The copy filmed here has been reproduced thanks to the generosity of:

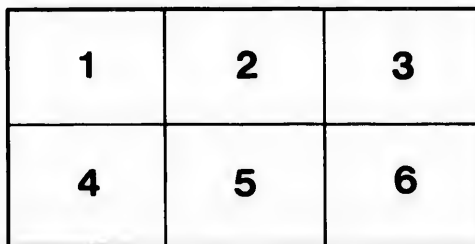

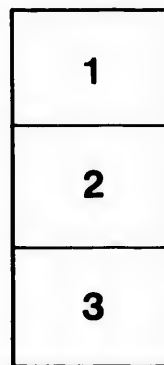

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

WEATHER GUIDE.

The following Table (the result of many years' actual observation) is ascribed to Dr. Herschel. It is constructed upon a due consideration of the attraction of the Sun and Moon in their several positions respecting the Earth, and serves to show what kind of weather will most probably follow the entrance of the Moon into any of her quarters:—

Moon.	Time of Change.	In Summer.	In Winter.
If New Moon, First Quarter, Full Moon, or Last Quarter, happens	Between midnight and 2 in the morning.	Fair.	Hard Frost unless wind be S. or W.
	Between 2 and 4 morn.	Cold with showers.	Snow & stormy.
	" 4 and 6 "	Rain.	Stormy & rainy.
	" 6 and 8 "	Wind and rain.	Stormy.
	" 8 and 10 "	Variable.	Rain if wind W. Snow if E.
	" 10 and 12 "	Showery.	Cold and high wind.
	At 12 Noon, and to 2 in the afternoon.	Very rainy.	Snow or rain.
	Between 2 and 4 after.	Variable.	Fair and mild.
	" 4 and 6 "	Fair.	Fair.
	" 6 and 8 "	Fair if wind be N. W., Rainy if S. or S. W.	Frosty if wind N or N.E., Snow if S. or S. W.
	" 8 and 10 "	Ditto. Ditto.	Ditto. Ditto.
	" 10 and midnight.	Fair.	Fair and frosty.

The nearer midnight any of the Moon's changes occur, the finer will be the weather during the succeeding week ; the nearer noon any of those changes happen, the more foul and wet will be the weather that will follow.

PARKS' COTTON YARNS.

Awarded the Only Medal Given at the Centennial Exhi-
bition for Cotton Yarns of Canadian Manufacture.

Nos. 5's to 10's.

WHITE, BLUE, RED, ORANGE AND GREEN.

Made of Good American Cotton, with great care Correctly
Numbered and Warranted full Length and Weight.

WE would ask the purchasers of Cotton Warp to remember
that our Yarn is spun on Throstle Frames, which make
a stronger yarn than the Ring Frames, used in making
American yarn.

It is also better twisted and more carefully reeled ; each
hank being tied up in 7 leas of 120 yards each. This makes
it much more easy to wind than when it is put up without
leas—as the American is—and also saves a great deal of waste.

Those acquainted with weaving will understand the great
advantage it is to them to use yarn put up in this manner.

COTTON CARPET WARP,

Made of No. 10 Yarn, 4-Ply Twisted.

WHITE, RED, BROWN, SLATE, &c., ALL FAST COLORS.

Each 5 lb. bundle contains 10,000 yards in length, and
will make a length of Carpet in proportion to the number
of ends in width.

We have put more twist into this warp than it formerly
had, and it will now make a more durable Carpet than can
be made with any other material. Since its introduction by
us, a few years ago, it has come into very general use through-
out the country.

All our goods have our name and address upon them.
None other are genuine.

JANUARY.—In these foot notes for farmers we endeavour to indicate briefly, each month, the more important matters to be attended to during the month, not only on the farm, but also in connection with the general advancement of Agriculture by the operations of Societies and Clubs. There should be a Farmers' Club meeting at least once a month in every Agricultural district. One of the most necessary "operations" of a farmer this month is to take stock. This may be done by taking a large sheet of ruled paper and placing on one side a statement of the value of the live stock and produce of all kinds in the barn and elsewhere, implements, sums collectable for produce sold during year, &c., to which may be added the increase in annual value by estimate of land seeded down, but from which a crop has not yet been obtained. On the other side a statement is to be made of

debts due and liabilities of all kinds. The difference between the total amounts on each page will show the amount of capital invested on the farm. If the farmer is himself owner of the land, its value will have to be added, minus mortgages or other incumbrances. In order to show the results of the past year's operations, it will be necessary to take another sheet, and, in like manner, place on one side a statement of all payments for seed, manure, implements, feed, wages for labour, insurance, rent or interest, &c., and on the other page a statement of cash received or due for produce of all kinds sold within the year, or used in the farmer's family. Add to this latter list the increased value of the farm, and the difference between the two totals will indicate the profit or loss on the year's operations. Every farmer who takes an observation of this kind on the first day of January will have

a starting point and land mark that will prove of great service to him in his whole year's operations. Where thorough-bred or high-grade stock are kept there should be a special Herd Register for recording pedigrees and domestic events. In such a book, the history of each animal need occupy no more than one line. As a guide to our readers we have copied the headings of the seven-column book used at Windsor by Her Majesty the Queen for the record of her Devon Herd:—1. Number. 2. Name. 3. Sire. 4. Dam. 5. When calved. 6. From whom, or how obtained. 7. How disposed of.

FEBRUARY is a trying month for cattle. We cannot too strongly impress the necessity of care in their feeding, watering, and general treatment, at this season of the year. When they once begin to fall off it is up-hill work to attempt to stop it. Burns may be faulty, and the cold is severely felt, the root cellar may be trouble-

some to get at, and the animals miss occasional meals, the wells may be frozen and the way to watering places may be so slippery that the cattle cannot reach them without discomfort or positive accident. In order to overcome these and many other difficulties that appear in February, it is a good rule to give extra time and attention to the stock. In feeding grain and meal always mix them into cut hay, moistened, otherwise they do not undergo the second mastication, but pass through the alimentary canal before a large portion of their nutritious material has been absorbed. Cattle should go out every day to water. If kept on the board floors all winter they are apt to become lame, partly from want of exercise, and partly from excessive growth of their hooves, which in spring-time will be found projecting forward like Chinese slippers.

Halifax Nursery, Cor. Robie and North Sts., HERBERT HARRIS, Proprietor.

MARCH.—It is too early to commence field operations beyond the carting out of manure and preparing and placing stuff for fencing, but a good deal of work may now be done in the garden. This is hot-bed month, and how to make a hot-bed is a secret worth knowing. Select a sheltered spot, protected from animals, lying to the sun, and not far from a well or water butt. Build on this space a neat pile of manure, of such a size that when the frame is put on top, there will be a clear foot of manure outside all round. Cow manure will not heat at this season. Horse manure will not heat at this season, if the animal has not been fed upon oats or some kind of grain. Keeping these facts in view you can select your manure, or make such a mixture as will give the degree of heat required. Spread over the manure, inside

the frame, about four or five inches of very fine soil; this should have been prepared in the Fall, and kept dry under cover all winter,—otherwise it is likely now to be a hard frozen mass. The glass ashes are then to be put on and kept close till the hot bed heats; the steam and heat will start the seeds of weeds, which may be allowed to grow. Air is then given, and when the heat modifies, weed and rake the surface and sow your spring seeds,—carniflowers, cabbages, celery, tomatoes, &c., for the kitchen garden; and stocks, verbenas, petunias, asters, balsams, and such like annuals for flower-garden ornament. The seeds will bear a good deal of heat before they emerge from the soil, but as soon as the first leaves begin to appear the frame must be aired daily, taking care to avoid cold draughts.

APRIL.—Seed time commences with April. One of the greatest evils of our climate is the accident of an unfavourable seed time. Farmers who leave all their ploughing till spring time are sure to have a bad seed time. Farmers on heavy land who have not run water furrows before winter are sure to have a bad seed time. Farmers who wait for fine weather to begin their spring operations are sure to have a bad seed time. On the other hand, every farmer who is "before-handed" in his work, who has done his full ploughing well, who has his implements, and manure, and seed, as well as himself, all ready for an early start as soon as the frost leaves the soil, is sure to have a good seed time. It is not the climate that is to blame, but our neglect in not accommodating our operations to it. Now that the cultivation of wheat is increasing in this Province, increased attention is being given to the preparation of the soil, and grubbers and cultivators are

taking the place of ploughs for turning up the land in spring. Every farmer should pride himself in raising his own wheat. Should the season prove early, and the soil be in a condition to admit of cultivation, all those crops that do not suffer from early spring frosts and require a long season, or the cool weather of spring, for their successful culture, should now be put in. The crops that especially require early sowing are peas, broadbeans, parsnips, onions, carrots. Towards the close of the month, the fields generally may be in a condition for working. Field peas, horse beans, tares, oats, and wheat should be put in as early as possible. Wherever the land is dry potatoes cannot be put in too soon. The gardens should be gone over, and all small fruits, such as currants, gooseberries, strawberries, raspberries, &c., carefully dressed. If manured the previous fall so much the better.

Halifax Nursery, Cor. Robie and North Sts., HERBERT HARRIS, Proprietor.

MAY. — May is especially the garden month. Flower beds have now to be worked and trimmed, and, as soon as the weather becomes warm enough, summer bedding plants should be put out. The best way to judge of the plants suited for your flower garden is to walk through the Public City Gardens of Halifax, and take note of the most effective kinds. Any nurseryman in the city will supply your order. The Gardens are open daily during the season, from 7 a. m. to sunset, and on Sundays from 10 a. m. to sunset. Dogs are not tolerated, and those found will be destroyed. This we quote from the Notice of the Commissioners. We have asked Mr. Power, the Superintendent, to give our readers the benefit of his extensive experience in regard to the bedding plants suitable for our climate, and he has kindly prepared the following list, which may be taken as a safe guide:—

A Superior Stock of Sponges at SMITH'S Drug Store.

JUNE.—All seed crops not yet committed to the soil should be put in without delay. After the 1st day of June it is not too early to sow any kind of seed suitable for our climate. The drill crops put in during April and May will now require attention, first in the way of hand hoeing, where this has to be done, and secondly by the use of the horse hoe or cultivator. But there are still some crops

to be planted or sown. Put out cabbages and cauliflower, but only in soil that has been well worked and well enriched. The *Haltia*, or turnip flea, is the great enemy of the cabbage; all efforts at his destruction have failed, and the only effective way of waging war with him is to treat him generously by sowing, between the cabbage rows, common white mustard, the young seedling plants of which are far more palatable than cabbage. Tomatoes also may be set out later in the month. Ground cherries do best when they come up from seed in the soil, which they will do for years. Finish planting everything now in field and garden, such as Indian corn, bush and pole beans, cucumbers, squashes, melons. Tender plants may now be put out in the flower beds. Do not touch strawberry plants by working or hoeing, and do not now hoe around raspberry canes, otherwise the fruit will not form.

Celery may be planted out at the end of the month. If there are still any "farmers" in the Province who are not members of an Agricultural Society, or if no such Society exists in their district, then the duty devolves upon them this month of joining a Society or organizing a new one. There can be no general progress among our farmers without co-operation, for the obtaining of suitable thorough-bred animals of the very highest class is beyond the reach of individuals. The reason attention is called to the matter this month is that a *new* Society desiring to participate in the Legislative grant-in-aid requires to send in the declaration required by Sec. 13 of the Act *before the first day of July*.

month of seed-time, yet Turnip sowing may still be done. Some even prefer to sow their Swedes this month, and the soft Turnips for immediate feeding need not necessarily be sown till the end of July. The ground should have undergone a thorough pulverization. Light sandy soil is the best for Turnips. They start best after the ground is warm, but the bulbs swell most rapidly during the cool dewy nights of Autumn. The soil must be worked to a deep or made too fine for Turnips. Town manures are valued for this crop; and crushed bones have been applied with the best effect, either when covered in the drills in the manner of ordinary dung, or sown by machine along with the seeds, so as to be in

immediate contact with the latter. Guano has been largely used of late years. Superphosphate is very efficacious. One point of Turnip culture that is often neglected in Nova Scotia, although well understood elsewhere, is that the seed should be put in the moment the soil is prepared. If the earth of the prepared drill gets dried up in the sun before the seed is committed to it, how can the latter be expected to germinate. Hoeing and weeding of all drill crops should be carried on actively this month and completed before haying time. Get your haying apparatus and implements in order. Get the kitchen and flower gardens in good order before haying begins, as there will be "no time" then.

are working into a mixed husbandry, so that cattle may not be fed on hay all winter and pastured in summer, but fed in winter on straw and roots and coarse grain, and in summer partially or wholly on green fodder in-doors. This is the only way to enrich a farm, or to attain to anything like high farming. We therefore recommend our readers to note at this season how convenient it is to have a field of tares or green oats or barley or Indian corn or rape, or any other green eatable thing for the cattle to grow or fatten upon when the pastures are all burnt up. After haying there will be work in the garden and especially in the orchard. Look after the ripening fruit, destroy caterpillars, if any still remain; pick the early August apples, and send them into market. When the rains come, beds of strawberries may be made up. See that the ground is well drained and enriched with old manure. Mushrooms now appear in the horse pastures.

SEPTEMBER. - It is the duty of every farmer in the Province to visit the Annual Agricultural Exhibition, and to take his family with him, in order that they may realize the advances that are being made in the culture of the soil, and the improvement of farm animals. Those enterprising farmers who are looking forward to taking prizes at the Fall Exhibition will now be busy with their live stock. Feed is the main thing to fit an animal for Exhibition, but there are other matters to be attended to as well, such as careful grooming and kindly treatment. It will be proper now to estimate what stock should be kept during the ensuing winter, so that any surplus may be sold off, either in present condition or after being fattened off with some extra feed, which is easily accomplished at this season on waste material, when grain is being cleaned and roots taken up. Sheep should be dipped or washed with some suitable sheep dip, if there is any appearance of ticks,

as the eggs hatch out in winter time and the young ticks are very troublesome to the sheep, causing loss not only of wool, but of condition and health. It is a good plan to wash or smear twice a year, in Spring when the wool is taken off, and in Fall when the eggs are being laid in the wool. A good smear may be made with butter and sulphur.

OCTOBER.—This is the happiest month for the farmers, for in it they gather in the crops, which are the most anxious objects of their cares. Roots ought to be cultivated on every farm to a much larger extent than they are at the present time in Nova Scotia. We say nothing about grain, because every farmer is likely to look after that, and harvest it carefully. But in regard to root crops there is a good deal of misconception. To take up and store roots successfully is a simple

art when properly understood, but the frequent destruction of roots in the cellar shows that it is not always understood or carried out. Potatoes should be dug in dry weather, and allowed to dry completely on the surface before being put together in heaps or in the cellar; the best way is to put them on a barn floor and exclude the light, otherwise they will become green and acquire a bitter taste and poisonous qualities. Mangels, turnips and carrots should be topped and the fine root fibres cut off. Before storing they should, in like manner, be exposed to dry air that the wounds may heal over; if put at once into the cellar, the wounded tissue will begin to ferment, and a large portion of the roots will be rotted by contact. If facts such as these are kept clearly in view, no farmer need lose his roots. Of course the cellar must be kept well aired and dry, and frost carefully excluded.

Fortunately we have no Colorado beetles to destroy our Potatoes in this Province.

NOVEMBER.—The improvement of cattle has at length taken a secure hold of the people of Nova Scotia. This improvement is being carried out principally through the agency of Agricultural Societies. These Societies are apt to forget that their arrangements for the ensuing season, in regard to animals, are most profitably made at this time of year. Every society keeps, or ought to keep, a sufficient number of male animals for the use of members. If the selection and purchase of these be deferred till Spring time, large prices have to be paid, and the demand is usually so great that suitable animals cannot be obtained. For beef cattle the Short Horn Durham breed is the best; their growth is more rapid than that of any other kind. For milk alone, Ayrshires are to be preferred, Devons make the best working oxen, are quick, active, and easily fed, and soon fatten in the wild

pastures for beef. For domestic cows in the city the creamy Alderneys or Jerseys are most suitable. As soon as the root crops are all cleared off the fields, and the weeds and potato vines are put in heaps to rot, the farmer should employ his whole strength of man and beast in fall ploughing. Whether on old or new land, fall ploughing is a most important operation. Without it a farm cannot be worked to advantage. After ploughing, do not forget to go carefully over the water furrows to make way for the exit of the floods of rain and melting snows that are sure to soak your fields before seed time. A well ploughed, well drained, field may be sown in Spring as soon as the frost is gone, whilst one that is irregularly ploughed, or has no water furrows, may long remain a puddle, defying every attempt to improve its condition. The best part of what is too often left to be "Spring work" is done in the month of November. All land intended for oats, peas, and horse beans should be effectively worked this month.

DECEMBER.—Under each month we have endeavoured to indicate matters that most urgently require the attention of the farmer. Last but not least we call his attention to his position as the member of a live Agricultural Society, in which, by example or precept, he may make his personal influence widely felt, and thereby conduce to the prosperity and advancement of by far the most important industrial interest of the Province. There are now nearly eighty Agricultural Societies in this Province, with a Membership of more than five thousand farmers. These societies are organized under the Central Board of Agriculture, and each Society is entitled to draw from the Provincial Treasury, (through the Board), an annual grant in aid to promote its operations. The special purpose of a Society is to improve the live stock of its district, which is accomplished by obtaining and keeping for the use of Members superior male animals, such as bulls, rams and boars, Societies

ments not previously used in the district. Exhibitions are held by some societies
or by the Societies of a County combining. The whole of the Societies of the
Province meet on the second Monday of December, each in its respective district,
when the members receive the Directors' Report, and select officers for the ensuing
year. There is still ample room for the formation of new societies in some of the
Counties, and in all the Societies may be much strengthened by an increase of
Membership. Full information as to the method of organising Societies may be
obtained on application to the member of the Board for the District, (see Board

The publications circulated are mainly those of the Religious Tract Society of London, and other non-denominational publishing houses. About \$44,000 have been spent in Colportage,—and about ninety-seven years of labour were devoted to this object. Religious Books, Tracts, Magazines, Sabbath School Papers, Libraries at half price, &c., are specialties of the Society's Depository. The operations of the Society are directed by an Executive Committee which meets monthly, and by Sub-Committees on Colportage, Publications and Finance.

This Cotton will be found quite equal to American in appearance, and, owing to the yarn being harder twisted, it will prove much more durable.

It is made with the smallest possible quantity of sizing, and is consequently very much superior to any English cotton imported.

Our Grey Cotton has our Stamp upon it.

ROBINSON'S PHOSPHORIZED EMULSION

(REGISTERED TRADE MARK)

OF

COD LIVER OIL,

WITH

Lacto-Phosphate of Lime,

FOR

**Pulmonary Consumption, Coughs, Bronchitis, Aphonia,
Chronic Rheumatism, Loss of Nervous Power, General
Debility, Emaciation, Scrofula, Scrophulous and
Syphilitic Ulcers, Rickets, Anæmia, Chlorosis,
Amenorrhœa, Leucorrhœa, and all impurities
of the Blood,**

Is now the STANDARD PREPARATION of COD LIVER OIL, and as a PHARMACEUTICAL PRODUCT, meets with the approbation of the *Medical Faculty*, and is largely prescribed by them in their daily practice—combining as it does the *medicinal virtues* of COD LIVER OIL of the finest quality; LIME, in the desirable form of the *Lacto-Phosphate*; SODA, as a *Hypophosphite*; PHOSPHORUS, in its most eligible form, and IRON, the great *Blood-Producing* element.

As an illustration of the manner in which it is spoken of by those who have tried it, read the following communication from Mr. George Sewell, of Memramcook, N. B., who writes from Moncton, N. B., under date of May 7, 1878:—

J. H. ROBINSON, Esq., St. John, N. B.,

DEAR SIR,—In January last I came to Moncton from Memramcook to consult a Physician, as I was in the last stages of Consumption. When I arrived here I had at once to go to my bed, and was so low I never expected to leave it. A Physician was called who pronounced my case as hopeless; that I might live a week or two, but certainly not more. As a last resort he recommended **Robinson's Emulsion of Cod Liver Oil with Lacto-Phosphate of Lime**. I purchased a bottle and after taking the first dose I commenced to improve. It seemed, after taking a dose, as if I had eaten a good hearty meal. I have continued taking it ever since and am rapidly improving. I am confident that had it not been for your Oil I would have been in my grave to-day. You are at liberty to use this in any way you wish, as I am anxious to let others, who are afflicted in the same way, know, in the hope that they, too, may receive the same benefit.

And again, dated June 22, 1878:

J. H. ROBINSON, Esq.,

DEAR SIR,—I wrote you in May last informing you of the wonderful cure your **Phosphorized Emulsion of Cod Liver Oil with Lacto-Phosphate of Lime** had made in my case, and, at the same time, promising to write you from time to time to let you know how I was getting along. I am much better in every way; am stronger; can walk a good long distance without getting tired. Sleep well and eat a hearty meal. In fact I am a new man in every respect, and those who saw me three months ago and see me now, can hardly believe I am the same person.

The above are facts, and believing that ingratitude is one of the unpardonable sins, I feel it a duty to tell you of what, under a kind Providence, your preparation has done for me. Wishing you every success, &c., &c.

For sale by Druggists and General Dealers. Price \$1.00 per bottle; six for \$5.00.
