LOVELL & GIBSON'S

CANADA ALMANAC

AND

ASTRONOMICAL EPHEMERIS,

FOR THE YEAR OF CHRIST 1849.

1849

*Being the third after Bissextile, or Leap Year, and, till the
20th day of June, the sixth year of the Reign of Her
Most Gracious Majesty Queen Victoria.*

Calculated for the Meridian of Montreal, in Latitude
45° 30' North, and Longitude 73° 22' West, from the Royal
Observatory, Greenwich; but arranged so as to serve with-
out essential variation for every other portion of Canada.

—
ASTRONOMICAL PART BY D. WELLS, PROV. SURV.

MONTREAL:

LOVELL & GIBSON, ST. NICHOLAS STREET.

4d per copy—5s per doz—50s per gross.

INTRODUCTION.

Up to the present time it has been the fate of Canada to be dependent upon other and older countries for almost everything connected, however remotely, with the more elevated sciences. There has not been any inducement sufficiently powerful to call into active being the intellectual energies with which the people are gifted in a proportion equal at least to those with which the inhabitants of other lands are endowed. The reason for this is extremely plain. As in all young countries, the business of life among us is to secure the means of comfortably living. There is no stationary class—none who are content to remain as they at present are. More or less, all are struggling upwards to some position which has not yet been reached. Ambition is a feeling as general among us as it is praiseworthy. The exceptions are exceedingly few, being sufficiently numerous only to prove the truth of the general remark. There is consequently but little time, and we scarcely err when we say there is less of inclination, to bestow attention upon anything which does not promise a rapid and tangible equivalent. It is, then, very little to be wondered at, if we have been contented to take at second hand the greater part of our scientific information, and even to borrow the ordinary astronomical knowledge which is contained in the common Almanacs of the country.

It will not be always thus, however. The dawn is breaking which proves that the night is at last about to pass away. We are no longer unknown in the world of literature. That we have minds among us which *can* comprehend the mysteries of science, and unroll the page of nature, we have a proof in the book which is now laid before the community. Of course, it will be understood that we refer only to the Astronomical portion of the book, which is the work of one who is already, and has long been familiarly and favourably known in Canada, and whose attainments entitle him to hold an eminent position, not among his fellow-colonists alone, but among the learned of every country. The Publishers are therefore warranted in the confidence with which they lay the result of his patient study and untiring labour before the public, and they cannot doubt that it will be received by the intelligent community with a cordiality and pleasure such as its merits entitle it to claim.

It will be noticed, however, that though the work is of a character to be appreciated and valued by the scientific enquirer, it is shorn of nothing which the every day reader can desire to find in it. All that the Almanacs hitherto published have contained will be found in its pages. There is nothing wanting which can ensure its acceptance with the merchant, the agriculturalist, or the mechanic, all of whom will find in it such information as must be useful in the business of common life. Apart from the Astronomical part of its contents it has been compiled on the model of the former Almanacs issued by its Publishers, with such additions as experience has suggested, and as have been found necessary in the improving circumstances of the country, and the wider field for usefulness which every year presents.

To the various officers of public departments to whom the publishers have applied for information, they have pleasure in acknowledging their obligations for the politeness with which their enquiries have been met, and the readiness with which whatever is necessary has been communicated.

1843.

LOVELL & GIBSON'S

&c. &c.

EXPLANATION OF THE CALENDAR PAGES.

PAGE I.—(EACH MONTH).

At the head of these pages are given the true *mean times* of the southing of each of the six visible Planets, together with their corresponding North or South declinations, respectively.

The first three vertical columns (in each of the pages) it is presumed need no explanation.

The fourth and fifth columns contain the Sun's declination and semidiameter for the *apparent noon* of each day at Montreal, the quantities in the fifth column being given to the nearest *tenth* of a second for the convenience of such as may require them in reducing Astronomical Observations of the Sun.

The sixth column contains the Equation of time, also adapted to the instant of apparent noon of Montreal, and calculated to the nearest second of time.

The *mean time* of the Sun's southing is readily found by *adding* the amount of this Equation, when it is marked "slow," to 12h. 0m. 0s., or by *subtracting* it from the same when it is marked "fast."

For example:—On the 16th day of January the Equation of time is 10m. 3s. *slow*. This added to 12h. 0m. 0s. gives 12h. 10m. 3s. for the time of the Sun's southing on that day. Again, on the 27th day of October the Equation of time is 15m. 59s. *fast*, which being *subtracted* from 12h. 0m. 0s. will leave 11h. 44m. 1s. for the time of the Sun's southing on that day; and the times so found are those which should be shewn by a good clock or watch adjusted to Mean Solar Time.

The seventh and eighth columns shew, to the nearest minute, the

mean times of the rising and setting of the Sun. These are the times when the Sun's *first* or *Western* Limb in rising, or his *second* or *Eastern* Limb in setting, will just touch the visible horizon of the place—allowance having been made in the computations for the Sun's semidiameter and the effects of horizontal refraction and parallax.

PAGE II.—(EACH MONTH).

At the head of each page, in addition to the ordinary Tables of the changes and quadratures of the Moon, are Equations for adapting the times of the rising and setting of the Sun, to the latitudes of Kingston and Quebec, at the times of the Sun's entrance into the first and fifteenth degrees of each sign of the Zodiac, and which, by interpolation, can be used for any intervening periods and adjacent parallels of latitude. The variability of the amount of horizontal refraction in different states of the atmosphere, and the general liability to the intervention of terrestrial objects in observations depending on the visible horizon of places on land, render the *actually visible* times of the rising or setting of the heavenly bodies so uncertain that those given in the calendar are only set down to the nearest minute, though calculated to within a tenth of that quantity. In these Equations the fractional parts of minutes in the differences, are retained for the convenience of interpolation.

The fourth and fifth columns of this page contain, respectively, the mean times of the southing, and the rising or setting of the Moon. The Moon's southing being frequently useful for the approximate determination of mean or apparent time, is computed to the nearest *tenth* of a minute. The times of the rising or setting are only given to the nearest minute, for the reasons mentioned above in respect to the Sun; and, in like manner, the computations are made for the rising of the Western, and setting of the Eastern Limb, corrections being applied on account of horizontal parallax and refraction, and the Moon's semidiameter.

The sixth column contains the Moon's places in the signs of the Zodiac.

The seventh column contains the true mean time to the nearest second, of the *upper* transit of the Polar Star (*Polaris*) across the meridian of Montreal for each day of the year. If the time of its lower transit be required for any day, it may be found by simply subtracting 11h. 53m. 2s. from the tabular time of the upper transit (increased by 12 hours if necessary) which will always give the time of the preceding lower transit; or, which is more concise and is the

ASTRONOMICAL SYMBOLS AND ABBREVIATIONS. 3

same in effect, to the tabular time of the upper transit add 1m. 58s. of time. The sum, taken in the preceding 12 hours, according to the common divisions of civil time, will be the time of lower transit required. For example :—let the time of the lower transit of Polaris for the 15th May be required :

	H. M. S.
Tabular time of upper transit, (increased by 12 hours),.....	21 31 54
Subtract	11 58 2
Remains, time required, (A. M.),.....	<u>9 33 52</u>

OR BY THE SECOND PROCESS.

Tabular time of upper transit, (P. M.),.....	9 31 54
Add	0 1 58
Sum = Time of lower transit as before, (A. M.),.....	<u>9 33 52</u>

The eighth column contains the true mean time, to the nearest second, each day, of the southing of some well known fixed Star of the first magnitude; for this purpose a Star has been always selected which comes to the meridian between sunset and midnight, during the given period of its transit.

SOLAR AND LUNAR ECLIPSES FOR 1843.

There will this year be two Eclipses of the Sun and one of the Moon.

I. An Annular Eclipse of the Sun, June 27th, invisible in Canada; Conjunction in Right Ascension at 23 minutes after 2 in the evening. This Eclipse will be visible in the southerly parts of North America, in nearly the whole of South America, and in a portion of the Northern and Southern Pacific Oceans.

II. A Partial Eclipse of the Moon, December 6th, visible in Canada, as follows, viz :

	Kingston.	Montreal.	Quebec.	Meantime in the evening.
	H. M.	H. M.	H. M.	
Moon rises	4 7.8	4 2.6	3 57.2	
First contact with Penumbra....	4 31.0	4 43.5	4 51.9	
First contact with dark shadow..	6 12.0	6 24.5	6 32.9	
Middle of Eclipse.....	7 5.1	7 17.6	7 26.0	
Last contact with dark shadow..	7 58.2	8 10.7	8 19.1	
Last contact with Penumbra.....	9 39.2	9 51.7	10 0.1	

Whole duration 5h. 8 2-10m. : Duration of Eclipse 1h. 46 2-10m. Magnitude (Moon's diameter = 1) 0.202 on the Southern Limb.

III. A total Eclipse of the Sun, December 20th and 21st, invisible in Canada; Conjunction in Right Ascension 21st day, 0h. 15m. in the morning. This Eclipse will be visible in Asia, the Southern parts of Europe and Africa, and in some portions of the Pacific, Southern, and Indian Oceans.

HERSCHEL'S PERPETUAL WEATHER TABLE.

5

THE following Table was constructed by the celebrated Dr. Herschell, upon a philosophical consideration of the attraction of the sun and moon, in their several positions, as to the earth, and has been confirmed by the experience of many years and actual observation. By reference to the tables shewing the changes of the moon, the kind of weather on any particular day, or at any particular season during the year, may be very nearly calculated—much better, indeed, than by the random methods hitherto adopted in Almanacks, and which, if relied upon, was more likely than not, to cause disappointment and chagrin.

<i>New or Full Moon.</i>	<i>Summer.</i>	<i>Winter.</i>
If it be a new or full Moon, or the Moon enters into the first or last quarter at the hour of 12, noon.....	Very Rainy.....	Snow or Rain.
Or between the hours of 2..... and 4	Changeable	Fair and Mild.
4.....	Fair	Fair.
6.....	{Fair, if wind N. W. (Rainy, if S. or S. W.)	Fair and Frosty, if N. or N. E.—Rain or Snow, if S. or S. W.
8.....	Ditto.....	Ditto.
10.....Midnight	Fair	Fair and Frosty.
Midnight	Fair	Hard Frost, unless wind S. or W.
2.....	{Cold, with frequent Showers.....}	Snow and Stormy.
4.....	Rain	Ditto.
6.....	Wind and Rain.....	Stormy.
8.....	Changeable	Cold Rain, if W. Snow, if E.
10.....12 Noon	Frequent Showers ...	Cold, with high Wind.

Hence, the nearer the time of the Moon's entrance at full, change, and quarters, is to MIDNIGHT, (that is, within two hours before and after midnight,) the more fair the weather is in Summer; but the nearer to noon, the less fair. Also, the Moon's entrance at full, change, and quarters, during six of the afternoon hours, viz. from 4 to 10, *may* be followed by fair weather, but this is mostly dependent on the wind. The Moon's entrance in all the hours after midnight, except the two first, is unfavourable to fair weather. The like nearly may be observed in the Winter.

If the clouds in the western hemisphere, at the time of sun-set, are tinged with a light red and yellow; or if there are no clouds, and the sky, towards that part of the horizon where the sun sets, be of a beautiful red and yellow, it will be fine weather; but if the sun be of a pale colour, or if the clouds change to a dark red, and continue, it will rain. The clouds tinged with a dark red in the opposite hemisphere to the sun, whether at rising or setting presage Wind. In Winter, when large clouds are observed with white edges, and a strong blue sky above them, it will be hail or snow; or probably these may be dissolved into rain before they reach the earth.

Begins on Sunday—hath 31 days.

A TABLE—Shewing the greatest Eastern or Western Azimuths of *a, Ursæ Minoris (Polaris)* for the 15th day of each month in the year 1843, to the nearest second of a degree; and calculated for each minute of Latitude from the 43d to the 47th degree North, inclusively, together with the reduced Polar distance of the Star for each of the above days, and the interval, in time, from its Meridian passage to the moment of the greatest Azimuth.

Mean difference in Azim. for 1° of Latitude.....		2°.067	2°.114	2°.167	2°.227	2°.292	2°.350	2°.411	2°.475	

EXPLANATION:—Opposite the given time and under the Latitude will be found the required greatest Azimuthal distance of *Polaris*. If there be any odd minutes of Latitude, not at the head of the table, take the next lesser Latitude, and add to the Azimuth corresponding thereto, the product of the given excess of minutes multiplied into the difference for 1°, standing below, rejecting fractions in such product: the sum will be the Azimuth required. The corresponding time from Meridian passage added to, or subtracted from that given in the Calendar, will shew the true mean time of such greatest Azimuth, West or East of the Meridian.—See ex. 2 on the suc. page.

A TABLE,

For reducing the time of a Star's passage over any given Meridian to the time of its passage over any other Meridian.

ARGUMENT.—DIFFERENCE OF LONGITUDE IN ARC.

Diff. of Long.	D. of Mer. passage in Mean Solar Time.	Diff. of Long.	D. of Mer. passage in Mean Solar Time.	Diff. of Long.	Diff. of Mer. passage in Mean Solar Time.	Diff. of Lon	D. of M. pas. in M. S. Time.

					30	0.328	
					40	0.437	
					50	0.546	
					60	0.655	

(These differences are always additive in East, and subtractive in West Longitude.)

EXAMPLE I.—Required the time of the Meridian passage of Polaris at Montreal, January 1, 1843, the time at the Royal Observatory, Greenwich, being 6h. 20m. 9.30s. P. M.

Longitude of Montreal = $73^{\circ} 22'$ West from Greenwich.

Difference from Tables,	S. $70 - 45.871$, $3 - 1.966$ $20 - 0.218$ $2 - 0.022$	H. M. S. Greenwich time.....	6 20 9.30
		Remains (difference subtracted because the Longitude) is West) — Mean time at Montreal,	0 0 48.077 6 19 21.223

EXAMPLE II.—Required the times of Meridian passage and greatest Western Azimuth of Polaris at Quebec, on the 10th January, 1843; the time of Meridian passage at Montreal, being (P. M.) 5h. 43m. 50.983s.

Longitude of Quebec = $2^{\circ} 5'$ East of Montreal.

Difference from Table,	S. $2 - 1.311$ (Montreal time)..... $5 - 0.055$,.....	H. M. S. 5 43 50.983 0 0 1.366
		Sum (difference added because the Longitude is East) — Mean time of Meridian passage,.....
		5 43 52.349
		Add time from Meridian passage (Table, preceding page, Latitude $46^{\circ} 48'$)
		5 52 33.683
		Sum — true time of greatest Western Azimuth (P. M.) 11 36 26.032

A TABLE,

Shewing the number of English Statute Miles and thousandth parts of a Mile, contained in a degree of Longitude at every degree and half degree of Latitude, according to the true Spheroidal figure of the Earth, the Equatorial Radius being — 3962 349-1000ths Miles, and Polar compression — 1-300.

FRENCH AND ENGLISH MEASURES.

THE Measures used in the Seigniorial parts of Canada are those of France, while, in the Townships, the Standard Measures of England are adopted. The relation these measures, respectively, bear to each other, is generally but little understood, and indiscriminate reference to them in legal instruments, and even in Acts of the Legislature, has often caused much inconvenience, and many cases of litigation in the country; to remedy (as much as possible) those evils, the following Tables have been constructed.

In assuming the relation the *Pied de Paris* or Paris Foot bears to the English foot, that given in the "*Philosophical Transactions*," vol. 58, page 326, has been taken as the best authority. By this it appears that 1000 French, are equal to 1065.75 English, feet. In this Province, for some years, the difference was accounted still greater than the above analogy gives it, 1068 English feet being considered as equal to 1000 feet of Paris. This last proportion, however, was found to be decidedly incorrect, and the care with which that was ascertained, as given in the *Philosophical Transactions*, can leave no doubt of its superior exactness.*

The denominations of French measures of distance, introduced in the Tables are Leagues, Arpens, Perches, Feet, and Inches; in Superficial or Square Measure, the only French Measures are Arpens and Perches, as applied to Land Measure, with decimal parts of the lesser denomination used in the Equivalents in all cases where they may occur, in the measures of either species.

The *Toise*, although much used by practical Geometricians in France, is seldom referred to in Canada, except in Solid or Cubic Measure, and is therefore not included among those used in the Tables. It consists of 6 French Feet or *one-third* of a Perch, and its value may thence be easily obtained from the Tables, by taking its equivalent in any other given denomination.

The following Table may be useful to those, not familiar with French Measures.

Inches.	Feet.	Perches.	Arpens.	League.
12 =	1			
216 =	18 =	1		
2160 =	180 =	10 =	1	
181440 =	3240 =	840 =	84 =	1

* The well known property of different metals to expand or contract in increased or diminished temperatures, as compared with those at which the measures of the standard feet of London and Paris are respectively taken, has caused some to apply a further correction to the above relation between their values, by which 1065.79 nearly, of English feet, would be equal to 1000 feet of Paris. The extreme smallness of this correction, amounting to less than a unit in 26000, seemed to render it unnecessary to depart from the general authorities in the compilation of the Tables.

EXAMPLE I.

In 360 feet 10 inches French measure, how many English feet?

Feet. Inch.

360 feet	=	319	8.70
60 do.	=	63	11.34
10 inches	=		10.66

Answer, 384 6.70

EXAMPLE II.

In 13 feet 11 inches French measure, how many chains and links?

13 feet	=	0	20.992
11 inches	=		1.480

Answer, 0 22.472

TABLE II,

For converting English Feet and Inches into French Feet and Inches.

LINEAL MEASURE.

English		French		English		French

8	7	6.08		1000		938	3.68
9	8	5.34					

EXAMPLE.

In 384 feet 6 7-10 inches of English measure, how many feet, &c.
French?

	Feet. Inches.
300 feet	= 281 5.90
80 do.	= 75 0.77
4 do.	= 3 9.04
6 inches	= 5.63
7-10 do.	= 66

Answer,

360 10.00

See the converse of the above example at the end of Table I.

IMPORT DUTIES.

IMPORT DUTIES.*

EXTRACTS FROM AN ACT TO AMEND THE LAWS FOR THE REGULATION
OF THE TRADE OF THE BRITISH POSSESSIONS ABROAD.

[To come into force 5th July, 1843.]

[The 1st, 2d, and 3d sections are devoted to the repeal of all such Acts as will interfere with the new Tables of Prohibitions, of Duties, and of Exemptions.]

§IV. And be it Enacted, that the several sorts of goods enumerated or described in the table following, denominated "A table of prohibitions and restrictions," are hereby prohibited to be imported or brought, either by sea or by inland carriage or navigation, into the British Possessions in America or the Mauritius, or shall be so imported or brought only under the restrictions mentioned in such table, according as the several sorts of such goods are set forth therein; (that is to say,)

A TABLE OF PROHIBITIONS AND RESTRICTIONS.

Gunpowder; Ammunitions, Arms, or Utensils of War, prohibited to be imported, except from the United Kingdom or from some other British Possession; Coffee, Sugar, not being refined, in bond in the United Kingdom; Molasses; Rum, being the produce or manufacture of any British Possessions within the limits of the East India Company's Charter, except and subject as hereafter is provided, or being of Foreign Produce or Manufacture, prohibited to be imported into any of the British Possessions on the Continent of South America or in the West Indies, (the Bahama and the Bermuda Islands not included,) or into the Mauritius, except to be warehoused for exportation only, and may also be prohibited into the Bahama or Bermuda Islands by Her Majesty's Order in Council; Base or Counterfeit Coin; Books such as are prohibited to be imported into the United Kingdom, prohibited to be imported; and if any Goods shall be imported or brought into any of the British Possessions in America or the Mauritius contrary to any of the prohibitions or restrictions mentioned in such table in respect of such goods, the same shall be forfeited; and if the ship or vessel in

*The portions of the Imperial Statute which affect this Province, are here given. The list of Provincial duties is omitted, it being more than probable that important alterations will be made previous to the commencement of the summer business in 1843.

which such goods shall be imported, be of less burden than seventy tons, such ship or vessel shall also be forfeited.

* * * * *

§ VII. And be it enacted, That there shall be raised, levied, collected, and paid unto Her Majesty the several duties of Customs as the same are respectively set forth in Figures in the Table of duties herein-after contained, upon Goods, Wares and Merchandise not being the Growth, Production, or Manufacture of the United Kingdom or of any of the British Possessions in America, or of the Mauritius, or of any of the British Possessions within the Limits of the East India Company's Charter, or the Produce of any of the British Fisheries, imported or brought into any of the British Possessions in America or the Mauritius, by Sea or Inland Carriage or Navigation:

TABLE OF DUTIES.

Wheat Flour, the barrel of 196 lbs. 2/; Fish of Foreign Taking or Curing, Dried or Salted, the cwt. 2/; Pickled, the barrel, 4/; Meat, salted or cured, the cwt. 3/; Butter, do. 8/; Cheese, do. 5/; Coffee, do. 5/; Cocoa, do. 1/; Molasses, do. 3/; Sugar, unrefined, do. 5/; Refined Sugar, the Produce of and refined in Foreign Countries, 20 per centum ad valorem; Tea, unless imported direct from China, or unless imported from the United Kingdom, or from any of the British Possessions, per pound, 1d; Spirits, Rum, per Gallon, 6d; other Spirits and Cordials, do. 1/; Glass Manufactures, Silk Manufactures, Spermaceti, 15 per centum ad valorem; Wine whether bottled or not, Cotton Manufactures, Linen do. Woollen do. Leather do. Paper do. Hardware do. Clocks and Watches, Manufactured Tobacco, Soap, Candles, other than Spermaceti, Corks, Cordage and Oakum, 7 per centum ad valorem; Oil, Blubber, Fins, and Skins, the Produce of Fish and Creatures living in the Sea, of Foreign Fishing, 15 per centum ad valorem; articles not enumerated except such as are comprised or referred to in the subjoined Table of Exceptions, 4 per centum ad valorem; and if any of the Goods hereinbefore proposed to be charged with Duty, except Sugar and Tea, shall be imported through the United Kingdom (having been warehoused therein, and being exported from the Warehouse, or the Duties thereon, if there paid, having been drawn back,) such Goods shall only be charged with Three-Fourths of the Duties herein-before proposed.

TABLE OF EXEMPTIONS.

Coin, Bullion, and Diamonds; Horses, Mules, Asses, Neat Cattle, and all other Live Stock; Hay and Straw; Tallow and Raw Hides; Salt; Rice; Corn and Grain unground; Biscuit or Bread; Meal or Flour, except Wheat Flour; Fresh Meat; Fresh Fish; Fruit and Vegetables, fresh; Carriages of Travellers; Wood and Lumber; Cotton Wool; Hemp, Flax, and Tow; Drugs; Gums and Rosins; Tortoise-shell; Manures of all kinds; Herrings, taken and cured by the inhabitants of the Isle of Man, and imported from thence; Provisions and Stores of every description, imported or supplied for the use of Her Majesty's land and sea forces; all Goods imported from the United Kingdom, after having there paid the duties of consumption, and imported from thence without drawback.

§ VIII. And be it enacted, that the Articles enumerated or mentioned in the table of exemptions hereinbefore contained, shall be imported without payment of any duty under this Act, and also such of the following articles, (namely:) Salted or cured Meat, Flour, Butter, Cheese, Molasses, Cork wood, Cordage, Oakum, Pitch, Tar, Turpentine, Leather and Leather-ware, Fishermen's Clothing and Hosiery, Fishing Craft Utensils, Instruments, and Bait, as shall be imported for the use of the British Fisheries in America, into any place at or from whence any such Fishery is carried on, subject to such regulations as the Commissioners of Customs, or the principal Officer of Customs at such place, shall make, and which they and he are hereby empowered to establish, for the purpose of ascertaining that such articles are bona fide intended to be applied to the use of such Fisheries, or that such provisions or stores as aforesaid, are bona fide imported or supplied for the use of Her Majesty's land and sea forces.

§ IX. And be it Enacted, that there shall be raised, levied, collected, and paid unto Her Majesty a duty of ten pounds for every one hundred pounds of the value, upon Sugar refined in bond in the United Kingdom, not being of the growth of any of the British Possessions in America or of the Mauritius, or of any of the British Possessions within the limits of the East India Company's charter, imported or brought into any of the British Possessions in America, or into the Mauritius, by sea or by inland carriage or navigation.
