TO find the hour of the day by this Table, take a staff, of what length you please, and (with a pair of Compasses) divide it into ten equal parts, making them upon the staff, then in some plain level place where the Sun shines set it upright, and mark where the end of the shadow thereof falls; then measure with your staff, the length of the shadow, and note the parts it contains, which find out in this Table against the day of the month, and over head you have the true hour of the day. For example, suppose the 13th of May or 30th of July, I should find the shadow of the staff to be forty three parts and one quarter (that is four staff lengths three parts and one quarter) therefore seeking in the Table against the said days, I see over head that

2003

is then either 6 o'clock in the morning or 6 in the evening; so that if your observation was in the morning it was 6 o'clock; or in the afternoon 6 o'clock.

By this example you may see the easy and excellent use of the Table, which is as ready as any moveable Sun-Dial; so that where-ever you are, or travel, you may, having this Almanack about you, speedily have the true hour of the day.

A T A B L E

A D D,

One-ninth to Sterling makes Quebec, New-Brunswick &
Halifax.

One-fifth to Halifax makes Lawful.

One-third to Sterling makes Lawful.

One-fourth to Lawful makes Philadelphia.

One-third to Lawful makes New-York.

DEDUCT,

One-tenth from Quebec, New-Brunswick, or Halifax, is
Sterling.

One-sixth from Lawful is New-Brunswick.

One-fourth from Lawful is Sterling.

One-fifth from Philadelphia is Lawful.

One-fourth from New-York is Lawful.

THOSE who reside on the South side of the BAY of FLENDY
will please to observe :

T H A T in and about Mines Bafon, Windsor, and that neighbour-
hood, at the full and change of the Moon, it is high water about
twelve o'clock, and of course, when the Moon quarters, it is high
water about 6 o'clock.

At Cumberland and Annapolis, it is high water at the full and
change of the Moon, about 15 minutes after 11 o'clock.

In five hours from the time of high water at Windsor, the river is
fordable at Falmouth, and it remains fordable for three hours in the
summer, and two hours in the winter season.

High water at Windsor about 50 minutes later than at Boston, and
in Cumberland Bafon and Annapolis Bafon, nearly the same as at
Boston.

ue of going through the F A L L S.

... are level, (or still-water) about three hours and an half on the Flood, and about two hours and an half on the ebb, which make it possible four times in 24 hours, about 10 or 15 minutes each time.—No other rule can be given, as much depends on the freshest in the River Saint John, and the time of high water or ebb, which is often hastened or retarded by the winds, and in proportion to the height of them.

PRO-BONO-PUBLICO.

AT Rome, on the 10th of March last, a Lady had the misfortune to be severely burnt, almost over the whole of her body, by her cloaths taking fire.—To give temporary ease to the raging water under which she suffered, a domestic had recourse to some ointment that lay at hand, and which had so good an effect, that at the end of nine days she was perfectly cured by the use of this remedy alone. Dr. Neil, a physician at St. Florentino, having been called in, was an ocular witness to this extraordinary cure, and published it for the information and service of his fellow-creatures.
