario cities, in Montreal, Winnipeg and the United States compared. Thinks it would be a benefit to operators and the general public if Government controlled the telegraphs, 824.

ALLENBY, JOHN, *Tailor, London* - - - - - **627-630**

A tailor's average wages. Very few male apprentices but quite a lot of women. The work of women compared with that of men. The prices paid to women for making vests. Prices for making a "similar" coat vary from \$2.50 to \$4.50. Average earnings of women. Hours of labor of men and women, 627. Men and women employed together in all the shops in the city except one which does not employ any women. Ironing is done in the same room where the hands work. Tailors are beginning to get their work done outside. Italians in London who run sweating shops. No child labor employed unless it be by the women, 628. The overall trade, 628-9. Wages in Great Britain and here compared. Wages paid in cash. Pay days. Shows in what respects organization would benefit the trade. Rents of workmen's houses in London. Wages have decreased. The purchasing power of a dollar is not so much by half as it was eight years ago, 629. Prices of the necessaries of life. Overall and shirt making. The effect of immigration on the trade. Attempt at organization, 630.

ANDERSON, JOHN, *Cornwall, Weaver* - - - - - **1082**

Employed at the Canada Cotton Mills. Runs four looms. Works by the piece. Wages. Sanitary condition and ventilation of the factory. Separate conveniences for each sex; how separated. Knows that all the weavers would prefer being paid weekly, 10-2.

ANDERSON, W. *Ottawa* - - - - - **1104-1107**

Is book-keeper for Mr. J. R. Booth. Wages of log-makers or shanty men and how they are paid. Wages of lumber mill hands and men on the booms. Hours of labor of the mills hands, 1104. Child labor (boys) how employed; age of the youngest. Wages and constancy of employment of the various classes of employees such as sawyers, platform men, pilers, teamsters and their average yearly earnings. Prices of supplies in pork, flour, beans, tea, sugar, syrup, rice and dried apples in 1877-8, 1884-5 and 1887-8, 1145. Labor troubles. Accidents. Does not know that the mills have been inspected. No copy of the Factory Act in the establishment. Arrange-

ments for paying the families of married men who go to the bush. Goods sold to men in the shanties for their convenience only, not for profit. Wages better than they were twenty years ago, and 24 to 25 per cent. higher than ten years ago, 1106. Classes of men who go the shanties and on the drive. When the timber is sold, 1107.

**ANDERSON, WILLIAM H., *Manufacturer of Carriage Woodwork, St. Thomas* - 507-511**

Is a member of the firm of John Heard & Co. Have but recently started in St. Thomas; been running about three months. Gets his lumber altogether in Canada. Canadian timber for carriage making is as good as the American but the supply is more limited, 507. Wages. Hours of labor. Expects to run all the year round. Finds a market for his product in the Dominion. Quality of Canadian and American carriage woodwork compared. Apprentices, 508. The use of machinery in his business has cheapened production: but has not reduced wages. Rents of workmen's houses. Rate of wages. Purchasing power of money, 509. Production cheapened twenty-five to fifty per cent. By use of machinery. Does not approve of shorter hours. Who gets the twenty-five or fifty per cent. saved in production? employers or workmen? 510-511.

**ANDREWS, JOHN, *Farmer, Southwold* - - - - - 503-505**

Crops raised in the district. Cattle raising. Prices of cattle and farm produce, 503. Fruit grown. Wages paid to farm laborers. Constancy of employment given to them. Farmers as a rule do not employ as much labor as formerly: the use of machinery has made farmers more independent of laborers. There is a scarcity of good farm laborers. Dairying. Cheese factories, 504. Price of milk in St. Thomas. Stock raising has, to a very large extent, taken the place of wheat raising, 505. Reasons for the scarcity of farm laborers. Raising horses and prices thereof. Immigration. 506. Farmers' combinations. Farmers grange, 507.

**ANGROVE, SAMUEL, *Pattern-maker, Kingston* - - - - - 945-947**

Is employed at the locomotive works. Constancy of employment. Wages. Pay days fortnightly, paid in cash. Garnisheing of wages. Weekly payments. Men are employed at the Kingston Locomotive works without a certificate from their last employer, 945. Strike last summer (1887) cause and how settled. Company do not object to the men belonging to Labor organizations. Number of locomotives turned out by the company last year. The trade fluctuates, 946. Cost of living in Kingston and wages now and five years ago compared, 947.

*Anonymous witnesses who do not desire their names to be published.*

\* \* \* ***Steamfitter, Toronto* - - - - - 28-36**

Rate of wages increased when hours of labor were reduced from ten to nine. The plumbers' strike the cause of the increase. Sanitary arrangement of the shops. Rate of wages now paid. Apprentices, 28 and 29. Indentures. Constancy of employment. Co-operation works. Age of apprentices. Pay days, fortnightly, would be better weekly. Saturday objectionable as a pay day, 39. Purchasing power of money as great as three years ago except in payment of rent and purchase of land. Foreign competition, 31. Fines. Benefit society. Sunday labor. Convict labor. Investment of savings. Rent of workingmen's houses. Trades Unions not opposed to employer's interests, 32. Method of settling labor disputes. Wages of apprentices. Term of apprenticeship, 33. Indenturing not generally practised, 34. Cost of board in Toronto. Building lots in Toronto: their cost and location, also restrictions imposed on the sale of them. Lien laws, 25. Rents increase more rapidly than wages. Rate of wages, 36.

\* \* \* , *Machinist, Toronto*

62-70

Reason why he does not wish his name published. Machinists partly organized under the "Amalgamated Society of Engineers, head office London, England, about sixty members here. Benefits derived from the organization, 62. Constancy of employment. Rules of the society provide for arbitration before a strike. Purchasing power of wages. House rents. Sanitary arrangements of machine shops in Toronto. Wages. Hours of labor. Purchasing power of money greater in England than Canada. Rents and accommodations of workmens' houses in England and Canada compared, 63. Cost of living now and five or ten years ago compared. Wages for overtime in England and Toronto compared. Wages and hours of labor of machinists in Durdee, 64. Wages in Toronto. Protection of machinery against accidents. Apprentices. Immigration of men from the Old Country. Pay days once a month, two weeks kept back, for men working for railway companies and fortnightly for others. Thorough organization would benefit the trade, 65. Convict labor. Possibility of mechanics saving money. Advantage to the mechanics of being paid oftener than once a month. Friday the best pay day. Immigration. Canadian and foreign mechanics compared. Arbitration, 68. Strikes. Apprentices. Indentures, 67. Lien law. Machinists under-paid considering the amount of skill required. The Amalgamated Society of Engineers more a benefit society in Canada than anything else. Grand Trunk sick and insurance benefit society, 68. Weekly payments would be a great advantage. Shortening hours of labor. A man cannot do as much in nine as in ten hours. Effect of the use of machinery. The Factory Act of Ontario. The Factory Act in the Old Country, 69. His opinion regarding the age when children should be sent to work, 70.

\* \* \* *Conductor on Grand Trunk Railway*

513-525

System by which the hours of labor of conductors are regulated, 513. Wages. Responsibility of conductors. Penalties for mistakes. Very often lack of proper rest prevents conductors from properly attending to their duties, 514. Difficulty when discharged to get employment with other companies. The ordinary crew of a freight train. Number of loaded cars that usually make a train. Distance required to stop a train. Signalling between conductor and driver. Bell cords not to be depended upon on freight trains. Blacklisting, 515. Fines. Danger to brakemen from running boards. Protection for brakemen. What claim the brakeman has against the company in case of accidents. Effect of the Ontario Government exempting the Grand Trunk Railway from the jurisdiction of the Employer's Liability law, and the plea on which it was done, 516. The uneven height of cars a source of danger to brakemen, 517. Railway Employees Benefit Society, 517, 518. Mr. Hickson's threatening circular regarding answering the questions of the Select Committee of the Local Legislature, 517. Grand Trunk Railway Co. compel their employees to sign a document absolving the company from all responsibility in case of accident; and the law regarding such contracts, 518. The Grand Trunk scheme of insurance 518, 520. The men prefer that the Employer's Liability Act "pure and simple," should be applied to the Grand Trunk Company, 518. Believes he knows men who will refrain from answering the Government questions through fear of the Company. Grand Trunk Punishment Sheet, or black list, 519. Fines. Conductor's Brotherhood. Car couplings now in use. Accidents resulting from car coupling, 520. Bridges. Accidents from frogs. The couplings used on the D. L. and W. are brutal, he would like to stop their cars from passing through the Dominion, 521. The adoption of the Miller coupling for freight cars would do away with all danger. Garnisheeing of wages, 522. Grand Trunk insurance, 522, 524. Dangers and difficulties to brakemen from narrow running boards, frogs, &c. Suggestions regarding what is necessary to improve the condition of railway employees and make their employment safer and better, 524. Licensing of railway conductors, 525.

\* \* \* *Conductor on the Canadian Division of the Michigan*

*Central Railway* - - - - -

**525-539**

Thoroughly approves of the evidence given by G. T. R. conductor. Compensation for accident to employes on the Michigan Central Road. Employer's Liability Act, 525. Odbert accident case. Licensing of conductors. Unnecessary delay in investigating cases, 526. Hours of labor of railway employes excessive, 526, 527. No remuneration for extra time. Paid by the trip. A conductor has to take whatever train is given him or lose the job, 527. Freight engines are often too heavily loaded. Usual number of cars to a train. Rules and manner in which the Michigan Central is governed here. Maximum number of cars a brakemen attends to. Signal lights, 528. The application of air brakes to freight train, 529. Further particulars regarding the breaking of trains, 529, 530. A railway employe should be paid extra if he is obliged to work more than ten hours, 530.

\* \* \* *Locomotive Engineer, G. T. R., St. Thomas* - - -

**543-547**

Railroad Superintendent organization or society. Hours of labor of locomotive engineers. Engineers' certificates of ability, services and conduct. Law required to make the issuing of those certificates obligatory and not merely at the option of the Superintendent. Charges against employes on the Grand Trunk Railway. How investigated. Locomotive Engineers' Organization, 543. Grand Trunk insurance scheme, 543, 544-545. Effect of Organization, 544. Grand Trunk employe's rule book which must be signed as a condition of employment, contains a clause waiving all claims in case of accident. Grand Trunk rule books sanctioned by the Privy Council. Accident. Condition of the road beds of Canadian railways. Examinations of locomotive engineers. Responsibility for a train rests on conductor and engineer jointly, 545. Inspection of locomotive boilers. Liability to accident from engineers being sent out on roads they are not acquainted with. Round and flat crown sheets on locomotive boilers, 546. Present signal system imperfect. Blacklisting. Necessity for a law compelling railway Superintendents to give certificates to engineers. Strikes, 547.

\* \* \* *Brakeman, M. C. R., St. Thomas* - - -

**571-576**

Difficulties brakemen have to contend with in regard to the present condition of running boards and car-couplers, 571. Bell cords no use and a source of danger. Frogs on the M. C. R. all filled. Hours of labor or the usual length of a trip for brakemen. Wages of brakemen. No allowance for overtime, 572. Couplings, 572, 573. Guards or hand rails along the running boards. Rest on delayed trips. Compensation for accident. The company's liability in case of accident. Paper employes are required to sign, protecting the company against actions in case of accidents. M. C. R. have no provident or insurance system like that of the G. T. R., 573. Suspensions previous to investigations. Certificates of service and character. Hours of labor and length of trips, 574. Air brakes applied to freight trains, 575.

\* \* \* *St. Thomas* - - - - -

**575-577**

Describes what changes are required in regard to running boards, &c., of freight cars. Says Mr. D. McCarthy's bill of last session meets all the requirements of the case, 575. Uselessness and danger of depending on bell cords on freight trains, 575, 576. Licensing of conductors and what they expect from the system, 576. Case of black listing, 577.

\* \* \* *Brakeman, M. C. R., St. Thomas* - - -

**577**

Agrees with evidence given in regard to a brakeman's life and work. Bell cords on freight trains. Oil used in lamps, 577.

- \* \* \* *M. C. R., St. Thomas* - - - - - **578-579**  
 Occupation brakeman. Agrees with the evidence of previous witness. Larger crews on freight trains would lessen the danger in braking. Many of the cars have not got brakes that will hold them; has gone through seventeen cars to get three good brakes fit to hold. Conductors' duty to report condition of cars. Cars inspected as far as their running is concerned but not the brakes. Has known the conductor to report bad brakes and the same car go out without being fixed, 578. Feasibility of using air brakes on freight cars. Lack of courtesy to men on trial, 579.
- \* \* \* *St. Thomas* - - - - - **579-580**  
 Has been employed on the Grand Trunk as section man. Wages of section men. Hours of labor. Pay days once a month. Employed all the year round. Overtime paid for at same rate as day work. Men are not frequently discharged. Forced to lose his benefits from Grand Trunk Insurance Society because ill-health caused him to leave the Grand Trunk Railway Co.'s employment, 579. Difficulty in remaining a member of the Grand Trunk Railway Company's Benefit Society after leaving the company's employ. Wages. It would be a benefit if they were paid oftener than once a month, 580.
- \* \* \* \* *of Cornwall, Mill Operative* - - - - - **1079-1080**  
 Employed in the lap room of the Stormont Mill. Firing of employees. Sanitary condition and arrangement of the closets. Wages. Accidents caused through carelessness, 1079. Machinery protected. Wages, 1080.
- \* \* \* *Cotton Spinner* - - - - - **1085-1086**  
 Hours of labor of spinners. Wages, 1085. Child labor employed at cotton spinning. Ages of the youngest. Hours of labor. Bad language by under overseers to operatives and children. Separate conveniences. Their condition satisfactory, 1086.
- \* \* \* *engaged in a Match Factory at Ottawa* - - - - - **1149**  
 Age. Wages. Hours of labor. Worked half a day at Booth's mill and got a finger cut off. Describes how it happened. Can write a little, 1149.
- \* \* \* *engaged in a Box Factory at Ottawa* - - - - - **1150**  
 Does not know his age. Cannot read. Lives with his parents. His father's occupation. Length of time he has been working. Description of his work. Boys sometimes get caught in the saw near which he works, 1150.
- \* \* \* *employed in Mills at Ottawa* - - - - - **1150**  
 Age. Length of time he has been working. Wages. Description of his work. Hours of labor, 1150.
- \* \* \* *Ottawa* - - - - - **1150-1151**  
 Age. Works in the box factory at Ottawa. Describes the work he does. Danger from the saws, 1151. Length of time he has been there. Wages. Hours of labor, 1151.
- \* \* \* *Ottawa* - - - - - **1151**  
 Age. Works at the box factory. Describes the work he does. Hours of labor. Wages. Accidents. Danger from the saws. Can read and write, 1151.
- \* \* \* *, Ottawa,* - - - - - **1151-1152**  
 Age. Works at Booth's mills. Length of time he has worked there, 1151. Hours of labor. States that there are boys only eleven and twelve years old working at Booth's mills. Some of these small boys work at night. Hours of labor of night hands. Describes the work that he and the other "little fellows" do. Wages, 1152.

- \* \* \* *Laborer, Ottawa* . . . . . **1158-1159**  
 Has been employed for twenty years at the locks, and is now employed there. Hours of labor of lock laborers. Wages. Constancy of employment. Sunday work paid for, 1158. The special grievances of Ottawa lock laborers. What they petitioned for but have not yet received, 1159.
- \* \* \* *Laborer, Ottawa* . . . . . **1159**  
 Is employed at the canal locks, as lockman. Hours of labor too long, 1159.
- MISS \* \* \* *Folder in a printing office, Ottawa* . . . . . **1161-1163**  
 Is employed in the Parliamentary Printing Office. Hours of labor. Wages by the day and for overtime, 1161. Working overtime optional. Wages docked if late. Fining of employees for playing. Use of profane language towards female employees by the foreman. Length of time it takes to learn folding. Wages of folders, 1162.
- MISS \* \* \* *Paper Folder, Ottawa* . . . . . **1162-1163**  
 Age. Fining of employees. Use of profane or bad language to young female employees by the foreman. Wages. Hours of labor, 1162 and 1163.
- MISS \* \* \* *Folder, Ottawa,* . . . . . **1163**  
 Works for MacLean, Roger & Co. Age. Has been fined for being late, 1163.
- MISS \* \* \* *Folder and Sewer, Ottawa* . . . . . **1171-1173**  
 Is forewoman at Messrs. Woodburn & Co.'s printing office. Number of young women employed under her. Age of the youngest. Length of time required to learn. Wages, 1171. Hours of labor. Sanitary condition of the room. Pay days weekly, paid regularly and in full. Water supply. Overtime, 1172.
- MISS \* \* \* *Folder and Stitcher, Ottawa* . . . . . **1172-1173**  
 Corroborates evidence of last witness (see p. 1171.) Paid for Saturday half holiday. Advantages of Saturday half holidays, 1172. Paid regularly and in cash; no sums kept back, 1173.
- ANTAYA, DANIEL, *Fisherman, Sandwich West* . . . . . **384**  
 Wishes the Government would make the close season correspond with the spawning season and carry it out properly, 384.
- ANTHES, J. J., *Berlin* . . . . . **837-839**  
 Is a manufacturer of children's carriages. Description of reed or rattan, of which the bodies of children's carriages are mostly made at present. Number of factories making rattan furniture in Ontario. The rattan industry only commenced four or five years ago. Wages of boys and girls employed in the rattan industry, 837. The rattan industry has probably reached its highest point. Rattan: where it comes from; how it comes; what it is; how it is manufactured; duty on it. Machinery cannot be used in manufacturing rattan goods. When the duty was raised he was compelled to manufacture rattan ware instead of importing it as he formerly did. Number of hands employed in making baby carriages in Canada. Competition from prison labor, 838. Prison labor; how to employ it. Ages of the girls he employs; work by piece; their wages; hours of labor. Bonusing and exempting factories from taxation. Quality of Canadian and American rattan goods compared, 839.
- ANTHES, J. S., *Berlin, re-called* . . . . . **842**  
 Profit sharing: his own experiment that way, 842.

- APPLETON, WALTER S., Harness-maker, Toronto** - - - - - **214**  
 Thinks a Government law compelling indentured apprenticeship would be a benefit to harness-makers. Organization among harness-makers is what is required to better the condition of the men, 214.
- ARMSTRONG, FERGUS, Hamilton** - - - - - **779-782**  
 Is station master at the Grand Trunk. The men who report to him. Accidents from coupling and making up trains. Car couplings: reasons why automatic couplers, which are perfectly suitable for passenger cars, would not suit freight cars. Blocking of frogs, 779. Guard on freight cars to prevent men from slipping or falling off. Car brakes: trials of Mr. Hall's method of using the ordinary pistons and cylinders of a locomotive for braking purposes. Wages of yard men and crossing men. The dangerousness of the style of dead-weights in use on freight cars, 780. The old fashioned couplers safer than the American ones. Signal system. Sunday travelling, 781. Sunday work in the yard at Suspension Bridge. Garnisheeing of wages. Rules regarding re-employment of men discharged, and granting certificates to men who have been discharged, 782.
- ANTY, GEORGE, Cornwall, Warp Dresser** - - - - - **1092-1094**  
 Is foreman warp dresser in the Stormont Cotton Mill. Number of men employed in his department. Wages, 1092. Condition of mechanics in Cornwall. The possibility of saving anything out of their wages. Education. Condition and location of the closets. Water supply, 1093.
- BAIN, JAMES, JR., Toronto** - - - - - **89-91**  
 Is Librarian of Toronto Free Library, Toronto. Free Library. When established. How supported. Who have access to. How many mechanics or laborers among list of readers in. Library well supplied with books for mechanics. How conducted. Industrial school, 89. Toronto Free Library. Number of readers increasing. Mechanics' Institute. Number of volumes on Arts circulated for home reading last year from Toronto Free Library. Mechanics who use the library, 90. Taste for reading increased since establishment of the library. Circulation of books from Toronto Free Library. Necessity of Saturday half holiday, to give workmen an opportunity to use such an institution as the Toronto Free Library, 91.
- BAIRD, ROBERT, Carpenter, Kingston** - - - - - **939**  
 Wages of carpenters. Hours of labor. Constancy of employment. Labor organization. Carpenter's machinery. Wages here and in the United States compared. Cost of living about the same as in the United States. Apprentices. Carpenters who own their own houses. Have acquired savings. Convict labor. Wages compared with six years ago. Rents higher, 939.
- BALHARIE, JAMES, Baker, Ottawa** - - - - - **1131**  
 Bakers' wages. Hours of labor. Sunday work. Ventilation of the shop in which he works, 1131.
- BALLANTINE, JOHN S., Carpenter, Toronto** - - - - - **243-244**  
 Organization on the part of employers done with a view to breaking up organization among the men and not to solve the difficulty between labor and capital. As hours of labor in Toronto were shortened wages advanced. Has not noticed any tendency to dissipation on the part of workmen on account of shortening of hours. Carpenters discharged for belonging to the union, 243. Does not know any employers who refuse to employ union men now. Nine hour system prevails generally in Ontario. That short hours leads to higher wages. Carpenters' wages in the United States, 244.

- BARLOW, THOMAS, Machinist, Kingston** . . . . . **1001-1002**  
Wages, 1001. Pay days, Apprentices at the locomotive works, their wages, &c., 1002.
- BARNHART, ANGUS, Cornwall** . . . . . **1077-1078**  
Is employed running an engine and firing at the Cornwall spinning mill. Is not a practical engineer. Wages. Hours of labor. Condition of the engine and boiler, 1077. Loading the safety valve, 1078.
- BARRELL, HENRY, Baker, Ottawa** . . . . . **1118-1120**  
Wages of bakers. Night work recently discontinued, 1118. The discontinuation of night work caused by the men organizing a union. Truck system or "store pay." Witness' hands in a specimen of a "store pay." "Shinplaster." Thinks the baking business can be done by day work without any injury to the public. Sanitary condition of bake shops in Ottawa, 1119. No bread inspector in Ottawa that he is aware of. Apprentices. Benefits of organization, 1120.
- BARRELL, HENRY, Recalled** . . . . . **1125**  
Truck or store pay. Shinplaster payments, referred to in his evidence, exists in Rockland, county of Russell, 1125.
- BARTHOLEMEW, JAMES, Moulder, Hamilton** . . . . . **801**  
Corroborates the statement made by John Stephenson, 801.
- BARTON, CHARLES W., Harness Maker, Toronto** . . . . . **210-213**  
Harness making distinct from collar making. Journeymen graded into three classes. Wages of each class, 210. Hours of labor. Agreement as to grading and wages not generally carried out. No organization at present worth anything. Used to have a union called the "Harness Makers' Protective Association." Thinks grading of men lowers wages. Reasons for the lowness of wages. Condition of harness makers in Ontario and England contrasted. Purchasing power of money in England greater than here and rents cheaper. Thinks that if the "bosses" had a union to keep up prices the men would reap the benefit of larger wages, 211. Capital required to start business. Sanitary condition of the shops. The trade overstocked with workmen. Shorter hours would better the condition of harness makers, 212. Co-operation. Knights of Labor and the union. Canada Harness Company. Men work for almost nothing. It is a foreign company. All their work done by piece. Is of an inferior quality. Ontario Harness Company. Harness makers have no regular apprentice system, 213.
- BAEKWILL, MICHAEL, Moulder, Hamilton** . . . . . **801**  
Desires to correct statement made by a previous witness regarding prices paid Grand Truck moulders, 801.
- BAUDIN, HENRY, Farmer, of Pittsburg** . . . . . **938-939**  
Crops he grows. Local market. Fruit-growing, 938. Agricultural labor scarce. Machinery. Immigration. Quality of farm labor inferior. Wages and hours of labor, 939.
- BECKETT, THOMAS** . . . . . **174-177**  
Is a journeyman carriage builder in Toronto. Divisions or classes carriage-makers are divided into. Wages in Toronto. Length of day's labor. Toronto carriage-makers' union. Wages of carriage-makers not as high, in proportion, as other trades. Cause. Foreign competition. Thinks Canada can fully compete in quality and style with the United States in carriage making, 174. Cannot compete in price with the large factories of the United States. Wages in Cleveland, O., and Toronto

compared. Carriage blacksmiths. Their wages. Length of day's labor, ten hours. Wages have decreased in the last eleven years. No machinery used in carriage shops, only in factories. Woodwork made in Canada compared with that imported. 175. Thinks employers since the National Policy could pay better wages than they do. Prices for finished goods in Canada and the United States compared. Rents in Detroit higher than Toronto. Carriages cost more in Detroit also. Cost of other items of living compared. Pay days in Toronto. Apprentices. Capital required to start business, 176. Class of men who start shops of their own, 177.

**BELL, JOHN, Hamilton**

**877-880**

Is secretary-treasurer of the "Ontario cotton mill." Employs boys, youths and men, also girls and women. Class of work the boys and girls do. Age of the youngest. Wages of skilled workmen and women who are skilled. Classes of work the women do. Wages of girls and boys. Number of looms a weaver attends to. Temperature of the rooms. 877. Hand weavers. Hours of labor of all the employees. Pay days every two weeks, on Friday. Wages now and six years ago compared. Prices of cotton now and ten years ago compared. Quality of Canadian, American and English cottons compared. Purity of Canadian and American cottons. Profits of wholesale and retail merchants on imported and homemade cottons compared. 878. Wages piece work. Does not object to employing members of labor organizations. Sanitary condition of the mill. Factory inspector's visit. Fire escapes. Protection to machinery. Wages of girls. Temperature of the rooms. Fining of employees. 879. Cotton Manufacturers Association for the Dominion. Fining of members of the Cotton Manufacturers Association. 880.

**BELL, WM., Relief and Health Inspector, London**

**591-594**

Sanitary condition and system of sewerage in London. Gives the number of people who got corporation relief last month and the corresponding month of last year. Showing a decrease for last year, 591. Classes of people who get relief. Not many immigrants apply for relief. Condition of the working classes in London. It is possible for a workingman to obtain a house of his own, but not of much benefit to him on account of the taxes being pretty heavy. The instalment plan a very bad way for a workingman to buy a house on, unless he is sure of constant work. Average rent of mechanics' houses in London, 592. Makes a yearly house to house inspection yearly. The sanitary condition of London will at present compare with that of any other city in Canada. Cause of typhoid fever. Many water closets and mills too close to each other. Sanitary condition of the Public School good; so also is their water supply. Sanitary condition of factories and workshops, good, 593. Not many factories in London where both sexes are employed, but where they are they have separate conveniences. Does not think much of the dry earth closet system unless they get a better system of removing the matter frequently, 594.

**BENNETT, ALEXANDER, Baker, Kingston**

**996-997**

Wages and hours of labor of bakers. Sanitary condition of bakeshops in Kingston, 996. Neglect of the Health Inspector to visit such places. Dangerousness of the machinery used in bakery, it ought to be better protected. Incompetency of some of the men who run stationary engines. The factory inspector. Organized labor, 997.

**BENSON, HENRY THOMAS, Toronto**

**266-268**

Is a member of the Builder's Laborers' Union. Average year's wages of a builder's laborer. Average rents paid by builder's laborers. Accidents from defective "plant." Recommends that an inspector of scaffolding be appointed. An employer's liability Act making proprietor liable for such accident would be acceptable. Example of defects in the working of the mechanics lien law. Corporation labor in Toronto, 267. Wages. Hours of labor. Benefits derived from organization. Strikes. French

system of arbitration. Ontario arbitration law not satisfactory, reason why. Thinks a Dominion Bureau of labor statistics would be a benefit and a Dominion liability bill better, 268.

**BENSON, WILLIAM, Collector of Customs, Windsor** - - - - - **369-371**

Nineteen years collector of Customs at Windsor. There is a good deal of illicit traffic between the two countries at Windsor. Nature of the traffic, 369. Comparison of prices of articles of family consumption in the two cities, Windsor and Detroit, 369-370. Manufacturing industries are increasing at Windsor; many of them branch firms from the United States. Describes the attempt made by the United States authorities to prevent workmen who live in Windsor, crossing the river to labor in Detroit. The attempt was made to enforce against Canadians the United States law in regard to foreign labor contracts. Increase of house rents in Detroit and Windsor. Reason why vegetables are cheaper in Detroit than Windsor, 371.

**BENSON, WILLIAM, Collector of Customs, Windsor, recalled** - - - - - **420**

Industries at Windsor, he forgot to mention in Mr. Stephens' box factory. The raising of radishes for export, 420.

**BETRAM, JOHN, Machinists' Tool Manufacturer, Dundas** - - - - - **856-858**

Wages of machinists, pattern-makers and laborers employed by his firm. Number of hands they employ. Apprentices. Indentured. Canadian and Scotch and English artisans compared, 856. Pay day. Moulders' wages. Never had a strike. Have had conferences with the men regarding differences: Instances one case regarding an apprentice. Thinks strikes may be avoided by mutual interchange of ideas between employer and employee. Where they get their iron and steel. Canadian iron. Market for their products. Sent some machines to the Colonial Exhibition and sold them there, 857. Their own tools and machines compared with English. Garmenting of wages and weekly payment of wages. Apprentices. A great many of their hands own their own houses. They get a better class of skilled labor in Dundas than in cities, because cost of living is cheaper. House rent. Indenture system is the right way to make workmen, 858.

**BICKLEY, JOHN J., Cornwall** - - - - - **1083-1086**

Is a spinner by trade. Is now and has been for some years a member of the Knights of Labor. Has frequently heard that employers in Cornwall refused to employ Knights of Labor because they were such, 1083. Was dismissed himself and given to understand that it was because he was a Knight of Labor. Arbitration is a fixed rule of the Order. Action of the Order regarding strikes. Strikes more frequent in towns where labor is not organized than where it is. Blacklisting or boycotting. Acted as arbitrator for the workmen in the recent strikes at the cotton mills. Describes the strikes, their cause and how settled, 1034. Wages of spinners. The usefulness of labor organization in promoting peace in times of excitement. Amount paid out by the Knights of Labor in Cornwall for the relief of distress. Plan of action of the Knights of Labor regarding strikes, 1085.

**BEDDO, T. D.** - - - - - **793-794**

Knows of two cases of employees of the Hamilton Forge and Rolling Mills Company paying from \$600 to \$1000 on account of houses they bought in three years. When the forging company commenced operation. Rolling mill commenced before the protection duty was put on iron. Rate of duty on iron. Ontario Rolling Mill. Wages of the men who paid \$600 on their houses in three years, 793. Wages of some of the employees of the Hamilton Forge and Rolling Mills Company, 794.

- BIRKETT, WILLIAM, Secretary-Treasurer of the Dundas Cotton Mills Company, Hamilton** . . . . . **895-899**  
 Wages of employees much the same as paid in the Ontario Cotton Mills (See pages 877-880 and 892 to 895). In regard to age of young persons employed they act strictly according to the requirements of the Ontario Factory Act, 895. Previous to the passing of the Ontario Act children under fourteen were employed. Hours of labor. Technical education, 896. Prices of cotton goods now and ten years ago compared. Prices of domestic and imported cottons compared. Character and quality of Canadian cottons. The effect of manufacturing industries on the morals of the people employed. The presence of such an industry as a cotton mill in a community beneficial, 897. Wages paid in Canadian and British and United States cotton mills compared. Labor trouble and how it was settled. Arbitration. Labor combinations. The employing of young people in such an industry does not prevent them getting as good an education as formerly, and is a source of material prosperity to both them and their parents. Supply of labor ample. The employment in the cotton mill of child labor does not tend to deteriorate the individual physically, 898.
- BIRLEY, F. P., Manufacturer of Paper Boxes, Toronto** . . . . . **364-366**  
 Employs girls principally; their age; all piece-work. Wages. Length of time it takes to become proficient. As a rule girls remain long in his employ. Sometimes hands are very scarce in the summer: Sometimes sit and sometimes stand at their work. Girls not fined for spoiled work, nor for being late but they are locked out till noon. Three doors or means of exit to the factory, 364. Has been in business nine years. His business may be looked upon as a new branch of industry in its infancy. Finds American competition. His business is protected to the extent of 25 per cent., but has to import his straw board and pay a duty on it. Where he gets his raw material. Number of people he employs. Employs men and boys to do the cutting; their wages, 365. Can buy raw material cheaper in the United States even after paying duty than he can get it in Canada, 366.
- BISSELL, JOSEPH, Builder's Laborer, Toronto** . . . . . **270-272**  
 No shelter for the men at meal time. Weekly payments better than fortnightly. The class of laborers who own houses in the city. Improvement in scaffolding wanted, 271-2.
- BLACK, DAVID, Iron Moulder, Toronto** . . . . . **278**  
 Empowered to correct a misstatement regarding hand's wages. Should be \$2 40 per day not \$2.25 as formerly stated, 278.
- BLACK, DAVID Stove plate, moulder, Toronto** . . . . . **151-153**  
 Stove plate moulders do not believe in compulsory arbitration. Kind of arbitration which would suit the stove plate moulders. Condition of shops good except in some cases that the ventilation is bad, 151. Does not think stove plate moulders wages constitute a fair share of the profits. Cost of living higher and rents higher than formerly. Piece system bad for the trade. Apprentices, proportion of to men. Stove plate moulders cannot save money, reasons why. Iron used in stove making is imported from United States and Great Britain, 152. Stove plate moulders do not work more than eight or nine months in the year. The "Iron Ring." Scotch iron better than American, 153.
- BLAKE, JAMES W., Painter, Chatham** . . . . . **455-457**  
 Approves of a thorough apprentice system. Average earning. Cannot get employment all the year round. Painters who own their own houses, and how they own them. Does not know any who have money in the Savings Bank. Rents of mechanics' houses. Thinks industrial education would be beneficial, 455. Believes in a

law making arbitration compulsory. How the Knights of Labor established nine hours as a day's labor in Chatham. Thinks shortening hours of labor would benefit painters. Thinks technical education would be taken advantage of and benefit the trade, 456. His experience of business on his own account, 457.

BLANCHARD, THOMAS, *Farmer, Appleby, County of Halton*

900-902

Corroborates the testimony of Mr. Fothergill (see p. 899.) Many farmers have made money enough out of a rented farm to buy one of their own but must be pretty economical to do so. State of comfort in which farmers live now compared with twenty-five years ago. Does not believe in going into any one kind of farming extensively; believes in mixed farming. Stock raising. Scarcity of farm labor. Farm laborers of to-day compared with those of thirty or forty years ago, 901. Reason for the scarcity of good farm laborers, 902.

BLUE, ARCHIBALD, *Toronto.*

70-88

Is Assistant Commissioner of Agriculture for the Province of Ontario, and Secretary of the Bureau of Industry. Sharing of profits by employers among employees not general, only two or three cases reported. Method of sharing profits in cases reported, 70. Manufacturers satisfied with results thereof. Tendency of wages has been since 1883 stationary. Average wages of blacksmiths, carpenters, machinists, moulders and painters. Method followed in obtaining returns for Ontario Bureau of Industry, 71. Has made calculation regarding the value created by labor, but from inadequate data. Answers regarding the acquisition of wealth by manufacturers. Does not know of workmen being forced to sign "ironclad" contracts. Does not know of any case of employers having blacklists of objectionable workmen. Does not know of anything in the Ontario law to prevent labor organization, 72. Age at which children are permitted to be employed in factories. Not many children under fifteen employed in factories. Has heard of a child working at eight years of age before Factory Act became law. Many girls employed in "sweat-shops" or places where clothing is made for wholesale establishments. Great reluctance on the part of shop girls or female clerks to give particulars regarding their hours of labor, &c., &c.; they fear their employers. Information given to the Bureau of Industry is confidential, 73. Hours of female clerks long. Are docked if they are one or two minutes late. Complaints have been made respecting the ventilation of workshops. Law of Ontario regarding employer's liability for accidents from machinery. Workmen's Compensation Act of 1886. Machinery generally properly protected. Accidents generally the result of carelessness. Accidents happen to inexperienced men running agricultural machines. Accidents not frequent. Workmen generally paid in cash. The "truck system" prevails to very small extent. Considers it an advantage to workmen to get paid in cash. Law of Ontario regarding persons engaged abroad to work in the Province, 74. Rents in 1885 and 1886. Does not think there is much change in the average rent in Toronto. One-fifth is the average proportion of a workingman's income which goes for rent. Wages in Ontario are generally paid weekly; in some cases fortnightly, and in a few cases monthly. Weekly the best manner of paying wages. Reasons why. Average hours of labor in mechanical trades in 1884, 1885 and 1886, 75. Tendency in some trades to make shorter hours. Conditions when shorter hours would be a benefit to employers. Increase in the productive power of labor from use of machinery, &c., 76. Cannot tell what is the purchasing power of money to-day compared with what it was a few years ago. Wages lower here than in Massachusetts; so also is cost of living. Provision in Ontario statute for arbitration in settlement of labor disputes rarely acted upon. Difference between that feeling (or want of feeling) existing between men engaged in buying and selling a piece of property compared with the feeling between employer and employee, 77. Arbitration voluntary by Ontario law. Strikes not frequent compared with other countries. Cause of the street railway employees' strike. Number of hours required of street car drivers and conductors. Wages paid them. Men dismissed for having

joined Knights of Labor. Strike at the Massey works settled by arbitration, 78. Arbitration compulsory in labor disputes in France. A similar law also exists in Massachusetts. Is of opinion that the people here like better to settle their own disputes. Labor organization make the workingman more independent in the sale of his labor. Thinks that the average workingman of Ontario does not stand upon an equality with the purchaser of his labor, 79. Thinks it practically impossible to establish continuous absolute equality between supply and demand. Shows how the result of earnings of carpenters (in his report) was arrived at. Sometimes has difficulty in getting returns from workingmen. Reasons why. Immigration and its effect on the labor market, 80. System of collecting labor statistics by Ontario Bureau. Thinks immigrants could be prevented coming into the country, but does not think it would be in the national interest to do so, 81. Combination among manufacturers to advance prices. Co-operation has scarcely been undertaken in Ontario yet. Co-operation, distribution or stores. Benefit societies among workingmen. Ontario law secures ample wages in case of failure of employer to pay; over that becomes an ordinary claim. Fining system or withholding portion of an employee's wages, 82. Sunday labor. Law regarding railway Sunday traffic. Industrial schools in Ontario. Technical schools. Mercer Reformatory, 83. Coercion on the part of employers to prevent workmen furnishing labor statistics. Hours of labor. Workmen generally prefer shorter hours. Reasons therefor, 84. Long day's labor by farmers and lumberers at special seasons. Fifty years of public school training has much improved the people of Ontario. Drinking habit largely disappeared. Short hour system has not had the effect of increasing the drinking habit. Sanitary condition of workingmen's houses, 85. Thinks there ought to be a rigid inspection of plumbing with a view to sanitation. Building societies. Sanitary arrangements of factories. Scope of the enquiries made by the Ontario Bureau of Industry, 86. Ontario Bureau of Industry want co-operation on the part of the Dominion Government. No labor bureau in any of the other provinces of the Dominion. Convict labor. Savings of the working classes. Importance of labor statistics, 87. Convict labor. Sunday labor in printing offices. Suggestions regarding the taking of the census. Laborers engaged in lumbering, 88.

**BONNY, GEORGE, Foreman Blacksmith, Kingston . . . . . 953-954**

Is employed at the locomotive works. Standard rate of wages and hours of labor. Pay day. Wages in Kingston and the United States compared, also cost of living. Cost of living in Kingston and the "old country" compared, 953. Wages 15 per cent lower in the "old country." Wages of a blacksmith's helper. Apprentices, 954.

**BOOTH, JOHN R., Manufacturer of Pine Lumber, Ottawa . . . . . 1178-1179**

Hours of labor of boys in his employ, 1178. Has boys in his employ who work from seven o'clock at night till half past five or six o'clock next morning. Never paid any attention to the Factory Act. Never had any visit from, or communication with the Factory inspector, 1179.

**BOWEN, JAMES, Hamilton . . . . . 809-811**

Is employed by Messrs Tuckett & Son, in the rolling department. Has been twenty years at the business. Wages of skilled men. Pay day every Saturday. Paid in cash. Would prefer Friday as pay day. Wages of unskilled labor. Hours of labor. Thinks a man can do as much work in eight hours as he could in nine or ten. Piece work, 809. The majority of the hands in the factory work by the piece. Female labor, what employed at. Wages of girls. Rollers hire their own help. Christmas presents from the Messrs Tuckett. All the men are organized, 810. Benefit derived from organization. Perfect harmony between Messrs Tuckett & Son and their employees. They are very particular about not employing any children under fourteen years of age. Visit of the Factory Inspector. States that Mr. Tuckett was in error and under-rated the average earnings of his workmen, 811.

**BOWICK, THOMAS, *Blacksmith, Toronto***

**103-107**

Is an employer of labor. Has been so for 12 years. Finds horse shoes made in Canada better and cheaper than those imported, quotes prices, 103, 105. Cheap material tends to raise men's wages. Believes all his men belong to labor organizations. Finds it a benefit to have all picked men at a high rate of wages. Believes in settling labor disputes by arbitration. Blacksmiths are paid weekly. Men are satisfied with weekly payments, 104. Prefers enforced arbitrations to strikes. His opinion of how enforced arbitration should be conducted. Apprentices. Lower port iron compares favorably with English iron. Rate of wages increased this year. Increase caused by the horseshoers forming a Union, 105. Grading of men according to merit. Thinks an agreement made through the Union would be more solid and binding than if made with the men individually. Does not find he has any advantage over his men in making an agreement. Cost of living, particularly rent increased in Toronto. His men do not work on Sunday. Workmen's houses. Use of machinery has not lowered the wages of blacksmiths. Average wages of blacksmiths. Thinks eighteen years young enough to send a child to work. Foreign contract labor, 106. Convict or prison labor: its effect on the trade. Apprentices are employed principally in country shops. Machine goods dispense with a certain amount of labor, 107.

**BOYLE, JAMES, *Iron Founder, Toronto***

**169-173**

Employs two men. Thinks a journeyman can under certain circumstances save money out of his wages. Men join the Union to better their condition. Very few men who are paid enough for what they do. Difference of opinion as to what are the necessaries of life, 169. Stove plate moulding is so very hard work that a man cannot possibly work more than four days a week in summer. Ten hours a day too long for a moulder to work. Very few moulders think of the sanitary condition of their shops. Men want shorter hours and more money. Thinks there is much ground for complaint regarding sanitary condition of shops. Advantages moulders in the "Old Country" have over those here. Was President of the Union in England, 170. Recommends a uniform minimum rate of wages. Illustrates his reasons for doing so, 170-71. Thinks organized labor beneficial. Enumerates the benefits derived from the Moulders' Union. Does not think organized labor has a tendency to keep men steady in habits and morals. Apprentices system, 171. Indenturing of apprentices, 171-2. Arbitration. Does not approve of Government Arbitration. Recommends weekly pay days. Condition of moulders improved. Wages have risen. Rents have gone up. Competition from foreign countries, 172. Age at which apprentices should commence to learn moulding. Piece work system injurious. Convict labor. Co-operation stores, 173.

**BOYLE, J. B., *Inspector of Public Schools, London***

**604-607**

Attendance at the public schools. Ages at which children are taken from the schools. Kindergarten system, 604. Suitability of the present system of education to boys who wish to become mechanics. Technical education might very well be grafted on the public school system. Does not know how it would work to continue the present system of education and add night schools for technical training. Thinks that the present system of education is filling up the professions to the loss of those entering them. Free library, 605. Female teachers. Salaries of teachers graded; how they are increased. Sanitary condition of the schools. Difference in the salaries of male and female teachers holding the same certificates. Everything in connection with the schools free except books, 606. Publication of school books, 607.

**BRICK, THOMAS, *Carter, Hamilton***

**817-820**

Usual pay and hours of labor of carters in Hamilton. Railway cartage monopolies: the advantages they have and the disadvantages of ordinary carters have in competing with them, 817. General condition of the working people of Hamilton. Number of applications to the mayor for relief. Immigration, 818. "Hun-

reds of families starving in Hamilton to-day" Coffee taverns. Number of broom-makers in Hamilton. Prison labor has destroyed the broommaking business, 819. The question of a public library for Hamilton voted down by the corporation and people of that city, 820.

**BRICKMAN, RYNAED W., Carpenter, Chatham - - - - - 457-458**

Difficult to get constant employment. Does not think a workingman can live and be comfortable paying all his expenses on the wages he gets in Chatham, not even if he were constantly employed. Always paid in cash, 457. Carpenters' wages, 458.

**BROCK, ROBERT, Farmer, Township of Enniskillen - - - - - 732-736**

Thirty years a farmer in the neighborhood. Good farming country. Average crop of wheat to the acre. Live stock. Hogs do not pay. Hours of labor, 732. Farming pays when gone into systematically. Prosperity of farmers. Butter and cheese factories. Cattle raising, 733. Sheep raising. Horse raising. Price of horses. The most profitable crop, 734. Cattle shows. Demand for farm labor: use of machinery has lessened it greatly. Immigration of agricultural laborers, 735. Does not approve of the existing law which deprives a man of his title to property provided he is out of it for ten years. Assessment law, 736.

**BROWN, JAMES R., Factory Inspector, Toronto - - - - - 315-320**

Has completed the preliminary inspection of factories in Ontario. Is inspector of the central district. His instructions as inspector. Found no opposition to complying with the requirements of Factory Act regarding hours of labor. In some places he found women working longer hours than the Act allows, 315. In the majority of factories women do not work as long as men, except in woollen mills. Separate conveniences. In many places males and females work in the same room: the Act does not forbid this. Found a large percentage of children working in cotton and woollen mills, cigar factories and knitting works. Some of them under age. Found a general willingness on the part of employers to comply with the Act, 316. Condition of machinery: in planing mill there was a great want of fencing and a lack of fans to take away dust and shavings. Recommends the automatic trap door for mill holes or hoists. Sanitary conditions. Ventilation and drainage. In some cases got his information from employees; but has found difficulty in getting them to say anything. In some places the condition of shops is satisfactory generally, but in others far from it. Found only twenty fire escapes including wooden ladders on his tour of inspection, 317. In some cases where women were working on the fourth story he found only one stair as a means of exit: in these cases he insisted upon fire escapes being provided. Has not so far found any objection on the part of the employers to provide fire escapes when asked to do so. Special rooms where employees may eat their meals. Has seen some factories which he would not consider comfortable places to work in, and moulding shops you could see daylight through. Act requires him to get a permit to inspect places where no machinery is used, 318. Sweat shops do not come under the Act unless twenty hands are employed, 318-19. Thinks it would be better if the Provinces were all under the Factory Act. His jurisdiction extends from the County of Peel on the west to County Leeds on the east. Notifies the manufacturers and produces his certificate if asked for on the first visit. Thinks he has a right to go through a factory when he likes: In only one case did he hear of boy and girl employees being sent home when it was known the factory inspector was coming to visit. Did not find any general inclination of manufacturer to avoid inspection. Has not heard any general desire for a Factory Act expressed by work people, 319. Inspector has full power to enforce the law. Would not care in the first instance to take proceedings against a violator of the factory law without first referring the case to the Government, 320.

**BRYSON, CHARLES, *Dry Goods Merchant, Ottawa*** - - - - - **1163-1165**

Is a member of the firm of Bryson, Graham & Co. Number of people employed by the firm. Female labor employed and the nature of their work. Age of the youngest about fourteen years, 1163. Average wages of dry-goods salesmen and saleswomen. Their hours of labor. Closets, their number and location. Male and female employees use the same closets. Female labor the firm employ in manufacturing ready-made clothing outside: Their wages. No fines imposed upon any of the firm employees, 1164. Hours of labor of the clerks. Advantages of clerks who speak two languages. Female clerks require to dress better than factory employees, 1165.

**BUCKLEY, JERRY, *Detroit*** - - - - - **409-415**

Is President of the Seamen's Union. Disadvantages of seamen on the lakes. Law regarding loading of vessels not enforced. Seamen's Union an international body, headquarters at Chicago, with branches throughout Canada and the United States, 409. American law regarding nationality of seamen not enforced. Inspection of hulls. Seamen's or ship's officers obliged to pass an examination in Canada but not in the United States. Vessels are now loaded as if there was no law, 410. Mentions vessels wrecked from overloading. Green hands or incompetent seamen. Vessels often leave port undermanned. Gear of vessels not inspected. Vessels often lost from defective gear, 411. Results from shipping green hands. Law required to prevent the shipping of green hands, 412. The Union cannot compel owners to ship competent seamen unless the Government help them. Seamen's Union have tried to get the U. S. Government to pass laws to prevent shipping of incompetent men. Overloading of vessels and for providing proper sleeping accommodation in the forecabin. Food generally good, 413. What makes vessels cranky. Deck loads. Provisions for saving life. Does not think the law regarding steamboats and their supplies is properly administered. Disadvantage of men on Canadian vessels on the lake shore loading square timber. Proper crew for the three masted schooner, 414. Condition of the forecabin. Inspection of boilers, 415.

**BURGOYNE, W. B., *St. Catherines, Printer, Manager of The "Star,"*** - - - - - **934-936**

The use of stereotyped plate matter on newspapers, 934. The use of stereotyped plate matter will probably have a tendency to reduce the number of apprentices, 936.

**BURKE HUGH, *Boxmaker, Toronto*** - - - - - **262-264**

Is an employer of labor. How the trade is supplied with labor. Accidents to green hands very frequent. Has never known the inspector to visit those places. How the accidents usually occur, 262. Boxmaking has greatly increased during last few years. Competition in Toronto keen. Wages. Combination of employers to raise price of boxes: how they did it. Organization. Strikes and lockouts. Cause of last year's strike was that the men wanted an understanding about apprentices, 263. Increase in price of boxes. Wages lower. Union rate of wages. Lumber used in box-making and the price of it, 264.

**BURNETT, Miss, *Milliner and Dressmaker, Toronto,*** - - - - - **358-359**

Average wages of a first-class milliner. Takes three or four years to learn the business. Beginners should commence about fourteen or fifteen years of age. Apprentices; does not care about taking them. Has to teach them in most cases what ought to be done at school, or common needlework. A great many unemployed milliners in Toronto; principally incompetent hands; how these incompetents graduate. Many milliners only get about six months' work in the year. Spring and fall seasons. Does not think they can make sufficient in six months' to keep them the other six months. More girls at the business than acquired. Many are better adapted to be domestic servants, 358. Reason why girls dislike domestic service. Girls in stores should not be kept standing all day, it can be avoided and is injurious, 359.

**BURNS, JAMES, Manufacturer of Engines and Mill-work, London** **670-674**

Number of hands employed. Product so far all sold in Canada. Class of machinery he makes, 670. Constancy of employment. Employs mostly skilled mechanics. Wages. Apprentices. Hours of labor. Pays fortnightly, on Mondays. Wages in his line of business have neither increased nor decreased in the last ten years. Uses a good deal of machinery. Machines always in charge of men and properly guarded against accident. Factory Inspector visited the place and was satisfied. The improved machinery introduced into his business within the past few years has not changed the rate of wages nor decreased the demand for labor, 671. Any kind of goods in his line of business now imported could be made in Canada. Imports some of his raw material. Has used almost exclusively Londonderry iron and finds it suits his purpose as well as the best imported iron. Thinks his men save money. Nearly all the married men in his employ have their own homesteads. Some of his men are union men, some are not. Never had any trouble with them on that account. Manufacturers in his line are not organized. Majority of his men are citizens here. Could always get what men he wanted here. Has never asked any of his men to sign any contract binding them except apprentices; they are indentured, 672. Believes in the system of indenturing apprentices. Gets all his coal from the United States. It is a matter of necessity to use the most improved machinery. Thinks that if the wish of a previous witness were acted upon, viz., "that no new machinery be made for thirty years" the country would go back the position it was in, as far as progress is concerned, 100 years ago. Yearly output of his establishment. Does not think that shorter hours of labor should follow from the increased use of machinery; reasons why, 673. Thinks workmen get fully a fair share of the benefit derived from improved machinery. Nearly all our machinery was imported ten years ago. It is due to the protective duty that machinery is prevented from coming into the country and trade in that line increased. The only thing working against Canadians manufactures at present is that we have not quite enough people in Canada to let them run into specialties. Thinks that the previous witness who wants immigration stopped ought to go to the other side, 674.

**BURNS, PATRICK, Laborer, London** **634-635**

Laborers' wages in London at present. Corporation laborers are employed only in spring and fall. The possible savings of a laboring man. Laborers' organizations. Sanitary condition of tenement houses in London. Immigration has a tendency to reduce laborers' wages. Immigrants who come here through misleading advertisements often wish themselves back again. Rents in London, 634-635.

**BYRNE, JOHN T.; Printer, Ottawa,** **1146-1147**

Is foreman of the departmental room at Messrs. MacLean, Rogor & Co.'s. Men are paid according to the union schedule for day work and 25 cents an hour for over time. Condition of the water closets. Pay days fortnightly, 1146. Reasons why the office employs none but union men, 1147.

**CALLOW, JOHN, Carpenter, Seaton Village, Toronto,** **51-62**

Connected with organized labor, Brotherhood of Carpenters; does not consider the principles of Trade Unions opposed to capital; and believes organizations among workmen to be a benefit to employers. Settlement of labor disputes by conference, 51. Wages, comparison between what is paid in Manchester, England, and Toronto. Cost of living in England and Toronto. Effect of wood-working machinery on labor. Pay days. Weekly payments preferable to fortnightly. Reasons why, 52. Wages. Average in Toronto. Favors Government interference in settlement of labor disputes. Effect of strikes on trade. Believes in the shortening of hours to increase wages. Effect of organization on wages, 53. Agreement as to what constitutes a day's labor. The term of apprenticeship in the old country is seven years, many in Canada only serve three months. Those who serve three months are not qualified. Proportion

of apprentices employed to the number of men, in England, 54. Wood-working machinery dispenses with the labor of men. Would prefer to work eight hours a day instead of nine although paid by the hour. Reasons why, 55. Reasons why a half holiday on Saturday should be granted. What constitutes a day's labor in Manchester, England. Value, or purchasing power of money greater in England than here, 56. Advantages of belonging to the union. Cost of living in England itemised. Average number of months a carpenter in Toronto is employed during the year, 57. Trades unions prevent the workmen's rights and privileges being infringed upon. Believes supply and demand will regulate wages, 58. Believes increase of pay and shortening of days labor will increase cost of production a little, but wants workmen to share the benefit. Minimum pay sanctioned by the union but some work for less. Believes accidents from use of machinery to be the result of carelessness in most cases. No co-operation or sharing of profits among carpenters as far as he knows, 59. Co-operation stores in England, also in Toronto. Rent, location of workmen's houses. Value of land. Workmen who own their own houses, 60. Machinery increases boy's labor to the detriment of skilled mechanics. Knows a boy who runs a stationary engine. Believes apprentices should be indentured, 61. Believes in co-operation stores conducted on the cash basis, 62.

CAMERON, BENJAMIN, *Moulder, Hamilton*

842-844

Is a machinery moulder. Hours of labor. Reasons for shortening hours of labor. Free Library in Hamilton; thinks if hours of labor were shortened, workmen would take advantage of it. Moulders' strike of summer of 1887, 842. Immigration. The eight-hour system. Effects of shortening hours of labor, 843. Effect of increased wages. Wash rooms for moulders. Danger, to moulders, of not having wash rooms. Apprentice. Technical schools. Length of time necessary to learn the trade, 844.

CAMPBELL, ARCHIBALD, *Chatham*

487-493

Is engaged in the milling business. Kind of wheat he uses and where he gets it, 487. Finds market for product of his mills in the Maritime Provinces, Glasgow and Liverpool. Finds the trade with Newfoundland increasing. Markets for bran and middling better in the Eastern States than Canada. Wages of skilled millers; hours of labor. Wages of unskilled hands; hours of labor, 488. Night work. Wages in the coopers' shop; hours of labor. Constancy of employment of coopers he employs. Sub-contracting in the coopers' shop, 489. A few but not many of his employees own their own houses. It is pretty hard for a workingman to maintain, educate and clothe his family. Chatham is not a dear place to live in. Average wages in Chatham. With the introduction of roller mills and improved machinery they do not require so many skilled men. Comparison between the rollers made in Canada and Lowell, Mass. The possibility of running mills regularly so as to give constant or regular employment, 490. Comparison of price and quality of North West and local wheat. Arbitration, approves of compulsory arbitration. Industrial education, 491. Apprentices. The establishment of a Dominion Bureau of Statistics would be a benefit to manufacturers, 492.

CAMPBELL, M. D., C. T., *London, Ont.*

582-591

Has considerable knowledge of benefit societies, the members of which are workingmen. Refers to general organizations with subordinate branches with a membership varying from one thousand to over half a million. Some of these associations affording benefits to members have lasted for a century, the other which provide "Assessment Assurance" or benefits payable to the family of a member at his death (the oldest of this latter class), do not date back more than thirty years. Masonic body itself gives no pecuniary benefits except as a matter of charity. The others (including Oddfellows, Foresters, Ancient Order of Workmen, &c., give benefits as a matter of business. Nearly all of these organizations claim that their great object is to teach virtue, truth, morality, charity and benevolence, and they do so, but the benefit sys-

tem is the practical part of their operation. In the great majority of those organizations giving life insurance the cost is less than half the ordinary cost of insurance in the old time insurance companies, 582. Very little of the money paid into those organizations is spent for maintenance; about 90 to 95 per cent. of it goes toward the insurance. Many of these assessment insurance societies were started by men who did not understand the laws of vital statistics, and not being conducted in a business-like manner have failed; but some are over twenty years old, and those started lately are established with much better prospects of permanency. Supposes it is a safe insurance when a man of twenty-one pays as much as a man of fifty, but not a fair one. Death rate in young assessment assurance societies likely to increase to the general average rate, 5.3. Chances of permanency are as great in the average assessment company as in the average old time insurance company. Benefit associations have a good educational effect on the workingmen as well as cultivating the principles of mutual and self help, 584. Competition causes these societies to promise more than they can fulfil. Government supervision of benefit societies, 585. Disposal by will of insurance in assessment societies. Many people must have the cheap insurance afforded by assessment societies or none at all; being unable to pay the fixed charge of regular insurance companies. Security given by officials of assessment assurance societies, 586. Technical education. Thinks the state in the United States and Canada provides too much education. Kindergarten system, 587. Kindergarten system extended into a system of technical education, 588. Curriculum of public schools too large. Salaries of teachers. School books, 589. Ladies as teachers. Difficulty of the Teachers Association striking a scale of salaries and keeping to it, 590. Those who make teaching a life work make the best teachers, not those who follow it as a temporary occupation. Fees in public schools. Publication of school books, 591.

**CAMPBELL, MANSON, Manufacturer of Fanning Mills, Chatham - 492-496**

Wages he pays for skilled and unskilled labor. Hours of labor. Constancy of employment, 492. Four of his hands own their own houses. Some of his men have saved enough to buy two or three houses, and in one case he knows the man earned it all by his labor. Rates of interest in Chatham. Business increasing yearly. Sells his mills altogether in Canada, but principally in Ontario. Comparison of prices obtained for fanning mills now and ten and fifteen years ago. Credit system in selling fanning mills, 493. Cost of production has been reduced. Cost of labor has not been reduced. Price of cord wood now and six or seven years ago. Margin of profit in his business less than it was five years ago. Sub-contracting, 494. Profit sharing. Co-operation, 495-496.

**CAMPBELL, W. J., Boiler Maker, Ottawa - 1115-1117**

Average number of men he employs, 1115. Apprentices; their wages and the indenture system. Wages of boiler makers. Wages of unskilled labor he employs. Pay day fortnightly. Opportunity that apprentices have to learn the trade. Hours of labor. Length of time required to learn the trade. Boiler making has a tendency to cause deafness. Overtime. Sanitary condition of the shop, 1116. Ventilation. Desire on the part of some employees to be paid oftener than fortnightly, 1117.

**CABEY, JOHN T., Secretary of the Seaman's Assembly of Canada - 911-916**

The Welland Canal is, at the present time, sailors' headquarters for Canada. Standard for membership in the assembly. Sick and death benefits in connection with the assembly. Other benefits derived from the assembly. Sailors want a better inspection of vessels so as to ensure seaworthiness. Vessels at present as a rule are overloaded and undermanned, 911. Proper crew for a vessel of 400 tons. Loss of vessels from insufficiency of crews. No law regulating the number of men a vessel should have. Inspection and classification of vessels by the Canadian Lloyds. A law compelling inspection of all vessels would be a benefit to both sailors and owners. Reasons why it would benefit owners. How and when vessels should be inspected.

912. The present system of inspection altogether unsatisfactory from a life saving point of view. Rules of the assembly regarding members going on unseaworthy vessels. Masters' and mates' certificates. The law regarding them not enforced, 913. Overloading of vessels. The Plimsoll load line the remedy for overloading. Condition of forecastles, 914. Number of men employed from Kingston up as sailors. Wages. How sailors are paid. Hours of labor. Black-listing. Provisions for saving the lives of crews in case of wrecks. Legislation required to ensure seaworthiness of vessels; to prevent overloading and to regulate the number and competency of crews, 915. Instances where incompetent men hold masters' and mates' certificates, 916.

CARLYLE, WILLIAM, *Baker, Toronto*

362-363

Thinks shortening the hours of labor caused more men to be employed; about one-fourth more. Always a surplus of labor in the baking trade in Toronto. Men from surrounding district not as competent as men turned out in Toronto. The incompetent man commands same wages in Union shops, 362. One of the rules of organized labor is same rate of wages for competent and incompetent men. Thinks shortening of hours has a tendency to keep men sober. Boss bakers of Toronto are organized. Object of that organization. Has no objection to organized labor; thinks it has been a benefit to his business, 363.

CARROLL, ANDREW J., *Printer, St. Catharines*

925-927

Printers' wages. Pay days. Apprentices. Law of the Typographical Union regarding apprentices. Hours of labor. Female printers. Strike caused by an attempt to prohibit use of stereotyped plates on newspapers, 925. Sufficient increase of duty required to prevent the importation of stereotyped plates for newspaper purpose. Lien laws. Truck system. The establishment of a bureau of labor statistics. Arbitration is recommended by the International to the Subordinate Typographical Unions and is one of the principal planks in the platform of the Knights of Labor, 926. Unseaworthiness of vessels leaving the Welland Canal. Labor organizations. Factory laws not thoroughly enforced, 927.

CARSLEY, SAMUEL, *Dry Goods Merchant, Ottawa*

1165-1169

Water closet and lavatory accommodations for both sexes in dry goods stores in Montreal, Brockville, Ottawa, Toronto and other places throughout the country, their condition and location, 1165. Treatment of milliners' and dressmakers' apprentices in Montreal. Hours of labor. Condition of girls employed in shirt factories and clothing houses; they are frequently paid irregularly and by "duo bills." Necessary to extend the provisions of the Factory Act to dry goods stores, wholesale clothing houses, shirt factories, &c., &c., 1166. Women and children employed in such places should be protected by the Government as employers will never do so until compelled. Sale of Canadian goods for the cheap trade increasing but not for the better class of trade. Payment of employees by coupons. Has no knowledge of an Ontario Act regulating the conditions and hours of women in stores, 1167. Advantage of a salesman who can speak both languages. Saleswomen are under more expense than factory girls. Condition of shop girls and factory girls regarding constancy of employment and wages compared. Salesmen and saleswomen not so well used in Canada as in England. What becomes of "extra milliners when not employed." Age of cash boys from ten and a half to twelve and a half years; thinks they would be better at school. Provision for applying Ontario Factory Act to stores, clothing houses and such places by petition from a majority of the trade. Objects to the term "closing the store;" it should be "dismissing the hands" because the hands are sometimes kept three hours after the store is closed. Describes the system of seizing the wages of poor people in Montreal as a great hardship. Thinks weekly payments would obviate the opportunity and necessity for doing so. The methods he follows in paying his employees, 1169.

**CASHION, DAVID, *Moulder, Hamilton* . . . . . 784-786**

Works for the Grand Trunk. Moulders Union of Hamilton. Number of establishments in Hamilton in which moulders are employed, and number of men employed in the largest of them. Union has a scale of prices in stove shops. Rate of wages for day work in pail shops. Hours of labor. Constancy of employment, 784. Earnings of piece hands in stove shops. Condition of the shops. Apprentices. Attitude of the Unions to non-union men. Strike in the summer of 1887, 785.

**CHABOT, PIERRE, *Dry Goods Merchant, Ottawa* . . . . . 1187-1188**

Wages of a tailor's cutter. Number of tailors and tailoresses he employs. Hours of labor of shantymen in the bush and on the drive. Food given to men in the lumber shanties, 1187. Paying shantymen with "due bills." Usual discount on those "due bills," 1188.

**CHARLTON, ROBERT, *Foreman Boilermaker, Kingston* . . . . . 962**

Apprentices. Technical education, 962.

**CHISNELL, RODERICK . . . . . 783-784**

Has been employed by the Hart Emery Wheel Company since they were established in Hamilton eight years ago. The company manufacture same wheel as they do in Detroit. Reasons why the company established the business in Canada. Number of men employed. Where they sell their products. Number of men employed and business steadily increasing. Quality of the wheels made here. Wages of skilled and unskilled workmen employed. Hours of labor. Piece work, 783. Raw material used and where it comes from. Pay day weekly. Machinery used. Boys employed, 784.

**CHITTY, GEORGE LANG, *Book-keeper to Messrs. Gilmour & Co., Lumber Merchants, Ottawa* . . . . . 1175-1177**

Number of men the firm employ. Wages of men in the bush. Constancy of employment. Kinds of food given to men in the shanties. Necessary goods sold to the men at the depots for their sole convenience at cost price with carriage added, 1175. Wages of mill hands. Boys employed in the mills, their occupations and age. Does not know of any Factory Act in the Province of Quebec. Pay days every two weeks, on Wednesdays. Men paid up to the preceding Saturday. In case of necessity payment as well as goods from the store given to men in advance of pay days and deducted from their pay, 1176. Wages of saw-filer, carpenters, millwright and blacksmiths employed by the firm. How the firm deal with men who meet with accidents. Hours of labor at the mills. Mills run more than sixty hours a week while the Quebec Factory Act states that no children shall be employed for more than sixty hours a week, 1177.

**CLARKE, W. A., *London* . . . . . 594-600**

Is a printer and a member of the Typographical Union. Benefits in connection with the Typographical Union, 594. Scale of wages and hours of labor on newspaper work, 594-595. The effect of having too many boys at the trade in London. Twenty-eight apprentices to twenty-seven journeymen. Rule of the Union regarding apprentices. Indenturing of apprentices. Length of time an apprentice should serve. Arbitration preferred. Strikes a last resort in settlement of labor disputes by the Union, 595. Government arbitrator. The use of "plate matter." Government should raise the duty on plate matter coming into the country. The union, thinks the men should be paid while waiting for copy. Female compositors, their wages, 596. Bureau of Labor Statistics. Sanitary condition of the workrooms. Pay days weekly, on Fridays. Wages in the United States and Canada compared, 597. Competency of female compositors. Apprentices. Thinks Government should

restrict the number of apprentices. Age when an apprentice should leave school. Industrial school. Boys at night work, their wages, 599. Danger of industrial school turning jacks-of-all-trades and masters of none, 600.

CLEMENTS, R., *Carpenter, Ottawa* - - - - - **1120-1121**

Wages of machine hands in carpentering. Protection to avoid accident. Visit of the Factory Inspector. Wages of a bench hand, 1120. Constancy of employment of carpenters throughout the city. Proportion of workmen who own their own houses in Ottawa. Accidents, 1121.

COLLINS, WILLIAM, *Engineer and Machinist, Burlington, County of Halton* - **825-829**

Example of a mechanic living in comfort and gaining sufficient competency to give up working altogether at the age of fifty years. How it was done, 825. Thinks that an ordinary workman with a family of two children, will find his earnings readily absorbed in educating them if so disposed. Wages in the G. W. Railway workshops fifteen to thirty years ago and hours of labor. The old school mechanics. The workman does not by any means receive his share of the benefits accruing from machinery. On account of the use of machinery reducing the demand for manual labor employment of artisans is made more precarious, 826. Effect of the use of machinery on the employment of labor, 827. Suggests the application of Henry George's ideas as the only logical remedy to improve the condition of the working classes. Profit sharing. His views regarding the relations of the manufacturer, the employee and the trustee, 828.

COOPER, WILLIAM, *Jeweller, Toronto* - - - - - **264-266**

Is a journeyman working jeweller. Branches of the business, 264. Wages. Length of apprenticeship. More Englishmen in the trade than Canadians. Immigrant or imported labor and its effect on the trade. Never had any strike. Have no organization among the men. Working jewellers can do better in England than in Canada. No scarcity of men in the city, 265. English workmen were brought here for the purpose of reducing wages. Number of men in the business in Toronto. Scarcity of employment, 266.

COULTER, ROBERT, *Shoemaker, Hamilton* - - - - - **887**

Comparison of wages paid in the Provinces of Ontario and Quebec. The competition of cheap labor in the Province of Quebec has left, out of five or six factories which formerly existed in Hamilton, only one. The number of shoemakers in Hamilton and the number employed in the factory. Machinery used in the factory in Hamilton. Wages of female labor. Toronto and Hamilton prices compared, 887.

COUSINEAU, ALEXANDER, *Baker, Ottawa* - - - - - **1133-1134**

Is an employer. Wages of bakers. Price of bread. Bread inspectors. Sells for cash, but does not always get it. Hours of labor. Apprentices. Sanitary condition of bake shops in Ottawa, 1133. Men belonging to the Knights of Labor are better paid than those who do not. Laboring men not belonging to the Knights of Labor are not generally paid sufficient to keep their families going. Effect of labor organization, 1134.

COVENTRY, DR. JOHN, *Medical Health Officer of the Town of Windsor and President of the Medical Health Officers of Ontario* - - - - - **354-385**

Sanitary condition and sewer system of Windsor, 384. Water supply system of Windsor. Contagious diseases. Plumbing bad, no redeeming feature in it, 385. Sanitary condition of factories, workshops and the homes of the working classes. A large number of workmen who own property. How the sewers are flushed. Advantage of the water supply from the river instead of from wells, 386. Illness from the gases from the charcoal furnaces in tailor's shops for heating irons. Sani-

tary condition of the school houses, bad, not sufficient air space. Qualities of the waters in Lakes Ontario, St. Clair and Huron and the Detroit River. Danger of contamination to the water supply of Windsor. Gas supply, 387. Unsanitary condition of the schools. Vaccination, 388.

**CRAFT, EDWIN, Chatham . . . . . 470-471**

Drives spokes in the wood shop of the waggon works. Wages. Sub-contracting. Feasibility of reducing the amount of work done daily and spreading the yearly production over the whole year instead of doing it in eight or nine months, 470. No importation of waggons from the United States. The wood for waggon making all procured in the surrounding country. Sub-contracting makes a slight downward difference in wages, 471

**CROSLY, JOHN W., Builder, Petrolia . . . . . 701-705**

Condition of the farms and farmers around Petrolia. The crops raised, 701, 702. Stock raising. Wages and average term of employment in the year of agricultural laborers. The introduction of machinery has lessened the demand for labor. Number of men engaged in lumbering south of Petrolia. Class of timber got out, 702. Tree planting. Length of time required to grow merchantable walnut timber. The advantages he thinks would result from establishing a Dominion Bureau of Statistics, 703. Number of hands he employs in the building trade and the wages he pays, 703, 704. Constancy of employment, "a good man need not be idle one hour," 704. Relative position of employer and employee in the sale of and purchase of labor, 704, 705. The supply of hickory in the vicinity. Sanitary condition of Petrolia. School accommodation. Technical education, 705.

**CROWLEY, THOMAS, Journeyman Shoemaker, Windsor . . . . . 430-434**

Trade is and has been for some time very poor. Attributes the depression to the competition of machine-made goods with custom work. Could average \$2 00 a day if he were employed all the time, but as it is his yearly average is less than \$1.00 a day, 430. Cost of hand-made boots in Windsor. His opinion of the cause of labor disputes and arbitration. Piece work and day work. No boys learning the trade now, 431. Factory shoe-making. Machinery has revolutionized the trade. Thinks assisted immigration one of the greatest injuries that could be inflicted upon Canada. Grounds upon which he objects to immigration, 432-433. Thinks immigration tends to make the rich richer and the poor poorer, 434.

**CUFF, J. E., Major, St. Catharines . . . . . 923-925**

Sanitary condition of St. Catharines. Water supply. Benefits which have accrued to the working people of St. Catharines from labor combinations. Applications for corporation relief, 923. Immigrants. Apprentices system. The use of United States stereotyped plates on newspapers. Profit sharing. Arbitration. Establishment of Dominion Bureau of Statistics. Labor organization endeavors to promote temperance, 923. Free Library, 924.

**DALEY, JAMES, Dyer, Cornwall . . . . . 1091-1092**

Is employed at the Stormont Cotton Mill. Dyer's wages. Constancy of employment. Boys employed in the dye house and their wages. Discharging of men for having their wages garnished. Fortnightly pay days and two weeks pay kept back. No reduction of wages. Condition of the closet and water supply. Protection against accidents, 1091. The cause of the recent strikes and how settled. His attitude, as a foreman, employing labor, towards the Knights of Labor. Thinks it is impossible to do same amount of work in shorter time. Does not deny that the demand for shorter hours was reasonable, 1092.

DANE, PAUL, *Cornwall, Weaver* - - - - -

1091-1095

Is employed at the Stormont Cotton Mill. Works by the piece. Wages. Possibility of saving money. Rents. Water supply at his dwelling house. Distance of some of the working people's dwellings from the factories causes them (especially the females) to get up too soon, for health sake, in order to get to work in time. Water supply and condition of the closets at the mills, 1094.

DANFORTH, BENJAMIN M., *Hamilton* - - - - -

760-764

Is employed in the nail works of the Ontario Rolling Mill. Number of men employed there. Constancy of employment. Hours of labor. Wages. Sanitary condition of the mill. Paid fortnightly on Saturday. Apprentices. Iron used is scrap iron from all over Canada. Wages compared with those paid in Montreal, 760. Visit of the Factory Inspector. Boys' employed by the men, not by the firm. All the work done by the piece. Boys wages. Nailers' Association. Benefits derived from organization. Sick benefit in connection with the Nailers' Association. Wages compared with those in the Maritime Provinces. Importation from the other side; none. Make steel nails, 761. Boys employed do not displace men. Arbitration. Strikes. Hours of labor, 762. Classes of rolled iron they turn out. Piece work. Factory inspector's visit. Accidents from machinery. Nationality of the firm. Rolling mill work, 763. Manufacture of rails, 764.

DAVIDSON, JOHN, *Agricultural Woodworker, London* - - - - -

622-626

Hours of labor. Rate of wages. Are paid \$10 every two weeks, the balance being kept back until it accumulates to \$25 or \$100; the firm pays no interest for the money thus kept back. The man who leaves most money in the hands of the firm is the most likely to get constant employment. Number of persons at the trade in London organized. Organization a benefit, 622. Apprentices. The indenture system would be a great benefit. Accidents to boys running machines. Machinery is not protected, 623. Reason for keeping back part of men's wages. Some of the men save money and buy houses. The use of machinery has lowered wages. Wages and cost of living in London, Ontario, and Syracuse, N. Y., compared, 624. Immigration interferes with the trade. Co-operation societies. Wood used is Canadian. In favor of Government arbitration. Was a shareholder in the Woodstock Co-operation Company, 625. The Woodstock Co-operation Company manufactured matches and failed through mismanagement. It is a general rule to put young boys to work at dangerous machines in the establishment he works in. Only works about seven months in the year, 626.

DAVIS, JOHN, *Wood dealer, Ottawa* - - - - -

1186-1187

Wages of laborers he employs and how they are occupied. Hours of labor. Price of beech and maple wood, 1186. Condition of the working classes in England and Canada compared, 1187.

DAWSON, RICHARD J., *Stationary Engineer, Ottawa* - - - - -

1170-1171

Difficult for a skilled engineer to get what he is worth on account of the many incompetent men ready to take positions. Certificates should be granted to stationary engineers who are qualified, that being as necessary in their case as in the case of steamboat engineers, 1170. Majority of stationary engineers at present in Ottawa are incompetent. Inspection of boilers. Wages of stationary engineers. What an engineer should be examined in before being granted a certificate, 1171.

DAY, THEWLIS, *Cornwall, Superintendent of the Mill of the Cornwall Manufacturing Company* - - - - -

1070-1073

Condition of the mill healthy and comfortable. The strike of last fall, the cause of it, and how it terminated. The feeling of the Company towards labor organiza-

tions. Fining of employees, 1070. How operators who leave without the regular notice are dealt with. Constancy of employment, Holidays not paid for. Visit of the Factory Inspector, 1071. Did not receive from the inspector a copy of the Factory Act to be posted up in the mill, 1072.

**DELANEY, ANDREW, Cooper, Toronto . . . . . 260-261**

Cooper business in a very bad condition. Chief cause of the trouble is the Scott Act. Beer barrels about the only class of work done in Toronto. Number of coopers have left the city altogether, 260. Piece work. Wages. Number of coopers in Toronto. Apprentices. Machinery, 261.

**DENNERY, THOMAS, Cornwall, Mill Operative . . . . . 1080**

Is employed running the colored slasher in the Canada Cotton Company's mill. Reduction of wages. Number of hands employed in his department and their wages, 1080.

**DENNIS, RICHARD, Builder and Contractor, Toronto . . . . . 119-132**

Minimum and maximum rate of wages paid to carpenters in Toronto. Men graduated according to ability, 119. Thinks it would be an advantage to slow men to be allowed by the Union to work for lower wages. Wages regulated by supply and demand. Thinks men can be as independent in the sale of their labor without the power of a Union behind them as with it. Causes of the recent strike in the building trade in Toronto, 120. The recent strike a failure. Employers were organized as well as the men. Does not think a Union or organization a benefit to either the employers or the men. Approximate estimate of number of carpenters in Toronto. They were not all out on strike, 121. Principal cause of strikes a demand for shorter hours and higher wages. Prefers to pay higher wages provided the rate is general. Does not know any employer of labor in the building trade who has become even moderately wealthy, competition is too keen. Thinks carpenters have benefited largely by the nine-hour movement, by having more time to build for themselves. Some of his men have as much as from one to four houses and not a mortgage on them, 122. Carpenters live much better than twenty years' ago. Cost of living compared with twenty to twenty-five years ago. Rents higher, 123. Does not think rented houses pay excessive interest. Renting workmen's houses pays better than renting expensive ones. Does not think the use of machinery by replacing labor has injured the workmen. Never heard of carpenters being obliged to sign a contract not to belong to a Union. Never had any accident from machinery except from carelessness. Pay-days every fortnight. Does not think it would help the men to be paid weekly nor does he think his men want it, 124. Credit system. Thinks those who want to buy direct from farmers suffer a disadvantage in being obliged to buy in the afternoon. Never heard of men being brought into this country to work under contracts made in foreign countries. Most of his men are immigrants who learned their trade in the old country, 125. Thinks a carpenter will be able to work at least two hundred days in the year. Wages paid in Toronto compared with those in cities of the United States and Great Britain. Never heard of cooperation among carpenters to carry on business. Apprentices: has none. Thinks a training school is badly wanted here, 126. Boys have a better chance to learn the trade in the old country than here. Contract labor does not interfere with him at all. Believes in settling labor disputes without strikes. Thinks the strike which inaugurated the nine hour system and got the men higher wages was successful, and could not have been brought about except by concerted action or union, 127. Is a member of the Master Builders Association. Cannot say that being so ever benefits him. Reasons why. Draft agreement submitted to Master Carpenters' Association by journeymen carpenters for acceptance, 22nd January, 1887, 128. Thinks arbitration better than strikes, but does not think a tailor could properly arbitrate for carpenters. Never occurred to him that Friday would suit the men better as a pay day than Saturday; but if it

would benefit the men he would pay Friday night, 129. Advocates the indenturing of apprentices as a remedy for keeping boys at one thing for years instead of having a chance of improving himself. Convict labor does not interfere in Toronto carpentering. Does not think it possible in the interests of either employers or society to do away with the use of machinery in building works. Thinks the rapid growth of Toronto and other places would not have been possible except by the use of machinery or the unlimited use of cheap labor, 130. Five years sufficient as a term of apprenticeship. Opinion regarding arbitration and the method of conducting it, 131. Would recommend Government interference as a last resort in settling of labor disputes, it being better than strikes. Blacklisting men, 132.

DICKSON, JOSEPH R., *Real Estate Agent*

471-474

Demand for real estate not good in Chatham. Value of lots. Some workingmen own their own houses in Chatham. Difficult for a workingman at present rate of wages to get a home for himself. Not so much lumbering as there was ten, fifteen years ago, 471. Kinds of lumber to be had in the district. Cost of lumber. Wages have been going down in Chatham. More men than required. The kind of legislation he proposes to benefit workingmen. Employees in the manufactures getting the profits accruing from cheapening of production by machinery: thinks the workingman should have a share of these profits, either by increased pay or shorter hours, 472. Reducing the hours of labor from ten to eight would hardly employ all the surplus labor. Tendency of young men on farms to seek clerkships. Interest on borrowed money in Chatham. Species of elm timber got out in the district. Cause of the surplus labor now in Chatham is over-production by machinery. Demand in the North-West for Chatham-made waggons, 473. Evils of the sub-contract system. Sub-contracting in Chatham. Where the fanning mills made in Chatham are sent to, 474.

DIXON, JOHN, *Carriage Builder, Toronto*

246-253

Is an employer. Has been in business twenty-six years. Most of the material used in carriage making is made here. Spokes, &c., come from the United States. Best quality of carriage making timber cannot be found in Canada. Rate of wages prevalent for carriage makers, 246. Have no apprentices. Boys learn the trade without indenturing. Does not think many of those boys would avail themselves of industrial education. Pay days. Hours of labor. Does not see what benefit the Saturday half-holiday can be to workmen. Carriage painting injurious to health: on account of the carelessness of the men. Does not employ female labor, 247. Good workmen command good wages but are not always steady. Sanitary condition of his shop. Workmen have more luxuries now than ever. House rent in Toronto. Profit sharing by carriage makers. No Carriage Makers' Union in Toronto, 248. Carriage makers' strike eleven years ago in Toronto. A few immigrant carriage makers come into Toronto from all parts. Thinks living cheaper in Toronto to-day than ever. Rents. Capital required to start business, 249. Sunday work. Convict labor. What he thinks of shorter hours, 250. Piece work. No surplus labor in Toronto. Some improvement in the apprentice system required. How the present apprentice system works, 251. Thinks if the men were better educated they would work better, 252.

DODS, JOHN, *Steamboat Engineer and Machinist, Kingston*

936

Tariff of steamboat engineer's wages. Engineer certificates. Steamboat inspection; boilers and hulls. Seamen have generally lost their wages when owners have failed. Steamboat engineers not organized, 936.

DODWELL, JOHN THOMAS, *Moulder, Toronto*

150-151

Five years in Toronto working at agricultural implement moulding, 150. Wages in and outside of Toronto. Different branches of the moulding trade all organized under one executive head would be beneficial if the organization was incorporated. Importation of agricultural implements for the United States, 151.

**DONNELLY, ROBERT** . . . . . **910-911**

Is a ship carpenter employed on the Welland Canal. Ship carpenter's wages and constancy of employment. Class of work he is principally engaged on. Unseaworthy vessels in use, 910. The insurance companies inspector. Vessels inspected from January till spring. Present system of inspection is not a satisfactory test, 911.

**DONNELLY, Capt. THOMAS, Mariner, Kingston** . . . . . **984-992**

Number of months in the year a captain is employed. Wages. Sailors' wages. Sailors' wages on the lakes compared with the Atlantic coast. Number of sailors around Kingston, 984. Seaworthiness of vessels on the rivers and lakes. Condition of forecastles and sailors sleeping accommodation. Spars and rigging of sailing vessels generally good, but it is different with barges; they are badly equipped and undermanned, consequently they are dangerous when a tow line breaks and they get adrift. Sails a barge ought to have, 985. Overloading of propellers. The Plimsoll load line. Number and competency of men who should form the crew of a barge. Borrowing mates' certificates. Law regarding masters and mates' certificates. Deck loads, 986. Thinks the Government will have to take some action regarding the seaworthiness of vessels. Sailors' wages generally increased in the month of September, reason why. No shipping master at Kingston, but he thinks it would be well if there was one. Most of the craft belonging to Kingston are well fitted with anchors, chains, &c. Deficiency of life buoys and preservers on sailing vessels, 987. Evils and disadvantages of shipping sailors by the trip from port to port; the rules of their organization demand this instead of by the month or the year. Is not opposed to organization but thinks this rule has a bad effect. Sailors as now engaged are not obliged to touch the cargoes in port. Reason why the union insists on sailors going ashore after each trip. Thinks sailors should be shipped and paid off at a shipping office, same as Atlantic ports, 988. Thinks sailors could save ten times as much as they do when paid off at every port, if they were engaged and paid by the year. The difference between the sailing business and any other business in regard to organized labor. As long as he can remember there has not been proper legislation in shipping interests in Canada, 989. Thinks that on account of the large shipping interests of Canada, there should have been a sailor on the Labor Commission. Acts passed of late years have not been properly constructed. The large marine association of vessel owners who met at Toronto last year wanted to abolish masters and mates on barges. Thinks Government should appoint an inspector of hulls, rigging, &c, but fears when they do so that political influence will have too much to do with it. Lloyds' inspectors. Lloyds only inspect vessel for their own purposes. Masters and mates' certificates, 990. Lloyds' inspectors cannot enforce repairs and equipment, they can only refuse qualification. Government should enforce what is necessary. The injustice of allowing steam vessels other than passenger boats to run with certificated engineers. Wrecking laws. Quotes "An Act to aid vessels wrecked or disabled in the "conterminous to the United States and the Dominion of Canada," passed by the United States Government 19th June, 1878. Explains why the Canadian Government did not meet this legislation in the reciprocal spirit and pass a similar Act, 991. Thinks the Government should legislate so as to give effect to this United States Act. Instances the result of a clause of the Marine Act requiring vessels with sails to have certificated officers while they are not required on a barge, 992.

**DONOVAN, MICHAEL, Cooper, Toronto** . . . . . **261-262**

Substantiates statement made by Mr. Delaney. Scott Act has an injurious effect on the business, 261-2.

**DOTY, JOHN, Manufacturer of Steam Engines and Machinery, Toronto** . . . . . **320-329**

Employs something over one hundred hands. Machinists' wages, 326. Wages of unskilled workmen. Hours of labor. Constancy of employment. Demand for

engines has increased. Does not employ many boys. Does not consider it necessary for men in charge of engines to be skilled. Thinks it would be a good idea for men in charge of a boiler or engines to pass an examination for competency, 327. Boys coming to him to learn the trade are not regularly apprenticed. Boys' wages. Length of time required to become a proficient machinist. Any technical knowledge an apprentice gets in learning engineering is learnt outside; thinks the best place to impart technical knowledge would be in night schools for that purpose. An artisan with technical knowledge is a superior mechanic, 328.

**DOUGLAS, HUGH, Stonemason and Bricklayer, Kingston . . . . . 1035-1036**

Wages of stonemasons and bricklayers. Constancy of employment. Average yearly wages. Corporation works. Are not organized. Apprentices, 1035. Scaffolding. Wages of bricklayers' laborers. Supply and demand regulates wages. Labor organization in connection with the building trade, 1036.

**DOUGLAS, W. A., Toronto . . . . . 13-22**

Is Assistant manager of a Loan Company. Attending the commission as a representative of the Anti-Poverty Society. Reads a paper on the labor problem, 13. Increase in value of land, from increase of population, different from the increased value accruing to material from the application of labor. Our present laws ignore this difference, 14. Effect of the fictitious value of land on the payment of labor. The margin of land cultivation determined by population. Wages must fall as population increases, 15. Values should belong to those who cause them. Membership and organization of the Anti-Poverty Society. Peculiar opinions of its members and the result of their practical application upon the workingman and society generally, 16-25. Permanent degradation of the toiler inevitable under the present system of land tenure, 22.

**DUFFY, WILLIAM, Moulder, Kingston . . . . . 1055-1056**

Wages of machinery moulder in Kingston not equal to the average paid elsewhere. Strike at the locomotive works last summer, Constancy of employment. The condition of mechanics has improved during the last ten years, 1055.

**DUNLAP, STEWART J., Printer, Toronto . . . . . 36-51**

Member of Trades Union. Printers' wages in Toronto. Idle printers an occasional evil in Toronto, 36. Accidents from machinery in press-room. Results from improvements in printing presses, 37-29. Co-operation or sharing of profits. Boycotting of offices by Union printers. Attitude of the Printers' Union to non-union men. Apprentices, Female compositors, and press feeders, 40-41. Difference in wages paid to male and female compositors. Pay days, Friday the best, 41. Apprentices; great advantage of returning to the indenture system. Nine hours a day's labor. Printers' Union and strikes, 42. Organization necessary to the printer's interest. No co-operation offices in Toronto. Sunday labor. Very few printers acquire homes of their own, 43. Printers' Union does not object to female members, 44. Desire of majority of printers to settle disputes by arbitration. Sanitary condition of the offices in Toronto. Apprentices as a rule far below the standard in education, 45. Rate of wages in country offices. Attitude of the Union to female printers, 47. Inferiority of female labor in a printing office and the causes. Benefit society in connection with the Union. Insurance Branch in connection with the International Union, 48. Labor organization equally good for employer and employee. Union scale of wages, 49.

**DWYER, JOHN, Laborer, Kingston . . . . . 990-1000**

Is a laborer at the Kingston Locomotive Works. Wages. Hours of labor. Weekly payments, 999. Apprentices, 1,000.

- EATON, THOMAS, Dry Goods Merchant, Toronto** - - - - - **291-294**  
Sells millinery and boots and shoes. Salaries he pays to male and female clerks, 291. Does not think he has any girls in his employ under 12 years of age. Wages young girls commence with. Hours of labor. Fines hands for being behind time without reasonable excuse, 292. Supply of competent clerks is not greater than the demand. Some females have to stand all day. Service of females behind the counters in certain classes of goods equally as valuable as that of males. Income derived from fines, 293. No system of apprenticeship in dry goods business. Have a great many applications from house servants for situations as dry goods clerks. Separate convenience for male and female clerks. Meals for clerks on the premises, 294.
- EDEY, MOSES C., Carpenter and Builder, Ottawa** - - - - - **1147-1148**  
Average wages of carpenters. Proportion of carpenters who can work from plans and drawings of an eighth scale. Apprentices. Technical education; its effect on workmen, 1147. How and where it ought to be taught, &c. The standard of training in the Ottawa Art School too high for mechanics and tradesmen, 1148.
- EICHORN, AUGUST, Merchant and Manufacturer of Cigars, Toronto** - - - - - **305-306**  
Average earnings of cigarmakers in Toronto. Piece work; rate per 1000. Females paid same rate as men. Females work in same room as men. Has no apprentices. Girls and boys employed as inferior work. Wages paid those girls and boys; age, opportunities to learn the trade, 305. Has no doubt that tobacco fit for cigars can be grown in Ontario. No domestic tobacco fit for cigars at present in the market. Consumption of cigars in Scott Act counties reduced about two-thirds. Employs union men. Does not find any difference between union and non-union men. Finds it an advantage in cities to have the blue or union label on his boxes, 306.
- ELLIOTT, EDWIN, Iron moulder, Ottawa** - - - - - **1180**  
Number of men and apprentices employed under him as foreman. Wages. Hours of labor. Sanitary condition and ventilation of the premises. Wages of laborers and furnace men. No visit from the Factory Inspector, nor have they been provided with a copy of the Factory Act, 1180.
- ELLIOTT, WILLIAM, of John Elliott & Son, Iron Founders, London** - - - - - **674-678**  
Manufacture agricultural implements. Number of men they employ. Wages they paid. Apprentices, 674. Does not think that apprentices can learn the trade well in an agricultural implement factory. Pay days fortnightly, on Fridays. The men asked to be paid on Friday. Very few agricultural implements imported. American manufacturers say that agricultural implements made here are better made and of better material than theirs. Use chiefly American and Nova Scotian (Londonderry) iron. Sell their goods chiefly in Ontario, the North West and British Columbia. Competition keen. Do not carry any stock but have reduced the price of machines from \$300 in 1851-52 to \$135 and \$150. Cost of these machines is reduced to the consumer because their machinery is better adapted for turning out the work. Number of selfbinders they made last year. The reaper trade is done; made none last year. None of the class of goods imported into Ontario; only a few into the Maritime Provinces and the North-West, 675. Average value of agricultural implements required for a 100 acre farm. Farmers do not require so much manual labor now because of improved machinery. Hours of labor of men in their factory, 676. A Canadian farmer cannot compete with United States farmers if he does not use the most improved kind of agricultural implements and machinery. Visit of the factory inspector. Uses Blassburg (American) coal; has always been told the Maritime Province coal is not suitable for forges. Thinks that the use of machinery generally has decreased the demand for labor; although it has not done so in his business. The use of the very latest improvements in machinery in his business a necessity to enable him to make any profit and compete with others. His

firm have no objections to employing men belonging to labor organization, 677. Reasons why the manufacture of agricultural machinery has increased in Ontario. Arbitration. Several of their men own their own houses; does not know of any of their men who do not live comfortably. Canadian workmen as good as American and foreigners after they learn. Canadian manufacturers, in his line, require a little protection yet till they get stronger. Ships goods to Prince Edward Island, England, Australia and a few to France. Class of goods they send abroad is binders, 678.

EVANS, FREDRICK S, *of the Barnum Wire and Iron Works Co., Windsor* - 388-391

Independent industry, established three years. Market throughout the whole Dominion. Class of work, 388. Where the wire and other material are got, 388-89. Duty on wire. Competition from importation from the United States. Really no protection. Advantages of large American factories. Number of men employed. Wages. Men mostly Americans living in Canada, 289. On wire, 390. Employs all men and boys. Age of the boys, seventeen or eighteen. Wages. Hours of labor. Apprentices not bound. Sanitary condition of shop as good as possible. Occupation healthy. Very little broken time. Business increasing steadily. Length of time to learn the trade, 391.

EVANS, THOMAS, *Carpenter, Ottawa,* - - - - - 1126-1127

Wages and constancy of employment of carpenters. Influence of inferior or half skilled workmen on wages, 1126.

EWARD, FRED., *Blacksmith, Kingston* - - - - - 1041-1042

Is employed at the locomotive works. Wages of blacksmiths' helpers. Corroborates the evidence of Mr. C. M. Morrice (see p. 1036), 1041.

FALCONER, JOHN, *Carpenter, Toronto* - - - - - 1-13

Resided in Toronto sixteen years; always a carpenter during that time. Standard rate of wages now paid to carpenters in Toronto. Standard number of hours for a day's labor. Lost time. Rate of wages has increased, 1. Capable sober men have no difficulty in finding employment. Outside carpenters mostly immigrants from England and Scotland. Do not generally join the Carpenters' Union. Have sometimes on that account difficulty in getting employment. Cost of living compared with fifteen years ago, 2. Rent the only item of expenditure in Toronto which has increased. Many carpenters freeholders in Toronto. Mechanics live in better style. Relations between employers and employees, 3. Carpenters wages less than any other mechanics employed in building. Independent Labor Union. Sick Benefit Fund of the Carpenters Union. Strikes, 4. Two-thirds of the carpenters opposed to strikes. Influences which cause strikes. Apprentices, 5. Recommends men should be graded according to ability by the Trades Unions. Courts of arbitration, approves of, 6. Drinking places; the closing of on Saturday night an advantage. Opinion of the Lien Law. Independent Labor Union, 7. Independent Labor Union. Grading according to ability one of its standard rules. Number of members in Toronto, 8. Effect of the use of machinery in carpentering on the labor market, 9. Percentage of idle carpenters in Toronto. Difficulty of obtaining work in winter. Co-operation or participation by workmen in profits, 10. Different rates of wages for carpenters in Toronto. Settlement of labor disputes by conciliations has not been successful. Nine-hour system obtained by amicable arrangement, not by striking, 11. Convict labor vs. carpenters. Co operation industry among carpenters. Sanitary arrangement in shops. Condition of workmen's dwellings. Tendency of the apprentice system to make better workmen. Fining of men for breach of duty. Savings of workmen; how invested, 12, 13.

**FARRELL, FRANCIS J., Printer, Ottawa** - - - - - **1152-1154**

Sanitary condition of the printing office and closets therein of MacLean, Roger & Co, 1152-1153. Unprotected machinery in the press-room. Accidents. Accommodations and sanitary condition of workmen's houses in Ottawa. Rents. Tyranny practised by employers toward workmen when men are not combined, 1153. Sanitary Inspector. Safety of MacLean, Roger & Co.'s printing office building, 1154.

**FIRSTBROOK, JAMES, Box Manufacturer, Toronto** - - - - - **311-315**

Employs between eighty and ninety men; employs some boys; describes the work they do. Ages of the boys. Length of time required to become proficient at box making. Wages paid. No uniform rate of wages. Wages have decreased during last year. Cause of the decrease, 311. Box makers of Toronto organized into an Assembly of the Knights of Labor. Have no difficulty in obtaining help. Supply of unskilled carpenters and box makers greater than the demand. Wages of machine hands. Constancy of employment. Accidents. Factory Inspector's visit, 312. Has no connection with any box manufacturers' organization. Was at first favorably impressed with labor organization, but his experience in 1887 taught him that organized labor was organized tyranny in his case at least. Wages raised when the men organized. Price of boxes went up also from same cause, 313. Trouble with the Knights of Labor in May, 1887. Accident which occurred in his factory, 314-315.

**FIRSTBROCK, JAMES, Box Manufacturer, Toronto, reappeared** - - - - - **326**

Explanation regarding some statements which had been made in connection with the recent trouble in his factory, 326.

**FITZTHOMAS, EDWARD, Chatham** - - - - - **466-468**

Has been working as a skilled laborer in Chatham for five years. Wages he received then and now. Hours of labor. Cannot save money out of his wages. Men employed in the agricultural implement factory at Chatham, their number and wages. Employed only seven or eight months in the year, 466. Organization, Arbitration. Apprentices. Believes in an indenture system. Sub-contracting or farming of labor, none that he is aware of. Pay days on Friday nights. Rents and sanitary condition of workmen's houses. Machinery properly protected. Overtime. No profit-sharing, 467. Cost of living has not increased since he came to Chatham. Co-operation none, 468.

**FLACK DAVID, Coal Merchant, Cornwall** - - - - - **1081-1082**

Price of coal. No coal dealers association in Cornwall. Understanding among coal dealers about prices, 1081. Refuses to answer whether the coal dealers of Cornwall used their influence to prevent the working people of Cornwall from getting a consignment of coal from Montreal dealers. Coal 55 to 60 cents a ton higher after the duty was taken off than it was before. Weighing of coal. The dealers buy by the long ton. Cannot tell if there was any understanding between coal merchants in Cornwall and the exchange in New York regarding the prices of coal, 1082.

**FLEMING, JAMES, Sailor, Kingston** - - - - - **1045-1048**

Has been President of the Sailor's Union. Wages of sailors, 1045. Effect of the lien law. Incompetency of masters and mates. The time barges should be inspected. The time when running gear and tackle should be inspected. Thinks there is too much latitude allowed to vessel owners in the matter of inspection. Reasons why the Seaman's Union discountenances the shipping of sailors by the mouth, 1046. It is a necessity that a government appoint an inspector of hulls and sailing vessels. Vessels allowed to go out that are not seaworthy, 1047. Conditions of forecastles. Handling of cargo not generally done by seamen. Seamen's Union merged into the

**Knights of Labor.** Deck loads on barges. Government should enforce the proper equipment and manning of barges, 1048.

**FLEMING, ROBERT G., Secretary-Treasurer Chatham Harvester Company - 435-441**

Sixteen years' in Chatham. Class of agricultural implements they make. Competition from the United States, none that he knows of. Prices of agricultural implements about the same as in the United States, 435. Imports the cutting apparatus of the implements from the United States. Number of hands they employ. Wages they pay. Where they get the material from, 36. Rent of mechanics' houses in Chatham. Cost of living. Majority of working people do not save money; reason therefor. Trade organizations in Chatham. Strike last summer for shorter hours, 437. How the strike was settled. Chatham manufacturing industries usually pay weekly, on Friday night. Working people of Chatham generally paid in cash. No co-operation enterprises in Chatham; there was a co-operative biscuit factory but it failed from lack of capital. Rents in Chatham. The employers of labor organized; is himself a member of that organization, 434. Object of the organization. How scale of wages is graded. Hands get from ten to eleven months work during the year. Overtime. How the meetings of the Employer's Association are conducted, 439. Workmen in Chatham do not migrate much. Many of them own the houses they live in. Mechanics Institute in Chatham is not so much appreciated as it should be. Does not think workmen would use more leisure time to their advantage, 440. Overtime never satisfactory although sometimes a necessity, 441.

**FOSTER, EDWARD H., Carpenter, Windsor - - - 420-429**

General condition of the trade good lately. Wages. Average about seven months work in this year, 420. Trade organized. The trade has been improved during last five years by shortening the hours. Thinks that apprentices who have had industrial training make better journeymen. Too many carpenters in the market now, consequently do not want any apprentices for some time. Believes in indenturing apprentices. Competition from machinery has reduced wages. Truck system abolished in Windsor about a year and a half ago, because the men refused to take store pay. Is in favor of a law compelling arbitration, 421. Thinks there are a good many carpenters in Windsor out of work now. Average about ten months work in the year. A good many carpenters own the houses they live in. Rents in Windsor of workingmen's houses. No co-operation among carpenters at Windsor. Sanitary condition of the shop good. Condition of the machinery not quite what it should be. Dust from sand-papering machines injurious to the health. Is not aware of the factory inspector having been at the shop, 422.

**FOTHERGILL, JOHN, Farmer, Burlington - - - 899-900**

The majority of the farmers around Burlington are getting into debt: cause therefor. Wages of farm laborers. Scarcity of farm laborers; result of the scarcity, 899. Farm machinery, its cost and time it will last: it reduces the cost of producing grain. Considers being near a city a great advantage to a farmer. Dairy farming. Selling milk to butter and cheese factories. Fruit growing, 900.

**FRANKLAND, GARRETT, T., Cattle Exporter, Toronto - - - 338-341**

Prices in the cattle trade not so good in Great Britain as they were four years ago. General statement regarding the cattle trade of Canada with Great Britain. How it came into existence in 1870, and a brief history of it since, 338-339. Cause of the present depression in prices. Still a paying business. British laws or regulations regarding importation of Canadian and American cattle. Has always been opposed to the transit of cattle from the United States through Canada. Reasons therefor, 339. How it pays the Canadian farmer to raise beef cattle for export. Kind and condition of cattle selected for shipping. Quality of Canadian, North-West and Western United States cattle compared. Would prefer to have nothing to do with

the low breed of cattle raised in Texas. In reply to the question "can cattle be best raised with a view to beef and dairy products combined or must they be followed out separately?" he replied that "all farmers must have stock," and is under the impression that mixed farming is most likely to be successful, 340. Advice to Government regarding inspection of cattle, ships and providing of proper wharves to ship from. How loss of cattle on board ship is caused. Exportation of cattle from the Argentine Republic. Claims Canada to be the most suitable country on earth to grow beef. Argentine Republic will never grow cattle for export alone; exports none on hoof. Australia does, but has been more successful with mutton, 341.

**FRANKLIN, J. J., Superintendent Toronto Street Railway - - - 328-335**

Average earnings of Street Railway employees, and hours of labor, 328-329. Overtime. Men sometimes leave employ of the firm to better themselves, but generally want to come back. No fines for being late. Men can leave and company can discharge without notice. Weekly pay days on Friday nights. Men in employ of the company are required to sign an agreement not to belong to any labor organization. Speaking for the company he thinks labor organizations have a bad influence on workmen, 330. Disputes or trouble between the company and their employees. Average day of a street car driver is eleven and a half hours. Shorter hours. Condition of street car employees in Toronto better than in the United States, 331. Quite a number of men employed by the company, own property, and earned their money in the employ of the company. Men relieved more frequently in severe weather. Labor organization interfering with the company's rights. Company has never had any trouble except from discharged men, 332. Company never discharged a man on suspicion that he was a labor agitator. Rents of houses in Toronto, such as the employees of the company require, 333. Wages of saddlers and carpenters in employ of company. Does not think the men made any demand on the company before striking. Does not know what the men struck for; does not think they knew themselves. Took back fifteen or twenty of the old hands after the strike. Had no difficulty in filling the places of the others, 334. Mechanics often apply for positions as drivers. The car service was not altogether stopped, but was very inadequate at the time of the strike, 335.

**FRASER, JOHN, Real Estate Agent, Petrolea - - - 722-723**

Savings of workmen in Petrolea. Cost of living, rents, &c. Constancy of employment. Workingmen who own their own houses. Profit-sharing. The establishment of a Dominion Bureau of Labor Statistics, 722. Rate of interest on loans on town property and farm property, 723.

**FRENCH, ALBERT, Woollen Manufacturer, Ottawa - - - 1144-1145**

Is proprietor of the New Edinburgh Mills. Employs about seventy-five hands, one half of whom are women and girls. Age of the youngest children employed. Wages of male and female spinners and weavers. Accidents. Fining of employees. Wages of hands employed in the picker room, carding room and filling room. Hours of labor. Pay days monthly, on the second Saturday of the month. Notice required before leaving, 1144. Night work. Separate conveniences in each room. Canadian and imported wools compared, he uses both, 1145.

**FREYSING, P., Manufacturer and Importer of Corks, Toronto - - - 307-309**

Employs 25 hands, men, girls and boys. Minimum age of boys and girls, fourteen year. Accidents. Wages. Only one cork factory in Toronto. American competition, 307-308. Pay days. Piece work, 309.

**GALBRAITH, JOHN, Professor of Engineering, Toronto - - - 217-222**

Has been connected with technical education only in teaching engineering at the school of Practical Science in Toronto. Definition of what he understands technical

education to be, 217. Evils resulting from competition for contracts in building. Workman would be benefited by better opportunities for learning the theoretical side of his work. Difficulty of teaching this in public schools. Practically impossible to teach trades in free school. Night schools. Does not think teaching children at school use of tools and the nature and properties of material would be of any use, 218. Teaching a little of all trades in school worse than useless. The only way to make teaching of trades of educational value is to teach them systematically. The penitentiary and the Mercer Institute the only places in this country where technical education, as it is called, is to be had, 219. Wardens of penitentiaries the only men who have devoted their time to systematic trade teaching. Night schools the place to give technical education. The difficulty with technical schools is to get teachers. Has little confidence in the knowledge a boy can get at public schools except reading, writing and arithmetic, 220. Unsatisfactory results of the teaching in our public schools. Turning out boys from our public schools who know nothing, 221. Necessity for more practical knowledge among our public school teachers. Trade teaching in Normal School. How engineers are taught the various trades connected with their profession in the Boston Institute of Technology. His idea of a school for teaching trades, 222.

**GALBRAITH, THOMAS, *Toronto* - - - - - 191-193**

Has been market reporter on the *Toronto Globe* for eight years. Memoranda of market prices in Toronto in the years 1881, 1882, 1877 and 1872, 191-92. The Lower Province crop of potatoes regulates price of potatoes in Ontario, 192. Ontario farmers have a better class of sheep now and grow a better class of wool. The demand for, and price of wool are governed to some extent by the style of woollen fabrics worn. The "ring" in coffee has made the price abnormally high. As a rule working people in Toronto do not buy inferior food on the market. Food inspection in Toronto, 193.

**GALE, JOHN, *Ottawa* - - - - - 1134-1135**

Is sixteen years of age. Lost, when he was between eleven and twelve years of age, his right arm while working in a saw mill; describes how the accident occurred. Other small boys similarly engaged at the same time, 1134. Did not recover any compensation from his employer. Cannot now earn a living unless he can get an education. Promises to bring another boy who lost both arms and legs in a saw mill. Was working for a sub-contractor when he met with his accident, 1135.

**GALLAGHER, PATRICK, *St. Catharines* - - - - - 917-918**

Is a sailor. Approves of the evidence of John T. Carey (see p. 911) and Peter Nelson (see p. 916). General unseaworthy condition of vessels going out of the canal. Principal defects of vessels. Proportion of wrecks caused by unseaworthiness, 917. Incompetent class of men being shipped on vessels which are towed. Advantage to be derived from a proper system of inspection. Canvas requisite for safety for a barge in tow, and the canvas usually carried. Overloading. Sailors' wages and hours of labor. Average season's earnings. How sailors are paid, 918.

**GALT, JOHN, *Civil and Mechanical Engineer, Toronto* - - - - - 194-197**

Has had a good deal of experience with the industrial or technical education of young people. Great necessity for technical or industrial education. At present in this country there is nothing between common school and university education. Science and art department in the old country. Method of conducting schools working under science and art department, 194, 195. Does not think public school education adapted to meet the wants of workmen. Science and art department was forced upon the British Government after the first Paris exhibition. Technical schools in Europe and America, 195. School of Technology in Toronto. Introduction of practical workshops into universities. Industrial training in schools and

colleges can never take the place of a thorough apprentice system. How industrial school teachers are treated in Great Britain. Necessity of industrial education for the working classes. School of Practical Science in Toronto, 196, 197.

GARON, LOUIS, *Baker, Ottawa* . . . . . **1132**

Wages of bakers. Hours of labor. Night work. Child labor employed in bakeries in Ottawa, 1132.

GARVOCK, WILLIAM, *Carpenter, Ottawa* . . . . . **1128-1130**

Corroborates the evidence of Thomas Evans (see p. 1126) regarding carpenters wages. Technical education, 1128. If imparted to all branches of trade would tend to remove inequalities amongst workmen. Favors a Government system of technical education. Branches of technical education most important to carpenters. The Ontario Government attempts a technical education of no practical use to workmen on account of incompetent teachers. The system in England. Apprentices get but little opportunity to learn the theory of their trade. Favors the indenture system, 1129. The Old Country system of an apprentice giving security that he will keep his engagement, 1130.

GASKIN, JOHN, *Forwarder, Kingston.* . . . . . **965-969**

Is outside manager for the Montreal Transportation and Forwarding Company. Where the company's vessels run to. Number of men the company employ. Wages of grain shovellers and constancy of employment, and hours of labor. Labor organization, 965. Certificates necessary for masters and mates of vessels. Inspection of vessels. Summer the proper time to inspect spars and rigging, 966. River barges of the company not insured. Masters and mates without certificates taking charge of vessels. Deck loads. Thinks men from the engine room or purser's office of a propeller should be allowed to take charge of the vessel if they qualify themselves for the position, 967. No law to regulate the number of the crew of a propeller. Number required. Forecasts and sailors' sleeping accommodations, 968. Organized labor. Believes in paying men according to their merits. Has no difficulty in getting what men he require, 969.

GAULT, ARCHIE, *Secretary of the Stormont Cotton Mills Company, Cornwall.* - **1058-1062**

Number of men. Females and children employed in the Stormont cotton mills. Hours of labor. Wages. Weavers all work by the piece. Aggregate amount of wages the company paid last year. Fines collected, 1058. Ill-treatment of operatives by overseers. Separate conveniences. Water supply. Strikes, beginning of 1887 on account of an equalizing or reduction of wages. How it was settled, 1059. Operatives fined only for spoiled work. Attitude of the company to the Knights of Labor. Child labor; means taken to ascertain the ages of, hours of; labor of. Overtime. Ventilation of the mill. Means of escape in case of fire, 1060. Pay days fortnightly. A fortnight's wages kept back. Notice to leave. Garnisheeing of wages. Weekly payments. Accidents, 1061. Operatives paid for time lost through breaking of machinery. Constancy of employment. Company's business has doubled during the past five years. Visit of the factory inspector. Cotton Manufacturers' Association, 1062.

GIBBENS, WILLIAM, *Ottawa, Manager of "The Citizen Printing and Publishing Company,"* . . . . . **1145-1146**

Number of compositors employed; proportion of them who work at night. Wages paid to book and job hands. Hours of labor. Printers on the newspaper work by the piece; rate paid them per 1000 ems. Hours of labor of newspaper compositors. Sanitary condition of the closets, 1145. One woman employed. Proof-reader's wages. Apprentices. Feeling between employers and men, good. Hours of labor of compositors. Average earnings of compositors who work by the piece, 1146.

**GIBSON, WILLIAM, *Biscuit Manufacturer, Ottawa* - - - 1102-1104**

Wages of his foreman biscuit baker, 1102. Wages of journeymen biscuit bakers. Average wages of boys from fourteen to seventeen years of age. His engineer's wages. Hours of labor. Overtime. No visit from the Ontario Factory Inspector. Pay days weekly, on Saturday nights. Does not take any apprentices. Just gives boys so much a week and they do what they are told. Biscuit baker's wages, 1103. Girls employed packing biscuits, their age. Wages. Sanitary condition of the place. Separate closets for each sex, 1104.

**GILBERT, EDWIN S., *Book-keeper, Hamilton* - - - 861-863**

Represents the Hamilton Land Tax Club. Description of the club and its objects, 861, 863.

**GNOSILL, HENRY, *Windsor* - - - 427-430**

Is a brass finisher at the Barnum Wire Works. About 40 men and boys employed in the wire works. It is the principal industry in Windsor. Employed all the year round. Wages. Apprentices. Quite a lot of machinery used in the wire works. Industrial or technical education would be a great benefit to wire workers, 427. Knights of Labor have caused wages of working people to improve during last year and a half. Wages in United States higher than in Canada. Rents and cost of living cheaper in Great Britain than here. Increase of rent compared with increase of pay at Windsor. Brass finisher's wages in Cincinnati and in England, 428. Comparative prices of food and clothing in Windsor and Detroit. Immigration does not interfere with his trade, 429.

**GOODBURNE, JOSEPH L., *Printer, London* - - - 615-617**

Employed on a newspaper, 615. Hours of labor, fourteen hours a day and four days a week. Constancy of employment. Piece work and day hands. Arbitration. Indenturing of apprentices. Wages, 616. Sanitary condition of the office, 617.

**GOSSETT, RALPH, *Painter, Chatham* - - - 458-460**

Works at carriage painting at present. Carriage works employ sixty-five men. Eight months' employment during the year. Paid by day work. Season's earnings. Pretty close work to live on a season's earnings. Could do so if employed constantly. Industrial education. Favors a law making arbitration compulsory. Wages, 458. An apprentice system better for employer and workman. Painters' wages and condition in England and in Chatham compared. Crowding work into seasons an injury that might be avoided. Shortening the hours of labor would give more employment. Tried to get the hours shortened, but failed. Character and status of the workingman here as good as in England, and it might be better if he got more time to do his work, 459. Sanitary condition of the carriage works. Has not seen the Factory Inspector, 460.

**GRAY, JOSEPH, *Dyer, Cornwall* - - - 1090**

Is employed in the Canada Cotton Mill. Healthiness of the business of dyeing. Hours of labor. Protection against accidents. Wages. Compensation for accidents. Conditions of the closets and water supply. Possibility of saving money out of a dyer's pay. Wages of overseers in the mill, 1090.

**GRATTON, LOUIS, *Cabinet Maker and Joiner, Ottawa* - - - 1159-1160**

Number of men he employs, 1159. Hours of labor. Weekly wages. Constancy of employment, 1160.

**GREEN, J. M., *St. Thomas* - - - 538-542**

Is a manufacturer, builder and contractor. Nature of his contracts. Reason for the depression in trade in St. Thomas. Carpenters' wages. Labor organization. Arbi-

tration, 538. Stonemasons and bricklayers' wages. Plasterers' wages. Slaters' wages. Shipping houses to Winnipeg. Prices of lumber, 539. Prefers arbitration to strikes. His apprentice system. Technical education, 540. Hours of labor of carpenters. Fortnightly pay days on Friday. Age a boy should be before commencing to learn the trade. Bonusing manufacturing industries, 541-542. Lumber used in building at St. Thomas and what it costs, 542.

**GREEN, THOMAS, *Carpenter and Builder, London* - - - - 645-649**

Is an employer. Carpenters' wages and hours of labor. Constancy of employment. Difficulty for a man with a family to save money at carpentering. Carpenters are organized. Strikes. Arbitration, 645. Mechanics' lien law. Men paid by the hour; rate per hour. The carpenters' strike. Carpenters are the worst paid mechanics in London. The trade is run down for want of proper organization. Cost of carpenters' tools, 646. Carpenters are poorly paid because the labor market is overstocked with a great many inferior workmen. Organization is a benefit to the workingmen and sometimes it is good for other people, too. Apprentices. Effect of the use of machinery in carpentering; it has not reduced wages, 647. The inferior mechanics in the trade are Canadians as a rule. Is a member of the Builders' Exchange. Members of the Builders' Exchange do not discriminate against those who are not members except that they prefer dealing with those who are members when possible, and members get a discount off when buying lumber, provided they pay monthly, 648. Practice of the Exchange in tendering for contracts, 648-649. The Factory Inspector has not visited his establishment that he is aware of. How his machinery is protected. Has not got any boys running machines. There are no fines in connection with the Builders' Exchange, 649.

**GREENING, SAMUEL, *Hamilton* - - - - 840-842**

Title of his firm, B. Greening & Co. Manufactures wire ropes, wire cloth, wire work and general permeated metals. Length of time business established. Material he uses. Employs about 110 hands, 60 per cent. of which is skilled labor. Wages of the various classes of skilled workmen employed. Uses almost every kind of wire made except piano wire. Employs boys. Wages they get. Apprentices. Market in Canada. Uses machinery. Has taken an accident policy for his men at his own cost, 840. Nature of the policy, 840-841. Visit of the Provincial Factory Inspector, 840. Never heard of any establishment the Factory Inspector was not satisfied with. Class of goods they make most of and what they are used for. Accidents from machinery. Indenturing of apprentices. Employs females; age of the youngest; what they work at, 841. Wages of the females, 842.

**GREER, RODGER, *Laborer, Kingston* - - - - 954-956**

Is a builder's laborer. Wages of builder's laborers. Wages of corporation laborers, 954. Corporation laborers are paid fortnightly, asked for weekly payments but were refused. Builders' laborers are organized and find it beneficial. Material condition of laborers in Kingston. Immigration. Builder's scaffolding. Lien laws. Sanitary condition of workingmen's houses might be improved, 955. Kingston health inspector, 956.

**GREEN, THOMAS A., *Hamilton* - - - - 850-855**

Has been captain on lake vessels for the last twelve years. Has sailed the lakes since 1864 or 1865, 850. Wages of sailors now and during the American war. Constancy of employment. Advantages of employing sailors by the season instead of by the trip. Average season's wages for a sailor. Class of men engaged on propellers: hired by the season, 851. Wages of men on sailing vessels and propellers compared. Food and sleeping accommodations of sailors. Vessels are seldom short-handed except in the fall. The sailing power barges which are towed ought to have. Number of hands required to handle a barge when she gets

adrift. Inspection of hulls. Inspection of rigging. Vessels often go to sea with improper rigging. Inspection of boilers and machinery, 852. Qualification required of engineers. Has heard tell of Canadian bottoms being run after they were condemned: sometimes they go to sea not altogether in ship-shape order. Inspectors of hulls, 853. Condition of the forecastles sleeping rooms of the sailors on sailing vessels and barges. Fog horns and soundings required. Light-houses, 854. Deck loads. Carrying capacity and strength of water. Qualifications for a sailor. Duties and qualifications of a mate. Life boats and life preservers, 855.

GURNETT, Miss HELEN, *Dressmaker, Toronto*

347-348

Average wages and hours of labor of dressmakers in Toronto. Length of time it takes to become experienced hands. Are usually apprenticed. Busy season lasts about four months, after that hands are employed at less wages balance of the year, 347. Wages in Toronto and the United States compared. Cost of living cheaper here than in the United States. Experienced dressmakers seldom immigrate to this country, 348.

GURNEY, EDWARD, *Toronto*

294-300

Is in the foundry business and makes stoves, &c. Employs about 400 men in Hamilton and Toronto. Average wages of a moulder on stovework. Number of days they work in the year in his foundries. Thinks the moulders estimated average of \$1.40 a day is exceptional. Does not think it possible to give his moulders constant employment all the year round, 294-5. His experience of providing workrooms for his moulders. Apprentices indentured. How deterioration of workmen has occurred. Settlement of labor disputes, 296. Does not think there are many moulders in Toronto who own their own houses: and thinks a certain number of them do not want to own them. Pattern-makers, their wages, more constantly employed than moulders. Stove Manufacturer's Association. Wages in Boston and Toronto and Hamilton compared, 297. The nature of his last difficulty with his employees. The giving of steady employment beyond the control of the manufacturers. No combine of the manufacturers of the United States and the Dominion. Describes the object and operation of the Stove Manufacturer's Association, 298. Stove manufacturers' and foundrymen have two separate organizations. Demand for higher priced goods increasing. Thinks the laboring classes in a better condition to-day than 30 years ago. Thinks the purchasing power of money greater. Not many stoves imported, 299. Coal he uses all foreign. Uses a large proportion of Canadian iron, 300.

HALL, JOHN, *Foreman at the Locomotive Works of the Grand Trunk Railway at Hamilton*

768-779

Has charge of the locomotives assigned to the Hamilton station of the Great Western Division of the Grand Trunk Railway. Drivers and firemen report to him. Thirty-two years in his present position; his experience previous to that. Hours of labor of drivers and firemen, 768. Rate of additional pay for extended trips. Length of continuous service required from men in exceptional cases. Rules regarding the calling of drivers and firemen to duty and relieving them. What is done when a man called to duty is in ill health, 769. Running boards on freight cars. His idea of guards to save men from falling off the top of freight cars, 770. Application of air brakes to freight cars. His own plan of using the ordinary pistons and cylinders of the locomotive as air pumps for braking purposes, 771. The expense of applying his plan to a freight car. The application of automatic freight couplers to freight cars. Accidents from frogs and guard rails. The law compelling frogs to be blocked is complied with on some parts of the Grand Trunk Railway. How those accidents may be avoided, 772. Old and new signal systems. Examinations of locomotive engineers, 773. On the operation and efficacy of air brakes, 774. Controlling of cars on heavy grades, 775. Westinghouse air brake, 774-776. Tests to

discover color blindness. The difficulty of locating lights at night, 776. Accidents at Beamsville from the difficulty of locating lights at night. The double light used by Mr. McMullen, president of the Chicago and Alton Railway. Utilizing the locomotive head lights as signals. Hauling power of a locomotive, 777. Distance required to stop a train in. Grand Trunk Railway Benefit Society, 778.

**HAMILTON, WILLIAM, E., B.A., T.C.D., Chatham - - - 481-486**

Editor of the *Planet* newspaper and publisher of the *Market Guide*, 481. Table of the prices of grain and other necessities in Chatham, 1879-1887 inclusive, 482. Bakers ignore a drop in the price of flour but are very sensitive to a raise. Thinks the artisan classes in Chatham are as a rule tolerably comfortable. When they have good health and are economical they could save a certain amount of money. Charitable institution and national societies are not often called upon for assistance only in exceptional cases. Mechanics Institute, 483. Technical classes in connection with the Mechanics Institute. Literary and Scientific Society. Macaulay Club, 484. Wages of mechanics in Chatham and the possibility of saving any money out of them. The trade combination, employees' union, farmer's granges, &c., in and around Chatham. Printers in Chatham, their wages, &c., 485.

**HANCOCK, EDWARD H., Carpenter, Hamilton, - - - 887-890**

Carpenters' wages. Constancy of employment, 887. Apprentice system. Hours of labor. Does not think a workingman receives a fair share of the product of his labor: reason why he does not think so. Hands to the Commissioners a copy of claims for wages against the Hamilton Knitting Company (Limited) which failed in June, 1883, which cannot be collected, 888. Thinks that claims for wages should have preference over all other claims. Lien laws in existence may be good enough for some branches of industry but should be made to protect all branches. Lowest wages paid to carpenters and to inferior men who work as carpenters. The apprentice system, 889.

**HARPER, GEORGE, Compositor, Hamilton - - - 746-748**

Union rate of wages for morning papers to piece hands. Matter set by piece hands and weekly hands. Wages of weekly hands on evening papers. Wages of week hands in job offices. Hours of labor. Journeymen printers who own their own houses. Journeymen printers who have started business in Hamilton, 746. Number of branches working together in the newspaper offices. Plate matter. Hours of labor of piece hands. Benefits derived from the Union. Printers wages in Hamilton and the United States compared. Thinks the establishment of a Bureau of Statistics would be a benefit, 747. Rent of artisans' houses in Hamilton. Arbitration. Strikes. Female compositors, 748.

**HARRIS, GEO., Painter, Toronto - - - 366-367**

At his trade in Toronto 20 years. Different grades in the trade. Scale of wages. Hours of labor. Wages have increased during past five years. Apprentices. Organization has been a benefit. Arbitration and strikes. International society. Painters engaged by the hour, 366. Paid weekly and fortnightly, on Fridays, 367.

**HARTY, WILLIAM, Managing Director of the Canadian Locomotive and Engine Company, Kingston - - - 1023-1030**

Wages and duties of foremen. Wages of fitters, fitters-assistants, turners, planers, drillers, pattern makers, blacksmiths, boilermakers, boilermaker's assistants, carpenters and laborers in the employ of the company. Docking of employees when late. The laborers asked for an increase of pay last summer and were refused: reason why, 1024. Labor trouble the company had last summer with their employees, and how it ended, 1025. Moulders work by the day. Hours of labor of moulders. The attitude of the company towards men belonging to labor organizations. Garnisheeing

of wages for debt. The company rather than have trouble would pay weekly instead of fortnightly. Officials of the company always approachable when the men have grievances, 1026. Condition of the workmen: the bulk of them own their homes. The fact that so many of the men owned property decided the company to allow the works to remain in Kingston. Instances the case of a carter working for \$1 a day owning a large amount of property. Purchasing power of money in regard to the necessaries of life. House rent. The locomotives made by the company all sold in Canada, 1027. Since the change in the tariff they get all their pig and bar iron in Canada and their boiler plates from Scotland. Londonderry (Nova Scotia) pig iron compared with other kinds. Cape Breton coal compared with United States coal in price and quality. Able to lay down Nova Scotia coal cheaper than American coal, this season, for the first time. Men are paid according to their ability. Objects to labor organization dictating to employees what wages they shall pay any body, 1028. Instances the strike of last summer as a case in point, when 230 men struck because four or five laborers wanted 10 cents a day added to their pay. Manufacture their brass goods themselves except brass mountings which are made in Montreal and Toronto. The cause of shutting down the works three years ago. Loss to the company by being obliged to shut down, 1029. Able under existing circumstances to compete in their line with anything on the continent. Importation of American engines, 1030.

**HARVEY, J. T.** *Blacksmith, Ottawa* - - - - -

1131

Blacksmiths, and plumbers, wages. Hours of labor. Savings of workingmen. Paid once a week, 1131.

**HAWKINS, EDWARD,** *Engineer, Toronto* - - - - -

257-259

Has been a stationary engineer in Toronto for eighteen years. Has not passed an examination. Is in favor of examination of engineers. All high pressure engines in Toronto except a few. No Government inspection of engines and boilers. Has often run engines in a dangerous condition. Length of term an engineer should serve as apprentices. Other requisites of a good stationary engineer, 257. Stationary engineers have formed a society for the purpose of agitating for Government inspection of steam engines and boilers, and examination of engineers. Thinks inspection should be done every three months. Class of men who usually run stationary engines. Wages. A practical school for engineers required. The Practical School of Science does not meet the requirements of working engineers, 258, 259.

**HAYMAN, JOHN,** *Builder and Contractor, London* - - - - -

636-641

Average earning of a bricklayer. Daily wages. Constancy of employment. Strike in June last and how it was settled. Arbitration, 636. Laborers wages, &c. Hours of labor. Profit sharing: does not think much of the system. Bricklayers, apprentices. The rules of the Union regarding bricklayers apprentices. Notice given to contractors before a strike, 637. Reason why the men declined to submit to arbitration during the strike. Building branch of the Board of Trade. Organization of employers. Method followed in tendering by members of the Builders Exchange, 638. The objects and working of the Builders Exchange, 639-640. Reason why the Builders Exchange was started, 640.

**HEARD, JOHN,** *Carriage Woodwork Manufacturer, St Thomas* - - - - -

511-513

American and Canadian timbers used in making carriage woodwork compared, 511. Timber he uses and where he gets it. Education, and its effect on the working classes, 512. Shorter hours, 512-513. Apprentices. Use of machinery makes the work lighter to the men, 513.

**HENDERSON, ALEXANDER,** *Carpenter Detroit* - - - - -

395-398

Average rate of wages. Hours of labor in Detroit and Windsor. Have an Assembly of the Knight of Labor in Windsor. Knights of Labor carpenters at Windsor will

not work with any one who has not a brotherhood card, 895. Rents in Detroit. Average earnings in a year of a carpenter in Detroit. Carpenters in Detroit with reasonable care save money. Pay days weekly and fortnightly in Detroit. Apprenticeship system in Detroit, 396. Compulsory indenture system. Industrial school in Detroit. Night school for workmen in Detroit, fee too high. No free night industrial schools in the United States. Union men refusing to work with non-union men. Difference between a non-union man and a union man who has violated the law of the union. Price of land in Detroit, 397. American Brotherhood of Carpenters have petitioned Congress for an arbitration law, which shall be compulsory and the decision arrived at final. Has known cases where a union man would not work along with a non-union man even at the same wages and hours. Never knew of non-union men object to union men on the ground of being union men, 398.

**HENDERSON, JOHN, Manager for J. McLaren & Company, Lumber Merchants, Ottawa - - - - - 1137-1139**

Number of men employed by the firm. Wages of gang and circular sawyers, platform men, pilers &c. Hours of labor. The piling is done by a jobber who hires his own men. Wages of shantymen. Constancy of employment of mill hands. Arrangements made for paying the families of the men in the shanties, 1137. Any supplies (other than provisions) are furnished men in the shanties at the same price as they could buy them at home solely, for their convenience. Technical education. Night schools. Shipping of lumber. Accidents. Boys employed in the lath and shingle mill. Complies with the Ontario Factory Act regarding the age of boys employed. Factory Inspector's visits, 1138. Inspector left him a copy of the Act in pamphlet form. Accident last summer, 1139.

**HOUSTON, WILLIAM, Librarian Ontario Legislative Assembly - - - - - 223-231**

Statement regarding what is now being done in industrial training under present Ontario school system. Tendency of the present educational system of Ontario, 223. Advisability of infusing intellectuality or culture into the ordinary occupations of life. Simultaneous mental and physical culture in Ancient Greece. The grand educational blunder of modern times, 224. Outline of the changes necessary in our system of education. Night schools. Ontario public educational institutes described, 225. Kindergarten system. Not a scintilla of industrial training in our public schools. Necessity of counteracting the attraction of professional life by infusing more intellectuality into industrial pursuits. Outlining how it might be done in farming, 226. Agricultural College at Guelph. Thinks the public school system might be made more useful in the industrial direction. Exemplifies how it might be done, 227. What the aim of industrial education should be. Industrial training might be introduced into our educational system by improving the School of Practical Science, 228. Outlines how that school might be improved, 229-230. Cost of maintaining the Agricultural College and farm compared with cost of maintaining the School of Practical Science. No danger of mechanics being able to assert themselves in the matter of industrial education whenever they wish, 230. Competition in industry is necessitating industrial education. Other nations are introducing industrial education. Deterioration going on among the artisan class necessitates industrial education. Deficiencies in the present working of the apprentice system, 231. Organization of labor and its deteriorating effect on the artisan, 231-2. The best preventive for this deterioration is industrial education, 232. Thinks that the injury done to workmen relatively by modern progress has created a necessity for industrial education. Publication of public school books, 233-234. Fully one-half of the students going through Provincial University come from the farming and mechanical class. Concentration of capital, 234.

**HEWITT, JOHN, Rating Clerk in the City Waterworks, Toronto - - - - - 300-305**

Marked improvement in the intellectual condition of the working classes in the last fifteen or twenty years: but their material conditions more stringent than in years

gone by. What he considers the reasons why their material condition has not improved. Tendency of civilization is to centralize and monopolize, and that is always detrimental to the interests of the working classes, 300. Thinks that working people do not receive a fair share of the wealth created by labor. Believes that it would be better for both parties if producer and manufacturer could share in the production and profits. Believes that a scheme for the distribution of profit in manufactories so as to obviate middlemen will be the ultimate condition of things. Difference between cost of manufacture and cost of distribution estimated. Co-operation in manufacturing coupled with sterling morality, the solution of many questions which now trouble the working classes. Technical education, 301. Present school system turning out a class of men of little use to society. Technical education should commence at the age of ten or twelve years. Monopolies and division of labor deteriorating the working classes. Believes that monopolies will in the near future become so obnoxious that the masses will rise and wipe them out. Stringent legislation in regard to apprentices would have a beneficial effect. Convict labor, 302. Benefits of organized labor. Introduction of machinery has so cheapened production that hours of labor might be shortened, 303. Purchasing power of money as great or greater than ten years ago. Constancy of employment for laborers has decreased during the last ten years and he expects it will decrease still more during next ten years. Conspiracy laws, 304. Benefits of the repeal of the conspiracy laws in England. Condition of the working classes improved during the present century chiefly the persistency of labor organization, 305.

**HEWTON, JOHN, *Manager of the Kingston Hosiery Company, Kingston* - 979-983**

Number of male and female employees. Age of youngest girl. Hours of labor. Saturday half-holiday obtained by working eleven hours a day for five days in the week. Sanitary arrangements and ventilation. Factory Inspector pleased. Fire escapes, 979. Water supply. Reduction of wages in several departments recently, 980. Increase of cutters' wages lately. Machinery not dangerous and properly protected, 981. The introduction of improved machinery displaces labor but does not reduce wages. Time checks. Rules regarding employees who come in late, 982. Piece hands. Does not object to operations belonging to labor organizations. Business has increased during last five years. Product sold in the Dominion. Royalty on the seaming machines. The newest and most improved machinery is a necessity in order to compete. National Policy, 983.

**HOLDEN, WILLIAM, *Hamilton* - - - - - 808-809**

Age eighteen next month. Is a stemmer at Tuckett & Sons, has been there three and a half years. Wages. Expects to learn the trade. Condition of the factory, 808. The firm do not take apprentices unless they have worked in the factory a long time, 809.

**HODGSON, JOHN, *Engineer, Toronto* - - - - - 260**

Is a practical engineer. Government should conduct examination of engineers and grant certificates. Grading of engineers, 260.

**HODGINS, S. M., *Cigarmaker, London* - - - - - 649-656**

Has worked at the trade for twenty years. Cigarmakers have no bill of prices in London now; they take whatever they can get; reason why, 649. The cigarmakers belonging to the Union in London were "blacklisted" some years ago by their employers; describes how it was done. The men did not strike, but were locked out. The result of the locking-out and blacklisting was that between seventy and eighty men were driven out of the city and child labor employed instead of them. The use of the Cigarmakers' Union trade mark or "Blue Label." The cigar manufacturers in London in their efforts for cheap production have brought the trade to that state that there is no living for anyone in it. The effect of the Scott

Act on the trade, 650. How cuttings are disposed of. Prices of cigarmaking labor in the Province of Quebec and London compared. Three Rivers is swamping the country with a cheap grade of cigars. Child labor employed in London at cigarmaking; wages paid, age, and what becomes of the children when they have learned the trade. The employers refused to interview or hear the men at all at the time of the lockout, 651. An alleged case of plugging cigars; the action of the Union thereon; the investigation and its result, 651-652. Another species of blacklisting, 652. Iron-clad contract or having to sign an agreement to renounce forever the Union as a condition of employment. Benefits derived from the Union. Females belong to the Union; those who do get same wages as men; but none belonging to the Union work in London; reason why. Truck system. Foreign contract labor was employed at the time of the lockout, 653. Case of fining by the Union. Duty on foreign cigars. Denial of Mr. Rose's assertion that cigarmakers were all inveterate drunkards. Blacklisting, 654. Tenement house work does not interfere with the trade in Canada. Sanitary arrangements of the factories in London. How and where the Unions or "Blue Label" is allowed to be used, and its objects. Rules of the Union regarding strikes, &c., 655. Benefit the men get from the Union in case of a strike. Arbitration. What the Government ought to do if they desire to better the condition of cigarmakers, 656.

**HOLDER, G. R., *St. Thomas* - - - - - 535-538**

Runs the featherbone factory. Has been running for two years in the United States. Started here last January. Came here to avoid paying the duties. Number of hands employed. Featherbone is a substitute for whalebone. Is largely replacing whalebone in the United States, but difficult to introduce here. Class of labor he employs, 535. Skill required and how long it takes to acquire that skill. Hours of labor. Makes his own machinery. Thinks the iron working machines he bought in Canada superior to what he bought in the United States. Sanitary condition of his factory. Employs female labor, 536. How featherbone is made, 536-537. His idea of the value of industrial fairs, 537.

**HOLMES, J., *Painter, Hamilton* - - - - - 869-870**

Wages. Average earnings for the year. Wages in Canada and the United States compared. Rents in American and Canadian cities compared. Cost of the necessities of life in Brooklyn and Hamilton compared, 869. House rents in Brooklyn and Hamilton compared. Street car fares, 870.

**HOPE, GEORGE S., *General Woodworker, Chatham* - - - - - 461-465**

Has followed woodworking for three years. A good many employed at it in Chatham. Wages. Average employment nine months in the year, 461. Reason for the idle season of three months in the year. The use of machinery in wood working and its effect on labor. No regular apprentices. Hours of labor. Weekly payment on Saturday. Paid in cash. Prefers Friday as a pay day. Reasons. Lockout a year ago because the men wanted a reduction of one hour a week. Employers' organization, 462. Arbitration in settlement of labor disputes one of the strong planks in the platform of the Knights of Labor. Favors compulsory arbitration. Does not think the system of a rushing season and an idle season is absolutely necessary. Shortening the hours of labor, 463. Thinks a Federal Bureau of Statistics would be a benefit to the working classes. Sanitary condition of workingmen's houses in Chatham. Purchasing power of money not as good as it was five or more years ago. Rents have neither increased nor decreased. Wages of the working classes. Labor organizations beneficial. Advantage of being paid Friday instead of Saturday. Use of machinery. Objects to it, 464. Machinery imperfectly protected. Setting green boys to run dangerous machines. Factory Inspector did not notice anything wrong, 465.

HOWLAND, W. H., *Mayor of Toronto* - - - - - 159-169

Thirty-two years resident in Toronto. Classes of people who require assistance. Except extreme cases of misfortune there are only two causes of extreme poverty in this country, viz.: drinking and immigration of people unsuited to the country. "Poor-house taint." Immigrants who are helpless and willing to be helped, 159. Proper way to reclaim the helpless and criminal classes of the old country. Recommends the children that Dr. Barnardo and others are training as useful and valuable immigrants. Does not approve of the class of immigrants sent out by the various poor-house Unions in England and Ireland, and recommends that Canadian Government stop such immigration, 160. Dr. Barnardo's boys. Miss McPherson's Home at Stratford. Miss Rye's Home. It is not right to load this country with paupers from other countries. Climate makes them suffer more here than at home. News-boys in Toronto, 161. Thinks the Glasgow school system if extended would improve them. Petty crime; cause, and means to prevent. Result of that means of prevention being applied. Homeless boys in Toronto. Reformatory for boys not convicted of crime, 162. Industrial schools. The necessity for and how conducted at Mimico, 162-3. Class of boys we are turning out of our public schools, 163. How to properly train boys. Illustration of how boys are trained in crime. Technical education. Recommends the old guild or craft system as the right apprentice system, 164. Answers regarding the application of the guild system. Recommends technical education in common schools, not to make perfect tradesmen, but thinks it will make better men of the boys if so trained. Would combine primary technical education with ordinary public school education. Thinks our public schools terribly imperfect at present. Would make every boy familiar with the use of tools. Austrian system of compelling every boy to learn a trade, 165. Homes of the poor, 165-6. Sanitary condition when bad is not complained of at the sanitary office because poor tenants are afraid of their landlords. Recommends Government supervision of, 166. Advance in rents. Shop girls, their condition and wages. Female labor. Supply greater than the demand. Results thereof. Recommends that Government fix a price below which work should not be given to helpless classes, 167. Underpayment of women often leads to vice. Ability on the part of a mechanic to own his home less than it formerly was on account of the increase in value anywhere within reasonable reach. Distance necessitates street car fare which is a considerable item of expense, 168. Hopes to see the street car system in the hands of the corporation so as to reduce fares and so help to remove the difficulty, 169.

HUGHES, JAMES L., *Public School Inspector, Toronto* - - - - - 278-285

Age at which children are admitted to the schools in Toronto. Age at which children shall attend school according to Ontario law. Thinks the larger percentage of pupils in the lower classes indicates that they leave school earlier than they should. Quotes the attendance in the various classes of last year. Pupils leave school in large numbers at 13 years of age, 278-79. Accommodation in the public schools, not sufficient for all who wish to take advantage thereof; Crooks' 29th amendment the cause. Ventilation of school rooms, overcrowding. Maximum number of pupils each teacher should have. Number of pupils attending Toronto public schools at present, 279. School books. Present rate of taxation for school purposes in Toronto, 280. His idea regarding the possibility of grafting on the public school system, a system of technical education. Kindergarten system, 280-281. Instrumental music as a subject to be taught in public schools. Fulfilment in Toronto of the Ontario school law regarding attendance of children between ages of seven and fourteen. School books. Reasons for the introduction of technical instruction in public schools, 282-283. Publication of school books, 284. Female teachers. Public school curriculum, 284-285.

HUNT, JOSEPH, *Moulder, Toronto* - - - - - 148-150

Objects to the evidence of the last witness, Thomas Pickett, in reference to wages. Condition of moulders in Toronto is better in regard to wages. As the population and

growth of the city have increased so have wages. Combination among men has a tendency to keep wages up. General condition of the shops bad, bad ventilation and not sufficient protection against wind and weather. Men frequently made ill from this cause; and several deaths. Employers have been spoken to regarding this state of affairs and promised to remedy it, but have done nothing for last three years. Cost of living and rents both increased. Only machines used in moulding shops are cranes, could not do without them. Apprentices, 148. Hours of labor. Pay days. Friday best. Reason why. Wages and cost of living compared in Canada and the United States. Tenement house in Toronto. Building societies, 149. Cost of living itemized. Thinks moulders get a fair share of the results of their labor. The union does not make the rate of wages. Arbitration, 150.

HUTCHISON, ALDERMAN WILLIAM, *Ottawa* - - - - - **1095-1098**

Is a member of the firm of Thomas McKay & Co., millers. Average number of men employed by his firm. Wages of laborers (including teamsters and shovellers) and millers. Have a summer and a winter rate of wages. Reason for this arrangement. Apprentices and their wages, 1095. Hours of labor. Holidays. How the firm deals with men who get hurt in the mills by accidents. Savings of the workmen; fully two-thirds own their own property. Highest and lowest wages paid to millers. Number of millers employed. Night work; how arranged. Same rate of wages for night and day work, 1096. Apprentices. Accidents. Quality of wheat and flour now and ten years ago compared. Manitoba wheat. Local market for their product. Price of flour during last five years. Constancy of employment. No visit from the Ontario Factory Inspector, 1097. Employs a millwright and two assistants. Their wages, 1098.

JAMES, W. R., *Printer, St. Catharines* - - - - - **930-934**

Effect of the use of stereotyped plate matter. Wages. Factory laws. Blacklisting. Ironclad contracts. Truck system, 930. Child labor. Female labor employed in tailoring. Difficulty in organizing female labor. Arbitration, 931. Ontario Arbitration Act. Effects of labor organization on the working classes. Sunday labor, 932. Immigration. Establishment of a Bureau of Statistics. Convict labor. Employment of boys in factories to run dangerous machinery, 933. Co-operation, 934.

JAMIESON, R. E., *Ottawa* - - - - - **1107-1108**

Is a member of the firm of R. E. & J. C. Jamieson, bakers and grocers. Number of men employed in the bake shop. Female labor employed in the confectionery; their wages. Hours of labor. Gave up rightwork six weeks ago, reasons why. Ventilation of the bake shop. Closets. No visit from the Factory Inspector, 1107. Pay day once a week. Cash payment in full, 1108.

JENKINS, CHARLES, *Oil Producer, Petrolia* - - - - - **724-727**

Government oil test; its deficiencies: changes required in it. Competition from American oil, 724. Standard Oil Company in the United States. A change in the Government test required to allow the manufacturers to make higher grade oil. Crude oil as fuel. Lubricating oils, 725. Measurement of crude oil, 726-727. Oil tanks: their cost, 727.

JENKINS, GEORGE M., *Carpenter, Windsor* - - - - - **424-426**

Condition of the trade this summer much better. Average time carpenters are employed during the year is seven to nine months. Would like to see an arbitration law put in force, also a law making eight hours a legal day's labor, 424. Average yearly earnings of carpenters at Windsor. Wants to reduce the hours and increase the demand for labor. Hours of labor in Detroit. Organization of carpenters has enabled them to regulate their own affairs and not be governed by what the trade in Detroit does. Condition of the workingmen in England. His ideas on the apprentice system,

indenturing, &c, 425. Employment of inferior workmen injurious to the trade. Wants a law compelling contractors to make a scaffolding strong enough, 426.

**JOHNSTON, GILBERT, *Engineer, Kingston* . . . . . 941-945**

Is foreman of the Transportation Company in Kingston. Engineers' wages; hours of labor and constancy of employment. Apprentices. Indentures, 941. Wages of indentured apprentices, and their age at commencement. Paid weekly, on Friday nights, in cash. Profit sharing. Cost of living has increased, wages have not, 942. Labor organizations. Arbitration. Establishment of a Bureau of Labor Statistics. The sanitary condition of his workshop. Fining of employees. Overtime. Convict labor, 943. Immigration, savings of workmen. The majority of the men under him own their own houses. Rate of interest on loans for building purposes. The examination and licensing of stationary engineers. Steamboats not as seaworthy as they should be sometime, 944. Thinks Government made a mistake in their recent legislation allowing any one to run the engines of a tug, reasons why, 945.

**JOHNSTONE, JAMES C., *Cornwall, Contractor* . . . . . 1078-1079**

Wages of stonemasons, bricklayers, plasterers and carpenters in Cornwall. Constancy of employment. Labor organizations, 1078. Wages of builders' laborers. No accidents in the building trade in Cornwall last year, 1079.

**JONES, THOMAS . . . . . 556**

Corroborates the evidence of Mr. J. R. Morford, Division Superintendent of the Michigan Central Railway, 556. His opinion of bell cords on freight trains, 576.

**JOYCE, JAMES, *Blacksmith and Oil Producer, Petrolia* . . . . . 730-732**

Manufacture and exportation of oil well tools. If there were a better class of Canadian oil made it would shut out American oil. Blacksmiths' wages. Constancy of employment of blacksmiths, 730. Oil well tools: cost and description of a complete set. Number of men employed in the oil well tool business. Measurement of crude oil tanks; thinks there should be a Government inspector. Importation of oil well tools, 731. Canadian made oil well tools more durable than American. Hours of labor. Employed all the year round, 732.

**KANE, JAMES, *Carpenter, Toronto* . . . . . 274-275**

Defects in the working of the mechanics' lien law. Suggestion for the improvement of mechanics' lien law, 274. How to employ prison labor, 274-275. Arbitration. Bureau of Labor Statistics. Opinion regarding technical education, 275.

**KEEFER, JOSEPH, *Compositor, St. Catharines* . . . . . 927-928**

Agrees with the statement of A. J. Carrol (see p. 925). Inspection of stationary engines and boilers, 927. Child labor. The Factory Inspector has not visited this district yet. Immigration, 928.

**KEHOE, EDWARD, *Seaman, Detroit* . . . . . 418-419**

Many barges not able to take care of themselves when they break loose from a tow, from not having sufficient sailing gear and not being sufficiently manned. Rigging and gear necessary to obviate this. Spars frequently carried away on account of defective standing gear, 418. Regular season of navigation on the lakes. Objections to female cooks. Insufficiency of life boats and pump valves. Many vessels do not have lake charts at all. Many captains who cannot read their own names and consequently could not use the charts, 419.

**KEER, JAMES, *Secretary of the Petrolia Oil Exchange, Petrolia* . . . . . 717-722**

The present system of Government oil inspection gives a guarantee as regard the safety of the oil but none as regards the quality. It would be in the interest of the

whole of Canada if a guarantee of the quality were given also: it would increase the market about 50 per cent., 717. Action of the Oil Exchange in regard to a quality standard, 717-718. What the Petrolia Oil Exchange is. Benefits to oil producers from the Exchange, 718. How members are admitted. What led to the establishment of the Oil Exchange. The production of oil three or four years ago compared with now. Surplus crude oil shipped to Chicago for fuel. No over-production of oil at present, 719. The flash tests and different characteristics of Canadian and American oil. The changes required in the Government inspection of oil. Canadian oil where properly purified is better than any American oil which comes into the country, 720. Approximate number of barrels of oil produced in Petrolia daily. Thinks that the duty on oil is high enough already; reason why he thinks so. Price of oil suitable for the Maritime Province trade. The American oil that goes to the Maritime Provinces is extremely poor stuff, 721. Cost of transporting oil to New Brunswick and Nova Scotia, 722.

**KERR, JOHN, Builder, Petrolia - - - - - 706-707**

Is engaged in the lumber, hardware and building businesses. Where he gets his lumber. Exports hardwood lumber to New York to be sent to Europe. Exports also manufactured goods required for drilling purposes. Inspection of oil measures and inspection of the burning qualities of oil. Inspection of boilers in which the refining is done, 706. Engineers in charge of boilers and engines, 706-707. Pay days of his employes. Number of men he employs. Relative position of workmen and employer in regard to sale and purchase of labor. Savings of workmen. Co-operation. Profit-sharing, 707.

**KERR, ROBERT, Foundryman and Merchant, Walkerville - - - - - 372-376**

Ten years in Walkerville. Class of work he makes. Does not think the business could stand at all without protective duties on certain articles. His labor costs more than it would in Detroit; reason why. Position of Walkerville at the end of the county makes iron cost more on account of freight. Only foundry in that part of the country which can turn out heavy forgings. Pig iron about same price as in Detroit. If there was no duty would be able to use iron from the United States, but prefers Scotch iron. Gets steel from England. Any product he makes a specialty of he can sell fully as cheap as it can be had in Detroit, 372. The large market of the Americans a benefit to them. Has special machinery for what he makes a specialty of. Tobacco growing at Walkerville. Some of the hands belong to labor organizations. Hours of labor. Piece work. Varies wages, according to what a man is worth. Never had any dispute with his men, but favors arbitration in settlement of labor disputes. Does not think Government should make arbitration compulsory, 373. A school teaching the principles of mechanics would be of use to men in his business. Apprenticeship; favors indenture. Boys would make better mechanics if they had technical teaching in schools. No one should be allowed to work at a trade without first serving his apprenticeship. The tradesman who has served his apprenticeship is entitled to the protection thus afforded. Branch manufacturing firms from the United States in Canada. How they are sometimes run, 374. Mechanics not first class who have not served an apprenticeship, at certain kinds of work. Wages paid in cash. Truck system. Thinks the mechanics of to-day is better intellectually and morally than they were ten years ago. Mechanics cannot save much money for lack of steady employment all the time. Thinks shortening of hours tends to improve the mechanics' mind, 375. A good many mechanics in Windsor own houses; acquired them on the monthly payment system, through loan associations. Does not fine men for being late, but docks them for the time they lose. Visit of the Factory Inspector. Rents of mechanics' houses in Windsor and Detroit. Wages; he pays his men higher than they can get in Detroit, 376.

**KIDD, W. G., Inspector of Schools, Kingston - - - - - 940**

School accommodation. Number of pupils a teacher should have. Kindergarten system. Age when a child should be admitted. Technical instruction: Heating

and ventilation of the Kingston school. Average attendance. The whole school population. Salaries of the teachers, male and female. Teachers' certificates. Female teachers do not get as large salaries as male teachers; reason why. It would be an advantage if books were supplied free; reason why. Night school. Mechanics Institute. Free library. Library in connection with the public schools. Saturday afternoon holiday would give more time for reading. Hours when the school library is open, 940.

**KILLEY, J. H., of the Osborne-Killey Manufacturing Company Hamilton - 904**  
Corroborates the evidence of his partner, Mr. Osborne (see p. 902), 904.

**KING, EDWARD, Cornwall, Mill operative - 1074-1075**  
Is boss carder in the Stormont Cotton Mills. Number of operatives employed in his department. Proportion of female labor. Child labor, ages of the children and their wages. Fining of employees. Condition and location of the closets. Supply of drinking water. The trouble which caused the rumor about ill treatment of operatives by overseers, 1074.

**KING, J. B., Compress Tobacco Maker, Hamilton - 816-817**  
Wages of men employed in his capacity. Length of time it takes to learn. Hours of labor. Wages of the man who runs the tobacco pressing machine, 816. Hours of labor. Does not think it is possible for a man to do as much in eight as in nine hours a day, 817.

**KNIGHT, A. P., Rector of Collegiate Institute, Kingston - 941**  
Numbers of subjects taught in the common and secondary schools should be reduced so as to leave room for technical and practical teaching. Technical teaching as a means of mental training. What education should aim at. Kindergarten. What subjects now taught might be curtailed, and what new subjects introduced with benefit. Fees and expense of books prevents the children of mechanics attending the institute. How school books should be supplied. Fees for the Collegiate Institute not uniform, 941.

**KNIGHT, ALBERT T., Manager of the mills of the Canada Cotton Company 1066-1068**  
The two recent strikes of the cotton operatives; the cause of them, 1066. Finally settled by arbitration. Does not know of any employee being discharged because he was a Knight of Labor. Is not aware of any objections on the part of the company to men belonging to labor organizations. The powers and duties of overseers. Fining of employees. Supply of water. Sanitary condition of the closets, 1067. How the present schedule of wages was arranged. No rule regarding fining of employees for being late, 1068.

**KRIBS, LOUIS P., Journalist, Toronto - 197-203**  
His knowledge of industrial education is theoretical, not practical. System of apprenticeship disappeared in this country and we have nothing to take its place. Division of labor militates against thorough training of artisans. Defects in the training received in Toronto public schools. Kindergarten. Night schools, 197. The necessity for technical or industrial education. Zurich Polytechnic School. Munich Technical High School. Chemintz Weaving School, 198. Westphalia Industrial School and the system of apprenticeship. Other industrial schools in Europe and America, 199-200. Kindergarten system furnishes the proper foundation for industrial education, 200. Practical education should be combined with ordinary teaching in our public schools. Specialty among mechanics, 201. Canada must always be at a disadvantage in manufacturing with other countries if her workmen are not properly educated and trained. Kindergarten schools. Everything used in schools should be

free to the pupils. Mimico Industrial School. City street waifs, their disadvantages and what should be done for them, 202-203.

**LABELLE, OCTAVE, Sub-foreman for Charlebois & Co., Contractors, Ottawa 1160-1161**

Number of men the firm employ. Wages of joiners. Men paid according to ability. Finds more common workmen than able ones. Strikes of stonecutters and bricklayers employed by the firm two years ago, and how they were settled, 1160. The architect's irresponsibility for mistakes. Evils of sub-contracting. Legislation required regarding the responsibility of the owner, architect and contractor for workmen's wages, &c., 1161.

**LALIBERTÉ, ALBERT, Tailor, Cornwall . . . . . 1083**

Is a merchant tailor. Employs female labor. Wages of females and males. No school of art, trades or design in Cornwall, 1083.

**LANCEFIELD, RICHARD T., Manager Publication Department of Grip, Toronto 25-28**

Inconsistencies of present assessment laws. Taxes of workmen would be less if assessment were made on the land and not on improvements. Exemptions from taxation, &c., 25 to 28.

**LANCEY, BLAKE, Dry Goods Merchant, Petrolia . . . . . 713-714**

Cost of dry goods in Petrolia compared with other places. Truck system, 713. Salaries of dry goods clerks. Female labor in dry goods stores, 714.

**LANE, JOHN, Stonecutter, Ottawa . . . . . 1123-1124**

Stonecutters' wages. Constancy of employment. The apprentice system, 1123. Sub-contracting and piece-work, 1124.

**LAVELL, WARDEN, of the Kingston Penitentiary . . . . . 937-938**

Distribution of the convicts at trades. Percentage of criminals who are returned to the penitentiary. Necessity of providing intelligent labor. Contract system of using prison labor. Effect of penitentiary labor on free labor. Manual labor should be used when possible; reason why. Penitentiary trade instructors. Compensation to prisoners for accidents from machinery, 937. What prisoners receive when discharged. How prisoners are employed now. Idleness of prisoners a worse evil than competition with free labor. How prisoners in Sing Sing and Auburn are employed. Labeling of prison goods. Effect of allowing a portion of the profit of their labor to go to the prisoners. Difficulty of getting sufficient Government work. If he had a 100 more convicts he would not know what to do with them. Penal colony. Hours of labor. How the women are employed. Government might give them all the work required, 938.

**LEE, GEORGE, Piano Maker, Toronto . . . . . 958-959**

Wages of a piano polisher in Kingston. Piano makers work on piece work; difficult to average them, 958.

**LEE, ROBERT, Carpenter, Toronto . . . . . 140-144**

Has been fifteen and a half years in Toronto. General condition of carpenter business at present. Has taken an interest in Trades Union. Is doubtful about the benefit derived from combinations among workmen. Very likely benefits in shortening hours of labor. Does not know of any rule which prohibits a union man from working with a non-union man. Has never known union men to interfere with non-union men. Effect of strikes on the trade. Arbitration, 140. Thinks the men would agree to a compulsory court of arbitration. Blacklisting. The use of machinery in carpentering, its effect. Apprentices. Indenture system; approves of it. Pay days, 141. Grading of men. Does not know of any apprentice system; thinks it would be better if there was one. Sanitary condition of carpenters' establishments. Number

of working hours. Condition of workmen at present better than it has been. Thinks the use of machinery in carpentering a necessity, and a benefit in some cases to the men, 142. Condition of workmen now and ten years ago contrasted. Cost of living. Workmen who are property holders. Workmen generally improved in their moral and intellectual condition; causes which have led to that result. Free library. Average age of boys engaged as apprentices. Thinks shortening hours of labor tends to make men more intelligent. Machinery, 143. Wages of carpenters generally paid in cash. Last summer when the carpenters offered to settle disputes by arbitration the employers refused. Blacklisting. Technical schools. Does not think the average mechanic in Toronto can save money and keep himself respectably, 144.

LEFEBVRE, JOSEPH, *Invalid, formerly in the mills at Ottawa* . . . . . **1135-1137**

Lost his arm and leg in a saw mill while at work when twelve years of age, describes the accident and how it occurred. 1135. Compensation he received. Has not been able to get work since. Children employed in the same mill now. Their ages. Other accidents which happened in same mill. 1136. Treatment of the children. Can read and write a little. Children go to school in the winter and work in the summer, 1137.

LEIGH, FREDRICK JAMES, *Engineer, Kingston* . . . . . **1017-1018**

Is superintendent of the locomotive works in Kingston. Number of men employed under him. The number of engines the company have in course of construction. Proportion intended for Canada, 1017. Number of foremen under his control. Length of time he served to become an engineer in the Old Country (Scotland), 1018.

LEONARD SAMUEL, *Hosiery Manufacturer, Dundas* . . . . . **859-861**

Is a member of the firm of Leonard, Sons & Bedford, Dundas, manufacturers of knitted goods. Class of labor they employ. Wages of the men they employ. Boys are not indentured. Length of time they work before becoming skilled workmen. Length of time required to make good operators of girls and women. Their wages. Hours of labor. Kinds of wool used, 859. Heating and conveniences of the work-rooms. Machinery so well protected they never have an accident. Visit of the Factory Inspector. Number of hands employed. Wages. Piece work. Never enquire if their hands belong to any labor organization or not, 860. Fining for being late. Half holiday on Saturday, 861.

LEVERT, HEL. LOUIS, *Ottawa, Laborer* . . . . . **1163**

Boys employed in saw mills, 1135.

LIMEBECK, MARK, *Cotton Spinner, Hamilton* . . . . . **899**

Employed in the Ontario Cotton Mill. Hours of labor. Wages. Length of time required to become expert. Female spinners. Healthiness of the occupation. Does not know of any cotton mill operatives union. Minimum age of girls employed. Fining of employees, 892.

LITTON, JOHN, *Driller, Kingston* . . . . . **956-957**

Is an iron driller in the locomotive works. Wages and hours of labor. Savings of iron drillers. Profit sharing. Wages of laborers in the locomotive works. Necessaries of life and house rent have increased during last five years. Immigration. Condition of laborers in Kingston and the "old country" compared, 956. Thinks shorter hours of labor would improve workmen intellectually; hopes it would not injure them financially. "Steam sawing and the wages of a steam Sawyer in the old country," 957.

- LOYD, HENRY, Carpenter, Toronto** . . . . . **235-241**  
 Carpentry business improved slightly during last eleven years, but not in proportion to other trades in building line; improvement due to organization. Organization a direct benefit to labor. Wages at present in Toronto. Is a member of the executive committee of the Union. Had an agreement with the employees regarding wages; result of that agreement. Describes the effort made by Union men to renew the agreement and settle disputes before the strike, 235. Changes in the agreement asked for. Arbitration, 236. Rules of the Union regarding non-union men. Difficult to learn the trade under the present apprentice system. Union favors having apprentices indentured. Corporation building among carpenters. Thinks that clause 23 of the Ontario Arbitration Act would prevent the settlement of such a dispute as the carpenters had last summer. The most frequent cause of labor disputes among carpenters, 237. The effect upon the carpenters of the employment of unskilled labor. Thinks there should be a difference in the pay of mechanics who are efficient and those who are not. Hours of labor. Sunday labor. Overtime, 238. Wages of bricklayers and house painters, compared with carpenters wages. Meeting of the Master Builder's Association and the Carpenters Union previous to the strike of last summer and matters discussed thereat, 239. Unskilled carpenters or "handy men" and the effect their working for less wages has upon the competent carpenter, 240-41.
- LOYD, HENRY, Carpenter, Toronto, recalled** . . . . . **272-274**  
 Is in favor of arbitration, 272. New York State law regarding arbitration, 272-3. Does not know of any industrial or technical schools or classes in Toronto. The Practical School of Science does not meet the requirements of workmen. Opinion regarding industrial schools. Prison labor, 273-4.
- LUMSDEN, JOHN H., Printer, Toronto** . . . . . **108-113**  
 Has been a printer over 20 years. Part of that time an employer of labor. Is a member of the Typographical Union. Rules of the Union regarding strikes. Apprentices. Female members. Arbitration. What constitutes a week's work, 108. Wages in Toronto paid weekly in most cases. Friday preferred by the majority of men as pay day. Date of the inauguration of the Printers' Union in Toronto. Number of strikes which have occurred since then. A great deal more printing done now in Toronto than formerly. Art of printing so much improved that illustrated work which used to come from a foreign market is now done in the city, 109. Printing in box factories. Females generally employed making boxes. Hours of labor in box factories. Sanitary condition of box factories. Working printers seldom own the houses they live in while employers have become wealthy. Apprentices, if indentured to the trade, make better mechanics, 110. Stereotyped plates. Union rule in regard to the efficiency of men admitted as members. Reasons for restricting the number of apprentices by the union, 111. Average earnings of a printer on newspaper work. Has known of employers objecting to employ a man because he belonged to the union. Union men object to work with non-union men, 112. Rules and precedents of the union regarding non-union men, and members who have violated the rules. Age apprentices ought to be before going to the trade. Female compositors. Education of boys. Thinks the average mechanic in Toronto can afford to keep his children at school till they are sixteen, 113.
- McANDREWS, WILLIAM, JR., Foreman Printer, Hamilton** . . . . . **748-752**  
 Is president of the Typographical Union of Hamilton. Workingmen owning property, 743. What a printer gains by travelling. The system in vogue of getting tenders for job work, &c. Lien laws, 749. Profit sharing. Arbitration. Apprenticeship system, 750. Does not approve of indenturing. His reasons therefor. Immigration, 751-752.

**McANDREWS, WILLIAM, recalled** . . . . .

759

Statement on behalf of the Typographical Union regarding the evidence of Mr. John Smith referring to the deaf and dumb printers sent out by Miss Gordon, 759.

**McCLARY, JOHN, Iron Founder and Tinware Manufacturer, London** . . . . .

612-615

Employs about 300 hands. Wages of moulders and constancy of employment, 612. Apprentices to moulding trade: indentured: serve three years. Approves of the indenture system. Female labor employed in the tin department: at soldering and japanning. Separate rooms for males and females. Wages of females. Capacity of females at that kind of work compared with that of men. Tinsmith's wages. Convict labor. Piece work, 613. A strike occurred among his men five years ago; the reason of the strike and how it was settled. Considers that a boy can learn stove moulding in three years. No attempt was made at arbitration during the strike. Does not believe compulsory arbitration possible. His opinion regarding a Government court of arbitration, 614. His opinion of the action of the Union during the strike. Is nominally a member of the Stove Manufacturers Association. Would not employ knowingly an escaped convict; but would not object to employ a man who had been a convict; and would pay him same wages as other moulders were receiving, 615.

**MACDONALD, GEORGE, Cornwall, Gentleman** . . . . .

1072-1073

Is postmaster and, last year, was mayor of Cornwall. Proportion of the working classes in Cornwall who own their own houses. Assessment. Corporation relief. Corporation laborer's wages, 1072. Constancy of employment of corporation laborers. House drainage in its infancy in Cornwall. Water, gas and electric light are owned and served by private companies in Cornwall. Corporation laborers paid monthly. Number of factories bonused; stipulations regarding the bonuses. No free library and no public night schools, 1073.

**McFARLANE, W. J., Carriage Maker, Toronto** . . . . .

114-119

Six years in Toronto. Wages during that time have decreased. Reasons for decrease being the importation of foreign goods, in parts made by machinery. Carriage makers of Toronto, some of them organized. Union and non-union men do not work in the same shops. Hours of labor. Standard rate of wages. How paid. Apprentices. Cost of living higher. Rents of dwellings higher. Arbitration preferred by the organized carriage makers to strikes. Benefits of organization, 114. Arbitrations: opinion as to how it should be conducted. Believes in Government interference in labor disputes in some cases. Effect of organized labor on carriage makers. Hours of labor. Reason why Canadians cannot compete with Americans in the production of carriage wood work. Apprentices: ages at which they commence, 115. Timbers used in carriage making and where procured. Leather work imported. Iron work got in Montreal. Wages in Canada compared with the United States. Amount of reduction in wages in six years. Factory system injures the mechanic, 116. Convict labor does not injure carriage making but immigration does. Nationality and competency of the immigrant carriage maker. Rents risen very much last two years. Sanitary condition of carriage factories, 117. American carriage making not so good as regards labor or work as Canadian but cheaper. Prices of the various parts used in carriage making, 118. Canadian carriage makers get better wages in the United States than American. Carriages wholly made in Canada, 33½ p. c. better than those imported from United States, 119.

**McGOWAN, John, Moulder, London** . . . . .

688

Confirms the evidence of J. B. Murphy of London, 688.

**MOLLWAIN, WILLIAM** . . . . .

907-910

Is inspector of hulls for the Canadian Lloyds, and is employed by Government to examine masters and mates of vessels. Captains Harbottle and Dick of Toronto

are Government inspectors of hulls. The proper test in examination of a vessel's hull. There are several vessels now sailing on Canadian waters that cannot be classed and are deemed unworthy of insurance, 907. How vessels are graded by the insurance inspector. Vessels sailing on inland lakes which have been refused insurance. Vessels lost which were classed too low for insurance. Vessels sailing which are not properly rigged and equipped. Inland vessels are not sufficiently manned. The necessary crews for vessels, 908. A sufficient number of unseaworthy vessels afloat to warrant Government prohibiting the use of them. A great many of the vessels now afloat are made unseaworthy by overloading. The Plimsoll load line is the proper remedy for overloading. The law regarding mates' and captains' certificates not thoroughly enforced. The proper officers to enforce the law, 909. Government should do all the inspection of vessels, sail and steam, and it should be done when they are running. The proper person to examine vessels, their crews and officers. Life boats. Forecastles of many barges unfit for human beings to live in, 910.

McLAREN, JOHN, *Gilder, Toronto* . . . . . **177-179**

Has been working as journeyman at the gilding business in Toronto for three months this term and five or six months two years ago. Gilder's wages not as high as five or ten years ago: more work done now than formerly. No women employed at gilding. Introduction of "German metal" has created a revolution in the gilding business and reduced wages. More boys at the trade now on account of the German process which does not require so much skill. Average wages. Piece work. Apprentices, 177. Women work at ornamenting mouldings. Pay days. No co-operative moulding factory in Toronto. Imported mouldings. Wages lower in Chicago than Toronto on account of the foreign labor there. Strikes: cause of one some time ago and how settled. Cost of living greater in Chicago than Toronto, also rents. Night work, 178. Sanitary condition. Ventilation. Wages paid in cash. Mode of living in Chicago compared with Toronto. Better class of work to be had in Chicago. Not a healthy business, 179.

McKAY, ALEX., M. P., *Hamilton* . . . . . **803-807**

Has been Mayor of this city for two years and was Alderman for seven years previous to that. The amount of destitution in Hamilton and classes of applicants for relief. Causes of the destitution, 803. The civic authorities work in conjunction with the benevolent societies in granting relief. Corporation laborers; their wages, 804. Contract system of doing corporation work. Is satisfied that the work does not suffer by being done by daily labor. Providing of corporation work to relieve those in want. Rate per cord paid for stone breaking. Corporation laborers are paid fortnightly. Possibility of corporation laborers saving money, 805. Corporation laborers who own property. Other daily laborers who own property; their wages. Laborers' Union. Printing of assessments rolls, 806. Mechanics who own property. Working people who have been able to save enough to keep themselves in old age. General state of comfort of the people of Hamilton, 807.

McKAY, ROBERT, *Foreman Car Department, Canada Southern Division,  
Michigan Central Railway, St. Thomas* . . . . . **564-566**

Rate of wages paid skilled mechanics. Hours of labor. Constancy of employment. Condition of the shop and machinery. Factory Inspector. Material condition of the employees. Savings and investments. Apprentices, 564. Mechanics' wages. Constancy of employment. Piece work. Protection of machinery, 565. Pay days monthly. Rule regarding men whose wages are garnisheed, 566.

McKAY, ROBERT, *Foreman Car Works, recalled* . . . . . **570-571**

Opinion as to the respective merits of the various kinds of car couplers, 570, 571.

MACKAY, THOMAS, *Hamilton* . . . . . **764-768**

Is a retail grocer over twenty-eight years in business in Hamilton. Price of groceries

compared with prices in former years, 764, 765, 766. Thinks groceries are cheaper now than they were five or ten years ago. Flour cheaper also, 765. Class of teas he sell most of now. Age of boys who commence to learn the grocery business; their salaries. Hours of labor. Cause of the present increase in the price of sugar. Truck system, 766. Whiskey is about five times as dear as it was. The credit system. Thinks monthly accounts as good as cash. Does not think that if workmen were paid weekly instead of fortnightly it would prevent them asking credit. Grocers in Hamilton tried to form an association but could not agree, 767. They tried to regulate prices and report bad paying customers but did not succeed. They did not publish a blacklist among the members; but he thinks if they could agree to do so it would be a good thing, 768.

**McKENNA, JAMES, Moulder, London**

**600-604**

Where the moulding shops are not strictly union they are overrun with apprentices. No proper case is taken to teach apprentices their trade. Custom of the union regarding the teaching of apprentices. Would undoubtedly be better for all concerned if there was a proper apprentice system. Ago a boy should be before commencing the business: length of time he should serve, 600. Had a strike six years ago: how it was settled. Would favor a law compelling arbitration. Moulder's wages in London. Hours of labor. Nearly all piece work in stove plate moulding. Organization required for the moulders in London. Benefits in connection with the Union: Immigrants do not interfere to any great extent, 601. Prison labor. Sanitary condition of the shops. Accidents. Co-operation. Wages in the United States and Canada compared. Rents and cost of living in the United States and Canada compared. Men paid every week, on Saturday nights, 602. Rents of workingmen's houses in London. Case of blacklisting. Constancy of employment. High roofs required in moulding shops to allow the gas and steam to rise, 603. Manufacturers bringing convicts from Elmira prison to work in moulding shops, 603-604.

**McKENNA, JOHN, Broom-maker, Hamilton**

**905-907**

Number of persons employed at broom-making in Hamilton. Proportion of boys to men. Apprentices two years to serve. Broom-maker's wages. Constancy of employment. Convict labor and its effects on this industry. Prices per dozen brooms paid for convict labor by Nelson & Sons, of Montreal, and the rate for free outside labor compared, 905-907.

**MACKENZIE, CAMPBELL, Cartage Agent, Grand Trunk Railway Company, Toronto**

**360-361**

Number of men employed in the business in Toronto: their wages, hours of labor, duties, constancy of employment, 360. Outsiders cannot take or deliver freight under the present system. Grand Trunk Company includes cartage in their rates. Does not know of any other obstacles thrown in the way of independent carters delivering freight. Never heard of any special legislation in favor of Grand Trunk Company, 361.

**McKETTRICK, THOMAS, Oil Producer, Petrolia**

**695-698**

Overproduction the cause of the present low prices. Storing of oil. Laboring men's wages, 695. Sunday labor. Men are paid, some weekly, but the companies as a rule pay by the month. Truck system. The standard measure of crude oil. A general desire on the part of producers to have the tanks inspected and measured by Government. Material condition of workmen, 696. Rents. Monthly payments. Truck system. Price of beef. Arbitration, 697.

**McMAHON, WILLIAM, Book-keeper for Messrs. McLean, Roger & Co, Parliamentary Printers, Ottawa,**

**1141-1143**

Number of printers the firm employs. Wages and hours of labor of night and day gangs of printers. Wages of pressmen and rate of pay for overtime. Wages of female

press feeders and rate of pay for overtime. Females are not discharged nor fined for refusing to work overtime when required. Wages and hours of labor of book folders, and rate they are paid for overtime. Sanitary condition of the office, 1141. Ventilation. Condition and location of the closets. Wages of copy holders. Women as compositors and press feeders, 1142. Factory inspection. Means of escape and protection in case of fire. His knowledge of and the firm's compliance with the requirements of the Ontario Factory Act. Accidents. The office is a union office, 1143.

**McMULLEN, RICHARD, Piano-maker, Kingston - - - 947-949**

The business has not increased in Kingston but has all through the Province. Difficult to average wages because the men all work piece work. A few boys employed, no women; age of the boys. Use of machinery has lowered the quantity of work but not the wages. Visit of the Factory Inspector, 947. Hours of labor: does not want them reduced if the pay is to be reduced also. Condition of the working classes here and in the Old Country compared. Wages here and in the Old Country compared. Effect of shortening the hours of labor, 948.

**McNALLY, THOMAS, Woodwork Machine Hand, Windsor - - - 423-424**

Machinery imperfectly protected in the shop at Windsor. Employed about seven months in the year. Wages, cannot save much if any. Rents. Cost of living. Thinks arbitration the right way to settle labor disputes. Favors compulsory arbitration, 423. Boys run some of the machines. Wages paid them, 424.

**McNEIL, JOHN, Iron Moulder, Kingston - - - 949-951**

Is a machine moulder. Hours of labor and wages of machine moulders. Constancy of employment. Apprentices, 949. Men paid fortnightly in cash and in full. Has not heard of any desire to be paid more frequently. Thinks moulders get a proportionate share of the product of their labors. Sanitary condition of the shops. Baths and washrooms for moulders. Ventilation of moulding shops, 950. Convict labor, 951.

**McPHADDEN, ROBERT E., Boiler-maker, Kingston - - - 957-958**

Average wages and hours of labor. Constancy of employment. Apprentices. Technical education. Social condition. Wages and cost of living in Canada and the United States compared, 957. Immigration. No standard rate of wages, men paid according to ability. Men paid every two weeks in full and in cash, 958.

**MAOHAR, MISS, Secretary of the Relief Association, Kingston - - - 969-971**

Kingston Poor Relief Association, of whom composed, and its objects, 969. Expenditure for relief. Classes of people who apply for relief. Immigrants who apply for relief. Society of St. Vincent de Paul. Length of time the Kingston Poor Relief Association has been in existence, 970 and 971.

**MARSHALL, ROBERT, Marine Engineer and Boilermaker, Kingston - - - 1042-1043**

Is a steamboat engineer during the summer and is a boilermaker in the winter. Boilermakers' wages. Steamboat engineers' wages. Thinks the law requiring certificated engineers on steamboats of a certain class should include tugs and barges as well as passenger boats. Steamboat engineers objected to the doing away with certificates, 1042. Engineers from Canada cannot run an American boat unless they be American citizens. Tariff rate of steamboat engineers' wages. Marine engineers' organization. Inspection of boilers and hulls. Unseaworthiness of some of the hulls on the upper lakes. Government should bring tugs under qualified engineers. It would be better if engineers had regular watches. Inspection of steamers, 1043.

**MARTIN, ANNIE, Cornwall, Cotton Spinner** . . . . .

1086

Is employed in the spinning room of the Canada Cotton Mills. Works by the piece. Wages. Constancy of employment. Supply of drinking water. Means of escape in case of fire, 1086.

**MASSEY, JAMES, Warden Central Prison, Toronto** . . . . .

341-347

Convict labor must more or less come into competition with outside labor, 341. Differences of opinion as to how convict labor ought to be employed. Thinks from a direct provincial point of view that convict labor cannot be employed without loss. In the Central Prison they make all the clothing and boots and shoes required for all the gaols in Ontario, but it employs very few men. On account of the short terms of imprisonment it is not possible to sufficiently train skilled labor in prisons, to make blankets, cottons, &c. Thinks prisons should be reform schools as well as places of punishment. Principal lines of business carried on in Central Prison now. Nearly all the products of Central Prison labor come into competition with outside labor. Central Prison labor principally let out by contract, 342. Contract expires in May, 1889, and will be discontinued after that. Does not think it possible to employ prison labor without competing with outside labor. Does not think that convict labor has driven free labor out of the market in Canada in those branches it has been employed in. Not many contractors who make money out of convict labor, but think the Government might under certain condition make a profit out of it. Particulars regarding convict labor in Central Prison, 343. Stamping of convict work as such. On the use of machinery in teaching trades to prisoners. Effect of contract work on prisoners. Reducing prison work to tasks. More than two-thirds the prisoners of Central Prison are from the county gaol, 344. Goods for the use of Government might be manufactured in prison if the men were imprisoned for long terms. Rate the contractors' pay for prison labor, and other arrangements with the contracts. Does not think the Factory Inspector has any control over Central Prison, but should not object to inspection at any time, 345. Employing convict labor in making goods for export so as not to interfere with free labor at home. The first duty of prison authorities is the safety of the prisoners and then to work for their reformation. Does not think prison labor in Canada has a disturbing influence on the markets. Brooms can be made cheaper in Quebec than the contractor pays in Central Prison. Earnings of the prisoners, 346. How "tasks" are arranged in Central Prison, 347.

**MATTHEWS, JR., RICHARD, Printer, London** . . . . .

631

Is a book compositor. Is paid by the week. Wages. Hours of labor. Book work by the piece. Piece hands and day hands employed in some offices, and the fat matter is given to the day hands. More apprentices at the job printing trade than there are men, 631.

**MEAD, OWEN, Toronto** . . . . .

214-217

Is permanent Secretary of Metropolitan Lodge Manchester Unity of Oddfellows, Lodge 6531. Branch societies in Ontario are not incorporated. Parent society in England is incorporated, 214. Treasurers in Ontario do not give bond for security. Surplus money is invested in the banks. Publish an annual statement. Have an arrangement so that members may benefit by surplus funds. Insurance benefits. Liabilities limited by laws of England, 215. Recommends Dominion inspection of such societies. Is purely a benefit and benevolent society, 2.6.

**MEEK, R, Journalist, Kingston** . . . . .

1002-1011

Is identified with the Knights of Labor. The policy of the Knights of Labor in disputes between employers and employees. Labor differences between the Kingston Hosiery Company and their employees, 1002. The working classes of Kingston in favor of the introduction of the Kindergarten system of education. Technical edu-

ation. Unnecessary reduction of wages at the Kingston Hosiery Mill. Public library. Mechanics' Institute library. Anticipated effect of shortening the hours of labor, 1003. Child labor. Iron-lad contracts. Blacklisting. Arbitration. Sunday labor. Effect of organized labor on the working classes. Convict labor, 1004. Workmen who own their own homes. Condition of the workmen a little better than it was five years ago through the efforts of the Knights of Labor organizations. Sanitary condition of workmen's houses in Kingston. Health inspector, 1005. Hours of labor. The Knights of Labor seriously advocating the nine-hour system. Sub-contracting system. Lien laws. Law respecting the protection of machinery. Pay days. Foreign contract labor. Immigration, 1006. Establishment of a Federal Bureau of Labor Statistics. Co-operation benefit societies. Profit-sharing, 1007. Banking and the monetary system. Post Office Savings Bank and Building Societies as places of deposit for workmen's savings. Rate of interest given and asked for money by building societies. The nine-hour movement. Reasons for asking that hours of labor be reduced to nine hours. Average of wages paid to dry goods clerks, male and female, and their hours of labor, 1008. Wages of dressmakers. Hours of labor of dressmakers and female clerks employed in stores. Domestic service compared with store work. Reasons why girls dislike domestic service. The apprentice system, 1009. Indenturing of apprentices. The use of stereotyped plate matter on newspapers, 1010. Stereotyped plates made in Canada are not so good as those imported. Organization of labor and its benefits to printers, 1011.

**MEEK, ROBERT, recalled . . . . . 1049**

Labor organizations believe in the classification of labor or grading of men according to ability. Reason why the arbitration in the locomotive works difficulty failed. Quotes from the petition of the employees asking for a readjustment of wages to show how groundless was the charge that the men wanted to dictate to their employers, 1049.

**MELOCHE, DANIEL, Fisherman, Sandwich West . . . . . 379-384**

Catches his fish on Detroit River. Kind of fish. Duties he has to pay sending to American market. His method of fishing. Fish decreasing for last fifteen years, 380. Reasons for the decrease, 380-381. Canadians are not in the habit of fishing on Lake Michigan. Wages he pays to men in his employ. Fishermen only employed three and a half months in the year. Prices he gets for fish in Detroit. Pound nets injurious to fishing, 382. Does not favor a close season. Thinks it would be wise for Government to establish official hatcheries and spawning places, providing the American Government would co-operate. Number of men employed in the fisheries in his district, 383. Injury to fishing by pound nets, 384.

**MENZIS, ROBERT E., Manager of the Producers' Oil Refinery Company, Petrolia . . . . . 707-712**

Wages of laborers, coopers and others employed in the oil refinery. Constancy of employment, 707. Length of the season and when it commences. Class of engineers they employ and their wages. Inspection of boilers. Approves of the examination and of the licensing of stationary engineers, 708. Accidents from boilers and how caused, 708-709. Technical education. Arbitration. Believes that the establishment of a Dominion Bureau of statistics would be a benefit to the oil industry, 709. Government inspector of boilers. Boiler explosions. Government inspector of oil measures. Skilled labor sometimes hard to get in Petrolia because they export skilled labor for drilling in foreign countries, 710. Unskilled laborers have some difficulty in getting employment. Immigration. Pay days. Government inspection of the burning qualities of oil. Comparison of American and Canadian oils, 711. If there was a government burning test it would be impossible to export the very inferior oils sometimes exported now. Extent of the oil territory. Oil, Exchange in Petrolia; its objects and the result of its operations, 712. The price of oil in Petrolia governs the price throughout the Dominion, 713.

**MERRILL, MELTON W., Foundryman and Machinist, Ottawa**

**1098-1100**

Number of men he employs. Wages of machinists and moulders. Apprentices, moulders. Pay days fortnightly, on Saturdays. No objections to men belonging to labor organizations so long as they do their work. Hours of labor. Night work. Rate of wages paid for overtime. Has had no visit from the Ontario Factory Inspector. Accidents. No boys employed in the foundry; one an apprentice in the machine shop, 1098. Wages of apprentices, and the opportunity they have to learn. Blacksmiths' wages. Savings of his workmen and property they own. Constancy of employment. Wages of a machinery moulder. Hours of labor. Pattern makers, wages, 1099. Sanitary condition of the moulding shop and closets. Health inspector. Wages of the blacksmith and his helpers. Pay days. Men paid in full. Garroisheeing of wages. Never heard any of his men asked to be paid weekly. Laborer's wages, 1100.

**METCALFE, GEORGE, Painter, Hamilton**

**865-869**

Before the Commission on behalf of the Brotherhood of Painters and Decorators. Wages and hours of labor, 865. Agreement regarding wages between the Brotherhood and employers. Constancy of employment. Scaffolding. Healthiness of the trade. Painters liable to lead poisoning. The use of barytes instead of lead. The Brotherhood of Painters and Decorators formed recently; formerly painters were attached to the Knights of Labor; reason for change, 866. Reasons antagonistic to a graded scale of wages. Agreement regarding apprentices not adhered to by the employers. Length of time an apprentice should serve. Wages of first-class men; class of work they do. The Brotherhood is a branch of the international body formed last year, 867. Sick and other benefits derived from the Brotherhood. Painting as a special skilled industry is not as highly paid as other highly skilled industries in this country. Arbitration. Feeling existing between employers and employees regarding the violation of the agreement regarding apprentices. Immigration. No federation of the workmen employed in the building trade, but thinks such a thing would be best for all concerned. Does not know of any such federation among the employers in the building trade, 868. Wages, 869.

**MILLER, ALFRED, Shoemaker, Hamilton**

**884-886**

Works in a shoe factory at trimming. Average wages of a trimmer. Piece work. Constancy of employment. Hours of labor. Seven or eight boys employed in the factory. They cannot learn the shoemaking trade. Boys do not run machines. How the business is learnt. Wages of a man who can run all the machines. Nineteenths of the boots and shoes worn in Canada are made in the Maritime Provinces. Custom work, 884. Wages at factory work and custom work compared. The trade is organized. Effect of the organization is to keep up wages. Labor trouble in the shoemaking trade in Montreal settled by arbitration. Good feeling between men and employers. Wages of men who run pegging machines and sewing machines. Lasters work by the piece. Average wages. Female labor or women's work. Wages. Sanitary condition of McPherson's factory, 885. Fire protection. Doors are locked at eight o'clock so as to make those who are late go through the counting room. Paid weekly, on Saturdays, 886.

**MILLER, JOHN, Moulder, Hamilton**

**801**

Corroborates the statement made by John Stephenson, 801.

**MILLER, M. H., Manager of the Grape Sugar Refining Company and Dominion Starch Company, Walkerville**

**877-879**

Length of time established. Uses corn wholly. Employs forty men. American corn superior and costs the same duty paid as Canadian. Manufacture glucose, starch, corn syrup and dextrine. How the refuse is disposed of. Wages. Skilled labor. Acids used procured in Canada. What they are made from, 377. Employs no

women. Boys employed; their ages. Wages paid to engineers and millers. Hours of labor. Expects to establish a coöperage in connection. Has heard no complaints about the business being unhealthy. Smell from the old process offensive. Waste runs into the river; not enough of it to make the water unfit for drinking, 378. No difficulty in getting hands. Hands all live in Windsor; are mostly Canadians. Amount of protection duty on starch and glucose is offset by the duty on corn and other supplies. Removal of the protective duty would injure their business at present, 379.

**MILLER, SHERMAN R., Seed Merchant, Detroit - - - 434-435**

Is connected with house of D. M. Ferry & Co., of Detroit. Has a branch establishment in Windsor. Gives the reasons why they established the Windsor branch. Particulars regarding the seed trade, 434. Number of hands employed in Windsor branch. Females. Employs scarcely any American help on this side, 435.

**MILLICHAMP, W., Manufacturer of show cases, general store fittings and cabinet works, Toronto - - - 357**

Demand for his goods has increased. Thinks the desire on the part of storekeepers to make their stores more attractive has caused the increased demand. Higher freights in Canada than the United States causes some of his class of goods to be imported from the United States. Could do well in New Brunswick but for that. The National Policy has increased the manufacture of all classes of goods, and is a benefit to his business. Wages he pays. Wages for the higher grades of workmen have increased since the introduction of the National Policy. Gets his raw material from the United States principally; reason why. The system of apprenticing he approves of, and length of term. What constitutes a day's work. Pays by the number of hours men work, on Friday. Prefers Friday as a pay day, 357.

**MILLS, DAVID, Oil Producer, Petrolia - - - 692-695**

On the measurement of oil in tanks. Wants the Government to fix a standard of measurement and appoint an inspector to see that the standard is carried out. Has reason to believe that different oil purchasers have different measures. Wages paid to engine drivers; cannot tell what laboring men are paid, but no one in the oil producing business has been able to live very comfortably during the past five or six years. Prices too low, and profits, all round, small. His opinion of the cause of the low prices. Importation of American oil, 693. Price of crude oil. How the refuse products obtained in refining are disposed of. Advises the inspection and measurement of crude oil by the Government. Oil supply. Depth of wells, 694. Cost of boring. Workmen as a general thing are employed all the year round. House rents, 695.

**MILLS, ROBERT JAMES, Cigar-maker, St. Catharines - - - 919-920**

Wages. Weekly payments. Hours of labor. Apprentices. Truck system. Law of the Cigar-Makers Union against the truck system. Blacklisting. Tobaccos used in cigar making. Female labor in making cigars, 919. The union or blue label. Effect of the Scott Act on the sale of cigars, 920.

**MILNE, JOHN - - - 834-837**

Is a member of the firm of Burrows, Stewart & Milne, founders. Class of goods they make. Number of foundries in Hamilton. Number of hands they employ. Classes of skilled labor. Moulders' wages. Machinists' wages. Pattern-makers' wages. Scale makers' wages. Constancy of employment. Hours of labor. Washroom and conveniences for the men. The nine-hour movement, 834. Nearly all the foundry owners in Hamilton were at one time workingmen. Workingmen have not the same opportunities to establish themselves in business that existed twenty-five years ago; reason why. Hours of labor in foundries could not be reduced without

reducing the output. Use of machinery lessens the hand labor for the workmen, 835. Effect of the North-West boom on manufacturing industries. Though the demand for manufactured goods is greater than twenty-five years ago, still there are more manufacturers; the country is fully supplied. Reasons for his thinking his workmen would not take advantage of washrooms. Wages of moulders twenty-five years ago. Capital required to start a small foundry. Hours of labor of moulders twenty-five years ago. Kinds of iron his firm use, 836. Londonderry iron compared with Scotch. Kind of fuel he uses. Reason why he has never used Nova Scotia coal, 837.

**MINER, PAUL, *Shantyman, Ottawa***

**1188-1191**

Shantymen sometimes badly boarded. Hours of labor, 1188. Precautions taken and compensation for accidents in the bush. Price of board and quality of the food. Men get sick on account of inferior food. Prices of similar articles in shanty depots and in the stores at Pembroke compared. If a man gets sick or is hurt in the bush he is charged for his board. Driving logs dangerous work, 1189. Loss of wages through sub-contractors. Quality of the food or board in shanties and price of meals. Payment of wages by "due bills," 1190. Wages of shantymen increased during last ten years. Wages ten years ago and now compared, 1191.

**MONCIEF, PETER, *Tinsmith, Kingston***

**978-979**

Wages. Constancy of employment. Apprentices. Immigration. Labor organization. Wages in Kingston and the United States compared. No truck system. Convict labor. Co-operation or benefit societies. Sanitary arrangements of the shops. 978. Cost of living in Canada and the United States compared. 979.

**MOORE, CHARLES, *Shoemaker, Kingston***

**1049-1053**

Is carrying on business for himself. Number of men he employs. Constancy of employment. Men work for him by the piece. Wages, 1049. Classification or grading of men. Indenturing of apprentices. The effect of piece work on apprentices, 1050. Shoe factories in the United States and Canada compared. The only profitable branch of the shoemaking business, 1051. Immigration, 1052.

**MORFORD, J. B., *St. Thomas, Division Superintendent of the Michigan Central Railway,***

**551-560**

Earnings of engineers; paid upon a mileage basis. Lengthening of time taken on trips by storms or delays. Employees paid extra for anything over twelve hours labor. Arrangements for allowing rest to train bands on lengthened trips, 552. Runs double crews when business requires it. Average for freight trains. Brakes. Running boards. Feasibility of putting guards on either side of the running boards. Willing to co-operate with other railroads in Canada and the United States for the adoption of any system of safety to trainmen, 553. Accidents to the brakemen. No disposition on the part of officials to lay blame for accident on the men. Accidents when coupling. His company about to adopt couplers by which cars can be coupled without the men passing between. Thinks that railroads will adopt these safety couplers without legislation to that effect. United States railway managers meet twice a year to consider and adopt measures for the saving of life and prevention of accidents to employees. Application of air brakes to freight cars, 554. Experiment to test the most economical speed to run freight trains at. Competition compels them to run fast freight trains, 555. Accidents more frequent on passenger than on freight trains. Labor difficulties. His method with labor questions. Equality of employees and officials in discussing and settling labor questions. (Mr. Thomas Jones here corroborated all that witness had said.) Has never discharged any man for making himself prominent in demanding concessions for the employees, 556. Indemnity to employees in case of accidents. Thinks that as general rule railroad employees are paid better salaries than in any other business where there is as much risk of

danger as on railways. The Michigan Central are paying much heavier wages for their train service than any other road in Canada. The men are required to sign an agreement that the company will not be held responsible for accidents to them while on duty, in regard to coupling cars. Certificates from a guarantee company only required from those who handle the company's money. Certificates given to men discharged for cause, 557. Guarantee company's certificates required from conductors on passenger trains only, for which the company pays. Other officers of the company furnish certificates themselves. Method of promoting employees. Signal system, 528. The only two causes which prevent employees from getting another certificate are stealing and intoxication. Suspension of employees before investigation of their cases and the lapse of time between, 559. The use of air brakes will not do away with the services of brake-men; some number will be required. Side loaders. Number of loaded cars a brakeman should be able to handle in case of accident, 560.

MORGAN, R. R., *Miller and Whip Manufacturer, Hamilton* - - - **882-883**

Number of men employed in his mills. Proportion of skilled and unskilled labor. Night work. Hours of labor. Wages of skilled millers and unskilled laborers, 882. Wheat used. Market for the flour. Prices of flour now, and ten years ago compared. Number of hands employed in the whip factory; half of them skilled hands. Women employed. Skilled hands all men. Wages. Hours of labor. Constancy of employment. Age of the youngest girl employed. Wages. Where the whips are sold. Hours of labor in the flour mill. Sunday labor, 883.

MORRELL, JENNIE, *Weaver, Cornwall, wife of William, of the same place,*  
*laborer,* - - - - - **1087**

Is a weaver in the Stormont Cotton Mill. Wages. Constancy of employment. Piece work. The use of obscene or bad language by overseers, 1037.

MORRICE, CHARLES M., *Blacksmith, Kingston* - - - - - **1036-1038**

Number of blacksmiths employed at the Locomotive Works; their wages and hours of labor. Wages of a blacksmith's helper, 1036. Apprentices. How the locomotive company deal with applications for redress of grievances from their employees. Strike of last summer at the Kingston locomotive works. Hours of labor on Saturday. Wages of a blacksmith in Scotland. Wages and cost of living, &c., of blacksmiths in the Old Country compared with Canada, 1031. Wages and hours of labor in Hamilton and Kingston compared, 1033.

MORRISON, JAMES, *Manufacturer of Brass Goods, Toronto* - - - - - **335-336**

Kind of goods he makes. Employs 110 to 115 hands. Brass-finisher's wages. Establishment open all the year round. Apprentices, does not bind them; understanding is that the term of apprenticeship is five years. Demand for skilled brass-finishers is in excess of the supply, 335. No object in men leaving Toronto for other cities to better their wages. Employs girls, making sand cores for the moulders; ages from 18 to 25 years; what they can earn, 336.

MOYES, JOSEPH, *Cornwall, Manufacturer* - - - - - **1081-1082**

Is proprietor of the Cornwall Spinning Mill. Manufactures yarns. Number of hands he employs: male and female. Wages. Pay days once a month. Retains ten days back pay. No rules for imposing fines. Notice required from an operative before leaving. Notice given them when discharged, 1081. Did not discharge J. J. Bickley because certain merchants or employees asked him to do so, because he belonged to the Knights of Labor, 1082.

MULHALL, THOMAS, *Seaman, Detroit* - - - - - **415-418**

Thirty-eight years seaman on the lakes. Seamen's grievances. Incompetent captains. Has known men to get certificates as captain who were not competent, 415. Naviga-

tion of the lakes more dangerous and arduous than navigation of the sea and consequently requires more competent steamships. Seamen who join the union are examined as to competency before being admitted, 416. Only a few vessels on the lower lakes under the union, the others generally ship anything they can get. Seamen paid by the day. Vessels sometimes leave port short of food. Sleeping accommodation for seamen bad. Benefit of a shifting board on a grain cargo, 417. Necessity of a proper system of inspection properly carried out, 418.

**MUNRO, JAMES, Foreman Tailor, Hamilton** . . . . . **829-833**

Has been six years in the employment of Messrs. Sandford & Co., clothing manufacturers. Approximate number of people employed by them outside and inside. How the sewing is farmed outside. Classes of people who do it and their earnings, 829. Cutters' wages. Trimmers' wages. About equal quantities of Canadian and British cloth used. British and Canadian cloths compared. Wages of those who work outside at sewing, 830. Class of people who do work outside. Some of them employ as many as twenty hands. Where the company finds a market for the clothing, 831. Competition they meet. Wages they pay compared with Montreal prices. Wages lowered in order to compete with Lower Canada. Average wages a woman with a sewing machine can earn on the work given out. Prices paid for making the various kinds of garments, &c. compared with prices paid for custom work, 832. They pay women the same prices they do men for the same work. Childrens clothing: made altogether by women. Advantage of doing work in large quantities. None of the outsiders make buttonholes, 833.

**MURPHY, J. B., Moulder, London** . . . . . **685-687**

Average number of moulders employed in London. Wages of stove moulders. Constancy of employment. The want of steady employment is caused by the employment of too many apprentices and piece work. The evils of piece work. Apprentices. Convict labor, 685. Arbitration. Blacklisting. Employment of ex-convicts from Elmira Prison. Reason why they were brought here. Wages of machinery moulders, 686. Complaint regarding the condition of moulding shops, 687. Confirmation of this evidence by John McGowan, Peckham, Thomas Walton and John Norfolk, moulders, of London, 688.

**NASH, PATRICK GEORGE, Ottawa, Managing Proprietor of the Canadian Granite Company** . . . . . **1139-1140**

Number of men employed by the company at the factory and at the quarries. Location of the quarries. Wages of men employed at the quarries. Constancy of employment. Wages of laborers employed at the factory, 1139. Wages of granite cutters and granite polishers. Hours of labor at the factory. Pay days every second Saturday. Factory Inspector's visit. Some of their men own property. Marbles the company works. Location of Canadian marble quarries owned by the company. Boys employed by the company: age of the youngest. Female labor they did employ and wages paid the women. Polish with machinery, 1140.

**NASMITH, JOHN D., Toronto** . . . . . **361-362**

Seventeen years in the business. Hours of labor better and shorter, and wages increased in that time. Wages at present. Hours of labor now. Organization or combination among the men has caused their improved condition, 361. Shortening the hours did not increase wages. Did not become necessary to employ more men after hours were shortened. No grading of wages for bakers except foremen. Apprentices. Thinks the indenturing system best. Ontario and North-West flour compared, 362.

**NELLES, B. R., Fruit and Vegetable Canner, Grimsby** . . . . . **890-891**

The canning season lasts from June till January. The kinds of fruit he cans. The kinds of labor employed. Women's wages during the season. Wages of children:

get paid same rate on piece work as journeymen. Number of hands employed making cans: their wages. Where the goods are sold, 890. Increased capacity of Canadian canning factories now compared with 1879-1880. Protection necessary to prevent importation. Advantage to fruit growers to have canning factories in Canada. How the employes are occupied after the season is over. Canadian and imported canned fruits compared. Child labor: young girls wages and hours of labor. Overtime. Age of the girls. Healthiness of the occupation. Machinery more used than formerly and for what purposes. Business increasing, 891.

**NELSON, PETER, *St. Catharines* . . . . . 916-917**

Is a sailor. Approves of John T. Carey's evidence (see page 911). Inspection and classification of vessels. Overloading of vessels. Condition of forecastles, 916. Frequent insufficient condition of gear and rigging. Sailors' wages and constancy of employment, 917.

**WILSON, HUGH, of *Callart & Wilson, Furniture Manufacturers, Chatham* 441-444**

Wages paid to furniture factory hands. They work by the day and by piece work. Workmen generally prefer working by the day. Had a strike a year ago for shorter hours, 441. Strike originated with the Knights of Labor. How it was settled. Most of the workmen stay steadily with the firm, but do not save much. Apprentices. Have no difficulty in getting all the hands they want. Prices of furniture here and in the United States compared. Skilled labor and partially skilled labor. Machines all properly protected. Factory Inspector has not visited the factory yet. Employs boys from the age of fifteen to sixteen. Gives one of his men all the finishing to do and lets him hire his own help. Margin of profit in the manufacture of furniture is small for the employer of labor, 442. Does not object to indenturing apprentices but has not done so. Has about thirty hands. Wages he pays. His firm is capable of teaching a boy all the branches of the trade. Chatham Employers' Association was formed to counteract the efforts of the men to get shorter hours, and was partially successful. Does not think a working man can save much after paying house rent and keeping four or five of a family. Sanitary condition of houses and factory, 443. Accidents. Thinks technical education would be of great advantage to boys learning the trade, 444.

**NESBITT, HUGH, *Boiler maker, Ottawa* . . . . . 1124-1125**

Wages of boiler makers. Apprentices. Pay days fortnightly, on Mondays. Ventilation of boiler shops in Ottawa. Scrip payments at Casselman, 1124.

**NESBITT, WILLIAM, *Pressman, St. Catharines* . . . . . 928-930**

Is employed on one of the city newspapers. Wages. Pay-days. Night work, 928. Imported stereotyped plates, 928 and 929. Blacklisting by the Typographical Union. Hours of labor, 929.

**NESBITT, DR. W. B., *Toronto* . . . . . 351-354**

His opinion regarding foods. French people live better and cheaper than the English. Rumsford's tables (of 1793) of cost and nourishing power of foods. Dinners provided for children in Manchester and London at one cent each. What constitutes a meal costing three-quarters of a cent. Meals for a quarter of a cent each. Considers barley, indian meal and red herrings sufficient for a laboring man to do a day's work on in this country, 351. Meals of the Scotch people. American tables of foods, Pemmican. Cost and efficiency of the foods of British, Canadian and German soldiers, 352. People in comfortable circumstances buy cheaper meats than many poor people less able to afford it. Cannot live on brown bread alone. Quotes the results arrived at by experimenters on the nourishing powers of foods, 353. Knowledge of the properties of food requires it to be extended, 354.

NICHOLS, FREDERIC, *Secretary Canadian Manufacturers' Association*, - 179-190

Not as much importation of manufactured goods into Canada as there was some years ago. Facts which leads him to that conclusion. Many American firms are establishing branch factories in Canada. Enumerates some of them. Does not think employers of labor have used coercion to prevent the employees from given evidence before the Commission, 179-80. Supply and demand regulate relation between employer and employee. Employer's Liability Act of Ontario. Employers think it a step in the right direction. Employers insuring their men at their own expense, 181. Railway companies excepted from the operation of the Ontario Employer's Liability Act, 182. Relation between employers and employees in Ontario. Conciliation in labor disputes. Arbitration. Legislation between labor and capital should be Dominion legislation, 183. If the Dominion Government has not the right to legislate in this matter each of the Provinces should make similar Acts and have them become operative at the same time. Thinks that the factory employees are better off in Western Ontario than in the Eastern section, 184. Wages of the mechanical classes rose steadily from 1878 to 1883, not much raise since then. Working people have undoubtedly received great advantage from more continuous work than formerly. Necessity for a Dominion Bureau of Statistics. Organization of the Cotton Manufacturers. Decrease in wages from 1873 to 1878, 185. Continuity of labor. Stringency in the money market. Government control of banking, 186. Manufacturers are in favor of arbitration and conciliation in settling labor disputes. Manufacturers gave no opposition to the Factory Act as a whole, 187. Manufacturers' Association did not send a deputation from Toronto to have certain clauses altered to suit their views. Difference between manufacturer's prices and retail prices. Economy of production and also distribution, 188. Manufacturing goods in the country instead of importing them reduces the cost of distribution. Commercial travellers, 189. Thinks it better that men be paid weekly. Profit sharing by employers and employees, 190.

NICHOLS, HENRY, *G. T. R. Car Works, London* - - - 656-659

His wages. Hours of labor. Constancy of employment. Was first employed as a laborer, is now employed in the upholsterers' shop. G. T. R. Provident and Insurance Society. Permanent employees of the company must belong to it, 656. Benefits derived from the G. T. R. Provident and Insurance Society, 657. Rules of the Society regarding incurables and discharged employees, 657-58. Garnisheeing of wages a plea for being paid more frequently than once a month. Reply of the general manager to an application from the men to be paid fortnightly, 658. Co-operative society for supply of fuel, 659.

NOBLE, JOHN, *St. Thomas* - - - - - 548

Granting bonuses to manufacturers. Exemptions from taxation. Co-operation among workmen, 543.

NORFOLK, JOHN, *Moulder, London* - - - - - 688

Confirms the evidence of J. B. Murphy of London, 683.

OBERNDORFER, SIMON, *Cigar Manufacturer, Kingston* - - - 962-965

Child labor, boys and girls he employs, ages, the class of work they do, 962. Wages of cigar factory employees. Female labor, 962 and 963. Organized labor. Apprentices. Sanitary condition of the factory. Factory inspector's visit. Where his cigars are sold. Business now, two and five years ago compared, 963. Protective duty, its effect on the trade. Prices of cigars. Class of cigars he sells most of. Effect of the Scott Act on the trade. Raw materials he uses and where produced. Labor organization, 964. Prohibition of liquor and tobacco traffic, 965.

O'DONNELL, JAMES, *Carder and Spindler, London* - - - - - **663-665**

Is the only workman engaged at the manufacture of woollen goods in the city. Only one factory in the city. They get their wool principally in the neighborhood. Cannot make fingering yarns. Trade principally local; the margin on the wholesale trade is so fine they cannot do it. His opinion is that overproduction and the employment of cheap or child labor are the causes of the present depression in the trade, 663. Men's wages run from \$7.50 to \$9 a week. If a man works nine months in the year he is doing well; the average is more like six months. No Sunday labor except in filling up the boilers. As a Knight of Labor would like to have the law allowing children thirteen years of age to work in factories changed to fifteen or seventeen years. The sanitary condition of the factory is not good. Knows that a man came and inspected the place; that he was not the regular inspector but a medical man. Believes the workingmen of London to be in favor of Government arbitration. The workingmen want assisted immigration stopped, 664. Wants the bringing out of orphan children stopped also. Claims that young girls in large shops are liable to become immoral; to lessen that liability advocates that they do not be so employed till they are sixteen or seventeen years old. Children work ten hours; their wages. Boys and girls get same rate of wages, it is generally piece work they do, 665.

OLDWRIGHT, DR. WM., *Toronto* - - - - - **91-98**

Is a physician. Has practised in Toronto twenty years. Is Professor of Hygiene in Provincial University; formerly Chairman Provincial Board of Health. Sanitary condition of workshops. Ventilation. Electric light vs. Gas from a sanitary point of view, 91. Method of ventilating the Pullman car workshops near Chicago. Drinking water as a cause of zymotic diseases. Ontario Public Health Act. Regarding the supply of drinking water. Thinks this Commission should make enquiries if this law is respected. Condition of workingmen's dwellings. Water closets. Employer's liability, 92. Employment of child labor. Female labor in factories and business establishments, 93. Thinks stores should close at 6 p.m., except one night in the week. Children employed in stores. Disease caused to female clerks from long continuous standing. Health of working people, except shop girls, compares favorably with other classes. Opinion regarding the number of hours a man can work without injury. Is in favor of Saturday half-holiday. Age children should reach before being allowed to work in factories, 94. Plumbing of houses. Ontario law of 1884 regarding ventilation. Considers workingmen's houses too small. Number of cubic feet a house should contain for each occupant. Method of ventilation, 95. School houses not properly ventilated. Lack of proper ventilation due to ignorance of the people. Method of educating the people to take care of their health. Means taken to prevent sale of unwholesome food. Lake water vs. well water in Toronto, 96. Sewer construction in Toronto. Toronto water supply. Gas supply of Toronto. Poisoning from use of water gas. Ventilation from gas burners, 97-8.

OLIVER, ISAAC, *Shipwright, Kingston* - - - - - **997-999**

Constancy of employment. Demand for shipwrights in Kingston, 997. Shipwrights' wages. Apprenticeship. Seaworthiness of vessels leaving the port of Kingston. A dry dock and marine railway required at Kingston. Inspection of vessels, 998. Proportion of shipwrights who are skilled mechanics and what the balance of the labor required consists of. Apprentice system, 999.

OLIVER, JAMES, *of Oliver & Son, Furniture Manufacturers, Ottawa* - - - **1117-1118**

Number of hands the firm employs. Wages of cabinet-makers and machine hands. Protection from accidents. Pay days weekly, on Wednesdays: reasons why they pay on Wednesdays. Wages of furniture finishers. Financial condition of the employees. Improvements in machinery enables the buyer to get better value in furniture than he could ten years ago, 1117, and has increased wages also by about one-

fourth. Apprentices. Length of time required to learn cabinet-making. Factory Inspector. All Canadian timber used except black walnut and veneers which are imported. Shaper is run by one man all the time, 1118.

ORONHYATEKHA, DR., *London*

641-645

Benevolent and benefit societies are in most cases now combined. Some however do not combine both purposes. Brief description of the systems of working, health and life insurance in the Independent Order of Foresters and Odd-Fellows. Investments of the Independent Order of Foresters, 641. Securities given by the chief officers of the order. Foresters' rates based upon actuarial tables. Expenses of management less than 5 per cent. of gross receipts. Foresters are accumulating a reserve fund, to be used only to pay death claims in case of an epidemic. Membership on 1st January, 1888. Headquarters of the Independent Order of Foresters in Canada, 642. Sanitary condition of London. Prefers earth closets to water closets running into sewers: reason why. Ventilation of the public schools exceedingly defective: 25 per cent. too many pupils in attendance for the accommodation. Taxes of the city of London up to 22 mills on the dollar, 643. Calls the attention of the Commission to the question of Government providing some means of investigating the funds of benefit societies. Approves of Government supervision of benefit societies. Thinks it would be a benefit to the industrial classes if Government would alter the General Insurance Act so that benefit societies could deposit their fund with the Government, 644. The advantages the workmen get from benefit societies, 645.

OSBORNE, R. B., *Secretary of the Osborne-Kelley Manufacturing Company, Hamilton*

902-904

Make engines and boilers principally. Number of hands employed. Men and boys. Apprentices. Indentures. Wages of skilled mechanics and laborers. Supply of labor. Pay days every two weeks, on Friday nights. Weekly payments. Savings of the workmen proved by many of them owning property. The machinery they make is sold all over Canada, 902. Average wages of all the hands in the machine shop. Average wages in New York. Piece work in the scale factory. Hours of labor and wages in the scale factory. Business steadily increasing. Raw materials they use are Scotch steel for boilers and Canadian iron. Bar iron made in Hamilton superior to either English or Scotch. Coal used imported from the United States. High freight rates make it impossible to use Canadian coal, 903. Cost of delivering American and Nova Scotia coal in Hamilton, 904.

PACKHAM, JOHN, *Moulder, London*

688

Confirms the evidence given by J. B. Murphy of London, 688.

PARSONS, CAPT., *Mariner, Kingston*

1018-1023

Seaworthiness of vessels on the lake. Inspection by Lloyd's agents. Any vessel Lloyd's agent would not pass should be condemned. Masters' and mates' certificates, 1018. A great many men holding certificates are not fit to hold them. How they got their certificates. The appointment of a Government inspector of vessel's hulls, rigging and equipment, 1019. The way the inspector examines spars, rigging, sails, &c., of sailing vessels. Thinks it would be right to have a law regulating the loading of barges. The difficulty of getting sober men to go, often the cause of barges being undermanned, 1020. How sailors are engaged now and twenty-eight years ago. Disadvantages of shipping sailors by the trip. Would support the appointment of a shipping master at Kingston, and advocates the establishment of a shipping office in such places as Toronto, Kingston and the Welland Canal, 1021. When sailors handle cargo in port they no doubt keep some one else (long shoremen) out of employment, but when they do not do it they are keeping themselves out of employment. Advocates hiring sailors by the month and paying a uniform rate of wages the season through. Sanitary condition of forecastles and sailors,

sleeping accommodations, 1022. Admits having had mates on board his vessel without certificates since the law requiring such came in force. Explains the circumstances under which it occurred. Impossible sometimes to get certificated mates, 1023.

PARTRIDGE, RICHARD, *Stationary Engineer, Hamilton* . . . . . 742

Advocates a board of examiners for stationary engineers. Wages of stationary engineers. Does not think they are sufficiently paid, 742.

PARTRIDGE, THOMAS, *President of the Canadian Association of Stationary Engineers, Hamilton* . . . . . 741-742

The stationary engineers of Hamilton are organized. They are incorporated and have a constitution. Object of the association in coming before the Commission to urge the necessity of examining and licensing stationary engineers. Proposes to grade them. Straining of boilers so that they will never after carry the guaranteed pressure, 741. On the causes of boiler explosions, Technical education, 742.

PARTRIDGE, WILLIAM, *Laborer, Chatham* . . . . . 460-461

Not steadily employed. Wages. Cannot possibly save anything, 460. Wages have not increased during the last five years. Necessaries of life have increased in price, 461.

PATTERSON, H. A., *Chatham* . . . . . 486-487

Is mayor of the town. No permanent resident of Chatham seeking relief from the city charities. Does not think there is much actual poverty among the permanent residents. Board of Trade has only been organized for a few days. Is engaged in the planing business. Men he employs. Constancy of employment given them. Wages paid them. Wages were higher in 1883 than now. Not many of his men own property or save money. Does not see any improvement or the reverse in the condition of workmen in Chatham during last eight years, 486. Machinery in his shops as well protected as he can get it. Heard no complaints from the Factory Inspector. Sanitary condition of Chatham is very unsatisfactory. The prime cause therefore is the want of waterworks. Sewerage. Health inspector. Very few industries in Chatham are exempt from taxation. Industries exempt from taxation compete with those who pay taxes, 487.

PASSMORE, C. A., *Painter and Decorator, London* . . . . . 682-684

The trade is divided into four branches, viz., brush hands, paper hangers, decorators and grainers. Wages and hours of labor. They were organized in March, 1887, as a branch of the international organization. Benefit branch of the organization, 682. Men are paid weekly; some on Saturday, some on Monday, but the majority of them would prefer Friday. A few parties in the city save money. Quite a few own their homesteads, and as a rule are comfortable. Had a labor trouble last spring. Cause, and how settled. The Union believes in arbitration in the settlement of labor trouble. Kind of arbitrators preferred. Does not altogether favor compulsory arbitration. Have a Bureau of Labor Statistics in connection with the international organization. Technical education, 683. The benefits accruing from shortening hours of labor, 683-684. Benefits which have resulted from the passing of the "Employer's Liability Act." Purchasing power of money. Wages have remained stationary for the last five or ten years, but the volume of work has increased. Rate of wages in American cities. Immigration, 684.

PEARCE, JOHN, *Printer, Ottawa* . . . . . 1179-1180

Sanitary condition of the *Free Press* office. Sanitary condition and location of the water closets, both sexes use the same closets, 1179. Neither the Factory Inspector nor the Sanitary Inspector visited the place that he is aware of before he left, 1180.

- PEARSON, CHARLES, *Real Estate Agent, Toronto*** . . . . . **254-257**  
 Has been about twenty years in the business. Land has advanced very much in value in that time. Rent of workingmen's houses increased thirty to forty per cent. Rents quoted. Accommodation in workingmen's houses. Sanitary condition. Sells a good many houses to working people. Plan of payment for such houses. Government Act regarding rate of interest. Cost of building increased. Average price of a workingman's house, 254-255. Some sort of check required for bad plumbing which is very prevalent in working people's houses. Inspection of plumbing. Price of lands in Toronto. Leasehold property, 256. Injustice of the law regarding leasehold property. Black-list of people who do not pay their rent, has none, 257.
- PEDDLE, SAMUEL, *Cabinetmaker, London*** . . . . . **631-634**  
 Has worked for the London Furniture Company nine years. Wages paid by the company. Does not know of any profit-sharing in Canada. Explains the difference between co-operation and profit-sharing, 631. Profit-sharing would lessen the difficulties between employer and employed, and make men more careful. It is practicable because it is done in England. Does not think it has been broached to any employer in Canada. The apprentice system in existence in the cabinet-making business is a bad one. Indenturing of apprentices. The more intelligent portion of the workingmen of London are in favor of the establishment of a Bureau of Labor Statistics. Arbitration, 632. The law in regard to employers liability for accidents does not protect the employee. Factory Inspector's visit a mere matter of form. Sanitary condition of the company's shops. Co-operative building societies, 633. Co-operative stores, 633-634.
- PEDDLE, SAMUEL, *re-called*** . . . . . **689-692**  
 Wages of cabinet makers in Canada compared with those paid in Great Britain and the United States. Hours of labor and cost of living in Great Britain and the United States compared with London. Condition of workmen's houses in England and rents thereof, 689. Accidents to boys through machinery, 689-690. There is not the least attempt at protection of the machinery in the London Furniture Company's factory. Immigration, 690. Sub-contracting in furniture factories. A dangerous unprotected hoist passed by the Factory Inspector and never noticed, 691. Importation of furniture. Wood used all Canadian except walnut which comes from Indiana, 692.
- PEEBLES, JOHN, *Shoemaker, Hamilton*** . . . . . **863-865**  
 Is one of the deputation from the Hamilton Land Tax Club, 863. Views of the members of the club regarding taxation. How rents would be lower if all taxation was levied upon land and not on improvements. Instances a case in Hamilton of increased value in land, the increased value of which should belong to the community not to the individual, 864.
- PEER, JOHN, *Moulder, Ottawa*** . . . . . **1130**  
 Average wages of machinery moulders. Constancy of employment. Hours of labor. Apprentices. Pay days fortnightly. Ventilation of moulding shops. Suction fans not required if ventilation is good, 1130.
- PENNOCK, W. H., *Ottawa*** . . . . . **1114-1115**  
 Is Savings Bank clerk in the Ottawa Post Office. Has been in his present position ten years. Average deposits of farmers, mechanics and laborers, 1114. Limit of yearly and total deposits. Observations regarding deposits. Obligated to refuse money sometimes from farmers on account of the limit, although the average deposit does not come up to the limit, 1115.
- PENSE, EDWARD, *Newspaper Proprietor, Kingston*** . . . . . **1057-1058**  
 Is proprietor of *Whig* printing office. Wages of printers. Effect of the use of stereotyped plate matter on newspapers. Apprentices. Lock-out in the *Whig* office two or three years ago, 1057. Sanitary condition of the *Whig* office, 1058.

- PERKINS, JAMES, Collector of Taxes, Petrolia** - - - - - **728-730**  
 Rate of taxation in Petrolia. Assessment. Exemption. Assessment of artisans for income. How assessors arrive at conclusions, 728. Publication of assessment rolls, 728-729. Changes required in the assessment laws. Thinks people with bank stocks should pay double taxes, 729. Measurement of crude oil, 729-730. Necessity for Government measurement of crude oil tanks, 730.
- PERRY, ALFRED, Machinist, Kingston** - - - - - **959-961**  
 Number of machinists in Kingston. Constancy of employment, 959. Hours of labor, 959-960. Wages. Sunday work. Apprentices system. Indentures. Organization and its benefits to the trade. Technical education, 959. Wages in Canada compared with the United States and Great Britain. Cost of living in Canada compared with the United States and Great Britain. Effects of shortening the hours of labor, 960. Mechanics' Institute. Free library. Technical teaching. Public school library. Arbitration. Establishment of a Bureau of Labor Statistics for the Dominion, 961.
- PERRY, EDWARD, Moulder** - - - - - **951-953**  
 Is a stove moulder and bench worker. Wages and constancy of employment, 951. Hours of labor. Apprentices. Stove moulders are organized in Kingston; they belong to the National Union. Immigration. Weekly payments, on Saturdays. Wages in Kingston compared with the United States, also cities of the size of Oshawa, Galt and Guelph. Sanitary condition of workmen's houses in Kingston. Rents. Proportionate profits of stove moulders and their employers. Effect of labor combination on the trade, 952. Arbitration. Death and sick benefits in connection with the Stove Moulders' Union, 953.
- PETTIT, A. H., Grimsby** - - - - - **847-850**  
 Has been engaged in fruit farming. Kinds of fruit raised in the Niagara peninsula. Fruit raising pays better than general farming. Peaches the most profitable. Demand for fruit. Principal market. Exportation of fruit to Glasgow. Canadian grapes in the British market, 847. Apples; where sold principally. Prices in the Old Country. Small fruits. Class of labor employed in the fruit industry. How children are employed. Wages. Female labor employed. Length of time these people are employed. Supply of labor is not always ample. Fruit canning. Fruit drying. Delaware and Canadian peaches compared, 848. Apple barrels. Earnings and age of the children employed. Average crops of apples and peaches, 849. His crop of grapes this year. Price paid for making apple barrels; earnings of those who make them and hours of labor. Apple packing, 850.
- PETTIT, J. R., Grimsby** - - - - - **844-847**  
 Has been a farmer all his life-time near Grimsby. Wages of farm laborers, 844. Supply of and demand for farm labor. Use of machinery has changed the condition of farm labor very much during the last twenty-five years. Wages of farm laborers now and twenty-five years ago compared. Cost of a good equipment of farm implements for a 100-acre farm. Advantages of agricultural machinery. Material condition of farmers in the neighborhood, 845. Farming in the neighborhood has largely changed into fruit growing. Farmers' hours of labor. Class of men who hire as extra help. Not the same necessity for extra help now on account of improved machinery. Immigrants, 846. Not aware of any combination on the part of farmers to raise prices. Stock raising, 847.
- PICKETT, THOMAS, Iron-moulder, Toronto** - - - - - **144-147**  
 Thirty years in Toronto. General condition of the shops very good. Rate of wages by the day. Hours of labor. Piece work, 144. Arbitration not resorted to by employers, although the men would prefer that method of settling disputes. No

strikes among iron-moulders in Toronto for the last eight or nine years; effect of strikes on the trade; strikes only a last resort with the union; and caused by employers refusing arbitration. Compulsory arbitration. Apprentices. Age at commencement: proportion of to men according to an understanding between employers and Union. Accidents. Employer's liability, 145. Wages higher in the United States than in Canada, 145, 146. Cost of living in Canada and the United States. Rents in Toronto have gone up. Benefit fund in connection with the Union. Term of apprenticeship. Immigration of moulders from foreign countries, 146. Organization a benefit to the trade; tendency of the teaching and rules of the Union. Benefits derived from the Union outside of organized labor. Nine hours as a day's work: no attempt in Toronto yet to secure. Thinks short hours a benefit. Convict labor, 147.

PICKETT, THOMAS, *re-called*

153-156

Compares the quality of Scotch, Canadian and American iron. Quotes prices, 153. Wages paid moulders. Not more than they were twenty-five years ago. And cost of living higher. A moulder with six or seven of a family living in Toronto cannot live respectably and make both ends meet at the wages paid to-day, 154. Suggests remedies for the evil of the workmen not being able to make both ends meet, one of them being the stoppage of speculation in land. Tenement houses. Rents in Toronto have increased. The increase in moulders' wages has not corresponded with the advance in price of goods, 155. Does not think that five per cent. of the moulding trade or any mechanical trade can save a dollar in Toronto, 156.

PIERCE, JOHN, *Machine Moulder, Toronto*

156-159

Recommends that the eight-hour movement should be carried in order to secure the half holiday, which would be a benefit to all workmen. Thinks a man can, in working steadily for a month, do as much in nine as ten hours a day. Long hours of labor tend to drinking habits. Education of the poorer children. Wages and cost of living, 156. Iron, prices quoted. Knows nothing of the "iron ring." Shorter hours would reduce the temptation to drink, 157. Ten hours labor a day at moulding too much strain on the constitution. Savings, answers relative to how much a moulder can save under existing circumstances. Benefits of the eight hour system. According to Moulders' Union statistics there are always one-third more men than required. Piece work, 158-159.

PORTER, A. W., *McCormick Manufacturing Co., London*

666-670

Manufacture crackers, biscuits, confectionery, &c. Find a market all over Canada. Do not export. Number of hands employed. Hours of labor. Night work. Wages of confectioners and females. Do not make their paper boxes on the premises, 666. No confectioners employed now by piece work. Pays the men weekly, on Friday evenings. Distinct and separate conveniences for males and females; although both work together in the same rooms. Wages of bakers. Hours of labor. Number of bakers employed. Wages of girls and boys employed in the baking department. Age at which the boys and girls commence work. Does not indenture apprentices. Cannot get boys to work as apprentices for more than three years, but as a rule they do not become competent journeymen in that time. As a rule these men are successful in saving money: some of them live in houses of their own and a few own other property besides, 667. Never had any difficulty with employees. Some of their present employees have been with them for from sixteen to twenty-two years. Sanitary condition of the factory exceedingly good. Factory Inspector inspected the place a short time ago and seemed very well pleased. Uses Canadian sugar altogether. Reason why. Would not use beet sugar knowing it to be so. Uses principally Canadian flour but also imports a little United States flour of the highest class as it suits the purpose for which it is wanted better. Does not use Manitoba flour. Has not for the past two years employed any one under the age of sixteen years. Has found a few instances where young people tried to deceive him

in regard to their age. The work the girls do is light, 668. Both crackers and confectionery are imported but not to any extent. Send some of their goods to British Columbia and the North-West Territory. Their trade is increasing. Ship also to the Maritime Provinces. Competition very high and prices very low. Use a good deal of machinery; it has not decreased their demand for labor, but has enabled them to do a larger business. Could not compete with others without machinery. Machinery has not decreased the price of labor. Wages higher than they were years ago. Mechanics Institute in London has a good library and art night school in connection with it, 669. Thinks technical education is given at the Mechanics Institute also. Rate of wages paid for night work. No Sunday work. Kind of goods imported: if they had to pay duty the higher price would keep them out. Have an idea that exhibits are a good advertising medium but have no means of knowing exactly, 670.

PUMFREY, THOMAS, *Hamilton* . . . . . **821-822**

Wages of moulders employed by the Grand Trunk Railway company. Hours of labor. Constancy of employment. Reasons why he would rather work in a railway foundry than in a stove foundry, 821. Immigration. Evils of monthly pay days. Wages in England and Hamilton compared. Piece work. Garnisheing of wages. The amount of wages the Grand Trunk Railway Company retain on pay days. Men can leave on an hour's notice, 822.

PURCELL, JOHN P., *Engineer, Ottawa* . . . . . **1181**

Is engineer in the *Free Press* printing office. Has a certificate. It is the desire of engineers to have a law providing for inspection of engines and boilers, and the examination of and granting certificates to competent engineers. As much danger to life from explosion in the *Free Press* office as on a passenger steamboat. Customary in Ottawa to employ as engineers incompetent men; wages paid to such men. Sanitary condition of the *Free Press* office and the closets therein. Does not know of any accidents last year through incompetent engineers, 1181.

QUINLAN, MICHAEL, *Cornwall, Electrician* . . . . . **1087-1088**

Rule of the Canada Cotton Company regarding employees whose wages are garnished. Difficulty for anyone to get employed again in Cornwall after being dismissed for having his wages garnished. Weekly payments, 1087. Hours of labor. Water supply at the Canada Cotton mills. Never heard of any blacklisting. Dismissal of employees for belonging to the Knights of Labor, 1088.

RANKIN, ROBERT, *Printer, Ottawa* . . . . . **1169-1170**

Is foreman of the job department of Messrs. A. S. Woodburn & Co. Number of men and boys employed. Age of the youngest boy. Accident through the fall of an elevator, 1169. Pay days every two weeks. Wages. Hours of labor. Condition of the closets. Apprentices. A good common school education necessary. The indenture system, 1170.

RATELLE, ISAAE, *Barber* . . . . . **1083**

Barbers' wages. Constancy of employment. No Sunday work. Schools of Cornwall, 1083.

RIPLEY, JAMES, *Moulder, Hamilton* . . . . . **801-803**

Lockout in Toronto. Bath or wash rooms in connection with foundries, 801. Wages in Hamilton compared with Pittsburgh. Piece work and day work. Apprentices: length of time to serve. Union rules regarding apprentices. Lockout in Toronto, 802.

RISDON, WILLIAM, *Manager of the Erie Iron Works, St. Thomas* . . . . . **549-551**

Is an original industry as far as St. Thomas is concerned. Trade increasing. Rate of wages. Apprentices. Savings of the workmen. Machinery fairly well protected.

Sanitary condition of the shop. Factory Inspector. Imports first-class plough handles from Ohio: reasons therefor, 549. Iron used and where it comes from. Hours of labor, 550. Free library. Thinks that shortening the hours of labor tends to a great extent to improve workingmen intellectually, 551.

ROBINSON, JAMES, *Cigar Manufacturer, St. Catharines* - - - - - **920-923**

Number of men he employs. All union men. Hours of labor and wages. Pay days weekly, on Saturday afternoon. Apprentices. Truck system. Was on strike against the truck system in 1881. Union-made cigars sell well in the city. Effect of cheap labor in London and Montreal on the trade. Difference in wages paid in London and St. Catharines, 920. The effect of child labor on the trade. Wages in St. Catharines, Montreal and Hamilton compared. Thinks a labor bureau would be a good thing in settlement of disputes between capital and labor. The plan of the Cigarmakers' Union for gaining a strike. Arbitration, 921.

ROBINSON, SAMUEL, *Baker, Kingston* - - - - - **1000-1001**

Wages, 1000. Organized labor. Sanitary condition of Kingston bakeshops. Girls employed in cracker factories, their wages, ages and hours of labor. Difference in bakers' wages in Kingston and Toronto. Hours of labor in Toronto, 1001.

ROBITAILLE, STEPHEN, *Ottawa* - - - - - **1111**

Is a kind of a general man round the milling establishment of Messrs. Thos. McKay & Co. Wages of laboring men in the establishment. His own wages. Hours of labor. Night work. Constancy of employment. Rents and location of workingmen's houses, 1111.

ROGERS, CHARLES, *Cabinet Maker, Toronto* - - - - - **354-356**

More demand for a better grade of furniture than ten years ago. Medium classed furniture is cheaper, but in cost of expensive furniture there is not much difference. The manufacture of first class furniture can be assisted by machinery. Wages of cabinet makers and upholsterers. Day work. Constancy of employment of cabinet makers all the year round a point of advantage over carpenters. Tendency of machinery is to displace men. Difference in wages paid to cabinet makers 30 years ago and now. Almost all machinery used in cabinet making has been introduced during the last thirty years. Hours of labor thirty five years ago and now. Thinks the condition of the mechanic is on the whole better than thirty-five years ago, 354. The furniture imported into Canada is principally for patterns. Uses Canadian materials principally, but has to import black walnut lumber and veneers. Term of apprenticeship. Thinks indentures beneficial, 355. Hay & Cox system of apprenticing. Gives his experience as an employer to show that a man working for \$2 a day is on the whole as well off as he is. Recommends that workingmen form co-operative companies of themselves instead of striking. Believes in profit-sharing, 356.

ROGERS, DAVID, *Farmer, Kingston* - - - - - **992-996**

Scarcity of farm labor. Government should establish a Farmer's Labor Bureau. Extra help in the busy season. Length of time employed, 992. The use of machinery does away to a large extent with extra help. Hours of labor of farmers and farm laborers. Wages of a farm laborer hired by the year. Immigration, 993. Does not know what the farming community would do but for the immigrants who come in. Scarcity of farm labor. Average hours of labor of city and farm laborers compared. City and farm labor compared, 994. Crops. Hay pays best, with least outlay. Stock raising. Many farmers have sold out and gone to live in Kingston on account of the scarcity of farm labor. Scarcity of domestic farm help. Average monthly wages of a servant girl in the city and country, 995. Necessity for a Bureau of Labor Statistics, 996.

ROGER, FREDERICK, *Foreman in the Binding of Messrs. MacLean, Roger & Co., Parliamentary Printers, Ottawa* - - - - **1173-1175**

Number of young women employed under him and the nature of their work. Wages of paper rulers. Wages of females employed folding, stitching, covering, &c. Constancy of employment. Wages of young girl apprentices. Length of time required to become a competent folder. Ventilation of the premises. Girls in his department have no need to go among the presses, the pressman brings the work to them. Space between the presses, 1173. Protection of machinery. Factory Inspector. Sanitary condition and location of the closets. Swearing at the girls. Fining of employees under him, 1174. No authorised system of fining in the office but something is necessary to keep order, 1175.

ROLPH, FRANK, *Cabinet Maker, Windsor* - - - - **403-404**

Only one cabinet shop, employing eight men in Windsor. Wages. Work pretty steady all the year round. No Cabinet Maker's Union in Windsor, some of the men belong to the Knights of Labor. Hour of labor. Pay days weekly, on Saturday morning. Sanitary condition of the shop. Wages in Michigan. Machinery in the shop at Windsor not properly protected. Never saw the Factory Inspector, 403. No boys in the shop. Considers piece work injurious to the trade. Accidents from improperly protected machinery, 404.

ROONEY, JOHN, *Painter, Toronto* - - - - **367-368**

Corroborates all said by Mr. Geo. Harris. Average yearly earning of painters in Toronto. Over three months in the year hardly anything to do. Painters in Toronto want shorter hours than ten hours a day. Condition in England and Toronto compared. A great many painters come to Toronto from the Old Country, 367. Both immigrant and native painters find a tendency to work to smaller wages, 368.

ROSE, JOHN A., *Cigar Manufacturer, London* - - - - **617-622**

Uses imported tobacco altogether. Requires a different license to manufacture domestic tobacco. Has never seen any domestic tobacco fit for cigarmaking. Improving the quality of domestic tobacco. Does not employ any cigarmakers now, employs boys and girls. Wages of girls. Age at which they commence. Considers female labor more profitable at present, 617. Does not think there are ten journeymen cigarmakers employed in London. Apprentices when they are out of their time demand journeymen's wages, then they are not wanted. Cigars made by men are superior to those made by women: but do not sell for any higher price. Separate conveniences for male and female help. Average earnings and hours of labor of men in the cigar business. Hours of labor and earnings of women who make cigars. Apprentices. Action of the Cigarmakers' Union: the cause of men being discharged as soon as they are out of their time. Present depression of the trade caused by the Scott Act and the high rate of duty, 618. Importation of inferior brands of cigars stopped since the duty on imported cigars was raised. Reason why he does not employ union men. Average price of cigars he makes, 619. Wholesale and retail prices of cigars compared. If the import duty was still higher, imported cigars could be kept out of the country altogether. Can make just as good cigars in Canada as in the United States. Best markets for cigars. Inferior class of cigars made in Quebec. Number of women and boys he employs. The cigar manufacturers had at one time to fight the Cigarmakers' Union. Rules of the Manufacturers' Union. Knows lots of cigarmakers who were blacklisted, has a lot blacklisted now, 620. Does not blacklist women because they do not go on strikes and get drunk. Considers that organization among workingmen is a benefit to them. What he considers wrong in the action of the unions. Reasons why he would prefer women to men even at the same wages. Cigarmakers always get drunk. Does not know that low wages tend to make men get drunk and careless. Does not think that the manufacturers of London can afford to pay same wages as in St. Catharines: reasons why. His cigars

objected to on account of not being union-made in any town where there is organized labor, 621. Effect of the union label on cigars, 622.

ROSS, CRAWFORD, *Dry Goods Merchant, Ottawa* - - - **1184-1186**

Number of clerks, male and female, he employs. Age of the youngest. Sanitary condition of the lower apartments of his shop very good. Water closets, location and condition, separate for each sex. Wages of female clerks; their hours of labor, 1184. The water closets. Seats behind the counter provided for female clerks. Number of milliners and dressmakers he employs. Wages and constancy of employment of milliners and dressmakers. Apprentices, their wages and length of time they have to serve. Pay-days weekly. Pays in cash. Fining of employes, 1185. Hours of labor. Overtime not paid for except piece work, 1186.

ROWCROFT, SAMUEL, *Mill Overseer, Kingston* - - - **976-977**

Corroborates the evidence of Mr. W. Wilson (see p. 791). Is employed by the Kingston Cotton Company. Compliance with the requirements of the Factory Act regarding age of girls employed. What the Factory Inspector said regarding the dismissal of children under age. Visit of the Factory Inspector, 976. Accommodation provided for employees who eat their dinner in the factory. Water supply, 977.

RUNDLE, CHARLES R., *Contractor and Builder, Toronto* - - - **203-206**

Is engaged more particularly in the plastering business. Has been an employer of labor for fourteen years. Condition of mechanics in the building trade improved during last seventeen years. Wages of plasterers. Hours of labor. Combinations among workmen have perhaps on the whole improved their condition. Short hours have not demoralized the men. Does not advocate long hours. Apprentices, proportion of limited by the Union, 203. Method of making and carrying out agreements with the Union. Describes what he considers an improvement in settling labor disputes. Always found workmen honorable in carrying out the construction they put upon an agreement, 204. Does not know if the Ontario Act covers the ground he desires to be covered in arbitration. The matter of apprentices is the most frequent cause of strikes. Proportion of plasterers' apprentices allowed to a number of journeymen. Is in favor of compulsory arbitration and that arbitrators fix rate of wages and hours of labor. Master Builders' Organization, 205. The last strike in Toronto, 205-5. Rate of wages he pays. Does not grade men according to ability. Toronto and Hamilton are the only places where a man can learn plastering properly. Apprentices generally indentured. Plastering is not dangerous to the health and constitution of the men. Reasons why bricklayers are paid a higher rate of wages than plasterers, 206.

RUSHFORD, JAMES, *Laborer, Kingston* - - - **1044-1045**

Is employed at the locomotive works. Wages of laborers employed at the locomotive works, 1044. Laborers who own their own houses. Weekly payments. Shortening the hours of labor, 1045.

RYMILL, HENRY, *Bricklayer, London* - - - **687-688**

Standard rate of wages in the city. Cause of the labor trouble in May, 1887. Number of months' in an average season's work. Average season's earnings, 687. Hours of labor. Arbitration. Benefit in connection with the Bricklayers International Organization, 688.

SCOTT, JOHN, *Livery Stable Keeper, Petrolia* - - - **700-701**

Workingmen in Petrolia paid about the same as in any other part of Canada. House rents. Cost of building lots. Reason why rents are high. The low price of oil due to over-production. Price of provisions and fuel, 700. Truck system, 701.

- SCOTT, W. J., Heater, Hamilton** . . . . . **820**  
 Works for the Hamilton Forging Co. Wages of heaters. Constancy of employment. Wages of heaters in Hamilton compared with Pittsburg. Have no union here. Wages of helpers. No boys working in the forge. Wages of boys employed in the rolling mills. Age of the boys. Wages of day laborers in the company's employ, 820.
- SCULLY, JOHN, Contractor's Agent, Toronto** . . . . . **252-254**  
 Describes the nature of his business. Labor statistics in regard to how laborers are hired and sent out to work on railways, canals and other public works and lumber shanties. Stonecutters and rough carpenters' wages, &c., 252-253. Immigrant laborers, 254.
- SHANNON, LEWIS W., Newspaper Proprietor, Kingston** . . . . . **1034-1035**  
 Printers' wages. Rules regarding the setting of advertisements and piecework. Effect of the use of stereotype plate matter. Overtime. Apprentices. Hours of labor. The demand for increased wages was amicably settled, 1034. Apprentices, 1035.
- SHARKEY, JAMES, Hamilton** . . . . . **807-808**  
 Age fifteen years. Stems tobacco for Tuckett & Son. Hours of labor. Paid by the week. Wages. Left school when he was ten or eleven years of age and went to work as a message boy, 807. The men try to teach him. Girls employed with Tuckett & Son. Their ages. They can sit or stand at their work just as they like, 808.
- SHAW, JOSEPH, Laborer, Kingston** . . . . . **1044**  
 Is employed at the locomotive works. Wages of laborers employed there. Pay days fortnightly. Weekly payments. Owns his own home, but it is not all paid for. It would take him twenty years to pay for his home at his present rate of wages. Has a pension. Value of his home, 1044.
- SHERWOOD, J. D., Circular Sawyer, Ottawa,** . . . . . **1127**  
 Hours of labor of sawyers and other saw-mill employees. Objects to work eleven hours a day, 1127.
- SHERWOOD, JOSEPH, Sawyer, Ottawa** . . . . . **1125-1126**  
 Works on what is termed the "turns" in a saw mill. Hours of labor of saw mill employees. Wages of saw mill employees, 1125. Pay days every two weeks, on Thursday. Accidents. Factory Inspector. Workmen who own their own houses. Wages now and seven years ago compared. Rents in New Edinburgh ward, 1126.
- SHIELDS, MICHAEL, Marble-cutter, Ottawa** . . . . . **1121-1123**  
 Wages of marble-cutters. Hours of labor. Marble used imported from the United States, 1121. Italian marble. Stone-cutter's wages; reason why their wages are lower in winter than in summer. Stone-cutting and bricklaying two distinct branches of the building trade in Ottawa. Kinds of building stone used in Ottawa. Constancy of employment of stone cutters. Apprentices, 1122.
- SHOEFELT, SAMUEL, Cornwall, Cotton Carder** . . . . . **1075-1077**  
 Is employed at the Canada Cotton Company's mill. Number of operatives in his room, male and female, adults and children. Wages. Constancy of employment. Arrangement and location of the closets, 1075. Time allowed to operatives to use the washroom previous to leaving. Fining of employees. No objection on the part of the company to employ operatives belonging to labor organizations. Wages.

House rent. Company owns and rents houses to their employees, 1076. Accommodation and rent of those houses. Overtime. Has not heard any desire expressed by the operatives to be paid oftener than fortnightly. Fining of employees. Ventilation, 1077.

SHORT, ALEXANDER, *Printer, Ottawa* . . . . . 1154-1157

Sanitary condition of printing offices in Ottawa. Dangerous elevators, 1154. Truck system. Irregularity in paying wages. The increase of printers' wages in Ottawa has been more than counterbalanced by increase of rents. Rents of workingmen's houses now and eight years ago compared. Sanitary Inspector. Printers' wages in Ottawa. Hours of labor. The Union obliged to accept incompetent printers as members through the avarice of employers, 1155. In any other place but Ottawa printers before being admitted as journeymen by the Union must prove themselves competent, but in Ottawa influence on employers sometimes prevents it being done. Employers in Ottawa refuse union men and take inferior workmen. The possible amount a printer might earn in a week working by the piece on a morning newspaper, 1156. Regarding inequality of workmen as to ability thinks "taking it the week through one man is about as good as another." Apprenticeship system, 1157.

SHORT, ALFRED, *Bricklayer, London* . . . . . 682

Effect of immigration on the trade, 682.

SIMPKINS, CHARLES, *Laborer* . . . . . 401-402

Did learn carpentering but had to give it up and do what he could to earn a living. Is now a general laborer. Not aware of any question being raised on account of his color when he was a carpenter, 401. Twenty years in Windsor. Came from South Carolina at the close of the civil war. His average wages as a laborer. Constancy of work. Hours of labor. Rent he pays. Is trying to built, to save rent. Belongs to the Knights of Labor. Belonging to the Knights of Labor has helped to keep him employed, 402.

SIMPSON, ALEX, *Shoemaker, Petrolia* . . . . . 714-717

Arbitration. Effect of labor combinations. Organization tends to teach the working-man not to strike. Labor organizations not antagonistic to the employer's interests, 714. Profit sharing. Paying workmen by cheques. Truck system. Co-operative societies cannot be successfully carried on in Canada under the existing laws. The establishment of a Government Bureau of Labor Statistics, 715. The effect of the use of machinery in boot and shoe factories on apprentices, 715-716. Wages of a shoemaker in Petrolia at custom work. Rents of houses in Petrolia. Price of the necessaries of life. Purchasing power of money compared with five years ago. The value of building lots in Petrolia increasing. Public Schools in Petrolia, 716. The water supply of Petrolia, 716-717.

SLINN, S., *Baker and Confectioner, Ottawa* . . . . . 1113-1114

Wages of bread and cake bakers. Hours of labor. Bakers about to strike against night work. Effect the doing away with night work will have. Apprentices, 1113. Sanitary condition and ventilation of his bake shop. Wages of bakers and profits on bread now and ten years ago compared. An apprentice who has not yet finished serving his time running business for himself, 1114.

SMILLIE, EDWARD, *Port Dalhousie, Submarine Diver* . . . . . 922-923

Chiefly employed by Government. His experience in diving among foundered vessels, 922. Number of divers engaged on the lakes. Constancy of employment. Wages, 923.

**SMITH, ANDREW, Carpenter, Petrolia** - - - - - **698-699**

Carpenters' wages. Constancy of employment of workmen generally in Petrolia. About 25 per cent. of them own their own houses. Truck system. Education, 698. Interest a workingman would have to pay on money supposing he wanted to build. Hours of labor. Truck system or store orders. Rent. Price of land, 699.

**SMITH, JOHN, Merchant Tailor, Toronto** - - - - - **132-140**

Takes an interest in workmen's benefit societies. Workmen's benevolent societies. Investment of, incorporation of, 132. Benevolent Societies' Act. Defects in it. Has known of the funds of such societies being used for purposes outside benevolent objects. Constitution of friendly societies regarding funds and investments, 133. Difficulty in applying the Benevolent Societies Act. Officers of such societies do not always give bond of security. The Act does not make the giving of such bond compulsory. Recommends that Government appoint an inspector to look after such societies. The Act does not compel such societies to publish an annual statement of their condition, 134. Inefficiency of the audit of accounts and books of such societies. Order of Foresters. Members sometimes induced to join by misrepresentation. Charges made and funds accumulated in excess of what is required for benevolent purposes, 135. Recommends that Government institute and control benefit societies, 136. Limit to the liability of benevolent societies; thinks the Foresters Society notwithstanding all its disadvantages a safe system of cheap insurance. Method of working the funds of the Ancient Orders of Foresters. Never heard of members being defrauded of their benefits. Thinks benevolent societies as far as he knows are conducted on a sound permanent basis. Does not think Government exercises sufficient jurisdiction over benevolent societies, 137. Opinion regarding Government control of benevolent societies, 138. Statement regarding workmen's cooperative benevolent societies (handed in by John Smith), 138-140.

**SMITH, JOHN, Hamilton** - - - - - **752-759**

Is immigration agent at Hamilton. The counties included in his district. Number of immigrants who settled in his district in 1887; their nationalities, 752. Departmental rules regarding assistance to immigrants. Assisted passengers. Proportion of mechanics among the immigrants who settled in his district. Shows that the immigrants who settled in his district last year have created more work for mechanics than the mechanics among them have taken from the Canadian mechanics already here, 753. The great bulk of the immigrants are agricultural and common laborers. Immigration agents in other countries are steamship companies and philanthropic societies. Deaf and dumb printers sent out by Miss Gordon, 754. Children sent out by Miss Rye. Assisted immigration has ceased as far as the Government is concerned. Difficulty met with in the working of the Hamilton Home for Children from relatives of the children. The Children's or Stephenson's Home in East Hamilton. Immigrant children sent out to this country; his opinion regarding them is favorable, except that class which comes from reformatories and industrial schools. About 4 per cent. of the boys immigrants who come to his district are of that class, 755. Generally the character of these boys is good. Thinks 4 per cent. of them are placed among farmers. Four of these boys have found their way to the Penetanguishene Reformatory in seven years. Can speak even more favorably of the girl immigrants; generally placed with farmers. How the Stephenson's Home is supported. Health inspection of immigrant children. The proportion who have turned out unhealthy. Early life of the children brought out. The class of children sent out by Miss Rye, Miss McPherson, and Mr. Middleman are desirable; those sent out by Dr. Barnardo are not always so, 756. Dr. Barnardo's method of selection. Workhouse children compared with those from the reformatories and industrial schools. The agreement between the Dominion and Ontario Governments regarding assistance of immigrants from Quebec to Ontario. Acts as agent for both Ontario and Dominion Governments. Assisted railroad passages. Pauper immi-

grants, 757. Does not think immigrants displace our own work people to any extent. Class of immigrants he has most applications for. Constant employment for agricultural laborers all the year round becoming more general; reason why. The class of agricultural laborers who drift back to the cities after harvest. Proportion of the population of Hamilton who are children and grandchildren of immigrants. The best immigrants who can come out to this country are men who have been mostly independent of capital. Rapidity of and extent to which wealth has been acquired by immigrants, 758. Chances for a poor man 50 per cent. better in the North-West than Ontario. Concentration of capital in Ontario has deprived the poor man of the chances of success he formerly had. How the Dominion Government appropriation for immigration is spent. Quarantine. How the money appropriated for immigration is spent, 759.

SMITH, JOSEPH E., *Painter, Chatham* . . . . . 452-455

Wages of house painters in Chatham. Average about eight months employment in the year. Customary to employ in the busy season any one who can swing a brush. Apprentices. Paid weekly, on Saturday night, 452. Hours of labor. Approves of a law enforcing arbitration in settlement of labor disputes. Cost of living. House rent has not increased during last five years. No improvement in wages during last five years. Painters not organized as a union, 453. Does not think any workmen in Chatham save anything out of their wages. Not much capital required to start the painting business. Co-operative work. Only three or four first class decorators in Chatham who have served their time. The trade is ruined by the employment of too many boys, 454. Age of some of the boys. Thinks a thorough apprentice system would make better workmen and protect the journeyman who has served his time, 455.

SMITH, JOSEPH E., *Painter, Chatham, recalled* . . . . . 465-466

Wants to mention a machine in the blacksmiths' shop of the Agricultural Implement works where he works which is not properly protected, 465. And a machine called a "rounder" in the wood shop not properly guarded, 466.

SOMERVILLE, RICHARD, *Cooper, Windsor* . . . . . 398-401

Seven years in Windsor. A cooper all the time. Wages of coopers in Windsor. Tight and loose work, 398. Number of journeymen coopers in Windsor. Scale of rates or wages for loose work. Most of the coopers in Windsor belong to an organization on the American side. Weekly pay days on Saturday night. Hours of labor. Piece work injurious to the trade. No apprentices. Only one shop in Windsor, 399. Sanitary condition of the shop good. Ventilation extra good, the snow drifts in. No steady work all the year round. The abolishing of piece work would be beneficial to coopers. The present practice of putting up flour in paper and linen bags has reduced the quantity of work for coopers. Machinery has killed the cooper trade, 400. Coopers in the fall sometimes work all night and have nothing to do in the summer. Convict labor. Does not think there is a man in the world would send his son to learn the cooper trade. Coopers' International Union is out of existence. Knights of Labor a benefit. Only for organized labor coopers would be even worse off, 401.

SOUTHWELL, RICHARD, *Carpenter, Toronto* . . . . . 241-242

Police protection granted to employers in case of a strike. Co-operative stores, 242.

SPASHETT, EDWARD S., *Chatham* . . . . . 468-470

Works at the waggon works as a bender of waggon and buggy material. Employed about eight or nine months in the year. General condition of workingmen in Chatham, 468. Strikes. Arbitration. No apprentices. Industrial education would be of great benefit. Machinery is reducing cost of production; has benefited both employer and workman. Sub-contracting. Wages, 469. Does not import any material used in waggon making. Bending works common all over Canada, 470. Reason why the waggon works do not run all the year round, 470.

- STALKER, GEORGE F., Ottawa** . . . . . **1127-1128**  
 Technical education. Number of pupils attending his drawing classes, enumerated by trades and professions, 1127. Positive benefits derived by mechanics and other who have attended. The proper age to commence the teaching of drawing, coloring &c. Industrial schools for practical training, 1128.
- STEPHENS, WILLARD, Sailor, Kingston** . . . . . **1030-1034**  
 Wages of sailors, generally ship by the day and are paid at the end of the trip. Hours of labor. Canadian and American barges compared. Condition of forecastles, 1030. Wages of sailors in sailing vessels are now mostly fixed according to the rule of the Seamen's Union. The crew a barge in tow ought to have. A vessel without sufficient canvas is not seaworthy. Overloading of vessels. Thinks the appointment of a Government inspector of hulls would be a benefit as regards the safety of the crew. Deck loads. The duty of captains or mates to see that sailors' sleeping apartments are kept clean. Has often known vessels leaving Kingston with bad gear, sails, &c. The best time to inspect a vessel, 1031. It is the rule of the sailors' organization to ship sailors by the trip; thinks it would be better for all parties if they were shipped by the month. Thinks it is the duty of longshoremen, not sailors to load and unload. Reason why wages are higher in the fall than in the summer. The employment of incompetent men. A life preserver on a sailing vessel is a very rare thing, 1032. The establishment of shipping master's offices at the different ports. Benefits in connection with the Seamen's Union. Wages have increased since the union was established, and how much. Has known vessels to leave port short handed because men could not be got. The habits of seamen generally in regard to the use of intoxicating liquors, 1033. Thinks it would be a rare case that a vessel would be obliged to leave port short handed through the intemperance of sailors, 1034.
- STEPHENSON, JAMES, Moulder, Hamilton** . . . . . **797-800**  
 Answers to questions asked by the Commission from the Hamilton Moulders' Union regarding ironclad contracts. Child labor. Employers' Liability Act. Truck system. Foreign contract labor. Rents. Weekly payments and pay days. Apprentices. Hours of labor and wages. Purchasing power of wages. Wages in Canada compared with Great Britain and the United States. Arbitration. Effects of organized labor. Strikes. Trusts, 797. Fining of employees. Sunday labor. Industrial schools. Tenement houses. Immigration. Sanitary arrangement. Conspiracy laws and blacklists. Workingmen's co-operative and benefit societies. Convict labor. Employers' Liability Act. Foreign contract labor, 798. Factory laws. Visit of the Factory Inspector. Sanitary arrangement and ventilation of foundries. Convict labor, 799. Industrial schools. Fines for breakages, 800. Corroboration of this evidence by John Miller and James Bartholemew, both moulders, Hamilton, 801.
- STEWART, THOMAS, Machinist, Ottawa** . . . . . **1191-1195**  
 Establishment of a Bureau of Labor Statistics, 1191. If post offices and postmasters were utilized in the collection and dissemination of labor statistics it would obviate necessity for strikes. Strikes mostly caused by the importation of foreign labor, 1192. Witness complains of being interrupted and prevented from expressing his thoughts, 1193. The only money Government spends on the workingman is that spent in assisted passages of immigrants brought here to compete with him. Assisted immigration, 1194. Number of men he employs. Thinks eight hours a day enough for any mechanic to work, 1195.
- STODDARD, THOMAS, Ottawa** . . . . . **1111-1113**  
 Is a pattern-maker and machinist. Number of moulders and machinists employed at Messrs. W. H. Baldwin & Co.'s. Their wages. Blacksmiths' wages, 1111. Hours of labor. Night work. Pay days fortnightly. Technical education. The Kindergarten system. Night schools. Libraries, 1112. Wages in his trade have not increased during past five years. Indenturing of apprentices, 1113.

- STUART, WILLIAM, Jr., Ottawa** . . . . . **1108-1110**  
 Is a contractor. Wages of stonecutters, bricklayers, masons and laborers. Constancy of employment. Lien law. Thinks a workingman's claim for wages should rank prior to a chattel mortgage, 1108. Pay days fortnightly. Establishment of a Bureau of Labor Statistics. Condition of the working classes in Ottawa fair. Probably two-thirds of the mechanics own the properties they live in. No regular standard of wages in the building trades, it goes by competition. Location and value of mechanics' houses. Wages of carpenters and plasterers. Hours of labor, 1109. Masons', bricklayers' and stonecutters' union. Saturday half holiday. Wages of plasterers' and builders' laborers Scaffolds. Appointment of a building inspector. Compensation for accidents. Lien law. Wages of lathers, 1110.
- STUDDART, WILLIAM AUGUSTUS, Hamilton** . . . . . **736-740**  
 Is now and has been secretary of the Hamilton Loan and Building Society since it was organized 1883, 736. How stock is issued and paid for. Classes of people who hold stock. How the money is loaned. Number of houses built with the money which has been loaned. Classes of people who have built the houses. Estimated time the loans will be paid in. Interest and bonus, 737. No money lent on speculation. Securities accepted. Bonds given as security by the treasurer. The authority on which loans are authorized and moneys paid. Have foreclosed no mortgages and met with no losses. How they deal with borrowers in arrears. By-laws regarding selling of stock. No money lent without real estate security, 738. Cost of management. Money can only be loaned at a meeting of the shareholders. Example of how a workingman may acquire a property worth \$1,200 in eight years at a cost of \$450 over and above his rent of \$8 a month. How the society's assets are invested. Business of the society has steadily increased. Opposition from money lenders, 739. How loans are repaid. Average discount paid for loans Loans advanced as the work on the house progresses. How directors are elected Repayment of loans before the expiration of the time, 740.
- STURGES, GEORGE J.** . . . . . **786-788**  
 Works in the rolling mill of the Hamilton Iron Forging Company. Hours of labor. Paid by the ton. Wages of the various classes of men employed in the rolling mill. Apprentices. Healthiness of the occupation. Wages in Hamilton compared with those paid in England and the United States, 786. No union in Hamilton. Pay days. Paid in cash. No truck. Work all the year round. Boys at the trade. Night and day gangs change weekly. Lowest rate of wages paid to unskilled men, 787. Wages of skilled workmen. Hours of labor. Trade is organized in the United States but not here. Wages and cost of living here and in the Western United States' cities compared. Size of iron they make. Age a boy should be when he goes to learn the trade. Education, 788.
- SULLIVAN, JOHN, Bricklayer, London** . . . . . **679-682**  
 Wages of a journeyman bricklayer. Length of time they are employed in the year. Average yearly earnings. Savings. A good many bricklayers in London own their own houses. Number of bricklayers in the city. House rents. Bricklayers are organized in London. Benefits derived from the organization. The organization has no laws regarding strikes; they prefer arbitration in the settlement of labor disputes. Strikes are a last resort. Cause of the strike in the summer of 1887, 679. No understanding between the bricklayers' organization and employers that notice be given previous to making demands for higher wages or reduction in hours. Union rules regarding apprentices. The Builders' Exchange is a combination or ring formed to keep everything in their own hands and prevent outsiders from doing anything in the building line. How they worked it. Believes the union to be in favor of compulsory arbitration. Knows that the Builders' Exchange discriminate against any builder who is not a member, but will not swear to it, 680. Fining

- of the members of the Builders' Exchange. Lien laws. Wages in Canada compared with wages in the United States and Great Britain. Co-operation society. Immigration. How the strike was settled, 681. Pay days weekly, on Saturdays, 682.
- SUTTON, WILLIAM, *Stationary Engineer, Toronto* . . . . . 210
- Illustrates the urgent necessity of protecting by law competent engineers, and law to compel inspection of stationary engines and boilers, 210.
- SWANTON, GEORGE, *Broom-maker, Hamilton* . . . . . 907
- Corroborates the evidence of John McKenna (See pp. 905-907), 907.
- SYMONS, ROBERT, *Shoemaker, London* . . . . . 659-663
- Not much "custom work" used in Canada; principally factory-made boots and shoes that are used. The consumers get better value in custom work than in factory work. Wages, 659. Wages have increased during the past few years, but both custom and factory work have decreased. Women employed in the factory in London. Only one factory of any size in the city. Not much of the goods made in London are sold in London, because they do not produce as good an article for same money as they do in other towns such as Toronto, Hamilton and in the Province of Quebec. The extensive use of female and child labor in the Province of Quebec enables the manufacturers there to undersell in London, the London manufacturers. Method of working in Quebec. Earnings of factory hands in London, 660. The factory in London closed down twice a year ostensibly to take stock, but really for want of work, 660-661. Co-operative society. States that the school inspector was in error when he said he never knew of children being sent home from school for want of the necessary books; says he knows of several instances of it being done; his own children being among the number, 661. The frequent changing and cost of school books a burden to the working classes. Thinks if schools were free children might be kept longer at school, 661-662. Thinks that female labor in any occupation should be paid as much as male labor if equal in capacity, 662. Corrects statements made by previous witnesses regarding the sanitary condition of London and wages paid to laborers, 662-663. Reasons why many workmen do not volunteer evidence before this Commission, 663.
- SYMONS, ROBERT, *recalled* . . . . . 688
- Complains of the Government assisting immigration as shown by last year's report. Says the labor market here is already overcrowded; is therefore opposed to the system of assisted immigration, 688.
- TANSEY, CHARLES, *Cigar-maker, St. Catharines* . . . . . 192-922
- Substantiates the evidence of R. J. Mills (see p. 919) and James Robinson (see p. 920). Truck system. Rules of the Cigar-makers' Union regarding the truck system, 921. Apprentices, 922.
- TASCHEREAU, E. A. *Card. and Arch. of Quebec* . . . . . 368
- Letter from him to the secretary of the Commission containing his opinion on child labor, female labor, sanitary arrangements of factories. Arbitration. Strikes and their results, 368.
- TASSÉ, DAMASE, *Printer, Ottawa* . . . . . 1157-1158
- Accommodation and sanitary condition of workmen's houses, 1157. Sanitary condition of printing-offices. The apprentice system, 1158.
- TAYLOR, EDWARD, *City Relieving Officer, Toronto* . . . . . 285-286
- A great deal of distress in Toronto at present. Classes of people who are applicants for relief. Chief causes of destitution: Seasons of the year when application for

relief are most numerous. Corporation grants to charitable institutions, 285. A great many applicants for relief among newly arrived immigrants. System of giving relief in Toronto. Percentage of immigrants who come to Toronto who are destitute, 286.

**TAYLOR, T. H., Chatham** - - - - - **475-480**

Is owner of a woollen mill, number of hands he employs and the proportion of skilled workmen amongst them. Length of time required to become expert in each department. Number of department. Principal products. Market principally local. Wages he pays. Age of boys he employs. Growth of his business. Wools he uses: and where he gets them, 475. A duty on fine imported wool would affect his business seriously. Sufficient coarse wool grows in Canada to supply the home market and leave a surplus for export. Wages have been stationary for four or five years; previous to that they rose. The North-West as a market for his products. Hours of labor. The application made to him for shorter hours, and how it was settled. Prices for his products fair for the local trade but cut close for the wholesale trade. Makes fine yarns that take the place of Berlin wools. Cannot tell why so much Berlin wools are imported; the home made article satisfies those who use it, 476. Quantity of wool grown in the county of Kent is not a quarter of what it was six years ago. Thinks Canadian tweeds are coming more into use and giving greater satisfaction than formerly. Admits it would be a benefit to him if the statistics of the trade throughout the Dominion were published annually by some Dominion authority, 477. Apprentices. Employs women as weavers, a girl runs only one loom. Is interested in a flour mill also. The kind of wheat he uses. Difficulty he has met in trying to handle North-West wheat. Price of wheat in Chatham and Toronto, 478. Number of hands he employs in the flour mill. Sells his flour in the Maritime Provinces altogether. How he ships his flour. Cannot supply the demand for bran and middling all over the Province. Price of bran. Condition of his employees, 479. Exempting mills and factories from taxation. What he thinks of such exemptions from taxation. Water supply of Chatham. Sewerage of Chatham. Epidemics. The general state of business in Chatham. Organized charitable bodies in Chatham, 481.

**TEAGUE, WILLIAM C., Printer, Ottawa** - - - - - **1181-1184**

Organized labor has been a direct benefit to the working classes in Ottawa. His opinion regarding shortening hours of labor, 1181. Beneficial effect of Saturday half holidays. Arbitration as a means of settling labor disputes. The formation of a Government Bureau of Labor Statistics. Workingmen's insurance companies controlled by Government, 1182. The apprentice system. Public night schools in Ottawa and the need of them. A Dominion Factory Act preferable to Provincial Acts of that kind. Free public libraries. Workingmen's insurance, 1183. Unorganized trades are not so well paid as those which are organized. Condition of the working classes in Ottawa during the last ten years has improved both socially and materially, 1184.

**THOMPSON, JAMES D., Mayor of the City of Kingston** - - - - - **1011-1016**

Corporation work which is given out by contract. Unskilled labor employed by the corporation, 1011. Contract and day work in the construction of corporation drains compared. The municipal authorities powerless to prevent foreign labor from being employed on corporation work under the contract system. Wages of day laborers. Corporation relief of the poor, how carried on; no regular system, 1012. Relief labor compared with the contract system. People of Kingston do not care who does the work so long as they get value for their money, 1013. Classes of people employed at corporation work. Outsiders only given work in case of a surplus. Assessment. Difficulty of getting an equitable assessment of income. Publication of assessment

rolls for the purpose of getting a more equitable assessment, 1014. Increase of the assessment of the city from 1870 to 1886. Volume of industry in the city has increased during last year. The improvement of the working classes in Kingston since 1865 "has been simply wonderful." Sanitary condition of the city, 1015. Sanitary condition of the public schools. Overcrowding of the schools. Rate of taxation. Total debt of the city. Bonus to the K. & P. Railway. Ten manufacturing establishments exempted from taxation, 1016.

THOMPSON, PHILLIPS, *Journalist, Toronto* - - - - **98-103**

Remarkable increase of rents in large centres, 98. Remedy for increase of house rents, 98-99. Any increase of wages is offset by increase of house rents; some trades or occupation not organized, do not receive any increase of wages to balance increased rents; objects to narrowing the application of the term workingman to those who labor with their hands only, 99. Thinks owners of houses receive excessive interest on the money invested therein; compares the loss which might accrue to property holders from such a change in the law as he would suggest, to the loss borne by the slave holder when deprived of his slaves. Remedy for exorbitant increase in value of property to the nationalization of the land. Thinks it will come gradually. Nationalization of land means shifting the whole burden of taxation on to the land; and the ownership to the government, 100. What this would lead to eventually, 101. Deficiency of land tax, if any, should be supplemented by tax on income, 102. Questions and answers theorizing on Nationalization of land, 101-2.

THORNE, JOSEPH, *Carpenter, Kingston* - - - - **1053-1054**

Wages of carpenters, 1053. Number of laborers and mechanics employed in the Montreal Transportation Company's yard. Protection of the machinery there. Attitude of the company to organized labor, 1054.

THORNTON, FRANKLIN, *Stonecutter, Windsor* - - - - **407-409**

Marble cutters do stonemasons' work in Windsor. Ohio stone principally used. Work by the day principally. Sometimes piece work, 407. Wages regulated by Detroit prices. Not organized in Windsor, but many belong to the Stonecutters' union on the other side. Wages of a stonemason not so high as those of a stonecutter. Stonecutters and bricklayers are the highest paid mechanics in the building trade. No slaters in Windsor, 408. Plastering. Prices of centre pieces, 409.

THORPE, J. W., *Job Printer, London* - - - - **635-636**

Is paid more than the standard wages, \$9 a week. State of the trade. Apprenticeship system. Females employed, 635. Wages of females. Printers' wages, 636.

THURSTON, WILLIAM, *Boot and Shoe-upper Manufacturer, Toronto* - - - - **307**

Wages he pays his employees. Hours of labor. Employs women. The wages he pays them. Males and females all work in same room. Divided off. No separate conveniences, 307.

TOWERS, THOMAS, *Hamilton* - - - - **870-877**

Is a carpenter and District Master of the Knights of Labor for Hamilton. Hands in a book called a charter containing a declaration of the principles of the Knights of Labor, 870. Degree of secrecy attending the meetings and transactions of the Knights of Labor. Attitude of Knights of Labor toward the Government under which they live. Child labor. Convict labor, 872. Foreign contract labor. Post Office Savings Banks. Chinese labor. Knights of Labor bound to uphold the institutions of the country in which they live. Clergymen admitted as Knights of Labor. Manufacturers' combinations, 873. Combination of employers in the building trades. Grocers, lawyers and doctors have their associations. District Assembly of the Knights of Labor incorporated. Benefits arising from the incorporation. The Knights of Labor as a national association. Class of members who favor

making it so. What might be the effect of a national organization of the Knights of Labor in the Dominion. National feeling tends to keep workingmen apart when they should be united, 874. Co-operation in Montreal assisted by money from the United States. Grand Trunk Railway employees are paid monthly, but would prefer to be paid weekly. Reasons why. Garnisheeing of wages of Grand Trunk Railway employees. Man discharged by any railroad company must have a certificate from that company before he is employed by any other, 875. Weekly payments. Shortening of hours of labor. Thinks a day's work could be done in much less than eight hours. With the machinery now in use it is unnecessary to employ men more than five hours. Proportionate profit of capital and labor. Credit system. Effects of the reduction of hours of labor on wages and cost of living, 876. Free public library, 877.

TUCKETT, GEO. T., *Tobacco Manufacturer, Hamilton* . . . . . **743-746**

Is the junior members of the firm of G. E. Tuckett & Son. Number of hands they employ. Class of labor employed and ages. Wages. Child labor. How employed. At what age. Constancy of employment. Children's wages or earnings. How apprentices are selected, 743. Machinery used is guarded in every possible way. Sanitary conditions of the factory. Class of tobacco they make. Sell it all over the world. Prices of tobacco. Where they get their raw tobacco from. Canadian tobacco. Wages and hours of labor. Voluntarily reduced the hours of labor from ten to nine hours a day and find they get the same amount of work done, 744. Pay days weekly, on Saturdays. Profit-sharing. The nine-hours limit, 745. Healthiness of the business, 746.

TWEEDALE, DR. JOHN B., *Physician to the Board of Health at St. Thomas* **501-503**

Sanitary condition of St. Thomas. Sewerage system. Plumbing. Sanitary condition of the school houses. Water supply, 501. Epidemics and the means taken to stamp them out. Does not know if the Factory Inspector has visited St. Thomas. Would say that the factory machinery is not properly protected in some places. Inspection of milk. Inspection of food. Death rate. Accidents from machinery. Child labor in factories, none that he is aware of, 502. Water supply in the schools not pure, 503.

VALE, WILLIAM JOHN . . . . . **812-816**

How to employ prison labor is one of the most difficult problems of the labor question. Thinks the system of contracting prison labor should be abolished. Evil results of keeping prisoners idle. Stamping of prison made goods. How money acquired by prison labor should be distributed, 812. Immigration. Printer's wages compared with those of other skilled mechanics. Thinks the previous witness who stated that a printer might in ten years own his own house, never went into figures. Five days a week is sufficient on a morning paper. Strongly in favor of curtailing the hours of labor; thinks it would be beneficial to both men and employers. Cordially in favor of Government doing their own printing. Government supervision of friendly and benevolent societies, 813. Mechanics' Institutes. Night schools. Effect shortening hours of labor would have on the labor market. Does not think shortening hours of labor would diminish production. If the mechanic had his share resulting from the improvements in machinery hours of labor might be shortened by three hours. Purchasing power of money. The increase in wages in some branches of trade due to organization. Cost of living has increased, 814. Shortening the hours of labor would increase the amount of production. Arbitration. Chances to purchase luxuries greater now, but opportunities fewer than ten years ago. How the workingmen in Hamilton who have had their hours of labor shortened have improved the opportunities thus given them. Compulsory arbitration favorably spoken of in France, where it is in operation, 815. Technical schools, 815-816.

**VALIANT, GEORGE, of Valiant & Co., Shoe Manufacturers, Toronto, - 309-311**

Five years in business. Employs thirty to forty men and about an equal number of females. Wages. Competition met with from the other provinces and the United States, 309. Does not know of any combination among the manufacturers regarding wages or prices. Hours of labor. Lasters' wages. Have not the same class of skilled workmen in Canada that they have in Boston. No apprentices. Shoemaking not taught in factories as a rule. Custom work, 310. Factories turn out a better class of work than they did ten years ago. Separate conveniences and separate workrooms for male and female hands. Machines used in the business on which royalties are paid come from the United States, 311.

**VANCE, JOHN, Cotton Weaver, Hamilton - 893-894**

Number of looms one weaver runs. Wages. Female weavers. Weaving is not hard but tiresome watchful work. Length of time required to learn. How the capacity of girls and boys is ascertained, 893. Lowest wages of a girl and hours of labor. Hours of labor too long. Constancy of employment, 894.

**VOLUME, JAMES, Shoemaker, Kingston - 936**

Shoemakers' wages and hours of labor. Piece work. Females, what employed at Apprentices. Pay days. No truck system in Kingston. Rents. Shoemakers who own their own houses. Savings. Purchasing power of wages. Boots imported from Montreal, Toronto, Boston and Rochester. Effect of organization on the trades, 936.

**WADDELL, JOHN, St. Thomas - 530-535**

Is foreman in J. M. Green's house furnishing factory, the wood work department; Sashes, doors and blinds. Constancy of employment. Trade decreasing for the last ten years, 530. Wages, 530-531. Apprentices. Benefits of indenturing apprentices, 531. Condition of the workshops. Is not aware of the Factory Inspector having been there. A great many poor workmen in the trade here. Labor organization. Arbitration. Would favor a law compelling arbitration, 532. Cause of the present depression of the business. Rents and condition of workmen's houses. Possibility of the workmen saving money. Trade purely local. Apprentice system. Reasons for the large number of poor workmen. Industrial education, 533. Benefits derived from organization. Apprentices and indentures. Kinds of wood used, 534. Profit sharing none. Indenturing apprentices, 535.

**WADDELL, JOHN, St. Thomas, recalled - 580-581**

Mechanics' lien law in its present form no benefit to the workingman. Suggests the changes necessary to secure the workmen and prevent inferior and unprincipled men from becoming contractors. Shows how the law in its operations is comparatively useless and the reason why men are reluctant to avail themselves of it, 580-581.

**WADE, BYRON J. - 560-563**

Is a farmer. Lives five miles west of St. Thomas. Has only seventy-five acres of a farm and makes a pretty good living off it. Crops and cattle he raised. Prices of cattle. Could barely make a living out of raising wheat at present prices, 560. Price and average yield of wheat. Condition of the farmers. Railroads a great improvement and a benefit to farmers. Timber in the vicinity. Cordwood. Wages of farm hands. Constancy of employment. No surplus of farm labor in the summer. Farmers in the neighborhood live more comfortably than they did fifteen or twenty-five years ago. Farm buildings generally are improved, 561. What becomes of the farm laborer in the winter who are not employed all the year round. Hours of labor of farm laborers in the busy season, 562. The amount of labor displaced by the use of self-binders. Price of cattle and produce very low. Cost of raising wheat very

much reduced by use of machinery. Does not think it would be possible to harvest crops now without machinery. Agricultural immigrants. Rotation of crops. Home and foreign markets, 563.

WALKER, JOHN, *Secy.-Treas. Crompton Corset Co., Toronto* - - - 287-289

The company employs on an average 230 girls and 20 men. Wages of skilled hands and laborers. Cutting done by piecework. Length of time required for female hands to become skilled. Wages paid them. Hours of labor. Girls nearly all work on piece work. Inspection of piece work, &c., 287. Constant employment. Age of the youngest girl at work for the company. Separate rooms and conveniences for males and females. Strike of the company's hands at Berlin. Cause thereof, 288. The company moved to Berlin expecting cheaper labor, 289.

WALKER, RICHARD D., *Laborer, Windsor* - - - 404-405

Is now a laborer. Has been night-watchman on the Steamer "Victoria" plying between Windsor and Detroit. Company owns five boats, 404. A watchman on each boat from 6 o'clock p.m. till 7 a.m. Wages \$1.25 per night. Constant work all the year round. Difficult to get employment as a laborer in Windsor. Hours of steamboat watchmen too long, 405.

WALKER, R. IRVING, *Dry Goods Merchant, Toronto* - - - 289-291

Average earnings of dry goods clerks in Toronto. No apprentice system. Wages of boys learning the business. Salary of a first-class salesman. Female dry goods clerks in Toronto. What they can earn. Their hours of labor, 289. Hours for closing dry good stores in Toronto. He manufactures clothing outside, not on the premises. Average earnings of the girls who do this work outside. Does not take apprentices to teach them this kind of work. Cash boys, 290. Thinks his employees are "pretty comfortable," 291.

WALTER, FRED., *Moulder, Hamilton* - - - 794-797

Number of moulders in Hamilton in the union and out of it. Attitude of union men to non union men. Hours of labor. Attempt to introduce machinery to lighten the work not successful. Constancy of employment. Possibility of extending the work over the whole year, 794. Average wages. Possibility of saving money. Strike of last summer (1887): cause and how settled, 795-796. Sick, funeral and accident benefits in connection with the union. Arbitration. Establishment of a Bureau of Labor Statistics at Ottawa, 796. Agreement between the Moulder's Union in Hamilton and the Employer's Association, 796-797. Foreign contract labor, 797.

WALTON, THOMAS, *Moulder, London* - - - 688

Confirms the evidence given by J. B. Murphy of London, 688.

WARDLAW, JAMES, *Machinist, Galt* - - - 276-278

Has had experience as a machinist in Galt, Ont., Glasgow, Scotland and the East Indies. Comparison of wages in Canada and Scotland. Technical education to a boy at school would be a benefit in some branches. Attended science classes at night in Glasgow. Found it pretty hard work to do so after the fatigue of a day's labor, 276. Wages paid in woolen mills in Scotland and Canada compared. Cost of living greater in Glasgow than in Galt. Thinks that working people can make more money in Canada than the Old Country. Never met workingmen in Glasgow who owned their own houses. Describes how they live there. Apprenticeship. Wages of apprentices. Was employed in a cotton mill in India. Describes the class of work people employed and their wages, 277-278. Wages paid in the cotton mills in India just sufficient to support life. Technical classes, 278.

WATSON ALEXANDER G., *Secretary of the Canada Cotton Manufacturing Company* - - - - - **1062-1066**

Number of operatives, male and female, adults and children, employed, 1062. Hours of labor. Holidays. Fire service in connection with the mill. Washrooms. Strikes on account of a reduction of wages, the first was settled by arbitration. The second was arranged by a committee of citizens, 1063. Arbitration. Condition and location of the closets for males and females. Never heard any complaints about overseers using insulting language to employees, 1064. Weekly payments. Rule regarding employees whose wages are garnisheed. Number of operatives employed and amounts paid for wages in 1884, 1885, 1886 and 1887. Nationality of the employees. Raising of foremen or overseers from men in the mills, 1065. Fining of employees, 1066.

WATSON, JAMES P., *Secretary and Manager, Cornwall Manufacturing Company, Cornwall* - - - - - **1068-1070**

Number of hands employed by the company, men, women, girls and boys. Weavers paid by the yard. Average earnings, 1068. Constancy of employment. Get raw material from Australia and South America. Do not use much Canadian wool. Pay day every fortnight, two weeks pay kept back, reason why it is kept back. Wages earned by boys and girls. Fining of employees. Condition and location of the closets. Import their skilled labor from the Old Country, unskilled labor they get here. Wages paid for unskilled labor, 1069. The Factory Inspector's visits, 1070.

WATSON, MISS M. J., *Dressmaker, Toronto* - - - - - **348-349**

Agrees with the evidence of Miss Gurnett. Thinks that if dressmakers as a rule would take the trouble to become more competent wages would be better, 348. Apprentices ought to serve three years in order to become competent. The prevalent incompetency arises from the want of an apprentice system, 349.

WEBB, THOMAS, *Laborer, Toronto* - - - - - **269-270**

Would like a clause in the Liability Act regarding scaffolding similar to the English law. Wages of laborers and builders' laborers in England. Scaffold builders. Dangerous method of scaffolding in Toronto, 269-270. The union takes action when necessary under the lien law, 270.

WHEELER, CALEB, *Chatham* - - - - - **496-501**

Is a cattle dealer and butcher in business for himself in Chatham twenty five years. Buys his cattle principally close to Chatham within a circuit of twenty miles. The local trade, prices, &c., 496-497. Quality of meats the working classes buy. Peddlers and middlemen are the sharks who pick up the lion's share of the bargains in provisions on the market. Prices and quality of cattle now and fifteen years ago compared. Depression in the English market, 497. Ships cattle to Toronto and Montreal. Statistics regarding the trade in hogs and pork, 498-499. Condition of the farmers in the vicinity now and five, ten or fifteen years ago compared, 499. Wheat and stock raising. Not much of a dairying country. The great drawback to the country is the growing of grain year after year. Reason for the falling off in the market for export cattle, 500. More statistics regarding the raising of cattle and hogs, 500-501.

WHITE, GEORGE, *Stonemason, Cornwall* - - - - - **1088-1089**

Constancy of employment of stonemasons in Cornwall. Refused employment because he is a Knight of Labor, 1088. Wages. The reason of the antipathy of the employers in Cornwall to Knights of Labor is that they tried to effect a settlement during the strikes in the cotton mills. Grading of workmen according to capacity, 1089.

WHITE, T. M., *Windsor* - - - - - **391-395**

Publishes a weekly newspaper. Printers' wages in Windsor slightly lower than in Detroit, 391. Rents in Windsor and Detroit compared. Windsor improved very

much in the last few years. The improvement mainly caused by the National Policy. Smuggling, an enormous quantity of it done at Windsor. Labor organization existing at Windsor. Efforts made at Windsor to shorten hours of labor, 392. Cannot say that shortening hours causes drunkenness among workingmen. A large proportion of workingmen in Windsor own property. A workingman in Windsor can save money if he has constant employment. Female compositors. Prices of lots. Apprentices. Value of money. Steadiness of work. Factories and shops busier than six years ago, 293. Strike in the building trade and how settled, 392, 394. Co-operative none. Windsor people who work in Detroit. Rate of printers wages in Windsor and Detroit. Rents in Windsor, 394. Apprentices. Favors indenture system, 395.

WHITEHEAD, SETH J., *Hamilton*

789-793

Is general superintendent of the Hamilton Forge Company and rolling mill. They use all scrap iron: some of it picked up in the country and some imported. Sell their product altogether in Ontario. Competition they met with. Quality of iron they make. Duties on iron. Number of men employed. Advantage to Canadians to have a market for scrap iron at home, 789. Class of iron used in other rolling mills in the United States and Canada. Hours of labor and wages of employees. All piece work except common laboring men. Reason why they cannot make iron as cheap as the English can. Strikes. The Union which existed in connection with the Amalgamated Association in the United States. Both men and employers better off since the Union was squelched, 790. Manufacturers' organizations. Effect of organized labor. Cause of the strike. Men quit at 3 o'clock on Saturdays. Class of work done in the forge. Capacity of the forge. Runs night and day. Workmen who own their own homes. Wages of laboring men, 792. Possibility of shortening hours and producing as much work, 793.

WHITELY, JOSEPH JAMES, *Machinist, Hamilton*

880-882

Has been at the trade thirty-two years. Average wages. Hours of labor. Constancy of employment, 880. Length of time required to learn the trade. Apprentices. Indenture system. Number of skilled mechanics decreasing, although the gross number of workmen is increasing. Wages in Canada and England compared. Purchasing power of wages. Prices of the necessaries of life in Canada and England compared, 881. The trade is organized. Amalgamated Society of Engineers; a branch in Hamilton; headquarters in England. Benefits derived from the organization. Wages of skilled machinists. Nine-hour system, 882.

WICKENS, A. M., *Stationary Engineer, Toronto*

207-210

Stationary Engineer's Association; one of the reasons why it was formed. No law for the inspection of stationary engines. Factory Act does not provide for that inspection. No qualification at all required by law for stationary engineers. Failure to inspect steam boilers and machinery leads to accidents. Should have a law compelling inspection of stationary engines and steam boilers as well as examining and licensing stationary engineers. Necessity for and advantages to be derived from technical schools. Stationary Engineers' Association are advocating such a system with the present Ontario Government, 207. Scientific learning will not make a stationary engineer "too big for his business." Wages of stationary engineers. Agricultural engines; incompetency of those having charges of. Second hand boilers, 208. Montreal the only Canadian city which compels owners of stationary engines to put on a lock valve. Steam boiler insurance and inspection. Rate of insurance. Cause of boiler explosions is carelessness or ignorance on the part of the attendant. Boiler purgers, 209. Foaming, 210.

WILD, JOSEPH, *Painter, Kingston*

940

Wages. Employment for seven months in the year. Wages reduced on account of his age. Kingston about the worst place for painters. Labor organizations. Appren-

tices. Canadian and English painters compared. Canada is a better place for any kind of workman than England. Painters do not get a fair share of wages for their work. Rent and fuel, 940.

**WILKINS, JOHN, Grocer, Kingston - - - - - 1038-1041**

Appears to give evidence in connection with the Knights of Labor. Effect of organization on the workingmen of Kingston, 1038. Wages paid to operatives at the knitting mills. Child labor employed at the knitting mills. Hours of labor of operatives at the cotton and knitting mills in Kingston, 1039. Shortening of the hours of labor. Apprentices system. Effects of indenturing apprentices, 1040.

**WILKINS, RICHARD, Dry Goods Salesman - - - - - 349-350**

Does not know average hours of dry goods salesmen in Toronto, but he works ten hours a day. Used to work thirteen hours a day. Stores on Yonge Street open all hours in the evening. Salesmen in Toronto have made an effort to shorten hours. Reasons for their want of success. Not more than one-third of Toronto retail merchants close at reasonable hours. People of wealth do more shopping after hours than the laboring classes. No system of apprenticeship. Average wages, 349. Engagements are usually made for a year, but the salesmen have to sign a paper that it may be terminated on a day's notice. Many are dismissed at the end of the busy season, 1st January, and find it difficult to get employment till 1st April. Wages of boys commencing. Wages of saleswomen. How they graduate. Six months in the millinery department with no pay, then from that behind the counter, &c., &c. Thinks if women do the work as well as men, they should be paid the same. Employment of female clerks has a depreciating effect on salesmen's wages and throws them out of employment, 350.

**WILLIAMSON, W. H., Gentlemen's Tie Manufacturer, Toronto, - - - - - 359-360**

Employs principally girls. Their ages. Principally hand work. All piece work, 359. Wages. Pays a uniform price, quotes it. Hours of labor. Constancy of employment. Maximum and minimum earnings of hands. At certain seasons finds difficulty in getting girls, 360.

**WILSON, CHARLES, Hamilton - - - - - 821**

Works as shipper for the Hamilton Forge Co. Entered the service of the company as a laborer and was advanced to his present position. Wages he received as a laborer. Out-put of the mill is increasing. Where they ship the iron to and what it is used for, 821.

**WILSON, DAVID, Farmer, Chatham - - - - - 444-447**

Opened out his own farm and lived near Chatham forty eight years. Employs labor. Wages he pays to farm hands. Uses machinery. Think that if the farmers would work as they could we would have a very prosperous people, 444. Good agricultural laborers scarce. His definition of a good farm hand. Hours he think they should work. Products he raises. Cattle raising. Does very little dairying, reason why, 445. Country round Chatham possesses the most productive soil on earth. Many farmers in the vicinity have made fortunes, and sometime the second generation spend them. There used to be a tendency on the part of young people raised on farms to drift into city life: but now they are taking more interest in their father's farms. Farmers do not look upon the Agricultural College as being of much use to them. Considers it madness to talk about Commercial Union. Cost of manuring and tilling two acres of beans, and what the product sold for. Other statistics regarding his farm, 446. Does not sell hay, uses it all on the farm, 447.

**WILSON, FRANCIS W., Chatham, Nurseryman and Farmer - - - - - 447-452**

Fruit raising in Kent County, 447-448. Employs sixteen men. Most of the "experienced" (journeymen) nurserymen he gets are a very poor class, all talk and little

work. Does not think education unfits a man for the nursery business. Thinks well of Agricultural College but has heard bad accounts of the conduct and character of young men attending it. Wages he pays to men employed in the nursery. Some of his men save as much as \$100. Less trouble last year in getting help than formerly. Employs all men, no boys, cannot get good work done by boys. Does not find good men looking for work and unable to get it, 448. The crops that pay best. Cattle raising. Can make more at other things than he can by nursery wheat. Thinks there should be a law to compel every farmer to give every man who leaves his employment an honest recommendation just for what he is worth, no more, no less, 449. Thinks Government should allow some sort of bonus or make some definite enactment for setting out timber. Walnut a very rapid growing tree. How he plants walnut trees, 450. Bean crops. Bean straw as fodder for cattle. Benefits received from the co-operation grange. Farmers have as much need of organization as any other producers. What he thinks should be taught in our common schools, 451. How he thinks common schools should be conducted, 452.

**WILSON, WILLIAM, *Manager of the Kingston Cotton Company, Kingston* - 971-976**

Statement showing the gross number of hands employed in the factory, the number of men, boys, women and girls and their wages. Ventilation and sanitary arrangements of the factory. Morality of the employees, 971. How and since when he has complied with the requirements of the Factory Act. Visit of the Factory Inspector. Means of escape in case of fire, 972. Temperature of the room. Hours of labor of young girls employed and wages, 973. Fining of employees. Output of the factory not increasing much. Cotton Manufacturers' Association, what led to its formation and its objects, 974. Cause of the present stagnation in prices. Competition from England and its results. English manufacturers adulterate their cottons so that they sell them for less than the yarns cost. Received an agent's circular regarding materials to adulterate cloth to the extent of 80 per cent. Profits of cotton mills in Canada during the last four years have not averaged 2 per cent. on capital invested. Does not know anything of mills which have been bonused, 975. Knows only one exempted from taxation for a number of years. Attitude of the company to organized labor, 976.

**WINLOW, R. C., *Manager of J. J. King & Co, Manufacturers of Boots and Shoes, Toronto* - 336-338**

Cheapest class of boots are not made in Toronto, but come from Quebec and Montreal. Cannot manufacture as cheaply in Toronto as there. Wages in Toronto higher. Employ seventy-five females, about 120 to 125 men and a few boys. Average earnings of the females. Work 50 to 51 weeks in the year. Nearly all hands are on piece work. Same rate of piece work wages prevail in all Toronto establishments. No apprentices employed; none but expert hands. Average earnings of the men. Takes about fifty men and women to make a boot, 336. Has separate convenience on separate floors for males and females. Means of exit from the factory. If operators damage work they are charged with cost of material to replace it, and labor expended on it. All employees are over 14 years of age. Hours of labor and regulations and customs regarding employees coming late, 337. Never knew of any accident in the factory. Heard of a false alarm some years ago. Has fire escapes and sprinklers all over the place. Wages of female operators higher in the United States than Toronto. Strikes, last one they had was with females in 1884 and a 24 hours' one with machine men since. Terms on which men went back to work. Factory inspector says he is satisfied with the sanitary condition of the factory, 338.

**WINN, DOMINIO, *Dyer, Hamilton* - 891-895**

Number employed at dyeing in Hamilton. All men, no boys or women. Wages, 894. Length of time required to learn. Duties and requirements of a "boss dyer." Hours of labor. Healthiness of the occupation, 895.

WOLFE, JOHN, *of the London Furniture Company, London* - - - **607-612**

Hours of labor of employees. Constancy of employment. Wages. Apprentices are indentured. Believes it to be an advantage to boys to be indentured. Savings. Most of the men buy houses for themselves, 607. Machinery protected. Factory Inspector's visit. Sanitary condition of the shop, ventilation, &c. Accidents. Never had any differences with the men. Wages have risen considerably during the last eleven years. System of raising wages. Trade divided into four branches. An apprentice only taught one branch. Not requisite for a man to know all four branches. A man who had learnt all four branches would not likely be as expert at any one branch, 608. Rate of wages paid to journeymen. Piece work. Boys who are not apprentices, wages they get. Does not think the use of machinery has lowered wages. Production has been cheapened by it. Thinks workingmen have been very greatly benefited by the use of machinery. Profit-sharing, 609. Wages paid in cash fortnightly, on Fridays. Truck system. Constancy of employment. Importation of black walnut. Where they find a market for their product. Price of furniture reduced 20 per cent. in the last ten years; what has caused the reduction. Importation of furniture. Apprentices, 610. Grading of men according to capacity. Planting and growing of walnut trees. Has seen walnut planks 35 inches wide, cut within 40 or 50 miles of London. Difference between manufacturer's prices and retail prices of furniture. Boys never employed at machines. Quality of furniture made now and formerly, 611. Half of the machinery used in making furniture got from the United States, the other half at Galt. Machinery made in Canada within the last two or three years is fully as good as that imported. Prices and method of working furniture in Canada and the United States compared. How Canadian manufacturers get their patterns, 612.

WOOD, J. F., *Ottawa*. - - - - - **1100-1102**

Is manager for E. H. Barnes, manufacturer of box shooks. Number of hands employed; one-third boys. Wages of men capable of attending to planers and resawing machines. Age of the youngest boys employed. Wages of boys about fifteen years old, 1100. Wages the firm pays in Oswego, U.S., and here for the same kind of work compared. Does not know the Ontario Factory Act. Wages of workingmen in the United States and here compared. Accidents. Wages of the engineer who runs the factory engine. Hours of labor. Pay days fortnightly, on Mondays, 1101. Age of the youngest boys employed; their wages. Rules for the guidance of employees. No visit from the Ontario Factory Inspector. Product sold exclusively in the United States. Protection of machinery to prevent accidents, 1102.

WOODBURN, ALEXANDER S., *Bookbinder, Printer and Publisher, Ottawa*. - **1177-1178**

Number of hands employed in the bookbinding branch of his business, and total number of his employees. No visit that he is aware of from the factory inspector. Sanitary condition of his premises, 1177. Arrangement and situation of the water closets. Has issued orders on stores to some of his employees, but only in advance and for the accommodation of the people receiving the orders. The elevator accident. Number of doors in the establishment; they open inward contrary to the requirements of the Factory Act, 1178.

WREN, JAMES, *Tailor, Windsor, Ont.* - - - - - **405-407**

Is a journeyman tailor employed at custom work. Number of tailors in Windsor. Average wages. Wages in Detroit higher. Six months constant employment in the year, the other six months broken time. Average yearly earnings, 405. Petty smuggling between Windsor and Detroit. Most of the tailors in Windsor belong to the Knights of Labor. Hours of labor. Quite a few tailors in Windsor own their own houses and have managed to save money. Prices paid female labor in tailoring at Windsor. Apprentices. Hours of females, 406. Sanitary condition of the shops. Conveniences not what they should be, 407.

WRIGHT, A. W. *Journalist, Toronto* - - - - - **320-325**

Labor organization, its object and how, so far, it has succeeded in accomplishing these objects. Knights of Labor organized also to bring about legislative reforms for the benefit of the working classes, 320. Lien law of Ontario so far a failure. How it should be amended. Cites a case where the lien law failed to accomplish its object and a labor organization compelled a settlement outside the law. Recommend a system of authorized arbitration. Thinks authorized arbitration would reduce the number of strikes, and thinks it would be acceptable to the working classes. A Bureau of Labor Statistics one of the demands made by all labor organizations. Factory laws, 321. Factory Act of Ontario not satisfactory. A Dominion Factory Act would suit the country better, or a uniform law by each Province. Thinks labor ought to have one hundred per cent. of profit derived from labor and capital none. Profit-sharing, 322. Apprentices system. If employers were bound to teach an apprentice his trade as the apprentice is bound to remain and learn, an improvement would be effected. Technical education. Condition of the working classes as good as it was fifteen years ago, but does not think they get a fair share of the benefits accruing from cheapened products by machinery. In well organized trades wages have gone up during last ten years, 323. Centralization of capital hinders the material prosperity of the working classes. Some of the means which should be adopted to obtain for the working classes that proportion of advantage they should have from the introduction of improved machinery. Only means by which the Legislature can or should interfere in the distribution of wealth for the benefit of the masses. Thinks railways and telegraph lines should be controlled by the Federal authorities; other monopolies, such as gas works and street car lines should be controlled by the municipalities. Convict labor, 324. Knights of Labor and arbitration, 325.

WRIGHT, JAMES, *Plasterer, Toronto* - - - - - **244-246**

Always had a desire to attend technical or trade schools, but has not been able to do so since he left England. Attended a trades school in Oldham, England, 244. Cooper Institute in New York; its object. Endeavored to establish a trades school in Toronto for plasterers; successful as far as attendance was concerned. Describes his experience with this school and recommends Government to establish such schools, 245-6.

WRIGLEY, GEORGE, *Printer, St. Thomas* - - - - - **566-570**

Printers' wages. Apprentices. Piece work. Stereotype plate matter, and its effect on the employment of printers, 566. Apprentices. Age at which children should attend school. Kindergarten system, 567. Technical instruction. His ideas of what common school education ought to be. Tendency resulting from making higher education expensive, 568. Model school system, 569. Truck system in printing offices in St. Thomas, 569-570. School books, 570.

# TOPICAL INDEX

ARRANGED ACCORDING TO THE ALPHABETICAL ORDER OF THE SUBJECTS INDEXED.

## ACCIDENTS—

**BOX FACTORIES.**—Very frequent, H. Burke, Toronto, 262. At E. H. Barnes, box shock factory, Ottawa, J. F. Wood, 1101.

**BUILDER'S LABORERS.**—From defective plant, H. T. Benson, 267. From defective scaffolding, recommends a clause in the Employers' Liability Act making proprietors liable for, H. T. Benson, 267.

**CABINET MAKERS' MACHINERY.** Through imperfect protection, F. Rolph, Windsor, 404. To boys employed running machinery, Sam. Peddle, London, 689 and 690.

**COMPENSATION FOR.**—By the Canada Cotton Company, Cornwall, Joseph Grey, 1090. How Messrs. Thomas McKay & Co., Ottawa, deal with employees who meet with accidents in their mills, W. Hutchison, 1096. W. Stuart jun., Ottawa, 1110. How Messrs. Gilmour & Co., Ottawa, deal with men who meet with accidents in their employ, G. L. Chitty, 1177. The Odbert case, W. C. Conductor, 526.

**COCK-CUTTING MACHINERY.**—P. Freysing, Toronto, 308.

**COTTON MILLS.**—In the Stormont Cotton Company's Mills, Cornwall, A. Gault, 1061. Caused through carelessness in the lap room of the Stormont Cotton Mills. Mill operative, Cornwall, 1079. Protection against accidents in the dye house of the Canada Cotton Mills—Cornwall, Joseph Grey, 1090. Protection against in the dye house of the Stormont Cotton Mills, Cornwall, James Daley, 1091.

**ENGINES AND BOILERS.**—Through lack of a proper inspection of, A. M. Wickens, 207.

**FLOUR MILLS.**—At the mills of Thomas McKay & Co., Ottawa, W. Hutchison, 1097.

**FOUNDRIES AND MACHINE SHOPS.**—M. W. Merrill, Ottawa, 1093. In foundries in Toronto, T. Pickett, 145.

**FURNITURE FACTORIES.**—At Chatham, H. Neilson, 444, At London, John Wolfe, 608.

**IRON ROLLING MILLS.**—Ontario Rolling Mills, Hamilton, B. M. Danforth, 763.

**LUMBER MILLS AND SHANTIES.**—At J. R. Booth's, Ottawa. W. Anderson, 1106. \* \* \* 1149. Saw mills, Ottawa, Joseph Sherwood, 1126. John Gale, 1134 and 1135. Joseph Lefebvre, 1135 and 1136. At James MacLaren & Co's., Ottawa, John Henderson, 1138 and 1139. Precautions taken against and compensation for accidents to shanty men in the bush, P. Miner, Ottawa, 1189.

**OIL WELLS.**—Accidents from boilers, and causes thereof, R. E. Menzies, Petrolia, 708 and 709.

**PRINTING OFFICES.**—How generally caused, S. J. Dunlap, 37. At McLean, Roger & Co's., Ottawa, W. McMahon, 1143. F. J. Farrell, 1153. At A. S. Woodburn & Co's., Ottawa, R. Rankin, 1169. A. S. Woodburn, 1178.

**RAILWAYS.**—Resulting from car coupling, \* \* \* Conductor, G.T.R., 520. From frogs, \* \* \* Conductor, G.T.R., 521. Sending engineers out on roads they are not acquainted with, causes a liability to accidents, \* \* \* engineer, G.T.R., St. Thomas, 546. To brakemen, J. B. Morford, St. Thomas, 554. More frequent on passenger than on freight trains, 556. No disposition

on the part of officials to blame the men in case of, J. B. Morford, St. Thomas, 554. Compensation for accidents. Michigan Central Railway Company's liability for accidents to employees. Document the Michigan Central Railway Company require their employees to sign, waiving all claims for damages in case of accidents, M.C.R. Brakemen, St. Thomas, 573. From frogs and guard rails, how might be avoided. John Hall, Hamilton, 772. At Beamsville caused by the difficulty of locating distance of signal lights at night, John Hall, Hamilton, 777. To railway employees engaged in coupling and making up trains, F. Armstrong, Hamilton, 779.

**WOODWORKERS' MACHINERY** in Agricultural implement factories. Accidents to boys running machines, J. Davidson, London, 623.

**WIRE WORKS.**—From machinery at B. Greening & Co.'s, Hamilton, S. Greening, 841. Accidents from machinery, generally the result of carelessness, John Callow, Seaton Village, 59. From machinery in Ontario, A. Blue, Toronto, 74. In the factories of St. Thomas, Dr. J. B. Tweedale, St. Thomas, 502. Insuring of men against accidents by their employees at their own expense, F. Nichols, Toronto, 181.

**AGREEMENT.**—Draft of an agreement submitted during the strike of the master carpenters for acceptance, R. Dennis, Toronto, 128.

**AMERICAN FIRMS** establishing branch factories in Canada, F. Nichols, Toronto, 179.

**ANTI-POVERTY SOCIETY.**—See evidence of W. A. Douglas, Toronto, 13.

**AGRICULTURAL COLLEGE AT GUELPH.**—W. Houston, Toronto, 227.

**AGRICULTURAL IMPLEMENTS AND MACHINERY.**—Manufacture and prices of—at Chatham, see evidence of R. G. FLEMING, Secy.-Treas., Chatham Harvester Co., 435. At London, W. Elliott, 675.

**AGRICULTURAL LABORERS.**—See **LABORERS.**

**APPRENTICES AND THE APPRENTICE SYSTEM.**—

**AGRICULTURAL IMPLEMENT AND MACHINE MAKERS**, apprentices, W. Elliott, London, 674 and 675. E. Fitzthomas, Chatham, 467. John Davidson, London, 623.

**APPRENTICE SYSTEM.**—J. Falconer, Toronto, 12. L. P. Kribs, Toronto, 197. W. Houston, Toronto, 231. A. W. Wright, Toronto, 323. The man who has served his apprenticeship should be protected, R. Kerr, Walkerville, 374. R. Gossett, Chatham, 459. J. M. Green, St. Thomas, 540. W. J. McAndrews, Hamilton, 750. J. E. Cuff, St. Catharines, 921. B. Meeks, Kingston, 1009. John Wilkins, Kingston, 1040. John Law, Ottawa, 1123. W. C. Teague, Ottawa, 1183. D. Tassé, Ottawa, 1158. Austrian system of compelling every man to learn a trade. Mayor Howland, Toronto, 165. Stringent legislation in regard to apprentices would have a beneficial effect, Hewitt, Toronto, 302. T. Bowick, Toronto, 105. C. R. Rundle, Toronto, 205.

**BAKERS.**—J. D. Nasmith, Toronto, 392. A. W. Porter, London, 667. W. Gibson, Ottawa, 1103. S. Slinn, Ottawa, 1113 and 1114. H. Barrell, Ottawa, 1120. A. Cousineau, Ottawa, 1133.

**BLACKSMITHS.**—Age they should commence, T. Bowick, Toronto, 107. Geo. Bonney, Kingston, 954. C. M. Morrice, Kingston, 1037.

**BOILERMAKERS.**—R. B. McPhadden, Kingston, 957. R. Charlton, Kingston, 962. Hugh Nesbitt, Ottawa, 1124. W. J. Campbell, Ottawa, 1116.

**BOOK FOLDERS.**—Miss \* \* \*, Ottawa, 1171. F. Roger, Ottawa, 1173.

**BOOT AND SHOEMAKERS.**—Geo. Valiant, Toronto, 310. R. C. Winlow, Toronto, 335. T. Crowley, Windsor, 431. A. Simpson, Petrolia, 715 and 716. A. Miller, Hamilton, 884. J. Volume, Kingston, 936. Chas. Moore, Kingston, 1050.

**BRASS FINISHERS.**—J. Morrison, Toronto, 335.

**BRICKLAYERS**—Rules of Bricklayers' Union regarding apprentices, J. Hayman, London, 637. J. Sullivan, London, 630.

**BROOM MAKERS.**—John McKenna, Hamilton, 905.

**BUILDING TRADES.**—Age boys should be before commencing to learn, J. M. Green, St. Thomas, 541.

**CABINET MAKERS.**—C. Rogers, Toronto, 355 and 356. Samuel Puddle, London, 632. See also Furniture Factories.

**CARPENTERS.**—J. Callow, Seaton Village, 54. R. Dennis, Toronto, 126, 127, 130 and 131. R. Lee, Toronto, 142 and 143. H. Lloyd, Toronto, 237. A. Henderson, Detroit, 396 and 397. J. Falconer, Toronto, 5. E. H. Foster, Windsor, 421. G. M. Jenkins, Windsor, 425. Thos. Green, London, 647. E. H. Hancock, Hamilton, 888 and 889. R. Baird, Kingston, 939. M. C. Edey, Ottawa, 1147.

**CARRIAGE MAKERS.**—W. J. Macfarlane, Toronto, 114 and 115. Thomas Beckett, Toronto, 176. J. Dixon, Toronto, 247 and 250.

**CARRIAGE WOODWORK MAKERS.**—W. H. Anderson, St. Thomas, 508. John Heard, St. Thomas, 513.

**CIGAR MAKERS.**—A. Eichhorn, 395. John A. Rose, London, 618. R. J. Mills, St. Catharines, 919. J. Robinson, St. Catharines, 920. C. Tansey, St. Catharines, 922. S. Oberndorfer, Kingston, 963.

**COOPERS.**—A. Delaney, Toronto, 261. R. Somerville, Windsor, 399 and 401.

**COTTON SPINNERS.**—M. Limbeck, Hamilton, 892. John Vance, Hamilton, 893.

**DRESSMAKERS.**—Miss H. Gunnett, Toronto, 347. Miss M. J. Watson, Toronto, 349.

**DRY GOODS SALESMEN AND SALESWOMEN.**—No system, R. J. Walker, Toronto, 289. T. Eaton, 294. R. Wilkins, Toronto, 349. How they graduate, R. Wilkins, 350. C. Ross, Ottawa, 1185.

**DYERS**—Length of time required to learn. D. Winn, Hamilton, 895.

**ENGINEERS, STATIONARY.**—E. Hawkins, Toronto, 257.

**FOUNDRY-MEN'S.**—T. Pickett, Toronto, 145. J. Hunt, Toronto, 148. D. Black, Toronto, 152. J. Boyle, Toronto, 171 and 173. E. Gurney, Toronto, 296. J. McKenna, London, 600. John McClary, London, 613 and 614. J. B. Murphy, London, 685. Hamilton Iron Moulders' Union, 797. J. Ripley, Hamilton, 802. B. Cameron, Hamilton, 844. J. McNeil, Kingston, 949. E. Perry, Kingston, 952. M. W. Merrill, Ottawa, 1098. John Peer, Ottawa, 1130.

**FURNITURE FACTORIES.**—H. Noelson, Chatham, 442. John Wolfe, London, 607, 608 and 610. James Oliver, Ottawa, 1118.

**GILDERS.**—J. McLaren, Toronto, 177.

**GROCCERS**—Thomas Mackey, Hamilton, 766.

**HARNESSMAKERS.**—C. W. Barton, Toronto, 213. W. S. Appleton, Toronto, 214.

**INDENTURING OF—**S. J. Dunlop, Toronto, 42 and 44. John Callow, Seaton Village, 61. J. H. Lumsden, Toronto, 110. R. Dennis, 130. R. Lee, Toronto, 141. J. Boyle, Toronto, 171 and 172. H. Lloyd, Toronto, 237. T. M. White, Windsor, 395. J. Burns, London, 672 and 673. John Bertram, Dundas, 856 and 858. B. Meeks, Kingston, 1010. John Wilkins, Kingston, 1040. W. Gaverock, Ottawa, 1129. T. Stoddart, Ottawa, 1113.

**IRON WORKERS.**—At the Erie Iron Works, St. Thomas, Wm. Risdon, 549. Hamilton Iron Forging Co.,—Geo. I. Sturges, 786 and 788.

**JEWELLERS.**—W. Cooper, Toronto, 265.

**KNITTING FACTORIES.**—S. Leonard, Dundas, 859.

**LUMBER MILLS.**—W. Anderson, Ottawa, 1106.

Angrove, 946. In Canada, Great Britain and the United States compared, Geo. Bonney, 954. Alfred Perry, 960. Peter Moncrief, 979. C. M. Morin, 1037. See evidence of Dr. W. B. Nesbitt, Toronto, regarding foods, 351. Prices of flour now, two and ten years ago compared, R. R. Morgan, Hamilton, 883. Quality of flour now and ten years ago compared, also prices during last five years, W. Hutchison, Ottawa, 1097. Comparison of the prices of articles of family consumption in Windsor and Detroit, Wm. Benson, Windsor, 370. Table of prices of the necessaries of life in Chatham from 1879 to 1887 inclusive, W. E. Hamilton, 481. Price of cordwood in Chatham now and six or seven years ago, M. Campbell, 494. Prices of the necessaries of life in London, John Allenby, 630. Prices of provisions and fuel in Petrolia, John Scott, 700. A. Simpson, 716. Prices of groceries, &c., in Hamilton, Thomas MacKay, 764, 765, 766. Cost of the necessaries of life in Canada and England compared, J. J. Whitely, Hamilton, 881. Prices of the necessaries of life increased during last five years in Kingston, John Litton, 956. Prices of shanty supplies in 1877-78, 1884-85 and 1887-88, W. Anderson, Ottawa, 1105. Price of bread in Ottawa, A. Cousineau, 1133. Peddlers and middlemen pick up the lion's share of the bargains on the market. Quality of meats the workmen usually buy, Caleb Wheeler, Chatham, 497. Prices of firewood in Ottawa, John Davis, 1186. Market prices in Toronto for the year 1887, 1882, 1877 and 1872, T. Galbraith, Toronto *Globe* market reporter, 191, 192.

**COST OF PRODUCTION.**—Increased by shortening the day's labor and increase of pay, John Callow, Seaton Village, 59.

**COTTON MILLS and EMPLOYEES** thereof.—In India, class of operatives employed and their wages, Jas. Wardlaw, Galt, 277, 278. Ontario Cotton Mill, see evidence of the Secy. Treas., John Bell, Hamilton, 877. Mark Limmbeck, 892. John Vanco, 893. Dundas Cotton Mills, see evidence of William Birkett, Secy. Treas., 895. Mills of the Kingston Cotton Co., see evidence of the Manager, William Wilson, 971. S. Rawcroft, mill overseer, 976. Stormont Cotton Mill Co.'s mills, see evidence of the Secretary, A. Gault, 1058. E. King, Boss

Carder, 1074. \* \* \* \* Mill operative in the lap room, 1079. Jennie Morrel, 1057. James Daly, Dyer, 1091. Geo. Auty, Warp Dresser, 1092. Paul Dane, Weaver, 1094. The trouble which gave rise to the rumor of ill treatment of operatives by overseers, E. King, 1074. Mills of the Canada Cotton Manufacturing Co'y. see evidence of the Secretary, A. G. Watson, 1062. Of the manager, A. T. Knight, 1066. S. Shoefelt, Carder, 1075. Thomas Denn ry, 1080. John Anderson, Weaver, 1082. \* \* \* Cotton Spinner, 1035. Annie Martin, 1086. Michael Quinlan, Electrician, 1087. Joseph Grey, Dyer, 1090.

- CREDIT SYSTEM.**—In selling fanning mills, M. Campbell, Chatham, 493. In the grocery business, Thos. Mackay, Hamilton, 767.
- CRIME.**—Causes of, and means to prevent petty crime, 162. Illustration of how boys are trained in crime, Mayor Howland, Toronto, 164.
- CRIMINAL** and helpless classes of the Old Country, the proper way to reclaim them, Mayor Howland, Toronto, 160.
- CROMPTON CORSET CO.**, Toronto.—See evidence of John Walker, Secy.-Treas., 287.
- DAIRYING.**—Reason why he does not do much of it, D. Wilson, Chatham, 445. In Kent County, C. Wheeler, Chatham, 509. In Southwold, John Andrew, 504. Dairy farming, John Fothergill, Burlington, 900.
- DEATH RATE.**—St. Thomas, Dr. J. B. Tweedale, 502.
- DEBT.**—(Total) of the City of Kingston, J. D. Thompson, mayor, 1016.
- DESTITUTION** and **DISTRESS.**—A great deal of it in Toronto at present; chief causes of it, E. Taylor, 2c5. Amount of destitution in Hamilton and causes thereof: classes of applicants for corporation relief, A. McKay, M.P. ex-Mayor, 803.
- DETERIOATION** of the **ARTIZAN.**—How it has occurred, E. Gurney, Toronto, 293. Industrial education the best preventive for the deterioration of the artizan caused by division of labor. This necessitates, and may be counteracted by industrial education, W. Houston, 231, 232.
- DISTRIBUTION.**—On economy of distribution, 188. Manufacturing goods in the country instead of importing them reduces cost of distribution, F. Nichols, Toronto, 190. Production and distribution in manufactures, J. Hewitt, Toronto, 301. Distribution of wealth for the benefit of the masses, A. W. Wright, Toronto, 324.
- DIVISION** of **LABOR**—Militates against thorough training of artizan, L. P. Kriba, Toronto, 197. Deteriorating effect of division of labor on the artizan, W. Houston, Toronto, 231, 232. J. Hewitt, Toronto, 302.
- DOCKING** of **EMPLOYEES.**—At the Kingston Locomotive Works, Wm. Harty, 1024.
- DOMESTIC SERVICE.**—Reasons why girls dislike it, Miss Burnett, Toronto, 359.
- DRESSMAKERS.**—In Toronto, Miss H. Gurnett, 347. Miss M. J. Watson, 349. In Kingston, B. Meeks, 1009. In Montreal and throughout the country, S. Carsley, Montreal, 1166. In Ottawa, Crawford Ross, 1185.
- DRILLING IMPLEMENTS.**—The manufacture and export of—, John Kerr, Petrolia, 706.

**DRINKING HABITS.**—Now and fifteen years ago compared. The closing of drinking places on Saturday nights, John Falconer, Toronto, 7. Among printers, S. J. Dunlop, Toronto, 41. One of the causes of poverty in Toronto, Mayor Howland, Toronto, 159. Long hours of labor tend to create drinking habits, John Pierce, Toronto, 156.

**DRY DOCK and Marine Railway** required at Kingston, J. Oliver, 993.

**DRYGOODS STORE EMPLOYEES**—In Toronto, see evidence of R. Irvin Walker, 289. Timothy Eaton, 291. R. Wilkins, 349, 350. In Petrolia, B. Lancey, 714. In Kingston. B. Meeks, 1008, 1009. In Ottawa, Chas. Bryson, 1163. Crawford Ross, 1184. In Montreal and throughout the country. S. Carsley, Montreal, 1165.

“**DUE BILLS.**”—See payment of wages and pay days.

**DWELLINGS OF THE WORKING CLASSES.**—Condition of them, John Falconer, Toronto, 12. In England and Canada compared, \* \* \*, Toronto, 64. Condition of them, Dr. Oldwright, Toronto, 92. Working printers seldom able to own their homes while their employers become wealthy, J. H. Lumsden, Toronto, 110. Tenement houses in Toronto, Joseph Hunt, 149. Tenement houses for workmen, T. Pickett, Toronto, 155. The homes of the poor, Mayor Howland, Toronto, 165, 166. C. Pearson, Toronto, 255. In St. Thomas, John Waddell, 533. In England, S. Peddle, London, Ont., 683. Owned and rented by the Canada Cotton Manufacturing Company, Cornwall, S. Shoefelt, 1076. In Cornwall, Paul Dane, 1094. In Ottawa, W. Stuart, jun., 1109, S. Robitaille, 1111. F. J. Farrell, 1153. D. Tassé, 1157.

**DYEING AND DYERS.**—In Hamilton, see evidence of Dominic Winn, 894. In Cornwall, see evidence of Joseph Gray, 1090. James Daley, 1091.

**EDUCATION.**—Agricultural College, Guelph, D. Wilson, Chatham, 446. F. W. Wilson, Chatham, 448. The educational effect of benefit societies, C. T. Campbell, M.D., London, 584. Printers Apprentices are as a rule far below the standard in education, S. J. Dunlop, Toronto, 45. Education in Cornwall, Geo. Aty, 1093. The fees and expense of books prevent children of mechanics from attending the Collegiate Institutes, A. P. Knight, Kingston, 941. See evidence of the rector of Kingston Collegiate Institute, 941. See the evidence of the Kingston Inspector of Schools, 940. Thinks an ordinary workman with a family of two children will find all his savings readily absorbed in educating them if so disposed, W. Collins, Burlington, 826. Geo. I. Sturges, Hamilton, 788. A. Smith, Petrolia, 698. See evidence of the inspector of Public Schools, London, 604. Fees in Public Schools, 591. Thinks the State in Canada and the United States provides too much education, C. T. Campbell, M. D., London, 587. Tendency of making higher education expensive, 568. His ideas regarding what common school education ought to be, 568. Age at which children should attend school, Geo. Wrigley, St. Thomas, 567. Its effect on the working class, John Heard, St. Thomas, 512. Does not think it unfit a man for the nursery business, F. W. Wilson, Chatham, 448. The educational blunder of modern times, and the necessity for infusing intellectuality into the ordinary occupations of life, W. Houston, Toronto, 224. S. J. Dunlop, Toronto, 46. The training of boys and how to do it, Mayor Howland, Toronto, 164. The education of boys who go to learn printing in Toronto, J. H. Lumsden, 113. The education of poorer children, John Pierce, Toronto, 156. Method of educating the people to take care of their health, Dr. Oldwright, Toronto, 96.

**INDUSTRIAL AND TECHNICAL EDUCATION.**—Industrial schools in Ontario, A. Blue, Toronto, 83. J. Bain, Toronto, 89. A training school for carpenters is badly wanted in Toronto, R. Dennis, 126. The necessity for industrial schools and how conducted at Mimico, Mayor Howland, Toronto, 162, 163. See evidence.

of John Galt, Toronto, 194 to 197. See evidence of L. P. Kribs, Toronto, 198 to 202. Industrial training in Public Schools, 218. In Normal Schools, John Galbraith, Toronto, 222. See evidence of W. Houston, Toronto, 226, 227, 228, 231, 232, 233 and 234. Industrial school for plasterers in Toronto, J. Wright, 245. Does not think boys learning carriage making would avail themselves of it, J. Dixon, Toronto, 247. No industrial schools in Toronto, H. Lloyd, 273. His opinions regarding industrial education, J. Kane, Toronto, 275. See evidence of A. Henderson, Detroit, 397. E. H. Foster, Windsor, 421. H. Gnosill, Windsor, 427. J. W. Blake, Chatham, 455, 456. E. H. Spashett, Chatham, 469. A. Campbell, Chatham, 491. John Waddell, St. Thomas, 533. W. A. Clarke, London, 539, 600. Hamilton Iron Moulders Union, 789. James Stephenson, Hamilton, 800. Technical Schools, A. Blue, 83. R. Lee, Toronto, 144. Mayor Howland, Toronto, 165. Science and Art Department in Great Britain, method of conducting schools under it, 194. Forced upon the British Government after the Paris Exhibition, 195. Industrial or technical schools in Europe and America, 195. School of Technology in Toronto, 196. School of Practical Science in Toronto, John Galt, 196, 197. Munich Technical High School, 198. Zurich Polytechnic School, L. P. Kribs, 198. Necessity for and advantages to be derived from technical schools, A. M. Wickens, 207. See evidence of John Galbraith, Toronto, 217. W. Houston, Toronto, 228. A practical school for working engineers is required in Toronto; the Practical School of Science does not meet their requirements, E. Hawkins, 259. H. Lloyd, Toronto, 273. John Wardlaw, Galt, 276, 278. J. L. Hughes, Toronto, 280, 281, 282, 283. J. Hewitt, Toronto, 301, 302. A. W. Wright, Toronto, 323. John Doty, Toronto, 323. Robert Kerr, Walkerville, 374. H. Neilson, Chatham, 444. W. E. Hamilton, Chatham, 484. J. M. Green, St. Thomas, 540. Geo Wrigley, St. Thomas, 568. C. T. Campbell, M.D., London, 587. J. B. Boyle, London, 605. A. W. Porter, London, 670. C. A. Passmore, London, 683. J. W. Crosby, Petrolia, 705. R. E. Menzies, Petrolia, 709. T. Partridge, Hamilton, 742. W. J. Vale, Hamilton, 815, 816. Schools that teach telegraphing, Thomas Allan, Hamilton, 823. B. Cameron, Hamilton, 884. W. Birkett, Hamilton, 896. W. G. Kidd, Kingston, 940. A. P. Knight, Kingston, 941. R. B. McPhadden, Kingston, 957. Alf. Perry, Kingston, 959, 960. R. Charlton, Kingston, 962. B. Meeks, Kingston, 1003. T. Stoddard, Ottawa, 1112. G. F. Stalker, Ottawa, 1127. Wm. Gaverock, Ottawa, 1128, 1129. John Henderson, Ottawa, 1138. M. C. Edey, Ottawa, 1147. A. Liberté, Cornwall, 1083.

**THE KINDERGARTEN SYSTEM.**—L. P. Kribs, Toronto, 197, 200, 202. W. Houston, Toronto, 226. J. L. Hughes, Toronto, 230, 281. Geo. Wrigley, St. Thomas, 567. C. T. Campbell, M. D., London, 587, 588. J. B. Boyle, London, 604. W. G. Kidd, Kingston, 940. A. P. Wright, Kingston, 941. B. Meeks, Kingston, 1003. T. Stoddard, Ottawa, 1112.

**FREE PUBLIC LIBRARIES.**—In Toronto, J. Bain, 89, 90, 91. R. Lee, 143. In St. Thomas, Wm. Risdon, 551. In London, J. B. Boyle, 605. In Hamilton, T. Brick, 80. B. Cameron, 842. T. Towers, 877. In St. Catharines, J. E. Cuff, 925. In Kingston, W. G. Kidd, 940. Alf. Perry, 960. B. Meeks, 1003. None in Cornwall, ex Mayor Geo. Macdonald, 1073. In Ottawa, T. Stoddard, 1112. W. C. Toague, 1183.

**MECHANICS' INSTITUTES.**—In Toronto, J. Bain, 90. In Chatham, R. G. Fleming, 440. W. E. Hamilton, 484. In London, A. W. Porter, 669. In Hamilton, W. J. Vale, 814. In Kingston, W. G. Kidd, 940. Alf. Perry, 960. B. Meeks, 1003.

**MODEL SCHOOL SYSTEM.**—Geo. Wrigley, St. Thomas, 569.

**NIGHT SCHOOL.**—Toronto, L. P. Kribs, 197. John Galbraith, 220. W. Houston, 225. John Doty, 328. A. Henderson, Detroit, 397. J. B. Boyd, London, 605. W. J. Vale, Hamilton, 814. W. G. Kidd, Kingston, 940. Ex-

Mayor Macdonald, Cornwall, 1073. In Ottawa, John Henderson, 1138. T. Stoddard, 1112. W. C. Teague, 1183.

**PUBLIC SCHOOLS AND THE PUBLIC SCHOOL SYSTEM.**—In Toronto, A. Blue, 85. Mayor Howland, 163, 165. John Galt, 195. L. P. Kribs, 197. John Galbraith, 221. W. Houston, 223, 225. J. L. Hughes, 278, 279, 282, 284, 285. John Hewitt, 302. In Chatham, F. W. Wilson, 451, 452. In London, C. T. Campbell, M. D., 5-9. J. B. Boyle, 604, 605. Dr. Oronhyatekha, 643. R. Symons, 661. In Petrolia, J. W. Crosby, 705. A. Simpson, 716. In Kingston, W. G. Kidd, 940. J. D. Thompson, Mayor, 1016. In Cornwall, Isaac Ratelle, 1033. The educational system has improved the moral and intellectual condition of workingmen, R. Lee, Toronto, 143. The Glasgow school system, if extended here would improve newsboys and boys of the poorer class, Mayor Howland, 162.

**SCHOOL BOOKS.**—Everything used in schools should be free, L. P. Kribs, 202. Publication of,—W. Houston, Toronto, 233, 234. J. L. Hughes, Toronto, 280, 284. Geo. Wrigley, St. Thomas, 570. C. T. Campbell, M. D., London, 589, 591. J. B. Boyle, London, 606, 607. R. Symons, London, 661, 662. W. G. Kidd, Kingston, 940. A. W. Wright, 941.

**TEACHING AND TEACHERS.**—Ladies as teachers, 590. Salaries of teachers, 589. Difficult for the Teachers' Association to strike a scale of salaries and keep to it, 590. Teaching as a temporary occupation, C. T. Campbell, M. D., 591. Teachers' salaries, J. B. Boyle, London, 606. Number of pupils a teacher ought to have. Teachers' certificates and the training of teachers, W. G. Kidd, Kingston, 940.

**UNIVERSITIES.**—Introduction of practical workshops into,—John Galt, Toronto, 196. Fully one half of the students in the Provincial University come from among the farming and artisan class, W. Houston, Toronto, 234.

**EMERY WHEEL MAKING.**—Hart Emery Wheel Company, Hamilton, and employees thereof, see evidence of R. Chisnell, 783.

**EMPLOYER'S LIABILITY.**—A. Blue, Toronto, 74. Dr. Oldwright, Toronto, 92. T. Pickett, Toronto, 145. Employer's Liability Act of Ontario and the exemption of railway employees from the operation of it, F. Nichols, Toronto, 181, 182. Would like a clause in the Act regarding builder's scaffolding, Thos. Webb, Toronto, 269. On the exemption of the Grand Trunk Railway employees from the operation of the Ontario Act, 516, 519. On the position of employees of the Michigan Central Railway Company in regard to compensation for accidents, Michigan Central Railway Company conductor, 525. Employees of the Michigan Central Railway are required to sign an agreement not to hold the Company responsible in case of accident while on duty, in regard to coupling cars. Indemnity to employees in case of accidents, J. B. Mumford, St. Thomas, 557. Michigan Central Railway Company brakeman, St. Thomas, 573. The law does not protect the workman, Samuel Peddle, London, 663. Benefits which have resulted from the passing of the Act, C. A. Passmore, London, 684. Hamilton Iron Moulders' Union's opinion on the subject, 797. Jas. Stephenson, 798. Has taken an accident policy for his men which removes his liability to company issuing the policy, S. Greening, Hamilton, 810, 841. Article No. 6 of the Declaration of the Principles of the Knights of Labor, 871.

**ENGINES AND BOILERS.**—No Government inspection of them, E. Hawkins, Toronto, 257. Demand for them has increased, John Doty, Toronto, 327. Engines and millwork, James Burns, London, 670. The condition of the engines and boilers at the Cornwall Spinning Mills; loading the safety valve, A. Barnhart, 1077, 1078.

**ENGINEERS.**—Incompetency of persons having charge of agricultural engines the cause of accidents, A. W. Wickens, Toronto, 208. Engineers and machinists at the Kingston Locomotive Works, F. J. Leigh, Kingston, 1017. Engineers and machinists. The Old School mechanics, W. Collins, Burlington, 825, 826. Examination of Locomotive engineers, John Hall, Hamilton, 713.

**MARINE ENGINEER.**—R. Marshall, Kingston, 1042. Capt. T. Donnelly, Kingston, 991. G. Johnston, Kingston, 941, 945. John Dods, Kingston, 936. T. A. Green, Hamilton, 853.

**STATIONARY ENGINEERS**—Toronto, A. M. Wickens, 207. W. Sutton, 210. Edward Hawkins, 257. John Hodgson, 260. John Doty, 327. John Kerr, Petrolia, 706, 707. R. E. Menzies, Petrolia, 708. See evidence of the President of the Canadian Association of Stationary Engineers, T. Partridge, 741. G. Johnston, Kingston, 944. A. Bennett, Kingston, 997. A. Barnhart, Cornwall, 1077. Wm. Gibson, Ottawa, 1103. J. F. Wood, Ottawa, 1101. John P. Purcell, 1181. R. J. Dawson, Ottawa, 1170, 1171.

**EPIDEMICS** and the means taken to stamp them out in St. Thomas, Dr. J. B. Tweedale, 562.

**EQUALITY** of the M. C. Railway employees and officials in discussing and settling labor disputes and questions, J. B. Morford, London, 556. Independence of the workmen in the sale of their labor, R. Dennis, Toronto, 120.

**ERIE IRON WORKS.**—See Iron Works.

**EXEMPTIONS FROM TAXATION.**—James Perkins, Petrolia, 728. J. D. Thompson, Mayor of Kingston, 1016.

**EXHIBITIONS.**—A. W. Porter, London, 670. G. R. Holder, St. Thomas, 517.

**EXPORTATIONS** of manufactured goods. John Elliott & Son, of London, export agricultural implements and machinery to England, France and Australia, W. Elliott, 678.

**FACTORY LAWS.**—Factory Acts in England and Canada, \* \* \* Toronto, 69, 70. Manufacturers gave no opposition to the passing of the Act as a whole, F. Nichols, Toronto, 187. The Act does not provide for inspection of stationary engines and boilers, A. M. Wickens, Toronto, 207. See evidence of Factory Inspector, James R. Brown, Toronto, 315. The Act not satisfactory; a Dominion Act or a uniform law passed by each Province required, A. W. Wright, 322. James Stephenson, Hamilton, 793. Factory Laws are not thoroughly enforced, A. J. Carroll, St. Catharines, 927. W. R. James, St. Catharines, 930. How and since when the manager has complied with the requirements of the Factory Act, W. Wilson, Kingston, 972. Did not receive a copy of the Factory Act from the inspector to put up in the mill of the Cornwall Manufacturing Co. of which he is superintendent, Thewlis Day, 1072. No copy of the Factory Act in J. R. Booth's lumber mill, W. Anderson, Ottawa, 1106. Does not know anything about the Factory Act, J. F. Wood, manager of E. H. Barns' box shoo factory, Ottawa, 1101. His knowledge of McLean, Roger & Co.'s compliance with the requirements of the Factory Act, W. McMahon, Ottawa, 1143. The requirements of the Factory Act complied with by J. MacLaren & Co., Ottawa, John Henderson, 1138. Necessary to extend the application of the Factory Laws to dry goods stores, wholesale clothing houses, shirt factories, &c., &c., 1166. Regarding the provision made for applying the Factory Laws to employees of stores, clothing houses and such places by petition from a majority of the trade. Objects to the term "closing the stores" it should be "dismissing the hands" because the hands are sometimes kept three hours after the store is closed, 1163. Has no knowledge of the Factory Act regulating the condition and hours of women employed in stores, &c., S. Carsley, Montreal, 1167. Does not know of

any Factory Act in the Province of Quebec, G. L. Chitty, 1176. Never paid any attention to the Factory Act, J. R. Booth, Ottawa, 1179. A Dominion Act preferable to Provincial Acts of that kind, W. C. Teague, Ottawa, 1183.

**FACTORY SYSTEM.**—Injures the mechanic, W. J. Macfarlane, Toronto, 116.

**FANNING MILL MAKERS.**—See evidence of Manson Campbell, Chatham, 492, 493, 494.

**FARMERS AND FARMING.**—In the County of Kent, see evidence of David Wilson, Chatham, 444, and F. W. Wilson, Chatham, 449, 451. Wheat raising *versus* stock raising. The great drawback to the country is the continuous growing of grain year after year, Caleb Wheeler, Chatham, 500. In Southwold, see evidence of John Andrews, 503. Stock raising has to a very large extent taken the place of wheat raising in Southwold, John Andrews, 505. Near St. Thomas. Condition of the farmers. Railroads a great benefit to farmers. Price and average yield of wheat. Crops and cattle, 560, 561, 562, 563. Amount of labor displaced by the use of self binders, B. J. Wade, 563. A Canadian farmer cannot compete with a United States farmer if he does not use the most improved agricultural implements and machinery, Wm. Elliott, London, 677. In the vicinity of Petrolia, J. W. Crosby, Petrolia, 701, 702. In Enniskillen, quality of the land. Average crop of wheat to the acre, 732. Prosperity of the farmers, R. Brock, 732, 733. Material condition of the farmers in the vicinity of Grimsby. Not the same necessity for extra help now on account of improved machinery, J. R. Pettitt, 845, 846. In the vicinity of Burlington, see evidence of John Fothergill, 899. In the County of Halton, see evidence of Thomas Blanchard, Appleby, 900. In the vicinity of Kingston, see evidence of H. Baudin, Pittsburgh, 938, 939, and D. Rogers, Kingston, 992. Average value of the implements and machinery required for a 100-acre farm, W. M. Elliott, London, 676.

**FEATHERBONE and the FEATHERBONE FACTORY.**—See evidence of G. R. Holden, St. Thomas, 535.

**FEMALE LABOR.**—Female compositors and press feeders. The attitude of the Printers' Union to employment of females. Inferiority of female labor in printing offices and the causes thereof, S. J. Dunlop, Toronto, 40, 44, 47, 48. Female clerks or shop girls, A. Blue, Toronto, 73, 74. In factories and stores, Dr. Oldwright, Toronto, 93, 94. Rules of the Typographical Union regarding female labor, J. H. Lumsden, Toronto, 103, 113. Shop girls, their condition and wages. The supply greater than the demand. The under payment of women often leads to vice, Mayor Howland, Toronto, 167, 168. Employed at ornamental mouldings in the gilding business, J. McLaren, Toronto, 178. Employed as dry goods clerks, 289, and sewing girls who make clothing, R. I. Walker, Toronto, 290. In dry goods stores, Thos. Eaton, Toronto, 293. Female cigar makers are paid at the same rate as men, A. Eichhorne, Toronto, 305. Employed at boot and shoe upper making, W. Thurston, Toronto, 307. Factory inspector, J. R. Brown, finds women working longer hours than the Ontario Factory Act permits and in many factories males and females working in the same rooms and does not forbid it, 315, 316. Employed in brass foundries in Toronto making sand cores for the moulders, J. Morrison, 336. Employed in J. D. King & Co.'s boot and shoe factory, Toronto, R. C. Winlow, 336. As dry goods clerks, R. Wilkins, Toronto, 350. Female clerks should not be kept standing all day: it can be most of the time avoided, and is injurious, Miss Burnett, Toronto, 359. In making gentlemen's ties, W. H. Williamson, Toronto, 359. Chiefly girls employed at paper box making, F. P. Birney, Toronto, 364. Female compositors at Windsor, T. M. White, 393. At tailoring in Windsor, James Wren, 406. Objection to female cooks on board vessels on the lakes, E. Kehoe, Detroit, 419. Employed in the seed trade by D. M. Ferry & Co., Windsor, S. R. Miller, 435.

As weavers at the woollen mills, Chatham, T. H. Taylor, 478. Employed in the Featherbone Factory, St. Thomas, G. R. Holden, 536. Female compositors, W. A. Clark, London, 596. Female teachers, J. B. Boyle, Toronto, 606. Employed in the tinware factory, John McClary, London, 613. His opinion regarding the employment of female labor, E. A. Card. Taschereau, Arch. of Quebec, 368. That were employed by the Canadian Granite Co., Ottawa, P. G. Nash, 1140. In Kingston, B. Meeks, 1008, 1009. Difficult to organize, W. R. James, St. Catharines, 931. Article No. 20 Declaration of the Principles of the Knights of Labor *re*, 871. Thinks that female labor in any occupation should be paid as much as male labor, if equal in capacity, R. Symons, London, 662. Employed packing biscuits, W. Gibson, Ottawa, 1104. As bookfolders, in Ottawa, W. McMahon, 1141. Miss \* \* \*, 1171. F. Rogers, 1173. In boot and shoe factories, London, R. Symons, 660. Hamilton, A. Miller, 885. In Kingston, J. Volume, 936. At cigar-making, in London, John A. Rose, 617, 618, 621. S. M. Hodgins, 653. In St. Catharines, R. J. Mills, 919. In Kingston, S. Oberndorfer, 962, 963. Employed as corfectioners, A. W. Porter, London, 666. R. E. Jamieson, Ottawa, 1107. Employed in Cotton Factories, Ontario Cotton Mills, Hamilton, John Bell, 877. M. Limebeck, 892. John Vance, 893. Kingston Cotton Co.'s Mills. W. Wilson, 971. Stormont Cotton Mills Co.'s Mills, Cornwall, A. Gault, 1058. E. King, 1074. Kidd, Kingston, 940. Employed at telegraphing, Thomas Allan, Hamilton, 823, 824. Employed in Tackett & Son's Tobacco Factory, James Bowen, Hamilton, 810. Employed in Morgan Bros. Whip Factory, Hamilton, R. R. Morgan, 883. Female wire workers, B. Greening, Hamilton, 841, 842. Employed in woollen mills, J. P. Watson, Cornwall, 1068. A. French, Ottawa, 1144.

**FINING OF EMPLOYEES.**—The fining system, A. Blue, Toronto, 82. For breach of duty, John Falconer, Toronto, 12. At the Ontario Cotton Mills, Hamilton, M. Limebeck, 892. John Bell, 879. At the Kingston Cotton Mills, W. Wilson, 974. At the Canada Cotton Manufacturing Co.'s Mills, Cornwall, A. G. Watson, 1066. A. T. Knight, 1067, 1068. S. Shoefelt, 1076, 1077. At the Stormont Cotton Mills, Cornwall, A. Gault, 1058, 1060. E. King, 1074. \* \* \* mill operative, 1079. In dry good stores, Thos. Eaton, Toronto, 292, 293. Chas. Bryson, Ottawa, 1164. Crawford Ross, Ottawa, 1185. Does not fine his men, but docks them for being late, Robert Kerr, Walkerville, 376. Hamilton Iron Moulders Union opinion regarding, 793. Fines for breakages, J. Stephenson, Hamilton, 800. G. Johnston, Kingston, 943. At the Knitting Factory, Dundas, S. Leonard, 861. At the Parliamentary Printing Office of McLean, Roger & Co., Ottawa, F. Rogers, 1174. Miss \* \* \* 1162, 1163. Fining of G. T. R. employees. Responsibility of conductors and penalties for mistakes, 514. Fines, 516, 520. No rules for imposing fines on employees in the Cornwall Spinning Mills, Jos. Moyes, 1081. Imposed on steam fitters in Toronto, \* \* \*, 32. The Toronto

Street Railway Co. does not fine their employees, J. J. Franklin, Supt., 330. At the Cornwall Manufacturing Co.'s Mills, J. P. Watson, 1069. Thewlis Day, 1079. At the New Edinburgh Woollen Mill, Ottawa, A. French, 1144.

**FIRE ESCAPES and FIRE PROTECTION.**—In factories in the Central District of Ontario, J. R. Brown, Factory Inspector, 317. Means of exit in case of fire from the boot and shoe factory of J. D. King & Co., Toronto, R. C. Winlow, 337. At the Ontario Cotton Mill, Hamilton, John Bell, 879. Means of escape in case of fire at the Kingston Cotton Mills, W. Wilson, 972. At the Kingston Knitting Factory, John Hewton, 979. At the Stormont Cotton Mills, Cornwall, A. Gault, 1060. At the Canada Cotton Mills, Cornwall, Annie Martin, 1086. Fire protection in McPherson's boot and shoe factory, Hamilton, A. Miller, 886. Fire service in connection with the Canada Cotton Mills, Cornwall, A. G. Watson, 1063. Means of escape and protection in case of fire at the Parliamentary Printing Office of McLean, Roger & Co., Ottawa, W. McMahon, 1143.

**FISHERIES and FISHERMEN on the Detroit River.**—Kind of fish caught. Methods of fishing. Duty to be paid on fish going to the American market, 379. Fish decreasing for the last fifteen years, 380. Reasons for the decrease, 380, 381. Pound nets injurious, 382, 384. Government should establish official hatcheries and spawning places. Number of men employed, D. Meloche, Sandwich West, 383. Government ought to make the close season correspond with the spawning season, and see that the law is properly carried out, Daniel Antaya, Sandwich West, 384.

**FLOUR.**—Ontario and North-West flour compared, J. D. Nasmith, Toronto, 362. Flour milling in Chatham, T. H. Taylor, 478, 479. A. Campbell, 487. Prices of flour now, two and ten years ago compared, R. R. Morgan, Hamilton, 883. Quality of flour now and ten years ago compared and prices during the last five years, W. Hutchison, Ottawa, 1097.

**FOOD.**—Means taken to prevent the sale of unwholesome foods, Dr. Oldwright, Toronto, 96. Foods bought on the Toronto markets by the working classes are as a rule not inferior. Food inspector, T. Galbraith, 193. Meals for a quarter of a cent, each: what constitutes such meals: according to Rumsford's tables are fit for hard workmen. French people live better and cheaper than the English. Considers barley, Indian meal and red herrings a sufficient meal for a workman in this country, 351. Cost and efficiency of the foods of British and German soldiers. Quotations from American tables of foods. Foods of the Scotch people, 352. Quotes results arrived at by experimenters on the nourishing powers of foods, 353. A knowledge of the properties of foods requires to be extended, Dr. W. B. Nesbitt, Toronto, 354. Food provided for men in lumber shanties, P. Chabot, Ottawa, 1187.

**FOREIGN COMPETITION.**—Does not affect steam fitters in Toronto, \* \* \* 31. Effect on Toronto moulders, James Boyle, 172. Its effect on carriage making in Toronto, T. Baskett, 174. American competition in the manufacture of paper boxes, F. P. Birley, Toronto, 265. U. S. competition in Wire Works, F. S. Evans, Windsor, 389. No importation of waggon from the U. S., B. Croft, Chatham, 471. Imports plow handles from Ohio; reasons why, Wm. Risdon, Manager of the Erie Iron Works, St. Thomas, 549. Importation of furniture, John Wolfe, London, 610. Confectionery and crackers are imported, but not to any great extent, A. W. Porter, London, 609. Importation of American oils, D. Mills, Petrolia, 693. Chas. Jenkins, Petrolia, 724. If there were a better class of Canadian oil made it would shut out American oil, James Joyce, Petrolia, 730. Importation of nails from the U. S., B. M. Danforth, Hamilton, 761. Competition from England in manufactured cotton and its results, W. Wilson, Kingston, 975. Importation of inferior brands of cigars stopped since the duty on imported cigars was raised, John A. Rose, London, 619.

- FOREIGN CONTRACT LABOR.**—Law regarding it, A. Blue, Toronto, 74. T. Bowick, Toronto, 107. R. Dennis, Toronto, 125. Describes the attempt made by the U. S. authorities to prevent workmen who live at Windsor crossing to labor in Detroit, Wm. Benson, Windsor, 371. It was employed during the cigar-makers' lockout in London, S. M. Hodgins, 653. F. Walters, Hamilton, 797. Hamilton Iron Moulders' Union's opinion regarding it, 797. James Stephenson, Hamilton, 798. See Article No. 16 Declaration of Principles of the Knights of Labor, 871. T. Towers, Hamilton, 873. B. Meeks, Kingston, 1006. Municipal authorities are powerless to prevent the employment of foreign labor on corporation work when done by contract, J. D. Thompson, Mayor of Kingston, 1012.
- FORESTERS, {ANCIENT ORDER} OF.**—See evidence of J. Smith, Toronto, 135, 136, 137.
- FORESTERS, INDEPENDENT ORDER OF.**—See evidence of Dr. Oronhyatekha, London, 641 to 645.
- FOUNDRYMEN, INCLUDING MOULDERS, PATTERN MAKERS, &c.**—
- IRON MOULDERS.**—In Toronto, see evidence of T. Pickett, 144. Joseph Hunt, 148. John T. Dodwell, 150. David Black, 151, 278. John Pierce, 156. James Boyle, 169. E. Gurney, 294. In Walkerville, see evidence of Robert Kerr, 372. In London, see evidence of James McKenna, 600. John McClary, 612. J. B. Murphy, 685. In Hamilton, see evidence of D. Cashion, 784. Fred Walters, 794. Agreement between the Union and the Employers' Association, F. Walters, 796, 797. See evidence of James Stephenson, 797. M. Baskwill, 801. James Ripley, 801. Thomas Pumfrey, 821. John Milne, 834. B. Cameron, 842. In Kingston, John McNeil, 949. E. Perry, 951. William Duffy, 1055. In Ottawa, Melton W. Merrill, 1093. Thomas Stoddard, 1111. John Peer, 1130. E. Elliott, 1180.
- PATTERN-MAKERS.**—In Kingston, see evidence of S. Angrove, 945. In Ottawa, see evidence of Melton W. Merrill, 1099.
- FREEMASONS.**—See evidence of C. T. Campbell, M. D., London, 582.
- FRUIT CANNING and DRYING.**—See evidence of A. H. Pettitt, Grimsby, 848; B. R. Nellis, Grimsby, 890, 891.
- FRUIT GROWING.**—See evidence of F. W. Wilson, Chatham, 447, 448, 449. John Andrews, Southwold, 504. Fruit growing has largely displaced farming in the vicinity of Grimsby, J. R. Pettitt, Grimsby, 846. See evidence of A. H. Pettitt, Grimsby, 847. Advantage Canadian canning factories are to fruit growers, B. R. Nellis, Grimsby, 891. Fruit growing near Kingston, H. Baudin, Pittsburgh, 9 8. A good deal of fruit grown around Burlington, John Fothergill, 900.
- FUEL.**—Crude oil as fuel, Chas Jenkins, Petrolia, 755.
- FURNITURE and FURNITURE FACTORIES and the employees of.**—Prices of furniture at Chatham and in the United States compared, 412. Furniture manufactured in Chatham, see evidence of Hugh Neilson, of Coltart & Neilson, Chatham, 411. Furniture factory and employees thereof of the London Furniture Company, see evidence of John Wolfe, 607, and Samuel Peddle, 631. Price of furniture reduced twenty per cent. in the last ten years; the cause of the reduction, 610. Difference between manufacturers' and retail prices of furniture, 611. Prices and methods of making furniture in Canada and the United States compared, John Wolfe, London, 612. Furniture manufacturing in Ottawa, see evidence of James Olliver, 1117.

**GARNISHING of WAGES.**—Rules of the Michigan Central Railway Company regarding men whose wages are garnished, R. M. McKay, St. Thomas, 566. Rules of the Grand Trunk Railway Company regarding employees of the Great Western Division whose wages are garnished, F. Armstrong, Hamilton, 782. Garnishing of wages of Grand Trunk Railway employees, Thos. Towers, Hamilton, 875. \* \* \* Grand Trunk Railway conductor, 522. A plea for being paid oftener than once a month, Henry Nichols, London, 658; T. Purnfrey, Hamilton, 822; John Bertram, Dundas, 858; S. Angrove, Kingston, 945; Wm. Harty, Kingston, 1023. Rule of the Canada Cotton Manufacturing Company regarding employees whose wages are garnished, A. G. Watson, Cornwall, 1065. Difficult to get employment in Cornwall after being dismissed for having wages garnished, M. Quinlan, Cornwall, 1057. Discharging men for having their wages garnished, James Daley, Cornwall, 1091. A. Gault, Cornwall, 1061. Melton W. Merrill, Ottawa, 1100. Describes the system practised in Montreal of seizing poor people's wages as an extreme hardship, S. Careley, Montreal, 1169.

**GAS SUPPLY of Toronto.**—Dr. Oldwright, 97.

**GAS WORKS.**—Street car lines and other monopolies should be controlled by the municipalities, A. W. Wright, Toronto, 324.

**GENTLEMEN'S TIE FACTORY** and employees thereof.—See evidence of W. H. Williamson, Toronto, 359.

**GEORGE, HENRY.**—The application of his ideas, the only logical remedy to improve the condition of the working classes, William Collins, Burlington, 828.

**GILDING BUSINESS.**—See evidence of John McLaren, Toronto, 177. The introduction of the German Metal Process and its effect on the trade, John McLaren, 177.

**GLUCOSE, Manufacture of.**—See evidence of M. H. Miller, Walkerville, 377.

**GOVERNMENT, THE FEDERAL,** should control railway and telegraph lines, A. W. Wright, 324.

**GRADING of WORKMEN,** according to ability, is one of the standard rules of the Independent Labor Union, John Falconer, Toronto, 8. By Trades Union, J. Falconer, 6, 7. T. Bowick, Toronto, 106. R. Dennis, Toronto, 119. R. Lee, Toronto, 142. C. R. Rundle, Toronto, 206. C. W. Barton, Toronto, 210. H. Lloyd, Toronto, 238. Grading of engineers, John Hodgson, Toronto, 260. Bakers' wages are not graded, except the foremen, John D. Nasmith, Toronto, 362. John Wolfe, London, 611. Telegraph operators, Thos. Allan, Hamilton, 8:3. Reasons antagonistic to a graded scale of wages for painters and decorators, Geo. Metcalf, Hamilton, 867. Men employed at the Kingston Locomotive Works are paid according to ability, Wm. Harty, 1028. Grading or classification of men according to ability, Chas. Moore, Kingston, 1050. Labor organizations advocate it, R. Meek, Kingston, 1049. Geo. White, Cornwall, 1089. Men employed by Charlebois & Co., contractors, Ottawa, are paid according to ability, O. Labelle, 1160. Thinks, taking the week through, one man is as good as another in a printing office, Alex. Short, Ottawa, 1057.

**GRAIN SHOVELLERS** employed by the Montreal Transportation and Forwarding Company, John Gaskin, Kingston, 965.

**GRANITE and MARBLE WORKS** employees.—See evidence of P. G. Nash, managing proprietor of the Canadian Granite Company, 1139.

- GRANITE QUARRIES** owned and worked by the Canadian Granite Company of Ottawa. Location of them, P. G. Nash, 1139.
- GUILD SYSTEM.**—Remarks regarding the application of it, Mayor Howland, Toronto, 165.
- HAMILTON, City of.**—See evidence of A. McKay, M.P., ex-mayor, 803 to 807.
- HAMILTON LAND TAX CLUB** and its objects. See evidence E. S. Gilbert, 861 to 863. John Peebles, 863 to 865.
- HANDY MEN** or semi-killed carpenters.—Effect of the employment of, H. Lloyd, Toronto, 238, 240, 241.
- HARNESS-MAKERS, Toronto.**—See evidence of C. W. Barton, 210.
- HART EMERY WHEEL CO., Hamilton.**—See evidence of R. Chisnell, 783.
- HEALTH** of the **WORKING CLASSES.**—Dr. Oldwright, Toronto, 94.
- HEALTH ACT OF ONTARIO** regarding supply of drinking water, Dr. Oldwright, 92.
- HEALTH OFFICE (MEDICAL)** of Windsor. Evidence of, 384.
- HEALTH INSPECTORS.**—See **INSPECTORS** and **INSPECTION.**
- HELPLESS CLASSES** (Women and Children). Recommends that Government fix a minimum price for their labor, Mayor Howland, Toronto, 167.

**LABORERS.**—Builder's laborers, H. T. Benson, Toronto, 263. In Windsor, Chas. Simpkin, 402. In Chatham, E. Fitzthomas, 466. In London, John Hayman, 637. In Kingston, D. Rogers, 991. John Dwyer, 999. H. Baudin, 939. In Ottawa, John Davis, 1,186. Lock laborers, Ottawa, \* \* \* , 1,158, 1159.

**LUMBER MILL EMPLOYEES.**—In Ottawa, W. Anderson, 1104. Joseph Sherwood, 1125, 1127. John Henderson, 1137. \* \* \* , 1152. J. R. Booth, 1178, 1179. In Chelsea, P. Q., at Gilmour & Co.'s., G. I. Chitty, 1177.

**LUMBER SHANTYMEN.**—P. Miner, Ottawa, 1188. P. Chabot, Ottawa, 1,187.

**MACHINISTS.**—In Toronto, \* \* \* , 65, 69. John Doty, 327. In St. Thomas, R. McKay, 564. In London, Henry Nichols, 656. James Barns, 671. In the G. W. Railway workshops, fifteen to thirty years ago, W. Collins, Burlington, 826. In Hamilton, J. J. Whitely, 880. In Kingston, Alf. Perry, 959, 960.

**MARBLE CUTTERS.**—In Ottawa, M. Shields, 1121.

**MATCH FACTORY, OTTAWA.**—Children employed in, \* \* \* , 1141.

**MILLERS.**—In Chatham, A. Campbell, 488. In Hamilton, R. R. Morgan, 883. In Ottawa, W. Hutchison, 1096. S. Robitaille, 1111.

**MILLINERS.**—Crawford Ross, Ottawa, 1185.

**NAIL MAKERS.**—B. M. Danforth, Hamilton, 760, 762.

**PAINTERS.**—Toronto, Geo. Harris, 366. John Rooney, 367. In Chatham, J. E. Smith, 453. In London, C. A. Passmore, 682. In Hamilton, Geo. Metcalfe, 865.

**PLASTERERS.**—C. R. Rundle, Toronto, 203. W. Stuart, Jr., Ottawa, 1109.

**PRINTERS.**—In Toronto, S. J. Dunlop, 42. J. H. Lumsden, 108. In London, W. A. Clarke, 594, 595. J. L. Goodbaum, 616. R. Mathews, Jr., 631. In Hamilton, Geo. Harper, 746. In St. Catharines, A. J. Carroll, 925. W. Nesbitt, 929. In Kingston, L. W. Shannon, 1034. In Ottawa, W. McMahon, 1141. R. Rankin, 1170. W. Gibbens, 1145, 1145. Alex. Short, 1155.

**RAILWAY EMPLOYEES.**—System by which the hours of labor of conductors on the G. T. R. are regulated, 513. Freight train engines on the M. C. R. are often too heavily loaded thus creating delay on the trip, and causing employees to work extra time, 528. Railway employees should be paid extra if obliged to work more than ten hours, M. C. R. conductor, 530. Hours of labor of engineers on the G. T. R., G. T. R. engineer, St. Thomas, 543. See evidence of J. B. Morford, St. Thomas, 552. On lengthened trips, arrangements are made on the M. C. R. for allowing men to rest, J. B. Morford, 552. Very often want of proper rest prevents conductors on the G. T. R. from properly attending to their duties, 514. Usual length of trips for brakemen, 572. Rest on delayed trips, 573. Brakemen's hours of labor and usual length of trips, M. C. R. brakeman, St. Thomas, 574. Hours of labor of section men, \* \* \* , St. Thomas, 579. Hours of labor of locomotive drivers and firemen on the G. W. Div. of the G. T. R., 768. Length of continuous service required from men in exceptional cases, 769. Rates on the G. W. Div. of the G. T. R. for calling driver

and firemen to duty and releasing them. What is done when a man called in in ill-health, John Hall, Hamilton, 969.

SAILORS.—See evidence of John T. Carey, 951, and P. Gallagher, 918.

SCALE FACTORY EMPLOYEES of the Osborne-Kelly Manufacturing Company, Hamilton, R. B. Osborne, 903.

SHOW-CASE AND STORE FITTING FACTORY EMPLOYEES.—What constitutes a day's labor, W. Millichamp, Toronto, 357.

STEAM FITTERS.—When the hours of labor were shortened from ten to nine hours a day wages increased, \* \* \* Toronto, 28.

GRANITE FACTORY EMPLOYEES.—P. C. Nash, Ottawa, 1140.

STREET CAR EMPLOYEE.—In Toronto, J. J. Frankland, 328, 329, 331.

TAILORS.—James Wren, Windsor, 406. J. Allenby, London, 627.

TELEGRAPH OPERATORS.—Thos. Allan, Hamilton, 822.

TOBACCO FACTORY EMPLOYEES.—At the factory of Tuckett & Son, Hamilton, G. T. Tuckett, 744. James Sharkoy, 807. James Bowen, 809. J. B. King, 816, 817.

WHIP FACTORY EMPLOYEES.—R. R. Morgan, Hamilton, 883.

WATCHMEN on steamers plying between Windsor and Detroit, R. D. Walker, Windsor, 405.

WIRE WORKERS employed by the Barnum Wire and Iron Works Company, Windsor, F. S. Evans, 391.

WOOD WORKERS.—Chatham, G. S. Hope, 462.

WOOLLEN MILLS EMPLOYEES.—In the majority of factories women do not work as long as men except in woollen factories, J. R. Brown, factory inspector, central district of Ontario, 316. In Chatham, T. H. Taylor, 476. At the New Edinburgh Mills, Ottawa, A. French, 1144.

WORKINGMEN in Petrolia, James Joyce, 732.

SHORTENING THE HOURS OF LABOR.—John Falconer, Toronto, 10. \* \* \* Toronto, 31. John Callaw, Seaton Village, 53, 59. Average hours of labor in Ontario, 1885-1886, A. Blue, Toronto, 75. Shortening of, A. Blue, 76, 84. Dr. Oldwright, Toronto, 94. Trades unions a benefit in shortening them, R. Lee, Toronto, 140. T. Pickett, Toronto, 147. C. R. Rundle, Toronto, 203. J. S. Ballantine, Toronto, 243, 244. Machinery has so cheapened production that the day's labor might be shortened, John Hewitt, Toronto, 303. Manufacturers in Central District of Ontario willing to comply with the requirements of the Factory Act respecting hours of labor, J. R. Brown, inspector, 315. Robert Kerr, Walkerville, 375. T. M. White, Windsor, 392, 393. R. G. Fleming, Chatham, 437, 440. J. W. Blake, Chatham, 456. R. Gossett, Chatham, 459. G. S. Hope, Chatham, 463. J. K. Dickson, Chatham, 473. W. H. Anderson, St. Thomas, 510. John Head, St. Thomas, 512, 513. Wm. Risdon, St. Thomas, 551. James Burns, London, 673. C. A. Passmore, London, 684. G. T. Tuckett, Hamilton, 744, 745. S. J. Whitehead, Hamilton, 793. W. J. Vale, Hamilton, 813, 814, 815. J. B. King, Hamilton, 817. B. Cameron, Hamilton, 842, 843. Thomas Towers, Hamilton, 876. R. McMillan, Kingston, 948. John Litton, Kingston, 957. Alf. Perry, Kingston, 960. B. Meeks, Kingston, 1003, 1006, 1008. John Wilkins, Kingston, 1040. James Rushford, Kingston, 1045. John Pierce, Toronto, 156, 158. R. Dennis, Toronto, 122. G. M. Jenkins, Windsor, 424. John Milne, Hamilton, 834. Article No. 21 of the Declaration of Principles of the Knights of Labor regarding the eight-hour system, 871. J. J. Whitely, Hamilton, 882. Hamilton Iron Moulders Union, 797. James Ainslie, Kingston, 1056. James Daley, Cornwall, 1092. W. C. Teague, 1181. Thomas Stewart, Ottawa, 1195.

HOUSE FURNISHING FACTORY, St. Thomas.—See evidence of John Waddell, 530.

**ILLICIT TRAFFIC** between United States and Canada at Windsor, Wm. Benson, Windsor, 369.

**IMMIGRATION** and its effects, John Allenby, London, 630. John Andrews, Southwold, 506. H. Baudin, Pittsburgh, 939. Wm. Bell, London, 592. A. Blue, Toronto, 80, 81. Thomas Brick, Hamilton, 818. R. Brock, Enniskillen, 735. Patrick Burns, London, 635. James Burns, London, 674. B. Cameron, Hamilton, 843. Wm. Cooper, Toronto, 265, 266. T. Crawley, Windsor, 432, 433, 434. J. E. Cuff, Mayor St. Catharines, 924. John Davidson, London, 625. R. Dennis, Toronto, 125. John Falconer, Toronto, 2. R. Greer, Kingston, 955. Miss H. Gurnett, Toronto, 348. H. Gnosill, Windsor, 429. Mayor Howland, Toronto, 159, 160. Iron Moulders Union, Hamilton, 789. W. R. James, St. Catharines, 933. G. Johnston, Kingston, 944. J. Keefer, St. Catharines, 927. John Litton, Kingston, 956. W. J. McAndrews, Hamilton, 751, 752, 759. W. J. McFarlane, Toronto, 117. James McKenna, London, 601. R. B. McPhadden, Kingston, 958. Miss Machar, Kingston, 970. B. Meeks, Kingston, 1006. R. E. Menzies, Petrolia, 711. Geo. Metcalfe, Hamilton, 863. Peter Moncrief, Kingston, 978. Charles Moore, Kingston, 1052. James O'Donnell, London, 664, 665. C. A. Passmore, London, 684. S. Peddle, London, 690. E. Perry, Kingston, 952. J. R. Pettitt, Grimsby, 846. T. Pickett, Toronto, 146. Thomas Pumfrey, Hamilton, 822. D. Rogers, Kingston, 993, 994. John Rooney, Toronto, 367. B. Taylor, Toronto, 286. John Scully, Toronto, 254. A. Short, London, 682. See evidence of John Smith, Immigration Agent at Hamilton, 752. Thomas Stewart, Ottawa, 1192. Robert Symmons, London, 638. W. J. Vale, Hamilton, 813. B. J. Wade, near St. Thomas, 563.

**IMPORTATIONS.**—Imports some of his raw material. Has used almost exclusively Londonderry iron for the last two years and finds it suits his purpose as well as the best imported iron. Any kind of goods in his line can just as well be made in Canada, James Burns, Manufacturer of engines and mill work, London, 672. Of oil well tools, James Joyce, Petrolia, 731. Of material used in the manufacture of show cases, store fittings, &c., W. Millichamp, Toronto, 357. Of manufactured goods into Canada reduced, F. Nichols, Toronto, 179. Of furniture, Samuel Peddle, London, 692. Very little furniture imported except for patterns, John Wolfe, London, 610.

**INDENTURES** and the **INDENTURE SYSTEM.**—See **APPRENTICES.**

**INDEPENDENT LABOR UNION.**—John Falconer, Toronto, 4, 8.

**INDUSTRIAL OCCUPATIONS.**—Necessity for infusing more intellectuality into them, W. Houston, Toronto, 226.

**INSPECTION** and **INSPECTORS**—

**OF BENEVOLENT or BENEFIT SOCIETIES.**—J. Smith, Toronto, 134. C. T. Campbell, M.D., London, 585. Owen Meade, Toronto, 216. Dr. Oronhyatekha, London, 664.

**OF BREAD.**—A. Cousineau, Ottawa, 1133.

**OF BUILDINGS.**—Appointment of a building inspector, Ottawa, W. Stuart, Jr., 1110.

**OF CATTLE SHIPS.**—Advice to Government regarding,—G. F. Frankland, Toronto, 341.

**OF DWELLINGS of Artisans.**—Recommends the appointment of a Government inspector of,—Mayor Howland, Toronto, 166.

**OF ENGINES (Stationary) and ENGINEERS.**—The Factory Act does not provide for, A. M. Wickins, Toronto, 207. E. Hawkins, Toronto, 267. R. J. Dawson, Ottawa, 1171. John P. Purcell, Ottawa, 1181. J. Keefer, St. Catharines, 927. E. Hawkins, Toronto, 267, 268, 269.

**OF ENGINES (Marine) and BILERS.**—T. A. Green, Hamilton, 853. Of steamboats, R. Marshall, Kingston, 1043.

**OF FACTORIES.**—W. Anderson, Ottawa, 1106. J. R. Brown, Inspector for Central District of Ontario, 315. John Ball, Hamilton, 879. A. Bennett, Kingston, 39. J. R. Booth, Ottawa, 1179. James Bowen, Hamilton, 811. R. Clements, Ottawa, 1029. B. M. Danforth, Hamilton, 761, 763. Thewlis Day, Cornwall, 1071. E. Elliott, Ottawa, 1180. W. Elliott, London, 677. J. Firstbrooke, Toronto, 312. E. H. Foster, Windsor, 422. A. Gault, Cornwall, 1062. W. Gibson, Ottawa, 1103. R. Goessett, Chatham, 460. Thomas Green, London, 648. S. Greening, Hamilton, 840, 841. John Henderson, Ottawa, 1138. John Hewton, Kingston, 979. G. S. Hope, Chatham, 465. W. Hutchison, Ottawa, 1097. R. E. Jamieson, Ottawa, 1107. J. Keefer, St. Catharines, 927. R. Kerr, Walkerville, 376. S. Leonard, Dundas, 869. W. McMahon, Ottawa, 1143. R. McMillan, Kingston, 947. J. Massey, Warden of Central Prison, 345. Melton W. Merrill, Ottawa, 1098. P. G. Nash, Ottawa, 1140. H. Neilson, Chatham, 442. S. Oberndorfer, Kingston, 963. James O'Donnell, London, 664. James Oliver, Ottawa, 1118. H. A. Patterson, Chatham, 487. John Pearce, Ottawa, 1180. S. Peddle, London, 633, 691. A. W. Porter, London, 668. F. Rogers, Ottawa, 1174. F. Ralph, Windsor, 403. S. Rowcroft, Kingston, 978. Joseph Sherwood, Ottawa, 1126. James Stephenson, Hamilton, 793. Dr. J. B. Tweedale, St. Thomas, 502. J. P. Watson, Cornwall, 1070. W. Wilson, Kingston, 972. John Wolfe, London, 608. J. F. Wood, Ottawa, 1102. A. S. Woodburn, Ottawa, 1177.

**OF FOOD.**—Dr. J. B. Tweedale, St. Thomas, 502

**HEALTH and SANITARY INSPECTION and INSPECTORS.**—At Kingston, A. Bennett, 997. R. Green, 956. B. Meeks, 1005. At Ottawa, F. J. Farrell, 1154. M. W. Merrill, 1100. John Pearce, 1180. Alex. Short, 1155.

**OF MILK.**—Dr. J. B. Tweedale, St. Thomas, 502.

**OIL (Petroleum) inspection and measurement of and of boilers used in refining it.**—Chas. Jenkins, Petrolia, 724, 725. James Joyce, Petrolia, 731. James Kerr, Petrolia, 717, 720. John Kerr, Petrolia, 706. Thomas McKetrick, Petrolia, 696. R. E. Menzies, 703, 710, 711, 712. David Mills, Petrolia, 692, 694. James Perkins, Petrolia, 730.

**OF PLUMBING.**—A. Blue, Toronto, 86. C. Pearson, Toronto, 256.

**OF SCAFFOLDING.**—H. T. Benson, Toronto, 267.

**OF SCHOOLS.**—See evidence of W. G. Kidd, Inspector of Public Schools, Kingston, 940, and James L. Hughes, Inspector of Public Schools, Toronto, 273.

**OF VESSELS.**—John T. Cary, 911, 912, 913. John Dods, Kingston, 936. R. Donnelly, 911. Capt. Thos. Donnelly, 990, 991. James Fleming, Kingston, 1046, 1047. Patrick Gallagher, 917, 918. John Gaskin, Kingston, 966. T. A. Green, Hamilton, 852, 853. See evidence of W. McIlwaine, Lloyd's Inspector, 907 to 910. R. Marshall, Kingston, 1043. Thomas Mulhall, Detroit, 418. Peter Nelson, 916, 917. Isaac Oliver, Kingston, 998. Capt. Parsons, Kingston, 918, 919, 920. W. Stephen, Kingston, 1031.

**INSURANCE.**—Of steam boilers, A. M. Wickens, Toronto, 209. Of vessels, W. McIlwaine, 908. John Gaskin, Kingston, 967.

**INTEREST, RATE OF.**—In Chatham, M. Campbell, 493. J. K. Dickson, 473. Rate of interest on loans on town and farm property, John Fraser, Petrolia, 723. Interest and bonus in the Hamilton Loan and Building Society, W. A. Studdart, 737.

**IRON.**—Where John Bertram & Sons get their iron and steel. Quality of Canadian iron, John Bertram, Dundas, 857. Canadian and imported iron compared, T. Bowick, Toronto, 105. Londonderry iron suits his purpose as well as the best imported iron, James Burns, London, 672. John Elliott & Sons of London use chiefly American and Nova Scotian (Londonderry) iron, Wm. Elliott, 675.

Uses a large proportion of Canadian iron in stove making, E. Gurney, Toronto and Hamilton, 300. Wm. Harty, Kingston, 1028. Kinds of iron used by Burrows, Stewart & Milne of Hamilton. Nova Scotian and Scotch iron compared, John Milne, 837, 836. Canadian bar-iron made in Hamilton, superior to either Scotch or English, R. B. Osborne, Hamilton, 903. Quality of Scotch, Canadian and American iron compared, T. Pickett, Toronto, 153. Prices of iron, John Pierce, Toronto, 157.

**IRON CLAD CONTRACTS.**—A. Blue, Toronto, 72. Hamilton Iron Moulders' Union, 797. W. R. James, St. Catharines, 930. B. Meeks, Kingston, 1004. Obligated to sign an agreement to renounce the Cigarmaker's Union for ever as a condition of employment, S. M. Hodgins, London, 653. Employees of the Toronto Street Car Co. required to sign an agreement not to belong to any labor organization, J. J. Franklin, Supt., Toronto, 330. Grand Trunk Railway Co.'s rule book, which must be signed by all employees as a condition of employment, contains a clause waiving all claims in case of accidents, G. T. R., Engineer, St. Thomas, 545.

**IRON MOULDERS.**—See **FOUNDRY MEN**.

**IRON WORKERS.**—In the Ontario Rolling Mills, Hamilton, T. D. Beddo, 793. B. M. Danforth, 760, 763. In the Erie Iron Works, St. Thomas, Wm. Risdon, 549 to 551. In Hamilton, see evidence of W. J. Scott, 820. Employed by the Hamilton Iron Forging Co., Geo. I. Sturges, 786. S. J. Whitehead, 789, 790, 792. Charles Wilson, 821.

**JEWELLERS.**—See evidence of William Cooper, Toronto, 264.

**KINGSTON LOCOMOTIVE WORKS.**—See **CANADIAN LOCOMOTIVE and ENGINE COMPANY**.

**KINGSTON PENITENTIARY.**—See evidence of the Warden thereof, 937.

**KINGSTON POOR RELIEF ASSOCIATION.**—See **POOR RELIEF, KNIGHTS of LABOR**. See **ORGANIZED LABOR**.

**KNITTING FACTORIES and EMPLOYEES thereof.**—Dundas Knitting Factory, see evidence of Samuel Leonard, 859. Hamilton Knitting Co., Limited, E. H. Hancock, Hamilton, 888. Kingston Hosiery Co.'s factory, see evidence of the manager, J. Hewton, 979. B. Meeks, Kingston, 1002.

**LABOR and LABORERS.**—Calculation made by Ontario Bureau of Labor regarding the value created by labor, A. Blue, Toronto, 72. The physical capacity of man for labor, Dr. Oldwright, Toronto, 94. Relative values of land and labor, W. A. Douglas, Toronto, 14. Paper on the labor problem by W. A. Douglas, Toronto, 13. Legislation between labor and capital should be Dominion Legislation, 183, and if by the Provinces should be general, similar and simultaneous, F. Nichol, Toronto, 184. Laws regarding capital and labor, see Article 5 declaration of the principles of the Knights of Labor, 871.

**LABORERS.**—In Kingston, see evidence of John Dwyer, 999. R. Greer, 954. James Rushford, 1044. In London, see evidence of Patrick Burns, 634. In Ottawa, John Davis, 1186. In Toronto, see evidence of Thomas Webb, 269. In Windsor, see evidence of Charles Simpkins, 402. R. D. Walker, 405.

**LABORERS, BUILDERS'.**—In Cornwall, see evidence of J. C. Johnston, 1079. In London, John Hayman, 637. In Ottawa, see evidence of W. Stuart, Jr., 1108. P. G. Nash, 1139. In Toronto, see evidence H. T. Benson, 266.

**LABORERS and LABOR, CORPORATION.**—Cornwall, see evidence of Ex.-Mayor Geo. Macdonald, 1072. In Hamilton, see evidence of Alex. McKay, M.P., Ex.-Mayor, 804. In Kingston, see evidence of Mayor J. D. Thompson, 1011.

**LABORERS, FARM.**—See evidence of John Andrews, 504. Farm laborers of to-day compared with those of thirty or forty years ago, T. Blanchard, Appleby, 901. See evidence of J. W. Crosby, 702. J. R. Pettitt, Grimsby, 844. B. J. Wade, St. Thomas, 562. D. Wilson, Chatham, 444.

**LABOR, FOREIGN.**—Its effect on the gilding business, J. McLaren, Toronto, 178.

**LABORERS IN FOUNDRIES AND MACHINE SHOPS.**—John Doty, Toronto, 327. E. Elliott, Ottawa, 1180. R. B. Osborne, Hamilton, 902.

**LABOR of the HELPLESS CLASSES.**—Recommends that Government fix a minimum price for it, Mayor Howland, Toronto, 167.

**LABORERS, LOCK,**—at Ottawa, 1158, 1159.

**LABORERS employed in the flour and oatmeal mills of Thos. McKay & Co.,** Ottawa, S. Robitaille, 1111.

**LABOR, SALE OF.**—Relative position of employer and employee in the sale of labor, J. W. Crosby, Petrolia, 704, 705. John Kerr, Petrolia, 707. J. Falconer, Toronto, 3. F. Nichols, Toronto, 181, 183.

**LABORERS, SKILLED.**—Chatham, see evidence of Edward Fitzthomas, 466.

**LABOR STATISTICS.**—Facts respecting the present methods of distributing the products of labor, W. A. Douglas, Toronto, 13. Difficulty in getting labor statistics from shop girls, A. Blue, Toronto, 73. Coercion on the part of employers to prevent employees from giving labor statistics, A. Blue, 84. Importance of labor statistics, A. Blue, 87. Statistics regarding laborers, viz., wages, and how they are hired and sent out to work on canals, railways, lumber shanties, &c., John Scully, Toronto, 252, 253.

**LABOR, SUPPLY OF AND DEMAND FOR**—Bakers, always a surplus in Toronto, Wm. Carlyle, 362. A scarcity of paper box makers in the summer, F. P. Barley, Toronto, 364. Supply of men greater than the demand, J. Firstbrooke, Toronto, 312. Carpenters poorly paid, because the labor market is overstocked with inferior workmen, Thos. Green, London, 647. Supply of cotton mill operatives in Hamilton, W. Birkett, 898. No difficulty in getting hands to work in the glucose and starch factory at Walkerville, M. H. Miller, 379. Harness-makers, the trade overstocked with workmen, C. W. Barton, Toronto, 212. Scarcity of good farm laborers in Southwold, 504. Reasons for the scarcity, John Andrews, 506. Farm labor near Kingston scarce and inferior, H. Baudin, Pittsburgh, 939. Scarcity of good farm labor, 901. Reasons therefor, T. Blanchard, Appleby, 902. The use of machinery has lessened the demand for farm labor, R. Brock, Enniskillen, 735. Farmers do not require so much labor now on account of improved machinery, Wm. Elliott, London, 676. Scarcity of farm labor, John Fothergill, Burlington, 899. J. R. Pettitt, Grimsby, 845. D. Rogers, Kingston, 992, 994, 995. B. J. Wade, St. Thomas, 561. D. Wilson, Chatham, 445. Foundry and machine shop laborers, James Burns, London, 671. R. B. Osborne, Hamilton, 902. Has no difficulty in getting all the hands he wants, H. Neilson, Chatham, 442. The introduction of machinery has lessened the demand for labor, J. W. Crosby, Petrolia, 702. More men than required in Chatham, 472. Overproduction by machinery the cause of the surplus labor now in Chatham, J. K. Dickson, 473. Scarcity of employment for working jewellers in Toronto, Wm. Cooper, 266. Labor supply in the nursery business, F. W. Neilson, Chatham, 448. Labor supply in the oil regions, near Petrolia, R. E. Menzies, 700. Effect of the use of stereotyped plate matter on the employment of printers, W. A. Clarke, London, 596. George Wrigley, St. Thomas, 566. The use of air brakes will not displace the service of brakemen on railways; same number will be required, J. B. Morford, St. Thomas, 560. Demand for shipwrights at Kingston, Isaac Oliver, 997. The Cornwall Manufacturing Company find it necessary to import skilled labor from the Old Country, J. P. Watson, 1069.

**LABOR COMMISSION.**—Reasons why many workingmen do not volunteer evidence to it, R. Symons, London, 663. Thinks that in view of the large shipping interests of Canada there ought to have been a sailor on it, Captain T. Donnelly, Kingston, 990.

**LABOR EXCHANGE.**—Government should establish a Farmers' Labor Exchange, D. Rogers, Kingston, 992.

**LABOR DISPUTES.**—Method of settling labor disputes among steamfitters in Toronto, \* \* \*, 33. Settlement of by conference, John Callow, Seaton Village, 51. Explanation regarding statement made in connection with the recent trouble in Firstbrooke's box factory, Toronto, J. Firstbrooke, 326. Labor disputes between the Toronto Street Car Company and their employees, J. J. Franklin, 331. Among stove moulders, E. Gurney, Toronto, 296. The most frequent cause of labor disputes among carpenters, H. Lloyd, 237. Policy of the Knights of Labor regarding labor disputes, B. Meeks, Kingston, 1002. His method of settling labor difficulties with railway employées on the M. C. R., J. B. Morford, St. Thomas, 556. Suggests improvements in the method of settling labor disputes, C. R. Rundle, Toronto, 204.

**LABOR ORGANIZATION.**—See ORGANIZED LABOR.

**LAND.**—See REAL ESTATE.

**LEGISLATION REQUIRED—**

Wants a law compelling contractors to make builders' scaffolding sufficiently strong, G. M. Jenkins, Windsor, 426. Thinks there should be a law to compel very farmer to give every man who leaves his employment an honest certificate of character, F. W. Wilson, Chatham, 449.

**SAILORS AND SHIPPING.**—To prevent the shipping of "green hands" or incompetent seamen, Jerry Buckley, Detroit, 409. To regulate the number of hands a vessel should have; to compel inspection of all vessels, 912, and prevent overloading, John T. Carey, 915. For as long as he can remember there has been no proper legislation regarding the shipping interests of Canada, 989. Maritime Acts of late years have not been properly constructed, 990. Legislation by the Canadian Government to give effect to the U. S. Wrecking Act of 19th June, 1878, Capt. T. Donnelly, Kingston, 992.

**RAILWAY EMPLOYEES.**—Bill for licensing of railway conductors, G. T. R. conductor, 525. A law to make the issuing of certificates of ability, services and conduct obligatory and not simply at the option of railway superintendents, G. T. R. Engineer, St. Thomas, 543, 547.

**TIMBER GROWING.**—Thinks Government should allow some sort of bonus for or make some definite enactment regarding the setting out of timber, F. W. Wilson, Chatham, 450.

**WORKINGMEN.**—The kind of legislation he proposes for the benefit of workingmen, J. R. Dickson, Chatham, 472.

**LIBRARIES.**—See EDUCATION.

**LIEN LAWS.**—\* \* \* Toronto, 68. Examples of defects in the working of the mechanics, lien law, H. T. Benson, 267. A. J. Carroll, St. Catharines, 926. Necessity for a law to prevent sailors from losing their wages when owners fail, John Dods, Kingston, 936. John Falconer, Toronto, 7. James Fleming, Kingston, 1046. Thomas Green, London, 646. R. Greer, Kingston, 955. E. H. Hancock, Hamilton, 888, 889. J. Kane, Toronto, 274. See article No. 8, Declaration of Principles of the Knights of Labor, 871. W. J. McAndrews, Hamilton, 749. B. Meeks, Kingston, 1006. W. Stewart, Jr., Ottawa, 1108, 1110. John Sullivan, London, 681. Mechanics' Lien Law in its present form  
A—85½

is no benefit to the workingman, John Waddell, St. Thomas, 580, 581. The Builders' Laborers' Union takes action for its members when necessary under the Lien Law, Thos. Webb, Toronto, 270. Lien Law of Ontario so far a failure. How it should be amended, A. W. Wright, Toronto, 321.

**LIFE INSURANCE.**—See **BENEFIT SOCIETIES.**

**LOCKOUT.**—See **STRIKES AND LOCKOUTS.**

**LOCK VALVES ON STEAM BOILERS.**—Montreal the only city in Canada which compels the use of them, A. M. Wickens, Toronto, 209.

**LUMBER AND THE LUMBER TRADE.**—Lumbering south of Petrolia, number of men engaged in it, class of timber cut, supply of hickory, &c., J. W. Crosby, Petrolia, 702, 705. Lumbering operations near Chatham decreased during last ten or fifteen years, 471. Kinds of lumber found in the district; cost of lumber in Chatham, J. K. Dickson, Chatham, 472, 473. Prices and suitability of lumber used in the building trade in St. Thomas, J. M. Green, 539, 542. The lumber trade in Petrolia, where the supply comes from, exportation of hardwood to New York, John Kerr, Petrolia, 706. Lumber used in furniture making in London, Samuel Peddle, 692. John Wolfe, 610.

**LUMBERMEN'S SAWMILL AND "BUSH" EMPLOYEES.**—Sawmill employees at J. R. Booth's, Ottawa, 1150, 1151. See evidence of W. Anderson, 1104, and J. R. Booth, 1178. Lumbermen's laborers, A. Blue, Toronto, 88. Sawmill employees and shantymen employed by Gilmour & Co., Chelsea, G. L. Chitty, 1175, 1177. Shantymen, see evidence of P. Chabot, Ottawa, 1187. Sawmills, see evidence of John Gale, Ottawa, 1134. Sawmill employees and shantymen, see evidence of John Henderson, manager for MacLaren & Co., Ottawa, 1137. Sawmill accidents, see evidence of Joseph Lefebvre, Ottawa, 1135. Shanties and shantymen, see evidence of Paul Miner, Ottawa, 1188. Sawyers and other sawmill employees, Joseph Sherwood, Ottawa, 1125.

## **MACHINERY—**

**THE EFFECT OF ITS USE ON WORKINGMEN.**—Machinery in machine shops more benefit to employers than workmen, \* \* \* Machinist, Toronto, 69. The use of machinery has not reduced wages in carriage woodworking but has cheapened production, W. H. Anderson, St. Thomas, 509, 510. The use of machinery has made farmers more independent of laborers, they do not as a rule employ as much labor as formerly, John Andrews, Southwold, 504. Machinery is used in carriage factories but not in carriage shops, T. Beckett, Toronto, 175. The use of machinery increases the productive power of labor, A. Blue, Toronto, 76. Machine made goods dispense with a certain amount of labor but have not lowered blacksmiths' wages, T. Bowick, Toronto, 107. The use of machinery has lessened the demand for farm labor, R. Brock, Enniskillen, 735. Thinks that if the wish expressed by a previous witness were acted upon, viz., that no new machinery be made for thirty years, the country as far as progress is concerned, would go back to where it was one hundred years ago. It is a matter of necessity for manufacturers to use the most improved machinery, 673. Thinks also that workingmen get their full share of the benefits derived from the use of improved machinery, James Burns, London, 674. Effect of woodworking machinery on labor, 52. It dispenses with the labor of men, 55. It increases boys' labor to the detriment of skilled mechanics, John Callow, Seaton Village, 61. With the introduction of roller mills and improved machinery there are not so many skilled men required, A. Campbell, Chatham, 490. The workingman does not by any means get his proper share of the benefits accruing from the use of machinery, 826. Effect of the use of machinery on the employment of labor, William Collins, Burlington, 827. The

introduction of machinery has lessened the demand for labor, J. W. Crosby, Petrolia, 702. Machinery used in boot and shoe making. Its effect on the trade, 430. Has revolutionized the trade, T. Crowley, Windsor, 432. The use of machinery has lowered the wages of agricultural woodworkers in London, John Davidson, 624. The use of machinery has not injured working carpenters, R. Dennis, Toronto, 124. Manufacturers get the profits accruing from the cheapening of production by machinery. Workingmen should have a share either in increased pay or shorter hours, J. R. Dickson, Chatham, 472. Results of the improvements in printing presses, S. J. Dunlop, Toronto, 38, 39. Cost of agricultural machinery is reduced to consumers because of the use of improved machinery in making it, 675. Farmers do not require so much manual labor because of improved machinery, 676. Thinks that the use of machinery generally has decreased the demand for labor, although it has not done so in his business. A Canadian farmer cannot compete with a United States farmer if he does not use the most improved implements and machinery, John Elliott, London, 677. Machinery used in carpentering. Its effect on labor and wages, J. Falconer, Toronto, 9. The use of machinery has reduced carpenters' wages, E. H. Foster, Windsor, 421. Farm machinery reduces the cost of production of grain, John Fothergill, Burlington, 901. Effect of the use of machinery on carpenters, Thos. Green, London, 647. The use of machinery in carriage woodwork making causes lighter work for employees, John Heard, St. Thomas, 513. The introduction of machinery has so cheapened production that hours of labor might be shortened, John Hewitt, Toronto, 303. The use of machinery displaces labor but does not reduce wages, 982. The newest improvements in machinery are necessary to enable the Kingston Hosiery Company to compete with others, J. Hewton, 983. The effects of machinery used in woodworking on labor, G. S. Hope, Chatham, 462. The effect of the use of machinery on carpenters, 141. Its use a necessity and in some cases a benefit, R. Lee, 142, 143. Machinery used in piano making has not lowered wages but has lessened the quantity of work, R. McMillan, Kingston, 947. The use of machinery lessens the hard labor of the workingman, John Milne, Hamilton, 835. The improvements in machinery enable furniture to be produced cheaper and have increased wages by one-fourth more than ten years ago, James Oliver, Ottawa, 1117, 1118. The use of machinery in making biscuits and confectionery has neither reduced the price of nor demand for labor but has enabled them to do a large business. Could not compete with others without using machinery, A. W. Porter, London, 669. Farmers have not the same necessity for extra help now because of the use of improved machinery, J. R. Pettitt, Grimsby, 846. The manufacture of first class furniture can be assisted by machinery but the tendency of its use is to displace men, C. Rogers, Toronto, 354. The use of machinery by the former does away to a large extent with extra help, D. Rogers, Kingston, 993. Coopering machinery has killed the trade, R. Somerville, Windsor, 400. The use of machinery by reducing the cost of production benefits both employer and workman, E. S. Spashett, Chatham, 469. With the machinery now in use it is unnecessary to employ men more than five hours a day, T. Towers, Hamilton, 876. The cost of growing wheat very much reduced by the use of machinery, B. J. Wade, St. Thomas, 563. The use of machinery in farming, D. Wilson, Chatham, 444. Does not think that the use of machinery has lowered the wages of furniture factory employees. Thinks men have been very greatly benefited and production cheapened by its use, John Wolfe, London, 609.

PROTECTION OF IT TO PREVENT ACCIDENTS.—\* \* \* Toronto, 65. In the laproom of the Stormont Cotton Mills, Cornwall, \* \* \* Mill operative, 1080. Machinery in Ontario generally well protected, A. Blue, Toronto, 74. Factory Inspector, J. R. Brown, finds a lack of fencing round machinery in his district, 317. James Burns, London, 671. Machinery used in baking is dangerous; it could and should be protected, A. Bennett, Kingston, 997. In the

Ontario Cotton Mills, Hamilton, John Bell, 879. In Toronto carpenters' shops, John Falconer, 7. Unprotected in McLean, Roger & Co.'s pressroom, Ottawa, F. J. Farrell, 1153. Thomas Green, London, 649. In the Kingston Hosiery Company's Factory not dangerous and well protected, John Hewton, 981. In woodworking establishments, Chatham; imperfectly protected, G. S. Hope, 465. In the car shops of the M.C.R., St. Thomas, R. McKay, 564, 565. Woodworking machinery, R. McNally, Windsor, 423. In the knitting factory, Dundas, S. Leonard, 860. The laws respecting the protection of machinery, B. Meeks, Kingston, 1006. In the furniture factory at Chatham, H. Neilson, 442. In Oliver & Sons furniture factory, Ottawa, James Oliver, 1117. In his shops at Chatham, H. A. Patterson, 487. In the London Furniture Company's factory, S. Peddle, 690. In the pressroom of McLean, Roger & Co.'s printing office, Ottawa, F. Roger, 1174. In the cabinet-makers' shops at Windsor, F. Ralph, 463. In the agricultural implement works at Chatham, J. E. Smith, 465, 466. Is not properly protected in some of the factories in St. Thomas, Dr. J. B. Tweedale, 502. In G. E. Tuckett & Sons, tobacco factory, Hamilton, G. T. Tuckett, 744. In the factory of the London Furniture Co., John Wolfe, 608. In E. H. Barne's box shoo factory, Ottawa, J. F. Wood, 1102.

The machinery used in Canada was nearly all imported ten years ago, James Burns, London, 674. The cost of a good equipment of implements and machinery for a 100 acre farm, J. R. Pettitt, Grimsby, 845. The machinery used in furniture making has nearly all been introduced in the last thirty years, C. Rogers, Toronto, 354. Half of the machinery used in furniture making is made in Galt; the other half comes from the U.S.; that made in Galt within the last two or three years fully equal to that imported, John Wolfe, London, 612. The machines used in shoe factories on which royalties are paid come from the U.S., Geo. Valiant, Toronto, 311.

**MACHINISTS.**—In Galt, see evidence of James Wardlaw, 276. In Hamilton, see evidence of William Collins, 825. John Milne, 834. R. B. Osborne, 902. J. J. Whitely, 880. In Kingston, see evidence of Thomas Barlow, 1001. John Dods, 936. F. J. Leigh, 1017. Alfred Perry, 959. In London, see evidence of James Burns, 676. In Ottawa, see evidence of M. W. Merrill, 1093. Thomas Stoddard, 1111. In Toronto, see evidence of \* \* \* machinist, 63. John Doty, 326. In Walkerville, see evidence of Robert Kerr, 372.

**MACHINIST'S' TOOLS.**—Manufacture of:—See evidence of John Bertram, Dundas, 856.

**McPHERSON'S (Miss) HOME** at Stratford, Mayor Howland, Toronto, 161.

**MANUFACTURERS.**—Acquisition of wealth by them, A. Blue, Toronto, 72.

**MANUFACTURING FIRMS IN CANADA WHICH ARE BRANCHES OF UNITED STATES FIRMS.**—Many of the manufacturing industries at Windsor are branches from the United States, W. Benson, 371. Branch manufacturing firms from the United States at Windsor and elsewhere on the border, Robert Kerr, Walkerville, 374. F. Nichols, Toronto, 179.

**MANUFACTURING INDUSTRIES** increasing at Windsor, W. Benson, 371.

**MARBLE AND MARBLE CUTTERS.**—Marble quarries owned and worked by the Canadian Granite Company, Ottawa, P. G. Nash, 1140. Stonemason's work done by marble cutters at Windsor, F. Thornton, 407. Marble used in Ottawa imported from the United States. Marble cutters in Ottawa, see evidence of M. Shield, 1121.

**MASTER BUILDERS' ASSOCIATION** in Toronto, R. Dennis, 128.

**MATCH FACTORY EMPLOYEES.**—See evidence of \* \* \* Ottawa, 1149.

**MECHANICS** often apply for positions as street car drivers, J. J. Franklin, Toronto, 335.

**MERCER REFORMATORY**, A. Blue, 83.

**MILLS AND MILLERS**.—See evidence of W. Hutchison, Ottawa, 1095. R. R. Morgan, Hamilton, 882.

**MILLINERS**. In Toronto, see evidence of Miss Burnett, 358. In Ottawa, Crawford Ross, 1185. In Montreal and elsewhere, S. Carsley, Montreal, 1166.

**MILLWRIGHTS**, at Thos. McKay & Company's Mills, Ottawa, W. Hutchison, 1098. At Gilmour & Company's Mills, Chelsea, G. L. Chitty, 1177.

**MODEL SCHOOLS**.—See **EDUCATION**.

**MONEY MARKET**.—Stringency in, F. Nichols, Toronto, 186.

**MONOPOLIES** and division of labor deteriorating the working classes. Believes that in the near future monopolies will become so obnoxious that the masses will rise and wipe them out, John Hewitt, Toronto, 302.

**MONTREAL TRANSPORTATION AND FORWARDING COMPANY**.—See evidence of Gilbert Johnston, Engineer, Kingston, 941, and John Gaskin, Manager, Kingston, 965.

**MOULDERS**.—See **FOUNDRYMEN**.

**NAIL MAKERS**.—See evidence of B. M. Danforth, Hamilton, 760.

**NATIONALITY**.—American laws regarding the nationality of seamen not enforced, J. Buckley, Detroit, 410. Of employees of the Canada Cotton Manufacturing Company, A. G. Watson, Cornwall, 1065.

**NATIONAL FEELING**.—Tends to keep workingmen apart when they should be united, T. Towers, Hamilton, 874.

**NATIONALIZATION of LAND**.—See **REAL ESTATE**.

**NATIONAL POLICY**.—See **PROTECTIVE DUTIES**.

**NAVIGATION of the LAKES and RIVERS**.—See **SAILORS and SHIPPING**.

**NECESSARIES of LIFE**.—See **COST of LIVING and FOODS**.

**NEWFOUNDLAND**.—Finds his flour trade with Newfoundland increasing, A. Campbell, Chatham, 488.

**NEWSBOYS**, in Toronto, Mayor Howland, 161.

**NIGHT WORK**—

**BAKERS and CONFECTIONERS**.—A. W. Porter, London, 670. In Ottawa, R. H. Jamieson, 1107; S. Slinn, 1113; H. Barrell, 1118, 1119; Louis Garon, 1132.

**FOUNDRYMEN**.—M. W. Merrill, Ottawa, 1098.

**GILDING BUSINESS**.—J. McLaren, Toronto, 178.

**MILLERS**.—A. Campbell, Chatham, 489. W. Hutchison, Ottawa, 1096.

**LUMBER MILL EMPLOYEES**.—J. R. Booth, Ottawa, 1179.

**PRINTERS**.—W. A. Clarke, London, 599. W. Nesbitt, St. Catharines, 928.

**TELEGRAPH OPERATORS**.—Thos. Allan, Hamilton, 822.

**WOOLLEN MILL EMPLOYEES**.—A. French, Ottawa, 1145.

**"NORTH-WEST BOOM"**.—Its effect on the manufacturing industries of the country, John Milne, Hamilton, 826.

**NURSERYMEN.**—See evidence of F. W. Wilson, Chatham, 448.

**ODDFELLOWS, INDEPENDENT ORDER of.**—See evidence of C. T. Campbell, M. D., London, 582, and Dr. Oronhyatekha, London, 641.

**ODDFELLOWS, MANCHESTER UNITY of.**—See evidence of Owen Meade, 214.

**OIL PRODUCING.**—The Government oil test, its deficiency and the changes required, 724. A change in the Government test required to allow manufacturers to make higher grade oil, 725. Measurement of crude oils, 726, 727. Cost of oil tanks, &c., Charles Jenkins, Petrolia, 727. Measurement of crude oil tanks; thinks there should be a Government Inspector, James Joyce, Petrolia, 731. The present system of inspection of oil gives a guarantee as regards safety only, but none as regards quality; a quality guarantee would increase the market fifty per cent., 717. Action of the Oil Exchange in regard to the quality standard, 718. Surplus crude oil shipped to Chicago for fuel. No overproduction now. The flash tests and different characteristics of American and Canadian oils, 719, 720. Changes required in the Government inspection of oil. Canadian oil when properly purified is better than any American oil which comes into the country, 720. Approximate number of barrels of oil produced in Petrolia daily. Price of oil suitable for the Maritime Province trade, James Kerr, Petrolia, 721. Inspection of oil and oil measures, also the boilers in which the refining is done, John Kerr, Petrolia, 706. Overproduction the cause of the present low price of oil; storing of oil, 695. Standard measure for crude oil. A general desire on the part of producers to have the tanks inspected and measured by Government, Thomas McKetrick, Petrolia, 696. Inspection of boilers. Length of the season and when it commences, 708. Government inspection of oil measures, 710. And the burning qualities of oil. American and Canadian oils compared, 711. Extent of the oil territory. A Government burning test would prevent the export of very inferior oils sometimes shipped, 712. The price of oil in Petrolia governs the price throughout the Dominion, R. E. Menzies, Petrolia, 713. Prices too low; his opinion of the cause, 693. How the refuse products obtained in refining are disposed of, 694. Supply, depth of wells, cost of boring, &c., 694, 695. Advises the inspection and measurement of crude oil by Government, D. Mills, Petrolia, 692, 694. Measurement of crude oil, 729, 730. Necessity for Government measurement of crude oil tanks, James Perkins, Petrolia, 730.

**OIL WELL TOOLS.**—Manufacture and export of oil well tools, 730. Number of men employed in the manufacture of them. Cost and description of a complete outfit of them, 731. Canadian made oil well tools more durable than American, James Joyce, Petrolia, 732.

**ONTARIO BUREAU OF INDUSTRY.**—See evidence of the Secretary, A. Blue, 72.

**ONTARIO ROLLING MILLS CO.**—Nationality of the firm, B. M. Danforth, Hamilton, 763.

**OPPORTUNITIES FOR ADVANCEMENT.**—Workingmen have not the same opportunities to establish themselves in business now that existed twenty-five years ago; reasons why, John Milne, 835.

**ORGANIZED LABOR and its EFFECTS.**—

**AGRICULTURAL IMPLEMENT MAKERS** and wood workers, John Davidson, London, 622. E. Fitzthomas, Chatham, 467.

**BAKERS.**—Combination among bakers has caused their improved condition, J. D. Nasmith, Toronto, 361. Competent and incompetent men command the same wages in Union shops, that being one of the rules of organized labor, Wm. Carlyle, Toronto, 362, 363. What organized labor has done for bakers in Kingston, S. Robinson, 1001. Organized labor caused the discontinuation of night work among bakers in Ottawa, H. Barrell, 1119.

**BLACKSMITHS.**—Increase of blacksmith's wages in Toronto, caused by Union, T. Bowick, 105.

**BOOT AND SHOEMAKERS** are organized in Hamilton; the effect of the organization is to keep up prices, A. Miller, 885. Effect of organization on shoemakers in Kingston, J. Volume, 936.

**BOXMAKERS.**—Effect of organization on them in Toronto, H. Burke, 263. J. Firstbrooke, 312, 313.

**BRICKLAYERS.**—Benefits in connection with the Bricklayers International Union, H. Rymill, London, 688. John Sullivan, London, 679, 680.

**BUILDING TRADES.**—Benefits derived from the organization of builders' laborers, H. T. Benson, Toronto, 260. Organization in connection with the building trades in Kingston, H. Douglass, 1036. Builders' laborers in Kingston find it beneficial, R. Greer, 955. Organization of employers in the building trades in London, John Hayman, 638. In Cornwall, J. C. Johnston, 1078. No federation of workmen engaged in the building trades exists in Hamilton, but thinks it would be best for all concerned if it did, Geo. Metcalfe, 868. Masons' Bricklayers' and Stone Cutters' Union, Ottawa, W. Stuart, jun., 110. Builders' Laborers' Union takes action under the lien law for its members when necessary, Thos. Weld, Toronto, 270.

**CARPENTERS.**—Benefit of organization in Kingston, R. Baird, 939. When discharged for belonging to the Union, J. S. Ballantine, Toronto, 243. Advantages of belonging to the Union, John Callow, Seaton Village, 57. Organized action or union among carpenters, R. Dennis, Toronto, 127. Carpenters' Union, Toronto, John Falconer, 207. At Windsor, E. H. Foster, 421. Carpenters' Organization in London does not interfere with employers except in case of strikes, Thomas Green, 645. Carpenters in Windsor have an assembly of the Knights of Labor and will not work along with a carpenter from Detroit who has not a brotherhood card, 395. Union rules regarding non-union men and union men who violate the laws, 397. Has known cases where a union man would work along with non-union men even at same wages and hours of labor; reasons therefor. The American Brotherhood have petitioned Congress for an arbitration law which shall be compulsory and decision final, A. Henderson, Detroit, 398. Organization of carpenters in Windsor has enabled them to regulate their own affairs and not be governed by what the trade in Detroit does, G. M. Jenkins, 425. Union men are not prohibited from working with non-union men, R. Lee, Toronto, 140. Improvement of the condition of carpenters due to organization, 235. Union rules regarding non-union men. Union in favor of indenturing apprentices, H. Lloyd, Toronto, 237.

**CARRIAGE MAKERS.**—In Toronto, Thomas Beckett, 174. John Dixon, 248. W. J. McFarlane, 114, 115.

**CIGARMAKERS.**—Finds it to be an advantage in cities to have the Union label on his boxes, A. Eichhorn, Toronto, 306. Use of the Union trade-mark or "Blue Label," 650. The alleged case of "plugging": the action of the Union regarding, 651, 652. Benefit derived from the Union, 653. Case of fining by the Union, 654. How and where the "blue label" is allowed to be used and its objects. Union rules regarding strikes, 655. Benefits the men get from the Union in case of a strike, S. M. Hodgins, London, 656. Law of the Union against the truck system, 919. Effect of the Union label on the sale of cigars, R. J. Mills, St. Catharines, 920. See S. Oberndorfer's evidence, 963, 964. Union-made cigars sell well in the city. Union plan for gaining a strike, James Robinson, St. Catharines, 920, 921. Reason why he does not employ union men, 619. What he considers wrong in the action of the Union. Cigars without the Union label objected to in towns where there is organized labor, 621. Effect of the Union label on the sale of cigars, John A. Rose, 622. Rules of the Union regarding strikes, C. Tansey, St. Catharines, 921.

**COOPERS.**—In Windsor mostly belong to an organization in the U.S., 399. Coopers' International Union out of existence, 401. Only for organized labor coopers would be even worse off than they are, R. Somerville, Windsor, 401.

**COTTON MILL OPERATIVES.**—Ontario Cotton Mill Co. do not object to employ members of labor organizations, John Bell, Hamilton, 879. Does not know of any Cotton Mill Operatives Union, M. Limebeck, Hamilton, 892.

**FARMERS.**—Have as much need of organization as any other producers, F. W. Wilson, Chatham, 451. Farmers' Grange in Southwold, John Andrews, 507.

**ENGINEERS.**—Stationary Engineers Association, A. M. Wickers, Toronto, 207. Steamboat engineers not organized, John Dods, Kingston, 936. Marine Engineers Association, R. Marshall, Kingston, 1043.

**HARNESSE-MAKERS** have no organization at present worth anything. Harness-makers' Protective Association, C. W. Barton, Toronto, 211, 212. Organization of the trade required, W. S. Appleton, Toronto, 214.

**INDEPENDENT LABOR UNION.**—John Falconer, Toronto, 4, 8.

**IRON WORKERS** are organized in the U. S., but not here, Geo. I. Sturges, Hamilton, 788. Both men and employers are better off since the Iron Workers' Union in Hamilton was squelched, S. J. Whitehead, Hamilton, 790.

**KNIGHTS OF LABOR.**—See evidence of John J. Bickley, Cornwall, 1083. A considerable number of cotton mill operatives belong to them, Wm. Birkett, Hamilton, 898. Men dismissed for having joined them, A. Blue, 78. Men who belong to them are better paid, A. Cousineau, Ottawa, 1134. His attitude as a foreman of the Stormont Cotton Mills Co. towards them, James Daley, 1092. His troubles with them in 1887, J. Firstbrooke, Toronto, 314, 315. Attitude of the Stormont Cotton Mills Co. towards them, A. Gault, Cornwall, 1060. They have caused the wages of working people in Windsor to improve during the last year and a half, H. Gnosill, 428. A. T. Knight, Cornwall, 1067. See evidence of B. Meeks, Kingston, 1002, 1049. Joseph Moyes, Cornwall, 1082. The strike a year ago at Chatham for shorter hours originated with them, H. Neilson, 442. Dismissal of employees belonging to them, M. Quinlan, Cornwall, 1088. No Cabinet-makers' Union at Windsor, but some of the men belong to the Knights of Labor, F. Rolph, 403. Being a Knight of Labor has helped to keep him employed, Chas. Simpkins, Windsor, 402. A benefit to coopers at Windsor, R. Somerville, 401. Charter or Declaration of Principles, 870. See evidence of T. Towers, District Master for Hamilton, 870. Refused employment because of being a Knight of Labor, 1088. Cause of the antipathy of employers in Cornwall to them, Geo. White, 1089. See evidence of John Wilkins, grocer, Kingston, 1038. Tailors at Windsor mostly Knights of Labor, James Wren, 406. Knights of Labor and arbitration, A. W. Wright, Toronto, 325.

**LABORERS** organization in London, Pat. Burns, 634. Union in Hamilton, A. McKay, M. P., 806.

**MACHINISTS.**—Thorough organization would be a benefit. Amalgamated Society of Engineers, \* \* \*, machinist, Toronto, 62, 65. Benefits of organization at Kingston, Alf. Perry, 959. Machinists' organization in Hamilton is a branch of the Amalgamated Society of Engineers: headquarters in England, J. J. Whitely, 882.

**MOULDERS.**—Benefit derived from the Moulders' Union, James Boyle, Toronto, 171, 169. D. Cashion, Hamilton, 784, 785. J. T. Dodwell, Toronto, 151. John McClary, London, 615. James McKenna, London, 600, 601. E. Perry, Kingston, 952. Strikes a last resort with the Moulders' Union in Toronto, 145. Organization a benefit; tendency of the rules of the Union, T. Pickett, Toronto, 147. Statement of the Hamilton Union, or answers to questions asked by circular by the Commission, 797, 798. James Stephenson, 797. Number of moulders in and out of the Union in Hamilton, F. Walters, 794.

**NAILERS** Association, Hamilton, B. M. Danforth, 761.

**PAINTERS.**—International Society of Painters, Geo. Harris, Toronto, 366. See evidence of Geo. Metcalfe, Hamilton, on behalf of the Brotherhood of Painters and Decorators, 865. Painters in London were organized as a branch of the International Organization in March, 1887, C. A. Passmore, 682. In Chatham, not organized as a union, J. E. Smith, 453.

**PLASTERERS.**—Organization has improved their condition, 203. Method of the Union in making and carrying out agreements, C. R. Rundle, 204.

**RAILWAY EMPLOYEES.**—Brotherhood of Railway Conductors, G.T.R. conductors, 520. Organization of locomotive engineers, G.T.R. engineers, St. Thomas, 543.

**SAILORS or Seamen's Assembly or Union, J. Buckley, Detroit, 409, 413. John T. Carey, 911, 913. Capt. T. Donnelly, Kingston, 988, 989. Reasons why the Union discountenances shipping by the month, 1046. Sailors' Union merged into the Knights of Labor, Jas. Fleming, Kingston, 1048. Thos. Mulhall, Detroit, 416, 417. Seamen's wages have been increased since the establishment of the Union, Willard Stephens, Kingston, 1033.**

**STEAMFITTERS.**—Labor union the means of securing better wages and shorter hours, 31. The Union in favor of indenturing apprentices, \* \* \* Toronto, 33.

**STONE-CUTTERS** not organized in Windsor, but may belong to the Union on the other or American side, F. Thornton, 408.

**STREET CAR COMPANY, of Toronto.**—Its attitude towards organized labor, A. Blue, Toronto, 78. J. J. Franklin, Toronto, 332, 333.

**TAILORS** attempt at organization in London, 630. Shows in what respect organization would benefit the trade, John Allenby, 629.

**TOBACCO WORKERS** in Tuckett & Son's factory, Hamilton, all organized, 810. Benefits derived from organization, James Bowen, 811.

**TYPOGRAPHICAL UNION.**—Laws regarding apprentices, A. J. Carroll, St. Catharines, 925. W. A. Clarke, London, 594, 595, 596. Attitude towards non-union men, 40, 41. Strikes, 42. Necessary to printers' interests, 43. Does not object to female members, S. J. Dunlop, Toronto, 44. Benefits derived from it, Geo. Harper, Hamilton, 747. Rules regarding strikes, arbitration, and apprentices, 108. Date of the inauguration of the union, 109. Rules regarding efficiency of members for restricting number of apprentices, 111. Members object to work with non-union men. Employers sometimes object to a printer because he belongs to the Union, 112. Regulations regarding non-union men and members who have violated the laws, J. H. Lumsden, Toronto, 113. Wm. McAndrews, Hamilton, 759. B. Meeks, Kingston, 1011. Alex. Short, Ottawa, 1155, 1156.

**INCORPORATION of Labor Organization, see Article 7, Declaration of Principles of the Knights of Labor, 871.**

**ORGANIZATION.**—Its effects and advantages, \* \* \* Toronto, 31. G. T. R. engineer, St. Thomas, 544. S. Angrove, Kingston, 946. H. Barrell, Ottawa, 1120. A. Bennett, Kingston, 997. Strikes more frequent in towns where labor is not organized, 1084. Usefulness of labor organizations in promoting peace in times of excitement, J. J. Bickley, Cornwall, 1085. Nothing in the Ontario laws to prevent labor organizations, A. Blue, Toronto, 72, 79. T. Bowick, Toronto, 104, 106. James Boyle, Toronto, 171. James Burns, London, 672. J. T. Byrne, Ottawa, 1147. **PAPER BOX MAKERS.**—F. P. Birely, Toronto, 364.

**PIANO MAKERS.**—Geo. Lee, Kingston, 958. R. McMillan, Kingston, 947.

**PRINTERS.**—In Kingston, L. W. Shannon, 1034. In London, J. L. Goodbaum, 616. In St. Thomas, Geo. Wrigley, 566.

**SCALE FACTORY EMPLOYEES.**—R. B. Osborne, Hamilton, 903.

**TINWARE FACTORY EMPLOYEES.**—John McClary, London, 613.

**TOBACCO WORKERS.**—James Bowen, Hamilton, 809, 810.

**WOOLLEN FACTORY EMPLOYEES.**—James O'Donnell, London, 665.

**PLASTERERS.**—In Cornwall, see evidence of J. C. Johnston, 1078. In Ottawa, see evidence of W. Stuart, Jr., 1109. In Toronto, see evidence of Chas. R. Rundle, 203, and James Wright, 244. In St. Thomas, see evidence of J. M. Green, 539. In Windsor, see evidence of F. Thornton, 409.

**PLUMBERS.**—J. T. Harvey, Ottawa, 1131. C. Pearson, Toronto, 255. Plumbing in Windsor bad; no redeeming feature, Dr. John Coventry, 385.

**POLICE PROTECTION.**—Granted to employers in case of a strike, R. Southwell, Toronto, 242.

**POORHOUSE TAINT.**—Mayor Howland, Toronto, 159.

**POOR RELIEF.**—Ex-Mayor George Macdonald, Cornwall, 1072. A. McKay, M.P., and Ex-Mayor, Hamilton, 803, 804, 805. See evidence of Miss Machar, secretary of the Kingston Poor Relief Association, 969, and the Mayor of Kingston, J. D. Thompson, 1012, 1013. Amounts paid out for relief of distress by the Knights of Labor in Cornwall, J. J. Bickley, 1085. Classes of people who apply for corporation relief in London, 592. Number who receive it decreased since last year, Wm. Bell, 591. Number of applicants to the Mayor of Hamilton for corporation relief, T. Brick, 818. Applications for corporation relief, St. Catharines, J. E. Cuff, Mayor, 923. See evidence of E. Taylor, relief officer of the city of Toronto, 285.

**POTATOES.**—The Lower Province crop regulates the price of potatoes in Ontario, T. Galbraith, 192.

**PRICES.**—Difference between manufacturers' and retail prices, F. Nichols, 188.

**PRINTERS.**—In Chatham, see evidence of W. E. Hamilton, 481. In Hamilton, see evidence of Geo. Harper, 746. W. J. McAndrews, 748. W. J. Vale, 813. In Kingston, see evidence of B. Meeks, 1010, 1011. E. Pence, 1057. L. W. Shannon, 1034. In London, see evidence of W. A. Clarke, 594. Joseph L. Goodburne, 615. Richard Matthews, Jr., 631. J. W. Thorpe, 635. In Ottawa, see evidence of John T. Byrnes, 1146. F. J. Farrell, 1152. W. Gibbens, 1145. W. McMahon, 1141. John Pearce, 1179. R. Rankin, 1169. Alex. Short, 1154. In St. Catharines, see evidence of W. B. Burgoyne, 134. Effect on printers of the use of stereotyped plate matter on newspapers, J. E. Cuff, 924. Andrew J. Carroll, 925. W. R. James, 930. Joseph Keefer, 927. William Nesbitt, pressman, 928. In St. Thomas, see evidence of Geo. Wrigley, 566. In Toronto, see evidence of Stewart Dunlop, 36. J. H. Lumsden, 108. In Windsor, see evidence of T. M. White, 391.

**PRISONS.**—Thinks they should be reform schools as well as places of punishment, James Massey, Warden Central Prison, 342.

**PROFIT SHARING.**—J. S. Anthes, Berlin, 842. A. Blue, Toronto, 70. John Callow, Seaton Village, 59. M. Campbell, Chatham, 495. Wm. Collins, Burlington, 828. J. E. Cuff, St. Catharines, 924. John Dixon, Toronto, 248. S. J. Dunlop, Toronto, 40. John Falconer, Toronto, 10. John Fraser, Petrolia, 722. John Hayman, London, 637. John Hewitt, Toronto, 301. Gilbert Johnston, Kingston, 942. John Kerr, Petrolia, 707. John Litton, Kingston, 956. W. J. McAndrews, Hamilton, 750. B. Meeks, Kingston, 1007. F. Nichols, Toronto, 190. Samuel Peddle, London, 631, 632. C. Rogers, Toronto, 356. A. Simpson, Petrolia, 715. G. T. Tuckett, Hamilton, 745. John Wolfe, London, 609. A. W. Wright, Toronto, 322.

**PROHIBITION**, of the Liquor and Tobacco Traffic.—S. Oberndorfer, Kingston, 965.

**PROPORTIONATE PROFITS OF LABOR AND CAPITAL.**—Machinery in machine shops more benefit to employers than workmen, \* \* \* machinist, Toronto, 69. Thinks workmen get fully a fair share of the benefits derived from the use of improved machinery, James Burns, London, 674. The workman does not by any means get his proper share of the benefits accruing from the use of machinery, William Collins, Burlington, 826. Manufacturers get the profits accruing from cheapening of production by the use of machinery, workingmen

should have a share either in increased pay or shorter hours, J. K. Dickson, Chatham, 472. Does not think a workingman gets a fair share of the product of his labor, E. H. Hancock, Hamilton, 888. The working classes do not receive a fair share of the wealth created by labor, John Hewitt, Toronto, 301. Thinks moulders get a fair share of the results of their labor, J. Hunt, Toronto, 150. See Article No. 2 of the Declaration of Principles of the Knights of Labor, 871. Thinks moulders get their share, John McNeil, Kingston, 950. E. Perry, Kingston, 952. T. Towers, Hamilton, 876. Thinks labor ought to have one hundred per cent. of the profits derived from labor and capital none, 322. The working classes do not get a fair share of the benefits arising from cheapened production by machinery, A. W. Wright, Toronto, 323.

**PROTECTIVE DUTIES.**—When the duty was raised he was compelled to manufacture rattan goods in Canada instead of importing as he formerly did, J. S. Anthes, Berlin, 838. Rates of duties on iron. The rolling mill of the Hamilton Forge and Rolling Mill Company was started before the protective duty was put on iron, T. D. Beddo, 793. Paper box making in Canada is protected to the extent of twenty-five per cent., but has to import straw board and pay duty on it, F. P. Birely, Toronto, 365. It is due to the protective duty that machinery is prevented from being imported and thus trade is increased in that line, James Burns, London, 674. Canadian manufacturers of agricultural implements require a little protection yet till they get stronger, Wm. Elliott, London, 678. Protective duty on wire and iron, F. S. Evans, Windsor, 389. The "National Policy," John Hewton, Kingston, 983. The duty on foreign cigars, S. M. Hodgins, London, 654. Thinks the duty on oil high enough already; reasons why he thinks so, James Kerr, Petrolia, 721. Does not think his business could stand at all without the protective duty on machinery, Robert Kerr, Walkerville, 372. Removal of the protective duty would injure business (glucose and starch factory) at present. Amount of duty on starch and glucose offset by the duty on corn and other supplies, M. H. Miller, Walkerville, 379. Wages of the higher grade of workmen engaged in the manufacture of show cases, store fittings, &c., have increased since the introduction of the "National Policy." The "National Policy" has increased the manufacture of all classes of goods, W. Millichamp, Toronto, 357. The protective tariff is necessary to prevent the importation of canned fruits, B. R. Nell's, Grimsby, 891. American firms establishing branch factories in Canada on account of the protective duties, F. Nichols, Toronto, 179. The effect of protection on the cigar trade, S. Oberndorfer, Kingston, 964. If the biscuits imported had to pay duty the higher price would keep them out, A. W. Porter, London, 670. Raising the import duty would keep out imported cigars altogether, John A. Rose, London, 620. A duty on fine foreign wool would seriously affect the business, T. H. Taylor, Chatham, 476. The "National Policy" has caused much improvement to Windsor during the last few years, T. M. White, 392.

**PUBLIC DEBTS.**—See article No. 15 of the Declaration of the Principles of the Knights of Labor, 871.

**PURCHASING POWER OF WAGES.**— \* \* \*, Toronto, 63. Purchasing power of money not so much by half as it was eight years ago, John Allenby, London, 629. W. H. Anderson, St. Thomas, 509. Greater in England than here, C. W. Barton, Toronto, 211. John Callow, Seaton Village, 56. John Falconer, Toronto, 3. Thinks it is greater now than it was thirty years ago, E. Gurney, Toronto, 299. Wm. Harty, Kingston, 1027. Greater than it was ten years ago, John Hewitt, Toronto, 304. Not so great as it was five or more years ago, G. S. Hope, Chatham, 564. Hamilton Iron Moulders' Union opinion regarding, 797. Compared with five years ago, A. Simpson, Petrolia, 716. W. J. Vale, Hamilton, 814. J. Volume, Kingston, 936. T. M. White, Windsor, 393. J. J. Whitely, Hamilton, 881.

**RAILWAYS, GOVERNMENT OWNERSHIP OF.**—See article No. 18, Declaration of Principles of the Knights of Labor, 871. Railways and Telegraph Lines should be controlled by the Federal Government, A. W. Wright, Toronto, 324.

**RAILWAYS, RAILWAY EMPLOYEES, &c.**—See evidence of \* \* \*, conductor G. T. R., 513. \* \* \*, conductor M. C. R., 52). \* \* \*, section man, G. T. R., St. Thomas, 579. \* \* \*, locomotive engineer, G. T. R., St. Thomas, 543. \* \* \*, brakeman, M. C. R., St. Thomas, 571, 577, 578. Fergus Armstrong, G. T. R. station-master, Hamilton, 779. John Hall, foreman at the G. T. R. locomotive works, Hamilton, 768. Robert McKay, foreman of the car works of the M. C. R., St. Thomas, 564. J. B. Morford, division superintendent, Canada Southern Branch, M. C. R., St. Thomas, 551. John Noble, engineer and blacksmith, M. C. R. car shops, St. Thomas, 548.

**RAIL MAKING** in Hamilton.—B. M. Danforth, 764.

**RATTAN INDUSTRY.**—See evidence of J. S. Anthes, Berlin, 837.

**REAL ESTATE.**—In Chatham, J. K. Dickson, 471. In Detroit, price of land, A. Henderson, 397. In Petrolia, John Scott, 700. A. Simpson, 716. A. Smith, 699. In Toronto, \* \* \*, 31, 35. C. Pearson, 254, 256. John Callow, Seaton Village, 60. In Windsor, T. M. White, 393. Land owners become rich without toil, the source of all wealth, in consequence of the impoverishment of the rest of the community, 14. The margin of land cultivation determined by population, 15. Increase in land value should belong to those who create it, 16. Permanent degradation of the toiler inevitable under the present system of land tenure, W. A. Douglas, Toronto, 22. Reservation of public lands for actual settlers; none for railroads or speculation, article 4 of the Declaration of Principles of the Knights of Labor, 871. Nationalization of land; what it means; what it would lead to; is the remedy for exorbitant increase of rents, &c., P. Thompson, Toronto, 100, 101, 102. Stoppage of land speculation would assist in remedying the workingman's troubles, T. Pickett, Toronto, 154.

**REFORMATORY FOR BOYS NOT CONVICTED OF ANY CRIME.**—Mayor Howland, Toronto, 162.

**RELATIVE POSITION OF WORKINGMEN AND EMPLOYERS IN THE SALE OF LABOR.**—See **LABOR AND LABORERS.**

**RENTS OF WORKINGMEN'S HOUSES, &c.**—Rents in Ontario, A. Blue, Toronto, 75. In Chatham, J. W. Blake, 455. E. Fitzthomas, 467. R. G. Fleming, 437, 438. G. S. Hope, 464. J. E. Smith, 453. In Cornwall, Paul Dane, 1094. S. Shoefelt, 1076, 1077. In Detroit, A. Henderson, 396. In Dundas, John Bertram, 858. In Hamilton, George Harper, 748. J. Holmes, 869, 870. John Peebles, 864. James Stephenson, 797. In Kingston, Wm. Harty, 1027. John Litton, 956. E. Perry, 952. J. Volume, 936. Joseph Weld, 940. In London, John Allenby, 629. Wm. Bell, 592. Patrick Burns, 635. James McKenna, 643. Samuel Peddle, 689. John Sullivan, 679. I. Ottawa, F. J. Farrell, 1153. S. Robitaille, 1111. Joseph Sherwood, 1126. Alex. Short, 1155. In Petrolia, John Fraser, 722. Thomas McKetrick, 697. D. Mills, 695. John Scott, 700. A. Simpson, 716. A. Smith, 699. In St. Thomas, W. H. Anderson, 509. John Waddell, 533. In Toronto, \* \* \*, 32, 36, 63. C. W. Barton, 211. Thos. Beckett, 176. H. T. Benson, 267. D. Black, 152. T. Bowick, 106. James Boyle, 172. John Callow, Seaton Village, 60. R. Dennis, 123, 124. John Dixon, 248, 249. John Falconer, 3. J. J. Franklin, 333. Mayor Howland, 167. J. Hunt, 148. W. J. McFarlane, 114, 117. C. Pearson, 254, 255. T. Pickett, 146. P. Thompson, 98, 99. In Windsor and Detroit, Robert Kerr, 376. In Windsor, Wm. Benson, 371. E. H. Foster, 422. H. Gnosill, 428. Thomas McNally, 423. Charles Simpkins, 402. T. M. White, 392, 394.

**ROYALTIES ON MACHINERY.**—Seaming machine in the knitting factory, Kingston, John Hewton, 983.

**RUSHING SYSTEM** of doing work.—Does not think the system of a “rushing season” and an idle season in the year absolutely necessary, G. S. Hope, Chatham, 463. The character and status of the workingman in Canada, as good as in England; but might be better if he got more time to do his work, R. Gossitt, Chatham, 459.

**RYE'S (MISS) HOME.**—Mayor Howland, Toronto, 161.

**SAILORS AND SHIPPING.**—See evidence of Jerry Buckley, President of the Seamen's Union, Detroit, 409. John T. Carey, Secretary of the Seamen's Union, 911. R. Donnelly, ship carpenter, 910. Capt. Thos. Donnelly, Kingston, 984. James Fleming, Kingston, 1045. P. Gallagher, St. Catharines, 917. John Gaskin, outside manager for the Montreal Transportation and Forwarding Co., Kingston, 965. T. A. Green, Hamilton, 850. E. Kehoe, Detroit, 418. William McIlwaine, Government Examiner of masters and mates, 907. Thomas Mulhall, seaman, Detroit, 415. Peter Nelson, 916. Capt. Parsons, Kingston, 1018. Willard Stephens, 1030.

**BARGES.**—Sails a barge ought to have, 985. The Marine Association of owners which met at Toronto last year wanted Government to abolish the masters and mates on barges, 990. Number and competency of men who should form the crew of a barge, Capt. T. Donnelly, Kingston, 986. Government should enforce the proper equipment and manning of barges, James Fleming, Kingston, 1048. Many barges are not able to take care of themselves when they break loose from a tow on account of insufficient sailing gear and being undermanned, E. Kehoe, Detroit, 418. Canadian and American barges compared, Willard Stephens, 1030.

**CERTIFICATES OF COMPETENCY OF OFFICERS.**—Ships' officers obliged to pass an examination in Canada but not in the United States, J. Buckley, Detroit, 410. The law regarding masters and mates certificates not enforced, 913. Instances cases of incompetent men holding certificates, John T. Carey, 916. Law regarding officers' certificates. Borrowing certificates, 986. The injustice of allowing steam vessels other than passenger boats to run without licensed engineers, Capt. T. Donnelly, Kingston, 991. The necessity for officers certificates, 966. Officers without certificates taking charge of vessels, John Gaskin, Kingston, 967. The law regarding officers' certificates not enforced properly. The proper officers to enforce the law, W. McIlwaine, 909. Has known captains to get certificates who were incompetent, Thos. Mulhall, Detroit, 415. A great many incompetent men hold certificates, how they got them, 1018, 1019. Impossible sometimes to get certificated mates. Admits having had mates without certificates on board his vessels since the law requiring such came into force: explains the circumstances, Capt. Parsons, Kingston, 1023.

**DECK LOADS.**—Capt. T. Donnelly, Kingston, 986. James Fleming, Kingston, 1048. John Gaskin, Kingston, 967. T. A. Green, Hamilton, 855. Willard Stephens, Kingston, 1031.

**FOOD AND SLEEPING ACCOMMODATION.**—Food generally good, J. Buckley, Detroit, 413. Condition of forecandle, John T. Carey, 914. John Gaskin, Kingston, 968. T. A. Green, Hamilton, 852, 854. Forecandles of many barges unfit for human beings to live in, W. McIlwaine, 910. Thos. Mulhall, Detroit, 417. Peter Nelson, 916. It is the duty of masters and mates to see that forecandles are kept clean, W. Stephens, Kingston, 1031.

**LIFE PRESERVING APPLIANCES.**—Provisions for saving the lives of crews, John T. Carey, 915. Deficiency of life buoys, and preservers on sailing vessels, Capt. T. Donnelly, Kingston, 987. Fog horns, soundings and lighthouses required for the navigation of the lakes, 854. Life boats and life preservers, T.

A. Green, Hamilton, 805. Insufficiency of life boats, &c., E. Kehoe, Detroit, 419. Life boats, W. McIlwaine, 910. A life preserver on a sailing vessel is a very rare thing, Willard Stephens, Kingston, 1032.

**NATIONALITY OF SAILORS.**—American law regarding nationality of sailors not enforced, J. Buckley, Detroit, 410.

**OVERLOADING OF VESSELS.**—Vessels now loaded as if there was no law, 410. Mentions vessels lost on account of overloading, J. Buckley, Detroit, 411. Vessels as a rule are at present overloaded, 911. The Plimsoll load line, the remedy for overloading of vessels, John T. Carey, 914. Overloading of propellers. The Plimsoll load line, Capt. T. Donnelly, Kingston, 986. P. Gallagher, 918. Vessels are rendered unseaworthy by overloading; the proper remedy is the Plimsoll load line, W. McIlwaine, 909. Opinion regarding the necessity for a "shifting board" with a cargo of grain, Thomas Mulhall, Detroit, 417. Peter Nelson, 916. Thinks it would be right to have a law to regulate the loading of barges, Capt. Parsons, Kingston, 1020. W. Stephens, Kingston, 1031.

**SHIPPING OF SAILORS.**—No shipping master at Kingston; it would be well if there was one, 987. Sailors should be shipped and paid off at a shipping office same as at Atlantic ports. Evils and disadvantages of shipping by the trip, from port to port, instead of by the month or year, 988. Sailors could save ten times as much as they do if engaged by the year instead of by the trip, Capt. T. Donnelly, Kingston, 989. Advantages of employing sailors by the season instead of by the trip, T. A. Green, Hamilton, 851. Advocates the establishment of shipping offices at such places as Toronto, Kingston and the Welland Canal. Would support the appointment of a shipping master at Kingston. How sailors are engaged now and how it was done twenty-eight years ago. Disadvantages of shipping by the trip, 1021. Advocates sailors being hired by the month and paid a uniform rate of wages all through the season, Capt. Parsons, Kingston, 1022. Sailors ship by the day and are paid at the end of the trip, 1030. It is the rule of the Seamen's Union that sailors ship by the trip; thinks it would be better for all parties if they were shipped by the month, W. Stephens, Kingston, 1032.

**UNDERMANNING OF VESSELS.**—J. Buckley, Detroit, 411. Vessels at present are as a rule undermanned, 911. Loss of vessels from insufficiency of crews, John T. Carey, 912. Vessels are seldom short handed except in the fall, T. A. Green, Hamilton, 852. Inland vessels are not sufficiently manned. The necessary crew for vessels, W. McIlwaine, 908. The difficulty of getting sober men, often the cause of undermanning of barges, Capt. Parsons, Kingston, 1020. Has known vessels to leave port short handed because men could not be had. The habits of seamen in regard to the habitual use of intoxicating liquors, W. Stephens, Kingston, 1033.

**UNSEAWORTHINESS OF VESSELS IN USE.**—Unseaworthiness of vessels leaving the Welland Canal, A. J. Carroll, St. Catharines, 927. R. Donnelly, 910. Thinks Government will have to take some action regarding the use of unseaworthy vessels, Capt. T. Donnelly, Kingston, 985, 937. James Fleming, Kingston, 1047. Steamboats sometimes not as seaworthy as they should be, G. Johnston, Kingston, 944. Many vessels have not got any charts and many captains could not use them if they had them, E. Kehoe, Detroit, 419. Several vessels now sailing on the lakes that cannot be classed as worthy of insurance, 907, 908. Vessels which are not properly rigged and equipped, 908. A sufficient number of unseaworthy vessels now afloat to warrant the Government prohibiting the use of them, Wm. McIlwaine, 909. R. Marshall, Kingston, 1043. Of vessels leaving the port of Kingston, Isaac Oliver, Kingston, 908. Capt. Parsons, Kingston, 1018. A vessel without sufficient canvas is not seaworthy. Has often known vessels leave Kingston with bad gear, sails, &c., Willard Stephens, 1031.

**ST. CATHARINES.**—See evidence of J. E. Cuff, Mayor, 923.

**SANITARY CONDITIONS AND VENTILATION—**

**OF BAKERIES AND BISCUIT FACTORIES.**—London, the McCormick Manufacturing Company's Factory, A. W. Porter, 668. Ottawa, James Balharrie, 1131. H. Barrill, 1119. A. Cousineau, 1133. W. Gibson, 1104. R. E. Jamieson, 1107. S. Slinn, 1114. Kingston, A. Bennett, 996. S. Robinson, 1001.

**OF BOILER SHOPS.**—Ottawa, W. J. Campbell, 1116. Hugh Nesbett, 1124.

**OF BOOT AND SHOE FACTORIES.**—Hamilton, McPherson's, A. Miller, 885. Toronto, J. D. King & Co.'s, R. C. Winlow, 338.

**OF THE BOX FACTORY.**—Toronto, J. H. Lumsden, 110.

**OF CARPENTERS SHOPS.**—Toronto, John Falconer, 12. R. Lee, 142. Windsor, E. H. Foster, 422.

**OF CARRIAGE MAKERS' SHOPS.**—Chatham, R. Gossett, 460. Toronto, John Dixon, 248. W. J. McFarlane, 117.

**OF CIGAR FACTORIES.**—London, S. M. Hodgins, 655. Kingston, S. Oberndorfer, 963.

**OF CITIES AND TOWNS**—Chatham, H. A. Patterson, 487. T. H. Taylor, 481. Cornwall, Geo. Macdonald, Ex-Mayor, 1073. Kingston, J. D. Thompson, Mayor, 1015. London, Wm. Bell, 591, 593. Dr. Oronhyatekha, 643. R. Symons, 662, 663. Petrolia, J. W. Crosby, 705. St. Catharines, J. E. Cuff, Mayor, 923. St. Thomas, Dr. J. B. Tweedale, 501. Windsor, Dr. John Coventry, 384, 3-6.

**OF COOPERS' SHOPS.**—Windsor, R. Somerville, 400.

**OF COTTON FACTORIES.**—Cornwall, the Canada Cotton Manufacturing Co.'s Factory, John Anderson, 1082. Joseph Grey, 1090. A. T. Knight, 1067. S. Shoefelt, 1075, 1077. A. G. Watson, 1064. Stormont Cotton Mills,\* \* \* \* mill operative, 1079. Geo. Anty, 1093. Paul Dane, 1094. James Daley, 1691. A. Gault, 1060. E. King, 1074. Hamilton, Ontario Cotton Mills, John Bell, 879. Kingston, Cotton Co.'s factory, W. Wilson, 971.

**OF DRY GOODS' STORES.**—Ottawa, Chas. Bryson, 1164. Crawford Ross, 1184, 1185.

**OF DWELLINGS OF THE WORKING CLASSES.**—Chatham, G. S. Hope, 464. H. Neilson, 443. Kingston, R. Green, 955. B. Meeks, 1005. E. Perry, 952. Ottawa, F. J. Farrell, 1153. Toronto, A. Blue, 85. Mayor Howland, 166. C. Pearson, 255.

**OF FACTORIES (GENERALLY).**—Wm. Bell. London, 593. A. Blue, Toronto, 86. J. R. Brown, Factory Inspector, Central Division of Ontario, Toronto, 317. E. A. Card. Taschereau, Arch. of Quebec, 368.

**OF THE FEATHERBONE FACTORY.**—St. Thomas, G. R. Holder, 536.

**OF FOUNDRIES.**—Hamilton, D. Cashion, 785. James Stephenson, 799. Kingston, John McNeil, 950. London, James McKenna, 602. J. B. Murphy, 686. Ottawa, E. Elliott, 1180. M. W. Merrill, 1100. John Peer, 1130. Toronto, D. Black, 151. James Boyle, 170. J. Hunt, 148. John McNeil, 950. T. Pickett, 144.

**OF FURNITURE FACTORIES.**—London, Samuel Peddle, 633. John Wolfe, 606.

**OF GUILDERS' WORKSHOP.**—Toronto, J. McLaren, 179.

**OF KNITTING FACTORIES.**—Dundas, S. Leonard, 860. Kingston, John Hewton, 979.

**OF IRON ROLLING MILLS.**—Hamilton, Ontario Rolling Mill, B. M. Danforth, 760. St. Thomas, Erie Iron Works, Wm. Risdon, 549.

**OF MACHINE SHOPS.**—Chicago, Pullman Car Works, Dr. Oldwright, 92. Kingston Shop of the Transportation Co., Gilbert Johnston, 943. Toronto, \* \* \* , 63.

**OF PRINTING OFFICES.**—Kingston, E. Pense, 1058. London, W. A. Clarke, 597. Ottawa, Miss \* \* \* , 1172. J. T. Byrne, 1146. W. Gibbens, 1145. F. J. Farrell, 1152, 1153, 1154. W. McMahon, 1141, 1142. John Pearce, 1179. John P. Purcell, 1181. R. Rankin, 1170. F. Rogers, 1173, 1174. D. Tassé, 1158. A. S. Woodburn, 1177. Toronto, S. J. Dunlop, 45.

OF SCHOOLS. Kingston, W. G. Kidd, 940. John D. Thompson, Mayor, 1016. London, Wm. Bell, 593. J. B. Boyle, 606. Dr. Oronhyatekha, 643. Toronto, J. L. Hughes, 279. Dr. Oldwright, 95. Windsor, Dr. John Coventry, 387.

OF STEAMFITTERS' SHOPS.—Toronto, \* \* \*, 29.

OF TAILORING ESTABLISHMENTS.—London, John Allenby, 628. Windsor, Dr. John Coventry, 387. James Wren, 407.

OF TINSMITHS' SHOPS.—Kingston, Peter Moncrief, 978.

OF TOBACCO FACTORY—of G. E. Tuckett & Son, Hamilton, G. T. Tuckett, 744.

OF WOODWORKING MILLS.—Inspector of factories, J. R. Brown, finds a lack of fans to take away dust and shavings, 317.

OF VESSELS' FORECASTLES OR SAILORS' SLEEPING ACCOMMODATION.—Capt. T. Donnelly, 985. James Fleming, 1048. Capt. Parsons, 1022.

OF WOOLLEN FACTORIES.—Cornwall, T. Day, 1070, J. P. Watson, 1069. London, James O'Donnell, 664.

OF WORKSHOPS.—A. Blue, Toronto, 74. Dr. Oldwright, Toronto, 91.

Prefers earth closets to water closets connected with or running into sewers, Dr. Oronhyatekha, London, 643. Hamilton Iron Moulders' Union's opinion regarding sanitary arrangements, 793. See evidence of Dr. Oldwright, Toronto, 91, 95, 96, 97, 98.

SANITARY INSPECTORS.—See INSPECTORS AND INSPECTION.

SAVINGS OF THE WORKING CLASSES AND THEIR INVESTMENTS.—

\* \* \*, Toronto, 32. Possibility of saving anything out of a workingman's wages, Geo. Auty, Cornwall, 1093. A. Blue, Toronto, 87. Stove plate moulders cannot save money; reason why, D. Black, Toronto, 152. Thinks that under certain circumstances a journeyman moulder can save money, James Boyle, 169. The class of builders' laborers who own houses, J. Bissell, Toronto, 271. Carpenters in Kingston who own their own houses; how acquired, R. Baird, 939. Knows of two cases where iron workers in Hamilton paid in three years, from \$600 to \$700, on their houses, T. D. Beddo, Hamilton, 793. Thinks it is possible for workingmen in London to acquire houses of their own; but does not think it much benefit to do so on account of heavy taxation. Does not approve of workingmen buying houses on the instalment plan unless they are sure of work, Wm. Bell, London, 592. A great many of his employees own their own homes, John Bertram, 858. J. W. Blake, Chatham, 455. Thinks his men save money. Nearly all the married men in his employ have their own houses, James Burns, London, 672. The possible savings of a workingman in London, Patrick Burns, 634. John Callow, Seaton Village, 60. A. Campbell, Chatham, 490. M. Campbell, Toronto, 493. Proportion of workingmen in Ottawa who own their own houses, R. Clement, 1121. Example of a mechanic living in comfort and gaining sufficient means to enable him to give up work altogether at the age of fifty years; how it was done, William Collins, 825, 826. Possibility of saving, Paul Dane, Cornwall, 1094. John Davidson, London, 624. R. Dennis, Toronto, 122. J. R. Dickson, Chatham, 471. Wm. Elliott, London, 678. John Falconer, Toronto, 3, 12. E. Fitzthomas, Chatham, 466. R. G. Fleming, Chatham, 437, 440. E. H. Foster, Windsor, 422. J. J. Franklin, Toronto, 332. John Fraser, Petrolia, 722. Joseph Gray, Cornwall, 1090. Thomas Green, London, 645. E. Gurney, Toronto, 297. W. E. Hamilton, Chatham, 485. Geo. Harper, Hamilton, 746, 748. Wm. Harty, Kingston, 1027. J. T. Harvey, Ottawa, 1131. A. Henderson, Detroit, 396. Mayor Howland, Toronto, 168. W. Hutchison, Ottawa, 1096. Gilbert Johnston, Kingston, 944. John Kerr, Petrolia, 707. Robert Kerr, Walkerville, 375, 376. Article No. 17, Declaration of Principles of the Knights of Labor, 271. R. Lee, Toronto, 143, 144. John Litton, Kingston, 956. W. J. McAndrews, Hamilton, 748. Geo. Macdonald, Cornwall, 1072. A. McKay, M.P., Hamilton, 805, 806, 807. Thomas

McNally, Windsor, 423. B. Meeks, Kingston, 1005, 1008. M. W. Merrill, Ottawa, 1099. P. G. Nash, Ottawa, 1140. H. Neilson, Chatham, 442, 443. R. B. Osborne, Hamilton, 902. C. A. Passmore, London, 683. H. A. Patterson, Chatham, 486. C. Pearson, Toronto, 255. P. O. Savings Bank Deposits in Ottawa, see evidence of W. H. Pennock, 1114. T. Pickett, Toronto, 156. John Pierce, Toronto, 158. A. W. Porter, London, 667. Wm. Risdon, St. Thomas, 549. James Rushford, Kingston, 1045. Joseph Shaw, Kingston, 1044. Joseph Sherwood, Ottawa, 1126. A. Smith, Petrolia, 698. J. E. Smith, Chatham, 454. W. Stuart, Jr., Ottawa, 1109. John Sullivan, London, 679. T. Towers, Hamilton, 873. W. J. Vale, Hamilton, 813. J. Volume, Kingston, 906. John Waddell, St. Thomas, 533. F. Walters, Hamilton, 795. F. M. White, Windsor, 393. S. J. Whitehead, Hamilton, 792. F. W. Wilson, Chatham, 448. John Wolfe, London, 607. James Wren, Windsor, 406.

**SAWYERS**, Ottawa.—See evidence of J. D. Sherwood, 1127.

**SCALE FACTORY EMPLOYEES**.—See evidence of John Milne, Hamilton, 834, and R. B. Osborne, Hamilton, 903.

“SCOTT ACT”—

ITS EFFECT ON THE CIGAR TRADE.—A. Eichhorne, Toronto, 306. S. M. Hodgins, London, 650. R. J. Mills, St. Catharines, 920. S. Oberndorfer, Kingston, 964. John A. Rose, London, 618.

ITS EFFECT ON COOPERS AND THEIR BUSINESS.—A. Delaney, Toronto, 261. M. Donovan, Toronto, 261, 262.

**SEED TRADE** of D. M. Ferry & Co., Windsor and Detroit.—See evidence of S. R. Miller, 434.

**SHIPWRIGHTS**.—See evidence of James Ainsley, Kingston, 1056. R. Donnelly, 910. Isaac Oliver, Kingston, 997.

**SHIRT MAKING AND SHIRT FACTORY EMPLOYEES**.—John Allenby, London, 630. S. Carsley, Montreal, 1166.

**SHOE MAKERS**.—See Boot and Shoe maker.

**SHOW CASE AND STORE FITTING FACTORY EMPLOYEES**.—See evidence of W. Millichamp, Toronto, 357.

**SLATERS**.—Wages in St. Thomas, J. M. Green, 539.

**SMUGGLING**.—At Windsor, T. M. White, 392. James Wren, 406.

**SPECIALTIES** in manufacturing.—The only thing working against Canadian manufacturers at present is that there is not quite enough people in Canada to let them run into specialties, James Burns, London, 674. Any product he makes a specialty of he can sell fully as cheap as they can in the U.S., but has special machinery for specialties, Robert Kerr, Walkerville, 373. Among mechanics, L. F. Kribs, Toronto, 201.

**SPINNING MILL AND EMPLOYEES THEREOF**.—See evidence of Angus Barnhart, Cornwall, 1077, and Joseph Moyes, proprietor of the Cornwall Spinning Mill, 1081.

**STARCH, MANUFACTURE OF**.—See evidence of M. H. Miller, Walkerville, 377.

**STEAM BOILERS**.—Second hand, A. M. Wickens, Toronto, 208. Explosions, cause of, A. M. Wickens, Toronto, 209. Insurance, A. M. Wickens, Toronto, 209. Lock valves on, A. M. Wickens, Toronto, 209. Pougiers, A. W. Wickens, Toronto, 209.

**STEAM FITTERS.**—See evidence of, \* \* \* Toronto, 28.

**STOCK RAISING** in Enniskillen, R. Brock, 732. In the vicinity of Petrolia, J. W. Crosby, 702. See also **CATTLE RAISING**.

**STONE.**—Kinds used in Ottawa for building purposes, M. Shields, 1122.

**STONE CUTTERS.**—See evidence of John Lane, Ottawa, 1123. M. Shields, Ottawa, 1122. W. Stuart, Jr., Ottawa, 1108. F. Thornton, 407, 408.

**STONE MASONS.**—Hugh Douglas, Kingston, 1035. J. M. Green, St. Thomas, 539. J. C. Johnston, Cornwall, 1078. W. Stuart, Jr., Ottawa, 1108. Stone mason's work done by marble cutters at Windsor, F. Thornton, 407. Geo. White, Cornwall, 1088.

**STREET CAR EMPLOYEES.**—Drivers' strike in Toronto, A. Blue, 78. See evidence of J. J. Franklin, Toronto, 328.

**STREET CAR FARE.**—An expense necessitated by the distance of the workmen's homes from their work in Toronto, Mayor Howland, 169.

**STREET CAR SYSTEM.**—Hopes to see it under the control of the corporation in Toronto: reasons therefor, Mayor Howland, 169.

**STREET WAIFS.**—Their disadvantages and what should be done for them, L. P. Kribs, 202, 203.

**STRIKES AND LOCKOUTS AND THEIR RESULTS.**—Workmen always suffer most from them, \* \* \* , Toronto, 67. The strike of the Toronto plumbers the cause of an increase in steamfitters' wages, \* \* \* , Toronto, 29. Never had a strike in his business and thinks they might be avoided by mutual interchange of opinion between employer and employees, John Bertram, Dundas, 857. Strikes more frequent in towns where labor is not organized than where it is, J. J. Bickley, Cornwall, 1084. Strikes in Ontario, A. Blue, Toronto, 78. Effect of strikes on trade, John Callow, Seaton Village, 53. B. M. Danforth, Hamilton, 762. Prevention of strikes one of the chief objects of the Independent Labor Union, John Falconer, Toronto, 8. Opinions of the Hamilton Iron Moulders' Union regarding strikes, 797. Geo. Harper, Hamilton, 748. Thinks a labor bureau would be a good thing to use in settlement of disputes between labor and capital, John Robinson, St. Catharines, 921. Police protection granted to employers in case of a strike, R. Southwell, Toronto, 242. Strikes mostly caused by the importation of foreign labor, Thomas Stewart, Ottawa, 1192. The opinions of E. A. Card. Taschereau, Arch. of Quebec, regarding, 368. Thinks authorized arbitration would tend to reduce the number of strikes, A. W. Wright, Toronto, 321.

**STRIKES among Agricultural Implement Makers at Chatham last summer for shorter hours, R. G. Fleming, Chatham, 437, 438.**

**AT THE BOOT AND SHOE FACTORY of J. D. King & Co., Toronto, R. C. Winlow, 338.**

**AMONG BOXMAKERS.**—H. Burke, Toronto, 263.

**AMONG CARPENTERS AND BUILDERS.**—Toronto, H. T. Benson, 268. R. Dennis, 120, 122, 126, 132. John Falconer, 4, 5. R. Lee, 140. H. Lloyd, 235, 239. London, Thomas Green, 646. John Hayman, 636, 637, 638. John Sullivan, 679, 682. Ottawa, O. Labelle, 1160. Windsor, T. M. White, 394.

**AMONG CARRIAGEMAKERS.**—John Dixon, Toronto, 249.

**AMONG THE CHATHAM WORKINGMEN.**—G. S. Hope, 462. E. S. Spashett, 469.

**AMONG CIGARMAKERS.**—The cigarmakers of London belonging to the Union did not strike but were locked out previous to being blacklisted, S. M. Hodgins, 650.

OF THE EMPLOYEES of the Crompton Corset Company at Berlin, John Walker, 288.

OF COTTON FACTORY EMPLOYEES.—John J. Bickley, Cornwall, 1034. Wm. Birkett, Hamilton, 898. James Daley, Cornwall, 1094. Thewlis Day, Cornwall, 1070. A. Gault, Cornwall, 1059. A. T. Knight, 1066. A. G. Watson, Cornwall, 1063.

AT THE CANADIAN LOCOMOTIVE AND ENGINE COMPANY'S WORKS, KINGSTON.—S. Angrove, 946. Wm. Duffy, 1055. Wm. Harty, 1025. C. M. Morrice, 1037.

AMONG IRON MOULDERS.—B. Cameron, Hamilton, 842. D. Cashion, Hamilton, 785. James McKenna, London, 601. T. Pickett, Toronto, 145. James Ripley, Hamilton, 801, 802. F. Walters, Hamilton, 795, 796. S. J. Whitehead, Hamilton, 790.

AMONG FURNITURE FACTORY EMPLOYEES.—A year ago for shorter hours, H. Neilson, Chatham, 441.

IN THE GILDING BUSINESS.—In Toronto, J. McLaren, 178.

AT THE MASSEY WORKS.—A. Blue, Toronto, 78.
