church will hold their meeting in the  
Sunday School room on Wednesday  
afternoon, December 14th at 2.30.  
All ladies of the congregation are  
welcome.

### Orange Meeting

Waterdown L. O. L. No. 2837 held  
its regular meeting in the Orange  
Hall on Friday evening, Dec. 2. A  
good attendance of members proved  
that the Lodge is wide awake and  
determined to forge ahead. W. M.  
Jas. Rutledge occupied the chair.  
The Waterdown brethren were honor-  
ed by a large delegation of visiting  
brethren from Hamilton, among who  
were the Wor. County Master, Bro.  
A. A. Peall and County Secretary  
Bro. T. Dove, also Wor. Past County  
Master J. McNivin with a goodly  
following of brethren from Dundas.  
A pleasing feature of the evening  
was the presence of Bro. W. C. Clark  
of London, who is a member of the  
celebrated Star of Bethlehem L. O. L.  
of London. Mr. Clark delivered a  
very clear and concise address which  
was greatly appreciated by all present.  
After the regular routine of  
business was completed, the elec-  
tion of officers for the coming year  
took place. Wor. County Master  
Peall taking charge of the election,  
and installation, which he handled  
in a most creditable manner. On  
account of the Lodge having been  
only recently organized, the officers  
were all returned to their respective  
offices. One new candidate was ad-  
mitted to the Orange, and two others  
were exalted to the Blue Degree.

The officers for the coming year  
are: Wor. M. Jas. Rutledge, D. M.  
Wm. Drummond, Jr. Chaplain, Wm.  
Drummond, Sr. Rec. Sec. R. Griffin,  
Fin. Sec. Walker Drummond, Treas.  
A. J. Lovejoy, Lecturer, Geo. Rut-  
ledge, Dir. of Ceremonies, J. Griffin  
1st Committeeman, Walter Galin.

### Locals

Miss Vera Nicholson spent the  
week end in Preston.

Miss Konkie and Miss McDonald  
of the Public school staff who have  
returned to their duties.

Mr. Ed. Bagden left on Wednes-  
day for a three months trip to Brit-  
ish Columbia and California.

Mrs. Harry Hood and daughter  
Bernice of Carlisle spent the week  
end with Mrs. Chester Bowman.

Knox Church Sunday School will  
hold their Christmas entertainment  
on Wednesday evening, Dec. 21st.

The Good Time Club will hold a  
dance in the Township hall on Fri-  
day night and also one on next Wed-  
nesday night.

Mrs. W. J. McKee and two little  
daughters, of West Flamboro, spent  
last week here with parents, Mr. and  
Mrs. D. Ribson.

Mr. J. O. Buckley and wife of  
Hamilton and Wm. Trueman and  
wife spent the week end with  
Mr. and Mrs. J. W. Griffin.

The Xmas Entertainment of the  
Methodist Sunday School on Friday  
evening Dec. 23rd. It gives promises  
of being one of the best yet given.

The Mission Circle will meet on  
Sunday afternoon at 2.30 at the  
home of Mrs. Herb Featherston,  
John St. As this will be their  
Christmas meeting a good attendance  
is expected.

The attendance at the Waterdown  
Public School for the month of Nov-  
ember was as follows:

Form	Teacher	Roll	Av	p.c
IV	D. Harper	39	37	94
III	Miss Powell	45	41	90
II	Miss Hamilton	32	29	88
I	Miss Konkie	26	21	82
Prim.	Miss Buchanan	26	21	82

### WINTERING OF PULLETS

If Possible Separate From All  
Hens and Cockerels.

Prepare Quarters Early and Transfer  
by November—Good Light and  
Ventilation Necessary—Winter  
Care of Pregnant Mares.

(Contributed by Ontario Department of  
Agriculture, Toronto.)

Many times the failure of securing  
a satisfactory winter egg yield is  
due to neglect of the pullets early in  
the fall. The ordinary pullets begin  
laying at from six to seven months  
of age, and many farmers get a few  
pullet eggs in October and November,  
followed by little or no production in  
December or early January. This  
frequently is due to a change in  
roosting quarters or being over-  
crowded and underfed in the poultry  
house.

Place In Winter Quarters Early.

To get the best results the pullets  
should be placed in winter quarters  
by November 1st. Before that time  
the henhouse should be thoroughly  
cleaned, the walls, ceiling, etc.,  
brushed down, and all old cobwebs,  
etc., removed. Then give the house  
a good whitewashing, and if the floor  
is earth or sand at least four inches  
of it should be renewed.

Separate Pullet From Young Hens.

If at all possible, separate the pul-  
lets from the old hens and cockerels.  
In order to lay well, they should be  
fed all they will eat, particularly of  
ground grains and green foods, and  
should not be overcrowded. About  
twenty-five to thirty-five pullets is  
plenty for a pen twelve feet square;  
in fact in many cases twenty-five pul-  
lets in the pen will lay almost as  
many eggs as the thirty-five. Should  
you be fortunate in having too many  
pullets, or where you can make a se-  
lection, get the earliest and best  
matured ones into the pen first. If  
you have to crowd or sell some, get  
rid of the small, weak ones and those  
that are slow to develop.

Have the Pen Well Lighted and  
Ventilated.

The pen should be light and well  
ventilated. Have all the ventilators  
or openings on one side of the  
house and close together. Do not  
have an opening in one end of the  
house and another in the other end.  
These cause drafts which are very  
apt to produce colds and sickness. It  
usually takes a pullet at least three  
weeks to get over a cold, and she  
seldom lays while she has a cold.  
Keep the house dry, and use plenty  
of dry straw in which the birds can  
scratch for the feed.

Give Laying Hens Plenty of Food.

Remember a laying hen needs  
plenty of food, grit, and shell ma-  
terial. Also there should be a var-  
iety to the food; that is green food  
such as clover leaves, cabbage,  
or sprouted oats, or if none of these  
can be had some roots. She also  
needs some form of meat food—sour  
milk is the best, but beef scrap, or  
other meat offal, if untainted, will  
answer. Usually about one-third of  
the grain should be ground or even  
up to one-half. The whole grain  
makes exercise in hunting for it in  
the straw. Always remember the pen  
should be clean, dry, and sweet.—  
R. W. Graham, O. A. College, Guelph.

No Gain In Too Early Pasturing.

Farmers should not be in a hurry  
to turn their cattle out to pasture.  
The cattle will travel over the entire  
pasture area, and by cutting up the  
sod with their hoofs while the  
ground is yet soft, and grazing off  
the first blades of grass they will  
greatly reduce the amount of feed  
which the pasture will yield if they  
are kept off a few weeks longer so  
that the grass may have opportunity  
to make a real start. Under average  
conditions it will by all means pay  
best to keep the cattle off the pas-  
ture until the sod has become firm  
and the grass has attained sufficient  
start to support them fully from the  
time they are turned out. Cattle  
should be turned on new grass the  
first time about the middle of the  
day, after they have already had a  
good fill of dry feed. They should be  
driven back to the feed lot each night  
for three or four nights, and given  
opportunity to eat some dry food  
each morning before going to the  
pasture.

All classes of stock will give bet-  
ter returns where a variety of food  
is supplied. A mixture of grain is  
generally better than feeding only  
one kind.

THURSDAY, DEC. 8, 1921

**FINISHING COCKERELS**

**It Does Not Pay to Raise and Sell Thin Chickens.**

Wyandottes, Reds and Rocks Best for Fattening—Feed a Mixture of Ground Barley, Corn Meal, Ground Buckwheat and Shorts, Mixed With Sour Milk—Winter Rhubarb Growing.

(Contributed by Ontario Department of Agriculture, Toronto.)

The marketing of thin chickens is not conserving our meat supply, nor is it the most profitable method to the producers. Present prices of market poultry admits of the liberal use of feeds and the marketing of well-fleshed birds.

In most localities there is considerable variation in the prices paid for thin and finished chickens. The spread in prices varies from two to five cents per pound; in some instances much more. It can readily be seen that the producers' gain in price on the original weight of the bird should make a profit, above the cost of finishing, on the gain in weight.

**Fatten the Heavier Breeds.**

The best birds to flesh or fatten are those of the heavier breeds, such as Wyandottes, Reds and Rocks. The light breeds, such as Leghorns, seldom pay to fatten unless they are very thin in flesh.

The birds intended for fattening should be confined to a small pen or slatted coop. The process is not difficult if you will but pay attention to a few points that are essential.

Do not feed the birds for the first day they are shut up. You should give them something to drink, but it is best to give no feed. Then feed very lightly for two or three days, and gradually increase the ration, being very careful not to overfeed. We usually start chickens on very finely ground grains at the rate of three-quarters of an ounce of grain per feed to each bird, feeding twice daily. This can be increased gradually to two or three times this amount. Generally the most profitable gains are made during the first fourteen to sixteen days' feeding. Such birds will not be excessively fat, but should be fat enough to cook and eat well. Some markets demand a fatter bird.

The most profitable gains are made on birds weighing from three and one-half to four and one-half pounds when put up to fatten.

**Feed the Grain Finely Ground.**

The grains fed should be finely ground, and, if at all possible, should be mixed with sour milk. Mix the feed to a consistency of a pancake batter. The more milk the chicken will take the better bird you will have in the end. Milk appears to have no good substitute for fattening chickens. If you cannot get milk then add ten to fifteen per cent. of meat meal to the ration and mix with water. The addition of a little green food daily will help matters. Many people get better results by feeding a little salt. About one-half pound to one hundred pounds of dry grain is sufficient. This mixes best by being dissolved in water and adding a little at each feed. Be careful not to use too much.

The best grains available now are a mixture of ground barley, corn-meal, finely ground buckwheat, and shorts. Oats are good if part of the hull is sifted out, as are also ground brewers' grains. We have used with good results a mixture of two parts of ground barley, two parts corn-meal, and two parts shorts, mixed with twice the amount of sour milk. In general feed about one-third shorts and then whatever finely ground grains you may have about the farm.

**Six Points Worth Remembering.**

The birds must be healthy. The coop should be clean and free from vermin.

Do not feed the first day. Feed lightly the first few days. Never leave feed before the birds for more than fifteen minutes. If it is not all consumed remove what is left.

If at all possible mix the ground grains with sour milk.—W. R. Graham, O. A. College, Guelph.

**A Confederation Poem.**

Charles G. D. Roberts, the Canadian poet, wrote "An Ode for the Canadian Confederacy," the first line being: "Awake, my country, the hour is great with change."

**The Eskimo Dog.**

With the going good, an Eskimo dog will draw an average of 300 pounds weight thirty-five miles in one day.

**The School To Attend**

is the one that has up-to-date equipment. A knowledge of such machines as

### To the Farmer:

The purchase of a Piano or Victrola is only purchased invariably once in a lifetime. Therefore it behoves the purchaser to get the best and make sure you have the best.

I have had 25 years experience in tuning and repairing musical instruments, therefore feel quite confident I can choose the best instruments on the market.

I shall be pleased to place any instrument in your home beside any other in fair competition and let you yourself be the judge, without you feeling under any obligations absolutely. I can also save the purchaser quite a few dollars on account of my expenses being so low. I will always give you my best personal service and devote the whole of my time to supplying the country people. A postcard or telephone call will oblige.

Yours truly,

## WHERE THE APPLE PAYS

Soil, Location and Transportation to be Considered.

It Helps to Be Near Cities — The Labor Question Still a Serious Problem — How to Restore Damaged Pastures.

(Contributed by Ontario Department of Agriculture, Toronto.)

This question will be discussed under four heads: Climate, Soil, Labor and Transportation.

### The Factor of Climate.

So far as climate is concerned apples can be grown commercially in any part of Old Ontario, south of a line drawn from Parry Sound to Ottawa; in fact, there are commercial orchards producing fruit at a profit considerably farther north than this. Many people think of commercial apple orchards as being necessarily confined to the milder parts of the province, and to the lake districts, but the fact is worth emphasizing that we have varieties of apples suitable for commercial culture in every county of Old Ontario. The winter hardiness of the many varieties grown throughout Ontario is now very well established, and it is possible to select varieties which will be hardy for any district.

### Late and Early Frosts.

The most serious climatic difficulty in the Province of Ontario is the occurrence of late frost in spring, and early frost in fall. Other difficulties of a climatic nature can be largely overcome by the selection of suitable varieties, or by careful discrimination with regard to soil, elevation, aspect, etc. It may be pointed out, however, that frosts are more common and more severe over large areas of flat country than where the topography is rolling or hilly. Large areas of some of the southern counties of Ontario are, therefore, more or less unsuited to commercial apple orcharding because of their flat character. A more rolling country is much to be preferred, so that orchards can be made safer from frost by the better air drainage afforded.

### Suitable Soil in Every County.

So far as soils are concerned, it may be stated that there is an abundance of land in every county suitable for apple growing. Well drained land is essential for successful orcharding, and there is plenty of soil of this type to be had in almost every district.

Summing up soil and climate, it may be said that no province or state in North America has so large an area so favorable in soil and climate for apple growing as has the Province of Ontario. If this statement is true it becomes obvious that the present distribution of apple orchards in Ontario is dependent on other factors.

### Most Profitable Near Cities.

Transportation is the most important factor having to do with the distribution of commercial apple orchards in Ontario. In other words, the commercial apple orchards are located within reach of transportation facilities, and the better these facilities have been with relation to large cities and to the developing markets of the prairies the more rapid has been the development of commercial orcharding. A location near a large city may be desirable, but if better soil and climate are to be found at a distance, the most distant location is likely to be preferred, provided transportation facilities are good.

Some districts in Ontario possess excellent conditions of soils and climate, but are lacking in transportation facilities, and until facilities are available little development can take place in commercial orcharding.

### The Labor Situation.

The labor situation for some years has been acute, but has become more

normal during the present year. For commercial orchard operations on a sizable basis, it is necessary to be within reach of a temporary supply of labor for apple picking. Otherwise, it becomes necessary to build dwellings for men and their families so that a supply of labor may be always available.

The difficulties of the labor situation at picking time can be lessened considerably by the planting of varieties which ripen in succession, and by taking care to get the right proportion of each. A large area of one variety ripening at one time is extremely difficult to handle. — J. W. Crow, O. A. College, Guelph.

### Kill Gophers in Orchards.

Look out for gophers and get them now. In well-drained orchards they delve deep and nest under the root-crown of your best cherry-tree without giving much evidence of it.

**Some Outstanding Varieties of Field Crops.**

**Rye.**—Of the spring varieties of rye, the O. A. C. No. 61 has not only given the highest average yield of grain per acre at the college but has surpassed the common spring rye in the co-operative experiments throughout Ontario in each of the past nine years, the average being practically three bushels per acre in favor of the former.

**Field Peas.**—The Canadian Beauty variety of field peas is one of the best of the large, smooth, white kinds. The Arthur, originated at the Central Experimental Farm at Ottawa, is coming into prominence. It is a medium late white pea of medium size. The Golden Vine is a small white field pea and one of the most suitable for mixing with oats in the production of green fodder or of hay by using one bushel of peas and two bushels of oats per acre. The Golden Vine peas and the O.A.C. No. 72 oats make an admirable combination.

**Field Beans.**—The Small White pea bean is the commercial variety of Ontario and is one which is grown extensively. The Pearce's Improved Tree bean is a medium late large yielding variety, producing large sized white beans of excellent quality. This variety has given excellent results in some localities.

**Buckwheat.**—The Silver Hull buckwheat produces a grain of excellent quality and is used considerably throughout the province. The Rough buckwheat is not so well known but it is an exceedingly heavy yielding producing about fifty per cent. larger yield of grain per acre than the Silver Hull. Although the last named variety is a high yielding, the grain possesses a thick hull and is not of an attractive appearance.—C. A. Zavitz, Professor of Field Husbandry, O. A. College, Guelph.

**Dairying in June.**  
Cows in clover or good June-grass pasture require very little attention. This is the ideal month for dairy operations. More milk and better milk, are produced in the month of June, than at any other time of the year, in Ontario. If there are any hot days, be careful to cool both milk and cream, by setting in ice water, or cold well water. Sour milk and cream are too frequently sent to the factory. Don't forget to wash the cream separator and strainer daily, or after each time of using.

**2,500 Guineas for Bull Calf.**  
A 12-days-old bull calf, Haydon's Dutch King, from the famous English Friesland herd of Mrs. Putnam, has been sold for the record price of 2,500 guineas to Mrs. Brown, of St. Albans.
