TO

SAMUEL WEGG, Efq. - Governor,
Sir JAMES'WINTER LAKE, Deputy Governor,
a ND
THE REST OF THE COMMITTEE
OF THE HONOURABLE
HUDSON'S BAT COMPANY. m:

HONOURABLE SIRS,
A S the following Journey was undertaken at your Requeft and Expence, I feel it no lefs my Duty than my Inclination to addrefs it to you; hoping that my humble Endeavours to relate, in a plain and unadorned Style, the various Circumftances and Remarks which your Approbation.

I am, with much Efteem and Gratitude, HONOURABLE SIRS,

Your moft obedient, and moft obliged humble Servant,

SAMUEL HEARNE.

## $\begin{array}{lllllll}P & R & E & F & A & C & E .\end{array}$

MR. Dalrymple, in one of his Pamphlets relating to Hudfon's Bay, has been fo very particular in his obfervations on my Journey, as to remark, that I have not explained the conftruction of the Quadrant which I had the misfortune to break in my fecond Journey to the North. It was a Hadley's Quadrant, with a bubble attached to it for an horizon, and made by Daniel Scatlif of Wapping. But as no inftrument on the fame principle could be procured when I was fetting out on my laft Journey, an old Elton's Quadrant, which had been upwards of thirty years at the Fort, was the only inftrument I could then be provided with, in any refpect proper for making obfervations with on the land.

Mr. Dalrymple alfo obferves, that I only inferted in my laft Journal to the Company, one obfervation for the latitude, which may be true; but I had, neverthelefs, feveral others during that Journey, particularly at Snow-bird Lake, Thelwey-aza-yeth, and Clowey, exclufive of that mentioned in the Journal taken at Conge-cathawhachaga. But when I was on that Journey, and for feveral

$$
\begin{array}{lllllll}
P & R & E & A & C & E .
\end{array}
$$

ycars after, I little thought that any remarks made in it would ever have attracted the notice of the Public: if I had, greater pains might and would have been taken to render it more worthy of their attention than it now is. At that time my ideas and ambition extended no farther than to give my employers fuch an account of my proccedings as might be fatisfactory to them, and anfwer the purpore which they had in view ; little thinking it would ever come under the infpection of fo ingenious and indefatigable a geographer as Mr. Dalrymple muft be allowed to be. But as the cafe has turned out otherwife, I have at my leifure hours recopied all my Journals into one book, and in fome inftances added to the remarks I had before made; not fo much for the information of thofe who are critics in gengraphy, as for the amufement of candid and indulgent readers, who may perhaps feel themfelves in fome meafure gratified, by having the face of a country brought to their view, which has hitherto been entirely unknown to every European except myfelf. Nor will, I flatter myfelf, a defcription of the modes of living, manners, and cuftoms of the natives, (which, though long known, have never been defcribed ${ }_{n}$ ) be lefs acceptable to the curious.

I cannnot help obferving, that I feel myfelf rather hurt at Mr. Dalrymple's rejecting my latitude in fo peremptory a manner, and in fo great a proportion, as he has done; becaufe, before I arrived at Conge-cathawhachaga, the

Sun did not fet during the whole night: a proof that I was then to the Northward of the Arctic Circle. I may be allowed to add, that when I was at the Coppor River, on the eighteenth of July, the Sun's declination was but $21^{\circ}$, and yet it was certainly fome height above the horizon at midnight; how, much, as I did not then remark, I will not now take upon me to fay; but it proves that the latitude was confiderably more than Mr. Dalrymple will admit of. His affertion, that no grafs is to be found on the (rocky) coaft of Greenland farther North than the latitude of $65^{\circ}$, is no proof there fhould not be any in a much higher latitude in the interior parts of North America. For, in the firft place, I think it is more than probable, that the Copper River empties itfelf into a fort of inland Sea, or extenfive Bay, fomewhat like that of Hudfon's: and it is well known that no part of the coaft of Hudfon's Straits, nor thofe of Labradore, at leaft for fome degrees South of them, any more than the Eaft coaft of Hudfon's Bay, till we arrive near Whale River, have any trees on them; while the Weft coalt of the Bay in the fame latitudes, is well clothed with timber. Where then is the ground for fuch an affertion? Had Mr. Dalrymple confidered this circumftance only, I flatter myfelf he would not fo haftily have objected to woods and grafs being feen in fimilar fituations, though in a much higher latitude. Neither can the reafoning which Mr. Dalrymple derives from the error I committed in eftimating the diftance to Cumberland Houfe, any way affect the queftion under con-

Fideration; becaufe that diftance being chiefly in longitude, I had no means of correcting it by an obfervation, which was not the cafe here.

I do not by any means wrifh to enter into a difpute with, or incur the difpleafure of Mr. Dalrymple; but thinking, as I do, that I have not been treated in fo liberal a manner as I ought to have been, he will excufe me for endeavouring to convince the Public that his objections are in a great meafure without foundation. And having done fo, I fhall quit the difagreeable fubject with declaring, that if any part of the following theets fhould afford amufement to Mr . Dalrymple, or any other of my readers, it will be the higheft gratification I can receive, and the only recompence I defire to obtain for the hardfhips and fatigue which I underwent in procuring the information contained in them.

Being well affiared that feveral learned and curious gentlemen are in poffeffion of manufcript copies of, or extracts from, my Journals, as well as copies of the Charts, I have been induced to make this copy as correct as poffible, and to publifh it; efpecially as I obferve that fcarcely any two of the publications that contain extracts from my Journals, agree in the dates when I arrived at, or departed from, particular places. To rectify thofe difagreements I applied to the Governor and Committee of the Hudfon's Bay Company, for leave to perufe my original Journals. This was granted with the greateft affability

## P R E F A C E.

and politenefs; as well as a fight of all my Charts relative to this Journey. With this affiftance I have been enabled to rectify fome inaccuracies that had, by trufting too much to memory, crept into this copy; and I now offer it to the Public under authentic dates and the beft authorities, however widely fome publications may differ from it.

I have taken the liberty to expunge fome päflages which were inferted in the original copy, as being no ways interefting to the Public, and feveral others have undergone great alterations; fo that; in fact, the whole may be faid to be new-modelled, by being blended with a variety of Remarks and Notes that were not inferted in the original copy, but which my long refidence in thie country has enabled me to add.

The account of the principal quadrupeds and birds that frequent thofe Northern regions in Summer, as well as thofe which never migrate, though not defcribed in a fcientific manner, may not be entirely unacceptable to the moft fcientific zoologifts; and to thofe who are unacquainted with the technical terms ufed in zoology, it may perhaps be more ufeful and entertaining, than if I had defcribed them in the moft claffical manner. But I muft not conclude this Preface, without acknowledging, in the moft ample manner, the affiftance I have received from the perufal of Mr. Pennant's Arctic Zoology; which has enabled me to give feveral of the birds their proper

$$
\begin{array}{lllllll}
\mathbf{P} & \mathbf{R} & \mathbf{E} & \mathrm{F} & \mathrm{~A} & \mathbf{C} & \mathbf{E}
\end{array}
$$

names; for thofe by which they are known in Hudfon's Bay are purely Indian, and of courfe quite unknown to every European who has not refided in that country.

To conclude, I cannot fufficiently regret the lofs of a confiderable Vocabulary of the Northern Indian Language, containing fixteen folio pages, which was lent to the late Mr. Hutchins, then Correfponding Secretary to the Company, to copy for Captain Duncan, when he went on difcoveries to Hudfon's Bay in the year one thoufand feven hundred and ninety. But Mr. Hutchins dying foon after, the Vocabulary was taken away with the reft of his effects, and cannot now be recovered; and memory, at this time, will by no means ferve to replace it.

## INTRODUCTION.

For many years it was the opinion of all ranks of people, that the Hudfon's Bay Company were averfe to making difcoveries of every kind; and being content with the profits of their fmall capital, as it was then called, did not want to increafe their trade. What might have been the ideas of former members of the Company refpecting the firft part of thefe charges I cannot fay, but I am well affured that they, as well as the prefent members, have always been ready to embrace every plaufible plan for extending the trade. As a proof of this affertion, I need only mention the vaft fums of money which they have expended at different times in endeavouring to eftablifh fifheries, though without fuccefs: and the following Journey, together with the various attempts made by Bean, Chriftopher, Johnfton, and Duncan, to find a North Weft paffage, are recent proofs that the prefent members are as defirous of making difcoveries, as they are of extending their trade.

That air of myftery, and affectation of fecrecy, perhaps, which formerly attended fome of the Company's proceedings in the Bay, might give rife to thofe conjectures; and the unfounded affertions and unjuft afperfions of Dobbs,

Ellis, Robfon, Dragge, and the American Traveller, the only Authors that have written on Hudfon's Bay, and who have all, from motives of intereft or revenge, taken a particular pleafure in arraigning the conduct of the Company, without having any real knowledge of their proceedings, or any experience in their fervice, on which to found their charges, pult have contributed to confirm the public in that opinion. Moft of thofe Writers, however, advance fuch notorious abfurdities, that none except thofe who are already prejudiced againft the Company can give them credit*.

Robfon, from his fix years refidence in Hudfon's Bay and in the Company's fervice, might naturally have been fuppofed to know fomething of the climate and foil immediately round the Factories at which he refided; but the whole of his book is evidently written with prejudice, and dictated by a fpirit of revenge, becaufe his romantic and inconfiftent fchemes were rejected by the Company. Befides, it is well known that Robfon was no more than a tool in the hand of Mr. Dobbs.

The American Traveller, though a more elegant writer, has ftill lefs claim to our indulgence, as his affertions are

[^0]
## INTRODUCTION.

a greater tax on our credulity. His faying that he difcovered feveral large lumps of the fineft virgin copper *, is fuch a palpable falfebood that it needs no refutation. No man, either Englifh or Indian, ever found a bit of eopper - in that coninty to the South of the feventy-firt degree of latitude, unlefs it bad been accidentally dropped by fome of the far Northern mndians in their way to the Company': Factory.

The natives who range over, rather than inhabit, the large track of land which lies to the North of Churchill River, having repeatedly brought famples of copper to the Company's Factory, many of our people conjectared that it was found not far from our fettlements; and as the Indians informed them that the mines were not very diftant from a large river, it was generally fuppofed that this river muft empty itfelf into Hudfon's Bay; as they could by no means think that any fet of people; however wandering their manner of life might be, could ever traverfe fo large a track of country as to pafs the Northern boundary of that Bay, and particularly without the affiftance of water-carriage. The following Journal, however, will thew how much thofe people have been miftaken, and prove alfo the improbability of putting their favourite fcheme of mining into practice.

[^1]The accounts of this grand River, which fome have turned into a Strait, together with the famples of copper, were brought to the Company's Factory at Churchill River immediately after its firft eftablifhment, in the year one thoufand feven hundred and fifteen; and it does not appear that any attempts were made to difcover either the river or mines till the year one thoufand feven hundred and nineteen, when the Company fitted out a hip, called the Albany Frigate, Captain George Barlow *, and a floop, called

- Capain Barlow was Governor at Albany Fort when the French went over land from Canada to befiege it in 1704. The Canadians and their Indian guides lurked in the neighbourhood of Albany for feveral days before they made the attack, and killed many of the cattle that were grazing in the marthes. A faithful Home-Indian, who was on a hunting excurfion, difcovering thofe ftrangers, and fappofing them to be enemies, immediately returned to the Fort, and informed the Governor of the circumftance, who gave little credit to it. However, eyery mearure was taken for the defence of the Fort, and orders were given to the Mafter of a lloop that lay at fome diftance, to come to the Fort with all polfibte expedition on hearing a gun fired.
Accordingly, in the middle of the night, or rather in the morning, the French came before the Fort, marched up to the gate, and demanded entrance. Mr. Barlow, who was then on the watch, told them, that the Governor was ancep, but he would get the keys immediately. The French hearing this, expected no oppofition, and flocked up to the gate as clofe as they could ftand. Barlow took the advantage of this opportunity, and inftead of opening the gate, only opened two port holes, where two fix-pounders ftood loaded with grape fhot, which were inftantly fired. This difcharge killed great numbers of the French, and among them the Commander, who was an Irifman.

Such an unexpected reception made the remainder retire with great precipiation; and the Mafter of the loop hearing the guns, made the beft of his
called the Difcovery, Captain David Vaughan. The fole command of this expedition, however, was given to Mr: James Knight, a man of great experience in the Company's fervice, who had been many years Governor at the different Factories in the Bay, and who had made the firf fettlement at Churchill River. Notwithftanding the experience Mr. Knight might have had of the Company's bufinefs, and his knowledge of thofe parts of the Bay where he had refided, it cannot be fuppofed he was well acquainted with the nature of the bufinefs in which he then engaged, having nothing to direct him but the flender and imperfect accounts which he had received from the Indians, who at that time were little known, and lefs underftood.
way up to the Fort; but fome of the French who lay concealed under the banks of the river killed him, and all the boat's crew.

The French retired from this plece with reluetance; for fome of them were heard fhooting in the neighbourhood of the Fort ten days after they were repulied; and one man in particular walked up äd down the platform leading from the gase of the Fort to the Launch for a whole day. Mr. Fullarton, who was then Governor at Albany, fpoke to him in French, and offered him kind quarters if he chofe to accept them; bur to thofe propolais he made no reply, and only thook his head. Mr. Fullarton then told him, that unlefs he would refign himelf up as a prifoner, he would moft affuredty fhoot him; on which the man advanced nearer the Fort, and Mr. Fullarton thot him out of his chamber window. Perhaps the hardihips this poor man expected to encounter in his return to Canada, made him prefer death; but his refufing to receive quaster from fo humane and generous an enemy as the Englifh, is aftoninaing.

Thofe difadrantages, added to his advanced age, be being thea near eighty, by noo memux difrouraged this bolk adventurer; who was fo prepoffrffed of his fuoceets; and of the great advantage that would larife from his difoo veries, that he procured, and tock with him; fome lange' iron-bound chefts, to hold gatd duft and other vafuables, which he fondly : flattered binfelf: wiere to be found in thofe parts.

The firf paragraph of the Company's Orders to Mr. Knight on this occafion appears to be as follows:
". To Captain James Kmight.
" S I R,
$4^{\text {th }}$ June, 1719.
"From the experience we have had of your abilities "" in the management of our affairs, we have, upon your. " application to us, fitted out the Albany frigate, Captain "George Barlow, and the Difcovery, Captain David "Vaughan Commander, upon a difcovery to the North " ward; and to that end have given you power and au" thority to act and do all things relating to the faid " voyage, the navigation of the faid Mip and floop only " excepted; and have given orders and intructions to our " faid Commanders for that purpofe.
" You are, with the firft opportunity of wind and " weather, to depart from Gravefend on your intended " voyage,
as rogage, mad by God's permiffion, to find ote the Straits " of Anian io order to difeover gold and othrer vaftable

Mr. Knight foor left Gravefend, and proweeded on his voyage; but the fhip not returning to England that year, as was expected; it was jadged that fhe hiad wintered in Hudfon's Bay; and baving on boarda goed flock of provifions, a houle in frame, together with all neceflly mechanies, and a great affortment of trading goods, little or no thoughts were entertained of their not being in fafety: but as neither flip nor floop returned to England in the following year, (one thoufand feven huindred and iwenty,) the Company much alarmed for their welfare; and, by their flip whieti went to Churchill in the year one thoufand feven hundied and twenty-one, they fent orders for a floop-called the Whale-Bone, John-Scroggs Mafter, to go in fearch of them; but the flif not arriving in Churchill till late in the year, thofe orders could not be put in execution till the Summer following (one thoufand feven hundred and twenty-two).

The North Weft coaft of Hudfon's Bay being little known in thofe days, and Mr. Scroggs finding himfelf greatly embarraffed with fhoals and rocks, returned to Prince of Wales's Fort without making any certain difcovery refpeeting the above fhip or floop; for all the marks he faw among the Efquimaux at Whale Cove fcarcely
amounted to the fpoils which might have been made from a trifling accident, and confequently could not be confidered as figns of a total Bipwreck.

The ftrong opinion which then prevailed in Europe refpecting the probability of a North Weft paffage by the way of Hudfon's Bay, made many conjecture that Meffrs. Knight and Barlow had found that paffage, and had gone through it into the South Sea, by the way of California. Many years elapfed without any other convincing proof occurring to the contrary; except that Middleton, Ellis, Bean, Chriftopher, and Johnfton, had not been able to find any fuch paffage. And/notwithftanding a floop was annually fent to the Northward on difcovery, and to trade with-the Efquimaux, it was the Summer of one thoufand feyen hundred and fixty-feven, before we had pofitive proofs that poor Mr. Knight-and Captain Barlow had been loft in Hudfon's Bay.

The Company were now carrying on a black whale fifhery, and Marble Illand was made the place of rendezvous, not only on account of the commodioufnefs of the harbour, but becaufe it had been obferved that the whales were more plentiful about that ifland than on any other part of the coaft. This being the cafe, the boats, when on the look-out for filh, had frequent occafion to row clofe to the ifland, by which means they difcovered a new harbour near the Eaft end of it, at the head
of which they found guns, anchors, cables, bricks, a fmith's anvil, and many other articles, which the hand of time had not defaced, and which being of no ufe to the natives, or too heavy to be removed by them, had not been taken from the place in which they were originally laid. The remains of the houfe, though pulled to pieces by the Efquimaux for the wood and iron, are yet very plain to be feen, as alfo the hulls, or more properly fpeaking, the bottoms of the fhip and floop, which lie funk in about five fathoms water, toward the head of the harbour. The figure-head of the fhip, and alfo the guns, $\mathcal{E}^{\circ} c$. were fent home to the Company, and are certain proofs that Meffrs. Knight and Barlow had been loft on that inhofpitable ifland, where neither ftick nor ftump was to be feen, and which lies near fixteen miles from the main land. Indeed the main is little better, being a jumble of barren hills and rocks, deftitute of every kind of herbage except mofs and grafs; and at that part, the woods are feveral hundreds of miles from the fea-fide.

In the Summer of one thoufand feven hundred and fixty-nine, while we.were profecuting the filhery, we faw feveral Efquimaux at this new, harbour; and perceiving that one or two of them were greatly advanced in years, our curiofity was excited to afk them fome queitions concerning the above fhip and floop, which we were the better enabled to do by the affiftance of an Efquimaux, who was then in the Company's fervice as a linguift, and annually failed in one of their veffels in that character. The
account which we received from them was full, clear, and unreferved, and the fum of it was to the following purport:

When the veffels arrived at this place (Marble Ifland) it was very late in the Fall, and in getting them into the harbour; the largeft received much damage; but on being fairly in, the Englifh began to build the houfe, their number at that time feeming to be about fifty. As foon as the ice permitted, in the following Summer, (one thoufand feven hundred and twenty,) the Efquimaux paid them another vifit, by which time the number of the Englifh was greatly reduced, and thofe that were living feemed very unhealthy. According to the account given by the Efquimaux they were then very bufily employed, but about what they could not eafily defcribe, probably in lengthening the long-boat; for at a little diftance from the houfe there is now lying a great quantity of oak chips, which have been moft affuredly made by carpenters.

Sicknefs and famine occafioned fuch havock among the Englifh, that by the fetting in of the fecond Winter their number was reduced to twenty. That Winter (one thoufand feven hundred and twenty) fome of the Efquimaux took up their abode on the oppofite fide of the harbour to that on which the Englifh had built their houfes *, and frequently

[^2]IMTRODUCTION.

xsxid
frequently fupplied them with fuch provifions as they had, which chiefly confifted of whate's blubber and feal's flefh and train oil.. When the Spring advanced, the Ef. quimaux weat to the continent, and on their vifiting Marble Inland again, in the Summer of one thoufand fever hundred and twenty-one, they only found five of the Englifh alive, and thofe were in fuch diftrefs for provifions that they eagerly eat the feal's flefh and whale's blabber quite raw, as they purchafed it from the natives. This difordered them for much, that three of them died in a few days, and the other two, though very weak, made a flift to bury them. Those two furvived many days after the reft, and frequently went to the top of an adjacent rock; and earnefly looked to the South and Eaft, as if in expectation of fome veffels coming to their relief. After continuing there a confiderable time together, and nothing appearing in fight, they fat down clofe together, and wept bitterly. At length one of the two died, and the other's Arength was 'fo far exhaufted, that he fell down and died alfo, in attempting to dig a grave for his companion. The

[^3]INTRODUCTION.
fcults and other large bones of thiofe two men are now lying above-ground clofe to the houfe.. The longet liver was, according to the Efquimaux account; always employed in working of iron into implements for them; probably he was the armourer, or finith.

Some Northiern Indians who came to trade at Prince of Wales's Fort in the Spring of the year one thoufand feven hundred and fixty-eight, brought farther accounts of the grand river, as it was called, and alfo feveral pieces of copper; as famples of the produce of the mine near it ; which determined Mr. Norton, who was then Governor at Churchill, to reprefent it to the Company as an affair worthy of their attention; and as he went that year to England, he had an opportunity of laying all the information he had received before the Board, with his opinion thereon, and the plan which he thought moft likely to fucceed in the difeovery of thofe mines. . In canfequence of Mr. Norton's reprefentations, the Committee refolved to fend an intelligent perfor by land to obferve the longitude and latitude of the river's mouth, to make a chart of the countriy he might walk through, with fuch remarks as occurred to him during the Journey; when I was pitched on as a proper perfon to conduct the expedition. By the Ghip that went to Churchill in the Summer of one thoufand feven hundred and fixty-nine, the Company fent out fome aftronomical inftruments, very portable, and fit for fuch obfervations as they required me

## 

to make, and at the fame time requefted me to undertake the Journey, promifing to allow me at my retura, a gratuity proportionable to the trouble rand fatigue I might undergo in the expedition *.

I did

* The conditions offered me on this occafion cannot be better expreffed than in the Company'sown words, which I have tranfcribed from their private letter to me, dated 25 th May. 1769.
"From the grod opinion we entertain of you, and Mr. Norton's recom$\sigma$ mendation, we have agreed to raife your wages to $£ \quad$ per axnemf for$\sigma$ two years, and have placed you in our Council at Prince of Wales's Fort; " and we thould have been ready to advance you to the command of the "Charlotte, according to your requeft, if a matter of mose inmediate confe" quence had not intervened.
"c Mr. Norton has propofed an inland Journey, far to the North-of Ghurchi"ill, to promote an extenfion of our trade, as well as for the difcovery of " a North Weft Paffage, Copper Mines, \&re. ; and as an undertaking of this " nature requires the attention of a.perfon capable-iof taking an obfervation " for determining the longitude and latitude, and alfo diftances, and the courfe " of rivers and their depths, we have fixed upon you (efpecially as it is re" prefented to us to be your own inclination) to conduct this Joumey, wish ${ }^{6}$ proper affiftants.
"We therefore hope you will fecond our expectations in readily perform" ing this fervice, and upon your return we thall willingly make you any ac" knowledgment fuitable to your trouble therein.
"We highly approve of your going in the Speedwell, to affift on the whale. " fifbery hat year, and beartily wifh you healch and fuccefs in the prefent ex"pedition."

The

## INTRODUCTYON

1 did not hefitate to comply with the requeft of the Company, and in the November following, when fome Northern Indians came to trade, Mr. Norton, who was then returned to the command of Prince of Wales's Fort, engaged fuch of them for my guides as he thought were moft likely to anfwer the purpofe; but none of them had been at this grand river. I was fitted out with ewery thing thought neceffary, and with ammunition to ferve two years. I was to be accompanied by two of the Company's fervants, two of the Home-guard * (Southern) Indians,

The Company had no fooner perufed my Journals and Charts, than they ordered a handfome fum to be placed to the credit of my account; and in the two firft. paragraphs of their letter to me, dated 12th May 1773, they exprefs themfelves in the following words:
" Mf. Samuel Hzarne,
"S IR,
"Your letter of the 28th Auguft lant gave us the agreeable pleafure to hear " of your fafe return to our Factory. Your Journal, and the twe charts you
" fent, fufficiently convinces us of your very judicious remarks.
"We have marurely confidered your great afliduity in the various accist dents which occurred in your feveral Journies. We hereby return you our " grateful thanks; and to manifeft our obligation we have confented to allow "you a gratuity of $£$ for thofe ferrices."

As a farther proof of the Company's being perfectly fatisfied wich my conduct while on that Journey, the Committee unanimoully appointed me Chief of Prince of Wales's Fort in the Summer of 1775 ; and Mr. Bibye Lake, who was then Gavernor, and feveral athers of the Committee, honoured me with a regular correfpondence as long as they lived.

- By the Home-guard Indians we are to undertand certain of the natives who are immediately.emptoyed undor the protection of the Company's Servants, sefide on the plantation, and are employed in hunting for the Factory.

$$
8 \text { and }
$$

and a fufficient number of Northern Indians to carty and haul my baggage, provide for me, 8fc. But for the better ftating this arrangement, is will not be improper to infert my. Inftruetions, which, with fome occafional remarks thereon, will throw macti light on the following Journal, and be the beft method of proving how far thofe orders have been complied with, as-well as hew my reafons for neglecting fome parts as unneceffary; and the impollibility of putting other parts of them in execution.
" ORDERS and INSTRUCTIONS for Mr. "Samuel Hearne, going on an Expedition by " Land towards the Latitude $70^{\circ}$ Nortb," in " order to gain a Krowtedge of the Nortbern "Indians Country, \&c. on Bebalf of the Ho" nourable Hudfon's Bay Company, in the Year " 1769.
"Mr. Samubl Hearnes
" S I R,
"Whereas the Honourable Hudfon's Bay Company
chave been informed by the report from Indians, that
" there is a great probability of confiderable advan" tages to be expected from a better knowledge of their " country by us, than what hitherto has been obtained; " and as it is the Company's earneft defire to embrace " every circumftance that may tend to the benefit of the " faid Company, or the Nation at large, they have re" quefted you to conduct this Fxpedition; and as you © have

## ANTRODUCTION

* have readily confented to undertake the prefent Journey, "y you are hereby defrred to proceed as foon as poffible, *s with William Ifbefter Eiilor, and Thomas Merriman " landfnuan, as companions, they both being willing to " accompany you; alfo two of the Home-guard Southern "Indians, who are to attend and affift you during the s' Journey; and Captain Chawchinahaw, his Lieutenant \&s Nabyah, and fix or eight of the beft Northern Indians " we can procure, with a fmall part of their families, are " to conduct you, provide for you, and affift you and "' your companions in every thing that lays in their power, " having particular orders fo to do.
" $2 \mathrm{~d} l \mathrm{y}$, Whereas you and your companions are well s" fitted-out with every thing wre think neceffiry, as alfo "a fample of light trading goods; thefe you are to dif"s pofe of by way of prefents (and not by way of trade) " to fuch far-off Indians as you may meet with, and to " fmoke your Calimut * of Peace with their leaders, in *s order to eftablifh a friendfhip with them. You are alfo " to perfuade them as much as poffible from going to war "with each other, to encourage them to exert themfelves " in procuring furrs and other articles for trade, and to "s affure them of good payment for them at the Com${ }^{\prime \prime}$ 'pany's Factory.
" It is fincerely recommended to you and your compa" nions to treat the natives with civility, fo as not to give
- The Calimut is a long ornamented ftem of a pipe, much in vfe among all the tribes of Indians who know the ufe of tobacco. It is particularty ufed in all cafes of ceremony, eitherin making war or peace; ax: att public cntertainments, orations, \&c.
INTRODUGTION.
" them any room for complaint or difguft, as they have " ftrict orders not to give you the leaft offence, but are to " aid and affift you in any matter you may requeft of them " for the benefit of the undertaking.
"If any Indians you may meet, that are coming to the "Fort, thould be willing to truft you with either food or "s clothing, make your agreement for thofe commodities, " and by them fepd me a letter, Specifying the quantity " of each article, and they hall be paid according to " your agreement. And, according to the Company's or" ders, you are to correfpond with me, or the Chief at "Prince of Wales's Fort for the time being, at all oppor" tunities: And as you have mathematical inftruments " with you, you are to fend me, or the Chief for the " time being, an account of what fatitude and longitude " you may be in at fuch and fuch periods, together with " the heads of your proceedings; which accounts are to be "s remitted to the Company by the return of their fhips*.
" 3 dly, The Indians who are now appointed your "s guides, are to conduct you to the barders of the Atha" pufcow + Indians country, where Captain Matonabbee
- No convenient opportanity offered during my laft Journey, except one, on the 22d March 1771; and as nothing material had happened during that part of my Journey, I thought there was not any neceffity for fending an extract of my Journal ; I therefore only fent a Letrer to thic Governor, informing him of my fituation with refpect to lavitude and longitude, and fome account of the ufage which I reecived from the natives, \&c.
$\dagger$ By miftake in my former Journal and Draft called Arathapefcow.
" is to meet you * in the Spring of one thoufand feven " hundred and feventy, in order to conduct you to a river reprefented by the Indians to abound with copper ore, animals of the furr kind, soc and which is faid to be fo far to the Northward, that in the middle of the Summer the Sun does not fet, and is fuppofed by the "Indians to empty itfelf into feme ocean. This river, "which is called by the Notthetn Indians Neetha-fan" Fan-dazey, or the Far Off Metal River, you are, if " polfible, to trace to the mouth, and there determine " the latitude and longitude as near as you can; but " more paiticularly fo if you find it navigable, and that "a fettlemerit can be made thère with any degree of "fafety, or benefit tơ the Company.
" Be careful to obferve what mines are near the river, " what water there is at the river's mouth, how far the "s woods are from the fea-fide, the courfe of the river, "s the nature of the foil, and the productions of it; and " make any other remarks that you may think will be " either feetlary or fativfactory. And if the faid river " be likely to be of any utility, take poffefion of it on " behalf of the Findfon's Bay Company, by cutting your

＂name on fome of the rocks，as allo the date of the ＂y year，month，；ic．＂
＂When you attempt to trace this or any other river， ＂be careful that the Indians are furnifhed with a fufficient ＂number of canoes for trying the depth of water，the ＂frength of the current，of．If by any unforefeen ＂accident or difafter you fhould not be able to reach the ＂before－mentioned river，it is earneftly recommended to ＂you，if poffible，to know the event of Wager Strait + ； ＂for it is reprefented by the tore difooverers to terminate ＂in fmall rivers and lakes．See hiow far the woods are ＂from the navigable parts of it；and whether a fettle－ ＂ment could with any propriety be made there．If this ＂Ghould prove unworthy of notice，you are to take the ＂fame method with Baker＇s Lake，which is the head of

[^5]" Bowden's or Chefterfield's Inlet ; as alfo with any " other rivers you may meet with; and if likely to be of " any utility, you are to take poffeffion of them, as be" fore mentioned, on the behalf of the Honourable Hud"fon's Bay Company. The draft of Bowden's Inlet and " Wager Strait I fend with you, that you may have a better " idea of thofe places, in cafe of your vifiting them.
"4 thly, Another material point which is recommended " to you, is to find out, if you can, either by your own " travels, or by information from the Indians, whether " there is a paffage through this continent + . It will be

- See the preceding Note.
$\dagger$ The Continent of America is much wider than many people imagine, particularly Robfon, who thought that the Pacific Ocean was but a few days journey from the Weft coart of Hudfon's Bay. This, however, is fo far from being the cafe, that when I was at my greateft Weftern diftance, upward of five hundred miks from Prince of Wales's Fort, the natives, my guides, well knew that many tribes of Indians lay to the Weft of us, and they knew no end to the land in that direction; nor have I met with any Indians, either Northern or Southern, that ever had feen the fea to the Weftward. It is, indeed, well known to the intelligent and well-informed part of the Company's fervants, that an extenfive and mumerous tribe of Indians, called E-arch-e-thinnews, whofe country lies far Weft of any of the Company's or Canadian fettlements, mouft have craffic with the Spaniards on the Weft fide of the Continent; becaufe fome of the Indians who formerly traded to York Fort, when at war with thofe people, frequently found faddles, bridles, muikets, and many orber articles, in their poffeffon, which werc undoubtedly of Spanifl manufetory.

I have feen feveral Indians who have been fo far Weft as to crofs the top of that immenfe chain of mountains which run from North to South of the continent of America. Beyond thofe mountains all rivers run to the Weflward. I muft here obferve, that all the Indians I ever heard relate their excuefions in that country, had invariably got fo far to the South, that they did not experience any Winter, nor the leaft appearance of either frof or fnow, though fometimes they have been abfent eighteen months, or two years.
" very ufeful to clear up this point, if poffible, in order to " prevent farther doubts from arifing hereafter refpecting " a paflage out of Hudfon's Bay *into the Weftern Ocean, " as hath lately been reprefented by the American Tra" veller. The particulars of thofe remarks you are to sc infert in your Journal, to be remitted home to the "Company.
" If you fhould want any fupplies of ammunition, or " other neceffaries, difpatch fome trufty Indians to the " Fort with a letter, fpecifying the quantity of each " article, and appoint a place for the faid Indians to meet " you again.
" When on your return, if at a proper time of the " year, and you fhould be near any of the harbours that " are frequented by the brigantine Charlotte, or the floop " Churchill, during their voyage to the Northward, and " you ghould chufe to return in one of them, you are de" fired to make frequent fmokes as you approach thofe " harbours, and they will endeavour to receive you by " making fmokes in anfwer to yours; and as one thou" fand feven hundred and feventy-one will probably be the " year in which you will return, theMafters of thofe veffels " at that period fhall have particular orders on that head.

* As to 2 paflage through the continent of America by the way of Hudfon's Bay, it has folong been exploded, notwithtainding what Mr. Ellis has urged in iss favour, and the place it has found in the vifionary Map of the Ameriean Traveller, that any comment on it would be quite unneceffary. My hatioude only will be a fufficient proof that no fuch paffage is in exiftence.
" It will be pleafing to hear by the frift opportunity, in "shat latitude and longitude you meet the Lexider Ma"tonabbee, and how far he thinks it is to the Coppper" mive River, ws alfo the prodathle time it may take be" fore you can return. But in cafe any thing fhould pre" vent the faid Leader from joining you, according to " expectation, you are then to procure the beft Indians " you can for your guides, and either add te, or diminifh, " your number, as you may from time to time think moft " neceffary for the good of the expedition.
"So I conclude, wifhing you and your companions " a continuance of health, together with a profperous " Journey, and a happy return in fafety. Amen.
" MOSES NORTON, Governor.
" Dated at Prince of Wales's Fort, Churchill
" River, Hudfon's Bay, North America,
" November 6th, r769."
Ifbefter and Merriman, mentioned in my Infructions, actually accompanied me during my firft fhort attempt; but the Indians knowing them to be bat common men, ufed them fo indifferently, particularly in fcarce times, that I was under fome apprehenfions of their being ftarved to death, and I thought myfelf exceedingly happy when I got them fafe back to the Factory. This extraordinary behaviour of the Indians made me determine not to take any Europeans with me on my two laft expeditions.

With regard to that part of my Inftructions which directs me to obferve the nature of the foil, the productions thereof, \& $c$. it muft be obferved, that during the whole time of my abfence from the Fort, I was invariably confined to ftony hills and barren plains all the Summer, and before we approached the woods in the Fall of the year, the ground was always covered with fnow to a confiderable depth; fo that I never had an opportunity of feeing any of the fmall plants and Chrubs to the Weftward. But from appearances, and the flow and dwarfy growth of the woods, \&f. (except in the Athapufcow country;) there is undoubtedly a greater fcarcity of vegetable productions than at the Company's moft Northern Settlement; and to the Eaftward of the woods, on the barren grounds, whether hills or vallies, there is a total want of herbage, except mofs, on which the deer feed; 2 few dwarf willows creep among the mofs; fome wihh-a-capucca and a little grafs may be feen here and there, but the latter is fcarcely fufficient to ferve the geefe and other birds of paffage during their chort ftay in thofe parts, though they are always in a fate of migration, except when they are breeding and in a moulting ftate.

In confequence of ny complying with the Company's requeft, and undertaking this Journey, it is natural to fuppofe that every neceffary arrangement was made- for the eafrer keeping of my reckoning, for $c$. under the many inconveniencies I munt be unavoidably obliged to labour in fuch an expedition. I darew a Map on a large ain of parchment, that contained twelve degrees of latitude

## INTRODUCTEON:

North, and thirty degrees of longitude Weft, of Chiurctiill Factory, and fketched all the Weft coaft of the Bay:onit; but left the interior parts blank; to be filled up during my Journey. I alfo prepared detached pieces on a much larger: fcale for every degree of latitude-aid longitude contained in the large Map. On thofe detached pieces I pricked off my daily courfes and diftaice, and enterod all hakes and rivers, ©c. that I met with; endownoping; by a ftrict enquiry of the natives, to find out the communication of one river with another, as alfo their connections with the many lakes with which that country abounds: and when opportunity offered, having corrected them by oblervations, I entered them in the general Map. Thefe and feveral other neceflary preparations, for the eafier, readier, and more correctly keeping my Journal and Chart, were alfo adopted; but as to myfelf, little was required to be done, as the nature of travelling long journies in thofe countries will never admit of carrying even the moft common article of clothing; fo that the traveller is obliged to depend on the country he paffes through, for that article, as well as for provifions. Ammunition, ufeful iton work, fome tobacco, a few knives, and ocher indifpenfable articles, make a fufficient load for any one to carry that is going a journey likely to laft twenty months, or two years. As that was the cafe, I only took the fhitt and clothes I then had on, one fpare coat, a pair of drawers, and as much cloth as would make me two or three pair of Indian ftockings, which, together with a blanket for bedding, compofed the whole of my ftock of clothing.

## A JOURNEYTOTHE

1769. The weather at that time being very mild, made it but

Norember. indifferent hauling, and all my crew being heavy laden, occafioned us to make but flort days journeys; how-
scin ever, on the eighth, we croffed the North branch of Po-co-ree-kif-co River, and that night put up in a fmall tuft of woods, which is betweer it and Seal River.' In the night, one of the Northern Indians deferted; and as all the reft of my crew were heavy laden, I was under the neceffity of hariling the fledge he had left, which. however was not very heary, as it farcely exceeded fixty pounds.-

The weather ftill continued very fine and pleafant : we directed our courfe to the Weft North Weft, and early gim in the day crofled Seal River. In the courfe of this day's journey we met feveral Northern Indians, who were going to the factory with furs and venifon; and as we had not killed any deer from our learing the Fort, I got feveral joints of venifon from thofe ftraugers, and gave them a note on the Governor for payment, which feemed perfeelly agreeable to all parties.

When ou the North Weft fide of Seal River, I afked Captain Chawchinataw the diffance, and probable time it would take, before we could reach the main woods; which he affured me would not exceed four or five days: journey. This put both me and my companions in good

## NORTHERNOCEAN.

fpirits, and we continued our courfe between the Wcft by North and North Weft, in daily expectation of arriving at thofe woods, which we were told would furnifh us with every thing the country affords. Thefe accounts were fo far from being true, that after we had walked double the time here mentioned, no figns of woods were to be feen in the direction we were then fteering; but we had frequently feen the looming of woods to the South Weft.

The cold being now very intenfe, our fmall ftock of Englifh provifions all expended, and not, the leaft thing to be got on the bleak hills we had for fome time been walking on, it became neceflary to Atrike more to the Weftwards which we accordingly did, and the next evening arrived at fome frall patches of low ferubby woods, where we faw the tracks of feveral deer, and killed a few partridges. The road we had traveried for many days before, was in general fo rough and ftony, that our fledges were daily breaking; and to add to the inconveniency, the land was fo barten, as not to afford us materials for repairing them: but the few woods we now fell in with,-amply fupplied us with neceffaries for thofe repairs; and as we were then enabled each night to pitch proper tents, our lodging was much more comfortable than it had been for many nighte before, while we were on the barren grounds, where, in general, we thought ourfeives well off if we could fcrape together as many flrubs as would make a fire; but it $\mathrm{B}_{2}$ was
1769.

## A JOURNEYTOTHE

1769. 

Nommber.
was fearcely ever in our power to make any othicr dofence: againft the weather; than by digging a hole in the fow down to the mofs, wrapping ourretives up in our clothing, and lying down in it, with our flodges fet up edgewizys to windward.

On the twenty-firft, we did mot move; fo the Indian: men wert a tuncing, and the wonde cut boles in the ice and caught a few fifh in a fmall lake, by the fide of which we had pitched our tents. At night the men returned with fome venifon, having kilhed three deer, which: was without doubt wery acceptable; bat our number being great, and the Indiaits haviag fach emormous tomachis, very litth was left but fragments after the two or three firfl good meals. Having depoured the three deer, and given fome necefliry repairs to ourr flodges and fow flioes, which only took one day, weragain proceeded on ebward the North Weft by. Weft and Wert North Weft, through low ferubly pines, intermixed wish fome dwarf larch, which is comintority exlled juitiper in Hudfon's Bay. In our toad we frequendy faw the tracks of deer, and many muk-oxen, as they are ealled there; but none of my companions were fo fortumate as to kill any of them : fo that a few partridges prese all we could get to live on, and thofe were fo fcaroe, that we feldom could kill as many as would amount to half a bird a day: for each man; which, confidering we had nothing elfe for the twenty-four hours, was in reality next to nothing.

By this time I found that Captain Chawchinahaw hac not the profperity of the undertaking at heart; he often painted the difficulkies in the worft colours, took every method to difhearten me and my European companions, and feveral times hinted his defire of our retarning back to the factory; but finding I was determined to proceed, he took fuch methods as he thought would be mof likely to anfwer his end; one of which was, that of not adminiftering towad our fupport: fo that we were a confiderable time without any other fubfiftence, but what our two home-grand (Southern) Indians procured, anci the little that I and the two European men could kin; which was very difproportionate to our wiants as we had to provide for feveral women and children who were with us.

Chawchinahaw finding that this kind of treatment was not likely to complete bis defgg, and that we were not to be flarwed into compliance, at length influenced feveral of the beft Northern Ladians to defert in the night, who took with them feveral bags of my ammuzition, fome pieces of iron work, fuch as hatchets, ice chiffels, files, \&c. as well as feveral other ufeful articles.

When I became acquainted with this piece of vil- 30 . lany, I akked Chawchinahaw the reafon of fuch behariour. To which be anfwered; that be knew nothing of the affair: but as that was the cafe, it would not be prudent,

$$
6
$$

## A JOURNEYTOTHE

1769. prudent, he faid, for us to proceed any farther; adding, Normber. that be and all the reft of his countrymen were going to ftrike off another way, in order to join the remainder of their wives and families: and after giving us a Chort account which way to fteer our courfe for the neareft part of seal River, which he faid would be our beft way homeward, he and his crew delivered me moft of the things which they had in charge, packed up their awfls, and fet out toward the South Weft, making the woods ring with their laughter, and left us to confider of our unhappy gituation, near two hundred miles from Prince of Wales's Fort; all heavily laden, and our ftrength and fpirits greatly reduced by hanger and fatigue.

Our Gituation at that time, though very alarming, would not permit us to fpend much time in reflection; fo we loaded our 1ledges to the beft advantage, (but were obliged to throw away fome bags of fhot and ball, and immediately fet out on our return. In the courfe of the day's walk we were fortunate enough to kill feveral partridges, for which we were all very thankful; as it was the firf meal we had had for feveral days: indeed, for the five preceding days we had not killed as much as amounted to half a partridge for each man; and fome days had not a fingle mouthful. While we were in this diftrefs, the Northern Indians were by no means in want; for as they always walked foremoft, they had
had ten times the chance to kill partridges, rabbits, or any other thing which was to be met with, than we had. Befide this advantage, they had great ftocks of flour, oatmeal, and other Englin provifions, which they had embezzled out of my ftock during the early part of the journey; and as one of my home Indians, called Mackachy, and his wife, who is a Northern Indian woman, always reforted to the Northern Indians tents, where they got amply fupplied with provifions when neither I nor my men had a fingle mouthfil, I have great realon to fufpect they had a principal hand in the embezzlement : indeed, both the man and his wife were capable of committing any crime, however diabolical.

This day we had fine pleafant weather for the fealon of the year: we fet out early in the morning, and arrived the fame day at Seal River, along which wre continued our courle for feveral days. In our way we killed plenty of partridges, and faw many deer; but the weather was. fo remarkably ferene that the Indians only killed two of the latter. By this time game was become fo plentiful, that all apprehenfions of ftarving were laid afide; and though we were beavily laden, and travelled pretty good days journeys, yet as our fpirits were good, our. ftrength gradually returned.

In our courfe down Seal River we met a flanger, a Northern Indian, on a hunting excurfion; and though. he

## A JOURNEYTOTHE

he had not met with any fuccers that day, yet he kindly invited us to his tent, faying he had plenty of venifon at my fervice; and told the Southern Indians, that as there were two or three beaver houfes near his tent, he fhould be glad of their affitance in taking them, for there was only one man and three wnea at the tent.

Though we were at that time far from being in wath of provifions, yet we accepted his offer, and fet off with our new guide for his tent, which, by a comparative diftance, he told us, was not above five miles from the place where we met him, but we found it to be nearer fiftoen; fo that it was the middle of the night before we annived at it. When we drew near the tent, the ufual fignal for the approach of ftrangers was given; by firing a gun or two, which was immediately anfwered by the man at the tent. On our arrival at the door, the good man of the houfe came out, fhook me by the hand, and welcomed us to his tent; But as it was too fmall to contain us all, he ordered his women to affift us in pitching our tent; and in the mean time invitod me and as many of my crew as his little habitation could contain, and regaled us with the beft in the houfe. The pipe went round pretty brifkly, and the conferfation naturally turned on the treatment we had received from Chawchinahow and his gang; which was always anfwered by our hoft with, "Ah| if "I had been there, it houid not have been fo!" when, notwithtanding hi hofpitality on the prefent occafion, he would

Having refroflied ourfilver wich a plentiful fappet, we tool leave of our holt for 2 while, and retired to our tent; but not without being made thoroughly fensible that many things would be expected from me, before I Gmaty left tbem.

Early in the marning, my Indians affifted us in taking the beaver heufer already mentioned; but the boufes being fmall, and fome of the beavers efcaping, they only killed fix, all of which were cooked the fane night, and voracioufly deroured under the denomination of a feaft I affo received from the Indians feveral joints of veaifon, to the amount of at leaft two deer; but notwichitunding I was to pay for the whole, I founce that Mackacloy and his wife got all the prime parts of the meat; and on my mentiosing it to them, there was fo much clanfhip among them, that they preferved making a prefent of it to Mackachy; to felling it to me at double the price for which venifon fells in thofe parts: a fufficient proof of the fingular advantage which a native of this country has over an Englifhman, when at fuch a diftance from the Company's Factories as to depend entirely on them for fubfiftence.
1769.

December \%

Thinking I had made my fay here long enough, I gave orders to prepare for our departure; and as I had purchafed plenty of meat for prefent ufe while we were at this tent, fo I likewife procured fuch a fupply to carry with us, as was likely to laft us to the Fort.
$\approx$ Early in the morning we took a final leave of our hoft, and proceeded on our journey homewards. One of the ftrangers accompanied us, for which at firf I could not fee his motive; but foon after our arrival at the Factory, I found that the purport of his vifit was to be paid for the meat, faid to be given gratis to Mackachy while we were at his tent. The weather continued very fine, but extremely cold; and during this part of my journey nothing material happened, till we arrived fafe at Prince of Wales's Fort on the eleventh of December, to my own great mortification, and to the no fmall furprife of the Governor; who had placed great confidence in the abilities and condua of Chawchinahaw.

$\cdots$ D
URING my ablence from Prince of Wales's Fort on ray farmer journey, feveral Northern Indians arxived in great distrefs at the Fastory, and were employed in hooting partridyes for the lefe of tur people at the Fort. One of thole Indians called Con-ne-e-qurefe faid, he bad been wery near to the tamous river i was engaged to go in quet of Accordingly Mr. Norton engaged him and two other Northern Imdians to accompany me on this fecond atempt; but to avoid all incumbrances as much as poifrble, it was thought advifable not to take any women *, that the Indians might have fewer to provide for. I would not permit any European to go with me, but two of the homeguard fouthern) Indian men were to accompany me as before. Indeed the Indians, both Northern and Southern, paid fo little attention to Ifbefter and Mertiman on my former journey, particularly in times of fearcity, that 1 was determined not to take them with me in future; though the former was very defirous to accompany me again, and was well calculated to encounter the hardibips of

[^7]NORTEERMOCIAN.
fech an undoruling. Merrimen asse arite fek of foch excurfina, and to fur fon offering hit fevvice a fecond time, foemed to te wery thankful that be was once more

Having come to the above refolutions, and finally desernined en the nember of Indians that wene to acciompany tw, we were agoin fifted oust with a latge fupply of ammunition, and ss many other wfefus article we could ominesienthy take with us, together with a fand faruple finght mading goods, fror prefents to the Jndians, as before.

My inftructiors on this occalion mornted to me more Han an order ta proceed as faft as poffible; and for my: conduct during, the journeys, I was referred to my formez infruction of Newember 6th, aj69.

Every thing being in readinefs for our departure, on the twenty-thisd of February I began my fecond journey, accompanied by three Northern Indians and two of the home-guard (Southern) dadians. 1 took particulas care, howerer, that Mackachy, though an excellent hunter, Giould not be of our party; as he had proved himieit. during my former journey, to be a fly artful villain.

The fnow at this time was fo deep on the top of the ramparts, that fei of the cannon were to be feen, otherwife
1770.
etrant:

## A JOURNET TOTHE

1770. Atherwife the Governor would have faluted me at my departure, an before; bit as thofe honouns could not poffibly be of any fervice to my expedition, I readily relinquifhed every thing of the kind; and in lieu of it, the Governor, officers, and people, infifted on giving me three cheers.

After leaving the Fwition, we continued our courfe in much the fame direction as in my former journey, till we arrived at Seal River; when, inftead of crofling it, and walking on the barren grounds as before, we followed the courfe of the river, except in two particular places, where the bends tended fo much to the South, that by crolfing two necks of land not more than five or fix miles wide, we faved. the walking of near twenty miles each time, and fill came to the main river again.

The weather had been fo remarkably boifferous and changeable, that we were frequently obliged to continue two or three nights in the tame place. To make up for this inconveniency, deer were fo pleatiful for the firt eight or ten days, that the induats killed as many as was neceffary; bat we were all fo heavy laden that we could not poffibly take much of the mear with us. This I foon perceived to be a great evil, which expofed us to fuch frequent inconveniences, that in cate of not kilting any thing for three or four days together, wewere in great want of provifions; we feldom, howeyer, went to bed entirely fuppertess

## NORTHERNOCEAN.

till the eighth of March; when though we had only walked about cight miles that morning, and expended all the remainder of the day in huating, we could not pro duce a fingle thing at night, not even a partridge $f$ no: had we difcerned the track of any thing that day, whicir was likely to afford us hopes of better fuccefs in the morning. This being the cafe, we prepared fome hook: and lines ready to augle for fifh, as our tent was then by the fide of a take belonging to Seal River, which feemed by its fituation to afford fome profpect of fuccefs.

Early in the moming we took down our tent, ane moved about five miles to the Weft by South, to a pa: of the lake that feemed more commodious for fining than that where we had been the night before. As foon as we arrived at this place, fome were immediately employed cutting holes in the ice, while others pitched the tent got frewood, \&cc.; after which, for it was early in the morning, thofe who pitched the tent went a hunting, and at night one of them returned with a porcupine, while thofe who were angling caught fevera? fine trout, which afforded us a plentiful fupper, and we had fome trifle left for breakfaft.

Angking for fill under the ice in winter requires $=0$ other procefs, than cutting round holes in the ice from one to two feet diameter, and letting down a baited hook, which is always kept in motion, not only to

A JOURNEY TO THE prevent the water from freczing fo foce as it woild do if fuffered to remain quite fiill, but becmufe it is found at the fame time to be 2 great: mean of allucing the fift to the hote; for it in atways obferved that the filf in thofe parts will take a bait which is in motion, much fooner than one that is at reft.

Tyi. Early in the moraing we again purfued our angling, and all the forenoon being expended without any fuccefs, we took down our tent and pitcliod it agaia about eight miles farther to the Weftward, on the fame lake, where we cut more holes in the ice for angling, and that sis. night caught feveral fine pike. The next day we meved about five miles to the Souct Weft, down a fmall riwer, where we pitched our tent; and having fet four fifting wets, in the courfe of the day we caught many fine finh, particulanly pike, trout, tittymeg, and a coarfe kind of Gifh known in Hudfon's Bay by the pame of Methy*.

To fet a net under the ice, it is firf neceffary to afcertain its exact leogtt; by fretching it out upon the ice near the part propofed for fetting it. This being done, a number of round holes are cat in the ice, at ten or twelve feet diftance from each other, and as many in number as will be fulficient to ftretch the nett at its full leagth. A line is ctien paffed under the ice, by means

[^8]of a long tight pole, which is firf introduced at one of the end holes, and, by means of two forked ficks, this
$177^{\circ}$ manck pole isceafily conducted, or paffed from one hole to another, under the ice, till it arrives at the laft. The pole is then taken out, and both ends of the line being properly fecured, is always ready for ufe. The net is made faft to one end of the line by one perfon, and hauled under the ice by a fecond; a large flone is tied to each of the lower corpers, which ferves to keep the net expanded, and prevents it rifing from the bottom with every waft of the current. The Europeans fettled in Hudfon's Bay proceed much in the fame manner, though they in general take much more pains; but the above method is found quite fufficient by the Indians.

In order to fearch a net thus fet, the two end troies only are opened; the line is veered away by one perfon, and thenet hauded froms under the ice by another; after. all the fifh are taken out, the net is eafly hauled back to its former ftation; and there fecured as before-

As this place feemed likely to afford us a conftant fupply of fifi, my guide propofed to flay here till the geefe began to Aly; which in thofe Northern parts is feldom before the middle of May. His reafons for to doing feemed well founded the The weather, he haid, " is at this time too cold to wralk on the barren "grounds, and the woods from this part lead fo much D $\because$ to : :
ifye. 6 to the Wefwhrd, that were we to continue rravelling xares "in any tolende thetter, our courfe would not be " better than Weft south Weft, which would only be ". going out of our way; whereas, if we fhould remain " here till the weather permit us to walk due North, it over the barsen groundi, we thall then in one mantih ${ }^{15}$.get farther advancod on owr journey, than if we " were to continue travelling all the remainder of the "t winter in the fweep of the woods."

Thefe realons appeared to me very judicious, and as the plan feemed likely to be attended with little troobie, it met with my entire approbation. That being the cafe, we took additional pains is buibding our tent, and made it as commodious as the materials and fituation wovic atinit.

To pitch Indian's tent in wister, it is firft aecefiary to fearch for a level piece of dry ground; which cannot be afcertained but by thrufting a fick through the fiow down to the ground, all over the propofed part. Whes a convenient fpot is found, the fnow it then cleared away in a circular form to the vey mole; and when it is pro. pofed to remain more than a night or two in one place, the mofs is alfo curt up and removed; it is very hable when dry to teke fire. and occufion-nuych trouble to the inhabitants. A quenciry of poles are then procured, which are generally proportioned both in number and length to the
fize of the tent clath, and the number of perions it is intended to contain. If one of the polen thould not happen

- to be forted, two of them are tival thagotier mear the top, then raifed erect, and their teate or lowner cedt extended as wide m the propofed diameter of the tent; the other poles are chen for mound equal diftances from each otber, and in fuch order, that their Jower ends form 2 complete cingle, which gives bousharies to the tent on all fides; the: tens cloth is ther fafteoed to a light poic, which is in wapis nififid up ond put round the poles from the weatber fode; fo the the two edges that hap over and form the door are always to the leeward. It muft be underfogod that this metinod is only in ure when the lodinas we woring frop place to place exery day; for When they intend to conciaue any time in one place, they adrays make the door of thoir tent to face the Sapth.

The test choth is wfually of thin Moofe lather, drafiect and made by the Indians, and in hape it nenty refembles a fap-mount iqperted; fo that when the langet curve inciofer the bottom of the poles, the sinallet one is always fufficient to cover the top; except 3 hote, which is defignediy left open to ferve the double purpofe of chimpey and window.

The fire is aiways made on the ground in the center, and the remainder of the foor, or botton of the tent, is covered all over with fmall branches of the pine tree,

## ATOURNEYTOTHE

770 which ferve both for feats and beds. $A$ quantity of pine tops and branches are laid round the bottom of the poles on the outfide, over which the eves of the tent is ftaked down; a quantity of frow is then packed over all, which excludes great part of the external air, and contributes greatly to the warmth within. The tent here defcribed is fuch as is made ufe of by the Southern Indians, and the fame with which I was furnifhed at the Factory; for that made ufe of by the Northen Indians is made of different materials, and is of a quite different fhape, as frall be defcribed hereafter.

The fituation of our tent at this time was truly pleafant, particularly for a fpring refidence; being on a fmall elevated point, which commanded an extenfive propect over a farge lake, the fhores of which abounded with wood of different kinds, fuch as pine, larch, birch, and poplar; and in many places was beautifully contrafted with a variety of high hills, that fhewed their fnowy fummits above the talleft woods. About two hundred yards front the tent was a fall, or rapid, which the ifwiftnefs of the current prevents from freezing in the coldeft winters. At the bottom of this fall, which empties itfelf into the above lake, was a fine fheet of open water near a mile in length, and at leaft half a mile in breadth; by the margin of which we had our filing nets fet, all in open view from the tent.

> NORTHERN.OCEAN.

The remaining part of this month paffed on without any interruption, or material occurrence, to difturb our
$: 770$. March. repofe, worth relating; our fifhing nets provided us with daily food, and the Indians had too much philofophy about them to give themfelves much additiona: trouble; for during the whole time not one of them offered to look for a partridge, or any thing elfe which could yield a change of diet.

As the time may now be fuppofed to have lain heary on my hands, it may mot be improper to inform the reader how I employed is.- In the firf place, I embraced every favourable opportunity of obferving the latitude of the place, the mean of which was $58^{\circ} 40^{\prime}$ $30^{\prime \prime}$ North; and the longitide by account was $5^{\circ} 37^{\circ}$ Weft, from Prince of Wales's Fort. I then correctei my reckoning from my laft obfervation; brought wa my journal, and filled up my chart, to the place of ou: refidence. 1 built alfo fome traps, and caught a fewr martins; and by way of faying my ammunition, fet fome fares for partridges. The former is performed by means of a few loge, fo arranged that when the martin attempts to take away the bait laid for him he with very littis Atruggle pulls down a fmall poft that fupports the whole weight of the trap; when, if the animal be not killec by the weight of the logs, he is confined till be be frozen to death, or killed by the hunter gaing his rounds.

To fnare partridges fequires no other procefr than making a few little hedget acrofa a croek, or a few fhort hedges projecting at right angles fromi the fide of an illand of willows, which thofe birds are foumd to frequent: Several openings muit be left in each bodge, to admit the birds to paff throught, and in each of thein a fnase muft be fet; fo that when the pertidgei ate hipping along the edge of the willows to feed, which is when wrid eublom, fome of them foon get into the fnares, where they are confmed till they are taken out. I have chught from three to ten partridges in a day by this fimple contrivance; which requires no farther attendarce than gaing sound them night and morning.

I have already obferved that nothing material happenei $\therefore$ to difturb orr repofe till the fivt of April, uiten to out great farprife the fiffing nets did not afford us a fingle Eifh. Though fome of the preceding days had been pretty freceffrul, yet thy comparions, like zrue tadians; Eldom went to nleep till they had cleared the teat of svery article of provifion. As nothing wat to be caught in the nets, we all went out to single; but in this we were equalty unficoefful, as we could not procase one Ef the whele day. This fuddea change of circumfances alarmed one of my companions 5 mach, that he began to think of refoming the ufe of bis gun, ifter having aid it by for-ncer a month.

## NORTHEEMOGBAN.

Early in the morning we arofe; when my guide Con-ne-e-quefe went a hunting, and the ref attended the nets and booke near home; but oll with fach bed fuccefs, that we could not procure enough in ope day to ferve two men for a fupper. This, inftead of awakening the reft of my companions, fent them to lleep; and fcarcely any of them had the prudence to look at the filhing nets, though they were not more than two or three hundred yards from the tent door.

My guide, who was a fteady man, and an excellent hunter, having for many years been accuftomed to provide for a large family, foomed by far the molt induftrious of all my crew; be clofely purfued his hunting for feveral days, and: feddom returned to the tent till after dark, while thofe at the teint pafficd moft of their time in: frocking wid Heeping.:

Several days paffed without any figns of relief, till the 1oth, when my guide continued out longer than ordinaxy, which made us conjecture that . he had met with fraagers, or feen fome deer, or ofber gane, which occafroned his detay. We all therefore lay down to fleep, baving had but little refreftment for the three preceding daysy exeept:a pipe of tobacco and a draught of water; even partridges: had become fo fearce that not one was to be got; the heary thaws had driven them all out towards the barren grounds. About midnight, to our
1770. Aprit

## A JOURNEY TO THE

 great joy, our hurter arrived, and brought with him the blood and fragments of twe deec that he had killed. This anexpected fuceef foon rowted the leepers, who, in an inftant, were buffy employod in cooking a large kettle of broth, made with the blood, and fome fat and fcraps of meat fhred fmall, boiled in tit This might be reckoned a dainty difh at any time, bte was more particularly fo in our prefent almont famified coidition.After partaking of this refrefhment, we refumed our relt, and early in the morning fet out in a body for the place where the deer were lying: As we intended to make our ftay but fhort, we left our tent ftanding, containiag all our baggage. On our arrival at the place of deftination, fome were immediately employed in making a hut or barrocado with young pine treex; while one man fkinned the deer, the remainder wrent a hunting, and in the afternoon returned to the hut, after having killed two deer.

Several days were no fpent in feating andi gluttony; during which the Ladians killed five more deer and three fine beavers; finding. at laft, however, that there was little profpect of procuring either more deer or beavers, we determined to return to our teat, with the remains of what we had alrendy obtained.

The flefh of thefe dear, though none of the largeft, might with frugality have ferved our fmall number, (being only

## NORTHERN,OCEAN.

During the courfe of our long inactivity, Saw-fop-okifhac, commonly called Soffop, my principal Southern Indian, as he was cutting fome birch for fpoons, difhes, and other neceflary houfehold furniture, had the misfortune to cut his leg in fuch a manner as to be incapable of walking; and the other Southern Indian, though a much younger man, was fo indolent as not to be of any fervice to me, except hauling part of our luggage, and eating up part of the provifions which had been provided by the more induftrious part of my companions.

On the twenty-fourth, early in the day, a great body of Indians was feen to the South Weft, on the large lake by the fide of which our tent ftood. On their arrival at our teat we difcoverod them to be the wives and families of the Northern Indian goofe-hunters, who were gone to Prince of Wales's Fort to attend the feafon. They were bound toward the barren ground, there to wait the return of their huibands and relations from the Fort, after the termination of the goole-feafon.

#### Abstract

only fix) for fome time; but my companions, like other Indians, feafted day and night while it lafted; and were fo indolent and unthinking, as not to attend properly to the fifting-nets; fo that many fine fifh, which had been entangled in the nets, were entirely fpoiled, and in about twelve or fourteen days we were nearly in as great diftrefs for prowifions as ever.

. My guide having for fome days paft determined to move toward the barren ground, this morning we took down our tent, packed up our luggage, and proceeded to the Eaftward in the fame track we came; but Soffop being fo lame as to be obliged to be hauled on a fledge, I eafily prevailed on two of the Indians who had joined us on the 24 th, and who were purfuing the fame road, to perform this fervice for him.

29in. After two days good walking in our old track, we arrived at a part of Seal River called She-than-nee, where we pitched our tent and fet both our fifhing-nets, intending to flay there till the geefe began to fly. Though we had feen feveral fwans and fome geefe flying to the Northward; it was the thirteenth of May before we could procure any. On that day the Indians killed two fwans and three geefe.' This in fome meafure alleviated our diftrefs, which at that time was very great; having had no other fubfiftence for five or fix days, than a few cranberries, that we gathered from the dry ridges where the fnow was thawed away in fpots; for though we fet our fifhing-nets in the beft judged places, and angled at every part that was likely to afford fuccefs, we only caught three fmall fifh during the whole time. Many of the Northern Indians, who had joined us on the 24 th of April, remained in our company for fome time; and though I well knew they had had a plentiful winter, and had then good focks of dried meat by them, and
were alfo acquainted with our diftrefs, they never gave me or my Southern companions the leaft fupply, although they had in fecret amply provided for our Northem guides.

By the nineteenth, the geefe, fwans, ducks, gulls, and other birds of paffage, were fo plentiful, that we killed every day as many as were fufficient for our fupport; and having Itopped a few days to recruit our fpirits after fo long a faft, on the twenty-third we began once more to proceed toward the barren ground. Soffop having now perfectly recovered from his late misfortune, every thing feemed to have a favourable appearance; efpecially as my crew had been augmented to twelve perfons, by the addition of one of my guide's wives, and five others, whom I had engaged to affift in carrying our luggage ; and I well knew, from the feaion of the year, that hauling would foon be at an end for the fummer.

The thaws having been by this time fo great as to render travelling in the woods almof impraticable, we continued our courfe to the Eaft on Seal River, about fixteen miles farther, when we came to a fmall river, and a ftring of lakes connected with it, that tended to the North.

The weather for fome time was remarkably fine and pleafant. Game of all kinds was exceedingly plentiful, $E_{2}$ and
1770.

Mat.

## A JOURNEYTOTHE

 and we continued our courfe to the Northward on the above river and lakes till the firft of June, when we acrived at a place called Beralzone. In our way thither, befide killing more geefe than was neceflary, we fhot two deer. One of my companions had now the misfortune to fhatter his hand very much by the burfting of a gun; but as no bones were broken, I bound up the wound, and with the affiftance of fome of Turlington's drops, yellow bafilicon, \&c. which I had with me, foon reftored the ufe of his hand; fo that in a very fhort time he feemed to be out of all danger.After ftopping a few days at Beralzone, to dry a little venifon and a few geefe, we again proceeded to the Northward on the barren ground; for on our leaving this place we foon got clear of all the woods.

The fnow was by this time fo foft as to render walking in fnow-fhoes very laborious; and though the ground was bare in many places, yet at times, and in particular places, the fnow-drifts were fo deep, that we could not poffibly oth do without them. By the fixth, however, the thaws were fo general, and the fnows fo much melted, that as our fnow-fhoes were attended with more trouble than fervice, we all confented to throw them away. Till the tenth, our fledges proved ferviceable, particularly in croffing lakes and ponds on the ice; but thiat mode of travelling now growing dangerous on account of the great thaws, we
determined to throw away our fledges, and every one to take $\underbrace{1770}_{\text {June. }}$
a load on his back.
This I found to be much harder work than the winter carriage, as my part of the luggage confifted of the following articles, viz. the quadrant and its ftand, a trunk contairing books, papers, \&cc. a land-compafs, and a large bag containing all my wearing apparel; alfo a hatchet, knives, files, \&cc. befide feveral fmall articles, intended for prefents to the natives. The aukwardnefs of my load, added to its great weight, which was upward of fixty pounds, and the exceffive heat of the weather, rendered walking the moft laborious tafk I had ever encountered; and what confiderably increafed the hardihip, was the badnefs of the road, and the coarfenefs of our lodging, being, on account of the want of proper tents, expofed to the utmoft feverity of the weather. The tent we had with us was not only too large, and unfit for barren ground fervice, where no poles were to be got, but we had been obliged to cut it up for fhoes, and each perfon carried his own fhare. Indeed my guide behaved both negligently and ungeneroully on this occafion; as he never made me, or my Southern Indians, acquainted with the nature of pitching tents on the barren ground; which had he done, we could eafily have procured a fet of poles before we left the woods. He took care, however, to procure a fet for himfelf and his wife; and when the tent was divided, though he made fhift to get a piece large enough to ferve him for
1770. a complete little tent, he never afked me or my Southern Juse. Indians to put our heads into it.

Befide the inconvenience of being expofed to the open air, night and day, in all weathers, we experienced real diftrefs from the want of viduals. When provifions were procured, it often happened that we could not make a fire, fo that we were obliged to eat the meat quite raw; which at firft, in the article of fifh particularly, was as little relifhed by my Southern companions as myfelf.

Notwithftanding thefe accumulated and complicated hardfhips, we continued in perfect health and good fpirits; and my guide, though a perfect niggard of his provifions, efpecially in times of fcarcity, gave us the ftrongeft affurance of foon arriving at a plentiful country, which would not only afford us a certain fupply of provifions, but where we fhould meet with other Indians, who probably would be willing to carry part of our luggage. This news naturally gave us great confolation; for at that time the weight of our conftant loads was fo great, that when Providence threw any thing in cur way, we could not carry above two days provifions with us, which indeed was the chief reafon of our being fo frequently in want.
23. From the twentieth to the twenty-third we walked every day near twenty miles, without any other fubliftence than

## NORTHERNOCEAN.

Early in the morning of the twenty -third, we fet out as ufual, but had not walked above feven or eight miles before we faw three mulk-oxen grazing by the fide of a fmall lake. The Indians immediately went in purfuit of them; and as fome of them were expert hunters, they foon killed the whole of them. This was no doubt very fortunate; but, to our great mortification, before we could get one of them. fkinned, fuch a fall of rain came on, as to put it quite out of our power to make a fire; which, even in the fineft weather, could only be made of mofs, as we were near an hundred miles from any woods. This was poor comfort for people who had not broke their faft for four or five days. Neceffity, however, has no law; and having been before initiated into the method of eating raw meat, we were the better prepared for this repaft: but this was by no means fo well relifhed, either by me or the Southern Indians, as either raw venifon or raw fifh had been: for the flelh of the mulk-ox is not only coarfe and tough, but fmells and taftes fo ftrong of mufk as to make it very difagreeable when raw, though it is tolerable eating when properly cooked. The weather continued fo remark-

## AJOURNEYTOTHE

${ }^{1770 .}$ remarkably bad, accompanied with conftant heavy rain, fnow, and fleet, and our neceffities were fo great by the time the weather permitted us to make a fire, that we had nearly eat to the amount of one buffalo quite raw.

Notwithftanding I muftcred up all my philofophy on this occafion, yet I muft confefs that my fpirits began to fail me. Indeed our other misfortunes were greatly aggravated by the inclemency of the weather, which was not only cold, but fo very wet that for near three days and nights I had not one dry thread about me. When the fine weather returned, we made a fire, though it was only of mofs, as I have already obferved; and having got my cloaths dry, all things feemed likely to go on in the old channel, though that was indifferent enough ; but I endeavoured, like a failor after a ftorm, to forget paft misfortuncs.

None of our natural wants, if we except thirft, are fo diftrefling, or hard to endure, as hunger; and in wandering fituations, like that which I now experienced, the hardfhip is greatly aggravated by the uncertainty with refpect to its duration, and the means moft proper to be ufed to remove it, as well as by the labour and fatigue we muft neceffarily undergo for that purpofe, and the difappointments which too frequently fruftrate our beft concerted plans and moft ftrenuous exertions: it not only enfeebles the body, but depreffes the fpirits, in fpite of every
every effort to preyent it. Befides, for want of action, the formach fo far Dofes its digetive powers, that after long faft-
$\underbrace{1770 .}$ Junc. ing it refumes its office with pain and reluctance. During this journey I have too frequently experienced the dreadful effects of this calamity, and more than once been reduced to fo low a fate by hunger and fatigue, that when Providence threw any thing in my way, my fomach has fcarcely been able to retain more than two or three ounces, without producing the moft oppreffive pain. Another difagreeable circumatance of long fafting is, the extreme difficulty and pain attending the natural evacuations for the firft time; and which is fo dreadful, that of it none but thofe who have experienced can have an adequate idea.

To record in detail each day's fare fince the commencement of this journey, would be little more than a dull repetition of the fame occurrences. A fufficient idea of it may be given in a few words, by obferving that it may juftly be faid to have been either all feasting, or all famine: fometimes we had too much, feldom juft enough, frequently too little, and often none at all. It will be only neceffary to fay that we have fafted many times two whole days and nights; twice upwards of three days; and once, while at She-than-nee, near feven days, during which we tafted not a mouthful of any thing, except a few cranberries, water, fcraps of old leather, and burnt bones. On thofe preffing occafions I have frequently feen the Indians examine their wardrobe,
which confifted chiefly of 1 kin-clothing, and confider what part could beft be fpared; fometimes a piece of an old, half-rotten deer fkin , and at others a pair of old fhoes, were facrificed to alleviate extreme hunger. The relation of fuch uncommon hardfhips may perhaps gain little credit in Europe; while thofe who are converfant with the hiftory of Hudfon's Bay, and who are thoroughly acquainted with the diftrefs which the natives of the country about it frequently endure, may confider them as no more than the common occurrences of an Indian life, in which they are frequently driven to the neceflity of eating one another*.

Knowing

- It is the general opinion of the Southern Indians, that when any of their tribe have been driven to the neceffity of eating human felth, they become fo fond of it, that no perfon is fafe in their company. And though it is well known they are never guilty of making this horrid repaft but when driven to it by neceffity, yet thofe who have made it are not only fhunned, but fo univerally detefted by all who know them, that no Indians will tent with them, and they are frequently murdered nily. I have feen feveral of thofe poor wretches who, unfortunately for them, have corae under the above defcription, and though they were perfons much efteemed before hunger had driven them to this act, were afterward fo univerfally defpifed and neglected, that a fmile never graced their countenances: deep melancholy has been feated on their brows, while the eye moft expreffively fpoke the dictates of the heart, and feemed to fay, "Why do you defpife me for my misfortunes? the period " is probably not far diftant, when you may be driven to the like neceffity!"

In the Spring of the year 1775, when I was building Cumberland Houfe, an Indian, whofe name was Wapoos, came to the fettlenent, at a time when fifteen tents of Indians were on the plantations: they examined him very minutely, and found he had come a confiderable way by himfelf, without a gun, or ammunition. This made many of them conjecture he had met with, and killed, fome perfon by the way; and this was the more eafly credited,

NORTHERNOCEAN.

Knowing that our conftant loads would not permit us to carry much provifions with us, we agreed to continue a day or two to refrefh ourfelves, and to dry a little meat in the fun, as it thereby not only becomes more portable, but is always ready for ufe. On the twenty-fixth, all that remained of the mufk-ox flefh being properly dried and fit for carriage, we began to proceed on our journey Northward, and on the thirtieth of June arrived
1770.

June. at a fmall river, called Cathawhachaga, which empties itfelf into a large lake called Yath-kyed-whoie, or White Snow Lake. Here we found feveral tents of Northern Indians, who had been fome time employed fpearing deer in their canoes, as they croffed the above mentioned little river. Here alfo we met a Northern Indian Leader, or Captain, called Keelfhies, and a fmall party of his crew, who were bound to Prince of Wales's. Fort, with furs
from the care he took to conceal a bag of provilions, which he had broughe with him, in a lofty pine-tree near the houre.

Being a ftranger, I invited him in, though I faw he had nothing for trade; and during that interview, fome of the Indian women examined his bag, and gave it as their opinion that the meat it contained was human Aleih: in confequence, it was not without the interference of fome principal Indians, whofe liberality of fentiment was more extenfive than that in the others, the poor creature faved his life. 'Many of the men cleaned and loaded their guns; ochers had their bows and arrows ready; and even the women took poffefion of the hatchets, to kill this poor inoffenfive wretch, for mo crime but that of travelling about two hundred miles by himfelf, urafifited by fire-arms for fupport in his journey.

A JOURNEY TO THE
and other commodities for trade. When Keelfites was made acquainted with the intent of my journey, he readily offered his fervice to bring me any thing from the Factory that we were likely to ftand in need of; and though we were then in latitude $63^{\circ} 4^{\prime}$ North, and longitude $9^{\circ} 12^{\prime}$ Weft from Churchill, yet he promifed to join us again, at a place appointed by my guide, by the feting in of the Winter. In consequence of this offer, I looked over our ammunition and other articles; and finding that 2 little powder, hot, tobacco, and a few knives, were likely to be of service before the journey could be completed, I determined to fend a letter to the governor of Prince of Wales's Fort, to advife him of my fituation, and to define him to fend by the bearer a certain quantity of the above articles; on which Keelhies and his crew proceeded on their journey for the Factory the fame day.

Cathawhachaga was the only river we had feed fince the breaking up of the ice that we could not ford ; and as we had not any canoes with us, we were obliged to get ferried acrofs by the ftrange Indians. When we arrived on the North fide of this river, where the Indians refined, my guide proposed to fop tome time, to dry and pound forme meat to take with us; to which I readily confented. We alfo fat our filhing-nets, and caught a confiderable quantity of very fine fifth; fuck as tittemeg, barbie, \&c.

## NORTHERN OCEAN.

The number of deer which croffed Cathawhachaga, during our ftay there, was by no means equal to our ex.

## $\frac{1770 .}{\text { Julx }}$

 pectations, and no more than juft fufficient to fupply our prefent wants; fo that after waiting feveral days in fruitlefs expectation, we began to prepare for moving; and eccordingly, on the fixth of July, we fet out, though oth. we had not at that time as much victuals belonging to our company as would furnifh us a fupper. During our ftay here, we had each day got as much fifh or flefh as was fufficient for prefent expenditure; but, being in hopes of better times, faved none.Before we left Cathawhachaga, I made feveral obfervations for the latitude, and found it to be $63^{\circ} 4^{\prime}$ North. I alfo brought up my journal, and filled up my chart to that time. Every thing being now ready for our departure, my guide informed me that in a few days a canoe would be abfolutely neceffary, to enable us to crofs fome unfordable rivers which we fhould meet, and could not avoid. This induced me to purchafe one at the eafy rate of a fingle knife, the full value of which did not exceed one penny. It mult be obferved, that the man who fold the canoe had no farther occafion for it, and was glad to take what he could get; but had he been thoroughly acquainted with our neceffities, he moft affuredly would have had the confcience to have afked goods to the amount of ten beaver flins at leaft.

## A JOURNEY TO THE

1770. 

July.

This additional piece of luggage obliged me to engage another Indian; and we were lucky enough at that time to meet with a poor forlorn fellow, who was fond of the office, having never been in a much better ftate than that of a beaft of burthen. Thus, provided with a canoe, and a man to carry it, we left Cathawhachaga, as has been obferved, on the fixth of July, and continued our courfe to the North by Weft, and North North Weft ; and that night put up by the fide of a fmall bay of White Snow Lake, where we angled, and caught feveral fine trout, fome of which weighed not lefs than fourteen or fixteen pounds. In the night heavy rain came on, which continued three days; but the ninth proving fine weather, and the fun difplaying his beams very powerfully, we dried our clothes, and proceeded to the Northward. Toward the evening, however, it began again to rain fo exceffively, that it was with much difficulty we kept our powder and books dry.

On the feventeenth, we faw many mufk-oxen, feveral of which the Indians killed; when we agreed to ftay here a day or two, to dry and pound * fome of the carcafes to take with us. The flefh of any animal, when it is thus prepared, is not only hearty food, but is always ready for

[^9]NORTHERNOCEAN. ..... 39
ufe, and at the fame time very portable. In moft parts of Hudfon's Bay it is known by the name of Thew-hagon, but amongft the Northern Indians it is called Achees.

Having prepared as much dried flefh as we could tranfport, we proceeded to the Northward; and at our departure left a great quantity of meat behind us, which we could neither eat nor carry away. This was not the firft time we had fo done; and however wafteful it may appear, it is a practice fo common among all the Indian tribes, as to be thought nothing of. On the twenty-fecond, we met feveral ftrangers, whom we joined in purfuit of the deer, \&cc. which were at this time fo plentiful, that we got every day a fufficient number for our fupport, and indeed too frequently killed feveral merely for the tongues, marrow, and fat.

After we had been fome time in company with thofe Indians, I found that my guide feemed to hefitate about proceeding any farther; and that he kept pitching his tent backward and forward, from place to place, after the deer, and the reft of the Indians. On my afking him his reafon for fo doing; he anfwered, that as the year was too far advanced to admit of our arrival at the Coppermine River that Summer, he thought it more advifable to pafs the Winter with fome of the Indianns then in company, and alleged that there could be no fear of our arriving at that river early in the Summer of one thoufand feven hundred and feventy-one. As I could not
1770. pretend to contradict him, I was entirely reconciled to July. his propofal; and accordingly we kept moving to the Weftward with the other Indians. In a few days, many others joined us from different quarters; fo that by the joth. thirtieth of July we had in all above feventy tents, which did not contain lefs than fix hundred perfons. Indeed our encampment at night had the appearance of a fmall town; and in the morning, when we began to move, the whole ground (at leatt for a large face all round) feemed to be alive, with men, women, children, and dogs. Though the land was entirely barren, and deftitute of every kind of herbage, except wihh-a-capucca* and mofs, yet the deer were fo mumerous that the Indians not only killed as many as were fufficient for our large number, but often feveral merely for the fkins, marrow, \&c. and left the carcafes to rot, or to be devoured by the wolves, foxes, and other beafts of prey.

In our way to the Weftward we came to feveral rivers, which, though fmall and of no note, were fo deep as not to be fordable, particularly Doo-baunt River $\dagger$. On thofe occafions only, we had recourfe to our canoe, which, though of the common fize, was too fmall to carry more

[^10]than two perfons; one of whom always lies down at full length for fear of making the cance top-heavy, and the
1770.

Augut. other fits on his heels and paddles. This method of ferrying over rivers, though tedious, is the mof expeditious way thefe poor people can contrive; for they are fometimes obliged to carry their canoes one hundred and fifty, or two hundred miles, without having occafion to make ufe of them; yet at times they cannot do without them; and were they not very fmall and portable, it would be impolitible for one man to carry them, which they are often obliged to do, not only the diftance above mentioned, bat even the whole Summer.

The perfon I engaged at Cathawhachaga to carry my canoe proving too weak for the takk, another of my crew was obliged to exchange loads with him, which feemed perfeely agreeable to all parties; and as we waiked but fhort days journies, and deer were very plentiful, ail things went on very fmoothly. Nothing material happened till the eighth, when we were near tofing the quadrant and all our powder from the following circumftance: the fellow who had been releafed from carrying the canoe proving too weak, as hath been already obferved, had, after the exchange, nothing to carry but my powder and his own trifles; the latter were indeed very inconfiderable, not equal in fize and weight to a foldier's knaplack. As I intended to have a little fport with the deer, and knowing his load to be much lighter than mine, I gave him the quatrant

$$
G
$$

${ }^{1770 \text {. }}$, and ftand to carry, which he took without the leaft hefiAuguft. tation, or feeming ill-will. Having thus eafed myfelf for the prefent of a heavy and cumberfome part of my load, I fet out early in the morning with fome of the Indian men; and after walking about eight or nine miles, faw, from the top of a high hill, a great number of deer feeding in a neighbouring valley; on which we laid down our loads and erected a flag, as a fignal for the others to pitch their tents there for the night. We then purfued our honting, which proved very fucceffful. At night, however, ' when we came to the hill where we had left our baggage, I found that only part of the Indians had arrived, and that the man who had been entrufted with my powder and quadrant, had fet off another way, with a fmall party of Indians that had been in our company that morning. The evening being far advanced, we were obliged to defer going in fearch of him till the morning, and as his track could not be eafily difcovered in the Summer, the Southern Indians, as well as myfelf, were very uneafy, fearing we had loft the powder, which was to provide us with food and raiment the remainder of our journey. The very uncourteous behqviour of the Northern Indians then in company, gave me little hopes of receiving affirtance from them, any longer than I had wherewithal to reward them for their trouble and expence; for during the whole time I had been with them, nottone of them had offered to give me the leaft morfel of viduals, without afking fomething in exchange, which, in general, was three times the value of what

## NORTHERNOCEAN.

what they could have got for the fame articles, had they carried them to the Factory, though feveral hundred miles
1770.
$\xlongequal[\text { Augut. }]{\text { In }}$ diftant.

So inconfiderate were thofe people, that wherever they met me, they always expected that I had a greas affortment of goods to relieve their neceffities; as if I had brought the Company's warehoufe with me. Some of them wanted guns; all wanted ammunition, iron-work, and tobacco; many were folicitous for medicine; and others preffed me for different articles of clothing: but when they found I had nothing to fpare, except a few nick-nacks and gewgaws, they made no fcruple of pronouncing me a " poor "f fervant, noways like the Governor at the Factory, who, "s they faid, they never faw, but he gave them fomething "c ufeful." It is fcarcely poffible to conceive any people fo void of common underftanding, as to think that the fole intent of my undertaking this fatiguing journcy, was to carry a large affortment of ufeful and heavy implements, to give to all that ftood in need of them; but many of them would afk me for what they wanted with the fame freedom, and apparently with the fame hopes of fuccefs, as if they had been at one of the Company's Factories. Others, with an air of more generofity, offered me furs to trade with at the fame ftandard as at the Factory; without confidering how unlikely it was that I hould increale the enormous weight of my load with articles which could be of no more ufe to me in my prefent fituation than they were to themfelves.
$\mathrm{G}_{2}$, This
${ }^{1770 .}$ This unaccountable behaviour of the Indians occafioned much ferious reflection on my part; as it fhewed plainly how little I had to expect if I fhould, by any accident, be reduced to the neceffity of depending upon them for fupport; fo that, though I laid me down to reft, fleep was a ftranger to me that night. The following beautiful lines of Dr. Young I repeated above an hundred times :
"Tired Nature's fweet reftorer, balmy Sleep;
" He, like the world, his ready vifit pays
"Where fortune fmiles; the wretched he forfakes:
"Swift on his downy pinions fies from woe,
" And lights on lids unfully'd with a tear." Night Thoughts.
gth.
After paffing the night in this melancholy manner, I got up at day-break, and, with the two Southern Indians, fet out in queft of our deferter. Many hours elapfed in fruitlefs fearch after him, as we could not difcover a fingle track in the direction which we were informed he had taken. The day being almoft fpent without the lealt appearance of fuccefs, I propofed repairing to the place where I had delivered the quadrant to him, in hopes of feeing fome track in the mofs that might lead to the way the. Indians were gone whom our deferter had accompanied. On our arrival at that place, we found they had ftruck down toward a little river which they had croffed the morning before; and there, to our great joy, we found the quadrant and the bẫg of powder lying on the top of a high ftone, but not a human being was to be feen. On

## NORTHERNOGEAN.

examining the powder, we found that the bag had been opened, and part of it taken out; but, notwithftanding our lofs was very confiderable, we returned with light hearts to the place at which we had been the night before, where we found our baggage fafe, but all the Indians gone: they had, however, been fo confrderate as to fet up marks to direct us what courfe to fteer. By the time we had adjufted our bundles, the day was quite fpent; feeing, however, a fmoke, or rather a fire, in the direction we were ordered to fteer, we bent our way towards it ; and a little after ten o'clock at night came up with the main body of the Indians; when, after refrefhing ourfelves with a plentiful fupper, the firft morfel we had tafted that day, we retired to reft, which I at leaft enjoyed with better fuccefs than the preceding night.

In the morning of the eleventh we proceeded on to the - Weft, and Weft by South ; but on the twelfth did not move. This gave us an opportunity of endeavouring to afcertain the latitude by a meridian altitude, when we found the place to be in $63^{\circ} \mathrm{ra}$ North nearly. It proving rather cloudy about noon, though exceeding fine weather, I let the quadrant ftand, in order to obtain the latitude more exactly by twe altitudes; but, to my great mortification, while I was eating my dinner, a fudden guft of wind blew it down; and as the ground where it food was. very ftoney, the bubble, the fight-vane, and vernier, were entirely broke, to pieces, which rendered the inftrument ufelefs. In confequence of this misfortune I refolved to return again to the Fort, though we were then in the latitude of $63^{\circ} 10^{\prime}$ North, and about $10^{\circ} 40^{\prime}$ Weft longitude from Churchill River.

#### Abstract

C H A P. III. Tranfactions from the Time the Quadrant was broken, till I arrived at the Factory.

> Several Arange Indians join us from the Nortbward.-They plundered me of all I bad; but did not plunder tbe Soutbern Indians.-My guide plundered.-We begin our return to the Factory.-Meet with otber Indians, wbo join our company.-Collect deer-fkins for clotbing, but could not get them dreffed. Wuffer much bardbip from the want of tents and warm clotbing.-Moft of the Indians leave us.- Meet with Matonabbee.-Some account of bim, "and bis bebaviour to me and the Soutbern Indians.-We remain in bis company fome time. - His obfervations on my two unfuccefsful attempts. -We leave bim, and proceed to a place to wbicb be directed us, in order to make fnow-fboes and jledges. - Foin Matonabbee again, and proceed towards the Factory in bis com-pany.-Ammunition runs ßort.-Myfelf and four Indians fet off poff for the Factory. - Much bewildered in a fnow fiorm; my dog is frozen to deatb; we lic in a bufb of willows.-Proceed on our journey.-Great difficulty in crofing a jumble of rocks.-Arrive at the Fort.

THE day after I had the misfortune to break the quadrant, feveral Indians joined me from the Northward, fome of whom plundered me and my companions of almoft every ufeful article we had, among which was my gun; and notwithftanding we were then on the point of returning to the Factory, yet, as one of my companions' guns was a little out of order, the lofs was likely to be feverely
1770.

Augurt.
fevercly felt; but it not being in my power to recover it again, we were obliged to reft contented.

Nothing can exceed the cool deliberation of thofe villains; a committee of them entered my tent *. The ringleader feated himfelf on my left-hand. They firft begged me to lend them my $\mathbf{f k i p e r t o g a n ~}+$ to fill a pipe of tobacco. After fmoking two or three pipes, they anked me for feveral articles which I had not, and among others for a pack of cards; but on my anfwering that I had not any of the articles they mentioned, one of them put his hand on my baggage, and afked if it was mine. Before I could anfwer in the affirmative, he and the reft of his companions (fix in number) had all my treafure fpread on the ground. One took one thing, and another another, till at laft nothing was left but the empty bag, which they permitted me to keep. At length, confidering that, though I was going to the Factory, I hould want a knife to cut my victuals, an awl to mend my fhoes, and a needle to mend my other clothing, they ruadly gave me thefe articles, though not without making me underftand that I ought to look upon

[^11]it as a great favour. Finding them poffeffed of fo much generofity, I vent red to folicit them for my razors; but
${ }^{1} 770$.
Auguft. thinking that one would be fufficient to have me during my paffage home, they made no fcruple to keep the other ; luckily they chofe the worft. To complete their generofity, they permitted me to take as much foap as I thought would be fufficient to wafh and thave me during the remainder of my journey to the Factory.

They were more cautious in plundering the Southern Indians, as the relation of fuch outrages being committed on them might occafion a war between the two nations; but they had nothing of that kind to dread from the Englifh. However, the Northern Indians had addrefs enough to talk my home-guard Indians out of all they had: fo that before we left them, they were as clean fwept as myfelf, excepting their guns, fome ammunition, an old hatchet, an ice-chiffel, and a file to fharpen them.

It may probably be thought ftrange that my guide, who was a Northern Indian, Should permit his countrymen to commit fuch outrages on thofe under his charge; but being a man of little note, he was fo far from being able to protect us, that he was obliged to fubmit to nearly the fame outrage himfelf. On this occafion he affumed a great air of generofity; but the fact was, be gave freely what it was not in his power to protect.

## A JOURNET TO THE

1770. Early in the morning of the nineteenth, I fet out on my Auguf. return, in company with feveral Northern Indians, who 19th. were bound to the Factory with furrs and other commodities in trade. This morning the Indian who took my gun, returned it to me, it being of no ufe to him, having no ammunition. The weather for fome time proved fine, and deer were very plentiful; but as the above ravagers had materially lightened my load, by taking every thing from me, except the quadrant, books, \&c. this part of my journey was the eafieft and moft pleafant of any I had experienced fince my leaving the Fort. In our way we frequently met with other Indians, fo that fcarcely a day paffed without our feeing feveral fmokes made by other ftrangers. Many of thofe we met joined our party, having furrs and other commodities for trade.

3it. The deer's hair being now of a proper length for clothing, it was neceffary, according to the cuftom, to procure as many of their fkins, while in feafon, as would make a a fuit of warm clothing for the Winter: and as each grown perfon requires the prime parts of from eight to eleven of thofe fkins (in proportion to their fize) to make a complete fuit, it mult naturally be fuppofed that this addition to my burden was very confiderable. My load, however cumberfome and heavy, was yet very bear-
September. able; but, after I had carried it feveral weeks, it proved of no fervice; for we had not any women properly belonging to our company, confequently had not any perfon
perfon to drefs them; and fo uncivil were the other Indians, that they would neither exchange them for others 1770. of an inferior quality already dreffed, nor permit their women to drefs them for us, under pretence that they were always employed in the like duty for themfelves and families, which was by no means the cafe; for many of them had fufficient time to have done every little fervice of that kind that we could have required of them. The truth was, they were too well informed of my poverty to do any acts of generofity, as they well knew I had it not then in my power to reward them for their trouble. I never faw a fet of people that poffeffed fo little humanity, or that could view the diftreffes of their fellow-creatures with fo little feeling and unconcern; for though they feem to have a great affection for their wives and children, yet they will laugh at and ridicule the diftrefs of every other perfon who is not immediately related to them.

This behaviour of the Indians made our fituation very difagreeable; for as the fall advanced, we began to feel the cold very feverely for want of proper clothing. We fuffered alfo greatly from the inclemency of the weather, as we had no tent to fhelter us. My guide was entirely exempted from all thofe inconveniences, having procured a good warm fuit of clothing; and, as one of his wives had long before joined our party, he was provided with a tent, and every other neceffary confiftent $\mathrm{H}_{2}$ with

## A JOURNEYTO HE

1770. 

September
15 th. with their manner of living: But the ofd fellow was fo far from interefting himfelf in our behalf, that he had, for fome time before, entirely withdrawn from our company; and though he then continued to carry the greateft part of our little remains of ammunition, yet he did not contribute in the fmalleft degree towards our fupport. As deer, however, were in great plenty, I felt little or no inconivenience from his neglect in this refpect.
rth. Provifions fill continued very plentiful; which was a fingular piece of good fortune, and the only circumftance which at this time could contribute to our happinefs or fafety; for notwithftanding the early feafon of the year, the weather was remarkably bad and feverely cold, at leaft it appeared fo to us, probably from having no kind of fkin-clothing. In this forlorn fate we continued our courfe to the South Eaft; and, to add to the gloominefs of our fituation, moft of the Northern Indians who had been in our company all the firft part of the fall, were by this time gone a-head, as we could not keep up with them for want of fnow-fhoes.

20th.
In the evening of the twentieth, we were joined from the Weftward by a famous Leader, called Matonabbee, mentioned in my inftructions; who, with his followers, or gang, was alfo going to Prince of Wales's Fort, with furrs, and other articles for trade. This Leader, when a youth, refided feveral years at the above Fort, and was

## " <br> NORTHERNOCEAN.

not only a perfect mafter of the Southern Indian language, but by being frequently with the Company's fervants, had acquired feveral words of Englifh, and was one of the men who brought the lateft accounts of the Coppermine River ; and it was on his information, added to that of one I-dot-le-ezey, (who is fince dead,) that this expedition was fet on foot.

The courteous behaviour of this franger ftruck me very fenfibly. As foon as he was acquainted with our diftrefs, he got fuch fkins as we had with us dreffed for the Southern Indians, and furnifhed me with a good warm fuit of otter and other fkins: but, as it was not in his power to provide us with fnow-fhoes, being then on the barren ground, ) he directed us to a little river which he knew, and where there was a fmall range of woods, which, though none of the beft, would, he faid, furnifh us with temporary fnow-fhoes and fledges, that might materially aflift us during the remaining part of our journey. We fpent feveral nights in company with this Leader, though we advanced towards the Fort at the rate of ten or twelve miles a day; and as provifions abounded, he made a grand feaft for me in the Southern Indian file, where there was plenty of good eating, and the whole concluded with finging and dancing, after the Southern Indian ftyle and manner. In this amufement my home-guard Indians bore no inconfiderable part, as they were both men of fome
${ }^{1770}$. consequence when at home, and well known to Matonabbee: but among the other Northern Indians, to whom they were not known, they were held in no eftimation; which indeed is not to be wondered at, when we confider that the value of a man among thole people, is always proportioned to his abilities in hunting; and as my two Indian had not exhibited any great talents that way, the Northern Indians hewed them as much refpect as they do in common to thole of very moderate talents among themfelves.

During my converfation with this Leader, he afked me very ferioully, If I would attempt another journey for the difcovery of the Copper-mines? And on my anfwering in the affirmative, provided I could get better guides than I had hitherto been furnifhed with, he faid he would readily engage in that fervice, provided the Governor at the Fort would employ him. In anfwer to this, I affured him his offer would be gladly accepted; and as I had already experienced every hardship that was likely to accompany any future trial, I was determined to complete the difcovery, even at the rifque of life itfelf. Matonabbee affured me, that by the accounts received from his own countrymen, the Southern Indians, and myself, it was very probable I might not experience fo much hardship during the whole journey, as I had already felt, though fcarcely advanced one third part of the journey.

He attributed all our misfortunes to the mifconduct of my guides, and the very plan we purfued, by the defire of the

Early in the morning of the twenty-third, I fruck out of the road to the Eaftward, with my two companions and two or three Northern Indians, while Matonabbee and his crew continued their courfe to the Factory, promifing

A JOURNEX TO THE
1770. to walk fo llow that we might come ap with them:again; and in two days we arrived at vhe place to which we were diretted. We went to mork immediately in makingfnowfhoe frames and Illedgos; but notwithitanding our utmoft endeavours, we could not complete them in lefs than four days. On the firft of Novemíer we again proceeded on our journey toward the Faetory; and on the fixth, came up with Matonabbee and his gang: after which we proceeded on together feveral days; when I found my new acquaintance, on all occafions, the moft fociable, kind, and fenfible Indian I had ever met with. He was a man well known, and, as an Indian, of univerfal knowledge, and generally refpected.

Deer proved pretty plentiful for fame time, but to :my great furprife, when I wanted to give Matonabbee a little ammunition for his own ufe, I found that my guide, Conreaquef, who had it all under his care, had fo embezzled or otherways expended it, that only ten balls and about three pounds of powder remained; fo that long before we arrived at the Fort we were obliged to cut up an ice-chiffel into fquare lumps, as a fubftitute for ball. It is, however, rather dangerous fring lumps of iron out of fuch flight barrels as are brought to this part of the world for trade. Thefe, though light and handy, and of courfe well adapted for the ufe of both Englifh and Indians in long journies, and of fufficient frength for leaden, fhot or ball, are not ftrong enough for
this
this kind of fhot; and ftrong fowling-pieces would not only be too heavy for the laborious ways of hunting in this country, but their bores being fo much larger, would require more than double the quantity of ammunition that fmall ones do; which, to Indians at leaft, muft be an object of no inconfiderable importance.

I kept company with Matonabbee till the twentieth, at which time the deer began to be fo fcarce that hardly a frefh track could be feen; and as we were then but a few days walk from the Fort, he advifed me to proceed on with all fpeed, while he and his companions followed at leifure. Accordingly, on the twenty-firf, I fet out poft-hafte, accompanied by one of the home-guard (Southern) Tribe, and three Northern Indians. That night we lay on the South fide of Egg River; but, long before day-break the next morning, the weather became fo bad, with a violent gale of wind from the North Weft, and fuch a drift of fnow, that we could not have a bit of fire: and as no good woods were near to afford us fhelter, we agreed to proceed on our way; efpecially as the wind was on our backs, and though the weather was bad near the furface, we could frequently fee the moon, and fometimes the fars, to direct us in our courfe. In this fituation we continued walking the whole day, and it was not till after ten at night that we could find the fmalleft tuft of woods to put up in; for though we well knew we mult have paffed by feveral hummocks of Arubby woods
that might have afforded us fome fhelter, yet the wind blew fo hard, and the fnow drifted fo exceffively thick, that we could not fee ten yards before us the whole day. Between feven and eight in the evening my dog, a valuable brute, was frozen to death; fo that his Aledge, which was a very heavy one, I was obliged to haul. Between nine and ten at night we arrived at a fmall creek, on which we walked about three quarters of a mile, when we came to a large tuft of tall willows, and two or three fets of old tent-poles. Being much jaded, we determined not to proceed any farther that night; fo we went to work, and made the beft defence againft the weather that the fituation of the place and our materials would admit. Our labour confifted only in digging a hole in the fnow, and fixing a few deer-fkins up to windward of us: but the moft difficult tafk was that of making a fire. When this was once accomplifhed, the old tent-poles amply fupplied us with fewel. By the time we had finifhed this bufinefs, the weather began to moderate, and the drift greatly to abate; fo that the moon and the Aurora Borealis thone out with great fplendor, and there appeared every fymptom of the return of fine weather. After eating a plentiful fupper of venifon, therefore, of which we had a fufficient ftock to laft us to the Fort, we laid down and got a little
${ }_{23}$. fleep. The next day proving fine and clear, though exceffively fharp, we proceeded on our journey early in the morning, and at night lay on the South Eaft fide of Seal River. We fhould have made a much longer day's jour-
ney, had we not been greatly embarraffed at fetting out, by a jumble of rocks, which we could not avoid without going greatly out of our way. .Here I muft obferve, that we were more than fortunate in not attempting to leave the little creek where we had fixed our habitation the preceding night, as the fpot where we lay was not more than two or three miles diftant from this dangerous place; in which, had we fallen in with it in the night, we muft unavoidably have been bewildered, if we had not all perifhed; notwithftanding the advantage of a clear day, and having ufed every poffible precaution, it was with the utmoft difficulty that we croffed it without broken limbs. Indeed it would have been next to an impoffibility to have done it in the night.

The twenty-fourth and twenty-fifth proved fine clear weather, though exceffively cold; and in the afternoon of the latter, we arrived at Prince of Wales's Fort, after having been abfent eight months and twenty-two days, on a fruitlefs, or at leaft an unfuccefsful journey.

1770.

November 28th.

ON my arrival at the Fort, I informed the Governor, of Matonabbee's being fo near. On the twenty-eighth of November he arrived. Notwithftanding the many difficulties and hardfhips which I had undergone during my two unfuccefsful attempts, I was fo far from being folicited
folicited on this occafion to undertake a third excurfion, that I willingly offered my fervice; which was readily accepted, as my abilities and approved courage, in perfevering under difficulties, were thought noways inferior to the tafk.

I then determined to engage Matonabbee to be my guide; to which he readily confented, and with a freedom of fpeech and correctnefs of language not commonly met with among Indians, not only pointed out the reafons which had occafioned all our misfortunes in my two former attempts, but defcribed the plan he intended to purfue; which at the fame time that it was highly fatisfactory to me, did honour to his penetration and judgment; as it proved him to be a man of extenfive obfervation with refpect to times, feafons, and places; and well quadified to explain every thing that could contribute either to facilitate or retard the eafe or progrefs of travelling in thofe dreary parts of the world.

Having engaged Matonabbee, therefore, as my guide, I began to make preparations for our departure; but Mr. Norton, the Governor, having been very fully occupied in trading with a large body of Indians, it was the feventh of December before I could obtain from him my difpatches.

December 7 th. It may not be improper to obferve, that he again wanted to force fome of the home-guard Indians (who were

# his own relations *) into our company, merely with a view that they might engrofs all the credit of taking care of 

#### Abstract

* Mr. Norton was an Indian; he was born at Prince of Wales's Fort, but had been in England nine years, and confidering the fmall fum which was expended in his education, had made fome progrefs in literature. At his return to Hudfon's Bay be entered into all the abominable vices of his countrymen. He kept for his own ufe five or fix of the fineft Indian girls which he could felect; and notwithftanding his own uncommon propenfity to the fair fex, took every means in his power to prevent any European from having intercourfe with the women of the country; for which purpofe he proceeded to the moft ridiculous length. To his own friends and country he was fo partial, that he fet more value on, and fhewed more refpect to one of their favourite dogs, than he evei did to his firf officer. Among his miferable and ignorant countrymen he paffed for a proficient in phyfic, and always kept a box of poifon, to adminifter to thofe who refufed him their wives br daughters.

With all thefe bad qualities, no man took more pains to inculcate virtue, morality, and continence on others; always painting, in the moft odious colours, the jealous and revengeful difpofition of the Indians, when any attempt was made to violate the chaftity of their wives or daughters. Lectures of this kind from a man of eftablifhed virtue might have had fome effect ; but when they came from one who was known to live in open defiance of every law, human and divine, they were always heard with indignation, and confidered as the hypocritical cant of a felifin debauchee, who wifhed to engrofs every woman in the country to himfelf.

His apartments were not only convenient but elegant, and always crowded with favourite Indians: at night he locked the doors, and put the keys under his pillow; fo that in the morning his dining-room was generally, for the want of neceflary conveniencies, worfe than a hog-ftye. As he advanced in years his jealoury increafed, and he actually poifoned two of his women becaufe he thought them partial to other objects more fuitable to their ages. He was a moft notorious fmuggler; but though he put many thoufands into the pockers of the Captains, he feldom put a hilling into his own.
me during the journey: but I had found them of fo little ufe in my two former attempts, that I abfolutely refufed
1770.

December. them; and by fo doing, offended Mr. Norton to fuch a degree, that neither time nor abfence could ever afterwards eradicate his dillike of me; fo that at my return he ufed every means in his power to treat me ill, and to render my life unhappy. However, to deal with candour on this occafion, it muft be acknowledged to his honour, that whatever our private animofities might have been, he did not fuffer them to interfere with public bufinefs; and I was fitted out with ammunition, and every other article which Matonabbee thought could be wanted. I was alfo furnifhed, as before, with a fmall affortment of light trading goods, as prefents to the far diftant Indians.

At laft I fucceeded in obtaining my infructions, which were as follows :

An inflammation in his bowels occafioned his death on the 2gth of December 1773; and though he died in the moft excruciating pain, he retained his jealoufy to the laft; for a few minutes before he expired, happening to fee an officer laying hold of the hand of one of his women who was ftanding by the fire, he bellowed out, in as loud a voice as his fituation would admit, "God "d-n yoù for a b-in, if I live I'll knock out your brains." A few minutes after making this elegant apoftrophe, he expired in the greateft agonies that can poffibly be conceived.

This I declare to be the real character and manner of life of the late Mr. Mofes Norton.

ac (Signied) Moses Norton, Governor.
" Dated at Prince of Wales's Fort, " 7th December, 1770 ."

On the feventh of December I fet out on my thind journeg; atdethe weather, conffidering the fearon of the year, was for foure days pretty mitd. One bf Matonab. bee's wives Being 11 , oceifioned us to walle fo flow, that
${ }^{1770}$. it was the thirteenth before we arrived at Seal River; at which time two men and their wives left us, whofe loads, when added to thofe of the remainder of my crew, made a very material difference, efpecially as Matonabbee's wife was fo ill as to be obliged to be hauled on a nledge.

Finding deer and all other game very fcarce; and not knowing how long it might be before we could reach any place where they were in greater plenty, the Indians walked as far each day as their loads and other circumftances would conveniently permit. On the fixteenth, we arrived at Egg River, where Matonabbee and the reft of my crew had laid up fome provifions and other neceffaries, when on their journey to the Fort. On going to the place where they thought the provifions had been carefully fecured from all kinds of wild beafts, they had the mortification to find that fome of their countrymen, with whom the Governor had firft traded and difpatched from the Fort, had robbed the ftore of every article, as well as of fome of their moft ufeful implements. This lofs was more feverely felt, as there was a total want of every kind of game; and the Indians, not expecting to meet with fo great a difappointment, had not ufed that ceconomy in the expenditure of the oatmeal and other provifions which they had received at the Fort, as they probably would have done, had they not relied firmly on finding a fupply at this place. This difappointment and lofs was borne by the Indians with the greatef fortitude; and I did not hear
one of them breathe the leaft hint of revenge in cafe they Should ever difcover the offenders: the only effect it had on them was, that of making them put the beft foot foremof. This was thought fo neceflary, that for fome time we walked every day from morning till night. The days, however, being fhort, our fledges heavy, and fome of the road very bad, our progrefs feldom exceeded fixteen or eighteen miles a day, and fome days we did not travel fo much.

On the eighteenth, as we were continuing our courfe to the North Weft, up a fmall creek that empties itfelf into Egg River, we faw the tracks of many deer which had croffed that part a few days before; at that time there was not a frefh track to be feen: fome of the Indians, however, who had lately paffed that way, had killed more than they had occafion for, fo that feveral joints of good meat were found in their old tent-places; which, though only fufficient for one good meal, were very acceptable, as we had been in exceeding ftraitened circumftances for many days.

On the nineteenth, we purfued our courfe in the North Weet quarter; and, after leaving the above-mentioned creek, traverfed nothing but entire barren ground, with empty bellies, till the twenty-feventh; for though we arrived at fome woods on the twenty-fixth, and faw $a$ few deer, four of which the Indians killed, they were K 2
at

27 th.
at fo great a diftance from the place on which we lay, that it was the twenty-feventh before the meat was brought to the tents. Here the Indians propofed to continue one day, under pretence of repairing their fledges and fnow fhoes; but from the little attention they paid to thofe repairs, I was led to think that the want of food was the chief thing that detained them, as they never ceafed eating the whole day. Indeed for many days before we had been in great want, and for the laft three days had not tafted a morfel of any thing, except a pipe of tobacco and a drink of fnow water; and as we walked daily from morning till night, and were all heavy laden, our ftrength began to fail. I muft confefs that I never fpent fo dull a Chriftmas; and when I recollected the merry feafon which was then paffing, and reflected ${ }_{\text {Hi }}^{\text {on }}$ the immenfe quantities, and great variety of delicacies which were then expending in every part of Chriftendom, and that with a profurfion bordering on wafte, I could not refrain frem wifting myfelf again in Europe, if it had been only to have had an opportunity of alleviating the extreme hanger which I fuffered with the refufe of the table of any one of my acquaintance. My Indians, however, ftill kept in good fpirits; and as we were then acrofs all the barren ground, and faw a few frefl tracks of deer, they began to think that the worft of the road was over for that winter, and flattered me with the expectation of foon meeting with deer and other game in greater plenty than we had done fince our departure from the Fort.

## NORTHERNOCEAN.

Early in the morning of the twenty-eighth, we again fet out, and direeted our courfe to the Weftward, through thick fhrubby woods, confifting chiefly of ill-fhaped ftunted pines, with fmall dwarf junipers, intermixed here and there, particularly round the margins of ponds and fwamps, with dwarf willow bưhes; and among the rocks and fides of the hills were alfo fome fmall poplars.

On the thirtieth; we arrived at the Eaft fide of Inland Lake, where the Indians killed two large buck deer; but the rutting feafon was fo lately over, that their flefh was only eatable by thofe who could not procure better food. In the evening, Matomabbee was taken very ill; and from the nature of his complaint, I judged his illnefs to have proceeded from the enormous quantity of meat that he had eat on the twenty-feventh, as he had been indifpofed ever fince that time. Nothing is more common with thofe Indians, after they have eat as much at a fitting as would ferve fix moderate men, than to find themfelves out of order; but not one of theme can bear to hear that it is the effect of eating too much : in defence of which they fay, that the meaneft of the animal creation knows when hunger is fatisfied, and will leave off accordingly. This, howeret, is a falfe affertion, advanced knowingly in fupport of an abfurd argument; for it is well known by them, as well as all the Southern Indians, that the black bear, who, for fize and the deficacy of its flefh, may jufly be called a refpectable animal, is fo far from knowing when
1770.

December.
when its hunger is fatisfied, that, in the Summer, when the berries are ripe, it will gorge to fuch a degree, that it frequently, and even diily, vomits up great quantitie of new-fwallowed fruit, before it has undergone any change in the fomach, and immediately renews its repaft with as much eagernefs as before.

Notwithftanding the Northern Indians are at times fo voracious, yet they bear hunger with a degree of fortitude which, as Mr. Ellis juftly obferves of the Southern Indians, " is much eafier to admire, than to imitate." I have more than once feen the Northern. Indians, at the end of three or four days fafting, as merry and jocofe on the fubjeet, as if they had toluntarily impofed it on themfelves; and would afk each other in the plaineft terms, and in the merrieft mood, If they had any inclination for an intrigue with a Atrange worman? I muft acknowledge that examples of this kind were of infinite fervice to me, as they tended to keep up my firits on thofe occafions, with a degree of fortitude that would have been impollible far me to have done had the Indians behaved in a contrary manner, and expreffed any apprehenfion of ftarving.

Early in the modrning of the thirty-firf, we continued our journey, and walked about fourteen miles to the Weftward on Illand Lake, where we fixed our refidence; but Matonabbee, was at this time fo ill as to be obliged to be hauled on a gledge the whole day. The
next morningy however, he fo far recovered as to be capable of walking: when we proceeded on to the Weft and Weft by North, about fixteen miles farther on the fame Lake, till we arrived at two tents, which contained the remainder of the wives and families of my guides, who had been waiting there for the return of their huibands from the Fort. Here we found only two men, though there were upward of twenty women and children; and as thofe two men had no gun or ammunition, they had no other method of fupporting themfelves and the women, but by catching fifh, and fnaring a few rabbits: the latter were fearce, but the former were eafily caught in confiderable numbers either with nets or hooks. The fpecies of filh generally caught in the nets are tittemeg, pike, and barble; and the only forts caught with hooks are trout, pike, burbut, and a fmall fifh, erroneoully called by the Englifh tench : the Southern Indians call it the toothed tittemeg, and the Northern Indians call it faint eab. They are delicate eating; being nearly as firm as a perch, and generally very fat. They feldom exceed a foot in length, and in chape much refemble a gurnard, except that of having a very long broad fin on the back, like a perch, but this fin is net armed with fimilar fpiken. The fcales are large, and of a footy brown. They ere generally moft efteemed when broiled or roafted with the fcales on, of courfe the ftin is not eaten.

A JOURNET.TO.THE
1775. As the Captain [Matonabbee] and one man were indif-

January
id. poled, we did not move on the fecond of January; but early in the morning of the third let out, and walked about leven miles to the North Weftward, five of which were on the above mentioned Lake; when the Indians having killed two deer, we put up for the night.

Inland Lake (near the center) is in latitude $60^{\circ} 45^{\circ}$ North, and $102^{\circ} 25^{\prime}$ Weft longitude, from London; and is, at the part we croffed, about thirty-five miles wide: but from the North Eat to the South Weft it is much larger, and entirely full of illands, fo near to each other as to make the whole Lake refemble a jumble of ferpentine rivers and creeks; and it is celebrated by the natives as abounding with great plenty of fine fin g during the beginsing of the Winter. At different parts of this Lake mot part of the wives and families of thole Northern Indians who vifit Prince of Wales's Fort in October and Novembeer generally refide, and wait for their return; as there is little fear of their being in want of provifions, ever without the affiftance of a gun and ammunition, which is a point of real consequence to them. The Lake is plentifully fupplied with water from Several fall rivulets and creeks which run into it at the South Weft end and it empties itself by mari of cottier fatal sites witch fun to the North Eat, te phacipal of which is Nemidea-feepee-a-fifh, or Little Fifth River. Many of the inland,
as well as the main land round this Lake, abound with dwarf woods, chiefly pines; but in fome parts intermixed 1771. Janary. with larch and fmall birch trees. The land, like all the reft which lies to the North of Seal River, is hilly, and full of rocks; and though none of the hills are high, yet as few of the woods grow on their fummits, they in general fhew their fnowy heads far above the woods which grow in the vallies, or thofe which are fcattered about their fides.

After leaving Illand Lake, we continued our old courfe between the Weft and North Weft, and travelled at the eafy rate of eight or nime miles a day. Provifions of all kinds were fcarce till the fixteenth, when the Indians killed twelve deer. This induced us to put up, though early in the day; and finding great plenty of deer in the neighbourhood of our little encampment, it was agreed by adl parties to remain a few days, in order to dry and pound fome meat to make it lighter for carriage.

Having, by the twenty-fecond, provided a fufficient ftock of provifion, properly prepared, to carry with us, and repaired our fledges and fnow-fhoes, we again purfued our courfe in the North Weft quarter; and in the afternoon fpoke with a ftranger, an Indian, who had one of Matonabbee's wives under his care. He did not remain in our company above an hour, as he only fmoked part of a few pipes with his friends, and returned to his tent, which could not

$$
\mathrm{L} \quad \text { be }
$$

1771. be far diftant from the place where we lay that night, as Janaary. the woman and her two children joined us next morming, before we had taken down our tent and made ready for moving. Thofe people were the frift Arangers whom we had met fince we left the Fort, though we bad travelled leveral hundred miles; which is a proof that this part of the country is but thinly inhabited. It is a truth well known to the natives, and doubtlels founded on experience, that there are many very extenfive tracts of land in thofe parts, which are incapable of affording fupport to any number of the human race even during the fhort time they are paffing through them, in the capacity of migrants, from one place to another; much befs are they capable of affording a conftant fupport to thofe who might wifh to make them their fixed refidence at any feafon of the year. It is true, that few rivers or lakes in thofe parts are entirely deftitute of fifh; but the uncertainty of meeting with a fufficient fupply for any confiderable time together, makes the natives very cautious how they put their whole dependance on that articie, as it has too frequently been the means of many hundreds being ftarved to death.

By the twenty-third, deer were fo plentiful that the Indians feemed to think that, untefs the feafon, contrary to expectation and general experience, fhould prove unfavourable, there would be no fear of our being in want of provifions
provifions during the reft of the Winter, as deer had always been known to be in great plenty in the direction which they intended to walk.

On the third of February, we continued our courfe to the Weft by North and Weft North Weft, and were fo

February. 3d. near the edge of the woods, that the barren ground was in fight to the Northward. As the woods trended away to the Weft, we were obliged to alter our courfe to Weft by South, for the fake of keeping among them, as well as the deer. In the courfe of this day's walk we faw feveral Atrangers, fome of whom remained in our company, while orthers went on their refpective ways.

On the fixth, we croffed the main branch of Cathawhachaga River; which, at that part, is about three quarters of a mile broad; and after walking three miles farther, came to the hide of Coffed Whoie, or Partridge Lake; but the day being far fpent, and the weather exceffively cold, we put up for the night.

Early in the moming of the feventh, the weather being ferene and clear, we fet out, and croffed the above mentioned Lake; which at that part is about fourteen miles wide; but from the Bouth Bouth Weft to North North Eait is much larger. It is impoffile to defcribe the interfenefs of the cold which wee experienced this day; and the difpatch we made in croffing the lake is almof incredible, as it was

$$
\mathrm{L}_{2} \quad \text { performed }
$$

performed by the greateft part of my crew in lefs than two hours; though fome of the women, who were heavy laden, took a much longer time. Several of the Indians were much frozen, but none of them more difagreeably to than one of Matonabbee's wives, whofe thighs and buttocks were in a manner incrufted with froft; and when thawed, feveral blifters arofe, nearly as large as theeps' bladders. The pain the poor woman fuffered on this occafion was greatly aggravated by the laughter and jeering of her companions, who faid that fhe was rightly ferved for belting her clothes fo high. I muft acknowledge that I was not in the number of thofe who pitied her, as I thought fhe took too much pains to fhew a clean heel and good leg; her garters being always in fight, which, though by no means confidered here as bordering on indecency is by far too airy to withftand the rigorous cold of a fevere winter in a high Northern latitude. I doubt not that the laughter of her companions was excited by fimilar ideas.

When we got on the Weft fide of Partridge Lake we continued our courfe for many days toward the Weft by South and Weft South Weft ; when deer were fo plentiful, and the Indians killed fuch valt numbers, that notwithftanding we frequently remained three, four, or five days in a place, to eat up the fóoils of our hunting, yet at our departure we frequently left great quantities of good meat behind us, which we could neither eat nor carry with us.

This conduct is the more excufable among people whofe wandering manner of life and contracted ideas make every thing appear to them as the effect of mere chance. The great uncertainty of their ever vifiting this or that part a fecond time, induces them to think there is nothing either wrong or improvident in living on the beft the country will afford; as they are paffing through it from place to place; and they feem willing that thofe who come after them Ghould take their chance, as they have done.

On the twenty-firft, we croffed The-whole-kyed Whoie, or Snowbird Lake, which at that part was about twelve or thirteen miles wide, though from North to South it is much larger. As deer were as plentiful as before, we expended much time in killing and eating them. This Matonabbee affured me was the beft way we could employ ourfelves, as the feafon would by no means permit us to proceed in a direct line for the Copper-mine River; but when theSpring advanced, and the deer began to draw out to the barrén ground, he would then, he faid, proceed in fuch a manner as to leave no room to doubt of our arrival at the Copper-mine River in proper time.

On the fecond of March, we lay by the fide of Whooldyah'd Whoie or Pike Lake, and not far from Doo-baunt Whoie River. On the next-day we began to crofs the above mentoned Lake, but after walking feven miles on it to the Weft' South Weft, we arrived at a large tent of Northern Indians,

March 2d. $3^{\text {d. }}$
1771. Indians, who had been living there from the beginning

March. of the Winter, and had found a plentiful fubfintence by catching deer in a pound. This kind of employment is performed in the following manner:

When the Indians defign to impound dear, they look out for one of the paths in which a mumber of them have trod, and which is obferved to be ftill frequented by them. When thefe paths crofs a lake, 2 wide river, or a barren plain, they are found to be much the beft for the purpofe; and if the path run through a clufter of woods, capable of affording materials for building the pound, it adds confiderably to the commodioufnefs of the fituation. The pound is built by making a frong fence with brumby trees, without obferving any degroe of reguilarity, and the work is continued to any extent, according to the pleafure of the builders. I have feen fome that were not lefs than a mile round, and am informed that there are others ftill more extenfive. The door, or entrance of the pound, is not larger than a common gate, and the infide is fo crowded with fmall counter-hedges as very much to refemble a maze; in every opening of which they fet a fnare, made with thongs of parchment deer-fkins well twifted together, which are amazingly Atrong. One end of the fnare is ufually made faft to a growing pole; but if no one of a fufficient fize can be found near the place where the faare is fet, a loofe pote is fubftituted in its roam, which is always of fuch fize and length that a deer cannot drag it
fer before it gets entangled amang the other woods, which are all left ftanding except what is found neceffary for making the fence, hedges, \&cc.

The pound being thus prepared, a row of fmall bruihwood is fluck up in the fnow on each fide the door or earrance; and thefe hedge-rows are continued along the open part of the lake, river, or plain, where neither ftick nor fump befides is to be feen, which makes them the more diftinetly obferved. Thefe poles, or brufh-wood, are generally placed at the diftance of fifteen or twenty yards from each other, and ranged in fuch a manner as to form two fides of a tong acute angle, growing gradually wider in proportion to the diftance they extend from the entrance of the pound, which fometimes is not lefs than two or three miles; while the deer's path is exactly along the middle, between the two rows of brulh-wood.

Indians employed on this fervice always pitch their tent on or near to an eminence that affords a commanding profpect of the path leading to the pound; and when they fee any deer going that way, men, women, and children walk along the lake or river-fide under cover of the woods, till they get behind them, then ftep forth to. open view, and proceed towands the pound in the form of a crefeent. The poor timorous deer finding themfelves purfued, and at the fame time taking the two rows of bruiny polen to be two ranks of people ftationed
1771. to prevent their paffing on either fide, run fraight forMarch. ward in the path till they get into the pound. The Indians then clofe in, and block up the entrance with fome brufhy trees, that have been cut down and lie at hand for that purpofe. The deer being thus enclofed, the women and children walk round the pound, to prevent them from breaking or jumping over the fence, while the men are employed feearing fuch as are entangled in the fnares, and Chooting with bows and arrows thofe which remain loofe in the pound.

This method of hunting, if it deferve the name, is fometimes fo fuccefsful, that many families fubfift by it without having occafion to move their tents above once or twice during the courfe of a whole winter; and when the Spring advances, both the deer and Indians draw out to the Eaftward, on the ground which is entirely barren, or at leaft what is fo called in thofe parts, as it neither produces trees or fhrubs of any kind, fo that mofs and fome little grais is all the herbage which is to be found on it. Such an eafy way of procuring a comfortable maintenance in the Winter months, (which is by far the worft time of the year, ) is wonderfully well adapted to the fupport of the aged and infirm, but is too apt to occafion a habitual indolence in the young and active, who frequently fend a whole Winter in this indolent manner : and as thofe parts of the country are almof deftitute of every animal of the furr kind, it cannot be fup-

> NORTHERNOCEAN.
pofed that thofe who indulge themfelves in this indolent method of procuring food can be mafters of any thing

March. for trade; whereas thofe who do not get their livelihood at fo eafy a rate, generally procure furrs enough during the Winter to purchafe a fufficient fupply of ammunition, and other European goods, to laft them another year. This is nearly the language of the more induftrious among them, who, of courfe, are of moft importance and value to the Hudfon's Bay Company, as it is from them the furrs are procured which compofe the greateft part of Churchill trade. But in my opinion, there cannot exift a ftronger proof that mankind was not created to enjoy happinefs in this world, than the conduet of the miferable beings who inhabit this wretched part of it; as none but the aged and infirm, the women and children, a few of the more indolent and unambitious part of them, will fubmit to remain in the parts where food and clothing are procured in this eafy manner, becaufe no animals are produced there whofe furrs are valuable. And what do the more induftrious gain by giving themfelves all this additional trouble? The real wants of thefe people are few, and eafily fupplied; a hatchet, an ice-chiffel, a file, and a knife, are all that is required to enable them, with a little induftry, to procure a comfortable livelihood; and thore who endeavour to poffefs more, are always the moft unhappy, and may, in fact, be faid to be only flaves and carriers to the reft, whofe ambition never leads them so any thing beyond the means of procuring food; M and
and clothing. It is true, the carries pride themselves much on the refpeet which is Shewn to them at the Factory; to obtain which they frequently run great rifques of being ftarved to death in their way thither and back; and all that they can poffibly get there for the furs they procure after a year's toil, feldom amounts to more than is fufficient to yield a bare fubfiftence, and a few furs for the enfuing year's market; while thole whom they call indolent and mean-fpirited live generally in a fate of plenty, without trouble or rifque; and consequently muff be the mort happy, and, in truth, the molt independent alpo. It muff be allowed that they are by far the greateft philofophers, as they never give themselves the trouble to acquire what they can do well enough without. The deer they kill, furnishes them with food; and a variety of warm and comfortable clothing, either with or without the hair, according as the feafons require ; and it mut be very hard indeed, if they cannot get furs enough in the courfe of two or three years, to purchafea hatchet, and fuch other edge-tools as are neceffary for their purpofe. Indeed, those who take no concern at all about procuring firs, have generally an opportunity of providing themfelves with all their real wants from their more induftrious countrymen, in exchange for provifions, and ready-dreffed kings for clothing.

It is undoubtedly the duty of every one of the Compang's servants to encourage a spirit of induftry among the
the natives, and to ufe every means in their power to induce them to procure furrs : ad other commodities for trade,
1771. March. by affuring them of a ready purchafe and good payment for every thing they bring to the Factory : and I can truly fay, that this has ever been the grand object of my attention. But 1 mult at the fame time confefs, that fuch conduct is by no means for the real benefit of the poor Indians; it being well known that thofe who have the leaft intercourfe with the Factories, are by far the happiet. As their whole aim is to procure a comfortable fubfiftence, they take the moft prudent methods to accompliinit ; and by always following the lead of the deer, are feldom expofed to the griping hand of famine, fo frequently felt by throfe who are called the anmual traders. It is trie, that there are few of the Indians, whole manner of life I have juft defcribed, but have once in their lives at leaft wifited Prifree of Wales's Fort; and the hardfhips and dangers which moft of them experienced on thofe occafrons, have left fueh a lafting mpreffion on their minds, that nothing can induce them to repeat their vifts: nor is it, in fact, the intereft of the Gompany that people of this eafy turn, and who require only as-much iron-work at a time as can be purchafed with three or four beaver-lkins, and that only once in two or three years, flould be invited to the Factories; becaufe what they beg and fteal while there, is worth, in the way of trade, three times the quantity of furts whick they bring. For this reafon, it is much mere for the intereft of the Company that-the anM 2

84

March.

## A. JOURNEY TO THE

nual traders fhould buy up all thofe fmall quantities of furrs, and bring them in their own name, than that a parcel of: beggars fhould be encouraged to come to the Factory with fcarcely as many furrs as will pay for the victuals they eat while they are on the plantation.

I have often heard-it obferved, that the Indians who attend the deer-pounds might, in the courfe of a Winter, collect a valt number of pelts, which would well deferve the attention of thofe who are called carriers or traders; but it is a truth, though unknown to thofe feeculators, that the deer kins at that feafon are not only as thin as a. bladder, but are alfo full of warbles, which render them of little or no value. Indeed, were they a more marketable commodity than they really are, the remote fituation of thofe pounds from the Company's Factories; muft for ewer be an unfurmountable. barrier to the Indians bringing any of thofe fkins to trade. The fame obfervation may be made of all the other Northern Indians, whofe chief fupport, the whale year xound, is venifon; but the want of heavy draught in Winter, and water-carriage in Summer, will not permit them to bring many deer fkins to market, not even thofe that are in feafon, and for which there has always been great encouragement given.

We fopped only one: night in company with the Indiaps. whom we met on Pike Lake, and in the morning. the of the fourth, proceeded to crofs the remainder of that

Lake;

Lake; but, though the weather was fine, and though the Lake was not more than twenty-feven miles broad at
1771.

March. the place where we croffed it, yet the Indians loft fo much time at play, that it was the feventh before we arrived on the Weft fide of it. During the whole time we were croffing it, each night we found either points of land, or iflands, to put up in. On the eighth, we lay a little to the Eaft North Eaft of Black Bear Hill, where the Indians killed two deer, which were the firft we had feen for ten days; but having plenty of dried meat and fat with us, we were by no means in want during any part of that time. On the ninth, we proceeded on our courfe to the Weftward, and foon met with as great plenty of deer as we had feen during any part of our journey; which, ne doubt; made things go on fmooth and eafy: and as the Spring advanced, the rigour of the Winter naturally abated, fo that at times we had fine pleafant weather over-head, though it was never fo warm as to occafion any thaw, unlefs in fuch places as lay expofed to the mid-day fun, and were fheltered from all the cold. winds.

On the nineteenth, as we were continuing our courfe to the Weft and Weft by South, we faw the tracks of feveral frangers; and on following the main path, we arrived that night at five tents of. Northern Indians, who had refided there great part of the Winter, fnaring deer in the. fame manner as thofe before mentioned.. Indeed, it Should. feem.
${ }^{177 \mathrm{r} .}$ feem that this, as well as fome other places, had been March. frequented more than once on this occafion; for the wood that had been cut down for fewel, and other ufes, was almoft 2oth. incredible. Before morning, the weather became fo bad, and the ftorm continued to rage with fuch violence, that we did not move for feveral days; and as fome of the Indians we met with at this place were going to Prince of Wales's Fort in the Summer, I embraced the opportunity of fending by them a Letter to the Chief at that Fort, agreeably to the tenor of my inftructions. By fumming up my courfes and diftances from my laft obfervation, for the weather at that time would not permit me to obferve, I judged myfelf to be in latitude $61^{\circ} 30^{\prime}$ North, and about $19^{\circ} 60^{\prime}$ of longitude to the Weft of Churchill River. This, and fome accounts of the ufage I received from the natives, with my opinion of the future fuccefs of the journey, formed the contents of my Letter.
23. On the twenty-third, the weather became fine and moderate, fo we once more purfued our way, and the next 26;k. day, as well as on the twenty-fixth, faw feveral more tents of Northern Indians, who were employed in the fame manner as thofe we had formerly met; but forne of them having had bad fuccefs, and being relations or acquaintances of part of my crew, joined our company, and procteded with us to the Weftward. Though the defr did not then keep regular paths, fo as to enable the Iadians to catch them in pounds, yet they were to be met
with in great abundance in fcattexed herds; fo that my companions killed as many as they pleafed with their
1771. March. guns.

We ftill sontinued our courfe to the Weft and Weft by Sourt, and on the eighth of April, arrived at a fmall Lake, called Thelewey-aza-yeth; but with what propriety it is fo called I cannot difcover, for the meaning of Thelewey-aza-yeth is Little Fifh Hill: probably fo called from a high hill which tands on a long point near the Weft end of the Lake. On an ifland in this Lake we pitched our tents, and the Indians finding deer very numerous, determined to ftay here fome time, in order to dry and pound meat to take with us; for they well knew, by the feafon of the year, that the deer were then drawing out to the barren ground, and as the Indians propofed to walk due North on our leaving the Lake, it was uncertain when we fhould again meet with any more. As feveral Indians had during the Winter joined our party, our number had now increafed to feven tents, which in the whote contained not lefs than feventy perfons.

Agreeably to the Indians' propofals we remained at Thelewey-aza-yeth ten days; during which time my companions were bufily employed (at their intervals from hunting in preparing fmall flaves of birch-wood, about one and a quarter. incle fquare, and feven or eight feet long. Thefe ferve as tent-poles all the Summer, while while on the barren ground; and as the fall advances, are converted into fnow-fhoe frames for Winter ufe. Birchrind, together with timbers and other wood-work for building canoes, were alfo another object of the Indian's attention while at this place; but as the canoes were not to be fet up till our arrival at Clowey, (which was many miles diftant,) all the wood-work was reduced to its proper fize, for the fake of making it light for carriage.

As to myfelf, I had little to do, except to make a few obfervations for determining the latitude, bringing up my journal, and filling up my chart to the prefent time. I found the latitude of this place $61^{\circ} 30^{\prime}$ North, and its longitude, by my account, $19^{\circ}$ Weft of Prince of Wales's Fort.
: 8 h . Having a good flock of dried provifions, and moft of the neceffary work for canoes all ready, on the eighteenth we moved about nine or ten miles to the North North Weft, and then came to a tent of Northern Indians who were tenting on the North fide of Thelewey-aza River. From thefe Indians Matonabbee purchafed another wife; fo that he had now no lefs than feven, mof of whom would for fize have made good grenadiers. He prided himfelf much in the height and ftrength of his wives, and would frequently faý, few women would carry or haul heavier loads; and though they had, in general, a. very mafculine appearance, yet he preferred them to thofe of a
more delicate form and moderate ftature. In a country like this, where a partner in exceffive hard labour is the
1771. ApriL chief motive for the union, and the fofter endearments of a conjugal life are only confidered as a fecondary object, there feems to be great propriety in fuch a choice; but if all the men were of this way of thinking, what would become of the greater part of the women, who in general are but of low ftature, and many of them of a moft delicate make, though not of the exacteft proportion, or moft beautiful mould ? Take them in a body, the women are as deftitute of real beauty as any nation I ever faw, though there are fome few of them, when young, who are tolerable; but the care of a family, added to their conftant hard labour, foon make the moft beautiful among them look old and wrinkled, even before they are thirty; and feveral of the more ordinary ones at that age are perfect antidotes to love and gallantry. This, however, does not render them lefs dear and valuable to their owners, which is a lucky circumftance for thofe women, and a certain proof that there is no fuch thing as any rule or ftandard for beauty. Afk a Northern Indian, what is beauty? he will anfwer, a broad flat face, fmall eyes, high cheekbones, three or four broad black lines a-crofs each cheek, a low forehead, a large broad chin, a clumfy book-nofe, a tawney hide, and brcafts hanging down to the belt. Thofe beauties are greatly heightened, or at leaft rendered more valuable, when the poffeffor is capable of dreffing all kinds of fkins, converting them into the different parts of their clothing, and able to carry eight of tan fane in Summer, or haul a much greater weight in Winter. There, and other fimilar accomplifhpaents, are all that are fought after, or expected, of a Northern Indian woinan. As to their temper, it is of little consequence ; for the men have a wonderful facility in making the mont suborn comply with as my ch alacrity an could pofilbly bo expended from thole of the midden and mot obliging turn of mind; fo that the only real difference is the one obeys through fear, and the other complies cheerfully from a willing mind; both knowing that what is commanded muff be dons. They are, in fact, all kept at a great diftance, and the rank they hold in the opinion of the men cannot be better expreffed or explained, than by obferving the method of treating or ferving them at meals, which would appear very humelisting, to an European woman, though cutom makes it fut light on thole whole lot it is to bear it. It is neceffary to observe, that when the men kill any large beat, the women are always feat to bring it to the tent: when it is brought there, every operation it undergoes, fuck as splitting, drying, pounding, \&sc. is performed by the women. When any thing is to be prepared for eating, it is the women who cook it; and when it is done, the wives and daughters of the greateft Captains in the country are never ferved, till all the males, even those who are in the capacity of fervants, have eaten what they think proper;

[^12]
## NOXTHERNOCEAN.

and in of fearcity it is frequently their tot to be left witiout a fingle motfel: It is; however, natural to think they the therty of helping theirifelves in fecret; but thifs fifurt be doitit with great praderce, às capital embezztements of ptovifloms in fuch times ate looked on as affaits of red corifequence, and frequently fubject them to a very fevtre beating. If they are practifed by a woman whofe youth and inattention to dotrieftic contcerns cannot plead in hiet favour, they will for ever be a blot in her charaeter, and few men will thufe to have het fot a wife.

Finding plenty of gbod birich gtowing by the frie bf Theley-ata River, we remained there for a fen days; in oraer to eomplete all the wodi-work for the canoes, as well at fot etery other ufe for which we could polfibly want it on the baritin ground, dutiing our Bummer's cruife. On the twentietif, Matonabbee ferit one of his brothers, and fome others, a-head, with birch-rind and wood-work for a cante, and gave them orders to proceed to a flath Lake tiear the barren ground called Clowey, where they wete deffred to make all poffible trate in building the carbe, that it might be ready on our arrival.

Fuaving finifhed fact wood-work as the firdians thought Wrold be nectitary, atod having augmented our ftock of orted theat and fat, the twenty-firlt was appointed For froting; but oite of the womén having been taken in labour, atrid it being ratiter an extraordinaty cafe, we

## A. JOURNEY TO THE

1771. were detained more than two days. The inftant, however, the poor woman was delivered, which was not until the had fuffered all the pains ufually felt on thofe occafions for near fifty-two hours, the fignal was made fo rmoving when the poor creature took her infant on her back and fet out with the reft of the company; and though another perion had the humanity to haul her fledge for her, (for one day only,) the was obliged to carry a confiderable load befide her little charge, and was frequently obliged to wade knee-deep in water and wet fnow. Her very looks, exclufive of her moans, were a fufficient proof of the great pain the endured, infomuch that although the was a perfon I greatly dilliked, her diftrefs at this time fo overcame my prejudice, that I never felt more for any of her fex in my life; indeed ber fighs pierced me to the foul, and rendered me very miferable, as it was not in my power to relieve her.

When a Northern Indian woman is taken in labour, a fmall tent is erected for her, at fuch a diftance from the other tents that her cries cannot eafily be heard, and the other women and young girls are her conftant vifitants: no male, except children in arms, ever offers to approach her. It is a circumftance perhaps to be lamented, that thefe people never attempt to affift each other on thofe occafions, even in the moft critical cafes. This is in fome meafure owing to delicacy, but more probably to an opinion they entertain that nature is abundantly
dantly fufficient to perform every thing required, without any external help whatever. When I informed them of the affiftance which European women derive from the fkill and attention of our midwives, they treated it with the utmoft contempt; ironically obferving, "that " the many hump-backs, bandy-legs, and other deformi" ties, fo frequent among the Englifh, were undoubtedly " owing to the great fkill of the perfons who affifted in " bringing them into the world, and to the extraordinary " care of their nurfes afterward."

A Northern Indian woman after child-birth is reckoned unclean for a month or five weeks; during which time the always remains in a fmall tent placed at a little diftance from the others, with only a female acquaintance or two; and during the whole time the father never fees the child. Their reafon for this practice is, that children when firft born are fometimes not very fightly, having in general large heads, and but little hair, and are, moreover, often difcoloured by the force of the labour; fo that were the father to fee them to fuch great difadvantage, he might probably take a dinlike to them, which never afterward could be removed.

The names of the children are always given to them by the parents, or fome perfon near of kin. Thofe of the boys are various, and generally derived from fome place, feafon, or animal; the names of the girls are chiefly taken

1jyit taken from fome parit of propecty of à Martin; fuch April. abs the White Mortin, the Blate Martem, the Summer Martif, the Mfarttan's Fetua, the Mattin's Foge, the Martin's Heart, the Martin's Tw, *

23d. On the twenty-third, as I hinted above, we began to move forward, and to Chape our courfe nearly North; but the weather was in general fo hot, and fo mexh frow had, in confequence, been metted, as made it bad walking in fnow-fhoes, and fuct exceding heavy hauling, that it was the third of May before we could arrive at Clowey, though the diftafice was not above eighty-five friles from Thelewey-aza-yeth. In our way we cfoffed part of two fmall Lakes, called Tittameg Lake and Seartack Lake; neither of which are of any note, though both abound with fine fifh.

- Matonabbee had eight wives, and they were all called Martins.

T
HE Lake Clowey is not much more than twelve miles broad in the wideft part. A fmall river which runs into it on the Weft fide, is faid by the Indians to join the Athapufcow Lake.

On our arrival at Clowey on the third of May, we found that the Captain's brother, and thofe who were fent a-head with him from Theley-aza River, had only got there two days before us; and, on account of the weather, had not made the leaft progrefs in building the canoe, the plan of which they had taken with them. The fame day we got to Clowey feveral other Indians joined us from different quarters, with intent to build their canoes at the fame place. Some of thofe Indians had refided within four or five miles, to the South Eaft of Clowey all the Winter; and had procured a plentiful livelihood by fnaring deer, in the manner which has been already defcribed.

Immediately affer our arrival at Clowey, the Indians began to build their canoes, and embraced every convenient opportunity for that purpofe : but as warm and dry weather only is fit for this bufinefs, which was by no means the cafe at prefent, it was the eighteenth of May before the canoes belonging to my party could be com- pleted. On the nineteenth we agreed to proceed on our journey; but Matonabbee's canoe meeting with fome damage, which took near a whole day to repair, we were detained till the twentieth.

Thofe veffels, though made of the fame materials with the canoes of the Southern Indians, differ from them both in fhape and conftruction; they are alfo much fmaller and lighter,
lighter; and though very flight and fimple in their conftrution, are neverthelefs the beft that could poffibly be contrived for the ufe of thofe poor people, who are frequently obliged to carry them a hundred, and fometimes a hundred and fifty miles at a time, without having occafion to put them into the water. Indeed, the chief ufe of thefe canoes is to ferry over unfordable rivers; though fometimes, and at a few places, it muft be acknowledged, that they are of great fervice in killing deer, as they enable the Indians to crofs rivers and the narrow parts of lakes; they are alfo ufeful in killing fwans, geefe, ducks, Scc. in the moulting feafon.

All the tools ufed by an Indian in building his canoe, as well as in making his fnow-fhoes, and every other kind of wood-work, confift of a hatchet, a knife, a file, and an awl; in the ufe of which they are fo dextrous, that every thing they make is executed with a neatnefs not to be excelled by the moft expert mechanic, affifted with every tool he could wifh."

In fhape the Northern Indian canoe bears fome refemblance to a weaver's chuttle; being flat-bottomed, with ftraight upright fides, and harp at each end ; but the ftern is by far the شideft part, as there the baggage is generally laid, and occafionally a fecond perfon, who always lies down at full length in the bottom of the canoe. In this manner they carry one another acrofs rivers and the narrow twelve or thirteen feet in length, and are from twentay inches to two feet broad in the wideft part. The bend; or fore part, is unnecefferity loing and namow; and is all covered over with: birch-bith, which adds confiderably to the weight, without costrifuting to the burthen: of the veffet. In general, theficistans make uft of the fingfe paddle, though a few kave idauble ones, like the Efquimaux: the latter; howevers ere feldom ufed; but by thofe who lie in wait to kill deer as they crofs rivers and narrow lakes *.

During our ftay at Clowey we were joined by upward of two hundred Indians from difforent quarters, moft of Whom built canoes at this place; but-as I was under the protedion of a principal man, no one offered to moleft

me, nor can I fay they were very clamorous for any thing I had. This was undoubtedly owing to Matonabbee's in-
1771. May. forming them of my true fituation; which was, that I had not, by any means, fufficient neceflaries for myfelf, much lefs to give away. The few goods which I had with me were intended to be referved for the Copper and Dogribbed Indians, who never vifit the Company's Factories. Tobacco was, however, always given away; for every one of any note, who joined us, expected to be treated with a few pipes, and on fome occafions it was fearcely poffible to get off without prefenting a few inches* to them; which, with the conftant fupplies which I was obliged to furnifh my own crew, decreafed that article of my fock fo faft, that notwithftanding I had yet advanced fo fmall a part of my journey, more than one half of my fore was expended. Gun-powder and fhot alfo were articles commonly afked for by moft of the Indians we met; and in general thefe were dealt roond to them with a liberal hand by my guide Matonabbee. I muft, however, do him the juftice to acknowledge, that what he diftributed was all his own, which he had purchafed at the Factory; to my certain knowledge he bartered one hundred add fifty martins' fkins for powder only; befides a great namber of beaver, and other furrs, for fhot, ball, iron-work, and tobacco, purpofely to give away among his countrymen; as he had certainly as many of thefe articles given to him as were, in

[^13]his opinion, fufficient for our fupport during our journey out and home.

May 20 th.

Matomabbee's canoe having been repaired, on the twentieth we left Clowey, and proceeded Northward. That morning a fmall gang of ftrangers joined us, who informed my guide, that Captain Keellhies was within a day's walk to the Southward. Keelfhies was the man by whom 1 had fent a letter to Prince of Wales's Fort, from Cathawhachaga, in the beginning of July one thoufand feven hundred and feventy; but not long after that, having the misfortune to break my quadrant, I was obliged to return to the Fort a fecond time; and though we faw many fmokes, and fpoke with feveral Indians on my return that year, yet he and I miffed each other on the barren ground, and I had not feen or heard of him fince that time.

As Matomabbee was defirous that I fhould receive my letters, and alfo the goods I had written for, he difpatched two of his young men to bring them. We continued
22f. our journey to the Northward; and the next day faw feveral large fmokes at a great diftance to the Eaftward on the barren ground, which were fuppofed to be made by fome parties of Indians bound to Prince of Wales's Fort with furrs and other commodities for trade.

On the twenty-fecond and twenty-third, we proceeded to the North, at the rate of fourteen or fifteen miles a-day; and in the evening of the latter, got clear of all
the woods, and lay on the barren ground. The fame evening the two young men who were fent for my let-
1771. Mar. ters, \&c. returned, and told me that Keelihies had promifed to join us in a few days, and deliver the things to me with his own hand.

The twenty-fourth proved bad and rainy weather, fo sithi that we only walked about feven miles, when finding a few blafted ftumps of trees, we pitched our tents. It was well we did fo, for toward night we had exceffively bad weather, with loud thunder, ftrong lightning, and heavy rain, attended with a very hard gale of wind from the South Weft; toward the next morning, however, the wind veered round to the North Weft, and the weather became intenfely cold and frofty. We walked that day about eight miles to the Northward, when we were obliged to put up, being almoft benumbed with cold. There we found a few dry ftumps, as we had done the day before, which ferved us for fewel *.

The

[^14]1771. The weather on the twenty-fixth was fo bad, with fnow and thick drifting fleet, that we did not move; but the next morning proving fine and pleafant, we dried our things, and walked about twelve miles to the Northward; moft of the way on the ice of a fmall river which runs into Pefhew Lake*. We then faw a fmoke to the Southward, which we judged to be made by Keelihies, fo we put up for the night by the fide of the above-mentioned Lake, where I expected we fhould have waited for his $23: \ldots$. arrival; but, to my great furprize, on the morrow we again fet forward, and walked twenty-two miles to the Northward on Pellew Lake, and in the afternoon pitched our tents on an ifland, where, by my deffre, the Indians made a large fmoke, and propofed to ftay a day or two for Captain Keelifhies.

In the night, one of Matonabbee's wives and another woman eloped: it was fuppofed they went off to the Eaftward, in order to meet their former hufbands, from

[^15]whom they had been fometime before taken by force. This affair made more noife and buftle than I could have fuppofed; and Matonabbee feemed entirely difconcerted, and quite inconfolable for the lofs of his wife. She was certainly by far the handfomeft of all his flock, of a moderate fize, and had a fair complexion; the apparently poffeffed a mild temper, and very engaging manners. In fact, fhe feemed to have every good quality that could be expected in a Nortiern Indian woman, and that could render her an agreeable companion to an inhabitant of this part of the world. She had not, however, appeared happy in her late fituation; and chofe rather to be the fole wife of a fprightly young fellow of no note, (though very capable of maintaining her,) than to have the feventh or eighth fhare of the affection of the greateft man in the country. I am forry to mention an incident which happened while we were building the canoes at Clowey, and which by no means does honour to Matonabbee: it is no lefs a crime than that of having actually ftabbed the hufband of the above-mentioned girl in three places; and had it not been for timely affiftance, would certainly have murdered him, for no other reafon than becaufe the poor man had fpoken difrefpectfully of him for having taken his wife away by force. The cool deliberation with which Matonabbee committed this bloody action, convinced me it had been a long premeditated defign; for he ne fooner heard of the man's arrival, than he opened one of his wiver' bundles, and, with the greatef: compofure,
1771.

May.

157 I .
diay.
compofure, took out a new long box-handled knife, went into the man's tent, and, without any preface whatever, took him by the collar, and began to execute his horrid defign. The poor man anticipating his danger, fell on his face, and called for affiftance; but before any could be had he received three wounds in the back. Fortunately for him, they all happened on the Choulder-blade, fo that his life was fpared. When Matonabbee returned to his tent, after committing this horrid deed, he fat down as compofedly as if nothing had happened, called for. water to walh his bloody hands and knife, fmoked his pipe as ufual, feemed to be perfectly at eare, and afked if I did not think he had done right?

It has ever been the cuftom among thofe people for the men to wrefle for any woman to whom they are attached; and, of courfe, the ftrongeft party always carries off the prize. A weak man, unlefs he be a good hunter and wellbeloved, is feldom permitted to keep a wife that a ftronger man thinks worth his notice: for at any time when the wives of thofe ftrong wreftlers are heavy-laden either with furrs or provifions, they make no fcruple of tearing any other man's wife from his bofom, and making her bear a part of his luggage. This cuftom prevails throughout all their tribes, and caufes a great firit of emulation among their youth, who are upon all occafions, from their childhood, trying their ftrength and fkill in wreftling. This enables them to protect their property, and particularly their wives, from
NORTHERN OCEAN. IOS
from the hands of thofe powerful ravihers; fome of whom make atmoft a livelibood by eaking what they pleafe from the weaker parties, without making them any return. Indeed, it is reprefented as an att of great generofity, if they condefcend to make an unequal oxchange; as, in gencral, abufe and infult are the ealy return for the lofs which is fuftained.

The way in which they tear the momon and ather property from one another, though it has the appearance of the greateft brutality, can fearcely be calted fighting. I never knew any of them receive the leaft hurt in thefe rencontres; the whole bufinefs conffts in hauling each other about by the hair of the head; they are feldorn krown either to Atrike or kiek one another. It is not uneommon for one of them to eut off his hair and to greale his ears, immediately before the contel begins. This, however, is done privatety; and it is fometimes truly laughable, to fee one of the parties ftratiog about with an air of great importance, and calling out, "Where is he? Why does " he not come, ont ?" when the other will bolt out with a clean fhorned head and greafed ears, rufh on his antagonift, feize him by the hair, and though perhaps a much weaker man, foon drag him to the ground, while the ftronger is not able to lay hold on him. It is very frequent on thofe oceafions for each party to have fpies, to watch the other's motions, which puts them more on a footing of equality. For want of hair to pull, they
$\underbrace{1777 .}_{\text {May }}$ feize each other about the waif, with legs wide extended, Mar. and try their ftrength, by endeavouring to vie who can firft throw the other down.

On thefe wrefting occafions the flanders-by never attempt to interfere in the conteft; even one brother offers, not to affift another, unlefs it be with advice, which, as it is always delivered openly an the field during the contef, may, in fact, be faid to be equally favourable to both parties. It fometimes happens that one of the wrefters is fuperior in ftrength to the other; and if a woman be the caufe of the conteft, the weaker is frequently unwilling to yied, notwithftanding he is greatly overpowered. When this happens to be the cafe, the relations and friends, or other bye-ftanders, will fometimes join to perfuade the weaker combatant to give up the conteft, left, by continuing it, he fhould get bruifed and hurt, without the leaft probability of being able to protect what he is conterding for. I obferved that very few of thofe people were diffatisfied with the wives which had fallen to their lot, for whenever any confiderable number of them were in company, foarcely a day paffed without fome overtures being made for contefts of this kind; and it was often very unpleafant to me, to fee the object of the conteft fixting in penfive filence watching her fate, while her hufband and his rival were contending for the prize. I have indeed not only felt pity for thofe poor wretched vietims, but the utmoft indignation, when I
NORTHERNOCEAN.
have feen them won, perhaps, by a man whom they mortally hated. On thofe occafions their grief and reluetance to follow their new lord has been fo great, that the bufinefs has often ended in the greateft brutality; for, in the ftruggle, I have feen the poor girls ftripped quite naked, and carried by main force to their new lodgings. At other times it was pleafant enough to fee a fine girl led off the field from a hufband the dilliked, with a tear in one eye and a finger on the other: for cuftom, or delicacy if you pleafe, has taught them to think it neceffary to whimper a little, let the change be ever fo much to their inclination. I have throughout this account given the women the appellation of girls, which is pretty applicable, as the objects of conteft are generally young, and without any family: few of the men chufe to be at the trouble of maintaining other people's children, except on particular oceafions, which will be taken notice of hereafter.

Some of the old men, who are famous on account of their fuppofed fkill in conjaration, have great influence in perfuading the rabble from committing thofe outrages; but the humanity of thefe fages is feldom known to extend beyond their own families. In defence of them they will exert theirautmont indluence; but when their own relations are guilty of the fame crime, they feldom interfere. This partial conduct createn fome fecret, and feveral apen enemies; but the generality of their neighbours are deterred; through fear or fuperfition, from exe- cuting their revenge, and even from talking difrefpeetfully of them, unlefs it be behind their backs; which is a vice of which almof every Indian in this country, without exception, is guilty.

Notwithftanding the Northern Indians are fo covetous, and pay fo little regard to private property as to take every advantage of bodily frength to rob their rudighbours, not only of their goods, but of their wive, yet they are, in orher refpects, the mildeft tribe, or nation, that is to be found on the borders of Hudfon's Bay: for let their affronts or loffes be ever fo great, they never will feek any other revenge than that of wrefling. As for murder, which is fo common among all the tribes of Soathern Indians, it is feldom heard of among them. A murderer is fhunned and detefted by all the tribe, and is obliged to wander up and down, forlorn and forfaken even by his own relations and former friends. In that refpect a murderer may truly be campared to Cain, after he had killed his brother Absl. The cosol reception he reeets with by all who know hiph, occafions him to grow melancholy, and he nerer leaves any place but the whole company fay, "There goes the murdererl" The women, it is true, fometimes receive an unlucky blow from their hufbands for milbehaviour, which occafions their death; but this is thought nothiag of: and for one man or woman to kill another out of revenge, or through jeatoufy, of on any other account, is fo extraordinary, that very few are now
exifting who have been guilty of it. At the prefent moment I kno not one, befide Matonabbee, who ever made

177 r . May. an atterapt of that nature; and he is, in every other refpect, a man of fuch univerfal good fenfe, and, as an Indian, of fuch great humanity, that 1 am at a lofs how to account for his having been guilty of fuch a crime, unlefs it be by his having lived among the Southern Indians fo long, as to become tainted with their blood-thirfty, revengeful, and vindictive difpofition.

Easly in the morning of the twenty-ninth, Captain Keelfhies joined us. He delivered to me a packet of letters, and a two-quart keg of French brandy; but affured me, that the powder, fhot, tobacco, knives, \&cc. which be received at the Fort for me, were all expended. He endeavoured to make fome apology for this, by faying, that fome of his relations died in the Winter, and that he had, according to their cuftom, thrown all his own things away; after which he was obliged to have recourfe to my ammunition and other goods, to fupport himfelf and a numerous family. The very affecting manner in which he related this ftory, often crying like a child, was a great proof of his extreme forrow, which he wifhed to perfuade me arofe from the recallection of his having embezzled fo much of my property; but I was of a different opinion, and attributed his grief to arife from the remembrance of his deceafed relations. However, as a fmall recompence for my lofs, he prefented me with four ready-
1771.

May. ready-dreffed moofe-fkins, which was, he faid, the only retribution he could then make. The moofe-fkins, though not the twentieth part of the value of the goods which he had embezzled, were in reality more acceptable to me, than the ammunition and the other articles would have been, on account of their great ufe as fhoe-leather, which at that time was a very fcarce article with us, whereas we had plenty of powder and fhot.

On the fame day that Keelfhies joined us, an Indian man, who had been fome time in our company, infilted on taking one of Matonabbee's wives from him by force, unlefs he complied with his demands, which were, that Matonabbee fhould give him a certain quantity of ammunition, fome pieces of iron-work, a kettle, and feveral other articles; every one of which, Matonabbee was obliged to deliver, or lofe the woman; for the other man far excelled him in ftrength. Matonabbee was more exafperated on this occafion, as the fame man had fold him the woman no langer ago than the aineteenth of the preceding April. Having expended all the goods he then poffeffed, however, he was determined to make another bargain for her; and as fhe was what may be called a valuable woman in their eftimation ; that is, one who was not only tolerably perfonable, but reckoned very fkilful in manufacturing the different kinds of leather, ©kins, and furrs, and at the fame time very clever in the performance of every other domeftic duty required of the fex in this part of the world;

## NORTHERN OGEAN.

111
world; Matonabbee was more unwilling to part with her, efpecially as he had fo lately fuffered a lofs of the fame

May. kind.

This difpute, which was after fome hours decided by words and prefents, had like to have proved fatal to my expedition; for Matonabbee, who at that time thought himfelf as great a man as then lived, took this affront fo much to heart, efpecially as it was offered in my prefence, that he almof determined not to proceed any farther toward the Copper-mine River, and was on the point of ftriking off to the Weftward, with an intent to join the Athapufco Indians, and continue with them: he being perfectly well acquainted with all their leaders, and moft of the principal Indians of that country, from whom, during a former refidence among them of feveral years, he faid he had met with more civility than he ever did from his own countrymen. As Matonabbee feemed refolutely bent on his defign, I had every reafon to think that my third expedition would prove equally unfuccefsful with the two former. I was not, however, under the leaft apprehenfion for my own fafety, as he promifed to take me with him, and procure me a paffage to Prince of Wales's Fort, with fome of the Athapufcow Indians, who at that time annually vifited the Factory in the way of trade. After waiting till I thought Matonabbee's paffion had a little abated, I ufed every argument of which I was mafter in favour of his proceeding on the journey; affuring him
${ }^{1771}$ not only of the future efteem of the prefent Governar of
May. Prince of Wales's Fort, but atfor of that of all his fucceffors as long as he lived ; and that even the Hudfon's Bay Company themfelves would be ready to acknowledge his affiduity and perfeverance, in condueting a bufinefs which had fo much the appearance of proving advantageous to them. After fome converfation of this kind, and a good deal of intreaty, he at length confented to proceed, and promifed to make all poffible hafte. Though it was then late in the afternoon, he gave orders for moving, and accordingly we walked about feven miles that night, and put up on ano ther ifland in Pefhew Lake. The preceding afternoon the Indians had killed a few deer; but ouf number was then fo great, that eight or ten deer would foarcely afford us all a tafte. Thefe deer were the firft we had feen fince our leaving the neighbourhood of Thelewey-aza-yeth; fo that we had lived all the time on the dried meat which had been prepared before we left that place in April.

30: . The thirtieth prozed bad, rainy weather; we walked, however, about ten miles to the Northward, when we arrived on the North fide of Pefhew Lake, and put up. Here Matonabbee immediately began to make every neceflary arrangement for facilitating the execution of our defign ; and as he had promifed to make all poffible hafte, he thought it expedient to leave moft of his wives and all his children in the care of fome Indians, then in our company, who had his orders to proceed to the Northward
NORTHERN OCEAN.
ward at their leifure; and who, at a particular place appointed by him, were to wait our return from the Copper-
1771. May. mine River. Having formed this refolution, Matonabbee felected two of his young wives who had no children, to accompany us; and in order to make their loads as light as poffible, it was agreed that we fhould not take more ammunition with us than was really neceffary for our fupport, till we might expect again to join thofe Indians and the women and children. The fame meafures were alfo adopted by all the other Indians of my party; particularly thofe who had a plurality of wives, and a number of children.

As thefe matters took fome time to adjuf, it was near nine o'clock in the evening of the thirty-firft before we could fet out; and then it was with much difficulty that Matonabbee could perfuade his other wives from following him, with their children and all their lumber; for fuch was their unwillingnefs to be left behind, that he was obliged to ufe his authority before they would confent, confequently they parted in anger; and we no fooner began our march, than they fet up a moft woeful cry, and continued to yell mof piteoully as long as we were within hearing. This mournful fcene had fo little effect on my party, that they walked away laughing, and as merry as ever. The few who expreffed any regret at their departure from thofe whom they were to leave behind, con-
1771. fined their regard wholly to their childrem, particularly to May. the youngeft, fcarcely ever mentioning their mother.

Though it was fo late when we left the women, we walked about ten miles that night before we ftopped. In our way we faw many deer; feveral of which the Indians killed. To talk of travelling and killing deer in the middle of the night, may at firft view have the appearance of romance; but our wonder will fpeedily abate, when it is confidered that we were then to the Northward of $64^{\circ}$ of North latitude, and that, in confequence of it, though the Sun did not remain the whole night above the horizon, yet the time it remained below it was fo Chort, and its depreffion even at midnight fo fmall at this feafon of the year, that the light, in clear weather, was quite fufficient for the purpofe both of walking, and hunting any kind of game.

It fhould have been obferved, that during our ftay at Clowey a great number of Indians entered into a combination with thofe of my party to accompany us to the Copper-mine River; and with no other intent than to murder the Equimaux, who are underfood by the Copper Indians to frequent that river in confiderable numbers. This fcheme, notwithftanding the trouble and fatigue, as well as danger, with which it muft be obvioully attended, was neverthelefs fo univerfally approved by thofe people, that for fome time almoft every man who joined

## NORTHERNOCEAN. <br> 115

us propofed to be of the party. Accordingly, each volunteer, as well as thofe who were properly of my party,
1771.

May. prepared a target, or thield, before we left the woods of Clowey: Thofe targets were compofed of thin boards, about three quarters of an.inch thick, two feet broad, and three feet long; and were intended to ward off the arrows of the Efquimaux. Notwithftanding thefe preparations, when:we came to leave the women and children, as has been already mentioned; only fixty volunteers would go with us; the reft, who were nearly as many more, though they had all prepared targets, reflecting that they had a great diftance to walk, and that no advantage could be expected from the expedition, very prudently begged to be excufed, faying, that they could not be fared for fo long a time from the maintenance of their wives and families; and particularly, as they did not fee any then in our company, who feemed willing to encumber themfelves with fuch a charge. This feemed to be a mere evafion, for I am clearly of opinion that poverty on one fide, and avarice on the other, were the only impediments to their joining our party; had they poffeffed as many European goods to Squander away among their countrymen as Matonabbee and thofe of my party did, in all probability many might have been found who would have been glad to have accompanied us.

When I was acquainted with the intentions of my companions, and faw the warlike preparations that were carrying on, I endeavoured as much as poffible to perfuade

Q2 $\quad \therefore \quad$ them
1771.

May.
them from putting their inhuman defign into execution; but fo far were my intreaties from having the wifhed-for effect, that it was concluded I was actuated by cowardice; and they told me, with great marks of derifion, that I was afraid of the Efquimaux. As I knew my perfonal fafety depended in a great meafure on the favourable opinion they entertained of me in this refpeet, I was obliged to change my tone, and replied, that I did not care if they rendered the name and race of the Efquimaux extinet; adding at the fame time, that though I was no enemy to the Efquimaux, and did not fee the neceflity of attacking them without caufe, yet if I fhould find it necefflary to do it, for the protection of any one of my company, my own fafety out of the queftion, fo far from being afraid of a poor defencelefs Efquimaux, whom I defpifed more than feared, nothing fhould be wanting on my part to protect all who were with me. This declaration was received with great fatisfaction; and I never afterwards ventured to interfere with any of their war-plans. Indeed, when I came to confider ferioully, I faw evidently that it was the higheft folly for an individual like me, and in my fituation, to attempt to turn the current of a national prejudice which had fubfifted between thofe two nations from the earlieft periods, or at leaft as long as they had been acquainted with the exiftence of each other.

Having got rid of all the women, children, dogs, heary baggage, and other incumbrances, on the firft of June we purfued

## NORTHERNOCEAN.

purfued our journey to the Northward with great fpeed; but the weather was in general fo precarious, and the fnow,

Junc. fleet, and rain fo frequent, that notwithftanding we embraced every opportunity which offered, it was the fixteenth of June before we arrived in the latitude of $67^{\circ} 30^{\prime}$, where Matonabbee had propofed that the women and children fhould wait our return from the Copper-mine River.

In our way hither we croffed feveral lakes on the ice; of which Thoy-noy-kyed Lake and Tboy-coy-lyned Lake were the principal. We alfo croffed a few inconfiderable creeks and rivers, which were only ufeful as they furnifhed a fmall fupply of fifh to the natives. The weather, as I have before obferved, was in general difagreeable, with a great deal of rain and fnow. To make up for that inconvenience, however, the deer were fo plentiful, that the 'Indians killed not only a fufficient quantity for our daily fupport, but frequently great numbers merely for the fat, marrow, and tongues. To induce them to defift from this practice, I often interefted myfelf, and endeavoured, as much as poffible, to convince them in the clearef terms of which I was mafter, of the great impropriety of fuch wafte; particularly at a time of the year when their fkins could not be of any ufe for clothing, and when the anxiety to proceed on our journey would not permit us to ftay long enough in one place to eat up half the fpoils of their hunting. As national cuftoms, however, are not eafily
1771. overcome, my remonitrances proved ineffectual; and I jure. was always anfwered, that it was certainly right to kill plenty; and live on the beft, when and where it was to be got, for that it would be impoffible to do it where every thing was fcarce: and they infifted on it, that killing plenty of deer and other game in one part of the country, could never make them fcarcer in another. Indeed, they were fo accuftomed to kill every thing that came within their reach, that few of them could pafs by a fmall bird's neft, without llaying the young ones, or deftroying the eggs.
s:i. From the feventeenth to the twentieth, we walked between feventy and eighty miles to the North Weft and North North Weft; the greater part of the way by Cogead Lake; but the Lake being then frozen, we croffed all the creeks and bays of it on the ice.
s:2. On the twenty-firft we had bad rainy weather, with fo thick a fog that we could not fee our way: about ten o'clock at night, however, it became fine and clear, and the Sun fhone very bright; indeed it did not fet all that night, which was a convincing proof, without any obfervation, that we were then confiderably to the North of the Arctic Polar Circle.

2ic As foon as the fine weather began, we fet out and walked about feven or eight miles to the Northward, when we

119
came to a branch of Conge-ca-tha-wha-chaga River; on the North fide of which we found feveral Copper Indians, who were affembled, aceording to annual cuftom, to kill deer as they crofs the river in their little canoes.

The ice being now broken up, we were, for the firft time this Summer; obliged to make ufe of our canoes to ferry acrofs the river; which would have proved very tedious, had it not been for the kindnefs of the Copper Indians, who fent all their canoes to our affiftance. Though our number was not much lefs than one hundred and fifty, we bad only three canoes; and thofe being of the common fize, could only carry two perfons each, without baggage. It is true, when water is fmooth, and a raft of three or four of thefe canoes is well fecured by poles lafhed acrofs them, they will carry a much greater weight in proportion, and be much fafer, as there is fcarcely a poffibility of their overfetting; and this is the general mode adopted by the people of this country in croffing rivers when they have more than one canoe with them.

Having arrived on the North fide of this river, we found that Matonabbee, and feveral others in our company, were perfonally acquainted with moft of the Copper Indians whom we found there. The latter feemed highly pleafed at the interview with our party, and endeavoured, by every means in their power, to convince our company of their readinefs to ferve us to the utmoft; fo that by the time

June.
$\underbrace{1771}$
June.
time we had got our tents pitched, the flangers had provided a large quantity of dried meat and fat, by way of a feaft, to which they invited moft of the principal Indians who accompanied me, as well as Matonabbee and myfelf, who were prefented with fome of the very beft.

It is natural to fuppofe, that immediately after our arrival the Copper Indians would be made acquainted with the nature and intention of our journey. This was no fooner done than they expreffed their entire approbation, and many of them feemed willing and defirous of giving every affiftance; particularly by lending us feveral canoes, which they affured us would be very ufefil in the remaining part of our journey, and contribute both to our eafe and difpatch. It muft be obferved, that thefe canoes were not entirely entrufted to my crew, but carried by the owners themfelves who accompanied us; as it would have been very uncertain where to have found them at our return from the Copper River.

Agreeably to my inftructions, I fmoked my calumet of peace with the principal of the Copper Indians, who feemed highly pleafed on the occafion; and, from a converfation held on the fubject of my journey, I found they were delighted with the hopes of having an European fettlement in their neighbourhood, and feemed to have no idea that any impediment could prevent fuch a fcheme from being carried into execution. Climates and feafons

## NORTHERNOCEAN. <br> 121

fearons had no weight with them; nor could they fee 1771. where the difficulty lay in getting to them; for though Juec. they acknowledged that they had never feen the fea at the mouth of the Copper River clear of ice, yet they could fee nothing that thould hinder a hip from approaching it; and they innocently enough obferved, that the water was always fo fmooth between the ice and lhore, that even fmall boats might get there with great eare and fafety. How a fhip was to get between the ice and the fhore, never once occurred to them.

Whether it was from real motives of hofpitality, or from the great advantages which they expected to reap by my difcoveries, I know not; but I muft confefs that their civility far exceeded what I could expect from fo uncivilized a tribe, and I was exceedingly forry that I had nothing of value to offer them. However, fuch articles as I had, I diftributed among them, and they were thankfully received by them. Though they have fome European commodities among them, which they purchafe from the Northern Indians, the fame articles from the hands of an Englifhman were more prized. As I was the firft whom they had ever feen, and in all probability might be the laft, it was curious to fee how they flocked about me, and expreffed as much defire to examine me from top to toe, as an European Naturalif would a non-defcript animal. They, however, found and pronounced me to be a perfea human being, except in the colour of my hair $\mathbf{R}$ and

## A JOURNEYTOTHE

 and eyes: the former, they faid, was like the fained hair juace of a buffaloe's tail, and the latter, being light, were like thofe of a gull. The whitenefs of my fkin alfo was, in their opinion, no ornament, as they faid it refembled meat which had been fodden in water till all the blood was extracted. On the whole, I was viewed as fo great a curiofity in this part of the world, that during my ftay there, whenever I combed my head, fome or other of them never failed to afk for the hairs that came off, which they carefully wrapped up, faying, "When I fee " you again, you fhall again fee your hair."23. The day after our arrival at Congecathawhachaga, Matonabbee difpatched his brother, and feveral Copper Indians, to Copper-mine River, with orders to acquaint any Indians they might meet, with the reafon of my vifiting thofe parts, and alfo when they might probably expect us at that river. By the bearers of this meffage I fent a prefent of tobacco and fome other things, to induce any ftrangers they met to be ready to give us affiftance, either by advice, or in any other way which might be required.

As Matonabbee and the other Indians thought it advifable to leave all the women at this place, and proceed to the Copper-mine River without them, it was thought neceffary to continue here a few days, to kill as many deer as would be fufficient for their fupport during,

> NORTHERN OCEAN.
our abfence. And notwithftanding decr were fo plentiful, yet our numbers were fo large, and our daily con$\underbrace{1771 .}_{\text {Junc. }}$ fumption was fo great, that feveral days elapfed before the men could provide the wivizen with a fufficient quantity; and then they had no other way of preferving it, than by cutting it in thin flices and drying it in the Sun. Meat, when thus prepared, is not only very portable, but palatable; as all the blood and juices are ftill remaining in the meat, it is very nourißhing and wholefome food; and may, with care, be kept a whole year without the leaft danger of fooiling. It is neceffary, however, to air it frequentiy during the warm weather, otherwife it is liable to grow mouldy: but as foon as the chill air of the fall begins, it requires no farther trouble till next Summer.

We had not been many days at Congecathawhachaga before I had reafon to be greatly concerned at the behaviour of feveral of my crew to the Copper Indians. They not only took many of their young women, furrs, and readydreffed fkins for clothing, but alfo feveral of their bows and arrows, which were the only implements they had to procure food and raiment, for the future fupport of themfelves, their wives, and families. It may probably be thought, that as thefe weapons are of fo fimple a form, and fo eafily conftructed, they might foon be replaced, without any other trouble or expence than a little labour; but this fuppofition can only hold good in places where proper materials are eafily procured, which was not the cafe here:

A JOURNEY TO THE

$\underbrace{177 \mathrm{I} .}_{\text {June. }}$if it had, they would not have been an object of plunder. In the midft of a foreft of trees, the wood that would make a Northern Indian a bow and a few arrows, or indeed a bow and arrows ready made, are not of much value; no more than the man's trouble that makes them: but carry that bow and arrows feveral hundred miles from any woods and place where thofe are the only weapons in ufe, their intrinfic value will be found to increafe, in the fame proportion as the materials which are made are lefs attainable *.

To do Matonabbee juftice on this occafion, I muft fay that he endeavoured as much as poffible to perfuade his countrymen from taking either furrs, clothing, or bows, from the Copper Indians, without making them fome fatisfactory return; but if he did not encourage, neither did he endeavour to hinder them from taking as many women as they pleafed. Indeed, the Copper Indian women feem to be muchefteemed by our Northern traders; for what reafon I know not, as they are in reality the fame people in every refpect; and their language differs not fo much as the dialects of fome of the neareft counties in England do from each other.

It is not furprifing that a plurality of wives is cuftomary among thefe people, as it is fo well adapted to

[^16]
## NORTHERNOCEAN.

their fituation and manner of life. In my opinion no race of people under the Sun have a greater occafion for
1771. June. fach an indulgence. Their annual haunts, in queft of furts, fore formote from any European fettlement, as to render them the greateft travellers in the known world; and as they have neither horfe nor water carriage, every good hunter is under the neceffity of having feveral perfons to affift in carrying his furrs to the Company's Fort, as well as carrying back the European goods which he receives in exchange for them. No perfons in this country are fo proper for this work as the women, becaufe they are inured to carry and haul heary loads from their childhood, and to do all manner of drudgery; fo that thofe men who are capable of providing for three, four, five, fix, or more women, generally find them humble and faithful fervants, affectionate wives, and fond and indulgent mothers to their children. Though cuftom makes this way of life fit apparently eafy on the generality of the women, and though, in general, the whole of their wants feem to be comprized in food and clothing only, yet nature at times gets the better of cuftom, and the fpirit of jealoufy makes its appearance among them: however, as the hufband is always arbitrator, he foon fettles the bufinefs, though perhaps not always to the entire fatisfaction of the parties.

Much does it redound to the honour of the Northern Indian women when I affirm, that they are the mildeft , and moft virtuous femalea I have feen in any part of North America;

America; though fome think this is more owing to habit, cuftom, and the fear of their hurbands, than from real inclination. It is undoubtedly well known that none can manage a Northern Indian woman fo well as a Northern Indian man; and when any of them have been permitted to remain at the Fort, they have, for the fake of gain, been eafily prevailed on to deviate from that character; and a few have, by degrees, become as abandoned as the Southern Indians, who are remarkable throughout all their tribes for being the moft debauched wretches under the Sun. So far from laying any reftraint on their fenfual appetites, as long as youth and inclination laft, they give themfelves up to all manner of even inceftuous debauchery; and that in fo beaflly a manner when they are intoxicated, a fate to which they are peculiarly addizted, that the brute creation are not lefs regardlefs of decency. I know that fome few Europeans, who have had little opportunity of feeing them, and of enquiring into their manners, have been very lavifh in their praife: but every one who has had much intercourfe with them, and penetration and induftry, enough to ftudy their difpofitions, will agree, that no accomplifhments whatever in a man, is fufficient to conciliate the affections, or preferve the chaflity of a Southern Indian woman *.

[^17]
# The Northern Indian women are in general fo far from being like thofe I have above defcribed, that it is very <br> June. 

fancy, and who, I can truly affirm, was directly the reverfe of the picture I have drawn.

Mary, the daughter of Mosrs Norton, many years Chief at Prince of Wales's Fort, in Hudfon's Bay, though born and brought up in a country of all others the leaft favourable to virtue and virtuous principles, poffeffed them, and every other good and amiable quality, in a moft eminent degree.

Without the affiftance of religion, and with no education but what the received among the diffolute natives of her country, fhe would have thone with fuperior luftre in any other country: for, if an engaging perfon, gente manners, an eafy freedom, arifing from a confcioufnefs of innocence, an amiabic modefty, and an unrivalied delicacy of fentiment, are graces and virtues which render a woman lovely, mone ever had greater pretenfions to general effeem and regard; while her benevolence, humanity, and fcrupulous adherence is truth and honefty, would have done honour to the moft enlightened ane. cievour Chriftian.

Dutiful, obedient, and affectionate to her parents; fteady and faithful to he:friends; grateful and humble to her benefactors; eafily forgiving and forgetting injuries; careful not to offend any, and courteous and kind to ali; he was, neverthelefs, fuffered to perith by the rigours of cold and hunger, amidit her own relations, at a time when the griping hand of famine was by no means feverely felt by any other member of their company; and it may truiy be faid that fhe fell a martyr to the prineiples of virtec. This happened in the Wiater of the year 1782, after the French had deltroyed Prince of Waics's Fort; at which time the was in the twenty-fecond year of her age.

Human nature fhudders at the bare recital of fuch brutality, and reaton Mrinks from the talk of accounting for the decrees of Providerice on luch cecafions as this: but they are the ftrongeft affurances of a future thate, io infinitely fuperior to the prefent, that the enjoyment of every pleatiere in this world by the moft worthlefs and abandoned wretch, of the mult tarocent aid
1771. uncommon to hear of their ever being guilty of inconti-

## Junc.

 nency, not even thofe who are confined to the fixth or even eighth part of a man.It is true, that were I to form my opinion of thofe women from the behaviour of fuch as I have been more particularly acquainted with, I fhould have little reafon to fay much in their favour; but impartiality will not
virtuous woman perifing by the moft excruciating of all deaths, are matters equally indiferent. Bur,

Peace to the alhes, and the virtuous mind, Of her who lived in peace with all mankind; Learn'd from the heart, unknowing of difguife, Truth in her thoughts, and candour in her ejes; Stranger alike to envy and to pride, Gaod fenfe her light, and Nature all her guide; But now removed from all the ills of life, Here refts the pleafing friend and faithful wife.

Wacist.
Her father was, undoubtedy, very blamable for bringing her up in the render manner which he did, rendering her by that means not only incapable of bearing the fatigues and hardhips which the reft of her countrywomen think little of, but of providing for herfelf. This is, indeed, 000 frequent 2 practice among Europeans in that country, who bring up their children in fo indulgent a manner, that when they retire, and leave their offspring behind, they find themfelves fo helplefs, as to be unable to provide for the few wants to which they are fubject. The late Mr. Ferdinand Jacobs, many years Chief at York Fort, was the only perfon whom I ever knew that acted in a different manner; though no man could pofibly be fonder of his children in other refpects, yet as there were fome that he could not bring to England, he had them brought up entirely among the natives; fo that when he left the country, they fearcely ever felt the lofs, though they regretted the abfence of 2 fond and indulgent parent.
permit me to make a few of the worlt characters a ftandard for the general conduct of all of them. Indeed it is but reafonable to think that travellers and interlopers will be always ferved with the worft commodities, though perhaps they pay the beft price for what they have.

It may appear ftrange, that while I am extolling the chaftity of the Northern Indian women, I fhould acknowledge that it is a very common cuftom among the men of this country to exchange a night's lodging with each other's wives. But this is fo far from being confidered as an act which is criminal, that it is eftcemed by them as one of the ftrongeft ties of friend!hip between two families; and in cafe of the death of either man, the other confiders himfelf bound to fupport the children of the deceafed. Thofe people are fo far from viewing this engagement as a mere ceremony, like moft of our Chriftian god-fathers and god-mothers, who, notwithftanding their vows are made in the moft folemn manner, and in the prefence of both God and man, fcarcely ever afterward remember what they have promifed, that there is not an inftance of a Northern Indian having once neglected the duty which he is fuppofed to have taken upon himfelf to perform. The Southern Indians, with all their bad qualities, are remark. ably humane and charitable to the widows and children of d parted friends; and as their fituation and manner of life cnable them to do more acts of charity with lefs trouble

17\%1., than falls to the lot of a Northern Indian, few widows or orphans are ever unprovided for among them.

Though the Northern Indian men make no fcruple of having two or three fifters for wives at one time, yet they are very particular in obferving a proper diftance in the confanguinity of thofe they admit to the abore-mentioned intercourfe with their wives. The Southern Indians are lefs fcrupulous on thofe occafions; among them it is not at all uncommon for one brother to make free with another brother's wife or daughter *; but this is held in abhorrence by the Northern Indians.

[^18]NORTHERNOCEAN. I3r

By the time the Indians had killed as many deer as they thought would be fufficient for the fupport of the women during our abfence, it was the firft of July; and during

177 r .
July.
in. this time I had two good obfervations, both by meridional and double altitudes; the mean of which determined the latitude of Congecathawhachaga to be $68^{\circ} 46^{\prime}$ North; and its longitude, by account, was $24^{\circ} 2^{\prime}$ Weft from Prince of Wales's Fort, or $118^{\circ} 15^{\prime}$ Weft of the meridian of London.

On the fecond, the weather proved very bad, with much fnow and lleet; about nine o'clock at night, however, it grew more moderate, and fomewhat clearer, fo that we fet out, and walked about ten miles to the North by Weft, when we lay down to take a little fleep. At our departure from Congecathawhachaga, feveral Indians who had entered the war-lift, rather chofe to ftay behind with the women; but their lofs was amply fupplied by Copper Indians, who accompanied us in the double capacity of guides and warriors.

On the third the weather was equally bad with that of 3 d. the preceding day; we made hift, however, to walk ten or eleven miles in the fame direction we had done the day before, and at laft were obliged to put up, not being able to fee our way for fnow and thick drift. By putting up, no more is to be underftood than that we got to leeward of a

1;7:. great Atone, or into the crevices of the rocks, where we
Jus. regaled ourfelves with fuch provifions as we had brought with us, frnoked our pipes, or went to fleep, till the weather permitted us to proceed on our journey.

4th. On the fourth, we had rather better weather, though conftant light fnow, which made it very difagreeable under foot. We neverthelefs walked twenty-feven miles to the North Weft, fourteen of which were on what the Indians call the Stony Mountains; and furely no part of the world better deferves that name. On our firf approaching thefe mountains, they appeared to be a confuled heap of ftones, utterly inacceffible to the frot of man: but having fome Copper Indians with us who knew the beft road, we made a tolerable Bift to get"on; though not without being obliged frequently to crawl on our hands and knees. Notwithftanding the intricacy of the road, there is a very vifible path the whole way acrofs thefe mountains, even in the moft difficult parts: and alfo on the fmooth rocks, and thofe parts which are capable of receiving an impreffion, the path is as plain and wellbeaten, as any bye foot-path in England. By the fide of this path there are, in different parts, feveral large, flat, or table ftones, which are covered with many thoufands of fmall pebbles. Thefe the Copper Indians fay have been gradually increafed by paffengers going to and from the mines; and on its being obferved to us that it was the uni-

#### Abstract

NORTHERNOCEAN. verfal cuftom for every one to add a fone to the heap, each of us took up a frall ftone in order to increafe the number, for good luck.

Juft as we arrived at the foot of the Stony Mountains, three of the Indians turned back; faying, that from every appearance, the remainder of the journey feemed likely to be attended with more trouble than would counterbalance the pleafure they could promife themfelves by going to war with the Efquimaux.

1771.

Juy.

On the fifth, as the weather was fo bad, with conftant
5 s. fnow, fleet, and rain, that we could not fee our way, we did not offer to move: but the fixth proving moderate, and quite fair till toward noon, we fet out in the morning, and walked about eleven miles to the North Weft; when perceiving bad weather at hand, we began to look oue for fhelter among the rocks, as we had done the four preceding nights; having neither tents nor tentpoles with us. The next morning fifteen more of the Indians deferted us, being quite fick of the road, and the uncommon badnefs of the weather. Indeed, though thefe people are all enured to hardihips, yet their complaint on the prefent occafion was not without reafon; for, from our leaving Congecathawhachaga we had fcarcely a: dry garment of any kind, or any thing to fkreen us from the inclemency of the weather, except rocks and caves;
1771. caves; the beft of which were but damp and unwholefome July. lodging. In fome the water was conftantly dropping from the rock that formed the roof, which made our place of retreat little better than the open air; and we had not been able to make one fpark of fire (except what was fufficient to light a pipe) from the time of our leaving the women on the fecond inftant; it true, in fome places there was a little mofs, but the conftant fleet and rain made it fo wet, as to render it as impoffible to fet fire to it as it would be to a wet fpunge.

We had no fooner entered our places of retreat, than we regaled ourfelves with fome raw venifon which the Indians had killed that morning; the fmall ftock of dried provifions we took with us when we lett the women being now all expended.

Agreeably to our expectations, a very fudden and heavy gale of wind came on from the North Weft, attended with fo great a fall of fnow, that the oldeft Indian in company faid, he never faw it exceeded at any time of the year, much lefs in the middle of Summer. The gale was foon over, and by degrees it became a perfect calm: but the flakes of fnow were fo large as to furpafs all credibility, and fell in fuch vaft quantities, that though the fhower only lafted nine hours, we were in danger of being fmothered in our caves.
NORTHERN OCEAN.

On the feventh, we had a freh breeze at North Weft, with fome flying fhowers of fmall rain, and at the fame time a conftant warm funhine, which foon diffolved the greateft part of the new-fallen fnow. Early in the morning we crawled out of our holes, which were on the North fide of the Stony Mountains, and walked about eighteen or twenty miles to the North Weft by Weft. In our way we croffed part of a large lake on the ice, which was then far from being broken up. This lake I diftinguifhed by the name of Buffalo, or Mufk-Ox Lake, from the number of thore animals that we found grazing on the margin of it; many of which the Indians killed, but finding them lean, only took fome of the bulls' hides for fhoe-foals. At night the bad weather returned, with a ftrong gale of wind at North Eaft, and very cold rain and fleet.

This was the firft time we had feen any of the murkoxen fince we left the Factory. It has been obferved that we faw a great number of them in my firft unfucceffful attempt, before I had got an hundred miles from the Factory; and indeed I once perceived the tracks of two of thofe animals within nine miles of Prince of Wales's Fort. Great numbers of them alfo were met with in my fecond journey to the North: feveral of which my companions killed, particularly on the feventeenth of July one thoufand feven hundred and feventy. They are alfo found at times in confiderable numbers near the fea-coaft of Hudfon's Bay,
177r. all the way from Knapp's Bay to Wager Water, but are July. moft plentiful within the Arctic Circle. In thofe high latitudes I have frequently feen many herds of them in the courfe of a day's walk, and fome of thofe herds did not contain lefs than cighty or an hundred head. The number of bulls is very few in proportion to the cows; for it is rare to fee more than two or three full-grown bulls with the largeft herd: and from the number of the males that are found dead, the Indians are of opinion that they kill each other in contending for the femalcs. In the rutting feafon they are fo jealous of the cows, that they run at either man or beaft who offers to approach them; and have been obferved to run and bellow even at ravens, and other large birds, which chanced to light near them. They delight in the moft fony and mountainous parts of the barren ground, and are feldom found at any great diftance from the woods. Though they are a beaft of great magnitude, and apparently of a very unwieldy inattive Aructure, yet they climb the rocks with great eafe and agility, and are nearly as fure-footed as a goat; like it too, they will feed on any thing; though they feem fondeft of grafs, yet in Winter, when that article cannot be had in fufficient quantity, they will eat mofs, or any other herbage they can find, as alfo the tops of willows and the tender branches of the pine tree. 'They take the bull in Auguft, and bring forth their young the latter end of May, or beginning of June; and they never have more than one at a time.

## NORTHERNOCEAN.

The mulk-ox, when full grown, is as large as the generality, or at leaft as the middling fize, of Englifh black
1771.

July. cattle *; but their legs, though large, are not fo long; nor is their tail longer than that of a bear; and, like the tail of that animal, it always bends downward and inward, fo that it is entirely hid by the long hair of the rump and hind quarters: the hunch on their fhoulders is not large, being little more in proportion than that of a. deer : their hair is in fome parts very long, particularly on the belly, fides, and hind quarters; but the longeft hair about them, particularly the bulls, is under the throat, extending from the chin to the lower part of the cheft, between the fore-legs; it there hangs down like a horfe's mane inverted, and is full as long, which makes the animal have a moft formidable appearance. It is of the hair from this part that the Efquimaux make their mufketto

[^19]1771. wigs, and not from the tail, as is afferted by Mr. Ellis*;

July. their tails, and the hair which is on them, being too fhort for that purpofe. In Winter they are provided with a thick fine wool, or furr, that grows at the root of the long hair, and fhields them from the intenfe cold to which they are expofed during that fearon; but as the Summer advances, this furt loofens from the fkin , and, by frequently rolling themfelves on the ground, it works out to the end of the hair, and in time drops off, leaving little for their Summer clothing except the long hair. This feafon is fo fhort in thofe high latitudes, that the new fleece begins to appear, almoft as foon as the old one drops off; fo that by the time the cold becomes fevere, they are again provided with a Winter-drefs.

The fleft of the murk-ox noways refembles that of the Weftern buffalo, but is more like that of the moofe or clk ; and the fat is of a clear white, flightly tinged with a light azure. The calves and young heifers are good eating; but the flefh of the bulls both fmells and taftes fo ftrong of mulk, as to render it very difagreeable: even the knife that cuts the flelh of an old bull will fmell fo ftrong of mufk, that nothing but fcowring the blade quite bright can remove it, and the handle will retain the fcent for a long time. Though no part of a bull is free from this fmell, yet the parts of generation, in particular the uretbra, are by far the moft ftrongly impregnated. The

- Yoyage to Hudtor's Bay, P. 232.

## NORTHERNOCEAN.

urine itfelf maft contain this feent in a very great degree ; for the sheaths of the bull's penis are corroded with a browt grommy fubftance, which is nearly as high-fcented with mufk as that faid to be produced by the civet cat; and after having been kept for feveral years, feems not to lofe any of its quality.

On the eighth, the weather was fine and moderate, though not without fome fhowers of rain. Early in the morning we fet out, and walked eighteen miles to the Northward. The Indians killed fome deer; fo we put up by the fide of a fmall creek, that afforded a few witlows, with which we made a fire for the firft time fince our leaving Congecathawhachaga; confequently it was here that we cooked our firft meal for a whole week. This, as may naturally be fuppofed, was well retiifhed by all parties, the badians as well as myfelf. And as the Sun had, in the courfe of the day, dried our clothing, in fpite of the fmall howers of tain, we felt ourfelves more comfortable than we had done fince we left the women. The place where we lay that night, is not far from Grizated Bear Hill; which takes its name from the numbers of thofe animals that are frequently krown to refort thither for the purpofe of bringing forth their young in a catic that is found there. The wondenful defcription which the Copper Indians gave of this place exciting the curiofity of feveral of my companions as well as myfelf, we went to piew it; but on our arrival at it
found
1771.

July. 8:h.

## A JOURNEY TOTHE

${ }^{177 \mathrm{i} .}$ found little worth remarking about it, being no more than
July. a high lump of earth, of a loamy quality, of which kind there are feveral others in the fame neighbourhood, all ftanding in the middle of a large marf, which makes them refemble fo many illands in a lake. The fides of thefe hills are quite perpendicular; and the height of Grizzled Bear Hill, which is the largeft, is about twenty feet above the level ground that furrounds it. Their fummits are covered with a thick fod of mofs and long grafs, which in fome places projects over the edge; and as the fides are conftantly mouldering away, and wafhing down with every fhower of rain during the fhort Summer, they muft in time be levelled with the marfh in which they are fituated. At prefent thofe iflands, as I call them, are excellent places of retreat for the birds which migrate there to breed; as they can bring forth their young in perfect fafety from every bealt except the Quequehatch, which, from the fharpnefs of its claws and the amazing ftrength of its legs, is capable of afcending the moft difficult precipices,

On the fide of the hill that I went to furvey, there is a large cave which penetrates a confiderable way into the rock, and may probably have been the werk of the bears, as we could difcover vifible marks that fome of thofe beafts had been there that Spring. This, though deemed very cu . rious by fome of my companions, did not appear fo to me, as it neither engaged my attention, nor raifed my furprife,
furprife, half fo much as the fight of the many hills and dry ridges on the Eaft fide of the marfh, which are turned over like ploughed land by thofe animals, in fearching for ground-fquirrels, and perhaps mice, which conftitute a favourite part of their food. It is furprifing to fee the extent of their refearches in queft of thofe animals, and ftill more to view the enormous fones rolled out of their beds by the bears on thofe occafions. At firft I thought thefe long and deep furrows had been effected by lightning; but the natives affured me they never knew any thing of the kind happen in thofe parts, and that it was entirely the work of the bears feeking for their prey.

On the ninth, the weather was moderate and cloudy, with fome flying fhowers of rain. We fet out early in the morning, and walked about forty miles to the North and North by Eaft. In our way we faw plenty of deer and mufk-oxen : feveral of the former the Indians killed, but a fmart fhower of rain coming on juft as we were going to put up, made the mofs fo wet as to render it impracticable to light a fire. The next day proving fine and clear, we fet out in the morning, and walked twenty miles to the North by Weft and North North Weft ; but about noon the weather became fo hot and fultry as to render walking very difagreeable; we therefore put up on the top of a high hill, and as the mofs was then dry, lighted a fire, and fhould have made a comfortable meal, and been otherwife tolerably happy, had it not been
1771. for the mulkettoes, which were uncommonly numerous, july. and their ftings almoft infufferable. The fame day Matonabbee fent feveral Indians a-head, with orders to proceed to the Copper-mine River as faft as poffible, and acquaint any Indians they might meet, of our approach. By thofe Indians I alfo fent fome fmall prefents, as the fureft means to induce any ftrangers they found, to come to our afliftance.
$::: t$. The eleventh was hot and fultry, like the preceding day. In the morning we walked ten or eleven miles to the North Weft, and then met a Northern Indian Leader, called Oule-eye, and his family, who were, in company with feveral Copper Indians, killing deer with bows and arrows and fpears, as they croffed a little river, by the fide of which we put up, as did alfo the above-mentioned Indians *. That afternoon I fmoked my calumet of peace with thefe ftrangers, and found them a quite different fet of people, at leaft in principle, from thofe I had feen at Congecathawhachaga: for though they had great plenty of provifions, they neither offered me nor my companions a mouthful, and would, if they had been permitted, have taken the laft garment from off my back, and robbed me of every article I poffeffed. Even my Northern companions could not help taking notice of fuch unaccountable behaviour. Nothing but their poverty pro-

[^20]tected them from being plundered by thofe of my creww; and had any of their women been worth notice, they $\underbrace{177 \%}_{\text {July. }}$ would moft affuredly have been preffed into our fervice.

The twelfth was fo exceedingly hot and fultry, that reth. we did not move; but early in the morning of the thir- $\mathrm{i}_{\text {th }}$ teenth, after my companions had taken what dry provifions they chofe from our unfociable ftrangers, we fer out, and walked about fifteen or fixteen miles to the North and North by Eaft, in expectation of arriving at the Copper-mine River that day; but when we had reached the top of a long chain of hills, between which we were told the river ran, we found it to be no more than a branch of it which empties itfelf into the main river about forty miles from its influx into the fea. At that time all the Copper Indians were difpatched different ways, fo that there was not one in company who knew the fhorteft cat to the main river. Seeing fome woods to the Weftward, and judging that the current of the rivulet ran that way, we concluded that the main river lay in that direction, and was not very remote from our prefent fituation. We therefore directed our courfe by the fide of it, when the Indians met with feveral wery fine buck deer, which they deftroyed; and as that part we now traverfed afforded plenty of good fire-wood, we put up, and cooked the moft comfortable meal to which we had fat down for fome months. As fuch favourable opportunities of indulging the appetite happen but feldom, it is a general
rule with the Indians, which we did not neglect, to exert every art in dreffing our food which the molt refined kill in Indian cookery has been able to invent, and which confifts chiefly in boiling, broiling, and rafting: but of all the difhes cooked by thole people, a beeatee, as it is called in their language, is certainly the mon delicious, at leaf for a change, that can be prepared from a deer only, without any other ingredient. It is a kind of haggis, made with the blood, a good quantity of fat fired fall, forme of the tenderest of the flefh, together with the heart and lungs cut, or more commonly torn into fall fivers; all which is put into the ftomach, and rafted, by being fufpended before the fire by a ftring. Care muff be taken that it does not get too much heat at firft, as the bag would thereby be liable to be burnt, and the contents be let out. When it is fufficiently done, it will emit fleam, in the fame manner as a fowl or a joint of meat; which is as much as to fay, Come, eat me now : and if it be taken in time, before the blood and other contents are too much done, it is certainly a mot delicious morel, even without pepper, fall, or any other feafoning.

After regaling ourfelves in the mot plentiful manner, and taking a few hours reft, (for it was almoft impoffible to hep for the mulkettoes,) we once more fat forward, directing our courfe to the North Weft by Weft; and after walking about nine or ten miles, arrived at that long wifhed-for foot, the Copper-mine River.

## C H A P. VI.

Tranfactions at the Copper-mine River, and till we joined

Some Copper Indians join us.-Indians fend tbree Spies dowen the river. Begin my furvey.-Spies return, and give an account of five tents of Efquimaux.-Indians confult the beft metbod to fieal on them in the nigbt, and kill them while afleep.-Crofs the river.-Proceedings of the Indians as they advance towards the Efquimaux tents. -The Indians begin the maffacre wbile the poor Efquimaux are afeep, and flay them all.-Mucb affected at the figbt of one. yuung woman killed cloje to my: feet. - Tbe bebaviour of the Indians on this occafion.-Their brutijb treatment of the dead bodies.-Seven more tents feen on the oppofite fide of the river. -Tbe Indians barafs them, till they $f$ ly to a fooal in the river for fafety.—Bebaviour of the Indians after killing tbofe Efquimaux.-Crofs the river, and proceed to the tents on tbat fide.-Plunder their tents, and defroy tbeir utenfls.- Continue my furvey to the river's mouth.Remarks tbere.-Set out on my return.-Arrive at one of the Copper-mines.-Remarks on it.-Many attempts made to induce the Copper Indians to carry their own goods to market. -Obffacles to it. -Villany and cruelty of Keelfbies to fome of tbofe poor Indians. - Leave the Coppermine, and walk at an amazing rate till we join the women, by the fide of Cogead Wboic.- Mucb foot-foundered.-Tbe appearance very alarming, but foon cbanges for the better.- Proceed to the Soutbward, and join the remainder of the women and cbildren.-Many other Indians arrive with them.
WE had fcarcely arrived at the Copper-mine River when four Copper Indians joined us, and brought with them two canoes. They had feen all the Indians who were fent from us at various times, except Matonabbec's

## all the women to the South of Cogead Lake.

 Congecathawhachaga.

On my arrival here I was not a little furprifed to find the river differ fo much from the defcription which the Indians had given of it at the Factory; for, inftead of being fo large as to be navigable for fhipping, as it had been reprefented by them, it was at that part fcarcely navigable for an Indian canoe, being no more than one hundred and eighty yards wide, every where full of hoals, and no lefs than three falls were in fight at firft view.

Near the water's edge there is fome wood ; but not one tree grows on or near the top of the hills between which the river runs. There appears to have been formerly a much greater quantity than there is at prefent; but the trees feem to have been fet on fire fome years ago, and, in confequence, there is at prefent ten ficks lying on the ground, for one green one which is growing befide them. The whole timber appears to have been, even in its greateft profperity, of fo crooked and dwarfinh a growth as to render it of little ufe for any purpofe but fire-wood.

Soon after our arrival at the river-fide, three Indians were fent off as fpies, in order to fee if any Efquimaux were inhabiting the river-fide between us and the fea. After walking about three quarters of a mile by the fide of the river, we put up, when moft of the Indians went a hunting,
hunting, and killed feveral mufk-oxen and fome deer. They were employed all the remainder of the day and night in fplitting and drying the meat by the fire. As we were not then in want of provifions, and as deer and other animals were fo plentiful, that each day's journey might have provided for itfelf, I was at a lofs to account for this unufual œconomy of my companions; but was foon informed, that thofe preparations were made with a view to have victuals enough ready-cooked to ferve us to the river's mouth, without being obliged to kill any in our way, as the report of the guns, and the fmoke of the fires, would be liable to alarm the natives, if any fhould be near at hand, and give them an opportunity of efcaping.

Early in the morning of the fifteenth, we fet out, when I immediately began my furvey; which I continued about ten miles down the river, till heavy rain coming on we were obliged to put up; and the place where we lay that night was the end, or edge of the woods, the whole fpace between it and the fea being entirely barren hills and wide open marthes. In the courfe of this day's furvey, I found the river as full of fhoals as the part which I had feen before; and in many places it was fo greatly diminifhed in its width, that in our way we paffed by two more capital falls.

Early in the morning of the fixteenth, the weather being fine and pleafant, I again proceeded with my furvey, and continued it for ten miles farther down the river;

## A JOURNEY TO THE

${ }^{177 \mathrm{I} .}$ but ftill found it the fame as before, being every where July. full of falls and thoals. At this time (it being about noon) the three men who had been fent as fpies met us on their return, and informed my companions that five tents of Efquimaux were on the weft fide of the river. The fituation, they faid, was very convenient for furprifing them; and, according to their account, I judged it to be about twelve miles from the place we met the fpies. When the Indians received this intelligence, no farther attendance or attention was paid to my furvey, but their whole thoughts were immediately engaged in planning the beft method of attack, and how they might fteal on the poor Efquimaux the enfuing night, and kill them all while afleep. To accomplifh this bloody defign more effectually, the Indians thought it neceffary to crofs the river as foon as poffible; and, by the account of the fpies, it appeared that no' part was more convenient for the purpofe than that where we had met them, it being there very fmooth, and at a confiderable diftance from any fall. Accordingly, after the Indians had put all their guns, fpears, targets, \&c. in good order, we croffed the river, which took up fome time.

When we arrived on the Weft fide of the river, each painted the front of his target or hhield; fome with the figure of the Sun, others with that of the Moon, feveral with different kinds of birds and beafts of prey, and many with the images of imaginary beings, which, accord-

$$
\text { NORTHERN OCEAN. }{ }^{1} 49
$$

ing to their filly notions, are the inhabitants of the different elements, Earth, Sea, Air, \&c.

177 r. July.

On enquiring the reafon of their doing fo, I learned that each man painted his hield with the image of that being on which he relied moft for fuccefs in the intended engagement. Some were contented with a fingle reprefentation; while others, doubtful, as I fuppofe, of the quality and power of any fingle being, had their fhields covered to the very margin with a group of hieroglyphics quite unintelligible to every one except the painter. Indeed, from the hurry in which this bufinefs was neceffarily done, the want of every colour but red and black, and the deficiency of ikill in the artift, moft of thofe paintings had more the appearance of a number of accidental blotches, than " of any thing that is on the earth, or in " the water under the earth;" and though fome few of them conveyed a tolerable idea of the thing intended, yet even thefe were many degrees worfe than our country fignpaintings in England.

When this piece of fuperfition was completed, we began to advance toward the Efquimaux tents; but were very careful to avoid croffing any hills, or talking loud, for fear of being feen or overheard by the inhabitants; by which means the diftance was not only much greater than it otherwife would have been, but, for the fake of keeping in the loweft grounds, we were obliged to walk through

## A JOURNEY TO THE

1771. 

July,
entire fwamps of ftiff marly clay, fometimes up to the knees. Our courfe, however, on this occafion, though very ferpentine, was not altogether fo remote from the river as entirely to exclude me from a view of it the whole way: on the contrary, feveral times (according to the fituation of the ground) we advanced fo near it, as to give me an opportunity of convincing myfelf that it was as unnavigable as it was in thole parts which I had furveyed before, and which entirely correfponded with the accounts given of it by the fries.

It is perhaps worth remarking, that my crew, though an undifciplined rabble, and by no means accuftomed to war or command, feemingly acted on this horrid occafion with the utmoft uniformity of fentiment. There was not among them the leaft altercation or feparate opinion; all were united in the general cause, and as ready to follow where Matonabbee led, as he appeared to be ready to lead, according to the advice of an old Copper Indian, who had joined us on our firft arrival at the river where this bloody bufinefs was firft propofed.

Never was reciprocity of interest more generally regarded among a number of people, than it was on the present occafion by my crew, for not one was a moment in want of any thing that another could fare; and if ever the spirit of difinterefted friendship expanded the heart of a Northern Indian, it was here exhibited in the molt ex-
tenfive

## NORTHERN OCEAN.

151
tenfive meaning of the word. Property of every kind that could be of general ufe now ceafed to be private, and every one who had any thing which came under that defcription, feemed proud of an opportunity of giving it, or lending it to thefe who had none, or were moft in want of it.

The number of my crew was fo much greater than that which five tents could contain, and the warlike manner in which they were equipped fo greatly fuperior to what could be expected of the poor Efquimaux, that no lefs than a total maffacre of every one of them was likely to be
the cafe, unlefs Providence fhould work a miracle for their than a total maffacre of every one of them was likely to be
the cafe, unlefs Providence fhould work a miracle for their deliverance.

The land was fo fituated that we walked under cover of the rocks and hills till we were within two hundred yards of the tents. There we lay in ambuh for fome yards of the tents. There we lay in ambuih for fome
time; watching the motions of the Efquimaux; and here the Indians would have advifed me to ftay till the fight was over, but to this I could by no means confent; for I conover, but to this I could by no means confent; for I con-
fidered that when the Efquimaux came to be furprifed, they would try every way to efcape, and if they found me alone, not knowing me from an enemy, they would probably proceed to violence againft me when no perfon was bably proceed to violence againit me when no perion was
near to affift. For this reafon I determined to accompany them, telling them at the fame time, that I would not have any hand in the murder they were about to commit, have any hand in the murders
1771. July. in which they were equipped fo greatly fuperior to what

## A JOURNEY TO THE

$\underbrace{1771 \text {. }}_{\text {fivi. }}$ unlefs I found it neceffary for my own fafety. The InJutr. dians were not difpleafed at this propofal; one of them immediately fixed me a fpear, and another lent me' a broad bayonet for my protection, but at that time I could not be provided with a target; nor did I want to be encumbered with fuch an unneceffary piece of lumber.

While we lay in ambufh, the Indians performed the laft ceremonies which were thought neceflary before the engagement. Thefe chiefly confifted in painting their faces; fome all black, fome all red, and others with a mixture of the two; and to prevent their hair from blowing into their eyes, it was either tiod before and behind, and on both fides, or elfe cut fhort all round. The next thing they confidered was to make themfelves as light as poffible for running; which they did, by pulling off their ftockings, and either cutting off the fleeves of their jackets, or rolling them up clofe to their arm-pits; and though the mufkettoes at that time were fo numerous as to furpafs all crebibility, yet fome of the Indians actually pulled off their jackets and entered the lifts quite naked, except their breech-cloths and fhoes. Fearing I might have occafion to run with the reft, I thought it alfo advifable to pull off my flockings and cap, and to tie my hair as clofe up as poffible.

By the time the Indians had made themfelves thus completely frightful, it was near one o'clock in the morning ing of the feventeenth; when finding all the Efquimaux quiet in their tents, they ruffed forth from their amburcade, and fell on the poor unfufpecting creatures, unper- ceived till clofe at the very eves of their tents, when they foo began the bloody maffacre, while I flood neuter in the rear.

In a few feconds the horrible fcene commenced; it was Shocking beyond defcription; the poor unhappy victims were furprifed in the midft of their flees, and had neither time nor power to make any refiftance; men, women, and children, in all upward of twenty, ran out of their tents stark naked, and endeavoured to make their efcape; but the Indians having poffeffion of all the land-fide, to no place could they fly for fhelter. One alternative only remained, that of jumping into the river; but, as none of them attempted it, they all fell a facrifice to Indian barbarity !

The Shrieks and groans of the poor expiring wretches were truly dreadful; and my horror was much increafed at freeing a young girl, feèmingly about eighteen years of age, killed fo near me, that when the first fear was fuck into her fide the fell down at my feet, and twitted round my legs, fo that it was with difficulty that I could difengage myself from her dying grasps. As two Indian men parfued this unfortunate victim, I folicited very hard for her life; but the murderers made no reply till they had X stuck

## A JOURNEYTOTHE

177r. ftuck both their fpears through her body, and transfixed her to the ground. They then looked me fternly in the face, and began to ridicule me, by alking if I wanted an Efquimaux wife; and paid not the fmalleft regard to the Arieks and agony of the poor wretch, who was twining round their fpears like an eel! lndeed, after receiving much abufive language from them on the occafion, I was at length obliged to defire that they would be mote expeditious in difpatching their vietim out of her mifery, otherwife I fhould be obliged, out of pity, to affift in the friendly office of putting an end to the exiftence of a fel-low-creature who was fo cruelly wounded. On this requeft being made, one of the Indians haftily drew his fpear from the place where it was firft lodged, and pierced it through her breaft near the heart. The love of life, however, even in this moft miferable ftate, was fo predominant, that though this might juftly be called the moft merciful act that could be done for the poor creature, it feemed to be unwelcome, for though mach exhaufted by pain and lofs of blood, fhe made feveral efforts to waid off the friendly blow. My fituation and the terror of my mind at beholding this butchery, cannot eafily be conceived, much lefs defcribed; though I fummed up all the fortitude I was mafter of on the occation, it was with difficulty that I could-refrain from tears; and I am confident that my features muft have feelingly expreffed how fincerely I was affected at the barbarous fcene I then witneffed;

> NORTHERNOCEAN.
neffed; even at this hour I cannot reflect on the tranfactions of that horrid day without fhedding tears.

177 .
July.

The brutifh manner in which thefe favages ufed the bodies they had fo cruelly bereaved of life was fo fhocking, that it would be indecent to defcribe it; particularly their curiofity in examining, and the remarks they made, on the formation of the women; which, they pretended to fay, differed materially from that of their own. For my own part I mult acknowledge, that however favourable the opportunity for determining that point might have been, yet may thoughts at the time were too much agitated to admit of any fuch remarks; and I firmly believe, that had there aftually been as much difference between them as there is faid to be between the Hottentots and thofe of Europe, it would not have been in my power to have marked the diftinction. I have reafon to think, however, that there is no ground for the affertion; and really believe that the declaration of the Indians on this occafion, was utterly void of truth, and proceeded only from the implacable hatred they bore to the whole tribe of people of whom I am fpeaking.

When the Indians had completed the murder of the poor Efquimaux, feven other tents on the Eaft fide the river immediately engaged their attention: very luckily, however, our canoes and baggage had been left at a little diftance up the river, fo that they had no way of X 2 crofling
croffing to get at them. The river at this part being little more than eighty yards wide, they began firing at them from the Weft fides. The poor Efquimaux on the oppofite fore, though all up in arms, did not attempt to abandon their tents; and they were fo unacquainted with the nature of fire-arms, that when the bullets ftruck the ground, they ran in crowds to fee what was fent them, and feemed anxious to examine all the pieces of lead which they found flattened againft the rocks. At length one of the Efquimaux men was hot in the calf of his leg, which put them in great confufion. They all immediately embarked in their little canoes, and paddled to a foal in the middle of the river, which being fomewhat more than a gun-fhot from any part of the chore, put them out of the reach of our barbarians.

When the ravages difcovered that the furviving Efquimax had gained the fore above mentioned, the Northern Indians began to plunder the tents of the deceafed of all the copper utenfils they could find; fuch as hatchets, bayonets, knives, \&c. after which they affembled on the top of an adjacent high hill, and ftanding all in a clufter, fo as to form a Solid circle, with their fears erect in the air, gave many touts of victory, conftantly clashing their fears againft each other, and frequently calling out tima! time* ! by way of derifion to the poor furviving Efqui-

[^21]NORTHERNOCEAN.
maux, who were ftanding on the fhoal almoft knee-deep in water. After paradifig the hill for fome time, it was
$17{ }^{2} \mathrm{I}$. July. agreed to return up the river to the place where we had left our canoes and baggage, which was about half a mile diftant, and then to crofs the river again and plunder the feven tents on the Eaft fide. This refolution was immediately put in force; and as ferrying acrofs with only three or four canoes * took a confiderable time, and as we were, from the crookednefs of the river and the form of the land, entirely under cover, feveral of the poor furviving Efquimaux, thinking probably that we were gone about our bufinefs, and meant to trouble them no more, bad returned from the fhoal to their habitations. When we approached their tents, which we did under cover of the rocks, we found them bufily employed tying up bundles. Thefe the Indians feized with their ufual ferocity; on which, the Efquimaux having their canoes lying ready in the water, immediately embarked, and all of them got fafe to the former fhoal, except an old man, who was fo intent on collecting his things, that the Indians coming upon him before he could reach his canoe, he fell a facrifice to their fury: I verily believe not Tefs than twenty had a hand in his death, as his whole body was like a cullender. It is here neceffary to obferve that the fieses,

[^22]A JOURNEYTOTHE
when on the look-out, could not fee there fever tents, though clofe under them, as the bank, on which they flood, ftretched over them.

It ought to have been mentioned in its proper place, that in making our retreat up the river, after killing the Efquimaux on the Weft fides, we flaw an old woman fitting by the fine of the water, killing falmon, which lay at the foot of the fall as thick as a choal of herrings. Whether from the noife of the fall, or a natural defect in the old woman's hearing, it is hard to determine, but certain it is, The had no knowledge of the tragical fcene which had been fo lately tranfacted at the tents, though the was not more than two hundred yards from the place. When we firft perceived her; the feemed perfectly at cafe, and was entirely furrounded with the produce of her labour. From her mannet of behaviour, and the appearance of her eyes, which were as red as blood, it is more than probable that her fight was not very good; for the fcarcely difcerned that the Indians were enemies, till they were within twice the length of their fears of her. It was in vain that the attempted to fly, for the wretches of my crew transfixed nee to the ground in a few seconds, and butchered her in the mort lavage manner. There was fcarcely a man among them who had not a thruft at her with his fear; and many in doing this, aimed at torture, rather than immediate death, as they not only poked out her eyes,

## NORTHERNOCEAN.

159
but ftabbed her in many parts very remote from thofe which are vital.

## ${ }_{\text {July. }}^{1771 .}$

It may appear ftrange, that a perfon fuppofed to be almoft blind fhould be employed in the bufinefs of fifhing, and particularly with any degree of fuccefs; but when the multitude of fifh is taken into the account, the wonder will ceafe. Indeed they were fo numerous at the foot of the fall, that when a light pole, armed with a few fikes, which was the inftrument the old woman ufed, was put under water, and hauled up with a jerk, it was fcarcely poffible to mifs them. Some of my Indians tried the method, for curiofity, with the old woman's ftaff, ana feldom got lefs than two at a jerk, fometimes three or four. Thofe fifh, though very fine, and beautifully red, are but fmall, feldom weighing more (as near as I could judge) than fix or feven pounds, and in general much lefs. Their numbers at this place were almoft incredible, perhaps equal to any thing that is related of the falmon in Kamfchatka, or any other part of the world. It does not appear that the Efquimaux have any other method of catching the fifh, unlefs it be by fpears and darts; for no appearance of nets was difcovered either at their tents, or on any part of the fhore. This is the cafe with all the Efquimaux on the Weft fide of Hudfon's Bay; fpearing in Summer, and angling in Winter, are the only methods they have yet devifed to catch fifh, though at

## A JOURNEYTOTHE

## 1771. times their whole dependance for fupport is on that arJulf. ticle *.

When

- When the Efquimaux who refice near Churchill River travel in Winter, $i n$ is always from lake to lake, or from river to river, where they have formed magazines of provifions, and heaps of mofs for firing. As fome of thofe places are at a confiderable diftance from each other, and fome of the lakes of confiderable width, they frequently pitch their tents on the ice, and inftead of having a fire, which the feverity of the climate fo much requires, they cut holes in the ice within their tents, and there fit and angle for fifh; if they meet with any fuccefs, the fifh are eaten alive out of the water; and when they are thirfty, water, their ufual beverage, is at hand.

When I firt entered into the employment of the Hudfon's Bay Company, it was as Mate of one of their hoops which was employed in trading with the Efquimaux; I had therefore frequent opportynities of obferving the miferable manner in which thofe people live. In the courfe of our trade with them we frequently purchafed feveral feal-fkin bags, which we fuppofed were full of oil; but on opening them have fometimer found great quantities of venifon, feals, and fea-horie paws, as well as falmon; and as thefe were of no ufe to us, we always returned them to the Indians, who eageriy devoured them, though fome of the articles had been perhaps a whole year in that ftate; and they feemed to exult greatly in having fo over-reached us in the way of trade, as to have fometimes one third of their bargain returned.

This method of preferving their food, though it effequally guards it from the external air, and from the flies, does not prevent puxrefaction entirely, though it renders its progrefs very Dow. Pure train oil is of fuch a quality that it never freezes folid in the coldet Winters; a happy circumftance for thofe people, who are condemned to live in the moft rigorous climate without the affiftance of fire. While thefe magazines laft, they have nothing more to do when hunger affails them, but to open one of the bags, take out a fide of venifon, a few feals, fea-horfe paws, or fome half-roten falmon, and without any preparation, fit down and make a meal; and the lake or river by which they pitch their tent, affords them water, which is their conftant drink. Befides the extraordinary food already mentioned, they have fe-

# When the Indians had plundered the feven tents of all the copper utenfils, which feemed the only thing worth <br> $177^{1 .}$ <br> July. 

veral other difhes equally difgufting to an European palate; I will only mention one, as it was more frequently part of their repaft when I vifited their tents, than any other, except fifh. The difh I allude to, is made of the raw liver of a deer, cut in fmall pieces of about an inch fquare, and mixed up with the contents of the fomach of the fame animal; and the farther digetion has taken place, the better it is fuited to their tafte. It is impoffible to defcribe or cconeive the pleafure they feem to enjoy when eating fuch unaccountable food: nay, I have even feen them eat whole handfuls of maggots that were produced in meat by fly-blows; and it is their conftant cuftom, when their nofes bleed by any accident, to lick their blood inta their mouths, and fwallow it. Indeed, if we confider the inhofpitable part of the globe they are deftined to inhabit, and the great diffreffes to which they are frequently driven by hunger in canfequence of it, we fhall no longer be furprifed at finding they can relifh any thing in common with the meaneft of the animal creation, but rather admire the wifdom and kindnefs of Providence in forming the palates and powers of all creatures in fuch a manner as isbeft adapted to the food, climate, and every other circumitance which may be incident to their refpective fituations.

It is no lefs true, that thefe people, when I firf knew them, would not eat any of our provifions, fugar, raifins, figs, or even bread; for though fome of them would put a bit of it into their mouths, they foon fipit it out again with evident marks of dilike; fo that they had no greater relifh for our food than we had for theirs. At prefent, however, they will eat any part of our provifions, either frefh or falted; and fome of them will drink a draft of porter, or a little brandy and water; and they are now fo far civilized, and attached to the Englih, that I am perfuaded any of the Company's fervants who could habituate themfelves to their diet and manner of life, might now live as fecure under their protection, as under that of any of the tribes of Indians who border oa Hudfon's Bay.

They live in a ftate of perfect freedom; no one apparently claiming the fuperiority over, or acknowledging the leaft fubordination to another,

## A JOURNEY TO THE

 their notice, they threw all the tents and tent-poles into the river, deftroyed a vaft quantity of dried falmon, mukkoxen flefh, and other provifions; broke all the fone kettles; and, in fact, did all the mifchief they poffibly could to diffrefs the poor creatures they could not murder, and who were ftanding on the hoal before mentioned, obliged to be woeful fpectators of their great, or perhaps irreparable lofs.After the Indians had completed this piece of wantonnefs we fat down, and made a good meal of frefh falmon, which were as numerous at the place where we now refted, as they were on the Weft fide of the river. When we had finifhed our meal, which was the firft we had enjoyed for many hours, the Indians told me that they were again ready to affift me in making an end of my furvey. It was then about five o'clock in the morning of the feventeenth, the fea being in fight from the North Weft by Weft to the North Eaft, about eight miles diftant. I therefore fet inftantly about commencing my furvey, and purfued it to the mouth of the river, which I found all the way fo full of fhoals and falls that it was not navigable even for a boat, and that it emptied itfelf into the fea over a ridge or bar.

[^23]$$
\text { NORTHERN OCEAN. } 16_{3}
$$

The tide was then out；but I judged from the marks which I faw on the edge of the ice，that it flowed about
1771. July． twelve or fourteen feet，which will only reach a little way within the river＇s mouth．The tide being out，the water in the river was perfeetly frefh；but I am certain of its being the fea，or fome branch of it，by the quantity of whatebone and feal－fkins which the Efquimaux had at their tents，and alfo by the number of feals which I faw on the ice．At the mouth of the river，the fea is full of iflands and Shoals，as far as I could fee with the affiftance of a good poeket telefcope．The ice was not then broke up，but was melted away for about three quarters of a mile from the main fhore，and to a little diftance round the iflands and fhoals．

By the time I had completed this furvey，it was about one in the morning of the eighteenth；but in thofe high＊ $88 \pm$. latitudes，and at this feafon of the year，the Sun is always at a good height above the horizon，fo that we had not only day－light，but fun－fhine the whole night ：a thick fog and drizzling rain then came on，and finding that neither the river nor fea were likely to be of any ufe，L did not think it worth while to wait for fair weather to determine the latitude exactly by an obfervation；but by the extraordi－ nary care I took in obferving the courfes and diftances when I walked from Congecathawhachaga，where I had two good obfervations，the latitude may be depended upon within twenty miles at the utmoft．－For the fake of form， Y 2 howeier，

## A JOURNET TOTHE

1771. however, after having had fome confultation with the InJuly. dians, I erected a mark, and took poffeffion of the coalt, on behalf of the Hudfon's Bay Company.

Having finifhed this bufinefs, we fet out on our return, and walked about twelve miles to the South by Eaft; when we ftopped and took a little fleep, which was the firft time that any of us bad clofed our eyes from the fifteenth inftant, and it was now fix o'clock in the morning of the eighteenth. Here the Indians-killed a mukk-ox; but the mofs being very wet, we could not make a fire, fo that we were obliged to eat the meat raw, which was intolerable, as it happened to be an old beaft.

Before I proceed farther on my return, it may not be improper to give fome account of the river, and the country adjacent; its productions, and the animala which conftantly inhabit thofe dreary regions, as well as thofe that only migrate thither in Summer, in order to breed and rear their young, unmolefted by man. That I may do this to better purpofe, it will be necerfiary to go back to the place where 1 firf came to the river, which was about forty miles from its mouth.

Befide the ftunted pines already mentioned, there are fome tufts of dwarf willows ; plenty of Wifhacumpuckey, (as the Englifh call it, and which they ufe as tea); Fome jacka-

NORTHERNOCEAN.
jackatheypuck; which the natives.ufe as tobacco; and a $\underbrace{177 \text { r. }}$ few cranberry and heathberry bulhes; but not the leart July. appearance of any fruit.

The woods grow gradually thinner and fmaller as you approach the fea; and the laft little tuft of pines that I faw is about thirty miles from the mouth of the river, fo that we meet with nothing between that fpot and the feafide but barren hills and marthes.

The general courfe of the river is about North by Eaft; but in fome places it is very crooked, and its breadth varies from twenty yards to four or five hundred. The banks are in general a folid rock, both frdes of which correfpond fo exactly with each other, as to leave no doubt that the chanmel of the river has been caufed by forme terrible convulfon of nature; and the fream is fupplied by 2 variety of little rivulets, that rulh down the fides of the hills, occafioned chiefly by the melting of the fnow. Someof the Indians fay, that this river takes its rife from the North Weft fide of Large WhiteStone Lake, which is at the diftance of near three hundred miles on a ftraight line; but I can fcarcely think that is the cafe, unlefs there be many intervening lakes, which are fupplied by the vaft quantity of water that is collected in fo great an extent of hilly and mountainous country: for were it otherwife, I fhould imagine that the mulcitude of frall rivers, which muff expty themfelves into the main ftream in the courfe of fo great a diftance, would have formed a much deeper and fronger current than I difcovered, and occafionod an annual deluge at the breaking up of the ice in the Spring, of which there was not the least appearance, except at Bloody Fall, where the river was contraced to the breadth of about twenty yards. It was at the foot of this fall that my Indians kitted the Efquimaux; which was the reason why I diftinguighed it by that appellation. From this fall, which is about eight mites from the fea-fide, there are very few hills, and thole not high. The land between them is a fief loam and clay, which, in forme parts, produces patches of pretty good graft, and in others tallith dwarf willows: at the foot of the hills alto there is plenty of fine fcurvy-grafs.

The Efquimaux at this river are but low in ftature, none exceeding the middle fire, and though broad let, are neither well-made nor frog bodied. Their complexion is of 2 dirty copper colour; fame of the women, however, are more fair and ruddy. Their dress much refembles that of the Greeslanders in Davis's Straits, except the women's boots, which are not ftiffened out with whalebone, and the tails of their jackets are not more than a foot long.

Their arms and fifhing-tackle are bows and arrows, fears, lances, darts, \&rc. which exactly refemble thole made ale of by the Efquimaux in Hudfon's Straits, and which

> NORTHERN OCEAN.
which have been well defcribed by Crantz*; but, for 1771. want of good edge-tools, are far inferior to them in work- Jutymanfaip. Their arrows, are either fhod with a triangular piece of black ftome, like flate, or a piece of copper; but moft commonly the former.

The body of their canoes is on the fame conftruction as that of the other Efquimaux, and there is no unneceffary prow-projection beyond the body of the veffel; thefe, like their arms and orher utenfils, are, for the want of better tools, by no means fo neat as thofe I have feen in Hudfon's Bay and Straits. The double-bladed paddle is in univerfal ufe among all the tribes of this people.

Their tents are made of parchment deer-fkins in the hair, and are pitched in a circular form, the fame as thofe of the Efquimaux in Hudfon's Bay. Thefe tents are undoubtedfy no more than their Summer habitations, for I faw the remains of two miferable hovels, which, from the fruation, the flructure, and the raft quantity of bones, old fhoes, fcraps of fkins, and other rubbifh lying near them, had certainly been fome of their Winter retreats. Thefe houfes were fituàted on the South fide of a hill; one half of them were under-ground, and the upper parts clofely fet round with poles, meeting at the top in a conical form, like their Summer-houfes or tents. Thefe tents, when inhabited, had undoubtedly been covered with fkins; and in. Winter entirely overfpread with the fnow-drift, which muft have greatly contributed to their warmth. They were fo fmall, that they did not contain more than fix or eight perfons each; and even that number of any other people would have found them but miferable habitations.

Their houfehold furniture chiefly \confifts of ftone kettles, and wooden troughs of various fizer; alfo dilhes, fooops, and fpoons, made of the buffalo or muik-ox horns. Their kettles are formed of a pepper and falt coloured ftone; and though the texture appears to be very coarfe, and as porous as a drip-ftone, yet they are perfealy tight, and will found as clear as a China bowl. Some of thofe kettles are folarge as to be capable of containing five or fix gallons; and though it is impoffible thefe poor people can perform this arduous work with any other tools than harder ftones, yet they are by far fuperior to any that 1 had ever feen in Hudfon's Bay; every one of them being ornamented with neat mouldings round the rim, and fome of the large ones with a kind of flute-work at each corner. In Chape they were a long fquare, fomething wider at the top than bottom, like a knife-tray, and Atrong handles of the folid ftone were left at each end to lift them up.

Their hatchets are made of a thick lump of copper, about five or fix inches long, and from one and a half to two inches fquare; they are bevelled away at one end like
mortioerchiffel. This is tranked into the end of a piece of wood about tivielve or fourtien inches long, in fuch a man-

Juit: ner as to axt like an adre: : in gencral they are appiied to the wood like a chiffel, and driver in with a heary club, inttead of a madlet. Neither the weight of the tooi nor the fharpoefs of the metal will admit of their being bandlec either as adize of axe, with any degree of fuccefs.

The mex's bryonets and women's knives a-e airo triace of copper; the former are in lhape like the ace of fpades, with the handie of deers: horn a foot long, and the latte: exactly relemble thore defcribed by Graptz. Sampies of both thefe impiements I formerly fent home to James Fitzgerald, Efc. then one of the Hudfon's Bay Committee.

Among ail the fooils of the tweire tents which my companions plundered, only two imall pieces of iron were found; one of which wastabout an inch and a tafe long, and three eighths of an inch broad, mace into $a$ woman's knife; the other was barely an inch long, anc a quarter of an inch wide. This laft was rivetted into a piece of ivory, fo as to form a man's knife, known :Hudfon's Bay by the name of Mokeatoggan, and is tie oniy inftrument ured by them in fhaping all their woocwork.

Thofe people had a fine and numerous breed of ciogs, with fharp erect ears, harp nofes, buiby tails, \&c. exZ aetly
1771. aetly like thofe feen among the Efquimaux in Hudfon's Bay and Straits. They were all tethered to ftones, to prevent them, as 1 fuppofe, from eating the finh that were fpread all over the rocks to dry. I do not recollect that my companions killed or hurt one of thofe animals; but after we had left the tents, they often wibhed they had taken fome of thofe fine dogs with them.

Though the drefs, canoes, utenfils, and many other articles belonging to thefe people, are very fimilar to thofe of Hudion's Bay, yet there is one cuftom that prevails among them namely, that of the men having all the hair of their heads pulled out by the roots-which pronounces them to be of a different tribe from any hitherto feen either on the coaft of Labradore, Hudfon's Bay, or Davis's Straits. The women wore their hair at full length, and exacty in the fame file as all the other Efquimaux women do whom I have feen.

When at the fea-fide, (at the mouth of the Copper River,) befides feeing many feals oa the ice, $I$ alfo obferved feveral flocks of fea-fowl lying about the fhores; fuch as, gulls, black-heads, loons, old wives, :ha-ha-wie's, dunter geefe, aretic gulls; and willicks. In the adjacent ponds alfo were fome fwans and geefe in a moulting ftate, and in the marhes fome curlews and plover; plenty of hawks-eyes, (i. e. the green plover,) and fome yellow-legs; alfo feveral other fmall birds, that vifit thofe Northern parts in the Spring

Spring to breed and moult, and which doubtiefs return Southward as the fall advances. My reafon for this conjec-

17\%:
Ju! ture is founded on a certain knowledge that all thofe birds migrate in Hudfon's Bay; and it is but reafonable to think that they are lefs capabie of withftanding the rigour of fuch a long and cold Winter as they muft neceffarily ezperience in a country which is fo many degrees within the Actic Circle, as that is where I now faw them.

That the muk-oxen, deer, bears, woives, wolva-ines, foxes, Alpine hares, white owis, ravens, partidges, groundfquirrels, common fquirrels, ermins, mice, scc. are the conftant inhabitants of thofe patts, is not to be joubtec. In many places, by the fides of the hiks, where the frow lay to a great deptib, the dung of the mufk-oxen anc jeen was lying in fuch long and continued heaps, as clearly to point out that thofe places had been their much-frecuentec paths during the preceding Winter. There were aifo many other fimilar appearances on the tills, and other parts, where the fnow was entirely thawed away, without any print 0 : a foot being viifible in the mois; which is a certain proof that thefe long ridges of dung muft have been dropped: : the fnow as the beafts were paffing and repafing ove: : in the Winter. There are likewife fimilar profs that tien Alpine hare and the partridge do not migrate, but :emair there the whole year: the latter we found in confice-able flocks among the tufts of willows which grow sea: the fea.

It is perhaps not generally kiowns, even to the curioma, fuly, therefore may not be unworthy of offervation, that the dung of the mufk-ox, thought fo largeren animal, is not larger, and at the fame time fo ncae the flinpe and colour of that of the Alpine hare, thist the Uifference is not eafily diftinguifhed but by the native, though in general the quaptity mey lead to a difoovery of the animal to which it betongs.

I did not fee any birds peculiar to thofe parts, except what the Copper Indians call the "Alarm Bind" or "Bird of Warning." In fize and colour it refembles a Cobadekoock, and is of the owl genus. The mame is faid to be well adapted to its qualities; for when it perceives any people, or beart, it directs its way towards them immediately, and afier hovering ower them fome time, flies sound them in cirodess or goes a-hesd in the fant direction in which they walk. They repeat thoir vifits frequently; and if they fee any other moving ebjects; fly alternately from one party to the other, hover orer them for fome time, and make alloud foceaming noife, like the crying of a child. In this inanner ehey are frid fometimes to follow paffengers a whote day. The Copper Indians put great emfindence in thofe bioks, and fay they are frequently apprized by them of the ippproich of iftrangers, and conducted by them tro herds of deer and mofk-axen; which, without their afliftance, in all probabitity, they never could have found.

The

- The Efquimasx feen aot have impibed the fance opinica of thofe birch; for if they had, they mulf have 477: been apprized of our ppurach toward their tepts, becuph at the time the Inditn lay in mputh, (before they began the maffacre, ) a laxge flock of thofe birds wefe continually Gying about, and bowerieg alternately ower them and the tentr, making a noife fufficient to awaken any man out of the foundeft leep.

After a fleep of five or fix hours we once more fet out, and walked eighteen or nineteen miles to the South South Eaft, when we arrived at one of the copper mines, which lies, from the river's mouth about South South Eaft, diftant about twenty-nine or thirty miles.

This mine, if it deferve that appellation, is no more than an entire jumble of rocks and gravel, which has been reat many ways by an earthquake. Through thefe nuins there runs a frmatt river; but no part of it, at the time I was there, was more than knee-deep.

The Indians who were the occafion of my undertaking this jonrney, reprefented this mine to be fo rich and valuble, that if a factory were built at the river, a mip might he ballafted with the car, inftead of Atone; and that with the fame eafe and difpatch as is dane with ftones at Churchill River. By their account the hills were entirely compofed of that metal, all in handy lumps, like a heap
${ }^{1771}$. a heap of pebbles. But their account differed fo much from the truth, that I and almoft all my companions expended near four hours in fearch of fome of this metal, with fuch poor fuccefs, that among us all, only one piece of any fize could be found. This, however, was remarkably good, and weighed above four pounds ${ }^{*}$. I believe the copper has formerly been in much greater plenty; for in many places, both on the furface and in the cavities and crevices of the rocks, the ftones are much tinged with verdigrife.

It may not be unworthy the notice of the curious, or undeferving a place in my Journal, to remark, that the Indians imagine that every bit of copper they find refembles fome object in nature; but by what I faw of the large piece, and fome fmaller ones which were found by my companions, it requires a great Chare of invention to make this out. I found that different people had different ideas on the fubjea, for the large piece of copper above mentioned had not been found long before it had twenty different names, One faying that it refembled this animal, and another that it reprefented a particular part of another; at laft it was generally allowed to refemble an Alpine hare couchant : for my part, I muft confefs that 1 could not fee it had the leaft refemblance to any thing to which they compared it. It would be endlefs to

[^24]enumerate the different parts of a deer, and other anin mals, which the Indians fay the beft pieces of copper re-
1771. femble: it may therefore be fufficient to fay, that the largeft pieces, with the feweft branches and the leaft drofs, are the beft for their ufe; as by the help of fire, and two ftones, they can beat it out to any thape they wilh.

Before Churchill River was fettled by the Hudfon's Bay Company, which was not miore than fifty years prexious to this journey being undertaken, the Northern Indians had no other metal but copper among them, except a fmall quantity of iron-work, which a party of them who vifited York Fort about the year one thoufand feven hundred and thirteen, or one thoufand feven hundred and fourteen, purchaved; and a few pieces of old iron found at Churchill River, which had undoubtedly been left there by Captain Monk. This being the cafe, numbers of them from all quarters ufed every Summer to refort to thefe hills in fearch of copper; of which they made hatchets, ice-chiffels, bayonets, knives, awls, arrow-heads, \&cc. * The many paths

[^25]Jd.
paths that luat been beaten by the fations on thefe toc cafions, and which greset, in many places, porfet,
 valites mid matilty gromils, however, they are molty grown over with letbaite, Yo as ide to be tifferned.

The Copper Indians fet a great value on their native metal even to this day; and prefer it to iton, for almoft every ufe except that of a tratchet, a knife, and an awl: for thefe three neceffary implements, copper makes but a very poor fubftitate. When they exchange copper for iron-work with our trading Northern Indians, which is but feldom, the ftandard is an ice-chiffel of copper for an ice-chiffel of iron, or an ice-chiffel and a few arrowheads of copper; for a half-worn hatchet; but when they barter furrs with our Indians, the eftablifhed rule is to give ten times the price for every thing they purchafe that is given for them at the Company's Factory. Thus, a hatchet that is bought at the Factory for one beaver-fkin, or one cat-1kin, or three ordinary martins' $1 k \mathrm{kins}$, is fold to

July. ribbed Indians, compofed the whole of their trade; which, on an average of many years, and indeed till very lately, feldom or ever exceeded fix thoufand Made Beaver per annum.

At prefent happy it is for them, and greatly to the advantage of the Company, that they are in perfeet peace, and lite in friendihip with their Southern peighbours. The grood effeet of this harmony is already fo vifible, that within a few years the trade from that quarter has increafed many thoufands of Made Beaver annually; fome years even to the amount of eleven thoufand Akins *. Befide the

#### Abstract

- Since this Journal was written, the Northern Indians, by anoually vifiting their Southern friends, the Athapufcow Indians, have contructed the fmall-pox, which has carried off nine-tenths of them, and particularty thofe people who compored the trade at Churchill Factory. The few furvivors follow the example of their Southern neighbours, and all trade with the Canadians, who art fealed in the heart of the Athapufow country: fo that a very few years has proved my hort-fightednefs, and that it would have been much more to the adrantage of the Company, as well as have prevented the depopulation of the Northern Indian country, if they had fill remained at war with the -Southern tribes, and never attempted to better their framaion fit the fame time, it is impoffible to fay what increafe of trade might not, in time, have arifen from a conftant and regutas traffic with the different ribes of Copper and Dog-ribbed Indians. But having been toonliy negletted for feveral years, they have now funk into their originat barbarifin and exteme indigence; and a war has enfued between the two tribes, for the fike of the few reminants of iron-work which was left among them; and the Dog-ribbed Inctinas were to pumerous, and $\mathrm{fo}^{*}$ fuccefful, as to deftroy ahmot the whole race of the Copper Indiane.

While
the advantage ariifing to the Company from this increafe, the poor Northern Indians reap innumerable benefits from

July. a fine and plentiful country, with the produce of which they annually load themfelves for trade, without giving the leaft offence to the proper inhabitants.

Several attempts have been made to induce the Copper and Dog-ribbed Indians to vifit the Company's Fort at Churchill River, and for that purpofe many prefents have been fent, but they never were attended with any fuccefs. And though feveral of the Copper Indians have vifited Churchill, in the capacity of fervants to the Northern Indians, and were generally fent back loaded with prefents for their countrymen, yet the Northern Indians always plundered them of the whole foon after they left the Fort. . This kind of treatment, added to the many inconveniencies that attend fo long a journey, are great obftacles in their way; otherwife it would be as poffible for them to bring their own goods to market, as for the Northern Indians to go fo far to purchafe them on their own account,

White I was writing this Note, I was informed by fome Northern Indians, that the few which remain of the Copper tribe have found their way to one of the Canedian hoofes in the Athapufcow. Indizns country, where they get fupplied with every thing at keff, or about half the price they were formerly obliged to give; fo that the few furviving Northern Indians, as well as the Hudfon's Bay Company, have now loft every thadow of any future trade from that quarter, unlefs the Cormpany will eftublifh a fertement with the Athapufcow country, and underfell the Canadianis.

$$

$$

and have the fame diftance to bring them as the furt proprietors would have had. Bat it is a political fabeme of our Northern traders to prevent fuch an intercoarfe, as it would greatly leffen their confoquence sad emohurent. Supertition, indeed, will, in all probability, be a jafting barrier againft thofe people ever having a fettled communication with our Fadory; wiw of them chure to travel in countries fo remote from their own, under a pertence that the change of air and provifions (thoogh exatty the fame to which they are accuftomed) are highly prejudicial to their health; and that not one out of these of thofe who have undertaken the journey, have ever lived to return. The firft of thefe pealons is exidently no more than grofs fuperfition; and though the latter is but 000 true, it has always been owing to the treachery and crwelty of the Northern Indians, who took them under their protection.

It is but a few years fince, that Captain Koellhies; who is frequently mentionod in this Journal, took twelpe of thefe people under his charge, all heavy laden with the moft valuable furrs; and long before they arrived at the Fort, he and the reft of his crew hat got all the furrs from them, in payment for provifions for their fuppart, and obliged them to carry the furre on their account.

On their arrival at Prince of Wales's Fort, Keelhies laid claim to great merit for haring brought thofe ftrangers,

50 richly laden, to the Paftory, and affered the Governor that he might, in future, expect a great incruare in trade from that quarter, through his intereft mind affiduity. One of the ftrangers was dabbed with the nasue of Captain, and treated accordingly, while at the Fort; that is, he was dreffed out in the beft manner; and at his departure, both himfelf and all bis coustrymen were loaded with prefents, in hopes that they would not only repeat the vifit themfelves, but by difplaying fo much generofity, many of their countrymen would be induced to accompany thers.

There feems to be great propricty in the conduct of the Governor * on this occafion; but however well-intended, it had quite the contrary effect, for Keelihies and the reft of his execrable gang, not content with fharing all the furrs thofe poor people had carried to the Fort, determined to get alfo all the European goods that had been given to them by the Governor. As neither Keelihies nor any of his gang had the courage to kill the Copper Indians, they concerted a deep-laid fcheme for their deftruction; which was to leave them on an iflard. With this view, when they got to the propofed fpot, the Northern Indians took care to have all the baggage belonging to the Copper Indians ferried acrofs to the main, and having ftripped them of fuch parts of their clothing as they

[^28]thought
1771. thought worthy their notice, went off with all the canoes, Juls. leaving them all behind on the illand, where they perifhed for want. When I was on my journey to the Fort in June one thoufand feven hundred and feventy-two, I faw the bones of thofe poor people, and had the foregoing account from my guide Matonabbee; but it was not made known to the Governor for fome years afterward, for fear of prejudicing him againft Keelfhies.

A fimilar circumftance had nearly happened to a Copper Indian who accompanied me to the Fort in one thoufand feven hundred and feventy-two: after we were all ferried acrofs Seal River, and the poor man's bundle of furrs on the South-fide, he was left alone on the oppofite fhore; and no one except Matonabbee would go over for him. The wind at that time blew fo hard, that Matonabbee ftripped himfelf quite naked, to be ready for fwimming in cafe the canoe fhould overfet; but he foon brought the Copper Indian fafe over, to the no fmall mortification of the wretch who had the charge of him, and who would gladly have poffeffed the bundle of furrs at the expence of the poor man's life.

When the Northern Indians returned from the Factory that year, the above Copper Indian put himfelf under the protection of Matonabbee, who accompanied him as far North as the latitude $64^{\circ}$, where they faw fome Copper Indians, among whom was the young man's father, into
whofe

#### Abstract

NORTHERNOCEAN. whofe hands Matonabbee delivered him in good beadth, with all his goods fafe, and in good order.

Soon after we had left the Copper-mine, there came on a thick fog with rain, and at intervals heary fhowers of fnow. This kind of weather continued for fome days; and at times it was fo thick, that we wexe obliged to ftop for feveral hours together, as we were unable to fee our way; and the road was remarkably rocky and intricate.

At three o'clock in the morning of the twenty-fecond, 22 d . Matonabbec's. brother and one of the Copper Indians, who had been firf difpatched a-head from Congecathawhachaga, overtook us. During their abfence they had not difcovered any Indians who could have been ferviceable to my expedition. They had, however, been at the Copper River; and feeing fome marks fet up there to direct them to return, they had made the beft of their way, and had not flept from the time they left the river till theys joined us, though the diftance was not lefs than a hundred miles. When they arrived we were alleep, but we foon awakened, and began to proceed on our journey. That day we walked forty-two miles; and in our way paffed: Buffrolake: at night, we put up about the middle of the Stony Mountains. The weather was exceffively hot. and fultry.

The
A JOERNEYTOTHE

On the twenty-third; the weather continued much the fame as on the preceding day. Early in the morning we Set out, and walked forty-five miles the frt day, during which the Indians killed feveral fine fat buck deer.
$2 \mathrm{~A} \quad$ About one o' clock in the morning of the twenty-fourth, we flopped and took a litho refrefhment, as we had alto done about noon the preceding day; but the Indians had been fo long from their wives and families; that they promired not to flee till they fay them, especially as: we were then in fight of the hills of Congecathawhachaga, where we had left the last of them. After renting about an hour, we proceeded on our way, and at fix in the morning arrived at Congecathawhachaga; when, to ourgreat-difappointment, we found thatallour women had got feet acrofs the river before the Copper Indians left that part; fo that when we arrived, not an Indian was to be found, except an old man and his family, who had -arrived in our abfence, and was waiting at the croffing-place with forme furs for Matonabbee, who was fo nearly related to the old man as to be his fon-in-law, having one of his daughters for a wife. The old man had another with him, who was alfo offered to the great man, but not accepted.

Our flay at this place may be said to have been of very Hort duration; for on fleeing a large fmoke to the Southward, we immediately croffed the river, and walked towards it, 6
when
when we found that the women had indeed been there fome days before, but were gone; and at their departure had fet the mofs on fire, which was then burning, and oceafioned the fmoke we had feen. By this time the afternoon was far adranced; we purfued, however, our courfe in the direction which the women took, for their track we could eafily difcover in the mols. We had not gone far, before we faw another froke at a great diftance, for which we fhaped our courfe; and, notwithitanding we redoubled our pace, it was eleven o'clock at night before we reached it; when, to our great mortification, we found it to be the place where the women had Alept the night before; having in the
1771.

Jaly. morning, at their departure, fet fire to the mofs which was then burning.

The Indians, froding that their wives were fo near as to be within one of their ordinary day's walk, which feldom exceeded ten or twelve miles, determined not to reft till they had joined then!. Accordingly we purfued our courfe, and about two oclock in the morning of the the twenty-fifth, came up with fome of the women, who had then pitched their tents by the fide of Cogead Lake.

From our leaving the Copper-mine River to this time we had travelled fo hard, and taken fo little reft by the way, that my feetand legs had fwelled confiderably, and I had become quite fiff at the ankles. In this fituation $I$ had

Bb fo frequently knocked them againgt the fones, with fuch force, as not only to jar and, diforder them but riy legsalfo: and the nails of my toes were bruifed to fuch a, degres, that feveral of them feftered and dropped off $T_{p_{i}}$ add to this mifhap, the fine was entirely chafed off fum, the tops of both my feet, and betwen every toe; fq that thes fand and gravel, which I could be no meane excluda irritated the raw parts fo much, that for a whole day before we arrived at the women's tents, I left the print of my feet in blood almoof at every ftep I tooke Several of the Iodians began to complain that their fegt alfo wers fore; but $t_{2}$. on examination, not one of them, was the twentigth-part in. fo bad a ftate as mine.

This being the firf time I had been in fuch a fituation, or feen any body foot-foundered, I was much aharmed, and under great apprehenfions for the confequencese. Though I was but little fatigued in body yet the excrus. ciating pain I fuffered when walking had foch an effegt on my fpirits, that if the Indigns had contipued to travel two or three days longer at that unmerciful rate 1 mult unavoidably have been left behind; for my feet were in many places quite honey-combed, by the dirt and gravel eating into the raw flefh.

As foon as we arrived at the women's tents, the firt thing I did, was to wah and clean my feet in . warm

## NOKTHERNOCEAN.

frarm water; then I bathed the fwelled parts with fpirits of wine, and dreffed thofe that were rew with Turner's
1771. cerate ; foon after which I betook myfelf to reit. As we did not move on the following day, I peresived that the fwelling abated, and the raw parts of nay feet were not quite fo moch inflamed. This chatige for the better gave me the Arongeft affurance that reft was the principal ching wanted to effect a fpeedy and complete cure of iny painfud, though in reality wery fimple diforder, (foot-foundoring, t which thad before confidered to be an affair of the greateft cosifiquence.

Reft, however, though effertial to my fipedy recovery, could not at this time be procured; for as the Indians were defirous of joining the reaninder of their wives and families as foon as poffible, they woold not fop even a fingle day; fo that on the tweney 4 feventh we zgain began to move; and though they mowed at the rate of eight or nine miles a day, it was with the utnoof difficulty that I could follow them. Indoed the weather proved remarkably fine and pleafant, and wite groud was in general precty dry; and free from fones; which contributed greatly to my eafe in walking, and enabled me to keep up with the natives.

On the thirty-firft of July, we arrived at the place where the wives and families of my companions had been ordered to wait our return from the Copper-mine River. Here we found feveral tents of Indians; but thofe beBb 2 longing

$$
27 \text { th }

min.
:77: Jonging to Matonabbee, and fome others of my crew, had zot arrived. We faw, however, a large fmoke to the Eaftward, which we fuppofed had been made by them, as no other Indians were expected from that quarter. Accordingly, the next morning, Matonabbee fent fome $\therefore \quad$ of his young men in queft of them, and on the fifth, they all joined us; when, contrary to expectation, a great number of other Indians were with them; in all, to the amount of more than forty tents. Among thofe InCians, was the man who Matonabbee ftabbed when we Were at Clowey. With the greateft fubmiffion, he led is wife to Matonabbee's tent, fet her down by his fide, and retired, without faying a word. Matonabbee took no notice of her, though fhe was bathed in tears; and by degrees, after reclining herfelf on her elbow for fome time, Ge lay down, and, fobbing, faid, fee'd dimne, fee'd dinne! which is, My hufband, my hufband! On which Mato:abbee told her, that if the had refpected him as fuch, She would not have run away from him; and that fhe was at 13 berty to go where the piealed. On which the got up, with feeming reluctance, though moft affuredly with a Ught heart, and returned to her former hubband's tent.

## C H A P. VII.

Remarks from the Time the Women joined us till our Arrival at the Athapufcow Lake.

Several of the Indians fick.-Metbod ufed by tbe conjurers to relieve one man, wbo recovers.-Matonabbee and bis crew proceed to the Soutb Weff.-Moff of the otber Indians feparate, and go their refpertive veaags.-Pafs by Wbite Stone Lake.—Many deer. kitled merely for their fins.-Remarks tbercon; and on tbe deer, refpecting feafons and places.-Arrive at Point Lake.-One of the Indian's wives being fick, is left bebind to peribb above-ground. -Weatber very bad, but deer plenty.-Stay fome time at Point Lake to dry meat, \&ec. Winter fet in.-Superfitious cufforms obferved by my companions, after they bad killed the Efquimaus: at Copper River--A violent gale of wind overfets my tent and breaks my quadrant.- Some Copper and Dog-ribbed Indians join us.-IIndians propofe to go to tbe Atbapufcow Country to kill moofe.-Leave Point Lake, and arrive at tbe roood's edge. - Arrive at Anawd Lake.-Tranfactions tbere.-Remarkable inftance of a man being cured of the palfey by tbe conjurers.-Leave Anawd Lake. - Arrive at the great Atbapuffow Lake.

SEVERAL of the Indians being very ill, the conjurers, who are always the doctors, and pretend to perform great cures, began to try their fkill to effect their recovery. Here it is neceffary to remark, that they ufe no medicine either for internal or external complaints, but perform all their cures by charms. In ordinary cafes, fucking the part affected, blowing, and finging to it; haugh-

 haughing, fpitting, and at the fame time uttering a heap of unintelligible jargon, compofe the whole procefs of the cure., For fome inward complaints; fuch as, griping in the inteftines, difficulty of making water, of $c$. it is very common to fee thofe jugglers blowing into the anus, or into the parts adjacent, till their eyes are almoft ftarting out of their heads: and this operation is performed indifferently on all, without regard either to age or fex. The accumulation of fo large a quantity of wind is at times apt to accafion fome extraordinary emotions, which are not eafly fuppreffed by a frok perfoom; and as there is no vent for it but by the chanacl ehrough which it was conveyed thither, it fometimes occafions an odd fcene between the doctor and his patient; which I once wantonly called an engagement, but for which I was afterward exceedingly forry, as it highly offonded foveral of the Indians; particularly the juggler and the fick perfon, both of whom were men I much efteemed, and, except in that moment of levity, it had ever been no lefs my inclination than my intereft to thew them every refpect that my fituation would admit.I have often admired the great pains thefe jugglers take to deceive their credulous countrymen, while at the fame time they are indefatigably induftrious and perfevering in their efforts to relieve them. Being naturally not very delicate, they frequently continue their windy procefs fo long, that I have more than once feen the doctor quit his patient with his face and breaft in a very difagreeable condition. However

#### Abstract

NORTHERNOCEAN. laughable this may appear to an European, cuftom makes it:very indecent, is their opinion, to turn any thing of the

177 I. Auguft. kindtro: ridicute

When afriend for whom they have a particular regard is, asethey fuppofer dangeroufly ill, befide the above methods, they havecrecourfe to another very extraordinary piece of rfuperfition; which is no lefs than than that of pretending, to fwallow hatchers, ice-chiffels, broad bayonets, kniver, andothe like; out of a fuperfitious notion that flucncein appeafing death, and procure a refpite for their patient.

On fuch extraordinary occafions a conjuring-houfe is erected, by driving the ends of four long fmall fticks, or poles, into the ground at right angles, fo as to form a fquare of fours: five, fix; or feven feet, as may be required. The tops of the poles are tied together, and all is clofe covered with a tent-cloth or other fkin, exactly in the fhape of a fmall: fquare tent, except that there is no vacancy left at the top to admit the light. In the middle of thin houre, or tent; the patient is laid, and is foon followed by the conjurer, or congurers. Sometimes five or fix of them give, their joint-affiftance; but before they enter, they ftrip: themfelves quite naked, and as foon as they get into the houre, the door being well clofed, they kneel round the fick perfon or perfons; and begin to fuck

## A JOURNEY TO THE

## 1771.

 Auguft. and blow at the parts affected, and then in a very fhort fpace of time fing and talk as if converfing with familiar fpirits, which they fay appear to them in the fhape of different beafts and birds of prey. When they have had fufficient conference with thofe neceffary agents, or fhadows, as they term them, they ank for the hatchet, bayonet, or the like, which is always prepared by another perfon, with a long ftring faftened to it by the haft, for the convenience of hauling it up again after they have fwallowed it; for they very wifely admit this to be a very neceffary precaution, as hard and compact bodies, fuch as iron and fteel, would be very difficult to digeft, even by the men who are enabled to fwallow them. Befides, as thofe tools are in themfelves very ufeful, and not always to be procured, it would be very ungenerous in the conjurers to digeft them, when it is known that barely fwallowing them and hauling them up again is fully fufficient to anfwer every purpofe that is expected from them.At the time when the forty and odd tents of Indians joined us, one man was fo dangerounly ill, that it was thought neceffary the conjurers fhould ufe fome of thofe wonderful experiments for his recovery; one of them therefore immediately confented to fwallow: a broad bayonet. Accordingly, a conjuring-houfe was erected in the manner above defcribed, into which the patient was conveyed, and he was foon followed by the conjurer, who, after a long preparatory difcourfe, and the neceffiry conference
ference with his familiar fpirits, or fhadows, as they call them, advanced to the door and anked for the bayonet, which was then ready prepared, by having a ftring faftened to it, and a fhort piece of wood tied to the other end of the ftring, to prevent him from fwallowing it. I could not help obferving that the length of the bit of wood was not more than the breadth of the bayonet: however, as it anfwered the intended purpofe, it did equally well as if it had been as long as a handfpike.

Though I am not fo credulous as to believe that the t. conjurer abfolutely fwallowed the bayonet, yet I mult acknowledge that in the twinkling of an eye he conveyed it to-God knows where; and the fmall piece of wood, or one exactly like it, was confined clofe to his teeth. He then paraded backward and forward before the conjuringhoufe for a thort time, when he feigned to be greatly difordered in his ftomach and bowels; and, after making many wry faces, and groaning moft hideously, he put his body into feveral diftorted attitudes, very fuitable to the occafion. He then returned to the door of the conjuring-houfe, and after making many ftrong efforts to vomit, by the help of the ftring he at length, and after tugging at it fome time, produced the bayonet, which apparently he hauled out of his mouth, to the no fmall furprize of all prefent. He then looked round with an air of exultation, and ftrutted into the conjuring-houfe, where he renewed his incantations, and continued them without intermiffion twenty-four hours. Cc Though
1771. Though I was not clofe to his elbow when ho performed Augnt. the above feat, yet I thought mypelf: neariasongh' (and P can affure my readers I was-all artention) to hiavodetedted him. Indeed I mont confers that it appeared to me to be a very nice picce of deocption, efpecinity as it wass pers formed by a man quite nakect.

Not long after this flighte-of hand work wass over; fame of the Indians afked me:what Itthought of it; to which I anfwered, that I was too far off to fee it fo plain as I could wifh; which indeed was no more than the flriteft truth, becaufe I was not near enough: to deteet the deception. The fick many, however, foon recoverod; and in a few days afterwands we left that place and procoeded to the South Weft.

5
On the ninth of Auguft, we once more purfued our journey, and continued our couple in-the Southi Weft quarter, generally walking about feven or eight miles a day. All the Indians, however, who-tidelbeen in our comptry; except twelve tents, ftreck off different whas. As to myfelf, having had feveral daya reff my feet were contpletely healed, though the ikin remained very: tender for fome time.

19th-2 sth From the nixeteenth to the twenty-fifth, we walked by the fide of Thaye-chuck-gyed Whoie, or Large Whiteftone Lake, which is about forty miles long from the North Eaft

Esft to the Bouth-Wof, but of very unequalibreadth. A river from che North, Weft fide of this lake is faid to ran in ia ferpentise manneres long way to the Weftoward; and :thencending to the Northwatd, compores the main-branch of the.Coppor-mine-River, as has been-already mentioned; which amay or may not-bekrue. It is certain, bowever, that there are:many rivulets which empty themfelves-into this take from the Gouth: Eaft; but as they are all fmall ftreams, they may probably be no more than what is fufficient to fupply the conftant decreafe occafioned by the exhalations, thich, during the fhort Summer, fo-hith a Northerr: tatitude-al ways ieffords.

Deer were wery plentiful the whole way; the Indians killed great numbers of them daity, merely for the fake, of Their hins; andiat this time of the year their,pelts are in good feafon, and the hair of a proper bength for clothing.

The great defturtion which is made of the deer in thofe parts at this feafon of the year only, is almot incredible; and as they are never known to have more than-one young one at a time, it is wonderful they do not become fearce: but fo far: is this from being the eafe, that the oldeft Northern Indiaii in all their tribe will affirm that the deer are as plentiful uoweas they ever have been; : and though , they are semaskablys fearce fome years near Gharchill river, yet it is faid, and with great probability of truth, that-they are C c 2 more
1791. Ampat.
more plentiful in other parts of the country than they were formerly. The fcarcity or abundance of thefe animals in different places at the fame feafon is caufed, in a great meafure; by the winds which prevail for fome time before; for the deer are fuppofed by the natives to alk always in the direction from which the wind blows, except when they migrate from Eaft to Weft, or from Weft to Eaft; in fearch of the oppofite fex, for the purpofe of propagating their fpecies.
ft requires the prime part of the fkins of from eight to ten deer to 'make a complete fuit of warm clothing for a grown perfon during the Winter; all of which fhould, if poffible, be killed in the month of Auguft, or early in September; for after that time the hair is too long, and at the fame time fo loofe in the pelt, that it will drop off with the ffighteft injury.

Befide thefe Ikins, which muft be in the hair, each perfon requires feveral others to be dreffed into leather, for flockizge and thoes, and light Summer clothing; feveral more are alfo wanted in a parchment ftate, to mike devola as they call it, or thongs to make netting for their frowthoes, fnares for deer, fewing for their lledges, and, in fact, for every other ufe where ftrings or lines of any kind are required; fo that each perfon, on an average, expends, in the covirfe of a year, upwards of twenty deer flins in clothing

## NORTHERNOCEAN.

clothing and other domieftic ufes, exclufive of tent cloths, bags, and many other things which it is impoffible ta remember, and unnecerfary to enumerate.

All kini for the above-mentioned purpofes are, if poffible, 'procured between the beginning of Auguft and the middle of Odober; for when the rutting feafon is over, and the Winter fets in, the deer-fkins are not only very thin, but in general full of worms and warbles; which render them of little ufe, unlefs it be to cut into fine thonge, of which they make filhing-nets, and nets for the lieels and toes of their fnow-ihoes. Indeed the chief ufe that is made of them in Winter is for the purpofe of food; and really when the hair is properly taken off, and all the warbles are fqueezed out, if they are well-boiled, they are far from being difagreeable. The Indians, however, never could perfuade me to eat the warbles; of which fome of them are remarkably fond, particularly the children. They are always eaten raw and alive, out of the fkin; and are faid, by thofe who like them, to be as fine as goofeberries. But the very idea of eating fuch things, exclufive of their appearance, (many of them being as large as the frift joint of the little finger, was quite fufficient to give me an unalterable difguft to fuch a repait; and when 1 acknowledge thinestie warbles out of the deers backis, and the domeftic lice, wece the anly two things I ever faw my com- panions eat, of which I could not, or did not, partake, I Fining Tuft I fall not be reckoned over-delicate in my appetite.

The month of October is the rutting fanon with the der in thole parts, and after the time of their courtship is over, the bucks feparate from the other; the former ptocoed to the Westward, to take fhelter: in the aroids daring the Winter, and the tatter keep out in the batreniground the whole year. This, though a general rule, is not withoutfome exceptions; for I have frequently feer many does in the woods, though they bore no proportion to the number of bucks. This rule, therefore; only hands grad repleting the deer to the North of Churchill River; for the dee to the Southward live promifeuoutly among the woods, as well as in the plains, and along the banks of rivers, lakes, do c. the whole year.

The old buck's horns are very large, with many branches, and always drop off in the month of Moverben, which is about the time they begin to approach the woods. This is undoubtedly wifely ordered by Provedence, the better to enable them to efcape from their enemiles through the woods; otherwise they would become an eafy prey to wolves and other beats, and be liable to get entangled among the trees, even in ranging about is fearch of food. The fame opinion may probably be adminted of the Southern deer, which always refile among
the proods; but-the Northern deer, though by far the frratheftin this country, have much the largeft horns, and the brianches are fo long, and at the fame-tisne fpread fo wide, as-to make them more liable to be entangled among the under-woods, than any other fpecies of deer that. I have notieed. The young bucks in thoie parts do not ihed their horm fo foon as the old ones: I have frequently feen them killed at or near Chrifmas, and could difcover no appearance of their horns being loofe. The does do zot fhed their horns till the Summer; fo that when the buck's horns are ready to drop off, the horns of the coes. are all hairy, and fcarcely come to their full growth.

The deer in thofe parts are generaliy in motion from Eaft to Weft, or from Weft to Ealt, according to the feafon, or the prevailing winds; and that is the principa reafon why the Northern Indians are aisways fhifting theiz fation. From Nowember till May, the bucks continue: so the Weftward, among the woods, when their horns begin to fprout; after which they proceed on to:the Eaftward, to the barren grounds; and the does that have jeen on the barren ground all the Winter, are taught by inftine to advance to the Wertward to meet them, in order :0 propagate their fpecies. Immediately after the rutting feafon is over, they feparate, as hath been mentioned above. The old vulgar faying, fo generally received among the lower clafs of people in England, concerning the bucks: Ghedding their yards; or more properiy the glands of the penis,
1771. penis, yearly, whether it be true in England or not, is certainly not true in any of the couptries bordering on Hudfon's Bay. A long refidence among the Indians has enabled me to confirm this affertion with great confidence, as I have feen deer killed every day throughout the year; and when I have mentioned this circumftance to the Indians, either Northern or Southern, they always affured me that they never obferved any fuch fymptoms. With equal truth I can affert, and that from ocular demonftration, that the animal which is called the Alpine Hare in Hudfon's Bay, actually undergoes fomething fimilar to that which is vulgarly afcribed to the Englinh deer. I have feen and handled feveral of them, who had been killed juft after they had coupled in the Spring, with the penifes hanging out, dried up, and Ahrivelled, like the navel-ftring of young animals; and on examination I always found a paffage through them for the urine to pals. I have thought proper to give this remark a place in my Journal, becaufe, in all probability, it is not generally known, even to thofe gentlemen who have made natural hiftory their chief ftudy; and if their refearches are of any real utility to mankind, it is furely to be regretted that Providence fhould have placed the greateft part of them too remote from want to be obliged to travel for ocular proofs of what they affert in their publications; they are therefore wifely content to ftay at home, and enjoy the bleflings with which they are endowed, refting fatisfied to collect fuch ipformation for their own amufement, and the gratification of the public, as thole
who are neceffitated to be travellers are able or willing to give them. It is true, and I am forry it is fo, that I come under the latter defoription; but hope I have not, or fhall not, in the courfe of this Jourmed, advance any thing that wih not fland the teft of experiment, and the fkill of the moft competent judges.

After leaving White Stone Lake, we continued our courfe in the South Weft quarter, feldom walking more than tweive miles a day, and frequently not half that diftance.

On the thiad of Seprember, we arrived at 2 fmall river belonging so Point Iake, but the weather at this time proved fo boitteroers, and there was fo much rain, frow, and froft, alternately, that we were obliged to wait feveral days before we could crofs it in our canoes; and the water was too deep, and the current too rapid, to attempt fording it. During this interruption, however, our time was not entirely loft, as deer were fo plentiful that the Indians kilied numbers of them, as well for the fake of their fins, as for their flefh, which was at prefent in excellent order, and the flins in proper feafon for the fundry ufes for which they are deftined.

In the afternoon of the feventh, the weather became fine and moderkte, when we all were ferried acrofs the river; and the next morning haped our courfe to the D d North

September 3 c. 8th.

## A JOURNEYTOTHE

1771. Jorth Weft, by the fide of Point Lake. After three days Sepember. journey, which only confifted of about eighteen miles, we came to a few fmall ferubby woods, which were the firft that we had feen from the twenty-fifth of May, except thofe we had perceived at the Copper-mine River.

One of the Indian's wives, who for fome time had been in a confumption, had for a few days paft bocome fo weak as to be incapable of travelling, which, among thofe people, is the moft deplorable ftate to which a human being can poffibly be brought. Whether fhe had been given over by the doctors, or that it was for want of friends among them, I cannot tell, but certain it is, that no expedients were taken for her recovery; fo that, without much ceremony, the was left unaffifted, to perilh aboveground.

Though this was the firft inftance of the kind I had feen, it is the common, and indeed the conftant practice of thofe Indians; for when a grown perfon is fo ill, efpecially in the Summer, as not to be able to walk, and too heary to be carried, they fay it is better to leave one who is paft recovery, than for the whole family to fit down by them and ftarve to death; well knowing that they cannot be of any fervice to the afflicted. On thofe occafions, therefore, the friends or relations of the fick generally leave them fome vituuals and water; and, if the fituation of the place will afford it, a little firing. When thofe
thofe articles are provided, the perfon to be left is acquainted with the road which the others intend to go;'

September. and then, after covering them well up with deer flins, Sc. they take their leave, and walk away erying.

Sometimes perfons thus left, recover; and come up with their friends, or wander about till they meet with other Indians, whom they accompany till they again join their relations. Inftances of this kind are feldom known. The poor woman above mentioned, however, came up with us three feveral times, after having been left in the mamer defcribed. At length, poor creature! the dropt behind, and no one attempted to go back in fearch of her.

A cuftom apparently fo unnatural is perhaps not to be found among any other of the human race: if properly confidered, however, it may with juftice be afcribed to neceflity and felf-prefervation, rather than to the want of humanity and focial feeling, which ought to be the characteriftic of men, as the nobleft part of the creation. Neceflity, added to national cuftom, contributes principally to make fcenes of this kind lefs hocking to thofe people, than they muft appear to the more civilized part of mankind.

During the early part of September, the weather was in general cold, with much fleet and fnow; which feemed to: Dd $2 \quad$ promife

## AJOERNETTOTEE

1777. promife that the Winter would fer in early. Docr at thii time being weny plentiful, and the few weeds we mot with affording tent-pelea and firing; the Indians propefed tor remain where we were fome time, in onder to drefo Akiss; and provide our Winter clothing; alfo to make fiow-hhoes and temporary fledges, as well as to prepare a large quantity of driod meat and fat to carry with us; for by the accounts of the Indians, they have adways experienoed a great fearcity of deer, and every other kind of game, in the direction they propofed we flould go when we left Point Lake.

Toward the middle of the month, the weather becanse quite mild and open, and continued fo till the end of it; but there was fo much conftant and inceffant rain, that it rotted moft of our tents. On the twenty-eighth, however, the wind fettled in the North Weft quarter, when ${ }_{3}$ oth. the weather grew fo cold, that by the thirtieth all the ponds, lakes, and other ftanding waters, were frozen over fo hard, that we were enabled to crofs them on the ice without danger.

Among the various fuperftitious cuftoms of thofe people, it is worth remarking, and ought to have been mentioned in its proper place, that immediately after my companions had killed the Efquimaux at the Copper River, they confidered themfelves in a ftate of uncleannefs, which induced them to practife fome very curious and unufual ceremonies.

In the frift: pliace, all who werre abfolutely concerned in: the maxder were probisibited from cooking any kind of vifunate, either for themfelves or others. Ar luckily there more omo in comprany who had not fled blood, they were employed alwayz as cooks till we joined the women. This circumitance was exceedingly favourable on my fide; for hat there been no perfons of the above defcription in company, that tafk, I was told, would have fallen on me; which would have been no lefs fatiguing and troublefome, than humiliating and vexatious.

When the viquals were cooked, all the murderers took a kind of red earth, or oker, and painted all the fpace between the nofe and chin, as well as the greater part of their choeks, almoft to the ears, before they would tafte a bit, and would not drink out of any other difh, or fmoke out of any other pipe, but their own; and none of the others fermed willing to drink or fmoke out of theirs.

We had no fooner joined the women, at our return from the expedition, than there feemed to be an univerfal fpirit of emulation among them, vying who fhould firft make a fuit of ornaments for their hufbands, which confifted of bracelets for thewritts, and a band for the forehead, compofed of porcupine quils and moofe-hair, curioully wrought on leather.

The cuftom of painting the mouth and part of the cheeks before each meal, and drinking and fmoking out
1771. of their own utenfils, was ftrietly and invariably obferved, till the Winter began to fet in; and during the whole of that time they would wever kifs any of their wives or children. They refrained alfo from eating many parts of the deer and other animate, particularly the head, entrails, and blood; and during their uncleannefs, their viturals were never fodden in water, but dried in the fun, eaten quite raw, or broiled, when a fire fit for the purpofe could be procured.

When the time arrived that was to put an end to thefe ceremonies, the men, without a female being prefent, made a fire at fome diftance from the tents, into which they threw all their ornaments, pipe-ftems, and difhes, which were foon confumed to alhes; after which a feaft was prepared, confifting of fuch articles as they had long been prohibited from eating; and when all was over; each man was at libery to eat, drink, and finoke as he pleafed; and alfo to kifs his wives and children at difcretion, which they feemed to do with more rapturei than I had ever known them do it either before or fince.

October. 6th.

October came in very roughly, attended with heavy falls of fnow, and much drift. On the fixth at night, a heavy gale of wind from the North Weft put us in great diforder; for though the few woods we paffed had furmiohed us with tent-poles and fewel, yet they did not afford us the leaft ohelter whatever. The wind blew with fuch violence,
violence, that in fpite of all our endeavours, it overfet feverial of the tents, and mine, among the reft, Chared the
1771. October. difatter, which I cannot fufficiently lament, as the butende of the weather tent-poles fell on the quadrant, and though it was in a ftrong wainfoot cafe, two of the bubbles, the index, and feveral other parts were broken, which rendered it entirely ufelefs. This being the cafe, I did not think it worth carriage, but broke it to pieces, and gave the brafs-work to the Indians, who cut it into fmall lumps, and made ufe of it inftead of ball.

On the twenty-third of Oetober, feveral Copper and a few dog-ribbed Indians came to our tents laden with furrs, which they fold to fome of my crew for fuch ironwork as they had to give in exchange. This vifit, I afterwards found; was by appointment of the Copper Indians whom we had feen at Congecathawhachaga, and who, in their way to us, had met the Dog-ribbed Indians, who were alfo glad of fo favourable an opportunity of purchafing fome of thofe valuable articles, though at a very extravagant price : fot one of the Indians in my company, though not properly of my party, got no lefs than forty beaver kins, and fixty martins, for one piece of iron which he had ftole when he was laft at the Fort *.

One

[^29]1771. Octaber.

One of thofe Atrangers had about forty beaver fkins, with which he intended to pay Matonabbee an old debt; but one of the other Indians feized the whole, notwithftanding he knew it to be in fact Mawoarbbee's property. This treatment, together with many acher infulto, which he had received during my abode with him, made him penew his old refolution of leaving his own country, and going to refide with the Athapufcow Indians.

As the moft interefting part of my journey was now over, I did not think it neceffary to interfere in his private affairs; and therefore did not eadeavour to influence him either one way or the other: out of complaifance, therefore, rather than any thing elfe, I told him, that I thought fuch behaviour very uncourteous, efpecially in a man of his rank and dignity. As to the reafon of his determination, I did not think it worth while to enquire into it ; but, by his difcourfe with the other Indians, I foon underftood that they all intended to make an excurfion into the country of the Athapoufcow Indians, in order to kill moofe and beaver. The former of thofe animals are never found in the Northern Indian territories; and the latter are fo fcarce in thofe Nerthern parts, that during the whole winter of one thoufand feven hundred and feventy,

[^30]I did not fee more than two beaver houfes. Martins $\underbrace{1771 \text {. }}$ are alfo fcarce in thofe parts; for during the above oeobe:period, I do not think that more than fix or eight were killed by all the Indians in my company. This exceedingly frall number, among fo many people, may with great truth be attributed to the indolence of the Indians, and the wandering life which they lead, rather than to the great fcarcity of the martins. It is true, that our moving fo frequently from place to place, did at times make it not an object worth while to build traps; but had they taken the advantage of all favourabte opportunities, and been poffeffed of half the induftry of the Company"s fe:vants in the Bay, they might with great eare have caught as many hundreds, if not fome thoufands; and when we confider the extent of ground which we walked over in that time, fuch a number would not have been any proc? of the martins being very plentiful.

Except a few martins; wolves, quiquehatches, fozes, and otters, are the chief furrs to be met with in thole parts, and few of the Northern Indians chufe to kill either the wolf or the quiquehatch, under a notion that they are fomething more than common animals. Indeed, I have known fome of them fo tigotfed to this opinion, tha: having by chance killed a quiquehatch by a gun which had been fet for a fox, they have left it where it was killed, and would not take off its fkin. Notwithftanding this $\mathrm{Ee} \quad \mathrm{d} l \mathrm{y}$
1771. filly notion, which is too frequently to be obferved among

By the thirtieth of OAober, all our clothing, frowfhoes, and temporary fledges, being completed, we once

November in. thofe people, it generally happens that there are fome in every gang who are lefs fcrupulous, fo that none of thofe furrs are ever left to rot; and even thofe who make a point of not killing the animals themfelves, are ready ta receive their keins from other Indians, and carry them to the Fort for trade. more began to prepare for moving; and on the following day fet ont, and walked five or fix miles to the Southward.
sib. From the firft to the fifth of November we walked on the ice of a large lake, which, though very confiderable both in length and breadth, is not diflingaifhed by any general name; on which account I gave it the name of No Name Lake. On the South fide of this lake we found fome wood, which was very acceptable, bring the firft that we had feen fince we left Point Lake.

No Name Lake is about fifty miles long from North to South, and, according to the account of the Indians, is thirtyfive miles wide from Eraft to Weft. . It is faid to abound with fine filh; but the weather at the time we croffed it was fo cold, as to render it impoffible to fit on the ice any length

$$
\text { NORTHERN OCEAN. } 2: I
$$

length of time to angle. A few exceedingly fine trout, and fome very large pike, however, were caught by my 179. November. companions.

When we arrived on the South fide of the above lake, we inaped our courfe to the South Weft; and though the weather was in general very cold, yet as we every night found tufts of wood, in which we could pitch our tents, we were enabled to make a better defence againft the weather, than we had had it in our power to do for fome time paft.

On the tenth of November, we artived at the edge os of the main woods; at which time the Indians began to make proper fledges, fome fnow-hhoes, 条c. after whick we proceeded again to the South Weft. But deer anc all other kinds of game were fo fcarce the whole way, that, except a few partridges, nothing was killed by any in company: we had, neverthelefs, plenty of the provifion which had been prepared at Point Lake.

On the twentieth of the fame month, we arrived at $00 \pm$ Anaw'd Whoie, or the Indian Lake. In our way we croffed part of Methy Lake, and walked near eighty miles on a fmall river belonging to it, which empties itfelf into the Great Athapufcow Lake*. While we were waiking

> * The courfe of this river is nearly Sourh WeA

Ee2
1771. on the above little river, the Indians fet fifhing-pets under the ice every night ; but their labour was attended with fo little fuccefs, that all they caught ferved only as a delicacy, or to make a little change in our diet; for the quantity was too trifling to occafion any confiderable faving of our other provifions.

Anaw'd Lake, though fo fmall as aot to exceed twenty miles wide in the broadeft part, is celebrated by the natives for abounding with plenty of fifh during the Winter; accordingly the Indians fet all their nets, which were not a few, and met with fuch fuccefs, that in about ten days the roes anly were as much as all the women could haul after them.

Tittimeg and barble, with a few fmall pike, were the only fin caught at this part; the roes of which, particularly thofe of the tittimeg, are more efteemed by the Northern Imdians, to take with them on a journey, than the fifh itfelf; for about two pounds weight of thefe roes, when well bruifed, will make near four gallons of broth, as thick as common burgoe; and if properly managed, will be as white as rice, which makes it very pleafing to the eye, and no lefs agreeable to the palate.

The land round this lake is very hilly, though not mountainous, and chiefly confifts of rocks and loofe ftones; there muft, however, be a fmall portion of foil
on the furface, as it is in moft parts well clothed with tall poplars, pines, fir, and birch; particularly in the vallies,
1771.

Norember. where the poplars, pine, and birch feem to thrive beft; but the firs were as large, and in as flourifhing a ftate, on the very fummit of the hills, as in any other part.

Rabbits were here fo plentiful, particularly on the South and South Eaft fide of the lake, that feveral of the Indians caugbt twenty or thirty in a night with fnares; and the wood-partridges were fo numerous in the fir trees, and fo tame, that I have known an Indian kill near twenty of them in a day with his bow and arrows. The Northern Indians call this fpecies of the partridge Day; and though their flelh is generally very black and bitter, occafroned by their feeding on the bruith of the fir tree, yet they make a variety, or change of diet, and are thought exceedingly good, particularly by the natives, who, though capable of living fo hard, and at times eating very ungrateful food, are neverthelefs as fond of variety as any people whom I ever faw ; and will go as great lengths, according to their circumftances, to gratify their palates, as the greateft epicure in England. As a proof of this affertion, I hare frequently known Matonabbee, and others who could afford it, for the fake of variety only, fend fome of their young men to kill a few partridges at the expence of more ammunition than would have killed deer fufficient to have maintained their families many days; whereas the partridges were always eaten up at one meal: and to heighten
1771. heighten the luxury on thefe occafions, the partridges are boiled in a kettle of theer fat, which it muft be allowed renders them beyond all defcription finer flavoured than when boiled in water or common broth. I have alfo eat deer-fkins boiled in fat, which were exceedingly good.

As during our ftay at Anaw'd Lake feveral of the Indians were fickly, the doctors undertook to adminifter relief; particularly to one man, who had been hauled on a Aedge by his brother for two months. His dilorder was the dead palley, which affected one fide, from the crown ,of his head to the fole of his foot. Befides this dreadful diforder, he had fome inward complaints, with a total lofs of appetite; fo that he was reduced to a mere fkeleton, and fo weak as to be fcarcely capable of fpeaking. In this deplorable condition, he was laid in the center of a large conjuring-houfe, made much after the manner as that which has been already defcribed. And that nothing might be wanting toward his recovery, the fame man who deceived me in fwallowing a bayonet in the Summer, now offered to fwallow a large piece of board, about the fize of a barrel-ftave, in order to effect his recovery. The piece of board was prepared by another man, and painted according to the direction of the juggler, with a rude reprefentation of fome beaft of prey on one fide, and on the reverfe was painted, according to their rude method, a refemblance of the fky .

#### Abstract

NORTHERN OCEAN.245

Without entering into a long detail of the preparations for this feat, I hall at once proceed to obferve, that after

Norember. the conjuter had held the neceffary conference with his invifible fpirits, or fhadows, he afked if I was prefent; for he had heard of my faying that I did not fee him fwallow the bayonet fair : and on being anfwered in the affirmative, he defired $\cdot$ me to come nearer; on which the mob made a lane for me to pafs, and I advanced clofe to him, and found him ftanding at the conjuring-houfe door as naked as he was born.

When the piece of board was delivered to him, he propofed at firft only to Move one-third of it down his throat, and then walk round the company afterward to fhove down another third; and fo proceed till he had fwallowed the whole, except a fmall piece of the end, which was left behind to haul it up again. When he put it to his mouth it apparently flipped down his throat like lightning, and only left about three inches fticking without his lips; after walking backwards and forwards three times, he hauled it up again, and ran into the conjuring-houfe with great precipitation. This he did to all appearance with great eafe and compofure; and notwithftanding I was all. attention on the occafion, I could not deteet the deceit; and as to the reality of its being a piece of wood that he pretended to fwallow, there is not the leaft reafon to doubt of it, for I had it in my hand, both before and immediately.after the ceremony.

## 2:6 A JOURNEY TO THE

177. Namer.

To prevent a variety of opinions on this occasion, and to leffen the apparent magnitude of the miracle, as well as. to give forme colour to my feepticifm, with might otherwife perhaps appear ridiculous, it is neceflary to obferve, that this feat was performed in a dark and excelfinely cold night; and although there was a large fire at forme diftance, which reflected a good light; yet there was great room for collusion : for though the conjurer himself was quite naked, there were feveral of his fraternity wellclothed, who attended him very clofe during the time of his attempting to fallow the board, as well as at the time of his hauling it up again.

For thee reafons it is neceffary also to obferve, that on the day preceding the performance of this piece of deception, in one of my hunting excurfions, I accidentally came acrofs the conjurer as he was fitting under a bulk, feveral miles from the tents, where he was bufily employed shaping a piece of wood exactly like that part which fuck out of his mouth after he had pretended to fallow the remainder of the piece. The chape of the piece which I Jaw him making was this, which exactly refembled the forked end of the main piece, the chape of which was this, $\square$ So that when his attendants had concoaled the main piece, it was easy for him to flick the mali point into his mouth, as it was reduced at the fall end to a proper fize for the purpofe.

Similar proofs may eafily be urged againt his fwallowing the bayonet in the Summer, as no perfon lefs ignorant 1771. than themfelves can poffibly place any belief in the reality of thofe feats; yet on the whole, they muft be allowed a confiderable thare of dexterity in the performance of thofe tricks, and a wonderful deal of perfeverance in what they do for the relief of thofe whom they undertake to cure.

Not long after the above performance had taken place, fome of the Indians began to aft me what I thought of it. As I could not have any plea for faying that I wras far off, and at the fame time not caring to affront them by hinting my fufpicions of the deceit, I was fome time at a lofs for an anfwer: I urged, however, the impoffibility of a man's fwallowing a piece of wood, that was not only much longer than his whole back, but nearly twice as broad as he could extend his mouth. On which fome of them laughed at my igaorance, as they were pleafed to call it ; and faid, that the fpirits in waiting fwallowed, or otherwife concealed, the fick, and only left the forked end apparently ficking out of the conjurer's mouth. My guide, Matonabbee, with all his other good fenfe, was fo bigotted to the reality of thofe performances, that he affured me in the ftrongeft terms, he had foen a man, who was then in company, fwallow a child's cradle, with as much eafe as he could fold up a piece of paper, and put it into his mouth; and that when he hauled it up again, not the Ff mark
1771. $\xlongequal[\text { Norember. }]{ }$
mark of a tooth, or of any violence, was to be difcovered about it.

This ftory fo far exceeded the feats which I had feen with the bayonet and board, that, for the rake of keeping up the farce, I began to be very inquifitive about the fpirits which appear to them on thofe occafions, and their form; when I was told that they appeared in various fhapes, for almoft every conjurer had his peculiar attendant; but that the fpirit which attended the man who pretended to fwallow the piece of wood, they faid, generally appeared to him in the fhape of a cloud. This I thought very a-propos to the prefent occafion; and I muft confers that I never had fo thick a cloud thrown before my eyes before or fince; and had it not been by accident, that I faw him make a counterpart to the piece of wood faid to be fwallowed, I hould have been fill at a lofs how to account for fo extraordinary a piece of deception, performed by a man who was entirely naked.

As foon as our conjurer had executed the above feat, and entered the conjuring-houfe, as already mentioned, five other men and an old.woman, all of whom were great profeffors of that art, ftripped themfelves quite naked and followed him, when they foon began to fuck, blow, fing, and dance, round the poor paralytic; and continued fo to do for three days and four nights, without taking the leaft reft or refrefhment, not even fo much as a drop of water.

When

> NORTHERNOCEAN.

When thefe poor deluding and deluded people came out of the conjuring-houfe, their mouths were fo parched with
1771. November. thirft as to be quite black, and their throats fo fore, that they were fcarcely able to articulate a fingle word, except thofe that ftand for yes and no in their language.

After fo long an abftinence they were very careful not to eat or drink too much at one time, particularly for the firft day; and indeed fome of them, to appearance, were almoft as bad as the poor man they had been endeavouring to relieve. But great part of this was feigned; for they lay on their backs with their eyes fixed, as if in the agonies of death, and were treated like young children; one perfon fat conßtantly by them, moiftening their mouths with fat, and now and then giving them a drop of water. At other times a fmall bit of meat was put into their mouths, or a pipe held for them to fmoke. This farce only lafted for the firf day; after which they feemed to be perfectly well, except the hoarfenefs, which continued for a confiderable time afterwards. And it is truly wonderful, though the ftrieteft truth, that when the poor fick man was taken from the conjuring-houfe, he had not only recovered his appetite to an amazing degree, but was able to move all the fingers and toes of the fide that had been fo long dead. In three weeks he recovered fo far as to be capable of walking, and at the end of fix weeks went a hunting for his family. He was one of the perfons * par-

[^31]1771. ticularly engaged to provide for me during my journey; and after his recovery from this dreadful diforder, accompanied me back to Prince of Wales's Fort in June one thoufand feven hundred and ferenty-two; and fince that time he has frequently vifited she Pactory, though he never had a healthy look afterwards, and at times feemed troubled with a nervous complaint. It may be added, that he had been formerly of a remarkable lively difpotition; but after his laft illnefs he always appeared thoughtful, fometimes gloomy, and, in fa\&, the diforder feemed to have changed his whole nature; for before that dreadful paralytic ftroke, he was diftinguifhed for his good-nature and benevolent difpofition; was entirely free from every appearance of avarice; and the whole of his wifnes feemed confined within the narrow limits of poffeffing as many goods as were abfolutely neceffary, with his own indurtry, to enable him to fupport his family from feafon to feafon; but after this event, he was the moft fractious, quarrelfome, difcontented, and covetous wretch alive.

Though the ordinary trick of thefe conjurers may be eafily detected, and juftly exploded, being no more than the tricks of common jugglers, yet the apparent good effect of their labours on the fick and difeafed is not fo. eafily accounted for. Perhaps the implicit confidence placed in them by the fick may, at times, leave the mind fo perfectly at reft, as to caufe the diforder to take a favourable turn; and a few fucceffful cafer are quite fufficient to eftablifh the doctor's character and reputation:

But how this confideration could operate in the cafe I have juft mentioned I am at a lofs to fay; fuch, however, was the fact, and I leave it to be accounted for by others.

> When thefe jugglers take a dinike to, and threaten a fecret revenge on any perfon, it often proves fatal to that perfon; a, from a firm belief that the conjurer has power over his life, be permits the very thoughts of it to prey on his fpirits, till by degrees it brings on a diforder which puts an end to his exiftence * and fometimes a threat of this kind

- As a proof of this, Matonabbee, (who always thought me poffeffed of this art, ) on his arrival at Prince of Wales's Fort in the Winter of 1778, informed me, that a man whom I had never feen but once, had treated him in fuch a manner that he was afraid of his life; in confequence of which he prefled me very much to kill him, though I was then feveral hundreds of miles diftant. On which, to pleafe this great man to whom I owed fo much, and not expecting that any harm could poffibly arife from it, I drew a rough fketch of tro human figures on a piece of paper, in the attitude of wreftling: in the hand of one of them, I drew the figure of a bayonet pointing to the breart of the other. This is me, faid I to Matonabbee, pointing to the figure which was holding the bayonet; and the other, is your enemy. Oppofite to thore figures I drew a pine-tree, over which I placed a large human eye, and out. of the tree projected a human hand. This paper I gave to Matonabbee, with inftructions to make it as publicly known as poffible. Sure enough, the following year, when he came in to trade, he informed me that the man was dead, though at that time he was not lefs than three hundred miles from Prince Wales's Fort. He affured me that the man was in perfect healch when he beard of my defign againt him; but almoft immediately afterwards became quite gloomy, and refifing all kind of fuftemance, in a very few days died. After this-I frequently applied to on the fame account, boch by Matomabbee and other leading Indians, but newer thought proper to comply with their requefts; by which means I not only preferved the credit I gained on the firt attempt, but always kept them in awe, and in fome degree of refpect and obedience

1771. kind caufes the death of a whole family; and that without Norember. any blood being fhed, or the lealt apparent moleftation being offered to any of the parties.

Having dried as many filh and finh-roes as we could conveniently take with us, we once more packed up our Itores, and, on the firft day of December, fet out, and continued our courfe to the South Weft, leaving Anaw'd Lake on the South Weft. Several of the Indians being out of order, we made but fhort days journies.

From the firft to the thirteenth, we walked along a courfe of fmall lakes, joined to each other by fmall rivers, or creeks, that have communication with Anaw'd Lake.

In our way we caught daily a few fifh by angling, and faw many beaver houfes; but thefe were generally in fo difficult a fituation, and had fo many ftones in the compofition of them, that the Indians killed but few, and that at a great expence of labour and tools.

On the thirteenth, one of the Indians killed two deer, which were the firf that we had feen fince the twentieth
obedience to me. In fuat, ftrange as it may appear, it is almoft abfolutely neceffary that the chiefis at this place fhould profefs fomething a little fupernatural, to be able to deal with thofe people. The circumitance here recorded is a fact well known to Mr. William Jefferfon, who fucceeded me at Churchill Factory, as well as to all the officers and many of the common men who were at Prince of Wales's Fort at the time.
of October. So that during a period of near two months, we had lived on the dried meat that we had prepared at Point Lake, and a few filh; of which the latter was not very confiderable in quantity, except what was caught at Anaw'd Lake. It is true, we alfo caught a few rabbits, and at times the wood-partridges were fo plentiful, that the Indians killed confiderable numbers of them with their bows and arrows; but the number of mouths was fo great, that all which was caught from our leaving Point Lake, though, if enumerated, they might appear very confiderable; would not have afforded us all a bare fubfistence; for though I and fome others experienced no real want, yet there were many in our company who could fcarcely be faid to live, and would not have exifted at all, had it not been for the dry meat we had with us.

When we left the above-mentioned lakes we thaped a courfe more to the Southward, and on the twenty-fourth, arrived at the North fide of the great Athapufcow Lake. In our way we faw many Indian deer, and beaver were very plentiful, many of which the Indians killed; but the days were fo fhort, that the Sun only took a circuit of 2 few points of the compafs above the horizon, and did not, at its greateft altitude, rife half-way up the trees. The brilliancy of the Aurora Borcalis, however, and of the Stars, even without the affiftance of the Moon, made fame amends for that deficiency; for it was frequently fa light all night, that I could fee to read a very fmall print.
1771.

December.

## A JOURNEYTOTHE

1771. The Indians make no difference between night and day December. when they are hunting of beaver; but thofe nocturnal lights are always found infufficient for the , purpofe of hunting deer or moofe.

I do not remember to have met with any travellers into high Northern latitudes, who remarked their having heard the Northern Lights make any noife in the air as they vary their colours or pofition; which may probably be owing to the want of perfect filence at the time they made their obfervations on thofe meteors. I can pofitively affirm, that in ftill nights I have frequently heard them make a ruftling and crackling noife, like the waving of a large flag in a freth gale of wind. This is not peculiar to the place of which I am now writing, as I have heard the fame noife very plain at Churchill River; and in all probability it is only for want of attention that it has not been heard in every part of the Northern hemifphere where they have been known to fhine with any confiderable degree of luftre. It is, however, very probable that thefe lights are fometimes much nearer the Earth than they are at others, according to the fate of the atmorphere, and this may have a great effect on the found: but the truth or falfetrood of this conjecture I leave to the determinations of thofe who are better \&illed in natural philofophy than I can pretend to be.

Indian deer (the only fpecies found in thofe parts, except the moofe) are fo much larger than thofe which fre-
quent the barren grounds to the North of Churchill River, that a frall doe is equal in fize to a Northern buck. The
1771. $\xlongequal[\text { December. }]{ }$ hair of the former is of a fandy red during the Winter; and their horns, though much ftronger, are not fo long and branchy as are thofe of the latter kind. Neither is the flefh of thofe deer fo much efteemed by the Northern Indians, as that of the fmaller kind, which inhabit the more Eaftern and Northern parts of the country. Indeed, it muft be allowed to be much coarfer, and of a different flavour ; inafmuch as the large Lincolnfhire mutton differs from grafs lamb. I muft acknowledge, however, that I always thought it very good. This is that fpecies of deer which are found fo plentiful near York Fort and Severn River. They are alfo at times found in confiderable numbers near Chufchill River; and I have feen them killed as far North, near the fea-fide, as Seal River: But the fmall Northern Indian deer are feldom known to crofs Churchill River, except in fome very extraordinary cold feafons, and when the Northern winds have prevailed much in the preceding fall; for thofe vifits are always made in the Winter. But though I own that the flefh of the large Southern deer is very good, I mult at the fame time confefs that the fleh of the fmall Northern deer, whether buck or doe, in their proper feafon, is by far more delicious, and the fineft I have ever eaten, either in this country or any other; and is of that peculiar quality, that it never cloys. I can affirm this from my-own experience; Gg for, for, after living on it entirely, as it may be faid, for twelve or eighteen months fucceflively, I fcarcely ever wifhed for a change of food; though when filh or fowl came in my way, it was very agreeable.

The beaver being fo plentiful, the attention of my companions was chiefly engaged on them, as they not only furnifhed delicious food, but their fkins proved a valuable acquifition, being a principal article of trade, as well as 2 ferviceable one for clothing, © 8 c.

The fituation of the beaver-houfes is various. Where the beavers are numerous they are found to inhabit kakes, ponds, and rivers, as well as thofe narrow creeks which connect the numerous lakes with which this country abounds; but the two latter are generally chofen by them when the depth of water and other circumftances are fuitable, as they have then the advantage of a current to convey wood and other neceffaries to their habitations, and becaufe, in general, they are more difficult to be taken, than thofe that are built in ftanding wate:

There is no one particular part of a lake, pond, river, or creek, of which the beavers make choice for building their houfes on, in preference to another; for they fometimes build on points, fometimes in the hollow of a bay, and often on fmall iflands; they always chufe, however, thofe

NORTHERN OCEAN.
thofe parts that have fuch a depth of water as will refift the froft in Winter, and prevent it from freezing to the bottom.

The beaver that build their houfes in fmall rivers or creeks, in which the water is liable to be drained off when the back fupplies are dried up by the froft, are wonderfully taught by inftinct to provide againft that evil, by making a dam quite acrofs the river, at a convenient diftance from their houfes. This I look upon as the moft curious piece of workmanhip that is performed by the beaver; not fo much for the neatnefs of the work, as for its ftrength and real fervice; and at the fame time it difcovers fuch a degree of fagacity and forefight in the animal, of approaching evils, as is little inferior to that of the human species, and is certainly peculiar to thofe animals.

The beaver-dams differ in fhape according to the nature of the place in which they are built. If the water in the river or creek have but little motion, the dam is almof Atraight; but when the current is more rapid, it is always made with a confiderable curve, convex toward the ftream. The materials made ufe of in thofe dams are drift-wood, green willows, birch, and poplars, if they can be got; alfo mud and ftones, intermixed in fuch a manner as muft evidently contribute to the ftrength of the dam; but in thefe dams there is no other order or method obferved, exG g 2
cept
1771. $\xlongequal[\text { December. }]{ }$

## 1771.

December. cept that of the work being carried on with a regular fweep, and all the parts being made of equal ftrength.

In places which have been long frequented by beaver undifturbed, their dams, by frequent repairing, become a folid bank, capable of refifting a great force both of water and ice ; and as the willow, poplar, and birch generally take root and choot up, they by degrees form a kind of regular-planted hedge, which I have feen in fome places fo tall, that birds have built their nefts among the branches.

Though the beaver which build their houfes in lakes and other ftanding waters, may enjoy a fufficient quantity of their favourite element without the affiftance of a dam, the trouble of getting wood and other neceffaries to their habitations without the help of a current, muft in fome meafure counterbalance the other advantages which are reaped from fuch a fituation; for it muft be obferved, that the beaver which build in rivers and creeks, always cut their wood above their houfes, fo that the current, with little trouble, conveys it to the place required.

The beaver houfes are built of the fame materials as their dams, and are always proportioned in fize to the number of inhabitants, which feldom exceed four old, and fix or eight young ones; though, by chance, I have feen above double that number.

Thefe

$$
\text { NOR-THERN OCEAN. } 229
$$

There houfes, though not altogether unworthy of admiration, fall very fhort of the general defcription given 1771. of them; for inftead of order or regulation being obferved in rearing them, they are of a much ruder ftructure than their dams.

Thofe who have undertaken to defcribe the infide of beaver-houfes, as having feveral apartments appropriated to various ufes; fuch as eating, fleeping, fore-houfes for provifions, and one for their natural occafions, $\mathscr{O}^{\circ} c$. muft have been very little acquainted with the fubject; or, which is ftill worfe, guilty of attempting to impore on the credulous, by reprefenting the greateft falfehoods as real facts. Many years conftant refidence among the Indians, during which Nad an opportunity of feeing feveral hundreds of thofe houfes, has enabled me to affirm that every thing of the kind is entirely void of truth; for, notwithftanding the fagacity of thofe animals, it has never been oblerved that they aim at any other conveniencies: in their houfes, than to have a dry place to lie on; and there they ufually eat their victuals, which they occafionally take out of the water.

It frequently: happens, that fome of the large houfes are found to bave one or more partitions, if they deferve that appellation; but that is no more than a part of the main building, left by the fagacity of the beaver to fupport the roof. On fuch occafions it is common for thofe
different
different apartments, as fome are pleafed to call them, to have no communication with each other but by water; fo that in fact they may be called double or treble houfes, rather than different apartments of the fame houfe. I have feen a large beaver-houfe built in a fmall ifland, that had near a dozen apartments under one roof: and, two or three of thefe only excepted, none of them had any communication with each other but by water. As there were beaver enough to inhabit each apartment, it is more than probable that each family knew its own, and always entered at their own door, without having any farther connection with their neighbours than a friendly intercourfe; and to join their united labours in ereeting their feparate habitations, and building their dams where required. It is difficule to fay whether their intereft on other occafions was anyways reciprocal. The Indians of my party killed twelve old beazer, and twenty-five young and half-grown ones out of the houfe above mentioned; and on examination found that feveral had efcaped their vigilance, and could not be taken but at the expence of more trouble than would be fufficient to take double the number in a lefs difficult fituation *

Travellers who affert that the beaver have two doors to their houfes, one on the land-fide, and the other next the

- The difficulty here alluded to, was the numberlefs vaults the beaver had in the fides of the pood, and the immenie thicknefs of the houre in fome parts.
water,

$$
\text { NORTHERNOCEAN. } 231
$$

water, feem to be lefs aequainted with thofe animals than others who affign them an elegant fuite of apartments. Such a proceeding would be quite contrary to their manner of life, and at the fame time would render their houfes of no ufe, either to protedt them from their enemies, or guard them againft the extrenie cold in Winter.

The quiquehatches, or wolvereens, are great enemies to the beaver; and if there were a paffage into their houfes on the land-fide, would not leave one of them alive whereever they came.

I cannot refrain from fmiting, when I read the accounts of different Authors who have written on the ceconomy of thofe animals; as there feems to be a conteft between them, who hall moff exceed in fition. But the Compiler of the Wonders of Nature and Art feems, in my opinion, to bave fucceeded beft in this refpect; as he has not only collected all the fictions into which other writers on the fubject have run, but has fo greatly improved on them, that little remains to be added to his account of the beaver, befide a vocabulary of their language, a code of their laws, and a fketch of their religion, to make it the moft complete natural hiftory of that animal which can poffibly be offered to the public.

There canoot be a greater impofition, or indeed a groffer infult, on common underftanding, than the wifh to make us believe the ftories of fome of the works afcribed to the beaver; and though it is not to be fuppofed that the compiler of a general work can be intimately acquainted with every fubject of which it may be neceffary to treat, yet a very moderate fhare of underftanding is furely fufficient to guard him againft giving credit to fuch marvellous tales, however fmoothly they may be told, or however boldly they may be afferted, by the romancing traveller.

To deny that the beaver is poffeffed of a very confiderable degree of fagacity, would be as abfurd in me, as it is in thofe Authors who think they cannot allow them too much. I fhall willingly grant them their full Chare; but it is impoffible for any one to conceive how, or by what means, a beaver, whofe full height when ftanding erect does not exceed two feet and a half, or three feet at moft, and whofe fore-paws are not much larger than a half-crown piece, can " drive ftakes as thick as a man's leg into the " ground three or four feet deep." Their " wattling thofe " \&takes with twigs," is equally abfurd; and their'" plaif " tering the infide of their houfes with a compofition of " mud and ftraw, and fwimming with mud and fones on " their tails," are fill more incredible. The form and fize of the animal, notwithftanding all its fagacity, will not admit of its performing fuch feats; and it would be as impoffible for a beaver to ufe its tail as a trowel, except on the furface of the ground on which it walks; as it
would have been for Sir James Thornhill to have painted the dome of St. Paul's cathedral without the affiftance of fcaffolding. The joints of their tail will not admit of their turning it over their backs on any occafion whatever, as it has a natural inclination to bend downwards; and it is not without fome confiderable exertion that they can keep it from trailing on the ground. This being the cafe, they cannot fit erect like a fquirrel, which is their common pofture ; particularly when eating, or when they are cleaning themfelves, as a cat or fquirrel does, without having their tails bent forward between their legs; and which may not improperly be called their trencher.

So far are the beaver from driving ftakes into the ground when building their houfes, that they lay moft of the wood crofswife, and nearly horizontal, and without any other order than that of leaving a hollow or cavity in the middle; when any unneceffary branches project inward, they cut them off with their teeth, and throw them in among the reft, to prevent the mud from falling through the roof. It is a miftaken notion, that the wood-work is firf completed and then plaiftereit; for the whole of their houfes, as well as their dams, are from the foundation one mafs of wood and mud, mixed with ftones, if they can be procured. The mud is always taken from the edge of the bank, or the bottom of the creek or pond, near the door of the houfe; and though their fore-paws are fo fmall, yet it is held clofe up between them, under their throat, Hh that
1771. $\xlongequal[\text { December: }]{ }$
1771. that they carry both mud and ftones; while they always December. drag the wood with their teeth.

All their work is executed in the night; and they are fo expeditious in completing it, that in the courfe of one night I have known them to have collected as much mud at their houfes as to hape amounted to fome thoufands of their little handfuls; and when any mixture of grafs or ftraw has appeared in it, it has been, moft affuredly, mere chance, owing to the nature of the ground from which they had taken it. As to their defignedly making a compofition for that purpofe, it is entirely void of truth.

It is a great piece of policy in thofe animals, to cover, or plaifter, as it is ufually called, the outfide of their houfes every fall with frefh mud, and as late as poffible in the Autumn, even when the froft becomes pretty fevere; as by this means it foon freezes as hard as a ftone, and prevents their common enemy, the quiquehatch, from difturbing them during the Winter. And as they are frequently feen to walk over their work, and fometimes to give a flap with their tail, particularly when plunging into the water, this has, without doubt, given rife to the vulgar opinion that they ufe their tails as a trowel, with which they plaifter their houfes; whereas that dapping of the taid is no more than a cuftom, which they always preferve, even when they become tame and domeftic, and more particularly fo when they are ftartled.

Their food chiefly confifts of a large root; fomething refembling a cabbage-ftalk, which grows at the bottom
1771.

December. of the lakes and rivers. They eat alfo the bark of trees, particularly that of the poplar, birch, and willow; but the ice preventing them from getting to the land in Winter, they have not any barks to feed upon during that feafon, excepe that of fuch fticks as they cut down in Summer, and throw into the water oppofite the doors of their houfes; and as they generally eat a great deal, the roots above mentioned conflitute a chief part of their food during the Winter.' In Summer they vary their diet, by eating various kinds of herbage, and fuch berries as grow near their haunts during that feafon.

When the fee breaks up in the Spring, the beaver always leave their houfes; and rove about the whole Summér, probably in fearch of a more commodious frtuation; but in cife of not facceeding in their endeavours, they return again to their old habitations a little before the fall of the leaf, and lay in their Winter ftock of woods. They feldom begin to repair the houfes till the froft commences, and never frifif the outer-coat till the cold is pretty fevere, as hath Been already mentioned.

When they fhift their habitations; or when the increafe of their nümber renders it neceflary to make fome addition to their hourfes, of to erect new ones, they begin felling
1771.

December. the wood for thefe purpofes early in the Summer, but feldom begin to build till the middle or latter end of Auguft, and never complete their houfes till the cold weather be fet in.

Notwithftanding what has been fo reperitedly reported of thofe animals affembling in great bodies, and jointly erecting large towns, cities, and commonwealths, as they have fometimes been called, I am confident, from many circumftances, that even where the greatef numbers of beaver are frtuated in the neighbourhood of each other; their labours are not carried on jointly in the erection of their different habitations, nor have they any reciprocal intereft, except it be fuch as live immediately under the fame roof; and then it extends no farther than to build or keep a dam which is common to feveral houfes. In fuch cafes it is natural to think that every one who receives benefit from fuch dams, thould affitt in erecting it, being fenfible of its utility to all.

Perfons who attempt to take beaver in Winter Bould be thoroughly acquainted with their mapner of life, otherwife they will have endiefs trouble to effect their purpofe, and probably without fuccefs in the end ; becaure they have atways a number of holes in the banks, which ferve thera as places of retreat when any injury is offered to their houfes; and in general it is in thofe holes that they are taken.

When

When the beaver which are fituated in a fmall river or creek are to be taken, the Indians fometimes find it ne1771. ceflary to ftake the river acrofs, to prevent them from paffing; after which, they endeavour to find out all their holes or places of retreat in the banks. This requires much praetice and experience to accomplifh, and is performed in the following manner: Every man being furnifhed with an ice-chifet, lafhes it to the end of a fmall ftaff about four or five feet long; he then walks along the edge of the bank今, and keeps knocking his chifels againft the ice. Thofe who are well acquainted with that kind of work well know by the found of the ice when they are oppofite to any of the beavers' holes or vaults. As foon as they fufpea any, they cut a hole through the ice big enough to admit an old beaver; and in this manner proceed till they have found out all their places of retreat, or at leaft as many of them as poffible. While the principal men are thus employed, fome of the underftrappers, and the women, are bufy in breaking open the houfe, which at times is no eafy tafk; for I have frequently known thefe houfcs to be five and fix feet thick; and one in' particular, was more than eight feet thick on the crown. When the beaver fad that their hatiotations are invaded, they fly to their holes in the banks for fhelter; and on being perceived by the Imdinng, which is eafily done, by attending to the motion of the water, they block up the entrance with Itaker of wiocdy and then haul the beaver out of its hole; either by hand, if they cun reach it, or with a large hook

> 必 made

## $177 \%$.

 December. long ftick.In this kind of hunting, every mand has the fole right to all the beaver caught by him in the holed on voultsg and as this is a conftant rule, each perfor taheos cafo to mank fuch as he difcovers, by flicking up the branch of a tree, or fome other diftinguifhing pofts by which he maty know them. All that are caught in the houfe alfo are the property of the perfon who finds it.

The fame regulations are obiferved, and the fame prbetfy ufed in takigg beaver that are found in lakes and ocher ftanding waters, except it be that of faking the lake acrofs, which would be both anneoeffary and impofide.: Taking beaver-houfes in thefe fituation is geterally attended with lefs trouble and more fuccors thatn in the former.

The beaver is an animal which cannot keep under water long at a time; fo that when their heules are broke opong and all their places of retreat diffowtredy they have but one choice lefty as, it may be calledy cithot to to sakentir: their houfes or their vatulte : in grnexal, they ptefer the: latter; for where thete is ohe beaver caught in the houfoy? many: thoufands are taken in their vaults in the bridiac: Sometimes they are cauglit in nets; and in the Samment very frequently in traps: In-Winter they are very fatand delicious;
NORTHERNOGEAN. ..... 239
delicious; bat the trouble of rearing their young, the 1771. thinnefs of their hair, and their conftantly roving from place to place, with the trouble they have in providing againt the apprach of. Winter, generally keep them very poor during the Summer fealon, at which time their flefh is but indiffereat eating, and their fkins of fo little value, that the Indians generally finge them, even to the amount of many thoufands is one Summer. They have from two to fare young, 影 a time. Mr. Dobbs, in his Account of Hudfon's Bay, enumerates no lefs than eight different kinds of beaver; but it mult be underftood that they are all of one kind and fpecies: his diftintions arife wholly from the different fealons of the year in which they are killed, and the different ufes to which their Ikins are applied. which is the fole reaton that they: vary fo much in value,

Jofeph Lefranc, or Mr, Dobbs-for him, fays, that a good bupter can kill fix hundred beaver in one feafon, and can ouly carry one hundred to market. If that was really the cafe in Lefranc's time, the canoes mult have been much fmaller than they are at prefent; for it is well knewn that the generatity of the canoes which have vifited the Compray's. Pactories for the laft forty or fifty Yeaver mapablo of caniying three hundred beaver-fkins with: zeranisan, onsolufive of the Endians luggage, provifiont Shat

## A JOURNEY TO THE

1771: If ever a particular Indian killed fix hundred beaver in one Winter, (which is rather to be doubted,) it is more than probable that many in his company did not kill twenty, and perhaps fome none at all; fo that by diftributing them among thofe who had bad fuccels, and others who had no abilities for that kind of hunting; there would be no neceffity of leaving them to rot, or for finging them in the fire, as related by that Author. Daring my refidence among the Indians I have known fome individuals kill more beaver, and other heavy furrs, in the courfe of a Winter, than their wives could manage; but the overplus was never wantonly deftroyed, but always given to their relations, or to thofe who had been lefs fuccefsful; fo that the whole of the great hunters labours were always brought to the Factory. It is indeed too frequently a cuftom among the Southern Indians to finge many otters, as well as beaver; but this is feldom done, except in Summer, when their fkins are of fo little value as to be fcarcely worth the duty; on which account it has been always thought impolitic to encourage the natives to kill fuch valuable animals at a time when their fkins are not in feafon.

The white beaver, mentioned by Lefranc, are fo rare, that inftead of being "blown upon by the Company's Factors," as he afferts, I rather doubt whethes one-tenth of themever. faw one during the time of their refidence in this country: In the courfe of twenty years experience in the countries about

Black beaver, and that of a beautiful glofs, are not uncommon: perhaps they are more plentiful at Churchill than at any other Factory in the Bay; but it is rare to get more than twelve or fifteen of their flins in the courfe of one year's trade.

Lefranc, as an. Indian, mult have known better than to have informed Mr. Dobbs that the beaver have from ten to fifteen young at a time; or if he did, he muft have deceived him wilfully: for the Indians, by killing them in all ftages of geftation, have abundant opportunities of afcertaining the ufual number of their offspring. I have feen fome hundreds of them killed at the feafons favourable for thate obfervations, and never could difcover more than fix young ingone female, and that only in two inII

#### Abstract

24 about Hudfon's Bay, though I travelled fix hundred miles to the Weft of the fea-coaft, I never faw but one white beaver-fkin, and it had many reddich and brown hairs along the ridge of the back, and the fides and belly were of a gloffy filvery white. It was deemed by the Indians a great curiofity; and I offered three times the ufual price for a few of them, if they could be got; but in the courfe of ten' years that I remained there afterward, I could not procure another; which is a convincing proof there is no fuch thing as a breed of that kind, and that a variation from the ufual colour is very rare. Decenaber.

## A JOURNEF TO THE

1771. ftances; for the ufual number, as I have before obferved, December: is from two to five.

Befides this merring method of affertaining the real number of young which any animal han an a time, there is another rule to go by, writh refpet to the beaver, which experience has proved to the Indisas never to vary or deceive them, that is by diffection; for an examining the womb of a beaver, even at a time when not with young, there is always found a hardifh round kniob for every young fhe had at the laft litter. This is a circumftance I have been particularly careful to examine, and can affirm it to be true, from real experience.

Moft of the accounts, nay I may fay all the accounts now extant, refpecting the beaver, are taken from the authority of the French who have refided in Canada; but thofe accounts differ fo much from the real ftate and oeconomy of all the beaver to the North of that place, as to leave great room to furpert the truth of them altogether. In the firft place, the affertion that they have two doors to their houles, one on the land-fide, and the ouber next the water, is, as I have before observed, quite contrary to fact and common fenfe, as it would render their houfes of no ure to them, either as places of thelter from the inclemency of the extreme cold in Winter, or as a retreat from their common enemy the quiquehatch. The only thing
that could have made M. Da Prate, and other Freach writers, conjecture that fuch a thing did exift, muft have
1791. Desember. been from having feen fome old beaver-houles which had been taken ty the Indians; for they are always obliged to make a hole in one fide of the houle before they can drive them out; and it.is more than probable that in $f_{0}$ mild a chimate as Canada, the Indians do generatly make thore holes on the tand-fide *, which-without doubt gave rife to the fuggeftion.

In refpect to the beaver dunging in their houres, as fome perfons affert, it is quite wrong, as they always plunge into the water to do it. I am the beter enabled to make this affertion, from having kept feveral of them till they became fo domefficated as to apforer to their name, and follow thofe to whom they were accuftomed, in the fame manner as a dog weuld do; and they were as much pleafed at being fondled, as any animad I ever faw. I had a houfe built for them, and a imath piece of water before the door, into which they always phunged when they wanted to eafe zature; and cheir dung being of a light fubitance, immediately rifes and floats on the furface,

[^32]1971. then feparates and fubfides to the bottom. When the December. Winter fets in fo as to freeze the water folid, they Atill continue their cuftom of coming out of their houfe, and dunging and making water on the ice; and when the weather was fo cold that I was obliged to take them into my houfe, they always went into a large tub of water which I fet for that purpofe: fo that they made not the leaft dirt, though they were kept in my own fittingroom, where they were the conftant companions of the Indian women and children, and were fo fond of their company, that when the Indians were abfent for any confiderable time, the beaver difcovered great figns of uneafinefs, and on their return hewed equal marks of pleafure, by fondling on them, crawling into their laps, laying on their backs, fitting ereet like a fquirrel, ${ }_{2}$ and behaving to them like children who fee their parents but feldom. In general, during the Winter they lived on the fame food as the women did, and were remarkably fond of rice and plum-pudding: they would ent partridges and freh venifon very freely, but I never tried them with fifh, though I have heard they; will at times prey on them. In fact, there are few of the granivorous animals that may not be brought to be carniverous. It is well known that our domeftic poultry will eat animal food: thoufands of geefe that come to London market are fattened on tallow-craps, and our horfes in Hudfon's Bay would not only ieat all kinds of animal food, but alfo drink freely of the walh, or pot-liquor, intended for the hogs.
NORTHERN OCEAN. ..... 245
hogs. And we are affured by the moft authentic Authors, that in Iceland, not only black eattle, but alfo the fheep, are almoft entitely fed on fifh and fifh-bones daring the Winter feafon: Even in the Illes of Orkney, and that in Summer, the fheep attend the ebbing of the tide as regular the Efquimanx curlew, and go down to the fhore which the tide has left, to feed on the fea-weed. This, however, is through neceflity; for even the famous Inland of Pomona * will not afford them an exiftence above high-water-mark.

With refpect to the inferior, or flave-beaver, of which fome Authors Speak, it is, in my opinion, very difficult for thofe who are beft acquainted with the ceonomy of this animal to determine whether there are any that deferve that appellation or not. It fometimes happens, that a beaver is caught, which has but a very indifferent coat, and which has broad patches on the back, and fhoulders almoft wholly without hair. This is the only foundation for afferting that there is an inferior, or llave-beaver, among them. And when one of the above defcription is taken, it is perhaps too haftily inferred that the hair is worn off from thofe parts by carrying heavy loads: whereas it is moft probable that it is caufed by a diforder that attacks them fomewhat fimilar to the mange; for

- Thiotbeing fan lergeft of the Orkney Iandes, is called by the Inhabiants the Main Land.

1771. 

Deocmber.
 were that falling off of the hair occafioned by performing extra labour, it is natural to think that inftances of it would be more frequent than there are; as it is rare to fee one of them in the courfe of feven or ten years. I have feen a whole houfe of thofe animals that had nothing on the furface of their bodies but the fine foft down; all the long hairs having molted off. This and every other deviation from the general run is undoubtedly owing to fome particular diforder.

A
TTER expending fome days in hunting beaver, we proceeded to crols the Athapufcow Lake; but as we had lof much time in hunting deer and beaver, which were very plentiful on fome of the iflands, it was the sin tinth of January before we arrived on the South fide.

This lake, from the beft information which 1 could get from the natives, is about one hundred and twenty leagues long from Eaft to Weft, and twenty wide from North to \$outh. The point where we crofled it is fatd to be the narroweft It is full of inands; mof of whichise cothed with-fine tall poplars, biech, and pine, aqdare well ftocked with Indian deek On fone of the he citiands we alfo found fereral beater, but this mutw efoctood only of fuch inlands as hot large ponds the wher for not one beare-houle was to be feen on the margin of any of them.

The lake is ftored with great quantities of very fine Ans; particularly between the iflancs, which in fome

A Winter view in the ATHAPUS C OW LAKE, by SAM.' HEARAE, 177.
parts are fo clote to each other as to form very narrow channels, fike little rivers, in which 1 found (when 1772. angling for fifh) a confiderable current fetting to the Eaftward.

The fill that are common in this lake, as well as in moft of the other lakes in this country, are pike, trout, perch, barble, tittameg, and methy; the two lart are names gizen by the natives to two fpecies of filh which are found only in this couptry. Befides thele, we allo caught another kind of finh, which is faid by the Northern Indians to be peculiar to this lake; at leaft none of the fame kind have been met with in any other. The body of this fifh much refembles a pike in hape; but the fcales, which are very large and ftiff, are of a beautifully bright filver colour: the mouth is large, and fituated like that of a pike; but when open, much refembles that of a Antgeon; and though not ptovided withany teeth, takes hait is ravenouthy as a pike-or a trout. The-figes we caught were from two feet long to four feet. Their Hefh, though delicately white, is very foft, and has fo rank a tafte, that many of the Indians, except they are in abfolute want, will not eat it. The Northern Indians call this falt Shees. The trout in this lake are of the largef fize I ever faw: fome that were caught by my companions could not, I think, be lefs than thisty-five or forty pounds weight. Pike are atlo of an incredible fize in this extenfive water; here they are feldom moK k
lefted,
1772. lefted, and have multitudes of fmaller fifh to prey upon. Jamary. If I fay that I have feen fome of thefe fifh that were upwards of forty pounds weight, I am fure I do not exceed the truth.

Immediately on our arrival on the South fide of the Athaptifcow Lake, the fcene was agreeably altered, from an entire jumble of rocks and hills, for fach is all the land on the North fide, to a fine tevel cotantry, in which there was not a hill to be feen, or a ftone to be found: fo that fuch of my compations as had not brafs kettles, loaded their fledges with ftones from fome of the laft illands, to boil their viduals with in their birch-rind kettles, which will not admit of being expofed to the fire. They therefore heat ftones and drop them into the water in the kettfe to make it boil.

Buffalo, moofe, and beaver were very plentiful; and we could difcover, in many parts through which we puffed, the itracks of martins, foxes, quiquehatches, and other animals of the furr kind; fo that they were by no means fcarce: but my companions never gave thenfolves the leaft trouble to catch any of the three laft mentioned animals; for the buffalo, moofe, and bealer eagaged all their attention; perhaps principally fo on account of the excellency of their flefh; whereas the flefh of the fox and quiquehatch are never eaten by thofe people, except when they are in the greateft diftrefs, and then mesily to fare life.

The buffalo in thafe parts, I think, are in general much lapger than the Englifh black cattle; particularly the bulls, which, though they may not in reality be taller than the largeft fize of the Englifh oxen, yet to me always appeared to be much larger. In fat, they are fo heary, that when fix or eight Indians are in company at the Akinning of a large bull, they never attempt to turn it over while entire, but when the upper fide is Akinned, they cat off the leg and choulder, rip up the belly, take out all the inteftines, cut off the head, and make it as light as poffible, before they turr it to ikin the under fide. The fkin is in fome places of an incredible thicknefs, particularly about the neck, where it often exceeds an inch. The horns are fhort, black, and almoft ftraight, but very thick at the roots or bafe.

The head of an old bull is of a great fize and weight indeed : fome which I have feen were fo large, that I could not without difficulty lift them from the ground:*;

[^33]$\mathrm{Kk}_{2}$ but
 are, in general, about 2 foot long, though fothe appear tobe, exclufive of the long brulh of hair at the end, longer. The hair on the tails of the tuifs is genctally of a fine gloffy black; but the bruff atictie efd of the oows' tails is always of a rufty brown, probubly owing to being ftained with their urime.

The hair of the body is foft and curfed, fomewat approaching to wool; it is generally of a fandy brown, and of an equal length and thicknefs all over the body: but on the head and neck it is much tonger than it is on any other part.

The Indians, after reducing all the parts of the fkin to an equal thicknefs by fcraping, drefs them in the hair for clothing; when they are light, foft, warm, and durable They alfo drefs fome of thofe fkins into leather without the hair, of which they make tents and hoes; but the grain is remarkably open and fpungy, by no means equal in goodnefs to that of the fkin of the moofe : nor an $i$ certain that the curriers or tanners in Europe could manufacture thefe fkins in fuch a mariner as to render them of any confiderable value; for, to appearance, they are of the fame quality with the flins of the mußk-ox, which are held in fo little eftimation in England, that when a number of them waie fent home from Churchill Factory, the Company iffued out orders the year following, that unlef they could be purchafed from the Indians at the rate of four Alins
frins for one betwety they weuld not anfwer the expence of fanding home; agreat proof of their being of very little watue.

The buffilos chiefly delight in wide open plains, which in thofe parts produce very long coarfe grafs, or rather a kibd of frall flags and rushes, upon which they feed; but when purfued they always take to the woods. They are of fuch an amazing Arength, that when they fly through the woods from a purfuer, they frequently brufh down trees as thick as a mad's, arm ; and be the frow ever fo deep, fuch is their Atringth and agility that they are enabled to plunge through it fafter than the fwiftef Indian can run in frow-hoes. To this I have been an eye-witnefs many times, and once had the vanity to think that I could have kept pace with them; but though I was at that time celebrated for being particularly fleet of foot in fnow-floes, I foon found that I was no match for the buffalos, potwithotanding they were then plunging through fuch deep fnow, that their bellies made a trench in it as large as if many heavy facks had been hauled through it. Of all the large beafts in thofe parts the buffalo is eafieft to kill, and the moofe are the moft difficult; neither are the deer very eafy to come at, except in windy weather: indeed it requires much practice, and a great deal of patience, to llay any of them, as they will by no means fuffer a direat approach, unlefs the hunter be entirely theltered by wroods or willows. The flefh of the buffalo.

## A JOURNEYTOTHE

1772. is exceedingly good eating; and fo entirely free from any difagreeable fuel or tate, that it resembles beef as nearly as poffible: the felt of the cows, when tome time gone with calf, is efteemed the fineft; and the young calves, cut out of their bellies, are reckoned a greatudicacy indeed. The hunch on their backs, or mote properly on their fhoulders, is not a large fleshy lamp, as forme fuppofe, but is occafioned by the bones that form the withers being continued to a greater length than in molt other animals. The flefh which furrounds this part being fo equally intermixed with fat and lean, is reckoned among the nicest bits. The weight, however, is by no means equal to what has been commonly reported. The tongue is alto very delicate; and what is mont extraordinary, when the beats are in the pooreft fate, which happens regularly at certain feafons, their tongues are then very fat and fine; forme fay, fatter than when they are in the beet order: the truth of which, I will not confirm. They are fo efteemed here, however, that many of them are brought down to the Company's Factory at York as prefents, and are entered a great luxury, probably for no other reafon but that they are far-fetched; for they are by no means fo large, and I think them not fo fine, as a neat's tongue in England.

The moore deer is alio a large beat, often exceeding the largest horfe both in height and bulk; but the length of the legs, the bulk of the body, the fhortnefs of the neck, and
NORTAERNOCEAN: ..... 25.5
and the macponmion leiggth of the head and ears, without

1772. $\xrightarrow[\text { Jemery. }]{\text {. }}$
 and diffet fremithan in colour. The hair of the male, which is longe bollows nod foft, like that of a deer, is at the pointa nearly black, but a little way under the furface it is of analh-colour, and at the roots perfeely white The hair of the female is of a fandy brown, and in fome parts, particularly under the throat, the belly, and the flank, is nearly white at the furface, and moft delicately fo at the root:

Their legs are fo long, and their necks fo hort, that they cannot graze on level ground like other animals, but are obliged to brouze on the tops of large plants and the leaves of treat during the Sumper it and in Winter they always feed on the tops of willows and the fmall branches of the birch tree; on whith account they are never found during that fgang hat, in fuch places as can afford them a plentifulfupply of their favourite foods and though they have no fore teete in the ypper-jaw, yet I have often feen willowt and, fmall birch-trees cropped by thein, in the fage manotras if they had beenicut by a gardener's Sheers, thongh fome of them were not mallex than common pipeftems, they feem particularly partial to the red willow.

In Summer, they are generally found to frequent the banks of rivereted labes, probably with no other view. thani
1772.
than to have the benefit of getting into the water, to avoid the innumerable multitudes of marftertoo and other fise that pefter them exocedingly during that feafon. There is alfo a variety of water-plants, of which the moofe are rery fond, and which are adapted to thoir neceffithe is a pectuliar manner during the Sumerver fenfon, an thepomerily brouze on them when nearly emerged in wutery too woid the torment of the flies.

The head of the moofe is, as I have obferved, remarkably long and large, not very unlike that of a horfe; bat the nofe and noftrils are at leaft twice as large. The ears are about a foot long, and large; and they always ftand erect. Their faculty of hearing is fuppofed to be more acute than either their fight or feent; which meters it very difficutt to kill them, efpecially as the Inatians in thofe parts have no other method of doing it but by creeping after them, among the trees and buifhes, till they get within gun-fhot; taking care always to keep to teemend of the moofe, for fear of being ovecheard. In Sutumer, when they frequent the margins of rivess and leken, they me often kitled by the Indinas in the water, whlte they are
 When purfued in this mamer, they are the mof minoffenfive of ail animals, never making any refitince; and the young ones are fo fimple, that I remember to have feen an Indiza paddle his eanoe up to one of them, and take it by the poll withoart the leaft oppofition: the poor harmulefs

$$
\text { NORTHERN OCEAN. } 257
$$

harmlefs animal feeming at the fame time as contented along-fide the canoe, as if fwimming by the fide of its
1772. January. dam, and looking up in our faces with the fame fearlefs innocence that a houfe-lamb would, making ufe of its fore-foot almoft every inftant to clear its eyes of mufkettoes, which at that time were remarkably numerous.

I have alfo feen women and boys kill the old moofe in this fituation, by knocking them on the head with a hatchet; and in the Summer of one thoufand feven hundred and feventy-five, when I was on my paffage from Cumberland Houfe to York Fort, two boys killed a fine buck moofe in the water, by forcing a ftick up its fundament; for they had neither gun, bow, nor arrows with them. The common deer are far more dangerous to approach in canoes, as they kick up their hind legs with fuch violence as to endanger any birch-rind canoe that comes within their reach; for which reafon all the Indians who kill deer upon the water are provided with a long ftick that will reach far beyond the head of the canoe.

The moofe are alfo the eafieft to tame and domefticate of any of the deer kind. I have repeatedly feen them at Churchill as tame as fheep *, and even more fo; for they

[^34] would follow their keeper any diftance from home, and at his call return with him, without the leal trouble, or ever offering to deviate from the path.*.

The flelh of the moore is very good, though the grain is but coarfe, and it is much tougher that any other kind of venifon. The note is mot excellent, as is also the tongue, though by no means fo fat and delicate as that of the common deer. It is perhaps worth remarking, that the livers of the moore are never found, not even at any time of the year; and, like the other deer, they have no gall. The fat of the inteftines is hard, like fuel; but all the external fat is fort, like that of a bread of cottons; and when put into a bladder, is as fine as marrow. In this they differ from all the other Species of deer, of which the external fat is as hard as that of the kidnies.

#### Abstract

- Since the above was written, the fame; Indian that brought all the abovementioned young moore to the Factory had, in the year 1777, two others, fo nne, that when on his paffige to Prince of Wader's Fort in a canoe, the moore always followed him along the bank of the river; and at nighty or on any other occafion when the Indians landed, the young moore generally came and fondled on them, in the fame manner as the mot domeftic animal would have done, and never offered to fray from the tears Unfortumety, in eroffing. a deep bay in one of the lakes, (on a fine day,) all the Indians chat were got interested in the fafe-landing of those engaging creatures, paddled from point to point; and the man that owned them; not caring to go fo far about by himferf, accompanied the others, in hopes they would follow him round as ufual; but at night the young moore did not arrive; and as the howling of rome wolves was heard in that quarter, if was fuppofed they had been devoured by them, as they were. never afterward len.

$$
\text { NORTHERN OCEAN. } 259
$$

The moofe in all their altions and attitudes appear, 1772. very uncouth, and when difturbed, never rin, olly miake jnüry a kind of trot, which the length of their legs enables them to do with great fwiftnefs, and apparently with much eafe; bat were the country they inhalit free from anter-wood, and dry underifoot, fo that horfemen and dogs might follow them, they would become an eafy prey, as they are both tender-feoted and fhort-winded: But of this mere hereafter*.

The fkins of the moofe, when dreffed by, tie natives, make excellent tent-covers and thoe-leather; and in faet every other paist of their clothing. Thefe, like the fkins of the bueffato, are of very onequal thicknefs. Some of the Indian women, who are zequainted with the manufacture of them; will, by meanis of foraping, render them as even as a piece of thick cloth, and when well drefled they are pefy foft; but not being dreffed in oil, they always grow hard after being wet, undefs great care be raken to keep rabbing them all the time they are drying. The fame may be faid of all the Indian-dreffed leather, except that of the wewaikifo, which will wah as well as fhammoy-leather, and always preferve its foftnefs.

[^35]L12 The
177.2

January.

The female moofe never have any horns, but the males have them of a prodigious fize and weight, and very different in Chape from thofe of the common deer. The extremity of each horn is palmated to the fize of a common fhovel, from which a few fhort branches floot out; and the fhaft of the horn is frequently as large as a common man's wrift. They fhed them annually like the common deer. The horns of the moofe are frequently found to exceed fixty pounds weight; and their texture, though of a large fize and of fuch rapid growth, is much harder than any other feccies of deer-horns in thofe parts.

Though the flefh of the moofe is efteemed by moft Indians both for its flavour and fubftance, yet the Northern Indians of my crew did not reckon either it or the flefh of the buffalo fubftantial food. This I fhould think entirely proceeded from prejudice, efpecially with refpect to the moofe; but the flefh of the buffalo, though fo fine to the eye, and pleafing to the tafte, is fo light and eafy of digeftion, as not to be deemed fubftantial food by any Indian in this country, either Northern or Southern. The moofe have from one to three young at a time, and generally bring them forth in the latter end of April; or beginning of May.

Soon after our arrival on the South-fide of Athapufcow Lake, Matonabbee propofed continuing our courfe in the South

South Weft quarter, in hopes of meeting fome of the Athapufoow Indians; becaufe I wifhed, if poffible, to
1772. Jamary. purchafe a tent, and other ready-dreffed fkins from them; as a fupply of: thofe articles would at this time have been of material fervice to us, being in great want both of tents and hoo-leather: and though my companions were daily killing either moofe or buffalo, the weather was fo exceffively cold, as to render drefling their fkins not only very troublefome, but almoft impracticable, efpecially to the generality of the Northern Indians, who are not well acquainted with the manufacture of that kind of leather.

To drefs thofe fkins according to the Indian method, a lather is made of the brains and fome of the fofteft fat or marrow of the animal, in which the fkin is well foaked, when it is taken out ${ }_{2}$ and not only dried by the heat of a , fire, but hung up in the fmoke for feveral days; it is then taken down, and well foaked and wafhed in warm water, till the grain of the $\mathbb{f k i n}$ is perfectly open, and has imbibed a fufficient quantity of water, after which it is taken out and wrung as dry as poffible, and then dried by the heat of a flow fire; care being taken to rub and ftretch it as long as any moifture remains in the fkin . By this fimple method, and by fcraping them afterwards, fome of the moofe fkins are made very delicate both to the eye and the touch.

1772: On the eleventh of January, as fome of my companions Jannī were hunting, they faw the track of a frange fnow-fhoe, isth. which they followed; and at a confiderable diftance:came to a little hut, where thoy difcovered a young woman fitting alone. As they foupd that the undertiood their language, they brought ber with thom tor theitints. On examination, he propred to be ane of the Wheftern Dogribbed Indians, who had been taken prifoner by the Athapufcow Indians in the Sumper of one thoutand feven hundred and fegenty; and in the following Summer, when the Indians that took her prifoner were near this part, the had eloped from them, with an intent to return to ber own country; but the diftance being fo great, and having, after the was taken prifoner, been carried in 2 canoe the whole way, the turnings and windings of the rivers and lakes were fo numerous, that the forgot the track; fo the built the hut in which we found her, to protect her from the weather during the Winter, and here the had refided from the firft fetting in of the fall.

From her account of the moons paft fince her elopement, it appeared that the had been near fexen months without feeing a human face; during all which time fhe had fupported herfelf very well by fraring partridges, rabbits, and Equirrels; the had ałfo killed two or three beaver, and fome porcupines. That hae did not feem to have been in want is evident, as the had a fmall fteck of provifions
provifiom by her when the was difcovered; and whe in good heath and conditions' and I think one of the fineft Janzary. womeny of ra real indian, that"I have feen in anty part of North Americai

The methods pratifed by this poor creature to ptocure a livelihood were truly admirable, and are great proofs that neceffity is the real mother of invention. When the few deer-finews that fhe had an opportunity of taking with ber were all expended in making fnares, and fewing hen clothing, she had nothing to fupphy their place but the fincws of the rabbits lega and feet; thefe the twifted together for that parjofe with griat dexterity and furceefs. The rabbits, Oc. which the caught in thofe fnares, not only furnifhed her with a comfortable fubfiftence, but of the fkins fhe made a fuit of neat and warm clothing for the Winter. It is fcareely poffible to conceive that a perfon in her forlorn fituation could be fo compofed as to be capable of contriving or executing any thing that was not abfolutely neceflary to her exiftence; but there were fufficient proofs that fhe had extended her care much farther, as all her clothing, befide being calculated for real fervice, fhewed great tafte, and exhibited no little variety of ornament. The materials, though rude, were very curioufly wrought, and fo judicioully placed, as to make the whole of her garb have a very pleafing, though rather rosmantic appearance.
1772. Her leifure hours from hunting had been employed January. in twifting the inner rind or bark of willows into fmall lines, like net-twine, of which the had fome hundred fathoms by her; with this fhe intended to make a fifhingnet as foon as the Spring advanced. It is of the inner bark of willows, twifted in this manner, that the Dogribbed Indians make their fifhing-nets; and they are much perferable to thofe made by the Northern Indians *.

Five or fix inches of an iron hoop, made into a knife, and the Shank of an arrow-head of iron, which ferved her as an awl, were all the metals this poor woman had with her when fhe eloped; and with thefe implements the had made herfelf complete fnow-fhoes, and feveral other ufeful articles.

Her method of making a fire was equally fingular and curious, having no other materials for that purpofe than two hard fulphurous ftones. Thefe, by long frition and hard knocking, produced a few fparks, which at length communicated to fome touchwood; but as this method was attended with great trouble, and not always with fuccefs, fhe did

[^36]> NORTHERNOCEAN.
not fuffer her fire to go out all the Winter. Hence we may conclude that the had no idea of producing fire by
1772. Janazry. frietion, in the manner practifed by the Efquimaux, and many other uncivilized nations; becaufe if the had, the above-mentioned precaution would have been unneceffary.

The fingularity of the circumftance, the comelinefs of her perfon, and her approved accomplifhments, occafioned a ftrong conteft between feveral of the Indians of my party, who fhould have her for a wife; and the poor girl was actually won and loft at wrefting by near half a fcore different nen the fame evening. My guide, Matonabbee, who at that time had no lefs than feren wives, all women grown, befides a young girl of eleven or twelve years old, would have put in for the prize alfo, had not one of his wives made him afhamed of it, by telling him that he had already more wives than he could properly attend. This piece of fatire, however true, proved fatal to the poor girl who dared to make fo open a declaration; for the great man, Matonabbee, who would willingly have been thought equal to eight or ten men in every refpect, took it as fuch an affront, that he fell on her with both hands and feet, and bruifed her to fuch 2 degree, that after lingering fome time the died.

When the Athapufcow Indians took the above Dogribbed Indian woman prifoner, they, according to the uniserfal cuftom of thofe favagen, furprifed her and her party in Mm
the
1772. the night, and killed every foul in the tent, except herfelf and three other ypungwinman. L. . A mong thofe whom they killed, were her father; mottier;-andhubband. Her young child, four or five months old, fhe concealed in a bundle of clothing, and took with her undifcovered in the night; but when fhe arrived at the place where the Athapufcow Indians had left their-wives, (which was not far diftant,) they began to examine her bundle, and finding the child; one of the women took it from her, and killed it on the fpot.

This laft piece of barbarity gave her fuch a difguft to thofe Indians, that notwithftanding the man who took care of her treated her in every refpeet as his wife, and was, the faid, remarkably kind to, and even fond of her; fo far was fhe from being able to reconcile herfelf to any of the tribe, that the rather chofe to expofe herfelf to mifery and want, than live in eafe and affluence among perfons who had fo cruelly murdered her infant *: The poor

- It is too common a cafe wich moft of the tribes: of Southem Indinas for the women to defire their hubbands or friends; when going to wer, to bring them 2 lave, that they may have the pleafure of killing it $t_{\text {and fome }}$ for thefe inhuman women will secompany their huwbends, anid murder the women and children as faft as their humbands do che men.

When I was at Cumberiand Houre, (an inland fettlement that I eftablithed for the Hodion's. Bay Company in the year 1774) I was particularty acquainted with a very young bedy of chis excruordinary turn; who when I defend fome Indians that were going to war to bring me a young Aave, wich I intended to have brought up as a domeftic, Mifiswas equesty defiroor that one maighe

$$

poor woman's relation of this Phocking ftory, which fhe delivered in a very affecting manner, only excited laughter among the favages of my party.

In a converfation with this woman foon afterward, the told us, that her country lies fo far to the Weftward, that fle had never feen iron, or any other kind of metal, till he was taken prifoner. All of her tribe, the obferved, made their hatchets and ice-chifels of deer's hornis, and their knives of ftones and bones; that their arrows were hod with a kind of flate, bones, and deer's horns; and the inftruments which they employed to make their woodwork were nothing but beavers' teeth. Though they had frequently heard of the ufeful materials which the nations or tribes to the Eaft of them were fupplied with from the Englifh, fo far were they from drawing nearer, to be in the way of trading for iron-work, \&fc. that they were obliged to retreat farther back, to avoid the Athapufcow Indians, who made furprifing flaughter among them, both in Winter and Summer.

On the fixteenth, as we were continuing our courfe in 2tht. the South Wert quarter, we arrived at the grand Atha-

[^37]
## A.JOURNEYTOTHE

pufcow River, which at that part is about two miles wide, and empties itfelf into the great lake of the fame name we had fó lately croffed, and which has been already defcribed.

The woods about this river, particularly the pines and poplars, are the talleft and ftouteft I have feen in any part of North Almeríca. The birch alfo grows to a confiderable fize, and fome fpecies of the willow are likewife tall; but none of them have any trunk, like thofe in England.
-
3 The bank of the river in moft parts is very high, and in fome places not lefs than a hundred feet above the ordinary furface of the water. As the foil is of a loamy quality, it is very fubject to moulder or wafh away by heavy rains, even during the fhort Summer allotted to this part of the globe. The breaking ap of the ice in the Spring is annually attended with a great deluge, when, I am told, it is not uncommon to fee whole points of land.wafhed away by the inundations; and as the wood grows clofe to the edge of the banks, vaft quantities of it are hurried down the ftream by the irrefiftible force of the water and ice, and conveyed into the great lake already mentioned; on the fhores and iftands of which, there lies the greateft quantity of 'drift wood I ever faw. Some of this wood is large enough to make mafts for the largeft hips that are built. The baaks of the river in general are fo fteep as to be inacceffible tơ either man or beaft, except in fame Alacks, or gulleys, that have been wore down by heavy raia, backwaters,
waters, or deluges; and even thofe flacks are, for the moft part, very difficult to afcend, an account of the number
1792. Jinmary. of large trees which lie in the way.

There are feveral low iflands in this river, which are much frequented by the moofe, for the fake of the fine willous they produce, which furnilh them with a plentiful fupply of their favourite food during the Winter. Some of thofe iflands are alfo frequented by a number of rabbits; but as larger game could be procured in great plenty, thofe fmall animals were not deemed worthy our notice at prefent.

Befide the grand river already mentioned, there are feveral others of lefs note, which empty themfelves into the great Athapufcow Lake: There are alfo feveral fmall rivers and creeks on the North Eaft fide of the Lake that carry off the fuperfluous waters, fome of which, after a variety of windings through the barren grounds to the North of Churchill River, are loft in the marhes and low grounds, while others, by means of many fmall channels and rivalets, are difcharged into other rivers and lakes, and at laft, doubelefs, find their way into Hudfon's Bay. Thefe rivers, though numberlefs, are all fo full of fhoals and ftones, as not to be navigable for an Indian canoe to any confiderable diftance; and if they were, it would be of little or no ufe to the natives, as none of them lead within feveral hundred miles of Churchill River.

Agree-

AJOURNEYTOTHE
1772. Agreeably to Matonabbee's propofal, we continued our courfe up the Athapufcow River for many days, and though we paffed feveral parts which we well knew to have been the former Winter-haunts of the Athapufcow Indians, yet we could not fee the leaft trace of any of them having been there that feafon. In the preceding Summer, when they were in thofe parts, they had fet fire to the woods; and though many months had elapled fyom that time till our arrival there, and notwithftanding the fnow was then very deep, the mofs was ftill burning in many places, which at firf deceived us very much, as we took it for the fmoke of frange tents; but after going much out of our way, and fearching very diligently, we could not difcover the leaft track of a ftranger.

Thus difappointed in our expectations of meeting the Southern Indians, it was refolved (in Council, as it may be called) to expend as much time in huating buffalo, moofe, and beaver as we could, fo that we might be able to reach Prince of Wales's Fort a little before the ufual time of the fhips arrival from England. Accordingly, after having walked upwards of forty miles by the fide of Athapufcow 27 th. River, on the twenty-feventh of January we ftruck off to the Eaftward, and left the River at that part where it begins to tend due South.

In confequence of this determination of the Indians; we continued our courfe to the Eaftward; but as game of all kinds was very plentiful, we made but hort days
jouraies,
journies, and often remained two or three days in one place, to eat up the fpoils or produce of the chace. The
1772.

Janaary. woods through which we were to pafs were in many places fo thick, that it was neceflary to cut a path before the women could pafs with their fledges; and in other places fo much of the woods had formerly been fet on fire and burnt, that we were frequently obliged to walk farther than we otherwife fhould have done, before we could find green brufh enough to floor our tents.

From the fifteenth to the twenty-fourth of February, we walked along a fmall river that empties itfelf into the Lake Clowrey, near the part where we built canoes in May one thoufand feven hundred and feventy-one. This little river is that which we mentioned in the former part of this Journal, as having communication with the Athapufow Lake: but, from appearances, it is of no confequence whence it takes its rife, or where it empties itfelf, as one half of it is nearly dry three-fourths of the year. The intervening ponds, however, having fufficient depth of water, are, we may fuppofe, favourable fituations for beaver, as many of their houfes are to be found in thofé parts.

On the twenty-fourth, a frange Northern Indian leader, called Thlew-fa-nell-ie, and feveral of his followers, joined us from the Eaftward. This leader prefented Matonabbee and myfelf with a foot of tobacco each, and a two-quart keg

February 15 th- 24 th. $3 \cos ^{24}-24$

## A JOURNEY TOTHE

1772. keg of brandy, which he intended as a prefent for the February. Southern Indians; but being informed by my companions, that there was not the leaft probability of meeting any, be did not think it worth any farther carriage. The tobacco was indeed very acceptable, as our ftock of that article had been expended fome time. Having been folong without tafting fpirituous liquors, I would not partake of the brandy, but left it entirely to the Indians, to whom, as they were numerous, it was fcarcely a tafte for each. Few of the Northern Indians are fond of fpirits, efpecially thofe who keep at a diftance from the Fort: fome who are near, and who ufually fhoot geefe for us in the Spring, will drink it at free coft as faft as the Southern Indians, but few of them are ever fo imprudent as to buy it.

The little river lately mentioned, as well as the adjacent lakes and ponds, being well-ftocked with beaver, and the land abounding with moofe and buffalo, we were induced to make but flow progrefs in our journey. Many days were fpent in hunting, feafting, and drying a large quantity of flefh to take with us, particularly that of the buffalo; for my companions knew by experience, that a few days walk to the Eaftward of our prefent frtuation would bring us to a part where we fhould not fee any of thofe animals.

The frangers who had joined us on the twenty-fourth informed us, that all were well at Prince of Wales's Fort

$$
13 \quad \text { when }
$$

$$
\text { NORTHERN OCEAN. } 273
$$

when they left it lat ; which, according to their account of the Moons paft fince, muft have been about the fifth of Norember one thoufand feven hundred and feventyone. Thefe ftrangers only remained in our company one night before the Leader and part of his crew left us, and proceeded on their journey to the North Weftward; but a few of them having procured fome furrs in the early part of the Winter, joined our party, with an intent to accompany us to the Factory.

Haring a good ftock of dried meat, fat, \&f.c. prepared in the beft manner for carriage, on the twenty-eighth we thaped our courfe in the South Ealt quarter, and proceeded at a much greater rate than we had lately done, as little or no time was now loft in hunting. The next day we faw the tracks of fome ftrangers; and though I did not perceive any of them myfelf, fome of my companions were at the trouble of fearching for them, and finding them to be poor inoffenfive people, plundered them not only of the few furrs which they had, but took alfo one of their young women from them.

Every additional act of violence committed by my companions on the poor and diftrefled, ferved to increafe my indignation and diflike; this laft act, however, difpleafed me more than all their former actions, becaufe it was committed on a fet of hamalefs creatures, whofe general manner of life readers then the moft fecluded from fociety of any of the human ract.

## AJOURNEYTOTHE

1772. Matonabbee affured me, that for more than a generations Februxy. paft one family only, as it may be colled; : (and to whiriah the young men belonged who were plundered by:my companions, ${ }^{\text {c }}$ have taken up, their Winter alatode in thofe woods, which are fituated to fur on the barien ground as to be quite out of the track of any ocher Indinas. From the beft accounts that I could collet, the latitudeof this place mult be about $63 \frac{1}{2}^{\circ}$; or $63^{\circ}$ at leaft; the longitude is very uncertain. From my oxen experience I can affirm, that it is fome hundreds of miles both from the fea-fide and the main woods to the Wefward. Few of the trading Northern Indians have vifited this place; but thofe who have, give a pleafing defcription of it, all agreeing that it is fituated or the banks of a riverwhich has communication with feveral fine lakee.: As the current fets to the North Eatowird, it emptice itfelf, in all probability, into fome part of Hadion's Bay; and, from the latitude, no part feems more likely for this communication, than Baker's Lake, at the head of Cheferfield's inlet. This, however, is mere conjocture; nor is it of any confequence, as savigation on any of the rivers in thofe parts is not only impracticable, but would be alfo unprofitable, as they do not lead into a country: that produces any thing for trade, or that contains. any inhabitants worth vifiting.

The accounts given of this place, and the manner of life of its inhabitarita, would, if related at full leagth, fill a volume : let it fuffice to obferve, that the fituation
NORTEERNOCEAN. ..... 275
is faid to be remarkably favourable for every kind of game ..... 1772.
that the barren ground produces at the different feafons ..... February.of the year; but the continuance of the game withthem is in general uncertain, except that of filh and par-tridgen. That being the cafe, the few who compofe thislittle commonwealth, are, by long cuftom and the conftantexample of their forefathers, poffeffed ${ }^{\text {i }}$ of a provident turnof mind, with a degree of frugality unknown to everyother tribe of Indians in this country except the Ef-quimaux.

Deer is fiid to vifit this part of the country in aftonifhing numbers, both in Spring and Autumn, of which circumftances the inhabitunte avail themfelves, by killing and drying as much of their flefh as poffible, particularly in the fall of the year; fo that they feldom are in want of a good Winter's ftock.

Geefe, ducks, and fwans vifit here in great plenty during their migrations both in the Spring and Fall, and by much art, joined to an infurmountable patience, are caught in confiderable numbers in fares *, and, without

[^38]
## A JOURNEYTO THE

out doubt, make a very pleafing change in the food. It is alfo reported, (though I confefs I doubt the truth of it ,).
ings 2 frare is hung and fattened to $a$ fake, which the bird, when intangted, cannot drag from the bottom; and to prevent.the frame from being wafted out of its proper place by the wind, it is fecured to the ftakes which form the opening, with tender grafs, which is eafily broken.

This method, though it has the appearance of being very fimple, is neverthelefs attended with much trouble, particularly when we confider the finalinefs of their canoes, and the great inconveniency they lebour waiker in performing works of this kind in the water. Many of the ftakes ufed on thafer occafions are of a confiderable length and fize, and the frmall branches which form the principal part of the hedges, are not arranged without much caution, for fear of overfeting the canoes, perticularly where the wier in deep, as it is in forne of the thakes; and in many of the rivers the currear is very fuift. which renders this bufinefs equally troublefome. When the lakes and rivers. are fhallow, the natives are frequently at the pains to make fences from thoreto fhore.

To fnare thofe birds in their nefts requires a confideratte degree of art, and, as the natives fay, a great deal of cleanlinefs; for they have obfervech. that when fares have been fet by thofe whofe hands were not clean, the birds. would not go into the neft.

Even the goofe, though fo fimple a bird, is sotoriouly knowa to forfake: her eggs, if they are breathed on by the Indians.

The fmaller (pecies of birds which make their neft in the ground, ave by nomeans fo delicate, of courfe lefs care is neceffery to friare them. It has been obferved that all birds which build in the ground go into their neft at one particular fide, and out of it on the oppofite. The Iadians, thoroughly conviriced: of this, ajways fet the frares on the fide on which the bird enters the neft; and if care be raken in feering thern, fettom fail of feizing their object. For fmall birds, fuch as burks, and many others of equal firse, the bodiseas. only ufe two or three hairs out of their head; but for larger biede. particalarly fwans, geefe, and ducks, they make frares of deer-finewh, twitied bikepackthread, and occafionally of a fmall thong cut from a parchmeat deerfkin.

1 that

## NORTHERNOCEAN.

The river and lakes near the little foreft where the family above mentioned had fixed their abode, abound with fine filh, particularly trout and barble, which are eafily caught; the former with hooks, and the latter in nets. In fact, I have not feen or heard of any part of this country which foeme to poffefe balf the advantages requifite for a conftant refidence, that are afcribed to this little fpot. The defcendents, however, of the prefent inhabitants muft in time evacuate it for want of wood, which is of fo flow a growth in thofe regions, that what is ufed in one year, exclufive of what is cut down and carried away by the Efquimaux, muft coft many years to replace.

It may probably be thought ffrange that any part of a community, apparently fo commodioully fituated, and Eappy within themfelves, fhould be found at fo great a diftance from the reft of their tribe, and indeed nothing but neceflity could poffibly have urged them to undertake a journey of fo many hundred miles as they have done; but no fituation is without its inconveniences, and as their woods contain no birch-trees of fufficient fize, or perhaps none of any fize, this party had come fo far to the Welt-
1772. Weftward to procure birch-rind for making two canoes, and fome of the fungus that grows on the outlide of the birch-tree, which is ufed by all the Indians in thofe parts for tinder. There are two forts of thefe fungufes which grow on the birch-trees; one is hard, the ufeful part of which much refembles rhubarb; the other is foft and fmooth like velvet on the outfide, and when laid on hot afhes for fome time, and well beaten between two ftones, is fomething like fpunk. The former is called by the Northern Indians Jolt-thee, and is known all over the country bordering on Hudfon's Bay by the name of Pefogan *, it being fo called by the Southern In-

[^39]
# NORTHERN OCEAN. <br> dians. The latter is only ufed by the Northern tribes, and is called by them Clalte-ad-dee. 

By the firft of March we began to leave the fine level country of the Athapufcows, and again to approach the fony mountains or hills which bound the Northern Indian country. Moofe and beaver ftill continued to be plentiful; but no buffaloes could be feen after the twentyninth of February.

As we were continuing our courfe to the Eaft South Eaft, on the fourteenth we difcovered the tracks of more ftrangers, and the next day came up with them. Among thofe Indians was the man who had carried a letter for me in March one thoufand feven hundred and feventy-one, to the Chief at Prince of Wales's Fort, and to which he had brought an anfwer, dated the twenty-firft of June. When this Indian received the letter from me, it was very uncertain what route we fhould take in our return from the Copper River, and, in all probability, he himfelf had not then determined on what fpot he would pafs the prefent Winter; confequently our meeting each other was merely accidental.

Thefe Indians having obtained a few furrs in the courfe of the Winter, joined our party, which now confifted of twenty tents, containing in the whole about two hundred
1772. dred perfons; and indeed our company had not been much March lefs during the whole Winter.

From the ftrangers who laft joined us we received fome ready-dreffed moofe-flins for tenting and thoe-leather; alfo fome other kins for clothing, for all of which the Chief at the Factory was to pay on our arrival.

I cannot fufficiently lament the lofs of my quadrant, as the want of it muft render the courfe of my journey from Point Lake, where it was broken, very uncertain; and my watch ftopping while I was at the Athapufcow Lake, has contributed greatly to the misfortune, as I am now deprived of every means of eftimating the diftances which we walked with 'any degree of accuracy, particularly in thick weather, when the Sun could not be feen.

8 sh
The Indians were employed at all convenient times in procuring birch-rind and making wood work ready for building canoes; alfo in preparing fmall ftaffs of birch-wood, to take with them on the barren ground, to ferve as tent-poles all the Summer; and which, as: hath been already obferved, they convert into fnowfhoe frames when the Winter fets in. Here it may be proper to obferve, that none of thofe incidental avocations interfere with, or retard the Indians in their journey; for they always take the advantage of every opportunity

# NORTEERUN:OCEAN. 

portunity which offers, as they pafs along, and when they fee a tree fit for their purpofe, cut it down, and either Atripiof the bast, if chat beswhat the rivant or Split the truathein pieces; and after hewing it roughly with their hatchet, carry it to the tent, where in the evenings, or in the morning before they fet out; they reduce it with their knives to the flape and fize which is required.

Provifions being plentiful, and the weather fine, we advanced a litte each day; and on the nineteenth took up our ledgings by the fide of Wholdyeab-chuck'd Whoic; or Large ilike Lake. In our wiy we croffed another fmall lake, where wre caught fome trout by angling, and killed a few deer and one, moofe.

On the twentieth we croffed Large Pike Lake, whick at that part way notmord than feven miles wide; but from North North Weft to the South South Eaft is much longer. The next day we arrived at Bedodid Lake, which in general is not more than three miles wides and in feveral places much leff; but it is upward of forty milé long, which gives it the appearance of a river. It is faid by the Indians to be fhine up on all fides, and eatirely furtounded withe high taind, which produces yaf quantity of fir trees but none of them grow to a great keight in thofe parts: their branches, however, fpread wider than thofe of firs of three time thair height and thicknefs do in Europe; forthat the ; afemble in apple-tree in Chape; 0 o more
1772. March.

## AJOURNET TOTHE

more than any feecies of the pine. They feem rich in tar, as the wood of them widl burn like a candle, and emit as froog 2 fmell, and ras mucbl black fmoke, ss the ftaves of an old tar-barrol; for which reafon po Indians chufe to burn it in their teats, or evien out of doors, for the purpofe of cooking their viauds.

The thaws began now to be very confiderable, and the under-woods were fo thick in thefe parts as to render travelling throagh them very difficult; we therefare toak the advantage of walking on the ice of the above-mpntioned Lake, which lay nearly in the diretion of our coourfe; but after proceeding about twenty-two miles on it, the Lake turned more toward the North, on which sccount we were obliged to leave it, Atriking off to the Eaftward; and after walking fourteen miles farther, we arrived at Noo-fhetht Whoie, of the Hill-wtandLake, fo culted from a very high illand which ftands in it.

April From the middle to the latter end of March, and in the beginning of April, though the thaw was not ganeral, 7
yet in the midule of the day it was very confiderable: it commonly froxe hard in the tighties; and the young men

1772: April. took the advantage of the mornings, when the fnow was hard ciratted over, and rant down minny moofe; for in thofe fituations a man with a good pair of fnow-fhoes will fcarcely make any impreffion on the foow, while the moofe, and even the deer, will break through it at every Atep up to the belly. Notwithftanding this, however, it is very feldom that the Indians attempt to run deer down. The moofe are fo tender-footed, and' fo fhort-winded, that a good runner will generally tire them in lefs than a day, and very fiequiently in fix or eighit hours; though I have known fome of the Indiains continue the chace for two days, before they could come up with, and kill the game. On thofe occafions the Indians, in general, only take with them a knife or beyonet, and a little bag containing a fet of fire-tackle, and are as lightity clothed as poffible; fome of them will carry a bow and two or three arrows, but I never knew any of them take a gun, unlefs fuch as had been blown or burfted, and the barrels cut quite fhort, which, when reduced to the leaft poifible fize to be capable of doing any fervice, muft be too great a weight for a man to run with in his hand for fo many hours together.

When the poor moofe are incapable of making farther fpeed, they ftand and keep their purfuers at bay with $\mathrm{OO}_{2}$ their
their head and fore-feet; in the ufe of which they: are very dexterous, efpecially the latter; fo: that the Indiame who have neither a bow nor arrows nor a hort: gin, with them, are generally obliged to lafte their knives or bayonets to the end of a lang frick, and the the moofe at a diffance. For weint of this neceffary preciution fome of the boys and fool-hardy yound men, whic haye attempted to sulh in upon them, have frequently tecerived fuch unlucky blows from their fore-feet; as to render their recovery very doubtful.

The flefh of the moore, thus killed; is far from being well-taftect, and I fhould think mift be very unwholefome, from being over-heated; as by running fo many hours. together, the animal muft have been in a viotent fever; the flefh being foft and clammy, muft have a very difagreeable tafte, neither refembling fift, flefh, nor fowl *.

The Southern Indians ufe dogs for this kind of hunting, which makes it eafier and more expeditious; but the Northern tribes thaving no dogs trained to that exercife, are under the neceffity of doing it themfelven.

[^40]On.
$\therefore$ On the feventhiwe croffed alpart: of Thee-ke-aza River: at which time the frall Nouthern deer were rematkably ptentiful, but the mpofe hegan to be very ranbe, os nope. were tilled after, the third.

On the twelfth, we faw feveral fwans flying to the Northward; they were the firft birds of paffage we had feen that Spring, except a few foow-birds, which always. precede the migrating birds, and confequently are with much propricty called the harbingers of Spring. The fwans alfo precede all the other fpecies of water-fowl, and migrate fo early in the feafon that they find no open water but at the falls of rivers, where they are readily met, and fometimes thot, in confiderable numbers.

On the fourteenth, we arrived at another part of Thee-lee-aza River, and pitched our tents not far from fome families of Atrange Northern Indians, who had been there fome time fnaring deer, and who were all fo poor as not to have one gun among them.

The villains belonging ta my crew were fo far from adminiftering to their relief, that thex robbed them of almof every ufeful article in their poffelfion; and to complete their cruelty, the men joined themfelves in parties of fix, eight, or ten in a gang, and dragged feveral of their young women to a little diftance from their tents, where

## A. JOURNEYTOTHE

1772. whete they not only fwitied thems, but otherwife illAqPil treated thom, and that in fo barberous a manner, as to endanger the live of one or two of them. Humanity on this, as well as on feveral other fimitite cecafions during my refidence among thofe wretches, prompted me to upbraid chent-with their berbarity; but fo far wete miy remonfirances fram having the defired effe, that thoy afterwards made no fcruple of telling me in the plaitieft terms, that if any female relation of mine had been thert, fhe flould liave been ferved in the fame manner.

Deer being plentiful, we remained at this place ten days; in order to dry and prepare a quantity of the ffefh and fat to carry with us; as this was the laft time the In dians expected to fee fuch plenty until they met them again on the barren ground: Düring our flay hete, the Indians completed the wood-work for their canoes, and procured all their Summer tent-poles, \&fc.; and while we were employed in this neceflary bufiner, the thaw was fo great that the bare ground began to appear in many places, and the ice in the rivers, where the water was fhallow and the current rapid, begas to break up; fo that we were in daily expectation of feeing geefe, ducks; and other birds of paffage.

On the twenty-fifth, the weather being cool and favourable for travelhing, we once more fet out, and thiat day
 wosecn had not joined us, wo did not mpore on the two following days.

On the twenty-aighth, hariag once more muntered all our forces, cady in the morning we fet out, and the nerst day pafied by Thleweyaza Yoth, the place ot which we had preparod wood-work for canpes in the Spring one thoufand feven hundred and feventy-one.

As the onoming of the frof of May was exceedingly fine and pleafant, with a light air from the South, and a great thaw, we walked cight of nipe miles to the Eaf by Nocth, when a heary fall of foow came on whicy was followed, or indeed more properly accompanied, by 2 hard gale of wind from the North Weft. At the timene the bad weather began, we were on the top of a high barren hill, a confiderable diftance from any woods: judging it to be no more than a fquall, we fat down, in expectation of its foon paffing by. As the night, however, advanced, the gale increafed to fuch a degree, that it was impoffible for a man to ftand upright; fo that we were obliged to lie down, without any other defence againft the weather, than putting our Aledges and other-4amber to windwerd of us, which in reality was of no real fervice, as it only harboured a great drift of fnow, with which in fome places we were cavered to the depth of two or three feet; and as the night was not very cold, I found myfelf, and

## AJODRNEYTOTHE

1772
May. and many others who were with me, long before morning in a puddle of water, occafioned by the heat of our bodies melting the fnow.
The fecond proved fine plealaint weather, with warm funthine. In the morning, having dried all our clothing, we proceeded on our jouinney. In the afternoon we enrived at the part at which my guinde intended we thould build our canoes; but having had fome difference with his countrymen, he altered his mind, and determined to proceed to the Eafward, as long as the feafon would permit, before he attempted to perform that duty. Accordingty, $3{ }^{4}$. on the third, we purfued our way, and as that and thefollowing day were very cold, which made us walk brifkly, we were enabled to make good days' joürnies ; but the fifth was fo hot and fultry, that we only walked about thirteen miles in our old courfe to the Ealt by North, and then halted about three-quarters of a mile to the South of Black Bear Hill; a place which I had feen in the Spring of one thoufand feven hundred and feventy-one.
Gth
On the fixth, the weather was equally hot with the preceding day; in the morning, however, we moved on eleven miles to the Baft, and then met feveral ftrange Indians, who informed us that a few others, who had a tolerable cargo of furrs, and were going to the Factory that Summer, were not far diftant.

On receiving this intelligence, my guide, Matonabbee, rent a meffenger to defire cheir company. This was foon
1772.

May. complied with, as it is an univerfal practioe with the Indian Leaders, both Northern and Southern, when going to the Company's Factory, to ufe their influence and intereft in canvalfing for companions; as they find by experience that a large gang gairs them much refpect. Indeed, the generality of Europeans who refide in thofe parts, being utterly unacquainted with the manners and cuftoms of the Indians, have conceived of high an opinion of thofe Leaderr, and their authority, as to imagine that all who accompany them on thofe occafions are entirely devoted to their fervice and command all the year; but this is fo far from being the cafe, that the authority of thofe great men, when abfent from the Company's Factory, never extends beyond their own family; and the trifling refpeet which is fhown them by their countrymen during their refidence at the Factory, proceeds only from motives of interef.

The Leaders have a very difagreeable tafk to perform on thofe occafions; for they are not only obliged to be the mouth-piece, but the beggars for all their friends and relations for whom they have a regard, as well as for thofe whom at other times they have reafon to fear. Thofe ununwelcome commiffions, which are impofed on them by their followers, joined to their own defire of being thought men of great confequence and intereft with the Englifh, $\mathrm{P}_{\mathrm{p}}$ make
make them very troublefome. And if a Governor deny them any thing which they afk, though it be only to give away to the noft worthlefs of their gang, they immediately turn fulky and impertinent to the higheft degree; and howerer rational they may be at other times, are inmediately divefted of every degree of reafon, and raife their demands to fo exorbitant a pitch, that after they have received to the amount of five times the value of all the furrs they themfelves have brought, they never ceare begging during their ftay at the Factory; and after all, few of them go away thoroughly fatisfied *.

After

- As 2 proof of this affertion I take the liberty, thougti a littie forcign to the narrative of my journes, to infert one inftance, out of many hundreds of the kind that happen at the different Factories in Hudfon's Bay, but perhaps no where fo frequently as at Churchill. In Oetober 1776, my old guide, Matonabbee, came at the head of a large gang of Northern Indians, to trade at Prince of Wales's Fort; at which time I had the honour to command it. When the ufual ceremonies had paffed, I dreffed him out as a Captain of the firft rank, and alfo clothed his fix wives from top to toe: after which, that is to fay, during his fay at the Fatory, which was ten days, he begged feven lieutenantr' coats, fifieen common coats, eighteen hats, eighteen fhirts, eight guns; one hundred and forty pounds weight of gunpowder, with thot, ball, and fints in proportion; together with many hatchets, ice-rhiffele, files, bayonets, knives, and a great quantity of tobicco, cloth, blankete, coimbs, lookingglaffes, ftockings, handkerchiefs, \&c. befides numberiefs frall suticles, fuch as awis, needles, paint, fteels, \&c. in all to the amount of upwards of feven hundred beiver in the way of trade, to give away among his followers. This was exclufive of his own prefent, which confifted of a variety of goods to 'the value of four hundred beaver more. But the moft extriondinary of his demands was twelve pounds of powder, twenty-eight pounds of fhoc and ball, four pounds of tobacco, fome articles of clothing, and feveral pieces of ironwork, \&cc. to give to two men who had hauled his tent and other lumber the preceding

> NORTHERN OCEAN.

After Ptopping four days at this place, Matonabbee, and all the Indians who were to eccompany me to the Fort, agreed to leave the elderly people and young children here, in the care of fome Indians who were capable of providing for them, and who had orders to proceed to a place called Cathawhachaga, on the barren grounds, and there wait the return of their relations from the Factory. Matters of this kind being fettled, apparently to the entire fatisfactionof all parties, we refumed our journey on the eleventh of
1772. May. May, and that at a much brifker pace than we could probably have done when all the old people and young children were with us. In the afternoon of the fame day we met fome other Northern Indians, who were alfo going to the Fort with furrs; thofe joined our party, and at night we all pitched our tents by the fide of a river that empties itfelf into Doo-baunt Lake. This day all of us threw away our fnow-fhoes, as the ground was fo bare in moft places as not to require any fuch affiftance; but fledges were occafionally ferviceable for fome time, particularly when we walked on the ice of rivers or lakes.

[^41] above-mentioned river, as to render walking on it the only very troublefome, but dangerous; fo after advancing about five mikes we pitched our tents, and the warm weather being likely to contiaus, the Indians immediately began to build their canoes, which were completed with fuch expedition, that in the afterncon of the

The morning of the mincteenth was fine pleafant weather; and as all the water was drained off from the top of the ice, it rendered walking on it both fafe and eary; accordingly we fet out pretty carly, and that day. walked upwards of twenty miles to: the Eaf North Eafton the above-mentioned river: The next day prosed fo cold, that after walking about fifteen miles, we were obligodito part up; for having left Doo-baunt River, we were froquently obliged to wade above the knees through fwamps of mud water, and wet fnow; which froze to our ftockings and fhoes in fuch a thick cruft, as not only rendered walking very laborious, but at the fame: time fubjected us to the danger of having our legs and feet frozen.

The weather on the twenty-firft was more fevere than on the preceding day; but the fwamps and ponds being
NORTHERNOCRAN.
by that time frozen over, it was tolerable walking: we proceediod therefore oa our journey, but the wind blew fo frefh, that we had not walked fixteen milet; before we found that thofo who carried the canoes conld not poffibly keep up with us, fo that we put up for the nigtit. In the courfe of this day's journey we croffed the North Weft Bay of Wholdyaild Lake ; which, at that part, is called by the Northern Indians A Naw-nee-tha'd Whoie. This day. feverat of the lindians turned back, not being able to proceed for wrant of provifions. Game of abl kinds indeed were fo fearce; that; except a few geofe, nothing had been killed by any of our party, from our leaving the women and children on the eleventh inftant, nor had we feen one doet the whole way.

The twent-fecond proved more moderate, when all our party havincy joined, we again advanced to the North Eafly, ant after walking.abiout thirteen miles, the Indians killed fowr deer. Our number, however, had now fo increafot, that four fmall Northern deer would fcarcely afford us atl a fingle meal.

The nex diy we contisued our journey, generally Welling in the Noth Eaf quarter; and on the twenty-

23d.
25 th. fifth, croffed the North bay of They-hole-kye'd Whoie, or Snow-bird Lake; and at night got clear of all woods, and lay on the basren ground. The fame day feveral of the Indians ftruck off another way, not being able to proceed

1772: coed to the Fort for want of ammunition. As we had for fome days paft made good journies, and at the fame time were all heary-laden, and in great diftrefs for provifions, fogle of my companions were fo weak as to be obliged to leave their bundles of furre ${ }^{*}$; and many others were fo reduced as to be no longer capable of proceeding with us, having neither guns nor ammunition; fo that their whole dependence for fupport was on the fift they might be able to catch; and though filh was pretty plentiful in moft of the rivers and lakes hereabout, yet they were not always to be depended on for fuch an immediate fupply of food as those poor people required.

Though I had at this time a fufficient ftock of ammanition to ferve me and all my proper companions to the Fort, yet felf-prefervation being the firft law of Nature, it was thought advifable to referve the greatelt part of it for our own ufe; efpecially as geefe and other frmaller birds were the only game now to be met with, and which, in times of fcancity, bears hard on the articles of powder and fhot. Indeed moft of the Indians who actually accompanied me the whole way to the Factory had fome little ammunition remaining 2 which enabled them to travel in times of real fcarcity better than thofe whom we left behind; and though

[^42]
## NORTHERNOCEAN.

295
we affilted many of them, yet feveral of their women died for want. It is a melancholy truth; and a difgrace to the 1772. Ming. little hrumanity of which thofe people are poffeffed, to think, that in times of want the poor wromen always come off fhort; and when real diftrefs approaches, many of them are permitted to ftarve, when the males are amply provided for.

The twenty-fixth was fine and pleafant. In the morning we fet aut as ufual, and after walking about five miles; the Indians killed three deer; as our numbers were greatly leffened, thefe ferved us for two or three meals, at a fmall expence of ammunition.

In continuing our courfe to the Eaftward, we croffed Cathawhachaga River, on the thirtieth of May, on the ice, which broke up foon after the laft perfon had croffed it. We had not been long on the Eaft fide of the river before we perceived bad weather near at hand, and began to make every preparation for it which our fituation would admit; and that was but very indifferent, being on entire barren ground. It is true, we had complete fets of Sum:mer tent-poles, and fuch tent-cloths as are generally ufed by the Northern Indians in that feafon; thefe were ar-sanged in the beft manner, and in 'fach places as were moft likely to afford us fhetter from the threatening ftorm: The rain foon began to defcend in fuch torrents as to make the river overflow to fuch a degree as foon to convert our firft

## 1772.

May.
place of retreat into as open fea, and oblige us in the smiddle of the night to affemble at the top of an adjacent hill; There the viotence of the wind would not permit us to pitch a teat; fo that the only feettor we could obtain was to take the tent-cloth about one :houlders, and fit with our becks to the wind; and in thin fication we we were obliged to remain without the leaft refteofment, till the morning of the third of June: in the courfe of which tume the wind fhifted all round the compars, but the bad weather fill continued, fo that we were conftantly obliged to fhift our pofition as the wind changed.

The weather now became more moderate, though there was ftill a frefh gale from the North_Weft, with hard froft and frequent fhowers of fnow. Early in the morning, however, we proceeded on our journey, but the wet and cold I had experienced the two preceding days fo benumbed my lower extremities, as to render walking for fome time very troublefome. In the courfe of this day's journey we faw great numbers of geefe flying to the Southward, 2 few of which we kiled; but thele were very difproportionate to the number of mouths we liad to feed, and to make up for our tong fafting.

From that time to the eighth we killed every day as many geefe as were fufficient to preferve lifes but on that day we perceived plenty of deer, five of which the Indians killed, which put us all into good fpirits, and: the number
number of deci we then faw afforded great hopes of more plentiful times daring the remainder of our journey. It is abmof neediefr to add, that people in our diftreffed fituation expeinded a little time in eating, and llicing fome of the flefh ready for drying; but the drying it occafioned no delay, as we faftened it on the tops of the women's bundles, and dried it by the fun and wind while we were watking; and, ftrange as it may appear, meat thus prepared is not only zery fubstantial frod, but pleafant to the tafte, and generally much efteemed by the natives. For my own part I muft acknowledge, that it was not only agreeable to my palate, but after eating a meal of it, I have slways found that I could travel longer without vieturale, than after any octher kind of food.' All the dried meat preparod by the Southern Indians is performed by expofing it to the heat of a large fire, which foon exhmuftill the fine juices from it, and when fufficienthy dry to prevent putrefaction, is no more to be compared with that cured by the Northern Indians in the Sun, or by the heat of a very flow fire, than meat that has been boiled down for the fake of the foup, is to that which is only fufficiently boited for eating: the latter has all the juices remaining, which, being eafily diffolved by the heat and moifture of the flomach, proves a ftrong and nourifhing food; whereas the former being entirely deprived of chofe qualities, can by no means have an equal elaim to that character. Moft of the Europeans, however, are fonder of it than they are of that cured by the North-
erri Indians. The fame may be faid of the bean patin 0 the beaft, which are firft dried, and then reduced inn a kind of powder. That done by the Northern Indians entirely free from fmoke, and quite foft and mellowin:the mouth; whereas that which is propecod by the Southem tribes is generally as bitter sa foot with frowive, and io as hard as the fcraps of horn, ©c. Which are burme to mede hardening for the cutiers. I never knew, that wis Earopean was fo fond of this as they are of that made bry the Nortbern Indians.
§in On the ninth, as we were continuing owr courfe to the Factory, which then lay in the Sonth Eaft quarter, we faw feveral fmokes to the North Eaf, and the fame day fpoke with many Northern Indians, who were going to Knapp's Bay to meet the Churchill floop. Several of thofe Indions had furrs with them, but having fome time lefone taken op goods on trutt at Prince of Wales's Fort, were taing that method to delay the paymest of them. Defrauds of thia kind have boen practifed by many of thofe people with great fuccefs, ever funce the furr-trade has been eftablifned with the Northern Indians at Knapp's Bay; by which means debts to a confiderable amount are annually loft to the Company, as well as their Gopernor in the Bay.

Being defirous of improving every opportunity that the fine weather afforded, we did not lofe much time in converfation with thofe Indians, but proceeded on our courfe

For many days after leaving thofe people, we had the grod fortune to meet with plenty of provifions; and as the weather was for a long time remarkably fine and pleafant; our circumetances were attered fo much for the better, that every thing foemed to contribute to our happinefs, ${ }^{35}$ if defirous to make fome amends for the fevere hunger, cold, and excefive hardmips that we had fuffered long before, and which had reduced us to the greateft mifery and wast.

Deer was fo plentiful great part of the way, that the Indians killed as many as were wanted, without going out of their road; and every lake and river to which we came feemed willing to give us a chang: of diet, by affording us plenty of the fineft finh, which we caught either with hooks or nets. Geefe, partridges, gulls, and many other fowls, which are excellent eating, were alfo in fuch plenty, that it only required ammunition, in fkilful hands, to have procured as many of them as we could defire.

The only inconvenience we now felt was from frequent thowers of heavy rain; but the intervals between theie fhowers being very warm, and the Sun fhining bright, that difficulty was eafily overcome, efpeciadly as the belly was plentifully fupplied with excellent victuals. Indeed the Qq 2 very

## A JOURNEYTOTHE

very thoughts of being once more arrived fo near home, made me capable of encountering every difficulty, even if it had been hunger itfelf in the moft formidable fhape.
ssth. On the eighteenth, we arrived at Egg River, from which place, at the folicitation of my guide Matonabbee, I fent a letter poft-bafte to the Chief at Prince of Wales's Fort, advifing him of my being fo far adranced on my return. The weather at this time was very bad and rainy, which caufed us to lofe near a whole day; but upon the fine weather returning, we again proceeded at our ufual rate of eighteen or twenty miles a day, fometimes more or lefs, according as the road, the weather, and other circumftances, would admit:

Deer now began to be not quite fo plentiful as they had been, though we met with enough for prefent ufe, which was all. we wanted, each perfon, having as much: dried meat as he could conveniently carry, befides his furs and other neceffary baggage.

Early in the morning of the twenty-fixth we arrived at Seal River*; but the wind blowing right up it, made

[^43]fo great a fea, that we were obliged to wait near ten hours before we could venture to crofs it in our little canoes.
affert that they have copper-mines in their country; for neither copper_Dor any other kind of metad is in ufe among them.

Mr. Jeremie was not too modeft when be faid, (fee Dobbs's Account of Huaton's Bay, p. 19.) " be could not fay any thing pofitively in going farcher "North;" for in my opinion he never was fo far North or Weft as be pretends, otherwife he would have been more correct in his defcription of thole parts

The Strait be mentions is undoubsediy no octer than what is now called Chefterfield's Inker, which, in fome late and cold feafons, is not clear, of ice the whote Summer: for I will affirm, that no Indian, either Northern or Sourthern, ever faw either Wager Water or Repolife Bay, except the two men who accompanied Caporin Middleton; and though thofe men were felected from fome hundreds for their univerfal knowledge of thafe parts yet they Enew noching of the coaft fo fur North as Marble Inand.

As 2 farther proof, that no Indinns, except the Efquimaux, ever frequent fuch high latitudes, unlefs at 2 great diftance from the fea, I muft bere mention, that fo lute as the year 1763, when Captain Chriftopher went to furvey Chefterfield's Inlet, though he was furnimhed with the moft intelligent and experienced Northern Indians that could be found, they did not know an inch of the kand to the Nofth of Whate Cove.

Mr. Jeremie is alfo as much miftaken in what he frys concerning Charchinl River, as he was in the direction of Seal. River; fon be fays that no woods were found bot in forme iflands which lie about ten or twebre miles up the riven. At the time he wrote, which was long before 2 fetrement was made there, wood was in great plenty on both fides the river; and that within five miles of where Prince of Wales's Fort now ftuids. But as to the iflands of which he fpeaks, if they ever exifted, they have of late yeapm moft affurediy difappeared; for fince the Company have had a fettement on chat river, no one ever faw an intad in it that produced cimber, or wood of any defcription, within forty miles.

## AJOURNETTOTHE

1772. In the aftermoon the weather grew more moderate, fo: that Jupe. we were emabled to ferry ower the river; after which we refumed our journey, and at night pitched our tents in fome tufts of willows in fight of the woods of Po-co-thee-kis-co River, at which we arrived early in the morning of the twenty-eighth; but the wind again blowing very hard in the North Eaft quarter, it was the afternoon of the twenty-ninth before we could attempt to crofs it.

Juft at the time we were croffing the 8eath branch of Po-co-thee-kis-co River, the Indians that were fent from Egg River with a letter to the Chief at Churchill, joined us on their return, and brought a littie tobeceo and fome other articles which I had defired. Though it was late in the afternoon before we had all croffed the river, yet we walked that evening till after ten o'clock, and then put up on one of the Goole-hunting Inlands, as they are generally called, about ten miles from the Factory. The next morning I arrived in good health at Prince of Wales's Fort, after having been abfent eighteen months and twenty-

#### Abstract

miles of the Fort. Bue the great number of flumps now remaining from which, in all probability, the trees have been cut for firing are fufficient to prove that when Churchill River was firt fettled, wood was then in grear plenty, but in the courfe of fevency-fix years refitence in one place, it is natural to fuppofe it was much thinned near the Setdement. Indeed fur fome gears pat common fewel is fo farce near that Factiory, that it is the chief employment of moft of the fervants for upwand of feven months in the year, to procure as much wood as will fupply the fires for a Winter, and a liutle cimber for seceffary cepairs.

three

## MORTHEKROCEAN.

three days on this laft expedition; but from my firft fet- 1772. ting out with Captain Chawchinaha, it was two years Junc. feven months and twenty-four days.

Though my difcoveries are not likely to prove of any material advantage to the Nation at large, or indeed to the Hudion's Bay Company, yet I have the pleafure to think that I have fully complied with the orders of my Mafters, and that it has puta final end to all difputes concerning a Morth Weft Buffye thoorgh Hudron's Bay. It will stfowipe off, in fome mexfuxe, the in-grounded and unjuit aiperfiom of Dotbe, thlis, Robfon, and the American Traveller; who have all taken much pains to condemn the conduet of the-Hudion's Bay Company, as being averfe from difeovaies, and from entarging their trade.

A$S$ to the perfons of the Northern Indians, they are in general ábove the middle fize; well-proportioned, ftrong, and roburt, but not corpulent. They do not poffefs that activity of body, and livelinefs of difpofition, which are fo commonly met with among the other tribes of Indians who inhabit the Weft coalt of Hudfon's Bay.

Their complexion is fomewhat of the copper caft, inclining rather toward a dingy brown; and their hair, like all the other tribes in India, is black, ftrong, and ftraight *. Few of the men have any beard; this feldom makes its appearance till they are arrived at middle-age, and then is by no means equal in quantity to what is obferved on the faces of the generality of Europeans; the little they have, however, is exceedingly ftrong and brifly. Some of them take but little pains to eradicate their beards, though it is confidered as very unbecoming; and thofe

- I have feen feveral of the Southern Indian men who were near fix feet high, preferve a fingle lock of their hair, that, when let down, would trail on the ground as they walked. This, however, is but feldom feen; and fome have fufpetted it to be falfe: but I have examined the hair of feveral of them, and found it to be real.

$$
R_{r} \quad \text { who }
$$

who do, have no other method than that of pulling it out by the roots betwen their fingers and the edge of a blunt knife. Neither fex have any hair under their armpits, and very little on any other part of the body, particularly the women; but on the place where Nature plants the hair, I never knew them attempt to eradicate it.

Their features are peculiar, and different from any other tribe in thofe parts; for they have very low foreheads, fmall eyes, high cheek-bones, Roman nofes, full cheeks, and in general long broad chins. Though few of either fex are exempt from this national fet of features, yet Nature feems to be more frict in her obfervance of it among the females, as they feldom vary fo much as the men. Their fkins are foft, fmooth, and polifhed; and when they are dreffed in clean clothing, they are as free from an offenfive fmell as any of the human race.

Evety tribe of Northern Indians, as well as the Copper and Dog-ribbed Indians, have three or four parallel black ftrokes marked on each choek; which is performed by entering an awl or needle under the flin, and, on drawing it out again, immediately rubbing powdered charcoal into the wound.

Their difpofitions are in general morofe and covetous, and they feem to be entirely unacquainted even with the name of gratitude. They are for ever pleading porerty,
even among themfelves; and when they vifit the Factory, there is not one of them who has not a thoufand wants.

When any real diftreffed objects prefent themfelves at the Company's Factory, they are always relieved with victuals, clothes, medicines, and every other neceflary, gratis; and in return, they inftruct every one of their countrymen how to behave, in order to obtain the fame charity. Thus it is very common to fee both men and women come to the Fort half-naked, when either the fevere cold in Winter, or the extreme troublefomenefs of the flies in Summer, make it neceflary for every part to be covered. On thofe occafions they are feldom at a lofi for a plaufible ftory, which they relate as the occafion of their diftrefs, (whether real or pretended,) and never fail to interlard their hiftory with plenty of fighs, groans, and tears, fometimes affecting to be lame, and even blind, in order to excite pity. Indeed, I know of no people that have more command of their paffions on fuch occafions; and in this refpeet the women ereeed the men, as I can affirm with truth I have feen fome of them with one. fide of the face bathed in tears, while the other has exhibited a fignificant fmile. Falfe pretences for obtaining charity are fo common among thofe people, and fo often detected, that the Governor is frequently obliged to turn a deaf ear to many who apply for relief; for if he did not, he might give away the whole of the Company's goods, and by degrees all the Northern R ${ }^{2}$
tribe

## A.JOURNET TOTHE

tribe would make a trade of begging, inftead of bringing furrs, to purchafe what they want. It may truly be faid; that they poffefs a confiderable degree of deceit, and are very complete adepts in the art of flattery, which they never fpare as long as they find that it conduces to their intereft, but not a moment longer. They take care always to feem attached to a new Governor, and flatter his pride, by telling him that they look up to him as the father of their tribe, on whom they can fafely place their dependance; and they never fail to depreciate the generofity of his predeceffor, however extenfive that might have been, however humane or difinterefted his condue; and if afperfing the old, and flattering the new Governor, has not the defired effect in a rearonable time, they reprefent him as the worft of characters, and tell him to his face that he is one of the moft cruel of men; that he has no feeling for the diftreffes of their tribe, and that many have perifhed for want of proper affiftance, (which, if it be true; is only owing to want of humanity among themfelves, and then they boaft of having received ten times the favours and prefents from his predeeeffor. It is remarkable that thofe are moft lavihh in their praifes, who have never either deferved or received any favours from him. In time, however, this language alfo ceafes, and they are perfectly reconciled to the man whom they would willingly have made a fool, and fay," he is no child, and not to be deceived by "them."

They

They differ fo much from the reft of mankind, that harf uncourteous ufage feems to agree better with the generality of them, particularly the lower clafs, than mild treatment; for if the leaft refpect be lhewn them, it makes them intolerably infolent; and though fome of their leaders may be exempt from this imputation, yet there are but few even of them who have fenfe enough to fet a proper value on the favours and indulgences which are granted to them while they remain at the Company's Factories, or elfewhere within their territories. Experience has convinced me, that by keeping a Northern Indian at a diftance, he may be made ferviceable both to himfelf and the Company; but by giving him the leaft indulgence at the Factory, he will grow indolent, inactive, and troublefome, and only contrive methods to tax the generofity of an European.

The greateft part of thefe people never fail to defraud Europeans whenever it is in their power, and take every method to over-reach them in the way of trade. They will difguife their perfons and change their names, in order to defraud them of their lawful debts, which they are foneetimes permitted to contract at the Company's Factory; and all debts that are outftanding at the fucceffion of a new Governor are entirely loft, as they always declare, and bring plenty of witneffes to prove, that they were paid long before, but that their names had been forgotten to be Atruck out of the book.

Notwithltanding all thofe bad qualities, they are the mildeft tribe of Indians that trade at any of the Company's fettlements; and as the greateft part of them are never heated with liquor, are always' in their fenfes, and never proceed to riot, or any violence beyond bad language.

The men are in general very jealous of their wives, and I make no doubt but the fame firitit reigns among the women; but they are kept fo much in awe of their hurbands, that the liberty of thinking is the greateft privilege they enjoy. The prefence of a Northern Indian man ftrikes a peculiar awe into his wives, as he always affumes the fame authority over them that the mafter of a family in Europe ufually does over his domeftic fervants.

Their marriages are not attended with any ceremony; all matches are made by the parents, or next of kin. On thofe occafions the women feem to have no choice, but implicitly obey the will of their parents, who always endeavour to marry their daughters to thofe that feem mof likely to be capable of maintaining them, let their age, perfon, or difpofition be ever fo defpicable.

The girls are always betrothed when children, but never to thofe of equal age, which is doubtlefs found policy with people in their fituation, where the exiftence of a family depends
depends entirely on the abilities and induftry of a fingle man. Children, as they juftly obferve, are fo liable to alter in their manners and difpofition, that it is impoffible to judge from the actions of early youth what abilities they may poffers when they arrive at puberty. For this reafon the girls are often fo difproportionably matched for age, that it is very common to fee men of thirty-five or forty years old have young girls of no more than ten or twelve, and fometimes much younger. From the early age of eight or nine years, they are prohibited by cuftom from joining in the mof innocent amufements with children of the oppofite fex; fo that when fitting in their tents, or even when travelling, they are watched and guarded with fuch an unremitting attention as cannot be exceeded by the moft rigid difcipline of an Engliih board-ing-fchool. Cuftom, however, and conftant example, make fuch uncommon reftraint and confinement fit light and eafy even on children, whofe tender ages feem better adapted to innocent and cheerful amufements, than to be cooped up by the fide of old women, and conftantly employed in fcraping fkins, mending fhoes, and learning other domeftic duties neceffary in the care of a family.

Notwithftanding thofe uncommon reftraints on the young girls, the conduet of their parents is by no means uniform or confiftent with this plan; as they fet no bounds to their converfation, but talk before them, and even to them, on the moft indeticate fubjects. As their ears are accuftomed
to fuch language from their earlieft youth, this has by no means the fame effection them; it would have on girls born and educated in a civilized country, where every care is taken to prevent their moralk frembling contaminated by obfeene converfation:. The Sorthern Indians are ftill lefs delicate in converfation, in the prefence of their children.

The women among the Northern Indians are in general more backward than the Southern Indian women; and though it is well known that neither tribe lofe any time, thofe early connections are feldom productive of children for fome years.

Divorces are pretty common among the Northern Indians; fometimes for incontinency, but more frequently for want of what they deem neceflary accomplifhments, or for bad behaviour. This ceremony, in either cafe, confifts of neither more nor lefs than a good drubbing, and turning the woman out of doors; telling her to go to her paramout, or relations, according to the nature of her crimé.

Providence is very kind in caufing thefe people to be lefs prolific than the inhabitants of civilized nations; it is very uncommon to fee one woman have more than five or fix children; and thefe are always born at fuch a diftance from one another, that the youngeft is generally two or three

## NORTHERNOCEAN.

three years old before another is brought into the world. Their ealy births, and the ceremonies which take place on thofe occafions, have already been mentioned; I faall therefore only oblerve here, that they make no ufe of cradies, like the Southern Indians, but only tie a lump of mofs between their legs; and always carry their children at their backs, next the fkin, till they are able to walk. Though their method of treating young children is in this refpect the moft uncouth and awkward I ever faw, there are few among them that can be called deformed, and not one in fifty who is not bow-legged.

There are certain periods at which they never permit the women to abide in the fame tent with their hufbands. At fuch times they are obliged to make a fmall hovel for themfelves at fome diftance from the other tents. As this is an univerial cuftom among all the tribes, it is alfo a piece of policy with the women, upon any difference with their hufbands, to make that an excufe for a temporary feparation, when, without any ceremony, they creep out (as is their ufual cuftom on thoie occafions) under the eves of that fide of the tent at which they happen to be fitting; for at thofe times they are not permitted to go in or out through the door. This cuftom is fo generally prevalent among the women, that I have frequently known fome of the fulky dames leave their hufbands and tent for four or five days at a time, and repeat the farce twice or thrice in a month, while the poor men have never fufpected the deceit, or if they S $f$
have,

## A JOURNEY TO THE

have, delicacy on their part has not permitted them to enquire into the matter. I have known Matonabbee's handfome wife, who eloped from him in May one thaufand feven hundred and feventy-one, live thun-nardy, as as they call it, (that is, alone,) for feveral weeks together, under this pretence; but as a proof he had fome fufpicion, fhe was always carefully watched, to prevent her from giving her company to any other man. The Southern Indians are alfo very delicate in this point; for though they do not force their wives to build a feparate tent, they never lie under the fame clothes during this period. It is, however, equally true, that the young girls, when thofe fymptoms make their firft appearance, generally go a little diftance from the other tents for four or five days, and at their return wear a kind of veil or curtain, made of beáds, for fome time after, as a mark of modefty; as they are then confidered marriageable, and of courfe are called women, though fome at thofe periods are not more than thirteen, while others at the age of fifteen or fixteen have been reckoned as children, though apparently arrived at nearly their full growth.

On thofe occafions a remarkable piece of fuperfition prevails among them; women in this fituation are never permitted to walk on the ice of rivers or lakes, or near the part where the men are hunting beaver, or where a fifh-ing-net is fet, for fear of averting their fuccefs. They are alfo prohibited at thofe times from partaking of the head
head of any animal, and even from walking in, or crofling the track where the head of a deer, moofe, beaver, and many other animals, have lately been carried, either on a fledge or on the back. To be guilty of a violation of this cuftom is confidered as of the greateft importance; becaufe they firmly believe that it would be a means of preventing the hunter from having an equal fuccefs in his future excurfions.

Thofe poor people live in fuch an inhofpitable part of the globe, that for want of firing they are frequently obliged to eat their victuals quite raw, particularly in the Summer feafon, while on the barren ground; but early cuftom and frequent neceffity make this practice fo familiar to them, that fo far from finding any inconvenience arife from it, or having the leaft diflike to it, they frequently do it by choice, and particularly in the article of filh; for when they do make a pretence of dreffing it, they feldom warm it through. I have frequently made one of a party who has fat round a fre?h-killed deer, and affifted in picking the boncs quite clean, when I thought that the raw brains and many other parts were exceedingly good ; and, however ftrange it may appear, I muft beftow the fame epithet on half-raw fifh: even to this day I give the preference to trout, falmon, and the brown tittemeg, when they are not warm at the bone.

## A JOURNEY TO THE n

The extreme poverty of thofe Indians in general will not permit one half of them to purchafe brafs kettles from the Company; fo that they are ftill under the neceffity of continuing their original mode of boiling their vitzuals in large upright veffels made of birch-rind. As thofe veffels will not admit of being expofed to the fire, the Indians, to fupply the defect, heat ftones red-hot and put them into the water, which foon occafions it to boil; and by having a conftant fucceffion of hot ftones, they may continue the procefs as long as it is neceffary. This method of cooking, though very expeditious, is attended with one great evil: the victuals which are thus prepared are full of fand; for the ftones thus heated, and then immerged in the water, are not only liable to fiver to pieces, but many of them being of a coarfe gritty nature, fall to a mafs of gravel in the kettle, which cannot be prevented from mixing with the victuals which are bailed in it. Befides this, they have feveral other methods of preparing their food, fuch as roafting it by a ftring, broiling it, $\mathscr{E}^{\circ} \mathrm{c}$. ; but thefe need no farther defcription.

The moft remarkable difh among them, as well as all the other tribes of Indians in thofe parts, both Northern and Southern, is blood mixed with the half-digefted food which is found in the deer's ftomach or paunch, and boiled up with a fufficient quantity of water, to make it of the confiftence of peafe-pottage. Some fat and fcraps
of tender flefh are alfo fhred fmall and boiled with it. To render this difh more palatable, they have a method of mixing the blood with the contents of the fomach in the paunch itfelf, and hanging it up in the heat and fmoke of the fire for feveral days; which puts the whole mafs into a fate of fermentation, and gives it fuch an agreeable acid tafte, that were it not for prejudice, it might be eater by thofe who have the niceft palates. It is true, fome people with delicate ftomachs would not be caffly perfuaded to partake of this difh, efpecially if they faw it-dreffed; for moft of the fat which is boiled in it is firf chewed by the men and boys, in order to break the globules that contain the fat; by which means it all boils out, and mixes with the broth: whereas, if it were permitted to remain as it came from the knife, it would ftill be in lumps, like fuet. To do juftice, however, to their cleanlinefs in this particular, I muft obferve, that they are very careful that neither old people with bad teeth, nor young children; have any hand in preparing this difh. At firf, I muft acknowledge that I was rather fhy in partaking of this mefs, but when $I$ was fufficiently convinced of the truth of the above remark, I no longer made any fcruple, but always thought it exceedingly good.

The fomach of no other large animal befide the deer is eaten by any of the Indians that border on Hudfon's Bay. In Winter, when the deer feed on fine white mofs, the contents of the fomach is fo much efteemed by them,

## A JOURNEYTOTHE

that I have often feen them fit round a deer where it was killed, and eat it warm out of the paunch. In Summer the deer feed more coarfely, and therefore this difh, if it deferve that appellation, is then not fo much in favour.

The young calves, fawns, beaver, $\mathfrak{E}^{\circ} \mathrm{c}$. taken out of the bellies of their mothers, are reckoned moft delicate food; and I am not the only European who heartily joins in pronouncing them the greateft dainties that can be eaten. Many gentlemen who have ferved with me at Churchill, as well as at York Fort, and the inland fettlements, will readily agree with me in afferting, that no one who ever got the better of prejudice fo far as to tafte of thofe young animals, but has immediately become exceffively fond of them; and the fame may be faid of young geefe, ducks, $\theta^{\circ} c$. in the fhell. In fact, it is almoft become a proverb in the Northern fettlements, that whoever wifhes to know what is good, muft live with the Indians.

The parts of generation belonging to any beaft they kill, both male and female, are always eaten by the men and boys; and though thofe parts, particularly in the males, are generally very tough, they are not, on any account, to be cut with edge-tool, but torn to pieces with the teeth; and when any part of them proves too tough to be mafticated, it is thrown into the fire and burnt. For the Indians believe firmly, that if a dog fhould eat any part of them, it would have the fame effect on their

## NORTHERNOCEAN.

fuccefs in hunting, that a woman crofling their huntingtrack at an improper period would have. The fame illfuccefs is fuppofed alfo to attend them if a woman eat any of thofe parts.

They are alfo remarkably fond of the womb of the buffalo, elk, deer, $\mathscr{O}^{\circ} c$. which they eagerly devour without wahhing, or any other procefs but barely ftroking out the contents. This, in fome of the larger animals, and efpecially when they are fome time gone with young, needs no defcription to make it fufficiently difguting ; and yet I have known fome in the Company's fervice remarkably fond of the difh, though I am not one of the number. The womb of the beaver and deer is well enough, but that of the moofe and buffalo is very rank, and truly difgufting*.

Our

* The Indian method of preparing this unaccountable difh is by throwing the filthy bag acrofs a pole directly over the fire, the fmoke of which, they fays much improves it, by taking of the original flavour; and when any of it is to be cooked, a large flake, like as much tripe, is cut off and boiled for a few minutes; but the many large nodes with which the infide of the womb is ftudded, make it abominable. Thefe nodes are as incapable of being divefted of moifture as the ikin of a live eel; but when boiled, much refemble, both in fhape and colour, the yolk of an egg, and are focailed by the natives, and as eagerly devoured by them.
The tripe of the buffalo is exceedingly good, and the Indian method of cooking it infinity fuperior to that practire in Europe. When opportunity will permit, they wafh it tolerably clean in cold water, ftrip off all the honeycomb, and only boil it about half, or three-quarters of an hour: in that time

## A JOURNEY TO THE

Our Northern Indians who trade at he Factory, as well as all the Copper tribe, pafs their whole Summer on the barren ground, where they generally find plenty of deer; and in fome of the rivers and lakes, a great abundance of fine filh.

Their bows and arrows, though their origirital weapons, are, fince the introduction of fire-arms among them, become of little ufe, except in killing deer as they walk or run through a narrow pafs prepared for their reception, where feveral Indianns lie concealed for that purpofe. This method of hunting is only practicable in Summer, and on the barren ground, where they have an extenfive profpect, and can fee the herds of deer at a great diftance, as well as difcover the nature of the country, and make every ne-
it is fufficiently done for eating; and though rather tougher than what is prepared in England, yet is exceedingly pleafant to the tafte, and muft be much more nourifhing than tripe that has been foked and ficrubbed in many hot waters, and then boiled for ten or twelve hours.

The leffer ftomach, or, as fome call it, the many-folds, either of buffalo, moofe, or deer, are ufually eat raw, and are very good; but that of the moofe, unlefs great care be taken in wahing it, is rather bitter, owing to the nature of their food.

The kidneys of both moofe and buffalo are ufually eat raw by the Southern Indians; for no fooner is one of thofe beatts killed, than the hunter rips up its belly, thrufts in his arm, fratches out the kidneys, and eats them warm, before the animal is quite dead. They alfo at times put their mouths to the wound the ball has made, and fuck the blood; which they fay quenches thirft, and is very nouriming.
ceffary arrangement for driving them through the narrow defiles. This method of hunting is performed in the following manner :

When the Indians fee a herd of deer, and intend to hunt them with bows and arrows, they obferve which way the wind blows, and always get to leeward, for fear of being fmelled by the deer. The next thing to which they attend, is to fearch for a convenient place to conceal thofe who are appointed to fhoot. This being done, a large bundle of fticks, like large ramrods, (which they carry with them the whole Summer for the purpofe, ) are ranged in two ranks, fo as to form the two fides of a very acute angle, and the fticks placed at the diftance of fifteen or twenty yards from each other. When thofe neceffary arrangements are completed, the women and boys feparate into two parties, and go round on both fides, till they form a crefcent at the back of the deer; which are drove right forward; and as each of the fticks bas a fmall flag, or more properly a pendant, faftened to it, which is eafily waved to and fro by the wind, and a lump of mofs fuck on each of their tops, the poor timorous deer, probably taking them for ranks of people, generally run ftraight forward between the two ranges of fticks, till they get among the Indians, who lie concealed in fmall circular fences, made with loofeftones, mofs, $\boldsymbol{o}^{\circ} c$. When the deer approach very near, the Indians who are thus concealed ftart up and hoot; but as the deer gencrally pafs along at

## A. JOURNEY TO THE

full fpeed, few Indians have time to fhoot more than one or two arrows, unlefs the herd be very large.

This method of hunting is not always attended with equal fuccefs; for fometimes after the Indians have been at the trouble of making places of fhelter, and arranging the flag-fticks, $\bigoplus^{\circ} c$. the deer will make off another way, before the women and children can furround them. At other times I have feen eleven or twelve of them killed with one volley of arrows; and if any gun-men attend on thofe occafions, they are always placed behind the other Indians, in order to pick up the deer that efcape the bowmen. By thefe means I have feen upwards of twenty fine deer killed at one broadfide, as it may be termed.

Though the Northern Indians may be faid to kill a great number of deer in this manner during the Summer, yet they have fo far loft the art of fhooting with bows and arrows, that I never knew any of them who could take thofe weapons only, and kill either deer, moofe, or buffalo, in the common, wandering, and promifcuous method of hunting. The Southern Indians, though they have been much longer ufed to fire-arms, are far more expert with the bow and arrow, their original weapons.

The tents made ufe of by thofe Indians, both in Summer and Winter, are generally compofed of deer-fkins in the hair; and for convenience of carriage, are always made
made in fmall pieces, feldom exceeding five buck-fkins in one piece. Thefe tents, as alfo their kettles, and fome other lumber, are always carried by dogs, which are trained to that fervice, and are very docile and tractable. Thofe animals are of various fizes and colours, but all of the fox and wolf breed, with fharp nofes, full bruhhy tails, and fharp ears ftanding erect. They are of great courage when attacked, and bite fo fharp, that the fmalleft cur among them will keep feveral of our largeft Englifh dogs at bay, if he can get up in a corner. Thefe dogs are equally willing to haul in a fledge, but as few of the men will be at the trouble of making fledges for them, the poor women are obliged to content themfelves with leffening the bulk of their load, more than the weight, by making the dogs carry thefe articles only, which are always lafhed on their backs, much after the fame manner as packs are, or ufed formerly to be, on pack-horfes.

In the fall of the year, and as the Winter advances, thofe people few the akins of the deers legs together in the fhape of long portmanteaus, which, when hauled on the fnow as the hair lies, are as flippery as an otter, and ferve them as temporary Aledges while on the barren ground; but when they arrive at any woods, they then make proper Aledges, with thin boards of the larch-tree, generally known in Hudfon's Bay by the name of Juniper.

## A JOURNEY TOTHE

Thofe fledges are of various fizes, according to the ftrength of the perfons who are to haul them: fome I have feen were not lefs than twelve or fourteen feet long, and fifteen or fixteen inches wide, but in general they do not exceed eight or nine feet in length, and twelve or fourteen inches in breadth.

The boards of which thofe fledges are compofed are not more than a quarter of an inch thick, and feldom exceed five or fix inches in width; as broader would be very unhandy for the Indians to work, who have no other tools than an ordinary knife, turned up a little at the point, from which it acquires the name of Bafe-hoth among the Northern Indians, but among the Southern tribes it is called Mo-co-toggan. The boards are fewed together with thongs of parchment deer-fkin, and feveral crofs bars of wood are fewed on the upper fide, which ferves both to ftrengthen the fledge and fecure the ground-larhing, to which the load is always faftened by other fmaller thongs, or ftripes of leather. The head or fore-part of the nedge is turned up fo as to form a femi-circle, of at leaft fifteen or twenty inches diameter. This prevents the carriage from diving into light fnow, and enables it to flide over the inequalities and hard drifts of fnow which are conftantly met with on the open plains and barren grounds. The trace or draught-line to thofe fledges is a double ftring, or flip of leather, made faft to the head; and the bight is put acrofs the fhoulders of the perfon who
hauls the fledge, fo as to reft againft the breaft. This contrivance, though fo fimple, cannot be improved by the moft ingenious collar-maker in the world.

Their fnow-fhoes differ from all others made ufe of in thofe parts; for though they are of the galley kind, that is, Charp-pointed before, yet they are always to be worn on one foot, and cannot be fhifted from fide to fide, like other fnow-fhoes; for this reafon the inner-fide of the frames are almoft ftraight, and the outer-fide has a very large fweep. The frames are generally made of birchwood, and the netting is compofed of thongs of deerfkin; but their mode of filling that compartment where the foot refts, is quite different from that ufed among the Southern Indians.

Their clothing, which chiefly confifts of deer fkins in the hair, makes them very fubject to be loufy; but that is fo far from being thought a difgrace, that the beft among them amufe themfelves with catching and eating thefe vermin; of which they are fo fond, that the produce of a loufy head or garment affords them not only pleafing amufement, but a delicious repaft. My old guide, Matonabbee, was fo remarkably fond of thofe little vermin, that he frequently fet five or fix of his Atrapping wives to work to loufe their hairy deer-fkin fhifts, the produce of which being always very confiderable, he eagerly received with both hands, and licked them in as faft, and with as good a grace, as
any European epicure would the mites in a cheefe. He often affured me that fuch amufement was not only very pleafing, but that the objects of the fearch were very good; for which I gave him credit, telling him at the fame time, that though I endeavoured to habituate myfelf to every other part of their diet, yet as I was but a fojourner among them, I had no inclination to accuftom myfelf to fuch dainties as $I$ could not procure in that part of the world where I was moft inclined to refide.

The Southern Indians and Efquimaux are equally fond of thofe vermin, which are fo deteftable in the eyes of an European; nay, the latter have many other dainties of a fimilar kind; for befide making ufe of train-oil as a cordial and as fauce to their meat, I have frequently feen them eat a whole handful of maggots that were produced in meat by fly-blows. It is their conftant cuftom to eat the filth thiat comes from the nofe; and when their nofes bleed by accident, they always lick the blood into their mouths, and fwallow it.

The track of land inhabited by the Northern Indians is very extenfive, reaching from the fifty-ninth to the fixtyeighth degree of North latitude; and from Eaft to Weft is upward of five hundred miles wide. It is bounded by Churchill River on the South; the Athapufcow Indians ${ }^{2}$ Country on the Weft; the Dog-ribbed and Copper Indians Country on the North; and by Hudfon's Bay on the Eaft. The

The land throughout that whole track of country is fcarcely. any thing but one folid mafs of rocks and ftones, and in moft parts very hilly, particularly to the Weftward, among the woods. The furface, it is very true, is in moft places covered with a thin fod of mofs, intermixed with the roots of the Wee-fa-ca-pucca, cranberries, and a few other infignificant fhrubs and herbage ; but under it there is in general a total want of foil, capable of producing any thing except what is peculiar to the climate. Some of the marfhes, indeed, produce feveral kinds of grafs, the growth of which is amazingly rapid; but this is dealt out with fo fparing a hand as to be barely fufficient to ferve the geefe, fwans, and other birds of paffage, during their migrations in the Spring and Fall, while they remair in a moulting ftate.

The many lakes and rivers with which this part of the country abounds, though they do not furnifh the natives with water-carriage, are get of infinite advantage to them; as they afford great numbers of fifh, both in Summer and Winter. The only feecies caught in thofe parts are trout, tittameg, (or tickomeg,) tench, two forts of barble, (called by the Southern Indians Na-may-pith,) burbot, pike, and a few perch. The four former are caught in all parts of this country, as well the woody as the barren; but the three latter are only caught to the Weftward, in fuch lakes and rivers as are fituated among the woods; and though fome of thofe rivers lead to the barren ground, yet the

## A JOURNEY TOTHE

three laft mentioned fpecies of fifh are feldom caught beyond the edge of the woods, not even in the Summer feafon.

There is a black, hard, crumply mofs, that grows on the rocks and large ftones in thofe parts, which is of infinite fervice to the natives, as it fometimes furniifhes them with a temporary fubriftence, when no animal food can be procured. This mofs, when boiled, turns to a gummy confiftence, and is more clammy in the mouth than fago; it may, by adding either mofs or water, be made to almoft any confiftence. It is fo palatable, that all who tafte it generally grow fond of it. It is remarkably good and pleafing when ufed to thicken any kind of broth, but it is generally moft efteemed when boiled in filh-liquor.

The only method practifed by thofe people to catch fifh either in Winter or Summer, is by angling and fetting nets; both of which methods is attended with much fuperfition, ceremony, and unneceffary trouble; but I will endeavour to defcribe them in as plain and brief a a manner as poflible.

When they make a new filhing-net, which is always compofed of fmall thongs cut from raw deer-fkins, they take a number of birds bills and feet, and tie them, a little apart from each other, to the head and foot rope of the net, and at the four corners generally faften fome of the toes and jaws of the otters and jackafhes. The birds feet

## NORTHERNOCEAN.

and bills made choice of on fuch occafions are generally thofe of the laughing goofe, wavey, (or white goofe,) gulls, loons, and black-heads; and unlefs fome or all of thefe be faftened to the net, they will not attempt to put it into the water, as they firmly believe it would not catch a fingle filh.

A net thus accoutred is'fit for fetting whenever occafion requires, and opportunity' offers; but the firf filh of whatever fpecies caught in it, are not to be fodden in the water, but broiled whole on the fire, and the flefh carefully taken from the bones without diflocating one joint ; after which the bones are laid on the fire at full length and burnt. A ftrict obfervance of thefe rules is fuppofed to be of the utmoft importance in promoting the future fuccefs of the new net; and a neglect of them would render it not worth a farthing .

When they fifh in rivers, or narrow channels that join two lakes together, they could frequently, by tying two, three, or more nets together, fpread over the whole breadth of the channel, and intercept every fizable fifh that paffed ; but inftead of that, they fcatter the nets at aconfiderable diftance from each other, from a fuperfti-

[^44]$$
\mathrm{U} \mathbf{u} \quad \text { tious }
$$
tious notion, that were they kept clofe together, one net would be jealous of its neighbour, and by that means not one of them would catch a fingle fifh.

The methods ufed, and ftrictly obferved, when angling, are equally abfurd as thofe I have mentioned; for when they bait a hook, a compofition of four, five, or fix articles, by way of charm, is concealed under the bait, which is always fewed round the hook. In fact, the only bait ufed by thofe people is in their opinion a compofition of charms, inclofed within a bit of filh-fkin, fo as in fome meafure to refemble a fmall fifh. The things ufed by way of charm, are bits of beavers tails and fat, otter's vents and teeth, mufk-rat's guts and tails, loon's vents, fquirrel's tefticles, the cruddled milk taken out of the ftomach of fucking fawns and calves, human hair, and numberlefs other articles equally abfurd.

Every mafter of a family, and indeed almoft every other perfon, particularly the men, have a fmall bundle of fuch trafh, which they always carry with them, both in Summer and Winter; and without fome of thofe articles to put under their bait, few of them could be prevailed upon to put a hook into the water, being fully perfuaded that they may as well fit in the tent, as attempt to angle without fuch affiftance. They have alfo a notion that finh of the fame fpecies inhabiting different parts of the country, are fond of different things; fo that almoft every.

> 4. lake
lake and river they arrive at, obliges them to alter the compofition of the charm. The fame rule is obferved on broiling the firft fruits of a new hook that is ufed for a new net; an old hook that has already been fucceffful in catching large fifh is efteemed of more value, than a handful of new ones which have never been tried.

Deer alfo, as well as fifh, are very numerous in many parts of this country; particularly to the North of the fixtieth degree of latitude. Alpine hares are in fome parts of the barren ground pretty plentiful, where alfo fome herds of mufk-oxen are to be met with; and to the Weftward, among the woods, there are fome rabbits and partridges. With all thofe feeming fources of plenty, however, one half of the inhabitants, and perhaps the other half alfo, are frequently in danger of being ftarved to death, owing partly to their want of œconomy; and moft of thefe fcenes of diftrefs happen during their journies to and from Prince of Wales's Fort, the only place at which they trade.

When Northern Indians are at the Factory, they are very liable to fteal any thing they think will be ferviceable; particularly iron hoops, fmall bolts, fpikes, carpenters tools, and, in hort, all fmall pieces of iron-work which they can turn to advantage, either for their own ufe, or for the purpofe of trading with fuch of their countrymen as feldom vifit the Company's Settlement: $\mathrm{U} \mathfrak{\mathrm { u }} 2$
among

## A JOURNEYTOTHE

among themfelves, however, the crime of theft is feldom: heard of.

When two parties of thofe Indians meet, the ceremonies which pafs between them are quite different from thofe made ufe of in Europe on fimilar occafions; for when they advance within twenty or thirty yards of each other, they make a full halt, and in general fit or lie down on the ground, and do not fpeak for fome minutes. At length one of them, generally an elderly man, if any be in company, breaks filence, by acquainting the other party with every misfortune that has befallen him and his companions from the laft time they had feen or heard of each other; and alfo of all deaths and other calamities that have befallen any other Indians during the fame period, at leaft as many particulars as have come to his knowledge.

When the firft has finifhed his oration, another aged orator (if there be any) belonging to the other party. relates, in like manner, all the bad news that has come to his knowledge; and both parties never fail to plead poverty and famine on all'occafions. If thofe orations contain any news that in the leaft affect the other party, it is not long before fome of them begin to figh and fob, and foon after break out into a loud cry, which is generally accompanied by moft of the grown perfons of bath fexes; and fometimes it is common to fee them all, men, women, and children, in one univerfal howl. The young girls, in particular,

## NORTHERN OCEAN.

particular, are often very obliging on thole occafions; for $\mathbf{I}$ never remember to have feen a crying match (as I called it). but the greateft part of the company affifted, although forme of them had no other reafon for it, but that of feeing their companions do the fame. When the firft transports of grief fubfide, they advance by degrees, and both parties mix with each other, the men always affociating with the men, and the women with the women. If they have any tobacco among them, the pipes are paffed round pretty freely, and the converfation foo becomes general. As they are on their firft meeting acquainted with all the bad news, they have by this time nothing left but good, which in general has fo far the predominance over the former, that in leis than half an hour nothing but files and cheerfulnefs are to be feed in every face; and if they be not really in want, fall prefents of provifions, ammunition, and other articles, often take place; fometimes merely as a gift, but more frequently by way of trying whether they cannot get a greater prefent.

They have but few diverfions; the chief is footing at a mark with bow and arrows; and another out-door game, called Holl, which in forme meafure refembles playing with quoits; only it is done with hort clubs, sharp at one end. They alTo amufe themfelves at times with dancing, which is always performed in the night." It is remarkable that thole people, though a diftinet nation, have never adopted any mode of dancing of their own, or any fongs to which
they can dance; fo that when any thing of this kind is attempted, which is but feldom, they always endeavour to imitate either the Dog-ribbed or Southern Indians, but more commonly the former, as few of them are fufficiently acquainted either with the Southern Indian language, or their manner of dancing. The Dog-ribbed method is not very difficult to learn, as it only confifts in lifting the feet alternately from the ground in a very quick fucceffion, and as high as poffible, without moving the body, which fhould be kept quite fill and motionlefs; the hands at the fame time being clofed, and held clofe to the breaft, and the head inclining forward. This diverfion is always performed quite naked, except the breech-cloth, and at times that is alfo thrown off; and the dancers, who feldom exceed three or four at a time, always ftand clofe to the mufic. The mufic may, by ftraining a point, be called both vocal and inftrumental, though both are fufficiently humble. The former is no more than a frequent repetition of the words hee, hee, hee, ho, ho, ho, $\mathscr{E}^{\circ} c$. which, by a more or lefs frequent repetition, dwelling longer on one word and fhorter on another, and raifing and lowering the voice, produce fomething like a tune, and has the defired effect. This is always accompanied by a drum or tabor; and fometimes a kind of rattle is added, made with a piece of diried buffalo fkin, in fhape exactly like an oil-flafe, into which they put a few fhot or pebbles, which, when fhook about, produces mufic liitle inferior to the drum, though not fo loud.

## NORTHERN OCEAN.

This mode of dancing naked is performed only by the men; for when the women are ordered to dance, they always exhibit without the tent, to mufic which is played within it; and though their method of dancing is perfectly decent, yet it has ftill lefs meaning and action than that of the men: for a whole heap of them crowd together in a Atraight line, and juft fhuffle themfelves a little from right to left, and back again in the fame line, without lifting their feet from the ground; and when the mufic ftops, they all give a little bend of the body and knee, fomewhat like an awkward curtfey, and pronounce, in a little fhrill tone, h-e-e, h-o-o-o-e.

Befide thefe diverfions, they have another fimple indoor game, which is that of taking a bit of wood, a button, or any other fmall thing, and after fhifting it from hand to hand feveral times, afking their antagonift, which hand it is in? When playing at this game, which only admits of two perfons, each of them have ten, fifteen, or twenty fmall chips of wood, like matches; and when one of the players gueffes right, he takes one of his antagonift's fticks, and lays it to his own; and he that firft gets all the fticks from the other in that manner, is faid to win the game, which is generally for a fingle load of powder and fhot, an arrow, or fome other thing of inconfiderable value.

The women never mix in any of their diverfions, not even in dancing; for when that is required of them, they always:
always exhibit without the tent, as has been already obferved; nor are they allowed to be prefent at a feaf. Indeed, the whole courfe of their lives is one continued fcene of drudgery, viz. carrying and hauling heavy loads, dreffing fkins for clothing, curing their provifions, and practifing other neceffary domeftic duties which are required in a family, without enjoying the leaft diverfion of any kind, or relaxation, on any occafion whatever; and except in the execution of thofe homely duties, in which they are always inftructed from their infancy, their fenfes feem almoft as dull and frigid as the zone they inhabit. There are indeed fome exceptions to be met with among them, and I fuppofe it only requires indulgence and precept to make fome of them as lofty and infolent as any women in the world. Though they wear their hair at full length, and never tie it up, like the Southern Indians; and though not one in fifty of them is ever poffeffed of a comb, yet by a wonderful dexterity of the fingers, and a good deal of patience, they make fhift to ftroke it out fo as not to leave two hairs entangled; but when their heads are infefted with vermin, from which very few of either fex are free, they mutually affift each other in keeping them under. .

A fcorbutic diforder, refembling the worft fage of the itch, confumptions, and fluxes, are their chief diforders. The firft of thefe, though very troublefome, is never known to prove fatal, unlefs it be accompanied with fome inward complaint; but the two latter, with a few acci-
dents, carries off great numbers of both fexes and all ages: indeed few of them live to any great age, probably owing to the great fatigue they undergo from their youth up, in procuring a fubfiftence for themfelves and their offspring.

Though the fcorbutic diford above mentioned does appear to be infectious, it is rare to fee one have it without the whole tent's crew being more or lefs affected with it; but this is by no means a proof of its being contagious; I rather attribute it to the effects of fome bad water, or the unwholefomenefs of fome fifh they may catch in particular places, in the courfe of their wandering manner of life. Were it otherwife, a fingle family would in a fhort time communicate it to the whole tribe; but, on the contrary, the difeafe is never known to fpread. In the younger fort it always attacks the hands and feet, not even fparing the palms and foles. Thofe of riper years generally have it about the wrifts, infteps, and pofteriors; and in the latter particularly, the blotches, or boils as they may juftly be called, are often as large as the top of a man's thumb. This diforder moft frequently makes its appearance in the Summer, while the Indians are out on the barren ground; and though it is by no means reckoned dangerous, yet it is fo obftinate, as not to yield to any medicine that has ever been applied to it while at the Company's Factory. And as the natives themfelves never make ufe of any medicines of their own preparing, Nature alone works the cure, which is never performed in $\mathrm{Xx} \quad$ lefs
lefs than twelve or eighteen months; and fome of them are troubled with this difagreeable and loathfome diforder for years before they are perfectly cured, and then a dark livid mark remains on thofe parts of the fkin which have been affected, for many years afterwards, and in fome during life.

When any of the principal Northern Indians die, it is generally believed that they are conjured to death, either by. fome of their own countrymen, by fome of the Southern Indians, or by fome of the Efquimaux : too frequently the fufpicion falls on the latter tribe, which is the grand reafon of their never being at peace with thofe poor and diftreffed people. For fome time paft, however, thofe Efquimaux who trade with our floops at Knapp's Bay, Navel's Bay, and Whale Cave, are in perfect peace and friendflip with the Northern Indians; which is entirely owing to the protection they have for feveral years paft received from the Chiefs at the Company's Fort at Churchill River*. But thofe of that tribe who live fa far to the North,

[^45]
# NORTHERNOCEAN. <br> North, as not to have any intercourfe with our veffels, very often fall a facrifice to the fury and fuperfition of the 

No Efquimaux were feen at Knapp's Bay for feveral years after; and thofe who trade there ar-prefent have undoubtedly been drawn from the Northward, fince the above unhappy tranfaction; for the convenience of being nearer the woods, as well as being in the way of trading with the floop that calls there annually. It is to be hoped that the meafures taken by the Goverriors at Prince of Wales's Fort of late years, will effectually prevent any fuch calamities happening in future, and by degrees be the means of bringing about a lafting, friendly, and reciprocal intereft between the two nations.

Notwithftanding the pacific and friendly terms which begin to dawn between thofe two tribes at Knapp's Bay, Navel's Bay, and Whale Cove, farther North hoftilities continue, and moft barbarous murders are perpetrated : and the only protection the Efquimaux have from the fury of their enemies, is their remote firuation in the Winter, and their refiding chiefly on iflands and peninfulas in Summer, which renders them lefs liable to be furprifed during that feafon. But even this fecluded life does not prevent the Northern Indians. from harafing them greatly, and at times they are fo clofely parfued as to be obliged to leave moft of their goods and utenfils to be deftroyed by their enemy; which muft be a great lofs, as thefe cannot be replaced but at the expence of much time and labour; and the want of them in the mean time muft create much diftrefs both to themfelves and their families, as they can feldom procure any part of their livelihood without the affiftance of a confiderable apparatus.
In 1756; the Efquimaux at Knapp's Bay fent two of their youths to Prince of. Wales's Fort in the floop, and the Summer following they were carried back to their friends, loaded with prefents, and much pleafed with the treatment they received while at the Fort. In 1767, they again fent one from Knapp's Bay and one from Whale Cowe; and though during their ftay at the Fort they made a confiderable progrefs boch in the Southern Indian and the Englifh languages, yet thofe intercourfes have not been any ways advantageous to the Company, by increafing the trade from that quarter. In fatt, the only

X×2
fatisfaction

## A JOURNEY TOTHE

Northern Indians; who are by no means a bold or warlike people; nor can I think from experience, that they are particularly guilty of committing acts of wanton cruelty on any other part of the human race befide the Efquimaux. Their hearts, however, are in general fo unfufceptible of tendernefs, that they can view the deepeft diftrefs in thofe who are not immediately related to them, without the leaft emotion; not even half fo much as the generality of mankind feel for the fufferings of the meaneft of the brute creation. I have been prefent when one of them, imitating the groans, diftorted features, and contracted pofition, of a
fatisfaction they have found for the great expence they have from time to time incurred, by introducing thofe' frrangers, is, that through the good conduct of their upper fervants at Churchii River, they have at length fo far humanized the hearts of thofe two tribes, that at prefent they can meet each other in a friendly. manner; whereas, a few years fince, whenever they met, each party premeditated the deftruction of the other; and what made their war more fhocking was, they never gave quarter:. fo that the ftrongeft party always killed the weakeft, without \{paring either man, woman, or child.

It is but a few years ago that the 几oop's crew who annually carried them all their wants, durft not venture on fhore among the Efquimaux unarmed, for fear of being murdered; but latterly they are fo civilized, that the Comp pany's fervants vifit their tents with the greateft freedom and fafety, are always welcome, and defired to partake of fuch provifions as they have: and knowing now our averfion from train-oil, they take every means in their power to convince our people that the viturals prepared for them is entirely free from it. But the fmell of their tents, cooking-utenfils, and other furniture, is fcarcely lefs offenfive than Greenland Dock. However, I have eaten both fifh and venifon cooked by them in fo cleanly a manner, that I have relifhed them very much, and partaken of them with a good apperite.
man who had died in the moft excruciating pain, put the whole company, except myfelf, into the moft violent fit of laughter.

The Northern Indians never bury their dead, but always leave the bodies where they die, Yo that they are fuppofed to be devoured by beafts and birds of prey; for which reafon they will not eat foxes, wolves, ravens, $\delta^{\circ} c$. unlefs it be through mere neceffity.

The death of a near relation affects them fo fenfibly, that they rend all their cloths from their backs, and go naked, till fome perfons lefs afflicted relieve them. After the death of a father, mother, hurband, wife, fon, or brother, they mourn, as it may be called, for a whole year, which they meafure by the moons and feafons. Thofe mournful periods are not diftinguifhed by any particular drefs, except that of cutting off the hair $\hat{\frac{1}{2}}$ and the ceremony conffts in almoft perpetually crying. Even. when walking, as well as at all other intervals from flecp, eating, and converfation, they make an odd howling noife, often repeating the relationhip of the deceafed. But as this is in a great meafure mere form and cuftom, fome of them have a method of foftening the harihnefs of the notes, and bringing them out in a more mufical tone than that in which they fing their fongs. When they reflect ferioufly on the lofs of a good friend, however, it has fuch an effect on them for the prefent, that they give an

## A JOURNEYTO THE

uncommon loofe to their grief. At thofe times they feem to fympathife (through cuftom) with each other's afflictions fo much, that I have often feen feveral fcores of them crying in concert, when at the fame time not above half a dozen of them had any more reafon for fo doing than I had, unlefs it was to preferve the old cuftom, and keep the others in countenance. The women are remarkably obliging on fuch occafions; and as no reftriction is laid on them, they may with truth be faid to cry with all their might and main; but in common converfation they are obliged to be very moderate.

They have a tradition among them, that the firf perfon upon earth was a woman, who, after having been fome time alone, in her refearches for berries, which was then her only food, found an animal like a dog, which followed her to the cave where fhe lived, and foon grew fond and domeftic. This dog, they fay, had the art of transforming itfelf into the fhape of a handfome young man, which it frequently did at night, but as the day approached, always refumed its former fhape; fo that the woman looked on all that paffed on thofe occafions as dreams and delufions. Thefe tranformations were foon productive of the confequences which at prefent generally follow fuch intimate connexions between the two fexes, and the mother of the world began to advance in her pregnancy.
NORTHERN OCEAN.,

Not long after this happened, a man of fuch a furprifing - height that his head reached up to the clouds, came to level the land, which at that time was a very rude mals; and after he had done this, by the help of his walkingftick he marked out all the lakes, ponds, and rivers, and immediately caufed them tore filled with water. He then took the dog, and tore it to pieces; the guts he threw into the lakes and rivers, commanding them to become the different kinds of fifh; the flefh he difperfed over the land, commanding it to become different kinds of beafts and land-animals; the ikin he alfo tore in fmall pieces, and threw it into the air, commanding it to become all kiads of birds; after which he gave the woman and her offspring full power to kill, eat, and never fpare, for that he had commanded them to multiply for her ufe in abundance. After this injunction, he returned to the place whence he came, and has not been heard of fince.

Religion has not as yet begun to dawn among the Northern Indians; for though their conjurors do indeed fing fongs, and make long fpeeches, to fome beafts and birds of prey, as alfo to imaginary beings, which they fay affift them in performing cures on the fick, yet they, as well as their credulous neighbours, are utterly deftitute of every idea of practical religion. It is true, fome of them will reprimand their youth for talking

## A JOURNEY TO THE

difrefpecturly of particular beafts and birds; but it is done with fo little energy, as to be often retorted back in derifion. Nefther is this, nor their cuftom of not killing wolves and quiquehatches, univerfally obferved, and thofe who do it can only be viewed with more pity and contempt than the others; for $I$ always found it arofe merely from the greater degree of confidence which they had in the fupernatural power of their conjurors, which induced them to believe, that talking lightly or difrefpeetfully of any thing they feemed to approve, would materially affect their health and happinefs in this world : and I never found any of them that had the leaft idea of futurity. Matonabbee, without one exception, was a man of as clear ideas in other matters as any that I ever faw : he was not only a perfect mafter of the Southern Indian language, and their belief, but could tell a better ftory of our Saviour's birth and life, than one half of thofe who call themfelves Chriftians; yet he always declared to me, that neither he, nor any of his countrymen, had an idea of a future ftate. Though he had been taught to look on things of this kind as ufelefs, his own good fenfe had taught him to be an advocate for univerfal toleration; and I have feen him feveral times affift at fome of the moft facred rites performed by the Southern Indians; apparently with as much zeal, as if he had given as much credit to them as they did: and with the fame liberality of fentiment he would, I am perfuaded, have affifted at the altar

## NORTHERNOCEAN.

of a Chriftian church, or in a Jewifh fynagogue; not with a view to reap any advantage himfelf, but merely, as he obferved, to affift others who believed in fuch ceremonies.

Being thus deftitute of all religious control, thefe people have, to ufe Matonabbee's own words, " nothing to do but "confult their own intereft, inclinations, and paffions; and " to pars through this world with as much eafe and con" tentment as poffible, without any hopes of reward, or " painful fear of puniflament, in the next." In this ftate of mind they are, when in profperity, the happieft of mortals; for nothing but perfonal or family calamities can difturb their tranquillity, while misfortunes of the leffer kind fit light on them. Like moft other uncivilized people, they bear bodily pain with great fortitude, though in that refpect I cannot think them equal to the Southern Indians.

Old age is the greateft calamity that can befal a Northern Indian'; for when he is paft labour, he is neglected, and treated with great difrefpect, even by his own children. They not only ferfe him laft at meals, but generally give him the coarfeft and worft of the victuals: and fuch of the fkins as they do not chufe to wear, are made up in the clumfieft manner into clothing for their aged parents; who, as they had, in all probability, treated their fathers and mothers with the fame neglect, in Y y their

A JOURNEYTOTHE
their turns, fubmitted patiently to their lot, even without a murmur, knowing it to be the common misfortune attendant on old age; fo that they may be faid to wait patiently for the melancholy hour when, being no longer capable of walking, they are to be left alone, to ftarve, and perifh for want. This, however Chocking and unnatural it may appear, is neverthelefs fo common, that, among thofe people, one half at leaft of the aged perfons. of both fexes absolutely die in this miferable condition.

The Northern Indians call the Aurora Borealis, Ed-thin; that is, Deer*: and when that meteor is very bright, they fay that deer is plentiful in that part of the atmofphere; but they have never yet extended their ideas fo. far as to entertain hopes of tafting thofe celeftial animals.

Befide this filly notion, they are very fuperftitious with refpect to the exiftence of feveral kinds of fairies, called by them Nant-e-na, whom they frequently fay they fee, and who are fuppofed by them to inhabit the different elements

[^46]
# NORTHERNOCEAN. 

of earth, fea, and air, according to their feveral qualities. To one or other of thofe fairies they ufually attribute any change in their circumftances, either for the better or worfe; and as they are led into this way of thinking entirely by the art of the conjurors, there is no fuch thing as any general mode of belief; for thofe jugglers differ fo much from each other in their accounts of thefe beings, that thofe who believe any thing they fay, have little to do but change their opinions according to the witl and caprice of the conjuror, who is almoft daily relating fome new whim, or extraordinary event, which, he fays; has been revealed to him in a dream, or by fome of his favourite fairies, wher on a hunting excurfion.

> Some Account of Matonabbe e, and of tbe eminent Services which be rendered to bis Country, as well as to the Hudfon's Bay Company.

Matonabber was the fon of a Northern Indian by a flave woman, who was formerly bought from fome Southern Indians who came to Prince of Wales's Fort with furrs, \&oc. This match was made by Mr. Richard Norton, then Governor, who detained them at and near the Fort, for the fame purpofe as he did thofe Indians called Home-guard. As to Matonabbee's real age, it is impoffible to be particular ; for the natives of thofe parts being utterly unacquainted with letters, or the ufe of hieroglyphics, though their memories are not lefs retentive than thofe of other nations, cannot preferve and tranfmit to pofterity the exact time when any particular event happens.' Indeed, the utmoft extent of their chronology reaches no farther, than to fay, My fon, or my daughter, was born in fuch a Governor's time, and fuch an event happened during fuch a perfon's life-time (though, perhaps, he or the has been dead many years). However, according to appearance, and fome corroborating circumftances, Matonabbee was born about the year one thoufand feven hundred and thirty-fix, or one thoufand feven hundred and thirty-feven; and his father dying while he was young, the Governor took the
boy, and, according to the Indian cuftom, adopted him as his fon.

Soon after the death of Matonabbee's father, Mr. Nortor went to England, and as the boy did not experience from his fucceffor the fame regard and attention which he had been accuftomed to receive from Mr. Norton, he was foon taken from the Factory by fome of his father's relations, and continued with the Northern Indians till Mr. Ferdinand Jacobs fucceeded to the command of Prince of Wales's Fort, in the year one thoufand feven hundred and fifty-two; when out $\phi$ f regard to old Mr. Norton, (who was then dead, Mr. Jacobs took the firft opportunity that offered to detain Matonabbee at the Factory, where he was for feveral years employed in the hunting-fervice with fome of the Company's fervants, particularly with the late Mr. Mofes Norton *, (fon of the late Governor,) and Mr. Magnus Johnftont.

In the courfe of his long ftay at and near the Fort, it is no wonder that he fhould have become perfect mafter of the Southern Indian language, and made fome progrefs in the Englifh. It was during this period, that he gained a knowledge of the Chriftian faith; and he always declared, that it was too deep and intricate for his comprehenfion. Though he was a perfect bigot with refpect to

[^47]
## A JOURNEY TO THE

the arts and tricks of Indian jugglers, yet he could by no means be impreffed with a belief of any part of our religion, nor of the religion of the Southern Indians, who have as firm a belief in a future ftate as any people under the Sun. He had fo much natural good fenfe and liberality of fentiment, however, as not to think that he had a right to ridicule any particular leet on account of their religious opinions. On the contrary, he declared, that he held them all equally in efteem, but was determined, as he came into the world, fo he would go out of it, without profefling any religion at all. Notwithftanding his averfion from religion, I have met with few Chriftians who porfeffed more good moral qualities, or fewer bad ones.

It is impoffible for any man to have been more punctual in the performance of a promife than he was; his fcrupulous adherence to truth and honefty would have done honour to the moft enlightened and devout Chriftian; while his benevolence and univerfal humanity to all the human race *, according to his abilities and manner of life, could not

[^48]not be exceeded by the moft illuftrious perfonage now on record; and to add to his other good qualities, he was the only Indian that I ever faw, except one, who was not guilty of backbiting and nandering his neighbours.

In ftature, Matonabbee was above the common fize, being nearly fix feet hight; and, except that his neck was rather (though not much) too thort, he was one of the fineft and beft proportioned men that I ever faw. In complexion he was dark, like the other Northern Indians, but his face was not disfigured by that ridiculous cuftom of marking the cheeks with three or four black lines. His features were regulor and agreeable, and yet fo ftrongly marked and expreffive, that they formed a complete index of his mind; which; as he never intended to deceive or diffemble, he never wifhed to conceal. In converfation he was eafy, lively, and agreeable, but exceedingly modef; and at table, the noblenefs and elegance of his manners might have been admired by the firft perfonages in the world; for to the vivacity of a Frenchman, and the

[^49]fincerity of an Englifhman, he added the gravity and noblenefs of a Turk; all fo happily blended, as to render his company and converfation univerfally pleafing to thofe who underftood either the Northern or Southern Indian languages, the only languages in which he ctould converfe.

He was remarkably fond of Spanihh wines, though he never drank to excefs; and as he would not partake of fpirituous liquors, howeyer fine in quality or plainly mixed, he was always mafter of himfelf. As no man is exempt from frailties, it is natural to fuppofe that as a man he had his thare; but the greateft with which I can charge him, is jealoufy, and that fometimes carried him keyond the bounds of humanity.

In his eatly youth he difcorered talents equal to the greateft tank that could poffibly be expected from an Indian. Accordingly Mr. Jacobs, then Governor at Prince of Wales's Fort, engaged him, when but a youth, as an Ambaffador and Mediator between the Northern Indians and the Athapufcow Tribe, who till then had always been at war with each other. In the courfe of this embafly Matonabbee not only difcovered the moft brilliant and folid parts, but fhewed an extenfive knowledge of every advantage that could arife to both nations from a total fuppreffion of hoftilities; and at times he difplayed fuch inftances of perfonal courage and magnanimity; as are rarely to be found among perfons of fuperior condition and rank.

He had not penetrated far into the country of the Athapufcow Indians, before he came to feveral tents with inbabitants; and there, to his great furprife, he found Captain Keelfhies, (a perfon frequently mentioned in this Journal *,) who was then a prifoner, with all his family and fome of his friends, the fate of whom was then undetermined; but through the means of Matonabbee, though young enough to have been his fon, Keellhies and a few others were releafed, with the lofs of his effects and all his wives, which were fix in number. Matonabbee not only kept his ground after Keelihies and his fmall party had been permitted to return, but made his way into the very heart of the Athapufcow country, in order to have a perfonal conference with all or moft of the principal inhabitants. The farther he advanced, the more occafion he had for intrepidity. At one time he came to five tents of thofe favages, which in the whole contained fixteen men, befides their wives, children, and fervants, while he himfelf was entirely alone, except one wife and a fervant boy. The Southern Indians, ever treacherous, and apparently the more kind when they are premeditating mifchief, feemed to give him a hearty welcome, accepted the tenders of peace and reconciliation with apparent fatisfaction, and, as a mark of their approbation, each tent in rotation made a feaft, or entertainment, the

[^50]fame night, and invited thim to partake; at the laft of which they had concerted a fcheme to murder him. He was, however, fo perfect a mafter of the Southern Indian language, that he foon difcovered their defign, and told them, he was not come in a hoftile manner, but if they attempted any thing of the kind he was determined to fell his life as dear as poffible. On hearing this, fome of them ordered that his fervant, gun, and fnow-hoes, (for it was Winter, ) hould be brought into the tent and fecured ; but he fprung from his feat, feized his gun and fnow-fhoes, and went out of the tent, telling them, if they had an intention to moleft him, that was the proper place where he could fee his enemy, and be under no apprehenfions of being fhot cowardly through the back. "I am fure (faid he) of killing two or three of you, " and if you chufe to purchafe my life at that price, now " is the time; but if otherwife, let me depart without " any farther moleftation." They then told him he was at liberty to go, on condition of leaving his fervant; but to this he would not confent. He then rufhed into the tent and took his fervant by force from two men; when finding there was no appearance of farther danger, he fet eut on his return to the frontiers of his own country, and from thence to the Factory.

The year following he again vifited the Athapufcow country, accompanied by a confiderable number of chofen men
men of his own aation, who wepe fo fas fuperior to fuch cmall parties of the Southern Indians as they had met, that they commanded refpect wherever they came; and having traverfed the whole country, and converfed with all . the principal men, peace and friendihip were apparently re-eftablifhed. Accordingly, when the Spring advanced the Northern Indians began to difperfe, and draw out to the Eaftward on the barren ground ${ }_{i}$ but Matonabbee, and a few others, chofe to pafs the Summer in the Athapufcow country. As foon as the Southern Indians were acquainted with this defign, and found the number of the Northern Indians fo reduced, a fuperior number of them dogged and harafled them the whole Summer, with a view to furprife and kill them' when afleep; and with that view twice aetually approaehed fo near their tents as fifty yards. But Matonabbee told them, as he had done when alone, that though there were but few of them, they were all determined to fell their lives as dear as poffible: on which the Southern Indians, without making any reply, retired; for no Indians in this country have the courage to face their enemies when they find them apprized of their approach, and on their guard to receive them.

Notwithftanding all thefe difcouragements and great dangers, Matonabbee perfevered with courage and refolution to vifit the Athapufcow Indians for feveral years fucceffively; and at length, by an uniform difplay of his pacific difpofition, and by rendering a long train of good

$$

$$

## A JOURNEYTOTHE

offices to thofe Indians, in return for their treachery and perfidy, he was fo happy as to be the fole inftrument of not only bringing about a lafting peace, but alfo of eftablifhing a trade and reciprocal intereft between the two nations.

After having performed this great work, he was prevailed upon to vifit the Copper-mine River, in company with a famous leader, called I-dat-le-aza; and it was from the report of thofe two men, that a journey to that part was propofed to the Hudfon's Bay Company by the late Mr. Mofes Norton, in one thoufand feven hundred and fixty-nine. In one thoufand feven hundred and feventy he was engaged as the principal guide on that expedition; which he performed with greater punctuality, and more to my fatisfaction, than perhaps any other Indian in all that country would have done. At his return to the Fort in one thoufand feven hundred and feventy-two, he was made head of all the Northern Indian nation; and continued to render great fervices to the Company during his life, by bringing a greater quantity of furrs to their Factory at Churchill River, than any other Indian ever did, or ever will do. His laft vifit to Prince of Wales's Fort was in the Spring of one thoufand feven hundred and eighty-two, and he intended to have repeated it in the Winter following; but when he heard that the French had deftroyed the Fort, and carried off all the Company's fervants, he never afterwards reared his head, but took an opportunity, when no one fufpected

## NORTHERN OCEAN.

fufpected his intention, to hang himfelf. This is the more to be wondered at, as he is the only Northern Indian who, that I ever heard, put an end to his own exiftence. The death of this man was a great lofs to the Hudfon's Bay Company, and was attended with a moft melancholy fcene; no lefs than the death of fix of his wives, and four children, all of whom were ftarved to death the fame Winter, in one thoufand feven hundred and eighty-three.

## C HAPP. X.

BEFORE I conclude this work, it may not be improper to give a fhort account of the principal Animals that frequent the high Northern latitudes, though moft of them are found alfo far to the Southward, and confe-
quently in much milder climates. The buffalo, mukox, deer, and the moofe, have been already defcribed in this Journal. I fhall therefore only make a few remarks on the latter, in order to rectify a miftake, which, from wrong information, has crept into Mr. Pennant's Aretic Zoology. In page 21 of that elegant work, he claffes the Moore with the We-was-kifh, though it certainly has not any affinity to it.

The We-was-kifh, or as fome (though improperly) call it, the Wafkeffe, is quite a different animal from the moofe, being by no means fo large in fize. The horns of the We-was-kifh are fomething fimilar to thofe of the common deer, but are not palmated in any part. They fand more upright, have fewer branches, and want the brow-antler. The head of this animal is fo far from being like that of the Moofe, that the nofe is Charp, like the nofe of a Cheep: indeed, the whole external appearance of the head is not very unlike that of an afs. The hair is ufually of a fandy red; and they are frequently called by the Englif who vifit the interior parts of the country, red deer. Their flefh is tolerable eating; but the fat is as hard as tallow, and if eaten as hot as poffible, will yet chill in fo fhort a time, that it clogs the teeth, and fticks to the roof of the mouth, in fuch a manner as to render it very difagreeable. In the Spring of one thoufand feven hundred and feventy-five, I had thirteen fledge-loads of this meat brought to Cumberland Houfe in one day, and alfo two of the heads of this animal unkinned, but the horns

## NORTHERNOCEAN.

were chopped off; a proof of their wearing them the whole Winter. They are the moft ftupid of all the deer kind, and frequently make a Mrill whifting, and quivering noife, not very unlike the braying of an afs, which directs the hunter to the very fpot where they are. They generally keep in large herds, and when they find plenty of pafture, remain a long time in one place. Thofe deer are feldom an object of chace with the Indians bordering on Bafquiau, except when moofe and other game fail. Their fkins, when dreffed, very much refemble that of the moofe, though they are much thinner, and have this peculiar quality; that they will wafh as well as fhamoy leather; whereas all the other leathers and pelts dreffed by the Indians, if they get wet, turn quite hard, unlefs great care be taken to keep conftantly rubbing them while drying.

The perfon who informed Mr. Pennant that the we-was-kifh and the moofe are the fame animal, never faw one of them; and the only reafon he had to fuppofe it, was the great refemblance of their fkins : yet it is rather ftrange, that fo indefatigable a colfector of Natural Hiftory as the late Mr. Andrew Graham, fhould have omitted making particular enquiry about them: for any foreign Indian, particularly thofe that refide near Bafquiau, could eafily have convinced him to the contrary.

## Animals witb Canine Teetb.

Wolves. Wolves are frequently met with in the countries Weft of Hudfon's Bay, both on the barren grounds and among the woods, but they are not numerous; it is very uncommon to fee more than three or four of them in a herd. Thofe that keep to the Weftward, among the woods, are generally of the ufual colour, but the greateft part of thofe that are killed by the Efquimaux are perfecly white. All the wolves in Hudion's Bay are very fly of the human race, get when tharp fer, they frequently follow the Indians for feveral daye, but always keep at a diftaince. They are great enemies to the Indian dogs, and frequently kill and eat thofe that are heary loaded, and cannot keep up with the main body. The Northern Indians have formed Atrange ideas of this animal, as they think it does not eat its vidual! raw; but by a fingular and wonderful fagacity, peculiar to itfelf, has a method of cooking them without fire. The females are much fwifter than the males; for which reafon the Indians, bath Northern and Southern, are of opinion that they kill the greateft part of the game. This cannot, however, always be the cafe; for to the North of Churchill they, in general, live a forlorn life all the Winter, and are feldom feen in pairs till the Spring, when they begin to couple; and generally keep in pairs all the Summer. They always burrow underground to bring forth their young; and though it is na-
tural to fuppofe them very fierce at thofe times, yet I have frequently feen the ladians go to their dens, and take out the young ones and play with them. I never knew a Northern Indian hurt one of them: on the contrary, they always put them carefully into the den again; and I have fometimes feen them paint. the faces of the young Wolves with vermillion, or red ochre.

The Arctic Forss are in fome years remarkably plentiful, but generally moft fo men the barnen ground, near the

Fores of various colours. fea-coeft. Notwrithtanding what has been faid of this animal only vifting the fettoments once in five or feven years, I can affirm there is not one year in twenty that they are not caught in greater or lefs numbers at Churchill; and I have known that for three years running, not lefs than from two hundeed to four hundred have been caught each yexs within thirty mites of the Fort. They atways come from the North along the coalk, and gencrally make their appearance at Chucchill about the middle of Oclober, but their fkins are feldem in feafon till November; during that time they are neyer moleftod, but permitted to foed round the Fort, till by degrees they become atmoft dameftic. The great numbers of thofe aximats that vifit Churchill River in fome years do not all come in a body, as it would be impoffibite for the fourth part of them to frad fubfiftence by the way; but when they come near the Fort, the carcaffer of dead. whales lying along the Shores, and the gio and other offad, after boiling the oid

$$
3 \mathbf{A ~}_{2} \quad \text { afford }
$$

afford them a plentiful repaft, and prove the means of keeping them about the Fort till, by frequent reinforcements from the Northward, their numbers are fo far increafed as almoft to exceed credibility.

When their $\mathbf{1 k i n s}$ are in feafon, a number of traps and guns are fet, and the greateft part of them are caught in one month, though fome few are found during the whole Winter. I have frequently known near forty killed in one night within half a mile of Prince of Wales's Fort ; but this feldom happens after the firft or fecond night. . When Churchill River is frozen over near the mouth, the greateft part of the furviving white Foxes crofs the river; and direat theit courfe to the Southward, and in fome years affemble in confiderable numbers at York Fort and Severn River. Whether they are all killed, or what becomes of thofe which efcape, is very uncertain; but it is well known that none of them ever migrate again to the Northward. Befides taking a trap fo freely, they are otherwife fo fimple, that I have feen them fhot off-hand while feeding, the fame as fparrows in a heap of chaff, fometimes two or three at a fhot. This fport is always moft fuccefsful in moon-light nights; for in the day-time they generally keèp in their holes among the rocks, and under the hollow ice at high-water-mark.

Thefe animals will prey on each other as readily as on any other animals they find dead in a trap, or wounded by gun; which renders them fo deftructive, that I have known upwards of one hundred and twenty Foxes of different
ferent colours eaten, and deftroyed in their traps by their comrades in the courfe of one Winter, within half a mile of the Fort.

The Naturalifts feem Atill ata lofs to know their breed-ing-places; which are doubtlefs in every part of the coalt they frequent. Several of them breed near Churchill, and I have feen them in confiderable numbers all along the Weft coalt of Hudfon's Bay, particularly at. Cape Efquimaux, Navel!'s Bay; and Whale Cove, alfo on Marble Illand; fo that with fome degree of confidence we may affirm, that they breed on every part of the coaft they inhabit daring the Summet feafon. They generally have from threc to five young at a litter; more I never faw with one old one. When young they are all over almoft of a footy black, but as the fall advances, the belly, fides, and tail turn to a light afh-colour; the back, legs, fome part of the face, and the tip of the tail, changes to a lead colour; but when the Winter fets in they become perfectly white : the ridge of the back and the tip of the tail are the laft places that change to that colour; and there are few of them which have not a few dark hairs at the tip of the tail all the Winter. If taken young, they are eafily domefticated in fome degree, but I never faw one that was fond of being carefled; and they are always impatient of confinement.

Whits Foxis, when killed at any confiderable diftance from the fee cooft, (where they cansot poffibly get any thing
thing to prey upon, except rabbits, mice, and partridges,) are far from being difagreeable cating. And on Marbie Ifland I have fhot them when they were equal in flavour to a rabbit; probably owing to their feeding entirely on eggs and young birds; but near.Churchill River they are as rank as train-oil.

The Lyns, or Wild Cat.

The Linx, or Wild Cat, is vety fearce to the North of Churchill; but is exactly the fame as thofe which are found in great plenty to the South Weft. I have obferved the tracks of this animal at Churchill, and foin them killed, and have eaten of their flefh in the neighbourhood of York Fort. The flefh is white, and nearly as good as that of a rabbit. They are, I think, mach larger than that which is defcribed in the Aretic Zoology; they never approach near the fertlements in Hudfon's Bay, and are very deftructive to rabbits: they feldom leave a place which is frequented by rabbits till they have neariy killed them all.

The Polar or White Bear.

The Poular ar Whits Bran, though common on the fea-coant, is feldom found in iss Winter retreats by any of our Northern Indians, except near Churchill River; ner do I fuppafe that the Efquiznanx fee or kill any of them more frequently during that feafon; for in the cearfe of many years refidence at Churchill River, I fcarcely ever faw a Wiater fkio brought from the Northward by the doop. Probably the Esquimaix, if they ki⿰扌 any, may referve
referve the fkins for their own ufe; for at that feafon their hair is very long, with a thick bed of wool at the botton, and they are remarkably clean and white. The Wintef is the only feafon that fo oily a flan as the Bear's can poffibly be cleaned and dreffed by thofe people, without greafing the hair, which is very unpleafant to them; for though they eat train-oil, doc. yet the are as careful as poffible to keep their clothes from being greafed with it. To drefs one of thofe greafy Ikins in Winter, as foon as taken from the beaf, it is ftretched out on a fmooth patch of frow, and there flaked dows, where it foon freezes as hard as a board: while in that ftate, the women fcrape off all the fat, till they come to the very roots of the hair. It is fometimes permitted to remain in that pofition for a confiderable time; and when taken from the fnow, is hung up in the open air. The more intenfe the froft, the greater is its drying quality; and by being wafted about by the wind, with a little fcraping, it in time becomes perfectly fupple, and both pelt and hair beautifully white. Drying deer, beaver, and otter fkins, in this manner render their pelts very white, but not fupple; probably owing to the clofe texture and thicknefs of their fkins: whereas the fkin of the bear, though fo large an animal, is remarkably thin and fpungy*.

Black

[^51]The Black Bear.

Black Bbars are not very numerous to the North Weft of Churchill. Their manner of life is the 'fame as the reft of the fpecies, though the face of the counitry they
deepeft drifs of fnow they can find, where they remain in a flate of inactivity, and without food, from the latter end of December of January, till the latter end of March; at which time they leave their'dens, and bènd their courfe towards the fea with their cubs; which, in geneport axe ewo in number. Notwithtaniding the great magnitude of thofe animats when foll grown, yet their young are not larger than rabbits, and when they leave their dens, in March, I have frequently feen them not larger than a white fox, and their fteps on the fnow not bigger than 2 crown-piece, when thofe' of their digm meafured near fifteen inches long, and nine inches broad. They propagate when young, or at leaft before they are half-grown; for I have killia young females not larger than a London calf, with milk in their teats; whereas fome of the full grown ones are heavier than the largeft of our common oxen. Indeed I was once at the killing of one, when one of its hind feet being cut off at the ankle, weighed fifty-four pounds. The males have 2 bone in their penis, as a dog has, and of courfe unite in copulation; but the time of their courthip is, I believe, not exactly known : probably it may be in July or Augurt, for at thofe times I have often been at the killing them, when the males were fo attached . to their miftreffes; that after the female was killed, the male would put his two fore-paws over, and fuffer himifelf to be.fhit before he would quit her. I have frequently leen and killed thofe animals near twelve leagues from the land; but as the Fall of the year advances, they are taught by inftinet to feek the fhore. Though fuch 2 tremendous animal; they are very fly of coming near a man; but when clofely purfued in the water, they frequentif ateack the boat, feize the oars, and wreft, them from , the hands of the ftrongeft man, feeming defirous to get on board; but the people on thofe occafions art always provided with fire-arms and hatchets, to prevent fuch an unwelcome vifit. The fefh of this animal, when killed in Winter, (if, not too old,) is far from being unpleafant eating; and the young cubs, in the Spring, are rather delicate than orherwife. The tits of the females are only two in number, and 'are placed between the fore-legs. CThe beft Drawing of this Animal I have feen, is that done by Mr. Webber, among the Plates of Cook's laft Voyage.
inhabit,
inhabit, differs widely from the more mild climates. In Summer they proul about in fearch of berries, $8^{\circ}$ c. and as the Winter approaches, retire to their dens, which are always under-ground; and generally, if not always, on the fide of a fmall hillock. The Bears that inhabit the Southern parts of America are faid to take up their Winter abode in hollow trees; but I never faw any trees in my Narthern travels, that could afford any fuç, fhelter.

The places of retreat of thofe Bears that burrow underground are eafily difcovered in Winter, by the rime that hangs about the mouth of the den; for let the fnow be ever fo deep; the heat and breath of the animal prevents the mouth of the den from being entirely clofed up. They generally retire to their Winter-quarters before the fnow is of any confiderable depth, and never come abroad again (unlefs difturbed) till the thaws are confiderable, which in thofe high latitudes is feldom till the latter end of March, or the beginning of April; fo that the few Black Bears that inhabit thofe cold regions may be faid to fubfift for four months at leaft without food. I have been prefent at the killing two of them in Winter; and the Northern Indian method is fimilar to that faid to be in ufe among the Kamtfchatkans; for they always blocked up the mouth of the den with logs of wood, then broke open the top of it, and killed the animal either with a fpear or a gun; but the latter method is reckoned both cowardly and wafteful, as it is not poffible for the Bear either to make its efcape, or to do the Indians the leaft injury. 3 B Some-

## A JOURNEY TOTHE

Sometimes they put a fnare about the Bear's neck, and draw up his head clofe to the hole, and kill him with a hatchet. Though thofe animals are but fcarce to the North of Churchill, get they are fo numerous between York Fort and Cumberland Houfe, that in one thoufand feven hundred and feventy-four I faw eleven killed in the courfe of one day's journey, but their flefh was abominable. This was in the month of June, long before any fruit was ripe, for the want of which they then fed entirely on water infects, which in fome of the lakes we croffed that day were in aftonifhing multitudes*.

The method by which the Bears catch thofe infects is by fwimming with their mouths open, in the fame manner as the whales do, when feeding on the fea-fpider. There was not one of the Bears killed that day, which had not its ftomach as full of thofe infects (only) as ever a hog's was with grains, and when cut open, the ftench from them was intolerable. I have, however, eaten of fome killed at that early feafon which were very good;

[^52]but they were found among the woods, far from the places where thofe infects haunt, and had fed on grafs and other herbage. After the middle of July, when the berries begin to ripen, they are excellent eating, and fo continue till January or February following; but late in the Spring they are, by long fafting, very poor and dry eating.

The Southern Indians kill great numbers of thofe Bears at all feafons of the year; but no encouragement can prevent them from fingeing almot every one that is in good condition: fo that the few fkins they do fave and bring to the market, are only of thofe which are fo poor that their flefh is not worth eating *. In fact, the fkinning of a Bear fpoils the meat thereof, as much as it would do to fkin a young porker, or a roafting pig. The fame may be faid of fwans (the kins of which the Company have lately made an article of trade); otherwife thoufands of their fkins might be brought to market annually, by the Indians that trade with the Hudfon's Bay Company's fervants at the different fettlements about the Bay.

Brown Bears are, I believe, never found in the NorthIndian territories; but I faw the fkin of an enormous

The Brown Bear.

[^53]grizzled Bear at the tents of the Efquimaux at the Copper River ; and many of them are faid to breed not very remote from that part.

The Wolverene.

The Wolverene is common in the Northern regions, as far North as the Copper River, and perhaps farther. They are equally the inhabitants of woods and barren grounds; for the Efquimaux to the North of Churchill kill many of them when their fkins are in excellent fealon: a proof of their being capable of braving the fevereft cold. They are very flow in their pace, but their wonderful fagacity, frength, and acute fcent, make ample amends for that defeet; for they are feldom killed at any feafon when they do not prove very fat: a great proof of their being excellent providers. With refped to the fiercenefs of this animal which fome affert, I can fay little, but I know them to be beafts of great courage and refolution, for I once faw one of them take poffefion of a deer that an Indian had killed, and though the Indian advanced within twenty yards, he would not relinquif his claim to it, but fuffered himfelf to be fhot ftanding on the deer. I once faw a fimilar inftance of a lynx, or wild cat, which alfo fuffered itfelf to be killed before it would relinquiin the prize. The Wolverenes have alfo frequently been feen to take a deer from a wolf before the latter had time to begin his repaft after killing it. Indeed their amazing frength, and the length and Charpnefs of their claws, render them capable of making a ftrong refiftance againft
any other animal in thofe parts; the Bear not excepted. As a proof of their amazing Atrength, there was one at Churchill fome years fince, that overfet the greateft part of a large pile of wood, (containing a whole Winter's firing, that meafured upwards of feventy yards round,) to get at fome provifions that had been hid there by the Company's fervants, when going to the Factory to fend the Chriftmas holidays. The fact was, this animal had been lurking about in the neighbourhood of their tent (which was about eight miles from the Factory) for fome weeks, and had committed many depredations on the game caught in their traps and fnares, as well as eaten many fozes that were killed by guns fet for that purpofe; but the Wolverene was too cunning to take either trap or gun himfelf. The people knowing the mifchievous difpofition of thofe animals, took (as they thought) the moft effectual method to fecure the remains of their provifions, which they did not chufe to carry home, and accordingly tied it up in bundles and placed it on the top of the wood-pile, (about two miles from their tent,) little thinking the Wolverene would find it out; but to their great furprife, when they returned to their tent after the holidays, they found the pile of wood in the ftate already mentioned, though fome of the trees that compofed it were as much as two men could carry. The only reaton the people could give for the animal doing fo much mifchief was, that in his attempting to carry off the booty, fome of the fmall parcels of provifions had fallen down into the heart of the pile, and fooner.

## A JOURNET TO THE

fooner than lofe half his prize, he purfued the above method till he had accomplifhed his ends. The bags of flour, oatmeal, and peafe, though of no ufe to him, he tore all to pieces, and fcattered the contents about on the fnow; but every bit of animal food, confifting of beef, pork, bacon, venifon, falt geefe, partridges, sc. to a confiderable amount, he carried away. Thefe animals are great enemies to the Beaver, but the manner of life of the latter prevents them from falling into their clutches fo frequently as many other animals; they commit valt depredations on the foxes daring the Summer, while the young ones are fmall; their quick foent directs them to their dens, and if the entrance be too fmall, their Arength enables them to widen it, and go in and kill the mother and all her cubs. In fact, they are the moft deftructive animals in this country ${ }^{*}$.

The Otter.
Otrers are pretty plentiful in the rivers to the North of Churchill, as far as latitude $62^{\circ}$; farther North I do not recollect to have feen any. In Winter they generally frequent thofe parts of rivers where there are falls or rapids, which do not freeze in the coldeft Winters; becaufe in

[^54]> NORTHERNOCEAN.
fuch fituations they are moft likely, to find plenty of fifh, and the open water gives them a free admiffion to the fhore, where they fometimes go to eat the fifh they have caught; but moft commonly fit on the ice, or get on a great ftone in the river. Ther are frequently feen in the very depth of Winter at a confiderable diftance from any known open water, boti in wroods and on open plains, as well as on the ice of large lakes; but it is not known what has led them to fuct places: perhaps merely for amufement, - for they are not known to kill any game on the land during that feafor. If purfued when among the woods in Winter, (where the fnow is always light and deep,) they immediately dive, and make confiderable way under it, but are eafily traced by the motion of the fnow above them, and foon overtaken. The Indians kill numbers of them with clubs, by tracing them in the fnow; but fome of the old ones are fo fierce when clofe purfued, that they turn and fly at their purfuer, and their bite is fo fevere that it is mach dreaded by the Indians. Befides this method, of killing them, the Indians have another, which is equally fuccelsful; namely, by concealing themfelves within a reafonable gun-hhot of the Otters ufual landing-places, and waiting their coming out of the water. This method is more generally practifed in moon-light nightsi They alfo fhoot many of them as they ane fporting in the water, and fome few are caught in traps.

The Otters in this, as well as every other part of the bay, vary in fize and colour, according to age and feafors.

## A JOURNEY TO THE

In Summer, when the hair is very fort, they are almoft black, but as the Winter advances, they turn to a beautiful dark auburn, except a fmall fpot under the chin, which is of a filver gray. This colour they retain all the Winter; but late in the Spring (though long before they fhed their coat) they turn to a dunl rufly brown; fo that a perfon who is acquainted with thofe changes can tell to a great nicety, by looking at the fkins, (when offered for Gale,) the very time they were killed, and pay for them according to their value. The number of their young is various, from three to five or fix. They unite in copulation the fame as a dog, and fo do every other animal that has a bone in the penis. I will here enumerate all of that defcription that I know of in thofe parts, viz. bears of all forts, wolves, wolvereens, foxes, martins, otters, wejacks, jackathes, flunks, and ermines *.

Jaceash. This animal is certaialy no other than the

The Jack2 ll. leffer Otter of Canada, as its colour, fize, and manner of life entirely correfpond with the defcription of that animal in Mr. Penant's Arctic Zoology. They, like the larger Otter, are frequently found in Winter feveral miles from any water, and are often caught in traps built for martins. They are fuppofed to prey on mice and partridges, the fame as the martin; but when by the fide of rivers or

[^55]creeks,
creeks, they generally feed on fifh. They vary fo much in fize and colour, that it was very eafy for Mr. Pennant to have miftaken the fpecimen fent home for another animal. They are the cafieft to tame and domefticate of any animal I know, except a large fpecies of field-mice, called the Hair-tailed Moufe; for in a very Ohort time they are fo fond, that it is fcarcely poffible to keep them from climbing up one's legs and body, and they never feel themfelves happier than when fitting on the fhoulder; but when angry, or frightened, (like the fkunk,) they emit a very difagreeable fmell. They fleep very much in the day, but prowl about and feed in the night; they are very fierce when at their meak, not fuffering thofe to whom they are moft attached to take it from them. I have kept feveral of them, but their over-fondnefs made them troublefome, as they were always in the way; and their fo frequently emitting a difagreeable fmell, rendered them quite difgufting.

Though the Wejack * and Skunk are never found in the Northern Indian country, yet I cannot help obferving The Wethat the fartid fmell of the latter has not been much exaggerated by any Author. When I was at Cumberland

- Mr. Graham afferts that this animal frequents the banks of creeks; and feeds on fifh; but thefe are by no means their ufual haunts. I have, however, no doubr, but when they find filh on the land, that they may eat it, like other earnivorous animals; ber they are as fhy of taking the water as a domeftic cat. They climb trees, and catch partridges, mice, and rabbits, with as much eafe as a martin. They are cafily tamed and domefticated, are very fond of.tezLeaves, have a pleafant mufky friell, and are very playfil.

Houfe, in the Fall of one thoufand feven huridred and feventy-four, fome Indians that were tenting on the plantation killed two of thofe animads, and made a feaft of them; when the fpot where they were finged and gutted was fo impregnated with that naufeous fmell which they emit, that after a whole Winter had elapred, and the f now had thawed away in the Spring, the fmell was ftill intolerible. I am told, howeter, that the flefh is by no means tainted with the fmell, if care be taken in gutting, and taking out the bag that contains this furprifing effluvia, and which they have the power of emitting at pleafure; but I rather doubt their being capable of ejecting their urine fo far as is reported; I do not think it is their urine which contains that peftilential effluvia, for if that was the cafe, all the country where they frequent would be fo fcented with it, that neither man nor bealt could live there with any degree of comfort.

The Common Ping Martin is found in moft parts of this country, and though very fcarce in what is abfolutely called the Northern Indian territory, yet by the Indians ftrolling toward the borders of the Southern Indian country, are killed in great numbers, and annually traded for at Churchill Factory.

The Ermine, or Stote.

## A JOURNEY TO THE

The Eqmine, or Stotb, is common in thofe parts, but generally more plentiful on the barren ground, and open plains or marlhes, than in the woods; probably owing to
the
the mice being more numerous in the former fituations than in the latter. In Summer they are of a tawney brown, but in Winter of a delicate white all over, except the tip of the tail, which is of a glofly black. They are, for their fize, the ftrongeft and moft courageous animal I know; as they not only kill partridges, but even attack rabbits with great fuccefs. They fometimes take up their abode in the out-offices and provifion-fheds belonging to the Factories; and though they commit fome depredations, make ample amends by killing great numbers of mice, which are very numerous and deftructive at molt of the fettlements in the Bay. I have taken much pains to tame and domefticate this beautiful animal, but never could fucceed; for the longer I kept it the more reftlefs and impatient it became.

## Animals with Cutting Teetb.

The Musi Rat, or Musquash; or, as Naturalifts call it, the Muse Bravbr; is common in thofe parts; generally

The Munf Rat. frequenting pands and deep fwamps that do not freeze dry in Winter. The manner of life of this fpecies of animals is peculiar, aud refembles that of the Beaver, as they are in fome refpects provident, and build houfes to fhelter themfelves from the inclemency of the cold in Winter; but inftead of making thofe hourfes on the banks of ponds or fwamps, like; the Beaver, they generally build them on the ice as foppins it is ginned over, and at a confiderable

$$
{ }_{3} C_{2} \quad \text { diftance }
$$

diftance from the fhore; always taking care to keep a hole open in the ice to admit them to dive for their food, which chiefly confifts of the roots of grafs: in the Southern parts of the country they feed much on a well-known root, called Calamus Aromaticus. Fhe materials made ufe of in building their houfes are mud and graf;', which they fetch up from the bottom. It fometimes happens in very cold Winters, that the holes in their houfes freeze over, in fpite of all their efforts to keep them open. When that is the cafe, and they have no provifions left in the houfe, the ftrongeft preys on the weakeft, till by degrees only one is left out of a whole lodge. I have feen feveral inftances fufficient to confirm the truth of this affertion; for when their houfes were broke open, the ikeletons of feven or eight have been found, and only one entire animal. Though they occafionally eat fifh and other animal food, yet in general they feed very clean, and when fat are good eating, particularly when nicely finged, fcalded, and boiled. They are cafily tamed, and foon grow fond; are very cleanly and playful, and fmell exceedingly pleafant of mufk; but their refemblance to a Rat is fo great, that few are partial to them. Indeed the only difference between them and a common Rat, exclufive of their fuperior fize, is, that their hind-feet are large and webbed, and the tail, inftead of being round, is flat and fealy.

Though I have before faid, that the Mußk Beaver generally build their houfes on the ice, it is not always the cafe; for in the Southern parts of the country, particularly

> NORTHERNOCEAN.
ticularly about Cumberland Houfe, I have feen, in fome of the deep fwamps that were over-run with rufhes and long grafs, many fmall illands that have been raifed by the induftry of thofe animals; on the tops of which they had built their houfes, like the beaver, fome of which were very large. The tops of thofe houles are favourite breed-ing-places for the geefe, which bring forth their young brood there, without the fear of being molefted by foxes, or any other deftructive animal, except the Eagle.

Porcupines are fo farce to the North of Churchill River, that I do not recolled to have feen more than fix during almoft three years refidence among the Northern Indians. Mr. Pennant obferves in his Aretic Zoology, that they always have two at a time; one brought forth alive and the other ftill-born ${ }^{*}$; but I never faw an inftance of this kind, though in different parts of the country I have feen them killed in all ftages of pregnancy. The flefh of the Porcupine is very delicious, and fo much efteemed by the Indians, that they think it the greatef luxury that their country affords. The quills are in great requeft among the women; who make them into a variety of ornaments, fuch as thot-bags, belts, garters, bracelets, ©\%c. Their mode of copulation is fingular, for their

[^56]quills will not permit them to perform that office in the ufual mode, like other quadrupeds. To remedy this inconvenience, they fometimes lie on their fides, and meet in that manner; but the ufual mode is for the male to lie on his back, and the female to walk over him, (beginning at his head,) till the parts of generation come in contact. They are the moft forlorn animal I know; for in thofe parts of Hudfon's Bay where they are moft numerous, it is not common to fee more than one in a place. They are fo remarkably flow and ftupid, that our Indians going with packets from Fort to Fort often fee them in the trees, but not having occafion for them at that time, leave them till their return; and hould their abfence be a week or ten days, they are fure to find them within a mile of the place where they had feen them before.

Foxes of various Colours.

Varying Hares.

Foxes of various colours are not fcarce in thofe parts; but the natives living fuch a wandering life, feldom kill many. It is rather ftrange that no other fpecies of Fox, except. the white, are found at any diftance from the woods on the barren ground; for fo long as the trade has been eftablifhed with the Efquimaux to the North of Churchill, I do not recollect that Foxes of any other colour than white were ever received from them.

The Varying Hares are numerous to the North of Churchill River, and extend as far as latitude $72^{\circ}$, probably farther. They delight moft in rocky and ftony places,
places, near the borders of woods; though many of them brave the coldeft Winters on entire barren ground. In Summer they are nearly the colour of our Englifh wild rabbit; but in Winter affume a moft delicate white all over, except the tips of the ears, which are black. They are, when full grown and in good condition, very large, many of them weighing fourteen or fifteen pounds; and if not too old, are good eating. In Winter they feed on long rye-grafs and the' tops of dwarf willows, but in Summer eat berries, and different forts of fmall herbage. They are frequently killed on the South-fide of Churchill River, and feveral have been known to breed near the fettlement at that place. They muft multiply very faft, for when we evacuated Prince of Wales's Fort in one thoufand feven hundred and eightytwo, it was rare to fee one of them within twenty or thirty miles of that place; but at our return, in one thoufand feven hundred and eighty-three, we found them in fuch numbers, that it was common for one man to kill two or three in a day within half $a$ mile of the new fettlement. But partly, perhaps, from fo many being killed, and partly from the furvivors being fo frequently difturbed, they have fhifted their fituation, and are at prefent as fcarce near the fettlement as ever. The Northern Indians purfue a fingular method in fhooting thofe Hares; finding by long experience that thefe animals will not bear a direet approach, when the Indians fee a hare fitting, they walk round it in circles, always drawing nearer at every revolution, till by degrees they get within gun-fhot. The

## A JOURNEYTOTHE

middle of the day, if it be clear weather, is the beft time to kill them in this manner; for before and aftes noon, the Sun's altitude being fo fmall, makes a man's fhadow so long on the fnow, as to frighten the Hare before he can approach near enough to kill it. The fame may be faid of deer when on open plains, who are frequently more frightened at the long fhadow than at the man himele.

The Ame-
tican Hare.

The Ambrican Hares; or, as they are called in Hudfon's Bay; Rabits, are not plentiful in the Eaftern parts of the Northern Indian couftry, not even in thofe parts that are fituated among the woods; but to the Weftward, bordering on the Southern Indian couptry, they are in fome places pretty numerous, though by no means equab to what has been reported of them at York Fort, and fome other fettlements in the Bay.

The furr of thofe animals, when killed in the beft part of the fearon, was for many years entirely neglected by: the furriers. E for fome time paft the Company bave ordered as many of their fkins to be fent home as can be procured; they are bat of fmall value.

The fleßh of thof Hares is geaerally more efteemed than that of the former. They are in feafon all the Winter; and though they generally feed on the brufh of pine and fir during that feafon, yet many of the Northern Indians eat the contents of the fomach. They are feldom fought after in Summer, as in that feafon they are not efteemed good
good eating; but as the Fall advances they are, by feeding on berries, $\mathcal{E}^{\circ} c$. moft excellent. In Spring they fhed their Winter coat, and during the Summer are nearly the colour of the Englifh wild rabbit, but as the Winter advances they become nearly white. In thick weather they are eafily fhot with the gun ; but the moft ufual method of killing them is by fnares, fet nearly in the manner defcribed by Dragge in the Firft Volume of his North Weft Paffage.

The Common Seuirrbis are plentiful in the woody parts of this country, and are caught by the natives in confiderable numbers with fnares, while the boys kill many of them with bunt-headed arrows. The mechod of fnaring them is rather curious, though very frmple, as it confifts of nothing more than fetting a number of fnares all round the body of the tree in which they are feen, and arranging them in fuch a manner that it is fearcely poffible for the fquirrels to defcend without being entangled in one of them. This is generally the amufement of the boys. Though fmall, and feldom fat, yet they are good eating.

The beauty and delicacy of this animal induced me to attempt taming and domefticating forme of them, but without fuccefs; for though feveral of them were fo familiar as to take any thing out of my hand, and fit on the table where I was writing, and play with the pens, © ${ }^{\circ} c$. yet they never would bear to be handled, and were very mifchievous; gnádwing the chair-bottoms, window-curtains, fafhes, ${ }^{\circ} \mathrm{c}$. to pieces. They are an article of trade in the

The Common Squirrel.

Company's ftandard, but the greateft part of their fkinsz being killed in Summer, are of very: little value.

TheGround Squirrel.

The Ground Sedirreis are never found in the woody parts of North America, but are very plentiful on the barren ground, to the North of Churchill River; as fax as the latitude $7 x^{\circ}$, and probably much farther. In fize they are equal to the American:Grey Squirrel, though more beautiful in colour. They generally burrow among the rocks and under great ftones, but fometimes on the fides of fandy ridges $;$ and are fo provident in laying up a Winter's fock ducing the Summer, that they are feldoms feen on the furface of the fnow in Winter. They genefally feed on-the tufts of geafs, the tender tops of dwarf willows, ${ }^{\circ}$ c. and are for the moft part exceedingly fat, and good eating. They are cafily tamed; and foongrow fond; by degrees they will bear handling as well as a cat; are exceeding cleanly, very playful, and by no means fo: seftlefs and impatient of, confinement as the Commons. Squirrek:

Mice are in great plenty and variety, in all parts of: Hudfon's Bay ; the marfhes being inhabited by one fpecies, and the dry ridges by another.: The Shrew Moufe is. frequently found in Beaver houfes during Winter, where. they not only find a warm trabitation, but alfo pick up a. comfortable livelihood from the fcraps left by the BeaverMoft.of the other fecies build or make.nefts of dry grafs,
of fuch a fize and thicknefs, that when covered with fnow, they muft be fufficiently warm. They all feed on grafs in general, but will alfo eat animal food when they can get it. The Hair-tailed Moufe is the largeft in the Northern parts of the Bay, being little inferior in fize to 2 common rat. They always burrow under ftones, on dry ridges; are very inoffenfive, and fo eafily tamed, that if taken when full-grown, fome of them will in a day or two be perfectly reconciled, and are fo fond of being handled, that they will creep about your neck, or into your bofom. In Summer they are grey, and in Winter change to white, but are by no means fo beautifill as a white ermine. At that feafon they are infefted with multitudes of fmall lice, not a fixth part fo large as the mites in a cheefe; in fact, they are fo fmall, that at firf fight they only appear like reddifh-brown duft, but on clofer examination are all perceived in motion. In one large and beautiful animal of this kind, caught in the depth of Winter, I found thofe little vermin fo numerous about it, that almoft every hair was covered with them as thick as ropes with onions, and when they approached near the ends of the hair they may be faid to change the moufe from white to a faint brown. At that time I had an excellent microfcope, and endeavoured to examine them, and to afcertain their form, but the weather was fo exceedingly cold, that the glaffes became damp with the moifture of my breath before I could get a fingle fight. The hind-feet of thefe Mice are exactly like thofe of a Bear, and the.

$$
{ }_{3} \mathrm{D}_{2} \quad \text { fore }
$$ fore-feet are armed with a horny fubfance, (that I never faw in any other (pecies of the Moufe,) which is wonderfully adapted for fcraping away the ground where they wilh to take up their abode. They are plentiful on fome of the ftony ridges near Churchill Factory, but never approach the houfe, or any of the out-offices. From appearances they are very local, and feldom ftray far from their habitations even in Summer, and in Winter they are feldom feen on the furface of the fnow; a great proof of their being provident in Summer to lay by a flock for that feafon.

## Pinnated शqadrupeds.

With refpect to the Pinnated Quadrupeds with fin-like feet, there are but few feccies in Hudfon's Bay.. The Walrus, or Sea-Horfe, and Seals, are the only ones that I know.

The Walrus are numerous about Merty and Jones's Illands, but more fo on a fmall ifland called Sea-Horfe Ifland, that lies in the fair way going to Whale Cove. In July one thoufand feven hundred and fixty-leven, when on my voyage to the North of Churchill River, in paffing Sea-Horfe Ithand, we faw fuch numbers of thore animals. lying on the fhore, that when fome fwivel guns loaded with ball were fired among them, the whole beach feemed to be in motion. The greateft part of them. plunged into the water, and many of them fwam round
the veffel within muket-fhot. Every one on board exerted their fkill in killing them, but it was attended with fo little fuccefs, that the few which were killed funk to the bottom, and thofe which were mortally wounded made off out of our reach.

With what propriety thofe animals are called Horfes, I cannot fee; for there is not the leaft refemblance in any one part. Their bodies, fins, $\boldsymbol{\sigma}^{9} c$. are exactly like thofe of an enormous Seal, and the head is not very unlike that animal, except that the nofe is much broader, to give room for the two large tufks that project from the upper jaw. Thofe tufks, and their red fparkling eyes, make them bave a very fierce and formidable appearance.

They are generally found in confiderable numbers, which indicate their love of fociety; and their affection for each other is very apparent, as they always flock round thofe that are wounded, and when they fink, accompany them to the bottom, but foon rife to the furface, and make a hideous roaring, and of all amphibious animals, they are at times the leaft fenfible of danger from man that I know.

They ofter attack fmall boats merely through wantonnefs, and not only put the people in great confurion, but fubject them to great danger; for they always aim at ftaving the boat with their tufks, or endeavour to get in, but are never known to burt the people. In the year one thoufand feven hundred and fixty-fix fome of the floop's
erew, who annually fail to the North to trade with the Efquimaux, were attacked by a great number of thofe animals; and notwithftanding their utmoft endeavours to keep them off, one more daring than the reft, though 2 fmall one, got in over the ftern, and after fitting and-looking at the people fome time, he again plunged into the water to his companions. At that inftant another, of an enormous fize, was getting in over the bow ; and every other means proving ineffectual to prevent fuch an unwelcome vifit, the bowman took up a gun, loaded with goofe-fhot, put the muzzle into the Horfe's mouth, and fhot him dead; the immediately funk, and was followed by all his companions. The people then made the beft of their. way to the veffel, and juft arrived before the Sea-Horfes were ready to make their fecond attack, which in all probability might have been worfe than the firft, as they feemed much earaged at the lofs of their companion.

Thofe animals are of various fizes, according to age and other circumftañces; fome are not larger than an old Seal, but there are thofe among them that are not lefs than two ton weight.

The Akin and teeth are the moft valuable parts to the natives; for the fat is hard and grifly, and the flelh coarfe, black, and tough.

Thofe animals are feldom found on the continent which borders on Hudfon's Bay, or far up, in bays, rivers, or inlets, but ufually frequent fmall iflands, and fea-girt fhoals,
fhoals, at fome diftance from the main land; but as thofe places are frozen over for many miles during Winter, it is ratural to think they keep at the edge of the water among the driving ice during that feafon. They are fuppofed to feed chiefly on marine plants, and perhaps on fhell-firh, for their excrement is exceedingly offenfive.

Seals of various fizes and colours are common in moff seads. parts of Hudfon's Bay, but moft numerous to the North. Some of thofe animals are beautifully fpeckled, black and white; others are of a dirty grey. The former are generally fmall; but fome of the latter arrive at an amazing fize, and their fkins are of great ufe to the Efquimaux; as it is of them they cover their eanoes, make all their boot-legs and fhoes, befides many other parts of their clothing. The Seal-ffins are alfo of great ufe to thofe people as a fubititute for cafks, to preferve oil, so co for Winter ufe; they are allo blown full of wind and dried, and then ufed as buoys on the whale-fifhery. The fleh: and fat of the Seal is alfo more efteemed by the Efquimaux than thofe of any other marine asimal, falmon not: excepted:

Befides thefe, the Sea-Unicorn is known to frequent Hudfon's Bay and Straits, but I never faw one of them. Their horns are frequently purchafed. from our friendly. Efquimaux, who probably get them in the way of. barter from thofe tribes that refide more to the North; but L . never:
never could be informed by the natives whether their fkins are like thofe of the Whale, or hairy like thofe of the Seal; I fuppofe the former.

## Species of Fifb.

The Fifh that inhabit the falt water of Hudfon's Bay are but few:-the Black Whale, White Whate, Salmon, and a fmall filh called Kepling, are the only fpecies of fea-filh in thofe parts *.

## A JOURNEY TO THE

 1 fupole the former.The Black Whale is fometimes found as far South as Churchill River, and I was prefent at the killing of three there; but this was in the courfe of twenty years. To the Northward, particularly near Marble Illand, they are more plentiful; but notwithftanding the Company carried on a filhery in that quarter, from the year one thoufand feven hundred and fixty-five till one thoufand feven hundred and feventy-two, they were fo far from making it anfwer their expectations, that they funk upwards of twenty thoufand pounds; which is the lefs to be wondered. at, when we confider the great inconveniencies and expences

[^57]> NORTHERN.OCEAN.
they laboured under in fuch an undertaking. For as it was impoffible to profecute it from England, all the people employed on that fervice were obliged to refide at their fettlement all the year at extravagant wages, exclufive of their maintenance. The harpooners had no lefs than fifty pounds per annum ftanding wages, and none of the crew lefs than from fifteen to twenty-five pounds; which, together with the Captains falaries, wear and tear of their veffels, and other contingent expences, made it appear on calculation, that if there were a certainty of loading the veffels every year, the Company could not clear themfelves. On the contrary, during the feven years they perfevered in that undertaking, only four Black Whales were taken near Marble Ifland; and, except one, they were fo fmall, that they would not have been deemed payable filh in the Greenland fervice*. But the Hudfon's Bay Company, with a liberality that does honour to them, though perfealy acquainted with the rules obferved in the Greenland fervice, gave the fame premium for a fucking fifh, as for one of the greateft magnitude.

White Whales are very plentiful in thofe parts, particularly from Chefterfield's Inlet to York Fort, or Hay's

White Whate.

[^58]
## A JOURNETTOTHE

River, on the Weft frde of the Bay; and from Cape Smith to Slude River on the Eaft fide. On the Weft coaft they are generally found in the greateft numbers at the mouths of the principal rivers; fuch as Seal River, Churchill, Port Nelfon, and Hay's Rivers. But the Eaft fide of the Bay not being fo well known, Whate River is the only part they are known to frequent in very confiderable numbers. Some years ago the Company had a fettlement at this river, called Richmond Fort; but all their endeavours to eftablifh a profitable fifhery here proved ineffectual, and the few Indians who reforted to it with furrs proving very inadequate to the expences, the Company determined to evacuate it. Accordingly, after keeping up this fettlement for upward of twelve years, and finking many thoufands of pounds, they ordered it to be burnt, for the more eafily getting the fpikes and other iron-work. This was in the year one thoufand feven hundred and fiftyeight.

At the old eftablifhed Factories on the Weft fide of the Bay, the Company have been more fuccefsful in the White Whale fifhery, particularly at Churchill, where fuch of the Company's fervants as cannot be employed during that feafon to more benefit for the Company, are fent on that duty, and in fome fuccefful years they fend home from eight to thirteen tons of fine oil. To encourage a fpirit of induftry among thofe employed on this fervice, the Company allows a gratuity, not only to the harpooners, but to every man that fails in the boats; and this
gratuity is fo ample as to infpire them with emulation, as they well know that the more they kill, the greater will be their emolument.

Salmon are in fome feafons very numerous on the North :Weft fide of Hudfon's Bay, particularly at Knapp's Bay and Whale Cove. At the latter I once found them fo plentiful, that had we been provided with a fufficient number of nets, cafks, and falt, we might foon have loaded the veffel with them. But this is feldom the cafe, for in fome years they are fo fcarce, that it is with difficulty a few meals of them can be procured during our flay at thofe harbours. They are in fome years fo plentiful near Churchill River, that I have known upward of two hundred fine filh taken out of four fmall nets in one tide within a quarter of a mile of the Fort; but in other years they are fo fcarce, that barely that number have been taken in upward of twenty nets during the whole feafon, which generally begins the latter end of June, and ends about the middle or latter end of Auguit.

Befide the fifh already mentioned, I know of no other that inhabits the falt water except the Kepling, which is a fmall fifh about the fize of a fmelt, but moft excellent eating. In fome years they refort to the fhores near Churchill River in fuch multitudes to fpawn, and fuch numbers of them are left dry among the rocks, as at times to be 3 E2 quite
quite offenfive. In other feafons they are fo fcarce, that hardly a meal can be procured.

The fame remark may be made on almof every feccies of game, which conftitutes the greateft part of the fare of the people refiding in thofe parts. For inftance, in fome years, hundreds of deer may eafily be killed within a mile of York Fort; and in others, there is not one to be feen within twenty or thirty miles. One day thoufands and tens of thoufands of geefe are feen, but the next they all raife flight, and go to the North to breed. Salmon, as I have lately obferved, is fo plentiful in fome years at Churchill River, that it might be procured in any quantity; at others, fo fcarce as to be thought a great delicacy.

In fact, after twenty years refidence in this country, I am perfuaded that whoever relies much on the produce of the different feafons, will frequently be deceived, and occafionally expofe himfelf and men to great want.

To remedy this evil, it is moft prudent for thofe in command to avail themfelves of plentiful feafons, and cure a fufficient quantity of the leaft perifhable food, particularly geefe.

## Sbell Fi/b.

Shell Fifh.
Shell Fish of a variety of kinds are alfo found in fome parts of Hudfon's Bay. Mufcles in particular are in great abundance on the rocky fhores near Churchill River, and what is vulgarly called the Periwinkle are very plentiful

> NORTHERNOCEAN.
on the rocks which dry at low-water. Small Crabs and Star-filh are frequently th own on the fhore by the furf in heavy gales of wind; and the empty fhclls of Wilks, fmall Scallops, Cockles, and many other kinds, are to be found on the beaches in great plenty. The fame may be faid of the interior parts of the country, where the banks of the lakes and rivers abound with empty fhells of various kinds; but the fifh themfelves have never been difcovered by the natives.

## Frogs, Grubs, and other Infects.

Frogs of various colours are numerous in thofe parts Frogsas far North as the latitude ${ }^{\circ} 1^{\circ}$. They always frequent the margins of lakes, ponds, rivers, and fwamps: and as the Winter approaches, they burrow under the mofs, at a confiderable diftance from the water, where they remain in a frozen ftate till the Spring. I have frequently feen them dug up with the mofs, (when pitching tents in Winter,) frozen as hard as ice: in which fate the legs are as eafily broken off as a pipe-ftem, without giving the leaft fenfation to the animal; but by wrapping them up in warm fkins, and expofing them to a flow fire, they foon recover life, and the mutilated animal gains its ufual activity; but if they are permitted to freeze again, they are paft all recovery, and are never more knowin to come to life. The fame may be faid of the various fecies of Spiders,

Sivers and

Spiders, and all the Grub kind, which are very numerous in thofe parts. I have feen thoufands of them dug up with the mofs, when we were pitching our tents in the Winter; all of which were invariably enclofed in a thick web, which Nature teaches them to fpin on thofe occafions; yet they were apparently all frozen as hard as ice. The Spiders, if let fall from any height on a hard fubftance, would rebound like a grey pea; and all the Grub kind are fo hard frozen as to be as eafily broken as a piece of ice of the fame fize; yet when expofed to a flow heat, even in the depth of Winter, they will foon come to life, and in a fhort time recover their ufual motions.

## Birds.

The feathered creation that refort to thofe parts in the different feafons are numerous, but fuch as brave the fevere Winter are but few in number, and Shall be particularly noticed in their proper places.

Eagles. EAGles of feveral forts are found in the country bordering on Hudfon's Bay during the Summer; but none, except the common brown Fifhing Eagle, ever frequent the Northern parts. They always make their appearance in thofe dreary regions about the latter end of March or beginning of April, and build their nefts in lofty trees, in the crevices of inacceffible rocks near the
banks
banks of rivers. They lay but two eggs, (which are white,) and frequently bring but one young. They generally feed on fifh, which they catch as they are fwimming near the furface; but they are very deftructive to the muik rat and hares, as alfo to geefe and ducks, when in a moulting fate, and frequently kill young beaver. Their nefts are very large, frequently fix feet in diameter; and before their young can ly, are fo provident, that the Indians frequently take a moft excellent meal of fifh, flefh, and fowl from their larder. Though they bring forth their young fo early as the latter end of May, or the beginning of June, yet they never fly till September; a little after which they migrate to the Southward. They are the moft ravenous of any bird I know; for when kept in confinement, or in a tame ftate as it may be called, I have known two of them eat more than a bufhel of fifh in a day. They are never known to breed on the barren grounds to the North of Churchill River, though many of the lakes and rivers in thofe parts abound with variety of fih. This is probably owing to the want of trees or high rocks to build in. The Northern Indians are very partial to the quill-feathers of the Eagle, as well as to thofe of the hawk, to wing or plume their arrows with, out of a fuperfitious notion that they have a greater effect than if winged with the feathers of geefe, cranes, crows, or other birds, that in fact would do equally as well. The fleh of the Eagle is ufually eaten by moft of the Indians, but is always black, hard, and fifhy; even the

## A JOURNEY TO THE

young ones, $\cdot$ when in a callow ftate, though the flefh is delicate white, are fo rank as to render them very unpleafant to fome perfons, except in times of neceffity.

## Mawks of

 variousfizes.Hawns of various fizes and plumage frequent the different parts of the country round Hudfon's Bay during Summer. Some of thofe Hawks are fo large as to weigh thrce pounds, and others-fo fmall as not to exceed five or fix ounces. But the weight of thofe, as well as every other fpecies of Birds, is no ftandard for the Naturalift to go by ; for at different feafons, and when in want of food, they are often fcarcely half the weight they are when fat and in good order. Notwithftanding the variety of Hawks that refort to thofe parts in Summer, I know but one fpecies that brave the intenfe cold of the long Winters to the North of Churchill River; and that is what Mr. Pennant calls the Sacre Falcon.' They, like the other large fpecies of Hawks, prey much on the white groufe or partridge, and alfo on the American hare, ufually called here Rabbits. They are always found to frequent thofe parts where partridges are plentiful, and are detefted by the fportfmen, as they generally drive all the game off the ground near their tents; but, in return, they often drive thither frefh flocks of fome hundreds. Notwithftanding this, they fo frequently baulk thofe who are employed on the hunting fervice, that the Governors generally give a reward of a quart of brandy for each of their heads. Their flefh is always caten by the Indians, and fometimes by the Englin;

Englifh; but it is always black, hard, and tough, and fometimes has a bitter talte.

The Indians are fond of taming thofe birds, and frequently keep them the whole Summer; but as the Winter approaches they generally take flight, and provide for themfelves. When at Cumberland Houfe I had one of them, of which my people were remarkably fond; and as it never wanted for food, would in all probability have remained with us all the Winter, had it not been killed by an Indian who did not know it to be tame.

The beautiful fpecies of White or Snowy Owl is common in all parts of Hudion's Bay, as far North as the

White or Snowy Owlo Copper-mine River. Thefe birds, when flying or fitting, appear very large, but when killed, feldom weigh more than three and a half, or four pounds, and fometimes fcarcely half that weight. They generally feed on mice and partridges, and are at times known to kill rabbits. They are, like the hawk, very troublefome to the fportfmen; and, contrary to any other bird that I know, have a great propenfity to follow the report of a gun, and frequently follow the hunters (as they are ufually called in Hudfon's Bay) the whole day. On thofe occafions they ufually perch on high trees, and watch till a bird is killed, when they fkim down and carry it off before the hunter can get near it; but in return, the hnnters, when they fee them on the watch ${ }_{2}$ frequently decoy them within gun-hot, by throwing up a dead bird, which

## A JOURNEY TO.THE

the Owl feldom refufes to accept; but the fportfman being fully provided for this vifit, and on his guard, generally fhoots them before they can carry off the partridge. They are, however, fo great a hindrance to thofe employed on the hunting fervice, that the fame premium is given for one of their heads as for that of a hawk.

In Winter they are frequently very fat, their flefh delicately white, and generally efteemed good eating, both by Englifh and Indians. Thofe Owls always make their nefts on the ground, generally lay from three to four eggs, but feldom hatch more than two; and in the extreme North the young ones do not fly till September. They never migrate, but brave the coldeft Winters, even on the barren ground, far remote from any woods; and in thofe fituations perch on high rocks and fones, and watch for their prey.

Grey or Mottled Owl.

The fpecies of Grey or Motrled Owl are by no means fo numerous as the former, are fomething inferior in fize, and always frequent the woods. They never go in fearch of their prey in the day-time, but perch on the tops of lofty pines, and are eafily approached and hot. Their food is generally known to be mice and fmall birds, yet their flefh is delicately white, and nearly as good as a barn-door fowl; of courfe it is much efteemed both by the Englifh and Indians. This fpecies of Owl is called by the Southern Indians Ho-ho, and the former Wap-a-kee-thow.

## NORTHERNOCEAN.

Befides thofe two fpecies of Owls, there is another that remains in Hudfon's Bay all the year, and is called by the Indians Сов-A-dee-соосн. It is fo far inferior in fize to the two former, that it feldom weighs half a pound; is of a mottled brown, the feathers long, and of a moft delicate foft and filky quality. In general this fpecies feed on mice, and birds they find dead; and are fo impudent at times, that they light on a partridge when killed by the hunter, but not being able to carry it off, are often obliged to relinquifh the prize. Like the White Owl, at times, though but feldom, they follow the report of a gun, and by fo frequently fkimming round the fportfmen, frighten the game nearly as much as the hawk. They feldom go far from the woods, build in trees, and lay from two to four eggs. They are never fat, and their fleh is eaten only by the Indians.

Ravens of a moft beautiful glofly black, richly tinged with purple and violet colour, are the conftant inhabitants of Hudfon's Bay ; but are fo far inferior in fize to the Englifh Raven, that they are ufually called Crows. They build their nefts in lofty pine-trees, and generally lay four fpeckled eggs; they bring forth their young fo early as the latter end of May, or the beginning of June. In Summer many of them frequent the barren grounds, feveral hundred miles from any woods; probably invited there by the multitudes of deer and muk-oxen that are killed by the Northern Indians during that feafon, merely for their $3 \mathrm{~F}_{2}$ fkins,

Cob-a-deecooch.
fkins, and who leave their fleh to rot, or be devoured by beafts or birds of prey: At thofe times they are very fat, and the flefh of the young ones is delicately white, and good eating. But in Winter they are, through neceffity, obliged to feed on a black mofs that grows on the pine-trees, alfo on deer's dung, and excrements of other animals. It is true, they kill fome mice; which they find in the furface of the fnow, and catch many wounded partridges and hares; in fome parts of the country they are a great nuifance to the hunter, hy eating the game that is cither caught in fnares or traps. With all this affiftance, they are in general fo poor during the fevere cold in Winter, as to excite wonder how they poffibly can exift.

Their faculty of fcent muft be very acute; for in the coldeft days in Winter, when every kind of effluvia is almoft inftantaneoully deftroyed by the froft, I have frequently known buffaloes and other beaft killed where not one of thofe birds were feen; but in a few hours fcores of them would gather about the fpot to pick up the dung, blood, and other offal. An unarmed man may approach them very near when feeding, but they are fhy of thofe that have a gun; a great proof that they fmell the gunpowder. They are, however, frequently fhot by guns fet for foxes; and fometimes caught in traps butilt for martins. Though, on the whole, they may be called a lhy bird, yet their neceffities in Winter, dre fo great, that, like the White Owl, they frequently follow the report of a gun, keep prudently at a diftance from the fportfman, and frequently

## NORTHERN OCEAN.

carry off many wounded birds. Their quills make moft excellent pens for drawing, or for ladies to write with.

The Cinerbous Crow, or, as it is called by the Southern Indians, Whifk-e-jonifh, by the Englifh Whifkey-

Cinereous Crown jack, and by the Northern Indians Gee-za, but as fome pronounce it, and that with more propriety, Jee-za, though claffed among the Crows, is in reality fo fmall, as feldom to weigh three ounces; the plumage grey, the feathers very long; foft, and filky, and in general entirely unwebbed, and in fome parts much refembles hair. This bird is very familiar, and fond of frequenting habitations, either houfes or tents; and fo much given to pilfering, that no kind of provifions it can come at, either frelh or falt, is fafe from its depredation. It is fo bold as to come into tents, and fit on the edge of the kettle when hanging over the fire, and fteal victuals out of the difhes. It is very troublefone to the hunters, both Englifh and Indian, frequently following them a whole day; it will perch on a tree while the hunter is baiting his martin-traps, and as foon as his back is turned go and eat the baits. It is a kind of mock-bird, and of courfe has a variety of notes; it is eafily tamed, but never lives long in confinement. It is well known to be a provident bird, laying up great quantities of berries in Summer for a Winter ftock; but its natural propenfity to pilfer at all feafons makes it much detefted both by the

## A JOURNEY TOTH゙E

Englifh and Indians. It builds its neft in trees, exactly like that of the blackbird and thrufh; lays four blue eggs, but feldom brings more than three young ones.

I know of only one fort of Wood-pecker that frequents the remote Northern parts of Hudfon's Bay; and this is diftinguifhed by Mr. Pennant by the name of the Golden Winged Bird; but to the South Weft that beautiful fpecies of Wood-pecker with a fcarlet crown is very frequent. The manner of life of this fpecies is nearly alike, always building their nefts in holes in trees, and feeding on worms and infects. They generally have from four to fix young at a time. They are faid to be very deftructive to fruittrees that are raifed in gardens in the more Southern parts of America; but the want of thofe luxuries in Hudfon's Bay renders them very harmlefs and inoffenfive birds. The red feathers of the larger fort, which frequent the interior and Southern parts of the Bay, are much valued by fome of the Indians, who ornament their pipe-ftems with them, and at times ufe them as ornaments to their children's clothing. Neither of the two fpecies here mentioned ever migrate, but are conftant inhabitants of the different climates in which they are found.

There are feveral fpecies of Grouse in the different parts of Hudfon's Bay; but two of the largeft, and one of them the moft beautiful, never reach fo far North
as the latitude $59^{\circ}$ : but as I have feen them in great plenty near Cumberland Houfe, I fhall take the liberty to defrribe them.

The Rupred Grousb. This is the moft beautiful of all that are claffed under that name. They are of a delicate brown, prettily variegated with black and white: tail large and long, like that of a hawk, which is ufually of an orange-colour, beautifully barred with black, chocolate, and white ; and the tail is frequently expanded like a fan. To add to their beauty, they have a ruff of gloffy black feathers, richly tinged with purple round the neck, which they can orect at pleafure: this they frequently do, but more particularly fo when they fpread their long tail, which gives them a noble appearance. In fize they exceed a partridge, but are inferior to a pheafant. In Winter they are ufually found perched on the branches of the pine-trees; and in that feafon are fo tame as to be eafily approached, and of courfe readily fhot.

They always make their nefts on the ground, generally at the root of a tree, and lay to the number of twelve or fourteen eggs. In fome of the Southern parts of America feveral attempts have been made to tame thofe beautiful birds, by taking their eggs and hatching them under domeftic hens, but it was never crowned with fuccefs; for when but a few days old, they always make their efcape into the woods, where they probably pick up a fubfiftence. Their flefh is delicately white and firm, and though

The Ruffed Groulc.

## A JOURNEY TO THE

though they are feldom fat, they are always good eating, and are generally eftemed beft when larded and roafted, or nicely boiled with abit of bacon.

There is fomething very remarkable in thofe birds, and I believe peculiar to themfelves, which is that of clapping their wings with fuch a force, that at half a mile diftance it refembles thunder. I have frequently heard them make that noife near Cumberland Houfe in the month of May, but it was always before San-rife, and a little after Sun-fet. It is faid by Mr. Barton and Le Hontan, that they never clap in this manner but in the Spring and Fall, and I muft acknowledge that I never heard them in Winter, though I have killed many of them in that feafon. The Indians informed me they never make that noife but when feeding, which is very probable; for it is notorioully known that all the fpecies of Groufe feed very early in the mornings, and late in the afternoons. This fpecies is called by fome of the Indians bordering on Hudfon's Bay, Pus-pus-kee, and by others Pus-pus-cue.

Shapp-aiied Sharp-talled Grouse, or, as they are called in HudGroufe. fon's Bay, Pheafant. Thofe birds are always found in the Southern parts of the Bay, are very plentiful in the interior parts of the country, and in fome Winters a few of them are fhot at York Fort, but never reach fo far North as Churchill. In colour they are not very unlike that of the Englifh hen pheafant; but the tail is fhort and pointed, like that of the common duck; and there is no perceivable
NORTHERN OCEAN.
able difference in plumage between the male and femalc. When full-grown, and in good condition, they frequently weigh two pounds, and though the fleh is dark, yet it is juicy, and always efteemed good eating, particularly when larded and roafted. In Summer they feed on berries, and in Winter on the tops of the dwarf birch and the buds of the poplar. In the Fall they are tolerably tame, but in the fevere cold more fhy ; frequently perch on the tops of the higheft poplars, out of moderate gun-fhot, and will not fuffer a near approach. They fometimes, when difturbed in this fituation, dive into the fnow; but the fportfman is equally baulked in his expectations, as they force their way fo faft under it as to raife flight many yards diftant from the place they entered, and very frequently in a diferent direction to that from which the fportfman expects *. They, like the other fpecies of groufe, make their nefts on the ground, and lay from ten to thirteen eggs. Like the Ruffed Groufe, they are not to be tamed, as many trials have been made at York Fort, but without fuccefs; for though they never made their efcape, yet they always died, probably for the want of proper food; for the hens that hatched them were equally fond of them, as they could poffibly have been had they been the produce of their own eggs. This fpecies of Groufe is called by the Southern Indians Aw-kis-cow.

- This I affert from my own experience when at Cumberland Houfe.

Wood Partridge.

> A JOURNEY TU THE

The Wood Partridges have acquired that name in Hudfon's Bay from their alway's frequenting the forefts of pines and fir; and in Winter feeding on the brufh of thofe trees, though they are fondeft of the latter. This fpecies of Groufe is inferior in fize and beauty to the Ruffed, yet may be called a handfome bird; the plumage being of a handfome brown, elegantly fpotted with white and black. The tail is long, and tipped with orange; and the legs are warmly covered with fhort feathers, but the feet are naked. They are generally in the extreme with refpect to fhynefs; fometimes not fuffering a man to come within two gun-fhots, and at others fo tame that the fportfman may kill five or fix out of one tree without fhifting his ftation. They are feen in fome years in confiderable numbers near York Fort. They are very fcarce at Churchill, though numerous in the interior parts, particularly on the borders of the Athapufcow Indians country, where I have feen my Indian companions kill many of them with blunt-headed arrows. In Winter their flefh is black, hard, and bitter, probably owing to the refinous quality of their food during that feafon; but this is not obferved in the rabbits, though they feed exactly in the fame manner in Winter: on the contrary, their flefh is efteemed more delicate than that of the Englifh rabbit. The Southern Indians call this fpecies of Partridge, Miftick-a-pethow; and the Northern Indians call it, Day.

The
NOR.THERN OCEAN.

The Willow Partridges have a ftrong black bill, with fcarlet eye-brows, very large and beautiful in the male, but lefs confpicuous in the female. In Summer they are brown, elegantly barred and mottled with orange, white, and black; and at that feafon the males are very proud and handfome, but the females are lefs beautiful, being of one univerfal brown. As the Fall advances they change to a delicate white, except fourteen black feathers in the tail, which are alfo tipped with white; and their legs and feet, quite down to the nails, are warmly covered with feathers. In the latter end of September and beginning of October they gather in flocks of fome hundreds, and proceed from the open plains and barren grounds, (whete they ufually breed,) to the woods and brufh-willows, where they hord together in a fate of fociety, till difperfed by their common enemies, the hawks, or hunters. They are by far the moft numerous of any of the Groufe fpecies that are found in Hudfon's Bay; and in fome places, when permitted to remain undifturbed for a confiderable time, their number is frequently fo great, as almoft to exceed credibility. I fhall by no means exceed truth, if I affert that I have feen upward of four hundred in one flock near Churchill River; but the greateft number I ever faw was on the North fide of Port Nelfon River, when returning with a packet in March one thoufand feven hundred and fixty-eight : at that time I faw thoufands flying to the North, and the whole furface of the fnow feemed to be in motion by thofe that were feeding on the tops of the fhort willows. Sir

Willow Parindye.

Thomas Button mentions, that when he wintered in Port Nelfon River in one thoufand fix hundred and twelve, his crew killed eighteen hundred dozen of thofe birds, which I have no reafon to doubt; and Mr. Jercmie, formerly Governor at York Fort, when that place was in the poffeffion of the French, and then called Fort Bourbon, afferts, that he and feventy-nine others eat no lefs thar ninety thoufand partridges and twenty-five thoufand hares in the courfe of one Winter; which, confidering the quantity of venifon, geefe, ducks, $\mathscr{E}^{\circ} c$. enumerated in his account, that were killed that year, makes the number fo great, that it is fcarcely poffible to conceive what eighty men could do with them; for on calculation, ninety thoufand partridges and twenty -five thoufand hares divided by eighty, amounts to no lefs than one thoufand one hundred and twenty-five partridges, and three hundred and twelve hares per man. This is by far too great a quantity, particularly when it is confidered that neither partridges nor hares are in feafon, or can be procured in any numbers, more than feven months in the year. Forty thoufand partridges and five thoufand hares would, I think, be much nearer the truth, and will be found, on calculation, to be ample provifion for eighty men for feven months, exclufive of any change. The common weight of thofe birds is from eighteen to twenty-two ounces when firft killed; there are fome few that are nearly that weight when fit for the fpit, but they are fo fcarce as by no means to ferve as a ftandard, and as they always hord with the com-
mon fize, there is no room to fufpect them of another fpecies. As all thofe over-grown partridges are notorioufly known to be males, it is more than probable that they are imperfect, and grow large and fat like capons; and every one that has had an opportunity of tafting thofe large partridges, will readily allow that they excel the common fort as much in flavour as they do in fize. It is remarked in thofe birds, as well as the Rock Partridge, that they are provided with additional clothing, as it may be called; for every feather, from the largeft to the fmalleft, except the quills and tail, are all double. The under-feather is foft aud downy, fhooting from the fhaft of the larger; and is wonderfully adapted to their fituation, as they not only brave the coldeft Winters, but the fpecies now under confideration always burrow under the fnow at nights, and at day-light come forth to feed. In Winter they are always found to frequent the banks of rivers and creeks, the frdes of lakes and ponds, and the plains which abound with dwarf willows; for it is on the buds and tops of that tree they always feed during the Winter. In Summer they eat berries and fmall herbage. Their food in. Winter being fo dry and harh, makes it neceffary for them to fwallow a confiderable quantity of gravel to promote digeftion; but the great depth of fnow renders it very fcarce during that feafon. The Indians having confidered this point, invented the method now in ufe among the Englifh, of catching them in nets by means of that fimple allurement, a heap of gravel. The nets for this purpofe are from eight
to twelve feet fquare, and are ftretched in a frame of wood, and ufually fet on the ice of rivers, creeks, ponds, and lakes, about one hundred yards from the willows, but in fome fituations not half that diftance. Under the center of the net a heap of fnow is thrown up to the fize of one or two bufhels, and when well packed is covered with gravel. To fet the nets, when thus prepared, requires no other trouble than lifting up one fide of the frame, and fupporting it with two fmall props, about four feet long: a line is faftened to thofe props, and the other end being conveyed to the neighbouring willows, is always fo contrived that a man can get to it without being feen by the birds under the net. When every thing is thus prepared, the hunters have nothing to do but go into the adjacent willows and woods, and when they ftart game, endeavour to drive them into the net, which at times is no hard tafk, as they frequently run before them like chickens; and fometimes require no driving, for as foon as they fee the black heap of gravel on the white fnow they fly ftreight towards it. The hunter then goes to the end of the line to watch their motions, and when he fees there are as many about the gravel as the net can cover, or as many as are likely to go under at that time, with a fudden pull he hawls down the ftakes, and the net falls horizontally on the fnow, and enclofes the greateft part of the birds that are under it. The hunter then runs to the net as foon as poffible, and kills all the birds by biting them at the back of the head. He then fets up the net, takes
takes away all the dead game, and repeats the operation as often as he pleafes, or as long as the birds are in good humour. By this fimple contrivance I have known upwards of three hundred partridges caught in one morning by three perfons; and a much greater number might have been procured had it been thought neceffary. Early in the morning, juft at break of day, and early in the afternoon, is the beft time for this fport. It is common to get from thirty to feventy at one hawl; and in the Winter of one thoufand feven hundred and eighty-fix, Mr. Prince, then Mafter of a floop at Churchill River, actually caught two hundred and four at two hawls. They are by no means equally plentiful every year; for in fome Winters I have known them fo fcarce, that it was impoffible to catch any in nets, and all that could be procured with the gun would hardly afford one day's allowance per week to the men during the feafon; but in the Winter one thoufand feven hundred and eighty-five, they were fo plentiful near Churchill, and fuch numbers were brought to the Factory, that I gave upward of two thoufand to the hogs. In the latter! end of March, or the beginning of April, thofe birds begin to change from white to their beautiful Summer plumage, and the firft brown feathers make their appearance on the neck *, and by degrees fpread

[^59]fpread over the whole body; but their Summer drefs is feldom complete till July. The feathers of thofe birds make excellent beds, and as they are the perquifite of the hunters, are ufually fold to the Captains and Mates of the Company' hips, at the eafy sate of three pence per pound.

Rock Par:ridges.

Rock Partridges. This feecies of Groufe are in Winter of the fame colour as the former, but inferior in fize; being in general not more than two-thirds of the weight. They have a black line from the bill to the eye, and differ in nature and manner from the Willow Partridge. They never frequent the woods or willows, but brave the fevereft cold on the open plains. They always feed on the buds and tops of the dwarf birch, and after this repaft, generally fit on the high ridges of fnow, with their heads to windward. 'They are never caught in nets, like the Willow Partridge; for when in want of gravel, their bills are of fuch an amazing ftrength, that they pick a fufficient quantity out of the rocks. Befide, being fo much inferior in fize to the former fpecies, their flefh is by no means fo good, being black, hard, and bitter. They are in general, like the Wood Partridge, either exceeding wild or very tame; and when in the latter humour, I have
undoubtedly owing to fome accident; and nothing is more likety thar that the feathers of the bird Mr. Dragge had examined, had been ftruck off by a hawk; and as the ufual feafon for changing their plumage was near, the Summer feathers fupplied their place; for out of the many hundresis of thoufands that I have feen killed, I never faw or heard of a fimilar inftance.
known one man kill one hundred and twenty in a few hours; for as they ufually keep in large flocks, the fportfmen can frequently kill fix or eight at a fhot. Thefe, like the Willow Partridge, change their plumage in Summer to a beautiful fpeckled brown; and at that feafon are fo hardy, that, unlefs fhot in the head or vitals, they will fly away with the greateft quantity of fhot of any bird I know. They difcover great fondnefs for their young; for during the time of incubation, they will frequently fuffer themfelves to be taken by hand off their eggs *. Pigeons of a fmall fize, not larger than a thrufh, are in fome Summers found as far North as Churchill River. The bill is of a flefh-colour, legs red, and the greateft part of the plumage of a light lilac or blufh. In the interior parts of the country they fly in large flocks, and perch on the poplar trees in fuch numbers that I have feen twelve of them killed at one fhot. They ufually feed on

[^60]poplar buds, and are good eating, though feldom fat. They build their nefts in trees, the fame as the Wood Pigeons do; never lay but two eggs, and are very fcarce near the fea-coaft in the Northern parts of Hudfon's Bay.

Red-breafted Thrufh.

The Red-breasted Thrushes, commonly called in Hudfon's Bay the Red Birds, but by fome the Black Birds, on account of their note, and by others the American Fieldfares ufually make their appearance at Churchill River about the middle of May, build their nefts of mud, like the Englih Thrufh, and lay four beautiful blue eggs. They have a very loud and pleafing note, which they generally exercife moft in the mornings and evenings, when perched on fome lofty tree near their neft; but when the young can fly they are filent, and migrate to the South early in the Fall. They are by no means numerous, and are generally feen in pairs; they are never fought after as an article of food, but when killed by the Indian boys, are efteemed good eating, though they always feed on worms and infects.

Groberak.
Grosbear. Thefe gay birds vifit Churchill River in fome years fo early as the latter end of March, but are by no means plentiful; they are always feen in pairs, and generally feed on the buds of the poplar and willow. The male is in moft parts of its plumage of a beautiful crimfon, but the female of a dull dirty green. In form they much refemble the Englifh bullfinch, but are near
double their fize. They build their nefts in trees, fometimes not far from the ground ; lay four white eggs, and always hatch them in June. They are faid to have a pleafing note in Spring, though I never heard it, and are known to retire to the South early in the Fall. The Englifh refiding in Hudfon's Bay generally call this bird the American Red Bird.

Snow Buntings, univerfally known in Hudion's Bay by the name of the Snow Birds, and in the Ifles of Orkney by the name of Snow Flakes, from their vifiting thofe parts in fuch numbers as to devour the grain as foon as fown, in fome years are fo deftructive as to oblige the farmer to fow his fields a fecond and occafionally a third time. Thefe birds make their appearance at the Northern fettlements in the Bay about the latter end of May, or beginning of April, when they are very fat, and not inferior in flavour to an ortolan. On their firft arrival they generally feed on grafs-feeds, and are fond of frequenting dunghills. At that time they are eafily caught in great numbers under a net baited with groats or oatmeal; but as the Summer advances, they feed much on worms, and are then not fo much efteemed. They fometimes fly in fuch large flocks, that I have killed upwards of twenty at one hot, and have known others who have killed double that number. In the Spring their plumage is prettily variegated, black and white; but their Summer drefs may be called elegant, though not gay. They live

$$
3 \mathrm{H}_{2} \quad \text { long }
$$

Whitecrowned Buating.

A JOURNEY TO THE
long in confinement, have naturally a pleafing note, and when in company with Canary birds foon imitate their fong. I have kept many of them in cages in the fame room with Canary birds, and always found they fung in Winter as well as in Summer; but even in confinement they change their plumage according to the feafon, the fame as in a wild ftate. This fpecies of bird feem fond of the coldeft regions, for as the Spring advances they fly fo far North that their breeding-places are not known to the inhabitants of Hudfon's Bay. In Autumn they return to the South in large flocks, and are frequently fhot in confiderable numbers merely as a delicacy; at that feafon, however, they are by no means fo good as when they firtt make their appearance in Spring.

White-crowned Bunting. This fpecies is inferior in fize to the former, and feldom make their appearance till June. 'They breed in moft parts of the Bay, always make their nefts on the ground, at the root of a dwarf willow or a goofeberry-buh. During the time their young are in a callow fate they have a delightful note, but as foon as they are fledged they become filent, and retire ta the South early in September.

Lapland Finch. This bird is common on Hudfon's Bay, and never migrates Southward in the coldeft Winters. During that feafon it generally frequents the juniper plains, and feeds on the fmall buds of that tree, alfo on grafsfeeds;

## NORTHERNOCEAN.

feeds but at the approach of Summer it flies fill farther North to breed. A variety of this bird is alfo common, and is beautifully marked with a red forehead and breaft. It is moft common in the Spring, and frequently caught in nets fet for the Snow Bunting; and when kept in cages has a pleafing note, but feldom lives long in confinement, though it generally dies very fat.

Larks of a pretty variegated colour frequent thofe parts in Summer, and always make their appearance, in May; build their nefts on the ground, ufually by the fide of a ftone at the root of a fmall buih, lay four fpeckled eggs, and bring forth their young in June. At their firft arrival, and till the young can fly, the male is in full fong; and, like the fky-lark, foars to a great height, and generally defcends in a perpendicular direction near their neff. Their note is loud and agreeable, but confifts of little variety, and as foon as the young can fly they become filent, and retire to the Southward early in the Fall. They are impatient of confinement, never fing in that ftate, and feldom live long.

The Titmouse is ufually called in Hudfon's Bay, Black- Titmorfe. cap. This diminutive bird braves the coldeft Winter, and during that feafon feeds on the feeds of long rye-grafs, but in Summer on infects and berries. The Southern. Indians call this bird Kifs-kifs-herhis, from a twittering noife they make, which much refembles that word in found.

Swallows.

## A JOURNEY TO THE

Swallows vifit thefe parts in confiderable numbers in Summer, and are very domeftic; building their nefts in neceffaries, ftables, and other out-offices that are much frequented. They feldom make their appearance at Churchill River till June, and retire South early in Auguft. They, like the European Swallow, gather in large flocks on the day of their departure, make feveral revolutions round the breeding-places, and then take their leave till the next year. I do not recollect to have feen any of thofe birds to the North of Seal River.

Martins. Martins alfo vifit Hudfoh's Bay in great numbers, but feldom fo far North as Churchill River. They ufually make their nefts in holes formed in the fteep banks of rivers; and, like the Swallow, lay four or five fpeckled eggs; and retire Southward in Auguft. At the Northern fettlements they are by no means fo domeftic as the Swallow.

Hooping Cranc.

Hooping Crane. This bird vifits Hudfon's Bay in the Spring, though not in great numbers. They are generally feen only in pairs, and that not very often. It is a bird of confiderable fize, often equal to that of a good turkey, and the great length of the bil, neck, and legs, makes it meafure, from the bill to the toes, near fix feet in common, and fome much more. Its plumage is of a pure white, except the quill-feathers, which are black; the crown is covered with a red Ikin, thinly
thinly befet with black brifles, and the legs are large and black. It ufually frequents open fwamps, the fides of rivers, and the margins of lakes and ponds, feeds on frogs and fmall fifh, and efteemed good eating. . The wing-bones of this bird are fo long and large, that I have known them made into flutes with tolerable fuccefs. It feldom has more than two young, and retires Southward early in the Fall.

The Brown $\boldsymbol{C}_{\text {rane. }}$ This fpecies is far inferior in fize to the former, being feldom three feet and a half in length, and on an average not weighing feven pounds. Their haunts and manner of life are nearly the fame as that of the Hooping Crane, and they never have more than two young, and thofe feldom fly till September. They are found farther North than the former, for I have killed feveral of them on Marble Ifland, and have feen them on the Continent as high as the latitude $65^{\circ}$. They are generally efteemed good eating, and, from the form of the body when fit for the fiit, they acquire the name of the North Weft Turkey. There is a circumftance refpecting this bird that is very peculiar; which is, that the gizard is larger than that of a fwan, and remarkably fo in the young birds. The Brown Cranes are frequently feen in hot calm. days to foar to an amazing height, always flying in circles, till by degrees they are almoft out of fight, yet their note is foloud, that the fportfman, before he fees their fituation, often fancies they are very near him. They vifit

## A JOURNEY TOTHE

Hudfon's Bay in far greater numbers than the former, and are very good eating.

Biterns. Bitterns are common at York Fort in Summer, but are feldom found fo far North as Churchill River. I have feen two fpecies of this bird; fome having afh-coloured legs, others with beautiful grafs-green legs, and very gay plumage. They always frequent marfhes and fwamps, alfo the banks of rivers that abound with reeds and long grafs. They generally feed on infects that are bred in the water, and probably on fmall frogs; and though feldom fat, they are generally good eating. They are by no means numerous even at York Fort, nor in fact in the moft Southern parts of the Bay that I have vifited.

Curlew. Curlews. There are two fpecies of this bird which frequent the coafts of Hudfon's Bay in great numbers during Summer, and breed in all parts of it as far North as the latitude $72^{\circ}$; the largef of this fpecies is diftinguifhed by that great Naturalift Mr. Pennant, by the name of the Efquimaux Curlew. They always keep near the fea coaft ; attend the ebbing of the tide, and are frequently found at low-water-mark in great numbers, where they feed on marine infects, which they find by the fides of fones in great plenty; but at high-water they retire to the dry ridges and wait the receding of the tide. They fly as fteady as a woodcock, anfwer to a whiftle that refembles their note; lay, long on their wings, and are a moft
NORTHERN OCEAN.
moft excellent fhot, and at times are delicious eating. The other fpecies of Curlew are in colour and thape exactly like the former, though inferior in fize, and differ in their manner of life, as they never frequent the water'sedge, but always keep among the rocks and dry ridges, and feed on berries and fmall infects. The flefh of this bird is generally more efteemed than that of the former, but they are by no means fo numerous. This feecies of Curlew are feldom found farther North than Egg River.

Jace Smifes. Thofe birds vifit Hudfon's Bay in Summer in confiderable numbers, but are feldom feen to the North of Whale Cove. They do not arrive till the ice of the rivers is broke up, and they retire to the South early in the Fall. During their ftay, they always frequent marhes near the fea coant, and the hozes of great rivers. In manner and flight they exactly refemble the European Jack Snipe; and when on the wing, fly at fuch a diftance from each other, that it is but feldom the beft fportiman can get more than one or two at a hot. Their flegh is by no means fo delicate as that of the Englifl Enipe.

Red Godwaits, ufually called at the Northern fettlements in Hudfon's Bay, Plovers. Thofe birds vifit the Shores of that part in very large flocks, and ufually frequent the marihes and the margias of ponds. They alfo frequently attend the tide, like the Efquimaux Curlews; fly down to low-water-mark, and feed on a fmall fifh,

$$
3 I
$$

Red Gode wait.
not much unlike a hrimp; but as the tide flows, they retire to the marfhes. They fly in fuch large flocks, and fo clofe to each other, that I have often killed upwards of twelye at orre fhot; and Mr. Atkinfon, Inng refident at York Fort, tequalfy killed feventy-two at fone fhot; but that was when the birds were fitting. Near Chưrchill River thét ate feldom fat, thoughtederably flelhy, and are generdtly good eating. . Thety ufually weigh from ten to thirteen ounces; the female is always larger than the male, and differs in colour, being of a much lighter brown. They retire to the South long before the froft commences; yet I have feen this bird as far North as the latitude $71^{\circ}$. $50^{\prime}$.

Spotrbd Godwait, known in Hudfon's Bay by the name of Yellow Legs. This bird alfo vifits that country in confiderable numbers, but more fo in the interior parts; and ufually frequents the flat muddy banks of rivers. In Summer it is generally very poor, but late in the Fall is, as it may be called, one lump of fat. This bird, with many others of the migratory tribe, 1 faw in conGderable numbers as far North as the latitude $71^{\circ}{ }^{\circ} 54^{\prime}$; and at York Fort I have known them fhot fo late as the latter end of October: at which time they are in the greateft perfection, and moft delicious eating, more particularly 50 when put into a bit of pafte, and boiled like an appledumpling; for' in fact they are generally too fat at that feafon to be eaten either roafted or boiled.
NORTHERN OCEAN.

Hebridal Sandpipers, but more commonly known in Hudfon's Bay by the Name of Whale Birds, on account of their feeding on the carcafes of thofe animals which frequently lie on the fhores, alfo on maggots that are produced in them by fly-blows. Thefe birds frequent thofe parts in confiderable numbers, and always keep near the margin of the fea. They may, in fact, be called beautiful birds, though not gay in their plumage; they are ufually very fat, but even when firft killed they. finell and tafte fo much like train-oil as to render them by no means pleafing to the palate, yet they are frequently eaten by the Company's fervants. As the Summer advances they fly fo far North of Churchill River, that their breeding-places are not known, though they remain at that part till the beginning of July, and return early in the Fall. They are by no means large birds, as they feldom weigh four ounces. The bill is black, plumage prettily variegated black and white, and the legs and feet are of a beautiful orange colour*.

Plovers, commonly called Hawk's Eyes, from their watchfulnefs to prevent a near approach when fitting. When thefe birds are on the wing, they fly very fwift and irregular, particularly when fingle or in fmall flocks. At Churchill River they are by no means numerous; but I have feen them in fuch large flocks at York Fort in the Fall of one

[^61]Hebridal Sandpipers.
thoufand feven hundred and feventy-three, that Mr. Ferdinand Jacobs then Governor, Mr. Robert Body Surgeon, and myfelf, killed in one afternoon as many as two mien could conveniently carry. They generally feed on infects, and are at all times good eating, but late in the Fall are moft excellent. They are by no means equally plentiful in all years; and at the Northern fettlements in the Bay they are not claffed with thofe fpecies of game that add to the general ftock of provifions, being only killed as a luxury; but I am informed that at Albany Fort, feveral barrels of them are annually falted for Winter ufe, and are efteemed good eating. This bird during Summer reforts to the remoteft Northern parts; for I have feen them at the Copper River, though in thofe dreary regions only in pairs. The young of thofe birds always leave their nelts as foon as hatched, and when but a few days old ruin very faft; at night, or in rainy weather, the old ones call them together, and cover them with their wings, in the fame manner as a hen does her chickens.

Black Gullemots.

Black Guleemots, known in Hudfon's Bay by the name of Sea Pigeons. Thofe birds frequent the hores of Hudfon's Bay and Straits in confiderable numbers; but more particularly the Northern parts, where they fly in large flocks; to the Southward they are only feen in pairs. They are of a fine black, but not gloffy, with fcarlet legs and feet; and the coverets of the wings are marked with white. They are in weight equal to a Widgeon, though
though to appearance not fo large. They ufually make their nefts in the holes of rocks, and lay two white eggs, which are delicate eating, but not proportionably large for the fize of the bird. My friend Mr. Pennant fays, they brave the coldeft Winters in thofe parts, by keeping at the edge of the ice near the open water; but as the fea at that feafon is frozen over for feveral miles from the fhore, I believe tro one's curiofity ever tempted him to confirm the truth of this; and it is well known they never make their appearance near the land after the froft becomes fevere.

Northern Divers. Thefe birds, though common in Hudfon's Bay, are by no means plentiful; they are feldom found near the fea coaft, but more frequently in frefh water lakes, and ufually in pairs. They build their nelts at the edge of finall inands, or the margins of lakes or ponds; they lay only two eggs, and it is very common to find only one pari and their young in one fheet of water; a great proof of their averfion to fociety. They are known in Hudfon's Bay by the name of Loons. They differ in fpecies from the Black and Red throated Divers, having a large black bill near four inches long; plumage on the back of a glofly black, elegantly baered with white; the belly of a filver white; and they are fo large as at times to weigh ffteen or fixteen pounds. Their fleft is always black, hard, and fifhy, yet it is generally eaten by the Indians.
A JOURNEY:TOTHE
$\because$ Biack-throated Dịvers. TThis fpecies are more beautiful than the former; 'having a long white bill, plumage on the back and wings black, elegantly tinged with purple and green, and prettily marked with white fpots. In fize they are equal to the former; but are fo watch ful as to dive at the flafh of a gun, and of courfe are feldom killed but when on the wing. Their flefh is equally black and fifhy with the former, but it is always eaten by the Indians. The fkins of thofe birds are very thick and ftrong, and they are. frequently dreffed with the fearhers on, and made into caps for the Indian men. The fkins of the Eagle and Raven, with their plumage complete, are alfo applied to that ufe, and are far from being an unbecoming head-drefs for a favage.

Red-throated Dizers.

- Red-throated Divers. This.fpecies are alfo called Loonsingudfon's Bay ; but they are fo far iriferior to the two:华mer, that they feldom weigh more than three or four ¢ounds. They, like the other fpecies of Loon, are excellent divers; they always feed on fifh, and when in purfuit of their'prey, are frequently entangled in filhing-nets, fet at the mouthis of creeks and fmall rivers. They are more numerous than either of the former, as they frequently fly in flocks; but like them make their nefts at the edge of the water, and only lay two eggs, which, though very rank and filhy, are always eaten by Indians and Englifh. The legs of thofe three fecies of Loon are placed fo near the
the rump as to be of no fervice to them on the land, as they are perfectly incapable of walking; and when found in that fituation (which is but feldom) they are eafily taken, though they make a ftrong refiftance with their bill, which is very hard and fharp.

White Gulls. Thefe birds vifit Hudfon's Bay in WhiteGulle great numbers, both on the fea coafts and in the interior parts, and probably extend quite acrofs the continent of America. They generally make their appearance at Churchill River about the middle of May; build their nefts on the iflands in lakes and rivers; lay two fpeckled eggs, and bring forth their young in June. Their eggs are generally efteemed good eating, as well as the flefh of thofe in the interior parts of the country, though they feed on filh and carrion. .They make_their ftay on Hudfon's Bay as long in the Fall as the froft will permit them to procure a livelihood.

Grey Gulls. Thefe birds, though common, are by no Grey Gulls means plentiful; and. I. never knew their breeding-places, as they feldom makè their appearance at Churchill River till the Fall of the year, and remain there only till the ice begins to be formed about the fhores. They feldom, frequent the interior parts of the country. They are not inferior in fize to the former, and in the Fall of the year are generally fat. The fleh is white and very-good eating; and, like moft
moft other Gulls, they are a moft excellent fhot when on the wing.

Black Gulls. Blact Gulls, ufually called in Hudfon's Bay, Men of War, from their purfuing and taking the prey from a leffer fpecies of Gull, known in that country by the name of Black-head. In fize they are much inferior to the two former fpecies; but, like them, always make their nefts on iflands, or at the margins of lakes or ponds; they lay only two eggs, and are found at a confiderable diftance from the fea coaft. The length of their wings is very great in proportion to the body; the tail is uniform, and the two middle feathers are four or five inches longer than the reft. Their eggs are always eaten, both by the Indians and Englifh; but the bird iffelf is generally rejected, except when other provifions are very fcarce.

Bizek-beads.
Black-heads. Thefe are the fmalleft fpecies of Gull that I know. They vifit the fea coaft of Hudfon's Bay in fuch vaft numbers, that they are frequently feen in flocks of feveral hundreds; and I have known buihels of their eggs taken on an illand of very frat circumference. Thefe eggs are very delicate eating, the yodks being equal to that of a young pullet, and the monites of a ferni-tranf parent azure, but the bird infelf is always filoy. Their affection for their young is fo flrong, that when any perfon atternpts to rod their nefts, they fly at him, and fometimes
approach fo near as to touch him with their pinions; and when they find their lofs, will frequently follow the plunderer to a confiderable diftance, and exprefs their grief by making an unufual fcreaming noife.

This bird may be ranked with the elegant part of the feathered creation, though it is by no means gay. The bill, legs, and feet are of a rich fcarlet; crown black, and the remainder of the plumage of a light ahh-colour, except the quill-feathers, which are prettily barred, and tipped with llack; and the tail much forked. The flight, or extent of wing, in this bird, is very great, in proportion to the body. They are found as far North as has hitherto been vifited, but retire to the South early in the Fall.

Pelicans. Thofe birds are numerous in the interior Pelicans: parts of the country, but never appear near the fea-coaft. They generally frequent large lakes, and always make their nefts on iflands. They are fo provident for their young, that great quantities of fifh lie rotting near their nefts, and emit fuch a horrid flench as to be fmelt at a confiderable diftance. The flefh of the young Pelican is frequently eaten by the Indians; and as they are always very fat, great quantities of it is melted down, and preferved in bladders for Winter ufe *, to mix with pounded flefh;

[^62]Heflr; but by keeping, it grows very rank. The Pelicans in thofe parts are about the fize of a common goofe; their plumage is of a delicate white, except the quill-feathers, which are black. The bill is near a foot long; and the bag, which reaches from the outer-end of the under-mandible to the breaft, is capable of containing upwards of three quarts. The fkins of thofe birds are thick and tough, and are frequently dreffed by the Indians and converted into bags, but are never made into clothing, though their feathers are as hard, clofe, and durable, as thofe of a Loon.

Gootanders. Goosandbrs, ofually called in Hudfon's Bay, Shelldrakes. Thofé birds are very common on the fea-coaft, but in the interior parts fly in very large flocks. The bill is long and parrow, and toothed like a faw; and they have a tuft of feathers at the back of the head, which they can erect at pleafure. They are moft excellent divers, and fuch great deftroyers of fifh, that they are frequently obliged to nomit fome of them before they cantake flight. Though not much larger than the Mallard Duck, they frequently fwallow fifh of fix or feven inches
induced us to referve this fat for particular purpofes; but when we came to open the bladders, it was litede fuperior to train oil, and was only catable by a few of my crew, which at that time confifted only of eight Englifmen and two of the home Indians fiom York Fort.

Cumberland Houre was the firft inland fettement the Company made from Hudfon's Fort; and though begun on fo fmall a feale, yet upon it and Hudfon's Houfe, which is fituated beyond is, upwards of feventy men were now employed.

#### Abstract

NORTHERNOCEAN. long and proportionably thick. Thofe that frequent the interior parts of the country prey much on crawfifh, which are very numerous in fome of the fhallow fony rivers. In the Fall of the year they are very fat, and though they always feed on fifh, yet their flefh at that fealon is very good; and they remain in thofe parts as long as the frof will permit them to procure a fubfiftence.

Swans. There are two fpecies of this bird that vifit Hudfon's Bay in Summer; and only differ in fize, as the plumage of both are perfectly white, with black bill and legs. The fmaller fort are more frequent near the feacoaft, but by no means plentiful, and are moft frequently feen in pairs, but fometimes fingle, probably owing to their mates having been killed on their paflage North. Both fpecies ufually breed on the inlands which are in lakes; and the eggs of the larger fpecies are fo big, that one of them is a fufficient meal for a moderate man, without bread, or any ocher addition. In the interior parts of the country the larger Swan precedes every other fpecies of water-fowl, and in fome years arrive fo early as the month of March, long before the ice of the rivers are broken up. At thofe times they always frequent the open waters of falls and rapids, where they are frequently thot by the Indians in confiderable numbers. They ufaally weigh upwards of thirty pounds, and the lefler fpecies from eighteen to twenty-four. The fleh of both are excellent $3 \mathrm{~K}_{2}$ eating,
eating, and when roafted, is equal in flavour to young heifer-beef, and the cygnets are very delicate.

Notwithftanding the fize of this bird, they are fo fwift on the wing as to make them the moft difficult to fhoot of any bird I know, it being frequently neceffary to take fight ten or twelve feet before their bills. This, however, is only when flying before the wind in a brifk gale, at which time they cannot fly at a lefs rate than an hundred miles an hour ; but when flying acrofs the wind, or againft it, they make but a flow progrefs, and are then a noble fhot. In their moulting fate they are not eafily taken, as their large feet, with the affiftance of their wings, enables them to run on the furface of the water as faft as an Indian canoe can be paddled, and therefore they are always obliged to be fhot; for by diving and other manceuvres they render it impoffible to take them by hand. It has been faid that the Swans whiftle or fing before their death, and I have read fome elegant defcriptions of it in fome of the poets; but I have never heard any thing of the kind, though I have been at the deaths of feveral. It is' true, in ferene evenings, after Sun-fet, 1 have heard them make a noife not very unlike that of a French-horn, but entirely divefted of every note that conftituted melody, and have often been forry to find it did not forebode their death. Mr. Lawfon, who, as Mr. Pennant juftly remarks, was no inaccurate obferver, properly enough calls the largef fpecies Trumpeters, and the leffer, Hoopers. Some years ago, when I built Cumberland Houfe, the Indians killed thofe birds
birds in fuch numbers, that the down and quills might have been procured inćconfiderable quantities at a trifling expence; but fince the depopulation of the natives by the fmall-pox, which has alfo driven the few furvivors to frequent other parts of the country, no advantage can be made of thofe articles, though of confiderable value in England*.

Gbese. There are no lefs than ten different fpecies of Geefe that frequent the various parts of Hudfon's Bay during Summer, and are as follow: Firft, The Coumon Grey Goofe. Second, The Canada Goofe. Third, The White, or Snow Goofe. Fifth, The Blue Goofe. Sixth, The Laughing Goofe. Seventh, The Barren Goofe. Eighth, The Brent Goofe. Ninth, The Dunter; and Tenth, the Bean Goofe.

Common Grey Goose. This bird precedps every other fpecies of Goofe in thofe parts, and in fome forward Springs arrives at Churchill River fo early as the latter

- Mr. Pennant, in treating of the Whifting Swann, takes notice of the formation of the Windpipe; but on examination, the windpipes of boch the fpecies which frequent Hudfon's Bay are found to be exactly alike, though their note is quite different. The breaft-bone of this bird is different from any other I have feen; : for inftead of being tharp and folid; tike that of a goofe, it is broad and hollow. Into this cavity the windpipe paffes from the valve, and reaching quite down to the abdomen, returns into the cheft, and joins the lungs. Neither of the fpecies of Swan that frequent Hudfon's Bay are mute; but the note of the larger is much louder and harfher than that of the fmaller.

Common Grey Goofe.

Gecte.
end of April, but more commonly from the eleventh to the fixteenth of May; and-in one year it was the twentyfixth of May before any Geefe made their appearance. At their firft arrival they generally come in pairs, and are fo fond of fociety, that they fly ftreight to the call that imitates their note; by which means they are eafily fhot. They breed in great numbers in the plains and marikes near Churchill River; and in fome years the young ones can be taken in confiderable numbers, and are eafily tamed; but will never learn to eat com, unlefs fome of the old ones are taken with them, which is eafly done when in a moulting ftate. On the ninth of Auguft one thoufand feven hundred and eighty-one, when I refided at Prince of Wales's Fort, I fent fome Indians up Churchill River in canoes to procure fome of thofe Geefe, and in the afternoon they were feen coming down the river with a large flock before them; the young ones not more than halfgrown, and the old ones fo far in a moulting ftate as not to be capable of flying; fo that, with the affiftance of the Englifh and the Indians then refiding on the plantation, the whole flock, to the amount of forty-one, was drove within the ftockade which inclofes the Fort, where they were fed and fattened for Winter ufe. Wild Geefe taken and fattened in this manner are much preferable to any tame Geefe in the world. When this fpecies of Geefe are full-grown. and in good condition, they often weigh twelve pounds, but more frequently much lefs.

$$
\text { NORTHERN OCEAN. } 439
$$

Canada Goose, or Pirk-a-fifh, as it is called by the Indians, as well as the Englifh in Hudfon's Bay. This fpecies do not differ in plumage from the former, but areinferior in fize; the bill is murch fmaller in proportion, and the flelh being much whiter, of courfe is more efteemed." They are by no means fo numerous as the former, and generally lly far North to breed; but fome few of their eggs are found near Churchill River. It is feldom that either of thefe fpecies lay more than four eggs; but if not robbed, they ufually bring them all forth.

White or Snow Goose. Thefe are the moft numerou's of all the fpecies of birds that frequent the Northern parts of the Bay, and generally make their appearance about a week or ten days after the Common Grey Goofe. In the firft part of the feafon they come in frall parties, but in the middle; and toward the latter end, they fly in fuch amazing flocks, that when they fettle in the marfhes to feed, the ground for a confiderable diftance appears like a field of fnow. When feeding in the fame marfh with the Grey Geefe, they never mix. Like the Grey Geefe, they fly to the call that refembles their note; and in fome years are killed and falted in great numbers for Winter provifion; they are almoft univerfally thought good eating, and will, if proper care be taken in curing them, continue good for eighteen months or two years. The Indians are far more expert in killing Geefe, as well as every other feecies of game, than any European I ever faw in Hudfon's Bay; 10

White or Snow Goore.
$\underset{\substack{\text { Canpda } \\ \text { Goofe, }}}{ }$
for fome of them frequently kill upward of a hundred Geefe in a day, whereas the moft expert of the Englifh think it: a good day's work to kill thirty. Some years back it was common for an Indian to kill from a thoufand to twelve hundred Geefe in one feafon; but latterly he is reckoned a good hunter that kills three hundred. This is by no means owing to the degeneracy of the natives; for the Geefe of late years do not frequent thofe parts in fuch numbers as formerly. The general breeding-place of this bird is not known to any Indian in Hudfon's Bay, not even to the Efquimaux who frequent the remoteft North. The general route they take in their return to the South in the Fall of the year, is equally unknown; for though fuch multitudes of them are feen at Churchill River in the Spring, and are frequently killed to the amount of five or fix thoufand; yet in the Fall of the year, feven or eight hundred is confidered a good hunt. At York Fort, though only two degrees South of Churchill River, the Geefe feafons fluctuate fo much, that in fome Springs they have falted forty hogeheads, and in others not more than one or two: and at Albany Fort, the Spring feafon is by no means to be depended on; but in the Fall they frequently falt fixty hogheads of Geefe, befides great quantities of Plover. The retreat of thofe birds in Winter is equally unknown, as that of their breeding-places. I obferve in Mr. Pennant's Arctic Zoology, that about Jakutz, and other parts of Siberia, they are caught in great numbers, both in nets and by decoying them into hovels; but if there
thefe are the fame birds, they mult at times vary as much in manner as they do in fituation; for in Hudfon's Bay they are the flyeft and moft watchful of all the fpecies of Geefe, never fuffering an open approach, not even within two or three gun-hots: yet in fome of the rivers near Cumberland Houfe, and at Bafquiau, the Indians frequently kill twenty at one loot; but this is only done in moon-light nights, when the Geefe are fitting on the mud, and the fportimen are perfectly concealed from their view. Though the plumage of thofe Geefe are perfectly white, except the quill-feathers, which are black, the fkin is of a dark lead-colour, and the flefh is excellent eating, either frefh or falt. They are much inferior in fize to the Common Grey Geefe, but equal to the Canada Geefe.

Blue Gbese: This fpecies are of the fame fize as the Bue Geefc. Snow Geefe; and, like them, the bill and legs are of a deep flefh-colour, but the whole plumage is of a dirty blue, refembling old lead. The fkin, when ftripped of its feathers, is of the fame colour as the Snow Goofe, and they are equally good eating. This fpecies of Geefe are feldom feen to the North of Churchill River, and not very common at York Fort; but at Albany Fort they are more plentiful than the White or Snow Geefe. Their breeding-places, are as little known to the moft accurate obferver as thofe of the Snow Geefe; for I never knew any of their eggs taken, and their Winter haunts have

$$

$$

## A JOURNEYTOTHE

hitherto been undifcovered. Thofe birds are frequently feen to lead a flock of the White ones; and, as they generally fly in angles, it is far from unpleafant to fee a bird of a different colour leading the van. The leader is generally the object of the firf fportfman who fires, which throws the whole flock into fuch confufion, that fome of the other hunters frequently kill fix or feven at a fhot.

Horned
Wavey.
Wavey.

Horned Wavby. This delicate and diminutive fpecies of the Goofe is not much larger than the Mallard Duck. Its plumage is delicately white, except the quill-feathers, which are black. The bill is not more than an inch long, and at the bafe is ftudded round with little knobs about the fize of peas, but more remarkably fo in the males. Both the bill and feet are of the fame colour with thofe of the Snow Goofe. This fpecies is very fcarce at Churchill River, and I believe are never found at any of the Southern fettlements; but about two or three hundred miles to the North Weft of Churchill, I have feen them in as large flocks as the Common Wavey, or Snow Goofe. The flefh of this bird is exceedingly delicate; but they are fo fmall, that when I was on my journey to the North I eat two of them one night for fupper. I do not find this bird defcribed by my worthy friend Mr. Pennant in his Aretic Zoology. Probably a feecimen of it was not fent home, for the perfon that commanded at Prince of Wales's Fort * at

## NORTHERNOCEAN.

the time the collection was making, did not pay any attention to it.

Laughing Goose. This elegant fpecies has a white bill, and the legs and feet are of a fine yellow colour; the upper part of the plumage is brown, the breaft and belly white, the former prettily blotched with black. In fize they are equal to the Snow Goofe, and their fkins, when ftripped of their feathers, are delicately white, and the fefh excellent. They vifit Churchill River in very fmall numbers; but about two hundred miles to the North Weft of that river I have feen them fly in large flocks, like the Common Waveys, or Snow Geefe; and near Cumberland Houfe and Bafquiau they are found in fuch numbers, that the Indians in moon-light nights frequently kill upwards of twenty at a thot. Like the Horned Wavey, they never fly with the lead of the coaft, but are always feen to come from the Weftward. Their general breeding-places are not known, though fome few of their eggs are occafionally found to the North of Churchill; but I never heard any Indian fay that he had feen any eggs of the Horned Wavey: it is probable they retire to North Greenland to breed; and their rout in the Fall of the year, as they return Southward, is equally unknown. They are, I believe, feldom feen on the coaft of Hudfon's Bay to the Southward of latitude $59^{\circ}$ North.

[^63]
## A. JOURNEYTOTHE

Barren Geesr. Thefe are the largeft of all the fpecies of Geefe that frequent Hudfon's Bay, as they frequently weigh fixteen or feventeen pounds. They differ from the Common Grey Goofe in nothing but in fize, and in the head and brealt being tinged with a rulty brown. They never make their appearance in the Spring till the greateft part of the other fpecies of Geefe are flown Northward to breed, and many of them remain near Churchill River the whole Summer. This large fpecies are generally found to be males, and from the exceeding fmallnefs of their tefticles, they are, I fuppofe, incapable of propagating their fpecies. I believe I can with truth fay, that I was the firf European who made that remark, though they had always been diftinguifhed by the name of the Barren Geefe; for no other reafon than that of their not being known to breed. Their flefh is by no means unpleafant. though always hard and tough; and their plumage is fo thick before they begin to moult, that one bird ufually produces a pound of fine feathers and down, of a furprifing elafticity. -
Brent Geese: This fecies certainly breed in the remoteft parts of the North, and feldom make their appearance at Churchill River till late in Auguft or September. The rout they take in Spring is unknown, and their breed-ing-places have never been difcovered by any Indian in Hudfon's Bay. When they make their appearance at

Churchill River, they always come from the North; fly near the margin of the coaft, and are never feen in the interior parts of the country. In fize they are larger than a Mallard Duck, but inferior to the Snow Goofe; and though their flein appears delicate to the eye, it is not much efteemed. In fome years they pafs the mouth of Churchill River in prodigious numbers, and many of them are killed and ferved to the Company's fervants as provifions; but, as I have juft obferved, they are not moch relifhed. When migrating to the South, they generally avail themfelves of a ftrong North or North Wefterly wind, which makes their flight fo fwift, that when I have killed four or five at a fhot, not one of them fell lefs than from twenty to fifty yards from the perpendicular fpot where they were killed. Like the White, or Snow Geefe, when in large flocks they fly in the chape of a wedge, and make a great noife. Their flight is very irregular, fometimes being forty or fifty yards above the water, and in an inftant.after they Akim clofe to the furface of it, and then rife again to a confiderable height; fo that they may juftly be faid to fly in feftoons.

The Dunter Goofe, as it is called in Hudfon's Bay, but which is certainly the Eider Duck. 'They are common at the mouth of Churchill River as foon as the ice breaks up, but generally fly far North to breed; and the few that do remain near the fettlement are fo fcattered among fmall iflands, and fea-girt rocks and fhoals, as to render

Dunter Gooic.
render it not worth while to attempt gathering their down. Their eggs, when found, are exceeding good eating; and in the Fall of the year the fleih is by no means unpleafant, though they are notorioully known to feed on filh.

Eean Coofe. Bean Goose. This feecies is feldom found in any part of Hudfon's Bay, as in all my travels I have only feen three that were killed. This bird never came under the infpection of Mr. Graham, or the late Mr. Hutchins, though they both contributed very largely to the collection §ent home to the Royal Society*.

## Species of Water-Foiol.

Ducks.
Ducks of various kinds are found in thofe parts during Summer; fome only frequenting the fea-coaft, while others vifit the interior parts of the country in aftonifhing numbers. The feecies of this bird which is found moft commonly here are, the King Duck, Black Duck, Mallard

> * It is, however, no lefs true, that the late Mr. Humphry Martin, mank years Governor of Albany Fort, fent home feveral hundred fpecimens of animals and plants to complete that collection; but by fome miftake, nothing of the kind was placed to the credit of his account. Even my refpected friend Mr. Pennant, who with a candour that does him honour, has fo generouny acknowledged his obligations no all to. whom he thought he was indebted for information when he was writing his Arctic Zoology, (fee the Advertifement,) has not mentioned his name; but I am fully perfuaded that it entirely proceeded from a want of knowing the perfon; and as Mr. Hutchins fucceeded him at Albany in the year 1774, every, thing that has been fent over from that part has been placed to his accounr.

Duck, Long-tailed Duck; Widgeon, and Teal. The two firft only vifit the fea-coaft, feed on fifh and fihh-fpawn;- and their flefh is by no means efteemed good, though their eggs are not difagreeable. The Mallard and Long-tailed Duck vifit Hudfon's Bay in great numbers, and extend from the fea-coaft to the remoteft Weftern parts, and near Cumberland Houfe are found in vaft multitudes. At their firlt arrival on the fea-coaft, they are exceeding good eating; but when in a moulting ftate, though very fat, they are in general fo rank that few Europeans are fond of them. At thofe feafons the difference in flawour is eafily known by the colour of the fat; for when that is white, the flefh is moft affuredly good; but when it is yellows, or of an orange colour, it is very rank and fifhy. This difference is only peculiar to thofe that frequent and breed near the fea-coaft; for in the interior parts I never knew them, killed but their felh was very good; and the young Malr lard Duck before it can fly is very fat, and moft delicate eating. The fame may be faid of the Long-tailed Duck. Neither of thofe fpecies lay more than fix or eight eggs in common, and frequently bring them all forth..

Widgeon. This species of Duck is very uncommon in Hudfon's Bay ; ufually keeping in pairs, and being feldom feen in flocks. They are by no means fo numerous as the two former, and are moft frequently feen in rivers and marhes near the fea-coaft. Their flefh is generally efteemed; and the down of thofe I have examined is little inferior in elafticity to that of the Eider; thaugh much horter.

## A JOURNET TO THE

fhorter. The fame may be faid of feveral other feecies of Ducks that frequent thofe parts; but the impoffibility of collecting the down in any quantity, prevents it from becoming an article of trade.

Tcal. Teal. Like the Mallard, they are found in confiderable numbers near the fea-coaft; but are more plentiful in the interior parts of the country, and fly in fuch large flocks that I have often killed twelve or fourteen at one fhot, and have feen both Englifh and Indians kill a much greater number. At their firft arrival they are but poor, though generally efteemed good eating. This diminutive Duck is by far the moft prolific of any I know that reforts to Hudfon's Bay ; for I have often feen the old ones fwimming at the head of feventeen young, when not much larger than walnuts. This bird remains in thofe parts as long as the feafon will permit; for in the year one thoufand feven hundred and feventy-five, in my paffage from Cumberland Houfe to York Fort, I, as well as my Indian companions, killed them in the rivers we paffed through as late as the twenticth of October. At thofe times they arc entirely involved in fat, but delicately white, and may truly be called a great luxury.

Befides the birds already defcribed, there is a great varicty of others, both of land and water fowl, that frequent thofe parts in Summer; but thefe came not fo immediately under my infpection as thofe I have already defcribed.

# NORTHERNOCEAN. 

## Of the Vegetable Productions.

The vegetable productions of this country by no means engaged my attention fo much as the animal creation; which is the lefs to be wondered at, as fo few of them are ufeful for the fupport of man. Yet I will endeavour to enumerate as many of them as I think are worth notice.

The Gooseberries thrive beft in ftony and rocky ground, which lies open and much expofed to the Sun. But in thofe fituations few of the bufhes grow to any height, and fpread along the ground like vines. The fruit is always moft plentiful and the fineft on the under-fide of the branches, probably owing to the reflected heat from the ftones and gravel; and from being fheltered from all cold winds and fog by the leaves. I never faw more than one fpecies of Goofeberry in any part of Hudfon's Bay, which is the red one. When green, they make excellent pies or tarts; and when ripe are very pleafant eating, though by no means fo large as thofe produced in England.

Cranberries grow in great abundance near Churchill; Cramberici. and are not confined to any particular fituation, for they 3 M

Goore-
berries.
are as common on open bleak plains and high rocks as among the woods. When carefully gathered in the Fall, in dry weather, and as carefully packed in cafks with moift fugar, they will keep for years, and are annually fent to England in confiderable quantities as prefents, where they are much efteemed. When the hips have remained in the Bay fo late that the Cranberries are ripe, fome of the Captains bave carried thern home in water with great fuccefs. berries.

Bethagotominick.

The Heathberries are in fome years fo plentiful near Churchill, that it is impoffible to walk in many places without treading on thoufands and millions of them. They grow clofe to the ground, and are a favourite repalt of many birds that migrate to thofe parts in Summer, particularly the Grey Goofe; on which account the Indians diftinguifh them by the name of Nifhca-minnick, or the Grey Goofeberry. The juice of this berry makes an exceeding pleafant beverage, and the fruit itfelf would be more pleafing were it not for the number of fmall feeds it contains.

Bethago-tomimicx, as it is called by the Indians, or the Dewater-beny of Mr. Dragge. I have feen this berry as far North as Marble Illand, and that in great abundance. It flourifhes beff, and is moft productive, in fwampy boggy ground covered with mofs, and is feldom found
among grafs. The plant itfelf is not very unlike that of a Strawberry, but the leaves are larger. Out of the center of the plant fhoots a fingle falk, fometimes to the height of feven or eight inches, and each plant only produces one berry, which at fome diftance refembles a Strawberry; but on examination they have not that conical form; and many of them are only compofed of three or four lobes, while others confift of near twenty. The flavour of this berry is far from unpleafing, and it is eaten by our people in confiderable quantities during the feafon, (which is Auguft,) and, like all the other fruits in thofe parts, is fuppofed to be wholefome, and a great antifcorbutic.

Currans, both red and black, are common about currans Churchill River, but the latter are far more plentiful than the former, and are very large and fine. The buthes on which thofe currans grow, frequently exceed three feet in height, and generally thrive beft in thofe parts that are moint but not fwampy. Small vallies between the rocks, at fome little diftance from the woods, aro very favourable to them; and I have frequently obferved that the fruit produced in thofe fituations is larger and finer than that which is found in the woods. Thofe berries have a very great effect on fome people if eaten in any confiderable quantities, by acting as a very powerful purgative, and in fome as an emetic at the fame $3 \mathrm{M}_{2}$ time;

## A JOURNEY TO THE

time; but if mixed with Cranberries, they never have that effect.

Juniper-
berries.

Strawberries.

Juniper-berrips are frequently found near the new fettlement at Churchill River, but by no means in fuch plenty as in the more Southern and interior parts of the country. The bufh they grow on is fo fimilar to the creeping pine, that one half of the Company's fervants refiding in Hudfon's Bay do not know one from the other. Like the Goofeberry buhes in thofe parts, the fruit is always moft plentiful on the under-fide of the branches. They are not much efteemed either by the Indians or Englifh, fo that the few that are made ufe of are generally infufed in brandy, by way of making a cordial, which is far from unpleafant *.
$S_{\text {Trawberries }}+$, and thofe of a confiderable fize and excellent flavour, are found as far North as Churchily River; and what is moft remarkable, they are frequently. known to be more plentiful in fuch places as have formerly been fet on fire: This is not peculiar to the Strawberry, but it is well known that in the interior parts of the country, as well as at Albany and Moofe Forts, that after

[^64]the ground, or more properly the under-wood and mofs, have been fet on fire, that Rafpberry-bufhes and Hips have thot up in great numbers on fpots where nothing of the kind had ever been feen before. This is a phænomenon that is not eafily accounted for; but it is more than probable that Nature wanted fome affiftance, and the mofs being all burnt away, not only admits the Sun to aet with more power, but the heat of the fire muft, in fome meafure, loofen the texture of the foil, fo as to admit the plants to fhoot up, after having been deep-rooted for many years without being able to force their way to the furface.

Befides the Berries already mentioned, there are three others found as far North as Churchill; namely, what the Indians call the Eye-berry, and the other two are termed Blue-berry and Partridge-berry by the Englifh.

The Eye-berry grows much in the fame manner as the Strawberry, and though fmaller, is infinitely fuperior in flavour. This berry is found in various fituations; but near Churchill River they are moft plentiful in fmall hollows among the rocks, which are fituated fome diftance from the woods; but they are never known to grow in fwampy ground, and I never faw them fo plentiful in any part of Hudfon's Bay as àbout Churchill River.

The

Blue-berry.
The Blub-brbry is about the fize of a Hurtleberry, and grows on buthes which rife to eighteen inches or two feet, but in general are much lower. They are feldom ripe till September, at which time the leayes turn to a beautiful red; and the fruit, though fmall, have as fine a bloom as any plum, and are much efteemed for the pleafantnefs of their flavour.

Partridgeberry.

The Partridge-berry is nearly as large as the Cranberry imported from Newfoundland, and though of a beautiful tranfparentred, yet has a difagreeable tafte. Thefe berries are feldom taken, either by the Indians or Englifh; and many of the latter call them Poifon-berries, but feveral birds are fond of them. They grow clofe to the ground, like the Cranberry, and the plant that produces them is not very unlike fmall fage, either in fhape or colour, but has none of its virtues.

I had nearly forgotten another fecies of Berry, which is found on the dry ridges at Churchill in confiderable numbers. In fize and colour they much refemble the Red Curran, and grow on bufhes fo much like the Creeping Willow, that people of little obfervation fcarcely know the difference; particularly as all the fruit is on the un-der-fide of the branches, and entirely hid by the leaves. I never knew this Berry eaten but by a frolickfome Indian girl; and as it had no ill effect, it is a proof it is

## NORTHERNOCEAN.

not unwholefone, though exceedingly unpleafant to the palate, and not much lefs fo to the fmell.

Hips of a fmall fize, though but few in ramber, are Hips. alfo found on the banks of Churchill River; at fome diftance from the fea. But in the interior parts of the country they are frequently found in fuch vaft quantities, that at a diftance they make the fpots they grow of appear perfectly red. In the interior parts of Hudfon's Bay they are as large as any I ever remember to have feen, and when ripe, have a moft delightful bloom; but at that feafon there is fcarcely one in ten which has not a worm in it; and they frequently act as a ftrong purgative.

With refpect to the fmaller productions of the vegetable world, $\mathbf{I}$ am obliged to be in a great meafure fitent, as the nature of my various occupations during my refidence in this country gave me little leifure, and being unacquainted with botany, I viewed with inattention things that were not of immediate ufe: the few which follow are all that particularly engaged my attention.

The Wish-a-ca-pucca, which grows in moft parts of this country, is faid by fome Authors to have great medical virtues, applied, either inwardly as an alterative, or ontwardly dried and pulverifed, to old fores and gangrenes. The truth of this I much doubt, and could

Wilh-2 pucca.

## A JOURNETTOTHE

never think it had the leaft medical quality. It is, however, much ufed by the lower clafs of the Company's fervants as tea; and by fome is thought very pleafant. But the flower is by far the moft delicate, and if gathered at a proper time, and carefully dried in the thade will retain its flavour for many years; and make a far more pleafant beverage than the leaves. There are feveral fpecies of this plant, of which fome of the leaves are nearly as large as that of the Creeping Willow, while others are as fmall and narrow as that of the Rofemary, and much refembles it in colour; but all the fpecies have the fame fredt and flavour,

Jaczasupy-puck. This herb much refembles Creeping Box, and is only ufed, either by the Indians or Englinh, to mix with tobacco, which makes it fmoke mild and pleafant; and would, I am perfuaded, be very acceptable to many frookers in England.

Moss of various forts and colours is plentiful enough in moft parts of this country, and is what the deer ufually feed on.

Grass of feveral kinds is alfo found in thofe parts, and fome of it amazingly rapid of growth, particularly that which is there called Rye-grafs; and which, in our fhort Summer at Churchill, frequently grows to the height of
of three feet. Another fpecies of Grafs, which is produced in marfhes, and on the margins of lakes, ponds, and rivers, is particularly adapted for the fupport of the multitudes of the feathered creation which refort to thofe parts in Summer. The Marfh Grafs at Churchill is of that peculiar nature, that where it is mowed one year, no crop can be procured the next Summer; whereas at York Fort, though the climate is not very different, they can get two crops, or harvefts, from the fame foot in one Summer. Vctches are plentiful in fome parts as far North as Churchill River; and Burrage, Sorrel, and Coltsfoot, may be ranked among the ufeful plants. Dandelion is alfo plentiful at Churchill, and makes an early falad, long before any thing can be produced in the gardens.

In fact, notwithftanding the length of the Winter, the feverity of the cold, and the great fcarcity of vegetables at this Northern fettlement, by proper attention to cleanlinefs, and keeping the people at reafonable exercife, I never had one man under me who had the leaft fymptoms of the fcurvy; whereas at York Fort, Albany, and Moofe River, there were almoft annual complaints that one half of the people were rendered incapable of duty by that dreadful diforder.

I do not wifh to lay claim to any merit on this occafien, but I cannot help obferving that, during ten years I had

## A JOURNEY, \&c.

the command at Churchill River, only two men died of that diftemper, though my complement at times amounted in number to fifty-three.

Tree The Fo it Trees that grow on this inhofpitable fpot are very few indeed; Pine, Juniper, fmall fcraggy Poplar, Creeping Birch, and Dwarf Willows, compofe the whole catalogue. Farther Weftward the Birch Tree is very plentiful; and in the Athapufcow country, the Pines, Larch, Poplar, and Birch, grow to a great fize; the Alder is alfo found there.
T. HE END.

 -

[^65]

[^0]:    - Since the above was written, a Mr. Umfreville has publifhed an account of Hudfon's Bay, with the fame ill-na:ure as the former Authors; and for no other reafon than that of being difappointed in fucceeding to a command in. the Bay, though there was no vacancy for him.

[^1]:    - American Traveller, page 23.

[^2]:    * I have feen the remains of thofe houfes feveral times; they are on the Weft fide of the harbour, and in all probability will be difcernible for many years to come.

[^3]:    It is rather forprifing, that neither Middleton, Ellis, Chriftopher, Johniton, nor Garbet, who have -all of them been at Marble Ihand, and fome of them often, ever difcovered this harbour; particularly the laft-mentioned gentleman, who actually failed quite round the illand in a very fine pleafant day in the Summer of 1766. Bue this difcowery was referved for a Mr. Jofeph Stephens! a man of the leafl macrit $I$ eyer knew, though he, then had the command of a yeffel called the Sucsefs, employed in the whale-fifhery; and in the year 1769, had the command of the Charlotte given to him, a fine brig of one hundred tons; when $I$ whas his mate.

[^4]:    * This was barely probable, as Matonabbee at that time had not any information of this Journey being fet on foot, much lefs had he received orders to join me at the place and time here appointed; and had we accidentally met, he would by no means have undertaken the Journey witbout firtt going to the Factory, and there making his agreement with the Governor; for no Indian is fond of performing any particular fervice for the Englifh, without firf knowing what is to be his reward. At the fame time, had I taken that rout on my outfet, it would have carried me fome hündreds of milés out of my road. See my Track on the Map in the Winter 1770, and the Spring 177 I .

[^5]:    ＊I was not provided with inftruments for cutting on ftone；but for form－ fake，I cut my name，date of the year，\＆ic．on 2 piece of board that had been one of the Indian＇s targets，and placed it in a heap of ftones on a fmail eminence near the entrance of the river，on the South fide．
    $\dagger$ There is certainly no harm in making out all Inftructions in the fulleft manner，yet it mult be gllowed that thofe two parts might have been omitted with great propriety；for as neither Middlewon，Ellis，nor Chritopher were able to penetrate far enough up thofe indets to difoover any kind of herbage except pols and grass，much lefs woods，it was not likely thofe parts were fo materially altered for the better fince their times，as to make it worth my while to attempt a farther difcovery of them；and efpecially as I had an op－ portunity，daring my fecond Journey，of proving that the woods do not reach the fea－coaft by fome hundreds of miles in the parallel of Chefterfield＇s Iniet． And as the edge of the woods to the Northward always tends to the Weftward， the ditance muft be greatly increafed in the latitude of Wager Strait．Thofe parts hate long fince been vifited by the Company＇s fervants，and are within ，the known limits of their Charter；confequently require no other form of poffefion．

[^6]:    - The coldes the weatherize the caber the fleages fiide over the foow.

[^7]:    - This was a propofal of the Governor's, though he well knew we corild not to without their affitance, both for heving our baggige, as well zo dieting fxias for ciothing, pitching our tent, getring firing $\& c_{\text {. }}$

[^8]:    *The Methy.are generally caught with $\mathbf{2}$ book; 2nd the beft time for that iportisin tis nights, and if the night be dats, the better.

[^9]:    - To prepare meat in this manner, it requires no farther operation than cutting the lean parts of the animal into thin nices, and drying it in the fun, or by a huw fire, till, after beating it between two ftones, it is reduced to a coarfe powder.

[^10]:    - Wifh-a-capucca is the name given by the natives to a plant which is found all over the country bordering on Hudfon's Bay; and an infufion of it is ufed as tee by all the Europemas fettied in that country.
    $\dagger$ This river, well all others deferving that appellation which I croffed during this part of my journey, ran to the Eaft and North Eaft; and both them and the lakes were perfectly frefh, and inhabited by firh that are well known never to frequemt falt water.

[^11]:    *This only confifted of three walking-fticks fuck into the ground, and a blanket thrown over them.
    $\dagger$ Skipertogan is a fmall bag that contains a fint and ftecl, alfo a pipe and tobacco, as well as touchwood, \&cc. for making a fire. Some of thefe bags may be called truly elegant; being richly ormaneasted wish heads porcupinequills, morferhair, \&xc. a work always performed by the women; and they are, with much propricty, greally eftecmed by moft Europeans for the neatnefs of their workmanilhip.

[^12]:    - The froze here meant is fourteen pounds.

[^13]:    *The tobaceo ufed in Hudion's Bay is the Brafil tobacco; which is twifted into the form of a rope, of near an inch diameter, and then wound into a large roll; from wich it-is aaken by meafores of length, for the natives.

[^14]:    * I have obferved, during my feveral journies in thofe parts, that all the way to the North of Seal River the edge of the wood is faced with old withered fumps, and trees which have been blown down by the wind. They are moftls of the fort which is called here Iuniper, but were feldom of any confiderable fize. Thofe biatted trees are found in fome parts to extend to the diftance of twenty miles from the living woods, and detached patches of them are much. farther off; which is a proof that the cotd taas been increafing in thofe parts. for fome ages. Indeed, fome of the older Northern Indians have affured me, that they have heard their fathers and grandfathers fay, they remembered the greateft part of thofe places where the trees are now blafted and dead, in, a flourihing:

[^15]:    flourihing ftate; and that they were remarkable for abounding with deer. It is a well-known fatt, that many deer are fond of frequenting thofe plains where the juniper trees abound near barren groundes particularly in fine weather during the Winter; but in heavy gates of wind they either take fhelter in che thick woods, or go out on the open plains. The Indiens, who never want a reafon for any thing, fay, that the deer quit the thin fraggling woods during the high winds, becaufe the nodding of the trees, when at a confiderable diftance from each other, frightens them; but in the midtt of a thick foreft, the conftant ruftling of the branches lulls them into fecurity, and renders them an eafy prey to 2 failful hunter.

    - Probably the fame with Partridge Lake in the Map.

[^16]:    - See Poftlethwayt on the article of Labour.

[^17]:    - Notwithtanding this is the general character of the Southern Indian women, as they are called on the coalts of Hudfon's Bay, and who are the fame tribe with the Canadian Indians, I am happy to have it in my power to infert a few lines to the memory of one of them, whom I knew from her infancy,

[^18]:    - Moft of the Sourthem Indians, as well the Athapufcow and Nehesway tribes, are entirely without feruple in this refpect. It is notorioully known, that many of them cohabit occafionally with their own mothers, and frequently efpoufe their fifters and daughters. I have known feveral of them who, after having lived in that ftate for fome time with their daughters, have given them to their fons, and all parties been perfectly reconciled to it.

    In fact, notwithftanding the feverity of the climate, the licentiournefs of the inhabitants cannot bt exceeded by any of the Eaftern nations, whofe luxurious manner of life, and genial clime, feem more adapted to excite extraordinary paffions, than the fevere cold of the frigid Zone.

    It is true, that few of thofe who live under the immediate protection of the Englif ever take either their fifters or daughters for wives, which is probably owing to the fear of incurring their difpleafure; but it is well known that acts of inceft too often take place among them, though perhaps not fo frequently as among the forcign Indians.

[^19]:    - Mr. Dragge fays, in his Voyage, vol. ii. p. 260, that the mufk-ox is lower than a deer, but larger as to belly and quarters; which is very far from the truth; they are of the fize I have here defcribed them, and the Indians always eftimate the fefh of a full-grown cow to be equal in quantity to three deer. I am forry alfo to be obliged to contradict my friend Mr. Graham, who fays that the fief of this animal is carried on nedges to Prince of Wales's Fort, to the amount of three or four thoufand pounds annually. To the amount of near one thoufand pounds may have been purchafed from the natives in fome particular years, but it more frequently happens that not an ounce is brought one year out of five. In fact, it is by no means efteemed by the Company's fervants, and of courfe no great encouragement is given to introduce it; but if it had been otherwife, their general fituation is fo remote from the fettiement, that it would not be worth the Indians while to haul it to the Fort. So that, in faet, all that has ever been carried to Prince of Wales's Fort, has moft: affuredly been killed out of a herd that has been accidentally found within a moderate diftance of the fettement; perhaps an hundred miles, which is only thought a ftep by an Indian.

[^20]:    - This river runs nearly North Eaft, and in all probability empties itfelf into the Northern Ocean, not far from the Copper River.

[^21]:    - Time in the Efquimaux language is a friendly word fimilar to what cher?

[^22]:    - When the fifteen Indians turned back at the Stony Mountains, they took two or three eanoes with them; fome of our crew that were fent a-head as meffengers had not yet returned, which occafioned the number of our canoes to be fo fmall.

[^23]:    except what is due from children to their parests, or fuch of their kin as take care of them when they are young and incapable of providing for themfelves. There is, however, reafon to think that, when grown up to manhood, they pay fome attention to the advice of the old men, on accoumt of their experience.

[^24]:    - This piece of Copper is now in the poffefion of the Hudfon's Bay Compray.

[^25]:    - There is a ftrange tradition among thofe people, that the firf perfon who difcovered thofe mines was 2 woman, and that the conducted them to the place for feveral years; but as the was the only woman in company, fome of the men took fuch libertics with her as mande ber vow revenge on them; and the is fide to have been a great congurer. Accordingly when the men had loided themetives with copper, and were going to return, fhe refufed to accompany them, and fiid fee moold fit on the mine till flie funk into the ground, and that the coppper thouid fink with ber. The next year, when the spen went for more copper, they found ber fuak up to the waift, thought fill aliva

[^26]:    alive, and the quantity of copper much decreafed; and on their repeating their vifit the year following, the had quite difappeared, and all the principal part of the mine with her; fo that after that period nothing remained on the furface but a few fmall pieces, and thofe were feattered at a confiderable diftance from each other. Before that period they fay the copper liay on the furface in fuch large heaps, that the Indians had nothing to do but turm it over, and pick fuch pieces as would beft fuit the different ufes for which they intended it.

[^28]:    - Mr. Mofes Norton.

[^29]:    - The piece of iren above mentioned was the contter of a new-fathioned plough, invenceith Cipain Joha Fowkr, lese Governor at Churchill River, with which he had a large piece of ground ploughed, and afterwards fowed with

[^30]:    with oats: but the part being nothing but a bot burning fand, like the Spanifh lines at Gibraloar, the fucceefs may cafily be gueffed; which was, that it did not produce a fingle grain.

[^31]:    - His name was Cof-abyagh, the Northern Indian name for the Rock Partridge.

[^32]:    - The Forthern Tadiane think thar the fagacity of the beaver directs them to mine that part of their houfe which froats the Noath much: thicker than any other part, witha view of defending themfelves from the cold winds which geserally blow from that quarter doring the Winter; and for this reafon the Wouhem indiagenemily theak open that fride of the beaver-houfes which exactly front the South.

[^33]:    - It is remarked by Mr. Carefby, in his defcription of this animal, that no man can lift one of their heads. Thofe I faw in the Athapurcow country are fuct as I have deferibed; and I amo affured by the Company's fervents, as well as the Indians who live near Hudfon's Houfe, that the buffalos chere are much fmaller; fo that the fpecies Mr. Catelby faw, or wrote of, muft have been much larger, or have had very large heads; for it is well known that 2 man of any tolerable hetength can fif two and i half, or three hundred pounds weight. I think that the heade of his buefflos are: too theave for the bodies, 25 the bodies of thofe I faw in the Athapurion country appear to have been of equal weight with his.

[^34]:    *The moofe formerly fent to his Majefty was from that place. A young maie was alfo put on board the flip, but it died on the paffage, otherwife it is probable they might have propagated in this country.

    L 1 would

[^35]:    * Mr. Du Pratz, in his defcription of this animal, fays, it is iever found farther North than Cape Breton and Nova Scotia; but. I have feen them in great numbers in de Athapurcow Country, which cannot be much Thort of $60^{\circ}$ North laticude.

[^36]:    * The Northern Indians make their filhing-nets with fmall thongs cut from raw deer-\{kins; which when dry appear very good, but after being foaked in water fome time, grow fo foft and nippery, that when large filh frike the net, the hitches are very apt to liip and let them efcape. Befide this inconvenience, they are very liable to rot, unlefs they be frequently taken out of the water and dried.

[^37]:    might be brought to her, for the cruel parpofe of murdering it. It is fearcely pofftble to exprefs my altonifhment, on hearing fuch an extraordinary requeft mide Zy' 1 young cretture farcely lixteen years old; however, as soon as I reconerel thom ing fuprife, I ordered her to leave the fetterment, which the did, vith thof whe ere paing to war; and it is cherefore probable the might not be difappointed tio hef requet. The next year I was ordered to the conmand of Prince of Walei'y Pity and therefore never faw her afterward.

[^38]:    - To fnare fwant, geefe, or duckes, in che water, it requires no other procefs than to make a number of hedget, or fences, project into the water, at right angles, from the buaks of a river, hike, or pond; for it is obferved that thofe birds generely fwim near the margin, for the benefit of feeding on the grafs, \&c. Thofe fences wre conimed for fome ditunce from the thore, and feparated swo or three yarch from each octher; fo that openinga are keft fufficiendy lerge to let the birds fivim through. In each of thofe openNn 2

[^39]:    * The Indians, both Northern and Southern, have found by experience, that by boiling the pefogan in water for a confiderable time, the texture is fo much improved, that when thoroughly dried, fome parts of it will be nearly as foft as fpunge.

    Some of thofe fungufes are as large as a man's head; the outfide, which is very hard and black, and much indented with deep cracks, being of no ufe, is always chopped off with a hatchet. Befides the two forts of touchwood already mentioned, there is another kind of it in thofe parts, that I think is infinitely preferable to either. This is found in old decayed poplars, and hes in flakes of various fizes and thicknefs; fome is not thicker than thamoy leather, others are as thick as a fhoe-fole. This, like the fungus of the birch-tree, is always moift when caken from the tree, but when dry, it is very foft and fexible, and takes fire readily from the fpark of a fteel; but it is much improved by being kept dry in a bag that has concoined gunpowder. It is racher furprifing that the Indians, whole mode of life I have juft been defcribing, have never acquired the method of making fire by frietion, like the Efquimaux. It is ahfo equally. furprifing that they do not make ufe of fkin-canoes. Probably deem-lkins cannot be manufytured to withftand the water; for it is well known that the Efquimaux ufe alozays feal-fkins for that purpofe, though they are in the habit of tilling great numbers of deer.
    dians.

[^40]:    - Though I was a fwifa runaer intchofe dayy I never accompanied che In dians in one of thofe chaces, bot have heard many of them fay, that after a long one, the moofe, when killed, did not preduce more than a quart of blood, the remainder being all fectied in the feeh; which; in that ftate, muat be tentimes worf refted, than the fipleen or milt of a bacon hog.

[^41]:    preceding Winter. This demand was fo very unreafonable, that I made fome feruple, or at leaft befituted to comply with it, hinting that he was the perfon who ought to fatisfy thiofe men for their fervices; but I was foon anfwered, That he did not expeet to have been denied fucb a trifle as that wass; and for the future be would canty his goods where he could get his own price for them. On my afling him where that was ? he replied, in a very infolent tone, "To che Canndian: Tradern." I was giad to comply with his demands; and I bere infert the anecdote, as a fpecimen of an Indimn's confeience.

[^42]:    - All the furss thus left wers properly fecured in caves and crevices of the rocks, fo as to withitand any ittecrapt that might be made on them by beats of prey, and were well hislded from the weacher; fo that, in all probibility, fow of them were boft.

[^43]:    - Mr. Jeremie is very incorrett in his account of the fituation of this River, and ies courfe. It is not eafy to guefs, whether the Copper or-Dogribbed Indians be the nation be calls Platfcotez de Cbieus: if it be the former, he is much miftaken; for they have abundance of beaver, and other animals of the furr kind, in their councry : and if the latter, he is equally wrong to

[^44]:    *They frequently fell new nets, which have not been wet more than once or twice, becaufe they have not been fuccefsful. Thofe nets, when foked in water, are eafily opened, and then make moft excellent heel and toe netting for fnow-fhoes. In general it is far fuperior to the netting cut by the Southern Indian women, and is not larger than common net-twine.

[^45]:    - In the Summer of 1756; a party of Northern Indians lay in wait at Knapp's Bay till the loop had failed out of the harbour, when they fell on the poor Efquimaux, and killed every foul. Mr. John Bean, then Mafter of the loop, and fince Mafter of the Trinity yacht, with all his crew, heard the guns very plain; but did not know the meaning or reafon of it till the Summer following, when he found the fhocking remains of more than forty Efquimaux, who had been murdered in that cowardly manner; and for no other reafon but becaufe two principat Northem Indians had died in the preceding Winter.

[^46]:    * Their ideas in this refpect are founded on a principle one would not imagine. Experience has thewn them, that when a hairy deer-Ikin is brifkly ftroked with the hand in a dark night, it will emit many fparks of eclectrical fire, as the back of a cat will. The idea which the Southern Indians have of this meteor is equally romantic, though more pleafing, as they believe it to be the fpirits of their departed friends dancing in the clouds; and when the Aurore Borealis is remarkably bright, at which time they vary moft in colour, form, and fituation, they fay, their deceafed friends are very merry.

[^47]:    - Afterwards Governor. $\quad$. Mafter of the Churchill noop.

[^48]:    - I murt here obferve, that when we went to war with the Efquimaux at the Copper River in July 1771, it was by no means his propofal: on the contrary, he was forced into it by his countrymen. For I have heard him lay, that when he firt vifited that river, in company with I-dot-le-aza, they met with feveral Efquimaux; and fo far from killing them, were very ffiendly to them, and ndade them finall prefents of fuch articles as they could beft fpare, and that would be of moft ufe to them. It is more than probable that the two biss of iron found among the plunder while I was there, were part of thofe prefents. There were alfo a few long beads found among thofe people,

[^49]:    people, but quite different from any that the Hudfon's Bay Company had ever fent to the Bay: fo that the only probable way they could have come by them, muft have been by an intercourfe with fome of their tribe, who hat dealings with the Danes in Davis's Straits. -It is very probable, howevei. they might have paffed through many hands before they reached this remor. place. Had they had an inamediate intercourfe with the Efquimaux in Davis Straits, it is natural to fuppofe that iron would not have been fo fcarce amonthem as it feemed to be; indeed the diftance is too great to admit of it.
    $\dagger$ I have feen two Northern Indians who mealured fix feet three inches; and one, fix feet four inches.

[^50]:    - The fame perfon was at Prince of Wales's Fort when the French arrived on the 8th of Auguft 1782, and faw them demolifh the Fort.

[^51]:    - It is rather fingotar phat the Polar Bears are feldom found on the land during the Winters on which nccoumtit is fuppofed they go our on the ice, and keep near the edge of the water during that feafon, whike the females that are pregnant feek fheloer at the akirts of the woods, and dig themfelves dens in the deepeft

[^52]:    - The isfects bere fpoket of are of two kinds; the one is nearly black, its fkin hard like a beetk, and not very unlike a grafshopper, and darts through the waser wish great eafe, and with fome degree of velocity. The ocher fort is brown, has wings, and is as foft as the common cleg-liy. The hater are the mot numerous; and in fome of the lakea fuch quantitics of them are forced into the bays in gales of wind, and there prefitd together in fuch mulcitudes, that they are killed, and remain there a grear nuifance; for I have feveral times, in my inland voyages from York Fort, found it fcarcely politible so land in fome of thofe bays for the insolerable ftench of thofe infects, which in fome places were lying in putrid maffes to the depth of two or three feet. It is more than probable, that the Bears occafionally feed on thefe dead infects.

[^53]:    - It is common for the Southern Indians to tame and domefticate the young cubs; and they are frequently taken fo young that they cannot eat. On thofe occafions the Indians oblige their wives who have milk in their breafts to fuckle chem. And one of the Company's fervants, whofe name is Ifaac Batt, willing to be as great a brute as his Indian companions, abfolutely forced one of his wives, who had recently laft her infant, to fuckle a young Bear.

    $$
    3 \text { B2. grizzled }
    $$

[^54]:    - Mr. Graham fays they take their lodgings in the clefts of rocks, or in hollow trees. The former I acknowledge, but I believe that neither Mr. Graham nor any of the Company's fervants ever faw an inftance of the latter. In fat, during all my travels in the interior parts of Hudfon's Bay, I never faw a hollow tree that was capable of affording thelter to any larger animal thay martins, jackafhes, or wejacks; muck lefs the quiquehatch or bear, as fome have afferted.

[^55]:    - The Otter is very fend of play; and one of their favourite paftimes is, to get on a high ridge of fnow, bend their fore-feet backward, and flide down the fide of it, fometimes to the difance of twenty yards.

[^56]:    - This information was given to Mr. Penpant from the authority of Mr. Graham; but the before-mentioned account of feeing them killed is all ftages of pregnancy, when no fymptoms of that kind appeared, will, I hope, be Gufficient to clear up that miftike.

[^57]:    * In the Fall of the pear 1768, a fine rock cod was drove on fhore in a high gale of wind, and was eaten at the Governor's table; Meffrs. William Wales and Jofeph Dymond, who went out to obferve the tranfit of Venus which happened on the 3 d of June 1769 , partook of it ; but I never heard of one being caught with a hook, nor ever faw an entire fifh of that defcription in thofe parts: their jaw-bones are, however, frequently found on the hores.

[^58]:    - I have heard that no. Whale caught by our Greenland fhips is called a Pay-fif; that is, that no emolument arifes to the harpooner that ftrikes it; unlefs the longeft blade of the bone; ufually called Whale-boné; meafures fixfeet: whereas thofe killed in Hudfon's Bay feldom meafured more than four feet and an half.

[^59]:    * Mr. Dragge obferves, in his North Weft Paffage, that when the partridges begin to change colour, the firt brown feathers appear in the rump; but this is fo far from being a general rule, that an experienced Hudfonian muft fmile at the idea. That Mr. Dragge never faw an inftance of this kind I will not fay, but when Nature deviates fo far from its ufual courfe, it is

[^60]:    * Befides the birds already mentioned; which form a conftant difh at our tables in Hudfon's Bay, during their refpective feafons, Mr. Jerome afferts, that curing the time he was Governor at York Fort, the buftard was common. But fince that Fort was delivered up to the Englifh at the peace of Utrecht in 1713, none of the Company's fervants have ever feen one of thofe birds: nor does it appear by all the Journals now in the poffeffion of the Hudfon's Bay Company, that any fuch bird was ever feen in the moft Southern parts of the Bay, much lefs at York Fort, which is in the latitude $57^{\circ}$ North; fo that a capital error, or a wilful defiga to milead, mult have taken place. Indeed, his account of the country immediately where he refided, and the productions of it, are fo erroneouly ftated as to deferve no notice. His colleague, De le Porries, afferts the exiftence of the buftard in thofe parts, and with an equal regard to truth.

[^61]:    - They exactly correfpond with the bird defcribed by Mr. Pennant, except ghat they are much longer.
