### DOCTORING BY TELEPHONE.

(Philadelphia Medical Journal.)

We heard a doctor complain recently that one of his patients, in order presumably to save his time, sometimes called him up on the telephone when she wanted him to give advice about the baby. The good dame would sit at the other end of the wire, pencil in hand, and ask the unfortunate doctor to dictate his instructions while she took them down. This continued until one day she asked him to dictate his prescription. At this he rebelled. He was willing to take the baby's temperature and pulse by telephone, and even to inspect the character of the dejections; he was even willing to tell all he knew about babies in general and about that baby in particular; he did not even object for a while to give the lady the full benefit of a professional call and charge it as an office visit; but his conscience smote him when it came to dictating a Latin prescription by telephone and having the thrifty-minded housewife sign his name to it before her own initials.

Some physicians should write a chapter on the medical ethics of the telephone. We would do it ourselves if we felt capable. There are two sides to the question. The patient sometimes gets the better of the doctor and saves a fee, but the doctor sometimes gets the better of the patient and saves himself a lot of trouble. It is obvious in either case the patient should pay for it. But the question arises. What should he pay? The advice is given in the office, but it is received in the house. This is somewhat of a metaphysical quandary. Should a doctor charge an office fee for giving advice that goes straight to the patient's bedside? On the other hand, should a patient be obliged to pay a house fee for advice which a doctor gives sitting comfortably in his office. The problem is full of difficulties. Perhaps it would be best to call it half-and-half, and charge accordingly.

A man should die as unconscious of his death as he is of his birth. We all sleep through the processes of birth, and feel the painful or unpleasant impressions of life only after awakening.

Death is a painless process, and when the cycle of life is completed the living being sleeps into it. The natural and easy descent into oblivion is the sequel of health; it is the happy death engrafted on the perfect life. Death should be divested of all fear, sorrow and suffering, and should come to us at last as a quiet sleep.—O. A. Palmer, M.D.

### HINTS FOR TREATMENT OF CHILDREN.

Sensations of pain, stiffness and lameness when beginning to move, relieved by continuous motion, are indications for *Rhus tox.* When a child moans and cries at the least touch, the crying being accompanied with a copious flow of tears, give *Pulsatilla*. When the child cries out violently in sleep, give *Apis*. If the child complains continually, *Helleborus*. When the child seeks to bite the nurse, *Stramonium*. When the child is feverish and delirious, with convulsions of the limbs, *Hyoscyamus*. Frequent screaming without any visible cause, *Calcarea*. Unready for every exertion, indifference and lacking in interest, *Acid. phosphoric.* Perspiration of the head, *Silicea*; the head perspires while cool, *Calcarea*; dry, hot head, *Sulphur*. *Aconite* cures pains in the back which prevent deep respiration. The sensation as if the skin of the forehead were too tightly drawn has been relieved by *Baptisia*. When the heart beats too strongly while in a recumbent position, give *Arsenicum*. A sensation of severe cold in the cardiac region requires *Natrum mur.* Constipation, even with a sensation of fermentation and distension, *Lycopodium*. Pains in the nerves, relieved by exercise in the open air, *Sabina*. Stiffness and torpor of the limbs, *Cocculus*. When the smell of food causes nausea, even when the patient before was hungry, *Colchicum*. Stiffness from a sprain or overlifting, *Rhus tox.* Periodic headache, recurring every few weeks, *Platina*.—*Homœopathic Envoy.*

### INFANTILE STOOLS.

The following summary is appended to a paper contributed to the "Physician and Surgeon" by Dr. Charles Douglas ("Med. Review of Reviews"):

Green stools are never healthy.

They always show imperfect digestion.

The damage to the child is in direct proportion to their presence.

These stools render children more susceptible to acute gastro-enteritis in hot weather.

The high infantile summer mortality follows children suffering from this colored stool.

Through unhealthy nutrition the blood is poisoned and the various tissues are improperly nourished.

The excreting organs, particularly the kidneys and liver, are frequently damaged by the extraordinary duties imposed on them in the elimination of these poisonous results from the blood.

The continued irritation and innutrition favors the development of inherited diatheses and acquired cachexias.

No child is free from complications dangerous to life, or from developmental errors, who suffers from frequently-recurring green-colored stools, particularly the very liquid and foul-smelling ones.

### THE PROPER FOOD FOR INFANTS.

BY J. B. DUNHAM, M.D.

Find the proper food for the bottle-fed baby and you will see the little one thrive, and make of the mother your firm friend. Give to the little one a food that does not agree with it, and, no matter what remedies you prescribe, the child will not thrive.

All "prepared" foods are useful in certain cases. No food is useful in all cases. Moreover, the expense attendant upon their use is, with some people, a serious matter, for they are all high-priced.

The following described preparation, which is very similar to certain high-priced foods, has, in my experience, proved to be as satisfactory as such diet can be, for no food can replace good breast-milk.

Sift thoroughly a small quantity of the best wheat flour. Place it in a new iron-stone china dish in the oven. Keep it there, stirring occasionally, until it becomes slightly brown. Take it out, cool it, put it at once in a sterilized can, keeping it air tight.

For young children dissolve two teaspoonfuls of this "home-made food" in water, a sufficient quantity to make it the consistency of cream. Add one-quarter pint of pure milk, a pinch of salt, and one-half teaspoonful of granulated sugar; pure sugar-of-milk is better. After adding milk let it come to the boiling point before removing from the fire.

For older children use three to four rounding teaspoonfuls of "home-made food" to one-half pint each of water and milk, cooking as above. If the food proves to be too rich, use less milk and more water. *Med. Era.*

## ACONITE.

"As an instance of the advantages of a study of *Materia Medica* by making provings on one's self, I will relate an experience of my own. Soon after entering upon the practice of medicine, twenty-seven years ago, one day I accidentally swallowed thirteen drops of the mother tincture of Aconite. It was not long before I began to have symptoms. They were many, and they were severe, and they were all characteristic. There was numbness of the tongue and the oral mucous membrane. There was a constant restlessness. I could not remain in one position an instant. Soon after taking the dose I was compelled to go to bed. There I passed a restless night. I ached all over the body. I turned from side to side and tossed about in the bed. I had a constant feeling of anxiety and apprehension, with a sort of smothered sensation. Occasionally I would draw a deep breath. I had what you all recognize as many of the pathogenetic symptoms of Aconite. There was, however, no rise in temperature; in fact, the skin was cool, though there was no perspiration."—Dr. Ch. Gatchell.

"There is a remedy that is useful in cholera infantum, and that is Aconite. I do not believe that the only indication for Aconite is fever. I prescribe it less in fever than in any other conditions; but there are cases of cholera infantum in which I cannot get along without the use of Aconite, and these are cases I can generally trace to cold, to the influence of cold in producing the disease, and in these cases I think Aconite acts beautifully."—Dr. A. P. Bowie.—*Homoeopathic Recorder*.

## THE BANANA.

The banana, notwithstanding certain prejudices to the contrary, is among the most valuable and nutritious foods. Primitive man in tropical countries is said to have subsisted mainly upon this fruit, and the savage of the sea islands owes to it his physical power. The claim is made, and supported by reliable authority, that bananas contain all the essential elements of nutrition, and that if necessary life can be sustained by an exclusive diet of the banana.—Ex.

Medicines given by the rectum or vagina should be given in twice the dose as by the mouth.

A raw egg, taken immediately, will carry down a fish bone that cannot be got up from the throat.

A common remedy to "bring out" the eruption in measles is a strong tea made from the leaves of the common holly.

## A NUTRITIVE LEMONADE FOR FEBRILE AND WASTING DISEASES.

In the case of a patient confined to liquid diet, milk, beef tea, whey, barley water and lemonade comprise about the entire bill of fare. Some of these preparations have little nutritive value, while the patient soon grows tired of milk. R. W. Leftwich, in Merck's Archives, therefore suggests a white-of-egg lemonade, which is best prepared in the following manner: Two lemons, the whites of two eggs, one pint of boiling water, loaf sugar to taste. The lemons must be peeled twice, the yellow rind being utilized, while the white layer is rejected. Place the sliced lemon and the yellow peel in a quart jug with two lumps of sugar. Pour on them the boiling water and stir occasionally. When cooled to about the ordinary temperature of tea, strain off the lemons. When the lemonade is in full agitation by whipping, add slowly the white of egg and continue the whipping for two or three minutes. While still warm, strain through muslin. Serve when cold. The white of egg imparts a blandness which makes the addition of sugar almost unnecessary, and this absence of sweetness is greatly appreciated by the feverish patients.

This lemonade is a most excellent drink throughout the course of typhoid fever. It would, however, probably be contraindicated in Bright's disease and in gastric ulcer.—*Medical Times*.

## HOGAN'S NERVE.

"I hear Hogan is sick," said the barber.

"Yes, but he's better now," said the bailiff. "He went to a doctor, who looked him over and then wrote out a prescription.

"How much will that cost, doc?" asks Hogan.

"'About a dollar and a half,' says the doctor.

"Have you got that much to loan me, doc?" says Hogan.

"The doctor took the prescription back and crossed off all of the items except 'aqua pura.'

"You can get that for ten cents," he says, handing it back to Hogan; "and here's a dime."

"Don't I have to take those things you scratched off?" asks Hogan.

"No," says the doctor. "Those are nerve tonics. You don't need 'em."

## DONATIONS IN APRIL.

The Lady Superintendent acknowledges with thanks the following:

Mrs. A. R. Griffith—9 1-2 quarts marmalade.

Mrs. Terroux.—2 dozen bananas, 3 dozen oranges, 2 pine apples.

Mr. F. W. Holland—Easter plants.

Mrs. A. S. Robertson—10 lbs. sugar, 1 lb. tea.

Mrs. T. Yates-Foster—Sponge cake and charlotte russes for nurses.

Miss Orkney—Fountain syringe, medicine vials.

Woman's Auxiliary—6 wrappers.

Mrs. R. L. Gaunt—2 rugs for "Gaunt Room."

Mrs. J. T. Hagar—Thermometer for "Hagar Room."

A Friend—6 towels.

A Friend—1 dozen artery forceps, 3 pairs surgical scissors.

Miss Mudge—1 jar marmalade, 1 tin cocoa, 2 lbs. biscuits.

No name—Magazines.

Mr. Lunlop—Flower seeds.

---

TAKE YOUR CHOICE.—The following is an incomplete list of the medical systems more or less in vogue to-day: Hydrotherapy, thermotherapy, electrotherapy, climatotherapy, hypnotism, mind cure, faith cure, Christian science, prayer cure, organotherapy, serum therapy, open air cure, biochemistry, massage, eclectism, osteopathy, spiritual healing, officialism, x-ray treatment, galvinism, combination tablets, bare feet cure, fasting cure, diet cure, rest cure, isopathy, allopathy, and homoeopathy.—Hom. Envoy.

## HINTS.

A few doses of Phosphorus will sometimes arrest or cure alopecia areata, i.e., where hair comes out in patches. Use 30th potency, one dose a week, for a few weeks.

If you have been taking much allopathic or patent medicines stop and take a few doses of Nux vomica 30, and you will probably get well.

Diarrhoea, with painful straining and urging before and after, requires Mercurius.

Indigestion relieved by eating may find a cure in Graphites.

"Running Colds," where the eyes are much involved, require Euphrasia ix.

Extremely painful colic, especially if brought on by cold, requires Colocynth.

Sleeplessness, if not caused by abuse of tobacco, tea, coffee, etc., may find a brilliant cure in Coffea cruda.

For unwholesome sweat on the head of infants give Calcarea carb.

A feeling of dread as evening draws on is a strong symptom for Calcarea carb.

Anacardium has proved curative in cases of brain-fag where the memory goes wrong.

Sulphur is a good remedy in oozema.

A subscriber asks for a remedy "for a pain in my left side which comes on just at night." Perhaps Lycopodium will relieve the complaint.

PHILLIPS' TRAINING SCHOOL NOTES.

TREASURER'S REPORT FOR MARCH 1903.

Miss Trench, ".02," is still in Sherbrooke, Que., but is expected home shortly.

Miss Grant, ".97", expects to leave for New York to take up post graduate work.

Miss Malboeuf, ".99", has returned from Southern California where she had been caring for a patient during the past winter.

Miss Lawrence, a graduate of the Metropolitan Hospital, New York, Training School and a former pupil of our school, was in the hospital for the past month having undergone a serious operation. She has returned home fully recovered.

The nurses' lectures for the session of 1902-03, having been completed the examinations will be held during the third and fourth week of this month. Three classes will come up for examination, viz.: Senior or graduating class; second year nurses and junior nurses. The examinations in theory, and practice of nursing will not be held until the fall term commences.

Miss Blackmore has returned from a three weeks holiday, and is again on duty; being the first to take the nurses annual vacation, the other nurses will follow in regular order.

Miss E. R. Lorenz, lady superintendent, has been granted two months' leave of absence, from June 1st. Miss E. Trench will have charge of the hospital in the interval.

Nurse De La Ronde has been off duty for some time, suffering from an attack of gripe.

Miss Bartholomew ".02" is at St. Alban's, Vt., on professional duty, with a patient and will not likely return for some time yet.

Professor Zimmer, of Berlin, has been investigating the causes of insanity among women, and has come to the conclusion that if women are admitted into competition with men the inevitable result will be a tremendous increase of insanity among the women. He finds that the percentage of women employed as telegraphers, sales clerks, and in the telephone service, and, furthermore, with regard to women engaged in the Swiss watchmaking trade. These inquiries showed that in the occupations mentioned a far larger proportion of women than men succumb to mental disorders.

## HOSPITAL NOTES.

REMEMBER to send in your new address to the business manager.

WORK on the diet kitchens was suspended during the carpenters' strike.

VISIT the hospital before leaving for your summer vacation and see the alterations and improvements.

AS THE FRUIT season is coming on, don't forget to put aside some of the preserves for the hospital.

THE COAL question is troubling us at present, last winter's experience being still fresh in mind. Have you any substantial suggestions to offer leading to a solution of this difficulty?

WE THOUGHT we were through with paint and painting for awhile at least, but the recent alterations have caused a change of mind and we will have more of it.

MRS. W. SUTHERLAND TAYLOR, treasurer of the Women's Auxiliary, desires to acknowledge with thanks the receipt of \$10 from Mrs. R. G. Reil, which was received this month after the report had been sent in for publication.

THE ATTEMPT to improve the appearance of the front entrance has resulted in failure, necessitating another effort to make it presentable.

THE DISPENSARY is open every week day from 11.30 a.m. to 1 p.m. for the free advice and treatment of the deserving poor, a fee of 10 cents for medicine being charged those who can pay. If you know of any poor people in need of medical services tell them about our outdoor department.

DR. AMOS, our capable and genial house physician, has left us for the Northwest to enter upon private practice. He was offered a chance to go out with the Barr colony and left April 18, intending to locate in the Battleford district. During the seven months he has been with us he has, by his un-failing courtesy and zealous attention to his duties, firmly established himself in the esteem of all connected with the hospital, and our best wishes for his success in the far northland are heartily given. He will be succeeded by Dr. Schenkelberger, of Chicago, who is expected to begin his service about May 15. The doctor is a recent graduate of Hahnemann College, Chicago, and comes to us highly recommended

YOUR ATTENTION is called to the new linen closet which the Woman's Auxiliary has secured through the alterations to the diet kitchens. It is a very large one, and will require extra effort to stock it. Better drop in to see it, and get an idea of how much help you are going to give the ladies.

THE NEW diet kitchens will be completed this month except the painting, for which provision must be made. As this work is in the nature of an extra, we would like you to help us in finishing it up in a proper manner. This will complete the painting of the hospital interior, and we trust suffice for a couple of years, after which time we will not need to ask for assistance.

THE REGULAR monthly meeting of the committee of management was held April 27. After reading of minutes of previous meeting, the regular business was entered upon. The question of cost for the coming season was discussed, and left in the hands of the president and treasurer for adjustment. The treasurer's report, which will be found in another column, for the month of March was submitted, and showed a credit balance after settlement of all liabilities. Reports were presented showing the completion of the electric bell system. The diet kitchens were almost completed, when the carpenters strike caused a cessation of work. The lady superintendent's report showed the month's work to be slightly behind that of the previous month. Three rooms in the maternity annex were engaged for May. The house physician had left for the Northwest, and a new one was expected about the middle of May. Leave of absence for two months was granted to the lady superintendent, and provision made for a substitute during her vacation. The painting of the new discussion. The meeting adjourned at 6 p.m., after which the members of the committee inspected the alterations to the diet kitchens and other improvements. The next meeting will be held Monday, May 25.

---

According to the latest Governmental statistics, each physician in the United States has 655 persons to look to for his support.

Whatever else you do in internal carbonic acid poisoning, give at once a large dose of alcohol—whiskey, brandy, rum or gin will answer—and repeat it often.

Among the popular novels is one entitled "the History of Sir Richard Calmady," by a daughter of the late Charles Kingsley—a lady presumably of the highest culture, and certainly of more than average intelligence. The hero of the story is described as having come into the world beautiful and perfect in body, with the exception of his lower limbs, which were crippled and monstrously deformed as the result of a maternal impression, his mother having listened at the door while his father, whose legs had been crushed by a fall from his horse, was undergoing amputation in the next room. The child, we are told, was born—"with his feet set right up where his knees should have been, thus dwarfing him by a fourth of his height" a few days after the accident. Within those few days, therefore, a quadruple amputation must have taken place in utero, the legs have been disposed of in some inconceivable way, and the feet secured, by a thorough union of tissue, etc., in their unnatural position. Well, to borrow a remark of Mr. Squeers, "It only shows what Natur can do, sir. She's a rum un, is Natur!"—Medical Times.

Tarnier said in 1873 that no woman on a milk diet ever has eclampsia, and Pinard's experience fully confirms this view.
