FOREWARD

This compilation represents an attempt to gather together in convenient form annual fishery export statistics for the years 1986 through 1988. Figures have been derived from published and unpublished Statistics Canada materials. The present publication is intended to be of assistance to Canadian fish exporters, government officials and industry representatives who are interested in tracking trends in exports of selected species and products.

In this publication, exports are classified by species, with sub-classifications by product form. Export destinations for each species/product are ranked according to value of 1988 exports. (Destinations for which exports were not listed in 1988 are ranked in descending order on the basis of previous years' figures.)

In 1988, Canada adopted the Harmonized Commodity Description and Coding System (Harmonized System, or H.S.) used internationally for the classification of imports and exports. The Harmonized System replaced the "Canadian International Trade Classification" (CITC) used previously. With the adoption of H.S., a number of products (eels, for example) which had previously been grouped together "anonymously" with other products have been given independent classifications. In the present publication, these new entries are signalled by the appearance of the note "Separate data unavailable prior to 1988". (As a consequence, readers should note that successive annual figures for miscellaneous categories such as "Fish, n.e.s." are not strictly comparable.) It is intended that this publication serve in part to help readers reconcile differences between the old and new trade classification schemes.

The author would like to acknowledge the assistance of colleagues with the Department of Fisheries and Oceans and Statistics Canada. They are, of course, not responsible for any compilation errors which may be contained in this publication.
