SCHELLING, FRIEDRICH WILHELM JOSEPH, the last survivor of that famous band of German philosophers of which Kant, Jacobi, Herbart, Fichte, and Hegel, are the other chiefs, was born in 1775, at Leonberg, in Württemberg. He studied first at Tübingen, where he and Hegel became intimate friends, thence he went to Leipsic and Jena. At Jena he studied under Fichte, whom he succeeded in the chair of philosophy at that university in 1798. In 1803, he was transferred to Würzburg; and, in 1807, to Munich, where he remained till 1841, when he accepted a chair at Berlin. This chair he soon relinquished, and the last years of his life were spent in comparative seclusion. By the nature of his speculations developed in a number of fragmentary publications, chiefly in the earlier part of his life, Schelling's place in the great series of German philosophers is determined to be between Fichte and Hegel, the former of whom died in 1814, and the latter in 1831. Schelling's metaphysical theory is generally known by the name of the "System of Identity." It rests on the principle that the two elements of thought, the objects respectively of understanding and reason, called by the various terms of matter and spirit, objective and subjective, real and ideal, &c., are only relatively opposed to one another as different forms of the *absolute* or *infinite*, hence sometimes called the two *poles* of the absolute. Died, 1854.

SCHIAVONE, ANDREA, painter, was born in Dalmatia, in 1522. His family name was *Medola*. He began life as a house-painter, but showing taste for art, he was employed

as assistant to Titian in the library of St Mark at Venice. Tintoretto was similarly employed there at the same time. Schiavone successfully imitated Titian as a colourist, but he failed in drawing, which he never learnt. Among his best pictures are named a Nativity and an Assumption of the Virgin, at Rimini; and a Head of John the Baptist, in the Louvre. There are several of his works in English galleries. Died at Vicenza, 1582.

SCHIAVONETTI, LUIGI, an eminent engraver, was born in 1765, at Bassano, in the state of Venice, and settled in England, where he acquired a high reputation, both as an artist and a man. Died, 1810.

SCHILL, FERDINAND VON, a distinguished Prussian officer, was born in 1773, and entered the army in 1789. He was severely wounded at the battle of Jena; but took the field again at the head of a free corps, displaying great ability. Indignant at the subjection of his country to the rule of Buonaparte, he resolved to make a great effort for the liberation of Germany. With that view he collected a small body of troops, and commenced operations on the Elbe; but, after having obtained some successes, he was overpowered and slain at Stralsund, in May, 1809.

SCHILLER, JOHANN CHRISTOPH FRIEDRICH VON, one of the most illustrious German poets, was born at Marbach, in Württemberg, in 1759. After having studied medicine, and become surgeon in a regiment, he, in his 22nd year, wrote his tragedy of "The Robbers," which at once raised him to the foremost rank among the dramatists of his country. It was performed at Mannheim, in 1782. But some passages of a revolutionary tendency having incurred the displeasure of the duke of Württemberg, Schiller left Stuttgart by stealth, and made his way to Mannheim, where, after various wanderings and many hardships, he got his tragedy of "Fiesco" brought out on the stage. The tragedies of "Cabal and Love," and "Don Carlos," were his next productions. In 1785 he repaired to Leipsic and Dresden, where he found many admirers. Here he wrote his singular romance called the "Geist-erseher" and his "Philosophical Letters," and collected materials for a "History of the Revolt of the Netherlands under Philip II." In 1787 he repaired to Weimar, where he was welcomed with great warmth by Wieland and Herder, undertook the management of a periodical called the German Mercury, and not long afterwards made the acquaintance of Goethe, which soon ripened into a friendship only dissolved by death. In 1789 he was appointed to the chair of history in the university of Jena, and besides lecturing to crowded audiences, he published his "History of the Thirty Years' War," and engaged in various literary enterprises, which had great influence on the literature of Germany. "Die Horen" and "Der Musen-Almanach," to which the most eminent men in Germany contributed, belong to this period. He also produced the "Xenien," a collection of epigrams, and wrote his "Ballads," which are reckoned among the finest compositions of their kind in any

language. language. About 1790 he exhibited a strong tendency to consumption, which by precluding him from lecturing, greatly reduced his income; but he was relieved from the pressure of misfortune by the kindness of the prince of Denmark, who settled upon him a pension of a thousand dollars for three years, and thus enabled him to pursue his studies, free at once from narrow circumstances and public duties. He soon after settled at Weimar, in order to direct the theatre in conjunction with Goethe, in accordance with their mutual tastes and opinions; and here he at intervals published the works which, together with those above mentioned, have immortalized his name. Among these are "Wallenstein," "Mary Stuart," "Joan of Arc," and "William Tell." There is a Life of Schiller by Thomas Carlyle, and an English translation by Lady Wallace of the Life by Palleske. Coleridge translated the "Piccolomini," and "Death of Wallenstein," and Sir E. B. Lytton has translated the "Poems and Ballads of Schiller." An English edition of his works forms part of Bohn's Standard Library. Died, 1805.

SCHIMMELPENNINCK, MARY ANNE, best known as an author by her "Memoirs of Port Royal," was the eldest child of Samuel and Lucy Galton, of Dudson, near Birmingham, and was born on 25th Nov., 1778. Her parents belonged to the Society of Friends. Her father was known as a man of science, and was also engaged in mercantile pursuits. Her mother, a lineal descendant of Barclay the apologist, was a woman of uncommon powers of mind, philosophic views, and strong principles. From early youth she was an enthusiastic student of Lavater's physiognomy, and her mind seems to have been matured by the society of the literary men who habitually met at her father's house. She had from childhood deep religious feelings, but at an early age she seems to have imbibed sceptical opinions. By remarkable circumstances she was thrown amongst members of the Church of United Brethren or Moravians; with them she found the peace she had long sought, and she joined their communion in 1818. In 1806, she married Lambeth Schimmelpenninck, of the Dutch family of that name, and went to reside at Bristol. Her "Memoirs of Port Royal" first introduced that community to the English public, and has been often reprinted. Her literary labours comprehend essays on various religious subjects, an ingenious theory on the "Principles of Beauty," and pamphlets in the antislavery cause. A slight paralytic seizure in 1837 for a time impaired the vigour of her mind, and was the occasion of her removal to Clifton. Her genius was characterized by that mixture of pathos and humour that belonged to the poet Cowper, and which, united to her wit and originality, gave her unrivalled powers of conversation. Her religion partook of the largeness of her mind, and she had the rare art, without effort, of making it a part of the daily interest of life. Her autobiography has been published since her death. She died at Clifton, 29th August, 1856.

SCHINKEL, KARL FRIEDRICH, one of the

most distinguished architects of his age, was born at Neu-Ruppin, in Brandenburg, in 1781. He studied architecture at Berlin under the two Gillys, David and Friedrich, and spent some time in Italy between 1803—1805. During the troubled years that followed till the peace of 1815 he occupied himself chiefly with painting; but after that time he had full work as an architect. Schinkel by his numerous works and more numerous designs gave a great impulse to architectural art. He followed chiefly the models of Greek art, seldom the Gothic; and among his principal works are the Berlin Museum, Theatre, and Observatory, the Church of St Nicholas, at Potsdam, which, however, was not completed, and Charlottenhof. He published two collections of his designs, "Entwürfe," and "Werke der höheren Baukunst;" among which were those for the Singing School at Berlin, and for the palace on the Acropolis of Athens; neither of which were adopted. He was appointed chief director of public buildings in 1839, and died, 9th October, 1841.

SCHLEGEL, AUGUST WILHELM VON, a celebrated critic, poet, and philologist, was born at Hanover, 1767. After finishing his studies at Göttingen, he became professor at Jena, where he lectured on the theory of art, and joined his brother Friedrich in the editorship of the Athenæum. In 1802 he repaired to Berlin, as a wider field for his literary pursuits; accompanied Madame de Staël, in 1805, on a tour through Italy, France, Germany, and Sweden; delivering lectures in Vienna, in 1808, on dramatic art; became secretary to Bernadotte, the crown prince of Sweden, in 1813; and, after studying Sanscrit in Paris, obtained in 1818 the professorship of history at Bonn, which he held till his death. Besides publishing numerous profound philological works, and many dissertations on subjects connected with the fine arts and poetry, he was the founder of the so-called *romantic* school, in contradistinction to the *classical*; his poems and ballads rank among the highest in Germany; his lectures on dramatic art and literature have become a standard work in England; and his translation of Shakespeare is accounted one of the most wonderful achievements in that difficult, though too often ill-appreciated, art. Schlegel often displayed a puerile passion for titles and small court distinctions, which formed a great drawback to his real merits, and drew down upon him merited ridicule. Died, 1845.

SCHLEGEL, FRIEDRICH VON, a celebrated German critic and philologist, and a younger brother of the preceding, was born in 1772, and studied at Göttingen and Leipzig. His first production of any importance was the "Greeks and Romans." He then joined his brother in conducting a periodical called the Athenæum, and after publishing the philosophical romance of "Lucinda," he visited Paris, where he delivered lectures on philosophy, and occupied himself with the fine arts. In 1804 he published a "Collection of the Romantic Poetry of the Middle Ages." In 1805 Schlegel, with his wife, a daughter of Moses Mendelssohn, was received into the

church of Rome, at Cologne. After this, he repaired to Vienna, and, in 1809, received an appointment at the headquarters of the Archduke Charles, where he drew up several animating proclamations. When peace was concluded, he delivered in Vienna the lectures on "The History of Ancient and Modern Literature;" a work which has been translated into nearly every European language. In 1812, he edited the "German Museum," and gained the confidence of Prince Metternich by the composition of various diplomatic papers; in consequence of which he was appointed Austrian counsellor of legation at the Germanic diet, which he held from 1814 to 1818. He then returned to Vienna, and resumed his literary occupations with great zest; contributing to various journals and reviews, lecturing on many topics connected with philosophy and aesthetics; and above all producing his "Philosophy of Life," "Philosophy of History," and "Philosophy of Language," which rank among his best literary efforts. Friedrich Schlegel's strong devotional tendencies are especially shown in his interesting "Letters on Christian Art." Died, 1829.

SCHLEIERMACHER, FRIEDRICH ERNST DANIEL, equally distinguished as theologian, philologist, orator, and translator, was born at Breslau in 1768; studied at Halle in 1787; and, after holding various ecclesiastical appointments in different parts of Germany, was called to Berlin in 1809 as preacher, and, in the following year, received the chair of theology in the university. The influence of his writings in Germany was, and still is, very great; but it was, perhaps, surpassed by that which his oral instructions and his personal character exercised over those who lived within his sphere. Of his numerous works we can only name the following: "Reden ueber die Religion," "Der Christliche Glaube," the translation of Plato, unrivalled in excellence, the Critical Commentary on Luke's writings, and the Sermons. As a theologian Schleiermacher held a place in his own country very similar to that of Coleridge in England, midway between the extremes of orthodoxy and doubt. Died, 1834.

SCHLOETZER, AUGUST LUDWIG VON, a German historian, was born in 1737, became professor of philosophy and politics at Göttingen, and died in 1809. Among his works are, a "History of Commerce," "General History of the North," &c. He was editor of the "Staatsanzeigen" for more than ten years.

SCHMAUSS, JOHANN JACOB, historian and publicist, was born at Landau, in 1690. He was educated at Halle, and commenced a life of literary labour at the age of 21, from which he was relieved by the margrave of Baden-Dourlach, who gave him official employment at his court. In 1734 he was appointed professor of history at the university of Göttingen, which was then regarded as a school of diplomacy for the youth of the greatest families in Europe. Among his principal works are, "A Sketch of the History of the Empire," "Corpus Juris publici Academicum," "Corpus Juris gentium Academicum," and an "Introduction to the Science of Politics." Died, 1757.

SCHMIDT, GEORG FRIEDRICH, an eminent German engraver, born at Berlin in 1712. After completing his studies at Paris, where, in 1742, he was admitted to the Academy, he was called to Berlin by Frederick II.; and received at the Berlin Academy, and named court-engraver. Invited to St Petersburg by the Empress Elizabeth, in 1756, he spent six years at her court. His prints are numerous, and many good engravers were trained in his school. Died, at Berlin, 1775.

SCHNEIDER, JOHANN CHRISTIAN FRIEDRICH, a distinguished composer, was born in 1736, near Zittau. His father began life as a weaver; but, by the force of perseverance, gained an appointment of organist at Watersdorf, and himself superintending the education of his boys. At an early period the son was distinguished, not merely as a pianoforte player, but as a composer; and during the course of his life, though contemporaneous with the career of Beethoven, Weber, Spohr, and Mendelssohn, he took his place among the musical creators of Germany. The list of his works includes almost every form of musical composition, theatrical writing alone excepted. His oratorios—the works by which he is best known in England—comprise his "Deluge," "Last Judgment," "Paradise Lost," "Pharaoh," "Christ the Master," "Absalom," "Christ the Child," "Gideon," "Gethsemane and Golgotha," besides cantatas, psalms, hymns, and other service music. At the time of his death he was chapel-master to the duke of Anhalt-Dessau. Died, 1853.

SCHNEIDER, JOHANN GOTTLIEB, an eminent German philologist and naturalist, was born at Kolm, near Hubertsburg, in 1750. He was educated at the universities of Leipzig and Göttingen, chiefly applying himself to classical literature, under the influence of Reiske, Fischer, and Weiz. In 1774 he became assistant to Brunck at Strasburg; and after publishing several works he was appointed, in 1776, professor of philology at Frankfort on the Oder, a post which he held, including five years at Breslau, whither the university was removed, till 1816. In that year he was appointed chief librarian to the university of Breslau. The great merit of Schneider was the remarkable combination in him of philosophical learning with the knowledge of natural history, which enabled him to throw light on many parts of ancient literature previously neglected or misinterpreted. His works are very numerous, and we can only name here his editions of Demetrius Phalereus, Xenophon, Aristotle's History of Animals, and Theophrastus, his Greek Lexicon, and "Eclogæ Physicæ." His original writings on Natural History are in German. Died, at Breslau, 1822.

SCHNORR VON KAROLSFELD, JULIUS, one of the greatest German fresco-painters, born at Leipzig in 1794. Having received his first lessons in art from his father, then director of the Academy of Art, he studied at Vienna, and in 1818 went to Rome, where he became the sympathizing associate of Cornelius, Overbeck, and other young artists of the Romantic School. After a residence

of ten years at painted his "and Rachel," and other picture decoration of t at Munich. His professor of the demy, by King crown-prince, whose commiss during the n Munich. of ten years at Rome, during which he painted his "Wedding at Cana," "Jacob and Rachel," "Ruth in the field of Boaz," and other pictures, besides assisting in the decoration of the Villa Massimi, he settled at Munich. He was appointed, in 1827, professor of historical painting in the Academy, by King Ludwig, to whom, while crown-prince, he had been introduced, and whose commissions kept him fully employed during the nineteen years of his stay at Munich. Schnorr removed in 1846 to Dresden, where he spent his remaining years as professor of painting, and director of the Picture Gallery. The most important works of this great painter are the four series of frescoes executed for the king of Bavaria in the palace of Munich, one series representing the successive scenes of the Nibelungen Lied, and occupying the walls of five rooms; the others, events in the histories of Charlemagne, Frederick Barbarossa, and Rudolph of Hapsburg, occupying three other rooms. The whole were designed by Schnorr, but the painting of many of the pictures was executed by his assistants under his direction. Schnorr executed many other paintings and designs, and his "Bibel in Bildern" is well known in England. His works display great force of imagination, variety of invention, and surprising technical skill. The frescoes are very impressive and very popular. Died, at Dresden, 13th April, 1853.

SCHOEFFER, PETER, one of the inventors of printing, was born at Gernsheim, in the territory of Darmstadt; was a partner with Gutenberg and Faust, and having married the daughter of the latter, became sole possessor of the printing establishment. He died about 1502.

SCHOEN, or SCHONGAUER, MARTIN, a celebrated early German painter and engraver, was born at Ulm, about 1420, or, according to Waagen, about 1440. He was the son of an artist, and studied first engraving, in which he attained great excellence. He afterwards applied himself to painting, under Roger vander Weiden at Antwerp, and became one of the best of the artists of the Van Eyck school. He settled at Colmar about 1481, and there founded a school of art. His best works are in the college of Colmar. This artist was known as "Hübsch Martin" among the Germans, was called "Bel Martino," and "Martino d'Anversa," by the Italians, and "Beau Martin" by the French. The National Gallery has a small "Death of the Virgin" by him. Died, at Colmar, 1488 or 1492.

SCHOEPFLIN, JOHANN DANIEL, a learned German historian, was born in 1694, and became professor of history and rhetoric at Strasburg; where he died in 1771. He published several works of great research, and was for more than half a century one of the most distinguished ornaments of the university of Strasburg. His valuable library and museum he left to the public.

SCHOLZ, JOHANN MATHIAS AUGUST, German biblical scholar and philologist, was born near Breslau in 1794. He was educated at the university of that city, and early devoted himself to the task which occupied so many years of his life, the critical examina-

tion of the text of the New Testament. He spent several years in visiting the principal European libraries, and collating the manuscripts of the Greek Testament; travelled in Egypt and Palestine; was ordained priest in 1821, and two years later was appointed professor of theology at the university of Bonn, and canon of the cathedral. His principal work, the edition of the Greek New Testament, appeared in 1830—1835. Scholz maintained the existence of two recensions, or families of manuscripts, the Alexandrian, which he called Occidental, and the Constantinopolitan, which he called Oriental; and in forming his text he gave the preference to the latter, believing them directly descended from the autographs of the writers. His system, however, is based on assertions without proofs, and has been controverted, if not refuted, by Rinck, and by Tischendorf in the Prolegomena to his edition of the New Testament. Among the other works of Scholz are a "Handbuch der biblischen Archæologie," and "Biblich-kritische Reise." Died, in November, 1852.

SCHOMBERG, HENRI DE, marshal of France, was descended of a German family. He served in 1617, in Piedmont, under Lesdiguières, and afterwards against the Huguenots in the civil wars. In 1625 he was made marshal, and two years afterwards defeated the English at the isle of Rhé. In 1629 he forced the passage of Susa, on which occasion he was severely wounded. The next year he took Pignerol, and relieved Casal. In 1632 he defeated the Huguenots in Languedoc at the battle of Castelnaudary, capturing their leader, the duke of Montmorenci, for which he was made governor of that province. He wrote a narrative of the war of Italy, and died in 1632.

SCHOMBERG, FREDERIC ARMAND, Duke of, was born about 1619, of an illustrious family, but not of the same as the preceding. He began his military career under Frederic Henry, prince of Orange, and his son William; but in 1650 he passed into the French service, became acquainted with Condé and Turenne, and obtained the government of Gravelines and Furnes. In 1661 he was sent to Portugal, where his success against the forces of Spain procured a favourable peace. On the revocation of the Edict of Nantes, he left France and went to Brandenburg, the elector of which made him minister of state. He accompanied the prince of Orange to England at the revolution, was created a peer, made knight of the Garter, and obtained a grant of £100,000. In 1689 he accompanied the king, William III., to Ireland, and was shot as he was crossing the Boyne, at the head of his regiment.

SCHOMBERG, ISAAC, a naval officer and historian. He served as lieutenant in the American war, distinguished himself in the victory gained by Admiral Rodney over Count de Grasse, and was captain of the Culloden in Lord Howe's fleet on "the glorious first of June," 1794. He eventually became a commissioner of the navy, and at his leisure devoted his attention to the composition of a work, entitled "Naval Chronology," 5 vols. Died, 1813.

SCHOPENHAUER, ARTHUR, a German philosopher, was born at Dantzic in 1788. His father was a merchant, and his mother the popular novelist and litterateur, Johanna Schopenhauer. His travels with them while a boy, and his early association with some of the leading literary men of the time—the Schlegels, Klopstock, Goethe, Wieland, &c., contributed to the development of his precocious intellect. He studied at Göttingen, attended the lectures of Fichte at Berlin, spent some time at Weimar and Dresden, and led a very restless life till 1831, when he settled at Frankfort on the Main. He was accompanied only by a female servant and a dog, and lived a quiet, reserved, selfishly comfortable life; seeming to some the model of a sage, and to others a surly fanatic. He despised his countrymen and their philosophies, read much of French and English literature, had the "Times" regularly sent to him throughout his life, and latterly paid much attention to oriental studies. He became an enthusiast for Buddha and the Vedas, and enjoyed tracing all Western accomplishments to Eastern sources. The principal work of Schopenhauer is entitled, "Die Welt als Wille und Vorstellung." It appeared in 1819, and after being neglected for many years attracted a good deal of attention, and received some sharp blows of criticism. The practical upshot of his system, which makes Will the one sole reality, is intolerably melancholy, taking from man all that constitutes his greatness, his goodness, or his bliss. God—futility—the soul—mere names, illusions; and the world of men is to him bad, hopelessly bad, and made so. "Strange, melancholy, and deterrent," says the *Saturday Review* (5th Sept., 1863), "the speculations of Schopenhauer are likely to remain a monument of dark genius rather than a light of philosophy. They form no centre of warmth and hope, but the funeral pyre on which faith and trust and aspiration immolate themselves." Schopenhauer published several other works of philosophy, of which the most important is, "Die beiden Grundprobleme der Ethik." Died, at Frankfort, 21st Sept., 1860.

SCHOPENHAUER, JOHANNA, a German authoress of great celebrity, was born at Dantzic, 1770. Her father, whose name was Trosina, was a wealthy citizen of that town, and under the paternal roof she enjoyed every facility for the improvement of her great natural abilities. Soon after her marriage she made a tour through France, Italy, and the British Islands, of which she subsequently published an account; and, on the death of her husband, she went to reside at Weimar, where she lived in the closest intimacy with Goethe, her home being the resort of all the eminent persons who were attracted to that court. Her chief works are, "Fernow's Leben," "Ausflucht an den Rhein," "Jugendleben und Wanderbilder" (an English translation of which was published in 1847), "Sidonia," "Die Tante," and, above all, "Gabriele," which presents a charming picture of female character. Died, 1838.

SCHIREVELIUS, CORNELIUS, a learned

critic, was born at Haarlem, about 1614. His father was rector of the school at Leyden, in which office he succeeded him. His name was principally known in England by his "Greek and Latin Lexicon." Died, 1667.

SCHUBERT, FRANZ, one of the most celebrated German musical composers, was born at Vienna, in 1797. He belonged to a family distinguished for their musical talents, and from his earliest years showed so strong a bent to musical studies and composition that the wishes of his friends, who would fain have made him a philosopher, gave way, and he was allowed to follow his true calling. At 7 years of age he was the pupil of Michael Holzer; became a chorister in the imperial chapel, and the pupil of the court-organist and of Salieri. He studied the works of Haydn, Mozart, and Beethoven, and gave lessons in music for a living. The number and variety of his compositions is extraordinary. The most admired are his "Lieder," and among them "Der Erlkönig," "Ave Maria," "Der Wanderer," and "Die Erwartung," are perhaps the best known. But he wrote also operas, sonatas, symphonies, overtures, cantatas, 6 masses, &c. He left numerous works unpublished at the time of his death. Schubert spent almost his whole life at Vienna, and there died, 19th November, 1828. His remains rest near those of Beethoven. The characteristic charms of Schubert's music are its marked originality, depth of poetic feeling, grace of melody, and startling force and truth of expression. It is now more than ever relished and appreciated in England. His grand Mass in E flat, the first published (1866), is highly praised as a rich and elaborate work. A "Schubert Society" is projected in London.

SCHULEMBOURG, JOHANN MATTHIAS, Count von, a celebrated general, born at Magdeburg in 1661. He first served in the Danish army; after which he distinguished himself as a brave and skilful general in the wars of Poland, under Sobieski; commanded the Saxon forces in the service of Holland against the French, especially distinguishing himself at the battle of Malplaquet, and, finally, became generalissimo of the Venetian forces, and in 1716 gained great renown by his noble defence of Corfu against the Turks. Died, 1747.

SCHULTENS, ALBRECHT, a German divine, who was designated the restorer of oriental literature in the 18th century, was born at Groningen, in 1686; became professor of oriental languages at Franeker, and afterwards at Leyden; wrote several learned works, among which are "Origines Hebraicae," and a Commentary on the Book of Job, and died in 1750.—**JOHANN JACOB**, his son, who died in 1778; and **HEINRICH ALBRECHT**, his grandson, who died in 1793, were both distinguished by their knowledge of the oriental tongues, and filled the same chair at Leyden.

SCHUMACHER, HEINRICH CHRISTIAN, a distinguished astronomer, was born in Holstein, 1780; was successively professor of astronomy at the university of Copenhagen, director at the observatory of Mannheim, in the grand-duchy of Baden, and for many

years astronomer at Altona, and editor of the *Nachrichten*. He was distinguished by order of the longitude from coast of Jutland from Skagen (Jutland) to the Hanover; a was continued by many other in for the English the difference of servatories of C was a diligent his latest labor of Encke's plan 1850.

SCHUMANN, German musician, born at Zwickau in Saxony, at an early age a strong and remarkable talent for composition. He was professor of the law at Leipzig, and he thus consented to the study of law in compliance with the wishes of his father, but he was totally uninterested in the study, and he spent his time at Leipzig, at the disposal of his pupil and friend, Friedrich Wieck, whose daughter he married, he composed many fine pieces; heard Paganini in 1830, his mother was so much affected by the entreaty, he finally dedicated himself to music, and settled at Leipzig, where he was employed by Wieck, composed several works of very originality, and established an "Institute for Music," and was the organizer of the Mendelssohn Society, and devoted to Dresden. He was distinguished for his studies, he was injured in his right arm, and he contrived to give his flexibility to his right hand, and all his devotion to the highest interment of his music, and Mendelssohn's to the songs of Burns, and he showed composition, and another, over his shadow over which fell a sombre and It gradually hopeless in his master at Dresden, and at Endernic Schumann, hated by the

years astronomer in the observatory at Altona, and editor of the *Astronomische Nachrichten*. From 1817 to 1821 he measured, by order of the government, the degrees of longitude from Copenhagen to the western coast of Jutland, and the degrees of latitude from Skagen (the northern extremity of Jutland) to the frontiers of the kingdom of Hanover; a work which was afterwards continued by the astronomer Gauss. Among many other important works, he executed for the English government the measure of the difference of longitude between the observatories of Greenwich and of Altona. He was a diligent and accurate observer, one of his latest labours being the investigation of Encke's planet *Astræa*. Died, 28th Dec., 1850.

SCHUMANN, ROBERT, the distinguished German musical composer, was born at Zwickau in Saxony, in 1810. The son of an intelligent publisher, he showed at a very early age a strong passion for music, and remarkable talent both for playing and composing. He was, however, destined for the profession of the law; and in 1828 he was sent to study at Leipsic university. It was in compliance with his mother's wish that he thus consented to the suppression of his genius and the pursuit of studies which were totally uninteresting to him. After a year at Leipsic, during which he became the pupil and friend of the musician, Friedrich Wieck, whose daughter Clara he afterwards married, he continued his studies at Heidelberg; heard Paganini at Frankfort; and in 1830, his mother at last yielding to his urgent entreaty, he finally abandoned the law, and dedicated himself to music alone. He settled at Leipsic, studied again with Wieck, composed a great number of pieces of very original and diversified character, established and edited the "*Neue Zeitschrift für Musik*," married in 1840, took part in the organization of the musical school founded by Mendelssohn, and in 1844, removed to Dresden. At the outset of his musical studies he lost the use of his right hand, injuring one of the fingers by the mechanism he contrived for the purpose of increasing its flexibility. But he worked on with a giant's strength, struggling against nature and all obstacles, "with uncompromising devotion to what he conceived to be the highest interests of art." Bach, Beethoven, Mendelssohn, and Schubert, were the gods of his musical idolatry. He composed music to the songs of Heine, Rückert, Chamisso, Burns, and other poets; then entered upon and showed himself a master of orchestral composition, producing one great work after another, overture, symphony, and quartett, in rapid succession. But there was a boding shadow over his life, a morbid melancholy, which fell also upon his music, and gave it a sombre and sometimes a painful character. It gradually darkened, and at last became hopeless insanity. He had settled as chapel-master at Düsseldorf in 1850, but could only fulfil the duties of his office for three or four years; and on the 29th July, 1856, he died, at Endenich, near Bonn. The genius of Schumann, at first slighted, questioned, or hated by the majority, has gradually won

wide and warm recognition, and he takes his place among great, if not beside the greatest masters. One of his most celebrated works is the cantata entitled "*Paradise and the Peri*." It was performed in London in 1856, but in spite of the charm of Jenny Lind's singing, failed to please. A second performance, in 1866, was not more successful. Schumann's music has now become an attractive feature of the Crystal Palace Concerts. There is a *Life of Schumann*, by Wasielewski, and a more recent one by Reissmann.

SCHURMANN, ANNA MARIA VON, born at Cologne, in 1607, whose acquirements in the learned languages, the fine arts, and polite literature obtained for her the appellation of the modern Sappho. This accomplished lady, who understood the Hebrew, Greek, Latin, Chaldee, and several modern languages, and who was skilled in painting, engraving, sculpture, and music, at length became the victim of fanatical delusion. In 1650 she appeared as a zealous disciple of the enthusiast Labadie, to whom, it is said, she was secretly married; and, after his death, she retired to Friesland, where she died in 1678. Her works were printed in 1652.

SCHUSTER, IGNATIUS, a famous comic actor at Vienna, on whose tomb the following expressive tribute is recorded:—"Here lies Ignatius Schuster, who made Vienna laugh daily for 30 years, and caused it to weep only once—upon the day of his death." Died, 1835.

SCHWANTHALER, LUDWIG VON, an eminent sculptor, descended from a family that for generations had been distinguished in the arts, was born at Munich, 1802. At the age of 16 he entered the Academy of Munich, where he soon attracted the attention of Cornelius, by whose advice he repaired to Rome, and after enjoying there the friendship and instructions of Thorwaldsen, he returned to his native city in 1827, where he found ample scope for the development of his genius in the numerous commissions intrusted to him by the royal family of Bavaria. It would be difficult with our limits to point out even a tithe of his productions; suffice it to say, that rich as Munich has become in works of art, it owes no small portion of its celebrity to this artist, whose marvellous power of composition and versatility of genius showed themselves no less in his admirable statues and reliefs, than in his frescoes and cartoons. Died, 1848.

SCHWARTZ, BERTHOLD, a monk of the order of Cordeliers, at the end of the 13th century, was a native of Fribourg, in Germany, and an able chemist. It is said, that as he was making some experiments with nitre, he was led to his invention of gunpowder, which was first applied to warlike purposes by the Venetians in 1300. There is, however, much discrepancy in the accounts of this discovery; and it is certain that Roger Bacon, who died in 1292, was acquainted with an inflammable composition similar to gunpowder, the knowledge of which Europeans appear to have derived from the Orientals.

SCHWARTZ, CHRISTIAN FREDERIC, a German missionary to the East Indies. He was born in 1726, and went to India in 1750. In 1767, he was employed by the English Society for the Promotion of Christian Knowledge, and he continued throughout his life to labour in the sacred cause with unceasing zeal. He was held in high esteem for his character by the Hindoos, and the rajah of Tanjore, when dying, made him tutor to his son. He was sent ambassador to Hyder Ali, and successfully negotiated a peace; and subsequently to Tippoo Saib, who refused to treat with him. Died, 1788.

SCHWARTZENBERG, CARL PHILIPP, Prince, an Austrian field-marshal, was born of an ancient and illustrious family at Vienna, in 1771. He entered into the army early, and rapidly proceeded through all the grades of military rank until he became a general officer. After serving two campaigns against the Turks, he was employed in the first campaign against the French in the war that followed the execution of Louis XVI. On the death of the Emperor Paul, in 1801, he was sent to St Petersburg to congratulate Alexander on his accession. He served under General Mack in 1805, and succeeded in withdrawing the cavalry under his command from the consequences of the capitulation of Ulm. He also took a share in the battle of Austerlitz, which was fought against his advice, and in that of Wagram. In 1812 he was appointed to the command of the auxiliary force of 30,000 Austrians, extorted by Napoleon in aid of his disastrous invasion of Russia; and in 1813 he was invested with the rank of field-marshal, with the commandship-in-chief of all the armies allied against France. On the return of Buonaparte from Elba he was again intrusted with the command of a great portion of the allied forces; and at the conclusion of the war he was made president of the aulic council, which post he occupied until his death, in 1820.

SCHWARZENBERG, Prince FELIX, an Austrian statesman, was born in 1800. He entered the army at an early age; but soon afterwards became attached to the Austrian embassy at St Petersburg, where he fell into a political scrape, in connection with a conspirator, which caused his expulsion from the Russian dominions. He was afterwards attached to the Austrian embassy in London, where he became acquainted with, and ruined, an English lady of high rank, and was compelled to fly under circumstances which for ever precluded his reappearance on British ground. He was subsequently sent as an Austrian minister to Turin and Naples. In 1848 he took part in the war that broke out between Austria and Sardinia, and was wounded; and in November of the same year he was recalled to Vienna, and became chief minister of the Austrian empire. The course which he then adopted to retrieve the shattered fortunes of his country belongs more to history than to biography; and we shall here only state that, though it is impossible to approve of the means to which he had recourse, his policy was successful, and a long and prosperous

career seemed to lie before him, when he died suddenly, in 1852.

SCHWERIN, CHRISTOPH, Count von, Prussian field-marshal, was born in 1684. He entered the Dutch army, and served his first campaign in the allied army under Marlborough and Prince Eugene in 1704, passing afterwards into the service of the duke of Mecklenburg, and in 1720 into that of Prussia. He obtained the rank of lieutenant-general in 1731, and of commander-general of infantry in 1739; was made a councillor of state by Frederick the Great on his accession, and contributed the following year to the important victory of Mollwitz. He was then named governor of Neiss and Brieg. He had a command in the campaign of Bohemia in 1744, was again called into active service at the beginning of the Seven Years' War, and was killed at the battle of Prague, 5th May, 1757.

SCINA, DOMENICO, an eminent Sicilian scholar and natural philosopher, born at Palermo in 1765. He was named while young assistant professor of mathematics at the university of that city, and subsequently titular professor of experimental physics, chancellor in 1822, and the next year chief librarian. He reorganized the library, and did good service also as member of the commission of education. His writings are numerous, and on a variety of subjects. Among them are, "Introduction to Experimental Physics," "Elements of Physics," "Memoirs on the Life and Philosophy of Empedocles," "Views of the Literary History of Sicily during the 18th Century," "Topography of Palermo and its Neighbourhood," and various works on the natural phenomena of Sicily. Died, at Palermo, 1837.

SCIOPIUS, CASPAR, German philologist and polemical writer, was born in the palatinate in 1576. He was brought up a Protestant, but having obtained the notice of Pope Clement VII., by a "Panegyric," which he wrote in 1598, he abjured Protestantism at Rome, and became a Catholic. Rewarded with honours and offices, he wrote several treatises in defence of the holy see. He quarrelled with Scaliger, who had turned Protestant, and in his "Sculliger Hypobolimus," ridiculed his vaunt of noble ancestry, and attacked Protestants with much bitterness. On a visit to Venice, in 1609, Sclopius had an interview with Father Paul, and endeavoured to win him to the side of Rome, for which he was imprisoned a few days. At Vienna, which he next visited, he was named aulic councillor, and created count-palatine. In 1613 he went to Spain, and at Madrid got a sound beating from the servants of the English ambassador, probably on account of his attacks on James I. in his recent works. These works were deemed worthy to be burnt by the hangman, both at London and at Paris. Sclopius fled from Spain, and discharged at the ambassador his "Legatus Latro." He wrote more and more ferociously against Protestants, especially in his "Classicum Belli Sacri," and afterwards wrote as savagely against the Jesuits, so that his life was not safe at Milan, and he fled to Padua. His

critical and polemical works are, "Verisimilium Lationum Institutiones Grammaticae et acutenae Scaliger, et operum eius sunt 1619.

SCIPIO AFRICANUS, LUCIUS CORNELIUS ROMANUS, was born of an ancient and illustrious family, B. C. 234. His father's life was cut off by his courage, and by the desertion of his troops, the defeat at Cannae, and the choice of command, where instead of superior forces he laid siege to the city, and took it the same year, in a generous conduct, and Spanish hostages among them, the most eminent even offered the character of Roman people. Scipio was recalled to Spain except the Carthaginian to visit to the court of the king, and won the next year his province, and character and was crossed, in the siege of Utica, Hasdrubal retired to the spring he double camp of their fugitive joined Hasdrubal surrendered to was recalled to the second Punic total defeat of Zama, 19th Oct. the next year home, had the had yet been S. AFRICANUS, which were of censor, consul ambassador to whose court nibal. Having Lucius to the 190, they were of monies rec was the lead Scipio, and successful, but by the advice tarity of Scipio never to return num, B. C. 14 Hannibal die ter of Emilia

critical and polemical works are more than a hundred in number, and among the former are, "Verisimilium libri IV.," "Suspectarum Lectorum libri V.," "De Arte Critica," and "Grammatica Philosophica, sive Institutiones Grammaticae Latinae." In learning and acuteness Scioppius might rival Scaliger, and some of his philological works are still of value. Died, at Padua, 1619.

SCIPIO AFRICANUS (the elder), **PUBLIUS CORNELIUS**, one of the greatest of the Romans, was born of an illustrious patrician family, B. C. 234. He is said to have saved his father's life at the battle of the Ticinus, and by his courage and decision he prevented the desertion of the young nobles after the defeat at Cannæ. At the age of 24 he was chosen to command, as proconsul, in Spain, where instead of risking a battle with the superior forces of the Carthaginians, he laid siege to the city of Carthago Nova, and took it the same year. His humane and generous conduct on becoming master of the city, and especially his liberation of the Spanish hostages and prisoners found there, among them a very beautiful girl, excited the most enthusiastic admiration. He was even offered the sovereignty of Spain, but declined to be more than general of the Roman people. During the next three years Scipio made himself master of all Spain except the town of Gades. In order to prepare the way for the invasion of the Carthaginian territory, he made a secret visit to the court of Syphax, king of Numidia, and won his alliance. In 206 he returned to Rome, and was chosen consul for the next year. Sicily was given to him as his province, and having attracted by his character and success an army of volunteers, he crossed, in 204, into Africa, and began the siege of Utica, but on the approach of Hasdrubal retired into winter-quarters. In the spring he burnt, by stratagem, the double camp of the enemy, and destroyed their fugitive forces. Syphax, who had joined Hasdrubal, was captured, and Cirta surrendered to the conquerors. Hannibal was recalled to oppose Scipio in Africa, and the second Punic War was terminated by the total defeat of Hannibal at the battle of Zama, 19th October, 202. Peace was signed the next year, and Scipio, on his return home, had the most splendid triumph which had yet been seen, and received the surname **AFRICANUS**. He declined other honours which were offered him; was subsequently censor, consul a second time, and in 193 ambassador to Antiochus, king of Syria, at whose court he is said to have met Hannibal. Having accompanied his brother Lucius to the Syrian war as lieutenant, in 190, they were accused of misappropriation of monies received from Antiochus. Cato was the leader of the party opposed to Scipio, and the prosecution of Lucius was successful, but that of Africanus was dropped by the advice of Tib. Gracchus. The popularity of Scipio had waned, and he left Rome never to return. Died at his villa, at Litternum, B. C. 183, the same year in which Hannibal died. Scipio married the daughter of **Æmilius Paulus**, and his youngest

daughter became the wife of Tib. Gracchus, and the mother of the tribunes, Tiberius and Calus. Throughout his career Scipio was distinguished by extraordinary self-confidence and decisiveness in action, and no less by a profound sense of religion. He professed, and it was believed by the people, that he was favoured with intercourse with the gods, and on all occasions he devoutly awaited divine direction before acting. The stately pride with which in his later years he disregarded the laws of his country obscured the lustre of the immense services he had earlier rendered.

SCIPIO, LUCIUS CORNELIUS, surnamed **ASIATICUS**, was brother of the preceding, with whom he served in Spain and Africa. He obtained the consulate, B. C. 190.

SCIPIO ÆMILIANUS AFRICANUS (the younger), **PUBLIUS CORNELIUS**, conqueror of Carthage, was born about B. C. 185. He was the youngest son of **Æmilius Paulus**, and the adopted son of P. Scipio, son of Africanus the elder. In his youth he had the advantage of the instructions and friendship of Polybius, who, exiled from Greece, was permitted to live in the house of **Æmilius Paulus**. He was an industrious student of literature, and early proved himself singularly free from the common vices of sensuality and covetousness. He began his military service in Spain in 161; gained great reputation soon after in Africa, in the third Punic War; and in 148, although not of fit age, was chosen consul. The next year, accompanied by Polybius and C. Lælius, he went to Africa, and at once commenced the siege of Carthage, which was heroically defended. It was entered by the Romans in the spring of 146; desperate fighting took place from street to street, and from house to house; with awful bloodshed, and at last a fire that raged nearly a week. Scipio mused mournfully over these horrors, and forebode like ruin for Rome. By order of the Senate the walls and houses were totally destroyed, and a curse pronounced against whoever should rebuild the city. Scipio had a magnificent triumph on his return. He led a simple and frugal life, and during his censorship, 142, tried to effect reforms in the manners of his countrymen, but without success. In 134 he was again consul, with Spain for his province, and his great achievement there was the siege and capture of Numantia; for which he had the surname **Numantinus**. His marriage with Sempronius, sister of the Gracchi, was not a happy one, and by his bold resistance to the proposed reforms, he lost the favour of the popular party; and at last, in 129, he was found dead in his bed. Suspicion of murder fell on various persons, but chiefly on Carbo, one of the most rash advocates of the agrarian reforms. Scipio was the friend of Terence, Panætius, and especially of Lælius, whose name is affixed to Cicero's discourse "De Amicitia."

SCOPAS, a celebrated Grecian sculptor, was a native of the isle of Paros, and flourished in the 4th century B. C.

SCOPOLI, GIOVANNI ANTONIO, an Italian naturalist and physician, was born in 1723, at Cavalese in the Tyrol; and became, successively, first physician of the Tyrolese

mines, professor of mineralogy at Chemnitz, and professor of botany and chemistry at Pavia. He wrote several works on botany and entomology. Died, 1787.

SCORESBY, WILLIAM, D.D., whose name will long be perpetuated in connection with Arctic discovery, was born at Whitby in 1790. He was the son of the captain of a Whitby whaler, and such was his early passion for the sea, that at the age of ten he concealed himself in his father's ship, and did not present himself until the vessel was well at sea. Although the captain's son, he was not permitted to "enter by the cabin window," and beginning at the bottom of his profession, he worked himself gradually up. The long intervals during which the vessel was laid up in the winter, he spent in study at Edinburgh. In 1820 he published a very interesting account of the Arctic regions which he had repeatedly visited. Soon afterwards he came to Liverpool, out of which port he sailed for some years. In his last voyage he surveyed a large portion of the coast of Greenland, which still bears the name of Liverpool Coast, and upon any chart of that coast may be read a long list of the names of Liverpool families in headlands, bays, and islands. Considering that he had a call to the ministry, Mr Scoresby then abandoned the sea, and studied for orders at Cambridge with such success that he took a doctor's degree, accepted the chaplainship of the Mariners' Church, Liverpool, and at a later period took charge of an immense parish at Bradford. For the last few years of his life he resided at Torquay in retirement. Wherever he was he succeeded in gaining the warm affection of all who were brought in connection with him. It is, however, as a man of science that Dr Scoresby will be most widely known. Before he changed his profession, he had upon several voyages turned his attention to the properties of the magnet, and much of the increased safety of iron ships is probably owing to the wholesome distrust of adjusted compasses excited by his experiments and lectures. Within a few months of his death, he went out in the Royal Charter to Melbourne, simply with the view of testing the truth of his theories. Besides his "Discourses to Seamen," which have gone through many editions, Dr Scoresby contributed numerous articles on natural history, physics, and meteorology, to the Edinburgh Philosophical Journal. Died, 1857.

SCOTT, JOHN, a Quaker poet, born at Bermondsey, in 1739. He resided, during the greater part of his life, at Amwell, a very picturesque village in Hertfordshire, enjoyed the friendship of Dr Johnson, and died in 1783. He was author of "Amwell," and other poems, which pleasingly reflect the charms of the pastoral scenery amidst which he lived; a "Digest of the Highway Laws;" and "Critical Essays." Amwell spring, the Emme-well of Domesday Book, is one of the heads of the New River, and Middleton has a monument there.

SCOTT, MICHAEL, a celebrated Scottish philosopher of the 13th century, whose knowledge of the occult sciences caused him to pass for a magician, was born at Balwirie, in Fifeshire. He is said to have

travelled in France, Germany, and England, and was received with great distinction by their respective sovereigns; received the honour of knighthood from the Scottish monarch, Alexander III.; and died in 1293. Several works on natural history and physical science are attributed to Michael Scott. But the account of his life is involved in much uncertainty, and it seems possible that there may have been two persons of the same name, and that their separate histories have been confused and run into one.

SCOTT, MICHAEL, the well-known author of "Tom Cringle's Log," was born in Glasgow, 1789; received his education at the high school and university of that city; went to Jamaica in 1806, where he remained till 1822; and finally settled in Scotland, where he embarked in commercial speculations. During his leisure he composed the entertaining sketches above mentioned, which first appeared in "Blackwood's Magazine;" and he preserved his incognito so well, that it was not until after his death that they were known to have proceeded from his pen. Died, 1835.

SCOTT, REGINALD, or REYNOLD, was a native of Kent, and received his education at Hart Hall, Cambridge. He had both the good sense and courage to oppose the absurd opinion, at that time prevalent, of the existence of witches, by publishing his "Discoveries of Witchcraft." Died, 1599.

SCOTT, SAMUEL, an eminent painter of sea scenery, who took Vandevelde for his model. His views of Old London Bridge and Westminster Bridge are in the National Gallery. Died, 1773.

SCOTT, THOMAS, an English divine, born in 1747, at Braytoft, in Lincolnshire, was intended for the medical profession, but entered the church, and rendered himself celebrated as a theological writer. He became chaplain of the Lock Hospital in 1783, and rector of Aston Sandford in 1801; was author of "The Force of Truth," a "Defence of Calvinism," the well-known "Commentary on the Bible," and "Sermons." Died, 1821.

SCOTT, SIR WALTER, bart., the great novelist, was born at Edinburgh, in 1771. He passed his youth in the pleasures of hunting, in the study of the law, and in reading old plays, romances, travels, and marvellous adventures. The antiquities and ancient poetry of Scotland early inflamed his imagination; he read the old chronicles, and made himself acquainted with the customs, obsolete laws, the traditions of families, and the superstitious beliefs of his countrymen. He made his debut as an author in "Minstrelsy of the Scottish Border," which had great success. His next work, the "Lay of the Last Minstrel," was received with still greater favour. "Marmion," "The Lady of the Lake," and "Rokeby" followed; but his poetical reputation was soon afterwards eclipsed by that of Lord Byron. Subsequently appeared "Paul's Letters to his Kinsfolk" and the "Battle of Waterloo," the first successful, the latter a failure. His novels, however, are his great passport to fame. be out of place, need only be enumerated; "Waverley," "Tales of my Landlord," "Ivanhoe," "The Monastery," "The Abbot," "Quentin Durward," "Everil of the Peak," "Woodstock," "Rob Roy," "The Heart of Mid Lothian," "Chronicles of the Canongate," &c. Sir Walter Scott was made a baronet by George IV., in 1821, after the coronation; in giving effect to the splendid and antiquarian costumes of which, it appears, his taste and erudition were consulted. Our limits prevent us from detailing the numerous engagements of this highly gifted and industrious man: suffice it, therefore, to say, that from the commencement of his literary career in 1798, when he published his translation of Burger's "Leonora" and "Wild Huntsman," to the year of his decease, he was constantly producing some literary work, and that he reaped an abundant harvest. His patrimonial estate was considerable; and, in 1800, he obtained the preferment of sheriff of Selkirkshire, worth about £300 a year; which sum was considerably increased in 1806, by his being appointed one of the principal clerks of the session in Scotland. He accordingly, in 1811, removed 6 or 7 miles below his former residence on the Tweed, where he purchased a farm of about 100 acres, and built the mansion, to which he gave the name of Abbotsford. Here he continued to reside, exercising the most open hospitality, and receiving the homage of admiration from all parts of the world, while he pursued his literary labours with unremitting activity. At length, in 1825, the firm of Constable and Co., at Edinburgh, having projected a cheap series of original and selected works, engaged Sir Walter to compose a "Life of Buonaparte." It was in progress when these publishers became bankrupts, and by that unhappy failure Scott found himself involved, on their behalf, for accommodation bills to the enormous amount of £120,000. The estate of Abbotsford had been settled on Sir Walter's eldest son on his marriage, and it was therefore beyond the reach of the creditors; but though he had very little property to answer the immense amount of his debts, there was still a vast source of profit remaining—his literary talents. "Gentlemen," said he to his creditors, "time and I against any two. Let me take this good ally into company, and I believe I shall be able to pay you every farthing." He further proposed, in their behalf, to insure the sum of £22,000 upon his life, which proposal was accepted; and he then sat down, at the age of 55, to the task of redeeming, by the exertion of his talents as a public writer, a debt exceeding 100,000 pounds! In the autumn of 1826 he visited Paris, in order to prosecute researches into several local and other details relating to the subject of his work; which appeared during the summer of 1827, in 9 vols. 8vo; and realized the sum of £12,000, being at the rate of £33 a day for the time he had devoted to it. Though from the time of the publication of "Waverley," Sir Walter had been generally considered the author of the "Scotch Novels," yet he had managed to preserve his incognito by various modes of evasion and half-denials whenever the subject was pub-

licly mooted; and the author, whoever he might prove to be, was fancifully styled the "Great Unknown." At length, the mystery was solved. At the annual dinner of the Theatrical Fund Association in 1827, Sir Walter, in returning thanks for the honour which the company had done him by drinking his health, unreservedly declared that they were wholly and solely his own compositions. By the republication of the former novels, in a cheap form, with new notes and prefaces; and by new works, viz. "Tales of a Grandfather," a "History of Scotland," in Dr Lardner's Encyclopedia; "Letters on Demonology and Witchcraft," in the Family Library, &c., he had paid, in part of his liabilities, £54,000; and his creditors presented to him, personally, the library, manuscripts, curiosities, and plate, which had once been his own, as a token of their gratified feelings. Early in 1831, symptoms of paralysis began to appear, and in the autumn his physicians recommended an excursion to Italy, as the means of delaying that illness which too obviously approached. A passage to Malta, in the *Barham* ship of war, was obtained for him, and he reached Naples by that route, Dec. 27. In April, 1832, he went to Rome, inspected the classical antiquities of that city with great interest, and visited Tivoli, Albani, and Frascati. Feeling, however, that his strength was rapidly decreasing, he determined upon returning, with all possible speed, wishing to die in his native country. On his arrival in London it was found that medical assistance was now useless; all hope of his recovery had fled; and at his own anxious desire he was conveyed by sea to Newhaven, where he landed on the 9th of July, reached Abbotsford on the 11th, and, after lingering for two months in a state of almost total insensibility, he died on the 21st of September, 1832. The life of Sir W. Scott was written by his son-in-law, J. G. Lockhart.

SCOTT, WILLIAM. [STOWELL, Lord.]

SCOTUS, JOHANNES. [ERIGENA.]

SCOTUS, DUNS. [DUNS SCOTUS.]

SCRIBE, AUGUSTIN EUGÈNE, a celebrated French dramatic writer, was born at Paris in 1791. He was educated for the law, but soon abandoned it for the stage. His first play, "Le Dervis," was produced in 1811, and at once made him a name. From that time till his death he was a most prolific writer, frequently employing assistants, and his influence remained unshaken through all the political changes of France. He has been called the greatest wholesale manufacturer of *bon-mots*, the Rothschild of epigrams, and the Autocrat of vaudevilles. A sly political satire pervades some of his plays, and had considerable influence at the time on the course of public opinion. The first of his five-act prose plays was the "Bertrand and Raton," which appeared soon after the accession of Louis Philippe, and set some great persons in a very contemptible light. Scribe sought only to amuse, and very clearly adapted his productions to the spirit of the times and the tastes of various audiences. Among the numerous *libretti* composed by him are—"Robert le Diable," "Fra Diavolo," "Les Diamans de la Cou-

ronne," "Lea Huguenots," and "La Juive." Among his other most celebrated pieces are—"La Camaraderie," "Le Comte Ory," "Une Chaine," and "Le Verre d'Eau." He was a member of the French Academy. Died at Paris, 20th February, 1861.

SCROPE, W., author of two popular works, "Days of Deerstalking," and "Days and Nights of Salmon Fishing," was the last male representative of the famous family of his name, seated at Castle Combe, in Wiltshire—of which they possessed the manor and estate as early as the reign of Edward the Third, and boasting among his historical worthies the name of Lord Scrope of Holton, Lord Chancellor of England in the reign of Richard the Second. Mr Scrope was proud of his descent, but prouder of his skill with the gun, the rod, and the pencil, as well as of his classical attainments. He had an eye alive to the varieties of nature, and great power in communicating to his readers what he had seen and what he knew, and his books above named are worthy of a place beside Walton's "Angler" and Davy's "Salmonia." Died, in his 81st year, 1832.

SEATON, JOHN COLBORNE, Lord, field-marshal of England, was born in 1779. He was educated at Winchester School, and, at the age of 15, was appointed ensign in the army. He first served as lieutenant in the disastrous campaign of the duke of York in Holland in 1799, afterwards in Egypt, in Italy and Sicily, and took part in the battle of Maida. He was next military secretary to General Fox, and in 1808-9 accompanied Sir John Moore in the same capacity, and was with him at the battle of Corunna. Major Colborne was doubtless one of those who took part in the simple hasty burial of the hero, when "slowly and sadly" they "laid him down." The same year he joined Wellington's army in Spain, was at the battles of Ocana and Busaco, and during the campaign of 1811, commanded a brigade which was employed as a firing force to keep in check the incursions of the French. His brigade was almost entirely destroyed at Albuera, being taken in flank and rear by the French. He greatly distinguished himself at the head of the 52nd Light Infantry in the assault on the fortress and town of Ciudad Rodrigo, 8th Jan., 1812; and though wounded in the shoulder by a musket-ball, still led his men on and won. Another most brilliant exploit was the carrying of the redoubts on the heights of Vera in the Pyrenees, on the 7th October, 1813. Colonel Colborne took part in the battles of Nivelle and the Nive; carried the entrenchments at Bidasson, on which occasion Havelock, then very young, distinguished himself by an act of dashing courage; and led the attack on Soult's position at Orthes, Feb. 27th, 1814. He commanded the 52nd at Waterloo, and by one well-timed decisive movement contributed to the great victory. In 1825, he was made major-general; was lieutenant-governor of Canada from 1828 till 1836; he suppressed the rebellion which broke out subsequently, was created G. C. H., and raised to the peerage as Baron Seaton, with an annuity of £2000. He was afterwards Lord High Commissioner of the Ionian Is-

lands, and commander-in-chief in Ireland. On his retirement in 1851, he was named colonel of the 2nd Life Guards; general, a few months later, and in 1860, was created field-marshal. "He will be remembered," says a writer in the *Saturday Review*, "as one of the ablest and most trusted lieutenants of Britain's greatest general, and as having headed, on its most brilliant days, 'a regiment never surpassed in arms since arms were first borne by men.'" Lord Seaton died at Torquay, April 17th, 1863. He left his wife surviving him, and his three sons have distinguished themselves in the army. A colossal statue of Lord Seaton is being executed by Mr Adams to be erected at Southampton (1865).

SEBASTIAN, king of Portugal, was born in 1554, and ascended the throne at three years of age, on the death of his grandfather, John III. Possessed of a romantic disposition and an extravagant admiration of the glories of chivalry, he rashly determined to carry on war against the Moors in Africa, hoping thereby to effect something for Christianity and the fame of Portugal. He accordingly equipped a fleet and an army, which comprised the flower of the Portuguese nobility, and sailed for Africa in 1578, at the age of 23 years. A general engagement soon took place, at Alencacer-Xebir, and the ardour of the young king bore him into the midst of the enemy, who were already pouring on the rear of his troops. Sebastian fought with the most determined bravery, while most of his attendants were slain by his side. He at length disappeared; and so complete was the slaughter, that no more than 50 Portuguese are said to have survived this wild and ill-fated expedition. The mystery which involved the fate of this royal warrior led several adventurers to assume his person and his claims, but there seems to be no doubt that he died on the field of battle. An interesting work has just been published (1866), entitled "Les Faux Don Sébastien, Étude sur l'Histoire de Portugal," by Don Miguel D'Antas.

SEBASTIANI, HORACE FRANÇOIS, Count, marshal of France and diplomatist, was born in Corsica, in 1776. He entered the army in 1792, served in the campaign of Italy, and obtained the favour of Napoleon by the part he took in the revolution of the 18 Brumaire (November, 1799). Various negotiations were intrusted to him, which he managed with much tact. At Austerlitz he greatly distinguished himself, was severely wounded, and was made general of division. He was employed in the Peninsula, 1803-1811; took part in the expedition to Russia, and in the campaign of 1813; and after Waterloo was one of the envoys to the allied sovereigns. In 1819 he became a member of the Chamber of Deputies; minister of marine and minister for foreign affairs under Louis Philippe; filled the post of ambassador to England for five years, 1835-40; was soon after created marshal of France, and died at Paris in July, 1851. The unfortunate duchess of Praslin, murdered by her husband in 1847, was the daughter of Marshal Sebastiani.

SEBASTIANO DEL PIOMBO. [PIOMBO.]
SECKER, THOMAS, archbishop of Canterbury, an eminent and pious prelate, was born at Sibthorpe, in Nottinghamshire, in 1693, and was educated with the view of becoming a dissenting minister. He, however, conformed to the Church of England, took orders, and obtained preferment. He became, successively, rector of Houghton-le-Spring, prebendary of Durham, king's chaplain, and rector of St James's, Westminster. In 1735 he was elevated to the see of Bristol; whence he was translated to that of Oxford, in 1737; and, in 1753, he was raised to the archiepiscopal see of Canterbury; in which situation he conducted himself with great dignity, munificence, and proper severity against any laxity in the morals and manners of the clergy under his more especial superintendance. His sermons, charges, and other works, form 12 vols. Died, 1768.

SEDLER, Sir CHARLES, a celebrated wit, courtier, and poet, of the age of Charles II., was born at Aylesford, in Kent, in 1639, and was educated at Wadham College, Oxford. He was a conspicuous character among the licentious circle which surrounded the gay monarch; but though himself a profligate, he was so much annoyed by an intrigue which James II. carried on with his daughter, afterwards created countess of Dorchester, that he took an active part in promoting the revolution. Died, 1701.

SEETZEN, ULRIC JASPER, a celebrated German traveller, was a native of East Friesland, and received his education in the university of Göttingen, where he particularly studied natural history and philosophy. Seconded by the patronage of the Dukes Ernest and Augustus of Saxe-Gotha, in a desire to visit Asia and Africa, he commenced his perilous undertaking in 1802, at Constantinople, where he stayed six months. The ambassadors there assembled, encouraged his enterprise; and at Smyrna the Russian Prince Oczakow, who had been over Asia Minor and Egypt, assisted him with many useful instructions. Seetzen stopped one year at Aleppo to learn the Arabic language, and to collect MSS. for the library of the duke of Saxe-Gotha, and reached Damascus in April, 1805. From thence he explored many parts of Syria, Palestine, and Arabia, which had not before been visited by any European; and in order that he might be able to undertake a pilgrimage to Mecca and Medina, he made a profession of Mahometanism. In 1810 he was at Mocha, whence he wrote the last letters that arrived from him in Europe. Having had his property seized by the Arabs, under the pretence of his being a magician, he proceeded towards Saana, to complain to the imam of that place; and, a few days after his departure (December, 1811), he died suddenly at Taes, probably from the effects of poison given him by order of the imam.

SEGUIER, JEAN FRANÇOIS, an eminent botanist, was born at Nismes, in 1703, and died in 1784. His works are "Bibliotheca Botanica," "Plantæ Veronenses," 3 vols.; and a translation of the Memoirs of Maffei.

SEIGUR, LOUIS PHILIPPE, Count de, a French diplomatist and historical writer,

was the eldest son of the Marshal de Segur, and born in 1753. He served during two campaigns in the American war, and was afterwards ambassador to St Petersburg and Berlin. On the overthrow of the French monarchy he relinquished his connection with affairs of state; he was, notwithstanding, arrested by order of the Committee of Public Safety; but being liberated shortly after, he quitted France; and did not return till after the fall of Robespierre. In 1803 he was nominated to the council of state; and, under the imperial government, he was appointed to the office of grand-master of the ceremonies at court. In 1813 he was made a senator; and, on the restoration of the Bourbon family, he was created a peer of France; notwithstanding which, after Buonaparte's return from Elba, he resumed his legislative functions, and again became grand-master of the ceremonies, and one of the peers appointed by Napoleon. On the final restoration of Louis XVIII. in 1815, the count was stripped of all his dignities, and passed the remainder of his life in literary retirement. He died in 1830. Among his works are, "A Political Picture of Europe," "The Reign of Frederick William II.," the "History of Modern Europe," &c.

SEIGUR, PHILIPPE HENRI, Marquis de, marshal of France, was born of an ancient and noble family in Périgord, in 1724. His family were Protestants, and had suffered much both during and after the civil wars. He served with distinction in the wars of Bohemia and Italy; was dangerously wounded at the battle of Raucoux; had his arm shattered at Lawfeldt, but continued at his post till victory was complete, and was made immediately *maréchal de camp* and lieutenant-general. At Clostercamp he received a bayonet wound in the neck and a sabre cut on the head, and was taken prisoner. Appointed inspector at the peace, he became minister of war under Louis XVI., in 1781, and filled that post with much ability till 1788; introducing great improvements in military organization, discipline, and finance. It was during his administration that the unjust ordinance was published by which none but the nobles could become officers in the army; but he is said to have protested against it. He was created marshal in 1793, and retired when Cardinal Loménie de Brienne became first minister. During the Reign of Terror the old soldier and statesman, feeble and covered with wounds, was arrested, deprived of his dignities and property, and imprisoned. Liberated by Napoleon, he died at Paris, in 1801.

SEJANUS, ÆLIUS, minister of the Emperor Tiberius. [See TIBERIUS.]

SELDEN, JOHN, an English antiquary, jurist, and historian, of most extensive acquirements, was a native of Sussex, and born in 1584. After receiving his education at Chichester, and Hart Hall, Oxford, he studied the law in the Temple, and was called to the bar. He practised chiefly as a chamber counsel, and devoted much of his time to studying the history and antiquities of his country. So early as 1607 he drew up a work, entitled "Analectum Anglo-Britanicum," which was quickly succeeded by

several others; and in 1614 appeared his "Titles of Honour." Next followed his "History of Tithes," for which he was cited before the court of High Commission, and had to make a sort of apology. In 1633 he entered parliament, and earnestly supported the measures of the popular party. He did not, however, abandon literary pursuits, and in 1635 published his "Mare Clausum," in which he endeavours to establish the British right of dominion over the circumjacent seas. He was elected in 1640 member for Oxford; at which time he was so well affected to the king, that when the king withdrew to York, he had some notion of appointing him chancellor. At the commencement of the disputes between Charles and the parliament he acted with great moderation, and uniformly endeavoured to prevent an ultimate appeal to the sword. In 1643, the House of Commons appointed him keeper of the records of the Tower, and the following year, one of the commissioners of the admiralty, voting him £3000 as a reward for his services. He employed all his influence for the protection of learning, and was universally esteemed for his honesty, urbanity, and goodness of heart. Died, 1654. Selden's valuable treatise, "De Jure Naturali et Gentium juxta disciplinam Hebræorum," was published in 1640. His "Table Talk" appeared in 1689, and has been very popular. A portrait of Selden, painter unknown, is in the National Portrait Gallery.

SELEUCUS NICATOR, founder of the dynasty of the Seleucids, was the son of a Macedonian general, and was born about B. C. 358. He greatly distinguished himself as a general in the campaigns of Alexander the Great in Persia and India. The satrapy of Babylonia was assigned to him after the death of Perdiccas, in 322; but five years later, in consequence of the growing power of Antigonus, he fled to Egypt, joined the league formed against him, and after the victory of Gaza in 312 recovered Babylonia. From this year is reckoned the so-called era of the Seleucids. Seleucus extended his dominions by conquest, and in 306 took the title of king. He took part in a second war with Antigonus, who was defeated and killed at the battle of Ipsus, in 301. By the acquisitions of territory made after this battle, Seleucus made his empire the greatest of those ruled by the successors of Alexander. He founded the cities of Antioch in Syria and Seleucia near Babylon, besides a great number of other cities, thus continuing the work which Alexander had begun. He married Stratonice, daughter of Demetrius Poliorcetes, but resigned her to his son Antiochus; to whom also he gave up a large part of his empire. Seleucus was afterwards engaged in war with Demetrius, made him prisoner in 286, and kept him so till his death, three years later. A war with Lysimachus ended in his defeat and death in 281, and Seleucus, advancing to the conquest of Macedon, was murdered by Ptolemy Ceraunus, 280.

SELIM III., sultan of Turkey, son of Mustafa III., was born in 1761, and succeeded his uncle, Abdul Hamid, in April, 1789. The

studies which he had diligently pursued, and the intercourse which he had held with eminent statesmen, made him ambitious of being a reformer; but the ill fortune of the Turks in the wars with Russia and Austria, and the numerous rebellions and insurrections in the various provinces of the empire, long prevented his attempting the task. War with France followed, and Egypt was conquered, but it was recovered by the English and restored to Selim. In 1806 he became protector to the Ionian Islands, and peace being established, he applied himself to the difficult work of internal reform. The organization and discipline of the army, the constitution of the divan, and the system of taxation were the matters which he sought to regulate. War with Russia again broke out in 1806, the new army organization, "Nizam Jedid," excited immense dissatisfaction, and in May, 1807, the janissaries revolted, and Selim was deposed, imprisoned, and in the following year strangled, 25th July, 1808.

SELKIRK, ALEXANDER, was born at Largo, in Scotland, about 1686. He was a good navigator, and made several voyages to the South Sea, in one of which, having a quarrel with his commander, he was put ashore in the island of Juan Fernandez, with a few necessaries, a fowling-piece, gunpowder, and shot. Here he remained in solitude nearly three years, till he was taken away by Captain Woods Rogers, in 1709. On his return to England, he is said to have given Daniel Defoe the narrative of his adventures, and that from this source originated the "Adventures of Robinson Crusoe."

SEMLER, JOHANN SALOMO, an eminent German theologian, born at Saalfeld, in 1725. He was educated at the university of Halle, where, after residing at Coburg and Altdorf, he was appointed in 1751 professor of theology, a post which he held till his death. Semler was brought up a Pietist, but became subsequently distinguished as a Rationalist divine. His writings are very numerous, and among the principal are—"Abhandlung von der Untersuchung des Canons;" "Apparatus ad liberalem Novi Testamenti Interpretationem;" a similar work on the Old Testament; "Selecta capita Historiæ Ecclesiasticæ;" and his "Lebensbeschreibung." Semler was for more than 20 years director of the Theological Seminary at Halle. Died, 1794.

SENEBIER, JEAN, natural philosopher and historian, was born at Geneva, in 1742. He adopted the ecclesiastical profession, but his attention was more particularly directed to philosophy and natural history. He obtained the office of public librarian at Geneva in 1773, became one of the conductors of the Geneva Journal in 1787, and died in 1809. Among his chief works are, an "Essai sur l'Art d'observer et de faire des Expériences," "Mémoires Physico-chimiques," "Histoire Littéraire de Genève," and "Physiologie Végétale." He translated the works of Spallanzani, and contributed memoirs to various learned societies.

SENECA, LUCIUS ANNÆUS, Roman philosopher, and tutor to the emperor Nero,

was the son of a rhetorician in Spain, about the time of the Punic wars. He was an advocate, and was made quaestor, and his intimacy with the emperor Nero, brought about the death of Messalina, led to the banishment of Seneca, where he was alleviated by the consolation of his friends. He was afterwards stooped to the most servile flattery, and allowed to return to Rome, where he was recalled, and was put to death by Nero, who was made emperor. Agrippina's son, Nero, ingratiated himself with the emperor, and continued to ascend to the throne, and continued to persecute the philosopher Strabo, emperor, or who was at or even banished, but he ascertained that Seneca was immensely rich, and furnished him with a large estate, and did gardens, and a ready money, and a favour of Agrippina against her, but not expressly, wrote Nero's Senate. He was the emperor, by the emperor, Rome for the emperor, was accused of treason, of Piso, his intention to put himself in each arm, and flowed very slowly, no effect, and bore with Stoic suffocation in were very numerous; among "De Consolatione Animi Tranquillitate;" "121 dies, and a relictionum Nat attached him, but adopted Seneca. was the son of M. Annæus Seneca, an eminent rhetorician, and was born at Corduba, in Spain, about the beginning of the Christian era. Taken early to Rome, he became an advocate, gained some distinction, and was made questor. But under Claudius, his intimacy with Julia, daughter of Germanicus, and an accusation of adultery with her, brought against him by the infamous Messalina, led to his being banished to Corsica, where he lived eight years. For a time he alleviated the bitterness of exile with the consolations of philosophy, but he afterwards stooped to the basest adulation and the most servile entreaties to Claudius to be allowed to return to Rome. In A. D. 49 he was recalled, through the influence of Agrippina, who was just married to Claudius. He was made prætor, and then tutor to Agrippina's son, the future Nero. Seneca ingratiated himself with the young prince, and continued to enjoy his favour after his accession to the throne. How far the philosopher strove to correct the vices of the emperor, or whether he did not rather wink at or even pander to them, cannot perhaps be ascertained. But the philosopher grew immensely rich, had a palace sumptuously furnished at Rome, country seats and splendid gardens, and an enormous amount of ready money. After long profiting by the favour of Agrippina, he took her son's part against her, probably sanctioned, tacitly, if not expressly, her murder by her son, and wrote Nero's letter of justification to the Senate. He soon after lost the favour of the emperor, who coveted his money; and by the emperor's permission he quitted Rome for the country. In A. D. 65 Seneca was accused of taking part in the conspiracy of Piso, his intimate friend, and was ordered to put himself to death. He opened a vein in each arm, then in his legs, but the blood flowed very slowly; a dose of hemlock had no effect, and at last his tortures, which he bore with Stoical fortitude, were ended by suffocation in a warm bath. His writings were very numerous, and many are still extant; among them are treatises "De Ira," "De Consolatione," "De Providentia," "De Animi Tranquillitate," and "De Vita beata;" 121 Letters to Lucillus; 10 Tragedies, and a remarkable work entitled "Quæstionum Naturalium Lib. VII." Seneca attached himself chiefly to the Stoic school, but adopted also principles from other systems. His works abound in quotable maxims and sentiments, his language is lucid and vigorous; but he is over-fond of antithesis. His style, like his conduct at his death, had a theatrical affectation about it. His works have been very much read, and very frequently republished.

SENEFELDER, ALOYS, inventor of lithography, was born at Prague in 1771. He was the son of an actor; was sent to study law at the university of Göttingen; became an actor and a play-wright; and at last, taking great interest in the process of printing, set himself to discover some cheaper mode of multiplying copies of a manuscript. After various projects, trials, and failures, he perfected the invention of lithography in 1798. Several lithographic establishments

were founded and got into successful operation, and in 1809 Senefelder reaped the late but welcome reward of his labours in his appointment as Inspector of the Royal Lithographic Establishment of Bavaria, with a good salary. He published in 1819 an interesting account of his various experiments, failures, and success, which was translated into English under the title of "A Complete Course of Lithography." The same year he received the gold medal of the London Society of Arts. Died at Munich, 1834.

SENIOR, NASSAU WILLIAM, political economist and miscellaneous writer, was born at Compton, Berkshire, in 1790. He was educated at Eton and Oxford, where he graduated in 1811; was called to the bar at Lincoln's Inn in 1819, and in 1825 was appointed professor of political economy in the university of Oxford, a post which he held till 1830. He was named a master in chancery in 1836, and was re-appointed to the professorship of political economy in 1847. He held for some years the office of examiner in political economy in the university of London. He was author of numerous works, chiefly on political economy, among which are—"Outline of the Science of Political Economy," originally an article for the Encyclopædia Metropolitana; "Political Economy;" "A Journal kept in Turkey and Greece, in the Autumn of 1857 and the beginning of 1858;" "Biographical Sketches;" and "Essays on Fiction;" both reprinted from the leading reviews. Ill health compelled him to resign his professorship in 1862, and he died at Kensington, June 4, 1864. "Few men," says a writer in the *Saturday Review*, "who have neither sat in parliament, nor held permanent official situations, nor written great books, have done so many and such various services to the world as Mr Senior." He was one of the authors of the new poor-law; was a zealous promoter of popular education; a prominent member of the commission on that subject in 1858-1861; sat on several other philanthropic commissions; filled his professorship at Oxford with great success, and was for more than forty years one of the most distinguished contributors to our best periodical literature.

SEPULVEDA, JUAN GINEZ DE, born in 1491, was historiographer to the Emperor Charles V., and rendered himself ignobly conspicuous as the author of a "Vindication of the Cruelties of the Spaniards against the Indians," in opposition to the benevolent representations of Las Casas. He was also the author of a "Life of Charles V.," 4 vols.

SERASSI, PIERO ANTONIO, an Italian biographer, born at Bergamo, in 1721. He wrote the Lives of Tusso, Dante, Politiano, Petrarck, and other eminent Italians. Died, 1791.

SERGEL, JOHANN TOBIAS, a celebrated Swedish sculptor, was born at Stockholm, in 1710; studied in Italy, and rose to great eminence in his art; was ennobled on his return to Sweden, and died in 1814. His numerous able works are chiefly confined to Sweden, but his "Diomedes stealing the Palladium of Troy" is in England.

SERRES, OLIVE, the self-styled princess

of Cumberland, was born at Warwick, in 1772, and educated under the protection of her uncle, the Rev. Dr Wilmot. At an early age she married Mr Serres, marine painter to George III., but after a few years they separated. She was an artist, and was appointed landscape-painter to the prince of Wales. She attracted a large share of public attention for some years; believing, or at least professing, herself to be the legitimate daughter of Henry Frederick, duke of Cumberland, by a marriage with the sister of Dr Wilmot. In June, 1822, Sir Gerard Noel was induced to move for an investigation of her claims in the House of Commons, and was seconded by Mr Hume; but Sir Robert Peel saw there was abundant room for a laugh at the expense of the *soi-disant* princess and her supporters; and, in a vein of successful irony, he overturned the whole fabric that had been raised to support "the Princess Olive's claims." Her latter years were passed in poverty, within the rules of a prison, in consequence of debts contracted while under her delusion of royalty; having at that time commenced a splendid establishment, assumed the royal livery, &c. She was at length liberated, and went to reside with Miss Macauley, at Somers Town, a short time previous to her death, which occurred in 1834, at the age of 62. The claim of Olive Serres is now (1866) once more brought into discussion by her daughter, Mrs Ryves, who styles herself Lavinia, princess of Cumberland and duchess of Lancaster, and is prosecuting her claim to £15,000 under the will of George III. She has published an "Appeal for Royalty," in the form of a letter to the queen.

SERTORIUS, QUINTUS, a distinguished Roman general, was a native of Nursia, in the country of the Sabines. He served under Marius in the Cimbric war, afterwards in Spain, and was made *quæstor*, B. C. 91. He joined the party of Marius in the civil war, and commanded with Cinna at the siege of Rome, B. C. 87; but was indignant at the atrocious proscription which followed. The licence and cruelties of the slaves especially excited his disgust, and he fell on them and slew several thousands. Appointed *prætor* in 83, he went soon after to Spain, where his courage and skill as a soldier were well known. He had, however, to retire before the forces of Sulla, and went to Africa; but on the invitation of the Lusitanians, returned and put himself at their head to fight for independence. His progress was rapid, he made himself master of great part of Spain, established a senate, founded a school at Osca for the education of young Spaniards in Greek and Roman learning, and to increase the superstitious reverence of the people for his person, gave out that he had communications with the gods through the white fawn which always accompanied him. Metellus Pius was sent against him in 79, but could effect nothing; two years later Pompey joined Metellus, but Sertorius, reinforced by Perperna, held out against both till 72. He entered into negotiations with Mithridates, which caused fresh alarm at Rome. But his influence and popularity were shaken by his despotic acts, and espe-

cially by the massacre of all the scholars at Osca; and he was assassinated by Perperna, his ally, at a banquet, in B. C. 72.

SERVETUS, MICHAEL, a learned Spaniard, memorable as the victim of religious intolerance, was born at Villanueva, in 1509; was educated at Toulouse, studied medicine at Paris, and was for some years in correspondence with Calvin. He published several anti-trinitarian works, especially one, entitled "Christianismi Restitutio," which excited against him the violent hatred of both Catholics and Protestants; and though he was so fortunate as to escape from the persecutions of the former, he could not elude the vengeance of the latter, headed and incited as they were by his implacable enemy, the stern and unforgiving reformer of Geneva. He was seized as he was passing through that city, tried for "blasphemy and heresy," and condemned to the flames, which sentence was carried into execution, Oct. 27, 1553. Servetus is supposed by many to have anticipated Harvey in the discovery of the circulation of the blood.

SERVIUS TULLIUS, the sixth mythical king of Rome. He married the daughter of Tarquinius the elder, whom he succeeded, and was murdered by his son-in-law, Tarquinius Superbus. To Servius are attributed the extension of the limits of the city of Rome, new fortifications, and a new constitution favourable to the plebeians.

SETTLE, ELKANAH, an English poet, was born at Dunstable, 1681; educated at Trinity College, Oxford; became for a short time the rival of Dryden as a dramatist; was much engaged in the political squabbles of the age, and wrote some clever pieces both in prose and verse. Died, 1724.

SEVERUS I., LUCIUS SEPTIMIUS, Roman emperor, was born A. D. 146, at Leptis, in Africa, and was raised to the throne on the death of Pertinax. He had to contend with several rivals; first Didius Julianus, whom he put to death; then Pescennius Niger, whom he defeated at Issus; and at a later period Albinus, whom he defeated near Lyons in 197. Severus had in the preceding year taken Byzantium after two years' siege. He carried on a successful war in the East, and in 208 visited Britain, made war on the Caledonians, and built the great wall across the north of England from the Solway to the Tyne. As a monarch he was cruel; and it has been said that he never performed an act of humanity, or forgave a fault. He was a man of letters, and composed a history of his own reign. He died at York, in 211.

SEVERUS. [ALEXANDER SEVERUS.]
SEVERUS, SULPICIUS. [SULPICIUS SEVERUS.]

SÉVIGNÉ, MARIE DE RAUTIN, Marchioness de, daughter of the Baron de Chaulat, was born in 1626. At the age of 18 she married the Marquis de Sévigné, who was killed in a duel seven years afterwards. Being thus left a widow, with two children, she devoted herself to their education; and when her daughter married the Count de Grignan, she kept up a correspondence with her; to which circumstance the world is indebted for the greater part of those letters on which her reputation securely

rests, and which published.

SEWARD, A. Thomas Seward of Besumont Eyam, in Derby a poetical taste published her poems and she subsequently sonnets, and a which she associated fifty lines of that Died, 1809. An a biographical p afterwards Sir ters" also appe has passed awa

rests, and which have been repeatedly republished.

SEWARD, ANNA, daughter of the Rev. Thomas Seward, himself a poet and editor of Beaumont and Fletcher, was born at Eyam, in Derbyshire, in 1747. She evinced a poetical taste in early life. In 1782 she published her poetical romance of "Louisa," and she subsequently printed a collection of sonnets, and a "Life of Dr Darwin," in which she asserted her claim to the first fifty lines of that author's "Botanic Garden." Died, 1809. An edition of her works, with a biographical preface, was published by Mr (afterwards Sir Walter) Scott; her "Letters" also appeared in 6 vols.; but her fame has passed away.

SEWARD, WILLIAM, a biographical writer, was born in London, 1747. He was educated at the Charter House and at Oxford; was intimate with Dr Johnson, and other eminent literary characters; and was author of "Anecdotes of distinguished Persons," "Biographiana," &c. He died in 1793.

SEWELL, WILLIAM, the son of an English refugee at Amsterdam, who, though brought up as a weaver, made himself master of several languages, and compiled an "English and Dutch Dictionary;" but he is best known by his "History of the Quakers," of which sect he was himself a member. Died, 1725.

SEXTUS EMPIRICUS, a Greek philosopher and physician, who lived in the reign of Commodus. Only two of his works are extant, the "Institutes of Pyrrhonism," and ten books against the mathematicians.

SEYMOUR, EDWARD, duke of Somerset, in the reign of Edward VI., to whom he was maternal uncle, being brother of Jane Seymour, third wife to Henry VIII. He devoted himself to the military profession, and commanded in a maritime expedition against the Scots, in 1544, when he landed a body of troops at Leith, and set fire to the city of Edinburgh. On the death of Henry VIII. he rose to unbounded power, procuring himself to be appointed governor of the king, and protector of the realms. In 1548 he obtained the post of lord treasurer, was created duke of Somerset, and made earl-marshal. The same year he headed an army, with which he invaded Scotland, and after having gained the victory of Musselburgh, returned in triumph to England. His success excited the jealousy of the earl of Warwick and others, who first procured his confinement in the Tower, for a short time during 1549, on the charge of arbitrary conduct and injustice, and finally caused him to be again arrested, two years afterwards, on the charge of treasonable designs against the lives of some of the privy-councillors, for which he was beheaded on Tower Hill, Jan. 22, 1552.

SFORZA, JACOPO, a very celebrated Italian condottiere, head of the illustrious family of Sforza, was born at Cotignola in the Romagna, in 1369. His family name was *Attendolo*, but on quitting his father's farm for the pursuit of arms he took the name of Sforza. He formed a company of soldiers

with which he entered into the service of any prince or state for pay; passing from one to another as seemed expedient. He was successively in the pay of the lords of Milan, the Florentines, the marquis of Ferrara, the Pope John XXIII., and the pope's enemy Ladislaus, king of Naples, who named him grand constable of the kingdom. After the death of Ladislaus he was twice imprisoned, but regained his liberty, acquired several towns and estates, and augmented and strengthened his band of soldiers, who were strongly and devotedly attached to him. He found a worthy rival in Braccio de Montone, and was for several years at war with him. In 1417 he was sent to re-establish the authority of the pope at Rome, in which he succeeded. In 1420 he passed into the service of Louis of Anjou, being still opposed to Braccio. In 1422 he had a meeting with Joanna, queen of Naples, so that she received Sforza into favour again, and made him constable of the kingdom. He was employed to combat her adopted son, Alfonso of Aragon, who had taken possession of Naples, and compelled him to quit the city. Sforza was drowned while attempting to cross the river Pescara in January, 1424.

SFORZA, FRANCESCO, duke of Milan, son of the preceding, was born in 1401. He followed his father in all his campaigns, and on his death succeeded to the command of his forces. He entered in 1425 the service of the duke of Milan, and was employed against the Florentines and Venetians. In 1434 he occupied the March of Ancona, and made it independent of the pope. About the same time he gained the firm alliance of Cosmo de Medici. After serving the Venetians and the Florentines against the Milanese, who were commanded by Piccinino, another celebrated condottiere, he married, in 1441, the daughter of the duke of Milan, and received with her the sovereignty of Cremona. The next year the pope, Eugenius IV., and the king of Naples, on the instigation of the duke, made war on Sforza to recover Ancona; and the pope excommunicated him. The war lasted till 1447, when Sforza gave up the last town he held in the March. On the death of his father-in-law the same year he claimed the states of Milan, and after several years of fighting, and finally blockading the city, he compelled the people to proclaim him duke, in March, 1450. War with the Venetians occupied him for two years, in which he was supported by René of Anjou, and peace was made in 1454. Sforza used his power with great prudence and moderation, and executed several important works for the strengthening and beautifying of Milan. Died, 1466.

SFORZA, LUDOVICO, surnamed *the Moor*, duke of Milan, was third son of the preceding, and was born in 1451. He was exiled from Milan during the reign of his brother, Galeazzo Maria, and again under his nephew, Giovanni Galeazzo; but in 1479 he returned in arms, put to death the wise Simonetta, secretary to the duchess-regent, and made himself absolute master. He married in 1491 Beatrice of Este; two years later invited Charles VIII. of France to invade

Italy and seize the kingdom of Naples, and at the same time prevailed on the Emperor Maximilian to give him the investiture of the duchy. On the death of the young duke his nephew, in October, 1494, by slow poison, it was said, administered by order of Ludovico, the latter succeeded him. Alarmed at the rapid conquest of the French, he joined in 1495 the league of the pope, the emperor, the king of Spain, and the princes of Italy against Charles, who, however, succeeded in fighting his way back to France. In 1499 the invasion of the Milanese was renewed under Louis XII., and the whole territory was conquered by his generals, Trivulzio and Torcell, Louis himself entering the capital in October. Ludovico succeeded in re-entering Milan in the following year, but was besieged in Novara, and betrayed to the French, who carried him with other princes of his house to France; and he passed the rest of his life as a prisoner at the château of Loches. Died, 1508 or 1510. His surname, the Moor, was given him either because of his swarthy colour, or in allusion to his device, the mulberry-tree, in Italian *El Moro*.

SHRAVESANDE. [GRAVESANDE.]

SHADWELL, Sir LANCELOT, vice-chancellor of England, was born 1779; educated at Eton and Cambridge, where he took his degree of B.A. in 1800, as seventh wrangler, obtaining also the second chancellor's medal. He was called to the bar by the honourable society of Lincoln's Inn in 1803, was appointed a king's counsel in 1821, sat for Ripon as M.P. in 1820, and was elevated to the vice-chancellorship of England in 1827. His Honour also twice filled the office of a commissioner of the great seal; first in 1835, after Lord Brougham's, and in 1850, after Lord Cottenham's resignation of the chancellorship. As a judge, Sir Lancelot gave great satisfaction. He disposed with great rapidity of the mere routine business of his court, and he was no less remarkable for his affability and courtesy, than for his humour and classical wit with which he seasoned his dicta. Died, Aug. 10, 1850.

SHADWELL, THOMAS, a dramatic poet, was born in 1640, at Stanton Hall, Norfolk, and was educated at Cambridge. When Dryden was removed from the offices of laureate and historiographer royal, Shadwell was appointed his successor, which exposed him to the severity of that poet's satire, who ridiculed him under the appellation of *Macflecknoe*. Died, 1692. His principal plays are "Epsom Wells," "Timon the Misanthrope," the "Virtuoso," the "Gentleman of Alsace," and the "Lancashire Witches."—CHARLES SHADWELL, supposed to have been the son or nephew of the preceding, wrote some plays, the best of which is entitled the "Fair Quaker of Deal." Died, 1726.

SHAPPEBURY. [COOPER.]

SHAKESPEARE, WILLIAM, the poet, was born at Stratford-on-Avon, a pleasant and very old town in Warwickshire, in 1564. He was baptized on the 26th April, and his birthday, according to tradition, was the 23rd April. Strange to say, of the life of this chief of poets, latest-born of the great Triad—Homer, Dante, Shakespeare—we

know almost nothing with any certainty. From such trivial matters as the spelling of his name and the house in which he was born, up to the high and difficult question of the meaning of his sonnets, almost all the particulars of his biography are either involved in total darkness, or only seen by the imperfect and bewildering light of conflicting traditions. All that it is possible to do here is to tell the story as it is usually told, or the most probable particulars of it. The poet's father was John Shakespeare, a well-to-do inhabitant of Stratford, probably glover, grazier, and dealer in wool, owner of landed property, alderman, and in 1568 chief magistrate of Stratford. His mother was Mary Arden, of an ancient and wealthy family, but of whom personally nothing whatever is known. His name appears in the forms—Shakespeare, Shaksperc, Shakspar, Shagspere, Saxpere, Chacksper, and with other variations, and is spelt differently by himself on different occasions. His birth-place, as pointed out by tradition, is the house in Henley Street, Stratford, which belonged to his father. But his father owned several other houses, and there is no evidence to show where he lived in 1564. The house is now the property of the nation. William Shakespeare was educated at the free Grammar School of Stratford, where he probably remained from the age of 7 to about 14. During his boyhood Stratford was frequently visited by companies of strolling players, whose performances doubtless first attracted him to the stage. The beautiful scenery of the Avon and the places of historical interest in the neighbourhood could not fail to influence his fine and sensitive nature. In his 19th year he married Anne Hathaway, daughter of a yeoman at the neighbouring hamlet of Shottery, and eight years older than himself. No register of the marriage is known to exist, nor is the place of its celebration known; but the marriage-bond is extant, taken by the bishop of Worcester for his security in licensing it with only one publication of banns. A first child, a daughter, was born about 6 months afterwards, May, 1583. Among the many suspicious stories told of Shakespeare's early life, one is of a drinking challenge made by a club at Bidford, called "The Topers," and accepted by him and his comrades; and of his sleeping off the effects of the bout under a crabtree on the way home. More celebrated is the tale of his taking part in stealing deer from the park of Sir Thomas Lucy at Charlote, and of his detection and prosecution. This affair is said to have been the immediate occasion of his going to London, about 1586. It is quite as probable that nuptial disappointments and dissatisfaction may have driven him from home; and very natural that his course should be to the metropolis with its large, full, and fascinating life. It is certain that he did go to London, and lived there many years, leaving his wife and children at Stratford; that he gained an honourable position as actor, play-writer, and shareholder in the Blackfriars and afterwards in the Globe Theatre; enjoyed the favour and patronage of Queen Elizabeth, James I., and the earl of Southampton, the

warm friendship of Ben Jonson, and the highest respect and admiration of his associates not only for his pre-eminence as a poet, but for his honesty, geniality, and worth as a man. Shakespeare gained also wealth, and became the purchaser of the house at Stratford called New Place, and afterwards of a large estate which he annexed to it. It was his ambition to found a family, and it was probably by his desire that his father, in 1597, obtained a grant of arms from the Heralds College and subsequently permission to impale the arms of Shakespeare with those of Arden. During his residence in London he is said to have visited his native town annually, and he returned to spend his last years there perhaps about 1604. Enjoying the dignified ease of the country gentleman, the highest respect of his countrymen, and the sweets of the rare wisdom to which he had attained, he awaited the end; not ceasing to write, but producing in those quiet years some of his grandest works. Of the end we have no other account than the short statement in the diary of the Rev. John Ward, vicar of Stratford, that "Shakespeare, Drayton, and Ben Jonson had a merry-meeting, and it seems drank too hard, for Shakespeare died of a fever then contracted." The date of his death is 23rd April, 1616. Two days after, his remains were buried in the chancel of Trinity Church, Stratford, and the well-known bust was executed and placed near the spot within seven years. Shakespeare's will, executed about a month before his death, is still preserved in Doctors' Commons. Besides his first child, Susanna, his only other children were a boy and a girl, twins, born in 1585. Susanna married Dr Hall, a physician of Stratford, in 1607, was left a widow in 1635, and died in 1640. She had one child only, a daughter, who, though twice married, left no children. Of the twins, the boy, named Hamnet, died at the age of eleven, and the girl, Judith, married Thomas Quiney in February, 1616, and had three sons, who all died childless. Shakespeare's wife, Anne, survived him, and died in 1623. His father died in 1601, and his mother in 1608. Although we have no proof that Shakespeare ever sat to a painter, portraits of him exist; but they curiously differ, and only three are thought of much importance; viz., that engraved by Martin Droeshout for the folio of 1623; the Chandos portrait; and that preserved in the museum at the birth-place. The bust is probably the best authenticated likeness. Ben Jonson's testimony is, however, very strong in favour of the Droeshout engraving. The Chandos portrait was presented by the earl of Ellesmere, in 1856, to the National Portrait Gallery. The first collected edition of Shakespeare's Plays was the folio of 1623. His poems of "Venus and Adonis" and "The Rape of Lucrece," were published in 1593 and 1594, and were the only works which appeared with his name in his lifetime. Of the 36 plays (exclusive of "Pericles") the dates of publication of only a few are known. The "Two Gentlemen of Verona" and "Love's Labour's Lost" were among the earliest, and "Tempest," "Troilus and

Cressida," "Henry VIII.," "Coriolanus," "Julius Cæsar," and "Antony and Cleopatra" among the latest. "Midsummer Night's Dream," "Merchant of Venice," "Romeo and Juliet," "Richard II.," "Richard III.," "Henry IV.," and "King John" were all produced before 1598. A copy of "Hamlet" is extant, bearing the date 1602. "Twelfth Night" was produced in 1601; "King Lear" was printed in 1607; "Tempest" was written in 1611. The second folio edition of the collected plays appeared in 1632, and two others subsequently. It is said that by 1830 not less than eighty-two editions had been published, without including separate plays and poems and commentaries. Since then the number has been enormously increased. The list of editors, biographers, and commentators is too long to give here; but among the most recent must be named Charles Knight, J. P. Collier, Dyce, Singer, Staunton, Kelghtly, Mr and Mrs Cowden Clarke, and the editors of the "Cambridge Shakespeare." A "Concordance to Shakespeare" has been compiled by Mrs Cowden Clarke. The work of Victor Hugo, entitled "William Shakespeare," and Guizot's "Shakespeare and his Times," must not be omitted. The works of Shakespeare have become to a large part of the world one of the primal necessities of life. In no other man's books, probably, is to be found so much truth, wisdom, and beauty as in his. Great to all men, he is greatest to the great, and the homage of the highest intellects of the world is silently or with eloquent speech yielded to him. The myriad-minded man, the greatest intellect, who in our recorded world has left record of himself in the way of literature, the poet of the human race, the melodious priest of a *true* Catholicism;—such are some of the phrases in which other great men have striven to express their sense of his superiority. Ben Jonson, Milton, Dryden, Pope, and in our own day Coleridge, De Quincey, Carlyle, and Emerson have led the chorus of his praise. In Germany Lessing revived the knowledge of his works; and after him, Herder, Tieck, Wieland, Schlegel, and Goethe have contributed to establish his supremacy. The most important of recent contributions to the critical study of Shakespeare is the Commentary of Professor Gervinus, of which an English translation has appeared. Another valuable critical work is Dr Hermann Ulrici's "Shakespeare's Dramatic Art," also translated. A Shakespeare jubilee, the first celebration of the kind in England, was suggested and carried out at Stratford by David Garrick, 6—8th September, 1769. A similar celebration took place under the auspices of the Shakespeare club in 1824, and was appointed to be held annually. In April, 1864, a Tercentenary Festival, with dramatic performances, exhibition of relics, and even sermons, was held at Stratford. An attempt was made to get up a national subscription for a monument to the poet, but it failed miserably. But during the same year the works of Shakespeare, his true monument, were republished in an immense variety of editions, ranging from the costly and splendid reproduction by photography of the folio

of 1623, down to penny editions of the separate plays. In Germany, one result of the Centenary movement was the formation of a "Shakespeare Society," which is to publish annually a volume devoted to Shakespeare subjects. The first volume has already appeared. An interesting work has recently appeared entitled "Shakespeare in Germany in the 16th and 17th centuries," by Albert Cohn; in which it is shown that English actors performed the plays of Shakespeare in the great cities of Germany as early as 1590, and that some of the plays were translated into German by 1611. A perfect copy of the much-talked-of and long vainly sought "Shakespeare's Jest Book" was discovered in the Göttingen Library in 1864, and has just been published. It is entitled "A Hundred Merry Tals," and bears the date of 1526. The latest addition to our Shakespeare literature is Mr Gerald Massey's "Shakespeare's Sonnets never before interpreted; his private Friends identified; together with a recovered Likeness of Himself." (April, 1866.)

SHARP, JAMES, archbishop of St Andrew's, a distinguished prelate of the 17th century, was born in Banffshire, in 1618, and obtained a professorship in the university of St Andrew's. The presbytery being abolished by parliament, under Charles II., Sharp, who had treacherously promoted that measure, was rewarded with the primacy, and appointed archbishop of St Andrew's. The wanton cruelties which followed confirmed the horror entertained against him, and raised the fury of some of his more bigoted opponents to conspire against his life. His carriage, in which he was travelling, about three miles from St Andrew's, on the 3rd of May, 1679, was met by some fanatics, headed by John Balfour of Burley, who were waiting there to intercept a servant of the archbishop's, named Carmichael. To tempers thus heated by fanaticism, the appearance of the archbishop himself was deemed a sign of the intention of Providence to substitute a more important victim; and, regardless of the tears and entreaties of his daughter, they dragged him from his carriage, and with savage ferocity murdered him before her face.

SHARP, JOHN, archbishop of York, was born at Bradford, in Yorkshire, in 1644; studied at Christ's College, Cambridge; and rose, by gradual preferments, to the deanery of Norwich. In the reign of James II. he gave such offence to the court by preaching against Popery, that an order was sent to the bishop of London to suspend him; but the bishop having refused on the ground of its being contrary to law, he as well as Dr Sharp were suspended by the ecclesiastical commission. The doctor, however, was soon restored to the exercise of his function; and, after the revolution, he was made dean of Canterbury: from whence, in 1691, he was elevated to the archbishopric of York. Died, 1713. His "Sermons," published after his death, form 7 vols.

SHARP, GRANVILLE, grandson of the preceding, distinguished for his philanthropy and learning, was born at Durham, in 1734. He obtained a place in the ordnance office, which he resigned at the commencement of

the American war, because he disapproved of its principles; after which he devoted his life to private study, and the active exercise of a benevolent mind. With infinite difficulty and expense, he established the right of negroes to their freedom while in England, instituted the society for the abolition of the slave trade, advocated the principles of parliamentary reform, and distinguished himself with equal zeal in other patriotic and benevolent objects; the last of which was the promotion of the distribution of the Scriptures. He was critically skilled in the Hebrew and Greek languages, and was the author of various works, the principal of which are, "Remarks on the Uses of the Definite Article in the Greek Testament," "Treatises on the Slave Trade, on Duelling, on the People's Right to a Share in the Legislature, &c." Died, 1813.

SHARP, RICHARD, well known in the literary world as "Conversation Sharp," and whose taste and judgment as a critic were equal to his conversational powers, died, aged 76, while on the road from Torquay to his residence in London, March 30, 1835. Mr Sharp was deeply engaged in commercial concerns, but employed his leisure hours in literary pursuits. He was the author of "Letters and Essays in Prose and Verse." He had formerly been an M.P. adhering to the Whig interest; and few men displayed more anxiety than he did for the extension of civil and religious liberty, and the moral improvement of the community. He left £250,000, which was divided between his nephews and nieces.

SHARP, WILLIAM, an eminent engraver, was born in London, in 1749, rose to excellence in his profession, and produced many admirable prints. But with all his merits as an artist, he was credulous in the extreme, and became, in succession, a believer in the reveries of Mesmer and a disciple of Swedenborg, a dupe of the notorious Richard Brothers, and a supporter of the pretensions of Joanna Southcott. Died, at Chiswick, 1824. His portrait, by Lonsdale, is in the National Collection.

SHARPE, GREGORY, oriental scholar and divine, was born in Yorkshire, in 1713, was educated at Westminster and Aberdeen, and eventually became master of the Temple. Among his writings are, "A Review of the Controversy on the Demoniacs," "Defence of Dr Clarke against the Attacks of Leibnitz," "Dissertations on the Origin of Languages, and the original Powers of Letters, with a Hebrew Lexicon," &c. Died, 1771.

SHAW, GEORGE, a distinguished writer on zoology, &c., was born in 1751, at Berton, in Buckinghamshire; was educated at Magdalen College, Oxford; studied medicine at Edinburgh, and graduated as M.D. at Oxford. He then settled as a physician in London, was elected F.R.S., and appointed a vice-president of the Linnean Society; delivered lectures on zoology at the Leverian Museum and at the Royal Institution; and was made librarian and assistant keeper of natural history at the British Museum. He was the author of several works on Zoology, conducted the "Naturalist's Miscellany," and was one of the editors of the

abridged Philosophical Dictionary, 1813.

SHAW, Sir JAMES, Bart., was born at Bicester, in the county of Oxford, in 1764; became a Justice of the Peace for the county of Oxford; distinguished himself by his diligence and great talents; and entered into a partnership in the mercantile business. He was elected alderman of the city of Oxford in 1803; he served in 1805 that of lord mayor; and the day previous to his election he was elected M.P. for the city of Oxford, which honourable office he retained till 1818, when he retired to his estate at Bicester, and was created baronet in 1809.

SHAW, THOMAS, an eminent antiquary, famous for his observations relative to the history and the language of the British, died in 1751.

SHEA, DANIEL, an eminent oriental language scholar, was born at Dublin, in 1751, at its university; he was chief clerk to the Admiralty, and had connections in the East Indies, Arabic and Persian. He acquired the Arabic and Persian languages, and was employed at the translation of the Persian language at the Asiatic Society. He died in 1836.

SHEBBEAR, JOHN, an eminent literary writer, was born in Devonshire, in 1751, and died in 1836. He visited Paris, in 1791, and was elected M.D. of the University of Sciences. He commenced his career in the law, but once pilloried for his violence in the streets, under the name of Bute, he apostrophized the people, and obtained a pardon. He was the author of "Letters to the Marquis of Bute," "The Marriage of Lydia, or the English Nation Sumatrans," &c.

SHEE, Sir JAMES, an eminent painter, was born in London, in 1751, and was the son of Reynolds, and by his illustrious father, Edmund Burke, at the Royal Academy, in the year 1789. He now has the full portraits, including the character of the surprising and surprising for many years.

abridged Philosophical Transactions. Died, 1813.

SHAW, Sir JAMES, bart., was born at Bicester, in the county of Ayr, in the year 1764; became a junior clerk in a mercantile house of the city of London; and, by constant diligence and great ability, gradually rose to a partnership in the firm. In 1798 he was elected alderman for his ward of Portsoken; in 1803 he served the office of sheriff, and in 1805 that of lord mayor; and, on the very day previous to his vacating the civic chair, he was elected M.P. for the city of London, which honourable position he retained till 1818, when he retired, having been created a baronet in 1809. In 1831 he was elected chamberlain of London, when he resigned his aldermanic gown. Simple in his habits, singularly industrious and persevering, Sir James was also extremely charitable. Died, Oct. 22, 1843, aged 80.

SHAW, THOMAS, an English divine and antiquary, famous for his "Travels, or Observations relating to several parts of Barbary and the Levant." Born, 1692; died, 1751.

SHEA, DANIEL, one of the professors of oriental languages at Haileybury College, was born at Dublin, in 1772, and educated at its university. Having held a situation as chief clerk to a large mercantile establishment in Malta, which had extensive connections in the East, he studied the Arabic and Persian tongues; and his oriental acquirements becoming known, a situation at Haileybury was provided for him. He translated Mirkhond's "History of the early Kings of Persia," and at the time of his death he had completed the translation of the Dabistan. This translation was presented to the Asiatic Society after his death. Died, 1836.

SIEBBEARE, JOHN, physician and political writer, was born at Bideford, in Devonshire, in 1709, where he was apprenticed to an apothecary. Having made a visit to Paris, he there obtained the degree of M.D., and was admitted into the Academy of Sciences. He settled in London, and commenced his career as a party writer; for his violence in which character he was once pilloried and twice imprisoned. Afterwards, under the administration of Lord Bute, he apostatized from the popular cause, and obtained a pension. His chief works are, "Letters to the People of England," "The Marriage Act," a satirical romance; "Lydia, or Filial Pleiy," "Letters on the English Nation," and the "History of the Sumatrans," a political satire. Died, 1788.

SHEE, Sir MARTIN ARCHER, president and senior member of the Royal Academy, was born in Dublin, 1769. On his arrival in London he was introduced to Sir Joshua Reynolds, and other distinguished persons, by his illustrious friend and countryman, Edmund Burke. He became an exhibitor at the Royal Academy for the first time in the year 1789. In 1796 he reached what is now the full academical number of eight portraits, including that of Mrs S. Kemble in the character of Cowslip, in "The Agreeable Surprise." He continued equally industrious for many years; and was elected an

associate of the Royal Academy in 1798. In 1800 he was elected a full royal academicalian; and of his 39 brethren by whom he was chosen he was the last survivor. He continued to produce portraits with amazing readiness; and for a time he was in nearly as great request as Lawrence. In 1805 he made his appearance as a poet by the publication of his "Rhymes on Art, or the Remonstrance of a Painter; in two parts, with Notes and a Preface, including Strictures on the State of the Arts, Criticism, Patronage, and Public Taste;" and this was followed in 1809 by a second poem, in six cantos, entitled "Elements of Art," to which Byron alludes in his "English Bards and Scotch Reviewers." A third poetical production, entitled "The Commemoration of Reynolds," &c., appeared from his pen in 1814. In 1824 he published a tragedy called "Alonso," with an angry preface directed against Mr Colman, the licenser of plays, who had some years previously put a veto on its being brought upon the stage. On the death of Lawrence in 1830, Shee was elected president of the Royal Academy, and immediately knighted. Sir Martin excelled in short, well-timed, and well-delivered speeches, and his eloquence was highly appreciated within the walls of the Academy. His name, says a contemporary from whom this memoir has been abridged, will descend in the history of painting as a clever artist with greater accomplishments than have commonly fallen to the class to which he belongs, and as a painter who has preserved to us the faces and figures of Sir Thomas Munro, Sir Thomas Picton, Sir Eyre Coote, Sir James Scarlett, Sir Henry Hallford, and the poet Moore. Died, Aug. 19, 1850. A Life of Sir M. A. Shee has been published by his son.

SHEEPSHANKS, RICHARD, mathematician and astronomer, was born at Leeds, in 1794. He studied at Cambridge, and became a fellow of Trinity College in 1817. He was called to the bar, but did not practise, and afterwards took orders. But from 1824, when he was chosen a fellow of the Royal Astronomical Society, he gave himself up to science, and especially to practical astronomy. He obtained a high reputation, and was consulted and employed on many important occasions. His most memorable achievement was the completion of the arduous task, commenced by Baily, of the restoration of the standards of measure and weight after their destruction by fire. It occupied him ten years. Mr Sheepshanks was a fellow of the Royal Society, and a member of the Board of Visitors of the Greenwich Observatory. Died at Reading, 4th August, 1855.

SHEEPSHANKS, JOHN, founder of the *Sheepshanks Gallery*, brother of the preceding, was born about 1787. Having formed a fine collection of paintings by British artists, he presented it in 1856 to the nation. It contains above 230 oil paintings, besides drawings and sketches, and is at present in the South Kensington Museum. Died, 5th October, 1863.

SHEFFIELD, JOHN. [BUCKINGHAM-SHIRE, Duke of.]

SHEIL, RICHARD LALOR, one of the greatest orators that Ireland has produced,

was born in 1794. After receiving his education at Stonyhurst and Trinity College, Dublin, he was called to the Irish bar in 1814, and was making some way there when the formation of the Catholic Association opened a new and more attractive arena for his energies and his eloquence. Second to O'Connell alone, Shell often, in that famous assembly, surpassed even the Agitator himself in his powers of captivation, from the beauty of his language and the grace of his imagination. As an author, Shell was also eminently distinguished. He wrote some successful tragedies; one of them, "Evadne," still retains possession of the stage; and his articles in the "New Monthly Magazine" under Campbell's editorship, were generally admired, especially his able sketches of the Irish bar. When the Emancipation Act passed, Shell was elected member for Milbourne Port, and, in spite of his shrill voice and vehement gesticulation, his fervid eloquence placed him at once in the foremost rank of the most attractive speakers in the House. When O'Connell's energies declined, many in Ireland looked upon Shell as his successor; but the orator had too closely allied himself to the Whig party, and for some years was heard in the House but on rare occasions. Besides being a queen's counsel and a privy-councillor, Mr Shell was successively a commissioner of Greenwich Hospital, vice-president of the Board of Trade, judge-advocate-general, and master of the Mint. His last appointment was that of minister plenipotentiary at Florence, whither he went just prior to the bringing in of the Ecclesiastical Titles Bill in 1851. Died at Florence, 1851.

SHELBURNE, W. F. PETTY, Earl of [PETTY.]

SHELDON, GILBERT, archbishop of Canterbury, was born at Staunton, Staffordshire, in 1598. He studied at Oxford, graduated M.A., and became fellow of All Souls College. Entering the church, he was made chaplain to Thomas, Lord Coventry, then keeper of the great seal, through whose influence appointments and promotion came rapidly. He was named chaplain to Charles I., and as such assisted at the treaty of Uxbridge, and attended the king at Oxford. After holding the wardenship of his college for twelve years, he was deprived by the parliamentary visitors, in 1647, and imprisoned. He lived in retirement till the Restoration, and was then made, in succession, dean of the Chapel Royal, bishop of London, master of the Savoy, and in 1663, on the death of Archbishop Juxon, he was raised to the primacy. The celebrated "Savoy Conference" was held at his house, but he did not take part in it. He stood courageously at his post during the plague, in 1665, and rendered great and generous service. He was afterwards chancellor of the university of Oxford; built there the well-known Sheldonian Theatre, and gave endowments to several colleges; and rebuilt the library at Lambeth. Died at Lambeth, 1677.

SHELLEY, PERCY BYSSHE, one of the most distinguished English poets, was born at Field Place, near Horsham, Sussex, in 1792. The rough experience of school life

was acutely painful to his over-sensitive organization, and gave a permanent unhappy tone to his mind. A similar experience at Eton, whither he was sent in 1805, roused him to a daring resistance to authority, and intensified his instinctive indignation at injustice. He quitted Eton after three years' stay, and, in 1810, was sent to Oxford university. During his two years of home life he had written a good deal, and he continued to write at Oxford. He published in 1811, without his name, a "Defence of Atheism," and on its authorship being discovered, he was at once expelled from the university, and even for a time refused admittance to his home. The same year he formed a rash marriage alliance, found not in it what he sought, and after two years had passed, and two children been born, a separation from his wife was arranged. On her death, in 1816, he claimed his children, but a decree in Chancery was obtained for leaving them in the care of his wife's father, on the ground of his own alleged atheism, and consequent unfitness to have charge of them. He had before that time become acquainted with Mary, the daughter of William Godwin and Mary Wollstonecraft, had travelled with her on the continent, found in her an intellectual and sympathizing companion, free and brave as himself, and at last made her his wife. The dedication to her of "The Revolt of Islam" is one of the most exquisitely touching of his poems. Leigh Hunt, Lord Byron, and Keats, were among the friends of Shelley. After a visit to Geneva, in 1817, he lived a year at Marlow, and finally quitted England, in March, 1818, for Italy, residing at Milan, Rome, Florence, and other cities. He took a warm interest in the movements towards political liberty in Spain, Italy, and especially in Greece; but he was not the man to take effective part in them either by act or word. His life, so full of rich promise, was too soon lost to the world. He was drowned at sea, by the wreck of his small sailing-boat on the way from Leghorn to his house at St Arengo, July 8, 1822. His body, found ashore after some days, was burnt, and the ashes buried near those of Keats in the Protestant graveyard at Rome. The obloquy and prejudice which long blinded his countrymen to the high poetic faculty, and the rare moral excellencies of Percy Bysshe Shelley, and made it a kind of sin to read, or even name him, have now passed away; and charity, in the best sense, covering his errors and faults, leaves us free to give his works the attention which they deserve, and the admiration they are certain to excite. In force, and splendour of imagination, he is perhaps unrivalled; and few poets equal him in wealth and felicity of diction. He is no realist; does not stand firmly on the ground and deal with men and women as Shakespeare does; but, while denouncing the evils and wrongs, corruptions and miseries of the world, dreams splendid dreams of truth and good and beauty and bliss, and creates scenes of Utopian peace and loveliness. His principal poems are—"Queen Mab," "The Revolt of Islam," "Prometheus Unbound," and "The Cenci,"

a tragedy full of Among his short singularly passionate over the death and Helen;" "Spirit of Solitude" &c. His wonderful "To a Sky" collected editions by his widow in him, also by Mr year. a tragedy full of horrors, and not ideal ones. Among his shorter pieces are "Adonais," a singularly passionate and beautiful lament over the death of John Keats; "Rosalind and Helen;" "Hellas;" "Alastor, or the Spirit of Solitude;" "The Triumph of Life," &c. His wonderful lyrics, "The Cloud," and "To a Skylark," are well known. A collected edition of his poems was published by his widow in 1839, and "Memorials" of him, also by Mrs Shelley, in the following year. Several Lives and notices of him have appeared since that time.—Mrs SHELLEY was born in 1798. At the age of 18 she wrote her wild and extraordinary tale of "Frankenstein," which gained immense popularity, and is still in demand at Mudie's library. She was also author of the "Lives of Literary Frenchmen," in Lardner's Cabinet Cyclopaedia, of "Rambles in Germany and Italy," and of several novels written after her husband's death. She died in 1851.

SHENSTONE, WILLIAM, an English poet, born in 1714, at Hales Owen, in Shropshire, was the son of a gentleman farmer—residing on his own estate, called the Leasowes. He was educated at Oxford; and on coming into possession of his paternal property, he relinquished all views of an active life, and occupied himself with rural pursuits, and the cultivation of poetry. His great desire to render the Leasowes famous for picturesque beauty and elegance, led to expenses which he could not ill support, and he was by no means a happy inhabitant of the Eden which he had created. His works, which consist of songs, elegies, pastorals, and miscellaneous essays, were printed in 3 vols. 8vo, by Dodsley. As a poet, he is pleasing, tender, and correct in sentiment; and his prose works display good sense and cultivated taste. Died, 1763.

SHERARD, or SHERWOOD, WILLIAM, an English botanist, was born in Leicestershire, in 1659. About 1702 he was appointed consul at Smyrna, and during his residence in the East he collected specimens of all the plants of Anatolia and Greece, and made observations on subjects of natural history and antiquities. He died in 1728, and by his will gave £3000 to provide a salary for a professor of botany at Oxford. He published Hermann's "Paradisus Batavus," and a work entitled "Schola Botanica."

SHERBURNE, Sir EDWARD, an ingenious writer, was born in London, in 1618. He held the office of clerk of the ordnance under Charles I., and suffered greatly during the civil war; but was restored to his office, and knighted, by Charles II. Died, 1702. He translated Seneca's tragedies, the astronomical poem of Manilius, entitled "Astronomica," and other works into English.

SHERIDAN, Dr THOMAS (the well-known friend of Dean Swift), was born in 1684, and died in 1738. He was eminent as a teacher; but being singularly thoughtless and extravagant, he closed his life in great poverty. He was the author of some sermons, and a translation of the satires of Persius.

SHERIDAN, THOMAS, son of the preceding, was born in 1721, at Quilca, in Ireland, and was educated at Westminster

School, and at Trinity College, Dublin. In 1742 he went upon the stage, and gained much celebrity as a tragedian, both in his native country and in England. He next became manager of the Dublin company; but being ruined by the opposition of a rival theatre and by riots in his own, he relinquished the profession, commenced as a lecturer on elocution, and for a time was very successful. During the ministry of Lord Bute, he obtained a pension of £200. He subsequently became manager of Drury Lane Theatre; but some disputes taking place, he retired, and resumed his attention to oratory. His principal works are, his "Dictionary of the English Language," and a "Life of Swift." Died, 1788.

SHERIDAN, RICHARD BRINSLEY, third son of the preceding, distinguished as a statesman, wit, and dramatist, was born at Dublin, in 1751. He was educated at Harrow School, and became a student of the Middle Temple, but was not called to the bar. His first dramatic attempt was "The Rivals," which was acted at Covent Garden in 1775, with moderate success; but the "Duenna," a musical entertainment, which followed, was received with general admiration; and his "School for Scandal" gained him the highest reputation as a comic writer. On the retirement of Garrick from Drury Lane Theatre, Sheridan purchased a share in that property, which qualified him for a seat in parliament; and, in 1780, he was chosen member for the borough of Stafford. He attained great celebrity as an orator, especially during the progress of the impeachment of Warren Hastings. The political changes consequent on the death of Pitt, in 1806, occasioned the rise of the party with which Sheridan was connected, and he obtained the lucrative post of treasurer of the navy, and the rank of a privy-councillor. This administration being weakened by the loss of Mr Fox, who survived his rival only a few months, new alterations took place, and Sheridan was deprived of office, to which he never returned. At the general election in 1806, he obtained a seat for Westminster, the great object of his ambition; but he was afterwards nominated for the borough of Ilchester, which he continued to represent during the remainder of his parliamentary career. The latter part of his life was embittered by misfortunes, principally arising from his own imprudence. His profuse habits involved him deeply in debt; his loss of a seat in parliament deprived him of protection from arrest; intemperance had undermined his constitution; mental anxiety completed the destruction of his health, and his death took place, July 7, 1816. Besides the pieces already noticed, he was the author of part of "A Translation of Aristænetus;" the farce of "The Critic," and poems. Sheridan was twice married, first to Miss Linley, a celebrated singer; and the second time to Miss Ogle, daughter of the dean of Winchester.

SHERLOCK, WILLIAM, an eminent English divine, born in 1641. He became dean of St Paul's, and wrote numerous books and pamphlets, the greater part of which were of the controversial kind. His "Practical

Treatise on Death," however, has been highly valued and very much read. Died, 1707.

SHERLOCK, THOMAS, bishop of London, son of the preceding, born in 1678, was distinguished as a spirited controversial writer. He was educated at Cambridge, succeeded his father as master of the Temple, and became, successively, dean of Chichester, and bishop of Bangor, Salisbury, and London. He took a leading part in the Bangorian controversy, and did good service in his day, in the controversies respecting the evidences of Christianity, by his work on Prophecy, and by his clever and interesting "Trial of the Witnesses." Died, 1761.

SHERWIN, JOHN KEYSE, an eminent engraver, who, till the age of 19, pursued the humble occupation of a wood-cutter. He was employed on the estate of Mr Mitford, near Petworth, in Sussex; and being one day at the house of that gentleman, the attention with which he observed some of the family who were drawing, attracted Mr Mitford's notice, who asked him if he could do anything in that way! Sherwin said that he could not tell, but he should like to try. On this a port-crayon was put into his hand, and he produced a drawing which astonished all present; and the Society of Arts, to whom it was presented, voted him the silver medal. He was then placed under Bartolozzi, and became his favourite pupil. His engravings are of the first excellence. Died, 1790.

SHERWOOD, MARY MARTHA, one of the most popular writers of juvenile and serious fiction, was the daughter of Dr George Butt, chaplain to George III., vicar of Kildermister, and rector of Stanford, in Worcestershire, where she was born in 1775. In 1803, she married her cousin, Henry Sherwood, of the 53rd regiment of foot, and accompanied her husband to India the same year, where she displayed great zeal in the cause of religion amongst the soldiers and natives dwelling around her. The great number of her books prevents an enumeration of even the most popular of them; but her principal works were "Henry and his Bearer," "The Lady of the Manor," "The Church Catechism," "The Nun," "The Fairchild Family," and more recently, "The Golden Garland of Inestimable Delight." Died, 1851.

SHIELD, WILLIAM, an eminent musical composer, was born at Smalwell, Durham, in 1754. His father, a teacher of singing, died when his son was in his 9th year. He was apprenticed to a boat-builder, but quitted that business as soon as his indentures expired, for he had never ceased to cultivate the knowledge of the violin, which he had early acquired. It was not long before he gained reputation at Scarborough, as leader of the concerts, which led to his being offered a situation in the Italian Opera House, where he remained 18 years as principal viola. In 1778 he came forward as a dramatic composer in the music to "The Flitch of Bacon," the success of which was great and decisive. It procured for him the situation of composer to Covent Garden Theatre, which he held for several years. At the death of Sir W. Parsons, he was ap-

pointed master of his Majesty's musicians in ordinary; and he continued to enjoy a high degree of popularity to the time of his death, which took place in January, 1829. His style was simple, chaste, and graceful. Among his dramatic pieces are, "Rosina," the "Poor Soldier," "Robin Hood," "Marrion," "Oscar and Malvina," "Hartford Bridge," &c. He also set to music many excellent songs, as "Tom Moody," "The Weaving of the Lead," "The Thorn," "Old Towler," &c.

SHIRLEY, ANTHONY, a celebrated English traveller, was born at Weston, in Sussex, in 1565. On leaving Oxford University, he served under the earl of Essex, with such reputation, as to receive the honour of knighthood. He next went to Italy, and from thence travelled to Persia, where he became a favourite with Shah Abbas, who in 1612 sent him as his ambassador to England. After this, the emperor created him a count, and the king of Spain appointed him admiral in the Levant seas. He died in Spain about 1630.

SHIRLEY, JAMES, an eminent dramatic poet, was born in London, about 1591; was educated at Merchant Taylors' School, and at St John's College, Oxford; obtained a curacy at St Alban's, which he resigned on becoming a Catholic; and then endeavoured, though without success, to establish a school there. He removed to London, and became a fertile writer for the stage; and, having obtained celebrity, he was taken into the service of Queen Henrietta Maria. He afterwards accompanied the earl of Kildare to Ireland, but returned on the breaking out of the rebellion, and resumed his scholastic employment in the Whitefriars. At the Restoration many of his plays were again acted, and he appears to have been prosperous; but having lost his property by the fire of London, in 1666, both he and his wife were so affected by the calamitous event, that they died of grief and terror within 24 hours of each other, on the 23rd of October, and were buried in the same grave. Shirley was the author of 37 tragedies, comedies, &c., besides a volume of poems; of which a complete edition was published by Gifford.

SHORE, JANE, the beautiful and unfortunate mistress of Edward IV., was the daughter of a London citizen, and the wife of a rich jeweller in Lombard Street. She had entire command over the king's heart and purse; but his favour "she never abused to any man's hurt, but often employed to many a man's relief." After the king's death, she became attached to Lord Hastings; and their known partiality to the young princes rendered them obnoxious to Richard III., who accused them of witchcraft. On this charge Hastings was beheaded, and his pretended accomplice committed to the Tower. After undergoing the form of a trial, she was ordered to do penance in St Paul's in a white sheet, and was paraded through the public streets, the bishop of London heading the procession. Her house and fortune were seized by the protector, and she was reduced to the greatest distress; but the story of her per-

ishing in a ditto given rise to the appear to be four when she died is VIII. Sir Thom per she was and so much in her behaviour; for a quick both read could of answe bling."

ishing in a ditch (which is said to have given rise to the name Shore-ditch), does not appear to be founded upon fact. Where or when she died is not known; but it is certain she was living in the reign of Henry VIII. Sir Thomas More says of her—"Proper she was and fair; yet delighted not men so much in her beauty as in her pleasant behaviour; for a proper wit had she, and could both read well and write; ready and quick of answer; neither mute nor babbling."

SHORE, SIR JOHN. [TEIGNMOUTH, Lord.]

SHORT, THOMAS, physician, was a native of Scotland, and was educated at Edinburgh. He settled first at Sheffield, but removed to Rotherham, where he died in 1772. He wrote a variety of works, among which were the "Comparative History of the Increase and Decrease of Mankind in England, and several Countries abroad," "Natural History of Mineral and Medicinal Waters," a "Chronological History of the Air, Weather, Seasons, Meteors," &c., 2 vols.

SHOVEL, SIR CLOUDESLEY, a gallant British admiral, was born near Cley, in Norfolk, about 1650. In 1674 he was a lieutenant under Sir John Narborough, who sent him to the bay of Tripoli with a requisition, which the latter treated with contempt. On his return he stated to the admiral the practicability of destroying the enemy's shipping, which service he performed the same night without the loss of a man. For this exploit he was appointed to the command of a ship, and he gradually rose in his profession, till he became a rear-admiral. He took part in the battle of Bantry Bay, and contributed to the victories of La Hogue and Malaga. He was afterwards joined with the earl of Peterborough in the expedition to Spain. While in command of the Mediterranean fleet in 1707, he sailed for England, and in the night of October 22nd fell by mistake upon the rocks of Scilly, where his ship was totally lost with some others, and all on board perished. His body being found by the fishermen, they stripped and buried it; but the fact becoming known, his remains were brought to London, and interred in Westminster Abbey.

SHRAPNEL, Lieut.-general HENRY, the inventor of the case-shot known as Shrapnel-shells, received his commission as second lieutenant in the royal artillery in 1779, and attained the rank of lieutenant-general in 1837. Shortly after the siege of Gibraltar he invented the spherical case-shot; this consists of a hollow globe of iron, filled with musket-balls and gunpowder, which, when the shell explodes, are projected about 150 yards, and do as much injury as the same number of muskets, in addition to the effects produced by the splinters of the exploded shell. On the adoption of these shells by the artillery, General Shrapnel was granted a pension of £1200 per annum in addition to his regular pay.

SHREWSBURY, JOHN TALBOT and **CHARLES TALBOT, Earls of.** [TALBOT.]

SHUCKBURGH-EVELYN, Sir GEORGE AUGUSTUS WILLIAM, an eminent mathematician and natural philosopher, was born in

1750. He took the name of Evelyn in addition to his family name of Shuckburgh on marrying the daughter of James Evelyn, Esq., of Falbridge, Surrey. He was a zealous student of astronomy; determined by experiments a formula for the barometrical measurement of the height of mountains; ascertained the relation between the English yard and the length of a pendulum vibrating a certain number of times in a minute; and had a standard measure of length made by Troughton. He was a fellow of the Royal Society and of the Society of Antiquaries; sat in parliament as member for Warwickshire, and died at his seat in that county, in 1804.

SHUCKFORD, SAMUEL, a learned divine, who was educated at Caius College, Cambridge, and became prebendary of Canterbury, and rector of Allhallows, in Lombard Street. He wrote two works, "On the Creation and Fall of Man," and "The History of the World, Sacred and Profane." Died, 1754.

SHUTTLEWORTH, PHILIP NICHOLAS, bishop of Chichester, was born in 1782, at Kirkham, Lancashire. He received his education at Winchester, and New College, Oxford, and was distinguished by his superior attainments. For some time he resided in Oxford, and filled the situation of tutor to his college; and when, in 1822, the wardenship of New College became vacant, he was unanimously elected. In 1840, Dr Shuttleworth was promoted to the see of Chichester; but his episcopal dignity was of brief duration, as he died in January, 1842. His principal works are a "Discourse on the Consistency of the whole Scheme of Revelation with itself and with Human Reason;" "Scripture not Tradition," in which his objections to Puseyism are stated with great force and learning; a volume of sermons, &c.

SIBBALD, Sir ROBERT, physician and naturalist, born near Leslie, in Fifeshire, about 1643. He was physician and geographer to Charles II.; and contributed to the foundation of the college of physicians at Edinburgh, of which he became the first president. Among his works are, "Scotia Illustrata" and "The Liberty and Independence of the Kingdom and Church of Scotland." Died, 1712.

SIBTHORP, JOHN, a very learned naturalist and regius professor of botany in the university of Oxford, was a native of that city, and received his education at Lincoln College. After studying medicine at Edinburgh, he visited France, Switzerland, and Greece, for the purpose of making botanical researches. In 1794 he revisited Greece, and the same year he published "Flora Oxoniensis," and at his death left an estate of £300 a year to the university, in order to defray the expense of publishing a splendid work, entitled "Flora Græca," and towards the foundation of a professorship of rural economy. The "Flora Græca" was subsequently edited, in 10 vols. folio, by Sir James Edward Smith and Professor Lindley. Died, 1796.

SICARD, ROCH-AMHROISE CUCURRON, an eminent teacher of the deaf and dumb, was

born in 1742, at Fousseret, near Toulouse. On the death of l'Épée, in 1789, the Abbé Sicard was called to Paris, to succeed him in the direction of the establishment there. In 1792 he was arrested amidst his scholars, sent to prison, and was in imminent danger of becoming a victim in the ensuing massacres. He, however, obtained his liberty, and in 1790 took part in compiling the "Annales Catholiques," for which he was sentenced to transportation, but escaped. When this storm had passed away, he resumed his situation as teacher of the deaf and dumb. He wrote several valuable works relating to the instruction of deaf mutes; and died in 1822.

SICKINGEN, FRANZ VON, an illustrious German knight of the 16th century, born at the castle of Ebernburg in 1484. He acquired great distinction as a warrior in the armies of the Emperors Maximilian and Charles V., and at the same time as the champion of the poor and oppressed, and the friend of learned men. While commanding in an expedition against Würtemberg he gave orders to spare the house of Reucklin, and sent for him to his camp, giving him protection against his monkish persecutors. He was the warm friend of Ulrich von Hutten, and gave him a home in his castle for a long time. Through Hutten's influence Sickingen embraced the doctrines of Luther, and so many of the reformers found a shelter at Ebernburg that Hutten used to call it "the hostelry of the righteous." Among them were Ecolampadius and Martin Bucer. In 1522 he made war on the archbishop of Treves, on behalf of the gospel, he said. Luther attempted in vain to dissuade him. Sickingen was repulsed, and in the spring of the following year he was attacked in turn in his castle of Landstein, severely wounded, and compelled to surrender. Died, almost immediately, 7th May, 1523.

SIDDONS, SARAH, the most celebrated of English tragic actresses, was a daughter of Roger Kemble, manager of an itinerant company, and born at Brecknock, in 1755. She commenced her theatrical career as a singer, but soon relinquished that line, and attempted tragedy. In her 18th year she was married to Mr Siddons; when she and her husband played at Liverpool and other places, gaining both reputation and profit. In 1775 she tried her powers on the London boards, in the character of Portia. Garrick at the same time appearing as Shylock, but was unsuccessful. She then obtained an engagement at Bath, where she improved rapidly, and became a general favourite. Time, with study and practice, matured her powers; and when she reappeared at Drury Lane, in October, 1782, as Isabella, in the "Fatal Marriage," her success was complete, and, from that time forward, her theatrical career was one continued triumph. Her great parts were Lady Macbeth, Constance, and Lady Randolph in "Douglas." In 1801 she transferred her talents to Covent Garden Theatre; and in 1812, having acquired an ample fortune, she retired from the stage, appearing only once again in London, which was in 1816, for the benefit of her brother, Mr Charles Kemble, and a few nights at

Edinburgh, to assist her widowed daughter-in-law. Mrs Siddons possessed every requisite, personal and acquired, for the high dramatic walk she aspired to, and those who witnessed her in the meridian of her splendid career, can never forget her surpassing intellectual powers, or her unparalleled dignity of deportment. She died in 1831. Portraits of Mrs Siddons were painted by Sir Joshua Reynolds in 1783, by Gainsborough in 1784, by Sir T. Lawrence and Sir W. Beechey about 1798. The first portrait is in the Grosvenor Gallery, the second and third in the National Gallery, and the fourth in the National Portrait Gallery.

SIDMOUTH, HENRY ADDINGTON, Viscount, &c., was the eldest son of Dr Addington, an eminent physician; was educated at Winchester, and Brasenose College, Oxford, and was intended for the profession of the law, which, however, he abandoned almost as soon as he was called to the bar, in order to follow the political fortunes of his boyhood's friend, the second William Pitt. Entering parliament for Devizes, in 1784, he in 1789 succeeded Lord Grenville as speaker of the House of Commons—an honour, we believe, never before or since conferred on so young a member. In this post he remained for 12 years, during which period he commanded the respect of both friends and foes, and only ceased to be speaker in order to take, in 1801, at the urgent request of George III., the still more arduous post of prime minister. His ministry lasted only two years and four months, but never were an English minister's talents and courage tried during a like space of time by a more perplexing state of public affairs, both foreign and domestic; and, when circumstances led him to resign, he most honourably supported government whenever he believed its measures to be calculated to benefit the country. In 1805 he became president of the council, under Mr Pitt, and was elevated to the peerage. This office he more than once resigned and re-accepted; but, on the formation of the Liverpool administration in 1812, after the assassination of Mr Perceval, he became secretary of state for the home department. The Spa Fields and the Manchester meetings, and the Cato Street conspiracy, furnish abundant proofs alike of the difficulties against which Lord Sidmouth had to contend, and of the sagacity, courage, and firmness with which he opposed and overcame them. In 1822, after passing nearly 40 years in the public service, he felt the infirmities of age pressing heavily upon him, and finally retired to private life. That he was singularly disinterested no one ever ventured to deny; more than once he refused a pension, and on one occasion he refused an earldom and the garter—those dazzling prizes for which so many statesmen have bartered both personal and political honour. He passed the remainder of life in retirement at his official residence as ranger of Richmond Park. Born at Reading, 1757; died, 1844. His portrait, by George Richmond, is in the National Collection.

Sidney, of Penshurst, in Kent, was born in 1551, and became one of the most accomplished statesmen and writers of the age. After leaving college, he travelled in France, Germany, and Italy; and, on his return, he became a favourite of Queen Elizabeth, who, in 1576, sent him on an embassy to the Emperor Rodolph, the real object of which was to promote a league among the Protestant states, which he effected. In 1581 he distinguished himself in the jousts and tournaments celebrated for the entertainment of the duke of Anjou; and, on the return of that prince to the continent, he accompanied him to Antwerp. The prince-palatine being invested with the order of the Garter in 1583, Mr Sidney was appointed his proxy, when he received the honour of knighthood. In 1585 he projected, in concert with Sir Francis Drake, an expedition against the Spaniards in America; and he had gone to Plymouth to embark on the undertaking, when an express mandate from the queen recalled him to court. Her influence also was exerted to prevent him from being elected king of Poland; "refusing," as Camden says, "to further his advancement, out of fear that she should lose the jewel of her times." He was subsequently appointed governor of Flushing, and general of the cavalry under his uncle, Dudley, earl of Leicester, who commanded the forces sent to assist the Dutch against the Spaniards. On the 22nd of September, 1588, he fell in with a convoy sent by the enemy to Zutphen; and though the English troops were inferior to the enemy, they gained the victory; but it was dearly purchased with the loss of their commander, who, after one horse was shot under him, mounted another, and continued the fight, till he received a ball in the left thigh, which proved fatal. As he was borne from the field, languid with the loss of blood, he asked for water, but just as the bottle was put to his lips, seeing a dying soldier looking wistfully at it, he resigned it, saying, "This man's necessity is greater than mine." He died on the 15th of October, and his body was brought to England, and interred in St Paul's Cathedral. He was the author of "A Defence of Poesy," "Sonnets and Poems," and the celebrated romance of "Arcadia." Thus perished the gallant, amiable, and accomplished Sir Philip Sidney, in his 32nd year, whose fate was the object of general regret, and whose talents and acquirements entitle him to be classed among the most distinguished persons of his age and nation.

SIDNEY, MARY, countess of Pembroke, celebrated for her beauty, intelligence, and goodness, was the sister of Sir Philip Sidney (noticed above). She was married to Henry, earl of Pembroke, about 1576; wrote several religious works, some poetical pieces, and translated from the French the "Discourse of Life and Death," by Philippe de Mornay. The "Arcadia" of her brother was written for her pleasure, and on its first publication was called "The Countess of Pembroke's Arcadia." She died, after a widowhood of twenty years, in 1621, and Ben Jonson wrote her epitaph:—

Underneath this sable hearse
Lies the subject of all verse.
Sidney's sister, Pembroke's mother;
Death! ere thou hast slain another,
Fair and wise and good as she,
Time shall throw a dart at thee.

A fine portrait of this noble lady is one of the most attractive pictures in the National Portrait Gallery.

SIDNEY, ALGERSON, a celebrated English republican, second son of Robert, earl of Leicester, was born about 1620. He was carefully educated under the inspection of his father, and early trained to a military life; served with considerable distinction under his brother, Lord Lisle, during the Irish rebellion; joined the parliamentarians on his return, in 1643; and, having displayed his skill and bravery in several actions, was ultimately made governor of Dover. When the high court of justice was formed for the trial of the king, he was nominated a member; and although he was neither present when sentence was pronounced, nor signed the warrant for the execution, yet he vindicated that measure. During the Commonwealth he retired to Penshurst, and there occupied himself in composing his celebrated "Discourses on Government." In 1659 he was one of the commissioners sent to mediate between Denmark and Sweden; and, conscious of the offence he had given the royalist party, he remained abroad till 1677, when he received a pardon, and returned. In 1688, on suspicion of being implicated in what was called the Rye-house Plot, he was arrested, with Lord William Russell and others; and when arraigned before the chief justice, Jefferies, he was found guilty, though the evidence was defective and illegal. He was executed on Tower Hill, December 7, 1687, and suffered with characteristic firmness and constancy. One of the first acts of the revolution was to reverse his attainder; and the name of Algernon Sidney has since been held in honour by those who maintain the fundamental principles of free government.

STEGEN, LUDWIG VON, inventor of mezzotinto engraving, was born at Utrecht in 1609. He was taken by his father to Cassel when ten years of age, and received his education at the college of Cassel, of which his father was appointed director by Prince Maurice. He appears afterwards to have served as a soldier. He first made known his invention of a new process of engraving in 1642, while living at Amsterdam; and in 1654, while visiting Cologne, he explained it to Prince Rupert, by whom it was introduced in England. Stegen was for some time in the service of the duke of Wolfenbüttel. Died, after 1675.

STEVES, Count EMANUEL, usually called the ABBÉ STEVES, was born in 1748, at Fréjus, where his father was director of the Post-office. Having finished his studies in the university of Paris, he was one of the grand vicars to the bishop of Chartres; but at the time of the American revolution, he abandoned his ecclesiastical pursuits to enter into the field of politics, where he boldly promulgated new doctrines, and acquired

very considerable influence. His abilities having soon made themselves known, he was in 1787 named a member of the provincial assembly which Necker had established at Orleans. He advocated the necessity and expediency of calling the States-general in 1787, and in 1789 published his pamphlet "Qu'est ce que le Tiers Etat?" which gained immense reputation, and undoubtedly hastened the crisis of the revolution. Soon afterwards he became one of the deputies for Paris to the States-general; and it was at his instigation that they assumed the title of National Assembly. In 1790 he brought forward a project for repressing the licentiousness of the press, and voted for the establishment of civil and criminal juries. He joined in the attack on Robespierre, was a member of the Committee of Public Safety, and of the Council of Five Hundred, and in 1797 was sent ambassador to Berlin. In the next year he was a member and president of the Directory. After the 18th brumaire he was named one of the three consuls; and from that time he remained steady to the constitutional principles he first asserted, opposing the Jacobins, declining union with Buonaparte, though he remained a member of the senate. When Napoleon returned from Elba, Sieyès protested against his mockery of a constitution, although Napoleon made him one of his peers. In 1816 he was obliged to retire from France, in consequence of the decree against the members of the convention who voted for the death of the king in 1793, and he took up his abode in Brussels. After the revolution of 1830, he, like the other French exiles, returned to his native country; but he never re-appeared on the political scene. He died in June, 1836, aged 88. The Abbé Sieyès, during the various phases of the revolution, published numerous pamphlets, the object of which was to consolidate a constitutional government, opposed at the same time to tyranny, dictatorship, and anarchy, and resting on the broadest possible base of freedom.

SIGAUD DE LAFOND, JEAN RENÉ, an eminent surgeon and natural philosopher, was born in 1740, at Dijon, and died in 1810. He devoted himself chiefly to obstetric practice, and projected a new mode of operation in certain cases of difficult parturition. His principal works are, "Elements of Theoretical and Experimental Philosophy," and "A Dictionary of Natural Philosophy."

SIGISMUND, emperor of the West, and king of Hungary and Bohemia, was second son of the Emperor Charles IV., and was born in 1366. On the death of his father, in 1378, he became margrave of Brandenburg, and was occupied four years in visiting his states, and receiving their homage. He married, in 1386, Maria, daughter of Ludwig (Louis), king of Hungary, and was crowned king the same year. He soon after extended his dominions by the conquest of Wallachia. His queen dying in 1392, his claim to the crown of Hungary was contested by Ladislaus V., king of Poland, but unsuccessfully; and the frequent conspiracies formed against Sigismund by the nobles made him suspicious and cruel. Alarmed by the conquests of the Turks, he sought aid of France and Eng-

land; and a great battle was fought at Nicopolis in 1396, in which the French under the count of Nevers were defeated and almost all slain, the Hungarians fled without fighting, and Sigismund narrowly escaped, and led a wandering life for eighteen months. In 1410 he was chosen emperor by one party of the electors, Jobst, marquis of Moravia, being chosen by another party, and Wenceslaus, who had been deposed, still retaining the title of emperor. So that there were at the same time three rival emperors, as there were also three rival popes. But the death of Jobst and the negligence of Wenceslaus left Sigismund without a rival in the following year. He was crowned at Aix-la-Chapelle in November, 1414, and went thence to the great Council of Constance. He surrounded the town with his troops, and remained master of its gates during the Council. The Bohemian reformer, John Huss, had come to Constance under a safe-conduct of the emperor; but he was, nevertheless, burnt, as was also his disciple, Jerome of Prague. Sigismund had a conference with the pope, Benedict XIII., at Perpignan, hoping to induce him to resign the tiara, but he failed. About the same time he sold Brandenburg to Frederick of Hohenzollern, burgrave of Nürnberg; raised Savoy into a duchy for Amadeus VIII., and visited France and England. He professed to negotiate a peace between Charles VI. and Henry V., but perfidiously made a secret alliance with the latter, hoping to recover Arles. By the death of his brother, Wenceslaus, in 1419, he succeeded to the crown of Bohemia, and the Hussite war began, which lasted fifteen years. The famous Zisca defeated Sigismund before Prague in 1423, but agreed to a truce; and Sigismund was crowned soon after. After the death of Zisca the war was able carried on by the two leaders, named Procopius. In 1431 Sigismund was crowned king of Italy at Milan; and in 1433, emperor at Rome by Eugenius IV. He died at Znaim, in Moravia, Dec. 9, 1437.

SIGISMUND I., king of Poland, fifth son of Casimir IV. and Elizabeth, daughter of the Emperor Albert II., was born in 1466. He was early invested with the duchy of Glogau, and made governor of Silesia, and on the death of his brother, Alexander, in 1506, was chosen to succeed him on the throne of Poland. The revolt of Gliniski, governor of Lithuania, led to a war with the Russians, which lasted many years. In 1514 the Russians became masters of Smolensko, which was opened to them by treachery. Sigismund was also engaged in war with the Teutonic Knights. In 1515 he had an important conference with the Emperor Maximilian, at Vienna, at which the kings of Hungary and Bohemia were also present; and which resulted in a firm alliance of Sigismund with the house of Hapsburg. Sigismund had the advantage of superior education, and did much to advance the civilization of his subjects. He also fortified and beautified many of the towns, and set the example of a simple and unostentatious way of life. His physical strength was extraordinary. He opposed the spread of the reformation in Poland, excluded from public

offices those who prohibited the German grand-master becoming a Sigismund's Prussia. Died

SIGISMUND, John III. of Sweden was grandson of Philip I. of France in 1357. He had his rival, but him to renounce came king of father; but in attachment to the relations with alienated from crown. He was Russians, and with the Turkizim in 1621. ever, by the year. A war lowed; and Sigismund 1632.

SIGNORETTI, Italian painter 1441. He is seen TONA. He was 1472, and painted. He holds an art as the knowledge to precursor of painted in the Città di Castello; but his frescoes in San Brizzio. The series of christ, the R and Paradise Giovanni, about Luca between were studied gelo, and to a in his "Last works of Luca the altar-pictorial of Perugia a man of high cipal as well his last year died there at SIGONIO, scholar and 1426. He studied Greek at Mo succeeded to wards professor 1563, at Bologna reputation a author of a illustrative; though and ecclesiastical. Among his Consolium, and norum Fast

offices those who accepted its doctrines, and prohibited the young men from frequenting the German universities. In 1523 Albert, grand-master of the Teutonic Knights, having become a Lutheran, was created, with Sigismund's consent, hereditary duke of Prussia. Died, 1518.

SIGISMUND III., king of Poland, son of John III. of Sweden, was born in 1566. He was grandson by his mother's side of Sigismund I. of Poland, and was called to the throne on the death of Stephen Bathori, in 1587. He had the Archduke Maximilian for his rival, but defeated him, and compelled him to renounce his claim. In 1593 he became king of Sweden on the death of his father; but in consequence of his strong attachment to the Catholic faith, and his close relations with the Jesuits, the Swedes were alienated from him, and, in 1604, he lost the crown. He was afterwards at war with the Russians, and took Smolensko in 1611; then with the Turks, from whom he took Choczim in 1621. He gave it up to them, however, by the treaty of peace signed the same year. A war with Gustavus Adolphus followed; and Sigismund died near Warsaw, in 1632.

SIGNORELLI, LUCA, a distinguished Italian painter, was born at Cortona about 1441. He is sometimes called **LUCA DA CORTONA**. He was a pupil of Piero della Francesca, began to distinguish himself about 1472, and painted till 1512, or perhaps later. He holds an important place in the history of art as the first who applied anatomical knowledge to painting, and thus became the precursor of Michael Angelo. Signorelli painted in the Sistine Chapel, at Arezzo, Città di Castello, Cortona, Perugia, and Volterra; but his greatest works are the powerful frescoes in the chapel of the Madonna di Saa Brizzio in the cathedral of Orvieto. The series comprises the History of Antichrist, the Resurrection of the Dead, Hell and Paradise. It was commenced by Fra Gioranni, about 1417, and was completed by Luca between 1499—1504. These frescoes were studied and admired by Michael Angelo, and to a certain extent imitated by him in his "Last Judgment." One of the best works of Luca is the "Madonna Enthroned," the altar-piece of St Onofrio, in the cathedral of Perugia, painted in 1484. Luca was a man of high character, and attained municipal as well as artistic honours. He spent his last years in retirement at Arezzo, and died there after 1524.

SIGNONIO, CAROLO, an eminent classical scholar and antiquary, born at Modena about 1436. He studied under Portus, professor of Greek at Modena, and then went to the universities of Bologna and Padua. In 1516 he succeeded to the chair of Portus, was afterwards professor at Venice and Padua, and in 1563, at Bologna, whither his learning and reputation attracted many students. He was author of a large number of works, chiefly illustrative of Roman history and antiquities; though he also treated of mediæval and ecclesiastical history and diplomaties. Among his principal writings are—"Regum, Consulium, Dictatorum, ac Censurum Romanorum Fasti;" "De Antiquo Jure Civium

Romanorum—Italice—Provinciarum;" and "Historia Ecclesiastica, lib. XIV.," the last undertaken by the desire of Gregory XIII. A complete edition of his works appeared at Milan in 6 vols. folio, in 1732—37. Died, near Modena, 1584.

SIGOURNEY, LYDIA HUSTLEY, an American poetess and miscellaneous writer, was born in Connecticut, U.S., in 1791. "Hustley" was her maiden name, and she married Mr Sigourney in 1819. Her first literary productions appeared in 1815, and from that period she was a very prolific writer, and her works enjoyed great popularity. Among her principal poems are—"Traits of the Aborigines of America," "Zinzendorf," "The Western Home," and "Pocahontas." She commemorated her visit to Europe in 1840, in her "Pleasant Memories of Pleasant Lands," partly in prose and partly in verse; and wrote several works in prose. Her last publication was "Past Meridian," which appeared in 1854, and in three years passed through three editions. Her poetry is characterized by grace and tender and pious feeling, and has been flatteringly compared to the poetry of Mrs Hemans. Mrs Sigourney died at Hartford, Connecticut, June 11, 1865.

SILIUS ITALICUS, CAIUS, a Roman poet, was born A. D. 25. He became a celebrated orator and advocate, rose to the dignities of consul and proconsul in Asia, and died at his villa of Tuscum, in his 75th year. He wrote a poem in 16 books, on the second Punic war. It is still extant, and is a painstaking and unpoetic versification of material chiefly taken from the historians Livy and Polybius.

SIMEON, CHARLES, an eminent English divine and theological writer, was born at Reading, in 1759, and was brother to Sir John Simeon, bart., recorder of that town, and a master of chancery. He was educated at Eton, and entered at King's College, Cambridge, in 1776, where he made great progress in his theological studies, and received those religious impressions for which through life he was distinguished. In 1783 he was presented to the living of Trinity Church in that university, of which he continued to be the rector and officiating minister during the remainder of his life—a period of 53 years. His works are numerous, and were published entire, in 1832. They consisted of 21 closely printed 8vo volumes, containing 2536 sermons and skeletons of sermons, which form a commentary upon every book of the Old and New Testament; besides various tracts and devotional treatises. When Mr Simeon received from Cadell, the bookseller, the sum of £5000 for the copyright, he appropriated £1000 to the Society for promoting Christianity among the Jews, £1000 to the London Clerical and Education Society, and £1000 to the Church Missionary Society. The death of this venerable pastor took place, Nov. 13, 1836.

SIMEON OF DURHAM, an English historian of the 12th century, who composed a history of the Saxon and other kings of England from 616 to 1130.

SIMEON STYLITES, ST., the famous anchorite, was born in Syria, in the latter

years of the 4th century. From a shepherd-boy he became a monk, entering a monastery at the age of thirteen. He outdid his companions in austerity and mortification of the body, and went such lengths as several times to have narrowly escaped death. He afterwards retired to a desolate mountain-side, chaining himself to the stones; and finally bethought himself of more completely escaping the sinful world, and drawing nearer to heaven, by establishing himself on the top of a column, first of nine feet, and finally of sixty feet in height. Here he lived—abode, rather—for thirty years, through heat and cold, calm and storm alike; stood, knelt, bowed head to feet, sang, prayed, and gave exhortations to the throngs who came to see him, and who venerated him as a celestial more than earthly being. It is affirmed by an eyewitness that thousands were moved by his exhortations to receive baptism, and that he often effected a reconciliation between enemies. A story is told that he once saw in a vision a chariot of fire, and an angel visiting him to ascend in it to heaven; that mistaking it for reality he raised his foot to mount, when the devil chastised his vanity by a sprain. Simeon died about the middle of the 5th century. His example was followed by a crowd of pillar-saints; his images were superstitiously venerated, and a figure of him was set as an amulet at the entrance of shops at Rome. (See Tennyson's profound exposition of the sentiments which inspired this strange man, in his poem "St Simeon Stylites.")

SIMONEL, LAMBERT, a pretender to the throne of England, was the son of a baker at Oxford, and was born about 1474. While yet a boy, he was trained by one Richard Simon, a priest, to play a part in opposition to Henry VII., and in 1487 he gave himself out to be Edward, earl of Warwick, son of Clarence, and sole heir of the house of York. He landed in Ireland, and finding adherents, was crowned at Dublin as Edward VI. The earl of Lincoln, with troops furnished by the duchess of Burgundy, supported him, and they landed in Lancashire early in June. But Henry defeated them a few days after at Stoke, imprisoned Simon for life, and gave Simeon a place in his household, first as scullion and afterwards as falconer.

SIMON, RICHARD, a celebrated French theologian and controversialist, born at Dieppe, in 1638. He entered into the congregation of the Oratory, in 1659, and for some years lectured on philosophy at the College of Juilly, and at Paris. He was engaged in almost continual controversy with Bossuet and the Port-Royalists, and by his angry way of carrying on the discussions he entered upon, offended both Catholics and Protestants. The work which excited most attention, and which led to his exclusion from the Oratory, was the "Histoire critique du Vieux Testament," published in 1678. One of his obnoxious assertions was that the Pentateuch was not written by Moses, but compiled by the scribes of the time of Esdras. This work had a large circulation, and was translated into Latin and English. Among the other works of Simon are, "Histoire Critique du Nouveau Testament," "Histoire

de l'Origine et des Progrès des Revenus Ecclésiastiques," and "Disquisitiones Criticæ de viciis per diversa Læta et Tempora Bibliorum Editionibus." Several of his works first appeared under fictitious names. He spent the last twenty years of his stormy life at Dieppe, and died there in 1712.

SIMONIDES, a celebrated Greek lyric poet, was born in the island of Ceos, B. C. 556. He lived at Athens during the reign of Hipparchus, whose patronage he enjoyed, and after a temporary retirement into Thessaly, returned again to Athens, where he lived till at least his 80th year. He was invited to the court of Hieron of Syracuse, and there spent his last years. Simonides especially excelled in the Elegy and Epigram, and celebrated in his poems the principal events of the Persian war. He was the contemporary of Æschylus, Pindar, and Lasus of Hermione; won very numerous prizes, and even defeated Æschylus by his elegy on the heroes who fell at Marathon. Only fragments of his poems are extant, and they bear out the high opinion of his contemporaries. Simonides made poetry his profession, and is said to have been the first poet who wrote for pay. He was also in repute as a philosopher; and is said to have added four letters to the Greek alphabet. Died, B. C. 467.

SIMPLICIUS, a philosopher of the sixth century, was born in Cilicia. He was the disciple of Ammonius, the Peripatetic, and lived for a time in Persia. Returning to Europe, he applied himself to philosophy, and endeavoured to prove a substantial agreement between the doctrines of Plato and Aristotle. Simplicius wrote commentaries on the works of Aristotle and Epictetus.

SIMPSON, THOMAS, an eminent mathematician, was born in 1710, at Market Bosworth, in Leicestershire, and was the son of a weaver, who brought him up to his own trade, and, perceiving his inclination for reading, took away his books. He in consequence left his father, and, after many vicissitudes, one of which was his becoming a fortune-teller, he rose to be a mathematical professor at the Royal Military Academy, Woolwich, and a member of the Royal Society. He wrote Treatises on Fluxions, Annuities, and Algebra, "Elements of Geometry," and other scientific works. Died, 1781.—Simpson's widow, who was allowed a pension of £200 per annum, reached the extraordinary age of 102.

SIMPSON, ROBERT, an eminent mathematician, was born in 1687, at Kirton Hall, in Ayrshire; studied medicine at Glasgow, but never practised; was professor of mathematics at Glasgow during a period of nearly half a century; and died in 1768. Among his works are an esteemed edition of Euclid's Elements, "A Treatise on Conic Sections," "The Loel Plan of Apollonius restored," &c. **SINCLAIR, CHARLES GIBSON**, Baron, a distinguished Swedish general and writer on military tactics. He was engaged in the service of various governments of Europe, during the wars of the last century; and published "Military Institutions," 3 vols., &c. Died, 1803.

professor of philosophy at Glasgow during the period of the Commonwealth. Being a zealous Presbyterian, he lost his situation at the Restoration, but was restored to it on the accession of William III. He was distinguished for his researches in physical science, was an able engineer, and published treatises on hydrostatics and astronomy. He was also believed to be the author of a book, entitled "Satan's Invisible World discovered," which was for a long time popular among the Scottish peasantry. Died, 1696.

SINCLAIR, Sir JOHN, bart., philanthropist and statistician, was born at Thurso Castle, in the county of Caithness, in 1751. He received his education chiefly at the High School, Edinburgh, but subsequently attended the universities of Edinburgh, Glasgow, and Oxford. In 1775 he was admitted a member of the faculty of advocates, and was afterwards called to the English bar. In 1780 he was elected member for the county of Caithness, which he also represented in the parliaments of 1790, 1802, and 1807; and sat for the borough of Lostwithiel in 1784, and for Petersfield in 1796. For more than half a century Sir John Sinclair occupied a prominent position in public life; and there was scarcely any topic in the whole range of political, statistical, or medical science, which had not engaged his active and inquiring mind. His reputation as a promoter of agricultural improvement, in particular, was not confined to Europe; the most eminent political economist in America appreciated his labours. He was the originator of the Board of Agriculture, in 1793; and he also procured the establishment of a society, in Scotland, for the improvement of wool; of both these he was the president. Nor were his patriotic exertions in defence of his country less conspicuous than his endeavours to improve his moral and economical condition. He raised two battalions of 1000 men each, in the counties of Ross and Caithness, which were the first fencible regiments whose services were extended beyond Scotland. To a patriotic and philanthropic disposition he added an unflinching perseverance. His principal works consist of a "History of the Revenue of Great Britain," 3 vols.; the "Statistical Account of Scotland," a work of unexampled labour; "Thoughts on the Naval Strength of Great Britain," "Considerations on Militias and Standing Armies," "Essays on Agriculture," and his publication of the alleged originals of the Ossianic Poems, with a "Dissertation." It is said that at the time of his death he had made a considerable progress in a "Political Code," and a "Code of Religion." Died, Dec. 21, 1835.

SINDIAH, or SCINDIA, MADHAJEE, a bold and ambitious Mahratta prince, was born in Hindostan, probably about 1743. He was the son of a Mahratta officer at the court of the peshwa, and was at the battle of Paniput in 1761, where he was wounded and taken prisoner; but made his escape, and took refuge in the Deccan. In 1770 he invaded Hindostan in concert with Holkar, and made himself master of Delhi; he also took Agra, where he established a cannon foundry, and was the first Indian prince whose troops were armed and disciplined

after the manner of Europeans. He was greatly indebted to the talents of Leborgne de Bolgne, a French general whom he had taken into his service, and who commanded the army which gained the famous battle of Patan, in 1790. He possessed an extensive territory, and was engaged in schemes of farther aggrandizement at the time of his death, which happened in 1794. His nephew, Dowla Rao Sindia, succeeded him.

SINGH, MAHA RAJAH RUNJEET, chief of Lahore and Cashmir, was born in 1779. Perhaps neither ancient nor modern times can furnish a more striking proof of the power that lies in an iron and energetic will, than is furnished by the singular career of this chief, who from being the leader of a gang of robbers, became the absolute despot of despots; whose word was law to princes, and who ruled 20,000,000 of men with a rod of iron. Brave, active, and remorseless, his bandit troop swelled its numbers, and became an army; the mere speck of earth which he first seized upon by the right of the strongest, a centre from which he carried the sword or the snare into the dominions of his neighbours. Of education he was so destitute that he could not read; but he had a very powerful memory, much shrewdness, and great discrimination; and he was in the daily habit of being read to in both Persian and Hindoo. Accessible to all ranks of his people, he administered justice with the utmost impartiality, at least when his own interests did not stand in the way of an equitable decision; but in taxing, or, to speak more correctly, in plundering the people who were unhappy enough to fall beneath his sway, he was absolutely merciless. Avarice seems to have been fully as much his incentive to warfare as ambition; for he has been known to undertake a military expedition against a distant prince who had the reputation of possessing particularly fine horses, or costly jewels. Among his immensely valuable treasures of the latter kind was the celebrated *Koh-i-Noor*, or Mountain of Light, now in possession of the queen of England. In stature he was very short, and the naturally sinister expression of his countenance was much increased by the loss of his left eye by the small-pox. His long grey tapering beard, which descended below his breast, gave him something of a venerable appearance. At his death, four of his princesses and seven slave girls were permitted to burn themselves upon his funeral pyre. Died, 1839.

SIRI, VITTORIO, an Italian monk and annalist, was born at Parma, in 1613. He obtained the patronage of Cardinals Richelieu and Mazarin, and settled at Paris, where he obtained an abbey, and was appointed almoner and historiographer to the king. Siri made himself known as author of two political journals, "Il Mercurio," a record of current events, in 15 vols., published between 1644-82; and "Memorie Recondite," a similar record of events from 1601 to 1640. Died, 1685.

SIMONDI, CHARLES SIMONDE DE, one of the most eminent of modern historians and political economists, was born at Geneva,

In 1773. In 1794 the house of his father, who had been an eminent member of the government of Geneva, was pillaged, two-fifths of his property confiscated, and both father and son condemned to 12 months' imprisonment. The future historian, as soon as he obtained his release, sought safety and peace in Tuscany; but here he was even more unfortunate than in his native country, for the French imprisoned him as being an aristocrat, and the Italian insurgents imprisoned him as being a Frenchman. In 1800 he returned to Geneva, where in the following year he commenced his career as an author, by the publication of "The Agriculture of Tuscany." His subsequent works were numerous and varied, including history, political economy, criticism, and biography. But the works by which he is most widely known are his "History of the Italian Republics during the Middle Ages" (an abridgment of which he wrote for Lardner's Cabinet Cyclopaedia), "History of the Fall of the Roman Empire" (also written for Lardner), "History of the Literature of the South of Europe," and his elaborate "History of the French," 31 vols. 8vo. In 1838 he was elected one of the five foreign members of the Institute of France, in the department of moral and political sciences. M. de Sismondi was in principle a rigid republican, and so truly humane in heart and mild in manner, that he won the esteem of all who knew him. Died, 1842, aged 69.

SIX, JAN, a Dutch dramatic poet, was born in 1618, and died in 1700. The works of Six are remarkable for purity of style. He was the friend and patron of Rembrandt, and his portrait was engraved by that artist.

SIXTUS V., Pope, FELICE PERETTI, was born near Montalto, in the March of Ancona, in 1521. He entered the convent of the Cordeliers at Ascoli, and by his natural good abilities, and his popularity as a preacher, made his way rapidly, notwithstanding a petulant temper, and frequent contentions with his associates. He was successively professor of theology, commissary-general of his order at Bologna, and inquisitor at Venice; whence he fled to Rome, and obtained still higher honours and offices. A remarkable change appeared in his character or manners, he showed himself meek and amiable, and ingratiated himself with all who had to do with him. Pius V., who had been his pupil, got him chosen general of the Cordeliers, named him his confessor, and, in 1570, created him cardinal. He was not in favour with Gregory XIII., and it is said that in his retirement he feigned great feebleness, walked leaning on a stick, his head declined, and his voice broken. These signs of old age vanished with surprising suddenness the moment of his election as successor to Gregory, in April, 1585. He threw away his staff, lifted up his head, and made the place ring with his loud *Te Deum*. His first care was to repress brigandage, and make Rome and the States of the Church safe from the violence which had long prevailed. One year of his vigorous government made an immense and beneficial change. Before the end of 1585 Sixtus published a bull of excommunication against

Henry of Navarre and the prince of Condé, who boldly protested against it, and had the protest affixed to the gates of the Vatican. After the murder of the duke of Guise and the cardinal of Lorraine, he cited Henry III. of France to Rome, and on his non-appearance excommunicated him. He afterwards publicly praised the zeal and deed of the assassin of Henry. He is said to have felt esteem for Queen Elizabeth, and an aversion against Philip II.; yet, when the latter sent his armada against England, the pope gave it his benediction and a consecrated banner; and, at the same time, by a terrible bull, laid an interdict on England, declared Elizabeth a usurper, a heretic, and excommunicated. During the five years of his pontificate Sixtus formed and executed many great designs for the improvement and adornment of Rome; at a cost which made him so unpopular with the people, that after his death they destroyed his statue. He caused the famous granite obelisk, which Caligula had brought from Egypt, to be set up on a pedestal; completed a great aqueduct for the supply of Rome with water, rebuilt the library of the Vatican, and established the celebrated printing-office in connection with it; had new editions of the Septuagint and the Vulgate published at his own expense, and yet left the treasury rich. Sixtus confirmed the order of "Fruillants," established or reformed many congregations for the management of secular or ecclesiastical affairs, and fixed the number of cardinals at seventy. Died, 1590.

SKELTON, JOHN, an English poet and satirist, was of a Cumberland family, and was born about 1460. He appears to have studied at Oxford, and became distinguished for his classical attainments; was ordained priest in 1499, and was appointed rector of Diss, in Norfolk. Henry VII. chose him for tutor to his son, afterwards Henry VIII. Skelton was in great repute for wit, but indulged so much in severe satire, especially against the clergy, and even Cardinal Wolsey, that he was at last ordered to be arrested. This he avoided by taking sanctuary at Westminster, and there he died in 1529. An excellent edition of his poems, with a Life and Annotations by Dyce, appeared in 1842.

SKINNER, STEPHEN, philologist, was born in London, about 1622; was educated at Christchurch, Oxford; settled as a physician at Lincoln, and died in 1667. He was author of "Etymologicon Linguae Anglicanae."

SLEEMAN, Sir WILLIAM HENRY, K.C.B., British resident at Lucknow, and miscellaneous writer, was born at Stratton, in Cornwall, in 1788. At the age of 20 he entered the service of the East India Company, and after distinguishing himself both in active service and by his literary accomplishments, he became, in 1820, agent in the Saugur and Nerbudda districts. Here he had the happiness of seeing his energetic efforts successful in the suppression of the infamous Thuggee system, for which, just before his death, he was created K.C.B. Appointed resident at Lucknow by Lord Dalhousie in 1842, he was charged with preparing the measures necessary in order to carry

out the annexation of Oude. Sir W. H. Sleeman was author of a "Diary in Oude," "Fables and Recollections of an Indian Officer," "Military Discipline in our Indian Army," &c. He left India in ill health, and died on his way home, in February, 1838.

SLEIDAN, JOHANN, an eminent German historian and diplomatist, was born at Sleida, near Cologne, in 1506. His family name was Philipson; Sleidan was adopted from his birth-place. He studied at some of the principal universities of Europe, and in 1535 was attached to the Cardinal du Bellay. He took part in the diets of Haguenau and Itzhusen, but as a Lutheran had to quit France in 1542; settled at Strasburg, was named historian to the league of Smalkald, and professor of law, and was employed in several political negotiations. He was sent as deputy of Strasburg to the Council of Trent in 1551. In the midst of his active life he found time for much literary labour, and published many works; of which the most important is his history of the Reformation, entitled—"De statu Religionis et Reipublice, Carolo quinto Cesare, Commentarii." It appeared in 1555, was translated into English, French, German, and Italian, and is esteemed for its original information, and its impartiality. Sleidan's work entitled, "De Quatuor Summis Imperiis;" passed through more than fifty editions. Charles V., it is said, called Sleidan and Paul Jovius his liars (*menteurs*), because the former spoke too ill of him, and the latter too well. Sleidan died in 1556.

SLINGELANDT, PIETER VAN, Dutch painter, born at Leyden in 1640. He was a pupil and painstaking imitator of Gerard Douw, and his pieces have been sometimes mistaken for those of his master. They are little known in England. Died, 1691.

SLOANE, SIR HANS, a distinguished physician and naturalist, was born at Killineagh, Ireland, in 1660, and studied medicine in London, where he settled. He was the first in England who introduced into general practice the use of bark, not only in fevers, but in a variety of other disorders. He formed a valuable museum of the rarest productions of nature and art, which, together with his library, consisting of upwards of 50,000 volumes and 3566 manuscripts, were purchased of his executors for £23,000 by act of parliament, and formed the basis of the collection of the British Museum. George I. created him a baronet in 1716, and he was appointed physician-general to the army; on the accession of George II., he was named physician in ordinary to his Majesty; and in 1727 he became president of the Royal Society, of which he had previously been secretary. Died, 1752.

SMART, CHRISTOPHER, an English poet, born in 1722, at Shipbourne, in Kent, was educated at Cambridge, and having settled in London, commenced author. The gaiety of his disposition rendered him an acceptable companion to the wits and authors of the day, with many of whom, particularly Pope, Johnson, Garrick, and Hawkesworth, he became intimate. He translated Pope's "Ode on St Cecilia's Day," and the "Essay on Criticism," into Latin verse; wrote a

poetical version of the Psalms; some original poems, odes, fables, &c. He also translated the works of Horace. Poverty, however, overtook him; and his distresses, aided by intemperance, made him mad. His "Song to David" was written in a mad-house, on the walls of his cell. He died, within the rules of the King's Bench prison, in 1771.

SMEATON, JOHN, an eminent civil engineer, was born in 1724, at Rusbthorpe, near Leeds. His father, who was an attorney, was desirous of bringing up his son to the same profession; but finding that the law was not suited to his taste, he wisely permitted him to follow the impulse of his genius, and he became a mathematical instrument-maker. In 1751 he visited Holland and Belgium for the purpose of inspecting the principal engineering works. In 1755 the Eddystone lighthouse was burnt down, and Mr Smeaton, being recommended to the proprietors, undertook the work of rebuilding it, and executed it in such a manner, as almost to bid defiance to the power of time, or accident. This was his greatest work. In 1759 he received the gold medal of the Royal Society, of which he was a member, for a paper on the power of wind and water to turn mills; and as an engineer, he rose to the summit of his profession. His last public employment was that of engineer for the improvement of Ramsgate Harbour. Died, 1792. There is a portrait of Smeaton in the National Portrait Gallery.

SMELLIE, WILLIAM, a printer at Edinburgh, distinguished also as a man of science and learning, was born in 1740. He was the translator of Buffon's Natural History, and author of the "Philosophy of Natural History," and of other ingenious works. He was a fellow of the Royal Society of Edinburgh, and was much esteemed among the literati of his native city, where he died in 1795.

SMIRKE, ROBERT, R.A., was born at Wigton, near Carlisle, in 1752; entered, at the age of 19, as a student at the Royal Academy (then in its infancy); in 1766 first became an exhibitor, and in 1792 was elected one of its members. His pictures were generally of an historical or imaginative character, his favourite subjects being taken from the sacred writings, English history, the works of Shakespeare, Cervantes, or other eminent authors. Died, Jan. 5th, 1845.

SMITH, ADAM, the celebrated political economist, was born at Kirkcaldy, in Scotland, in 1723. He was educated first at Kirkcaldy school, then at the university of Glasgow, and in 1740 was sent to the university of Oxford, where he studied till 1747. He was next engaged as lecturer on rhetoric and belles lettres at Edinburgh, and in 1751 was appointed professor of logic at Glasgow university; a post which he exchanged, in 1752, for that of professor of moral philosophy. His lectures attracted considerable attention, and contained the germs of the views which he subsequently developed in his well-known works. Towards the close of 1763, he accepted an invitation to travel with the duke of Buccleugh, and having resigned his chair, made a long tour in France, becoming acquainted at Paris with some of

the most eminent philosophers and economists. Among them were Turgot, Quesnay, D'Alembert, and Necker. Returning in 1766, he spent the next ten years in retirement at Kirkcaldy, engaged in the composition of his great work, the "Inquiry into the Nature and Causes of the Wealth of Nations," which first appeared in 1776. It has a high rank among the successful books of the world; overthrowing the grave errors which it attacked, and establishing their opposite truths. Its main principle is that *labour*, not money, nor land, is the real source of wealth. The means of making labour most fruitful, the division of labour, what wealth consists in, the mischiefs of legislative interference with industry and commerce, the necessity of freedom of trade, are admirably discussed and expounded. The book may be regarded as the basis of modern Political Economy, and one of its great objects has been accomplished in England in the establishment of *Free Trade*. In 1788, Adam Smith settled at Edinburgh, where he had the appointment of a commissioner of customs for Scotland. He was the friend of David Hume, of whose last days and death he wrote an account, with a warm panegyric on his character, which was published with Hume's autobiography. He was also author of a "Theory of Moral Sentiments," which appeared in 1759, and the doctrine of which is that Sympathy is the foundation of Morals. It reached a sixth edition in 1790, and has been frequently reprinted. The degree of D.D. was conferred on Adam Smith by the university of Glasgow, of which also he was chosen rector in 1787. Died, unmarried, 8th July, 1790.

SMITH, ANKER, engraver, was born at London, in 1759. He was for some time assistant to James Heath; was employed on the illustrations to Bell's British Poets, and, in 1797, was chosen A.R.A. for his excellent print of the Death of Wat the Tyler, after Northcote. Died, 1819.

SMITH, GEORGE, painter, was born at Chichester, in 1714. He excelled in landscape, and some of his pieces gained prizes from the Society of Arts. Died, 1776.

SMITH, Sir HENRY GEORGE WAKELYN, bart., usually called Sir HARRY SMITH, a distinguished British general, was a native of Whittlesea, in Cambridgeshire. He was born in 1788, entered the army at the age of 17, and first served in the expedition to Monte Video and Buenos Ayres. He was present at the siege of Copenhagen, and afterwards served in the Peninsula, where he took part in almost all the principal battles and sieges of the war. At the storming of Badajoz he saved the life of a Spanish lady, whom, in 1814, he made his wife. He distinguished himself as assistant-adjutant-general at the taking of Washington, in 1814, took part in the unsuccessful attack on New Orleans later in the same year, and in the capture of Fort Bowyer. At Waterloo, he served as quarter-master-general to the 6th division. After being employed in British North America, the West Indies, and the Cape Colony, he was sent to India about 1840, and distinguished himself at the battles of Gwalior, Maharajpore, Moodkee, and Fe-

rozepore. He won the victory of Aliwal over the Sikhs, 28th January, 1846, and contributed to the victory of Soobraon in the following month; for which services he received the thanks of the House of Lords, and was made G. C. B. and Baronet. In 1847, he was appointed governor of the Cape of Good Hope, and conducted the Kafir War to a successful close, in 1852. After his return to England he was made lieutenant-general, and commander of the northern and midland military districts. Died, at London, 12th October, 1860.

SMITH, Sir JAMES EDWARD, an eminent English physician and naturalist, was born at Norwich, in 1759; studied medicine at Edinburgh, and took his degree at Leyden, in 1786; visited France and Italy; and, on his return to England, published "A Sketch of a Tour on the Continent," 3 vols., in which there is much information on subjects of natural history. In 1784, he became the purchaser of the collection of books, &c., of Linnaeus, which was afterwards sold to the Linnaean Society. He established the Linnaean Society, and was its first president, received the honour of knighthood from George IV., and died in 1828, at his native city, where he had long practised as a physician. Besides his "Tour" before mentioned, he wrote a "Natural History of the Lepidopterous Insects of Georgia," 2 vols. folio; "English Botany," 36 vols. 8vo. "Flora Botanica," 3 vols. 8vo; the "English Flora," 4 vols. 8vo; and an "Introduction to Botany." Sir James was also editor of the splendid "Flora Græca" of Sibthorp.

SMITH, JAMES and HORACE, a celebrated literary duumvirate, were the sons of Robert Smith, solicitor to the board of ordnance, and born respectively in London, Feb. 10th, 1775, and Dec. 31st, 1779. James was articled to his father, was subsequently taken into partnership, and eventually succeeded to his business as well as to his official appointment. Horace became a member of the stock exchange. Perhaps no two situations in life could at first sight appear less favourable to the cultivation of the muses than a lawyer's desk and Chapel Court; but James and Horace Smith triumphed over obstacles that would have crushed less genial natures, and went on from step to step till they left their names deeply graven in the literature of their time. Their first effusions were contributed to the Pic Nic newspaper, established by Colonel Greville, in 1802. They also wrote largely for the Monthly Mirror and the London Review, and some of their best vers de société appeared in the New Monthly Magazine, while under Thomas Campbell's editorship. But the work by which the brothers are best known, and by which they will be longest remembered, is the "Rejected Addresses," which appeared on the reopening of Drury Lane Theatre in 1812, and of which twenty-two editions have been sold. The popularity of this work appears to have satisfied the ambition of the elder brother. But soon afterwards Horace became an indefatigable novel writer. He commenced his novels with "Gaieties and Gravities" in 1825, and ended them with "Love and Mesmerism" in 1845; and with-

in these 20 years he also gave to the public "Irambley House," "Tor Hill," "Reuben Apsley," "Zillah," "The New Forest," "Adam Brown," &c., all of which were well received. James Smith died in London, Dec. 24th, 1839; Horace died at Tunbridge Wells, July 12th, 1849.

SMITH, JAMES, of Deanston, a name intimately associated with agricultural and manufacturing improvement, was born at Glasgow, 1759. While only a youth of 18, he had attained such a thorough knowledge of mechanics and cotton-spinning, that his uncle gave him the entire management of the extensive cotton works at Deanston, in which he was a partner; and he soon afterwards began to put in practice on the Deanston farm various schemes for thorough draining and deep working, which have since been so generally adopted. In 1831 he published a pamphlet on this subject which attracted great attention; and since that period he rose so highly in public estimation, that he became an authority on all questions connected with agricultural pursuits. In 1815 he was one of the commissioners appointed by Sir Robert Peel to inquire into and report upon the sanitary condition of the manufacturing towns; and the schemes of improvement which he suggested can hardly fail of their effect. Died, suddenly, June 9, 1850.

SMITH, JOHN, distinguished as the heroic leader of the English colonists of Virginia, was born at Willoughby, in Lincolnshire, about 1579. Of a daring spirit, longing for a larger and more adventurous life, he served in early life in the Netherlands, a soldier in the cause of liberty. He then travelled in France, visited Egypt and Italy, and about 1602 greatly distinguished himself in the wars of Hungary against the Turks, gaining the favour of Sigismund Bathori, prince of Transylvania. Wounded and taken prisoner by the Turks, he was sold as a slave, was harshly treated in the Crimea, and made his escape. Rumours of war in Morocco attracted him thither, and thence he returned to England about 1606. He entered with enthusiasm into the project of colonizing the New World, and with Gosnold, Winkfield, Hunt, and others, set out in December, 1606, with a squadron of three small vessels for Virginia, under the authority of a charter granted by James I. Amidst the unhappy dissensions, difficulties, and distress of the first years of the great enterprise, Smith rendered the most important services, by his irrepressible hopefulness, his practical wisdom, and his vigorous government. But for his wisdom and noble exertions the project would probably have been abandoned. He made important geographical explorations and discoveries; in 1607 ascending the Chickahominy, and penetrating into the interior of the country. He and his comrades were captured by the Indians, and he only, by his rare self-possession, escaped with life. He remained a prisoner for some weeks, carefully observed the country, got some knowledge of the language of the natives, and when at last they were going to put him to death, he was saved by the affectionate pleading of Pocahontas, the daugh-

ter of the chief Powhattan, a girl of ten or twelve years old. Reconciled to Jamestown, Smith had need for all his energy to save the desponding colonists. In the summer of 1608 he explored in an open boat the Bay of the Chesapeake and its tributary rivers, a navigation of nearly 3000 miles. He also penetrated inland, established friendly relations with the Indians, and prepared a map of the country. On his return from this great expedition, he was made president of the colonial council. In 1609 he was severely injured by an accidental explosion of gunpowder, and without reward for his splendid services, except in his own conscience and the applause of the world, returned to England. He visited Virginia in 1614, was captured by the French in the following year, and on his return to London after three months, heard of the arrival of his Indian friend, Pocahontas. She had been taken prisoner by the colonists, had become a Christian, married an Englishman, John Rolfe, and with him had come to England. Smith made known her services, and she was presented to the queen, and loaded with marks of honour and gratitude. She was on the point of embarking for America, when she died at Gravesend, in 1617. Smith published in 1608 "A True Relation of such Occurrences and Accidents of note as hath happened in Virginia since the first planting of that Colony, &c." He died in 1631.

SMITH, DR JOHN, an eminent antiquarian and Celtic scholar, was born at Glenorchy, in Argyleshire, in the year 1747; studied at the university of St Andrew's; and, in 1774, was appointed assistant and successor in the parish of Kilbrandon, Lorn, where he preached for 7 years. About this time he translated into Gaelic, "Alleine's Alarm" and the "Catechisms of Dr Watts." In 1781 he became minister of Campbellton. Soon after his settlement in this parish, he published his "Essay on Gaelic Antiquities," "A Dissertation on the Authenticity of the Poems of Ossian," and a "Collection of Ancient Poems, translated from the Gaelic." About 1783 he was associated with Dr Stewart, minister of Luss, in translating the Scriptures into Gaelic. He also wrote a concise commentary on the whole of the Bible. In 1787 he published the "Life of St Columba, the Apostle of the Highlands," extracted from the Latin of St Adaman, &c. About the same time he published a new and improved edition of the Psalms in Gaelic. Besides his unwearying labours for the spiritual improvement of the people committed to his care, he was eager to introduce among them an improved system of husbandry. With this view, he wrote many essays on the subject, and frequently obtained prizes from the Highland Society. Died, 1807, aged 60.

SMITH, JOHN PYE, D.D., LL.D., F.R.S., an eminent Nonconformist divine, was born at Sheffield, 1775. He was the son of a book seller, and was intended for his father's business. But his piety, talents, and love of learning, marked him out for the ministry, and he became a student at Rotherham College in 1793. When his course was fin-

ished, he was chosen classical tutor of the college; and he was invited, at the early age of 25, to become theological tutor and principal of Homerton College, the oldest of the institutions for training ministers among the Independents. In January, 1801, he entered on the duties of that post, which he filled with the highest efficiency for 50 years. Two or three years after his settlement at Homerton, he became pastor of the church assembling at the Gravel Pits Chapel, and continued to discharge his pastoral duties in that congregation for about 47 years. The mind of Dr Smith was singularly energetic. He was critically acquainted both with ancient and modern languages, and studied both the exact and the experimental sciences. When geology offered its somewhat startling revelations, he embraced it as a part of the communications of the Author of nature and of truth; and by his patient investigations he endeavoured to show the tangible records of creation to be in harmony with the word of God. On the publication of his "Scripture and Geology," the Royal Society enrolled him as one of their fellows. Dr Smith engaged in controversy with Professor Lee, of Cambridge, on the question of the union of church and state; and with the Rev. Thomas Belsham, and other Unitarians, on the Divinity of Christ. Among other works which emanated from his pen were, "Four Discourses on Priesthood and Sacrifice," and "Reasons of the Protestant Faith, with an Exposure of Popish Errors," which he republished, with a new preface, within a few weeks of his death. But the most elaborate of his publications is "The Scripture Testimony to the Messiah," a work of profound learning and candid criticism, which has been admitted, though the work of a dissenter, as an authority in the English universities. Dr Smith was on the side of progress in general politics; shrunk not from advocacy of the repeal of the corn laws; went to an extreme, even, as many deem it, in respect to some modes of social reformation; but whatever he did, it was impossible to doubt either his conscientiousness, the purity of his motives, or the philanthropy and benevolence that filled his heart. Died, at Guildford, Feb. 5, 1851.

SMITH, JOSEPH, founder of Mormonism, was born in Windsor County, Vermont, U. S., in 1805. He was the son of a farmer, and worked on the farm, receiving but a scanty education. He professed that the divisions and differences of Christendom excited in him the desire to discover for himself the divine truth; and that during his retirement, in 1823, he saw a vision, in which an angel appeared and made various prophetic and historical communications to him. Many angel-visits followed, and in 1827 the "Book of Mormon," a mysterious volume composed of thin plates of metal, in appearance like gold, and containing, in all kinds of characters, a history of America from the earliest ages down to the 5th century of our era, was delivered to him. His story found believers in his nearest relations, and excited general curiosity, with many suspicious and ill reports. A copy of

the book, or of one part of it, was shown to Dr Anthon, who declared it to be an imposture. Whether it was got up by Smith, or was appropriated with some modifications from a manuscript tale by one Spaulding, as has been asserted and sworn to, remains uncertain. Certain witnesses pretended to have seen the plates; Smith translated the record, and in 1830 it was published. The same year the new society began to take shape and organization under the name of "The Church of Jesus Christ of Latter Day Saints." It grew and spread rapidly, but success was accompanied by cruelty and frequent violence, so that Smith and his adherents had to remove from place to place, and from State to State, to avoid persecution of the coarsest kind. In 1839 Smith founded the city of Nauvoo, on the Mississippi, and got a charter of incorporation for it. It prospered greatly, attracted settlers from various parts of the world, had a fine temple, a university, and a regularly organized militia. By successive "revelations" Smith constituted the church, with himself as prophet and legislator. But dissensions existed between the faithful and the unbelievers in the new city; rival newspapers carried on the war, till the mob took it out of their hands, and the governor of the State in turn out of theirs. In June, 1844, Smith was arrested and imprisoned on a charge of treason, and on the 27th of that month he was murdered by the mob, who burst into the prison. Brigham Young was chosen his successor, and the Mormons had soon after to seek a new settlement. This they found in Utah, which was recognized as one of the United States in 1850.

SMITH, ROBERT, an eminent English mathematician, born in 1689. While still young he became tutor to the duke of Cumberland, and in 1716, on the death of his relative and friend, Roger Cotes, was called to succeed him as Plumian professor of astronomy in the university of Cambridge. Two years later he was chosen F.R.S., and in 1723 was made M.A., Cambridge. He succeeded Bentley as master of Trinity College in 1742. Dr Smith's original works are, "A Complete System of Optics," published in 1739, and "Harmonics, or the Philosophy of Musical Sounds," which appeared in 1748. He edited, with commentaries, some memoirs of his friend Cotes under the title of "Harmonia Mensurarum," and also his "Lectures on Hydrostatics and Pneumatics." He was the founder of two yearly prizes for students in mathematics and natural philosophy. Died, at Cambridge, 1768.

SMITH, SIR WILLIAM SIDNEY, G.C.B., British admiral, was the son of a captain in the army, John Spencer Smith, of Midgham, Sussex, and was born at Westminster, 1744. He received his education chiefly under Dr Vicesimus Knox, of Tunbridge School; but was sent, before the age of 12 years, as midshipman on board the Sandwich, under Lord Rodney. In 1780 he became a lieutenant; in 1782 a commander; and, in 1783, obtained post rank, with the command of the Nemesis, of 28 guns. The American war having just been brought to a close, the young captain

who was not quite 20, entered into the service of the king of Sweden, who presented him with the grand cross of the order of the sword, for the skill and energy he displayed on several occasions, particularly in an attack on a Russian flotilla, a great part of which he destroyed. A peace between Sweden and Russia again threw him out of active life, and he travelled in the south of Europe. Hearing that Lord Hood had got possession of Toulon, he hastened thither, and offered his services. Soon after his arrival it was determined to evacuate the city; and the destruction of the ships of war, which could not be carried off, was intrusted to Sir Sidney, who performed the hazardous exploit with signal ability. He was now appointed to the command of the Diamond frigate, of 38 guns, in which, with a small flotilla under his direction, he greatly annoyed the enemy; but in a gallant attempt to cut out a ship at Havre in 1796, he was taken prisoner, and, on pretence of having violated the law of nations, by landing assassins in France, he was confined for two years in the prison of the Temple, at Paris. At length, by the address and intrepidity of a French officer, named Philippeaux, and two of his friends, Sir Sidney's escape was somewhat mysteriously effected. By means of a forced order to the gaoler, and false passports, they escaped to Rouen, and thence in an open boat, to the Channel, where they were taken up by the Argo frigate, which soon landed them at Portsmouth. In 1798 Sir Sidney sailed in the Tigre, of 80 guns, for the Mediterranean, to assume a distinct command, as commodore, on the coast of Egypt. In March, 1799, he proceeded to St Jean d'Acre; and, on the 18th, captured a French flotilla, the guns of which he employed in the defence of Acre, against Buonaparte, who invested it two days after. Many fierce contests followed, and the French repeatedly endeavoured to carry the place by storm; but the determined valour of the British commodore and his gallant band, assisted by the troops of Hassan Bey, frustrated every attempt. Buonaparte having quitted Egypt, Sir Sidney negotiated with General Kleber for the evacuation of the country, and by a treaty signed at El Arish, in January, 1800, the return of the French was agreed to. The British government had previously announced that it would agree to no capitulation, and hostilities were recommenced by Kleber. But they nevertheless determined to abide by it. In 1801 Sir Sidney co-operated with the army sent to Egypt under Abercromby; and he was wounded in the battle which proved fatal to that gallant general. On his return to England he received a valuable sword, with the freedom of the city, from the corporation of London; and, in 1802, he was returned to parliament as member for Rochester. He was subsequently employed in the Mediterranean and in South America. On his return to England, in 1814, he was presented with the freedom of Plymouth; in the following year he was made a knight commander of the Bath; in 1821, full admiral, and, in 1830, lieutenant-general of marines, succeeding therein his

Majesty, William IV. In 1814, he endeavoured to procure, from the congress of Vienna, the abolition of the slave trade, and a conjoint attack of the sovereigns upon the piratical states of Barbary; but his exertions proved fruitless. He then formed at Paris an association called the Anti-Piratic, which probably helped to render the subjugation of Algiers a popular measure in France, if it did not immediately lead to that event. At the close of the war Sir Sidney's services were rewarded with a pension of £1000 a year. A more chivalric character than Sir Sidney Smith is not to be found among the heroes of modern times; and those who recollect his brilliant career will be ready to subscribe to the eulogium passed on him by his biographer, E. Howard: "All his public actions seem to have been less the offspring of mere military calculation and naval science, than of the intuition of the most romantic courage and the highest moral feeling, always controlled by prudence and intrepidity, that no danger, however sudden, could surprise, and no difficulty, however menacing, vanquish." There was a time when his very name, like that of Nelson, struck terror into our enemies; and his constitutional activity kept him constantly on the alert to take advantage of every opportunity to harass and annoy them. He died at his residence in Paris, on the 26th of May, 1810, aged 76.

SMITH, SYDNEY, M.A., canon residentiary of St Paul's, rector of Combe Florey, Somersetshire, who, for half a century, rendered himself conspicuous as a political writer and critic, was born at Woodford, in Essex; received his education at Winchester College, and was thence elected to New College, Oxford, in 1780. He commenced his ministry as curate of Netheravon, Wilts; but relinquished it soon after, in order to travel with the son of Mr Hicks Beach, M. P. for Cirencester; which event, and its immediate consequences, he thus humourously describes in the preface to his collected writings:—"When first I went into the church, I had a curacy in the middle of Salisbury Plain. The squire of the parish took a fancy to me, and requested me to go with his son to reside at the university of Weimar. Before we could get there, Germany became the seat of war, and in stress of politics we put into Edinburgh, where I remained five years. The principles of the French revolution were then fully afloat, and it is impossible to conceive a more violent and agitated state of society. Among the first persons with whom I became acquainted were Lord Jeffrey, Lord Murray (late lord advocate for Scotland), and Lord Brougham; all of them maintaining opinions upon political subjects a little too liberal for the dynasty of Dundas, then exercising supreme power over the northern division of the island. One day we happened to meet in the eighth or ninth story or flat in Buccleugh Place, the elevated residence of the then Mr Jeffrey; I proposed that we should set up a 'Review'; this was acceded to with acclamation. I was appointed editor, and remained long enough in Edinburgh to edit the first number of the Edin-

burgh Review." He soon after removed to London, and though the editorial department fell into the hands of Mr Jeffrey, he continued for many years one of the most active contributors to this celebrated organ of Whig principles. During his residence at Edinburgh, Mr Smith was minister of the episcopal church there; and when he settled in London, he became in every sense of the word "a popular preacher," who could at once delight and instruct the crowded assemblages of wealth and fashion that resorted to the West-end chapels. Nor were his oral eloquence, wit, and learning confined to the pulpit alone; with equal success he displayed his abilities as a lecturer on the *belles lettres* at the Royal Institution, his fame increasing with every fresh effort of his genius. During the Perceval administration, Mr Smith's activity as a political writer was at its height; and it was thought that the celebrated and amusing "Letters of Peter Plymley," which he produced at that period, did more towards effecting Catholic emancipation than any publication of the time. Throughout his whole career, indeed, he exerted himself in favour of "liberal" measures; or, to use his own words, he "always endeavoured to fight against evil." His last literary efforts were made in denouncing the repudiators of Pennsylvania. His "Contributions" to the Edinburgh Review and various other productions of his wise and witty pen have been collected, and have gone through numerous editions; and, more recently, his "Sketches of Moral Philosophy," or lectures upon that subject, delivered at the Royal Institution, have been published. He died, Feb. 21, 1845, aged 76. A Memoir of his life, with his Correspondence, has been edited by Lady Holland.

SMITH, Dr THOMAS, a learned English divine, historian, biographer, and critic; born in London, in 1638; died, 1710. He wrote numerous works, among which are, "An Account of the Greek Church," two volumes of "Miscellanea" in Latin, a "Life of Camden," and "Vite quorundam Eruditissimorum et Illustrium Virorum."

SMITH, Sir THOMAS, a learned English statesman, historian, and critic, was born at Saffron Walden, in Essex; and after having been Greek professor and university orator at Cambridge, became secretary of state in the reigns of Edward VI. and Elizabeth. Born, 1512; died, 1577. His "Commonwealth of England" is the book by which he is best known.

SMITH, WILLIAM, LL. D., F. G. S., an eminent geologist, was born at Churchill, in Oxfordshire; and at the outset of his career he studied geology and land-surveying. In 1806 he published "A Treatise on Irrigation," in which his geological discoveries enabled him to make some valuable improvements. From this time he steadily rose into notice in the scientific world. In 1808 his collection of organic remains was examined by the president and principal members of the Geological Society; and in the first volume of the Society's Transactions, which appeared in 1811, his discoveries are prominently noticed. But it was not until 1815 that he gave

to the world the long-promised "Delineation of the Strata of England and Wales," in the form of a handsome map. This publication led to the purchase, in the same year, by the British Museum, of the whole of his collection; and the task of arranging and describing it led him to publish "Strata Identified by Organized Fossils" and a "Stratigraphical System of Organized Fossils." From 1815 to 1825, Mr Smith published twenty geological maps of various counties of England, delivered lectures in provincial towns, and travelled in search of new facts, having, for a long time, "scarcely any home but the rocks, except one year which he passed at Kirkby Lonsdale, in Westmoreland." In 1835 the degree of LL.D. was conferred upon him by Trinity College, Dublin. But though careful, he became embarrassed; and it was at length well known to his friends, that this excellent and highly-gifted man, now fast falling into the "sere and yellow leaf of age, was without the means of procuring even the common comforts of life. An application was made to the crown, and a pension of £100 per annum was immediately bestowed upon him. Born, 1763; died, 1840.

SMOLLETT, THOMAS, novelist and miscellaneous writer, was born of a respectable family, at Dalquhurn, in Dumbartonshire, in 1721. He was educated at Dumbarton school, apprenticed to a surgeon at Glasgow, and served for several years in the navy. He accompanied the expedition to Carthage, and afterwards went to Jamaica. Not succeeding in his profession, he turned to literature for bread, and his first publication was a satire entitled "Advice," in 1746. His long life was one of restless activity, writing, travelling, quarrelling, place-seeking; without earnestness, or depth, or principle. He was for a time editor of the Critical Review, wrote against Wilkes in the "Briton," and published various political satires. His most celebrated novel is "Roderick Random," published in 1748; full of amusing incident, and characterized by a coarse but hearty humour. His other novels are "Peregrine Pickle," "Adventures of Ferdinand Count Fathom," "Adventures of Sir Launcelot Greaves," and the "Expedition of Humphrey Clinker." He was also author of a "Complete History of England," a translation of Don Quixote, and some worthless poems. His writings are not fit for delicate hands to touch, by reason of their indecency and moral filth. Smollett died at Leghorn, in 1771.

SMYTH, WILLIAM, professor of modern history in the university of Cambridge, was born in 1764. He took his degree of M. A. in 1790, and in 1807 he was appointed to the chair of modern history, which he held for 42 years. Most of his life was passed at Cambridge, in a constant train of quiet duties and innocent pleasures. Endowed with a fine taste and correct judgment, he delighted in nursing the flame of infant genius. He was among the first to appreciate the merits of Henry Kirke White, whom he treated during his life with characteristic kindness, and after his death gave a durable expression of his friendship in the beautiful lines inscribed on the youthful poet's monument in

SMYTH, WILLIAM HENRY, British admiral, a distinguished naval surveyor, astronomer, and antiquary, was born at Westminster in 1788. He is said to have been a descendant of the famous Captain John Smith, the preserver and early historian of the colony of Virginia. [See **SMITH, JOHN**.] He entered the navy at the age of 17, and continued to serve in it till the close of the war in 1815. He had the command of a gunboat at the siege of Cadiz in 1810, and was made a lieutenant in 1813. Having observed the defects of the charts of the Mediterranean Sea, he began to make observations for the correction of them, and being supported by the Admiralty, he employed nearly ten years in surveys of Sicily, the coasts of the Adriatic, and the island of Sardinia. In these surveys he was assisted by Captain Beaufort and Captain Gaultier du Parc of the French army. He became post-captain in 1824; returned the same year to England; completed the charts for the "Atlas of Sicily," published by the Admiralty; and published an interesting Memoir on that island. He afterwards settled at Bedford, where he built an observatory, and made a long series of observations on Double Stars; the results of his studies and observations appearing in his "Cycle of Celestial Objects," which was published in two volumes in 1844, and includes the "Bedford Catalogue." It is esteemed one of the best handbooks of practical astronomy. Admiral Smyth also made himself known as an antiquary. He formed a collection of Roman brass coins, and published a Descriptive Catalogue of them and another of the Northumberland collection. Having removed to Chelsea, he was for some time a prominent figure in the scientific circles of London; being a fellow of the Society of Antiquaries from 1821; afterwards vice-president; F. R. S. from 1826, and subsequently vice-president, foreign secretary, and member of the council; member of the council, and president of the Astronomical Society; one of the council and president of the Geographical Society; visitor of Greenwich Observatory; and one of the founders of the United Service Institution. He was also a corresponding member of various foreign academies. Admiral Smyth's principal literary work is—"The Mediterranean, a Memoir, Physical, Historical, and Nautical," published in 1854. Of his other works may be named, his "Sketch of the Present State of the Island of Sardinia," 1828; and translations of Arago's "Popular Astronomy," in conjunction with Grant; the same author's "Biographies of distinguished Scientific Men," in conjunction with Baden Powell and Grant; and Bezzoni's "History of the New World." He was long engaged on a "Nautical Dictionary," which he has left complete in manuscript, and which is to be published.

His numerous contributions to the "United Service Journal" were also revised by him for republication. Admiral Smyth was distinguished for his good sense, sterling integrity, and especially his love of fun, no less than for his enthusiasm for science, his energy, and varied acquirements. He died at his seat, St John's Lodge, near Aylesbury, September 9, 1865.

SNAYERS, HENRIK, Dutch engraver, was born at Antwerp in 1612. Among his best prints are—the Virgin surrounded by Saints, the Communion of St Francis of Assisi, both after Rubens; and Sanson delivered to the Philistines by Dalilah, after Vanduyck. He spent his whole life at Antwerp, and attained the reputation of one of the best engravers of his age.

SNAYERS, PIETER, Dutch painter, was born at Antwerp in 1593. He studied under Henrik van Balen, and improved himself by a visit to Italy. He was named painter to the Archduke Albert, and afterwards to the Cardinal Infante of Spain. Snayers excelled in historical, landscape, and battle pieces, and executed many works for the churches of Brussels and the principal mansions. He was the friend of Rubens and Vanduyck, and the latter painted his portrait. Died at Brussels, 1670.

SHELL, ROOFLER, an eminent mathematician and philologist writer, was born at Oudenarde, in Holland, in 1547. He became professor of mathematics, and afterwards of Hebrew, in the university of Leyden, where he died in 1613. He published "Apollonius Batavius," and several treatises on the works of Ramus.—His son, **WILHELMUS SELL**, born at Leyden, in 1591, succeeded his father in the mathematical chair, and died in 1626. He discovered the law of refraction of rays of light; and was the first who undertook the measurement of the earth, or a degree of the meridian, by the application of trigonometry. He published some of the works of the ancient mathematicians, and a few learned treatises of his own on mathematical subjects.

SNIADOCKI, JAN, a distinguished Polish astronomer, born in 1756. He studied at the universities of Cracow and Göttingen, visited Holland and France, became acquainted with Laplace, D'Alembert, Condorcet, and other eminent men, and in 1781 was appointed professor of mathematics and astronomy, at Cracow; whence he removed in 1806 to the new university of Wilna, of which he became rector. He retired from the post which he had filled so ably and honourably in 1821, and died in 1830. His scientific and miscellaneous writings appeared in a collected form in 8 vols., in 1837—1839.

SNIADOCKI, ANDREW, a distinguished Polish physiologist and chemist, was younger brother of the preceding, and was born in 1768. He was educated at the university of Cracow, studied afterwards at the universities of Pavia and Edinburgh, and, like his brother, was called to fill a chair at Wilna. He rendered great services to science in Poland as professor of chemistry and pharmacy there, and retained that post till 1830, when the university was suppressed by Russia. Sniadocki's work, entitled "The

Theory of Organic Existences," was translated into French and German. Died at Wilna, 1838.

SNORRO STURLESON, Icelandic poet and historian, was born in 1178. He received a good education, rose to high office in his native island, and was in high reputation for his varied requirements and his skill as a story-teller. He published the collection of Sagas entitled the "Heimskringla," in which are many songs of his own composition, and which was first printed in 1697. There are Swedish, Danish, German, and Latin translations of it. Snorro was also editor of the collection, entitled "Skaldia," or "Snorro-Edda." Snorro was murdered in 1211.

SNYDERS, FRANS, a celebrated painter of the Flemish school, born at Antwerp, in 1579. He studied under Henrik van Balen; and, after visiting Italy for improvement, settled at Brussels, under the patronage of the Archduke Ferdinand. His battles and hunting-pieces are admirable, and in the representation of animals none have ever surpassed him. Died, 1657.

SOANE, Sir JOHN, an eminent architect, was born at Reading, in Berkshire, in 1752; came to London at an early age with his father, who was a builder; was placed with Dance, the architect, when about 15, and afterwards under Holland. In 1772, being a student of the Royal Academy, he was awarded the silver medal for the best drawing of the Banqueting House, Whitehall. Four years afterwards he obtained the gold medal for the best design for a triumphal bridge. Soon after this he was introduced to George III., by Sir W. Chambers, and was sent to pursue his studies at Rome, with the Acadamy pension of £60 per annum for three years. There he continued until 1780, and studied assiduously the remains of ancient art. On his return to England he was employed on many public works, as well as private buildings; and on the death of Sir Robert Taylor, in 1788, he was appointed architect and surveyor to the Bank of England. In 1791 he was appointed clerk of the works to St James's Palace, the Parliament Houses, and other public buildings; and in 1795 architect of the Royal Woods and Forests, both of which offices he some years afterwards resigned. In 1794, a committee of the House of Lords directed him to consider what alterations could properly be made to render the house, offices, &c., more convenient and commodious. He accordingly made the requisite surveys, plans, &c., but though his designs were approved by the king, the execution of the work fell to the lot of James Wyatt. In 1806 he was elected professor of architecture to the Royal Academy. At this period, and for many years after, Mr Soane was actively engaged in erecting or improving public edifices in the metropolis and elsewhere. Among these were the Dulwich Gallery, the National Debt Redemption Office in the Old Jewry, the new Law Courts, &c. In 1821 he made a magnificent design for a new palace, to be constructed on Constitution Hill, but Buckingham House was preferred. In 1824 he was elected archi-

tect to the Royal College of Surgeons, and a fellow of the Royal Society. In 1826 he built Freemason's Hall, in Queen Street, and in 1833 completed the new State Paper Office in St James's Park. This was the last of his professional works; and, having passed his 80th year, he retired. He bequeathed his collection of works of art (valued at upwards of £50,000) to the nation, for the benefit of students in the arts, and especially for the advancement of architectural knowledge. This arrangement he lived to see completed by act of parliament, and at his death, which occurred Jun. 23, 1837, his house and museum in Lincoln's Inn Fields became the property of the public. Jackson's portrait of Sir John Soane is in the National Gallery.

SOBIESKI, JOHN (John III.), King of Poland, and one of the greatest warriors of his age, was born of a noble family in the district of Olesko, in 1629. He was sent, with his elder brother, Mark Sobieski, to finish his education in France, and served for a time in the body-guards of Louis XIV. The brothers travelled together, but were suddenly recalled to Poland by an invasion of the Cossacks, in a battle with whom Mark was killed. John distinguished himself very greatly in the continual wars with Cossacks and Tartars, Swedes, Russians, and Turks, and attained the dignity of grand-marshal of Poland. One of his most memorable exploits was the great victory won in 1667 over the combined Cossack and Tartar hosts, in a battle or series of battles which lasted seventeen days. He had only 20,000 men to oppose to 100,000, and with them he saved Poland from destruction. In 1671 he again defeated the Tartars in twenty combats, and liberated 30,000 Poles who had been taken prisoners by them. In the following year he obtained a great victory over the Turks, and took Choczim from them. Sobieski was elected king of Poland, as John III., in 1674, and had the arduous task of raising the country from a state of extreme depression and embarrassment. War with Tartars and Turks still went on, and Sobieski justified the confidence of his countrymen. He was crowned, with his wife, Maria Casimire, in February, 1676; and the same year Poland was invaded by an immense army of Turks under Ibrahim, pasha of Damascus, surnamed Shaitan, or the Devil. The armies approached each other by trenches and counter-trenches, but a treaty of peace was concluded. The Emperor Leopold, in dread of the Turks, sought in 1682 the aid of the Christian powers, amongst them, that of Poland; but Sobieski, whose title Leopold had refused to acknowledge, in turn refused to make an alliance with him. But in the following year he did so. And Vienna being besieged by 200,000 Turks under the grand vizier, Kara Mustapha, and the imperial family having fled, Sobieski hastened to relieve the city with 20,000 men. He was joined by the duke of Lorraine and the elector of Bavaria, each with 30,000 men; and came in sight of the besieging host on the 11th September. The next day he totally defeated them and became master of their camp, artillery, and immense treasure. The victory was cele-

brated by a Te

artillery, and
ury was cele-

brated by a *Te Deum* in the cathedral of Vienna, and filled Europe with joy. A short and unsatisfactory interview took place between the emperor and the savour of Vienna, and they parted in mutual discontent. Sobieski pursued the Turks, was defeated near Gran, but soon after defeated them again. He afterwards led an expedition to recover Kamluick from the Turks; and was on the point of succeeding by negotiation, when the emperor offered in 1686 to aid him in the conquest of Moldavia and Wallachia. He overran these principalities, but failed to make a permanent conquest. This closed his military career, and his strength failing him, he declined gradually, and was at last carried off by apoplexy, 17th June, 1696. His last years were saddened by the failure of all his attempts to introduce reforms in the government. The nobles invariably opposed their constitutional anarchic "Veto," and the patriot king confessed himself powerless to save his country.

SOCINUS, LÆLIUS, theologian, was born at Sienna, in 1525. He was of a distinguished family, was brought up to the law, but applied himself especially to the study of the Scriptures, and became a member of a society formed in the neighbourhood of Vicenza for free discussion of theological questions. The denial of the doctrine of the Trinity was the principal result of these discussions, and some of the inquirers being put to death, Lælius with others fled from Italy. He wandered for four years through the principal countries of Europe, visiting Poland twice, and finding many proselytes there, and spent his last years at Zürich, where he died in 1562. Lælius was an eminent scholar, and the correspondent of many distinguished men, amongst them of Calvin.

SOCINUS, FAUSTUS, usually considered the founder of the Socinian system of doctrine, was nephew of the preceding, and was born at Sienna, in 1539. He received only a defective education, and having adopted the theological views of his uncle, he was obliged to exile himself for several years. On his return to Italy he entered the service of the grand-duke of Tuscany, with whom he remained twelve years. He resigned his offices at Florence in 1574 in order to devote himself seriously to theological studies, and went to Basel. Thence he visited Transylvania, and in 1579, Poland, where he was at first refused admission into the Anti-Trinitarian churches. He lived some years at Cracow, retired a while into the country, became connected by marriage with some of the leading families, and after the loss of his wife by death, returned to Cracow. He was there subjected in 1598 to a disgraceful outrage; seized by a mob in his sick-room, and dragged half-naked along the streets, his house robbed, and his papers burnt. He then retired to a village, where he spent his remaining years. The aim of Socinus as a theological teacher was to get rid of all doctrines which appeared contrary to reason. He taught the humanity of Christ, while he insisted on the divine authority of his teaching; and opposed the doctrines of the atonement, predestination, and original sin, and others insisted on by the reformers. He did

not invent, but for the most part merely gave a systematic form to the opinions which he maintained. His works form the first two volumes of the work, entitled "Bibliotheca Fratrum Polonorum," published in 1656. They are written in Latin. Died, 1601.

SOCRATES, the great Athenian philosopher, was the son of Sophroniscus and Phanarete, and was born near Athens, B. C. 469. He was brought up to his father's calling, that of a sculptor, and for a time gained his living by it. He was, however, naturally an eager student, and by means of the best teachers and the best works accessible to him, got the best education his country and his age could give him. He was one of the disciples of the great Anaxagoras, and of his successor Archelaus, and soon gave himself up entirely to philosophy. He led an active social life, married—unhappily for himself, a Xanthippe—served his country as a soldier, distinguishing himself by his courage and extraordinary endurance at the siege of Potidaea, at the battle of Delium, and at Amphipolis. At Potidaea he saved the life of his pupil Alcibiades, and at Delium the life of his pupil Xenophon. His robust constitution made him indifferent to the extremes of temperature; he could dress alike and go barefoot all the year round. He appears to have scarcely ever held any political office, and seems to have inclined rather to the aristocratic than the democratic party. Critias, one of the Thirty Tyrants, had been his pupil; Theramenes was his friend; so was Charmides. Yet he fearlessly rebuked Critias for his vices, and thereby made him his enemy; and he with equal courage and disregard of consequences denounced the proceedings of the Thirty, and in one important case refused to obey their command. On the trial of the six generals after the battle of Arginusæ he firmly opposed the injustice of the sentence. But it was as a Teacher that Socrates made himself the foremost man of Athens, and perhaps of the ancient world. He wrote no book, he did not establish a school, nor constitute a system of philosophy. But he almost lived abroad, and mixed with men familiarly, and in the street or any place of public resort, where listeners gathered round him, he talked and questioned and discussed, not for pay, but from the love of truth and a sense of duty. He was persuaded that he had a high religious mission to fulfil, and that a divine voice (afterwards spoken of as his *Dæmon* or *Genius*) habitually interfered to restrain him from certain actions; and instead of encouraging profitless speculations upon nature, or the rhetorical churlatany of the Sophists, he turned the thoughts of men to themselves, their actions, and their duties. Yet even on these things he did not dogmatize; instead of asserting and imparting, he questioned and suggested and showed and led the way to real knowledge. He ruthlessly compelled ignorance and pretence to own themselves, and thus drew on himself the hatred of many. As early as B. C. 424 he was attacked by Aristophanes in his comedy of the "Clouds," as the arch-sophist, the enemy of religion, and corrupter of youth;

substantially the same charges as those on which he was prosecuted twenty years later. He was made to appear not only hateful, but ridiculous; a result the more easy to be attained because of his singularly ugly physiognomy, so easily rendered by the comic mask. He was persecuted during the tyranny of the Thirty, and after their fall he was impeached by Anytus, one of their leading opponents, with whom were associated Melittus, a tragic poet, and Lycon, an orator. He was charged with not believing in the gods which the state worshipped; with introducing new divinities; and with corrupting the youth. Death was proposed as the penalty. Socrates refused to make use of a speech prepared for his defence by Lysias, and defended himself in a tone of confident innocence and worthiness, which aggravated the ill-will of his judges. He was condemned by a majority of six only; but his additional speech in mitigation of the sentence raised the majority against him to eighty. Thirty days elapsed between his sentence and its execution, in pursuance of the law that no criminal must be put to death during the voyage of the sacred ship, the *Theoria*, to Delos with the annual offerings. During that period Socrates had the society of his friends, and conversed with them as usual; the last conversation being on the immortality of the soul. He refused the offer of some of his friends to procure means of escape for him; drank the hemlock cup with perfect composure, and so died, in the 70th year of his age, B. C. 399. Socrates opened a new era in philosophy, and without founding a system he originated, by rousing men to reflection and leading them towards self-knowledge, a vast movement of intellect, which produced, first, Platonism and the Aristotelian logic, and then all the systems, even conflicting ones, which rose into more or less importance during ten successive centuries. So true, on a wider scale than he meant, was his own conception of his method as an "intellectual obstetricism." By his religious spirit, his belief in God and in immortality, his aim to reunite religion and morality, and his own noble and beautiful life, the mirror of the truths he taught, he exerted so strong and wholesome an influence that the historian of the Christian religion, Neander, does not hesitate to adopt the saying of the Florentine philosopher, Marsilio Ficino, that Socrates, like John the Baptist, was a forerunner of Christ. Our primary authorities for the life and teaching of this extraordinary man are Xenophon's *Memorabilia* and *Apology* of Socrates, and Plato's *Dialogues*, in which he forms the great central figure. (See Mr Grote's admirable account of him in his *History of Greece*.)

SOCRATES, an ecclesiastical historian of the 5th century. He was born at Constantinople, and bred to the bar, whence he obtained the name of **SCHOLASTICUS**. He wrote the *History of the Church*, from the period at which that of Eusebius terminates to the year 440. An English translation forms part of Bohn's *Ecclesiastical Library*.

SODOMA, IL. [RAZZI.]

SOEUR, HUBERT LE. a sculptor of the 17th century, of whose biography little is known. The country of his birth, and the dates of his birth and death, are not ascertained. He is said to have been a pupil of John of Bologna, and to have come to England before 1630. His best-known works are the equestrian statue of Charles I., at Charing Cross, and the statue of William, earl of Pembroke, at Oxford.

SOISSONS, CHARLES DE BOURBON, Count de, grand-master of France under Henry IV., was the youngest son of Louis I., Prince of Condé, and was born in 1536. Proud, ambitious, and of only middling ability, he constantly pursued his own selfish interests, shifting from side to side in the conflict of parties, and passing his whole life in intrigues. In 1587 he quitted the court of Henry III., and joined the king of Navarre, who had offered him in marriage his sister and presumptive heir, Catherine. He distinguished himself at the battle of Coutras, and for his own ends dissuaded Henry from following up the advantage he had gained. The next year a breach took place between Henry and Soissons, and the latter returned to the service of Henry III., distinguished himself at the siege of Tours, and was named governor of Brittany. He soon after rejoined the king of Navarre, and commanded the English auxiliaries at the siege of Paris. For his service on that occasion he was named grand-master of France. He subsequently rendered important military services to Henry IV., but also quarrelled with and disobeyed him. He was a bitter enemy of the great minister Sully. After the death of Henry IV. he was made governor of Normandy, allied himself with the duke d'Epemon, and proposed to him to murder Sully; which proposal the duke rejected with horror. Soissons assisted at the coronation of Louis XIII., and died in 1612.

SOLANDER, DANIEL CHARLES, naturalist, was born in Sweden, in 1738; studied at Upsal, where he became a pupil of Linnæus, and took his degree of M.D. In 1760 he came to England, obtained an employment in the British Museum, and was elected a member of the Royal Society. In 1768 he accompanied Mr Banks (afterwards Sir Joseph) in his voyage round the world with Captain Cook; and he was subsequently employed in arranging and describing their valuable botanical collections. He was created D.C.L. at Oxford, in 1771; was made one of the assistant librarians at the British Museum, in 1773; and died in 1782.

SOLARIO, ANTONIO, surnamed **LO ZINGARO**, or the Gipsy, an eminent Italian fresco-painter, was born about 1382. He followed his father's occupation of itinerant smith, but falling in love with the daughter of the painter Colantonio del Fiore, he applied himself for ten years to painting, to satisfy her father's wish, and win the lady of his choice. He succeeded, and gained a great reputation at Naples, where he executed most of his works. The most important are the series of frescoes in the church of St Severino, illustrating the life of St Benedict, which have been esteemed by

some critics one of the best works of his. He was distinguished by a scape background at Naples, 1453.

SOLIMAN, the Ottomans, was born about his father in 1520, during the rebellion in Syria. He took in August 1570 a powerful Rhodes, which had been held by Jerusalem. He sent himself in August 1570 Rhodes surrendered. Soliman next exempted in 1571 from the Christian subjugation of Hungary. He had, in which part of his army and burnt it; and retook it, his ally and a garrison massacre the capitulation he stormed so were slaughtered of the same year Vienna, but besieged, heathen, compelled retire. In 1573 engaged in other towns Baghdad, and About the same the celebrated conquered Tunis taken from BAROSSA.] Kingdom of 1540. Soon a concluded bet Soliman, again pursuit of the coasts of Italy and returned prisoners. 10 in Hungary, 10 armies of the years. The dis Bajazet, embajazet being he was put to 1570, Tripoli Soliman, and knights of St was attacked fended by the lette. Solim but died in August, 1566, greatest of the ruler.

SOLIMAN, THE MAGNIFICENT, sultan of the Ottomans, was only son of Selim I., and was born about 1490. He succeeded his father in 1520, and having suppressed a rebellion in Syria, he turned his arms against the Christians, and besieged Belgrade, which he took in August, 1521. The next year he sent a powerful fleet against the isle of Rhodes, which for more than 200 years had been held by the Knights of St John of Jerusalem. He joined the armament himself in August, and after five months' siege Rhodes surrendered to him, December, 1522. Soliman next suppressed a revolt in Egypt; exempted in 1525 the French in his dominions from the tribute imposed on his other Christian subjects; and in 1526, invaded Hungary. He gained the victory of Mohacz, in which the king, Louis II., and great part of his army was killed; entered Buda, and burnt it; lost it in the following year, and retook it, in behalf of John Zapolski, his ally and vassal, in 1529. He had the garrison massacred, contrary to the terms of the capitulation; and at Altenburg, which he stormed soon after, all the inhabitants were slaughtered by his order. In September of the same year he undertook the siege of Vienna, but the heroic resistance of the besieged, headed by Frederick, prince-palatin, compelled him after twenty days to retire. In 1531, he passed into the East, and engaged in war with Persia, took Van, and other towns in Upper Armenia, entered Bagdad, and made himself master of Tauris. About the same time he took into his service the celebrated pirate, Barbarossa, who conquered Tunis, which, however, was soon taken from him by Charles V. [See BARBAROSSA.] War with the emperor for the kingdom of Hungary broke out again in 1540. Soon after, a treaty of alliance was concluded between Francis I. of France and Soliman, against the Emperor Charles V., in pursuit of which Barbarossa attacked the coasts of Italy, besieged Nice unsuccessfully, and returned to Constantinople with 7000 prisoners. Renewed war with Persia and in Hungary, Russia, and Africa occupied the armies of the sultan during the following years. The dissensions of his sons, Selim and Bajazet, embittered his domestic life, and Bajazet being defeated, fled to Persia, where he was put to death with his children. In 1560, Tripoli was taken by the fleets of Soliman, and, in 1565, Malta, held by the knights of St John since the loss of Rhodes, was attacked; but it was successfully defended by the grand-master John de la Valette. Soliman again invaded Hungary, but died in his camp before Szigeth, 30th August, 1566. He is generally esteemed the greatest of the sultans, both as warrior and ruler.

SOLIMENA, FRANCISCO, painter and poet, born at Naples, in 1657, and died in 1747. His works are numerous in Naples and other cities of Italy. Philip V. sat to him for his portrait; and the Emperor Charles VI. con-

ferred on him the honour of knighthood. He was perhaps as much admired as a poet, and his poems have been several times reprinted.

SOLINUS, CAIUS JULIUS, a Roman geographer, probably of the 3rd century. He compiled a work, entitled "Collectanea Itinera Memorabilia," to which he afterwards gave the title "Polyhistor." This name was afterwards transferred to the author. The book was a great favourite in the Middle Ages. It was translated into English by Arthur Golding in 1587. A new edition of the "Polyhistor," with a learned preface by Mommsen, appeared at Berlin in 1864.

SOLIS, ANTONIO DE, a Spanish poet and historian, was born at Placenza, in Old Castile, in 1610; was appointed historiographer of the Indies, and wrote the "History of the Conquest of Mexico." His other works consist of dramas, poems, and letters. At the latter part of his life, De Solis entered into orders, and died in 1686.

SOLOMON, ABRAHAM, a popular English painter, born at London, in 1824. He began to study at the Royal Academy in 1839, and exhibited for the first time in 1843. Among the most celebrated of his pictures are, "Waiting for the Verdict," painted in 1857; "First Class" and "Second Class," in 1854; "The Lion in Love," and "The Lost Found." Ill health led him to seek a warmer climate in the south of France, in 1862, and he died at Biarritz, 19th December of that year.

SOLON, one of the seven sages of Greece, and the celebrated legislator of Athens, was born at Salamis, in the 7th century B.C. Inheriting but a small patrimony, he had recourse to commerce; but at the same time he applied himself to the study of moral and political wisdom, and soon became distinguished by his superior knowledge in state affairs. After having enhanced the glory of his country by recovering Salamis, he was chosen archon B.C. 594, and having received full power to do whatever he judged needful, he set himself to the task of improving the condition of his countrymen. He abolished most of the cruel laws of Draco, and formed a new constitution, founded on the principle of making property, not birth, the title to the honours and offices of the state. He made a fourfold division of the citizens according to their various degrees of wealth; gave additional important powers to the popular assembly, and made the archons and inferior officers accountable to it. He made many special laws also relating to trade and commerce, marriage, disposition of property by will, &c. One of his laws was directed against the neutrality of any citizen during a sedition. When Solon had completed his laws, he caused them to be engraved on wooden cylinders, and is said to have bound the Athenians by an oath not to make any changes in his code for ten years. He then left the country, to avoid being obliged to make any alterations in them; and visited Egypt, Cyprus, and Lydia. The beautiful story of his visit to the court of Croesus, so celebrated in ancient times, is now numbered with other beautiful myths which can only be admired, not believed. On his return, after an ab-

sence of ten years, he found the state torn by party violence, and his kinsman Plistratus aiming at the sovereignty which he soon seized. Solon then withdrew from public life, and is supposed to have died at the age of 80, about B. C. 558.

SOLYNS, FRANS BALTHASAR, traveller and engraver, born at Antwerp, in 1760. He accompanied Sir Home Popham in a voyage to the Red Sea and the East Indies; and having arrived in Hindostan, he studied the languages, manners, customs, and religion of the Hindoos, that he might be able accurately to illustrate them by his pen and pencil. After an absence of 15 years, he returned to Europe, settled at Paris, and published, as the result of his labours, "Les Hindous, ou Description pittoresque des Mœurs, Costumes, et Cérémonies Religieuses de ce Peuple," 4 vols. folio. He died at Antwerp, in 1824.

SOMERS, JOHN, Lord, a distinguished statesman and lawyer, was born at Worcester, about 1652. He passed some time as clerk to a barrister, and, when called to the bar himself, evinced talents of a high order. He made himself conspicuous by his opposition to the tyrannical measures of Charles II. and James II.; and acquired great credit as one of the counsel for the seven bishops. He strenuously promoted the revolution, and sat, as one of the representatives for Worcester, in the convention parliament. He became, successively, solicitor-general, attorney-general, lord keeper, and, in 1695, lord high chancellor of England, with the title of Lord Somers, Baron Evesham. After the death of William III., Lord Somers spent his time in literary retirement, and was chosen president of the Royal Society. In 1706 he drew up a plan for effecting an union between England and Scotland, which was so much approved, that Queen Anne appointed him one of the commissioners to carry it into execution. Upon a change of ministry, in 1708, he was nominated president of the council. He died in 1716, having earned a high character for political purity and legal ability. He was also deservedly esteemed as a patron of men of letters.

SOMERSET, Duke of. [SEYMOUR, EDWARD.]

SOMERSET, EDWARD. [WORCESTER, Marquis of.]

SOMERSET, Lord FITZROY. [RAGLAN, Lord.]

SOMERVILLE, WILLIAM, the author of "The Chase," and other poems, was born at Edston, in Warwickshire, in 1692, where he inherited a considerable estate, on which he chiefly lived, mingling an ardent attachment to the sports of the field with the studies of a man of letters. Died, 1742.

SOMNER, WILLIAM, a learned antiquarian, was born at Canterbury, about 1598. He was author of "The Antiquities of Canterbury," a "Saxon Dictionary," and a "Treatise on Gavelkind." Died, 1669.

SONNEIAT, PIERRE, naturalist and traveller, was born at Lyons, about 1745. After making several voyages to the East Indies, Malacca, the Philippine Islands, &c., he returned to France with a rich collection of

natural curiosities; wrote narratives of his voyages to New Guinea, the East Indies, and China; and died in 1814.

SONNINI DE MANONCOURT, CHARLES NICOLAS SIGISBEIT, an eminent French traveller and naturalist, was born at Lunéville, in 1751; studied the law, which he relinquished for the army; and being sent to Cayenne as an officer of marine engineers, he was enabled at the same time to gratify his love of travelling and taste for natural history. He assisted Buffon in his account of foreign birds, visited different parts of Europe and Africa, and employed himself in scientific researches till the revolution, when he narrowly escaped from the tyranny of Robespierre. Under the consular and imperial governments he was unable to obtain employment, in consequence of the prejudice entertained against him by Buonaparte for his remarks on the Egyptian expedition. Among the works of Sonnini are, "Travels in Egypt," "Travels in Greece and Turkey," and an edition, in 127 vols. 8vo, of Buffon's Natural History. He also assisted in the Dictionnaire d'Histoire Naturelle, 24 vols. 8vo; and was conductor of the Bibliothèque Physico-Economique. Died, 1811.

SONTAG, HENRIETTA, one of the most distinguished singers of her age, was born at Coblenz, in 1805. Sprung from a theatrical family, Henrietta Sontag trod the stage when yet a child; playing at the theatres of Darmstadt, Berlin, and Prague. Her talents obtained her admission into the music school of Prague; where she laid the foundation of her sound knowledge of the art. Before she was eighteen she was the prima donna of the Berlin stage, and the idol of the capital; and when she soon afterwards went to Paris, her desertion excited a degree of resentment which did not speedily subside. Her first season at the Théâtre Italien was followed in the same year, 1828, by her début in London, where her youth and beauty, her fresh and lovely voice, and the high finish and exquisite purity of her style, produced universal delight. She left England at the end of the season, not to return for many years. Her retirement from the stage, in consequence of her marriage with Count Rossi, a Piedmontese nobleman, immediately followed. Her virtues, her manners, and her accomplishments, made her everywhere acceptable in the highest circles. But she never lost her love of her art, and she continued to make progress as an artist in the midst of all the enjoyments of high life. After a happy union of nearly twenty years, her husband became involved in the political troubles of 1848, and lost his fortune. Without hesitation she resolved to have recourse to her art for the sake of her husband and her children. She accepted an engagement of £7000 at her Majesty's Theatre for the season of 1849, and reappeared, after one-and-twenty years, on the scene of her early triumphs. Tempted by the success of Jenny Lind and other musical artists, Madame Sontag resolved to visit the United States, and arrived at New York in the autumn of 1852. After a brilliant and successful tour through the Union, she accepted a tempting offer

from the manager of the principal theatre of Mexico; where she was cut off by cholera while she was preparing for her first appearance before the public. Died, 1851.

SOPHOCLES, the great Greek tragic poet, was the son of Sophilus, and was born at the Attic demus or village of Colonus, B. C. 495, thirty years later than Aeschylus. He received a good education, and at an early age gained the prizes in music and gymnastics. He was fifteen when the battle of Salamis was fought, and for his remarkable beauty and skill in music, he was chosen to lead the chorus which sang the psalm of victory. As usual on such occasions, he appeared naked, anointed with oil, and holding a lyre in his left hand. His first appearance as a dramatist was in 469, when under memorable circumstances he had Aeschylus for his rival, and won the victory. Of the next 28 years of his life nothing is recorded; but it is known that he made poetry his business, and that he composed a great many plays during that period. Not one of them, however, is now extant. The "Antigone," the earliest of his extant tragedies, was brought out in 440, and won the prize. The interest of the play turns on the conflict between the claims of the state and the family, and the wisdom of its sentiments on public affairs led to the appointment of the poet as one of the ten *Strategoi* (Generals) for the next year. As such he took part with Pericles in the war with the aristocrats of Samos. The most interesting fact recorded of him on this occasion is, that he became acquainted with Herodotus, then living at Samos, and composed a poem for him. Sophocles does not appear to have taken any farther part in politics or war. The number of plays attributed to him, without question, was 113, of which 81 were probably produced after the "Antigone." Seven only are extant, viz., "Antigone," "Electra," "Trachinian Women," "King Edipus," "Ajax," "Philoctetes," and "Edipus at Colonus." These exhibit his art in its maturity, and sustain the verdict of ancient and modern critics that Sophocles carried the Greek drama to its highest perfection. He effected a complete change in the constitution of tragedy as Aeschylus left it; loosening the connection between the parts of the trilogy and the satyric drama, and making them not one great poem, but four distinct ones; introducing a third actor; and for subjects selecting, not a series of heroic and mythical actions, but for each play one leading fact of real human interest and lasting significance. "Of all the poets of antiquity," says K. O. Müller, "Sophocles has penetrated most deeply into the recesses of the human heart." Although he works with energy and sustained earnestness, he is always temperate and moderate, and by the harmonious perfection of his faculties satisfied the laws of his art. His native sweetness and gracefulness were indicated by the ancients in the appellation which they gave him of the Attic bee. And he, says A. W. Schlegel, of all the Grecian poets, is the one whose feelings bear the strongest affinity to the spirit of our religion. Sophocles lived to be nearly 90, and in his latest

years most probably wrote the "Edipus Coloneus," so full of sweetness and tender melancholy and consoling hopes. It was not presented on the stage till five years after the poet's death, but he had read it, or the beautiful *parados* (song of the chorus) from it, when his son, Iophon, endeavoured to get the management of the property taken out of his hands on the ground of incapacity; and the judges were satisfied, and dismissed the case. Iophon repented of his error, and was reconciled to his father. Sophocles was twice married, first to Neestrata, a free-woman of Athens, mother of his son Iophon; and afterwards to Theoris, of Sicyon, who bore him another son, Ariston. Ariston was father of the younger Sophocles, who was especially beloved by the poet. Sophocles died, B. C. 406. There are English metrical translations of the Tragedies of Sophocles by Francklin (1758), Potter (1788), and Dale (1824). But a new and admirable version has appeared this year (1865) from the pen of E. H. Plumptre, M.A., professor of Divinity, King's College, London; accompanied by a Biographical Essay.

SORBONNE, ROBERT DE, founder of the college of the Sorbonne at Paris, was born in 1201. He was confessor and chaplain to St Louis, who gave him the canonry of Cambrey. He died in 1274.

SOREL, AGNES, the celebrated mistress of Charles VII. of France, was born at the village of Fromenteau, in Touraine, in 1409. As maid of honour to the duchess of Anjou, she accompanied her to court in 1431, and the king falling in love with her, she was appointed maid of honour to the queen. She acquired great influence over the king, and she used it to rouse him from the life of sloth and indolence into which he had sunk. She retired, in 1445, to her château of Loches, and was absent from the court five years. The king, however, visited her there, and at the instance of the queen, who was sincerely attached to her, she returned. Died at the abbey of Jumièges, then the winter-quarters of the king, in January, 1450.

SOSIGENES, an astronomer of Egypt, who was invited to Rome by Julius Cæsar, for the reformation of the calendar. He fixed the year at 365 days, called the Julian year, which commenced B. C. 45. No further particulars respecting him are known, nor are any of his works extant.

SOSTRATUS, an eminent architect, who flourished in the 3rd century B. C., and was patronized by Ptolemy Philadelphus, king of Egypt. Among his works are the famous Pharos, or light-house of Alexandria, which is said to have cost 800 talents, and was reckoned one of the wonders of the world.

SOTHEBY, SAMUEL LEIGH, typographical antiquary, was born about 1806. He became a member of the eminent firm of Sotheby and Wilkinson, to which his father belonged, and showed from his youth the taste for typographical studies, which distinguished him through life. He will be remembered as author of the important work entitled, "Principia Typographica. The Block-Books; or Xylographic delineations of Scripture History, issued in Holland,

Flanders, and Germany, during the 15th century," which appeared in 3 vols. 4to, in 1858. It was projected and partly prepared by his father, Samuel Sotheby. Two hundred and fifteen copies only were printed. Mr Sotheby also published a folio volume illustrating the handwriting of Luther and Melancthon, and "Rambblings in the Euclidation of the Autograph of Milton." He was a member of the Archaeological Association. He was found dead in the shallows of the river Dart, near his house, 19th June, 1861.

SOUBISE, BENJAMIN DE ROHAN, Seigneur de, one of the chiefs of the Protestant party in France under Louis XIII., was born about 1589. His first training to arms was under Maurice of Nassau in Holland. In 1621, at the commencement of the civil war, he was named by the assembly of La Rochelle commander in Poitou, Brittany, and Anjou. Having shut himself up in St Jean d'Angely, he was there besieged by the king, and after a month surrendered, promising fidelity to his sovereign. He was soon, however, in arms again, and when Louis marched to oppose him he fled to Rochelle, and sought aid in England. The war was terminated by the edict of pacification, signed at Montpellier in October, 1622. Early in 1625 he sailed from the isle of Rhé, captured the royal fleet at Blavet, and occupied the Isle of Oleron. After several defeats he again went to England and obtained from Charles I. a fleet under the orders of the duke of Buckingham, but it was refused admission to the harbour, as was also a second fleet. A third sailed, but did nothing, and Soubise, refusing to accept the terms offered by the king, took refuge in England. Died, 1641.

SOUBISE, CHARLES DE ROHAN, Prince de, duke of Rohan, peer, and marshal of France, was born in 1715. He was of the same family as the preceding, entered the army at the age of 19, and served as aide-de-camp to Louis XV. in the campaigns of 1744—1748. He was wounded at the siege of Friburg in 1745, and was appointed in 1751 governor of Flanders and Hainault. Owing to the favour of Madame Pompadour, he had an important command in the Seven Years' War, but he was totally defeated at Rossbach by Frederick the Great, in November, 1757. He enjoyed still the favour of the king, who made him a minister of state, and gave him a rich pension; but he was hated and despised by the courtiers, who made him the butt of their epigrams. A new command was intrusted to him in the following year, and by two victories over the Hessians, Hanoverians, and English, he made himself master of the landgraviate of Hesse, for which he was created marshal. He had a command on the Rhine in 1761, but misunderstandings arose between him and marshal de Broglie, which, through the influence of Madame Pompadour, led to the recall and exile of the latter. The military career of Marshal Soubise ended with the battle of Johannisberg, and his life was thenceforth that of a venal courtier and favourite. His fidelity to his unworthy master, Louis XV., was touchingly displayed in the circumstance that he was the only

one of the courtiers who followed his master's remains to the grave. He continued to hold his place as minister under Louis XVI., and died in 1787.

SOUFFLOT, JACQUES GERMAIN, an eminent French architect, born in 1713. He studied at Rome, and after travelling in Italy and the Levant, to examine the remains of antiquity, he settled at Lyons, where he built an exchange and a hospital, which gained him so much credit, that he was called to Paris, and made superintendent of the royal buildings. His principal work is the church of Salute-Genève, the first stone of which was laid by Louis XV., 6th Sept., 1764. He was a knight of the order of St Michael, and died in 1781.

SOULT, NICOLAS-JEAN-DE-DIEU, a distinguished French marshal, was born at St Amand (Tarn), in 1769, the same memorable year which gave birth to Arthur Wellesley and Napoleon Buonaparte. He entered the Royal Regiment of Infantry in 1785, was made non-commissioned officer in 1790, and then passed rapidly through the intermediate grades, until he reached that of adjutant-general of the staff, when General Lefebvre attached him to his own service, with the grade of chief of brigade. In that quality he went through the campaigns of 1794 and 1795 with the army of the Moselle, and owed to his talents, as well as to his Republican principles, a rapid promotion. Successively raised to the rank of general of brigade and general of division, he took part in all the campaigns of Germany, until 1799, when he followed Massena into Switzerland, and thence to Genoa, where he was wounded and taken prisoner. Set at liberty after the battle of Marengo, and raised to the command of Piedmont, he returned to France at the peace of Amiens, in 1802, and was named one of the four colonels of the guard of the consuls. When the empire was proclaimed, in 1804, he was nominated marshal of France; and during the campaign which terminated at Austerlitz, he held the command of the fourth corps of the grand army, and in all the great German battles he took a conspicuous part. In 1808 the marshal entered Spain; and, falling upon Sir John Moore's division, caused the disastrous retreat to Corunna—only, however, to be repulsed with loss when the English turned to bay below the walls. By his orders the French fired minute guns over the grave of Sir John Moore, and he caused a record of the death of the brave English general to be carved on a rock near the spot on which he fell. For some time thereafter, success attended every operation of Soult's arms. He invaded Portugal, took Oporto, and governed the country so vigorously and fairly that the opponents of the Braganza family made overtures for the permanence of his sway. But the evil luck of the marshal was approaching. Wellington was advancing to meet him; and he was attacked and routed at the famous passage of the Douro—one of the most gallant exploits ever attempted by an assaulting army. But the French general, nothing daunted, rallied his forces during the night, the disorder of the army was partially mended, and he quickly continued his

retreat, when he was stunned by the intelligence that Marshal Beresford had crossed the Douro higher up than Wellington, and held the bridge over the Amarante. He was obliged to leave the whole of his baggage behind him, and retreat by forced marches through the mountains. As soon as Soult heard of the disastrous check to the French arms at Talavera, he managed, by a series of rapid movements, to join Ney and Mortier, and forced Wellington to retire upon Portugal. In 1809 he was appointed major-general of the French forces in Spain; and being thus virtually commander-in-chief, he gained the great victory of Ocana, which resulted in the subjugation of Andalusia. In 1811 he captured Olivenza and Badajoz; but the British forces laying siege to the latter place, Soult marched to relieve it, attacked the British under Beresford at Albuera, and sustained a bloody defeat. He nevertheless bravely defended the south of Spain. But in 1812 Wellington commenced his offensive movements and captured Badajoz. In 1813 the great battle of Salamanca loosened the French hold of Spain, and Soult, compelled to abandon Andalusia, was recalled to aid the emperor in his great struggle in Germany, and he was chief of the staff of Napoleon at the battles of Lützen and Bautzen. On the news of the French defeat at Vittoria, Soult flew to Spain, and assumed the command. But the game was all against him. He knew it to be hopeless. Yet, upon taking the command of the army in July, 1813, as the "lieutenant" of the emperor, his proclamation to the troops breathed the haughtiest confidence in his cause, and in his chances—declaring, as it did, that if the French had been well commanded at Vittoria, they would have beaten the English. For two days he obstinately defended his entrenched camp, not far from Bayonne; but on Wellington manœuvring to turn his flank, he continued his retreat, offering a desperate resistance while passing the Pyrenees. At length the British forces entered France. The Bidassoa was passed, Soult's position on the Nive carried, and the allies became an army of invasion. Still Soult fought with the energy of despair. After the battle of Orthez, finding all his efforts useless, he withdrew to Toulouse, where was fought the last and crowning action of the long Peninsular war, a battle claimed by both sides, and in which it is not to be denied that on both sides were displayed consummate military skill and the most determined and stubborn bravery. But the French had the worst of it. On the announcement of the event at Paris, Soult signed a suspension of arms, and adhered to the re-establishment of Louis XVIII., who presented him with the cross of St Louis, and called him to the command of the thirtieth military division, and then to the ministry of war (Dec. 3, 1814). On March 8, 1815, learning the landing from Elba, he published an order of the day in which Napoleon was treated more than severely. Yet on March 11, he resigned his portfolio as minister of war, and declared for the emperor, who raised him to the dignity of peer of France, and major-general of the army. After

Waterloo, where he fought energetically, the marshal took refuge at Malzieu with General Brun de Villeret, his former aide-camp. Being set down on the list of the proscribed, he withdrew to Büsseldorf until 1819, when a royal ordinance allowed him to return to France. He then went to live with his family at St Amand, his native place, and his marshal's bâton, which had been withdrawn from him, was afterwards restored. Charles X. treated Marshal Soult with favour, creating him a knight, and afterwards peer of France. After the revolution of July, 1830, the declaration of the Chamber of Deputies deprived him of that rank; but he was restored to it 4 days later by Louis Philippe, who appointed him minister of war and president of the council. In 1838, on the coronation of Queen Victoria, Soult was nominated ambassador extraordinary to represent France at the great ceremonial. He was welcomed with great popular enthusiasm, and feted by the duke of Wellington; and the two aged heroes were received with acclamation on their public appearance together. A banquet was given by the corporation of London in Guildhall; and the healths of the duke of Wellington and Marshal Soult were proposed together, and responded to by the illustrious guests. In 1847, Soult resigned his ministerial functions; and King Louis Philippe conferred upon him the dignity of marshal of France. He spent his latter days at his château in the land of his birth; and after the revolution of 1848 took no part in politics. Died, Nov. 26, 1851.

SOUTH, ROBERT, an eminent divine, was born at Hackney, in 1693; and educated at Westminster School, and Christchurch, Oxford. In 1660 he was chosen public orator of the university, and successively became chaplain to the earl of Clarendon, prebendary of Westminster, canon of Christchurch, and rector of Islip, in Oxfordshire. He preached before Charles II., but refused all offers of promotion in the church. He would not take part in promoting the revolution, and was never tired of preaching against the Dissenters. In 1693 he carried on a controversy with Sherlock, on the doctrine of the Trinity, when both disputants were charged with heresy, for attempting to explain an indefinable mystery. He was a man of great wit, and did not spare to display it even on serious occasions. His "Sermons" possess the merits of earnestness and originality, clearness, good sense, lively invention, and forcible expression. Died, 1716.

SOUTHAMPTON, THOMAS WRIOTHESLEY, Earl of, lord chancellor of England, was born at London, of an ancient family distinguished as Heralds. He was educated at Cambridge, was called to the bar, and in 1535 obtained an office in the Common Pleas. Three years later he was named secretary of state, stood in high favour with the king, Henry VIII., and after the fall of Cromwell was virtually first minister. He was a conscientious Romanist, and was recognized as head of that party in the state. Early in 1543 the king created him a peer by the title of Baron Wriothesley of Titchfield, in Hamp-

shire, and gave him the abbey lands. He succeeded Lord Audley as chancellor in May, 1544, taking the usual oath of abjuration of the pope. A commissioner was appointed to assist him in hearing causes, and he applied himself almost entirely to state affairs. Wriothesley was not wiser than his generation in respect to persecution, and not only promoted the severe measures against the Protestants, but in the case of Anne Askew took part personally in the act of torture. The king commanded him to impeach and arrest the queen, Catherine Parr, for her supposed heterodoxy; but when he arrived to execute the order the king was of another mind, and dismissed him with rough words. Having negotiated a satisfactory treaty with Scotland, he was rewarded with the knighthood of the Garter. It was the influence of Wriothesley which chiefly led to the execution of the earl of Surrey and the attainder of the duke of Norfolk, in 1547. He was one of the executors of Henry VIII., and an opponent of the Protector Somerset. Edward VI. made him earl of Southampton, and at the instigation of Somerset, deprived him of the seals. Restored to the council in September, 1549, he finally retired from public life a few months later, and died at London, 30th July, 1550. He was buried in St Andrew's Church, Holborn.

SOUTHAMPTON, HENRY WRIOTHESLEY, Earl of, a distinguished statesman and courtier, was grandson of the preceding, and was born in 1573. He was a friend of the earl of Essex, whom he accompanied to Cadiz, and afterwards to Ireland; took part in his rebellion, was tried and found guilty and committed to the Tower in 1601. Two years later he was restored to his honours by James I. He suffered subsequently a second imprisonment, served in the war in the Netherlands in 1624, and died at Bergen-op-Zoom, the same year. He is now chiefly remembered as the friend and patron of Shakespeare, who dedicated to him his "Venus and Adonis." A portrait of Southampton, by Mirevelt, is in the National Collection.

SOUTHCOTT, JOANNA, was born in the west of England, of parents in humble life, in 1750. When about 40 years of age, she began to give herself out for a prophetess; and her numerous converts, who are said at one time to have amounted to at least 100,000, put implicit faith in her wild and blasphemous rhapsodies. She described herself as the woman spoken of in the book of Revelation; and, although in the highest degree illiterate, she scribbled a mass of unintelligible nonsense, which she dignified by the title of prophetic inspirations, while she carried on a lucrative trade in the sale of seals, which were, under certain conditions, to be the passports to eternal salvation. At length, she was attacked with a disease which gave her the outward appearance of pregnancy, and she boldly announced to the world that she was destined to be the mother of the promised Shiloh. So fully persuaded, indeed, were her deluded followers of its truth, that they made the most splendid preparations for the reception of

the miraculous babe that superstition and credulity could suggest; when, about the end of 1814, her death put an end to their expectations. The body of Joanna underwent an anatomical examination after her death, when she was found to have suffered from dropsy; but the belief in her divine mission was not eradicated from the minds of her votaries, and the sect is not even yet wholly extinct.

SOUTHERN, THOMAS, an eminent dramatic poet, was born at Dublin, in 1669, became a servitor in Pembroke College, Oxford; and then settled in London. He was patronized by James II. while duke of York, and afterwards served in the royal army against the duke of Monmouth. He wrote the "Persian Prince," "Isabella, or the Fatal Marriage," and "Oronoko," tragedies; the "Disappointment," the "Rambling Lady," and the "Wife's Excuse," comedies. His tragedy of "Isabella" is one of the most pathetic and effective dramas in the language, and is memorable as the play in which, in 1782, Mrs Siddons made her first successful appearance at Drury Lane. Southern held a commission in the army, which with his writings produced him a handsome competency; and he died, aged 86, in 1746.

SOUTHEY, CAROLINE ANNE, whose maiden name was **BOWLES**, was the only child of Captain Charles Bowles, of Buckland, near Lymington, where she was born in 1787. Her earliest production was the "Birthday." For more than twenty years, the writings of Caroline Bowles were anonymous, and although widely circulated and warmly appreciated by the public, she was a stranger by name, save to a few attached admirers and friends; and it was not until after the publication of "Ellen Fitz-Arthur," and several of the pathetic novelettes which she contributed to Blackwood's Magazine under the title of "Chapters on Churchyards," that her name became known beyond that limited circle. Among the first friends attracted to her by her genius were the poets Southey and Bowles; the former of whom reviewed a volume of her poems in a highly complimentary manner, before he had any personal knowledge of its author, and availed himself of other opportunities, in the Quarterly Review and elsewhere, of testifying his admiration of her genius. A cordial friendship subsisted for more than twenty years between Caroline Bowles and Robert Southey, and in 1839 she accepted him as her husband. At the date of the marriage, Southey had been a widower two years; his former wife having been virtually dead to him many more. On his death, Mrs Southey was left with means insufficient to provide her with the ordinary comforts of life; but she was soon relieved from anxiety, by being placed on the civil list for a pension of £200 a year. The order of Mrs Southey's works is as follows:—"Ellen Fitz-Arthur," a poem (1820); "The Widow's Tale," and other poems (1822); "Solitary Hours," prose and verse (1826); "Chapters on Churchyards," two vols. (1829); "Tales of the Factories," and "Robin Hood," a fragment, by the late Robert Southey and Caro-

line Bowles; w

line Bowles; with other poems, (1847). Died, 1834.

SOUTHEY, ROBERT, poet, biographer, and miscellaneous writer, was the son of a respectable linendraper, and was born at Bristol, in 1774. After receiving the rudiments of education from country schoolmasters, he was sent to Westminster School, and thence to Balliol College, Oxford; his early display of more than ordinary talents and a corresponding steadiness of character having led his friends to choose the church as his destination. At Oxford, however, he remained but two years, the then unsettled state of his opinions as to both church and state causing him to quit the university, and wholly renounce the idea of taking orders, in the year 1794. After travelling in Spain and Portugal, and residing in Ireland as secretary to Mr Corry, he having for some time been married, he at length settled at Keswick, in Cumberland, in 1803. He was already known as author of "Joan of Arc," "Wat Tyler," "Lines on Bradshaw the Regicide," and other pieces, which indicated more political and poetical fire than political judgment or personal prudence, and at Keswick he commenced an almost unexampled career of industry in literary composition of every description; his overflowing mind and ready pen being equal to whatever could be demanded of them, a mere list of his separate publications would form a long article, not to speak of his numerous and elaborate contributions to the Quarterly Review. But though he wrote so much he wrote everything carefully and well. His biographies especially are admirable; that of the great Nelson is, perhaps, one of the most perfect biographies in our language; while that of Wesley is highly appreciated, both by churchmen and dissenters, for its candour and impartiality. Southey's views and opinions underwent a similar change with those of his friends Coleridge and Wordsworth, and he became a thorough-going churchman and tory, and the eloquent defender of the church and of the throne. He continued to delight and instruct the reading world by his genius and his industry, until 1840, when the intense labours of a long life at length overpowered his fine mind, and he remained in a state of mental darkness to the day of his death. He had received the appointment of poet-laureate in 1813, and in 1835 he received a pension of £300 per annum. His poetical works, collected in one volume, enjoyed great popularity; and his admirable *philosophic gossiping* romance "The Docteur," &c., which was published anonymously (also in one volume), must long continue to be the wonder and delight of the reading and the thinking world. His "Common-Place Book," a posthumous publication in 4 vols. 8vo, is a marvellous monument of his reading and research. Died, 21st March, 1843. His *Life and Correspondence*, edited by his son, appeared, in 6 vols., in 1849-50. A portrait, drawn by H. Edridge, in 1804, is in the National Collection.

SOUTH WEL L. ROBERT, an English Jesuit and poet, was born in 1560; studied at Douai, entered the order of Jesuits at

Rome, and afterwards returned to England as a missionary. In 1592 he was sent to prison, where he remained three years before he was brought to trial, when, owing that he came to England in order to propagate the Catholic religion, he was condemned and executed, in 1595. He was the author of various prose works and of several poems possessing considerable merit.

SOWERBY, JAMES, an eminent naturalist and artist, was born in London in 1757. He first studied painting at the Royal Academy, and afterwards applied himself to botany; and combining his acquirements in these two fields, produced several great and valuable works. These are—the "English Botany" (in conjunction with Sir J. E. Smith), "English Fungi or Mushrooms," "Mineral Conchology of Great Britain," &c. He was F.L.S., F.G.S., and F.Z.S. Died, 1822.

SOWERBY, GEORGE BRETtingham, son of the preceding, and an eminent naturalist, was born in London in 1788. His principal production is entitled "The Genera of Recent and Fossil Shells," and appeared between 1820—1824. He published also "Species Conchylorum," a catalogue of the Tankerville collection of shells, of which, with other collections, he became the possessor. He was a fellow of the Linnæan Society, and contributed many papers on natural history to periodical journals. Died, 1854.

SOZOMEN (SOZOMENUS), a Greek ecclesiastical historian, who flourished in the 5th century, in the reign of the Emperor Theodosius II. He was a native of Palestine, was sent by his Christian parents to be educated in a monastery, and afterwards settled at Constantinople as an advocate. He wrote a history of the church in nine books, embracing a period of about a century, from 323 to 423. It was dedicated to Theodosius. Sozomen was a contemporary of the church historian Socrates. An English translation of Sozomen, by Walford, is included in John's Ecclesiastical Library.

SPAENDONCK, GERARD VAN, an eminent flower and miniature painter, was born in 1746, at Tilburg, in Holland, settled at Paris, where he became miniature painter to the king, and professor of iconography at the Jardin des Plantes. Died, 1822.

SPAGNOLETTO. [RIBERA.]

SPALDING, JOHANN JOACHIM, a celebrated Swedish divine, born in 1714. He studied at the university of Htostock, and afterwards at Greifswald; and after various engagements as pastor settled, in 1764, at Berlin, as first pastor of St Nicholas church, which post he filled till 1788. The publication of the *Religious-Edict* compelled him to retire. His Sermons were esteemed very highly for their depth both of thought and feeling, and their pure and elegant style, and several collections of them have been published. His work on the "Destination of Man" was reprinted many times; and his other works, "On the Value of Feeling in Christianity," "On the Utility of Preaching," and "Religion the chief Affair of Man," passed through several editions. Died, at

Berlin, 1804. His son, Georg Ludwig, is noticed below.

SPALDING, GEORG LUDWIG, philologist, was second son of the preceding, and was born at Harth in 1762. He studied first at a Berlin gymnasium, then directed by Hüsche, and afterwards at Göttingen and Halle. After travelling through the principal countries of Europe, he became tutor to the children of Prince Ferdinand, and professor at a gymnasium of Berlin. He was M. A. Halle, and a member of the Berlin Academy of Sciences. In consequence of the "Religious-Edict" he abandoned theology, and devoted the rest of his life to philology. He is chiefly remembered for his excellent edition of the works of Quintilian, in 5 vols., of which three only were completed by him. Died, 1811.

SPALLANZANI, LAZARO, a celebrated Italian naturalist, was born at Scandiano, near Reggio, in 1729. After studying at the Jesuits' College of Reggio, and the university of Bologna, under the guidance of the latter of the celebrated Laura Bassi, he was chosen, in 1751, professor of logic and Greek literature at the university of Reggio, whence after six years he removed to Modena to fill the same chair there. He had already acquired a great reputation as a scholar, but from that time he devoted himself to his favourite studies in natural history. About 1770 he was called to Pavia as professor of natural history, and was soon after made director of the Museum. He engaged in numerous ingenious scientific experiments, especially for the purpose of illustrating the circulation of the blood, and made many discoveries in physiology and anatomy. He also investigated the subjects of generation, respiration, and digestion, and determined the animal nature of the infusoria. He undertook extensive travels, especially exploring the coasts of the Mediterranean, and in 1785 visited Constantinople. On his return to Pavia he disproved a shameful accusation made against him in his absence, and had a triumphal entry into the city. On a subsequent journey in Italy he made collections for the Museum of Pavia, of which he has been called the second founder. Spallanzani published numerous works embodying the results of his observations and researches, and among them are—"On the Action of the Heart," "On the Phenomena of the Circulation," "Memoirs on Respiration," "Dissertations on Animal and Vegetable Physies," "On the Reproduction of Animals," and "Travels." He was a member of the principal Academies of Europe, and the correspondent of his most eminent scientific contemporaries. He was offered the chair of Natural History at the Paris *Jardin des Plantes*; and Haller expressed his sense of his great services to science by dedicating to him a volume of his great work on Physiology. Died, 12th February, 1789.

SPANHEIM, EZEKIEL, a learned numismatist and statesman, was the eldest son of Frederick Spanheim, professor of divinity at Leyden, and born in 1629, at Geneva, where he was appointed professor of eloquence at the age of 20. He soon after became tutor

to the son of Charles Louis, elector-palatine, who employed him in several important missions. He assisted at the conferences of Oppenheim and Spire, and at the Congress of Breda. He came to England as minister of the elector-palatine, and was also appointed ambassador of the elector of Brandenburg. In the latter capacity he was sent to Paris in 1680. After the peace of Itzwick he was sent again to France, and from thence to England, where he died in 1710. His principal works are, "De Præstantia et Usu Numismatum antiquorum," 2 vols., "Orbis Itomanus," and Letters and Dissertations on Medals.

SPARRMANN, ANDREW, a Swedish naturalist and traveller, was born about 1747, and studied at Upsal, where, by his attention to natural history, he attracted the notice of Linnæus. He visited China and the Cape of Good Hope, penetrated a considerable distance into the interior of Southern Africa, and accompanied Captain Cook on one of his voyages. He wrote narratives of his travels, and died at Stockholm, in 1820.

SPARTACUS, leader of the revolt of the gladiators in Italy, and one of the most extraordinary men of his time, was a Thracian by birth. He was first a shepherd, and after the conquest of Macedonia by the Romans he was compelled to serve in the Roman armies. He deserted, carried on a harassing warfare against the conquerors, and was captured and sold as a slave. On account of his great size and strength he was trained for a gladiator in the company of Lentulus at Capua. Here, in B. C. 73, he persuaded about seventy of his fellow-slaves to join him in an attempt to escape. They succeeded, and took up a position on Vesuvius, having possessed themselves of arms on their way. Blockaded there by the prætor, they defeated him, and were rapidly augmented in numbers by slaves and wretched labourers; among whom Spartacus established such discipline as was possible. His band rose in number from 70 to 10,000, and even later to 70,000, and their ravages and repeated victories caused the greatest alarm. Army after army was sent against them only to be defeated, and for two years Spartacus defied the power of Rome. At last Crassus took the field with six fresh legions, and after repeated attacks defeated him on the river Silarus, on the borders of Campania, B. C. 72. Spartacus fought heroically to the last, and was killed; 5000 of the insurgents escaped to the north of Italy, and were slain by Pompey returning from Spain, and 6000 more were captured and hung along the road from Rome to Capua.

SPECKTER, ERWIN, German painter, was born at Hamburg in 1806. He received his first instruction in art from a painter at Altona, and at the age of 16 became acquainted with Rumohr, whose counsel was of great service to him, and who remained his friend. Intense admiration of Overbeck's painting of "Christ's entry into Jerusalem," induced him to become a pupil of Cornelius, at Munich; and he was commissioned to execute some frescoes in the Picture Gallery, but did not live to do it. Visits

to the Berlin will more his change in his early Overbeck turn from Italy with frescoes a fore they were interesting "Italy." were pr

SPELMAN, lish historian, Congham, in quently emp and he rece for his servi many valu "Glossarium lare Anglica

—His son, his father's and was the Great." He and died at SPENCE, was born in at Oxford, v

To the Berlin and Dresden Galleries, and still more his visit to Italy, led to a great change in his style, freeing him from his early Overbeck worship, and bringing him nearer to nature and reality. After his return from Italy he was employed to adorn with frescoes a Hamburg villa, but died before they were finished, November, 1835. His interesting "Letters of a German Artist from Italy," were published in 1846.

SPEED, JOHN, an English chronologist, historian, and antiquary, born in 1542. He is the author of "The Theatre of the Empire of Great Britain," and "The History of Great Britain, from Julius Cæsar to James I." Died at London, where he had spent most of his life, 1629.

SPEKE, JOHN HANNING, a distinguished African traveller, and explorer of the sources of the Nile, was born of an ancient family at Whitelackington, in Somersetshire, in 1827. He entered the Indian army at the age of 17, served in Sir Colin Campbell's division through the campaign in the Punjab, and during his annual leave of absence made exploring expeditions in the Himalaya and in Tibet, especially studying the botany, geology, and natural history of the region, and collecting specimens. He subsequently accompanied Captain Burton in his exploration of Eastern Africa, and in 1858 reached the head of the great lake Nyanza, under the Mountains of the Moon, and since called Victoria Nyanza. Desirous of ascertaining whether the Nile has its sources in that lake, he set out from Zanzibar in 1860, accompanied by Captain Grant, to find the southern end of the lake; and after heroic struggles against extraordinary difficulties, succeeded in his object, spent some time on the shores of the Nyanza, and striking the Nile at Uronogoni, retraced its course to the lake. The intelligence of this discovery was received in England, by telegraph, in February, 1863, and occasioned great rejoicing as the solution of the knotty problem of ages. If the first enthusiasm had to abate, it is at least certain that Captain Speke has made the most important contribution towards the settlement of the question of the origin of the Nile. Captain Speke was accidentally shot near Bath, September 15, 1864. His "Journal of the Discovery of the Source of the Nile" appeared in 1863, and a pamphlet entitled "What led to the discovery of the Source of the Nile" in 1864.

SPELMAN, Sir HENRY, an eminent English historian and antiquary, was born at Congham, in Norfolk, in 1561. James I. frequently employed him on public business, and he received the honour of knighthood for his services. He died in 1641, leaving many valuable works, among which his "Glossarium Archæologicum" and "Villare Anglicanum" are still highly esteemed.—His son, Sir JOHN SPELMAN, inherited his father's taste for archæological inquiries, and was the author of a "Life of Alfred the Great." He was knighted by Charles I., and died at Oxford, in 1683.

SPENCE, JOSEPH, a divine and critic, was born in 1698, and received his education at Oxford, where he obtained a fellowship,

and was elected professor of poetry. He afterwards held the living of Great Horwood, and a prebend in Durham cathedral. He wrote an "Essay on Pope's Odyssey," but his principal work is entitled "Polymetis; or, an Inquiry into the Agreement between the Works of the Roman Poets and the Remains of Ancient Artists." The anecdotes collected by him, concerning eminent literary characters, have been published. His death, which happened in 1768, was occasioned by his having accidentally fallen into a pond.

SPENCE, WILLIAM, F.R.S., was born about the year 1780, and showed at an early age his disposition for that study to which his life was devoted. While engaged in business at Hull, he embraced a casual opportunity of sending a present of a few insects to the Rev. W. Kirby, at Barham; and thus was laid the foundation of a life-long friendship, of which the memory will be preserved by their joint work, entitled "Introduction to Entomology." This work, written in the form of letters, became immediately popular, and ran rapidly through several editions. Almost exhausting the subject of which it treats, it is a most valuable contribution to natural science. Died, January, 1850.

SPENCER, Dr JOHN, an ingenious and learned English divine and critic, was born in 1630, at Houghton, in Kent; became master of Corpus Christi College, archdeacon of Sudbury, and dean of Ely; and died in 1695. His principal and most erudite work is, "De Legibus Hebræorum Ritualibus et earum Rationibus." His attempt in this work to find the origin of some Jewish ceremonies in those of Pagan nations gave great offence, and brought on him numerous attacks.

SPENCER, JOHN CHARLES, Earl (better known as Viscount ALTHORP), was born in 1782, and was educated at Harrow and Trinity College, Cambridge. He first entered the House of Commons as member for Northampton; but from the year 1806 to 1831, when he succeeded to the peerage, he represented the county of Northampton, generally supporting all the important measures of the Whig party. Shortly after the accession of William IV. he was made chancellor of the exchequer; and, though he occasionally made erroneous calculations, yet in bringing forward the financial details he showed singular industry and candour. He was manly, liberal, straightforward, and disinterested; his honesty of purpose was never questioned; but he possessed not the physical powers requisite for a good orator. In another and a very different sphere of action, however, he was unrivalled. The improvement of agriculture was at all times his great aim; and when he retired from office, he applied himself with zeal and energy to the practice and encouragement of that great branch of our national industry. To his exertions the establishment of the Royal Society of Agriculture was mainly owing; and he was present at nearly all the great agricultural meetings throughout the country; promoting the general good by his example, either as the president, or as an exhibitor of prize cattle, the patron of mechanical and scientific improvements, or as the generous

rewarder of the labourer's skill and industry. Died, Oct. 1, 1845.

SPENCER, the Hon. **WILLIAM ROBERT**, the best writer of *vers de société* in his time, was the younger son of Lord Charles Spencer, and was born in 1770. He was educated at Harrow and Oxford; and in 1796 published a translation of Bürger's "Lenore," beautifully illustrated by Lady Diana Beauclerc. In proof of his astonishing power of memory, it is gravely asserted that he undertook, for a wager, to get the whole contents of a newspaper by rote, which he did, and repeated it without the omission of a single word. He held the situation of a commissioner of stamps. Died, 1834.

SPENCER, **HENRY, ROBERT**, and **CHARLES**. [SUNDERLAND, Earls of.]

SPENEL, **PHILIPP JACOB**, an eminent German Protestant theologian, usually considered the founder of the sect of Pietists, was born in Alsace in 1635. He studied at the university of Strasburg, visiting afterwards several other universities, and in 1662 became public preacher at Strasburg. Two years later he obtained his degree of D.D., and removed to Frankfort on the Main, where he had the appointment of chief preacher. He distinguished himself by his religious earnestness, and especially insisted on the need of a general reform. He would have sermons less dogmatic and more practical. The special meetings for religious purposes which gave rise subsequently to the sect of Pietists, were first held by him in 1670, and were called "Collegia Pietatis." Spener removed to Dresden in 1686, as court-preacher, and four years later to Berlin as inspector and first pastor of St Nicholas' Church. Soon afterwards his views were introduced at Halle, which became the head-quarters of Pietism. Spener was author of numerous theological works, and also of several genealogico-historical and heraldic works. He first introduced the study of heraldry into Germany. Died at Berlin, 1705.

SPENSER, **EDMUND**, one of the most illustrious English poets, was born in London, about 1533; was educated at Pembroke Hall, Cambridge, and, on leaving the university, took up his residence with some relations in the north of England, probably as a tutor. In 1579 he published his first poem, "The Shepherd's Calendar," dedicating it to his friend, Sir Philip Sidney. In 1580 he accompanied Lord Grey de Wilton, viceroy of Ireland, as his secretary, and procured a grant of 3028 acres in the county of Cork, out of the forfeited lands of the earl of Desmond: on which, however, by the terms of the gift, he was obliged to become resident. He accordingly fixed his residence at Killoolman, in the county of Cork, where he was visited by Sir Walter Raleigh, who became his patron after the death of Sir Philip Sidney, and whom he celebrates under the title of the "Shepherd of the Ocean." Sir Walter persuaded him to write the "Faerie Queen," the first part of which was printed in 1590, and presented to Queen Elizabeth, who granted the poet a pension of £50 per annum. In 1591 he published his pastoral of "Colin Clout's come home

again;" and, the same year, the second part of his "Faerie Queen;" but the poem, according to the original plan, was never completed. About this time Spenser presented to the queen his "View of the State of Ireland," being then clerk of the council of the province of Munster. This interesting and masterly work was not printed till 1633. In 1597 he returned to Ireland; but when the rebellion of Tyrone broke out, he was obliged to fly with such precipitancy, as to leave behind his infant child, whom the merciless cruelty of the insurgents burnt with the house. The unfortunate poet came to England with a heart broken by these misfortunes, and died at Westminster, January 16, 1598-9. His remains were interred at the expense of the earl of Essex, in Westminster Abbey, where the countess of Dorset raised a monument to his memory. Spenser is one of the most purely poetic of all poets. Yet, as it is with Milton, so is it with him; his name is spoken with a proud admiration, and his "Faerie Queen" is not read. Some, like Hume, find it more a task than a pleasure to read this poem. Others, like Pope, find it charming in old age as well as in youth. Milton, in his "Areopagitica," speaks of "our sage and serious poet, Spenser, whom I dare be known to think a better teacher than Scotus or Aquinas." And an eminent modern critic asserts that "the shaping spirit of imagination was never possessed in the like degree by any other writer; nor has any other evinced a deeper feeling of all forms of the beautiful; nor have words ever been made by any other, to embody thought with more wonderful art." His verse is exquisitely melodious, and the moral tone of his poetry is of the noblest and purest. The language, though to some extent antiquated, is not so much so as to alarm any but idle readers. The slight difficulty of a first acquaintance soon vanishes, and the trouble is repaid with infinite delight.

SPIGELIUS, or **VANDEN SPIEGHEL**, **ADRIAN**, physician and anatomist, was born at Brussels, in 1578. He studied at Louvain and Padua, in which last university he became professor of anatomy and surgery; which office he discharged with such reputation, that the Venetian government made him a knight of St Mark, and gave him a chain of gold. Died, 1625.

SPILLER, **JOHN**, a young English sculptor, of great promise, was born in London, in 1763, and studied under Bacon. He distinguished himself by his talents at the Royal Academy, and was chosen to execute a statue of Charles II. for the centre of the old Royal Exchange; but the much admired production had scarcely being erected before the artist expired, a victim to consumption, at the age of 30, in 1794. "The energy of his labour, with the strong excitement of his feelings, had already made fatal inroads on his constitution. But he was willing, he said, to die at the foot of his statue. The statue was raised, and the young sculptor, with the shining eyes and hectic flush of consumption, beheld it there, returned home, and shortly was no more."

SPINELLO ARETINO, a celebrated Italian painter, was a native of Arezzo, and a pupil

of Jacopo di Caso, worked of the school of Giotto, and his father, near Florentine Pisa, and in the province of Lunigiana. He worked with good colourist, and one of his most celebrated works is the Death of St. Maria degli Angeli. Fall of the Rebelious devil is said to have been painted that picture has one example was living in 14th that time, aged 80. **SPINOLA**, **ALBERT**, a Spanish general. At the age of 30 Philip III., taking troops which he was to pay. He first 1604 he took 60 years, for which in-chief of all the Countries, where of Nassau. During Spinola went to fight with Henry IV. what were his pains. The general entered into a detestable communication with the enemy, as he could not have revealed to the king. Finding, however, that it was not good as his work, he ceased speaking the truth by the disputes of Cleves and Juliers and Brabant. He employed in the master of the army, able to subdue the rebellious provinces, and orders were proclaimed, "The king's name," and fell in battle.

SPINOZA, **BARUCH**, or **BRUNO**, a celebrated philosopher, was born in 1632. He was a Jew, and was adopted that of the faith of his father, but was able for an ardent and logical in studies were made no secret in his mind, a prosecution on him in the house of the king, he studied Latin and metaphysics, attracted by the large bribe was to continue to court, but neither was sent to prison, but was made to live in a very narrow

of Jacopo di Casentino. He studied also the works of the school of Giotto, and soon surpassed his first master. He painted best in fresco, and his finest works are at San Miniato, near Florence, in the Campo Santo of Pisa, and in the Public Palace of Sienna. He worked with ease and rapidity, was a good colourist, and excelled in the draperies. One of his most admirable compositions is the death of St. Benedict, one of the series at San Miniato. In the church of Santa Maria degli Angeli at Arezzo he painted the Fall of the Rebel Angels, and his own hideous devil is said to have frightened him in a vision, and hastened his death. It is known, however, that he lived some years after painting that picture. The National Gallery has one example of this master. Aretino was living in 1408, and died probably about that time, aged 92.

SPINOLA, AMBROSE, Marquis, a celebrated Spanish general, was born about 1569. At the age of 30 he entered the service of Philip III., taking command of a body of troops which he had raised, and undertook to pay. He first served in Flanders, and in 1604 he took Ostend, after a siege of three years, for which he was made commander-in-chief of all the Spanish troops in the Low Countries, where he was opposed by Maurice of Nassau. During a cessation of operations, Spinola went to Paris, and in an interview with Henry IV., the monarch asked him what were his plans for the ensuing campaign. The general, without hesitation, entered into a detail of his projects, and Henry communicated to Maurice the direct contrary, as he could not believe that Spinola had revealed to him his real intentions. Finding, however, that the Spaniard was as good as his word, he exclaimed, "Others deceive by telling falsehoods, but this man by speaking the truth." In the war occasioned by the disputed succession to the duchy of Cleves and Juliers, in 1621, Spinola took Juliers and Breda. He was subsequently employed in Italy, where he made himself master of the city of Casal; but not being able to subdue the citadel, owing to imprudent orders sent him from Madrid, he exclaimed, "They have robbed me of my honour," and fell a prey to chagrin, in 1630.

SPINOZA, or SPINOSA, BENEDICT, a celebrated philosopher, was born at Amsterdam, in 1632. He was the son of a Portuguese Jew, and was first named BARUCH, but adopted that of Benedict on renouncing the faith of his fathers. He was early remarkable for an ardent love of truth, and a keen and logical intellect; and his first serious studies were the Bible and the Talmud. He made no secret of the doubts which grew up in his mind, and was exposed to much persecution on account of them. Taking refuge in the house of the physician Vanden Ende, he studied Latin and Greek, mathematics and metaphysics, and was especially attracted by the philosophy of Descartes. A large bribe was offered him if he would continue to conform outwardly to Judaism; but neither his will nor his poverty consented to such a degradation. An attempt was made to assassinate him, and he had a very narrow escape. He was at last excom-

municated, and being driven from Amsterdam, lived for a time near Leyden, and afterwards at the Hague. He devoted himself wholly to philosophy, earning such a livelihood as contented him by the trade of polishing glasses for optical instruments. His character was most estimable, and endeared him to his personal friends. His system of philosophy has been made odious by the vulgar accusation of atheism; which is the very reverse of the truth. To his thought God is the only being, the only substance, infinite, eternal; before whom all things else have but a phenomenal existence. And his aim was to build up, on the knowledge of God as foundation, a system of morals by a rigorously mathematical method. With more reason Spinoza has been called the father of modern Pantheism. The great defect of his system is the virtual suppression of individuality, and the denial of free-will; all finite things, not excepting human actions, being parts of a necessary chain of sequences. Spinoza has of late been more fairly judged, and both his merits and errors impartially discussed. His influence on the mind of Goethe was overpowering. Cousin says—"The author whom this pretended atheist most resembles, is the unknown author of the "Imitation of Jesus Christ." And Schleiermacher thus testifies to the depth of the religious sentiment in Spinoza:—"He was filled with religion and religious feeling; and therefore is it that he stands alone, unapproachable, the master in his art, but elevated above the profane world, without adherents, and without even citizenship." The works of Spinoza are—"Renati Descartes Principiorum pars Prima et Secunda more Geometrico Demonstrata;" "Cogitata Metaphysica;" "Tractatus Theologico-Politicus;" "Ethica," perhaps the most important of his treatises; "Tractatus Politicus;" "De Intellectus Emendatione," and "Epistola." The last four form his "Opera Posthuma." The works written in defence and refutation of the system of Spinoza are very numerous. Died at the Hague, 1677.

SPIX, JOHANN BAPTIST VON, German zoologist, was born in Bavaria, in 1781. After studying theology for a short time, he turned to medicine, graduating M.D., and became keeper of the museum of Natural History at Munich. He accompanied Von Martius on a scientific expedition to Brazil, in 1817, and was absent three years. Spix was author of a "History and Critique of all Systems of Zoology;" a work entitled "Cephalogenesis;" and several works on the natural history of Brazil. He was a member of the Academy of Sciences of Munich. Died, 1826.

SPOHN, FRIEDRICH AUGUST WILHELM, an eminent German writer on philology. He was born at Dortmund, in 1792; became professor of philosophy and ancient literature in Leipzig, and died in 1824, from the effects of excessive study.

SPOHR, LUDWIG, the celebrated musical composer, was born at Brunswick, in 1781. He early distinguished himself as a violinist, entered the service of the duke of Brunswick, became in 1805 chapel-master at Gotha, in 1813 director of the Theatre at Vienna,

where he produced some of his best works, and after other engagements he accepted in 1823 the office of chapel-master at Cassel, which he held till age compelled him to resign. He was the greatest violinist of his time, both as performer and composer. His compositions produced intense excitement and enthusiastic admiration; which time has quietly abated. The want of good melodies is a fatal defect in them. The principal operas of Spohr are, "Faust," "Jessonda," and "Zemira and Azor." His oratorios are, "The Last Judgment," "The Crucifixion," and the "Fall of Babylon." The last and perhaps the best was composed in 1840 for the Norwich Musical Festival of that year. Among his other compositions is a grand symphony, entitled "The Consecration of Sound" (*Die Weihe der Töne*). Spohr visited England in 1819, and on several subsequent occasions. Died, 1859. His "Autobiography" was soon after published, and an English translation of it appeared in 1865.

SPONTINI, GASPARO, a distinguished musical composer, was born at Majolatti, near Jesi, in the Roman States, 1778. He was educated at the Conservatorio de la Pietà of Naples, and began his career when 17 years of age, as the composer of an opera, "I Puntigli delle Donne." This was followed by some 16 operas, produced within 6 years, for the theatres of Italy and Sicily, but not a note of which has survived. In 1803 Spontini went to Paris; in 1807 he was appointed music-director to the Empress Josephine; and in 1808 he produced his most famous work, "La Vestale," with brilliant and decisive success. His "Fernando Cortez" appeared in 1809; and the next year witnessed his appointment to the directorship of the Italian Opera in Paris, which he held for ten years. In 1820 the magnificent appointments offered by the court of Prussia tempted him to leave Paris for Berlin, in which capital his last 3 grand operas, "Nourmahal" (founded on Lalla Rookh), "Alcidor," and "Agnès von Hohenstauffen," were produced with great splendour. Spontini continued to reside as first chapel-master in Berlin till the death of the king in 1840. The latter period of his sojourn at Berlin was embittered by professional disputes; and in 1842 he repaired to Paris, where, in 1839, he had been elected one of the five members of the Académie des Beaux Arts. Died, at the place of his birth, 1851.

SPOTSWOOD, or SPOTISWOOD, JOHN, archbishop of St Andrew's, in Scotland, was born in 1565, educated at Glasgow, and in 1601 went as chaplain to the duke of Lennox on his embassy to France. On the accession of James VI. to the throne of England, he accompanied him to England; and the same year was raised to the archbishopric of Glasgow, and made one of the privy-council in Scotland. In 1615 he was translated to St Andrew's. He crowned Charles I. at Holyrood House, in 1633; and two years afterwards, was made chancellor of Scotland. The prosecution of Lord Balmerino, in which Spotswood, who was his personal enemy, took a leading part, caused great agitation in Scotland. On the failure of Laud's attempt to introduce the liturgy Spotswood

was deposed, and retired to London, where he died in 1639, and was buried in Westminster Abbey. He wrote a "History of the Church of Scotland," of which the greater part is a narrative of the events of his own time.

SPRAGGE, SIR EDWARD, a brave English admiral, was a captain in the first engagement with the Dutch in 1665, when, for his gallant conduct, he was knighted by the king on board the Royal Charles. He attracted the particular notice of the duke of Albemarle in the four days' battle in 1666, and the year following he burned a number of Dutch fire-ships when they came up the Thames, which threw their whole fleet into confusion. In 1671 he destroyed in the Mediterranean, seven Algerine men of war. He was sunk in his boat in an engagement with Van Tromp in 1673, as he was going towards a sinking ship to another.

SPRANGER, BARTHOLOMEW, an eminent painter of Antwerp, was born in 1545, and died about 1625.

SPRAT, THOMAS, bishop of Rochester, poet, and historian, was born in Devonshire, in 1636. He graduated M.A. and D.D. at Oxford, became chaplain to Buckingham, and afterwards to Charles I., was made prebendary of Westminster in 1668, dean of Westminster in 1683, and bishop of Rochester in the following year. He was one of the first members of the Royal Society. Dr Sprat was author of a "Life of Cowley," a "History of the Royal Society," an account of the Rye-house Plot, and a few poems of little merit. He was esteemed an able and eloquent preacher. Died at Bromley, 1713.

SPRENGEL, CURT, a learned German physician and botanist, was born in Pomerania, in 1766. He was first the pupil of his father, a clergyman of great learning, and afterwards studied at Halle, where he graduated M.D. in 1787. He had made great attainments in science as well as in classical literature and oriental languages. In 1789 he was named extraordinary, and six years later ordinary professor of medicine at Halle, and this post, as well as the chair of botany, soon given to him, he filled till his death. He published a great number of works, esteemed for their learning as well as for original observations in science. Among them are to be noted—his "History of Medicine," "Institutiones Medicæ," "Antiquitates Botanice," "Historia rei Herbariæ," "Flora Halensis," a German translation of Theophrastus, &c. Sprengel was an honorary member of many learned societies, and his character was as estimable as his attainments were high. Died at Halle, 1833.

SPRING-RICE, THOMAS. [MONTEAGLE, Lord.]

SPURZHEIM, GASPAR, the phrenologist, was born near Treves, in 1776, and received his medical education at Vienna, where he became acquainted with Dr Gall, the founder of phrenology. To this science Spurzheim was attracted; and he joined Gall in his inquiries into the anatomy of the brain. They quitted Vienna in 1805, to travel; visited Paris, and lectured in England, Scotland, and Ireland, on their novel system.

Lord Stafford was committed to the Tower. Articles of impeachment for treason were sent up by the Commons, in April, 1679, but the proceedings were conducted very dilatorily, and the trial did not take place till the end of November, 1680. It lasted till the 7th December, and resulted in his condemnation. The king avowed his belief in his innocence, but could do no more than remit the usual severities of execution, and reduce it to simple beheading; and his right to do this was questioned. The execution took place on Tower Hill, December 29, 1680. The attainder of Lord Stafford was not reversed till 1824.

STAGNELIUS, ERIK JOHAN, Swedish poet, born in 1793. He studied at the universities of Lund and Upsal, and obtained an appointment in a government office, which he held till his death. He is said to have been very ugly, to have shunned society, and indulged in drinking to excess. His collected works are in three volumes, and include epics, dramas, and lyrics. Among the more note-worthy are "Vladimir the Great," "The Martyrs," "The Bacchanals," and the "Lilies of Sharon." The latter, a collection of short poems, is the most admired of his writings. Died, 1823.

STAHL, GEORG ERNST, an eminent German physician and chemist, was born at Anspach, in 1660, studied at Jena, became professor of medicine, &c., at Halle, in 1694, and, in 1716, physician to the king of Prussia, and died in 1734. He established a new theory in physiology, asserting, in opposition to that which sought to explain all the phenomena of physical life by chemical and mechanical laws, that these phenomena and processes are controlled by an immaterial principle, which he named "anima," or "soul." In chemistry he is celebrated as the author of the *phlogistic* theory. His works are very numerous: among them are, "Theoria Medica vera," "Fundamenta Chymia," "Experimenta, Observationes," &c.

STAHREMBERG, GUIDO BALDI, Count de, a celebrated Austrian field-marshal, was born in 1657. He commanded the imperial army in Germany, Italy, and Spain; and during a long career was distinguished for his military skill and bravery. Died, 1737.

STAIR, JAMES DALRYMPLE, first Viscount, an eminent Scottish jurist, president of the Court of Session, was born in Carrick, in 1619. He studied and graduated M.A. at the university of Glasgow, held a commission in the army, and in 1641 was appointed professor of philosophy at Glasgow. He was admitted advocate at Edinburgh in 1648, having resigned his chair the previous year. He accompanied as secretary the commissioners sent to Breda, in 1649 and 1650, to invite Prince Charles into Scotland. On the recommendation of General Monk he was appointed, in 1657, one of the lords of session with the approval of Cromwell, and was confirmed in that office at the Restoration. He was knighted at the same time, was afterwards created a baronet by Charles II., and in 1671 became president of the Court of Session; a post which he filled with unrivalled ability for ten years. His moderation having given offence to the

court, he was deprived, and retired into Holland, where he employed himself in literary labour. He obtained the favour of the prince of Orange, with whom he returned to England. He was again made president, and raised to the peerage as Viscount Stair. His great work as a jurist is the "Institutions of the Law of Scotland," which appeared in 1691, and has been an authority ever since. He also published two volumes of "Decisions of the Court of Session," "Philosophia nova Experimentalis," and a "Vindication of the Divine Perfections." Died, November 23, 1695.

STAIR, JOHN DALRYMPLE, second Viscount, and first Earl, son of the preceding, was born about 1648, and became an eminent advocate. After his father's retirement to Holland he was twice imprisoned, but succeeded in making his peace with the court, and getting a pardon for his father. He was made a lord of session, then supported the prince of Orange, took a leading part in the Scottish Convention parliament, and was one of the commissioners sent to offer the crown of Scotland to William III. In 1691 he was appointed secretary of state for Scotland, an office in which he had the chief direction of affairs, and which he filled with great ability. But his name is covered with infamy as the chief instigator of the atrocious crime known as the "Massacre of Glencoe." With Argyll and Breadalbane, heads of the Campbells, he plotted the massacre of the Macdonalds, in 1692; and by concealing from the king the fact that MacLain, their chief, had made submission, obtained from him an order to extirpate them. His letters breathe a spirit of most implacable cruelty, and the means he used were perfidious. The massacre very slowly became generally known, and only in 1695 was a royal commission appointed to inquire into it: the result of which was merely that the master of Stair, as he was then called, was mildly censured and dismissed from his office. The same year he succeeded his father as Viscount Stair, took his seat in parliament in 1700, was made a privy-councillor by Queen Anne, and created earl of Stair, in 1703. He was one of the commissioners for the treaty of Union, and supported it with great energy. Died, January 8, 1707.

STAIR, JOHN DALRYMPLE, second Earl, a distinguished statesman and general, was son of the preceding, and was born in 1673. He entered the army, served under William III. in Ireland, and in 1692 was named secretary of state for Scotland. He distinguished himself in the campaigns of the war with France under the king and under Marlborough, was sent on a mission to the court of Poland, and retired from the army on the disgrace of the duke. Under George I. he was made a privy-councillor and commander-in-chief in Scotland; was sent ambassador to France, in 1715; became the associate of the regent Orleans, and detected the schemes of the Pretender; projected the Quadruple Alliance, and was soon after recalled. After a long retirement from public life he accepted the post of commander-in-chief of the English forces in

Flanders, and to the states-general he roused the queen of England and soon after the less victory Noailles, Georfield. In 1745 tions against t in 1747.

Flanders, and was named also ambassador to the states-general. With great difficulty he roused the Dutch to fight on behalf of the queen of Hungary against the French: and soon after, June, 1743, he won the fruitless victory of Dettingen over Marshal Noailles, George II. being present on the field. In 1745 he traced the plan of operations against the young Pretender, and died in 1747.

STANDISH, FRANK HALL, author of the "Life of Voltaire," &c., and well known as a connoisseur, was the son of Anthony Hall, Esq., of Flax, in the county of Durham; but having succeeded to the estates of Sir Frank Standish, bart., as cousin and heir at law, assumed his name by royal licence. He gratified his natural inclination for foreign travels for acquiring information on classic antiquities and literature, and being possessed of an exquisite judgment as a connoisseur, he made an admirable collection of pictures, books, manuscripts, &c.; the whole of which he bequeathed to Louis Philippe, king of the French, "in token (as he says) of his esteem for a generous and polite nation, one that is always ready to welcome the traveller and relieve the stranger, and one that he has ever gone to with pleasure and quitted with regret." The works published by Mr Standish are, "The Life of Voltaire," which appeared in 1821; "The Shores of the Mediterranean," 2 vols.; "Notices on the Northern Capitals of Europe;" "Seville and its vicinity;" and a volume of "Poems." Died, aged 42, December, 1840.

STANHOPE, JAMES, Earl, a celebrated English statesman and soldier, was born in Herefordshire, in 1673. He entered early into the army, and distinguished himself by so much bravery at the siege of Namur, in 1695, that King William gave him a company and the rank of colonel. He entered parliament in 1702. In 1705, he served as a brigadier-general under the earl of Peterborough, at the siege of Barcelona. In 1708 he took Port Mahon, and thus reduced Minorca. He afterwards contributed to the victories of Almanara and Saragossa; but being intrusted with the defence of Brihuega, he was obliged to surrender it, after a gallant resistance, to the duke de Vendôme. From the time of his return to England he took an active part in politics, and in 1714 was made secretary of state. He attended the king to Hanover two years later, and in 1717 became prime minister. This office he only filled about three months. He was soon after raised to the peerage, as Viscount Stanhope of Mahon, became again secretary of state, was created an earl, and was employed in important negotiations in France and Spain, the result of which was the famous "Quadruple Alliance." Died, 1721. His portrait, by Kneller, is in the National Collection.

STANHOPE, CHARLES, Earl, grandson of the above, a politician and man of science, born in 1753; was educated at Eton and Geneva; and came into parliament for High Wycombe, which he represented until 1788, when he succeeded his father in the peerage. He distinguished himself at an early period of the French revolution by an

open avowal of republican sentiments, and went so far as to lay aside the external ornaments of the peerage. As a man of science he ranked high, and was the author of many inventions, particularly of a method of securing buildings from fire, an arithmetical machine, a new printing press, a monochord for tuning musical instruments, and a vessel to sail against wind and tide. He was twice married, first to Lady Hester Pitt, daughter of the great earl of Chatham, by whom he had three daughters; and secondly to Miss Grenville, by whom he had three sons. Died, 1816.

STANHOPE, Lady HESTER, a very highly accomplished, but no less eccentric, English lady, was daughter of the preceding by his first wife, and niece of the celebrated William Pitt. Soon after the death of that great statesman, with whom she lived, and with whose pursuits she so much sympathized as to act upon some occasions as his private secretary, she went to Syria, assumed the dress of a male native of that country, and devoted herself to astrology, in which she was a most implicit believer. She had a large pension from the English government, and for many years was possessed of considerable influence over the Turkish pashas, which, however, when habitual carelessness in money matters had deprived her of the means of bribing them, she so entirely lost as to be in actual danger of her life. Of her way of life as well as her way of thinking, some notion will easily be formed from her reply to an English traveller, who humanely advised her to quit her perilous and desolate abode, and return to England: "As to leaving this country," said her ladyship, "your advice is in vain; I will never return to England. I am encompassed by perils, true; but I am no stranger to them. I have suffered shipwreck off the coast of Cyprus, I have had the plague here; I fell from my horse near Acre, and was trampled upon by him; I have encountered the robbers of the desert, and when my servants quailed I have galloped in among them, and compelled them to be courteous; and when a horde of plunderers was breaking in at my gate I sallied out among them sword in hand, and having convinced them that they could not hurt me if they would, I fed them at my gate, and they behaved like thankful beggars. Here I am destined to remain. What is written in the great book of life, who can alter? It is true that I am surrounded by perils; it is true that I am at war with the prince of the mountains, and with the pacha of Acre; it is very true that my enemies are capable of assassination, but if I do perish, my fall shall be a bloody one. I have plenty of arms, good Damascus blades; I use no guns, and while I have an arm to wield a *hanjar*, these barren rocks shall have a banquet of slaughter before my face looks black in the presence of my enemies." So completely anti-national were the prejudices of this very eccentric lady, that though at the time of her death she had no fewer than 23 domestics, not one of them was English, and her last sigh was breathed among foreigners and hirelings. Born, 1766; died, 1839.

STANISLAUS AUGUSTUS. [PONIA-TOWSKI.]

STANISLAUS I. [LECZINSKI.]

STANLEY, EDWARD, bishop of Norwich, was the younger son of Sir John Thomas Stanley, bart., of Alderley, in Cheshire, and was born in 1770. Having finished his studies at St John's College, Cambridge, he was presented by his father to the rectory of Alderley in 1805; and there he laboured for upwards of 30 years in the faithful discharge of his pastoral duties. His connection with the Whig party led to his nomination to the see of Norwich in 1837; and such was his unwearied devotion to every good and useful work, his sincerity, his disinterestedness, and his pure and active benevolence in all the relations of life, that his character truly corresponded with the apostolic portrait of a Christian bishop. Bishop Stanley also attained distinction as an author. Whilst rector of Alderley, he occasionally delivered lectures on various branches of natural history, and contributed papers on the same subject to Blackwood's and the British Magazine, besides publishing various pamphlets on questions more immediately connected with his clerical office. But his most popular work was his "Familiar History of Birds," published in 1835, which has gone through several editions. Died, Sept. 6th, 1840. "The Addresses and Charges of Bishop Stanley, with a Memoir of his Life, have been edited by Dean Stanley.

STANLEY, THOMAS, miscellaneous writer, was the son of Sir Thomas Stanley, and born at Cumberlow, in Hertfordshire, in 1624. He received his education at Pembroke Hall, Cambridge, then went on his travels, and on his return took up his residence in the Middle Temple. His works are, "The History of Philosophy," which appeared in 1655-62, passed through many editions, and was even translated into Latin and Dutch, but is now neglected for more critical and trustworthy books; "Poems and Translations;" and an edition of Eschylus, with a Latin translation. Died, 1678. The portrait of Stanley was painted by Lely, and is in the National Portrait Gallery.

STAPLETON, SIR ROBERT, a soldier and poet of the 17th century. On the breaking out of the civil wars, he distinguished himself by his gallant behaviour at the battle of Edgehill, in 1642, for which the king knighted him. At the Restoration he accompanied Charles II. to London, and remained about the court till his decease, in 1669. He translated Juvenal and Musæus, and Strada's History of the Belgic War, wrote four plays, and was created LL.D. at Oxford.

STATIUS, PUBLIUS PAPINIUS, a Roman poet, was born at Naples, A.D. 61. His principal productions are two epic poems, the "Thebais," in twelve books, and the "Achilleis," in two books, which he left unfinished, and the "Silvæ," occasional poems on various subjects, and the most pleasing of his works. Died in his 35th year.

STAUNTON, SIR GEORGE LEONARD, was born in the county of Galway, in Ireland, and educated at Montpellier, where he took his medical degree. About 1762 he went to the island of Grenada, where he practised as

a physician, and purchased lands. He became the intimate friend of Lord Macartney, the governor, who made him his secretary, and took him to Madras, where he successfully negotiated peace with Tippoo Saib, and was employed to arrest the commander-in-chief, General Stuart. On his return to England he was created a baronet, and, in 1790, received the degree of LL.D. When Lord Macartney was selected as head of the embassy to China, Sir George was appointed secretary of legation, with the title of envoy-extraordinary. Of that mission, and of the empire and people of China, he published an interesting account in 1797, 2 vols. 4to. He died in 1801.

STEELE, SIR RICHARD, a celebrated essayist and dramatic writer, was a native of Dublin, where his father, an English barrister, was secretary to the duke of Ormond. He was born in 1671, was educated at the Charter-house and at Oxford, obtained an ensigncy in the Guards; and while in that service wrote "The Christian Hero," which he dedicated to Lord Cutts, who appointed him his secretary, and procured him a captain's commission in the Fusiliers. In 1702 he commenced dramatic writer, in his comedy of "The Funeral, or Grief à-la-Mode," which had great success. This was followed by "The Tender Husband" and "The Lying Lover." In 1709, under the name of Isaac Bickerstaff, he established the "Tatler," a periodical paper, in which he had the assistance of Addison, as he also had in the "Spectator" and "Guardian;" the former commenced in 1711, and the latter in 1713. These papers were the first of their class, and in them Steele aimed at a social reformation, which was to a great extent accomplished. His reputation as a writer procured him the place of commissioner of the stamp office, which he resigned on being chosen member for Stockbridge, but was expelled the House soon after for writing two alleged libels, under the titles of "The Englishman" and "The Crisis." On the accession of George I. he received the honour of knighthood, and was appointed surveyor of the stables at Hampton Court, and governor of the royal company of comedians. He was also, on the suppression of the rebellion of 1715, made one of the commissioners of the forfeited estates in Scotland. In 1722 his play of the "Conscious Lovers" was acted with great success; and, when published, was dedicated to the king, who gave the author £500; but being always engaged in some unsuccessful scheme or other, and with habits both benevolent and lavish, he wasted his regular income in anticipation of a greater, until absolute distress was the consequence. A paralytic attack at length rendered him incapable of literary exertion; and he retired to Llangunnor, in Caermarthenshire, where he died, in 1729. A new Memoir of his Life and Writings was published by H. B. Montgomery, in 1865. His portrait, by Richardson, is in the National Portrait Gallery.

STEEN, JAN, an eminent painter, was born at Leyden, in 1636. One of his masters was Van Goyen, whose daughter he married; but Steen proved a dissipated character, and totally neglected his family. Died, 1689.

STEENWYK, HENRIK VAN, Dutch painter, was born in 1550. He was a pupil of his father and of De Vries, and became distinguished for his pictures of architectural interiors. The war in the Netherlands drove him from his home, and he settled at Frankfurt-on-the-Main, where he died about 1601. This painter was the master of Peter Neefs and his son.

STEENWYK, HENRIK VAN, the younger, and also a painter, was born at Amsterdam, in 1599. He was instructed by his father, and excelled, like him, in architectural subjects. He was the friend of Vandyck, and through his influence came to England, where he enjoyed a high reputation. Died young, at London.

STEEVENS, GEORGE, commentator on Shakespeare, was born at Stepney, in 1736; and was educated at the Grammar School, Kingston, and King's College, Cambridge. In 1766 he published 20 of Shakespeare's plays, in 4 vols. 8vo, carefully reprinted from the earliest 4tos; and in 1770 his notes on the great dramatist were incorporated with those of Johnson in an edition in 10 vols. 8vo, afterwards extended to 15 vols. Steevens, who was an elegant scholar, and well versed in old English literature, was one of the contributors to Nichols's Biographical Anecdotes of Hogarth, and also assisted in the Biographia Dramatica. He died at Hampstead, in 1800.

STEFFANI, AGOSTINO, an Italian musical composer, was born in 1655. In his youth he was a chorister of St Mark's, at Venice, whence a German nobleman, attracted by the sweetness of his voice, took him to Bavaria, gave him a classical education, and put him under the best musicians. After this he entered into orders, and at last became bishop of Spilga. Died, 1730.

STEFFENS, HEINRICH, a distinguished naturalist, novelist, and miscellaneous writer, was born at Stavanger, in Norway, 1733; studied at Copenhagen, and delivered lectures at Kiel on natural history, in 1796; and was successively appointed to the chair of natural history in Jena, Halle, Breslau, and Berlin. He took an active part in the German war of liberation, to the success of which he largely contributed, not merely by his personal exertions, but by his spirit-stirring harangues in support of the national cause. Among his chief works are his "Beitrag zur inneren Naturgeschichte der Erde," "Grundzüge der Philos. Wissenschaft," "Handbuch der Oryktognosie," "Walseth und Leith," "Die Vier Norweger," and an interesting autobiographical sketch, entitled "Was ich erlebte." &c. Died, 1848.

STEIN, HEINRICH F. KARL, Baron von, a distinguished Prussian statesman, was born at Nassau, in October, 1757, of an old and noble family, which held immediately of the empire. He received the rudiments of his education at Göttingen, and afterwards studied public law at Wetzlar, the seat of the imperial chamber. In 1780, at the age of 23, he first entered the civil service of Prussia, to which he had been early destined by his father, as director of the mines at Wettin, in Westphalia; and, in 1784, was appointed ambassador at Aeschaffenburg.

His great abilities having become known in these situations, he was, in 1786, appointed to the important situation of president of all the Westphalian chambers, in which office he laboured assiduously and successfully till 1804. In that year he was, on the death of Struensee, minister of finance and trade, promoted to that office; in which he remained till 1806, when, on account of some differences with the king of Prussia, he resigned, and retired to his estates at Nassau. The king, however, recalled him soon after the peace of Tilsit; and it was then that he planned and executed those great, yet cautious, social reforms, which laid the foundations of the restored monarchy. Ere long, however, his patriotic spirit and great abilities excited the jealousy of Napoleon, who had him exiled. He retired to Prague, where he remained, associating much with Arndt, with the banished elector of Hesse-Cassel, and other vehement enemies of Napoleon, till May, 1812, when, on the approach of the French emperor to Dresden, on the eve of the Moscow campaign, he went to St Petersburg, where his firmness and energy were of great service in supporting the Emperor Alexander through that crisis. After the occupation of Saxony by the allied forces, he was placed at the head of the central administration, and put forth all his energies in keeping alive the patriotic enthusiasm which displayed itself on all sides. But the principles proclaimed at the first peace of Paris did not meet the objects which he had in view for the political organization of the German people, and he withdrew in disappointment to his estate, which he continued to cultivate till 1827, when he once more briefly appeared on the stage of politics. Died, 1831. His "Briefe an den Baron von Gagern"—a name afterwards famous throughout Europe—have been published.

STELLA, JACQUES, an eminent painter, was born in 1596, at Lyons, where his father gave him his first instruction. While at Florence he was patronized by the grand-duke. He then went to Rome, where he spent several years, and on his return to France had a pension granted him, with apartments in the Louvre. He there painted several excellent pictures for the king, who honoured him with the order of St Michael. Died, 1647.

STENO, NICHOLAS, a celebrated anatomist, was born at Copenhagen, in 1638. He was a pupil of Bartholin; and afterwards travelled into Germany, France, and Italy, where he abjured the Protestant faith. On his return home, he was made professor of anatomy; but the change of his religion having raised him enemies, he renounced his medical studies for the church; and Pope Innocent XII. consecrated him bishop, *in partibus*, of Heliopolis, and vicar apostolic in the north of Europe. The results of his important anatomical studies are contained in his "Observations on the Muscles and Glands," his "Discours sur l'Anatomie du Cervain," and other works. Died in 1687.

STEPHEN, king of England, the son of Stephen, count of Blois, by Adela, fourth daughter of William the Conqueror, was born in 1104. On the death of Henry I. he

immediately came over from Normandy to England, and laid claim to the crown, although he had been one of the most zealous in taking the oath for securing the succession to Henry's daughter, the Empress Matilda. By the aid of his brother, who was bishop of Winchester, he possessed himself of the royal treasure, and was enabled to bribe some of the most restive of his opponents, while he sought the support of the people at large by promising to restore the laws of Edward the Confessor. After a war with the Scots, who were finally defeated at the famous battle of the Standard, the Empress Matilda landed in England with her brother, the earl of Gloucester; and being joined by several powerful barons, a civil war ensued, which for cruelty and devastation proved one of the most calamitous in the annals of the country. After various turns of fortune, Matilda retired to Normandy, and the contest was carried on by her son, Henry Plantagenet, who in 1153 landed an army in England. Being joined by the barons of his mother's party, the competitors met at the head of their respective forces at Wallingford; but an armistice took place instead of a battle; by which it was agreed, that Stephen should reign during his lifetime, and that Henry should succeed him. In the following year Stephen died, aged 49.

STEPHEN BATHORI, or BATTORI, king of Poland, was born in Hungary about 1533. He was of a noble family, and by his great abilities and brilliant actions as a soldier raised himself to the dignity of prince of Transylvania, in 1571. At the close of 1575 he was elected king of Poland, on condition of marrying Anna, sister of Sigismund Augustus, the deceased king. He then resigned Transylvania to his brother. With much wisdom and vigour he settled and regulated the domestic affairs of the kingdom, subdued the party of his rival, Maximilian, and then carried on war with the Russians for five years, the king of Sweden being in alliance with him. The Czar procured the mediation of the pope, and peace was concluded in 1582. Bathori was author of some important improvements in the administration, especially the establishment of the grand tribunal of the crown. Under his rule the Ukraine began to recover from the state of devastation in which it had long lain, and the Cossacks were regularly organized and disciplined. He was a patron of learning, and founded the university of Wilna, and the college of Polocz. Died at Grodno, 1586.

STEPHEN, JAMES, an eminent lawyer and political writer, was a native of Poole, in Dorsetshire, received his education at Winchester, was brought up as a barrister, and became parliamentary reporter for the Morning Chronicle. He obtained an appointment in the prize court at the island of St Christopher's, where he realized a fortune. Having acquired, while abroad, an intimate knowledge of colonial law, he obtained on his return a large practice as an advocate in prize causes before the privy-council. As the violation of territory by the masters of American vessels often came under his notice, he published a pamphlet, entitled "War in Disguise, or the Frauds of Neutral

Flags;" and he was soon after introduced into parliament as member for Tralee. He suggested and arranged the whole system of the continental blockade; and for his services the minister appointed him a master in chancery, which office he held during 20 years. He also distinguished himself as the constant friend of African emancipation, and was regarded by the West India planters as their most formidable antagonist. Died, 1832.

STEPHEN, Sir JAMES, K.C.B., was born Jan. 3, 1789, and graduated as bachelor of laws, at Cambridge, in 1812. Till 1823 he practised as a chancery barrister, being employed also as counsel to the colonial department; and this office he retained for the succeeding ten years, together with the post of standing counsel to the Board of Trade. He was afterwards for fourteen years under-secretary of state for the Colonies, on which office he brought to bear the experience and thought of many years with an amount of industry and perseverance very rarely surpassed. For upwards of ten years before his retirement from the public service, he was a contributor to the "Edinburgh Review," and some of his articles contributed to that journal were republished under the title of "Essays in Ecclesiastical Biography," in the same year (1849) in which he was appointed to succeed Professor Smyth in the chair of modern history at Cambridge. Two years later he published his "Lectures on the History of France." He died September 14, 1859.

STEPHENS, properly ESTIENNE, the name of a family of learned French printers, who flourished from the beginning of the 16th to near the end of the 17th century. The founder of the family was HENRY STEPHENS, born at Paris about 1470. He is said to have begun printing there in 1502, and he died in 1520, leaving three sons, Francis, Robert, and Charles. Of the eldest, Francis, hardly anything is known except that he was partner of Simon de Colines, whose daughter he married.—ROBERT STEPHENS, second son of Henry, and one of the most illustrious scholars of his age, was born at Paris in 1503. At the early age of 19 he superintended, for De Colines, a new edition of the New Testament in Latin, which called forth the angry menaces of the Sorbonne, the first warning of the persecutions which harassed him through life. He appears to have begun printing on his own account about 1525 or a little later, and sent forth an immense number of Latin, Greek, and Hebrew works, many of them edited and the proofs corrected by himself. In 1539 he was honoured with the title of printer to the king of Latin, Greek, and Hebrew works, and he enjoyed the high esteem and steady support of Francis I., who had some new types of great beauty cast for him. Among the most noteworthy of his publications were—the "Biblia Latina," 1528, and several subsequent editions; "Biblia Hebraica," 1546; the Greek New Testament, with a Latin translation, 1550; a set of the Greek Ecclesiastical Historians, the "Evangelical Preparation" of Eusebius, about 1544; the "Roman Antiquities" of Dionysius of Hal-

carnassus, &c. work was the folio, 1531, and lifetime. The tors of the Sor Francis I. prohibited, drove France. K.C.B., was born as bachelor of 12. Till 1823 he was a barrister, being engaged in the colonial department retained for the service with the post office Board of Trade. In 1827 he spent 17 years under the colonies, on which he had a great experience and with an amount of very rarely surmountable years before public service, he was appointed to the "Edinburgh Review" articles contributed published under the pseudonym of "Theological Biographer" (1849) in which he was professor Smyth in the University at Cambridge. He died Sep.

ESTIENNE, the first French printers, beginning of the 17th century. He was HENRY STEPHENS, died 1470. He is said to have been here in 1502, and had three sons, Francis, the eldest, Francis, the second, in except that he was Colines, whose name was BERT STEPHENS, one of the most distinguished, was born at an early age of 19 he was a new edition of the Latin, which called of the Sorbonne, persecutions which he underwent. He appears to his own account and sent forth an edition, Greek, and Hebrew, edited and the first. In 1539 he was a printer to the Hebrew works, and a steady and some new for him. Among his publications "1528, and several Biblia Hebraica," Testament, with a set of the Greek and the "Evangelical," about 1544; the Dionysius of Hal-

carmassus, &c. His most important original work was the "Latina Lingua Thesaurus," folio, 1531, and several later editions in his lifetime. The repeated attacks of the doctors of the Sorbonne, who after the death of Francis I. got the sale of his Bibles prohibited, drove this eminent scholar from France. Attached to the Reformation, he chose Geneva for his new home, and managed to escape with his family about 1531. He published an answer, both in Latin and French, to the censures of the Sorbonne, and died at Geneva in 1559. It was this Robert Stephens who introduced, in 1535, the division of chapter and verse into the Bible, since almost universally adopted. It is known, however, that he followed the system of Pagninus, whose Latin Bible appeared in 1528.—CHARLES STEPHENS, third son of Henry, was first a physician, and made himself known by various works, especially several on agriculture, which were collected under the title of "Prædium Rusticum," and translated by himself into French. The work passed through thirty editions in different languages. He became head of the printing establishment at Paris after his brother Robert's departure to Geneva, and was named printer to the king. He died in 1564.—HENRY STEPHENS, second of that name, and the most illustrious of his family, was son of Robert, and was born at Paris in 1528. He early showed extraordinary abilities, and made rapid progress in the study of the Greek and Latin languages, learning the latter by hearing it spoken in the family, and the former under the best masters. At the age of 19 he visited Italy, and spent three years in examining the principal libraries, discovering and collating manuscripts, and making the acquaintance of many learned men. He made a short visit to England in 1550, and was presented to Edward VI.; then travelled in the Netherlands, and returned to Paris in 1551. He had a printing-office there before the end of 1556, but on the death of his father, in 1559, he became head of the Geneva office. His travels and costly publications involved him in money difficulties, from which he was for many years relieved by the liberality of the Fuggers, a mercantile house of Augsburg. Among his numerous publications, many of which were annotated by himself, are—the works of Æschylus, Maximus Tyrius, Dioscorus Scelus, Xenophon, Herodotus, with the translation by Valla, Terence, Plato, in 3 vols. folio; Homer, and collections of the Greek lyric poets and orators. Of his original works, the greatest is his "Thesaurus Linguae Græcæ," which cost him ten years of labour, and the greater part of his fortune, and first appeared in 5 vols. folio, in 1572. It earned him the gratitude of scholars, and contributed greatly to the progress of philology, but had too small a sale to pay. A second edition was published at London in 7 vols. folio, between 1815 and 1828; and a third at Paris recently, under the superintendence of Hase and Dindorf. After the publication of his "Thesaurus," Henry Stephens travelled in France and Germany. He made a long stay at Paris some years later, and was well received by the king,

Henry III. During his latter years he led a restless wandering life, and was frequently at Paris, his circumstances becoming more and more embarrassed. He died at the hospital of Lyons, in March, 1598.—There were five or six other members of this family who were eminent printers, the last of whom Anthony, died at Paris in 1674.

STEPHENSON, GEORGE, whose name will be for ever identified with the greatest mechanical revolution effected since the days of Watt—the application of steam to railroads—was born near Newcastle in 1781. His father was an engine-temperer at a colliery, and he himself began life as a pit-engine boy at 2*d*. a day's wages. A lucky accident having given him an opportunity of showing his skill, he was advanced to the office of engine-man. He was afterwards employed in forming railway planes and engines under ground, and all his leisure time was spent in working out the great problem, which he at last so happily solved. Stephenson's early patron and employer, Nicholas Wood, of Hetton, was one of the first English writers of note on railroads. He survived till December, 1865. Stephenson's first locomotive was constructed in 1814. His first railway was at Hetton; he subsequently planned the line between Stockton and Darlington; but his crowning achievement was the Manchester and Liverpool line; a project which, despite the sarcasms and incredulity with which it was assailed, we need not say succeeded beyond even the projector's expectations. Stephenson's subsequent career was as rapid and smooth as the railway locomotion which he had done so much to realize. He at once took the lead in railway engineering, became an extensive locomotive manufacturer at Newcastle, a railway contractor, and a great colliery and iron-work owner; but he always retained the manly simplicity of character which had marked his early career, and his memory will long be cherished by all who appreciate moral worth as well as mental ability. Died, 1848. We are indebted to Mr Smiles for an excellent memoir of the life of this great engineer.

STEPHENSON, ROBERT, civil engineer, F.R.S., D.C.L., M.P., &c., the inventor and first constructor of tubular plate iron bridges, the only son of George Stephenson (the "Father of the Railway System"), was born at Willington Quay, near Newcastle-on-Tyne, October 16, 1803, and died October 12, 1859. His early years were passed under disadvantages only less than those which his father had surmounted with such signal success. Having received an "English education," and some instruction in the higher branches of mathematics at Bruce's school, Newcastle, he was apprenticed to a coal-viewer. At the close of 1822 he went to Edinburgh, and for about six months attended the university lectures on chemistry, mathematics, and geology. Having assisted his father in making surveys for the Stockton and Darlington railway, and in establishing his locomotive manufactory at Newcastle, he quitted England in the June of 1824, and for three years superintended the working of the gold and silver mines belonging to the

Columbian Mining Association in South America. On his return he assisted his father in laying down the Liverpool and Manchester railway; but his chief field of labour for the next few years was the locomotive manufactory. He there constructed a series of travelling steam-engines, of which the "Rocket" won in 1829 the prize of £500 offered by the directors of the Liverpool and Manchester line, and the "Planet," constructed on the same principles, gave the type to all succeeding locomotives. To Robert Stephenson also is due the merit of raising the locomotive engine of 1829 to that of 1861. The first great work—begun and completed by him, and for the success of which he was solely responsible—was the London and Birmingham railway, opened in 1838. From that time till his death he was personally engaged, or was consulted, on the construction of railways in all the four quarters of the globe. In the memorable parliamentary contests,—the battle of the atmospheric system, and the battle of the gauges—he opposed Brunel, who appeared as the champion of atmospheric propulsion and the broad gauge. The works by which Robert Stephenson will be best known to posterity are his iron bridges,—such as the High Level Bridge at Newcastle, the Conway and Britannia tubular bridges, the tubular bridges over the Nile at Benah and Kaffre Azzayat, on the Egyptian railways from Alexandria to Suez, and the Victoria Tubular Bridge across the St Lawrence River in Canada. More generally successful in his undertakings than Brunel, whom he followed almost immediately to the grave, he was not less free than his antagonist from all professional jealousy, or less valued for the excellence of his disposition and his life. Robert Stephenson was interred in Westminster Abbey,—his body being laid near that of George Telford, and his funeral being attended by those of his contemporaries whose names are most illustrious in literature, art, and science. There are Lives of Robert Stephenson by Smiles and Jeffreys.

STEPNEY, GEORGE, an English poet, diplomatist, and political writer; born, 1663; died, 1707.

STERLING, JOHN, an accomplished critic and essayist, whose promising career was broken by long-continued illness, and at last prematurely closed, was born at Kames Castle, in the isle of Iute, 1806, where his parents happened to be residing. His father, who was a distinguished political writer, and editor of the "Times," had him educated chiefly at home. In 1824 he went to Trinity College, Cambridge, where he had Archdeacon Hare for his classical tutor; and a year later he entered Trinity Hall with the intention of graduating in law; but he left Cambridge in 1827 without taking a degree, and during the next few years he resided chiefly in London, contributing to the Athenæum and other literary journals, and preparing himself, in familiar intercourse with Coleridge, Wordsworth, and many other distinguished persons, for the peculiar career he had marked out for his exertions. Soon after his marriage, in 1830, he was forced

by threatening pulmonary symptoms to seek a temporary home in St Vincent, where his family held some property. He returned to Europe in 1832, and after much thought and meditation he was ordained a deacon of the English church in 1834, and became Archdeacon Hare's curate at Ilurstonconenax. But his constitution soon sunk under the severe pastoral duties which he had prescribed for himself; and the rest of his life was spent in travelling from place to place in search of health, varied by inquiries into the more recent philosophical and religious speculations of Germany, towards which he began to show a decided bias, and in contributing to Blackwood's Magazine, the London and Westminster Review, &c., various stories and critiques, which speak no less for his ability and originality as a thinker, than for his love of truth, and his integrity as a man. Died at Ventnor, 1844. His "Essays and Tales" were collected by Archdeacon Hare, and published with an interesting memoir, a "Life of John Sterling" was afterwards published by Thomas Carlyle, whose friendship Sterling had enjoyed since 1835; and a "Sterling" club has been formed to commemorate his many excellent qualities both of head and heart.

STERNE, LAURENCE, a divine and miscellaneous writer, of a very singular and original cast, was a grandson of Richard Sterne, archbishop of York, and born in 1713, at Clonmel, in Ireland, where his father, a lieutenant in the army, was at that time stationed. He was educated at Jesus College, Cambridge, where he took his degree of M.A. in 1740. Having entered into orders, his uncle, Dr Sterne, a wealthy pluralist, presented him with the living of Sutton, to which were afterwards added a prebend at York, the rectory of Stillington, and the curacy of Coxwold. For many years he was little known beyond the vicinity of his pastoral residences; the only production of his pen being his humorous satire upon a greedy church dignitary of York, entitled the "History of a Watch Coat." In 1759 appeared the first 2 vols. of his celebrated "Tristram Shandy," which drew upon him praise and censure of every kind, and became so popular, that a bookseller engaged for its completion on very lucrative terms. During the intervals of the publication of "Tristram Shandy," the ninth volume of which appeared in 1767, he published 3 vols. of "Sermons," with his own comic figure, from a painting by Reynolds, at the head of them. He then spent some years in travelling on the continent, and in 1768 he composed his "Sentimental Journey," which by a number of pathetic incidents, and vivid strokes of national and characteristic delineation, is rendered extremely entertaining, and acquired a more general reputation than even its predecessor. Having come to London to see his "Sentimental Journey" through the press, he was seized with a severe illness, which proved fatal, March 18, 1768. That Sterne possessed true wit and the most thoroughly original humour, none who have read his works can doubt; but his occasional indecencies are disgusting, and deserve the severest reprehension. of Laurence Sterno" (1864), by Percy Fitzgerald, M.A.

STERNHOLD, THOMAS, joint author with Hopkins of the first version of the Psalms of David in English metre, was born in Hampshire, and educated at Oxford; after which he became groom of the robes to Henry VIII. and Edward VI. He died in 1549. Sternhold versified 51 of the Psalms; the remainder were written by Hopkins, Norton, and others.

STESICHORUS, a celebrated Greek lyric poet, was a native of Himera, in Sicily, born probably about B. C. 640. Little is known of his biography, many fabulous reports being mingled with existing accounts of him. It is supposed that the office of training and directing the choruses for the religious festivals was hereditary in his family. He is distinguished for the improved form which he gave to the choruses; substantially that which was adopted and perfected by Pindar. Some fragments of his poems are still extant. Died probably about B. C. 560.

STEWART, Sir JAMES. [STEWART.]

STEVENSON, GEORGE ALEXANDER, an eccentric character, was born in London, and brought up to a mechanical business, which he quitted to become a strolling player. He wrote a novel, called "Tom Fool;" "The Hirth-day Folly;" and "Religion," &c., two poems; and subsequently invented his popular entertainment, called a "Lecture on Heads," a prose satire on the manners of the times, possessing no small portion of drollery. Several of his songs, including "The Storm," have been much admired. Died, 1784.

STEVENSON, Sir JOHN ANDREW, an eminent musical composer, was born at Dublin, in 1761. At 10 years of age he was received into the choir school of Christchurch, where he soon gave promise of those abilities for which he was afterwards so deservedly celebrated. In conjunction with Tom Moore, he rescued the matchless airs of their native land from oblivion, by adapting them to the words of the "Irish Melodies," and enriching them with graceful accompaniments. He also produced an oratorio, entitled the "Thanksgiving," anthems, glees, &c., many of which still retain their popularity. Died, 1833.

STEVENSON, ROBERT, a distinguished civil engineer, was born at Glasgow in 1772, was initiated into the principles of mechanics by his step-father, Mr T. Smith, and became, in 1797, engineer to the Northern Lighthouse Board; in which capacity he designed the structure of many of the Scottish Lighthouses, the chief of which—that on the Bell Rock—placed him in the foremost ranks of his profession. Died, 1850.

STEWART DENHAM, Sir JAMES, a writer on political economy, was born at Edinburgh in 1713, was educated at the university, and became an advocate. In 1740 he married the daughter of the earl of Wemyss, and great expectations were entertained of his rising in his profession; but these were disappointed by the part he took in the rebellion of 1745. In that last struggle of the house of Stuart, Sir James co-operated so zealously as to be obliged to

go into exile. In 1757 he published, at Frankfort, his "Apologie du Sentiment de Monsieur le Chevalier Newton, sur l'Antienne Chronologie des Grecs." Ten years after this he was restored to his native country and the estate of his ancestors, and died in 1780. His most valuable work is entitled, "An Inquiry into the Principles of Political Economy," which preceded the great work of Adam Smith by several years.

STEWART, MATTHEW, an eminent mathematician, was born at Bthsay, in the isle of Bute, in 1717. He studied mathematics at Edinburgh, under MacLaurin, whom he succeeded in his professorship; on which occasion he published his "Geometrical Theorems." In 1761 appeared his "Tracts, Physical and Mathematical," in which he proposed to deduce a theory of the moon, and to determine the sun's distance from the earth. He was also the author of a "Treatise on the Sun's Distance," and one entitled "Propositiones more Veterum demonstratæ." He died in 1785.

STEWART, JUGALD, an eminent Scotch philosopher, was son of the preceding, and was born at Edinburgh in 1753. He received his education at the High School of Edinburgh, and at the university of Glasgow, under Reid. In 1774 he was named assistant professor of mathematics with his father, and in 1785 he was called to the chair of moral philosophy, previously filled by Ferguson. This post he held till 1810, when failing health compelled him to resign. The rest of his life was spent in retirement and literary labour, at his seat on the Frith of Forth. Stewart was very popular as a professor and lecturer, and the elegance, clearness, and good sense of his lectures attracted crowds, who found no depth or speculative height or strain of logic to weary and offend them. His teaching, like his master's, was a protest against the extreme results of the sensualist philosophy. He first appeared as an author in 1792, when he published the first volume of his "Elements of the Philosophy of the Human Mind." The second did not appear till 1814, and the third followed in 1827. Among his other works are, "Philosophical Essays," which passed through several editions, "Outlines of Moral Philosophy," a Preliminary Dissertation, for the Encyclopædia Britannica, on the progress of Metaphysical, Ethical, and Political Science, which appeared in two parts in 1815 and 1821, and had a great run for a time; and biographies of Adam Smith, Dr Reid, and Dr Robertson. Died, at Edinburgh, 1828.

STIEGLITZ, CHRISTIAN LUDWIG, German writer on architecture, born at Leipsic in 1756. He was educated at the university of Leipsic, and graduated LL.D. in 1784; but he devoted himself thenceforth almost exclusively to literary and artistic studies. The most important of his voluminous writings are, the "Encyclopædia of Civil Architecture," "History of the Architecture of the Ancients," "Early German Architecture," and "History of Architecture." He was a contributor to Ersch and Gruber's Encyclopædia, and to several journals. Died, 1836.

STIGAND, archbishop of Canterbury in the 11th century, is first known to us as chaplain and minister of Emma, queen and widow first of Ethelred and then of Canute. He was intimately associated with the great Earl Godwin, and was consecrated bishop of the East Angles, in 1043. But he was almost immediately deposed by Edward the Confessor, who seized his possessions at the same time that he seized those of Emma. In 1044 he was restored, became chaplain to Edward, and procured for the queen-mother her dower and permission to live at Winchester. Stigand was translated to Winchester in 1047, and five years later, on the deposition of Archbishop Robert, was appointed to administer the see of Canterbury. He was probably made archbishop in the following year (1053); assisted in the consecration of Westminster Abbey in 1065; and on the death of the Confessor summoned the Witenagemot which elected Harold II. king. He crowned Harold, and after his defeat and death at the battle of Hastings anointed Edgar the Atheling, who was elected by the council assembled at London. But the Conqueror was irresistible, and Stigand, with other leading men, made formal submission to him, and was received with great outward respect. When William went to Normandy in 1067 he took with him Edgar, Stigand, and the chief of the Saxon nobles. Stigand after his return to England procured a safe retreat for the Atheling in Scotland; and went himself with his immense treasures to the famous "Camp of Refuge" in the Isle of Ely. But the camp was entered by the Normans, the heroic Hereward made his peace with William, and Stigand was put in chains (1072). He had been deposed two years previously, and spent the rest of his life in prison at Winchester, refusing to the last to give up his treasures or betray their place of concealment. Lanfranc succeeded him in the primacy.

STIGLMAYER, JOHANN BAPTIST, a celebrated German bronze-founder, was born near Munich in 1791. He entered the Academy of that city as a student of sculpture in 1810, and, acquiring great skill as a medallist, he was named engraver to the Mint. He afterwards spent several years in Italy, where he acquainted himself with the process of metal-casting, to which he devoted the rest of his life. A foundry was established by the king, Ludwig I., at Munich in 1826, and Stiglmayer was appointed director. The works he executed are very numerous, and among the principal are—colossal statues of the ancestors of Ludwig, for the royal palace; of Jean Paul, Mozart, Schiller, and the elector, Maximilian I., of Bavaria, the last an equestrian group; monument of King Maximilian I.; statue of Goethe, and colossal figure of Bavaria, the last two not completed at his death. Died, 1844.

STILICHO, the great general of the Western Empire, under Honorius, was probably a Vandal, and early served in the Roman armies. The ability with which, in A. D. 384, he negotiated a treaty with the king of Persia, procured him in marriage Serena, favourite niece of the Emperor

Theodosius. He was made successively master of the horse, count of the domestics, and master-general of the armies of the Western Empire, and on the death of Theodosius, in 395, he was charged with the care of his sons, Honorius and Arcadius, and of the Western Empire. His rival was Rufinus, minister of the East, and to clear the way for his ambition Stilicho procured the murder of Rufinus. But the favourite Eutropius succeeded to the power of Rufinus, and was supported by the army which Stilicho had sent. Meanwhile the Goths, under Alaric, were ravaging Greece, and Stilicho set out to oppose them, and in 396 blockaded their camp in Arcadia; but Alaric escaped with his plunder into Epirus, and Stilicho returned to Italy. By his prudent measures he relieved Rome from the scarcity occasioned by the revolt of Gildo, in Africa, and sent an expedition which put an end to the revolt. At this period the influence of Stilicho was confirmed by the marriage of his daughter Maria to Honorius. On the invasion of Italy by Alaric, in 409, Stilicho directed all his energies to checking his progress, and totally defeated him at Pollentia, in 403. He drove him out of Italy, and shared with Honorius the honour of a triumph at Rome. In 405 Italy was invaded by a host of Vandals, Suevi, and Burgundians, led by the chieftain Radagaisus, Florence was besieged and Rome threatened; but Stilicho defeated him and destroyed his army, and was thus the second time the deliverer of Italy. Stilicho long carried on negotiations with Alaric, and in 408 the claims of the latter were debated in the senate, which ultimately agreed to grant him a subsidy to secure his friendship. The confidence of Honorius in his great minister and general was at last destroyed by the false charges made against him by Olympius, who had risen by his favour; the leading friends of Stilicho were massacred at Pavia, and soon after Stilicho himself was murdered, by the authority of Honorius, at Ravenna, in 408. The poet Claudianus enjoyed the high favour of Stilicho, and has celebrated his achievements.

STILL, JOHN, bishop of Bath and Wells, died in 1607. He is the reputed author of "Gammer Gurton's Needle," a dramatic piece of low humour, very characteristic of the manners of our ancestors in that day.

STILLING, JOHANN HENRICH, frequently called JUNG-STILLING, Jung being his family name, was a celebrated Pietist, and was born at Grund, in the duchy of Nassau, in 1740. His father was a charcoal-burner, and his early life was a series of struggles with adverse and depressing circumstances. His strong religious faith did not fail him, and after being charcoal-burner, and in frequent alternation tailor and schoolmaster, he found the means of going to Strasburg to study medicine. Goethe was there at the same time, and he and Stilling meeting at a dinner, Goethe liked him, and remained his warm friend. Stilling settled as physician at Elberfeld, and subsequently was professor at Marburg and Heidelberg. He had singular skill in eye-operations, and restored to sight more

than 2000 poor reward, supported hospital at his duke of Baden councillor. S and his work celebrated an graphy, entitled Wanderschaft ing," and pu fanciful "The audiobiograph tion of Goeth lated into E 1817.

than 2000 poor blind persons without fee or reward, supporting many of them in the hospital at his own expence. The grand- duke of Baden gave him the title of aulic councillor. Stilling was a popular writer, and his works fill 13 vols. 8vo. The most celebrated among them are his autobiography, entitled, "Jugend-Jüngling-Jahre, Wanderschaft und Alter von Heinrich Stilling," and published in 1777-79; and his fanciful "Theorie der Geisterkunde." The autobiography was written on the suggestion of Goethe, and both works are translated into English. Died, at Karlsruhe, 1817.

STILLINGFLEET, EDWARD, bishop of Worcester, and a celebrated controversialist, was born at Cranbourne, in Dorsetshire, in 1635. He was educated at Cambridge, became a fellow of St John's College, and in 1657 rector of Sutton. Two years later he first appeared as an author, and as a churchman of most liberal views, in his treatise entitled, "Irenicum," which by his subsequent course and writings he virtually retracted. He acquired great reputation by his works, and after the Restoration preferments fell fast to his lot. He was preacher at the Rolls, chaplain to the king, and dean of St Paul's. His life was almost one continuous controversy, with Romanists, Nonconformists, Socinians, and the philosopher, John Locke. Among his Nonconformist opponents were Owen, Baxter, and Howe. He condemned the Ecclesiastical Commission under James II., and on the accession of William III. was raised to the see of Worcester. Among his numerous works, filling 6 vols. folio, the most important was the "Origines Sacre, or Rational Account of the Christian Faith as to the Truth and Divine Authority of the Scriptures." Others are—"Origines Britannicæ," the early church history of Great Britain, "Vindication of the Trinity," "Unreasonableness of Separation," and a "Rational Account of the Grounds of the Protestant Religion." Died, at Westminster, 1699.

STILLINGFLEET, BENJAMIN, the naturalist, a grandson of the preceding, was born in 1702. He graduated at Cambridge, became tutor to W. Windham (father of the statesman), and, with other Englishmen, accompanied him on his memorable visit to Chamouni in 1741; and was known as author of "The Calendar of Flora," "Miscellaneous Tracts in Natural History," and a "Treatise on the Principles and Power of Harmony." Died, 1771. An account of his Literary Life appeared in 3 vols. in 1811.

STILPO, a philosopher of Megara, who lived about 306 B. C. He acquired so great a reputation for his sagacity and virtue, that, when Demetrius took Megara, he forbade any one to injure either his person or property.

STIRLING, WILLIAM, Earl of. [ALEXANDER.]

STORÆUS, JOANNES, a Greek writer, probably of the 5th or 6th century of our era, known only by his compilation of interesting extracts from earlier Greek authors, including many whose works are lost.

His collection is in two divisions, one entitled "Elogia," and the other "Anthologia." The extracts are all classified according to their subjects. Stobæus is supposed to have been a native of Stobi, in Macedonia, but nothing is known of his life. His "Anthologia" was first printed at Venice in 1536, and the "Elogia" at Antwerp in 1575.

STOCK, SIMON, general of the order of Carmelites, was by birth an Englishman, and died in 1263. He is celebrated as the institutor of the Sepulchary, which Romanists believe he received from the Virgin Mary, in a vision, with a promise that all who wore it, or one consecrated like it, should be sure of her protection in every emergency.

STOLBERG, CHRISTIAN, Count von, German poet, was born at Hamburg in 1748. He was educated with his brother Leopold, noticed below, at the university of Göttingen, and made also with him a tour in Switzerland and North Italy, Goethe and Lavater being their companions through part of their journey. In 1777 he married, and settled on his estate in Schleswig. As a poet he was greatly influenced by Klopstock, and, like him, studied especially the Greek poets. He was warmly attached to his brother, and survived him but a short time. Died, 1821.

STOLBERG, LEOPOLD FRIEDRICH, Count von, a distinguished German historian, traveller, and litterateur, was born in Holstein in 1750. He was younger brother of the preceding, studied with him at Göttingen, and travelled with him in Switzerland and Italy. In 1777 he was appointed minister of the duke of Oldenburg, prince-bishop of Lübeck, at the court of Denmark. Five years later he married, and in 1785 was charged with a political mission to Russia. He lost his wife, whom he tenderly loved, in 1788, married again in 1790, and travelled in Germany, Switzerland, Italy, and Sicily. On his return he was placed at the head of the government of Lübeck, a post which left him full leisure for literary pursuits. In 1800 he renounced Protestantism, and received into the Catholic church, and giving up his office, settled at Münster. Count Stolberg's conversion to the Romish faith gave the first impulse to a great religious movement in Germany. His example was followed a few years later by Friedrich Schlegel. His principal work is the "Geschichte der Religion Jesu Christi," which first appeared in 15 vols. in 1806. A fourth edition was published in 1816, and it was afterwards translated into Italian by order of Pope Pius VII. Among his other works are, "Reise durch Deutschland, die Schweiz," &c., "Leben des Alfreds der Grosse," and "Ein Büchlein von der Liebe." He wrote some dramatic and other poems, and translated the Iliad, several plays of Æschylus, and part of the writings of St Augustine. Died at Sondermühlen, near Osnabrück, 1819.

STONE, EDMUND, an eminent mathematician, was a native of Scotland, his father being gardener to the duke of Argyle. At the age of 18 he was discovered by that nobleman

STOW, JOHN, a celebrated antiquary and annalist, was born in London, about 1525. He was bred a tailor, but began early to study the antiquities of his country; in which he was encouraged by Archbishop Parker and the earl of Leicester. His first work was the "Summary of the Chronicles of England;" which he entered in 1600, and published under the title of "Flores Historiarum, or Annals of this Kingdom, from the time of the Ancient Britons." In 1598 appeared the first edition of his "Survey of London." In his old age he was reduced to such indigence that he was compelled to beg his bread. He was authorized especially to do so by letters patent of James I. granted in 1604. Died, 1605.

STOWELL, WILLIAM SCOTT, Lord, the celebrated English judge, son of W. Scott, a merchant of Newcastle, and elder brother of Lord Eldon, was born at Heworth, Durham, in 1745, the memorable year of the rebellion in Scotland. Neweastle, like other towns in the north, was in expectation of a visit from the rebels; the town walls were planted with cannon, and every practicable measure adopted to withstand a siege. Many families retired into the country; and it was desirable that Mrs Scott, who was then far advanced in pregnancy, should be removed; but egress in any common way being next to impossible, she was let down in a clothes-basket, from the top of the wall to the quay, where a boat was in readiness to receive her, by which she was conveyed to Heworth, a village about three miles distant. Here she gave birth to twins—the subject of this article, and a daughter named Barbara. Lord Stowell received the rudiments of his classical education, with his brother, the earl of Eldon, at the Newcastle grammar school, and completed it at Corpus Christi College, Oxford. He afterwards removed to University College, and in his 20th year was appointed one of the tutors. About the year 1776, Mr Scott retired from the tutorship, and devoted himself to severe study in that branch of the legal profession of which he afterwards became so great an ornament. In 1779 he took the degree of D.C.L., and soon after commenced his career as an advocate in the civil law courts. Here he rose to the highest eminence with unparalleled rapidity. He was appointed king's advocate-general in 1787; shortly after, judge of the consistory court, vicar-general of the province of Canterbury, and master of the faculties. He was knighted in 1788, and in 1798 became judge of the high court of admiralty and a privy-councillor. In 1790 he entered parliament as member for Downton, and in the following year was unanimously elected as member for the university of Oxford; which he remained till the coronation of George IV., when he was created a peer. "Devoting his brilliant talents and extraordinary acumen to the noblest branch of his profession—the study of international law, and living in times when a general war called all this knowledge into action, his decisions have passed into precedents, equal, if not superior, in authority, to those of the venerable fathers of the science, Grotius, Puffendorf, Vattel, &c." He was

an accomplished scholar, a profound reasoner, and an uncompromising supporter of established institutions in church and state. Died, Jan. 28, 1830. A bust of Lord Stowell, sculptured by Ithames, is in the National Portrait Gallery.

STRABO, a celebrated Greek historian and geographer, was born at Ammia, in Cappadocia, about B. C. 50, and travelled through Greece, Italy, Egypt, and Asia, endeavouring to obtain the most accurate information in regard to the geography, statistics, and political condition of the countries which he visited. The time of his death is unknown, but he is supposed to have died after 20 A. D. His great work, in seventeen books, contains not only a description of different countries, but the chief particulars of their history, notices of eminent men, and accounts of the manners and customs of the people.

STRADA, FASIANUS, an Italian historian and modern Latin poet, was born at Rome, in 1572. He entered the Society of Jesuits, and became professor of rhetoric at the Roman college, where he resided till his death, in 1649. His most famous work is the "History of the Wars in the Netherlands," between 1555—1590, which notwithstanding some faults and defects, and a natural bias in favour of Spain, is valuable and esteemed.

STRADA, JOHN, or **STRADANUS**, an eminent painter, born at Bruges, in 1536. He went early to Italy to perfect his art studies, and acquiring great reputation, was employed by Cosmo I., duke of Tuscany, and by the pope, and settled at Florence, where he executed many fine works. One of the most admired is a crucifixion, Strada painted animals with great spirit, and a few battle pieces. He is called sometimes *Giovanni Stradano*. Died, probably about 1605.

STRAFFORD, THOMAS WENTWORTH, Earl of, the great minister of Charles I., and lord-lieutenant of Ireland, was of an ancient and wealthy Yorkshire family, and was born at London, in 1593. He studied at Cambridge, married in 1611, was knighted, and travelled on the continent. He was returned to parliament as member for Yorkshire in 1614, and the next year was named *custos rotularum* for the West Riding. He sat in several parliaments for Yorkshire, and without going to extremes, took part with the opponents of the court. He was once made sheriff of Yorkshire that he might not be returned to parliament, and was afterwards imprisoned for refusing a forced loan. In 1628 his course was changed, he went over to the side of the king, and was created Baron Wentworth, then viscount, lord president of the council of the North, and in 1629 privy-councillor. As president of the North he exercised arbitrary power, and violated the petition of right; and his love of power still unsatisfied, he was made, by his own desire, lord deputy of Ireland in July, 1633. His government was despotic and cruel; he would fain have driven out of the country all the Scots who had taken the covenant; he raised a large army, which was no doubt intended for the support of tyranny in England; and by his infamous claim of

the whole province of Connaught for the crown created general alarm, and led the way to the rebellion of 1641. Ireland, however, owes to him the introduction of the growth of flax, and the establishment of the linen manufacture. In 1639 Wentworth was created earl of Strafford, and received the title of lord-lieutenant of Ireland. He was soon after called to command against the Scots, but he effected nothing. He took his seat in the House of Lords in November, 1640, and was immediately impeached of high treason, Pym taking the leading part against him. He was committed to the Tower, and in March, 1641, his trial began—one of the most memorable of state trials. The whole House of Commons was present, with them commissioners from Scotland and Ireland, eighty peers as judges, and the king and queen as spectators. The management of the proceedings was intrusted to Pym. For seventeen days, says Guizot, he unaided against thirteen accusers, who relieved one another, argued the charges which they brought forward. The impeachment seemed likely to fail, and a bill of attainder was proposed. The trial went on, Strafford closed his eloquent defence on the 13th April, the attainder was hurried on, and passed on the 21st, but the king refused his assent. The popular excitement rose to a panic, a report was spread that the House of Commons was to be blown up, and twice within a week a cracking of the floor caused the flight of the members. At last, moved by the tears of his wife, who hated Strafford, and was on the point of fleeing to France; influenced also by the intrigues and sophistry of the bishop of Lincoln, the king gave his assent to the attainder; and his minister, who had trusted in his promise of protection, was beheaded on Tower-hill, 12th May, 1641. Strafford's character is thus sketched by Macaulay:—"He was the first Englishman to whom a peerage was a sacrament of infamy, a baptism into the communion of corruption. As he was the earliest of the hateful list, so was he also by far the greatest; eloquent, sagacious, adventurous, intrepid, ready of invention, immutable of purpose, in every talent which exalts or destroys nations pre-eminent, the lost archangel, the Satan of the apostasy." Strafford's Letters and Despatches have been published in 2 vols. folio, and his Life has been written by Forster. The attainder of the earl of Strafford was reversed in 1662.

STRANGE, SIR ROBERT, an eminent engraver, was born in one of the Orkney islands, in 1721. He first studied painting; but having entered into the army of the Pretender in 1745, he for a time lived in concealment, and afterwards went to Paris, where he became a pupil of Le Bas, the celebrated landscape engraver; and, on settling in London, in 1751, he applied himself to historical engraving, in which he arrived at great excellence. In 1760 he went to Italy, where he was chosen a member of the academies of Rome, Florence, and Bologna; he was knighted in 1787, and died in 1792. *Memoirs of his Life*, by James Dennistoun, appeared in 1855.

STRANGFORD, PERCY CLINTON SYD-

NEY SMYTHE, Viscount, diplomatist and miscellaneous writer, was born in 1780, and was educated at Trinity College, Dublin. Before he was of age he had contributed to the "Poetical Register," and he succeeded to his father's peerage in October, 1801. A short time previously he had entered the diplomatic service, and was already secretary of legation at Lisbon. Here he made a translation of the poems of Camoens, which he published in 1803, prefixing to it a Life of the poet. In 1806 he was appointed minister at the court of Lisbon; a position which, some two years later, he exchanged for that of envoy extraordinary and minister plenipotentiary, being at the same time created a G. C. B., and sworn a member of the privy-council. When the Portuguese court emigrated to the Brazils, he was appointed to accompany it. Returning to England in 1816, in the following year he was sent to the court of Sweden, and was removed in 1820 to the more important post of ambassador at the Porte. In 1825 he was sent ambassador to Russia, and was at St Petersburg when the Emperor Nicholas ascended the throne. In the summer of 1826 he returned to England. In 1825 he was made a Knight Grand Cross of the Hanoverian Guelphic order, and accepted the English barony of Penhurst, which gave him a seat in the House of Lords. In 1854 he was created an honorary D.C.L. of Oxford, at the installation of the duke of Wellington, with whom he had been associated as plenipotentiary at the Congress of Verona, in 1822. Lord Strangford was an ardent lover of literature and the fine arts. He was a frequent correspondent of the "Gentleman's Magazine," under the initials of his name, P. C. S. S., and the signature often appeared in "Notes and Queries." He was well-known as a fellow of the Society of Antiquaries, of which he became vice-president. Died, 1857.

STREATER, ROBERT, an English painter, excelling in history, architecture, and landscape. At the Restoration, he was made serjeant-painter to the king. Born, 1621; died, 1680.

STRICKLAND, HUGH EDWIN, geologist and zoologist, was born at Righton, in the East Riding of Yorkshire, in 1811. He studied under Dr Arnold, at Laleham, and then at Oxford University, devoting himself thenceforth to the pursuits in which he became distinguished. Having investigated the geology of his native district, the Cotswold Hills, &c., and contributed many memoirs to the Transactions of the Geological Society, he visited Asia Minor, and published the results of his observations in the same Transactions. Mr Strickland succeeded Dr Buckland as reader in geology in the university of Oxford; he was also one of the earliest members of the Geological Society, and took part in establishing the Ray Society. He was an accomplished ornithologist, and among his numerous writings is a treatise on "The Dodo and its Kindred." He was killed by a train on the Great Northern Railway, while examining the cuttings near Clarbrough Tunnel, 14th September, 1853.

STROZZI, PALLA, Florentine statesman

and scholar, of illustrious family, 1372. He early zealous promoter of a great renance of lea the collection Greece. STROZZI be mentio COLE, fath of whom century- quished h of the c edificata. BROZZI of two t

and scholar, one of the most eminent of the illustrious family of the Strozzi, was born in 1372. He early distinguished himself as a zealous promoter of classical studies; devoted a great part of his wealth to the maintenance of learned men in Florence, and to the collection of valuable manuscripts from Greece. Among those he procured were the "Politics" of Aristotle, the "Almagest" of Ptolemy, Plutarch's "Lives," and the works of Plato. In 1428 he was placed at the head of the university of Florence, and effected great improvements in its organization and working. Palla Strozzi was employed on many important political affairs, and having associated himself with the party opposed to the Medici, he was, with the rest of his party, exiled in 1435. He spent the rest of his long life in peaceful and studious retirement at Padua, and died there in 1482.

STROZZI, FILIPPO, a celebrated Florentine patriot, was born about 1488. He married a daughter of the last of the Medici, but nevertheless opposed their restoration to power. He took the lead in the revolution which in 1527 led to the re-establishment of the republic. The pope and the emperor combined to overthrow it three years later, and Filippo for a time acquiesced in the rule of Alessandro de' Medici. But after the death of Pope Clement VII., he undertook the hazardous enterprise of restoring the liberties of his country. For this purpose he drew over to his party Lorenzo de' Medici, called the younger, who, on the 6th of January, 1537, assassinated Alessandro, and then escaped to Venice. The perpetration of this crime did not answer the object of those who contrived it; for Cosmo de' Medici succeeded to the government. Filippo having been taken prisoner, and apprehending he should be put to the torture, he resolved to anticipate the trial by a voluntary death, and finding a sword, plunged it into his breast, and immediately expired. This event took place in 1538. Mr T. A. Trollope has written a Life of Filippo Strozzi.

STROZZI, PIERO, son of the preceding, having with the rest of the family taken refuge in France, rose to the rank of field-marshal, and signalized himself by his services, both by land and sea. In 1548 he was sent to Scotland with a body of Italians, to act against the English; and in 1558 he contributed to the capture of Calais; but in the same year he received a mortal wound at the siege of Thionville.—His son, **FILIPPO**, proved as brave as the rest of his family, but his end was unfortunate, for when wounded in a fight with the Spanish fleet, off the island of St Michael, he was thrown overboard alive by order of the admiral, and perished, in 1582.

STROZZI. Several poets of this name may be mentioned. **TITO VESPASIANO** and **ERCOLE**, father and son, natives of Ferrara, both of whom died at the beginning of the 16th century.—**GIULIO STROZZI**, who distinguished himself by a fine poem on the origin of the city of Venice, entitled "Venezia edificata." Died, 1636.—Also **NICCOLO STROZZI**, who died in 1654. He was author of two tragedies, "David of Trebizonde"

and "Conrad;" also "Idylls," "Sonnets," &c.

STRUENSEE, JOHN FREDERICK, first minister of Christian VII. of Denmark, was born at Halle, in Saxony, in 1737. He was brought up to medicine, and became in 1768 physician to the king of Denmark, whom he accompanied on his tour to Germany, France, and England. Soon after the marriage of Christian with the Princess Catherine Matilda of England, Struensee became a favourite of the young queen; and after a long course of court intrigues, Count Bernstorff and the other ministers were obliged to yield to him and his friend Count Brandt. Taking advantage of the imbecility of the monarch, he gradually came to direct the whole affairs of government. He endeavoured to introduce important reforms in the law and the administration, most of which were ignorantly and violently opposed. His monopoly of power at length roused the jealousy of the principal nobility, who, aided by the young queen's mortal enemy, the queen-dowager, entered into a conspiracy to destroy him and his party, which they effected in the following manner. A scandalous charge was made against Queen Catherine Matilda, that she cherished a guilty passion for the hated minister; and on the night of the 16th of Jan., 1772, the conspirators suddenly aroused the king in his bed, and making him believe that his life was in danger, obtained his order for arresting the queen, Struensee, Brandt, and all their adherents. The result was, that they were tried and convicted as traitors on the most preposterous charges. Struensee made a cowardly confession. The queen too confessed her guilt, but it is difficult to admit the truth of it. Struensee and Brandt were beheaded and quartered; and the queen, who was confined in the castle of Cronenburg, would have probably shared a similar fate, had not a British fleet appeared in the Baltic, and conveyed her to Zell, where she died in 1776.

STRUTT, JOSEPH, an artist and antiquary, was born in 1749, at Springfield, in Essex, and was a pupil of Ryland the engraver. Uniting the study of antiquities with the practice of his art, he published, in 1773, his work entitled the "Regal and Ecclesiastical Antiquities of England," containing representations of the English monarchs, from Edward the Confessor to Henry VIII. This was followed, among other works, chiefly of an antiquarian cast, by his "Biographical Dictionary of Engravers," in 2 volumes; and his "Complete View of the Dresses and Habits of the People of England." In 1801 he published his last and favourite work, entitled the "Sports and Pastimes," &c., with numerous plates. He was also the author of "Queen Hoo Hall," "Ancient Times," and "The Test of Guilt." Died, 1802.

STRUVE, GEORGE ADAM, an eminent German jurist, born at Magdeburg, in 1619. He studied at the universities of Jena and Helmstadt, and graduated LL.D. at the latter in 1646. At the close of the same year he was appointed professor of law at Jena, and, in 1648, assessor to the high court of

the circle of Saxony. He removed to Weimar in 1667, where he had the appointment of privy-councillor; but after seven years' service he was again called to Jena as Ordinarius of the Judicial College, and professor of Canon Law. On the appointment, in 1680, of a council of regency during the minority of the duke of Weimar, Struve was called to the responsible post of president, which he filled ten years. Notwithstanding the pressure of his professorial and judicial duties, Struve found time to publish numerous learned works on law; among which the most celebrated are—"Syntagma Juris Feudalis," "Syntagma Jurisprudentiæ Civilis," "Jus sacrum Justinianæum," and "Jurisprudenz, oder Verfassung der Landüblichen Rechte," the first treatise of the kind in the German language. It appeared in 1689. Struve was twice married, and had a large family by each of his wives. He died in 1692.

STRUVE, BURCHARD GOTTHELF, son of the preceding, was a learned and indefatigable German bibliographer. His talents attracted much notice at Jena, where he lectured on philosophy, antiquities, &c. His works on history, law, and philosophy, are numerous and highly esteemed. Born, 1671; died, 1758.

STRUVE, FRIEDRICH GEORGE WILHELM, a distinguished astronomer, born at Altona, in 1793. He was educated at the university of Dorpat, obtained a post in the observatory there in 1813, and was named director in 1817. He applied himself zealously to the study of "double stars," and the works he afterwards published, containing his "Observations," "Catalogue" and micrometric measurements, rank among the most important of their class. Struve was early engaged in the trigonometrical survey of Livonia, and he took part in various other important geodetic works, especially the measurement of an arc of the meridian in Russia and Scandinavia, the longest ever attempted. This was one of his latest tasks, and was executed in conjunction with General Tenner. Struve had been director of the noble observatory of Pulkowa since 1839, and he published a "Description de l'Observatoire central de Russie," and a Catalogue of its library. He engaged in laborious researches on the Milky Way, and determined the parallax of the star α Lyre. Died at St Petersburg, November 23, 1864.

STRYPE, JOHN, an ecclesiastical historian and biographer, was born at Stepney, in 1643; was educated at St Paul's School, and at Jesus College, Cambridge; and enjoyed the living of Low Layton, in Essex, 60 years, although he was never inducted. During his residence at this place, he applied diligently to the study of English history, and, by procuring access to numerous collections of manuscripts, was enabled to throw more light upon the period of the Reformation than any writer who went before him. His chief works are, "Ecclesiastical Monuments," 3 vols. folio; "Annals of the Reformation," 4 vols. folio; and an augmented edition of Stow's Survey of London, 2 vols. folio. He also wrote the Lives of the Archbishops Cranmer, Parker, Grindal, and Whitgift; and those of Sir John Cheke, Sir

Thomas Smith, and Bishop Aylmer. During the latter part of his life he was rector of Hackney, where he died in 1737, aged 94.

STUART, ARABELLA. [ARABELLA.]
STUART, CHARLES EDWARD. [CHARLES EDWARD.]

STUART, DANIEL, an able political writer, known for many years as the editor and proprietor of the Morning Post and the Courier, was born in Edinburgh, 1766; but removed to London when a mere lad, his brothers, under whose care he was placed, being established there in connection with the press. Through their means he became acquainted with the spirit and views of different parties; and in 1795 he purchased several shares in the Morning Post, of which he ultimately became sole proprietor and editor. His success was rapid and flattering. His own ready pen, aided by that of his brother-in-law, Mr (afterwards Sir James) Mackintosh, Coleridge, Southey, and Wordsworth, raised the reputation of the paper beyond that of any contemporary journal. In 1803 he sold the Morning Post, and having become joint proprietor of the Courier, he increased the fame of this journal by the same sagacity, industry, and talent, that had raised the other. In 1816 he retired into private life, and for thirty years enjoyed in easy competence the fruits of the labours of an active life. Died, 1846.

STUART, LORD DUDLEY COUTTS, eighth son of John, first marquis of Bute, by his second wife, Frances, daughter of Thomas Coutts, the banker, was born in 1803. Having graduated at Christ's College, Cambridge, in 1823, he proceeded on a continental tour; and in 1824 he married a daughter of Lucien Bonaparte, prince of Canino. In 1830 he became M.P. for Arundel, and distinguished himself by his advocacy of the Reform Bill, and the other measures of reform supported by the liberal party. After being without a seat in parliament for 10 years, he was returned for Marylebone in 1847, and continued to sit for this borough till his death. His chief title to remembrance rests on his attachment to the Polish cause, which he embraced on the outbreak of the insurrection in Poland in 1830, and to which he adhered with undeviating constancy. Died at Stockholm, November 17, 1854.

STUART, GILBERT, historian and miscellaneous writer, was born at Edinburgh, in 1742, and received his education in the university. He studied jurisprudence, but became an author by profession. In his 22nd year, he published a "Dissertation concerning the Antiquity of the British Constitution;" for which he was complimented with the degree of LL.D. His next work was a "View of Society in Europe;" but being disappointed of the professorship of law at Edinburgh, he removed to London, and became a writer in the Monthly Review. He, however, returned in 1773, and commenced the Edinburgh Magazine and Review, which was discontinued in 1776. Besides the works before mentioned, he wrote "The History of Scotland," a "History of the Reformation of Scotland," &c. Dropsy, brought on by a life of intemperance, caused his death in 1786.

CAN STUART), an eminent portrait-painter, was born of Scotch parents at Narragansett, Rhode Island, U.S., in 1755. He was brought early to Scotland, and is said to have graduated at the university of Glasgow. He subsequently became a pupil of West, in London, and began to practise as a portrait-painter, in 1781. He was very successful, and had among his sitters George III., George IV. (then prince of Wales), Louis XVI. of France, Sir Joshua Reynolds, his master, West, &c. In 1793 he returned to America, lived at Philadelphia, Washington, and Boston successively, and took the highest rank in his art among his countrymen. He painted the fine portrait of Washington which is now in the Boston Athenæum, besides portraits of Adams, Jefferson, and three other presidents of the United States. Died at Boston, July, 1828.

STUART, HENRY BENEDICT MARIA CLEMENT, cardinal of York, younger brother of Charles Edward, the Pretender, and the last descendant of the royal line of the Stuarts, was born at Rome, in 1725. When the last grand effort for the restoration of his family in 1745 proved abortive, he took orders, and in 1747 Pope Benedict XIV. raised him to the purple. The extraordinary events arising out of the French revolution had the effect of making the cardinal dependent on the bounty of the king of England; for having been obliged to flee to Venice when the French invaded Italy, he was indebted for his support to a pension from the English court. Died, 1807.

STUART, JAMES FRANCIS EDWARD. [JAMES.]

STUART, JAMES. [MURRAY, Earl of.]

STUART, JAMES, commonly called ATHENIAN STUART, a celebrated traveller, antiquary, and delineator of Athenian architecture, was born in London, in 1713. He originally gained his livelihood by painting; but having made himself master of Greek, Latin, and the mathematics, he travelled to Italy on foot, and afterwards visited Athens, in company with Nicholas Revett, a skillful architect, where they employed themselves in making drawings of the architectural relics which have escaped the ravages of time and violence. On his return to England, he became eminent as an architect, and was appointed surveyor to Greenwich Hospital; became F. R. S. and F. S. A., and published the result of his foreign labours in a valuable work, entitled "The Antiquities of Athens," 4 vols. folio. Died, 1788. There is a miniature portrait of Stuart in the National Collection.

STUART, JAMES, of Duncarn, was a scion of the noble house of Moray, and was born in 1776. He was bred to the legal profession, and became a writer to the signet in 1798. But with great aptitude for business, he became engrossed in political engagements, and distinguished himself by the vigour with which he maintained Whig principles in opposition to what was then called the "dynasty of Dundas" in Scotland. Certain truculent pasquinades reflecting on his honour and courage having been traced to Sir A. Boswell, the son of Dr Johnson's biographer, Mr Stuart fought a duel with him in March,

1822, when the baronet received a shot in the neck, which next day caused his death. Mr Stuart was tried for murder before the high court of justiciary, and was acquitted. His experiments in farming and commercial speculations in the year 1825 proved so disastrous as to compel him to embark for America. There he resided for three years; and on his return to England he published an account of his travels in the United States, which obtained great success. Soon after, he undertook the editorship of the Courier newspaper, and when Lord Melbourne became premier in 1835, he obtained the office of inspector of factories, which he held till his death. Mr Stuart was distinguished for his taste in the fine arts, and his eminent social qualities procured him a hearty welcome wherever he appeared. Died, 1849.

STUART, JOHN, A.M., F.R.S.A., an antiquarian writer, and professor of Greek in Marischal College, Aberdeen, was born at Castleton, Kincardine, in 1751. He was the youngest son of John Stuart, of Inchbrick, M.D., and lineally descended from Walter Stuart, of Morphee, in the Mearns, whose grandfather Murdoch, Duke of Albany, was grandson of Robert the Second, by Elizabeth Mure, of Rowallan. He was a profound antiquarian, especially on all subjects connected with Scottish history, and was the friend and correspondent of Pinkerton, Chalmers, Jamieson, Generals Hutton, Kay, &c. He was the author of the "Account of Marischal College and University," published in Sir John Sinclair's Statistical Account of Scotland; "Sketch of the Life of Iur Duncann Liddle," Aberdeen, 1790; and antiquarian essays communicated to the Royal Antiquarian Society of Scotland, consisting of "Observations upon the various Accounts of the Progress of the Roman Arms in Scotland," and "An Account of the Sculptured Pillars in the Northern Counties of Scotland." Died, 1827.

STUART, WORTLEY, Lady EMMELINE, whose name was long familiar to the literary world, was the second daughter of the duke of Rutland, by the Lady Elizabeth Howard, daughter of the 5th earl of Carlisle, and born in 1806. At an early age she gained considerable reputation as an authoress. She was a frequent contributor to the "Keepsake," the "Drawing-room Scrap-book," and other annuals, and confirmed her reputation by her sketches of travels in the United States, published under the title of "Etcetera," as well as by "Portugal and Madeira," "A Voyage in a Russian Steamer to St Petersburg," and by various poems. Lady Emmeline was of enthusiastic and poetic temperament, and probably, during her long residence abroad, had seen more of foreign countries and foreign society than any English lady of modern times. In 1831 she married the Hon. Charles Stuart Wortley, brother of Lord Wharfedale, but was left a widow in 1844. She died at Meyroot in 1855 from the effects of the kick of a mule, which threw her, and fractured her leg, while she was riding on the hills in the neighbourhood of Jerusalem.

STUBBS, GEORGE, a painter, was born at Liverpool, in 1724; studied at Rome; and,

on his return, settled in London, where he distinguished himself as a painter of animals, particularly horses. He was an associate of the Royal Academy; and published "The Anatomy of the Horse," and a "Comparative Anatomical Exposition of the Structure of the Human Body, with that of a Tiger and a Common Fowl." Died, 1806.

STUBBS, or STUBBE, JOHN, a splited lawyer, and a celebrated political writer, was born about 1541, and educated at Corpus Christi College, Cambridge, whence he removed to Lincoln's Inn. When the duke of Anjou became a suitor to Queen Elizabeth, Stubbs, who had become a Puritan, published a pamphlet against the alliance, entitled "The Discovery of a gaping Gulph, wherein England is likely to be swallowed up by another French Marriage." For this he was condemned to have his right hand cut off; and when the barbarous sentence was executed, Stubbs, with amazing fortitude, took off his cap with his left hand, and cried "God save the Queen."

STUERBOUT, DIECK, or DIRK VAN HAARLEM, a distinguished early Dutch painter, who flourished in the 15th century. His fame rests now on the two large pictures of scenes from the history of the Emperor Otto III., and his Empress Mary, painted for the council hall of Louvain, in 1468, and now forming part of the royal collection at the Hague. From the style and execution of these remarkable paintings, it is inferred that Dirk of Haarlem was of the school of the Van Eycks. He is sometimes called Dirk of Louvain.

STUKELEY, WILLIAM, a celebrated English antiquary, was born at Holbech, in Lincolnshire, in 1687; was educated at Bene't College, Cambridge, where he devoted his time principally to medical studies, and took the degree of M.B. He then settled at Boston, but removed to London in 1717, and in 1720 was admitted a fellow of the College of Physicians. In 1726 he went to reside at Grantham, where he acquired great reputation as a medical practitioner; but repeated attacks of the gout induced him to relinquish his profession and enter into holy orders; and he was presented to the living of All Saints, in Stamford. In 1747 the duke of Montague gave him the rectory of St George the Martyr, Queen Square, London, where he died, 1765. Dr Stukeley pursued his antiquarian researches with an unusual degree of spirit and enthusiasm, and he made important accessions to our knowledge of the early monuments of human art and industry belonging to our native country. But his speculations and theories were most fanciful and often absurd. His principal works are, "Itinerarium Curiosum; or, an Account of the Antiquities and Curiosities of Great Britain," 2 vols. folio; "Palæographia Sacra; or Discourses on the Monuments of Antiquity, that relate to Sacred History," 4to; "An Account of Stonehenge," folio; "Palæographia Britannica," 4to; "The History of Carausius," 2 vols. 4to, &c. It was Dr Stukeley who first introduced in England the pretended work of Richard of Cirencester, "De Situ Britannie." (See notice of RICHARD OF CIRENCESTER.)

STÜLER, AUGUST, the distinguished Prussian architect, was born at Berlin in 1800. He was one of the most distinguished pupils of Schinkel, with whom he remained as assistant till 1830. He made himself known and beautiful designs for cabinet-work (Vorlegeblätter für Moebeltischler), and then of numerous plans for public, useful, and decorative works. Besides many private houses which he built in Berlin, he designed the Council House at Perleberg, in the mediæval Italian style; he restored the Winter Palace of St Petersburg, the Berlin Exchange, and many seats of the nobility. His most celebrated work is the New Museum of Berlin, in the various parts of which he has successfully adopted various styles of architecture according to the destination of the several halls. Among his other works are the Exchange at Frankfort on the Main, the Catholic Church at Rhede, the palace of the grand-duke of Mecklenburg-Schwerin, and several churches at Berlin. Stüler long held the office of chief architect to the king of Prussia, and died at Berlin, in the spring of 1865.

STURGEON, WILLIAM, whose career presents a remarkable illustration of the successful pursuit of knowledge under difficulties, was born at Whittington, in Lancashire, 1783, and was apprenticed to a shoemaker. In 1802 he entered the Westmoreland militia; and two years later he enlisted in the royal artillery, in which corps he remained about 20 years. While in this corps he devoted his leisure to scientific studies, and appears to have made himself familiar with all the great facts of electricity and magnetism, which were then opening to the world. His earliest essays on electro-magnetism appeared in the Philosophical Magazine in 1823 and 1824. In 1825 he published, in the Transactions of the Society of Arts, the description of a complete set of novel electro-magnetic apparatus; and the Society of Arts testified their sense of the importance of this contribution by awarding to its author their large silver medal, with a purse of 30 guineas. He continued to furnish contributions to the Philosophical Magazine from time to time; and in 1830 he published a pamphlet, entitled "Experimental Researches in Electro-Magnetism, Galvanism," &c., comprising an extensive series of original experiments, and exhibiting an improvement in the preparation of the positive plates of the galvanic apparatus, which has not yet been superseded. In 1836, Mr Sturgeon communicated a paper to the Royal Society, which contains the description of a perfectly original magnetic electrical machine, in which a most ingenious contrivance was adopted for uniting the reciprocating electric currents, developed so as to give them one uniform direction. In the same year, the great industry of Mr Sturgeon was rewarded by two other important inventions. The first of these was that of the electro-magnetic coil machine, an instrument devised for the purpose of giving a succession of electric shocks in medical treatment, and which has been generally preferred by medical men to all others intended for similar purposes. The

other was an electric driving motion to works, Mr Sturgeon published a paper on Electricity, Magnetism, and Galvanism; and the publication, numerous scientific works, &c.—Soon after appointed to the philosophy in the Royal Military Academy, which he filled with credit. In 1842 of the Victoria at Manchester; afterwards discovered experimentalist in life, overwhelmed however, were by a government awarded to him STURM, CHRISTIAN, born in 1783, was chiefly known for his investigations on the We frequently represented countries, as we published "Monks every Day in the sacred poetry, &c. Died, 1786 STURM, JACOB, a celebrated mathematician, born in Geneva in 1803, was a professor of mathematics at the Sorbonne, Paris, and at the Polytechnic School, Paris, where he died, 1855. He was received soon after called to the Collège professor of School. The foreign member, and received English Died, 1855. STURM, classical scholar at Sledan (8 After study Paris in 1521 which pros decrees against who had doctrines, to nasium of abilities rather, in 15

other was an electro-magnetic engine, for giving motion to machinery. Besides these works, Mr Sturgeon edited the "Annals of Electricity, Magnetism, and Chemistry;" and published a treatise on electricity and galvanism; and one of his last works was the publication, in a collected form, of his numerous scientific Memoirs, in one volume.—Soon after he left the army he was appointed to the chair of experimental philosophy in the Honourable East India Company's Military Academy at Addiscombe, which he filled for many years with great credit. In 1842 he became superintendent of the Victoria Gallery of practical science at Manchester; but this institution was soon afterwards discontinued; and this able experimentalist saw himself, in the decline of life, overwhelmed with difficulties, which, however, were to a small extent mitigated by a government pension of £50 a year, awarded to him in 1849. Died, 1850.

STURM, CHRISTOPH CHRISTIAN, a German divine, born at Augsburg, in 1740. He is chiefly known as the author of "Reflections on the Works of God," which has been frequently reprinted in England and other countries, as well as in his own. He also published "Morning Converse with God, for every Day in the Year," several volumes of sacred poetry, highly esteemed in Germany, &c. Died, 1786.

STURM, JACQUES CHARLES FRANÇOIS, a celebrated mathematician, was born at Geneva in 1803. After studying at the university of that city and being engaged as tutor to the son of Madame de Staël, he settled at Paris, and was soon made known to many of the leading scientific men, among them, to Arago, Ampère, and Fourier. In May, 1829, he communicated in a memoir to the Academy of Sciences the theorem, on the discovery of which his reputation chiefly rests; a theorem which had vainly been attempted by some of the greatest mathematicians, and by which, in the best method hitherto known, the complete analysis and solution of numerical equations is effected. The first account of the discovery was published in the "Bulletin Universel des Sciences Mathématiques, Physiques, et Chimiques, with which he was connected. He was received at the Academy in 1836; was soon after called to the chair of mathematics at the Collège Rollin, and, in 1840, became professor of mechanics at the Polytechnic School. The same year he was chosen foreign member of the Royal Society of London, and received the Copley Medal. He visited England in the following year. Died, 1855.

STURM, JOHANN, an eminent German classical scholar and theologian, was born at Seldan (Schleiden), near Cologne, in 1507. After studying at Louvain, he settled at Paris in 1529, and established a school there, which prospered greatly; but the rigorous decrees against Protestants induced Sturm, who had long secretly held the reformed doctrines, to quit Paris in 1538. He gladly accepted the post of rector of the new gymnasium of Strasburg, and by his zeal and abilities raised it to so high a reputation that, in 1566, the Emperor Maximilian con-

stituted it a university. Sturm was its first rector. He was at the same time an active promoter of the reformation, and the steady friend of its persecuted adherents. His moderation and his leaning to the views of Calvin made him many enemies, and, in 1583, he was dismissed from his office, but was allowed to receive the salary. He wrote many works, philological, theological, and educational, in Latin so pure and elegant that he was named the German Cicero. He also edited the works of Cicero. Died, near Strasburg, 1589.

STURT, JOHN, engraver, was born in London, in 1658. He is principally celebrated for the extraordinary minuteness and beauty of his letters. The most curious of his works is the "Book of Common Prayer," which he executed on silver plates. Each page is headed with a vignette, and prefixed to the book is a portrait of George I., the lines of the face being expressed by writing so small, as scarcely to be read with a magnifying glass. This writing consists of the Lord's prayer, the decalogue, the prayers for the royal family, and the 21st psalm. Died, 1730.

SUAREZ, FRANCISCO, a celebrated Spanish Jesuit, born at Granada in 1548. While studying at the university of Salamanca, he was induced to enter the order of Jesuits; and after teaching philosophy and theology at Valladolid, Rome, Alcalá, and Salamanca, he was appointed, by Philip II., first professor of divinity at the university of Coimbra, in 1597. He was a man of fervid piety, of retiring disposition, unwearied in the discharge of his professional and religious duties, and a voluminous writer. He took part in the controversy on grace and free-will between the Jesuits and the followers of Molina, and conceived a system called *Congruism*, a modified Molinism. His works were collected and published after his death in 23 vols. folio. Among them is the celebrated "Defensio Catholica: Fidei contra Anglicana: Sectæ Errores," which was written by command of Pope Paul V., against the oath of allegiance required by James I. It appeared in 1613, and was burnt publicly by the hangman both at London and Paris. Died at Lisbon, 1617.

SUTERMANS, JUSTUS, a portrait and historical painter of Antwerp, who died in 1681.

SUCHET, LOUIS GABRIEL, duke of Albuféra, marshal of France, was born at Lyons, in 1772, and entered the army as a volunteer. He distinguished himself in Italy and Switzerland on numerous occasions; and, before the end of the year 1800, he had attained the rank of major-general. The battles of Marengo and Austerlitz added to his fame; and in 1803 he was appointed general-in-chief in Aragon, a post which he retained till the French were expelled from the Peninsula. During that period he displayed great knowledge of the art of war, succeeded in restoring discipline in the army, took Lerida, Tarragona, and other fortified places, occupied Mont Serrat, and was rewarded with the rank of marshal and a dukedom. By the justice of his administration and the humanity with which he

reated the conquered province, he won the grateful esteem of the people. On Napoleon's return from Elba, the frontiers of Savoy were intrusted to his defence. Died, 1826.

SUCKLING, Sir JOHN, poet and courtier, was born at Whitton, in Middlesex, in 1609. His father, who was comptroller of the royal household, sent him early on his travels, and he served a campaign in the army of Gustavus Adolphus. On his return he acquired reputation as a wit and a dramatist; and, at the beginning of the Scotch rebellion, he raised a troop of horse for the king's service, but their conduct in the field disgraced both themselves and their commander. An abortive attempt to effect the escape of the earl of Strafford, confined in the Tower under articles of impeachment from the Commons, implicated Sir John so seriously, that he thought it advisable to retire to France, where he died in 1641. His writings consist of letters, plays, and poems; the last of which have obtained a place in standard collections.

SUE, EUGENE, one of the most prolific novelists that France has produced, was born at Paris in 1801. Educated at the Lycée Bonaparte, he studied medicine in the hospitals and schools of Paris, entered a company of the Royal Body Guards as aide-major in 1823, and soon afterwards was transferred to the staff of the French army then preparing to enter Spain, under the Duc d'Angoulême, and was present at the siege of Cadiz, and at some minor operations. In 1825 he exchanged the army for the naval service, and visited America, Asia, and the Mediterranean coasts; thus obtaining a knowledge of ocean scenes and sailor-life which he afterwards turned to good account in his earlier tales. In 1828 he took part in the engagement at Navarino. In the following year, by the death of his father, he came into possession of a considerable fortune, became a painter, and entered the studio of Gudin. After contributing to some minor stage pieces, he wrote various novels, chiefly illustrative of naval life, which had great popularity in France. From 1832 to 1840 Eugène Sue confined himself to that class of fictions in which he endeavoured to emulate Fenimore Cooper in sea adventures, and Sir Walter Scott in historical delineations. But changing on a sudden his political views, he embraced the opinions of the Socialists, and in his "Mathilde," published in 1841, he laboured to expose the wrongs of the lower classes and the miseries of the poor, which he afterwards developed with so much power in the "Mysteries of Paris," and the "Wandering Jew." These two novels, which originally appeared in the "Journal des Débats," and the "Constitutionnel," were welcomed with great enthusiasm in France, and brought him a large accession of fame and fortune. In the columns of the "Constitutionnel," Eugène Sue, in 1846, published his "Martin l'Enfant Trouvé," a socialist romance, and in the following year "Les Sept Péchés Capitaux," "Les Mystères du Peuple," published in 1849-1856, which was intended to be an exposure of the misery to which the common people of every country have been reduced

in all ages of the world by injustice and tyranny, was suppressed by the government, in 1857, as a seditious and immoral publication. In 1849, after the revolution of February, Eugène Sue adopted the strongest democratic and socialist opinions, and was elected in 1850 a member of the National Assembly. His name was thought to shed so much credit over the visions of the *Red Republic* that he was considered one of its chiefs, and accordingly when Louis Napoleon perpetrated the *coup d'état* in December, 1851, Eugène Sue was driven into exile, and died proscribed in 1857.

SUETONIUS TRANQUILLUS, CAIUS, Roman historian, who lived in the 1st and 2nd centuries of our era. He was the son of a Roman officer, became an advocate at Rome, and afterwards secretary (*magister epistolarum*) to the Emperor Hadrian. This place he lost through some familiarities, not clearly described, with the Empress Sabina. Suetonius was the friend of Pliny the younger. He wrote numerous works, of which four are extant. The most important is his "Vite duodecim Cesarum," which contains a large mass of curious and valuable facts, and though not systematically or rhetorically composed, but chiefly *anecdotic*, is esteemed impartial and trustworthy. It has passed through a great number of editions, and has been translated into almost all European languages. His other extant works are Notices of grammarians, rhetoricians, and poets. An English translation of Suetonius is included in Bohn's Classical Library.

SUETONIUS PAULINUS, a celebrated Roman general, who distinguished himself, A.D. 41, by reducing the revolted Mauritians. In 59 he was appointed to the government of Britain, subdued the island of Mona (Anglesey) in 61, and the same year vanquished the heroic Boadicea. He soon after returned to Italy, became consul, and took part in the war with Vitellius.

SUEUR, EUSTACHE LE. [LESUEUR.]
SUFFOLK, CHARLES BRANDON, Duke of, was nephew of Sir William Brandon, standard-bearer to the earl of Richmond at the battle of Bosworth, and being early taken to court, became the companion of Prince Henry. After the accession of the latter, as Henry VIII., to the throne, Brandon was created Viscount L'Isle. He accompanied the king to France in 1513, and on the conclusion of peace in the following year attended the beautiful Princess Mary to France on her marriage with the old and almost dying king, Louis XII.; a marriage of policy, arranged by Wolsey, to which the young princess most reluctantly assented, and not without obtaining from her brother Henry a distinct promise that she should do "as she list" next time. The king knew of her love for Suffolk at that time. On the death of Louis, about three months after the marriage, Suffolk was sent ambassador to congratulate Francis I. on his accession. During his stay he was privately married to the widowed queen, and returning with her to England in April, 1515, they were publicly married at Greenwich in the presence of the king and queen, in May. It was displeasing

to the king, but of Wolsey, instead of imposing hard terms on her plate and jewels, she was bound her to her former marriage, in favour of Henry on various occasions from Calais in 1518 took part in the negotiations in England at the siege and and died in 1522 twelve years.

Windsor. Mary folk, who after **SUGER**, ABEL VI. and Louis I. an obscure family was brought up where he was taken on the accession in 1103, Suger was a minister. He was 1122, and assumed church dignities. Bernard induced him to leave government, but he had a large share in the affairs, and showed Louis VII. confidence. He endeavoured to go on the death of the regency due to his old age he was even proposed as general. By his death, in 1151, the life of his minister count of the administration.

SUIDAS, a Greek lived in the 10th of a lexicon, which contains information on the subjects.

SULLA, or **SULLA**, or a celebrated Roman was descended from an illustrious family youth in dissipation of his mother's distinction, and a questor. He Marius, in Africa other occasions ship in the 49th piracy he was landed in the mission of the besieged and the multitudes of people succeeded to Asia ing Mithridates tagueous treaty During his his enemies Rome. Marius of the friend rents; he his property died; and as

to the king, but, softened by the influence of Wolsey, instead of punishing it as treason, he imposed hard terms on Mary; taking all her plate and jewels and her full dowry, and binding her to repay the expenses of her former marriage. Suffolk still retained the favour of Henry, and was employed by him on various occasions. He made an incursion from Calais in 1523, almost reaching Paris; took part in the suppression of the insurrections in England in 1536-37; was present at the siege and capture of Boulogne in 1544; and died in 1545, having survived Mary twelve years. His remains were buried at Windsor. Mary was the third wife of Suffolk, who after her death married a fourth.

SUGER, ABBÉ, first minister to Louis VI. and Louis VII., of France, was born of an obscure family in the 11th century, and was brought up at the abbey of St Denis, where he was the companion of Louis (VI.). On the accession of this prince to the throne, in 1103, Suger became his confidential adviser. He was named abbot of St Denis in 1122, and assumed the usual pomp of high church dignitaries; but the preaching of St Bernard induced him to renounce it. He had a large share in the conduct of the government, both in home and foreign affairs, and showed great practical wisdom. Louis VII. continued him in the same office. He endeavoured to prevent the young king going on the crusade, but failing, accepted the regency during the absence of Louis. In his old age he wished to promote a crusade, and even proposed to raise an army and be its general. This mad project was crossed by his death, in 1152. The Abbé Suger left a Life of his master, Louis VI., and an account of the principal events of his administration.

SUIDAS, a Greek writer, supposed to have lived in the 10th century, was the compiler of a lexicon, which is valuable for the fragments it contains of many lost works, and the information it gives respecting the authors.

SULLA, or **SYLLA**, **LUCIUS CORNELIUS**, a celebrated Roman general and statesman, was descended from a branch of the once illustrious family of the Cornelii; passed his youth in dissipation; and having obtained wealth by the bequests of a courtesan and of his mother-in-law, he aspired to political distinction, and in 107 B. C. he was chosen quaestor. He served with reputation under Marius, in Africa, in Pontus, and on various other occasions; and he rose to the consulship in the 49th year of his age. At its expiration he set sail for the East; and having landed in Thessaly, and received the submission of several Greek cities, he besieged and took Athens, and slaughtered multitudes of its inhabitants. He then proceeded to Asia, and after repeatedly defeating Mithridates, he concluded a very advantageous treaty with that powerful enemy. During his three years' absence from Italy, his enemies had regained the superiority in Rome. Marius had been recalled; the blood of the friends of Sulla had been shed in torrents; he himself had been proscribed, and his property confiscated. Meanwhile Marius died; and as soon as Sulla returned with his

victorious army, they entered Rome, and began the dreadful work of retaliation. At length, having glutted his vengeance by the murder or proscription of many thousand citizens, and the desolation of several Italian cities, he celebrated his bloody deeds by a triumph, exceeding in splendour any that preceded it, and caused himself to be named dictator, B. C. 81. He now ruled without restraint, repealed and made laws, abolished the tribuneship, added 300 knights to the senate, and admitted 10,000 slaves of persons proscribed to the rights of citizenship. Having governed the Roman world two years as dictator, he voluntarily laid down his power, and retired to private life. But resuming his early habits of debauchery, he was attacked with a disgusting disease, and he died, B. C. 78, aged 60.

SULLIVAN, JOHN, an American general, who served with reputation in the republican army at the battles of Brandywine and Germantown, in 1777, and subsequently against the Indians; but was deprived of his command, on a charge of peculation, and lived in retirement till 1788, when he became a member of congress, and was afterwards judge of New Hampshire. Born, 1741; died, 1795.

SULLIVAN, JAMES, brother of the preceding, was successively justice, attorney-general, and governor of the province of Massachusetts. He was for many years president of the Historical Society of Massachusetts; and was the author of "Observations on the Government of the United States of America," a "Dissertation on the Constitutional Liberty of the Press," &c. Died, 1808.

SULLY, MAXIMILIEN DE BETHUNE, Duke of, a celebrated French statesman and warrior, was born at the castle of Rosny, in 1559, and educated in the Protestant faith. At an early age he entered the service of the king of Navarre, afterwards Henry IV., of France, to whom he ever continued to be firmly attached. While at Paris with the prince, he narrowly escaped from the massacre of St Bartholomew, having been preserved by the president of the college of Burgundy, who concealed him for three days. In the service of the young king of Navarre, the Baron de Rosny, as he was then styled, distinguished himself on several occasions by a bravery approaching to rashness. He contributed to the victory of the Huguenots at the battle of Coutras; and took part in the battles of Arques and Ivry, at the latter of which he was wounded. But his abilities as a diplomatist and financier were no less remarkable. In 1586 he concluded a treaty with the Swiss, for a supply of 20,000 troops for his master's service; in 1597 he was placed at the head of the department of finance; and, two years afterwards, he was declared superintendent. About the same time he also negotiated the marriage of Henry with Mary de' Medici. In his embassies to England, first to Queen Elizabeth, and afterwards to James I., he displayed great penetration and address, and concluded a treaty with James I., advantageous to both countries. In addition to his other offices, he was appointed grand

surveyor of France, grand master of the artillery, governor of the Bastille, and superintendent of fortifications throughout the kingdom. His labours as minister of finance were attended with the happiest success; and the revenues of the government, which had been reduced to a state of complete dilapidation, by the combined effect of civil anarchy and warfare, were by his care restored to order. With a revenue of 35,000,000, he paid off, in 10 years, a debt of 200,000,000, besides laying up 35,000,000. Though frequently thwarted in his purposes by the rapacity of the courtiers and mistresses of the monarch, he nobly pursued his career, ever distinguishing himself as the zealous friend of his country, and not the temporizing minister of his master. His industry was unrearied. He rose every morning at 4 o'clock, and after dedicating some time to business, he gave audience to all who solicited admission to him. After his return from his mission to England, he was made governor of Poitou, and grand master of the ports and harbours of Provence; and the territory of Sully-sur-Loire was erected into a duchy in his favour, in 1606. After the death of Henry IV., Sully retired from public affairs, and he died in 1641. His "Memoirs," which are highly important and interesting, were translated into English by Charlotte Lennox, and form 8 vols.

SULPICIUS GALLUS, one of the earliest of the Roman astronomers. Serving in the army of *Emilius Paulus*, in Greece, during the year 168 B.C., his skill enabled him to discover that an eclipse of the moon would happen on the night previous to the day fixed for giving battle to *Persens*, king of Macedonia, and thus prevent the panic by which the soldiers would have otherwise been seized. He afterwards filled the office of consul.

SULPICIUS SEVERUS, an ecclesiastical historian of the 5th century. He wrote the "Life of *St Martin of Tours*," and an "Abridgment of Ecclesiastical History."

SULZER, **JOHANN GEORGE**, a Swiss philosophical writer, born in the canton of Zürich, in 1720. He was for a short time a country curate, then private tutor, until in 1747 he was appointed professor of mathematics at the *Joachimsthal College*, Berlin. He was received three years later associate of the Academy of Sciences in the class of speculative philosophy. After the loss of his wife, in 1760, he spent several years in his native country, but, by the desire of the king, *Frederick II.*, he returned to Berlin, and was named professor of philosophy at the Military Academy, with a handsome pension. Sulzer had a great reputation in his day as a philosopher, but he has added nothing of permanent value to the literature of philosophy. His most celebrated work is the "*Allgemeine Theorie der schönen Künste*," published in 1771-74. His object in this investigation of the fine arts was to find a moral explanation of their influence. Of his other works may be named, his "*Moralische Betrachtungen über die Werke der Natur*;" and "*Vermischte philosophische Schriften*." Died at Berlin, 1779.

SUMAROKOV, **ALEXANDER**, a Russian

poet and dramatist, the son of a general officer, was born at Moscow in 1727. He was educated in the seminary of cadets at Petersburg; and, while a student, wrote a tragedy, called "*Koref*," which was acted by his schoolfellows, and afterwards performed in the presence of the court, with such applause, as encouraged the author to proceed in his dramatic career. Besides tragedies and comedies, he wrote odes, idylls, fables, satires, and other poems; together with a few prose pieces. He was created a councillor of state, and honoured with other marks of distinction. Died, 1777.

SUNDERLAND, **HENRY SPENCER**, first Earl of, was born in 1620. At the age of 13 he succeeded, by his father's death, to the title of Lord *Wormleighton*. He joined the king, *Charles I.*, at Nottingham, at the beginning of the civil war, not, however, from any sympathy with the royal aims and cause. He fought with distinction at *Edgehill*, followed *Charles* to Oxford, was created earl of *Sunderland* in June, 1643, and was killed at the battle of *Newbury* (as was Lord *Falkland*), 20th September of the same year. His wife was the beautiful and accomplished *Lady Dorothy Sidney*, sister of *Algernon Sidney*.

SUNDERLAND, **ROBERT SPENCER**, second Earl of, first minister of *James II.*, was only son of the preceding, and was born about 1641. He spent some time on the continent during the Commonwealth, was sent by *Charles II.* on embassies to Madrid and Paris, in 1671, and was made a privy-councillor three years later. After another mission to Paris in 1678, he was appointed secretary of state; first opposed and then supported the bill for the exclusion of the duke of *York* from the throne; for which he fell into disgrace with the king, and was excluded from the council and the secretaryship. He was, however, soon reinstated, and in 1685 was made president of the council by *James II.* While receiving the full confidence of the king, *Sunderland* was in the pay of France, and was in negotiation with the prince of *Orange*. In 1687, he was created Knight of the Garter, and the same year he professed himself a Catholic. *Edward Petre*, a Jesuit, was his confidential instrument, the two being the chief advisers of the king. In 1688 his intrigues became known to *James*, and being dismissed from office, he retired, on the landing of the prince of *Orange*, to Holland. He was excepted out of the act of *Indemnity*, and remained abroad two years. But after his return he gained the confidence of *William III.*, and was his chief adviser. The king honoured him with a week's visit at his seat at *Althorpe*, in 1695, and soon after made him lord chamberlain and privy-councillor. He retired from public life in December, 1697, and died in 1702. Clever, insinuating, and unscrupulous, *Sunderland* left a character for baseness that is happily matched by that of few English statesmen.

SUNDERLAND, **CHARLES SPENCER**, third Earl of, prime minister of England, was second son of the preceding, and was born in 1674. He was returned to parliament as member for *Tiverton*, in 1695, and succeeded his father in the peerage in 1702. After the

death of his first duke of *Newcastle* 1699, a daughter thus strengthened the Whig party. In the next year in Scotland; and a pointed one of state. death of his first wife, a daughter of the duke of Newcastle, he married, in January, 1699, a daughter of the duke of Marlborough, thus strengthening his relation with the Whig party. In 1705 he was sent on political missions to Vienna and Berlin; took part the next year in negotiating the union with Scotland; and at the close of 1707 was appointed one of the principal secretaries of state. Dismissed in 1710, he refused the large pension which the queen offered him, and said that if he could not serve his country, at least he would not be a burden to it. On the accession of George I., Sunderland was named lord-lieutenant of Ireland, and took no prominent part in public affairs. In 1715 he was appointed lord privy-seal, and two years later he again became secretary of state and president of the council. In March, 1718, he was made first lord of the treasury. Sunderland, with other ministers, was deeply involved in the South Sea Scheme; but on the investigation of his case by the House of Commons he was acquitted. Though he was dismissed from his offices, he continued to exercise great influence on affairs till his death, which took place in April, 1722.

SURREY, Earl of. [HOWARD, HENRY.]
SUSSEX, Earl of. [RATCLIFFE, THOMAS.]

SUSSEX, H. R. H. AUGUSTUS FREDERICK, Duke of, was the sixth son of King George the Third, and was born at Buckingham Palace, Jan. 27, 1773. Having made some progress in his studies in England, he was sent to Göttingen to complete them; thence he went to Italy, and while there, and still a minor, he married Lady Augusta Murray, second daughter of the earl of Dunmore. This marriage gave great offence to the king, and the prerogative court pronounced it to be null and void. The young couple, however, continued to live together as man and wife. The lady died in 1830, leaving two children, the elder of whom, Sir Augustus d'Este (since dead), claimed to be considered legitimate. This marriage, and the duke's connection with the Whig party, completely alienated him from his father, and of course from the court; and he had arrived at the age of 28 before he was created duke of Sussex, with an income of £12,000 per annum, which was subsequently increased to £18,000. His royal highness was a steady friend to art, science, and literature; and his presence as chairman at dinners or meetings for the benefit of public charities met always be reckoned on. We shall only add, that though but moderately learned, he knew how to value learning; his library was very extensive, and, perhaps, the richest private collection in England, in Bibles, in various tongues and of various editions. By his will he seemed to wish to be as much separated from his family in his death as he had been in his life, for he gave orders that he should be buried at the cemetery at Kensall Green, and not at Windsor! Died, April 21, 1843, aged 70.—His daughter, Mlle d'Este, married Sir Thomas Wilde, who in 1850 became lord-chancellor, and was raised to the peerage with the title of Baron Truro.

SUTCLIFFE, MATTHEW, an English divine, was born in Devonshire, and educated at Trinity College, Cambridge. He was admitted a civilian in 1582; but took orders, and became dean of Exeter. He founded a college at Chelsea, the fellows of which were to be employed in writing the annals of their times, and in combating the errors of Popery and Pelagianism. Sutcliffe was himself the first provost; but the establishment fell to decay, and became at last an asylum for invalid soldiers, being part of the present Chelsea Hospital. He was an eminent controversialist, and wrote numerous tracts against the Catholic propagandists. Died, 1629.

SUTTON, THOMAS, the founder of the Charter House, was a wealthy English merchant of the age of Elizabeth. He was born in 1532, at Knalthe, in Lincolnshire; received his education at Eton and Cambridge, and afterwards studied at Lincoln's Inn. On becoming secretary to the earl of Warwick, he was made master of the ordnance at Berwick, where he signalized himself during the rebellion raised by the earls of Northumberland and Westmoreland. On account of his services at that period, he obtained a patent for the office of master-general of the ordnance in the north, for life. In 1573 he commanded one of the batteries, which compelled the castle of Edinburgh to surrender to the English. While thus employed, he was singularly fortunate in a purchase which he made of two valuable manors from the bishop of Durham, with their coal mines, which laid the foundation of his immense riches. At the time of the Spanish armada he is said to have completely equipped a ship of war at his own expense, called by his own name, and sent to join the fleet under Drake. His personal expenditure was in a princely style, till the death of his wife, in 1602, threw him into melancholy, which occasioned a total change in his mode of living; and he then resolved to dedicate his vast wealth to the benefit of his fellow-creatures. He accordingly purchased from the earl of Suffolk the dissolved monastery of the Chartreux, called Howard House, and there founded the munificent institution, known now as the Charter House; but the founder scarcely lived to witness the completion of his noble establishment. He died in 1611, and his remains, which at first were deposited in Christchurch, Newgate Street, were afterwards removed to a vault prepared for them in the chapel of the Charter House.

SUWAROW, or SUVAROFF, ALEXANDER VASSILOVICH, Count Rymnikski, Prince Italinski, a celebrated Russian field-marshal, was born in 1730, at Suskol, in the Ukraine, and educated at the cadet school of St Petersburg. He entered the army as a private soldier, distinguished himself during the Seven Years' War; and, after 20 years' service, was raised to the command of a regiment. In 1768 he obtained the rank of brigadier-general, and served several campaigns in Poland, receiving, in reward for his courage and conduct, the crosses of three Russian orders of knighthood. In 1773 he was appointed to the command of a division under Count Romanzoff, and com-

pletely defeated a portion of the Turkish army at Turtakey, killing several of the enemy with his own hand. Crossing the Danube, he afterwards, in conjunction with the force under Kamenskoy, routed the army of the Turks with great slaughter, and captured the whole of their artillery. In 1783 he reduced the Budziac Tartars under the Russian yoke. At the battle of Kinburn, the siege of Oczakow, and the battle of Fockzami his daring valour was equally displayed; and, in September, 1789, the Austrian troops, under the prince of Saxe-Coburg, being surrounded, on the banks of the Rymnik, by 100,000 Turks, owed their preservation to his timely arrival with 10,000 Russians, who not only rescued them from a destruction that appeared inevitable, but occasioned the utter overthrow of the enemy. The next and most sanguinary of his actions was the storming of Ismail. In 1790, this strongly fortified town had resisted all attempts to reduce it for a period of seven months, when Suwarow received temporary orders from Prince Potemkin to take it without delay, and pledged himself to execute the task assigned him in three days. Of the sacking of the place on the third day, and the massacre of 40,000 of its inhabitants, of every age and sex, the accounts are most revolting. The announcement of his bloody triumph was made by the general, who affected a Spartan brevity in his despatches, in the words "Glory to God! Ismail is ours." Peace being proclaimed, the empress had leisure to mature her designs against the devoted kingdom of Poland; and Suwarow was selected as a fit instrument to carry them into execution. He marched, accordingly, at the head of his troops, to Warsaw, destroying about 20,000 Poles in his way, and ended a campaign, of which the unprincipled partition of the country was the result. On this occasion he received a field-marshal's baton, and an estate in the dominions which he had contributed to annex to the Russian crown. The last and most celebrated of his actions was his campaign in Italy, in 1799, when his courage and genius for a while repaired the disasters of the allied forces. Paul gave him the command of the Russian forces destined to act with the Austrians, and the emperor created him field-marshal and commander-in-chief of the Austrian troops in Italy. After gaining several brilliant victories, and driving the French from all the towns and fortresses of Upper Italy, the plan of operations was changed, and the expected reinforcements from Austria did not arrive. The Russian hero, however, effected a masterly retreat from Switzerland, and entering Germany, marched to Russia by order of his sovereign. For his service in this campaign he was created a prince, by the title of Italiuski. But he was treated by Paul with great ingratitude, which deeply affected his spirits; and he died of chagrin, in 1800.

SWAMMERDAM, JOHN, a celebrated naturalist and anatomist, was born at Amsterdam, in 1637; took his medical degree at Leyden, but applied himself chiefly to anatomy and entomology, formed a very valuable cabinet of natural history, and ex-

celled in the art of injecting the vessels of dissected bodies with wax, and in anatomizing the minutest part of insects. He was the author of a "General History of Insects," and a "History of the Day-fly." Rendered hypochondriacal by intensity of study and other causes, he became totally unfit for society, in which state he received impressions from the mysticism of Antoinette Bourignon, whom he followed to Holsteia. He afterwards returned to Amsterdam, where he died, in 1680.

SWEDENBORG, EMANUEL, founder of the "New Church," and one of the most distinguished men of science of the 18th century, was born at Stockholm in 1688, and carefully educated under the care of his father, bishop of Skara, in West Gothland, in the principles of the Lutheran Church. He was remarkable for his religious susceptibility in his youth, and his parents said that angels spoke through him. After pursuing his studies, and taking the degree of Ph. D. at Upsala, he went on his travels in 1710, and visited the universities of England, Holland, France, and Germany. On his return, he was appointed assessor extraordinary to the College of Mines, and in 1719 was ennobled, upon which occasion his name was changed from Swedberg to Swedenborg. He had in the previous year achieved a great engineering feat, in the transport, over a mountain district, of several galleys and bunts, for service at the siege of Frederichshall. In 1721 he again travelled to examine mines, &c. He continued his scientific studies with an ardour that placed him in the first rank of European philosophers, until the year 1743, when, as he himself affirms, a new era of his life commenced, and he was permitted to hold intercourse with the inhabitants of the invisible world. In 1747 he resigned his office in the mining college, retired from public life, and, spending his time alternately in Sweden and in England, devoted himself to the publication of his theological works. These are in themselves sufficiently numerous to form a life's work, and present throughout evidences of the deepest religious feeling. The style of composition marks them as works of a master-mind; they are filled with illustrations from the scientific and metaphysical lore of their author, and present, perhaps, as remarkable a combination of science and theology as is anywhere to be met with. Though it is frequently affirmed that Swedenborg laboured under a delusion, his writings show no symptoms of aberration; the last, finished but a few months before his death, being singularly clear, logical, and free from enthusiasm. He was always regarded as a learned and pious man; and it would appear that the story of his insanity rests for its support upon the word of a single enemy. He was never married, and his habits and mode of life were remarkable for their simplicity. The believers in his doctrines are now become a numerous body, not only in various countries of Europe, but in America. Of his very numerous works it is impossible to name more than a few of the most important. In science, the "Dædalus Hyperboreus," published 1716—18; "Opera philo-

sophica et Mino Regni Animalis, in theologia, the Cultu et Amore Helli," "On Conj Christian Religio Representative as the type of "there is no su his theological w commanding; y must be made."

SWIFT, Dr Patrick's, a eel and miscellaneous lin, in 1667. He Swift, vicar of who married El poet, and by her sons, named Jo attorney, had a side in Ireland his widow preg her brother-in-torney at Dubl the subject of returned to her she left this chi who sent him kenny, and nex poetry, to the suits, especially end of 4 years and even at the admitted special his uncle, and came to Englai William Temp Swift's mother with kindness, During his res he had frequen liam, who offe which he decl reected to the quarrelled wit Ireland, where a prebend in th soon returned sinking under his company r few remaining they therefore his death, Swi a pecuniary lo papers. sophlea et Mineralia," 1731; " (Economia Regni Animalis," and " Regnum Animale." In theology, the " Arcana Coelestia," " De Cultu et Amore Dei," " On Heaven and Hell," " On Conjugal Love," and the " True Christian Religion." Emerson, who in his " Representative Men " selected Swedenborg as the type of the mystic, remarks that " there is no such problem for criticism as his theological writings, their merits are so commanding; yet such grave deductions must be made." He died in London, in 1772.

SWIFT, Dr JONATHAN, dean of St Patrick's, a celebrated political, satirical, and miscellaneous writer, was born at Dublin, in 1667. He was the grandson of Thomas Swift, vicar of Goodrich, in Herefordshire, who married Elizabeth Dryden, aunt of the poet, and by her had six sons. One of these sons, named Jonathan, who was bred an attorney, had married before he went to reside in Ireland; and, dying soon after, left his widow pregnant. She went to live with her brother-in-law, Godwin Swift, an attorney at Dublin, where she gave birth to the subject of this article. When Mrs Swift returned to her friends in Leicestershire, she left this child to the care of his uncle, who sent him first to the school of Kilkenny, and next to Trinity College, Dublin, where, applying himself to history and poetry, to the neglect of academical pursuits, especially mathematics, he was at the end of 4 years refused the degree of B.A., and even at the end of 7 years he was only admitted *speciali gratia*. In 1688 he lost his uncle, and being left without support, he came to England, where he waited on Sir William Temple, who being related to Swift's mother by marriage, received him with kindness, and made him his companion. During his residence with that statesman, he had frequent interviews with King William, who offered him a troop of horse, which he declined, his thoughts being directed to the church. After some time he quarrelled with his patron, and went to Ireland, where he took orders, and obtained a prebend in the diocese of Connor. But he soon returned to Sir William Temple, who, sinking under age and infirmities, required his company more than ever. During the few remaining years of that statesman's life, they therefore remained together; and, on his death, Swift found himself benefited by a pecuniary legacy and the bequest of his papers. He next accompanied Lord Berkeley, one of the lords justices, to Ireland, as chaplain, and obtained from him the livings of Laracor and Rathbiggan, on the former of which he went to reside. During his residence there, he invited to Ireland Miss Johnson, the lady whom he has celebrated by the name of Stella, and who was the daughter of Sir William Temple's steward. She was accompanied by a Mrs Dingley, and the two ladies lived in the neighbourhood when Swift was at home, and at the parsonage-house during his absence; which mysterious connection lasted till Stella's death. In 1701 he took his doctor's degree, and entered on public life as a political pamphleteer. He also published, anonymously, his humorous " Tale of a Tub," and the " Battle of

the Books." On the accession of Queen Anne he visited England, where he lived during a great part of her reign, and distinguished himself as a powerful writer on the side of the Tories. Having become intimate with Harley and Bolingbroke, he exerted himself strenuously in behalf of their party, taking a leading share in the Tory periodical, the Examiner, while with his battery of pamphlets and pasquinades, replete with bitter sarcasm or bold invective, he kept up a constant and galling fire on their political adversaries. But though immersed in politics, he did not neglect general literature. In 1711 he published a " Proposal for correcting, improving, and ascertaining the English Tongue," in a letter to the earl of Oxford, the object of which was to establish an institution to secure the purity of the language. A bishopric in England was the grand object of his ambition; but Archbishop Sharpe, on the ground, it is said, of his " Tale of a Tub," having infused into the mind of Queen Anne suspicions of his orthodoxy, the only preferment his ministerial friends could give him, was the Irish deanery of St Patrick's, to which he was presented in 1713. He accordingly, though by no means willingly, returned to Dublin, where he attended to his ecclesiastical functions, and made some important reforms in the chapter of St Patrick's. In 1716 he was privately married to Miss Johnson; but the ceremony was attended with no acknowledgment which could gratify the feelings of the victim of his pride and cruelty. The ascendancy which he acquired over Miss Hester Vanhomrigh, another accomplished woman, was attended with circumstances still more censurable. He became acquainted with her in London, in 1712; and as she possessed, with a large fortune, a taste for literature, Swift took pleasure in affording her instruction. The pupil became enamoured of her tutor, and even proposed marriage to him; but being probably at that time engaged to Stella, he avoided giving her a decisive answer. This affair terminated fatally; for, ultimately discovering his secret union with Stella, the unfortunate lady never recovered the shock, and died in 14 months after, in 1723. It was about this period that he made his first great efforts to better the condition of Ireland. He published a " Proposal for the universal Use of Irish Manufactures," which rendered him highly popular; and when his celebrated " Letters " appeared, in which he so ably exposed the job of Wood's patent for a supply of copper coinage, he became the idol of the Irish people. Soon after this, he wrote his admirable " Gulliver's Travels;" and the next event worthy of record is the death of his much-injured Stella. And now the fate which he had often apprehended overtook him; the faculties of his mind decayed, and he sank into absolute idiotcy. After three years of mental suffering, he died, in 1745, aged 77; having bequeathed the greatest part of his fortune to a hospital for lunatics and idiots. It would be useless now to enumerate his various writings; the most important are, " The Drapier's Letters," " The Tale of a Tub," and " Gulliver's Travels." From each

and all of these, as well as from his domestic history, a tolerably correct estimate of his real character may be drawn, difficult though it be to delineate a character in which the best and worst of human passions are so strangely blended.

SWIFT, DEANE, a relation of the preceding, was descended, by the mother's side, from Admiral Deane, a naval officer in the time of Cromwell. He was the author of "An Essay on the Life, Writings, and Character of Dr Jonathan Swift," and died in 1783.

SWINDEN, JAN HENRIK VAN, professor of philosophy, logic, and metaphysics at Franeker, and afterwards of mathematics and astronomy at Amsterdam, was born at the Hague, in 1746. In 1803 he was nominated a correspondent of the French Institute; he was also a member of the Directory, under the Batavian republic, and counsellor of state in the service of the king of the Netherlands. He was the author of several scientific works, and died in 1823.

SWITHIN, ST. bishop of Winchester in the 9th century, became chaplain to Egbert, educated Egbert's son, Ethelwulf, who, on his accession, made him his chancellor, and, about 852, bishop of Winchester. St Swithin distinguished himself by a diligent and devoted discharge of his ecclesiastical offices, and by great humility and liberality to the poor. After his death he was in great repute as a worker of miracles. Died, 862. He was recognized as a saint in the 10th century, and the translation of his remains to the shrine in Winchester cathedral was fixed for the 15th July, since observed in England as his festival. But, according to the tradition, a long continuance of rainy weather caused a delay of forty days in the translation; and this gave rise to the well-known popular belief about St Swithin's day and the weather.

SYBRECHT, JOHN, an eminent landscape painter, born at Antwerp, about 1630; died in London, where he had many years resided, about 1703.

SYDENHAM, CHARLES EDWARD POULETT THOMSON, Lord, governor-general of Canada, was the son of J. Poulett Thomson, a London merchant, and was born in 1799. When about 20, he became resident in St Petersburg as the correspondent of his father's firm; and, until his accession to public office, in 1832, he continued to be connected with mercantile business. His political life commenced in 1826, as member for Dover; but in 1832 being returned for both Dover and Manchester, he gave preference to the latter. On the formation of the reform cabinet he was appointed vice-president of the Board of Trade, and treasurer of the navy; he became president of the Board of Trade in 1834; and, in 1839, succeeded Lord Durham as governor-general in Canada. He arrived in Quebec in October, 1839, assumed the reins of government, and in the following year her Majesty conferred on him the peerage of the United Kingdom, by the title of Baron Sydenham of Toronto. Under his administration the prosperity of Canada was gradually recovering, but he did not live to carry into execution many judicious mea-

asures for the colony which he had contemplated. Whilst riding near Kingston, Lord Sydenham met with an accident by the falling of his horse, and died, Sept. 19, 1841.

SYDENHAM, FLOYER, an eminent Greek scholar, was born in 1710, and educated at Wadham College, Oxford, where he took the degree of M.A. in 1734. He translated some of the Dialogues of Plato into English, but the want of patronage involved him in embarrassments; he was arrested and thrown into prison for a trifling debt due for his frugal meals, and there died in 1788. Such was the sympathy which his sad fate excited, that it gave rise to that excellent institution, the Literary Fund.

SYDENHAM, THOMAS, the eminent English physician, was born in 1624, at Winford Eagle, in Dorsetshire. He was educated at Oxford, and became about 1649 a fellow of All Souls College. After a visit to the celebrated medical school of Montpellier, he graduated M.D. at Cambridge, and established himself as physician in London. He acquired a high reputation and a very large practice; and by his singular acuteness as an observer and his accurate descriptions of the symptoms of diseases, he rendered to the science of medicine services of permanent value. He avoided equally the errors of those who carried the chemical theories to extremes, and of those who went too far with mathematical theories, and followed for himself the safe and fruitful path of observation and experiment. He introduced a most important change in the treatment of fevers and small pox, and carefully studied the relation between the conditions of the atmosphere and epidemic diseases. His works are not numerous, but are much esteemed, and have passed through many editions. Died at London, 1689. The "Sydenham Society," named after this great physician, was instituted in 1843 for the purpose of printing a succession of important medical works, both ancient and modern, and British and foreign. Its first publication was the complete works of Sydenham.

SYDNEY. [SIDNEY.]

SYLLA. [SULLA.]

SYLVESTER II. Pope (GERBERT), was a native of Auvergne. He was of an obscure family, but received a superior education, studying first in the monastery of Aurillac, and afterwards in Spain. He was made abbot of Bobbio by the Emperor Otto II., and became very distinguished as a teacher. His attainments in science procured him the reputation of a magician. Among the numerous useful inventions attributed to Gerbert is the balance-clock, which was in use till the adoption of the pendulum in 1650. Gerbert was tutor to Otto III., and subsequently head of the school of Rheims, which he made one of the first in Europe. Robert, afterwards king of France, was among his pupils. In 992 he was named archbishop of Rheims, on the deposition of Arnoul; was deprived after three years; and in 998, through the influence of Otto III., was named archbishop of Ravenna. He was called to the papal chair on the death of Gregory V., and administered the

affairs of the church and moderation. pope. Died, at a advanced age. Sylvester in 1618; with the robes of a cardinal; but a severe illness. Some of his works are extant.

SYLVESTER, a poet, known in England as Sylvester, died in Holland in 1618. He wrote "English Verse and Works;" "The Art of Poetry;" "Tobacco-batter;" &c.

SYLVIVS, A SYMES, M.P. who was sent to court, at America, in 1793, in satisfaction of a treaty of commerce. On arrival in the kingdom, he published the "Kingdom of the Netherlands," &c. Sir John Moore, of the 66th regt. 1809.

TACCA, P. Italian sculptor. Two of his greatest works are the "Ferdinand I." and "Charles V." with four slaves; and the "Charles IV." at Madrid.

TACITUS, a celebrated Roman historian, was born in the Cornelia family, in Gaul, and became early distinguished, and in his youth the daughter of a senator of the year of Domitian; but soon after his absence from the reign of Nero, he was consul, and afterwards a senator. Under Trajan, he was distinguished, and with whom Tacitus, proconsul of the province of Bithynia, was in the period of the reign of Trajan, Rome, from the part of which Tacitus was of the time. affairs of the church with much prudence and moderation. He was the first French pope. Died, at a great age, 1003. The tomb of Sylvester in the Lateran church was opened in 1648, and his remains, invested with the robes of office, were in perfect preservation; but a touch dissolved them into dust. Some of his letters and *opuscula* are extant.

SYLVESTER, JOSHUA, a quaint English poet, known in his day as the "silver-tongued Sylvester," was born in 1563; and died in Holland in 1618. He translated into English verse "Du Bartas's Divine Weeks and Works;" and wrote, amongst other pieces, a satire against tobacco, entitled "Tobacco battered and the Pipes shattered," &c.

SYLVIUS, ÆNEAS. [PIUS II.]

SYMES, MICHAEL, an English officer, who was sent an ambassador to the Burmese court, at Amerapora, in 1795, and had the satisfaction of concluding an advantageous treaty of commerce with the Burmese emperor. On arriving in England, Major Symes published the account of his "Embassy to the kingdom of Ava." He died, from fatigue, shortly after the disastrous retreat of Sir John Moore's army, being then colonel of the 66th regiment of infantry, January, 1809.

SYMMONS, Dr CHARLES, was born in 1749, at Carlisle, which town his father represented in three successive parliaments. He was the author of "Inez" and "Constantia," dramatic poems; a metrical translation of the *Æneid*, and a "Life of Milton." Dr Symmons was a zealous supporter of the Literary Fund Society. Died, 1826.—CAROLINE SYMMONS, his daughter, was remarkable for precocity of talent. She was born in 1789; and after her death, which took place in 1812, her father published a collection of her poems.

SYNCELLUS, GEORGE, a monk of Constantinople, who flourished A. D. 800. He wrote a "Chronography," or Universal History, which is extant. It is substantially identical with a similar work by Eusebius.

SYNESIUS, of Cyrene, an ancient father, and bishop of the church, who flourished at the beginning of the 5th century. His works, consisting of about 150 epistles on philosophical and polemical subjects, are in high esteem with the learned.

SZALKAI, ANTHONY VON, a Hungarian poet, who is regarded as the founder of the dramatic literature of his country. His "Pikko Hertzeg" is the first regular piece composed in the Hungarian language; he also wrote a travesty of the *Æneid*. Died, 1804.

T.

TACCA, PIERO JACOPO, a celebrated Italian sculptor, was a pupil of John of Bologna. Two of his greatest works are the statue of Ferdinand III., grand-duke of Tuscany, with four slaves chained at his feet, at Leghorn; and the equestrian figure of Philip IV., at Madrid. Died, 1640.

TACITUS, CAIUS CORNELIUS, the celebrated Roman historian, was the son of Cornelius Tacitus, procurator in Belgic Gaul, and born probably about A. D. 54. He early distinguished himself as an advocate, and in his twenty-first year married the daughter of Julius Agricola. In the seventh year of Domitian, A. D. 88, he became prætor; but soon after he left Rome, and, during his absence, Agricola died. In the short reign of Nerva, he succeeded Virginus Rufus as consul, A. D. 97, and delivered the funeral oration in honour of his predecessor. Under Trajan, Tacitus enjoyed great distinction, and lived on terms of friendship with the younger Pliny, in conjunction with whom he pleaded against Marius Priscus, proconsul of Africa. It was at this period that he published the "History of Rome, from Galba to the death of Domitian," part of which only has escaped the ravages of time. This work was followed by the "Annals," from the year of Rome 767 to the

death of Nero, in 821. He also wrote "The Life of Agricola," "The Manners of the Germans," and a "Dialogue on Oratory." No name stands higher as historian than that of Tacitus, and his writings are a rich storehouse of political and philosophical wisdom. He displays a profound acquaintance with human nature, and with the subtlest influences that affect human character and conduct. His style is remarkable for conciseness, vigour, apparent abruptness, and occasional obscurity; and his writings, like all the productions of great minds, charm most those who study them best. They have been translated into almost every European language. The exact date of his death is not known.

TACITUS, MARCUS CLAUDIUS, Roman emperor, elected on the death of Aurelian, A. D. 275, when in his 75th year. He was descended from the great historian, and had been twice consul; but he reigned only six months, in which short space he displayed singular wisdom, vigour, and moderation.

TAFFI, ANDREA, an Italian artist, born at Florence in 1213. He introduced into Italy the art of designing in mosaic, which he learnt from some Greeks employed at Venice. Died, 1294.

TAGLIACOZZI, or TALIAOCOTIUS, GAS-

PARE, an eminent Italian surgeon, was born at Bologna, in 1546, where he was for many years anatomical professor. He applied himself chiefly to curing wounds of the ears, lips, &c., but more particularly of the nose. His method of restoring lost noses, which has obtained the name of the *Taliacotian* process, has both been performed and written on by Mr Carpue and Mr Travers. It appears, also, that a similar operation had long been practised in India. Died, 1599.

TALBOT, JOHN, Lord, a famous military commander, was the second son of Sir Richard Talbot, of Goodrich Castle, in Shropshire, and born in 1373. In the second year of Henry V., he was appointed lieutenant of Ireland, where he suppressed a rebellion, and brought the chief, Donald Macmurrough, to England. In 1420 he attended Henry V. to France, and was present with him at his two sieges and triumphant entry into Paris. In the next reign he laid siege to Orleans, where his name struck terror into the French soldiers; but the appearance of Joan of Arc turned the scale, and the English army retreated. The battle of Patay completed the disaster, and Lord Talbot was made prisoner. At the end of three years and a half he was exchanged, and again led the English to victory. He took many strong places, and carried his arms to the walls of Paris, for which he was created Earl of Shrewsbury, and raised to the dignity of a marshal of France. On his return from France he was again sent to Ireland, and the earldoms of Wexford and Waterford were added to his honours. He again sought fame on French ground, was made lieutenant-general of Aquitaine, reduced several towns, and was marching to the relief of Chatillon, when his usual good fortune forsook him, and he and his son fell on the field of battle, July 17, 1453. The English on this occasion were wholly routed, and their expulsion from France soon followed.

TALBOT, CHARLES, Earl, afterwards duke of Shrewsbury, lord-lieutenant of Ireland, was son of the eleventh earl of Shrewsbury, and was born in 1660. He became a zealous promoter of the revolution, joining the prince of Orange in Holland, and coming over with him; was made secretary of state, and in 1694 was created marquis of Alton and duke of Shrewsbury. He was appointed one of the lords justices during William's absence in Holland, in 1695, twice held the office of lord chamberlain, spent several years in Italy, was sent ambassador extraordinary to France, in 1712, and in the following year was named viceroy of Ireland. He soon left Ireland, and was sent for by Queen Anne two days before her death, to assume the direction of affairs as lord treasurer, and the peaceable accession of the House of Brunswick was greatly promoted by his prudent and decisive measures. As a statesman he was too changeable to gain the confidence of any party. While openly supporting William III. he secretly corresponded with James II., and he was dismissed from office by George I. soon after his accession. Died, 1718.

TALBOT, ROBERT, an English antiquary and divine, was born at Thorp, in North-

amptonshire; was educated at Oxford; obtained a prebend in Wells cathedral, in 1541; and died, treasurer of Norwich cathedral, in 1558. He paid great attention to the antiquities of his native country, and was the first English writer who illustrated the Itinerary of Antoninus, by a commentary and notes.

TALBOT, CHARLES, Lord TALBOT, lord chancellor of England, was the son of William Talbot, bishop of Durham, and was born in 1684. Educated at Oxford, he became fellow of All Souls, early distinguished himself at the bar, and was returned to parliament as member for Tregony, in 1719. He subsequently represented the city of Durham. In 1726 he was appointed solicitor-general, and in 1733 was made lord chancellor and privy-councillor, and created Baron Talbot. He had the reputation of an able lawyer, an upright and sagacious judge, and a good orator. Pope and Thomson eulogized his character. His portrait, by Richardson, is in the National Portrait Gallery. Died, 1737.

TALFOURD, THOMAS NOON, an eminent English judge, poet, and miscellaneous writer, was born at Reading in 1795. His father was a large brewer. His mother was the daughter of a dissenting minister. He was first sent to a dissenting grammar school, and he afterwards studied for some time under Dr Valpy. In 1813 he became a pupil of Mr Chitty; in 1821 he was called to the bar, and soon after travelled on the Western Circuit, discharging at the same time the duties of law-reporter to the *Times*. Every year brought out more fully his thorough knowledge, his power as an orator, and his painstaking zeal as a lawyer. In 1835 he was returned as a member of parliament for Reading. In his representative capacity he introduced and carried through two useful measures, viz., the Custody of Infants Act, and the Copyright Act of 1841: but he continued as diligent as ever in his professional duties, and he was raised to the Bench in 1849. Mr Justice Talfourd's contributions to literature were both in prose and verse; but it is as a poet, and through his dramas, that he will be best remembered. His three tragedies, "Ion," "The Athenian Captive," and "Glencoe," are amongst the few modern plays that have stood the test of representation and proved successful on the stage. Of these, the first, "Ion," is the most celebrated. It was privately printed, and noticed in the "Quarterly Review" with high praise some time before it was represented in 1835 by Macready, then lessee of Covent Garden. Of Mr Talfourd's prose works, his "Vacation Rambles" is a most genial work, evincing fine literary culture, and the full enjoyment of natural beauty; while the lovers of Charles Lamb will always be grateful to him for his Memorials of that delightful humorist. In 1854, as he was addressing the grand jury at the Stafford Assizes, he was seized with a fit of apoplexy, and died almost before he could be carried out of court. In his address to the grand jury he was lamenting the want of a genuine kindly relation between the upper and lower classes, between employer and employed, and his last words were: "If

TALIAIACOTIUS. [TAGLIACCOZZI.]

TALIESIN, termed **PEN BEIRDD**, or Chief of the Bards, is regarded as the most eminent of the ancient British poets. He lived in the 6th century ; and his name has been handed down to posterity in conjunction with the two Merlins, under the appellation of the three principal Christian bards.

TALLARD, **CAMILLE D'HOSTUN**, Duke de, a celebrated marshal of France, was born in 1652. After having distinguished himself under Condé, in Holland, and under Turenne, in Alsace, he gradually rose to be lieutenant-general in 1693. He was, in 1697, sent ambassador to England, to negotiate concerning the succession to the crown of Spain on the death of Charles II. War breaking out in 1702, he received a command on the Rhine, distinguished himself at Kaiserswerdt and Mulheim, took Traarbach, and was honoured with a marshal's staff ; and after he had defeated the imperialists before Landau, and the town had capitulated, he announced his success to Louis XIV. in the following terms : " I have taken more standards than your Majesty has lost soldiers." He was afterwards opposed to the duke of Marlborough and Prince Eugène, and was taken prisoner at the battle of Hochstedt ; on which occasion he said to the duke, " Your Grace has beaten the finest troops in Europe." The duke replied, " You will except, I hope, those who defeated them." Marshal Tallard remained in England till 1712, when he returned to Paris, and was created a duke. In 1726 he was made minister of state, and died in 1728.

TALLEYRAND, PERIGORD CHARLES MAURICE DE, the celebrated French diplomatist, was born at Paris in 1754, and was descended from one of the most illustrious houses of France. As he was intended for the church, he entered the seminary of St Sulpice ; and his ready wit, insinuating manners, and a quick penetration into the real character of men, caused him, in 1780, to be named agent-general for ecclesiastical affairs. Eight years later he became bishop of Autun, and he had gained a considerable reputation when the revolution commenced. He was chosen deputy by the clergy of his diocese to the States-general in 1789, and at once threw himself warmly on the popular side. Acting as the representative of the clergy, he proposed the suppression of tithes, and brought forward the decree which gave the property of the church to the state. Deaf to every appeal of the clergy, he ceased not to enforce the law which obliged them to swear obedience to the civil power, and officiated in his pontifical robes at the Feast of the Federation in the Champ de Mars, on the 14th of July, 1790, where he was the first to take the oath. He subsequently consecrated the first constitutional bishops, and for this was excommunicated by Pope Pius VI. He then gave up his bishopric, and was elected a member of the administration of

the department of the Seine. He proposed the plan of a great national school on philosophical principles ; and in the discussion which followed gave the first ideas for the Institute, which was established five years afterwards. In 1792 Talleyrand was sent to England on a secret mission ; but as he was suspected both by the Jacobins and the emigrants, his presence was disapproved, and the English minister, in 1794, gave him and the French ambassador, M. de Chauvelin, orders to quit the English territories within 24 hours. He then left France for the United States, and there employed himself in commercial speculations, until he was recalled in 1796 by a decree of the Convention. On his return he was appointed minister for foreign affairs, chiefly through the influence of Madame de Stael, and supported himself with the utmost sang-froid against numerous attacks from different parties. He knew the ambition of General Buonaparte to make himself supreme ; and, with Sieyès as his colleague, he became the mainspring of the movements in the cabinet of the first consul. He was the negotiator with Austria at Luneville, as well as with England in the treaty of Amiens. A brief, issued by Pope Pius VII., having released him from the obligation of celibacy, he married Madame Grandt ; and on Napoleon becoming emperor, he was made grand chamberlain, and in 1806 prince of Benevento, still retaining the foreign portfolio. In March, 1806, he opened negotiations of peace with the English government, but the death of Fox put an end to them. In 1807 he was made vice-grand elector ; having, besides, the titles of grand chamberlain and prince of Benevento ; and was superseded, as foreign secretary, by De Champagay, in consequence of his opposition to the project of making Joseph Buonaparte king of Spain. The first reverse of the French arms increased Napoleon's irritation against his clear-sighted advisers, and Talleyrand was excluded from the cabinet and placed under *surveillance*. Buonaparte saw his error when too late. He recalled Talleyrand ; but Talleyrand would not accept his invitation. No one can tell what influence he exercised but himself ; and as by his will he has prohibited his heirs from publishing his memoirs before the lapse of 30 years from the day of his death, many a grand secret in diplomacy must till that period be impenetrable. On the capitulation of Paris the Emperor Alexander did the prince of Benevento the honour of taking up his residence at his hotel ; and the convention of Paris was negotiated by Talleyrand. He was elected president of the provisional government, and exercised that function till the restoration of the Bourbons ; when he was appointed foreign minister, made a peer, and sent ambassador to the congress of Vienna, in which he exercised immense influence. On Napoleon's return from Elba, the latter attempted, vainly, to attach him to his fortunes ; but he remained steady to the new dynasty, and urged the personal declarations against Napoleon of the 13th and 25th of March, 1815. After the battle of Waterloo, he returned to Paris with Louis XVIII., and was re-appointed foreign minister, and

named president of the council; but he resigned rather than put his name to the treaty for the occupation of France by the allies. From that time till the fall of Charles X. he placed himself at the head of the opposition in the Chamber of Peers; contributed greatly, by the course he pursued, to the formation of a liberal constitutional party in France; and on Louis Philippe becoming king, in 1830, he was sent ambassador to England, in which capacity he remained there till 1837. Although he then retired from public life, he was frequently consulted by the king on important and difficult matters of state. Throughout the varying situations in which he was placed, open as he is to the charges of duplicity and selfishness, one prevailing sentiment may be remarked—a strong and unceasing interest in his country's greatness. His sincerity was always questionable; but his firmness of character, his diplomatic superiority, his infinite resources, the clearness of his views, the brilliancy of his wit, and the elegance of his language, all combined to form a man capable of influencing the destinies of a nation. He died at Paris, in the 84th year of his age, in May, 1838.

TALLIEN, JEAN LAMBERT, one of the most prominent characters in the French revolution, was born at Paris, in 1769, and was the son of the maître-d'hôtel to the Marquis de Bercy, to whom he was indebted for his education. Previously to the revolution he had been clerk to an attorney; but he commenced his political career as secretary to the deputy Broustaret, and neglected no means to bring himself into notice as the violent opponent of the king and his ministers, and thereby gradually acquired considerable influence. He joined the Jacobin Club, published a journal called "L'Ami du Citoyen," was the great friend of Danton, and took part in the insurrection of the 10th of August, 1792. He was one of the promoters of the September massacres, and for his services was returned to the Convention. He strongly urged the immediate trial of Louis XVI., added new charges to the accusation against him, voted for his death, and on the day of his execution he was president of the Convention. He showed equal zeal in defending Marat. Early in 1794 he was sent on a mission to Bordeaux, and there for several months he presided over a band of ruffians, and by the most atrocious proscription and massacres threw the city into hopeless misery. At length, however, he became more moderate, and it was mainly by his courage and eloquence that the downfall of Robespierre was effected. He had formed an attachment for Madame de Fontenai, a lady of great personal charms, whose family name was Cabarrus; and his heart of stone was somewhat softened by her pleadings. He was recalled on account of his milder proceedings, and Madame de Fontenai was thrown into a dungeon by Robespierre. The tyrant offered her life and liberty if she would betray Tallien. But she rejected the proposal; and sent privately this note to Tallien: "The minister of police has announced to me that to-morrow I am to appear at the tribunal, that is to say, that I am to ascend the scaffold. I dreamt last night that Robespierre was no more, and

that my prison-doors were opened. A brave man might have realized this dream; but, thanks to your cowardice, no one remains capable of its accomplishment." Tallien answered, "Be as prudent as I shall prove brave; and, above all, be tranquil." The next day he hurried to the tribune, and, after an animated picture of the atrocities of Robespierre, he suddenly turned to the bust of Brutus, and, invoking the genius of the Roman patriot, he drew a dagger from his bosom, and swore that he would bury it in the tyrant's heart, if the representatives of the people had not courage to order his immediate arrest. The moment was critical; the fate of Tallien hung on a thread; but the assembly joined him, and Robespierre perished on the scaffold. Tallien, who now married Madame de Fontenai, continued to be an active member of the legislature till 1798, when he accompanied Buonaparte to Egypt; but Menou obliged him to return; and the vessel in which he sailed being captured by the English, he was taken to London. On revisiting his native country, he was little noticed by Buonaparte; but he eventually obtained the office of French consul at Alicant. Died at Paris in a state of isolation and great poverty, in 1820.

TALLIS, THOMAS, a celebrated English musician of the 16th century. He is said to have filled the situation of organist of the chapel royal under Henry VIII. and the three succeeding sovereigns; and some of his compositions are still used in our cathedrals. Died, 1585.

TALMA, FRANÇOIS JOSEPH, the most eminent tragic actor France ever produced, was born at Paris, in 1763, but spent his childhood in Flanders and England, where his father was a dentist. When 9 years of age he was sent to Paris to be educated, became passionately fond of the drama, and, returning to England, formed one of an amateur French company, which performed at Hanover Square Rooms, and he was at one time on the point of appearing at Drury Lane Theatre. Circumstances, however, led him to Paris, where he entered the royal school for declamation, and in 1787 made his début at the Théâtre Français, in the character of Seide, in Voltaire's "Mahomet." He was received with applause, and from that moment devoted himself with zeal and perseverance to the study of his art. He sought the society of distinguished literati and artists; studied history for the purpose of becoming acquainted with the manners and customs of nations, and the characters of remarkable individuals; and made himself acquainted with the best productions of ancient sculpture. For many years he continued at the summit of his profession, and acquired by it a handsome fortune. He died in 1826.

TAMERLANE, properly **TIMUR-BEG**, the great Tartar (Mogul) sultan and conqueror, was born at Sebzar, 40 miles to the south of Samarand, in 1336. At an early age he entered on the career of a soldier, and by his exploits and professions attracted the hopes of his countrymen as their deliverer from foreign invasion and tyranny.

He was gradually federates, and the Transoxiana of the Tamerlane, who to Zenghis Khan. Zagatal, made Sa and set out on the he hoped was to of the world. He had been his rival rels he was killed lane. He was gradually joined by bands of confederates, and they cleared the kingdom of Transoxiana of the intruding Getae. In 1370 Tamerlane, who traced remotely his descent to Zenghis Khan, was crowned sovereign of Zaratal, made Samarcand his royal seat, and set out on the path of conquest which he hoped was to lead him to the monarchy of the world. His brother-in-law, Hussain, had been his rival, but after frequent quarrels he was killed by the officers of Tamerlane. After easily making himself master of Carisme and Candahar, Timur invaded Persia, defeated Shah Mansur, near the city of Shiraz, took Baghad, Ormuz, and Edessa, and subdued all the country along the whole course of the Tigris and Euphrates. He next conquered Turkestan and Klpszak, or Western Tartary, penetrating even into the eastern and southern provinces of Russia, exciting alarm at Moscow, and destroying the cities of Azof, Serai, and Astrachan. In 1386 he undertook the conquest of India, which was facilitated by the internal anarchy and weakness of the country. The Mogul host crossed the Indus at Attok, traversed the Punjab, and besieged Delhi; into which city, after a great victory over the Sultan Mahmoud, Timur made a triumphal entry. He advanced a hundred miles beyond Delhi, crossed the Ganges, and reached the famous rock of Coupele. Tidings of the ambitious schemes of the Ottoman Sultan Bajazet reached Timur on the Ganges, and he returned to Samarcand. After a short interval of repose he assembled his army at Ispahan in preparation for his great expedition against Bajazet, with whom a hostile correspondence was soon begun. In 1400 Timur invaded Syria, defeated the Mamelukes near Aleppo, and sacked that city; marched thence to Damascus, where he was nearly defeated, but getting possession of the city by a perfidious promise, he sacked and destroyed it. Baghad shared the same fate, and on its ruins was reared a pyramid of ninety thousand heads. In 1402 he made a swift march through difficult country into Anatolia, and began the siege of Angora. Bajazet hastened to the relief of the city, and in the memorable battle which took place, 28th July, Timur won his greatest victory, and made his rival his prisoner. [See BAJAZET.] While his subordinates overran the country as far as the Bosphorus, Timur besieged and took Smyrna, and put the inhabitants to death. He was already meditating the conquest of China, and preparations were made for the expedition while he was slowly returning to Samarcand. There he celebrated his triumph in 1404, and received the ambassadors of Egypt, Arabia, India, Tartary, Russia, and Spain. In January, 1405, undeterred by age—he was then 70—or by wintry cold, he set out at the head of his army for China; but near Otrar he was surprised by death, 1st April, 1405. His last ambitious design was thus crossed, and the immense dominions he had conquered and ruled with absolute power, without ministers or favourites, fell to pieces, and became the scenes of new wars and miseries. The history of Timur was written in Persian by Sheref-eddin from authentic records kept by the secretaries of

the sultan, and was translated into French by Petis de la Croix, in 1722. Timur is said to have composed Commentaries of his own life and political institutions, which have been translated from the Persian into English and French, and published under various titles. There are many other Lives of this Tartar hero. Samarcand is still full of grand ruins, the green stone is still shown from which Timur issued his decrees, and so deeply is his image impressed on the hearts of the people that now, after the lapse of four centuries and a half, they speak of him as if he had but just died, and scrupulously obey his posthumous commands.

TANNAHILL, ROBERT, a Scottish poet, was born at Paisley, in 1774, and bred a weaver. He read the works of Burns with enthusiasm, and, like many more of his countrymen, he burned to emulate him; and though he fell immeasurably short of his model, he produced some very sweet and graceful songs. Died, 1810.

TANNEIL, THOMAS, bishop of St Asaph, a learned antiquary and bibliographer, was born at Market Lavington, in Wiltshire, in 1674. He was educated at Oxford, and became a fellow of All Souls in 1696. He took orders, and among numerous preferments which fell to his lot were a prebend of Ely, the rectory of Thorp, near Norwich, and the archdeaconry of Norfolk. In 1710 he graduated D.D., and in 1723 was named canon of Christ Church, Oxford. He was raised to the see of St Asaph in 1732. In his youth he had shown great fondness for antiquarian studies, and acquired considerable reputation. He was author of an account of the Religious Houses of England and Wales, which first appeared in 1695, under the title of "Notitia Monastica," and was republished and greatly enlarged after the author's death; and of a learned and valuable work, entitled "Bibliotheca Britannico-Hibernica," published in 1748. He also published a new edition of Wood's "Athenae Oxonienses." Died, 1735.

TANSILLO, LUIGI, an Italian poet, born about 1510. Having composed a poem of a licentious character, Pope Paul V. placed his works in the Index Expurgatorius, or list of prohibited books; upon which the poet made the best reparation in his power by writing a devout poem. He was also author of sonnets, songs, comedies, and "The Nurse," which has been translated into English by Mr Roscoe. He died, in 1568, judge of Gaeta.

TARLETON, RICHARD, a celebrated actor and jester, was born at Conover, in Shropshire. He was author of a play called "The Seven Deadly Sins;" and many of his witticisms have appeared in jest-books. Died, 1589.

TARQUINIUS, surnamed PRISCUS, or TARQUIN THE ELDER, fifth mythical king of Rome, was the son of Greek parents, and born in the town of Tarquinii, in Etruria. His name was Lucumon Denaratus, which he changed on going to Rome, by the advice of his wife, Tanaquil. He had, according to the legends, a long and prosperous reign, and had reached his 80th year, when he was assassinated by the sons of his predecessor.

To Tarquinius Priscus are attributed several changes in the constitution, the construction of the Cloaca Maxima, and the building of the Forum.

TARQUINIUS, surnamed **SUPERBUS**, or **TARQUIN THE PROUD**, seventh and last mythical king of Rome, was a tyrant and usurper, who rendered himself odious to the Romans by his pride and cruelty. He appears also in the legends as a successful warrior, strengthening and extending the influence of Rome. The rape of Lucretia, by his son, Sextus Tarquinius, is represented as the immediate occasion of the revolution which put an end to the monarchy, and established the republic of Rome, about B. C. 507.

TARTINI, G. USEPPE, an excellent Italian musician and composer, was born in 1692, at Pirano, in Istria. He was sent to study the law at Padua; but having married without the consent of his parents, they discarded him, and he became a player on the violin. A singular story is told respecting one of his most celebrated compositions. One night he dreamed that he had made a compact with the devil, and bound himself to his service. To ascertain the musical abilities of his associate, he gave him his violin, and desired him to play a solo, which Satan executed in so masterly a manner, that Tartini, awaking in the ecstacy which it produced, and seizing his instrument, endeavoured to recall the delicious sounds. His efforts were so far effectual as to produce the piece generally admired under the name of the "Devil's Sonata." He was leader of the orchestra at the church of St Anthony at Padua; and died in 1770. Besides his musical compositions, Tartini wrote several treatises on the science.

TARVER, JOHN CHARLES, lexicographer, was born at Dieppe, in 1790. He was of an English family, and settled in England in 1815, employing himself as a teacher of French. He received the appointment of French master at Eton in 1826, and held it till his death. His reputation rests on his "Phraseological French and English Dictionary," which appeared in 1849. Its preparation had occupied him during many years of his residence in England, and for its fulness, sound critical knowledge, good taste, and mastery of the peculiar difficulties of both languages, it is one of the most important contributions to French lexicography made either in France or England in recent years. Tarver was author also of a Dictionary of French verbs, a French prose translation of Dante's "Inferno," and several other works. Died, 1851.

TASMAN, ABEL JANSSEN, one of the most distinguished geographical discoverers of the 17th century, but whose merits were long left almost unrecognized, and of whose private history hardly anything is even now known. While engaged in the service of the Dutch East India Company his capacities and energy recommended him to the governor-general, who in 1642 gave him the command of an exploring expedition on the coast of Australia. In the course of his voyage he discovered Van Diemen's Land, and doubled its southern extremity, imagining it to be

part of the Australian continent. He named it in honour of the governor-general. Soon after he discovered New Zealand, which he also supposed to be part of Australia, and which he named Staaten-Land. He continued his voyage in the neighbouring seas, and made discoveries of various islands, arriving once more at Batavia in June, 1643. In the following year he was charged with the conduct of another exploring expedition, chiefly for the purpose of ascertaining whether Van Diemen's Land was an island. But there are no particulars of this voyage, nor any further notice of Tasman. The name "Tasmania" is now frequently used for Van Diemen's Land.

TASSIE, JAMES, an ingenious modeller, was born near Glasgow, and brought up as a stonemason, but having acquired from Dr Quin, a physician in Dublin, the art of imitating gems in coloured pastes, he came to London in 1766, where, by dint of talent and perseverance, he obtained both fame and fortune. The catalogue of his collection of ancient and modern gems, published in 1791, included more than 15,000 articles. Died 1799.

TASSO, BERNARDO, an Italian poet, born at Bergamo, in 1493. He was of a good family, and was successively in the service of the prince of Salerno and the dukes of Urbino and Mantua. His chief poem is "Amadigi," a romance founded on the Spanish "Amadis de Gaul." Died, 1569.

TASSO, TORQUATO, one of the greatest poets of modern Italy, was son of Bernardo Tasso, and was born at Sorrento, in 1544. He studied law at the university of Padua, but had no heart for it, and vexed his father by liking poetry better and writing it. After being for some years in the service of Cardinal Luigi d'Este, by whom he was introduced at the court of Alfonso, duke of Ferrara, brother of the cardinal, he entered the service of Alfonso, who admired his poetical compositions, and made him his familiar associate. Tasso the while had fallen in love with the fair Princess Eleanora, the duke's sister, and had addressed to her many love-songs, some of them over-passing the line of delicacy and propriety. The princess remained his friend, but nothing more. It appears probable that Alfonso by some means became possessed of some of Tasso's verses to Eleanora, and that this was the cause of his subsequent treatment of the poet. The latter, however, was of a very irritable temper, and on some occasions did not restrain himself from passionate and offensive outbursts. On one such occasion, in 1577, the duke had him arrested and confined in a convent, alleging that he was mad, but Tasso made his escape, and visited Sorrento and Rome. He soon after begged and obtained leave of the duke to return to Ferrara; but it was on condition of submitting to the rules of the physicians, and he was not permitted to see the princess. Again he left Ferrara, went to Mantua, Urbino, and Turin, but was induced to return early in 1579.

His demeanour was so violent that he was once more arrested and confined in a mad-house, where after a time he appears to have been kindly treated, and was allowed to

write and to receive the visits of his friends. Among those who came to see him were Montaigne, the great French essayist, and the younger Aldo, one of the famous printers. Through the intercession of several sovereigns—the pope, the emperor, the duke of Mantua, and the grand-duke of Tuscany—on his behalf, he was liberated in 1586, and went first to the court of Mantua. He could not rest, but moved from place to place—now at Naples, now at Rome, then at Florence—and in 1594 he was called to Rome, to receive at the hands of Pope Clement VIII. the laurel-crown. But soon after his arrival the fell ill, and by his own desire was removed to the monastery of St Onofrio, where he died. Tasso's masterpiece is the "Gerusalemme Liberata," an epic poem in 24 books on the events of the great crusade and the recovery of Jerusalem from the Saracens. It was published in 1581, and the savage attacks made on it by the critics wounded the sensitive poet severely. It nevertheless won immense admiration, passed through seven editions within the first year, and took its place among the great poems of the world. It is constantly reprinted, and has been translated into almost all the languages of Europe. There are five or six English translations, the earliest by Fairfax, the most recent by Wiffen. Tasso was induced by the adverse criticism of his great poem to remodel it and make it more what the critics said it should be. He altered almost every stanza, added four cantos, and called it "Gerusalemme Conquistata." But its life was gone. The melancholy altered manuscript is preserved in the Imperial Library, Vienna. Among his other works, which are very numerous, are "Rinaldo," his earliest poem; "Aminta," an exquisite pastoral drama; "Il Torrismondo," a tragedy; many short poems, dialogues, and other prose pieces. His complete works in the edition of Rosini, all 30 vols. Died at Rome, 25th April, 1595.

TASSONI, ALESSANDRO, an Italian poet, born at Modena, in 1565. His writings display genuine humour; and one of them especially, the mock heroic poem entitled "Secchia Rapita," or the "Rape of the Bucket," is highly esteemed by his countrymen. Died, 1635.

TATE, FRANCIS, an English lawyer in the reign of Elizabeth, who acquired great reputation as a Saxon scholar and antiquary. He was made a Welsh judge in the reign of James I. Died, 1615.

TATE, NAHUM, poet, was born in Dublin, in 1652, and was educated in the college of his native city. On coming to London he assisted Dryden in some of his works; and succeeded Shadwell as poet-laureate. He altered Shakspeare's play of Lear, and wrote several poems; but he is best known by the Version of the Psalms, which he executed in conjunction with Brady.

TAULER, JOHANN, one of the most celebrated German mystics, born about 1294. He became a monk of the Dominican order, was well versed in the scholastic philosophy, and was one of the most famous preachers and devotional writers of his day. His sermons were composed in Latin, but

delivered in German, and were as free as he could make them of the dialect of philosophy. Tauler not only distinguished himself by his piety and eloquent preaching, whereby he had an extraordinary influence on the religious life of Germany; but also by the excellence of his language and style, which have entitled him to high honours as one at least of the creators of German prose literature. "His sermons contain," says Wachler (quoted by Carlyle), "a treasure of meditations, hints, indications, full of heartfelt piety, which still speak to the inmost longings and noblest wants of man's mind. He was the first that wrested from our German speech the fit expression for ideas of moral Reason and Emotion." Tauler appears to have lived and preached at Strasburg, and there he died in 1361. His tombstone is still in existence there. His works were translated into Latin by Surius in 1548, and there are also French, Italian, and Dutch translations of all or parts of them. An English translation of his sermons with a memoir appeared some years ago.

TAUSAN, or TAGESÉN, JOHAN, Danish theologian, and the first apostle of the Reformation in Denmark, was born in Fünen in 1494. While studying at Cologne he was attracted to hear Wittenberg to hear Luther; whence, after graduating M.A. at Rostock, he returned to his country in 1521. He preached the new doctrine in his convent, and a great agitation being caused, he removed to the monastery of Wiborg. The king, Frederick I., named him in 1526 his chaplain, and authorized him to preach at Wiborg; but so violent was ecclesiastical opposition to him, that the king called him, in 1529, to Copenhagen. Tausan discontinued the Latin service of the church, and introduced the Danish language; crowds came to hear him, and Lutheranism spread rapidly. In 1530 an assembly was held, at which Catholics and Protestants presented and discussed their professions of faith, and the Protestants were authorized to continue their teaching. On the death of Frederick, Tausan was again persecuted for a short time; became preacher at Roskilde, in 1537, and bishop of Ripen in 1542. He was author of many theological works, and died in 1561.

TAVERNIER, JEAN BAPTISTE, a celebrated French traveller, was the son of a Dutch map-seller, who being driven from his country on account of his Protestantism, had settled at Paris. He was born there in 1605, and the continual sight of maps, and conversation about other lands, made him a rambler from his boyhood. By 1627 he had seen great part of Europe, and learnt most of its languages; he was present at the battle of Prague, in 1620, was four years and a half page to the viceroy of Hungary, afterwards visited Italy, France, and Germany, and in 1630 was present at the Diet of Itatibon. On the invitation of Father Joseph, the famous agent of Cardinal Richelieu, he agreed to accompany two young French noblemen to Asia Minor. He parted with them at Constantinople, in 1631, and accompanied a caravan to Persia, visiting Ispahan, Bagdad, and Aleppo, and making his journey a very

TAYLOR, a clergyman of the church of England, is known as author of the learned and valuable work entitled "Words and Places," in which he attempts to furnish a complete explanation of the local names of Great Britain.

TAYLOR, JANE, miscellaneous writer, was sister of the preceding, and was born in 1763. She very early in life gave indications of poetic talent, and relinquished the pursuit of art, to which she was trained, for literature. Her first publication, "The Beggar Boy," appeared in 1804; and from that time forward she continued to publish, occasionally, miscellaneous pieces in verse. The principal of these are, "Original Poems for Infant Minds" and "Essays in Rhyme on Morals and Manners," which were long the delight of all nurseries, and are not forgotten yet. She also wrote a prose tale, entitled "Display," which met with much success. Died, 1824.

TAYLOR, JEREMY, bishop of Down and Connor, and one of the most illustrious divines of the 17th century, was born at Cambridge, in 1613. Among his ancestors was the noble Protestant martyr, Dr Rowland Taylor. He was educated at Cambridge university, and having taken orders, became a favourite, and to a great extent a follower, of Archbishop Laud, through whose influence he was led to settle at Oxford, and afterwards obtained a fellowship. About 1638 he was presented by Bishop Juxon to the rectory of Uppingham, and having been named chaplain to Charles I., attended him at Oxford, and adhered to his cause through the civil war. For his services the degree of D.D. was, by the king's command, conferred on him. His living was soon after sequestered, and during the Commonwealth he suffered imprisonment several times. After living for a time in Wales, where, under the protection of the earl of Carbery, he preached and wrote and kept a school, he removed in 1658 to Ireland. At the Restoration, having obtained the favour of Charles II., he was appointed bishop of Down and Connor, and made a member of the Irish privy-council. About the same time he was chosen vice-chancellor of Dublin University. His labours as a preacher do not appear to have been very fruitful. His real works are his books. Coleridge pronounced Jeremy Taylor the most eloquent of divines, adding, "Had I said, of men, Cicero would forgive me, and Demosthenes not assent." He was accustomed to call him Chrysostom, and counted him one of the four great geniuses of old English literature. But Taylor's gorgeous eloquence did not blind Coleridge to his faults and errors. He believed that his "great and lovely mind" was greatly perverted by the influence of Laud: so that while he was a latitudinarian in his creed, he was "a rigorist indeed concerning the authority of the church." In naming him as an excellent author to study, he does so not only for the sake of his noble principles, but for the habit of caution and reflection which must be formed to detect his numerous errors. Taylor's principal works are, his "Discourse of the Liberty of Prophecy," published in 1647; "Holy Living and

Holy Dying," 1651; a "Life of Christ;" "Deus Justificatus," the doctrine of which is profoundly criticised by Coleridge in the "Aids to Reflection;" "Discourse of the Nature, Offices, and Measures of Friendship;" and the famous "Ductor Dubitantium, or Rules of Conscience in all her general measures," published in 1660, and described by Hallam as the most extensive and learned work on casuistry which has appeared in the English language. In addition to these there are various devotional works, and his wonderful sermons. The works of Jeremy Taylor were edited by Bishop Heber in 1819, with an account of his life. The latest complete edition appeared in 1847—54, revised by Eden and Taylor. An admirable critical view of them is given by Hallam in his "Introduction to the Literature of Europe." This distinguished prelate died at Lisburn, in 1667, leaving three daughters by his second marriage.

TAYLOR, JOHN, usually called the Water Poet, from his being a waterman, was born in Gloucestershire, about 1580. In 1596, he served in the fleet under the earl of Essex, and was present at the attack upon Cadiz. After his return he pined on the Thames, and was for many years collector for the lieutenant of the Tower, of his fees on the wines imported into London. He also styled himself the king's water poet, and the queen's waterman. When the civil wars began he retired to Oxford, where he kept a public-house, as he afterwards did near Long Acre. At this place he manifested his loyalty by assuming for a sign, the "Crown in Mourning," which proving offensive, he substituted his own portrait. In 1618, he walked from London to Edinburgh and back again, and published an account of his journey under the title of "The Pennyless Pilgrimage." In his "Last Voyage and Adventure" he describes his passage with a small boat from London to Oxford, Gloucester, Bristol, &c., in 1641. He published many occasional pieces, which are interesting for the curious glimpses they afford of the times he lived in. Died, 1654.

TAYLOR, JOHN, an eminent Unitarian divine, was born in Lancashire, in 1694. He was educated at Whitehaven; and after officiating some years as pastor to a congregation at Norwich, he accepted the office of divinity tutor at the newly founded academy of Warrington. His most important works are, the "Scripture Doctrine of Original Sin," the "Scripture Doctrine of Atonement," a "Hebrew-English Concordance," his principal work and the labour of his life, and a "Sketch of Moral Philosophy." Died, 1761.

TAYLOR, JOHN, a divine and civilian, was born at Shrewsbury, in 1704. He was educated at St John's College, Cambridge, where he obtained a fellowship, and proceeded to the degree of LL.D. In 1742 he became a member of Doctors' Commons, and two years afterwards was appointed chancellor of Lincoln; but in 1751 he entered into orders, was presented to the rectory of Lawford, in Essex, and became a canon residentiary of St Paul's. His chief works are an edition of the Greek Orators,

and "Elements of Civil Law." Died, 1766.

TAYLOR, ROWLAND, one of the most learned English divines of the 16th century, but most illustrious in his heroic death as Protestant martyr, was chaplain to Archbishop Cranmer. He quitted Cranmer's family on being presented to the rectory of Hadleigh, in Suffolk, and devoted himself entirely to his duties as parish priest; winning the highest esteem and warmest love of his flock by his great abilities, unfeigned piety, and singular cheerfulness and simplicity of life. On the accession of Queen Mary he was one of the first to suffer for resistance to the attempts to restore the popish worship. Having resisted the performance of mass in his parish church, he was cited, in 1553, to appear before Gardiner, bishop of Winchester, and also lord chancellor. Refusing to yield to the persuasion of his friends who would have had him make his escape, he went to London, had a long conference with Gardiner, which the latter closed by "his strong argument, Carry him to prison." Taylor lay in prison about a year and three-quarters, and after the revival of some old tyrannous laws, was again cited before Gardiner, Bonner, and other bishops, was deprived of his benefice, formally degraded from the priestly office, and conducted by the sheriff from London to Hadleigh. All efforts to induce the cheerful heroic man to recant failed; he had a most affecting farewell interview with his wife and children; received the blessings of his parishioners, and was burnt at the stake on Aldham Common near Hadleigh, 8th February, 1555. The story of Rowland Taylor is one of the most beautiful and pathetic in Fox's Book of Martyrs; a history, says Heber, which few men have ever read without its making them sadder and better.

TAYLOR, SIJAS, an English antiquary, was born at Harley, in Shropshire, in 1624. On leaving Oxford University, he entered into the parliamentary army; and afterwards became sequestrator of the estates of the royalists in Herefordshire, but conducted himself with moderation. At the Restoration he was made keeper of the stores at Harwich. Died, 1678.

TAYLOR, THOMAS, "the Platonist," the translator of the works of Plato, Aristotle, and other Greek authors, was born at London in 1758. He was educated partly at St Paul's School and afterwards by a Dissenting minister. An early marriage compelled him to relinquish his intention of becoming a preacher, and he became clerk in a bank, private tutor, and assistant-secretary to the Society of Arts. But through all these engagements he was a most laborious student, especially of the Greek philosophers, and at the same time by his social habits he made many acquaintances and friends, some of whom proved willing enough to aid him materially in his literary projects. He led a quiet, studious, uneventful life, residing at Walworth from about 1795 till his death. His principal works are the—Translations of the "Works of Plato," published in 5 vols. 4to, in 1804, at the expense of Taylor's friend, the duke of Norfolk; the "Works of Aristotle," in 9 vols. 4to, in 1812, printed

at the expense of another friend of the translator; "Description of Greece, by Pausanias," in 3 vols. 8vo, in 1794; "Select Works of Porphyry;" the writings of Proclus, &c. Taylor was also a contributor to the "Classical Journal." Died, 1835.

TAYLOR, WILLIAM, a distinguished critic, translator, and *littérateur*, was the only son of an eminent merchant of Norwich, where he was born, 1765. He was originally destined for his father's business; but his early bias for literary pursuits proved so strong, that his father gave way to his inclinations, and after one or two somewhat lengthened sojourns in France and Germany, he gave himself up almost entirely to literature and politics. He first became known by a vigorous translation of Bürger's "Lenore;" and stimulated by success, he made other translations from the same author, and from time to time contributed specimens of other German poets to the magazines and periodicals. In 1798 he formed an acquaintance with Southey, which ripened into the warmest friendship; and in 1802, he became editor of the Norwich Iris, which he made the organ of his peculiar political and religious opinions; but he soon abandoned this speculation, and henceforth engaged in reviewing, writing chiefly for the Monthly Review, then under the editorship of Dr Griffiths. Mr Taylor wrote few separate works. Among these, however, should be mentioned his "English Synonymes;" and in 1830 he published a "Historic Survey of German Poetry," consisting chiefly of his collected translations, with commentaries and explanatory notes. This work was reviewed by Mr Carlyle, in the Edinburgh Review, No. 105. See his "Essays," vol. ii. Taylor died, 1836. A "Memoir of his Life and Writings" was published by Mr Robberds, in 1843.

TAYLOR, WILLIAM COOKE, LL.D., historical and miscellaneous writer, was born at Youghal, 1800. After prosecuting his studies at the university of Dublin with great distinction, he repaired to the metropolis, and entered upon a literary career, which, for constancy of application, and variety of subject, has had few equals in modern times. Being literally a writer for his daily bread, little profound thought or originality of speculation was to be looked for in his writings; but the care and diligence which he bestowed on every subject he undertook, amply atoned for the absence of these higher qualities, and he has left a name in the literary history of his country which will not soon be forgotten. In his zeal for the promotion of education, he had acquired such vast information, that his opinion was eagerly sought. He was employed in 1846, by the British government, to inquire into the systems of education on the continent; and he was just on the eve of being placed in a position on the establishment of the lieutenant of Ireland, to carry out his views, when he was cut off by the pestilence that ravaged Great Britain and Ireland in 1849. Among his chief works are, his Manuals of Ancient and Modern History," "Life and Times of Sir Robert Peel," "History of Mohammedanism," "Revolutions and Remark-

TAYLOR, ZACHARY, president of the United States, was born in Virginia, 1786. His father, who had fought at the side of Washington during all the war of independence, at its conclusion settled in Kentucky, and conducted his family to their forest-home, where his son, amid the perils of savage life, had ample opportunities of developing those military qualities of which he afterwards gave so signal a proof. At the outbreak of the war with England, in 1807, he hastened to join the army, and was appointed to guard the banks of the Wabash. In 1812, while in command of the garrison of Fort Henderson, consisting only of 52 men, he was suddenly attacked at midnight by a hostile party, who succeeded in setting fire to the fort. But Taylor, with his handful of men, extinguished the flames and forced the enemy to retreat. For this exploit he was raised to the rank of major. In the war against the Indians, both in Florida and Arkansas, he passed successively through all the grades of his profession, till he reached the rank of general. Nominated in 1816 to the command of a corps of observation on the frontiers of Mexico, an attack of the Mexicans gave him an opportunity of crossing the Rio Grande, and of gaining his first battle at Palo-Alto. The victories of Resaca, Pulma, Monterey, and Buena-Vista proved him at once a valiant soldier and an able general, and marked him out to the suffrages of his countrymen for the presidency. Chosen in Nov., 1848, he entered on his high office in March, 1849; but he had only filled the chair of Washington and Jefferson for sixteen months, when he was suddenly attacked by cholera, and died, to the great regret of his countrymen, July, 1850.

TEGNER, ESAIAS, the distinguished Swedish poet, was born in 1782. He was the son of a parish priest, and was sent to study at the university of Lund; but before he was ten years old he lost his father, and was then for several years assistant to a tax-collector. In consequence of his fondness for study he was allowed to become a pupil of his elder brother, then tutor in a private family, and with his aid and the advantage of a good library, he made rapid progress in the study of ancient and modern languages, taking especial delight in Homer and Ossian. He shared with his brother the duties of tutor, and found a wife in one of the daughters of the house. In 1799, he entered the university of Lund, obtained the post of sub-librarian, and, in 1812, was appointed professor of Greek, a post which he held for twelve years. He took orders the same year, and, in 1824, he was made bishop of Wexiö. Contrary to the expectation of some of his friends, he settled down with great gravity in his see, left off his habits of levity, wrote no more poetry, but built churches, studied the fathers and the commentators, and kept his episcopal accounts well. An attack of insanity, of which he

had expressed a foreboding, interrupted him in the discharge of his duties in 1810, and he only partially recovered for a short time. As a poet he first made himself known by a spirited war-song in 1809. His chief works are "Frithlof's Saga," which at first appeared in parts between 1820-25; "Axel," 1821; and the "Children of the Lord's Supper," in 1820. The last is an exquisite idyll, descriptive of scenes of village life, and has been translated into English by Longfellow. There are several English translations of "Frithlof's Saga" and one of "Axel," by Lathum, one of the translators of "Frithlof." Tegner is considered the chief of the poets of Sweden, and to him was assigned, in 1829, the honourable office of placing the poetical crown on the head of Oelenschläger. Died, 2nd November, 1846. The works of Tegner appeared in a collected form, in 6 vols., about a year after his death.

TEIGNMOUTH, JOHN SHORE, Lord, was born in Devonshire, 1751. Himself the son of a supercargo, and the grandson of a captain in the East India Company's marine, he was destined from his youth to the same service. Having finished his education at Harrow and Hackney, he went to Bengal in 1769 as a cadet; in 1773 he was appointed Persian translator and secretary to the provincial council of Moorsheadabad; and his diligence and abilities being now duly appreciated, he was nominated a member of the general committee of revenue, an office which brought him into friendly relations with Warren Hastings, whom he accompanied to England in 1785. In 1786 he returned to Calcutta as a member of the supreme council, and so distinguished himself by the numerous reforms, financial and judicial, which he introduced, that in 1793 he was appointed governor general of India, having in the preceding year been created a baronet. In 1797, he quitted his high office, and returned to England with the title of Lord Teignmouth, where he entered on a career of practical philanthropy. He became a member of what was known as "The Clapham Sect," which numbered among its adherents Wilberforce, Clarkson, Z. Macaulay, I. Milner, and Granville Sharpe; and closed a long life, passed in works of charity and mercy, Feb. 14th, 1834. He was the first president of the British and Foreign Bible Society, established in 1804; he was also president of the Asiatic Society; and though he never acquired great celebrity as an author, he published an edition of the works of Sir W. Jones, together with a memoir, besides various pamphlets on religious questions. A memoir of his life and correspondence was published by his son in 1843.

TEISSIER, ANTOINE, a learned French advocate, born at Montpellier, in 1632. Being a Protestant, he was forced, by the revocation of the Edict of Nantes, to emigrate; and became historiographer to the Prussian court. He wrote many historical and biographical works, besides several translations. The best known is his "Eloges des Hommes Savants." Died, 1715.

TEKELI, EMERIC, Count de, a Hungarian nobleman, was born in 1658, and took the

command of his countrymen in their struggle to throw off the yoke of Austria. He defeated the Imperialists in several battles; but, after many vicissitudes, he was compelled to seek an asylum in Turkey, and died at Constantinople, in 1705.

TELESIO, BERNARDINO, Italian philosopher, born at Cosenza, in the kingdom of Naples, in 1508. He was educated at the university of Padua, became professor of natural philosophy at Naples, and is distinguished as one of the first philosophers who ventured to attack the scholastic system, and the authority of Aristotle. In his great work entitled "De Natura, juxta propria principia," which appeared at Rome in 1584, he maintains the necessity of the study of nature, and of making experiment the basis of science. The general spirit of this work, says Cousin, almost makes Telesio a forerunner of Bacon. A second edition was published at Naples in 1570, and the fear of ecclesiastical censure, or worse, led him to retire to Cosenza, where he died in 1588.

TELFORD, THOMAS, a distinguished civil engineer, was born in Eskdale, Dumfriesshire, in 1757. He began life as a shepherd boy, but at the age of 14 was apprenticed to a stone-mason in his native district. After serving his time, he was employed in Edinburgh, and in 1782 came to London, where through good introductions he obtained several important engagements. Five years later he settled at Shrewsbury, and became surveyor for the county of Shropshire, a post which he held till his death. His reputation by this time was considerable, and about 1793 he was charged with the construction of the Ellesmere canal, his first great work. It occupied ten years. The Caledonian canal, for which he was employed to make the necessary surveys of the coasts and the country, was commenced under his direction about 1803, but from various causes was not completed till 1823. Besides this canal, Telford, as engineer to the commissioners of highland roads and bridges, constructed about a thousand miles of road in Scotland, in the course of which were also about twelve hundred bridges. It is impossible to enumerate the other very numerous canals, bridges, roads, &c., executed under his direction, not only in his native country, but abroad. The beautiful suspension bridge over the Menai Strait, in the line of the London and Holyhead road, one of his most celebrated works, was erected about 1826. Telford constructed the St Katherine's Docks, London, which were opened in 1828. He was F.R.S.E. from 1803, president of the institution of civil engineers from 1820, and was chosen F.R.S. London, in 1827. He contributed several articles to the "Edinburgh Encyclopædia," and in his last years wrote his own Life, which was published with additions by its editor in 1838. Telford died at Westminster in 1831.

TELL, WILLIAM, the renowned champion of Swiss liberty, was a native of Burglen, in the canton of Uri. He was distinguished by his skill in archery, his strength, and courage. He joined the league of the three Forest-cantons formed to free the country

from Austrian tyranny. The Austrian governor of Switzerland, Herman Gessler, pushed his insolence so far, as to require the Swiss to uncover their heads before his hat (as an emblem of his sovereignty); and is said to have condemned Tell, who refused to comply with this mandate, to shoot an apple from the head of his own son. Tell was successful, but confessed that a second arrow, which he bore about his person, was intended, in case he had failed, for the punishment of the tyrant, and he was therefore retained prisoner. While crossing the lake of the Four Cantons, or lake of Lucerne, in the same boat with Gessler, a violent storm arose. Tell, as the most vigorous and skilful helmsman, was set free, and he conducted the boat successfully to the shore, but seized the opportunity to spring upon a rock, at the same time pushing off the boat. He had fortunately taken his bow with him; and when the governor finally escaped the storm, and reached the shore, Tell shot him dead on the road to Küssnacht. This event was the signal for a general rising, and a most obstinate war between the Swiss and Austrians, which was not brought to a close until 1499. Tell is supposed to have lost his life during an inundation in 1350. Doubt has been thrown upon this popular story by some modern critics, but even if some of its details are mythical, it is scarcely possible, in the face of the testimony of early chroniclers, and the concurrent evidence of local customs and observances, to deny the substantial truth of the history. However, it is certain that Tell contributed to emancipate his country; and there are many local customs referring to the events here related. The memorable event above described is said to have happened on the 7th November, 1307; and the citizens having previously chosen for their leaders three men of approved courage and abilities, namely, Werner of Schwitz, Walther Furst of Uri, and Arnold Melchthal of Unterwalden, they secretly agreed to surprise and demolish the castles in which the imperial governors resided. This resolution being effected, these three cantons joined in a league for ten years, which gave birth to the Helvetic confederacy.

TELLEZ, GABRIEL, whose assumed name was TIRSO DE MOLINA, a celebrated Spanish dramatist, born at Madrid in the latter part of the 16th century. He studied at the university of Alcalá, and in 1620 became a monk. He was one of the most voluminous writers of the age, and as dramatist ranks next after Calderon and Lope de Vega. He wrote above 300 comedies, besides novels, interludes, and autos, and displayed great and varied powers; wit and humour, fancy and invention, and considerable satiric severity, especially against the nobles, the clergy, and the monks. Fifty-eight of his comedies are extant, some of which keep their place on the Spanish stage. Among them is the famous "Burlador de Sevilla," or "Deceiver of Seville," which Molière imitated in his "Festin de Pierre," and the hero of which, under the name of Don Juan, is known to all the world through the poems of Corneille and Byron, and the celebrated

opera of Mozart. Tirso's "Don Gil in Another good play Court." Died, prior

TEMANZA, TOM and biographer, was He is chiefly remembered as an excellent biographer. Lives of the most Architects and Sculptors. He wrote also the and other works. works are the churchens, at Venice, the herita at Padua, over the Brenta.

TEMPELHOF, German officer, a Bombardier," "Tactics," "The 17th War," &c. In the stationery war with the command of the Prussian he received the order Frederick William lieutenant-general young princes, he died, 1807.

TEMPESTA, AN was born at Florence disciple of John Scalapes, animals, a 1630.

TEMPESTA, H was MOLYN, but of Tempesta from of storms and from Haarlem. He was ing his religion, was condemned to of his wife, while perpetual imprisonment in confinement escape. Born, 16 TEMPLE, Sir Temple, secretary in, was born in his father at Dublin and became master conciliator in Ireland. Sir John was, "A History 1641."

TEMPLE, statesman, the son born in London, by the learned uncle, and completed College, Cambridge commenced his in France, Holland. In 1635 he was prince-bishop of was employed in ance between land. He next at the Hague, at the marriage of Mary, eldest daughter which union took of politics at home in 1671, was intended broad

opera of Mozart. More popular in Spain is Tirso's "Don Gil in the Green Pantaloon." Another good play is his "Bashful Man at Court." Died, prior of Sorin, 1648.

TEMANZA, TOMMASO, Italian architect and biographer, was born at Venice in 1705. He is chiefly remembered as author of the excellent biographical work, entitled—"Lives of the most celebrated Venetian Architects and Sculptors," published in 1777. He wrote also the "Antiquities of Rimini," and other works. Among his architectural works are the church of La Santa Maddalena, at Venice, the façade of Santa Margherita at Padua, and the bridge of Dolo over the Brenta. Died at Venice, 1789.

TEMPELHOF, GEORG FRIEDRICH, a German officer, author of "The Prussian Bombardier," "The Elements of Military Tactics," "The History of the Seven Years' War," &c. In the beginning of the revolutionary war with France, he had the command of the Prussian artillery; and, in 1802, he received the order of the Red Eagle from Frederick William III., who nominated him lieutenant-general and military tutor to the young princes, his brothers. Born, 1737, died, 1807.

TEMPESTA, ANTONIO, an Italian painter, was born at Florence, in 1555. He was a disciple of John Strada, and excelled in landscapes, animals, and battles. Died, at Rome, 1630.

TEMPESTA, PETER, whose real name was MOLYN, but who received the sobriquet of Tempesta from his frequent delineation of storms and shipwrecks, was a native of Haarlem. He went to Rome, and on changing his religion, was made a chevalier; but was condemned to be hanged for the murder of his wife, which sentence was changed to perpetual imprisonment. After remaining in confinement 16 years, he effected his escape. Born, 1637; died, 1701.

TEMPLE, Sir JOHN, son of Sir William Temple, secretary to Sir Philip Sidney, and afterwards provost of Trinity College, Dublin, was born in London, and educated under his father at Dublin. He studied the law, and became master of the Rolls and a privy-councillor in Ireland in the reign of Charles II. Sir John wrote from his own observations, "A History of the Irish Rebellion in 1641."

TEMPLE, Sir WILLIAM, an eminent statesman, the son of Sir John Temple, was born in London, in 1628. He was instructed by the learned Dr Hammond, his maternal uncle, and completed his studies at Emanuel College, Cambridge. In his 25th year he commenced his travels, and passed six years in France, Holland, Flanders, and Germany. In 1653 he went on a secret mission to the prince-bishop of Munster, after which he was employed in negotiating the triple alliance between England, Sweden, and Holland. He next became the resident minister at the Hague, and in that capacity promoted the marriage of the prince of Orange with Mary, eldest daughter of the duke of York, which union took place in 1677. A change of politics at home led to the recall of Temple in 1671, who, refusing to sanction the intended breach with Holland, retired from

public business to Sheen, and employed himself in writing his "Observations on the United Provinces," and part of his "Miscellanies." In 1674, Sir William Temple was again ambassador to the states-general, in order to negotiate a general pacification. In 1679 he was appointed secretary of state; but the next year he resigned, and retired to his country-seat in Surrey, where he was often visited by Charles II., James II., and William III. Died, 1700. His portrait, by Lely, is in the National Portrait Gallery.

TEMPLEMAN, PETER, physician, born at Dorchester, in 1711; was educated at the Charter-house, and at Trinity College, Cambridge, and took his degree at Leyden. He practised in London; but a fondness for literature and the company of literary men diverted his attention from his profession; and having, in 1753, obtained a situation in the British Museum, as keeper of the reading-room, he from that time devoted his whole attention to pursuits more congenial to his disposition. He wrote some medical works, and translated Norden's Travels in Egypt. Died, 1769.

TENIERS, DAVID, the elder, a celebrated painter of the Flemish school, was born at Antwerp, in 1582; studied under Rubens, and afterwards at Rome. On his return to his native country, he occupied himself principally in the delineation of fairs, rustic sports, and carousals, &c., which he exhibited with such truth, humour, and originality, that he may be considered the founder of a style of painting, which his son afterwards brought to perfection. His pictures are usually of a small size, and are highly valued. Died, 1649.

TENIERS, DAVID, the younger, son of the preceding, was born at Brussels, in 1610. In his youth, such was his facility of imitating the styles of various masters, that he was called the Proteus, and the Ape of painting. He confined himself principally to the same kind of subjects as his father, but excelled him in correctness and finish. Died, 1694. The younger Teniers rose to the highest reputation in his profession, and was patronized by Christina of Sweden, the king of Spain, and other illustrious personages.

TENISON, THOMAS, archbishop of Canterbury, a learned and pious prelate, was born at Cottenham, in Cambridgeshire, in 1636, and graduated at Corpus Christi College; obtained the living of St Peter Mancroft, Norwich; and was afterwards presented to the vicarage of St Martin-in-the-Fields, London, where he founded a parochial school and library. He distinguished himself so much by his zeal in favour of Protestantism, both before and after the revolution, that in 1691 he was consecrated bishop of Lincoln, from whence he was raised to the see of Canterbury in 1694, and held the primacy with moderation, fairness, and ability, till his death, in 1715. He published "The Creed of Hobbes examined," "Baconiana, or Remains of Sir F. Bacon," "Sir Thomas Browne's Tracts," and various sermons.

TENNANT, SMITHSON, F.R.S., an eminent chemist, was born at Selby, in Yorkshire, in 1761; studied medicine at Edin-

burgh, and took his degree at Cambridge, in 1706. He was chosen professor of chemistry at Cambridge, in 1813; and was killed by a fall from his horse, at Boulogne, in February, 1815. His discoveries appear in several valuable memoirs in the Philosophical Transactions.

TENNANT, WILLIAM, a Scottish poet and philologist, was a native of Anstruther, in Fifeshire; the town where Dr Chalmers first saw the light. Lame in both limbs from his childhood, he early entered on the path of study; and gradually amassed those stores of literary wealth, which raised him to public honour. After filling the office of parochial schoolmaster in various places in Scotland, he was in 1810 elected classical teacher of the Dollar Academy; and in 1837 was presented to the chair of oriental languages in the university of St Andrew's, which he filled with credit till his death. As a poet, Professor Tennant rose into eminence by his "Anster Fair," published in 1812, and since often reprinted; and this was followed by his tragedy of "Cardinal Beaton," and various smaller poems, marked by much originality and poetic power. Died, 1843.

TENNEMANN, WILHELM GOTTLIEB, German philosopher and historian of philosophy, born in 1761, at Brembach, near Erfurt. He studied at the universities of Erfurt and Jena, and after distinguishing himself by the publication of several philosophical works, became, first, professor extraordinary at Jena, and in 1804 ordinary professor of philosophy at the university of Marburg, a post which he filled till his death. He was also appointed, in 1816, librarian to the university. His most important work is the "Geschichte der Philosophie," published in eleven volumes, between 1798—1809. His well-known "Manual of the History of Philosophy," of which an English translation by Johnson appeared in 1832, is an epitome of the "History." The translation, revised and augmented by J. H. Morell, was republished in 1852, in Bohn's Philological Library. Among Tennemann's other works, are an exposition of the "System of the Platonic Philosophy;" and German translations of Locke's Essay on the Human Understanding, and Hume's "Inquiry concerning the Human Understanding." Tennemann was a disciple of the Kantian philosophy, and employed its terminology. Died, 1819.

TENTERDEN, CHARLES ABBOTT, Lord, lord chief justice of England, was the son of a hairdresser, was born at Canterbury in 1762, and received his education at the King's School of that city. In 1778 he was elected to a scholarship in Corpus Christi College, Oxford, where he was soon distinguished for scholastic attainments and for purity of moral conduct; and, having the good fortune to be appointed tutor to the son of Judge Buller, this gentleman took great interest in his welfare, and with his characteristic acuteness of observation, advised him to turn his attention to the law, and not to the church, for which he had hitherto designed himself. After practising some time as a special pleader he was called

to the bar, being then in the 33rd year of his age, and went the Oxford circuit. His practice soon became extensive, and for twenty years he steadily pursued his way, acquiring both fortune and reputation, and making himself known to the profession not merely as a skilful pleader, but also as a learned and accurate writer. His "Treatise of the Law of Merchant Ships and Seamen," published in 1802, became the standard work upon maritime law. In 1815 his incessant and arduous labour had begun to have a serious effect upon his health and spirits. His sight, too, was impaired, and it is said that but for the dissuasion of his friends he would have wholly retired from the profession. He had as far back as 1808 refused a seat on the bench, his professional emoluments at that time being far greater than those of a judge. But when, in 1816, he was again offered promotion, his health had become so unequal to the toils of practice, that he closed with the offer, and was made a puisne judge in the Common Pleas. This took place in February, and in the following May he was removed to the King's Bench, on the death of Mr Justice Le Blanc. In 1818, on the retirement of Lord Ellenborough, he became lord chief justice of the King's Bench; and though his inflexible Toryism rendered him unpopular, it was admitted by men of all parties, that a more impartial chief justice had never presided in that court. During the premiership of Mr Canning he was raised to the peerage, but did not long enjoy his title; and it is said that his last words were, "Gentlemen of the jury, you may retire." Died, 1832.

TERBURGH, GERHARD, Dutch painter, born at Zwoll, in 1608. He was taught painting by his father, and improved himself by a visit to Italy. He acquired a great reputation by his portraits and "conversation pieces," and practised with success at Paris, London, and Madrid. His most remarkable work is the "Congress of Munster," a portrait group of the diplomatists who there negotiated the celebrated Treaty of Westphalia, which closed the Thirty Years' War. Terburgh's pictures are delicately painted and exquisitely finished; and he was fond of displaying his skill in white satin drapery, which is found in most of his works. There are many of his pictures in English collections. Died, burgo-master of Deventer, in 1681.

TERENTIUS AFER, PUBLIUS (TERENCE), the celebrated Roman comic poet, was probably born at Carthage, about B.C. 195. The accounts of his life are scanty and conflicting, and little is certainly known about it. He is said to have become the slave of a Roman senator, who gave him a good education, and set him free. He acquired the patronage and friendship of Lælius and Scipio Africanus the younger, and was assisted, it is said, by them in the composition of his plays. The first of these exhibited was the "Andria," in B.C. 166. This was followed by the "Hecyra," or the Stepmother, in the next year; the "Heauton-Timorumenos," or Self-tormentor, in 163; the "Eunuchus" and the "Phormio," in 162; and the "Adelphi," or the Brothers,

acted at the funeral games in 160. These plays contain changes of plot, and works of the Greek Terence and Apollodorus. Terence was a "homo" who closely followed fortune in common with his fortunes. He aimed at laughter by hold on the development of delicate shades of wit. They are also contain passages of wit. They are also of their Latinity, metre. After the comedies Terence is said to have translated a hundred of the comedies made of his death usually said that he was a sea of his translation B.C. 158. There are Terence by Colman, latter, in prose, for the library.

TERTIASSON, several ingenious and 18th century whom were JEAN born at Lyons in 1715. He adopted Law, and wrote "Le nouveau Systeme de la Philosophie de l'année, 1721, he also author of a "Sethos," and of Siulus. He was deny of Sciences, died, 1750.—ANT 1705. He composed D'Aguesseau's Jurisprudence; censor royal and lege. Died, 1782.

ster, in
ormio,"
rothers,

acted at the funeral games of *Æmilius Paulus* in 160. These plays are imitations, with certain changes of plan and structure, of the works of the Greek comic poets, *Menander* and *Apollodorus*. Terence was praised by *Julius Cæsar* as a "half *Menander*." Terence, who closely followed *Plautus* in time, had little in common with him in character or in fortunes. He aims far less at exciting laughter by bold coarse jests, and more at the development of plot, and the painting of delicate shades of character. His plays lean to the instructive and sentimental, and contain passages of deep pathos and refined wit. They are also remarkable for the purity of their Latinity, and the variety of their metre. After the appearance of his six comedies Terence left Rome for Greece, and is said to have translated there above a hundred of the comedies of *Menander*. The mode of his death is uncertain; but it is usually said that he died of grief for the loss of a sea of his translations of *Menander*, about *n. c.* 158. There are English translations of Terence by *Colman* and *H. T. Riley*. The latter, in prose, forms part of *Bohn's Classical Library*.

TERHASSON.—Of this name there were several ingenious French writers in the 17th and 18th centuries, the most eminent of whom were *JEAN* and *ANTOINE*.—*JEAN* was born at Lyons in 1670. His first work was a Dissertation on the *Iliad*, and appeared in 1715. He adopted the financial schemes of *Law*, and wrote "Trois Lettres sur le Nouveau Système de Finances." In the following year, 1721, he was made professor of philosophy at the College of France. He was also author of an Egyptian tale entitled "*Sethos*," and of a translation of *Diodorus Siculus*. He was a member both of the Academy of Sciences and of the French Academy. Died, 1750.—*ANTOINE* was born at Paris, in 1705. He composed, by order of the chancellor *D'Aguesseau*, the "History of Roman Jurisprudence;" for which he was named censor royal and professor in the royal college. Died, 1782.

**TERRAY, JOSEPH MARIE (ABBE TER-
RAY)**, the dissolute France-minister of *Louis XV.*, was born in 1715. At the age of 21 he was appointed to an office in the parliament of Paris, and for a time led a modest and laborious life. But on inheriting a large fortune from his uncle, he threw off all restraint, lived a scandalous life, and sought to make his way at court. He ingratiated himself with *Madame Pompadour*, and co-operated with her in the expulsion of the Jesuits. He secretly supported the odious measures of the minister of finance, and at the same time prepared the remonstrances of the parliament against them. At the close of 1769 he reached the height his ambition had aimed at, and was named controller-general of the finances. His edicts fell in showers, and while he ruined France by recklessness and injustice, he enriched himself and his patroness, the *Dubarry*, and insulted with cynical mockery the miseries of the people. He held his post till after the accession of *Louis XVI.*, and fell with his colleagues, the Chancellor *Maupeou* and *D'Alquillon*, on the 24th August, 1774, a day which has

been called the *St Bartholomew of Ministers*. Died, at Paris, hated and despised, 1778.

TERTULLIANUS, QUINTUS SEPTIMIUS FLORENS, the first and one of the most celebrated of the Latin Fathers, flourished about *A. D.* 190—214, in the reigns of the Emperors *Severus* and *Caracalla*. He was son of a centurion in the service of the præconsul of Africa, and was born at Carthage; became an eminent rhetorician, was converted to the Christian religion either at Carthage or Rome, and obtained the office of presbyter. After he was past middle age he embraced the doctrines of *Montanus*, to which his ardent, sensuous imagination and ascetic tendencies would naturally incline him. He is said to have been determined to that course by the ill-treatment he received from the Roman clergy. Whether he remained a Montanist till his death, or ultimately returned to the Catholic church, cannot be decided. He lived to a great age, and wrote a very large number of works, some of which were early lost. The most important of his extant works are—the "*Apologeticus adversus Gentes pro Christianis*," addressed to the Roman magistrates in 198; "*Ad Martyres*;" "*De Testimonio Animæ*," in which he endeavours to work out the idea of the pre-conformity of the human soul to the doctrine of Christ; "*De Præscriptione Hæreticorum*;" "*De Oratone*;" "*De Patientia*," "*De Oratione*," and "*De Baptismo*." His works are of four classes, apologetic, practical, doctrinal, and polemical. They are characterized by vast learning, profound and comprehensive thought, fiery imagination, and passionate partisanship, leading into exaggeration and sophistry. His style is frequently obscure. "He had to create," says *Neander*, "a language for the new spiritual matter, and that out of the rude Punic Latin, without the aid of a logical and grammatical education, and in the very midst of the current of thoughts and feelings by which his ardent nature was hurried along." The study of Tertullian had a marked influence on *Cyprian*, who used to ask his secretary for his works in the words "Da *Magistrum*." The doctrine of the Millennial Reign of Christ was taught in one of the lost works of this Father.

TESSIER, HENRI ALEXANDRE, an eminent French writer on agriculture, to which he devoted a long life, died at Paris, in December, 1837, aged 94. During the period of revolutionary anarchy, he lived in retirement in Normandy, still, however, actively engaged in his favourite pursuit. He was the editor of the "*French Annals of Agriculture*," a voluminous periodical work. He was also the early patron of *Cuvier*, being the first to discover his talents, and introduce him to the scientific world.

TESSIN, NICODEMUS, a senator of Sweden, principally celebrated for his architectural works, was born at *Nikoping*, in 1654. He held several high appointments in the government, and numerous public edifices were erected from his designs. Died, 1718.

TESTELIN, LOUIS, French painter, born at Paris in 1615. He was a pupil of *Youet*, and studied the best pictures in the galleries

of Paris and Fontainebleau. He was one of the first members of the Academy of Painting and Sculpture, and in 1650 was appointed a professor. His best works are the pictures of "Tabitha restored to life by St Paul," the "Flagellation of St Paul and Silas,"—both in Notre Dame—and "St Louis attending a sick man." Testelin was an intimate friend of Le Brun. Died at Paris, 1655.

TESTI, FULVIO, an eminent lyric poet, accounted the Horace of modern Italy. He was born at Ferrara, in 1593, of a noble family; was thrown into prison in consequence of having entered into a correspondence with Cardinal Mazarin; and is supposed to have been there put to death, in 1646.

TETZEL, or TEZEL, JOHANN, a Dominican monk of the 16th century, was born at Leipsic, where he studied, and was created bachelor in theology in 1487. He entered the Dominican order two years later, and from 1502 was employed in the sale of indulgences issued by Pope Leo X. He represented them as possessing the virtue of pardoning all sins, past, present, and future. Purchasers came in crowds, and Tetzel realized immense sums of money by his lying trade. He was a man of immoral character, and was once convicted of adultery, and sentenced to an ignominious death. He owed his escape to the elector of Saxony. Luther first heard of him in 1516, and vowed to "knock a hole in his drum." Luther's bold attack on him, and on the sale of indulgences in the following year, was the first occasion of the great reformation. The papal government, seeing the mischief likely to accrue from the indiscreet zeal and bigotry of Tetzel, so severely rebuked him, through the legate Miltitz, that he is said to have died of a broken heart, in 1519.

THACKERAY, WILLIAM MAKEPEACE, one of the greatest of English novelists, belonged to a Yorkshire family, and was born at Calcutta, in 1811, his father being at that time in the civil service of the East India Company. He was early brought to England, and was educated first at the Charterhouse, for which he retained through life a hearty attachment, and then at Cambridge University, which he left without taking a degree. He began life with a fair fortune, and his inclination was for the life of an artist. To prepare himself for such a course he travelled on the continent, visiting Rome, Paris, and Weimar, seeing Goethe there, and associating principally wherever he went with artists. A true love for art and artists distinguished him to the last; but it became necessary for him to work, and instead of pursuing the path of art, he applied himself to literature. At first he wrote for various journals and periodicals, contributing tales, essays, sketches, reviews, and poems. Some brilliant epigrammatic articles in the "Examiner" were from his pen; and for "Fraser's Magazine" he wrote, under the suggestive name of Michael Angelo Titmarsh, some of the best of his minor pieces. Among these were "The Great Hogarty Diamond," and "The Shabby Genteel Story." He joined the staff of "Punch," for which his sparkling wit, refined satire, and genuine

humour so admirably qualified him; and in that honourable position he was associated with Douglas Jerrold, Gilbert A'Beckett, John Leech, and other genial and honoured men who have not yet, like them, passed from among us. The well-known "Snob Papers" and "James's Diary" originally appeared in the pages of Punch. About 1843 he visited the East for the benefit of his health, and soon after published a record of his travels under the title of "Notes of a Journey from Cornhill to Cairo." The same year in which this appeared, 1846, Thackeray began to publish, in monthly numbers, the masterly fiction which first fairly showed the world what he could do, and established his reputation—"Vanity Fair." This was followed in 1849-50 by "Pendennis;" in 1852 by his charming "History of Henry Esmond," the most studied and highly finished of all his works; "The Virginians," a sequel to "Esmond" (which four masterpieces have been happily named by a friendly critic, the "Thackeray Quadrilateral"); "The Newcomes," and the "Adventures of Philip in his Way through the World." His shorter works are very numerous, but we can only name "Our Street," "Doctor Birch and his Young Friends," and "The Rose and the Ring," the latter a tale for children. In 1851 Thackeray ventured on a new path, and delivered his "Lectures on the English Humourists," first in London and the principal towns of England, and then in the United States. He conquered his natural repugnance to public speaking in order, by these lectures, to make provision for those most dear to him; and he succeeded. He made a second visit to America in 1855, and on that occasion first delivered the "Lectures on the Four Georges." These also were afterwards listened to with admiration in England. In 1857 he stood as a Liberal candidate for the representation of the city of Oxford, and he was beaten by his opponent, Mr Cardwell, by only the small majority of 1085 to 1018. Two years later he started the "Cornhill Magazine," and undertook the task of editor; which, however, he found too heavy, and after a year or two resigned. In the pages of his Magazine appeared his story of "Philip" and the "Roundabout Papers." Thackeray has been much spoken against and written against as a cynical, ill-natured man, who refused to see or to paint any but the dark and ugly sides of things. But whatever ground there may be in his writings for such a charge, it is certain that to those who knew him personally he was one of the most genial and kind-hearted men in the world. "It was impossible," says the *Times*, "to be long with him without seeing his truthfulness, his gentleness, his humility, his sympathy with all suffering, his tender sense of honour; and one felt these moral qualities all the more when one came to see how clear was his insight into human nature, how wide was his experience of life, how large his acquaintance with books, and how well he had thought upon all he had seen, and how clearly and gracefully he expressed himself. A man in all the qualities of intellect, he was a child in all the qualities of heart." In person he was tall and strongly

built, with a noble very white hair. He was at the anniversary of a few days before place at his house Gardens, 24th Dec. and his funeral was of distinguished artists. A bust of THACKWELL, a distinguished was born Feb. 1, early, and served Irish Rebellion; in the 15th Hussars that corps for 32 years of which he held sent at Corunna. contused. At W wounds, losing 1 horses shot and first wound in his head of his men second shot taken amputation became ever, rejoined the India he served manding the cavalry He received the medals on three occasions THALES, the Greece, born at founded the Ionian and died about 480 B.C. lent geometric revolution of the first Greek philosopher. He was also the first to use water as the first also united moral researches his knowledge pithy aphorisms. THELUSSO, of Geneva, was London, where fortune, and £100,000 to his of his property million, is to his three sons when, if there and name existing to the sinking ing contracted lished by a doctor 1805; it, how an act, restricting property for 21 years after His eldest son the title of Earl THELWA, laneous writer tradesman, and successively law, he gave a literary life by his pos

built, with a noble head and a mass of silvery white hair. His last public appearance was at the annual Charter-house dinner, a few days before his death; which took place at his house in Kensington Palace Gardens, 24th December, 1863. His remains were interred in Kensal Green Cemetery, and his funeral was attended by a large number of distinguished men, both authors and artists. A bust of Thackeray, by Marochetti, has been placed in Westminster Abbey.

THACKWELL, Sir JOSEPH, G.C.B., K.H., a distinguished British lieutenant-general, was born Feb. 1, 1781. He entered the army early, and served in the latter part of the Irish Rebellion; but purchasing a comrady in the 15th Hussars in 1800, he served in that corps for 32 years, during the last eleven of which he held the command. He went to Spain with Sir John Moore, and was present at Corunna. At Vittoria he was severely contused. At Waterloo he received several wounds, losing his left arm, and had two horses shot under him. On receiving the first wound in the fore-arm, he seized his bridle with his mouth, and dashed on at the head of his men to charge the enemy. A second shot taking effect on the same arm, amputation became necessary. He, however, rejoined the army in a few weeks. In India he served with great distinction, commanding the cavalry in the first Afghan, in the Gwulior, and the two Sikh campaigns. He received the thanks of the House of Commons on three occasions. Died, April 8, 1859.

THALES, the chief of the seven sages of Greece, born at Miletus, about B. C. 640, founded the Ionic school of philosophers, and died about B. C. 545. He was an excellent geometrician and astronomer, fixed the revolution of the sun at 365 days, and was the first Greek who predicted a solar eclipse. In his physical speculations he regarded water as the first principle of all things. He also united moral and political wisdom to the researches of science, and exemplified his knowledge of mankind by numerous pithy aphorisms.

THELLUSSON, PETER ISAAC, a native of Geneva, who settled as a merchant in London, where he acquired a prodigious fortune, and died in 1798. He left about £100,000 to his family; and the remainder of his property, considerably above half a million, is to accumulate during the lives of his three sons and the lives of their sons, when, if there are none of his descendants and name existing, the whole is to be added to the sinking fund. This singular will being contested by the heirs at law, was established by a decision of the House of Lords in 1805; it, however, occasioned the passing of an act, restraining the power of devising property for the purpose of accumulation to 21 years after the death of the testator.—His eldest son was raised to the peerage by the title of Baron Rendlesham.

THELWALL, JOHN, political and miscellaneous writer, was the son of a London tradesman, and was born in 1764. Quitting, successively, his father's business and the law, he gave himself up in early manhood to a literary life, and first made himself known by his poems, published in 1787. He is

chiefly remembered, however, as a political orator and a member of the Corresponding Society in the first years of the French revolution. He was prosecuted with Hardy and Horne Tooke for treason, but was acquitted. He was afterwards occupied as a popular lecturer, especially on elocution, and he threw out some important suggestions on the cure of stammering. He was a man of thorough uprightness and generous sentiment; was twice married, and had several children; and died at Bath, in 1834. His second wife survived him, and died in great distress at Windsor, in 1865.

THEMISTOCLES, an ancient Greek orator, Peripatetic philosopher, and critic, who flourished about 360—390. More than 30 orations of Themistocles are still extant.

THEMISTOCLES, the illustrious Athenian statesman and general, was the son of Neocles, and was born about B. C. 514. The ambition which inspired him in his manhood, and the great natural genius which fitted him to play a great part, were early manifested. He was wilful and wayward in his youth, eager for real knowledge, careless of mere accomplishments; fond both of getting and spending money, and could not sleep sometimes for thinking of the trophies of Miltiades. He gradually rose into credit with his fellow-citizens, and one of the first occasions on which he took an important part in public affairs was the ostracism of Aristides in 483. This measure he promoted, and it left him the foremost man at Athens. Two years later he was Archon. His aim was mainly the greatness and security of Athens, but this perhaps in order that he might have the wider field for his personal influence and action. He saw the necessity of naval supremacy for Athens, and succeeded in getting a decree for applying the produce of the silver mines of Laurium to the building of ships. When Xerxes invaded Greece in 480, Themistocles had the command of the fleet, and by his advice the citizens abandoned Athens with their families, and went to Salamis, Egina, and Troezen. On the appearance of the Persian fleet off Salamis, he could scarcely dissuade the Peloponnesians from leaving; and at the last moment, in order to save the Greeks in spite of themselves, he resorted to the stratagem of sending a secret message to Xerxes, which induced him to make an immediate attack. The Greeks were thus compelled to cease debating and fight; and the great victory of Salamis was won. Themistocles is said to have sent a second secret message to Xerxes after the battle, but its purport is uncertain. His fame among his countrymen was now established. Sparta did him unusual honour; awarding him the chaplet of olive leaves, and the best chariot the city possessed. In the following year under his direction the Athenians undertook the rebuilding of their walls and the fortification of Piræus. A Spartan embassy was sent to hinder the work; but Themistocles by his clever unscrupulous diplomacy thwarted Sparta, and the supremacy of Athens was secured. His influence, however, began to wane. He was accused of enriching himself by exacting contributions from the islands

the Julian Alps, and appeared in Italy. He encountered Odoacer, then sovereign, in three battles, near Aquileia, near Verona, and on the Adda; and after blockading Ravenna for three years, received the capitulation of Odoacer, and agreed to rule jointly with him. A few days after, Theodoric had him put to death at a banquet, with his family and mercenaries, and himself proclaimed king of Italy, 493. From this time he reigned, for the most part in peace and prosperity, thirty-three years, earning the esteem of his own times by his wisdom, courage, and humanity. He fixed his residence at Ravenna; did not assume the title of emperor; waged only defensive wars, and saved his kingdom from invasion; divided a third part of the lands of Italy among his soldiers; made alliances by marriage with the Franks, Burgundians, Visigoths, Vandals, and Thuringians; and had a large fleet of light vessels built. By a visit of some months to Rome, in 500, he increased his popularity with both senate and people, and at the same time displayed a rational concern for the preservation of the works of ancient art. In religion Theodoric was an Arian, but the Catholics enjoyed full toleration. The severe edict of the Emperor Justinus against the Arians provoked retaliation on the part of Theodoric, but his death prevented the actual outbreak of the meditated persecution. The imprisonment and barbarous execution of the senator Boethius, and his aged father-in-law, Symmachus, on suspicion of treason, sullied his fair fame in the last years of his life. He did not long survive, and his end was perhaps hastened by remorse. Died, 526. A monument was erected to him at Ravenna by his daughter, Amalasintha.

THEODOSIUS, the Great, emperor of the East, was a native of Spain, and was born about A. D. 346. He was the son of the general of the same name, who was appointed to the command in Britain in 367, afterwards distinguished himself in Africa, and, in 379, fell into disgrace, and was put to death. Theodosius accompanied his father in his campaigns, and was named duke of Mesia, which province he saved by a victory over the Sarmatians. After the great defeat of the Romans, and the death of Valens at the battle of Adrianople, in 378, Theodosius was called by Gratian from his retreat in Spain to assume the government of the East, and to take the conduct of the Gothic War. He fixed his head-quarters at Thessalonica, and by prudent and cautious measures gradually weakened the Goths and delivered the empire. The revolt of Maximus and the murder of Gratian soon followed, and the former was recognized as emperor of the West by Theodosius. But the latter subsequently took arms in the cause of Valentinian, defeated Maximus near Aquileia, and had him put to death, in 388. After spending the winter at Milan, he made a triumphal entry into Rome. Theodosius was a zealous Catholic, and theological conflicts form a prominent part of the history of his reign. He was baptized by an orthodox bishop before the end of the first year of his reign, and immediately published an edict in sup-

port of the doctrine of the Trinity, branding all who did not hold it as heretics. The Arian archbishop of Constantinople was deprived, and Gregory Nazianzen was promoted to the see; and shortly after all Arian bishops and clergy were expelled from their churches. The council of Constantinople was convoked in 381, and after disorderly and disgraceful proceedings, confirmed the orthodox faith. During the first fifteen years of his reign, Theodosius published fifteen severe edicts against "heretics;" exile, confiscation, and fines for the pastors, prohibition of meetings, and a civil excommunication which disqualified them for all honourable offices. An officer was appointed to see to the execution of these edicts, who was called *Inquisitor of the Faith*. The rites and sacrifices of Paganism were finally suppressed by Theodosius, who promulgated many severe laws against them, and had many of the temples destroyed. In 397, disturbances took place at Antioch, occasioned by oppressive taxation, and the images of the emperor, the empress, and others of his family were thrown down and broken in pieces; in consequence of which the emperor degraded the city to the rank of a village, and deprived it of its revenues and privileges. But on the humble intercession of the people, supported by the senate of Constantinople, the city was pardoned and restored. Three years later broke out the sedition of Thessalonica, which the emperor avenged by a general massacre of the people when assembled in the circus by his own invitation. This frightful crime, by which 7000, or perhaps double that number of lives were sacrificed, brought on Theodosius the solemn rebuke of Ambrose, archbishop of Milan, at which city the emperor was residing at the time. Ambrose retired to the country and sent a letter to him; and on his attempting to enter the church of Milan, he was stopped by Ambrose with fearless and dignified demand of public penance. To this Theodosius submitted, and after eight months was restored to the communion of the faithful. After establishing Valentinian in the Western empire, he returned to his own capital, but in 394 he was called to a new war against the usurper Eugenius and his supporter, Arbogastes, both of whom were defeated and slain. Theodosius died at Milan only four months after this victory, in January, 395, leaving the empire to be divided between his sons, Arcadius and Honorius.

THEODOSIUS II., son of Arcadius, whom he succeeded, in 408, in the empire of the East. The government was carried on during the greater part of his reign by his sister Pulcheria. In his reign was compiled and published the celebrated code of laws, styled after him the "Theodosian Code." Died, 450.

THEOGNIS, a Greek elegiac poet, was a native of Megara, and born about 550 B. C. Of his writings we possess only fragmentary passages, consisting chiefly of moral axioms or apothegms with frequent allusions to political affairs and social enjoyments. Theognis was living in B. C. 490.

THEON, of Alexandria, a philosopher and

mathematician in the time of Theodosius the Great, was father of the celebrated Hypatia.

THEOPHANES, GEORGE, a Greek historian, was born at Constantinople, of a noble family. Leo, the Armenian, exiled him to Samothrace, where he died in 818.

THEOPHRASTUS, the Greek philosopher and naturalist, was a native of Eresus, in Lesbos, and flourished in the 4th century B. C. He became a pupil of Plato at Athens, and made at the academy the acquaintance of Aristotle; but he quitted the academy after Plato's death, and was absent from Athens for some years. On his return he gladly studied philosophy under his friend Aristotle, who had so high a regard for him as to bequeath to him his library, and to name him his successor. Theophrastus had extraordinary success as head of the Lyceum, and was attended, it is said, by 2000 disciples. Among them were Demetrius Phalereus and Menander. A charge of impiety was brought against him, but he successfully defended himself, and generously interposed to save his adversary from the popular vengeance. He was, however, compelled to leave Athens in 305, under the law which banished all philosophers. The law was soon repealed, and he returned to his post, and peacefully taught and commented on the system of his master, Aristotle, till his death. His writings were very numerous, but have perished, with the following exceptions; his work entitled "Characters," a set of lively sketches of vicious or ridiculous characters; treatises on the "History of Plants," on the "Causes of Plants," and on "Stones;" a work on the Senses, and several fragments. The "Characters" served as the model for La Bruyère's work with the same title; it has been several times translated into English, French, and German. The works of Theophrastus were first printed by Aldus in 1495.

THERAMENES, an illustrious Athenian, a member of the government of the 400, which he also helped to overthrow. He was present at the battle of Arginusæ, and afterwards took the lead in procuring the condemnation of the six generals. In B. C. 404 he was one of the 30 tyrants, but so zealously opposed his colleagues in their tyranny, as to excite their hatred. Accordingly, Critias denounced him to the senate, and when he perceived a disposition on the part of the judges to acquit the accused, he surrounded the tribunal with his creatures, and denounced sentence of death against Theramenes by his own authority. Theramenes, finding himself overpowered by his enemies, drank the fatal draught prepared for him.

THERESA, ST., reformer of the order of Carmelites, was born in Old Castile, in 1515. She was remarkable almost from infancy for her fervent piety, but through a long course of years, periods of ascetic devotion alternated with periods of gaiety and indulgence in worldly pleasures, according as she was affected by great sorrows or was free from them. She had been placed in the convent of the Augustine order in her native town, Avila, soon after the death of her mother, in 1527, and she took the vows seven

years later. After years of painful interior conflicts, she resolved to attempt the reform of her order, which she commenced by founding, in 1562, another convent at Avila, in which a more close and rigorous observance of the rule should be enforced. The new society was called the "Barefooted Carmelites," and other houses were soon founded. St Theresa was aided in her pious enterprise by the co-operation of John de Santa Cruz. Died at Alba, 1582, and was canonized by Gregory XV. in 1621. Her remains were removed to Avila in 1585, but were restored to Alba in the following year by order of the pope. The writings of St Theresa, chiefly ascetic, were published in 1675, in 2 vols. folio, and have several times been republished. Among them is her Life, written by herself. A new English Life of her, edited by Dr Manning, appeared in 1865. It repeats as historically true, and with evident belief, all the extravagancies and hallucinations of the saint, her fancies, and visions of angels and devils, &c.

THESPIS, a Greek poet, born at Icarus, in Attica. He is considered the inventor of tragedy, from his having, B. C. 535, introduced an actor in addition to the chorus, and was the author of several tragedies.

THEVENOT, MELCHISEDEC, an eminent traveller, was born at Paris, in 1621. He travelled in various parts of Europe; and on his return devoted himself entirely to study and to the promotion of the interests of literature, by collecting books and manuscripts, and by carrying on a correspondence with the learned in all parts of the world. He was appointed royal librarian in 1684, having long before published his "Voyages and Travels," and died in 1692.

THEVENOT, JEAN DE, nephew of the preceding, was born at Paris, in 1633. Being enabled to gratify his love of travelling, he visited several parts of Europe, and afterwards explored many countries in the East. On his second oriental tour, as he was returning from Hindostan, through Persia, he died, near Tauris, in 1667. His various narratives of travel were collected and published under the title of "Voyages de M. Thévenot, tant en Europe qu'en Asie et en Afrique."

THIBAUT, ANTON JUSTUS FRIEDRICH, a celebrated German jurist, was born at Hameln, in Hanover, 1772; studied successively at Göttingen, Königsberg, and Kiel; and after displaying great ability as a private teacher of law at Jena, was appointed to the chair of civil law at Heidelberg in 1805, where he remained till his death, in 1840. A list of his various works would be too long for our columns; but his chief title to fame rests on his "System des Pandecten-rechts," which has passed through numerous editions, and is regarded as an authority by most German lawyers.

THICKNESSE, PHILIP, miscellaneous writer, was born in 1720. He entered the army when young, and went to Georgia with Governor Oglethorpe; after which he served in the West Indies, and, on his return to England, obtained a captain's commission. He married a French lady; and on becoming a widower, he obtained the

hand of Lady Elizabeth, the ancient baron chased the office of Landguard Fort. son, with whom, o title and estate of had some very unp 1761 Mr Thicknes and shortly after n by whom he had a travelling through he settled in Wales at the commencement he went abru Boulogne, in 1792 works, the most account of his own title, "Memoirs a Thicknesse, late Landguard Fort, a to George Touchet THICKNESSE, preceding, a lady quirements, was t solicitor, and cler born in 1737. band of Lady Elizabeth Touchet, heiress of the ancient barony of Audley; and purchased the office of lieutenant-governor to Landguard Fort. By this lady he had one son, with whom, on his succeeding to the title and estate of his mother's family, he had some very unpleasant disputes. About 1761 Mr Thicknesse lost his second wife, and shortly after married Miss Anne Ford, by whom he had a numerous family. After travelling through France, Italy, and Spain, he settled in Wales, and next at Bath; but at the commencement of the French revolution he went abroad again, and died, near Boulogne, in 1792. He published several works, the most curious of which is an account of his own life, with the following title, "Memoirs and Anecdotes of Philip Thicknesse, late Lieutenant-governor of Landguard Fort, and unfortunately Father to George Touchet, Baron Audley," 2 vols.

THICKNESSE, ANNE, third wife of the preceding, a lady of great beauty and acquirements, was the daughter of John Ford, solicitor, and clerk of the arraigns, and was born in 1737. She eloped from her father's house in order to avoid a disagreeable marriage, and her talents and personal attractions having early introduced her into the world of fashion, she took advantage of that circumstance to give three concerts at the Opera House, by which she realized £1500, and acquiring the patronage of Lady Thicknesse, she became domesticated in the family. On the death of this lady she married Mr Thicknesse, and during a union of 30 years, till his death in 1792, she accompanied him on various journeys to different parts of the continent. The French revolution had commenced, and Mrs Thicknesse, in company with several other English ladies, was imprisoned, but escaped the guillotine through the death of Robespierre. She died at her house in Edgware Road, London, in 1824. She was intimate with the leading wits of her time, and spoke several languages with fluency. Her principal works are, "Biographical Sketches of Literary Females of the French Nation," and a novel entitled "The School of Fashion."

THIERRY, JACQUES-NICOLAS-AUGUSTIN, the distinguished French historian, was born at Blois, in 1795. Educated at the college of his native town, he went to Paris in 1814, an ardent enthusiastic youth, full of theories and speculative inquiries, and threw himself into the Socialist school of St Simon, in conjunction with whom he published several political pamphlets. Disappointed in this quarter, he commenced writing for the press, and his pen was engaged in a constant supply of political and historical articles to the "Censeur Européen," and the "Courrier Français." These papers laid the foundation of his brilliant, but not very trustworthy, history of the "Norman Conquest of England," which appeared in 1823, and gained him a world-wide reputation. His fame is sustained by his "Letters on the History of France," published two years later. His slight and his nervous system now failed him; but though he passed the remainder of his days in total blindness, his mental eye remained undimmed, and his

vigour unabated. He continued to issue to the world his philosophic thoughts in various essays, which he subsequently reprinted in a collective form. In 1840 he published his work, entitled "Récits des temps Mérovingiens," in which he explores a considerable portion of the traditional records of that time; and which contains, among other interesting features, an autobiography. His last work was his essay on the "History of the Tiers Etat." It was published in 1853, and is marked by the same picturesque style and felicity of observation for which his previous works were conspicuous. Died, 1856.

THISTLEWOOD, ARTHUR, memorable as the leader of the "Cato Street" conspirators in 1820, was the son of a respectable farmer near Lincoln, and was born in 1772. He obtained a lieutenant's commission in the supplementary militia, in 1797, and shortly after married a young lady with a considerable fortune, but who died about 18 months after their union. After squandering his property in dissipation and gambling, he left Lincoln for London, and made occasional voyages to America and France. He married again, and thereby improved his circumstances; but he had now become a gambler by profession, and had also connected himself with disaffected characters, which drew on him the notice of government. When the riots in Spa Fields took place, he was arrested as one of the ringleaders; but after being kept some time in confinement he was liberated, there being no proof of his guilt. Shortly after he sent a challenge to the home secretary, Lord Sidmouth, as the author of the bad treatment he had received during his confinement; which occasioned his subsequent detention in prison for a considerable time. Burning with rage, he became the principal agent in the Cato Street conspiracy, the object of which was to murder several members of the administration, while at a cabinet-dinner at Lord Harrowby's, and excite an insurrection in the metropolis. Information, however, having been given to the ministers by a spy employed for the purpose, a party of police officers, with a company of the guards ready at hand, if wanted, proceeded to the place of meeting—a room over some stables in Cato Street—where the conspirators were, at the time, preparing for their enterprise. As soon as the officers entered, Thistlewood seized a sword, and killed the foremost of them on the spot. But he and his coadjutors were quickly secured; and being brought to trial, were condemned, and suffered as traitors, May 1, 1820.

THOM, WALTER, miscellaneous writer, was born at Bervie, in the county of Kincardine, April 14, 1770. He commenced business as a manufacturer in his native town, but not succeeding, he went to Aberdeen, and adopted literature as a profession. During his residence in Aberdeen, he published "The History of Aberdeen," and the "Annals of Pedestrianism." He afterwards went to Dublin, where he was engaged as editor of the Dublin Correspondent, which he conducted for some years. He was author of several articles in Brewster's Encyclopædia, and contributed portions of the Sta-

tistical Account of Scotland, for Sir John Sinclair, and also to Mr Shaw Masson's Agricultural and Statistical Account of Ireland, and various other works. He died at his house in Dublin, June 16, 1824, aged 54.

THOMAS AQUINAS. [AQUINAS.]

THOMAS A BECKET. [BECKET.]

THOMAS A KEMPIS. [KEMPIS.]

THOMAS, JOHN, an English sculptor, born about 1815. He executed the colossal lions at the ends of the Britannia Bridge; the large bas-reliefs at Euston Station; the sculpture on the entrance piers at Buckingham Palace, and some sculptures at the Westminster Palace. He was employed by the Prince Consort in Windsor Castle, prepared designs for several public and private buildings, and left unfinished statues of Joseph Sturge and Sir Hugh Myddleton. Among his works of higher class are a "Musiadora," "Una and the Lion," and a model for a monument to Shakespeare, which was placed in the International Exhibition of 1862. Died, still in his prime, at his residence, Malda Hill, April 9, 1862.

THOMAS, WILLIAM, a grandson of William Thomas, bishop of Worcester, who died in 1689, was born in 1670, and educated at Westminster School, and Trinity College, Cambridge. He obtained the living of Exal, in Warwickshire; and in 1723 was presented to the rectory of St Nicholas, in Worcester. Died, 1738. He published, among other works, an enlarged edition of Dugdale's Warwickshire, 2 vols.; and a "Survey of Worcester Cathedral." He had made collections for a history of Worcestershire, which fell into the hands of Dr Treadway Nash, and served as the foundation of his work.

THOMAS, CHRISTIAN, a distinguished German philosopher, was born at Leipsic in 1655. He was educated by his father, the Professor Jacob Thomasius, who was also the master of Leibnitz; graduated M.A. at the university of his native town, in 1672, and LL.D. at Frankfurt on the Oder, in 1679. He soon after became a professor at Leipsic, and there did good service by his bold attacks on the routine of the schools, and on many antiquated prejudices; and especially by setting the example, in 1687, of delivering his lectures, not in Latin, but in German; which practice, after passing through the customary ordeal of angry censure, was gradually adopted, and became universal in Germany. A host of enemies rose against the reformer, and at last the *odium theologum* was stirred by the ridiculous charge of atheism. He had dared to oppose the belief in ghosts and witches, and to assert that polygamy was not contrary to the law of nature, and that there was no harm in marriages between persons of different religions. To escape arrest at the instigation of the enraged theologians, he went to Berlin, and was appointed by the elector, Frederick III., to lecture at the *Ritteracademie* of Halle, in 1690. Four years later Frederick founded the university of Halle, and Thomasius had the chair of jurisprudence. He was subsequently made privy-councillor, rector of the university, and dean of the faculty of

jurisprudence. His works are numerous, and we can only name here—"Introduction to the Art of Reasoning," 1691; "The Art of Living Reasonably and Virtuously," 1692, an introduction to ethics; "History of Wisdom and Folly," several works on natural law, and a collection of minor essays. Thomasius started a Monthly Review in 1688, in which he carried on vigorously the war with prejudice and pedantry. He died at Halle in 1728.

THOMPSON, WILLIAM, a distinguished naturalist, was born at Belfast in 1805, and from his earliest youth was warmly attached to scientific and literary studies. The numerous memoirs published by him chiefly in scientific periodicals, and latterly more especially in the "Annals of Natural History," embrace all departments of zoology, and several are devoted to botanical investigations. He was constantly on the watch for new facts bearing on the natural history of his native island. But he did not confine his inquiries to Irish subjects, but added considerably to our knowledge of the natural history of England and Scotland; and when Professor E. Forbes proceeded to the Egean at the invitation of Captain Graves, Mr Thompson, himself an intimate friend of the distinguished officer just named, accompanied him, and devoted the short time he was in the Archipelago to interesting zoological observations since published, chiefly on the migration of birds. His love of ornithology was indeed intense, and the results of his labours in that department are narrated with full and charming details in the volumes that have been published of his great work on "The Natural History of Ireland." His name is associated with many discoveries, and numerous species of animals have been named after him. His reputation stood equally high on the continent and in America. Entirely devoid of any envious feeling, loving to co-operate with others, and to assist in furthering their researches, truthful and energetic, he spared neither time, labour, nor pains, to help in every possible way all who were engaged in kindred pursuits. His love of the fine arts was only second to his love of science, and for many years he was one of their most active promoters, and especially of painting, in Ireland. Died, 1852.

THOMPSON, BENJAMIN. [RUMFORD, Count.]

THOMPSON, DR ANDREW, an eminent modern divine and leader in the national church courts of Scotland, was born at Sanquhar, in Dumfriesshire, in 1779. He was ordained minister of the parish of Sprouston, in 1802; removed to the East Church of Perth, in 1808, where he laboured assiduously till 1810, when he received a presentation from the magistrates and council of Edinburgh to the New Grey Friars' Church in that city. Eloquent, indefatigable, and zealous, he came prepared to the discussion of every subject, making an impression on the public mind which has but few parallels in the history of ministerial labours. In 1814 he was appointed to St George's Church, where, labouring in his vocation with surpassing energy, he rapidly extended his re-

putation, and acquiescence. Died, 1833.

THOMPSON, ANNE, a distinguished medical writer, was born at Edinborough. Her father had settled an important office connected at the high school of his native city, and pursued his medical studies, in Speculative Society, and acquaintance of other eminent persons, enjoyed till his death as a general practitioner there for years, laying the foundation by the most judicious publishing his "European repository," no less in conjunction with the Edinburgh Medical Repository; and by the amiability than by his professional became one of the university of London. He commenced practice in 1780, and took advantage of the opportunity procured, to write "Medical Repository," which in 2 vols., and to which he afterwards contributed to different medical works, and his science; and his edition of Salvarum, Omens, and application of Thomasius's explanatory notes. His "Treatise on a posthumous paper." THOMPSON, JAMES, a Scotch clergyman, Roxburghshire, who was born at Jedburgh, and after having finished his first intention, he went to London, where he published his "Wintering," which was "Summer," which was "Spring," During the winter, he produced "Sophia's Poem on Sir Isaac Newton," this he was selected as the associate of the society, and was thus the course of which opened courts, and was awarded with the gold medal. In 1735 he published with the countess much disapproval of Lord Chamberlain, who was vacated, succeeded to the general of the general of the produced a

putation, and acquired extraordinary influence. Died, 1831.

THOMSON, ANTHONY TODD, M.D., a distinguished medical writer and practitioner, was born at Edinburgh, 1778, where his father had settled, after having long held an important office in America. He was educated at the high school and university of his native city, and while prosecuting his medical studies, he became a member of the Speculative Society, and thus formed the acquaintance of Lord Brougham, and many other eminent persons, whose friendship he enjoyed till his death. In 1806 he settled as a general practitioner at Chelsea, and practised there for 25 years with great success, laying the basis of his future reputation by the most indefatigable study, and publishing his "Conspicua," a work of European reputation, and his "London Dispensatory," no less distinguished; editing, in conjunction with Dr Burrows, the Medical Repository; and gaining "golden opinions" by the amiability of his character, no less than by his professional skill. In 1826 he became one of the first professors of the university of London, and held the chairs of Materia Medica and medical jurisprudence till his death. About this period, also, he commenced practice as a physician; and he took advantage of the greater leisure thus procured, to write his lectures on "Materia Medica," which were afterwards published in 2 vols., and to plan various other works which he afterwards gave to the world, besides contributing many articles and reviews to different medical journals. Dr Thomson was a votary of literature no less than of science; and his last works were, a translation of Salvarte's Philosophy of Magic, Omens, and apparent Miracles, and an edition of Thomson's Seasons, with numerous explanatory notes. Died, July 3rd, 1849. His "Treatise on Diseases of the Skin" was a posthumous publication.

THOMSON, JAMES, the poet, the son of a Scotch clergyman, was born at Ednam, in Roxburghshire, in 1700; and was educated at Jedburgh and at Edinburgh. Relinquishing his first intention of entering the church, he went to London, where, in 1726, he published his "Winter." In 1727 appeared his "Summer," which he addressed to Bubb Duddington. This was followed the year after by "Spring," and in 1730 by "Autumn." During the same period Thomson produced "Sophonisba," a tragedy; and a Poem on Sir Isaac Newton. Not long after this he was selected as the travelling associate of the son of Lord Chancellor Talbot, and was thus occupied for three years, in the course of which he visited most of the European courts. On his return he was rewarded with the post of secretary of briefs. In 1735 he published his poem of "Liberty," with the cool reception of which he was much disappointed. Soon after, by the death of Lord Chancellor Talbot, Thomson's office was vacated, and Lord Hardwick, who succeeded to the seals, gave it to another; but he was indemnified by the office of surveyor-general of the Leeward Islands, and a pension from the Prince of Wales. In 1738 he produced a second tragedy, entitled "Aga-

mennon," which was followed by "Edward and Eleanora," "Tancred and Sigismunda," and "Coriolanus;" the masque of "Alfred," in conjunction with Mallet; and "The Castle of Indolence." The "Seasons" and "Castle of Indolence" are Thomson's best works. The former still retains its popularity, especially with young lovers of nature. The latter, though less generally read, is more carefully finished, and in some respects deserves the highest place. He died at Richmond, in 1748. His portrait, by Paton, is in the National Collection.

THOMSON, JOHN, landscape painter, was born at Dailly, in Ayrshire, 1778; succeeded his father as minister of that parish in 1800, and was translated to Duddingstone, near Edinburgh, in 1803, where he remained till his death. From his boyhood he evinced a strong predilection for art, which increased with his years; and having early become an honorary member of the Royal Scottish Academy, he produced a great variety of landscapes, which have placed him on a level with the best artists of his native land. Died, 1840.

THOMSON, THOMAS, F.R.S., regius professor of chemistry in the university of Glasgow, who exercised a remarkable influence on the development of the science of chemistry, was born at Crieff, in 1773. He was educated at the parish schools of Crieff and Sterling, where he acquired a thorough classical education, the benefits of which were manifested in his improvements of chemical nomenclature now generally adopted. After studying at St Andrew's, he went to Edinburgh, and in the season of 1795-96, he attended the lectures of Dr Black, of whom he spoke in terms of the utmost veneration. In 1796 he succeeded his brother in the editorship of the Supplement to the third edition of the "Encyclopædia Britannica," and remained in this position till 1800. During this period he drew up the first outline of his system of chemistry, which appeared in the Supplement to the "Encyclopædia," under the articles Chemistry, Mineralogy, Vegetable Substances, Animal Substances, and Dyeing Substances. In the article Mineralogy, written about 1798, he first introduced the use of symbols into chemical science, acknowledged to be one of the most valuable improvements in modern times. In 1807 he first introduced to the notice of the world, in the third edition of his system, Dalton's atomic theory, which had been privately communicated to him in 1804. He continued to lecture in Edinburgh till 1811, and during that time opened a laboratory for pupils, the first of the kind, it is believed, in Great Britain. During this period Dr Thomson made his investigations for government on the malt and distillation questions, which laid the basis of the Scotch legislation on excise, and rendered him in after-life arbitrator in many important revenue cases. In 1817 he was appointed to the chair of chemistry in Glasgow University; and here he continued to lecture for thirty years, sending forth numerous pupils, who have occupied the highest positions as chemical teachers or manufacturers, and enriching the literature of the country with

numerous works, of which we may mention his "Annals of Philosophy," "Attempt to establish the First Principles of Chemistry by Experiments," "Outlines of Mineralogy and Geology," and, above all, his learned and fascinating "History of Chemistry." Died, 1852.

THORSHY, RALPH, an eminent antiquary and topographer, was born at Leeds, in 1658. He was educated at the school of his native place, after which he went to Rotterdam to learn the Dutch and French languages, to fit him for mercantile pursuits. On the death of his father he succeeded to a large concern, but he found leisure to cultivate his taste for antiquarian pursuits, and produced two works on the topography of Leeds, entitled "Ducatus Leodiensis," and "Vicaria Leodiensis." He was a fellow of the Royal Society. Died, 1725.

THORLAKSON, JON, Icelandic poet, was born in 1744. He became a priest, and in 1788 settled in the village of Boegisa, in the dreary northern parts of the island. He had an income of about £7 a year, and lived in a poor hut, with a door four feet high, and furnished only with a bed, a table, and a chair. His wife did not relish the desolate living, and would not share her husband's home. Thorlakson occupied himself with the labours of the farmers, and amused his indoor leisure with writing poems. His chief production is the Icelandic translation of "Paradise Lost," which is said to have become a common household treasure. It was made not from the original, but from a Danish translation, is of much greater length, and written in totally different verse. Henderson, the English traveller, visited the old poet in 1814, and afterwards sent him a helpful gift of money collected in England. A pension was also granted him by the Danish government. Died, 1819.

THORNHILL, Sir JAMES, an eminent English painter, was born in 1676, at Weymouth, in Dorsetshire; and, after studying in this country, greatly improved himself on the continent. On his return, he was much engaged in the decoration of palaces and public buildings. Among his principal works are, the dome of St Paul's, the refectory and saloon at Greenwich Hospital, the hall at Blenheim, and some of the apartments at Hampton Court. He displayed great skill in treating allegorical compositions, and he was by no means an indifferent architect. Died, 1734.

THORNTON, BONNEL, a humorous writer and poet, was born in London, in 1724; and was educated at Westminster School, and Christchurch, Oxford. He made literature his profession, and was on terms of intimacy with many of the wits of the age, united with the elder Colman in the *Connoisseur*, and was a fertile contributor to the periodicals of the day. He projected an exhibition of sign paintings; and brought out a burlesque "Ode for St Cecilia's Day," which afforded much amusement. In 1766 he published a translation of Plautus; and the year following a poem, entitled "The Battle of the Wigs," in ridicule of the dispute between the licentiates and fellows of the College of Physicians. Died, 1768.

THORNTON, JOHN ROBERT, botanist, was born about 1758, and was educated at Cambridge. Shortly after, having acquired a fortune by the death of his brother, he resolved to make medicine his profession, and became a member of Guy's Hospital. After studying three years in London, he visited the continent; and, returning to the metropolis, commenced practice with considerable success. In 1798 he published a work in support of the Brunonian system, entitled "The Philosophy of Medicine, or Medical Extracts on the Nature of Health and Disease," in 5 vols. Soon after, he brought out a work, called "The Philosophy of Politics," &c., 3 vols.; but he derives his chief fame from his magnificent "Temple of Flora, or Garden of the Botanist, Poet, Painter, and Philosopher." Died, 1837.

THORWALDSEN, ALBERT, the great Danish sculptor, was the son of a carver on wood, and having early shown great talent for drawing, was gratuitously educated at the Copenhagen Academy of Arts. Here he studied so effectually that he obtained two gold medals and a travelling studentship, which entitles the competitor to a salary for three years. Thus far fortunate, Thorwaldsen proceeded to Rome, where he worked with zeal and energy, but where he is said to have been for some time so impressed by the magnificence of ancient art, as to break up not a few of his earlier works as soon as they were completed. The young sculptor was preparing to return home, his three years' allowance being completely exhausted, when the clay model of his Jason was seen by that princely patron of art, Henry Philip Hope, who ordered the marble statue at a price which set aside all his thoughts of returning home. The model had received emphatic praise from Canova. The Jason once completed, and by Mr Hope's means made known, Thorwaldsen's fortune was virtually made; orders at vast prices poured in upon him from all parts; and the numerous works completed by him from the commencement of 1800 to the close of 1837, give him a high place among modern sculptors. His countrymen were justly proud of him, and honoured him with a public funeral. Among his most celebrated works are the "Triumph of Alexander," a bas-relief; "Night" and "Day;" "Christ and the Twelve Apostles;" "Procession to Golgotha;" monuments to Copernicus, Poniatowski, Maximilian of Bavaria, &c. The character of Thorwaldsen as a man is very unfavourably depicted in a recent biography. The taint of his low birth and want of early cultivation, both intellectual and moral, remained on him through life. He was mean and money-loving, fond of drink and pet dogs, very licentious and faithless, and basely jealous of rivals in his art. Died, March 24, 1844, aged 73.

THOU, JACQUES AUGUSTE DE (THUANUS), the illustrious statesman and historian, was born at Paris, in 1553. He was third son of Christophe de Thou, first president of the parliament of Paris, and was brought up to the church. At the age of 18 he studied under Cujacius at the university of Valence, and there became the friend of Joseph Scaliger.

He witnessed at Paris the marriage of Henry of Navarre and the Massacre of St Bartholomew, and in 1573 went to Italy. He quitted the church, resigned his benefices, and was named master of requests to Henry III., whose cause, in the sad distractions of that time, he steadily supported. In 1581 made councillor of state, he was present at the States-general at Blois, discharged the office of president of the parliament at Tours, and at the time of the assassination of his sovereign was at Venice, engaged in seeking aid in men and money in Italy, as he had been in Germany. Returning at once to France, he entered the service of Henry IV., and attended him in his campaigns the next five years; was appointed royal librarian, and in 1594 succeeded his uncle as president & mortier. De Thou assisted in preparing the articles of the famous Edict of Nantes, and energetically defended the liberties of the Gallican church against the pretensions of Rome. His influence declined after the death of Henry IV., and he accepted, with regret, the appointment of joint director of the finances after the resignation of Sully. The influence of the papal court prevented his obtaining the office of first president of the parliament at Paris; and his bitter disappointment, with some personal sorrows, probably shortened his life. His great work is the "Historia sui Temporis," in 138 books, the first portion of which appeared in 1604; and which, after the publication of a further portion, had the honour of admission to the papal Index. It ranks with the few great histories of the world; and as the narrative of so illustrious a man, who was himself part of what he had to relate, who had an eye to see and did see, who, without being indifferent, knew how to be fair, not only in politics but in religion, it must always possess a rare interest and a high importance. It was at once received with hearty admiration in all the countries of Europe, and a sixth edition was preparing at the time of the author's death. A magnificent edition, in 7 vols. folio, was published by Thomas Carte in 1733, with an autobiography and the Letters and Latin poems of De Thou. A French translation appeared in 1734. Died, May, 1617.

THOU, FRANÇOIS AUGUSTE DE, son of the preceding, inherited the virtues and intelligence of his father; but having been privy to the secret correspondence carried on between Cinquars and the court of Spain, he was beheaded at Lyons, in 1642.

THOUARS. [PETIT-THOUARS.]

THRASYBULUS, an illustrious Athenian, son of Lycus, had a command in the fleet at Samos, in B. C. 411, and not only prevented the establishment of an oligarchical government in that island, but took a leading part in the overthrow of the tyranny of the Four Hundred at Athens. He distinguished himself at the battle of Cyzicus, recovered for Athens the towns of Thrace, and took part in the battle of Arginusæ, in 406. He was chosen with Theramenes to visit the wrecks after the fight, and to save all the men they could; but being prevented by stormy weather, the generals were impeached. Banished from Athens by the Thirty Tyrants, he resolved in his retirement at

Thebes to attempt the deliverance of his country. With a small band of fellow-exiles, and a small supply of arms and money from the Thebans, he seized, in 403, the fortress of Phyle, within twelve miles of Athens; defeated, with his increased force, the troops sent against him, and four days after marched by night into Piræus, where the people gladly joined him. He won another victory at Munychia, and the Thirty were deposed, a new college of Ten being appointed. The Ten, however, were equally hostile to Thrasybulus, and asked the aid of Sparta. Lysander blockaded the exiles in Piræus, and Pausanias, the Spartan king, marched into Attica, as if to support him. But he used his influence as mediator, and a treaty was concluded between the opposing parties, under the guarantee of Sparta. The exiles returned, and soon after a complete amnesty was granted to the partisans of the Thirty. Thrasybulus worked quietly for many years for the good of Athens, and was once more called to command the fleet in 389. After many successes, he was murdered the same year by the citizens of Apendos, in Pamphylia.

THROCMORTON, Sir NICHOLAS, an English diplomatist of the 16th century, was the son of Sir George Throcmorton, and was born about 1613. He became page to the duke of Richmond, and was afterwards, successively, in the service of Henry VIII., his queen dowager, and Edward VI., who made him under-treasurer of the Mint. Sir Nicholas was a Protestant, although his father was a staunch Romanist. He was present at the death of Edward VI. in 1553, and in the next year was implicated in Wyatt's rebellion, for which he was committed to the Tower. On his trial he conducted his own defence, and was acquitted; the jury being heavily fined for their verdict, and himself detained in prison for months afterwards. He then went abroad for several years, and on Elizabeth's accession he was made chief butler of England, and subsequently chamberlain of the Exchequer. He was ambassador at Paris four years, and afterwards to Mary, queen of Scots. He at last fell into disgrace by engaging in an intrigue for the marriage of Mary with the duke of Norfolk. Died, 1571.

THUANUS. [THOU, J. A. DE.]

THUCYDIDES, the great Greek historian, was born at Athens, in B. C. 471, nine years after the battle of Salamis. He was the son of Olorus and Hegesipyle, and through his mother is supposed to have been connected with the family of Miltiades. His family was wealthy, and he himself possessed some gold mines in Thrace. That he received the best education Athens could give him is not to be doubted. But we are no longer allowed to accept as historical the beautiful story of his being moved to tears in his boyhood on hearing Herodotus read his History at the Olympic games. Thucydides was at Athens during the plague, in 430, and was seized with it, but recovered. In the 8th year of the Peloponnesian war, 424, he had the command of a squadron off Thasos, and was called to assist Brasidas at Amphipolis, but arriving too late, was condemned for neglect

and enjoyed a very high reputation. Some of his most admirable paintings have been attributed to other great masters of his time. His works are generally marked by earnestness, and even gloom, by fertility of invention, accuracy of drawing, and skill in foreshortening. They are very numerous at Bologna, Florence, Parma, and other cities of Italy; and among the most celebrated are, the "Deposition from the Cross," the "Miracle of St Dominic," the "Miracle of St Bernard," at Bologna; Exhumation of a Dead Monk," at Bosco. "Repentance of St Peter after his Denial of Christ," at Modena; and the "Repentance of St Joseph," now in the Louvre. Died at Bologna, aged 91, in 1668.

TIBALDI, PELLEGRINO, a celebrated Italian painter and architect, was born at Bologna, probably in 1527. He is sometimes called PELLEGRINO PELLEGRINI, and PELLEGRINO DA BOLOGNA. It is not known who was his first master, and there is some uncertainty about the dates of his birth and death. He visited Rome in 1547, and there carefully studied the lately completed works of Michael Angelo in the Sistine chapel. His admiration of them made him an imitator of that great master, the rough energy of whose style he, however, tempered with a softening grace and delicacy, so that he was called the "reformed Michael Angelo." Among his most remarkable works are the frescoes in the Institute of Bologna, at that time the palace of Cardinal Foggli, and in the Foggli chapel. The former represent scenes in the life of Ulysses. He painted also at Loreto and Ancona, and afterwards in the Escurial. He was employed as an architect by (San) Carlo Borromeo at Milan, and in 1570 was named architect of the Duomo of that city. In 1586 he went to Madrid, and was employed nine years by Philip II. as fresco-painter and architect, and returned richly remunerated and honoured with the title of marquis of Valdelsa. Tibaldi designed the façade of the cathedral of Milan. The date of his death, at Milan, is variously given from 1590 to 1608.

TIBERIUS CLAUDIUS NERO, Roman Emperor, was born at Rome, B. C. 42. He was sprang from the patrician family of the Claudii, early displayed remarkable abilities, was carefully educated, and began, even in boyhood, to play a part in public affairs. Before he was five years old he became stepson to Octavianus, who procured the divorce of his mother Livia, and married her. Tiberius married Vipsania Agrippina, daughter of Agrippa, and had by her a son, whom he named after his beloved brother, Drusus. During his early manhood he took a distinguished part both in civil and military affairs; made his first campaign at the age of 19, in Spain; restored Tigranes to the throne of Armenia; retook from the Parthians the standards lost by Crassus; was charged with the government of Gallia Transalpina; and, in conjunction with his brother, subdued the Rhætians, and put an end to the war in Pannonia. For his services he was honoured with a triumph. In 13 he was chosen consul, and, in the following year, on the death of Agrippa, Augustus

compelled him to separate from his wife and marry Julia, daughter of the emperor and widow of Agrippa. The divorce of Agrippina was a bitter grief to him, and the scandalous conduct of Julia embittered his life still further. In B. C. 8 he lost his brother, who died in Germany, whither Tiberius hastened to receive his last breath; and he accompanied the corpse on foot the whole way to Rome. After another campaign in Germany, he was again chosen consul, and had a second triumph. And then, in the flower of his age and the height of his renown, he suddenly withdrew from public life, and retired to the island of Rhodes, B. C. 5. The same year the two sons of Julia were declared successors of Augustus. During his residence in Rhodes, Julia was banished for her vices to the island of Pandataria. Tiberius led a simple and regular life, enjoying open air exercises, the pursuit of literature and science, and correspondence with eminent men. He returned to Rome A. D. 2, up to which time his character and reputation were untarnished; and within a short time both the sons of Julia died, and Augustus adopted Tiberius as his successor, compelling him in turn to adopt his nephew Germanicus. During the last ten years of the reign of Augustus, Tiberius rendered the most important services to the empire, especially distinguishing himself in his German campaigns, for which he had a third triumph; and, in A. D. 14, he succeeded Augustus. Suspicions had been excited that the sons of Julia were poisoned; and suspicions of a like kind were awakened by the death of Augustus. Whether well-founded or not, their justice would be in perfect accordance with the character of Tiberius, as it appeared after his accession to the throne. He swept away all vestiges of popular government, guarded his own majesty by severe laws, by spies, and a secret police, and by unscrupulous cruelty. In all which measures he had a worthy agent in his minister Sejanus, who became virtually sovereign in A. D. 22; the emperor gradually leaving the state in his hands, and giving himself up to the most scandalous licentiousness. In A. D. 26 he left Rome, and in the next year settled in the island of Capræ, where he gave free scope to his sensuality. Sejanus, suspected of aiming at the empire, was put to death by order of Tiberius, in 31, and Tiberius, falling ill at Misenum in 37, was suffocated by Macro, commander of the Prætorian guards. The character of this emperor, painted by Tacitus in such dark colours, as a despot, cruel, licentious, and above all, a hypocrite, remains to some extent an enigma. Suetonius and Velleius Patereulus deplete him in brighter colours. Suetonius made use of a short account written by Tiberius of his own life. In modern times he has not wanted apologists, among whom are Buchholz, and most recently Adolf Stahr. The latter goes the length of a determined panegyrist, and tries to make him out a model of heroic wisdom.

TIBERIUS, surnamed CONSTANTINUS, emperor of the East, was a Thracian by birth, and was brought up at the court of Justinian. He rose gradually to the highest

military honours, and was commander of the imperial guards under Justinus. His character and services endeared him equally to the emperor and the people, and in 574 he was proclaimed Cæsar. The government was left in his hands, and in 578 he was crowned emperor on the abdication of Justinus, who died a few days later. Tiberius then took the surname of Constantinus. He carried on successfully, by his generals, Justinian and Maurice, the war with Persia, and maintained the imperial authority against the Lombards in Italy. Died, 582, after having created Maurice Cæsar, and given him in marriage his daughter Constantina.

TIBULLUS, ALBIUS, the celebrated Roman elegiac poet, was of an equestrian family, and flourished in the age of Augustus. The dates of his birth and death are not known, but are inferred to have been respectively about B. C. 54 and 18. His life was passed for the most part peacefully on his paternal estate of Pedum, between Tibur and Præneste; which he was deprived of during the proscriptions and confiscations following the civil war, but appears to have had restored to him. He had a patron in M. Valerius Messala, and accompanied him during his campaign in Gaul. Tibullus was the contemporary of Virgil and the intimate friend of Horace and Ovid. His poems consist of four books of Elegies, chiefly expressions of the passion of love; breathing the most profound sensibility, the tenderest melancholy, and the finest appreciation of the beauties of nature. The authenticity of the last two books is doubted. The poems of Tibullus have usually been printed with those of Catullus and Propertius, but they have also been frequently published separately, and translated into English, French, German, and Italian. Granger's metrical version with a prose translation is included in a volume of Bohn's Classical Library.

TICKELL, THOMAS, poet and essayist, was born in 1686, at Bridekirk, in Cumberland; and became fellow of Queen's College, Oxford. Through the friendship of Addison, he was made under-secretary of state, and was afterwards appointed secretary to the lords justices of Ireland. Some of his pieces are in the Spectator; besides which, he wrote "The Prospect of Peace," "The Royal Progress," and other poems; and, in rivalry of Pope, translated the first book of the Iliad. Died, 1740.

TIECK, CHRISTIAN FRIEDRICH, German sculptor, chiefly celebrated for his portrait busts, was born at Berlin in 1776. He was brother of Ludwig Tieck, noticed below; was a pupil of Schadow, and of the French painter David; and during a short residence at Weimar gained the friendship of Goethe and many noble and eminent persons. He made two visits to Italy, and became the friend of the crown prince, Ludwig, of Bavaria, of Madame de Stael, and the sculptor Rauch. From the year 1819 he lived at Berlin, and throughout his life was fully employed on public and private works; was admitted to the Academy, and made director of the department of Sculpture in the Mu-

seum. Among his very numerous busts are those of King Ludwig, Goethe, his brother Ludwig, Lessing, Schelling, Voos, Herder, and Wolff. The sculptor, August Kiss, was a pupil of Tieck. Died, 1851.

TIECK, LUDWIG, the distinguished German poet, novelist, and translator, one of the reputed founders of the so-called Romantic School of German literature, was born at Berlin in 1773. After studying at the Gymnasium, he went to the university of Halle, and afterwards continued his studies at Göttingen and Erlangen. From his youth he was chiefly attracted by the poetic side of nature and literature, and he ranged himself on the side of the critical principles set forth by Goethe and Schiller in the "Horen" and "Xenien." He was an ardent student of English literature, especially the dramatic of the 18th century, and among his earliest productions were a novel entitled, "William Lovell," an attempt to depict English life, and a translation from Ben Jonson. After completing his studies he travelled; married at Hamburg; became acquainted with the Schlegels at Jena, and also with Novalls, the fine genius so early lost, and whose fragmentary writings he afterwards edited in conjunction with Friedrich Schlegel. His place of residence was frequently changed in the following years; we find him successively at Berlin, Dresden, Frankfurt-on-the-Oder, and then in Italy, 1801-1806. On his return to Germany he settled first at Munich, then again near Frankfurt; and in 1818 he visited London, for the purpose of extending his acquaintance with our literature by examining the public and private libraries, to which access was freely given him. Dresden appears to have been his home from that period for about twenty years, and his literary activity was almost incessant. In 1840 he removed to Berlin on the invitation of the king, who honoured him with the title of privy-councillor. There he spent the remaining thirteen years of his laborious and fruitful life. His works are of very varied character, and far too numerous to be named here; they fill 20 volumes. Among those which brought him the highest reputation are his tales and plays embodying in new forms some of the old familiar Märchen. The publication of these, under the title of "Peter Leberecht's Volksmärchen," in 1797, first brought him into general notice. They were republished in 1812, retouched and combined into a whole by a tissue of conversations, under the title of "Phantastus." They are full of mirth and genial laughter and good-natured satire on the literary world of his time. "Franz Sternbalds Wanderungen," the fictitious history of an art student, and "Kaiser Octavianus," are perhaps his highest achievements as a novelist, and "Geneveva" his best play. His "Dichtersleben" is a novel in which he attempts to depict Shakespeare and his times. The admirable translation of Shakespeare, in part executed by August Wilhelm Schlegel, and published between 1797-1810, was throughout revised and completed by Tieck, whose edition appeared between 1825-1829. It is esteemed the best German translation. Among his

other works are Schwabischen Z Theater," "Alt-matürigische Hiat von Don Quixote 1833.

TIGHE, M.

Other works are, "Minnelieder aus dem Schwabischen Zeitalter," "Alt-Englisches Theater," "Alt-Deutsches Theater," "Dramaturgische Blätter," and a good translation of Don Quixote. Died, at Berlin, 28th April, 1854.

TIEDEMANN, DIETRICH, German philosopher, was born at Irenervörde, in the duchy of Bremen, in 1748. He completed his studies at the university of Göttingen, and gave up, successively, theology and law to devote himself to philosophy. After being engaged several years as private tutor, he became, through the influence of Heyne, a member of the philological seminary of Göttingen, and soon after was appointed professor of ancient literature at the college of Cassel. In 1780, he was transferred to the university of Marburg, as professor of philosophy, lecturing, however, on various subjects from time to time. His first publication was an inquiry into the Origin of language, published in 1772. His principal works are—"System der Stoischen Philosophie," "Untersuchungen über den Menschen," "Geist der speculativen Philosophie," and "Handbuch der Psychologie." Died, 1803.

TIEDGE, CHRISTOPH AUGUST, a celebrated German poet, was born in 1752. Educated at Halle for the law, he soon abandoned it and became a private teacher, obtaining introductions to several persons of eminence in literature. Among other friendships early formed was that of a lady, Madame von der Becke, who generously made her home his own, and at her death, in 1833, provided for his continued enjoyment of it while he lived. His principal poems are the "Urania," "Wanderungen durch den Markt des Lebens," "Frauenspiegel," &c. His complete works fill 10 vols. 8vo. An interesting account of his visit to Italy, in company with his friend Madame von der Becke, was published by her. Died, 1841.

TIERNY, GEORGE, a distinguished statesman and political writer, was born in London, in 1756; received his education at Cambridge, and was designed for the bar. At the commencement of his public life, Mr Tierney attached himself to the Whigs, and in 1798 he was elected M. P. for Southwark. He soon proved himself an able debater, and was one of the most formidable opponents of Mr Pitt. In 1806 he lost his seat as member for Southwark, and afterwards successively represented Athlone, Handon-Bridge, Appleby, and Knaresborough. During a debate in the House were the cause of a duel between him and Mr Pitt, in which, however, neither party was wounded. When Mr Addington became minister, in 1802, he made Mr Tierney treasurer of the Navy. In 1806, under the Grenville administration, he became president of the Board of Control, but went out of office on the resignation of the ministry early in the following year. On the formation of the Canning ministry, he was appointed to the mastership of the Mint; from which he retired, with Lord Goderich, in 1828, and died in 1830.

TIGHE, MARY, poetess, was born in Ire-

land in 1773. Her maiden name was Blackford, and at the age of 20 she married Henry Tighe, a relative by her mother's side. She is remembered as authoress of the charming poem of "Psyche," the subject of which is taken from the well-known story of Apuleius. It was first published, with some shorter pieces, about a year after her death, which took place in 1810.

TILLEMANS, PETER, a Dutch painter, was a native of Antwerp; he came to England in 1708, and was employed by several noblemen in taking views of their seats and pictures of their hunts, races, and horses. Died, 1734.

TILLEMONT, SEBASTIEN LENAIN DE, the celebrated French ecclesiastical historian, was born at Paris in 1637. He was educated at Port-Royal, and was taught logic and church history by Nicole. He was, from his earliest years, remarkable for gentleness, goodness, and a deep sense of religion, and from humility he long refused to take holy orders. The urgent persuasion of his friend, Isaac de Sacl, overcame his reluctance, and in 1676 he was ordained priest. Expelled three years later with the other Port-Royalists, he withdrew to his family estate of Tillemont; visited his fellow-refugees in Holland in 1681, and spent the rest of his life in studious retirement. His great works are—"Histoire des Empereurs et des autres Princes qui ont régné durant les six premiers Siècles de l'Église," published in 6 vols. 4to, between 1693—1738, and "Mémoires pour servir à l'Histoire Ecclésiastique des six premiers Siècles," in 16 vols. 4to, which appeared between 1693—1712. These works both consist of passages selected and translated from the original sources of information, with connecting narrative and illustrative notes where necessary. Vast learning, keen sense of fact, and scrupulous accuracy, without any pretence, are the characteristics of Tillemont. Out of his stores of knowledge he furnished matter for the works of several other authors. Died, at Paris, in 1698, and was buried in the abbey of Port-Royal.

TILLI, MICHEL ANGELO, botanist and physician, was born at Florence, in 1655. His greatest work is the "Catalogus Plantarum Horti Pisani," printed at Florence, 1723. He was a friend of the naturalist Redi, and the correspondent of many eminent European botanists. He was also a fellow of the Royal Society of London. Died, 1740.

TILLOCH, ALEXANDER, was born at Glasgow, in 1759. His father was a tobacco-merchant, and it was his intention to bring up his son to the same trade; but his mind was bent on mechanical improvements, and at length, though totally uneducated, he formed the idea of printing with stereotyped plates. He began his experiments in 1781; and having succeeded in them, Mr Foulis, a printer, of Glasgow, joined him, and a patent was taken out in their names. Circumstances, however, induced them to lay it aside for a time, and it was never afterwards renewed by them as a speculation. In 1787, Mr Tilloch quitted Scotland for London, and soon after purchased the

Star, an evening paper, of which he became the editor, and carried it on till within four years of his death. In 1797 he projected and established the Philosophical Magazine, which he carried on for a number of years with great credit; and, only 15 days before his death, he had obtained a patent for an improvement on the steam-engine. Yet amidst these avocations he found time for theological studies, and published some papers on the Prophecies. In 1823 he printed an octavo volume, entitled "Dissertations on the Apocalypse;" and he was latterly engaged in superintending "The Mechanic's Oracle." Some years before his death the university of Glasgow conferred on him the degree of LL.D.; and he preached occasionally to a dissenting congregation in Goswell Street Road. Died, 1825.

TILLOTSON, JOHN, a distinguished English prelate, was the son of a clothier at Sowerby, near Halifax, and born in 1630. His father, who was a strict Calvinist, brought him up in the same principles, and sent him to Clare Hall, Cambridge. At the Restoration he conformed to the established church, was made king's chaplain, and presented to a prebend of Canterbury. When Charles II., in 1672, issued a declaration for liberty of conscience, for the purpose of favouring the Roman Catholics, he preached strongly against it, but was, nevertheless, advanced to the deanery of Canterbury, and obtained a prebend in St Paul's. He warmly promoted the exclusion bill against the duke of York, and refused to sign the address of the London clergy to the king, on his declaration that he would not consent to it. At the execution of Lord William Russell he attended him with Dr Burnet; and, though afterwards decided friends to the revolution, both these divines urged that nobleman to acknowledge the unlawfulness of resistance. After the revolution he was appointed clerk of the closet; and, on the deprivation of Sancroft, in 1691, he was raised to the see of Canterbury. Died, 1694. His sermons rank amongst the most popular in the English language, and were at one time regarded as a standard of finished oratory. His portrait, by Mrs Beale, is in the National Portrait Gallery.

TILLY, JOHN TZERCLAS, Count von, the famous commander-in-chief of the imperial armies in the Thirty Years' War, was born in South Brabant, in 1559. He was of an illustrious family, and was brought up by the Jesuits; soon, however, quitting the order and becoming a soldier. He first served in the Spanish army in the Netherlands, next in the imperial army, and about 1607 was appointed commander-in-chief of the Bavarian army. To this post was added that of commander-in-chief of the forces of the Catholic League. In this capacity he greatly distinguished himself during the Thirty Years' War. After conquering the Upper Palatinate he won the great battle of Prague against the Bohemians in November, 1620; and after several other victories defeated the duke of Brunswick and Count Mansfeld at Stadt-Loe, near Münster, in August, 1623, and was made count of the empire. After the disgrace and dismissal of

Wallenstein, Tilly was appointed, in 1630, commander-in-chief of the imperial armies, and at the same time was created field-marshal. In the following spring he besieged and took Magdeburg, which he gave up to pillage and massacre for three days, and then destroyed. After being victor in thirty-six battles, he was at length defeated at Breitenfeld, by Gustavus Adolphus, and severely wounded, in September, 1631. His career closed with the battle on the banks of the Lech, in which he was again defeated by Gustavus, and being mortally wounded, died the next day, 6th April, 1632, at Ingolstadt. Tilly was never married, cared for none of the pleasures of sense, and lived as abstemiously as an ideal monk. A small, taciturn, authoritative man, who fought fanatically for the Catholic church.

TIMEUS, a Pythagorean philosopher, was a native of Loeri, in Italy, and is styled by Plato a "most diligent inquirer into all the works of nature."—TIMEUS, a Greek historian, banished from Sicily by Agathocles, tyrant of Syracuse. He wrote a "History of the Wars of Pyrrhus," a "General History of Sicily," &c.—TIMEUS, the Sophist, author of a "Dictionary of Platonic Phrases," who is supposed to have flourished about A. D. 400.

TIMOLEON, the illustrious Greek general, was born of a noble family at Corinth, about four centuries before the Christian era. He early exhibited intrepid courage and a hatred of tyranny; which he carried to such a pitch, that, according to Plutarch, he stood by while his brother Timophanes, who had made himself tyrant of Corinth, was assassinated. When the Syracusans solicited the aid of the Corinthians against an invasion of the Carthaginians, he was appointed to command the auxiliary forces, and, by a happy mixture of valour and prudence, succeeded not only in restoring Syracuse to liberty, but he brought the whole land of Sicily into a more prosperous and tranquil state than it had been in for many years. He fixed his abode at Syracuse, and lived as a private citizen, distinguished only by his influence and the respect paid to his virtues. He became blind in his last days. Died, B. C. 337.

TIMON, a Greek poet and philosopher, was the disciple of Pyrrho, and lived in the third century B. C. He wrote comedies, tragedies, and satyric dramas; besides his satires, called "Silloe," which are still in part extant.

TIMON, the Misanthrope, was born near Athens, and lived during the Peloponnesian war. The faithlessness of his friends and successive disappointments soured his nature, and drove him into solitude; where he is said, however, to have welcomed Alcibiades. His name has become proverbial, and his story is familiar through the tragedy of Shakespeare.

TIMOTELO DELLA URIBINO, also called TIMOTELO DELLA VITE, Italian painter, was born about 1470. He learnt the art of a jeweller, but as he had considerable skill in drawing, he was sent to study under Francia at Bologna, where he remained about five years. His first works as a painter were exe-

cutted at Urbino; and to Rome by invitation he was related, and his frescoes of the to his native city. appears in most later show also th It has been conjectured for the birth and each ten years to be.

TIMOTHEUS, musician of antiochus, in Caria, and of Philip of Macedonia. To him is attributed by four authors.

TIMOTHEUS, general, lived in the son of Cleomenes, and he had the command to act in aid of Sparta, by Peloponnesus.

many cities, and Athens. He died in naval combat, and turned to Athens on behalf of some of the territories.

He provoked a new reign sent to be played by the movements among the superseded in the trial, in consequence of his flight from the Mol.

Phere, the latter life by going Timotheus was placed at the head of an important service.

command of the Chares, against Samos was chosen he was fined 1000 which he could not quit.

Athen Eubara, and the Conon, was appointed by Alexander the Great to the command of part of the fleet.

TINDAL, a literary writer in Devonshire, is distinguished by his works, and according to some accounts he obtained a fellowship in a university.

He was a fellow and graduate of the University of Cambridge, and went over to France, where he returned to spend the greater part of his life, and was chief of the party.

It is supposed that he was the author of the bar, but Tindal filled a very important contemporary position, and his successive works excited even

cut at Urbino; but he is said to have gone to Rome by invitation of Raphael, to whom he was related, and to have assisted him in his frescoes of the Sibyls. He soon returned to his native city. The influence of Francia appears in most of his paintings, but his later show also that of Raphael. Died, 1523. It has been conjectured that the dates given for the birth and death of this master are each ten years earlier than they ought to be.

TIMOTHEUS, a celebrated lyric poet and musician of antiquity, was a native of Miletus, in Caria, and flourished at the court of Philip of Macedonia. He died B. C. 357. To him is attributed the completion of the lyre by four additional strings.

TIMOTHEUS, an illustrious Athenian general, lived in the 4th century B. C. He was the son of Conon, also renowned as a general, and the disciple of Isocrates. In 376 he had the command of the fleet which was to act in aid of the Thebans in their war with Sparta, by ravaging the coasts of the Peloponnese. He took Coreyra, and by his moderation easily won the alliance of many cities, and re-established the power of Athens. He defeated the Spartans in a naval combat, and a peace being made, returned to Athens. By humane interference on behalf of some exiles of Zacynthus, he violated the terms of the peace, and provoked a new outbreak of war. He was again sent to protect Coreyra, but being delayed by the necessity of procuring equipments among the allies of Athens, he was superseded in the command by Iphicrates, and only escaped sentence of death on his trial, in consequence of the earnest intervention of his friends, especially of Alectas, king of the Molossians, and Jason, tyrant of Phere, the latter of whom risked his own life by going to Athens to protect him. Timotheus was several times afterwards placed at the head of the army, and rendered important services. In 356 he held a joint command of the fleet with Iphicrates and Charisius, against the revolted allies of Athens; but the failure of the expedition against Samos was charged on him, and being tried, he was fined 100 talents; an enormous sum, which he could not pay. He therefore quitted Athens and went to Chalcis, in Eubœa, and there died, about 354. His son, Conon, was allowed to settle the debt to the state by spending ten talents on the restoration of part of the walls of Athens.

TINDAL, MATTHEW, a celebrated polemical writer, was born at Beer-Ferris, in Devonshire, in 1657. He studied at Oxford, and according to the report of his enemies, led a very immoral life there. But he obtained a fellowship at All Souls' College, and graduated B. A. For a short time he went over to the Romish communion, but returned to the church of England. He spent the greater part of his life in London, and was chiefly occupied in literary labour. It is supposed that he may have been called to the bar, but there is no proof that he was. Tindal filled a large place in the view of his contemporaries, as a polemical theologian; his successive writings made a great noise, excited even a panic among certain classes,

and called forth a host of angry replies. He appears to have been a reasonably learned man, careful and fair, and content to write what he meant clearly and plainly. His numerous political pamphlets are now sunk out of sight, but among his theological works are still noteworthy—"The Rights of the Christian Church asserted, against the Romish and all other priests who claim an independent power over it," which appeared in 1706, and was followed by two "Defences;" the three were burnt by order of the House of Commons, in 1710; and his "Christianity as Old as the Creation, or the Gospel a Republication of the Religion of Nature," published in 1730. It was replied to by Waterland, Leland, Conybeare, James Foster, and other writers, and was defended by the author in his "Remarks on Scripture Vindicated (by Waterland) and some other late Writings." Died at London, 1733.

TINDAL, NICHOLAS, nephew to the foregoing, divine, miscellaneous writer, and translator and continuator of Rapin's History of England. Born, 1687; died, 1774.

TINDAL, SIR NICHOLAS CONYNGHAM, lord chief justice of the court of Common Pleas, was born in 1777, educated at Trinity College, Cambridge, and having become a student of Lincoln's Inn, he commenced practice as a special pleader, and in 1809 was called to the bar. He entered parliament, in 1824, as member for the Wigton district of burghs; and in 1826 he was made solicitor-general, and knighted. When Sir John Copley, who had represented the university of Cambridge, was raised to the office of lord chancellor, in 1827, Sir Nicholas Tindal contested with Mr Banks the honour of representing his *alma mater*, and was returned by a considerable majority. Two years afterwards he was promoted to the chief justiceship, which position he occupied till his death. Died, July 6, 1846, in the 70th year of his age.

TINDAL, or TYNDALE, WILLIAM, one of the English reformers, was born in 1500; studied at Oxford; but was obliged to leave that university on account of having imbibed the doctrines of Luther. He then withdrew to Cambridge, where he took a degree, and soon after went to reside as tutor in the family of Sir John Welch, near Bristol. While in this situation, he translated Erasmus's "Enchiridion Militis Christiani" into English; but, in consequence of his opinions, articles were preferred against him before the chancellor of the diocese, and he received a reprimand. Upon this he withdrew to London, and next to Antwerp, where he translated the New Testament into English. This version was printed in 1526, and the greater part being sent to England, the prelates Warham and Tunstall bought up all the copies they could procure, and caused them to be burnt. By means of the money thus received, Tyndale was enabled to print a new edition in 1534; after which he began a translation of the Old Testament, in which he was assisted by Miles Coverdale; but they proceeded no farther than the Pentateuch. Through the interference of the English government, Tyndale was apprehended at Antwerp, and, in

1536, being brought to trial at Augsburg, he was condemned to the stake, which sentence he quietly endured, being first strangled and then burnt. His last words were, "Lord, open the king of England's eyes."

TINTORLITTO, IL, one of the most celebrated Italian painters, was born at Venice, in 1512. His name was **JACOPO ROBUSTI**, and he acquired that by which he is usually called from the fact of his being the son of a dyer (*Tintore*). He was placed in the school of Titian, but only remained there a few days; Titian dismissing him on seeing some of his clever drawings. With utmost energy and patience he then pursued the study and practice of his chosen art, aiming high, aspiring to follow Michael Angelo in design, and Titian, whose works he diligently copied, in colouring. He also studied anatomy, and by carefully-contrived arrangements, made himself a great master of light and shade. He worked with surprising rapidity, did everything he could get commissions for, and some things besides; for he cared more for the "praise" than he did for the "pudding." His works are consequently very numerous, and also, with the exception of some early ones, carelessly executed. In some of his best paintings he was the acknowledged rival of Titian; but in other works he fell below himself. He painted both in fresco and in oil. He put his name to three pictures only; the "Crucifixion," in the Scuola di San Rocco, Venice; the "Miracolo dello Schiavo," probably his masterpiece, and now in the Academy of Venice; and the "Marringe at Cnna," now in the church of Santa Maria della Salute. Among his other works are the "Resurrection of Christ," the "Slaughter of the Innocents," the "Miracle of the Loaves and Fishes," with many others in the Scuola di San Rocco; the great picture of "Paradise" in the Ducal Palace, the "Coronation of Frederick Barbarossa," and the "Siege of Zara," also in the Palace. Tintoretto distinguished himself very greatly as a portrait painter. The National Gallery possesses but one work of this master, "St George destroying the Dragon;" but there are other works of his in several private collections in England. Tintoretto died at Venice in 1594.—His daughter, **MARETTA**, excelled in portrait painting. She died in 1590, aged 30.

TIPPOO SAIB, sultan of Mysore, the son of Hyder Ally, was born in 1749, and succeeded to the throne in 1782. He continued the war in which his father was engaged with the English, until the peace of Paris (1783), which deprived him of the assistance of the French; and the alliance of the Mahrajas with the British induced him to sign the treaty of Mangalore, in 1784, on advantageous terms. He, however, never ceased to cherish the hope of expelling the British from Hindostan, and carried on repeated wars with our native allies. At length the Marquis Cornwallis, in 1792, compelled him to sue for a peace, which was granted on his paying a large sum of money, ceding part of his territories, and giving up his two sons to the English as hostages. Still implacable, he continued his plots against the English. The result was a second and final

war, which terminated in 1799, by his death at the storming of Seringapatam.

TIPTOFT, JOHN, earl of Worcester, a patron of learning in the 15th century, was appointed lord-deputy of Ireland by Henry VI., and afterwards became lord high constable and lord high treasurer. After this he went on a pilgrimage to Jerusalem, and on his return presented many valuable manuscripts to the university of Oxford. On the temporary reverse of fortune experienced by Edward IV. and the house of York, he was accused of cruelty in his Irish administration, particularly towards two infant sons of the earl of Desmond, and condemned to lose his head on Tower Hill, which sentence was executed, Oct. 15, 1470. He wrote many works, and was the great patron of Caxton the printer, who most pathetically lamented his death.

TIRABOSCHI, GIROLAMO, an eminent Italian historian, was born at Bergamo, in 1731; entered the society of Jesuits; was librarian and counsellor to the duke of Modena, who knighted him; and died in 1794. His chief work is the "Storia della Letteratura Italiana," published in 11 vols. 4to between 1772—1783. It was the first work of the kind, and is highly esteemed. Among the other works of Tiraboschi are, "Biblioteca Modenese," "Notizie di Pittori, Scultori, Incisori ed Architetti Modenesi," "Memorie Storiche Modenesi," &c.

TIRSO DE MOLINA. [TELEZ, GABRIEL.]

TISCHBEIN, JOHANN HEINRICH, a celebrated German painter, was born near Gotha, in 1722. Through the friendly offices of Count Stadion he went to Paris, and studied several years under Charles Vanloo; improved himself by a visit to Italy; and in 1752 was named painter to William, landgrave of Hesse Cassel. He was subsequently director of the Academy of Cassel and professor at the Caroline College. Tischbein painted many historical pictures, and also many subjects from classical mythology. Among his principal works are named a "Resurrection of Christ," a "Transfiguration," a "Deposition from the Cross," a series of subjects from the life of Cleopatra, &c. He copied and etched some of his own works. Died, 1789.

TISCHBEIN, JOHANN HEINRICH WILHELM, nephew of the preceding, and, like him, an eminent painter, was born near Gotha, in 1751. After receiving his first instruction from his uncles, Johann Heinrich and Johann Jacob, and visiting Holland, Hanover, Berlin, and Zürich, he went, in 1781, to Italy; became director of the Academy of Naples, and held that post nine years; returned to Germany when the French occupied Naples, in 1799; and spent the rest of his life at Hamburg, and in the duchy of Oldenburg. He published several remarkable works: "Têtes de Différents Animaux Dessinés d'après Nature;" "Collection of Engravings from antique vases," illustrative of Sir W. Hamilton's second collection; and "Homer, nach Antiken Gezeichnet," with explanations of the figures by Heyne. Died, 1829.

Venice, in 157
TITUS FLA-
man emperor,
panied his fat-

physician and medical writer, was born at Grancy, in the Pays de Vaud, in 1728. He was chiefly distinguished by his successful treatment of confluent small pox. Died at Lausanne, in 1797. His works were collected by himself, and form 10 vols.

TITIAN, or **TIZIANO VECELLIO**, the greatest painter of the Venetian School, was born at Capo del Cadore, in 1477. After studying for a short time under Zuccati and Gentile Bellini, he became the pupil of Giovanni Bellini; and he profited also by the example of his fellow-pupil, Giorgione. He rapidly made himself a reputation, and was employed, about 1515, at the court of the duke of Ferrara, where he met Ariosto, and painted his portrait. On his return to Venice he was charged to complete one of the works left unfinished by his master in the Council Hall, and was then appointed to the office of La Sauseria, the chief duty of which was to paint the portraits of the Doges of his time. His increasing renown procured him invitations to Rome and to Paris, which, however, he did not accept. Through his intimate friend, Aretino, he was made known to the emperor, Charles V., visited him at Bologna, in 1530 and 1532, and painted his portrait on each occasion. It is said that Charles took him to Madrid, and created him a count-palatine of the empire and a knight of St. Iago; and that Titian remained three years in Spain, and painted some of his best pictures there. But there is considerable uncertainty about this story. In 1543 Titian visited Pope Paul III. at Bologna, and painted his portrait. Two years later he visited Rome, again painted the pope, and while there was visited by Michael Angelo and Vasari. He was twice called by Charles V. to Augsburg, and was again visited by Vasari, at Venice, in 1566. Titian is especially distinguished for his mastery of colour and his faithful imitation of nature. As portrait painter he is unrivalled. Among his finest works are—the "Assumption of the Virgin," now in the Academy of Venice; the "Tribute Money," now in the Dresden Gallery; the "Entombment," in the Manfredi Gallery; the "Death of St. Peter Martyr," in the church of St. John and St. Paul, Venice; the "Martyrdom of St. Sebastian," in the Vatican; the "Venus," in the Dresden Gallery, of which there is a repetition in the Fitzwilliam Museum at Cambridge; the "Martyrdom of St. Lawrence," in the Jesuits' Church, Venice; a "Sleeping Venus," in the Prado Gallery, Madrid; and a "Last Supper," in the Escorial. There are some fine examples in the Louvre, and our National Gallery has nine, among which are—"Bacchus and Ariadne;" "Venus and Adonis;" "Rape of Ganymede;" "Portrait of Ariosto;" and a "Music Lesson." Among the pupils of Titian were Paris Bordone, Montazio Veneziano, Girolamo di Tiziano and his son, Orazio Vecellio. Titian enjoyed the favour of Phillip II. after the death of the emperor. He died of the plague at Venice, in 1576, aged 99.

TITUS FLAVIUS VESPASIANUS, Roman emperor, was born A. D. 40. He accompanied his father Vespasian to Syria, where

he distinguished himself greatly in the Jewish War. When Vespasian was summoned to Italy to assume the purple, Titus was left in command of the Roman army at the memorable siege of Jerusalem. In A. D. 70, the city was taken, and in spite of the exertions of Titus to preserve it, the temple was burnt. Though his youth was tainted with the vice of dissipation, he happily disappointed the gloomy predictions of the people when he came to the throne, A. D. 79, by the wisdom and beneficence of his government. The Romans, however, did not long enjoy his administration, Titus having been seized with a violent fever, which carried him off in the 41st year of his age, after a reign of little more than two years, A. D. 81.

TOBIN, JOHN, dramatic writer, was born at Salisbury, in 1770, and bred to the law, but the stage had more attractions for him than the attorney's desk. He was author of "The Honey Moon," "The Curfew," &c. Died, 1804.

TOCQUEVILLE, ALEXIS C. H. CLEBEL DE, an eminent French statesman and historian, was born at Verneuil in 1805, studied law and was admitted a member of the French bar in 1825. In the following year he was appointed Juge d'Instruction at Versailles; which office he held for three years, exchanging it in 1830 for that of Juge-suppléant. In 1832 he was sent on a joint mission with M. G. de Beaumont to America, to inquire into the penitentiary system of the United States, with a view to its introduction into France. There he spent two years, visiting the different States, and inquiring assiduously into the institutions of the country. As the results of his researches and reflections he published in 1835 his "Démocratie en Amérique," which has been pronounced to be the best and profoundest work that has appeared on the political institutions of the United States. In 1839 he became a member of the Chamber of Deputies; and his senatorial efforts were remarkable for largeness of view and that sagacity and foresight which distinguish the statesman from the mere politician. In 1847 appeared his "Histoire Philosophique du Règne de Louis XV.," to which he afterwards added the "Coup-d'œil sur le Règne de Louis XVI." After the revolution of 1848 he was returned both to the National and Legislative Assemblies, when he vigorously opposed the doctrines of the Socialists and M. Louis Blanc's theories, as to the organization of labour. In June, 1849, he was appointed minister of Foreign Affairs, but resigned his portfolio in October, in consequence of the president's message appearing to deviate from the system of moderation to which he was attached. As a private member of the Legislative Chamber, he continued to oppose the personal system of the Elysée: to the last he remained a faithful adherent of parliamentary government; and he was one of those who protested against the *coup d'état* of Dec. 2, 1851, and with the rest of his colleagues was thrown into prison. From this period he devoted himself entirely to literary pursuits; and in 1856 he published his elaborate work, "L'Anéen Régime et la Révolution," which for profound and

original views, and beauty of style, has rarely been surpassed. Died, 1859. A Memoir and several volumes of his Correspondence, and a uniform edition of his works, have since been published.

TOD, JAMES, a lieutenant-colonel in the service of the East India Company; author of "Annals of Rajast'han" and "Travels in Western India," the latter of which was scarcely completed when he died, Nov., 1835. Colonel Tod surveyed Rujpootana, and completed his magnificent map in 1815; and it was by him that the name of Central India was originally given to that important and interesting tract of country. He was a sound scholar, indefatigable in research, and enthusiastic in his zeal to benefit the people for whom he laboured.

TODD, HENRY JOHN, church of England divine, and an industrious littérateur, was born about 1763. He graduated M.A. at Oxford, entered the church, and was for many years rector of Allhallow, Lombard Street. During the same period he had the office of keeper of the manuscripts at Lambeth Palace, of which he prepared a catalogue. In 1820 he was presented to the rectory of Settrington, in Yorkshire, where he spent the rest of his life. He became archdeacon of Cleveland and chaplain to the queen. He edited the poetical works of Milton and Spenser, and Johnson's Dictionary; wrote an "Account of the Deans of Canterbury;" "Illustrations of the Lives and Works of John Gower and Geoffrey Chaucer;" "Life of Archbishop Cranmer," and various theological and controversial pieces; prepared a catalogue of Christchurch Library, Canterbury, and assisted in the compilation of Hasted's History of Kent. Died, 1845.

TOLAND, JOHN, the celebrated freethinker, and political and miscellaneous writer, was born in the county of Derry, Ireland, about 1670. His parents were Roman Catholics, but he early renounced the faith of his childhood. At the age of 17 he went to study at Glasgow university, afterwards graduated M.A. at Edinburgh, and completed his studies at Leyden, with the intention of becoming a dissenting minister. He became acquainted there with Leclere and Leibnitz, and maintained a friendly correspondence with them. The first work he published was entitled "Christianity not Mysterious." It appeared in 1696, excited much ill feeling against him, and was burnt by the hangman at Dublin. Among the very numerous publications of Toland are—a "Life of Milton," followed by "Amyntor," a Defence of it; "Anglia Libera," occasioned by the act passed for the succession of the line of Hanover; "The State Anatomy of Great Britain;" "Nazareus, or Jewish, Gentile, or Mahometan Christianity;" "Panthéistion;" and "Tetradymus." Toland was several times employed as a political agent abroad; was patronized by Harley, earl of Oxford, who was concerned in the South Sea scheme, continued to write incessantly to the last; and died at Putney in 1722.

TOLER, JOHN, earl of Norbury, chief justice of the court of Common Pleas in Ireland, was born in 1745, at Beechwood, in the county of Tipperary. He was called to the

bar in 1770; appointed king's counsel in 1781, solicitor-general in 1789, attorney-general in 1798, during which year he was actively engaged in the prosecution of the Irish rebels; and was advanced to the chief justiceship of the Common Pleas in 1800, with the title of Lord Norbury. This high office he retained till 1827, when, on his retirement, he obtained a pension of £2016, and was advanced to the title of Viscount Glandine and earl of Norbury. He died in 1831. He was an able judge; but he was chiefly in reputation for wit and drollery. "Lord Norbury's jokes" were sprinkled very thickly with his law, and the Dublin court of Common Pleas was often thronged with idlers attracted by the amusement which was to be found in the sallies of wit and repartee so freely bandied about from judge, counsel, and witnesses.

TOLETANUS, RODERICUS, archbishop of Toledo, a celebrated Spanish historian, was born about 1170. After studying at Paris, he was in the service of the king of Navarre, Sancho V., and was subsequently appointed, by Alfonso VIII., king of Castile, to the see of Toledo. He was a good scholar, a zealous ecclesiastic, and also a brave soldier, and distinguished himself as much by his courage in fighting the Moors as by his scholarship and eloquence in the Lateran Council. He was author of the following, among other works—"Rerum in Hispania gestarum Chronicon;" "Historia Arabum;" and Histories of the Huns, Vandals, &c., and Ostrogoths. Toletanus was present at the Council of Lyons assembled in 1245, and died in France in 1247.

TOLLENS, HENDRIK CORNELISZON, a distinguished Dutch poet, born at Rotterdam, in 1780. He was brought up to his father's trade, that of a colour merchant, and began to write poetry under the stimulus of the French invasion of his native country. After unsuccessfully attempting dramatic composition, he applied himself to lyrical and narrative poetry, choosing his subjects for the most part from striking passages of Dutch history, and from the scenes and sentiments of home life. In this field he became the most popular poet of his day, and to popular admiration were added public honours; he was made commander of the order of the Dutch Lion, and was presented with a gold medal struck in his honour. He received both these flattering testimonies on his 70th birthday. Died, 1856. A collected edition of his works has been published since his death.

TOMLINE, GEORGE, an eminent English prelate, whose family name was Prettymann, was born at Bury St Edmund's, in Suffolk, in 1750. He was senior wrangler at Cambridge, in 1772; and having been chosen fellow of Pembroke College, he served, in 1781, the office of moderator. He had been the academical tutor of Mr Pitt, who, on becoming chancellor of the exchequer, made him his private secretary, gave him the living of Sudbury, and a prebend of Westminster, and, in 1787, raised him to the see of Lincoln; from which, in 1820, he was translated to that of Winchester. In 1799 he published a work, entitled "Elements of

Christian Theology appeared his "Calvinism again." He also published Hon. William P. Tomline, in whom he was acquainted him on that special

Christian Theology," 2 vols.; and in 1812 appeared his "Refutation of the Charge of Calvinism against the Church of England." He also published the "Life of the Right Hon. William Pitt." He took the name of Tomline, in consequence of a person, to whom he was almost unknown, having bequeathed him a very considerable fortune on that special condition.

TOKE, THEOHALD WOLFE, founder of the "Society of United Irishmen," was born in Dublin, in 1763, and was bred to the bar. In 1780 he published a pamphlet, the object of which was to expose the mismanagement of the English government regarding Ireland; and, in 1793, he established the society above mentioned. He afterwards became involved in a treasonable correspondence with France, but made a sort of compromise with the British government, and was allowed to withdraw himself. He accordingly went to America in 1795, from whence he proceeded to France in the following year. By his persuasions, the French Directory fitted out an expedition, consisting of 17 sail of the line, 13 frigates, &c., with 14,000 troops on board, and upwards of 40,000 stand of arms, besides artillery and warlike stores. Tone was appointed chief de brigade under General Hoche, the commander-in-chief. They set sail Dec. 15, 1796; but, before they had all reached their destination (Bantry Bay), a hurricane arose, in consequence of which three ships of the line and a frigate only remained together. This bold attempt being thus frustrated by the elements, the scattered ships made the best of their way back to France, and Tone was foiled in all his future endeavours to persuade the French government to undertake another expedition on a large scale. But he still persevered in those plans which he conceived would lead to a separation of Ireland from Great Britain; and he at length embarked in one of those petty armaments, the inefficiency of which, he thought, perhaps, might be remedied by his own courage and experience. He was taken prisoner in the Hoche, after fighting bravely in a desperate action, was tried by a military commission, and sentenced to be hanged. The execution of his sentence, however, he avoided, by cutting his own throat in prison, Nov. 19, 1798.

TONSTALL, CUTHBERT. [TUNSTALL.]
TOOKE, JOHN HORNE, a politician and philologist, who for many years was known by his family name of Horne, was born in Westminster, in 1736; was educated at Westminster and Eton Schools, and St John's College, Cambridge; and in 1760 was inducted to the chapelry of New Brentford. The clerical profession being little suited to his habits and feelings, he took an active part in politics, and became the partisan of Wilkes; till, on founding the "Society for supporting the Bill of Rights," a quarrel arose between them, each charging the other with venality and hypocrisy. In 1771 he was fiercely attacked by Junius; but he defended himself with spirit and success. Resigning his living at Brentford, he studied law at the Temple, but his ecclesiastical character proved an obstacle to his being admitted to the bar. He was a warm opponent of the

American war; and, in 1775, was prosecuted, and sentenced to a year's imprisonment and a fine, on the charge of having libelled the king's troops in America. He defended himself with his characteristic spirit and acuteness; and out of this circumstance arose his "Letter to Dunning," which formed the basis of his subsequent philological work, "The Diversions of Parley," published in 1786. In 1780 he stood, ineffectually, as candidate for Westminster, as he did again in 1796. In the year 1791 he was committed to the Tower on the charge of high treason, founded on the presumed objects of the corresponding societies to overthrow the constitution; but, after a trial of six days, was acquitted; and he appears to have been much more cautious afterwards in the choice of his companions. In 1801 he was returned to parliament for Old Sarum, but he sat only during that session, a bill being passed to render clerical persons ineligible as members of the House of Commons for the future. His latter days were cheered by easy circumstances, and he died at Wimbledon, in 1812, aged 76. His portrait, by T. Hardly, is in the National Collection.

TOOKE, WILLIAM, miscellaneous writer, was born in 1741, at Islington. He was originally a printer; but, in 1771, he obtained episcopal ordination, and was appointed minister of the English church at Cronstadt. In 1774 he became chaplain to the factory at St Petersburg; and, after residing there many years, he returned to his own country, and died in 1820. His principal works are, "Varieties of Literature" 2 vols.; "The Life of Catharine II.," "A View of the Russian Empire," "A General History of Russia," and translations of Lucian and Zollikoffer's Sermons.

TOOKE, THOMAS, an eminent merchant and writer on financial subjects, was son of the preceding, and was born in 1774, at St Petersburg. Early in life he entered into mercantile pursuits as partner in one of the largest houses engaged in the Russian trade; and there gained the great experience and knowledge of details which are so conspicuous in his works on financial subjects. In 1820 he drew up the famous document known as the "Merchants' Petition in favour of Free Trade," and from this period to the close of his life he was an active participator in all inquiries and legislation connected with social and financial reform. His "History of Prices," in six volumes, has secured for him a place in the first rank of political economists. It embodies a great mass of information with respect to the commercial history of England during the eventful period of fifty-six years, ending with 1856, and is no less valuable to speculative than to practical inquirers. Died, 1858.

TOPLADY, AUGUSTUS MONTAGUE, a zealous advocate for the Calvinism of the church of England, was born at Farnham, in Surrey, in 1740; was educated at Westminster School, and at Trinity College, Dublin; and died, vicar of Broad Henbury, in Devonshire, in 1778. Topladly was a strenuous opponent of Wesley, and brought a large share of metaphysical acuteness into the Calvinistic controversy. His works form 6 vols.

TORDENSKIÖLD, PETER, whose family name was **WESSEL**, was a celebrated Danish admiral, born in 1691, at Drontheim, in Norway; and was killed in a duel, in 1720. For his gallant exploits his sovereign gave him the name of Tordenskiöld, or "Thunder-shield." Among his achievements were the capturing of a Swedish squadron in the port of Dyncskln, and the taking of the town of Marstrand and the citadel of Carlstein.

TORELLI, GIUSEPPE, an Italian mathematician, born at Verona, in 1721. Besides the Hebrew, Greek, and Latin languages, he was well acquainted with French, Spanish, and English; and he had also an extensive knowledge of antiquities; but his favourite study was the mathematics. His most important work is a complete edition of the works of Archimedes, printed in folio, at Oxford. He died in 1781. Torelli translated Esop's Fables into Latin, and the first two books of the *Æneid* into Italian.

TORENO, Count JOSE DE, known also as viscount of Mattarosa, a distinguished Spanish statesman and historian, was born at Oviedo, 1786; bore a share in all the troubles of his country in the early part of this century; and was repeatedly proscribed by the despotic advisers of Ferdinand VII. But on the accession of the queen he once more returned to Madrid, where he was nominated minister of finance, and soon afterwards of foreign affairs, which he held till 1835. His latter years were spent at Paris, where he published his interesting "History of the Insurrection, War, and Revolution of Spain." Died, 1843.

TORFEUS, THORMODUS, Danish historian, was born in Iceland, in 1640; educated at Copenhagen, and was afterwards appointed historiographer for Denmark and Norway. Among his works are, "Historia Rerum Norvegiarum," 2 vols.; "Series Dynastarum et Regum Danicæ;" and "Historia Vinlandiæ Antiquæ." Died, 1719.

TORQUEMADA, THOMAS DE, the first inquisitor-general of Spain, was born about 1420. He was a monk of the order of St Dominic, became inquisitor-general in 1483, was confirmed in his authority by Innocent VIII., who made him grand inquisitor of Spain, and gave him the title of Confessor of Sovereigns. He died in 1498. During the exercise of his power, in the course of 16 years, it is said that no less than 8800 victims were committed to the flames, 90,000 were condemned to perpetual imprisonment and other severe punishments, and above 80,000 Jews were banished from Spain.

TORRE, GIOVANNI MARIA DELLA, an eminent natural philosopher, was born at Rome in 1713; studied at the Clementine College; became professor of philosophy and the mathematics at Ciudad de Friuli; and afterwards, settling at Naples, was appointed librarian to the king, superintendent of the royal printing office, and keeper of the museum. He made great improvements in the magnifying power of microscopes, and published works on Natural Philosophy, "Microscopical Observations," &c. Died, 1782.

TORRENS, Sir HENRY, adjutant-general, was born at Londonderry, in 1779; received

his education in the military academy at Dublin; entered as an ensign in the 52nd regiment of foot; and, going to the West Indies, was early distinguished for bravery in actual service, and fortitude in enduring hardships. He afterwards served in Holland, where he was wounded; next proceeded to join the army in Egypt; thence embarked at a port on the Red Sea for Bombay; but being seized with a coup-de-soleil, he was obliged to take his passage to England. The ship touched at St Helena, where, recovering his health and spirits, he married Miss Patton, the governor's daughter. He was present at the attack on Buenos Ayres, and gave his testimony on the trial of General Whitelock in a manner that evinced his judgment and integrity. He was appointed secretary to Sir Arthur Wellesley, and accompanied him to Portugal. In March, 1820, Sir Henry was made adjutant-general, in which situation he revised the army regulations, and introduced many essential improvements. Died, 1828.

TORRICELLI, EVANGELISTA, a celebrated Italian mathematician, was born in 1608, at Fuenza; began his education under the Jesuits there, and completed it at Rome; was invited to Florence by Galileo, whom he succeeded as professor of mathematics. The grand-duke also appointed him his mathematician. He wrote several geometrical works, and to him science is indebted for the invention of the barometer. Died, 1647.

TORREGIANO, PIERO, a distinguished Italian sculptor, born at Florence, in 1472. He was a fellow-student with Michael Angelo in the gardens of St Mark, and one day, a dispute arising between them, he struck a savage blow and broke Michael Angelo's nose. Compelled to quit Florence, he first worked at Rome, and then became a soldier, and served under Caesar Borgia. He afterwards came to England, and in the service of Henry VIII. obtained a great reputation. His principal work is the tomb of Henry VII., in Westminster Abbey, called by Bacon "one of the stateliest and daintiest monuments in Europe." The tombs of Margaret, countess of Richmond, and of Dr Young, the latter in Chancery Lane Chapel, are attributed to him. Torregiano afterwards went to Spain, where he is said to have made, among other works, a terra-cotta statue of St Jerome, and a marble group of the Madonna and Child. There is a duplicate of the St Jerome in the Crystal Palace. Respecting the death of this sculptor, the traditional story is, that having made a copy of his Madonna, and being angry at the low price offered him, he dashed it in pieces; that he was then denounced to the Inquisition for impiety, and imprisoned; and to avoid the death of a heretic, starved himself. Died at Seville, 1522.

TORRIJOS, Don JOSE MARIA, a Spanish patriot, born in 1791, who served against the French during the war of independence, and, gradually passing through the inferior posts, obtained the rank of colonel on the field of battle. He was in disgrace after the return of Ferdinand VII.; but, in 1820, the Cortes made him field-marshal, and chief commandant of Navarre and the Basque pro-

vinces. When in 1823, Torrijos signed the capitulation of Cadiz had surrendered to General Mina, resolved to renege of Spain, he ratar, in 1831, he and his country by a coup of the same year.

TORRINGTON, count, British admiral, 1663. He entered the fleet as Orange, but was commander at and afterwards under Admiral in 1703. He was captured by the French at Malaga. He was Anne, and was court of Barcelona took part in the accession of the baronet, won the fleet off Cadiz years later was had for some months. The other honour at the time of the Admiralty portrait of Viscount Kneller, is in Italy.

TORRINGTON, British admiral, fifth Viscount of London, in shipman on board of age, and between Admiralty, on the flag-ship East Indies, Souffrin. Captain; in Galatea frigate French corvette but ill health command in uncle, the title his father days after, Torrington, the Warrior prince of Orange 1813, and that service ships to the period a promotion him rear-admiral made vice admiral 1831.

TORSE, Torston, a Swedish general, commenced his military career

viaces. When the French invaded Spain, in 1823, Torrijos held out to the last; he signed the capitulation of Carthage after Cadix had surrendered, and gave up his arms to General Mina; but having subsequently resolved to renew his efforts for the liberation of Spain, he quitted his asylum at Gibraltar, in 1831, and on repairing to Malaga, he and his companions were made prisoners, tried by a court-martial, and shot, Dec. 11 of the same year.

TORRINGTON, GEORGE BYNG, first Viscount, British admiral, was born in Kent, in 1663. He entered the navy in 1678; served in the fleet sent to oppose the prince of Orange, but went over to his party; was a commander at the battle off Beachy Head; and afterwards served in the Mediterranean under Admirals Rooke and Russell. Rear-admiral in 1703, he served under Sir Cloudesley Shovel, commanded the squadron which attacked Gibraltar in the following year, and distinguished himself at the battle of Malaga. He was then knighted by Queen Anne, and was sent, as vice-admiral, to succour Barcelona, in 1706. The same year he took part in the capture of Alicante. At the accession of George I. he was created a baronet, won a great victory over the Spanish fleet off Cape Passaro in 1719, and two years later was raised to the peerage. He had for some years sat in parliament for Plymouth. The knighthood of the Bath and other honours were conferred on him, and at the time of his death he was first lord of the Admiralty. Died, 17th Jan., 1773. The portrait of Viscount Torrington, painted by Kneller, is in the National Portrait Gallery.

TORRINGTON, GEORGE BYNG, Viscount, British admiral, was the son of John, the fifth Viscount Torrington, and was born in London, in 1768. He was entered a midshipman on board the *Thunderer* at 10 years of age, and was present in the action between Admiral Keppel and the Count d'Orvilliers, on the 27th July, 1778. He joined the flag-ship of Sir Edward Hughes, in the *East Indies*, and was in the actions with M. Soufferin. In June, 1795, he was made post-captain; in 1797 he had the command of the *Galatea* frigate, in which he captured a French corvette, and some armed vessels; but ill health compelled him to resign the command in 1802. In December, 1812, his uncle, the fourth viscount, died, to whose title his father succeeded; but he dying 14 days after, Captain Byng became Viscount Torrington. He at that time commanded the *Warrior*, in which ship he conveyed the prince of Orange from the Downs, in Nov., 1812, and landed him at Schwelling. After that service, he convoyed a fleet of merchant ships to the West Indies. During that period a promotion took place, which made him rear-admiral of the Blue, and he was made vice-admiral in 1821. He died in 1831.

TORSELLINO. [TURSELLINUS.]

TORSTENSON, LEONARD, Count, a celebrated Swedish general, was born in 1595; commenced his career as page to Gustavus Adolphus, and was rapidly promoted for his military talent by that monarch, and dis-

tinguished himself on numerous occasions during the Thirty Years' War. Died, 1654.

TOSCANELLA, PAOLO, an astronomer of the 15th century. He erected on the cathedral of Florence the famous gnomon, of which father Ximenes published a curious description. Died, 1482.

TOTILA, king of the Ostrogoths in Italy, was proclaimed in 541. He at once assembled the Gothic army, and undertook the restoration of the kingdom of Italy. He defeated the Romans near Faenza, passed the Po and the Apennines, and blockaded Naples. The imperial vessels sent to succour the city were intercepted by his fleet, and after a truce Naples surrendered. Cumæ did the same, and without resistance Totila marched to within a few miles of Rome. His prudence, temperance, and fidelity to his word were equal to his courage, and these qualities gained numbers to his side. He left no garrisons in the conquered towns, but destroyed their fortifications; enforced by frequent harangues the necessity of moral as well as military virtue, and severely punished violations of discipline. In 546, he formed the siege of Rome. Meanwhile the great general Belisarius was recalled from the Persian war and sent to save Italy; but sent without men, horses, arms, and money. When recruits were collected, and succours arrived from Constantinople, he made a vigorous attempt to raise the siege of Rome, in which, however, he failed through the misconduct of his subordinates. Before the end of the year the gates were opened by treachery, and the Goths took possession of Rome. At the prayer of the archdeacon Pelagius the conqueror displayed his clemency to the people in sparing their lives and the chastity of the women, while he gave up the city to pillage. The walls were partly demolished, and Totila was on the point of totally destroying all the noble monuments of ancient art; when on the earnest remonstrance of Belisarius he agreed to spare them. He carried off with his army the senators, sent the citizens and their families into exile, and for several weeks left Rome a solitude. In February, 547, Belisarius once more recovered possession of the city, and repulsed three assaults of Totila, who hastily returned. But Belisarius was ordered away from Rome on other service, and soon after recalled to the Imperial court; and in 549, Totila again took possession of the city. He reduced Rhegium and Tarentum, devastated Sicily and the coasts of Greece, and the Emperor Justinian was at last alarmed by his conquests, and sent an army into Italy to oppose him. It was led by the eunuch Narses, and in the bloody battle fought in the neighbourhood of Rome, in July, 552, Totila was defeated, and being overtaken in flight, was pierced by the lance of Asbad, leader of the Gepidæ, and died a few days after.

TOTT, FRANÇOIS, Baron de, a French negotiator and officer, was born, in 1733, at Champigny, and after having served in the army, was employed in the French embassy at Constantinople. In 1767 he was appointed consul in the Crimea. He subsequently went back to Constantinople, and was

charged by the grand seignior to carry into effect various important reforms in the military department. He was promoted on his return to France, but emigrated in 1790, and died 1793.

TOUR D'AUVERGNE, H. DE LA. [TURNERNE.]

TOURNEFORT, JOSEPH PITTON DE, an eminent botanist, was born in 1656, at Aix, in Provence. He manifested very early in life a love of botany; studied medicine and anatomy at Montpellier; travelled in various parts of Europe and Asia; was professor of physic in the Royal College, and of botany in the Jardin du Roi at Paris, and died in 1708. The method established by Tournefort was founded upon the varieties of the petals of flowers, taken in conjunction with the fruit; and it soon became highly popular from its facility. Among his works are "Voyages in the Levant," "Elements of Botany," and a "History of Plants in the neighbourhood of Paris."

TOURNEUR, PIERRE LE, French litterateur, born at Valognes in 1736. He appears to have spent the last twenty years of his life in laborious literary occupations at Paris, chiefly as a translator of English works into French. He was for some time private secretary to Monsieur, afterwards Louis XVIII. He deserves mention in every English biographical dictionary for his honest attempt to provide his countrymen with a complete translation of Shakespeare. He executed this laborious undertaking almost unaided, and so fairly that his version, which is in prose, was thought worthy of revision and republication by Guizot in 1821. It first appeared in 1776, and the six following years. Le Tourneur's preface was angrily attacked by Voltaire, who could not tolerate even the suspicion that it was an attempt to set the "drunken savage" above the French classical dramatists. Among Le Tourneur's other translations were — Young's Night Thoughts and other Poems; Hervey's Meditations; Ossian's Poems; and Clarissa Harlowe. By these labours he contributed to spread the knowledge of English literature and create or foster a taste for it in France; and, through the writings of his friend Diderot, even in Germany. Died at Paris, 1788.

TOUSSAINT L'OUVERTURE, a celebrated negro chieftain, of great courage, intelligence, and activity, was born in 1745, at St Domingo. His early years were spent in slavery on the estate of Count Noe, where his excellent conduct attracted the attention of M. Bayon de Libertas, the agent of the estate, who taught him reading, writing, and arithmetic. When the general rising of the blacks took place, the abilities and courage of Toussaint soon raised him to the highest rank among them. By his wise and vigorous measures, he succeeded in expelling the English, reducing the Spanish part of the island, and restoring peace and order in the colony; for which the central assembly of St Domingo voted him the dignity of president for life. The first cure of Toussaint was to form a system of civil policy suited to the state of the colony; for which purpose he introduced many useful regulations, tending

to improve the moral state of the blacks, and to induce habits of industry among them. By these means the colony began to revive, and was rapidly advancing in prosperity under the administration of this negro chief, when suddenly the whole state of affairs was changed. Anxious to recover so valuable a colony, Buonaparte, in 1801, despatched General Leclerc with a fleet and army; a desperate contest ensued; and, after a short but brave resistance, Toussaint was overcome. He was sent a prisoner to France, and died in the fortress of Joux, near Besançon, in 1803. His fate is the theme of a noble sonnet by Wordsworth.

TOWERS, JOSEPH, political and miscellaneous writer, was born in 1737, in Southwark, where his father was a dealer in second-hand books. He was, successively, a printer, a bookseller, and a preacher among the Unitarians; received the degree of LL.D. from the university of Edinburgh, and died in 1799. Among his works are, 7 vols. of the "British Biography," a "Life of Frederic, King of Prussia," "A Vindication of the Political Opinions of Mr Locke," "Observations on the Rights and Duties of Juries," and many political and other tracts. He also contributed to Dr Kippis's edition of the Biographia Britannica.

TOWNLEY, CHARLES, an English antiquary and collector, was born of an ancient family at Townley Hall, in Lancashire. He resided many years at Rome, where he employed himself in collecting the remains of ancient art; and having formed a museum, replete with valuable manuscripts, medals, vases, urns, &c., he purchased two houses in Park Street, Westminster, for their reception. The Townley marbles are now in the British Museum, of which Mr Townley was a trustee. Died, 1805.

TOWNSHEND, CHARLES, Viscount, statesman and diplomatist, was born in 1676. He succeeded to the peerage on the death of his father, in 1686, and soon after taking his seat in the House of Lords, he joined the Whig party. Lord Townshend was one of the commissioners for the union with Scotland in 1706, and three years later plenipotentiary with Marlborough at the fruitless conferences for peace held at Gertruydenberg in 1710. He remained at the Hague as ambassador to the states-general, and negotiated the celebrated "Barrier Treaty," for which he was afterwards voted an enemy to the kingdom by the House of Commons. On the accession of George I. Lord Townshend was named secretary of state, and chose General Stanhope for his colleague. But during the king's absence in Hanover in 1716, Townshend fell under suspicion, and was dismissed from office; accepting, however, of the lord-lieutenancy of Ireland, as a temporary office. He was soon dismissed from it without having gone to Ireland. His friend and associate in the ministry, Sir Robert Walpole, whose sister he had married, resigned at the same time, and both joined the ranks of the opposition. In 1720, Townshend was received into favour again, and was made president of the council; and was named secretary of state in the following year, Walpole being prime minister. An

unhappy breach between the two highest places in a wearisome contest in May, 1730. He died in 1738.

TOWNSHENT CHARLES, an English statesman, was born in 1722, preceding, and was a member of which he was appointed lord of two years later under the administration of Devonshire. He was at war in 1761-3, following year first of the forces under Rockingham, and Chatham being by illness, Townshend minister; and the disgrace of the tax on tea, which occurred in 1769, led to the American Stamp Act year. Townshend was a very able and skilful in saying without fixed side to side in September, 1769.

TOWNSHEND, CHARLES, Viscount, statesman and diplomatist, was born in 1676. He succeeded to the peerage on the death of his father, in 1686, and soon after taking his seat in the House of Lords, he joined the Whig party. Lord Townshend was one of the commissioners for the union with Scotland in 1706, and three years later plenipotentiary with Marlborough at the fruitless conferences for peace held at Gertruydenberg in 1710. He remained at the Hague as ambassador to the states-general, and negotiated the celebrated "Barrier Treaty," for which he was afterwards voted an enemy to the kingdom by the House of Commons. On the accession of George I. Lord Townshend was named secretary of state, and chose General Stanhope for his colleague. But during the king's absence in Hanover in 1716, Townshend fell under suspicion, and was dismissed from office; accepting, however, of the lord-lieutenancy of Ireland, as a temporary office. He was soon dismissed from it without having gone to Ireland. His friend and associate in the ministry, Sir Robert Walpole, whose sister he had married, resigned at the same time, and both joined the ranks of the opposition. In 1720, Townshend was received into favour again, and was made president of the council; and was named secretary of state in the following year, Walpole being prime minister. An

unhappy breach between the two highest places in a wearisome contest in May, 1730. He died in 1738.

TRADES

unhappy breach afterwards took place between the two friends, Walpole had the highest place in royal favour, and after long wearisome contentions Townshend resigned in May, 1730. He spent the rest of his life at his seat, Rainham Hall, in Norfolk, and died in 1738.

TOWNSHEND, the Right Honourable CHARLES, an eminent British statesman, was born in 1725. He was grandson of the preceding, and early distinguished himself as a member of the House of Commons, to which he was returned in 1747. He was appointed lord of the Admiralty in 1754, and two years later treasurer of the chamber under the administration of the duke of Devonshire. He held the office of secretary at war in 1761-2, and was made in the following year first lord of trade and the plantations. In 1765, he became paymaster of the forces under the ministry of Lord Rockingham, and chancellor of the exchequer under Lord Chatham in 1766. Lord Chatham being incapacitated for business by illness, Townshend was virtually prime minister; and to him belongs the honour or the disgrace of proposing the fatal resolution for taxing the North American colonists, which occasioned the American war, and led to the declaration of independence. He had been a zealous supporter of the American Stamp Act, passed in the previous year. Townshend was a very vain and ambitious man, witty, eloquent, and singularly skilful in saying just the things likely to suit the taste and temper of his audience. Without fixed principles, he shifted from side to side in politics so frequently that he was spoken of as the weather-cock. Died, September, 1767.

TOWNSHEND, JOHN, founder of the Deaf and Dumb Asylum, was born in London, in 1757. He settled as minister to an independent congregation at Kingston, in Surrey, whence, in 1784, he removed to Hermondsey, where he continued to reside during the remainder of his life. With the assistance of the Rev. H. C. Mason, rector of Hermondsey, he founded, in 1792, the institution for the deaf and dumb children of indigent parents; which obtained such efficient patronage, that, in 1807, a building, since much enlarged, was erected under the auspices of the duke of Gloucester. Mr Townshend also assisted in the formation of the London Missionary Society, the Female Penitentiary, and other religious and charitable associations; besides instituting a congregational school, for the gratuitous education of the children of dissenting ministers. Died, 1826.

TRADESCANT, JOHN, naturalist, traveller, and antiquary, is usually said to have been a Dutchman. He was, however, settled in England as early as 1608. In the course of his extensive travels in Europe, Asia, and North Africa, he began to make a collection of objects of Natural History, which he subsequently enlarged, and added to it antiquities and rarities. He held the situation of gardener to several English noblemen successively, and, in 1629, was named gardener to Charles I. Died, 1638.

TRADESCANT, JOHN, son of the preced-

ing, and like him a naturalist and antiquary, was born in Kent, in 1608. He visited the colony of Virginia, augmented his father's collection, and enjoyed the friendship of many eminent persons. He published in 1636 a descriptive catalogue of the collection, under the title of "*Museum Tradescantium*." The Tradescants lived latterly at Lambeth, and had a garden there with many rare and curious plants. They were the means of introducing many new species of plants into England. Died, 1662. After the death of the younger Tradescant a Chancery suit was instituted for the settlement of the conflicting claims of his widow and his friend Ashmole to the possession of the Museum. The case was decided in favour of Ashmole, who afterwards gave the Museum to Oxford University. It forms the principal part of the "Ashmolean Museum."

TRAJANUS, MARCUS ULPIS, Roman emperor, was born in Spain, A. D. 52. He served with his father in the Parthian and Jewish wars, and was consul in 91. He next served in Germany, and his moral and military virtues not only endeared him to the army, but recommended him to the Emperor Nerva, who in 97 adopted him, and created him Cæsar. Early in 98 he succeeded to the empire, and soon justified by his wise and vigorous administration the hopes of Nerva, and the joy of his subjects. A war with the Dacians began in 100, and occupied him three years. On the defeat of Decebalus, their king, Trajan had a triumph at Rome, and received the surname of Dacicus. In 103 he appointed Pliny the Younger, who was his intimate friend, proconsul of Bithynia; and the difficulty which Pliny felt as to the mode of dealing with the "new superstition" of the Christians led him to get information, and send to the emperor an impartial report, that he might have the benefit of his judgment. This was the occasion of the important rescript of Trajan establishing a legal mode of proceeding against the Christians, and illustrating his justice and humanity. In 104 the second Dacian war broke out, which ended in 106 with the defeat and death of Decebalus, and the reduction of Dacia to a Roman province. Trajan then celebrated a second triumph, and the games exhibited lasted 123 days. For the next eight years the empire enjoyed peace, and Trajan applied himself to the duties of government and the execution of many important works for the improvement of Rome. In 114 he set out for the East, carried on war with the Parthians, took Ctesiphon, Edessa, and other towns, subdued great part of Western Asia, and having deposed Chosroes, made Parthmaspis king of Parthia. He then passed down the Tigris to the Persian Gulf, but being soon after seized with illness, he set out to return to Italy. Died at Selinus, in Cilicia, in 117. His ashes were carried to Rome. Trajan was deservedly named "Optimus" by the senate, for he was one of the wisest and best of the emperors. He was the first emperor who was not an Italian by birth. His most celebrated public works were the Forum Trajani, in which the famous column was erected in his honour; the bridge over the Danube, built during the second Dacian war

with stone piers and wooden arches; the great road across the Pomptine Marshes, and other roads; and a theatre, library, and other buildings at Rome.

TREGOLD, THOMAS, an eminent civil engineer, born near Durham, in 1788. During the period of his apprenticeship, and while subsequently working as a carpenter, he was a diligent student of architecture and mathematics, and about 1813 he settled in London, taking a situation in the office of Mr Atkinson, architect to the Board of Ordnance. He continued and extended his studies, and began to employ himself in literary labours, contributing articles on various matters of Natural Philosophy to the "Philosophical Magazine," "Annals of Philosophy," and the "Encyclopædia Britannica." During the last six years of his life he was in practice on his own account as a civil engineer. Among his works are—"Elementary Principles of Carpentry," "Essay on the Strength of Cast Iron," "Practical Treatise on Rail-roads and Carriages," and an admirable account of "The Steam-Engine." The last named appeared in 1827, and after the author's death was republished, extended, and beautifully illustrated. This able engineer was of a weak constitution, and his health broke down under the heavy tasks he imposed on himself. He died in 1829.

TREMBLEY, ABRAHAM, an eminent naturalist, was born in 1700, at Geneva. After having been tutor to the families of Lord Bentinck and the duke of Richmond, he returned in 1757 to his native city, where he became one of the members of the great council. He first acquired notice as a naturalist by his "Memoirs on Fresh Water Polytes," and was admitted into the Royal Society, and other learned bodies. He also wrote "Instructions from a Father to his Children on the Nature of Religion," "Instructions on Natural and Revealed Religion," &c. Died, 1784.

TRENCHARD, SIR JOHN, an English statesman, was born of an ancient Dorsetshire family in 1650. He was educated at Oxford, and called to the bar; first sat in parliament for Taunton in 1679; was arrested and imprisoned in 1683, on suspicion of taking part in the Ryehouse Plot; narrowly escaped hanging as a supporter of Monmouth's rebellion, and lived abroad several years; and only returned at the revolution. He was a member of the Convention parliament in 1689, and William III. acknowledged his services by making him chief justice of Chester and knight, and in 1693 secretary of state. Died, 1695.

TRENCHARD, JOHN, a political writer of the Whig party, was born in 1662, in Somersetshire. He was of the same family as the preceding, was brought up to the law, but abandoned it, and was appointed commissioner of forfeited estates in Ireland, and died in 1723. He wrote "The Natural History of Superstition," and various political tracts and pamphlets; and, in conjunction with Gordon, a series of Letters on Civil and Religious Liberty, which appeared under the name of "Cato."

TRENCK, FREDERICK, Baron von, a Prussian officer, celebrated for his adventures and

misfortunes, was born in 1726, at Königsberg, and made such rapid progress in his studies, that, at the age of 17, he was presented to the king, Frederick II., as a student who was well worthy the royal patronage. Frederick rapidly advanced him in the army, and manifested much regard for him; but the accomplishments of Trenck having won the heart of the Princess Amelia, the king's sister, his enemies took advantage of some letters that fell into their hands, and had him accused and arrested. He was imprisoned in the fortress of Glatz, but contrived to effect his escape. He then visited the north of Europe, Austria, and Italy. In 1758 he was seized at Dantzic, and was conveyed to Magdeburg, where, loaded with irons, he was for years incarcerated. On procuring his liberation, in 1763, he withdrew to Vienna, after which he went to Aix-la-Chapelle, where literature, politics, and commerce alternately engaged his attention. He next went to reside at his castle of Zwerbeck, in Hungary, and while there he published his own "Memoirs," a book which was greedily read all over Europe. In 1791 he settled in France, joined the Jacobins, and, in 1794, was charged with being a secret emissary of the king of Prussia, and died by the guillotine.

TRESSAN, LOUIS ELISABETH DE LA VERGNE, Count de, a distinguished French officer and writer, was born in 1705, at Mons; entered the army in 1723; was conspicuous for his valour during several campaigns, particularly at the battle of Fontenoy; was appointed grand marshal of the court of Stanislaus, the shadow-king of Poland, in Lorraine, in 1750; was admitted into the French Academy in 1781, and died in 1783. His works, published in 12 vols., contain his miscellaneous pieces, and his translations of Anadisi de Gaul, the Orlando Furioso, and several old French romances. He did not, however, wholly confine himself to subjects of mere amusement, but produced a "Treatise on Electricity," and some other works of science.

TREVIGI, or TREVISO, GIROLAMO DA, Italian painter, was born at Treviso in 1497 or 1508. He was probably the pupil of his father, Piermaria Pennacchi, but he studied the works and imitated the style of Raphael. He painted at Bologna, Venice, Genoa, and Trent; leaving Genoa on account of the success of his rival, Perino del Vaga. He afterwards visited England, and was employed by Henry VIII. as architect and engineer. The reputed masterpiece of Trevigi is the picture of the "Madonna and Child enthroned," now in the National Gallery. It was painted for the church of San Domenico at Bologna. "The Adoration of the Kings," painted from a drawing of Baldassare Peruzzi, is attributed to this master. Both drawing and painting are in the National Gallery. Trevigi excelled in portraits, but his works are now rare. He was killed by a cannon-shot at the siege of Boulogne by his master, Henry VIII., in the autumn of 1544.

TREVOR, SIR JOHN, secretary of state to Charles II., was of an ancient Welsh family, and was born in 1626. At the Restoration he entered the service of the king, and in

1668 was sent on a mission to France, where he resided at Aix-la-Chapelle, for several years, and made secret treaties with Louis XIV. which he held till his death. He was a base negotiator, and was on with Louis XIV. to strain the persecutions; but he appeared to have no influence on the king.

TRIBOLO, IL, or TRIBACCI, AN, an eminent Italian painter, was born at Florence, in 1485. He was a pupil of Sanzio, and in 1510 he directed the work of twelve bas-reliefs in the doors of that church. He was a pupil of Lorenzo and Florentine, and again a pupil of Cellini, and again a pupil of Tribolo was the inventor of the intaglio. He died at Florence, in 1550.

TRIBONIANUS, a Roman lawyer, was born about the middle of the 5th century, at Side, in Cappadocia. He acquired a reputation at Side, and on the accession of state he was made master of the laws, and master of the code. He was a Roman lawyer entrusted to the care of his proposed reforms, the result of which was the Digest, and the Digest were transmitted to posterity, had not equal to his talents.

TRIMMER, SAMUEL, an English popular works for the people, was born at Ipswich in 1741. He was married to Mrs. Kirby, who was married to Mr. Trimmer, that time living at the appointment of the Palace. She died as an authoress till her "Easy Introduction to Nature." Among her separate works were "The Family Magazine of Education," from her own contributions. She died in 1804. Account of her life.

TRISSINO, GIOVANNI, an Italian poet, was born at Padua, educated at Rome, and was a pupil of Leo X. and of various diplomatics. Among his works were "Italy from the Alps to the Adriatic," a treatise on the history of the forgotten tragedians.

TRITHEM, FRIEDRICH, a German scholar, was born in 1822, at Odessa, but came to the University of Bonn. He was a student and three years assistant in the P...

1669 was sent on a diplomatic mission to France, where he negotiated the treaty of Aix-la-Chapelle, for peace between France and Spain. The same year he was knighted and made secretary of state, a post which he held till his death. He was opposed to the base negotiations which Charles II. carried on with Louis XIV., and after the passing of the Conventicle Act, endeavoured to restrain the persecution of the Nonconformists; but he appears to have had little influence on the course of affairs. Died, 1672.

TRIBOLO, IL, whose name was **NICCOLO BRACCINI**, an eminent Italian sculptor, born at Florence, 1445. He was a pupil of Jacopo Sansavino, and in 1525 was called to Bologna to direct the works at San Petronio. The twelve bas-reliefs which he executed for the doors of that church are considered his best works. He was employed at Rome, at Loreto and Florence, visited Venice with Cellini, and again worked at Bologna. Tribolo was the intimate friend of Vasari. Died at Florence, 1550.

TRIHONIANUS, a celebrated Roman lawyer, was born about the beginning of the 6th century, at Side, in Pamphylia; obtained reputation at the bar; and rose, through a succession of state offices, to those of consul and master of the offices. The Emperor Justinian intrusted to him the superintendence of his proposed reformation of jurisprudence, the result of which was the celebrated Code and the Digest or Pandects, which would have transmitted his name with honour to posterity, had not his venality been at least equal to his talents. Died, 547.

TRIMMER, SARA, authoress of many popular works for the young, was born at Ipswich in 1741. She was the daughter of Joshua Kirby, writer on Perspective, and married Mr Trimmer in 1762. She was at that time living at Kew, her father having the appointment of clerk of the works at the Palace. She did not make herself known as an authoress till 1780, when she published her "Easy Introduction to the Knowledge of Nature." Among her numerous writings was a "Sacred History" in 6 vols. Besides her separate works she conducted for a time the "Family Magazine" and the "Guardian of Education," from both of which some of her own contributions were reprinted separately. She died suddenly in 1810, and an Account of her Life appeared four years later.

TRISSINO, GIOVANNI GIORGIO, an Italian poet, was born in 1478, at Vicenza; was educated at Rome and Milan; was employed by Leo X. and his successor, Clement, on various diplomatic missions, and died in 1558. Among his works are, "The Deliverance of Italy from the Goths," an epic poem; a treatise on the "Art of Poetry," and the forgotten tragedy of "Sophonisba."

TRITHEM, FREDERICK HENRY, Sanscrit scholar, was a native of Switzerland, and was born in 1820. He was brought up at Odessa, but completed his education at the university of Berlin, where he was a pupil of Bopp. He came to England about 1841, and three years later he was appointed assistant in the Printed Book Department of

the British Museum. He went in 1845 to Russia, visited Turkey and Egypt, and returning to England, obtained the appointment of professor of modern languages at the Taylor Institution, Oxford, in 1848. An attack of insanity compelled his retirement after only two years' labour in his new post. Died, near Odessa, 1851. He has left few written proofs of his abilities and acquirements, except some articles on his special subjects in the Penny Cyclopædia, and in the unfinished Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.

TRIVET, NICOLAS, an English Dominican, born in Norfolk, 1258, was the son of Sir Thomas Trivet, chief justice of the King's Bench. He was educated at Oxford and Paris, and was author of "Annales Regum Anglie." Died, prior of a Dominican monastery at London, 1328.

TROGUS POMPEIUS, a Roman historian, was born in Gallia Narbonensis, and lived in the reign of Augustus. Trogus wrote a Universal History, entitled "Historiæ Philippicæ," in 44 books, which is not extant, but portions of which are preserved to us in the epitome or abridgement by Justinus.

TROLLOPE, FRANCES, novelist and miscellaneous writer, was born in 1790; at the age of 19 married a barrister, Anthony Trollope, who had neither good fortune nor good health; and in 1825 was left a widow. She visited America in 1829, and attempted to establish herself there, but after three years returned to England; and urged by the necessity and duty of supporting her family, she wrote in 1832 her "Domestic Life of the Americans," which brought her considerable reputation in England, and called forth much angry criticism in America. From that time her narrations of travel and her novels followed in rapid succession for more than twenty years; all bright, cheery, witty, and not at all reflecting the shadow and sadness of her own life. Among the travels are, "Paris and the Parisians in 1835;" "Vienna and the Austrians;" "A Visit to Italy;" and "Belgium and Western Germany." And among the novels—"Jonathan Jefferson Whitlaw;" "The Year of Wrexhill;" "Tremordyn Cliff;" "The Widow Barnaby;" &c. Mrs Trollope spent the last years of her laborious life at Florence, and died there, 6th October, 1863. The well-known writer, Mr Thomas Adolphus Trollope, author of the "History of the Commonwealth of Florence," "Life of Filippo Strozzi," and other works, is her son; and the distinguished novelist, Mr Anthony Trollope, is nearly related to her.

TROMP, MARTEN HARFERTZON, the celebrated Dutch admiral, was born at the Brill, in 1597. He began to serve under his father in the navy at ten years of age, and was captured and detained for two years by an English privateer. He gradually rose to distinction, and in 1637 attained the rank of lieutenant-admiral; in which capacity he served against the Spaniards, captured many of their ships, and was created chevalier of St Michael by the king of France. In October, 1639, he won a great victory over the

Spanish fleet and captured thirteen galleons. He was engaged in the naval campaigns of 1640 and 1641; but his courage and abilities were most strikingly displayed in the war with England in 1652-53. He had Robert Blake for his adversary, and was defeated off Dover in March, 1652. In November following he defeated Blake, and sailed up the Channel with a broom at his mast-head. Another engagement took place in the Channel in February, 1653, when the Dutch lost many of their ships, but Tromp succeeded in saving the 300 merchant-ships he was convoying. After commanding in several other battles against the English, this great seaman fell in the engagement with Monk, 23rd July, 1653.

TROMP, CORNELIS VAN, son of the preceding, was born at Rotterdam, in 1629, and, like his father, rose to eminence as a naval commander. He early distinguished himself under Van Galen in the Mediterranean, afterwards against the Algerine pirates, and in 1665 took part in the engagement of 13th July with the English fleet. He served under De Ruyter against the English in 1666, and in consequence of a quarrel with that admiral, was deprived of his commission, which, however, was restored to him by William, prince of Orange, in 1673. He was again employed on various occasions, visited England, and was made a baron by Charles II.; was created a count by the king of Denmark, and on De Ruyter's death received the appointment of lieutenant-admiral-general of the United Provinces. Died at Amsterdam, 1691.

TRONCHIN, THEODORE, an eminent physician, was born in 1709, at Geneva; and being maternally related to Lord Hologbrooke, he was sent to England, to be educated at Cambridge. He studied medicine under Boerhaave, at Leyden; and having taken the degree of M.D., he first settled at Amsterdam, and afterwards at his native city; but subsequently removed to Paris, on being appointed physician to the duke of Orleans. Tronchin was a man of consummate skill in his profession, and of great benevolence. He was the friend of Voltaire, Rousseau, and many other celebrated characters, who have eulogized his talents and his virtues in their writings. Died, 1781.

TROTTER, THOMAS, M.D., an eminent medical writer, was a native of Roxburghshire, and educated at the university of Edinburgh. After being duly qualified, he was appointed a surgeon in the navy, in 1782; obtained his doctor's degree at Edinburgh, in 1788; was appointed physician to the royal hospital at Portsmouth, in 1793, and in the following year, physician to the fleet. He introduced many improvements into the medical discipline of the navy; was indefatigable in his endeavours to mitigate the pernicious effects of scurvy; and was completely successful in repressing a putrid fever which broke out among the French prisoners taken on the 1st of June, 1794. On his retirement from the public service, he settled at Newcastle as a physician; and died there in 1832. He wrote many useful works, of which the following are the principal; "Medical and Chemical Essays," "Medica

Nautica, or an Essay on the Diseases of Seamen," a "Treatise on Scurvy," a "Review of the Medical Department of the British Navy," "The Noble Foundling," a tragedy; a volume of poems, &c.

TROUGHTON, EDWARD, a celebrated astronomical instrument maker, was born at London, in 1733. He became a partner in the business carried on by several members of his family, took the deepest interest in all the details of his work, and earned himself a distinguished name among scientific men by the numerous improvements he devised in astronomical instruments. Died, 1835. His bust, by Chantrey, was placed in the Observatory at Greenwich.

TROWBRIDGE, SIR THOMAS, baronet, British admiral, began his service in the navy under Admiral Hughes in the East Indies, attaining the rank of post-captain in 1782. Taken prisoner by the French in 1794, he recovered his liberty at the great battle won by Lord Howe over the French fleet on the 1st June of that year. As commander of the Culloden he took a distinguished part in the defeat of the Spaniards by Sir John Jervis, off Cape St Vincent, in February, 1797, and afterwards served under Nelson, in the Mediterranean. His exertions beforehand contributed to the victory of the Nile, but he was accidentally prevented from taking part in the battle. In 1799 he took the castle of San Elmo, Naples, and before the close of the year was made a baronet. He served as captain of the Channel fleet in 1801, was made a lord of the Admiralty, and in 1804 attained the rank of admiral. He sailed from Madras in the Blenheim in January, 1807, and probably perished with his ship and crew in a storm soon after.

TROY, FRANÇOIS DE, a French painter, was born at Toulouse, in 1645; and died at Paris, in 1730. His principal performances are in the Hotel de Ville and the church of St Genevieve, at Paris.

TROYON, CONSTANT, the distinguished French landscape and animal painter, was born at Sèvres, in 1813. His employment in the celebrated porcelain works of that town first brought out his genius for painting, and, after studying under Riocreux, for wider study of nature he travelled in the most picturesque districts of France and in Holland. He began to exhibit at the age of twenty, and from that time he continued to work indefatigably at his art, and attained high distinction. He was a member of the Academy of Amsterdam, and of the Legion of Honour. Among his most celebrated works are the "Bœufs au Labour," the "Folre Limousine," "Marché d'Antreaux," "la Vallée de la Touche en Normandie," "les Chiens courants au Repos," "le Retour à la Ferme," &c. M. Troyon acquired an immense fortune by his works, and died 20th March, 1863.

TRUMBULL, JOHN, an eminent American painter, born at Lebanon, Connecticut, in 1756. After finishing his studies at Harvard University, he served in the War of Independence, and was subsequently a pupil of West, in England. He finally settled in his native country in 1786, and applied himself to the execution of a long-

cherished project, of painting a series of pictures in illustration of the war. Among those he executed are the "Battle of Bunker Hill," "Death of General Montgomery," "Signers of the Declaration of Independence," "Surrender of Burgoyne," "Surrender of Cornwallis," and "Washington surrendering his commission." The last four were commissioned by the government of the United States, and are now in the Capitol at Washington. The pictures remaining in his own possession he presented to Yale College. In 1817 he was named president of the American Academy of Arts, and died at New York, in 1843.

TRUMBULL, Sir WILLIAM, an English statesman, was born at East Hampstead, in Berkshire, in 1636. He studied at Oxford, and having taken the degree of doctor of laws, was admitted to practice in Doctors' Commons. After this he was employed in state affairs, and in 1684 received the honour of knighthood. He went on diplomatic missions to Paris and Constantinople; was subsequently made a lord of the treasury and secretary of state; and died in 1716. Sir William was the friend of Dryden and the patron of Pope, in whose correspondence are many of his letters.

TRURO, THOMAS WILDE, Baron, lord chancellor of England, whose career affords an eminent illustration of the power of talent and industry to win for their possessor the highest offices in the state, was born in 1782. He received his early education at St Paul's School, was articled to his father, a solicitor, in Warwick Square, and admitted an attorney in 1805. Soon after his admission he entered into partnership with Mr Knight, and practised in Castle Street, Falcon Square, with much industry and ability. For more than ten years he remained a member of this firm, when he abandoned the humbler branch of his profession, and was called to the bar of the Inner Temple in 1817. In his new career he soon became the undisputed "leader" of his circuit. Together with Messrs Brougham and Denman, he was engaged as a junior in defending the cause of Queen Caroline, a distinction which materially added to his professional reputation, though it accounted for the fact that he never attained to political office during the reign of George IV. In Easter Term, 1824, he was made a sergeant-at-law, and in 1827 a king's sergeant. In this position he displayed an intimate and practical knowledge of the law, unwearied labour, and indefatigable zeal in the interest of his clients. In 1831 he was returned to parliament as member for Newark, in which town, at that time, the influence of the duke of Newcastle was not so great as it afterwards became. Upon the general election, however, in December, 1832, he was defeated by a small majority, but regained his seat in 1835, when he was elected for the borough in conjunction with Mr William Ewart Gladstone. In 1839 his first political prize fell into his hands, in the shape of the solicitor-generalship, which then happened to be vacated by the promotion of Sir R. M. Rolfe (now Lord Cranworth) to the attorney-generalship. In 1841 he was promoted to be attorney-general, and

at the same time was elected M.P. for Worcester, which he continued to represent till he was raised to the peerage. On the famous question of parliamentary privilege, he delivered a masterly speech, which held the House enchained for upwards of three hours, and which was pronounced even by his opponents to be a consummate triumph of legal reasoning. Sharing the vicissitudes of the Whig party when the Protectionists reversed the repeal of the corn-laws, by deposing Sir Robert Peel, in July, 1846, Sir Thomas Wilde was again appointed to his former office, and within the same week was raised to the bench as chief justice of the Common Pleas (upon the death of Sir Nicholas Tindal). In July, 1850, he received the great seal under Lord John Russell's administration, and was elevated to the peerage by the title of Lord Truro, but held his high office only till February, 1852. Lord Truro was twice married. His second wife was Mademoiselle Augusta d'Este, daughter of H. R. H. the late duke of Sussex and Lady Augusta Murray, daughter of the earl of Dunmore. Died, 1855.

TRUSLETT, Dr JOHN, was born in London, in 1735; was brought up as an apothecary, but entered into orders, and for a time officiated as a curate. He published abridgments of popular sermons, printed in imitation of manuscript, for the use of the pulpit; this turned out a profitable speculation, and led to his commencing business as a bookseller, by which, and the numerous compilations he produced, he realized a good fortune. Died, 1820.

TSCHIRNIAUSEN, EHMENFRIED WALTHER VON, German mathematician and natural philosopher, was born at Kiecklingwald, in Upper Lusatia, in 1651. He was of a noble family, and after studying at the university of Leyden, served a short time in the army of the Netherlands, and then travelled through the principal countries of Europe. He had continued his scientific studies, and in 1682 made himself favourably known by announcing before the French Academy of Sciences his discovery of the curve called the "epicycloid," one of those subsequently named, from their peculiar properties and the discoverer, "the *Cuspidæ* of Tschirnhausen." He was received associate and afterwards member of the Academy. The construction of burning-glasses of extraordinary power next engaged his attention, and he procured the establishment of several glass-works in Saxony. Among the lenses which he made were two, double-convex, 3 feet in diameter, which were powerful enough to burn green wood and fuse thin slips of iron. One of them was presented by the duke of Orleans to the French Academy, and the other was given by the maker to the Emperor Leopold. The Saxon porcelain manufacture originated in a discovery of this eminent man. Besides various scientific memoirs contributed to the academy, Tschirnhausen was author of "*Medicina Corporis*," and "*Medicina Mentis*." Died in 1703, and had a pompous funeral at the expense of the elector of Saxony.

TUCKER, ABRAHAM, an English philosopher, was born in London, in 1705. He was

educated at Merton College, Oxford, and then studied law at the Inner Temple, but was never called to the bar. In 1727 he became owner of a large estate at Hetchworth, in Surrey, and thenceforth paid great attention to agriculture. He married in 1736, and after eighteen years of unusual nuptial content, lost his wife, who left him two daughters. To dull the sharp sense of his sorrow he is said to have copied twice over all the letters of his wife; and soon after began the preparation of the work on which his reputation rests,—“The Light of Nature pursued.” It was published in 4 vols., in 1765, a short portion of it having separately appeared two years previously, under the title of “Free-will, Foreknowledge, and Fate.” On the first appearance of this work the author assumed the name of “Edward Search.” Three additional volumes were published after his death, under the care of his eldest daughter, Judith, who had devoted herself affectionately to his service in his literary labours, and especially during the last three years of his life, when he had become blind. Tucker’s work is unsystematic, very prolix, and full of repetition; practical, and not scientific in its aim; and grounds everything in morals on expediency. Hence Paley’s praise and acknowledgment of obligation to it. The interest and charm of the book is nevertheless considerable. It is original, honest, full of good sense, exact observation, and admirable illustrations from the homeliest sources, and has a vein of genuine humour running through it. Tucker died in 1774. A new edition of “The Light of Nature pursued” was published in 1805 by Sir Henry P. St John Mildmay, son of Tucker’s youngest daughter. It has been several times reprinted, and was abridged by Hazlitt, in 1807.

TUCKER, JOSIAH, political economist, was born in 1711, in Caernarthenshire; was educated at St John’s College, Oxford; and was successively curate of All Saints, and rector of St Stephen’s, Bristol, minor canon and prebendary in the cathedral, and dean of Gloucester. During the American war he published many pamphlets, and strenuously recommended the separation of the colonies from Great Britain, as conducive to their mutual interest. But he especially distinguished himself by his able tracts on commerce, in which he preceded Adam Smith in advocacy of free trade. He died in 1799.

TUCKER, ST GEORGE, an American lawyer and statesman, distinguished in his own country by the title of “The American Blackstone,” was a zealous promoter of the independence of the United States, and bore a part in its accomplishment, not only with his pen, but his sword. Died, 1828.

TUCKEY, JAMES KINGSTON, traveller, was born in 1778, at Greenhill, in the county of Cork; entered the navy at an early age, went to India in 1794, was employed in surveying the coast of New South Wales, was taken prisoner by the French in 1805, and remained in captivity till 1814. He was then selected to command the expedition for exploring the river Congo, where he died, in 1816. He was the author of “Maritime Geography and Statistics,” in 4 vols., written

during his imprisonment, besides Narratives of his voyages to Australia and Congo.

TUDELA, BENJAMIN OF. [BENJAMIN.] TULL, JETHRO, agriculturist, was a native of Oxfordshire, and born about 1680. He studied at the Temple, and was admitted a barrister; but, returning from his travels, he settled on his paternal estate, and devoted himself to agriculture. Tull was the inventor of the horse-hoeing system of husbandry, on which he wrote a treatise and various tracts. These were reprinted by Mr Cobbett, who warmly espoused the system.

TULLUS HOSTILIUS, third mythical king of Rome, and successor of Numa. His reign was a series of wars, with Alba, Veii, and the Sabines. The legend of the famous combat between the Horatii and Curiatii forms part of the story of the Alban war.

TULP, NICHOLAS, an eminent physician and distinguished patriot, was born at Amsterdam, in 1593. He not only rose to eminence in his profession, but, being elected burgomaster of Amsterdam at a very advanced age, he so strenuously encouraged his countrymen in their resistance to the invasion of Holland by Louis XIV., in 1672, that a silver medal was struck to his honour, with the motto, “Vires ultra sortemque se necat.”

TUNSTALL, or TONSTAL, CUTHBERT, an eminent English prelate, was born at Hatchford, in Yorkshire, about 1474. He held various appointments, legal and ecclesiastical; in 1516 he was made Master of the Rolls, and the same year was sent ambassador, with Sir Thomas More, to the emperor, Charles V., then at Brussels. In 1522 he was made bishop of London, in the following year appointed keeper of the privy-seal, and in 1530 he was translated to the see of Durham. Under Edward VI. he was sent to the Tower, where he remained till the accession of Mary, when he obtained his release, and was restored to his bishopric. He conducted himself with great moderation during this sanguinary reign, and would not suffer any Protestants to be molested in his diocese. On the accession of Elizabeth he was again deprived, and committed to the custody of Archbishop Parker, at Lambeth, where he died in 1559.

TURBERVILLE, GEORGE, an English poet, was born at Whitechurch, in Dorsetshire, about 1530. After being educated at Winchester and New College, Oxford, he became secretary to Sir Thomas Randolph, ambassador at the court of Russia, of which country he wrote a description, in three poetical epistles. He published “Songs and Sonnets,” translations of the “Heroical Epistles of Ovid,” and “Tragical Tales.” Died, probably about 1600.

TURENNE, HENRI DE LA TOUR D’AUVERGNE, Viscount de, the great French general, was born at Sedan in 1611. He was second son of the duke of Bouillon, a distinguished Huguenot leader, and Elizabeth of Nassau, daughter of William L., prince of Orange, and was brought up a Protestant. In his fourteenth year he was sent to Holland, where he learnt the art of war under his uncles, Maurice and Henry of Nassau. Sent to Paris as a hostage by his mother, the

ides Narrative of Congo. (BENJAMIN.) was a Christian, was admitted about 1680. He was admitted on his travels, and devoted as the inventor of husbandry, on various tracts. Cobbett, who

was a messenger-duchess. In 1630, he was at once appointed to a command in the French army. He attained the rank of *Maréchal-du-camp* in 1631; distinguished himself in the campaigns in Germany and Flanders, and in 1638 was made lieutenant-general. Two years later he served under Count d'Harcourt in Italy, and rendered valuable service at the siege of Turin. In 1643 he was employed to reorganize the army of Germany, of which he held the command till the peace of Westphalia, to the conclusion of which his exertions and successes greatly contributed. One of his most famous exploits was the conduct of the retreat after the battle of Marienthal in 1645. About three months later he gained or contributed to the victory of Nordlingen over the Imperialists. For a short time Turenne retired to Holland, then allied himself with the party of the Fronde, was defeated at *Rhédel*, and soon making his peace with the court, took command of the royalist forces in 1652. He was now the adversary of the prince of Condé, whom he had recently aided and got released from imprisonment. The campaign was successfully conducted, and the war of the Fronde terminated. In 1653 began his splendid campaigns in the Netherlands, where Condé commanded against him, and which only terminated with the peace of the Pyrenees, concluded in 1659, soon after the defeat of Condé at the battle of the Dunes. In 1660 he was named by Louis XIV. marshal-general of the armies of the king. After the death of his wife he renounced Protestantism, and was received, in 1668, into the Catholic church; a change he is said to have long meditated. Turenne was again called to active service in 1672, when he was named generalissimo of the French army in Holland. In this war he had for his opponent Montecucculi, and he carried the war into the heart of Germany with brilliant success; but sullied his reputation by the devastation of the palatinate, in which thirty villages were burnt. This great man, whose private life was as pure as his military career was glorious, was shot while making preparation for an engagement near *Satzbach*, 27th July, 1675. His remains, placed at first in the church of *St Denis*, were removed to the church of the *Invalides*, by order of Napoleon, in 1800.

TURGOT, ANNE ROBERT JACQUES, controller-general of Finance to Louis XVI., was born at Paris, of an ancient and illustrious family, in 1727. He was educated at the Sorbonne, for the career of an ecclesiastic, and had there for fellow-pupils (the future cardinal) *Loménie de Brienne* and (*abbé*) *Morellet*. But he had no heart for the church, and turning to the profession of the law, was appointed in 1753 Master of Requests. Pursuing in his leisure hours the study of ancient literature, physical and mathematical science, and above all political economy, he became the friend of many eminent men, and particularly of *Quesnay* and *Gournay*, leading economists. Already meditating important fiscal, commercial, and sanitary reforms, he was appointed, in 1761, to the responsible post of intendant of *Limoges*. He began at once to

introduce measures for the more just levying of the land-tax in his province, for the abolition of the *corvées*, or repair of roads by forced labour, for the construction of canals and new roads, the better cultivation of the lands, &c. On the accession of Louis XVI. he was appointed minister of marine, and a few weeks later was called to the post which he was most fitted for, that of controller-general of Finance, or first minister. The task before him was vast, and as it proved, impossible; but with "a whole pacific French Revolution in his head," he set himself honestly, fearlessly, and with clear insight to execute it. He aimed at the suppression of servitude and privilege; "proposed," says *Mignet*, "to enfranchise the rural districts from statute labour, provinces from their barriers, commerce from internal duties, trade from its shackles, and, lastly, to make the nobility and clergy contribute to the taxes." He thus made nobles, courtiers, clergy, financiers, all his enemies, and uniting in their common cause, they assailed him with various charges, and compelled the king to dismiss him in May, 1776. Turgot had only been in office 20 months, and the king had just written to him—"there is none but you and I that love the people." He was author of various works, which fill nine volumes, and was a member of the Academy of Inscriptions. His incessant labours as minister seriously aggravated the attacks of gout to which he had been subject, and he died the 20th March, 1781. There is a *Life of Turgot* by *Condorcet*.

TURNEBUS, ADRIEN, a distinguished French classical scholar, born at *Les Andelys*, in Normandy, in 1512. He studied with distinction at Paris, and was appointed professor of humanity at *Toulouse*, where he made himself a great reputation. In 1547 he was called to Paris to fill the chair of Greek and Latin, and among the numerous students attracted by his fame was *Henry Stephens*, the learned printer. He became, in 1552, joint superintendent, with *Morel*, of the Royal Printing Office for Greek books, and in 1556 exchanged this post for that of royal professor. The reputation which Turnebus enjoyed as a scholar was matched by the esteem in which he was held as a man; and he numbered among his friends some of the greatest of his contemporaries—*Montaigne*, *L'Hôpital*, and *De Thou*. His works, consisting chiefly of critical and philological treatises, and Latin translations of Greek authors, were collected and published in 3 vols. folio. This does not, however, include his detached observations entitled "*Adversaria*," which fill 3 vols. 4to. Died, at Paris, 1565.

TURNER, Dr EDWARD, M.D., F.R.S., professor of chemistry at University College, London, was born at *Jamaica*, in 1797; was educated in England, graduated as doctor of medicine in *Edinburgh*, and afterwards spent two years at *Göttingen*, under Professor *Stromeyer*, in close application to the kindred sciences of chemistry and mineralogy. He was appointed professor of chemistry in the London University on its foundation in 1828; and by his talents and

Indefatigable exertions, his moral qualities and amenity of temper, he was admirably fitted for the situation he so ably filled. As a writer he will long be known by his "Elements of Chemistry." Died, 1837.

TURNER, FRANCIS, bishop of Ely, was one of the seven bishops prosecuted for resisting the royal authority in ecclesiastical affairs under James II.; yet he refused to take the oath of allegiance to William III., and was consequently deprived of his see. Died, 1700. He wrote animadversions on a pamphlet entitled "The Naked Truth," and was answered by Andrew Marvell. He was also author of a "Vindication of Archbishop Sancroft and the rest of the deprived Bishops."

TURNER, JOSEPH WILLIAM MALLARD, the most distinguished English landscape painter, was born, according to the best authorities, in 1769. His father was a hairdresser in Maiden Lane, Covent Garden, who gave him an ordinary education. From his earliest years he exhibited a marked predilection for drawing and colouring; and while still a boy he was employed, with his youthful acquaintance, Girtin, afterwards the founder of the School of Painting in Water Colours,—in colouring prints for Mr J. R. Smith of Maiden Lane, and putting skies and foregrounds into architectural drawings. In 1789 he entered as a student at the Royal Academy, where he worked assiduously for five years; and in 1793 he exhibited three pictures, one of which represented "The Pantheon the morning after the fire." In 1799 he was elected associate of the Royal Academy, and in 1802 he became R.A. The "Tenth Plague of Egypt" and the "Falls of the Clyde" were amongst his subjects this year. Down to this period he was chiefly known as a water-colour painter. But he now turned his attention more to oil; and during the next half-century he exhibited more than 200 pictures. In 1807 he was nominated professor of perspective, and in the same year he began publishing his "Liber Studiorum," in imitation of Claude's "Liber Veritatis," having etched the subjects with his own hand. But this volume was only the precursor of an immense series of drawings and sketches, embracing the topography of this country in the "River Scenery" and the "Southern Coast,"—the scenery of the Alps, of Italy, and great part of Europe. These drawings are now widely diffused in England, and form the basis of several important collections, such as those of Pittworth, of Mr Windus, Mr Fawkes, and Mr Munro. So great is the value of them, that 120 guineas have not unfrequently been paid for a small sketch in water-colours. A sketch book, containing chalk drawings of one of Turner's river tours on the continent, fetched the enormous sum of 600 guineas. The prices of his more finished oil paintings range from 700 to 1200 or 1400 guineas. We can only mention a few of the other products of his genius in every variety of style:—from the "Wreck," in Lord Yarborough's collection, the "Italian Landscape," in the same gallery, the pendant to Lord Ellesmere's "Vandervelde," or Mr Munro's "Ve-

nus and Adonis," in the Titianesque manner, to the more original and sometimes eccentric productions of his latter years, such as the "Rome" and "Venice," the "Golden Bough," the "Téméraire," the "Tusculum," the "Hannibal," the "Hurl of Wikie," the "Death of Nelson," "Rain, Steam, and Speed," and "War," the "Exile," and the "Rock Limpet." The ruling qualities of Turner's works are comprehension and truth to nature. Brilliance and fervour of imagination, and breadth of observation, are indeed conspicuous; but these are only motives of that vivid penetration with which he entered into the secrets of nature. In many of his works there is an air almost of intuition. He sometimes misunderstood nature—construed her in hyperbole and distortion; but he scarcely ever failed to catch a portion of her meaning. Mr Turner seldom mixed much in society, and only displayed in the closest intimacy the shrewdness of his observation and the playfulness of his wit. Everywhere he kept back much of what was in him; and while the keenest intelligence, mingled with a strong tinge of satire, animated his countenance, it seemed to nuzzle him to be but half understood. His nearest social ties were those formed in the Royal Academy, of which he was the oldest member, and to whose interests he was most warmly attached. His personal habits were peculiar, and even penurious; but in all that related to his art he was generous to munificence. He was never married; he was not known to have any relations, and his wants were of the most limited kind. The only ornaments of his house in Queen Anne Street were his own pictures, which he had constantly refused to part with at any price, among which the "Rise and Fall of Carthage," and the "Crossing of the Brook," rank among the choicest specimens of his finest manner. He had long lived and at last died in humble lodgings at Chelsea, where he was known as "Mr Brooks," and the only friend who was acquainted with his abode was his legal adviser. He bequeathed the great bulk of his property to found almshouses for the benefit of unfortunate and meritorious artists; and he left his pictures to the nation on the express condition that a suitable place should be provided for their deposit and exhibition. These works, about a hundred in number, are now exhibited in the "Turner Room" of the National Gallery. Died, 19th Dec., 1851. His remains were interred in the crypt of St Paul's, beside those of Reynolds and other great painters. A Life of Turner has been written by Mr Thornbury.

TURNEL, SAMUEL, traveller and diplomatist, was born in Gloucestershire, about 1749. He entered the military service of the East India Company, and having attracted the favourable notice of the governor, Warren Hastings, was sent on an embassy to congratulate the new sovereign of Thibet, in 1783. In the war with Tipoo Saib, this officer distinguished himself at the siege of Seringapatam; and being afterwards sent ambassador to the sovereign of Mysore, acquitted himself so much to the satisfaction of the Company, that they rewarded him

with a handsome England, and pu count of an Emba shoo Lama in Thi

TURNER, SHARON, the well-known historian of the Anglo-Saxons, was born in London, 1768. Having chosen the law for his profession, he was articled to an attorney at the age of 15. The death of his master before his articles of clerkship were expired left him free to decide on his future career; but at the suggestion of an old client, who promised him support, he took up the business, and notwithstanding the great amount of time occupied by his literary pursuits, he continued to conduct a large professional business. His chief works are, the "History of England from the earliest Period to the Death of Elizabeth," and the "Sacred History of the World;" they have been repeatedly reprinted, and form part of the standard literature of the country. Shortly before his death he published a poem, entitled "Richard III." Died, 1817.

TURNER, T. HUDSON, a distinguished British archaeologist, and for some time secretary of the Archaeological Institute, was originally brought up as a printer, and acquired a taste for antiquarian pursuits, which led to his obtaining a situation in the record office in the Tower. Here he made active use of the facilities thus afforded him for research. He is understood to have contributed largely to the "Athenæum;" and his published works consist of a volume of "Early Household Expenses," edited for the Roxburgh Club, some papers in the "Archæological Journal," and the learned work "On the Domestic Architecture of the Middle Ages." Died, 1832, in his 37th year.

TURNER, WILLIAM, an English naturalist and divine of the 16th century, was born at Morpeth, in Northumberland; was educated at Pembroke Hall, Cambridge; became dean of Wells, and died in 1568. He wrote, among other things, a "History of Plants," which is the earliest English herbal. The first part appeared in 1551, and the second eleven years later. He was also author of several theological works.

TURSELLINUS, HORATIUS, the Latin form of the name of **ORAZIO TOISELLINO**, a learned Italian Jesuit, was born in Rome in 1545. At the age of 17 he entered the Order of Jesuits, was afterwards employed as teacher in various seminaries, and during twenty years held the post of rector of the Roman College. He was especially distinguished as a Latin scholar, and published, in 1598, a valuable treatise entitled, "De Particulis Latine Orationis," which has been many times reprinted. He was also author of an interesting Life of S. Francis Xavier, and a short Universal History, both in Latin, and frequently republished. The French translation of the Universal History was burnt, by order of the parliament, in 1761. Turcellinus died at Rome in 1599.

TUSSAUD, Madame, the well-known proprietress of the wax-work collection in the metropolis, was born in Berne, 1760. Adopted by her uncle, M. Curtius, an artist in Paris, she repaired thither early in life, and soon became, under his care, so proficient in the

fine arts, that she received the appointment of drawing-mistress to the family of Louis XVI., whose sufferings she witnessed, and in some measure participated. In 1802 she came to England, and commenced her exhibition, travelling with it from town to town; but in 1812, while crossing over to Ireland, the vessel in which she had embarked was wrecked, and her goodly collection fell a prey to the waves. Nothing daunted by this disaster, the enterprising artistess began the world anew, with what success, all who have beheld her interesting exhibition, which is justly considered one of "the sights" of the metropolis, can testify. Died, April 16, 1830.

TUSSELL, THOMAS, an early English poet, was born about 1515, at Rivenhall, in Essex. After having been a chorister at St Paul's, he was educated at Eton, and at King's College, Cambridge; spent 10 years at court under the patronage of Lord Paget, and then became a farmer in Suffolk, where he composed a book on husbandry, and dedicated it to his patron. His work is in homely verse, and is entitled "Five Hundred Points of Good Husbandry." It was first published in 1557, but was subsequently considerably enlarged. Died, about 1580.

TWEDDELL, JOHN, a highly accomplished scholar, was born in 1769, at Threepwood, near Hexham; was educated first at Hart-forth School, Yorkshire; next under Dr Parr; and, lastly, at Trinity College, Cambridge, of which he became a fellow in 1792; gained the highest honours in classics at the university; became a student of the Middle Temple; began his travels in 1795, and, after remaining abroad four years, died suddenly at Athens in 1799. He examined with intense interest the remains of ancient art, had drawings made by a French artist who accompanied him, and kept a regular journal of all noteworthy occurrences and objects during his travels. It was known that he had amassed large materials with a view to publication; but the manuscript of the observations which he made in his journey was unfortunately and somewhat mysteriously lost in the course of transmission to England. All that is left to us of the productions of this promising scholar are his "Prolusiones Juveniles," and a Selection of his private Letters, which were published, together with a Memoir, by his brother, in 1815.

TWISS, HORACE, a miscellaneous writer, was the eldest son of Francis Twiss, Esq., author of a verbal index to Shakspeare, and of Frances, second daughter of Roger Kemble, the father of the illustrious family of actors. Called to the bar in 1811, he travelled the Oxford circuit for some years, and became one of its leaders; but he subsequently attached himself to the equity courts. His political life commenced in 1820 as member for Wootton Bassett. He represented this borough for ten years, during which he won great distinction by his business talents, and his speeches in favour of Catholic emancipation and law reform. On the formation of the duke of Wellington's administration in 1828, he was appointed under-secretary to the colonies, having previously been counsel to the Admiralty and judge-advocate during Lord

Liverpool's administration. In 1830 he sat for Newport; but the reform bill, which he opposed, cut short his parliamentary career, for though he represented Liverpool from 1835 to 1837, all his subsequent attempts to obtain a seat in parliament proved abortive. From this period he devoted his talents to the press. He occasionally contributed leading articles to the *Times*. In 1844 he received the appointment of vice-chancellor of the duchy of Lancaster. From an early age, Mr Twiss had been devoted to literary pursuits. He gained distinction by slight dramatic productions, poetry, jeux-d'esprit, and other publications, chiefly on constitutional subjects; but his literary fame rests on his elaborate "Life of Lord Eldon," which will long be consulted, not merely as one of the best biographies ever written, but as a repository of the most remarkable political transactions of the era to which it refers. In private life Mr Twiss was no less esteemed than in the world of literature and politics. Died, 1849.

TWISS, RICHARD, an English traveller, born at Rotterdam, in 1747, was a man of fortune, and spent several years in visiting various parts of the continent. He was a fellow of the Royal Society, and died at London in 1821. Among his works are, "Travels through Spain and Portugal," "A Tour in Ireland," "A Trip to Paris in 1792," "The Game of Chess," and "Miscellanies."

TWYSDEN, Sir ROGER, the second baronet, was born at East Peckham, in Kent, in 1597. His father, Sir William, accompanied James I. to England, and was created a baronet. Sir Roger, who was an excellent antiquary, suffered severely in the civil war from his attachment to the royal cause. Besides contributing to Philip's Survey of Kent, and the publication of the "Decem Scriptores," he was author of "The Historical Defence of the Church of England." Died, 1672.

TYCHSEN, OLAUS GERHARD, a celebrated Danish orientalist, was born in 1734, at Tondern, in the duchy of Schleswig; studied at the university of Göttingen; and became professor of oriental languages and librarian at Rostock. He wrote several able works on the Hebrew, Arabic, and Syriac tongues. Died, 1815.

TYNDAL, WILLIAM. [TINDAL.] TYRREL, JAMES, historian and political writer, was born in 1642, in London; was educated at Queen's College, Oxford; studied in the Inner Temple, and was called to the bar, but never practised professionally. He is the author of a "General History of England," and other works. Died, 1718.

TYRTÆUS, an ancient Greek poet, celebrated for his martial strains, flourished about B. C. 680. His birthplace is unknown. He was lame, and blind of one eye. In the war between the Lacedæmonians and Mæssians, the former applied to the Athenians for a general; and the latter, it is said, in derision, sent them Tyrtæus. The bard, however, so inspired the Spartans by his warlike songs, that they reduced the Mæssians to subjection. He was accordingly treated with great respect, and received the

rights of citizenship. Some fragments of his songs are extant.

TYRWRIGHT, THOMAS, an eminent scholar and critic, was born at Westminster, in 1730, and was educated at Eton, and at Queen's College, Oxford. In 1756 he was under-secretary in the war department; and, in 1762, clerk of the House of Commons; but he resigned his situation in 1768, in order to devote himself to literature. He was a fellow of the Royal and Antiquarian Societies, and one of the curators of the British Museum. Among his works are, editions of "Chaucer's Canterbury Tales," 5 vols., and "Rowley's Poems," the latter of which he proves to be the composition of Chatterton; also "Dissertatio de Hæbræo," "Notes on Euripides," &c. Died, 1780.

TYSON, EDWARD, physician, was born at Bristol, in 1649; and educated at Magdalen Hall, Oxford. He became a member of the College of Physicians and the Royal Society; and he was physician to Becham and Bride-well Hospitals. Dr Tyson was a very skilful anatomist and an able writer; he published "The Anatomy of a Porpoise," "The Anatomy of a Pigmy, compared with that of a Monkey, an Ape, and a Man, with a Philosophical Discourse concerning the Pigmies of the Ancients;" and several clever essays in the Philosophical Transactions. Died, 1708.

TYSENS, PETER, a Flemish painter, born at Antwerp in 1625. In historical composition, it is said, he was very little inferior to Rubens. Died, 1692.—He had two sons, also painters of some note, but less eminent than their father.

TYTLER, JAMES, an eccentric, laborious, and able writer, was born at Brechin, in Scotland, in 1747. His first work, entitled "Essays on the most important Subjects of Natural and Revealed Religion," was printed by the author himself, without any manuscript or notes whatever, but just as the ideas arose in his mind. His other principal works are, "A System of Geography," a "Geographical, Historical, and Commercial Grammar," a "History of Edinburgh," and a metrical translation of Virgil's *Eclogues*. He also edited several periodical works, viz. the *Historical Register*, the *Gentleman and Lady's Magazine*, the *Weekly Review*, &c., and contributed largely to the *Encyclopædia Britannica*. Having joined the society of the "Friends of the People," he was outlawed, and died in America, in 1805.

TYTLER, WILLIAM, an historical and miscellaneous writer, was born at Edinburgh, in 1711; was educated at the university of his native city; followed the profession of writer to the signet; and died in 1792. His principal work is, "An Historical and Critical Inquiry into the Evidence produced against Mary, Queen of Scots." He was also a contributor to the *Transactions of the Edinburgh Antiquarian Society*, of which he was one of the vice-presidents.

TYTLER, ALEXANDER FRASER, Lord Woodhouselee, son of the preceding, was born in 1747, at Edinburgh, in which city he was educated. After having been professor of universal history at the university, and judge-advocate for Scotland, he was raised to

the bench, and to houselee, in 1802. Lord Hope to the Secretary. Among the Court of "Marital Law," "An Essay on the Life of Pe the Life and W Died, 1813.

the bench, and took his seat as Lord Woodhouselee, in 1802; and on the elevation of Lord Hope to the president's chair in 1811, he was appointed a commissioner of justice. Among his works are, "Decisions of the Court of Session," a treatise on "Marital Law," "Elements of General History," "An Essay on the Principles of Translation," "An Historical and Critical Essay on the Life of Petrarch," and "Memoirs of the Life and Writings of Lord Kames." Died, 1813.

TYTLER, PATRICK FRASER, an eminent historian, son of the preceding, was born, 1790. After the usual curriculum of a Scotch education, he was enrolled a member of the faculty of advocates in 1813. But he soon turned from the law to the pursuit of letters, his first adventure being a volume of travels in France in 1814 or 1815. But the work which first gave him a place of note in the world of letters, was his "Life of the Admirable Crichton," which reached a second edition in 1823. The same year saw the publication of his "Account of the Life and Writings of Sir Thomas Craik, of Riccarton, including Biographical Sketches of the most eminent Legal Characters," &c. But the work by which his name has become most widely known is his "History of Scotland," the first volume of which appeared in 1829, and the ninth and last in 1843. During the composition of his great work, he found leisure to give several others to the world.

He contributed to Mr Murray's Family Library one of the most delightful of all his writings, 3 vols. of "Lives of Scottish Worthies" (1832-3.) For the Edinburgh Cabinet Library, he wrote an "Historical View of the Progress of Discovery on the more Northern Coasts of America" (1832), the "Life of Sir Walter Raleigh" (1832), and the "Life of Henry VIII." (1837); besides editing various other works, the materials for which he had collected in the state paper office. A pension of £200 a year was conferred upon him during the administration of Sir Robert Peel. Mr Tytler's constitution was never robust, and it gradually gave way under the exhausting labours of a literary life. During a lingering illness of mind and body, he wandered over the continent in search of health, and returned to England, only to die in the land for the illustration of whose annals he had done much and contemplated more. Died at Great Malvern, 1849.

TZETZES, JOHANNES, a Greek poet and critic of the 12th century. He wrote numerous works both in verse and prose. Among the former is "Iliaca," a complete story of the Trojan war, "Chillades," consisting of miscellaneous stories, legendary and historical, &c.; the latter consist of commentaries on Greek authors. He was celebrated in his time for his prodigious memory and great acquirements.

U.

UBALDINI, PETRUCCIO, a celebrated historian and illuminator on vellum, in the 16th century, was a native of Florence, and came to England in the reign of Edward VI. His "Vita di Carlo Magno," which appeared in 1581, is said to be the first Italian book printed in this country. He also wrote a "Description of Scotland," and "The Lives of Illustrious Women of England and Scotland."

UCCELLI, PAOLO, a celebrated Italian painter, was born at Florence, probably in 1396. His family name was DONI, and he acquired the name UCCELLI from his fondness for painting birds. He was apprenticed to Lorenzo Ghiberti to learn the goldsmith's art, and was one of his assistants in making the famous Gates of the Baptistery. He was the first of the Florentine painters of the Naturalist School, and especially devoted himself to the mastery of perspective and foreshortening. Among his works, which are now very rare, are several battle-pieces, the best being the "Battle of San Egidio," now in the National Gallery; an equestrian portrait of Hawkwood; an English condottiere in the service of Flor-

ence, and frescos of sacred subjects in the cloisters of Santa Maria Novella, now much injured. At the age of 72 he was employed at Urbino. Died at Florence, probably about 1479.

UDINE, GIOVANNI DA, Italian painter, was born in 1487. After attaining some eminence as the scholar of Giorgione he went to Rome, and became scholar and assistant of Raphael. He executed most of the arabesque and grotesque decorations and stucco-work of the Vatican Loggia, and especially excelled in painting animals, birds, and what are called "still-life" subjects. One of his early works is the picture of "Christ with the Doctors," now in the Academy of Venice. He assisted Raphael in the famous Cartoons, and was employed to decorate many villas and palaces. Died at Rome, 1564.

UGGIONE. [OGGIONE.]

UHLAND, JOHANN LUDWIG, a distinguished German poet and patriot, born at Tübingen in 1787. He completed his education at the university of his native city, and settled at Stuttgart as an advocate, in 1812. He had begun to make himself known by

his songs several years earlier. Taking a deep interest in political affairs, he became, in 1819, a member of the State Assembly of Würtemberg, and was always an earnest champion of liberal principles and measures. In 1839 he was appointed to the chair of the German language and literature at Tübingen, but held it only three years, preferring to take part in the discussions of the Diet, to which he was elected. After a period of literary retirement he was chosen deputy to the National Assembly at Frankfurt, in 1848. This was his last participation in public life. Uhland's "Gedichte" appeared in a collected edition in 1815, and have been repeatedly republished with numerous additions. The eleventh edition appeared in 1853. Their charm lies in their vigour, truth, and simplicity, their fervent patriotism and deep reverence for the past. Uhland was author also of the following works—"Ueber Walther von der Vogelweide," "Ueber den Mythos der nordischen Sagenlehre von Thor," and a collection of ancient "Volkslieder." Since his death the first volume of his critical works (Schriften zur Geschichte der Dichtung und Sage), from manuscripts left in a rough and unfinished state, has appeared. There is an English translation of his poems by the Rev. W. W. Skeat, M.A. Died at Tübingen, Nov. 13, 1862.

ULFILAS. [ULPHILAS.]

ULLOA, DON ANTONIO, a Spanish mathematician, and commander of the order of St Jago, was born at Seville, in 1716. He was one of the mathematicians employed in measuring a degree of the meridian in Peru, in 1735; and remained there 10 years. On his return, he was taken prisoner by the English, but was soon released, and was chosen F.R.S. He published his "Travels," and a physico-historical work on South America. Died, 1795.

ULPHILAS, or ULFILAS, bishop and apostle of the Goths in the 4th century, probably sprang from a Christian family of Cappadocia, his ancestors having been carried off by the Goths in one of their incursions into that province. The chronology of his life is involved in obscurity; in general he appears to have begun his pious labours among the West Goths in the reign of Constantine, and to have continued them through great part of the reign of Valens. He won the love and confidence of his people by his blameless life and religious earnestness; and did them important service, not only by his teaching and ministrations, but by successfully conducting important negotiations between them and the Roman empire. In doctrine he appears at first to have held with the orthodox; but through his later intercourse with the empire and the Arian bishops was led to embrace the Arian creed. The most memorable service rendered to his countrymen by Ulphilas was the translation of the Bible into their language; for which he had first to devise an alphabet. He omitted the four Books of the Kings, lest their warlike spirit should excite too much the naturally fierce spirit of the people. A volume containing the Four Gospels of this Gothic version, very imperfect, was

discovered in a monastery near Cologne, and after singular fortunes found a permanent rest in the university of Upsal. It is bound in silver, and is therefore called the "Codex Argenteus." Its text was first published in 1665. Additional portions were subsequently discovered in the library of Wolfenbützel and at Milan, and an edition of the whole appeared in Germany between 1836-46. The version of Ulphilas possesses very high interest and importance as the most ancient monument of the Teutonic family of languages. The close resemblance between the Gothic and Anglo-Saxon versions is shown in Dr Bosworth's edition (1865) of the two printed in parallel columns, with the Versions of Wycliffe and Tyndale. More recently (1866) some fragments of the Gothic version of St Paul's Epistles have been discovered in the monastery of Bobbio, by Dr Reiferscheid of Bonn.

ULPIANUS, DOMITIUS, an eminent Roman civilian, the tutor, friend, and minister of the Emperor Alexander Severus, who made him his secretary and afterwards prætorian prefect. Having offended the soldiery by his reforms, they broke out into open mutiny, and Ulpianus was murdered by them, in A. D. 228. His writings on law were very numerous, and many excerpts from them are included in the "Digest."

ULUGH-BEGH, or OLEG BEK, a Tatar prince of the 15th century, celebrated for his astronomical knowledge, was grandson of Tamerlane, and was born in 1394. His real name was Mohammed Taragat. He formed a seminary, chiefly for the study of mathematics and astronomy, constructed an observatory at Samarcand, and was a patron of learning. After a reign of about 40 years, first as regent till his father's death, in 1447, and then in his own name, he was put to death, in 1449, by one of his sons who had rebelled against him. Science is indebted to him for a series of observations on the fixed stars; and his works on chronology, geography, and astronomy were published in Latin by Greaves and Hyde.

URBAN II., Pope, ODON, or EUDES, was a native of France, was educated by St Bruno, at Rheims, became a canon of the cathedral and a monk of Clugny, and in 1078 was sent by the abbot to Rome, where he gained the confidence of Gregory VII., who made him bishop of Ostia. He was chosen to succeed Victor III. in 1088. Urban took for his guidance as pope the example of Gregory VII., and the quarrel of Guelf and Ghibelline continued. The antipope, Guibert, was driven from Rome, but after the capture of Mantua by the emperor, Henry IV., he was recalled, and took possession of Rome. Such alternations of fortune continued to take place throughout his pontificate. In 1095 Urban presided at the council of Clermont, and there excommunicated Philip I. of France for having put away his wife, Bertha, and married Hertrada, wife of Fulk of Anjou. The most memorable act of Urban II. was the publication of the first crusade. Moved by the pleadings of Peter the Hermit, the pope first announced the design of a crusade at the council of Piacenza, and published it

more fully, in a pathetic speech, at a assembly cried—"I Two other counte the furtherance of the pope returned an interview with Salerno, and the cessors perpetual. URBAN VI., SANO, by bir bishop of Bari when he was XI., in 1378. formed the cor and the rest

more fully, in a most impassioned and pathetic speech, at Clermont; when the assembly cried—"Dien le vent, Dien le vent." Two other councils were held in France for the furtherance of the crusade, and in 1096 the pope returned to Italy. In 1098 he had an interview with Roger, count of Sicily, at Salerno, and then named him and his successors perpetual apostolic legates in Sicily. The same year he presided at the council of Bari, at which discussions took place on the famous phrase "filioque," several bishops of the eastern church, and Anselm, archbishop of Canterbury, taking part in them. Urban II. lived to hear of the first successes of the crusaders, but died at Rome before he reached him, in July, 1099.

URBAN V., Pope, GUILLAUME DE GRIMOARD, was born in France in 1302, and was educated at the university of Montpellier, where he afterwards professed civil and canon law. He entered the Benedictine order (the dress of which he is said to have worn night and day till his death), and became successively abbot of St Germain of Auxerre and of St Victor of Marseilles. In his absence, and without being created cardinal, he was chosen to succeed Innocent VI., in 1362. The tidings of his election reached him at Florence, and he was proclaimed and crowned at Avignon, where he took up his abode. He was there visited by John, king of France, and the famous Pierre de Lusignan, king of Cyprus, and with them endeavoured, but without success, to get up a new crusade. In 1367, in compliance with the urgent wishes of the emperor and the Romans, but against the will of the king of France, Urban quitted Avignon, and once more established the papal court in the Vatican. Rome, and indeed the whole of Italy, was at this time in a miserable condition. The city was half depopulated, and the country was desolated by almost incessant petty wars, and overrun by the bands of mercenaries. And although the emperor led an army into Italy for the purpose of suppressing the disorders, he dismissed his forces, and left things as they were. The pope received him at Viterbo, and they made their entry into Rome together; the coronation of the empress being soon after performed. The visit of the eastern emperor, John Palæologus, took place in 1369; but his professed conformity to the Roman church in doctrine failed to procure him the solid help against the Turks which he went to ask. In the following year Urban once more returned to Avignon; but he died three months after his arrival, December, 1370. He was zealous in promoting better discipline in the church, did much for the advancement of learning, and sent Franciscan missionaries into Tartary and Georgia. The palace at Avignon was built under his direction.

URBAN VI., Pope, BARTOLOMEO PRIGNANO, by birth a Neapolitan, was archbishop of Bari, and about 60 years of age, when he was elected to succeed Gregory XI., in 1378. Of the sixteen cardinals who formed the conclave four only were Italians, and the rest Frenchmen. The sitting was

stormy, and the decision in favour of Urban was determined by the violence of the populace, who insisted on having an Italian pope. By his imprudent severity of rebuke, and demand for reforms of discipline, he soon alienated the cardinals from him; and quitting Rome, they annulled their own act so far as they could by electing another pope at Anagni, Robert of Geneva, who took the title of CLEMENT VII. Thus began the schism in the papacy, which lasted forty years, and was prolific in dissensions, confusion, and even wars. The rivals held councils, excommunicated each other and each other's adherents, proclaimed crusades, and employed bands of mercenary troops. Urban was recognized by great part of the empire, by England, Hungary, and Bohemia; and Clement by France, Savoy, and Naples. But the question of the real pope who could answer? To make up for the loss of his cardinals Urban created a large batch of new ones. To support the crusade which he proclaimed against the partisans of his rival, he ordered the levy of a tenth on all the English benefices. The "fighting bishop" of Norwich, Henry Spenser, took the command of an expedition into Flanders, which came to nothing, and was censured by parliament. Urban also called to his aid Charles of Durazzo, crowned him king of Naples, and sent him to conquer that kingdom, which he did; putting Joanna to death. Urban soon after quarrelled with Charles. While at Nocera, in 1385, six cardinals formed a conspiracy against the pope; but being warned of it, he arrested and imprisoned them; put them to the torture without extorting a confession except from one; carried them with him to Genoa, where they were kept in irons, and again put to the torture; and, finally, without any proof of their guilt, had five of them strangled. The sixth was an Englishman, Adam Easton, and he alone escaped, through the intervention of the king, Richard II. The popular indignation drove Urban from Genoa, and he went to Lucca and to Perugia; and was on his way to Rome, when he was severely hurt by a fall from his mule, and died in October, 1389.

URBAN VIII., Pope, MAFFEI BARBERINI, was born at Florence, in 1568. He studied law at Pisa; after which he entered into orders, and, in 1606, attained the rank of cardinal. In 1623 he was elected to the papal chair; and proved himself a zealous advocate for the interests, spiritual and temporal, of the Romish church. He was also a patron of learning, and founded the college "De Propaganda Fide." No less than 74 cardinals were created by this pontiff. Died, 1644.

URBAN, FERDINAND DE ST, an eminent artist, born at Nancy, in 1654. He became first architect and director of the cabinet of medals to Pope Innocent XI., and his two immediate successors, for whom he executed a great number of moulds or matrices of exquisite beauty. Died, 1731.

URE, Dr ANDREW, an eminent chemist and writer on chemistry and the kindred sciences, was born in Glasgow in 1778. After pursuing his studies at the universities of Glasgow and Edinburgh, he succeeded Dr Birkbeck as Andersonian professor of

chemistry and natural philosophy at Glasgow in 1800, where he gained great fame by his lectures, and his class experiments. In the year 1818 he brought forward his "New Experimental Researches on some of the leading doctrines of Caloric, particularly on the relation between the elasticity, temperature, and latent heat of different vapours, and on thermometric measurement and capacity," which was read before the Royal Society, and published in their "Transactions" for that year. In 1821 appeared the first edition of his well-known "Dictionary of Chemistry," which procured him the friendship of Sir H. Davy, Dr Wollaston, and Dr E. D. Clarke. This was followed by various papers which he contributed to philosophical journals, his "System of Geology," published in 1829, and by his "Philosophy of Manufactures," and his work on the "Cotton Manufactures of Great Britain," published respectively in 1830 and 1831. His last great work was the "Dictionary of Arts, Manufactures, and Mines," a work of immense labour and research, which has gone through many editions, and has been translated into the leading continental languages. Distinguished as a sound chemical philosopher, he was no less remarkable for accuracy in chemical analysis, and it has been asserted by competent authority, that none of his results have ever been upset. He was one of the original Fellows of the Geological Society. He had also belonged to the Astronomical Society, and was a member of several scientific continental societies. Dr Ure resided in London since the year 1830. Died, 1857.

URFÉ, HONORÉ D', a French romance writer, was born in 1567, at Marseilles. He distinguished himself as a soldier during the wars of the League, and as a negotiator in Savoy and at Venice. He was author of the romance of Astrée, which was once exceedingly popular in France. Died, 1625.

URQUHART, or URCHARD, SIR THOMAS, of Cromarty, in Scotland, was a philologist and mathematician. He was a cavalier officer among the followers of Charles II., and was present at the battle of Worcester; relative to which he published a piece, entitled "The Discovery of a most rare Jewel, found in the Kennel of Worcester Streets," &c. He was also the author of a work on trigonometry; but the performance which he regarded as his most admirable invention was called "Logopandecticon, or an Introduction to the Universal Language." Sir Thomas Urquhart is also known by his excellent translation of Rabelais published in 1633.

URQUIJO, LUIZ DE, a Spanish statesman, born in Old Castle, in 1768. He passed some of his early years in England, and is supposed to have there acquired those liberal notions in politics, which he afterwards displayed. During the ministry of Godoy, he became secretary of state for foreign affairs; but having at length offended the royal favourite, he was disgraced in 1800, and for several years closely confined in the citadel of Pampluna. On the accession of Ferdinand in 1808, he was set at liberty; followed the royal family to Bayonne, and

afterwards minister of state, and died in 1817.

URSINUS, ZACHARIAS, one of the early reformers, was born at Broslau, in Silesia, in 1534. He studied at Wittenberg, where he acquired the friendship of Melancthon, whom he accompanied to the conference at Worms. He afterwards became master of the school at Broslau; then went to Heidelberg, where he obtained a professorship; and died, professor of divinity, at Neustadt, in 1583. The celebrated Heidelberg Catechism was compiled by Ursinus, who also wrote a commentary on it.

USSHER, JAMES, (USSERIUS,) archbishop of Armagh, the celebrated chronologist, was born at Dublin, of an ancient and honourable family, in 1580. His father was a clerk in the Irish court of chancery, and his uncle was archbishop of Armagh. He received a careful education in his native city, first at a school and then at the newly-founded Trinity College, where he graduated M.A. in 1600. His reputation for learning was already high. Ordained priest in 1601, he had an appointment as preacher in Dublin, and six years later was named professor of divinity at Trinity College, a post which he filled for thirteen years. About the same time he was chosen chancellor of St Patrick's Church. During this period he was an indefatigable student, and made repeated visits to the Libraries of Oxford, Cambridge, and London, gaining the friendship of several eminent scholars; among them, Sir Thomas Rodley, Sir Robert Cotton, Selden, and Camden. He obtained his degree of D.D. in 1612, became bishop of Meath in 1620, member of the privy-council of Ireland, and in 1624, archbishop of Armagh and primate of Ireland. After many years of tranquillity his home was broken up by the rebellion of 1641, and from that time he remained in England. After several changes of abode he settled at London, in the house of the countess of Peterborough, and for eight years was preacher to the society of Lincoln's Inn. Archbishop Ussher was attached to the cause of Charles I., preached before him at Oxford, and in 1649 was consulted by him in the Isle of Wight. The works of this learned prelate are very numerous, and in the latest edition, that by Elrington and Todd, fill 17 volumes. The most celebrated is his great work on sacred chronology, entitled the "Annales Veteris et Novi Testamenti," first published in 2 vols. folio in 1650-54. Ussher's system of chronology is founded on the authority of the Hebrew text of the Bible, and is now rejected by all scholars as far too contracted, inconsistent with the records and monuments of other nations, and even with the history of the Jews. It was introduced into our English Bibles, but by whose authority is not known. Of Ussher's other works may be named—"De Ecclesiarum Christianarum successione et statu;" "Emmanuel, or a Treatise on the Incarnation;" "Britannicarum Ecclesiarum Antiquitates;" "Dissertatio de Macedonum et Asianorum anno solari;" and "Chronologia Sacra." Ussher married, in 1613, a daughter of Dr Luke Challoner, by whom he had one daughter,

who survived him and his only child, spent at Hlygate, the countess of Cromwell's order

USTARIZ, JERONIMO, political economist of the 18th century. Practice of Communism translated both languages.

UEDEALE, ROBERT, botanist, was born in 1750, was educated at Trinity College, a classical scholar, Foundation School, botanical garden, care, and contact. Dr Uvedale associated in the date of his

who survived him. His wife died in 1654, and himself in 1656. His last days were spent at Ryegate, in the family of his friend, the countess of Peterborough. His remains were interred in Westminster Abbey by Cromwell's order.

ESTARIZ, JEROME, a Spanish writer on political economy, who died about the middle of the 18th century. His "Theory and Practice of Commerce and Navigation" was translated both into the French and English languages.

UVEDALE, ROBERT, LL.D., an eminent botanist, was born in London, in 1642; and was educated at Westminster School, and Trinity College, Cambridge. He was a good classical scholar, and became master of the Foundation School, at Enfield, where his botanical garden was cultivated with great care, and contained a number of choice exotics. Dr Uvedale assisted Dryden and his associates in translating Plutarch's Lives. The date of his death is not known.

UWINS, DAVID, M.D., an eminent physician, was born in London, in 1780. After completing his studies at Edinburgh, he commenced practice as assistant-physician to the Finsbury Dispensary; subsequently settled at Aylesbury; and, returning to London shortly after he had married, was elected physician to the City Dispensary in 1815. He particularly directed his attention to mental diseases; and an essay on "Insanity and Mad-houses," in the Quarterly Review for July, 1816, established his power as a medical writer. He also wrote "Reports" in the Monthly Magazine, and afterwards became editor of the Medical Repository. In 1828 he was appointed physician to the Lunatic Asylum at Prekham, and published a work on "Insanity," which was eagerly read. But his last production, a pamphlet on "Homeopathy," injured his professional reputation. He died in September, 1837.

V.

VAGA, PERINO DEL, whose family name was BUONACCOSI, a celebrated Italian painter, was born at Florence, in 1500. He was first a pupil of Ridolfo Ghirlandajo, then of another Florentine painter, Vaga, whom he accompanied to Rome. There he became one of the scholars and assistants of Raphael, who employed him to paint some of the frescoes in the Vatican. He lost his property at the sack of Rome, in 1527, and then lived some time at Genoa, where he executed his best works in the Doria Palace. He became the founder of the Genoese school of painting, and had some distinguished scholars. His reputation was very high, and on his return to Rome he was employed and pensioned by the pope, Paul III. Died at Rome, 1547.

VAHL, MARTIN, a Norwegian botanist, was born at Bergen, in 1749; studied natural history and botany under Linnæus; and travelled over various parts of Europe and Africa. In 1785 he became professor of natural history, and, about 1800, professor of botany, and inspector of the botanic garden at Copenhagen; and died in 1804. He wrote "Symbolæ Botanice;" "Eloge Americe;" "Enumeratio Plantarum," and was the continuator of the "Flora Danica."

VAILLANT, FRANÇOIS LE. (LEVAILLANT.)

VAILLANT, JEAN FOI, a celebrated French numismatist, was born at Beauvais, in 1632. He first studied medicine, and took the degree of doctor, but quitted the profession for the study of antiquities, and was employed by Colbert to travel in quest of medals for the royal cabinet. In

1674 he sailed from Marseilles for Italy, but was taken by the Algerines, and kept in slavery about five months, when he recovered his liberty, and twenty medals which had been taken from him. On his voyage home, the ship was chased by another corsair, and the dread of being again captured induced him to swallow his medals, which fortunately did him no serious injury. He afterwards travelled into Persia and Egypt, greatly augmented the treasures of the king's cabinet, and published some excellent works on numismatology. Died, 1706.—JEAN FRANÇOIS FOI, his son, followed the pursuits of his father. Died, 1708.

VAILLANT, SEBASTIEN, botanist, was born, in 1669, at Vigny, near Pontoise. He was first a musician, next a surgeon, and afterwards secretary to Fagon, physician to Louis XIV. By the interest of his patron he became director of the Jardin du Roi, where he was made professor and demonstrator of plants. His great work is the "Botanicon Parisiense." Died, 1722.

VALCKENAER, LUDWIG CASPAR, an able philologist and critic, was born at Leeuwarden, in Friesland, in 1715; and became professor of Greek literature and antiquities, and also of National History, at the university of Leyden, where he died in 1785. His works are numerous and crude.—His son, JAN VALCKENAER, who was professor of jurisprudence at Franeker, having joined the patriot party against the house of Orange, was obliged to take refuge in France, but returned to Holland on the invasion of that country by the French, in 1795, and took a very active part in politics. He was subse-

quently employed in diplomatic missions to Prussia, Spain, and France. Died, 1820.

VALDÉS, or VALDESSO, JUAN DE, one of the small band of Spanish Reformers, was born at Cuença, about 1495, of a noble and wealthy family. He was early introduced, with his twin brother, Alfonso, at the court of Ferdinand and Isabella, where they both profited by the influence and example of Cardinal Ximenes, and other enlightened and liberal men. Juan was for a time in the service of Pope Adrian VI., and then of the Emperor Charles V. Sympathizing with and aiding in the temporary movement of free thought and liberal policy, he fell under the suspicion of the Inquisition and, to avoid persecution, retired to Naples, his brother remaining in Germany. The rest of his short life was passed in retirement, study, and the society of a small circle of congenial friends; among whom were Bernardino Ochino, Peter Martyr, afterwards teacher of divinity at Oxford, Vittoria Colonna, and the noble hearted Giulia Gonzaga. They spent their Sundays together at Juan's country-house, reading in the morning the Scriptures, inquiring and discussing; and afterwards enjoying discourse on less grave matters. Valdés left in his various works a fair representation of the nature of those delightful gatherings. But it was not permitted him long to enjoy so calm a life. He died about the close of 1540. The influence of Valdés had been powerful enough to attract the notice of the pope, and to attach his name, as leader of a sect, to his opinions; and, in 1542, "Valdesianism" was attacked in Naples by a special inquisitor. Many of his friends were proscribed and put to death, and his writings narrowly escaped destruction. Valdés wrote the "Hundred and Ten Considerations," the "Dialogue on the Spanish Language," and probably the small work entitled "Beneficio di Christo." The last was printed at Venice, in 1542; the "Considerations" appeared (in Italian) at Basel in 1560, and the "Dialogue" was not printed till 1737, nor in a complete state till 1860. The "Considerations" were translated into French and Dutch, and into English by Nicholas Ferrar. The life and works of this illustrious man have been recently studied and lifted out of the obscurity in which they have long lain, by a German scholar, Dr Böhmer, who in 1863 published an interesting account of him in Herzog's Encyclopædia. An English scholar, Mr Benjamin H. Wiffen, was at the same time engaged in a like task, and the fruit of his investigations has just appeared (Dec. 1865), in the "Life and Writings of Juan de Valdés," with a translation of the "Considerations," by J. T. Heits. Valdés, though a reformer, was not a Lutheran, nor did he question any church doctrine. The position he held of a *religious mediator*, who saw more in spiritual fellowship with Christ than in any forms either of word or observance, exposed him to the angry denunciation both of the Romish and the Reformed churches. There are some points of resemblance between his "Hundred and Ten Considerations" and Arndt's work, entitled "True Christian-ity."

VALDEZ, JUAN MELENDEZ. [MELENDEZ-VALDEZ.]

VALDO, or WALDO, PETER, reputed founder of the sect of the Valdotes, or Waldenses, in the 12th century, was born at Vaux, in Dauphiny, and acquired a fortune as a merchant of Lyons. The sudden death of a friend had such an effect on his mind, as to induce him to sell his property, give the produce of it to the poor, and devote the remainder of his life to acts of piety. Like the Quakers, he taught that the laity might conduct the offices of religion without the intervention of priests; but a hierarchy so obnoxious to the ecclesiastics soon met with the direst persecution; Valdo and his followers fled to the mountains of Dauphiny and Piedmont; and the Waldenses were everywhere exterminated, except in the valleys of Piedmont, where a remnant of them still exists.

VALENS, FLAVIUS, Roman emperor, born in Pannonia, about A. D. 328, and admitted to a share of the Imperial authority by his brother Valentinian, in 364, when he took the government of the East. He perished in a revolt of the Persians and Goths, whom he had previously subdued, A. D. 378.

VALENTIN, MOISE, an eminent French painter, was born at Coulommiers, in Brie, in 1600. He studied in Italy, and became the intimate friend of Nicolas Poussin. He usually painted scenes of familiar life; but his masterpiece is the "Martyrdom of St. Processo and Martiniano," in St. Peter's at Rome. Died, 1632.

VALENTINIANUS I, FLAVIUS, Roman emperor, the elder brother of Valens, born in 321, in Pannonia; succeeded Julian in 364, made his brother Valens emperor of the East, carried on war with the Alemanni and the Quadi, and died in 375.—**VALENTINIANUS II**, his son, succeeded to the empire with his brother Gratian, in 375; and had Italy as his share. He was dispossessed by Maximus, but was afterwards restored; and died, as is supposed, by strangulation, in 392.—**VALENTINIANUS III, FLAVIUS PLACIDIUS**, emperor of the West, was born in 419, at Ravenna. He was proclaimed Augustus at the age of six years. Having intrigued with the wife of the patrician Petronius Maximus, he was assassinated by him in 455.

VALERIANUS, PUBLIUS LICINIUS, Roman emperor, proclaimed by his soldiers in Rhætia, in 251. He was defeated and taken prisoner near Edessa, by Sapor, king of Persia, who kept him prisoner for the rest of his life, and when he died had his skin stuffed and kept as a trophy.

VALERIUS MAXIMUS, a Roman historian, who lived in the reign of Tiberius. After having served in Asia, under Sextus Pompeius, he devoted his leisure to the composition of a collection of anecdotes and observations, entitled "De Præcis Dicitisque Memorabilibus." It was much read in the middle ages, and was one of the earliest books that issued from the press after the invention of printing.

VALETTE, JEAN PARISOT DE LA, grand-master of the order of St John of Jerusalem, was born in 1494, and succeeded to the grand-mastership in 1557. He and his knights gallantly repulsed Solymán, the Turkish

sultan, in his attempt of compelling the Jews to convert to Christianity, and of 30,000 men. Valleta was for on the site of during the siege

VALLEA, JOHN, of the greatest century, was educated of rhetoric at Padua, became the friend of (L. of Naples), and journeys for which he spent Constantine to had to flee for but there got in ment theologian afterwards invited Rome, and made the Lateran. A thinker, and shook the authority of philosophy and to set reason free in his poetry, Filelfo, Biondo, and others, and was subjected to the most important "Elegantiarum" by him the highest and has been philosopher, Aristotle, &c.

VALLENTINUS, other works of of Aragon; "ment;" Latin prose), Herodotus, and Cæsar. Valla was to doubt the in Rome, about 1400. Niebuhr of the church of the

VALLANCY, was born in Ireland, as often devoted himself to topography, and made a survey received £1000. Dictionary of literature of Ireland. He obtained the rank of several ages, aged 90, in 1810.

VALLÉ, PIERRE, of the 16th century, was a French scholar, and a lover of interesting. Arabia, Persia, of 11 years in the language. At Bagdad, he was until he died in 1622. He caused her b

sultan, in his attempt to take Malta, in 1565, compelling the besiegers to retire with a loss of 30,000 men. Died, 1568. The city of Valetta was founded by this grand-master on the site of the fort of St Elmo, destroyed during the siege.

VALLA, LORENZO, or LAURENTIUS, one of the greatest classical scholars of the 15th century, was born at Rome about 1407, and was educated there. He became professor of rhetoric at Pavia, Milan, and other cities; became the friend of Alfonso V. of Aragon (I. of Naples), and attended him in his wars and journeys for several years; again went to Rome, and there published a book, in which he disproved the alleged donation of Constantine to the holy see, for which he had to flee for his life; took refuge at Naples, but there got into trouble through a vehement theological controversy; and was afterwards invited by Pope Nicholas V. to Rome, and made his secretary and canon of the Lateran. Valla was a bold and original thinker, and contributed by his writings to shake the authority of the scholastic philosophy and theology, to revive learning, and to set reason above tradition. He carried on his polemical discussions with Poggio, Filelfo, Beccadelli, and others in the violent and calumniating style of the age, and was subject to much persecution. His most important philological work is the "Elegantie Sermonia Latini," which gives him the highest rank as a Latin scholar, and has been frequently republished. As philosopher he wrote, "De Dialectica contra Aristoteles," "De Libero Arbitrio," and "De Voluptate et Vero Bono." Among his other works are a "History of Ferdinand of Aragon;" "Notes on the New Testament;" Latin translations of the *Iliad* (in prose), Herodorus, Thucydides, and *Æsop's Fables*; and Commentaries on Livy and Sallust. Valla was the first critic bold enough to doubt the infallibility of Livy. Died, at Rome, about 1457, or perhaps several years later. Niebuhr visited his tomb in the church of the Lateran, and had it restored.

VALLANCY, or VALLANCE, CHARLES, was born in 1721. During his residence in Ireland, as officer in a corps of engineers, he devoted himself to the study of the language, topography, and antiquities of that country; made a survey of the island, for which he received £1000; and wrote a "Grammar and Dictionary of the Irish Language," "Collectanea de Rebus Hibernicis," &c. He attained the rank of a general, was a member of several scientific institutions, and died, aged 90, in 1812.

VALLÉ, PIETRO DELLA, a celebrated traveller of the 17th century, was born at Rome, in 1586, of a noble family. His travels, though not free from traces of credulity and a love of the marvellous, are highly interesting. He visited Turkey, Egypt, Arabia, Persia, and India, passing upwards of 11 years in these countries, and studying the languages and manners of the inhabitants. At Baghdad he married a beautiful Georgian, who accompanied him on his travels until her death, at Mina, in Caramania, in 1632. Her death so affected him, that he caused her body to be embalmed, and took it

about with him until his return to Rome, where he buried it with great magnificence, and pronounced the funeral oration himself. Died, 1652.

VALLI, EUSEBIO, an eminent Italian physician, born at Pistoia, in 1762. He travelled to Smyrna and Constantinople, in order to make observations on the plague; and exposed himself to it, to determine the efficacy of vaccination as a preventive. At length he fell a victim to his imprudence: for in September, 1816, having gone to the Havannah, to add to his observations on the yellow fever, he purposely exposed himself to the contagion, and caught the disease, of which he died. His works on the subjects he so closely investigated are considered valuable.

VALLISNERI, ANTONIO, Italian naturalist and physician, was born in the duchy of Modena, in 1661. He was educated by the Jesuits at Modena, and then pursued the study of medicine and of natural history, under Malpighi at Bologna. By his observations and discourses he gained a high reputation, and at the same time found himself at variance with established systems and their adherents. In 1700 he was appointed professor of practical medicine at Padua, and in 1711 first professor of the theory of medicine. He contributed greatly to the advance of medical science, was honoured by offers of various high appointments, was chosen F. R. S. London, and died at Padua, in 1730. A genus of plants has been named in his honour *Vallisneria*. A collected edition of his writings, "Opere Fisico-mediche," appeared in 3 vols. folio, three years after his death.

VALOIS, HENRI DE (HENRICUS VALESIUS), French philologist, was born at Paris, in 1603. Educated by the Jesuits, he practised for a short time as a lawyer, but soon gave himself up wholly to literature. From excessive application he injured his sight, and about 1662 became totally blind. His principal work is an edition of the Greek Ecclesiastical Historians, which appeared in successive volumes between 1659 and 1673. He edited also Ammianus Marcellinus, and wrote various lesser critical works, which were published together in 1740. Died, 1676.

VALPERGA DI CALUSO, TOMASO, a Piedmontese mathematician and astronomer, was born at Turin, in 1737. He first served in the navy, but quitted the profession of arms for that of an ecclesiastic, and devoted much of his attention to science. He was member of the grand council and director of the observatory of Turin, a member of the Legion of Honour, &c. Died, 1815.

VALPY, Dr RICHARD, F. A. S., an eminent classical scholar, was a native of Jersey, and born in 1751. At 10 years of age he was sent to the college of Valognes, in Normandy, where he remained five years; thence to the grammar school at Southampton; and completed his studies at Oxford, having been appointed to one of the scholarships founded in Pembroke College for the natives of Jersey and Guernsey. From Oxford he removed first to Bury St Edmund's, and afterwards (1781) to Reading, where he

had been unanimously elected head-master of the school founded by Henry VII. His unwearied industry in discharging the duties of a public instructor was not confined to the school-room; all the hours he could spare were spent in his study, and numerous elementary works of acknowledged excellence were the result of his praiseworthy exertions. About six years before his death he retired from his scholastic labours, when his youngest son, the Rev. F. Valpy, was elected as his successor. Died, 1836.

VALSALVA, ANTONIO MARIA, a distinguished Italian physician and surgeon, born at Imola, in 1666. He graduated M. D. at Bologna, in 1687, having been there a pupil of Malpighi. Ten years later he was appointed professor of anatomy in the same university, and in 1705 surgeon to the Hospital for Incurables. He was an enthusiastic student, observer, and lover of science, and rendered great services by his improvements in surgical instruments, anatomical discoveries, and better methods of treatment. The anatomy of the ear was one of his special subjects of study. He was several times chosen president of the Institute of Bologna, and was a fellow of the Royal Society of London. Valsalva wrote but little, leaving only the classical work entitled "De Aure Humana Tractatus," published in 1704, and often reprinted, and three Anatomical Dissertations, published after his death. The illustrious Morgagni was the scholar of Valsalva. Died at Bologna, 1723.

VAN ACHEN, HANS. [ACHEN, JOHANN.

VANBRUGH, Sir JOHN, dramatist and architect, descended from a Flemish family resident in England, was born in 1666, and entered into the army. In 1697, his comedy of "The Relapse" was represented; and, in the following year, he produced "The Provoked Wife" and "Æsop," afterwards altered by Garrick. When Betterton and Congreve obtained a patent for erecting a theatre in the Haymarket, Vanbrugh wrote the "Confederacy," the most witty and licentious of his productions. As an architect, Vanbrugh gained distinction by the palace of Castle Howard built for Charles, earl of Carlisle, and afterwards by the palace of Blenheim, erected for the great duke of Marlborough. He obtained the office of Clarenceux king-at-arms; and, in 1714, received the honour of knighthood. He was also appointed comptroller of the board of works and surveyor of Greenwich Hospital. Died, 1726.

VANCOUVER, GEORGE, circumnavigator, and a captain in the British navy. He served as a midshipman under Captain Cook; and a voyage of discovery, to ascertain the existence of any navigable communication between the North Pacific and North Atlantic oceans being determined on, he was appointed to command it. "Vancouver's Voyage" was afterwards published by him. Died, 1798.

VANDAMME, DOMINIQUE, a French general, born in 1771. He entered the army very young, and was made general of di-

vision in 1799, after distinguishing himself in the campaigns of the Rhine. He served in Napoleon's German campaigns in 1805-7-9; but was not in the Russian campaign of 1812, having been disgraced in consequence of some dispute with Jerome Buonaparte. But he had the command of the 32nd division in 1813. With that corps he fell into an ambushade at Kulm, his forces were nearly all cut to pieces, and himself, being made prisoner, was sent to Kasan, near the borders of Siberia. He was restored to freedom by the peace of 1814, but ordered to quit Paris in 24 hours. He joined Buonaparte during the Hundred Days, and served in Grouchy's division at the battle of Waterloo. He made a skilful retreat, and offered the provisional government to defend Paris with the 80,000 troops he had saved and collected; but was compelled by the negotiations to retire behind the Loire. In 1816 he was banished by ordonnance to Ghent, and afterwards fixed his residence in the United States. By a subsequent ordonnance he was permitted to re-enter France, and put on half-pay in 1824. He died in 1830.

VANDER HELST. [HELST.]

VANDER MEULEN. [MEULEN.]

VANDER NEER. [NEER.]

VANDERVELDE, or VANDEVELDE, WILLEM, called the Old, a celebrated painter, was born at Leyden, in 1610. He excelled in marine subjects, and with his son, whose pursuits in art were similar to his own, he came to London, and received a pension from Charles II. At the great naval fight between the duke of York and the Dutch admiral Opdam, Vanderveelde sailed between the hostile fleets in a light skiff to mark their positions and observe their operations; and in this manner he is said to have been also a spectator of the memorable three days' engagement between Monk and De Ruyter. Died, 1693.

VANDERVELDE, or VANDEVELDE, WILLEM, the younger, son of the preceding, and like him an admirable marine painter, was born at Amsterdam, in 1633. With his father he settled in England, and was in the service of Charles II. This painter is pronounced by Horace Walpole to be without a rival in his sea-pieces. The National Gallery possesses two of his small works. Died at London, 1707.

VAN DER WERFF, ADRIAN, Dutch painter, was born at Rotterdam, in 1659. He was a scholar of Vander Neer, and began to practise his art as a portrait painter, but soon turned to historical subjects. The elector-palatine took him into his service in 1697, giving him a large pension and a patent of nobility. Most of the paintings executed by him for the elector are now in the Munich Gallery. His works, notwithstanding their excellence of design and colouring, and their high finish, are cold and hard in effect, and fail to charm the spectator. Among them are an "Ecce Homo," "Abraham with Sarah and Hagar," a "Magdalen in the Wilderness," a "Holy Family," two "Judgments of Paris," &c. Died at Rotterdam, 1722.

VANDER WEYDEN, ROGER, an early Flemish painter, born at Brussels or Louvain

about the beginning of the 15th century. He was trained by Rogier van der Weyden, whose style he painted in distemper on a blue cloth to a great improvement in design. In 1436 he was in the city of Brussels, where he died at Brussels. His Gallery possesses a "Tomb," by this painter. **ROGER VANDER WEYDEN**, painter, who died in 1464. There are four pictures of him in the National Gallery. "Ecce Homo," by **VANDYCK**, a Dutch painter, born at Antwerp, in 1639. His pictures from nature became the favourite subjects of the painter, and he advised him to paint, and to set out for that colouring of Titian. Rubens in the rival of the imitated. Charles I. he pension, and in a splendid style, was himself a painter. He died at London in 1691. There are very numerous pictures of him in England. He is considered one of the finest painters of his time. Five of his works are of which is one of which is "Virtus;" which is the portrait of a man. This picture is in the hands of the artist.

VANE, Sir HENRY, who was secretary of the royal household, received his education at the School, and after which he returned to England, and then emigrated to the colony of Maryland, where he was appointed governor of Maryland, and was involved in a dispute with the proprietors of the colony in England, and was removed from the office. A member of parliament, he was an active part in the principal and covenant, and ordinance; but he was not successful; and he afterwards returned to England. He afterwards returned to England, and was appointed to establish a new colony in the Restoration. He was admitted to the office of secretary of the Treasury for transaction of business. After his death, he was buried in the Tower Hill, in the execution, Mr. Vane the greatest of the kind, had left the earth, had left the earth of him."

about the beginning of the 15th century. He was trained in the school of the Van Eycks, whose style he contributed to spread; painted in distemper and in oil; preferred linen cloth to wood to work on; and made a great improvement in the Flemish style of design. In 1436 he was named painter to the city of Brussels, was in Italy in 1450, and died at Brussels, in 1464. The National Gallery possesses a "Deposition in the Tomb," by this master.—There was another ROGER VANDER WEYDEN, also an eminent painter, who died at Antwerp, in 1529. There are four small pictures attributed to him in the National Gallery, one of which is an "Eece Homo," presented by the queen.

VANDYCK, SIR ANTHONY, the most eminent of all portrait painters, was born at Antwerp, in 1599. He received his first instructions from Van Balen, but afterwards became the favourite pupil of Rubens, who advised him to apply wholly to portrait painting, and to visit Italy. Accordingly he set out for that country, where he studied the colouring of Titian with such success as to excel Rubens in his tints, and almost to become the rival of the great master whose art he imitated. In 1632, on the invitation of Charles I., he came to England, obtained a pension, and was knighted. He lived in splendid style, kept the first company, and was himself a liberal patron of the arts. Died at London, 1641. Vandyck's portraits are very numerous, and the most celebrated are in England. Among his historical paintings the finest perhaps is his "Crucifixion." Five of his works are in the National Gallery, one of which is the fine head named "Gevarcius;" which, however, is now known to be the portrait of Cornelius Vander Geest. This picture is by some attributed to Rubens.

VANE, SIR HENRY, the son of a baronet who was secretary of state, and treasurer of the royal household, was born in 1612; received his education at Westminster School, and at Magdalen College, Oxford; after which he resided for a time at Geneva, and returned a republican and puritan. He then emigrated to America, and was elected governor of Massachusetts; but becoming involved in religious disputes, he returned to England, and was appointed joint treasurer of the navy. In 1640 he was elected member of parliament for Hull, and took an active part against the royalists. He was the principal mover of the solemn league and covenant, and also of the self-denying ordinance; but he did not sit on the king's trial; and he resisted Cromwell to such a degree, that he was sent to Carisbrook Castle. He afterwards strenuously exerted himself to establish a republican government. At the Restoration he was arrested and committed to the Tower. Although accused only for transactions that occurred after the king's death, he was found guilty, and beheaded on Tower Hill, in 1662. After describing his execution, Mr Forster says of him, "one of the greatest and purest of men that ever walked the earth, to adorn and elevate his kind, had left the world which was not worthy of him."

VAN EFFEN. [EFFEN.]

VAN ERPEN. [ERPENIUS.]

VAN HUYSUM. [HUYSUM.]

VANINI, LUCILIO, a Neapolitan free-thinker, whose writings were deemed atheistical, was born in 1585. After travelling through Germany, Holland, and England, he went to Genoa, where he taught philosophy, and afterwards to Toulouse, where he was arrested, and condemned by the parliament to be burnt alive as an atheist. He wrote "Amphitheatrum Aeternæ Providentiæ," and "De Admirandis Naturæ Arcanis," for which latter work he suffered in 1619.

VANLOO, JEAN BAPTISTE, an eminent French painter, was born at Aix, in Provence, of a family distinguished in art, in 1684. He was a pupil of his father, painted at Toulon and Aix for some years, and having obtained the patronage of the prince of Carignano, was sent to study at Rome at his expense. He had Benedetto Luti for his master. In 1719 he accompanied the prince to Paris, where he was in high reputation, especially for his portraits, and was employed by the regent Orléans at Fontainebleau. He was received at the Academy of Painting, and became a professor. In 1738 he visited England, and while he remained took the lead as a portrait painter. Falling health induced him to visit his native place, and he died there in 1745. Two of his sons distinguished themselves as painters.

VANLOO, CHARLES ANDRÉ, a distinguished French painter, was younger brother of the preceding, and was born at Nice, in 1705. A pupil of Jean Baptiste and of Benedetto Luti, he accompanied his brother to Paris, and assisted him in the restorations on which he was employed at the palace of Fontainebleau. After a short visit to Italy he settled at Paris, in 1729, was admitted to the Academy a few years later, became professor, painter to the king, and director of the Academy. Louis XV. made him chevalier of the order of St Michael, and Frederick the Great attempted to entice him to Berlin, but unsuccessfully. His works are very numerous, and were at first over-praised; as they have since been perhaps underrated. Died, 1765.

VAN MANDELT, CAREL, a Flemish painter, biographer, and translator, was born, in 1548, of an ancient and distinguished family. He was a pupil of Lucas de Heere; spent several years at Rome; was driven from his home by the civil wars, and settled at Haarlem, in 1583. He founded a school of painting there, and also occupied himself, as he had all his life, with literary labour. Van Mander painted historical, landscape, and portrait pieces, in fresco and in oil. He is now chiefly remembered for his "Het Schilder Boek," or "Lives of the Painters." He wrote poems, and translated Homer and Virgil. Died at Amsterdam, 1606.—His son CHARLES was also a good painter, and entered the service of the king of Denmark.

VAN MILDEERT, DR WILLIAM, bishop of Durham, was born in London, in 1765; received his education at Merchant Taylors' School, and at Queen's College, Oxford; and entered into holy orders in 1788, as curate of Sherbourne and Lewknor, Oxfordshire. He obtained in 1796 the rectory of

St Mary-le-Bow, London. His abilities as a preacher soon attracted public notice, especially as displayed in his "Boyle Lectures." He was soon after presented with the vicarage of Parningham, Kent, and he subsequently became preacher of Lincoln's Inn and regius professor of divinity at Oxford. In 1819 he was made bishop of Llandaff, and dean of St Paul's in the following year. He then resigned his chair at Oxford; and on the death of Dr Shute Barrington, in 1826, he was raised to the see of Durham. As a theological writer, Dr Van Mildert stands in the first class: his "Life of Waterland" is a luminous and comprehensive performance, filling up a void in our ecclesiastical history; and many of his sermons are perfect specimens of pulpit eloquence and logical reasoning. Died, Feb. 21, 1836.

VANNI, FRANCESCO, Italian painter, born at Siena about 1565, was of a family distinguished in art. He was first taught by his father, and afterwards studied at Rome under Giovanni de Vecchi. He improved himself by copying some of the works of Coreggio and Parmigiano, and adopted the style of Barocci so successfully that some of his pictures have been attributed to Barocci. He painted at Rome, for Pope Clement VIII., an altarpiece in St Peter's, of Peter rebuking Simon Magus, and the pope created him *Cavaliere*. Vanni was also an etcher and a skillful architect. Among his best pictures are—"St Raymond walking on the Sea," at Siena; the "Scourging of Christ;" and "Death of St Cecilia," at Rome. Died, at Siena, 1609. He left two sons, named Michael Angelo and Raphael, who distinguished themselves as painters.

VAN OS, PIETER GERARD, a Dutch painter and engraver, born in 1776. He was first the pupil of his father, a flower-painter at the Hague, and afterwards became an imitator of Paul Potter. He excelled in painting animals, and his pictures are highly esteemed. He was also a good etcher. Died at the Hague, in 1839.

VANSOMER, PAUL, portrait painter, was born at Antwerp, in 1576; and died in 1621. He resided in England many years, and painted portraits of many of the nobility and gentry.

VAN SWIETEN, GERARD, an eminent physician, was born at Leyden, in 1700. He studied under Boerhaave, and in 1745 went to reside at Vienna, and there laid the foundation of a medical school, established chemical lectures in one of the hospitals, enlarged the botanical garden, and prevailed upon the government to rebuild the university. His principal work is a "Commentary on the Aphorisms of Boerhaave," 5 vols. 4to. Died, 1772.

VANUCCHI, ANDREA. [SARTO.]

VAN VEEN. [VENIUS, OTTO.]

VANVITELLI, LUGI, a celebrated Italian architect, was born at Naples, of a Flemish family, in 1700. He early distinguished himself as a painter, but preferring architecture, studied under Ivara, and was first employed by the Cardinal di San Clemente to restore the Albani Palace at Urbino. His success in this work, and in the two churches which he built in the same city, procured him the

place of architect of St Peter's at Rome in 1726. He executed many works at Ancona, Perugia, Siena, and other places, but the work on which his reputation rests is the magnificent palace erected by him at Caserta for the king of Naples. It was commenced in 1752. He also constructed the vast aqueducts by which the palace is supplied with water. A volume of his designs for this palace was published in 1757. Vanvitelli died at Caserta in 1773.

VARGAS, LUIS DE, a Spanish painter, born at Seville, in 1502. At the age of 25 he went to Rome, and did not return to his native place for nearly 30 years. He excelled both in oil and in fresco-painting, and executed many fine works for the churches of Seville. Few of his works are still preserved. Died, 1568.

VARIGNON, PIERRE, an eminent French mathematician, was born at Caen, in Normandy, in 1654. He studied at Paris, and in 1698 was admitted to the Academy of Sciences, and made professor at the college Mazarin. He was afterwards professor of mathematics at the college of France. Among his works are, "Projet d'une nouvelle Mécanique," "Nouvelles Conjectures sur la Pesanteur," "Nouvelle Mécanique ou Statique," 2 vols., "Traité du Mouvement et de la Mesure des Eaux Courantes," &c. Died, 1722.

VARIUS, LUCIUS, a Latin poet, the intimate friend of Virgil and Horace. He was patronized by Mecenas, and his poems, epic and dramatic, were very highly esteemed. Some fragments of them are preserved. Died, after B. C. 19.

VARNHAGEN VON ENSE, KARL AUGUST, the distinguished German historian, biographer, and diplomatist, was born at Düsseldorf, in 1785. He first studied medicine at Berlin, but with more ardour applied himself to philosophy and literature; to which the influence of Fichte and A. W. von Schlegel contributed to attach him. In 1801, in conjunction with Chamisso, he published a "Museummanach." He was at Berlin at the time of the battle of Jena, and witnessed the occupation of the capital by the French. He continued his studies at Berlin and at Tübingen, extending his acquaintance with the most eminent of his countrymen, and, especially, getting introduced in 1808 to Rahel Levin, a Jewess of singular intellectual endowments, and the central figure of a circle of men of letters, politicians, and artists. In 1809 he entered the Austrian army, and was severely wounded at Wagram; followed Prince Bentheim to Paris, and witnessed the festivities, and the terrible calamity attending them, of the marriage of Napoleon with the Archduchess Maria Louisa, and then for some time lived in retirement. In 1812 he served in the Russian army under Tottenborn, whom he followed to Paris in 1814, and there met Madame de Staël. The same year he entered the diplomatic service of Prussia, married the noble Rahel, who had embraced the Christian faith, and accompanied the chancellor Hardenberg to the congress of Vienna. His wife went with him. In the following year he was sent ambassador to Baden, and from

1819 he took no public office for ten years. He was then sent as envoy extraordinary to Cassel. Varnhagen was a voluminous writer, and his works have received very high praise. He was an earnest patriot, and his noble instincts and aspirations were not weakened or corrupted by official life. The steady foe of absolutism, and the keen detector of attempts to encroach on popular freedom, he felt deeply the degradation of his country under the rule of Frederick William IV., and had gloomy forebodings of its future. In his books, and especially in his "Diary," of which eight volumes have been published, he most vividly and truthfully depicts both the men and the events he lived amongst; and for these portraits he will perhaps be chiefly remembered. Among his works, too numerous to be fully set forth, are "Deutsche Erzählungen," "Vermischte Gedichte," "Biographische Denkmale;" "Lives of Generals Seydlitz, Winterfeldt, Schwerin, and others;" "Rahel: ein Buch des Andenkens für ihre Freunde," and "Galerie von Bildnissen aus Rahels Umgang." Varnhagen owed much to the influence, both intellectual and moral, of his wife, whose death he had to mourn in 1833. She was born in 1771, and was therefore a good deal his senior. She left no written work, but many of her letters are published in her husband's memorial, "Rahel." She was as much distinguished by feminine grace and delicacy, and by child-like simplicity, as by vigour, freshness, and vivacity of intellect. In society she was easily supreme. Varnhagen von Ense died at Berlin, October 10, 1858. The volumes of his Diary (*Tagebücher*), edited by his niece, have been seized by the Prussian government as they have appeared. The last (8th) volume was printed at Zürich. His niece is a refugee.

VARRO, MARCUS TERENCE, the learned and voluminous Roman writer, was born at Rome, B. C. 116. He appears to have had the best education his age could give him; took part with distinction in public affairs; commanded under Pompey the Great against the pirates of the Mediterranean; adhered to his party in the civil war, and served under him in Spain; but after the battle of Pharsalia made his peace with Julius Cæsar, and was charged by him with the formation and management of the public library founded at Rome. Varro narrowly escaped the proscription under the second triumvirate, and did not actually lose his large collection of books. He enjoyed the favour of Augustus, and lived to a great age, busy with his books to the last. He has the reputation of being the most learned of the Romans, and his learning was surprisingly various. He wrote 490 books; some historical, some antiquarian; others poetical, philosophical, and scientific. But of the whole number two only with fragments of others are extant. The work on which his chief fame rested was the "Antiquitatum Libri," now lost; but from the division of which, the "Antiquitates Rerum Divinarum," Augustine derived much of the material for his "City of God." His extant works are—"De Re Rustica," and "De Lingua Latina." The first is

in three books, and is the best treatise on ancient agriculture left to us. The last is also of great value. Varro died B. C. 28.

VARTHEMA, LUDOVICO DI, a Venetian traveller of the 16th century. He left Europe about the close of 1502, whether merely to gratify a natural inquisitiveness or as agent for the merchant princes of Venice does not appear, and visited Egypt, Syria, Arabia,—making the pilgrimage to Medina and to Mecca,—Persia, India, and the islands of Borneo and Java, returning to Europe in 1508. The narrative of his travels appeared in 1510, and an English translation by Mr Winter Jones, with notes and an introduction by Mr Badger, was published in 1861. The book is not only highly curious and amusing, but valuable for its accuracy of description and information; especially for the account of Yemen, and of the pilgrimage to Mecca. It contains an allusion both to Australia, and to a great southern continent, earlier than the earliest evidences of the discovery of that country, or the first known reference in maps to such a continent.

VASA. [GUSTAVUS VASA.]

VASARI, GIORGIO, Italian painter, the celebrated biographer of the Italian artists, was born at Arezzo in 1512. His father was his first master, and he was afterwards the pupil of Michael Angelo and Andrea del Sarto at Florence. He became the friend and imitator of the former; was patronized successively by Cardinal Ippolito de' Medici, Pope Clement VII., and the grand-duke Cosmo I.; executed a large number of paintings, in which, however, he was assisted by his pupils; but sacrificing quality to quickness, left little that is of lasting worth. Some of his portraits are commended, especially one of Lorenzo the Magnificent. Vasari was skilled also in the arts of the goldsmith and the architect. But he is now remembered not for his own achievements as an artist, but for his voluminous, graphic, and delightful account of the lives and works of others. His work is entitled, "Lives of the most excellent Painters, Sculptors, and Architects," and was first published in 1550. It comprises a period of four hundred years, beginning with the age of Cimabue. Vasari published a second edition during his lifetime, and it has passed through many editions since, and has been translated into French, German, and English. Notwithstanding the sharp attacks of criticism, and its admitted numerous errors, strange omissions, and partial views, the book holds, and must hold, an important place in the history of art which cannot otherwise be filled. Successive editors and translators have made important corrections and additions; and amongst them must be named Bottari, Della Valle, Schorn, and Förster, and especially Le Monnier, the latest editor. The English version forms part of Bohn's Standard Library. Died at Florence, 1574.

VÄTTEL, EMMERICH, the celebrated publisher, born at Couvet, in Neuchâtel, in 1714. He studied at Basel and Geneva, intending to enter the church, but his ambition drew him towards public affairs, and the advancement to be hoped for that way.

Failing to make his way at the court of Frederick the Great, to which he went in 1741, he was induced to visit Dresden; and the fluttering attentions of the minister, Count von Brühl, kept him in the service of Saxony. The king, Augustus III., gave him, in 1746, the title of "conseiller d'ambassade," and sent him to Berné as Saxon minister there. He had little to do as diplomatist, and lived chiefly at Neufchâtel. In 1758 he was recalled to Dresden, and named privy-councillor, but his new work was too heavy for his health. He married in 1764, visited his native country two years later, and died there in 1767. The work on which the reputation of Vattel rests is the "Droit des Gens, ou Principes de la Loi Naturelle Appliqués à la Conduite et aux Affaires des Nations et des Souverains." It was published in 1758, and recommended by its clearness and method, as well as by its easy superficiality, it became fashionable; was a text-book of universities, was again and again republished, and translated into most of the European languages. It was founded more upon the writings of earlier publicists than upon any original investigations of the subject, and does not display either much historical or practical diplomatic knowledge. Vattel was also author of "Questions de Droit Naturel," and several collections of light literary productions.

VAUBAN, SÉBASTIEN LE PRESTRE DE, marshal of France, one of the greatest of military engineers, was born in Burgundy, in 1633. Early left an orphan, and poor, he was brought up by a charitable prior, and in his 17th year entered the Spanish army, and served under the prince of Condé. He zealously studied the art of war, especially fortification, and had given promise of distinguishing himself, when in 1653 he was taken prisoner by a party of his countrymen—royalists—and was persuaded by Cardinal Mazarin to enter the French army. Placed under Clerville, he made so great progress in his art that in 1658 he was charged with the direction of the sieges of Gravelines, Ypres, and Oudenarde. From that time his life was full of great enterprises and achievements; in war he was indispensable to conduct sieges, and in peace equally so to restore decayed fortifications or construct new ones. To detail his deeds would be to tell almost the history of France during his life. He had the conduct of fifty-three sieges, was present at one hundred and forty battles, erected thirty-three fortresses, and renewed the works of three hundred old ones. Among the most important sieges directed by him were those of Lille, in 1667; Maëstricht, in 1672, at which he introduced the system of parallels; Valenciennes, in 1675; Courtrai and Luxembourg, in 1680; Philippsburg, in 1688; Mons, in 1691; Namur, in the next year; and Charleroi, in 1693. Vauban was named brigadier of the armies of the king in 1674, *maréchal de camp* in the following year, and on the death of Clerville accepted with modest reluctance the office of commissary-general of fortifications. He was created marshal of France in 1703, but notwithstanding his high rank, he could not deny himself the satisfaction of serving at

the siege of Old Brisach. His last service as engineer was to strengthen the defences of Dunkirk. Although his life was full of active service, Vauban was a voluminous writer; his published works consisting of memoirs on sieges, frontiers, &c.; treatises on military matters, and miscellaneous writings. He left also no less than 12 folio volumes of manuscript memoirs, projects, notes, &c., which he named "*Mes Oisivetés*." The character of this great man has drawn forth the highest praise from some of the most distinguished of his countrymen—Carnot, Voltaire, Fontenelle, and St Simon. The latter pronounced him the most upright, simple, true, and modest man of his age. He was one of the first chevaliers of the order of St Louis, and an honorary member of the Academy of Sciences. Died in March, 1707, leaving two daughters.

VAUGHAN, HENRY, called *The Silurist*, an English poet of the 17th century, who deserves a higher place in general esteem than he has yet attained, was born in the parish of Llansaintfred on the Usk, in 1621, and was descended from an ancient and wealthy family. With his twin-brother, Thomas, he studied at Jesus College, Oxford, making occasional visits to London, and becoming an ardent royalist. He chose the medical profession, graduated M.D., and practised first at Brecknock and then in his native parish. A severe illness produced a great change in his character, and his new religious life was fed by the writings of George Herbert, which he made thenceforth his models. His first volume of "Poems" appeared in 1646; a second, entitled "*Olor Iscanus*" (Swan of the Usk), was ready in 1647, but not printed till three years later. Meanwhile he had given to the world, not heedful of the gift, a series of his "Sacred Poems and Pious Ejaculations" under the quaint title of "*Silix Scintillans*." An additional series of similar poems was published with the first a few years later; but few heard the voice, and the sweet singer remained silent. Henry Vaughan was author also of several devotional works in prose, and another volume of his verses was published by a friend, under the title of "*Thalia Rediviva*." He was twice married, and had several children; passed his last years amidst the beautiful scenery of his native valley, and died, 23rd April, 1693. An edition of his Poems, with a Memoir by the Rev. H. F. Lyte, appeared in 1847, and another edition, with a reprint of the Memoir, in 1858.—THOMAS, twin-brother of the above, also studied at Oxford, fought on the king's side in the civil war, entered the church, was expelled from his living as a royalist, and spent the rest of his life in the study of chemistry and magic. He was long in the service of Sir Robert Murray, Scottish secretary of state, published several books on his favourite subjects, one of which involved him in a controversy with Henry More, and died at Albury, Oxfordshire, in 1665.

VAUGHAN, WILLIAM, an ingenious Welsh poet, was born in Carmarthenshire, in 1577; and was the author of some miscellaneous poems, the principal of which are,

VAUX, the name of a noble English family originally of French extraction.—NICHOLAS, the first Lord VAUX, was a gallant officer, and ranked deservedly high in the favour of Henry VIII., and was present with him and the French monarch at the "field of the cloth of gold." Died, 1530.—His son, THOMAS, born in 1510, inherited his father's valour, and was besides a poet. He attended Henry VIII. to Calais and Boulogne, was made governor of Jersey, and died about 1553.

VECHIETTA, IL, whose name was LORENZO DI PIETRO, Italian painter, sculptor, and architect, was born in the Senese territory in 1412, and was a pupil of Quercia. His best work as a painter is the "Assumption of the Virgin" at Pienza. He executed the bronze tabernacle now above the altar in the Duomo of Siena, the monument to the jurist Marino Soccino, and figures of Christ, St Peter, and St Paul. Died, 1480.

VEGA, LOPEZ DE I.A., or LOPE FELIX DE VEGA CARPIO, a celebrated Spanish poet, was born at Madrid, in 1562. After studying at Alcalá, he entered into the service of the duke of Alva, at whose instance he wrote the heroic pastoral of "Arenidia." Soon after this he married; but, on the loss of his wife, he embarked in the Armada, prepared for the invasion of England. In the course of this voyage he wrote a poem, entitled "Urmosura de Angélica," to which, when published, he added the "Dragontea," an invective against Drake and Queen Elizabeth. In 1590 Lope married a second time, and again became a widower, on which he entered into the order of St Francis. He still, however, cultivated poetry, and scarcely a week passed without seeing a drama from his prolific muse. Honours and wealth flowed in upon him, and he was idolized by the whole nation. At his death, which happened in 1635, the highest honours were paid to his remains, and all the poets of the age vied in encomiastic tributes to his memory.

VELAZQUEZ, DON DIEGO RODRIGUEZ DE SILVA, one of the greatest Spanish painters, was born at Seville in 1599. From his first master, Francisco Herrera the elder, he acquired his "naturalist" style, to which he steadfastly adhered; from his second, Francisco Pacheco, with whom he remained five years, he gained little, except indeed his daughter in marriage. He therefore taught himself as well as he could, taking a peasant lad for a model, and painting him industriously, accurately, in all varieties of attitude. He visited Madrid in 1622, to see the works of the great masters there; and in the following year he returned to that city on the invitation of the duke of Olivarez, then first minister and favourite of Philip IV. Velazquez painted first the portrait of the minister, then that of the king, so successfully that he was at once named court painter. Prince Charles, afterwards Charles I. of England, sat to him in 1623, but the portrait was not finished, and is lost. In 1628 Velazquez became acquainted with

Rubens, who was sent on a political mission to Spain. The next year he went to Italy; spent a year at Rome, the pope assigning him an apartment in the Vatican during part of that time; next to Naples, where he became the friend of his countryman Ribera, and was particularly impressed by the works of the painter Stanzioni; and in 1631, returned to Madrid. Philip IV. made a friend of the great painter, gave him a studio in the royal palace, and an office about his person. In 1648, he was sent to Italy to buy pictures and casts of Greek sculptures for the king, and after his return, in 1651, he was created a knight of the order of St Jago, and was appointed *Aposentador Mayor*, or quartermaster to the king. In this capacity he had to make the arrangements for the conferences on the *Edassoa* in 1660, which resulted in the marriage of Louis XIV. with the Infanta, and his over-exertions brought on the illness which soon ended fatally. The works of this original and extraordinary painter are rare except in Spain, and even in Spain except at Madrid. He attained the highest excellence in portrait, landscape, historical, and animal painting, had such perfect mastery over his materials, and made his subjects so live and breathe before you, that he seems, it has been said, to have painted by mere will and not by hand. But he was intensely realistic, painted only what he saw, no angels, no ideally lovely women; and remained entirely unaffected in his style, not only by the examples of gorgeous colouring of his friend Rubens, but also by the study and copying of the grand designs of Michael Angelo and the serenely beautiful compositions of Raphael. Among his greatest works are the equestrian portrait of Philip IV., portraits of his queen, Elizabeth of Bourbon, the Infanta Margarita, Pope Innocent X., the count duke of Olivarez, and Admiral Paraja; "Las Lanzas," "Las Hileras," "Los Bebedores," and "Las Meninas." The last-named represents the Infanta Margarita surrounded by her ladies and dwarfs, posed for her portrait in the painter's studio. A sketch, supposed to be the original, for this fine work, is in the possession of H. J. P. Bankes, Esq., and was exhibited at the British Institution in 1864. Four other works of Velazquez with this sketch formed the chief attraction of that exhibition. The National Gallery possesses three of his paintings—"Philip IV. hunting the Wild Boar," which has been to a large extent repainted, a "Nativity, or Adoration of the Shepherds," a good example of his early style, and the "Orlando Muerto," or Dead Warrior. His "Aquador" (Water-carrier) is in the collection at Apsley House. Fourteen of his works were exhibited at the Manchester Art Treasures in 1857. Velazquez died at Madrid, 7th August, 1660, and was buried with much pomp in the church of San Juan. His wife died broken-hearted seven days after him, and shared his grave. No monument has ever been erected to him.

VENDOME, LOUIS JOSEPH, Duke of, a celebrated French general, great-grandson to Henry IV. He was born in 1654, served in the wars of Louis XIV., in Holland, took

Marcelona in 1697, was very successful against the imperialists in Italy, and was sent in 1708 to succeed Villeroi in the command in Holland. In the same year he was defeated at Oudenarde by Marlborough and Prince Eugene. He contributed greatly to the establishment of Philip V. on the Spanish throne, by the victory of Villaviecosa, in 1710; and was admitted to the honours of a prince of the blood-royal. Died, 1712.

VENEZIANO, AGOSTINO, a celebrated Italian engraver, was born at Venice about 1490. He was one of the most able pupils of Marc-Antonio, whom he almost equalled in delicacy of execution, while he was far inferior to him in design and in the treatment of light and shade. His most admired print is that of "the Skeletons" after Bandinelli, executed in 1518. Agostino engraved many of the works of Raphael and many fine portraits. Died at Rome, probably about 1540.

VENEZIANO, ANTONIO, Italian painter, who flourished 1370—1386. He was a native of Venice, but learnt painting at Florence, and became one of the best fresco painters of his time. He painted in the cathedral of Sienna, at Florence, and at Pisa. His three frescoes in the Campo Santo of Pisa were the best seen there.

VENEZIANO, DOMENICO, an Italian painter, whose birth and training are involved in obscurity. It is concluded by the most recent historians that he was of a Venetian family, was born early in the 15th century, studied at Florence, was long connected with the Medici family, was well acquainted with the great Florentine painters of his time and their works, lived some time at Perugia, and died at Florence in May, 1461. He is said to have painted the choir of Santa Maria Nuova at Florence, but the frescoes have perished. Two only of his pictures are now extant; the best of them being in Santa Lucia de' Servi, at Florence, of St Lucy, the Virgin and Child, and several Saints. The long current story that Domenico learnt the secret of oil-painting from Antonello da Messina, and that Andrea del Castagno cunningly acquired it from him, and then from jealousy murdered him, is now shown to be false. Domenico survived Andrea four years.

VENIUS, or VAN VEEN, OTTO, a Dutch painter, was born at Leyden, in 1556. He studied at Rome under Zuccherro, and after visiting Germany, where the emperor offered to take him into his service, he returned to his native country. He became painter to the prince of Parma, and was named director of the mint by the Archduke Albert. But Van Veen's chief title to distinction is that he was the master of Rubens. Died, 1631.

VENN, HENRY, an English divine, was born at Barnes, in Surrey, in 1725; and died at Clapham, in 1796. He was author of "The Complete Duty of Man," first published in 1764; "Mistakes in Religion exposed," &c.

VERE, EDWARD, earl of Oxford, a courtier poet in Elizabeth's time, was educated at St John's College, Cambridge. In 1586 he held the office of lord high chamberlain, and as such sat upon the trial of Mary, queen of Scots; he had also a command in

the fleet sent against the Spanish armada. Died, 1604.

VERE, Sir FRANCIS, a renowned English general of the reign of Queen Elizabeth, was born in 1534. His whole military career forms part of the history of the war between the Spaniards and the Dutch after the declaration of independence by the United Provinces. He was sent to Holland with the auxiliary forces under the earl of Leicester, in 1585, and distinguished himself on many occasions during the war; took part in the defence of Sluys and Bergen-op-Zoom, relieved Berg, and had his horse killed in the combat, accompanied the expedition to Cadiz, under Lords Essex and Howard of Effingham, and was named governor of the Brill. He contributed to the victory over the Spaniards at Nieuport, in 1600, and though twice severely wounded, remained on the field till his horse was shot. His last active service was the defence of Ostend in 1601—2. He held out for eight months with 1700 men against 12,000 of the enemy. Died, in England, in 1608. A monument was erected to him in Westminster Abbey.

VERE, Sir HORACE, baron of Tilbury, younger brother of the preceding, was born in 1565. He served with his brother in the Netherlands, and had a considerable share in the victory near Nieuport, and in the defence of Ostend. In the reign of James I. he commanded the forces sent to the assistance of the elector-palatine; on which occasion he effected a memorable retreat before Spinola, the Spanish general. He was the first person raised to the peerage by Charles I. Died, 1635.

VERELST, SIMON, an eminent Flemish painter, who excelled in flowers and fruits. He was born at Antwerp in 1661, and came at an early age to England, where he attained extraordinary popularity. It is not known when he died.

VERGIL, or VIRGIL, POLYDOR, historian and miscellaneous writer, was born at Urbino, in central Italy. He took holy orders, was a friend and correspondent of Erasmus, and after making himself known as a writer, was selected by Pope Alexander VI., soon after 1500, to visit England as collector of the tribute called Peter-pence. In this ungrateful office Vergil had no successor; but although the tax finally ceased to be paid under Henry VIII. he remained here till 1550, and held successively various church preferments. In 1513 he became prebendary of St Paul's. His principal work is the "Historia Anglica," dedicated to Henry VIII., and published at Basel in 1534. It is highly praised for its elegant Latinity, but does not possess weight as a historical authority. Polydore Vergil also wrote a treatise, "De Rerum Inventoribus," and a work in the form of dialogues, "De Prodigis." His first publication was a collection of proverbs. Died, probably at Urbino, in 1555.

VERGNAUD, PIERRE VICTORIN, born in 1738; one of the chiefs of the Girondist party in the French revolution, remarkable for the brilliant energy of his oratory; who, with Gensonné and Gaudet, opposed the sanguinary measures of Robespierre; and

being beaten in before the revolution, before the guillotine, his colleagues, prepared a suit there was not a them, he genero them. Died, 31 VERMIGI PETER.]

Died, 31st Oct., 1793.

VERMIGLI, PIETRO. [MARTYR, PETER.]

VERNET, CLAUDE JOSEPH, a French painter, was born at Avignon, in 1714. He studied for many years in Italy, and before his return to France became the first marine painter in Europe. In 1753 he was admitted to the Academy of Painting, and was employed to paint a series of views of the principal French seaports. Died, 1789. His "Castle of St. Angelo, Rome," is in the National Gallery.

VERNET, ANTOINE CHARLES HORACE, better known as CARLE VERNET, a celebrated French painter, was the son and pupil of the preceding, and was born at Bordeaux in 1758. He won the grand prize of the Academy in 1782, and went to study at Rome. He excelled as a painter of battle-pieces, but also executed many small *genre* pictures, and was esteemed one of the best painters of horses. Among his principal works are, the "Triumph of Æmilius Paulus," "Review in the Court of the Tuilleries by the First Consul," the Battles of Marengo, Rivoli, and Wagram, "Morning of the Battle of Austerlitz," &c. He also painted some good portraits. Carle Vernet was the father and teacher of the more distinguished Horace Vernet, noticed below. Died, at Paris, 1836.

VERNET, JEAN EMILE HORACE, usually called HORACE VERNET, the distinguished French painter, was son of the preceding, and the last scion of a family of artists, originally of Avignon. He was born, in 1789, in the Louvre, where his father, Carl Vernet, and his grandfather, Joseph, had official apartments. His earliest years were passed amid the agitations of the revolution, and his education was comparatively neglected. But he soon began to use the pencil, and his first sketches were of soldiers. At the age of 13 he could support himself by the payments received for his drawings. His father was his master in painting, and from him he caught that spirit of independence and love of reality which made him the opponent of the classical orthodoxy of the school of David. Failing to win the grand prize and the scholarship at Rome, he exhibited the same year (1810) his picture entitled, "Prise du Camp Retranché de Glatz," which laid the foundation of his reputation as a painter of battles. About the same time he married Louise Pujol, who was his sympathizing companion for forty years. The popularity which Horace obtained by his first battle-piece grew constantly, and did not wane throughout his life. In 1814 he took part, for a few days, in the defence of Paris, and received from Napoleon the cross of the Legion of Honour. After the fall of the emperor Vernet excited the ill-will of the government of the Restoration by his lithographic caricatures, and in 1822 the Salon

was closed against his works. He then opened a private exhibition in his own studio, which was very successful. Public honours came in time. In 1825 he was made officer of the Legion of Honour; the next year was received at the Institute, and in 1828 was appointed director of the Academy of Fine Arts at Rome, a post which he filled till the end of 1834. On his return to Paris the king, Louis Philippe, who, while duke of Orleans, had been his patron, received him well, and commissioned him to paint the historical galleries of the Museum of Versailles. This task occupied him more than five years. Among the most remarkable of the pictures are the "Attack on the Citadel of Antwerp," the "Assault of Constantin," and the "Opening of the Breach at Constantin." After completing the series he visited Egypt, Palestine, and Syria, returning in 1840. In 1842 he visited St Petersburg—it was his second visit, and he was received by the Emperor Nicholas with much kindness. Vernet accompanied him on a journey to Sebastopol, and was none the less honoured for his frankness and fearlessness of speech. In 1845 he visited Spain and Algeria; and the same year lost his noble and beautiful daughter, Louise, the wife of Paul Delarocque, one of the largest sorrows of his life, from the darkness of which he never wholly escaped. During the revolutions of 1848 he was actively employed as colonel of the National Guard of Versailles; in 1853 he followed the French army to Varna, but soon returned to Paris, and painted his last great picture, the "Battle of the Alma." The death of his wife added to the sadness which had long brooded over him, and a second marriage, in 1858, was soon after followed by a last long and painful illness. The great painter died in his apartment, at the Institute, 17th January, 1863. The Academy resolved, out of respect to his memory, not to appoint his successor till after six months of mourning. To the works already named must be added the great picture of the "Taking of La Smala," Battles of Montmirail, Fontenoy, Wagram, &c., &c., "Arrest of the Princes," which, with other fine works, was destroyed at the revolution of February, 1848, "School of Raphael," "Prayer in the Desert," "Council of Arabs," and portraits of Napoleon, Charles X., and Brother Philippe. A pleasant record of the Vernets has just appeared (1865) entitled, "Joseph, Carle, et Horace Vernet, Correspondance et Biographies," by Amédée Durand.

VERNON, EDWARD, a brave English admiral, born in Westminster, in 1681, was a son of James Vernon, secretary of state to William III. After a variety of service under different commanders, he was made vice-admiral of the Blue in 1739, and sent with a squadron to Spanish America, where he took Porto Bello, and destroyed the fortifications; but in 1741 he proved unsuccessful in an attack upon Carthagena. Died, 1757.

VERNON, ROBERT, a distinguished patron of the fine arts, was born, 1774. Originally a dealer in horses, he, by his integrity, prudence, and assiduity, amassed a large

fortune, which he liberally expended in assisting struggling talent, and in befriending men of genius. His munificent gift to the nation, in 1847, of the "Vernon Gallery," a collection of pictures, the works of modern British artists, on which he is said to have laid out £150,000, has gained for him a lasting name. Died, 22nd May, 1849. A portrait of Vernon, by H. W. Pickersgill, and a bust, by Behnes, the latter presented by the Queen, are in the National Gallery.

VERONESE, PAOLO. [CAGLIARI.]
VERRES, CAIUS, the rapacious pro-prætor of Sicily, was, in B. C. 82, one of the party of Marius, but went over to Sulla and became legatus to Dolabella in Cilicia, whom in turn he deserted and betrayed. He was appointed pro-prætor in Sicily B. C. 73, and the island was left at his mercy during the two following years. By his unbounded avarice and the unscrupulous cruelty and tyranny with which he gratified it, the island was completely desolated, and the inhabitants reduced to want and despair. It was resolved to prosecute him, and the conduct of the proceedings was intrusted to Cicero. All attempts of the friends of Verres to get it out of Cicero's hands, and to put it off, failed; and by mere weight of testimony, without flourish of oratory, the case was decided against him. He quitted Rome before sentence was actually passed, his own advocate, Hortensius, giving up the defence. Verres settled at Marseille, and was afterwards proscribed by Antony. There are seven Orations of Cicero against Verres, of which only two were spoken.

VERROCCHIO, ANDREA DEL, a distinguished Italian painter and sculptor, was born at Florence in 1432. He was first apprenticed to a goldsmith, and executed many exquisite works in metal, which are lost. He learnt the art of sculpture under Donatello, and soon gave up painting, of his skill in which only one example is left,—a "Baptism of Christ," in the Academy of Florence. His great works as a sculptor are the bronze group of the "Incredulity of St Thomas," for the church of Or San Michele, which he began in 1466, but did not complete for nearly 20 years; the monument of Piero and Giovanna de' Medici; silver statuette of the Apostles, and the tomb of Selvaggia Tornabuoni, executed at Rome, the statue of David, and the magnificent equestrian statue of Bartolomeo Coleoni, the great condottiere, at Venice. Verrocchio was the master of Leonardo da Vinci and Lorenzo di Credi. In power and versatility of talent he greatly resembles Leonardo, and their drawings are frequently difficult to distinguish. It is believed that Leonardo assisted his master in painting the "Baptism." Died, at Venice, 1488.

VERSCHURING, HENDRIK, a Dutch painter, born at Gorcum, in 1627. He principally excelled in battle-pieces; and, in order to insure accuracy, he made a campaign in 1672. Accidentally drowned, 1690.

VERSTEGAN, RICHARD, an ingenious writer on English antiquities, was born in London, of Dutch parents, and resided at Antwerp. He was the author of a curious work on the persecution of the Papists under

Queen Elizabeth, entitled "Theatrum Crudelitatum Hæreticorum Nostri Temporis." His chief work, now little valued, is the "Restitution of decayed Intelligence concerning the Antiquities of the noble and renowned English Nation." Died, 1638.

VERTOT D'AUMONT, RENE AUBERT DE, a French historian, was born at Benetot, in Normandy, in 1655. He entered into the order of Capuchins; but the austerities of that society not agreeing with his health, he was induced to exchange it for the Premonstratenses, in which he became prior; but this order he also quitted, and settled at Paris as a secular ecclesiastic. His talents soon procured him distinction, and he was appointed secretary to the duke and duchess of Orleans, historiographer of the order of Malta, and commander of Santery. His chief work is the "Histoire des Révolutions de la République Romaine." He also wrote histories of the revolutions of Portugal and Sweden; but though they are lively, elegant, and interesting, they have no value as histories. Died, 1735.

VERTUE, GEORGE, a distinguished engraver and antiquary, was born in London, in 1684. After being instructed in engraving first by a Frenchman, and afterwards by a Dutchman, he began to practise on his own account in 1709. He was aided by the favour of Sir Godfrey Kneller, and soon making way by his excellent prints, he found many noble and wealthy patrons; among them, Harley, earl of Oxford, the earl of Winchelsea, the duke of Dorset, lord Coleraine, and subsequently the prince of Wales. He was one of the first members of the Academy of Painting established in 1711, and engraver to the Society of Antiquaries. Having projected an extensive work on the history of the fine arts in England, he undertook extensive researches, made many journeys in company with one or other of his noble patrons, and collected a large mass of materials, which after his death became the property of Horace Walpole, and were published by him under the titles of "Anecdotes of Painting in England," and "Catalogue of Engravers." Vertue's prints are very numerous, and among the best of them are the set of twelve portraits of English poets, ten portraits of Charles I. and his friends, and portraits of the kings of England for Rapin's History. He was a man of singular piety, modesty, industry, and scrupulous truthfulness; he could not bring his mind to engrave portraits that were not true, nor increase his business by the arts of puffery. Died, 1756, and was buried in the cloisters of Westminster Abbey.

VESALIUS, ANDREAS, the great anatomist, was the son of an apothecary in the service of the Princess Margaret, governess of the Netherlands, and was born at Brussels in 1514. From his boyhood he showed a strong bent to the study of anatomy, and with great courage and determination he applied himself to it at Louvain and at Paris, running great risks to obtain subjects. He accompanied for a short time the Imperial army, for the sake of increasing his knowledge; taught at the universities of Pavia, Bologna, and Pisa, with extraor-

inary success; and the publication of his two years later, and the Emperor had thenceforth movements. inary success; acquired wider renown by the publication of his great work in 1542; and two years later was appointed first physician to the Emperor Charles V., whom he had thenceforth to accompany in all his movements. He held the same office under Philip II., and in consequence of the claims on his time as royal physician, he did not prosecute his scientific studies. Suddenly, in the height of his honours and prosperity, he resolved on making the pilgrimage to Jerusalem. For this strange step a reason was assigned still more strange, and hardly credible; that he was found guilty of murder by the Inquisition for having opened a body for dissection before death had really taken place, the heart, it was said, quivering in his hand; and that he was allowed to expiate the crime by a pilgrimage instead of death. Vesalius was at Jerusalem in 1564. During his absence he was invited to fill the chair of anatomy at Padua, vacant by the death of his eminent scholar Fallopius. But on his return voyage he was wrecked, and perished of hunger or exhaustion in the island of Zante, in October, 1564. His great work is entitled "De Corporis Humani Fabrica," and by its original views, important discoveries, and convincing evidence, it constituted the science of human anatomy, and opened a new era in the progress of medical science. Its daring attacks on established doctrines, and the venerated authority of Galen, brought down on its author a storm of bitter reproach and opposition; but the storm soon allayed itself, and Vesalius was honoured by the next generation as the discoverer of a new world. He was author of several other works, and the whole were edited by Boerhaave and Albinus, in 2 vols. folio, in 1725.

VESLING, JOHANN, an eminent writer on natural history and anatomy, born at Minden, in Germany, in 1598; studied at Vienna, and after a journey to Palestine became professor of anatomy and botany, and keeper of the botanic garden at Padua. He afterwards visited Egypt, and wrote several works on his favourite sciences. Died, 1649.

VESPASIANUS, TITUS FLAVIUS, Roman emperor, was born of a poor family in the country of the Sabines, A. D. 9. He served in the Roman armies, gradually rising to distinction, and in 41—2 was employed as legatus in Germany, and in 43 in the same capacity in the expedition under Claudius into Britain. He was again in Britain in 47, served afterwards as proconsul in Africa, and in 66 was charged by Nero with the conduct of the Jewish War. He was still engaged in it when Nero died; and while the civil war was going on between Otho and Vitellius, Vespasian was proclaimed emperor, A. D. 69. He returned to Italy, leaving the conduct of the Jewish War to his son Titus, and applied himself to the re-establishment of order, and the improvement of the administration. He contented himself with the outward life of a private citizen, and contributed the force of his own example towards the introduction of a simpler mode of life, and purer morals. The Jewish War ended in 70, and the next year Vespasian and Titus had a joint triumph. The

expedition under Agricola to Britain took place during the reign of this emperor. Vespasian died in his native country, whither he had gone for the benefit of his health, A. D. 79. He left two sons, Titus and Domitianus, who both became emperors. VESPUCCI, AMERIGO. [AMERIGO.] VICENTE, GIL. [GIL VICENTE.]

VICO, GIOVANNI BATTISTA, an Italian philosopher, one of the most original thinkers of his age, was born at Naples in 1668. He was of an obscure family, and for the most part was self-educated. For some years he supported himself as a private tutor, devoting all his spare time to the pursuit of his beloved studies. Like all great minds, he was attracted to the great works of the ancients, head-springs of thought and wisdom, and cared little for the literature of the moderns; except the few works which rise nearest to the first great ones. He studied Plato most of all; strove to form his style upon that of Cicero; and loved the sad wisdom of Dante. In 1697 he was appointed professor of rhetoric at the university of Naples, and held that post nearly forty years. Throughout life, notwithstanding the reputation he acquired, he had to struggle with narrow circumstances, and probably missed promotion because he had not a supple knee. In his old age, and when worn down with long laborious studies and accumulated cares, he was named historiographer to the king of Naples, his son being at the same time appointed professor of rhetoric. The great work of Vico is entitled "Principi di una Scienza Nuova," and first appeared in 1725. It is a philosophy of history, founded on the recognition of certain laws determining the course of events, and the progress of the human race. Vico anticipated in some important points the speculations of some of the most eminent thinkers of a later time. His work passed through three editions in his lifetime, and then seems to have been long lost sight of. In 1827 Michelet published a French translation of it, and a German translation had appeared a few years earlier. A collected edition of Vico's works appeared at Naples in 1818, and was reprinted in 1835. Died, 1744.

VICTOR AMADEUS II., duke of Savoy and king of Sardinia, was born in 1666, and succeeded his father, Charles Emmanuel, under the regency of his mother in 1675. At the instigation of Louis XIV., who had just revoked the Edict of Nantes, he renewed in 1686 the cruel war against the Waldenses, whose sufferings thirty years before had provoked the effective intervention of Cromwell. In 1690 the duke joined the league of Spain and the empire against France, and Savoy was invaded by the French. The same year, through the influence of England and the Netherlands, the Vaudois were restored to their homes and possessions, and freedom of worship was granted them. In 1692 the duke invaded Dauphiny, was defeated the next year at Marsaglia by Catinat, and by the peace with France, concluded in 1696, recovered all his territories. In the war of the Spanish Succession he was named generalissimo of the combined forces of France and Spain, in Italy, and at the same time

had a secret understanding with the house of Austria. Declaring himself against the king of Spain, his son-in-law, in 1701, his duchy was again overrun by the French, and Turin was besieged in 1706. But joined by Prince Eugene, he won a great victory over the French near Turin, thus delivering the city and regaining his states. He soon after acquired the duchy of Montferrat, and by the treaty of Utrecht, in 1713, he was recognized as heir to the crown of Spain in default of issue of Philip V., and received Sicily and its dependencies with the title of king. He was crowned with his wife at Palermo. But Sicily was afterwards seized by the king of Spain, and on the accession of Victor Amadeus in 1720 to the Quadruple Alliance, Sardinia was given him by way of compensation, with the title of king. After ten years of peace, devoted to the internal improvement of his dominions, he abdicated in favour of his son Charles Emmanuel. In 1731 he attempted to resume the crown, and was arrested by order of the king and imprisoned. Died, 1732.

VICTOIL, CLAUDE PERRIN, duke of Helluno and marshal of France, was born at Marche (Voges) in 1766, and entered the army in 1781. He distinguished himself at the siege of Toulon in 1793, was twice wounded, and was named general of brigade. Serving next in the army of the Eastern Pyrenees, he passed thence into the army of Italy, and took a brilliant part in the campaigns of 1796—97. For his success at the affair of St George, when he compelled 8000 Austrians to lay down their arms, he was named general of division. He took Ancona, and thereby determined the conclusion of the treaty of Tolentino. As commander of La Vendée he did much by his wise moderation to establish peace and order in the province. Recalled to Italy in 1799, he contributed to the victories of Montebello and Marengo; was sent after the peace of Amiens ambassador to the court of Denmark; resumed his command in the army in 1806, greatly distinguished himself at the battles of Jena and Friedland, and on the field of Friedland was created marshal of France. After holding the office of governor of Berlin for more than a year, he served in the Peninsula, obtained several victories over the Spanish forces, and was defeated at Talavera by Sir Arthur Wellesley. The blockade of Cadiz occupied him above two years, and then he joined the great expedition to Russia, in all the successes and disasters of which he took a prominent part. The French army was saved by his heroic services at the passage of the Beresina in November, 1812. He reaped fresh honours in the campaigns of 1813 and 1814, was severely wounded at the battle of Craonne, hastened to submit to the restored Bourbons, and displayed great ingratitude towards Napoleon. Marshal Victor followed Louis XVIII. to Ghent, and after Waterloo was created peer of France, and named commander of the 16th military division. He was minister of war from 1821 to 1823; accompanied the expedition to Spain under the Duke d'Angoulême; and was for a short time ambassador to Vienna. Died at Paris, 1841.

VICTOR, SEXTUS AURELIUS, a Roman historian, who lived in the 4th century. He was governor of part of Pamphonia in 361, and probably consul with Valentinian in 373. The works attributed to him are, "Origo Gentis Romane," "De Viris Illustribus Urbis Romae," "De Caesaribus Historicis," and "De Vita et Moribus Imperatorum Romanorum excerpta."

VICTORIUS, or VETTORI, PIETRO, an eminent Italian scholar, was born at Florence, in 1499. After the revolution which took place in his native city, in 1529, he went to Rome, and resided there till Cosmo de' Medici invited him home, and appointed him to the Greek and Latin professorship. He wrote commentaries on Aristotle, and published editions of Terence, Sallust, and other ancient authors; "Variae Lectiones," and Latin poems and orations. Died, 1585.

VIDA, MARCO GIROLAMO, a modern Latin poet, was born at Cremona, about 1490. After studying in his own country he went to Rome, when his poem, entitled "Seucessia Ludus" (Game of Chess), procured him the patronage of Leo X., who suggested to him the composition of his celebrated "Christiad." Clement VIII. made Vida apostolical secretary, and afterwards bishop of Alba, in which capacity he attended the council of Trent. Died, 1567.

VIEN, JOSEPH MARIE, a celebrated French painter, born at Montpellier in 1716. He went to Paris in 1741, obtained the grand prize two years later, and was sent to study at Rome. He applied himself with enthusiasm to the study and imitation of the antique, thus beginning the work carried on afterwards by his pupils, David and Vincent. After his return to Paris in 1750, he became successively member of the Academy of Painting, professor, and rector. He held the office of director of the French Academy at Rome for ten years, returning to Paris in 1781. He was afterwards named first painter to Louis XVI., lost his places and income at the revolution, was one of the first members of the Institute, and was named by Napoleon senator, count, and commander of the Legion of Honour. His paintings are very numerous, and among the most celebrated are—the Preaching of St Denis, in the church of St Roch; the Sleeping Hermit; Slaughter of the Innocents; Julius Cæsar before the statue of Alexander; St Louis investing Blanche of Castile with the Regency, and the Parting of Heector and Andromache. He left also many drawings, sketches, and etchings. Died at Paris, 1809.—His wife and son were also distinguished painters.

VIETA, FRANÇOIS, a celebrated mathematician, was born at Fontenay, in Poitou, in 1540, and died in 1603. He held various public offices during the reigns of Henry III. and Henry IV. He succeeded in discovering the key to the cipher employed by the Spanish government in its secret correspondence; and afterwards made a sharp attack on the Gregorian Calendar. The principal writings of Vieta are—"In Artem Analyticam Isagoge," "De Equationum Recognitione," "Harmonicon Cælestium," and "Canon Mathematicus."

celebrated Italian architect, was born in 1567, at Vignola. While studying at Rome, he formed an acquaintance with Pirrotaiccio, who took him to Paris, where he remained two years. Returning to Italy, he designed the church of St. Petronius, at Bologna, and built some elegant palaces in that city. Settling afterwards at Rome, he was appointed architect to the pope, Julius II., for whom he built the Villa Giulia. His masterpiece is the palace of Cardinal Alexander Farnese at Caprarola. Died, 1573. He was author of a celebrated work "On the Five Orders of Architecture," &c.

VIGNY, ALFRED VICTOR, Count de, French poet and novelist, born at Loches (Indre-et-Loire) of a noble family, in 1799. He received his education at Paris, and entered the army, which, however, he quitted on his marriage, in 1825. He had, before that period, attracted some attention by his occasional contributions to periodical literature, and he henceforth occupied himself exclusively with the pen. His "Poèmes Antiques et Modernes" appeared in 1826, and obtained immense popularity. His most celebrated prose work is the historical novel of "Cinq-Mars," which appeared the same year, passed through many editions, and has been translated into the principal languages of Europe. He was also author of several plays, among which are the "Marshall d'Ancre," and "Chatterton," and French translations of "Othello," and the "Merchant of Venice;" of a prose tale, entitled "Stello on les Diables bleus," and numerous articles in the "Revue des Deux Mondes." Alfred de Vigny was a member of the French Academy, and an officer of the Legion of Honour. Died, Sept., 1863.

VILLANI, GIOVANNI, an early Italian historian, was a native of Florence. A visit to Rome, at the Jubilee of 1300, is said to have awakened in him the desire to write the history of his native city. He was engaged in the pursuits of commerce which called him into various countries; he visited France and Flanders, and followed all the movements of the war between Philip the Fair and the Flemings; held afterwards some of the highest offices of the republic of Florence, and in 1328 rendered great services during a famine. His great work is the "Istorie Fiorentine," in twelve books; part of which is merely a copy of earlier chronicles. But the portion relating to the events of the historian's own time is highly esteemed as an authentic and fair narrative. It was not printed till 1537. Villani died of the plague in 1348.

VILLARS, LOUIS HECTOR, Duke of, marshal of France, was born at Moulins in 1653. He began his career as a soldier in Holland, serving in the corps commanded by the king in person; next in Germany, under Condé and Turenne, and at the age of 21 he became colonel of a regiment of cavalry. During the next four years he served in Flanders. After the peace of Nimeguen he was sent ambassador to the court of Vienna, and succeeded in winning over the elector of Bavaria to the side of France; but the elector was soon after recovered for Austria by the clever diplomacy of the countess of Kaunitz.

Villars was again ambassador to Vienna in 1699, and spent three years in wearisome intrigues and negotiations, and often in great personal danger. In 1702, he was called to active service in the war of the Succession, but by his own desire was recalled. He then accepted the task of subduing the *Camisards*, the Protestants of the Cevennes; in which he appears to have shown all the humane consideration which could be combined with the suppression of the religious revolt. In 1705, he established the famous camp of Sirek, on the heights near Fronsberg, a position naturally so strong that Marlborough did not venture to attempt it. Resuming the offensive, he had a series of successes, but was defeated by Marlborough at Ramillies, in 1706. He passed the Rhine, and forced the imperial lines at Stolhofen, but some of his troops being withdrawn, he had to retire. After a short campaign in Savoy he again took the command in Flanders; was defeated by Prince Eugene and the duke of Marlborough, and severely wounded at Malplaquet, in 1709; and after a compulsory retirement to recover his health, he attacked successfully, in 1712, the entrenched camp of Denain, and took several towns and fortresses. The treaty of Utrecht was concluded in the following year, and the peace of Rastadt followed, in 1714. For the next eighteen years Marshal Villars exchanged service in the field for the intrigues of the court. He attended Louis XIV. on his death-bed, was admitted to the French Academy, and, as member of the Council of Regency, opposed the Quadruple Alliance, the financial operations of Law, and the influence of Dubois. His rival, Fleury, finally supplanted him. On the outbreak of the war with Austria, in 1732, although more than 80 years of age, he accepted the command in Italy, with the title of marshal-general of France; but after a successful commencement he demanded his recall, and died at Turin, in 1734.

VILLEHARDOUIN, GEOFFROY DE, an early French historian, was born of an ancient family of Champagne about 1167. Marshal of Champagne in 1199 he was sent ambassador to Venice, where he negotiated the treaty which secured, at a high price, the assistance of the republic for the French in the crusade just proclaimed. He accompanied the crusade, was several times employed in negotiations, witnessed the capture of Constantinople in 1204, and was appointed, by the Emperor Baldwin, marshal of Romania. He continued to serve the Emperor Henry, and was rewarded with the gift of the city of Messinopolis. He left a valuable record of the events of the crusade from 1198 to 1207; entitled "Histoire de la Prise de Constantinople par les Français et les Vénitiens." It was first printed in 1573, and was edited with Observations and a Glossary by Dueange, in 1657. Villehardouin spent his last years in Thessaly, and died about 1213.

VILLENEUVE, PIERRE CHARLES JEAN BAPTISTE SILVESTRE DE, French admiral, born in 1763. He entered the navy in 1778, and rapidly rose to the rank of rear-admiral. He had the command of a division

at the battle of Aboukir, and escaped with several ships to Malta. In 1805 he joined the Spanish admiral, Gravina, off Cadiz, and the combined fleet sailed for the West Indies, Nelson the while at a loss to conjecture their course and purpose. He started in pursuit four weeks later, and only arrived in the West Indies when Villeneuve was far on his way back to Europe. The tidings of his movements however reached England, and a squadron was sent out under Sir Robert Calder and Admiral Stirling in search of the French and Spanish fleet. The engagement took place on the 22nd July, about 50 leagues westward of Cape Finisterre, and was terminated by the darkness of the night. It was not renewed the next day, and Sir Robert Calder sailed with his prizes for the north, and Villeneuve took refuge in Ferrol. Villeneuve distinguished himself at the battle of Trafalgar, but was taken prisoner and sent to England. Released in April, 1806, he feared to present himself at Paris, and received no encouragement to do so. On the 22nd he was found dead in his bed at Rennes; and it was clear that he had killed himself.

VILLIERS, GEORGE. [HUCKINGHAM, Duke of.]

VILLOISON, JEAN BAPTISTE GASPARD D'ANSE DE, a celebrated French scholar, was born at Corbeil-sur-Seine, in 1750. He devoted his time to bringing to light valuable but forgotten Greek manuscripts; for which purpose he visited the principal libraries in Europe, and travelled to the East. He published Apollonius's Lexicon to Homer from a manuscript in the library of St Germain-des-Prés; also "Anecdota Græca," "Epistolæ Vimarcienses," a Greek translation of the Old Testament, made by a Jew in the 9th century, &c.; but his most important discovery was a copy of Homer, probably of the 10th century. He suffered considerably in his property during the revolution; but on the restoration of order he resumed his literary career, and was appointed by Buonaparte professor of Greek at the college of France. Died, 1805.

VINCE, SAMUEL, F.R.S., an eminent mathematician and astronomer, was a native of Fressingfield, in Suffolk. His parents were in a humble station of life; but by the generosity of Mr Tilney, of Harleston, he was educated at Caius College, Cambridge, where he soon distinguished himself by his superior acquirements; and he eventually became Plumian professor of astronomy and experimental philosophy. His works on astronomy and the mathematical sciences are numerous and important; the principal is, "A complete System of Astronomy," 3 vols. 4to; others are, "Elements of Conic Sections," treatises on Fluxions, Hydrostatics, Trigonometry, &c.; "The Credibility of Christianity vindicated," "A Confutation of Athelism from the Laws of the Heavenly Bodies," &c. He obtained preferment in the church, and at the time of his decease was rector of Kirby Bedon, vicar of South Creake, and archdeacon of Bedford. Died, 1821.

VINCENT DE PAUL, St, the eminent French philanthropist, was born at Ran-

quines, in the department of the Landes, April 24, 1577. After studying in a convent of the Cordeliers, he went to the university of Toulouse, and, in 1600, was ordained priest. On a voyage from Marseilles to Narbonne, he was captured by pirates, and sent to Tunis, where he was in slavery for two years under three masters, the last of whom he re-converted to Christianity, and escaped with him to France, in 1607. He soon after settled at Paris, devoting himself to works of charity. An absurd accusation of theft was brought against him there, the falseness of which could not be proved for six years. He was named almoner to Margaret of Valois, held for a short time the cure of Cléchy, and, in 1613, became tutor to the sons of Philippe de Gondi, one of whom was afterwards celebrated as the cardinal de Retz. In 1616 he began the course of labours as a missionary which occupied so large a part of his life, and the next year he founded the first *confrérie de charité*, model of so many others afterwards established. His next great task was the reform of the condition of criminals condemned to the galleys; for which great service he was appointed almoner-general of the galleys. This unwearied philanthropist founded, in 1623, the Congregation of the Mission, which was constituted by royal letters patent, and approved by the pope. In 1634 he instituted the "Sisters of Charity," the most widely known perhaps of all his foundations. But the charitable institutions which owed their origin to him are too numerous to be even named here. He attended Louis XIII. on his death-bed; was named by the queen-regent Anne of Austria, president of the council of conscience; took part in the controversy between the Jesuits and the Jansenists, against the latter; and died in the convent of the Lazarists, September 27, 1660. He left several theological writings, and was canonized by Pope Clement XII, in 1737.

VINCENT, Earl St. [JERVIS.]

VINCENT, WILLIAM, a distinguished classical scholar, head-master of Westminster School, was the son of a London trader, and was born in 1739. Educated at Westminster and at Trinity College, Cambridge, of which he became a fellow, he was appointed second master of the school in 1771, and head-master in 1788. He held various preferments in the church, graduated D.D. in 1776, and was named dean of Westminster in 1802. The principal works of Dr Vincent are—"The Voyage of Nearchus to the Euphrates," and "The Periplus of the Erythraean Sea," subsequently published together under the new title of "History of the Commerce and Navigation of the Ancients in the Indian Ocean." He was also author of "The Greek Verb Analyzed, an Hypothesis," a "Defence of Public Education," &c.; besides contributions to the Classical Journal and the British Critic. Died, 1815.

VINCI, LEONARDO DA, the great Italian painter and sculptor, &c., was born at the Castel da Vinci, near Florence, in 1452. He was the son of a notary, and showing in his boyhood a rare intelligence, and especially a wonderful faculty for drawing, was sent

to study under rapid progress made his master give up painting, and painted a picture of the work which drove Verrocchio from his art. Leonard about thirty years Moro, duke of time a master, sculpture, arch and mechanics, included also a v botany, mather proposal was r gave him a sal one of the se soon after his s lishment of a first public wor tor, was the n of Francisco S of Ludovico. duke to Pavie France; and at he became the antonio della with him. Le rence, where state, and h 1502 he bec

to study under Andrea Verrochio. His rapid progress and extraordinary powers made his master despair of himself, and give up painting entirely. The figure of an angel, painted by Leonardo in Verrochio's picture of the Imptism of Christ, is named as the work which by its surpassing loveliness drove Verrochio from the farther pursuit of his art. Leonardo offered his services when about thirty years of age to Ludovico II Moro, duke of Milan; and he was at that time a master, not only in painting, but in sculpture, architecture, music, engineering, and mechanics. His accomplishments included also a vast knowledge of anatomy, botany, mathematics, and astronomy. His proposal was accepted by the duke, who gave him a salary of 500 scudi per annum. One of the services he rendered to Milan soon after his settling there, was the establishment of an Academy of Arts (1485). His first public work, and his greatest as a sculptor, was the model of an equestrian statue of Francesco Sforza, father and predecessor of Ludovico. In 1494 he accompanied the duke to Pavia to meet Charles VIII. of France; and at that time, or perhaps earlier, he became the friend of the anatomist Marcantonio della Torre, and studied anatomy with him. These studies he carried out far beyond the necessities of art, and made himself, as Dr William Hunter said, the first anatomist of his time. He made a great many careful and minute sketches and drawings in pen and ink; which prove that he anticipated some anatomical discoveries usually supposed to have been first made a century later. A collection of these studies is one of the most precious treasures of the Royal Library at Windsor Castle. A small number of them were published in 1812 by Chamberlain. The last great work executed by Leonardo at Milan was the famous picture of the "Last Supper" (*Cenacolo*), which he painted in oil on the wall of the refectory in the Dominican convent of the Madonna delle Grazie, about 1497. It was the greatest achievement of painting the world had up to that time seen; and by it Leonardo showed himself the first Italian painter who broke through the cramping traditional forms, and worked freely and directly after nature. This picture, which by its measureless superiority superseded all other representations of the same subject, and became the Last Supper, perished almost as soon as it was finished. Little of its miraculous beauty was traceable in fifty years. But several copies had been taken before decay had ruined it, and among them one by Marco d'Oggione, reckoned very good, which is now in the Royal Academy, London. The picture is universally known by engravings and photographs. Leonardo was employed in the building of the cathedral of Milan, and in various engineering works. His great statue of Francesco Sforza was never executed, on account of the cost of the bronze required; and the model itself was destroyed by the French after the flight of Ludovico in 1499. Leonardo then returned to Florence, where he entered the service of the state, and had a pension assigned him. In 1502 he became architect and engineer to

Cesar Borgia; and in 1503 drew at Florence the famous cartoon known as "The Battle of the Standard," part of a larger composition which was not completed. It was to be the companion picture to Michael Angelo's "Cartoon of Pisa." Leonardo was afterwards named painter to Louis XII. of France; visited Rome in 1514, and was introduced to Leo X., but soon left the Vatican in disgust; then entered the service of Francis I. of France, and returned with him to France in 1517. He did not long survive, and died, without having executed any more works, at Cloux, near Amboise, May 2, 1519. Vasari's statement that he died in the arms of Francis proves to be a mistake. Besides the works already mentioned, are to be remembered the cartoon of St Anne and the Virgin, now in our Royal Academy; the portrait of Mona Lisa, in the Louvre; and the magnificent portrait of Leonardo himself, unsurpassed by any portrait in the world, now in the Gallery of Florence. This great artist left great numbers of drawings, the chief collections of which are in the Ambrosian Library at Milan, and at Windsor Castle; and several volumes of MS. notes on all the various subjects to which he had devoted his attention. The "Trattato della Pittura" is a selection of the notes relating to painting. Others, on "Hydraulics," have been printed in a collection of Italian writings on physical science; and Venturi published translations of fragments of those which were taken to Paris by Buonaparte. The most eloquent eulogy on this astonishing genius may be found in Libri's History of the Mathematical Sciences in Italy; and references to his MSS. will justify the praises.

VINER, CHARLES, an able English lawyer, was born in 1680, at Aldershot, Hants. He was the founder of the Vinerian professorship at Oxford, and the compiler of a "General Abridgment of the Laws of England," originally printed in 24 vols. folio. Died, 1756.

VINET, ALEXANDRE RODOLPHE, a distinguished Swiss theologian and historian of French literature, was born at Lausanne in 1797. He was professor of French literature at the gymnasium of Basel for twenty years, only quitting it in 1837, on his appointment to the professorship of practical theology at the Academy of Lausanne. He had been a minister of the Protestant church since 1819, and on his settlement at Lausanne took an active part, as member of the government commission, in preparing a new constitution for the church; but a change in his views induced him in 1840 to secede from the church, and at the same time to quit the chair of theology. Thenceforth he was known as the earnest but temperate advocate of entire freedom of religious worship, and of the separation of church and state. Vinet's writings are very numerous, and are partly theological, and partly literary. Among the former are his eloquent "Essai sur la Manifestation des Convictions Religieuses, et sur la Séparation de l'Eglise et de l'Etat," which appeared in 1842, and was at once translated into English; "Discours sur quelques Sujets Religieux" (entitled

to a lady, he refused to enter into orders. His knowledge of archæology was superior to that of his father, and his general talents were of the highest order. He was appointed conservator of the museum of the Vatican; and when the French took possession of Rome, and established a provisional government in 1797, he was nominated minister of the interior. He afterwards retired to France, became a member of the Institute, professor of archæology, and surveyor of the Museum of Antiquities. His most important works are the "Iconographie Grecque," "Iconographie Romaine," and "Il Museo Pio-Clementino." Died, 1818.

VISSCHER, CORNELIUS, a very distinguished Dutch engraver, of whose life we have only the scantiest information. He was born in 1629, and died, at the age of 29, in 1658, having executed a surprising number of admirable prints. A full classified and descriptive catalogue of Visscher's works, by William Smith, F. S. A., has recently appeared in the successive numbers of the Fine Arts Quarterly Review (1863—64.) His subjects are various; religious, historical, portrait-pieces, and prints after designs by himself and by celebrated painters.

VITE, TIMOTEO DELLA. [TIMOTEO DA URHINO.]

VITRUVIUS, MARCUS POLLIO, a celebrated writer on architecture, who flourished under Julius Cæsar and Augustus, and is supposed to have been born at Formiæ, in Campania. His celebrated work, "De Architectura," is a compendium of the works of various Greek and Roman writers on the same subject. It was written in his old age, and was dedicated to Augustus. It was first printed about 1480, has passed through very numerous editions, and has been translated into English, French, German, Dutch, and Italian.

VIVES, JOHN LOUIS, one of the revivers of literature, was born at Valencia, in Spain, in 1492. He studied at Paris and Louvain, after which he visited England, and in 1517 was chosen one of the first fellows of Corpus Christi College, Oxford. He was employed by Henry VIII. in the education of the Princess Mary, for whose use he composed his "De Ratione Studii puerilis" and "De Institutione Fœminæ Christianæ;" but venturing to argue and write against the king's divorce from Katherine, he was disgraced and imprisoned. On regaining his liberty he went to Brussels, where he married, and remained for the rest of his life, occupied as a teacher of the belles lettres. He died in 1540.

VIVIAN, RICHARD HUSSEY, Lord, was born in 1775, the eldest son of John Vivian, Esq., of Truro, Cornwall, warden of the Stannaries. In 1793 he commenced his military career as ensign in the 20th infantry. His active service commenced within three months of his joining his regiment, which formed part of Lord Moira's army on the coast of France; and for the following two years he was present at various battles and affairs of outposts, in which his zeal, courage, and conduct were especially conspicuous, in Holland and in the West Indies. In

1808 he sailed in command of the 7th dragoons for Corunna, which he reached in November, and had the perilous honour of covering the retreat of Sir John Moore in January, 1809. Unlike his chief, he reached England in safety, received the brevet of colonel in 1812, and in 1813 embarked with his regiment for the Peninsula. From this time to the battle of Waterloo, he was continually in active service. In the advance upon Toulouse, on the 8th of April, 1814, he was severely wounded in the right arm while making, as the duke of Wellington's despatch remarked, "a most gallant attack upon a superior body of the enemy's cavalry, which was driven through the village of Crals d'Orade." In June, 1814, he returned to England, received the rank of major-general, was appointed to the staff at Brighton, and had a splendid piece of plate presented to him by the officers of the 7th hussars. In 1830 he was made lieutenant-general, and in 1837 colonel of the 1st dragoons. Subsequently to the battle of Waterloo, General Vivian, who was created a baronet in 1828, when he also had a grant of arms alluding to his services, took an active part in politics, both as a debater in the House of Commons and in his character of master-general of the ordnance, to which office he was appointed in 1835. He was called to the House of Peers by patent, in August, 1841. Died, October, 1842.

VIVIANI, VINCENTIO, a celebrated Italian mathematician, was born at Florence, in 1622. He was the disciple of Galileo and Torricelli. He entered into the service of the grand-duke of Tuscany, who appointed him his first mathematician and chief engineer. He restored a part of the lost works of Aristæus and Apollonius, and wrote several valuable treatises on geometry, &c. Viviani was a member of the French Academy of Sciences, and a fellow of the Royal Society of London. Died, 1703.

VOET, or VOETIUS, GISEBERT, a Dutch theologian, was born at Hensden, in 1593. Having studied at Leyden, he first settled as a minister at his native place, where he remained till 1634. He then went to Utrecht, as professor of divinity and the oriental languages. He distinguished himself by his attacks on the Arminians; and when the Cartesian philosophy was engaging the public attention, he wrote against Descartes with much asperity and illiberality. His principal works are, "Selectæ Disputationes Theologicæ," 5 vols. 4to; and "Politica Ecclesiasticæ," 4 vols. 4to. Died, 1677.—PAUL VOET, his son, who also died in 1677, was, successively, professor of logic, metaphysics, and civil law, at Utrecht; was the author of several learned works on theology and jurisprudence.—JOHN VOET, son of Paul, professor of law at Leyden, was the author of a valuable "Commentary on the Pandectæ." Died, 1714.

VOGELWEIDE. [WALTHER VON DER VOGELWEIDE.]

VOISENON, CLAUDE HENRI FUSÉE DE, a French dramatist and poet, was born near Melun, in 1708; was educated for the ecclesiastical profession, and became grand-vicar of Boulogne. He was of a lively, humorous

disposition, and conscientiously refused the bishopric of Boulogne, from a sense of his unfitness for the episcopal office; but chose to pursue those studies for which by nature he was qualified. In 1763 he was admitted a member of the French Academy, and he spent his life in literary pursuits, too freely mingled with licentiousness. Like Piron, he had his days of dissoluteness and his moments of devotion. He wrote "Literary Anecdotes," comedies, and fugitive poetry; and died in 1775.

VOITURE, VINCENT, a celebrated French wit and poet, born at Amlens in 1598. His manners were highly agreeable, and he became master of the ceremonies to Gaston, duke of Orleans. In 1634 he was admitted into the French Academy, and was subsequently sent on a mission to Spain, where he was much caressed, and where he composed some verses in such pure and natural Spanish, that they were ascribed to Lope de Vega. Under the administration of Cardinal Mazarin, Volture was in the zenith of his reputation, and enjoyed large pensions; but gambling, and other vicious habits, kept him poor. He wrote verses in French, Spanish, and Italian; but his letters were the chief basis of his literary reputation, and in their day were extravagantly admired. He died in 1648.

VOLKOFF, THEODORE, a Russian dramatist, was born at Kostroma, in 1729. He wrote several plays, and erected a theatre at Jaroslav, where his success was such, that the Empress Elizabeth sent for him to St Petersburg, and appointed him director and first actor of the Russian theatre. In 1759 he was sent to establish a national theatre at Moscow; and Catharine II. bestowed on him an estate, with a patent of nobility. He died in 1763, and his funeral obsequies were celebrated with great magnificence.

VOLNEY, CONSTANTIN FRANÇOIS CHASSEBUEF, Count de, peer of France, a celebrated French writer, was born at Craon, in Brittany, in 1757. He was educated at Angers, and studied medicine at Paris; but coming into possession of a small estate, he was enabled to gratify his ardent love of travel. He spent nearly three years in Egypt and Syria; and on his return to France, in 1787, published his "Voyage en Syrie et en Egypte," 2 vols., which was translated into English and other languages, and procured him an extensive reputation. He was elected a member of the states-general; was confined nearly a twelvemonth during the Reign of Terror; was appointed professor of history at the normal school in 1794; went to America in the following year, and resided there till 1798; was created a senator and count, during the consulate; and, on the restoration of the Bourbons, he was designated a member of the Chamber of Peers. In all situations, however, he was the defender of liberal principles. Among his principal works are his "Ruins, or Meditations on the Revolutions of Empires," "Lectures on History," and "New Researches on Ancient History." Died, 1820.

VOLPATO, GIOVANNI, an eminent Italian

engraver, born at Bassano, in 1733. He was a self-taught artist, and acquired a degree of excellence in his profession rarely equalled. He was engaged to make engravings from the paintings of Raphael in the Vatican. Died, 1802. Volpato wrote the "Principles of Design," and Raphael Morghen was his pupil and son-in-law.

VOLTA, ALESSANDRO, a celebrated experimental philosopher, was born at Como, in 1745. He laid the foundation of his fame by two treatises, which described a new electrical machine; was for 30 years professor of natural philosophy at Pavia, was made an Italian count and senator by Napoleon, and died in 1826. Volta directed his attention particularly to the subject of galvanism, or animal electricity, in which science he made many discoveries and improvements; but the great invention which immortalizes his name is the Voltaic pile, or electrical column. Volta was a fellow of the Royal Society of London, and in 1794 received the Copley medal for his important communications. His works form 5 vols. 8vo.

VOLTAIRE, FRANÇOIS MARIE AROUET DE, the celebrated French Deist, distinguished as a poet, historian, and philosopher, was born at Chatenay, near Sceaux, 20th February, 1694. His baptism was deferred for nine months on account of his extreme feebleness. His family name was AROUET, and at what time, or on what account, Voltaire assumed the name by which he is universally known is uncertain. Carlyle seems to have settled the puzzling question whence he got the name "Voltaire," by the discovery that it is a possible anagram on "Arouet l. j." i. e. "Arouet le jeune." He was educated by the Jesuits at the college of Louis le Grand, and already showed so clearly the characteristics which marked him through life, that one of his teachers foretold his eminence as the "Coryphée du Désisme." He was early introduced at the *salon* of Ninon de l'Enclos, and became familiar with some of the most distinguished persons of the time. Ninon, pleased with his remarkable intelligence and liveliness, left him a legacy of 2000 francs to buy books. His father's ambition was that he should become not author, but lawyer and judge; and to break off his associations in Paris, sent him away in 1713, as page to the Marquis de Châteauneuf, ambassador to Holland. He was soon sent home, however, after getting into trouble about a love affair, and was next placed with a lawyer. Quickly and finally escaping this attempt to tame and train him for official life, he soon appeared in Paris again, and from this time he pursued his course as a literary man. His life was so full of action, incident, and vicissitude, that to give a mere epitome of it would require far more space than can be allotted in the Biographical Treasury to a single life. A general notion of its leading features, with an account of his principal writings, is all that is possible. In 1716 he was committed to the Bastille on suspicion of being the author of a satirical poem on Louis XIV., and remained there a year. His first literary work of mark was the

mark was the

tragedy of "Œdipe," which with much difficulty he got represented in 1718. During a visit to Brussels in 1721, Voltaire was introduced to Rousseau, but their interview made enemies of them once for all. He was sent to the Bastille a second time in consequence of a quarrel at the duke of Sully's house, and after his release spent three years in England, where the prevalence of "free-thinking" made an atmosphere congenial to him. Here, in 1728, he published his celebrated epic poem "La Henriade," under the title of "La Ligue," and applied himself to other literary labours. His Elegy on the death of the actress Adrienne Lecouvreur, to whose remains the rites of burial were refused; his "Lettres Philosophiques;" and his "Épître à Uranie," raised successive storms of indignation and threats of prosecution against him, which however he escaped by unscrupulous dissuavals and timely running away. After the publication of several plays he retired about 1735 to Cirey, to the estate of the Marquise du Châtelet, his "divine Emilie;" the strangest compound of intellectual superiority, scientific attainment, and mere vulgar debauchery that perhaps was ever seen in the form of woman. They studied science together, and the quiet of a country life was diversified by frequent travelling, and perhaps more frequent outbreaks of the sharp temper of the modern Xanthippe. A new epoch opened in Voltaire's life, when, in 1736, he was flattered by a letter from Frederick, prince royal of Prussia, afterwards Frederick the Great. These two remarkable men first met after the accession of Frederick to the throne in 1740. The meeting was at a château near Cleves, and a second took place soon after at Berlin. The first Silesian war separated them, and Voltaire returned to Holland. They continued, however, to correspond. In 1743 Voltaire was a candidate for a seat in the French Academy, but through the influence of an intriguing bishop he was excluded. He was soon after sent on a secret diplomatic mission to the court of Berlin, and succeeded in his purpose; but he was cheated of his hoped-for reward by the revenge of the mistress of Louis XV. Her successor, the celebrated Madame de Pompadour, was his warm friend, and procured him the appointments of historiographer of France and gentleman of the king's bedchamber. He was at the same time received at the Academy. Soon losing favour at court, he went with Madame du Châtelet to the court of Stanislaus, king of Poland, at Lunéville, and there in the following year, 1749, took place the *accouchement*, and a few days later the death, of "Emilie." Her husband, Voltaire, and a more recent and favoured lover, M. de Saint-Lambert, were all present at the closing scene. Voltaire returned to Paris, and in 1750 accepted the often-renewed invitation of Frederick II. to settle at his court. His residence at Potsdam, where he had a magnificent pension, the key of a chamberlain, and the cross of merit, was fruitful chiefly in jealousies, dissensions, and all kinds of unpleasurableness, and ended after three years by the flight of Voltaire. At Frankfort he was

joined by his niece, Madame Denis; and at the same city he was arrested by the Prussian resident, and detained till a volume of Frederick's poems was given up. After a short stay at Colinar, and some trouble about his "Essai sur les Mœurs," he settled with Madame Denis at Ferney, then a mere hamlet, near the Genevese territory. There he passed the last twenty years of his life, unwearied in writing, and at the same time active in promoting the interests of the little village, which under his fostering care grew up into a neat little town, and became the seat of a flourishing colony of watch-makers. As the home of Voltaire Ferney became a centre of attraction for the most distinguished persons of all countries. Voltaire carried on correspondence with Frederick the Great and Catherine II. of Russia; pleaded eloquently and successfully for the Calas family; educated the grand-niece of Corneille, and gave her a marriage portion; offered Rousseau an asylum; but above all, continued to wage war with unabated virulence against the Christian religion and all its representatives. All the while *blind to the holy light of it*; seeing nothing but books, institutions, and official persons; having no deep, original word to say against them, but only repeating and popularizing what had been said for generations past. All Voltaire did or could do, being what he was, was to deny and to destroy. To affirm and build up is the task of men that see and love truth for its own sake, and in its service forget themselves. The end of Voltaire's career was remarkable and singularly appropriate. At the age of 84, yielding to the importunities of his niece, who grew sick of the dull monotony of Ferney, he once more visited Paris; and his whole journey and his reception there was one continuous splendid triumph. He was everywhere attended by crowds; occupied the director's seat at the Academy, was crowned at the theatre; and then, exhausted by the excitement and loss of sleep, took opiates, and after great sufferings, fell into a lethargy, and so died, 30th May, 1778. The curé of St Sulpice refused the rites of burial, and the body of the "great" mocker was interred by night in the abbey of Sullyères, whence it was removed at the revolution, and deposited in the Pantheon. The works of Voltaire, in the most complete edition, fill 70 vols. 8vo, and range over almost all subjects. In addition to those already named, we mention, of his plays, "Alzire," "Mahomet," "Mérope," "Mort de César," and "Oreste;" his poem "La Pucelle;" the "Histoire de Charles XII.," "Histoire de Russie," "Siècle de Louis XIV.," "Siècle de Louis XV.," and "Mélanges Historiques;" the "Essai sur les Mœurs et l'Esprit des Nations," one of his most noteworthy works; the "Elémens de la Philosophie de Newton" and other works on physical science; the "Dictionnaire Philosophique;" his metaphysical and theological writings, and his correspondence, the latter forming 19 vols. Memoirs of Voltaire and documents relating to him and his works have accumulated to a portentous height; and his works have passed through a great number of editions.

His life, especially in its relations with Frederick the Great, is very fully treated by Carlyle in his recent "History" of that monarch; and no more profound, lucid, and fair estimate of Voltaire and Voltairism is to be found in English literature than is presented in Carlyle's masterly "Essay."

VOLTERRA, DANIELE DA, whose family name was **RICCIARELLI**, a celebrated Italian painter and sculptor, born at Volterra in 1509. He was instructed in painting by several masters; assisted Perino del Vaga and Michael Angelo at Rome, and became one of the most eminent scholars of the latter. He succeeded Perino del Vaga as director of the works in the Vatican, but he was deprived by Julius III. His masterpiece is the "Descent from the Cross," the best of a series of frescoes executed by him in the church of the Trinita de' Monti at Rome. It is said to have been partly painted by Michael Angelo. This great work was destroyed by the French, who attempted to detach it from the wall. The famous picture by Rubens in the cathedral of Antwerp is in composition almost a repetition of Volterra's fresco. Volterra was employed by the Pope Paul IV., on the singular task of draping some of the nude figures in the "Last Judgment" of Michael Angelo, whence he received the nickname of **BRAGHETTORE**. In his latter years he was engaged chiefly in sculpture, and at the time of his death had partly executed an equestrian statue of Henry II. of France. Died at Rome, 1566.

VOLUSENUS. [WILSON, FLORENCE.] **VONDEL, JOOST VAN DEN**, the celebrated Dutch poet, was born in 1597, at Cologne; his parents, who were Anabaptists, being refugees from the persecution of the Spanish government in their native land. They soon returned thither, and the poet spent his life at Amsterdam. He had little school instruction, and carried on the business of a hosier; to which, however, his wife chiefly attended, and thus secured him leisure for his higher work. After her death his affairs became embarrassed, and he accepted a situation as banker's clerk. His last ten years he spent in comparative ease, his modest wants satisfied by the continuance of his salary as a pension. The principal works of Vondel are the tragedies of "Palamedes," "Ghisbert van Amstel," "The Exile of Ghisbert," "Jephtha," and "Lucifer." The first appeared in 1623, and brought him not only great reputation, but a government prosecution, and a heavy fine, on account of its fervent patriotism and its censure of the execution of Barneveldt, the grand-pensionary. The "Lucifer" is thought worthy of comparison with "Paradise Lost," which was published a few years later. The lyrical poems scattered through the plays of Vondel are the most admired of his works. Vondel meditated and commenced a poem on Constantine the Great, but had not energy to go on with it. Died, 1679. A new edition of his works was published in 1829, by De Vries.

VOPISCUS, FLAVIUS, a native of Syracuse, who flourished A. D. 304. He wrote the history of Aurelian, Tacitus, Florianus, Probus, Firmius, Carus, &c.

VORST, CONRAD (Latin, **VORSTIUS**), an

eminent German theologian, was born of a Roman Catholic family at Cologne, in 1569. With his father and the rest of the family he became a Protestant; studied at Düsseldorf and Cologne, and later at Herborn. He graduated B.D. at Heidelberg in 1594; visited Switzerland, and gave lectures at Geneva; and in 1596 accepted the post of professor at a new theological college at Steinfurt. He acquired a wide reputation, but suspicions of his orthodoxy were spread, and he had to defend himself before the theological faculty of Heidelberg. In 1610 he published his "Tractatus Theologicus de Deo," which at once brought a storm of persecution on him, as an adherent of Arminius. He was the same year called to succeed Arminius as professor of theology at Leyden, and notwithstanding the bitter opposition of the Gomarist party, he accepted the chair. But he was benten. The book was intolerable to the Calvinists: it was denounced even by James I. of England, and by his order burnt at London, Oxford, and Cambridge. Vorst had to appear before the states, then to flee the country, and after the Synod of Dort to hide himself and his family; and in 1622 he took refuge in Hoolstein. But he died there the same year, and was buried at Friedriehstadt.

VORTIGERN (GWORTIYERN), a British chief, who after the final departure of the Romans from the island, appears to have become supreme ruler. It is scarcely possible to fix the chronology of his reign, or to discover the facts of it; so overlaid are they with the legends of the Chronicles, and the passionate denunciations of the Triads. The year A. D. 424, about six years after the departure of the Romans, probably saw Vortigern first invested with the sovereignty of all the Britons. Pressed by foes on all sides,—the Picts and Scots, the sea-rovers, and domestic rivals,—he invited or accepted the aid of the Saxons against them. The arrival of these warriors is variously assigned to the years 428, 445, and 449; when under their leaders (named in the legends Hengst and Horsa) they landed on the coast of Kent, and soon received for their services the Isle of Thanet. Vortigern is said to have been so fascinated at a banquet by the fair Rowena, daughter of Hengst, that he divorced his wife to marry her. But the marriage alliance did not prevent the pagan invaders from soon joining the Picts and Scots, and ravaging Britain from one end to the other. They appear then to have returned to their own land, and Vortigern was restored to his throne. Of his subsequent history nothing is certainly known. There is, however, a story of a subsequent meeting between the Britons and Saxons for making terms of peace, at which the latter, on a signal from Hengst, massacred all the Britons present except Vortigern, who was made prisoner.

VOS, MARTIN DE, a Dutch painter, was born at Antwerp, about 1534, and died there in 1604. He studied in Italy under Tintoretto, and painted history, portraits, and landscapes.—**SIMON DE VOS**, another artist of Antwerp, was born in 1603, and died about 1670. He painted historical subjects and

portraits, but there were so same name.

VOSS, JOHANNES, a distinguished German scholar, was born at Heideburg. He studied first at Heideburg, was then at private tutoring, classical studies, by occasional complete his studies, took a distinguished literary men.

He was Heyne, Kossy and Ill-will, and Heyne, who aggravated. He was rector in Hanover; but to a similar post he held for two of three years a congenial society call to Heideburg receive a handsome any special rest of his life.

VOSS, JOHANN HEINRICH, the distinguished German poet, philologist, and translator, was born in Mecklenburg in 1751. He studied first at the school of New Brandenburg, was then engaged for several years as private tutor, diligently continuing his classical studies, and making himself known by occasional poems, and in 1772 went to complete his studies at Göttingen. He soon took a distinguished place in the circle of literary men, among whom at that time were Heyne, Klopstock, and Claudius. Jealousy and ill-will soon appeared between him and Ihyme, which time unfortunately only aggravated. In 1778 he had the appointment of rector of the college at Otterndorf, in Hanover; but after four years he removed to a similar post at Eutin, in Holstein, which he held for twenty years. After a residence of three years at Jena, full of the delights of congenial society, he accepted a pressing call to Heidelberg, in 1805, where he was to receive a handsome pension without holding any special office. There he spent the rest of his life. A collected edition of the poems of Voss appeared in 4 vols. 8vo in 1802. The most admired is "Louise," which is said to have suggested to Goethe the idea of his "Hermann und Dorothea." His translations of the Iliad and Odyssey are in hexameter verse, and are probably the most accurate representations of the originals ever produced. He translated with equal success all the works of Virgil, Hesiod, and Theocritus, and a commentary of great value accompanied the "Georgics." Besides several other translations of classical authors, he commenced in his old age one of Shakespeare. Among his critical and other works are the "Mythologische Briefe," "Antisymbolik," and numerous papers collected under the title of "Kritische Blätter." There was much that was painful in the quarrels between Voss and Heyne, nor less in the controversy on which he entered with his old friend, Count Friedrich von Stolberg. It was probably his intense love of religious and political freedom that made him write so severely against the apparent revival of Romanism and mysticism; but he is to be censured for indulging in personalities. This great scholar and true poet died at Heidelberg, in 1826.

VOSSIUS, GERARD, a learned Dutch philologist, was born near Heidelberg, in 1577, and was educated at Dort, and the university of Leyden. He became director of the College of Dort, and in 1614 director of the theological college at Leyden. The latter office he had to resign in consequence of suspicions arising as to his theological views. He was the warm friend of Grotius, and had published a history of Pelagianism, and was therefore supposed to favour the doctrinal system of Arminius, which was condemned by the synod of Dort. Vossius accepted the chair of eloquence and chronology, and was soon conditionally restored to his theological rectorship. He was twice invited to England, and through the influence of Laud was made prebendary of Canterbury. On a visit

to this country in 1629, he was created LL.D. Oxford. In 1633 he was called to the chair of history in the gymnasium of Amsterdam, and there spent the rest of his days. His most important writings are—"Aristarchus," a treatise on Grammar; "De Historicis Latinis;" "De Historicis Græcis;" and "De Veterum Poetarum Temporibus." The manner of his death was singular. He fell from a ladder in his library, and was found dead, 1649.

VOSSIUS, ISAAC, son of the preceding, was born at Leyden, in 1618, and, possessing great natural talents, very early acquired a high reputation among the learned. He went to Sweden in 1648, and spent ten years at the court of Queen Christina. He returned to his own country, and in 1670 he came to England, and obtained from Charles II. a canonry of Windsor, and the degree of doctor of laws from the university of Oxford. He died in 1688. His works are numerous and erudite. He was rude in his manners, and sceptical in his religious notions, but so credulous in other matters, that Charles II. said, "he is a strange man for a divine, for there is nothing which he refuses to believe except the Bible."

VOUET, SIMON, an eminent French painter, was born at Paris, in 1552, and, after a residence of 14 years in Italy, was recalled by Louis XIII. to assist in the decorations of the Louvre and the Luxembourg. Died, 1641.

VOYER D'ARGENSON. [D'ARGENSON.] VOYER DE PAULMY. [PAULMY.]

VRIES, HANS FREDRICK DE, Dutch painter, was born at Leenwarden, in 1527, and studied under a painter of Amsterdam. He was celebrated for his mastery of perspective, and painted many architectural pieces, some of which had so vivid a reality as to deceive the sharpest eye. The figures in his paintings were often executed by other artists. He was still living in 1601.—His two sons, Paul and Solomon, were also painters of similar subjects to their father's.

VROLIK, WILLEM, a distinguished Dutch comparative anatomist, was born at Amsterdam, in 1801. He studied at the university of Utrecht and at Paris, and graduated M.D. at the former in 1823. After practising medicine for several years at his native city, he was appointed, in 1829, professor extraordinary of anatomy in the university of Groningen, and in 1831 professor of anatomy, physiology, and zoology, in the Athenæum of Amsterdam, a post which he filled with distinction till 1863. He was a knight of several orders, and a fellow of various scientific societies. Among his works are—"Recherches d'Anatomie Comparée sur le Chimpanzé;" "Handboek der zichtkundige Oudeeldkunde;" "Tabulæ ad illustrandum Embryogenesis in Hominis et Mammulium." He contributed articles to Todd's Cyclopædia of anatomy and physiology. Died, 22nd December, 1863.

VROOM, HENRIK CORNELIS, a Dutch painter, born at Haarlem, in 1566. He was famous in sea-pieces, and drew the designs for the tapestry in the House of Lords, representing the details of the defeat of the Spanish armada.

W.

WACE, ROBERT, an Anglo-Norman poet of the 12th century. He was a native of Jersey, and became "reading clerk" to Henry I. and Henry II. of England. The latter gave him a canonry in the cathedral of Bayeux. He wrote, in Norman-French verse, a history of England, an account of the Norman conquest, and some romances. Died in England, about 1184.

WADING, or WADDING, LUKE, a learned Irish ecclesiastic, born at Waterford, in 1588. He held a divinity professorship in the university of Salamanca; but having accompanied the bishop of Carthage to Rome, he continued to reside there during the remainder of his life. He refused a cardinal's hat, and founded the college of St Isidore for Irish students of the Franciscan order; he is said to have encouraged the Irish rebellion in 1641. He wrote a "History of the Order of St Francis," and edited the works of Duns Scotus, Calasio's Concordance, &c. Died, 1657.

WADHAM, NICHOLAS, the founder of Wadham College, Oxford, was born in 1536, in Somersetshire, and was educated at Christchurch College. He died about 1610, and the college which bears his name was completed in 1613.

WADSTROM, CHARLES BERN, a Swedish traveller and philanthropist, was born at Stockholm, in 1746. Having visited Africa, with a view to acquire information that might lead to the abolition of the slave trade, he was, on his return to Europe, examined at the bar of the English House of Commons upon that subject; and he afterwards published his "Observations on the Slave Trade," &c. Died, 1799.

WAFER, LIONEL, an English traveller, was originally a surgeon in the navy. Having accompanied Dampier, the circumnavigator, and quarrelled with him, he was left on the isthmus of Darien; but, owing to his medical skill, the Indians treated him kindly, and gave him his liberty when an English vessel arrived on the coast. On his return, in 1690, he published an interesting account of his adventures.

WAGENAAR, JAN, a Dutch historian, was born at Amsterdam, in 1709. He was author of a History of Holland, 21 vols., for which he was appointed historiographer to his native city. He also wrote "The Present State of the United Provinces," &c. Died, 1773.

WAGENSEL, JOHANN CHRISTOPH, an eminent German scholar and polemic, was born at Nürnberg, in 1633. He was, in 1667, made professor of history and jurisprudence, and afterwards of oriental languages, at Altdorf. His "Tela Ignea Sathanæ," a controversial treatise, in refutation of the Jewish writers on the Christian religion, is a work of great ability. Died, 1705.

WAGHORN, Lieut. THOMAS, R.N., whose name is associated with the great achieve-

ment of steam communication between England and India, was born at Chatham, 1800. At 12 years of age he was appointed a midshipman, and before he had completed his 17th year he became lieutenant. After a short cruise he volunteered for the Arracan war, and having received the command of the East India Company's cutter, *Matchless*, and seen much service by land and sea, he returned to Calcutta in 1827. From this period he turned his attention to the great project he had had long secretly at heart—a steam communication between England and India; and the ardour, perseverance, and firmness with which he worked it to completion, have gained him a name among the benefactors of his race. But we regret to say that fame was all that he achieved by his arduous and long-continued exertions; for the gigantic operations in which he had been engaged exhausted his resources, and he met with but scanty assistance from those whom every consideration of humanity and liberality should have induced to lend him a helping hand. Died, 1850.

WAHLENBERG, GEORGE, an eminent botanist, was born in the province of Warmeland, in 1780. He visited the remote parts of the Scandinavian peninsula, and most of the northern countries of Europe, for the purpose of making botanical and geological researches; and on his return to Upsal, where he was superintendent of the Museum of Science, he published his "Flora Lapponicæ," "Flora Carpethorum," "Flora Upsaliensis," and "Flora Suecicæ," besides some geological treatises. Died, 1851.

WAILLY, CHARLES DE, an eminent French architect, was born in 1729, at Paris; studied at Rome; was a member of the Institute, and chief founder of the Society of the Friends of the Arts. He died in 1798. Among the buildings which he designed are the Spinola palace at Genoa, the château of Ormes in Touraine, and the Odéon at Paris.

WAKE, Sir ISAAC, an able diplomatist and miscellaneous writer, born at Billing, in Northamptonshire, in 1575. He became fellow of Merton College, Oxford; and, in 1604, was chosen public orator of the university. He was afterwards employed as ambassador to several foreign courts; and, in 1619, received the honour of knighthood. He wrote several works, the principal of which was his "Rex Platonicus." Died, 1632.

WAKE, WILLIAM, archbishop of Canterbury, a learned and exemplary prelate, was born at Blandford, in Dorsetshire, in 1657, and educated at Oxford. Having entered into orders, he soon distinguished himself by the zeal with which he espoused the Protestant cause, though in opposition to the wishes of the court; and he was accordingly well received by William III. on his accession to the throne. He was, successively, king's chaplain, rector of St James's,

Westminster, he was advanced, and, in 1716, to the see of Canterbury; in which he distinguished himself by his liberality. He was the author of the "Memoirs for which he published the memoirs of the Apostolical Church and Clergy in 17 volumes of "Sermons" is a portrait of Wake in the National Collection.

WAKEFIELD, the name of the "Wakefield," was born the sons of Edward in Ireland, and was himself a member of the House of Commons in 1828 as the representative of Newgate, and was a member of the House of Commons, of the House of Commons, performed at the House of Commons, a good account of himself, his family, his convict settlements, first-fruits of them from Sydney,"

of statesmen. "View of the Affairs of the House of Commons after a committee was appointed to inquire into the colonial lands, before the committee had been formed, the system had been established, the colony of New South Wales, the colony of New South Wales, at low prices to be obtained by the emigrants. Mr. Wakefield's system of transport of Mr. Hunt, or of the "Spence's" worth; and by the introduction of a convict transportation land Association, Wakefield as the formation of the same time he was the disaffection of the colony, and as the Duke of Durham, who was general, he contributed to the formation of government statesman, Charles Wakefield, who was official secretary at that occasion, by this time he had spent some time and at last settled at Wellington.

WAKEFIELD, the name of the Wakefield scholar and clergyman, in 1756. He was a member of Jesus College,

Westminster, and dean of Exeter. In 1705 he was advanced to the bishopric of Lincoln; and, in 1716, he was raised to the see of Canterbury; in which station he distinguished himself by his moderation, firmness, and liberality. He endeavoured to promote a union of the English and Gallican churches, for which he was grossly calumniated, though the measure was well meant. He published a translation of the "Epistles of the Apostolical Fathers," an "Exposition of the Church Catechism," "The State of the Church and Clergy of England," and three volumes of "Sermons." Died, 1737. There is a portrait of Archbishop Wake in the National Collection.

WAKEFIELD, EDWARD GIBBON, founder of the "Wakefield System of Colonization," was born about 1786. He was one of the sons of Edward Turner, author of a book on "Ireland, Statistical and Political," and was himself first known to the public in 1826 as the hero of an abduction case, which ended with his three years' imprisonment in Newgate, and the dissolution, by act of parliament, of the marriage, which had been performed at Gretna Green. He turned to good account his prison experiences; made himself familiar with all the details of our convict settlements, and gave the world the first-fruits of his reflections in his "Letters from Sydney," which attracted the attention of statesmen. In 1833 he published his "View of the Art of Colonization," and soon after a committee of the House of Commons was appointed to inquire into the disposal of colonial lands. Wakefield gave evidence before the committee; but meanwhile his system had been adopted by the founders of the colony of South Australia. The principle of his system is that the new lands of the colony should be sold in small allotments at low prices to settlers, and the funds thus obtained be expended in carrying out fresh emigrants. Mr Wakefield next attacked the system of transportation; gained the support of Mr Rintoul, the able founder and editor of the "Spectator," and of Sir W. Molesworth; and by the conclusive evidence produced before the committee on the subject procured in a few years the abolition of convict transportation. In 1837 the New Zealand Association was established, and Mr Wakefield as director took a leading part in the formation of the new colony. At the same time he pointed out the real cause of the disaffection then showing itself in Canada, and as private secretary to the earl of Durham, who was sent out as governor-general, he rendered valuable service, and contributed to the introduction of the new form of government. The distinguished statesman, Charles Buller, too early lost, was official secretary to Lord Durham on that occasion. Over-work and anxiety had by this time broken Mr Wakefield's health, and he had to retire from public life. He spent some time in the south of France, and at last settled in New Zealand. He died at Wellington, in that colony, May 16, 1862.

WAKEFIELD, GILBERT, an eminent scholar and critic, was born at Nottingham, in 1736. He took his degree of B.A. at Jesus College, Cambridge, in 1776, and at

the same time was elected to a fellowship. On entering into orders, he held a curacy at Stockport, in Cheshire, and next at Liverpool; but he grew dissatisfied with the doctrines of the church of England, and left it to become classical teacher in the academy at Warrington. In 1790 he removed to the dissenting college at Hackney, his connection with which he ended in about a year. Soon after this he published a pamphlet against public worship, which startled many of his most ardent admirers, and was answered chiefly by dissenters. He wrote some pamphlets against the government, of which no notice was taken, until his letter to the bishop of Llandaff appeared, when the attorney-general instituted a prosecution against him and the publisher. Mr Wakefield was sentenced to be imprisoned two years in Dorchester gaol, from which he was liberated in May, 1801, but died of a fever in September following. The principal of his works are, a "Translation of the New Testament," 2 vols.; an edition of Lucretius," 3 vols.; an "Inquiry into the Opinions of the Christian Writers of the Three first Centuries, concerning the Person of Jesus Christ," 4 vols.; and the "Silva Critica."

WAKEFIELD, PRISCILLA, well known by the many ingenious works which she wrote for the young. She was the original promoter of banks for the savings of the poor. She resided for many years at Tottenham, in Middlesex; but died at Ipswich, in Suffolk, in 1832, aged 82.

WALDENSIS, THOMAS, an English Carmelite, whose real name was Netter, was born at Walden, in Essex, about 1367. He studied at Oxford; and, in 1409, was sent, as a champion of the church against heretics, by Henry IV. to the council of Pisa. Henry V. reposed entire confidence in him, made him his confessor, sent him to the council of Constance, in 1415, and died in his arms at Vincennes. He became no less a favourite with the young monarch, whom he attended to France, and died there in 1430. Waldensis was author of a work in 3 vols. folio, entitled, "Doctrinale Antiquum Fidei Ecclesie Catholicae." Russell, bishop of Lincoln, made a compendium of this work, to facilitate for his successors the detection of heresy!

WALDO, PETER. [VALDO.]

WALLES, WILLIAM, mathematician and astronomer, was born about 1734; went to Hudson's Bay, in 1769, to observe the transit of Venus; accompanied Captain Cook in two voyages round the world; became mathematical master at Christ's Hospital, and secretary to the Board of Longitude; and died in 1798. Among his works are, "Astronomical Observations on the Southern Hemisphere," a treatise on the "Discovery of the Longitude by Time-keepers," and an "Inquiry concerning the Population of England and Wales."

WALKER, CLEMENT, a political writer of the 17th century, was born at Cliffe, in Dorsetshire; was educated at Christchurch, Oxford; and became M.P. for Wells. In parliament he acted with the Presbyterians, and he was violently hostile to the Independents, against whom he published, in 1648, his "History of Independency." He

was committed to the Tower by Cromwell, and while imprisoned wrote his violent treatise, entitled "The High Court of Justice, or Cromwell's New Slaughter-House." He died in prison in 1651.

WALKER, SIR EDWARD, historian and herald, was born at Netherstowey, in Somersetshire. He was made clerk of the privy-council in 1641, and received the honour of knighthood; attended Charles II. in his exile, and was appointed by him garter-king-at-arms. Died, 1677. He is said to have written "Iter Carolinum, or an Account of the Marches, &c., of King Charles I.," "Military Discoveries," "Historical Discourses," &c.

WALKER, GEORGE, was born of English parents, in county Tyrone, in Ireland; and is celebrated for his heroic defence of Londonderry against James II. He enjoyed much favour with William III., whom he accompanied throughout his Irish campaigns, and fell at the battle of the Boyne, in 1690.

WALKER, JOHN, the lexicographer, was born in 1732, at Friem Barnet, in Hertfordshire. He was at one time master of a school at Kensington, and subsequently a lecturer on elocution, which art he had studied with a view to the stage. His principal works are the well-known "Critical Pronouncing Dictionary," a "Rhyming Dictionary," "Elements of Elocution," and a "Rhetorical Grammar." Died, 1807.

WALKER, ROBERT, an English portrait painter, who flourished about the middle of the 17th century. Nothing seems to be known of his life, but he is remembered as the principal painter employed by Cromwell. One of his portraits of the Protector is in the British Museum, another is in Pitti Palace at Florence, and there are several others in English collections. The portraits of many of Cromwell's great captains were painted by Walker, amongst them that of Blake, now in Wadham College, Oxford. Died about 1659.

WALL, WILLIAM, who for upwards of half a century was the incumbent of Shoreham, in Sussex, was author of a work, entitled the "History of Infant Baptism." He also wrote "Critical Notes on the Old Testament," 2 vols. &c. Died, 1728.

WALLACE, W. VINCENT, musical composer, was born at Waterford, in Ireland, in 1814. Born with a passion for music, which was early cultivated by his father, a military band master, he seems to have had an equal passion for travelling. Having attained considerable skill as a pianist and violinist, he set out at the age of 18 on a long course of wanderings, visiting successively Australia, New Zealand, India, South and North America, practising his art, and winning a high reputation as a performer. The first work which made him known in England as a composer was the opera of "Maritana," produced at Drury Lane in 1846, and which had a long run. This was soon followed by "Matilda of Hungary." He then visited Vienna and Paris, and for the recovery of his health took a long sea-voyage. In 1854 he produced "Lurline," one of his best works, and also one of the most suc-

cessful. His other works are, "The Amber Witch," "Love's Triumph," and "The Desert Flower." Wallace was essentially a melodist, and many songs of great sweetness are scattered through his works, and have become popular favourites. Among these are his "Fireside Song," "Go, thou Restless Wind!" "Sweet and Low," "Bird of the Wild Wing," &c. After a protracted illness at Paris, in 1864-65, he was removed for milder air to the Château de Itzen in the Haute Garonne, and there he died, October 12, 1865. His remains were brought to England, and interred in Kensal Green Cemetery. Wallace was a true artist and a genial man, attracting not only public admiration, but the warmest love of his private friends.

WALLACE, SIR WILLIAM, the national hero of Scotland, was born probably about 1270. He is said to have been a son of Sir Malcolm Wallace, of Ellerslie, in Renfrewshire, and to have been educated at Dundee. After Edward I. had got himself acknowledged sovereign lord of Scotland, Wallace appears to have become leader of a band of outlaws, and to have done many deeds of daring in defiance of the English authorities; and thereby to have won the confidence and revived the patriotic hopes and resolution of his countrymen. So that when the insurrection broke out, in 1297, he was chosen to be commander-in-chief. Some of the principal nobles were associated with him, but they submitted to Warrene, the guardian appointed by Edward, and signed the treaty of Irvine. Wallace, however, kept the field. He was already a knight. With his followers, still numerous, and rapidly multiplied, he carried on the war, took several towns in the north of Scotland from the English, and was besieging Dundee when the English army, led by Earl Warrene, arrived near Stirling. Marching without delay to meet it, he won a great victory at Cambuskenneth, September 19, and his country was independent once more. Pursuing the English, who abandoned all the strongholds, he crossed the border and ravaged Northumberland; and on his return was recognized as guardian of the kingdom in the name of King John (Babiol, then in the Tower of London). The jealousy of the Scottish nobles made his high position very unstable, and in the following year, 1298, Edward made a truce with France, hastened home, and without delay marched into Scotland, his fleet sailing to the Frith of Forth. The famous battle of Falkirk was fought on the 22nd of July, in which Wallace and the Scots were totally routed with great slaughter. Wallace ceased to be governor of the kingdom, and appears to have resumed the guerilla warfare in which he first distinguished himself, and thus held out for seven years. After the conclusion of the treaty with Edward, in February, 1301, in which Wallace did not join, he was declared an outlaw, and being captured near Glasgow, in 1305, by what means is unknown, was sent to London, and hung as a traitor in West Smithfield, August 24. His head was set up on London Bridge, and his limbs exposed at Newcastle, Berwick, Perth, and

Aberdeen. Es Wallace are ve large spaces in have been till whose testimon land, is at len history has tol clam question

Aberdeen. Extant contemporary notices of Wallace are very few and scanty. But the large spaces in his life left blank by history have been filled up by poetry and legend, whose testimony on the matter, out of Scotland, is at least doubtful. But whatever history has told, or legend feigned, or criticism questioned, it is certain that

—Wallace fought for Scotland; left the name

Of Wallace to be found, like a wild flower,
All over his dear country; left the deeds
Of Wallace, like a family of ghosts,
To peep the steep rocks and river banks,
Her natural sanctuaries, with a local soul
Of independence and stern liberty.

A "Life of Sir William Wallace," by Carrick, appeared in 1840; and more recently "Sir William Wallace; a Narrative of his Life and Times," by Wntson; and "Wallace, the Hero of Scotland," by Paterson.

WALLACE, WILLIAM, a Scottish mathematician, was born at Dysart in 1768. At the age of 16 he was apprenticed to a book-binder at Edinburgh, but employed his leisure hours in study, especially of mathematics. After several successful engagements in trade, he quitted it in 1793, and in the following year became assistant mathematical tutor in the academy. In 1803 he exchanged this post for that of mathematical master at the Royal Military College, which he ably filled till 1819. In that year he was chosen professor of mathematics at the university of Edinburgh. He was one of the first fellows of the Royal Astronomical Society, F.R.S.E., and LL.D., Edinburgh. His writings consist of memoirs presented to the Royal Society of Edinburgh, and the Astronomical Society, contributions to several journals, and numerous articles in the Edinburgh Encyclopedia and the Encyclopedia Britannica. He retired from the professorship in 1838, and after a long illness, died at Edinburgh in 1843. A government pension had been conferred on him.

WALLENSTEIN, ALBRECHT WENZEL ESEBIVS, Count VON WALDSTEIN, the great general of the Imperialists in the Thirty Years' War, was born in 1583, of an ancient and noble family of Bohemia. His family were Protestants, but he early lost his father and mother, and being educated by the Jesuits at Olmutz, he became a Catholic. He received the best education the age could give him, studying at the universities of Altdorf, Pavia, and Bologna. Astrology was among his studies, and the belief in it stuck to him through life. Bent on a military life, he served his first campaign against the Turks in Hungary, and displayed his dashing courage at the siege of Gran. Marrying soon after, he spent the next ten or eleven years on his estates, growing richer and richer, till he became the richest noble in Bohemia. He rendered important service to the Archduke Ferdinand in the war with the Venetians in 1617, and was soon after made a count of the Holy Roman Empire. He was for a short time commander of the Moravian *landwehr* (militia); and on the outbreak of the war in Bohemia was appointed quarter-master-general of the im-

perial army, and he not only served the emperor with his sword, but also with his purse. In 1621, and again in 1623, he defeated Bethlem Gabor, prince of Transylvania; and was soon after created duke of Friedland and prince of the Holy Roman Empire. In 1626, at the head of a large army raised by his own efforts and at his own expense, and in co-operation with the army of the League under his rival Tilly, he fought a successful campaign against Count Mansfeld and Bethlem Gabor. He conducted a second memorable campaign against the Danes in the following year, negotiated the Peace of Lubeck, and was invested with the duchy of Mecklenburg. His enemies, jealous and profoundly irritated not only by his success, his enormous wealth, and accumulated dignities, but also by his haughty and despotic behaviour, pressed their accusations against him with so much vehemence, that in 1630 he was deprived of his command. He retired silently to his estates, just as Gustavus Adolphus was on the point of invading Germany to give his support to the Protestant cause. The victories of the great Swede and the death of Tilly left no choice for the emperor but to pray his dismissed general once more to take the command. Wallenstein, after some prudent show of reluctance, agreed to do so, on condition of being absolute master of his army. Gustavus having taken up his position in an entrenched camp at Nürnberg, whose citizens enthusiastically supported him, Wallenstein, after a general review of his army at Neumark, entrenched himself in a strong position opposite Nürnberg, intending by a tedious blockade to wear out his great foe. The Swedes intercepted a large convoy from Bavaria, on its way to the Imperialists, captured the whole of it, and destroyed the escort. Want and pestilence afflicted both armies, and Gustavus, having been reinforced, made an attack on Wallenstein's lines, 21th August, 1632; but after a ten hours' action and repeated assaults, Wallenstein remained unconquered within his lines, and the Swedes had to retire. Fifteen days later the latter broke up their camp and marched towards Bavaria; Wallenstein immediately breaking up and burning his camp, and marching towards Saxony. They next met at the memorable battle of Lützen, fought in November; Gustavus fell early in the battle, but Wallenstein was defeated. The conduct of his officers was rigorously investigated, and many were punished with death. Wallenstein next marched into Silesia, then into Bavaria; carrying on negotiations with France and other courts, and evidently aiming at a high place in the empire. Fresh accusations were urged against him; his officers signed at Pilsen a declaration of their fidelity to him; and the emperor declared him a rebel, and ordered his capture, alive or dead. His estates were confiscated, some of his trusted officers were traitors, and on the 25th of February, 1634, the great commander was murdered in the castle of Egra. His memory has been cleared of the long-credited charge of treason against the emperor, and it is certain that his fall was brought about by the intrigues and lies of his personal enemies. "Waldsteins

trials" were published in 3 vols. 8vo, in 1828; and a biography by Förster in 1834. The story of Wallenstein furnished Schiller with the subject of his splendid trilogy, "Wallenstein's Camp," "The Piccolomini," and "The Death of Wallenstein;" well-known through Coleridge's magnificent translation.

WALLER, EDMUND, an English poet, was born at Coleshill, in Hertfordshire, and was educated at Eton, and at King's College, Cambridge. He was elected a member of parliament when in his 17th year, and at the age of 23 he married a rich heiress, who died soon after, and left him an infant daughter. Waller then paid his addresses to Lady Dorothea Sidney, daughter of the earl of Leicester, whom he has immortalized under the poetical name of Saccarissa; but though she admired his verses, she slighted his offers, and married the earl of Sunderland. He then married a lady of the name of Bresse, by whom he had 13 children. In the Long Parliament he represented Amersham, and was appointed one of the commissioners to treat with the king; but in 1643 he was taken up for a plot, when, to save his life, he made a confession, and after a year's imprisonment, and paying a fine of £10,000, obtained his liberty. He then went to France, and resided there till he found himself getting to the end of his resources, when he applied to Cromwell, who gave him leave to return, and restored his estate. Waller repaid the favour by a panegyric on the Protector; but he was equally lavish of his praise on Charles II., with whom he was a favourite; as he also was with James II.; and he appears to have taken advantage of his intimacy with that monarch to give him very sound advice. He now turned his thoughts to devotion, and composed "Divine Poems." He died at Beaconsfield, in 1687, aged 82. His intellectual powers were of a superior order; he was at once a prompt, elegant, and graceful speaker, while the wit and pleasantness of his conversation made him a favourite, even with those whom his abject flattery must have disgusted. English versification is much indebted to him; and for ease, gaiety, brilliancy, and wit, his amatory poetry has not been surpassed. His portrait, by John Riley, is in the National Portrait Gallery.

WALLER, Sir WILLIAM, an eminent general of the parliamentary army in the reign of Charles I., was born in 1597, in Kent, and was educated at Magdalen College and Hart-Hall, Oxford. On his return from Germany, where he had served as a volunteer in the army of the Protestant princes against the emperor, he was elected for Andover as a member of the Long Parliament. He belonged to the Presbyterian party, and, on the breaking out of the war, was made second in command under the earl of Essex. The West of England was the scene of his principal exploits; and in the early part of his career he fought with signal success, but was ultimately defeated. The Self-denying Ordinance removed him from service, and he became so much an object of suspicion to the republicans, that he was twice imprisoned. He died in 1668. He

wrote "Divine Meditations" and a "Vindication" of his Character and Conduct.

WALLERIUS, JOHAN TOTTSCHEALK, an eminent Swedish chemist and mineralogist, author of "Systema Mineralogicum," "Chemia Physica;" and other excellent works. Died, 1785.

WALLIS, JOHN, an eminent English mathematician and divine, was born in 1616, at Ashford, in Kent, and educated at Emanuel College, Cambridge. He was chosen, in 1649, Savilian professor of geometry at Oxford, and made keeper of the archives there, in 1658; was one of the earliest members of the Royal Society; and, after a long life devoted to science and his clerical duties, died in 1703. His mathematical works are included in three volumes, and his "Sermons" form a fourth.

WALMESLEY, CHARLES, a Roman Catholic divine, and an eminent mathematician, was a doctor of the Sorbonne, a monk of the Benedictine order, and vicar apostolic of the western district of England. He died at Bath, in 1797, aged 76. He was a member of the Royal Society, and the author of several mathematical treatises.

WALPOLE, Sir ROBERT, earl of Orford, prime minister of England, was born in 1676, at Houghton, his father's seat in Norfolk, and was educated at Eton, and King's College, Cambridge. He entered parliament in 1701, as member for Castle Rising, which borough his father had represented; but in the following year he was elected for Lynn. In 1708 he was appointed secretary of war; in 1709, treasurer of the navy; and, in 1710, one of the managers of Sacheverell's trial; but on the dissolution of the Whig ministry, he was dismissed from all his offices, expelled the House, and committed to the Tower, on the charge of breach of trust and notorious corruption. This was looked upon as a mere party proceeding by a majority of the people, and, on the accession of George I., the Whigs being again in the ascendant, he was made paymaster of the forces, and, subsequently, prime minister. In consequence of disputes with his colleagues, however, he was induced to resign in 1717, and he remained in opposition till 1720, when he once more became paymaster of the forces. His reputation as a financier drew all eyes towards him on the occurrence of the disasters arising from the bursting of the South Sea bubble; and Lord Sunderland being obliged to retire, Walpole was again made premier, an office which he retained for more than twenty years, in spite of incessant attacks from political enemies of the most splendid talents. In 1742 he resigned, and was created earl of Orford. He had long before received the knighthood of the Bath, and also that of the Garter. He was an able financier, a good tactician in debate, a most serviceable minister to the house of Brunswick, and a zealous friend of the Protestant succession. He died in 1745. His portrait, by Van Loo, is in the National Portrait Gallery.

WALPOLE, HORATIO, Lord, brother of the preceding, was born in 1678, held various offices under the government, and was an able diplomatist, was created a peer in 1756, and died in 1757. He wrote an answer to

Bolingbroke's political pamphlet.

WALPOLE, HORACE, earl of Orford, the youngest son of Sir Robert, was born in 1717, and was educated at Eton, and at King's College, Cambridge. Gray, the poet, was his fellow-collegian, and accompanied him in a continental tour; but they quarrelled, and separated before their return. In 1741, Walpole entered parliament, successively representing Callington, Castle Rising, and Lynn. But it was soon apparent that he took little interest in politics, he seldom joined in the debates, and in 1768 he retired wholly from public life. Literature and the fine arts were the great sources of his delight, and much of his time was dedicated to the embellishment of his Gothic villa at Strawberry Hill, near Twickenham, and to the formation of a splendid collection of works of art and relics of antiquity. He also established a private press, and printed several works there. In 1791 he succeeded to the earldom, but never took his seat in the House of Lords. His principal works are, "The Castle of Otranto," a novel, which became very popular, and is not yet forgotten; "Historic Doubts on the Life and Reign of Richard III.," "The Mysterious Mother," a tragedy; "Catalogue of Royal and Noble Authors," "Anecdotes of Painting in England," and a "Catalogue of Engravers." The two last-named works are substantially Vertue's, the engraver. [See VERTUE.] He also wrote Memoirs of the last ten years of the reign of George II., and of the first twelve years of George III. But his reputation as a writer rests chiefly on his letters, in which he is admitted to be without a rival in our language. His correspondence extends over the 62 years from 1735 to 1797, and in the last complete collection, edited by Cunningham, occupies 9 vols. 8vo. Some interesting additional glimpses into his private life are furnished in the "Journals and Correspondence of Miss Berry," just published (1865). Horace Walpole died at his London residence, 2nd March, 1797. His portrait, by an unknown hand, is in the National Portrait Gallery.

WALSH, WILLIAM, a minor English poet of the 17th century. He was the friend of Dryden and the patron of Pope, held a situation in the household of Queen Anne, and died in 1708. His poems are chiefly of an amatory character.

WALSINGHAM, Sir FRANCIS, an eminent statesman in the reign of Elizabeth, was born at Chiselhurst in Kent, in 1536. After receiving his education at King's College, Cambridge, where he acquired an excellent knowledge of languages, he entered on public life, and was sent ambassador to Paris in 1570; was there during the period of the Massacre of St Bartholomew; and after his return, in 1573, he was appointed one of the secretaries of state, and knighted. In 1583 he went on an embassy to James VI., king of Scotland; and three years afterwards sat as one of the commissioners on the trial of Queen Mary. He was a man of subtle policy, sparing neither time, trouble, nor expense in carrying such measures as he thought likely to serve the cause of the queen and embar-

raas her enemies. It has been said, that "he outdid the Jesuits in their own bow, and over-reached them in their equivocation," and that he kept 53 agents and 18 spies in foreign courts. He died in 1590.

WALSINGHAM, THOMAS, an English chronicler of the 15th century, was a native of Norfolk, and a Benedictine monk of St Alban's. He wrote "A History of England, from 1273 to the death of Henry V.," and a work entitled "Ypodigma Neustriae." His writings are for the most part plagiarisms, and contain very little original information.

WALTER, JOHN, whose name has become inseparably connected with the gigantic achievements of the press in modern times, was the son of Mr John Walter, printer to the customs, and for many years chief proprietor of the *Times* newspaper. He was born in 1773, and having, on the completion of his education, made himself acquainted with all the technicalities and routine of a large printing establishment, he, in 1803, became a joint proprietor and exclusive manager of the *Times*; and from this period, during the long course of 44 years, he devoted himself to the moral and material improvement of what is termed "the fourth estate" of the realm. Besides being among the first to impart to the daily press its vast range and celerity of information, its accuracy, and its universal correspondence, he was the first to bring the steam-engine to its assistance. The first application of steam-power to printing took place Nov. 29, 1814; and familiar as it is now, it was not made without an amount of risk, labour, and anxiety, which few men could have undergone. Mr Walter's success in the establishment of the *Times* as the "leading journal" was attained not so much by his own brilliant abilities, as by the discernment with which he sought out, and the munificence with which he rewarded, talent, wherever it could be found, and by the intuitive sagacity with which he, from time to time, felt the pulse of the nation, and prescribed accordingly. In adopting this course he necessarily exposed himself to the charge of inconsistency, and incurred the hostility of all party politicians and class interests; but for these sacrifices he was amply compensated, in witnessing the growing success of that great organ of public opinion, which it had been his glory to found, and his chief pleasure to assist and advise. Mr Walter sat in parliament from 1823 to 1837 for Berkshire, where his estate, Bearwood, was situated; in 1840 he contested Southwark unsuccessfully; in April, 1841, he was returned for Nottingham; and it is a curious circumstance that Mr Walter's vote in parliament may be said to have sealed the fate of the Melbourne administration, which he had long been combating in the press (the motion of want of confidence, which led to its overthrow, being carried only by a majority of one). Died, 1847.

WALTHER, BERNARD, an eminent astronomer of Nürnberg, in the 15th century. He studied under and assisted Regiomontanus, and is regarded as the first discoverer of the regular effect of atmospheric refraction. Died, 1504.

WALTHER VON DER VOGELWEIDE, the celebrated Minnesinger, one of the earliest German poets, belonging to the period called the "Swabian Era." He was born probably soon after 1160, and passed his life in going from court to court, patronized successively by Frederick, duke of Austria, Phillip, king of the Romans, Otto, margrave of Saxony, Hermann, landgrave of Thuringia, the Emperor Frederick II., and other princes. Walther made extensive travels, seeing Paris, North Italy, Constantinople, and the Holy Land. In 1206 he took part in the poetical contest in the Wartburg, and in the crusade of Frederick II. in 1228. His poems consist of love-songs and patriotic appeals to his countrymen, and they possess in a high degree the best qualities of the poetry of their age. The Life of this German Troubadour has been written by Uhland, and a new Life by Dr R. Menzel has appeared this year (1865). His poems have been frequently republished, and translated into modern German.

WALTON, BRIAN, a learned prelate, was born at Cleveland, in Yorkshire, in 1600. He was educated at Cambridge, and became prebendary of St Paul's, and chaplain to Charles I. He suffered considerably at the breaking out of the civil war, fled to Oxford, and there formed the plan of his "Polyglot Bible," which was published in 6 vols. folio, and to which he principally owes his literary reputation. In 1661 he was preferred to the see of Chester, but died in London soon after.

WALTON, IZAAK, the "Angler," was born at Stafford in 1593, and was carrying on the trade of a hosier in Fleet Street, near Chancery Lane, in 1624. Two years later he married a lady who was a descendant of Archbishop Cranmer. Left a widower in 1640, he married in 1647 a sister of Bishop Ken, by whom, as well as by his first wife he had several children. His sympathies and connections were with the royalist party in the civil war, and he discharged a dangerous office for Charles II. after the battle of Worcester. His clunges of residence it is hardly possible to ascertain, but after the death of his second wife, in 1662, he appears to have gone to live at Winchester, with his friend Dr Morley, then bishop of that see. Walton numbered among his friends Dr Donne, Sir Henry Wotton, Bishop Sanderson, and Charles Cotton. His principal work is the "Complete Angler, or Contemplative Man's Recreation," which first appeared in 1653, and soon established itself as a general favourite, not only with lovers of the sport, but with readers of all classes, especially with those who love nature and rural life, and can relish the quiet simple utterance of pure sentiments of morality and piety. It was extended by the addition of a treatise by Cotton in the author's lifetime, and has since been constantly in demand. A good edition by Sir Harris Nicolas was published in 1833. Walton's pleasant Lives of Hooker, Sanderson, Wotton, Donne, and Herbert have enjoyed a popularity almost as great as his "Angler," and deserve to retain it. Izaak Walton was editor of the work entitled,

"Reliquie Wottonianæ." He lived to the age of 90, and died at the house of his son-in-law, at Winchester, 15th December, 1683. A small half-length portrait of him, by Huysman, was bequeathed in 1838 by one of his descendants to the National Gallery. New editions of Walton's Angler, and the Lives, have recently (1864) appeared in Bell and Daldy's beautiful Elzevir Series of standard works.

WANLEY, HUMPHRY, bibliographer, was born at Coventry, in 1672, and educated at Edmund Hall, Oxford; became secretary to the Society for Promoting Christian Knowledge, and afterwards librarian to the earl of Oxford, in whose service he died in 1726. Mr Wanley formed a catalogue of Saxon manuscripts for Dr Hickes's Thesaurus, and made numerous collections relative to archeology and bibliography.

WARBECK, PETER, or **PERKIN**, whose real history has been the subject of much speculation, and is still involved in uncertainty, made his appearance in Ireland, in the reign of Henry VII. (1492), and assumed the character and title of Richard, duke of York, the younger son of Edward IV., supposed to have been murdered in the Tower, together with his brother, by order of Richard III. Having been acknowledged by Margaret, duchess of Burgundy, as her nephew, and by France and Scotland, he proceeded to claim the crown of England, and, landing in Cornwall in 1497, was joined by some thousands of insurgents. He laid siege to Exeter; but, on the approach of the royal army, he fled to Beaulieu Abbey, in Hampshire, which sanctuary he was induced to quit, under the promise of a pardon, and he was sent in custody to the Tower of London. He was there treated as an impostor, and eventually, in 1499, was hanged, drawn, and quartered. Henry VII. published an alleged confession of the captive, purporting that he was the son of one Warbeck, or Osbeck, a converted Jew of Tournay; but many have asserted that he was an illegitimate son of Edward IV.

WARBURTON, ELIOT BARTHOLOMEW, historical and miscellaneous writer, was born near Tullamore, in Ireland, in 1810. He completed his education at Trinity College, Cambridge, and adopted the profession of the law; studying in London under Mr Praeger (Harry Cornwall) and others. After keeping terms at the Inner Temple he was called to the Irish bar, but he did not long follow his profession. In 1843 he visited the East, and afterwards published an account of his travels in the work entitled, "The Crescent and the Cross," which obtained immense popularity, and has passed through a great number of editions. After his return he lived in London, and was one of the most genial and welcome associates of many of his distinguished contemporaries. He rendered generous and valuable services to the tenantry on his estates in Galway and Kildare during the famine of 1846-47. Continuing to apply himself to literature, he published "Memoirs of Prince Rupert and the Cavaliers," "Reginald Hastings," and "Darien, or the Merchant Prince," besides contributing papers to periodicals. work, " Darien," has a peculiar interest from the fact that it contains a vivid description of the burning of a ship at sea; thus strangely foreshadowing the disaster which closed the author's career shortly afterwards. He was one of the passengers on board the steamer "Amazon," in January, 1852, and perished with the burning vessel in the bay of Biscay, 4th January.

WARBURTON, JOHN, an English antiquary and herald; author of "Vallum Romanum." Born, 1682; died, 1759.

WARBURTON, WILLIAM, bishop of Gloucester, a very eminent theological writer, critic, and controversialist, was born at Newark-upon-Trent, in 1698. He commenced his clerical career in 1726, as vicar of Griesley, in Nottinghamshire; was appointed, in 1746, preacher to the society of Lincoln's Inn; and rapidly advanced in his profession, becoming, in succession, chaplain to the king, prebendary of Durham, dean of Bristol, and, finally, bishop of Gloucester in 1759. His works are very numerous; but those for which he is most celebrated are, "A Critical and Philosophical Inquiry into the Causes of Prodiges and Miracles, as related by Historians," "The Alliance between Church and State," "The Divine Legation of Moses," "Vindication of Mr Pope's Essay on Man," and editions of Shakespeare, Pope, &c. Dr Warburton was a man of vigorous faculties, a mind fervid and vehement, supplied, by incessant and unlimited inquiry, with wonderful extent and variety of knowledge; but he was proud of his literary powers, and treated all who opposed him with haughty disdain. He died in June, 1779. A portrait of Warburton, by Phillips, is in the National Portrait Gallery. A new Life of him was recently published by the Rev. J. S. Watson.

WARD, JAMES, a celebrated animal painter, was born in London in 1769, and was first apprenticed to an engraver. After practising engraving for several years he turned to painting, and took Morland for his model. Many of his early pictures were so much in Morland's manner that they were long sold as his. In 1794 Ward was appointed painter and engraver to the prince of Wales, was elected A.R.A. in 1807, and R.A. four years later. He was a regular exhibitor at the Royal Academy for more than sixty years, his last pictures appearing in 1854. In some attempts which he made in historical and allegorical painting he was not successful. One of his best works is the "Landscape with Cattle—Alderney Hill, Cow, and Calf," now in the National Gallery. It was painted in 1820—22, in express rivalry with Paul Potter's famous "Bull," and was exhibited at the British Institution in 1823, and at Manchester in 1857. Among his other well-known works are the "Council of Horses," and "Lake and Tower in Tabley Park," both in the National Gallery; "Deer-Stalking," "Horse and Serpent," and "Bulls fighting across a Tree." Died, 1859.

WARD, JOHN, professor of rhetoric at Gresham College, was born in London in 1679, and died in 1738. He was a fellow of the Royal and Antiquarian Societies, and

wrote the "Lives of the Gresham Professors," "Lectures on Oratory," 2 vols. &c.

WARD, ROBERT PLUMER, statesman and miscellaneous writer, was born in London, 1765. His father was a Spanish merchant resident at Gibraltar, where his son Robert passed his early years. When about eight years of age, he was sent to England. He received his education at Walthamstow, where he had Mr Justice Park for a school-fellow; thence he was transferred to Christchurch, Oxford; and, after a short period of continental travel, was called to the bar at the Inner Temple, in 1790. For some years he went the western circuit, spending his long vacations at the house of his elder brother, in the Isle of Wight; and here he wrote his "Inquiry into the Foundation and History of the Law of Nations in Europe," &c., which was published in 1795, and proved successful. He was now frequently employed in cases before the privy-council; and the works relating to international and maritime law, which he produced from time to time, secured him the friendship of Lord Grenville, Sir W. Scott, and Lord Eldon, who offered him a judgeship in the admiralty court of Nova Scotia. This offer, however, he declined, and in 1802, through the influence of Pitt and Lord Mulgrave, to whom he was related by marriage, he was elected to parliament for Cokeremouth, aided the premier both by his speeches and his pen, and had just been nominated to a Welsh judgeship, in 1805, when he relinquished it for the under-secretaryship of foreign affairs, Lord Mulgrave being his chief. On the death of Mr Pitt, 1806, he retired into the country; but on the formation of the Portland ministry, in 1807, he was made one of the lords of the admiralty, exchanging this office in 1811 for the clerkship of the ordinance, which he held till 1823. He then retired from parliament and from public life. But he once more resumed the pen, and wrote "Tremaine," which, though published anonymously, produced a great sensation in literary circles, and became exceedingly popular. This was followed, in 1827, by "De Vere," which was hardly less successful; and, after some years spent in retirement, by "Illustrations of Human Life," "Pictures of the World," "Historical Essay on the Revolution of 1688," and "De Clifford," a novel in 4 vols. Mr Ward was thrice married. His second wife was Mrs Plumber Lewis, of Gilston Park, in Herts; and shortly after his marriage he assumed the name of Plumer before that of Ward. Died at Okeover Hall, Stafford, 1846, aged 81. His "Memoirs and Literary Remains" were published by the Hon. E. Phipps.

WARD, SETH, bishop of Salisbury, a learned prelate, chiefly distinguished for his skill in mathematics and astronomy. He was born in Hertfordshire; studied at Sidney Sussex College, Cambridge, of which he became a fellow; lost his fellowship during the civil war, became private tutor, and in 1649 was appointed Savilian professor of astronomy at Oxford. He subsequently became principal of Jesus College, and president of Trinity College; had various preferments after the Restoration, and was

named bishop of Exeter in 1662, and bishop of Salisbury in 1667. The dignity of chancellor of the Order of the Garter was afterwards conferred on him. Bishop Ward was public-spirited and munificent, contributing to several liberal undertakings, besides founding and endowing a College of Matrons for 10 clergymen's widows. He was one of the first fellows of the Royal Society. Born, 1617; died, 1689.

WARDLAW, DR RALPH, an eminent nonconformist divine, was born in Dalkeith in 1779, and studied at Glasgow for the ministry in connection with the United Secession Church. Tracing his descent to Ralph Erskine, he felt an hereditary attachment to that church; an attachment which he was ever ready to avow. But when on the eve of being licensed, he avowed his preference for Congregationalism, and in 1803 was ordained in North Albion Street Chapel, where he continued to labour for about twenty years, when he and his congregation removed to a splendid chapel in West George Street, which they had erected at a cost exceeding £10,000. About seven years after his ordination he became tutor in the Glasgow Theological Academy, a position which he filled with much efficiency and acceptance till his decease; and for many years he discharged his professional duties without fee or reward. His fame as a theologian attracted students of all evangelical denominations to his class-room. Dr Wardlaw was a voluminous and varied writer. He wrote on the Socinian Controversy, Infant Baptism, Christian Ethics, Church Establishments, &c.; published several volumes of discourses, and many single sermons, besides an interesting Memoir of Dr McAil, and a Treatise on Congregationalism. In private life he was greatly beloved. His manners were unaffected and conciliatory, and he was a genuine pattern of the refinements, accomplishments, and virtues which mark the scholar and Christian gentleman. Died, 1853. A Memoir of Dr Wardlaw has been published by the Rev. W. L. Alexander.

WARDLAW, HENRY, bishop of St Andrew's, and founder of the university there, was preferred to that see by Pope Benedict XIII. in 1404. Though a man of strict morals and great simplicity of character, he was a still greater enemy to what he believed to be heresy than to immorality; and he condemned to the stake those who questioned the doctrines of the Romish church. Died, 1440.

WARE, Sir James, an eminent antiquary and historian, was born at Dublin, in 1594, and died in 1666. He wrote "De Præsulibus Hiberniæ," the "History and Antiquities of Ireland," and several other works.

WARHAM, WILLIAM, an English prelate and statesman, was born in Hampshire, and educated at Winchester School, and New College, Oxford. He successively became master of the Rolls, lord chancellor, bishop of London, and archbishop of Canterbury. In 1515 he resigned the great seal on account of the differences between him and Wolsey, and died in 1532. He was the friend of Erasmus, and a great patron of literature.

WARING, EDWARD, Lucasian professor of mathematics at Cambridge, was born in Shropshire in 1736. He studied at Magdalen College, Cambridge, and was senior wrangler in 1757. In 1760 he obtained the Lucasian professorship, the duties of which occupied him till his death. He was author of several mathematical treatises: "Miscellanea Analytica," "Meditationes Algebraicæ," "Proprietates Algebraicarum Curvarum," &c., and contributed some valuable papers to the Philosophical Transactions. He was chosen F.R.S. in 1763, and died in 1793.

WARNER, JOHN, a learned prelate, born at Westminster, in 1585. He was educated at Oxford, and became successively prebendary of Canterbury, dean of Lichfield, and bishop of Rochester; suffered much for his loyalty in the civil war, but recovered his see at the Restoration; and died in 1666. He was the founder of the college at Bromley, Kent, for the widows of clergyman.

WARNER, WILLIAM, an English poet of the 16th century; author of "Albion's England," a poem once in great repute, and which passed through several editions, and "Syrinx, a Sevenfold History." Born, 1558; died, 1609.

WARREN, CHARLES, an eminent engraver, was a native of London, and for many years held a distinguished rank in his profession. He was the first who effectually removed the difficulties of engraving on steel. Died, 1823.

WARREN, Sir JOHN BORLASE, an eminent naval officer, was born in 1754, in Nottinghamshire; was educated at Winchester School, and at an early age entered the navy. He, however, afterwards studied at Cambridge, and in 1774 entered parliament. During the American war he performed several gallant actions, and rose to the rank of post-captain. On the breaking out of the French revolutionary war he equally distinguished himself; particularly in capturing, off the coast of Ireland, the Hoche man-of-war, and three frigates laden with troops for the conquest of that island. After the peace of Amiens, he was appointed ambassador to Russia, in which post he remained until 1805. He attained the rank of admiral in 1810, and died in 1822.

WARREN, Sir PETER, an able English admiral, born in 1703, entered the navy when very young, and gradually rose to the rank of commodore. In 1745 he commanded a squadron, with which he attacked and took possession of Louisbourg; and in 1747 he fell in with a French squadron, which he completely defeated, capturing several of their men-of-war. This last exploit rendered him very popular, and he was returned M.P. for Westminster. Died, 1752.

WARRINGTON, Earl of. [BOOTH, HENRY.]

WARTON, Dr JOSEPH, son of Thomas Warton, professor of poetry at Oxford, was born in 1722, at Dunsford, in Surrey; was educated at Winchester School and Oriel College, Oxford; became curate of Chelsea, and rector of Tunworth; and, in 1766, was advanced to the station of head-master at Winchester, where he presided with high reputation nearly 30 years. In 1788 he ob-

tained a stall in the choir, and the rectory was changed for Upham, in Hampshire, where his chief works are, a translation of Virgil.

WARTON, Theophilus, an English poet, was born at Winchelsea, in Kent, and distinguished himself by a poetical vindication of his reflections on Mass Spenser's Faery Queen, and prepared the edition of the professors, which he filled for the first volume of Poetry was published second and third, 1781. His plan of the period from the but when he had written his abandoned, the un-Whithead as p. 1790 Besides the wrote some elegies various other liter-

WARWICK, John, a king-maker. He was the elder earl of Salisbury, become possessor of the Warwick family. His personal abilities, his endowments, and his family connections, made him the favourite of the life would be all roses, in which Duke of York, failed to take the side his dashing courtier in 1455, when he the victory of then appointed governor or cap a short interval, May, 1458, he attacked, and after several of them. attempt was made him, and the war. But after some army was dispersed father retired to a piratical warfare in Kent with a by large number on July 10th at Northampton. Queen's army, with of York at Wake-

tained a stall in the cathedral of Winchester, and the rectory of Easton, which he exchanged for Upham. In 1793 he retired from the school to his rectory of Wickham, in Hampshire, where he died in 1806. His chief works are, an "Essay on the Writings and Genius of Pope," and translations from Virgil.

WARTON, THOMAS, brother of the preceding, was born in 1728; received his education at Winchester School and Trinity College, Oxford; and in his 20th year he distinguished himself by his "Triumph of Isis," a poetical vindication of Oxford against the reflections of Mason. His "Observations on Speaser's Fairy Queen," published in 1754, made him advantageously known as a critic, and prepared the way for his election, in 1757, to the professorship of poetry at Oxford, which he filled for 10 years with great ability. The first volume of his "History of English Poetry" was published in 1774, and the second and third, respectively, in 1778 and 1781. His plan was extensive, including the period from the 11th to the 18th century; but when he had gone as far as the Elizabethan writers he suspended, and ultimately abandoned, the undertaking. He succeeded Whitehead as poet-laureate, and died in 1790. Besides the works above noticed, he wrote some elegant poems, and performed various other literary labours.

WARWICK, JOHN DUDLEY, Earl of [DUDLEY.]

WARWICK, RICHARD NEVILLE, Earl of, "the king-maker," was born about 1428. He was the eldest son of Richard Neville, earl of Salisbury, and having by marriage become possessor of the immense estates of the Warwick family, was created earl of Warwick, when about the age of twenty-one. His personal character and great abilities, his enormous wealth and lavish expenditure, and his extended and important family connections, made him at once the mightiest English noble of his time, and the favourite of the people. The story of his life would be also that of the Wars of the Roses, in which he is the most prominent figure. A family alliance with Richard, duke of York, father of Edward IV., led him to take the side of the house of York, and his dashing courage at the battle of St Alban's in 1455, when he led the van, chiefly decided the victory of the duke of York. He was then appointed to the important post of governor or captain of Calais, which, with a short interval, he held till his death. In May, 1458, he attacked a fleet of Lübeck vessels, and after a sharp combat, captured several of them. A few months later an attempt was made in London to assassinate him, and the war soon after was renewed. But after some trifling successes the Yorkist army was dispersed, and Warwick with his father retired to Calais. After carrying on a piratical warfare for a short time, he landed in Kent with an army in 1460; was joined by large numbers, marched on London, and on July 10th defeated the Lancastrians at Northampton, and took Henry VI. prisoner. Queen Margaret escaped and raised an army, with which she defeated the duke of York at Wakefield, in December, and the

earl of Warwick at St Alban's, in February, 1461. But these victories were fruitless, for Warwick joined by Edward, now duke of York, compelled the royal army to retire to the north, and occupied London, where Edward was at once proclaimed king. Warwick defeated the Lancastrians at Towton, and was rewarded for that and other important services by various appointments and large grants of forfeited estates. He was made captain of Dover, warden of the West Marches, and lord chamberlain, his two brothers being similarly honoured with high appointments. But Warwick and his family did not long retain the favour of the king. Edward married in 1464 Elizabeth Woodville, and jealousies naturally grew up between the Nevilles and her relations. Other causes probably contributed to the alienation, which was shown in 1467 by the king's depriving George Neville, archbishop of York, of the great seal; afterwards by insurrections in the north; and in 1470 by the alliance of Warwick with Queen Margaret, and the marriage of her son, Prince Edward, to Anne Neville, younger daughter of the great earl. Warwick then invaded England with a fresh force, proclaimed and restored Henry VI., and with the duke of Clarence, Edward's brother, entered London in triumph. The Nevilles were reinstated in their dignities and offices, and Warwick was appointed in addition lord high admiral. But once more the tide turned; Edward, landing in Yorkshire in March, 1471, was joined by Clarence and the archbishop of York, and won the decisive victory of Barnet, 14th April, at which the king-maker and his brother, Lord Montague, were killed. Their bodies were exposed to public view in London, and afterwards buried in Bisham Abbey, in Berkshire. The widow of Warwick long survived him, taking refuge for a time at Beaulieu; was reduced to penury, and was still living in 1490.

WASHINGTON, GEORGE, founder and first president of the United States of America, born in Westmoreland County, Virginia, in 1732. His family, which came from the north of England, had settled in Virginia about the middle of the 17th century. At ten years of age he lost his father, and his education appears to have been of very limited character. At 16 we find him studying mathematics and land-surveying, and through Lord Fairfax he obtained an appointment as public surveyor. In 1751 he was set over one of the military districts of Virginia as adjutant-general, and discharged with great energy and success an important mission rendered necessary in 1753 by the encroachments of the French on the province. Washington served his first campaign against the French in 1754. In the following year, war having been declared between Great Britain and France, he served under General Braddock, and distinguished himself at the disastrous battle of Monongahela. He resigned his commission as commander of the Militia in 1758, and devoted himself for the next fifteen years chiefly to his private affairs. He was, however, very constant in attendance as a representative in the House of Burgesses. In 1759 he mar-

ried. During the unhappy contests which arose between the colonies and the parent state Washington firmly opposed the right of taxation claimed by the latter. He was a member of the first congress in 1774, and in the following year was named commander-in-chief of the continental army. His first task was the reorganization of the army, the difficulty of which was seriously increased by the want of discipline, the unfriendliness of the officers, and the interference of the civil powers. The first important operation undertaken was the fortifying of Dorchester heights, near Boston, in 1776, which led to the evacuation of the city by the British, who, however, soon gained possession of New York. In the following year the battles of the Brandywine and Germantown were fought, and the Americans were defeated in both. In 1778 an alliance was formed with the French, and Philadelphia was evacuated by the British. The campaigns of the two following years were not marked by any decisive events. In 1781 a mutiny broke out in the American army, which was promptly quelled. In the autumn of that year a joint attack was made on York-town, then held by the British under Lord Cornwallis, by the American and French armies. It was completely successful; Cornwallis being compelled to capitulate. The struggle was virtually at an end. In 1783 the British evacuated New York, peace was signed, and the independence of the States acknowledged. Washington resigned his commission, and received the warmest acknowledgment from congress of the great services he had rendered to his country. After several years of retirement, full, however, of activity not for private ends alone, Washington was elected in 1789 first president of the United States. To this high office he was re-elected in 1793, and was succeeded by John Adams in 1797. He took leave of the nation in a proclamation worthy of him, and died in December, 1799. Washington left no children. He was tall, and of noble and graceful bearing; a man of singular good sense (which it has been said was his genius) and of consummate prudence; above all, true, inflexibly just, and absolutely brave. He was a man of action, not of words, and his success was as perfect as his task was singular and difficult. No example is to be found of a purer, more unselfish devotion to the service of one's country, than that furnished by the career of Washington.

WAT TYLER, or WAT THE TYLER, leader of the Insurrection which broke out in Kent, in the reign of Richard II., was a working man of Dartford, in Kent. A poll-tax having been granted by the parliament in 1380, on every person above 15 years of age, one of the collectors demanded it for Wat's daughter who was not of that age, and behaving scandalously to enforce the claim, Wat killed him on the spot. The smouldering discontent of the rural population at once burst into a flame; and Wat, as if by mere accident, found himself captain of the host, June, 1381. After assembling them on Blackheath, he led them to London, where they sacked Lambeth Palace, burnt the palace of the duke of Lancaster and

other great buildings, seized the Tower, and killed the archbishop of Canterbury, the royal treasurer, and many wealthy persons. On June 15th the young king met the insurgents in Smithfield, and during the conference Wat Tyler was killed by the lord mayor of London. Richard then got his followers out of London by smooth promises of granting them their reasonable demands; and as soon as danger was past the royal promises were broken, and 1500 of those who had trusted in them were executed.

WATELET, CLAUDE HENRI, a French writer on art, was born at Paris in 1718. He was the son of a receiver-general, and on his father's death, in 1749, succeeded him in his office. He learnt painting and etching in his youth, visited Italy twice, travelled in the Netherlands, and on his return was received as associate of the Academy of Painting. His poem entitled "L'Art de Peindre" gained him admission to the French Academy. He was also a member of several foreign academies. Watelet's principal work is the "Dictionnaire de Peinture, de Gravure et de Sculpture," which was completed by Lesques, and published in 1792. Died, 1786.

WATERLAND, DANIEL, a learned divine and controversialist, was born in 1683, at Wasely, in Lincolnshire, and was educated at Magdalen College, Cambridge, of which he became master. At his death, in 1740, he was chancellor of York, archdeacon of Middlesex, canon of Windsor, and vicar of Twickenham. Among his works are "A History of the Athanasian Creed," "Scripture vindicated," "A Defence of Christ's Divinity," and "A Review of the Doctrine of the Eucharist."

WATERLOO, ANTHONY, an eminent Dutch painter, born about 1618, and died in 1662. He excelled in landscapes, and was distinguished as an engraver.

WATERTON, CHARLES, the celebrated naturalist, was born in 1782. He was the son of Thomas Waterton, Esq., of Walton Hall, near Wakefield, representative of an ancient and honourable Lincolnshire family, zealous adherents of the Catholic faith. Through his grandmother he was lineally descended from Sir Thomas More. He was educated at Stonyhurst College, but had far more relish for out-of-door sports, especially such as enlarged his knowledge of natural history, than for books. He, nevertheless, made respectable attainments in classical literature. After completing his education he spent many years in foreign travel: visiting Spain, managing some estates in Demerara, and making several visits to South America for the purpose of studying its rich and varied forms of life and nature. Record of these journeys he gave to the world in his very lively and charming volume, entitled "Wanderings in South America." Settling in his ancestral home, built on a small island in the midst of lovely landscapes, he was surrounded with the scenes and the creatures that he loved; and by prohibiting the use of fire-arms on his grounds, he made them the chosen haunt of many rare and shy birds and animals. A zealous Catholic, but no bigot, genial, cultivated, and hospitable,

he enjoyed the love of his friends, ten health was sound was caused by a May 26, 1865. He wood, and his ceremony, conducting directions," he published on Natural History to Loudon's Magazine.

WATSON, CHARLES, born at Westminster navy at an early motion, and in 1770. He served in the navy to cruise with distinction with the French, year he was promoted admiral. He was command of the expedition of which his skill abated. His last in the attack on 1757. Five months, and he died monument was erected.

WATSON, RICHARD, prelate, was born in Westmoreland; he was a fellow, bridge; was chosen chemistry; and in of divinity. He was an earlier fellow of early distinguished his political opinion before the union under the title of revolution vindicated usual degree of printed his "A which he addressed was advanced to with permission. Ely, his professional preferment published a letter ferbury, containing church revenues at a second time religion, in his "signed as an answer Reason." The reply to the most so fiercely and it is still worth of some historical terpiece of style vulgar opponent tees and candour lar and gentleman also the author vols.; "Sermon sars." Died, 18 WATSON, ROBERT, at St Andrew's, obtained the pro and belles lettres also became printed in 1780. Dr

he enjoyed the hearty esteem and respect of his friends, tenants, and dependents. His health was sound to the last, and his death was caused by a fall in his own grounds, May 26, 1865. He was buried in his favourite wood, and his funeral was a very imposing ceremony, conducted according to his own directions. Besides the well-known "Wanderings," he published a volume of "Essays on Natural History," originally contributed to London's Magazine.

WATSON, CHARLES, British admiral, was born at Westminster in 1714. Entering the navy at an early age, he soon earned promotion, and in 1738 was appointed captain. He served in the Mediterranean, was employed to cruise off Cadix, and took part with distinction in various engagements with the French, in 1747. In the following year he was promoted to the rank of rear-admiral. He was sent in 1754 to India, in command of the squadron forming part of the expedition of Clive, to the success of which his skill and daring greatly contributed. His last service was to co-operate in the attack on Chandernagore, in March, 1757. Five months later his health gave way, and he died in India, August, 1757. A monument was erected to him in Westminster Abt. y.

WATSON, RICHARD, a celebrated English prelate, was born in 1737, at Heversham, in Westmoreland; became a sizar, and afterwards a fellow, of Trinity College, Cambridge; was chosen, in 1764, professor of chemistry; and in 1771 he succeeded to that of divinity. He had been chosen two years earlier fellow of the Royal Society. He early distinguished himself by a display of his political opinions, in a sermon preached before the university, which was printed under the title of the "Principles of the Revolution vindicated," and excited an unusual degree of public attention. In 1776 he printed his "Apology for Christianity," which he addressed to Gibbon. In 1782 he was advanced to the bishopric of Llandaff, with permission to hold the archdeaconry of Ely, his professorship, and other ecclesiastical preferments. On this promotion he published a letter to the archbishop of Canterbury, containing a plan for equalizing church revenues. In 1796 the bishop appeared a second time as the defender of revealed religion, in his "Apology for the Bible," designed as an answer to Tom Paine's "Age of Reason." The "Apology" is an inadequate reply to the most weighty questions raised so fiercely and ignorantly by Tom Paine, but it is still worth reading, not only as a book of some historical importance, but as a masterpiece of style; handling a coarse and vulgar opponent with the "splendid courtesy and candour" of an accomplished scholar and gentleman. Bishop Watson was also the author of "Chemical Essays," 5 vols.; "Sermons," and "Theological Essays." Died, 1816.

WATSON, ROBERT, historian, was born at St Andrew's, in Scotland, in 1730. He obtained the professorship of logic, rhetoric, and belles lettres at St Andrew's, where he also became principal of the university, and died in 1780. Dr Watson wrote "The History

of Philip II.," and commenced that of Philip III., which was completed and published, for the benefit of his family, by Dr Thomson.

WATT, JAMES, the great civil engineer, who for the important improvements which he made in the steam-engine almost merits the title of its inventor, was the son of a wealthy and honourable citizen of Greenock, and was born there January 19, 1736. Of feeble health but unusually quick intelligence, signs were not wanting in his childhood of the passion that was to rule him as a man. Acquiring a taste for mechanics, he chose the trade of mathematical instrument maker, learnt it in London, where he spent a year (1755-56), and settled at Glasgow. He was refused leave to establish a shop because he was not a freeman of the borough, but what the town refused the university gave him, and he took up his quarters within the university buildings. Diligent and successful in his trade, he was at the same time a close student, and enjoyed the kindly regard of the leading men of the university, among them Adam Smith, Dr Black, the chemist, Simson, the mathematician, and Dr Dick. His studies and experiments on the applicability of steam as a motive power began about 1758, and were shared by his friend Robison, afterwards professor of natural philosophy. Three years later he constructed a model high-pressure engine, and in 1763 the examination and repair of a model of Newcomen's engine led him straight into the path of original invention. The principal features of his own engine were clearly outlined in 1763, and he made a second model. A third and larger one was completed three years later, and in January, 1769, he obtained a patent for it. He had just before given up his original trade, and now being prevented by untoward circumstances from continuing his experiments, he occupied himself with various engineering works, canals, bridges, harbours, &c. He practised also as a surveyor, and invented an improved micrometer. Early in 1771, on the invitation of Matthew Boulton, founder of the Soho Works, Birmingham, he entered into partnership with him; that by the combination of scientific faculty and business experience and sagacity, the manufacture of steam-engines might be hopefully undertaken on a large scale. A fourth model was constructed, the term of the patent was extended, and by the frank and liberal policy of the firm all kinds of difficulties, mechanical, financial, and social, were overcome, and Watt's wonderful steam-engine—with its separate condenser, uniformly warm cylinder, steam-pressed piston, and sun-and-planet wheel—took the lead in all mines and manufactories. The credit of the invention of the crank and fly-wheel was warmly disputed between Watt and Pickard, who got a patent for it. To Watt belongs the invention of the double-acting principle, parallel motion, and the regulating action of the governor. Years of vexatious and most unjust litigation harassed the noble inventor, and in 1800 he retired from the business, his sons having been admitted to it several years previously. Watt was the inventor of the "copying press," and of a method of

warning houses by steam. He also introduced into this country the method of bleaching by chlorine, and by his researches and suggestions on water came very near to the honour of the discovery of its composition, which was the triumph of Cavendish. The evening of his laborious and useful life was calm and cheerful. His intellect remained unimpaired to the last, and his vast stores of knowledge, admirable powers of conversation, simplicity of nature, and affectionate disposition, made him the charm of an admiring circle. Public honours were not wanting as acknowledgments of his great services to the world. He was chosen fellow of the Royal Societies of London and Edinburgh, correspondent of the Institute of France, and foreign associate of the Academy of Sciences; and was created LL.D. by the university of Glasgow. Died, August 25, 1819. A statue by Chantrey was erected to the memory of Watt in Westminster Abbey by national subscription; and a copy in bronze is placed in front of the Infirmary at Manchester. In 1854 appeared an important work on the Life of Watt, entitled "The Origin and Progress of the Mechanical Inventions of James Watt, illustrated by his Correspondence with his Friends and the Specifications of his Patents," by James P. Muirhead, M.A., in 3 vols. 8vo. And a new work has just appeared (1865), entitled "Lives of Boulton and Watt," by Samuel Smiles, author of "Lives of the Engineers." A portrait of Watt, by C. F. de Breda, R.A., is in the National Portrait Gallery.

WATT, GREGORY, son of the preceding, by his second wife, was born in 1777. He completed his education at the university of Glasgow, and being sent on account of his delicate health into Cornwall, he lodged in the house of the mother of Sir Humphrey Davy, and a warm friendship grew up between the two young students of science. Although Gregory Watt had been admitted to partnership in his father's business, he took no practical part in it, but his ill health did not prevent him from pursuing with zeal scientific studies and experiments. The only monument left of his rare ability is the paper entitled—"Observations on Basalt, and on the transition from the vitreous to the stony texture in the gradual refrigeration of melted Basalt," written in 1804. Died October 16, of the same year.

WATT, ROBERT, a physician and bibliographer, was born in 1774, in Ayrshire; became president of the Faculty of Physicians and Surgeons at Glasgow, and died there, in 1819. He compiled the "Bibliotheca Britannica," and wrote some medical treatises.

WATTEAU, ANTOINE, an eminent French painter, was born in 1684, at Valenciennes. He commenced as a scene painter at Paris, but his genius soon raised him above that humble occupation; and having produced a picture which gained the prize at the Academy, his ardour for the art increased, and he speedily rose to fame. His works were very numerous, but his subjects were almost limited to the class of *fêtes champêtres*, representations of a sham rural life. The fashion which he set long prevailed in French art. Died, 1721.

WATTS, ISAAC, the Nonconformist divine, poet, and miscellaneous writer, was born at Southampton, July 17, 1674. He was the eldest son of a Nonconformist schoolmaster, was fond of books from his earliest years, and received his first instructions in the Free School of his native town. In 1690 he was sent to London, and passed the next three years in an academy conducted by Mr Rowe, a dissenting minister. Watts seriously injured his health by his excessive application to his studies; and he had already begun to try his hand as verse-maker, and on Latin essays. After leaving Mr Rowe he spent two years in private study at his father's house, and in 1696 became tutor to the son of Sir John Hartopp, then residing at Stoke Newington. Watts had been brought up a Nonconformist, he continued one from conviction, and his purpose was to devote himself to the ministry. He preached his first sermon on his birthday, 1698, having been chosen assistant to Dr Chauncy. About three years later he succeeded to the pastorate of the church which then met in Mark Lane, but in consequence of a severe illness which immediately attacked him, an assistant was appointed. A still severer attack broke him down in 1712, and for rest and change he visited his friend Sir Thomas Abney, at Theobald's. This visit, fruitful of good and joy to himself and the family, was prolonged for six-and-thirty years, Watts remaining the guest of Sir Thomas and of his widow till his death. Lady Abney survived him. Watts remained pastor of his church, and preached as often as his health allowed; refusing his salary when incapacitated for his work. In his retirement he pursued his studies, and composed and published his various theological and literary works, which in their day had a large circulation, and steadily served the cause of popular education as well as of religion. His sermons and theological dissertations are very numerous. His "Logic, or the right Use of Reason in the Inquiry after Truth," was published in 1725, and became a favourite text-book in the higher schools. Among his other writings are his "Improvement of the Mind," an expansion of passages in Locke's "Conduct of the Understanding;" an "Essay towards the Encouragement of Charity Schools;" and the "Horræ Lyricæ." But Dr Watts has probably exerted his widest influence, and earned his most enduring celebrity by his metrical version of the Psalms of David, and his Hymns. These are, perhaps, now in danger of being underrated. But while it cannot be pretended that they are as a whole at all adequate expressions of the new and rich spiritual life and experience of men, it is certain that they would not have gained and held the place they occupy in religious observances unless they had much solid and appreciable truth and worth. And after all concessions are made to the depreciating critic, it must still be acknowledged that among Watts's Psalms and Hymns not a few possess the charms of truth, deep feeling, simple and felicitous expression, and are as truly poetic as they are pious. These the world will not let die. His "Divine and Moral Songs" for

children have to series, and school- they seem as perm books as Esop's Grimm's Fairy Tales, and are like of grave criticism handsomely illus Songs are among year (1865). children have taken strong hold on nurseries, and school-rooms, and home firesides; they seem us permanent a part of children's books as Esop's Fables, Robinson Crusoe, Grimm's Fairy Tales, and the Pilgrim's Progress, and are likely to remain so in defiance of grave criticism and light laughter. Two handsomely illustrated editions of these Songs are among the publications of this year (1865). The last years of this venerable man were passed in great physical weakness, and were saddened by the unkindness of some of his relations. He died peacefully, November 25, 1748, and was buried in Bunhill Fields. His monument was erected by Lady Abney and Sir John Hartopp.

WAYNFLETE, WILLIAM, a magnificent prelate of the 15th century, whose real name was Patten, was born at Wainfleet, in Lincolnshire; and was educated at Winchester School, and at Oxford. He was made provost of Eton, in 1442; bishop of Winchester, in 1447; and lord chancellor, in 1456. Died, 1486. He was the founder of Magdalen College, Oxford, and of a free school at his native place.

WEAVER, JOHN. [WEEVEL.]

WEBER, SAMUEL, an eminent English musician, particularly celebrated for his glees, was born in 1740, and was apprenticed to a cabinet-maker, but he abandoned his trade, and gained a subsistence by copying music. By study and perseverance he became an excellent composer, and also acquired several languages. Died, 1816. His glees and part songs form three volumes, and are much admired.

WEBER, CARL MARIA VON, the celebrated musical composer, was born at Eutin, in Holstein, in 1766. His father was a musician, and had him carefully educated. He learnt for a time painting and engraving, but music was his passion, and took its rightful place. Among his musical teachers were Haushkel, Michael Haydn, and Kalcher, and he began to compose at the age of twelve. After a short indulgence in the practice of lithography, he made various musical tours with his father, and about 1803 visited Vienna, where he became acquainted with the celebrated Haydn and the Abbé Vogler, from whom he received valuable help in his studies. He had now become widely known, and filled successively the offices of chapel-master at Breslau and Carlsruhe, and director of the opera at Prague; making in the mean time other professional journeys in Germany. At the close of 1816 he settled at Dresden, where he was the founder and director of the German Opera. In 1822 he went to Berlin to bring out his "Der Freischütz," the most celebrated of his compositions, and which at once gave him rank with the great masters of his art. It was produced in London and Paris two years later. In 1826 Weber visited London to superintend the production of his "Oberon," which he had composed for Covent Garden Theatre. It was well received, and twenty-four representations were directed by the composer. He was, however, seriously out of health, and died at London, June 5, 1826. Weber was a man of highly cultivated mind, of refined and

gentlemanly tastes and manners, and pure and upright in life. Of his other compositions may be named the operas of "Das Waldmädchen," recast under the title of "Sylvana," "Rübezahl," and "Euryanthe." A Life of Weber has been published by his son, and an English translation, by J. P. Simpson, M.A., appeared in 1863.

WEBER, HENRY WILLIAM, archæologist and miscellaneous writer, was born in 1783, at St Petersburg, of German parents; studied medicine at Edinburgh and at Jena; settled in Scotland, where he devoted himself to literary pursuits, and died in 1818. Among his publications are, "Metrical Romances of the Thirteenth, Fourteenth, and Fifteenth Centuries," "The Battle of Flodden Field," a poem, &c.

WEBSTER, DANIEL, one of the greatest statesmen and orators of the United States, was born at Salisbury, in New Hampshire, in 1782, the last year of the revolutionary war, and, after finishing his legal studies, was admitted to practice in 1805, in New Hampshire, where he soon obtained business and reputation. But a career in the provincial courts of that State was not very lucrative; and in 1816 he went to Boston, which was thenceforth his home. His professional fame and income increased rapidly; and he held the first rank both in the Massachusetts courts and in the Supreme Court of the United States. Many of his forensic arguments have been published, and have attracted much praise for the subtlety and closeness of reasoning and the great extent of legal learning which they display. But it is as a statesman that Daniel Webster won his chief celebrity. He took his seat in Congress as member for New Hampshire in May, 1813, and from that time to his death he was prominently before the world as one of the mightiest leaders of the great Trans-Atlantic democracy. When he was first elected to congress, war was raging between America and England, and Mr Webster at once attracted attention by his fervent eloquence in urging his countrymen to attack England by sea, and also by the historical knowledge and full acquaintance with international law which he displayed in the debates respecting the communication between America and France us to the Berlin and Milan decrees. Probably his personal advantages did much to insure his success as an orator. His figure was commanding; his countenance was remarkable even in repose, but when animated by the excitement of debate it "spoke no less audibly than his words." His gestures were vehement, without being undignified; and his voice was unrivalled in power, in clearness, and in modulated variety of tone. In 1827 he became a member of the Senate. On various occasions he was an unsuccessful candidate for the presidency. In 1839 he visited Europe, and was received both in England and France with the greatest cordiality and respect. In 1841 he became secretary for Foreign Affairs under President Harrison; and during his administration he settled with Lord Ashburton the great question of the "Boundary Line," which had more than once threatened to embroil England and the

United States. In 1850, on the accession of President Fillmore, he again became secretary of state, in which office he remained till his death. Mr Webster throughout his long political career was a steady supporter of whig principles, as the Americans then termed the principles which we designate as conservative. In 1852 he again became a candidate for the presidency; and to gain the favour of the Southern States he abandoned the opinions he had long maintained on the question of slavery, though in this case his sacrifice of principle was in vain; and it is conjectured that disappointment hastened his end. Died, 1852.

WEBSTER, JOHN, one of the greatest of early English dramatists, lived in the 17th century. So scanty is the information respecting him that his biographer and editor, Mr Dyce, confesses that he can do little more than enumerate his works. Webster's first play was that entitled "The White Devil," published in 1612. He had, however, previously composed several plays in conjunction with other dramatists, Chettle, Decker, Drayton, Heywood, &c. His "Duchess of Malfi," produced in 1616 and published seven years later, and "Appius and Virginia," published in 1654, are perhaps his greatest works. The works of Webster were first collected and edited by Mr Dyce in 1830, and a new edition, revised by him, was published in 1837.

WEBSTER, NOAH, LL.D., the eminent American lexicographer, was born in West Hartford, United States, in 1758. His ancestor, John Webster, was one of the earliest English settlers in Hartford, and was subsequently governor of Connecticut. Noah, his father, and two other Websters, were in the army on the occasion of Burgoyne's expedition to Canada. Restored to more peaceful pursuits, he continued his studies, and in 1781 was called to the bar. He abandoned the law, however, became a schoolmaster and author, and published the "First Part of a Grammatical Institute," "Sketches of American Policy," and other works, and also established and conducted a daily paper in New York. But the work on which his reputation is founded is his elaborate English Dictionary, which, notwithstanding it contains some very serious mistakes in etymology and the analogy of languages, is a vast monument of his ability and industry. Died, May 28, 1843; aged 85.

WEBSTER, THOMAS, professor of Geology in the London University, was a native of the Orkneys, and was educated as an architect. Having become acquainted with Count Rumford, whom he assisted in his researches into the principles of domestic economy, he abandoned his original profession, and engaged in scientific pursuits. His favourite study was geology; and a paper on the "Fresh-water Beds," in the Isle of Wight, which appeared in the Transactions of the Geological Society, in 1814, not only brought him into notice in that department of science, but obtained for him, in the first instance, the office of keeper of the Society's museum and draftsman, and, subsequently, those of house-secretary and curator. His last literary occupation was the "Encyclopædia of Domestic Economy." Died, Dec. 26, 1844, aged 71.

WEDDERBURN, ALEXANDER. (ROSS-LYN, Earl of.)

WEDGWOOD, JOSIAH, the great English potter, was born at Burslem in 1730, of a family long settled there as potters. The youngest of thirteen children, he was early left an orphan, and was apprenticed to his elder brother; but a severe illness left him lame and incapable of continuing his occupation as a "thrower." He soon showed great skill in the production of novel kinds of ornamental and coloured pottery. After carrying on business with two partners successively, he established himself at Burslem in 1759, and his business grew rapidly. He made tortoise-shell and marble plates, flower-vases, white stone-ware, and green glazed earthenware, and soon produced his beautiful cream-coloured Queen's-ware, and the unglazed black porcelain. In this ware he imitated the vases of the ancients. In 1766, requiring larger works, he founded the village of Etruria, opened a house in London, which was conducted by his new partner, Bentley, and soon after engaged the great sculptor Flaxman as a designer. Wedgwood by his energy, good taste, and success almost created a new branch of commerce, and by the beautiful works of art which he produced—cameos, medallions, miniature sculptures, painted vases, &c.—greatly raised the standard of national taste, and excited a healthy rivalry abroad. In 1790 he achieved his greatest triumph in his fine imitation of the Portland (Barberini) Vase, of which he executed fifty copies. He was chosen F.R.S. and F.S.A.; was chief promoter of the Grand Trunk Canal; established schools, and made roads for the potteries; amassed a great fortune, and died at Etruria, in 1795. A new life of this artist by Mr Jewitt has recently appeared, 1865, and another by Miss Meteyard is in course of publication.

WEENIX, or WEENIX, JAN BAPTISTA, the elder, an eminent Dutch painter, was born at Amsterdam in 1621. He was the son of an architect, and early displaying remarkable talent for drawing, became a pupil of Bloemart at Utrecht, and afterwards of Nicholas Mojer. He visited Rome, and spent several years there. His pictures are of almost all classes of subjects, and though rapidly executed, are sometimes finely finished. He excelled in painting birds. Weenix married a daughter of the painter Giles Hondelcoeter. Died, 1660.

WEENIX, JAN, the younger, son of the preceding, and also an excellent painter, was born at Amsterdam in 1644. He was taught by his father, and ultimately surpassed him, especially in colouring. His reputation rests chiefly on his hunting-pieces and pictures of dead game. He was for some time in the service of Johann Wilhelm, the elector-palatine. Died at Amsterdam, 1719.

WEEVER, JOHN, an English antiquary, was a native of Lancashire, and educated at Cambridge. He published a work of great interest and value, entitled "Ancient Funerary Monuments in Great Britain and Ireland and Isles adjacent," and died about 1632.

WEIGEL, EHRARD, an eminent mathematician and astronomer of the 17th century. Died, 1699.

WEIMAR, ANNE AMALIE, Duchess of SAXE-WEIMAR.]

WEINBLENNER, FRIEDRICH, an eminent German architect, born at Carlsruhe, in 1766. After studying in Italy, and travelling over the continent for the purpose of examining works of art, he returned to his native country, and founded an institution for the study of architecture; and from this school issued many distinguished artists. He erected several splendid edifices at Carlsruhe, Leipsic, and other places, and wrote treatises on architecture. Died, 1826.

WEISSE, CHRISTIAN FELIX, a German poet and littérateur, born at Annaberg, in Saxony, in 1726. He studied at the university of Leipsic, where he gained the friendship of Lessing; attempted the composition of tragedies, then of comedies, more successfully, and at last found his right place as a writer of books for children, and of works on education. The most celebrated of these is that entitled "Der Kinder-Freund" or "Children's Friend," which was published periodically, and in its complete form fills many volumes. It furnished Berquin with the model and some of the materials of his "Aml des Enfants." Weisse wrote also some "Lieder für Kinder." He was editor for several years of the "Bibliothek der schönen Wissenschaften und freien Künste." Died, 1804. His son, CHRISTIAN ERNST, was an eminent jurist, and his grandson, CHRISTIAN HERMANN, a Leipsic professor of philosophy.

WELD, THOMAS, an English cardinal, was born in 1773, at Lulworth Castle, Dorsetshire, and was the eldest son of Thomas Weld, Esq., founder of the Roman Catholic College at Stoneyhurst, in Lancashire. He succeeded to his ancestral estates in 1810; but, on the death of his wife, in 1815, he took orders, and was some years afterwards consecrated condutor bishop of Canada. Being in Italy with his daughter, Lady de Clifford, in 1829, Pope Pius VIII. elevated him to the dignity of a cardinal. For many years previous he had devoted the whole of his time, and a great part of his fortune, to pious and charitable purposes; and he now relinquished his estates to his brother, Joseph Weld, Esq., who, in 1830, received Charles X. of France, and his family, as guests at Lulworth Castle, previous to their removal to Holyrood House. He died, April 16, 1837.

WELLESLEY, Sir ARTHUR. [WELLINGTON, Duke of.]

WELLESLEY, RICHARD COLLEY, Marquis, a distinguished British statesman and diplomatist, was the eldest child of the first earl of Mornington, and was born at Dublin, in June, 1760. At an early age he was placed at Eton, and in due time transferred to Oxford; and at both those seats of learning his superior classical attainments attracted the notice of his contemporaries. His father dying in 1781, the young earl of Mornington took his seat in the Irish House of Peers; but it was not till after his entrance into the British House of Commons (first as member for Beeralston, and subsequently for New Windsor) that his statesman-like qualities could find ample room for their develop-

ment. He was created a British privy-councillor in 1793; and in 1797 he succeeded Lord Cornwallis as governor-general of India, being at the same time raised to the British peerage by the title of Baron Wellesley. Accompanied by his illustrious brother, Colonel Wellesley, afterwards duke of Wellington, he arrived in India at a most critical period, to take the supreme command. Buonaparte had accomplished the conquest of Egypt, and was supposed to meditate an attack upon our Indian possessions. The spirit of Tippoo Saib, sovereign of the Mysore, rankled under his losses; and emissaries from the French government encouraged him in his secret plans for the recovery of the district of Colmbator and the hill fortresses which he had been compelled to surrender. The first step taken by his lordship was to secure and fortify the island of Perim, which commands the entrance to the Straits of Habelmandeb; the next was to negotiate with Tippoo for the purpose of inducing him to abstain from intercourse with the French. The sultan, however, entertained a strong conviction that his true interests would be promoted by an alliance with the Directory of France. This being evident to the governor-general, he determined to strike an immediate blow, and the army, under General (afterwards Lord) Harris, was ordered to invest Seringapatam. The siege lasted a month, the town was taken by assault, the sultan slain, and his dominions partitioned. The governor-general was immediately raised a step in the Irish peerage, and received the title of Marquis Wellesley. He soon made a viceregal progress through the northern provinces of India, visiting the native princes, redressing grievances, and laying upon a broad basis the foundations of that vast empire. We pass over the various achievements by which, under the governor-general's direction, his illustrious brother and other British commanders succeeded in bringing to a successful termination the desperate wars in which they were engaged. At length, in 1805, he was, at his own request, recalled; the East India Company having, in the course of his wise administration, raised their revenue from seven millions to upwards of fifteen millions annually. On his return the ministers of the crown, as well as the East India Company, expressed the deep sense they entertained of his splendid services; but as there were many who thought his administration had been needlessly expensive, and that his conduct was, in some instances, unjust to the native princes, articles of impeachment were presented against him by Mr Paul, a member of the House of Commons: they were, however, soon withdrawn, and a vote obtained in his favour. In 1809 his lordship was appointed ambassador to the supreme central junta of Spain; but dissensions in the British cabinet, and the fact that in the Peninsula military services were more required than diplomatic negotiations, caused his speedy return. On the death of the duke of Portland the Percival government was formed, and the Marquis Wellesley was prevailed upon to accept the office of secretary of state for foreign affairs.

This he held from Dec., 1809, till Jan., 1812; but differing from his colleagues on the Roman Catholic claims, and on other material points, he withdrew from the government. On the formation of Lord Liverpool's administration, after Mr Perceval had been assassinated, his lordship remained in opposition; during which time he repeatedly called the attention of parliament to the situation in which his illustrious brother was placed in the Peninsula. He described the conduct of the Spanish government as feeble, irregular, and ill-directed: while he deplored the system adopted by the British ministers as "timid without prudence, and narrow without economy—profuse without the fruits of expenditure, and slow without the benefits of caution." In Dec., 1821, Lord Wellesley was appointed lord-lieutenant of Ireland, Sir Robert Peel being the home secretary. This, while it raised the hopes of the Roman Catholics, naturally disappointed the Protestants; and his arrival was converted into a signal for the renewed jealousy and rancour of both parties. His duties were, consequently, most arduous; and it is but bare justice to say that throughout his viceregal career he evinced great wisdom, discretion, and impartiality. His brother the duke having come into power, the noble marquis, in 1828, resigned his post, and continued out of office till Lord Grey became head of the government, when a second time, in 1833, he was appointed to the lord-lieutenancy of Ireland, having for a short time previously filled the office of lord-steward. During the administration of Sir Robert Peel, 1834-5, Lord Wellesley held no official appointment; but on the formation of the second Melbourne ministry, in April, 1835, he accepted the appointment of lord-chamberlain. His lordship, however, resigned it in the course of the same year, and never afterwards filled any public office. He had attained the age of 77, his health began to decline, and he thought the time had at length arrived for a season of repose. His death took place on the 26th of September, 1842. He had been the subject of five successive sovereigns—namely, George II., George III., George IV., William IV., and Victoria. His mother survived her husband half a century, and died in 1831, at the age of 89 years. She lived to see four of her sons attain to seats in the House of Lords by their own merits, and in reward for perhaps the greatest public services ever rendered by the members of one family. There is a bust of Marquis Wellesley, by Bacon, in the National Gallery.

WELLINGTON, ARTHUR WELLESLEY, Duke of, third son of the earl of Mornington, was born at Dangan Castle, or, as some allege, in Merrion Square, Dublin, in the early spring of 1769, the same memorable year that gave birth to Napoleon Buonaparte, Marshal Soult, Chateaubriand, and Alex. Humboldt. While still very young he was sent to Eton; and soon afterwards, to the military seminary at Angers, where he remained six years. Before he was 18 he was gazetted as ensign in the 73rd regiment of foot, and in the same year moved as lieutenant into the 76th, passing during the sub-

sequent six years through the following grades:—subaltern in the 41st and 12th light dragoons, captain in the 58th foot, major in the 33rd, and finally lieutenant-colonel in the same regiment. At the age of 21 he was returned to the Irish parliament for the borough of Trim, a portion of the Mornington estate, while his elder brother, Richard, who had early come under the notice of Pitt, was appointed commissioner for the affairs in India. Placed in command of the 33rd regiment by the influence of his brother, in his 28th year, he embarked at Cork in May, 1791, for Ostend, under somewhat inauspicious circumstances; for at that time the prestige of British valour had been lost by the repulse of the duke of York's troops in a series of engagements with the French. He joined the main body of the army at Antwerp, and was employed in covering the retreat, displaying that coolness and judgment in keeping in check a superior force, which won for him the commendations of his superior officers. In 1795 his regiment embarked for the West Indies, but the fleet was driven back; and next year his regiment was despatched to Bengal, Colonel Wellesley landing at Calcutta in Feb., 1797, at a most critical moment for the British power in India. War had just been declared against Tippoo Sultan, and an army of 60,000 men, of which Colonel Wellesley's regiment formed part, marched against him. The siege of Seringapatam, in 1799, was the first great military operation in which he was engaged. After this the rise of Colonel Wellesley was comparatively rapid, and in little more than 2 years he had attained to a station of independent and almost vice-regal command, having been appointed civil and military governor of Seringapatam and Mysore. His next military adventure was the chasing of Doondiah Waugh, "the King of the Two Worlds," a robber chieftain, who had made himself formidable by his bravery and his strategic resources. But his military genius was first fully established by the great battle of Assaye, fought Sept. 23, 1803, which was gained under every disadvantage of locality and pre-arrangement, and inflicted a blow on the Mahratta power from which it never recovered. After this great achievement Wellesley became the hero of India. Rich gifts poured in upon him. The British inhabitants of Calcutta voted him a sword valued at 1000 guineas, the army a service of plate valued at 2000 guineas, and the civil authorities poured in their congratulations and addresses; and what he valued more than all the rest, and exhibited on many occasions in after-life, was an address of the native inhabitants of Seringapatam praying "that the God of all castes and colours would bless and reward him for his just and equal rule in Mysore." Wellesley, now Sir Arthur Wellesley, Knight Companion of the Bath,—the first instalment of that rich store of rank and honours that were subsequently showered upon him,—returned to England in September, 1805. After his marriage with the Hon. Miss Pakenham in April, 1806, he was engaged in the military and diplomatic movements which terminated in the surrender of Copenhagen, his

merits on this occasion being acknowledged by the thanks of parliament. In 1806 he was elected M.P. for Rye; in 1807, for Midshill; the same year he was appointed secretary for Ireland and privy-councillor, and was elected M.P. for Newport, in the Isle of Wight. Meanwhile Napoleon had swept over Europe, dictating laws from the Vistula to the Po, and almost threatening the integrity and independence of England. Spain had been seized upon, and Joseph Buonaparte had been placed upon the throne, when the British government determined upon a military expedition to resist this aggression. On the 1st of August, 1808, Sir A. Wellesley landed in Mondego Bay, with 13,000 troops, midway between Lisbon and Oporto, marched rapidly on Lisbon, and would in all human probability have finished the campaign victoriously, when Sir H. Burrard, the general commanding-in-chief, in spite of the remonstrances of Sir A. Wellesley, countermanded the manœuvre, and thus enabled the French general Junot to return to Lisbon. A series of disasters, followed by the treaty of Cintra, ensued; and, chagrined and indignant, Sir Arthur returned to England, after having gained two decisive battles, Roliça and Vimiera, and driven the usurpers out of Portugal. Soon afterwards, Sir Arthur Wellesley submitted a plan for the defence of the Peninsula, which exhibited unusually comprehensive military views; and the eyes of the nation were instinctively turned upon its author as the man best able to conduct it. Resigning his office of secretary for Ireland, and his seat in parliament, to take the command of the British army, on the 22nd of April, 1809, we find him on the Tagus, where his presence caused the most unbounded joy to the Portuguese. The famous passage of the Douro, and the defeat of Soult which followed, are among the most masterly exploits of this campaign. On the 28th July was fought the great battle of Talavera, when the British troops were opposed by double their number of picked French veterans under Victor and Jourdain, encouraged by the presence of King Joseph. This was the first great Peninsular engagement in which the French and British measured their relative strength; and for this victory the government raised the triumphant general to the peerage, and voted him a pension of £2000 per annum for two generations. In 1810 he fought the battle of Busaco; after which he made his famous defence in the lines of Torres Vedras, where he maintained his position ten weeks in the face of a well-disciplined army of 50,000 men. In 1811 he advanced from Torres Vedras, and defeated the French at Fuentes d'Onore. In 1812 he took Ciudad Rodrigo and Badajoz by storm, the rapidity of which so astonished the French generals that they confessed themselves "unable to account for it." In the same year Lord Wellington fought the battle of Salamanca, one of his most splendid victories: French loss, 14,000; British, 5200. On the 12th August, 1812, the victorious general entered Madrid. Honours continued to be showered upon him by both countries; he received the thanks of parliament, was raised to the dignity of a marquis, and a

sum of £100,000 was voted to purchase him an estate. It is needless to follow his triumphant career from the shores of Portugal to the frontier of France, where he ended the campaign by the decisive battle of Vittoria, in which the French lost their cannon, stores, and treasures, and a vast number of killed and wounded. In return for the *bâton* of Jourdain, which was found in the field and transmitted to the Prince Regent, the latter sent Wellington the *bâton* of an English field-marshal. In 1814 the victory at Orthez was gained, with a loss on the French side of 14,000 men, the greater portion deserting; British loss 2300 men: "In the battle the French met the charge like lions, but the pursuit was like hare-hunting; prisoners were literally caught by the skirts as they ran." In the same year was fought the battle of Toulouse, in which Soult's best troops were routed, and the way opened for the British army to the heart of France. In six weeks, with scarcely 100,000 men, Lord Wellington had marched 600 miles, crossed six great rivers, gained two decisive battles, invested two fortresses, and, after driving 120,000 veteran troops from Spain, stood on the summit of the Pyrenees a recognized conqueror. On the 28th June, 1814, Lord Wellington, who, while in Paris, had been advanced to the dignity of a duke, appeared in his place in parliament. The ovation was as splendid a one as could well be conceived. He appeared in his field-marshal's uniform, decorated with the Garter, and was introduced by the dukes of Beaufort and Richmond, when his various patents, as baron, viscount, earl, marquis, and duke, were severally read over. The circumstance is without parallel in the history of this country; and, when the thanks of parliament were read over to him, his reply was in his usual brief and characteristic style, two words for his comrades and one for himself. A feature of no little interest on this memorable occasion was the presence of Lady Mornington, the duke's mother, and the duchess of Wellington, his wife. The Commons had previously voted him £500,000 for the support of his dignity as a peer, and he soon afterwards left London for Vienna to assist at the congress for readjusting the affairs of Europe. But meanwhile Napoleon had escaped from Elba, and all was again in commotion—the duke wrote at once to Lord Castlereagh, expressing his readiness to join the army, or do anything else the government pleased. No other man could of course be selected for so important a duty; and he reached Brussels in April, occupying himself with preparing plans of the campaign, and organizing an efficient army out of the raw levies and incongruous materials he had to deal with. Napoleon's game was promptitude, while delay was that of his opponents; and early in June a powerful French army was assembled on the frontiers of Belgium, headed by Napoleon himself, and supported by all his veteran marshals and generals. The army of the Allies was opposed to an army of 70,000 French troops, chosen veterans, commanded by Napoleon himself; while the force commanded by the duke of Welling-

ton consisted of English, Scotch, and Irish, and also of Dutch, Brunswickers, Hanoverians, Belgians, and Nassau troops, forming in the whole, what the duke himself thought a "sad mixture," compared to his old trained veterans of the Peninsula—many of whom had sailed for America, with which country we were then at war. But fortune was once more on the side of the duke, and he gained his crowning victory at Waterloo, June 18, 1815, which changed the destinies of Europe, and hurled the French emperor from his throne to a prison and a grave. When the news of the victory of Waterloo reached this country, an additional grant of £200,000 was made to purchase a mansion and estate for the duke. A subscription of upwards of £100,000 was made up for the widows and orphans of the slain, the duke generously giving for the same purpose half of the parliamentary compensation due to him for the Peninsular prize-money. He was created prince of Waterloo by the king of the Netherlands, received a splendid sword from the corporation of London, and £60,000 as his share of the Waterloo prize-money, a magnificent dessert service of Dresden china from the king of Saxony, a silver plateau, valued at 10,000 guineas, from the king of Portugal, and a splendid silver-gilt shield; while a colossal trophy, formed of cannon taken at Salamanca, Vittoria, Toulouse, and Waterloo, was erected in Hyde Park by the ladies, at a cost of £10,000. It was not till some time after the great events of 1815 that the duke of Wellington took any prominent part in home politics. In 1818 he was appointed master-general of the ordnance; attending in parliament with great regularity, and voting with the Tory ministry of the day, but rarely taking any part in the debates. In 1823 he was nominated plenipotentiary to the congress of Verona; in 1826 he went to St Petersburg as ambassador; and in 1827 he succeeded the duke of York as commander-in-chief. The same year, Mr Canning being called on to form an administration, to the great annoyance of the Tory part of the government, Wellington, Eldon, and Peel and others refused to join him in any capacity, or upon any conditions. The duke even went so far as to throw up the commandership-in-chief. When charged with factions opposition in the House of Lords, for the purpose of obtaining the premiership for himself, he boldly denied it, being sensible that he was unqualified, and that he "should have been mad to think of it." In August, 1827, on the death of Canning, he resumed the commandership-in-chief under Lord Goderich. But this administration never came to maturity; and in 1828 the king sent for the duke, who assumed the office for which, eight months previously, he had declared his total incapacity. His position, however, was one of embarrassment; for the repeal of the Test and Corporation Acts, which the Government strenuously opposed in the House of Commons, was carried against them by a majority of forty-four. The cabinet was divided, but the duke cut the Gordian knot by supporting the bill in the House of Lords. His next difficulty was the Catholic Emancipa-

tion Bill. The duke had long been opposed to the removal of the Catholic disabilities; but in February, 1829, he gave his sanction to the introduction of a measure for this purpose, though his change of opinion laid him open to the most bitter assaults, as guilty of dereliction of principle. Amongst other attacks on the Ministry, the earl of Winchelsea did not scruple to write that the design of the premier had been all along to break down the constitution of England, and insidiously to introduce Popery into every department of the State. After an explanation had been refused, the duke challenged his assailant, and they met in Battersea fields. It was, however, creditable to Lord Winchelsea's feelings, that, as an acknowledgment that he had been in the wrong, he fired his pistol in the air, and wrote a handsome letter of retraction. The question, however, could no longer be trifled with, and the duke's memorable declaration on that occasion is well known, "That if he could avoid even one month of civil war in the country, by any sacrifice, he would lay down his life in order to do it." In little more than a month the bill became the law of the land. The great question of Reform at length came on, and here the usual sagacity of the duke was at fault. George IV. having died in June, 1830, parliament was necessarily dissolved. But in the interval the French revolution had occurred, and given an impetus to the reform movement unknown before. The new parliament met on the 2nd of November, and at the first sitting, in answer to a question from Earl Grey, the duke of Wellington made a speech which has become famous, in which he declared that the institutions of this country deserved the confidence of the country—that they could not be improved, and should not be altered, so long as he had power to prevent it. The sentiment of the speech was unmistakable, the tone was exasperating, and every one saw that the end of the Government was come. Notices of motion for reform were instantly given in both Houses, but, before they could come on, ministers were defeated in the House of Commons on the question of the civil list; and on the 16th of November the duke of Wellington and his colleagues left office—not to resume it, except for a short interval, for upwards of ten years. In the reform debates in the new parliament the duke of Wellington took a prominent part as a member of the opposition, as soon as the measure had reached the House of Lords. As might have been expected, he became more unpopular than even in the worst days of the Liverpool administration. He was hooted in the streets, and at length was personally attacked. He was accused of intriguing with Polignac, of aiding and encouraging the mad fantasy of Charles X., of making secret military preparations for the general massacre of the people of London; and the savour of Europe was at last obliged to get iron blinds put to his windows to keep out the stones, and it was a curious trait in the duke's character that he never removed them. On the passing of the Reform Bill, the duke of Wellington retired, for some time, from anything like a leading

part in public life attendance at the to take a share debates. The reform while, prosperous popular demand the general exc people, who sold an once more to colleague of Pri the Peninsula a luly, his popula hootings of a year ations. part in public life; but he did not relax his attendance at the House, where he continued to take a share in the more important debates. The reform ministry went on, for a while, prosperously and vigorously. The popular demand having been complied with, the general excitement abated; and the people, who seldom bear long grudges, began once more to recognize in the fancied colleague of Prince Polignac the hero of the Peninsula and of Waterloo. Accordingly, his popularity grew apace, and the hoodings of a year before changed to acclamations. In 1834 he was installed as chancellor of the university of Oxford. Meantime, the Whigs having been greatly weakened by the withdrawal of Earl Grey, and afterwards by the death of Lord Spencer, and the consequent transference of Lord Althorp to the Upper House, in November, 1834, King William IV. suddenly dismissed the cabinet, and called in the duke of Wellington, who advised his Majesty to send for Sir Robert Peel, who was then in Italy. Meanwhile his Grace offered, as a temporary arrangement, to carry on the government. This plan was agreed to, and the duke of Wellington became for the time the whole cabinet, to the strong indignation of the liberal party, who denounced the arrangement as utterly unconstitutional, and proclaimed that its author ought to be impeached for usurpation. On Sir Robert Peel's return from Italy, the duke of Wellington assumed the duties of the foreign office. This was the last definite political post which he held. In 1835 he resigned his office on the defeat of Sir Robert Peel in the House of Commons; in 1839 he supported Sir Robert in his refusal to take office on the ground of the so-called "Bedchamber Plot;" and in August of the same year, as lord warden of the Cinque Ports, he was entertained at a great banquet at Dover, which is memorable for having brought his old antagonist Lord Brougham forward as his panegyrist. In 1841, on the return of Sir Robert Peel to power, the duke became a member of the cabinet, but without office, and supported that able minister throughout all his plans of commercial reform. In 1842 he was re-appointed, on Lord Hill's retirement, to the commandership-in-chief of the army, which post he retained till his death. Down to his latest moments no man was ever more frequently summoned to give counsel to royalty in difficulties, and he was always regarded as the indispensable adjuster and regulator of state affairs. Meanwhile years came on apace. Still his Grace—who was now familiarly and universally designated "The Duke"—appeared regularly in his place in the House of Lords, and took part in every discussion of importance. It has been truly said that the duke knew no dotage. Bright and clear in intellect, though growing feeble in bodily power, he was to the last, if we reckon ripeness of wisdom along with honesty of purpose and vigour of action, what Talleyrand called him long ago, "the most capable man in England;" and what Tenyson, in his noble "Ode," has more eloquently called him—

" * * * that tower of strength,
Which stood four-squares to all the winds
that blew!"

The last speech he delivered in parliament was on June 22, 1852. After the dissolution of parliament he went to reside at Walmer Castle; and on the 13th Sept. he retired to rest, apparently in the full enjoyment of health, though in his 84th year. Next morning the duke's servant went to rouse his venerable master at the accustomed hour of six; but he refused to rise, and desired that a surgeon might be sent for. An hour or two later the veteran was seized with speechlessness and insensibility. In the course of the day he recovered his consciousness, but not speech; and in the afternoon he gently sank beneath the stroke that had missed him in a hundred battle-fields. The sensation produced by the announcement of this sudden though long-anticipated event was universal and profound. On hearing of it, her Majesty, and her family and household, in their privacy at Balmoral, immediately paid those outward tokens of respect for the memory of the duke of Wellington which, in courts, are usually reserved for royalty alone. At the same time she signified, through her prime minister, her desire that public honours should be paid to the deceased; but that the interment should be postponed until after the meeting of parliament, in order that the representatives of the people might determine the mode of paying due respect to the ashes of the great commander, and that those honours might be the expression of the mind of the British nation, and not the dictate of personal, though royal, partiality. This was accordingly done; and on the 18th November, 1852, the body of the illustrious duke, after lying in state in Chelsea for five days, was conveyed with unprecedented honours to St Paul's Cathedral, where the hero of the land now reposes, side by side with Nelson, his brother hero of the sea. In every relation of life Wellington's guiding principle was an energetic and unhesitating obedience to the call of duty. Amidst the glory of a thousand victories, and the opulence of honours reaped as a harvest grown on the very heights of civilized Europe, perhaps his most lasting distinction will be that he grew with time, and that a nature plastic enough to be moulded by the pressure of successive events adapted itself, to the last, to a condition of things the most opposite to that which surrounded him in his youth. With native aristocratic tendencies, which no less than his constitutional temperament led him far towards absolutism, he accepted the Reform Bill, emancipated the Catholics, and liberated the commerce of the country. A Spartan in his native manners, he was the dignified Athenian of polished society; a soldier almost from his birth, he was the head of one of the most celebrated universities in the world; while, as if to complete the circle of his glory, his immortal "Despatches," forming, with the "Supplementary Despatches, Correspondence, &c.," 24 vols. 8vo., have gained for him a literary reputation which even few professed writers are destined to obtain. Several biographies

of the duke have been published. A bust, after Nollikens, by Baily, is in the National Gallery.

WELLS, CHARLES WILLIAM, physician and natural philosopher, was born of Scotch parents at Charleston, in South Carolina, in 1757. He was sent to Scotland to be educated, and in consequence of the events of the American war, crossed the Atlantic several times. He graduated M.D. at Edinburgh, began to practise in London in 1785, and distinguished himself both in his profession and as a man of science, became physician to St Thomas's Hospital, and fellow of the Royal Society. He is deservedly remembered for his "Essay on Dew," published in 1814, of which Sir John Herschel, in his "Discourse of the Study of Natural Philosophy," speaks as "one of the most beautiful specimens of inductive experimental inquiry lying within a moderate compass." Dr Wells contributed several memoirs to the Royal Society, and numerous papers on general subjects to periodical literature. A collected edition of his writings, with an autobiography, appeared after his death. Died, 1817.

WELSTED, LEONARD, an English poet, dramatist, and miscellaneous writer. His name would probably have been forgotten but for Pope's lines on him in the "Dunciad." Born, 1689; died, 1749.

WENCESLAUS, king of Bohemia, and emperor of the West, was eldest son of the emperor Charles IV., and was born in 1361. When two years old he was crowned king of Bohemia, at sixteen king of the Romans, and in 1378 succeeded his father in the empire. He had been faultily educated, and his life is depicted as a tissue of sensuality, cruelty, and meanness. His tyrannies roused the free cities of the empire to form a league in self-defence, and this in turn led to a counter-league of the princes, and a war between them. The emperor was powerless to suppress these troubles, as he also was to put an end to those growing out of the schism in the papacy. Among his unjust and cruel measures was that of cancelling all debts due to Jews. He tortured and had John Nepomuk, a Bohemian preacher, drowned, in 1393; and the same year his Bohemian nobles imprisoned him for some months. The doctrines of Wycliffe having penetrated into Bohemia, and the preaching of Huss causing much excitement, Wenceslaus attended the diet at Frankfort, and pretended to be desirous of promoting the peace of the church. Soon afterwards the electors consulted as to deposing him, and this was effected in 1400. He still continued to call himself emperor, although another was elected, and he retained the crown of Bohemia till his death. The entrance of Zizka and his armed Hussites into Prague, in August, 1419, agitated him so deeply that he died of apoplexy a few days later. It is noteworthy that Æneas Sylvius, in speaking of this king, says nothing of the enormities commonly laid to his charge.

WENTWORTH, THOMAS. [STRAF-FORD, Earl of.]

WERGELAND, HENRIK ARNOLD, a Norwegian poet and miscellaneous writer,

born at Christiansand in 1808. He finished his education at the university of Christiania, became a clergyman, and curate to his father in the parish of Eidsvold, and at first attracted public notice by his political articles and poems. He was the passionate advocate for the separate existence of Norway, in opposition to the party who desired to see a close political union of Sweden, Denmark, and Norway. In 1836 he had the appointment of librarian to the university, having quitted the church two years previously. Habits of intemperance broke up his health, and he died in 1845. His writings were published after his death, in nine volumes, under the editorship of Lassen.

WERNER, ABRAHAM GOTTLIEB, a celebrated German mineralogist, born in Upper Lusatia, in 1750. His treatise, "On the external Characteristics of Minerals," procured him the professorship of mineralogy at Freyberg, where his lectures on geology and mineralogy were attended by students from various parts of Europe. He was also keeper of the Cabinet of Natural History, and councillor of the mines in Saxony. His cabinet of minerals, consisting of 100,000 specimens, and which was unrivalled for completeness and arrangement, he sold for 40,000 crowns, reserving the interest of 33,000 to revert, at the death of his sister, to the Mineralogical Academy of Freyberg. To him the science is highly indebted for its systematic arrangement; and he may, in fact, be considered the Linnaeus of mineralogy. Died, 1817.

WERNER, FRIEDRICH LUDWIG ZACHARIAS, a German dramatist, was born at Königsberg, in 1768, and studied philosophy under Kant. In 1801 he published, at Berlin, "The Sons of the Valley," which was followed by "The Templars in Cyprus," and "The Brethren of the Cross." He was very eccentric in his thoughts and habits, and occupied himself with many romantic projects. At length, in 1811, he embraced the Catholic faith, studied theology, and was ordained a priest. He wrote several tragedies and religious pieces, and died in 1823.

WERNER, PAUL VON, a celebrated Prussian general, born in 1707. He displayed great bravery at the head of his troops at the battles of Prague, Kollin, Breslau, &c., and, in 1759, he drove General de Ville out of Silesia, and raised the siege of Coberg. He was afterwards taken prisoner by the Russians, and the most advantageous offers were made him by the Czar Peter III. to induce him to enter into his service, but he rejected them, and, returning to Prussia, was again successfully employed in his country's service, and died in 1783.

WESLEY, SAMUEL, an English divine, was born about 1662, in Dorsetshire, was admitted a servitor of Exeter College, Oxford; and, on taking orders, obtained the living of South Ormesby, in Lincolnshire, and afterwards the rectories of Epworth and Wroote. He wrote a volume of poems, entitled "Maggot," "The Life of Christ," an heroic poem, "The History of the Old and New Testament, in verse," 3 vols. &c. Died, 1735.

WESLEY, SAMUEL, eldest son of the

preceding, was born in 1692; was educated at Christchurch, Oxford; Westminister School; and was appointed master of the school at Triverton, where he was a rigid high-church man, and proved of the greatest use to the church and Charles II. He died at the Battle of the Sea.

WESLEY, JOHN, an English Methodist, was born in 1703, while at school with his brother, who formed themselves the purpose of mutual exercises. So many considerable names bestowed on the Methodists was a result with some other converts to Georgia, in America, of converting there of two years leave the country affair, and the queen. He there where Whitfield, inducing much effect in 1738, was marked in the mind of the Moravian society the following year preacher, and the churches built spacious at Bristol, and other was united with arising, respectation, they separated were denominational leaders. himself from the indefatigable in continually engaged Wales, Scotland, though consisting well organized, fluence over it some volumes of political tracts, in Wesley's gravity were but appeared extreme. ners he was able: in the public and argumentative age did not in diligence; he was ling; and his aside his literary were almost buried life was yet he married about mented him was conduct. She finally in 1771, the 89th year of ley, by Hone, is **WESLEY, CHARLES**, the preceding, was He was educated at Christchurch,

preceding, was born at Epworth, about 1692; was educated at Westminster and Christchurch, Oxford; became usher in Westminster School, and in 1732 was appointed master of the grammar-school at Tiverton, where he died in 1739. He was a rigid high-churchman, and wholly disapproved of the course of his brothers John and Charles. He was the author of "The Battle of the Sexes," and other poems.

WESLEY, JOHN, founder of Wesleyan Methodism, was the son of Samuel Wesley the elder, and was born at Epworth, in 1703. In 1730, while at Oxford University, he and his brother, with a few other students, formed themselves into a society for the purpose of mutual edification in religious exercises. So singular an association excited considerable notice, and, among other nicknames bestowed upon the members, that of Methodists was applied to them. Mr Wesley, with some others, chiefly Moravians, went to Georgia, in America, in 1735, with a view of converting the Indians. After a stay there of two years, he was compelled to leave the country in consequence of a love affair, and the quarrel in which it involved him. He therefore returned to England, where Whitfield's preaching was then producing much excitement. The same year, 1738, was marked by a great religious change in the mind of Wesley, and by his visit to the Moravian settlement at Herrnhut. In the following year he commenced itinerant preacher, and gathered many followers. The churches being shut against him, he built spacious meeting-houses in London, Bristol, and other places. For some time he was united with Whitfield; but differences arising, respecting the doctrine of election, they separated, and the Methodists were denominated according to their respective leaders. He had already separated himself from the Moravians. Wesley was indefatigable in his labours, and almost continually engaged in travelling over England, Wales, Scotland, and Ireland. His society, though consisting of many thousands, was well organized, and he preserved his influence over it to the last. He published some volumes of hymns, numerous sermons, political tracts, and controversial treatises. In Wesley's countenance mildness and gravity were blended, and in old age he appeared extremely venerable; in manners he was social, polite, and conversable; in the pulpit he was fluent, clear, and argumentative. The approach of old age did not in the least abate his zeal and diligence; he was almost perpetually travelling; and his religious services, setting aside his literary and controversial labours, were almost beyond calculation. His married life was very unhappy. His wife, whom he married about 1750, appears to have tormented him with jealousy and refractory conduct. She several times left him, and finally in 1771. He died March 2, 1791, in the 89th year of his age. A portrait of Wesley, by Hone, is in the National Collection.

WESLEY, CHARLES, younger brother of the preceding, was born at Epworth in 1708. He was educated at Westminster School, and at Christchurch, Oxford, and was asso-

ciated with his brother John in all his labours in the establishment and spread of Methodism. Yet he was very unlike him in character and disposition. Charles Wesley was of a more genial and generous nature, and did not think liveliness and laughter incompatible with genuine piety. He wrote many of the hymns for his brother's collection, and some of them have much poetic spirit and elegance of expression. Died, at London, 1788.

WESLEY, SAMUEL, an eminent musician, born in 1766, was the younger son of the preceding Charles Wesley, and nephew to the celebrated John Wesley. When only three years old he could play and extemporize freely on the organ; and he became not only one of the most astonishing extemporaneous players in Europe, but a fine composer and an excellent classical scholar. In 1787, from an accidental fall, which nearly proved fatal, Mr Wesley so seriously injured his head, that for seven years after he remained in a low desponding state, and during the remainder of his life was subject to periodical attacks of nervous irritability. During his intervals of health he prosecuted the science of music with the utmost ardour; he composed many pieces, and was much engaged in public performances on the organ. His compositions are grave and masterly; his melodies sweet, varied, and novel. He possessed remarkable energy of mind, united with rare simplicity of character. Died, Oct. 11, 1837, aged 71.

WESSEL, JOHN, a celebrated Dutch theologian, sometimes called a precursor of Luther, was born at Groningen in 1419. He became a great Hebrew and Greek scholar, taught theology at Heidelberg, Cologne, Louvain, and Paris, and in the disputes between the Realists and Nominalists he adopted the views of the latter. He was the friend of Francisco della Rovere (afterwards Pope Sixtus IV.), and spent some years at Rome during his pontificate. He never took orders, but published several treatises on theological and ecclesiastical subjects, and fearlessly attacked what he believed to be false doctrines, as well as flagrant abuses in practice. Of course he was suspected of heresy. Died at Groningen in 1498. Professor Ullmann published in 1834 an interesting work entitled, "Johann Wessel, ein Vorgänger Luthers," which was republished in 1842 under the title "Reformatoren vor der Reformation." It has been translated into English.

WEST, BENJAMIN, the celebrated painter, president of the Royal Academy, was born in 1738, near Springfield, in Pennsylvania, of Quaker parents. After exercising his pencil in different parts of America, he went to Italy in 1760, and came to England in 1763. One of his earliest friends was Dr Drummond, archbishop of York, who introduced the young American artist to George III., by whose order he executed his picture of "The Departure of Regulus from Rome," and whose patronage he enjoyed about 40 years. On the death of Sir Joshua Reynolds, in 1792, Mr West, who had been a member of the Royal Academy

from its foundation, was elected president; which chair he enjoyed, with the exception of a short interval, till his death, in 1820. His "Death of General Wolfe" was among the first of his productions that attracted public notice, especially for the rational innovation on which he had ventured in it, of painting historical persons in a modern dress. And among his last and largest works were, "Death on the Pale Horse" and "Christ healing the Sick." West was buried in St Paul's, London. Five of his pictures are in the National Gallery; which also possesses portraits of West, by Lawrence and Gilbert Stuart.

WEST, GILBERT, poet and miscellaneous writer, born in 1706, was educated at Christchurch, Oxford. He obtained the offices of clerk to the privy-council, and treasurer of Chelsea College; and was the author of "Poems" and "Observations on the Resurrection;" and translated some of the Odes of Pindar. Died, 1756.

WESTALL, RICHARD, an eminent draughtsman and designer, born in 1765, was apprenticed to an engraver in heraldry on silver, &c.; but having studied at the Royal Academy, in 1786 he commenced his career as a painter, imparting to his water-colour paintings a brilliance and vigour before unknown. About this time he became the friend of Mr (afterwards Sir Thomas) Lawrence. Mr Westall produced a few historical paintings; but he is best known by his designs for Lloydell's superb editions of Milton and Shakespeare, and as the illustrator of numerous other works. From the great facility with which he produced book designs, he was led into a great degree of mannerism. Like his friend, Sir Thomas Lawrence, he enjoyed royal patronage, giving her present Majesty (then Princess Victoria) lessons in drawing and painting. He died, aged 71, Dec. 4, 1836.

WESTALL, WILLIAM, a younger brother of the preceding, and like him an eminent artist, was born in 1782. In early life he accompanied Captain Flinders in his voyage round the world, on his return from which he illustrated Captain Flinders's work, and opened an exhibition in Brook Street, of his foreign sketches. In 1813 he was elected an associate of the Royal Academy. "Though little celebrated," says a contemporary, "for his oil pictures, he had a pleasant feeling for landscape nature, lake scenery more especially." He worked largely for booksellers; and among other works which he illustrated may be mentioned, "A Series of Views of Picturesque and Romantic Scenery in Madeira, the Cape of Good Hope," &c. fol. 1811-14; "Views of the Caves near Ingleton, &c., in Yorkshire," fol. 1818; "Britannia delineata," "Views in London and its Environs," 1825; "Picturesque Tour of the Thames," &c. Died, Jan. 22, 1850.

WESTMACOTT, SIR RICHARD, R.A., one of the most distinguished sculptors of modern times, was born in London in 1775. Having received the first rudiments of instruction in the studio of his father, who was a sculptor of some eminence in Mount-street, Grosvenor-square, he visited Rome in 1793, studied for a time under Canova, and re-

ceived the following year from the Academy of Florence their first premium for sculpture. Having passed some years in the classic regions of Italy, and made himself familiar with the best remains of ancient art, he returned to England, and established himself in the west-end of London, where he soon gained an extensive reputation. In 1805 the Royal Academy elected him an associate of their body, and he became in 1816 a Royal Academician. The works of art by which he is best known are his statues of Addison, Pitt, and Erskine, those of the duke of Bedford and of Charles James Fox, in Bedford and Russell Squares, and his monuments to Sir Ralph Abercromby, Lord Collingwood, and others, in Westminster Abbey and St Paul's Cathedral, together with the elegant and classical figure of Psyche, so much admired by every lover of art for its elegance of form and chastity of expression. Besides these, he designed the colossal statue of Achilles in Hyde Park, and the statue of Nelson at the Liverpool Exchange, and, together with Flaxman and Baily, a portion of the figures on the frieze of the marble arch originally erected at Buckingham Palace, but now standing at Cumberland-gate. His latest work was the sculptured pediment of the British Museum. In 1827 he succeeded Flaxman as professor of sculpture in the Royal Academy, and held that appointment until his decease. Among the best known of his productions are "The Distressed Mother," which he executed in 1822 for the marquis of Lansdowne; "The Houseless Traveller," a copy of which is in Westminster Abbey; his "Euphrosyne," for the duke of Newcastle in 1837; his two statues, "Cupid" and "Psyche," in the possession of the duke of Bedford; together with a large alto-relievo, "The Death of Horace," which he executed for the earl of Egremont. He received the honour of knighthood, as an acknowledgment of his artistic merits, in 1837. Died, 1856. His son, Richard Westmacott, is professor of sculpture at the Royal Academy, and author of the "Handbook of Sculpture."

WESTON, STEPHEN, an eminent classical scholar and orientalist, was born at Exeter, in 1747; educated at Eton, and Exeter College, Oxford; obtained the living of Manhead, Devon, in 1777; but resigned his ecclesiastical preferment in 1790, and thenceforth devoted himself wholly to literary pursuits. We can here find space for the enumeration of only a few of his works; among which may be mentioned, "A Specimen of the Conformity of the European Languages, particularly the English, with the Oriental Languages," "Letters from Paris," 2 vols., "Specimen of a Chinese Dictionary," besides various translations from the Chinese and Persian, in prose and verse; sermons, tales, and works relative to philology, divinity, and antiquities. Died, 1830.

WESTON, WILLIAM, rector of Campden, in Gloucestershire, where he died in 1760, was the author of two very learned works, one entitled, "An Enquiry into the Rejection of the Christian Miracles by the Heathens;" the other, "Dissertations on

some of the most Antiquity."

WETHERELL, distinguished chancery learned Dean of Oxenford, than half a century College, Oxenford received his education and in 1791 was many years he moderate success and he resolved King's Bench and Lord Eldon received Mr Wetherell of as member for St displayed much "his slovenly work phrascolod odd theories, re-fashioned jokes, buffoon when the his ingenuity, re-honoured his co-1826 Sir Charles Oxford; subsequent and in 1830 he was which was disfranchised in 1824 his just being appointed ceiving the honours afterwards Copley as attorney resigning assuming the resigned. some of the most remarkable Wonders of Antiquity."

WETHERELL, SIR CHARLES, a distinguished chancery lawyer, was the son of the learned Dean of Hereford, who for more than half a century was master of University College, Oxford. He was born in 1770, received his education at Magdalen College, and in 1794 was called to the bar. For many years he practised, though but with moderate success, at the common law bar; and he resolved on quitting the courts of King's Bench and Common Pleas soon after Lord Eldon received the great seal. In 1818 Mr Wetherell obtained a seat in parliament as member for Shaftesbury; and though he displayed much power and energy in debate, "his slovenly attire, uncouth gestures, patch-work phraseology, fanciful illustrations, odd theories, recondite allusions, and old-fashioned jokes, tempted men to call him a buffoon when they ought to have admired his ingenuity, revered his learning, and honoured his consistency." From 1820 to 1828 Sir Charles represented the city of Oxford; subsequently he sat for Plympton; and in 1830 he was elected for Boroughbridge, which was disfranchised by the Reform Act. In 1824 his just ambition was gratified in being appointed solicitor-general, and receiving the honour of knighthood. Three years afterwards he succeeded Sir John Copley as attorney-general, but on Mr Canning assuming the reins of government he resigned. He again, however, came into office in 1828, under the duke of Wellington, but remained only 15 months, being inveterately opposed to Catholic emancipation, and determined, as he expressed himself, to have no connection with "the scarlet individual whose seat is on the seven hills." To the latest moment of his parliamentary career his zeal for Protestantism and his opposition to reform—either whig or radical—knew no abatement; and amidst a torrent of eloquence, learning, drollery, and enthusiasm, he closed his senatorial life, exclaiming, "This is the last dying speech and confession of the member for Boroughbridge." Sir Charles held the office of recorder of Bristol; and it was expected that his great unpopularity, as the marked opponent of the reform bill, would render him particularly obnoxious in that city, when he appeared there to hold the Michaelmas sessions for 1831. This was intimated to him, but he was unwilling to shrink from the discharge of a public duty, and (after consulting Lord Melbourne, the home secretary) he resolved to proceed to Bristol as usual. When Sir Charles entered the city, his carriage was surrounded by an infuriated mob, who hooted at and pelted him with stones; and it was with the utmost difficulty that he and the other corporate authorities who accompanied him escaped without sustaining mortal injury. Of the disgraceful riots and burnings that took place on the following day and night, it is sufficient here to observe, that the subject of this memoir escaped the deadly peril that was designed for him, and continued to fulfil the duties of his office until his death in 1846, aged 76.

WETSTEIN, JOHANN JACOB, a learned theologian, was born in 1693, at Basel (where several others of his family also distinguished themselves by their acquirements). He was pastor in his native city from 1713 till 1730, when his orthodoxy being suspected, he retired to Holland. He was soon recalled, but preferred to remain at Amsterdam, where he was made professor of Greek, and afterwards of ecclesiastical history. He devoted himself, with great ardour and perseverance, to the restoration of the purity of the text of the New Testament; and, after collating the various Greek manuscripts which he could find in the principal European libraries, he published, in 1739, his "Prolegomena" to the Greek Testament. His valuable edition of the Greek text itself was published in 1751—52. Wetstein visited England several times, and was chosen fellow of the Royal Society. Died, 1754.

WEYDEN, ROGER VANDER. [VANDER WEYDEN.]

WEYSE, CHRISTOPH ERNST FRIEDRICH, a dramatic and lyric composer of great eminence, was born at Altona, in 1774. From his relations, who were musical, he received instructions from his infancy; and his fine natural capacity was thus so much improved, that in 1799, when he was barely 25 years old, the "Allgemeine Musikalische Zeitung," a very high musical authority, said of him, "He is one of the first performers on the pianoforte now living; in his fantasias he unites the science of Bach and the inexhaustible genius of Mozart; if he can succeed in reaching the taste of the latter, the art cannot be carried to greater perfection." Though to his musical studies he added a very diligent and extensive cultivation of philosophy, astronomy, medicine, and languages, his compositions were very numerous and various. He composed "Floribella" and "Kenilworth," two admirable operas; "An Adventure in the Garden of Rosenburg," a very spirited comic opera; almost innumerable songs, so popular, that they are everywhere sung by the peasantry of Sweden, where he found constant patronage. But it was chiefly in oratorios and other sacred music that he excelled; of which his "Ambrosian Chant," "Pentecost," "The Sacrifice of Jesus," &c., are excellent specimens. Died, 1842, aged 68.

WHARTON, HENRY, a learned divine and ecclesiastical historian, was born at Worstead, in Norfolk, in 1664. He was educated at Caius College, Cambridge; became, in 1686, assistant to Dr Cave in the preparation of his "Scriptorum Ecclesiasticorum Historia Literaria;" and soon after graduated M.A., and entered the church. He obtained the favour and friendship of Dr Tenison, afterwards archbishop of Canterbury, and of Archbishop Sancroft, who made him his chaplain. Wharton's life was spent in close literary labour, and his original works and learned compilations are very numerous. His most valuable work is that entitled "Anglia Sacra," a collection of biographies of English archbishops and bishops from the earliest times. It appeared in 2 vols. folio, in 1691. Wharton edited some of the writings of the Venerable Bede,

and Laud's own Account of his Troubles and Trials; made a sharp attack on the errors and defects of Burnet's History of the Reformation, and published several treatises against Romish errors. Died, at Newton, Cambridgeshire, in 1695.

WHARTON, THOMAS, Marquis of, was born in 1640, sat in several parliaments during the reigns of Charles II. and James II., in which he strenuously opposed the court, and at the revolution he joined the Prince of Orange, and was made a privy-councillor. He succeeded to the peerage in 1696, and the next year was made chief justice in eyre. He took part in negotiating the union with Scotland, and for two years held the post of lord-lieutenant of Ireland. Being a zealous Whig, and a firm supporter of the Hanoverian succession, he was raised to the rank of a marquis by George I. Died, 1715.

WHARTON, PHILIP, Duke of, son of the preceding, was born in 1698, and very early gave signs of those talents which he afterwards displayed in a manner that more disgraced than honoured their possessor. After leaving, during his travels, accepted the title of duke from the Pretender, he returned to England, and evinced the versatility of his political principles by becoming a warm champion of the existing government. Having impoverished himself by extravagance, he again changed his politics, and retiring to the continent, intrigued with the Stuarts. He died in indigence, in Spain, 1731. His poems, letters, and miscellaneous pieces form 2 vols.

WHATELY, RICHARD, D.D., archbishop of Dublin, one of the most distinguished theological writers of his age, was born in London, in 1787. He was educated at Oriel College, Oxford, became a fellow of his college in 1811, and the next year took his master's degree. Among his contemporaries at Oxford were Keble, Arnold, Pusey, John Newman, and many other men since of world-wide fame. In 1822 he was presented to the rectory of Halesworth, in Suffolk, and applied himself with characteristic energy to the duties of a parish clergyman, besides finding time to write. His country life did not last long, for in 1825 he was recalled to Oxford as Head of Alban Hall, a post which he held for five years. His literary activity during this period was extraordinary, and the subjects of his works very various. In 1831 he was appointed, by Earl Grey, archbishop of Dublin. It was two years after the passing of the Roman Catholic Relief Act, and he had the difficult task of carrying out, in the details of social, political, and religious life, the principle which it embodied. His known liberal views and sympathies, and his energy and honesty of work, fitted him for the task; and he won the hearty confidence and co-operation of Archbishop Murray. But many of his own clergy regarded him with suspicion or dislike, and after twenty years of hard labour, especially in the promotion of the system of unsectarian education, he retired from the National Board, finding it impossible to co-operate with Dr (now Cardinal) Cullen, Murray's successor. His clergy were gra-

dually reconciled to him, and his family, with his tacit acquiescence, took a very active part in the promotion of Irish Church Missions, and Ragged Schools and Refuges. Dr Whately took little part in the wider and more concerning religious controversies which arose after his settlement in Dublin. Among his distinguishing personal qualities were a "large munificence, genial hospitality, ever-ready wit, and solid common sense." During his Oxford life he was feared and disliked by many for his singular contempt for the proprieties, and his intolerance of mediocrity and pretentiousness. With his free thought, fearless questionings, and suspected orthodoxy, he had "a quill up for everybody," and Oxford, it has been said, breathed more freely when Whately left for Halesworth. The writings of Archbishop Whately are very numerous, and among the principal are—"Elements of Logic," first published in 1826, and very often reprinted; "Elements of Rhetoric," 1828 (both these works were originally contributed to the *Encyclopedia Metropolitana*); "Errors of Romanism traced to their origin in Human Nature," 1830; "The Kingdom of Christ delineated," 1841; "Essays on some of the Difficulties in the Writings of St Paul;" "Introduction to Political Economy," the substance of his lectures while he held the chair of political economy at Oxford, in 1830—31; and "Historic Doubts relative to Napoleon Bonaparte," 1821, a nut for certain free thinkers to crack. Dr Whately wrote several instructive manuals for the National Schools, but after the death of Archbishop Murray they were proscribed by the Board. He became bishop of Kildare, in 1846, by the union of that see with Dublin; was visitor of Trinity College; president of the Royal Irish Academy, and chancellor of the Order of St Patrick. He was also the founder of a professorship of political economy, in Dublin University. Dr Whately married in 1821, was left widower in 1860, and after a long decline, died at Dublin, October 8, 1863.

WHEATLEY, CHARLES, a divine of the church of England, and author of a "Rational Illustration of the Common Prayer." Died, 1742.

WHEATLEY, FRANCIS, a painter of some eminence, born in London, in 1747; died, 1801. He was a self-instructed artist, attained celebrity as a portrait painter, and excelled in the representation of rural scenes. He became R.A. in 1791.

WHEATON, HENRY, the distinguished American publicist and diplomatist, was born in Rhode Island, U.S., in 1785. He studied at Brown University, adopted the profession of the law, and was called to the bar. After a visit to Europe he settled at New York, where he became, in 1815, a judge in the Marine Court, and soon after reporter to the Supreme Court of the United States. In addition to his heavy professional duties he found time also for much miscellaneous literary labour, contributing to the "North American Review," and lecturing before several learned societies. After being employed for some years in the revision of the constitution and laws of the State of New

York, he was d'affaires to Cooper at Berlin for his important 1816, enjoying the confidence not only the governments Wheaton's great International Law passed through a generally regarded his other works of Nations in Europe earliest times to "Reports of Cases in the Supreme Court" "History of the received the de Brown and Ha March 11, 1848, professor of International University.

York, he was sent, in 1827, as chargé d'affaires to Copenhagen. He held a similar post at Berlin from 1834 to 1837, when he was named minister plenipotentiary. In this important position he remained till 1846, enjoying the highest esteem and confidence not only of his countrymen, but of the governments and statesmen of Europe. Wheaton's great work, "The Elements of International Law," appeared in 1836, has passed through several editions, and is generally regarded as an authority. Among his other works are a "History of the Law of Nations in Europe and America from the earliest times to the Treaty of Washington;" "Reports of Cases argued and determined in the Supreme Court of the United States;" "History of the Northmen," &c. Wheaton received the degree of LL.D. from both Brown and Harvard Universities. Died, March 11, 1848, having been just appointed professor of International Law at Harvard University.

WHEELER, or WHEELER, SIR GEORGE, divine and traveller, was born in 1650, at Breda; was educated at Lincoln Hall, Oxford, travelled into Greece and Asia Minor, became a prebendary of Durham, vicar of Basingstoke, and rector of Houghton-le-Spring, and died in 1723-4. Besides his "Journey into Greece," a valuable and authentic work, he wrote "The Protestant Monastery," and "An Account of the Churches of the Primitive Christians." He built a chapel on his estate in Spitalfields, which still bears his name.

WHEWELL, WILLIAM, D.D., F.R.S., master of Trinity College, Cambridge, was born at Lancaster about 1798. He was the son of a humble tradesman, was educated at the Free Grammar School of Lancaster, and at Trinity College, Cambridge, graduating B.A. in 1816, and becoming successively fellow, tutor, professor, and master. In 1828 he was elected professor of mineralogy, a post which he held four years; and in 1838 professor of moral philosophy. Three years later he was nominated to the mastership, and in that office actively promoted the introduction of the natural and moral sciences triposes, thus widening the basis of education, and founded prizes for the encouragement of the new studies. Early distinguished for his scientific attainments, he was chosen F.R.S. in 1820; was president of the British Association in 1811, and drew up the reports on the tides, and on the theories of heat, magnetism, and electricity. He was also an active fellow of the Geological Society, and of the Cambridge Philosophical Society. In 1855 he resigned his professorship on becoming vice-chancellor of the university. Dr Whewell was a man of singularly wide and varied attainments; of great physical and intellectual power; of great audacity in venturing upon any topics of discussion; manly and generous, and incapable of jealousy and manners. Sydney Smith's witty saying is well known, that "science was his forte and omniscience his foible." His chief fault was perhaps a certain roughness of manner, a boisterous, overbearing spirit, offensive to those whom he silenced; but this manner was much softened by years;

and it could hardly abate the esteem, reverence, and love, with which he was regarded as the intelligent representative and champion of the university. He was proud of his college, and the university was proud of him. Some years before his death he built, as a gift to his college, a "Master's Hotel," or set of chambers for undergraduates. The works of Dr Whewell are numerous. The most important are—the Bridgewater "Treatise on Astronomy and General Physics;" "History of the Inductive Sciences," published in 1837; "Philosophy of the Inductive Sciences," 1840; "History of Scientific Ideas;" "Philosophy of Discovery;" and "Lectures on Systematic Morality;" the brilliant "Essay on the Plurality of Worlds," which was published anonymously, and gave rise to so much controversy, was written by Dr Whewell. In philosophy Dr Whewell was the most powerful antagonist of the system at present dominant, under the sway of John Stuart Mill; stoutly maintaining the transcendental against the sensualist theory. These great men avowed the highest respect for each other; Mill, in the preface to his "Logic," stating that "without the aid derived from the facts and ideas contained in Dr Whewell's 'History of the Inductive Sciences,' the corresponding portion of this work would probably not have been written." Dr Whewell was twice married, lost his first wife in 1854, and his second in April, 1865. He died at Cambridge, from the effects of a fall from his horse, on the 5th March, 1866.

WHISTON, WILLIAM, a learned divine and mathematician, was born at Norton, in Leicestershire, in 1667. He studied at Clare Hall, Cambridge, was chosen a fellow of his college, and entered into holy orders. In 1703 he succeeded Sir Isaac Newton as professor of mathematics, but having conceived doubts concerning the doctrine of the Trinity, and, at length, adopted Arian opinions, he was expelled from the university in 1710, and deprived of his office. He then removed to the metropolis, and gave lectures on astronomy; but was prosecuted as a heretic, though the proceedings were ultimately terminated by an act of grace in 1715. Being refused admission to the sacrament at his parish church, he opened his own house for public worship, using a liturgy of his own composition; and towards the close of his life he became a Baptist. Having subsequently distinguished himself by an abortive attempt to discover the longitude, and by his opinions on the millennium and the restoration of the Jews, he died in 1752. His translation of "The Works of Josephus" became very popular, and has passed through many editions. It is still read, although superseded by more able and trustworthy translations. His other works are now neglected.

WHITAKER, JOHN, divine and historian, was born at Manchester about 1735, and died, rector of Ruan Lanyhorne, Cornwall, in 1808. Among his numerous works are—"The History of Manchester;" a "Vindication of Mary, Queen of Scots;" 3 vols.; "The Course of Hannibal over the

Alps," 2 vols.; and "The Origin of Government."

WHITAKER, THOMAS DUNHAM, an English topographical antiquary, was born at Rainham, in Norfolk, in 1759. He completed his education at St John's College, Cambridge, entered the church, and became, in 1797, perpetual curate of Holme, in Lancashire, where his family had held an estate for more than three hundred years. He was afterwards presented successively to the vicarages of Whalley and Blackburn, which he held till his death. He graduated LL.D. in 1801. Dr Whitaker had the feeling and enthusiasm of a poet as well as the antiquary's love of facts, and his attainments as a classical scholar were above the average. Among his works are histories of the parish of Whalley, Honour of Clitheroe, and Deanery of Craven, and a fragment of an unfinished History of Yorkshire; and editions of Thoresby's "Ducatus Leodiniensis," and the "Visions of Piers Ploughman." Died, 1821.

WHITBREAD, SAMUEL, a distinguished member of the House of Commons, was the son of the eminent brewer in Chiswell Street, London, and born in 1758. Educated at Eton and St John's College, Cambridge, he made the grand tour, married the daughter of Earl Grey, and in the following year, 1790, entered parliament. He represented Bedford in parliament many years, and was one of the most vigorous opponents of Mr Pitt. He also conducted the impeachment of Lord Melville, and was uniformly in opposition to the government. In a fit of insanity, supposed to be occasioned by his over-anxious attention to business, and particularly to the intricate concerns of Drury Lane Theatre, with which he was connected, he destroyed himself in 1815.

WHITBY, DANIEL, a Church of England divine and celebrated controversialist, was born at Kishden, in Northamptonshire, in 1638. He studied at Trinity College, Oxford, of which he became a fellow, in 1664. Through the patronage of Dr Seth Ward, bishop of Salisbury, he obtained two prebends in the cathedral, and was rector of St Edmund's Church from about 1673 till his death. Dr Whitby was a very learned theologian and voluminous writer, but the greatest part of his writings had reference to controversies of his time, and, like them, now lie forgotten. He wrote many works against the Papists; pleaded for the Dissenters in his "Protestant Reconciler," a book which was burnt by order of the university of which he was a member, and the principles of which he formally disavowed; wrote against Calvinism, and afterwards against the doctrine of the Trinity, and published a great many sermons. His most important work was the "Paraphrase and Commentary on the New Testament," in 2 vols. folio, which was first published in 1703, and has been frequently reprinted. Many editions have been sold of his "Discourse concerning the true Import of the words 'Election' and 'Reprobation,'" familiarly spoken of as "Whitby on the Five Points." Died at Salisbury, in 1726.

WHITE, GILBERT, the naturalist of Selborne, was born in that village, in 1720.

He was sent to school at Basingstoke, and had for his master the Rev. Thomas Warton, then vicar of that parish, and father of Dr Joseph Warton, and Thomas Warton, professor of poetry at Oxford. He was admitted student at Oriel College, Oxford, in 1739, became fellow of his college, graduated M.A. in 1746, and was one of the senior proctors of the university in 1752. An ardent lover of nature, he settled early in his native village, a secluded and picturesque spot in the eastern corner of Hampshire, and on the edge of Sussex, and there, in patient observation and faithful recording of facts and phenomena, which to many seem trivial, he passed the years of his tranquil, uneventful life. His well-known "Natural History of Selborne" was first published in quarto, in 1789. It consists of a series of letters, originally addressed to Thomas Pennant and the Hon. Daines Barrington; written with so much enthusiasm, painstaking accuracy, and simplicity of style, that it soon became, what it still remains, one of the standard popular favourites, without which no English library is complete. The best editions contain White's account of the Antiquities of Selborne and his Naturalist's Calendar. Gilbert White lived to the age of 73, and died unmarried, June 26, 1793.

WHITE, HENRY KIRKE, the poet, was born at Nottingham, in 1785, and from his infancy manifested an extraordinary love of learning. He was first placed with a stocking-weaver, from which business he was removed to the office of an attorney, where he devoted all his spare time to the acquirement of Latin and Greek; and at length, through the generosity of Mr Wilberforce, he was admitted a student of St John's College, Cambridge. There he applied himself to his studies with such unremitting labour that his constitution sunk under the effort, and he died in 1806. The "Remains of Henry Kirke White," consisting of poems, letters, and fragments, were edited by Southey. A medallion profile of the young poet, by Chantrey, is in the National Portrait Gallery.

WHITE, JOSEPH, an eminent divine, and orientalist, was born at Stroud, in Gloucestershire, in 1746; was educated at Wadham College, Oxford; and was elected Laudian professor of Arabic, in 1775. Having, in 1781, as Bampton lecturer, delivered a series of sermons on the evidences of Christianity, which were highly approved, he was presented to a prebend at Gloucester, and took the degree of D.D.; though it afterwards appeared he was much indebted to Mr Ladocek and Dr Parr in the composition of them. In 1800 he published his "Diatesaron," or a Harmony of the Gospels in Latin, which was followed by his "Ægyptiaca, or Observations on certain Antiquities of Egypt;" "Griesbach's Greek Testament," &c. Died, 1814.

WHITE, JOSEPH BLANCO, theological and miscellaneous writer, was born of an Irish family settled at Seville, in 1775. He was brought up a Roman Catholic, educated at the Dominican Convent of Seville, and in 1799 was ordained priest. But falling into a state of religious doubt, he left the church

of Rome and his England, in a clergyman of still harassed joined the Unit at work with h works in Spani and edited Sp attributed to some views. Among "Letters from assumed name Internal Evid "The Poor M Popery;" and which was edit by Mr J. H. Th was the friend ridge, Southey, S. Mill, Lord men. He was the English go time of his dea from ill health Mr Rathbone, C May 20, 1841.

WHITE, SIR College, Oxford 1492; became man; and, in lord mayor, a knight hood for city during Wy 1566.

WHITE, GEORGE, found lists, was born his father kept broke College, leys and their dained deacon. preacher. In settlement of gave great satis he returned to tions for build settlement. O and repairing which he preach the assembled o the pian of pres he did to vast came from all p again embarke tour through se he preached to turned to Engl the difference and Wesley res tion appeared, without utterly. In 1748 White celebrated Cour appointed her Wesley he mar life is said to visiting many Scotland, and gree of intrepi all difficulties, America, and d England, Sept. field, preaching in the Nationa

of Rome and his native country, and settled in England, in 1810. He soon after became a clergyman of the church of England, but still harassed by doubt, quitted it too, and joined the Unitarians. Almost incessantly at work with his pen, he produced original works in Spanish and in English, established and edited Spanish periodicals, and contributed to some of the leading English Reviews. Among his separate works are—"Letters from Spain," published under the assumed name of Doblado; "Practical and Internal Evidence against Catholicism;" "The Poor Man's Preservative against Popery;" and his Life, written by himself, which was edited with his Correspondence, by Mr J. H. Thom, in 1845. Blanco White was the friend and correspondent of Coleridge, Southey, Whately, J. H. Newman, J. S. Mill, Lord Holland, and other eminent men. He was in receipt of a pension from the English government from 1814 till the time of his death. Died, after long suffering from ill health, at the house of his friend Mr Rathbone, Green Bank, near Liverpool, May 20, 1811.

WHITE, Sir THOMAS, founder of St John's College, Oxford, was born at Reading, in 1492; became an opulent London tradesman; and, in 1553, he served the office of lord mayor, and received the honour of knighthood for preserving the peace of the city during Wyatt's rebellion. He died in 1568.

WHITEFIELD, or WHITFIELD, GEORGE, founder of the Calvinistic Methodists, was born in 1714, at Gloucester, where his father kept the Bell Inn. While at Pembroke College, Oxford, he joined the Wesleys and their associates, and on being ordained deacon, he soon became a popular preacher. In 1738 he went to the American settlement of Georgia, where his conduct gave great satisfaction to the colonists, and he returned to England to procure subscriptions for building an orphan house in the settlement. On obtaining priest's orders, and repairing to London, the churches in which he preached were incapable of holding the assembled crowds; he therefore adopted the plan of preaching in the open air, which he did to vast assemblages of people, who came from all parts to hear him. In 1739 he again embarked for America, and made a tour through several of the provinces, where he preached to immense audiences, and returned to England in 1741. About this time the difference of view between Whitefield and Wesley respecting the doctrine of election appeared, and it led to their separation without utterly destroying their friendship. In 1748 Whitefield was introduced to the celebrated Countess of Huntingdon, and was appointed her chaplain. Like his friend Wesley he married a widow, and his married life is said to have been unhappy. After visiting many parts of England, Wales, Scotland, and Ireland, and displaying a degree of intrepidity and zeal that overcame all difficulties, he made a seventh voyage to America, and died at Newbury Port, in New England, Sept. 30, 1770. A picture of Whitefield, preaching to a village congregation, is in the National Portrait Gallery.

WHITEHEAD, WILLIAM, poet, was born at Cambridge, in 1715, was educated at Winchester School and Clare Hall, and succeeded Cibber as poet-laureate. He wrote the tragedies of "The Roman Father" and "Creusa," the comedy of "The School for Lovers," several elegant poems, &c. His writings are forgotten. Died, 1788.

WHITEHURST, JOHN, an ingenious mechanic, born at Cringleton, in Cheshire, in 1713; was distinguished by his superior construction of hydraulic machines, thermometers, barometers, &c. Died, 1788.

WHITELOCK, BULSTRODE, one of the statesmen of the Commonwealth, was the son of a Judge of the Common Pleas, and was born at London, in 1605. He was educated at Merchant Taylor's School, and St John's College, Oxford; studied law at the Middle Temple; and in 1640 was elected member of the Long Parliament. He took a leading part in the management of the impeachment of the earl of Strafford; was one of the commissioners sent to treat of peace with the king, at Oxford; assisted in the treaty of Uxbridge; and in 1648 was one of the commissioners of the great seal. He took part in many negotiations between the parliament and the king, but refused to concur in the proceedings of the High Court of Justice for the trial of the king. He more than once urged Cromwell to make terms with the exiled prince of Wales, and in other matters opposed the protector without losing his confidence. In 1653 White-lock was sent ambassador to Sweden, returning the following year, after concluding an important treaty. He was a member of Cromwell's second parliament, filled the post of speaker in the third, was one of the members deputed to offer the crown to Cromwell, and took part in the ceremony of his inauguration as protector. Under Richard Cromwell he was again a commissioner of the great seal, and member of the council of state. At the Restoration his name was near being excluded from the Act of oblivion, and being curtly dismissed from court, he spent the rest of his life in retirement at his seat, at Clifton, Wilts. He left in manuscript two valuable works illustrating the history of his times. These are—"Memorials of the English Affairs," several times reprinted, the latest edition in 1853; and "Journal of the Swedish Embassy in 1653 and 1654, from the Commonwealth of England," of which a new edition appeared in 1855. Died, 1676.

WHITGIFT, JOHN, archbishop of Canterbury, was born at Great Grimby, in Lincolnshire, in 1530. He was brought up by an uncle, Abbot Whitgift, from whom he imbibed views which inclined him afterwards to support the Reformation. He completed his education at Cambridge, studying first at Queen's College, and then at Pembroke Hall, under Ridley and Bradford. By politic reticence he escaped persecution during the reign of Queen Mary, and on the accession of Elizabeth was ordained priest. He held at Cambridge successively the posts of Lady Margaret's professor of divinity, master of Pembroke Hall, master of Trinity College, and Regius professor of

divinity. He was also named chaplain to the Queen. Whitgift already showed himself in the university what he became afterwards in the widest field, a rigid conformist and disciplinarian, intolerant of deviation from the forms and doctrines of the established Church either on the side of Romanism or of Puritanism. He took a prominent part as vice-chancellor in the expulsion of Cartwright, the great Puritan preacher and professor of divinity; wrote an answer to the "Admonition of the Parliament;" and in 1577 was appointed bishop of Worcester. He was also made vice-president of the marches of Wales. On the death of Grindal, in 1583, he became primate. From that time he acted the part of inquisitor—a sort of star chamber sole—with pitiless rigour; insisting on new articles of subscription, suspending the clergy who refused them, and procuring tyrannous laws against the press. Personally he was pious, liberal, and free from harshness; but officially he was intolerant of dissentients and doubters, and sincerely believed he ought to deal with them as he did. Under James I. he took a prominent part in the conference at Hampton Court, but did not live to join the commission appointed for regulating church affairs. Died at Lambeth, February 29, 1604. His Life was written by Strype and Sir George Paule.

WHITLOCK, ELIZABETH, actress, a sister of the Kembles and Mrs Siddons, was born in 1761. Allured by the success of her sister, she chose the histrionic art, and after a little practice in the country, made her first appearance at Drury Lane Theatre in 1783, the same year that John and Stephen made their debut in London. In 1785 she married Mr Whitlock, manager of the Newcastle Theatre, and in 1792 she accompanied her husband to America, where, in 1799, he died. Though far excelled by her sister, whom she greatly resembled in person, she was a good tragic actress, and realized a fortune by her profession. Died, 1836.

WHITTINGHAM, Sir SAMUEL FORD, a lieutenant-general in the British service, passed through the various gradations as a cavalry officer, and was appointed deputy assistant quarter-master-general in the army under the duke of Wellington in 1809. He afterwards served with the Portuguese army, and was subsequently employed in America. But the chief scene of his services was with the Spanish troops during the Peninsular war, having been aide-de-camp to General Castanos, and afterwards serving under the duke of Albuquerque. He consequently shared in the battles of Baylen, Barossa, and Talavera, in the latter of which he was severely wounded. In 1812, after having raised and disciplined a large corps of Spanish troops, he was appointed to the command of them, as major-general; and, in junction with the British army at Alicante, he was successfully opposed to the French under Marshal Suchet; after which he served with distinction in command of a division of infantry, under Sir John Murray, and subsequently under Lord W. Bentinck. As a reward for his services, the prince regent appointed him one of his aides-de-camp, and

he received the honour of knighthood. He was also invested with the grand cross of the order of San Ferdinando by the king of Spain, who, on Napoleon's escape from Elba, in 1815, sent expressly for Sir William. In 1819 he was appointed governor of Iominica; but in 1822 his services were transferred to India, as quarter-master-general of the king's troops, and subsequently as a major-general. On returning from India in 1835, he was appointed to the command of the forces in the Windward and Leeward Islands; but he was permitted to resign this post in 1839, in order to take the command in chief at Madras, where he arrived in August, 1840, and died in January, 1841.

WHITTINGTON, Sir RICHARD, lord mayor of London, was born of a good family in Gloucestershire in the 14th century. The story of Whittington and his cat, famous in the nursery for generations past, and to most persons seeming to be nothing more than a pretty legend, has been recently investigated by a diligent antiquary, the Rev. Samuel Lysons, M. A.; and he has succeeded in establishing many facts, and in giving an air of great probability to the whole familiar tale. Richard's father, Sir William de Whityngdon, lord of the manor of Pauntley, in Gloucestershire, died in 1360. Richard, as a younger son, had to seek his living; walked, according to the story, to London, and was apprenticed there; and soon running away, was arrested by the sound of Bow Bells as he sat at the foot of Highgate Hill, and returned and stuck to his business. He grew very rich, married Alice Fitzwarren, his master's daughter, and was thrice chosen lord mayor of London, in 1397, 1406, and 1419, besides being once named by the king, Richard II., to succeed a mayor who died during his term of office. It is certain that he on one occasion lent £1000—equal to £10,000 of our currency—to Henry IV., and on another occasion 700 marks to Henry V. His trade was that of a mercer, and among the curious documents which are still extant to certify his existence, and some facts of his life, are his invoices for the wedding *trousseaux* of the Princesses Blanche and Philippa, daughters of Henry IV. Whittington left no children, and at his death bequeathed his wealth for public objects. Among these were the rebuilding of Newgate prison, the founding of a college and of the libraries at Guildhall, and of the Grey Friars, the repair of St Bartholomew's Hospital, &c. He shared with Richard Harweden the expense of rebuilding the nave of Westminster Abbey. For the curious illustrations of the cat story, and the suggestions which make even that seem no longer impossible, we must refer to Mr Lysons' interesting Memoir, entitled "The Model Merchant of the Middle Ages," published in 1860. Whittington died in 1423.

WHITWORTH, CHARLES, Lord, diplomatist, was born at Aldbaston, of a Staffordshire family, somewhere about 1680. After holding some subordinate position, he was named in 1702 president to the diet of Ratisbon. Two years later he was envoy to St Petersburg, where he was in great favour with Catherine I., and in 1710 he was again sent

as ambassador vengeance of t arrest for debt He succeeded in was subsequent capacities to the bon, to Berlin, t of Cambray. In Whitworth of G retired from pu was author of a was in 1710. Di

Courtenay was th in February, 1377, to appear before a Wickliffe appear

as ambassador extraordinary to avert the vengeance of the Czar, Peter I., for the arrest for debt of his minister in London. He succeeded in this delicate mission. He was subsequently sent in various diplomatic capacities to the diets of Augsburg and Ratisbon, to Berlin, the Hague, and the Congress of Cambray. In 1721 he was created Baron Whitworth of Galway, and three years later retired from public life. Lord Whitworth was author of an Account of Russia as it was in 1710. Died, 1725.

WHITWORTH, CHARLES, Earl, an able diplomatist, was born in 1754, at Laybourne Grange, in Kent, and was educated at Tunbridge School. He was ambassador to Poland in 1786, and to Russia in 1788, at which court he resided 12 years. In 1801 he negotiated a treaty with Denmark, was sent as plenipotentiary to Paris in 1802, and early in the following year had the memorable interview with Napoleon, then first consul, the report of which caused so great a sensation in Europe. Lord Whitworth went to Ireland as viceroy in 1814, and died in 1825.

WICKLIFFE, or WYCLIFFE, JOHN, the "Morning Star of the Reformation," was born probably at Wycliffe, near Richemond, in Yorkshire, about 1324. He was educated at Oxford, where he attended the lectures of the learned and pious Bradwardine at Merton College. The terrible pestilence of 1348 appears to have profoundly impressed his mind and aroused him to earnest reflection. While he pursued diligently his studies in various departments he especially devoted himself to philosophy and theology. Like Bradwardine, he drank deep at the Biblical fountains, and early began to call others to them. Nor was he slow to see and to expose the ills and abuses prevailing both among the monks and the clergy. He took a leading part in the contests between the Mendicant Orders and the university, and between the Crown and the papacy. In 1361 he was elected warden of Balliol, and about the same time was appointed rector of Fyflingham, in Lincolnshire. Four years later he became warden of Canterbury Hall, from which office, however, he was soon removed, and he unsuccessfully appealed to the pope against the sentence of the archbishop. In 1372 he took his degree of doctor in theology, and became professor of divinity in the university. His reputation and influence were so great that in 1374 he was one of the commissioners sent by Edward III. to Bruges, to treat with Pope Gregory XI. respecting the repeal of the statutes of Provisors and Premunire. A compromise was agreed to, and on Wickliffe's return, in 1375, he was named prebendary of the Collegiate Church of Westbury, and presented to the rectory of Lutterworth, in Leicestershire. He laboured incessantly as a preacher and pastor, and his sharp sayings about the pope and the Church could not but excite attention in high quarters. His opinions spread rapidly among the common people, and the Church grew alarmed. The zealous and haughty Courtenay was then bishop of London, and in February, 1377, he cited the bold preacher to appear before a convocation at St Paul's. Wickliffe appeared there on the 19th Febru-

ary, attended by Lord Percy, marshal of England, and John of Gaunt, duke of Lancaster. The cathedral was densely crowded; hard words passed between the bishop and the duke, then the most powerful noble in England; blows followed, and the meeting broke up in confusion. In May following three bulls of Gregory XI. were addressed to the king, the primate, and the university of Oxford, requiring them to proceed against Wickliffe; who early in 1378 answered the summons of the primate, and went unattended to the chapel at Lambeth. "Men expected he should be devoured;" but the proceedings were stopped by an order from the queen-mother, and Wickliffe was dismissed, like the apostles Peter and John, with a warning not to say such things again. About this time he appears to have commenced sending out his "poor priests," evangelists, and missionaries to propagato in the country places the truth of the gospel. The same year, 1378, began the great schism in the papacy. Early in 1379 Wickliffe fell dangerously ill at Oxford, and an attempt was made by a party of monks, who visited him, to induce him to recant. With an energy starting in one so feeble and pale, he faced them and said, "I shall not die, but live; and again declare the evil deeds of the friars." He did live, and in the following year he dealt the hardest blow of all to error and evil by the completion and publication of his English Bible, on which he had worked between ten and fifteen years. It was translated from the Vulgate, and is believed to have been the first complete version in English. In 1381 he publicly attacked the doctrine of transubstantiation; sentence of condemnation was pronounced by the university, and even Lancaster could not support him. The breaking out of Wat Tyler's insurrection the same year intensified the alarm which his opinions excited. A synod was held in London, at which Courtenay, now primate, presided; Wickliffe's opinions were declared heretical; and soon after a royal ordinance was issued for the arrest and imprisonment of *Lollards*, his followers. Wickliffe addressed a petition to the Commons, and they demanded the repeal of the ordinance. In November, 1382, he was cited before the primate at Oxford; presented two confessions, one in Latin, the other in English; and without being again formally condemned, withdrew to his cure at Lutterworth. He is said to have been summoned to Rome by Urban VI., and to have been prevented by bodily weakness from obeying it. He spent his remaining days in peace, writing and preaching fearlessly to the last. He was struck with paralysis while standing before the altar at Lutterworth, 29th December, 1384, and was carried to his house, where on the last day of the year he peacefully died. No statute *de Hæretico comburendo* had yet been passed, and heresy was regarded in England as a spiritual offence, punishable only by spiritual censures; or Wickliffe must have been burnt. His doctrine was condemned by the council of Constance, and his remains were, by order of the council, exhumed, burnt, and cast into the Swift, a brook running by Lutterworth.

"Thus this brook," says Fuller, "hath conveyed his ashes into Avon, Avon into Severn, Severn into the narrow seas, they into the main ocean; and thus the ashes of Wickliffe are the emblem of his doctrine, which now is dispersed all the world over." Most of Wickliffe's writings still remain in manuscript, and a catalogue of all the MSS. extant in London, Oxford, Cambridge, Lambeth, and Lincoln, Dublin, Paris, Vienna, and Prague, as well as in private collections, has just been printed (1865), at the Clarendon Press, by Dr Shirley. Wickliffe's New Testament has been several times printed, but his whole Bible was not printed till 1850, when it appeared in 4 vols. 4to, under the editorship of Forshall and Madden. There are Lives of Wickliffe by Lewis, Le Bas, and Dr Vaughan. A portrait is preserved in the vicarage of Wycliffe, of which the earl of Denbigh possesses a replica. Its value as a likeness has been curiously verified. A living representative of the Wycliffe family, a Yorkshire clergyman, was accosted at Geneva, from his resemblance to this portrait, by an enthusiastic German student. The replica is now (June, 1866) in the National Portrait Exhibition at South Kensington. Wickliffe's church at Lutterworth is about to be restored.

WIELAND, CHRISTOPH MARTIN, German poet, novelist, and translator, was born near Biberach, in Suabia, in 1733. He was the son of a Pietist clergyman, and was educated at the school of Klosterbergen, near Magdeburg, and at the university of Tübingen. In 1752 he went to Zurich, where after a short residence with Bodmer, during which he made the acquaintance of many eminent men, he was engaged as tutor in several families, and in 1758 he went to Berne. Two years later he settled at Biberach, and became a member of the municipal council; married in 1765; and in 1769 was appointed professor of philosophy at Erfurt. Three years later he removed to Weimar, as tutor to the sons of the Duchess Amalie. Here, on Goethe's subsequent settlement, he became his friend. Wieland retired to a beautiful country seat in the neighbourhood in 1798, but after the loss of his wife and his favourite grand-daughter, he returned to Weimar, and there spent his last years. He found a new friend in Schiller. The works of Wieland are very numerous, and very diversified in kind and character. His principal poem is the epic romance, entitled "Oberon," published in 1780. His most admired novel is "Agathon," 1766. Among his other works are, the poem entitled "Die Grazien;" "Musarion;" "Die Abderiten;" and "Erzählungen und Märchen." Wieland made the first German translation of Shakespeare. It appeared between 1762 and 1766. In his latter years he made translations from Horace and Lucian, wrote several pieces in imitation of the latter, and translated Cicero's letters; founded and edited the "Deutscher Mercur;" and edited alone, or with others, two other literary journals. In 1808 he was presented to Napoleon at Erfurt, and received from him the decoration of the Legion of Honour. The same year he made the acquaintance of

Madame de Staël. Wieland was a foreign member of the French Institute and chevalier of the Russian order of St Anne. The death of the accomplished Duchess Amalie, in 1807, deeply affected him, and his own death took place the 20th January, 1813.

WIFFEN, JEREMIAH HOLME, a Quaker poet, was born in 1792, and brought up to the profession of a schoolmaster, in which he was for some years engaged. The work on which his poetical fame rests is a translation of Tasso, in which he adopted the Spenserian stanza; but he wrote many other works, and was a contributor of poetry to the Annuals. He was also author of a prose work, "The History of the Russell family." With a liberality befitting his wealth and station, the duke of Bedford appointed Mr Wiffen his private secretary and librarian; and under the patronage of his Grace, surrounded by rare books, paintings, sculpture, and objects of *virtu*, he spent his hours in an enviable state of mental luxury; for he was not a mere book worm, but had a taste for the fine arts generally. He died in 1836. His sister married Mr Alaric Watts.

WILBERFORCE, WILLIAM, the distinguished philanthropist, was born in 1759, at Hull. He completed his education at Cambridge, and there obtained the friendship of Mr Pitt. He was elected M.P. for Hull directly he was of age. It was in 1787 that he began to distinguish himself by his exertions for the abolition of the slave trade, which, after a contest, was finally decreed by the British legislature in 1807. Mr Wilberforce approved the principles of the French revolution, as they exhibited themselves at its commencement; and, on the motion of M. Brissot, in August, 1792, was voted the right of French citizenship. But in 1801 he denounced the designs of Buonaparte, and supported all the ministerial measures of vigorous opposition to France. In his exertions to emancipate the hapless African from the chains of slavery, Mr Wilberforce never relaxed; and he lived to see the second reading of the "Emancipation Act" carried by the House of Commons. He published a "Practical View of the prevailing Religious Systems of Professed Christians;" and an "Apology for the Christian Sabbath." Died, aged 73, in 1833. His Life was published by his sons, in 5 vols., in 1839, and subsequently his Correspondence. More recently appeared "Recollections of Wilberforce," by Harford; and "William Wilberforce; his Friends and his Times," by J. C. Colquhoun. The unfinished portrait, by Lawrence, is in the National Portrait Gallery.

WILBRORD. [WILLIBROD.]
WILBYE, JOHN, an English musical composer, of whom hardly anything is known, except that he was living in London in 1588, and was author of some very charming and highly scientific madrigals. One book appeared in the year just mentioned, and another eleven years later. Selections from them have been published by Warren, at the close of the last century, and more recently by the Society of Musical Antiquaries.

WILD, HENRY, the learned tailor of Norwich, who made himself master of the He-

brew, Arabic, and was indebted to the Bodleian for the Arabic, Mal Born, 1684; die

WILFORD, a naturalist, was a native of India in 1781, a troops sent there. He became one of the Asiatic Society's many valuable antiquities of his searches. Died

WILFRED, a knight, was born, probably in Umbria, in 664. He went with Charlemagne to Delphinus, and from the king of Ripon. In 633, made a long late Delphinus, and from the king of Ripon. In 633, Egilbert, bishop, he distinguished Whitby as the ad on the Easter qu opposition to the appointed archbishop to be consecrated his absence another made by the Bri get possession of tion, pride, and p his enemies, and his immense dove set out for Rome t preached for so on the way obtain favour, which th prisoned, and mak the kingdom of th to York in 687, an appealed to the p 705, held the see of in 709, and was b Ripon. Wilfred churches in the n cated to him.

WILKES, JOHN, distinguished for his conduct, was born in 1727. He received a liberal education after travelling on a lady of fortune of the Buckingham he was elected M. publishing an offe periodical paper, i warrant was issue to seize him and committed to the after, however, he habeas corpus, bef the Common Pleas. warrants were il quently discharge of the pop Wilkes incurred printing an obscen on Woman;" and ceive judgment, v went to France, w when he was elect

brew, Arabic, and other Oriental languages; and was indebted to Dr Pridesaux for a place in the Bodleian Library. He translated from the Arabic, Mahomet's Journey to Heaven. Born, 1684; died, probably about 1734.

WILFORD, FRANCIS, an eminent orientalist, was a native of Hanover, and went to India in 1781, as an officer with the foreign troops sent there by the British government. He became one of the first members of the Asiatic Society of Calcutta, and published many valuable memoirs on the history and antiquities of Hindostan, in the Asiatic Researches. Died, 1822.

WILFRED, ST, archbishop of York, celebrated as the supporter of papal authority, was born, probably in the kingdom of Northumbria, in 664. Having studied theology, he went with Benedict Biscop to Rome in 688, made a long stay at Lyons with the prelate Deidnus, and on his return received from the king of Northumbria the monastery of Ripon. In 634 he was ordained priest by Egilbert, bishop of Paris, and the same year he distinguished himself at the synod of Whitby as the advocate of the Roman views on the Easter question and other matters, in opposition to the Scottish teachers. He was appointed archbishop of York, and preferred to be consecrated at Paris by Egilbert. In his absence another appointment had been made by the British party, and he did not get possession of his see till 667. His ambition, pride, and pompous way of living made him enemies, and in 678 he was deposed, and his immense diocese divided into three. He set out for Rome to make appeal to the pope; preached for some months in Friesland, on the way obtained the pope's decree in his favour, which the king slighted; was imprisoned, and making his escape, preached in the kingdom of the South Saxons. Restored to York in 687, and again deposed, he again appealed to the pope, and after his return, in 705, held the see of Hexham. Died at Oundle in 709, and was buried at his monastery of Ripon. Wilfred was canonized, and many churches in the north of England are dedicated to him.

WILKES, JOHN, an alderman of London, distinguished for the violence of his political conduct, was born in the metropolis, in 1727. He received a liberal education; and after travelling on the continent, married a lady of fortune, and became a colonel of the Buckinghamshire militia. In 1761 he was elected M.P. for Aylesbury; but on publishing an offensive libel in No. 45 of his periodical paper, the North Briton, a general warrant was issued by the secretary of state to seize him and his papers, and he was committed to the Tower. In a few days after, however, he was brought, by writ of habeas corpus, before Chief Justice Pratt of the Common Pleas, who decided that general warrants were illegal, and he was consequently discharged, amidst the general rejoicings of the populace. In the mean time Wilkes incurred another prosecution for printing an obscene poem, called an "Essay on Woman;" and, for not appearing to receive judgment, was outlawed. He then went to France, where he resided till 1768, when he was elected for Middlesex; but was

prevented from taking his seat, and committed to the King's Bench prison, which occasioned serious riots in St George's Fields. He had now attained the height of his popularity; a large subscription was entered into to pay his debts; and in 1774, the year of his majority, he was again elected for Middlesex, and permitted to take his seat without farther opposition. He died in 1797.

WILKIE, SIR DAVID, the distinguished painter, was born near Cupar, in Fifeshire, in 1785, his father being a minister of the Scotch Church. In 1805 he came to London, and soon attracted notice by the excellence of his earliest efforts; his career of fame commencing with his "Village Politicians," "Blind Fiddler" (now in the National Gallery), "Rent Day," &c. His reputation was soon established, and in 1811 he was made a Royal Academician, from which period he regularly produced, and as regularly sold at increasing prices, his most celebrated pictures, of which we shall merely mention a few; as "Distraint for Rent," "The Penny Wedding," "Blind Man's Buff," "The Village Festival" (now in the National Gallery), "The Reading of the Will," and "Chelsea Pensioners reading the Gazette of the Battle of Waterloo" (painted for the duke of Wellington, in 1821, for £1200). In consequence of ill health, brought on by close application and some serious pecuniary losses, a continental tour was recommended by his physicians; and he accordingly visited Italy and Spain, where he remained till 1828. But his love of art and his habitual industry could neither be restrained by the injunctions of physicians nor the entreaties of friends; and, accordingly, several finished pictures, altogether different from his former style of execution, soon appeared. Upon this total change of style and choice of subjects it has been remarked, that, in departing from the principle of the Flemish and Dutch schools, and adopting that of the Spanish, "he determined on the hazardous experiment of resting his future fame on a style utterly opposite to that in which he then stood unrivalled amidst European artists." In January, 1830, on the death of Sir Thomas Lawrence, he was appointed principal painter in ordinary to George IV., whose portrait in the Highland costume, and "His Majesty's reception at Holyrood House," he was at that time occupied in painting. On the accession of William IV. the royal favour was continued to him, and he was knighted in 1836. Queen Victoria honoured him with sittings for his splendid picture of her Majesty's "First Council;" and by the queen's command he went to the Turkish capital to paint the portrait of the sultan. This was his last and fatal mission. On his return, on board the *Oriental* steamer, after having touched at Malta and Gibraltar, he was taken suddenly ill, and died in Gibraltar Bay, aged 58, June 1, 1841; the last sad offices of committing his body to the deep being rendered necessary by the strict orders of the governor, who could not allow it to be brought on shore. Among the principal pictures painted by Sir David, in his second or Spanish style,

cules," a British ship of the line; was soon after made rear-admiral by Napoleon, and commander of the light squadron of the armament of Brest; and was next charged with an expedition against the English colonies and ships wherever he could do them most damage. The emperor's brother, Jerome Buonaparte, accompanied the expedition. The squadron, after accomplishing much of its task of destruction, was itself dispersed and almost destroyed in 1806 by a storm and by the attack of the English off the Havannah. Four English squadrons had been despatched in pursuit of Willaumez. In 1809 he made an unsuccessful sortie from Brest against the English stations before Lorient and Rochefort, and from that period to the end of the war he commanded the flotilla of the Zuyder-Zee. During the years of peace which followed Admiral Willaumez took an active part in improving the organization of the navy. Died, dean of the French admirals, at Surmes, in 1845. His "Dictionnaire de Marine" is highly esteemed.

WILLDENOW, CARL LUDWIG, a celebrated botanist, born at Berlin, in 1765. After having filled the chair of natural history, he was made director of the botanic garden at Berlin, which he greatly improved, and also presented to the museum a zoological cabinet of his formation. In 1811 he was invited to Paris by Humboldt, to classify and describe the multitude of new plants brought by that traveller from America. Among his principal works are, "Prodromus Florae Borealis," "Grundriss der Kräuter-kunde," and "Species Plantarum," which was not quite completed when he died, in 1812.

WILLEMS, JAN FRANS, a Dutch poet and scholar, distinguished as the zealous promoter of the cultivation of the Dutch language, was born near Antwerp, in 1793. He attracted public attention in 1818 by a poetical address to his countrymen on the importance of using the tongue their fathers spoke, and in the following year appeared the first volume of his "Dissertation on the Dutch Language and Literature in connection with the Southern Provinces of the Netherlands." This was followed five years later by the second and concluding volume, and much warm debate was excited on the subject. Willems was editor of the "Belgisch Museum," of which ten volumes were published. Among his other works are a Flemish version of "Reynard the Fox," editions of several Chronicles, and "Miscellanies on National Subjects." Died at Ghent, 1846.

WILLIAM I., the CONQUEROR, king of England, was the natural son of Robert, duke of Normandy, and was born at Falaise, in 1027. He was brought up at the court of the king of France, and succeeded to the duchy at the age of eight. But during his minority there were frequent revolts of the nobles, and his authority was not fully established for many years. On the death of Edward the Confessor, king of England, William made a formal claim to the crown, alleging a bequest in his favour by Edward and a promise which he had extorted from Harold. His claim being denied, he at once prepared for an invasion of England; effected a landing at Pevensey, September 28, 1066,

while Harold was engaged in opposing the Norwegians in the north, and fortified a camp near Hastings. The decisive battle of Hastings was fought on Saturday, October 14, 1066, Harold was defeated and slain, and the Norman Conquest was commenced. His rival, Edgar Atheling, was supported by some of the leading men for a short time, but they all made submission to William at Ilerkhamptstead, and on the following Christmas day he was crowned at Westminster by Aldred, archbishop of York; a riot occurring in which some lives were lost, and some houses burnt. The first measures of the new king were conciliatory, but served merely for a show for a short time. The inevitable conflict was not long deferred. Early in 1067 William went to Normandy, leaving the government of his new dominions in the hands of Odo, bishop of Bayeux, and William Fitz-Osbern. Tidings of revolt in various quarters recalled him, and he was occupied through most of his reign in the conquest of the country. Of the military events the most terribly memorable is his campaign in the north in 1069; when he mercilessly devastated the whole district beyond the Humber with fire and slaughter, so that from York to Durham not an inhabited village remained, and the ground for more than sixty miles lay bare and uncultivated for more than half a century afterwards. The order established was that of death; famine and pestilence completing what the sword had begun. This campaign was followed in 1071 by the attack on the fortified camp of Hereward, the resolute and unconquered English chieftain, in the Isle of Ely. The settlement of the country was as cruel as the conquest. The English were dispossessed of their estates, and of all offices both in church and state; William assumed the feudal proprietorship of all the lands, and distributed them among his followers, carrying the feudal system out to its fullest development; garrisoned the chief towns, and built numerous fortresses; re-established the payment of Peter's pence, indignantly refusing, however, to do homage to the pope; and converted many districts of the country into deer parks and forests. The most extensive of these was the New Forest in Hampshire, formed in 1079. He ordered a complete survey of the land in 1085, the particulars of which were carefully recorded, and have come down to us in the *Domesday Book*. According to tradition the *Cusfew Bell* was introduced by the conqueror; and the attempt was made to supersede the English by the Norman-French language, which was for some time used in official documents. In his latter years William was engaged in war with his own sons, and with the king of France; and in August, 1087, he burnt the town of Mantes. Injured by the stumbling of his horse among the burning ruins, he was carried to Rouen, and died in the abbey of St. Gervaa, 9th September. He was buried in the cathedral of Caen, where a monument was erected to him by his son William II. This monument perished during the Huguenot wars. William married, while duke of Normandy, his cousin Matilda, daughter of Baldwin, count of Flanders, by whom he had four sons, two of whom, William and Henry,

became kings of England, and several daughters. The building of the Tower of London was begun by William I. about 1080. Battle Abbey was also built by him in commemoration of his victory at Hastings. A statue of William I. was erected at Falaise, in 1853. Domesday Book has been recently reproduced by the photosincrographic process, under the direction of Sir H. James.

WILLIAM II., RUFUS, or THE RUDDY, king of England, was third son of William I., and was born in Normandy, about 1060. He was educated by Lanfranc, and appears to have been from childhood his father's favourite son. On his father's death, and by his express desire, he hastened to England, obtained possession of the royal treasury at Winchester, and was crowned by Lanfranc, then archbishop of Canterbury, at Westminster, 26 September, 1087. An insurrection in favour of his elder brother Robert, duke of Normandy, broke out in the following year, headed by Bishop Odo, and several Norman nobles; but by politic promises of good laws William obtained the assistance of his English subjects, and quelled the rising. In 1090 he made war on Robert in Normandy, but their quarrel was ended by a treaty. Similar ending had the war begun with Malcolm, king of Scotland, who agreed to do homage to William. It was, however, afterwards renewed, and Malcolm fell at Alnwick, in 1093. Renewed war in Normandy, campaigns against the Welsh, a long quarrel with Anselm, the new primate, from whom William long kept the temporalities of the see, and other troubles, filled up the rest of his reign. In 1096 he acquired, perhaps subject to a right of redemption, the duchy of Normandy for a large sum of money; Robert going on the first crusade. In the following year he began building the first Westminster Hall, and a bridge over the Thames, and completed the Tower of London. His avarice, profligate life, and severity as a ruler made him universally hated, and the manner of his death was considered an expression of God's judgment against him. He was shot while hunting in the New Forest, August 2, 1100; by whose hand, and whether by accident or otherwise, it is impossible to tell. He was buried in the cathedral of Winchester.

WILLIAM III., king of England, was the son of William II., prince of Orange, by his wife Mary, daughter of Charles I., and was born at the Hague, November 4, 1650. His father, stadtholder of the United Provinces, died a few days before his birth; and through the influence of the Republican party he was long excluded from that office; his exclusion being demanded also by Cromwell on the conclusion of the treaty with Holland in 1654. But in 1672 the serious peril of the Republic from the aggressions of Louis XIV. led to the annulment of the edict by which the stadtholderate had been abolished, the De Witts were imprisoned and massacred, and William of Nassau was installed in the office of stadtholder. Though only 22 years of age he showed himself the worthy descendant of William the Silent, founder of the Republic; and in two campaigns drove the French out of the Dutch territory. He

was defeated by the prince of Condé at Seneff, and the war lasted till 1678. In the previous year William had married Mary, daughter of James, duke of York, afterwards James II., and this alliance gave him far greater importance as head of the league subsequently formed against France, and leader of the Protestants of Europe. When the arbitrary measures of James II. became intolerable to his subjects, the hopes of the leading friends of freedom and Protestantism naturally turned to him, and he accepted the call sent him, to come and save their rights and liberties. He landed at Torbay, 5th Nov., 1688; the king fled, but was captured and brought back; William arrived in London in December; and by the convention, assembled in January, 1689, the crown was offered to William and Mary, and was accepted by them. They were crowned, 11th April, by Compton, bishop of London, and the sermon was preached by Bishop Burnet. The primate Sancroft and seven of the bishops, refusing to take the oaths to the new government, were suspended from their office, and Sancroft with five of the bishops (all who then survived) were subsequently deprived. Some of the clergy followed the example of the prelates, and with them are known as the party of the *Nonjurors*. Resistance was made in Scotland, but ended with the defeat of Dundee at Killiecrankie; while a more serious conflict raged in Ireland, in which James II. and William personally took part, and which was closed by the victory of the latter at the battle of the Boyne. The principal aim of the king thenceforth was to humble France, and he spent much of his time abroad, engaged as leader of the army of the confederates. He took Namur, but was defeated by the French at Steenkirk, and Neerwinden (Landen), and by the Peace of Ryswick, in 1697, was recognized as king of England. Three years before he had lost his queen, a great personal sorrow, but the throne was secured to him by the provisions of the Bill of Rights. He was, however, very unpopular with his subjects, and hostile intrigues, conspiracies, and projects of assassination troubled his reign. Whigs, Tories, and Jacobites alike distrusted him. He continued to take an active part in the affairs of Europe, and especially in the negotiation of the famous Partition Treaties for the disposal of the dominions of the Spanish king. He was provoked to prepare a new war against France by the recognition by Louis XIV. of the son of James II. as king, but this project was set aside by his death. The reign of William III. forms one of the great epochs of our Constitutional History—the *revolution*; the main feature of which is the final recognition by law of those great principles of regulated liberty for which the statesmen and heroes of the Commonwealth had contended. The character of William has been both extravagantly lauded and passionately depreciated. His taciturn cold manner, his preference of his foreign friends, and the way in which he stood aloof from both the political parties naturally excited prejudice and ill-will against him. But it is not possible to doubt his great intellectual and moral qualities, clear-sightedness, courage

(often to rash and indomitable purpose. One ineffaceable; atrocious master of Kensington Park from his horse, buried in West

WILLIAM I. before his accession. **LIAM HENRY** third son of Gust the 21st, entered the name of the Prince George by Admiral Digby's same footing, youths of the Prince William. Admiral Rodney's fleet, commencing. The prince served his time as a merchant and off the coast; and many honourable to his late of him during career. He was Warwick, of 5th Keith, and was captured the first and the Terror, in 1782. who was in Queen De Grasse and the Barfleur fleet. Nelson, then in June, 1783, returned to England of 1785 the lieutenant of as captain of sailed for Nov. proceeded to the and remained orders of Nelson's friendship (not between them prince returned pointed to command in which he aged. In 1789 he was earl of Munster the House of I. admiral of the B. however, he was sloop. In 1816 Parker as an capacity he bore for the purpose France; and received the of Prussia. In the life of a privy ling at Bushy appointed rangess of Guifford with Mrs Jordan memoir of that Princess Charlotte opened in the duke of Clarence 1818, he married

(often for rashness in the field), decisiveness and indomitable energy, and persistency of purpose. One dark stain on his character is ineffaceable; he distinctly sanctioned the atrocious massacre of Glencoe, devised by the master of Stair. William III. died at Kensington Palace, in consequence of a fall from his horse, 8th March, 1702, and was buried in Westminster Abbey.

WILLIAM IV., king of England, known before his accession to the throne as WILLIAM HENRY, duke of Clarence, was the third son of George III., and was born August the 21st, 1765. At 14 years of age he entered the navy as a midshipman on board the Prince George, a 98-gun ship, commanded by Admiral Digby; and he was placed on the same footing, in every respect, with other youths of the same rank in the service. Prince William Henry was present with Admiral Rodney at the capture of the Caracas fleet, commanded by Don Juan Langara. The prince served nearly all the residue of his time as a midshipman in the West Indies, and off the coasts of Nova Scotia and Canada; and many characteristic anecdotes, honourable to his bravery and humanity, are related of him during the period of his naval career. He was afterwards removed to the Warwick, of 50 guns, commanded by Lord Keith, and was present when that officer captured the frigates L'Aigle and La Sophie, and the Terror sloop-of-war, off the Delaware, in 1782. He then joined Lord Hood, who was in quest of the French fleet under De Grasse and Vaudreuil, and on board the Barfleur first became acquainted with Nelson, then in command of the Albemarle. In June, 1783, Lord Hood's squadron returned to England; and in the summer of 1785 the prince was appointed third lieutenant of the Hebe frigate. In 1786, as captain of the Pegasus, of 28 guns, he sailed for Nova Scotia; whence he proceeded to the Leeward Islands station, and remained for some months under the orders of Nelson, when a strong and lasting friendship (honourable to both) sprang up between them. In December, 1787, the prince returned to England, and was appointed to command the Andromeda frigate, in which he again sailed for the West Indies. In 1789 he was created duke of Clarence and earl of Munster, in Ireland, took his seat in the House of Lords, and was made rear-admiral of the Blue in 1790. From this time, however, he saw no more active service afloat. In 1811 he succeeded Sir Peter Parker as admiral of the fleet. In that capacity he hoisted his flag for the last time, for the purpose of escorting Louis XVIII. to France; and on board the Impregnable he received the emperor of Russia and the king of Prussia. For many years the duke lived the life of a private English gentleman, residing at Bushy Park, of which he had been appointed ranger, on the death of the countess of Guilford, in 1797. [His connection with Mrs Jordan has been noticed in our memoir of that lady.] After the death of the Princess Charlotte of Wales, in 1817, a new era opened in the position and prospects of the duke of Clarence; and on the 11th of July, 1818, he married the Princess Adelaide, eldest

daughter of the duke of Saxe Meiningen. Two daughters, the eldest of whom died on the day of her birth, and the youngest when only three months old, were their only offspring. Having become heir-presumptive to the throne, in 1827, by the death of the duke of York, he received an additional parliamentary grant, which raised his income to £40,000 a year. He was also appointed lord high admiral of England, a post revived for the occasion; but owing to some objections made by the duke of Wellington to the expenses of his royal highness's progresses, he resigned the office. On the 26th of June, 1830, the duke of Clarence succeeded his brother, George IV., as king of England, and was crowned, with his royal consort, in Westminster Abbey, September the 8th, 1831. A marked difference was soon observable in the conduct of William IV. and his predecessor. The secluded habits and fastidious retirement that had distinguished the last years of his brother's life, gave place to an obvious desire of popularity on the part of the new monarch; while the Wellington administration was succeeded by that of Earl Grey, under whom the reform of parliament was effected. Political animosities were at their height; but still the king was on the popular side, and the court offered, in every respect, an example worthy of imitation. In May, 1837, his Majesty was taken ill, and in four weeks from that time, June 20, 1837, he died.—"A man," said Lord Grey, "more sincerely devoted to the interests of his country, and better understanding what was necessary for the attainment of that object, there never did exist; and if ever there was a sovereign entitled to the character, his Majesty may truly be styled a PATRIOT KING."

WILLIAM (FREDERICK) I., king of the Netherlands, grand-duke of Luxembourg, prince of Orange, and duke of Nassau, was son of William V., prince of Orange, and was born at the Hague, 24th August, 1772. He received at his birth the title of hereditary prince of the United Provinces. At the age of 16 he was sent to the court of his uncle, Frederick William II. of Prussia; went two years later to study at Leyden; and in 1791 married his cousin, Frederica Louisa Wilhelmina, daughter of the king of Prussia. He had received a military training, and on the French invasion of Holland, in 1793, he was commander-in-chief of the Dutch army. After the final triumph of the French arms, in 1795, he accompanied his father to England; lived afterwards at Berlin, and at Fulda; served in the Prussian and Austrian armies against the French, distinguishing himself at Jena and at Wagram; and in December, 1813, after an insurrection in Holland in his favour, he was proclaimed sovereign prince of Holland. The French were driven from the fortresses then in their possession; a constitution was drawn up and sworn to; and by a decree of the congress of Vienna, Belgium and the bishopric of Liège were united with Holland, and William became in March, 1815, king of the Netherlands and duke of Luxembourg. A new constitution thus became necessary, and was adopted. The union of Holland and

Belgium lasted fifteen years; but notwithstanding the general wisdom of the administration, and great commercial and manufacturing prosperity, the religious, political, and social discordance of the Dutch and the Belgians could not but tend to their ultimate separation. One month after the French revolution of July, 1830, a revolution broke out in Brussels; the war was terminated by the intervention of the Great Powers and the recognition of the independence of Belgium. The Dutch in 1831 rushed to arms, and invaded Belgium, led by the prince of Orange; but the arms and diplomacy of France and England could not be resisted; the citadel of Antwerp, which William had retained in his possession, was taken by the French, after a long siege, in December, 1832; and after six years more of difficult and wearisome negotiations, conducted by the conference of London, matters were adjusted, and the king signed the treaty by which the separation of the two countries was established. Financial embarrassments and great popular discontent led the king to abdicate in favour of his son, William II., in October, 1840. He retired to Berlin, and there died, enormously rich, in November, 1843. He had married in February, 1841, the Countess d'Oultremont, a Roman Catholic lady.

WILLIAM II., king of Holland, better known in England as the prince of Orange, son of William I., was born in 1792, at the very moment when revolutionary France invaded the Netherlands, and thus compelled the young prince to be brought to England, where he passed his youth. Educated under the care of Dr Howley, afterwards archbishop of Canterbury, he at 19 years of age joined Wellington in Spain as extra aide-de-camp, and in this capacity he followed the fortunes of the British army from 1811 to 1814, and gained great distinction at the sieges of Ciudad Rodrigo and Badajoz, as well as in the battles of Salamanca and Vittoria, the Pyrenees, and the Nivelle. After the expulsion of the French from Holland in 1813, the young prince was designated as the husband of the Princess Charlotte of Wales; but she evinced the most decided objection to the union; and many years subsequently, when Prince Leopold, who afterwards became her husband, was elected to the throne of Belgium, the coincidence was remarked that he should have been successful against his princely competitor in obtaining from him both a kingdom and a wife. During the whole of the campaign of 1815 he commanded the army of the Netherlands, and distinguished himself at Waterloo, where he was severely wounded. After this event he chiefly resided in Brussels, till the revolution of 1830, separating Belgium from Holland, compelled his departure for the Hague. The abdication of his father (see above) in 1840, raised him prematurely to the throne, and he continued to govern with great prudence and moderation, till his death in March, 1848, a few days after the outbreak of the third revolution of that country, which it had been his fate to witness.

WILLIAM of NASSAU. [ORANGE, Prince of.]

WILLIAM of NEWBURY. [LITTLE, WILLIAM.]

WILLIAM of MALMESBURY. [MALMESBURY.]

WILLIAM of WYKEHAM. [WYKEHAM.]

WILLIAMS, DANIEL, a Presbyterian minister, was born at Wrexham, in Denbighshire, in 1644, and died in 1716. He founded the library in Redcross Street for dissenting ministers.

WILLIAMS, HELEN MARIA, miscellaneous writer, was born in the north of England in 1762. In 1790 she settled at Paris; and soon after appeared her "Letters from France," the object of which was to recommend the doctrines of the Girondists; and on their fall she was arrested, imprisoned, and narrowly escaped their fate. Besides other poems and works, she made an English translation of the Personal Narrative of the Travels of Humboldt and Bonpland in America, 6 vols.; she also wrote a "Narrative of Events in France in 1815," &c. Died, 1827.

WILLIAMS, JOHN, archbishop of York, and lord-keeper of the great seal, was born at Aber-Conway, in 1582, and was educated at Ruthin School and St John's College, Cambridge. Although he led a gay and expensive life at college, he was at the same time a hard student, and amassed almost incredible stores of various knowledge. Three hours of sleep in the twenty-four were enough for him. He learnt Greek and Hebrew; read the Fathers and the Schoolmen; knew all the Greek and Latin canons; was thoroughly versed in ecclesiastical history, and no less in general history; and "he had some work continually on the loom." He graduated M.A. in 1605, was ordained priest in 1609, and in the following year became chaplain to Lord Chancellor Ellesmere; the first step to his worldly success. He was soon introduced to the king, James I., was appointed one of his chaplains in 1619, and soon after dean of Salisbury, and both by his learning and his Toryism made himself a great favourite with James. He succeeded in ingratiating himself also with Buckingham, the "pipe through which all royal graces flowed," and he was made dean of Westminster. As adviser of the duke he used his influence against monopolies and illegal exactions; and, on the fall of Bacon, in 1621, Williams was named Lord Keeper, and about the same time was raised to the see of Lincoln. His labours at this period were enormous, as chancellor, statesman, and bishop. He is said to have had in his employ a number of court spies; to have been greedy of preferments, of which he had so many as to be a "diocese" in himself; yet his conduct in the court of Star Chamber is praised and also blamed for mildness. He had a large share in the negotiation about the Spanish marriage, and made Buckingham his bitter enemy. He also offended Prince Charles, on whose accession he was dismissed from his office of chancellor. He supported the Petition of Right in the parliament of 1628, and was half-reconciled to Charles I. But Laud, who owed his first preferment to Williams, became his enemy, and aimed at his ruin. He instituted three

prosecutions a year (besides a carefully noted years' harassment) to pay a fine and suspended the third pro more. After released, in 1641 he w suffered another Tower; rema the civil war, the king, who and died at A His "Life," b 1693.

WILLIAMS guished Welsh born at Liangy He was educa where he grad in 1838. Havi minister suece Wales, was apy, Merioneth later rector of county. He tish and Wels into Welsh Er at length by h and his edito scripts, made

prosecutions against him in the Star Chamber (besides dreaming ill dreams of him, as carefully noted in his diary), and after eight years' harassment Williams was sentenced to pay a fine of £10,000, to be imprisoned, and suspended from his office as bishop. On the third prosecution he was fined £8000 more. After four years' confinement he was released, in 1640, by the Long Parliament. In 1641 he was made archbishop of York; suffered another year's imprisonment in the Tower; remained a firm royalist through the civil war, and held Conway Castle for the king, whose execution broke his heart; and died at Aber-Conway in March, 1650. His "Life," by Bishop Hacket, appeared in 1693.

WILLIAMS, JOHN, the devoted missionary to the islands of the South Seas, was born at Tottenham, near London, in 1796. He was brought up to the trade of ironmonger, but at the age of 20 his strong religious feelings led him to become a missionary, and he was sent as agent of the London Missionary Society to the Society Islands; his young wife accompanying him. After a short time he settled in the island of Raiatea, where he zealously laboured not only for the religious instruction, but for the social and secular interests of the people, with marked success. He got a government organized, a chapel built, taught the natives how to build houses, contrived a sort of sugar-mill, and in order to promote the commerce of the islands, bought a ship, named the "Endeavour," with which to pass from island to island. In 1823 he discovered the island of Rarotonga; translated the dialect to writing, and made a translation of the New Testament into it; built himself a ship to return to Raiatea; made afterwards several voyages in it among the various groups of islands; and in 1834 visited England, where he remained about four years. During this period he wrote and published his profoundly interesting "Narrative of Missionary Enterprises in the South Seas," which had a very large circulation, and was afterwards republished in a cheaper form. He sailed again in April, 1838, with a company of missionaries in the "Camden," purchased for the service of the mission, and after making visits to Rarotonga, Tahiti, Raiatea, and other islands, landed at Erromanga. And there this pure-hearted, self-denying, and indefatigable Christian missionary was attacked and murdered by the natives, November 20, 1839.

WILLIAMS (AB ITHEL), JOHN, a distinguished Welsh scholar and antiquary, was born at Llangynhafel, Denbighshire, in 1811. He was educated at Jesus College, Oxford, where he graduated B.A. in 1834, and M.A. in 1838. Having entered the church, he was minister successively of several parishes in Wales, was appointed rector of Llanymowddwy, Merionethshire, in 1852, and ten years later rector of Llaneddwyn, in the same county. He began early to write for English and Welsh periodicals, and to translate into Welsh English devotional works; and at length by his studies in Celtic archaeology, and his editions of ancient Welsh manuscripts, made himself a considerable reputa-

tion, not only in Great Britain, but on the continent. He wrote "The Ecclesiastical Antiquities of the Cymry," 1841; "Druidic Stones," "A Glossary of Terms used for the Articles of British Dress and Armour," &c. Among the works edited by him are a Poem by Aneurin, with translation and notes; an ancient Welsh grammar; an ancient Welsh medical work; and, for the series of memorials of Great Britain and Ireland published under the direction of the master of the Rolls, the "Annales Cambrie," and "Brut y Tywysogion, or the Chronicle of the Princes of Wales," both published in 1860. Mr Williams was an Examiner at Llandoverly College; editor of the "Cambrian Journal," and for some years of the "Archæologia Cambrensis," published by the Cambrian Archæological Association, of which he was one of the founders. Just before his death he published a work entitled "Barddas," a collection of documents illustrative of the Bardic-Druidic System. Died, August 27, 1862.

WILLIAMS, ROGER, the founder of the State of Rhode Island, U.S., and nobly distinguished as the first assertor in modern Christendom of the sanctity and perfect freedom of conscience, was a native of Wales. Born in 1599, he studied at Oxford, entered the church, and naturally joined the Puritan party. To escape the persecutions to which the Puritans were subject in England, he, like so many others, fled to the New World to find what was denied them here, freedom to worship God. He arrived at Boston, New England, in February, 1631, and holding already in perfect clearness the grand truth of which he was the first modern apostle, soon found himself in collision with the churches already existing there; for they still acted on the very principles of which they had been the victims at home. He was invited to settle as pastor at Salem, but the court of Boston would not allow it, and he withdrew to Plymouth. Two years later the church of Salem elected him for their teacher; but the hostility to this "troubler of Israel" grew fiercer, and the breach widened, Salem was disfranchised, and sentence of exile was pronounced against Williams. Permission being given him to remain till the winter was past, he used to preach to the people who flocked to his own house to hear him. But at length, in 1636, he was ordered to embark for England. To avoid this he left Salem in the winter weather, wandered houseless and half-fed for fourteen weeks, then found friends and hospitality among the Indians, whose language he had learnt. He preached to them, won their love, and was their friend and peace-maker till his death. He had resolved on founding a new settlement, and after beginning to build and plant at Setonk, had to abandon the spot, and selected Rhode Island, on which he landed from an Indian canoe, with five comrades, in June, 1636. He called the place "Providence," and commenced building. In the course of two years he was joined by others, who were glad of such an asylum. Williams founded a commonwealth in the form of a pure democracy, and his system has had its in-

John's, Wapping. He then studied medicine, and, devoting his attention to maniacal diseases, established a private asylum for lunatics at Greatford, in Lincolnshire. The anomaly of a clergyman keeping a mad-house being sharply animadverted upon by the faculty, he proceeded to take his degrees, and properly qualified himself as a physician. When George III. was seized with the malady which for a time suspended the royal functions, Dr Willis was called in, and, in opposition to the other physicians, pronounced it as his decided opinion, that his majesty would recover. The doctor was, in consequence, intrusted with the principal care of the royal person; and the result confirmed the accuracy of his judgment. His success was rewarded with a handsome gratuity from parliament, and a vast accession of professional practice very naturally flowed in upon him. He died in 1807.

WILLIS, THOMAS, an eminent physician and anatomist, born at Great Bedmin, in Wiltshire, in 1621. He was educated at Christ Church, Oxford, and graduated M.A. in 1642. He first practised at Oxford, and being a thorough royalist in his sympathies, he obtained at the Restoration the Sedleian professorship of natural philosophy. After graduating M.D., and obtaining great reputation by the publication of his work on the Brain, he settled in London, and became physician to Charles II. Willis's principal work is entitled, "Cerebri Anatome; cui accessit Nervorum Descriptio et Usus," and contains a distinct announcement of the now generally accepted conception of the brain as a cluster of organs of the mind. He wrote also "Pathologicæ Cerebri et Nervosi Generis Specimina," "De Anima Brutorum," and other works, all written in good Latin, and frequently reprinted. Died, 1675.

WILLMOT, ROBERT ARIS, an English litterateur, was born at Bradford, in Wiltshire, in 1809. He was educated at Merchant Taylors' and Harrow Schools, and after being engaged for several years, first in Suffolk as private tutor, and then in London as man of letters, entered Trinity College, Cambridge, in 1832. Having graduated B.A. in 1841, he entered the church, held a London curacy for a short time, and in 1846 became incumbent of Bear Wood, Hants, a position in which he remained for 16 years, discharging his duties with much fervour and devotedness, but often interrupted by ill health. He published numerous works, chiefly collections or selections from other writers, with genial illustrative notices. Among them are a volume of his poems, "Journal of Summer Time in the Country," of which a fourth edition appeared in 1864, with a pleasing Memoir by his sister; editions of George Herbert's Works, of Cowper, Akenside, Burns, and Percy's Reliques, and an illustrated volume entitled, "The Poets of the Nineteenth Century." He was also author of an original biography of Jeremy Taylor, which appeared in 1847, and was highly spoken of. He contributed papers to Fraser's Magazine, the Critic, the Church Quarterly Review, and other periodicals. After long suffering from want of sleep,

he was attacked with paralysis, and died at Nettlebed, in Oxfordshire, 27th May, 1863.

WILLOUGHBY, SIR HUGH, an early Arctic voyager, of whom almost nothing is known, except that he was commander of the expedition of discovery, consisting of three vessels, sent out in 1553 by the company of Merchant Adventurers; that the ships got separated by storms in the North Sea, and not one of them reached England again. It is believed that some of Willoughby's men were living in January, 1554, and a few of those belonging to another of the ships returned to England. Richard Chancellor was captain of one of the vessels in this expedition, which was the first step towards our trade with Russia.

WILLSHIRE, SIR THOMAS, Bart., British general, born at Halifax, North America, in 1789. He was educated in England, and was named a lieutenant at six years of age. After serving in the West Indies, and in the expedition of the Rio de la Plata, under General White Locke, during which he took part in the attack on Buenos Ayres, in 1807, he served in the Peninsula, and was in the retreat to Corunna; was at Walcheren in 1809, and in 1812 returned to the Peninsula, and distinguished himself at the assault of San Sebastian. He took part in the passage of the Bidassoa and the battles of Nivelle and Nive. In 1818 he was employed on the frontiers of Kaffraria, where he did good service as road and bridge-maker, and built a fort named after him, Fort Willshire. His most important service there was his defence of Grahamstown against the chief Makanna, the capture of Makanna, and the acquisition of the territory between the Keiskamma and Great Fish Rivers. He next served in India against the Mahrattas, and, in 1827, became lieutenant-colonel in the 2nd Queen's Royals, which regiment he brought into a high state of discipline. The dignity of C. B. was conferred on him in 1838, and in the following year he commanded under Sir John Keane through the Afghan campaign, distinguished himself at the siege of Ghuznee, and took the fortress of Khelat, for which he was made a baronet, and received the thanks of parliament. Returning to England in ill health, in 1840, he held for five years the command of Chatham, resigned, and was made major-general in 1847, and spent his remaining years in retirement. He was invested with the Grand Cross of the Bath in 1861, and died suddenly at Hill-house, near Windsor, 31st May, 1862.

WILLOUGHBY, FRANCIS, a celebrated naturalist, born in 1635. He studied at Cambridge, and had John Ray for his master, with whom he formed a firm friendship, and travelled through the principal countries of Europe for scientific purposes. He paid particular attention to ornithology and ichthyology, and formed a rich museum of animal and fossil productions. His friend Ray arranged and published his works after his decease. These are the "Ornithologiae Libri Tres," and the "Historiæ Piscium Libri Quatuor." Died, 1672.

WILMOT, JOHN. [ROCHESTER, Earl of.]

WILMOT, JOHN EARDLEY, a learned judge, was born at Derby, in 1709; and, passing through the ordinary legal promotions, became chief justice of the Common Pleas in 1766. Died, 1792. His "Notes of Opinions" were published in 1802.—His son, JOHN WILMOT EARDLEY, born at Derby, in 1748, was an eminent chancery lawyer, and died in 1815. He published Glauvil's "Treatise on the Laws and Customs of England," "Memoirs of his Father," "Life and Letters of Bishop Hugh," &c.

WILSON, ALEXANDER, a celebrated ornithologist, was born at Paisley, in 1766. He was brought up as a weaver, but his poetical disposition, and relish for the quiet beauties of nature, made him long for an opportunity to escape from the bondage of trade. After having been imprisoned for libelling the master-weavers of Paisley, during a violent dispute between them and the journeymen, Wilson emigrated to America, where he landed in July, 1794, with his fowling-piece in his hand, and only a few shillings in his pocket, without a friend or letter of introduction, or any definite idea in what manner he was to earn his livelihood. In the varied occupations of a weaver, pedlar, and schoolmaster, he toiled on for upwards of 8 years, during which time he tasked his powers to the utmost in his efforts at self-improvement; and among the acquirements he made were the arts of drawing, colouring, and etching, which afterwards proved of incalculable use to him. In October, 1804, he set out for the Falls of Niagara; and, wading on through the mud and snow, encumbered with his gun and fowling-bag, the latter of which was of course always increasing in bulk, he arrived safely at home, after an absence of 69 days, during which he had walked 1260 miles. From this time forward Wilson applied his whole energies to his ornithological work, drawing, etching, and colouring all the plates himself; and Mr Bradford, a bookseller of Philadelphia, having agreed to run all the risk of publication, in 1808 the first volume of his "American Ornithology" made its appearance. Another and another volume followed, and their indefatigable author travelled from one end of the American continent to the other, for the purpose of obtaining subscribers to his work, as well as to increase his collection of birds. In 1811 he thus writes to his brother: "Since February, 1810, I have slept for several weeks in the wilderness alone, in an Indian country, with my gun and my pistols in my bosom; and have found myself so reduced by sickness as to be scarcely able to stand, when not within 300 miles of a white settlement, and under the burning latitude of 25 degrees. I have, by resolution, surmounted all these and other obstacles, in my way to my object, and now begin to see the blue sky of independence open around me." Honours as well as profit soon after began to pour in upon him; he was a member of several learned societies, and there was not a crowned head in Europe but had then become a subscriber to the "American

Ornithology." He was attacked with a dysentery in August, 1813, which carried him off in a few days.

WILSON, FLORENCE, or in Latin VOLU-
SENU, a Scottish writer, born probably near Elgin, about 1600. He studied at the university of Paris, became an accomplished scholar, made the acquaintance of several distinguished men of his time, and was for some time master of the school of Carpentras. He wrote, amongst other works, a dialogue "De Animi Tranquillitate," which has been several times republished. Died, in Dauphiné, on his way to his native country, in 1546.

WILSON, GEORGE, regius professor of technology in the university of Edinburgh, and director of the Industrial Museum of Scotland, was born at Edinburgh, 21st February, 1818. He early showed a superior intelligence, energy, and vivacity, was fond both of books and animals, and for the sake of the studies which it would make necessary he chose the medical profession, and served his apprenticeship in the laboratory of the Royal Infirmary. During the same period he attended the Medical Classes at the university. But a short trial of the duties of a surgeon convinced him of his unfitness for the profession, and he relinquished it, devoting himself thenceforth to chemistry. He became assistant in the Laboratory of Professor Christison, and in 1838 he came to London and took a place as unpaid assistant in the laboratory of Professor Graham at University College. One of his classmates there was David (now Dr) Livingstone. Recalled to Edinburgh by the sudden death of a beloved relative, he resolved to settle there; obtained soon after the degree of M.D., was admitted an associate of the "Maga Club," and was chosen president of the Physical Society. In 1840 he began his career as lecturer on chemistry, and at the same time his health began to fail. But with passionate love of science, and desire to teach it, he bravely held on, struggling with the vigour of a hero, the hopeful calmness of a Christian philosopher, and the most beautiful sweetness of disposition, against frequently recurring physical weakness and suffering. In 1855 he was appointed director of the Scottish Industrial Museum, and almost immediately after professor of technology at the university of Edinburgh. These posts he held till his death. His ambition was to fill the chair of chemistry, and he had the prospect of success the year before he died, but he felt compelled to retire from the candidature on account of his want of strength to face the labour. George Wilson was one of the most successful of lecturers on science, and no less able as a writer and expounder. He also made many important, chemical investigations and experiments, and cleared up points previously obscure. The most complete and important of these investigations were the "Researches on Colour-Blindness," an account of which was published in 1855. His ability as popular expounder of science is shown in his admirable "Chemistry; an elementary Text-Book," in Chambers's series, published in

1850, in his "1857, and his Electric Telegraph Stars," the Edinburgh Review Quarterly, a "Travellers' Grapher and himself by his "able Henry Cavendish Sc John Reid," and Works of Robert Boyle Quarterly. I on chemistry tered through societies. D. 22, 1859, and burial-ground sister, Jessie A condensed 1866).

1830, in his "Five Gateways of Knowledge," 1837, and his articles on "Electricity, and the Electric Telegraph," and "Chemistry of the Stars," the former contributed to the Edinburgh Review, the latter to the British Quarterly, and both reprinted in the "Travellers' Library." As scientific biographer and historian he distinguished himself by his "Life and Works of the Honourable Henry Cavendish," printed for the Cavendish Society, 1851; his "Life of Dr John Reid," and his sketches of the Lives and Works of John Dalton, Wollaston, and Robert Boyle, contributed to the British Quarterly. He also wrote numerous papers on chemistry and physics, which are scattered through the transactions of scientific societies. Died, at Edinburgh, November 22, 1859, and was buried in the Old Calton burial-ground. A charming Memoir, by his sister, Jessie A. Wilson, appeared in 1860. A condensed edition is announced (May, 1866).

WILSON, HORACE HAYMAN, one of our most distinguished oriental scholars, was born about the year 1786. In 1808 he went to India as assistant surgeon, but was soon appointed assay master and mint secretary at Calcutta, and, on the death of Dr Hunter, in 1811, secretary of the Asiatic Society of Bengal. In 1819 he completed a dictionary of the Sanskrit language, which at once raised him to eminence as an Orientalist, and he afterwards made known to the English public four ancient Sanskrit dramas under the title of the "Hindu Theatre." He was the first to introduce the study of the English language and literature in the education of the natives of India, and himself directed the studies of the Hindu College at Calcutta from the time of its establishment. While still engaged in a course of practical usefulness as well as learning in India, he was elected, in 1833, without solicitation, to the Sanskrit professorship in the university of Oxford, then founded by the magnificent bequest of Colonel Boden; and from that time until his death, at the age of 74, in May, 1860, he continued without intermission his eminent services in the progress of Sanskrit scholarship, publishing many original works, as well as editing others, and contributing a series of elaborate articles to the Journal of the Royal Asiatic Society.

WILSON, JAMES, a well-known financier, was born in 1805, and commenced his career as a hatter, in which he at first failed. He then turned his mind to political economy, in which his great powers soon raised him to a high reputation. In 1839 he published a volume on "The Influences of the Corn Laws." This was followed by others on the "Fluctuations of Currency, Commerce, and Manufactures," "On Capital, Currency, Banking," &c. In 1843 he set up the "Economist" newspaper, in 1848 was appointed secretary to the Board of Control, and subsequently financial secretary to the Treasury. In 1859 he went as finance minister to India, where he immediately introduced many financial alterations, the most important being the establishment of an income-tax comprehending the native population. He was, however, soon cut off by cholera

and died at Calcutta, August 11, 1860, aged 55.

WILSON, JOHN, a distinguished poet, critic, and prose-writer, the well-known "Christopher North" of Blackwood's Magazine, was the son of a prosperous manufacturer in Paisley, where he was born, in 1785. From the university of Glasgow he passed to that of Oxford, entering Magdalene College as a gentleman commoner, and winning the Newdegate prize for English verse. On quitting the university, the young poet took up his abode on the banks of Windermere, at Elleray, a beautiful place which he had purchased, and where he continued for several years to enjoy the society of Wordsworth, and the other distinguished men of letters who then shared the retirement of the English Lakes. Here he wrote the first poem which made his name known beyond college circles—an "Elegy on the Death of James Grahame," the author of "The Sabbath." This was followed in 1812 by "The Isle of Palms," a work which advanced its author's reputation so highly that it can hardly be said to have been materially extended by his later and more elaborate composition of "The City of the Plague." Leaving the path of poetry, he addressed himself to prose fiction, and enriched our literature, in rapid succession, with those beautiful and fascinating books, the "Lights and Shadows of Scottish Life," the "Trials of Margaret Lyndsay," and "The Forresters." But it was chiefly in periodical literature that he earned his well-merited fame. Soon after the establishment of Blackwood's Magazine, in 1817, he became its chief editor; and it was in this field that all his varied gifts were summoned into activity, and that he produced, month after month, that series of articles which long filled the public with mingled delight and astonishment, by their extraordinary combination of the most opposite qualities—pathos the purest, the deepest, and the most tender; wild, wanton, and withering sarcasm; sentiment, refined and exalted to the pitch of devotion; and humour of the freest, broadest, and most exuberant vein. Mr Wilson was called to the Scotch bar in 1815, but never practised. In 1820 he was appointed to the chair of moral philosophy in Edinburgh University, then vacant by the death of Dr Thomas Brown; and it is remarkable that, even thus early, Sir Walter Scott had recognized in him talents, which only wanted proper direction "to make him the first man of the age." In 1851 he resigned his professorship in consequence of ill health; and about the same time he received a pension from the crown of £300 a year. Professor Wilson's academical prelections will never be forgotten by those who had the good fortune to hear them. Nor was it only the force and splendour of his eloquence that endeared him to all his students. He was the never-failing friend of every youth who sought his help; the counsel which he was ever ready to impart attested not less the kindness of his benevolent heart than the sagacity of his discriminating judgment; and the disinterested integrity of his character, and the conscientious consistency with

which he ever maintained his principles, were acknowledged as sincerely by his most resolute opponents as by his firmest friends. Died, 1834. Memoirs of Wilson, by Mrs Gordon, have since appeared.

WILSON, RICHARD, an eminent English landscape painter, was born in 1714, in Montgomeryshire. He began his career as a portrait painter, which line he quitted, by the advice of Zuccarelli, and went to Italy, where he studied landscape painting with a success that obtained for him the appellation of the English Claude. The first picture he exhibited was Niobe, and in 1765 he produced a view of Rome. Although whatever came from his easel bore the stamp of elegance and truth, yet, during the latter part of his life, he was doomed to undergo neglect, and he was reduced to solicit the office of librarian to the Royal Academy, of which he had been chosen one of the first members. Among his best works are the "Niobe," the "Ruins of the Villa of Mæcenas" (now with several other of his works in the National Gallery), "Phæton," "Ceyx and Aleyone," "Snowdon," &c. Died, at Llanferris, in Denbighshire, 1782. A Memoir of his Life, by T. Wright, appeared in 1824.

WILSON, SIR ROBERT, a distinguished general officer, who played also a conspicuous part in the party politics of his time, was born in London, 1777. Educated at Westminster and Winchester, he went into a solicitor's office, with a view to qualify himself for the law; but an accidental introduction to the duke of York induced him to exchange the desk for the field, and in 1793 he went to Flanders as a volunteer, and bore a distinguished part in all the cavalry actions of that campaign. During the rebellion in Ireland he served on the staff; in 1799 he made the campaign in Holland, and the following year he took part in Abercromby's expedition to Egypt. He afterwards published an account of this expedition, which derived especial popularity from its charges against Buonaparte of cruelty towards the prisoners at Jaffa. In 1805 he accompanied Sir D. Baird to the Brazils, and was present at the capture of the Cape of Good Hope. On his return he accompanied Lord Hutchinson to the continent on a secret mission. He was attached to the combined armies, and present in all the operations, battles, and actions, from Pultusk to Friedland. We next find this active officer in Lisbon, where, in 1808, he superintended the levy of the Portuguese refugees; and he subsequently commanded a legion in Spain, and wound up a career of great gallantry and peril in the Peninsula by a successful engagement with the French at Balmos. His reputation for courage and ability was still further increased by the Russian and German campaigns of 1812, 1813, and 1814; and the Emperor Alexander testified his admiration of his exploits by hanging the cross of St George round his neck in the presence of the assembled army. After the peace in 1815 he visited Paris, where he drew upon himself great notoriety by aiding in the escape of Lavalette, as detailed in our sketch of that remarkable man. In consequence of this act he

incurred the displeasure of the prince regent, and his conduct at the funeral of Queen Caroline having completed his disgrace at head-quarters, he was dismissed from the army in 1821, and all the foreign orders he had received were resumed by their respective sovereigns. But a public subscription was made to indemnify him, and after the lapse of a few years he was restored to his rank. Sir R. Wilson sat from 1818 to 1831 in parliament for Southwark; in 1841 he attained the full rank of general, and in 1842 he was appointed governor of Gibraltar, and had just returned from that post after seven years of command, when he died suddenly, May 9, 1849. His "Private Diary, kept during the Campaigns of 1812-14," and a "Life" from his own memoirs, &c., have been since published.

WILSON, THOMAS, bishop of Sodor and Man, born, 1663; died, 1753. He was educated at Trinity College, Dublin, was ordained priest in 1689, and three years later became tutor to Lord Strange, son of the earl of Derby. He was consecrated bishop of Sodor and Man in 1698. He applied himself zealously to the moral and religious improvement of his diocese, but carried out his views of discipline with too high a hand, and in 1722 suffered imprisonment at Castle Rushin. He was released on appeal the following year. His works consist of "Religious Tracts," and "Sermons," with a short "History of the Isle of Man." A Life of this prelate was written by Keble.

WILSON, WILLIAM RAE, LL.D., chiefly known by his "Travels in the Holy Land," was born in 1774. At an early age he became acquainted with the duke of Kent, who remained his steady patron through life, and who furnished him with every species of recommendation likely to facilitate his travels in the East. He was one of the first of a class of travellers, since become numerous, whose object has been to illustrate the statements of holy writ by observations on the scenery and manners of those parts of the world in which its events took place. In all his works he preserved a religious tone, with a strong bias against the Roman Catholic Church; but, on the whole, his writings display an unusual freedom from false colouring and affectation. Died, June 2nd, 1849.

WILTON, JOSEPH, an English sculptor, born at London, in 1722. He studied in Holland, France, and Italy; was joint-director with Cipriani of the duke of Richmond's Gallery for art-students, and one of the founders of the Royal Academy. He was employed by George III., executed a great many statues and busts, and grew very rich by his art. Among his works are monuments of Wolfe in Westminster Abbey, of Stephen Hales, and Admiral Holmes; and busts of Cromwell, Newton, Chatham, &c. Wilton died in 1803.

WINCHESTER, WILLIAM PAULET (or POULET), Marquis of, a distinguished English statesman of the 16th century, was descended from a Somersetshire family, but had his chief estates in Hampshire. Born about 1475, he indulged in early life in such extravagant modes of living that he was

compelled to a court, and "as says Fuller," "perished so well more than any." He was first made treasurer VIII. and Edward made him a peer marquis and He was elevated that office also Elizabeth. "his character 10th March, 15 besieged by marquis of W unknown hand

compelled to sell his lands, and then went to court, and "on the bare stock of his wit," says Fuller, "trafficked so wisely and prospered so well, that he got, spent, and left more than any subject since the Conquest." He was first in the service of Henry VII., was treasurer of the household of Henry VIII. and Edward VI., the former of whom made him a peer and K. G., and the latter a marquis and lord-high-treasurer in 1551. He was clever and supple enough to hold that office also under Queen Mary and Queen Elizabeth. "No oak, but an osier," was his character as drawn by himself. Died, 10th March, 1572. Basing House, which was besieged by Cromwell, was built by this marquis of Winchester. His portrait, by an unknown hand, is in the National Collection.

WINCKELMANN, JOHANN JOACHIM, a celebrated writer on art, was born of poor parents at Stendal, in Prussia, in 1717. He was enthusiastically fond of books and study in his childhood; was sent to study theology at Halle; passed many years in the task work of a schoolmaster, private tutor, and librarian, and in 1755, after becoming a Roman Catholic for the sake of an offer made to him by the papal nuncio at Dresden, he went to Rome, where his great accomplishments as art-student soon made him the friend of the most distinguished persons. The painter, Mengs, was his intimate friend. After various temporary engagements he became librarian to Cardinal Albani, and devoted himself thenceforth to the composition of his numerous works. The principal of these is his "Geschichte der Kunst des Alterthums," which, though inadequate as a history, was highly appreciated at the time of its publication for its learning and criticism, and was the means of inciting others to a more full investigation of the subject it treats of. Among Winckelmann's other works are, "Monumenti Antichi inediti," a treatise on the Imitation of Greek works of Art, Observations on the History of Art, and a large collection of Letters. In 1768 he visited Vienna, and was received there with great honour; but on his return-journey to Italy he was assassinated at Trieste, 8th June, by a man named Arcangeli, who had accompanied him during part of his journey.

WINDHAM, JOSEPH, an eminent anti-
quary, was born at Twickenham, in 1739; was educated at Eton, and Christ's College, Cambridge; went to Rome, and there took drawings of the monuments of antiquity; composed the principal parts of the "Ionian Antiquities," published by the Dilettanti Society, and assisted Stuart in his work on Athens. He was a fellow of the Royal and Antiquarian Societies. Died, 1810.

WINDHAM, WILLIAM, an eminent Eng-
lish statesman, was born in London, in 1750. He was of an ancient Norfolk family, whose seat, since 1461, was Felbrigg Hall; was educated at Eton, Glasgow University, and University College, Oxford; and began his political career in 1778, by a speech at Norwich, in condemnation of the American War. Two years later he was an unsuccessful candidate for the representation of Norwich in parliament, but in 1783 he was

elected for that city. He took part in the conduct of the impeachment of Warren Hastings; held the office of secretary-at-war under Pitt's ministry for seven years; was one of the leading members of opposition under the Addington administration, and in consequence of his condemnation of the short-lived peace of Amiens, in 1802, lost his seat for Norwich. He was returned for a small borough, and remained in opposition under the succeeding Pitt ministry; but in 1806 he accepted the post of secretary-at-war, and also for the colonies, in the "Administration of the Talents," which only lasted about a year. Mr Windham showed himself always a man of honour, temperate, liberal, and highly accomplished. He was an advocate for the removal of Catholic disabilities; condemned the attack on Copenhagen and the Walcheren expedition; but was an opponent of parliamentary reform. Died, 1810. Mr Windham married, but left no children, and bequeathed Felbrigg to Admiral Lukin, who assumed the name of Windham. His grandson, who's foolish, profligate life has been too notorious, sold the estate, and died early this year (1866). The portrait of the statesman, by Reynolds, is in the National Gallery; another, by Lawrence, is in the National Portrait Gallery. His "Diary," kept at the suggestion of Dr Johnson, whose friendship he enjoyed, has lately appeared, edited by Mrs H. Baring.

WINDISCHGRATZ, ALFRED, Prince, Austrian field-marshal and commander-in-chief, was son of Joseph Prince Windischgratz, and was born at Brussels, in 1787. He succeeded to his father's title in 1802, and two years later entered the Austrian army. He took part in the campaigns of 1805, 1809, and 1813-14 against the French, and attained the rank of lieutenant-general in 1833. He is chiefly remembered for the part he played in opposing the revolutionary movements of 1848-49. He was governor of Prague at the outbreak of the Slave insurrection of June, 1848; the princess, his wife, was shot by the insurgents as she looked from a window; and the prince bombarded the town for 48 hours, and after a severe conflict, defeated the insurgents and suppressed the movement. He was created in October following field-marshal, and named commander-in-chief of the forces of the empire out of Italy, and marched on Vienna, which was then in the power of the revolutionary party. He proclaimed a state of siege, and after some days' delay commenced the attack, which was supported by the Croats under Jellachich. The conflict was very sharp, and only ended after four days' fighting with the capture of the city, 1st November. The execution of the republican leader, Robert Blum, a fortnight later, produced a very painful feeling throughout Europe. In the following year Prince Windischgratz was employed against the Hungarians, but after some favourable movements and the occupation of several towns, he was unable to accomplish anything more, and had to quit Buda before the increasing forces of the enemy. He had fought on the side of absolutism all his life, and his last days were embittered by the discovery that it was the

losing side. Died at Vienna, 24th March, 1862.

WINGATE, EDMUND, an eminent mathematician, was born in 1593, in Yorkshire, studied at Queen's College, Oxford, and at Gray's Inn; went to France, instructed the Princess Henrietta Maria in the English language; espoused the popular side in the civil war; was an M.P.; and died in 1656. Among his works are, "A Natural and Artificial Arithmetic," "Ludus Mathematicus," "Maxims of Henson," and an "Abridgment of the Statutes."

WINSLOW, JACQUES BENIGNE, a celebrated Danish anatomist, was born in 1669, at Odensee; settled in France; and in 1743, succeeded M. Hunnault as professor of anatomy and physiology, at the Royal Botanic Garden. His principal work, which has been translated into English, German, Italian, and Latin, is entitled "Exposition Anatomique de la Structure du Corps Humain." Died, 1760.

WINSOR, FREDERICK ALBERT, an enterprising projector, to whom we are indebted for the gas lights which illuminate our streets, &c.; made his first public experiments at the Lyceum, in the Strand, in 1803. He afterwards lighted with gas the walls of Carlton Palace Gardens, on the king's birthday in 1807; and during 1809 and 1810 he lighted one side of Pall Mall, from the house which he then occupied in that street. He followed up his object with great perseverance, and at length obtained a charter of incorporation for a gas-light and coke company. In consequence, however, of some misunderstanding with the parties with whom he was associated, he did not obtain his expected remuneration. In 1815 he went to Paris, where he also erected gas-works, and established a company. Died, 1830.

WINSTON, CHARLES, an eminent writer on glass-painting, was son of Benjamin Sandford, vicar of Farningham, in Kent, and was born in 1814. His father afterwards took the name of Winston. The son was brought up to the law, entered the Inner Temple about 1834, and was called to the bar in 1845. From his youth he had taken great interest in glass-painting, and having spent a large part of his time for many years in the study of it, he published in 1847 his valuable "Inquiry into the Difference of Style observable in ancient Glass-painting, especially in England; with Hints on Glass-painting." It appeared anonymously, but he soon after published a summary of the work, with his name. It is highly esteemed, and has contributed to a great improvement in the art. Died suddenly at his chambers, 3rd October, 1864. A volume of his "Memoirs Illustrative of the Art of Painting on Glass," with a short biography, has since appeared.

WINT. (DE WINT.)

WINTER, JAN WILLEM DE, a Dutch admiral, was born in 1750. Having been an active partisan in the revolution which broke out in 1787, he was obliged to take refuge in France, when the party of the stadtholder prevailed. In France he entered the army, served under Dumouriez and Pichegru, and in a short time rose to the rank of general of brigade. In 1798, when Pichegru invaded

Holland, De Winter returned to his country, where the states-general made him vice-admiral and commander of the naval forces at Texel. Here, with 29 vessels, of which 16 were ships of the line, he was completely defeated by Duncan, Oct. 11, 1797. Died, 1812.

WINTER, PETER VON, an eminent German musician, born at Manheim, in 1754, and, at the age of 10 years, was appointed a member of the orchestra of the elector. He composed operas, oratorios, and other vocal and instrumental music, much of which has considerable merit. Died, 1825.

WINWOOD, SIR RALPH, statesman, was born about 1565, at Aynhoe, in Northamptonshire. He was twice envoy to Holland, was knighted in 1607, and was secretary of state from 1614, till his decease, in 1617. He wrote "Memorials of Affairs of State in the Reigns of Queen Elizabeth and King James I.," 3 vols. folio. His portrait, by Mireveldt, is in the National Portrait Gallery.

WISE, FRANCIS, an English antiquary and Radcliffe librarian at Oxford, was born at Oxford in 1695. He was educated at Trinity College, graduated M.A. in 1717, and became fellow of his college in 1719. Employed for a time as assistant in the Bodleian Library, he was afterwards tutor to the Hon. Francis North, who gave him the living of Ellesfield, near Oxford. He led a retired, studious life, published several books and pamphlets, and was named Radcliffe Librarian in 1748. His writings are two pamphlets on the curious ancient work known as the White Horse, in Berkshire, a catalogue of the coins in the Bodleian Library, "Enquiries concerning the first Inhabitants, Learning, and Letters of Europe," &c. Mr Wise was a fellow of the Society of Antiquaries. Died at Ellesfield in 1767.

WISE, MICHAEL, one of the best English composers of sacred music, was a native of Wiltshire, and in 1660 became one of the choristers of the Chapel Royal. He was subsequently organist of Salisbury Cathedral, gentleman of the Chapel Royal, and almoner of St Paul's. He enjoyed for some time the favour of Charles II., and was at last killed in a street quarrel, in 1687.

WISEMAN, NICHOLAS, Cardinal, Roman Catholic archbishop of Westminster, was born at Seville, in 1802. He was of a very ancient English family, traceable as holders of estates in Essex in the time of Edward IV., one of them being knighted by Henry VIII., and another made a baronet by Charles I. After studying for eight years at the College of St Cuthbert, near Durham, he went, in 1818, to Rome, and was one of the first members of the English College there. Created D.D. in 1824, he soon after took holy orders, and became professor of oriental languages in the university, and rector of the English College. At the same period he had gained some reputation as one of the few oriental scholars of Europe by the publication of his "Horæ Syriacæ." After his return to England, in 1835, he was engaged in a controversy with Dr Turton, afterwards bishop of Ely, respecting the Eucharist. In 1840 Dr Wiseman was appointed coadjutor to Bishop Walsh, then vicar apostolic of the Midland

District, and a St Mary's College. At that period the Tractarian movement was more than he for the unseemly to make priest-verts." In 1841 of the London year he was after Pius IX. re-establishing and by a brief bishop of West- celebrated "pa- such a storm passing of a spe- tion of certain Wiseman was a dical, being the since the Refor- years joint edit- to the "Dublin therein were se His name was as a lecturer on other topics; his shine in many a master in one. before his death a doubt respecti- creed; no wond- stand the times through his inf- Foreign Review liberal party in condemned, and- tated. District, and at the same time president of St Mary's College, Oscott, near Birmingham. At that period he was deeply interested in the Tractarian movement at Oxford, which he zealously promoted, and from which he hoped more than he realized. He was censured for the unseemly haste with which he sought to make priests of the "distinguished converts." In 1849 he became vicar apostolic of the London District. In the following year he was summoned to Rome, and soon after Pius IX. issued an "apostolical letter," re-establishing the hierarchy in England, and by a brief named Dr Wiseman "arch-bishop of Westminster." This was the too celebrated "papal aggression," which raised such a storm in England, and led to the passing of a special act against the assumption of certain ecclesiastical titles. Dr Wiseman was at the same time created cardinal, being the seventh English cardinal since the Reformation. He was for many years joint editor and a frequent contributor to the "Dublin Review," and his essays therein were separately published in 1853. His name was frequently before the public as a lecturer on art, science, history, and other topics; his ambition being rather to shine in many fields than to be thoroughly master in one. He is said to have declared before his death that he had never in his life a doubt respecting any article of the Catholic creed; no wonder that he failed to understand the times in which he lived. It was through his influence that the "Home and Foreign Review," the able organ of the liberal party in the church of Rome, was condemned, and its discontinuance necessitated. Among his works, besides those named above, are "Lectures on the Connection between Science and Revealed Religion;" "High Church Claims," strictures on the Tractarian movement; "Fabiola," a tale; "The Four Last Popes," and various Letters and Lectures on ecclesiastical matters. One of his latest literary papers was a "Proposal for a Tercentenary Edition of Shakespeare," which appeared in the Fine Arts Quarterly Review. Cardinal Wiseman had been in ill health for several years; he visited Rome in 1860; and died at London, 15th February, 1865. He was interred with great pomp and ceremony in the Roman Catholic Cemetery at Kensal Green.

WISHART, GEORGE, the friend of John Knox, and usually called THE MARTYR, was a Scottish schoolmaster, and having received the doctrines of the Reformation, began to preach them, probably about 1536. Fear, however, drove him from his native country, and he was some years in England, where also he preached, and by persecution was induced to recant. After his return to Scotland, in 1543, he distinguished himself as one of the boldest and most vehement promoters of the Reformation, riots and destruction of churches sometimes following his discourses. Recent investigations have made it all but certain that Wishart was concerned in the plots formed against the life of Cardinal Beaton. He was seized at Haddington by the soldiers in the service of Beaton, tried for heresy, and burnt at St Andrews, 28th March, 1546.

WISHART, GEORGE, a Scottish historian, was born in 1602, became a parish minister at St Andrews, but refusing to sign the covenant, was more than once imprisoned. He was several years chaplain to the marquis of Montrose, on whose execution, in 1650, he held the like situation in the household of the queen of Bohemia. He returned to England at the Restoration, was appointed rector of Newcastle, and two years later bishop of Edinburgh. Wishart was author of a history of the campaigns of Montrose, written in Latin, and published in 1650. It was translated into English, and has been several times reprinted. Died, 1671.

WITHER, GEORGE, poet, whose works, long neglected, have been brought into repute by Sir Egerton Brydges and others, was born in 1588, at Bentworth, in Hampshire, and was educated at Magdalen College, Oxford. In 1613 he was committed to prison for his satires, called "Abuses Strip and Whipt." In the civil war he espoused the popular cause, raised a troop of horse, and rose to the rank of major-general; but having published a piece, called "Vox Vulgi," he was again incarcerated after the Restoration. Died, 1667.

WITHERING, WILLIAM, physician and botanist, was born in 1741, at Wellington, in Shropshire; studied at Edinburgh; practised at Stafford, and afterwards at Birmingham; and died in 1799. He was a fellow of the Royal Society. His chief work is, a "Systematic Arrangement of British Plants;" but he wrote several others, and the native carbonate of barytes was discovered and first described by him.

WITHERINGTON, WILLIAM FREDERICK, R.A., an English landscape painter, was born in London in 1786. He became a student at the Royal Academy at the age of nineteen, and first exhibited at the British Institution in 1811. In 1830 he was chosen A.R.A., and ten years later R.A. Among his best known pictures are "the Cornfield," "the Orchard," "the Hop-garden," "the Stepping Stone" (the last two are now in the National Gallery), "John Gilpin," and "Sancho Panza and Don Quixote." Died, April 11, 1865.

WITT. [DE WITT.]
WITTGENSTEIN, LUDWIG ADOLF, Count von, field-marshal of Russia, was born of a noble German family long settled in Westphalia, in 1769. He began his military career in 1793, serving in the army of Prussia against the French Republic, and afterwards served with distinction in the Russian army. During the French invasion of Russia in 1812, he successfully protected the capital against Marshal Macdonald, and in the following year was named commander-in-chief of the allied Russian and Prussian forces. Defeated by Napoleon at Lützen and Bautzen, he took part as commander of a division at the great battle of Lepsie in October, 1813, and in the campaign of 1814. After Waterloo he retired, receiving as a reward the grant of large estates from the Emperor Alexander. He was created field-marshal in 1826, and two years later commanded in the first campaign against the Turks; received the title of Prince in

where he afterwards became professor of Greek, rector of the gymnasium, and public librarian. He had made the acquaintance and gained the esteem of Melancthon at Wittenberg. Wolf edited and translated the orations of Demosthenes, Eschines, and Isocrates, the Lexicon of Suidas, and other Greek authors. He was never married; dabbled in astrology; and died at Augsburg, in 1580.

WOLFE, CHARLES, an Irish divine and a poet of great promise, was born in 1791, at Dublin; was educated at High Abbey School, Winchester, and at Trinity College, Dublin; obtained the curacy of Hallyclog, which he exchanged for that of Castle Caulfield; and died, of consumption, in 1823. Among other poems possessing considerable merit he wrote the well-known "Burial of Sir John Moore," commencing, "Not a drum was heard;" which was pronounced by Lord Byron "the most perfect ode in the language."

WOLFE, JAMES, Major-general, the son of Lieutenant-general Edward Wolfe, was born at Westerham, in Kent, in 1726. He entered early into the army, and distinguished himself by his bravery and the decision of his character on many occasions during the German war. He was present at the battle of Dettingen, took part in the campaign of Fontenoy, was present at the battles of Falkirk and Culloden, and at the siege of Maestricht. Returning to England in 1749, he commanded a regiment in the Highlands the next five years. In 1757 he served in the expedition against Rochefort, and the following year under General Amherst in North America. On his return he was appointed to the command of the expedition against Quebec. The enterprise was great and hazardous; but General Wolfe, in spite of failing health and a very inadequate force, surmounted all obstacles, and on the heights of Abraham, Sept. 13, 1759, encountered the French; when, in the moment of victory, he received a ball in the wrist and another in the body, which obliged him to be carried into the rear. There, while in the agonies of death, being roused by the sound of "They run!" he eagerly asked, "Who run?" and being told the French, he exclaimed, "I thank God, and die contented." A touching story is told how General Wolfe, on the eve of the battle, recited, in a boat on the river, nearly the whole of Gray's "Elegy," then recently published, and said he would rather have been its author than have the glory of beating the French next day. His remains were brought to England and interred at Greenwich, and a monument was erected to his memory in Westminster Abbey. The death of Wolfe was the subject of one of the best works of the painter West. His portrait, by Highmore, belonged to the Princess Charlotte, and was presented by Leopold, king of the Belgians, to the National Portrait Gallery, in 1858. An interesting Memoir, by R. Wright, was lately published.

WOLFF, JOSEPH, D.D., the celebrated traveller, and missionary to the Jews, was the son of a Jewish Rabbi, and was born at Wellersbach, near Bamberg, in 1795. At a

very early age he had a wish to become a Christian; and after studying at Stuttgart and Bamberg, getting turned out of doors by his friends, and wandering about in South Germany teaching Hebrew for bread, he was received into the church of Rome at Prague in 1812. He had already become acquainted with Goethe and Yoss; and at Vienna, where he entered the university, he made the acquaintance of Professor Jahn, Von Hammer, Friedrich von Schlegel, Theodore Kürner, and the general of the Redemptorists, Hoffbauer. He was much influenced by his friend Count von Stolberg, and Bishop Selzer. After continuing his studies at Tübingen he went, in 1816, to Rome, meeting on his way the mystic Madame Krudener and Madame de Staël. Through the patronage of Niebuhr, then Prussian minister at Rome, the young convert was presented to the pope, Pius VII., and was received as a student in the Roman college, and then in the college of the Propaganda. During his stay at Rome he became a friend of the painter Overbeck. In 1818, in consequence of his daring dissent from the opinions and practices of those about him, he was expelled from the Propaganda, and from Rome; entered the Redemptorist monastery of Val-Sainte, in Switzerland; and in 1819 came to London, joined the church of England, and was sent to Cambridge to study the oriental languages under Dr Lee, and thus prepare himself for the work of a missionary to the Jews under the auspices of the London Society. At Cambridge his chief friend was the celebrated preacher, and professor of theology, Charles Simeon. He set out on his first missionary journey in 1821, visiting Malta, Alexandria, Mount Sinai, Jerusalem, Cyprus, Baghdad, Spain, Tiflis, &c., and returning to England in 1826. The next year he married Lady Georgiana Walpole, daughter of the second earl of Orford, who accompanied him soon after on a second missionary journey as far as Malta; whence he went alone through Persia, Bokhara, India, and Egypt. He returned to England in 1831; set out two years later for Abyssinia, Arabia, India, and the United States, where he was ordained deacon, and made D.D., and in 1838 was ordained priest. He made a second journey to Bokhara in 1843, to discover the fate and effect the liberation, if possible, of the English envoys, Stoddart and Conolly. On his return, in 1845, he was presented to the vicarage of Isle Brewers. His wife dying in 1859, he married again in 1861, and died at Isle Brewers, May 2, 1862. The most fascinating of the writings of this extraordinary man is his Autobiography, entitled "Travels and Adventures of the Rev. Joseph Wolff, D.D.," 2 vols., 1860 and 1861. Among his other works are—"Journal of Missionary Labours, 1827—1838;" "Mission to Bokhara;" and a second series of "Missionary Labours."

WOLFF, JOHANN CHRISTIAN VON, German philosopher and mathematician, born at Brestau in 1679. He was educated at the universities of Jena and Leipzig, and in 1707 was named professor of mathematics at Halle. Notwithstanding the nature of his

professional duties, he pursued with the deepest interest and persistent attention those metaphysical studies which always chiefly attracted him. Through the influence partly of personal enemies, and partly of the "odium theologicum," aroused by some of his opinions, he was deprived of his chair and banished from Prussia, in November, 1723. He long held the chair of mathematics and philosophy at Marburg; but on the invitation of Frederick the Great he returned to Halle, in 1741, as professor of International Law. He was also honoured with the appointments of privy-councillor and chancellor of the university. He was a fellow of the Royal Society of London, member of the French Academy of Sciences, and Baron of the Empire. His chief philosophical work is entitled, "Philosophia Rationalis," which appeared in 1728, and was followed by "Philosophia P.ima," "Theologia Naturalis," and several others. His principal mathematical work is the "Elementa Matheseos Universæ." Wolff wrote many of his works in German—an offensive novelty at that time—and he greatly contributed to the final downfall of the scholastic philosophy in Germany. He was less an original thinker than a successful methodizer and expositor of the views of others. His system is for the most part coincident with that of Leibnitz. A host of adversaries rose against him, and he was called fatalist and atheist, but he had also many disciples, and his school long held its place.

WOLLASTON, WILLIAM, an ethical and theological writer, was born in 1659, at Cotton Clanford, in Staffordshire; was educated at Sidney Sussex College, Cambridge; took orders; but having come into possession of considerable property, he relinquished the clerical profession, and devoted his time to literary researches. His principal work is, "The Religion of Nature delineated." It appeared the year of his death, and became very popular. It has passed through several editions. Died, 1724.

WOLLASTON, WILLIAM HYDE, physician and experimental philosopher, was great-grandson of the foregoing, and born in 1766. He studied at Cambridge, and graduated M.D. in 1793. He was soon after admitted to the Royal Society, of which he subsequently became secretary. His want of patronage as a physician induced him to give up his profession in disgust, and devote himself to scientific pursuits, the result of which was, that he became one of the most eminent chemists and experimentalists of modern times. Among his discoveries in mineralogy are the two metals palladium and rhodium, and the method of rendering platinum malleable, by the last of which he is said to have gained £30,000. He invented a sliding scale of chemical equivalents, a goniometer, and the camera lucida. His papers in the Philosophical Transaction, are numerous. Died, 1828.

WOLLSTONECRAFT, MARY. [GODWIN, Mrs.]

WOLSEY, THOMAS, the celebrated cardinal archbishop of York, and minister of state under Henry VIII., was the son of a butcher at Ipswich, and born there in 1471.

After finishing his education at Oxford, he became tutor to the sons of the marquiss of Dorset; was subsequently domestic chaplain to the archbishop of Canterbury; and, on going to court, he gained the favour of Henry VII., who sent him on an embassy to the emperor, and on his return made him dean of Lincoln. Henry VIII. gave him the living of Torrington, in Devon, and afterwards appointed him register of the Garter and canon of Windsor. He next obtained the deanery of York, and, attending the king to Tournay, in France, was made bishop of that city. In 1514 he was advanced to the see of Lincoln, and the year following to the archbishopric of York. Insatiable in the pursuit of emolument, he obtained the administration of the see of Bath and Wells, and the temporalities of the abbey of St Alban's, soon after which he enjoyed in succession the rich bishoprics of Durham and Winchester. By these means his revenues nearly equalled those of the crown, part of which he expended in pomp and ostentation, and part in laudable munificence for the advancement of learning. He founded several lectures at Oxford, where he also erected the college of Christ Church, and built a palace at Hampton Court, which he presented to the king. He was at this time in the zenith of power, and had a complete ascendancy over the mind of Henry, who made him lord chancellor, and obtained for him a cardinalship. He was also nominated the pope's legate; and aspired to the chair of St Peter. In this he failed, and a few years later he lost all the power and the possessions he had gained. His advice in the matter of the king's divorce from Queen Katherine, the ruinous taxation he had imposed, and the personal enmity of some powerful persons, combined for his overthrow. He was prosecuted under the statutes of Præmunire, deprived of everything, and sent to live in retirement at Esher. Although the king restored him to some of his offices soon after, and he returned to his see of York, a charge of treason was brought against him. In 1530 he was apprehended at York, but was taken ill, and died at Leicester on his way to London, exclaiming, "Had I but served my God as faithfully as I have served my king, he would not have given me over in my grey hairs." An account of his life was written by his gentleman-usher, George Cavendish; portions of which are appended to Galt's "Life of Wolsey." The portrait of the great Cardinal, by Holbein, is in Christ Church College, Oxford. There is one by an unknown painter, in the National Portrait Gallery.

WOOD, ANTHONY, an eminent English biographer and antiquary, was born in 1632, at Oxford, and was educated at Merton College. His "History and Antiquities of Oxford," which was translated into Latin by Dr Fell and others, appeared in 1674, and his "Athenæ Oxonienses" was published in 1691. An attack upon Lord Clarendon, in the last of these works, subjected him to a sentence of expulsion from the university, and his prejudices in favour of Jacobitism rendered him an object of hatred to the other party. Died, 1695.

WOOD, JAMES, proprietor of the Old Gloucester Bank,—a *millionnaire*, whose riches and parsimonious eccentricities entitled him to a place among the "remarkable characters" of the age,—was born at Gloucester in 1756, and succeeded to the bank, which had been there established, in 1716, by his grandfather. In conjunction with the bank, he kept a shop to the day of his death, and dealt in almost every article that could be asked for; nothing was too trifling for "Jemmy Wood" by which a penny could be turned, and nothing too extensive for him to supply—a farthing rushlight, or a merchant's shipping order. He was a bachelor, and spent the whole week in his banking-shop, or rather his shop-bank (for the business of the "Old Gloucester Bank" was transacted at one end of his chandlery store); he entertained no company, visited none, took his country walk of a Sunday in order to enjoy a frugal meal in the open air, and ever made it his especial care not to diminish his wealth by attending to the calls of humanity. He died April 20, 1836, leaving his vast property to be divided between his four executors. His personal property was sworn under £900,000; but Mr James Wood, of Islington, stated to be one of nine cousins of the deceased, entered a caveat against the probate. A codicil was afterwards discovered, by which various legacies are bequeathed to his kindred, besides a very large sum to the corporation of Gloucester; this codicil, however, was not satisfactorily authenticated.

WOOD, Alderman Sir MATTHEW, bart., M.P., was the son of a serge manufacturer at Tiverton, and was apprenticed to a chemist and druggist. After serving his time, and being for a few years employed as a traveller in the drug trade, he commenced business in London, at first as a chemist, and subsequently as a hop merchant, in which latter trade he acquired a very handsome fortune. After serving some minor offices in the city, Mr Wood was elevated to the mayoralty in 1815, and re-elected in 1816; a departure from the ordinary course that was unprecedented during several previous centuries. During his second mayoralty he gained a still higher position in public favour by his humane conduct in saving the lives of three Irishmen who were sentenced to be hanged, on the perjured testimony of three police officers. The livery sent his name up a third time for the mayoralty; but the court of aldermen deeming this too irregular, passed his name over. During his second mayoralty he was elected M.P. for London, and from that time till his death he was invariably returned, and on all occasions save one at the head of the poll. Of Mr Wood's conduct as a magistrate it is not possible to speak too highly; but we can by no means give the like unqualified praise to his course as a senator, for, in his place in parliament, he displayed more obstinacy than candour, more zeal than wisdom. He gained great notoriety for the zeal with which he attached himself to the fate and fortunes of the ill-starred Queen Caroline. His political course obtained him the friendship of a maiden lady, sister of the wealthy James Wood, banker

of Gloucester. At her death she bequeathed him a handsome property, and her brother subsequently left him a fourth of his vast fortune. He was created a baronet during the Melbourne administration, in 1837. Died, Sept. 25, 1843, aged 76.

WOOD, ROBERT, an accomplished scholar, was born in 1716, at Riverstown, county of Meath; made the tour of Greece and Palestine in 1751; and was appointed under-secretary of state in 1759. He wrote "The Ruins of Baalbec," "The Ruins of Palmyra," and an "Essay on the Genus and Writings of Homer," which was published after his death. Died, 1771.

WOODDESON, RICHARD, an eminent civilian, was born in 1745, at Kingston, in Surrey; was educated at Pembroke and Magdalen College, Oxford; and chosen Vincian professor, on the resignation of Sir Robert Chambers. He wrote "Elements of Jurisprudence," "A Systematic View of the Laws of England," and "A Brief Vindication of the Rights of the British Legislature." Died, 1822.

WOODFALL, WILLIAM, printer and parliamentary reporter, who became in some measure a public character from his being exposed to a prosecution as publisher of the famous "Letters of Junius." Being gifted with a wonderfully retentive memory, he reported the debates in parliament with great ability and precision, and was the first who introduced them to the public after their present fashion. Died, 1803.

WOODHOUSE, ROBERT, an eminent mathematician, was born at Norwich in 1773, and educated at Cambridge. He was elected Lucasian professor in 1820, Plumian professor in 1822, and keeper of the observatory in 1824. He wrote "The Principles of Analytical Calculation," "A Treatise on Trigonometry," &c. Died, 1827.

WOODHOUSELEE, Lord. [TYTLER, ALEXANDER FRASER.]

WOODVILLE, or WYDEVILLE, ELIZABETH, widow of Sir John Grey, who was slain in the battle of Barnard's Heath. On her applying for the restoration of her husband's estate, Edward IV. fell in love with, and married her. The princess Elizabeth who married Henry VII., and thus united the houses of York and Lancaster, was the fruit of this marriage. See WYDEVILLE.

WOODVILLE, WILLIAM, an eminent physician, was born in 1752, at Cockermonth; studied at Edinburgh; and settled in London, where he became physician to the Middlesex Dispensary and the Smallpox Hospital. He was the author of "Medical Botany," and the "History of the Smallpox Inoculation." Died, 1805.

WOODWARD, JOHN, the geologist, was born in Derbyshire in 1665. He was brought up to the medical profession, graduated M.D., and became fellow of the Royal College of Physicians, and professor at Gresham College. He was also a fellow of the Royal Society. But he is now remembered for his researches and writings on geology, to which he was early attracted by the limestones of Gloucestershire, and their interesting fossils. His principal work is entitled

"A Natural History of the Earth," and appeared in 1695. In reply to several able attacks on his views, he published a defence of the work in 1724, with a classified list of fossils. He also left in manuscript "An attempt towards a Natural History of the Fossils of England," which was published immediately after his death. By his writings, his large collection of geological specimens, and by his foundation of the professorship of geology at Cambridge University, to which he also bequeathed his collection, he contributed greatly to the progress and development of the science. Died, 1728.

WOOLLETT, WILLIAM, one of the best English engravers of the last century, was born at Maidstone, in 1735. He excelled chiefly in landscape, but executed also some good historical subjects; among the latter, the prints after West's "Death of General Wolfe" and "Battle of La Hogue" being most noteworthy. He engraved some of Wilson's best landscapes very successfully, was named engraver to George III., and died at London in 1785. His portrait, by Gilbert Stuart, is in the National Gallery.

WOOLSTON, THOMAS, theologian, was born in 1669, at Northampton, and became a fellow of Sidney Sussex College, Cambridge. His first work, "The Old Apology for the Truth of the Christian Religion revived," was meant to prove that the actions of Moses were typical of Christ and the church; but he gradually became a deist, and his "Six Discourses on Miracles" subjected him to a prosecution, and he was fined and imprisoned. Died, 1732.

WORCESTER, EDWARD SOMERSET, Marquis of, distinguished as the inventor of the steam-engine, was born about 1601. He was son of the first marquis (known as chief of the Catholic party, and one of the most devoted adherents of Charles I. in the civil war), and bore successively the titles of Lord Herbert, earl of Glamorgan, and earl and marquis of Worcester. He spent some years in foreign travel, married about 1628, then gave himself up to his favourite mathematical and mechanical studies, at his father's seat, Raglan Castle, and in 1641 entered into the service of Charles I. At the head of his troops, raised and maintained at the expense of his father and himself, he obtained several important successes. But about 1645 the king sent him on a secret commission to treat with the Irish Catholics, and to raise troops for service in England. The secret was discovered, Glamorgan was imprisoned on a charge of treason, and Charles with his usual unscrupulous treachery disowned his agent. To procure his release, however, the king informed the lord-lieutenant that Glamorgan had acted by his orders. After a voluntary exile of several years, he returned to England in 1652, and suffered an imprisonment in the Tower till 1655. In that year he drew up his famous "Century of Inventions," which was first printed in 1663. Among them is that for which he is deservedly remembered, "an admirable and most forcible way to drive up water by fire;" which was, in fact, a steam-engine. Although it was seen by eminent persons, the invention seems to have been little thought

of, and the inventor was equally slighted. He spent a large sum of money on the erection of his great water-works at Vauxhall, and died in April, 1667. His character, abilities, and inventions have been admirably illustrated by Mr Dureks, C.E., in his work entitled "The Life, Times, and Scientific Labours of the Second Marquis of Worcester," published in 1865. It includes a reprint of the "Century of Inventions." Mr Dureks has still more recently published "Worcesteriana," consisting of notices of 180 works relating to the marquis of Worcester or his family connections.

WORCESTER, JOHN, Earl of. [TIPTOT, JOHN.]

WORDSWORTH, WILLIAM, one of the greatest poets of our age and country, was born at Cockermouth, in Cumberland, April 7th, 1770. He received the rudiments of his mental culture at Hawkshead School, and in the year 1787 was entered at St John's College, Cambridge. Having completed his studies, and taken his academical degree, he made the tour of France and Switzerland at a period when the revolution in France had attained its grand crisis; and its influence upon the fiery imagination and sensitive mind of Wordsworth was no less forcible than that produced upon those of his friends and frequent companions, Coleridge, Southey, and Lloyd. The earnest thoughts that had been generated by his continued meditations upon this theme found an utterance in his "Descriptive Sketches" and "Evening Walk," both of which made their appearance in 1793. In 1797 he had conceived a plan for the regeneration of English poetry. In 1798 he published, in conjunction with Coleridge, a collection of "Lyrical Ballads." The majority of these were from his own pen. This book, so far from making converts to Wordsworth's peculiar way of thinking, met everywhere with the bitterest contempt and ridicule. The Edinburgh Review denounced his theory as puerile, and stigmatized his verses as a species of second-rate nursery rhymes. "There can be no doubt" that Wordsworth in his zeal to 'redeem the English muse from a corrupted and inane phraseology, like other re-actionists of a sterner character, pushed his favourite theory too far. Still many of his readers sympathized with his views; and through their encouragement he was induced to publish two other volumes of poetry in 1807. In 1813 he settled at Rydal Mount, which was his home thenceforward till his death. In 1814 appeared his great work, "The Excursion." About this period Wordsworth obtained the situation of distributor of stamps for Westmoreland, which office he retained during 23 years, retiring in 1842 on a pension of £300, while his son filled the vacancy thus occasioned. Several works followed the "Excursion," among which may be mentioned the exquisite "White Doe of Rylstone;" and several series of "Sonnets," and in 1842 appeared a volume containing several poems written in the poet's early youth, accompanied by others written in his old age. In 1843 he succeeded his friend Southey as poet-laureate. It would be almost impossible to

over-estimate the importance of the influence which Wordsworth, in conjunction with Coleridge, has exercised in the formation of the intellectual characteristics of the present age. Many of our greatest thinkers have sat at the feet of Coleridge, that "old man eloquent;" while almost the whole of our recent poetry has been tintured and coloured by the genius of Wordsworth. "During the last 30 years," said a contemporary critic, "the regenerative power of his genius has so operated upon the public taste, that the pure, the simple, and the good are now the more regarded elements of poetry, while the Laras, Giaours, and the other dis-tempered objects of a feverish imagination are ceasing to be among the attractive imagery of song. Perhaps the most remarkable triumph of his genius is its conquest over that very review which scorned and sneered at him in the beginning of his career; for his spirit now undoubtedly pervades this very organ which scoffed at him so bitterly, and even rejected his language as too puerile for the nursery." For many years, Wordsworth enjoyed that guerdon of love and admiration which are too frequently reserved for departed genius. Thousands of his admirers made a pilgrimage to the poet's home, Rydal Mount; and not a few crossed over from other lands to catch a glimpse of that great man who has filled the world with his fame. Died, 1850. His noble autobiographical poem, "The Prelude, or the Growth of a Poet's Mind," was a posthumous publication. Memoirs of Wordsworth were published soon after his death by his nephew, Canon Wordsworth. His portrait, by H. W. Pickersgill, is in the National Portrait Gallery.

WORDLIDGE, THOMAS, a portrait painter and engraver, born at Peterborough, in 1709, whose etchings after Rembrandt were peculiarly excellent. He published a book of drawings of antique gems. Died, 1766.

WORMIUS, OLAUS, an able Danish physician and antiquary, was born in 1588; was made a canon of the cathedral of Lund by Christian IV. as a reward for his medical services; and died in 1654. His principal works relate to Danish and Norwegian history and antiquities.

WORONZOW, MICHAEL SEMENOVICH, Prince, an eminent Russian statesman and general, was born of an illustrious family, at Moscow, in 1782. He was educated in England, where his father was Russian ambassador more than 20 years; entered the Russian army in 1801, served against the Turks, and distinguished himself in the great war with France. He was severely wounded at Borodino, and commanded the cavalry at the battle of Leipsic, October, 1813. Ten years later he was named governor of New Russia and Bessarabia, and in 1844 governor of the Caucasus. He carried on the war with the heroic mountain-tribes, and took Shamyl's stronghold, Dargo. The love for England which he acquired in early life was not quenched by age, and he is said to have disapproved the Crimean War. Died at Odessa, 18th November, 1856. The sister of Prince Woronzow was married to the earl of Pembroke, and was the mother of Lord Herbert.

WORSLEY, Sir RICHARD, bart., was born

in 1751, in the Isle of Wight; and became governor of the island, comptroller of His Majesty's household, and member of parliament for Newport. He resided in Italy many years, and made a large collection of antiquities, of which a catalogue was published under the title of "Museum Worslelanum." Sir Richard also wrote the "History of the Isle of Wight." Died, 1805.

WORTHINGTON, WILLIAM, a learned divine, was born in Merionethshire, in 1703; was educated at Jesus College, Oxford; and obtained prebends in the cathedrals of Asaph and York. His principal works are, an "Essay on the Scheme of Redemption," "On the Historical Sense of the Mosaic Account of the Fall of Man," and "The Scripture Theory of the Earth." Died, 1778.

WOTTON, Sir HENRY, diplomatist and political writer, was born in 1568, at Boughton Hall, in Kent; was educated at Winchester and Oxford; spent some time in travelling through the principal countries of Europe; became secretary to the earl of Essex, whom he accompanied on his expedition to Spain, and into Ireland; and, on the fall of that nobleman, he went to reside at Florence. About 1602 the grand-duke of Tuscany sent him on a secret mission to James VI. of Scotland, which he so discharged as to obtain the lasting favour of the king. After James's accession to the throne of England he employed him on various missions to Italy and Germany. He was made provost of Eton College in 1624, and died in 1639. He wrote "Elements of Architecture," "The State of Christendom," a "Survey of Education," some Poems, &c., a collection of which was published by Izaak Walton under the title of "Reliquiæ Wottonianæ."

WOTTON, WILLIAM, an English divine, critic, historian, and miscellaneous writer of great learning; born, 1666; died, 1726. He had a remarkable facility in acquiring languages, and extraordinary force of memory. He graduated B.A. at Cambridge before he was 13, and M.A. at 17 years of age. His chief works are, "Reflections upon Ancient and Modern Learning," an edition and Latin translation of the ancient laws of Wales, and "The History of Rome from the Death of Antoninus Pius to the Death of Alexander Severus."

WOUVERMANS, PHILIP, an eminent painter, was born at Haarlem, in 1620. His hunting pieces, landscapes, and battle scenes are admirable. The Dulwich Gallery possesses many of his works. Died, 1668.

WRANGEL, CARL GUSTAF, a distinguished Swedish naval and military commander, born in 1613. After a course of foreign travel, and a year spent in Holland in studying navigation, he was taken into the service of the king, Gustavus Adolphus, whom he attended as officer of the guards at the famous battle of Lützen, in November, 1632. After the fall of his royal master he contributed to the completion of the victory. He served with much distinction under Banier, then under Torstenson; contributed to the defeat of the Imperialists at Leipsic, in October, 1642; won a naval victory over the Danes in 1644, and rescued the Swedish admiral, Clas Flemming, from blockade; won

a similar victory near the isle of Femern; and about 1645 succeeded Torstenson in the chief command in Germany. A series of successful operations procured him the dignities of field-marshal and senator of Sweden. He united his army with the French forces under Turcine, and with him entered Bavaria, and afterwards Bohemia, where in 1647 they took Eggra. Wrangel especially distinguished himself at the battle of Sommershausen, in 1648, the result of which was that Bavaria fell into the hands of the Swedes and the French. At the peace of Westphalia he received the title of Count, and considerable estates for his services. Wrangel took the command of the fleet in the war with Poland, blockaded Dantzic, took part in the battle of Warsaw in 1656, and captured Fredrikssudde in the following year. He was then named admiral of the kingdom, rendered further important services, and in 1660 was raised to the dignity of marshal of the kingdom, and president of the College of War. He was also chosen by Charles Gustavus one of the governors of his son, afterwards Charles XI. Died, 1676.

WRAXALL, Sir NATHANIEL WILLIAM, bart., an eminent traveller and historical writer, was born at Bristol, in 1751. He entered the civil service of the East India Company in 1769, and acted as judge-advocate and paymaster of the forces for the presidency of Bombay. In 1772 he returned to England, and then travelled on the continent, visiting almost every country from Naples to Lapland. He published several tours, the "History of the House of Valois," "Memoirs of the Courts of Berlin, Dresden, Warsaw, and Vienna," "The History of France," 6 vols. 8vo, &c. In 1813 he was created a baronet, and, in 1815, he published his last work, "Historical Memoirs of my Own Time," 2 vols. 8vo. In these memoirs, which contain a fund of anecdote, was a libel on Count Woronzow, the Russian ambassador; for which Sir Nathaniel was sentenced to a fine, and six months' imprisonment. He died at Dover, while on his way to Naples, in 1831, aged 80. Several volumes of additional "Memoirs" were published after his death.

WRAY, ROBERT BATEMAN, a celebrated engraver of gems, was born at Broadchalk, in Wiltshire, in 1715. He learnt drawing of his uncle, Edward Byng, a portrait painter, and was apprenticed to a seal-engraver in London. He aimed at success in a higher field, and by enthusiasm and persistent effort achieved it, and gained a European reputation for his engravings on gems in the manner of the ancient Greek artists. His Dying Cleopatra, Head of Medusa, Magdalene, Madonna, Milton (front face and two profiles), and some female heads, are among the finest of his works. In 1759 he settled at Salisbury, and there died in 1770.

WREDE, KARL PHILIPP, Field-marshal, Prince, an eminent Bavarian soldier and statesman, whose fate it was to be a most formidable foe to the gigantic military genius under whom he obtained his earliest distinction. In 1805 he served as a Bavarian lieutenant-colonel against Austria and as the ally of France, and distinguished himself so

much, that Napoleon personally conferred upon him the grand cross of the Legion of Honour. In subsequent campaigns he still further distinguished himself, and was created a field-marshal when dangerously wounded at the decisive battle of Wagram. In the memorable campaign against Russia, too, the contingent furnished by Bavaria to France was commanded by him; and covered the retreat of the French with such dogged determination, as to lose nearly the whole of its cavalry. In 1813 Marshal Wrede, as Bavarian plenipotentiary, signed the treaty by which Bavaria declared herself separated from the confederation of the Rhine, and also from the cause of the emperor. Shortly afterwards Wrede, at the head of a combined Bavarian and Austrian army, made a gallant and skilful, though unsuccessful, attempt to intercept Napoleon at Hanau, after the battle of Leipzig. In 1814 he was actively engaged in France, and with his usual gallantry; and, at the conclusion of the war, he was elevated to the rank of a prince, and shortly afterwards, nominated an honorary knight grand cross of the English order of the Bath. The termination of the war did not terminate his services to his country. He was appointed minister of state, and inspector general of the army. Born, 1767; died, 1839.

WREN, Sir CHRISTOPHER, the celebrated architect, was born at East Knoyle, in Wiltshire, in 1632; studied at Wadham College, Oxford; was chosen fellow of All Souls, in 1653; was appointed professor of astronomy at Gresham College, in 1657; and, in 1661, was nominated to the Savilian professorship, and created LL.D. He had very early shown remarkable fondness for scientific studies, and made several ingenious instruments, but his genius for architecture had scarcely yet appeared. In 1661 he was named assistant to Sir John Denham, the surveyor-general, and two years later he received a commission to produce designs for the restoration of St Paul's Cathedral, then one of the most remarkable Gothic edifices in the kingdom. To prepare himself for the execution of this great undertaking he made a visit to France, in 1665, and then finished the designs; but while they were under consideration the cathedral was destroyed by the fire of 1666. Wren had now an opportunity for signaling his talents by the erection of an entirely new structure. The contemporaneous destruction of fifty parochial churches and many public buildings also furnished an ample field for his genius; and he would have had the honour of founding, as it were, a new city, if the design which he laid before the king and parliament could have been adopted; but private interests prevented its acceptance. On the death of Sir John Denham he succeeded to the office of surveyor of the works; and, in 1674, received the honour of knighthood. The first stone of his grand work was laid in June of the following year, and the whole was completed in 35 years. Of his other works we may name the Monument, Greenwich Hospital, Hampton Court, the churches of St Mary-le-Bow; St Michael, Cornhill; St Dunstan in the East; St Magnus, London Bridge; and

WRIOTH Southampton land, under Wriothsley, peare. After against Char prerogative f king's side, o

St Stephen, Walbrook. In 1680 he was chosen president of the Royal Society; was afterwards appointed architect and commissioner of Chelsea Hospital, and comptroller of the works at Windsor. He was elected M.P. for the borough of Plympton, in 1685, and for Weymouth, in 1700. After having long been the highest ornament of his profession, he was, in 1718, to the disgrace of the administration, deprived of the surveyorship of the royal works, merely from political motives; he was then in the 85th year of his age. He died, Feb. 25, 1723, aged 90, and was buried in St Paul's Cathedral. Over his tomb was placed the fitting inscription—"Si monumentum quaris circumspice." His portrait, by Sir G. Kneller, is in the National Portrait Gallery.

WREN, CHRISTOPHER, son of the preceding, was a learned antiquary, and collected memoirs of his family, which in 1750 were published by Dr Stephen Wren, his son, under the title of "Parentalia."

WREN, MATTHEW, bishop of Ely, was born in London in 1585; studied at Pembroke Hall, Cambridge, of which he was chosen fellow; took orders, and in 1621 was named chaplain to Prince Charles (Charles I.). He accompanied the prince and Buckingham on their journey to Madrid in 1623, and gained great influence with Charles. Wren was appointed in 1629 one of the judges of the Star Chamber, a post for which his acrid rigorous temper well fitted him. He accompanied the king to Scotland in 1633; was promoted in rapid succession to the sees of Hereford, Norwich, and (in 1638) Ely; composed the form of prayer for the 29th May, and assisted in preparing the Scottish liturgy, the first use of which had such memorable consequences. Articles of impeachment were brought against him by the Commons at the close of 1640, the court of Star Chamber and the High Commission Court being abolished about the same time; and Wren was a prisoner in the Tower for eighteen years. He was released at the Restoration, and died in 1667.

WRIGHT, JOSEPH, painter, usually styled "Wright of Derby," was born in that town in 1734. He was first placed under Hudson, the portrait painter; afterwards visited Italy, where he made great advances in his profession; returned to England in 1755, and was elected an associate of the Royal Academy in 1782. He settled at Derby, painted many admirable landscapes, &c., and died in 1797. He especially excelled in representing effects of firelight, or storm-scenes. Among his best pictures are the well-known and pathetic "Dead Soldier," "Belshazzar's Feast," "Eruption of Vesuvius," the "Forge," and the "Air-Pump." The last is in the National Gallery. Wright's portrait of himself is in the National Portrait Gallery.

WRIOTHESLEY, THOMAS, 4th earl of Southampton, lord high treasurer of England, under Charles II., was son of Henry Wriothesley, 3rd earl, the patron of Shakspeare. After supporting the popular party against Charles I. and the encroachments of prerogative for a time, he went over to the king's side, opposed the attainder of Straf-

ford, and was made a privy-councillor. He was employed to convey the king's proposals of accommodation to the parliament immediately after the royal standard was set up at Nottingham, in August, 1642, and was one of the royal commissioners to discuss terms of peace at Uxbridge, in January, 1645. During the commonwealth he lived in retirement in England; but soon after the Restoration he was appointed lord high treasurer. He was highly distinguished for his political wisdom, and no less for his unsullied honour and integrity. He sent large supplies of money to Charles II. during his exile, and was the intimate friend of Clarendon. His character is eloquently portrayed both by Clarendon and Burnet. Died, 1667.

WRIOTHESLEY, THOMAS, and WRIOTHESLEY, HENRY. [SOUTHAMPTON, Earls of.]

WURMSER, DAGOBERT SIGISMUND, Count von, an illustrious Austrian general, was born in Alsace in 1724, and served through the campaigns of 1745-46-47 in the French army. Having removed with his family to Vienna, he entered the Austrian army, served with distinction at the battles of Prague, Lissa, Moehkirchen, and Liegnitz, and was rewarded with successive promotions, and the cross of the Order of Maria Theresa. He became lieutenant-general in 1778; won a victory over the Prussians at Kubelschwert in the following year; held afterwards the post of commander of Galicia, and was called to take an active part in the war with France, which broke out in 1793. He co-operated with the prince of Condé and the duke of Brunswick, took part in forcing the French lines at Weissenbourg, and was after many successes driven back by Pichegru across the Rhine. In October, 1794, he defeated the French on the Neckar, bombarded and took Mannheim, and subsequently received the grand cross of Maria Theresa. Repulsed by Moreau, Wurmsers was next called to command in Italy, and was there opposed by Napoleon, who defeated him at Lonato, Castiglione, Roveredo, and on the Brenta, in the first week of August, 1796. He succeeded in reaching Mantua, but after a brave defence was compelled to capitulate to his great antagonist. Napoleon generously refused to make him a prisoner, and Wurmsers, with answering honour, disclosed to Napoleon a plot against his life. Wurmsers died, unmarried, at Vienna, in 1797.

WYATT, JAMES, an eminent architect, was born at Burton, in Staffordshire, about 1743, and studied architecture and painting at Rome. On his return to England he erected the Pantheon in Oxford Street, and he succeeded Sir William Chambers as surveyor-general to the Board of Works. He also became a member, and for a short time president, of the Royal Academy. Wyatt was employed to build Fonthill Abbey for Beekford, a palace at Kew, which has been demolished, the Military Academy at Woolwich, &c., and to make alterations in Windsor Castle, Salisbury Cathedral, Magdalen College, Oxford, &c. He died in 1813.

WYATT, MATTHEW COTES, an English sculptor, born in 1777. Educated at Eton,

he was at an early age employed by George III. at Windsor Castle, and long enjoyed the patronage of the court and aristocracy. He designed the monument to Lord Nelson at Liverpool, executed the cenotaph of the Princess Charlotte in St George's Chapel, Windsor, a group of George and the Dragon, the beautiful monument of the duchess of Rutland at Belvoir Castle, and many equestrian statues. One of his most successful works was his figure of the favourite dog of the earl of Dudley. Died, at Paddington, 10th January, 1862.

WYATT, R. J., an accomplished sculptor. Was born on the 3rd of May, 1795, in Oxford Street, London, where his father, Edward Wyatt, was then settled. At an early age he was articled to Charles Rossi, R. A., for the term of seven years; and during that term his studies at the Royal Academy were so successfully prosecuted, as to entitle him to the award of medals upon two occasions. At the time Wyatt was under the tuition of Rossi he executed a monument in the church of Esher, in memory of Mrs Hughes, and another in the chapel at St John's Wood. When Canova visited this country he became so far interested in Wyatt, as at once to promise him his protection and the permission to work in his studio at Rome. Thither he went in 1821, after having spent some time in Paris under the celebrated Italian sculptor Bozlo; and so devotedly did he prosecute the labours of his profession, that only once did he revisit his native country. It was during Wyatt's visit to England, in 1841, that he was honoured by the queen with a commission for his statue of "Penelope," which in Rome was considered the best of his works. His group of "Ino and the Infant Bæchus," a statue of "Glycera," "Musidora," a statue, and two statues of Nymphs, are all works of high merit. The industry of Wyatt was singularly constant. In summer, long before five in the morning, he was to be seen on his way to the Caffè Greco, where artists of all nations assemble; and in winter, long before daylight, he was to be seen at the same place reading the papers by the light of a taper which he always carried with him for that purpose. At daylight he was in his studio, and remained at work sometimes until midnight. Died, suddenly, at Rome, May 29, 1850.

WYATT, Sir THOMAS, a distinguished courtier, statesman, and poet, was born in 1503, at Allington, in Kent; was educated at Cambridge and Oxford, became a favourite of Henry VIII., and was employed by him on various diplomatic missions to Spain and the Imperial Court, and died in 1541. His poetical works consist of odes, love elegies, &c., and possess a considerable degree of elegance.

WYATT, Sir THOMAS, the younger, was only son of the preceding, and was born about 1520. He married young, and succeeded to his father's estates at the age of twenty-two. He soon distinguished himself as a soldier, and took part in the siege of Landrecies, with a troop raised at his own expense. He held a command at Boulogne for some time; but he is chiefly remembered

as one of the leaders of the rebellion which broke out in 1554, in consequence of the conclusion of the marriage between Queen Mary and Philip of Spain. At the head of the Kentish men he occupied Rochester Castle, and was there joined by a band of Londoners sent against him under the duke of Norfolk, the duke fleeing with the loss of his guns and ammunition. Wyatt marched on London, plundered the palace of the bishop of Winchester at Southwark, and after retiring to Kingston, again entered London, but was repulsed, and in a skilful attack on Temple Bar surrendered, and was committed to the Tower. Among his leading accomplices were the duke of Suffolk, Sir Peter Carew, Sir Nicholas Throckmorton, Sir Thomas Grey, and others. Wyatt pleaded guilty on his trial, and was executed, 11th April, 1554. Several other of the leaders were executed, and about fifty of their followers. The execution of Lady Jane Grey and her husband took place within a week after the suppression of this rebellion.

WYCHERLEY, WILLIAM, a dramatic writer and man of fashion in the time of Charles II., was born in 1640, at Cleve, in Shropshire; studied the law; but having a taste for poetry and the drama, he came into notice as the author of "Love in a Wood," a comedy, and obtained through it the patronage of the duchess of Cleveland, the profligate duke of Buckingham, and the monarch himself. He at length lost the king's favour by clandestinely marrying the countess of Drogheda, a young, rich, and beautiful widow; and although at her death she settled her fortune on him, yet his title being disputed, the law expenses produced embarrassment and arrest, and he remained in confinement 7 years. He was at last released from prison by James II., who gave him a pension of £200 per annum. He was the author of the comedies of the "Plain Dealer," the "Gentleman Dancing Master," and the "Country Wife," besides poems, &c. Died, 1715.

WYCLIFFE, JOHN. [WICKLIFFE.] WYDEVILLE, or WOODVILLE, ANTHONY, Earl RIVERS, an accomplished nobleman of the 15th century, was born in 1442. In consequence of his sister having been married to Edward IV., he shared in all the vicissitudes which befell that warlike and luxurious monarch, and became governor of Calais and captain-general of the king's forces. He was also made governor of Prince Edward, and chief Butler of England. On the death of the king the earl assembled a body of troops, with the intention of crowning his nephew; but his design was defeated by the machinations of the duke of Gloucester, afterwards Richard III., who caused the gallant nobleman to be beheaded, without trial, in the castle of Pontefract, June, 1483.

WYKEHAM, WILLIAM OF, bishop of Winchester, and lord high chancellor of England, was born in 1324, at Wickham, in Hampshire, of respectable parents, but poor, and was indebted for his education to Nicholas Uvedale, governor of Winchester Castle. On the completion of his studies he became private secretary to his patron, and was by

him events Edward I. integrity h king raised place in the pointed sun under his d. him eventually recommended to the notice of Edward III. The talents, diligence, and integrity he displayed in the service of the king raised him gradually to a distinguished place in the royal favour; and being appointed surveyor of his works at Windsor, under his directions the castle was rebuilt. He now gradually, but rapidly, rose to the highest dignities both in church and state. In 1357 he was presented to the rectory of Pulham, in Norfolk, to which was added a prebend in the church of Lichfield; and in 1360 he was made dean of the collegiate church of St Martin le Grand, London. He was also successively appointed keeper of the privy-seal, secretary to the king, and governor of the great council. In 1366 he was advanced to the bishopric of Winchester, and in the following year was made chancellor of England. These high dignities he sustained with honour and ability, dedicating a large portion of his temporalities to the restoration of the numerous palaces belonging to his see. He resigned the seals in 1371. Owing to the influence of a party, headed by John of Gaunt, who were strongly opposed to the increasing influence of the clergy, he was prosecuted on various charges, and deprived of his temporalities in 1376; but the esteem in which he was held by the people generally compensated for the loss; and on the accession of Richard II. he was restored to his dignities and emoluments. In 1386 he completed his munificent foundation of New College, Oxford; in the chapel of which is still to be seen his crosier, or pastoral staff, supposed to be the only one in England. He also built and endowed St Mary's College, at Winchester, and having, in 1391, a second time resigned the chancellorship, he devoted the remainder of his life to the rebuilding of the cathedral, and the exercise of Christian benevolence. He died, Sept. 24, 1404, and was buried in Winchester cathedral, where a splendid monument is erected to his memory.

WYNANTS, JOHAN, Dutch painter, born at Haarlem about 1600. Little is known of him, and his pictures are very rare. He is supposed to have been the master of Wouvermans, excelled in landscape, and had the figures in his works painted by other artists. Indolent and self-indulgent, he is said to have destroyed his health by habits of dissipation. Died, probably, about 1677. Several of his pictures are in the Dulwich Gallery.

WYNDHAM, Sir WILLIAM, a celebrated statesman, was a native of Somersetshire, and born in 1637. Having been elected M. P. for the county, he soon became conspicuous as one of the ablest senators in the House. He was appointed secretary of war, and, in 1713, chancellor of the exchequer; but being dismissed on the death of Queen Anne, he took a leading part in opposition, and signalized himself by his defence of the duke of Ormond and the earls of Oxford and Strafford, when impeached by the Commons. He was committed to the Tower in 1715, on the charge of being concerned in the rebellion of the earl of Mar, but was never brought to trial. Died, 1740. His portrait, by Highmore, is in the National

Collection.—His eldest son, CHARLES WYNDHAM, became earl of Egremont, and died in 1763.

WYNN, Right Hon. CHARLES WATKINS WILLIAMS, a distinguished member of parliament, born about 1776, and, at the time of his death, the oldest member of the House of Commons, having sat for Montgomeryshire since 1797, and about a year previously for Old Sarum. He held the offices of secretary-at-war (in the Grey administration) and chancellor of the duchy of Lancaster from December, 1834, to April, 1835. Next to Sir Robert Peel, perhaps, there was no parliamentary character more prominent than Mr Wynn, whose age and experience made him an oracle upon questions of privilege and doubtful points of precedent and order, even amid the infirmities of accumulated years. At one period he was nearly chosen to fill the speaker's chair. He was the fast friend of the poet Southey, was attached to literature, an able exponent of political measures, and altogether a man to be respected and esteemed during a lengthened career, in which everything praiseworthy and honourable attached to his name. Died, 1850.

WYON, WILLIAM, J. A., a medal engraver of admirable skill, was of German descent; the son of Peter Wyon, a die-sinker at Birmingham, where he was born in 1795. Apprenticed to his father, he evinced when very young that taste and skill in his art of which he has left behind him so many admirable examples. In 1816 Mr Wyon came to London; and in that year he was appointed second engraver in the Royal Mint. Here he had a fair field and an honourable career before him; but his hopes were darkened by official difficulties, on which we need not dwell. In 1832 he was elected an associate of the Royal Academy; and in 1838 a full academician. Mr Wyon's works may be classified under the several heads of coins—pattern-pieces not coined—medals—and seals. His medals include the war medals of the Peninsula, Trafalgar, Jellabad, and Cabul,—the civic medals of the Royal Academy, the Royal Society, the Royal Institution, the Geological Society, the Geographical Society, the Bengal Asiatic Society, and indeed of almost every learned society, home and colonial. His heads have both force and delicacy,—and are always admirable in point of likeness. His reverses are conceived in the manner of Flaxman, for whose works he evinced greater enthusiasm than for those of any other modern artist. Died, 1851.

WYTHIER, GEORGE. [WYTHIER.]

WYTTEBACH, DANIEL, a learned philologist, was born at Berne, in 1746; studied at Marburg and Göttingen, obtained the professorship of philosophy and literature at the Remonstrants' College at Amsterdam; and was subsequently professor of philosophy at the Athenaeum in that city. He became afterwards professor of eloquence at Leyden, and held that chair till incapacitated by age. Among his works are "Vita Ruhnkenii," "Opuscula Oratorica, Historica, Critica," and an edition of the Moral Works of Plutarch. Died, 1820.

X.

XAVIER, ST FRANCIS, a celebrated Jesuit missionary, born in Spain in 1506. He was sent to study at Paris, and there met Ignatius Loyola, whose affectionate disciple and ally he thenceforth became. He assisted Loyola in the formation of the new society, and gladly undertook, in 1540, the laborious mission to the East Indies. After very devoted service at Goa, on the Malabar coast, in Travancore, and in the islands of the Archipelago, he went to Ceylon. Meeting there a Javanese refugee, he accompanied him, in 1549, to Japan, and established there the mission, which was maintained by the Jesuits more than a century. On his return to India he fell ill, and died on an island off the coast of China, in December, 1552. He was beatified in 1619, and canonized by Gregory XV. three years later. He left five books of epistles and other small works. It has been recently shown that there is much exaggeration in the common accounts of the successes of this eminent preacher. An account of his "Missionary Life and Labours," by the Rev. H. Venn, was recently published.

XENOCRATES, a Greek philosopher, remarkable for the severity of his manners, and his incorruptible integrity, was born at Chalcodon, about B. C. 400. He was a pupil of Plato, and sent on embassies to Philip, king of Macedonia, and afterwards to Antipater. It is said that the Athenians caused him to be sold as a slave, because he was too poor to pay the taxes. Demetrius Phalereus, however, discharged the debt, and gave him his freedom. He was for many years head of the Academy. Died, B. C. 314.

XENOPHANES, a Greek philosopher and poet, was a native of Colophon, and settled at Elea in Magna Græcia. He lived in the latter half of the 6th century B. C., and was a contemporary of Pythagoras. He is recognized as the founder of the Eleatic School, the characteristic doctrine of which was an idealistic pantheism. Xenophanes was the first philosopher who endeavoured to set the idea of the Deity free from the degrading images previously associated with it. Fragments of his poem "On Nature" and of his elegies are all that are preserved to us of his writings.

XENOPHON, the illustrious Athenian historian, was born probably about B. C. 450. He was a disciple and friend of Socrates, who saved his life at the battle of Delium. With his friend Proxenus he joined the army of Cyrus the younger as a volunteer in the expedition against Artaxerxes. After the death of Cyrus, at the battle of Cunaxa, and the treacherous murder of the Greek generals, Xenophon took the lead in conducting the famous "Retreat of the Ten Thousand" from Upper Asia to their native land. He afterwards served in the Spartan army against the Persians, and sentence of banishment being passed on him by the

Athenians, he retired into Elis, and lived there about 20 years. It is not known whether he availed himself of the permission to return to Athens, nor when nor where he died. He was living B. C. 357. The principal works of Xenophon are the "Anabasis of Cyrus," the history of the expedition in which the historian took so prominent a part; the "Cyropædia," a fascinating picture of an ideal state based on the traditions respecting the elder Cyrus; the "Memorabilia of Socrates," a very precious memorial of the great practical philosopher; and the "Hellenica," a historical narrative. He wrote several shorter works. Xenophon's mode of thought is practical, not speculative, and his style is singularly lucid, simple, and manly.

XERXES I., king of Persia, was the son of Darius, and succeeded him on the throne B. C. 485. After suppressing a revolt in Egypt he prepared for the invasion of Greece. In 480 he set out at the head of an enormous host, which he reviewed at Dorisæus, and succeeded in reaching the pass of Thermopylæ. Great part of his fleet was destroyed by a storm, the rest of it engaged the Greek fleet off Artemisium. At the same time took place the memorable battle of Thermopylæ, in which Leonidas and his band of Spartans heroically withstood the Persian host for several days, and then fell through treachery. Xerxes then advanced to Athens, and at the battle of Salamis saw his fleet defeated by Themistocles. He returned to Persia, leaving his general, Mardonius, to carry on the war in Greece. Murdered by Artabannus, B. C. 465.

XIMÉNEZ DE CISNEROS, FRANCISCO, cardinal, archbishop of Toledo, a distinguished Spanish statesman, was born in Castile in 1437. He studied at the university of Salamanca, then visited Rome, where he acquired a great reputation, suffered a long imprisonment in consequence of a dispute with the archbishop of Toledo, and in 1482 entered the Franciscan order, to the rule of which he devoutly and rigidly conformed. Ten years later Queen Isabella of Castile chose him for her confessor, an office which he would fain have declined. He succeeded Cardinal Mendoza in the archbishopric of Toledo, in 1495. In 1506 he became regent of Spain, and distinguished himself by the wisdom and energy of his administration. Though seventy years of age, he even conducted an expedition into Africa and conquered Oran. He was again regent after the death of Ferdinand in 1516, and died in the following year. Cardinal Ximenes was one of the greatest men of his age, and the services which he rendered as statesman, as churchman, and as patron of literature, were very important. He founded the university of Alcalá de Henares, and had the celebrated Complutensian Polyglot compiled at his own expense. Spain owes to him the first estab-

lishment of the rule which excludes papal bulls not sanctioned by the king, and the first measures towards the emancipation of the towns from the tyranny of the feudal nobles.

XIMENEZ, FRANCISCO, one of the 12 friars who first preached Christianity to the Mexicans in the 16th century. During his residence in Mexico he collected a great deal of information relative to the plants and

animals of that country, and published a treatise on the subject, which is allowed to possess considerable merit.

XIPHILINUS, JOHN, patriarch of Constantinople in the 11th century, was a man of great erudition and exemplary character. Died, 1075. — His nephew, of the same name, was the author of a Greek abridgment of Dion Cassius, and is often confounded with his uncle.

Y.

YALDEN, or YOULding, THOMAS, divine and poet, was born about 1671, and educated at Magdalen College, Oxford, where he formed an intimacy with Addison and Sacheverel, which lasted through life. He obtained the rectories of Charlton and Cleenville, in Herefordshire; and, in 1713, was appointed preacher to Bridewell Hospital, on the resignation of Dr Atterbury. Among his poetical pieces are, "The Temple of Fame," "The Conquest of Namur," "Hymen to Darkness," &c. Died, 1736.

YARRELL, WILLIAM, an eminent naturalist, was born in London in 1784, where his father carried on the business of a newspaper agent. From the earliest age he manifested a strong inclination for rural sports, and while engaged in them he studied minutely the natural history and habits of the game he hunted. In 1828 he sent a paper to the Zoological Journal on "Some rare British Birds," and from this period for nearly thirty years he continued to furnish contributions on similar subjects to many scientific journals; but the works on which his reputation mainly rests are his "History of British Birds," and "History of British Fishes," the former published in 1836, and the latter in 1843.

YATES, FREDERICK HENRY, a popular and versatile actor, first made his appearance on the stage in a piece called "The Actor of All Work," in 1817. In the following year he was engaged at Covent Garden, subsequently performed in every line of character from Shakspeare's tragedy to the broadest farce, and it was not easy to decide whether his pathos or his humour were most admirable. As manager of the Adelphi Theatre his taste and skill were also universally acknowledged. Died, June 21, 1842, aged 45.

YEATES, THOMAS, orientalist, author of excellent grammars of the Hebrew and Syriac, a most laborious editor and translator of portions of the Scripture, and distinguished in his day for a variety of biblical labours of considerable value. In early life he was a member and secretary of the Society for promoting Constitutional Reform, but for many years previous to his death

he took no part in politics. Born, 1768; died, 1839.

YEZDEGERD III., king of Persia, last of the dynasty of the Sassanids, came to the throne A. D. 632. He was only fifteen years of age, and the conquests of the Moslems were creating alarm in Persia. The command of his army was given to his favourite Rustam, and a great battle, lasting several days, was fought in the plains of Cadesia in 634 or 636, in which the Persians were defeated, and Rustam killed in his flight. Ctesiphon was occupied by the Moslems in 637, and Yezdegerd fled to the Median hills. Farther successes of the invaders drove him still farther from his kingdom; he passed the Oxus, reached the Jaxartes, and obtained the friendship and aid of the emperor of China. But he was betrayed, overtaken, and killed by Turkish cavalry in the 19th year of his reign, A. D. 651. With him fell the Persian kingdom and the religion of Zoroaster. The era of Yezdegerd commences from the 16th June, 632.

YORK, FREDERICK, Duke of, second son of George III., was born August 16, 1763, and in the February following he was elected prince-bishop of Osnaburg, in Germany. In 1780 he was appointed a brevet-colonel in the British army, and went to study military tactics in the school of the great Frederick at Berlin. In 1784 he was created duke of York and Albany; returned from the continent in 1787; took his seat in the House of Lords the same year; and, in 1789, fought a duel, which had nearly proved fatal to him, with Colonel Lennox, afterwards duke of Richmond. In 1791 he married the eldest daughter of the king of Prussia; was placed at the head of the British army in Flanders, in 1793, took part in the siege of Valenciennes, and after repeated defeats by the French, was compelled to return to England. He was, however, made field-marshal and commander-in-chief, and in 1799 was again sent to Holland. He was again unsuccessful, and had to sign a disadvantageous convention. In 1809 a series of charges were preferred against him in the House of Commons by Colonel Wardle, for having suffered a female favourite to influ-

ence him in the disposal of commissions in the army; but as nothing occurred to implicate the duke in corrupt transactions, he was acquitted. His royal highness, however, resigned his post of commander-in-chief, but he was reinstated about two years after by the prince regent; and from that time he exercised the most rigid impartiality in the distribution of promotion, while he attended to the rights and comforts of the soldier, and enforced strict discipline and subordination. The care of the king's person was intrusted to the duke of York in 1819. In the latter years of his life the duke showed himself a bitter opponent of Catholic Emancipation. It was the subject of his last speech in the House of Lords. He was humane, frank, affable, and benevolent; but a passion for gaming was fatal to his own repose, and threw a shade over his manly and generous character. Died, January 5, 1827.

YORK, JAMES, Duke of. [JAMES II.]

YORK, RICHARD, third Duke of, was the only son of Richard, earl of Cambridge, and Anne, daughter of Roger Mortimer; through whom and her mother Philippa he traced his descent from Lionel, duke of Clarence, third son of Edward III. At the death of his father, executed for conspiracy in 1415, he was intrusted to the guardianship of the countess of Westmoreland, and ten years later the attainder was set aside, and he succeeded to the title of duke of York. He took a very important part in public affairs, and was for some time virtually sovereign. Made constable of England in 1430, regent of France after the duke of Bedford's death, he was recalled in 1446, opposed the policy of Queen Margaret, and was named, in 1449, lieutenant of Ireland. He won the esteem and support of the Irish by his good administration, and now asserted his right to the crown. On his return to England he had an interview with the king, Henry VI., and was appointed protector of the kingdom in 1454. But reconciliation of the two houses was impossible, and in the following year the Wars of the Roses began. After five years of fluctuating fortune the duke was defeated, and killed at the battle of Wakefield, December 31, 1460. His head was placed over the gates of York for a time, and then his remains were interred, first at Pomfret, and ultimately at Fotheringay. He was father of Edward IV., Richard III., and George, duke of Clarence. His daughter, Margaret was married to Charles the Bold, duke of Burgundy.

YOUNG, Sir ARETAS WILLIAM, colonel. This officer entered the army in 1795, as ensign; and became a captain in the 13th foot the following year, by purchase. His first active duty was in Ireland, during the rebellion; his next in Egypt, 1801; and, for several years after, in Sicily and at Gibraltar, he acted as aide-de-camp to General Fox. In 1807 he obtained the rank of major in the 47th, and was present at the battles of Vimiera, Talavera, Busaco, Badajoz, &c. In 1813 he was promoted to a lieutenant-colonelcy in the 3rd West India regiment, stationed at Trinidad; and, in 1815, he was sent to join the expedition against Guadaloupe, and received one of the badges of the order of

Merit, presented by Louis XVIII. He was next selected to command the troops in Grenada, where his conduct gave the highest satisfaction; and on his being ordered back to Trinidad, the council of assembly presented him with a sword, value 100 guineas. From this time to the final disbandment of the 3rd West India regiment, in 1825, he administered the government at various times during the absence of Sir Ralph Woodford, and was rewarded for the "candour, integrity, and impartiality which had marked his administration," by 150 guineas for a sword, and a piece of plate, value £250. In 1826, Lieut.-colonel Young was appointed to the office of protector of slaves in Demerara; and in 1831 he was made lieutenant-governor of Prince Edward's Island; and, in 1834, he received the honour of knighthood. Died, 1835.

YOUNG, ARTHUR, an eminent writer on agriculture, was born in 1711, at Bradfield, in Suffolk. With a desire to improve British husbandry, he made innumerable experiments at home, and also travelled over Great Britain, Ireland, France, Spain, and Italy. In 1779 he published his "Farmer's Calendar," which became a very popular work; and in 1784 began to publish the periodical, entitled the "Annals of Agriculture." It contained many important communications, signed by their contributors; among whom was King George III. under the assumed name of Ralph Robinson. On the establishment of the Board of Agriculture he was appointed secretary, which office he held till his decease. Besides the works already mentioned, he published his *Tours in England, Ireland, and France*; "Political Arithmetic," and many other works of more or less importance. Young corresponded with Washington, received valuable presents from the Empress Catherine of Russia, and from Count Rostopchin, governor of Moscow; was chosen F.R.S., and received a gold medal from the Board of Agriculture. In 1801 his works on agriculture were, by order of the Directory, translated into French, and published under the title of "Le Cultivateur Anglais." He was blind for some years before his death, which took place at his native village, April 12, 1820.

YOUNG, EDWARD, an English poet, author of the "Night Thoughts," was born at the village of Upham, in Hampshire, in 1684. He was educated at Winchester School and Oxford University, obtained a law fellowship at All Souls College, and, in 1719, graduated D.C.L. He had before that time made himself known by the publication of several of his poems, and held the situation of tutor to the young Lord Burleigh; which he gave up in consequence of an offer by the duke of Wharton of a larger income. This matter was the subject of a lawsuit after the death of the duke. Young was ordained priest in 1727, and was appointed chaplain to the king, and three years later rector of Welwyn, in Hertfordshire. He continued to publish a succession of poems, each with its flattering dedication to some influential person; place-hunting being one of Young's most prominent characteristics. He was named, in 1761, clerk of the closet to the

princess dowry work as which app reason of the immortal duties while force and forth, obtai long held it England. fensive to a lines and p forgotten. Day;" "T of clever "The Univ entitled " "The Reve and short y marks on O Centaur not leaving one Lee, whom 1741.

Dr Y of St George Board of L of the Fre principal wo Natural Phi published in work was a latory theor interference by Sir Joh "Discourse, regarded as equal for be application Dr Young a student of the Egypt, and

princeps dowager of Wales. Young's principal work as a poet is the "Night Thoughts," which appeared between 1742-46, and by reason of the seriousness of its subject—the immortality of the soul, and the practical duties which flow from that fact—and the force and showiness with which it is set forth, obtained an immense reputation, and long held its ground as a household book in England. Its style is wearisome and offensive to a cultivated taste, but there are lines and passages in it which will not be forgotten. His other poems are—"The Last Day;" "The Force of Religion;" a series of clever but superficial satires entitled "The Universal Passion;" three tragedies, entitled "Busiris," "The Brothers," and "The Revenge;" and several odes, epistles, and short pieces. In prose he wrote "Remarks on Original Composition," and "The Centaur not Fabulous." Died, April 12, 1765, leaving one son by his wife, Lady Elizabeth Lee, whom he married in 1731. She died in 1741.

YOUNG, MATTHEW, an Irish mathematician and divine, was born in 1750, in the county of Roscommon; was educated at Trinity College, Dublin, where, in 1786, he became professor of philosophy; was raised to the see of Clonfert, by Marquis Cornwallis, and died in 1800. He was the author of "An Analysis of the Principles of Natural Philosophy," and "The Method of Prime and Ultimate Ratios."

YOUNG, DR THOMAS, a distinguished natural philosopher, was born of a Quaker family at Milverton, in Somersetshire, in 1773. He was carefully educated, and was a zealous student of ancient and modern languages, mathematics, and natural philosophy. At the age of 19 he went to London to study medicine; became a pupil of John Hunter; and, through his uncle, Dr Brocklesby, made the acquaintance of Burke and Sir Joshua Reynolds. At this period he began to shake off his Quakerism, and to dress and live like the people he was thrown amongst. After studying a short time at Edinburgh, he made a tour through Germany, and early in 1797 entered Emmanuel College, Cambridge. He began to practise as a physician in London, in 1801; was chosen the next year professor of natural philosophy at the Royal Institution, a post which he held only two years; and, in 1802, became foreign secretary to the Royal Society. Dr Young was subsequently physician of St George's Hospital, secretary to the Board of Longitude, and foreign associate of the French Academy of Sciences. His principal work is the "Course of Lectures on Natural Philosophy and Mechanical Arts," published in 2 vols., 4to, in 1807. In this work was announced the beautiful undulatory theory of light, and the principle of interference of rays, which is characterized by Sir John Herschel, in his well-known "Discourse," as a principle in optics which, regarded as a physical law, has hardly its equal for beauty, simplicity, and extent of application in the whole circle of science. Dr Young also distinguished himself as a student of the hieroglyphical inscriptions of Egypt, and was the first to suggest the dis-

covery, for which Champollion obtained the chief credit. He contributed many articles to the Encyclopædia Britannica, the Quarterly Review, the Philosophical Transactions, and various scientific journals. Died, May 16, 1829. A life of this eminent man of science was published, in 1855, by Dr Peacock; who also edited his Miscellaneous Writings. His Hieroglyphical Essays and his Correspondence were edited by Leitch.

YPSILANTI, Prince ALEXANDER, the first active agent in the Greek revolution, son of Demetrius, hospodar of Wallachia, was born at Constantinople, in 1792. About the year 1805 Ypsilanti's father received a summons from the grand seignor to repair to Constantinople, and judging that obedience to the command might cost him his life, he determined on retiring into Russia. The son, adopting the military profession, entered into the Russian army; was a captain of hussars, when a ball, at the battle of Dresden, carried away his right hand; attained the rank of major-general, and was made aide-de-camp to the emperor. In 1820 he became acquainted with the Hetairein, of which association he eventually became the leader. When he saw that the breaking out of the insurrection in Greece could no longer be delayed, he resolved to plant in Moldavia the standard of revolt. He crossed the Pruth with a few attendants, and in March, 1821, he issued a proclamation, announcing that Greece had kindled the torch of freedom, and thrown off the yoke of tyranny. The Emperor Alexander, to express publicly his disapprobation of the undertaking of the Hetairists, summoned Ypsilanti to make his defence; and, as he did not obey, he caused his name to be struck from the rolls of the Russian army. After sustaining repeated defeats, Ypsilanti gave up the cause of Greece. Having crossed the frontiers, he was arrested in Transylvania, and long held captive, as a prisoner of state, in the fortress of Mungatsch. He died at Vienna in 1828, aged 36. Ypsilanti undoubtedly possessed the necessary courage, but his ridiculous pride and tenaciousness of ceremony due to his rank rendered him wholly unfit for the duties of a patriot chieftain.

YRIARTE, JUAN DE, librarian to Philip V. king of Spain, was born of a Spanish family at Orotava, in Teneriffe, in 1702. He was sent to France to be educated, and studied eight years at the college of Louis le Grand. On visiting Madrid in his 22nd year, his great acquirements attracted the notice of influential persons, and after various honourable employments, he became royal librarian in 1732. This office he filled till his death; and during the forty years of his librarianship he greatly increased the collection both of printed books and manuscripts, and prepared several catalogues. The office of translator to the chief secretary of state was given to him in 1740, and this also he held till his death. He was an active member of the Royal Academy of Madrid, and began to compile a Spanish-Latin Dictionary. Died at Madrid, 1771.

YRIARTE, TOMASO DE, an eminent Spanish poet, youngest son of the preceding.

was born about 1750, studied at Madrid, held an official situation under the government, and was editor of the Madrid Mercury.

His chief works are, "La Musica," a poem; and "Fabulas Litterarias." Died, 1790.

Z.

ZABAGLIA, NICCOLO, an Italian architect, was born at Rome, in 1674, and displayed such great abilities while employed as a carpenter at the Vatican, that he was appointed architect of St Peter's. Died, 1750. He invented the method of transferring fresco paintings from the plaster.

ZABARELLA, FRANCESCO, a distinguished Italian ecclesiastic, was born at Padua, in 1339. He was an eminent professor of the canon law; and arrived, successively, at the dignities of bishop of Padua, archbishop of Florence, and cardinal. He took a prominent part in the council of Constance, and was the author of several learned treatises on ecclesiastical subjects. Died, 1417.

ZACH, FRANZ XAVIER, Baron von, German astronomer, born at Pesth in 1754. After completing his early studies he travelled, spent several years in England, and, in 1786, became director of the Observatory of Seeberg, founded for him by the duke of Saxe-Gotha. He rendered great service to the science of astronomy by his laborious observations, his Star Catalogues, Solar and other Tables, and the journal which he originated, entitled "Monatliche Correspondenz." He lived some time at Genoa, and the last six years of his life at Paris. He was chosen F.R.S., London, in 1804, and was an associate of the Royal Astronomical Society. Died, 1832.

ZACHARIE, JUST FRIEDRICH WILHELM, German poet and translator, was a native of Thuringia. He was born in 1726; was educated at Leipsic, where he made the acquaintance and fellower the literary influence of Gottsched; extended the circle of his friends at Göttingen, and became professor of poetry at the Carolinum of Brunswick, in 1761. He was author of several comic epics—"Der Renommist," "Phaeton," "Das Schnupftuch," and "Murner in der Hölle;" also of a collection of "Fabeln and Erzählungen," and some pleasant songs. He translated "Paradise Lost" into German hexameters, and for several years edited the Neue Braunschweiger Zeitung. His poems and translations form 9 vols. 8vo. Died, 1777.

ZACHARIE, KARL SALOMON, an eminent German jurist and publicist, was born at Meissen in 1769. He studied at the universities of Leipsic and Wittenberg, and having acquired great reputation as a writer on law, was appointed, in 1802, professor of jurisprudence at Wittenberg. Five years

later he removed to Heidelberg, where he held a similar chair till his death. His principal works are—"Vierzig Bücher vom Staate," in 7 vols.; "Handbuch des Französischen Civilrechts;" "Die Einheit des Staats und der Kirche;" &c. Died, 1843.

ZAGOSKIN, MICHAEL NIKOLAEVICH, Russian dramatist and novelist, was born in 1789. His first play was a comedy entitled "The Wag," which was well received at the theatre of St Petersburg, and procured him employment in the Imperial Library. In 1820 he removed to Moscow, where he continued to produce comedies and novels. His most popular novel is "George Miloslavsky," a clever picture of Russia at the beginning of the 17th century. Among his other works are "Rostavlev," a tale, and "Moscow and the Moscowers," a series of essays. Died at Moscow, 1852.

ZAHRTMANN, CHRISTIAN CHRISTOPHER, Danish admiral and hydrographer to the admiralty, was born about 1793. He entered the navy at the age of 12, and served in it till the peace of 1815. In his capacity of hydrographer he prepared and published a valuable description of the seas round Denmark, and a chart of the North Sea. His services procured him the esteem of his countrymen, the knighthood of the Dannebrog, and various foreign orders, and several offices of state. He was also honorary member of the Royal Geographical Society of London. Died, 1853.

ZALONCZEK, JOSEPH, Prince, a Polish general, was born in 1752, at Kaminiack. In the diets from 1788 to 1792 he espoused the cause of his country's freedom, and was among the foremost who fought for it in 1792 and 1794. He commanded at Praga, when that suburb of Warsaw was taken by assault. Being made prisoner, and sent to the fortress of Josephstadt, he remained there till after the death of the empress Catharine; when, on being liberated, he entered into the French army, and was in active service from 1797 till 1812, in the various campaigns of Italy, Egypt, Prussia, Poland, and Russia. When the congress of Vienna assigned Poland to Russia, the Emperor Alexander conferred on him the office of viceroy, with the title of prince. With these favours the patriotism of Zaloncek vanished, and he became the devoted slave of the sovereign who had exalted him. He died in 1826.

of Posen,
beral Pole,

who, in 1792 and 1794, distinguished himself among his countrymen in their efforts to shake off the yoke of Russia. On the Russians being driven out of Warsaw in 1794, he was appointed president of the national council; but when that city fell into the hands of Suwarrow, the implacable Catharine caused him to be arrested, and imprisoned with Mostowski, Potocki, and other patriots, at St Petersburg, where he remained till the accession of the emperor Paul, who set him at liberty.

ZALEUCUS, a renowned legislator of the Locrians, who flourished about 660 B. C. It is related that having made a law to punish adulterers with the loss of sight, he refused to exonerate his own son when convicted of the crime, but submitted to the loss of one of his own eyes, instead of exacting the penalty of both from the offender. The laws of Zaleucus were long in force, and are said to have been the earliest written laws in Greece.

ZALUSKI, JOSEPH ANDREW, a Polish noble, founder of the Zalusk Library, was born in 1701. His passion for book-collecting was remarked in his youth, and his whole life and fortune were dedicated to its gratification. He was assisted in forming the library by his brother, the bishop of Cracow, and, in 1748, it was opened to the public at Warsaw. For a political offence Zaluski was banished by the diet under Russian influence, in 1767, and not allowed to return to Warsaw for six years. Meanwhile many of the books had been stolen, and the whole collection was in a state of neglect and decay. Zaluski died at the beginning of 1774. After various misfortunes this great library, in spite of great losses, numbering about 200,000 volumes, was seized and carried off to St Petersburg, where it was subsequently enlarged, and is known as the Imperial Library.

ZAMBECARI, Count FRANCESCO, a celebrated Italian aeronaut, born at Bologna, in 1756. His experiments and researches were chiefly directed to the means of guiding balloons in the air, by availing himself of currents at different heights, by employing oars, and by the occasional diminution and augmentation of the gas. He perished in making one of these experiments in 1812, the balloon which conveyed him having entangled itself in a tree, and caught fire.

ZAMOYSKI, JOHN SARIUS, a distinguished Polish statesman and general, born in 1541. After studying at Paris and Padua, and becoming rector of the university at the latter city, he returned to Poland, and was one of the ambassadors sent to Paris in 1573, to offer the Polish crown to the duke of Anjou, afterwards Henry III. of France. When Stephen Bathori came to the throne, he gave his niece in marriage to Zamoyski, whom he also made grand-chancellor of the realm and general of his armies. He distinguished himself as a warrior, and in 1580 rescued from the Muscovite yoke many of the Polish provinces. On the death of Bathori Zamoyski promoted the election of Sigismund, prince of Sweden, to the throne. He afterwards commanded with great distinction against the Turks, the Tartars, and

the Swedes. He also founded colleges, and patronized the arts; and at his death, in 1605, he was honoured with the title of defender of his country, and the protector of the sciences.

ZAMOYSKI, JOHN, Polish general, grandson of the preceding, was born in 1626. As castellan of Kalisch he assisted at the election and coronation of John Casimir in 1649; greatly distinguished himself two years later in the campaigns against the Cossacks, and was named palatine of Sandomir. He took a distinguished part in the war of the succession, and in 1659 contended with the Russians in the Ukraine. He assisted at the diet in the following year, and sanctioned the peace of Oliva. Died at Warsaw, 1665.

ZAMOYSKI, ANDREW, a distinguished Polish statesman, a member of the same family as the preceding, was born in 1716. Having completed his education at the universities of Liegnitz and Paris, he gave up his fortune in 1740 to his brothers, and entered into the Saxon army, in which he served till 1754. Returning to Poland, he was appointed to a high office in the magistracy, and ten years later he was made keeper of the seals. His influence was exerted for the reform of abuses, the promotion of education, and the increase of the army. Indignant at the seizure and exile, under Russian influence, of Zaluski and other nobles in 1787, he resigned the seals, and went into retirement. He was surprised by the commission intrusted to him in 1776 to prepare a code for the kingdom; at once applied himself to the task, and on its completion had the profound grief of seeing it rejected by the diet. Russian influence was at the time predominant and thwarted every measure likely to save the country from anarchy. Zamoyski withdrew to Italy, and there in 1791 he had the consolation to hear that his code was at last adopted in the new constitution. He hastened to return to his country, and died there in February, 1792.

ZAMPIERI. [DOMENICHIINO.]

ZANCHI, GIROLAMO, was born at Alzano, in 1516; and having formed a close intimacy with the celebrated Peter Martyr, while they were canons regular of San Giovanni di Laterano, the conversation and example of this distinguished convert to the reformed church ultimately produced such an effect on the mind of Zanchi, as induced him to throw off the monastic habit and abjure the Romish faith. He was accordingly under the necessity of quitting Italy, and, after seeking a refuge first at Geneva, and next at Strasburg and Chlavenna, he accepted the divinity professorship at Heidelberg, in 1569; where he settled, under the immediate patronage of Frederick III., elector-palatine, at whose instigation he composed his great treatise against Antinomianism. The death of this prince, in 1578, occasioned his resignation, and he removed to Neustadt; but he returned to Heidelberg in 1585, and died there in 1590. His treatise "On the Doctrine of Predestination" was translated into English by Dr Toplady.

ZANOTTI, FRANCESCO MARIA, a mathematician, was born at Bologna, in 1692, and

became librarian, secretary, and president of the institute of his native city. He was at first a Cartesian, but afterwards became a zealous defender of Newton's system. He was a good Latin and Italian poet. Died, 1777.

ZELOTTI, BATTISTA, Italian painter, was born at Verona, in 1532. He was a pupil of Antonio Badde at the same time with Paul Veronese, whose assistant and rival he afterwards became. Zelotti excelled in fresco painting, and his principal work was a series in illustration of the exploits of the Obizzi. Some of his works have been mistaken for those of Paul Veronese, whose style he imitated. There is a portrait by Zelotti in the National Gallery. Died about 1592.

ZENDRINI, BERNARDO, an eminent Italian mathematician, was born at Savio, in 1679, and settled at Venice as a physician. His profound knowledge of hydraulics obtained for him the appointment of chief engineer to the Venetian republic, with the superintendence of all the rivers, ports, &c. He was also employed by the Austrian government and the republic of Lucca; and many works of great importance were executed by him. Died, 1747.

ZENO, of Elea, a Greek philosopher, was born about B. C. 490, at Elea, in Magna Græcia, and was a disciple of Parmenides. He is said to have visited Athens with Parmenides, and to have lived there some time. The invention, or at least the development, of dialectics is ascribed to him. His native city having fallen under the dominion of a despot, he endeavoured to deliver it, but failed; and, being put to the torture, he is said to have bitten off his tongue, in order to prevent himself from betraying his companions.

ZENO, the Greek philosopher, founder of the Stoic School, was born at Citium, a small town in Cyprus. The date of his birth is uncertain, but it was probably about B. C. 355. His father, Mnaseas, was a merchant, and brought him up to the same calling. But the writings of the Socratic philosophers fell in his way, and attracted him to a higher field, and the accident of his shipwreck, with the loss of a valuable cargo, on the coast of Attica, left him poor and free to follow his genius, and become a philosopher. He first attended at Athens the lectures of Crates, the cynic; but soon, unsatisfied and dissatisfied, turned to Stilpo of the Megaric school; and afterwards to the philosophers of the Academy, Xenocrates and Plato. He did not permanently adhere to any of these schools, but after twenty years' ardent inquiry and pursuit of truth, began to teach a system of his own. He gathered his disciples in the *Stoa*, or Portico, painted by Polygnotus; whence the name of his school—the *Stoic*. Zeno was of feeble health and deeply thoughtful aspect; lived very abstemiously, presided over the school for 58 years, and reached, it is said, the age of 98. His personal character was the faithful counterpart of his doctrine, and he was held in such high honour by his fellow-citizens that they are said to have placed in his keeping the keys of their citadel. The aim of Zeno was

to found a system of human knowledge, which should take the place of the scepticism then prevalent, and arrest if possible the decay which he saw fast spreading over Greek civilization. He had some of the best qualities of the early Romans; mainly energy, severe simplicity of life, and profound regard for moral obligation. His philosophy therefore had a practical rather than a speculative aim. He derived all knowledge from sensation and reflection—the exercise of reason upon impressions received through the senses; taught that the highest aim of man is to live according to right reason; that the way to virtue (perfect manhood) is through wisdom; that virtue alone is the ground of blessedness; that all good actions are equally good, and all evil ones equally evil; that the passions must be eradicated and tranquillity secured by "apathy" (freedom from passion). The system of the Stoics was more fully developed by the great followers of Zeno, among whom were Cleanthes, his pupil and successor, Chrysippus, Diogenes of Babylon, and others. Many great thinkers and noble characters went forth from this school, and its doctrines were peculiarly attractive to the noblest Romans. But the system also produced many examples of extravagant egotism, pride, and asperity, and some of its most distinguished adherents availed themselves of the liberty it gave them of putting an end to their own lives. Zeno is said to have done so, in consequence of an accident as he quitted the *Stoa*. The date of his death is probably about B. C. 263. After his death the Athenians are said to have honoured him by the decree of a crown of gold, a public funeral, and a statue of brass.

ZENO, emperor of the East, got himself proclaimed emperor in A. D. 474. He was father of Leo II., who was appointed by Leo I. to succeed him; but being an infant, Zeno assumed the government and the purple, and the young Leo soon after died. In the following year Zeno made peace with Genseric, king of the Vandals; and was soon after driven into exile by a revolt headed by Illasiliscus, who reigned till 477. In that year Zeno returned to Constantinople, and the usurper being betrayed to him, was banished with his wife and family to die of hardships in Cappadocia. Another revolt broke out in 479 under Marcian, son of the emperor Anthemius, but it was easily suppressed. Zeno had no capacity for government, and led a sensual corrupt life; but he undertook to interfere in ecclesiastical affairs, and attempted, by the publication, in 482, of his famous *Henoticon*, to put an end to the miserable disputes and disgraceful disorders of the churches. But instead of leading to union, this concordat was the fruitful germ of new divisions. In 484 Verina, the widow of Leo I., promoted another revolt, and had Leontius proclaimed emperor at Tarsus; but he was defeated, and after being blockaded in a fortress for several years, was taken and put to death. Zeno died, A. D. 491.

ZENO, APOSTOLO, the father of the Italian opera, was born at Venice, in 1669. He established the academy of the *Animosi* at

his native

of the Ita- n 1669. He Animosi at

his native city, in 1696, and commenced, in 1710, the celebrated periodical work called "Il Giornale di Letterati." He wrote "Observations on the Italian Historians," 2 vols. 4to; and his dramatic works were printed in 1744, in 11 vols. Died, 1750.

ZENO, CARLO, grand admiral of Venice, was born about 1334. He was educated at the university of Padua, served as a soldier, engaged in commerce, and in 1376 negotiated with the emperor John Palaeologus the cession of the Isle of Tenedos to Venice. In the war of Chiozza which followed, he defended Treviso, defeated the Genoese fleet, threatened the coasts of Genoa, convoyed the rich trading fleet from Beyrout to Venice, again defeated the Genoese, and recovered Chiozza. He was made grand admiral in 1390, and distinguished himself by various military and diplomatic services during the thirty years following. Died, 1418.

ZENO, NICCOLO and ANTONIO, two celebrated Venetian navigators of the 14th century, to whom the discovery of America, prior to the voyage of Columbus, has been attributed. Washington Irving, however, considers that they merely visited Greenland, and that the rest of their story is a fabrication.

ZENOBIA, the celebrated queen of Palmyra and of the East, was the daughter of an Arab chieftain of Mesopotamia, but claimed descent from the Macedonian kings of Egypt. Lovely, learned, and heroic, she married the chieftain Odenathus, who made himself master of the East, and received the title of Augustus from the emperor Gallienus in A. D. 261. On her husband's death, 267, she succeeded to the government; and displayed in her new position the qualities of prudence, ambition, hardihood, and adventurous courage which had previously contributed to her husband's success and elevation. She had been taught Greek by the great Longinus, and he became her chief adviser. She extended her dominions, and probably purposed to found an independent monarchy; but in 273 Aurelian led an expedition against her, defeated her in two great battles near Antioch and Emesa, and then besieged and took Palmyra. Zenobia escaped on a fleet dromedary, but was overtaken and captured by the Romans on the banks of the Euphrates. In the presence of Aurelian, her courage failed her, and she betrayed Longinus, as the instigator of her resistance to the Roman power, to death by the executioner. Zenobia herself was taken to Rome, and led in triumph, in 274, before the chariot of Aurelian, who permitted her to spend the rest of her days with her children at Tibur (Tivoli). The time of her death is not known.

ZEUXIS, one of the greatest Greek painters, was a native of one of the many cities named Heraclea, and flourished in the latter half of the 5th century B. C. He travelled a good deal, spending some time at Athens during the Peloponnesian war, visiting the court of Archelaus, king of Macedonia, and afterwards Italy and Sicily. He excelled in form, light and shade, and colouring, in dramatic composition of grand subjects, and in imitation of inanimate objects. He made a large

fortune, was enormously vain, and at last used to give away his pictures because he thought them worth more than any price that could be set on them. One of his most celebrated works was the picture of Helen, painted for a temple at Croton. Five of the most beautiful girls of that city were his models for the work. Among the other famous works of Zeuxis were his "Infant Hercules strangling the serpent," "Female Hippocentaur," "Zeus in the assembly of the Gods," &c. Parrhasius was a younger rival of Zeuxis, and in a competition between them was allowed by Zeuxis to surpass him. On that occasion Zeuxis painted a bunch of grapes which birds pecked at, and Parrhasius a curtain which deceived Zeuxis.

ZHUKOVSKY, VASILII ANDREEVICH, a celebrated Russian poet, was born in 1783. His native village, Mishnensky, stands pleasantly on the river Oka. There, at the age of 19, he wrote a translation of Gray's Elegy into Russian, which at once made him famous. In 1812 he served as volunteer in the great French war, and at the same time stimulated his fellow-soldiers by his patriotic songs. A life-pension was soon after granted him, and he settled at St Petersburg. He enjoyed great favour at the Imperial court, was tutor to the son of the emperor Nicholas, and accompanied the prince (Alexander II.) on various extensive tours. In 1841 Zhukovsky married, and spent his last years in retirement in Germany. His most admired poem is entitled "Svietlana." A large number of his compositions are ballads, and many are translations. Among the latter are the "Shah-Nameh" and the "Odyssey." Died at Baden, 1852.

ZIETHEN, JOHANN JOACHIM VON, a distinguished Prussian general, was born at Wustrow, near Ruppin, in 1699. Of a noble but not wealthy family, he entered the army at the age of 14, and after several untoward chances, attained the rank of captain in 1735. His ability procured him the marked favour of Frederick William I., and he became the esteemed personal friend, as well as one of the greatest generals, of Frederick II. He took part with great distinction, at the head of his hussars, in the first Silesian war, 1741; contributed to the victories of Mollwitz and Czaslau, and was named major-general in 1744. Ziethen displayed his skill and courage in covering the retreat from Bohemia in the following year, and in subsequently re-establishing communication between the main body of the Prussian army and the force under the Margrave Karl, then separated by an Austrian army of 20,000 men. He was severely wounded at the ensuing battle of Hoenersdorf, and peace being concluded, he retired to his native place. Slanderous tongues maligned him to the king, and his worth and services seemed for a time to be forgotten. In vain was Winterfeldt sent with words of friendship and reconciliation; and only by the personal visit and earnest pleading of Frederick was he induced once more to quit his retreat. Created lieutenant-general in 1756, he made the campaign of Saxony, the first of the Seven Years' War,

and contributed to the famous capture of the camp of Pirna, and to the victories of Reichenberg and Prague. He distinguished himself at Leutchen and at Liegnitz, and crowned all his exploits with that which decided the victory of Torgau in November, 1760; the march by a long circuit to the rear of the enemy, and the decisive attack from the heights of Siptitz. After the peace Zieten lived at Berlin, married, and enjoyed the highest honours, especially the warmest and most touching regard of the king, who usually called him *his dear Zieten*. Died at Berlin, 27th January, 1786. A monument was soon after erected to him, on which was inscribed, *Zieten zu Siptitz*, 3rd Nov. 1760. His life was written by his niece, Luise de Blumenthal.

ZIMMERMANN, JOHANN GEORG VON, the distinguished physician and moralist, was born at Brugg, in the canton of Berne, in 1728. He completed his education at the university of Göttingen, where he lived in the family of his great countryman, Haller. After a short visit to Holland and to Paris, he settled as physician at Berne; but he soon after had the appointment of town physician in his native place. He was already in great repute, and his practice became very large, yet he found time for much literary work, and by his successive publications made himself famous throughout Europe. He was not, however, mentally at ease; had no congenial society; shunned that which was ungenial, and took refuge in solitude and study. The melancholy, which ultimately deepened into mania, distinctly showed itself during this period of his life. In 1768, after declining several offers of honourable posts, he settled at Hanover as physician to the king, George III. of England, and received the title of aulic councillor. He soon after lost his wife, and being seriously out of health, he went to Berlin. During his stay there he was presented to Frederick the Great. The loss of his daughter, soon after his return to Hanover, was a heavy blow to him; but he was restored to tranquillity for a time by the kindly influence and society of a second wife. Zimmermann was called to Potsdam in 1786, to attend Frederick, then seriously ill, and he at once saw that it was the last illness. From this period his mind became more and more disordered, his imagination was a prey to torturing delusions, and he became completely insane. His most celebrated work is that entitled, "Ueber die Einsamkeit" (Essay on Solitude), which appeared complete in 4 vols. 8vo, in 1784-85, a first sketch of it having been published in 1756. This work was read all over Europe, and gained an extraordinary popularity; procuring its author, among other marks of honour, an invitation to St Petersburg as physician to Catherine II. Zimmermann wrote also a valuable work on Experience in Medicine, and another on National Pride, both of which were widely circulated. He was author of a Life of Haller, of two books on Frederick the Great, and some miscellaneous smaller writings. Died, at Hanover, 7th October, 1795.

ZIMMERMANN, EBERHARD AUGUST

WILHELM VON, a German naturalist, was born at Weltzen, in 1743; studied at Göttingen and Leyden; and obtained the professorship of natural philosophy at the Caroline College at Brunswick. His first work was a treatise on the "Analysis of Curves;" and in 1777 he published "Specimen Zoologie," the outline of his "Geographical History of Man and Quadrupeds," 3 vols. He visited England three times, and printed here, in 1787, his "Political Survey of the Present State of Europe;" and he subsequently employed his pen in opposing the revolutionary statesmen of France; for which he was ennobled by the Emperor Leopold II. After this he published several geographical works; one of the best of which was a "General Survey of France and of the United States of America," 2 vols. Died, 1815.

ZINCKE, CHRISTIAN FRIEDRICH, a celebrated painter in enamel, was born at Dresden, about 1684. He came to England in 1706, studied under Bolt, whom he soon far surpassed; and was patronized by the royal family. Died, 1767.

ZINGARELLI, NICOLÒ, Italian musical composer, was born at Naples in 1752. He first applied himself to the composition of operas, which had great success in their day. He visited Paris at the beginning of the revolution, became organist to the cathedral of Milan, and in 1806 chapel-master of the Vatican. He was subsequently appointed director of the conservatory of Naples, a post which he held till his death. He composed only sacred music after his return to Italy, masses, oratorios, and motets. His best oratorio is "The Destruction of Jerusalem." Died at Naples, 1837.

ZINGARO, Lp. [SOLARIO, ANTONIO.] ZINZENDORF, NICOLAUS LUDWIG VON, founder of the Moravian settlement of Herrnhut, and restorer of the sect, was son of George Louis Count von Zinzendorf, Saxon minister of state, and was born at Dresden in 1700. He was piously brought up, and fell early under the influence of the Pietist teacher, Spener. He was educated under the care of Francke, the philanthropist, at Halle, and at the university of Wittenberg, and in opposition to the wish of his friends, resolved to enter the church. For a short time he led, it is said, a loose and immoral life. After a stay of three years at Wittenberg, during which he gained the friendship of Frederick von Watterville, a young Swiss noble, and the missionary Ziegenbalg, he visited Holland and France, making the acquaintance of many eminent persons, and winning general esteem. After his return to Saxony, in 1721, he married a sister of his friend, the count of Reuss-Ebersdorf, and soon after he generously offered a home on his estate to such of the Moravian Brethren as wished to escape the persecution of the Austrian government. The settlers, few, poor, and industrious, established themselves on the spot afterwards so celebrated under the name of Herrnhut. Nine years later Count von Zinzendorf carried out the project he had long cherished of sending missionaries to the heathen, and the first were sent to Greenland. Ordained minister of the

engaged in th

Lutheran Church in 1734, he was banished from Sweden, and soon after from Saxony; travelled in Holland, Livonia, and Prussia; had several interviews with the king, Frederick William I., and was ordained bishop. In 1737 he was in London, where he held meetings, made John Wesley's acquaintance, and got a Moravian society established. After a visit to the West Indies, where he rendered great services to the missionaries, he made a journey through the British colonies of North America, gained the esteem of the Friends, travelled among the Red Indians, and founded a Moravian settlement at Bethlehem. In 1747 he was allowed to return to Saxony. He made a second visit to England and America, and after travelling again in Holland and Switzerland, married a second wife, and spent his last years peacefully at Herrnhut. He died there, 9th May, 1760, and his funeral was attended by Brethren from all parts of the world. He was author of many short religious works, and many hymns. His life has been written by Spaengerberg, his disciple and friend; by Duvernoy, Müller, and Varnhagen von Ense. Another memoir, by F. Hovet, has recently appeared.

ZIZKA, JOHANN, the Hussite leader, was born at Trocznow, in Bohemia, about 1360, or 1380. He was of a noble family, and became a page at the court of King Wenceslaus; but soon disgusted with the frivolity and vice he witnessed, he entered on a soldier's life. He served in the English army in France; then in the Polish army, and greatly distinguished himself at the famous battle of Tannenberg, in which the Teutonic Knights were finally defeated; next fought against the Turks, and in 1415 distinguished himself in the English army at Agincourt. That same year the reformers, John Huss and Jerome of Prague, countrymen of Zizka, and whose doctrines he held, were burnt at Constance. Failing to rouse the king, whose chamberlain he was, to decisive action, Zizka resolved to take arms himself as the defender of the Hussites. A body of troops was organized, and the terrible Hussite war began with a riot at Prague, in July, 1419. Zizka took the chief command, built fortresses, and trained the troops, took Prague in 1420, and won a great victory over the Emperor Sigismund, who attacked him on Mount Wittkow, since named Zizka-Berg, in July. In the following year he made himself master of the citadel of Prague, and soon after lost his remaining eye—he had lost one in his childhood. He nevertheless continued to hold the command, and to beat the imperial armies, and among all the battles and engagements he fought, he was only once defeated. The emperor at last treated with him on equal terms, granted freedom of worship to the Hussites, and appointed their hero governor of Bohemia. Zizka tarnished his fame by the cruelties he practised on the enemies of his faith; and like some other men called to like grave tasks, justified his course on the ground that he was the agent of Divine Providence in inflicting vengeance. The treaty with the emperor was not completed when Zizka, engaged in the siege of a castle near Czaslau,

was seized with the plague, and died there, 12th October, 1424. His remains were interred at Czaslau, and the Emperor Ferdinand I., visiting the church in 1534, is said to have gone with terror from the town to sleep elsewhere. The awe inspired by the name of this great soldier is illustrated by the myths which have grown up around it. The war between the Catholics and the Hussites continued for eleven years after Zizka's death.

ZOEGA, GEORGE, an eminent Danish archaeologist, who resided for many years at Rome as consul for Denmark, and was much esteemed by Pius VI. Among his works are, a treatise "De Origine et Usu Obeliscorum," "Nummi Egyptii," and the "Ancient Bassi Relievi of Rome." Born, 1755; died, 1809.

ZOFFANY, JOHANN, a German painter, born at Frankfort-on-the-Main, or at Ratisbon, in 1735. After studying in Italy he settled at Coblenz, but came to England, and was one of the earliest members of the Royal Academy. He went to India about 1782, worked successfully there, and came back rich after fourteen years' absence. Among his works are portraits of George III., one with the royal family; portraits of Garrick and Foote; the "Life-School of the Royal Academy;" the "Florentine Picture-gallery;" "Embassy of Hyderbeck to Calcutta," &c. Died at Kew, in 1810.

ZOLLUS, a Greek rhetorician, who lived in the 4th century before the Christian era, and whose criticism on the works of Homer, Plato, and others, procured him an unenviable notoriety. His name has become a by-word for illiberal and captious pretenders to criticism.

ZOLLIKOFER, GEORGE JOACHIM, an eminent Swiss divine, born at St Gall, in 1730. He was educated at Bremen and Utrecht; after which he became, successively, pastor to congregations at Murten, Monstein in the Grisons, Isenburg, and Leipsic; distinguished himself by great purity of character, eloquence, and general abilities. His "Devotional Exercises" and "Sermons" have been translated into English.

ZONARAS, JOHANNES, a Greek historian of the 12th century, who compiled a "Chronicle, or Annals from the Creation to A. D. 1118." He was also the author of "Commentaries on the Apostolic Canons."

ZOPPO, MANCO, an Italian painter, who flourished at Bologna in the second half of the 15th century. He was the fellow-student of Andrea Mantegna in the school of Squarcione; became the instructor of Francia, and founder of the Bolognese School. He painted chiefly Madonnas and other sacred subjects. One of his best works is preserved in one of the churches of Bologna, others are at Venice and Berlin. The dates of his birth and death are not known. He was living in 1498.

ZOROASTER or ZERDUSHT, was the reputed founder of the Magian religion. His history is involved in obscurity; some asserting that there was but one of that name, the Zerdusht of the Persians, while others speak of several, and carry the name back to the patriarchal ages.

ZOSIMUS, a Greek historian of the 5th century, of whose life nothing is known except that he held a public office under Theodosius the younger. He wrote a History of the Roman Empire, which is to a large extent compiled from earlier writers. Zosimus was a pagan, and spoke very freely of the faults of the Christian emperors, but he is esteemed on the whole a trustworthy writer.

ZOUCH, RICHARD, an eminent civilian, born at Anstey, in Wiltshire, about 1390. He was educated at Winchester and New College, Oxford; became professor of law and principal of St Alban's Hall, warden of the cinque ports, and judge of the admiralty; wrote numerous works in Latin, on civil, military, and maritime jurisprudence; and died in 1660.

ZOUCH, DR THOMAS, a divine and biographer, was born in Yorkshire, in 1737; received his education at Trinity College, Cambridge; became rector of Scrayingham, and prebendary of Durham; refused the bishopric of Carlisle in 1808, on account of his advanced age; and died in 1815. Among his works are, "The Crucifixion," a Scatonian prize poem; "An Inquiry into the Prophetic Character of the Romans," Memoirs of Sir Philip Sidney, Dean Sudbury, Sir George Wheeler, &c.

ZSCHOKKE, HEINRICH, whose name occupies an important place in the annals of German literature and Swiss history, was born at Magdeburg, 1771. He commenced life as a strolling player, but afterwards found means to study philosophy and divinity at Frankfort-on-the-Oder; and, after many years of travels and varied adventures, he devoted himself to the education of youth, and fixed his residence in Switzerland in 1796. Here he rendered great political services to his adopted country; and for more than 40 years sent forth, at intervals, from his peaceful retreat at Aarau, various works of philosophy, history, criticism, and fiction; and displaying at once the versatility of his acquirements, his fertile imagination, and a power and felicity of expression attained by few. His chequered life had given him a deep insight into the springs of human action; and few writers have more largely contributed to entertain and improve their fellow-men. His chief productions are, "Miscellen für die neueste Weltkunde," "Des Schweizerlandes Geschichte," "Bilder aus der Schweiz," "Das Goldmachersdorf," "Stunden der Andacht," &c. His works have been collected in 40 vols., including his autobiography, which has been translated into English. Died, 1848.

ZUCCARELLI, FRANCISCO, a celebrated Italian painter, born near Florence, in 1702. He came to England about 1752, and met with such encouragement, that he made a handsome fortune, was one of the first members of the Royal Academy, and returned to his own country, where he died in 1788.

ZUCCHERO, or ZUCCARO, TADDEO, an Italian painter, born at Sant' Angelo, in Vado, in 1529. He was instructed by Pompeo da Fano and Giacomone da Faenza; and having gone at the age of 14 to Rome, he was employed by Daniello da Parma to

assist him in some frescoes at Alivito, near Sora. He worked afterwards for Popes Julius III. and Paul IV. for the duke of Urbino, and for Cardinal Alessandro Farnese. His best paintings were those executed for the cardinal at Caprarola, and the frescoes in the church of the Consolazione at Rome. Died at Rome in 1566, and was buried in the Pantheon, by Raphael's side.

ZUCCHERO, or ZUCCARO, FEDERICO, younger brother and pupil of the preceding, was born at Sant' Angelo, in Vado, in 1543. He early became assistant to Taddeo, and painted in his manner, but fell short of him in excellence. He was employed to paint the cupola of the Duomo at Florence, and covered it with three hundred figures forty or fifty feet high, and among them a Lucifer towering like a giant above their heads. This "great" work procured him immense reputation, and plenty of work. He painted in the Vatican, but quarrelled with and caricatured some of the pope's attendants, for which he had to leave Rome. In 1574 Zucchero was in England, and while here painted portraits of Queen Elizabeth, Mary queen of Scots, Sir Nicholas Bacon, and other eminent persons; and also of the queen's huge porter, the last now at Hampton Court. He soon returned to Rome, made his peace with the pope; was employed in the Escorial in 1586, and in 1595 founded and became first president of the Academy of St Luke at Rome. He wrote a book on art, entitled "L'Idée de' Pittori, Scultori e Architetti," which is severely criticised by Lanzi. Died, at Ancona, 1609.

ZUMALACARREGUI, TOMASO, Don, a distinguished Spanish military commander, first entered the army as a guerrilla officer, under Mina, in 1808, when the French invaded Spain. Being opposed to the new constitutional government, he took an early opportunity of joining the army of the Faith under Quesada, in 1822; and, on the rising of the Navarrese, became general-in-chief of the troops and partisans attached to the cause of Don Carlos. In this service he displayed the greatest skill and bravery, performing the most brilliant exploits, and keeping in check the regular army of Donna Maria, which, under various generals, was sent to oppose him. Born at a village near Villareal, 1789; died, from a wound he received at the siege of Bilbao, 1835.

ZUMMO, GAETANO JULIO, a celebrated modeller in wax, was born at Syracuse, in 1656. His profound knowledge of anatomy, combined with his skill in executing his works in coloured wax, obtained the admiration of connoisseurs. Some of his specimens represent, with astonishing accuracy, the different stages of decomposition in the human body. He died at Paris, in 1701.

ZURBARAN, FRANCISCO, a distinguished Spanish painter, born, 1598. His genius showing itself early, he was sent to Seville, where he studied the art under Juan de las Roelas. His style bears a strong resemblance to, and is probably an imitation of, that of Caravaggio; so that he early acquired the title of the Spanish Caravaggio. Most of his works are at Seville, and among them

his picture considered the best he ever painted. He played at cards, and was very fond of Philip IV. less important than his more artistic one. National Gallery, London, 1662.

ZURITA, a Spanish writer, was having been at home, and appointed principal of the University of Aragon.

ZWINGI, a great reformer of the hamlet of Ketzlingen, in the canton of Lucerne, in 1519.

He was a man of great respectability, and of an office. He was a man of great respectability, and of an office.

his picture of "St Thomas Aquinas" is considered the best. He was some time employed at Madrid, and had the title of painter to Philip III. and Philip IV. One of his less important works, but still a characteristic one, a "Franciscan Monk," is in the National Gallery. Died at Seville or Madrid, 1662.

ZURITA, GERONIMO, a Spanish historian, was a native of Saragossa. After having been employed in various offices at home, and on a mission to Germany, he was appointed historiographer of Aragon. His principal work is the "Annales de la Corona de Aragon." Born, 1512; died, 1581.

ZWINGLI, or ZWINGLI, ULRICH, the great reformer of Switzerland, was born at the hamlet of Wildhaus, in the Tockenburg, January 1, 1481, seven weeks after the birth of Luther. His father, an Alpine herdsman, was *amman* of the commune, and highly respected for his character as well as his office. Ulrich showed high intellectual endowments in his earliest years, was brought up piously, and after receiving instruction from his uncle, parish priest of Wesen, was sent to study first at Basel, then at Herne, and afterwards at Vienna. At the age of 18 he returned to his native village, but only to quit it again almost immediately, and renew his studies at Basel. He applied himself to scholastic theology, but gave it up in disgust, as a mere waste of time; and soon after rejoiced to hear the teaching of Thomas Wittenbach. Zwingli eagerly studied the classics, and became one of the best scholars of his time. He was also passionately fond of music, and learnt to play well on the flute, the lute, the violin, and other instruments. In 1506 he was ordained priest—he had been master of arts for several years—and accepted the place of pastor of Glarus, which he filled with zeal and devotedness for ten years. During this period thoughts were working in his mind, which were the germs of the reformation to come. He twice accompanied the Swiss auxiliaries to the wars in Italy, fought at the battle of Marignano; and used his influence with his countrymen to dissuade them from foreign military service. In 1514 he had visited Erasmus at Basel, and was greatly influenced by his writings. His visits to Italy were of service to him in the same way as such visits were to Luther; making clear to him the evils, errors, and corruptions of the church, and the necessity of reform. The year 1516 Zwingli has noted as the period of the commencement of the Swiss Reformation. That same year he removed to the secluded monastery of Einsiedlen, of which he was appointed priest and preacher. His clear and eloquent announcement of scriptural truth astonished his new hearers, and drew crowds from the surrounding country to hear him. When the friar Sansom appeared in Switzerland, and carried on with matchless impudence the traffic in indulgences, Zwingli boldly opposed him, so that he was refused admission at several places. In the following year, 1519, through his high reputation for learning, piety, and eloquence, and the

active influence of his friend, Oswald Myconius, Zwingli was appointed preacher at the cathedral of Zurich, and was thus brought into the centre of the political movements of Switzerland. His preaching produced immense excitement, by its novelty, freshness, sincerity, and truthfulness; but while most were charmed, not a few were alarmed and angry. In the autumn of the same year he was attacked by the plague (known then as "the great death"), and it was reported that he was dead. He however recovered, and with a new vigour, and devotedness, and fullness, resumed his work as a teacher of the truth. In 1522 began the action of the court of Rome against the reformation in Switzerland; the bishop of Constance by letter to the chapter at Zurich attempted to stop the preaching of Zwingli. The latter replied in his "Architeles," and the attempt failed. But an order of the Diet was soon after obtained, which prohibited preaching against the monks. About the same time Zwingli married Anna Reinhold, a widow, and mother of Zwingli's beloved disciple and friend, Gerold. He did not make his marriage known till two years later. Meanwhile enmity was growing into persecution, and the reformer was sometimes overwhelmed with the forebodings of evil to come, and the failure of his holiest hopes. Early in 1523 a conference between the advocates and opponents of the new doctrines was held at Zurich, by order of the Great Council; but the discussions, which lasted three days, left the controversy as it was; the reformers arguing on the basis of Scripture, and their opponents from the canon law, and there being no first principles in common to them. Not long after the reformation was publicly established in Zurich, pictures, and statues, &c. were taken out of the churches, and instead of the mass a simple form of celebrating the Lord's Supper was adopted. Education was provided for, and convents were suppressed, just regard being had to the interests of their inmates. In 1528 Zwingli attended the important conferences of Baden, and in 1529 that of Marburg, where he agreed on certain articles of faith with Luther and Melancthon. Two years later the long-suppressed enmity of the cantons which remained Catholic broke out in open war against Zurich and Herne. Delay, indecision, and half-heartedness among the citizens of Zurich made their cause hopeless; and at the battle of Cappel their handful of disorderly troops was easily destroyed or dispersed by the superior numbers and discipline of the Catholic army. Zwingli fell on that field, October 11, 1531. His body was discovered, burnt, quartered, and his ashes mingled with those of swine, and scattered to the winds. The works of this noble man were published in 1581, in 3 vols. 4to. His Life has been written by Myconius, Hess, Vogelín, Hottinger, and others; and full accounts respecting him may be found in "Hottinger's History of the Swiss Reformation," and Merle D'Aubigné's "History of the Reformation in the 16th Century."
