	When exceeding ninety-seven degrees but not exceeding ninety-eight degrees, per one hundred pounds..	$1.34320	46.00 cents
	Over ninety-eight degrees, per one hundred pounds..	$1.4250	46.50 cents

Provided that all raw sugar, including sugar specified in this item, the produce of any British Colony or possession, shall be entitled to entry under the British Preferential Tariff, when imported direct into Canada from any British country.

Provided that sugar imported under this item shall not be subject to special duty.

3 and 4. There has been no tariff change made on sugar since December 1st, 1924.

[Mr. Cardin.]

QUESTIONS PASSED AS ORDERS FOR RETURNS

VANCOUVER GOVERNMENT PROPERTY

Hon. Mr. STEVENS:

1. What amount of insurance is carried on property in Vancouver: (a) In the name of the Dominion government; (b) In the name of Vancouver Harbour Commissioners; (c) In the name of the Board of Grain Commissioners?
2. What was the total premium paid on said insurance for each of the years during 1922, 1923, 1924?
3. To whom was the said insurance given and who were the agents of the companies with whom said insurance was placed?

Hon. Mr. COPP: I have the information that my hon. friend asks for and, as it is very lengthy, I would suggest that it be made an order for return and be laid on the table at once.

Mr. STEVENS: The only thing is that we do not get it printed in Hansard.

Mr. COPP: It will occupy several pages of Hansard.

Mr. STEVENS: A summary might have been made, but it will be quite all right to pass it as an order for return.

MILITARY STATISTICS

Mr. POWER:

1. Are any retired officers of the imperial forces now employed by the Department of National Defence?
2. If so, what are their names, rank or position?
3. What salaries do they receive from the Canadian government?
4. What pension do they receive from the Imperial government?
5. Have the pay and allowances of private soldiers in the permanent militia been decreased since the year 1922?
6. If so, to what extent?
7. Have the pay and allowances of non-commissioned officers in the permanent militia been decreased since the year 1922?
8. If so, to what extent?

CANADIAN NATIONAL RAILWAYS—MEDICAL ADVISERS

Mr. POULIOT:

1. What are the names of the doctors who were officially appointed as medical advisers to the employees of the Canadian National Railways, at Rivière du Loup, from 1900 to date?
2. From and to what date did each of them perform these duties?
3. On whose recommendation were each of them appointed?
4. Does such a post entitle the holder to a pass on the Canadian National Railways?

CIVIL SERVICE SUPERANNUATION

Mr. McQUARRIE:

1. How many civil servants are eligible to come under the provisions of the Civil Service Superannuation Act, 1924?
2. How many civil servants have made application to date to come under the provisions of the said Act?

Hon. Mr. ROBB: I have the answer to No. 2 of this question, but I submit to my hon. friend that I am not sure whether it is important that he should have the answer to No. 1. If it is, the question will have to be passed as an order for return as it involves considerable work and communications in different parts of the provinces.

Mr. McQUARRIE: I would like to have the answer if it can be given.

Mr. ROBB:

1. Passed as order for return.
2. The number who have elected to come under the provisions of the act and who have been accepted to date is 8,258.

ROUYN—NIPISSING CENTRAL EXTENSION

Mr. W. G. McQUARRIE (New Westminster) moved:

For a copy of all correspondence and other documents passing between the executive officers of the Canadian National Railways and the Temiskaming and Northern Ontario Railway Commission or any of its officers, and between the Canadian National Railways and the government of Canada or any of the ministers thereof, and between any of the above-mentioned and the government of the province of Quebec or any of the ministers or officials thereof, regarding the proposed extension of the Temiskaming and Northern Ontario Railway subsidiary (the Nipissing Central) into Rouyn.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): The other day I called attention to the fact that this motion, as it is put now, might be held to ask the Department of Railways and Canals of Canada to produce correspondence between the Quebec government and the Ontario government. Of course, we could not undertake to do that.

Mr. McQUARRIE: Certainly not.

Mr. GRAHAM: It reads that way.

Mr. McQUARRIE: It was not intended that way.

Mr. GRAHAM: I have no objection, with that understanding to an order passing, although there may be some correspondence between the railways and the government that might be confidential at the present time as I believe matters in question between them have not been settled.

Motion agreed to.

UNOPPOSED MOTIONS FOR PAPERS

ST. LAWRENCE WATERWAY SCHEME

Mr. ARCHAMBAULT:

For a copy of all correspondence, of whatever nature it may be, exchanged between the government of Canada and that of the United States or between

any official of said governments, either through the departments or commissioners from June 1, 1924, up to this present date, in connection with the St. Lawrence Waterway scheme, the diversion of the waters of lake Michigan for the Chicago drainage canal and the diversion of the waters of Niagara Falls.

ST. IGNACE POSTMASTER

Mr. DOUCET:

For a copy of all correspondence and other documents in connection with the appointment of the new postmaster at St. Ignace, electoral district of Kent, New Brunswick.

MR. ALBERT E. ROBICHAUD

Mr. DOUCET:

For a copy of all correspondence and other documents received by the Post Office Department relating to the dismissal of Albert E. Robichaud, as postmaster of Lamèque, Gloucester county, New Brunswick, together with a copy of the evidence taken at the inquiry, the report of the investigator and all correspondence relating to the appointment of the new postmaster.

FERGUS AND ELORA—PURCHASE OF TOWN HALLS

Mr. CHISHOLM:

For a copy of all correspondence and other papers and documents relating to the purchase or lease from the towns of Fergus and Elora, of their town halls, in the county of Wellington, during the year 1921, and of all accounts rendered, moneys paid or expended in connection with changes made in said buildings in said year.

CUSTOMS EXCISE OUTPORT AT DRUMHELLER

Mr. GARLAND (Bow River):

For a copy of all correspondence, letters, telegrams, and communications passed between the government, any member or official of the government, and any persons, concerning the establishment of Drumheller as a customs excise outport, and warehouse port, under the survey of the port of Calgary, Alberta.

AUSTRALIAN TREATY

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I desire to call the attention of the government to the despatch which appeared in the press of Friday from Melbourne, Australia, as follows:

Melbourne, Australia, April 23.—(Via Reuter's.)—Premier Stanley M. Bruce has replied to a cable from Premier Mackenzie King of Canada on the matter of re-opening the Canadian-Australian trade treaty negotiations, the Commonwealth premier declining to do so.

Premier Bruce, in his reply, says he regrets his inability to agree to Premier King's suggestion that the discussion on the proposed trade treaty should be re-opened. The Australian Premier says he is now awaiting the decision of the Canadian Parliament on the treaty.

May I ask if the despatch fairly represents the facts, and if it does, if the government is in a position to make a further statement as to its purpose?

[Mr. Archambault.]

Right Hon. W. L. MACKENZIE KING (Prime Minister): I decline to make any statement based on newspaper reports. Certainly the despatch as read does not represent accurately the situation between Australia and Canada at the present time. The last communication I had from Premier Bruce made inquiry as to certain changes we were proposing to make in what was the original basis of our agreement. That telegram has not been replied to as yet, but it will be replied to very shortly. I may mention also that after Australia had made the changes in her treaty which she had agreed to make she also made certain changes with respect to the conditions under which goods would be admitted under the treaty, which conditions had not been discussed before. By order in council the Australian government adopted a condition that, Canadian goods might not be given the advantage of the changes made in the Australian tariff, unless—as I understand it—75 per cent, of the labour and materials were of British origin. That feature was never considered when the discussion relating to the changes in the tariff took place between the two governments, and until we get that phase of the question definitely understood we do not propose to ask this House to make any changes in our tariff, because it is a very material factor in the matter. I might say that the government has decided to have Mr. Ross, who was in Australia before, return to Australia to conduct further with the Australian government such negotiations as we may have with them, in the hope that we shall get matters so adjusted as to bring about a final arrangement that will be satisfactory to our government as well as to the Australian government.

Mr. MEIGHEN: I would gather from the Prime Minister's statement that there is no hope that the matter will reach a conclusion in time for confirmation this session.

Mr. MACKENZIE KING: I would not say that. I rather hope it will although I cannot say.

Mr. MEIGHEN: As I understand it, that 75 per cent merely applies to productions the raw material of which is not produced in Australia.

Mr. MACKENZIE KING: No, I think not.

Mr. MEIGHEN: And 25 per cent where the raw material is produced in Australia. At any rate the statement is correct that the 75 per cent just applies to goods competing with Australian goods. As a matter of fact,

will the Prime Minister or the Minister of Trade and Commerce say that with that restriction actual Canadian exports are really affected?

Mr. MACKENZIE KING: Yes.

Mr. MEIGHEN: But to any appreciable extent?

Mr. ROBB: I think so.

LEASE OF RESERVE TO V. GRENON

On the Orders of the Day:

Mr. JAMES ARTHURS (Parry Sound): I call attention to the fact that the order for return passed on 16th March for correspondence, documents, and so on, regarding the leasing of certain property in the lower French Indian reserve to one V. Grenon has not been complied with. I think the papers are not very voluminous and I would like to have them brought down.

Mr. KING (Kootenay): I shall make inquiry.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE.

The House resumed from Friday, April 24, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. E. R. E. CHEVRIER (Ottawa): When the House rose on Friday, Mr. Speaker, I was about to ask the question: What are the benefits to be derived from the South African trip? Before I proceed with the few remarks which I have yet to make, may I refer to a news item which has appeared to-day in the local press. I find that delegates the world over are proceeding to Washington to attend the Quinquennial International Council of Women at Washington. I find that amongst those there are delegates from South Africa and also twelve Canadian delegates, amongst whom are two from Ottawa, Mrs. C. H. Thorburn, who is the vice-president of the National Council of Women, and Mrs. Smellie, who is the convener of National Public Health committee—Ottawa is fortunate in being so eminently represented. They are now proceeding to Washington to attend this conference. As one of those who was privileged to visit South Africa, may I be allowed to extend to the ladies representing South Africa our heartiest wishes of welcome? I hope they will return home with the same idea of our hospitality and generosity of entertainment as their people implanted in us.

What good may be derived from this trip to South Africa? Let me say that at no time during our stay there did our hosts ask us on our return to Canada to endeavour to benefit South Africa in any material way. The meeting was simply the result of their kind invitation to attend. I feel, however, that it is a duty, now that we have returned home, to endeavour to do something more than keep burning in our hearts the souvenir of that hospitality, and that the bonds connecting us with South Africa should be a little more concrete. If we look to the trade balance of South Africa we find it rather interesting, but we should not place too much reliance upon it as it stands because of the preponderance of their gold export, which of course, as anybody will understand, varies considerably from year to year according to the variations of the gold premium. In 1913 South Africa's imports amounted to £57,836,000 while her exports totalled £78,557,000. Of the export total £39,990,000 represented gold, £12,338,000 wool and £7,207,000 diamonds. Roughly, seven-eighths of their entire export trade is covered by these three items. In spite, however, of this variation, the trade balance of South Africa has been consistently favourable, amounting in 1923 to £20,721,000. Her trade balance reflects the demands due to her peculiar position, namely, her great mining industry, her lack of forests and consequently of merchantable timber, the progress of her agriculture, and the lack of metal working and textile industries. Her imports of cotton goods and food and drink items are followed closely in value by machinery, apparel, wood, wool products, motor vehicles, oil, iron, steel, hardware, woollens, and haberdashery. If South Africa is lacking in her imports in comparison with Canada, it will be in semi-manufactured goods, otherwise the buying power per capita of her white population seems to be about the same as that of Canada. In exports, besides the three principal products enumerated, important quantities of the following commodities are marketed abroad: coal, maize, mohair, dried fruit, wattle bark, wines, hides and skins, ostrich feathers, oranges, soft fruits and crayfish. As to ostrich feathers, I may say that a number of delegates brought back ostrich feathers which did not go to contribute in any marked degree to the monetary value of South Africa's exports; they were given freely and very gladly received. Linked, however, to Great Britain in almost every conceivable

fashion, it is not surprising to find that more than one-half of South Africa's total imports originate in the Motherland. For all practical purposes it may be assumed that this state of affairs will continue for many years. It may also be assumed that the foreshadowed continental competition will affect the United States and Canada rather than Great Britain. The United States, with roughly one-quarter the volume of trade of the United Kingdom, is her closest competitor, and she in turn has almost three times the volume of trade of her closest rivals, who in order are Germany, India, Canada and Australia. As the exports of India and Australia to the South African Union are more or less restricted to a few commodities, and as Germany caters to demands that Canada cannot meet, the potential value of this market to Canada can be gauged by our ability to compete with the United States for trade worth about $10,000,000 per annum. Forty-seven items in the South African customs tariff account for £7,509,000, or about 94 per cent of the United States exports to South Africa. Of these forty-seven items Canada is a competitor in thirty-six. Of these thirty-six items the United States at present provide a value of about £5,704,000, or about 81 per cent of the total trade. In other words, this represents a range of goods amounting to about £6,000,000 in which we compete at present on more or less even terms with the United States, and in the supply of which we might occupy an exceedingly advantageous position through tariff preference.

Now, in expressing the following view I represent my own personal opinion, and in no way do I want to bind anyone. I ask that those of the government within whose competency the foregoing remarks fall will consider them, and I hope that what I have said in this respect will help to establish somewhat more firmly and in a different way the bonds that unite us to South Africa. In 1913 Canada was sixth among the nations supplying South Africa. At that time our exports to her represented a value of £856,000 and we were preceded by the United Kingdom, Australia, India, Germany and the United States. Two years later—in spite of a very considerable increase by Sweden, Canada's chief competitor in wood products, about which my hon. friend the member for New Westminster (Mr. McQuarrie) spoke the other evening—she was fifth, having replaced Australia. Canada's trade with South Africa now amounts to £1,824,000. About seven-eighths of our business in South Africa is done in fourteen items, in the following order of importance: motor cars, wheat, paper, flour, lumber, rubber tires, ploughs and harrows, agricultural machinery, condensed milk, fencing, canned fish, confectionery, white lead, oatmeal, binder twine, and cement. There are about 225 Canadian manufacturers directly interested in this trade, and at least another fifty are represented indirectly through New York houses and English indent connections. Perhaps another twenty-five have no representatives, marketing outright. These manufacturers cover almost every class of commodity manufactured, produced or prepared in Canada, with the majority offering specialties of American type. Whilst I was in Cape Town it was my good fortune to spend most of two days with our trade commissioner there, Mr. Stevens. Of him I will say a little more later on. Whilst there I felt it was my duty as a Canadian to inquire into local conditions, for it is so very seldom that we are accorded the privilege of attending such distant parts of the empire where our trade commissioners do their best to promote this country's commercial interests. The South African tariff consists of six schedules, differing in degree and method of taxation. These schedules, their preferences and the grouping of the principal items of Canadian import, may be tabulated as follows:

Schedule	Method assessment	British preference	Principal Canadian entries under each
Class 1.....	Specific on weights and volumes.	Partly specific, partly 3 per cent ad valorem, partly omitted.	Cement, confectionery, wheat, flour, milk, wrapping paper, tires, fish, oatmeal.
Class 2.....	Mixed ad valorem and specific.	3 per cent ad valorem.	
Class 3.....	25 per cent ad valorem.	3 per cent ad valorem.	
Class 4.....	3 per cent ad valorem.	3 per cent ad valorem.	Agricultural machinery, ploughs, newsprint, fencing, lumber, twine, white lead.
Class 5.....	Free.	No preference.	
Class 6.....	20 per cent ad valorem.	3 per cent ad valorem.	

With reference to cement, I may say that at Slurry, near Pretoria, there is a very extensive plant where cement is being manufactured. I understand that our exports of cement to South Africa have decreased to the extent that we furnished about 500 barrels last year. South

Africa is now manufacturing a very fine quality of cement. We were privileged to visit that exploitation field and we found that the cement manufactured there is about 96 per cent pure. While we were on the Mozambique coast we noted that the graphite produced on the isle of Madagascar is supplanting the graphite we produce here. So it is that when we are brought in touch with these facts it becomes our duty to bring them before the Canadian people in an endeavour to apply a remedy, and if possible to attract some other line in order to make up for what we are losing in that particular direction.

It is therefore certain that the preference is a definite determining factor in Canada's favour in respect to the following commodities: condensed milk, wrapping paper, rubber tires, canned fish, oatmeal, fencing, and binder twine. These are commodities which ordinarily could be obtained by South Africa to equal advantage elsewhere. In respect to the remainder of these principal entries the preference is undoubtedly of great assistance. Among lesser commodities the preference is of undoubted value to Canadian exporters of the following goods: paints, hardware, iron and steel bars and pipe, tools and implements, woodenware and furniture, pumps and machinery, leather, chemicals, musical instruments, glass bottles, canned foods, knitted goods and brushware. These latter commodities I enumerate because they are general items which would benefit largely from an extended South African preference. None of these commodities is on the South African free list at the present time, and only four, namely, glass bottles, pipe, certain classes of machinery and leather are in class 4, on which 100 per cent preference is already given.

On the other hand, what is the value of the Canadian preference to South Africa? As I have stated, with gold and diamonds marketed under monopoly, wines explicitly excluded by Canada in granting preferential treatment, and wool, coal, mohair, wattle bark and maize on the Canadian free list, the value of a Canadian preference to South Africa is very seriously curtailed. The only commodities now dutiable in Canada which interest South Africa to any appreciable degree are dried fruits, fresh soft fruits, and to a very limited degree, sugar. As a matter of fact sugar may be more or less disregarded, because of the limited South African surplus for export and its high local manufacturing cost.

May I be permitted for just a few moments to deal with a few items that I think should be of interest from the point of view of the making of a bargain with South Africa looking to the promoting of trade with that country? Take oranges, for instance: the production in South Africa in 1923 was 1,009,000 boxes. The quality was comparable with that of the Canadian import. Canada used on an average about 1,000,000 cases and the source of supply for Canada was 95 per cent from the United States, most of the remainder from the British West Indies, and some from Spain. Could not some of that import be taken from South Africa? Of pears, the production in South Africa was 759,000 boxes, and the quality was comparable with that of the present Canadian import. Canada imported 17,800,000 pounds, and the source of supply was entirely the United States. In peaches the production in South Africa was 4,406,000 boxes and the quality was comparable with the best Canadian imports. The source of supply to Canada was entirely the United States. In 1923 Canada imported 13,406,000 pounds of peaches. Of plums South Africa produced 365,000 boxes, of a quality, however, not equalling that of the larger part of the Canadian import. Canada imported 140,000 bushels, entirely from the United States. Of grapes the production in South Africa was 150,000 tons, of a quality comparable with the Canadian import. Canada imported 5,103 tons, the source of supply being entirely the United States. Of maize, the South African export was 1,128,314,250 pounds, the quality being comparable with that of Canadian imports. Canada imported 9,227,416 bushels, the source of supply being the United States. I cite these figures in the hope that when the conditions permit something may be done with a view to having trade arrangements in these commodities entered into with South Africa.

Now, let me deal for a moment with the question of oranges. It is entirely a matter of transportation. The distance is not too great, and the quality and price are right. As to maize, any tariff concession on this commodity would be of extreme value. If all maize were subject to the 7½ cents per bushel to which maize for distillation is liable, and this were accorded to South Africa as a preference, the result ought to swing this valuable business from the United States to the Union. So far as fresh deciduous fruits are concerned, given the transportation, this business could be developed either with or without preference, as Canada is paying more for her winter fruit at present than South Africa realizes in her principal market.

In conclusion I would suggest some action to induce the Elder Dempster Steamship Company to return to Canadian ports, and the

establishment of a Canadian duty upon oranges and maize for the purpose of offering South Africa a substantial preference. A preference upon dried fruits comparable to the present advantages accorded to Australian dried fruits might also be advisable.

As I said a moment ago, while at Cape Town I spent some time in the office of our trade commissioner, Mr. Stevens. Mr. Stevens was preceded in that office by a very distinguished gentleman who is held in high esteem throughout South Africa and whose name I heard at Cape Town, at Durban and as far north as Salisbury; I refer to Mr. Egan, now Deputy Minister of Immigration. But Mr. Stevens is somewhat handicapped in the handling of the office down there. Mr. Stevens has not said anything of the kind to me, but so far as my observations have led me to conclude, I think he should be allowed a little more latitude, and particularly a little more in the matter of pecuniary assistance. I would have been delighted to have had the advantage of Mr. Stevens' knowledge throughout this trip in South Africa, and particularly if he had been allowed to accompany us through the peninsula. I think it is only fair, if we want to have our trade with South Africa or other distant parts of the empire develop, that when these questions come up we should not be too niggardly in the matter of the expenses that go with the administration of those offices. It is always exceedingly difficult to appreciate the difficulties that exist down there. For instance, to travel between Cape Town and Johannesburg or Pretoria, where the administration offices are, does not seem to us to be any distance at all, but it entails a considerable amount of expense and also a considerable amount of time.

Passing along, after leaving Cape Town, we returned to England about the 18th of November. It was my good fortune to spend a few weeks in London, and my greater good fortune to meet quite a number of times our distinguished representative there, Hon. Mr. Larkin, and I desire to assure everyone that our interests are very ably looked after over there by Hon. Mr. Larkin and his most efficient staff. I referred the other evening to Canada's status in the empire and to the talk of appointing an ambassador to Washington. I am one of those who believes that it is time, and high time, to appoint an ambassador to Washington. I believe that is only consistent with Canada's dignity and importance, and I want it clearly understood that if I advocate the appointment of an ambassador to the United States, that does not in any way derogate from my fidelity and loyalty to the British Crown; but I feel that we have reached that stage of national development where we can have our own representatives in the other portions of the world. We talk of appointing an ambassador to Washington, and yet we have in London but a high commissioner, and in Paris an agent. To my mind, there is an absolute inconsistency between these three terms. These two officers in London and Paris respectively are held by two Canadians of the highest distinction, who fill those positions in a way that reflects the greatest credit upon Canada, and it is with a feeling of pride that one hears their praise repeated by all those whose good fortune it has been to come in contact with them. But the same thing cannot be said of the premises wherein they do the best they can for the national development of Canada and for her reputation abroad. It was my good fortune also to be invited to Australia House, when the Attorney General for Australia, Sir Lyttleton Groom, was in England on his way back to Canada and Australia, and really I was ashamed of myself and of the way Canada is looking after its representatives abroad when I compared Kinnaird House or the Agency in Paris with Australia House or the South African quarters. Australia House is within a stone's throw of Kinnaird House, and has the most luxurious, sumptuous reception halls. It is a building all by itself, where one feels at home, and where the products of Australia are exhibited in a way that is quite as commendable as the exhibits one sees in Windsor station, Montreal, or in other places where the Canadian Pacific or the Canadian National show the products of this country. I was really surprised, and after having been received with the kindness and hospitality and warmth of sentiment that marked our reception at Australia House there was but one consolation, and it was that if our premises at Kinnaird House are so cheap, so poor, so out of keeping with Canada's status, at all events the warmth and cordiality of our reception by Mr. Larkin, both in our own building and later at his own house, not only was on a par but it did go much deeper to my heart than the reception we received at the other buildings.

That brings me to say a word with reference to the changing of our Canadian quarters in London. Something has been said with reference to the purchase of the Union club. Now I do resent and feel very deeply the remarks that are made by some hon. gentlemen

who whether they know whereof they speak, or, I will not say know not, but who speak without a full knowledge of the facts, in reference to the location of our quarters in London. I have visited the Union club building; I have seen what improvements are being made, and I am perfectly well satisfied, both as a member of this House and as a citizen of Canada, that what has been done has been done in the most commendable way, and that no expenditure has been made which should not have been made, and that it is a building consistent with the standing of Canada. I do resent the statement which was made that this building is situated in a blind alley. Statements like that should not be made. People who have visited London and are well aware of the layout of the city know that this club is not situated in a blind alley, but in Trafalgar Square, on the corner of Cockspur street, with the National Art Gallery at the back, and leading up to the Strand and Australia House. I was so impressed with what was being done while I was there that I made certain notes of my own, and asked for certain information which I will give to the House now. I have put this down in writing so that there will be no misunderstanding as to the exact location, if any hon. gentleman wants to locate it afterwards.

The building is situated on the west side of Trafalgar Square and the frontage—120 feet—on the Square occupies practically the entire west side. The second frontage—72 feet—and chief entrance surmounted by an imposing pediment, will be on Cockspur street, which is the main thoroughfare of traffic from the city to the West End. The south side of Trafalgar Square is enclosed by Cockspur street. The corner formed and occupied by the Canadian building is probably the principal site in the heart of the West End of London. If any gentleman says that this is located in a blind alley, he is the one who is blind. The National Art Gallery faces Trafalgar Square from the north and occupies the whole of that side. The South African government building faces the east side of the square and the Canadian Pacific Railway building from the south, which position was secured by that company many years ago.

In addition to these, the following buildings or office premises are located within a stone's throw of the Union club:

The Sun Life Insurance Company
Canadian Pacific Railway offices
Royal Mail Steam Packet Company's offices
Cunard Steamship Company, Limited
H. M. Government of Norway
International Sleeping Car Company
Canadian National Railway
Peninsular and Oriental Steam Navigation Company
Orient Steam Navigation Company, Limited
Thomas Cook & Sons
Brown Bros. & Company, International Bankers
The White Star Steamship Company and subsidiaries
Credit Lyonnais
The Carlton Hotel

On Northumberland avenue and the Strand, immediately opposite, are:

The Grand Hotel
Victoria Hotel
Metropole Hotel
Charing Cross Railway Station

Then within five hundred yards of this corner are:

Colonial Office
War Office
The Admiralty
The Privy Council
Foreign Office
Home Office
India Office
Scottish Office
Treasury
Ministry of Agriculture
Board of Trade
Ministry of Labour
Ministry of Health
Office of Woods and Forests

Then as to the accommodation we find there: At present the High Commissioner's office in Kinnaird house has 5,238 square feet; the emigration office on Regent street has 5,549 square feet; the pension office, on Oxford street, has 1,800 square feet; and the Trade Commissioner's office, on Basinghall street, 700 square feet. The four offices, absolutely unconnected one with the other, are on four different premises containing 13,287 square feet. The idea is to bring them under the same roof, and the new building will provide 26,971 square feet, which will give a surplus available for extension of about 3,700 square feet. I will not give the House the history of the acquisition of these properties, I will reserve that for another occasion; but the consensus of opinion in England, on the part of people who are not financially interested in this question at all, is that the bargain is a good one. My own impression is that it was a good bargain and that we should have no fear or apprehension or doubt about it. Personally I am prepared to say, after having seen the property, after having looked it over, after having heard what it cost, and after having heard what the rentals are in proportion to the other buildings in the neighbourhood, that it was a good bargain.

It was also my privilege to spend a few weeks in France, and there I met Hon. Mr. Roy—not our ambassador, not even our high commissioner, but the agent of Canada. Not-

withstanding his unimpressive title Mr. Roy is a man well qualified to shed lustre on the title of ambassador in France, just as Mr. Larkin reflects credit upon his office in England. But the status of Canada's representative in France is simply that of agent. There also I found that somewhat the same conditions prevailed as in London. I have no hesitation in saying that the offices of Canada's representative on the Boulevard des Capucines are far from being in keeping with the dignity which Canada should maintain on French soil. I make this statement—and I make it without any fear of contradiction by any hon. gentleman who has been in France—that the room of Hon. Mr. Roy is far below the character of the quarters provided for a number of officers of this House; and that the room of many members of this parliament is far better equipped than the room of our agent in Paris. When one enters this long room one sees an old time-worn table in the centre and time-worn chairs along the sides, newspapers strewn around, and foreign newspapers hanging on the walls. Fifteen people can hardly sit at ease in that room; and I should like to ask the Minister of Finance (Mr. Fielding) how he

4 p.m.

felt when he was seated there studying the wonderful French language at the time of the negotiation of the French treaty? Would he not have preferred to have better quarters where he could have mixed with some degree of comfort with the distinguished French people whom he saw? Would he not have preferred to meet those people in a very much better place than where he did meet them? It certainly would have been far more in consonance with Canada's dignity.

In conclusion, I rejoice in the statement that has been made by the Acting Minister of Finance as to our present financial position. I feel that the statement will be well received by the people of Canada; and I sincerely trust that in the administration of the affairs of this country no false economy will be practised, but that the high standard of national development at which Canada has arrived, coupled with proper economy, will not be marred or hampered by the fear or the refusal to spend adequately—and I repeat the word "adequately"—in that connection. Ours is a vast heritage; it has been worth living for, it has been worth dying for. I have no other desire and no other ambition than to see Canada continue her national development, guided in her own way but remaining forever a component part of the greatest Commonwealth of nations.

[Mr. Chevrier.]

Mr. ANDREW KNOX (Prince Albert): Mr. Speaker, it is not my intention to speak at any great length in this debate which has been moving along rather slowly. I find that I am the eighty-eighth speaker since the debate started, and the twentieth speaker from the group of which I am a member. In looking over the columns of Hansard I observe that although there are a number of speeches that occupied almost three hours, the speakers from this group have not averaged more than half an hour each, and I do not intend to exceed that time.

In regard to the budget I must say that the proposals contained in it are not of such a character as to develop any enthusiasm on my part, and therefore in my brief remarks I shall deal with the budget from a critical standpoint. We were led to believe on a former occasion that the reductions then put into force were but the fore-runner of others to follow; but I am afraid the fore-runner must have, in some way, lost its connection with the main body. The budget has been dealt with from so many different angles that it is rather difficult to approach its consideration from any new point of view, consequently my remarks will be general in their character. While I criticize the government for its action—or possibly I should say inaction—I also wish to say that the high tariff policy of the Conservative party will find no foothold today in the prairie provinces, but—

Mr. MEIGHEN: You have not been there lately.

Mr. KNOX: I have just returned from there. But permit me to say that a party like the Liberal party which has made no further advance, during the four years in which it has held office, to carry into effect its platform and published policy, will certainly not be received with open arms by the thinking portion of the electorate, especially in that part of Canada lying west of the Great Lakes, and I wish to say that the people of Canada to whom that remark applies are now extremely alert. The haphazard easy going individual who believes everything he hears and tells everything he believes is now a back number. The thinking element have now commenced to see that in times past they have been made use of for the benefit of other people; they are beginning to see that owing to the immense production, on a per capita basis, of the value of the products of their farms, particularly in the case of the western farms, and from the fact that they are compelled to sell their products in competition with the world in the world's markets while at the same time forced

to purchase what they need for their own requirements in the restricted, protected, high priced home market, the time has come for a change. The conditions through which they have been passing are such as to compel all those men and women who have suffered from those conditions to do a lot of thinking. The result is that a great number are convinced that neither of the two old political parties is much interested in trying to help the farming community nor the communities which are entirely dependent upon the success of agriculture. Accordingly I am convinced of this, that in the west—in the prairie provinces at least—neither the policy of the Conservative party nor the policy of the Liberal party—judged by their actions during the last few years—will make any appeal to the thinking masses; and the man who is bold enough out there to argue that benefit is to be derived by the farming community from supporting either of those parties is likely to be only "a voice crying in the wilderness."

I have been impressed with the similarity of the position of the Maritime provinces, and the conditions there, to those of the western provinces. They too are more or less isolated and hampered in regard to traffic restrictions. They too are handicapped by a long, expensive rail haul, and they too are striving to develop their ocean ports without the sympathy and assistance which should be given them by centralized interests. It is quite plain that the Maritimes are also beginning to see that party politics is not getting them anywhere. I have been greatly interested in the addresses which have been delivered by Maritime men during this debate, particularly one by the hon. member for Kings, P.E.I. (Mr. Hughes). These addresses clearly show dissatisfaction with existing political and economic conditions, and the editor of Maritime Rights, a paper published in Halifax, in last Saturday's issue has the following to say in an editorial:

> It has very often been said there is more party politics to the square inch in the Maritimes than in any other part of the world. It looks like it. What has it got us? Are we the most prosperous provinces in the Dominion? We all know the reverse is the fact.
>
> Cut out the party stuff. No matter what side. Put on your war paint and go out after the things that will make these provinces prosperous and you will succeed. We have the country; we have the resources; we have the men; we have the money too; and what we do not have we can get. There is nothing wrong with the Maritimes. The trouble is with Us the People. Forget party and there will be a flow of life blood through your veins that will surprise you. Just look round and see the mess things are in generally and ask yourself who are to blame. The answer will be as plain as the nose on your face: you.

After reading this and knowing that no part of the Dominion has stuck to party politics so faithfully or long and without results as the Maritimes, I am convinced that the psychology of the movement at present in those provinces is precisely the same as it is in the west and in many parts of Ontario, although, perhaps, not quite so far advanced. I am also convinced that in their hearts these Maritime men are not satisfied with the present party system. Consequently, I have no hesitation in giving to them the old Macedonian invitation to "come over and help us," or I might put it in more up-to-date language by saying: "Come on in, the water is fine."

I would ask your indulgence, Mr. Speaker, for a few moments while I revert to some matters which are more or less parochial, but which, while they may not at the present time be closely connected with the budget, may some day have a very direct bearing on the finances of the country. I would refer first to the necessity for a survey of the great hinterland in northern Saskatchewan lying around the south of lake La Ronge. I might point out that lake La Ronge is a lake of considerable size. I think it might possibly cover some 400 square miles. It is surrounded by a rocky formation. This rocky formation is a continuation of the Laurentian range starting in Quebec, running through northern Ontario, northern Manitoba and on into Saskatchewan. Prior to the present time, owing to its inaccessibility, this portion of the Laurentian range lying in Saskatchewan has been very little explored. Now, there is a wagon road constructed by the provincial government from Prince Albert to Montreal lake, a distance of sixty miles, and from there to lake La Ronge there is good water connection, in fact right into the Churchill river and on into the north. My point is that I would like that some attention be given to this matter in the shape of a survey of the shores of the lake, also that this be followed by an aeroplane survey such as has been undertaken in some other parts of the north country, so that prospectors going in there will have something to work upon. This part of the Laurentian range contains the same minerals, such as gold and copper, that have been found in other parts of it. But it contains another mineral that has not been discovered in any portion of the Laurentian range to the east, and that is coal. In proof of that I would read a couple of extracts from speeches delivered by Hon. Chas. A. Dunning, Premier of Saskatchewan, in the legislature there. The

first was delivered on the 23rd November, 1920, and will be found in the Sessional Papers of that year at pages 40 and 41. He says:

I should refer at this point to the preliminary northern exploration which was made in the past summer. Some publicity was given to the matter. It was the intention of the government to make arrangements to either confirm or disprove the rumours which had been persistent for many years, circulated by Indians, trappers, Hudson bay men, missionaries and so on that coal existed in the neighbourhood of lac la Ronge. Arrangements were made for an exploration party to go into that district and to verify the existence of coal and also to bring back samples.

I have stated the tremendous economic importance of the presence of good coal in that portion of the north. The presence of good coal in that portion of the north would mean tremendous development. In addition to investigating coal the exploration party made a reconnaissance survey of a considerable area of the north-eastern portion of the province, the trip embracing all told over one thousand miles north and north-east of Prince Albert.

Naturally the party could not, in covering such a large amount of territory, do a great deal of detailed prospecting. That class of work must still be done by the prospector who is prepared to wander off with his pack on his back and his pick and shovel and take chances on what he may find. No government organization has ever arranged to take the place of the prospector in the search for precious metals.

I have the major part of the report of this party at the present time. Lieutenant-Colonel Garner was in charge of the party and I have his diary which makes interesting reading and gives a good deal of information as to what is to be found in that section of the north. The reports from the geologist and mines expert of the province representing coal I have not yet received but as regards coal I can say that it is there. It is a kind of coal similar in character to the coal which is found in the south and therefore a low grade lignite coal. As to whether it will be possible to create out of it a commercial commodity in the future it is difficult to say but while I do not want to be too optimistic, the situation of the coal, the nature of its overlay and the nature of the material underlying it is such as to lead to the hope that somewhere in the vicinity of this seam there may be coal of a considerable better quality. In the bottoms of some of the streams drift coal is present also.

* * * *

I have in my possession a sample of sand brought back by the party from a large deposit of pure white sand. It shows on analysis 99 per cent pure silica which means an excellent glass sand. The deposit is 150 miles north of Prince Albert but it is a valuable resource. The only other raw materials needed for the manufacture of practically all grades of glass are sulphate of soda of high purity and some lime. Sulphate of soda and fuel are available in large quantities in our province and there seems to be the opportunity in the future for the establishment of a glass industry.

The second extract from Mr. Dunning's speeches is under date of January 24, 1922, also dealing with the same matter. Mr. Dunning says:

This summer the government picked out what appeared to be the most logical place for intensive survey work and the party was asked to devote its attention to that particular area, the Wapawekka lake and Bear hills, immediately south of Lac La Ronge. I do not think the country covered had been explored previously. Travel in the north is largely restricted to water ways and in portions of the country covered by the party this summer they are satisfied that even the Indians did not know the country intimately.

The party did not find any great coal deposits or oil. The thing I would most like to find in our north land is coal, rather than gold or copper. The best guarantee of immediate development of the north, from the railway and agricultural point of view, would be the discovery of good coal beyond the present range of settlement. It would mean immediate railway development. The discovery of coal of good average quality, for smelting for instance, would mean a tremendous industrial development because of the copper deposits on the boundary between Manitoba and Saskatchewan which are handicapped by reasons of the fact that their ore must be shipped to Trail in British Columbia for smelting. The discovery of a coal suitable for smelting purposes in the north would mean industrial development similar to that which took place in northern Ontario under similar or even more difficult conditions than in Saskatchewan. I had been hoping that the result of the trip of the party would result in the discovery of good coal. A year ago the party confirmed reports of coal, which had been made prior to settlement in this country, by Indians, prospectors and travellers. It is true that coal is there.

I should like to read a brief extract from the report of Mr. J. B. Tyrrell, in the Geological Survey report of 1892. Mr. Tyrrell is a noted explorer and geologist. It is in reference to an examination he made of a deposit of drift coal on the banks of the Saskatchewan river 7 miles east of Prince Albert, at a place called Red Cliff. In connection with that examination he says:

This sand is composed of grains of quartz in layers, interbedded with layers of fragments of black lignite, the latter occasionally in well rounded pebbles an inch or more in diameter. There is a great quantity of this lignite, the bed of sand, whose thickness could not then be determined, being often composed largely of it.

These rounded grains and pebbles of lignite have clearly been washed some distance by the water, and deposited alternately with the heavier quartz grains as the current varied in strength, but the quantity present would seem to be too great to permit of its having been washed from any of the known coal seams on the river, the lowest of which is near the mouth of Egg Creek, 400 miles higher up the stream. It is much more likely that these fragments of lignite have been washed from a deposit, not at any great distance, which is now covered.

In order to determine whether such a deposit of coal exists in the vicinity or not, also whether the Dakota sandstone is here tar-bearing or not, as well as to ascertain the exact nature of the cretaceous section in this district, where the surface appears to be almost everywhere covered with drift, it would be of the greatest service to make a boring down to the underlying Palaeozoic rocks. If either coal or oil were met with the value of the country would be enhanced to many times the cost of the boring.

My point is that it would be a great advantage to this northern country if a survey such as I have suggested were made, so that prospectors going in there could secure maps of the country and know where they were going, and I would urge that this survey be included in the programme for this year We

have the engineers already in the employ of the department, and we have the aeroplanes already doing this class of work, so that I am not asking for any further expenditure.

Another point to which I would refer is in connection with the soldier land settlement; and I might say that I have always had and still have some hope for this scheme working out to the advantage of the soldier settlers, but there is no question in my mind that a readjustment in value, such as was suggested by the special parliamentary committee last year, will have to be brought about, and there is no excuse for leaving this in abeyance any longer if the confidence of the men is to be retained. A short time ago there was some mention of closing the soldier settlement office at Prince Albert and transferring the work and supervision to one of the other two offices in the province, in spite of the fact that the Prince Albert district has more men under the board than either of the other two. It may not have as much money lent out, but following out the spirit under which the act was first introduced, the welfare of the men, and not the money, should be the first consideration.

I also find that the Prince Albert office controls more acreage under the act than either of the other two offices in the province, the total being 756,410 acres for Prince Albert or 226,005 more than Saskatoon and 88,923 more than Regina. In regard to acreage, Prince Albert is fourth largest in the Dominion, in which we have altogether thirteen districts.

As regards the number of men settled under the act, Prince Albert has 3,145 or 579 men more than Saskatoon and 201 more than Regina. In this respect it is again fourth in the Dominion. As to the number of total repaid loans, Prince Albert heads the list with a good lead as far as the province of Saskatchewan is concerned. It might be interesting to know in what portions of the Dominion the soldier settlers under the act are showing up to best advantage. This is easily discovered by looking up the adjustment or salvage cases which may be looked upon as the failures. In this respect the Prince Albert district has a much smaller percentage of failures than any of the other twelve districts in the Dominion.

I might say I am not surprised at this, because I have farmed in this district myself for the last thirty-five years, and I do not hesitate to say that last year was the only year that could be called a real set-back in all that period. I have figured out here the percentage of failures in the thirteen different districts. They are not given in percentages in the report of the Soldier Settlement board, but I think these are perfectly reliable. I find that the percentages of failures or of salvage cases at Prince Albert was 11.7. I am giving these in their order of merit, starting with the lowest number of failures and working up. The next in order of merit is Prince Edward Island, 17.11. Saskatoon follows very closely with 17.14 and Vernon, British Columbia with 18.21. The percentages are as follows:

Office	Percentage
Prince Albert	11.7
Prince Edward Island	17.11
Saskatoon	17.14
Vernon, B.C.	18.21
Ontario	18.22
Regina	18.9
Calgary	19.3
Nova Scotia	19.4
Vancouver	20.6
Edmonton	24.2
New Brunswick	25.9
Manitoba	30.04
Quebec	38.6
Dominion total	21.5

Comparatively speaking, Mr. Speaker, I should like to say that the Prince Albert district has been well handled, and I sincerely hope we will hear no more about closing the office while the men require it.

Mr. ROBB: Just for information, is the percentage based on the whole, or on the number within the area?

Mr. KNOX: In the different districts. I was giving the percentage for that district, with Prince Albert as I said very much lower than any district in the Dominion, being 11.7, while the next was 17.11. This is largely based on local conditions.

There is one other matter which I propose to touch on very briefly—I refer to the conversion of the hon. Minister of Agriculture (Mr. Motherwell) in favour of the Hudson Bay railway. During the many discussions, Mr. Speaker, in which I have taken part in regard to the completion of the Hudson Bay railway, I have often wondered why the hon. minister could not see his way to give us his influential support. But the mists were cleared away a few days ago when, in the course of that memorable three-hour speech of his, he informed us that after his trip up the line as far as Kettle rapids—which by the way is still ninety-two miles from the bay—he was an out-and-out believer in the scheme, and that Hudson bay was the logical outlet and inlet for the prairie provinces. Up to this point he gave us encouragement. Then he showed the real

thought in his mind by informing the House that the engineers, navigators and other qualified officials who had investigated the comparative merits of Port Nelson and Fort Churchill had made a grave mistake by selecting the wrong port and spending over $5,000,000 there, and that a truce should be called for another indefinite period while further investigations might be undertaken to determine which should be the tidewater terminus. I am sure the House will agree with me when I say that it is most regrettable that the hon minister did not visit Kettle rapids years ago. But why did he not continue on to the bay? He could not learn anything about the suitability or otherwise of the present terminus while he remained at Kettle rapids, because he was still ninety-two miles from tidewater. We are almost forced to the conclusion that he had his line of action already decided upon before he started for Kettle rapids. Such a statement coming at the present time to me looks somewhat fishy, too much of the red herring variety —a further excuse for further delay. I hope, Mr. Speaker, to have an opportunity of speaking further on this matter in the near future.

Mr. W. D. EULER (North Waterloo): Mr. Speaker, I do not propose to answer the observations of my hon. friend who has just completed an excellent address, further than to say, if I may do so without offending my good friends across the way, that I hope some day his grandson will come to this House and still have an opportunity of advocating the completion of the Hudson Bay railway.

My only excuse, Sir, for entering the debate, which has already been excessively prolonged, is my desire to press upon the government consideration of a suggestion which, in my humble opinion, is of vital importance to Canada. It has to do with the National railways, and while I realize that the time for debate on the railway probably would be more opportune when the estimates are under consideration, yet certain observations have been made from this side of the House with regard to the disposition of the Canadian National system that I feel should not go unchallenged. I desire also to discuss very briefly a few other matters which come more properly within this debate. At the outset let me say that I am not a pessimist regarding the future of Canada, and I have no sympathy with those who, perhaps unwittingly, by their observations in this House are doing something to destroy the reputation and the credit of Canada abroad; and, what is infinitely worse in my opinion, are destroying the confidence of Canadians in their own country. Our debt, Sir, is enormous, our annual obligations of some $340,000,000 by way of taxation constitute a very heavy burden; but it would be folly for members on this side, and almost treason on the part of members of any party, to exaggerate unduly the gravity of our financial situation; nor would it be wisdom to deny that it is grave. I propose to do neither, but to the best of my ability to make some reasonable suggestions as to what the government can do to remedy the situation.

I congratulate the Acting Minister of Finance (Mr. Robb) upon his presentation of the budget. I do not do so in the ordinary stereotyped manner that is sometimes expected of a supporter of the government. The budget gives some reason for satisfaction. In the face of falling revenues it comes as a surprise and a gratification to the people to know that instead of being confronted with a heavy deficit we have a small surplus. True, our friends diagonally opposite, and perhaps some of our friends directly opposite, have figured that with the capital expenditures on our National railways we have a very heavy deficit. But my position with respect to that has already been made quite clear, and I am not going to take time by discussing it now. In congratulating the government on the budget, I do not mean to say that I agree with all that has been done or that has not been done—for there are in my opinion some errors of omission. I should have liked to see the entire abolition of what are sometimes called the nuisance taxes. From the very first day when the stamp taxes were introduced by the former government I was opposed to this form of taxation. I believe they are properly named nuisance taxes. If taxes were ever devised to annoy the public, you could hardly conceive of anything to better fulfil that purpose than the imposition of stamp taxes. The tax on receipts comes in the same category. In my opinion that form of taxation is absolutely illogical and has only the one recommendation—that it produces the revenue.

Mr. MARLER: Which tax?

Mr. EULER: The taxes on cheques, receipts and commercial paper generally. I should also like to have seen a reduction in postage rates, and I believe that a return to the prewar figure would not have resulted in loss of revenue. In that connection I should like to quote from the Canadian Milling and Grain Journal the following article:

To stimulate business

Following the change of government in Great Britain, the Manchester Guardian Commercial, circularized fourteen of the leading business men of

that city, asking each to suggest how best the new Baldwin administration could stimulate trade. The replies indicated that while many of the writers had strong and original views on the subject, there was a measure of agreement among them, which should not be without interest in Canada. Seven out of the fourteen declared that if the government would remove the taxes on cheques and receipts and reduce postage rates to pre-war level, then business all over the kingdom would receive a great impetus. There may be a suggestion somewhere here for Ottawa.

I would draw attention also to one or two weaknesses, as I see them, in the present sales tax. A wholesaler or a manufacturer, under the Sales Tax Act, is made the collector of the tax. He puts the amount of the tax on the invoices which he sends out to his customers, and makes his monthly remittances—I think they are monthly—to the government. In many cases he has not yet collected the tax from his customer when he forwards the account to the government at Ottawa. It has occurred quite frequently, and I know some cases in point, where manufacturers have sold large quantities of goods to retailers in other provinces, paying the tax to the government, and later these retailers failed in business and did not pay either the principal amount of the invoices nor the tax. Yet the government holds the manufacturer responsible for the payment of that tax. He is in the unfortunate position not only of losing his principal, his capital, but of paying the tax when he was not really intended to pay it. In cases of that kind, it seems to me that if the manufacturer has not been reimbursed he should receive a refund or rebate of the amount paid in respect of that tax.

There is one other weakness in the law, to which I would like to refer. It is a discrimination which I consider unjust—and I should not like the members of the House to think I have any personal interest in the matter at all. It refers to the printing business. We have on the statute book a law which exempts from the operation of sales tax all printers who do a business of less than $10,000 a year. A man who has a business, we will say, of $9,990, escapes paying the sales tax, while the man who does a business of $10,010 is subject to the payment of the tax. It seems to me that is a gross injustice and should not be continued. I see no justification whatever for it.

Mr. GOULD: Would the hon. member accept it as an axiom that the people object to taxation according to their understanding of the tax?

Mr. EULER: I am not sure that I get the meaning of the hon. gentleman's question.

Mr. GOULD: The objections of the people to taxation are greater according to their understanding of the tax in question. That is, they can see more distinctly through the principle of direct taxation than the principle of indirect taxation.

Mr. EULER: I am dealing entirely with direct taxation in this particular instance. I see no reason why one man who does a little smaller business than another should be excused from the payment of a particular tax while the man with the slightly larger business has to pay it. There is no reason why anybody should be exempt from sales tax, in the same line of business at least.

Mr. GOULD: My idea was that a person studying the principle of taxation will more readily understand the principle of direct than the principle of indirect taxation and will consequently object to the latter more quickly.

Mr. HUGHES: With reference to the sales tax on the printing business, what change, if any, does the hon. member suggest?

Mr. EULER: I think that is very obvious: I should say they should all be taxed. I would like to make reference to some of the remarks made by hon. gentlemen "angularly opposite," as they have been described. The hon. member for Fort William and Rainy River (Mr. Manion), who, I am sorry to observe, is not in his seat, made a very excellent speech some weeks ago. If I had any criticism to make of what he said—and of course I have no authority to lecture anyone—I would say that the severity of his language did not add anything to the strength of his argument. I think also he was a little careless with his figures, but I am not going to go into that just now. His speech was interesting. I was rather surprised that he should quote in support of his contentions such a man as President Coolidge, who, after all, is an American and not entirely unprejudiced. He also made some very interesting references to historical events; and his references to my hon. friend the Acting Minister of Finance (Mr. Robb) were not just as courteous as they might have been. I remember one interesting allusion he made to ancient history: he spoke of Nero fiddling while Rome burned, and he drew a comparison with the action of the government in that regard. I was almost sure when he did that that he was about to lead up to another interesting historical incident and make a comparison with that well known occasion when the Gaul was at the gates of Rome and the cackling of the geese saved the people of that city. He also criticized the lack of

unanimity on the part of hon. members on this side of the House. His remarks in that respect had reference chiefly, I think, to differences of opinion on this side with regard to the tariff and with regard to the principle of public ownership. He is quite right in that. There are members on this side who are protectionists; there are some—two or three, perhaps—who are free traders; there are others who believe in a tariff for revenue or, we will say, moderate protection. But the same thing exists among our friends diagonally opposite. I think I can remember last year the hon. member for Kent, N.B. (Mr. Doucet) moving a resolution with regard to higher tariffs. I think I can also remember that this year when the hon. member for Macleod (Mr. Coote) moved a resolution in favour of the reduction of the tariff on automobiles, the hon. member for Kent voted for that proposed reduction.

Mr. DOUCET: If the hon. gentleman will permit me, the amendment of last year declared for tariff consistency, fiscal stability—a consistently maintained tariff policy; and this year the resolution to which my hon. friend refers dealt with the reduction of a duty which is higher than that on any other article imported into this country.

Mr. EULER: I am not finding any particular fault with my hon. friend for voting either one way or the other. I am merely pointing out that it was a case of the pot calling the kettle black. We also had other members from the Maritime provinces, even a member of the former Union government—the hon. member for St. John and Albert (Mr. Baxter)—voting for a reduction in the tariff. So did the hon. member for York-Sunbury (Mr. Hanson) and the hon. member for Royal (Mr. Jones). I am not finding fault with them, but the fact remains that members of the House will vote according to their own interest, whether it be on the question of tariff or not; and occasionally they will vote against the attitude taken by their own leader.

I might make some reference also to the other question in respect to which hon. gentlemen opposite say we have been inconsistent, that of public ownership. Members on this side, I am sorry to say—a great majority of them, I believe—are opposed to public ownership, while some of them, including myself, are believers in the principle of public ownership. On the other side we have heard very little with regard to public ownership; so far as I can remember, only one hon. gentleman, the member for South York (Mr. Maclean) has this session said one word in favour of that principle, although scattered among the members of that party are those who in former days supported it very strongly.

We have the amendment now—and it has not been discussed to any considerable extent—for the reduction of the sales tax. In theory, Sir, I am in favour of the amendment. We also saw in the press before the session opened a suggestion on the part of the leader of the opposition that we should have a reduction in freight rates both east and west. The thing that I desire to point out in connection with both these suggestions is that both must mean a reduction in the revenues of the country, and I have heard no practical suggestion as to how those revenues are to be replaced.

The hon. member for York-Sunbury condemned such arrangements as the Crowsnest pass agreement. He stated,—he is not here and I shall not do him any injustice, but I think this is correct—that he was entirely opposed to any special agreements that would give preferences to one class of the people or to the people of one section of the country as against those of another. That is a very sound principle; but in the very same speech he also stated that it was necessary that the people of the Maritime provinces should receive special consideration so far as freight rates were concerned. I see no consistency in that attitude.

There are many things I should like to discuss, Mr. Speaker, but I shall deal only with the subjects which to me seem of greatest importance at this time. It is true that business stagnation exists in Canada. I do not believe it is more serious than it is in the United States, but I would like to deal briefly with what I consider to be the causes of that depression, and to suggest as far as possible some remedy. I would say that there are three chief causes: over-industrialization; lack of confidence on the part of business men—for reasons which I shall examine a little later—and last, and greatest of all, high taxation.

With regard to over-industrialization, I would say that during the prosperous years of the war, and later, in 1920, the manufacturers of this country—I am not blaming them for doing it—extended their businesses more than was warranted by the business that was offering in this country itself, and with taxation becoming high, costs became greater, and people not having the same purchasing power as they had before. These two are the causes of over-industrialization. We have factory plant in this country which is more

than sufficient to supply the needs of the Canadian people. Now if I am right in that statement, then it points clearly to the necessity of developing foreign markets, and I am glad to say that this government is doing something in that direction.

But, Sir, if foreign markets are to be developed they must be developed in a systematic way. I do not believe in paternalism as a principle of politics, but in my opinion the government, or the Department of Trade and Commerce, ought to have in every country where some trade may be looked for commercial agents to advance the business interests of this country.

Mr. FORKE: While I agree entirely with the remarks that are being made by the hon. member, would he kindly explain—I am asking just for information—how we are going to compete in foreign markets when we are continually being told that Canadian manufacturers are unable to compete in foreign markets owing to the low cost of production in these other countries?

Mr. EULER: The hon. gentleman is falling into this very common error. When we speak of foreign markets and low cost of production, we are not saying that that obtains in all countries of the world. There are certain countries in Europe to-day manufacturing certain lines of goods in which it is utterly impossible for Canadian manufacturers to compete at this time; but there are some countries in which we can sell things, as witness the proposed trade agreement with Australia, and the suggestion of the hon. member for Ottawa (Mr. Chevrier) that we should be able to do more business with South Africa.

Mr. FORKE: I want to put myself right. I do not believe in those arguments myself. I only put them up to you.

Mr. EULER: I have no fault to find with the hon. gentleman's objections to my argument.

Mr. FORKE: I do not mean your argument, but the argument that we cannot compete with other countries. I think we can, if we go about it right.

Mr. EULER: I would just put this up to my hon. friend—and I would not like him to think that I am in any sense an extremely high protectionist: I think he will admit that in some countries of Europe at least, and of Asia as well, the cost of labour is very much lower than it is in Canada or the United States. If wages are higher in the United States than in Canada, Canadians will naturally drift to the United States. I think that follows.

Mr. FORKE: If the cost of living in the United States is no higher.

Mr. EULER: Well, we will say that. I think the cost of living is practically the same in Canada as in the United States. Now, if wages are higher in the United States than in Canada, Canadians will naturally go to the United States. If wages in Canada are as high as they are in the States and if they are lower in Europe, I say it is very difficult for Canadians to compete with the low-paid labour of Europe. I did not intend, Mr. Speaker, to go into a lengthy dissertation on the tariff to-day at all.

Mr. STEVENS: The hon. gentleman stated that one of our difficulties in Canada was that we were over-industrialized. In view of the importation last year of $140,000,000 worth of iron and steel products, does he still contend that Canada is over-industrialized in that line?

Mr. EULER: I would not say that of iron and steel, no; my statement is made in an entirely general way. As for the United States, Mr. Speaker, I think it is high time indeed, both for commercial purposes and for the sake of our national self-respect, that we should appoint a representative at Washington. I remember very well that an appropriation for that purpose was made under the former government. No appointment ever was made by that government, and that neglect has been continued by this government. For my part, I cannot understand why there should be such a long delay when the desirability of such action is admitted on all sides. We may as well admit that our interests are inevitably bound up with those of the United States. The United States does not admit it, but she must ultimately realize that she cannot prosper permanently unless she obeys the well-known economic law that she cannot hope to sell if she does not buy. A well-known American economist has given it as his opinion that if we Canadians survive for another ten years, which, of course we will, the United States will have 135,000,000 of people, and she will then purchase all the foodstuffs that Canada can produce. We ought, I say, to put ourselves in a position to meet those conditions as they come, and one of the things we should do is to appoint a Canadian representative at Washington as a necessary step in that direction.

I spoke of lack of confidence. Our friends of the official opposition say that the tariff is not properly adjusted, and that the uncertainty as to its stability causes the waning of enterprise and a lack of confidence in every way. I think there may be some justification for that statement. My position on the tariff is, I think, pretty well known. It is the same as it was last year, it is the same as it was the year before, and it is exactly the same as it was when I entered this House some eight years ago. I am not going to review all that again; I shall content myself with saying that I favour such a tariff as will ensure that at least a fair share of the Canadian home market shall be preserved for Canadian workmen and Canadian industry. I voted against the budget last year, not because the reductions in the tariff were great or startling, not because any industry of my riding was seriously injured; but because I believed then as I believe now, that before changes in the tariff are made there should be the most careful investigation as to the effect of such changes. I urged then the appointment of a tariff board, not a partisan body of men but a body of men selected with one object—and only one object—in view, a body of men who have the ability to go into the business places of this country, with the power necessary to find out exactly the condition of those businesses, and to obtain knowledge and to bring information to this government and to parliament which will enable an intelligent revision of the tariff to be made.

Mr. HOEY: How would such a commission determine costs in other countries? The hon. gentleman may have read how the tariff commission of the United States attempted to ascertain costs in Germany and France, and how unsuccessful they were, and how they threw up their hands in despair at making the actual cost basis a factor in the tariff schedules.

Mr. EULER: Costs, of course, would be only one feature.

Mr. HOEY: But a very important feature.

Mr. EULER: If you want to search out the books of a company or find out the costs of any manufacturing enterprise, I do not think it would be very difficult for expert accountants to go to those places and find out exactly what the costs are.

Mr. HOEY: In foreign countries?

Mr. EULER: Not in foreign countries. There they would be entirely at the mercy of the people of that country.

Mr. HOEY: Then you have no comparison.

Mr. EULER: Under the former government, where the dumping clause was supposed to be applied on the basis of what goods cost in the United States, it was found impossible to enforce that clause because Canadian officials would not be permitted to go into United States factories and make investigations.

Mr. STEVENS: They do it now.

Mr. EULER: I think you would find a great deal of difficulty in sending any Canadian into a United States factory, a man who has no particular business there, and who does not represent Americans, and get them to give him free access to their books to ascertain anything he may choose to obtain.

Mr. STEVENS: The Customs Inspection department check up the cost of goods now in exactly that way.

Mr. EULER: I think all they check up is this: If they think an invoice of goods coming into Canada is too low, all they do is to go to Boston, New York or some other place of business and check up the prices named in that invoice with the regular prices at which these things are sold throughout that country.

Mr. ROBB. They find the fair market value.

Mr. EULER: Yes, the fair market value. I congratulate the Prime Minister and the government upon their decision to create such a board. We have had the statement of the minister that upon that board shall be certain experts from the department. I have no fault to find with that, but I should like to urge upon the government as strongly as I can, that upon that board there should be a preponderance of independent men chosen entirely for their fitness for the work to be done and clothed with ample power to do it properly.

Mr. HOEY: You will have to import them.

Mr. EULER: In that case we will put a tariff against them. Unless what I have suggested in connection with the tariff board be done such a board may very easily do more harm than good. On the other hand, if the personnel of that board is what it ought to be a great deal of good will come from it. I believe such a board will inspire a good deal of confidence because our businessmen will know that before changes in the tariff are made they will at least be given an opportunity to present their side of the case; and in that way—although not entirely, because I believe the responsibility for taxation and the making of tariffs must always remain with parliament and with the government—we may, to some extent at least, keep the tariff out of politics.

Now I am going to refer to another feature of the tariff with which probably many members will not agree. I took the opportunity last year—I think twice, both in the debate on the Speech from the Throne and in the debate on the budget—to refer to what is known as the British preference. Our friends angularly opposite are in favour of higher tariffs. I would say to them that nothing else would be more properly and more nearly to their hand than action to abolish the British preference. My reason for being opposed to the British preference rests entirely upon the commonsense basis that if protection—if you want to call it that—or a tariff for the maintenance of your industries is right and proper, I do not see why there should be any qualification at all one way or another. Tariffs are a matter of business and not of sentiment, and the sooner we proceed on that basis the better. For my part I see no reason why the British preference should be maintained if the tariff is to be used for the preservation of Canadian industry, in which I believe. If a Canadian industry is ruined because of competition from Britain I do not think it makes it any more bearable for the Canadian who is ruined if that result has been brought about by a British industry rather than by an American industry; and one of the defects, one of the abuses, in reference to that preference is that large quantities of goods come into this country under the preference as British goods that are not British goods at all. They merely come from other countries via Britain and get the benefit of the preference.

Mr. HOEY: More than we sell to them?

Mr. EULER: Possibly. I was going to say that if our friends opposite, the members of the official opposition, are sincere—and I am not questioning their sincerity with reference to the tariff—I would suggest that if the leader of the opposition will submit a resolution to this chamber for the cancellation of the preference I shall support it with my vote. If he does not I rather think he owes an explanation to Canadian industry.

Mr. MacLEAN (Prince): I think you are perfectly safe in making the suggestion.

Mr. EULER: Perhaps so. But, Mr. Speaker, while these things are factors in the business depression that exists, the greatest of all is the matter of high taxation to which I propose to devote my remarks now. We have the sales tax, the income tax, the stamp taxes, and the excise taxes of various kinds including the luxury tax. All these increased the cost of production and result in high prices, and so limit the power of the people to purchase. High taxation without a doubt is to-day the chief obstacle to national prosperity. And what, Mr. Speaker, is the remedy? Our friends opposite suggest economy and a higher tariff. Well, Sir, I am in favour of economy, of course, as is every other member of the House, and a reasonable degree of protection. The government has made some progress in the direction of economy, although that is denied. But economy in administration is admittedly very difficult. Still there may be room for improvement, and perhaps the one direction in which some improvement might yet be made is in that much abused arm of the service known as the civil service. Now, I do not believe that civil servants as individuals are overpaid; in fact I am certain that a good many of the men in the service are underpaid, and we very frequently lose them because we do not pay them as much as they are worth; but I have a suspicion or more than a suspicion that it is still true that the civil service is overmanned, and we have had statements of ministers of the crown to that effect. Consequently it occurs to me, and I have said this before, that if some survey were made of the other departments such as was made in the case of the Printing Bureau it might be found possible to effect some economies there. But when all is said and done there is still a large residue of expenditure which is uncontrollable. Our debt, exclusive of the railways, is nearly two and a half billions of dollars; I think we realize just a little more accurately what is meant by that when we say it is two thousand five hundred millions of dollars. Pensions are practically uncontrollable, and the cost of the ordinary administration of the country's affairs cannot be reduced below a certain minimum. The interest on the war debt is enormous, and while something can perhaps be done from time to time by way of careful refunding, as was done last year by the Acting Minister of Finance, that burden must remain heavy. We had a reference the other day to the waste that took place in connection with the war. I have nothing to say with regard to that, but after all I think our friends of the opposition should not be hypercritical in regard to war debt, and perhaps with regard to taxation. After all, our debt was created largely when our friends opposite were in office and the most of the responsibility is theirs. Wars are costly and their burdens continue to rest upon generations to come.

But there is one large item of our tax burden which in my opinion can be wiped out if the government has the inclination and

the courage to grapple with the problem. That item is the loss suffered each year by the National Railways. Now I have no criticism to make of the head of the National Railways; rather would I say a great deal that stands to his credit. He came to us less than three years ago. He found a series or group of railways more or less disorganized; and I think the House will admit that he has welded them into the very efficient system known to-day as the National Railway System. Those of you who travel over the line, and you all do, will admit freely that the service on the National to-day is not excelled in Canada and I think that means on the continent of North America. I had the pleasure of a trip over the National railways last fall from Toronto to Prince Rupert, and throughout the whole of that system the service was such as would make any Canadian proud.

Mr. PUTNAM: Should we be proud of that or should we economize?

Mr. EULER: I am proud of it. I am quite free to say that I am proud of the service that is being given by the National; and if Sir Hentry Thornton has done nothing else, he has created a spirit of esprit de corps among the employees of that road that is simply admirable and is not excelled by the employees of any other railway, and I should like to say to my hon. friend that that costs the country nothing.

Mr. PUTNAM: That has nothing to do with the question of unjustifiable luxury.

Mr. EULER: It also stands to the credit of the president of the road that in a year which was a bad year he has been able to cut expenditures in operating the road some $14,000,000, and has showed a net operating revenue of $17,000,000. Yet in the face of all that the loss each year is very high. The National railways owe to the government of Canada the sum of $560,000,000, not including interest on that debt for some years. The interest upon this sum last year was $31,000,000—I am giving only the millions—which has to come out of the pockets of the taxpayers of Canada. That sum of money forms part of the consolidated debt of Canada and it is taken care of in the annual estimates of the Acting Minister of Finance (Mr. Robb). In addition to this item of $31,000,000, we had to contribute on last year's account some $21,000,000 towards paying fixed charges on the bonds of the railways owned by the public, that is not by the government of Canada. That makes a total amount upon the taxpayers of Canada of the $31,000,000 plus the $21,000,000, or $52,000,000 each year.

Mr. MARLER: That is for interest?

Mr. EULER: Yes. I am not referring to the amounts put on capital expenditure which my hon. friend also treated as a loss and deficit. Upon that point I cannot agree with him.

Mr. MARLER: Temporarily.

Mr. EULER: Until the business pays and then it all becomes a surplus?

Mr. MARLER: No.

Mr. EULER: That is what the hon. member said the other day.

Mr. MARLER: Until it becomes active.

Mr. EULER: I believe we might carry out a plan by which, instead of having a loss of some $50,000,000 a year we could show a surplus of some $50,000,000. I am sure that will appeal to hon. members, and in a very few moments I desire to go into that a little more fully. That really is my reason for rising to speak to-day.

Mr. MARLER: A Daniel come to judgment!

Mr. EULER: Thank you. Before doing that, I should like, for the sake of discussing the matter intelligently, to give a number of essential figures in connection with the National railways. First, the investment in road and equipment is about $1,837,000,000. The total assets of the road amount to about $2,074,000,000.

Mr. FORKE: How are those assets figured?

Mr. EULER: That is what has been charged up as the cost. They may not be worth that now. Loans from the government, as I stated a few minutes ago, amount to $560,397,957.64. The interest on the loans is not included in that sum.

Mr. MARLER: There are other capital amounts besides that, not included in that amount.

Mr. EULER: Interest on loans by the government amounted to $31,000,000 last year. The debt to the public of Canada, not the government, but outside bond holders, many of whom the hon. member for South York (Mr. Maclean) says are foreigners, is $913,913,082.80. The fixed charges or interest on that debt amounts to $38,361,704.14. Taking

then fixed charges of $38,361,704.14 to the public and interest on the moneys owed by the railways to the government of $31,000,000, we have a total in round numbers of $69,000,000 of fixed charges on the National Railways. From this we deduct the operating revenue of $17,000,000, leaving, as I stated before, a net deficit of $52,000,000. I think it is only fair to say at this point that this is not fairly chargeable to public ownership of railways. I will read just an extract from the Toronto Globe which bears on that:

> A large part of it represents the mistakes and extravagances of governments and private owners and promoters in the past, and is not based on replacement values. It is announced that the management will submit before long a consistent statement of the case for writing down the capitalization. It will be a highly important question for parliament to decide, as the writing-down process would involve an increase of the national debt. The advantage of lower fixed charges would be that it would give the National Railways a definite financial objective which they might hope to reach within a few years.

I quite appreciate the statement made by the hon. member for Vancouver Centre (Mr. Stevens) some time ago that writing down of the capitalization of the National Railways is not going to wipe out the debt. The debt will remain, of course. That is somewhat elementary, I think, but this will give the National Railways, under public ownership, just the same chance as private ownership would have had if those roads had been organized under a new company and had been conducted as a private corporation.

Mr. MARLER: It means simply that you are transferring to consolidated fund so much interest that has to be paid, instead of charging it against the railways. The interest there is exactly the same.

Mr. EULER: I am not questioning that at all. We are not going to save any money by doing it, but we are going to give the principle of public ownership as fair a chance as these railways would have under private ownership. These things were piled up under private ownership, and if these railways had been taken over by a privately organized company, the hon. member knows that they would have been reorganized; that these amounts would have been written down, and that they would have gone on with a capitalization more like that of the Canadian Pacific, about which my hon. friend knows more than I do.

Mr. MARLER: I do not. We would be simply deluding ourselves into a false position. In other words, we are making a bookkeeping entry and putting on one side certain millions of dollars and imagining, for it is purely imagination, that as regards the railways we are paying less in fixed charges. That is the point I make.

Mr. EULER: I am quite willing to let the House judge what is desirable. I think the House understands what I mean.

Mr. MacLEAN (Prince): Will the hon. gentleman give the House the amount that is carried by private parties in bonds?

Mr. EULER: I gave that before.—$913,913,082.80.

Mr. MacLEAN (Prince): What is the interest paid on that?

Mr. EULER: It is $38,361,704.14.

Mr. MacLEAN (Prince): What percentage is that?

Mr. EULER: It varies. I cannot give that exactly. I spoke last year about the duplication and waste involved in the operation of these two great railway systems. I did so at that time as chairman of the select committee on estimates for the National Railways. In our report at that time appeared this paragraph:

> Your committee desires to direct the attention of the government to the apparent unnecessary competition and duplication of services between important centres by the Canadian National and Canadian Pacific railways and to suggest that the railways be invited to consider the whole question with a view to elimination, wherever possible, of unnecessary duplication and competition, so as to conserve the revenues and resources of both companies while still rendering adequate service to the public.

We have heard within the last few days—and I think it is gratifying to all members of the House—that the heads of the two national railways, together with their officials, are getting together with a view to eliminating, as far as possible, duplication of services. That is well worth while doing if we are going to continue as we are. But I think there is a better way, and the hon. member for South York and myself, in the debate on the ocean freight rates resolution, made reference to it. Last year I said—and I said it again in the course of that debate—that I had it on the highest possible authority that a saving of from $50,000,000 to $75,000,000 could be made each year if the two railways were amalgamated and welded into one system. I say now—and again I say this upon the highest possible authority—that if the two roads could be amalgamated, there could be saved the colossal sum of $100,000,000 a year. That is nothing less than a staggering statement.

Mr. McCREA: Which system would do the amalgamating?

Mr. EULER: I am coming to that. I know we are going to have a difference of opinion.

Mr. GRAHAM: That is the rock on which we split.

Mr. EULER: If that sum were saved each year to the people of Canada, it would pay the national debt in about twenty years.

Mr. CALDWELL: Does the hon. gentleman's calculation include the saving that would be made on the Canadian National Railways and Canadian Pacific, or on the Canadian National Railways alone?

Mr. EULER: The total saving effected by the amalgamation of the road. That would relieve the heavy burden of taxation. This was the suggestion I was going to make; if we combined the two roads it would immediately solve the ocean freight rate problem with which we are now wrestling. The president of the National Railways is reported in the paper—I am not permitted to make any reference to the committee—as stating that the savings would be enormous and would be sufficient not only to pay the operating expenses of the amalgamated roads, but the fixed charges on the debt to the public and in addition to that the interest on the money loaned by the Dominion of Canada to the National Railways. Lord Shaughnessy in his famous proposal figured out a saving of $56,000,000 by amalgamation, and he was calculating on the basis of a condition under which the Grand Trunk Railway would not be included. He was ready to cut the Grand Trunk adrift and let that road do the best it could for itself. The Grand Trunk was added to the National system after Lord Shaughnessy's plan was first submitted. I submit that this matter of the railways and the savings that could be effected is the most important question before parliament and the country to-day, barring none. I say that it is of tremendous importance. If $100,000,000 can be taken off our tax levy each year it will have an effect on the industry of the country that will be simply incalculable.

Mr. CALDWELL: Is my hon. friend not crediting the $100,000,000 to the reduction of taxes, when possibly half of it would be a saving to the Canadian Pacific Railway?

Mr. EULER: It depends on whether you are going to have the railways run by the Canadian Pacific Railway or the Canadian National after the amalgamation is effected.

[Mr. Euler.]

Mr. HUGHES: If the merger took place, would the service be as good?

Mr. EULER: I think so.

Mr. BROWN: You could apply to the railway commission to reduce the rates if the railways were merged, the same as you do now.

Mr. EULER: Yes. If parliament decided that it would sooner have the railway rates reduced than have the taxes reduced, that could be done according to its judgment.

Mr. STEVENS: My hon. friend's statement that $100,000,000 would be saved is naturally of vital interest to the country, but a statement made on the responsibility of the chairman of the committee ought to be accompanied in some way with an explanation of where the saving was to come from, and how the figure was arrived at. My hon. friend cannot furnish that.

Mr. EULER: My hon. friend does not expect to present to the House an itemized statement of where the savings could be effected.

Mr. STEVENS: I am not so unreasonable as to expect that an itemized statement should be given, but I suggest a statement from the chairman of the special railway committee that $100,000,000 going out to the country is of first class importance, and ought to be accompanied at least by some general intimation of how the figure is arrived at.

Mr. EULER: The general impression is—and I think it is evident to every hon. member who travels on the railways of Canada—that there is a tremendous degree of duplication of service, absolute waste, lines paralleling each other, duplicate stations and duplicate offices in almost every city in Canada. It seems to me that without any great explanation the principle of the thing must be apparent to everybody. As to the amount, I cannot give my hon. friend any information in detail, and I do not know whether those in authority would be prepared at the moment to give it in detail. But I would say that the men who are most concerned in the conduct of the National Railways and the Canadian Pacific Railway are agreed that a saving nearly as large as the figure I have mentioned can be made by a merging of the roads. The amount of $100,000,000 as a saving—and I expected to be asked my authority for that statement—is given to me by the highest authority in the land, or at least as high an authority as we have in this country.

Mr. FORKE: I would not like to throw cold water on such an alluring proposition as my hon. friend presents, but would my hon. friend see no danger, if this proposition were carried out, of the Dominion of Canada coming under the powers of a private corporation on the one side, or on the other side, of the whole thing being controlled from a political point of view? These are the things that are in my mind. Outside of that, I think the idea is a splendid one.

Mr. EULER: The thing I desire to bring before parliament is this: the saving would be $75,000,000 or $100,000,000. Parliament and the people of Canada would have to decide whether it is worth while to put all the railways of Canada under public control with the possible danger of political influence; or on the other hand to put all the railways of Canada under the control of the Canadian Pacific Railway, with all the danger of private monopoly, which I would not like for one moment to support.

In my opinion—and I may as well say it now—it would be in the interests of the Canadian people if these roads were combined under public ownership, so that the country would get the benefit of the saving made, and not the private corporation, which would enjoy a monopoly of the railway business in Canada. I know that this estimate of $100,000,000 sounds like an extreme statement, but I am not making it without reason, and if it is well founded, it transcends in importance all other matters before us at the present time, and I think it becomes the duty of the government to take some action.

Mr. BEAUBIEN: Is it not a fact that the hon. gentleman for Vancouver South (Mr. Ladner) made the statement the other day in the House that there were five transcontinental trains running between Montreal and Vancouver, and that each one of those trains cost the taxpayers or the people of the country $9,000,000.

Mr. EULER: I was not present when he made that statement, but I would say that there is a partial answer to his question as to how those savings could be effected.

Mr. STEVENS: My hon. friend is looking at me. I am not from Vancouver South, and I did not make any such statement.

Mr. EULER: I was not here when the statement was made. I assure hon. members that the people of Canada are beginning to take a very great interest in this matter, and I would urge it upon the consideration of the government. I am not trying to be dogmatic on this question. I have my own opinion with regard to what ought to be done, but I believe it becomes the duty of the government to at least make an investigation as to whether this statement of the savings which can be effected by the amalgamation is founded on fact or whether it is not.

Mr. DRUMMOND: In this saving of $100,000,000, does the hon. member take into consideration the amount of interest that would be assumed by buying out the Canadian Pacific Railway?

Mr. EULER: Certainly. Suppose for the sake of argument, the Canadian National took over the Canadian Pacific Railway, we must assume that the Canadian Pacific stockholders and bondholders would continue to receive the return on the investment.

Mr. DRUMMOND: And you would be assuming a very much greater liability than you have at the present time.

Mr. EULER: But look at the income. The saving is supposed to be $100,000,000 over and above what the two railways are now able to accomplish.

Mr. MacLEAN (Prince): How would the hon. member fix the dividends to the shareholders of the Canadian Pacific Railway?

Mr. EULER: I am afraid the hon. member is going into details which are rather premature.

Mr. GRAHAM: Any such amalgamation would have to be by the consent of the directors, and the shareholders, too, of the Canadian Pacific Railway.

Mr. EULER: Perhaps so; and I for one am inclined to believe that it might just be possible that the shareholders of the company would consent to an amalgamation.

Mr. GRAHAM: I am not questioning that at all.

Mr. EULER: My point is this, Mr. Speaker, that if the statement I have made be true, then it should be at least worth while for the government to take the initiative and make some investigation with regard to it, and then take such action as may seem suitable.

Mr. STEWART (Humboldt): Does the hon. member not fear that this estimate of saving $100,000,000 was based on the thought that when the competitive element was taken away it would be possible to reduce the service to the public not only to the point where duplication was cut out, but where the public would not care to stand for the reduced service?

Mr. EULER: I have absolutely no reason whatever to believe that that thought was in the minds of those who made that estimate. I would also add, though, that I believe it would be possible, if there were no competition, to cut out a great deal of the service that we are now receiving and that is entirely unnecessary.

Now, Sir, I realize there would be a decided difference of opinion in this House, and perhaps throughout the country, as to whether the combined systems should come under the control of the Canadian National Railways or of the Canadian Pacific Railway. In that connection I should like to correct an inference which might be drawn from a statement made by the Border Cities Star, which seems to be taking quite an interest in this question and which is urging very strongly that the railways be combined under Canadian Pacific management. The paper has spoken of the great economies that could be effected, and of the great waste that obtains just now, and it continues:

> There is only one way to meet it—the situation—and that is for the people of Canada to adopt the course that the president of their railway system has practically advised them to follow. The acquisition of the Canadian National Railways would be a tremendous advantage to the Canadian Pacific Railway.

I leave it right there, with this remark, that there is no ground for the inference that the president of the Canadian National Railways is in favour of combining the railways under the control of the Canadian Pacific Railway. Nothing he has said at any time, so far as I know, and nothing he has said upon which the articles in the Border Cities Star are based, would justify the paper in making that interpretation.

Now for my part, Mr. Speaker, I hold it unthinkable that a private corporation should have a national monopoly of a great public utility such as the railways of Canada. If there is to be a monopoly, it must be held by the people themselves. Some of my fellow-members on this side of the House sometimes express surprise that I should be in favour of public ownership. Well, I am from a city and from a part of Canada where public ownership has been made a great success. I might refer to the hydro system, which I have already done on other occasions, but I will confine myself to my own city of Kitchener. We have there under public control and public ownership our electric plant, our gas plant and our municipal railway. Never yet have the ratepayers of that city been called upon to pay one penny in taxes to carry on these businesses; never yet have they paid a cent in taxes to discharge the debentures as they fell due and the interest; never yet has the commission that manages those concerns found it necessary to do any refunding, and at the present moment, after some twenty years of operation with a five-cent street railway fare, we find the public utilities of Kitchener in this condition, that even with low rates for electric current, gas and street railway fares, they have built up a surplus of $1,000,000.

Mr. HUGHES: Did they reduce the capital expenditure as well?

Mr. EULER: As the debentures fell due the principal and interest were paid out of earnings, and in that way they have built up a surplus of $1,000,000.

Mr. DRUMMOND: If public ownership of hydro has been such a success in Ontario, will the hon. member explain why they have seen fit to advance the rates?

Mr. EULER: That does not necessarily say that public ownership is not a success. The probabilities are that if it were not publicly owned and operated the rates would have been advanced still more. In any case there are those who hold a theory, for I think it is only a theory, that a publicly owned and operated road is not so efficient as a privately managed one. That theory, Mr. Speaker, is in my opinion no longer tenable. We need only look to the conduct of the National Railways to-day. I can call no better witness than my hon. friend for George Etienne Cartier (Mr. Jacobs) who is antagonistic to public ownership and who the other day said on the floor of the House that the service on the National Railways is excellent, and he added that it was the best in the world. The National Railways are giving an excellent service, a service that is improving steadily, and no one of late has charged that politics is playing any part in the management.

Mr. BEAUBIEN: You cannot improve the service; it is the finest in the world.

Mr. EULER: I am glad my hon. friend agrees with me. The usual objections to government operation are, as I have said, that you do not get the same efficient service as under private operation. That, I think, has been disproved. The other objection to the amalgamation of the Canadian Pacific Railway with the Canadian National under government control is that it would cost a great deal of money to take over the Canadian Pacific Railway. I do not profess to have any particular financial ability like my hon. friend for St. Lawrence-St. George (Mr. Marler), but I would say that it would not require the expenditure of any money what-

ever to take over that system. I should think that the bondholders and stockholders of the Canadian Pacific Railway could be given securities in the National Railways and draw their dividends or their interest just as they are doing now. The hon. member for George Etienne Cartier was strongly opposed to the Canadian National Railways, and he advocated just as strongly that the road should be combined with its rival under Canadian Pacific ownership and management.

Some hon. MEMBERS: Hear, hear.

Mr. EULER: I would say to hon. gentlemen that at the time our friend made that speech he gave us a great deal of interesting information and afforded us some amusement, and he reminded me of this little story. An old Englishman was sitting in his cottage and was being belaboured by his loving spouse, but he took it with perfect equanimity. One of his friends happened to walk in and expressed his surprise that he could take such treatment so calmly. The old man replied, "It pleases she and it don't hurt I." I felt the same way about my hon. friend. We had a good deal of enjoyment listening to what he said and, after all, what he said did not hurt the National Railways at all. But, after so much publicity being given to what was said by that hon. gentleman, and also by my hon. friend for St. Lawrence-St. George, who also advocated the acceptance of something in line with the Shaughnessy plan, I think it would be well to make some reference to that plan. The hon. member for George Etienne Cartier admitted to the leader of the opposition the other day that the merger of the roads now under the National system was good; that to merge them was the only thing to do—although, mark you, at first he had been very strongly opposed to that course. Perhaps he will admit at a later stage that a similar merger of the Canadian Pacific with the National Railways under public ownership would also be the only thing to do.

But let me get on with the Shaughnessy plan. To my mind the Shaughnessy plan was a most excellent proposal,—for the Canadian Pacific. It proposed first of all that they keep out of the merger all their ocean steamship lines; keep out the express companies; keep out the hotels; keep out the lands and land contracts; keep out their railways in the United States; keep out their mining interests and certain other things. The Canadian Pacific Railway proper, then, was to take over our National system holus-bolus with the exception of the Grand Trunk, which came into our system afterwards. Now, what the country would get for this was the reasonable certainty, according to Lord Shaughnessy's own figures as taken from his proposal—and I think the right hon. leader of the opposition will know whether or not I am giving it correctly, because it was addressed to him—

Mr. MEIGHEN: There might be an inference in what the hon. member said that the plan involved subsequent acquisition of the Grand Trunk. It did not; the Grand Trunk was to remain as a separate road.

Mr. EULER: If my right hon. friend will search his memory I think he will find that Lord Shaughnessy's proposal was that the Grand Trunk should stay out and be allowed to shift for itself.

Mr. MEIGHEN: That is what I said.

Mr. EULER: That is correct; and I made reference to that before in my observations. But what the country would get would be a reasonable certainty of an annual loss of $55,000,000 under the Shaughnessy plan, and the loss of our railway besides. Let us see how it works out. First of all, the shareholders of the Canadian Pacific Railway Company were to be guaranteed fixed dividends forever by the government of Canada. The rate is not specified, but I presume it would not be less than seven per cent, which is what they are receiving now out of the railway proper.

Mr. MARLER: My hon. friend in his argument has already admitted that.

Mr. EULER: Exactly; I am explaining the purport of the agreement. First of all the Canadian Pacific shareholders would be guaranteed fixed dividends forever by the government of Canada. On the basis of the 1920 business—that was the year used by Lord Shaughnessy in his calculations—the combined systems would have a deficit of $80,000,000. Lord Shaughnessy thought, however, that the savings which could be effected by amalgamation—and perhaps this may have some force with the hon. member for Vancouver Centre—an amalgamation in which there would be no Grand Trunk railway, by the way, would reduce this deficit to $24,000,000. In other words, the saving would be $56,000,000—a very substantial sum—according to Lord Shaughnessy's calculation. These figures are based on the business of 1920, which, he said, was a bad year; a good year, he thought, might reduce the deficit to $11,000,000 or $12,000,000. But as he is definitely taking 1920 as a basis I think it is fair to adopt his estimate of $24,000,000. Now, Lord Shaughnessy was very careful not to say any-

where that his new company would pay the interest on the advances made by the government of Canada to the National railways, in principal some $560,000,000 in all, involving annual interest charges of $31,000,000. Thus we would continue to pay under his plan the annual interest charge of $31,000,000, plus the deficit of $24,000,000, or a total each year, as I said before, of $55,000,000. Is that an attractive proposal, Mr. Speaker—to continue to pay out of taxation $55,000,000 a year and to give away our railway besides?

Mr. MARLER: I think it is only fair that my hon. friend should point out that it is now over five years since this suggestion was made, and circumstances have altered considerably since that time.

Mr. EULER: I am quite willing to accept that for what it is worth, but I do not know just what value I can place upon it.

Mr. MARLER: And also that the figures in that plan were estimates; similarly are the present suggested figures estimates.

Mr. EULER: Certainly; that goes without saying. I have not given any hard and fast calculations; these are estimates—it is all we can possibly base our argument on.

Mr. MARLER: My hon. friend's hard and fast arguments are his own view of public ownership.

Mr. EULER: I am sorry, Sir; I had hoped to get through in not more than an hour, but as my hon. friend himself said once before, others are making a speech for me. We are actually doing just a little better than that now—and I would like hon. members of the House to note this: we are doing just a little better than we would do under the plan suggested by Lord Shaughnessy. We lose the $31,000,000 by way of interest on the moneys advanced to the National Railways, and this year we failed by some $21,000,000 to pay the fixed charges on the debt owing by the National Railways to the public, or a total loss of $52,000,000. That is what the railways are costing us this year as a loss; so I say we are actually $3,000,000 better off than we would be under the Shaughnessy plan, and we still have our railways and the control of them.

In addition to this—and I think this is of prime importance—the Canadian Pacific under the Shaughnessy plan, would get all the benefits of the savings effected by amalgamation, over and above the required $21,000,000 to pay the fixed charges on the debt owing to the public; which would amount to the trifling sum of from $60,000,000 to $75,000,000 a year. Mark you, the Shaughnessy plan also says that in addition to the fixed dividend which shall be guaranteed in perpetuity to the shareholders of the Canadian Pacific, if the profits of the combined system warrant it, the shareholders of the Canadian Pacific shall receive further dividends. There is nothing in his statement to suggest, I repeat, that the people of Canada shall have interest paid on the moneys advanced to the National Railways, or any profits that might accrue under an amalgamation with the Canadian Pacific to be carried on under Canadian Pacific control.

Now, Sir, I am almost through with what I had to say. I consider that the proposal of amalgation under the ownership of the Canadian Pacific Railway should not be considered at all. The Toronto Globe—and I do not always take the Toronto Globe for my guide—thinks it is hardly worth while discussing that proposal. The Canadian people, Sir, will never permit a monopoly of the railway business in Canada by any private company; if they must have a monopoly it must be a public monopoly. We are not going to place ourselves at the mercy of a private concern in the matter of the railway business of this country. It is said that the railway commission will protect us if the Canadian Pacific has a monopoly of the railway business of the country. Yes, the railway commission can control rates, but within the four corners of their right to operate, and entirely outside the practical powers of the railway commission, I contend there lies the whole field of service, and that service may be good, bad or indifferent. I leave it to the good judgment of the House whether any private corporation where there is no competition, no matter how good the intentions of the management may be, is not more apt to give indifferent service than anything else. Here is the difference in theory between the two plans: The privately owned business always has as its primary purpose the making of money, the making of profits, whereas a publicly owned business always has or ought to have in view the primary purpose of service to the public.

I believe the people of Canada would destroy any government that would dare to hand over the National Railways to a privately owned corporation. I believe they would wipe out the candidates of monopoly, although possibly some of my friends who come from the city of Montreal might escape; but I doubt very much whether the sober common sense of the French-Canadian people would

tolerate the suggestion that the railway business of Canada should come under the control of a private monopoly. Certainly from the Ottawa river west, and I think I know whereof I speak, not a baker's dozen would come back to parliament on that issue. I marvel, Sir, at the boldness of the man who made the Shaughnessy suggestion. It was not a compliment to the intelligence of the people of Canada or to the intelligence of parliament, and certainly not to the intelligence of the right hon. leader of the opposition (Mr. Meighen), who then was Prime Minister of this country, and who I am glad to say never apparently considered the proposal. I can only understand the acceptance of this plan by my able friend for St. Lawrence-St. George and my good friend for George Etienne Cartier on the assumption that they did not realize quite what was involved in that suggestion, or else they were so influenced by their antagonism to the principle of public ownership that they let their prejudices run away with their usual good judgment.

Mr. MARLER: Let me say quite clearly to my hon. friend from North Waterloo that I have not entirely accepted the Shaughnessy plan at all in any way.

Mr. EULER: You mentioned it.

Mr. MARLER: The Shaughnessy plan was to me a tentative proposal, nothing more or less. I have never analysed the figures of the Shaughnessy plan in any way, but what I say is this, that some plan should be devised and proposed to this country that will effect the savings that are necessary. If any other plan is as good as the Shaughnessy plan, I for one am quite prepared to accept it.

Mr. EULER: Always, I presume, if it be a plan for the Canadian Pacific Railway taking over the Canadian National Railways.

Mr. MARLER: Not at all. Let me correct my hon. friend there also. I am not at all wedded to the question of the Canadian Pacific Railway taking over the Canadian National Railways. I want to see the railway deficit stopped in this country, first of all.

Mr. EULER: I am very glad the hon. member and I are quite agreed on one point.

Mr. MARLER: My hon. friend is speaking like a partisan.

Mr. EULER: I will leave it to the judgment of the House as to who is the partisan when we come to the question of the railways.

Sir, the union of these systems under national ownership offers a good deal more than the Shaughnessy plan. It gives to the country the benefit of the savings effected, and not to the Canadian Pacific. When I remarked the other day that Sir Henry Thornton believed that union would result in the paying of all fixed charges, including the interest on the moneys advanced by the government of Canada to the railways, the hon. member for George Etienne Cartier rather ungraciously remarked that Sir Henry Thornton was a good promiser. I would just like to draw attention to this, that Lord Shaughnessy was also a promiser, and that the one promiser represented private interests, and the other promiser the Canadian people, and I would like to ask: Which one would the members of this House as the representatives of the Canadian people consider the more disinterested?

Now we have the three alternatives. We can continue as we are, run our roads in as close co-operation as possible with the Canadian Pacific Railway, making savings wherever we can, but running as two independent systems. I believe much can be done that way, and with a reasonably good year I believe that we will come very close to paying fixed charges to the public. If we continue in that way I believe that something should be done by way of writing down the capitalization of the National Railways so that they will be placed on some sort of basis that will enable them to go on as they would be able to do under private ownership.

Then we have the second plan—combine under Canadian Pacific Railway ownership. I am not going to discuss that any more, because I think it should not be very seriously discussed.

Third, combine the National Railways and the Canadian Pacific Railway into one great public-owned system. That in my opinion is the proper solution, a solution which seems perhaps impossible, may I say, because of its apparent magnitude or because men's minds have not learned to adjust themselves to so big an undertaking, but which, Mr. Speaker, in my opinion will be forced eventually by the logic of facts. If anyone had said ten years ago that five great railway systems in Canada would now be combined into what is known as the Canadian National Railways, he would have found very little credence with the Canadian public; but we have them combined into one system to-day.

Let me repeat, Sir, if $100,000,000 can be saved to this country by a union of the two great railway systems, it constitutes a challenge to parliament and to the government, and I believe the people of Canada will expect some sort of action, even if it be only investigation of what I say. I think it can in duty do

nothing less, and if it finds it true, its duty is so clear that the neglect of it, I think, would be inexcusable.

In conclusion, let me summarize what results we can expect if we grapple courageously with the suggestion to settle this question as it must one day be settled.

First, it will enable the government to reduce taxation by nearly one-third, or at least one-quarter.

It will restore confidence, and encourage the Canadian people to go ahead, knowing that light is breaking at last on our financial horizon.

It will stimulate trade. It will lower the cost of living. It will encourage enterprise and lead to the more rapid development of our natural resources. It will at once solve our ocean freight rates problem.

And finally, on it could be based a practical scheme for the extinction of our enormous public debt, to which may be attributed most of our difficulties.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. H. A. STEWART (Leeds): Mr. Speaker, like the hon. member for George Etienne Cartier (Mr. Jacobs) I very seldom take part in the debates in this House and therefore have no apology to offer for occupying a brief period of the time of hon. members this evening. The hon. gentleman in question mentioned a statement as to the cost of a sitting of the House, and if I remember correctly he said it was at the rate of about $18,000 per day. A statement somewhat similar to that was made by some hon. member during one of the previous sessions of parliament, and the Minister of Justice (Mr. Lapointe) last session made a statement which placed the matter right, and as it is more favourable to those who are rather inclined to indulge in long speeches I feel perhaps justified in giving his figures. He stated that the cost of a session of the House was about $55,000 per month, over and above the regular permanent charges which must be paid in any event. Figuring twenty working days to the month that would make the cost about $2,700 a day, very much smaller than the figure mentioned by the hon. member to whom I referred. So that I feel the situation in that regard is not as bad as it might be after all, and possibly I may be disposed to take a few minutes longer than if the cost were $18,000 a day as represented.

[Mr. Euler.]

Before proceeding with the matters that I intend to discuss I should like to refer briefly to the very interesting address of the hon. member for North Waterloo (Mr. Euler), who finished his remarks just before six o'clock. The hon. gentleman always has something interesting to say and speaks with a knowledge of his subject. To me the remarkable feature of his address to-day was the extent of his criticism of the government. He found fault with the taxes. He called some of them nuisance taxes, criticized the sales tax, thought the income tax should be lowered, and was not altogether complimentary in his references to the dealings of the government with the railway proposition. One would expect that after all this volume of criticism he would not be quite comfortable on that side of the House. His criticism covered many subjects and was of a wide range, but I notice that the hon. gentleman sat down without stating how he was going to vote in connection with this budget. One would scarcely expect, in view of the criticism indulged in, that he could possibly support the government on this budget; we will await with interest his action when the vote takes place.

The budget, of course, is the subject of discussion at the present time. There have been many attacks upon it, attacks from many angles, and few of the members seem to be able to understand it. Many confess that they are unable to do so; and it would appear that if the Acting Minister of Finance (Mr. Robb) had endeavoured to present a statement that was confusing and hard to understand he could not have possibly succeeded better than he has on this occasion. The leader of the Progressive party (Mr. Forke) says that he cannot understand the statement, and other members, as I have stated, take the same position. The distinguishing feature of this budget is that it lacks clarity and, worse still, lacks candour. The Acting Minister of Finance admits an increase in the public debt for the last fiscal year amounting to approximately $14,000,000. To arrive at this conclusion he adds to the estimated cash surplus of revenue, amounting to approximately $1,823,000, the sum of $4,000,000 due from Roumania and Greece for interest on certain loans, although this sum has not been paid and possibly may never be paid or received by the Dominion of Canada. Assuming, however, that payment will ultimately be made this item should be treated as an asset, and there is no justification whatever for its addition to the revenue pending actual payment. If this proper course had been adopted the increase

in the public debt for the last fiscal year would have been approximately $18,000,000, an increase which I think most hon. members admit would in itself be rather alarming in view of the high rate of taxation prevailing in this country particularly as compared with the rate prevailing in the United States. It must be remembered too that the $18,000,000 above mentioned does not include moneys borrowed for the Canadian National Railways, the repayment of which has been guaranteed by Canada. The amount thus provided for the last fiscal year is approximately $64,000,000. On this basis the total increase of public debt, including moneys provided for railways, is $82,000,000 and in addition to that we have $18,000,000 provided for the National Railways for branch lines. Therefore, if that is taken into consideration, as I submit it should be, the total increase in our national debt during the last fiscal year is approximately $100,000,000. As against the moneys advanced to the Canadian National Railways, there may fairly be set off the increase in capital assets. But as is admitted all around, that already these railways stand in our books at a very much larger figure than their real value and there is a contention from different parts of this House that the capitalization should be written down, very little comfort is derived from the mental process of endeavouring to estimate how much our roads have been increased in value by these expenditures. This government appears to have done its best to confuse the statement and conceal the facts; but an analysis of the figures forces any competent authority to a realization of the serious condition that confronts the Canadian people. The question is: How long can we afford to go on increasing our national indebtedness at the rate of approximately $100,000,000 a year, and how long will the Canadian people tolerate a government that carries on in this way?

What is the cause of the confusion on the part of members in this House as to the actual state of affairs in connection with these accounts? This may be found in a reading of the budget speeches of the Minister of Finance (Mr. Fielding) and comparing them with the speech made by the Acting Minister of Finance (Mr. Robb) in delivering his second budget. I wish to quote briefly from Hansard of the session of 1922, volume 3, pages 2106 and 2107, where the Minister of Finance made the following statement dealing with the public debt:

> I want to call attention now to the increase of our public debt. Against the gross debt are set off what are called the assets of the Dominion. In former years practically all our assets are treated as good. When the amount was not very great in proportion to our business, perhaps there was no need for any discrimination, but when these assets, under the operation of our railways, grew to very large figures, it became desirable or necessary that there should be discrimination. My predecessor in office, very properly I think, made that discrimination by dividing those assets into active and non-active. It makes no difference with regard to the general expenditure, but if only the good assets are set off against the gross debt we get a fairer statement of the real debt of the country. Now, we are continuing this method of treating the assets: we treat these railway moneys as loans. Perhaps there can be some just objection to that. The Grand Trunk and the Canadian Northern are now virtually owned by the Dominion of Canada, and when we advance money to them we are, in a sense, lending money to ourselves. When we represent these debts as assets, a keen critic might find some fault. But it may be that it will be necessary to continue that system; we are following out the accounts for 1922 in that way. There may be an advantage and a convenience in separating the railway operation from the rest of our expenditure. However, there is another view of the matter. We have a justification for charging to capital or to a special account some particular thing—the building of a railway for instance. Various classes of public expenditure having permanent results may properly be classified as assets, may properly be classified under capital account; but if from year to year we are to provide for the ordinary expenses of the railway; if we are to provide for the deficits, the difference between receipts and expenditure; if we are also to provide large sums for interest on the bonds and other securities of these so-called railway companies —if we are to do that unfailingly every year, with a reducing figure we may hope, it will be open to some to say with much justice, that this is no longer a special account but part of the ordinary expenditure of the country; and if so, that ordinary expenditure should be included before we undertake to declare a surplus. However, as I said a moment ago, there may be some advantage in keeping the accounts of the railways for the present as separate and apart from others. If we clearly and definitely understand the nature of the transaction, I suppose there may be no serious objection to it.

Then, dealing with loans, he said:

> During the year four Canadian government loans have been floated. Three of these have been in the names of the railway companies and one a direct government obligation. We still keep up the theory of corporations in regard to these railways; the railway loans are issued in the names of the railway companies, with guarantees by the government. As a matter of fact, the government to-day are both makers and endorsers of those securities; so that practically they are now government loans.

In 1923, the Minister of Finance, dealing with income and expenditure, made the following statement, as reported in Hansard, volume 3, page 2641:

> We turn now to the year 1922-1923 which closed not many days ago. We have not the complete accounts before us, but there is sufficient information to enable us practically to announce the result. Ordinary revenue amounted to $393,619,000. These are estimates as the figures are not absolutely final. Ordinary expenditure amounted to about $331,780,000. As between those two items, there was then a surplus of $61,839,000. Capital expenditure, however, represents $14,500,000; adjustment of war claims,

$6,700,000; cost of loan flotations, $3,050,000; these representing in all $24,250,000. There was thus a surplus over ordinary, capital and special expenditures, of $37,589,000. But again the railways have to be taken into account. We had to advance during that year $92,190,000 for railways, and $6,060,720 for the Canadian Government Merchant Marine, making in all for that charge, $98,250,720. This, of course, takes up all the surplus I have mentioned and leaves a large balance on the other side of the account. If we take everything into consideration for the year, the net result was that we added to the public debt in the year just closed $49,293,086. The receipt of something over $8,000,000 from the British government on exchange account helped us to keep down what otherwise would have been a larger addition to the public debt.

The point to which I wish to call the attention of the House in these two budget speeches of the Minister of Finance is that he dealt explicitly with loans to the Canadian National Railways and clearly stated that they must be taken into consideration in dealing with the national debt. He went almost so far as to say that they should be taken and included in the expenditure for the year. Just let us see how the Acting Minister of Finance (Mr. Robb) in his first budget speech departs from this practice which, I submit, is entirely sound. I am quoting from Hansard of 1924, volume 2, page 1214. In dealing with railway loans, the Acting Minister of Finance speaks as follows:

> I may say when loans are made by way of cash, under the arrangements made by the former Minister of Finance, they are treated as non-active assets and are, therefore, not taken into account when determining the net public debt. Moneys raised by way of guarantee, which places the government in the position of an endorser, do not presently affect the public debt in any way as they are indirect obligations.

I do not think that contention will commend itself to the best judgment of the members of this House, and it is quite in opposition and quite different from the position taken by the Acting Minister of Finance. I think it is absolutely unsound, and reminds one of the practice of our old friend Micawber, who gave a note and said the debt was paid, and that was the end of it. The hon. member for St. Lawrence-St. George (Mr. Marler) in dealing with this matter the other night also made it very clear in the course of his remarks that these guarantees were part of the national debt and must be taken into consideration in dealing with this question. At page 2335 of Hansard he says:

> That is not the point in question. The point in question is this, as to how much of those bonds emitted year after year, have to be added, using that argument, to the net consolidated debt or, if you put it in another way, to the combined debt of the country. In other words, hon. gentlemen have complained that in a certain year we paid out a great deal of money in cash on account of the railways and we charged that in the net consolidated account. Consequently, the deficit was very large.

[Mr. H. A. Stewart.]

Now, they say, you come along and say to us: We do not intend to pay out cash, but we intend to finance by way of bonds. Consequently your net deficit is very much less or you may have a surplus as the case may be. There is a good deal in that argument and it has to be fairly faced. The question of policy is one which does not make any difference one way or the other in the financial arrangements. Whether the railways are financed by way of cash or by way of bonds, it matters not, all the obligations of the railways are our debts and have to be taken into consideration in some way or another. If $20,000,000 is issued, guaranteed or unguaranteed, in any particular year, that is reflected in the debt of the country, perhaps not for book-keeping purposes in the consolidated debt, but in the combined debt of the country. We owe that money and we have to pay it. Of course, as against it, we have the assets, if any, purchased by the funds or proceeds of those particular bonds. Therefore, in the last analysis it does not make any difference whether we pay cash or issue bonds, for practical purposes we have to take into consideration the net result which is obtained.

That is a position which I submit, Mr. Speaker, is quite different from the position taken by the Acting Minister of Finance in his address. Nearly every speaker has spoken of the high taxation that prevails in Canada. I do not know that we always realize how high it really is, and we can only get at this by a comparison with taxation in other countries. We all admit it is too high, and that it should be reduced if possible. We are apt to think of England as a country in which the taxation is exceedingly high, and figures have been quoted in this connection; but if you take into consideration the taxation in the Dominion of Canada, including our federal, our provincial and our municipal taxation, we find that it is a little higher in Canada than it is in England. An authority dealing with this question quotes the taxation in England as $80, and in Canada our Dominion taxation amounts to $38. In the province of Ontario our provincial taxation is $13 and our school and municipal taxation $30, making a total of $81, just approximately $1 in excess of the taxation that exists in Great Britain.

Mr. ROBB: If my hon. friend is going to quote the taxation in Canada as against the taxation in England, it would be fairer if he would quote all the provinces, instead of picking out Ontario where the taxes are high.

Mr. STEWART (Leeds): I do not know of any province where the taxes are low.

Mr. ROBB: They are lower in Quebec.

Mr. STEWART (Leeds): I understand other provinces are higher than Ontario.

Mr. ROBB: Not Quebec.

Mr. STEWART (Leeds): British Columbia is higher.

Mr. ROBB: Yes.

Mr. STEWART (Leeds): I do not know about Quebec. Perhaps they have ways of getting revenue which the other provinces have not. We may overtake them after a little while. The discouraging feature of it is that while the taxation is high in Canada, it is getting lower in other countries, and we are not able to reduce our taxation. Australia, New Zealand, the United States and Great Britain are all able to reduce their rate of taxation. Canada on the other hand is not able to do so and we are going further behind every year. Let me quote a statement made by President Coolidge, which I think is just as applicable to Canada as to the United States. He said:

> All experience shows that a larger amount of money can be collected from large incomes at a moderate rate than at a high rate. When the rate is too high large incomes disappear, leaving all the burden of taxes on the wage earners, and people of small means.

Then the Prime Minister of Australia says—and I think this is just as applicable to Canada as it is to that country—

> I think all students of economics are agreed that nothing curtails development, hampers trade and industry and reduces the standard of living of the people more than crippling taxation. In comparison with other countries of the world our taxation is not excessive but having regard to our particular circumstances, it is having a disastrous effect. We are a young country, with illimitable natural resources, but no great accumulated wealth. A burden which could lightly be borne by an old country, with its great capital resources, is one which might strangle the future development of a young nation.

These are, I submit, particularly applicable to Canada. We all realize that to-day the greatest competitor of Canada is the United States, situated as it is just across the line. The same language is spoken in both countries. The difficulty of transferring individuals or money from one country to the other is not great, and unfortunately we find that the transfer of people is very excessive, and there is no real sign of an abatement. On different occasions in this House I advocated the wisdom and the necessity of a reduction in income tax and I wish now to give a comparison of the rate of income tax in the United States and in Canada.

Income married man	Canada	United States
$ 3,000	$ 40	$ 7 50
4,000	80	22 50
5,000	126	37 50
6,000	117 50	57 50
10,000	619 50	207 50
20,000	2,089 50	1,017 50

I do not need to pursue this table any further to show the great discrepancy between the income tax levied in the two countries and the immense advantage that capital enjoys in the United States as compared with Canada. I sincerely hope that the government will find some way to meet the many demands that come from all parts of this House for a reduction in the scale of income tax.

When we come to the tariff we at once get on controversial ground. We have had a good many debates on the subject, even since the introduction of this budget, and no subject has been the cause of more prolonged discussions during the last quarter of a century than this same question. I do not, however propose to deal with it exhaustively to-night; I hope another opportunity will be presented when the resolution standing in the name of my leader comes up for discussion to go into the subject more fully. Let me briefly review the record of the government upon this important question. The government was elected upon a platform of a downward revision of the tariff; that was clearly set forth at the convention of the Liberal party in 1919 and was enunciated in this House by the Prime Minister when leader of the opposition and by all of his supporters during the last election campaign. When the government came into office their first budget showed a slight reduction in the tariff, so slight that it was entirely offset by an increase in the sales tax. Recognizing that this did not in any way amount to a fulfilment of their pre-election pledges, they told us to be patient, that this was a beginning, that it was a step in the right direction—"Wait until you see us next year." Next year the Minister of Finance (Mr. Fielding), to the surprise of all, announced that we must have tariff stability, that it would not be right or proper to be always tinkering with the tariff, particularly as our tariff was only a moderate one anyway. I commend his statement to those hon. members who are accustomed to speak of our tariff as high. It is not a high tariff; it is a low tariff compared with the tariff of other countries, particularly since the war. In the third session of this parliament, notwithstanding that announcement by the Minister of Finance, the budget contained considerable reductions in the tariff, reductions which disturbed industry and alarmed capital, and resulted in no corresponding advantage; in fact it would be hard to imagine any advantage that could compensate for the injuries caused by these reductions. We were told that the government were carrying out their programme, which they would persist in until finally we had that all-round downward revision which had been promised in

their platform. Shortly before the opening of this session the Prime Minister, in the course of a speech in Toronto, announced that there would be a pause in the downward revision, that after all there would be no serious tariff changes in the next budget. What do we find to-day? In this, the fourth budget of the government, instead of carrying out the earlier programme of a downward revision, we find there is an increase in the tariff on coal, and we have a sort of promise—for what it may be worth—that a tariff board is to be constituted.

The member for Springfield (Mr. Hoey), in dealing with this proposed tariff board, intimated that he thought it was really something that would enable the government to avoid responsibility, a sort of smoke screen behind which they could hide for protection. The proposition is so hazy, so indefinite, and the government have so frequently resorted to royal commissions of one kind and another to escape responsibility upon every vital issue that has come up, that I do not wonder at the member for Springfield looking upon this tariff board as a similar device. I think it would be possible to erect a commission that would really be helpful to the government and to all concerned in tariff matters; but this proposition is so vague, there is so little detail presented, that we are unable to judge whether such a board would be of any real service or not. I suggest, Mr. Speaker, that this proposal is put forward on the eve of a general election to enable the government to escape from the difficulty in which they find themselves. Is it not intended to make the tariff issue a free for all, to enable their candidates to preach high protection where it suits, to preach low tariff where it suits, to preach tariff for revenue where it suits —in short to suit the tariff policy of the government to the particular constituency, so that some of their candidates may pose as supporters of a tariff for revenue only, others as protectionists, and still others as free traders—ready to ring "the death knell of protection?" I submit that the proposal is open to this interpretation in view of the action of the government on this vital issue. But, Mr. Speaker, these tactics will not save the government. The Canadian people have been waiting for some clear, clean cut pronouncement of policy on this important question, and they are not going to be satisfied with vague and indefinite promises and platforms by those who in the past have failed to redeem their pre-election pledges.

As was pointed out by the member for Lincoln (Mr. Chaplin), tariff reductions resulted disastrously to Canada in connection with the French treaty. He showed that in ten months of the last fiscal year Canada lost in tariff duties and excise duties—lowered because of the French treaty—no less than $1,600,000. What we need at the present time is tariff stability, something like continuity of tariff policy. The hon. gentleman also pointed out that this reduction was not upon the necessaries of life, but upon luxuries, of which he gave this list: Brandy, non-sparkling wines, silk fabrics, ribbons, silk stockings, perfumery, soap, jewelry and other articles of a similar character. The fact is, Mr. Speaker, that upon this vital question of the tariff the government has no policy, no programme except a sessional programme—whatever is necessary to get through the session from year to year.

Now I come to the question of railways. I do not propose to deal with that subject at any considerable length, as we shall have other opportunities for discussing it more fully. The member for North Waterloo went into the question exhaustively this afternoon, and one would think his address would either persuade or provoke the government into announcing some sort of policy that would put an end to the extravagant expenditure and waste of duplication that is taking place on these two railway systems in Canada. I have before me a portion of the statement of the Canadian National Railways for the last year. We find that their operating revenues decreased by $17,500,000, in round figures, and their operating expenses decreased by $14,300,000, in round figures. There was a net decrease of revenue of $3,186,000 odd. It is interesting to look at the regions of these railways which yielded a deficit and those which produced a profit, and I sincerely hope that our friends to our left will give serious attention to this phase of the question and consider it in connection with their claim for continued lower rates in the western provinces. I will quote the figures:

	Operating Revenue	Operating Expense	Surplus	Deficit
Central region..	$114,564,818	$98,131,371	$16,433,446	
United States lines..	34,363,689	28,883,527	5,480,162	
Western region..	65,938,275	67,062,628	.....	$1,124,353
Atlantic region..	20,721,399	24,266,403	.....	3,545,004

So that two of the regions showed a surplus, but that surplus is reduced by the deficits incurred in the other two regions. That is interesting and illuminating in connection

with the present muddle in connection with the railway rate question in the western provinces, arising out of the Crowsnest pass agreement. We had hoped that the government would bring down before this time its policy upon this important question. Surely the time has come when this agreement, which operates in such a way as to work a serious discrimination, should be terminated and the whole matter turned over to the railway commission for the framing of a fair and proper system of railway rates, based on such instructions as may be given it in any policy laid down by this parliament.

The two matters that call for action at the present time are the abolition of excessive and extravagant expenditures in a very high class of service, and the elimination of overlapping and duplication of the two systems. If a conference between the heads of these railways fails to bring about the desired result, then I submit the matter should be sent to the railway commission and if necessary the Railway Act should be amended to enable the commission, upon application of either of the railway companies, of the Minister of Railways, or of the Governor in Council, to deal with this matter and to make such order as will bring about an elimination of this needless competition.

Another matter which I desire to deal with very briefly is that of hydro electric power, and my reference to it is suggested by the imposition of an export duty on power. Hydro electric power is the most potent attraction for industry and development on the face of the globe to-day, and the province of Ontario is more interested in this than in any other future or possible development. It is an asset of almost inestimable value to Canada, and particularly to central Canada, because of the use of a vast quantity of coal and the extent to which electricity is taking the place of coal for power purposes and domestic use, both urban and rural. The development of hydro electric power, the extent of its use, and its successful transmission for long distances, is one of the remarkable developments of the last quarter of a century. A few years ago there was considerable anxiety with regard to the question whether a sale could be found for the large volume of power the development of which had been undertaken and was assured. Any fears in this direction have been entirely dispelled by the constantly increasing use of electricity for so many purposes, and the difficulty that now presents itself is to meet the demand, which has overtaken and overrun the supply. If there is any national asset which with peculiar advantage may be retained and developed for the Canadian people, it is hydro electric power.

The passing of an order in council under the provisions of the Electricity and Fluid Exportation Act imposing an export duty of $1.95 per horse power per year raises the question as to what our policy should be. On a previous occasion I pointed out to this House the importance of this matter and urged that hydro electric power should not be exported but should be retained for the use of our people, the development of our natural resources, and industrial enterprise. At that time I was speaking with particular reference to the proposed development on the St. Lawrence, and urged that this government approve the plans filed by the Hydro Electric Power Commission of Ontario and allow the province to proceed at once with this new development to furnish power to supply a shortage which already existed and to meet the demands upon the Ontario system. I now wish to repeat that request and to condemn the imposition of an export duty. We should not, Mr. Speaker, export our power at all If export is now allowed difficulties will develop when we find it necessary to discontinue the export. Contracts will have been made and vested rights acquired, and many objections will be urged against the cancellation of export licenses.

Our experience in connection with the diversion of water by the Chicago drainage canal, made without permission or license, has been very unfortunate and has led to years of expensive controversy between Canada and the United States. A severe lowering of the level of our lakes and harbours has taken place because of this unauthorized diversion, with millions of dollars of consequent loss to shippers and a large expenditure of public money in deepening the channels of navigation and our harbours. The end is not yet. We must wait for years before conditions become normal, and in the meantime make additional large expenditures of public money. The complications that are sure to develop in the export of hydro electric power are likely to cause a situation equally serious and difficult of adjustment. Let us take warning from our past experience and avoid future difficulty by preserving this asset intact for the benefit of Canadian agriculture, Canadian industry, Canadian labour and Canadian railways.

A similar policy should be adopted in connection with our pulpwood, either by the imposition of an embargo, or perhaps better still by a good stiff export duty, increasing

from year to year. And the same with our asbestos and our mineral products.

We have heard a great deal, Mr. Speaker, about conditions in Canada. We have heard it urged by some that conditions are not satisfactory, that we are not prospering. Others have controverted that and said that we are doing pretty well, after all. Well, you can imagine the effect that a two-hour address by the Minister of Labour (Mr. Murdock) would have on a man who is out of work and seeking employment. You can understand how far his address would go towards giving a man in those circumstances satisfaction.

What is really wrong with Canada at the present time, because I think we all admit that conditions are not as they should be? What is really wrong with us, after all? We are suffering from dislocation of business and general confusion following the war. For this the government is not to be held entirely responsible, but the government must be held responsible for its failure to take such action as is best calculated to overcome these handicaps. Canada is debilitated, run down, weak hearted, because of her repeated overdoses of tariff reduction. We need the stimulus that has been adopted by nearly every other civilized nation since the war, namely, the adoption of a policy of preserving the home market for our own population. Canada stands alone as the one nation adopting the opposite course of opening her markets to foreign competition from highly protected countries, from whose markets we are excluded. It will not be a cure for all our troubles and all our difficulties, but it is a first step necessary to restore confidence and give employment, and stop the exodus of our best workmen and young men from Canada. What does Canada really need at the present time? I have a few headings here which I think will suggest a good deal to the hon. members of this House.

First, we need thrift on the part of the Canadian people. Second, we need economy by all governments, federal, provincial and municipal. Third, we need the adoption of a proper tariff policy and stabilization of our tariff. Fourth, we need readjustment of railway rates and removal of duplication in our railway services. Fifth, we need a readjustment of taxation, particularly income and sales taxes.

Now with regard to the first item, thrift. A great many people in Canada are suffering to-day because of extravagance and unnecessary expenditure. I am afraid the Canadian people have to a large extent forgotten how to be thrifty as our ancestors were. The people of the older countries, particularly Scotland, knew how to be thrifty, and they practised thrift to their own good and to the national advantage. Thrift keeps people out of debt; it makes them independent; it gives them confidence and courage; it enables them to meet unexpected reverses. Economy on the part of governments is necessary. Governments, just like the people, have lost perhaps a sense of economy in large measure. In the old days the idea was that to be popular a government must be a spending government, but Mr. Speaker, for the next few years the government that will make good with the Canadian people will not be a spending government, but a government that practises economy, a government that sets aside all unnecessary public expenditure and that calls upon those who are demanding it to wait until we are in a better condition. This government pretends that it is practising economy. It has not succeeded in any large measure. I think when you look at the large number of commissions it has appointed, you will find that there is a failure to practise economy. What about the pulpwood commission that cost Canada $75,000, and that has enabled the government to dodge this question and that brought about no practical result? What about the grain commission that cost us $170,000? What about the abortive lake freights investigation that cost $41,000? What about the ocean rates investigation by Mr. Preston, which report has finally been discarded and a contract made entirely independent of it? What about the purchase of the Union club for $2,000,000? What about the purchase of the Scribe hotel for $3,000,000? What about the raising of the Auditor General's salary from $6,500 to $15,000? And so on with a large number of other items I could mention. When the supplementary estimates come down, if, as last year, they disclose a large expenditure on public works, we shall find there very little evidence of economy on the part of this government.

I spoke of the adoption of a proper tariff policy for this country, a tariff policy that keeps our workmen at home, and that preserves our home market for our own farmers and our own people. I have gone into the question of the railway rates and the readjustment of taxation.

The government claims that we are prosperous in Canada. The Prime Minister spoke about two hours quoting statistics, and I think he must have been convinced that he had failed to satisfy the members of this House and the people of Canada because the Minister of Labour spent another two hours

9 p.m.

endeavouring to accomplish the same result. I would point out, Mr. Speaker, to this government some of the things that I think most clearly indicate a lack of prosperity in Canada. First, our falling revenue. There has been a decrease in the revenue as compared with last year of approximately $52,000,000, partly due, undoubtedly, to a reduction in the sales tax and the lowering of duties. The Acting Minister of Finance last year estimated that our loss of revenue in this direction would amount to about $24,000,000, but it is double that amount showing that there is a falling off in the volume of business from which the revenues of this country are to be derived. There is a decrease in the amount received from income tax in 1922 as compared with 1924 of about 31 per cent. There is a decrease in the gross railway earnings for 1923-24 of the two national systems. In the case of the Canadian Pacific the decrease is about $14,000,000, and in the case of the Canadian National Railways about $17,000,000. Is there any evidence of prosperity in these decreases? Then there is a continued exodus to the United States annually of at least 150,000 of our best people, of which number only about one in four return.

These, I submit, Mr. Speaker are facts which show that Canada is not prospering as we would like it to prosper, but that on the contrary it is going in an opposite direction. Prosperity is its own best witness, and when it comes to Canada all the Canadian people will recognize it and gladly welcome it. We shall not require long speeches by ministers of the crown to let us know when it is here. Prosperity will not come under an administration such as we have had for the last three years under the present government. Its policy has no stability upon any vital issue, particularly upon the tariff. The government's policy has been sessional, it has gone forward and then backward; it has stood still; it has sidestepped, wobbled, and pussyfooted until it has become dazed and confused, and does not know in which direction to move. It has introduced anti-dumping legislation, and then has itself dumped its own legislation. But the great dumping act will take place at the next election when the Canadian people dump this government. Some people will vote against it because it has not fulfilled its pledges; others will vote against it because it has tinkered with the tariff—sometimes raising it, sometimes lowering it, sometimes pausing in its programme of ringing the death knell of protection, and now proposing a commission behind which to take refuge for at least another session; others will vote against it because it has muddled our finances and increased our taxes and public debt; workmen will vote against it because many of their number are out of work and others have been forced to emigrate to the United States to secure employment; capital will vote against it because it has destroyed confidence; farmers will vote against it because it has refused their reasonable request for a fair measure of protection against the large volume of products of the United States, and because they are in a large measure losing their home market. The government's sole desire has been to retain power at the expense of principle. In its confusion it does not know what to do, how to lead. Prosperity will come in Canada when we adopt a sane, stable tariff policy that will protect agriculture, labour, industry and capital, and will give to the hundreds of thousands of Canadian workmen employment in Canada instead of in the United States. Prosperity will come when we adopt a policy that will preserve our forests and our resources of field, mine and water-power for the benefit of Canadians and those who may desire to become Canadians. This policy will solve our immigration problem by retaining our own people and attracting desirable immigrants. By doing this and providing additional freight for our railways deficits will disappear, and our burden of taxation will be lightened. The Canadian people are longing for the adoption of this policy, and realize that they must look not to the present government but to a new government with courage, with capacity and with determination to face the present difficult situation fairly and squarely.

Mr. PUTNAM: I understood from the hon. gentleman's remarks that he conceived that the Canadian people at the last general election had voted for a downward trend in the tariff; is that his view?

Mr. STEWART (Leeds): I did not say that. I said that the government had promised a downward revision of the tariff, and I added that it had not fulfilled its pledge. I want to say further that not only did the government appeal for votes on a downward revision of the tariff, but there are hon. gentlemen sitting on the government side because they ran on a policy of a higher tariff—it was a case of one policy here and another policy there; anything at all in order that they might be elected.

Mr. PUTNAM: The hon. gentleman distinctly and in terms said that the government was elected on the platform of a downward tariff.

Some hon. MEMBERS: Order.

Mr. STEWART (Leeds): I said the government secured votes on that issue and undoubtedly it did secure some.

Mr. PUTNAM: You said it was elected on that platform.

Mr. STEWART (Leeds): It was elected on anything and everything.

Mr. PUTNAM: You have changed what you said.

Mr. STEWART (Leeds): It was elected on inconsistent promises—promises here and promises there; high tariff and low tariff, free trade, a tariff for revenue, anything under heaven to get votes. The hon. gentleman knows that.

Mr. PUTNAM: I must thank you for your frank answer.

Mr. STEWART (Leeds): When interrupted I was just about to conclude. I was saying that what we needed in Canada was a sane, stable tariff—a tariff that protected industry, that protected capital, that protected labour, and that preserved our natural resources and developed them up to the last point for the Canadian people.

Mr. PUTNAM: How?

Mr. STEWART (Leeds): By using them at home and not sending the raw material to the United States as is the case now; by keeping the home market for the Canadian farmer, by keeping out the many million dollars' worth of farm products that are coming into this country—

Mr. PUTNAM: How high would you go?

Mr. STEWART (Leeds): —just in the same way as the government is protecting the coal industry in the Maritime provinces and for which policy I presume the hon. gentleman is going to vote in connection with this budget. Such a policy, Mr. Speaker, is outlined in the resolution of the right hon. leader of the opposition and which I hope will be discussed at length before the end of this session.

I am convinced, Mr. Speaker, that the budget proposals do not meet the present requirements of Canada, or promise any relief from our present taxation; that the financial statement presented is confusing and misleading; that our debt is increasing altogether too rapidly; and for these reasons I intend to support the amendment of the hon. member for West York (Sir Henry Drayton).

Mr. T. H. McCONICA (Battleford): Mr. Speaker, the first matter that naturally presents itself in this discussion is the amendment by the hon. member for West York (Sir Henry Drayton). That amendment recites that conditions in Canada demand a reduction of taxation, especially of the sales tax, and deplores the fact that the financial statement does not show the economy necessary to enable the government to do this. I apprehend that we are all agreed that a reduction of taxation is desirable, that it is a "consummation devoutly to be wished"; on this point we are all in accord. While this is true, Mr. Speaker, I have a theory that the Canadian taxpayer gets more value for the dollar he pays the tax gatherer than for any other dollar that passes through his hands. I believe that is true. I believe that he gets the most substantial value—in the way of items that are inestimable and beyond price—for the money he pays the tax gatherer. The great burden of taxation is represented in the amount paid for the war debt, for the expenses incidental to that great struggle. When we consider the scope of the catastrophe which we escaped can we rightly estimate what that victory meant to us? Can we, in any way, conceive what would have been the disaster if the victory had gone to the other side and Canada to-day was under the German flag, or the heel of the military despot was on our necks and we were paying reparations beyond all measure while our own obligations were postponed? No, we should pay that tax and pay it thankfully that we had escaped the disaster that threatened us. Do we begrudge the money we pay our wounded soldiers? I think not. I think that tax is a sacred duty and that we pay it willingly. We are told that we are burdened with our railroad deficits, and that is true. We are told that our railroads are overbuilt. We probably do not need them all at the present time; but the time was when these railroads were all needed, when every acre of land that they developed and brought under cultivation was required. During the war we saw long trains sweeping across the prairies and over the mountains loaded with our soldiers, with workmen from China and the Orient, with supplies gathered from all quarters of the earth, with the golden stream that flowed from the prairie provinces

over the prairies across the mountains and over the sea to our soldiers and our allies. Those railways were absolutely necessary; we needed them badly in those dark days, and we could not, in all probability, have succeeded without them. I still think there was something almost providential in the fact that they were built and that the land in the west was developed as it was. No, we needed those railroads then and our railway situation to-day is improving. The condition is far better to-day than it was when I came to this parliament. We are gradually evolving towards the light. I am satisfied that some plan will be arrived at by which the deficit will be met, it may be by the plan of the hon. member for North Waterloo (Mr. Euler), or that of the venerable Nestor of the House (Mr. Maclean), or that of the hon. member for Leeds (Mr. Stewart). The day will come and it is not far distant when we shall meet that deficit. The time will come, in my opinion, very soon when we shall remember those dark days and the memory will be a pleasure to us.

Then we have the tax for the ordinary expenses of the government, a comparatively small portion of our expenditure, not very much more than we spent prior to the war. We have a list of the public utilities and public services rendered in our estimates. We go over them carefully; we look at them individually, and we decide that each one is worth more to the taxpayer than it is costing him; that it would be a distinct loss to the country to discontinue them. The time may come when it will be necessary to discontinue some; but let us remember that Canada is a going concern and that we must not curtail those things the curtailmennt of which will inflict a loss beyond the loss we are suffering in the taxes we are paying. We examine these estimates fairly carefully. It is charged that there is great waste. I do not see just exactly where it is. We look over the estimates; we decide the purpose for which the money shall be expended; we decide the amount that is to be spent, and if there is profligate and extravagant waste, we, as members of this parliament, are responsible for it. We cannot hide behind the skirts of the government. Every man here is responsible if there is wild extravagance in the expenditure for the current demands of the government. I do not think there is such extravagance. It would be a marvel if some money did not get away; but upon the whole, considering the magnitude of the enterprise I am of opinion that it is not very good business to be trying to convince the people that they are being unmercifully taxed and that money is being recklessly squandered. I do not think that is a very patriotic thing to do, and I do not believe it should be done. The people are meeting their obligations manfully. They know they must pay heavy taxes; they realize the condition of the country, and they are meeting their taxes with little grumbling. We hear more of it in this House than we hear anywhere else. More fuss is made in one day here about taxes than in Saskatchewan in a year, and I do not think it is patriotic to perpetuate this sort of propaganda.

But our friends to the right tell us that a reduction of taxation is desirable, and we agree with them. How do they propose to bring this about? Take a dollar off the sales tax and add four dollars to the indirect taxation! Take a penny off a man's tax bill and add a pound to the cost of his coat, for it takes four dollars paid by the consumer to put one dollar into the treasury. If we take a dollar off the sales tax, we must make it up by the tariff, and we pay four dollars to make up the deficit. That is not the kind of taxation relief that the country needs, and I do not believe the taxpayers are looking for that sort of benefit. This is like the relief which the vulture gives to the lamb when he covers and devours it. Four dollars on for one taken off! That is the philosophy of our protectionist friends.

To what end is this to be done. In order that we may keep our manufacturers busy. What is the trouble with our manufacturing enterprises to-day? Is it that the home market has gone? Why, our imports fell off by the million last year. If there is any market here, we have it for our manufactures. The trouble with the protective proposition is that the thing has undermined itself. It has sapped the purchasing power of the country until our workmen are living from hand to mouth in rented houses, our salaried men are just able to live, our farmers are working on mortgaged farms with impaired and worn out equipment, and there is no purchasing power. You may galvanize it with all the high protection imaginable, and you cannot sell a single dollar's worth of goods more than you are selling to-day. The trouble is not that our factories cannot manufacture under the present tariff. The only trouble is that they cannot sell. They tell us that we are over-industrialized. I suspect we are. We are told also that money is not being invested in manufacturing enterprises. Certainly it is not; it was not before the change in the tariff. It has not been invested in manufacturing enterprises since the war, and there is no call for it.

I was rather interested in the pathetic story told by the hon. member for Vancouver Centre (Mr. Stevens) in his speech on the Address. He told us that there were large amounts of iron ore within half a day's ride of Vancouver, and large quantities of splendid coking coal in the immediate vicinity. He intimated that if it had not been for the reduction in the tariff there would have been iron mills and steel plants out there and that country would have blossomed into a hive of industry. I do not doubt that these minerals exist. I have no reason to question the hon. gentleman's accuracy on that point. I have no doubt they are there, and they have been there for some time. They were put there before the morning stars sang together, and for fifty years we have had a tariff, and during much of that time we have had a bounty on steel; during a great part of that time we had in power a party in favour of increasing the tariff if asked to do so. And yet during all those fifty years not a ton of that ore was smelted and not a ton of that coal found its way into a blast furnace; yet the hon. gentleman would have us understand that if we had not taken just a shaving off the tariff at that particular time, just an infinitesimal amount, that whole country would have blossomed into a busy hive of industry, the hillsides would have been speckled with workmen and the valleys would rumble with rolling mills and great fumes of black smoke would be shooting up from those factories until they had tarnished the very stars of heaven. But that little change was made in the tariff, and that stopped the whole proceeding. Now, Mr. Speaker, if that enterprise was so weak and wabbly that that trifling change in the tariff was going to kill it, it was better that it should stop in embryo, in my opinion,—better that it should have stopped before it was born; otherwise we would have had another lame duck on our hands asking for more protection.

It is said that no money is now going into new plants, and yet we are told that just across the river a new concern is to be started, with a capital of $27,000,000, quite a considerable amount, more money than I have seen for a month. They are going to start manufacturing, and they are going to employ Canadian workmen. They are going to use Canadian raw materials and Canadian power. They are going to compete with the pauper labour of Europe and the massed production of the United States. They are going to turn out goods and sell them in the markets of the world. That is the kind of factories we need. What they can do others can do. As the hon. member for Leeds (Mr. Stewart) said, electrical power in this country is the great attraction. Now, why under heaven manufacturing cannot be carried on in Canada where we have an abundance of the cheapest and best power in the world, and more that can be developed easily is difficult to understand. Why we cannot manufacture with the raw material at hand, with the best workmen, or as good workmen as are to be found in the world, just as skilful, just as industrious and efficient, and why we cannot compete in the markets of the world is something I cannot understand.

If we are to develop a manufacturing nation we must compete in the markets of the world; otherwise we cannot consume the products of all our factories nor the products of our farms. We must have a foreign market, and in order to sell abroad we must buy from abroad. One trade brings another and we cannot simply ship our produce across the ocean and bring back the money. We must take goods in return or else we will find no market. The hon. member for East York (Mr. Maclean) tells us that market gardeners need protection. He would like to protect the market gardener, and starve the people for ten months of the year with the hope that they would eat more during the other two months. But it would not have that effect. The fact that in April or May I eat strawberries that were raised in New Jersey early in the spring is no reason why I will not eat them in July if they are raised in Ontario. A man's dinner is not like his coat. It does not last him three or four years. He must have at least one dinner a day. I have a theory that the market gardener should be supported for the people instead of the people for the market gardener. But that argument is as logical as any of the tariff arguments we hear. The theory is, make the people take what you want to give them and when you want to give it to them, charge them a good round price for it, and if they grumble and object to it they are not patriotic. I will not prolong this argument. I am glad to know it only costs me $2,700 a day and I do not want to pay for very much extra time.

This tariff situation is an important matter. We are going to have a vote on the budget. I do not propose to vote for the amendment. That is quite settled in my mind. Now, how about the budget? My hon. friends to my right are going to vote against it because the tariff is not high enough. My friends to my left are supposed to vote against it because it is too high. If I vote against it and my friends on my right vote against it, are they

voting with me or am I voting with them? Or are we trying to hitch up a team and pull the government from the seat of power, with one horse pulling east and the other pulling west? And if we succeed, who is going to get the credit and who is going to take the responsibility? That is the question I would like to have settled in my mind. What would be the issue in the next campaign if we were to put the government out of office on this vote? Would it mean that we were in favour of a higher tariff or in favour of a lower tariff? That is a question for hon. gentlemen to try and settle one way or the other. I have been thinking it over pretty thoroughly, and I am going to keep on thinking for a little while, and listen to the balance of the discussion.

There are some questions I should like to have threshed out. I think it was a great improvement when they amended the dumping clause. I supported the Progressive amendment with enthusiasm because I especially objected to the dumping clause. That clause, I am glad to see, is to be eliminated. I hope there may be some other eliminations. I am in favour of a lower tariff. I should like to have seen a reduction in tariff at this time not on the items reduced last year but on other items. I believe that we should gradually come down to the point where we have a tariff for revenue. I do not believe we can walk on industrial stilts to the end of time, and get them longer and longer all the time. If we do, we are bound to take a tumble. I believe we should get down to the ground, and stand on a firm foundation where we can manufacture and sell in the markets of the world. I believe we can do that. Until we do, we will not have an industrial Canada.

Mr. CLEMENT ROBITAILLE (Maisonneuve) (Translation): Mr. Speaker, I wish to express my sorrow for the illness of the hon. Minister of Finance (Mr. Fielding), which deprives us of his presence in the House. Even if I must wound the modesty of the hon. Acting Minister of Finance (Mr. Robb), I want to congratulate him and express to him my admiration for the way he administers both the Department of Immigration and the very responsible Department of Finance.

I shall not thresh out the budget; other members better able than I am have clearly shown its nice points and advantages, and the country, I feel sure, is well satisfied.

I cannot pass over in silence the remarks of the hon. member for Kent (Mr. Doucet) in regard to the French language. It is unfortunate, that he was not a member before, he might have been able, perhaps, to infuse in his leaders a few principles of equity and justice towards the French Canadian, for he cannot have forgotten that the province of Quebec had almost always been ignored under the Borden-Meighen government. The hon. member for Kent must not have forgotten that his present leader, when Prime Minister, only invited or was only forced to invite French Canadians into his cabinet in the dying hours of his government; however, the province of Quebec, faithful to its motto, remembers.

The hon. member for Hull (Mr. Fontaine), in the course of this debate, has shown that the present government had always endeavoured to be fair to French Canadians and he gave proofs to support his contentions.

One could add further proofs. For intance, it was a French Canadian that the present government chose to negotiate with the French Republic, on behalf of Canada, a parcel of land which would serve to commemorate the glory of our brothers fallen on the battlefield, and it is you, Mr. Speaker, who obtained from France this grant of land on Vimy ridge.

The hon. member for Hull forgot to mention all the positions to which our people had been appointed and which, perhaps, would be too long to enumerate. He neither mentioned that at the door of every office in this building, we notice, this year, for the first time, bilingual inscriptions engraved on brass plates.

The friends of the hon. member for Kent, have never shown much enthusiasm for our language, if we are to judge from the answer given to the hon. member for Charlevoix-Montmorency (Mr. Casgrain) to questions he put to the government on May 5, 1920:

1. Why is the calendar of the Clerk on the table of the House of Commons in English only?
2. Is it the intention of the government to have also on this table a French calendar?
3. If so, when?
4. If not, why?

Sir George Foster: My reply to the question asked by my hon. friend the member for Charlevoix and Montmorency is this:

In placing that calendar on the table of the House of Commons, traditions of former years since the origin of Confederation until our days have been observed. Under these circumstances, I do not deem it necessary either to replace it with another one or to put another one on the Clerk's desk. What was sufficient for the Fathers of Confederation should surely satisfy us, for we are not less intelligent nor more patriotic than our predecessors.

I think, Sir, that it is befitting to say a few words regarding the political campaign being waged by the friends, old and new, of the right hon. leader of the opposition (Mr. Meighen), in the province of Quebec. Important ques-

tions are being discussed: tariff, British preference, protection, etc. In the "et cetera" is included conscription, of which the right hon. leader of the opposition has proclaimed himself the father. They reproach the 65 members of the province of Quebec for not having this act repealed. Is there a more low and despicable campaign than this one? I think, they are men connected with the law, barristers, who discuss this question in public. They have certainly forgotten an important factor; it is the views of their leader, who for them, is infallible. Allow me to remind them of it. On April 3, 1922, the present Premier (Mr. Mackenzie King) speaking on this question, among other things stated, what follows, which will be found on page 640 of Hansard:

> If the statutes were being revised, Mr. Speaker, the commissioners would simply drop this act altogether. For us to proceed any further would be to take action which is wholly unnecessary.

To the above Mr. Meighen answered immediately:

> Of the correctness of the position taken by the Prime Minister (Mr. Mackenzie King) there is no doubt whatever. The act has no present force and effect; there is no room for legal dispute of any kind on that point. The act plainly applied to the then war, and to no other; it could not by any government be applied to any other emergency, contingency, or war whatsoever. Consequently, on the termination of that war, the act became obliterated so far as actual operation at any time is concerned.

The hon. Speaker put an end to the discussion in the following manner which will be found at page 644 of Hansard:

> In my judgment this discussion is out of order. Any resolution presented in the House must have something positive as to its effect. If a motion is made or a bill introduced with a view to repeal that legislation must be in existence. From the opinions of the Law Officers of the House of Commons and of the Deputy Minister of Justice, and, after the opinion expressed by some of the leaders on both sides, I come to the conclusion that the Military Service Act, 1917, cannot be repealed, because it has exhausted itself, and is considered as non-existent at present in the statutes. Therefore I give it as my opinion that this bill should be dropped and that the discussion should not proceed and I so rule.

In spite of this fact, the friends of the hon. eader of the opposition continue at their neetings, to use this question for purposes of political capital by seeking to lead the people of our province astray. Tariff, protection and national policy are also discussed. What did they do with the tariff when they were in power? Did they alter it? Did they do anything to help trade and the labouring class? No. Yet these gentlemen charge us with ruining the manufacturers. Have the latter to complain of the changes made to the tariff by the present government? Far from complaining they are well satisfied.

Now, we are told that if business is at a standstill it is due to the British preference. In a brief article which appeared a short time ago in the newspaper La Patrie it was stated that the manufacturers of boots and shoes of Maisonneuve, were not satisfied with the figures quoted by the hon. member for St. Denis (Mr. Denis) in his address on the budget, in regard to imports of boots and shoes, and they hoped that I would make the necessary corrections. I wish to state that I have received no protests on the part of the manufacturers of boots and shoes of my electoral division—and you are aware, Sir, that they are numerous—I am further informed that many are not affected by the British preference. Yet, this preferential tariff exists since a number of years—since 1907, I think. We heard of no protests when the Conservatives were in power; it is only within the last few years, since the Liberal party is at the helm of affairs that a great stir is set up in regard to this preferential tariff. I have a few official figures in hand; they are far from gainsaying those of the hon. member for St. Denis. It was thought in certain quarters, that the figures quoted by the hon. member for St. Denis only applied to imports of leather footwear, while in reality they included imports of all kinds of boots and shoes: leather, canvas, rubber and footwear made up of leather and canvas.

However, what is most important to us, what concerns the most our manufacturers and our leather workers, is to know exactly the figures of imports in leather footwear, that get the benefit of this preferential tariff. I have before me the statistics of the Department of Trade and Commerce which give the following figures for each fiscal year: 1914, imports $4,349,587—no mention is made of the years 1914 to 1918, they are exceptional years; 1918, imports $3,179,138; 1920, $2,731,-591; 1921, $2,200,121; 1922, $1,338,775; 1923, $1,220,734; 1924, $1,546,216. Well, Sir, if figures speak, it is certain that the criticisms of our opponents are uncalled for when they state in our manufacturing centres, that the Liberal government's policy is on the eve of closing up all the factories. Far from closing their doors, our factories are working quite normally. I understand that quite a number of people are out of work; but if the boot and shoe manufacturers are unable to operate

their factories to their full capacity it is clear the preference tariff in vigour since 1907 is not to be blamed for it, as we are importing to-day far less goods from England than in 1914 and in the following years; it is rather due to the overproduction in evidence under the extravagant administration of our adversaries. Moreover, these imports are bound to decline, on account of the pound sterling being now at par.

Allow me, however, to make a suggestion. I understand that if we favour the importation of British goods it is certainly not for the sake of the mother country, it is because we have mutual trade relations, and we grant certain advantages to England because we are getting something in return. Now, under the Act at present in force, imported goods must contain at least 25 per cent workmanship and material of British origin, whilst Australia demands that at least 50 per cent of the workmanship and material be of British origin. I submit, Mr. Speaker, that we would do well to raise our ratio to 50 per cent at least.

The necessity for economy is another point insisted on by our opponents in the cities. They falsely contend that economy is not practised by this government. It is all very well for them to urge economy! It is all very well for these gentlemen to say: Do as I tell you and not as we do or have done. After squandering millions and billions, they now advocate economy! What they have saved does not amount to much, unless it be daylight, through their daylight saving enactments.

Now, Sir, I shall take the liberty to point out an anomaly in the Income Tax Act: it is that the consorts under the community of property clause are less favoured than those whose regime is separation of property. The incomes of consorts living under the community of property clause are considered as forming a whole, while those of consorts married under the separation clause are figured separately. In the last instance, the husband and wife benefit by the statutory exemption while the consorts living under the community regime are entitled to a single exemption.

I am of opinion, Mr. Speaker, that the present discrimination that is being made in connection with the income tax of Public Utility Companies providing gas and electricity should be done away with. Private companies are made to pay the tax while public ownership companies, like the Hydro-Electric of Ontario go scot-free. This is a disadvantage for the labouring class and citizens at large of Montreal and other cities similarly situated, since private companies invariably recoup themselves at the expense of the consumer.

Of course, taxes of whatever nature they may be, are not popular, and a further grievance is the lien retained by the government on the property of tax-payers in arrears. I think the government would perform an act of justice if it would cancel this section of the act which may be detrimental to the real estate business.

In conclusion, Mr. Speaker, I submit that the government would be well advised to establish a free section in the port of Montreal. That would be a great help to promote trade. If the plan proved profitable, a free section might be provided in the other harbours. I think these recommendations should be considered by the government, and I am satisfied that if carried out they would greatly further the progress of our country.

Mr. G. G. COOTE (Macleod): Mr. Speaker, my chief reason for taking any part in this budget debate is a desire to place before the House and before the country the present condition of the farming industry in western Canada. I want to deal with the question as it affects western Canada particularly, because I do not pretend to be very familiar with conditions in eastern Canada. I make no apology for discussing this particular industry, because I think it is the most important in Canada. It employs more capital than any other industry in this country; it gives employment to more people; it provides the greater proportion of our exports. The hon. member for Vancouver South (Mr. Ladner), speaking a few days ago, referred to the amount of our export of agricultural produce. I think there was some mistake in the figures which he quoted. I have here a table taken from the trade report showing just what part agriculture plays in the matter of our total exports; I will not read this statement, but if I have the permission of the House I would like to place it on Hansard.

The statement is as follows:

Exports

	1921	1922	1923	1924
Wheat, bushels	129,215,157	136,489,238	215,074,566	256,870,237
Wheat value	$310,952,138	$179,990,730	$252,145,805	$267,758,559
Flour, value	66,520,490	53,478,150	60,075,426	62,783,118
Total wheat and flour	$377,472,628	$233,468,880	$312,221,231	$330,541,677
Total grains and farinaceous products	$418,394,620	$272,021,473	$350,640,813	$363,608,617
Field crops				$409,898,382
Animal industry				93,493,020
Total Canadian farm products				$503,391,402
Foreign farm products				24,416,226
Wild life origin				18,426,213
Marine origin				30,988,812
Forest origin				273,603,598
Mineral origin				170,686,286
Mixed origin				23,838,519
				$1,045,351,656

It will be seen from this statement that our total exports were $1,045,000,000 odd. Of that amount the export of wheat and flour was valued at $330,541,000. Wheat and wheat flour together constitute 31 per cent, Canadian field crops 40 per cent and Canadian farm products 48 per cent of our total exports. That shows that agriculture plays a larger part in providing the exports from this country than any other industry.

Agriculture is very important also to our manufacturing industries in Canada. I have a statement here, copied from the Canada Year Book for 1922-23, giving the value of the products of forty of the leading industries in Canada, and the following will show the value of the products of the first four of these industries:

	Value of Product
Slaughtering and meat packing	$ 240,000,000
Flour and grist mills	239,000,000
Pulp and paper	236,000,000
Lumber, lath and shingles	207,000,000

These first two industries are entirely dependent upon our agricultural industry. I believe there is a general impression throughout Canada that a big crop or a big yield means prosperity to the farmer or to the man producing the commodity in question. The Right Hon. Mr. Fielding, I think, made a statement, two years ago, that one or two good crops would mend conditions in western Canada. Well, we have had two of the biggest crops western Canada ever had; 1922 and 1923 were two of the best years we have ever seen in that part of the country, but the conditions there are not yet anything like ideal. I have before me an article from the Financial Post headed, 'A half size crop but more revenue in Saskatchewan". It goes on to show that the proceeds from this year's crop are practically the same as those from the crop of 1923, although the yield is only half what it was in that year. I have another article from the same paper—and I like to quote articles from the Financial Post because it is generally highly regarded by many who are not engaged in the farming industry. This article is headed, "Farmers' profit based on prices more than yield". It goes on to show that in some of the years when the farmers have had the smallest crop they have had the largest financial returns. Let me read just the last two sentences of this article. It says:

> Comparing the years 1920 and 1922, we find that in 1920 the total value of agricultural products was $550,641,471 while in 1922 it was $505,318,966, although in the latter year the wheat yield was 250,167,000 bushels, or very nearly two and one-half times as great as in 1920. Taking the years 1919 and 1921, the figures furnish the same undeniable proof that it is the price and not the volume of production which makes for prosperity in agriculture. In 1921 the farmers' total income was $444,937,773, the smallest during the five years, but the wheat yield amounted to 201,347,483 bushels as against only 89,993,685 in 1919.

We have often heard in this House and we have often read in the press statements regarding the cost of producing wheat in Canada and in the United States as found by the United States Tariff Commission. This commission made a very extensive inquiry to determine the cost of producing wheat in both countries, and I think it would be interesting to this House to know something of what that commission did report.

I have here another article, again from the Financial Post. It is headed, "Costs ninety-one cents to grow bushel of western wheat, but there are objections to calculations of United States expert." It goes on to say:

> It cost according to the Tariff Commission of the United States which spent a good many thousand

dollars to find out, 91 cents a bushel to grow wheat in western Canada in the three years from 1921 to 1923 inclusive. That is the cost of wheat at the elevator.

Further on it says:

But next you have to make an adjustment on account of taxes. Taxes were left out of consideration by the Tariff Commission, but they can in no wise be left out of the calculations of the farmer. You can estimate those for the period reviewed by the commission at from five to ten cents a bushel to be added to the 91 cents.

Further on, after drawing attention to some other discrepancies in this report, it says:

Let us call it one dollar a bushel, and to recall the statement that many farmers have repeatedly made in the past two years, that if they could be assured of a dollar a bushel net at the elevator for their wheat, before paying handling and transportation charges, they would be content.

I have here a statement prepared by the Bureau of Statistics, showing that the farmers of the three western provinces produced in the years 1921, 1922 and 1923, 1,107,552,000 bushels of wheat, and that they received for that $826,376,000. Now the total production as I have stated was 1,107,552,000 bushels, and taking the cost price at $1 per bushel, as figured out by the Financial Post, it gives you a production cost of $1,107,552,000. If you deduct from that the $826,376,000 that the farmers received, you will find that the farmers of the three prairie provinces lost in those three years in the production of their wheat crop $281,176,000.

We have heard a good deal, Mr. Speaker, of the losses that some of our other industries have sustained, but I would like to know whether any one of them has sustained such a loss in its production as the farmers in western Canada on their wheat crop.

If you object to these figures in the Financial Post, and take rather those as set out by the Tariff Commission, of 91 cents a bushel, you find that the farmers of the three prairie provinces lost in the production of those three crops $181,496,320.

I have here a statement taken from an immigration pamphlet issued by this government. It is entitled "Canada, the New Homeland," and is issued by the department of the hon. the Minister of Immigration. It says in part:

Evidence was given in 1923 before the United States Tariff Commission to show that the Canadian farmer was able to produce a bushel of wheat for 46 cents less than the United States farmer. The per bushel cost in the United States in that year was $1.49; in Canada $1.03.

In 1923, according to the statement of the Bureau of Statistics, we produced 452,260,000 bushels of wheat. At $1.03 a bushel the cost of production of our total crop that year was $465,827,800. The amount that the farmers received for this crop, as given by the Bureau of Statistics, was $294,686,000, showing a loss to the farmers on their wheat production for 1923 of $171,141,800. I would not like to say that this statement of the Immigration department was right, but on the other hand, I do not think they have overstated the case. I do not think it can be fairly shown that wheat can be produced for less than the cost per bushel which they give here. This article which I have taken from the Financial Post goes on to say that the writer started out on his calculations with the spending power of the farmer in mind. He says:

We have calculated away the profit or devoted it to the payment of debts. Has the farmer's purchasing power vanished in the calculation? Not at all. It is the current turnover of this business of farming that is important.

In what other business, Mr. Speaker, is the turnover considered as important? In every industry discussed in this House, it seems to me, except agriculture, it is the profits that are the determining factor. If profits can be made and dividends paid, that is the supreme end to be attained, but according to these financial papers, with agriculture it is different. The important thing, it says here, is the turnover. It says:

A business with a total cash return of $350,000,000 is a pretty important thing to other business even if the whole receipts are eaten up in the living of the proprietors and their families, and the upkeep of their establishments. You do not calculate the importance of an industry to the country by the amount of dividends drawn out.

I hope when we come to discuss some of the other industries in this House that point will be borne in mind, but I have never seen that statement in the Financial Post or in any other financial journal in regard to any industry except agriculture, and it cannot be wondered at by financial men in this country that the farmers finally decided to send farmers down here to speak for them in this House, and demand of this House a little bit of fair play. It says further on:

The business is going on again next year.

That is the business of producing wheat, whether produced at a profit or a loss:

The business is going on again next year, again with a necessary turnover of from three hundred to three hundred and fifty million dollars. Some debts paid off this year will simply mean the re-establishment of credit for another year's operations. Make all allowances necessary for such purely financial transactions as are involved in the purchase of land and the payment of interest on mortgages and debts and you come to the conclusion that the business of raising wheat in western Canada involves the expenditure on actual purchases of merchandise and

material of from two hundred to two hundred and fifty million dollars.

How those expenditures are likely to be distributed is another story, but at least it is clear that there is big business here.

It is quite clear, Mr. Speaker, that there is big business here, whether or not there are any big profits. I want you to notice just what the writer stated, that the business of raising wheat in western Canada involves the expenditure on actual purchases of merchandise and material of from two hundred to two hundred and fifty million dollars.

Compare that with the actual receipts to the farmers which were in 1921, $219,000,000, in 1922, $312,000,000, in 1923, $294,000,000.

I expect, Mr. Speaker, that some hon. gentleman will ask, what about the crop of 1924?—we heard you got $2 a bushel for it. I have tried to figure out the cost of producing the crop of 1924 by the same method as was employed by the United States Tariff Commission, and to the best of my ability I find that it cost about $1.15 to $1.20 a bushel to produce the 1924 crop. I find from the statement furnished by the Bureau of Statistics that the farmers of Manitoba netted $1.24 per bushel, those of Saskatchewan $1.21 per bushel, and those of Alberta $1.20 per bushel. I should like to have the permission of the House to place on Hansard these two statements furnished by the bureau:

10 p.m.

Area, Yield and Value of Wheat in the Prairie Provinces, 1924

Province	Area acres	Yield per acre bush.	Total yield bush.	Average price	Total value
Manitoba	2,459,408	16.9	41,464,000	$1.24	$ 51,415,000
Saskatchewan	13,033,000	10.2	132,918,000	1.21	160,831,000
Alberta	5,573,813	11.0	61,312,000	1.20	73,575,000
Prairie Provinces	21,066,221	....	235,694,000	....	285,821,000

Area, yield and value of wheat in the Prairie Provinces, 1921, 1922 and 1923

Province	Area acres	Yield per acre bush.	Total yield bush.	Average price	Total value
Manitoba—					
1921	3,501,217	11.2	39,054,000	$0.91	$35,539,000
1922	3,125,556	19.3	60,051,000	0.83	49,842,000
1923	2,915,915	12.3	35,804,000	0.67	23,989,000
Saskatchewan—					
1921	13,556,708	13.8	188,000,000	0.76	142,880,000
1922	12,332,297	20.3	250,167,000	0.85	212,642,000
1923	12,791,000	21.3	271,622,000	0.65	176,554,000
Alberta—					
1921	5,123,404	10.4	53,044,000	0.77	40,756,000
1922	5,765,595	11.3	64,976,000	0.77	50,031,000
1923	5,172,643	28.0	144,834,000	0.65	94,143,000
Prairies Provinces—					
1921	22,181,329	....	280,098,000	....	219,175,000
1922	21,223,448	....	375,194,000	....	312,515,000
1923	20,879,558	....	452,260,000	....	294,686,000
			1,107,552,000		$826,376,000

In order to present to the House the prices received by western farmers as compared with those paid to farmers in other parts of Canada I should like to place another statement on Hansard if I have the desired permission. It shows the price of wheat, oats, barley, hay and clover received in the provinces of Quebec, Ontario, Manitoba, Alberta and British Columbia:

Average price per bushel received by farmers in different provinces, crop 1923

Wheat—	
Quebec	$1 47
Ontario	97
Manitoba	67
Alberta	65
British Columbia	1 20
Oats—	
Quebec	57
Ontario	44
Manitoba	30
Alberta	24
British Columbia	62
Barley—	
Quebec	91
Ontario	60
Manitoba	37
Alberta	33
British Columbia	82
Hay and Clover—	Per ton
Quebec	$11 00
Ontario	10 80
Manitoba	8 00
Alberta	6 00
British Columbia	20 25

The price received for wheat is indicative of the prices received for all commodities.

It will be noticed that the price of wheat in Quebec was $1.47, in Ontario 97 cents, in Manitoba 67 cents, in Alberta 65 cents, and in British Columbia $1.20. I should now like to have placed upon the record a statement showing the prices paid for fat steers, fat cows, and hogs in Montreal, Toronto, Winnipeg and Calgary. Given in that order they are:

	Best steers per hundred pounds
Montreal	$6 16
Toronto	7 04
Winnipeg	4 57
Calgary	4 53

I should like you to note, Mr. Speaker, that there is a difference of about $2.50 per hundred pounds between the price received in the east and that received in the west.

Mr. MARLER: What accounts for the difference between the Montreal price and the Toronto price? My reason for asking the question is that I am very much interested in the subject.

Mr. COOTE: I would not like to account for the difference; I am not well enough acquainted with the conditions in the east.

Mr. MARLER: There is a difference of about $2 is there not?

Mr. COOTE: No, the difference is about 90 cents. The price given is $6.16 in Montreal and $7.04 in Toronto.

Mr. MARLER: I would think that the price would be more in Montreal than in Toronto?

Mr. COOTE: Yes, if the home market fixes the price it ought to be better in Montreal. But possibly the price is regulated by a packers' combine. Now as to the price of cows:

	Per hundred pounds
Montreal	$4 55
Toronto	4 25

There the condition is reversed; 25 cents more is paid in Montreal.

Winnipeg	$3 30
Calgary	2 90

Select hogs:

	Per hundred pounds
Montreal	$10 09
Toronto	10 12
Winnipeg	8 67
Calgary	8 55

I am giving these prices, Mr. Speaker, in order to impress upon the House the difficulties which the farmers of western Canada are confronted with.

Mr. STEVENS: Will the hon. member give the authority for his information and the dates?

Mr. COOTE: Yes, this information is taken from the Monthly Bulletin of Agricultural Statistics issued in January, 1925, and the prices are for December, 1924. The former statement which I gave is taken from the same bulletin, January, 1925. Then from the bulletin issued in February, 1925, I shall quote figures to show the difference in price of farmers' produce to-day as compared with 1915:

Alberta—	1915	1924
Horses	113	38
Milch cows	69	38
Other cattle	49	23
Total cattle	53	27
Sheep	8	10
Swine	13	12

The only live stock which show an increase in price in that time are sheep. In all other classes there is a very big decrease, particularly in cattle, the price for total cattle dropping from an average value of $53 to an average value of $27. To further impress upon the House the position of the man who is producing cattle in western Canada and the loss which he has taken, I may say that the average value of cattle exported from Canada to the United States in 1921 was $73 per head. In the year 1922, the average value had dropped to $23 per head. I have not the publication from which those figures are taken but they were published in one of the government reports issued a year ago.

Mr. MARLER: Could my hon. friend point out to those who desire to try and get some knowledge of this subject what his reasons are for this drop in price? I am merely asking for information not to combat my hon. friend's statement.

Mr. COOTE: There are quite a variety of causes. The chief one was I think, the deflation which hit us in the year 1921; then a poor crop which made feed very scarce. The western farmer in many instances as a consequence was compelled to sacrifice his cattle because he did not have feed for them. In other cases he was forced to sell—either by banks, loan companies or some other creditors—and there seemed to be nothing to uphold the market. Prices went down until one-half the cattle were sold for their value for canning purposes.

Mr. LEWIS: Was there about the same kind of cattle in 1921 as in 1922?

Mr. COOTE: No, I think the class exported in 1922 were not quite as good as those exported in 1921, I should say that in all fair-

ness. The reason for that was, as I say, that in 1922 cattle were being forced out of the farmer's hands on to the market for a variety of reasons. Many of these cattle of course, were young and not finished, and that partially accounts for the big decrease. The increase in duty under the Fordney tariff, or the emergency tariff that was in force I think at that time, was also very largely responsible. We had the home market to ourselves, as an hon. member sitting near me suggests, but the home market was not sufficient to absorb the production.

I have here a little item from the report of the telephone department of the government of Alberta for the year just ended and I think it will give some indication of the condition of the farmers in Alberta at the present time. In the year 1923 we had the biggest crop in our history, but it would be along in the year of 1924 before a great many of those farmers would have received the value of that crop so that its purchasing power could be felt. In 1924 although we had a short crop the price was the biggest we had received since the closing of the war. Yet I find that in the year 1924 there was a drop of $4,508 in rural phone revenue; a total of 1,937 rural phones were removed during the year; and 1,318 phones were added showing a net loss of 619 rural phones. In exchange phones there was a net gain of 904 during the year, showing the difference in the condition between urban and rural districts. There is now a total of 54,000 phones in use of which 20,000 are rural. There are said to be 75,000 farms in Alberta, so that apparently less than one-third of those farms can afford to own a phone. Now, this certainly shows the reverse of prosperity after having had in 1923 the biggest crop that Alberta ever produced, a bigger one than we may naturally hope to produce for some years to come. Just what use is there in this country deluding itself with the idea, in the face of these actual conditions, that the farmers in the west are overburdened with prosperity? I am not expressing my opinions here; I am trying to give some actual facts to this House. I sometimes think this is useless because, as a rule, the budget speech of a back-bencher like myself is not listened to with very much attention. I am a little surprised that somebody has not already risen and suggested that we should try mixed farming. I have endeavoured to show this House that there is very little hope for the farmer in raising cattle. We have increased our production of butter in Alberta during the last year when I find the production was 21,500,000 pounds as compared with 17,800,000 pounds in 1923. I remember, about a year ago, being told that our trouble in the west was that we were all grain farmers and that we did not keep any milch cows or poultry or pigs on the farm. I was a little surprised the other day to find that Alberta now stands second, I think, of the provinces with reference to the number of poultry on farms, the average number in that province being 80 as compared with Canada's average of 63.9. I also notice that Alberta's egg exports grew 33 per cent during 1924. I have figures here, but I will not take time to read them to the House showing that the total grain crops last year were less than one-half the value of our agricultural production. Therefore, hon. members will see that the Alberta farmers are trying, not only grain raising, but any avenue of production that they feel is open to them at all. The question will naturally arise, how the farmers can go on producing wheat at a loss, as I have already shown in my statement tonight. The first reason is that they are working for less than a living wage. Not only that, but the wife is helping to earn the living. She is trying to keep things going by raising poultry and milking cows. If there are any children in the family, they are pressed into service and they are encouraged to raise hogs, calves, chickens, and to help to milk the cows. In fact, the whole family must work hard in order to keep the home going. As I go through Canada from one end to the other, it strikes me very often that in no other industry do we see the women helping to earn the living. I remember noticing a statement in a paper here recently in reference to some noted farmer in western Canada who had been to the Old Country, I think under the auspices of the Immigration department. This paper was telling how well this gentleman had done in the west, and I noticed one thing that it stated in reference to his wife was that she had at times cooked for twenty-four men. Any man who has a wife capable of cooking for twenty-four men, helping to earn the living, surely should make some progress. He should be able to make enough to get a trip to the Old Country once in a while.

Mr. STEWART (Argenteuil): Did he take her along?

Mr. COOTE: I believe he did, and I am glad that he did. But there are many women in western Canada who have cooked for a number of men for many years and who are not yet in a position to take a trip to the Old Country. If there is one thing more than another that makes me wish to stay in this farmer's fight for a fair deal, it is the con-

dition of many farm women in western Canada. I have not been to Nova Scotia to see the shacks that the miners are living in there; I believe some of them are very poor affairs; but I have seen people living in shacks in western Canada that, I think, are not any better. Some of these shacks are one-ply of boards covered with tar paper, and both the boards and the tar paper were protected by a very substantial tariff. That is just on the side. I do not want to dwell on this too long, so I must hurry on. One reason why the farmers are able to continue producing at a loss is that the farms are depreciating. Buildings and fences are not being kept in repair and the land is becoming weedy. They cannot afford to hire sufficient help to do all these things. Neither can they afford to buy the necessary paint to keep their buildings painted.

Then, the cost of raising wheat varies in different localities. This statement of the United States Tariff Commission to which I have referred shows that some of this wheat was produced at a cost of about sixty cents per bushel, but in other localities the cost ran as high as $1.40 per bushel. In those districts where they receive more than the average crop, they are able to go on producing under present conditions, but in those districts where they are receiving less than the average crop, the farmers are gradually going deeper into debt. Because so many of these farmers are going into debt and have got into debt in the past through no fault of their own, I want to urge upon the government that one of the first things they should do when this budget is finally disposed of, is to bring down some amendments to the Bankruptcy Act, such as were recommended by the Banking committee last year. The government refused to bring in legislation to give effect to those amendments. I do not know all the reasons that may have deterred the government from bringing in this legislation; but it will cost this government absolutely nothing to bring them in and if they refuse to do so, we are going to lose another few thousand bankrupt farmers who will go to the United States to get rid of their debts. If they were given an opportunity of going through bankruptcy, I think they would remain here, and in time they might again become successful farmers. They are far better citizens for us to have in this country than many of the immigrants brought in from Europe to take their place.

I want to urge the government to revise the Canada Grain Act at this session. The Minister of Trade and Commerce (Mr. Low) I understand—I did not happen to be in the House at the time—stated that he did not intend to proceed with the act this year. I want to urge the government to proceed with that act. I think the present act caused a loss of millions of dollars to the farmers in western Canada last year, and that loss could have been avoided, I believe, under a proper Canada Grain Act. As the hon. member for Humboldt (Mr. Stewart) pointed out the other day, we have large wheat pools operating in western Canada, and the Grain Act, needs some revision to allow these wheat pools to operate fairly with the old grain companies that are doing business there. I do not think this House should prorogue until the Canada Grain Act has been revised, regardless of what else we do.

I wish to urge upon the government some action in reference to establishing a system of rural credits. I am not going to argue the subject because I think it is pretty well understood in this House. But I want to impress upon the government and the House that western farmers cannot continue to carry on under circumstances such as I have pointed out here and pay from 8 to 10 per cent on long term loans and from 8 to 13 per cent on short term loans. But the most pressing thing is the long term loan. Many of our farmers now are just on the very edge of going into bankruptcy or keeping out of it. Some men will say that the farmers have had too much credit, and I will agree that many of them have had too much credit. It has been the ruination of them. But it costs a farmer no more to carry a loan of $8,000 at 5 per cent than to carry a loan of $5,000 at 8 per cent. That is just where the difference comes in. The farmer possibly can make use of two or three thousand dollars if he could obtain it at 6 per cent, but if he has to pay 9 per cent he had better do without it. Many of these farmers are in a position where they now owe the money they obtained by a short term loan at 9 per cent. I mean a four or five year loan. But a man in that situation has very little purchasing power. Every cent he can make must go on the mortgage. I do not think we can do anything in Canada which would stimulate business more than establishing and putting into operation a proper system of rural credit. It would mean a reduction of 2 per cent in the interest rate, and that would be equivalent to three or four cents a bushel added to the price of the wheat. It is pretty difficult for us to devise means of increasing the price of wheat three or four cents a bushel. Two per cent reduction of interest would be

equivalent to that increase. Just here I want to refer to a matter which possibly may seem very small to the Acting Minister of Finance, but I desire once more to urge it upon him; that is that he should abolish the war stamp tax on notes. I have here a statement made to me by a banker in Alberta showing one loan current since 1919, as follows:

> Loan account current since 1919, various amounts which have not been paid and which now aggregate in the neighbourhood of $10,000—total revenue tax $42.89. This loan is in addition to temporary borrowings for current expenditures, et cetera and as the party is unable to pay any part of the loan the revenue tax was added into each renewal thus increasing his loan more rapidly.

I have a statement of another loan current since 1919, various amounts aggregating at the present time in the neighbourhood of $20,000, where the revenue tax amounted to $101.38. I wish to ask the Acting Minister of Finance (Mr. Robb) if he thinks it is a proper method of taxation to tax a man who is hopelessly in debt. We heard a great deal from the hon. member for North Waterloo about the nuisance taxes, and I heartily agree with most of what he said. I believe that we may have to put up with the nuisance tax for a while but surely the tax on notes could be abolished, or reduced to two cents, the same as the tax on receipts. The man who has received payment can afford to pay a two cent tax, but in the case of the man who owes the debt and is forced by his creditors to put a stamp on his note of four cents a hundred dollars it seems to me nothing less than robbery.

Then I urge the Acting Minister of Finance to place the farmer's income tax on a three year basis. There are many cases where a man has produced three or four crops at a loss, and sometimes he does not get a crop at all. Then a good year comes and he makes sufficient profit to render him liable to assessment for income tax. In some cases a creditor would have a lien on all his crop and the man would have absolutely nothing to pay his income tax, although he was liable for it.

Mr. STEWART (Leeds): What is the difference between the farmer and the professional or business man in similar circumstances?

Mr. COOTE: I have no objection to the Acting Minister of Finance adopting a three year basis for everybody, but I say there is a difference, because a professional man is not dependent upon the weather, and he fixes the price of his product. Every other man except the farmer can do that. When the farmer sows a crop he does not know whether wheat is going to be fifty cents or a dollar a bushel. He has no way of protecting himself, as other men have. Otherwise I quite agree with the suggestion of my hon. friend. In addition to that the farmer goes on and does his year's work, whether he obtains an income from it or not. Sometimes he gets practically no income, and instead of having an income he is probably short one or two thousand dollars on his year's operations. It seems to me the most reasonable thing in the world that my suggestion should be accepted.

I should also like to urge upon the minister —not because nobody else has done it, because it seems to be unorthodox if you do not do it—that there should be a reduction in taxation. My principal reason for urging it is that I believe that taxation ultimately falls upon the producer of wealth, no matter where you collect the tax. I am reminded that Sir Thomas White is reported to have said some years ago, when he was floating some of our victory loans, that if these loans were to be repaid it would be from the top six inches of the soil of Canada. That certainly meant that the farmers were to pay it. I do not believe in a lot of this talk of economy that is given out by the magnates of this country, but I do believe in economy in government, because it is a very difficult thing to collect these taxes, and very often we collect them in the wrong place. I think there is altogether too much talk of economy among certain classes of people, because if we all do as we were urged to do during the war years, produce and save, I am not able to see who was to purchase what we produced, if that system had been carried on for a year. However, that is by the way. One other thing I want to urge upon the government as a remedy for the situation in which the farmer finds himself to-day: is that the freight rates should be made just as low as possible. I realize that the question of freight rates is a very contentious one in Canada, but when I tell you that a reduction of one cent in the freight rates on the wheat of Alberta would amount to as much as all the turkeys the women raise there in a year, you will see it is very important. Western Canada to-day has only one determining factor in the freight rate structure and that is the Crowsnest pass agreement. That is why I have always advocated the maintenance of that agreement. I do not see how we can afford to do without it. Freight rates in the end must be decided in this House, by this parliament, and when it comes to procuring a decision from this parliament the representatives from western Canada are very much in the minority. For that reason I say that it is very important to us

that the Crowsnest pass agreement should remain a determining factor in freight rates. I am not going to press that point. I assume we will be told here that the grain is now being carried at a loss, but I have seen the statement several times within the last three months that the reason for the big drop in the earnings of our two great railway systems this year was the small grain crop in western Canada. I wish to ask hon. gentlemen this question: If the reduced net earnings on these railroads are caused by the small grain crop in western Canada, are those railways carrying that crop at a loss? If they have been carrying these crops at a loss, the loss surely would be greater if we had a large crop. In 1923 we had a large crop and our railways made more money than in 1924 when they had that small crop. Does that look as though this grain was being carried at a loss? Then I think it has been brought to the attention of this House before by the hon. member for West Edmonton (Mr. Kennedy) that Mr. E. W. Beatty, in the course of an address in the city of New York, made a statement to the effect that if the builders of the Canadian Northern line had been content with a railway system extending from the Great Lakes to the mountains they would to-day be the richest men in Canada. Mr. Beatty is, I think, very well posted on railway matters. The bulk of the traffic that the old Canadian Northern would have to carry in western Canada would be grain. I think those two statements together surely ought to prove that our western grain is not being carried at a loss, in spite of the figures that railway officials may give in an attempt to prove the contrary. It was not very long ago that I heard a railway man state that he could prove that grain carried at any rate was carried at a loss, and, further, that he could prove the same in regard to any other commodity. But I do not see how the two points can be controverted.

Now, Mr. Speaker, I do not want to take up too much time, but I intend to refer very briefly to some of the arguments that have been advanced in this debate in regard to making Canada a self-contained country. I do not see how that can be done for a great many years to come at any rate. Recently I read in the May 1923 number of the Annals of the American Academy of Political and Social Science an article entitled "Canada's Outstanding Imports," by H. S. Logan, of the Foreign Department of the Canadian Bank of Commerce, Toronto. I wish I had time to present this article to the House. Mr. Logan states there, as anyone who takes the trouble to read will see, that Canada, at least for the present, must import coal, iron and steel, oil, cotton and silk, sugar, tea and coffee, tropical and semi-tropical fruits, rice, sago and tapioca, crude rubber, chemicals and articles of that nature. I was rather interested in the speech made by the hon. member for Vancouver South (Mr. Ladner) the other night in which he advocated an export duty on pulpwood. A few moments afterwards he mentioned cotton, and I wondered how he would feel if the United States placed an export duty on that commodity. Would our cotton manufacturers move their factories across the line? I think we must continue for years to import very largely, these commodities which I have mentioned. Our biggest manufacturers in Ontario and Quebec are importing the bulk of their raw material, and if a tariff of 20 per cent was placed on their importations, I think they would be forced to close up shop; I do not think they could get many of those raw materials in Canada.

We must have exports to pay for these imports. Surely everyone will admit that. As I pointed out at the beginning of my address, 32 per cent of our exports at the present time are wheat and flour, and about 50 per cent are from the field crops and live stock produced on our farms. The budget speech of the Acting Minister of Finance (Mr. Robb) showed a balance of exports over imports of $165,000,000. It is estimated that we have now an investment of foreign capital in Canada of five and a quarter billion dollars. Now, let us assume that this is drawing a rate of interest of, say, 5½ per cent; that would give a total interest of $281,000,000, or a net adverse balance of $116,000,000. I think something would have to be added to provide for the invisible factors, such as ocean freight rates—because most of the shipping lines are owned outside of Canada—lake and rail rates, marine insurance, fire, life and accident insurance, and so on. It is hard to estimate just what these invisible factors are worth, but I think it will be agreed by almost all hon. members that there is a considerable net balance of trade against us.

Now, I think it would be worth while for hon. members to inquire why we have such a large investment of foreign capital in Canada. I have here a booklet entitled 'The flow of capital" by Harvey E. Fisk, of the Bankers' Trust Company, New York. Speaking of the investment of American capital in Canada, he says:

> The United States would now appear to have invested in Canada in round figures 2½ billion dollars, or almost as much as the British investment, while other foreign countries may still have a small amount invested. This would give as the total investment of

foreign and British capital, as of January, 1923, in Canadian government, provincial, municipal and corporate securities, properties and enterprises, about 5¼ billion dollars.

Later on he says:

It is computed that more than two hundred branch factories were opened in Canada by Americans in 1919 and a great number in 1920 and 1921, and that late in 1922 there must have been over 700 such establishments, with a further number seeking suitable locations. One of the incentives for this development is that the American manufacturers can thus supply the Canadian market and at the same time escape the Canadian tariff.

I hope hon. members will note that sentence:

—and at the same time escape the Canadian tariff.

Then he continues:

American investment in Canadian industries has unquestionably largely increased since 1919, and so on.

And he adds:

This is apparently what has happened, the United States has made a brand new investment in Canadian enterprise of a billion and three quarters of dollars.

It seems to me, Mr. Speaker, that this investment of American capital in Canada has been largely increased because of our tariff. I do not believe that the Canadian people have given enough serious thought to this condition. It would be interesting to know just how much we have taxed ourselves through the tariff for the benefit of the American millionaires who establish these industries in Canada. Take the Ford Company of Canada as an example. The dividends they have paid and their present equipment total about thirty-million dollars on an investment of a hundred and twenty-five thousand dollars; and American stockholders hold the majority of the stock in that corporation. This article states that about seven hundred American manufacturers have established branch factories here. It is to be hoped that they have not all taxed us to the same extent as has the Ford Company of Canada. And yet when I bring in a resolution asking for a reduction of the duty on automobiles so that these American millionaires could not tax us quite so heavily, the Acting Minister of Finance says that he cannot accept it because he must have the revenue from the tariff on automobiles. I did have a statement showing the tariff revenue from automobiles for each year for the past ten years, but I neglected to bring it with me. It shows that the customs duties collected on automobiles are growing less and less each year as these factories are established in this country and secure the market. Not only have we taxed ourselves to establish these branch factories here, but we must go on taxing ourselves in perpetuity, because if we are to believe the arguments of our protectionist friends, if the tariff is removed or lowered a little bit these factories will be closed up, and then we shall have taxed ourselves for nothing. It seems to me that we are taxing ourselves to establish American industries in Canada so that they may charge us higher prices than they charge to their customers in foreign countries. In fact, as I put it on a former occasion, we have taxed ourselves on automobiles to the extent of 40 per cent—that is what it works out at—so that the manufacturers can sell automobiles cheaper to New Zealanders than they do to us. I have here a statement showing the percentage of capital owned in Canada and the percentage owned outside of Canada in a number of leading industries in this country, published in 1919. I do not want to read it all to the House, and if I may be allowed to place it on Hansard I would like to do so.

The statement is as follows:

Percentage of Capital invested in Canadian Industries
Year 1919

	Owned in Canada Per cent	Owned outside of Canada Per cent
Lumber industry	61	39
Pulp and paper	68	32
Agricultural implements	58	42
Foundry and machine shop	70	30
Building and construction industry	46.4	55
Electrical apparatus industry	36	64
Meat packing	57	53
Rubber	40	60
Patent medicines	12	88
Paint and varnish	47	53
Sugar	67.2	32.8
Car construction	40.4	59.6
Drug and chemical	36	64
Brass and copper castings	55	45
Condensed milk	48.5	51.5
Refined petroleum	46.7	53.3
Automobile accessory	6.5	93.5
Automobile industry	39	61

There has undoubtedly been an increase since that time in the percentage held by the United States investors in certain industries, notably the pulp and paper and automobile industries.

Now, just a word or two more about the establishment of these American industries in Canada. I brought to the attention of the House what it cost to have the Ford Company establish a branch in Canada. I could give many examples, but I shall refer to just two or three. One is the Canadian General Electric Company. I notice they have recently announced a dividend of six per cent on the common stock of $10,000,000; their preferred stock is $2,000,000. This company is,

I am informed, really a branch of the General Electric Company in the United States. But we put on a tariff to protect them from the competition of the same concern in the United States, with the result that a radio which sells at $83 in the United States costs $98.75 in Canada. Then I have here a statement of the Sherwin Williams Company in Canada, which I believe is really a subsidiary or branch of the Sherwin Williams Company in the United States. I find that this company consists of a merger of three companies, formerly the Sherwin Williams Company, Lewis Berger and Sons, and the Canada Paint Company. They had a total capitalization of $2,500,000. After the merger was completed, we find they had bonds of $2,450,000; perferred stock, $3,000,000; common stock, $4,000,000; total capitalization, $9,450,000. I quote from Greenshields' market report of a year ago regarding this stock. It says:

> After provision for all prior charges, including depreciation, renewals and interest, earnings available for dividends on the 7 per cent cumulative preferred stock have averaged since the inception of the company $585,210 per annum. This is equal to 18.1 per cent on the average preferred stock outstanding and is equal to approximately two and a half times the annual dividend requirements at the present time.
>
> Dividends are now being paid on the common at the rate of 6 per cent.

There is a duty on paint, "not otherwise provided," of 20 per cent, 27½ per cent, and 30 per cent. Every time I travel from here to Montreal and look at the large number of buildings that have never received a coat of paint I cannot help but wonder that these Montreal magnates do not lower the price of paint a little bit. I suppose those who defend this tariff would say it makes work for the paint makers in Canada. That may be true, but if paint were cheaper the farmers might be able to hire somebody to put paint on their barns and we would provide some work for painters and give employment to more men than are now employed in the paint factories. Nothing looks more desolate to me than building after building that has never received a coat of paint. Some of them have probably been without paint for thirty years and I suppose they will stay without it for another thirty years before we will get the duty on paint reduced.

Mr. McMASTER: The wood would need to be sound.

Mr. COOTE: Well, it is good Canadian lumber. I have here an item from the Financial Post of a year ago telling about a meeting of manufacturers in Liberal Quebec at which a pretty strong protest was registered against any proposal to reduce the protection necessary for the prosperity of the industry. It says that among those attending was "W. S. Fallis, Sherwin Williams Company, Montreal". He was there, I presume, to look after the duty on paint.

Then, coming to some strictly Canadian companies, I want to throw out a word of cheer to those who are so concerned about the steel industry in Canada. I find that the Steel Company of Canada was a merger of five companies, the combined capital of which was $9,969,500. Of this amount a large percentage was common stock, because there had been several mergers before. The new merger issue consisted of bonds $7,500,000; preferred stock, $6,496,300, and common stock $11,500,000, a total capitalization of $25,496,300. You will notice that over half of this was water, but it is now capital. Here is an item from the Financial Times of a year ago. It says in regard to the Steel Company of Canada:

> During the decade there has been paid on account of preferred dividends a sum of $4,547,411. Deduction of this figure from the ten years' net income leaves net earnings available on the common stock of $15,828,053, which indicates average annual earnings over the period of $1,582,805, or 13.76 per cent per annum. This is almost double common stock dividend requirements of 7 per cent per annum.

I quote the following also as showing the earnings of the Steel Company of Canada for the past year:

> Steel of Canada's position is steadily becoming stronger, in 1924, despite adverse conditions and the tariff.

Mr. MARLER: Its earnings were less, though.

Mr. COOTE: I did not take the trouble to read about the earnings. Anyway, the company is still in a splendid position and still able to pay dividends out of earnings.

I seem to have mislaid a statement I wanted to give the House in regard to the textile industry, because the member for York-Sunbury (Mr. Hanson) bewailed the condition of that industry and I wanted to make some reference to it. However, I should like to draw the attention of the House to the fact that the common stock of the Dominion Textile Company when this merger was formed was $5,000,000, but the money invested in that stock was only $500,000. That is, it was sold at $10 a share. The earnings on this stock have certainly been very handsome. A few years ago the stock had risen to $213 per share. As that made the stock hard to trade in on the market there was a split up of three shares for one, and now the common stock of that company stands at $15,000,000. They have paid dividends on

this common stock for many years. I think I gave some statistics about this company two years ago, so it is not necessary for me to go into it further now; an investment of $500,000 some years ago has now become $15,000,000. We have here, I think, a good example of how capital is created.

Mr. MARLER: I think I should correct my hon. friend in that respect. The Dominion Textile Company took over a number of mills at a very moderate price. In addition to the $500,000 my hon. friends speaks of, those who got the common stock had to put up a great deal of money with respect to the bonds. I think my hon. friend should be quite certain of the statements he makes with regard to that company. I am not trying to defend it in any way, but I do not think it fair to say that $500,000 has increased to the amount he suggests.

Mr. COOTE: I think a fairly complete statement regarding this company is given in the Journals of the House for the year 1919, and I think the facts there will be found exactly as I have stated them to-night, except that since that time the $5,000,000 has been increased to $15,000,000. If I had the Journals of the House I could produce the statement.

Mr. MARLER: The Journals of the House are not necessarily right. A statement made in 1919 is not necessarily right.

Mr. ARCHAMBAULT: May I point out that during the inquiry into the high cost of living the president, I think, of the Textile Company admitted those facts.

Mr. COOTE: I think that is substantially correct. It was not the president, but the secretary of the company.

Mr. McMASTER: It was Mr. Daniels.

Mr. COOTE: I believe it was Mr. Daniels. I would like to point out now how capital is created. I have here a statement of the Sun Life Insurance Company, issued a year ago, and in a printed list of their investments I find that they hold common stock of the Dominion Textile Company for $1,007,656,23. The money which the people of Canada have paid to this insurance company to provide for their widows and orphans would surely be considered actual capital, and we now find this money invested in this common stock. So I think it can fairly be claimed that this $15,000,000 is now actual capital. The men who originally purchased this stock I presume will still control at least 51 per cent of it. They have received handsome dividends, because some years ago I saw a statement made that this common stock had returned in dividends ten times the amount originally paid for it. They have sold a large part of this common stock to the public, and they now have several millions of real money invested in the common stock of this corporation. I am sure they feel perfectly secure, knowing that the public will now protect them because as I have shown the public are vitally interested.

I could show, too, that this insurance company, one of the largest of its kind in Canada, has $350,000 of the common stock of the Canadian General Electric Company, and $1,965,000 of the General Electric Company, as well as common stock in several other companies.

I do not wish to deal with the tariff any further, Mr. Speaker, except to refer very briefly to the question of protecting the farmer through the tariff. It is rather strange that a tariff on wheat does not increase the price of wheat, whereas a tariff of 35 per cent on automobiles affects the price of automobiles to the extent of 40 per cent. The tariff will increase the price of goods if those who are producing the goods are few enough to get together in a combine or gentleman's agreement and fix the price. A tariff on boots and shoes will not hurt us very much in this country if the boot and shoe men do not take advantage of the tariff to force up their prices, nor will the tariff on any other article increase the price very much under those conditions. The producers of wheat are too numerous to get together and force up the price of wheat, even if you did put a tariff on it. I admit that some farm produce can possibly be advanced in price through the tariff. That the price of apples can be advanced through the tariff has been demonstrated to be a fact; that is the way it has worked out. But it will not work that way with wheat and cattle because the men producing them are too numerous to get together.

I have here a little article from Commerce and Finance, a financial paper issued in New York entitled, "Congress, Coolidge and the Farmer." It deals at some length with the situation of the agriculturists in the United States. It mentions the desire of the government and of the public men in the United States to improve the financial position of the farmer in that country. It devotes considerable space to the McNary-Haugen bill, which would create a government body to handle wheat and charge the American consumer about 42 cents a bushel more for wheat than was charged to the buyer in foreign countries. It goes on to say that this bill was killed in

congress for certain reasons. It then says that the bill will be up again, and if that bill is not put into effect some other marketing agency will likely be created in an endeavour to assist the farmer in marketing his products and in charging the American consumer more than the foreign purchaser of wheat. It also states that in the United States they are endeavouring to persuade the farmer to limit his production, but the writer of this article says:

Whether the remedy be production or marketing the starting point is production. If this first step is omitted, the experts and the congressmen may mill around in circles, but will never arrive at any goal.

I want to draw the attention of the Minister of Immigration to that fact. If he goes on endeavouring to fill up the vacant lands in this country with farmers, what are we going to do with that production? This article is by James E. Boyle, Professor of Rural Economy, Cornell University, who has made a particular study of this subject. This is what he says about the tariff:

I am no defender of the protective tariff. I agree with the official findings of the American Farm Bureau Federation that our present tariff is costing the American farmers three hundred millions of dollars a year.

I do not think I can leave the question of the tariff with any better quotation than that. That is the last remedy I am going to suggest to the Acting Minister of Finance for the position the farmer in the west finds himself in to-day. He might reduce the tariff on a few necessities which the farmer has to purchase.

I have here a little pamphlet published by the Edmonton Journal, which, as you all know, is generally regarded as a Conservative organ. They are advocating a "Canada Forward" policy. They evidently have discarded the old National Policy. They say:

A Canada Forward policy should recognize frankly that agriculture is and must be for some time Canada's basic industry, and that there can be no general or permanent prosperity in this country except under conditions that make for a prosperous agriculture.

Mr. STEWART (Argenteuil): They are not advocating reduction of the tariff, are they?

Mr. COOTE: Yes, I think I can show they are advocating it, but I do not want to make too long a speech.

Mr. STEWART (Argenteuil): I never caught them at that before.

Mr. COOTE: They go on to say that if there are certain industries in Canada which cannot stand on their own feet, they have got to be eliminated, or something to that effect. He says here in part:

If Canada is to compete with other nations our agricultural methods and our industrial processes must reflect the latest achievements of agricultural and industrial science. Much of our agricultural products is sold in the world market where tariffs cannot avail, and Canada cannot afford the luxury of tariff protection for industries that are not one hundred per cent efficient in their industrial processes.

And I think on another page he does advocate a gradual tariff reduction.

Now I want to refer to certain remarks made by the hon. member for Vancouver South (Mr. Ladner) in his speech two days ago. He said in part—page 2432 of Hansard:

My submission is that it is entirely because of the Progressive party, and very largely their views from a purely economic view are sound. They say: We produce wheat in our country; we sell in the markets of the world and we buy in a protected market; therefore if we can eliminate the protective duties we may get our goods cheaper and have a bigger margin of profit or be able to sell more wheat in the markets of the world. That is a hard argument to answer from the economic point of view.

Later on he says:

The value of wheat and wheat flour exported was $327,000,000, or 22 per cent of the total agricultural production. So that this 22 per cent, representing the views of the prairie provinces through the Progressive party in this parliament, are dominating the government and the fiscal policy of this country. There is our trouble.

I should like to draw to the attention of the hon. member for Vancouver South the statement of the Premier of Ontario, made I think about a year and a half ago, and as near as I can repeat it it was that Ontario had always dominated the politics of the Dominion. I thought at the time that the Premier of Ontario had made a very correct statement, and I should like to suggest to the hon. member for Vancouver South that he might confer with the Premier of Ontario and see whether he is not, after all, mistaken. I feel that Ontario, and possibly we might add Quebec, has dominated the policies of this country and I think, possibly, will continue to do so. It is only natural for them to expect that they will, because they are the populous parts of Canada and return a majority of the members of this House. But I should like to refer you again to some of the words used by the hon. member in question. He says the Progressive argument is a hard argument to answer and he admits that it is hard to answer our argument from the economic point of view. But he goes on to point out that we are in the minority and asks why should our views prevail—why should they influence this government? If our views were influencing this government I

for one would support the present budget; but I do not think this is the case, and I am going to vote against the budget not simply because our views are not influencing the cabinet, but because I think the policy laid down in the budget is not one that I can support; it is not in line with the platform on which I was elected and I intend to stand by my principles. But when the hon. member was elaborating this point that although we might be economically sound and we had a hard argument to answer we represented only 22 per cent of the people so why should we influence the government—I looked on the mace—the glittering mace we have on the table—and I thought the hon. member was simply advocating the policy that had been in force in this country for many years; the policy of using the big stick on the minority although they might be economically sound in the views which they were advocating. What I would advocate, Mr. Speaker, is that this mace should be removed from the table; we should not have big stick government in this country. In place of the mace I would place on the table the figure that I think all members have seen where the goddess stands with the scales weighing out justice to all. That is what we must have in this country instead of having a big stick waved at the minority. "You may be economically sound," we are told, "but then you are advocating something that the majority do not want, so we will just take the big stick to you and you can climb down."

We hear a great deal about national unity; we have heard more from this government than we ever heard on the subject before. Why have we heard it? We would hear very little about national unity if all sections of Canada were getting justice. You are not going to get national unity until something more nearly approximating justice is granted than is the case to-day. There are two schools of thought in this country, Mr. Speaker, at least on this particular subject. One is that the west—I should not say the west—but those who are advocating lower tariffs cannot get their wishes carried out; that we are going to have protection, and that if we put the Conservatives into power we will get higher protection than we have now. Therefore we must continue the present government in office at all costs because they will not raise the tariff. Well, I cannot subscribe to that doctrine; I believe in justice to all. If our views are economically sound and our argument hard to answer but nevertheless we are denied what we are asking for, then it is up to those who are opposing us to show in what way our demands may be fairly met. Are the people of the west to remain in this position forever, advocating something that is economically sound but being denied it because they are in the minority? Surely confederation cannot be held together on such a policy as that. I have listened in this House to a great many speakers on the budget, and on other subjects, and I have yet to hear a suggestion from any hon. member as to what way or in what manner any quid pro quo for this protective tariff is to be given to us. On the other hand I have heard admissions from many members that the protective tariff is of no benefit to us, that in fact it is a hinderance. The hon. member for North Waterloo (Mr. Euler) this afternoon in a very well reasoned speech advocated the wiping out of the British preference on the ground, as nearly as I can recollect it, that he did not believe in sentiment influencing our economic policies in this country. Well, is it taken for granted that sentiment will persuade the west indefinitely to continue under a policy which is economically unsound for it?

That is the point I want to impress upon this House; there is no use our trying to gloss it over. This feeling of injustice has been bearing particularly hard upon the west while we have had adverse conditions and poor prices to contend with. So long as the people are prosperous they will put up with a wrong economic policy, but when it begins to bear hardly upon them they must seek a remedy. There is no use disguising the fact that there is an agitation in certain parts of western Canada to get rid of this domination of the east in some manner, and I think it is the duty of this House—I do not think it is too strong a term to use—it is the plain and bounden duty of this House, to see to it that that feeling of injustice is no longer allowed to grow. There is a demand, as I say, for some action which will relieve us from this position. If some action is not taken, if we are allowed to go on as we are going to-day, I believe that feeling will grow in spite of all the talk upon national unity that can be handed out to those people.

Before I sit down, I should like to say in regard to this point which I have been bringing to the attention of the House, that as long ago as 1910 this feeling was very strong in certain parts of western Canada, and the late Mr. Bramley-Moore issued a little book entitled "Canada and her Colonies or Home Rule for Alberta". I do not think the late Mr. Bramley-Moore's loyalty could be questioned at all, as he was an Englishman who, when war broke out, although he was a member of the

Alberta legislature, enlisted, I think, as a private, went overseas and was killed in the Great war. But Mr. Bramley-Moore, in his book, endeavours to point out—and I think he makes a very good case—that as regards the western provinces, they were being treated by, I would say, older Canada in regard to this tariff in the same manner as Britain, Spain and Portugual treated their colonies years ago. He makes this statement:

> Hitherto no colony of the Anglo-Saxon race has rested content in being made subordinate and subservient to the interests of the Mother Country. It remains to be seen whether western Canadians have lost the spirit of their fathers. In these days when state interference with individual liberty of action is becoming more and more pronounced, we may be tending to acquire the mental characteristics of the orientals who bend their patient backs beneath a government's tyranny with a proper self-effacement and equanimity.

I do not want to keep the House any longer; but surely the time has come when the people of western Canada particularly should be told whether this is the tariff that they have to put up with or not. If this is the minimum tariff that the Liberal party, who are the traditional low tariff party in this country, are prepared to endeavour to put into force, that should be made clear to the west. As I have said already, if there is any quid pro quo to be offered to western Canada, I think that should be done at this session of parliament.

Mr. A. L. BEAUBIEN (Provencher): Mr. Speaker, in rising to make a few observations on the present budget, it is my intention to follow the example set by members in this part of the House and to be very brief. I said some two years ago that any remarks that I would make in this House would not be much longer than twenty minutes and I intend to close within that time to-night.

First, I desire to express my regret at the absence of the Minister of Finance (Mr. Fielding) through illness. I am sure we all miss his presence in the House and we all hope for his speedy recovery. I also wish to thank the Minister of Marine and Fisheries (Mr. Cardin) and the Minister without Portfolio, the senior member for Ottawa (Mr. McGiverin) for the visit they paid to the constituency which I have the honour to represent in this House. I am sure the electors of Provencher appreciated their visit. I think members of the government and every member of parliament should acquaint themselves with the different problems throughout the various parts of this country. There is only one way in which they can do so and it is by paying visits to the different parts of Canada. One of our chief difficulties in solving our national problems is that the knowledge of a great percentage of the members centres around their particular constituency and province, and until the members know the whole country, it is impossible for them to give justice to the various national problems that we have to solve.

On September 1, 1921, the present leader of the opposition (Mr. Meighen) made a speech in London, Ontario, before 3,000 electors, announcing a general election. He stated the main issues, and I would like to read a few extracts from his speech as published in the Montreal Gazette of September 2, 1921. The right hon. gentleman said:

> But there is an issue. Here are 3,000 people! You have watched the shaping of events and the movements of political forces for the past few years. Is there one of this whole 3,000 who does not know as he sits in his seat to-night that there is something that Canada must decide and decisively decide before we square away for the journey ahead? I do not think there are two opinions in this hall as to what we have to decide. It is the tariff of Canada.

Then he goes on:

> But there is a challenge from the official opposition under Mr. Mackenzie King. They adopted two years ago in solemn convention a resolution that bound them to place on the free list nineteen classes of articles including foodstuffs, farm implements and machinery and lumber of every kind, and to increase the British preference 50 per cent and to substantially reduce the tariff on boots and shoes and articles of consumption.

The point I want to make in reading the remarks of the then Prime Minister is that the tariff was a well-defined issue at the last general election. The Liberal party covered this whole country, going from coast to coast, preaching low tariff. The Progressives did the same. They all preached low tariff, and the Conservatives went from ocean to ocean and preached protection. On the 6th day of December, 1921, the electors gave their verdict, and the verdict given by the electors should be taken notice of and respected. The electors on the 6th December, 1921, elected with large majorities 186 members who preached low tariff throughout this whole country, and they returned only 49 protectionist Conservatives. What was the meaning of that verdict given by the electors? There is no denying that it was a mandate to the government who took office substantially to reduce tariffs on the implements of production and the necessaries of life. This government has been in power now for four years and this is its fourth budget. I do not want to be too critical, but in my opinion we have had three stand-pat budgets and one with slight reductions on the implements of production. Is the government prepared to

go back to the electors and say to them: We have taken no notice of the mandate that you gave us in 1921, but return us to power and we shall see what we can do? I say you cannot fool the electorate all the time.

What has been the result of the government's failure to keep its promises? It has been to produce the present conditions of business depression and industrial stagnation. The government cannot take any credit for the improvement in agricultural prices. They have no control, for example, over the price of wheat. Nothing they can do would cause it to rise or fall. The farmers' returns are determined, broadly speaking, by world conditions which no government can affect; but with general business and industrial activities the condition is different. The government may help or hinder these interests. If the government had last year devoted its surplus revenues of some $24,000,000 to reducing the general tariff, business and industry would be to-day in a more flourishing state. The taxes remitted would have added to the purchasing power of the people, and in addition to the gain to the consumers of the country by the reduction of the tariff taxes paid to the exchequer, something like $3 for every $1 of revenue collected would also have been saved to the farmers and the consumers generally, by the reduction of the concealed bonuses paid to the manufacturing industries of the country under the protective system. Thus, instead of $24,000,000 of additional purchasing power something approaching $80,000,000 or $100,000,000 would have been available.

Mr. BOUCHARD (Translation): Will the hon. member allow me a question? I wish to ask him how he can explain that, on the one hand, the Conservatives tell us that the stagnation in business is due to the lowering of the tariff, and that, on the other hand, a good Progressive like my hon. friend, asserts that the depression is due to the high tariff maintained by us?

Mr. BEAUBIEN (Translation): My hon. friend is, himself, well aware that the reason why business is at a standstill, and factories not producing as much as they should, is that the people have not the necessary purchasing power, and as I have just stated, for each dollar of revenue turned over to the Treasury, the people have to put up three dollars.

This huge sum spent by the people at large upon the implements of production and the necessaries and comforts of life would have brought about a stimulation of industrial and business conditions. We should to-day see far less unemployment and far greater prosperity if the government had the foresight and the courage to live up to its promises to the electors to reduce the tariff.

This year no reduction of taxation is proposed. Thanks to trade depression the revenues have fallen off. The Acting Minister of Finance (Mr. Robb) has, it is true, a surplus on paper of $1,820,000, but the figures on which this surplus is based are, after all, only estimates. Comparison of the minister's estimates of expenditures at the beginning of the fiscal year and his estimate made a month before the end of the year show a difference of $9,386,300.07. It is somewhat remarkable that the minister who would be entitled to claim credit for so considerable a saving on the year's administration did not do so. It would be interesting to know just how and where these apparent savings accrued, but we are not afforded the information.

Everybody admits the need for economy. The need is the greater since revenues have fallen so alarmingly, and there is yet no evidence of their recovery. Reduction of taxation is a prime necessity and it is evident that it can result only from savings in public expenditures. The ministers cannot reasonably contend that reductions cannot be made in the expenditures for which they are responsible. The record of the United States in this respect is one that they might profitably emulate. Writing in MacLean's Magazine of April 1, 1925, Mr. J. Herbert Hodgins makes the following comment:

> Federal estimates in the United States provide for the spending of $3,062,277,407 for 1925. President Coolidge wants the amount to an even $3,000,000,000.

Then a statement by General Lord, who is the director of the Bureau of the Budget, as follows:

> General Lord has counselled all federal spenders: "Go over your estimates with a microscope in one hand and a pruning knife in the other. If there is doubt whether a cut should be made—cut, resolve every doubt in favour of the taxpayers."

Further on in this article Mr. Hodgins says:

> President Coolidge, with the active help of the director of the Bureau of the Budget, has given the United States lower taxes, "a material reduction of about $2,000,000,000 yearly" as he, himself, stated in Washington on January 26, 1925. Which, after all, touches the average citizen in his most sensitive spot, his purse, and convinces him of the worth-whileness of the national effort.
>
> In a previous article I quoted figures that were presented by President Coolidge to show, how in four years, 1921-1924, there was the remarkable cut in the United States public debt of $3,198,000,000. This reduces the annual interest from $999,000,000 to $865,000,000—

a saving of $134,000,000, or a sum within one million dollars of Canada's annual interest bill.

President Coolidge has saved the United States more than $5,343,000,000.

Now, Mr. Speaker, if they can do that in the United States, if they can reduce the expenditures of Great Britain, there is not the slightest reason why we cannot reduce our expenditures in Canada. I might offer a few suggestions as to how we could reduce our expenditures. I do not think the Minister of Agriculture (Mr. Motherwell) would agree with me in this respect, but I think we could make a reduction in the expenditures for experimental farms. We have too many experimental farms in this country. I know that these farms have been a benefit to Canada; I am not denying that, but they do not reach the farmer to-day, or else the farmer does not reach them. I think the government could reduce the expenditure on experimental farms by a large amount, and devote a certain percentage of that saving to research work.

Mr. GRAHAM: That would not reduce the expenditure.

Mr. BEAUBIEN: No. I said that we could spend a certain percentage of that reduction in research work, which would be of greater advantage to the Canadian people as a whole. We might reduce our public printing. I go down to the post office in the morning, in the afternoon, and in the evening and it is always full. It contains many government publications some of which are beneficial. With reference to the others, most of the members throw them in the wastepaper basket. We might reduce our expenditures on national defence. I see the minister is in his seat just now.

Mr. MACDONALD (Pictou): Would the hon. gentleman favour spending money on the Hudson Bay railway?

Mr. BEAUBIEN: If it is of public importance I would.

Mr. MACDONALD (Pictou): It is not a question of "if"; is the hon. member in favour of it?

Mr. BEAUBIEN: I am in favour of spending the money where the taxpayer and the country as a whole are going to get the benefit from it.

Mr. MACDONALD (Pictou): That is very general.

Mr. BEAUBIEN: If the Canadian people are ever to reduce their national indebtedness, with its accompanying annual payments of interest, some thrift must be exercised and the old-fashioned policy of cutting our coat according to our cloth must be made effective. To the people of western Canada, Mr. Speaker, this budget is disappointing. Not only because it does not reduce taxation, but because it does nothing to fulfil the promise held out to them of relief from the unduly high cost of the instruments of production and of the necessaries of life. Agriculture must be made a profitable industry if this country is to be fully and properly developed. It can be made so only by the removal of the handicaps it suffers from excessive taxation and from the protective policy.

This, Mr. Speaker, brings me to another point,—the lack of facilities for obtaining adequate loans on favourable terms, which is a serious disadvantage to our agriculturists. In his latest report, Dr. H. M. Tory says:

> The question of agricultural credit is not one coming by accident out of the peculiar conditions of to-day, and therefore requiring only a temporary solution, but it arises out of conditions that are permanent and require to be dealt with on a permanent basis.

This statement, I am sure, will be endorsed by everyone who has given any attention at all to western conditions. The financial difficulties of the western farmers fall into two classes—those which are of a very pressing but quite temporary character, and those which will remain after all the immediate difficulties have been overcome, and which require the permanent remedy indicated in Dr. Tory's statement. Many of our western people could derive no benefit at the present time from a permanent scheme of rural credits because they are too heavily in debt; they have no credit left. Under the influence of circumstances, largely outside their own control, they have become deeply involved financially, and some way must be found to relieve their immediate financial necessities and to put them in a fair way to prosperity as well as to make their industry profitable. Then, and then only, will they be in a position to make proper use of rural credit facilities.

One of the chief instruments in assisting the heavily indebted farmers to place themselves in a more advantageous position for the pursuit of their industry is to be found in the Bankruptcy Act. At the close of last session certain amendments to that act were recommended to this House by the standing committee on Banking and Commerce. These amendments were drafted with the object of making the administration of the act more equitable and more effective so far as farmers are concerned. The government was pressed at that time to pass legislation along the lines recommended, but was unable to do so owing

to the advanced stage of the session. But no effort seems to have been made in the present session to give effect to the committee's recommendations. We on this side of the House would urge upon the government the necessity for immediate action in this matter. If the process of debt adjustment and of relieving bankrupts from their impossible situation could go ahead with greater freedom, there would be some prospects that hundreds of farmers would be retained upon their farms who otherwise will be driven off their land and probably out of the country, while thousands of others will be enabled to adjust themselves to existing conditions and to take advantage of any permanent facilities for rural credits which it may be found possible to establish. To this end the passage of the proposed amendments to the Bankruptcy Act are indispensable. Some such legislation must precede the application of any permanent plan for providing farm loans, and I would again urge upon the government the need for action at this session of parliament.

There is another point, Mr. Speaker, on which I feel it is my duty to say a few words. I refer to the proposed embargo on pulpwood. I will not go into the details of that question, as many hon. members know more about it than I do and they can treat the subject more adequately. It has been shown, and conclusively shown, I believe, to every member of this House who has given the matter a careful and unbiased study, that only the very small group of manufacturers who are urging an embargo on pulpwood would benefit by it. Its enforcement would spell injustice and hardships to hundreds who would be deprived of a good, and perhaps a near market for their products. In my own constituency of Provencher many settlers depend entirely upon the sale of pulpwood for their living until their farm products give them a sufficient revenue to live on. As they are located near the main Canadian National railway line, or one of its branches, the nearest point where they can sell their pulpwood to good advantage is International Falls, and the proposed embargo would close down the market to them What would happen then? There is no doubt most of them would have to leave the land to go either to the United States or to increase the number of unemployed in our cities. On behalf of those bona fide settlers I appeal to the government not to chase out of their farms those hard workers who constitute one of the best assets of our country, and who should not be made innocent victims of a few selfish and voracious manufacturers. It has been proven that of the yearly destruction of our forests 90 per cent is due to fire, winds and insects. Of the remaining 10 per cent statistics show that the proportion used in various industries is as follows: In Canada, 84 per cent; outside of Canada, 16 per cent. Then 16 per cent of 10 per cent of all the timber cut or destroyed each year in Canada, or in other words, one-half of one per cent only of such timber is exported. Why is it that to save such a small proportion of our timber the proponents of the embargo would not hesitate to injure the settlers, the farmers and the woodland owners? It is that they would reap big profits in forcing the sale of that percentage of timber to their own mills at their own prices. Will the government listen to them, or will they listen to the farmers who claim that our first duty is to protect our forests against fire, insects and other controllable causes of destruction? I hope, Mr. Speaker, the government will not hesitate to give fair treatment to our settlers.

I repeat, Mr. Speaker, the budget is disappointing to the western people, who look upon it as an anti-national and unfairly balanced policy. If there be an election this year, as has been foreshadowed by some newspapers which claim to be well informed, I consider it will be my duty to tell the electors of my constituency that the present government has utterly failed to keep the pledges of the Liberal platform of 1919 which seems to have been drafted not in a spirit of sincerity, but as a vote-catcher.

Before taking my seat, Mr. Speaker, I wish to emphasize the fact that notwithstanding the villainous attacks of petty politicians whose aims seem only to be to find fault with others and to sow discord and strife between the different classes of Canada, the Progressive group has constantly worked for the welfare of the whole country and of every individual of all classes. Our main object has been to try to place all Canadian citizens as nearly as possible on the same level, not by reducing the higher classes but by improving the lot of those who heretofore had to bear the heaviest burdens and by trying to secure for them a fair share of the prosperity and of the happiness which our country has in store for its inhabitants. In trying to reach our aim, we raised ourselves above all questions of race and creed, and we worked to promote harmony and unity in basing our actions on the principle of equal rights to all. In the course of his remarks the other day, the hon. member for Chambly and Vercheres (Mr. Archambault) recognized the fact and speaking of the "restoration of harmony and unity between the different races, religions and sections of

this country" he said that "the great task was accomplished with the co-operation of the Progressive party." I would be glad, Mr. Speaker, were I able to return the compliment to the hon. member for Chambly and Vercheres, and to declare that his party has stood by the principles embodied in their platform. On May 15, 1923, in a very eloquent speech delivered on behalf of this group, the hon. member for Nelson (Mr. Bird) laid down our policy. He said:

> I want to say, moreover, that the Progressives are out for the unity of Canada, and I make bold to say that we have the only basis upon which there can be such unity, that is, the basis of justice as between classes in Canada and as between sections in the community. That is the only real basis upon which there can be any unity. We have no traditional spites and no petty feelings of strife behind us. Our sole stock in trade is what we carry with us, just a straightforward economic policy, that is all. It does not matter what you are religiously, socially or provincially, you are equally welcome into this fellowship, because we do not specialize in any of those things that divide one Canadian from another. The basis on which we work is the basis on which all the people can co-operate.

In concluding, Mr. Speaker, I will say without fear of being contradicted that we have always lived up to those principles, and I feel sure that for the good of Canada the Progressive group will always stand by them.

Mr. JOHN EVANS (Saskatoon): Mr. Speaker, it seems that this House has suddenly been seized with the importance of some practical suggestions for economy. It is a quarter to twelve and I am to go on now until I finish. However, it makes very little difference; I suppose the order will be as good now as it is during any other part of the day.

Anyone, Sir, who undertakes to analyse the speeches on the budget is bound to come to the conclusion that in this House we are a set of legislators each fighting for his particular section of country. A lack of unity prevails. Only yesterday I read of a movement in Montreal on the part of a number of young men who were forming themselves into what is called the Confederation Club of Canada. The idea is to promote unity—a noble aspiration. But the very fact that such an organization is considered to be necessary is a serious indictment against the National Policy under which we have been working during the last sixty years, a policy that has developed disintegration rather than unity. It is only, Sir, on the solid basis of justice, liberty and equality that the unity of a nation can be maintained. It is not race or religion, not climate or distance that separates us or that endangers confederation; it is the economic injustice of class privilege which is the dividing factor.

I am not going to analyse the financial statement presented in the budget, any more than to say that the net debt seems to be gradually increasing. If we take the four years from March 31, 1920, to March 31, 1924 we find that our net debt has increased over $182,000,000. In 1920 the debt was $2,248,000,000; now we find it is $2,431,000,000. This does not seem to be warranted by the state of the trade and commerce of this country. It would seem, Sir, that the demand of the people for greater economy is a reasonable one. While our debt has been increasing and our taxation has been mounting, the population of the country has not correspondingly increased; neither has the earning power of the people advanced. Those who have been in large measure responsible for the financial and industrial policies of this Dominion and to whom many privileges have been granted by law, have not assumed the responsibility which may be regarded as commensurate with the privileges received. They have not made it easier for the workers to find employment throughout the Dominion or for the government to get revenue by the development of our natural resources, but rather they have withdrawn their capital from industry and have sought investment in foreign countries or in tax free bonds. A country's prosperity lies in its power to produce and its freedom to exchange, and I think it should be a policy of our government to develop these features in our national life rather than to sacrifice the freedom of the whole to class privilege, which it seems anxious to do.

One thing regarding the financial statement presented with the budget which is more pronounced this year, I think, even than in former years, is the annual wrangling which takes place as to the financial standing of the country. The budget, of course, having to do with the future, naturally calls for some prospective comment. But if book-keeping and accounting is an exact science—and I think the hon. member for Vancouver Centre (Mr. Stevens) will say it is—I cannot see any reason why such scandalous wrangling, which does so much to lower the tone of public life in the public mind, takes place from year to year.

I would like to have seen some alterations this year regarding taxation—a tendency to draw the revenue that is needed more from land values and profits. I condemn the principle of tariff taxation, tariff protection. If a customs tariff is needed at all it should be

based on the needs of the public revenue and should be levied with that end in view.

I would like to have seen some further reductions made along the lines of those of last year, with a view to making production on the farms easier and to making it easier to compete in the markets of the world with our products, both in price and in volume. These things are very badly needed; indeed they are necessary to the success of the country at this time. But instead the government have seen fit to tighten up the taxation on primary production by insisting now that the stamp tax be applied to all cash tickets given for certain farm products, particularly milk, grain and cream. This is a tax on dairying which in Saskatchewan is calculated to put a burden of many thousand dollars on an already overtaxed industry. Agriculture is the one industry that has not received any special privilege. To place a further imposition on this industry means the hampering of production. Many of these cheques, Sir, are for as low an amount as one or two dollars, and I think it is unfair to this industry. Agriculture, particularly in western Canada is discriminated against. It was discriminated against during the war in having the prices of its products fixed and in having the railway rates raised, and now it is discriminated against to pay that debt incurred largely by the profiteering in those war years, by having a tax placed on this part of primary production.

Again, if large cheques are to be exempt from taxation, surely we should exempt the poor man who receives only his small cheque. I find, too, that promissory notes are still to bear the stamp tax except as far as such may be used for collateral security. I look on this, too, as an undue advantage taken of a man's misfortune. It is discriminatory in that it places a tax on those who are least able to bear it. To tax such a liability of a farmer I think is unsound in principle, and while I say this, I have in mind the great mass of agricultural producers who are compelled each year to borrow money for primary production. To borrow for speculation is a different matter, and I do not think that any valid objection can be raised against a tax on loans for such a purpose. I do hope, however, that some consideration will be given this matter before the budget is passed.

I would for a short time draw the attention of the House to some incongruities of tariff taxation and some incongruities of argument entered into by some protectionist advocates in this House. The hon. member for Lincoln (Mr. Chaplin) speaking the other day—page 2010 of Hansard—defiantly asked, who pays the duty? and he stated an utter fallacy when he asserted that the manufacturer of the United States when exporting to Canada has to sell his goods cheaper here by an amount equal to the tariff impositions placed against such goods when imported into this country. The fact is, Mr. Speaker, the Canadian manufacturer adds the amount of tariff protection to the cost at which the article can be imported from abroad, and I think he knows that very well, as all the other advocates of protection do, or they would not be so strongly arguing for greater protection. Now the reason why governments adopt this indirect method of taxation is because it is always passed on to the consumer. It is really a rich man's law, and wherever it is in vogue there is always some collusion between the manufacturer and the politician. I am using the word "collusion," Sir, in its full meaning. I mean a secret agreement for a fraudulent purpose. The workers are always defrauded of their rights under a tariff tax, and the rich manufacturer and politician have always to resort to the use of intentional violations of the truth to maintain the fallacy, such as the high standard of living, high wages, the packed dinner pail, and numerous other things which are designated to catch the working voter.

But to come more closely to the budget, this year we are increasing the duty on several articles. We are increasing the duty on coal, and as far as that duty on coal is concerned the Montreal Witness, that old champion of the people's rights, puts the case in a nutshell. It says:

> At a monkey shop the monkeys were in adjoining compartments. When a basket of crab apples was placed in front of each, each monkey immediately had a hand in each of his neighbour's baskets. None was the richer for it, but each thought he was. That is the way we humans do in Canada. Old Canada has her hands deep in the baskets of Nova Scotia and the prairie provinces; and now, instead of making her take her hands out we say: "Come along, Nova Scotia, put your hand into these steam-users' pockets; we'll hold them open for you. They will submit, as they know quite well that their's is still the best of the bargain. Indeed, it was they who sent the pied piper to pipe you into protection." There are some in the Maritime provinces—in fact, nearly all—who get no advantage from this coal duty, and there are some steam-users in old Canada, for instance, the publishers, who get no protection in return. We have, however, in both ways, managed to make Canada a dearer country to live in, and that would seem to be our prime objective.

By a duty on coal old Canada, as the Witness calls Quebec and Ontario, hopes to enlist the Maritimes in the cause of protection; at least, they expect to put them in the position where they cannot with consistency protest against the legalized looting

which the advocates of protection say is the life of industry in this Dominion. The member for Fort William and Rainy River (Mr. Manion), also the member for East York (Mr. Harris), say that the farmers of this industrial area between Montreal and Windsor have to have protection against the market gardeners of the United States. This is also a bid for the support of the rural vote at the next election, and it is also calculated to put the farmers in an incongruous position. But the manufacturers, who are, as they say, always solicitous for the workers will gloat over their victory, if coal and vegetables will become dearer to themselves, they can pass it on as they have always done with all other unjust charges, and as for the householder he can go hang as long as the power of price fixing for them is maintained.

12 m.

The government during this session has emphasized the fact that the tariff is not a paramount matter at present. The arch-protectionists on the government side, such as the hon. member for St. Lawrence-St. George (Mr. Marler) feel satisfied with their party this year; that hon. gentleman for example, never mentioned the tariff in his speech in this debate. The hon. member for Brantford (Mr. Raymond) is content too this year to advocate a little tariff for revenue this time. He feels quite safe after an experience of three years showing that his party is prepared to repudiate all Liberal principles. The higher duty on coal which enlists the support of the Maritimes, the advocacy by our Tory friends of protection for the agriculturist, particularly the market gardeners of the east, along with the fact that the government is going to appoint a tariff commission—all goes to show that the forces of class privilege in this House are mobilizing for another raid on the earnings of the agriculturists and the workers, and to increase living costs in the cities for the factory workers, whom they expect to reduce really to a state of slavery over the whole Dominion, a condition which is practically begun at Glace Bay.

I want to say, Sir, that it will not be long until the politicians and their directors, the capitalists of this country, will have to choose between the maintenance of class privilege and confederation. The politics of this Dominion, one of the newest countries on earth, have sunk in two generations into a slough of hopeless immorality when members of parliament representing industry can in this House advocate class privilege as their right. The hon. member for West York (Sir Henry Drayton) admits that protection increases the cost of living until the industries get going; but he does not say how long it takes them to get going. In Canada they have had protection since 1878, and the hon. member admits that as yet they have not been able to reach the stage where it may be said that they are going. In fact, after all this time, according to the leader of the opposition and the member for West York, they are going in the wrong direction.

Several of my Conservative friends mentioned a glass factory at Hamilton that has had to close its doors because it had not the privilege of setting its prices high enough. Well, here is an industry that, admittedly, the longer it has been in operation and receiving protection the worse it has been getting, until finally it has had to close its doors. All the time it has been in operation it has received high protection. At present its keenest competitor, perhaps, is Belgium, but even under the Belgian treaty the rates of duty are: On common and colourless glass 11½ per cent ad valorem; on plate glass not bevelled up to seven square feet it enjoys protection up to 10 per cent; on plate glass from seven feet to twenty-five square feet 25 per cent ad valorem; and on all other glass not otherwise provided for 30 per cent ad valorem, with 10 per cent off, making 27 per cent net. Now the warning thrown out that the price of glass will be dearer than ever is simply absurd. There is no article manufactured to-day throughout the world in which there is keener competition than glass; I do not know why the people of Canada should pay an enhanced price for the glass they need when it can be bought at competitive prices. It will be said, if we import glass what of the workman? The protectionist always uses that argument. But I will take glass as one example of Canadian industry and show that the duty on it, along with others, is to-day responsible for very much of the unemployment in our towns and cities. Glass is one of the articles that enter very largely into the cost of building and this, along with all other building material, has been enhanced in price so much that it has prevented development in the building trade both in the cities and on the farms. Had we no protection on glass it could be imported and sold at a much lower price; but because there is a duty on glass our own manufacturing and distributing combines have a price fixing power which prevents our own home builders and glass users getting the article at a competitive rate. According to the right hon. leader of the opposition protection has done this industry no good. In that he is right because the concern, of course, is out of business; but because there is pro-

tection on this article it has hampered all kindred industries by increasing the price particularly in the case of house building. While this is true of glass it is also true of protection all the way down the line, and in this way is responsible for unemployment. The price-fixing power of the class that is so privileged has put the cost of doing everything in this land out of line with the prices obtained for our exports, so that every kind of development, practically, in a national way has had to stop. Because it cannot be denied that after all this country depends on its exports for its income, and every activity—whether in a public or private way—depends upon our income legitimately made in trade according to the world's prices as dictated by the law of supply and demand. The member for West York, when he was speaking, said that the law of supply and demand was as dead as the dodo. He defiantly invited interruptions, and I ventured the question "What of Canadian agricultural products?" "Oh," he said, "I will come to that later," but the hon. gentleman has not come to it yet. He knows, as well as any man in this House, that the farmers have to depend on prices for their products as set by the law of supply and demand; and I would challenge him now, if he were in his seat, to say if the price of wheat, cattle, butter, cheese, eggs, and poultry have ever been higher than the world's prices as set by the law of supply and demand?

Now the right hon. leader of the opposition declares in a resolution he has on the order paper that the tariff must be put on a consistently protective basis. It would be just as logical to say that the depredatory acts of the Jesse James gang were consistent with law and order as to say that the old National Policy of 1878 was consistently fair to all classes in this commonwealth. Protection at the best is a tax which somebody has to bear. It is an imposition on some class in the country. If all were protected, that is, if all classes were given price-fixing powers on what they produced, no class would benefit. If there were not some one class to prey upon, a protective tariff would be non-effective. Yet the hon. gentleman prates about making class privilege consistent. There is no such thing. Class privilege and consistency are as far apart as the poles. The agriculturists of Canada have had to stand the price-fixing power of other classes while they have had to meet the competition of the whole world in finding a price for farm products.

When the ex-Minister of Finance (Sir Henry Drayton) was speaking, he was very emphatic in denouncing the callousness of the free trader for his fellow workmen, and I wish he was in his seat. Let us see how this works out. The British Empire Steel Corporation will serve very well as an example of the care and responsibility of the protectionist for his fellow men. All I can see that the protectionist cares for is to have a crowd around the factory door every morning. If they go hungry, that is none of his business. If they become desperate, the Minister of National Defence (Mr. Macdonald) would be called on to send in the forces, a thing which, in the past, he has been only too willing to do. Perhaps the hon. gentleman may at some time be able to tell this House the beautiful connection which he sees between fellow-feeling and class privilege. The fellow-feeling of the protectionists and industrial lords of Canada towards the agriculturist and the labourer is very well interpreted in the immigration policy carried on by certain companies and the government at the expense of the taxpayer. There would be no need of an immigration policy for this country if it were not for the manipulation of labour and prices as regards farm products and necessaries of life by a chain of interests in collusion with the politicians who are at the head of the government here in both the House of Commons and the Senate alike. No protest was made last year by any protectionist who, according to the hon. member for West York, is solicitous for the workingman, when the British Empire Steel Corporation brought in 105 Chinamen and sacked the Canadian crews off their boats to make room for them. This was done in an attempt to break the labour organizations, and the present immigration policy of the government seems to be carried on in an attempt to lower the standard of living in the workshops and civilization on the farms of Canada. All the concern the industrialist of this Dominion exhibits for labour and agriculture is to reduce the labourers to serfs and the agriculturists to peasants.

I should like here to show the example the British Empire Steel Corporation is setting at this time, and what the Canadian Railroad Employees Monthly says of that great concern. It is certainly a good example of what industry comes to be that depends on the politician. The Nova Scotia government has stood by and witnessed the horrors of nakedness and starvation all this time practised on their workers. An ex-premier of a neighbouring colony not long ago was found to have made a sale of his country's rights to the British Empire Steel Corporation. I should like, in the face of this, to ask: Why is it now that the Nova Scotia government is afraid to interfere, and why is it that this

Dominion has to stand by and see the enactment of the greatest outrage on men, women and children that has ever taken place in times of peace? But the railroad employees monthly has this to say:

> The game that Besco is playing is to secure a cut wage rate so that Besco can get cheaper coal for its steel works, its steamers, its ore mines, its lumber mills and for its boilers at its coal mines. The second phase of the game is to secure a higher tariff so that every other user of coal on the Atlantic seaboard from Sydney to Montreal shall pay more for their coal, and the idleness and hunger are the weapons being used to hold up the government and the country and the miners.

Perhaps one of the greatest incongruities of argument in the speech of the hon. member for West York is to be found in the paragraph dealing with copper. He said there is a duty of ten per cent on brass manufactures, which duty he does not consider sufficient, but unless it is some product of copper or brass used by manufacturers in their factories, any product of copper or brass is not imported except at twice that rate. The duty on anything for consumers' use is 20 per cent under the British preference, 27½ per cent intermediate, and 30 per cent under the general tariff. Protection is not for the worker nor to keep the money in the country—and this is another argument of theirs—but to give them the power of price-fixing over all their articles. Surely 20 to 30 per cent is plenty of an advantage to our Canadian promoters of industry, even if we admit their self-asserted incompetence. But here again the hon. member for West York runs up against a contradiction of an apparently admitted principle. He says that we should not be importing anything which we can produce in this country; that none of these products should be imported? But they are coming in. The tariff does not stop them. This is the dilemma the indigent brass manufacturer along with others finds himself in at the present time, and the hon. member for West York is pleading with the government to make the consumers' pockets more accessible to be picked. But it does not matter whether it is copper and brass, iron ore and its products, artificial silk, hemp manufactures or clothes pegs, all industry except agriculture depends upon the politician. I believe the hon. member still thinks that if the duty were raised we could prevent any importations. But we cannot. The fact is that the higher the tariff is raised the higher will be the price of the home-made article. And it makes very little difference to a country like Britain whether the tariff, say in Canada and the United States, is high or low; they can export to these countries just the same. Hon. gentlemen to my right assert that the tariff does not raise prices. In that case the manufacturers and distributors must live according to the golden rule. A very interesting article appeared in the Listening Post some time ago, largely taken from the Manchester Guardian of May 29, 1924, and it shows how the Fordney tariff of the United States has failed to protect the manufacturer of New England in his own country and at the same time has rendered him incapable of competing abroad. The Listening Post has this to say:

> Among the "interests" which pressed for the adoption of the Fordney tariff was "Fall River," the New England cotton manufacturers. They claimed that European, and especially Lancashire competition could not be met. The Fordney tariff passed. What has happened to Fall River? Not only has it shared in the general set-back to business which began in the United States in March, 1923, and is now perhaps nearly at its worst, but it has completely lost the race so far as competition with Lancashire goes. In 1913 the United States was twenty-third on the list of importers of Lancashire goods. In 1923 the United States was fifth on this list. In 1914 the United States imported 62,000,000 square yards of cotton piece goods. In 1923 it imported 219,000,000—the increase mainly consisting of Lancashire goods.
>
> It was foretold in Lancashire that this would happen, but the Fall River protectionists apparently hope that no one outside Lancashire understands the economic sequence, for they are now sending out a circular for more protection still.

It goes on to say:

> Our corrupt newspapers and some of our more inept "public men", have recently been referring to the Fordney tariff as a good example to follow, saying that it is the "highest tariff in history". Our newspapers and some of our public men know very little history.

Mr. Walter Leaf, a great banker in England, speaking at the annual meeting of the Westminster Bank, asked this question:

> How has the Fordney tariff worked? I have before me the figures of trade between the United States and Great Britain for the first nine months of 1923, and I compare them with the first nine months of 1922. You will suppose—or at least the authors of the tariff certainly supposed—that there will be a great falling off in the exports from Great Britain to the United States, while the exports from the United States to Great Britain will be maintained. Well, what are the facts? The exports from the United States to Great Britain have in the period fallen off by more than £16,000,000, while the exports from Great Britain to the United States have increased by over £10,000,000. The balance of trade in those nine months has moved nearly £27,000,000 in favour of this country. Surely this must give Mr. Fordney serious matter for consideration.

If our protectionist friends would seriously consider these economic problems not from the standpoint of their own pocket and immediate gain unearned, but from the standpoint of the country at large and the wider viewpoint of humanity they would not ask for a measure that puts the cost of manufacture in this country so high that they are

debarred from exporting except as they can charge their loss to the home consumer. I think it might be logical to assume that this is what Canadian industrials have done for many years. past. They have reaped an undue profit on what they have sold or they charged their losses to the home consumer; that is on their export trade.

Despite all that the Minister of the Interior (Mr. Stewart, Argenteuil) said in his speech this year—and he did last year give this House and the country the impression that the government had made it their policy to do away with the tariff as far as protection was concerned—they now seek to tighten up on us by increasing protection, and announced boldly in the budget that goods imported are not to be valued for customs purposes at the price at which they are sold to the trade in the country of origin, but instead they are to be valued according to the discretion of the minister, and at the instigation of the manufacturing or distributing concerns affected. However, since then the government has announced that this change has been withdrawn. As far as we are concerned or as far as the country is concerned, the Acting Minister of Finance, need not have withdrawn the alteration as announced in the budget. The budget statement only crystallized what has been the practice of the Department of Customs for a long time past. It all goes to show that the government have no intention of lowering this wall of protection or of decreasing the cost of living; in fact it seems that they seek by every means possible to increase the price by the dark and devious ways of withdrawing the administration of the tariff act from under statutory regulations, and putting the whole thing at the discretion of the minister. I cannot help viewing this as being all designed to better hide from the public the reason that the cost of living is kept up to its present height.

A tariff board is to be appointed and the government is now seeking to place the responsibility for class privilege on a board to be appointed and composed partly of officers of the Customs and Excise service. I look on this, Sir, as an abandonment of Liberalism and the government's own platform. It is a capitulation as complete as the betrayal of 1897 to the demands of the class that has sought and obtained vast privileges for the last forty years. It is an acknowledgment that the trade prevention tax, or tariff imposition, is the natural right of the urban industrialists of this Dominion. The government is abandoning its own principles, it is putting the responsibility for unjust taxation on a body to be further removed from the people. Some may say that it will depend very largely upon the personnel of this board as to what the results will be—I deny, Sir, the right of any government to appoint a body of men, however learned or expert in taxation matters, to determine the extent to which one class of the people shall be placed in bondage to another.

This is all to be done for the sake of the industrial area situated between Montreal and Windsor. The appointment of a tariff board is an attempt to permanently establish the tariff imposition on the agriculturists of this Dominion, and to further concentrate the wealth of the country in this industrial area. In view of all this, I ask what prospect is there for western provinces, what prospect is there for the Maritime provinces, when by the force of numbers Quebec and Ontario intend to dominate this Dominion? What else is to be expected but a dissolution of confederation if things go on this way? By the appointment of a tariff board the government may hope to shirk responsibility in this matter—I say, Sir, that parliament is the only body to deal with this question. To appoint a board is a foregone conclusion that there is a class in this country which has a right to lay under tribute the agriculturist and the worker, and that these have no partnership in this commonwealth. The appointment of a tariff board is a natural step to take by a government which believes in special or class privilege. The Liberal party, I believe, when in power has led in this feature since the 1897 revision of the tariff. If the government by its action during the last four years had given the country some assurance that it meant to carry out its own principles as laid down in its platform, a tariff board might have been appointed to best carry out that policy, and the country would have accepted it; but under present conditions this is not possible. The dominant idea seems to be to separate as widely as possible the government and the people. By a tariff board it may be hoped to still widen the gulf, but unless the political perceptions of the people can be lulled into a comatose state of stupidity, the government cannot hope to escape the responsibility. This, along with the immigration scheme to replace the intelligent farmer and worker by an ignorant drudge, seems to be the present policy of the government. Our government has again confirmed itself as the head of the great communism of pelf.

To show some of the methods, Sir, used by the tariff authorities for greater protection than it would seem the law calls for, I would detain the House just a little longer. I wish to show how completely the Customs Tariff is set aside. The public has believed all along that they knew what duty they had to pay by the classifying of merchandise and the rate imposed, as laid down by the Customs Tariff of 1907, brought up to date by various orders in council. But the fact is they do not know. The Customs Act here comes in, which lays down the method of arriving at the value for duty, and also the method to be used by customs appraisers in arriving at the status of the importer, something which no government has a right to take into account. It would be safe to say that for every dollar collected from large importers, two dollars or more are collected from the consumer on the very same articles imported in the same quantities. To illustrate this point, I will take as an example any common household utensil, particularly kitchen hardware, which seems to lend itself best to this sort of manipulation. I will set out the status, the discount allowed, the rate of duty, the value for duty, the amount of duty, and the sales tax on these articles as paid by the varying classes of importers. The list price to all is $100. To the small dealer there is a 50 per cent discount plus 15 and 5 per cent; the rate of duty 30 per cent; the value for duty then becomes $40.38, the duty $12.11, the sales tax $3.14: the total cost to this importer would be $55.63. To the large dealer there is a discount of 50 per cent plus 15 and 10; the value for duty would be $38.25; the duty itself $11.47; the sales tax $2.98, or a total cost of $52.70. To the departmental store the total price would be, $49.71. To the jobber there is a 50 per cent discount, plus 15 and 20; the value for duty in that case would be $34.01; the duty $10.20; sales tax, $2.65, or a total of $46.86. Now, to the consumer, for customs purposes no trade discount is allowed; it does not matter what quantity or what the class of goods may be; so the value for duty is $100; the duty itself is $30; the sales tax $7.80, or a total of $137.80. You see, the consumer has to pay $137.80 for what the others get at from $46 to $55. These widely divergent values for duty of the same article purchased in varying quantities by dealers and consumers are governed by sections 40 and 41 of the Customs Act, which read as follows:

Section 40. Whenever any duty ad valorem is imposed on any goods imported into Canada, the value for duty shall be the fair market value thereof when sold for home consumption in the principal markets of the country whence and at the time the same were exported directly to Canada.

Section 41 reads:

Such market value shall be the fair market value of such goods in the usual and ordinary commercial acceptation of the term and as sold in the ordinary course of trade.

I think this last sentence gives the authority to classify the different citizens. In the first instance the manufacturer is protected all that he asks, namely, 30 per cent as against the large importer, and as against the man who pays the impost, the consumer, about 90 per cent. In the second case the situation is more glaring, as the protection afforded the manufacturer is a shade over 150 per cent. I would alter sections 40 and 41 to read as follows:

Whenever any duty is imposed on any goods imported into Canada, the value for duty shall be the fair market value thereof, when sold for home consumption, by the manufacturer thereof in quantities taking the maximum discount allowed by the manufacturer, in the principal markets of the country whence and at the time when the same were exported directly to Canada.

The value for duty of goods, when subject to any ad valorem duty, imported under other conditions than set out in the foregoing section, shall be the fair value of such goods as sold at the first sale in the principal markets of the country exporting same directly to Canada.

Then section 41 would follow, further confining the transaction in terms of trade. I believe in free trade, Sir, but if we are to have a tariff at all let us by all means get rid of these injustices, such as the classifying of citizens in the application of the law. It is not the right of any government to discriminate between one citizen and another. That is not government; I would call it brigandage. If every citizen—and here comes the chief objection—was on an equality as regards the law, the chain of privilege, of which the politician forms the chief part, would be badly shattered. I have reason to believe that even the members of the cabinet, or many of them, are unaware to-day of the methods used to fleece the workers of this Dominion. The hon. member for Nanaimo (Mr. Dickie), speaking the other day, almost pitied the misguided members of the Progressive party in their plea for freer trade, but I venture to say that he himself has no idea of the extent to which the privileged class of this Dominion enjoy protection. Many of them, in fact, are protected against importations by consumers to the extent of about 150 per cent. I ask, Sir, is it any wonder that under these conditions our young men and women are going to the United States, a country of protection, it is true, but where callousness is not embodied in legislation as it is in Canada?

For the year 1924 the per capita rate of duty in Canada was $14.65; during the same year in the United States it was $4.86. These figures have been taken from the Canada Year Book and also from the report of the Secretary of the Treasury of the United States. The hon. member for Vancouver Centre (Mr. Stevens) said that the tariff of the United States was about three times as high as that of Canada, but it is quite the other way. In 1924, $135,122,345 was taken in through the customs tariff, but it cost the country two and a half or three times that amount to collect it. This amount was collected on imports valued at $640,000,000, but the consumption of home manufactured goods was over $1,608,000,000, or just about three times as much as was imported. That would mean that the tariff cost the people of Canada last year some $391,000,000, only $135,000,000 of which went into the Dominion treasury. Over $256,000,000 went into the pockets of the privileged class, for which the people got nothing in return.

Sir Richard Cartwright calculated that the first thirteen years of tariff protection after 1879 and up to 1893, when the great Liberal convention was held in this city, took a billion dollars out of the pockets of the people for which they got no return whatsoever. During some of that time Canada had less than four millions of people. Industry in Canada does not need to lean as it does on agriculture; it is quite capable of bearing its own burdens. Yesterday I came across an advertisement of the Brantford Cordage Company which is very illuminating in view of the deathlike howls from the Conservative party in this House. The Brantford Cordage Company claims on its own admission to be the greatest concern of its kind in the British Empire. The advertisement says:

> The Brantford Cordage Company is an old-established business which started operations in 1901. The company now owns three mills, occupying seven and one-half acres at Brantford. It put into operation, last January, the third new mill with most modern equipment, increasing its productive capacity fifty per cent. The business has steadily expanded until to-day it is the largest manufacturer of binder twine in the British Empire.

We all know that twine is on the free list; there is free trade in twine. This is an advertisement offering shares to the public at eight per cent. The advertisement is very interesting in view of the fact that most of our manufacturers say they cannot live without some help from other industries. This is an industry standing on its own feet and not only that, it is doing very well, despite the fact that it is burdened with the high cost of production due to the high cost of living in a protected country.

In conclusion, I wish to say that there is one thing that must be done. When Right Hon. W. S. Fielding brought in the first budget of this parliament, he emphasized the fact that we would seek reciprocity with the United States. I wonder what the government has to say that it has done during this last three years to bring about that measure which would be so beneficial to the whole of this country. We would like to know. The natural market for the cattle of this country is in the United States. They have the means of finishing beeves there that cannot be attained with the same ease and profit in any part of Canada, owing to the climate and the irregular rainfall over much of the agricultural parts of the Dominion. In the middle states, where corn is grown to such an extent, there is always a great supply of the feed necessary to the finishing of beeves. They want our store cattle, which can be raised with ease and profit in western Canada on the tremendous surplus of roughage consequent in any grain growing area. I think, Sir, that everything should be done to bring about the freest kind of trade that is possible with our neighbours to the south. It is no use talking the way our friends of the opposition do and place an embargo on the export of everything we have to sell. We have done plenty in years gone by of this nose-cutting business. The prosperity of this country lies in the greatest freedom of exchange that is possible to arrange with all countries, and while we would like to have free trade within the empire, the destiny of this country lies very largely with our neighbours to the south.

I think, Sir, one of the means of attaining this end will be to appoint a representative of this government at Washington, and I would urge on the government the necessity of doing this, and that we should not do anything further to create enmity and ill feeling between ourselves and the people of the neighbouring country, which should prove the best market for our agricultural products.

I would like to remind the government that their own political platform is a contract which they have violated so far. The budget is to-day a violation of their own principles. I can never understand the attitude of men who believe that any contract when openly and

honestly entered into can be violated without any excuse or under any set of circumstances with advantage to those who offered it as their pledge.

On motion of Mr. Milne the debate was adjourned.

On motion of Mr. Graham the House adjourned at 1 a.m. Tuesday.

Tuesday, April 28, 1925

The House met at three o'clock.

REPORT

Third report of the select standing committee on Miscellaneous Private Bills—Mr. Mackinnon.

OLD AGE PENSIONS

Mr. H. A. FORTIER (Labelle): I have the honour, Mr. Speaker, to lay on the table of the House a petition from the council of the township of Marchand, praying for an act to provide for old age pensions.

THE WAR CHARITIES ACT, 1917, REPEAL

Hon. A. B. COPP (Secretary of State) moved for leave to introduce Bill No. 47, to repeal The War Charities Act, 1917.

He said: The War Charities Act was passed in 1917 entirely as a war measure. It provided that all associations collecting moneys for works of charity during the war should be licensed, and that a register should be kept in connection with these organizations; it was also provided that returns should be made to the Department of the Secretary of State every six months in regard to the work done, showing what moneys had been collected and what disposition had been made of them. During the war 846 of such associations were licensed, and, of these, since the close of the war 671 have been dropped from the register, being no longer in existence. There are 143 associations now under license as chapters of the Imperial Order of the Daughters of the Empire, and these are practically all the organizations at present under the licensing system. It has been deemed advisable to repeal the act, as it is felt that the system of licensing such associations is no longer necessary and is only a burden on the women working in these organizations. The officials of the department have advised me that there is no longer any necessity for this particular statute.

Motion agreed to and bill read the first time.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. E. J. GARLAND (Bow River): Is the government aware of the establishment recently of a national committee for the relief of the Nova Scotia miners? If so, will the government take into consideration the possibility of extending financial assistance to that organization?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am sure that every hon. member will be pleased to know that a national organization has been formed for the purpose mentioned, and will hope that it may be successful in its efforts. I do not see, however, that the formation of such an organization should be expected to change in any particular the attitude which the government has taken in this matter, from the outset.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Monday, April 27, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. ROBERT MILNE (Neepawa): Mr. Speaker, in rising to make a few remarks in this debate I cannot help referring to the changed attitude in certain sections of this House during the last two or three sessions. If the pictures that have been painted of the calamity that has overtaken Canada and the glowing scenes that have been depicted of conditions prevailing in the United States and France are to be taken as a test of patriotism, then I think the Progressives are entirely exonerated from reproach for any unpatriotic speeches that have been made here at any time. Our Conservative friends have certainly painted a very gloomy picture of existing conditions in the Dominion; on the other hand, the government and its supporters have endeavoured to convince us that members of the official opposition were entirely wrong and that everything was running along satisfactorily. Now, I do not like to believe that conditions are as bad as they are pictured by our Conservative friends, and at the same time I am sorry that I cannot believe they are as rosy and as satisfactory as pictured by the government and its supporters. Knowing that agriculture is the basic industry of the Dominion I feel perfectly

satisfied that other industries cannot be more prosperous than this basic industry. I know the conditions of our agricultural sections, and therefore I am forced to the conclusion that things are not as good as we would like to see them. Undoubtedly many of our citizens are leaving their country for the United States, and our tax burdens are too heavy; but our main trouble is that we cannot sell our commodities at a profit.

The causes for these unsatisfactory conditions are not all to be laid at the feet of the present government. No doubt world conditions have had a considerable influence in causing the depression which we are now experiencing. On the other hand, it must not be forgotten that in the past there has been a good deal of blind optimism in running our national affairs, and in addition for the last thirty or forty years there has been considerable unsound financing. By blind optimism I mean that our railways were constructed fifty years ahead of our requirements, and many of our public buildings have been erected in an extravagant manner and equally far ahead of our needs. These huge expenditures that were never warranted are to-day imposing an extremely heavy burden on our citizens, a burden which will have to be borne for generations to come. We have heard a good deal about our huge national debt of $2,400,000,000. This debt has increased since 1911 by five hundred per cent. A good deal of the increase has been attributed to our war expenditure and the cost of demobilization. If we deduct the moneys paid out on this account, we find that we still have an increase since 1911 of over 135 per cent. The expenses of government have increased from $122,681,000 in 1911 to $344,221,000 in 1923, or about 173 per cent. While this mountain of debt has been piling up what provision have we been making to meet its payment? It is true our population has increased from 7,206,643 in 1911 to 9,082,000 odd in 1924, or about 25 per cent. Since 1867 our national debt has been reduced only nine times, the reductions totalling less than $80,000,000. There has been no attempt to establish a sinking fund to meet maturing bonds and to take care of depreciation, or anything of that nature. We have followed since confederation the insane policy of borrowing money to pay the interest on our debt. We know very well that if a business concern adopted such an unsound practice it would be only a very short time before it would be bankrupt.

[Mr. Milne.]

While this insane financial policy has been pursued, what has been happening to our natural resources? Our farms have become depleted of their fertility; we have plant diseases, insect pests, weeds and many other things established in our soil; and these are going to increase our cost of production tremendously. What is happening to our forests? Large areas have been wiped out entirely. I refer especially to the forest areas of the western provinces. The country has suffered the loss in order that certain influential individuals might become immensely wealthy. What has this depletion brought in its train? I could show hon. members areas in the western provinces through which flowed streams that had their source in the forests and watered our prairies for miles and miles. To-day those streams run only for a very short time in the spring, thereby depriving many districts of a regular water supply.

Mr. ARTHURS: The hon. gentleman, I am sure, is making some very interesting remarks, but we in this end of the House have not been able to hear him.

Mr. SPEAKER: I would direct the attention of hon. members to the fact that there is so much private conversation going on in the chamber that I myself can hardly hear what the hon. member is saying.

Mr. MILNE: I will try to make hon. gentlemen hear, but I fear it is impossible to drown the conversations that are being carried on.

I was speaking about the streams having dried out due to the forest being cleared away in some of our prairie sections. Besides, we are informed—and we believe it to be true—that the presence of forests has an important effect upon the extent of our rainfall. Through the wiping away of our forest areas in the prairie sections our rainfall has decreased, and that is one of the things the prairie provinces need in the very worst way.

What has been happening in our mines? We are informed that certain coal mines have been drawn on to such an extent that it is necessary to go several miles under the sea to secure the coal, thereby increasing the cost of getting it to the head of the mine. I may say just here that I am decidedly opposed to the increased duty on coal. I am not an admirer of the dole system, but I would rather dole out assistance to the miners if I know it is going right to them than to dole it out to a corporation or company which has absolute control of the whole situation, there

being no assurance that the workmen of our country will reap the benefit of the protection afforded.

Mr. LOGAN: Is the hon. member aware that there are a large number of independent coal companies operating in this country?

Mr. MILNE: Yes, I believe there are, but what I say to one I say to all. What has been happening to the fisheries? A good many of our lakes throughout the Dominion are fished out. We used to hear of tremendous catches of salmon in the British Columbia streams, but to-day, I understand, many of the canneries that formerly operated there have had to shut down owing to the want of fish. It is essential that large sums of money be spent in the very near future to replenish our supply of fish in order to keep this industry going.

Mr. LOGAN: Why keep the fishery industry going if you are not willing to keep the coal industry going? The coal companies to which I refer have been working from one to three days a week for the last year and a half. Is the fishing industry to receive assistance and the coal industry to receive none?

Mr. MILNE: That is a very pertinent question, I suppose, especially when a man is interested in coal mines. You cannot make coal; but no departure from policy is involved in the suggestion that the streams and lakes of our country be replenished with fish, the policy is regarded as a sound one and there is no question in my mind that it will have to be carried on to a greater extent than it has been in the past.

In any reference I make to our resources being depleted, I do not mean to intimate that they are practically exhausted or anything like nearly wiped out. We still have unlimited natural resources, but the resources that were easily accessible, Mr. Speaker, are practically gone, and the production costs of all these basic industries have been greatly increased. The sorry part of it is that instead of making some reservation while these easily accessible resources were being exploited, nothing was done in that direction and our liabilities were increasing all the time while the resources were being depleted.

It seems to me we have been wallowing around in financial difficulties long enough and that we should turn our faces the other way and head for some solid ground. All the conditions I speak of have been brought about while we have been following the old policy of protection. There has been very little difference between the tariff policies in force in this country as far back as I have been able to get information. From 1915, up to the last few years the highest average duty on our total import was 26.1 per cent; to-day it is about 22.3 per cent. As a matter of fact a few years ago it was down as low as 20.5; in the last two or three years there seems to have been a slight increase. But I do not consider that these slight fluctuations are due to any change in policy; the policy, so far as we can ascertain, has been practically the same. When one party was in office the other was advocating lower duties, but when those in opposition got into power the other party promptly started off on the same tack. My observation has convinced me that both the Liberals and the Conservatives are protectionist parties. Some try to get under the flag of low tariff, but they have a hard time to establish themselves there and an even harder time to convince the people that they are sincere.

Let me deal for a few moments with agriculture and agricultural conditions—and I do so because I have been familiar with those conditions all my life. In this respect I may depart from the general method that is followed in the east, because from what I can gather it would seem that most people in this part of the country like to talk about agricultural conditions when they know very little about them. Agriculture is one of the most important industries of our country. It is our basic industry—and you do not have to go very far these days before you get conclusive proof of that. During the Easter recess I was visiting around the country a little, and every business man I spoke to about business conditions would say, "Oh, if the west gets a good crop this year, things will be all right; we shall be on the royal road to success." I have heard that, I would not like to say how many times, but at least a dozen times during the last six months. That convinces me more than ever that agriculture really is of vital importance to the country. Our friends in the government do not seem to lay much stress on agriculture this year, that is, if we are to assume that their sympathy is indicated by the proposals in the budget, but some of the officials in the government service apparently realize its importance. I will read an extract from Seasonable Hints, No. 31, March, 1925:

> Canada's prosperity depends largely on agriculture, and in turn agricultural prosperity depends on our ability to satisfy local markets and produce a large surplus of superior quality for export. Unless this surplus is produced at a cost per unit sufficiently low to compete with other exporting countries, then our export trade, in fact our agricultural prosperity, is curtailed if not doomed.

I say that when our agriculture is doomed there is not much hope for Canada's prosperity.

Agriculture leads in our products exported. The total exports of agricultural products, including raw, partly manufactured, and manufactured, amount to $527,807,628; products of forest origin, $273,603,598; products of mineral origin, $170,686,286; of marine origin, $30,988,812. I think that is a sufficient reason why agriculture should receive consideration, and I propose to deal with it for a little while.

What are the farmers of Canada doing? The value of their total field crops has increased from $899,834,000 odd in 1923 to $995,234,000 odd in 1924. Our butter production has increased from approximately 126,834,000 pounds in 1923, to 182,287,000 pounds in 1924. There has been a slight decrease in the amount of cheese produced. Then as to the total value of our live stock—and I might say that I did not try to get the numbers, because to give the numbers in each particular class of live stock would have meant giving a lengthy list of figures—the total value of our live stock in 1923 amounted to $613,260,000, and in 1924 to $641,144,000. That shows an increase in the value of our live stock, and at the same time the price per animal was somewhat less than in 1923. Our poultry also shows a substantial increase.

I want to be pardoned for referring to Manitoba specifically, but I do this for the reason that the western provinces are continually being accused of "wheat mining"; that is the term that is invariably used, especially in eastern Canada. I will give you figures to give you an idea of what Manitoba produces. In 1924 her total field crops were valued at approximately $136,000,000. Her total wheat crop was valued at $55,296,000. That shows the proportion of the wheat crop to the total field crop. Other field crops that were produced in Manitoba were fodder corn to the amount of $2,070,000; potatoes, $2,063,000; hay and clover, $5,320,000; turnips and mangels, $549,620; alfalfa, $206,000. Other cereals produced were: oats, approximately $33,250,000; barley, $28,500,000; rye, $6,000,000; flax, $6,500,000.

Manitoba has increased her number of cattle holdings from 691,000 odd in 1923 to 710,000 odd in 1924; sheep have increased from 93,000 to 95,000; swine from 291,000 to 425,000; poultry from 3,289,000 to 3,693,000 odd. Her butter production has increased from 10,730,000 to 12,632,000 pounds; her cheese from 231,000 pounds to 500,000 pounds; her honey production from 66,047 pounds in 1920 to 1,302,000 pounds in 1924.

Mr. PUTNAM: What does her grain aggregate?

Mr. MILNE: Our wheat crop was valued at $55,296,000. Does that answer the question?

Mr. PUTNAM: Does that include all grains, oats and barley?

Mr. MILNE: No, just our wheat crop. Our oats amounted approximately to $33,250,000, barley, $28,500,000, rye $5,750,000, flax $6,500,000.

Mr. PUTNAM: What was the total production in buckwheat?

Mr. MILNE: I have no information as to buckwheat.

Mr. GARLAND (Bow River): Was that export value?

Mr. MILNE: I could not say. I have given the House these figures to show that Manitoba is not a "wheat mining" province, as it is generally considered to be. The farmers of Manitoba are producing live stock and dairy products, and are developing practically every branch of agriculture that can be followed in that country, and with the exception of fruit I think they have nearly as wide a range of production as any other province in the Dominion.

Now, do the farmers of Canada know their business, or are they really working at something they do not know anything about? We would be inclined to think from what we hear sometimes that we did not know very much about our business, but I want to put on Hansard the number of prizes that Canada has won for her live stock at the International Fair in the last three years. In 1922 Canada won at the International Live Stock Show at Chicago 30 first prizes, 28 seconds, and 26 thirds; in 1923, 42 firsts, 40 seconds, and 32 thirds; in 1924, 68 firsts, 47 seconds, and 35 thirds. I ask you, Mr. Speaker, do the Canadian farmers know their business? I think the figures I have given will answer the question definitely; our Canadian farmers are producing and their products are of a high quality. But they are not doing this without considerable effort. There are many toilworn hands on the farm; there are many stooped shoulders that have been accomplishing these things, shoulders that will never straighten. There are many women on our Canadian

farms that I pity. I would rather not say what I am about to say, but I believe that unless these things are known we shall never be able to solve our problems. Here are the conditions that exist. I can take hon. members to many farms where the women milk daily seven, or eight cows, feed calves, and keep a flock of from a hundred to a hundred and fifty chickens. Besides doing these things they are raising a family and looking after the home. Now, what are these women getting in return? The farmer's wife works night and morning, Sunday and Monday throughout the year. But if she wants to get a power washing machine to lighten the labour in the house she is taxed 30 per cent. I believe the rate is 25 or 35 per cent. If she wants to exchange her butter or eggs for a pair of boots or some woollen underclothes for the children she is taxed 25 to 30 per cent. But, besides this, after that woman has gathered her five-gallon can of cream and taken it to the dairy, the government planks a two-cent tax on the paltry little cheque of probably $2.50 or $3 which she receives for her cream. I think when we come down and consider the facts as they are to-day in our country we find conditions that are really disgraceful. The farm woman's small cream cheque of two or three dollars is taxed, but a cheque for three or four thousand dollars is not so heavily taxed speaking relatively. I certainly think that this stamp of two cents on a cheque for $2 or $2.50 is—

Mr. FORKE: The last straw.

Mr. MILNE: Yes, very nearly the last straw. And what is she offered in compensation for that? Cheaper grape fruit for breakfast. In a nutshell that is what the hard working farmers are getting to-day from this budget —an additional tax of two cents on their cream cheques and a reduction on grape fruit. But perhaps I had better make that statement clear. I imagine there are some people living in the east who use grape fruit every morning for breakfast, but it is not a common article of diet for the farmer's breakfast; I do not believe there is one farmer out of five hundred who ever eats grape fruit at his morning meal.

Mr. FORKE: Porridge.

Mr. MILNE: His breakfast consists mainly of oatmeal. Now the farmers are doing their share and are willing to continue doing so; there is not a respectable farmer in the whole country but is willing to do his share. There are exceptions to every rule, but generally speaking that may be said of the farmers of the country. Now, you may tell me that the farmers in western Canada, and even the farmers in old Ontario, have made money in farming and consequently my argument absolutely falls to the ground. As to that I want to say something about the changed conditions in farming, and I am not going to deal with Ontario specially, because Ontario went through the condition I have in mind a good many years ago and the situation there now is entirely different from what it is in the west. Perhaps my description is applicable to sections of Ontario as well, but I am going to apply it more particularly to the west because I am better acquainted with conditions there. In the west twenty years ago we had cheap land, we had free homesteads and we could buy land at from $2 to $5 an acre. To-day in the west we have to pay from $20 to $50 an acre for our land. Twenty years ago we had big yields; there was no difficulty in getting, for example, forty bushels of wheat to the acre, that was quite a common thing; and if we did not get thirty-five bushels to the acre we thought Providence had been hard on us. What do we get to-day? Fifteen or sixteen bushels to the acre. That falling off is caused, as I mentioned before, by various plant diseases, for example rust. We cannot estimate how rust has diminished the value of our grain crop. We have plant diseases, we have plant insects, and we have weeds. These things were unknown twenty years ago. Then too at that time we had low taxes. I can remember when our municipal tax amounted to $5 on the old homestead. What is it to-day? It amounts to a neat $100. I know of quarter sections in western Canada where the farmers are paying $130 a quarter section and where there are probably only forty or fifty acres under cultivation out of one hundred and sixty. In those days only a small capital was needed to enable the farmer to carry on; to-day a huge capital is necessary and he must have recourse to borrowing. Most of the farmers are compelled to borrow, and they have to pay from 8 to 10 per cent interest on the loans they get. At that time also fuel was cheap. There were few sections of Manitoba where we could not get our fuel from the woods in a day's drive. To-day we have to buy coal, and to relieve that situation an increased tax of fifty cents a ton has been placed on coal. Furthermore, at that time we had cheap building material. The farmers could haul logs from the woods and build their outbuildings and—even, as a good many did—their homes, log houses which were very comfortable and very good in their day This facility

is not available to-day; you have to go to the lumber yard and buy lumber at $50 and $60 a thousand in order to get your home established. Then, taking the cattle industry into consideration, years ago we had all kinds of pastures. We could go out into the meadows and cut around as much hay as we thought we could put up, and we would have plenty of hay to feed our stock. The cattle were turned out in the spring, and roamed over perhaps a section or two near by—free pasture. What have we got to-day? We have to confine our cattle to our own land which is probably worth $30 or $40 an acre, and we have to provide hay off our own farms. These are the changed conditions that we have to face to-day; they are entirely different from what they were twenty years ago. I will admit that under the conditions which formerly prevailed the farmers were able to pay the extra burden of taxation that was thrust on them and perhaps did not feel it. But to-day the farmers are suffering from a tremendously increased cost of production and are groaning under the load. I do not mean to say that the present government is responsible for these conditions, but I say that these conditions cannot be remedied without an effort. While I appreciate the work of our press I desire to say that as long as the hand that controls the pen is directed by others, the press is not going to help us very much in solving our problems. I do not want to say anything about other organizations that are in existence. We find these organizations more in the industrial section of Canada than in the west, but if we are going to solve our problems we want the help of everybody. The people have got to help themselves so far as they can. We cannot expect better conditions on our farms and in our agricultural districts unless we have a diligent and careful people, and I maintain that generally speaking we have. We must be ready to adopt better methods of farming; we must be ready to co-operate in every possible way to promote the community or Dominion interests. Unless we can do that we cannot expect prosperity. No family can get along if one member of the family takes all the cream for his porridge. Dad will look after that; he will spread the cream around But if Dad takes all the cream for himself, what will happen? The youngsters get out as soon as they can. That is the condition existing in Canada to-day. Unless the provinces of the country are prepared to deal justly with one another, we cannot expect good results; but the fellow who is getting the skimmed milk is going to press for justice. I claim the government, instead of following a fiscal policy that will encourage special privilege should be doing just the very opposite, they should prevent such a thing as that occurring. I am satisfied that the tariff has had a lot to do with the condition that exists in our country to-day. We cannot hope to increase the price of our products, because the price is set in competition with the world; it is hopeless to assume that we can do that, we cannot do it by any system of taxation or anything else that I know of. The only alternative we have is to lower our cost of production, and in order to do that we have to look for cheaper production costs, and I maintain that the tariff is one of the main things by which to bring about that result. If we had cheaper implements of production and cheaper necessities of life, it would materially assist in cheaper production.

The credit machinery of our country never was adopted for the agriculturist. It is just about as applicable to the farming industry of our country as a clover huller would be to husk or shell corn. I say that a three or four months' credit was never adequate for the agricultural people, and the day for the mortgages maturing in three or five years is past and gone so far as agriculture is concerned. I am not going to deal with the credit phase of the question very much because I do hope that the government will take some action this session. Last year we were living in hopes all session; this year we are still living in hopes. I merely mention the matter to impress on the government the necessity of taking some steps in this direction. Many farmers in our country have given mortgages bearing eight, nine or ten per cent. Very often you will meet a farmer, who will tell you, "Well, I have been able to pay the interest on my mortgage this year, but have not been able to pay any principal". I claim that the interest he is paying at the present time should amortize that whole debt in twenty-five or thirty years. In that event he would have some encouragement, whereas at the present time he goes on paying interest and at the end of twenty or thirty years his debt is just as great as ever. Something must be done, otherwise many farmers will become insolvent and leave the country. We were looking for some remedy last year; I believe the Banking and Commerce committee recommended that the Bankruptcy Act be amended, and I would certainly advocate that that action be taken as early this session

4 p.m.

as possible. We have thousands of farmers leaving our country and our Dominion simply to get rid of their debts. The creditors might just as well make some arrangement and free these men of their debts, because they will never get anything out of them any other way. Cheaper credits would naturally reduce our cost of production.

Transportation is another big problem and requires immediate attention. When we consider the amount that is taken out of our product in getting it to the ultimate market, we realize how important it is, especially to western farmers, who are located far inland. We have a national railway which was left on our doorstep by private enterprise. I say by all means transfer some of the capital of the National Railways to our national debt or to some other account. I do not know what you would call the "other" account unless you call it the "political bungling" or "campaign" account. I am pretty well convinced that if the government had been true to the people of this country an account of this kind would have been opened long ago. The load that is tied around the neck of the Canadian National Railways has very little to do with the value that is in the National Railways, and I say by all means get rid of that. Until we can get rid of it, we will have to pay interest on the bonds, no doubt. But why burden the National Railway in its management when no private corporation could carry on with that load? If the road had gone through the ordinary court of bankruptcy we would have had the debt added to our national debt but it would have been off the railway. I say therefore that when transportation is of such vital importance we cannot afford to strangle our carrying system or to allow it to be crushed under any unjust or unfair load.

There is a suggestion that the National Railways should be taken over by the Canadian Pacific, and that is something to which I would be absolutely opposed; I would oppose any such bargain. I do not think it would be in the best interests of this Dominion to have a monopolistic corporation of such magnitude operating a public utility such as our railways. Perhaps the ideal condition exists to-day from the standpoint of stimulating an efficient management; we have one road privately owned and one road publicly owned, and satisfactory results should accrue from such a condition, if some regulating agency will prevent duplication of service and extravagance of equipment. We cannot allow wasteful competition to continue. I think that there should be some control by means of which the duplication of train service might be eliminated, and I should also like to see such a measure of control as would cut out some of the extravagance that now obtains in connection with some of our palatial office buildings as well as in the matter of dining car service, hotel service, and Pullman car service. The companies will tell us that the Pullman, dining car and hotel services are run at a loss, and I see no reason why we should continue to carry these conveniences at a loss. If the people who demand this class of accommodation really want it they should pay for it; there is no justice in making the citizen who rides in a day coach and eats from a lunch box pay for the exclusive service which is provided in the Pullman and dining cars and in the hotels. I would advocate action, and immediate action. Last year it was rumoured that something would be done to get the heads of the railways together. Well, they have been together and have parted again, and so far as I know and the Dominion knows we are no further ahead now than we were before in the matter of reducing useless competition. Frankly, I do not believe that the heads of the railways would care to have any interference in their affairs; they have a big job and they have a complete staff to do the work, and I do not think they are apt to invite us to interfere with them. But I claim that we should interfere to the extent of regulating things to some degree. If we cannot carry on the two systems under separate management, efficiently by some means of regulation, then by all means let us bring them under one head and make the joint system a publicly owned affair. We cannot continue under existing conditions to lose $50,000,000 a year, when we might be saving at least $100,000,000 a year, according to figures quoted in the House yesterday.

I shall now touch briefly upon the soldier settlement problem, which is of vital interest to the agriculturists of western Canada. I mention western Canada again because I am more familiar with conditions there than I am with conditions in the east, the same thing might apply in this connection to the newer parts of Ontario and other provinces. Here is the condition of affairs. When the soldiers were established on the land it was necessary to build schools and construct roads; and other things that go to make up a community had to be done. In the province of Manitoba, over twenty-five per cent of these farms have been vacated, and I know certain municipalities in which as high as sixty per cent of

such lands have been abandoned. What load does that throw on the rest of the people who are left there? We have to maintain these school systems and carry on all the community work, and we must keep up the roads that go past the idle farms. This is an absolute burden on the people who are left. The burden becomes almost unbearable. I certainly think that the municipal taxes should be paid by the government on vacated lands. There is an objection to that; it is held that if this were done in one place it would have to be done elsewhere as well. So far as that is concerned, I notice an item in the Auditor General's report which strikes me as being almost parallel with this, that is to say, in the matter of road construction. I understand that in Peterborough the city wanted the street repaired past some of the public buildings there, and the government here appropriated $1,163 for the purpose of carrying out the work. It is held that there was a precedent for this grant, although the Auditor General questioned that claim. Let me ask this question: Is the city of Peterborough any more entitled to a road past that government property than the people in my municipality are entitled to a road past a quarter section there?

I have endeavoured to show in my remarks that instead of trying to increase the price of the farmers' products we should try to decrease the cost of production, and that this could be brought about by a lower tariff on the implements of production and on the necessaries of life. Cheaper credits and cheaper transportation if possible, would also assist materially in cheapening production. There are other things that have to be considered, and I want to give everyone credit where any credit is due. I am glad that the Minister of Agriculture (Mr. Motherwell) is in his seat, because I am going to say that in my opinion the Department of Agriculture and its officials are doing a really valuable work from the point of view of investigation. I do not approve of all that is done on the experimental farms; a good deal of the money spent in this direction could be utilized to better advantage in other ways. The work that has been carried on by the plant and animal pathologists is I think excellent, and we cannot do too much to develop it. We have been so far devoting all our energies to increased production, which is all right; but we should not forget the importance of distribution and marketing. It costs more than half the price of our agricultural products to distribute them to the ultimate consumer; that is, the railway companies, the commission men, the merchants and the retailers get more than the producer. I believe that we should have an economic expert to study the problem of distribution, a system might be evolved by which a considerable saving could be effected. Up to the present time it seems to be nobody's business to bring about economy of distribution; everybody steps in and takes a slice wherever he can, thus adding to the ultimate selling price. I think some of the work that is being done to-day by the Department of Agriculture might well be dropped in favour of a study of a more economic system of distribution. And this study should not be confined to the products of the farm; I think the economic distribution of manufactured goods should be included. It is rather startling to compare the manufacturers' price with the retail price. A short time ago I met the agent for a company that makes trousers, and I was surprised to note the difference between the prices at which he was selling his goods as compared with prices the consumer pays. Therefore I think the manufacturer could well afford to make a careful study of the economic distribution of his products.

I do not propose to discuss the amendment to the budget. To my mind, it is like the chip in the Scotchman's porridge—it does not amount to much. What I would urge most earnestly is this—if we expect conditions to improve in this country we must stop throwing mud at each other, and seek a common basis to solve our national problems.

Mr. PIERRE F. CASGRAIN (Charlevoix-Montmorency) (Translation): Mr. Speaker, the period preceding a new budget is always attended by a certain expectant anxiety. Some desire the enforcement of certain restrictions which will protect them against competition; others want greater trade facilities and lower prices on everything necessary to their own industries; every hon. member strives to obtain for those he represents all that he possibly can to make life pleasant for them. It is the duty of the government to listen to all the representations made, to lend an ear to the legitimate claims of the members of the House of Commons who represent the constituents of the various ridings and then to bring before the House the measures that it considers in the best interests of a majority of the population of the country. Hence, the budget, whatever its nature, cannot appeal alike to everyone.

Last year the government made certain changes in the tariff which chiefly affected the implements of production necessary to the development of the natural resources of the country. The benefit of these changes accrued

largely to the agricultural community; this was in the nature of an encouragement. One may say that the budget of last year raised the morale of the farming class. The Tories were dissatisfied; they claimed that the government went too far in reducing the tariff and that the downward revision was contrary to the best interests of the country. This year the government has not touched the tariff; but the Tories are still not pleased and we even hear that a goodly number of the Progressive members who represent a considerable part of the west, are not altogether satisfied either. As regards the Tories particularly, the government has merely followed the advice emanating from that quarter last year, that is, to call a halt in the downward revision of the tariff which the government had begun, to protect the interests of the farmers. This year we have almost completely attained the tariff stability of which there was so much question two years ago, which the opposition demanded then and is still demanding now. I believe it was the hon. Minister of Marine (Mr. Cardin) who said recently in Montreal: "No matter what we do, we shall never be able to satisfy the Tories". I may add that when the Last Judgment comes, when we are about to receive our eternal reward, there will still be critics and malcontents and I feel quite sure that we shall find the Tories among them.

Representing, as I do, a constituency where the chief activities are farming and fishing it is once more my duty this year, as it was last, to support and congratulate the government and more particularly the hon. Acting Minister of Finance (Mr. Robb) on the budget brought down in the House. The export duty on electric power is most timely and is in perfect accord with the wise policy of the Quebec provincial government. The decrease in the duties on tackle and other material necessary to our fishermen of the Atlantic and the Pacific and of the lower St. Lawrence is sure to be a great help to this interesting class of our population. The duty on soft coal will benefit our friends of the Maritime provinces without undue interference with the industries in other sections of the country.

There is a new departure in the budget of this year: the Acting Minister of Finance has announced the appointment of a commission to study the tariff. I fully believe that such a commission may be very useful; but may I be allowed to express my humble opinion that the commission's powers should be purely advisory and that it should nowise decide the tariff policy of the government; this to my mind is the absolutely exclusive prerogative of the representatives of the people in the House of Commons. I therefore accept the second Robb budget, without the slightest reservation, as coming from a wise, prudent, honest and practical man of affairs. It is a budget which gives a reasonable measure of justice to all classes of society. For the second time the hon. minister has had the honour and the pleasure to present to the people of Canada a balanced budget, that is one which shows a surplus of revenue over expenditure, a feature unknown to this country for more than ten years.

Since the beginning of this debate most of the hon. gentlemen who sit immediately to your left, Mr. Speaker, the remnants of the Tory party, have done all they possibly could to paint the economic state of the country in the darkest colours. Were we to believe them, the country is at the end of its tether; the country is ruined! They are the worst calamity howlers one could meet. They are defeatists of the very worst kind and were it not that I might be accused of exaggerating, I would even say that the attitude they take before the House and before the country, spreading bad news the way they do, is not the attitude of real patriots and true Canadians, irrespective of what may be their race or creed. If a man should have faith in his country, there is assuredly nothing comforting in the attitude taken in this House by the members of the Tory opposition.

Now let us see if what they claim be true. If we look at the newspapers, especially at the financial page, we find rather that the country is doing pretty well after having been through the financial crisis brought on by the war and its aftermath which were so disastrous to our country.

C.P.R. Handles Big Hardware Train
Largest Shipment of Dairy and Barn Equipment Ever Sent West
(Special to The Gazette.)

Fergus, Ont., February 22.—The largest shipment of hardware ever made in Canada left the plant of Beatty Brothers, Fergus, on Saturday afternoon in a special Canadian Pacific train of 24 cars and was composed of more than 2,000 iron farm pumps, 1,000 step and extension ladders, 1,000 electric and hand washing machines and barn equipment for spring delivery to 700 dealers throughout western Canada, the invoice price of the shipment being more than $150,000.

And further in the same article:

The firm intend shortly to extend their Fergus plant, and will spend many thousands of dollars this year in an extensive advertising campaign.

Therefore the people have confidence.

In the morning Journal of March 24, 1925, Sir George Paish, an authority on economics, stated:

I anticipate high prices for Canadian wheat over a considerable period of years. Canada is ready now to increase her production greatly.

And concluding his interview:

I expect to see the Canadian farmer prosperous and the vexing Canadian railway problem solved through increased traffic.

There is another industry of which some members of the Tory party in this House said it was ruined. I am referring to the woollen industry which is operating particularly in Ontario. Well, here is what Mr. James Thompson, propagandist of the live stock division of the Department of Agriculture, stated in La Presse, last week:

However, the wool market is now 30 per cent better than in July 1924 and there is every reason to hope for futher improvement. As a matter of fact, there is a shortage of wool on the various markets of the world.

I want to quote another article from the same paper, La Presse, which I find in its issue of April 22, 1925. It may be taken as an answer to the hon. member for Parry Sound (Mr. Arthurs) who, a few days ago, asserted that the woollen industry had been ruined in his own district. Here is what La Presse said, among other things:

Woollen Industry on the Increase in Canada

The Trent River Textile, Ltd, is a new erterprise which is being organized and which will be financed by the Dominion Development Corporation whose offices are situated in Toronto and Montreal.

And further:

The company will erect, quite close to the factory of the Dominion Combing Mills, a mill with a complete modern equipment.

Therefore, hon. members can see that our industries are not yet threatening to fall, even in the good province of Ontario.

Now, if we glance over the other Montreal newspapers, say the Star, we shall find, in its issue of April 23, 1925, an article entitled:

Paramount Int. Rubber to operate at Farnham.

That is a new industry which is being introduced in our good province of Quebec.

Moreover, on April 18, 1925, The Montreal Gazette published an article under the following headings:

Improvements in trade conditions.

Building has started and hardware sales are increasing.

In that connection, Mr. Speaker, I am pleased to point out to those who contend that trade conditions are not very good in this country that in our good old city of Montreal where I have the privilege of living the greater part of the year, they are now putting up more buildings, great and small, industrial and others, than at any time in the past. Therefore it shows that the people have confidence in the future welfare of this Dominion and those who have invested millions of dollars in the building of factories and private houses are convinced that this country is not quite ruined.

Only recently in the district which I have the honour to represent, that of Montmorency, I received an inquiry about some pulp and paper companies that intend to operate at St. Joachim. I am also told that a company is going to build a mill at Murray Bay where they will be able to finish the product which they manufacture at their present plant

To anyone who wonders whether the country is in as bad a condition as some people claim it is, I would point out as reliable evidence the various newspaper extracts which I have quoted to the House and you will find many other similar ones in the financial sections of our great daily newspapers.

There is another important fact, namely that for some time, particularly for a year past, we always had a favourable trade balance; then, our Canadian dollar which was under par some years ago has now reached par and this never happened under a Tory government.

The Tories are greatly incensed on account of our people going away to the United States and they erroneously claim that it is due to the unsound policy of the present government. Let us see whether the United States are actually as prosperous a country as Canada.

I find, in La Presse an interview given to that newspaper, at Montreal, about a month ago, by Mr. J. T. Lord, of Worcester. He advises our people to remain at home. He says:

You may write, in large headlines, that our Canadians should remain here, if they wish to avoid hardships existing at present, in the U.S.

Further on, Mr. Lord, who is an American citizen, native of French Canada, a broker of Worcester, says that, notwithstanding the upward trend of business in the United States, the labour situation is not sufficiently advantageous to attract French Canadians who have far more chances of success in the province of Quebec.

Mr. W. D. Robb, Vice-President of the National Railways, on his return from a trip to the Pacific coast, gave out a statement of the same nature. This is what he says on the subject:

There are numerous Canadians in California who would, gladly, return to Canada if they had the means, for there is a great deal of unemployment in that state.

I was told that there are 200,000 Canadians in California; and I believe these figures are exact, for

wherever you go in that state, you meet Canadians. Most of them have learned that California is not quite the garden of Eden. They found out that the taxes were heavy. When the Canadian farmer has, perhaps, a $4,000 mortgage against his property, the farmer in California has one which varies between $10,000 and $20,000.

It is evident that the high protective tariff did not have in the United States the results expected and did not bring to the people of that country all that was hoped for.

There exist, in the New England States, certain cotton and woollen industries, which were very flourishing, in the past, and where many of our own people went to work. I find the following article published in L'Avenir National of Manchester:

The American Woollen Company is the principal factor in the woollen industry of this country, since it owns a great number of factories with a capital of $142,000,000. The result of its operations for 1924 shows a deficit of $6,944,000, and this before the payment of dividends on preferred and common stock was made. The dividends were met on preferred stock from the surplus previously earned, but they were discontinued, in September, on the common stock, owing to the small returns. The operating results of this company are typical of what were, in general, the results in the woollen industry, last year.

The situation was similar in the cotton industry. The Amoskeag Company which is as well known as the American Woollen Company had a deficit, in 1923, and it discontinued its dividends in 1924. Its last year's report has not yet been published.

Knight and Company of Rhode Island, one of the oldest and best known cotton companies, manufacturers of "Fruit of the Loom" a long and popular established trade mark, could not meet the interest on its consolidated debt, in 1924, and it is now operated by a committee representing the shareholders.

We, therefore, also find in the New England States, companies or corporations which became bankrupt. It is, therefore, not extraordinary that, in the province of Quebec, certain industries find themselves obliged to close their doors, and I think that we cannot give as a reason, the fact that the tariff was modified or that the government's policy was not fair and just.

A short time ago, I read in the New York Times of February 19, 1925, what follows—I do not know whether it is about the company that I have just mentioned:

American Woollen Deficit $11,969,837
Record Depression Shown by Annual Report, Against Profit of $6,660,212 in 1923
Stock Takes a Drop
Common Goes Down, Then Rallies, but Finishes at 2¼ Down for the Day

We have often heard, and much fuss has been made about it, on all the stages and platforms of this country, during the provincial campaigns as well in the course of the political campaign which is being waged, at present, by the Conservatives, who represent the old Tory party, that the French Canadians are emigrating to the United States and do not return; we have heard that they are crossing over the borders in great number and are a loss to the country. This is what the Citizen of Ottawa had to say on the subject, a short time ago:

Many Families Return to Canada

Brockville, Ont., Mar. 31.—During the fiscal year of the Department of Immigration which closed to-day, 248 former Canadians returned to this country from the United States through this port. Hardly a day passes, immigration officers state, without one or more families applying for re-admission to Canada at the port of Brockville.

The Ottawa Journal of April 22, 1925, thus expressed itself on the subject:

American Settlers Have Cash, effects
Many Are Entering Canada This Spring, Report States.

Further on we find:

This return shows that, according to United States figures, emigration from Canada to the United States for the month of February last fell off nearly two-thirds as compared with February a year ago.

All this, Sir, tends to prove that the emigration of our people to the United States is not as great as it is stated in certain quarters and that, at all events, the reports spread by those representing the Conservative party have been greatly exaggerated.

Allow me, Sir, to say a few words, now, on the subject of immigration. Without entirely approving an excessive immigration policy, I think that the country needs an immigration influx as we had in the prosperous days of the late Sir Wilfrid Laurier, our revered leader, whose policy had been crowned with so much success in this country, and was the cause of so much wealth and prosperity. However, I must caution the department that, notwithstanding the restrictions imposed, founded on the experience of other countries, and of a nature to protect us, they must not be carried out to excess. Each case may present special features which are worth studying in detail, and the findings should be applied accordingly.

In the course of this debate the question of railways was discussed more so than on previous years. Allow me, Sir, with your kind indulgence, to add a few words on the subject. The freight rates are too high in general, and, especially, as regards farm products. Ever since the government has adopted the policy of "fair trial" for the National Railways, to which it has pledged the political standing and future of all the members who support it, the government has, I admit, and I congratulate it, done all that was necessary and in its power to make the management of the National Railways a success, however, I cannot say that the results have been in proportion to the

hopes we entertained. Although there is a reasonable surplus on the yearly operations, we must nevertheless each year, disburse millions to help meeting the commitments of all the merged railways, and of which the government guaranteed the payments in becoming owners.

Let me, while on the subject, draw your attention to a strange fact and which, in my opinion, is an injustice towards the province of Quebec. It is, that although the province of Quebec, has never guaranteed any of the National Railways' bonds, not more than those of the Canadian Northern originally owned by Mackenzie and Mann or others, it pays, to-day, a large share of them, through the revenues which the Dominion government levies, in taxes direct or otherwise, from the province of Quebec and the French Canadian tax-payer of that province; and this to the benefit of the province of Ontario, and especially the western provinces, which, years ago, through an unwise policy, entirely pledged themselves by guaranteeing the bonds which they thought they could pay in the future, but which they never were able to meet, and that the Canadian government rendered themselves responsible for, when purchasing the National railways, merged in 1919. Quebec, per capita, has far less railways, than,—and not as good a service as,—any of the other provinces of Canada. However, when it comes to being stalled, Quebec is never forgotten. If it becomes necessary to do away with the service of a train, to dispense with a station agent during certain periods of the year, Quebec catches it like the others and as much as the other provinces. If it becomes necessary to extend a platform, to construct a side line necessary for the development and progress in a rural district, Quebec is always refused. Under the plea of economy, the development of certain parts of our province is impeded and prevented. If it is a question of giving a better service to certain parts, as for instance the peninsula of Gaspé, which my hon. friend (Mr. Marcil), has had the honour of representing for a number of years, the excuse is given that it is impossible to do more at present; is it found necessary to build a branch line or a new line needed, as in my district, from Murray Bay to Chicoutimi, it is impossible to do so now because of the deficits which we have to meet. In the district just mentioned, there is space to open up for settlement two or three new parishes, these cannot be established owing to the fact that we must economize so as not to increase the debt of our railways and to make both ends meet. This also prevents, in many cases, the members of the province of Quebec from obtaining recognition of certain claims that we have been putting forth for a number of years, and it also prevents us from obtaining the improvement of certain essential services for the development of our districts, for instance, the establishment of a boat service between Murray Bay, Tadoussac and intermediary ports, in Saguenay county, which I have the honour to represent in this House. I state that, when to pay these enormous deficits of our railways which threaten to perpetuate themselves, when, so as not to increase the national debt, we are obliged to refuse such works, which are necessary to certain districts, it is more than time to think of doing something to solve this great problem of our railways. It has become, to-day, Sir, the most important question. The government that will finally solve that problem will secure the universal and everlasting gratitude of the Canadian people.

Many proposals have been submitted. Again, yesterday, I was listening with pleasure to the chairman of the committee on railways, the hon. member for Waterloo (Mr. Euler), who was giving his views and telling us which, in his opinion, were the three proposals that could be resorted to. I have no technical knowledge as to how railways should be administered. I could not say which of the proposals he advocated yesterday would be the best, but I shall say that the people of this country are looking forward to one thing: the adoption of either of these proposals.

Only after we have succeeded in dealing properly with this important problem, will the people of this country be satisfied and happy. Some suggested a merger with the Canadian Pacific. I do not know that this would be the best way out, but that company, I believe, whose able management was of such great advantage to this Dominion, could perhaps, to a certain extent, administer this country's railways, provided, however, that the interests of the Canadian people were safeguarded. Sir, there is another question on which I would like to say a few words; this question has been discussed in this House last year and is to come up again this year. It is about a grant to the Quebec Bridge company for the carrying out of improvements which are contemplated on a large scale. Last year a certain amount was voted for preliminary work to be undertaken. The reason given for not voting a larger amount, was because the final plans and estimates were not ready. This year, I believe, everything is ready. As a member

of this House representing a riding, which forms part of the Quebec district, I am in duty bound to ask the government this year to do all in their power to develop the Quebec harbour. The rights of Quebec district should be on a par with those of any other section of the province of Quebec and of any of the other provinces in this Dominion. With the Quebec harbour properly equipped, properly fitted and extended so as to accommodate the large ocean going steamers, it should bring to this country instead of expenses and deficits, a substantial amount of revenue, while such improvements and equipment could not in any way detract from the trade that goes to the port of Montreal. There is, I believe, on the St. Lawrence river, in the province of Quebec, room for two great national harbours, that of Quebec and that of Montreal.

Another point that has been dealt with this year perhaps oftener this year than in the past; it was discussed at length by the hon. member for Muskoka (Mr. Hammell) and later, by the hon. member for Kings (Mr. Robinson); both these gentlemen suggested that the government should allow a greater amount for the development of the tourist trade in Canada. Coming from a district which a great number of tourists visit each year and to which a great many persons come each year from other parts of Canada, from the States and from every country in the world, I feel that I should join those hon. members and ask the government to advertise more freely so as to reveal the natural beauties of Charlevoix, Montmorency and Saguenay counties and more particularly the district of Murray Bay where the distinguished Speaker of the House of Commons, the Hon. Rodolphe Lemieux, spends the summer each year. Some years ago I urged upon the National Railways to carry on a more active campaign to boom this district. I hope that this year, with reduced deficits, the government will be free to vote a handsome amount for publicity work in favour of that district. Last year and in the preceding years, the question of amending the income tax act was referred to. That act, I believe, as it stands to-day, is responsible for a great deal of trouble and handicap for those who honestly and regularly pay their debt to the country. As it stands, this act offers a way out to those who are anxious to avoid paying the tax. It might well be modified; the government could do away with a few troublesome clauses of the act and, by so doing, increase the amount collected heretofore. Mr. Speaker, to revert to what I said at the outset the Tories complain of the fact that the expenses of the country were not reduced, that they were increased and that we do nothing to better the conditions that exist in this country in this respect. I have before me the budget for the year ending on the 31st of March, 1926, and I notice a decrease of $6,933,279.38 in the estimates for the year; last year brought also a reduction in the amount expended and so did the preceding year.

The hon. member for Leeds (Mr. Stewart) speaking on this question last night, told us that the government always brought down large estimates, and supplementary estimates just as large. He was not telling the whole truth because the government have reduced expenditure as much as they could; they have kept down construction and public works, and if any had to suffer, it is certainly the members of some rural districts which, in many cases, were obliged to wait until the following or another year, to obtain what they had requested. Fortunately their electors, who are intelligent and full of common sense, understood that the government, under the circumstances, could not do more. Therefore, the Tory party is very ill advised to preach a greater economy.

I was listening with pleasure, yesterday, to the hon. member for North Waterloo (Mr. Euler) telling us that he had a great admiration for our public employees, but that the civil service is too overcrowded at present. If the civil service is overcrowded, it is due to the fact that, under the Conservative government, from 1911 to 1921, the departments were packed as much as possible; and moreover, the government, in 1918, 1919 and 1920, seeing election time approaching, had a spurt of energy and brought from the United States certain representatives of the Griffinhagen & Young Co., whose services were retained at enormous fees. These persons were paid the sum of $510,747.83 to carry out the classification of the civil service. Result: when this government came to power, there were as many employees as before the arrival of these Americans, and the government was forced in the first and second year of its administration, to dismiss at least 4,000. In the amount which I just mentioned above, spent for the classification of the civil service under the Tory regime, there is an amount of $162,475.26 which was spent for the reorganization of the staff of the National Printing Bureau, with the result that three or four hundred French Canadians were dismissed. That was about the only result obtained. The Tories wished to practise economy but only the kind we call penny wise and pound foolish. In fact, to-day, almost all the work, instead of being done

at the Government Printing Bureau, is awarded outside by contract, and all the departments receive allocations to have the required printing done outside.

There is another subject, Sir, upon which I wish to draw your attention—although the thing may not be of any consequence—it is the campaign which the Conservative party have been waging for some time in the province of Quebec. If we criticize the Tories, if we put to the fore all we have to reproach them, and if we praise the government, we are taunted with being prejudiced and acting in a spirit of partisanship. The other day, while travelling to Montreal, I read with pleasure, in a newspaper, which I can call an independent paper Le Droit of Ottawa, an article which if you will allow me to read to the House, is as follows:

A Conservative campaign. Strange attitude—The Conservative policy during the war—The heritage bequeathed to the Liberals—Mr. Meighen, imperialist. Mr. Rodolphe Monty must have been inspired when he stated the other day: "We must not examine political questions from the viewpoint of parties, but from the national viewpoint." Himself and the other Conservative speakers unfortunately did not put this excellent advice into practice, when, last Sunday, they placed at the door of this present government all the wrongs, all the political blunders made by the governments which have succeeded to one another for the last twenty-five years.

They behaved themselves like real partisans, warmed up by the approach of general elections, and wishing to sow among the people suspicion, prejudice, and blame capable of harming the political opponent.

The present government is not perfect. Nobody thinks it is, not even those composing it. That it is open to criticism, there is nothing astonishing: otherwise it would not be human.

But what takes the wind out of our sails, is that it is the Conservatives who reproach the government for the unstability of the tariff, the treking of the Canadians towards the United States, the upholding of the British preference, the increase in taxation, the raising of our debt, the banishment of the French language, et cetera.

Let us distinguish between a public man who carries on constructive criticism, and the one who, through envy or hatred, is always bent in destroying and refuses to give his opponent any merit.

It is always the privilege of one who has erred to acknowledge his mistake and try to make amends for it. But what are we to think of a person, having erred, trying to throw the blame on his neighbour's shoulders? That is of what the Conservative speakers were guilty last Sunday.

Conservatives must have a tremendous amount of cheek or their memory must be very poor to broach the subject of the national debt, the deficits of our railways, the extravagance in the administration of public funds. One should not make painful allusions.

The present government has to face problems of an economic, social and international order, almost without solution. If we take into consideration the political contingencies and the rooted practice of carrying on the government by opportunism and half measures, it is doing the best it can.

However, we must not forget that if we have a national debt which staggers us, it is due to the late government. They are the ones who forced Canada into an excessive participation in the war, who nationalized the Canadian Northern system, who thus contracted obligations of which we shall never see the end. By coming into power, in 1921, the Liberals did not come into a very enviable heritage. The governments, for years to come, if they wish to balance their budgets, must seek a thousand expedients and expose themselves to criticism.

Instead of endeavouring to amend their blunders, the Conservatives aggravate them by rendering more difficult the task of the present government. They should, however, be the first to help them for the welfare of the country.

However, they will have much to do to blot out from the minds of the people, the remembrance of their participation in the war of 1914, with its consequences: Such as conscription, the national ill-feeling, the increase of our debt, the high cost of living, et cetera. Mr. Meighen's attitude, since the end of hostilities, and still recently, is not of a nature to lead us to believe that the Conservatives, in the event of another war, would be more thoughtful of the Canadian interests.

Mr. FAFARD (Translation): On what date was this article published?

Mr. CASGRAIN (Translation): April 24, 1925. Mr. Speaker, certain passages of this article which I have just read fit the Conservatives like a glove. The hat fits splendidly the leader and other members of the opposition party who sit directly on your left, Sir.

It is very strange, Sir, that in the speeches delivered in this House, by certain leaders of the Tory party, nothing has been suggested to remedy this state of things that these gentlemen so much deplore. The amendment itself which was moved by the ex-Minister of Finance (Sir Henry Drayton) is not of a nature to bring relief to the ills which are said to exist to-day.

When we consider the financial situation in which the country found itself when the present government came to power, it is astonishing to note what the government have been able to accomplish. I state that the members of the government are giants for having been able to so well adminster public affairs in so difficult circumstances. Although there are always people ready to criticize and never satisfied, so long as they have not obtained the last cent, the pound of flesh contracted for, I have too much confidence in the people of the province of Quebec and those of the other provinces of Canada, as to not be convinced that, when the day of reckoning comes, the people will, once more, remember the administration of the leader of the opposition, that they will separate the tares from the wheat, and on the voting day, they will mark their ballots as they did in 1921, in favour of the present government.

Hon. S. F. TOLMIE (Victoria City): Mr. Speaker, during the discussion on the bud-

get the hon. Minister of Public Works (Mr. King) made the statement that the manufacturers of logging equipment on the Pacific coast had not suffered to any considerable extent as a result of the cuts in the tariff made last year. On that occasion he referred particularly to a firm known as the Vancouver Machinery Depot, Limited. I find on inquiry that this is not a manufacturing firm but is rather a firm that is dealing in American machinery and in machinery from the Old Country; it is also agent for one eastern Canadian firm. It has nine agencies, I understand, of which six are American firms, so that quite naturally under those conditions it is in favour of cuts in the tariff.

With regard to the effect of the tariff reductions in these particular commodities, let me say that early in 1924 tenders were called by the Victoria Lumber Company of Chemainus, on Vancouver island, one of the largest logging organizations in the whole Dominion. Bids were entered by Canadian firms, but when it was learned that the tariff reductions had been made on 5 p.m. April 11, 1924, the order was immediately placed with the Diamond Iron Works Company of Minneapolis, and the contract amounted to somethink like $200,000. I have here copy of a wire from the Metal Trades Employers section of the Canadian Manufacturers' Association, dated at Vancouver, April 17, 1925, addressed to Hon. J. H. King, Minister of Public Works. It states:

> Companies here actually engaged manufacture of logging and saw mill equipment strongly deprecate statements ascribed to you in local press recently as to the effect on industry of tariff reduction, more particularly as your remarks were based on information supplied to you by principal of firm here who are not and do not claim to be manufacturers and who do not even hold sales tax license but who are jobbers principally of Americal equipment, and whose interests naturally dictate the maintenance of the lowest possible tariff basis to facilitate their sale of imported equipment, irrespective of indisputable serious effect of low tariff in curtailing and discouraging efforts bona fide local manufacturers logging and saw mill equipment.

I have also a letter here from the Britannia Wire Rope Company, Limited of Vancouver, manufacturers of wire ropes, wire products and modern logging equipment, dated at Vancouver, April 14, 1925. It says:

> HUGH DALTON, Esq.,
> Secretary, Canadian Manufacturers Association,
> Pender Street, Vancouver, B.C.
>
> Dear Sir,—
>
> As an indication of just how this juggling with the customs tariff by the Mackenize King administration at Ottawa is affecting young industries such as ours struggling to establish itself, the following figures may be of interest.
>
> In our machine and blacksmith shop, whose work is devoted entirely to the logging industry, 31 men were employed in March 1924, at a monthly payroll of $3,046.73. In March 1925 it was the utmost we could do to find employment for 20 men, with a payroll totalling $1,700.32.
>
> Comment is needless. These figures speak for themselves. If, however, there is any further information you desire, or any manner in which we may be of service to you in bringing home just how much the reduction in tariff is affecting the workers of the community, we shall be only too glad to have you call upon us.
>
> Yours very truly,
> Britannia Wire Rope Co. Ltd.
> T. S. CAMPBELL,
> General Manager.

No further comment is necessary, I think, under the circumstances.

Mr. KING (Kootenay): If I might interrupt for just a moment, my hon. friend is placing on Hansard certain observations made by manufacturers in western Canada to refute a statement I made in the House some weeks ago, when I met the statement made by the hon. member for Vancouver Centre (Mr. Stevens) in which he claimed, not that they had been injured, but that the factories had been closed and wiped out. That is not so. There are only two logging concerns in the city of Vancouver who make logging cars, and they are continuing business to-day, and have not been wiped out.

Mr. CLARK: Are they manufacturing logging cars to-day?

Mr. KING (Kootenay): Yes, they are.

Mr. TOLMIE: I just brought this to the attention of the House so that we might know the truth. That is all we want. We do not want any unfair advantage at all in connection with matters of this kind.

Now with regard to the budget, I am quite sure, Mr. Speaker, that after listening to the discussion of the budget for several weeks as we have done, we feel that after all people living in one part of Canada know very little about the particular conditions under which people live in other parts of Canada distant from where they are located. It has brought to our attention from day to day the absolute necessity for us to know more about the general conditions of the country, so that when we come to discuss matters in this House we can look at them and take them up in more of a national way rather than in a provincial way. I do not know of anything that would be of greater benefit to us than to possess this knowledge and this viewpoint. Some few years ago I proposed in some remarks I was making here that it would be to the great advantage of this country if, after

an election, the members were afforded an opportunity of moving from one end of the country to the other and meeting various organizations, chambers of commerce, boards of trade, and so forth, so as to familiarize themselves as much as possible with the conditions throughout Canada, and then when gathering in this House they would be in a position to discuss the matters brought up here in a much more intelligent way than they are able to do at present.

If there is one other thing that is of great importance to this country, it is the creation of a national spirit, and the stimulation of a feeling of pride that we are Canadians and proud of our country, as we should be. I think we might certainly take a lesson in that respect from our neighbours to the south in the way they celebrate the fourth of July. If we could fill our Canadians with the same enthusiasm for the first of July that the Americans display on the fourth, so that they would celebrate it in the way in which it should be celebrated, I am sure we would be rendering a great service to this whole country. Somebody interjects "The twelfth of July." Well, that would be extra.

I think I am on perfectly safe ground when I call attention to the fact that we are in need of all the business increases that we can secure in this country. We should develop every possible line which will promise to bring us revenue, at the same time reducing our expenses to the greatest possible extent and practising economy within the country. I propose to-day to call attention to just a few points in connection, with which I think this might be profitably done.

On the 22nd of September, 1922, our American friends introduced what is known as the Fordney tariff. Up to that time the tariff on agricultural products coming into Canada from the United States, and the tariff on the other side of the line on Canadian products going into the United States were practically equal, with a very few exceptions. But when the Fordney tariff was introduced, we find that their tariff on the other side was raised very much, and there has been no compensating raising of the tariff on this side of the line, and this government has permitted those conditions to go on from year to year, bringing down budget after budget, without ever meeting the situation. I think if we want prosperity in this country, one of the first things that we might do would be to bring our tariff on agricultural products up to that of the United States. After all, the diversified farmer in this country is naturally a protectionist, with very few exceptions indeed. If he is not when he begins, he soon will be when he has met a little of the unfair competition I propose to call attention to to-day.

I was pleased with one phase of the budget, and that was the proposition to create a tariff board. No tariff should be administered in such a way as to enable any person, either a manufacturer or a farmer, to take unfair advantage of the protection afforded to him, and if this tariff board is carefully selected, if the personnel is such that it will be able to function intelligently and without any political influence, then a real service will be given to the consumers of Canada, to the farmers, and also the manufacturers. After all, all that the farmer asks in connection with the administration of the tariff is absolute fair play, fair play and equalization of the tariff so that it is just as much a protection to him as it is to other parts of the country.

Taking the commodity of eggs, one that is common to all farms where diversified farming is carried on, I would like to call attention, Mr. Speaker, to the unfair competition that the Canadian farmer suffers from in this direction. In the first place, there is a tariff of 8 cents a dozen on eggs produced in Canada going into the United States, while we charge only 3 cents a dozen on eggs coming the other way. I have been engaged in the poultry business as a side line on my farm out west, and I know a little bit about the cost of production of eggs under varying seasonal conditions. Now the unfair competition that the Canadian producer has to meet is simply this: During the months of January, February, and March, we import into this country immense quantities of eggs from the United States. At that very time our Canadian producers are under mid-winter conditions, requiring a better and more expensive poultry house in which to keep their poultry and protect them from the cold, richer and more expensive feeds to keep up the bodily heat, and in addition to that, anyone who has any experience in the poultry business will know that under these mid-winter conditions you do not receive nearly the production from the hens that you do under early spring conditions. Now while our Canadian farmer is labouring along in the face of those obstacles and those high expenses, the American producer of eggs in the southern states, and particularly in California, is enjoying during these same months excellent spring conditions when the output is very much increased. As you all know, the greater the output per hen the less the cost per dozen eggs, so the American producer has a decided advantage

over his northern competitor. Advantage is taken of these conditions by our Canadian buyers who buy eggs to put in cold storage for the winter supply. Knowing they can secure these American eggs during these early months of the year, they are not particular to put into storage as large a quantity as they might otherwise do if they were faced with an 8-cent tariff, and the result is that when hens on this side are producing eggs in quantity and the eggs have reached a low price, these buyers come forward, secure these eggs and place them in storage, being careful and anxious only to have enough to carry them to that period when the American eggs will be coming in. In that way the local producer of eggs is handicapped. If he were protected with an 8-cent tariff, the local buyers would be careful to put in a much larger quantity, and this would have the effect of stiffening the price on the Canadian side.

Now, to show you the importance of this industry, let me say that in 1924 the value of Canadian egg products was $56,822,439, and of poultry products, including poultry meat, in the same year $106,266,756; or in dozens the Canadian hen produces 238,648,685, while in the United States the production reached the huge quantity of 2,196,194,000 dozen. The Canadian consumption of eggs averages about 26 dozen per year per capita while in the United States the per capita consumption is only about 19.36 dozen. It will be seen from these figures how easy it is, under certain trade conditions, for the United States producer to flood this market. Now let us see what we import from the United States, and also what we export to that country. In 1923-24 we imported from the United States eggs to the value of $1,961,477, and in the same year we exported to that country only $49,458 worth. In 1922-23 we imported from the United States $2,494,650 worth, and we exported during the same year $98,181 worth, showing a very distinct and large balance in favour of the United States. The question that I should like to ask, Mr. Speaker, under these conditions is: Would it not be good sound sane business to increase our tariff to 8 cents a dozen, and to save and conserve for the Canadian producer the great amount of business I have just mentioned?

But the government, not satisfied with the competition met by our poultry producers from the United States, have also allowed them to be brought into competition at a very low tariff with our oriental friends on the other side of the Pacific. During the early months of the year we imported from oriental points 3,500 cases of eggs. Of this number 2,500 cases graded as seconds, which is really the fourth grade of eggs in this country. One thousand of these cases could find no grade whatever; they were of such bad quality they were of no use to Canada and they were sent to New York. In this particular connection I beg to offer a resolution from the Surrey Farmers' Institute, a farmers' institute located on the Fraser river at Cloverdale, British Columbia, which resolution is signed by H. Bose, secretary. With the permission of the House I should like to place this resolution on Hansard.

Whereas there has developed, due to natural conditions, a large poultry industry in the lower part of British Columbia, to such an extent that a very important trade is being established with the prairie and eastern provinces of the Dominion.

And whereas this industry owned and controlled by small farmers is placed at a great disadvantage and being seriously handicapped by reason of the flooded importation of eggs into Canada from both the United States and China which uncontrolled by regulations completely demoralizes the markets.

And whereas the freight rate on grain for export is .22½ cents, as against the domestic rate of .41½ cents, a difference of $3.80 a ton.

And whereas the duty on eggs imported into Canada is only three cents per dozen as against that of a duty of eight cents per dozen on eggs exported into the United States.

Now therefore we your petitioners humbly solicit the earnest consideration on the part of yourself and your department to the equalization of the duty, the marking of all foreign eggs with the name of the country of origin, and a uniform freight rate, believing that in so doing a more stable market will be maintained and the public best served.

Our Canadian producers also suffer in another direction, largely owing to climatic conditions. We import early vegetables into this country by the millions. This is a very important industry. Many of those engaged in it require considerable skill, and much hard work is necessary in connection with the business. The men who operate in this particular line are perhaps the most intelligent of those working on the land, and they need adequate protection. Owing to the fact that vegetables produced to the south come on the market so much earlier than Canadian early vegetables the demand for early vegetables has already been pretty well satisfied with the result that the Canadian producers do not reap the high prices they otherwise would secure. In addition to that they are met with the competition from mid-season districts after the first flush of the season is over, when the grower in the United States has obtained already his high prices and is bent on getting rid of his surplus stock. Towards the end of the season these cheaper products are brought into Canada and enter

into competition with the commodities of our Canadian producers. That, however, is not nearly as bad a situation as exists in connection with the hot-house grower on this side of the line. The hot-house grower has to install first an expensive plant. He has to buy and install a large amount of glass and steel for his hot-houses, and then introduce heating appliances which necessarily in this colder climate must be of much greater extent and in much greater proportion than in the case of hot-houses in the milder climate south of the line. Now, our hot-house producer of early vegetables—take tomatoes and lettuce for instance—first meets with the competition of outdoor vegetables from Mexico, then with the competition of outdoor vegetables from the southern states and also California, placing him at a distinct disadvantage in attempting to compete with these products. I claim, Mr. Speaker, that we should meet this competition with a proper tariff such as will place our producers of these commodities on a good, safe, sound basis. In that connection, with the permission of the House, I should like to place on Hansard, a resolution passed by the Canadian Horticultural Council at its annual meeting in Ottawa, March 3, 4 and 5, 1925, with respect to the customs tariff on fruits and vegetables:

The following resolution, passed unanimously at the annual meeting of the Canadian Horticultural Council, representing the fruit and vegetable organizations and allied industries in Canada, is respectfully submitted for your consideration:

Whereas fruit and vegetable growers located in districts in Canada which are specially adapted to the production of tender fruits and early vegetables, and who have large financial investments in lands, buildings and equipment, having been and are now at a decided disadvantage with growers of like kinds of products imported into Canada and produced in foreign countries where milder climatic conditions obtain, resulting in crops maturing at a very early date, and

Whereas the Dominion government statistics show very heavy importation of tender fruits of a kind produced in Canada during the season when Canadian producers, by reason of their more northerly location and colder climate cannot produce these products, and

Whereas the public demand for these products for use as table desserts and luxuries has been to a great extent satisfied before the Canadian crops can be matured, thereby depriving Canadian producers of the more remunerative prices and compelling them to accept substantially lower prices for the same kind of products maturing at a later season, and

Whereas large quantities of foreign fruits of a kind which are not produced in Canada and which compete directly with Canadian grown fruits are imported into Canada duty free, and

Whereas the specific duty now applicable to fruits of a kind produced in Canada, imported from foreign countries, and which was adopted in 1906, when values were substantially lower than at present time, is lower than the average duty applied on manufactured articles of the kinds produced in Canada, and

[Mr. Tolmie.]

Whereas should this condition continue many fruit and vegetable growers will be forced to abandon their business.

Therefore be it resolved that the Canadian Horticultural Council do petition the honourable the Minister of Finance of the federal government to place an import tax, in addition to the tariff now provided, of not less than 20 per cent ad valorem on all fruits of a kind produced in Canada each year up to expiry dates, which shall be determined according to groups and that the tariff pertaining to vegetables be amended so that duty shall be applied on the invoiced pound weight, weight of package included. We request the following schedule:—

Onions, ½ cent per pound invoice weight.
Potatoes, 1 cent per pound invoice weight.
Cabbages, 1½ cent per pound invoice weight.
Celery, 2 cents per pound invoice weight.
Asparagus, 3 cents per pound invoice weight.
Bunch Carrots, 3 cents per pound invoice weight.
Beets (Bunch), 3 cents per pound invoice weight.
Fresh Peas, 3 cents per pound invoice weight.
Lettuce, 3 cents per pounds invoice weight.
Cucumbers, 5 cents per pounds invoice weight.
Spinach, 5 cents per pound invoice weight.
Radish, 5 cents per pound invoice weight.
Tomatoes, 5 cents per pound invoice weight.
Peppers, 5 cents per pound invoice weight.

Another striking illustration of this unfair competition was presented to this House the other day by the hon. member for West Elgin (Mr. McKillop), in the very excellent speech he made. In that case he referred to the commodity of beans. We import $754,086 worth of this commodity from eleven different countries. The amount of $618,818 is imported from countries where farm labour is very much cheaper than it is in Canada; and beans to the value of $288,338 worth are imported from the Orient. Here we are again in competition with John Chinaman in the production of beans. I think it is decidedly unfair that in a commodity such as beans, where a considerable amount of labour is necessary, the producers of this country should be compelled to compete with oriental labour. Our governments have long recognized that the workmen of this country cannnot be expected to compete with the oriental because of his cheap methods of living—his ability to live on very little indeed and to work for very low wages—and we cannot hope to maintain our high standards of living if these people are permitted to compete with us. If it is necessary to protect the worker and also the manufacturer against this cheap competition, and I quite agree with that, why should not the farmer be protected also? We charge a tariff of only 25 cents per bushel on beans entering this country. Now let us look at the United States and see how they have carefully protected themselves against any of this cheap labour competition. Their duty on beans amounts to no less than $1.05 which is practically prohibitory.

There is another industry in this country which is only yet in its infancy but which offers to us immense prospects for development—I refer to the production of seed. We have all heard the slogan "Northern grown seed". It is generally recognized now all over the world that seed grown in northern countries possesses far more vitality and will produce much greater crops than seed grown in warmer climates. Why not capitalize this for Canada? Why not specialize along this particular line? Why not expend money to develop particularly this line of industry and then, after we are able to produce on a rather extensive scale, by advertising place this seed in the markets of the world to the great profit of this country. Canada is peculiarly suited to the production of seeds. Our timothy seed produced in Alberta is second to none in the world. We are producing unexcelled clover in northern Alberta. We are producing vegetable seeds, field root seeds, and flower seeds out on the Pacific coast that are second to none, and seeds produced on Vancouver island are finding in Great Britain a very ready market. In connection with the production of bulbs we have already made a reputation for ourselves, and our product is equal in every way to the famous Dutch bulbs from Holland. Certified seed potatoes, are selling at Victoria to-day at $70 a ton while the ordinary seed potatoes sell at $50 a ton. Here is an excellent opportunity to develop along this line; and in connection with the seed cereals we have already proven, at Chicago and other big shows, that we are capable of bringing forth a product that has no equal in the world. Our imports in this commodity run into some three or four million dollars. I am quite sure that we can grow all this material at home very readily indeed, and I think we can build up a very important export market. Great Britain alone imported from the state of California last year no less than five million dollars worth of seed. By fostering this industry and building up the export trade we would be rendering a great service to the country, and greatly increase the value of our products, but we know it is of even greater importance that we should be using, and the farmers of this country I think should be induced to use, the best and purest varieties of seed. It is claimed by an expert with whom I was in conversation the other day that if the farmers of the country would use nothing but the best seed in connection with their cereal crops it would increase the farm products to no less an extent than from fifty to a hundred million dollars, and an approved timothy seed, as compared with the present seed, will yield an increase in crop from twenty to thirty per cent.

There is another line of agricultural production that as yet is young, and has become important in connection with the exports only within the last few years. I refer to the tobacco growing industry. The exhibit we staged at Wembley created a very favourable impression on the people who visited that great exposition; they were not only impressed but surprised that Canada could produce tobacco of such excellent quality; but there are two new varieties that are needed in this country and if we are able to secure them they will take hold in the British market. They are the Green River and Dark Fire varieties. The experimental farms have done an excellent service with regard to the dissemination of information among the farmers in regard to the production of tobacco, and in connection with the curing of the tobacco and with the harvesting. Canada imported last year about twenty million pounds of tobacco and exported about eighteen million pounds. We can produce all this balance at home, and all it requires at the present time is just a few cigar wrappers and tobacco for blending. Canada can supply herself with all the rest. It is stated by this expert that in Great Britain there is an excellent field for marketing our export tobacco, and we can secure a market worth fifty million dollars to the tobacco growers of Canada. I am informed that with proper care in packing for export we can increase the value from ten to seventy per cent.

Referring for a few moments to the possibilities of the development of the sheep industry in this country, let me say that our sheep population number 2,753,860. That industry has been in a fairly stagnant condition. It has been moving in spurts. There have been certain years of prosperity when the sheep industry went ahead, but there were years when the sheep industry was lagging and we did not make very much progress. The quality of the sheep has vastly improved, owing to the fact that our experimental farms have rendered excellent service, and our exhibitions are assisting also in improving the grades of the sheep in various parts of the country. But our sheep population in the last three years has shrunk to the extent of three-quarters of a million head. We should be able to carry in this country at least ten times as many sheep as we have at the present time. Compare our 2,000,000 sheep with 27,000,000 in Great Britain, a country not as large as Canada, 40,000,000 in the

United States and 80,000,000 in Australia, and hon. gentlemen will realize the position.

A great factor in stabilizing the sheep industry in this country would be the placing of the wool market on a good sound foundation. I think that would have a greater effect in stabilizing the sheep industry in Canada than anything else. We have at present a varying price for wool.

Mr. BALDWIN: I desire to ask the hon. gentleman simply for information; is it not my hon. friend's opinion that the greatest curse, and hindrance to sheep raising in this country, is the dog nuisance, which brings no revenue to anybody?

Mr. TOLMIE: Yes, we have dogs troubling us to a great extent out west, but out in my district we have learned to shoot with a forty-five calibre rifle, and we always keep a horse and rifle ready for use at any time, so that if a dog enters your premises he becomes the object of your attention. I may say that out in British Columbia the dog nuisance got so bad that a provincial law was passed allowing a farmer to shoot a dog which happened to be on his premises where sheep were kept, if the dog did not have an attendant with him. Many dogs disappeared after this law was passed, and nobody knew where they went. Out in British Columbia we have no objection to a man owning dogs and chasing sheep with them, providing he owns the sheep himself.

We also have trouble with the coyote and in the coyote section out on the prairies and British Columbia we have to care for our sheep under herded conditions. In the open country a man will herd two or three thousand sheep a day, but in British Columbia a man will only handle about a thousand sheep.

I have heard that people will not go into the sheep business on account of the coyote; but by making proper provision, putting up fences and taking other precautions you can protect your sheep against depredations of the coyote. The hon. gentleman has placed his finger on one of the chief dangers that we have to encounter out west. However, I have always thought that there was enough money in the sheep business to stand that loss.

We imported last year about 5,205,926 pounds of wool. We can practically produce now nearly all the kinds of wool that are necessary, with perhaps very few exceptions. However, we should make an attempt to produce at home the very kind we import at the present time.

[Mr. Tolmie.]

On the prairies they are now producing the Rambouillet merino wool and they are producing a very much better quality than formerly. On May 27, 1923, when speaking on the budget I called attention to the fact that there was a fifteen per cent tariff on our statute books on combed wool, and that this had never yet been put into effect. I pointed out that year that we were in competition at that time with the bonused combed wool from Australia and from Japan, and nobody can ever hope to compete with the Chinese or Japanese successfully. In this particular instance, again the farmer has been permitted to hustle for himself, as he has in connection with the matter of eggs, and also in connection with early vegetables. I would strongly urge on the government that they put this provision into effect. I should like to put on Hansard a letter I have received from the Dominion Combing Mills, Limited, dealing with this very matter. The letter reads:

Dominion Combing Mills Limited
Top Makers
Commission Merchants and Wool Brokers
Toronto

April 23rd, 1925.

Hon. S. F. TOLMIE,
House of Commons,
Ottawa, Canada.

Dear Sir:—

1. Are you aware of the fact that the action of the Department of Customs in not enforcing the Customs Act is equivalent to discrimination against our firm.

2. Items 555 and 556 of Customs tariff are not being enforced.

3. The Commissioner of Customs and his staff are aware of this and admit the facts.

4. This duty was placed on the statute to encourage someone to establish a key industry.

5. After investigating the matter and being assured there was a duty on wool tops, we established the finest combing mill in the world at Trenton, Ontario, capable of taking care of the entire requirements of all the worsted spinners in Canada.

6. Over 15,000 citizens of Canada are financially interested in the success of this company and all the wool growers in Canada, and numerous other industries, will profit by its success.

7. The failure of the government to enforce and collect the duty as called for, means a loss of over half a million dollars a year in revenue, on wool and wool tops, and a severe hardship to the shareholders in this company.

8. The officials of the department claim that they cannot enforce this duty without instructions from the Finance Minister.

9. As one of the law makers of this country, will you please call the attention of the Finance Minister of the unfairness to us in this matter, and use your best influence to have the law properly administered.

Yours sincerely,

A. E. REA,
President.

The prospects for the production of sheep in the immediate future are very good. We

have assurances that there is a shortage of wool in the world at the present time amounting to about 395,000,000 pounds. Every effort should be made to improve the quality of our wool and also of our sheep and meat products. The best way to do this is by the distribution of pure bred sires, but we are met with the obstacle of the tremendous increase in our freight rates and you can understand a man not wishing to buy one sheep for the purpose of improving his stock when it will cost him a considerable sum to have that animal shipped to him. He could afford to do that years ago, but now the freight charges render it almost impossible for him to obtain these sires.

I should like to urge as strongly as I can the advisability of co-operating with the provincial government and the Live Stock Associations clubbing together and buying in carload lots pure bred animals, so that they might be shipped to the nearest point for distribution, and sent to their destination either in automobiles or by express. I might suggest also that the distribution of new breeding stock might be carried on in the same way, and I am quite sure that in building up this industry we are working on perfectly sound ground. I have no doubt that it will add greatly to the value of agriculture in Canada if we can get our people thoroughly interested in sheep.

With regard to the swine industry, the market at the present time can be said to be good, indeed, it is much better than it was a little while ago. And it is interesting to note that hog raising is coming into greater favour than it was a few years ago. When this industry was first introduced it met with a good deal of opposition simply because our farmers did not understand the situation and did not appreciate the absolute necessity for placing on the British market such animals as would secure for the producers of Canada the highest possible price. There is no use trying to fool the Englishman about what he will eat; he knows more about that than anybody else in the world. I listened with interest to the discussion that took place with regard to the estimates for live stock when they were under consideration, and it was pointed out that it would be a great favour to some of the producers of hogs in this country if we did not tie them down so closely to weights in the production of the Wiltshire sides which the British market requires. It was proposed that there should be a little latitude, that the farmers might be allowed an extra ten or fifteen pounds of weight in the hogs they raised. That would be all right for the producer but it would not produce the kind of hog which the Britisher wants; and the price would be immediately cut down.

I think we should hurry up the hog industry; if one thing should be speeded in the whole live stock business it is this particular industry, if we are to secure a sound footing on the British market. If we want to get such a market we must increase the volume of our output. To-day the British market desires not only a steady but a uniform supply and of sufficient volume to keep it interested. Why is there need of haste at the present time? It is necessary for this reason. We find that Russia, a great grain producing country, has regained her feet and she will be in the market shortly looking for a place for her surplus products. Then we must remember that Poland has a hog population of eight to ten million; in that country there will be a production of some five million hogs every year which will be thrown upon the market. In comparison with this, we have altogether in Canada only about 4,800,000 hogs. And Sweden is also aiming at a place in the British market. So that if we can increase the volume of our hog output and send the right sort of animal, and if by this means we can once get located firmly on the British market, there will be little chance of these other countries dislodging us. But we can only do this by means of education among our farmers and demonstrations that will show exactly what kind of hog is necessary.

I am glad the Minister of Agriculture (Mr. Motherwell) is here, because when we were discussing the live stock estimates he was good enough to promise that some day he would have a demonstration carried out either at the experimental farm or at one of the packing houses to indicate exactly what a bacon hog was. That demonstration would show just what kind of animals should be produced and what the British market requires. This is an excellent opportunity for the minister to put that promise into effect. There are a number of men here who are making their living on farms, besides others who are interested generally in farming, and if such a demonstration were carried out there would be missionaries who would carry the information to the four corners of the country. I sincerely hope therefore that the minister will take advantage of the opportunity he has and will see that this is done some time before the close of the session.

There is no reason at all why we should not be in a position to beat our competitors in the British market, even such a competitor as Denmark. By strict attention to business

and a careful study of the types required in Great Britain Denmark farmers have been able to establish a market in the United Kingdom second to none. On the average they receive probably the highest prices the year round for their bacon. But we should be able to beat Denmark in this direction for the reason that to-day they are importing over sixty per cent of the grain necessary for the production of these hogs as well as for the production of butter, whereas in Canada we grow our own grain and ship our product in the more concentrated form of bacon and also in the shape of butter. If what I have said is of importance, I would suggest that if we are to speed up production we should take this opportunity of promoting, in the manner I have described in discussing the shipping question, the distribution of breeding stock so as to stimulate and increase the volume of our output at the earliest date.

I come now to the cattle situation. I am glad to note that there has been a steady increase in our exports to Great Britain particularly after thirty years of fighting, on the part of both Liberal and Conservative governments, for the removal of the cattle embargo. In 1922 our exports of cattle to Great Britain numbered 18,475 head; in 1923 it had increased to 56,672; and in 1924 we shipped overseas 79,435 head. In addition to this there has been a slight improvement in prices. A very interesting fact that has developed in connection with the beef industry of the world, and something that was quite unexpected a short time ago, I might here refer to. In 1921 prices dropped over fifty per cent and cattle were produced at a loss in Australia, New Zealand and South America owing to the low market in Great Britain. What caused the change? The surplus in 1924 has entirely disappeared and the outlook at the present time for the cattle producer is better than it has been for some time. It was so bad in the Argentine in 1922 that they destroyed on birth hundreds of thousands of calves; and besides this, the pastoral lands given over to the grazing of cattle have been ploughed up in many instances and now cereals are being produced. The continent of Europe, up until the war, consumed mostly pork; they imported more pork than anything else. Since the war, however, they have learned to eat beef, and fortunately they have learned to use frozen beef. This is all the more fortunate for those producers south of the equator. That the people of Europe are satisfied to take frozen beef is due to the fact that they boil or stew their meat, adding flavourings of various kinds that disguise the taste, so that they do not notice the difference between frozen and fresh beef, as the Englishman discovered years ago. This trade in Europe has increased to an enormous extent; whereas in 1922 the people there consumed 113,240 tons of frozen beef, they bought 223,000 tons in 1923, and the consumption increased in 1924 to 459,000 tons. This meat has been used by France, Belgium, Spain, Italy, Holland, Czecho-Slovakia, Austria and Germany, and the trade appears to be on a fairly permament footing. This meat, finding another outlet, is not forced on the British market, and the result is that the Britisher will have to pay a slightly increased price for his meats, and Canada will benefit in consequence. The consumption of frozen beef on the continent has had an interesting effect on the United States, who are finding that so far as their pork shipments to that part of the world are concerned there has been a reduction of some fifty per cent. Now, our farmers can help themselves to a great extent in the beef industry. In fact I think they should always take the position—if I may be allowed to offer suggestions, having been in the business all my life—they should take the position of helping themselves, of doing their best, under all conditions. While they can look for a certain amount of assistance from the government and from the live stock associations, after all what they do themselves is what actually counts. During certain periods of the year, particularly the months of October, November and December, if you take a trip out through that western prairie country, you will find trainloads of skinny cattle being shipped to market; they are only half fat and many of them are of very poor quality indeed. Improving the breed of our cattle has made very fair progress in past years until to-day it has reached the point—and I think the minister will agree with me—where it is more important to see that the animals are properly fed before they reach the market. The farmer can assist himself to a very great extent by properly fattening his cattle. There is another way whereby he can improve his position, and that is by avoiding crowding all his cattle on the market during the months I have mentioned; he should scatter them over the winter period and on into the spring. If he will do that he will be able to get better prices, wherever that is possible. I know that in certain sections intelligent farmers are buying these half-fat cattle, feeding them and selling them at a very fair profit.

Concerning immigration, which is linked up very closely not only with agriculture but also with our national prosperity, I quite agree with those members who have said it is nonsense

to bring settlers into this country on any large scale to compete with those who are already here unless we can assure them a good living. Immigrants, however, are not nearly so easy to secure as they were a few years ago. With our national debt of two and a half billion dollars, with only four people to the square mile, and with 22,000 miles of government owned railway on which there is an annual deficit of from $60,000,000 upwards, you will see how necessary it is that we should fill up our vacant spaces if we are to put our railways on a sound basis and be able to meet our obligations. There are two or three ways in which our railways might be placed on a paying basis. Perhaps one way, the least to be desired, would be for the Canadian National to compete with its great competitor, the Canadian Pacific, in such a way as to obtain from it a sufficient amount of business to attain a paying position. This would be very unfortunate indeed, because I think the Canadian Pacific Railway to-day deserves great credit for what it has accomplished. It is one of the greatest organizations of its kind in the whole world. If one of our great transcontinental systems were to profit at the expense of the other it would be very unfortunate for the whole country. The next way would be to settle our land, fill up the intervening spaces so as to get revenue for the railways from the land adjacent to their lines. This will be necessary even if a certain degree of amalgamation or working arrangement is brought about between the two lines. I am heartily in favour of some sort of agreement that will operate these railways at a lower cost and so reduce the deficit. I think it is a far better plan for us to sit down and try to work out a proposition of this kind than to continue year after year to pay railway deficits.

In connection with immigration, the prairies have received most attention in the past. To-day we hear complaints from various parts of the country, extending from the Atlantic to the Pacific as to why immigrants do not come here now as they did before the war. In the first place, intending immigrants are met with heavy fare, very much greater than it used to be. At the present time to bring over a man and his wife and four children from some point in Europe to the prairie sections of this country costs at least $450. In addition to that, the immigrant would require at least $1,000 to make any kind of a start on a farm. If he has this money, whether he lives in the Old Country or on the continent of Europe, but particularly in the latter, he is in a position, under present conditions there, to be "somebody" and perhaps can do just as well at home as by emigrating. Canada can absorb an immense number of agricultural labourers and farmers, but we have reached the point where these men have not got the money to come, even if they desired to. It has been suggested by some that we should adopt the open door policy, that is, allow immigrants to come in unchecked. This in my opinion would be a very unfortunate policy. In the first place, we would fill up the country with a class of people whom we do not desire at all, and we would be seriously increasing our unemployment and adding to our bread line in the winter time, for many of such immigrants would soon become a public charge. Moreover, I think it is only fair to assume that we would simply become the back door to the United States for those immigrants who had enough ginger to move across the line if they were not satisfied to remain here. Now, we would like to secure Scandinavians. I have seen them do remarkably well in the western United States, particularly in the state of Washington, and also in western Canada, where I have an opportunity to observe them. They are hard workers, careful, and usually very thrifty. But Sweden, Norway and Denmark discourage emigration altogether, and do not permit the spreading of propaganda within their borders. The United States has been the source of our immigrants for a number of years, but conditions have changed there considerably, and during the last four years the western states particularly have been pretty well combed by our immigration agents without very great success. After the great boom during the war, when farming paid high prices and when the value of land went up to $150 and $200 an acre, there was the usual crash such as usually follows an experience of that kind, and over one hundred thousand farmers in the western states, particularly in those sections where the single-crop system of farming is carried on, drifted away to the cities. In addition there were a great number of bank failures. Now, many farmers in those sections who would like to come to this country are so heavily mortgaged that they cannot sell out and secure enough capital to move anywhere.

Therefore, under present conditions the British Isles offer the best field for the development of immigration. But even there we find that in many cases they are hard put to it after the war, and for lack of means cannot move out to this country to establish themselves. The British government, recognizing this fact, in 1921 passed legislation

known as the Empire Settlement Act, under which they are appropriating £3,000,000 per year for a period of fifteen years to assist emigrants to the various dominions, allowing £300 to each family for the purpose of assisting in the purchase of farm stock and equipment. The British government are working in co-operation with the various dominions, and up to the present Australia has benefited to a very great extent under this legislation. We have co-operated to a certain extent, and in a very short time should be able to form an opinion as to whether this proposition is going to be a success or not. So far as the self-financed settlers are concerned, I am informed by those posted in immigration that since the war the self-financed families which have come out here to establish themselves on the land and begin farming have not averaged one per day. Up until the time of the war we had a steady stream of immigration, but this has badly broken down, as I have pointed out, and under present conditions the only means of bringing settlers out would be under a proper colonization scheme.

Another point to which one does not like to refer but which should receive some attention is the necessity of giving the new settler in this country every possible encouragement to help him along in making a home for himself. I am informed in many sections that when these settlers arrive here they are met by men on the trains who immediately begin to throw cold water on their prospects, and if the newcomers are at all timid their hearts go down in their boots long before they reach their destination. This is a most unfortunate situation indeed.

I have been pointing out that we have been giving the most attention in the past to the settling of the prairie country. Let me emphasize the necessity of linking up as closely as we can the different parts of this country from the Atlantic to the Pacific by filling up those vacant lands along the line of the Canadian National. Here we have some 2,000 miles of railway line with a very thin settlement indeed along its route. We cannot hope successfully to operate our National railways, whether amalgamation is effected or not, unless the sections of country along the line are settled so that their activities can give business to the railway and make it self-supporting. In New Brunswick we have about 200 miles of National railway line, the area contiguous to which, or a good deal of it, is very suitable for mixed farming. In Quebec there are about 300 miles, and in Ontario some 600 miles, running through similar territory. In northern British Columbia there is a huge inland empire, with fertile soil and suitable climate, where good living conditions could be had, and where the opportunities are good for the production of live stock, for dairying, and so on. In addition to that, we have on Vancouver island a short line of railway included in the National system which serves a territory to which settlers could be taken and where they could do very well.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. TOLMIE: The reports from the agricultural experiment stations situated in the provinces I have mentioned indicate that these lands are of a very fertile nature, and that they are quite capable of sustaining the thousands of farmers who wish to engage in diversified farming, being well adapted for dairying, for live stock raising, for poultry raising, and so forth, as well as being able to produce large amounts of fodder for carrying live stock through the winter season. I might point out that in addition to the fertile soil situated in these districts I have mentioned, there is an ample supply of water, plenty of rainfall so as to assure crops every year, ample timber for building fences, houses and barns, plenty of fish and game in many of these districts, and in addition there is an opportunity for the man who is getting under way, and who possesses only a small capital, to engage in work in the various camps, lumber camps, tie camps, mining camps, fishing camps and so forth, so that part of the year he can put in on his farm and the balance of the time be earning a little ready money if he so desires.

Some one of you may perhaps shake your head at the proposition of a man going on to a bush farm in Canada at this time, but let me just point out that this great country was opened up by the pioneers who went on to the bush farms, and who cleared them up under much more adverse circumstances than are offered to the men who engage in that line of work at this time. In those days their markets were very limited indeed. They were also badly handicapped for transportation. They had no railways, and in many cases no roads, and sometimes the roads they had were of very poor quality, but in spite of all these handicaps, being men of spirit, they went on to these farms, raised large families, and they were the predecessors of

some of the most prominent business men in Canada at this time. In those days they disposed of their dressed pork in some cases at 2½ cents a pound, eggs at 15 cents a dozen, and butter at a very low price, and they had to take most of it out in trade at the country stores, so they were entirely at the mercy of the storekeeper. The man taking up one of these farms to-day will be in a much more favourable position, inasmuch as his markets are very much better, his means of transportation much better, and in no way can his lot be compared with that of the earlier settler to whom I have referred. Of course to engage in this line of work we would not want a class of farmer who would farm in the summer time and be a tourist in California during the winter. To begin with, he would have to be a man who would be willing to work, and in the second place the fact that he was the right kind of man and that he was engaged all the year round would keep him much better satisfied than it would the man who is only engaged for a portion of the year. This settlement is most important to the progress of this country, and it is particularly important in connection with placing our railway problem on a satisfactory basis. It is also important to the preservation of confederation, so as to link up the Atlantic with the prairies on the one hand and the Pacific with the prairies on the other. This is a matter, as I have said, of great importance to this country. The federal government in my opinion should take very keen interest in it and by co-operation with the provincial governments and with the Old Country government—for the latter are anxious, as I pointed out to-day, to send settlers to this country—they should be able to accomplish a great deal of valuable work in this direction. When we have solved the problem of bringing the different sections of the country closer together under mutually satisfactory conditions, then we will have solved many of the other questions which we have under consideration at this time. I think in this connection the federal government might go to the extent of largely engaging in the financing of this colonization scheme, and money spent in that direction I think would be money very well spent.

Now, while I have said something about the importance of immigration to this country, let me touch on one other very important point, and that is the preservation of the young Canadians who are born here. I want to call your attention, Mr. Speaker, to a few rather interesting figures in reference to infant mortality in Canada. And here let me say that after all, the Canadian makes the very best settler on the land that we could possibly get. Now the average rate of infantile mortality in sixteen countries is as follows:

	Per thousand
Canada	86.8
Australia	52.7
Austria	156.8
Belgium	115.3
British Isles	79.4
Denmark	85.4
Finland	94.6
France	122.7
Germany	133.8
Japan	168.3
The Netherlands	67.3
New Zealand	41.9
Norway	57.9
Sweden	64.6
Switzerland	74
United States	75.6

In the infant deaths per thousand of the population you will find here that Canada is in the eleventh position. In the nine provinces of the Dominion you find the infantile mortality to be as follows:

British Columbia	66.8
Alberta	94.5
Saskatchewan	93.5
Manitoba	85.6
Ontario	84.9
New Brunswick	106.4
Nova Scotia	97.8
Prince Edward Island	88.9

Showing British Columbia with the lowest infantile mortality of 66.8. Now, the last records for eleven cities of 40,000 and over in Canada are the records of 1922, and they are as follows:

Victoria	45.1
Toronto	90.4
Winnipeg	77.5
Vancouver	58.5
Hamilton	87.8
Ottawa	129.8
Calgary	80.5
London	91.9
Edmonton	89
Halifax	134.5
St. John, N.B.	146.9

Mr. MERCIER: What was the percentage for Quebec?

Mr. TOLMIE: I have no statistics at all for Quebec, I am sorry to say.

Mr. MERCIER: Do you conclude that there are none?

Mr. TOLMIE: I have not come to any conclusion on that point; the fact is I have none here. Now in this particular case Victoria is shown with 45.1, the lowest infantile mortality. That was in 1922, but in 1924 Victoria broke all the records in this particular connection by reducing her infantile mortality

to 31.1 per thousand. At the great Child Welfare Conference held in London last year there were no mortality figures, urban or rural, that came within twice this figure shown at Victoria. The point I wish to make plain to the House is, that this result has not been attained by chance. Victoria has a very live medical health officer and he has worked out a plan for an absolutely clean milk supply, or as nearly as possible. In 1922 the infantile mortality in that city was 45.1. That was reduced to 44.1 in 1923, and in 1924 to 31.1. As a further proof of the quality of the milk supplied in that city let me say that in 1924 not a single infant death was due to digestive trouble. The medical health officer there has had the close co-operation of the Victorian Order of Nurses, an organization that is very well known for the excellent work that it does. Together they carried on a compaign of education in the care of young babies. The Victorian Order of Nurses educates mothers on pre-natal care with the result that from 1,000 births the death rate of infants born alive but incapable of sustaining life totalled 34.4 in 1922, 25.4 in 1923, and only 17.8 in 1924, indicating the great value of this work.

Now I do not believe that the excellent showing made by British Columbia is the result of chance merely. Let me say in that particular province we have carried out tuberculin testing of dairy herds, and have insisted on good sanitation in the dairies for a very much longer period than any other province in the Dominion, with the result that many of the herds have been clear of tuberculosis for very many years. The record that Victoria has shown, however, is but another added attraction to a city that has already become famous for its wonderful climate, its purity of air, its general healthiness and natural beauty, all of which make it one of the most attractive cities in the world. What has been accomplished in the city of Victoria, and in the province of British Columbia, can be accomplished everywhere else. I should like to see the federal government give every possible assistance to this work, particularly to such organizations as the Victorian Order of Nurses, and especially to give assistance to the Minister of Agriculture in securing the needed money to carry on tuberculin testing in Canada so as to make our herds as clean as possible, because I believe there is nothing more important in this country than the saving of our young life.

In the early part of my remarks this afternoon I made the statement that if there was one thing Canada needed more than another it was business—that we should encourage every possible source of revenue that we can. In this particular connection we have a very important business engaging our attention in this country, one that is growing very rapidly, one that last year was responsible for bringing $136,000,000 into Canada. I refer to the tourist traffic coming to the Dominion during the summer months. As I have said our income from that source in 1924 is estimated at $136,000,000 divided among the provinces as follows:

British Columbia	$36,000,000
Alberta	20,000,000
Saskatchewan and Manitoba	10,000,000
Ontario	30,000,000
Quebec	30,000,000
Maritime provinces	10,000,000

The national parks are estimated to be responsible for an income of $21,000,000 while the cost for their administration was only $1,250,000. It is estimated that tourists brought into southern California in 1924 no less than $148,000,000 of business. There is another very striking statement made by Californians, and it is to the effect that 75 per cent of the settlers and investors in that state first came to California as tourists, indicating that the tourist traffic is of the very greatest possible value as an advertising medium. In fact it may well be said that many of the tourists to-day will be settlers in the country in a short time. I may say in this connection that it helps to promote a very much better feeling between the two countries which lying side by side, have maintained peaceful relations for a hundred years, and improves our international relations. The federal government, perhaps noting the importance of this work and the magnitude to which it should grow within the next few years, might render I think a certain amount of assistance by advertising on a somewhat large scale at the seasons of the year best suited to attracting tourists to this country.

There is one other important thing the federal government can do, and that is to remove every possible impediment that confronts the tourist when he comes to this country. At the present time it is possible to climb into an automobile in this city and motor to Sault Ste. Marie, go into the United States and enter Canada again at Emerson, Manitoba. From there you can ride to Princeton, British Columbia in the western end of the Similkameen country, and there you can go into the United States and up to Blain, Washington and then back to British Columbia. The government of British Columbia at the present time is constructing a piece of highway over the Fraser canyon

and through the beautiful Hell canyon, one of the finest bits of scenery in British Columbia. When this road is completed, as it will be in a very short time, it will be possible to motor from Emerson, Manitoba, not only to Vancouver but further into the prairie country. Now the length of time allotted to an American tourist coming into the country at the present time is thirty days. He has to report out at the end of that time or secure an extension. If he is going to stay in the country longer he is supposed to put up a bond of $25. I have had several communications from the west in which the parties express a strong desire to have this period extended from one to three months, so as to permit the tourist to come in from the east, take time leisurely to cross the country and get out at the west coast, allowing plenty of time to do it. I would strongly urge this matter upon the attention of the government and I hope they will give it close attention.

There is another matter in which the federal government can render a little assistance to the city of Victoria particularly, and such assistance will be very much appreciated indeed. Outside of Victoria, at William Head, we have a quarantine station. Steamers from Australia, from New Zealand and from the Asiatic countries, come up from the straits of Juan de Fuca and report at quarantine before landing at Victoria. They remain there very often two or three hours, tourists have a chance to go ashore, the Victoria people are afforded the opportunity of meeting the tourists and everybody is happy. But occasionally when they land at the ocean docks at Victoria the immigration officers take such a long time to examine the passengers before permitting them to go ashore that perhaps darkness sets in, or the period of the stay of the steamer at that point is so largely taken up that it is not worth while for them to go ashore and look around. We would like the government to send their immigration officer with the pilot to William Head, where the pilot climbs on board the ship; so that the officer could begin his examination there, and when the ship ties up at the dock at Victoria the examination will be pretty well completed, the passengers will be permitted to go ashore at once, and the people of Victoria will have a little longer time to extend their hospitality.

Another subject on which I touch very briefly is this: In 1873 two or three schooners went out from Victoria into the north Pacific ocean to begin fishing for fur seal. This business grew at a very rapid rate until a few years later some fifty-nine vessels were engaged in sealing, and some fifteen hundred people made their living in that occupation. This was an important business and was very profitable. I might point out that the seal rookeries in the Pacific ocean where the first seal breeds were located are confined to the islands off the coast of Russia, and Japan, and Prybiloff island in the Bering sea, the property of the United States. This point is very important. It simply means that the vessels coming out from Victoria at that time and carrying on their work for a number of years established the claim of the British Columbia people to the sealing industry, because we had no rookeries in our own territory. In 1886-87 the United States closed the Bering sea; Great Britain objected and claimed that it was part of the ocean. After a number of conferences and agreements following one after the other, at Paris, at Quebec and at one or two other places, the Canadian sealers, under the various regulations that were put in force at these different conferences, were practically regulated out of their business, with the result that for three years these vessels lay in Victoria harbour tied up, expecting that at some time in the near future a settlement of the question would be reached and they would be permitted to proceed with their business again. During those three years when the ships were tied up, four other Victoria sealers proceeded to sea, and broke all the laws and regulations which had been made, did not respect any treaty and carried on illegal sealing during that period. When the commission sat for the purpose of awarding proper damages to the men whose business had been taken away from them, they awarded damages to these four, law-breaking schooners, but did not give the others anything. That was their reward for enterprise.

In 1911 Great Britain, the United States, Japan and Russia entered into a treaty prohibiting sealing until 1926. Great Britain is to receive fifteen per cent of the value of the skins kept, and up to the present time their income from this source has amounted to $694,548. When the treaty went into effect in 1911 it was estimated by Professor Elliot, an expert on sealing, that this should bring a revenue of $7,250,000. Either Professor Elliot was very much out in his calculation or something else went wrong. It is necessary to give twelve months' notice before the present treaty can be cancelled, and I have a resolution endorsed by the chamber of commerce of the city of Victoria, and also by the city council of Victoria, asking that

the necessary twelve months' notice be given for the cancellation of the treaty, so that the Victoria sealers may resume their business, and with the permission of the House I will place it on Hansard.

It is dated 6th April, 1925, and reads:

Whereas the Pelagic Sealing treaty expires next year;

And whereas, prior to the treaty, sealing, for fur-seal, was an important British Columbia industry, employing large numbers of white men and Indians, and adding materially to the prosperity of the Pacific coast, and it is desirable that the industry shall be renewed;

And further, it is desirable that any industry training and accustoming young men to a hardy, seafaring life shall be encouraged;

Therefore be it resolved that the board of directors of the Victoria chamber of commerce go on record as being opposed to the renewal of the Pelagic Sealing treaty, and that the Dominion government be communicated with and requested not to renew the said treaty; and also request that, in December next, written notice of such termination be served upon the other parties to the treaty, such notice, at the expiration of fourteen years, as provided by the treaty, being twelve months in advance of the expiry date;

And that a copy of this resolution, together with suitable communications requesting support, be forwarded to Victoria's representatives in both the House of Commons and in the Senate.

I sincerely hope that the government will give this resolution very careful consideration and endeavour to look into the matter very thoroughly from all angles. The people of Victoria will be very pleased if the government find in their favour and recommend the cancellation of the treaty.

While I have been speaking on constructive matters very largely since I commenced today, I desire to say that we are drifting along as far as defensive works are concerned. Out on the Pacific coast during the war we had an opportunity of realizing our defenceless position. At that time there was a very live German cruiser squadron cruising around the Pacific ocean, and we did not know at what time we might be attacked. If it had not been for the interference of the British, who secured the services of one of her allies to protect us, ws probably would have suffered severe damage at that time. Now everyone will acknowledge that, although the war is over, the world is certainly not in a very restful condition. We know that countries are arming on all sides. We have competition for trade, many international questions are arising that might cause an outbreak of war at any time, and I feel that it is very foolish to lull ourselves into a feeling of false security, or to follow the example of the ostrich, hide our heads in the sand and imagine we are safe. It is better to face the proposition squarely and devise some plan of whatever nature we may deem best and just, and then to carry that plan to a successful conclusion.

In the matter of naval defence, it is quite apparent that the great powers are not satisfied that all danger of war is over. I have here a copy of a White paper issued in London on March 4 giving particulars regarding the number of vessels of certain types under the control of different countries; and the ships are very heavily armed. The following is a comparative table of these vessels:

	Cruisers	Destroyers	Submarines
British Empire.. ..	8	2	4
United States.. ..	9	12	15
Japan..	11	36	59
France..	9	23	28
Italy..	5	26	20

I quote the following despatch:

The admiralty give details of the designs of many of the new foreign ships in the White paper, but discreetly suppress all details about our own vessels.

Thus we learn that there is a probability of the new Japanese cruisers of the Nachi class carrying the stupendous armament of twelve 8-inch guns. They will presumably be mounted in four turrets, and the broadside fire of such a cruiser would be 3,000 lbs.—five times as much as that of the pre-Washington cruisers.

The new French cruisers will have an armament of eight 8-inch guns, and the same number is allotted to the new Italian vessels.

This would indicate quite clearly that the great powers are not satisfied that all danger of war is over. Looking at our own condition, we find that we are practically helpless at the present time. We forget that the mere fact of our being disarmed will not save us from attack, and our losses in the event of attack would be simply tremendous. On the Pacific they would destroy our commerce and levy toll on our cities, perhaps destroying the coast cities; and they would ruin the coal mines of Vancouver island and destroy the dry docks and docking facilities generally as well as our elevators. And in the dry summer season they would set fire to hundreds of millions of dollars' worth of timber which could never be replaced. Altogether an attack would set back Canadian prosperity perhaps a hundred years, on the coast at all events. Our defence provided at the present time to protect us against any possibility of attack consists of two destroyers and four trawlers. These are not considered naval ships anywhere in the world that I know of except in Mexico, which country does not stand among the first. These destroyers do not possess the necessary accommodation for training purposes so that training work cannot be carried on beyond a day's voyage. The trawlers are slow little vessels steaming about nine knots

under favourable conditions and in good weather, and they are fortunate if they make four knots in a gale. I understand that they are unable to lower the boats in rough weather and they have no power to tow. And everyone who knows anything about the Pacific knows what the weather is like there in certain seasons. They are also inadequate for life saving purposes, and nothing but the best equipment should be used in this direction. In case of shipwreck with vessels of this kind a serious loss of life might result.

On the east coast the naval equipment is practically the same, except for the fact that they have an opportunity of training with the British navy at certain seasons of the year in the West Indies.

The personnel of the navy in my opinion is first rate in every respect, and most of the men during the war had an opportunity of serving in conjunction with the British navy. You can imagine therefore what their feelings must be, after having participated in the war, to be required to put up with the meagre equipment at hand. They are carrying on from year to year in the hope that at some time some substantial improvement will be made in our naval establishment. They get no pension and no separation allowance, and I would call this fact to the attention of the Minister of National Defence (Mr. Macdonald, Pictou) with a view to having these men placed on an equal footing with our other defensive forces. There is the Royal Canadian Naval Reserve and there is also the Royal Volunteer Reserve, both of which are doing well, the officers being interchangeable with the British navy under certain conditions. Now, in considering the naval question we should remember that it requires about four years to train a seaman or seaman-gunner and seven years to train an officer. So that time is a very vital factor. With regard to our defensive measures, that is simply a matter for experts. After talking about all sorts of things in relation to agriculture I would not risk for one moment any suggestion touching the question of naval defence, for I do not know anything about the subject. I wish however to present a resolution passed by the Air Force Club of British Columbia, and with the permission of the House I would place it on Hansard.

The resolution submitted reads:

Whereas in the consideration of Canada's general defence policy, and having in mind also the trend of modern warfare, some thought must be given to the question of countering the use of aircraft by an enemy;

And whereas an air arm of defence, capable of co-operating with the present or future land and sea defence forces of the Dominion, becomes a matter of necessity;

And whereas financial considerations make the maintenance of an adequate and efficient permanent air force impossible;

Therefore be it resolved that the Department of National Defence of the Dominion of Canada be asked to give due consideration to the suggestions embodied hereinafter and to take appropriate action in the same connection:—

1. That a Reserve Air Arm be formed to supplement the existing Royal Canadian Air Force.

2. That the personnel of such a reserve be drawn from the membership of accredited air force clubs in each province.

3. That the training of such personnel be done at the existing R.C.A.F. stations and under the supervision of officers of the R.C.A.F.

4. That supplementary equipment be supplied to each R.C.A.F. station to make such training possible, due consideration being given to the physical requirements of each locality.

5. That priority be given in the supply of facilities for training to the province of British Columbia in view of the fact that owing to climatic conditions training can be carried on at Jericho air station at Vancouver all the year round.

6. That training be commenced at the earliest possible opportunity at the Jericho air station for members of the Air Force Club of British Columbia under the supervision as No. 3 provides, all active members of the before-mentioned club to be automatically enrolled on the Air Force Reserve (vide No. 1), and all such active members to be instructed or reinstructed, according as to whether they have flown before or not, and brought to a standard of efficiency to be decided on by the senior supervising officer or O.C. station.

It is submitted that by adopting the action outlined above the Dominion of Canada would be assured at all times of having at the least possible cost the maximum of trained air personnel, both available and in a state of efficiency that would make it a force of the greatest value, both when acting as a first line of defence, and also when co-operating with naval and military forces guarding the coast of British Columbia which lies nearest the most probable zone of warfare in which in the future Canada might be defensively engaged.

What is Japan doing? She has the third largest navy in the world, is very efficient, and is establishing several stations on the Pacific. And the United States is rapidly preparing for any emergency. She has provided for naval defence on three sides and for this purpose she requires a very large force. On the Atlantic coast she is strongly fortified, and she has fortifications on the Panama canal and along the southern section of the country. On the Pacific coast as well as on the Hawaiian and Philippine islands she has also considerable fortifications. And she is establishing naval bases at all these places. In Alaska she has three military posts already and is talking of establishing a naval base at a place called Dutch Harbour, while at Puget Sound she has six powerful fortifications. In addition to that she has a strong naval base at Bremerton, where there is a 700 foot dry dock; and she is building works for the accommodation of the

whole north Pacific squadron. At the mouth of the Columbia river she has three strong forces and in California she has fortifications, naval training stations, marine barracks, naval air stations, army air stations, destroyer bases and huge storage capacity for oil, gasoline and lubricants. In Hawaii she has established very powerful forts and is building a strong naval station at Pearl Harbour, which is being fortified with sixteen-inch guns. In the Panama canal she is placing four sixteen-inch guns at each end and in addition to that she will maintain forty seaplanes besides other defensive works.

Apparently therefore the United States is not going to allow itself to be lulled to sleep by any peace conferences; and with the United States and Japan arming, we in Canada must wake up to the possibilities of the future. Canada is much more favourably situated than the United States from the standpoint of defence. In the first place, it would not be of any use for an army to attack us on the north, even on the Hudson bay. And on the north Atlantic, from Labrador to the north shore of the St. Lawrence, as far as Saguenay river, an attack would be futile. Our eastern strategic area would be Newfoundland, Nova Scotia, New Brunswick and Gaspé. On the Pacific we have a long coast line which, taking into consideration all the islands and indentations into the shore line, would cover some 10,000 miles. There are very few points along that coast where there would be access to railways or where there would be good roads, while parts of the country are so rough that it would be altogether useless for a force to attempt to land. With our long narrow channels and our deep fiords running into the mainland, certain lines of defence could be very effective. The great question in the event of Japan and the United States engaging in war would be the necessity for our maintaining a position of complete neutrality. There would be an opportunity on the long coast line of the Pacific for one of the belligerents to establish a submarine base and we should be immediately involved in a complication unless we could preserve a strict neutrality. We would, it is true, expect the assistance of the British fleet, but the British fleet might take a considerable time to get under way, as it did in the last war, inasmuch as it must extend over the whole globe for the protection of British dominions wherever they exist. So that the delay might be serious if we did not have adequate defensive works to serve us in the meantime. A good, defensive equipment on the Pacific coast would, on account of the nature of the coast and of the country there, cause any enemy to hesitate for some time before proceeding to attack us. Now, as I have already pointed out, the plans for our defence should be left entirely in the hands of experts, but I would suggest the following procedure under present conditions. We may be involved in war at any time, and in that event we would be absolutely helpless. No one realizes the necessity for economy more than I do, and I would not for one moment propose that we go ahead and build immediately any big defensive works; rather I would propose that we should have a carefully thought out plan of defence, and then decide on certain construction work and proceed gradually, adding a little every year, until we had completed a very effective defence. I would call this to the attention of the government, and particularly of the Minister of National Defence.

Mr. FERNAND RINFRET (St. James) (Translation): Mr. Speaker, I wish to briefly express my views on the budget, and to do so in the French language. It has sometimes been a matter of reproach to French Canadian members that they do not make a more frequent use of their native tongue in the debates of the House of Commons. No one more than myself, Sir, wishes to uphold our claims in favour of the rights of the French language. Is it necessary for me to add that, when we express ourselves in another tongue than ours, we do not do so because it eases our task or we think that we can express ourselves more fluently in a language which is foreign to us. However, it may be necessary, in a brief debate, when views are exchanged in the course of the same sitting and the vote must be taken that very evening, it may become necessary, if we wish to acquaint the House with our views as to those very rights connected with the French tongue, to couch our remarks in a language which may be understood by those for whom they are intended.

Some hon. MEMBERS: Hear, hear!

Mr. RINFRET: This is why the French Canadians in this House, often take part in English, in the discussions, and furthermore, because they wish to maintain, in the Parliament of Canada, the influence of the province they represent. Far from rebuking them, I think they should be congratulated on the unavoidable effort they are forced to make to reach this aim. Nevertheless, I am fully aware that, if we go to extremes, there would be danger of not hearing often enough, in this parliament, the lovely accents of the French language; there are other discussions,

such as those that are protracted, when it is, on the contrary desirable that the French language should be heard. I, therefore, think that the discussion on the budget, or the one in answer to the Speech from the Throne are occasions when one may do so without any inconvenience. Quite a number of my colleagues, before I rose, took advantage of this privilege in the course of the present debate, and it is a pleasure for me to follow suit.

There is, at present, a committee appointed to revise the rules and regulations of the House, and through the partly opened door, we have already heard the rumour that one of the reforms will tend to limit the speeches of members to half an hour. It is my intention, Sir, even before this new regulation is submitted to the House or is adopted, to apply it to myself, and I shall endeavour to express myself as briefly as possible.

I wish, first, to express my astonishment that, in the course of this debate, so little was mentioned about the tariff. In listening to the members of the opposition last year, and even sometimes when they are delivering speeches before the public of this country, the most important question, was that of the tariff. Yet, we have heard quite a number of members from the opposite side, we have equally looked into the empty and distressed amendment of the member for West York (Sir Henry Drayton) and we have noticed that no mention whatever is made of the tariff. I am anxious to hear the leader of the opposition to see if he will not take his cue from his lieutenants on this question or whether they only obeyed formal orders from him. The leader of the opposition (Mr. Meighen) will fall back, no doubt, on his contention that he has placed on the order paper of the House, a motion which outlines and explains his policy on protection. He has already, on more than one occasion, made use of this subterfuge to avoid being dragged on these grounds by questions or other means. I am inclined to think, Sir, that when the leader of the opposition placed this motion on the order paper at the beginning of the session, it was not with the idea of discussing it, but rather to give himself a pretext not to do so when, as in the present circumstances, he would be called upon to state definitely, both his views and those of his followers, on the budget.

Mr. ARCHAMBAULT: Hear, hear!

Mr. RINFRET: And why? Why did he, through the intermediary of his lieutenant, move an amendment in which are not included his views on the tariff? He wished to drag behind him,—which is an easy task—the very small phalanx of those who support him in the House; however, he also wished to transmit a message devoid of a tariff proposal to a whole group of agrarian members holding entirely different views from his own, on this question, but who on other grounds may disagree with the government.

The Conservative party last year had forecasted that the King government would entirely demolish the tariff walls. In the city of Montreal, Sir, they published beforehand the photographs of the factories which, it was said, would close their doors in the course of the year. This year, the opposition is very much disappointed to notice that in the present budget, the government not only does not lower the tariff, as it had been foreseen, but that on certain items the changes are upwards. And, in my opinion, this is an excellent policy, a policy of good common sense. Tariff, to my viewpoint, must not be a question of fast rule. It always amuses me, I wish to be frank, to hear certain members in the House for whom there is but one rule to follow in tariff matters: if you lower the tariff, it is an excellent policy, if you increase the tariff, it is a bad policy. While you have others who, obeying the same impulse, but in an opposite way, take absolutely the same attitude in favour of what they call protectionism. I would further add that the tariff should not be based on local consideration. Very often a member who proclaims himself moderate in tariff matters takes the following attitude: He demands protection for the industries which are in his county, although he is perfectly willing to open the doors for those which happen to be in the neighbouring counties. I do not agree that we should look at the tariff in that light. I think, on the contrary, that tariff is above all a business question, an adjustment to be established among the various interests of the country. The present government was quite justified, last year, in lowering the tariff on farming implements, as it wished by this measure to help the farming class which needed it, and events have shown that this lowering of the tariff has given excellent results.

Mr. BOUCHARD: Hear, hear!

Mr. RINFRET: However, I equally state that the present government is quite right, this year, when they increase the tariff on coal; for, in so doing, it adjusts a situation which was extremely complicated and greatly

to the disadvantage of our Canadian coal producers. Once more has the government proved its wisdom.

For my part, I would approve with pleasure a budget introducing, on the one hand, reduction in tariff, where they can be useful to certain classes; however, on the other hand, raising the duties where they are necessary. In other words, I would support a tariff policy which, leaving aside fast rules and theory, only acknowledges the practical interests of the country.

While on the subject, I would like to point out: That a certain group has been led to believe that the word protection was identical with that of high tariff. I maintain that the only way of protecting industries is not necessarily to raise the tariff. For instance, last year, by decreasing the tariff on the raw material which enters into the manufacture of farm implements, the government was protecting, on the one hand, these industries, in the proportion that it had, on the other hand, exposed them to foreign competition.

The industries of this country are at various stages of industrial development. It has happened to me, in the course of a session of parliament, to receive representations on the part of two industries requesting, as means of protection, measures which were the very counterpart of one another. And why? The former manufacturer, who was located in the county of my good friend from Rouville (Mr. Morin), turned out a finished product; and what he wanted, was a high tariff on the finished article. On the other hand, the other manufacturer received from foreign countries a product which he but finished, therefore, his interest was that we should allow this half finished product to enter free, while the manufacturer who produced the same article wanted it protected by a duty. You cannot, under one tariff, afford equal protection to all industries; if you admit the raw materials free of duty you protect certain industries more effectively than with a uniformly high tariff wall.

Another way you can help industry indirectly is by increasing exports, by obtaining tariff concessions in the way of decreased duties on our products entering foreign countries. Therefore, Mr. Speaker, it is undeniably wrong to confuse the term "protection" with the term "high tariff," since quite frequently the effects of the one and of the other are conflicting.

As to the British preference I think we might with advantage study this question. Were I to find fault, it would be to say that the British preference is too restricted. Just as I balk at a doctrinaire tariff so with the British preference I would have preferred that instead of being on a straight level it had left some margin for readjustments, had retained some elasticity. I believe it is time to ascertain right now if there be not certain products on which the British preference should be curtailed or done away with entirely. Moreover I would like to see a certain measure of reciprocity granted Canada by England. However, I have read with interest in the newspapers that the present Imperial government in its budget, will restore the famous McKenna duties. Once that is done the home government may be in a position to grant us certain favours over foreign products.

I would like now, Sir, to say a word concerning our transportation problems, which are many and varied. This year the government will attempt, through the medium of a subsidized company, to control ocean rates. The question has been referred to a special committee. Those who have followed the proceedings before this committee realize how very complicated the problem is; and for my part I shall certainly have nothing to say on the matter until the committee has finished its work. But I might request the Conservative organs to do as much; while the parliamentary committee is compiling the testimony of those who are best acquainted with the subject, I cannot be expected to evince much interest in the forecast of these Conservative organs which have already decided that the evil is non-existent or that the government's plans are worthless. We shall be at leisure to judge matters when we are fully apprised of the whole situation.

The House will be called upon also to make a very important decision with regard to freight rates established under the Crowsnest pass agreement. I shall not go into the history of this agreement which is well known to you, Mr. Speaker. You are well aware, too, how matters stand. At the present time the rates laid down by this agreement are in force, since the suspension was lifted. The case was taken before the Supreme court. The court held that the act creating the Board of Railway Commissioners did not give the board jurisdiction in the matter at hand. The House will have to decide whether or not we should extend this jurisdiction to the Board of Railway Commissioners. It is quite evident that we will have to study this question in the light of the needs of every district in the country; and on this point, as on the tariff, I am willing to concede that our attitude should not favour one part of the country to the detriment of another. But it

in a flagrant contradiction that while we give the railway board the authority to fix rates on our Canadian railroads, the board's hands should be tied with respect to one part of the country. It appears to my mind impossible for the board to devise a harmonious schedule of rates for the whole country if, at the very start, jurisdiction is denied it over certain commodities and certain districts. We are desirous of protecting the interests of the whole country; but I trust that the government, with the support of this parliament, will bring down a bill granting the needed authority to the railway board which is essential to its efficiency.

Another transportation problem with which we have to deal every year is that concerned with the government merchant marine. During the last campaign we were very severe on the preceding administration for having built these ships and saddled a tremendous debt and an annual deficit on the taxpayers of this country. I admit in all frankness, Mr. Speaker, that personally I have more sympathy for the present government than for the marine bequeathed to it and I wish that circumstances would reveal some manner of getting rid of this problem. I realize that any definite advice would be premature. We are told that some of these ships co-operate with our National railways; and if the Petersen contract becomes a reality it is possible that some of them may be added to that fleet, although very grave doubts exist on that score.

At any rate, I must congratulate the government for having offered some of those ships for sale and even if there has not been any satisfactory bidders so far to relieve us of part of that burden, I would certainly be ill-advised to reproach them with maintaining inevitably the balance of that fleet.

But there is something far more important than the government merchant marine: I mean the government owned railways, and on that question I wish to express myself very definitely. Nobody will deny that the fair trial which has been made of public ownership has brought about some improvements, unquestionable improvements in our railway service. Everybody will admit it. But the result is quite different as regards the financial improvements of these roads, for as you study that problem, and as you go through the public accounts you will find at every page of the public ledgers more items than ever relating to the National Railways which show that the deficit and the obligations are still greater than most people would imagine. We took no exception to a fair trial being made of public ownership, but I think that such trial, if it is to be fair towards the railways must also be fair towards the taxpayers who have to bear the cost. We can already foresee the day when we shall be bound to realize that the experiment cannot be carried on forever.

The other day, when I was present at the committee inquiring into the estimates of the National Railways, I was greatly impressed by two formal statements of Sir Henry Thornton. First, he said that there was not enough traffic in Canada to support two competing roads such as we have at present and he added that owing to the progress of the motor cars which are now carrying not only passengers but freight, the loss thereby sustained by the railways was greater than the gains they were able to make elsewhere. The president of the National Railways further stated that, in his opinion, if the two roads were merged into one system, he thought their profits would be sufficient to pay the interest on all fixed charges. We must face the actual facts. The losses are not operating losses, for we are told that there are profits from that source. It is due to the tremendous amount of interest which we have to pay on obligations and fixed charges. That is why, if we have done wrong in building or in giving grants for the building of too many roads at a time when nobody could expect that the war would revolutionize our financial system, it was also a mistake, in my opinion, and perhaps a greater mistake to take over these railways, especially so because the government, when they bought the roads, assumed all their obligations, whereas it certainly would have been possible, had they proceeded otherwise, to assume only part of these obligations. Whereas no private concern in the world would have taken over the Canadian Northern or even the Grand Trunk and assumed at the same time the whole of their obligations, the government of the day, that is the government preceding the present administration, bought the roads and said: All these obligations, all these guarantees, all these debts, we are ready to assume and endorse and we will pay each year the interest on these charges. Therefore, Mr. Speaker, when people talk about changing the train schedule and doing away with so many trains on such or such a line, I think that is merely adding a drop of water or rather taking it from the ocean. Naturally, under such conditions, any saving, how small it may be, would be welcome; but is it not evident, at first sight, that it is not the way to secure for the railways not even profits, but a lesser deficit than that which we have at present.

The fixed charges will always exist and we shall always have to meet them. But, Sir Henry Thornton says, if the two railways were merged, leaving only one system, the returns to be derived therefrom could balance the interest charges to be met and then we might be able to make both ends meet. I admit that there are considerable objections on both sides. If the government or the National Railways are to take over all the railways of this country, it means that we shall go deeper into public-ownership and you know, Mr. Speaker, that it has not been a success anywhere in the world. So far as I am concerned, I would be very sorry, notwithstanding the stand taken by some hon. members from this side of the House, to see the government aggravating our situation in that direction. On the other side, if the railways are absorbed by the great private company operating it at present, I very well see the danger of a monopoly. The fault rests with the topography itself of our country, trade moves from east to west and vice-versa. Perhaps the fault also rests in the way we proceeded, not only in the last twenty years, but since the inception of railway construction in Canada. How different is the American system. There exists in the United States a great number of railway companies. Each state has its own. There exists no transcontinental railway. We do not find in that country this rivalry to extend from ocean to ocean which drove, first, the Canadian Pacific Railway, then, the Grand Trunk Railway and finally the Canadian Northern to build from the eastern centres as far as the Pacific coast. Moreover, the United States forming a perfect quadrangle, the movement of trade spreads in all directions. It is clear that the railway situation is far better and easier than ours.

Therefore, Sir, in view of this intricate situation and the drawbacks which I fully perceive, I am disinclined to definitely come to a conclusion. However, I think that we should, at least make provision for the time when we shall have to put an end to the present situation, when the trial, as fair as it may be, will end by weighing too heavily on the shoulders of the taxpayers; and consider a project of merger. It will, however, be necessary that, by this merger, the government that is the country, should secure reasonable conditions in regard to financial readjustment of those obligations which run up our public debt, and that the new service obtained, be placed under the complete control of the railway commission, so as to guard against the danger of monopoly.

[Mr. Rinfret.]

Before resuming my seat, Mr. Speaker, I wish to congratulate the government on the fair and just way in which it has undertaken, since it is in power, to re-establish the proportion which is due to the French-Canadian element in regard to the various positions of this country. And if I do so—it is always a delicate matter to talk upon a question which gives rise so easily to prejudice—if I do so, it is precisely because we have been challenged by the opposition on this question. A very satisfactory answer has been given, by enumerating a great number of positions which have been allotted to our people, or which, in certain cases, have been for the first time, as for instance in the case of the Auditor General, allotted to a French-Canadian.

It is, I repeat it, a very delicate question. We only claim our fair share. Never would the thought enter our head to precipitate a conflict on this question. The Liberal party, on the contrary, has always been a party of moderation and conciliation; it has always been challenged right and left precisely on such questions. However, it would be very unfair not to recognize that, from the bottom to the top of the ladder, the present government has done enormously to re-establish in the realm of influence the share which belonged to the French Canadians of this country.

I might also, myself, recall the splendid way in which we were represented both overseas and in Washington, by French-Canadian ministers. And, were it not that I see two, who do me the honour of listening, at this moment, and were it not for the fear of wounding their modesty, I would dilate at greater length on the subject. There are others. Never, perhaps, at any time in our history, have we been given, in foreign representation, the recognition granted to us by the present government. The same may be said of appointments to the bench, of our share of influence in the government itself, of the important appointments in the civil service. I recall that at one of the first sessions of this parliament, I strongly advocated that the Postmaster General (Mr. Murphy) should appoint a French-Canadian deputy minister in his department. The leader of the opposition, who was sitting on the opposite benches, rose then, and, in the satirical tone, which is particular to him, prophesied that we would never obtain such a favour. Nevertheless, a few months later a French Canadian was appointed Assistant Postmaster General. On other occasions, a more favourable proportion, for our people.

was re-established. Everything cannot be accomplished in a day; and I would be the first to ask, that in the assertion of our claims, we do not go so far as to precipitate a regrettable conflict or revolution. We lost so much ground under the preceding government that it was impossible to hope that within a few months equilibrium would be restored. However, what astonishes me, to-day, is that, while we are discreetly endeavouring to obtain favours or our rights, which are generously granted to us, it is the representatives of the party who infallibly refused them to us, that rise in their seats to loudly claim justice. And they are the ones who are held up among certain groups as the saviours of our race.

I wish to point out the fact that in many cases, of equal competence, preference was given to French Canadians, because it was deemed proper to restore our fair proportion. We did not even consider the political affiliations of the candidate to whom we granted a promotion, if in obtaining it that could better the situation of our people. I could understand, perhaps, that certain Liberals carried away by their zeal made us a slight reproach on the subject; I could still understand that in certain cases an English speaking member would rise to ask for explanations on some appointments; however, what I cannot understand, is that it is precisely those of the political group who maintain that they have no other aim than to seek the interest of French Canadians, that they are precisely those who reproach us when we obtain favours of that nature. Fortunately, however, the people are not to be deceived. We witnessed in 1910 and 1911 such a campaign. It was equally said, at the time, that the Liberal government were not fair to our people. A number of our people were deceived, they voted for certain members who were to save our race, and we well know that when they reached this House they did not even save their skin. The Quebec people know where to find their friends. When I say that I am astonished at this campaign, it is but my first impression; no, I am not astonished. Ever since they have come into existence, since that memorable time when, in 1909, that party came to life in broad daylight, they have always taken that attitude towards us. They have never placed any faith in the Liberal party and neither have they ever acknowledged what we have done for our people; they have never ceased criticizing. Whenever we obtain a favour, instead of congratulating us as we deserve, they hasten to point out some other thing upon which, it seems, we have gone wrong; and far from registering the successive stages of our conquests, they only create difficulties and throw obstacles in our way which very often prevent us from obtaining more. I stated, Sir, at the outset that I would remain within the half hour limit; I hope that I have not gone beyond the time stipulated and that I have complied beforehand with the excellent new regulation that your committee will submit to the House in the course of this session.

Were I to sum up my views, I would first state that I am in favour neither of free trade nor protection, but of a tariff committed to no fixed rule or sentiment, or that is inspired by the true interests of the country. And as to our railways, without going deeply into such an important and intricate question, I state that the time has come to study carefully a merger scheme which would lighten the burden of state ownership; providing that this merger scheme be of a nature to free us from our public debt, of part if not from the whole of the obligations which these railways impose on us; and that we can place the new service under the perfect control of a commission which will see to it that the interests of the taxpayers are fully protected.

Mr. A. J. LEWIS ((Swift Current): Mr. Speaker, my only reason for rising to take part in this debate is to deal with the financial situation of Canada as I see it. But before dealing with the financial statement, I should like to make a few remarks with regard to certain questions that have been raised and brought to my notice during the past few days.

A few days ago I read in the newspapers that a certain gentleman from western Canada had suggested a scheme that would relieve us of a great many of our difficulties and possibly solve our financial problems. I read the brief report of his remarks and afterwards received the full account of what he said. I thought at first he had some new scheme to offer that would afford a remedy for our present difficulties, but after going into it very thoroughly, I find there is very little in it that is new; it is simply the old National Policy intensified and carried to the "nth" degree. I have reference, of course, to the Patterson scheme for Canada. I will first synopsize it and then briefly criticize it. It proposes a protective tariff "high enough to guarantee that goods will be made in Canada." Well, there is not very much new about that. Then, protection for the consumer by regulating the price of goods made in Canada. There may be something new in that

if it is possible to accomplish it. Then, limiting the import of goods to the extent of eighty per cent of their present figure. Now, in attempting to carry out this scheme, the first premise would be fairly easy; and I can readily understand that such a premise would appeal to those whose slogan is, "buy goods made in Canada." It would be easy enough if the right party got into power to make the tariff high enough to guarantee that commodities would be made in Canada. The second premise is a little more difficult; the control of commodity prices when you shut off competition is admittedly difficult. It would be possible to place on the statute book a law to provide that the present prices of any commodities protected by the new legislation should not be exceeded, but who is to say whether the price is justified or not, and who is to enforce the law everywhere in Canada? When you attempt any artificial restriction with or interference in commerce, in nine cases out of ten the consumer suffers. To stop eighty per cent of the present imports into Canada could also be arranged if the tariff was high enough, but what would be the result? At present we sell over 200,000,000 bushels of wheat in the European market, Great Britain being our largest buyer; and we also ship bacon, eggs, cattle, butter, fruit, flour, and so forth, in large quantities to those markets. How will these people pay for the commodities we ship to them in such large quantities if they are prevented from selling to us? It is beyond my comprehension. Even if it were possible for them to pay in gold, what about the return cargo? How long would the shipowners continue to carry our cargoes at the present prices—and there are many in this House who think the prices are already too high—if the ships had to come back empty? It could not be done. The scheme is absurd, fantastic; the child of a disordered brain; a scheme the results of which would make the present confusion appear as law and order. If we hope to sell in a foreign market we must reciprocate by buying in that market, otherwise the consumer and the primary producer will ultimately suffer.

I know there is a great demand in Canada for lower taxation. I have spoken to ministers, to bankers, to business men, to boards of trade and to hundreds of farmers in the west, and they are all very anxious that the government should show some signs of tackling the problem and of instituting some scheme that will ultimately bring about a reduction of our national debt. Yet we are forced to the conclusion that we must raise a larger revenue. I have studied the question very carefully and I believe that if the government will get down to real business it can be done. We have to make a start and we should give the people a lead and encourage them. The people of Canada are very much depressed and I know it is difficult to remove that depression. But your difficulties and problems are not solved by putting your hands down to your side; by inactivity; by submission to the powers that be. On the contrary, they can only be solved if we courageously shoulder our burdens and give the people a square deal, and that can only be done by taxing those who enjoy special privileges that are not enjoyed by the masses.

Before passing to the financial question, I would like to congratulate the member for Victoria City (Mr. Tolmie) on his contribution to this debate, and especially his contribution to agriculture. It was full of pregnant suggestions, and there is not a doubt in my mind that if many of them were carried out, the agricultural communities in Canada would be greatly assisted. But we are too often fed up with suggestions. We realize that many of our own men are practical farmers, experienced in every detail of their work and yet under these conditions they are not able to make their farms pay.

The other day there was placed in my hand a paper with reference to Canada's competitors in the various markets of the world. I do not think that our farmers need very much advice on how to farm or as to what system of farming they should cultivate, but what I do believe is this, that the government and the powers that be should assist or at least attempt to provide adequate markets for the great production of our farmers at the present time. Here is one suggestion that I want to make, and it is in regard to butter. Three years ago I was in Moose Jaw at the time of the by-election, and when I returned to the House I made the statement that eggs and butter were selling at a certain price, and a friend of mine diametrically opposite read a certain passage out of the Moose Jaw Times of the same date evidently contradicting what I had said. I was new to the House at the time or he would not have got away with it; he would not get away with it to-day. I want to point out that at that particular time he was quoting from an editorial, and that editorial was copied from an editorial that had appeared somewhere down in Fort William, so it had absolutely no reference whatever to the situation. Let

me read this in regard to Canada's competitors:

> Let us look at the possibilities of the British market, as it is the only steady market in the world and should be catered to by the Canadian people, as is being done by numerous other countries. It might be interesting at this point to know something of the amount of butter imported by the United Kingdom. We find that the figures for the year 1924 are 592,789,232 pounds. Again, let us look where this butter comes from. We find Denmark at the head of the list with exports of 194,226,032 pounds, or 32.8 per cent of the whole import of Britain. Next in volume is New Zealand with 121,706,704 pounds or 20.5 of the whole. Following in line comes Australia with 70,567,616 pounds.

That is Australia, farther away from the British market than we are, but it has 11.9 per cent of the whole import.

> Next in order is Argentine with 60,340,448 pounds, or 10.2 per cent. Next in order the Irish Free State with 51,666,832 pounds or 8.7 of the whole. Next comes the little land of Finland with 15,071,168 pounds, or 2.5 of the whole. Next is Canada with 14,713,888 pounds, or about 2.5 of the whole.

I shall not go further down the list. There are a few other countries with an even lower amount. What I wish to suggest is this: Here is an opportunity for the Department of Agriculture, the pools and the co-operative societies to get together to see if it is not possible that we in western Canada shall have part of this market for our dairy products. In the recess while I was at home, butter was selling at 20 cents a pound. There is very little money in it at that, and all the local dealers could get for it if they sent it to the city of Moose Jaw was 17 cents. New laid eggs were selling at 15 cents per dozen. Now there is very little use in advocating diversified farming in western Canada because the local market is already glutted, and unless we get some co-operative marketing system, and a definite understanding of what is required for the British trade, it is not much use continuing as we are doing. The British trade, as I have already said, offers a steady market, and I believe it is worth our while to cultivate it. From the figures I have read you can readily see that we are only touching the very fringe of it. A dairy commissioner from New Zealand, who was on his way back home from Great Britain via Canada, and whom I met in Central Butte told me that as a result of his year's work the average price in the British market of New Zealand butter was nearly 50 cents or 1s. 11½d. per pound.

I do not know what it will cost to take butter from western Canada to Great Britain. I know it costs 3 cents a pound to get it to Montreal. It may cost another 3 cents to take it overseas, and with commission charges of 4 cents, there would still be a margin left to the western dairy farmer of 40 cents a pound, double the amount that he is getting at the present time. But to capture the British market we shall have to have a uniform standard of quality and also be in a position, I understand, to guarantee a regular supply to that market. It is well worth while, and if our authorities, provincial and federal, and our co-operative societies would get together in an attempt to get a fair share of the trade of the British people it would solve one of our dairying difficulties at the present time.

Attention has already been called to the proposed extension of the stamp tax to be applied to cream cheques. It has been mentioned by many of our western members, and I have received letter after letter from various companies in the west and numerous letters from many of the dairy farmers. In view of the reports made by the western members, I think the Acting Minister of Finance (Mr. Robb), when he makes his reply, should announce to the House that this tax will apply only to cream cheques over $10. As has already been explained, many of these cream cheques are only for $5, and some of them for less. Without stressing any further importance of this infant industry of the west, I would point out that the minister has already many examples of such exemptions on the statute book at the present time. For instance, cheques over a certain sum, over $2,500, are tax free, even though the cheques may run up into the millions. It is true that a tax is paid up to a definite figure, but once that figure is reached the balance is untaxed. Now if the Acting Minister of Finance listened to the pleading of his wealthy friends or the capitalists, because that tax was changed to meet their wishes, surely it is just as reasonable for him to accede to the wishes of the struggling mass of primary producers. Another example is the tax on automobiles. On automobiles under $1,200 the excise tax is 5 per cent, and on cars over that amount, 10 per cent. This is eminently fair, as we feel that those who can afford to buy a better and a dearer car can afford to pay a higher tax. We also exempt from the income tax incomes less than $2,000. Here we have three specific instances of tax relief or total exemption under certain sums, and I feel that the Acting Minister of Finance would be only following these precedents if he eliminated from the proposed new tax all such methods of payment in the case of sums under $10. The Minister of Agriculture (Mr. Motherwell) is

in his seat. He has continuously advocated mixed farming in the west, and hundreds and thousands of farmers have taken his advice seriously only to find that the result is to be used as a further means of taxation. I trust that when the proper time comes the minister will use his influence in this matter in so far as it applies to cheques under $10.

Now I wish to speak in regard to the financial question. The subject of the disapproval or approval of the means of raising taxation and revenue for our various expenditures is before us once again, and it has been the subject of debate in this chamber now for one month. The Acting Minister of Finance, in spite of the depression that seems to be evident amongst our great industries and the decreasing revenue, has made what I would term the best of a bad job. Of course a budget will not satisfy every person no matter who brings it down—whether the Liberals or the Conservatives bring it down, and there possibly would not be much difference between the budget in either case. I do not suppose that even a Progressive budget would satisfy everybody. It would not satisfy the capitalists; but I do believe that if the Progressives brought down a budget it would at least satisfy the common people and the masses in this country. I am quite aware that it is the easiest thing in the world to criticize, but it is difficult very often to put forward a constructive programme. One of the criticisms levelled at the Conservative party during the debate on the Petersen subsidy was the fact, that although they saw its weakness and criticized it, although they saw the need of reduced ocean freight rates, they did not attempt to advance any alternative plan. The question that invariably arises in this connection is: What would the Progressives do if they were in power and were called upon to raise a revenue of from three hundred to four hundred million dollars a year? The task has not been made any easier by the fact that the revenue has been reduced this year by about $52,000,000; and there is the added fact that depression and unemployment are greater than has possibly been the case for some time. Under the circumstances I sympathize with any government. I sympathize with the Acting Minister of Finance in his task; but I also think that the Liberal party has fallen into the error of believing, as suggested by our Conservative friends, that this loss of revenue is due to the fact that a year ago they touched the tariff. If that is all the faith the Liberals have in their own pledges and in their own platform, then I think the sooner we get those people who believe in the tariff, those who believe in protection on one side of the House and those who believe in a tariff for revenue only, on the other side of the House, the better it will be for all concerned.

Now, with respect to the financial condition of Canada and also of the Canadian National Railways it is extremely difficult for the average citizen of Canada to learn just what we spend. Here I want to congratulate the Acting Minister of Finance on putting it over the Canadian people. I may say that during the recess I spoke to three or four assemblies of people in the west, and I never met one man who knew just where we stood financially. I have also listened to many of the speeches in this House, and nearly every hon. member deals with different figures and arrives at different conclusions in regard to our public debt. I know that the Acting Minister of Finance said last year, and this year reiterated the statement, that he had balanced the budget and that there was $35,000,000 to the good. But the question I should like to ask is this: Did we receive more money last year than we expended altogether? The very fact that we had to get loans last year is proof ipso facto that we did not balance the whole budget of the administration and the Canadian National Railways. As regards the current year, and this is the year we are concerned in, the government professes to show a surplus of over a million dollars and that in spite of the fact that the revenue has decreased by $52,000,000. Of course this statement is only approximate, and it includes the sum of $35,000,000 although the average monthly revenue for the previous eleven months was in the neighbourhood of $29,000,000. If the average for the eleven months is taken instead of the $35,000,000 we shall find that we do not have a surplus even over the ordinary expenditure. But it does seem to me a tragedy that the government of this country cannot take the Canadian people into its confidence and reveal to them honestly the financial situation of Canada in a system of bookkeeping that could be understood. The effort of the government seems to be to show a better state of affairs than actually exists. I was speaking to a banker in regard to the situation and he said to me "Of course, Mr. Lewis, neither the finance minister nor the government can fool us people." But is it not wise to keep the truth as to the actual financial state of the country from the people at large? I believe in the old biblical quotation "The truth shall make you free." The system of

bookkeeping adopted by this parliament, in my opinion, would ruin any business concern, destroy public confidence in any bank, and place every farmer on the rocks if persisted in. How then can we expect the Canadian people to have confidence in our country or in our financial system if the government of the day sets them the example of hiding the real state of affairs by a fictitious system of bookkeeping. Now, in order that my people may see the financial condition of Canada and of the Canadian National Railways let me endeavour to illustrate the facts to them by means of a concrete case. For instance, suppose a farmer bought a farm and the capital investment was $12,000. At the end of the year the revenue of the farm pays the running expenses, but not the upkeep, nor the depreciation, nor the interest on the capital investment. We will say that the deficit amounts to $3,000 and that farmer adopts the practice of this government and adds to the capital investment the sum of $3,000 obtained by loan. The capital investment in the farm has now been increased to $15,000, and the difficulty next year of making the farm pay is increased immensely. The following year the farmer finds that he is still able to pay the running expenses and there is a small profit, but the loss in upkeep and interest is even greater. This year it is $5,000. The invested capital will now be $20,000. How long could that state of things go on? It could not go on ad infinitum. The result would be the farmer would become discouraged and throw up the farm. Is this not really the financial position of Canada to-day and especially of the Canadian National Railways? The capitalized investment, as has already been said, is too high, and many hon. members in this House have suggested time and again that we revalue them; at the present valuation they are not able to make a profit, without adding year by year the loans to the capital investment which we have made to the managers to cover the deficit and interest on capital, and in the long run by this method of bookkeeping, we will not only discourage the management, but we will force the people, which is worse, to lose confidence in public ownership and discredit the railways in the eyes of the people. The time must come when we in Canada, on behalf of the people, shall demand from the government that they shall raise sufficient revenue every year to meet not only the administrative expenses, but also the fixed charges and any loss sustained as a result of public ownership. I have prepared a statement and put it in detailed form close together. I have carefully scanned Hansard and I have not found any place where the figures have been put in close proximity so that the average man could really make a comparison. Therefore I have prepared this statement. I have taken the figures of the Acting Finance Minister, the figures from the report of the Canadian National Railways and of the merchant marine, and I wish to place these on Hansard. The figures are as follows:

Expenditures for the year ending 1925	
Expenditures chargeable to consolidated revenue	$319,700,000
Expenditures capital for public works	6,697,000
Railways and canals	11,380,000
Special expenditures	475,000
Discount of loans, flotations, etc.	3,350,000
Consolidated fund transfers	575,000
Merchant Marine as per balance sheet, deficit	8,836,729
Quebec harbour	600,000
Net income deficit on Canadian National railway as per balance sheet	54,860,419
Total expenses for the year 1925	$406,474,028

Revenue for the year ending 1925	
Customs	$108,200,000
Excise duties	39,000,000
Excise taxes	85,000,000
Income tax	56,550,000
Delayed business profit tax	2,400,000
Interest on investments	9,350,000
Post Office	28,100,000
All other sources	15,200,000
Total	$344,000,000
Net deficit over all expenses for the year 1925	$ 62,474,028

Mr. MARLER: Referring to the Canadian National Railways and the Canadian Government Merchant Marine, I would remind my hon. friend that there is a difference in the figures, because the calendar year and the fiscal year are not the same.

Mr. LEWIS: I understand that. I have taken the net deficits and not the loans—just simply the deficit of the railway. The further figures are as follows:

Debt of Dominion, consolidated 1925	$2,431,487,113
Loans from Dominion government to Canadian Northern Railway	560,397,957
Interest accrued 1925	31,271,043
Total	$3,023,156,113

We have also backed the Canadian National Railways with respect to their bonds sold to the public to the extent of:

Bonds 1925	$913,913,082
Interest 1925	38,361,704
Total	$952,274,786

If we add this to the public debt we have an indebtedness of $3,975,540,899, which means a per capita debt of approximately $441.70. Besides all this the Dominion government have made appropriations in cash to the Canadian National Railways amounting to $451,712,484.98. The total assets on which this company is called upon to earn a profit amount to $2,074,255,348 while the Canadian Pacific Railway including its steamship service has assets of only $1,113,756,696.56, or approximately one-half. How can we really expect the management of the Canadian National Railways to make the railways pay under such disadvantage? Even if we adopted the system of my hon. friend who interrupted me a moment ago, an opponent of public ownership, we could hardly expect the officials of the Canadian Pacific Railway to make the amalgamated lines pay, unless we first reduced the capital indebtedness of our own lines; and if this were necessary, if the lines were amalgamated in order to give the officials of the Canadian Pacific Railway a fair chance, and we had to add the amount of the reduction to our consolidated debt, why not do it now and give the present officials and public ownership a fair chance? It seems to me that before we attempt to incorporate the two lines, we should see if a system of co-operation and strict economy would not be to the best advantage of the people and of the companies. The officials are only human; they are fully aware of the difficulties of the Canadian people and they know we can only stand so much taxation. Why then does this parliament not go on record demanding that the officials of the two railways get together, and not only cut out duplication in passenger lines, but duplication in freight service and in building extensions? Failing this, inform them that the government will legislate in the future to merge the two systems into one Canadian National system.

Now in the face of such a statement I do not think the budget address will bring very much hope to the Canadian people, or inspire them with fresh confidence in the country, or even in the present administration. Instead of reducing our capital debt we go on adding to it year by year, which forces the government to increase our taxation. This taxation is already heavy, and unless we attempt in some measure to decrease it we shall drive people out of the country. It is quite true a large amount of our expenditure is fixed charges, but the reduction of expenses for last year is very small indeed. It was $5,100,000 this year and the previous year $7,480,542. Our expenditures are still well over the $300,000,000 mark which means that every man and woman in Canada will have to pay a federal tax of $33 for ordinary revenue of this Dominion. The Acting Minister of Finance states that the situation is one of which Canadians may be proud, and he goes on to explain in part the reduction of revenue by stating that as a result of decreasing the burden of taxation the government will receive $52,837,000 less from the people of Canada.

This is a very nice way of handing a lemon to the Canadian people: in other words, we tell them that the loss of revenue is due to decreased taxation. I think we shall have a very difficult task if we attempt to prove to our people in the west that they have had any reduction in taxation. It is true partially that the reduction of revenue was due to the reduction of the sales tax and also to the reduction in the customs tariff last year; but it is also due to the fact that in many places in Canada a great many people did not have the purchasing power to buy even the necessities of life. That is nearer the truth than the former.

It was estimated by the Minister of Finance last year that as a result of the reduction in the sales tax the loss of revenue on the same amount of business transacted would be $20,000,000. The loss of revenue however has been $35,000,000 and this shows that the loss in the purchasing of goods by the Canadian people must have been in the neighbourhood of $300,000,000 on a basis of a sales tax of 5 per cent. The loss in customs duties has been some $14,000,000, which is almost twice what the minister expected last year as a result of the reduction in the customs tariff. This also means that the condition of the Canadian people was worse, in the purchasing of such commodities, to the extent of $70,000,000. So that the loss of revenue to the department as a result of the reduction last year was $28,000,000, the rest being due to business and financial depression in the country.

I do not blame the government for this. I readily realize that it is due to the conditions that have come as the aftermath of the Great War, and it is due also to the depression that now exists in Europe and in other countries of the world. I say I do not blame the government for it. But I have been sitting on a certain committee lately, and when we ask individuals to explain the reason for this decline in business they tell us one and all that it was due not to the tariff or tariff

changes but to the financial and business depression that prevails throughout the world at the present time. I am sorry therefore that the government have apparently fallen into the error of believing that this depression is due to the reduction in the tariff. I regret that they have lost faith so soon in their own pledges. I would urge the government to overhaul their platform, which is similar to our own, except for the fact that although they have had an opportunity to put it into force they have not done so. If the Liberal party have really lost faith in the policy to which they pledged themselves, I think the Progressive party had better put their policy to the test; it would at least have this virtue. that the people of Canada when called upon to vote the next time would know where we stood.

I want to suggest to the government most seriously a scheme whereby we may reduce our national debt. I think that if we look the situation fairly and squarely in the face as business men, anxious in our own hearts to put this country on a paying basis, we shall find that this can be done. I said a moment ago that the total consolidated debt of the whole Dominion was in the neighbourhood of approximately $4,000,000,000; and in spite of the remarks of my hon. friend opposite, I believe that the Canadian National Railways have at least some assets. We might place them say at $1,500,000,000. On the other hand, as I pointed out just now, we have a loan to the Canadian National Railways, with interest, of $600,000,000. Let us take this $600,000,000 from the railways and put it into our consolidated debt and that will bring the total consolidated debt up to $3,000,000,000. That means that if we are going to pay our ordinary interest on the consolidated debt and make provision for reducing it at the rate of say $50,000,000 a year, we must raise in revenue through taxation between $425,000,000 and $450,000,000 a year. The first duty I would urge upon any government in power would be to see to it that provision was made not only to pay the interest on the debt and to run the government but to introduce a system that would reduce the debt. If we started some system whereby we could devote $50,000,000 a year towards the reduction of the debt, in sixty years we should get it down to zero. It is a large sum, but it must be reduced. It will take Great Britain sixty years to get rid of her debt, and some of the European countries even longer; and I do not see why a young nation like Canada, with immense natural and great potentialities, should be unduly discouraged. It is a just debt and I feel sure that the people of Canada, if taxation is applied with equity and justice, will be willing to discharge it. To carry out such a system looking to the reduction of our national debt to the zero point in sixty years, under the present administration, with a deficit in connection with the Canadian National Railways and discharged by a population of 9,000,000, it would mean that every man, woman and child would have to pay $50 in federal taxation. But if we were to increase the population to 10,000,000 we should automatically reduce that per capita contribution to $45; while if we increased the population to 15,000,000 in the next ten years—and I see no earthly reason at all why this could not be done under a sane business administration and a sound immigration policy—we should reduce the amount still further to $30 a head. And with the increased immigration, with the increased trade, with the increased commerce the railways themselves would begin to pay; and there is no doubt in my mind that there would be a reduction in the deficit to the extent of $5 a head. If this system were carried out, in ten years we should be on Easy street, and we should have cut taxation in half.

10 p.m.

Mr. GRAHAM: I take it that we are to deduce from all this that the hon. member's idea is that the solution of our trouble depends mostly upon an increase in immigration.

Mr. LEWIS: Not particularly in immigration; it depends upon the raising of our own people too. I think this is an object that is worthy of due consideration. I do not believe that this country can stand much longer any sort of political gerrymandering or angling for patronage or power. With such an ideal as I have suggested we could be on Easy street in a few years. As we have all read in history, Nero fiddled while Rome burned; but that could not be much worse than the spectacle presented here of war scandals being resuscitated and dirty linen washed while the country is fast going into bankruptcy. The moment we put into force such a system we shall make progress. And I have no doubt at all that if the Progressives were returned to power such a system would be carried out; I am sure it would have been put into practice during the past four years, and it would result in elevating the present depressed morale of the Canadian people to a normal, sound, sane, optimism, which is the right-

ful heritage of a northern energetic, virile people On the other hand, to go on as we are at present would simply breed unrest, dissatisfaction, misery and disunion. Indeed it is already here. It is all very well for people to try to close their ears against it. Last year I addressed dozens and dozens of meetings in the west, meetings composed of business men, members of boards of trade and the general public, and at only one meeting was I not asked what the result would be in the west if we had secession. I am not advocating secession, I am simply endeavouring to show what our people are thinking. They are thinking seriously of these problems, and they are wondering whether secession would not be one form of relief. I do not think it would. I stand for unity, but I also stand for a sane, business administration.

Mr. JACOBS: Does the hon. gentleman believe that the Progressives could give us such an administration?

Mr. LEWIS: I think it would be just as sane as the immigration policy advocated by my hon. friend a few days ago.

Mr. JACOBS: I had in mind the success of the Progressives in Ontario; that is why I asked my friend.

Mr. FORKE: That is too small for Montreal.

Mr. LEWIS: I was not going to say anything about immigration, but since my hon. friend has mentioned it, I may tell him that I do not agree with some of the statements he made regarding immigrants from the British Isles. I have been in western Canada twenty-three years, and during that time I have had the privilege of visiting mission fields eighty and ninety miles away from the railways, and there I have come in contact with many British settlers. I want to say that those settlers are just as good as any that come to this country; and when we have had to help any in a charitable way, it was not the British settlers but those of other nationalities. I do not altogether stand for the open door policy, although I should like to see more people come to Canada. I remember my hon. friend said that Jacob and his sons went down to Egypt and they made a success of it; but it is just as well to remember the kind of cattle scheme that Jacob inaugurated; it is also well to remember that they even had to sell one of the brothers to get the almighty dollar; and further it is well to remember that when one of them was in slavery he managed to get a corner on wheat. So for those reasons we need to be careful how we let these people in.

[Mr. Lewis.]

Mr. JACOBS: The Progressives could not teach them anything on that, could they?

Mr. LEWIS: Perhaps not. Now, the question before us is: How are we going to raise the $450,000,000 required to pay our way, in view of the fact that everyone is demanding lower taxation? It is true that there would be a considerable saving on the Canadian National Railways if the amalgamation proposed by some hon. members were to be put into effect. I do not agree with the hon. member for North Waterloo (Mr. Euler), nor do I think many others will agree with him, that we could save $100,000,000 a year by such an amalgamation, but I do believe that a saving of say, $25,000,000 could be effected. That would leave us at least $425,000,000 to raise in order to pay our way. I am not going to criticize the government unduly for extravagance, although I do think that the Minister of Agriculture, mind you, has added just a little too many men to the civil service.

Mr. MOTHERWELL: I suppose the hon. member ought to know best.

Mr. LEWIS: Perhaps. I notice that about every two or three days we receive one of these papers, and recently I noticed that five positions were advertised, four being in the Department of Agriculture. I am not saying that possibly these men are not needed, but I think the minister has been a little extravagant in filling positions in his department during the last four years. I also think that when everybody is demanding economy our cabinet ministers should be satisfied with less expensive cars to run around in, driven by liveried chauffeurs, and so on. This may be all very well in a prosperous country, but when there is such urgent need for economy, let us at least cut out some of these expensive frills.

Mr. MOTHERWELL: Might I inform my hon. friend that ever since I came to Ottawa I have been using a second hand Tory car?

Mr. LEWIS: I am afraid that my hon. friend is an exception to the general rule. Even with the strictest economy we cannot very well get along with the amount I have mentioned. The difficulty of the Acting Minister of Finance is increased by the loss of revenue. However, I am going to suggest a few ways and means whereby I think he could raise $50,000,000 additional revenue, and the taxes necessary for this purpose would have at least this virtue,—that they would fall upon those who are able to pay. Now, there are certain taxes which might be de-

scribed as optional, and I am going to make a comparison between these and other taxes which are inescapable. For instance, if a man finds a binder is necessary to run his farm, he has no option, he must buy that binder and pay the tariff duty assessed against it. But if the government were to place a 10 per cent tax on tickets for admission to professional hockey or professional baseball games, the man who does not want to pay the tax need not buy a ticket; therefore the tax is optional. You will find in Ottawa, Toronto, Montreal, Regina, Saskatoon and other Canadian cities thousands of people who will pay prices ranging from one dollar to two dollars for tickets of admission to professional hockey and professional baseball games. Now, if they are so fond of this kind of professional sport, there is no reason why the government should not take a certain amount of that money; indeed I think they ought to. It is just as logical, just as sane as placing a tax upon woollens, boots and shoes and other things that a man who is raising a family must buy. Then I see no earthly reason why the government do not get after the bachelors. When there is drastic need of revenue, you have to take drastic means of raising it.

An hon. MEMBER: Do you know how many there are?

Mr. LEWIS: There are a great many. I would tax all bachelors over twenty-five years of age.

An hon. MEMBER: What about old maids?

Mr. LEWIS: Never mind the old maids. A man, no matter how patriotic he is in raising a family, is penalized, while the bachelor to a large extent escapes taxation. I think the right hon. Prime Minister is setting a very bad example to the young men of this country. I read a speech delivered by him at a dinner that he attended in the Old Land, in the course of which he spoke of his illustrious grandfather, the "Little Rebel," the man who stands so high in Canadian history. If there is not very soon a change in the right hon. gentleman's condition, he will never have any grandchildren to boast of their illustrious grandfather! Now, to raise a family in this land costs thousands of dollars, and I consider that the husband and wife who are raising a family to-day are our greatest patriots.

Some hon. MEMBERS: Hear, hear.

Mr. LEWIS: And I consider that the men who shirk that responsibility ought to be taxed so that they may be compelled to at least pay their share of the cost of government. I have not figured out what would be a fair rate of taxation, but it should be graduated, beginning at age twenty-five and increasing for every year thereafter that the bachelor shirks his responsibilities. I am going to suggest seriously ways and means of raising the revenue.

One source of revenue that the minister has overlooked is the automobile industry, one of the most flourishing industries in Canada. I do not agree with the hon. member for Macleod (Mr. Coote) that the tariff should be lowered, but it is my opinion that the excise tax should be increased upon Canadian manufactured cars. The hon. member for Macleod, and also the Acting Minister of Finance himself, spoke of the number of cars owned by Canadian people and pointed out that the price paid for these cars was at least 35 to 40 per cent higher than that paid in the United States. The value of the cars sold in Canada last year, the product of Canadian manufacturers, was $63,541,000, which, plus the tariff, would bring the selling price to the consumer up to $100,000,000. The imported cars were valued at $11,000,000 and upward, but these would not be included in this new source of revenue. The tariff on these cars was shown to be about 35 per cent, so that the manufacturer in Canada has protection to the extent of one-third of the price of the cars compared with the manufacturer in the United States. The excise tax is from 5 to 10 per cent—5 per cent on cars up to $1,200, and 10 per cent on cars in excess of that value—still giving a protection to the Canadian manufacturer of from 25 to 30 per cent. The sales tax is the same on both United States and Canadian cars. If the minister would raise the excise tax on Canadian manufactured cars from 5 to 10 per cent and from 10 to 20 per cent, allowing the tariff to remain as it is, the cars would still sell at the same price to the consumer, because if the manufacturer raised his price the cars that were bought would be obtained from the United States. Thus the home manufacturer would still be protected, as also would the workmen—of whom we talk so much but for whom we do so little in this parliament—and there would be paid into the public treasury a sum of from $12,000,000 to $15,000,000.

Mr. PUTNAM: That is on the assumption that just as many cars would be sold?

Mr. LEWIS: Yes, I am not assuming that there is to be a decrease in the number of cars bought.

Mr. PUTNAM: If you raise the price you will decrease the number purchased.

Mr. LEWIS: I am not raising the price at all; I am suggesting that a larger excise tax be imposed. This would still give the Canadian manufacturer the benefit of 20 to 25 per cent protection over all other rivals and I feel sure that no injustice would be done to Canadian industries. The hon. member for Macleod showed quite clearly the other evening that the Canadian manufacturers could stand this extra tax, because they are exporting to all civilized countries in the world, with the possible exception of the United States.

There is another source of revenue that the minister might with a good deal of profit investigate. I have reference to the excise tax on cigars. I mentioned this fact to the minister in my speech on the budget in 1922, when the value of the cigars imported was in the neighbourhood of $14,000,000, and this figure has not since been reduced. I showed at that time that the increase of the excise tax on cigarettes was out of all proportion to the increase on cigars, and that while cigarettes were generally smoked by the working people the expensive cigars were used by those who could well afford to pay. The tax on cigarettes was raised from 75 to 90 per cent, while on cigars it remained as low as 5 per cent. I want that to sink in. This is hardly in accordance with the professions of the Liberal party that they were in favour of the principle of placing the taxes on those who could afford to pay. Later the minister lowered very slightly the excise tax on cigarettes, but the tax on cigars remained the same—65 to 70 per cent lower than on cigarettes. If the duty on cigars was made the same as on cigarettes—and for the life of me I cannot see why there should be any discrimination—it would bring in an additional revenue of over $6,000,000 on the basis of the present consumption. Here is a source of revenue that well could be utilized, without any resort to a nuisance tax such as the tax on cream cheques which is now proposed and which affects every farmer in western Canada; for in the final analysis the consumer and the farmer are always called upon to pay.

Now, I want to say something about the French treaty. As a result of the French treaty, last year we imported into this country nearly $15,000,000 worth of brandies, perfumes, and other luxuries of the kind, these commodities coming in under a preference provided by the treaty. It is a pity that after they come here the government cannot place an excise tax upon them; for certainly they are luxuries, and those who use them, those who can afford to buy such things, can pay a little extra, especially when the nation is in such great need of funds.

Another thing that the minister has overlooked is the luxury tax. I know this is a very delicate subject, but when people satisfy their expensive tastes; when they delight in luxury, it seems to me they should be willing to make some contribution to a much depleted federal treasury. I want to say this for the city of Ottawa: I have been in many cities in Canada and I believe the ladies of Ottawa are the best dressed of those of any other city in the Dominion. But if they can afford to buy such expensive dresses, if they can afford to buy the expensive fur coats that we see galore on our streets, then it is fair that they should pay something into the public exchequer. In other words, we should be willing to pay a luxury tax. I do not wonder that some of our young people do not wish to stay on the farms. I was speaking to a man the other night and he was saying that on the farm we ought to grow everything, ought to card our wool, make dresses, and so on. Yet when you go into the city you see most of the young girls with shoes that cost as much as eleven dollars, but which are not worth two; you see extravagance on every hand—and then you wonder why our young people are not remaining on the farms. I submit that that is a source of revenue that the government should look into. It would bring in millions of dollars, and it is much fairer to tax the people who can buy these luxuries than it is to tax those who can hardly make ends meet.

Another prolific source of revenue that has been overlooked in this country is the radio industry, which has become a very extensive industry indeed. I do not wish to be misunderstood: I am not desirous of raising the prices to the radio fans, because the prices they pay are already too high. But the profits that are made on radio equipment are out of all proportion to those made on other manufactured goods. The bill that was brought in here the other night made the situation quite clear so far as certain tubes used in radio sets were concerned. These tubes have been sold at $6; an hon. member behind me says that they have sold as high as $9. I have bought them at $6; to-day I believe they sell at $4. In the committee, when we were hearing a discussion of these radio matters, a gentleman from the United States who had gone into the question said that it cost just sixty-seven cents to produce these tubes, yet

they have been sold to the Canadian people at as high as $9. Here is a splendid source of revenue. It was also stated in the committee that we have over 400,000 receiving sets, and a great many of these are not paying a license fee. It was estimated that the Canadian public consumed over one million of these tubes, and in the near future, as radio is extended to every part of the country, the number will go far beyond that. Why, then, not place a tax upon these things if they are going to sell them to the Canadian consumer at four, five and six dollars? I think it is quite time the government took their fair share of the profits on these sales in order to help pay our national debt.

Under the same head of luxuries would come, I think, jewellery. There is a great deal of expensive jewellery worn in this country, and you get a glimpse of it when you come to this parliament. There is no reason in the wide world why, if people can afford to buy these things, they cannot afford to pay a part of our national debt. These are the people the government should get after, and let the workingman alone who has to buy leather mitts, overalls, woollens, and boots and shoes for his family. At the present time the average man and woman cannot afford to raise a family, and we have to resort to a policy of immigration to fill up the vacant spaces which under healthy and normal conditions should be filled with our own children.

As to economy, I know that subject is taboo, but it seems to me that our war debt and our war obligations are decreasing year by year, the administrative expenses are only very slightly less. It is a very difficult thing to economize in a country like Canada, where the administration of the government must extend from the 49th parallel to the Arctic sea and from the Atlantic to the Pacific. Nevertheless, our position is such to-day that trenchant economy is absolutely necessary, and if we are going to pay our debts, we must have this economy and raise the money. So far, I say quite seriously and frankly, no real attempt has been made to pay off our national indebtedness. We heard from the Prime Minister before the last election that the late administration, in spite of all the war profits that had been made, had not paid off one cent of the national debt. That may be true or otherwise, according to the manner of analysing the book-keeping, but it is all very well to criticize the old party for what should have been done eight or nine or ten years ago and was not done. I say that we in this parliament, and I am taking my own responsibility in the matter, have been here also for four years, and we have received hundreds of thousands of dollars from Great Britain in regard to our war debt. We have also collected millions and millions of dollars of special war revenue in this country, and so far we have not paid off one cent. Is it not time that we should begin to sweep our own house and accept our own responsibility, and give the people of Canada a lead?

I would urge the government to get down to business and take stock of our natural resources and of the possible sources of revenue that I have indicated, sources that would be less burdensome to the masses, and let the government make a serious attempt not only to balance our ordinary expenditures but to pay the whole yearly expenses of the government. We cannot go on ad infinitum increasing our debt without seriously affecting our standing in the financial world. The people are anxiously awaiting signs of statesmanship in this respect from this parliament, not only from the government but from all sides. They are demanding that the expenses shall be kept within the revenue of the government. They are asking that we at least seriously grapple with the problem, instead of weighing in the balance how many votes will this policy gain or lose. If the government will come out definitely and with faith in their pledges and tell us what they really intend to do, I am willing to give them my serious support and make the very best contribution I can in the matter.

Before these budget speeches are concluded, I would like to hear the Prime Minister make a speech on the budget. I would like to hear him definitely state what he is going to do in regard to the Grain Act this year, which is so important to our western people. I would like him to state definitely what the policy of the government will be in regard to the Crowsnest pass agreement. I would like him to say definitely what he is going to do in regard to rural credits, and in regard to soldier settlement and re-establishment. I would also like him to state definitely what he is going to do in regard to the Hudson Bay railway. If he comes down with a sane, healthy, business programme, I am willing to give him my very best support.

Mr. DAVID SPENCE (Parkdale): Mr. Speaker, I seldom worry the House, and if I worry it for a little while to-night I hope hon. members will be indulgent. I hesitate to take up the time of the House at all, after so many speeches have been made by

so many hon. members on all sides. My own view is that a vote should have been taken on this question two weeks ago, yet we are still going on in this lackadaisical way without the government apparently exercising any control. I see members getting up and seeing how many pages of Hansard they can fill, simply playing to the gallery. The first thing will happen it will be impossible for any man who has any business to attend to to come to this House at all. As I said last year, you should apply economy to yourself. It is irritating to have to sit and listen to the stuff you hear in the House. There are only two classes of people who should be in this House—those who have made their pile and need no more, and those who have no visible means of support, but I do not know that then it would be better than it is.

I must confess that I had a speech ready at one time, but now, Mr. Speaker, it seems to have all gone. One member has stolen a piece, another has stolen a piece, and I must now try and do the best I can with what is left.

I had intended to discuss the railway situation, which is the most difficult problem this country has to contend with to-day, but my good friend for George Etienne Cartier (Mr. Jacobs) expressed my views the other night very well. I must compliment him on the splendid address he gave us on the railway affairs of this country. While I do not agree with him in regard to the compromise he suggested, I feel that if he and I and a few more would get together and make a few compromises, we might solve the railway situation. I do not mean myself particularly, but members of the House, because we are not very far apart after all on this question. Something has got to be done with the railways, but I will not touch on that further, as I do not want to repeat what hon. members have said. I will try and confine my remarks to the administration of this government and to business generally.

We all regret the absence of the right hon. Minister of Finance (Mr. Fielding). I feel that industry and commerce in this country would not have been in the state of chaos it is in to-day had the Minister of Finance been in his own good health, because I think he would have followed a policy of stability. However, the government are to be congratulated in having an Acting Minister of Finance (Mr. Robb) so capable of preparing a budget to suit the government's purpose. It is apparently satisfactory to them all, and may I say that it took some manipulation on the part of the Acting Minister of Finance to show surpluses where deficits exist.

I must confess, Mr. Speaker, that I am not a politician. My life has been a busy one, trying to eke out a living in the business world. May I say that at no time in the last thirty years has it been so difficult to carry on a business as it has been in the last two years, regardless of anything to the contrary that may be said by hon. members opposite. It is to be regretted that such a diversity of opinion should exist among hon. gentlemen on this side and hon. gentlemen opposite in regard to the actual financial situation of the country. Is it not possible that the government in reality see eye to eye with hon. gentlemen on this side and is really aware of the true state of affairs? Let me say that a proper system of accounting should be adopted in preparing the financial statement so as to make it impossible for any political party to deceive the Canadian people by not presenting the finances of the country in the proper light. Any auditor of repute who might be called in by any branch of the government service should prepare a reliable statement which would disclose the truth in regard to the financial situation. The country should not be deceived at any time, but I believe that deception is being practised in regard to this matter. I am not a financial critic. I am not qualified like my hon. friend the member for St. Lawrence-St. George (Mr. Marler) to speak with authority on financial matters. I have done some financing in my time but nothing bearing any resemblance to what is done here. Very often I had to do my financing without any resources behind me; here you have the whole country behind you so you cannot be short of cash.

Why did the government bring down its budget before the end of the present fiscal year? Was it because it did not want to show that a deficit really existed, and what the amount of that deficit was? A statement was issued by the Department of Finance on February 28 for the eleven months up to that time which showed a decrease in revenue of $54,970,000 as compared with the same period of last year. That was a creditable showing, I must say—a decrease in the revenue of this country in that period of time of over $54,000,000. For the month of February alone the decrease amounted to $4,760,000, a total decrease for the year of $60,000,000. Then hon. gentlemen opposite wonder why the country is not prosperous and why business is not good.

This falling off in revenue would not be a real calamity if there was a corresponding reduction in the expenditure, but there actually was an increase in the public outlay for the same eleven months of $1,558,197, so hon. gentlemen can understand that the country is getting no better fast. The government endeavoured to lead the public to believe that the advance to the Canadian National Railways amounted to $56,000,000, but some time later a supplementary estimate came down for $7,500,000, making the total advance to the national system $63,500,000. That is what I call handing it out easy by piecemeal to the public. No wonder the government is ashamed of the financial statement in connection with the National Railways when it has information with respect to it handed out in that way.

The Conservative party to-day is to be congratulated on its tariff policy.

Some hon. MEMBERS: Hear, hear.

Mr. SPENCE: "Hear, hear" is right. Since the Liberals have started to tinker with the tariff they have ruined Canadian industries and caused the depression which exists to-day. The government's action with respect to the tariff has been the cause of the great depression which prevails in this country at the present time.

An hon. MEMBER: Unemployment.

Mr. SPENCE: Naturally that follows from the injury to our industries brought about by the tariff changes. The government has now called a halt which proves conclusively that the Conservative policy was correct. The changes in the tariff which the Liberals made in 1923 when the duty was lowered on textiles killed the textile industry in this country, and drove the textile workers from Canada to develop the industry in other lands. In 1924, the duties were lowered on farm implements.

Mr. ARCHAMBAULT: Is it not a fact that the textile industry has been suffering in every country in the world—

Mr. SPENCE: I do not know about that; I am only discussing conditions in Canada—

Mr. ARCHAMBAULT:—particularly in England and in the United States?

Mr. SPENCE: —and my conclusion is that they are very much worse here than they are in any other country. I hope to be able to prove that after a while. This government also lowered the duty on farm implements, thus depriving the country of much needed revenue. When the government saw it had killed the implement business it tried to prop that industry up again by taking off the sales tax, and removing the duty on raw materials entering Canada. That probably made conditions better for the Massey Harris Company and the International Harvester Company, but the country was deprived of the revenue which it should have got, and we have been making good the loss by personal taxes, or something of that kind. The injury to Canadian industries from the tariff changes resulted in the killing of a number of subsidiary companies; I know of one such company in Owen Sound which did a business of making bolts and nuts for the Massey Harris Company and the International Harvester Company. I know of another concern in Welland that had a contract for $50,000 worth of malleable iron with the International Harvester Company, and immediately the duty was taken off agricultural implements that order was cancelled. The Conservative party are now advocating a revision of the tariff on account of the industrial upheaval which resulted from the Great war. Other countries have become selfish and are taking steps through tariffs to protect themselves. We must follow their example if we wish to hold our own. Every other country has a higher tariff to-day than it had before the war. Yet Canada is trying to reduce its tariff. We cannot sit idly by and ask our Canadian people to live on starvation wages or permit them to leave Canada in order to seek a living in some other land.

We have heard talk from hon. gentlemen opposite about the elimination of combines, but we have not seen any action taken yet in that direction. Hours at a time in this House have been occupied in discussing the Petersen contract. I have some knowledge of the transportation business and I have come to the conclusion that it would be impossible to obtain lower ocean freight rates by the method adopted by the present government. It is merely a sop to the farmers of Canada, particularly to the farmers of the west, to make them believe the government is going to reduce the freight rates on their cattle and their wheat. There is also an attempt to lead the public at large into the belief that the Conservative party are behind a combine and have no consideration for the Canadian farmer. This action on the part of the government is deception pure and simple. Let me say that the Conservative party does not hope to gain any advantage by misleading any element in this country. Our aim is the initiation of sane and sound policies that will be in the interest of Canada and its people. Our policy has always been one of progressiveness.

A year or two ago this government undertook to regulate the question of lake and other freight, and we all know the mess it got into. The only result of the government's action was to drive vessels from the lakes and it cost the farmers of the prairie provinces some $4,000,000. Eventually the government had to coax these vessels back into the trade again. Now the government is talking of controlling rates on the Atlantic but its policy is nothing but a delusion and a snare in the hope of fooling the farmers again. Every hon. member here believes in low freight rates and would support any honest and tangible policy that would bring that result about. This parliament was not asked to vote for control of ocean rates; it was asked to vote a grant of $13,000,000 to the Petersen company without any hope of controlling ocean rates. We have a merchant marine of our own, and if we could at all control ocean freight rates it ought to be through that merchant marine. Why pay a subsidy to another steamship company to get lower rates on cattle? If you have any idea of helping the producer or exporter of cattle, why not pay him five or ten dollars a head, and then you would be sure that those you intended to help would receive the benefit themselves. A statement was made by the Prime Minister that the ocean rates had killed industry. That is absolutely wrong. If rates on the ocean are high, they are still too high on the land. The railways themselves have done a great deal to injure the country and to kill business. They did not give a proper service and they did not give any attention to the country's need, particularly in the express business. I will give the House an instance of what the people of Toronto were up against a few years ago when the men who operated the railways were trying to run them. Between Toronto and Hamilton there is a fine fruit growing country, and thousands of crates of strawberries were shipped from every station along the line. There is a large business in that commodity between Toronto, Hamilton and St. Catharines. The train came down at eleven o'clock each day and picked up from 800 to 1,000 crates of strawberries. Some days when the conductor was in a bad humour, when there would be a large number of crates lying on the platform, on a hot day, he would say, "Go on, let them lie there". Possibly the engineer would be in the same kind of humour and would say the same thing. We appealed to the railways, and they replied that the passengers were always kicking about the service. This course drove the business from the hands of the railways to the motor trucks. Hundreds of trucks of berries would be carried in that way between Toronto, Hamilton and St. Catharines and other places. It is no wonder the business of the railways suffered. However, I do not blame it so much on the people who had the money in the railways as on the people who were running the railways. In any event the rates at the present time cannot be compared with the rates some years ago, particularly before the war. The hon. member for Cariboo (Mr. McBride) gave a splendid illustration of how impossible it would be to have freight rates on the ocean as low as they used to be. He told the House particularly of the cost of the boats to begin with, and of the wages paid to the captain, the steward, and first and second mates, all the way down the line, each one drawing twice or three times as much as he was receiving before the war. That is the reason why it would be impossible to get freight rates down to the pre-war figure. No one would expect the men of the merchant marine to work for such a small pittance as they used to get, while men on the land received 100 to 150 per cent more than they received previously. I think the men of the merchant marine deserve the best of treatment, on account of their conduct during the war. Their loyalty to Great Britain should never be forgotten. I have had great respect for these men ever since the war, and I hope each and every one of us will remember, when we are paying our freight rates, that we should not begrudge the men of the merchant marine a reasonable and fair salary.

To my mind the subsidizing of a fleet of boats similar to the Petersen steamers would never have any effect on the Atlantic. We might just as well set two countries at war, one with a dreadnaught and the other with a row boat. You know which would come out on top. If the United States Shipping Board with 300 vessels in operation and 900 in reserve could not offset a combine on the Atlantic what could ten boats the size of the Petersen fleet be expected to do?

The present government are absolutely opposed to the Canadian Government Merchant Marine. They are prejudiced against it, and they are not getting the best results. When I first heard the merchant marine ridiculed by hon. gentlemen on the government side, I advocated, as I do now, the inauguration of a service with the merchant marine between Canada and Mediterranean ports. I pointed out to them the commodities we could get from those ports, the number of boats which could be kept running and the amount of tonnage. I also advocated putting on the merch-

ant marine between the West Indies, which is a British possession, and Canada and building up a trade between the two countries. But nothing has been done. If we had established a proper and regular service between Mediterranean ports and the West Indies to-day we would be carrying thousands of tons of freight to the Canadian National Railways and keeping the merchant marine going at the same time. But there would be no use in doing that unless we had proper refrigerating service and a heated dock at either St. John or Halifax. There is no necessity for a heated dock at Montreal, because we cannot get up there in the winter-time, but it would be absolutely necessary to build a heated dock at St. John or Halifax, and in that way we would develop our country and develop the British possessions, and good results would be obtained. I understand that it may be the intention to withdraw the Canadian Government Merchant Marine boats from the West Indies. I may say that that would be a terrible disaster for the West Indies, and we would be putting the business in the hands of the United Fruit Company of Boston, which is the greatest known monopoly in the world. The West Indies could never succeed if the business got in the hands of the United Fruit Company. We should develop a large business with the West Indies. We can create a large market for wheat, and we could extend that market to all classes of Canadian manufacture. I understand there is a great demand there for shoes and other commodities which we produce. May I say that the West Indies must have our support, or it will be lost to us entirely. The Americans are keeping their eyes on it very closely, and something might happen in that regard. It is up to the government to make a statement as to a permanent policy regarding steamship service, equipment, refrigeration to Canadian ports and heated docks at St. John or Halifax. We should be able to dispose of a million dollars worth of produce in the West Indies. All the people of Canada are thinking along the lines which I am now proposing. My hon. friend from East York (Mr. Harris) received a letter, I think from a gentleman in North Bay, and it deals with the question of the government giving steamship service to the West Indies. This is an important question and I wish the government would give attention to it. The letter says:

> So that they could obtain remunerative prices, and many thousands of acres will again be brought back to a productive state as a result if refrigeration is provided. Pineapples, bananas, grapefruit, oranges, lemons, and so forth. Cocoanuts and every kind of tropical fruit can be produced.

If all that he suggests can be produced in the West Indies, and we have any interest in that country, let us do all we can to give a proper service between our own ports and the West Indies.

The letter continues:

> I should say that if the government agrees to put on a refrigerator service (and I cannot imagine such madness as that they will refuse to do this), their fruit buying agencies in the colonies must be arranged at once, so as to put an end to the present monopoly.

That is a letter that came from a gentleman in North Bay who I presume is interested in the West Indies. I happened to get it this morning from my hon. friend from East York. From the information that is available, money is now being lost under present rates. The hon. member for North Toronto (Mr. Church) the other night said that the tramp steamers were a very important factor in the reduction of the cost of ocean transportation. He is right; but the difficulty with the tramp steamer is that she travels only when she can get a cargo and therefore does not give the service; and what the people want is regular service. This the tramp steamers cannot provide. There is not nearly so much stuff shipped to England, Germany and other European countries to-day as was sent over before the war. The people in the British Isles, in Germany, France and other European countries have not the money to purchase to the same extent as they did before, and what money they have is depreciated. I remember that before the war everything that was produced in this country in the line of fruits would be shipped to France, Germany and England, particularly apples, evaporated or dried; and even the cores of the apples were baled and shipped to Germany, coming back here in the shape of wine, or brandy or champagne or something of that kind. To-day our producers are suffering because of the lack of demand for the poorer class of apples which we could dispose of under normal conditions in the European countries. As a result, business on the Atlantic has suffered and that is why the rates are a little higher than they should be.

Generally speaking, a low tariff is worthless. The home market is the best for all our producers. My hon. friends to my left do not think so, but I will not deal with that point just now. Our need in this country is an increased home consumption. Our population is being depleted in the industrial centres; our workers are leaving for lack of employment; and even people with incomes large enough to live on comfortably in normal times are being forced to get out, because our taxes are so numerous and heavy. There

can be no question that the home market is decidedly the best for our truck farmers and fruit growers. Take the tract of land for about 100 miles between Toronto and Niagara Falls, and you will find that the people there grow nothing but fruit and garden truck. Now, if unemployment gets any worse and our people continue to leave the country, and if such cities

11 p.m.

as Hamilton and Toronto are drained of their working population, then there will be no hope for the truck farmer and the fruit grower. Their market is entirely in the city at home, because they have no chance of getting into the American market. The Americans produce all their own fruit and vegetables, so that there is no other market for the Canadian truck farmer and fruit grower than the market in this country. This is unquestionably true of Ontario, and it applies also to the good old province of Quebec. There may have been a time when there were large farmers in Quebec, but the farms in that province have been cut up so that every farmer there operates now on a small scale. And as in the case of the Toronto farmer, the truck farmer and fruit grower of the province of Quebec must look to the industrial centres to find an outlet for his product. If therefore our population continues to drift to the United States these farmers will be wiped out. We all know that the United States is a great producing country, and this can readily be understood when we consider that the climatic conditions there are so very much more favourable to truck farming and fruit growing than they are in this or any other country. In Florida, Louisiana, Texas, Tennessee and North and South Carolina they get from two to three crops a year under these ideal conditions while our farmers in this country spend all their time trying to grow one crop.

Now, as a result of the low prices that are obtained for fruit and garden truck in this country the prices of our farms are going down; the value of farm lands is being depreciated. Men who have acquired farms in the last five or six years are finding it difficult to eke out a living in Ontario in those places surrounding Toronto, Hamilton and other cities. I know several of them who are going through this experience. And the same thing is true of the farms adjacent to Montreal. These farmers are finding it exceedingly difficult to meet the interest on the money they agreed to pay for their farms, and they are not getting the protection they deserve. I do not know whether a higher tariff on vegetables coming into this country this spring would bring about the results we should like to attain, but I might give you an illustration of the condition that exists. Even this year this country was filled with new carrots around the month of December, something that never happened before. We got carload after carload of new carrots in bushel baskets from the state of California in the month of December, and as a result of that new supply coming in the farmers around Toronto lost on nearly the whole of their crop. The reason is not far to seek; so long as the public can get the new stuff they will not buy any of the old vegetables. If we had had a tariff commission that knew something about the business conditions of the country they would have advised the government to put on an embargo for a couple of months to enable the Canadian producers to dispose of their output. Millions of dollars' worth of produce from the United States is being sold to-day on the streets of Montreal and Toronto, although the men who buy it do not make a dollar. The man who buys this stuff is in competition with the other fellow and so long as his competitor buys it he feels that he must do likewise. And while the streets of our cities are loaded with the American produce our own garden truck is rotting. The home market to-day is in a deplorable condition. Two months ago new potatoes sold at $12 a barrel, No. 2 American, while Ontario first-class was selling at from 70 to 75 cents a bag. Yet there was a demand for the new potatoes. A barrel of that old stuff would be worth $1.50 while a barrel of the new potatoes would fetch $12. At the present time a barrel of the new potatoes sells for $6 and the old potatoes around $1 a barrel; yet the people demand the new potatoes. And so long as we have people with champagne tastes this will be the case. We need a tariff commission to advise the government as to what should be done in circumstances of this kind.

Some of my hon. friends to my left and some opposite are changing their minds with regard to the tariff. Some of them are advocating a duty on certain commodities produced in their own ridings. I do not want to mention any names, but I have heard gentlemen this year advocating a tariff who denounced protection last year. We are glad they are coming our way, because the policy of the Liberal party has been tried and found wanting and I see no reason why hon. gentlemen to my left and protectionists in front of me should not support the policy of the Conservative party, a policy devised to protect the interests of all.

Let me say that there will be a demand yet for protection on the prairies, as I told my hon. friends a year or two ago. I congratulated them on the development of their industries in Alberta and in Manitoba. As soon as they get away from mining the country, growing nothing but wheat, and go in for mixed farming they will be making the same howl for protection as they have made here for free trade during the last two or three years, and then they will give the Conservative party the credit which is its due.

The business administration of this government has not been altogether up to date. I doubt very much if any government ever gives a real, business administration, but this is about the worst I have yet seen. They have been bargaining and making treaties. and in the treaty arranged with France I do not think our negotiators got the best of the bargain, and I am satisfied that the government are disappointed with the result. What followed the ratification of the treaty? We bought $5,000,000 worth more from France and we sold them $3,000,000 worth less. I cannot see what benefit that was to Canada. The imports included wines, silks, satins, and so on, on which we should have collected a revenue. These are luxuries, and those who can afford to buy them can afford to pay duty on them. After all, that is what is ruining this country to-day—the lack of revenue and too much taxation. We hear that another treaty is in course of negotiation with Australia. Whether it will go through or not we do not know. I am not going to enumerate the articles on which Australia extends to Canada the preferential treatment, but among the commodities on which we offer Australia a preference rate are meats. Now, that is one of the the things that we export, we have an over supply, and so long as that is the case I am not going to support the treaty with Australia. Then there is a preference given on eggs, cheese, butter, onions and other articles. It is my opinion, I do not know whether it is shared by my party, that we have lots of those things in this country. To encourage their importation tends to kill our producers, the tillers of the soil, and they are the men we have to protect. I am just as anxious to protect the man who tills the soil as I am to support the manufacturer—in fact I have lost a certain amount of respect for the manufacturer. Then dried fruits, raisins and currants, are dealt with, and to these I have no objection. But I do object to our giving Australia preferential rates on vegetables. This country is so full of vegetables that we could supply Australia and England combined. All this tends to ruin our men who produce this stuff. So far as I am concerned, I hope there will be no more such treaties negotiated with any country; I think our motto should be "Canada first."

I wish the government would give the country an economical business administration instead of a political administration. I hate to say that they have been endeavouring to humbug the people, but that is really the only way I can express it. They have been manipulating our trade figures to show that there is a national prosperity that really does not exist. The right hon. Prime Minister spent two hours one night trying to tell the House and the country how much better off we are this year than we were last. Any hon. member need only ask himself and his relatives and friends how much more money they have in their pockets now than they had last year to realize the hollowness of such claims. That is what I call humbugging the people—the Prime Minister of this Dominion standing on the floor of this House trying to tell the people they are better off to-day than they were two or three years ago! He could not convince anyone of that. He also boasted that our exports were so much greater than our imports. But we all know why. We have been exporting raw material, such as wheat, copper and pulpwood; that is the reason why our exports are so much in excess of our imports. The principal reduction in our imports was in bituminous coal, steel and other raw material, which proves that our industries were shut down and did not need either coal or raw materials. An argument of that kind is absolutely nonsensical.

Last year I spoke about government by commissions and committees, and I remarked that the House was run like a six-ring circus. You can add another ring to that this year, if you like. This session committees are the fashion as usual. The government are trying to make the country believe that they are absolutely fair in everything they do, and especially when they adopt the recommendations of any of these committees. But every hon. member knows what might be expected from a committee composed of eight members of the Liberal party, four members of the Progressive party—which is worse than the Liberal party—and three lone members of the old Conservative party. You can imagine what kind of a deal we are likely to get out of that sort of committee. The government can say to an anxious public and to

any interested corporations: "That committee has not reported yet. Just wait a little while. They may recommend so and so." The government can promise anything and everything to keep themselves in power, and that is the only policy they have got.

Last year I pointed out that the Minister of Agriculture (Mr. Motherwell)—is he there?

Mr. MOTHERWELL: Oh yes.

Mr. SPENCE: I must congratulate him this year: I see he cut several thousand dollars off the item for publications. Yet there are many publications still being sent to members of the House which I do not think are ever read. I pointed out the waste and the uselessness of having our postmen lugging these publications there and here and dropping them in our homes. My wife said to me, "I wish you would stop that stuff coming into the house." I say it is a waste of money to distribute so many publications all over the country. What are not distributed are baled and sold at the price of scrap, probably half a cent a pound. I think the item for scrap paper sold last year was $24,000 or $25,000. The hon. Minister of Labour (Mr. Murdock) knows all about that, because last year he told me I was wrong. It seems to me that the Civil Service Commission could keep a printing bureau of their own advertising for help needed in the Department of Agriculture. Where the minister puts them all I cannot tell you, whether he hires them there and sends them somewhere else I do not know, but every day the Civil Service Commission is advertising vacancies in his department. And worst of all, we will soon need a new dictionary to understand the nature of the duties which these additions to his staff are expected to undertake, for no one can understand the terms used in the advertisements. Where the money goes we do not know, but it goes just the same. I will give you an idea where some of it goes, and I will show that large amounts of money have been wasted—I will not say deliberately—for the purpose of camouflage or of fooling the public. Some time ago the Minister of Trade and Commerce (Mr. Low) had an advertisement published, entitled "Canada is coming back."

Some hon. MEMBERS: "Coming through."

Mr. SPENCE:—"Canada is coming through"—inserted in several newspapers; and here are the papers that were paid for this bit of camouflage: Manitoba Free Press—I do not know that that is a Conservative paper, anyhow; Gazette Printing Company—well, I do not care, it is a matter of policy; Canada Congress Publishing Company; Globe Printing Company—I do not see the Mail and Empire there; Saturday Night; MacLean's Magazine; Financial Post—an item of $2,893 for publishing an advertisement that was not true, and every hon. member knows it was not true

We spent last year $21,402 for an agricultural investigation, and nothing at all came out of it. An investigation into ocean rates is being held, supposedly arising out of the report of that committee, though I thought it was because of W. T. R. Preston's report. Then we come to our friend Mr. Preston, who received $10,698, salary and expenses, in connection with various activities on behalf of the government. The Great Lakes freight investigation cost $2,291; the secretaryship of the grain commission, $5,310; allowance for house in England, $150, and so on. Now, this is something I do not approve of; I do not think it is necessary. Then, we had another commission known as the pulpwood commission. The hon. member for Fort William and Rainy River (Mr. Manion) asked what was the total cost to the country of the pulpwood commission and the reply came from the Acting Minister of Finance that it was the tidy sum of $75,672.51. The question was also asked, what was the cost of the grain inquiry and what were the estimated outstanding accounts, to which the minister replied that from June 30, 1923 to March 31, 1924, the cost had been $107,612 and from April 1, 1924 to February 5, 1925, $59,994.88, a total of $166,606. Mr. Speaker, if a man had to work hard for this money himself I do not think he would spend it in that way.

Then, in 1924-25, W. T. R. Preston was paid $12,000 and $9,000. My own opinion is that there should be fewer committees and commissions and that the government should take the responsibility and do this work themselves. Let me assure the government that from what I am able to gather the people are going to take a more active interest in the next election than they have taken in elections in the past. Their friends and relations are being forced to leave their native land, many to seek a living in the United States, and these people are now ready to stand behind the good old Conservative party, which is always relied upon to restore confidence and to bring things back to normal conditions.

Somebody on the government side of the House said the other day that two hundred new industries had been started in northern Ontario. Well, if that is so, it is a case of two hundred men individually starting out in industry themselves in order to provide little

jobs which they were unable to get in any other way.

A great deal has been said with regard to the desirability of our manufacturing our pulpwood rather than shipping it out in the form of raw material. The Ontario government are to be congratulated on what they have done in this respect; they prohibited the exportation of pulpwood from crown reserves, with the result that employment has been given to many hundreds of people. Why should we in Ontario or in the Dominion of Canada send out our pulpwood and our men to develop an industry in Tonawanda, near Buffalo? To-day that place is booming as a result of those activities. It is clear that a great deal of this material should be manufactured into the finished product in Canada before it is exported. We cut 4,350,000 cords of pulpwood last year and nearly all of that went out in the form of raw material.

It is well known that we have valuable resources of copper in this country, but nearly all the copper we produced went to the United States, and the result is that the English and German business is going to that country instead of coming to Canada. Canada sold only 7 per cent of this product to these countries. That is an unfortunate state of affairs. Of iron ore we imported $128,000,000 worth. If our iron ore industry was developed as it should be, there would be no necessity of our buying a dollar's worth of this material in the United States. Reports of the best geologists in this country tell us that there is any amount of iron ore in the Hudson bay region which will test at 55 to 60; and I understand there is a movement on foot on the part of the Ontario government to have it brought down to Moose Factory for transport over the Temiskaming and Northern Ontario railway in the near future. I hope that will be done.

I noticed by the budget that the duty was taken off West Indian grape fruit—that is, grape fruit from Jamaica. I approve of that but there is no use taking the duty off grape fruit unless a proper steamship service and refrigerator accommodation are provided to take care of the imported products when brought to the ports of Halifax and St. John. I was talking to an importer of grape fruit the other day in Toronto, whose brother is now in Jamaica. He said he appreciated the removal of the duty from grape fruit, but the trouble was that the Canadian ports were not provided with the facilities for handling this product. My opinion is that there is too much duty at present on the Florida grape fruit. The Union government put a duty of a cent a pound on grape fruit from Florida. I advocate a specific duty. I do not like the ad valorem duty, because there is always some difference between the buyer and the customs officials as to how many pounds a box of grape fruit contains. There is always a tendency on the part of the buyer to try to show the Customs department how little the box contains, while the Customs department try to show how much it weighs. The best system is to put on a specific duty of so much per box. The specific duty does not penalize the man who ships a good, thin-skinned, juicy grape fruit as against the man who ships a thick-skinned, pithy grape fruit with very little juice in it. The man who ships the inferior stuff pays 65 cents a box, while the man who ships the first class fruit is required to pay 75 cents a box. I would therefore advise the government to reduce the duty on grape fruit from Florida to at least not more than fifty cents per box, making it a specific rather than an ad valorem duty.

We have another grievance. Last year we had an over supply of onions in Canada. In the district of Leamington and Windsor we had more onions produced last year than this country could consume. There is a duty of 30 per cent on onions coming into Canada and a dollar a bag, or a cent a pound, on onions going into the United States. Had our duty been the same as that of the United States, we would have cleaned all the onions out of this country, with no loss to the producer of onions. So instead of having a 30 per cent duty on onions coming into Canada, let us have a duty of one cent a pound, the same as the United States, and give our own people a chance in this country.

We have strawberries coming in here with a duty of two cents a pound. That is another problem that it is difficult to contend with, for our customs officials have to weigh several boxes in a carload of strawberries. I would advise the government to make the duty so much per box, instead of so much per pound, because there is always trouble over how many ounces each box weighs. Instead of a duty of two cents a pound, which makes three cents a box, I would make the duty on American strawberries five cents a quart box, and two or three cents a pint.

I have always opposed special taxation, the sales tax, the stamp tax, and all that sort of thing. What I would suggest as an alternative is this. To-day the price of oranges, bananas and pineapples has gone up so high that a duty of 25 cents per box would make little difference; it would add nothing to the resale price. Bananas are coming in here

plentifully at the very time of the year when our own Canadian strawberries, cherries and peaches are coming in, and they are the biggest menace that our growers have from any foreign market. Bananas are in the hands of the greatest monopoly in the world. I remember many years ago when bananas would not be worth three or three and a half cents a pound. To-day you cannot buy them by the carload for less than 7½ cents a pound, and many times they have to keep them and let them rot there rather than sell cheap. That is the result of a lack of the steamboat service that we should be giving these countries.

My opinion is that the simplest and easiest and cheapest way of getting the money to run our country is by the tariff as far as possible. It is not so irritating; people do not know they are paying it. They get their medicine regularly in small doses. The customs officials are always on the job, and there is no reason why they should not be kept busy. To-day this government is establishing tax collection offices at different places and employing extra help, which always eats up a great percentage of the money collected. You could eliminate entirely the tax offices if you collected all the money you require by means of duties.

I am in favour of doing anything that will help the prairie provinces or the Maritime provinces, and if Nova Scotia is as badly off as hon. members say I have no objection to the individual fisherman getting the duty lowered on equipment for their boats. I am in favour of the duty on slack coal, but I am also in favour of protecting the man who finds that duty adds largely to the overhead of his business. I will give you an instance. I know of a nursery business whose overhead has been increased by $7,000 or $8,000 by that extra duty of 34 cents on soft coal. Now something should be done to help an industry that that duty hurts. I refer to the Dale's Nursery at Brampton, one of the biggest nurseries in Canada. To-day we have only a 17 per cent duty on cut flowers coming into Canada, while the United States have a duty of 45 to 46 per cent on cut flowers from Canada going in there. What should be done is to help this nursery or any similar organization by increasing the duty on the goods it raises coming into this country when it is affected by this duty on coal to the amount of $7,500 or $8,000 additional overhead.

Mr. McMASTER: And the consumer will pay that duty.

[Mr. Spence.]

Mr. SPENCE: Why will the consumer pay it?

Mr. McMASTER: Who is going to pay it if not the consumer?

Mr. SPENCE: Why will any Liberal member advocate destroying an industry by adding $8,000 to its overhead? It cannot stand it.

Mr. McMASTER: I am not proposing that.

Mr. SPENCE: What is the difference when you allow cut flowers, high-class roses, to come into Canada under a 17 per cent duty, when our cut flowers have to pay 45 and 46 per cent going to New York and Philadelphia and other places in the United States. People who can afford to buy American roses in this country at from $2 to $8 per dozen can afford to pay the extra duty, and help the industry you are killing.

Mr. STEVENS: What is the difference between coal and roses so far as paying the duty is concrened?

Mr. McMASTER: The principle is bad in both cases.

Mr. STEVENS: My hon. friend is going to vote for the principle in the one case, but he would not in the other.

Mr. SPENCE: We have too many methods of taxation and they are too rigid. I am absolutely opposed to the sales tax. The income tax I have no grievance with because anyone who makes sufficient income should pay an income tax. I am sorry to say that the income tax I will have to pay this year will be very low as compared with some years ago. I will be very glad to pay income tax. However, the income tax is not administered just as it should be. Let me give you an instance of how the department treated a perfect gentleman, a man I know very well, who made a mistake. He was executor of a certain will in Toronto, and he was three days late in making his return to the Income Tax department. He was fined $50, although he had paid the tax within the time limit. That was about the time the Hon. Mr. Fielding took sick, and I tried to intercede for this gentleman. That is what makes men like that, men of the highest type, get sore on governments because the system is applied so rigorously. I know another case in our own business. In this case the party was using horses and wagons for livery purposes. They were changing from horses to motor delivery, and in the statement they made to the Income Tax department they put down $600 for old wagons and one horse and some harness and

things like that. The next year all the party got for their horses and the whole outfit was not $600, but $150. Do you suppose the tax department allowed them anything for that? They said: No, we will allow you 25 per cent depreciation. The man showed them the actual receipts of the sale, but the officials insisted on his coming back and paying income tax on $337.50 that they had no right to get whatever. A system that is unfair in that way is a bad one, and makes bad friends for any government.

The stamp tax I think is absolutely against the ordinary man. The man who issues cheques from $2 up to $200 is penalized, while the man who issues cheques for $50,000 is always protected. We have so many classes of taxation to-day, federal, provincial and municipal, that they are becoming very burdensome. It is very difficult for the ordinary business man to understand these taxation laws; they are not sufficiently simple in form. I know an instance where several parties who were going out collecting money decided that it would be proper to put a two cent stamp on every receipt over $10. These people were going out and collecting say $10 and putting a stamp on each $10 paid on account. Others were not putting on any stamp at all; they thought it was not necessary unless the whole amount was paid to affix a stamp to the receipt. I saw an account which came back to one of the hon. members of this House some time ago and it was marked "Received your cheque. No need to send a receipt." So you see these laws cannot be enforced. From what I know of the mercantile world the government must be collecting much less income tax every year. There are so many old established firms being driven out of business that it could not be otherwise. The hon. member for East York suggested the other day that we had too many representatives in parliament. I concur in what he said in that regard.

Some hon. MEMBERS: Hear, hear.

Mr. SPENCE: "Hear, hear" is right. The unit of representation should be increased. We have too much government for our population. I believe in representative government, but we have enough representatives in this House for a population 20,000,000 greater. I want to say there is too much time wasted in discussing radical proposals and economic conditions, and it costs the country too much money. We have township, county and city councils in addition to our federal and provincial legislatures. We are governed to death and in making this statement I am not giving you my own views; I am repeating the views of the man on the street. The people are sick and tired of too much government; what we should have is a less number of representatives in this House.

Now as to immigration, I agree practically with what one hon. member said the other day. We spent millions on immigration and have induced 350,000 immigrants to come to Canada, but we lost 450,000 of our own Canadian people in the same time. It seems to me, Mr. Speaker, that we are importing muscle and exporting brains to develop the industries of the United States. I would spend very little on immigration. I would allow every healthy individual from the British Isles or northern Europe, and a quota from other countries, to come to Canada, and they should all become Canadians or else stay out. We do not want any race of people that we cannot readily assimilate and make good Canadians of. We have immigration agents here and immigration agents there, but the class of immigrants we have been getting for the last few years are a detriment to any country. There never was a time when we had as good an opportunity to increase the population of Canada by the inclusion of good English, Irish and Scotch immigrants as during the present year. There were a number of people coming out from the British Isles and naturally they all wanted to get to the United States because they had heard so much of the great prosperity of that country. When they were refused admission to the United States by reason of the quota having been exceeded they stopped in some of the larger cities of Canada; and had there been a possibility of getting employment in Canada my opinion is the population of this country would have been increased by several hundred young immigrants from the British Isles. A number of them hailing from that part of the Old Country where I was raised, came to me to know if I could assist them. Many of those immigrants made their way illegally to the United States; I believe quite as many entered the United States illegally as were legally admitted.

I may say that I advocated the appointment of a tariff commission in the sessions of 1922 or 1923, and I am still of the same opinion. I suggested that there should be a tariff commission to advise the government. but I would not want the government to accept the views of such a commission if at all illogical. Neither would I have the government appoint a body of this kind merely as a figurehead or an ornament. Competent men are needed in an advisory capacity of

this kind. My reason for first advocating the appointment of this commission was this: When the present government was elected it was supposed to be a low tariff party and I was afraid it might carry out the platform of the Liberal convention of 1919. Accordingly I wanted to head the government off but it did not keep its promises.

Mr. McMASTER: You thought a tariff commission might have that effect?

Mr. SPENCE: It would have the effect of not allowing you to ruin the country. The tariff commission should be composed of men of outstanding ability, men of the highest integrity; they should be men who had been trained in the commercial world, in the fields of industry and commerce, on the farm or in the factory. I would make one suggestion, however, to the hon. members of the government who are listening to me, and that is that Mr. W. T. R. Preston should not be the chairman of the proposed tariff commission. That would be a political commission and these henchmen would always be on the job.

I listened with a great deal of interest the other day to what the hon. member for Prince, (Mr. MacLean) said about discrimination in freight rates in this country. He said that a certain Mr. Armstrong had quoted certain rates, and when I heard the statements of the hon. gentleman I thought I would endeavour to find out whether they were true. He informed the House that the rate on potatoes from Kentville to Sydney, 312 miles, was 53 cents while the rate from Toronto to Winnipeg, 1,232 was 55 cents. Now I happen to know something about rates. The Saturday following when I went home I observed a bill in my own warehouse showing the prepaid freight on a car of carrots to Winnipeg, and the rate was 80½ cents. This year on account of the scarce crop in the west and the big volume in Ontario the Canadian National Railways made a sacrifice and cut the rate to 66 cents on a 4,500 car. What I wish to say is that hon. members should not make statements of such a character unless they know them to be true, otherwise they are simply creating trouble.

The hon. member in question also talked about the Minister of Trade and Commerce developing a market for Canadian potatoes in the Old Country. Let me say, Mr. Speaker, that when a commodity is scarce you can always find a market for it without going to the Minister of Trade and Commerce. A few years ago when this country had a dearth of potatoes the men in the business did not have to go to the Minister of Trade and Commerce to find out where they could get a supply. They discovered there were lots of potatoes in Ireland, England and Scotland, and they brought potatoes here from those countries. I do not therefore see any particular reason why the Minister of Trade and Commerce should be given credit for developing a market in the Old Country. If the minister had succeeded in getting Britain to remove the embargo from potatoes he would have done something for which he could have claimed credit. The hon. member to whom I have referred said the Maritime provinces had no market for their products in Ontario; they had to go to the United States in order to sell their fish and potatoes. Now I may say that we get 7,000,000 pounds of fish from Nova Scotia in the vicinity of Toronto alone, and that city is filled with seed potatoes from Prince Edward Island. It is not fair either to say that there is no market in Ontario for apples from British Columbia or Nova Scotia. Let me say that I have seen thousands of barrels of Nova Scotia apples in the city of Toronto alone. If Nova Scotia would become up-to-date, and if they would use a decent looking barrel or get a good box and pack them nicely, I would guarantee that Toronto would take 100,000 boxes a year. It is their own fault they are not getting the trade. The difficulty has been dishonest packing and old-fashioned, antiquated ideas. They are using nails four inches long instead of inch and a quarter. You would think the boxes came out of Noah's ark.

The hon. member for Kings, P.E.I. (Mr. Hughes) was howling about everything. He was opposed to the duty on coal. He did not like to see one of his sister provinces getting something to help her along. I must congratulate my hon. friends to my left this year. I never heard so little howling in my life. Last year it was a continual howl, but this year it is different. I think they have been told to be good boys and keep quiet or we will go to the country. They are breaking up internally, and I am going to leave them to their fate. Individually there is not a better class of boys than the hon. members sitting to my left, but collectively their policy is absolutely ruinous to every part of Canada except their own district. I am informed on good authority that when hon. members talk in this House about secession, they are not expressing the views of the western people, and I am convinced that there is nothing whatever in this talk about the feeling in the west with regard

to secession. I want to part good friends with hon. gentlemen to my left and if we should have an election this year I am satisfied the present representation from the west will not be here again. I may travel out west this coming winter, and I hope to meet them and be friendly with them. I know for a positive fact that, although other Progressives may come here, very few of my hon. friends will be here and I desire to part with them the very best of friends. There is a feeling that there is going to be an election, and I am hoping it will be very soon.

Hon. members have been talking about there being more unemployment in the United States in proportion to population than in Canada. I think the hon. member for Chambly and Vercheres (Mr. Archambault) said that the Associated Press made the statement that in New York alone there were over 300,000 unemployed. He also said that in the New England textiles there was misery and unemployment and stated that it was a better year for the Massey Harris and International Harvester companies. I do not care what the statistics, the hon. member or the Associated Press state I say it was not a better year for the Massey Harris people. They are located within two thousand yards of my riding, and I can remember the time when they employed from four thousand to four thousand five hundred men, with the exception of a short time in the fall of the year, and to-day there are not a thousand people in their employ, and at the present time I know some of the stock holders have very little to live on and there is no dividend. Why any hon. gentleman rises in this House and says they are doing better this year than previously, I cannot understand. I would not believe it. Then there is the Abel Company right in my riding. This company used to employ 1,500 men. They are now the Rumley people of Chicago, and there are only four or five men distributing goods obtained from their plant in Chicago, and Canada is holding the bag in the distribution.

Then another statement my hon. friend made was that a change had taken place in regard to certain lines of boots and shoes. I was talking to a friend the other day who knew the facts, and I regret to say that his report is that the Ames Holden people are going to shut down their factory in Montreal. I have a report from one of our commissioners in New York which proves the statements I have made to be correct and that the statements made by the hon. gentleman and by the Associated Press are incorrect. This report is by Commissioner Frederick Hudd and reads:

> Industry continues at a comparatively satisfactory level of activity and the maintenance of production and distribution point to a favourable business outlook. There is no decrease in production in the basic industries. Pig iron production in February was the highest on record for any February and there was an increase in steel ingot production. In the automobile industry, production has expanded and it is estimated that 277,600 cars were produced in February as compared with 240,912 in January, while at the beginning of March the industry was more active than in February.
>
> The Guaranty Survey appraises the present business situation in the following terms:—
>
> The continuance of a large physical volume of trade is evidenced by the seasonal record in freight car loading during the first ten weeks of the year. The average daily number of loadings last month was greater than in the preceding month or in February a year ago. Moreover, current reports of retail dealers indicate an active movement of goods into consumers hands. The business of mail order houses and ten-cent chain stores was about 11 per cent larger.
>
> Factory employment in the state of New-York has increased. This is especially the case in the textile industry. There has been increased employment in the iron and steel and textile industries.

Then here is the money and the exchange situation:

> The Money Situation
>
> The discount rate of the Federal Reserve Bank of New York rose from 3 per cent to 3½ per cent at the end of February. Payments through banks for the first quarter are above the corresponding figures for last year. Exchange of cheques at the principal clearing houses of the United States in March rose to a total of $41,946,379,288—an increase of 12 per cent over February and of 14.4 per cent over March, 1924. This total exceeded that of any other March on record and March, 1920, by $608,119,597. Clearings in New York city aggregated $23,349,010,749, which was 10.9 per cent over February and 18.8 per cent larger than March, 1924. The exchange of cheques outside New York city totalled $18,597,368,539, an advance of 13.4 per cent over February and of 9.4 per cent over March, 1924.
>
> The Exchange Situation
>
> Our decrease in clearing house returns in eastern Canada was $553,000,000—1924.

I got this out of Commercial Intelligence issued by the Department of Trade and Commerce April 18, 1925.

The policy of protection to my mind multiplies employment. It will attract capital which will be adding to industry and constantly improving conditions in the factory, accumulating assets.

To-day everybody is discouraged; there is no stability and every investor feels himself to be under suspended sentence. There is too much money in victory bonds. I went into this subject last year, and advised borrowing cheaper money in New York. We have barrels of money in Canada now to put into industry, but no one will take a chance and never will as long as the present government

are in power unless they swallow our policy. I say to hon. members of the government: throw up your hands and give Canada a chance; go to the country and ask the endorsation of the people.

The hon. member for Victoria (Mr. Thurston) made a statement in this House on the 20th April, that in twenty-five years there would be no Conservative party. Let me say to the hon. member that in five years there will be nothing left but the Conservative party, and the hon. member himself will be out of it in less than five months, with some good Tory representing his riding. I always back up my statements if anyone challenges them.

It seems to me that the government are really forcing the people to consider annexation, and we all know that people will do anything rather than starve. This government's policy is one of wait and see, and they will do anything at all to keep in power. And they got into power through misrepresentation; there is absolutely no doubt about that. They tried to put the blame on the Conservative party for everything that happened in the war, and they pitted the minds of the good people of the province of Quebec against my hon. leader (Mr. Meighen) and the Conservative party. But their luck will change, the chickens will come home to roost. The government's time is nearly at an end, and their doom is certain the moment they appeal to the country. My hon. leader has been accused of making pessimistic speeches. Well, we are all more or less pessimistic, according to the meaning we attach to that word, when we see things as they are and point them out with a view to remedying them. So far as any charge of pessimism is concerned, my leader is altogether misrepresented. I wonder whether hon. gentlemen know just what the word pessimism really means. Do you think that it is right that the country should not know the true state of affairs? Why should the people be deceived? So far as I can see, there is no reason whatever why there should not be a proper statement of the financial condition of the country submitted to the people at large so that they might know just how we stand. Suppose you were at sea on a great ocean liner and a storm arose; what would you expect the captain to do if he had the interests of his passengers at heart? Would it not be the part of wisdom for him to nail down the hatches and so save both passengers and ship? Would it be pessimistic for him to see danger ahead and try to avert it? Let me tell the members of the government that we are trying to save the ship of state. That ship is listed southward and unless some remedy is applied immediately it will list to a dangerously greater extent before long.

I want to read from a letter I have received from the French Ivory Products Limited, a manufacturing concern in my constituency. Hon. members will see what the state of things really is when they hear this.

Toronto, April 1st, 1925.

Dear Sir,—

Our business consists of the manufacture of toiletware such as mirrors, brushes, hair receivers, puff boxes, jewel boxes, combs, etc., from French ivory (celluloid). This industry has been developed during the last ten years from a very small beginning until to-day it is quite a considerable business and able to cope with legitimate import competition, such as English, where rates of wages, while lower than Canadian, are nearer our standards than are the wage rates of other countries such as Germany and Japan.

Realizing that the bulk of our lines sell most freely in the fall, when merchants stock up for the holiday trade, thus necessitating much short time in our factory during the early part of the year, we set about developing our comb lines which are an all year round seller, and this finally grew into a very large proportion of our business. (One of these lines we were able to supply the government in large quantities during the War). This development has enabled us to keep our workmen more steadily employed throughout the year.

Recently this comb business, which we have built up primarily to keep our wheels turning, and our men employed during the early part of the year, has been imperilled by German competition. We have had to reduce our staff and cut our working hours, with a result that our wage bill has been cut practically in half. During the last year some of our employees have gone to the States owing to the fact that we could not keep them employed.

The prices at which German and Japanese combs can be sold in Canada are below our production cost and yet we have every reason to believe that the ridiculously low prices at which these combs are being bought in Germany gives the agents and jobbers and dealers profit before the public get any benefit of it.

We know the prices at which these combs can be bought in Germany and the large profit that is possible on them, as we were offered an agency. We turned this down as we preferred to manufacture rather than throw our workmen out of employment and try to sell German manufactured goods. We find, however, that the Germans secured other Canadian agents.

Since the war the government have enacted several commendable pieces of legislation in an endeavour to guard against this unfair and undesirable competition, but at present none of these are in force and Germany is now a real menace to our industry.

Only last week our Toronto traveller called on several of the largest jobbers in our line and found them all solidly sold on the German line on account of the prices.

As an illustration we will take a pocket comb with case. This costs in Germany $4.50 per gross. Our nearest comb uses $4.28 worth of material alone which is only charged in at scrap value as the comb is made from small pieces. To the $4.28 must be added our labor, factory expense and commercial overhead.

A similar English comb sells wholesale in England at a little over $18 per gross.

As this is only one illustration which might be multiplied, it is not difficult to see what will happen to the Canadian comb business if some steps are not taken

at once to protect the Canadian workmen against unfair German working conditions.

We would respectfully urge upon you the importance and necessity of immediate amending legislation which will provide greater protection based on Canadian values and Canadian wages and would appreciate your support of any legislation along these lines.

I have another letter along the same lines but I will not read it. But it all goes to show how the country is suffering from this cheap foreign labour in countries where they work ten to fifteen hours a day in competition with our workmen.

The hon. member for Chambly and Vercheres the other evening endeavoured to stir up a little strife—it may have been unintentional—on the expenditures incurred in connection with the war. Now if any wrong was done, and I do not admit that there was, the Liberal party were equally guilty; whatever was done at that time was done under the administration of the Union government. The hon. member quoted the cost of sending unnecessary men to France. But who knows whether we sent unnecessary men or not? It is possible that the men were not all fit for the firing line, but there were many other uses to which men who were not sufficiently sound for the trenches could be put in the rear in connection with transportation and so on. He also condemned the government of that day for having wasted $247,000,000 on the Ross rifles and other equipment. That is a ridiculous statement, for the hon. member knows that the Ross rifles were in use before the Union government got into power. Then he referred to the waste of $80,000,000 on the Canadian merchant marine, all of which he attributed to the Conservative party; and he talked about $10,000,000 expended on useless Canadian Northern Railway stock. The hon. member knows that the Canadian Northern had to be taken over, so that his remarks in that direction are not pertinent. Then he spoke about the loss of revenue in tax free bonds. But if he knows anything he knows that our bond market was in very poor shape at that time; England was in the war and America was not sympathetic, and we had to give some encouragement to the people here to buy the bonds. That is why these bonds were sold at 5½ per cent. The hon. member puts down the loss at $110,000,000. Now, we had to give some encouragement in order to sell those bonds at all, because as I have said, we had no bond market and were in a difficult position. Statements of that kind should not be made on the floor of the House; they simply promote strife between the good people of Ontario and the good people of Quebec. There is no necessity for such discussion; the war is over, and we may as well have peace; there is no use for us to be continually fighting. Those of us who are comparatively new members have been more or less disgusted with the way in which certain hon. members quarrel across the floor. We are here to legislate for the present and the future, and we should care very little for the past. Sometimes I get weary listening to hon. members resurrecting things that happened years ago. If it comes to extravagance, no government has sinned more than the present, unless it was the Drury government in Ontario, whose members spent money like drunken sailors. You all know what Ontario did to them. So people in glass houses should not throw stones. A few evenings ago the hon. member for Cape Breton South and Richmond (Mr. Kyte) delved into ancient history, to thirty-two years ago, respecting a commissioner whom we sent to the World's Fair in Chicago, for the purpose, I presume, of entertaining distinguished guests, and the hon. member gave us details of hotel bills and so on, in an attempt to justify the expenditure last year on the trip of himself and two other gentlemen to the Wembley exhibition. I am not criticizing that expenditure, the sum spent by the boys at Wembley was not very large; but maybe there was no necessity for sending them to London at the country's expense. However, the criticism of that expenditure by certain hon. members in no way justified the hon. member for Cape Breton South and Richmond referring to a member long since dead, and I do not think he added any dignity to our proceedings by his counter attack. Matters of this kind should not be brought up in the House for they always create more or less trouble.

12 m.

The government are continually blowing about how Canada is coming through, and they are spending barrels of money advertising how it may be done. I want to tell them how to bring Canada through without spending so much money—just give the people a chance at an early general election, and they will provide the remedy. I believe this government is a menace to Canada, I believe they are actually willing to trade off any part of it for any emolument. They are sacrificing the industries of this country in pandering to the few Progressives to my left in order to continue themselves in power. That is simply their whole consideration. I hope that in the very near future, if they do not soon make up their minds to go to the country and secure the verdict of the people on their administration of the past four years, they will at least

try to give the country a business administration between now and the next general election.

Mr. PRESTON ELLIOTT (Dundas): Mr. Speaker, I must congratulate the hon. member for Parkdale (Mr. Spence) on his very short speech—extending over two hours. If there is one man in the House who has criticized members in this corner for long speeches I think it is the hon. member. I do not intend to detain the House at any great length at this late hour, but I desire to touch very briefly on some of the things mentioned by the hon. gentleman. In speaking of the home market he emphasized the fact that the truck gardeners near our cities must depend entirely on that home market. Then why should he need protection? Who is to oppose him in that home market? There cannot be any opposition if he is depending entirely on that market. Who is sending in anything to compete with him? If that applies to the Canadian truck farmer, it will also apply to the American.

We were very sorry to hear the hon. gentleman bid us good-bye. We expected that Tory Toronto would still remain true to the hon. member, and that he would be back again next session, but we regret to hear that he does not expect to be a member of the next House of Commons.

Now, Mr. Speaker, I dislike to prolong this debate, but I do not wish to give a silent vote on this budget or on the amendment. I do not intend to support the latter, for the following reason. I was elected on a platform entirely opposed to the proposition contained in the amendment. As I understand the speech of the hon. ex-Minister of Finance (Sir Henry Drayton), I cannot see how any man in this country to-day could support his amendment. He takes into consideration our imports to-day and places them at $892,000,000, and of this total he would bar out $700,000,000, as representing goods which could be manufactured in Canada. Apparently he would bar out everything with the exception of a few raw products, such as silk, wool, coal, crude rubber and so forth. The net result would be that our only imports from Great Britain would be coal. This means that the Conservative party intend to cut off entirely any trade with Great Britain, with the exception of coal, and yet expect her to furnish a market for our own products. Britain is not in a position to pay in gold for what she buys from us to-day, although the Baldwin government have just declared that the country will return to a gold basis at once. Therefore she must exchange her goods in payment for what she buys from us. Now, if Canada will not exchange goods with Britain, Britain will look somewhere else for a market. There is this further objection to the purpose of the amendment. If we are shipping goods to Britain, and are taking nothing back in return, we must bear an overhead expense greater than if we were bringing back return cargoes. No doubt this is the considered policy on which the official opposition intends to appeal to the country. I would go a little further. We have been fed on protection for fifty years, and Canada is in her present position in spite of —I think I am within bounds in using that phrase—in spite of our tariff policy, or the old National Policy. Our friends to the right speak as though they considered nothing of any importance in this country to-day but the industrial structure—the development of factories and financial institutions. They do not take into consideration the fact that the producers of this country are of some importance. The production of the necessaries of life is an essential function, but the necessaries of life are not all manufactured goods. The real measure of the prosperity of a country is the amount of happiness and prosperity that is found in the average home. In this country to-day that prosperity is not prevalent throughout the rural districts, and for that reason I am going to oppose the amendment proposed by the ex-Minister of Finance (Sir Henry Drayton). As I said before, I was elected on a free trade platform, and I am going to read one or two planks from the platform on which the present government was elected:

> That a revision downwards of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption (other than luxuries), as well as on the raw material entering into the manufacture of the same.
>
> That the British preference be increased to 50 per cent of the general tariff.

Part of their resolution has been carried out. Concessions were made last year so far as agricultural implements were concerned which resulted in a saving to the farmer, as one hon. member has put it, of 83 cents on a 150 acre farm. Now, we acknowledge that we have received some benefit from that, but I do not believe we should come here and advocate something for ourselves alone; we are in favour of giving the poorer or the labouring people of this country some benefits. The tariff platform as laid down and adopted by the Liberal Convention of 1919 called for what I have just read. But I would like to go a little further and make reference to the fact that the platform received its blessing

from the present Minister of Agriculture (Mr Motherwell). Let me read some statements taken from his speech on that occasion:

Whatever conclusions are arrived at here in regard to the platform, the leadership, or anything else, when we go forth to our respective homes we must stand by these conclusions to the last ditch. There is no use of coming here, harmonizing our differences and then going away and everybody having a platform and a leader of his own. Do the best you can to impress your views upon the great body of this convention and, having done that, stand by the net result.

Further he states:

There is another thing I would suggest and that is that no platform, no matter how good it is, will carry itself into effect.

And further:

It is necessary that we should have full confidence in our own platform and leader if we are to instill similar confidence in other people. We must if necessary sound forth a clarion note, even from the housetops, and then people will stop and listen because they will see, that we, ourselves are in earnest.

Mr. LADNER: May I inquire who it was who used these words?

Mr. ELLIOTT (Dundas): The present Minister of Agriculture. He says further:

I have talked so much since I left home that my voice sounds almost like a buzz saw.

If the present Minister of Agriculture would stand up now on the floor of this House and make these remarks, what would be the effect? But he was not alone in calling on the Liberal convention or the Liberal party to stand by their pledges. I am going to quote from the remarks of another hon. member on this occasion the present Minister of Customs and Excise (Mr. Bureau).

He said:

If we are to have a great nation, it is not the platform of the party that comes first; there is no use in having a platform if you have not the men with the heart to put that platform into practice. First, we must be united. Let us be Canadians; let us be Liberals; and we shall have a great country, progressive, prosperous and happy.

I would like to draw the attention of the House to the fact that the last plank in that tariff platform that I read has never been touched. Now, I do not want to pick out one or two members of the present government and throw all the responsibility on them. Our friends here to the right are talking of an election, but I think they want an election least of any in this House, because with the policy they have to go to the country on, they will never come back. I am going to read now from the speech of Mr. Duncan Marshall, who I understand, is at present engaged as Liberal Organizer throughout this country: He said:

The Dominion government should take from off the backs of the farmers of Canada the burden of the protective tariff. If governments will do these two things for the farmers of our country then the farmers will take care of themselves.

He said further:

We are willing to go as far as anybody will go along the lines of free trade; personally, I should be glad to burn every custom house between Canada and the United States.

I would like to ask whether this man is preaching the same doctrine to-day. If he is, what right have the people to pay any attention to him?

The statement has been made from the right hand corner of this House that the people of the province of Ontario are all for protection. The hon. member for Parry Sound (Mr. Arthurs) made the following statement the other night:

I think that the average man in Ontario, whether farmer or manufacturer or labourer, is a protectionist on principle, and the man in the west should have some sympathy for their viewpoint, which is just as honest as the free traders'.

In the last election in 1921 there were twenty-four Progressives elected in Ontario, and they were elected on a low tariff platform. There were also elected from Ontario twenty Liberals who subscribed to the tariff policy which I have just read. I submit that these men have not been true to the promises they made to the people of Ontario. I intend to vote against the present budget for the very reason that it does not conform to the platform which I advocated and which I promised the people I would try to carry into effect.

Mr. MOTHERWELL: May I interrupt for a moment? Can my hon. friend recall any time since confederation when the duty on the chief agricultural implements of the country were as low as they are now? Is my hon. friend aware that a very substantial number of the imports from Great Britain have now a 50 per cent preference as set forth in that platform—a very substantial preference?

Mr. ELLIOTT (Dundas): I am willing to admit that concessions were made along the lines of agricultural implements and other machinery used in well drilling and the like. I will concede that, but what I contend is that this plank in the Liberal platform, which apparently was to look after the poorer classes of the people in this country, has been entirely disregarded. The duties on the necessaries of life, such as boots and shoes, clothing and so on, have not been touched.

Mr. LADNER: Would the hon. gentleman advocate reducing the duty on boots and shoes lower than it is at present?

Mr. ELLIOTT (Dundas): I would answer in this way: I am a farmer, and I have to compete in the markets of the world against everybody. I do not believe in handing out special privileges to anyone.

Mr. LADNER: If the hon. gentleman is consistent, he would then eliminate all customs tariffs in their entirety.

Mr. ELLIOTT (Dundas): If the tariff commission that is appointed is an absolutely independent and efficient tariff commission—I do not mean a tariff commission that will be sent broadcast all over this country such as we have had in previous years—but a commission formed of experts in the different departments, and we have men in the departments here who are quite capable of handling any question pertaining to trade in any line in this country, and if the people who are engaged in any industry come to that commission and show why they should have protection, I will be willing to see that our industries are not pushed off the map; but go further I will not.

I have some more choice gems here. I have one here from the Minister of Public Works for New Brunswick. The question has been raised here to-night as to how the revenue should be raised. The hon. member for Parkdale said that his policy was to increase the tariff. The hon. member for East Calgary (Mr. Irvine) the other day, in a very clever speech, showed that the tariff at the present time was between the two extremes for the purpose of raising almost as much revenue as it was possible to raise. Everybody knows that if the tariff is raised to an extreme point it performs the same function as an embargo, and that if you carry it down to the bottom you get less revenue. This question of raising the revenue came up at the Liberal convention, and the Hon. Peter J. Veniot, Minister of Public Works for New Brunswick, answered the question how they would raise the revenue in this way:

> There are some who contend that the lowering of the tariff will injure the industries of the Dominion. There are some that contend that the lowering of the tariff will reduce the revenue of our country, and that having regard to the conditions brought about by the war and to the fact that Canada is in need of a large revenue, it would be disastrous to reduce our tariff at the present time. There are even some Liberals who hold that view, and to those especially allow me to say a word. Allow me to take them back in imagination to 1896, the time of the introduction of the Fielding tariff. Notwithstanding what our Conservative friends may say as to there being very little difference between the Fielding tariff and the National Policy, we know that there was a considerable reduction in the tariff of 1896 as compared with that of previous years.

That is a question. He goes on:

> Notwithstanding that reduction, ladies and gentlemen, the revenues of Canada increased by leaps and bounds; so much so that when the Liberals were defeated in 1911 the revenues of Canada had soared to such a figure that the like had never been known before in the history of our country.

That, Mr. Speaker, is the Liberal solution of the problem of raising the revenue. I have a number of other extracts that I am not going to weary the House by reading at this late hour. I have brought these in for the purpose of explaining why I was going to vote against the budget. I believe the mandate that was given to the present government was to lower the tariff, and had the tariff been lowered the people in this corner I believe would have supported it. It has been said that this present budget is a stand-patter, but I think it is a rock-a-bye, for it goes backward and forward. For that very reason I am not going to submerge my own personal convictions on the question of the tariff by supporting any budget that is not along the lines laid down in this platform. I do not care what the consequences are, and if it means an election should the Progressives in this corner stand out against the budget, the sooner we have it the better, and let the people decide whether the pledges given to them by this present government have been put into effect.

The discussion of this budget, although it has been long, has been very amusing and educative as well. I am going to refer to a statement made by the hon. member for Brantford (Mr. Raymond) the other day in this House. Someone from the official opposition asked him if he had advocated a low tariff during his campaign. His answer was that he did not know where they advocated low tariff, but it was not in his riding. Now that goes to prove that in the present House there are some who did not believe in the platform which their party adopted in 1919, and it would be very easy for me to name some more of them.

Many statements were made the other day by the hon. member for St. Lawrence-St. George (Mr. Marler), who spent considerable time explaining the system of bookkeeping that this government followed in bringing down the budget. I venture to say this, that the present budget would be similar to the Speech from the Throne in that it would be prepared and placed in the hands of the Acting Minister of Finance by the officials in the department, who would probably be the same as under the late government, and I expect that

their system of drawing up the budget would be the same that was followed in previous years. But I would like to draw attention to this: The man in the street does not care a rip what system of bookkeeping the government follows so long as they pay their way.

The sum and substance of the budget, as far as I can see, is this: When we take every expenditure into consideration, including the advances or loans to the railways, we find there is a deficit, which means that that deficit is added on to our national debt which means in turn that the taxpayer of this country has to provide more interest in other years. That, to my mind, is of greater importance to the people of this country than the system of bookkeeping that is followed by the government.

Another thing that came up in the House the other day was the disclosures, if I might use the word, made by the hon. member for Chambly and Vercheres (Mr. Archambault). I need not recall, because you will all remember, the charges he laid against the official opposition of profiteering that went on during the war, of the money wasted in building the merchant marine after the war was over, and a number of other things I need not go into. But those things are over. I am not saying that the Conservative government of that time was guilty of chicanery or anything like that, but I do say this: As the time is not far distant when we are going to have another war, if we are to judge by what we see in the papers from day to day, the duty of the government at the present time is to bring down measures which will prevent anything of that kind taking place again in the future. That is the lesson we should learn from the speech of the hon. member for Chambly and Vercheres. The one regrettable feature in connection with that expenditure is this: If it was reckless, it is passed on to the men who fought to save this country, and they will be carrying that burden till their dying day. That is one of the hardships which those people have to suffer. Surely if it is in our power to prevent such a thing as that happening again we should not hesitate to do so.

There is one more matter I wish to discuss before bringing my remarks to a close—a question that has been brought before the House in many different ways—and that is the condition existing at the present time in Cape Breton. The situation there has been referred to as a strike. I do not think the word "strike" is appropriate; I think it should be regarded as a "crisis." I do not wish to cast any discredit on the corporation that is operating there, but it looks to the public at large in this country as if that corporation cannot carry on. If such is the case there is a duty devolving upon this government, and that is to provide for those people in Cape Breton who are starving. I am not trying to introduce this matter in a political sense at all; I do not care who is right, whether it is the employees or the corporation, but what I do say is this: That we should not in a country as rich as Canada allow women and children to exist in the conditions which prevail in the Glace Bay district to-day. No matter what the cause of the controversy may be, I say it is a blot on the name of Canada to allow those conditions to exist. If we go back only a few years when the war was on we found thousands of those miners enlisting. When this country was in need those people responded to Canada's call. To-day they are in need and what is this country doing in their behalf? We have heard different sides of this question presented in the House. But I had the pleasure to-day of listening to the superintendent of relief conditions in that district, and I understand that he is to address the members of this House to-morrow afternoon. I think there is enough humanitarianism among hon. members to go and give that man a hearing. I venture to say that after hearing his statements hon. gentlemen will adopt an attitude towards that community very different from what they do to-day. We have been told by the Prime Minister, and I do not dissent from his statement, that technical questions prevent him from stepping in and taking some measures for the relief of the miners and their families. But technical questions did not prevent this country from granting relief at the time of the earthquake in Japan, at the time of the Halifax catastrophe, of the earthquake in San Francisco and many other emergencies. Now surely if the Canadian government was justified in spending money of the Canadian people in relieving distress outside our own boundaries—as was the case in two of these emergencies at least—are they not more justified in meeting the necessities of our own people in a case such as the present?

I listened very attentively to the remarks of the hon. member for Chambly and Vercheres (Mr. Archambault). In his closing observations he appealed for national unity. I think his appeal should be listened to by everybody in this country. If Canada needs anything it needs unity because we have in the Dominion people of different races and different religions. I think if hon. members would study intelligently all the troubles and problems of the people of Canada, no matter

in what district they may be found, national unity would be achieved very much more quickly than is likely to be the case from the way we are proceeding.

Mr. W. J. LOVIE (Macdonald): Mr. Speaker, although the hour is late I recall the fact that in the budget debate last year I had the good fortune to secure the floor at a quarter past three in the afternoon, so I am not going to indulge in any kicking about the lateness of the hour on the present occasion. In taking part in the budget debate of 1925 I had hoped to be able to assure the House that I would not take up very much time, but I am afraid I shall have to speak at some length as there are quite a few points I wish to touch upon.

I wish to say at the outset that the present budget lends itself to criticism on the ground that it is not following up and extending the admirable policy so worthily started by its predecessor the 1924 budget. The budget of last year was accepted by the country as a whole not so much for what it actually contained as for what it portended. The people of Canada thought that a start was being made towards relieving them from the crushing burden of taxation which hangs so heavily on the shoulders of each and every one. An editorial in the Manitoba Free Press at the time the budget was presented last year, announced that that budget gave general satisfaction all over the west, although the reduction in duties was practically confined to agricultural implements, a slight reduction in the sales tax, and a few exceptions. The budget of 1925 offers no reduction in taxation. It is generally called in this House a stand-pat budget, and as such will not be received with very much favour by the country in general. Another reason why I at least will reject the present budget is that it is a protectionist budget and as such does not sound the much heralded "death knell of protection" of which we heard so much last year. To listen to arguments in this House one is forced to the conclusion that in advocating the wiping out of a protective tariff one is advocating the wiping out of customs duties entirely. That is not so. What the Progressive party stand for, and what they are fighting for, is to have the protective feature wiped out of the tariff entirely. Now, the question will be asked immediately "Where is Canada's revenue to come from?" and I believe it has been asked even this evening. That question, Mr. Speaker, is very easily answered. A protective tariff does not raise revenue; it was never intended that it should. The objective

[Mr. Elliott.]

of a protective tariff, brought to its logical conclusion, is to prevent importations. Therefore no duty can be paid where there is no importation.

Mr. LADNER: Where does the hon. gentleman draw the line between a protective tariff and a tariff for revenue only? Surely a tariff for revenue ipso facto is a protective tariff?

Mr. LOVIE: I think I will answer that question of the hon. gentleman as I go along in my address.

Canada at present raises $344,000,000 of revenue annually, of which only $108,000,000 or about 31 per cent is raised from customs. Of course in wiping out the protective feature of the tariff one is not doing away with the customs house as a means of raising revenue, there could still be duties on tea, coffee, silks and so on which are not produced at home, and excise tax on wines, spirits, tobacco and so on which are produced at home to a limited extent, and which should all bear their share of a revenue producing tax. The income tax and the sales tax, two methods of taxation, started since the war period, are responsible for raising a large share of the revenue of Canada, and were the plan adopted that I have outlined I have no doubt that the increased volume of business transacted would make the income tax and the sales tax more and more available as a revenue producer. There is no doubt, in fact it is a foregone conclusion, that the fetters of protection duties once removed Canadian trade and prosperity would advance with leaps and bounds. On one point all in Canada are in perfect accord: A remedy for existing conditions must be found and applied quickly. As to what the specific remedy will be there is difference of opinion. Our Conservative friends—there are not many of them here to-night but those that are here are on the job—are constantly advocating that a protective tariff high enough to protect the industries of this country and to keep out competition is all that is necessary to promote trade and give prosperity to all and sundry. They claim that raising the tariff will stimulate industries at home, prevent the importation of products that can be manufactured in Canada, do away with the unemployment problem, stop the exodus to the United States, and in short, cure all the ills from which we are suffering at the present time. This to my mind is a fallacy of the worst kind. The party in this House that advocates high and still higher protection points with pride to the United States as a shining example of the benefits of a protective tariff. On this point I should just like to read an extract which

came to my notice about half an hour ago. It is taken from the Treherne Times, a paper published in my own constituency:

April 23, 1925: Henry Ford is credited with the following: We in America can live within ourselves. We can even raise rubber. We can place a tariff wall about ourselves high enough to keep out the goods of other countries if we so desire. But I for one do not favour that narrow provincial policy. I am for free trade unrestricted and unhampered among the nations of the world. The free, natural unhampered and unrestricted trade between the forty-eight states of the United States is a perfect demonstration of the line that world trade should follow. And such a course will be followed when we come to know that all tinkering and monkeying with natural free trade hurts and restricts all legitimate business and industry.

Such world trade based on labour and fair exchange of goods and no favours does not need armies and navies for its protection. It needs only the goodwill and confidence of friendly neighbours, who have been helped and not hurt by its development.

And of course Henry Ford's ability is well known and no comment need be made on that article. The party in this House who advocate high and still higher protection point with pride to the United States as a shining example of the benefits of a protective tariff and entirely overlook the fact that the United States is the largest free trade area in the world, that on account of her diversity of products and industries, on account of the north being able to trade with the south, and the south with the north, the east with the west and the west with the east, protection has done that great country less harm than it would have in a more restricted area. In short, the United States has prospered, not because of protection, but in spite of it; but we in Canada from our geographical position cannot claim the same results from a protective policy, such as we have had for the past.

To those in this House who are recommending a still higher protectionist policy than we have at present, as a cure-all for the financial sickness of Canada at the present time, I would like to quote for their benefit part of a speech delivered by Richard Cobden in London on September 28, 1843. Richard Cobden was reciting the condition of the people in Great Britain prior to the breaking of the back of monopoly there by the repeal of the corn laws, and these are his words. Conditions in Great Britain seemed to have been on a par with what we in Canada have at the present time, namely, starvation in the midst of plenty. I quote these words to show what conditions were in Great Britain on September 28, 1843. I do not think I will take time to quote the speech, but I have it here if anyone doubts it.

I may say that the conclusion reached by Mr. Cobden was not the conclusion reached by the Conservative party of to-day as to the nature of the remedy to be employed, but history has demonstrated that Richard Cobden was right in the conclusions which he reached and in the remedies which he advocated for the cure of the economic ills of Great Britain. The hon. member for Fort William and Rainy River (Mr. Manion) has mentioned in this budget debate that all Great Britain's prosperity was achieved prior to the repeal of the corn laws in 1846. The hon. member has gone back quite a few years for his comparison, but I am able to go back just as far. I might say that I for one worked with and alongside farmers in Scotland who farmed both before and after the repeal of the corn laws, and these men were able to tell, and did tell from actual experience, how much conditions had improved for the agriculturist and the working man and incidentally for the whole population after the repeal of the corn laws. I do not want hon. members to take my word, but I will quote Cobden's speech in 1884 as to conditions in Great Britain. He gives the conditions in Scotland, England and Wales all separately, and I will take a short quotation from what he said about the Scotch labourer and farmer because I know those conditions better. He said:

Yet I find the following description of the diet of these labourers in a Scotch paper:

"In East Lothian, the bread used by hinds and other agricultural labourers is a mixture of barley, peas and beans, ground into meal; and you will understand its appearance when we inform you that it is very like the rape and oil cakes used for feeding cattle and manuring the fields; and it is very indigestible. coarse food."

He says also:

In this country (Forfarshire), the mode of engaging farm-servants is from Whitsunday to Whitsunday; in some cases the period of engagement is only for half a year. The present average rate of wages is eleven pounds per annum, or a fraction more than four shillings per week, with the addition of two pecks or sixteen pounds of oatmeal, and seven Scotch pints of milk weekly. The amount of wages may be stated thus:—

	s.	d.
Money..	4	0
Oatmeal, two pecks at 10d..	1	8
Seven pints of milk at 2d..	1	2
Total..	6	10

That is the current weekly wages of an able-bodied agricultural labourer. An old man—that is, a man a little beyond the prime of life—if employed at all, his wages are considerably lower.

These are the conditions as they were in Scotland before the repeal of the corn laws and it is practically the starvation that was brought about that put the protective tariff out of business.

Conditions in Scotland such as Cobden describes prevailed prior to 1846 but do not obtain to-day. These dark days are left be-

hind never to return. The putting of the trade of Great Britain on a free trade basis with a revenue tariff on certain articles not produced at home, and an excise tax on certain articles produced at home, has shown the world a method of conducting the financial affairs of a country which is both sure and stable, as it gives fair play to all and special privileges to none, and the record of Great Britain since the signing of the Armistice in the payment of war obligations, and in the reduction of her war debt, has shown that her method of financing is efficient, effective and stable.

The secret of the success of Great Britain is that she trades with the whole world on an equal basis. During the whole period from 1846 to 1914, manufacturers in the United Kingdom had to meet the competition of every country in the world that must find overseas markets for the output of its factories. This competition British manufacturers had to meet, and did meet with success, without a vestige of tariff protection at ports in the United Kingdom. In 1912, only two years before the war, the total value of the import, export and re-export trade of the United Kingdom, was $1,343,602,000. It exceeded the foreign trade of Germany by nearly 40 per cent; it exceeded the overseas trade of the United States by 70 per cent, and it exceeded that of France by 125 per cent. Our fiscal policy, said the Economist of London, in 1912, approximated that of free trade, while the fiscal policies of our three principal rivals, Germany, the United States and France, was that of high tariffs and trusts. The moral appears to be obvious. If the people of Canada will not trust the Conservative party to apply the so-called cure of high protection to economic ills from which they are suffering, how about the policy of the Liberal party? I will take a few quotations from an editorial in the Manitoba Free Press of May 17, 1924, headed, "A Turning Point in Political History." This editorial will describe the feeling of the majority of people in western Canada in choicer and more concise language than I can command. It says in part.

> The Liberals were protectionists, where they needed to be to get elected, and believers in a revenue tariff where that view was popular; with the result that the parliamentary representation, in place of being a compact body, was a combination of two wings, one protectionist, the other low tariff with a nondescript centre, prepared to be governed entirely by consideration of expediency.

Now, we may ask ourselves the question, what is wrong with Canada and Canadian conditions. That she is sick, no one will deny, and it is no use doctoring the effect. Let us get to the cause if we can. Canada has unlimited natural resources but at present they are undeveloped. They consist of agricultural lands, mines and fisheries. Of these four sources of wealth which Canada has in practically unlimited quantities agriculture is the greatest. There are in Canada 440,000,000 acres of arable land of which 110,000,000 acres are occupied, only 60,000,000 acres being under cultivation. On what is under cultivation we raised in 1923 over 400,000,000 bushels of wheat, of which 80 per cent had to find a market outside Canada. The export market also ruled the price of the balance sold on the home market, so that the farmers received for their wheat what it was worth in the open market of the world, less storage and transportation charges. The farmer in the disposal of his surplus product has to come into competition with the cheap labour and low standards of living of other countries, as well as depreciated currency and other incidentals. He is prepared for that competition; he accepts it as part of the day's work. But he has to face something far harder at home in his own country, and that is the problem of the high cost of agricultural implements and machinery, excessive transportation charges both by rail and water, high interest charges on borrowed money, high taxation, and a high cost of all articles he has to purchase; while the cost of the necessaries of life is enhanced by the protective tariff and the cost of the distribution system as well. The great problem in Canada, then, at the present time is how to make agriculture profitable. Not only is agriculture unprofitable in the three prairie provinces, but the conditions are even worse. Let me quote from an Ontario newspaper the following:

> The Kincardine (Bruce County) Review tells how for years past the Western Ontario United Boards of Trade, representing organizations in Perth, Essex, Brant, Huron, Waterloo, Kent, Grey, Lambton, Elgin, Wellington, Oxford, Middlesex, Bruce and Norfolk, have been collecting information from the 157 township clerks in these counties. They now find that agriculture is on the decline in the area they have been studying.
>
> It is found that in these fourteen counties 212 60 acres are known to be for sale; farms actually vacant not including those abandoned as useless for agricultural purposes, come to 75,000 acres; there is reported to be 100,000 acres more land in pasture than is necessary.
>
> All this indicates a decline in the agricultural activity throughout many of the finest counties in the province, and the western Ontario organization means to call a conference later in the year to discuss the facts and see what can be done to improve matters.
>
> Everybody knows that western Ontario is a highly important part of the province and dominion, and everybody in western Ontario knows that the foundations of its prosperity are in its agriculture. The moving away of skilled farmers, the departure of the farmer's family for the city, the inability to secure useful farm help means at first idle fields and later idle farms, and a reduced and poorer countryside.

It is time city people paid more heed than they have ever done to the warnings given in these columns that the province and dominion can have no real prosperity unless that prosperity begins with agriculture—the corner-stone of everything in this country.

From 1920 to 1924 the farmers of Manitoba, part of that great country which has been rightly called the granary of the empire, would have been better off financially had they allowed their farms to rest for three years, just raising sufficient for their own use. This period includes the year in which there was a rusty crop which was not worth the expense of handling; and from 1920 to 1924 the more the farmer raised the further he went behind, by reason of the high cost of production. It took two years before that calamity had reflected itself in the balance sheet of the eastern manufacturer. But it has got as far as eastern Canada; and it would be amusing were it not tragic to contemplate the different reasons assigned for the depression of trade conditions in this country. One of the real reasons for this depression is the fact that the prices of the products the farmer has to sell have been depreciated to pre-war level since 1920, while the prices of all the things he has to purchase have stayed at what they were during the war. Taken in bulk, everything the farmer purchases is twice as expensive now as it was in 1914, and it is small wonder he is making so few purchases on capital account. Very few farm implements have been purchased in these years of depression, and that condition has been reflected back to the makers of implements, who through lack of orders are unable to keep their factories going. This has resulted in unemployment. Very few buildings are being erected on the farms, and this means that the builders have had no employment; while building material has not been required and as a natural consequence there has been no business for the lumber yards. This has been reflected back in the saw mills and further back to the bush cruise. Again, no nails have been required, nor has there been any need for general hardware, so that there is less business for the hardware stores, and this is reflected back to the wholesalers. Small wonder there is unemployment and the men are leaving this country and going elsewhere to get a chance to earn their daily bread. But they will come back as soon as conditions improve.

What is urgently needed in Canada above all else is a method to make agriculture profitable. In spite of all squirming and twisting, we will admit sooner or later that this basic truth remains, unshaken and undeniable, that the farmer's business must be made profitable or no one else's business is worth five cents. And this should be kept squarely before us in any form of readjustment we may have in view. Nor do conditions relating to agriculture, such as I have described, obtain in Canada alone; the American farmer is in the same boat with his Canadian cousin. The Breeders' Gazette of December 4 last contained an editorial commenting on President Coolidge's remarks delivered at the Chicago stock yards. This article was written by Mr. Saunders, the editor of the Breeders' Gazette and president of the company, and it says in part:

We share in the President's sympathy with practical movements promising to give farmers a decent reward for their labours. The greatest single question before America to-day is how to make the farm pay. To the solution of the problems involved must be brought the best thought of the nation, and a disposition upon the part of all other industries to confess the great truth enunciated by the president in his down-town Chicago speech to city businessmen, to the effect that we must not and can not divest farming of the "human element" entering into it. His business must afford him a decent living for himself and family. In the language of the president, "He wants a fair show, and when he gets it he can be relied upon to take good care of himself and to contribute substantially towards taking care of the rest of us."

The question looms up larger than ever, how to make agriculture profitable. You cannot by any possibility raise the price of commodities on the markets of the world, and therefore the only thing is to lower production costs. The Montreal Gazette last fall had this to say about agri-

1 a.m. cultural conditions, that it was neither the tariff nor high freight costs that hurt the west but the low world price for wheat. The same writer told the western farmers that they must look to the home markets because of the uncertain prospect of stability and economic recovery in Europe as a result of the adoption of the Dawes plan. I may say this about the home market for wheat: With 7 bushels per capita as the outside consumption, how is a population of 10,000,000 to consume an output which in 1923 amounted to 400,000,000 bushels and which in future years may easily exceed that? The Gazette's economist, out of a sense of patriotism and devotion to his economic views, might multiply the consumption of wheat fivefold, but this would be beyond the capacity of the rest of our 10,000,000 people. This means that we shall have to sell our wheat to the British, the Germans, the Italians, the Japanese, the Chinese—to every nation under the sun which imports wheat; and to get into these markets we shall have to conform to world conditions. If the prices fixed by these conditions are so low at times as to wipe out the margin of profit,

the result will be stagnation in the west with resultant hard times down east. The east is suffering to-day from a lack of purchasing power on the part of the western farmers; and until this revives there will be industrial depression.

Now, as to making agriculture profitable. It is no use at this time suggesting the home market as a remedy, because, although that might be a factor fifty years hence, relief from existing conditions must be given at once if agriculture and industry in Canada are going to be salvaged. The farmer had the value of all his stock and products depreciated in 1920 and 1921 to pre-war levels. He took his loss, and it was a heavy one, but he perforce had to take it and grin and bear. No other portion of the community have yet taken the loss and depreciation the farmer took in 1920 and 1921, and it is up to them to trim their sails and adjust their business to the conditions which now obtain. Manufacturers stated when deflation started there would be no reduction in prices of implements or machinery until implements manufactured from high priced material were sold at war prices, and this has militated against a return to normal as farm implements are almost twice the price they were in pre-war days. Labour in Canada as a whole is 25 per cent better off in wages than it was in pre-war days, but the cost of living is high and rents are higher; consequently they will about break even. Freight rates are high, also express rates, and these last named play havoc with the marketing of produce, such as eggs, butter, cream and so on.

I do not know whether railroad wages are too high or not, but they are certainly out of line with the wages paid the men who are producing the freight for the railways to haul. Possibly the men on the farm are paid too low wages, I am inclined to think they are, but they are paid all the business of farming will afford. I will give a personal experience as to the difference between railway wages and farm wages. Last harvest I had stooking and threshing for me a Canadian Pacific fireman who was out of work. I was paying him $3.50 for stooking and $4 for threshing. He stayed with me until the weather became very wet, when he said, "I can get a job at railway firing and earn twice as much money as you are paying me." That is a far higher rate of wages than the farmer can afford to pay. Consequently I repeat, I do not know whether our farm men are paid enough, but they are paid all the business of farming will afford. Nine men out of every ten will tell you that because of the seasonal nature of railway work in Canada high wages have to be paid to compensate the men for the season of the year when they are perforce idle. To find out just how seasonal railway employment is in Canada, I wrote the Dominion Statistician asking him to give me the number of men employed on Canadian railways month by month. On receiving his answer, I wrote him asking for the payroll of employees on Canadian railways month by month. I must say I was surprised, for the statistics certainly do not bear out the contention of seasonal employment and the consequent necessity for very high wages. These two tables are in my hand, and they can be placed on Hansard if the House is willing:

Number of Employees
All Railways

	1923	1924

*Includes adjustments of $27,083 (deducted).

The question of deficits on the Canadian National railway system should at once receive the attention of parliament. This subject has been taken up a good many times and I desire to mention it again in order to impress it on the House. No board of directors can give their best service in the interests of a system that they know is in such a position financially, through over-capitalization, that it is impossible to earn operating expenses and pay interest on fixed charges. The hon. member for North Waterloo (Mr. Euler) dealt with this question so fully that there is no need to go into it any further than to say that this proposal is not new; it has been brought before

the House and the country on several occasions, but it will have to be emphasized over and over again before the government will move in the matter. The government should, at as early a date as possible, write off the excess capitalization of the Canadian National Railways and add it to the national debt of the country. Give Sir Henry Thornton and his board of directors a fair field with no favours and no political interference, and let them understand that if they cannot make the system pay under conditions extremely favourable, they must resign and make room for men who can accomplish the job. But, Mr. Speaker, I have faith enough in Sir Henry and his business ability to feel satisfied that he could accomplish the job successfully. The successful operation of the railways will not be accomplished by a raise in freight rates, as rates are now as high as the traffic will bear, and in some cases higher, but economy and good business management must be exercised, and duplication of service must be reduced to the minimum.

I wish, Mr. Speaker, to say a word on the coal situation. I am not familiar with the local conditions in Nova Scotia, but I am going to touch the coal question from a national and international standpoint. I am strenuously opposed to all duties on coal and seeing that the United States has no duty on coal, against any nation which allows American coal in free, I would strongly urge that American coal be allowed entry duty free, in other words, there should be reciprocity in coal. I have never been convinced that Alberta coal could be brought to Ontario, in fact I consider the proposition is not feasible commercially, and I am strenuously opposed to the taxpayers' money being paid out to assist impossible trade ventures. Winnipeg is as far east as Alberta coal can be drawn by rail as a commercial proposition, and even then it is worth $12 per ton, which is certainly its extreme value. With free trade in coal, Alberta mines could supply not only Alberta, Saskatchewan and Manitoba but also North and South Dakota and Montana, which would give them quite a territory contiguous to their mines; Ontario would get its coal supply from Pennsylvania; and the Maritimes would supply the local market and the New England states. The fuel problem certainly looks simple when you wipe out the restrictions upon trade, imposed by man in his so-called wisdom and apply the law of geography and common sense, which is, that the shortest hauls possible should be utilized for heavy freight.

Our friends of the Conservative party are fond of throwing out the taunt to the government, "They are afraid to go to the country and submit their policy to the electors." Well, the life of the Canadian parliament is supposed to be five years, and personally I see no reason why general elections should be brought on oftener than is absolutely necessary. There is a certain amount of dislocation and unsettlement of business accompanying every general election, so the less of that unsettlement the country is subjected to the better for the country. While at my home in Manitoba during the Easter recess meeting my constituents, when the question of a general election was discussed the general expression of opinion was that these electors figured that they had done a pretty good stroke of business in 1921 in sending to parliament 65 members, all Progressives. These Progressive members owed allegiance to neither of the old political parties, were men and women who would vote on questions coming before parliament solely on the merits of the question at issue and in its reference to the good of the people of Canada as a whole, and with no consideration for party advantage. A record of the votes cast in this chamber during the sessions of 1922, 1923, 1924, and so far this session will show that so far the Progressive party have voted about as often with the official opposition as with the government, and sometimes the Progressive party have stood alone against the combined forces of the government and the official opposition. The men and women of western Canada who sent Progressive members to parliament in 1921 feel to-day that they played a very safe game in electing to the federal parliament members who thoroughly understand rural conditions, who are hampered by no party affiliations and to whom the lust for power or the spoils of office make no appeal, and these electors are quite prepared to repeat at the next federal election what they did in December 1921.

The policy proclaimed and preached by the Conservative party is anathema to a prairie farmer. He knows absolutely that no amount of protective tariff can assist him in any possible manner. Consequently he is not going to cast his vote to give the other fellow the privilege of taxing him in the so-called "interest of industry", as he well knows that the ability of any industry to establish and sustain itself in a free field is the measure of its public utility. A western farmer and those dependent upon him know absolutely that a vote cast for the Conservative party means a vote which, carried to its logical conclusion, will rivet more firmly than ever the fetters that have been hindering and handicapping him ever since the inauguration of the National Policy

of protection The only party who will obtain support in the prairie provinces is the one who will absolutely stand squarely for equal rights to all, special privileges to none. If these manufacturers in Canada who clamour for protection would devote the same energy and expense to keeping their factories strictly up to date and keeping down production and distribution costs intead of maintaining an expensive lobby at Ottawa, they would enter the same class as the Brantford Cordage Company's binder twine factory at Brantford, Ontario, which claims to be doing very well under free trade conditions. I have an article here with regard to the conditions in connection with the Brantford Cordage Company: I will just read the last paragraph of it:

Regardless of political convictions, every Canadian must recognize in the Brantford Cordage Company a concrete denial of the oft-repeated doctrine that no Canadian company can battle unprotected against American competition. Here is a purely Canadian organization, created and operated with no governmental protection, possessing no peculiar advantages, which has succeeded, with constant progress, against the best efforts of the largest companies in the world through no means other than sheer courage, efficiency and hard work.

It would be unwise to generalize too freely from this instance to success. But the history of the Brantford company does indicate that where the necessity of self-reliance is accepted it is possible to substitute for tariff protection the independent defence of increased efficiency; that such necessity embodied in free trade conditions stimulates inventive effort and resourcefulness; that it tests courage and in testing it, strengthens it.

I wish to quote also a short paragraph from the Toronto Telegram of April 13, which is a report of a speech delivered by the hon. member for East York (Mr. Harris). Under the caption, "Canada needs Protection," the report quotes the hon. member as saying:

There was shipped into Canada from the United States 195,000 barrels of apples, 5,000,000 pounds of strawberries, 17,000,000 pounds of pears, 1,000,000 pounds of tomatoes, 27,000,000 bushels of potatoes and other farming produce which we grow ourselves. Let us protect ourselves against the men who can ship a month earlier than we can produce ready for market by a protective tariff and give our farmers a chance.

And at the bottom it adds:

Mr. Harris was received with great enthusiasm.

I may say just here that three years ago I was in a very southerly part of Ontario, on the 24th of May, and I went to see a gentleman there whom I knew. That particular country lying between Leamington and Windsor was a hive of industry: men and women were busy putting in all kinds of garden truck. The farms are small, but four or five men were employed on each one; in fact they were so busy at the time I was there that the people were unable to take in the sports that were going on not half a mile away. I asked this gentleman where they found a market for all the garden truck that was being raised in that part of the country. He said: "We get all the market we want in Detroit." When I remarked about the duty, he said; "Oh, the duty does not bother us. The people come from Detroit with their motor trucks; they drive right into the fields and they take away all the stuff we can raise." Now, if the farmers in the Leamington district can find a market for all their garden truck in the city of Detroit, I cannot see that there is anything wrong with some of our people in Canada buying earlier fruit and vegetables from across the boundary.

Mr. McMASTER: It is the Liberal part of Ontario down there.

Mr. LOVIE: I do not know as to that. Let me quote the following with regard to shortage of British Columbia rhubarb:

The fruit and vegetable jobbing trade of Winnipeg are puzzled to understand why more British Columbia rhubarb is not reaching this city. So far, it was learned yesterday only one car of British Columbia rhubarb had arrived, while seven or eight cars have come in from the state of Washington. There is a large demand in Manitoba at this time of the year for this article of diet before the Manitoba product comes on the market, after which all outside shipments cease.

Note these last words: As soon as the home product comes on the market, all these outside shipments cease.

I wish to make some reference to the immigration problem, but I shall not say very much about it at this time, because the matter will come up later in the House, probably on the estimates. Moreover, the question has been discussed from every possible angle and I do not think I can throw very much light on it. We have had the open door advocated, and on the other hand there are some who are advocates of keeping out immigrants altogether. This is a tremendously big country—I have said, with 440,000,000 acres that are arable, only 110,000,000 are occupied, and 60,000,000 under cultivation; so that there is certainly room for a lot more people. I am not in favour of the policy that was advocated by the hon. member for George Etienne Cartier (Mr. Jacobs) in his very able speech of the other day, to which we all listened with so much interest—a policy of the open door for immigration. There are certain countries from which I think our immigrants should come. First and foremost, I would draw the Americans from the northern states, because they are already acquainted with conditions such as obtain in the Canadian west. As a rule when they decide to move to Canada they have farms to sell, and they bring their

outfits with them—horses, implements, and probably enough money to give them a start; they know the conditions and exactly how to go to work and make their work count. So I would take the American first. Second, I would take British born; third, Scandinavians and Icelanders, and, fourth, people from northern and central Europe. If we had about as many as we could assimilate every year from these two countries I think Canada would be on pretty safe ground so far as the question of immigration is concerned.

In the constituency of Macdonald, which I have the honour to represent in this House, particularly south of Glenboro, and Cypress river, there are a good many Icelanders, and these men are ideal farmers. They have splendid houses and barns and seem to adapt themselves readily to the conditions in that part of the country. The Icelanders and the Scandinavians seem to be very closely related, and I would say that from either of these countries, as well as from Denmark, we can get the very best settlers. One thing I am entirely opposed to as regards immigration is allowing people who come from other countries and who do not know the ways of Canada to settle here in colonies. That has always been a mistake. The first large immigration I remember in Manitoba was an immigration from the west highlands of Scotland, sent out under the auspices of Lady Gordon Cathcart. These men were fishers or crofters, but having settled in a colony near Pelican lake they did not do well and ultimately lost their land. But the young people who came from Scotland along with their families, who grew up and strayed around the country, were the nucleus of the very best settlers we have. I am very much in favour of allowing only those people to come to Canada who can be assimilated into our population, with whom we need not be ashamed to have our sons and daughters, brothers and sisters, intermarry—men and women whose descendants will grow up and be what we call the very best Canadians.

Those of us who are in this quarter of the House have been looking forward to having a measure to provide for the single transferable vote put on the statute book of this country. We were promised by the Prime Minister that that would be done at the last session, but it was not done and we have not heard a word of it this session. However, we still hope that a measure for the transferable vote will be enacted into legislation before the close of this session.

In conclusion, so far as the amendment to the budget moved by the hon. member for West York (Sir Henry Drayton) is concerned, about the only comment I can make on that is one that I often heard made by a farmer in our part of the country, a very old man now, but who in his early years lived in Muskoka, later moving to Manitoba, where he made an ideal farmer, and he is now finishing his days in British Columbia. In commenting on patent medicines I often heard him say, "They are just like a drink of water—little good, little harm." This amendment strikes me as a good deal like patent medicine—little good, little harm, and I for one am going to vote against it. As far as the budget itself is concerned, as I am an absolute believer in free trade, I cannot conscientiously myself, nor in the interests of my constituents, support this budget.

On motion of Mr. Lapointe the debate was adjourned.

PRIVATE BILL

SECOND READING, COMMITTEE—THIRD READING

Bill No. 45, for the relief of Jessie Louise Cowan.—Mr. Duff.

On motion of Mr. Lapointe the House adjourned at 1.28 a.m. Wednesday.

Wednesday, April 29, 1925

The House met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

DR. EDWARD FARREL

Mr. JONES:

1. Is Dr. Edward Farrel of Halifax, Nova Scotia, in the service of the Canadian National Railways?
2. If so, what position does he hold, what are his duties, and when was he appointed?
3. What salary does he receive?
4. Has he the privilege of free transportation over Canadian National lines, and if so, to what extent and during what period?

Hon. Mr. GRAHAM:

1. Yes.
2. Attached to hotel department in temporary capacity. He is making a study of hotel possibilities along the Canadian National railways in the Maritime provinces from the standpoint of private enterprise with a view to developing tourist travel.
3. None.
4. Yes; over the central and Atlantic regions in Canada to June 15, 1924.

INDIAN OFFICERS' RELIEF

*Hon. Mr. BAXTER:

1. Has the government received from the Legislative Assembly of Prince Edward Island a resolution or ad-

dress praying that the Dominion government would grant relief to certain Indian officers who had been defrauded by Andrew Fraser Mitchell?

2. If such has been received what has been the decision of the government in the matter?

Hon. Mr. COPP: Mr. Speaker, in reply to question No. 1, I may say that the resolution referred to was received by the government on Saturday last. The government has not yet considered its decision in the matter.

CANADIAN NATIONAL RAILWAYS—FREIGHT TONNAGE

Sir HENRY DRAYTON:

What are the respective freight tonnages carried from Vancouver and Prince Rupert by the Canadian National system in each of the years 1923 and 1924?

Hon. Mr. GRAHAM: From Vancouver, year 1923, 104,084 tons; 1924, 84,906 tons. From Prince Rupert, year 1923, 27,516 tons; 1924, 18,645 tons.

CANADIAN NATIONAL RAILWAYS—PRIVATE CARS

Mr. DOUCET:

1. What is the number of cars described as private, business or official, on the Canadian National system?

2. What officials have the right to use such cars?

3. What was the total mileage of such cars for each of the years 1923-1924?

4. What is the cost per mile of the operation of the passenger trains of the system?

Hon. Mr. GRAHAM:

1. 64.

2. Superintendents, general superintendents, assistant general managers, general managers, vice-presidents, president and other officers when their duties require.

3. Car miles—

1923	1,471,720
1924	1,386,538

4. Train miles—

1923	$2 87
1924	2 90

SUMMER TRAINING CAMPS

*Mr. CHURCH:

Will any spring or summer training camps be held this year for the militia or regular force, and where will they be located, for what time, and for what units and number of men?

Hon. Mr. MACDONALD (Pictou): Mr. Speaker, in answer to this question, I may say that it is expected that certain spring or summer training camps will be held this year, but where they will be located and for what time has not yet been decided upon by the department.

SOLDIER SETTLEMENT BOARD—WILSON

Mr. ARTHURS:

1. Has the property of a man named Wilson, at or near Clandeboye, Manitoba, been sold by the Soldier Settlement Board?

[Mr. Baxter.]

2. If so, what numbers of stock were sold, and what price per head was realized?

Hon. Mr. ROBB:

1. Stock and equipment sold; land and buildings not sold.

2. Two aged small horses: $32 and $35; four cows in poor condition and not in calf: $12, $13, $13.50 and $10. Three horses and seven cattle died in the settler's hands: two cows reserved.

SOLDIER SETTLEMENT BOARD—NORTHCUTT

Mr. ARTHURS:

1. Has the property of a man named Northcutt, of Selkirk, Manitoba, been sold by the Soldier Land Settlement Board?

2. If so, how long after the death of Northcutt was the sale held?

3. What proportion of the indebtedness of this soldier was realized at this sale, having regard to each of the various loans made to him?

4. What was total amount realized at sale?

Hon. Mr. ROBB:

1. Land and buildings not sold; chattels sold.

2. 25 days.

3. 27.3 per cent of loans for stock and equipment.

4. $624.

CANADIAN NATIONAL RAILWAYS—PRIVATE CARS

*Mr. WILSON:

1. How many private cars are in the possession of the Canadian National Railways for the use of officials?

2. How many of these have been secured in the past two and a half years?

3. How many were used to carry officers of the company to Portland on the occasion of the departure of Mr. C. J. Smith for England?

4. Who were the officers who used these cars for this purpose?

5. How many cars were on this same occasion sent around to Halifax, and for what purpose were they so sent?

Hon. Mr. GRAHAM: Mr. Speaker, I do not see my hon. friend (Mr. Wilson) in his place. When this question was called on a former occasion I suggested that the last three inquiries should not be pressed. I think the hon. gentleman would be well advised to drop them, as to answer them would lead to interminable questions on little matters of detail which I think are not of great interest. However, I will let it stand until he is in his place.

Mr. SPEAKER: Stands.

MATANE WHARF

Mr. HANSON:

1. What has been the cost to date of the Matane wharf?

2. Was the contract or any part of same let by tender, and if so, who was the successful tenderer in each case, and at what price, and was the successful tenderer the lowest tenderer?

3. If the contract was not let by tender how was the wharf constructed, by whom, and on what basis?
4. What prices were paid for the various classes of lumber used?
5. Who was the inspector in charge and on whose recommendation was he appointed?
6. Is it a fact that the wharf has not as yet been used for the purposes of shipment and transit?
7. Is it a fact that the wharf is now largely in a state of wreck?

Hon. Mr. KING (Kootenay):

1. $34,362.60.
2. (a) The contract was let by tender.
(b) Messrs. J. R. & J. E. Boulanger.
(c) $30,972.80 based on unit prices.
(d) Yes.
3. Answered by No. 2.
4. Lumber supplies by contractor—no information.
Lumber supplied by department and taken over by contractor at cost price:—
Protection piles, spruce, 33' x 6" 11602 l.f. at .20 $2,320.40.
Foundation piles, spruce 7" dia. 6399 l.f. at .13 $831.87.
Foundation piles, spruce 8" dia. 4573 l.f. at .13 $594.49.
Black birch 8' x 10" 42 l.f. at .30 $12.60.
5. (a) J. R. Pelletier.
(b) Appointed by Civil Service Commission.
6. Yes, wharf not yet completed.
7. No. The wharf was damaged by the storm of December, 1924, and repairs are now under consideration.

SHEET HARBOUR WHARF

Mr. BLACK (Halifax):

1. What proportion of the total cost of the wharf under construction at Sheet Harbour, Halifax County, Nova Scotia, for the use of the A.P.W. pulp and power company, is the government paying?
2. Where were the plans and specifications for this work prepared, and under whose supervision?
3. Were tenders for this work publicly called for, in what papers were notices of tender advertised, and on what dates?
4. Were plans and specifications of this work on view at the A.P.W. pulp and power company's office at Sheet Harbour, to any one wishing to tender?
5. Were the plans and specifications of the wharf at Sheet Harbour on view at the office of the Public Works department at Halifax, where such plans and specifications are usually lodged, and as has been customary in these cases?
6. Is the work to be done under the supervision of the Public Works department?
7. (a) How many tenders were received, and (b) from whom?
8. Where did the firms who tendered, get the tender forms?
9. Who was awarded the contract, and (b) what is the contract price?
10. Where were the tenders opened, and in whose presence?

Hon. Mr. KING (Kootenay):

1. One half, the total contribution not to exceed the sum of $7,500.
2. Plans and specifications for work prepared by public works engineers under supervision of Mr. District Engineer Thos. J. Locke, at Halifax, N.S.
3. Company did not advertise for tenders, but asked reputable firms for bids.
4. No information.
5. Yes.
6. Yes.
7. (a) Four tenders received. (b) Parsons-Ed Company, Moncton, N.B.; Halifax Dredging Company; Standard Construction Company; H. A. Russell Construction Company.
8. From the A.P.W. Pulp and Power Company, Ltd.
9. H. A. Russell Construction Company (b) at following schedule rates: Unballasted cribwork, 8 cents per cubic foot; Span between blocks, 25 cents per square foot; Rock ballast, $1.40 per cubic yard; making the contract price approximately $17,940.
10. In the office of the district engineer at Halifax, N.S., in the presence of Mr. District Engineer Thos. J. Locke and Mr. Connors, representing the A.P.W. Pulp and Power Company, Ltd.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, April 28, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, the feeling of those who have to take part in the budget debate at this stage is well expressed by the French writer: Tout est dit et l'on vien trop tard—everything has been said, and we were born too late. Our particular system has been described as "government by discussion." Well, I am sure that nobody will deny that we are applying the democratic principle to its fullest extent. Our friends opposite have said that the budget offered by my hon. friend the Acting Minister of Finance (Mr. Robb) is a colourless instrument, a standpat budget;—they have certainly done it great honour by discussing it so vehemently and for such a long time. Of course, we knew it could not satisfy them—nothing could satisfy them coming from this government. Remembrance of the past and fear of the future are responsible for the discretion of my hon.

friends opposite in their expression of satisfaction with any action of the party which sits to your right, Sir. Their criticism has been directed against the manner in which the financial statement had been prepared and presented, and more particularly concerning accounts of the Canadian National Railways. They have used very strong language regarding it. Indeed, my knowledge of English has been improved—or otherwise—by listening to this debate, and I have added a few energetic words to my vocabulary. My friend from Fort William and Rainy River (Mr. Manion) has excelled himself, and probably others, in this respect. He did it—if he will forgive me for saying so—with the characteristic zeal, and even furore, of a neophyte. I have always noticed that when circumstances, or perhaps error of judgment, pervert a man into a Tory, he always becomes a very bitter Tory, a very strong disciple of the faith. He has a troubled sense of guilt, and he feels the necessity of justifying himself by all available methods. I have seen it stated in the papers that came from home this morning that my hon. friend will pay a visit to my city of Quebec next Saturday. From here I extend to him a hearty welcome, and as I have already been invited to go to Fort William it is possible that I may pay a return visit to my hon. friend.

Mr. MANION: I will extend to the minister a hearty welcome in return.

Mr. LAPOINTE: I knew I would be welcome. It is possible that I shall be offered the opportunity of seeing the dead bodies of two manufactures which have fallen victim to the tariff, as my hon. friend said the other day; because some mischievous citizen of Fort William has conveyed to me in writing the information that these manufactures were closed when the present government came into office.

Mr. MANION: I have not spoken of these manufactures this year at all. However, there are two in Fort William that have actually been closed on account of the lack of tariff protection which this government has refused to extend to them.

Mr. LAPOINTE: Oh, I see. Had the protection been decreased on the products of these two industries?

Mr. MANION: No, it has not been decreased.

Mr. LAPOINTE: Why should my hon. friend single out this government, then?

[Mr. Lapointe.]

Mr. MANION: This government is in power. We on this side cannot increase the tariff.

Mr. LAPOINTE: Yes, the government is in power, and it is going to stay in power. I was reading the other day a very clever French book written by Monsieur Barthou—Le Politique—in which members of parliament taking part in discussions were advised that it is very unwise and very dangerous to interrupt all the time. When we show my hon. friend and his associates that the method of bookkeeping followed by the Acting Minister of Finance (Mr. Robb) was the one in practice when his predecessors presented budgets to the House, even during the time of the member for West York (Sir Henry Drayton) and of Sir Thomas White—well, they tell us that has nothing to do with it. In other words, they are prepared to sacrifice these two gentlemen or anyone else on the altar of political exigency. I commend, Sir, this method of bookkeeping not because it was the method followed by the hon. member for West York but because I think it is the right and fair method. I submit it is fair that all our railway accounts are to be kept separately from the ordinary accounts of the country both as regards the national debt and as regards the operation and the effect of the operation of the railways on the surplus or deficit in connection with our national finances as a whole. And I may say that this practice is followed elsewhere. I have in my hand an issue of the Wall Street Journal of Tuesday, April 21, of this year, in which the accounts of the state of Switzerland are given. There the ordinary debt and the debt of the railways are dealt with separately and given separately; indeed, the debt of the railway is higher than the ordinary debt of the federation. Then, in another account they give the federal railroad statement, the operating surplus, the net capital charges, and either the surplus or the deficit, as the case may be. This is not withholding information; I submit that it is giving full and complete and understandable information. But apart from that it is the only fair method, both to the railway and to the government. We are operating these railways under a system of public ownership and we are obliged to give that system a fair trial. The people of Canada desire that these railways shall be operated free from political or government interference, and it is our policy that this shall be done. Our main responsibility, I claim, is in the appointment of

the head of the railway. This government takes full responsibility for the appointment of Sir Henry Thornton, and if that appointment is challenged we are ready to join the issue and take up the challenge before the people of Canada at any time. Of course, when the national railways become a paying proposition—it will not be before a long time, but it will be before my hon. friends come back to office—hon. gentlemen opposite will be the first to ask that the accounts be kept separately. But at present the adoption of that course does not synchronize, to use a familiar term of days gone by, with their present policy of alarm, blue ruin, and panic.

My hon. friends emphasize in every possible way the unavoidable deficits for which they themselves are largely responsible. They magnify the importance of the deficits—and it is a strange way of giving public ownership a fair trial—but they never mention the fact that two years ago the Canadian National Railways had an operating surplus of $20,000,000 and that even last year they had an operating surplus of $17,000,000. What the railways are suffering from is the legacy of debt which has been left to the present administrators, but to refer to this also would not harmonize with the policy of preaching blue ruin and disaster so zealously followed by my hon. friends.

In speaking on the address the right hon. leader of the opposition (Mr. Meighen) complained that I had described him as a Jeremiah, and stated that he would not be deterred from stating the facts as they were. Well, I will never find fault with my right hon. friend or with anybody else for stating the facts as they are. But I protest against misrepresenting Canada in the face of the world. I protest against the demoralizing influence of a campaign which has the effect of supplying erroneous information and mischievous and misleading material to those who are carrying on anti-Canadian propaganda in Europe or elsewhere. Indeed, we read in the press that the agents of the government of Canada, both for immigration and trade, are complaining of the effect of that campaign. To say, for instance, that our manufacturers are closing down their plants and failing by the thousands is a statement which I claim should not be made by any public man in this country, unless it be true. If it is not true, it is not fair to the people of Canada and to the Canadian nation. Now, were failures so numerous in this country last year? I have in my hand a compilation of statistics made by Bradstreet's which appeared in the Financial Times, of Montreal, of February 13, 1925, as to financial affairs in Canada during the year 1924. It shows that the failures in Canada in 1924 numbered 2,312, a decrease of 21.9 per cent from 1923, and of 28.8 per cent from 1922. But what is more interesting in this statement is that this agency of Bradstreet's gives the causes of those failures and statistics as to those causes, and what do we find with regard to those failures in Canada? The figures are as follows:

Failures due to—	1924
Incompetence	591
Inexperience	118
Lack of capital	887

Surely no one will claim that we should increase the tariff on account of failures due to any of those causes. To continue the list:

Failures due to—	1924
Unwise credits	55
Failures of others	11
Extravagance	9
Neglect	30

Then comes the one under which, if at all responsible for any, the tariff could come:

Failures due to—	1924
Competition	68

Now competition in the broad sense of the word means competition apart from tariff competition, so out of a total of 2,312 failures only 68 are due to competition, according to Bradstreet's; that is, only 2.7 per cent of the failures in Canada during the last year were due to competition. I claim the liberty of giving this to Hansard.

Mr. Speaker, we are hearing much also about debt and taxes. Canada has been described on all the platforms of the country as being the country where we are most heavily burdened with debt, and where we are taxed much higher than any other country not only in the British Empire, but some have even said in the whole world. You will remember, Mr. Speaker, that last year I caused almost a commotion by stating in this House that Canada was the least taxed country in the British Empire. I was taken to task for having made such a statement, and the Ottawa Journal had an editorial in that connection deploring in gloomy terms the impropriety of a public man being guilty of such grossly erroneous and false statements. Of course, it meant the falling down of the citadel of misrepresentations that had been erected in the preceding months.

This year I have asked the Bureau of Statistics to make the necessary researches into debt and taxation and prepare a statement to that effect, and I will ask you, Mr. Speaker,

to permit Hansard to print their statement. What do I find there? It is that Canada has the least debt of all the countries of the empire, though larger than that of the United States, the latter being due to the fact that in Canada we own public utilities and railways and their debts are added to the national debt. The debt of Canada per capita is $442.46, and that includes federal debt, provincial debt and municipal debt. The debt of the United States, including all the debts of the states and all municipal debts, amounts to $268.57 per capita; Great Britain, $922.48; the Commonwealth of Australia, $820.58; New Zealand, $884.94; Union of South Africa, $647.52.

When it comes to taxation, the taxation per capita of Canada is $63.51, including taxes federal, provincial, municipal and school; United States, $68.49, or $5 more than in Canada; United Kingdom, $99.36; Australia, $69.22; New Zealand, $77.12; South Africa, $75.92. All the particulars as to the national debt, the provincial debt, and the municipal debt are given in detail in this statement, and I think it is important on account of the lack of knowledge as to this question to put this statement on Hansard:

AGGREGATE DEBT AND TAXATION OF ENGLISH-SPEAKING COUNTRIES

The accompanying figures are taken from the best sources for all the countries included and are given for the latest possible dates. Statistics for the United States, so far as state and local debts and taxation are concerned, are taken from a United States offical report published June 6, 1924. It may seem somewhat remarkable that the per capita debt in Canada should be greater than in the United States, while our total taxation is lower, but the reason is to be found in the fact, that in this country public ownership of public utilities prevails to a far greater extent than across the line and that the capital invested in such publicly owned utilities, being borrowed, appears in our debt, while the revenue derived from such utilities is not tax revenue but is a voluntary payment by the individual for specific services rendered to him. Such payments cannot properly be considered as part of the "burden of taxation."

† European Population only. The native population is nearly four times as large as the European, but has a very low tax-paying power. The per capita debt for the total population is $142.56 and the per capita taxation, $16.88.

Of course, nobody likes to pay taxes, and it is a catchy appeal to refer to high taxation. I was reading some time ago the words of an eminent English writer, who says that that man is highly educated who pays his taxes gladly. I am afraid that if we were to adopt this test as to education, few of us would qualify.

As regards the banks, I have statistics of all the deposits, but I do not think it is necessary to put those figures on Hansard.

Some gentlemen like to make comparisons with the United States. Well, Sir, first, it is not a fair comparison to make, because Canada was in the war from the very first day; it was not so with the United States. But even disregarding that, I think we stand the comparison pretty well. Three years ago our dollar was worth seventeen cents less than the American dollar; to-day it is just as valuable as the American dollar. The exports of the United States have increased to-day over what they were in pre-war times by 22 per cent; the exports of Canada have increased over what they were in pre-war times by 57 per cent.

Yes, Mr. Speaker, these are difficult times. The waters are stormy, and the strongest vessel has to struggle desperately to keep afloat, but our national ship is going along steadily and safely through the crisis which has disturbed and upset the world. The prophets of disaster may continue to stab themselves and cry out after the manner of an ancient pagan priest, but the economic process will go on its way in Canada towards a condition in which the means of well living will exist for all Canadians. We do not ask the leader of the opposition and hon. gentlemen opposite to help us, it is beyond their virtue, but at least will they not refrain from hindering, hampering and blocking the way? Through you, Mr. Speaker, I say to them "Play the game. Do not push your country back. Keep cheerful, or at least keep still". A very able French public man, whose name has again become prominent recently, was convicted and sentenced to deportation during the war because he was a defeatist—what the French call a defeatist. He was preaching despondency and representing that disaster was looming ahead of the French army. In war time, of course, this is a crime. In these times when all the problems of national and international life are coming together for solution, when the nations are still reeling under disturbances which have been unparalleled in history, defeatism although not a crime is at least a most unfair and unpatriotic system of dealing with one's country.

Now, with regard to the budget they describe it as a standpat budget, and the very

same gentlemen who denounce it as being such are declaring vigorously that we must have stability in tariff matters. What do those worshippers of stability mean? Is not stability standpatism under another name? Does their conception of stability mean only non-interference with the budget when it is a question of lowering the duties, but when it is a question of increasing them then it is still stability? I cannot see any logic or consistency in such a contention. Under freedom only can real stability exist; and those gentlemen are the last in the world to desire freedom in trade matters. A protective tariff is essentially unstable. We hear very often the example of France given to us in that regard, especially by my hon friend for West York (Sir Henry Drayton). France is a high-protection country. Do you think that she has stability in tariff? In France—and I took the figures from a French financial review a few days ago—the tariff of 1892, which was described as possessing stability, was modified 348 times between 1892 and 1908, and the tariff was changed in toto in 1910. From 1916 to January 1, 1923, sixty-five changes have afforded 3,294 modifications in the tariff. Well, I do not think that any serious minded man can claim that this is stability in tariff matters.

What about the amendment proposed by the hon. member for West York? Well, there has been a change of attitude. I remember well our first year after the general election when my hon. friend (Sir Henry Drayton) moved an amendment taking this government to task for not having fulfilled its pledges by reducing the tariff. He did not want, of course, that the tariff should be decreased; on the other hand he was not satisfied with the government for not decreasing it. We were the subject of criticism in any event. "You shall and you shan't, you will and you won't, you will be cursed if you do and you will be cursed if you don't." Then the word "protection" was in every amendment since, but this year it is sweetly eliminated from it. I read the other day that the style adopted in recent years by young ladies of bobbing their hair was going out of fashion. Apparently my hon. friend from West York was not aware of it. His amendment is outrageously bobbed; it is an emasculated political instrument deprived of all virility. My hon. friend from Chambly and Vercheres (Mr. Archambault) said the other day that it was an agglomeration of commonplace platitudes, and I agree with him. I am afraid that my hon. friend next year will move that in the opinion of the House babies are not brought into the world by storks. But if the amendment has not been very illuminating the debate has been illuminating in at least one respect. The very opposite lines of attack against our policy, coming as they do from extreme opposite angles, is the best illustration of the necessity of a middle course, of a policy of compromise trying to harmonize to the largest possible extent the apparently uncompromising attitude of my hon. friends opposite. Indeed the speeches of my hon. friends in one corner of the House are very well answered by the speeches of my hon. friends in the other corner and the first speeches were a reply in advance to those of my hon. friends angularly opposite. The intention to vote against the budget by gentlemen in this House, as expressed in their speeches is for wholly different and contradictory reasons, the one setting forth the extraordinary contention that a country whose territory is as large as the territory of Europe, and which has only nine millions of population spread over that expanse of country, rich in natural resources and wealth of all kinds, may enrich itself by erecting a wall around its boundaries and refusing financial and economic communication with the rest of the world; the other—and I will give my hon. friends of the Progressive party credit for greater sincerity of purpose than I do the official opposition—claiming that an industrial system which has been in force for a large number of years should be subject to a radical and immediate evolution or revolution at a time when normalcy has not yet resumed her position again in the world, and when conditions are most unfavourable to giving changes a fair chance of proving effective and beneficial. Such a conjunction of opposite forces is of a negative and destructive character. If successful it would merely prevent the government from functioning normally and would transform parliament into a crystallized deadlock. It is not a part of our public economy that it should be subject to any party which can paralyse but cannot replace it.

These divergent views show also very strikingly that circumstances and conditions of geography play a large part in determining the fiscal views of communities and individuals. Indeed, only yesterday a gentleman well known in this country, who was Minister of Public Works in the late administration, stated in the city of Toronto that he did not believe any longer in protection, not because of the unsoundness of the doctrine—he did not express any view on that—but because protection was no good for the province of

Nova Scotia. We have a huge country, and we have sectional interests which are not identical and in many cases are widely different. Those who are entrusted with public functions are trustees, not for one class, not for one section of the community, but for the whole people and country of Canada. It is their duty to try to find out the causes of these divergences of interest, and to find if possible the concessions which it may be possible and desirable to obtain. Tariff stability may have its virtue, but national stability is preferable. The decision to be reached may sometimes be a choice of the second best, but then through all history politics have been in the main the acceptance of the second best against the impossible or the ideal. Newspaper editors, professors, or extreme partisans, may be displeased, but the practical man knows that his duty is to deal with practical affairs and not with theories of panic and despair. We need compromise and men of compromise.

Compromise in the sense of avoiding extremes is a truly characteristic British policy. It has made the empire and keeps it together. It is hated by all extremists, either radical or reactionary. I tell you, in all sincerity, Mr. Speaker, the political party of Canada which will inscribe the word "Moderation" on its banner will stand amidst all others, like the rock of Gibraltar. It will be very dangerous and even destructive for this country—and I think everybody will agree with me on that statement—if extreme views on one side were to be followed in the direction of affairs by extreme views on the other side; in that case we would have to stand a succession of economic revolutions and counter-revolutions in this country. Open-mindedness and a recognition of the law of change is part of the Liberal doctrine, and with a reconsideration of policy when required we shall always be ready to face the situation: policies are made for men and not men for policies. May I say to my friends of the Progressive party that I think we have shown where we stand. We have reduced the tariff and have been violently attacked for it. Is it not desirable from the point of view of the advocates of low tariff to let our policy vindicate itself and to show that the high protectionists are wrong when they claim that the loss or decrease of revenue is due to the reduction of the tariff? Surely it is well to give the low tariff a fair trial. Moreover, people should not forget that it is an important and specific phase of our national policy. It is after all one of many thousand other factors that affect our social and national life. The physician diagnoses the disturbance of a single organ and treats it as a correlative part of the whole body. What physicians do governments must do, and I think it is the only successful way.

Another subject about which I wish to say a word is the British preference. It is extraordinary to see the numerous misconceptions and the erroneous notions which exist with regard to this. Why, only recently it was stated in my own city that Sir Wilfrid Laurier had opposed the British preference. No more erroneous statement, of course, can be made. Sir Wilfrid Laurier was the father of the British preference. He pursued that policy to the end of his life, and in the last speech he made before the Eastern Ontario Liberal Association he claimed that that policy had been back of the Liberal party, and he was proud to be able to say that he had been the originator of it. There are some who think it is a sentimental device in the interests of Great Britain and not in the interests of Canada. I do not hesitate to say—and everyone may take down my words—that if such were the case I would be opposed to the British preference. But the British preference has been conceived and carried out in the interests of Canada and Canadians; it is part of the low tariff policy of the Liberal party. The United States have erected a wall against the products of our farms and other products, and we have to find outlets for our trade. Was it not good policy to build up a trade with Great Britain, where our own goods go free? Was it not in the interests of Canada to build up a trade between the Mother Country and ourselves? Have we been the loser by reason of such policy? What has been the result? The very year after a preference was granted, in 1898, our exports to Great Britain increased from $75,000,000 to $100,000,000, and the progression has consistently continued until last year our exports amounted to $361,160,802. At the same time, last year, our imports from Great Britain were more than $153,000,000, a good deal less than half the value of our exports. Are we the losers? We sold Great Britain that $361,000,000 worth of goods without paying one cent in duty. Great Britain has paid us over $28,000,000 in duty on the $150,000,000 of goods which she sold us. Are we the losers? Thirty-five per cent of our exports go to England while we receive from her only seventeen per cent of our imports. I repeat, are we the losers? Our goods are going to England free. Their goods are paying duty when sent to this country.

Now we have heard very much about the boot and shoe industry.

Mr. GRAHAM: Hear, hear.

Mr. LAPOINTE: I observe that my hon. friend says "hear, hear." Yes, I am interested in the boot and shoe industry. It is a very important industry in the county which I have the honour to represent, and which I think I shall have the honour of representing in the next parliament. Our hon. friends opposite have been very strong in their criticism of the government's policy in regard to the boot and shoe industry. Well, the boot and shoe industry is a national one. It is subsidized by purely Canadian capital; its raw material is Canadian; it is indigenous to our country, and it is certainly entitled to sympathetic treatment and encouragement. But are our hon. friends opposite fair in regard to the boot and shoe industry and this government? Is it true that imported boots and shoes are flooding our markets to a much larger degree than before? I am going to make another startling statement, but I will back it up by evidence. There are fewer imports of boots and shoes to-day and there were fewer last year and the year before than in any year during the Conservative administration. I claim the liberty of placing on Hansard the following itemized statement prepared by the Bureau of Statistics of the Department of Trade and Commerce:

1. IMPORTS INTO CANADA, FOR CONSUMPTION, OF BOOTS AND SHOES

(Fiscal years 1905 to 1922)

Periods	Boots and shoes and slippers of all kinds except rubber and leather			Boots and shoes of leather, n.o.p.			Boots and shoes, pegged or wire fastened with unstitched soles, close edged (leather)

1918	102,972	311,850	414,822	146,784	3,017,924	3,164,708	1,603	12,827	14,430
1919	50,681	249,683	300,364	78,994	2,615,112	2,694,106	445	14,972	15,417
1920	71,470	362,792	434,262	94,009	2,617,613	2,711,622	4,211	15,758	19,969
1921	206,406	318,149	524,555	358,451	1,816,758	2,175,209	2,133	22,779	24,912
1922	46,035	197,887	243,922	335,761	991,800	1,327,561	2,867	8,347	11,214
1923	69,297	358,886	428,183	410,273	794,631	1,204,904	4,291	11,539	15,830
1924	140,072	287,225	427,297	707,349	821,838	1,529,187	5,514	11,515	17,029
1925	166,188	155,986	322,174	1,044,693	728,393	1,773,086	6,353	9,470	15,823

This shows that for the year just ended, March 31, 1925, the imports are a little above $2,000,000, and prior to 1921 they were a good deal more. During the years of the war, they were over $3,000,000. In 1914, they were nearly $4,000,000, and in 1913, they were over $3,500,000. As I say, this shows that imports of boots and shoes were larger during every year of the Conservative administration than during the last four years of the Liberal administration. If there are difficulties at the present time, does any hon gentleman claim that that is due to the tariff or to considerable imports? The production of boots and shoes in this country for the year 1923 amounted to a value of $45,596,012. Of course all the reports for 1924 are not in yet, and while they will be available only in the month of May or June, it is expected that the production will be about the same. The production has increased a great deal since pre-war times and the number of manufacturers is as great to-day as it ever was, being 186. In dealing with this problem we must not forget, since the United States tariff is always set before us as an example, that boots and shoes enter the United States free of any duty. Three million pairs of boots and shoes were imported into the United States last year and there does not seem to be any movement to erect a tariff against them. But I repeat, if the industry could be prosperous at a period when imports were larger

than they are to-day, surely the difficulties must be attributed to some other causes. There are many causes, one of them being high railway freight rates, and many manufacturers have told me that this was a great difficulty with which they had to cope.

Mr. CALDWELL: Has the minister any record as to the exports of boots and shoes from Canada to the United States?

Mr. LAPOINTE: I have not those figures with me, but the exports, except during the war, are not of such importance as to merit great consideration. During war time exports were very large, and that may be one of the causes of the present difficulties. Our manufacturers enlarged their plants considerably in order to meet the demands during the war, and now the demand has been greatly reduced. As I have said, high railway freight rates constitute one of the causes of the difficulty, and I hope in that article of consumption which plays such a large part in all families, it will be possible to reduce the rates on our railways. We have tried to meet the difficulty in some other ways. Last year the sales tax was reduced on boots and shoes, and even this year the sales tax is taken off materials which are used in the manufacture of boots and shoes. A reduction in the cost of living and a consequent increase in the purchasing power of consumers, farmers and others, would be another great factor in regard to this industry as in regard to any other industry. When a man cannot afford to buy two pairs of boots for every member of his family, he buys only one pair, and this has its effect on the activities of the trade.

As regards the British preference and just to show how opinions vary as to its effect, I will read to the House a letter which was addressed to my hon. friend, the Acting Minister of Finance (Mr. Robb) by the wholesale hardware merchants of the city of Quebec under date of March 14, 1925, after a resolution had been sent to him requesting the repeal of the British preference:

The Honorable J. A. Robb,
Acting Minister of Finance,
Ottawa, Ont.

Dear Sir,—

We, the undersigned wholesale merchants of this city, who handle in large quantities goods manufactured of iron, steel, brass and copper, would respectfully request your government not to alter the present British preferential tariff on the different lines in which we are interested.

We would like to call your attention to the fact that a great many of the iron and steel goods that we sell are ultimately used by the farmer, who we feel at the present is not in a position to pay any higher prices than he is now obliged to pay on articles of iron or steel that are necessary for his welfare.

Trusting that this petition will receive your favorable consideration,

We have the honour to be,
Yours truly

Samson & Filion,
Per D. Samson.

Per Guy H. Simpson.
Vice-President and Manager.

I may say, en passant, that some of these names—and my friends from the city of Quebec will recognize them—are not those of particular friends of the Liberal party, but they are in favour of the British preference.

Mr. ARCHAMBAULT: Can my hon. friend state what is the actual policy of the official opposition with regard to the British preference?

Mr. LAPOINTE: I will answer, as the hon. member for George Etienne Cartier (Mr. Jacobs) did the other day, that it is like the wisdom of God, above all comprehension and understanding.

Our natural market is the United States, but we have difficulty of access to it. The United States made us an offer of reciprocity in 1911. We cannot complain because we slammed the door back in the face of the Americans in that year; but we are facing conditions as they are, and we must find other markets. The British preference was one means of finding such a market, and commercial treaties with foreign countries are another means.

4 p.m.

I am sorry that I do not see the familiar and friendly features of my hon. friend from Lincoln (Mr. Chaplin) as I want to say a word or two about the French treaty. Since that treaty was signed in 1922 it has got on his nerves and disturbed his sleep, and I am afraid I have to bear some of the responsibility for shortening the days of the hon. member. Last year he made a strong criticism of the treaty. There is no nicer gentleman in the world than my hon. friend when we meet him privately, but last session I had to point out how unfair he was in criticizing the French treaty, and this session he has made the same mistake. He gives us a list of

articles coming to this country, regarding which he says: They have paid such and such an amount of duty; if there had been no treaty negotiated in 1922 they would have paid a larger amount of duty; consequently the country has lost hundreds of thousands of dollars. Well, in 1922, when this treaty was signed, the general tariff was not applied by Canada to the products of France; but my friend is always basing his calculations on the general tariff. As a matter of fact, there had been a treaty in force since 1908. After the war France notified all nations with which she had treaties that those treaties were terminated. For some time there was no trade agreement between France and Canada, but in 1921 the Minister of Trade and Commerce of the then government, Sir George Foster, entered into another trade agreement with France, which was ratified by this parliament, and under which Canada was applying to all products coming from France the most favourable tariffs that are or may be granted by Canada to the products of any third power except those of the United Kingdom or of the British dominions and possessions. To show what really would happen, I have asked the officers of the Tariff branch of the Finance department to give me a couple of typical items, and they have selected silks and velvets. According to my hon. friend from Lincoln, the country would lose $169,000 on those two items alone. Why, if you base your calculation on the tariff as it was under the agreement entered into by my friends opposite, which was in force in 1922, and was then replaced by the present treaty, instead of losing $169,000 of duties, you will find we have increased our revenue by $30,000. This shows how unfair such a criticism is, and I do not think it should be indulged in.

Now, it may be asked, why was this treaty negotiated and signed when there was that trade agreement in existence. I answer, that it was because the Canadian manufacturers, as represented by the Canadian Manufacturers' Association, were complaining that under that agreement Canadian goods could not enter France on the same basis and under the same conditions as American goods. The treaty was negotiated at the instance of the manufacturers of Canada to give them on French territory the same rights and privileges as those enjoyed by the manufacturers of the United States, and I myself heard representatives of our agricultural implement industry congratulate and thank the government for having given them the privileges which they now enjoy under this treaty.

[Mr. Lapointe.]

There is another criticism by my hon. friend, but for which I cannot blame him, because he based his figures on statistics given by the Department of Customs. He said that last year the balance of trade with France was against us by $5,000,000 or $3,000,000,—I do not remember which. As a matter of fact that is how it appears in the reports issued by the Customs department; but I was surprised to see that the reports as given by the French government for 1924 differ substantially from ours. This will be found in the Commercial Intelligence Journal of April 4:

> The statistics of the French Department of Customs show that during 1924 the commercial relations between Canada and France can be viewed with considerable satisfaction. The value of merchandise exported to Canada almost doubled in 1924 as compared with 1923—333,260,000 francs against 183,457,000 francs. The exports from Canada to France show a total increase of 109,130,000 francs—482,826,000 francs in 1924 against 373,000,000 odd in 1923.

So our exports are still much larger than our imports according to the figures issued by the French government; and surely everybody will admit that France would not show a balance of trade unfavourable to her if she could help it.

Mr. MEIGHEN: Which government is right?

Mr. LAPOINTE: I am coming to the explanation.

Mr. STEVENS: Was the exchange the same in both periods?

Mr. LAPOINTE: There was not any very great difference. This is the reason for the discrepancy between the French and the Canadian figures as given to me by the Finance department. I am advised that of late, especially from Vancouver, owing to the length of the voyage, cargoes are cleared for Britain and attributed in the figures of the Customs department to Britain, but the ships wait for orders as to where they should proceed and unload. The customs papers credit those cargoes to British exports, while in many cases they are actually French or Belgian or those of other European countries. I do not know whether it is possible to prevent that sort of thing, but if it is, it is certainly most desirable to do so, for even when ships are cleared apparently for Britain we ought to have means of knowing where in reality the final orders will direct the ships to unload.

Mr. MEIGHEN: Can the minister say who gives that explanation? I do not think it can possibly be correct.

Mr. LAPOINTE: Mr. Russell. He is the tariff officer in the Department of Finance.

Mr. MEIGHEN: Surely the minister does not suggest that our trade figures are built up upon the basis of the immediate destination of a ship? If so, they are all pure fiction.

Mr. LAPOINTE: I think our trade figures, as given by the Customs department, are according to the clearance of the ship.

Mr. MEIGHEN: Oh, no.

Mr. LAPOINTE: That is what I am told by the officers.

Mr. STEVENS: Would not the invoices and the manifests show the destination or the origin, as the case may be, of the goods, and are not these documents submitted in duplicate or triplicate form for the customs officers at the point of unloading?

Mr. LAPOINTE: My hon. friend knows—

Mr. STEVENS: That is so undoubtedly.

Mr. LAPOINTE: —I am not acquainted with that part of it at all. But I am told that owing to the length of the voyage and because of the fluctuation of prices during the twenty or twenty-four days that the ship takes going to Europe by the Panama canal, large quantities of goods are virtually shipped without the final destination being given. But I am giving the explanation as it is given to me. At all events the figures of the French government giving the quantity of imports from Canada should, I think, be relied on.

Now, I hasten to conclude my remarks. In commercial and economic as well as other matters our policy is dictated exclusively by the interests of Canada. Conditions are not what they were in 1878, when the so-called National Policy was launched. There was no west at that time. We have now four different and separate sections, and the true Canadian policy must consider all the interests and divergences of interest of all those sections. We cannot compare our conditions with those of homogeneous countries which are small in territory and uniform in interest; still less can we compare our situation with that of the United States, which though a protectionist country to all outside appearances, is really enjoying free trade among various states having an aggregate population of over 110,000,000. Arguments with regard to the home market which may be valuable there are preposterous in Canada; and to call "national" a policy which has the effect of selling Canadian goods cheaper to the inhabitants of the antipodes than to our own citizens is not sensible, in my judgment. The true national policy is one that will permit all Canadians to live and will give equal justice to all. That equal justice, I am afraid, cannot come from those who want everything their own way without considering the interests of others. It cannot come from any party which is eastern or western in its character and which policy appeals only to one or the other of our great geographical sections. How many times did we hear the suggestion made by different people in eastern Canada that Quebec and Ontario should unite against the activities of the west? Sir, I would rather see the Liberal party and the government of which I am a member go down to defeat than attain an ephemeral success, an inglorious victory, by such nefarious methods. I believe in Canada, in the whole of Canada, Canada for Canadians is a splendid policy, but it must be Canada for all Canadians, not for any privileged section of the people.

Mr. R. V. LeSUEUR (West Lambton): Mr. Speaker, I believe I should first relieve the Minister of Justice (Mr. Lapointe) of an apprehension which is apparently worrying him by stating at once that I am not a pessimist and that I have no desire to spread blue ruin. I believe that statement may be applied with equal force to all other hon. members sitting in this section of the House. In fact, I can assure the hon. Minister of Justice that we are essentially optimistic here and that our optimism grows every day as the election approaches.

I can say this also, Mr. Speaker: that being optimistic I would be just as happy as the Acting Minister of Finance (Mr. Robb) could possibly be if conditions in Canada to-day permitted the people to practically forget the budget. But unfortunately that is not the case and the budget to-day remains the most important, the most eagerly awaited, and the most carefully studied pronouncement that the government makes during the session. For the same reason the office of Minister of Finance remains of an importance fully equal to that of the office of Prime Minister. I have no desire to detract from the prestige of that office, but frankly I get no satisfaction from the conditions which contribute so largely to that importance. I refer to the difficult financial situation and to the difficult financial problems which to-day face this country and to the prolonged continuance of the depression or readjustment, whichever you like to call it, which this country has been undergoing for the last four years, a

depression or readjustment which is accentuated by the burden of still unreduced war time taxes. Sometimes, Sir, I fear that we have but a vague and hazy realization of our position. I believe the Minister of Finance (Mr. Fielding) fully appraised the situation and that it fairly bewildered him. I believe that the ever-present weight of the problems connected with that situation contributed in no small degree to his ill-health, and for the sacrifice he made in that respect this Dominion owes him a great obligation.

I would like first to glance briefly at our trade conditions; and I may add that I do so partly on account of the divergence of opinion which exists in that regard, and partly in order to serve as a basis for my later remarks. The remarks of the Minister of Justice amply illustrate the divergence which prevails on this question. I shall endeavour to get a reasonably accurate view of it and to base my conclusion, so far as that is possible, on fundamental facts which must be admitted; then I shall see if we cannot arrive at some remedies which will apply to our present difficulties.

First, we should keep in mind the fact that the last years of the war and the year or so thereafter produced a period of industrial expansion and considerable inflation. Immediately following that we had a period of depression which spread like a great pall over the whole civilized world. That period was marked by a recession in wages and in the standard of living which varied greatly in degree in the various countries affected. It was also marked by a rapid and uneven depreciation in currency and by a wild and uneven fluctuation in exchange. In view of these chaotic and highly irregular conditions in the various trading countries certain nations immediately took aggressive steps to protect their nationals. I want to deal briefly with this phase of the subject by way of following up to some extent what I said last year. France, we know, immediately increased her tariff to the highest point in her history. France has since that time been blessed with an expanding prosperity, her basic industries showing a marked increase and reaching to-day perhaps the highest point in her history. Her internal and external trade alike are at a pinnacle at the present time, and unemployment is unknown. I know some hon. member will have in mind the fact of the supposed recent financial difficulty in France. But I may explain that that was a proposal to increase the arbitrary limit which had been set to the note issue of the Bank of France from 41 milliards to 45 milliards. That increase, however, was purely a financial measure to give further elasticity to their currency and enable it to meet the expanding demands of trade. That is the view taken in financial circles, I may say, and is fully explained in a very recent number of the London Statist.

The United States likewise took drastic and immediate measures in the depression of 1921 to protect her internal industrial life against what I have described as the chaotic and highly irregular trade conditions existing in other countries She had a most remarkable recovery and enjoyed ever increasing prosperity from about the first part of 1922 to possibly the end of the first quarter in 1924. At that time her trade had a recession, but since September, 1924, and especially since she was reassured of a continuance of her strong and stable fiscal policy on November 4, 1924, the United States has recovered remarkably from the recession which she experienced in the second and third quarters of that year. The last number, the April issue, of the Federal Reserve Bulletin is clear evidence of that. It shows clearly that her production in basic industries is materially greater in January of 1925 than it was in January of 1924, and is materially higher than it was in the low quarters of 1924. Likewise her production in minerals, her manufacturing production and her agricultural movements are all greater. If we turn to her bank statements we find that the current loans for this January are much in excess of the current loans of the year before. Her bank debits are likewise higher, and her time deposits have correspondingly decreased, showing an increased activity in trade. I believe that is one of the best criterions. When you have larger current loans and smaller time deposits you know that the money is in circulation, being used in business, and that you have then greater business activity. I could take up other points in the United States, but I will point my remarks as to their prosperous condition by the statement of Andrew W. Mellon, that wizard of finance to whom the United States is so much obligated, and whose statements are generally regarded as those of a business man and not of a politician. He prophesies a continuance of good conditions in the United States, and says that present conditions are fundamentally sound.

Now if we look at conditions as they exist in Canada to-day, we realize that Canada suffered from the same depression in 1921, and that such depression continued with more or less unvarying monotony during the years 1922 and 1923; that in the early part of 1924 there

were signs of a recovery from our depression, but 1924 unfortunately did not fulfil those hopes, and we had through the greater part of 1924 an even worse trade condition than we had previously. Now I am glad to say that the early months of this year have shown signs of improvement. We have improved from the low point of 1924, so far as I can judge, but I doubt very much if we have yet come to the point where we were in the first quarter of 1924. In judging of that condition, let us look first at our bank statements. We find that the current loans in our banks declined from an average of $938,000,000 in December to an average of about $908,000,000 in February. We must allow for seasonal fluctuation, because December represents possibly our busiest retail trade. But we find that February of this year is about $80,000,000 less than February of last year. If we take our bank debits, almost the same condition prevails. In March our bank debits show a slight improvement over March of last year, but the general result of the quarter is lower than the first quarter of last year. I might say that our time deposits, corresponding to what we find in our loans and debits, show an increase in the first three months of this year, showing that our people are putting their money in the banks on a time basis and business is quiet. Our time deposits again are greater than they were in the first quarter of last year. So it all goes to show that business activity, while it is possibly improving at the present time, is still considerably below what it was in the first quarter of 1924, which was a period of depression. I might also take up the question of our basic industries. In our basic industries production is also showing signs of improvement, especially in March, but allowing for seasonal fluctuation the general conclusion must be very nearly the same as is to be drawn from our bank statements, namely, that while we are showing signs of improvement we are still below our condition of 1924. I might take up the question of employment and find out just how we stand there. Taking January, 1920, as our index we find that our employment on March 1, 1923, was 89.9 per cent; on March 1, 1924, 90.7 per cent, and on March 1, of this year, 87 per cent, or about 3 per cent lower than for the corresponding period in either of the years 1923 or 1924. In this regard I might refer to some of the detailed statements which were placed on Hansard referring to specific industries by the hon. Minister of Labour (Mr. Murdock). I note, for instance, that he speaks of the employment in some 47 mills engaged in the manufacture of woollen yarn and cloth. This table shows that the numbers employed in 1925, while gradually increasing, are less than the numbers employed in the same months in each of the years 1922, 1923 and 1924, exactly proving what I have stated. If we turn to his figures with regard to the boot and shoe industry, in which he takes 91 manufacturers as his test, we find exactly the same thing, that the employment in 1925, while improving, is still below the numbers employed in the years 1922, 1923 and 1924. I may add that I do not think any of the tables presented by the hon. Minister of Labour in his address to this House contradict or even reflect on the conclusion to which I have come. If he were here, I would ask him to point out any that did conflict, because I have gone carefully through them and I believe they are all in accord.

Before I leave the remarks of the Minister of Labour, I would like to point out one thing, and that is that he gives two tables with regard to the boot and shoe industry, one on page 2002 of Hansard, in which he sets forth for 1923, 189 establishments, with 12,439 wage earners, and a product value of practically $45,000,000, and then on the next page, for the same industry and the same year he sets forth the number of establishments as 121, the number of employees 10,903, and the value of production $36,000,000 odd. Now, without adequate explanation these two tables are certainly most confusing, and in the minister's statement there is no explanation. Both tables are under the same headings and are for the same years, and show diametrically opposed figures. The minister must either explain that, or we can only conclude that he has disproved in the latter part of his speech what he attempted to prove in the earlier part.

Now, I believe that the more or less fundamental facts which I have given form a sufficient basis for the conclusion at which I have arrived, namely, that our condition is gradually improving and has improved from the low point of 1924, but that we are still suffering from a marked depression, and that that depression is as yet below what it was in the first quarter of 1924. Furthermore we have no clear and definite signs as to when this period of readjustment will end, or that we are going to continue improving and come back to normalcy.

Before leaving the subject of trade conditions I should like to indicate two conclusions which to my mind are obvious. The first is that the actual results and facts have shown that France and the United States were wise in their action in protecting their internal industries against outside chaotic conditions.

By reason of that protection France has enjoyed tremendous prosperity and could to-day, I believe, without serious injury to her nationals increase her taxation. The United States has likewise prospered largely by reason of adopting the same measures, and has been enabled, largely on that account, to decrease her taxation and reduce her war debt. The second conclusion which appears to me obvious is this: It is inconceivable, at least to me, how in the face of our present trade depression, and with no clear and definite signs of a recovery from that depression, we can claim that we are enjoying great prosperity. I am firmly persuaded that a stable fiscal policy, administered with the advice of a competent tariff board, is a primary factor in the recovery of our country. I would further say that we should not endeavour to spread a measure of optimism among our people by unduly optimistic statements. The better way to proceed would be to inaugurate a campaign of intensive economy as to which I shall have some suggestions to offer, and a rigid reduction of expenditures, apart altogether from political considerations. One of the greatest grounds for confidence and one of the greatest factors in inspiring confidence is when a business in times of stress cuts its expenditure to the bone even to the smallest items. Such a course inspires confidence among the people connected with that industry, and not indulgence in unduly optimistic talk.

Mr. CARRUTHERS: Would the hon. member permit me a question before he leaves that point? He has spoken of the prosperity of France. Would he explain how that country is more prosperous than Canada when the value of the franc is at such a low figure whereas our dollar is at par?

Mr. LeSUEUR: In answer to my hon. friend I would say that if you study the rates of the exchange for the franc during the last year you will find that the franc has remained practically stable at its present rate of exchange. You may say that the value of the franc has been stabilized at that figure, and has remained there for a very considerable time past.

Now, let us look at the question of expenditure, and in order to get possibly a broader and truer conception of our present financial status, I should like to consider not only the last budget but a few preceding budgets. But before doing that let me refer to the question of the guaranteed railway bonds brought up by the hon. Minister of Justice. I can say that so far as I am concerned in this discussion it is of very little concern to me whether we call the bonds which are guaranteed and from time to time floated on the security of the Dominion direct obligations or indirect obligations. The substantial nature and the incidence of our railway obligations make them as direct a burden on this Dominion as our so-called direct obligations, no matter what difference in name we may adopt, and while, to avoid argument, I am calling our railway Dominion-guaranteed debts indirect obligations, I am treating both our so-called indirect and our direct obligations as equally active and equally proximate in their burden.

Let me illustrate why this must be the case. For some years back our railways have required a certain amount of money each year. Prior to 1924 it appears to have been the practice to advance the greater part or the whole of the railway requirements in cash, and to meet either a small amount or none at all of those requirements by the issue of bonds guaranteed by the government. Since the year 1924 we have advanced a smaller proportion of the requirements of the National railway system in cash, and a greater proportion by way of bonds guaranteed by the Dominion. For example, in 1923 our railways required about $77,863,000. All that amount was advanced in cash to the system and naturally it appeared in our balance sheet as affecting the direct public debt. In the year 1925 our railways required 82 millions and some odd thousand dollars. Of that amount $18,000,000 or thereabouts was advanced by way of cash and of course appeared as directly affecting our public debt. The balance of $64,000,000 or thereabouts, was raised by bonds guaranteed by the Dominion and then handed over to the railway system and appears as an indirect obligation. The substance was the same; only the form was different. It is merely a matter of convenience with the Acting Minister of Finance as to whether he raises the money by way of guaranteed bonds and hands it over to the railways, or makes direct advances to them in cash. Now proceeding on that basis, and including the cash advanced to the National Railways and the money secured for them by guaranteeing their bonds, we find that our total expenditures were for the year 1923 about $434,000,000; in 1924, about $420,000,000; and in 1925, about $426,000,000. If we go further and look at the estimates for the coming year ending March 31, 1926, we find that the estimates for ordinary and net capital expenditures and the requirements of the National Railways as tabled this year represent about $409,878,039. If we add to that an amount for special expenditure equal to what

was paid out therefor in the year just closed, and also allow, say, $10,000,000 for supplementary estimates which are yet to come down, we have an expenditure for the coming year of approximately $424,000,000 or $425,000,000. My point is that our total expenditures have been running more or less the same for three or four years past, and it looks as if they will be the same in the coming year.

Now then let us look at the details of those expenditures. We naturally expect that such expenditures as pensions, Soldiers' Civil Re-establishment and so on, will, by their very nature, and apart from legislative addition, decrease year by year. Such is actually the case. The interest charge on our public debt we would also expect to decrease gradually year by year. Money is now more plentiful and interest lower than when that debt was incurred, and with each refunding operation we can expect a reduction. Such is actually taking place. From $137,000,000 in 1923 our interest charge is now $131,000,000, or a saving of about $6,000,000. Likewise in our expenditure for Soldiers' Civil Re-establishment we can expect a gradual and automatic decrease. From about $13,365,000 in 1923 it has dropped to $8,340,000, or a saving of about $5,000,000. Likewise our expenditure for the adjustment of war claims has dropped from $6,784,000 in 1923 to practically nothing to-day. But outside of these expenditures, which are legacies from the war, which must naturally decrease as we get further and further from the war, the expenditure in what is properly civil government remains to-day practically the same as it has been for the three or four years back. For the purpose of illustrating this I have prepared a table taken from the Public Accounts of the years 1922, 1923 and 1924, and based on the estimates which are tabled for the years 1925 and 1926. I might go through the whole list, but with the permission of the House I will place it on Hansard:

	1922	1923	1924	1925 (based on estimates submitted to House)	1926 (based on estimates submitted to House)
Agriculture	$ 6,758,636	$ 7,169,381	$ 7,787,107	$ 6,809,085	$ 6,703,855
Customs and Excise	8,250,557	7,779,930	8,017,227	10,052,315	10,688,259
Finance	8,017,371 (1)	4,895,906	4,905,754	.....	.....
Immigration and Colonization	2,052,370	2,354,975	3,482,986	4,101,235	3,393,770
Indian Affairs	3,217,108	3,306,232	3,830,690	3,827,058	3,779,516
Interior	7,097,341	6,897,912	6,947,575	.....	.....
Justice	4,113,893	4,191,729	4,252,565	4,111,298	4,073,855
Labour	1,884,933 (2)	2,209,631	1,429,274	1,641,715	1,610,930
Legislation	3,941,747 (3)	2,653,566	2,367,036	2,378,713	2,288,863
Marine and Fisheries	6,518,302	6,316,077	7,345,975	8,612,774	8,502,370

Note 1. This figure $8,017,371 includes costs of loan flotation $3,302,674. Cost of loan flotation for 1923 and 1924 were $3,065,095 and $7,705,543 respectively, though they are not included under this heading of Finance in above figures for 1923 and 1924.

Note 2. These figures include $500,000 spent in relief of unemployment in 1922, $944,877 in 1923, and $4,273 in 1924, which accounts for their variance. Nothing is included for relief of unemployment in the estimates of 1925 and 1926.

Note 3. This figure includes the cost of the 1921 Dominion elections—$1,739,988—which accounts for the variance between the years.

Note 4. The figures for 1922 include $6,326,800 paid to Canadian Government Railway system to make up deficiency in receipts to meet working expenses; the figures for 1923 include $5,695,609 paid for same reason; no such sum paid in 1924. This accounts for the variance between the years.

Note 5. The figures for 1922 include cost of Dominion Census of 1921 which was $1,664,088.

Note 6. These figures do not include any expenditures under Canada Highways Act 1919, which in 1924 was $4,066,210.14.

It will be observed by one who reads these figures that there is no appreciable difference in the expenditures of the various departments during the period covered. Some variance of expenditures in the above years may appear in these tables, but they are explained as noted on the table as being for special items, such as Dominion census or Dominion election and so on. The point that the above facts and this table bring to the attention of hon. members is that the only material reductions which have been made are in those legacies or burdens which we have derived from the war which have automatically decreased, and that in all other departments our expenditures remain at practically the same level. This I say is essentially wrong, and I maintain that we should make a very aggressive attack on the expenditures

of the several departments of our government. Let us now look for a minute at the revenues we are collecting. They are as follows:

1922.. .. .. About	$381,000,000
1923..	394,000,000
1924..	397,000,000
1925..	344,000,000

In that $344,000,000 I am not including the $4,000,000 which we received by way of bonds in lieu of back interest. If we treat that merely as a better security for interest already due, then we should not include it. If we treat it as a receipt then our receipts would be about $348,000,000. I have not seen any estimates for 1926, but if the government expect to get a revenue more or less equal to that of the year 1924, namely $397,000,000, then allowing for the reduction in revenue of $24,000,000 made in the 1924 budget, we have left $373,000,000, or a deficit of nearly $51,000,000; and if we look to our greatest revenue, which was in 1920, of about $434,000,000, and again allowing for the reduction of $24,000,000 as provided for in the budget of 1924, even then we have a deficit, and I would point out that the year 1920, was a year of great boom and inflation, a condition we cannot hope to have recur in 1926.

Let us look at three or four of the salient or outstanding features which obtrude themselves from this statement of facts. In the first place we should note that the war is over and has been over for six years, but that we are still collecting practically full war taxes. The revenue received from these extraordinary taxes, such as income war tax, stamp tax, sales tax and other nuisance taxes, would run about $181,000,000 for 1923, $182,000,000 for 1924, and possibly about $150,000,000 for this year. But we are still collecting all these war taxes, while the war has been past these six years, and we are still piling up deficits. Our direct and indirect obligations are still mounting, and have increased in the last three or four years about $150,000,000. This is in marked contrast with the United States.

Mr. MARLER: Allow me to contradict my hon. friend. It is not $150,000,000 in the last three years. If refundings are taken off my hon. friend would find it about $100,000,000.

Mr. MEIGHEN: No.

Mr. LeSUEUR: I think $150,000,000 is the right figure, without refunding.

Mr. MARLER: No. If my hon. friend will take the direct and indirect obligations less refunding, it would not amount to that sum.

[Mr. LeSueur.]

Mr. LeSUEUR: I must say I still maintain my figure of $150,000,000, which was figured carefully on the basis which I mentioned when I set out to discuss this matter.

Mr. MARLER: My hon. friend is not right.

Mr. LeSUEUR: It is also in marked contrast, as I have said, with the condition in the United States where they have not only reduced their taxation one-half, but reduced their debt. Similarly it is in marked contrast with conditions in Great Britain.

The second point which, I think, we should note in our situation is that a large part of our debt is uncontrollable. We have, on our direct debt, annual interest charges of about $131,000,000. We have on our debt guaranteed for the railways, that is to the public, annual interest charges of about $40,000,000. Then we have other matters such as our war pensions and so forth. But I do not think that the amount of our uncontrollable expenditure is any excuse for not making reductions in our expenditures nor is it any cause for pessimism; if we look at the United States and Great Britain we find that their uncontrollable debt three years ago was practically in the same proportion. In Great Britain in 1923, for interest on their war debt, or rather on their total debt, and for pensions, they paid out about £460,000,000, and their total expenditure for that year was about £812,000,000. In the United States, according to the Bureau of the Budget, their uncontrollable expenditures for 1923 were $2,100,000,000 and their controllable expenditure was $1,765,000,000. Therefore, I say the figures in our case are no excuse or reason for discouragement.

Third, can we get over our difficulty by increasing taxation? There is not the slightest chance of either increasing the rate of our direct taxation or imposing new direct taxes. It has been well said that a tax is the forcible exaction by the state of a portion of the earnings of the individual for public purposes and taxation is beneficial only when the state can spend that money collectively to better advantage than the individual can handle it by saving it or spending it. That is pretty much the basis of taxation and our industries today are suffering from heavy taxation. They are possibly being hindered from making a better recovery than they otherwise would, and we can safely conclude that we cannot get relief for our financial position by increasing our rate of direct taxation or by imposing new direct taxes.

The fourth point I would like to make is this: What effect is this situation going to have on our public credit? The Acting Min-

ister of Finance (Mr. Robb) says that our public credit is better than it ever was before. I have some reason to doubt the correctness of that statement. Public credit depends upon a continued policy of gradually reducing the public debt and keeping our expenditures within our income. While this may not have touched our public credit as yet, if we go on piling up deficits or having our expenditures greater than our receipts ,and sitting helplessly by or drifting along, a time will come when it certainly will impair our credit.

5 p.m.

Now, at what point have we arrived? Our total yearly expenditures are not being reduced; our annual revenue cannot be increased by higher taxation; and our deficits are piling up. When I say "deficits," I refer to the total of our direct and indirect obligations, for which we are equally liable. The question is: What are we to do? There is no use in drifting along idly. There is no use in waiting for better times or for Providence to help us out, because Providence helps those who help themselves. We should take aggressive measures to handle this situation and not be dependent upon Providence to save the country. What should we do? I am not a prophet, but I am going to venture some suggestions which, although I do not insist they are correct, I offer to the House for their consideration.

In the first place, we should adopt uniform and up-to-date business methods and principles in handling the routine affairs of government, as if it were a great business corporation, and political considerations should be absolutely tabooed. For the purpose of illustrating exactly what I mean, I am going to ask hon. members to follow me in discussing the means taken in the United States to reduce expenditures and to bring about economy and business methods.

About the beginning of their fiscal year, 1922, the United States government decided that, in the interests of their people and for the purpose of reducing taxation, an aggressive campaign of economy must be instituted. The Bureau of the Budget was formed and the United States were singularly fortunate to have at that time the gentleman whom I have named, Andrew W. Mellon, as their treasurer. They were also fortunate in securing the services of Charles G. Dawes, as director of that bureau. Mr. Dawes has since gained a world-wide reputation in his adjustment of European matters. He gathered about him a number of business men who served on the dollar-a-year basis, and with their help he enunciated two principles which served as the main principles of the bureau. The first principle was that the bureau should review the expenditures of the various departments, and in conjunction with each department should then eliminate all expenses which could be reasonably eliminated or should postpone any expenditures which could be reasonably postponed. The second principle consisted, in the formation of a number of co-ordinating boards, composed almost entirely of members of the civil service. They were really inter-departmental committees with a practical business man, in most cases, at their head. The objects of those co-ordinating boards or inter-departmental committees were to eliminate waste and duplication, to infuse economy throughout the civil service, and so to co-ordinate matters as to get team play between the various departments. Of course, their principal object was the installing of uniform and up-to-date business principles in the routine business of the government. I might say that some of these boards were: Board on Printing, Board on Traffic, Purchasing Board, Board of Contracts and Adjustment, and a number of other boards of more or less similar nature. I will illustrate how these co-ordinating boards work by using two examples. For instance, the printing board functions under the chairman or head of the Bureau of Printing and Engraving, Mr. Carter. That board first endeavoured to co-ordinate, and did co-ordinate, the printing work of the various departments so as to eliminate as far as possible what is known as "rush work". Rush work costs about twenty per cent more than ordinary work. They next largely eliminated the expense involved in what is called "author's corrections" which is quite a heavy item in a big government expenditure. By co-ordinating and watching the work of the various departments they largely eliminated these "author's corrections". Then they established a style manual for the various departments; they established standard blank forms; a standard of quality, weight and size of letter heads to be used for the various departments; they cut down the use of embossed paper as much as possible. Further, they looked into the number of annual reports printed and eliminated a large number which they considered absolutely unessential. In that item alone I understand they saved about $180,000 a year. They took up the question of mimeographing, multigraphing and printing considering where economy in one commenced or where it ceased in the other, and by arranging a proper point where mimeographing should stop and printing commence they

saved large sums of money. It is estimated that the Board on Printing, in conjunction with reforms made in the bureau of Engraving and Printing itself, saved over a million dollars a year.

Then let me refer to their purchasing board. This board, composed, as I have said, of members of the different branches of the civil service which were particularly concerned, established a sort of clearing house whereby orders from the various departments could be cleared, and thus avoid as far as possible the purchase of new material when it was not necessary. They established the practice of buying in carload lots f.o.b. factory, they established the practice of definite quantity purchases; and according to their report they saved in a great many of the principal items so purchased from 8 to 25 per cent on the old method of doing business. In the post office department they saved 15 per cent on the paper purchased; they saved 25 per cent on stationery, and on what they called "miscellaneous items" they saved 11 per cent. Those are the figures presented in the 1924 report of the Bureau of the Budget. This will give hon. members some idea of the saving effected by co-ordinating the routine business of government. To bring it home, I would say that the director of the bureau of the budget reported in the first eight months' operation of that bureau a saving in the routine business of government of about $250,000,000. Further: At the opening of 1923 the estimated expenditures of the United States government were some $823,000,000 over their estimated revenues. The problem was put up to the bureau of the budget to eliminate that difference. In the first seven months of that year the bureau saved $321,000,000. In the same period the receipts exceeded expectations by some $408,000,000. In the remaining months of the year the bureau of the budget saved further money; receipts increased; and instead of a deficit of $823,000,000 the United States had a handsome surplus at the end of the year.

There is another side to this question of co-ordinating government routine business, and that is that the work of those co-ordinating boards, composed, as I have said, of civil servants themselves, shows that there was transfused something of the idea of economy throughout the whole service. General Lord, who succeeded General Dawes as the director of the budget, when speaking of the effect of these boards in inculcating the idea of economy throughout the whole civil service, read as an illustration certain letters which he had received. Here is a letter from a fireman:

[Mr. LeSueur.]

> I, —— ——, filling position of fireman and drawing laborer pay, I save the diferance between maximent pay of fireman and manuel laborer; then i am economical with materrel; and also assisted in planing the change of grate in boilers which saves quite a bit of coal, which means dolars.

General Lord, commenting on this letter, said:

> By making the change in the grates in the boilers in this particular plant 400 tons of coal a year was saved.

He quotes another letter, this time from a caretaker, who says:

> By using brooms longer than others would have used them, I have save 4 brooms. In a similar manner I have saved 4 mops, 3 dust pans, 3 brushes, 60 cakes soap, 40 ‡ washing powder. Now saving 30 lb. ice per day. (Signed).

General Lord also quotes this letter from a truck driver:

> I, —— ——, do make this statement, that I have keep the foard truck in good condision and keep it bissy at work and keep the men all bissy and seen that there was nothen wasted during the time to the best of my knowledge.

I quote these letters, Mr. Speaker, as showing some evidence of the spirit of economy which these boards, composed of civil servants themselves, managed to infuse in the personnel of the whole service.

Now as to the work of these co-ordinating boards. We know what happened in the government expenditures of the United States, how those expenditures were cut and trimmed, and how to-day, largely as the result of the work of those boards, the civil service at Washington is being readjusted and the departments are being rearranged and grouped so as to get the most economical result. I should like to read, as more or less proof of what I have said, the conclusions arrived at by President Coolidge and by General Lord on the work of those boards. In the course of an address in 1923, President Coolidge said:

> These co-ordinating agencies are accomplishing the purpose for which they were created, to provide machinery through which to co-ordinate the activities of the departments and establishments so as to guarantee the most provident and efficient expenditure of public moneys, and to furnish the executive an agency for imposing a unified, concerted plan of governmental routine business. The results attained show how admirably these important agencies are functioning. They are performing a most important part in the task of developing team work, instituting economies and applying business principles to government routine operations.

And General Lord said:

> My study of the activities of these organizations impresses me more and more with the indispensable part they play in carrying out any effective policy of economy with efficiency, and deepens my admiration of the wisdom and foresight of the first Director of the Bureau of the Budget (Mr. Dawes) to whose wisdom we are indebted for their creation. Without

them team work in the government would be impossible, and an organization without team work is in sorry plight.

Now, turning to our own situation in Canada the question naturally arises: Is this system applicable to our own government expenditures, which are much smaller, and to our own government system, which is much simpler? I do not think it is really necessary for me to answer that question; I think hon. members realize that the answer is yes. But in relation to it, I should like to read a few statements made by the Anditor General in the introductory remarks to his last general report. He points out that by cutting down the size of his report and without eliminating any material information there was effected a saving of some $6,000 in printing alone. I would like also to read something which he says on page 22:

> In conclusion, though I am not in a position, under present conditions, to make a thorough examination of the system of accounting in the various departments, still I am convinced that the conditions in the government services would benefit considerably by the application, more generally, of modern methods of accounting.
>
> Standardized methods have the effect, when strictly applied, of creating a greater degree of uniformity, coordination and co-operation with correspondingly more complete control of existing and prospective revenue and of expenditure and also of providing a better grasp of the general situation with regard to operations and affairs through reports showing more clearly and completely the various phases of the national finances.

And further:

> The sooner attention is given this matter the better, as the system of accounting and auditing called for by the great development of the Dominion should be the last word in efficiency and this it seems to me would result in economy and subsequent reduction in the present burden of the taxpayers of this country.

I want to say here that in our civil service we have a great many men of marked ability, and I believe we will find, both in the chiefs and in the staffs of the departments, men who are just as patriotic, just as eager to co-ordinate, just as eager to economize, as were found among the civil servants of the United States. I would go further: I believe our civil service throughout the country is just as eager to co-operate in such an economy campaign as I have explained as were the United States civil servants, and I am confident that if some such system as the one I have just described was adopted we would get real results. The point is, however, that the civil servants cannot themselves initiate the campaign. We have heard a great many criticisms of our civil service, but any system or campaign of the kind I have mentioned must be instituted by the government, not by the civil service; the government must take the initiative and bring in these reforms.

Turning to my second step towards reducing our expenditures, I would say we should eliminate all expenditures which we reasonably can eliminate and postpone all that can be postponed until our financial situation is thoroughly sound. It is not necessary to elucidate this statement, but I believe if such a principle had been applied, if we had kept in mind that our depression could be materially relieved by a reduction of taxes, and to that end expenditures must be reduced, it being impossible to increase our revenue we would not have seen $600,000 spent on the completion of the tower in this building; would not have seen 40,000,000 francs expended on the Scribe hotel property, nor would a great deal of money we have expended on commissions have been spent in that way. A great many of these commissions are still operating, but up to date no real result has come from any of them.

I may just add in passing that this economy campaign is not confined to the United States, they have had a similar campaign in Great Britain. An economy committee was appointed in 1921 under Sir Eric Geddes, and that committee has made three reports. In the civil government, as they call it there, which embraces all their civil departments, they have effected a reduction in the last three years, I believe, of about £200,000,000— a marvellous accomplishment, and the result largely of the work of the economy committee in co-operation with the departments.

I should like to deal for a moment with our railway situation, which has been discussed by several members of the House. I am thoroughly in accord with the suggestion that the government should investigate and develop the idea of amalgamating the roads. Present conditions make that an imperative duty on the part of the government. One section of the members of the House believe that the Canadian Pacific railway system should take over the Canadian National railways. We must remember in that connection that the Canadian Pacific is a very efficiently managed road; that during a time of depression they have not only paid their fixed charges, the interest on their preferred stock and the usual dividends, but have had a considerable surplus. They have been able to compete in times of depression with the National Railways while the latter were delving deeply into the national treasury to keep the system in an efficient state and in the position of a strong competitor. Naturally under these conditions the Canadian Pacific will endeavour to protect its shareholders in connection with any proposed assumption of the extra burden of the National

system. I agree with some hon. members that the people of Canada will very carefully scrutinize any agreement which is proposed whereby the Canadian Pacific are to take over the Canadian National Railways; in fact, it is possible that no matter what terms that agreement may contain the people would be very chary about accepting it and that even if the powers of the railway board were increased as a measure of protection. On the other hand, other hon. members suggest that the Canadian National Railways should take over the Canadian Pacific. I do not think that that is the easy and simple problem which some of the speakers have indicated. The Canadian Pacific railway system represents not only $260,000,000 of ordinary stock, but about $1,100,000,000 worth of assets which would have to be absorbed. It further represents about 20,000 miles of railway trackage, including 5,000 miles outside of Canada; and I fear that the experiment of the Canadian National taking over the Canadian Pacific would be an extremely hazardous and extremely dangerous one. In fact, one of the greatest difficulties, I believe, would be that of financing the transaction. I have grave fears that the attempt of the Canadian National Railways to take over the Canadian Pacific would seriously impair Canada's credit in banking circles both in Canada and in the important financial centres of the world. I do not think that banking circles would look upon the proposal to put the Canadian Pacific under public ownership—though I am entirely open-minded on the question of public ownership—without grave consideration as to the consequent effect on Canada's credit. The government, I believe, should develop the question of amalgamation. Possibly they may find it feasible, but for the immediate present I believe our practical duty is to consider the present situation of our own railway system; and for a few moments I should like to examine that question.

In this connection I want to say that I fully realize that our two great railway systems are the arteries through which our industrial life flows and by which it is made possible, and that their continuance and their prosperity and efficiency are of vital concern to us. But while I realize that, I also think that it is pretty nearly time that we should ask: How and when are the Canadian National railways going to stand on their own feet? The statement brought down by the Minister of Railways (Mr. Graham) showing that $118,000,000 had been advanced or secured for the Canadian National Railway system by Canada during the calendar year 1924 was astounding. It becomes more startling when we hear that it only cost $163,000,000 to build the Transcontinental railway. But what I want to point out is this, that the fixed charges to the public payable in connection with our railways were only $38,000,000, and therefore there must have been in the hands of the railway for expenditure in the calendar year 1924, approximately $80,000,000. Now the question is, how was that money spent? We have their balance sheet, and in looking through it I find no statement of receipts and expenditures, which is for the ordinary man possibly the most illuminating statement in an annual report. The only thing I can do is to take the consolidated balance sheet for 1924, and compare it with the consolidated balance sheet for 1923, and try to discover where that $80,000,000 has been spent; and my conclusions are liable to be vague and inaccurate because I am not sufficient of an accountant to be sure that I am right. If I turn to the Canadian Pacific annual report for the same year, 1924, I find on page 26 a statement of receipts and expenditures which shows all the operating net income received from their railway, their income from other sources, the total amount received from the sale of securities, and so on; and then on the other side a complete, compact, and concise statement of how that money was spent, with references to later tables explaining the different items. I would like to bring to the attention of the Minister of Railways that this House should have a statement of receipts and expenditures from the Canadian National Railways. This House should be informed of how that $80,000,000, over and above the fixed charges of $38,000,000 on the debt to the public, was spent. The sums are tremendous. We are accountable for voting those sums, and I think we should know exactly how they were spent, whether economy was practised or whether extravagance governed. I think that is our duty.

Mr. MEIGHEN: Is the hon. member right in saying that this House was accountable for voting that sum? We did not vote it. We were denied the right to vote it by the government.

Mr. LeSUEUR: I will accept the statement of the hon. leader of the opposition (Mr. Meighen) on that matter.

In further developing this question as to when and how the Canadian National railway system is going to stand on its own feet, I would like to point this out: I believe that the Canadian people have been very generous in their grants to the railway, and very

patient in awaiting results. I believe they have come more or less to this conclusion: They believe to-day that with the enormous sums granted to the Canadian National Railway by the Dominion of Canada, that railway is now sufficiently equipped with rolling stock, sufficiently equipped with motive power, and has a sufficiently good roadbed and the miscellaneous properties that a railway requires and I note by their balance sheet for 1924 that the Canadian National Railways have on hand about $30,000,000 in cash, and about $50,000,000 in materials and supplies. This is more or less the same as it was at the end of 1923; therefore, surely the Canadian National Railways are now in a position to stand on their own feet, and certainly they should be, provided we take care of the fixed charges to the public. The Canadian public are going a very long distance in saying: We expect no dividends; we do not ask you to pay interest on the debt represented by cash advanced to you by the government; we are willing to take care of your fixed charges to the public to such extent and so long as may be absolutely necessary, but outside of that $38,000,000 or $40,000,000 you cannot ask this House for a cent. If the Canadian National Railways when thus relieved of their fixed charges cannot now carry on and operate, then I think we should have what is commonly called a showdown.

Mr. MEIGHEN: Would the hon. member be in favour of giving the directorate carte blanche to borrow without the authority of parliament or the Governor in Council?

Mr. LESUEUR: Absolutely no. I would be inclined to keep them on the same basis as they are now, but to limit the advances they might expect from this House to the fixed charges of $38,000,000, or $40,000,000. I would go further; I believe that unless you take a definite stand of that kind, you are not going to get the utmost results from the operation of your railways. If the railway cannot carry on with that $40,000,000 taken care of, then I think that the responsibility for any further expenditure or advances, should be placed directly on the government. In other words, we should have some governing body, some check on the month to month outgo of the Canadian National Railway system, and if they require sums beyond what is called for by their fixed charges, the government must be consulted, must be apprised of all the details, and must O.K. that expenditure before the money is advanced. That method of establishing a check may not be practical, but my point is that some such method, some check over the expenditure of the Canadian National Railways must be sought and must be enforced.

Mr. MEIGHEN: Is not that the law to-day? Has not all capital expenditure first to be submitted to the Governor in Council and approved?

Mr. LESUEUR: I maintain that it should be submitted, but if we are informed correctly, when the Scribe hotel was purchased the Minister of Railways knew nothing about it apparently until after the deal was closed.

Mr. MEIGHEN: Sir Henry Thornton gave evidence to the distinct contrary.

Mr. LESUEUR: There is no question that the government should keep in touch from month to month and should know constantly whether the Canadian National Railway is being conducted, on lines of economy or extravagance. The sooner we take means to bring that responsibility home to the government and to let the railways know that they must stand on their own feet the better it will be. Necessity is the mother of invention. If we are ever going to get real results our National Railways have got to know exactly the limit to which they can go.

Now, Sir, I should have liked to express some views on immigration, which I believe is one of our vital problems and the solution of which I regard as a very necessary measure in getting out of the present depression and out of the present financial situation. But that is an entire subject in itself, and I have purposely curtailed my other remarks so as to close before six o'clock. Therefore, all that I will say about immigration is this: I believe that owing to the essentially individualistic and economic character of migratory movements to-day and owing to the conditions in certain countries of Europe and to the regulations as to emigration to the United States, we have to-day an exceptionally good opportunity for an aggressive immigration policy. The essential need in a real immigration policy appears to be co-operation between the Dominion government, the various provincial governments, and the Empire Settlement Board. The next point is that owing to the nature of immigration you have got to have an inducement for the immigrant; I believe the greatest inducement which we can offer is that the immigrant will be taken care of when he locates in this country, and if that inducement is to be solid, it must be on a more or less sound and businesslike foundation. I believe these aims could be accomplished with a great deal of practicalness to-day. I hope at some later time in

this House to deal further with that proposition.

Now let me say in conclusion that I have endeavoured this afternoon to present a reasonably accurate view of our trade conditions and the necessity of reducing our taxes in an endeavour to better that position; also to give a fairly accurate view of our financial situation and the way we are heading. I have suggested some remedies. These remedies I may briefly summarize as follows: First, I believe that we must have a strong and stable fiscal policy, administered as I have said with the advice of a competent tariff commission which will reasonably assure our industries of intelligent, stable and businesslike treatment. Second, that we should have an aggressive attack on our expenditures in the routine business of government that we should deal with our expenditures in the same way as any business corporation would, and should establish inter-departmental boards with the object of bringing up-to-date modern business methods into our routine business and by co-operation and team work, eliminate waste and duplication. Third, I believe that we should establish a check or governor on the expenditures of our railway system. And lastly, which is possibly the kernel of the whole business, I think that our government should stop the policy of drifting along in apparent helplessness without facing squarely the difficulties which confront them; and their slogan should be "Business and results," not "politics."

Mr. G. A. BRETHEN (East Peterborough): Mr. Speaker, I have listened with much pleasure to the address which has just been delivered. It stands out very brilliantly in comparison with much of the partisan debate that we have heard so far. I will try to follow the ideal set by the hon. gentleman and in doing so will endeavour to speak without prejudice, actuated by the sole desire to examine the question "What is wrong with Canada?" and if possible suggest an answer.

Canada is so diversified in its interests and outlook that no solution can be arrived at unless a spirit of sympathy and genuine co-operation holds sway. Lacking such co-operation between the different units that make up the Canadian commonwealth and between the different classes in each community, any fiscal policy is certain to fail. Enjoying such sympathy and co-operation I believe that under almost any fiscal policy Canada is certain to succeed.

"What is wrong with Canada?" Answering this question I would say a lack of teamwork; an attitude of pulling apart rather than one of pulling together: a lack of sympathy and understanding between rural and urban interests within the community, and a prevalence of sectional interests within Canada herself. What is the remedy for this condition? Some few years ago when the thought laid hold of the people of Canada that the Canadian National railways were our railways, that we the people of Canada were vitally interested in their success or failure, things began to happen to the Canadian National Railway—it gained the greatest asset instrumental to the success of any organization, the good will of the people. So with the industrial and commercial life of this country. Let the people feel that Canadian industries are our industries, that Canadian farms are our farms, that the interests of both are immutably joined together, that one cannot succeed if the other fail, and that both are worth saving. When the people of Canada are actuated by such a feeling, Canada as a whole will move forward. In this connection the Farmers Advocate of April 16, last, under the editorial "The same road and the same gait" has this to say:

> Capitalists, manufacturers, tradesmen, labour and urban people generally were never more convinced than now that poverty and prosperity are closely associated with the economic status and well being of the farmer. It has taken more than words and oratory to make the lesson understood. Only decreased sales, lack of employment and a general slowing down of business could persuade the other classes of people that whether they like it or not they will have to keep step with the farmer.

What is throttling the life of some of our Canadian industries to-day? Lack of sales. With increased sales follows increased production, lower overhead costs and, with efficient management, more profitable returns. Develop in Canada the morale that will boost the purchase of Canadian products. That does not mean to apply only in a limited sense to made-in-Canada boots and shoes, hats and caps and farm implements, but just as truly to Canadian eggs and cheese, butter and bacon, apples and fish. Let Canada do her best along these lines, and such a revival in trade will result as will make every legitimate industry in Canada as busy as a Canadian beaver.

The heart of the Canadian people is sound. What stands in the way of this much-to-be-desired condition? A cloud of misunderstanding seems to exist in the minds of some people that, given the privilege to enforce a system of still higher taxation upon the consumers of this country that industry and Canada as a whole will prosper. Such a system will always be resented by the people taxed. Such a system will always prove a barrier to

that bond of sympathy and co-operation that would ensure maximum sales within the country. When you tax the over-burdened taxpayer of East Peterborough on the implements he uses and the clothes he wears, to give the benefit of such tax to some gentleman in Toronto or Montreal, you do not add to the taxable wealth of Canada. You do hamper and prevent the just and equitable distribution of such wealth.

The United States of America has often been referred to in this debate because of the success it has attained, supposedly to the policy of protection. Mr. Coolidge, making his maiden speech in Washington on December 6, 1923, has this to say regarding United States agriculture, then and still in a deplorable state of distress:

> No complicated scheme of relief, no plan for government fixing of prices, no resort to the public treasury will be of any permanent value in establishing agriculture. Simple and direct methods put in operation by the farmer himself are the only real sources for restoration.

If such words were true of agriculture in 1923, have they not been proven equally true to-day? The American farmer was hoodwinked, or hoodwinked himself into believing that high protective tariffs would alleviate his conditions. Apparently the very reverse has been true, and he is compelled, as have farmers in Canada, to fall back on simple and direct methods of organization and co-operative marketing.

But if the statement of President Coolidge is correct concerning agriculture, is it not equally true of industry? In Canada we have the spectacle of some industrial concerns, notably the binder twine industry of Brantford, working under simple and direct methods, put in operation by the industry itself, and buying their raw materials in the open markets of the world, working overtime, expanding its operations to the point where it is acknowledged to be the greatest of its kind in the British Empire, and paying regular dividends to its shareholders. Side by side with this industry in the city of Brantford, we have other industries enjoying special privilege in the sale of their products and given practicaly free trade in the purchase of their raw material. Yet according to my hon. friends to my right, these industries are closed or in a very unhealthy condition.

What conclusions can we draw from such a situation?

1. That altogether too much emphasis has been placed upon the effect of the changes made in our tariff during the past two or three years. These changes averaging between one and two per cent are so insignificant that they could not possibly be responsible for either the good effects claimed by the government or the bad effects claimed just as vigorously by the opposition.

2. That the real cause—and admitted so by the representatives of industry themselves—is lack of sales.

I remember during the past year that in our caucus room we met representatives of the implement manufacturers of Brantford and they proceeded to place the industrial situation in Brantford before us. They made the statement that many factories were closed, and I asked one of the gentlemen, the spokesman of the party, "Are all the factories in Brantford in that condition?" And he said, "No, there is the binder twine industry, for instance, that is working night and day." But, he said, "Of course they have a good sale for their product." I said, "Is the question, then not one of lack of sales in all these industries?" And he admitted that it was. "Well then would the proposed increase in the protective tariff alleviate or would it aggravate that situation? Would charging a higher price enable them to sell more, to increase their sales, or would it not?" There was no answer to that question.

Now just on the side, in leaving that meeting I was informed by a gentleman from the city of Brantford that the spokesman of that party started in some years ago—and he was still a man in his prime—with practically nothing and had recently sold out one-half interest in his business for half a million dollars. He claimed that he got very little assistance from the protective tariff, that he did not use the tariff to fix his prices in any way, and yet he had made good in his particular industry in Brantford.

Developing this conclusion that the problem is one of lack of sales I will go further and state that I do not believe the increased tariff imposed by the United States against Canada and the world helped very materially in bringing about conditions in that country, as they exist to-day. I admit it hurt us by dislocating our trade, but it certainly did not benefit the American farmers, and I repeat that I seriously question if industry in the United States reaped any material gain. We are accustomed to this argument advanced by some hon. members; "The United States has a high protective tariff; the United States is prosperous; therefore high protective tariffs bring prosperity". But here I would like to remind my hon. friends that during the past winter in the highly industrialized city of Detroit the Ford motor plant, one of the most highly financed, highly organized and efficiently

managed industrial concerns in the world, was running but three days a week, and thousands of unemployed were almost on the bread line.

Conditions in the United States have, by way of comparison with those in Canada, entered so frequently into the discussions in this House that I will be pardoned if I refer to them. From first hand information received through personal interviews with people across the line, real estate dealers, bankers, contractors, workers in motor plants and allied industries, I have drawn the conclusion that the happy conditions in the United States we so often hear about from our friends to the right are due, not to highly protective tariff, but to the following reasons:

1. To the tremendous financial advantage gained by the United States by her late entry into the world war.

2. To a commendable reduction of some $5,000,000,000 in taxation during the past four years.

3. To an immense building boom—suspended during the war period—of some $5,000,000,000 or $6,000,000,000 spread over the cities of the central and northern states.

4. To a system of financing, the very reverse of that practised in Canada, whereby credit instead of cash sales are encouraged. Fully 90 per cent, I believe, of the sales in real estate and business contracts, in fact, almost every commercial transaction is performed on the basis of a cash payment down of 10, 15 or 20 per cent, with the balance on paper.

5. To the fact that apparently everybody in the big cities, the real estate dealer, banker, doctor, lawyer, worker in the factory, even the nurse in the hospital, subscribes to this financial practice.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, April 30, 1925

The House met at three o'clock.

REPORT

Report of the Department of National Defence on Civil Aviation, including civil operations for other government departments undertaken by the Royal Canadian Air Force for the year 1924.—Hon. Mr. Macdonald.

PRIVATE BILLS

FIRST READINGS

Bill No. 48, from the Senate, for the relief of George Thomas Grigor.—Mr. Martell.

[Mr. Brethen.]

Bill No. 49, from the Senate, for the relief of Ethel May Sheriff.—Mr. Church.

Bill No. 50, from the Senate, for the relief of Max Arno Frind.—Mr. Hocken.

Bill No. 51, from the Senate, for the relief of Elizabeth Burns.—Mr. Garland (Carleton).

Bill No. 52, from the Senate, for the relief of Fred Herdman Ogden.—Mr. Church.

Bill No. 53, from the Senate, for the relief of Marion Gooderham Smith.—Mr. Hocken.

Bill No. 54, from the Senate, for the relief of Edith Mary Wiles.—Mr. Garland (Carleton).

Bill No. 55, from the Senate, for the relief of Annie Kate Winch.—Mr. Hanson.

Bill No. 56, from the Senate, for the relief of Florence Kate Coutts.—Mr. Ryckman.

Bill No. 57, from the Senate, for the relief of George Kerr Jess.—Mr. Hanson.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

AERATED WATER BEVERAGES

Mr. ANDERSON:

1. How many aerated water factories are there in Canada?

2. Have their products any alcoholic content, and if so, what is the percentage?

3. What was the value of the beverages made from citrus products imported into Canada from the United States during the calendar year 1924; and what was the duty collected on same?

4. What is the percentage of alcohol in these beverages?

5. What is the alcoholic content in Orange Crush; Lemon Crush; Whistle and Green River, respectively?

Hon. Mr. LOW:

1. In 1923, there were 295 plants making aerated waters in Canada.

2. and 5. No information is available, but the subject is under investigation.

3. Separate statistics of imports of citrus fruit juices are not available, except in the case of crude lime juice. They are grouped in the tariff with other fruit juices. Imports of fruit juices from the United States during the calendar year 1924, with duty collected thereon were as follows:

Lime juice, crude only.. ..	Gallons	.....
	Value	$.....
	Duty	.....
Lime juice and fruit juices, fortified with or containing not more than twenty-five per cent of proof spirits..	Gallons	809
	Value	$7,039
	Duty	2,022 50

Lime juice and fruit juice, fortified with or containing more than twenty-five per cent of proof spirits..	..Gallons	207
	Value	$2,725
	Duty	2,887 50
Lime juice and other fruit syrups and fruit juices, n.o.p...	..Gallons	10,629
	Value	$33,549
	Duty	7,548 53

4. Information not available at present further than as indicated in the items quoted under answer No. 3.

HALIFAX TERMINALS

Mr. BLACK (Halifax):

1. What has been the total expenditure to date on the new Halifax ocean and rail terminals?
2. What is the estimated cost of finishing them in accordance with the original plan?
3. What are the intentions of the government in regard to the completion of this work?

Hon. Mr. GRAHAM:

1. $17,064,768.68.
2. $6,000,000.
3. The terminals are under the control of the Canadian National Railways. Any recommendation by the management will be carefully considered by the government.

WINNIPEG RESEARCH LABORATORY

Mr. WARD:

1. Is it a fact that the salary of the official in charge of the research laboratory of the Department of Trade and Commerce at Winnipeg has been reduced from $4,600 to $3,300?
2. If so, is there a precedent for such a reduction?
3. Has any order in council been passed making the said reduction?
4. If so, will the minister correct the estimate, or bring in a supplementary estimate covering the matter?

Hon. Mr. LOW: The main estimates show a reduction in the salary referred to, but the department is inserting a sufficient amount in the supplementary estimates to maintain the salary for the position referred to, at its previous level.

Mr. W. T. R. PRESTON

Sir HENRY DRAYTON:

1. In view of the following statements made by Mr. Symington, government counsel, appearing before the special committee on certain ocean rates:

"Whether Mr Preston has published a proper report, an exaggerated report, or a false report, under the reference to this committee, so far as I see makes no difference" and "I do not care about the Preston report which is largely a matter of opinion. I am not saying that it is right or that it is wrong. I do not see that it makes very much difference, whether it is right or wrong, so far as the facts are concerned" is the government still retaining W. T. R. Preston on the pay roll?
2. If so for what purpose?

Hon. Mr. LOW:

1. Yes
2. Mr. Preston's services are being retained for such time as he may be actually engaged in the work of the ocean freight rate inquiry.

TRADE WITH GERMANY

Mr. CHURCH:

What were the imports from, and exports to Germany for each of the following years: (a) 1910 to 1914; (b) 1919 to 1924?

Hon. Mr. LOW:

TRADE OF CANADA WITH GERMANY

Fiscal years	Imports	Exports		
		Canadian produce	Foreign produce	Total exports
(a)	$	$	$	$
1910..	7,935,230	2,065,768	435,423	2,501,191
1911..	10,047,340	2,028,649	634,368	2,663,017
1912..	11,090,005	3,577,847	237,067	3,814,914
1913..	14,214,547	3,049,105	353,289	3,402,394
1914..	14,586,223	4,044,019	389,717	4,433,736
(b)				
1919..	75	.....	.....	.....
1920..	44,255	610,528	45,298	655,826
1921..	1,547,685	8,215,337	1,699	8,217,036
1922..	2,041,016	4,509,547	82,534	4,592,081
1923..	2,568,409	9,950,877	112,002	10,062,879
1924..	5,382,506	16,153,650	141,188	16,294,838

WOOL IMPORTS

Mr. SUTHERLAND:

1. What quantity of wool, also worsted tops, as defined under items 555 and 556 of the customs tariff, have been imported into Canada during the years 1922, 1923 and 1924?
2. What is the rate of duty on said commodities?
3. What quantity of each has duty been collected on during the years referred to?
4. What amount of duty has been collected in this connection?

Hon. Mr. LOW:

Items	Fiscal Years	(1) Quantities Imported Pounds	(2) Rates of Duty	(3) Amount on which Duty was Collected Pounds	(4) Amount of Duty Collected
Wool under tariff item 555.. ..	1922	75,117	Preferential—		
	1923	17,749	2 cents per pound..	75,117	$2,253 51
	1924	.....	Intermediate—		
			2½ cents per pound..	17,749	532 17
			General—		
			3 cents per pound..	.....	.....
			Preferential—	(a)	
		(a)	10 per cent..	$ 255	$25 50
Worsted tops under tariff item 556..1922		$ 255	Intermediate—		
	1923	1,151	12½ per cent..	1,151	122 35
	1924	510	General—		
			15 per cent..	510	76 50

(a) Quantities of imports under this item are not recorded.

LEATHER BELTING IMPORTS

Mr. TOBIN:

1. What amount of leather belting has been imported into Canada from the United States during the fiscal years 1920, 1921, 1922, 1923, 1924 and 1925?
2. What was the amount of duty collected on same?
3. What amount of leather belting has been imported into Canada from Great Britain during the same years?
4. What was the total amount of duty collected on same?
5. What amount of leather belting was imported into Canada from all other countries during the said fiscal years?
6. What was the total amount of duty collected on same?

Hon. Mr. LOW:

Imports of Leather Belting into Canada

Fiscal years ended March 31

Imports of leather belting from United States—	1920	1921	1922	1923	1924	1925
1. Amount of imports..	$139,965 00	$128,129 00	$88,203 00	$138,905 00	$117,344 00	$90,705 00
2. Duty collected..	31,492 59	28,829,66	19,846 16	31,254 22	26,403 07	20,409 34
Imports of leather belting from United Kingdom—						
3. Amount of imports..	21,902 00	38,280 00	10,158.00	17,904 00	26,217 00	11,485 00
4. Duty collected..	3,285 30	5,752 95	1,546 57	2,685 60	3,961 27	1,735 73
Imports of leather belting from all other countries—						
5. Amount of imports..	.....	.....	.....	48 00	68 00	114 00
6. Duty collected..	.....	.....	.....	10 80	15 30	22 80

CLOTHES-PIN IMPORTS

Mr. TOBIN:

1. What was the quality of spring clothes-pins imported into Canada from Sweden during the fiscal years 1920, 1921, 1922, 1923, 1924 and 1925?
2. What was the total amount of duty collected on same?
3. What quantity of spring clothes-pins was imported into Canada from the United States during the fiscal years 1920, 1921, 1922, 1923, 1924 and 1925?
4. What was the total amount of duty collected on same?

Hon. Mr. LOW: Spring clothes-pins are not specified in the customs tariff nor in the statistical classification of imports. No information is available.

STEFANSSON EXPEDITION

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): Mr. Speaker, in view of the contradictory statements which are being made and which are the cause of some agitation in certain sections of Ontario in regard to the Stefansson expedition and the cause of the death of Allan Crawford, I would like to ask the Minister of the Interior (Mr. Stewart) if when his estimates come down, in order to clear the air and give the facts as the government know them—not for any purpose of takng part in the controversy—he would be prepared to give a statement dealing with the whole expedition.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Wednesday, April 29, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House

to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. G. A. BRETHEN (East Peterborough): Mr. Speaker, yesterday I referred to the lack of team work and the need of better understanding among the many elements in Canada. When the House rose I was dealing with the argument advanced by some hon. members thus: The United States has high protective duties, the United States is prosperous, therefore high protective duties bring prosperity. In this connection I referred to the situation during the past winter in the highly industrialized city of Detroit, where the Ford motor plant was running but three days a week, and thousands of unemployed were almost on the bread line.

Referring to conditions in the United States and Canada I drew the conclusion from personal interviews with residents of the United States that the happy conditions there that we so often hear about were due not so much to a highly protective tariff as to certain other factors, namely: the tremendous financial advantage gained by the United States by her late entry into the World War; the commendable reduction of some five million dollars in taxation; the immense building boom suspended during the war period and running up to some five or six billions of dollars; also to their system of financing, the very reverse of that practised in Canada, whereby credit instead of cash sales is encouraged. Fully ninety per cent, I believe, of the sales in real estate as well as business contracts, indeed almost every commercial transaction is performed on the basis of a small cash payment down—ten, fifteen or twenty per cent—and the balance on paper. Further, there is the fact that apparently everybody in the big cities, doctors, lawyers, workers in the factories, and even nurses in the hospitals, subscribed to this financial practice.

The nature of practically every commercial transaction in the big industrial cities in the United States is well illustrated by this familiar example. A purchaser in the city of Detroit can go into the shop of a Ford dealer, pay $12.50 down and promise to pay $5 a week, and drive out a fully equipped Ford car. Such a system in the final analysis is costly, wasteful, and vicious to the country at large. As the inevitable result we find the big industrial cities of the United States in the very midst of an inflated condition, with the rural districts experiencing a corresponding depression, due to the inflated values of everything the farmer has to buy and to world market prices for everything he has to sell. In other words, the big industrial districts of the United States, which have attracted so many of the best of our young manhood during the past few years, are experiencing a situation very similar to that experienced in western Canada some years ago—unbounded optimism, easy credit, inflated land values, immigration pouring into the country, and men and women in every walk of life leaving the beaten paths of stable industry in an effort to get rich quick and at any cost—all the earmarks of seeming prosperity.

I will not attempt to refresh the minds of hon. gentlemen of this House with what ultimately followed such a financial practice, the results are too vividly in the minds of our people to be easily forgotten. Is such a system of finance sound? Is this the system that we are asked to strive to emulate? Given the same or similar premises, similar results are certain to follow, and with mathematical precision. If the industrial centres of the United States do not soon take stock, cease their fictitious trading with one another, and build on the more permanent basis of the stable prosperity of the country as a whole, then should any serious deflation occur, and it has occurred in the United States, the same unfortunate results, as we experienced in western Canada some years ago will follow. A house divided against itself cannot stand. Great Britain, the United States of America, the Dominion of Canada, France or any other country cannot go forward to permanent prosperity unless as a united people—united we stand, divided we fall. Developing this thought further, the Farmer's Advocate editorially says:

> A movement is on foot in the United States to bring about a better understanding between industry and agriculture and conferences with this end in view are held from time to time. The organizers look at it in this light: "Better results mean better times for manufacturers; better markets for farmers, better times for farmers; better markets for manufactured goods, better employment for labour." It is realized on every hand that the first step in the right direction is a "better understanding."

And that applies as well to Canada as it does to the United States. It goes on:

> There is too much meaningless criticism offered in place of constructive suggestion, while both industry and agriculture are often the victims of demagogic attacks that are sometimes not even correct in theory. Considering the lack of understanding between classes and industries, between rural and urban people, and between labour and employer, it is remarkable that so much progress has actually been made.
>
> Is it not time that the various organizations representing agriculture, manufacturing, finance and labour held fewer meetings by themselves and took a little time off to get acquainted with the other fellow's viewpoint and the other fellow's conditions?

As showing the need of a better working understanding among this great family, the Canadian people, I am reminded of the story of a young man whose trousers were too long. He went to mother and requested her to shorten them, but mother was too busy. He went to sister. Sister was too busy. Thrown upon his own resources, he decided to do the job himself. He took a generous slice off each leg, and hung the pants away for Sunday. Later mother regretted that she had not acceded to his request, and she also took a slice off the already diminished trousers. Sister's conscience bothered her and she repeated the operation, and when the young man on Sunday glanced ruefully at the abbreviated pants he remarked, "What this family needs is less operation, and more co-operation."

The politicians of France and the United States are putting everything they have in the way of indications of prosperity in the front shop window. Great Britain is plugging away in the background, but still going down to the sea in ships. Canada is divided. Some of us are working earnestly to bring about permanent prosperity on the basis of "equal opportunities to all and special privileges to none," while others are just busying themselves flashing 4.4 beer in the window or sulking in the cellar of pessimism. Is it any wonder that our Canadian boys turn from this drab picture of steady Canadian progress to the flashy picture of American boom and bustle and seeming prosperity?

But why should we be downhearted? The pound sterling is crowding the top perch with the American eagle. The Canadian dollar is at par, and John Bull and Jack Canuck, with the earnest patriotic support of every Canadian citizen, will some how paddle through.

How can we help to bring about happier conditions in Canada? By taking a few leaves from the book of our friends to the south. Put some of Canada's real assets to the fore. In this connection I should like to pay a compliment to the hon. member for Muskoka (Mr. Hammell) who refusing the other night, to be led aside into mere partisan debate, proceeded to put before this House and the world the revenue producing possibilities of the tourist traffic of Canada. We are all acquainted with the importance of the Swiss watch industry—everybody has heard of the Swiss watch—a great industry. But when compared to the tourist traffic of Switzerland the relation is $15,000,000 for the watch industry to $300,000,000 for the tourist traffic. Of course the Swiss people are a sane, frugal, efficient people. A story is told by a traveller of Swiss efficiency. When up among the mountains in that country one day, he came to a herdsman's cottage. Through the open door he saw the mother in the home with a book from which she was singing, in one hand, the other hand working a churn, and her foot rocking the cradle; and as the traveller looked into that window he soliloquized "What an illustration of efficiency; mind, eye, voice, hands and feet all working." But to his amazement when the woman in reply to his summons left her chair he saw she also had been pressing a Swiss cheese. I repeat, let us put the assets, the real assets, of Canada to the fore; put them in the front shop window. Let us tell our wealthy American friends, who annually spend hundreds of millions of dollars in sightseeing the world about this wonderful country at their very doors; about our sparkling lakes and rivers filled with the gamest, sportiest fish in all the world; its ease of access by railroad, by motor, and launch through scenery unsurpassed; about her snow-capped mountains, crystal streams, and hidden lakes which I have heard world travelled Americans describe as unsurpassed even by the Alps themselves. Here is a source of revenue whose fringe has scarcely been touched. I will support a largely increased expenditure for development here. Let us tell the world about our fertile fields, an empire in extent; our No. 1 northern that commands a premium on any market; about the wealth of our forests, our fisheries and minerals. Let us tell them about our wonderful water powers developed and undeveloped, and how they operate the wheels of industry; about our sturdy, reliable Canadian workers; our stable system of financing and sound economic practices in commercial transactions. We have been knocking Canada before the world long enough: let us boost some.

Let us take another leaf from the book of our American neighbour: Reduction of federal taxation. By a system of economies in small things as well as by eliminating expensive duplications in the service the United States has been able to reduce her federal tax from $54 to $27 annually. Since the war the United States has reduced her debt by over five billions.

How has this been accomplished? By old fashioned thrift, actually saving the pennies rather than talking about saving the millions: by co-ordination in the public service. To illustrate what can be accomplished here I should like to refer to the situation when President Coolidge became governor of the

state of Massachusetts. When he entered that office he found departments which aggregated 118 in number. He was successful in getting a bill through the legislature which allowed a reduction to not more than 20, and was given three years to do it in. The number was reduced to 18, and the thing seemingly impossible was actually accomplished in less than one year. Friends and enemies alike, said, "This is the death knell of your political future. These disgruntled partisans that have been turned out of office will spell your defeat." He came into office as governor of Massachusetts with the majority of 17,000, and was returned with a majority of 125,000, proving that the great mass of the people will support any government that has the moral courage to attack and correct this duplication and wasteful expenditure in the public service. Reduction of taxation by avoiding every unnecessary expenditure. How this may be brought about is well illustrated by the inaugural ceremony that has recently taken place at Washington. Formerly the outlay upon such occasions amounted to about $100,000. This year it cost but $5,000. This saving may not have pleased the elite at Washington, but looked good to the people who pay the taxes. President Coolidge has this to say:

> I am interested in this policy of economy not because I want to save money but because I want to save people.

Another saving was effected through the creation of the bureau of the budget. This was referred to yesterday by the hon. member for West Lambton (Mr. LeSueur) in detail, and I take this opportunity of again congratulating that hon. gentleman upon his contribution to the debate. General Lord, who succeeded General Dawes as the director of the budget at Washington, has this to say: "Little or no saving was achieved in the public service prior to the budget." Since its inception the government has been enabled to reduce taxation some two billion dollars annually according to President Coolidge's statement in Washington, on January 26.

Reduction in taxation, federal, provincial and municipal, can only be accomplished when the government receives the whole-hearted support of the individual elector. The people can no longer reasonably expect to continue to receive lavish expenditures for public services from the government, and at the same time enjoy any drastic reduction in taxation. It can't be done! I know of no surer way of bringing this home to the people than by the practice of refusing every request for the expenditure of public money that cannot be ear-marked "solely in the public interest." "Resolve every doubt in favor of the taxpayer." New post offices such as the one referred to by the hon. member for Yale (Mr. Stirling) at Penticton, or the building of a wharf similar to the one at Belle River, whose existence was dependent solely on the return of a government supporter, would not be considered legitimate under this policy.

I have no personal grievance with anyone in the civil service, and any words I have to say concerning that service will be directed against the policy and not against the individuals. I would suggest, in order to reduce taxation, a vigorous cutting-down of the civil service. This would not be a popular movement right here in Ottawa, but the government that had the moral backbone to effect such an economy would have the lasting gratitude of the people of Canada. The most effective way to accomplish such a reduction would be to remove the "haven of rest" idea with which the service is enveloped and place the service on a business basis. Lengthen the hours in the inside service from an average of less than six hours a day to a commercial eight-hour day. I believe by this means a real saving of possibly $10,000,000 annually can be made. The departments would not suffer any in efficiency, and such economy in the public service would be appreciated by the over-burdened tax-payer who works eight, ten, twelve or fourteen hours a day. If such action interferes with any section of the Civil Service Act I would scrap or amend that section. The Civil Service Act was made for man and not man for the act.

Another suggestion would be the co-ordination of the departments. Will any hon. member offer any serious objection to the uniting, say, of the office of Solicitor General with that of the Minister of Justice? In a little by-play in the debate the other day we learned that one of the best arguments for retaining the office of Solicitor General was that the now right hon. leader of the opposition (Mr. Meighen) at one time filled the office very ably. After the practical demonstration given by the sixty-seven-year-young Minister of Railways (Mr. Graham) in administering three departments, and acting as prime minister simultaneously, why should we be nervous if a $14,000 per year minister were entrusted with the combined offices of say Secretary of State and National Defence or Trade and Commerce? Great savings were accomplished in the United States along these

lines. The people of Canada will appreciate a saving here.

I have never been very critical of the Senate, believing that with some minor reforms the upper house could well serve a very useful purpose. After a larger acquaintance with the working of parliament, with all due respect to the hon. gentlemen of that august body I am frank to admit, however, I am a convert to the idea of abolition. At present the good services that might be performed by the Senate in initiating good legislation and checking ill-advised legislation are largely offset by the practice of the elected representatives of the people in the House of Commons using the upper house as a smoke screen behind which they may hide in dealing with questions that may be of peculiarly lively interest to certain sections of our people. I believe every hon. gentleman now adorning the Red Chamber whose ability and physical condition would permit could serve his country better as an elected representative of the people in the House of Commons, and I have no doubt he would be welcomed as such. The British North America Act is evidently not perfect and an amendment to permit of such action would I believe meet the hearty approval of the people of Canada.

I doubt if much saving can be accomplished under the present practice of administering the departments of the government. The system savours too much of the cost-plus species of remuneration, with the inevitable result, gradually growing departments with higher administration costs. To me the only feasible method of reducing the ever-growing cost of departmental government is by way of a reduced allotment for each department by a body independent of government heads of the departments. I have no doubt that under such a system the head of each department would accommodate his work to the reduced expenditure, without any serious loss in efficiency, the same as the farmer and others have had to do under falling revenue.

Now I come to the consideration of this House itself;—economy like charity should begin at home. I am heartily in favour of the suggestion of many hon. gentlemen that the membership in this House should be materially reduced. This would seem an opportune time to give this matter serious consideration, in view of the expressed intention of considering at a near conference amendments to the British North America Act that would enable such changes to be made. Another change that is quite within the powers of parliament and which I seriously recommend to members of this House is a reasonable reduction of the indemnity. While many good arguments can be advanced against such action, the truth remains that no drastic economies can be effected without the members of this House demonstrating their willingness to give a lead. Some say that with any reduction there would be no inducement for good men to enter public life. Answering this I should like to say "the lure of the dollar can never attract the best men in Canada like the call of service." and I am sure no hon. member would suffer any permanent inconvenience when the good effects of such action are measured. The indemnity is not a salary but is supposed to be given to secure hon. members against financial loss. I recognize that members coming from the extremes of Canada, on account of their inability to give personal supervision to their business, suffer a greater financial loss than the member within a stone's throw of Ottawa, and therefore I would favour as fair and reasonable the payment of indemnity under a graduated scale or a zone system. Coming from Ontario I can suggest such a change with more freedom than could an hon. member from those parts of Canada who would be favourably affected by such an arrangement.

I do not purpose referring to our uncontrollable expenditures such as interest on national debt, pensions, and so on, further than to say that while some hon. members of the late government might be seriously criticized for their lack of vision in failing to reduce the capital expenditure during the period of good times following the war, the fact remains that these debts are with us, we must bend every energy to prevent them expanding and devise some means for their substantial reduction.

I have suggested some practical economies in the public expenditure that can and will be appreciated by every taxpayer in Canada. I would now like to refer for a few minutes to methods that might be employed to raise the necessary revenue with the least hardship to the people at large. What then should be our sources of taxation?

First: Death duties carefully and stiffly graded. This is the fairest of all taxes. When a man has had a life use of the money which the country has helped him to make, the country has a right to a share of it at his death. Of course, the interests of the widows and orphans must be safeguarded to a reasonable extent.

Second: A graded income tax, beginning well down and after a certain sum—say $10,000 a year—is reached, rising very sharply on large incomes. This is getting the money from where it exists. But I would make a distinction favourable to incomes reinvested in industrial enterprises over the latent or dormant income. Such a tax on a man's income is easily collectible and it is preferable to the tariff which is a tax on the poor man's needs.

Third: A sales tax which might be largely excise in its character, bearing most heavily on luxuries and on such Canadian manufactories as enjoy the highest protection. Automobiles, for instance, would be considered as in such class.

Fourth: A tariff for revenue. This, of necessity, must be flexible and levied as far as possible on the non-necessities of life and luxuries. Tariffs are usually costly taxes, troublesome to collect and, in my opinion, an implement of taxation warranted only by dire necessity. When levied as protective, tariffs are unjust and ruinous taxes; they are a privilege granted to the few to bleed the many; they drain the country without filling the exchequer; they are heaviest on the best citizens, the men who are rearing worthily families whose needs have to be supplied; they are harsh on the poor. These are taxed out of all proportions to their means with every purchase. It is the purchasing power of the mass of the people that makes trade prosperous. It is the worker's needs supplied that makes work for workers.

I have been rather surprised during this debate to hear our friends to the right advocating almost with one accord reciprocity with the United States—reciprocity of tariffs, not of freer trade. Our Liberal-Conservative friends are not always protectionists; sometimes they are more Liberal than Conservative, and a few nights ago they were almost Progressive in their leanings. A certain private bill was proposed by the member for St. Lawrence-St. George (Mr. Marler) which was to extend for six years a certain patent enjoyed by a manufacturing concern in Montreal. When it was strenuously opposed by the hon. member for Norfolk (Mr. Wallace) and others in this part of the House, to our surprise the only apparent support that came from anywhere in this House for the company seeking this particular protection came from that doughty protectionist, the sponsor of the bill. He was like "a voice crying in the wilderness." I am opposed to protective tariffs. They have been given a fair, reasonable trial in Canada for well-nigh fifty years. Successive governments, as was shown by the hon. member for South Winnipeg (Mr. Hudson) have made insignificant, downward changes; yet when we point to the impoverished farmers throughout the country, when we point to the strikes of labouring men for higher wages, to seasonable unemployment and to the suspension of protected industries, our protectionist friends in this House say this is all due to a reduction or threatened reduction of the tariff. Such a charge I defy my protectionist friends to sustain. On the contrary they but discredit themselves by advancing such a baseless argument and by seeking to avoid responsibility for conditions, for which they are clearly and undeniably responsible.

In conclusion, Mr. Speaker, I would say that if there is any man in Canada who really believes that, under a democratic form of government where the people rule, where laws should be made for the good of all, any party has the right to impose taxes or to put burdens on one class in order to benefit another class, then that man is unworthy of a place in the free country in which he lives.

I have tried honestly to answer the question: What is wrong with Canada? and to offer some humble suggestions by way of remedy. In so doing, I have endeavoured to avoid unduly harsh or destructive criticism, believing that Canada needs at this time, as in the war-time crisis, the united, unbiased, whole-hearted, patriotic efforts of every member of this House to bring Canada through.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, the debate has this year extended to an extraordinary length, and I know all hon. members are relieved to be certain that it will close to-night. I am not making any reflection on the length of the debate, although it is well known that, as regards this side of the House, we were prepared to close last week. The budget debate in Canada serves a purpose which is not there to be served in many other countries. We are a very widely scattered people. We have great diversity of interests, physical conditions and occupations. The budget debate is the medium by which the opposing views of many sections are expressed and brought together. I do not believe severe strictures on the length of the debate, therefore, are warranted; but at the same time it is possible to overdo everything, and I would have preferred had this debate closed sooner.

My contribution, if it can be called such, will not be lengthy to-day. We on this side

have on the order paper a notice of motion in my name which we have endeavoured to move and have discussed, but so far without success. This notice of motion has to do with what is the transcendent question in Canadian politics to-day, namely, that of the best fiscal policy under the conditions of the world at this time. The notice of motion covers this field and this only, and I think it will save the time of the House and contribute to orderly debate if I leave its discussion to the time when I may be able to move the motion.

I am going to attempt to analyse our financial position and to do so with all the clearness I can. I do not feel that I can speak with any pontifical authority, but I will do this for hon. members who do me the favour of listening: I will give my authority for each statement which I make, and leave the House to judge whether it is dependable or not. The result will be nothing very cheering so far as Canada is concerned, especially for our taxpayers. And while I believe that it is due in considerable degree to inefficiency, lack of control and lack of definiteness of purpose on the part of the government, I want to make it clear at the beginning that in my judgment the consequences are traceable in far greater degree to unsoundness of fiscal policy, to unsoundness of fiscal practice on the part of the administration, and to still greater seriousness of their fiscal threats.

I had intended making some reference, as a member of the late government, to remarks which fell from the hon. member for Chambly and Vercheres (Mr. Archambault); but on looking back over past debates I find that everything which he so recklessly alleged was irrefutably answered in 1917 in his own hearing, and to the material of which answers he made no reference. It was there shown that, so far from there being any waste in respect of the matters to which he referred, each and every article was supplanted by another without a dollar of cost: the Ross rifle by the Lee-Enfield, rifle for rifle; the Oliver equipment by the Webb equipment, each for each; that neither of these was used one single day, so soon as it was possible to get another to take its place; and that far from its having been possible to have the substitution made earlier, so great was the scarcity, especially in rifles, that the British government were compelled, though they did not favour the Ross, to place large orders in this country for that very rifle. It is very hard to understand how an hon. member could drag these musty subjects into the debates of to-day and do so with a good conscience, having regard to present conditions in Canada.

4 p.m.

I pass now to a review of the year's results, and from that I shall move to a review of the full results of the past three years and a quarter. There is in the minds of many hon. members confusion, at all events there is very little in the way of agreement, as to what is disclosed in the budget speech of this year. I do not think I can recall two hon. members who have given to the House the same deductions from the budget presentation. If there have been any single group who have agreed it would be quite a number, by no means all, of hon. gentlemen opposite, who draw a deduction which is manifestly wrong and which not one of them in a real encounter would venture to sustain. The hon. member for St. Lawrence-St. George (Mr. Marler) argues that the budget presentation is clear. Strange indeed it is, if such is the case, that hon. members of this House cannot tell what the result of it is; and stranger still is it that no one erred more frequently than the hon. member for St. Lawrence-St. George himself.

The budget presentation is not either complete or clear; it fails in the main purpose of a budget presentation, a purpose which the hon. member for St. Lawrence-St. George endeavoured, I think conscientiously, to supply, but which it should not have been necessary for anyone to attempt at all to supply, if the budget speech had contained the one great element which should be its first essential. Hon. members to my left have repeatedly urged that something be stated which is clear, which they will understand, which other than accountants can understand. It is suggested that this is not possible. Why is it not possible? When the Minister of Finance (Mr. Fielding) presented his budget two years ago I complained that it was not complete; but no one in this House found any difficulty in deciding upon its results. The same was true of the budget he presented the year before; I never heard any complaint as to its not being clear. Nor was there any complaint of that kind in respect of any previous budget presentation so far as I can recall, though, years having passed, one may possibly have overlooked an instance. The reason that it is possible for the present budget to be obscure is the fact that the finances of Canada to-day appear under two phases instead of under one; and it is obscure not because the bookkeeping of the country differs in principle, or differs at all, from the bookkeeping of previous years: it is simply because the government in presenting the results of the book-

keeping have concealed the result and facts from the public.

I have said that our financial affairs now run in two channels; everyone knows what I mean. We make two fronts before the world. first as Canada in its own account and secondly Canada as the National Railways. Each is our possession, the finances of each are our concern, and the debts of each are our responsibility. I am not complaining that the accounts are kept separately; no one would so complain. They should be. But they should not be kept separately for the purpose of concealing the result of one or failing to disclose the joint result of both. What is this joint result so far as 1924-25, the last fiscal year, is concerned?

If we look to 1922-23, the last year of the Hon. Mr. Fielding's regime, we shall find that the result was given as a deficit of $31,000,000. He arrived at that deficit. Mr. Fielding—I must mention his name, if I may be forgiven —took into account the whole of the finances of both phases, both of account No. 1 and of account No. 2. On this we are all agreed. In 1923-24, the first year of the present Acting Minister of Finance, the whole was not collected and a total result of the whole given the public. It is not fair, though, to say that all of one was removed to one side and the result of the other alone given as the result of the year. Part of one was given, and all of the other. Part of the railway result was included, that is to say, the cash advances, but not the assistance, the commitments in other forms; cash advances amounting to some $23,000,000—these the present acting minister included in his annual outlay in arriving at the result which he presented to the country, namely, a surplus of $35,000,000. I hope that, so far, I am clear. To arrive at that claimed surplus the Acting Minister of Finance placed all his receipts on one side, which was right; all the disbursements, ordinary, capital and special, of account number one on the other, and as to account number two, the railways, he included all cash disbursements, but no more. He did include what he had loaned in cash. He did add not only what he had loaned the railway in cash to his ordinary expenditure of the country, but he added his capital as well, and his special expenditure too. In a word, he included everything except the guarantees he made for the National Railways. Now I hope so far there is no difference of view; if there is, I am trying to state it accurately and I would be only too glad to be corrected or placed on the right track if I am wrong. This resulted in a surplus of $35,000,000. It is true the guarantees, which were not included, were 72½ millions. With those included there would have been a deficit of 36½ millions. Or, to put it in a word, the result of putting the two accounts together meant a deficit of 36½ millions.

Mr. MARLER: May I interrupt for a moment? My right hon. friend has not taken into consideration refunding operations —not yet, at any rate.

Mr. MEIGHEN: I will in a moment. I did not take it into consideration in the discussion last year, for this reason: the Acting Minister of Finance stated that the guarantees were for the purposes of capital investments; he mentioned no refunding.

Now I come to this year. If I were to ask hon. members of the House what the result this year is, I fancy if there was any agreement between two it would be on the part of hon. members opposite, most of those who have spoken; they would say we have a surplus this year of $1,823,000. Another would say: Well, if we take in the interest from Roumania and Greece that is not paid, we would have a surplus of $5,823,000. Now, let us pause to inquire: Is that $1,823,000 arrived at the way the $35,000,000 was arrived at the year before? Will any hon. member suggest it is? That is what hon. members are claiming as the surplus for this year.

Mr. MARLER: No.

Mr. MEIGHEN: I know the member for St. Lawrence-St. George (Mr. Marler) did not; but what a significant silence on the part of everyone else! Not at all, the Acting Minister of Finance last year knew that if he made up his accounts and presented the total of both the way his predecessor had done he would have been compelled to show a deficit of 36½ millions; if he had done that this year he would have had to show a bigger deficit still. But he said to himself: If I make up my accounts and join the two together the way I did last year I shall be in the hole far worse than the 36½ millions of last year—and he was determined that no newspaper would get a headline announcing a deficit. So what did he do? He not only put to one side the guarantees as he had done the previous year, whether for refunding or anything else, but he took the cash loans that he had made and put them to one side too.

Mr. MARLER: Not at all.

Mr. MEIGHEN: Without a question.

Mr. MARLER: The Acting Minister of Finance claimed a surplus of $1,823,000 on ordinary services, as was done in previous budgets under the administration of my right hon. friend. He can see it if he looks up the budget debates.

Mr. MEIGHEN: If the hon. gentleman will wait a minute he will see that his interruption had not very much pertinency and less excuse. The point is this: the $1,823,000 does not take into account the $18,000,000 loaned to the National Railways.

Mr. MARLER: No one claimed it did.

Mr. MEIGHEN: I am not saying he claimed it did. The point is this: The year before, the $35,000,000 did take account of the cash advances for the National Railways. Why the difference? The difference was just in order to get a headline surplus instead of a headline deficit. Not content with leaving out the guarantees, as was done last year; with leaving out the cash advances, as was not done last year, he thought that would not be quite enough, so he quietly took the Quebec Harbour Commission moneys and put them all aside, too, giving as his excuse that that commission was not paying interest. Then he took the merchant marine advance, $900,000, and set that to one side, too; and by the time he got all these four things to one side he had $1,823,000 of a surplus. Now, that surplus took into account all ordinary expenditure. It took into account more: it took into account all capital expenditure and all special expenditure, but it left out these other things, every one of which but one was included last year.

Now, I endeavoured to set the hon. member for St. Lawrence-St. George right when he was speaking. He claimed then—he will not now, for he has looked into it—that the $1,823,000 was merely the excess of revenue over ordinary expenditure. It was not; it was revenue over ordinary capital and special capital expenditure, but it leaves out cash advanced to the railway, cash advanced to the merchant marine, $600,000 of the Quebec Harbour Commission, and all the guarantees.

Mr. MACKENZIE KING: I will admit what my right hon. friend says, but I will add this: It is precisely what the Acting Minister of Finance said.

Mr. MARLER: May I make another interruption? That is precisely the way Sir Thomas White did it, and also the way the member for West York (Sir Henry Drayton) did it in his budget. If my right hon. friend will permit me, the difference is this—

Mr. BOYS: Why did you not answer questions when they were put to you?

Mr. MARLER: I am quite prepared, if my hon. friends opposite want to—

Mr. BOYS: You left the chamber without doing it.

Mr. MARLER: Not while I was speaking. Now, if my hon. friend objects to questions I will not ask another single question in the course of this debate. All he has to do is to request me not to ask any.

Mr. BOYS: Practise what you preach.

Mr. MARLER: Well, does my right hon. friend desire that I should not ask a question?

Mr. MEIGHEN: If it is a question. The hon. member has not asked one this afternoon yet.

Mr. MARLER: Well, if my right hon. friend will allow me to make this assertion, I will say this—

Some hon. MEMBERS: A question.

Mr. MARLER: Well, are we going to be reasonable about this debate, or not?

Mr. SPEAKER: Order.

Mr. BOYS: Why didn't you?

Mr. MARLER: I was.

Mr. BOYS: My hon. friend knows I asked him a question that he did not answer.

Mr. MARLER: The hon. member for South Simcoe—

Mr. SPEAKER: I would ask hon. members on both sides to listen without interruption to the address of the hon. member who has the floor, unless interruptions are permitted by him. I suggest that it is far better that the hon. member who is addressing the House should be allowed to proceed with his speech.

Mr. MEIGHEN: When the Prime Minister admits I am right, I should not have thought any of his followers would question the accuracy of my statement. The difference is this, that there was no summation this year at all; no summation of joint accounts, no adding up. The defect which the member for St. Lawrence tried to fill should never have had to be filled. In other words, the Acting Minister of Finance tried to show what the whole result of the year was, but he discreetly left these things out because he

wanted a headline in his newspapers showing a surplus of $1,823,000. That is why he left them out.

I am going to inquire as to what the real result was first, and then I am going to discuss whether the principle at which I arrive is sound or whether it is not. The Acting Minister of Finance, as I stated, includes all his revenue, and puts against it his ordinary capital and special expenditure. His revenue shows a diminution of about $53,000,000; I believe it is a little over that now. If I asked hon. members of this House how much the expenditure was more, or less, than it was last year, aside from the railways altogether, I wonder if there is one who could answer me. I am saying that, not by way of reflection upon hon. members; I am saying it by way of comment on this budget.

Mr. MACKENZIE KING: I will give my hon. friend the answer when I come to speak.

Mr. MEIGHEN: Unfortunately, the right hon. gentleman is not very dependable when he speaks last. I wonder if there is one hon. member who can tell me now? If there is, he cannot get it out of the budget. He will find that in ordinary expenditure there is $5,100,000 less than last year, but the budget speech does not compare the capital expenditure with last year's capital expenditure at all. Are hon. members surprised to know—it is some six millions more? The budget speech does not compare even the special expenditure this year with the special expenditure last year. This year's special expenditure is about $4,000,000 less, because no doubt of recession from the war. So, summing the three together, the improvement in expenditure less than the year before is approximately $3,000,000, or a little over. So we have $53,000,000 less revenue, and about $3,000,000 less expenditure—some $49,000,000 worse off in the total, and this irrespective of the railways, than we were a year ago. Taking all together, irrespective of what the minister leaves out, we accept $1,823,000 as right.

Now what other obligations have we entered into during the past year? And may I say, especially with reference to some comment that has been made by the hon. member for North Waterloo (Mr. Euler)?—in arriving at our position we cannot, on the system we have followed for years, claim to have a surplus unless we have a surplus over everything. We have not done it for years. We never claimed a surplus in our time. We said we had a surplus over certain things, but we showed clearly we had a deficit altogether. Expenditure on capital account was always included, has been for many years in this country, and because capital account is included in our expenditure as a country, why in the world should we distinguish it in our expenditure as a railway?—the more so because whatever capital expenditure we put in now or for years to come, we cannot, if we are honest, call the return for that expenditure an active asset, of this country. For this reason: If we want to know where we are at, we must absolutely include every commitment until the day comes, if it ever does, when we can honestly consider our investments in our railways as active assets.

I stated that we were accepting the figure as $1,823,000, understanding that to one side were placed all the items I have referred to. Now these items are, according to the minister's own figures: $18,027,000 cash advance; $46,000,000 guarantees—National Railway bonds—and $18,000,000 further guarantees, aside altogether from another $17,000,000, which is for refunding. May I state my own view on this point? In arriving at our position, and in this I entirely agree with the hon. member for St. Lawrence-St. George (Mr. Marler), our endeavour should be to ascertain how much the National Railways have gone further into debt. Of course, to get how much further they have gone into debt, we have to take off what debt has been paid. Now $17,000,000 of last year's guarantee was for refunding; $18,000,000 was not. So the total assistance to the railways is made up of these three items: $18,000,000, $46,000,000, $18,027,000, or a total of $82,027,000. In addition, there was $900,000 for the merchant marine, and $600,000 for Quebec harbour, making a grand total of $83,527,000. From this must be deducted the surplus claimed on the balance of our accounts; that is to say, ordinary revenue over ordinary expenditure, capital and special—$1,823,000. This deducted we find that there has been a net recession for the year of $81,704,000. I do not think those figures can be honestly controverted. They take into account all refunding. This is the amount we have gone back this year—$81,704,000.

Now, it is claimed that if the government admitted $81,000,000, they would be putting themselves in a position unfavourable as compared with presentations made in previous years by the late government; that is to say, they would be admitting liability for guarantees of loans when the previous government did not admit those as part of the debt of

Canada. I am going to inquire into that contention.

In the first place, let me say that if we assume it as absolutely true—and I think I will show to the satisfaction of anyone it is not, but assume that it is—what difference does it make? We still have gone back $81,000,000 this year. All it would mean would be this, that we claimed to have gone back in certain former years less than we really did go back; that is all it would mean. So whether I succeed or not in showing that the comparison cannot be made to our disadvantage, it is established that we did go back $81,000,000 this year anyway; and if the Prime Minister in his contention a year ago is right—that we did not include our guarantees even when they were not for refunding—all he succeeds in showing is that in those years we went back further than we admitted.

Now let us see if that is true. I do not know just how my hon. friend for St. Lawrence-St. George got some of his figures. I am sure he did not intentionally present them wrongly, but I could not follow some of his figures.

Mr. MARLER: I will show my figures to my hon. friend now if he cares to have them.

Mr. MEIGHEN: I have here the figures from the reports of the National Railway Company as well as the department. I am sure they will agree, but I could not make them agree. Perhaps the hon. member can. I have more guarantees than he has. The guarantees that we gave were in the fiscal year 1920, $25,000,000 for the Canadian Northern, and $25,000,000 for the Grand Trunk; and in the fiscal year 1921, the very same—$25,000,000 Canadian Northern, $25,000,000 Grand Trunk. The hon. member refers, as well, to a guarantee of $11,000,000 in the fiscal year 1921-22, which is right. But this was after the end of 1921; it was therefore by the present government; and in any event it was all for refunding. Mr. Fielding did not include it, and he was perfectly right. Therefore, I must direct my inquiry into the $100,000,000 I have named—$50,000,000 in 1920, and $50,000,000 in 1921.

Mr. MARLER: Does my hon. friend intend to take in the unguaranteed securities?

Mr. MEIGHEN: No, I have not been able to trace any. I know the hon. member says there were some, but I have not been able to trace any unguaranteed securities, unless possibly some for equipment.

[Mr. Meighen.]

Mr. MARLER: There were some for equipment that were not guaranteed.

Mr. MEIGHEN: Yes, there may have been some used for equipment that were not guaranteed at all.

Mr. MARLER: They were not guaranteed but nevertheless formed part of the railway debt.

Mr. MEIGHEN: Yes they are to-day part of the debt of the Canadian National Railways.

Mr. MARLER: And should be included in making a comparison.

Mr. MEIGHEN: Well, I was referring, for the present, to the guaranteed securities, all those that I referred to a year ago.

Mr. MARLER: If I may interrupt my right hon. friend: if he refers only to the guaranteed securities he cannot get exactly the same comparison. Because some of the securities for equipment issued by this government were guaranteed whereas they were not all guaranteed by the past government.

Mr. MEIGHEN: In the comparison I am making I am taking exactly the government guarantees in each case.

Mr. MARLER: If my right hon. friend does not include the non-guaranteed issues I have indicated his comparison is not a fair one.

Mr. SPEAKER: Order. This debate cannot proceed in this way. The right hon. leader of the opposition has the floor, and unless he gives permission he cannot be interrupted.

Mr. MEIGHEN: What I am pointing out is this: In referring to what we have gone back this year I have taken into account the guarantees alone. In taking our total debt into account we have got to take into consideration those securities that were unguaranteed I admit, so there is no actual difference between us at all. There were $100,000,000 guaranteed in those two years. Now it is true that the proceeds of those guarantees did not go altogether to reduction of debt. That is quite true. I never contended that it did. What I contended was this: That while we had guaranteed $100,000,000 we also provided the money, either in cash or guarantee, and reduced the debt by more than $100,000,000.

Mr. MARLER: That is precisely what my right hon. friend did not do.

Mr. MEIGHEN: Well, I do not know, Mr. Speaker, what you think of that interruption, but for my part I cannot admire the language and I cannot detect the thought.

I proceed now to inquire whether or not there was a reduction of the debt of the railways by the amount of the guarantee, $100,000,000. I have before me a statement first of all from the Railway department. I asked my secretary to obtain it and from it I have the figures which I have already given, I also have the following: These quotations are made wholly from the annual reports of the National Railway Companies, they are made from no other source. The figures that I gave are from that source. This statement is included by way of explanation in the memorandum:

The financial practice of the Grand Trunk seems to have been very general. They appear to have financed ordnary requirements out of proceeds of guaranteed bond issues, and at times met retiring capital obligations (maturing loans) out of loans advanced by the government.

They did both. Now as to the Canadian Northern Railway:

The Canadian Northern on the other hand seems to have been more specific in its financial practice, possibly because of the magnitude of its transactions, but it also is understood to have retired maturing obligations out of straight loans as well as equipment issue retirements.

Now in the matter of retirements I do not think I have them all. I have them all in the case of the Grand Trunk and the Canadian Northern, but I do not think I have them all in the case of the Grand Trunk Pacific, but I have sufficient. I read from the report, taking the Grand Trunk Railway first, its report for the year ending December 31, 1920:

The principal retirements during the year were $1,166 666.67, 5½ per cent, 5 years secured notes, due July 1, 1920.

That appears to have been the only retirement that year. Now I take the report for the next year:

Principal retirements during the year were $4,866,666.67—6 per cent, 3 year secured notes, due January 14, 1921, $14,600,000.00—6 per cent 3 year secured notes, due October 1st, 1921, and $719,780.00—6 per cent second equipment mortgage bonds, due July 1, 1921.

Those were the retirements of the Grand Trunk in those two years. I have them all tabulated and will give the result.

I will now give the results according to the Canadian Northern Railway report, for the year ending December 31, 1920:

In December, an issue of $25,000,000— 7 per cent 20 year bonds, guaranteed by the Dominion government, was authorized to provide for maturing loans.

Next the report of the succeeding year:

During the year an issue of $25,000,000 Canadian Northern Railway 6½, twenty-five year sinking fund bonds guaranteed by the Dominion of Canada was sold in New York, the proceeds being paid to the Receiver General in repayment of advances by the Dominion government. There were also retired during the year $2,000,000—5 per cent Duluth, Rainy Lake and Winnipeg Railway bonds guaranteed by the Canadian Northern Railway Company and £3,650,000 Canadian Northern Railway 5 per cent guaranteed notes.

That ends the entire retirement so far as I can find, and I think they are all securities of the Grand Trunk and Canadian Northern. The figures I have read total $102,353,113.34, or something over $2,000,000 more than the total amount of our guarantees. In addition if hon. members will look at the report of the Department of Railways and Canals for 1922, which covers the year 1921, they will find that an issue of $9,720,000 of the bonds of that road were paid off on March 1, 1921, and they were paid off necessarily out of moneys provided by the government for the road was in liquidation. The total thereof is $112.073,-113.34 reduction of debt as against only $100,-000,000 of guarantees, so there was no necessity of including the guarantees in the additional liability to the country though in those liabilities certainly both phases of our account should appear. May I repeat—I have read from nothing save the annual reports of the railway companies themselves in the case of the Canadian Northern Railway and the Grand Trunk Railway, and from the reports of the Department of Railways and Canals in the case of the Grand Trunk Pacific.

Mr. MARLER: May I ask the right hon. gentleman a question. Has the Finance department checked over these refundings? My reason for asking the question is that my statement of refunding was checked over carefully by the department.

Mr. MEIGHEN: I did not take them to the Finance department. It is the railway company's business. If I read in a report of the company that a certain loan was paid I do not need to go to the Department of Finance to see that it was paid. Now, this is as far as I need go, I think, in relation to last year. Suffice it to conclude that we went back by $81,000,000; this country is that much further in debt than it was a year ago.

Now, I want to inquire as to what has been the result of the three years and three months up to April 1, of this year of the present administration. It is important so to inquire and I proceed to do so including both accounts of course. I proceed to do so taking into account all refundings and the way to get it

is this: To take the debt on the first account as at the end of 1921 and take the debt on that account on 31st March, 1925. The difference is the increase or decrease as the case may be. Then in relation to the other account, the National Railways, take the debt at the end of 1921 and the debt at the end of March, 1925. Now, if I leave my statement that way it is not altogether fair. In getting the total increased obligations of the country it will not do to include the whole increase of the National Railway debt. All that it is right to include is the increase of the debt due to the public—due to the third parties; you cannot include the increase of the debt due the government, because of course that is not any increase of the joint debt at all.

Now, what is the increase in the debt on the first account?—that is, the old account of the government of Canada proper. The Canada Gazette shows the debt on the 31st December, 1921, to have been $2,366,861,252.29. This government took office on December 29, 1921. The Acting Minister of Finance (Mr. Robb) shows the debt at the end of April to have been $2,431,487,112.88. The difference is $64,625,860.59. There can be no dispute of these figures. All the comment I have ever heard is this: That when you take the debt at the end of 1921, and add the debt for the three months succeeding, you are adding debt which was incurred under estimates prepared by the previous government. That is true. But the expenditure from the end of 1921, from the accession of this government, was wholly under the control of this government, because when moneys are voted in estimates it does not mean that those moneys have to be spent. It is only authority to spend those moneys. The payments by this government after they come into office are their responsibility, and the responsibility of no other. The actual increase in debt is the $64,625,000 which I have just given.

Now I proceed to inquire where we stand in relation to the railways. Certain figures have been put on Hansard by the Minister of Railways in response to questions put by the hon. member for West York (Sir Henry Drayton). These figures show an increase in the three years, not taking into account these latter three months, of $294,000,000. That is the increase of public debt and of government debt both. Those figures do not differ very much from those given in the reports of the company, but they do differ somewhat. They differ very considerably in the division of the increase between the public and the government. I hold in my hand the report of the National Railways for this last year.

[Mr. Meighen.]

This report gives the debt due the public at the end of 1924 as $913,913,082.80. This is due the public alone. This will be found at page 29 of this report. In order to find out what was due the public at the end of 1921 it is necessary to have recourse to two authorities. One is the annual report of the Grand Trunk, because the roads were not united then; and in the annual report of that company for the year 1921, at page 8, the following is given as the debt outstanding on the 31st December, 1921; $371,042,194.75. Now if hon. members will turn to the annual report of the Department of Railways and Canals for the year 1922—that is the report for the previous year—they will find that out of this amount there is due the government the sum of $76,965,322.10. Take this away from the $371,000,000, the total debt, and we have the amount due the public $294,064,872. This is the debt on the Grand Trunk at the end of 1921. Now we have to get the debt on the Canadian National Railways at the end of 1921. This appears in the report of the Railways and Canals department at pages 35 and 38. The figures are:

Canadian Northern..	$302,399,006
Grand Trunk Pacific..	157,699,714

So that adding the three figures together, the $294,000,000 on the Grand Trunk, $302,000,000 on the Canadian Northern and the $157,000,000 on the Grand Trunk Pacific, we have a total debt to the public at the end of 1921 of $755,115,592. We have $755,000,000 odd due the public at the end of 1921, $913,913,000 odd due the public at the end of 1924, and since 1924, until the end of March of this year $18,000,000 more has been added according to the statement of the minister which is correct as we all know, the $18,000,000 being new money from proceeds of the $35,000,000 issue made this year.

Then adding all these together, the $913,913,082 and the $18,000,000 we have $931,913,082 as the debt due to the public at the end of March last. Deducting the debt due to the public $755,115,592 on the 31st December, 1921, when this government took office, we find the increase in our debt as denominated, Canadian National Railways, $176,796,490. This is the increase in the one account, the increase in the other account is $64,625,860, and the two together make a total on both accounts of $241,423,350. Nor does this represent the total increase in the debt from December, 1921. To arrive at these figures there is included the $4,000,162 that has been added this year on account of the debt of Greece and Roumania. There was included as well some $8,199,333.31 last year and $8,938,260

the year before which were rightly taken in as an asset, but which were just as much our assets five years ago as they are to-day—exchange adjusted as due us by the British government; and a similar amount the year before. I am not complaining at least in the case of the latter two items being included in our estimates to get at our right debt now, but what I say is that we cannot fool ourselves by thinking we are that much better off than we were. We are just exactly in the same position. They were our property then as they are now. Adding these, the debt that we have gone into since this government took office, after all refunding is allowed for, is $262,561,105. I do not think it can be successfully contradicted that that is the real position. I do not think I am in disagreement at all with the hon. member for St. Lawrence-St. George in this respect.

Mr. MARLER: My right hon. friend is totally in disagreement with me, because his figures are incorrect.

Mr. MEIGHEN: I thank my hon. friend for so saying so frankly.

Mr. MARLER: If my right hon. friend will permit me, the increase is $111,000,000 in the three years of this government's administration, taking into consideration the two debts, consolidated debt and railway debt, less refundings.

Mr. MEIGHEN: I thought the hon. member had said I was correct and I did not know how my figures could have been correct and those of my right hon. friend's also.

Mr. MARLER: I will be most happy to submit my figures to anybody.

Mr. MEIGHEN: My hon. friend is entirely wrong. I have taken the debt to the public at the end of March from the reports of the companies. I have taken the debt to the public at the end of December, 1921, from the same reports and the reports of the Department of Railways and Canals, the only sources from which they can be secured. I have read in every case the report. The difference is virtually the same as given by the Acting Minister of Finance. The only difference is this, that while he makes a total increase of debt practically the same, he divides it differently between the public and the government. The reports of the department are absolutely clear and the reports of the companies agree. It is, however, wrongly divided. The amount due the public is larger; the amount due the government is smaller.

Mr. MARLER: I do not want to be factious in interrupting. All I can say is that these figures perfectly balance. They have been checked up and checked back. I am not trying to mislead my right hon. friend at all.

Mr. MEIGHEN: The basis of them is wrong.

Mr. MARLER: No, the basis is right.

Mr. MEIGHEN: Does the hon. member deny that there is owing to the public to-day $931,913,000 in respect of the Canadian National Railways?

Mr. MARLER: What I state is this, if my right hon. friend would like to hear the statement, that from the 1st April, 1922, to the 1st April, 1925, the combined debt of this country, that is to say, taking all outgoings, including railways, less refundings, shows $111,473,508 of an increase.

Mr. MEIGHEN: I do not know why it was necessary for my hon. friend to keep forever repeating his conclusion. It would have been enlightening if he had given us his method of arriving at it. I have given my method of arriving at the result just presented and I have quoted my authority at every stage. My hon. friend is entirely wrong as to his figures of a surplus. I commend, to him, more careful inquiry, more deliberation and less determination to get back into the good graces of the government.

What is the significance of all these returns? Has this House been prepared for the fact, which is admitted even in the report of the Minister of Railways, that in the three years, irrespective of what has taken place in the last three months, the National Railway debt to the public and the government increased by more than $294,000,000? Is it prepared for the fact, which nobody disputes, that, adding the last three months, it is now, according to the minister, about $312,000,000—or, according to the reports of the companies, about $327,000,000—more than it was just at the end of December, 1921? The increase to the public is colossal in any event; the increase in both is still worse. We have been supplied all along with data as to how the operating account was running. We were told through the year 1923: "It is improving." The operating account was improving. We were told through the year 1924: "It is getting worse." It was getting worse. But the operating account discloses only a mere fraction of the whole truth as to the National Railways and the real position we are in to-day.

Let me say a few words by way of personal reference. I am not one who has been predisposed to criticize the National Railways. I have been assailed myself most severely for the part I took in amalgamating the roads under the government of Canada at the time they were amalgamated, especially for the acquisition of the Grand Trunk. No one hoped more ardently than I did that the operation of those roads, controlled by the statutes which were submitted and passed by this House, would be a success. After the first two years' reports came down, the hopes that I had originally entertained were strengthened. When the Minister of Railways presented his report in the spring of 1922, I commented, as the House will remember, most favourably upon it and looked forward hopefully to the success of the system so amalgamated. In 1923, I followed in the same vein. It is certainly with a degree of disappointment, which I do not think anyone will sincerely question, that I now am compelled to say that the whole aggregate result to-day is discouraging. It is not that the disappointment is so great in respect of the result of operations, but the disappointment, indeed, is keen when we have regard to the fearful pace at which, in these last three years, the capital account has been increased. I know the capital account was very considerably increased prior to 1921. When we took over the Grand Trunk railway particularly, it was in a dilapidated condition. The board of arbitration found that that company had been paying to shareholders dividends which should have been applied to their system, which should have been invested in rolling stock, in their line of railway, in maintenance and things of that kind. The condition of the road was such that millions had to be invested to get it into the shape in which we found it in 1922. Those millions, however were not as great as have been generally believed. They were given by the hon. member for St. Lawrence-St. George and they were given correctly; but everybody thought at the end of 1921 that these large capital investments would be over. Nobody thought all capital additions would be over. You cannot maintain a railway without some enlargement of capital investment. In the year 1922, this policy was rightly, honestly pursued. The board of management of that year added to the debt of that railway in 1922 only the sum of $59,000,000, as is shown by the minister's return. This sum of $59,000,000 could have very little in it except the deficit inclusive of fixed charges and operation. The deficit alone would be something over $50,000,000, so that the amount of capital investment in 1922 was relatively very small. The management at that time was under Mr. Hanna and the former board and it determined that we had gone as far in the way of investment as we should go for the time being; that our business was to take the property we had and make it go, to endeavour to get traffic enough for it to give returns to the people of Canada and not to continue the process of adding million by million to the capital debt of the system.

Mr. EULER: Would the right hon. member state, in detail, just what his objections are to the moneys that have been expended on capital investment?

Mr. MEIGHEN: Does the hon. member mean: To which expenditures I object?

Mr. EULER: Yes.

Mr. MEIGHEN: I do not know because I have not seen a statement of them. Where can you get them? I know this, that according to the minister's returns, in the next year, 1923, instead of $59,000,000 being added, it was $116,000,000 odd. This is a terrific sum, and in the next year, 1924, it was $118,000,000. According to the reports of the companies it is more than either of those figures, about $12,000,000 more. These figures are staggering.

Mr. EULER: Does the right hon. member think that the mere statement of the size of the sum is in itself a proof that the money is ill spent or not properly expended?

Mr. MEIGHEN: It is not a proof, no; but it is a proof that the policy that has been followed is unwise. Never under the conditions of these last three years was this country justified in putting $327,000,000 more into the National Railways; even if you assume—which I will not—that the money is now represented by tangible assets, the policy was not the right one. We already had over $1,100,000,000 in that road and to-day we have $1,492,000,000. And of that, $327,000,000 has been put into the railways since this government came into power. These figures, I say, are staggering; they have staggered the people of Canada. And this government under the law of the land is responsible for all moneys provided for capital expenditure of the Canadian National Railways. Let no one forget that fact. The statute makes the government responsible for capital. I could point to investments of the railways that have not been sound; but I do not claim that under any management every investment that is

made will be sound. What I claim however is that the road has been run without financial direction, of a quality adequate to such an enterprise, ever since the end of 1922.

You may have a high opinion of Sir Henry Thornton or you may not; he has his critics and his friends, and he has many of both. But neither Sir Henry Thornton nor any other man in charge of a railway can be master of all the phases of this huge enterprise. Name me the president or general manager of any great system half the size of this who is surrounded with the class of men whom this government provided to manage a road in which—including the Intercolonial and Transcontinental—we have invested nearly two billions of the money of the people of Canada. This road's operations are twice the size of the titanic United States Steel Corporation; and I wonder if we would compare the directors of the United States Steel Corporation with the Talbots, the Goughs, the Dawsons with whom this government supplied Sir Henry Thornton at the end of 1922. Where is the man on that board—or rather, where was the man on that board, for I shall comment on the present board in due course—who was competent to render any real assistance to Sir Henry Thornton, assuming that he himself was competent, giving him every credit for what he has done, when the old board was changed at the end of 1922? Instead of Mr. E. R. Wood, instead of Mr. Riley, instead of Mr. Hobson, we had on the board, the men I have named. The consequences are now upon us. There has been a little improvement of personnel lately, I admit. I do not object to, rather I commend, the appointment of two or three men, Mr. Gardiner, I think, was a good appointment; so was Mr. Brown. But these men have been only lately put on the board. Up to their appointment who was there on the board who held the slightest control over the financial direction of that colossal enterprise? No control from the directors, no control from the government—and Canada to-day finds itself $176,000,000 more in debt to the public in respect of the railways, and $327,000,000 more in debt altogether since this government has come into power.

5 p.m.

Canada is not a country that can afford to go down hill at such a pace, and the hon. member for St. Lawrence-St. George is absolutely right when he calls attention to the inevitable end. Such a state of affairs cannot continue and the responsibility is on the administration, who having the power to control this tremendous outlay has failed to exercise that power. They have allowed millions to go into Scribe hotels, golf courses, radio sets and all that sort of thing. If this country were going ahead it would not be so bad. If we were expanding and the population were growing, if there were sufficient traffic to supply both railways, with a surplus, these expenditures might be justified. But when there is only a limited amount of traffic available, to be spending the money of the Canadian people in tens of millions in a mad effort to get the traffic from the other enterprises is manifestly not wisdom. It is because of this policy that we find ourselves where we are to-day.

I said there was no expansion. Have hon. members observed what has been going on? Has there been any attempt at co-ordination or economy? I look at the Colonization department alone and I find that what in 1922 was about $160,000 has increased until now it is $770,000. And this in competition with the immigration efforts of the government. How can such a duplication of effort be justified? During the fiscal year 1923-24 the government spent $3,482,986 on immigration work, or $1,128,000 more than was spent during the year 1922-23. And with all this duplication we have an immigration of 111,000 as against 148,000 the year before. This year the Canadian National Railways' expenditure in colonization has gone up by 150 per cent; while, as I have stated, the government has spent $1,128,000 more on immigration. Yet, notwithstanding all that additional expenditure, to say nothing of the overlapping, we have received about 37,000 less in immigrants than we did the year before.

The Prime Minister (Mr. Mackenzie King) has been in the habit of telling us that when his government started this work they had to begin at the bottom of the hill; that the old government had allowed the immigration machinery to go to rack and ruin, and so the present administration had to start at the bottom; and the people must therefore wait until later figures would be available to see what the full harvest of the government's policy will be. Well, by actual count, they have announced nine policies in their three years of office so far as immigration is concerned. The figures however show that our immigration, as at the 31st of March, was as follows in each of the years enumerated:

1920	111,336

In that year our soldiers had not all returned.

1921	148,477
1922	89,999
1923	72,887
1924	148,560
1925	111,000

Mr. MACKENZIE KING: Has my right hon. friend been adding in the cost of the Wembley exhibition as part of the immigration expenses he has quoted?

Mr. MEIGHEN: My secretary got the figures from the department; I do not know whether that item is included.

Mr. MACKENZIE KING: Can the right hon. gentleman not tell us whether it is included?

Mr. MEIGHEN: If it is I cannot dispute it; my secretary got them from the department's returns.

Mr. MACKENZIE KING: The right hon. gentleman ought to be more careful before quoting figures.

Mr. MEIGHEN: It would make little difference anyway, because there has been a great increase in the immigration figures. But I got the figures from the department; and if the items referred to should not be included under the head of Immigration why did the department so include them?

Now, these are the consequences which we have to face. They are not very cheerful to contemplate, nor will recovery from them be very easy. I sometimes wonder how the government can justify the course it is pursuing. We have abundant resources, we are told; but abundant resources are not enough, unless we manage them for the benefit of the people of our country. All this talk about great resources is just so much air; what is essential to accompany resources is a policy which will develop them; and the government should see to it that the people of Canada shall get the benefit of the full harvest of that development.

We have been met year after year with admissions: things were not any too good, but they were going to be very good soon. One year we had one excuse; the next year we had another; the third year we had still another; and I wondered what was to be the excuse this year. I remembered that last year the Acting Minister of Finance told us in his statement that with these reductions of duty on basic commodities, on the "instruments of production," there would be so much to buy and so much money to buy it with that our workmen would be employed overtime and our factories running night and day. This was the prophecy made in the closing words of the budget of last year. Instead of that, everybody knows—not only everybody here but the people throughout the whole country—that the very reverse has been the fact; and I wondered what the Acting Minister of Finance would say by way of explanation when he came before the House this year with his budget. He looked about for some new excuse. The three best had gone; he had to have another. He looked across to Europe, and he said: "I know what the trouble is; it is the reparations problem over in Europe. Europe is all mixed up; the people there cannot buy. The reparations trouble left them in chaos up to last year, but last year they got it fixed up by the Dawes plan, so now we are on the eve of expansion." Do hon. members really think there is the slightest thing in that? Do hon. members really think that is valid to the extent of one per cent? Is it difficulty in selling our exports that has been our trouble? Have we ever got as good prices in history, in time of peace, as we got this last year? I do not think we ever did, nor do I think we have ever found so ready a sale—that is, for our raw product, the production of which and the marketing of which was going to make us all so busy, all so happy, all so rich. On the contrary it is business at home that has become stagnant, the people at home who have become discouraged. I ask, with such policies as this government is pursuing—the National Railways running more or less wild, expenditure mounting up and revenue decreasing—what will be our position next year? Does the government anticipate that next year we will get higher prices for our products? If so, on what is that expectation based? Does the government expect that a contracted population is going to produce more than an expanded population? If it does not expect these things, upon what does it rely to extricate this country from the mire of debt into which it has fallen?

Now, the hon. member for West York (Sir Henry Drayton) in the amendment says this and this alone: that the essential thing for Canada to-day is reduction of taxation, especially of those taxes which bear on the masses of the people and which this government has increased—the sales tax, these nuisance taxes, and the like. Reduction of all taxes is necessary, but of these especially. The amendment says, as well that there is disclosed in the budget of this year no evidence of that economy that will make such a reduction possible. I ask, is there any hon. member of this House who in his heart of hearts thinks he can discover any such evidence in the budget of this year? Is there an hon. member to my left—and they are on trial in this debate as well as the rest of us—is there one of them who has not

stated in this House the very things that are stated in the amendment? Has there been one hon. member to my left who has uttered in this debate an opinion which conflicts with the statements made in the amendment? Are those statements not of importance? Is it not of value that this House should declare a fact—and it is a fact—so vital to the welfare of this country? If hon. members admit those facts, how is it that they are going to vote against them? Some hon. members have said, "These people to our right are protectionists." Well, there is no protectionist statement in the amendment. We have not diverged from our views—and I own it—on the subject of protection; we stand where we stood in office and we are going to stand there. Further, we are going to do everything in our power to get the judgment of the people of Canada on the issue. We have a statement of our faith in that respect on the records of this House; there it has been since the first day of this session, and there it will stay until it is moved and discussed in parliament. But if we had included in the amendment a declaration with regard to protection, duplicating our other declaration of faith, hon. members to our left would have said: Oh, the rest of your amendment is all right; we are with you on economy, we are with you in reduction of taxation, but there is that protection declaration—we have to vote against you on that account. But this time they have no such excuse. This time the sincerity of their professions on this question are to be tested. This time the country is going to know whether hon. members to my left are more interested in continuance in office of this government than in the adoption of sound principles of public administration.

As for this government I can make no such appeal to them. They are interested in one thing, so far as I can see, and one thing only—the retention of power. But I do ask them to have some regard, before it is too late, to the actual condition of this Dominion. I do ask them to adopt principles and practices, both of administration and of fiscal policy; I do ask them to adopt such courses as will relieve the discouragement of industry, the lassitude of trade and the wastage of population which confront us now.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the rules of this House have been so arranged as to make possible a discussion on particular occasions of matters of great concern to the country as a whole, and at such times the House and the country have a right to expect that the topics which are the subject of consideration will be brought under review particularly by the party leaders in the House. It is customary on the occasion of the budget debate for all political leaders to discuss the budget proper. A time has been set apart for the discussion of railway problems. In order to permit of the fullest possible discussion, matters relating to railways are referred to a select committee of the House with power of examining in detail all the questions involved of calling witnesses and going into all the facts and figures and circumstances relative to the railways of the country. When the report of the committee is presented to the House, it is reasonable to assume that railway matters will then and there be considered and that every member will be prepared to discuss them. But I submit, Mr. Speaker, that when we come to discuss the budget, if we are to follow established precedent we have a right to expect from the right hon. leader of the opposition (Mr. Meighen) a discussion, if not, above all else, at least in some measure, of the fiscal policy of the country. He told us this afternoon that he regarded the fiscal policy of the country as an all-important question. I think we will all agree with him in that, and I think it goes without saying that the time for the discussion of fiscal policy is when the House is assembled for that express purpose, namely, to debate the budget. Instead we have listened this afternoon to a discussion on the part of the right hon. gentleman which has had to do almost exclusively with railway matters.

We are told by the right hon. leader of the opposition himself that he does not intend to discuss the fiscal policy at this time. Well, Sir, I do not know what motive my right hon. friend has in mind in not wishing to discuss the fiscal policy, in not wishing to bring forward his own fiscal policy and have it made a subject of debate here, unless it be that he is either ashamed or afraid of his own offspring. On the eve of the assembling of this parliament my right hon. friend issued a manifesto to this country, a manifesto dealing with fiscal matters. The House had every reason to expect that when we came to a debate on the budget, my right hon. friend would move as an amendment at the first opportunity, as he had the right and privilege to do what he had set forward as the fiscal policy in which he believed. Did he adopt that course? He was careful when the House assembled to place on the order paper in the

form of a notice of motion this statement of policy to which I refer and which he had first given to the public through the press as a manifesto. He knows the rules of the House, better I will pay him the compliment of saying—better I believe than almost any other hon. member, and he knew as well as all hon. members assembled here know, that the time to debate a question of that kind is when the budget resolutions are before this House. When he placed his resolution on the order paper, he also knew as well as every other hon. member that the chance of the resolution coming up at an appropriate moment for discussion before the budget was introduced was remote indeed. I say, Mr. Speaker, that my right hon. friend this afternoon as the leader of a party has been departing altogether from the spirit of the rules of this House in having selected this occasion to discuss, practically exclusively, railway matters, and in omitting altogether to discuss the great question of fiscal policy, on which his party has one view, and on which hon. members in the rest of the House have another.

May I further point this out? If my right hon. friend really desired to have his fiscal policy considered, he could at any appropriate time in this debate have done so by speaking on the budget. He has carefully waited until virtually the last moment of the last day, after this House has been discussing matters pertaining to fiscal policies for a month and a half, to tell us he does not propose to discuss at all at this time the fiscal question, which, mark you, he says is all important. Well, the public will draw its conclusion, just as every hon. member will draw his conclusion, with respect to what my right hon. friend has had in mind. The truth of the matter is that he knows, and knows very well, that had he presented his resolution, had he presented his fiscal policy in the form of an amendment to the budget, it would have been so overwhelmingly defeated in this House that he would have been even more ashamed of it than he is at the present time.

My right hon. friend began his address by making reference to the length of this debate. I should like to say just a word or two following him in that regard. When the government called parliament together early in the month of February, it did so with the hope and expectation that the business of the country would be expedited, that the convenience of hon. members would be consulted, and that, the government being prepared to bring down its measures rapidly as opportunity permitted, it would be possible for this House to adjourn before the end of the spring days or at any rate before the beginning of the summer days, thus suiting the convenience, as I have already said, of most of the members of the House, and certainly also meeting with the wishes of the general public, who, I think, do not like to see time indefinitely consumed here to no particular purpose. Having that object in view, the government presented to this House almost on the day of opening, certainly as soon as opportunity permitted, the Auditor General's report in its complete form. The government brought down as soon as opportunity permitted the estimates and placed them on the table of the House. The debate on the Address was a short one. The government was proceeding with business rapidly, and I think every hon. member felt that the session had opened in a manner which promised rapid and expeditious disposal of the several questions that were to come before the House. Then, for some reason or other, we began to meet with protracted discussion. Hon. gentlemen opposite, my right hon. friend and those who sit about him, began to protract and delay the proceedings of the House in a most inexcusable manner and, I might add, in a manner without precedent.

When the government signified its intention of introducing an ocean rates control bill, it was intimated by the hon. Minister of Trade and Commerce (Mr. Low) at that time that before the House would be asked to pass on the measure itself, the bill would be referred to a select committee of the House, where the fullest opportunity would be afforded to go into all details. Hon. members were told that the committee would have the full powers, given such committees. In accordance with customary procedure we then started in briefly to discuss the resolution, as a preliminary to bringing in the bill itself, and while the resolution was under discussion the House was assured over and over again that the questions which were being asked at the time could be answered more satisfactorily if the measure were in committee. In view of this fact the government repeatedly made overtures to hon. gentlemen to allow the measure to get to a committee and save the time of the House. But what did hon. gentlemen opposite do? They kept up a debate day after day, until fully seven days of the time of the House were consumed on the resolution before the bill was even introduced, and when finally the government decided that a vote on the resolution must come some time, they complained they

had been badly treated because a vote was taken at the end of this seven days' debate. I have said, Mr. Speaker, that that kind of procedure is without precedent so far as dealing with a preliminary resolution of the kind is concerned.

May I now show the House how different the action of this government was from the action of hon. gentlemen opposite under similar circumstances? We have heard a great deal from my right hon. friend this afternoon with respect to the deficits on the National Railways. How were the National Railways acquired? Who was responsible for the acquisition of the major portion of the National Railways? A colleague of my right hon. friend opposite was the one who brought in the resolution for the acquisition of the National Railways. Now in the case of the acquisition of the National Railways, there was a necessity as in the case of the contract for the control of ocean rates, to precede the bill itself by a resolution. What position did the government of which my right hon. friend was a member take with respect to that resolution? It contended that the House had not even the right to debate the resolution. It would not allow one hour's debate on the resolution for the acquisition of the Grand Trunk Railway system.

Mr. MEIGHEN: Has the hon. gentleman got the quotation there?

Mr. MACKENZIE KING: Does my right hon. friend deny it?

Mr. MEIGHEN: I have not the slightest recollection of it, and I do not think it is correct.

Mr. MACKENZIE KING: I think I am coming to know my right hon. friend's methods. I thought he would say exactly what he has just said so I brought the Hansard with me. I have in my hand the Hansard of the second session of 1919, volume II, page 1012, and where I find the following:

GRAND TRUNK RAILWAY SYSTEM

Resolution Respecting its Acquisition by the Government

Hon. J. D. Reid (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Then follow three columns of Hansard setting forth the resolution for the acquisition of the Grand Trunk Railway system. It goes on:

Mr. Speaker: Is it the pleasure of the House to adopt the motion?

Some hon. members: No.

Mr. Devlin: Mr. Speaker, I would like to ask the minister—

Mr. Speaker: The motion is not debatable. Of course, if hon. members desire that a vote be taken on the motion, that would be quite in order. Is it the pleasure of the House to adopt the motion?

Some hon. members: No.

Some hon. members: Carried.

The House then divided on the motion of hon. Mr. Reid which was agreed to on the following division:

And the division is there recorded.

Mr. MEIGHEN: The right hon. gentleman quoted the Speaker's ruling. The government did not ask for it, and my right hon. friend quoted nothing to that effect.

Mr. MACKENZIE KING: My right hon. friend has the finest sense of chivalry and loyalty of any man I know! I have quoted the record showing what was done at a time when the Speaker of his own party was in the chair, and when action by the Speaker was asked by one of his own colleagues in the ministry. He turns round here when the Speaker is no longer in the House and asserts such a pretext as that.

Some hon. MEMBERS: Oh, oh.

Mr. MEIGHEN: Rubbish. The minister never asked for it.

Mr. MACKENZIE KING: I tell my right hon. friend that the country as well as the House is beginning to understand his methods and his actions.

Mr. MEIGHEN: Nonsense.

Some hon. MEMBERS: Try again.

Mr. MACKENZIE KING: What did my right hon. friend say this afternoon in another effort to deceive the country? He began quoting figures with regard to immigration costs. He began by saying that the government had increased the outlay on immigration by more than a million of dollars, and when I asked him if he was including in that statement the cost of the Wembley exhibition which amounts to over a million dollars, the right hon. gentleman said "I do not know, my secretary got this memorandum." In the former case to which I alluded the right hon. gentleman blamed the Speaker, but in this instance he puts the blame on his private secretary.

Mr. MEIGHEN: Rubbish. I said my secretary got it from the Immigration department and I took full responsibility. Was it any crime to get it? If the statement was wrong ask the minister why it was wrong.

Mr. MACKENZIE KING: The responsibility devolved upon my right hon. friend to

satisfy himself in advance that the figures he was giving the House and the country were correct before he used them.

Mr. MEIGHEN: I took the minister's word for it.

Mr. MACKENZIE KING: I think hon. members of the House will know what value to attach to the other statements which my right hon. friend gave this afternoon and which I venture to say are in every particular as misleading as the two particular instances I have just mentioned.

Now, Mr. Speaker, let me continue with respect to the delay there has been. Perhaps my right hon. friend will dispute even this: The next measure that was brought forward—related to canteen funds. Because the government knew that the returned soldiers were anxious to have legislation affecting their interests introduced without delay—this measure, intended to be followed by others, was brought forward in the House at an early date so that it might go to the Senate as soon as possible, and that no question would arise there of full opportunity not having been given for consideration. That was the bill respecting the canteen funds.

Mr. ARTHURS: That has nothing to do with the returned soldiers.

Mr. MACKENZIE KING: It has to do with matters in which the returned soldiers were interested.

Mr. ARTHURS: It has nothing to do with the Pension Act.

Mr. MACKENZIE KING: The soldier is vitally interested in the question of canteen funds, and the intention of the government, as soon as that question should be disposed of, was to bring in other legislation of interest to returned soldiers. Nevertheless when that particular matter was brought before the House hon. gentlemen opposite took up three days debating the resolution. Now, that resolution passed this House last session as did the bill based on it. It contained no new features; the whole effect of it was in accord with—

Mr. ARTHURS: The right hon. gentleman is absolutely wrong in the assertion that this measure was before the House last year.

Mr. BELAND: It was passed last year.

Mr. ARTHURS: The canteen bill?

Mr. BELAND: Yes.

Mr. MACKENZIE KING: When my hon. friend's constituents read his remarks this afternoon they will wonder what he does with his time while away from home. The records of parliament speak for themselves. I repeat, the measure passed this House last year and my hon. friend possibly may find that he took part in the debate.

Mr. ARTHURS: The right hon. gentleman is distinctly mistaken in saying the measure was passed last year; it was thrown out by the Senate.

Mr. MACKENZIE KING: The measure was not thrown out of this House, it was passed here. I am speaking of this House not of the Senate.

Mr. ARTHURS: I want to ask—

Some hon. MEMBERS: Order.

Mr. DEPUTY SPEAKER: I must ask that the hon. member be allowed to put his question if the Prime Minister consents.

Mr. ARTHURS: I merely wish to ask a simple question: Was the canteen fund bill thrown out by the Senate last year?

Mr. BELAND: Yes it was.

Mr. MACKENZIE KING: The point I wish to bring to the attention of the House is this—that three days of the time of parliament were taken up by, I think it is fair to say, wholly unnecessary discussion.

Mr. MANION: May I just interject the statement that we took parts of three days not three full days, and that we agreed with the government to finish at a certain time. That agreement we lived up to.

Mr. MACKENZIE KING: The greater part of three days was consumed as I have indicated.

Mr. MANION: Part only.

Mr. MACKENZIE KING: The point I wish to make is this: For reasons best known to hon. gentlemen opposite there has been evidence, not only in this debate but in the case of the other two matters to which I have referred, of a deliberate effort to protract the proceedings of this parliament. The reason of it, if I am not misinformed, is that hon. gentlemen opposite have it in their minds that the government has thoughts of appealing to the country this year, possibly in June, and they are going to take good care that the government will not be given a chance to make the appeal at that time.

Some hon. MEMBERS: Oh, oh.

Mr. MACKENZIE KING: A higher compliment could not be paid the administration than that at all costs they must be kept in office, and that all through this discussion, which has been running on for a month and a half—during which hon. members have discussed all kind of topics pertaining to all parts of the country—we have not heard either from hon. gentlemen opposite or any of the other groups, the slightest demand to this government to make an appeal to the people and test public opinion.

Some hon. MEMBERS: Oh, oh.

Mr. MEIGHEN: I tell the right hon. gentleman that what he is saying is not true. The demand has been made over and over again in the debate, and I make it now.

Some hon. MEMBERS: Oh, oh.

Mr. MEIGHEN: My right hon. friend had better stay in the chamber and hear the debate.

Mr. MACKENZIE KING: My right hon. friend might put that in the form of a motion and let us debate it.

Mr. MEIGHEN: Give us a day for it.

Mr. MACKENZIE KING: I mention these facts because I think the country is entitled to some explanation as to why the proceedings have been protracted in this way. May I say with regard to the present debate that I believe it is the longest budget debate that has ever taken place in this parliament. Certainly it is the longest that has taken place in the last thirty years, and over a budget that is in the main non-contentious. What has been the nature of the debate? Most of the time has been taken up by hon. gentlemen of the official opposition in saying that the government should have put the tariff higher, and by hon. gentlemen of the Progressive group in saying that they were not satisfied because the government had not made the tariff lower. As a government we are being condemned by hon. gentlemen opposite not because they agree. If they join together in a vote against the budget their vote will only have this significance, that we are being censured because at one and the same time we have not gone in diametrically opposite directions. That is the force of the opposition that has occupied a month and a half of the time of this parliament, the government is to be criticized because it has so sized up public opinion in Canada to-day and in this House that it seeks to avoid an extreme in either direction, and to do at the present time the thing which the moderate, sensible people of this country wish to be done.

It may interest hon. members to have a review of the length of time that has been spent year by year over the last thirty years in debating the several budgets. In twenty-three years of the last thirty the debate on the budget has not occupied a longer time than ten days at the outside. In several sessions it has not occupied more than five days and in some sessions but one or two days. In 1896 it occupied twelve days. That was just before an election and probably at the present time some hon. members feel it is necessary to speak on the budget because they think there is a possibility of an election coming on in the near future. In 1915 the budget debate lasted thirteen days. In 1902 and in 1922 the budget debate lasted fourteen days. Last year it occupied nineteen days. In 1900, before the general election of that year, it lasted twenty-three days. This year the debate has run into twenty-four days. We began on the 24th March and to-morrow will be the 1st May. The time of the House, with the exception of a brief adjournment at Easter and the ordinary adjournments over Saturday and Sunday has been given continuously to the discussion of this budget.

Mr. LADNER: Have the hon. gentleman's followers not taken one-half the time?

Mr. MACKENZIE KING: No, they have not. I am glad my hon. friend asks that question, because if he looks at the records he will find the greater part of the time has been taken up by himself and those who sit around him.

Mr. MEIGHEN: That is not correct. It is not within a mile of the fact.

Mr. MACKENZIE KING: We are not discussing distances, but time.

Mr. MEIGHEN: Will my hon. friend give the pages?

Mr. MACKENZIE KING: May I now come to what in other particulars has been the nature of the criticism directed against the government. It has been in part along the line taken by the right hon. leader of the opposition this afternoon. First of all, there has been criticism of the manner in which the public accounts of the country have been made up. In the next place there has been criticism of the method in which the budget has been presented and the time at which it was introduced, and finally there has been the amendment of the ex-Minister

of Finance (Sir Henry Drayton) and the different points referred to therein. I think in these particulars we have summarized fairly well the nature of the opposition which has come from hon. gentlemen opposite. May I say that I think it ought to be possible for hon. gentlemen in this House to debate public questions without either impugning the honour of ministers of the crown or the integrity of government officials. It is because hon. gentlemen opposite, including my right hon. friend this afternoon in the course of his remarks, have descended to that level, that I wish to take the strongest possible exception to the nature of the pronouncements they have made against the government and one of its honourable members, as well as against members of the public service of the country. My right hon. friend last year—and hon. members opposite have done the same thing this year—insinuated that the government in some way caused the public accounts to be made up in a different fashion from the form in which they had been made up hitherto. In fact, the sole point of my right hon. friend's remarks this afternoon is that the government has not taken into account in connection with the discussion of the government services as such and what relates to the government services as such, the railways and facts and figures relating thereto. There has been a direct statement—I will not call it an insinuation, although it started as an insinuation, and, as in the case of many other things oft repeated, those who repeated it have come to believe it themselves, it comes now to a direct statement—that the government has changed the method of making up the public accounts so as to deceive the House and the country. Hon. gentlemen will recall that over and over again we heard the statement that we had not included in our public accounts as contributing to the net consolidated debt the guaranteed and unguaranteed amounts which the railways had expended and which they say we should have included, and further that by not so doing we were altering the method of bringing the public accounts before the people of this country. Hon. gentlemen opposite, when they were confronted with the sworn statement of the auditors who in their day audited the books of this country, found that while they might make that assertion a few times they could not make it indefinitely, and so they have abandoned it as my right hon. friend abandoned it to-day, and have come now to make the statement that it is not the books of the country that have been altered, but it is the method of the presentation by the Minister of Finance of the accounts of the country.

[Mr. Mackenzie King.]

Let me come to the statement of the books of the country. In the year 1920, the then Minister of Finance, the present member for West York (Sir Henry Drayton) called in a firm of accountants from the city of Toronto to go over the books of the Finance department to see if they were kept in a proper way and to audit them. I think it was a wise and desirable course to adopt. There had been large expenditures during the war. The minister wished to have a sense of security that in these vast outlays there had not been too much in the way of confusion; and he brought in a firm of auditors and gave them not only the task of auditing the books of the Finance department but gave them also the further task of straightening out the accounts of the Finance department in such a way that they would more readily compare in form with the methods adopted by great financial institutions or railway companies and industrial concerns. I will read to the House the statement that appears in the report of the Deputy Minister of Finance in the Public Accounts for 1920. It is as follows:

> In carrying out the policy of making the balance sheet simple and illustrative its usual form has, under the personal supervision of Mr. George Edwards, F.C.A., C.B.E., of the well-known firm of Messrs. Edwards, Morgan and Company, Chartered Accountants, head office in the city of Toronto, been revised and set up in a manner more in conformity with those of banks, railway corporations and other financial institutions. Mr. Edwards and his firm have given considerable attention to this revision without remuneration. The revised balance sheet will undoubtedly be favourably received by outside business concerns.

Then there is the certificate of the firm of Edwards, Morgan and Company, chartered accountants, dated Ottawa, December 1, 1920, which appears in the Public Accounts 1920, at that time:

> We have examined the balance sheet of the Dominion of Canada (shewn herewith) as of March 31, 1920, also the expenditure and revenue account for the fiscal year ended on the said date, and have verified the same by reference to the Dominion ledgers. We certify that the above-mentioned statements accurately set forth the matters therein referred to, and are as shewn by the said books.
>
> Edwards, Morgan and Company,
> Chartered Accountants.

That is the firm this government retained to examine the public accounts and books of the Finance department last year, after hon. gentlemen opposite had said they were made up in a different fashion. We asked them to certify to parliament as to whether or not any change had been made in the manner of presenting the public accounts. This is the certificate which that firm has given, a firm

which I wish the House to remember was retained by hon. gentlemen opposite in the first instance, and which was requested by this government to certify whether there had been any change in the method by which the public accounts for 1924 were made up. This certificate appears in the Public Accounts of this year:

> We have examined the balance sheet of the Dominion of Canada as at March 31, 1924, and we certify that the balance sheet conforms to the balance sheets of previous years in not including in the net debt of the Dominion, issues of the Canadian National Railway Company and companies included in its system, which carry the guarantee of the Dominion of Canada. Such guaranteed issues are shown year by year as indirect liabilities.
>
> GEO. EDWARDS,
> Of the firm of Edwards, Morgan & Co.
>
> W. GARTH THOMSON,
> Of the firm of Peat, Marwick, Mitchell & Co.
>
> Ottawa, Canada, 27th January, 1925.

With that certificate before us, can any hon gentleman any longer argue in this House or in this country that the present government has sought in any particular to deal dishonestly with the House or with the public in separating the railway accounts from the rest of the public finances? I marvel at hon. gentlemen opposite daring to suggest such a thing. It is not patriotic. It is not honest. It is not true. Talk of deceiving the public—that is the way to deceive them. I say that it cannot again be questioned that, as regards the railway accounts, this country from the beginning of confederation down to the present time has kept the railway accounts separately with respect to guaranteed and unguaranteed amounts, and if this government were to change that method, it would only serve to bring confusion into the whole national situation by making impossible comparisons between the cost of government to-day with the cost of government in previous or succeeding years and the cost of national control of railways, a matter which is being given a fair trial at the present time.

Let me say a word in regard to this matter of the control of the National Railways and the bringing of their accounts into the government accounts. First of all, I would ask hon. gentlemen: Who was responsible for having the Grand Trunk railway system being made a charge upon this country? Who brought into being the National railway system as we have it at the present time, or rather not as we have it at the present time, because this government has organized by legislation efficiency out of the chaos left by the previous administration? Hon. gentlemen opposite were the ones who, by act of parliament, decided that this bankrupt railway system should not be allowed, as has been done frequently in the United States, to go into liquidation, but instead should be bought at a particular price in the condition it was in and made part of the National system. It is very fine for my right hon. friend and his friends to turn round now and try to indict this government and this party for enormous expenditures which, he says should not have been added to the debt of this country, when as a matter of fact we have had no responsibility whatever in the initiation of that policy. We have a responsibility in the matter of carrying on the control of the railways, and I shall endeavour to show, as I continue to speak, how we have sought to discharge that responsibility and what we have done in that connection. It will reflect very favourably, I can assure the House, as compared with the methods of my right hon. friend during the short time he had control.

The point I wish to make here is that the National railways were turned over to the government, and when this was done, the government had to decide upon one of two policies. I am going to submit this to the fairness of the hon. members of the House and of the country. The two policies that were possible in connection with this vast railway system were: Either to administer the system as a part of the government business of the country under the control of a minister of the crown who would be responsible for everything that was done, who would have the complete direction and control and who would have to give an accounting to the country; or to take the National railway system entirely out of the control of politics and entrust it to a president, board and a set of officers, who would be assured that they would be given a free hand and that there would be no political control at all from the government's point of view. Those are the only possible alternatives. We adopted the latter, believing that that was most in accord with public opinion, that it would give, as nothing else possible could give, a fair chance to the National railways to show whether they would pay or not. But I ask hon. members: Having done that, having parted with control, in deference to public opinion, and I might say, in accordance with the unanimous wish of this House, because there is not an hon. gentleman opposite but said that that was the policy that ought to be adopted, are we to be held responsible and the government blamed for all the expenditures, all the debts, all the difficulties that arise in connection with the

National Railways? If we are to have responsibility, then we must have control; but if we have not control, we cannot be held responsible at the same time for the methods or consequences of administration.

I think the country is pretty well satisfied, despite whatever my right hon. friend may say about Sir Henry Thornton or the gentlemen who surround him, that Sir Henry Thornton was the ablest executive it would have been possible to find anywhere. If the roads can be made to pay at all, they can be made to pay better under his direction and guiding genius than under the direction and guiding genius of any other person these gentlemen can name. The government will take responsibility for the appointment of Sir Henry Thornton. That was our responsibility. We took our time; we made inquiries in as many directions as possible; we moved cautiously; We considered different railway executives and when we had come to the conclusion that we had found the one man that we really believed possessed the qualities to make the National system a success, if it could be made a success, we took the responsibility of offering him the appointment. If he had failed, ours would have been the responsibility for the poor executive we had chosen. In the first talk I had with Sir Henry Thornton, I told him that the responsibility would be upon him and his officers for the running of the road; that there would be no interference in the nature of political control with them so far as it was possible for me or any of my colleagues to prevent it, that they would have a free hand. Sir Henry Thornton was equally frank in saying that he would not undertake the responsibility of administering a system as vast as that on any other basis.

Having parted with and given to Sir Henry Thornton that right of control, and the country having endorsed that proceeding, is it right to say that this government must bring into its public accounts to-day the whole accounts of the Canadian National system when such a course has never been adopted before at any time and when such a procedure would serve only to create confusion? The Acting Minister of Finance (Mr. Robb) never for one minute claimed that the surplus he spoke of or the figures he gave to the House related to other than ordinary government business as is so understood. He made it perfectly clear to the House that there was to be considered by this parliament at this time the ordinary government business; that there was the railway business also to be considered but at the appropriate time. If we understand that there can be no room for difference between us. I agree with the view that every dollar of public expenditure that the railways incur is an expenditure of which account should be taken in estimating the finances of the country. But there is this vast difference between the railway and the ordinary business of government. The railway is in the nature of an industrial enterprise, conducted from a financial point of view for the purpose of profit or gain. The business of the government is not of the same character. The National railways are an industrial corporation, taken in hand by the state for a short time or for a longer period, as time may disclose, but this administration is a wholly different kind of business from the administration of the affairs of a country. I think hon. members will agree with that; I am sure the country will. This financing is done in calendar years, ours in fiscal years ending with March 31. From now on, so far as my discussion of the matter is concerned, I shall keep to the line which the Acting Minister of Finance adopted, which the officials of his department advised him to adopt, which hon. gentlemen opposite adopted when in office, and which will have to be followed in future if we are to avoid the sort of confusion which has been thrown into the debate to-day by the speech of the leader of the opposition wherever we fail to keep separate the ordinary business of the country from the finances of the railway system.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. MACKENZIE KING: Mr. Speaker, before recess I was endeavouring to make clear that the government in the presentation of its financial statement to the House had no desire other than to give to the House and to the country the fullest information on the financial situation, and that we were following in our budget presentation this year and last year, the methods followed in previous years by this administration and by previous administrations. I was pointing out also that we felt it would not be in the interests of the government services, in the interests of the railways, of the public, or of parliament, to occasion confusion by changing these methods in such a way as to bring all the railway business into the discussion of the fiscal questions involved in the presentation and consideration of the budget address. I want to

repeat that in what I have to say to-night about the finances, answering my right hon. friend, I do not intend to take account of railway finances at all except to refer to the expenditures made during the time we have been in office as compared with those made under the administration of my right hon. friend and his party. There has been no desire, in the presentation of the financial statement, in any way to mislead or deceive the country. The government wants the country to understand that it is keeping the whole railway situation separate and distinct from the general finances. We are prepared to admit all that the committee that has been specially appointed to look into the railway situation find to be the deficit of the railways year by year after having had an opportunity of examining expert witnesses and getting all the facts. We have no desire to conceal anything. Our policy with respect to the National railways is to give government ownership a fair chance—as fair a chance as it is possible to give it in the face of the tremendous handicaps that the National system has fallen heir to through the manner in which it has come into being. In other words, this bankrupt system was taken over by our predecessors and it has to be carried on by us; I doubt very much whether government ownership is getting or can possibly get a fair trial under an inheritance of that kind. However, it is in no way the fault of this administration that the inheritance is what it is. We are responsible for taking circumstances as we find them and doing the best we can to give the railways every possible chance. That was our policy as enunciated when the government came into office; it was stated as our policy when we made our appeal to the people, and it is the policy which we intend to follow in dealing with these railway matters. We do not intend to confuse the railway situation with the other business of the country, that is to say the ordinary business of government.

As I have pointed out, the criticism of the opposition against the government has been, first of all, as to the method in which the public accounts have been presented. I think I have made it very clear that there has been no alteration in the method of presenting the accounts. There was the further charge, or insinuation, if it was not a charge, that the Acting Minister of Finance had presented his figures in a way that was different from the method ordinarily followed. I wish again to assert that there has been no change in that particular. The method followed by the minister, as must be apparent to anyone who will give the matter careful study, is on all-fours with the method always followed by finance ministers in presenting their financial statements to the House. The custom is this: The Finance Minister first of all states what his total revenues are. He deals with the preceding year, then he deals with the year which he is presenting his estimates. In dealing with the preceding year he states what his revenues have been; then he goes into the matter of ordinary expenditure. He sets out the ordinary expenditures, then certain outlays on capital account, then outlays on special account. These are presented as a first statement, set off against the revenues. In addition, he presents another statement of indirect liabilities which are a charge upon the public debt of the country which go to make up the total net consolidated public debt. These figures include cash advances made by the government to railways, loans or cash to such institutions as harbour commissions, payments on account of the merchant marine—in other words, services that are not regarded as part of the ordinary services of the government, but involving advances which, nevertheless, constitute liabilities and which have to be taken into account in estimating the net consolidated public debt. Now, that is exactly what my hon. friend has done; in all particulars he has presented his statement in the usual way. Then, he has said there are in addition, the railway finances to be taken into account.

The right hon. leader of the opposition insinuated, if he did not directly charge it, that the Acting Minister of Finance, in bringing down the budget before we had entered upon the new fiscal year, had some ulterior motive in view. My right hon. friend sought to leave the impression that this should not have been done; that he was surprised at the precipitate manner in which the government had brought on the budget; and the inference thrown out was that the Acting Minister of Finance for reasons best known to himself wished to have the budget over before the figures of the year were complete. Well, I want to tell my right hon. friend that in presenting his budget the Acting Minister of Finance was careful in every particular to underestimate the revenue of the country and to overestimate the expenditure. Had he waited till the fiscal year was ended, he would have been in a position, as I am to-night, to present a much more favourable statement to the House of Commons.

Before giving to the House the figures, let me correct the false impression my right hon. friend sought to create as to the method of

procedure and the time at which the budget should be brought in. My right hon. friend knows very well that the proper thing to do is, if possible, to bring the budget in and have it discussed before the old fiscal year is over and the new fiscal year to which it also relates begins. Our fiscal year for many years ended on June 30th, not on March 31st, as it does at the present time. It was in 1906 that the change was made to March 31st, and from 1890 down to 1906, with the exception of the one year, 1905, the budget was brought into this House before the expiration of the fiscal year on every occasion. Remembering that the fiscal year from 1890 to 1906 ended on June 30, the budget on one occasion during that period was brought down in January, once in February, six times in March, three times in April, three times in May, and twice in June before the month was out. After 1906 the budget was brought down before the end of the fiscal year in 1907, 1908, 1910, 1911, 1912, 1915 and in 1916. In fact, it is only of very recent years that it has been as late in coming down as we appear to have witnessed it here. In 1919 it was brought down on June 5, very late; in 1920, it was brought down on May 18, also late, the business of the country being somewhat delayed as a consequence. In 1921, 1922, and 1923 it was brought down in May. Last year it was brought down on April 10, and this year it was brought down on March 24.

The government, if anything, is entitled to credit for having endeavoured to expedite the business of the House by bringing the budget in at a much earlier stage. Indeed, if it had not been, as I pointed out this afternoon, for the manner in which debates were protracted before the budget was brought in, the government was ready a fortnight before, as I stated to the House at the time, to present the budget, and the budget making allowance for a period of nearly a month for the purpose of its budget debate, might well have been out of the way before the Easter recess and we would then have been free after the Easter recess to get along with the other important measures to be dealt with by the House.

Hon. gentlemen opposite are making inquiries from time to time as to when certain particular measures are going to be introduced. How is it possible for the government to say what it is going to be possible to do this session when we are confronted with the kind of protracted discussion that we have met with in the last two months? I will have something further to say about that before the debate concludes, but I just wish to make plain to hon. gentlemen opposite that the government has been ready to proceed with its business expeditiously, has had its measures in readiness and has been awaiting an opportunity to get them before the House for discussion at as early a date as possible. If some measures fail of discussion the fault will not be with the government, but with the circumstances that we have been unduly hampered as all hon members know, in the manner in which I have described this afternoon.

Now let me give the figures of my hon. friend the Acting Minister of Finance. He presented his budget on March 24th, and today is April 30th. The fiscal year having ended on March 31st it is now possible to give with greater accuracy just exactly what the revenues and the expenditures are likely to be for the past year. My hon. friend the Acting Minister of Finance gave as his estimate for ordinary revenue $344,000,000. Now the figures which I shall give at the present time I am assured are still an underestimate; they are still erring, so to speak, on the safe side, so that when the final statement is given, when all the revenues are in, they may be expected to run beyond the figures which I now give. The latest estimate is that the ordinary revenue will be not $344,000,000, but $344,700,000.

Now as to the expenses of the government. My hon. friend has considerably over-estimated here. He gave as an estimate for government services $342,177,000. As a matter of fact, the expenses for government services will not exceed $339,884,000.

The surplus which he estimated on government services, and I ask hon. members to note that he laid no claim to this being a surplus on the score of the net consolidated debt, it being stated that it was a surplus only on the ordinary business of the government, was $1,823,000. The latest estimate indicates that there will be a surplus on government services of revenue over expenditure of $4,816,000, or an increase above what my hon. friend the Acting Minister of Finance gave the House of $2,993,000.

Now of other receipts of which my hon. friend made no mention, namely, receipts by way of special revenue, a total of $725,000 has come into the treasury.

Other expenses—this is the part that goes to make up the total debt—my hon. friend estimated would total $19,527,000. In that he included the cash advances that would be made to the railways. As a matter of fact, these other expenses, instead of totalling $19,527,000 will probably not total $11,602,000; in other words, my hon. friend over-

estimated expenses there to the extent of $7,925,000. In statistical form the figures are as follows:

Estimate Fiscal Year 1924-25

Item	Budget Estimate March 24	Latest Estimate April 30
Ordinary Revenue.	$344,000,000	$344,700,000
Expenditure—Government Services..	342,177,000	339,884,000
Surplus, Government Services..	1,823,000	4,816,000
Other receipts:		
Total Special Revenue..		725,000
Other Expenditures, total.	19,527,000	11,602,000

Summary

Increase of surplus, government services, over budget estimate..	$2,993,000
Special revenue not previously taken into account..	725,000
Reduction effected in "other expenditures", previously over-estimated..	7,925,000
Total savings over budget estimate..	$11,643,000
Increase in public debt estimated in budget	$13,703,000
Deduct savings over budget estimate.. ..	11,643,000
Increase net consolidated public debt, according to the latest estimate..	$ 2,059,000

These figures disclose that the increase in the net consolidated public debt of Canada for the year 1924-25, made up as the net consolidated debt of Canada has been made up from the days of confederation down to the present time, will not exceed $2,059,000, and this in the year following the budget in which the government made the large reductions which it did in the customs tariff, removed a large proportion of the sales tax, and relieved the people of this country from a very considerable tax burden.

Now what have my hon. friends opposite to offer? They have criticized our method of financing; what have they to offer in place of it? The ex-Minister of Finance (Sir Henry Drayton) in his amendment says we ought to reduce the sales tax and other levies. The hon. member for Vancouver Centre (Mr. Stevens) said that we ought to reduce the income tax, and he was also a member of the previous administration, a former minister of the crown. Then the ex-Minister of Finance (Sir Henry Drayton) made another statement. He said that the $700,000,000-odd worth of imports into this country should never have come in, that we should have manufactured all the things represented by those imports at home. My right hon. friend the leader of the opposition says that his remedy is "protection, protection, more protection; put up the tariff" and his former Minister of Finance says that to the extent of $700,000,000 the goods that are coming in and that yield a revenue should be kept out. The government, in the opinion of my hon. friends opposite, ought to lower the sales tax, lower the income tax, and give up customs duties, and still carry on the business of this country, two-thirds of which is in the nature of uncontrollable expenditure, two-thirds of which is in the nature of money which has to be collected by the government, acting more or less as a collecting agency, to pay the interest on the public debt, to pay for pensions, to pay bondholders, to pay subsidies to the provinces, and to meet different items over which the government has no control whatever. It is easy for hon. gentlemen opposite to talk about reducing taxation all along the line, but you cannot reduce taxation all along the line in this general fashion and at the same time carry on the government of Canada. Conditions in this country are different from what they have been at any preceding period in the country's history; and sources of revenue are required without which we might possibly be able to get along were it not for the conditions resulting from the war.

Now may I come to the suggestion which the ex-Minister of Finance makes in his amendment, and which the right hon. leader of the opposition says affords common ground on which both the members of the Progressive party and his own followers can vote against the government. I will read the amendment as it has been moved:

Moved by Sir Henry Drayton, seconded by Mr. Baxter:

Conditions in Canada urgently demand reductions of taxation, especially of the sales tax and other levies which have been increased by the present government, and the House regrets that the financial statements now presented show no evidence of the economy necessary to make such reductions possible but rather disclose an alarming increase in the public debt.

An examination of that amendment will disclose that for the most part it is in the nature of mere generalities and platitudes, intended, as the right hon. leader of the opposition frankly admitted this afternoon, to carry the support of both sections of what he speaks of as the opposition, and that for the rest, it contains statements that are not only misleading but which are untrue. It refers to "an alarming increase in the public debt." Now the increase in the public debt this year, as I mentioned a moment or two ago, will not exceed between two and three million dollars. That is the alarming increase that my hon. friend speaks of, and that in the light of the fact that the government has saved to the

country some $30,000,000 odd of taxation as the result of the tariff changes made last year. I think I shall be able to show that in other particulars the statements set forth in this amendment do not deserve the support of hon. gentlemen, at any rate those of the Progressive party.

In the first place what do the statements as brought down show? My right hon. friend this afternoon said he would review the government's situation during the last three years. Well, I will take the last three years and I will be a little fairer than he is. I will compare our record of the last three years, not with the previous three years, but with the previous two years, and I state to the House that the record shows that with respect to financial matters there has been an improvement, first of all, on ordinary business account; in the second place, in respect to the railway accounts, and in the third place, with respect to the combined debt including all the accounts that can be possibly brought together. In all these particulars this government's record of three years of expenditure will show less in the way of expenditure, less in the way of public debt, than does the record of two years of the time when my right hon. friend the leader of the opposition was for the most part leading the government. What is the first fact in regard to ordinary business from the exact figures? The truth is that the previous administration in two years added $174.000,000 to the public debt. That is what hon. gentlemen opposite did in the two years 1920-21 and 1921-22. Hon. gentlemen will observe that so far as the period of the war was concerned it ran from 1914 to 1918. Then there was the period of demobilization; I am allowing two years for that, 1918-19 and 1919-20. So that I give only the period of 1920-21 and 1921-22 for hon. gentlemen opposite. In those two years they added, as I have said, to the public debt of this country, taking the figures of the debt at the beginning of the period I have mentioned in comparison with them at its expiration, the sum of $174,-000,000.

Mr. GRAHAM: That does not include the railways.

Mr. MACKENZIE KING: No it includes the ordinary business. Now what is the position of this government with regard to the public debt. Instead of adding $174,000,000 to the public debt in two years, the figures show that in three years this government has actually reduced the public debt by $3,000,000. In other words the public debt of this country to-day is $3,000,000 less than it was when this administration took office. Now may I give the actual figures. Taking the two year period, on March 31, 1920, the public debt stood at 2,248 millions. On March 31, 1921, it was 2,340 millions. On March 31, 1922, it stood at 2,422 millions, a net increase in the two fiscal years ended March 31, 1922 of $174,000,-000. Now the consolidated net public debt for the three year period that this government has been in office was as follows: For the year 1922-23 it stood at 2,453 millions; in 1923-24, it stood at 2,417 millions; and in 1924-25, it stood at 2,419 millions, or a net decrease in the three years since 1922 of $3,000,000. This is what the ex-Minister of Finance calls "an alarming increase in the public debt". I want again to make it clear that the government is not trying to make the claim that the net public debt of this country in the three years we have been in office has been reduced $3,000,000 taking into account the deficits of the railway. I say it has been decreased by that amount leaving out of account the railway situation which we will discuss by itself and for which we will take our responsibility. Let me say also that the above showing has been made in spite of the enormous burden that was left to us by our predecessors when we came into office. Hon. gentlemen opposite know there were many obligations entered into by them which had been left unfulfilled and which we had to meet, obligations that should never have been incurred but which we found on the doorstep when we came into office.

Then what is the position in regard to the railways? I am going to quote from the figures prepared by the hon. member for St. Lawrence-St. George (Mr. Marler). I do not think any hon. member of the House will feel that the hon. member for St. Lawrence-St. George has tried to underestimate the railway situation and the seriousness of it. I think he has estimated it accurately, as far as I have been able to check up the figures. I have gone to considerable trouble with regard to all the figures I have given to have them verified by officers of the Finance department and the statistical department of the government; and in giving the figures I am presenting to the House to-night I am speaking with the full sense of responsibility which I have in having to speak in the name of the government. I think my hon. friend from St. Lawrence-St. George presented a correct point of view when he said; let us, in estimating the railway business, find what is the amount of new money put into the railways, the amount of money put in by hon. members opposite and new money put in by hon. members on

this side of the House. What are the figures? I will give the three-year period first, but will still hold to what I have said that in three years this government has not put in as much new money as the hon. gentlemen opposite did in two, viz.: 1920 and 1921. Their advances of new money to the railways were as follows:

1919-20	$106,000,000
1920-21	144,000,000
1921-22	105,000,000
	$355,000,000

So that the total in the three-year period would be $355,000,000, in the two-year period the total would be $249,000,000, that is the last two years. Now take the time the present government has been in office. In 1922-23 we advanced $59,000,000. That was the first year, as against $105,000,000 advanced by the late government the last year they were in office, or $144,000,000 advanced the previous year. Our advances were as follows:

1922-23	$59,000,000
1923-24	85,000,000
1924-25	76,000,000

I am taking the latest figures as revised, for which I will vouch. In the three years we have advanced in new money altogether $220,000,000, as against $355,000,000 advanced by hon. gentlemen opposite in three years, or as against $249,000,000 advanced by them in two years. In other words we have in three years advanced $29,000,000 less than hon. gentlemen opposite did in two years. Now, take the combined debt, a phrase that my hon. friend from St. Lawrence-St. George has used, if not invented, and which I think is an admirable one to use in order to make the situation clear. Let us take the combined debt as being all that has been advanced for expenditure for the ordinary business of government, all that has been advanced by the government in cash or by way of guarantees and all the amounts raised by the National railways themselves without the guarantee of the government. What does the combined debt thus calculated disclose? It discloses an excess of expenditure under the previous administration for two years of $106,000,000 more than the expenditure of the three-year period of the present government. The increase in the net consolidated and railway debt for the last two fiscal years of the present administration was $205,000,000. The increase in the combined debt for the three-year period, net consolidated and railway, of the present administration amounts to $99,000,000, according to the latest figures. In other words the previous administration added to the combined debt at the rate of approximately $102,000,000 per year in 1920-21 and 1921-22; and the present administration has added to the combined debt at the rate of $33,000,000 per year in the years 1922-23, 1923-24, and 1924-25.

Now, may I return and present the facts of the situation with respect to the ordinary business of the country in another form which corroborates exactly what I stated in the figures I gave the House a few moments ago? One way of discussing the relative amounts paid by previous administrations is to compare the balance sheets of the different years. It will not be much trouble for hon. gentlemen to do that. If hon. gentlemen will look at the balance sheets of the different years as respects the ordinary business of the country, and will compare the relation of revenues and expenditures, it will be seen that whereas the balances of the two years of the preceding administration disclose a net deficit of $173,000,000 arising out of expenditure on account of the ordinary business of the country, the combined balances of three years under the present administration reveal a net surplus of $3,000,000. I have the figures here and if the House will permit me I will place them on Hansard without reading them. They are headed with the fiscal year, total receipts, expenditure, ordinary business of the country, advances outside of ordinary business. They indicate whether there has been a deficit or a surplus, and I have indicated clearly on this table the source of the information and any point that I think is liable to raise a question.

Fiscal Year	Total Receipts	Expenditure: Ordinary business of country	Expenditure: Advances outside ordinary	—Deficit +Surplus	
1919-20	350 millions	740 millions	46 millions	—436 millions	
1920-21	436 "	418 "	110 "	— 92 "	—173 millions
1921-22	382 "	365 "	98 "	— 81 "	
1922-23	403 "	350 "	84 "	— 31 "	+ 3 millions
1923-24	406 "	344 "	26 "	+ 36 "	
1924-25	344 "	339 "	7* "	— 2 "	

* Obtained by deducting from the advances to railways, etc., which are treated as non-active assets, the $4,000,000 from Roumania and Greece, which owing to the year's transactions has been transferred in accordance with practice in like circumstances from non-active assets to active assets.

I think hon. gentlemen will find that my statement is accurate when I repeat again that in the two years hon. gentlemen opposite were in office they left a balance sheet with a net deficit of $173,000,000, while the present administration at the end of three years can at least say it has reduced the net consolidated public debt and effected a surplus in the net consolidated debt of $3,000,000.

My hon. friend says in his resolution that the situation demands reduction in taxation; that conditions in the country demand reduction in taxation. That is a very easy thing to say, but it depends upon what one means by the expression, "demands reduction in taxation." In some respects conditions demand a very great increase in taxation. The whole capital cost of the war remains to be paid. I do not know when any of it is going to be paid at the rate of taxation we have to-day. I do not wish to debate that point, but what I wish to draw the attention of the House to is this: that while it is true always that it is a desirable thing to reduce taxation, the reason why the present government is unable to reduce taxation more than it has reduced it is because of the legacies that were left by hon. gentlemen opposite during the time they were in office. I think I can make perfectly clear that those legacies are due to the manner in which the hon. gentlemen conducted the finances of this country during the period they had control of the government. First of all, as I have said, there is the fact which stares us in the face, that cannot be denied, that the whole capital cost of the war, amounting to $1,760,000,000 was financed out of borrowed money. Not a dollar of the taxation of the people of this country went to meet the capital cost of the war and of demobilization during the six years of war and demobilization. Every cent of it was paid out of borrowed money. And yet we are blamed because we do not reduce taxation. what is the present interest per annum on that capital cost of the war and of demobilization? Something like $90,000,000. Is it fair to blame the administration for a circumstance such as that? We cannot reduce that interest until we are able to reduce the principal. We cannot reduce the principal until we have more in the way of revenue and that revenue will have to come through taxation. Not only did hon. gentlemen opposite during the period of the war finance the war on borrowed money, but they used borrowed money to the extent of $13,000,000 to meet deficits on the ordinary business of the country during that period. That is another statement that cannot be gainsaid.

In addition to that, not only did hon. gentlemen opposite carry on the business of the war by borrowing, but they financed in a way which made it very difficult for any government that succeeded or may succeed them for many years to come adequately to meet the situation. They issued large quantities of tax exempt bonds. It was one thing not to trust the patriotism of those who were in a position to afford it, to the extent of making them meet some of the expenses of the war out of taxation when men were giving their lives at the front, but it was another thing not to have enough faith in the patriotism of the wealthy men and wealthy corporations of this country to believe they would take up bonds with the government's guarantee without making those bonds exempt from taxation. That exemption from taxation comes to a very considerable sum. I have here a statement of the tax exempt bonds giving the different loans, the rates at which they were issued and the outstanding balance in 1924, and if I may be permitted to do so, I will have this statement placed on Hansard. The statement is as follows:

NON-TAXABLE DOMINION OF CANADA BONDS

	Domestic loan per cent	Original issue	Outstanding Dec. 1, 1924	
1915-25	5	$ 100,000,000	$ 42,014,500	Balance converted to later issues.
1916-31	5	106,706,300	52,931,600	Balance converted to later issues.
1917-37	5	172,926,800	90,166,900	Balance converted to later issues.
1917-22	5½	230,737,950	.....	Redeemed.
1917-27	5½	69,051,900	63,437,250	Balance converted to later issues.
1917-37	5½	246,366,450	236,298,850	Balance converted to later issues.
1918-23	5½	172,471,150	.....	Redeemed.
1918-33	5½	446,663,800	446,658,800	
		$1,544,924,350	$931,507,900	

The interest charges per annum at the above-mentioned rates of interest on the $931,507,900 of non-taxable bonds which were outstanding on December 31, 1924, amount to $50,307,369.50.

Mr. GRAHAM: That would pretty nearly run the railways.

Mr. MACKENZIE KING: Those are the figures at which hon. gentlemen financed

these bonds. I have sought to have an estimate made of how much the country loses in income tax on them. As I say, we have to meet the interest charges annually, and yet hon. gentlemen who are responsible for the issue of these bonds say that the conditions of Canada demand a reduction of taxation. Let us see how much income tax is lost on these tax exempt bonds? My right hon. friend said the other day that he did not think it was possible for an estimate to be formed showing what would be lost in that way. That is not the opinion of the officers of the Finance department who are accustomed to dealing with these matters and who think they can form a reasonable estimate, and I have the following as a basis which more or less errs on the safe side. The rate of income tax on $1,000, when the total income of the individual is over $100,000, but does not exceed the next division is $630. When the total income is over $200,000, but does not exceed the next division, the tax is $714. When the total income is over $500,000, the tax is $745.50. When the total income is over $1,000,000, the tax is $766.50. If the average income of holders of tax paid bonds exceeds $100,000,—and that is regarded as a fair estimate—the loss of revenue during the calendar year, 1925, would amount to $18,487,958. This is estimated by one-half being held by individuals, totalling $15,846,821, and one-half held by companies, totalling $2,641,137, making a total of $18,487,958. I am prepared to say that this statement may not be accurate. It is merely an estimate, but it is an estimate which financial men of experience believe to be a fair and reasonable one. It helps to show one more of the difficulties that the government faces in having to meet the financial situation when called upon to reduce taxation.

Not only did the late government finance the entire cost of the war without levying a dollar of taxation for the purpose; not only did they issue these tax exempt bonds on which there is an annual interest charge of $50,000,000 to be paid and which is costing the country in loss of income tax some $18,000,000 odd to which I have referred; but if one looks at the method of financing of hon. gentlemen opposite, he will find that the method they adopted both during and especially since the war was to issue long term loans at high rates of interest, unnecessarily long terms and unnecessarily high rates of interest. These loans cannot be called in. They fall due at a particular time and they carry till then these high rates of interest. Let me give to the House the figures with respect to some of these loans. I will not take all of them, but I will ask the House to pay particular attention to the last loan of hon. gentlemen opposite in comparison with the first loan made by the present administration. I shall not discuss loans issued during the war period, interest rates on which were high; but I shall come at once to the period subsequent to the war, subsequent to demobilization, to the time when my right hon. friend was Prime Minister of this country and when the hon. member for West York the ex-Minister of Finance (Sir Henry Drayton), who has presented this amendment to the House, was handling the finances of Canada. In October, 1920, my right hon. friend's government floated a guaranteed loan of $25,000,000 running for twenty years. The rate of interest was 7 per cent and the annual interest charge is $1,750,000. This issue sold for 96.20. In December of the same year the same right hon. gentleman floated another guaranteed loan of $25,000,000. The rate in this case was also 7 per cent and the annual interest charge is $1,750,000. This loan sold for 94.05. In February, 1924, the present administration floated a thirty-year guaranteed loan of $50,000,000. This loan bears interest, not at 7 per cent, but at 5 per cent, and the annual interest charge is $2,500,000. This loan sold at 97.81. Thus the interest charges which we are at present paying and will continue to pay until 1940 on $50,000,000 issued by hon. gentlemen opposite are exactly $1,000,000 greater than the interest charges on a like amount issued in 1924 by the present government. If we admit that interest rates in the meantime have declined, the issuing of long-term bonds when the interest rate was at its peak of 7 per cent, amounts to a glaring instance of financial incapacity.

Sir HENRY DRAYTON: Oh, oh.

Mr. MACKENZIE KING: My hon. friend who laughs so heartily takes this as a light matter, but this was the money of the country, not his own. Again let me compare the last loan of the late administration with the first loan of the present government. In July, 1921, the ex-Minister of Finance floated a guaranteed loan of $25,000,000. This loan runs for twenty-five years and bears interest at 6½ per cent, giving an annual interest charge of $1,625,000. This issue sold for 92.05. In March, 1922, only a few months later, the present government floated its first guaranteed loan of $11,000,000. This loan ran for three years and bore interest at 5 per cent, giving an annual interest charge of $550,000. This loan sold for 99.03. I might add that during the present year the Acting Minister of Finance

has refunded some of the loans that fell due within the past few months. By his financing, going into the market himself at this time, he has been able to effect a saving of $2,643,264.92 in the annual interest charges. That is the result of the better financing which he has effected this year. Yet hon. gentlemen of the Progressive party and other hon. members of the House are asked to support this amendment and condemn the present government on the score of the manner in which it has administred the finances of the country.

Take another item which helps to account for the fact that it is impossible to reduce the taxation which we have to shoulder in this country. Hon. gentlemen opposite when in office paid $10,000,000 for the stock of the Canadian Northern, which, according to the ex-Minister of Finance (Sir Henry Drayton) himself, in a report, was not worth a five cent piece and for which not a dollar of money was ever paid. The accrued interest on this amount capitalized every year at an average rate of 5½ per cent would come to $3,808,167. Were the present government not obliged to pay these vast sums, we could soon bring down the rent.

Some hon. MEMBERS: Oh, oh.

Mr. MACKENZIE KING: I mean the rate of taxation. But I was not far wrong even at that: A term that is frequently used in reference to a mortgage is the rent charge. Hon. gentlemen opposite have put upon the backs of the people of this country a national mortgage equalling nearly $2,000,000,000, on which colossal sum this and all succeeding governments will have to pay the interest. That is the reason it is not possible to bring down taxation as rapidly as hon. gentlemen opposite might like.

Let us consider the National railways for a moment. What are the facts in this regard? True, the railways are a heavy charge on the country, but so far as figures indicate anything, they would indicate that there has been a very distinct improvement, even as respects the National railways, since the present administration came in. Take the situation with regard to operating results. For the calendar year 1920, when hon. gentlemen opposite were in office, the operating results showed a deficit of $32,000,000. The next year there was a deficit of $11,000,000; while in 1922 the operations showed for the first time a surplus of $4,000,000. And in that year the present government had been in office three months. In 1923 the surplus had reached $21,000,000 while in 1924 it was $17,000,000. Let us take now the total deficits after fixed charges have been paid on the railways. During the calendar year 1920 they amounted to $74,000,000; in 1921 they amounted to $72,000,000 odd. In 1922 the total was $58,000,000, in 1923 $52,000,000 and in 1924 $54,000,000. In other words, with the change of government these deficits were brought from the seventies down into the fifties.

9 p.m.

Then there is the Canadian merchant marine, another item of extravagance on the part of hon. gentlemen opposite, on which they spent $74,000,000, after the close of the war, when it was perfectly clear that the ships would never be required for the purpose for which at the outset it was stated they were being built. I need not go into that because hon. members are familiar enough with that particular transaction. I might refer to many of the matters mentioned in the course of this debate, such for example as those brought up by the hon. member for Chambly and Vercheres (Mr. Archambault). In this regard, no one will take the passing word of the leader of the opposition (Mr. Meighen) that no waste took place during the war, that there were no scandals with respect to any contracts, and that the last cent was carefully accounted for. An examination will show that a very heavy obligation was added to the debt of the country as a consequence of the financing of that time. Nor will I take up the time of the House to go into other innumerable obligations contracted by hon. gentlemen opposite with respect to all sorts of things, dry docks at Esquimalt; terminals by the Atlantic; the purchase of buildings such as the Daly building, taken over at $1,000,000 from the former president of the Home Bank on the eve of hon. gentlemen's going out of office; the purchase of ice-breakers; obligations entered into with respect to Dominion Iron & Steel, left for this government to settle, and amounting to many millions of dollars; obligations with respect to the acquisition of the Grand Trunk, which we were called upon to settle—all of which have been added to our debt and which make it difficult for us to carry on at a lower rate of taxation than is now levied. It is easy for hon. gentlemen opposite to talk about the times demanding a reduction in taxation. But I repeat that if it is impossible to reduce the taxation as we should like, it is because of these enormous charges which have been left to this government by the previous administration, contracted while they were in office.

Now let me refer to one other statement in the amendment of my hon. friend the ex-Minister of Finance. He says that there is

no evidence of economy, That is not correct. I am going to submit to the House a few statements and I shall leave it to hon. members to judge whether this government should be criticized on that score. First of all, the allegation is contradicted absolutely by the general reduction that has taken place in expenditures. Let us see what reduction there has been in the total disbursements per head of population. I shall quote the figures with regard to expenditures in the last few years. I shall put the whole statement on Hansard, but for the moment I shall merely give a summary. For the fiscal year 1921-22 the grand total of disbursements of the country amounted to $464,000,000. During the following years they were:

1922-23	$434,000,000
1923-24	370,000,000
1924-25	361,000,000

And taking the revised figures as we have them to-night, the last mentioned amount is not $361,000,000; it will not exceed $350,000,000. In other words, 1925 shows a reduction in the total disbursements, as compared with 1924, of $20,000,000, while it shows a reduction as compared with the year 1922, when the government took office, of $114,000,000. Will my hon. friends say that there is no evidence of economy there? And what do these figures indicate with respect to the grand total disbursements per head of population? Let me give a summary of those figures:

	Per Capita
1922	$51 77
1923	47 50
1924	39 36
1925	37 51

In other words, the disbursements per head of population in 1925 were about three-quarters of what they amounted to in 1922. For every $4 which hon. gentlemen opposite were spending at the time they left office the government to-day is spending $3. This is the best possible answer as to whether or not there has been a saving.

The following table shows the total reductions in expenditures:

Budget of	Fiscal Year	Total generally controllable expenditure	Total generally uncontrollable expenditure	Grand total disbursements
1922	1921-22	$157,000,000	$307,000,000	$464,000,000
1923	1922-23	143,000,000	291,300,000	434,000,000
1924	1923-24	141,000,000	230,000,000	370,000,000
1925	1924-25	.....	.....	350,000,000

1925 shows reduction in total disbursements of $20,000,000 over 1924.

1925 shows reduction in total disbursements of $114,000,000 over 1922.

Take the estimates of the present year. Hon. gentlemen have those estimates before them; will they say that there is no evidence of an endeavour at economy so far as the figures there given are concerned? Let them open the Estimates at page 4 and look at the summary for the entire year. What does it show? The grand total for the year 1924-25 is $348,000,000 while the grand total for this year 1925-26 is estimated at $342,000,000, a reduction or saving of $6,933,000.

I am free to admit that there may be, and probably will be, other estimates to add; but if hon. members will look at what we are asking for the different services they will see that there is hardly a service, with one or two exceptions that can readily be accounted for, where there have not been very important reductions. The following list will show some of the reductions that have been effected in the estimates of government departments this year as compared with the estimates of last year:

Administration of Justice	$ 35,700
Legislation	89,850
Agriculture	103,500
Immigration and Colonization	708,000
Health	35,000
Scientific Institutions	81,824
Labour	28,000
Indian Affairs	46,542
Government of Northwest Territories	26,000
Dominion Lands and Parks	65,588
Miscellaneous services	3,429,525
Trade and Commerce	806,855
Public Works, capital	3,106,345
Public Works, income	949,316
Public Works, collection of revenue	36,100

I venture to say there has never before been presented to parliament in like circumstances an estimate showing an equivalent amount of reduction over the estimates of the preceding year. This government laboured night and day during the months prior to the opening of the House in examining closely the estimates of the different departments in order that we might be in a position to submit to the House a considerable reduction, notwithstanding the large reductions that had been effected in previous years.

Moreover, where there are increases they are more apparent than real. Take, for example, the Post Office Department, where there is cited an increase. What is that owing to? It is owing to the salary revision by the Civil Service Commission which has in effect combined bonus with salary. This year's estimate included an amount which was formerly provided from the general vote for bonus. So that while there would appear to be an increase of $1,668,515, in reality there is a net reduction of $288,573. Then, in connection with Customs and Excise, where there

is an increase of $635,943, that is due similarly to provision having been made for statutory increases to the completion by the Civil Service Commission of the reclassification of that department under which the usual bonus has been absorbed into the salaries, and also to a provision for further efforts to stop smuggling. Then there is the Department of National Defence: In these services there is an apparent increase of $243,220. As a matter of fact the combined military and naval services show a decrease. There is under Air Service an increase of $319,850 in the amount set apart for the purchase of aircraft. This, however, is required primarily for patrolling the forests in the interests of the various provinces and results from the taking over by the Defence department of patrol services formerly under other departments of administration.

There is a record which speaks for itself and which surely should appeal to hon. gentlemen opposite. But turn over two pages further, and look at the civil government estimates. What do we find there? I would be glad if Hansard could publish the two columns which make a comparison as to reduction or increase in the estimates for the two years, 1924 and 1925:

CIVIL GOVERNMENT ESTIMATE, 1925-26

Department	Compared with Estimates of 1924-25	
	Increase	Decrease
	$ cts.	$ cts.

CIVIL GOVERNMENT ESTIMATES 1925-26

Department	Compared with Estimates of 1924-25 Increase	Decrease
	$ cts.	$ cts.
Soldiers' Civil Re-establishment—		
Salaries..		7,320 00
Trade and Commerce—		
Salaries..		38 32
Contingencies..		2,000 00
Appropriation not required for 1925-26..		45,755 00
.....		$170,516 30

It will be seen that the civil government estimates show a decrease this year over those of last year of $170,516.30; and these estimates take into account the amount that has to be voted for statutory increases in the civil service. How does it come about that notwithstanding the statutory increases we have been able to effect a reduction of over $170,000? It has been by continuing the process of reducing the numbers in the permanent service. In that regard my hon. friends say there has been no evidence of economy. What are the facts with regard to the public service during the last three or four years? The following figures are interesting in that connection:

REDUCTIONS IN GOVERNMENT SERVICES

	Personnel	Reduction	Expenditure	Reduction
			(Month of January)	
Civil Service:				
Jan. 1922.....	41,094	.....	$ 4,985,613	
Jan. 1924.....	*38,062*	3,032	*4,746,694*	$ 238,919
			(being at rate of approx. 2¾ millions per year).	

There is indicated in the estimates for 1925-26 a further reduction in personnel of Civil Service of abou 100 during 1924-25.

	Personnel	Reduction	Expenditure	Reduction
			(Month of January)	
National Defence:				
Jan. 1922.....	4,896	.....	$ 511,176	
Jan. 1925.....	*4,233*	663	*452,979*	$ 58,197
			(being at rate of approx. ¾ millions per year).	

	Personnel	Reduction	Expenditure	Reduction
			(Fiscal Year)	
Royal Canadian Mounted Police:				
Dec. 31, 1921.....	1,676	.....	1921-22 $ 3,527,570	
Dec. 31, 1924.....	*986*	690	1924-25 $ *1,999,872*	$ 1,527,698

In other words, there has been during the time the present government has been in office a net reduction in the three services—civil government, National Defence, and the Royal Canadian Mounted Police—of at least 4,485 persons, certainly approximately 5,000 and a saving of at least $5,000,000 annually in expenditure on salaries.

May I take a few minutes to make one further comparison? The ex-Minister of Finance (Sir Henry Drayton) is the one who speaks to us about economy, about reduction of taxation. I want to compare for a moment his financing with that of the present Acting Minister of Finance. The following table makes an interesting comparison in that regard:

COMPARISON OF FINANCE, FISCAL YEARS 1924-25 AND 1920-21

Year	Total Revenue Receipts	Accrued from Taxation	Per Head of Population
	$	$	$ cts.
1920-21.....	434,386,573	369,010,605	41 99
1924-25 (estimate)....	344,000,000 (approx.)	294,000,000	31 38

In other words, the per capita pressure of taxation is three-fourths less this last year than it was under the preceding administration or if I may put the matter in another way, for every dollar the average Canadian paid in taxation in 1921, when my hon. friend was in

office, he is paying to-day seventy-five cents, or to express it in dollars, for every $4 per capita that was being paid when my hon. friend was in office only four or five years ago, to-day we have the taxation down to $3 per person. Or, to put it in still another way, the present government is collecting in 1925 about $75,000,000 less in taxation than the hon. ex-Minister of Finance collected in 1921.

Now let me make a further comparison, because I want hon. members to see wherein it is difficult for any government to attempt to go much further in the reduction of taxes under existing circumstances.

We have to meet out of our taxation these special obligations that I have referred to as being in the nature of uncontrollable expenditure, the interest on the war debt, provincial subsidies, part of the railway deficits and the like, all of which are met out of the $294,000,000 revenue raised by taxation. We have left after we have met this uncontrollable expenditure about $99,000,000 to carry on the regular business of the country or between $10 and $11 per head of population. Comparing that with the last year of Sir Wilfrid Laurier's administration this $99,000,000 of taxation has to do the work which in 1911 required a net tax revenue of about $81,000,000. The population having increased since then, it means that to-day there is actually a lower per capita cost in dollars, in spite of a rise of some 50 per cent in commodities and service. Or take the last pre-war year of Sir Robert Borden, 1913-1914. In that year $127,000,000 was collected. From this must be deducted provincial subsidies amounting to $11,000,000, leaving taxation for Dominion purposes of $116,000,000, as compared with $80,000,000 odd in the last year of Sir Wilfrid Laurier's administration, or an increase of more than 43 per cent in the tax burden of the Canadian people in the first three years of the Conservative administration.

Comparing Sir Robert Borden's last year with the present administration, $116,000,000 tax revenue was required in 1913-1914 to do the work which our $99,000,000 of taxation revenue does to-day, despite the increase in the cost of commodities and services.

The hon. member for West York in his amendment blames us for the addition of $13,000,000 to the public debt this year. As a matter of fact, as I have already shown, there has been an addition of only $2,000,000. Compare that with what he added. We have added $2,000,000 to the debt in 1925, and the hon. member for West York, after collecting $75,000,000 more in taxes than we did, added in 1921, $92,000,000 more to the debt than we did; in other words there has been a total improvement in the finances in this one fiscal year, over that year of his administration of $165,000,000.

I am sorry to take up the time of the House with these figures, but I think they are necessary in order to show clearly the position of the present administration in its endeavour to deal with debt, with taxation and with matters of economy, and I submit that when one considers the handicaps under which we have laboured since we came into office, the economic conditions of the country and the unsettled condition of the world, and the vast obligations we have been called upon to meet, this is as good a showing as any administration under like circumstances could possibly have made.

What I have said with respect to these matters of public debt, taxation and economy in referring to the amendment of my hon. friend from West York are equally applicable to what in part my hon. friend the leader of the Progressives (Mr. Forke) said in the amendment which he introduced into the House, but which under the rules of the House was not permitted to be moved. I hope that my hon. friend will feel, having before him at the present time figures which he had not in his possession at the time his amendment was drafted, that perhaps the government is entitled to more consideration than was given it in the form of his original draft. He referred to one other matter, which is a matter of great importance, and that is the question of the cost of living. I would like to have gone into that, but I have spoken at considerable length, and I think I will reserve for another time the remarks that I have to make in that connection. But I would like to point this out to my hon. friend and hon. gentlemen opposite, that the cost of living in Canada has been considerably reduced since the present administration took office. The cost of living has been reduced, first of all through the reduction of taxation to which I have just referred, a reduction which amounts to a difference in payment of taxes of $3 per head as against $4 per capita when we came into office.

The cost of living has also been materially affected for the better by the changes which were made in the tariff last year—the removal of the duties on implements of production to a very considerable extent, also the sales tax thereon which has had the effect of cheapening materially the cost of production in the basic industries, and as hon.

members know, whatever affects materially any of the basic industries will affect all the subsequent industrial life of the country. I might add also the changes made in the tariff in the two preceding years not only on implements of production but on many articles of daily consumption, food, clothing, and the like affecting the homes of countless numbers in our land.

The cost of living has also been affected by the reductions we have made in the income tax by means of increased exemptions in the case of families, first of all in our raising the exemption to $300 per child and then later increasing that amount to $500, thus making a considerable saving to a large number of families.

In addition to that, the sales tax besides being removed from the implements of production as mentioned, has been completely taken off a large number of commodities, commodities that enter into the daily needs of a large number of families. We have sacrificed a considerable amount of income in that regard. True, we found a certain rate of sales tax. We added to that for a time, and reduced it in part again, but we also made perfectly free large numbers of articles that enter into the ordinary consumption of the great body of the people.

In addition to that we removed the duties from the coverings used exclusively for covering goods not subject to sales tax, these include cheese boxes, butter boxes, fruit packages and the like and constitute a very material reduction which also has its effect upon the cost of living. We also have given a 10 per cent discount upon preference rates where goods come into Canada via Canadian ports.

I would further submit that the great development that has taken place in trade under the present administration has had the effect of giving the average citizen more in the way of purchasing power and a man's cost of living has to be estimated, as it were, in terms of two quantities, the price of the things he buys, and the money he has to purchase them with, and if trade is more extensive as it certainly is, I submit that the lot of the average man in this country through increase of purchasing power has to that extent improved.

I would like to give just one brief summary in respect to the cost of living which has been carefully prepared by the aid of statisticians in the government service, and which will help to indicate what has taken place. In September, 1921—which I will compare with September, 1924 as well as March, 1925, so that it will not be thought that I am choosing particular months, and I take September, 1921, because it was the time my right hon. friend was getting ready to make his appeal to the country—in September, 1921, the cost of living as based upon a family budget of foods, fuel, lighting and rent, was 159.3 per cent of what it was in 1913. In September, 1924, the index number had fallen to 147.2, and in March of 1925 it was 148.4, or a decline of about 11 points since September 1921. Foods, which had been at 161.1 in September of 1921, were 140.4 in September, 1924 and 142.6 in March, 1925. All the foods in the budget except mutton, rice, tea and coffee were lower in September, 1924 than in September, 1921.

Again, the retail index number of fuel and lighting, which includes coal, wood and coal oil, was 189.0 in September, 1921, 175.9 in September, 1924 and 175.4 in March, 1925. While rent shows little change since 1921, the retail price of clothing has fallen from 167 in September of 1921 to 155 in March, 1925.

These index numbers, however, do not tell the whole story. They do not include some of the most notable of the achievements of the present government in the reduction of taxation. Thus, for example, they do not include reductions in the rate of income tax. Yet, to take a very ordinary case, the married man with an average family of three children and an income of $3,500 a year, who in 1921 paid $36 in income tax to the government of that day, is to-day entirely exempt therefrom.

There is no doubt therefore that the position of the average man and his ability to make ends meet has considerably improved during the years of the present administration. I should like to supplement my remarks in this connection with a table which I have, giving in graphic form the figures I have just quoted:

Index Numbers of a Family Budget of Staple Foods, Fuel and Lighting and Rent in Sixty Cities in Canada

	1913 = 100		
	Sept. 1921	Sept. 1924	March 1925
Foods..	161.1	140.1	142.6
Fuel and lighting	189.0	175.9	175.4
Rent..	144.6	146.7	146.5
Total	159.3	147.2	148.4

All foods included in the budget were lower in September 1924 as compared with September 1921, except mutton, rice, tea and coffee.

A calculation for clothing places the index for September 1921 at 167 and for September 1924 at 155.

Now, Mr. Speaker, it had been my intention to-night not to debate the question of finance but to discuss the question of the tariff. I thought that this debate would be largely concerned with matters of fiscal policy, but as

the right hon. leader of the opposition has not discussed those matters, has run away from all tariff discussion, I shall defer until some other time what I had intended to say in that regard.

There is one point however, which I wish to make perfectly clear to hon. members of the House because it has been one that has been differently viewed in the course of this debate, and that is with respect to the reference contained in the speech of the Acting Minister of Finance to the intention of the government to have an advisory board to advise the Minister of Finance on taxation whether in the form of customs duties, or excise duties, income tax or in other forms. Hon. gentlemen of the Conservative party advocate a tariff commission. They purpose to appoint independently certain gentlemen who will be given power to make examinations on their own account and make recommendations to the government. Should the government in power be that of my right hon. friend if that government were to act in accordance with the terms of his manifesto, it would not be obliged to carry out those recommendations; the commission may make recommendations but that is all there is to it in that regard. The proposal for such a body takes away from parliament altogether the settlement of the fiscal policy. Now, I submit, Mr. Speaker, that it is utterly impossible to remove from the arena of the House of Commons the settlement of the fiscal policy of the country. Parliament necessarily concerns itself amongst other things with the business of taxation and from time immemorial has exercised the right of imposing taxation. That right should never be handed over to any tribunal of men, no matter whom they may be, but should always be in the hands of the representatives of the people. Hon. gentlemen opposite talk about appointing a commission representative of manufacturers, of labour, and of some other class. I contend, Mr. Speaker, that in this House of Commons we have representatives of manufactures, we have representatives of labour, we have representatives of agriculture, we have representatives of all the classes that go to make up this country, and this is the place where the voice of the people thus represented should be heard. What the government feels is this: That in order to discuss intelligently these matters of the tariff, these complicated questions of taxation—and in view of the conditions in which this country and the rest of the world finds itself to-day, there is greater need than there ever was of expert advice and guidance,—that the Minister of Finance should have attached to his department experts, men of great experience, who will command the confidence of labour, of the manufacturers, of the farmer, who will be so trained that they will be able to go through the various tariff schedules and indicate the effect of existing tariffs upon industry and upon revenue, indicate what the effect of certain changes will be upon industry and upon revenue, so that when the Minister of Finance comes to the government or comes to the House with his budget he will be in a position to give the fullest and most accurate information it is possible to have with respect to the basis upon which taxation is made.

My hon. friend the leader of the Progressive party (Mr. Forke) thinks the tariff should be revised so as to bring in a larger amount of revenue. As to that I am in entire accord with him. We believe that the tariff should be used for purposes of revenue; it should not be used as my hon. friends opposite contend for purposes primarily of protection. The two things are entirely different; the two objectives are different. We join issue with hon. gentlemen opposite on this. They say we want a tariff for protection. Protection of what? Certain special industries. Then they go on enlarging, and enlarging, and enlarging, until what is the result? They want to include all the industries, and then after they are all included the costs all round will be raised by a corresponding amount. What they really want is the protection of certain special interests for the benefit of those whose capital has been invested in them. They say they want protection in the interest of labour. How is labour going to gain? Will not the wages of labour continue to be settled as they are to-day through competition in the labour market? Is there any guarantee that if two, or three, or four manufactures get special protection while capital may secure its extra monopoly profits the labour in those industries will be paid any wage other than that which competition of those available for these particular industries, may determine? Talk about protection! What about the women of this country who are not engaged in the specially favoured industries, who are nevertheless the heads of families and that to-day have to provide for needs of the household? Do they not need protection? Do not they and all other women need some protection with respect to the commodities they have to buy? What about all the younger element of the country? What about those who are in the civil service of Canada? What about those in the learned professions, what about those who go to make up the great numbers performing the clerical work of the country? What

about all these classes? Are they not to be considered? Are you going to limit the protection to special interests in which some specially favoured happen to have capital invested on which they want to make a higher rate of profit? Our position is that if you are going to have protection then protect the people as a whole and not merely a favoured few. Have your tariff so arranged that it will help to bring in revenues to the country in a manner which will relieve taxation not add to it and thereby serve the best interests of the people at large.

That is the intention with respect to this tariff board to which I have referred. There are in the government service at the present time gentlemen who have very full and accurate statistical knowledge; some with regard to trade, some with regard to customs, some with regard to income tax and the like. That information ought to be made available to the government and to the particular member of the cabinet on whom it devolves to bring down the budget to this House. We propose by this means to get such information as we can obtain; but we propose also to supplement the clerical staff that may be used for this purpose with two or three expert advisers who will give all of their time—not part of their time, as these other gentlemen will be expected to give—to studying taxation problems, tariff schedules, schedule after schedule and the like; studying the effect, as I have said, of the existing or a proposed tariff on a particular industry, and the effect of the tariff upon revenue; the effect of depreciated and appreciated currencies and kindred topics. They will not be appointed for an indefinite time but they will be appointed for a year at a time, and the appropriation will be made by this parliament. The minister will be responsible for those whom he appoints. What we will seek to bring into our tariff discussion will be more light and less heat so that in discussing these matters we shall be able to do only what is most in the interest of the people as a whole.

Now may I conclude what I have to say by making a reference to the subject of trade. But just before I do, let me make this reference in case I should overlook it. It has been intimated to me by some hon. members that they would like me to state what the government is going to do with certain measures that have still to be brought forward. On that point may I say this: The government brought on this session, as I have already intimated, early in the month of February, the first week of February in fact, in the hope that we would get through business at least before the hot weather came. We brought on the session when we did believing that it was in the interest of the country to have the public business put through with despatch. We believe the people do not want the public money wasted in lengthy discussions involving prolonged sittings of this parliament. As I intimated in the early part of my remarks this afternoon we believe there has been and is a deliberate attempt to protract the session, and in view of that fact it would be impossible as I stand here to give any assurances as to what measures can be brought down and put through at this particular session of parliament. We have some very important legislation still to introduce. There is the railway rates legislation, which is important, and which we ought to have been discussing a month ago. There is the legislation respecting the Home Bank depositors which is important. Hon. gentlemen opposite have asked me two or three times about the alternative vote. I promised last session that it would be brought down, and it will be brought down and we will proceed with it. These are measures which will take considerable time. The Grain Act has been drafted. The minister made mention earlier in the session of his intention to bring down that measure and I hope we will be able to put it through. As to some of the other measures, rural credits and the like, I am unable to speak definitely until I see how the work of the session progresses; but I want to say this, and I want to make it perfectly clear: This government does not intend to stay here through the summer months trying to carry on the business of the country; and if for no other reason than that hon. gentlemen opposite wish us to go in two opposite directions at one and the same time, or because hon. gentlemen directly opposite want to prevent by undue discussion a campaign from being brought on, I will say here and now that if for these or any other reasons the government finds it impossible to carry on the business of the country in an expeditious and in a satisfactory manner, I shall not for one minute hesitate to ask His Excellency to dissolve this parliament and give us a chance to appeal to the people. So far as the business of this country is concerned, I believe that the people of Canada have the same view that the people of Great Britain and the people of the United States apparently have had; they want to see in power a government that will not be faced with uncertainty in its proceedings, and that will not be faced with embarrassment because it is surrounded by groups at variance with each other; they

want to see in power a government with a strong majority that will be able to carry on the business of the country without fear and without favour in any direction, and I can tell hon. gentlemen opposite that when the time comes to appeal to the country, it is on these lines the appeal will be made.

I have given an outline of the manner in which the government has endeavoured to carry on the business of the country. I have shown that, despite the obstacles we have had to contend with, the heavy legacy of public debt and other financial obligations, our majority of one, the unsettled conditions throughout the country and the world, a divided opposition, a Senate which is politically hostile to us, and embarrassments of different kinds, we have been able to make a record of which any administration might well be proud. Not only that, but I have only to give to the country the figures that I hold in my hand with respect to trade development to show how Canada has prospered during the period the present government has been in office. I shall quote these figures, and with that I shall conclude. What are the figures with respect to the trade conditions of the country?

In the fiscal year 1920-21, when hon. gentlemen opposite were in office, the trade imports exceeded the exports $30,000,000. The result was that in November, 1920, $1 of American money required an exchange of $1.20 in Canadian money. In 1921-22, for nine months of which my hon. friends were in office, the exports exceeded the imports by $6,000,000. The result was that in November 1921 one American dollar was worth $1.09 Canadian money. In January, 1922, immediately after the change of government the American dollar commanded only $1.05½ in Canadian money. In 1922-23 the exports of Canada exceeded the imports by $142,000,000. In 1923-24 the exports exceeded the imports by $165,000,000, and now the 30th April has come and I am able to give the House the exact figures with respect to the last fiscal year. We find the exports last year have exceeded the imports by $284,000,000, the largest favourable balance of trade that had ever been known in this country, with the possible exception of the period of the war.

Again I wish to say to hon. gentlemen opposite,—and here I speak more particularly to my friends of the Progressive party—the government has been able to accomplish this in no inconsiderable part through the co-operation which has been accorded us by hon. gentlemen belonging to the Progressive party, and in spite of the difficulties which have been put in our way by hon. gentlemen directly opposite. We have endeavoured while seeking to carry on the economic side of the work of this country also to do another work which is perhaps even more important. We have sought to remove, as far as we were able to do it, all that there was of discord and division among the people on racial, religious or sectional grounds in different parts of the country. We have worked steadily for national unity, and hon. gentlemen have helped us in that. Last year we made considerable changes in the tariff which I think I am right in saying benefited more than any other part of the Dominion the part of the country from which the majority of hon. members of the Progressive party come. In doing that we were not only helping hon. gentlemen opposite, but we were helping all parts of Canada. Hon. gentlemen on this side of the House stood solidly with the government in helping to bring about changes which we believed were for the good of western Canada, and whilst improving conditions from an economic standpoint would help to make for the furtherance of a spirit of national unity throughout the Dominion.

This year, as far as the tariff goes, we have thought it advisable to permit an unobstructed view of the effect of our changes of last year, so that the country will have an opportunity of seeing that they need not be alarmed with respect to tariff changes, with respect to the reduction of duties on agricultural implements or other commodities, where made after mature consideration, and in accordance with a policy that goes to make for the welfare of the country as a whole. We believe that the country is being steadily reassured, and it is for that reason among others that we have thought it inadvisable to make any change of a material character. One change we have made, continuing our policy of last year, a change designed to benefit some of the fishermen of the Atlantic and Pacific coasts engaged in a basic industry which did not come in for as full consideration as others at the last session. We have beside lowered the duty on bituminous coal three cents a ton. Not much has been said of that, but it gives some benefit to the consumer. The household consumers of coal use bituminous coal, they do not use slack. We have raised the duty on bituminous slack coal, and why? Well, for two or three reasons. In the first place at the time the duties were fixed it was never thought that bituminous slack coal would begin to enter into effective competition with run of mine bituminous coal, which is a product of the mines not only in the Maritime province but in Alberta as well. The gov-

ernment of the day did not believe it would result in the customs being defrauded and in purchasers being defrauded, as has certainly been the case, because we know on account of the difference in the tariff, slack coal is being brought into this country, paying a lower rate of duty, than mixed with run of mine and sold as run of mine, with the result that the purchaser is defrauded in what he pays for and the government defrauded in duties as well. We have felt further that there is one part of our Dominion which to-day has been having a hard struggle; no one can deny that. The Maritime provinces have had and are having a hard time. We were not without hope that our action in this particular would put new faith and comfort into the hearts and minds of the people of the Maritime provinces and for no class more than those who are engaged in the hard work of mining coal in connection with the primary industries of that part of our country. We felt this was helping on as well a great national policy of self-sufficiency in the matter of our coal supplies in this country. Those were great national reasons transcending, I believe, all other reasons. I ask my friends of the Progressive party: Are you not going to be magnanimous enough to sink any little feeling you may entertain with respect to some theoretical maximum on tariffs and stretch to our friends in the Maritime provinces the same helping hand they stretched out to you in good faith and good fellowship last session? You have an opportunity to do so on this budget. You have an opportunity by your action on this budget to show that in your outlook you are something more than sectional; that you have a broad vision; that you are thinking first of Canada as a whole, not only of the particular constituency from which you may come. Nay, rather, may I say this in justice to your constituencies? I should feel pretty badly if I thought that any group of men and women in western Canada in the constituencies from which you come would not respond to attitude of that kind and would not rather condemn you if you failed to assume it. You have your chance on this budget and it is for you to say. I again appeal to my hon. friends. It has been from this larger point of view, from the point of view of national interest as a whole, national economy, national well-being and national goodwill, that the government has taken the stand that it has on the tariff question at this particular session.

Let me conclude with these words. In the short time that we have been in office now some three years or more, we have reduced the public debt. We have reduced expenditure. We have reduced the taxation of this country. We have reduced the cost of the public service. We have reduced the cost of living. More than that, we are able to point to a vast increase in the trade of the country, reflecting improved conditions of industry, to an improvement in our credit enabling us to borrow in the world's money markets at business rates of interest. Not only has our money been at par for some time past but if you will look at this evening's paper, you will see what I had the pleasure of reading to-night in large letters across the centre page: "Canadian dollar quoted at a premium." Above all this we have achieved a growing national unity. Having regard to these and other circumstances, I think the government is entitled to ask from all or at least hon. gentlemen who have promised honourable co-operation in the government's efforts to serve the country's interest a ready measure of support of the budget now before the House.

Mr. D. W. WARNER (Strathcona): Mr. Speaker, the tariff has been emphasized more than any other phase of this debate, and so I will offer a few remarks on that first. The tariff is important, but at the same time we realize that some other subjects are also important although, perhaps, not very much has been said about them during the course of the debate. As regards the emphasis placed on the tariff, it appears to me that to my immediate right the emphasis has taken the position almost of preaching blue ruin on account of small reductions that have been made in the tariff. The people who sent me here want a lower tariff than we have at present, and I think they are quite reasonable in not expecting that reduction to be brought about all at once. At the same time they want progress made all along that line. Our friends to the right have been all the time using the United States as an example for Canada to follow. I know something about conditions there from experience and in other ways as well. The idea is held out that the prosperity in the United States has been brought about by the highly protective tariff which they have had continuously. My opinion is that the United States have become prosperous in spite of the tariff rather than on account of it. I lived there long enough to form that conclusion from experience. The statement has been made that the United States have three times as high a tariff as Canada has. It makes a difference how you undertake to figure that tariff. I

want to read just a little from a clipping taken from the Ottawa Citizen and I think it is a pretty good authority under the circumstances under which it was taken:

> Early in the session, Mr. Stevens, of Vancouver, spoke of the United States "with a four thousand mile boundary and a tariff three times as high as ours." This information was given as an argument for the increase of the Canadian tariff to equal that of the United States, accompanied by the understanding that conditions in the United States due to higher tariff were more satisfactory than in Canada.

A little further on in the same editorial, we have this:

> For his benefit, as well as for the information of students of tariff affairs generally, the following comparisons may be quoted from Imperial sources. For the year 1924 the per capita rate of duty in Canada was $14.65 and in the United States $4.86.

I think that is a fair way of looking at the tariff; we must consider it from the per capita point of view. These calculations have been carefully checked on the data furnished by the above-mentioned reports. As a matter of fact, if the year 1921 is taken, the comparison shows in all three of the above that the Canadian rate is higher than in the United States.

Our friends to the right in stressing the tariff have gone beyond what they ought reasonably to expect, and I wonder if they really want the sort of tariff that they are talking about. I was a candidate in 1917 as well as in 1921 for election to this House and in both those campaigns the Conservatives apologised for the high tariff which they had had in that part of the country where I was running; and some of them went so far as to declare that a reduction was necessary. And the only way they could justify the tariff then in force was to say that it was no higher than the tariff that had been in effect at any other time under the Liberals. I will not discuss that point as it has no bearing on the present question. However, hon. gentlemen have emphasized in this House their claim that the reduction of the tariff will mean the ruin of this country. Just what their object is would not seem to be quite clear, but it strikes me that they have been making a desperate effort to prevent this government from reducing the tariff to a greater extent than they have done. What effect this move on the part of hon. gentlemen will have on their supporters back home I do not know, but that is what they have evidently been doing. As I see it, there would appear to be in the minds of hon. gentlemen some idea of party advantage in stalling the government in their endeavour to reduce the tariff, and then turning round and telling the people throughout the country that the government had not carried out their pledges.

Now, the Progressives want a lower tariff and perhaps most of them will vote against the budget on that account. I can see that this will place the government in a very undesirable position; I can quite readily understand that. But whether hon. gentlemen vote against the government because they want a lower tariff, or whether they vote against the government because they are anxious to stall them for the purpose of conveying to the country the impression that this administration have failed to fulfil their pledges, the vote in either case will be an adverse one. It does seem to me that we could put in our time to better advantage than by talking for the purpose of furthering party interests; I think the country is in too serious a condition for us to carry on a debate for four or five weeks merely for party purposes.

10 p.m.

I shall say just a few words now about the tariff commission. Parliament cannot dodge its responsibility for dealing with the matters which members are sent here to consider. I do not want to be put in the position of opposing a tariff commission, but I should like to know just what is intended in this connection. I think we have some assurance from the Prime Minister (Mr. Mackenzie King) and from the government benches that this tariff board is not to decide what shall be done in the way of changing the tariff; its purpose is merely to gather information. If the board is to obtain information and come to a decision as to how industries in the country will be affected by tariff changes, either up or down, and if its function is to be simply advisory, then it would seem to be a good thing to have such a body to advise parliament. Ever since I can remember, the tariff has been a political football in the United States and this country, and I do not think that it is the best thing for any country to allow its fiscal policy to be treated in that way. I believe that the people are entitled to full information in regard to tariff matters; they should know what their tariff is and how its changes would affect them. But under the conditions that have existed in this country, how are the people to know just what the exact state of affairs is? This tariff question is largely comparable to religion; a man may hold any religious belief he pleases; he can prove that his opinions are right in his own opinion by the Bible; he can take the Bible to prove any position he chooses to assume. Similarly, a man can belong to any party at

all and support any kind of tariff policy he wants to, with the party information and the party statistics with which he is supplied. But I do not believe that it is to the advantage of the country to have the tariff handled in that way; and if we had a board that would provide the proper information which we could depend upon I think it would be a good thing; we should then be able to arrive at conclusions a great deal more satisfactorily than we can without such a board or some similar body to supply us with information.

Now I come to another subject which I wish to discuss to some extent; I refer to the question of raising revenue in this country. The revenue-earning power of the tariff would appear to me to be rather doubtful; and we never know how much we get out of it nor how much it costs us for what we get. Let me for a moment or two refer to the question of direct taxation. The organization that has sent me here to serve as their representative believe in direct taxation. I do not want to be understood as opposing the idea of direct taxation, but I want that direct taxation to be fair, if it can be made so; and that is the idea I want to emphasize in my remarks on this subject. If direct taxation is fair and we know how much we have to pay in connection with it, then we are ready for direct taxation instead of this conundrum, the tariff, as a method of raising money.

I wish to refer for a moment to the question of milk and cream tickets. I have here a letter from a gentleman who is secretary of the National Dairy Council and who is counsel for that organization, and I would like to put it on Hansard. It is as follows:

In answer to your request for information I beg to say that, acting as counsel of the National Dairy Council, I secured a ruling last year from the Department of Customs and Excise, to the effect that a cream ticket which was not addressed to a bank was not a cheque and was not subject to the law requiring a stamp upon cheques. However, the department decided that a cream ticket was a receipt and that therefore, if the cream ticket amounted to $10 or more, the law requiring a two cent stamp on a receipt of $10 or more applied, and a two cent stamp had to be put upon the cream ticket. Acting as counsel for the dairy interests, I advised to this effect.

The practice of paying for each can of cream by issuing a cream ticket, which is followed by the creamerymen in the provinces of Alberta, Saskatchewan and Manitoba, is not followed in Ontario and Quebec. In these two provinces the dairy farmer is paid every two weeks by a cheque or express order. This used to be the practice also in the prairie provinces, but some time ago it was changed to the cash system, which has been found most beneficial to the western farmer and the merchants in the western towns. These cream tickets which may be sent by mail to a farmer a hundred miles away from the creamery are treated as cash by the merchants and the banks and therefore have been of material assistance in times of stress, by keeping money in circulation.

Another practice that exists in the prairie provinces, which is not generally followed in Ontario and Quebec, is the paying of cream on grade. There are three principal grades, being special, first and second. The farmer who ships special, gets a better price than is paid for first grade, and the farmer who ships first grade gets a better price than is paid for second grade. The result is that cream is shipped frequently and in comparatively small volume. This practice results in a better quality of butter being made and it has been encouraged by the cash system of payments through cream tickets.

From my knowledge of the dairy industry, I am satisfied that the system of cash payments through cream tickets is a decided improvement on the system of half monthly payments and therefore I sincerely hope that nothing will be done to prejudice the system now existing in the west.

I have read this letter in order to show how this system grew up. It is the opinion of creamery men that under this system a better grade of butter is produced than can be produced under the system that was formerly followed. I take it that the secretary of this organization, which acts for all the dairymen of Canada, is a good authority on this subject. We want the dairy business to grow. This government have been doing all that one could expect any government to do to encourage the dairy business, but if they impose this extra burden upon it the result will be very detrimental to those who are engaged in it. I have here a wire from the Alberta Dairymen's Association, through their secretary, representing all the creamery men and dairymen in Alberta; I have also a letter from him. I shall not read either the wire or the letter, but they would be good reading and contain information that it would be well to have on Hansard. I have also a letter and a wire from the chairman of the producing section of the Alberta Dairymen's Association, who speaks for all the producers in that province. It is the view of all these men that the business cannot stand the extra burden that it is proposed to place upon it in the form of this tax. I have also communications from private creameries—from the Edmonton City dairy, the Woodland dairy, the Wetaskiwin dairy and the Camrose dairy. I have a statement by the manager of the Wetaskiwin dairy that I would like to put on Hansard; I judge that he is a pretty good authority on this subject and that the figures he gives may be taken as approximate. Speaking to the Kiwanis Club of Wetaskiwin, he said:,

In 1919 about 13,000,000 pounds of butter were made in Alberta, while in 1924 this figure was increased to 22,000,000 . . . . In 1922 the Dairymen's Act of Alberta was passed, making the grading of cream compulsory. Saskatchewan and Manitoba have followed Alberta's

example in this respect, and to-day the butter from the prairie provinces has a place on the world's markets second to none.

That is what we are aiming at; we want to turn out the best product that can possibly be manufactured, and the ticket system helps to bring that about. It can only injure the industry if these tickets are regarded as cheques instead of receipts and are all required to have a two cent stamp. I said at the outset that I was in favour of direct taxation if it was fair, and I believe the stamp tax, properly applied, is a fair tax. But a different situation is created if, in accordance with the minister's proposed amendment, these tickets are treated as cheques instead of receipts. We have men delivering small amounts of cream to those dairies every day for which they would receive one or two dollars, so you can see at once that if you put a 2-cent stamp on five of these cheques there will be a tax of 10 cents to pay on amounts as low as ten dollars. That is surely an unfair amount of taxation to place on that business. On the ordinary ten dollar receipt a man has only to pay a two-cent tax, whereas the man taking his cream to the dairy will pay the very same tax on an account of one or two dollars.

Now I come to the cheques. Suppose they issue cheques. Very few of these accounts are over ten dollars, and most of them are below that. On an ordinary business cheque for fifty dollars you only have to pay a two cent tax, but you might have to pay fifty cents if you were in the dairy business and took fifty dollars worth of cream to the dairy. There is no other business this tax strikes so hard, on account of the budget calling these receipts cheques and requiring them to be stamped the same as the ordinary cheque. If these accounts were paid in bigger cheques it would not be so bad, but hardly any of these accounts reaches ten dollars. The dairymen all say that they are willing to put on a two-cent stamp if the account goes over ten dollars, but you can see what a handicap the tax will be to the business if a two-cent stamp is required on every ticket, however small, and I want to tell the government that I do not believe they are going to get the revenue they expect from these tickets, because the dairymen will be compelled to go back most likely to payment every two weeks or once a month

I have here a number of letters that I shall not put on Hansard as time is passing, but they all go to show that the dairy business cannot stand this tax, and they will have to adopt some other method. The government

[Mr. Warner.]

are going to get these creamery men into a lot of difficulty. They will simply have to avoid this stamp tax in some way because they cannot afford to pay it, and it means they will have to change their system. The government in that case will not get the revenue, but they will fall into discredit with a whole lot of farmers who want the cash system that is now in operation continued. The creamerymen cannot undertake to give cash to each man who brings in his cream. That is out of the question, because not one man in twenty takes his own cream in to the creamery; he gets someone else to haul it in for him, and some of it is shipped a hundred miles. These cream tickets are as good as money to the farmer because the merchants or anybody will take them in as cash knowing that the creamery men will make it good; so it is really a cash system. But you cannot take money out of the bank and pay actual cash to the producer who sends in his cream to the creamery, because he does not go to the creamery himself. We do not want a handicap to be placed on this industry from a lack of knowledge of what this tax will mean, and that is one reason why I am taking time to explain the system to the House to-night. These gentlemen who are in the business certainly know what they are talking about, and they know another thing, that they will not be to blame if they have to go back to the two weeks or monthly payment system, and that will be a step backward. The cream will have to be kept too long so it will not make good butter. The man who is getting these cash payments in the west certainly needs these certificates every day in order to carry on his household expenses and support his family. Now why do we need to put a two-cent stamp on this dairy certificate? What is the reason we have to do it? It has not been made clear to me yet, but what has been made clear to me on investigation is that there are already some exemptions allowed. For instance, when a man clips a coupon from a bond and deposits it in the bank he does not have to put a stamp on that. I am not going to say that that is not wise provided we can afford it, but I do say that it is not fair to exempt the coupon clipper and to tax the dairyman, upon whom you are depending to build up this country in every part of it. There are other exemptions I might mention. One dollar will pay the maximum amount of revenue that you have to put on any cheque,, even if it amounts to $100,000. All amounts over $2,500 are exempt

Now, Mr. Speaker, and gentlemen, hon. members of this House, when you allow those exemptions is it fair to tax the small man who is producing a little cream to take care of his family through the summer season, and many of them are now depending upon it for the winter as well? If you want to be fair, if you are going to tax the cream ticket, I say tax the man that puts a bond coupon in the bank, and put a tax of two cents on every fifty dollars when a cheque is drawn no matter for how large an amount; I do not care if it is a cheque for $100,000. A man who can afford to write a cheque for that amount can better afford to pay the tax than the small dairyman.

You might say that the creamery men should stand this tax. But it is like any other business, there is a certain amount of overhead, and this tax will be charged in their overhead, and the small producer will have to pay it. It will not be the consumer who will pay it in this case, because the world's market makes the price for butter, and the rest of the butter at home will sell at the price butter will bring in the world's market, less the cost of transportation there, so the tax will come back to the small man. It may not break the dairy business, but it will be a handicap on the business, and I claim that it is an unjust tax. If there were other businesses that were exposed to so much expense and had so many small accounts to pay then perhaps there would not be so much objection. The dairy business is growing, and I have a number of statistics here that will indicate the growth. Our butter is being regarded with more favour on the world's market. In the British market, in Japan and in other parts of the Orient, and in a general way all over the world, our butter is establishing a reputation for itself. With the new system now in vogue, in view of the system of cash payments and the small amounts of cream going into the dairy while it is sweet, our dairymen are able to compete with the dairy products of any other country in the world's market. The fact that our butter is getting such a good name for itself is a strong factor in enabling our product to compete with the butter from other countries and secure a top price. We have not yet exported in any great volume, although it is increasing satisfactorily and we hope that given proper treatment the business in future will enormously increase. Before I leave this subject I must say that this development in the dairy industry has been brought about as the result of information furnished by the Department of Customs by their classing milk tickets as receipts, it has not been brought about through any violation of the law. To-day the industry is not asking for any special favour; all it is asking for is even handed justice and a fair deal. That is all we are asking for and we think that as dairymen we are entitled to it.

Now, Mr. Speaker, I have several notes here dealing with matters on which I wished to speak, but the time is going faster than I realized and I cannot take them all up. But I do want to mention the subject of rural credits, I have not heard much on that question this session. Nevertheless throughout the country the people are looking for something along that line to be done at this session of parliament. Reports on the subject were presented in 1924 and 1925, by a commissioner employed by the government to investigate the feasibility and the possibility of a rural credit system. I claim that in those reports we have information enough to enable us to make a start on that line. This subject was investigated by a special committee appointed to consider agricultural conditions in Canada, and Dr. Tory, the commissioner in question, states in his report that he has followed very closely the suggestions offered by the committee on Agriculture based on the evidence that the special committee took. We also have his statement that he has followed very closely the recommendations of the committee on Banking and Commerce. In the second report on agricultural credits made last year to the Minister of Finance, and printed as sessional paper No. 142 there is a resolution passed by the Banking and Commerce committee. I quote from the report:

> This resolution was concurred in by the House of Commons on Friday, July 18, 1924. Subsequent to this action instructions were received from the Acting Minister of Finance to complete the investigation suggested by the resolution of the select standing committee on Banking and Commerce referred to above.

Now, there are many quotations that I should like to put on Hansard if I felt that I had the time, but in view of the lateness of the hour, and the fact that a number of other gentlemen wish to speak, I shall read only a further quotation or two from Dr. Tory's report:

> In Canada we have invested in lands under occupation approximately $2,250,000,000, upon which there is live stock valued at about $1,000,000,000. In addition, the average crop production for the five years ending 1923 was $1,230,000,000. It is respectfully suggested that the time has come for the creation of financial organizations which will think in the terms of this industry, aiming specifically and definitely and without excuse

to meet its needs, free from the constant lure of other semi-speculative financial activities.

Now, Mr. Speaker, we have this report recommending certain schemes, and comparing what may be done in Canada with what has been accomplished in other countries. There is just one more quotation that I should like to give:

It is hardlly necessary to point out that the movement for rural credits on this continent is not an incident in the history of an individual country, but is part of a movement covering the whole civilized world, and would appear to be a normal development growing out of the conditions of modern agriculture.

Agriculture is struggling under many handicaps but as we are all aware of that fact there is no need for me to stress it. It is struggling under the handicap of a high rate of interest and the uncertainty of being able to get the capital which is necessary. I concur in the statement I have heard made a good many times that perhaps when credit is made too easy people get too much of it. That may be the case, and I think it is in some instances, but there are hundreds of thousands of our farmers who are now in debt and must re-fund their debts because they cannot afford to carry their indebtedness at the rate of interest they have to pay and the short time allowed for the loan. I believe that a rural credit system can be worked out for this country that will materially reduce the amount of interest the farmer has to pay. I should like to broaden out on that point and show hon. gentlemen how the interest of the entire country is borne by production, but I do not need to stress that point because the subject is likely to come up at a later stage. At any rate I hope that an opportunity will be afforded us of discussing the question this session.

In closing my remarks on this particular matter I want to say that I believe unless the rate of interest comes down it will be ruinous to the world. I do not believe civilization can stand the amount of interest that we are now paying; whether right or wrong, that is my opinion. I certainly think the country is paying too much interest. There are too many people living off interest, and every time a man gets in debt in this country it is pretty hard for him to get out, simply because he cannot earn enough in the agricultural business to pay his interest and his principal. I am speaking of the agricultural community, and I know that my statement is correct. There are a few men who can handle the business and pay the rate of interest and who seem to get on, but they are very few. We must make laws that will give the ordinary citizen a chance to make good, because most of the people in any country are ordinary people. Now I do not know that it will be worth much, but I wish to say that my feeling and my wish would be to cut the rate of interest in two. Eight per cent is the ordinary rate the farmer is paying. I should like to see the rate reduced to four per cent. I do not know that we can do it. We cannot go below what it would cost to furnish the money to the farmer, but we can get below the rate the farmers are paying at the present time, and we can give them a chance over a long period of years to pay back the money they have already borrowed, instead of having the bank coming to them every three to twelve months. Many farmers cannot get money for a year at a time from the banks, for, as we all know, banks are not organized to make such loans. If farmers were not in debt it would be a good thing to advise them not to go into debt, but they are in debt. As Dr. Tory says, it is not a difficulty which is experienced in one country alone but it exists the world over. Agriculture is in this condition in all countries, and you cannot blame our farmers for the condition in which they find themselves. Some of them have incurred expenses which should not have been incurred, but we cannot condemn them all because a few go into debt more than they should. I think it is up to this House to consider a rural credit scheme, I think it could be carried out in a reasonable, practical way, and Dr. Tory's report will guide us very much as to what can be done.

Referring to the Home Bank, I think we should consider the claim of the depositors and give them what they are entitled to during this session of parliament, if it can possibly be done. I do not care to discuss the matter further. Others will probably take it up at greater length.

I made a note of the statement made by the hon. member for Vancouver South (Mr. Ladner) that the Progressives wanted to take the Crowsnest pass home for political purposes. I would like to see hon. members get over the idea that we Progressives are taking all things home for political purposes. There is no justification for any such notion.

Mr. Speaker, a messenger has just handed me two more telegrams from creameries stating that they cannot stand this new tax. That point seems to be pretty thoroughly decided among them.

Referring to the Crowsnest pass agreement I have some ideas of my own. I live in a part of the country where, if the Crowsnest pass agreement was put into force according to the judgment of the court we would be discriminated against. I am not ready to accept the continuance of that condition, but we also

have a Dominion railway law, which says that there shall be no undue discrimination in freight rates. I am depending on that law to defend us in my district, if we hold to the Crowsnest pass agreement and regulate freight rates by it. Some might say we are forgetting the railways altogether. I will tell hon. gentlemen that the railways in most cases are able to take care of themselves, whether the railways are under private ownership or under government ownership we are the people who pay the bill anyway, and it seems to me that we need something to regulate freight rates. This brings to my mind something that happened when I first came into the country in 1898, soon after the Crowsnest pass agreement was enacted, which was in 1897. It was rather a new thing then. It was explained to me that that would always hold the freight rates within reason. I felt, as I was going a long distance from the seaboard, that the freight rates on our products might be pretty stiff. The argument was presented to me that the Crowsnest pass agreement would always keep the freight rates within reason. Well it did until it was suspended. I remember the time when the railways were hauling at less rates than the Crowsnest pass agreement called for. The Canadian Pacific Railway have done wonders in helping Canada, but at the same time Canada has done wonders for the Canadian Pacific Railway. When I first came to the country our freight was not of very great volume. The Canadian Pacific Railway said they could haul freight at a less rate when they got more of it. I have lived out in the west for years and we produced so much at times that the Canadian Pacific Railway could not haul it all; we were flooded with products all through the country and they could not be moved. We had blockades, as anyone who has lived in that country long enough will know. The wheat was piled up on that railway, then they said it cost them too much to move it on account of there being too much of it.

The Crowsnest pass agreement was a bargain made between the people of Canada and the Canadian Pacific Railway. I am sorry that the court did not decide that it should apply to other railroads as well as those which were in existence at that time. I am not going to question their decision, but I would expect Dominion law to do the rest of it, when we hold the Crowsnest pass agreement for the regulation of the freight rates on those roads that were in existence at the time the agreement was adopted.

What is a bargain? When a contract is, as it is said, signed, sealed and delivered between two people, it is a bargain to stay, and I do not see why this bargain between the Canadian Pacific and the people of Canada should not be made to stay. The Canadian Pacific officials say—and some people may sympathise with them—that conditions have changed so that they cannot operate their road as cheaply as they could when that bargain was made, and that consequently that bargain should be abrogated and they should have an opportunity to set the rates in some other way. That is all right from the Canadian Pacific point of view, but there is another side to the question. When the Canadian Pacific railway was built through that western country where I live, Canada gave that railway a great deal of land there—speaking off hand I cannot say how much—in order to get them to build that road. The people of Canada might just as well say: The Canadian Pacific land has risen in value until they do not need that much land, and we might just as well abrogate the agreement and take back the land in the same way as the Canadian Pacific wish to abrogate the agreement in respect to the rates which they should charge. Moreover, the people have had trouble with the Canadian Pacific lands. I know of many new neighbourhoods that have not been able to keep their schools going because those lands in their vicinity are not paying taxes. The Canadian Pacific land was getting the benefit of the improvement of the roads, schools and other things, and the land was lying idle because they were asking such an unreasonable price for it that the people could not afford to buy it and put it into cultivation so that it would pay taxes. A bargain is a bargain and we have that bargain. We have the Crowsnest pass agreement and this parliament will not be doing right unless we hold to that bargain in order to regulate the freight rates of Canada, especially in the west. As regards taking this home for political purposes, I do not believe one Progressive that came from the west had anything of that kind in mind. I believe they understand that the Crowsnest pass agreement is a bargain and they are not taking it home at all. It is there. They have nothing to do with it more than to hold it and not allow it to be abrogated.

I have noticed that many hon. members to my right seem to be very fond of going after the Progressives and telling them what a frail bunch they are. The hon. member for Vancouver South (Mr. Ladner) said that 22 per cent of the members of this House—I am not just sure what word he used—were controlling or bossing the government, and

the government was imposing such a low tariff it was going to ruin the whole country on account of the 22 per cent of Progressive members who were dictating to the government. I do not think any party in this House have come as near to having their way as the Conservatives have. They are trying to prevent the government from giving a lower tariff, and have succeeded. The people throughout Canada want a lower tariff; they have sent a large majority of members here who are in favour of a lower tariff if they represent their constituents as they should. Hon. members to my right have prevented the government from going further with their lower tariff policy. As the saying goes, the government are between the devil and the deep sea. At the same time it has been the Conservatives with a few Tory-Liberals added who have preached the ruination of this country on account of a very little bit having been cut off the tariff at last session. If they wanted a higher tariff, why did they not have it when they were in power and could get it? They did not have a very much higher tariff than the Liberal party, and they made the claim in 1917 and 1921 that they would be just as low tariff people as the Liberals if they had a chance. We are not, as I say, taking a hand in the political fight. We do not feel that we came here to carry on any political fight. Our people have told us over and over again that we are here to represent them, we are here to support the government when they are doing what we can afford to support, to help to carry on the business of the country in a proper way and to oppose measures which are not in the interest of those whom we represent. We are not sent here to build up any party machine nor to strengthen any party machine that is already built up. If this debate has lasted longer than it should have, I believe the country will understand that that is due to the political propaganda that has been carried on.

The soldier settlers in our country are appealing to members of parliament in some way to take enough off their indebtedness that they may be able to make good and hold their farms. I am in favour of immigration to our country, but I want to see the right kind of people coming here and I do not want to see money wasted in bringing in the wrong kind of people. We have a great big country that needs many more people in order that we may carry it on economically and profitably. We have in Canada these soldier settlers, a class of settlers that we cannot afford to ignore, and we should give them an opportunity to make good. They have already suffered loss, and if their equipment and stock have shrunk in value until they will not return the money paid for them, you cannot expect the soldier settlers to carry on under those conditions, because most of them had no capital outside of that furnished to them by the government. They are, therefore, up against an impossibility, and if necessary I would be in favour, instead of spending all our money to bring other settlers into this country, of spending some of it in helping the soldier settlers that we already have here—sufficient at least to enable them to make good. These men have done their very best; and if in some cases they have not come up to the standard that we might expect of them, that is no reason why we should treat shabbily those who have exerted their best efforts. I do not think we can afford to close this session of parliament without doing something to reduce the indebtedness of these men, whose position at the present time is simply impossible.

I have just one word to say with regard to the Hudson Bay railway; I certainly think that undertaking should be carried through to completion. The people in my part of the country are more interested in this matter than they realize. They have not been pushing very strenuously for it because they have had their eyes to the west; they have been looking to western shipping. But I think that this Hudson bay proposition is of more importance to them than they realize just now, and in order to save the investment we have already sunk in it we should go ahead and finish the road. I think we have sufficient information on which to take action.

I have said little about the tariff inasmuch as I felt that these other problems were more important, but I would make just a brief comparison between the United States and Canada. Notwithstanding the great difficulties we have to put up with in Canada, it is my opinion that none of them is great enough to render this country unprofitable for any immigrant who wants to come out to this part of the world and establish a home where he can live comfortably on a farm. In my opinion, such an immigrant would find it more profitable to come to Canada than to go to the United States. I am not saying this as a guess; after the experience of a lifetime in the two countries I have come to this conclusion. I do not suggest that this would be true unless we did our part; we must do our best to

lighten the burden of taxation in every possible way. I can see that the government has so much in the way of fixed charges to contend with that it is a difficult problem for us to reduce taxation in Canada. But at the same time we must do everything we can to relieve the people of this burden to as great an extent as possible, and we must help our people to produce by lowering the cost of production. This is imperative if Canada is to be made a prosperous country. This is not a country in which money can be picked up along the road; you have to work for it. But when this is said, I think that people have in Canada a chance which is greater than can be found anywhere else in the world. That is my opinion, although I do not forget that difficulties do exist. But the more we can and do help ourselves, the more the government can push forward production by assisting the people in the way of reduced taxation and reduced cost of the implements of production. I must apologize for the time I have taken up, but I feel that the subjects I have touched upon call for some consideration, and I shall leave these few remarks with the House.

Mr. G. B. JONES (Royal): I do not intend to answer all the arguments that have been advanced by the speakers who have preceded me, and I shall be as brief as possible in what I have to say, considering the long-drawn-out debate which has taken place on the budget. But coming from the Maritime provinces as I do—that part of the country which was once referred to in the House of Commons as "the shreds and patches of Confederation"—I wish to bring to the attention of the House some matters which at the present time are of very vital interest to our people. Before going into these matters I want to join with others in extending my sympathy to the Minister of Finance (Mr. Fielding). Those of us who come from the Maritime provinces particularly miss him; after reading speeches that he delivered during the Laurier administration, and especially after listening to his budget speeches in 1922 and 1923, I believe we would have had a different presentation to-day had that hon. gentleman been able to take his seat in the House.

11 p.m

As to the present budget proposals, it is not my intention to deal at all with our debt; we all know what it is. We hear one statement coming from one party and some other statement from another party, and it is difficult for anyone who is not very familiar with accounting to know which side is right. But one thing we do know and that is that beyond any question we are taxed to the limit in Canada.

I was very glad to note in the budget proposals the provision for the increase in duty on slack coal, which will be of great benefit to the Maritime provinces as well as to the west. But one would hardly think that we should have experienced what has occurred during the past four years, or nearly four years, since the present administration took over the reins of power, especially after listening to the eloquent statements of the present Minister of National Defence (Mr. Macdonald, Pictou), whose voice was heard, in the campaign of 1921, in the interests of the coal industry of the Maritime provinces and of course of the rest of Canada, as well as in behalf of the steel industry of the Maritimes. One would hardly suppose that such suffering as has been endured by the miners would be necessary, nor would the unsettled state of business which we have witnessed appear to be reasonable, seeing that the hon. member for Pictou is a member of the cabinet and that the government itself has had a solid sixteen from Nova Scotia. I do not see why there should have been any necessity for a strike and nearly starvation before the present government took action.

Another proposal I notice in the budget relates to the export of hydro electric power from Canada to the United States, the only place of course to which we could send such power. This would be all right in a way; if we had any extra energy to ship out of the country it would be well to export it and charge a certain rate on it. But I think it would be a great deal better for this power to be used in our own country for the manufacture of our own raw materials, instead of shipping both the power and the raw materials to the United States to be there manufactured and to give employment there to Canadian labourers who are being driven out of Canada. While I am referring to this matter I may say that there is at present a great development in process in the matter of hydro electric energy in the province of New Brunswick, and in conjunction with this a large industry is being established by New Brunswickers in the border state of Maine; I refer to the Fraser Companies, Limited, of New Brunswick whose head office is at Edmundston in the county of Madawaska. These people have already made arrangements and have let the contract for the building of a very large paper mill at Madawaska on the American side of the river St. John. This is a matter that should certainly be looked into. I cannot understand why the present administration does not take some steps to prevent the ex-

portation of our pulpwood. Even our own business men in New Brunswick are going over to the United States and spending large amounts of money, in the building of a paper-mill to finish our raw material.

Another proposal included in the budget is that of the appointment of a board to review matters of tariff, taxation, and transportation. The country has waited four years for the government to make some announcement in the matter of a policy, but up to the present they have failed to do so. Since the government do not see fit to make any progress in this direction I personally favour the appointment of such a board, because we may then get the government to announce some kind of policy and we shall know what we are doing.

I wish to refer for a few moments to the question of immigration. At the first session of this parliament in 1922 the Maritime members got together on several occasions and discussed the question of immigration. We did not seem to make very much headway, although politics were not mentioned, although members of all parties, Liberal, Conservative and Progressive, met together in an effort to devise ways and means by which some immigration could be brought to the Maritime provinces. I do not think we have ever received our just due in the matter of immigration to that part of the country. So far as population goes, we constitute about one-eighth of the Dominion. A very large amount is expended annually by the federal government, for the purposes of immigration. As a result of some of these meetings it was decided that the then Minister of Immigration, now Minister of the Interior (Mr. Stewart) was to pay a visit to the Maritime provinces. I was to take him to my constituency and give him an opportunity of looking over a number of vacant farms we have in that district. I was to accompany him to Petitcodiac, in the county of Westmoreland, and the hon. Secretary of State (Mr. Copp) was to then introduce him in his constituency. The minister did not make the trip to the Maritime provinces, and shortly after that there was a shuffle in the cabinet and he was relieved of that office. Next year we took the matter up again, but no further progress was made. Last year I brought it up in the committee on National Railways and Shipping, of which I had the honour to be a member, and I was referred to Mr. W. D. Robb, vice-president of the National Railways, who in turn referred me to Mr. C. Price-Green. Mr. Price-Green came from Montreal and attended meetings of the committee, and we arranged that after the session someone from the colonization department of the Canadian National Railways should visit my constituency and other constituencies in New Brunswick. About the first of August a representative of the Canadian National Railways, Mr. Biette, came to my constituency. I spent a week with him, took him over both Kings and Queens counties, and in that time he viewed a large number of farms. Many of them he did not list for various reasons. Those reasons I will not state here; I suppose he thought they were not suitable in every respect. But we did list sixty-five farms. I wish to give the details of a few of the farms that were listed at that time by Mr. Biette. It was my intention originally to read the entire list, but I do not wish to detain the House at this stage of the debate. The first farm that Mr. Biette listed is described as follows:

Location—Erb settlement, Sussex parish, Kings county; 3 miles from Apohaqui; 1½ miles from Secord siding; ½ mile from school; church on corner. Rural route.
Price—$3,000; $1,000 cash; balance on terms.
Acres—400 acres; 75 acres cultivated; orchard 50 trees. Will winter 30 head cattle, 3 horses.
Building—House, frame, 26X34, 1½ storey, 10 rooms. Barns, 2, 26X30 and 30X40. Machinery shed, 12X18. Blacksmith shop. Well house.
Remarks—Consider this good bargain
Reason for selling—Widow

I know this farm very well; it is only a short distance from my own home, and I would say that the house could not be built for $3,000. This is not a farm that is run out; as Mr. Biette says, it will winter thirty cows and three horses, so that it is a going proposition. I may say also that I have called up the office of the National Railways in Montreal in regard to this matter and I have discussed it in committee here; and I am told that the question of immigration for the Maritime provinces is something which must be looked after by the provinces themselves. I do not think that statement will bear the light of day. Millions of dollars are expended in this country on immigration, and as I have pointed out we are a part of confederation, we are entitled to our just due in this matter, and whilst we have splendid opportunities for immigrant settlers, we are continually and repeatedly given the go-by.

Then I will take No. 6.

Location—Collina, Springfield parish, Kings county; 7 miles from Apohaqui; ½ mile from Collina church, school, stores, cheese factory. Rural route.
Price—$800.
Acres—100 acres, 45 cultivated.
Building—House 20x30. Barns, 2, 24x30. Small outbuildings, well, etc., excellent water.
Remarks—Good bargain.
Reason for selling—Old couple, no children.

I said I was going to refer to just a few of these farms that were listed. I will take next No. 10—and I am not making any selection of them; I am simply picking them out at random. The description of this farm is as follows:

Location—Collina, Studholm parish, Kings county, English settlement, 9 miles from Apohaqui; 2½ miles from Collina store, school, cheese factory and church; rural route; telephone. School on next lot.
Price—$1,500.
Acres—100 acres, 50 cultivated. Orchard 40 trees. Well and spring.
Building—House 24x32. Barns, 2, 26x36 and 30x40, new.
Remarks—100,000 feet of lumber on this place.
Reason for selling—Owner has two farms, wishes to dispose of one.

I know this place very well, and I would say that in this case also the house on the property could not be built for the sum asked for the whole property. This farm, as in the case of the first one I referred to, is not by any means run out; it is a going proposition. An immigrant who came in there to-day could make a living, and I believe could make good. Then, No. 23:

Location—Den Road, Cambridge parish, Queens county 2½ miles from Whites cove, store, wharf on Grand lake; ½ mile from School. Rural route.
Price—$1,000.
Area—100 acres, 50 acres cleared.
Building—House, ten rooms. Barn 36x36. Stable, 22x28. Wagon shed, hog house, etc., well and spring through farm.
Remarks—Owner cuts 25 tons of hay off this land every year.
Reason for selling—Party who owns this farm owns another farm and is only able to take care of one place.

The particulars of No. 26 are as follows:

Location—Waterboro parish, Queens county, Den Road, 3 miles from store and wharf at Whites cove, Grand lake, ¾ miles from school; 1¼ miles from church.
Price—$1,000.
Area—150 acres, 45 acres cleared. Can winter 14 cows and 3 horses.
Building—House, 10 rooms. Barn, 30x60. Hog house, hen house, granary, and so forth. Wells, two.
Remarks—Consider this a real bargain.
Reason for selling—The owner is an old man and has two farms, wishes to dispose of one.

I might say that the farms we listed on our trip through Kings and Queens counties were not in back districts but on main thoroughfares and every one on the list I believe has free rural mail delivery, and is close to churches, school house, cheese and butter factories.

Then, No. 41:

Location—Studholm parish, Kings county. Half mile from head of mill stream, cheese and butter factory, churches, stores, grist mill, saw mill, etc. 1 mile from school, ¼ mile from R.R.
Price—$700.
Area—100 acres. 50 acres cleared. Orchard 20 trees.
Building—House, 18x24, kitchen 16x20, roof bad. Wood shed 20x26. Barn 30x44, good. Shed 14x24. Granary 12x14. Pig house, 14x16. Brook through pasture. Good water boiling spring.
Remarks—This is a very good buy.
Reason for selling—Owner has too much land to take care of.

Farm No. 53:

Location—Havelock parish, Kings county, 1 mile from school; ¼ mile from church, 3 miles from cheese factory, stores, etc. Rural Route.
Price—$1,650.
Area—100 acres, 50 acres cleared.
Building—House, 24x28 shingled. Barn 28x34, stable 14x30. Pig pen, hen house, granary. Well. Brook through farm.
Remarks: This property is right on the main road (Cannan road) is an excellent district.
Reason for selling—Owner desires to go elsewhere.

Farm No. 57:

Location—Havelock parish, Kings county ¼ mile from Corn Hill cheese factory, school, blacksmith shop, store, church, and so forth. Rural Route, Telephone—Rural and New Brunswick Telephone Company.
Price—$3,500.
Area—110 acres, 70 acres cleared; orchard, 15 trees.
Buildings—House 24x30, two bay windows, concrete steps, kitchen 14x28, wood shed 18x20, good cellar, excellent repair. Barn, 30x90, stable 18x50 attached, hog house, 24x24. Machinery shed 18x24; garage, 12x12, hen house 12x16. Well; water in house; brook through farm.
Remarks—This is an excellent farm in A1 condition. Good fences around the property, lightning rods on the house.
Reason for selling—Widow.

The last one I wish to mention is No. 61.

Location—Havelock parish, Kings county. 4½ miles from Havelock where there are stores, churches, school, cheese factory, garage, and railroad station. ½ mile from school and cheese factory. Rural route. Telephone.
Price—$300.
Area—100 acres, 40 acres cleared.
Building—House 22x26, kitchen 12x14, fair repair. Barn 26x36, new.
Remarks—This farm is right on the main road. This is a great bargain.

I have put these particulars on record, Mr. Speaker, to show you the kind of properties down there, and I might say that we listed no property that was vacant except in the case of a widow or an old man who owned two places and was not able to farm both, or in the case of young people sometimes with adjoining farms who could not work both. Any vacant farms that we listed were vacant, not because they were not a going proposition, but for one or other of the reasons referred to.

As I brought to the attention of the House a few moments ago, the argument of the Immigration branch of the Canadian National Railways is that their properties in the west can be got very much cheaper. Perhaps that is so, as far as acreage is concerned, but these

properties out west would have no buildings on them, and I claim that every one of the farms listed here is a real value, and needs consideration by the Immigration department of this country. We have propositions to offer intending settlers that should be fully advertised.

Just for a few moments I wish to refer to conditions in my constituency. Agriculture is the chief industry that is followed there. Over fifty per cent of the entire dairy products of the Maritime provinces is manufactured and put up in the constituency that I represent. I do not think that can be successfully contradicted by anyone, because the statement has been made for a number of years down there on different occasions, and I have never known anyone to say that it is not correct. Our farmers at the present time are not very prosperous on account of unsettled conditions, the high cost of living, the great burden of taxation, and especially on account of the very high freight rates on all the commodities they purchase and on the products they have to place on the market. Our dairy farmers have to import large quantities of bran, shorts, middlings and other feeds to keep their stock at a high-producing standard, and their manufactured product of butter, cheese and milk has to be transported a considerable distance to the larger centres and shipping points.

The farmers of this country need protection about as much as any other industry. I noticed in an American paper just a few days ago that the president of the National Dairy Council of the United States, Mr. M. D. Munn, appeared before a committee of the government at Washington urging that the tariff on butter from Canada into the United States be raised from eight to twelve cents. Mr. Munn states that they manufacture in the United States more than two billion pounds of butter, and that they import about twenty-five million pounds, which is a very small amount compared with the amount they produce themselves. He goes on to say, however, that that amount is enough to upset their market and at various times in the year to break their price from five to seventeen cents a pound. We are under the same conditions in this country, especially in the Maritime provinces. Whenever our butter and eggs get up to a fair price there are large imports coming in from the United States, whilst our tariff against their products is less than half what their tariff is against ours.

[Mr. Jones.]

In the province of New Brunswick, the next largest industry to agriculture is lumbering. In the constituency I represent about 75,000,000 feet are cut annually. That amount was cut down considerably during the past year on account of over-production the year before and the slow sale of lumber during the year, due also to the competition that we meet in the New England states, the city of Montreal and other large centres by importation from the Pacific coast. This industry is very badly handicapped, and knowing conditions as I do, I might say that of the large number of operators and manufacturers of lumber on the north shore of the province, I do not believe there are more than two or three whose business is not for sale at the present time. The hon. member for Northumberland, N.B. (Mr. Snowball) is a large operator and has been ever since I can remember. The name of Snowball is very well known in the Maritime provinces but the hon. member's firm is doing very little business this year, in fact it is only operating a portable mill where it has two very large stationary mills. The hon. member in question, during his speech earlier in the debate said that conditions were not extra good in New Brunswick, but quoted newspaper clippings to show that business was improving and that conditions were better than they had been. I have been in business at the place where I am located for the past thirty-five years, and I have never known conditions on the farm, in lumbering, and in industry generally, in that district, to be in such a sluggish and bad state as they are at the present time. To prove this statement I wish to refer to a speech delivered in the New Brunswick legislature on April 8, and the quotation is taken from the Telegraph-Journal, a newspaper printed in the city of St. John, N.B. The gentleman who made the statement in the New Brunswick legislature is Mr. J. D. McKenna, president of the Telegraph-Journal. I am only going to read the headlines placed on the speech; I shall not weary the House by reading the statement itself. One headline is:

Vision provinces, enduring most hideous annexation form in movement to U.S.

Then another one:

King's legislator tells House young people are leaving country by thousands and asks broad minded men devise new methods.

This does not bear out the statement made by many hon. gentlemen who claimed that conditions in Canada are good, and that conditions in the United States are worse than

they are here at the present time. I do not think statements of that character made in this House, would bear the light of investigation. To further demonstrate that conditions are not as they were represented to be by the hon. member for Northumberland, I wish to read an extract from an address delivered by Mr. J. A. McLeod, general manager of the Bank of Nova Scotia, in the city of Toronto. Every person in this country knows that the Bank of Nova Scotia is one of our good, solid, substantial banks and that dependence can be placed upon the statement of its officers. Mr. McLeod, in the address in question, said:

> Last year we referred to the onerous taxation which was pressing upon industry in Canada. There has been no improvement in this situation during the year. If business is to be revived, we feel that some relief from the burden of taxation will have to be given. We fully realize that the cost of the war has to be met, but we do not believe that our governments, by which we mean the Dominion, provincial and municipal authorities, yet realize the seriousness of the situation. New obligations continue to be incurred which are bound to result in increase of taxation rather than decrease. There should be such economy in all departments of government as will permit of some reduction of taxes, in order to encourage the business man to go ahead with new projects in the expectation that he, and not the tax collector, will reap the whole benefit of his industry. The British and United States governments have already made substantial tax reductions, but the tendency of Canadian taxes has been steadily upward. If we are to maintain and develop our foreign trade, our producers and exporters must not be handicapped by a heavier scale of taxation than applies to their competitors in other countries.

Another of our great problems in the Maritime provinces at the present time has to do with the old story of freight rates which have been very much increased. I realize that under conditions as they exist here to-day this is a very hard problem to deal with, but I believe that something could be done in this direction which would tend to relieve the present situation. Just at this point, and to contrast the conditions prevailing in the United States with those existing in Canada I wish to read the following clipping taken from the Financial Review and published a short time ago.

> Railroads Break Freight Records
>
> American Lines Attribute Increase to Manufactured Goods
>
> New York, March 20—(United Press).—American railroads during the first ten weeks of 1925 handled the greatest volume of freight ever carried at this season of the year—9,000,328 cars having been loaded from January to March 7.
>
> That is 144,858 cars higher than the previous record established last year.
>
> These figures were announced at the meeting of the directors of the American Railway Association here to-day.
>
> The bulk of the increase has come from manufactured products or commodities used by the manufacturing industry. Since most agricultural products moved last Fall and early in the winter, there has been a decrease in the loadings of those commodities.
>
> On March 1, 1925, railroads had 4,988 serviceable locomotives in storage compared with 3,800 on March 1. 1924.

You will observe that the movement referred to is not the movement of a large quantity of wheat or other natural products; it is a shipment of manufactured goods produced in the United States. It is not my intention to dwell on this matter very much longer except to discuss to some extent matters affecting the Canadian National Railways. In dealing with this branch of the subject I wish to say that I am not inspired by any feeling against the Canadian National Railways. Being a resident in the Maritimes and living on the main line of the National system I have always been a supporter of it and have tried to give it all the business possible. My firm—you will excuse me for this personal reference—gives the Canadian National Railways about 250 car loads of outward freight every year, and about 80 car loads of inward freight, besides freight in less than car load quantities and other business, so that any reference I may make to the National railways is not of a personal nature. I am prompted to speak as I do because of what I would term the most gross extravagance that has prevailed on the National railways under the management of Sir Henry Thornton. When that gentleman was appointed president of the National Railways I certainly was very hopeful that we would see a change in conditions, but as time goes by apparently the management is going from bad to worse. We were assured at the time Sir Henry Thornton was appointed that he would be above political influence, and would not stand for any political interference so far as the management of the road was concerned. I think that everyone in this country at that time believed that Sir Henry Thornton would not stand for any political interference, but after following Sir Henry Thornton in his different trips to the Maritime provinces, and keeping tabs on him in the rest of Canada, I believe that Sir Henry is a very clever and astute politician, and that he is paying about as much attention to the political side of the question as was done by certain officials in the days of the management of the old Intercolonial in the Maritime provinces.

I am glad the Secretary of State (Mr. Copp) is in his seat, because I intend to refer to another matter now. Last December there was a provincial by-election held in the city of Moncton for the seat rendered vacant by the elevation of the Hon. C. W. Robinson to the Senate of Canada. That vacancy existed for

some time, I suppose they considered the seat in Moncton as perhaps a little doubtful, although my hon. friend the Secretary of State in the last federal election had a majority in the vicinity of seven thousand in his constituency.

Mr. COPP: A comfortable majority.

Mr. JONES: A very comfortable majority indeed, and one would think there would not be any fear in bringing on a by-election there and that a member of one of his own party would be able to secure election. The election was held on December 1st, and about a week before the Moncton election Sir Henry Thornton made a trip through the Maritime provinces and conveniently stopped off at Moncton, that being the chief railway town and the head office of the Atlantic railway region of the Canadian National Railways. And by the way a gentleman for whom I have the finest regard, Mr. Matthew Lodge of Moncton, was appointed a director of the Canadian National Railways about that time. I believe he will make a good director and I am not saying anything against his appointment, because I am sure he has the interests of the province at heart, and when he has those interests at heart he will be looking after the interests of Canada as well, because we surely form a part of Canada. Every effort I believe was made by the government of the province of New Brunswick to get certain matters straightened out in Moncton city, and they thought matters were straightened out. However, Mr. Rand, who was a candidate in Moncton and who aspired to the office of Attorney General was defeated by about nine hundred dollars—or rather votes.

Mr. COPP: It cost him more than that sum.

Mr. JONES: I have no doubt it cost him a lot more than that amount, according to reports, and I have every reason to believe they are correct. That night Premier Veniot of our province had to look round for some excuses for this great reverse in that election. One of his excuses was that there was a heavy snowstorm just the day before. Another reason he gave was the unpopularity of the National Railways, that there had been certain dismissals, parties had lost their positions there, and that if he had received Mr. Dalrymple's wire on the previous day in all probability they would have been able to pull through. Mr. Dalrymple, I might say, is the vice-president of the Canadian National Railways.

Mr. COPP: Has the hon. member a copy of the telegram from Mr. Dalrymple?

[Mr. Jones.]

Mr. JONES: No, I have not, but the Premier of New Brunswick said the telegram came a day or two after the election, in place of the day before.

Mr. COPP: I never heard of it.

Mr. JONES: It was public talk in the city of Moncton. I was discussing the matter of the attitude of the management of the Canadian National Railways, and I said at the beginning that I believed there was the most gross extravagance going on, especially under such conditions as we are confronted with in Canada to-day. I am only going to mention a few of them, and the first will be the Scribe hotel in Paris, the grant of $3,000,000, the Union club in London, $1,500,000, and the radio broadcasting stations. It is not only what the cost of the installation of radio stations will be, but their upkeep for all time to come, and of course it is going on all the time. Then we have the golf courses, parks and operation of hotels, and the question of rolling stock on the Canadian National Railways. The first year of Sir Henry Thornton's management of the railways was 1923, and a question was asked of the Department of Railways and Canals regarding the building of new steel cars for the Canadian National. In 1922-1923, being Sir Henry Thornton's first year, he had not got well established in the business, and no new steel cars were purchased, but in 1923-1924 we find that 154 steel cars were bought by the Canadian National; in 1924-25 we find 65 steel cars, or in the two years 219 steel cars were purchased, at a cost of about $15,000,000. I claim these expenditures unwarranted and extravagant under present financial conditions. There are hundreds and hundreds of good first class and other cars which could be used. All they need is a coat of paint and a little repairing of the upholstery to make them all right under conditions such as we are confronted with in this country at the present time. I do not believe the people of this country will approve such extravagant expenditures.

Another matter is the use of private cars. I am not opposed to some private cars. I believe in the use of private cars for presidents of railways, or perhaps for cabinet ministers if they do not abuse it. For managers of railways the private car is just as essential as an office at headquarters, because in going from one point to another in a division they can carry on business just the same practically as in their offices. But what I object to is this: I have heard mention made of trips that Sir Henry Thornton made in the Maritime provinces, and in fact in the rest

of Canada, not merely in private cars but in private trains of eight or ten cars, just as if he were going up and down the country on a joy ride. I object to this expenditure on the Canadian National Railways, because when patrons of the road in remote sections ask for trifling concessions, they are invariably denied their just demands on the plea of economy.

I will close with just one more reference to a matter that was referred to by a number of other hon. members at this and other sessions of parliament. It was referred to this session by the hon. member for York-Sunbury (Mr. Hanson), and it is the matter of representation in this House. I would support and do everything I possibly could to have a reduction in the number of representatives. It is too large. Canada, with a population of eight or nine million people, is certainly overgoverned and there is too much expense in every way. A reduction in the membership of the House would necessitate a reduction in the cabinet by at least one-third, and I believe you would get more effective and better work if the present cabinet were cut in two.

I am also in favour of a reduction in the indemnity, and if the resolution that was on the order paper for a couple of years had ever come to a vote, it was my intention to support it. I believe the session could be shortened up very much, yes, by at least one-third. A lengthy session may be all right for members from Quebec who live in the vicinity of Montreal and that section and members from Ontario who live near Ottawa, but members coming long distances, from the west and the Maritime provinces, are here for five or six months listening to debates on academic questions that get us nowhere.

The Prime Minister, (Mr. Mackenzie King), in his closing remarks referred very feelingly, I thought, to our friends the Progressives in regard to the budget. He told them it was up to them whether they would support him or the amendment of the hon. member for West York (Sir Henry Drayton). He said that if he did not have a good substantial majority, he did not see anything left for him to do, but resign. I do not know what our friends the Progressives are going to do in this regard, but the best thing for them to do if they have any interest in the welfare of this country, would be to oppose the present budget and give the Prime Minister a chance to dissolve parliament, go to the country and receive the condemnation he so richly deserves.

Before I take my seat I wish to say that the Prime Minister favoured me with a speech in my constituency during the campaign of 1921 when he spoke in the opera house in the town of Sussex. There he referred to my right hon. leader as an autocrat. He stated that business was going to the wall; that the cost of living was high, and that if the electors of Canada would only elect him and his party, we would see a great change in conditions in this country. In making his address here to-night, he said that he had reduced the cost of living, but wherein, he did not say. The Canadian people have reasons to think otherwise. I do not know that he said he had increased the speed of the wheels of industry, but that matter will be decided by the electors when an opportunity is given them at the ballot box and the wheels drawing the chariot of the present administration to its down-fall will move with great velocity.

Mr. T. W. BIRD (Nelson): Mr. Speaker, when the Prime Minister (Mr. Mackenzie King) was addressing the House, he charged the opposition with protracting this debate. He threw the charge over to this side of the House in somewhat of an indiscriminate manner, and in order to make the position as clear as possible, I should like to read out these figures which have been given to me and which, I think, will make it absolutely plain to the House who it is that has been protracting the debate. Prior to the present time, 46 Liberals have filled 823 columns of Hansard, averaging 18 columns for each speaker; 26 Conservatives have filled 583 columns of Hansard, averaging 22½ columns each, and 31 Progressives have filled 381 columns of Hansard, averaging 12⅓ columns each. The showing is yet more in favour of the Progressives if you consider the pointedness of the speeches which have been made.

Mr. LADNER: Has the hon. gentleman calculated the number of columns contributed by members on the government side as compared with those contributed by the combined opposition? It is about even.

Mr. BIRD: The government have followed the policy of intervening in the debate after each Conservative and after each Progressive.

Mr. DUFF: No, they have not.

Mr. BIRD: I think, therefore, the charge of protracting the debate does not come very well from that side of the House. The Prime Minister also forgot to make it clear that the Progressives took no part in protracting the debate on the Petersen contract. I thought he forgot also to tell us about his own four-hour speech. All that is by the way. These little matters influence public

opinion to some extent, and for that reason I have taken up time just to make the situation clear.

The House will, perhaps, indulge me for a few moments if I direct its attention, following the example of the Minister of Agriculture (Mr. Motherwell), to the Hudson Bay railway, The Hudson Bay railway is not altogether irrelevant to this debate. If you go on taxing the western farmer, the farmer in general for that matter, every year as you tax him in this budget, in order to benefit other portions of the community, it is only reasonable that this House should pay some attention to proposals which, in some measure at least, may be able to relieve the farmers' situation. With respect to the utterance of the Minister of Agriculture, I do not know whether to take it as a reason for hope or despair. The fact that he professed a change of heart was satisfactory so far as it went. Late conversions are not notoriously noteworthy for their sincerity, but in the case of the minister I do not intend for a moment to question his sincerity. I hope the good work will proceed. We shall not cease to pray for the other western members of the Liberal party. When we get those converted and on our side, we shall have some hope for the rest of the Liberal party in regard to this project. The disturbing part of the minister's speech with regard to the Hudson Bay railway was the tendency which he displayed from the very start to develop heretical ideas about the ports. It seemed to me while he was speaking that the latter part of his utterance destroyed the effect of the first. He came to bless and stayed to curse, so to speak; and there was great glee in the camp of the enemy the day after he had spoken. Unwittingly, perhaps, he played directly into their hands. As to the merits of the discussion itself, I do not want to delay the House by entering in any detail into that at the present time, but I do want to say that all the data which the minister presented to the House has been refuted over and over again in this chamber during the last three years. I would point out also that each one of the authorities he adduced was forty years old or more; they all date back to a time before any systematic investigation had been made. It is only within recent times that these ports have been investigated with any degree of system and thoroughness. If the minister had read the reports of the investigations instituted by his own government and by the late Conservative government, as I have read them, I think he would have hesitated before giving expression to the opinion which he did the other day.

[Mr. Bird.]

Mr. MOTHERWELL: Did the hon. member take note of my remarks with regard to Captain Bernier's evidence?

Mr. BIRD: I was coming to him. As I was saying, if the minister had read these systematic and scientific reports issued by his own government, instead of listening to what after all are only sea yarns, however interesting they may be, he would have refrained from expressing the opinion which he gave. I have the greatest respect for Captain Bernier, whom I consider one of Canada's finest seamen; and I am glad to note that at the age of over seventy he is fitting out for another Arctic expedition. There is no doubt that as a seaman his skill and ability are beyond all question; but as an authority on Port Nelson, I do not think he should have been listened to for a moment by the minister. I am willing to admit that the minister, after an insufficient investigation, has blundered into that position, a position which is contrary to public opinion throughout the west; and the opinion which has come from him is calculated to play into the hands of those opposed to the completion of this road. Public opinion will not be so kind to him as I am prepared to be.

Mr. MOTHERWELL: I will take my chances on that.

Mr. BIRD: Already I have had intimations that opinion in the west regards the minister's utterance as a smoke screen behind which the government can carry on its policy of delay in this matter. There is a time to correct that view, and when the Minister of Railways (Mr. Graham) gives his statement, then the government may have an opportunity to make clear to the public just what its policy is on this important matter. That is all I intend to say at the present time in regard to the Hudson Bay railway.

12 m.

I want to say a few things touching the budget in general. A large part of this debate has been taken up with a wrangling over our methods of government bookkeeping. It appears that we have developed a system of bookkeeping which is designed to justify the government that happens to be in power instead of throwing any real light on the questions before the public. From the debate which has been going on it is impossible to draw any other conclusion. It seems to me to be a system of bookkeeping worthy of a Chinese laundry. What the public needs is not an elaborate and confusing justification of whatever government happens to be in power; the public needs a straightforward,

unequivocal presentation of the facts. Why not put the revenue on one side and the expenditure on the other and give the public a chance to see where the balance really lies? Some countries go so far as to put their annual statement forward in diagrammatic form, and that is a suggestion which I would pass on to the government, so that the man who runs may read and understand without every year having to be dragged through a maze of balances and distinctions that are meant to confuse him. I have been reminded during this debate of the old fashioned grocer who used to keep his accounts by means of certain hieroglyphics which no one understood but himself. It was all right so long as the grocer was an honest man; but how was any one to tell whether he was honest or not? And that is precisely true of our present way of accounting; it has never been meant to enlighten the public but rather to justify the government that happened to be in power. I believe that we have probably spent too much time discussing this matter and too little time discussing what is the real substance, the heart of the annual statement. After all the people are not very much interested in the kind of book entry that has been made; they are interested in the amount of taxes they have been paying and the way in which they have paid them. This year the government has taxed the people to the extent of $290,000,000, a stupendous sum, and the only satisfaction we have in contemplating it is that it is somewhat less than the amount last year. It would be premature to congratulate the government, because when you strike the average for the last three years, which is something like $323,000,000, two or three millions higher than it was when this government came into power—when you look at it in that way, while it may not reflect any discredit on the government it does reveal the plight of the taxpayer. I do not think Edwards Morgan & Company could make it any plainer —$291,000,000 taken from the people in taxes this year. But that is not the really important thing from the taxpayer's point of view —that is, from the point of view of the ordinary taxpayer, the ordinary consumer and producer. What they are interested in, perhaps more than the amount, is the incidence. They want to know just where the blow has fallen, and that is one thing that has been neglected in this debate—an attempt to show the public just how they have been taxed. Canada for many years has been notorious amongst democracies in the way the cost of running an expensive government has been loaded on the shoulders of the consumer. What has happened in the last two or three years? It was bad enough before, but during the two or three years of a professedly popular government, what has happened? We find that in that time indirect taxation has grown from an already high figure of 67 per cent to 80 per cent. That is to say, 80 per cent of the cost of running this country to-day rests upon the shoulders of the consumer and of the producer. Eighty per cent of the interest on the war debt; 80 per cent of our war pensions; 80 per cent of the cost of this debate, rests upon the shoulders of the consumer, the workingman with a family, the soldier settler struggling on a bush farm, the pensioned soldier and his family living on a government pittance. I do not think we can find in this world a country that lays any claim to democratic development that so cheerfully lays the burden where it is most difficult for it to be borne. Search the world through, and I question whether you can find a country where the principle of ability to pay is so much neglected as it is in this Canada of ours. Whether you go to free trade Britain or to protected America, you will find that this is true. In Great Britain 57½ per cent of the taxes are raised by direct taxation, and in the United States 55 per cent; and if you add the estate duty it brings the United States figure up to the level of that of Great Britain, which proves that those two great democracies have been in step in evolving democratic forms of taxation. We in Canada are lagging behind, and the reason is because the governments we have had for a generation or two have not been concerned about legislating for the people as a whole, because the people as a whole during that time have not been represented. Their voice has not been heard here, and the annual budget for more than two generations has absolutely ignored the common people, with the result that at present we are raising by indirect taxation 80 per cent of the total cost of running our government.

Our friends to the right, the Conservatives, are almost silent on this phase of the budget —and very naturally so; it accords well with the ancient Tory practice of bolstering up a privileged few at the expense of the many. But we do not look for that kind of doctrine from a Liberal government whose traditions are so opposed to that kind of taxation. The Conservatives have in their amendment made a gesture in this direction. The leader of the opposition (Mr. Meighen) when he was speaking addressed his remarks most particularly to this side of the House. He looked at

us almost in a threatening manner when he was dealing with this question. Were we as Progressives, he asked, going to vote against an amendment proposing a reduction in the sales tax? Well, we Progressives, while we may be simple men, are not so easily taken in as the leader of the opposition seems to imagine. It is very easy to see through that amendment. A reduction in the sales tax, coming from the Conservative party, simply means baiting the protectionist trap. The Conservative wants to lower the sales tax and the stamp tax and the income tax; where is he going to get his revenue? There is only one source left, and that is the tariff. 'Surely in vain the net is spread in the sight of any bird." He cannot expect the Progressives to be misled by such a simple device as that.

The Conservatives have not said very much about reducing the income tax, but I have noticed that certain papers for a long time now have been exerting a silent pressure in that direction, and it seemed to find an echo in the speech of the member for Vancouver Centre (Mr. Stevens). When that hon. member was speaking he compared the plight of the income tax payer in Vancouver with the plight of the income tax payer in Seattle. I would not question his figures for a moment, but the real significance of them is this: There is no doubt that the income tax payer in Canada is carrying a heavier burden than the individual income tax payer in the United States, but so is the consumer in Canada bearing a heavier burden than the consumer in the United States. The fact is this, that Canada as a country is much more heavily burdened than the United States as a country. We are groaning under a burden that the United States knows nothing about. The difference is this, that in Canada the burden is more inequitably placed than it is in the United States. In the United States the burden is fairly distributed; in Canada the burden has been shifted over onto the backs of the consumer. If you take the contribution of the average tax payer of the United States, you will find it amounts to $17.50; in Canada the average contribution is $6.50, which is a very vivid demonstration of how the burden is being distributed in this Canada of ours, and the result of that policy is written right across Canada. For some years there has been a tendency in this country, on the one side, towards an effiminating luxury, and on the other side, and I speak sincerely when I say it, a tendency to a degrading poverty, and that process has been going on quicker than some hon. gentlemen imagine. Dives has been having a little more purple and fine linen each year, a little more sumptuous living, while poor Lazarus has had just a few less crumbs to his share. You are faced every day of your life with business buildings and bank buildings that resemble pagan temples, and on the other side we have homes which resemble mediaeval hovels rather than homes, and yet there are some hon. members here who would still further denude the homes of the people in order that they might embellish still more the homes of the well-to-do, because that is what this system of taxation means.

I turn for a few moments to the question of the tariff, that time-worn topic in this annual debate. I notice that the two chief protagonists on these occasions are the hon. member for Brome (Mr. McMaster) and the ex-Minister of Finance (Sir Henry Drayton). When the ex-Minister of Finance was speaking, he twitted the member for Brome on his "ism," as he called it, but the ex-Minister of Finance is also smitten with an ism, whether he knows it or not, and I am afraid his ism is perhaps a little more wild-eyed and impractical than the other. The member for Brome has this advantage for his theory, that it has been associated for a long time with the fine traditions of good British common sense, but the ism of the ex-Minister of Finance, as I understand, was spun some years ago out of the brain of a German professor who promulgated the doctrine that it was a very fine and patriotic thing to tax the agricultural population in order to build up a strong productive power. That is real Prussianism, and I want to say that it is just as anti-social as it is anti-British in its spirit. The unfortunate thing is, Mr. Speaker, that humanity cannot live on theories alone, it does not matter how respectable they are. When we are offered free trade on the one hand, and protection on the other, we are really not offered very much at all in a country like this, for this reason, that the Canadian people for one cause and another have never been able to accept either doctrine. A medicine that the stomach will not retain is really no medicine at all, and yet for a good many years Doctor Liberal and Doctor Conservative have been called in to minister to an ailing country. Those nostrums are all that they have ever had to offer to an ailing Canada, and Canada for some reason or other has never found itself in the frame of mind to accept either of them. I think that situation is capable of being explained. I believe the reason that Canada does not accept the doctrine of the hon. member for Brome is because of a certain state of mind. We as Canadians are subject to a

certain fear complex, born of the proximity of another country which far surpasses us in population and productive power. That overshadows us and it makes it very hard to convince the average Canadian of the virtues of the Cobdenite doctrine—very hard indeed. It also makes it very easy for our Tory friends to influence them in the other direction. The one wave of the flag is worth a dozen arguments to our protectionist friends. They do not need to do much arguing at all, for psychology works furiously on their behalf. Now so long as protection dominates the international situation, and so long as the gigantic trusts hide behind these tariff walls and carry on their commercial aggression, just so long will Canadians resist the eloquence, the very fine eloquence, of the hon. member for Brome. I pity him, and I pity them. On the other hand, the reason why Canadians do not accept the protectionist doctrine is purely upon economic grounds.

Canada is a predominantly agricultural country, under the necessity of exporting its products and selling them in the world markets at the world's prices; and so long as that maintains, Mr. Speaker, the average Canadian will resist the doctrine of high protection. But this brings us to a rather curious position to which I want to draw the attention of this House for a few moments, because I think it is a most significant thing in Canadian public life. The attitude of the present Liberal government on the tariff brings us to the crux of the whole situation. That policy of theirs, which is so inconsistent with their out-of-office professions is the most significant thing in Canadian. public life. Now, our Tory friends attribute it to the moral degeneracy of the Liberal politician. I think that is a very superficial way of looking at it. This thing is not due to the moral delinquency of the Liberal politicians. I think on the whole they stand up just as well in that regard as perhaps any of us, But this thing, this strange phenomenon is due not to the moral degeneracy of the Liberal statesman, but rather to the political acumen of Liberal statesmen. That is not a theory of my own, because we have had ample demonstration of it in this debate. The Liberals no longer apologize for that attitude. This is an attitude which comes from divining that public opinion is not crystallized upon this question. For a generation or two the Liberals have pursued that policy. It is a purely political policy. It is as far removed from economics or from the science of government as it can be. It is pure politics, unabashed politics, and for a good many years the policy adopted by the Liberals has been profitable to them. They have got away with it, and it has yielded to them the sweet and delectable fruits of office for a good many years; and after all what is policy for but to win office by? Now the Minister of Justice in his speech—yesterday was it?—alluded to this phase of the question. The Minister of Justice has the typical philosophic mind, and he made it his business to take this political attitude of the Liberals and erect it into a philosophy. I listened very attentively to him while he was trying to do it. The Liberal party from now on is going to assume the role of a centrist group, holding the balance between the Tories on the one hand and the Progressives on the other. They are going to save Canada from disruption by holding that balance. Now, while he was speaking I could not help remembering that that is just exactly what the Liberal party in Great Britain thought, that is just the role they thought they were going to play; but I would remind the hon. minister that it is a position that is getting more and more difficult to hold as people become more enlightened on political matters. Why just fancy this government going to the country and trying to persuade the average Canadian citizen that they are neither the one thing nor the other. We are reminded of the old revival hymn which used to say "Oh to be nothing, nothing!"

Mr. GRAHAM: My hon. friend has sung that often.

Mr. BIRD: Yes? I think I will sing it again, probably, with no diminished fervour. The hon. Minister of Justice thinks that he and his colleagues can tip-toe along the invisible line which divides progress from re-action. I very much doubt whether it can be done any more. A kind of political Blondin that walks over the angry whirlpool of public opinion on the tight-rope of a vacuous policy. They used to be able to do that when I was young, it was the sum and substance of the old political game; but I feel convinced that the game is played out—this old futile game of free trade vs protection played between those two phantom goals for the delight of the Canadian public every four or five years. The public of Canada has undergone mighty changes since those things used to be successful. Somebody here will very likely ask: What is the Progressive attitude on these questions, what is the Progressive attitude on protection and free trade? Well, that goes to the very root of our being, to the very root of our

existence. The Progressives four years ago were sent here as a protest against the predominance of urban ideas in this parliament. The Progressive party has no other cause for existence but that. The tariff is not the only question that has been framed according to urban ideas; there are others too. The tariff was put over on this country, saddled upon it, long before rural Canada was organized. If rural Canada had been organized it never would have been put over. Since that time rural Canada has been organized and it stays organized; and there will be no peace in this parliament until this tariff question is settled along lines that bring something more like justice to the producers of this country.

The farmers of Canada are not unreasonable as some people try to make out. They are not sectional; they are not divisionists; they are among the most stable citizens in this country. The farmers do not think they will ever get it all their own way; they are not numerically preponderant; they never dream they will exercise autocratic political power in this country—that is not the point at all. I do not believe that the average farmer in this country thinks for a moment that he will get his own way even on the tariff question. But I will tell you what the average farmer, at any rate in the west, demands from this government, from this parliament, is a broad, constructive policy that will be designed to give him, for the first time in his existence, something like justice —justice in comparison with other elements in the community. Until now he has had no chance at all. He has been faced in this parliament with governments that were bourgeois in character, that were urbanized in their point of view and still are—governments which had their eyes everlastingly glued to the sources from which came their political power. That kind of thing cannot endure. It is no use the Prime Minister making his emotional appeals to members on this side of the House; we have long ceased to be moved by emotion. The realities of the situation will not permit us to be stirred up by eloquence of that kind. The Prime Minister in his subtle manner may try to drive us before the public mind into a position where we will be looked upon as divisionists and as sectionalists, but we have been too long in the confidence of the people who sent us here to permit him to succeed. He will have to couch his overtures in more reasonable language than he has done before he can meet with any success. What we want is not emotional appeals of the old political kind. We want a definite announcement of what he is prepared to do for rural Canada. He has not given us that. He has evaded the question every time it has been put up to him. His policy has been a policy of evasion, and it is no use trying to answer the proposal that I am presenting by a peroration of the kind that he delivered to-night. I know there is a very insidious influence in that casuistic idea that if we vote against the government we will vote with the Tories, but the Liberals cannot get away with that in the fourth year of our experience here. If it had only been our first year they might have done it. The idea of trying to put us into that camp because we happen to vote against the Liberals is childish. My position is that I am not an enemy of the government. I would gladly support the government if I could see any indication of a policy that would be suited to that portion of the country which I represent. The details of the budget do not concern me very much. I do not scruple very much about the tariff this way or that in any particular budget. My conscience would not balk at that. I am voting on the budget in the way members always vote on it. I am voting on the general policy of the government and on their attitude towards the Crowsnest pass agreement and the Hudson Bay railway. In short, I am voting on their entire attitude towards the rural population of the west.

Mr. MICHAUD: The hon. member is voting like a Tory.

Mr. BIRD: If the way I am going to vote is voting like a Tory I will be proud to vote like one. If that is the hon. member's definition of voting like a Tory I think it argues profound discrimination on his part. I will have to go a long way before I will be as Tory as some of the hon. gentlemen on the other side of the House. What the Canadian public want is for this government not to occupy the dead centre, not to sit there eternally like a row of extinct volcanoes, with no positive proposition that is of any use for the man who is earning his bread on a Canadian farm. The government has to declare itself. It cannot be serving two masters. It cannot be all the time subject to a paralyzing fear from the direction of Montreal and at the same time trying to persuade the Progressives to come over in a body to that side of the House. The government must declare itself, but that is just the thing they dare not do, because if the government did declare itself it would split up into smithereens. The government dare not declare itself on the Crowsnest pass agreement because a fissure would be opened

right through those benches at once. They dare not declare themselves on the Crowsnest pass agreement, because a chasm would immediately yawn right through their midst. But the government would be well advised to declare itself, because the spirit of Liberalism is not dead in this country. It is still to be found in the hearts of the common people. Liberalism is the doctrine of the common people, but the people have ceased almost to hope for any manifestation of it from that side of the House. When I vote against the budget I am voting for Progressive principles, and nobody is going to divert me from voting for Progressive principles. Those principles are what placed me here. That is the trust I have to hold and maintain in this parliament. I have no other reason for being here. No casuistry or no juggling can divert me for one moment from casting my vote on behalf of what I conceive to be Progressive principles and those principles mark you are exactly the same as the principles enunciated by the Liberal party when out of office.

Mr. MICHAUD: Is that the principle the amendment to the budget expresses?

Mr. BIRD: I am not voting for the amendment to the budget and I thought I made that abundantly clear. I said I had no positive dislike for the Liberal policy as they profess it, when out of office, but I have a distinct dislike for the policy of my Conservative friends. I never could hide my dislike of their policy. The only policy of the Liberals that I dislike and to which I am antagonistic is the policy they put in practice immediately they come into office.

Mr. STEWART (Argenteuil): Does my hon. friend object to the reductions in duty which were made last year?

Mr. BIRD: No, I voted for the budget last year and expressed my approval of it.

Mr. MALCOLM: Does the hon. member object to the reduction the government gave in respect of grain rates by the restoration of the Crowsnest pass agreement.

Mr. BIRD: No, it delighted my heart. It struck me that there was something good left in the Liberals after all.

Mr. MALCOLM: Why does the hon. member object?

Mr. BIRD: I do not object. My criticism is not of the Liberal policy, in those details but I want to say the attitude of the government on the Crowsnest pass agreement is not satisfactory and has not been satisfactory. They brought the Crowsnest pass agreement into a very dangerous situation.

Mr. STEWART (Argenteuil): I would like the hon. gentleman to tell us how.

Mr. BIRD: They had full power to prevent the Crowsnest pass agreement being in the situation it is at present.

Mr. MOTHERWELL: The Supreme court gave a decision on the matter.

Mr. BIRD: This government is supposed to maintain the statutes and defend them when necessary.

Mr. STEWART (Argenteuil): It did.

Mr. DUFF: Did not the members of the Progressive party agree with the Liberals on the committee when this question was before them?

Mr. BIRD: What committee?

Mr. DUFF: The hon. gentleman ought to know.

Mr. BIRD: I certainly do not know what the hon. member is thinking about.

Mr. DUFF: Of course the hon. gentleman knows. It was one of the most important committees of the House.

Mr. BIRD: If it will clear up the situation, I will say again that I am not opposed to certain attempts that the Liberal government has made during the last four years to bring something like ordinary justice to the western farmers. But some of those attempts have been half-hearted; some of them have been bungled, and some of those out of which they tried to claim the most merit are by no means settled. Are the government expecting us to vote for them on trust? I think that is what they are doing. They are expecting us to give them a blank cheque. Has the Prime Minister said to us what he is going to do this session? Has he opened up his policy? I do not think he has. It irks me even to seek to introduce a note of political antagonism, but I know the views of my constituents, and those I have expressed are moderate as compared with the views that are held by the people amongst whom I live. I know that is their judgment. I am speaking to the government with a good deal more sympathy in my nature than my words would seem to express.

An hon. MEMBER: I hope so.

Mr. BIRD: I hope, too. I hope my words will bear fruit; that the Liberals will in the future attempt to emulate the doctrine which they so freely preach when out of office. They

are the friends of the farmer, the producer, the working man, when out of office, why not be a friend when in office?

Mr. JOS. T. SHAW (West Calgary): Mr. Speaker, for fear there should be any misunderstanding, I would like to say at the outset that the party to which I belong, which consists of myself, is not responsible so far for any space taken up in Hansard save a very small section of some ten lines in which I asked a question of an hon. gentleman on the opposite side. I feel that the American system might be copied in some particulars. In congress, they have a system by which a member can hand in his manuscript and the printer does the rest. I do not know but that it might be advisable to change the rules in that respect.

Mr. POWER: Does the hon. member wish that we give him permission to do that to-night? If so, it will be readily granted.

Mr. SHAW: If I had my speech prepared, I would not hesitate to agree to the suggestion of the hon. member. I would ask the indulgence of the House for a few minutes while I discuss what seem to be the vital and important matters before us. Our attention in this debate, by reason of the amendment and the motion itself, has been attracted in two directions, first of all to the matter of economy and, second, the budget itself directs our attention to matters of finance and of fiscal policy. I dislike being put into a position where my attitude must be entirely one of criticism. If I cannot be in a position where I can helpfully criticize, I have no desire to criticize merely for the sake of criticism. So I approach what few remarks I intend to make, not with the attitude of mere captious criticism, but for the purpose of seeing if I can add anything of value to this already overburdened Hansard.

It seems to me that, with regard to the question of economy, there are two promising and fertile fields for investigation into our situation to-day. There is, first of all, the railway situation. The matter has been gone into at great length; but briefly, the position assumed by the hon. member for North Waterloo (Mr. Euler) expresses so clearly and definitely the views that I hold in the matter that I do not propose to weary the House by going into it in any detail this evening. In the first place, I am convinced that consolidation of these two railway systems must come. I am convinced likewise that that consolidation must be only under a system of national ownership. If these points are established, if they are accepted, why cannot we take steps now to accomplish our purpose? Why wait until one or the other system gives evidence of a breakdown before we actually put our hands, as the government of Canada, to the wheel, take control of the situation and save, not millions, but tens of millions of dollars annually? After all, both railways get their money from the people of Canada; the people of Canada pay the railway transportation charges, and if one railway steadily increases its earnings, the other railway will necessarily, and to an increasing extent in the future, decrease its earnings. So, I say, if these two principles are established, why should the government, why should not this parliament, now formulate a definite proposal, present it to the Canadian Pacific Railway Company and say: Here is a proposition for your acceptance or refusal? The Canadian Pacific will realize that if they refuse the proposal, they must face the competition of the Canadian National Railways in increasing measure in the future, with the result that, perhaps, in a few short years it may be in a much worse position as regards deficits than the Canadian National is in to-day. So I suggest to the government that now is the opportune time, now is the appointed hour to present to the Canadian Pacific a proposition for the consolidation of these two railways. I have not the slightest doubt that a consolidation of that character will save tens of millions of dollars yearly. It is important that the opportunity should be grasped. There is no use in trying to save money in petty ways when in such a large way we can save such vast sums.

The next field and a very promising field for the economizing in expenditure of the public money is that of federal administration. Government, after all, is the biggest and most important business that we have in this country. The government should aim to be a model employer. The government should also, keeping this principle in mind, aim to establish economical and efficient business administration. In the field of government expenditure and administration do we reach those high standards in any particular? Some people look at the anuual expenditures; they are shocked by the amounts, and then they promptly wield the sword on the heads of any unoffending civil servants who may happen to be within their reach. That, it seems to me, is not the proper way to approach this problem. Whatever fault there may be rests, not with the individual civil servant, but rather with the system which has grown up in this country.

May I preface what I have to say by asking hon. members this question for example: What are the numbers of our civil servants and what is the payroll of the civil service? I am going to give you two or three figures. A Senate committee last year made a very careful examination of this and allied problems and they came to the conclusion that for the fiscal year ending March 31, 1924, the government of Canada had on its payroll 42,238 employees, the annual payroll amounting to $48,206,527. The hon. member for Bow River (Mr. Garland) at the beginning of the session asked for a return showing the cost of the civil service, and the number of employees in the month of January, 1924, as well as in July of the same year. The figures submitted show that in January, 1924, there were 38,062 employees at a monthly cost of $4,746,694.90. These were the figures given Hansard to-night by the Prime Minister (Mr. Mackenzie King). In the month of July, 1924, the number of employees was 40,927, the monthly salary including bonus being $4,814,724. Taking these two months as the average, this would indicate that the annual payroll is $58,000,000 and not $48,000,000 as the Senate found. I turn now to the Auditor General's report for last year and I find therein that the cost of the civil service is given as not less than $74,000,000 per annum Why these vast discrepancies—forty-eight, fifty-eight, and seventy-four millions? I wonder which of these is right.

An hon. MEMBER: One is for the inside service while the other includes inside and outside.

Mr. SHAW: If the hon. gentleman is using these terms in their accepted sense he is mistaken. Now, we find that in Canada we have under our system thirty-six officers holding the rank of deputy minister and enjoying an annual payroll amounting to $277,500; whereas in the United States there are only twenty-one heads of departments with an annual payroll of $157,500. I am not suggesting at all that these men in Canada are over-paid: I believe in paying the best possible salary and requiring the best possible service in return. But I do think that we are altogether too much over-departmentalized. May I now make some reference to a matter which was discussed the other day by the hon. member for West Lambton (Mr. LeSueur).

Mr. GRAHAM: I think it would be fair to say that the heads of the departments in the United States do not have to spend six months of the year in session; they are not members of congress.

Mr. SHAW: I am not talking about cabinet ministers in Canada; I am referring to deputy heads of departments. The hon. member for West Lambton discussed in some detail the bureau of the budget as established in the United States, and I would like to give to the House, if I may, a somewhat more comprehensive survey of the situation in that country in order that we may see if it is possible to make in this country some application of a system which seems to me to have much merit. I am not doing this in any spirit of criticism. Perhaps I might tell a story here. A rooster had wandered somewhat afield from his own barnyard and he discovered to his surprise a large ostrich egg. With infinite patience and with much labour he rolled it up before the gaze of his admiring flock, to whom he gave this assurance, "This is not intended as a reflection; it only shows what can be done". It is in that spirit that I desire to say something with regard to the bureau of the budget. The Budget and Accounting Act of the United States was passed in the year 1921. At that time the United States had a very large debt approximating $24,000,000,000, and they had an annual expenditure of $5,700,000,000. In the year ending June 30, 1921, their deficit was something like $80,000,000. On account of the financial chaos and the generally difficult conditions in which that country found itself, congress at that time passed the Budget and Accounting Act to come into effect on July 1, 1921. Perhaps I should say one or two things with regard to the purpose of that act, and in this connection I may read a statement made by President Harding before a group of the departmental heads in that government. He said:

1 a.m.

I am very glad to come before you and stand sponsor for this meeting. The present administration of the federal government is committed to a period of economy and efficiency in government. The statement is not made with any thought of criticizing what has gone before. It is made in a new realization of the necessity of driving at the loose, unscientific expenditures of government. There is not a menace in the world to-day like that of growing public indebtedness and mounting public expenditures. There has seemingly grown up an impression that the public treasuries are inexhaustible things, and with it a conviction that no efficiency and no economy are ever to be thought of in public expense.

We want to reverse things. Congress, in order to aid in the change of policy, has provided, for the first time in the history of the federal government, for a bureau of the budget. It has been my privilege and my responsibility to choose the director of the budget. After a conference with him, it was

decided that the way to begin with an efficient system under the budget was to look to those who are in fact responsible for government efficiency and economy. Sometimes in our habits we overlook those who really do things in this world, and in the federal government there are tens of thousands of public servants who are giving the best that is in them to bring about a satisfactory administration of affairs, but whom the public never knows.

I want to bring into this picture of a drive for efficiency and economy you servants of the government who are directly responsible for a better order of affairs, if it is to be brought about.

And so the first thing President Harding did was to appoint General Dawes to be director of the budget. General Dawes was a former controller of the United States treasury in the McKinley administration, and he knew much about the civil service. He had been chief of staff overseas of the United States army during the war, a position of tremendous importance and responsibility, and it was felt that he would be a good man, with the adequate amount of experience and training, to give the United States a business government. The first thing he did was to select some twelve or fifteen of the best business men of the United States whom he could gather together. May I say that General Dawes agreed to stay only for a year, and that at a salary of $7,500, and he engaged the business men at one dollar per year. They went to Washington and went into the various departments of government. General Dawes decided that he was not going to build up a new bureau, a new form of autocracy; he determined to make use of the men in the various departments; so from the departments he selected key men familiar with the work of the various government services, who were to be strictly responsible to the director of the budget, the director himself being the direct agent of the President of the United States. Now, what did General Dawes find when he commenced to investigate the service? He found a great deal of duplication of service. He found considerable over-manning. He found that as soon as a vote was granted, the departments, as a general rule, felt that it was necessary for them to spend the amount appropriated. He found that, generally speaking, government was in a very inefficient condition and working certainly at a great disadvantage.

General Dawes promptly called the meeting to which I have referred, which was addressed by President Harding from whose address on that occasion I have just read an extract. Their work in connection with the estimates would ordinarily have been concerned with the year 1923, because with the fiscal year ending on June 30, the estimates had already been provided by congress for the ensuing year. But General Dawes was not satisfied with that. He said: We will look into these estimates that have already been passed by congress. Accordingly he asked the heads of the various departments to submit to him, with the assistance of the officers he had selected in each department, recommendations with a view to economizing in expenditure. Within a month he had a report, and the result was that the amounts provided by congress were reduced to the extent of some $112,000,000. Now, let me give some further figures. We have been so accustomed to dealing in millions, throwing them recklessly about here and there, that perhaps hon. members will not object if we raise it a little bit and call it billions.

For the fiscal year ending June 30, 1921, the expenditure of the United States government was $5,538,000,000, and the receipts totalled $5,624,000,000. For the year ending June 30, 1922, the first year of the operation of this budget, the expenditure had been decreased over $1,700,000,000, to the sum of $3,795,000,000. The receipts of the government, by reason of lessened taxation made possible by reductions in expenditures, were reduced to $4,109,000,000, a drop of $1,500,000,000. For the year ending June 30, 1923, the expenditure was further reduced to $3,697,000,000, and the receipts also, by reason of lessened taxes, fell to $4,007,000,000. In the year ending June 30, 1924, the expenses of the United States government were further reduced to $3,497,000,000 and the receipts totalled $3,995,000,000.

Now, the estimated expenditure for the year ending June 30, 1925, was $3,083,000,000. I should say that under this system the President meets half-yearly the officers of the budget bureau heads. In his address to the gathering in June last President Coolidge asked them to reduce this expenditure to three billions, and for the current year, as the result of continued executive pressure, the estimates have been reduced to that figure. What has been the result of the bureau's activities? Putting it in percentages, before this budget scheme developed the expenditure of the United States government was 59 per cent of all governmental expenditure throughout the United States.

Mr. McMASTER: Including state and municipal?

Mr. SHAW: Yes, state and municipal expenditures. The figures have just been reversed, so that to-day only 41 per cent of governmental expenditure in the United States is

represented by federal expenditure. May I say, too, that the public debt of the United States in that period has decreased from $23,976,000,000 to $21,254,000,000, a decrease in three years of $2,722,000,000, an interest saving alone of $120,000,000 a year. Further, and as one result the tax receipts of the United States government have been decreased to the extent of $6,000,000 a day. Not only that, but the personnel of the service has been reduced in that period by 51,000; in the month of March last it was reduced by a further 2,500.

As I have indicated the director of the budget was at first concerned primarily in revising estimates. But he soon found that he could render much more valuable service than that, so he undertook the work of co-ordinating the public services. Now, I know that a word like "co-ordinate" is not acceptable to some people in this House. I know that the right hon. leader of the opposition will object if I use the word "co-operation", and others will object if I use the word "collaboration". But I may say on the authority of General Lord that these words have been written into the United States civil service dictionary for the first time, and now that service understands fully the significance of these words.

As I say, General Dawes in his investigation found within a short period of years a tremendous overlapping in the services. What did he do? He appointed a chief co-ordinator in whom he had the utmost confidence. He then appointed assistant co-ordinators with jurisdiction in nine areas in the United States, those areas corresponding with the existing military districts. It is the duty of these persons to see to it there that there is no overlapping, no over manning, no duplication in the service. Let me suggest one of the things discovered. The War Department of the United States had a large quantity of surplus supplies. They called for tenders and sold them to a group of speculators at figures much below the original purchase price, and the speculators promptly turned round and sold at a great advance exactly the same goods to the Naval Department. That is the sort of thing that was going on in the United States service. The director of the budget among other things organized a central purchasing department, something that is very greatly needed in this country, and generally the whole system has worked out entirely satisfactorily. As I said before, business meetings are held every six months, with the President and the members of his cabinet right on the platform, and the director of the budget talks to them just as he talks to those who come under his immediate supervision. Every few months the director of the budget calls for reports from bureau heads and from his co-ordinating staffs and asks them: What have you done in the last few months in the direction of economy? They make their reports, and it is rather interesting to read what has been done as a matter of actual practice as the result of the application of this system.

Hon. members may be interested in knowing what this costs, because after all the cost of such an organization is an important factor. In the first year, congress appropriated the sum of $225,000 for this service. The bureau of the budget spent only $120,000 in the first year, and the estimate for the current year is just $180,000. That small expense is possible by reason of the fact that the director is using the services already provided. He stands there as the direct agent of the President, who is the chief executive officer of that nation. He has his finger upon every department, and with the co-operation of these departments with his own staff collected for co-ordination purposes he has been able to achieve the results which I have indicated.

Now there can be no doubt that this result has been largely achieved by reason of the budget bureau, and by reason too, particularly, of the splendid spirit which has animated the whole civil service. A real spirit of co-operation is certainly evidenced in the United States. Just let me read one or two words from the statement of President Coolidge on June 30, 1924. He said:

> The insistent demand for economy and reduction in expenditures necessarily requires increasing efficiency of administration. I realize that it is making an ever increasing call upon the administrative ability of responsible officials, but this is a call for real service. It demands a most searching inquiry into the field of your activities, so as to remove entirely from them all elements which are not essential, and so as to curtail all those which may be reduced without prejudice to the welfare of the nation.

He says further, and this I commend to the members of this House:

> We must have no carelessness in our dealings with public property or the expenditure of public money. Such a condition is characteristic either of an undeveloped people or of a decadent civilization. America is neither. It stands out strong and vigorous and mature.

Further on he says:

> I am for economy. After that I am for more economy. At this time and under present conditions that is my conception of serving all the people.

Now it is all very well to see what can be done, but have these facts no immediate

concern for us in this country? I suggest, Mr. Speaker, that they have. We had in 1923 a committee appointed by this parliament for the purpose of investigating the operation of the Civil Service Act, and one of the suggestions made by that committee, whose report, however, was never adopted by this parliament, reads as follows:

> Your committee is impressed with the necessity of co-ordinating and harmonizing the various departments of the public service into one efficient administrative unit in order to prevent duplication and over-lapping and to eliminate over-staffing.
>
> Some progress has been made, but your committee is convinced that the fullest efficiency can only be secured by definitely charging some central authority with this important task. The Prime Minister, it is suggested, is the proper authority to act as the co-ordinating head and business manager of all government services, but the serious and grave responsibilities attached to his office, particularly with reference to government policies, would probably make it necessary that this duty should be delegated to an expert, in the same manner that the government has delegated its responsibility in connection with the management of government railways. Such an expert could be also entrusted with the duty of supervising public purchasing and contracts, with a view of securing business efficiency.

That is the recommendation of the Malcolm committee of 1923. I am not going to tell you who was responsible for writing into the report that particular provision, but I want to make what I think is a practical suggestion. First of all, the success of the United States plan has resulted from the application of executive pressure through the executive agent, the director of the budget. The Prime Minister, I think it cannot be denied, is the chief executive of this nation. He is charged, in addition to other duties, with administrative functions. He is the one who is primarily responsible. Now I say, let us give him the machinery, let us give him whatever is necessary in order to carry out his duties, and then let us hold him fully and completely responsible for economy and efficiency in all government expenditure.

We have in this country a Civil Service Commission which has two functions to perform, an examination function for the purpose of determining the qualifications of applicants for the service, and a second function, namely, the duty of organization. I am not going to discuss the first function, but in regard to the second, I claim that the Civil Service Commission have wholly failed. They have not, except in a few isolated instances, made any attempt to carry out their statutory obligations to organize efficiently the various departments of government, and what is the reason they give for their failure? The reason given is that they cannot get the co-operation of the government departments. Now I suggest the act makes no provision about getting the co-operation of government departments. The act says it is the commission's duty, and there being no limitation, they must be held accountable for their failure in that regard.

Sir EUGENE FISET: Did they not reorganize some departments of the government, but not all?

Mr. SHAW: I am giving the reason for their failure to go into all the departments of the government. I did say they have gone into one or two departments, the Printing Bureau, for instance, and the Militia department, and I think they have organized those departments efficiently, but with regard to the Interior department, for example, they have not apparently as yet developed any scheme of reorganization, and that is a department which I think stands in great need, and I say it without reflecting on anybody, of the closest scrutiny with a view to reorganization. If I may use the lurid language of General Dawes, when he found that there were some department heads he had difficulty in co-operating with, he said that it seemed like using a pile driver to kill a flea but that he was prepared to put the hook, as he called it, into these rat holes of covert hostility, and in that way secure co-operation and assistance.

Now my idea is this, that this organization branch of the Civil Service Commission should by an act of this parliament be taken away from the Civil Service Commission and be placed directly under the Prime Minister of this country. It should be made directly responsible to him as the chief executive officer of this country, and then, given his opportunity, given his duty, we should hold the Prime Minister responsible to see that there was developed in Canada an efficient business administration. If some such policy was adopted I am satisfied that there would be a tremendous saving in government expenditures and in the expenditure on the public service in this country. The saving to the country I suggest, under the consolidation of the railways would mount up to tens of millions of dollars a year. The reorganization of the public service would certainly save millions of dollars a year.

I come now to the fiscal proposals embodied in the budget. Frankly I propose to vote for the motion, and I am going to tell the House my reason. There are two or three items in the budget that I want to discuss very shortly. There is a reduction in the tariff, so far as it affects well-drilling machinery, of 22½ per cent. This is a very substantial reduction. The tariff on well-drilling machinery is a tax from which western Canada has sought relief for many years. We have great hopes

in the province from which I come that our whole area is underlaid with oil reservoirs—I hope it is anyway—but the depth is such that the ordinary Canadian machinery is not adequate to meet the difficulties incident to deep well-drilling. The result has been that we have been forced to largely buy well-drilling machinery from Pennsylvania and pay a duty of 27½ per cent, and in that way this enterprise—which under the best of circumstances must be a speculative one—this effort to develop our natural resources is hampered by reason of this heavy tariff exaction. And so I look with approval, and I am sure the people of western Canada do also, to that very substantial reduction in the tariff on well-drilling machinery.

There is another item to which I wish to direct attention, and that is the matter of the duty on slack coal. Here there has been an increase. Now, I do not pretend to be dogmatic so far as particular items in the tariff are concerned. If I felt that that increase of the duty on slack coal would solve the serious labour problems in the province of Nova Scotia, or the serious coal-mining problems in the province of Alberta, I would not hesitate for a single moment in the interests of peace and harmony in those fields to sacrifice my principles to the extent of voting for the duty on slack coal. In my opinion, regardless of what may be said, the economic unity of this country is an absolute essential, economic peace in Canada is an absolute essential; and we in a matter of this kind cannot say that we are called upon to pay too high a price or make too much of a sacrifice of principle if it has the effect suggested. Frankly I do not know. The coal miners in my province are in favour of it; the coal miners, as I understand it, in the province of Nova Scotia have assumed a non-committal attitude, and have suggested that they want primarily a fact-finding commission for the purpose of investigating Besco. But with that reservation, with the reservation that I am not sure that the duty on slack coal will have the effect contended, I say that if it did accomplish that purpose I would have no hesitation whatever in the interests of the economic unity of this country in supporting that proposal.

Now the budget does not advance very much beyond the tariff proposals of last year. It is suggested that we have got to allow a breathing spell after the proposals which were incorporated in the budget of last year. There is no doubt that our revenues have fallen very much, and it may be that it is desirable that for the present at least no further substantial change should be made. In this connection I am reminded of a speech made by the hon. member for Brome (Mr. McMaster) on the occasion of the Liberal convention held in this city. I recall his militant language; I think, perhaps, he may have been slightly intoxicated—

Some hon. MEMBERS: Oh, oh.

Mr. SHAW: Perhaps my hon. friends will permit me to finish. He may have been slightly intoxicated with the enthusiasm of the occasion which led him to use this somewhat militant language. He said—and apparently he pointed in a certain direction—"yonder is the castle of special privilege surrounded by the redoubts of protection." I take it he was referring to this chamber, or to the government of the day, perhaps, and then his suggestion was "Let's up and at 'em". Now when the smoke of battle cleared away I think the hon. member for Brome retired from the stricken field dismayed—shall I say?—but yet undaunted. I have had a little experience in military matters, and one lesson which I learned was this: That where you find an enemy entrenched—my hon. friend from Brome would indicate that the forces of special privilege were entrenched, and I think he is right—the attack must be made by men who are like-minded and who have the one high purpose to serve. If there are deserters why of course the attack will not likely be a successful one. But in addition to that, experience shows that where specially entrenched foes of this character are attacked, the attack seldom can be made in one grand effort—it must be done by continuously exerted pressure. Every new position gained must be consolidated before a further attack is made. And so I feel with regard to the tariff that we must consolidate the position already secured if we hope finally to achieve the result to which all aspire. Then may I say again that in tariff matters I have tried to adopt a consistent position. I think perhaps if hon. members will examine my record on tariff matters before the House they will find that my position in supporting this budget this morning is absolutely consistent. Let me just shortly indicate—and I state this only for the benefit of my friends whose confidence and good wishes I would like to maintain: I am indifferent as to my enemies—the course which I have pursued. In 1922 I voted against the government proposals because to my recollection they went—in fact they did not go at all. In 1923 we had a slight advance, as I recall, on the budget of 1922. There was some lowering of the tariff on some important items—not con-

siderable but some; there was a turning in the direction at least of freer trade. But in conjunction with that the tariff was also raised in some particulars. Not only that but we had the introduction of copper bounties, of hemp bounties, and I do not know what other bounties. And I was surprised to find this year that some of my hon. friends on this side of the House were parties to the introduction at least of one of those bounties. As I say in 1923, because of the suggestion that tariff stability was the thing required and because of that more or less mixed budget I voted against the government's proposals. In 1924 we had a situation which has not persisted, a situation which did not exist before during my experience in this House. An amendment to the government proposals which went a considerable distance in the direction of freer trade was proposed by the hon. member for Centre Winnipeg (Mr. Woodsworth), an amendment which represented my fiscal views on the tariff. I had no hesitation, although I found myself only in the company of sixteen or seventeen hon. members, in supporting the amendment to the budget which was then proposed, but I did not deny support to the government for the proposals such as it made. So I say that my position to-day is thoroughly consistent, if consistency be a virtue. I do not know that it always is, but if consistency be a virtue my position to-day is substantially and exactly in accord with the position I have always taken on tariff questions. More than that I am satisfied that the issue is directly between those who stand for freer trade, be the progress slow or fast, and those who stand for high protection. Personally I do not propose by my vote to give any solace or comfort whatever to the advocates of high protection in this chamber or outside of it. Under the circumstances, in voting against the present proposals of the government it seems to me that I would be directly doing what it is my purpose not to do.

I apologize to the House for having taken the time in discussing my position, but I feel, by reason of the misrepresentation which has been made as to my position, that in all fairness I should make my position perfectly clear.

There are a couple of matters I desire to speak about before I conclude. The first is the matter of rural credits. I sincerely hope that the government this year will not allow the opportunity to pass without giving effect at least to some variety of long term rural credit. We all speak about the importance of agriculture. We all stress its difficulties and its trials. I think we are all well advised in so doing. There is no problem to my mind of such consequence to the farmers to-day, particularly those in western Canada where the need is greatest, as adequate credit facilities at a low interest rate, and credit of a kind suitable to the needs and requirements of agriculture. The farmer in western Canada to-day has only two sources of supply to meet his demand. He may go to the bank, but he cannot borrow money on his real property from the bank, because that is prohibited under the terms of the Bank Act. He may go to a mortgage company but its rates of interest vary from eight per cent upwards. No farmer in western Canada can afford to pay eight per cent per annum, and the result is that the farmers find themselves in continual and increasing financial difficulties. More than that, the Canadian farmer must meet the competition of the world. He must meet competitors, all of whom enjoy rural credit facilities at a much lower interest rate than he himself enjoys, and so I say to the government, if many things must pass by the board, let not this particular subject be forgotten. I know there are interests, financial and otherwise, that are opposed to it. I know that there is propaganda abroad in the land against a system of rural credit, but I say to the government, of all the problems before us no one is deserving of prior consideration to this matter of adequate credit facilities for our farming population.

Another matter to which perhaps I may be permitted to direct the attention of the House is the matter of railway rates. Unlike the hon. member for Nelson (Mr. Bird), I do not hesitate to say that the government has, in my judgment during the whole course of this controversy beginning with the very first session of this parliament, taken exactly the correct and proper attitude with regard to the Crowsnest pass agreement. The hon. member for Nelson has apparently not studied this matter with his usual capacity and industry, because the fact is that in 1922, at the first session of this parliament, the government allowed the one section of that rate agreement covering eastbound commodities,—to come into operation, and in July last year, they allowed, by the effluxion of time and the operation of law, the section of the agreement dealing with westbound rates to go automatically into effect. What else could the government do? They might have taken the opposite position and introduced legislation to prevent the operation of the Crowsnest pass agreement. But they did not. Along

came the Board of Railway Commissioners. They heard a case, and they held in October of last year that the Crowsnest pass agreement, although incorporated in a statute of this country, was not an agreement binding on the railway commission. An appeal was taken to the Privy Council in Canada, and the Privy Council held that the Crowsnest pass agreement, in so far as it had been affected by the judgment of the railway commission, should again come into effect. What else could the government do? There was nothing further they could do. This is the very application which I made before the Governor in Council when I attended here acting on behalf of the United Farmers of Alberta in November last.

Mr. McMASTER: Was the appeal made to the Privy Council? Was it not rather to the Supreme court?

Mr. SHAW: There was an appeal made by the provinces to the Privy Council, and subsequently an appeal to the Supreme Court of Canada. The two methods of appeal are open. Then later the matter came up under the consideration of the Supreme Court of Canada, and that court refused to follow the railway commission and endorsed the position taken by the Privy Council, the difficulty arises in the restricted application of the Crowsnest pass agreement by reason of the decision of the Supreme Court of Canada.

Mr. JACOBS: Was not the appeal to the Privy Council in Canada, to the government?

Mr. SHAW: The hon. member is quite right. I should have said to the Privy Council of Canada. The position is that by reason of that decision of the Supreme Court of Canada the Crowsnest pass agreement has only a restricted application, and the result is a certain amount of rate chaos and rate discrimination in all parts of Canada. I am satisfied the government must take action in the matter. I trust the government will take no action which will eliminate this Crowsnest pass agreement as a rate-controlling safeguard to the people of western Canada. I think the people of eastern Canada do not realize the significance of that agreement. That agreement arose primarily because, while other parts of Canada had the benefits of water competition, thereby keeping their rates down to a minimum, western Canada, by reason of its geographical position has no such safeguard. Suppose there is a railway deficit and no maximum rate controlling agreement such as the Crowsnest pass agreement, such deficit can only be collected in rates from western Canada. In other words any deficit of the Canadian National Railways could only be made good by the people of western Canada. Now we do not want that. We want to pay our fair share, we pay now some fifteen per cent increase in the rates imposed on eastern Canada. We do not want, in addition, to have piled on to that, for the purpose of making our railways show a balance, any deficit that accumulates from year to year.

May I, just in conclusion, suggest that to the appeal for unity in this country, certainly I for one as a Canadian will not turn a deaf ear. We have great difficulties. We have diversities, not only in economic conditions, but in our people. We have racial differences, religious differences. It is urgent, and vitally important, that every effort should be made to weld a real nationality out of Canada as it exists to-day. Ours is a country struggling against the facts of geography; and unless we are prepared to do our part in seeking and furthering all proper plans or suggestions by which we can preserve unity, this country has a very sad future. As a Canadian I have always objected to and will continue to protest against the suggestion of secession in this country. In western Canada there are, from time to time, suggestions of that kind, and I think they should be frowned upon, not only because they are impossible of accomplishment but also because the last state would be worse than the first. This would, without question, divide the country and make impossible of success the result that we should achieve, make impossible the achievement for this country of the destiny which, I am sure, we all hope for and desire. No mere Hudson Bay railway will solve the problems of Canada. I for one quite frankly am against the Hudson Bay railway proposal. I am satisfied the people of western Canada are not a unit at all in connection with that project. I know, in the province from which I come, by reason of the opening up and development of the Vancouver route not nearly as much interest is taken in it as in other days. But this is not a plan which will solve our problems. We require the closest studentship into the great economic difficulties that surround us if we hope ultimately to secure unity, and after all political unity can be based only upon economic solidarity.

Mr. HOEY: Did the United Farmers of Alberta at their last conference not pass a resolution asking for the immediate completion of the Hudson Bay railway?

Mr. SHAW: The United Farmers of Alberta from year to year have passed such a resolution. This year, if my recollection is correct, there was no discussion on it at all. If the project had been discussed, I doubt in view of the changed conditions that I have suggested, if the proposal would have received anything like the support that it did receive.

Mr. McMURRAY: Before Alberta got an opening through to the coast, were the people of that province not very much in favour of the Hudson Bay railway?

Mr. SHAW: I rather think they were.

Mr. W. A. BLACK (Halifax): Mr. Speaker much has been said respecting the budget; it has been many times criticized and attempts have been made to uphold it. I will not take up the time of the House over it except to say that, with conditions as they have been in Canada during the past twelve months, with well-managed business houses closing their books, year after year, with a loss, is it reasonable to suppose that the business of this government, or any government, managed in an unbusiness-like way, can show a profit? —to have a surplus—I do not believe the budget, as presented to this House, represents the actual financial state of the country.

In my address before this House last session, I deplored the situation in relation to the Maritime provinces, especially regarding Nova Scotia, and I expressed the hope that some steps might be taken by the government to discover causes and apply remedies. I hoped that my colleagues representing that province would exert themselves to disclose reasons for the depression now existing amongst us, and endeavour to improve conditions. Further, I referred to the fact that I had lived in a pre-confederation period and have had personal experience of the results which have come to the province since the formation of the union. I was speaking with knowledge. I speak now with knowledge. Impressed by that knowledge, after laying the case as fairly as I could before the government and parliament, I said this:

> I implore the government to rectify the grievances. I say to you, Mr. Speaker, and the country, that early action is imperative. I warn you that failure will bring us all to regret, if not to disaster.

Now, after a year is passed, I ask myself if anything has been done by the government of the day to rectify the grievances which I referred to; or to insipre the people of the province of Nova Scotia with confidence in the government; or to decrease discontent and distrust, and to increase buoyancy of spirits and contentment. I am forced to say that conditions are worse to-day than they were a year ago, and that the government has not taken any heed of the warnings I venture to give them.

I realize that the government has proposed a change in the tariff on coal. This is being reluctantly done after persistent representations were made to them. But it is a small measure of the justice which the province of Nova Scotia demands—which it justifiably demands—and which it should be receiving at the hands of the government.

At the time representations were made to the government in regard to the coal duties, the need of tariff assistance for the Nova Scotia steel industry was just as strongly urged upon them. But nothing is being done for it. The argument for the one is just as powerful as the argument for the other. Why, I ask, is the province being put off again with a pittance instead of substantial justice? It is a well known fact that the government's tariff changes of 1924 militated seriously against the stability and progress of the Nova Scotia steel industry. Certain of its products were the raw materials of other industrial plants in central Canada. These plants were the only markets of the Nova Scotia steel industry for such products. This government deliberately took those markets from the Nova Scotia steel industry. They did that by tariff changes which permitted the plants in central Canada to import, free of duty, products of the classes I refer to, for the purposes of their manufacturing business; and worse still, they enlarged the classes of plants which might thus import such products free of duty. This action of the government was a telling blow at the Nova Scotia steel industry. It deprived that industry of markets. It forced that industry partially to close its doors. Its men were laid off. The injury extended to the coal mining industry. The quantity of coal used in the steel plants was substantially reduced. Men who work in the mines were thrown out of employment, or put on short time. In brief, the government's decision to let foreign steel makers supply the products which should be made in Nova Scotia, and foreign labour do the work which should be done by Nova Scotia labour, contributed largely to the industrial debacle which is now being witnessed in eastern Nova Scotia and which is palsying the whole economic life of this province. When representative men a few weeks ago presented these matters to the government, and besought them to deal fairly with those two fundamental and vital industries of Nova

Scotia, coal and steel, the government grudgingly agreed to make a small concession to Nova Scotia in regard to coal, but turned a deaf ear to the equally convincing argument for justice in regard to the steel industry.

This government is pursuing the fetish of low cost of living as if it were a thing of substance. It is only an incident of existing conditions. Low cost of living is the evidence of few opportunities. Higher cost of living is the evidence of many opportunities. Of what advantage, might I ask, could cheap living be to the men of the coal mining industry and their families in eastern Nova Scotia when they are unable to obtain employment and earn wages? Give them steady work and good wages and they would never be heard grumbling about high cost of living. The government magnifies this fetish into a creed, apparently thinking that the acme of contentment would be reached if everything were cheap. How can everything be cheap unless wages be lowered, and people be willing to adopt primitive methods of living? Shall we emulate the nationalities that are contented to live in squalid conditions, whose spirituality finds no expression in the comforts and accompaniments of modern life as we would have it in our own country, in order that Canada may be advertised as a cheap country? I say, Mr. Speaker, that the government's policy in this regard is founded in error, and stupidly persisted in. Let prices go up, let wages go up, let opportunities increase, let prosperity grow. These things are all incidents one of the other. It is infinitely better to have a country so conditioned, than one in which a man can live cheaply, but find himself in a dead environment.

Mr. ARCHAMBAULT: I rise to a point of order; I call to your attention, Mr. Speaker, the fact that the hon. member is reading his speech, which is contrary to the rules of the House.

Mr. SPEAKER: Unquestionably it is against the rules for any hon. member to read his speech, but I must say that in the course of this long and protracted debate there has been a tendency in all parts of the House, if not to abuse, at any rate to deviate from the spirit of this rule. Hon. members on all sides have been reading their notes. There are certain amenities that should be observed in the House and when a new member is speaking he is generally accorded by unanimous consent the courtesy of referring to his notes. Under the circumstances I would ask the hon. member (Mr. Archambault) not to press the point.

Mr. ARCHAMBAULT: It is now two o'clock in the morning and I think that the Speaker should enforce the rule in this case. We have been listening to speeches all night and we shall probably not reach a vote until five or six o'clock. The hon. gentleman is not a new member, and he read his speech last year. I insist on the point of order.

2 a.m.

Mr. SPEAKER: The spirit of the rule is of course that no speeches shall be read. But I cannot prevent the hon. member from referring to his notes, and I take it that this is all he is doing.

Mr. BLACK (Halifax): I assure you, Mr Speaker, and the hon. gentleman who has interrupted me, that I am merely following some extended notes as did the hon. gentleman, Mr. Archambault, when addressing the house two days ago. There has been a great deal of discussion in which the issue has been the state of the country in general. On the government side, reams of figures have been put into Hansard to prove that Canada is prosperous. I may say that these figures do not prove anything. We have only to look around and see with our own eyes and know that the figures do not truly testify. If this great mass of statistics were collected and published in one massive volume, and were placed in the hands of the people of Nova Scotia, not one mind would be convinced by them. The people would not be convinced because they know by personal experience and through personal knowledge that Nova Scotia was never, in all of its history, passing through such a gruelling period of depression as it is suffering to-day. Yet this government thinks to make Nova Scotians believe that they are really in a golden era; and that that golden era is the product of the wisdom and activity of the government. When Nova Scotians ask for bread they are handed a stone. When they ask for redress of grievances and the granting of a fair measure of justice in accordance with the undertakings given at the time of confederation and since then, they are supplied with volumes of figures, and are told to study those figures and be satisfied that the government of the day is providing bountifully for them, and have bestowed upon them prosperity such as they never enjoyed.

It is a tragedy in history that there should be in control of the affairs of this country a government so blind to facts, and so impervious to the force of reason, and deaf to the

calls of justice, as is the government now in office in Canada.

I shall not repeat what has been often well said in regard to the understandings and agreements which were corner-stones in the union of the provinces in 1867; which understandings and agreements, Nova Scotia claims have not been faithfully lived up to; in respect to which Nova Scotia claims redress. These matters have been fully set before the governments of the dominions. But the people of the province are still forced to wait for a square deal.

Let me remind the House further of that other later period of history, pregnant with interest to Nova Scotia, when the government of the day assisted the great ventures of constructing second and third transcontinental lines of railway at enormous cost. We in the Maritime provinces were again given pledges by the government. We were invited to support the government's policy, with the assurance that it would mean the inauguration of national transportation on Canadian territory and through Canadian ports. Our country was to be freed from the domination in commerce and transportation of the neighboring republic. The Maritime provinces were to reap the direct and fructifying fruits of this national policy. At last some justice was to be accorded to them. This is one of the pledges given in 1903 by Right Hon. W. S. Fielding, now Finance Minister whose continued illness, I, in common with other hon. members, deplore:

> Surely, Sir, the time has come after years of deception, humbugging and trickery about the lines of the Maritime provinces, that faith should be kept with these people, and they should have a through line running on Canadian territory from ocean to ocean.

I might refer to the national pledges which the then Prime Minister, Sir Wilfrid Laurier, and his government gave to the people, speaking in the House on July 30, 1903. On one occasion he said:

> Now, Sir, we lay it down as a principle, upon which we are to be judged by friend and foe, that we are to have a transcontinental railway, and that its terminus must be in Canadian waters, and that the whole line, every inch of it, must be in Canadian territory. We say further, that such a line is a necessity to our commercial independence.

Mr. ARCHAMBAULT: I beg to move that by unanimous consent the hon. member have leave to put the notes on Hansard.

Mr. BLACK (Halifax): I will quote again, Sir, from the speech of Sir Wilfrid Laurier on the occasion referred to. This is what he said:

> Now, there is another feature of this contract to which I shall call the attention of the House. If we have gone into this contract, our intention has been, as stated in the preamble, to force traffic in Canadian channels and through Canadian waters. We have made it a special condition of the contract and this condition is expressed in section 42, as follows.

The section referred to, paragraph 42, reads as follows:

> It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agree that all freight originating on the line of the railway, or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada be carried entirely on Canadian territory or between Canadian inland ports, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ports.

Paragraph 43 emphasizes that. It says:

> The company further agrees that it shall not, in any matter within its power, directly or indirectly advise or encourage the transportation of such freight by routes other than those provided above, but shall in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely the development of trade through Canadian ocean ports and Canadian channels.

These two sections have been a dead letter since they were written twenty-two years ago. Again, in 1911 when the Canadian Northern Ontario railway was seeking assistance, we had this provision in the legislation granting that assistance:

> It is hereby declared that the aid herein provided for is granted by the government for the express purpose of encouraging the transportation of goods through Canadian channels.

Then again in 1914, when that same railway was applying to parliament for $45,000,000, we had this declaration:

> That at all times hereafter all freight originating on the lines of the Canadian Northern Railway, or on the lines of any of the constituent companies, or on any line or lines of railway now or hereafter owned, leased or operated by the Canadian Northern, or by any of the constituent or subsidiary companies, their successors or assigns, shall, when destined to points in Canada, be carried over the lines of the Canadian Northern or of the constituent companies, or over some other Canadian railway or railways (which term shall include the line operated by the Canadian Pacific Railway Company between Montreal and St. John, N.B.) and that the through rate on export traffic from the point of origin to the point of destination shall not be greater via Canadian ports than it would be via United States ports; and that all inward and outward ocean traffic shall be carried to Canadian ports, and that the Canadian Northern and the several constituent and subsidiary companies shall not, in any matter within their power or control, directly or indirectly advise or encourage the transportation of any such freight by routes other than those above provided, but shall in all respects, in good faith, use their utmost endeavours to further the development of trade through Canadian channels and Canadian ports.

I have not taken the time to read these paragraphs in their entirety, but with the permission of the House I would ask that they be placed on Hansard.

Again I would quote from the Right Hon. W. S. Fielding, as follows:

> With this road built, instead of being dependent on the Canadian Pacific Railway only, St. John will have two strings to its bow. Not a pound of traffic that goes to St. John now will be taken away, and St. John will stand its chance of getting a fair share of the new traffic to be created by this road. Halifax with its peerless harbour will have advantages which it has not hitherto enjoyed. Surely, Sir, the time has come after years of deception, humbugging and trickery about the lines to the Maritime Provinces, that faith should be kept with these people, and they should have a through line running on Canadian territory from ocean to ocean.

What, may I ask, is the faith that was to be kept; and how has it been kept? While these assurances were being given out by the leaders I have mentioned, in another place, the Hon. Mr. Scott, cabinet minister in the government of Sir Wilfrid Laurier, was explaining the situation in these words:

> Therefore, it is to our interest if we are going to have that grain go east through Halifax and ports along the St. Lawrence, to do something to induce it to go there.

It goes without saying that Nova Scotia has contributed its full share to all public works in Canada. But let us consider her position in this matter. The Maritime provinces' portion of the cost of railways and canals since confederation amounts to the huge sum of $304,745,338. Nova Scotia, having a population of a little less than one-half of the three provinces, pays, $152,372,669, or say, $150,000,000, which is equal, in round figures, to 2¾ millions annually. What has Nova Scotia in return for this huge expenditure? Not a foot of transcontinental railway was ever built in the province—not a canal.

Mr. DUFF: Where would you build canals in Nova Scotia?

Mr. BLACK (Halifax): You can answer that.

Mr. DUFF: I am asking you.

Mr. BLACK (Halifax): These figures are amazing, and I am sure will surprise not only members of this House but the country generally, and especially Nova Scotians. Public buildings cost Nova Scotians about $150,000 annually, over and above income. Under such conditions as these, can the government of Canada ignore the demands of the Maritimes, especially those of Nova Scotia? But, Mr. Speaker, faith has not been kept. The railways have been built. First the Intercolonial railway, which was to be the special agency for the development of the Maritime provinces by providing those provinces the means of reaching the markets of central Canada. Later the railways sponsored in 1903 were built for the purposes mentioned by the leaders of the country whom I mentioned. But instead of helping developing the Maritime provinces, instead of helping them and making them prosperous; they have been converted into agencies for the depression of those provinces. They have become millstones around the necks of the Maritime provinces. They have imposed freight rates which deny Maritime people access to the markets that were warranted to them in the days of nation building. Listen while I read the language of Premier Armstrong in regard to this matter:

> The remedy for this condition undoubtedly lies in a Canadian-wide appreciation of Maritime disabilities, and a general realization that excessive freight rates are choking out our industrial life.

I do not preach sectionalism; such is inadvisable, in fact deplorable.

Nova Scotians are not suppliants. They ask that pledges be carried out. A policy is what they want which will benefit all sections of the country. This government has no policy that benefits any section of our Dominion.

The question of freight rates is a burning one with Nova Scotians. So exorbitant are these rates that traffic is being handled daily by other means. I give one instance: The freight rate on brick, less than car-loads, from Pugwash to Dorchester, is one and a half times greater than the cost of the brick. I read this morning that sugar is being shipped from the Halifax and St. John refineries to Montreal by water—the freight and charges being less than if shipped by rail.

Western shippers complain of ocean freight rates when they reach 10 per cent of the value of the article shipped; what would they say if the rates were from 50 to 150 per cent of the value of their products?

In addition to this, the 5 per cent sales tax is a serious handicap on basic commodities used in the building trades.

As to the promises of 1903, not a vestige of satisfaction has been awarded to the people of Nova Scotia. The keeping of faith is still a mere figure of speech. And the grain spoken of by Hon. Mr. Scott has been pouring out through foreign ports without regard to promises made or the vital necessity of building up Canadian commerce on Canadian territory, and doing at least some of the "forcing" through Canadian ports, which Sir Wilfrid Laurier so vividly portrayed and pledged the country to see done.

I do not overlook the fact that after prolonged electioneering dodging, a contract is at last let for the construction of a small grain elevator at Halifax. The government evaded its election promises in this regard as long as it could, and only took steps to have the promises made good, in part after it was driven out of every hole of retreat. This, again, is but a slight instalment of the "good faith" promised to Nova Scotia over twenty years ago. It will not go very far towards restoring the province to its rightful place in the Canadian confederation. The government cannot excuse themselves by asserting that they do not possess understanding of the minds of the people of my province and the other Maritime provinces. It is well known that the Premier of Nova Scotia has been at Ottawa on several occasions, and that he brought back with him alleged glittering assurances from the government there. These have proved to be entirely made of tinsel, which quickly fades. If Premier Armstrong truly reported what was said to him by the Prime Minister and others of his cabinet, we are again forced to the conclusion that good faith is not being kept.

Twelve months ago, after the duty on fertilizer was reduced, a factory in Halifax closed down. The buildings are now vacant, and the machinery idle. This factory gave employment to a number of men, nearly all of whom supported families; to-day they are probably with the tens of thousands across the line, to the south of us. This factory was a further benefit to Halifax, because the company imported cargoes of raw material, such as phosphate rock, bones, and so forth, and the vessels which brought these cargoes disbursed large sums of money in the port—pilotage, for instance, hospital dues, port wardens' fees, tug-boat charges, wages earned by longshoremen in the discharging and storing of the cargoes, insurance thereon; furthermore, each of the members of the crew of the vessel, from the captain down, receives the wages due him, or at least a portion thereof, a portion at least of which is spent amongst the shopkeepers of the city. The vessel is provisioned for her next voyage and buys more or less paint, rope, canvas, and so forth, possibly going into dry-dock. Quite a large sum of money is disbursed in this operation which is now lost to our longshoremen, shop-keepers and others. This is a concrete instance of the value of one small industry to a community. After the closing of this factory, what did I find? Belgian fertilizer was imported and advertised, and as evidence, I could exhibit an advertisement, a whole page nearly, in large attractive letters and form. Details of this kind are, perhaps, not often given in this House, Mr. Speaker, but I look upon these cases as a striking result of free trade policy in this country, and worthy of mention.

A similar factory in Sydney, was also closed down.

Now a word as to immigration. The Maritimes have not even been thought of, or mentioned, in this connection. They have no status in the Immigration department of this government. A suggestion was made to that department that half a dozen families of Hebrideans out of several hundred reported coming to Canada this spring be located in Nova Scotia, but the idea was pooh-poohed; all these people were wanted out west. Yet out of the two hundred and one-third millions of dollars spent on immigration by Canada, Nova Scotia contributed $400,000 of this amount, without a family being located in that province.

National Parks receive liberal federal aid, about $2,763,000 having been spent on such parks throughout the entire country, but the Maritime portion is insignificant.

I submit, Sir, that the Maritimes are a valuable asset to Canada, contributing as they do so generously to the finance of this country, and possessing such exceptional and diversified natural resources, but apparently no place have they in the minds of this government.

Owing largely to the immigration policy of the United States, the number of steamers calling at Halifax has considerably increased. The dock facilities are insufficient, and these steamers are delayed in consequence on account of the incomplete wharf and shed accommodation at the new terminals, and although the department of the government responsible for this work has been repeatedly appealed to for completion of these different works, nothing has been done. Again is Nova Scotia ignored, as she is in so many other instances.

Mr. DUFF: Does my hon. friend say that this government is responsible for the building of the Halifax terminals?

Mr. BLACK (Halifax): They are responsible for not completing them.

Mr. DUFF: You said they were responsible for building them. The Tory government built them, and you know it.

Mr. MEIGHEN: You are getting sleepy.

Mr. DUFF: The hon. member is

Mr. BLACK (Halifax): Hundreds of thousands of dollars can be spent on radios, but not one dollar can be obtained for the completion of the necessary sheds and facilities for economically conducting the business of the port of Halifax.

Very recently, however, as this House knows, a very large delegation of Maritime province men came to Ottawa to interview the government and the members of parliament; and to lay before them the case of those provinces. I am speaking in the hearing of honourable gentlemen who saw and heard this delegation; and I can safely leave it to them to say whether or not that delegation presented a powerful argument on behalf of the Maritime provinces. I am satisfied that they did; and that what was said shows conclusively that if this country is to make the progress which we all, as good Canadians, desire, measures must be adopted to wipe out the discontent which prevails in those provinces, and to give the people substantial reason for believing that they are not to be further treated with disdain. This feeling, I regret to say, prevails. I can call Premier Armstrong to witness on the point. In April, 1923, an interview with him was published in a Montreal newspaper, and he expressed himself as follows:

> While dismissing any ideas of secession, however, the Premier pointed out that the people of the Maritime provinces felt keenly that they have not been fairly treated by the rest of the Dominion. They have been made to feel, he said, that they are and should remain isolated, more or less forgotten, tolerated at the best and not provided for like the more fortunate provinces to the west.

I commend these sentiments to the earnest consideration of the government. They should convince the government that the utterances of the Maritime provinces are not the catch-penny cries of a few partisans; but are the expressions of sincere convictions of the whole people. And I remind the government that it is disastrous to the whole country to have any parts of Canada imbued with the conviction that justice is not being done.

What I have just said is emphasized by the stand which the government of Nova Scotia is now taking in regard to what are deemed to be the wrongs and the rights of the province. Premier Armstrong has submitted to the legislature a series of resolutions in which he sets out these wrongs and rights as his government sees them. It is unnecesary for me to say whether I concur in all of his views. For the purposes of my argument it is sufficient to state that the government of the province, now confronted with general elections which must be held within a few weeks, is forced by existing conditions to agonize over the distressful state of the province, and to appeal to the government of the Dominion and this parliament for the square deal which has been so long denied. It may be true that Premier Armstrong is taking this action because his government has lost the confidence of the people, and he hopes by these means to win back that confidence. The fact remains that the people are dissatisfied and discontented, that the province is not making progress, that the outlook is discouraging, and that the blame is largely placed on the shoulders of the Dominion government for neglecting to recognize the just claims of the province.

This is how the people are thinking; and it is vitally necessary to eliminate this conviction from their minds, if it be desired to have contented Maritime provinces and a united Canada. Hon. members will see that I am not exaggerating. The final proof, if any more were needed, is expressed in the attitude of the Armstrong government, the friends of the government of the Dominion. The Armstrong government would not assume the attitude I have described if they did not feel themselves forced into the position by the overwhelming power of public conviction in the province, and their own impending destruction.

Nova Scotians are still crossing the line—the best blood of the country, skilled in all departments of work—in order that they earn a livelihood. It is said that there are more Nova Scotians in Massachusetts and the New England states than in the province itself.

I, at times, picture our fair province with all these native born at home—Halifax, a city of 150,000 and all other parts of the country doubled or more in population. What a bee hive we would have. What numbers to feed, clothe, and so on. But alas! Industries are closed, markets are unreachable, and on all hands there is idleness.

In conclusion, therefore, I again entreat the government of the day to give heed to the warnings that come from Nova Scotia. I repeat what I said last year, that early action is imperative. I repeat the warning. that failure will bring us all regret, if not disaster.

Mr. HARRY LEADER (Portage la Prairie): Mr. Speaker, while I am sorry to have to make my remarks at this late hour, I do not intend on that account to apologize for a moment. I claim it is my right to make the observations I intend to make to-night, and that in doing so I am only performing my duty. During the debate on the Address

in reply to the Speech from the Throne, arrangements were made to desist from further discussion. I as a Progressive member was the next on the list to speak when that arrangement was arrived at, and I agreed to drop out. I would have been willing to do the same to-night, had such an arrangement been made in time, I would gladly have agreed to any proposal such as that. I do not think the time is entirely lost in discussing matters here; but when a debate is drawn out to the length that this one has been, I do not think there is any real value in any further discussion. However, I must make my remarks even at this late hour. Hon. members will wonder, perhaps, what it is I have to say. They will wonder if I have anything new to offer, and I think perhaps I have. My remarks will be based more especially upon the Auditor General's report, and I will have figures to prove any of the statements or arguments that I advance.

I intend on this occasion to make a plea for economy, as I have done on previous occasions in this House. Hon. members have discussed the same question; in fact there have been pleas for economy from all sections of the chamber. But the truth is, Mr. Speaker, that we prate about economy and forget the very first principle involved in it, and that is to spend less money. I am going to make the charge that this government have failed to adopt any real policy of genuine economy, notwithstanding the excellent speech delivered by the Prime Minister to-night. He told us that we had a surplus of $11,000,000 over ordinary expenditure this year, but he admits that there was an increase in the public debt of between two and three million dollars. It appears to me, Mr. Speaker, even with my imperfect knowledge of book-keeping, that we are still in the hole, and that we have cause to worry yet. I intend to prove that this government have not enforced a policy of economy to the satisfaction of the people who have to pay the bill if not to the satisfaction of the government itself. Can I not say in truth, Mr. Speaker, that every revision of the salaries of the public servants of this country since this government came into power has been a revision upwards? Can I not say that this government have found offices for a group of favorites? In this connection I might mention Mr. Duncan Marshall, and Hon. Dr. Pugsley now deceased, not forgetting W. T. R. Preston. I want to prove on the present occasion that not only has there been an increase in the inside government offices in Canada, but there has been an increase in the expenditure in the outside service. I have some figures here extracted from the Auditor General's report of 1923 and 1924. I wish to place these on Hansard for their educational effect, because I do not believe people know money is being spent in this manner. First, I wish to say that there has been an increase in the expenditure on the high commissioner's office in London. In the year 1923 the total expenditure in connection with that office was $112,107. In 1924 it had grown to $121,905, an increase of $9,978. The Paris agency in 1923 cost $29,942, in 1924 $31,065, an increase of $1,123.

The Canadian representative in the United States in 1923 cost $10,994; in 1924, $13,008, an increase of $2,014.

Now it seems to me that a policy of economy can be inaugurated in regard to our overseas offices. I see there are travelling expenses in connection with the high commissioner's office, notwithstanding the fact that he is drawing a salary of $10,000 a year and $5,000 in lieu of house and furniture. I see he has a travelling account in 1922 of $2,913, in 1923 a travelling account of $4,168 and in 1924 of $5,265. In the Paris agency we have a man by the name of Philippe Roy. He receives a salary of $14,000 a year, and in addition to that a bonus of $500. As far as I can go back in the Public Accounts, I find he has an allowance of $3,000 for the maintenance of an automobile. It seems to me that $3,000 would purchase a brand new automobile every year, and I think economy should be exercised there. In 1923 I see he had a travelling account of $1,582.

I have on previous occasions placed the fact before this House that we have spent considerable amounts of public money in entertainments, public dinners and so on. I do not intend to go into that at length to-night, but I have selected four items which I intend to give to the House. These are not all by any means, because in going through the Auditor General's report and the Public Accounts we will find there are dozens of public entertainments and dinners. Sometimes we find items of $50 and $75 for cigars and cigarettes.

I do not wish to be partial or to make any charges against the present government that cannot be made against all previous governments, and therefore I have selected two dinners from the Auditor General's report of 1921, first a dinner to the Imperial Press Conference in Ottawa which cost the sum of $1,335.56, and also a dinner to the French Mission at the Country club which cost $1,257.67. That was the previous government. In 1923—and now it is the present government—we find an entertainment at the experi-

mental farm Ottawa, $1,115. Then there is a grant to the entertainment of the A.V.M.A., $1,000.

An hon. MEMBER: What is that?

Mr. LEADER: I cannot tell you. It is all very well, Mr. Speaker, to say, "Hurrah boys!" when you are spending other people's money. I want to read to the House to-night some of the hotel bills we have paid for distinguished visitors coming to Canada. The figures I am quoting are from the Auditor General's report of 1921. These expenses were incurred by the previous government. The expenses are as follows:

French mission, hotel expenses, Chateau Frontenac Hotel	$680
Windsor Hotel, Montreal	872
Chateau Laurier, Ottawa	755
King Edward Hotel, Toronto	339
Royal Connaught Hotel, Hamilton	458
Clifton Hotel, Niagara Falls	757

Of course they had to see the falls. Then the previous government also entertained a lady—a distinguished lady no doubt—by the name of Miss Cartier. One of her expense bills in connection with the Ritz Carleton hotel was $1,218.

Mr. BOYS: Can the hon. member verify that?

Mr. LEADER: Yes, everything I have said is accurate. I have some figures here in regard to trips taken by members of the government and cabinet ministers attending conferences in Europe. I am also going to give figures of expenses incurred by the previous government and expenses incurred by the present government. In 1921 we start off with the ex-Prime Minister (Mr. Meighen) travelling expenses $7,293, and Hon. Dr. Tolmie, $6,831. Then we have expenses of delegates to the League of Nations at Geneva:

Hon. C. J. Doherty, Sir George Foster, Hon. N. W. Rowell	$14,645

At the Genoa conference we have travelling expenses as follows:

Sir Charles Gordon	$8,000
Edouard Montpetit	8,000

Then these distinguished gentlemen I have last mentioned have had the sum of $1,131 for hospitality fund entertainment. I do not know what that would mean, unless it would mean that they took $1,131 and said, "Hurrah boys! have this on me to-night".

Then we have the conference—also by the previous government—on the Limitations of Armaments at Washington, headed by Sir Robert Borden, with a total cost of $17,956.57. Then expenses incurred here, including $1,500 for a second hand Cadillac car. The car had to be repaired and insured. Making a total cost of $1,938.

Now we come to expenses incurred by the present government. First is travelling expenses to the League of Nations:

1923: Travelling expenses to the League of Nations:		
Hon. W. S. Fielding		
Hon. Ernest Lapointe and staff	$15,391 00	
Expenses of Mr. Fielding to Brussels and Paris	8,265 00	
International Labour Conference:		
Hon. Ernest Lapointe	1,784 00	
Hon. James Murdock	3,482 00	
Total expenses of delegates		$12,625 00
1924: Imperial Economic Conference:		
Travelling and living expenses of Premier King and staff	3,032 00	
Hon. Geo. P. Graham and staff	6,217 00	
Sir Lomer Gouin and staff	6,698 00	
	$15,947 00	

The Prime Minister took with him as adviser or secretary O. D. Skelton, and the charge for him for services at $50 a day and travelling expenses $5,068. In addition to Mr. Skelton they employed a secretary overseas in the person of Mr. Reed Hyde, London, England, at £7 per day. His expenses amounted to $3,966.

Then we have the Canadian League of Nations, travelling expenses:

George P. Graham and staff	$4,605
Sir Lomer Gouin and staff	5,402

Considerable work has been involved in obtaining these figures, and I have boiled them down as much as I possibly could. I have an item here which I wish to give to the House and I have prepared a brief statement. These are the travelling expenses of the ministers in each department in Ottawa. These figures include the travelling expenses of each minister and his immediate official staff:

Post Office Department	$ 4,828
Justice Department	2,415
Public Works Department	30,330
Customs and Excise Department	6,820
External Affairs Department	1,467
Agriculture Department	86,591
Railways Department	12,369
Trade and Commerce Department	3,374
Secretary of State Department	24,325
Interior Department	25,182
Militia and Defence Department	23,637
Labour Department	2,729
Total	$224,067

This is a mere bagatelle in comparison with the millions that, I think I can safely say, are spent annually by the civil service of this country in travelling expenses. For instance, in the Department of Agriculture alone, I think the amount will total nearly $200,000,

with the stock promoters—commercial travellers, you might call them—that are employed in that department.

Again, placing the two old parties together, because many people say that there is very little difference, if any, between them, I have gone to the trouble of finding out what the travelling expenses of the previous government amount to, and I find they total up almost equal to those of the present government.

Mr. JACOBS: Does the hon. member contend that these people should travel for nothing?

Mr. LEADER: I do not, but I am pleading to-night for economy. There is room here for us to save a few hundred thousand dollars to the taxpayers of this country, if we would utilize the keen brains that, I know, each and every one of the ministers possesses.

Mr. JACOBS: Is the hon. member able to place a figure upon what these gentlemen should have spent when in Europe?

Mr. LEADER: I do not know, but I think if they were travelling at their own expense, they could cut it one-half. As I stated before, what I am saying to-night is a matter of education for the people of this country, because I do not believe they know how their money is being spent.

I want now to deal briefly with some extracts from the Auditor General's report in regard to our external affairs. The duty and function of the Minister of External Affairs who, in our case and in that of the previous government is the Prime Minister himself, is one of entertainment. A great deal of the money spent in that department is spent in entertaining distinguished visitors who come to Canada. I am going to read to the House some of the expenses incurred by the previous government. This is taken from the Auditor General's report for the year ended March 31, 1922:

Visit of Premier Massey of New Zealand.. ..	$ 593 11
Unforeseen expenses..	606 11
	$1,199 52
Visit of Admiral Beatty..	$1,506 83
Visit of delegation from Washington of American senators and congressmen..	1,517 20
Dinner at Royal Ottawa Golf Club, $695.65; special cars to golf club, $45..	740 65
Luncheon at Chateau Laurier..	300 00
E. J. Chambers, personal services, $300; travelling expenses, $176.55..	476 55
Visit of Marshall Foch ($1,053.70)—	
Hotel expenses: Chateau Frontenac, Quebec, $134.45; Windsor Hotel, Montreal, $258.50	392 95
Auto hire, $486.25; telegrams, $42.58; sundries, $27.92..	556 75
E. J. Chambers, travelling expenses..	104 00

Then, coming to 1923, we have the following expenses incurred by the present government:

Visit of Rt. Hon. Srinivasa Sastri ($6,106.84)—	
Transportation, $1,451.78; supplies for private car, $316.79..	1,768 57
Hotel expenses: Victoria, $447.40; Vancouver, $186.45; Lake Louise, $35.50; Banff, $25.95; Winnipeg, $76.75; Ottawa, $268.41; Montreal, $602.65; Quebec, $202.40..	1,845 51
Dinner at Country Club, Ottawa, $635.85; entertainment at Niagara Falls, $46.30.. ..	682 15
Motor hire, $405.90; telegrams and telephone messages, $178.48; baggage transfer, $78.60	662 98
Meals, $50.10; tips, $155.45; album of press clippings, $125..	330 55

No doubt this would be interesting reading to that distinguished visitor when he reads all the nice things that the Ottawa papers said about him. There is another item here from the Auditor General's report of 1923-24, in connection with unforeseen expenses:

Transportation and entertainment of distinguished visitors to Canada; Australian Trade Delegation, $763.09; Rt. Hon. D. Lloyd George, $913; President Harding of the United States, $5,082.21; Hon. Chas. E. Hughes, Secretary of State of the United States, $1,278.85; Rt. Hon. W. F. Massey, Premier of New Zealand, $1.076.15; Premiers of New South Wales and Victoria, $501.76; Hon. E. J. Theodore, Premier of Queensland, Australia and party, $682.15; Hon. W. R. Warren, Premier of Newfoundland and party, $6,255..	$10,359 76
Cadillac car for Prime Minister, $7,150; less allowance for old car, $300..	6,850

There is a story in connection with this car. Going back to the second-hand Cadillac car purchased by Sir Robert Borden in Washington, I think if you follow it up, it is the old car that they traded in for an allowance of $300 on this $7,000 car. That seems to be very poor business. We are all business men in this House, and I do not think any hon. member here would undertake to bring over a $1,900 car, pay duty and freight on it, and then trade it in for $300 on a new one. A lack of business is shown in all these departments and even in that of the Prime Minister himself.

Mr. JACOBS: How long was that car in use?

Mr. LEADER: Less than two years, I would say—between the time of the delegation at Washington and the time the government was defeated. The hon. member knows himself the time that intervened between those two dates.

What I am about to refer to now is rather of a personal nature. I regret that very much, but I think I have charity for all and certainly I have malice towards none. I intend, however, to use the motto used by the Hon. Alexander Mackenzie, and that is "to

seek no man's favour and fear no man's frown." I think too much public money is being paid to able-bodied men in pensions. Last year I think I brought before the House the fact that we have thirty-eight judges drawing pensions, many of whom are still able-bodied and quite capable of work. Some of them are living in a foreign country and the taxpayers have to go down in their pockets and pay pensions to these retired judges. I think the annual payroll to these retired judges is in the neighbourhood of $200,000. I have before me a newspaper clipping which expresses certain views in regard to the matter in better language and more concisely than I perhaps could, and I intend to take the liberty of reading it to the House. This was clipped from a paper printed in Toronto called the Orange Sentinel some time last fall. The item that I am going to quote is entitled "A Scandalous Abuse." It reads:

> When a man can retire from the public service with a superannuation allowance of six or seven thousand dollars a year, and then engage in other activities that bring him anywhere from four to ten thousand dollars a year additional, it must be admitted there is something wrong with the act.
>
> The principle underlying superannuation must surely be to provide for old servants of the country when they become unable to carry on their work. To shield an old public servant from poverty in his last years is a duty the state owes him. He, on the other hand, owes a duty to the state to perform his official duties as long as he can do so efficiently. It should not be possible for a man like General Fiset to retire from the service at fifty years of age with a pension of $6,000 a year. He is physically fit to continue as Deputy Minister of Defence for ten, or perhaps twenty, years yet. But he becomes a six-thousand-dollar-a-year-burden on the country, and then takes a place in the House of Commons, from which he will draw four thousand dollars a year more. If he is vigorous enough to run for parliament, and to bear the strain of a five months' session, he is strong enough to retain his place as deputy minister. It is nothing short of an outrage that he should be permitted to draw a double income from the taxpayers.

Sir EUGENE FISET: Will the hon. gentleman permit me? He should inquire about the real facts of the case instead of reading extracts from papers that, not only he is not sure of, but contain absolutely blunt untruths.

Mr. LEADER: If I am reading anything that is untrue, I am very sorry, but I do not accept the responsibility.

Sir EUGENE FISET: Then you should not mention it.

Mr. LEADER: It was given in good faith and if the hon. gentleman will contain himself for a few minutes he will have an opportunity to speak when I am through.

Mr. POULIOT: Do you believe all that is written in the Orange Sentinel?

Mr. LEADER: If the hon. member is vigorous enough to bear the strain of a five-months' session, I say that he is strong enough to take his place as deputy minister and he should not be permitted to draw a double income at the expense of the taxpayers.

Mr. MACDONALD (Pictou): Let me assure the hon. gentleman that the hon. member for Rimouski (Sir Eugene Fiset) at the time of his retirement was pronounced by the best medical authorities of Canada to be incapable any longer of holding the position he then filled, and this by reason of the severe illness he had gone through. It is fortunate for Canada that Providence has spared him and enabled him to come through. The conditions surrounding his retirement were vouched for by the best medical authorities of the country, and Canada will be the better for his recovery.

Mr. LEADER: That may be all true, but on the ground of economy I still take the stand that an able-bodied man should not be drawing a pension when he is able to bear the strain of a five-months' session. At any rate legislation should be passed to protect the taxpayers of the country from such an imposition. I intended reading a little further from this article.

Mr. MACDONALD (Pictou): What is the hon. member reading from?

Mr. LEADER: I am reading from the Orange Sentinel.

Mr. MACDONALD (Pictou): Does the hon. gentleman think that the Orange Sentinel's views should dominate this country?

Mr. LEADER: I do not think that the Orange Sentinel should dominate the country, but I think that its views have as much right to be stated here as have the opinions of any other newspaper published in the country. And let me tell the hon. gentleman that I am no more an admirer of the Orange Sentinel than of any other sectarian newspaper in Canada.

Mr. HEALY: Will the hon. gentleman permit me a question?

Mr. LEADER: We are not getting through with the debate.

Mr. HEALY: This is the only question I am asking. Does the hon. gentleman suggest that retired civil servants should be killed off in order to save the country money?

Mr. LEADER: I would hesitate to kill anyone. I was going on to quote the following:

General Fiset is not the first pensioner to double his income in that way. Hon. Charles Doherty, who was Minister of Justice in the cabinet of Sir Robert Borden, drew a judge's pension of $7,000 a year besides a cabinet minister's salary of $10,000, and sessional indemnity of $4,000. He was supposed to be the fountain head of justice, but anybody who can see the elements of justice in that must have second sight.

As a matter of fact, the Hon. Mr. Doherty's pension was $6,666.66. Now I have given figures to show our extravagance in public expenditures and I intend to offer some suggestions in the way of retrenchment. I introduced a resolution on the floor of the House two years ago for the purpose of reducing our sessional indemnity, and I did so not because I thought it was too much but because I considered that if any lead in economy was to be given the country, and if we were sincere in our advocacy of retrenchment, it was our duty to set the example. Hon. members know what happened to that resolution. Again, last year at the proper time, when the Prime Minister (Mr. Mackenzie King) himself was introducing the bill in regard to redistribution, I took occasion to suggest that it was then an opportune moment to consider the question of reducing the representation in this House; I suggested that the membership be reduced one-third. But the Prime Minister did not take kindly to that suggestion. I also offered the further suggestion that the cabinet representation be cut down.

3 a.m.

Mr. MACDONALD (Pictou): Did not the hon. member know when he made that suggestion with regard to a reduction in the representation that it would require an amendment of the British North America Act by the Imperial parliament.

Mr. LEADER: I am perfectly aware of that. But is that act iron-clad? When this country wanted to retain the representation of Prince Edward Island at its present figure there was no trouble about amending the British North America Act.

Mr. MACDONALD (Pictou): Why did you not move the resolution in the proper way, instead of talking?

Mr. LEADER: I know that this will get under the hide of some ministers, and I intend that it should: I suggested that the number of cabinet ministers should be reduced, and I made that suggestion believing we have too many of them. I suggested that the number could be reduced to at least ten.

[Mr. Healy.]

The much-respected Minister of Railways (Mr. Graham) was not very favourably impressed with the proposal; he took me to task for daring to suggest such a thing. I have here an article written in one of the newspapers last year in which it is stated that Sir George Foster in the Senate recommended that the cabinet could be cut down to twelve members, and he states what departments could be amalgamated. I had also a clipping from an article written by the Hon. T. A. Crerar in MacLean's magazine, in which he suggested that it was reasonable to expect a reduction in the number of cabinet ministers. Both these gentlemen had served as cabinet ministers and they should know what they are talking about if I do not. Unfortunately, these men have the inclination when they have not the opportunity; and when they had the opportunity they had not the inclination. I have some figures here but I shall be considerate enough to refrain from reading them at this hour. But they go to show that the cost of our representation in proportion to population is four times greater in Canada than it is in the United States; the cost of representation in the Senate is six times greater here than it is in that country; and the cost of our cabinet ministers—and this is where the real overcrowding takes place—is twenty times greater in Canada than it is in the United States, on the basis of population.

Now, as a practical suggestion looking to economy, I think that we might abolish the office of Lieutenant Governor in each province of the Dominion. We have nine Lieutenant Governors, and in two of the provinces they are receiving salaries of $10,000 per annum, while in six other provinces the salary is $9,000, and in Prince Edward Island $7.000. This makes a total of $81,000 a year which we are paying out in salaries to Lieutenant Governors. I do not know what their expenses amount to, but I think they are paid by the provinces. The province of Alberta this year abolished Government House, and to show how this action was regarded by the Lieutenant Governor himself, I may say that he confessed that he was glad of it inasmuch as it would save him $20,000 a year in expenses for entertainments. I think we might very well abolish the office of Lieutenant Governor or at any rate provide by legislation that the salaries of these officers be paid by the provinces; that would bring about the same end.

I shall now touch upon a delicate subject, and as a prefatory remark I will tell the House that I am as loyal as any man here. My father was born in England and I am of Eng-

lish stock; so that no man can impute to me any sentiments of disloyalty. What I am about to say is by no means a reflection on the present Governor General. His Excellency had already won our admiration and respect by his gallantry as commander of the troops at Vimy Ridge; and he has added to that our confidence in him as a representative of our Sovereign. But I want to give some figures to the House and to the country with reference to the expenses in connection with this institution. I do not think that I have them all, but I have sufficient to serve my present purpose. It has been declared by eminent writers, both men and women who are supposed to know what they are talking about, that Rideau Hall has cost the people of Canada some $5,000,000. Now, this is only guess work on my part; it may be near the truth or it may be over or under estimated. However, the figures that I shall now give are authentic, having been gleaned from the pages of the Auditor General's report. In 1924 I find that the following were some of the expenses in connection with the residence of the Governor General, Rideau Hall, and grounds:

Governor General's office	$149,271
Alterations	13,248
Improvements	60,000
Fuel and light	19,000
Telephone service	1,825
Water	2,792
Governor General's cars	42,659
	288,795
Interest on Rideau Hall at 5 per cent	250,000
Total	$538,795

I think the time has come when serious attention should be given to a reduction in the expenses in connection with that institution. I do not know whether or not it would be wise to do away altogether with the office of Governor General; I do not think it would be.

Mr. MACDONALD (Pictou): Would my hon. friend suggest what would be substituted for it?

Mr. LEADER: I would substitute the Chief Justice of the Supreme Court of Canada, who now is the Governor Generals' deputy.

Mr. MACDONALD (Pictou): Has the hon. member thought very much about that?

Mr. LEADER: Perhaps I have given it more thought than the hon. minister has, or he would not treat it so frivolously.

Mr. MACDONALD (Pictou): Does my hon. friend suggest that the Chief Justice of the Supreme Court of Canada should be Governor General and that he should perform the duties of both offices without any additional salary?

Mr. LEADER: Perhaps not, but if you gave him $100,000 we would still be $400,000 to the good.

Mr. MACDONALD (Pictou): Who would represent His Majesty here?

Mr. LEADER: He would represent His Majesty.

Mr. MACDONALD (Pictou): Well, you had better arrange with the Imperial parliament about all these wonderful reforms of yours.

Mr. LEADER: When it is found convenient, the arrangement can be made all right. So far no attempt has ever been made to make it.

Mr. MACDONALD (Pictou): You had better start in and you will find out what it will lead you to.

Mr. LEADER: I have been interrupted a good deal, Mr. Speaker and that accounts for my taking longer than I would otherwise have taken. I have about completed my remarks, but I have not yet explained my position in regard to the vote that is to be taken to-day. Hon. members will have guessed that I intend to vote against the budget. The amendment of my hon. friends to my right holds for me no attraction.

I want to take just four or five minutes now to discuss a little article that I find in a paper called The Western Record, printed in Winnipeg. It says:

> We have been asked if The Western Record is a Conservative organ? Rather a stupid question for anyone to ask if they have carefully read it. It is a Conservative organ and has clearly enunciated the policies of both Dominion and provincial Conservative parties.

The article makes an attack upon the Progressives here at Ottawa. I am going to read one or two little samples of the material we find in this article. Following up a statement it makes as to our holding the balance of power at Ottawa, the article says:

> Unfortunately this marvellous group, with the nomenclature "Progressives" comprised such a bunch of hayseeds that they were unable to make use of their power, and they furthermore had not the gumption to realize that when a political party enunciates principles and fails to stand by them it destroys political morality. Not only that but puts the cog in the wheels of government machinery which naturally impedes national progress.

Then it goes on to say:

> It was not long before this inflated group of windjammers began to disintegrate. The big suave Crerar found it impossible to lead his sheep.

Then it goes on to say that now the Progressives are being led by the "double-pronged Forke." But the paragraph to which I wish particularly to call the attention of the House is one which was brought up in the House here the other day by the whip of the Progressive party, (Mr. Johnston.) The statements contained in it were most emphatically denied by him, and he deplored the fact that any newspaper of any standing in this country should dare to print such an article. I find that this Conservative paper printed in Winnipeg carried the same article, and I will read it so that the record may be available for future reference. It says:

> Ottawa has been watching with amusement the conduct of this Progressive group. As everybody knows, the wheat market has been in a highly nervous condition, and at a recent important division a preliminary count by the whips showed 30 Progressives missing, their presence was needed to save the government. Where do you suppose those representatives of the farmers of the west were? Down town at brokerage offices watching the rise and fall of wheat prices on the blackboards, in which they were all interested. Autos were hastily commandeered and a little later a bunch of bareheaded members were located and their mental deliberations disturbed by being dragged back to the House, and the government was saved by a narrow margin.

Now, we are called "hayseeds," Mr. Speaker, "wind-jammers" and betrayers of public trust. I wonder if the Conservative members in the House here at Ottawa endorse what I have read in this Conservative paper printed in Winnipeg? I am glad to hear the chief whip of the Conservative party say that he repudiates the article. I wish to add, Mr. Speaker, that such scurrilous articles are a disgrace to our newspapers and an insult to the intelligence of our people, they are sure of the condemnation they deserve. If the remnants of the once great party persist in using such tactics the sooner the remnants are disposed of the better it will be for our citizenship. If this kind of dope is what the Grand Old Party relies on to win the next election, they had better cash in and give up the ghost.

Mr. W. A. BOYS (South Simcoe): May I crave the indulgence of the House, Mr. Speaker, for five or six minutes? I did not intend to take part in the discussion, but in justice to the party to which I belong, and also to my hon. friends of the Progressive party, I feel that I should try to put right a very extravagant statement made by the Prime Minister (Mr. Mackenzie King) in his speech to-day. He accused this party of obstruction, of taking up a tremendous amount of time, and he accused with us my hon. friends of the Progressive party. I think it is only fair that the House and the country should know the length of time consumed in the debates upon the three matters to which he referred.

Last week I gave to the press a statement which I believe to be accurate regarding the time consumed in the debate on the budget. I have brought these figures down to date. I do not blame the government at all for taking up the time they did; I realize that they are entitled, if they want to, to put up speaker for speaker. In other words, they have one speaker while we of the opposition, both groups, have one speaker; and I concede to them that right. But I think we may properly object to any intimation on the part of the Prime Minister that we have taken more than the share of the time which belongs to us. Up till yesterday—I cannot make the calculation for to-day because one cannot tell just how many columns of Hansard will be used by that portion of the debate which has not yet been published—the Liberals in the present debate have taken up 843 columns of Hansard. The Conservatives have taken up 634, and the Progressives and Independent 558. The Liberals have put up 46 speakers, the Conservatives 26, the Progressives 26 and the Independents 7. In connection with the ocean shipping rates discussion, about which the Prime Minister had so much to say, and in connection with which he made the most extravagant statements, statements which will not be borne out for one moment by an analysis of Hansard, we find that the debate started on March 3, and that it continued on the 10th, 12th, 13th, 17th, 19th and 20th. May I say in this connection that the Prime Minister accused the party to which I belong of consuming most of the time, and with us he coupled my friends of the Progressive party. What are the facts? The Liberals took 279 columns of Hansard, the Conservatives 228, and the Progressives, including the Independents, 126. But how the right hon. the Prime Minister could venture a criticism of any group in this House in view of his own action in that debate is beyond my comprehension.

Mr. LOVETT: In proportion to your numbers you took more time by far than the Liberals.

Mr. CASGRAIN: Hear, hear.

Mr. BOYS: I am glad that affords comfort to my hon. friend. I do not know how I can do it any more fairly than I am doing it. I am quoting to the House the actual columns of Hansard, and if there is any other way in which I can do it better, I would be glad to do it. It is true that some speakers speak

faster than others and do not consume as much time, but one cannot calculate that. I am taking the columns of Hansard, and I have given you the totals.

And now let us look at just one other feature of that same debate, and if the Prime Minister pauses to consider this, one wonders how he could ever presume to accuse this party or the Progressives of consuming unnecessary time. He took himself 79 columns of Hansard, one-third of the total time of the Conservatives who spoke on this side of the House in that debate, 16 in number. He took 79 columns himself in that debate as against 126 by the Progressives or over half as much as all the Progressives that spoke in that debate, and yet he stands up here and attempts to criticize us of the Conservative faith and my Progressive friends of obstructing the business of the House.

He then dealt with one other feature, that is the canteen funds debate. Now I want to say to the House that my figures in this connection may not be accurate. I have honestly tried to find out what the truth is. It is difficult to go through it and be sure of your figures. I did it in a hurry, and I may be wrong, but so far as I could find from a search of Hansard to-night that matter was dealt with on one day, on March 5th, and the total time occupied—

Some hon. MEMBERS: No. More than that.

Mr. MURDOCK: On three days.

Mr. BOYS: My hon. friends can correct me if I am wrong. I have tried to be fair, and if my friends now can point to another day, I will admit at once I have overlooked it, but I could not find it. On March 5th I find that out of the whole day the only time consumed in connection with the canteen funds was 38 columns of Hansard, and I leave it to the judgment of this House whether the remarks of the Prime Minister, who tried to pass on to us and to my Progressive friends the thought of obstructing is justified in view of the facts I have stated. There has been no justification. The Peterson contract is an important matter, and warranted all the time that was taken upon it, and I venture to say that when it comes back, if it ever does, the members of all parties in this House will want to spend some time discussing it. My own view is that it will never come back from the committee stage.

I think it is only right to put this matter in its fair and true light. I think I have correctly calculated the time that was taken by the various speakers in this House, and if my figures are correct, I think hon. gentlemen even on the opposite side of the House will agree that the Prime Minister could not have made a calculation, and that he spoke without thought, without looking the matter up, and without justification.

Mr. D. M. KENNEDY (West Edmonton): Mr. Speaker, I know this is not a very good hour in the morning at which to start a speech, but possibly hon. members will not suffer any more than I have in listening to what has gone before. I can assure hon. members of this, however, that what I have to say I shall say in as few words as possible, but on the other hand I intend to say it. I have not previously taken any part in a budget debate, and I was anxious from the first to take part in this one.

Since the commencement of this debate we have heard a great many attempts made in this House to classify the budget. There are those who think it is a protectionist budget; there are those who think it is getting somewhere near a free trade budget; and there are those who think it is a moderate budget. So far as the members on the government side of the House are concerned, we have had almost free trade speeches in favour of the budget; we have also had members who stand out distinctly for protection apparently give the budget their blessing. The hon. member for Chambly and Vercheres (Mr. Archambault) the other night in his speech said that this budget broke the back of the Conservative opposition. He said that the Tories were out apparently trying to scare the people by saying that there was a general reduction in the tariff coming, and that this budget had broken the back of that propaganda in the country. I believe, Mr. Speaker, that for the present at least the budget has done that very thing. But it has gone further than that in my judgment. It is a repudiation of the Liberal platform of 1919, and of the professions made by the vast majority of the Liberals before the people of Canada in 1921.

The Liberal party met in Ottawa in 1919 and drew up a platform. Now there are those who say that a platform is all very well for the time at which it is drawn up, but that conditions change. Well, this platform was not drawn up by a party that had had no experience in this sort of thing, because the party had been in existence a great many years and had previous experience, and in its ranks at that day and at that convention were men who had been in the Liberal party in 1893 when they drew up that platform, which the country

were assured meant that the Liberal party, once they came into power, would so fix the tariff for revenue purposes that not a cent would be taken from the pockets of the people that did not go into the treasury of the Dominion of Canada. I wish to read the tariff part of the Liberal platform of 1919, so that the House and the country may know what was definitely promised in this regard. The reason I want to do so is, that there has been a tendency throughout Canada to justify any reductions that have been made in the tariff on the ground of concessions to the Progressives. Now I do not believe that the Liberal party or any other party has the right to make concessions to any party for support. Wherever reductions are made in the tariff they ought to be made on the ground that they are believed to be the best thing for the Dominion of Canada. But I wish to demonstrate this morning that even though there have been some reductions made, those reductions do not come anywhere near meeting the definite pledges made by the Liberal party in 1919, and again in 1921 to the people of this country. The resolution on the tariff at the Liberal convention of 1919 reads as follows:

That the best interests of Canada demand that substantial reductions of the burdens of Customs taxation be made with a view to the accomplishing of two purposes of the highest importance: First, diminishing the very high cost of living which presses so severely on the masses of the people; second, reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion, the vigorous development of which is essential to the progress and prosperity of our country.

If the platform had stopped there there might not be much difficulty, but it becomes very specific from that point to the end:

That, to these ends, wheat, wheat flour and all products of wheat; the principal articles of food; farm implements and machinery: farm tractors, mining, flour and saw-mill machinery and repair parts thereof; rough and partly dressed lumber; gasoline, illuminating, lubricating and fuel oils; nets, net-twines and fishermen's equipments; cement and fertilizers, should be free from customs duties, as well as the raw material entering into the same.

That a revision downwards of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption (other than luxuries), as well as on the raw material entering into the manufacture of the same.

That the British preference be increased to 50 per cent of the general tariff.

And the Liberal party hereby pledges itself to implement by legislation the provision of this resolution when returned to power.

Now, it might have been argued, indeed it was argued in the first session after the general election of 1921, that the Liberal party should not be expected to go the full length of their platform in their very first budget; but this is the fourth budget brought down by this government, and we have not made much more than a respectable beginning, if it could be called that, towards the accomplishment of those definite promises made to the people of Canada—the pledges that the party promised to implement when returned to power. I have taken those definite promises made to the people. I have examined the various items as they stood in the tariff in 1921, and where they stand to-day, and we will take them in the order in which they appear in this platform:

—	British Preference Tariff	Intermediate Tariff	General Tariff
Wheat, when imported from a country which imposes the customs duty on wheat grown in Canada, per bushel.....	8 cents	12 cents	12 cents

There has been no reduction whatever in this item. The tariff stands as it did in 1921:

Wheat flour and semolina.....	30 cents	50 cents	50 cents

The duties stand at the same figure to-day. "The principal articles of food."

This would be a very long list, and so I have taken out just a few. We will take, for example, sugar which is one of the necessities of life.

Sugar, 1921.....	$1 52	$1 93	$1 93
Sugar, 1925.....	0 83	1 50	1 50
Apples, 1921.....	0 60	0 90	0 90
Apples, 1925.....	0 60	0 90	0 90
Raisins and dry currants.....	½ cent	⅔ cent	⅔ cent

On raisins and dry currants there is a possibility that the rates will be 3 cents under the British preference, 3 cents under the intermediate, and 3 cents under the general tariff if our treaty with Australia goes through. On tea there has been no change whatever. On coffee there has been no change. On tomatoes and other vegetables, which are necessities of life, the tariff stands practically to-day as it stood in 1921. Farm implements. These were going on the free list. Item 445 of the tariff reads:

Mowing machines, harvesters, self-binding or without binder, binding attachments, reapers, and complete parts thereof, not including shafting or malleable iron castings, 1921	12½ p.c.	12½ p.c.	12½ p.c.
Mowing machines, harvesters, self-binding or without binder, binding attachments, reapers, and complete parts thereof, not including shafting or malleable iron castings, 1925	Free	6 p.c.	6 p.c.
Cultivators, 1921	10 p.c.	15 p.c.	15 p.c.
Cultivators, 1925	Free	7½ p.c.	7½ p.c.

Traction ditching machines were free under all tariffs in 1921. To-day they are also free.

1921 ploughs and complete parts thereof	12½ p.c.	17½ p.c.	17½ p.c.
1925 ploughs and complete parts thereof	5 p.c.	10 p.c.	10 p.c.
Windmills and complete parts thereof, 1921	12½ p.c.	17½ p.c.	17½ p.c.
Windmills and complete parts thereof, 1925	12½ p.c.	17½ p.c.	17½ p.c.

I might point out that windmills affect particularly the cattle industry. It is one branch of the agricultural industry that has been hit hardest within the last two years. In portable engines there has been no change. The figures are 12½ per cent, 17½ per cent, 17½ per cent.

—	British Preferential Tariff	Intermediate Tariff	General Tariff
Hayloaders, potato diggers, 1921	12½ p.c.	20 p.c.	20 p.c.
Hayloaders, potato diggers, 1925	5 p.c.	10 p.c.	10 p.c.

Mine and quarry machinery is free.

Iron and steel pipe, 1921	5 p.c.	7½ p.c.	10 p.c.
Iron and steel pipe, 1925	5 p.c.	7½ p.c.	10 p.c.
Sawmill machinery and repairs, 1925	10 p.c.	15 p.c.	20 p.c.

Planks and boards were free under the tariff of 1921 and they are free today. There was, of course, 7½ per cent war tax. Planks, boards and other lumber or wood, sawn, split or cut, and dressed on one side only, and so on, were free in 1921 under the three tariffs and they are free to-day.

Gasoline under ·725 specific gravity at 60 degrees temperature, 1921	Free	Free	Free
Gasoline under ·725 specific gravity at 60 degrees temperature, 1925	Free	Free	Free
Gasoline ·725 specific gravity but not heavier than ·750 specific gravity at 60 degrees tenperature, per gallon, 1921	½ cent	¾ cent	1 cent

That is the tariff to-day. There has been no increase there. Crude petroleum in its natural state. It was free in 1921 and it is still free.

Illuminating oils, composed wholly or in part of the products of petroleum, 1921	15 p.c.	17½ p.c.	20 p.c.

The percentage is the same to-day under all three tariffs.

Lubricating oils, 1921	1½ cents	2¼ cents	2½ cents

The tariff is the same to-day. In the case of oils—petroleum—the rates in 1921 were ½ cent in each case. The same rates apply to-day, ½ cent per gallon.

I wish to call the attention of the House to the tremendously high duties in connection with clothing, and clothing of course is one of the necessaries of life especially in this country. I take item No. 563 of the tariff, women's and children's dress goods. This of course was not to be made free according to the Liberal platform, but substantial reductions were promised. This is how the item stood in 1921 and how it stands to-day:

Tariff Items.	—	British Preferential Tariff.	Intermediate Tariff.	General Tariff.
	Women's and children's dress goods, 1921	15 p.c.	21½ p.c.	25 p.c.
	Women's and children's dress goods, 1925	15 p.c.	22½ p.c.	25 p.c.
565	Blankets composed wholly of pure wool	22½ p.c.	30 p.c.	35 p.c.
		22½ p.c.	30 p.c.	35 p.c.
	1925 France and Italy	.....	30 p.c.	less 10 p.c.
568	Undershirts, drawers and knitted goods, n.o.p.	22½ p.c.	30 p.c.	35 p.c.
		20 p.c.	30 p.c.	35 p.c.
567	Fabrics, manufacturers, wearing apparel and ready-made clothing, composed wholly or in part of wool, etc.	30 p.c.	35 p.c.	35 p.c.
		27½ p.c.	35 p.c.	35 p.c.
	1921 France, Belgium and Netherlands	.....	35 p.c.	
	1925 France and Italy	.....	35 p.c.	less 15 p.c.
568a	Socks and stockings of all kinds	25 p.c.	32½ p.c.	35 p.c.
		25 p.c.	32½ p.c.	35 p.c.
	France and Italy	.....	32½ p.c.	less 10 p.c.
611	Boots and shoes, pegged or wire fastened, with unstitched soles close edged	17½ p.c.	22½ p.c.	25 p.c.
		15 p.c.	22½ p.c.	25 p.c.
61	Boots, shoes, slippers and insoles of any material, n.o.p.	20 p.c.	27½ p.c.	30 p.c.
		17½ p.c.	27½ p.c.	30 p.c.
	1921 France, Belgium and Netherlands	.....	27½	

Now the other clause states:

That the British preference be increased to fifty per cent of the general tariff.

I am not going into any specific cases because that has not been done, but I want to say that there is not, as far as I can see, any reasonable excuse for not carrying out those specific and definite pledges to the people of Canada, for the simple reason that the gentlemen drawing up this platform had experience previously both in drawing up platforms and in the government of the country, and understood the financial condition of Canada at the time the platform was drawn up, and if anybody challenges me this morning to provide something constructive I would say that the constructive suggestion I should like to offer to this government or to any other government is that when a government makes definite pledges to the people of Canada they should keep those pledges. There has been ever since 1921 and ever since the campaign a line of argument taken by various members of the government, and members supporting the government to the effect that the Liberal party is the great central party, the moderation party, a party between the two extremes, the high protectionists and the free traders. Well, Mr. Speaker, that may be, but that point of moderation has been shifting considerably. I remember back in 1921 this position was taken by the Prime Minister in his manifesto to the people of Canada. It was taken by the Prime Minister in his speech on the discussion of the budget in 1922. It was taken also by the hon. member for Chambly and Verchères (Mr. Archambault) the other night, and taken by the Minister of Justice (Mr. Lapointe) yesterday; but I wish to say that it is not a justification to say that because the Liberal party stands midway, or claims to stand midway between the high protectionists and the free traders, or the extremely low tariff party, they are necessarily right. They are not right according to the standards set up by themselves, and the definite promises they made to the people of Canada, and there ought at least to be some substantial reason given to the people of Canada as to why these pledges have not been carried out and why the policy has been changed. I wish to say that I believe that the last election should mean something to the government and to the party supporting the government. In this campaign book, the Speaker's Handbook, we have not only the Liberal party platform, but we have the Farmers' platform, and a little further on we

have an article devoted to reasons why the Farmers and the Liberals ought to get together, and having appealed to the people of Canada on the basis of this platform, we have about 117 Liberal members, of course a few of these refused to recognize the platform, but still the vast majority of them stood apparently on the platform, and we have about sixty or sixty-five members in this corner of the House elected on a platform, going not only in the direction of the Liberal platform but a little further, and therefore I claim that there was a mandate given to the government and to the House of Commons to fulfil at least all the pledges of the platform of 1919. I think it would not be unreasonable to say that it should be done in the first session, and it is certainly not unreasonable that after four sessions it ought to be carried out in full. The argument has been advanced that the country needs revenue. Well this statement was met by an argument in this campaign handbook; both the protectionist and the revenue arguments are treated here. I am not going to take time to read from it at any great length. I find in the Handbook an article headed, "Women and Politics," and at page 4, the following:

There are two ways which the country has of raising the taxes necessary to pay its debts. One is by direct taxation which means that every man and woman must pay from his or her income a certain sum annually. If an individual's income is over a certain amount, that individual will easily understand how much he will have to pay by way of income tax. Among working people this income may not be sufficient in amount to be directly taxed, and therefore it may appear to such individuals (who make up, after all, the bulk of the nation) that they are not paying taxes at all. This is a mistaken idea—Every man and every woman pays taxes in some form.

Now regarding the tariff this book says:

Let us suppose therefore that in the United States there is a manufacturer of shoes who can make ordinary wearing boots for $3 a pair. Suppose the cost of selling and transportation of these boots from the United States factory to the consumer in Canada amounts to $2 a pair,' a duty on these goods coming into the country is, say 50 cents per pair, they can be sold in Canada for $5.50 in all. The 50 cents duty goes into the government treasury for the payment of the country's obligations. It is collected at the boundary as a customs duty. The real duty is much higher.

If, in Canada, there is a manufacturer of shoes who can also make the same kind of wearing boots at $3 a pair and if the selling and transportation from the Canadian factory to the Canadian buyer costs also, say, $2 a pair, making in all a cost of $5, yet, nevertheless, he sells the boots in Canada for the same price as does the American producer. He gets $5.50 for the boots, but the difference of 50 cents he puts in his own pocket. This difference is the amount of protection that the home manufacturer gets behind the tariff wall, which shelters him against American competition.

Mr. GARLAND (Bow River): What is the hon. member reading from?

Mr. KENNEDY (Edmonton): The Speaker's Handbook.

Mr. GARLAND (Bow River): Of what?

Mr. KENNEDY (Edmonton): Of the Liberal party of 1921. Then I refer to page 6, of the same pamphlet, "Mr. King against High Protection". This deals with the question of protection and the repudiation of it by the Prime Minister, and also the question of revenue:

Mr. King thinks first of the people and second of the industry. All the people are greater than a few manufacturers. Mr. King stands for all the people. Mr. King is against high protection. In the example of the pair of boots just referred to, Mr. Meighen would stand for the manufacturer getting fifty cents for himself on each pair of boots. That is the tariff should be fifty cents per pair. But Mr. King would say: No—twenty cents a pair is enough. Let the manufacturer have this amount to aid his industry, but let the other thirty cents per pair be allowed to the woman who buys the boots making the price to her $5.20 instead of $5.50. All over the country the difference in these policies on every article to wear, to eat, for the husband, the wife, the children, means millions saved in the homes and incomes of the people, and the manufacturers will still have a fair profit as well.

It means besides, that there is still a tariff on the American boots of twenty cents per pair instead of fifty cents per pair. The twenty cents per pair as duty collected against foreign goods will still go to the government in customs duties. This explains the difference between a tariff for protection and a tariff for revenue.

This is a little different from the 1893 explanation, of course.

But, some one argues, that on such a reduction of duties the customs revenue will fall and the government will fail to get money with which to carry on. The answer is reasonable, lowering of tariff duties means a great increase in trading, a great increase in buying by the consumer because he can get so much more for his money and consequently—

And the rest is in heavy black type.

—a sure increase in government revenue.

But they go further than that. This is the plank resolution on "Financial condition and taxation," and I am going to read just a small part of it. I leave out the various "whereases."

Be it and it is hereby resolved:

1. That the serious nature of the country's financial situation calls for the profoundest consideration of all patriotic citizens—

Mr. SPENCER: What is the hon. member reading from?

Mr. KENNEDY (Edmonton): The National Liberal Convention of August 5, 6 and 7, 1919, the official report:

—and the exercise of the severest economy by the government;

2. That increase of revenue must be sought from an equitable and effective imposition and collection

of graduated taxes, on business profits and income, applicable to all incomes above reasonable exemptions;

3. Taxes on luxuries.

I think we have there an official declaration by the Liberal party that they are ready to go on and give the country a large reduction in customs tariffs, to put a certain number of articles on the free list, and they are certain that the result of that will be an increase of revenue. In any case they know where to go for increases in revenue in case the reduction in the tariff duties should not provide the same. In view of that fact, I have a very strong feeling that they have not kept their solemn pledges made to the Dominion of Canada. I believe it is the duty of a government to do that, not by way of concessions to Progressives or Conservatives or anybody else; but because they have made those pledges, they ought to stand by them or at least to test them out. It is because I believe no serious attempt to go in that direction has been made that I have voted against the various budgets. I did vote for the budget last year, although I voted for the amendment as well.

I wish to say just a little about the amendment. I cannot vote for the amendment. The amendment calls for a reduction in the sales tax. I would like to see a reduction in the sales tax, but I would like still more to see a reduction in the tariff. I believe the sales tax is objectionable in many ways, but I believe the tariff is still more so. It has been argued in this House—and I believe it is nearly correct—that the sales tax pyramids nearly 100 per cent. When customs duty is paid at the boundary on goods coming in the goods will go through very nearly the same selling process as goods on which the sales tax is paid, and we must have pyramiding to the same extent. We must have an equal pyramiding on goods that are manufactured in Canada and on which the manufacturer charges the tariff or a portion of it for his own benefit. Therefore, because at the present time we are apparently being held up on tariff reductions on account of the need of revenue or for some other reasons, I am not in favour of further reductions in the sales tax. I want first reductions in the tariff duties which, in my judgment, are about two or three times as objectionable as the sales tax.

We have an increase in the tariff this year as a result of the government's action with regard to slack coal. We have a small reduction from 53 to 50 cents a ton on certain kinds of coal, and then we have a general increase in the duty on slack coal. I suppose this increase was given as a result of representations made to the government by delegates from Nova Scotia and, I was told also, by someone from Alberta, I believe it was the Premier of Alberta. Possibly the difficult situation in Nova Scotia with regard to the coal-mining industry has been the chief lever in this regard, but I have not seen anything to convince me that this duty on coal is going to relieve conditions there. I believe conditions in Nova Scotia require a thorough investigation, and when the Minister of Labour (Mr. Murdock) and other members of the government argue that it was hardly the right thing for the government to go in and investigate conditions there, I could hardly help thinking they were not using their best judgment. It is a strange, palsied attitude to take—no, we cannot go in and do anything because that is the duty of the government of Nova Scotia. They are the proper authorities, but we come later with a tariff tax on the rest of the people of Canada. Surely if conditions there are as bad as we have heard they are—and I think the convincing arguments have come from those who have been telling of the difficult situation that the miners are labouring and living under—there was justification and urgent need for the government, before doing anything in this regard, to make absolutely sure of their ground and to know where they were travelling. I have been informed very definitely that one of the troubles in Nova Scotia is an increase in overhead through the opening of too many mines owing to the high price of coal during the war, and I suppose the same thing is true with regard to Alberta. All industries in Canada as a result of war conditions had a tremendous increase of overhead and a great many mines like a great many farms were brought under operation which under normal conditions could not exist; and the government owe a duty to the people of Canada, whom they are taxing for the benefit of certain parties in the west or in the east, to make absolutely sure of their ground. I do not think that has been done. I am told that in the province of Alberta one of the difficulties is that a great many mines have been opened up that should have been left untouched. But in any case there is a commission there investigating the whole question, and this action on the part of this government is premature. And in Nova Scotia we have no guarantee that one cent of the duty will ever reach a miner who may be in distress. It seems to me that

there are men at the head of the British Empire Steel who are not worthy to develop industries in this Dominion. What about our friend Mr. Wolvin? We remember some of his operations in connection with the combine on the Great Lakes, and he was referred to somewhat severely by the now Solicitor General (Mr. McMurray) in 1923. This is what the Solicitor General then had to say about him:

> This combine that had the audacity to charge these terrific rates and to impose an illegal and altogether improper insurance on the shipper had the temerity to intimidate the people of Winnipeg. There is a series of interesting telegrams that passed between the members of this combine. They appear at page 19 of the report and I think that in all fairness to those who may come after us they should be placed on Hansard so that there may be no misapprenhension if the subject ever comes up again for discussion. These telegrams display the same intimidating attitude to those who had the courage to appeal to this government for protection against the injustice and the predatory measures practised against them. When one reads and carefully studies this report, when one ponders the evidence, one is appalled at the boldness of these men who secured control of the only shipping channel for our western grain. The name "Wolvin" is significant, and it is difficult for anyone to speak dispassionately and calmly as he realizes that significance in its fullest extent. The nearest synonym that I can suggest for it, if it has any English equivalent, would be the word "wolverine". The wolverine is described as a "voracious, sagacious and ferocious animal", and apparently these men exhibited all these qualities, because they were certainly voracious, they were undoubtedly sagacious, and to the shippers of Western Canada they were beyond any question "ferocious". Hon. members will realize the audacity of this whole matter when they read the telegrams that were exchanged, as disclosed in this report.

I think that in view of the past record of Mr. Wolvin it is not surprising that we hear the reports we do of him and his officers, or that his officers should say that they are willing to "do their worst" and that the men "cannot stand the gaff". It looks as though they were running true to form. It seems to me that these allied industries, in which this Dominion has placed millions of dollars, I believe something like $19,000,000, by way of bonuses, should get no help directly or indirectly until there is a cleanup and the whole business is put on a proper footing, either by means of Whitley councils or some method of that kind, to ensure at least a living wage to the men who are working for the corporation. There is not a millionaire's fortune in Canada or in the United States or anywhere else the saving of which could be justified by such conditions as exist in Nova Scotia. The very first thing that should be taken into consideration in connection with an industry is the question whether or not it will provide a living wage and a decent standard of living for the workmen and their families; and profits and the financial operations of men like Mr. Wolvin ought to be a decided, a far second. I think therefore, in view of the fact that the government has taken this step, that they should not be considered as having justified it by saying that the present affairs are no business of theirs; have we no right under these circumstances to tax the people of Canada unless we are able to do so with a complete knowledge of what we are doing. If on the other hand the duty is to stand I think it ought to be left in such a way as to give the greatest benefit to the greatest number and I do not think that this has been done, because with a drawback on coal coming from the United States to coking plants we shall have, so far as Alberta is concerned I understand, a worse condition than we had before. I am not an expert on the coal business but I have received that information from an expert, and possibly we shall see later on how true it is. It seems to me that if the Premier of Alberta did make representations for a duty on coal he got a little of what he wanted and a great deal of what he did not want.

4 a.m.

A suggestion was made to me a few days ago by the hon. member for Bow River (Mr. Garland) that there was a possibility of raising additional revenue by means of a graduated tax on radios. I believe that the present tax is $1 per annum on every radio, and the boy who makes a small set in town pays the same tax as the man who owns a $500 outfit. There are 100,000 radios in Canada and a graduated tax applied according to the number of tubes, one, two or three as the case might be, might be a fruitful source of revenue. If a boy with a 95-cent set or a man with a $40-set pays $1 per annum and that is considered equitable, then possibly the people who can afford the luxury of a $300-set might be able to pay something a little higher than $1.

The hon. member for Brantford (Mr. Raymond), for whom I have a great deal of respect, said the other day that the Progressives were not satisfied. He seemed to be of the opinion that these few reductions in wagons had been made for our benefit and he thought that we should support the government on that account. I cannot understand the logic of the protectionist who thinks that because he has been allowed to tax the people of Canada 10 or 15 per cent for a period of twenty or thirty years, and because that tax is reduced to 6 per cent, there has been a concession made to the man who has been paying the tax all these years. I believe

that the people of the west are clear thinking enough and vigorous enough to demand complete equity in this matter of taxation, and I trust that they will never submit quietly without protest to being taxed for the benefit of any private individual in the Dominion or elsewhere, unless it is a case of distress.

Mr. ROBICHAUD: If this reduction of taxation from 15 to 6 per cent is not a concession, what is it?

Mr. KENNEDY (Edmonton): It is still taxation of 6 per cent. It is taxation of the man who buys implements for the man who has been selling them. It is still taxation of the private individual for the benefit of the manufacturer, and you have not attained equality until neither is taxed anything for the benefit of the other. If there ever is worked out a system of protection that will protect the home market and guarantee quality and fair prices then you may get acquiescence in it, but not until then, and I do not know of any way it can be done.

Now, I am going to make a few observations with regard to the railway situation, with particular reference to a railway that I am interested in. We are told these days that we ought to ease up on railway construction simply because we have too many railways. I do not think we have too many railways, but I think we have too many in some places. My home is twenty miles from the end of steel, and I am not willing to submit to that argument, particularly when it comes from those who are living in districts where they can hear the sound of an engine's whistle practically any hour of the day or night. It is very easy for the men who live in a city where street cars and railways go past them in all directions to say, "Let us ease up on railway construction." I understand that the investigation that is being carried on by the railway heads is demonstrating that the places where the railways are losing some money at least is in the thickly populated centres through duplication of services that are not required. I wish to support the hon. members in this House who have been pleading for a consolidation of railways, and I believe that ought to be done under national control in order that we may save the people of Canada a great many millions per annum. I was rather surprised the other day when the hon. member for North Waterloo (Mr. Euler) in the course of his remarks on this subject said that the Canadian Pacific should be taken over by the government that consolidation should be effected under national control; to hear the Minister of Railways say that it could only be taken over with the consent of the bondholders. Well, if the bondholders are not willing that the property should be taken over on a fair basis to save the people of Canada $100,000,000 in transportation charges, I do not think they have a right to expect, if a scheme can be worked out, that Canada will continue to pay this $100,000,000 per annum extra in freights and railway service charges in order to allow them to carry on the particular form of organization they desire. If the $100,000,000 can be saved, and the people of Canada are convinced of that, then no government can exist that will not go ahead and try to put it through.

On October 10, 1924, the Prime Minister made the following statement in Edmonton:

> There is north of this city a vast tract of land that is crying out for development. The Peace River country is immense and among the richest in Canada . . . I pledge myself that as soon as it is humanly possible the great Peace River country will be given that means of railways that will bring to the people of that country the outlet that has been so long delayed, and will open up the country.

I believe that that undertaking was made in good faith. I find however that the Speech from the Throne uses much more guarded language; it says that in due course steps will be taken to open up the Peace river, and so on. A few days ago when I asked the Minister of Railways (Mr. Graham) regarding the matter, he said that he found that the question was a difficult one. Now, that is not progress, Mr. Speaker; it is really the opposite of progress. I hope that even though the minister has not disclosed anything definite to us yet, some progress is being made behind the scenes. I may say that I have not been asking these questions to embarrass the minister or the government, but because I represent people who are putting up a heroic struggle to do something in the development of Canada and to establish themselves under difficult conditions. They have come to that stage where it is very nearly a question of life and death with them. We have not any special delight in embarrassing anyone, but I believe the interests of the people who are carrying on that struggle are more important than the comfort of any minister or any railway executive in Canada.

We have, Mr. Speaker, a good country. We have one of the best climates in the country, or as good as any. We have land as rich as there is anywhere, I think, in Saskatchewan, Manitoba or Alberta, or, for that matter, in Ontario. We are geographically situated, potentially at least, very favour

ably. We are practically as near Vancouver as Edmonton is, but with our railway development as it has taken place we are just about twice as far from Vancouver as Edmonton is.

Now, that country was settled in 1910. Previously there was some settlement, but a big inflow of settlers took place in that year. The settlers, of course, carried on for a few years in the hope that the Canadian Northern railway would go through northwest from Edmonton to the Pacific coast. In 1912, after having gone over the Edson trial 210 miles on what the Irishmen call the "mud canal," we met Canadian Northern representatives in the village of Grande Prairie who told us that the very limit of time it would take to get the Canadian Northern through there would be three years, and they were buying options on right of way through the country then. That resulted in a great deal of settlement, but the Canadian Northern is not half way to the Peace river country yet. That country is served by the Edmonton, Dunvegan and British Columbia railway. This line leaves Edmonton and runs northwest to McLennan, 132 miles north and 150 miles west of Edmonton. It forks there, one part running into the Peace river, and then across the river and west through the settlement north of the Peace river for a distance of 23 miles. The other goes directly west through Spirit river, then south to Grande Prairie, running through the Grande Prairie district, a distance of about 25 miles. We are situated 400 miles northwest of Edmonton. In order to get to Vancouver we ought to be able to go south about 200 miles and then directly west about 500, but instead of that we have to go southeast to Edmonton about 400 miles, south to Calgary another 200, and then west 650 to Vancouver. The Grande Prairie country is about 400 miles north of the international boundary, and it embraces the Grande Prairie district about 80 miles in length, and of an average width of from 30 to 40 miles. Grande Prairie is densely settled. There were no Canadian Pacific or Hudson bay lands in that district, so that everything has been taken up; and the same is true of the district north of Peace river, where we have a territory about 70 miles in length and 15 to 20 miles in width. Then we have that other prairie in the constituency of my hon. friend from Cariboo, the Pouce Coupé district. I want to endorse what the hon. member for Cariboo (Mr. McBride) has said about the difficulties of the settlers in that district. They are still 60 miles from a railway, and some of the people in the Grande Prairie district and north of the Peace river are from 10 to 45 miles from a railway. I have seen cattle shipped out from Pouce Coupé, raised to the age of two years, driven 65 miles, and still a liability of 25 cents a hundred on the hands of the farmer who raised them. It cost then—in 1922—one dollar a hundred at the very least to ship cattle from Spirit River to Edmonton, and I have seen those cattle, after having been raised on Pouce Coupé and driven sixty miles to the railway, shipped to Edmonton at one dollar a hundred, and sold on the Edmonton yards at 75 cents a hundred. It is no wonder that we say the settlers there have carried on a heroic fight and it is no wonder that they are looking for some relief.

There is only one possible real solution of this question so far as the Peace river country is concerned, and that is a direct outlet to the Pacific and we ought to be in a position to-day to get a decision on that matter. We have spent during the last two years a total of $125,000 for surveys. I have stated in this House that I thought the route down to Brûlé or some point on the Canadian National east of the mountains was the best route but now that these surveys have been made we must, of course, allow the engineers of the railway to determine which is the better route. We have had surveyors working on this question for two years, at a cost of $125,000, and I think we should know what the decision is. The Canadian Pacific railway has been in that country for five years and they also have done some surveying, and I say we ought to be in a position to get a statement from the Minister of Railways as to what the intention of the government is. It is very important that the proper route be decided on because though we have four hundred miles of railway running from Edmonton north to the Peace river country, yet there is much well developed arable country not served by local branch lines. It is not wise to develop those branch lines until the outlet to the Pacific coast is determined on and laid out, because you cannot lay them out wisely so that they will fit in with the general scheme until the outlet has been decided upon. Furthermore, it is very important that we get an immediate decision. I think that ought to be available after the money we have spent on surveys and after the work the engineers have done.

Mr. CAHILL: I understand my hon. friend to be advocating the construction of a line from Peace river to the Pacific coast, and that such construction would be very important to his constituency. Does he think that by criticizing the government and saying that the government will not keep their word he is acting in the best interests of his constituents?

Mr. KENNEDY (Edmonton): I have not said the government will not keep their word. What I did say was that they have not carried out their pledges. They may do so some time in the future, next year, for instance.

Mr. CAHILL: What is the difference?

Mr. KENNEDY (Edmonton): I would say to my hon. friend that I am not willing to shut my eyes to facts. I want to face the facts, and I would like the government to do the same. I hope the government will face the railway issue and the tariff on their merits. My criticism, if it is founded in fact, should have no bearing at all on the question of whether that outlet will be built or not. I am not willing to bargain my support for a tariff if I think it is wrong, or to give my support for the sake of getting something else.

Mr. CAHILL: Does my hon. friend think the best course to take in order to get this railway is to vote the government out?

Mr. KENNEDY (Edmonton): I remember when we came into the House of Commons first, the hon. member for East Calgary advocated that we should vote on questions on their merit, without involving confidence or no confidence in the government. I supported that view, and I still believe in it. My hon. friend, I believe, and those around him voted to call almost any adverse vote on any government question a vote of want of confidence. That is a difficulty we are facing. I want to tell my hon. friend that I am not willing to submit to that rule. I have protested against it, and if it lands us in difficulties we shall have to face them. In the meantime I am offering my criticism to the government for what it is worth, and I intend to stand by my convictions in the matter. If the government is going to make it a personal matter, I cannot help that. I am not dealing with this matter on a personal basis at all. I am acting in what I believe to be the public interest. I may be wrong, and it may be that the people of my constituency will think it will be better to elect somebody else who will support the government through thick and thin, right or wrong, to get certain things. But I cannot do that; I am not doing it now, and I do not intend to do it.

Mr. Speaker, the Peace River district is only part of my constituency. I represent an area about half as large, I believe, as the province of Alberta. The people in the Peace river district are hanging on, and I say that it is not fair to keep them hanging on, if we have got the facts, without letting them know what we are going to do. They have gone into that country about three hundred miles back from a railway, and have freighted their supplies in there for the first few years. During the last few years most of the men hauling out wheat have been hauling it out over trails from thirty to forty miles long. They have been doing that in the hope that something better was coming, and I think it is only fair that the government with the facts in its possession should come out definitely and state its policy, whether it intends to do anything or not.

Mr. GRAHAM: Which government does my hon. friend refer to;—The government of Alberta that has leased to the Canadian Pacific the Edmonton and Dunvegan, in whose hands rests the transportation so far as that country is concerned, or the federal government which has no control over the Edmonton and Dunvegan whatever?

Mr. KENNEDY (Edmonton): I was not informed until now that the Alberta government had re-leased to the Canadian Pacific.

Mr. GRAHAM: I say there has been a lease for several years. It does not expire till July. I thought my hon. friend was referring to the Alberta government giving its decision about a lease.

Mr. KENNEDY (Edmonton): That is a fine point.

Mr. GRAHAM: No, it is not; it is the truth.

Mr. KENNEDY (Edmonton): I want to tell the minister that the present arrangement with the Canadian Pacific will not save that country, and what this government has to consider is whether that country is worth saving or not. If the agreement with the Canadian Pacific terminates in the near future, if the Canadian National go into that territory, there is no question about the Canadian Pacific being able to make some arrangement with the Canadian National to give us direct connection, or they will have to get out and let the Edmonton and Dunvegan railway fall into the National Railways hands. They could not possibly compete with the route to the west. You may say: let us use the present route and save the additional capital expenditure. Well, there is something to be said for that, but unless it is possible to give us a decent reduction in freight rates, the thing is hopeless. The real question back of this whole business is this, whether this Peace river country is

worth saving and worth developing. Men who have been hauling wheat thirty and forty miles for years begin to feel old age creeping upon them very, very fast. When men go into a country some distance from a railway, they go in there with the hope that a railway service is coming. They have been promised it in days gone by, and I think that the government ought to decide in the very near future whether or not they are going into that country. Under present conditions I do not think the Canadian Pacific can possibly help us out. The main line of that company runs to our natural exporting port at Vancouver, but it involves travelling by Calgary and over the high grades in the Rocky mountains. The Canadian National railway is two hundred miles nearer the Peace river country and it has favourable grades through the mountains. That territory is therefore a natural territory for the Canadian National. I wish to give some figures regarding freight rates between Alberta points and Fort William and Vancouver:

Freight rates from—	To Fort William per 100 lbs.	To Vancouver per 100 lbs.
Edmonton-Calgary	26 cts.	22½ cts.
Lethbridge	25	23½
Grande Prairie	43	39½
Sexsmith	43	39½
Spirit River	42½	39
B rwyn	42½	39
Wembly	44	40½
Whitelaw	43	39½

I have also a statement regarding traffic originating in the Peace river country. It is as follows:

DOMINION BUREAU OF STATISTICS—TRANSPORTATION BRANCH, EDMONTON, DUNVEGAN AND BRITISH COLUMBIA RY.

1924	314,626	49,395	364,021

In spite of the fact that we have been losing a large part of our population traffic is increasing. The reason, of course, being this: In a new country it is very difficult to produce a large amount per capita for a few years until buildings, wells, fences and so on have been conveniently built. After the settler gets to that stage he can increase his production, especially in a good year. I would have nothing to say if the Canadian Pacific Railway could and would give us a direct outlet, but it can operate the Edmonton, Dunvegan and British Columbia railway, only in connection with its line to Edmonton or Calgary. Therefore it can never in my opinion do anything than fight for very high freight rates, rates that place us at a tremendous disadvantage with the rates granted to the rest of the country. Therefore, I say it is the conviction of men who are farming in that district and will have to pay those rates that we will have a very difficult time unless a line is built directly to the Pacific coast. The Canadian National is comparatively close to the Peace river country as compared with the Canadian Pacific railway, therefore, I think it is the duty of the former system to solve that problem. I think that if they do they are bound

to take over under some arrangement the Edmonton, Dunvegan and British Columbia railway because I do not see how the Canadian Pacific can handle it. I want to say this much further: Owing to unnecessary mileage having been built in days gone by through a wrong location, I fear we will have to face the problem of possibly taking some loss in connection with it. But I also say the counsel that because we have made mistakes in the past we should tie ourselves up and do nothing in the future is the counsel of despair and a hopeless counsel for this Dominion. It is up to us to learn wisdom from our past mistakes and past successes, and try to apply that knowledge in the solution of the future problems of the country.

I notice that the hon. member for Brome (Mr. McMaster) is in the House, and there is one other thing I wish to refer to before I sit down. That will involve going back to the tariff again. A statement has been made that the reductions in the duties on implements were about 83 cents per half section to the farmers of Canada. The hon. member for Brome challenged those figures, and I think he was justified in making the challenge. Apparently the sacrifice in duty, so far as the government was concerned, amounted to 83 cents. However, I have a statement here which was prepared by one of the government departments which I wish to place on Hansard. It will speak for itself:

COMPARATIVE STATEMENT SHOWING THE BENEFIT TO THE FARMERS (a) OF CANADA (b) OF THE THREE PRAIRIE PROVINCES BY THE REDUCTIONS IN THE TARIFF ON AGRICULTURAL IMPLEMENTS IN SESSION 1924.

STATEMENT No. 1—

Duty on dutiable farm equipment entered for consumption from April 1st to October 31st, 1923 and 1924 for all Canada.

Value	Duty	Percentage of Dutiable goods
	1923	
		%
$5,644,528 (free 3,684,418)	$ 814,331.01	14·4
	1924	
$3,156,986 (free 1,697,896)	$ 306,836.57	9·7

On imports of all dutiable agricultural implements valued at $3,156,986, April 1 to October 31, 1924, there was a reduction of duty of 4·7% or an actual reduction of duty paid by the farmers of the whole of Canada of $148,378.

By return to E. J. Garland acres in field crops	57,230,534
half sections	178,845
saving per half section	$0.83

STATEMENT No.2

Duty on dutiable farm equipment entered for consumption from April 1 to October 31, 1923 and 1924 for Manitoba, Saskatchewan and Alberta.

	Value		Duty	%	
		1923			
Manitoba	$ 1,767,320	(free $787,095)	$ 260,347.40	14·7	
Saskatchewan	2,184,635	(free 1,433,465)	321,595.43	14·7	
Alberta	610,940	(free 313,820)	84,184.95	13·7	
	$ 4,562,895		$ 666,127.78	14·4	average
		1924			
Manitoba	$ 853,259	(free $432,248)	$ 85,409.80	10·0	
Saskatchewan	979,994	(free 524,279)	97,795.39	9·9	
Alberta	346,722	(free 140,807)	34,640.27	9·9	
	$ 2,179,975		$ 217,845.46	9·9	average

So it will be seen that the saving to the farmers was three times 83 cents or about $2.49 per half section. The figure of 83 cents was given for a half section, and the figure of $2.49 would be for a half section also. I may say that that statement would be pretty well

borne out by a statement made by the Minister of Finance (Mr. Fielding) who I regret is unable to be with us. This statement is to be found at page 3151 of Hansard of 1921 as follows:

> But it must be remembered—and economists, I think will agree—that the saving you make in a case like that is not to be measured only by the amount that you did not pay into the Customs: you have to take into account also the check that was put upon the rise of prices at home, and that for every dollar saved to the people in that direct way probably two dollars were saved in the difference between the prices prevailing and those which would otherwise have been charged by the home manufacturer.

Mr. BOYS: In making a few remarks an hour ago I referred to the discussion on the canteen fund, and stated, that I had only been able to find one day, March 5, on which 38 columns of Hansard were occupied in dealing with it. I did say that I was not certain that I was right. I have since found I was wrong and in justice to my hon. friends opposite I want to put myself right. I find that on March 24, 67 columns were occupied in dealing with the canteen fund out of a total of 114 columns on that date. On March 25, Wednesday, a half day, 37 columns were occupied out of a total of 52. I think it is only right that I should correct myself and not leave a false impression.

Mr. JOHNSTON: Now that the whip of the Conservative party has risen to a question of privilege, I do the same, and I would like to explain to the House that as there has been some discussion as to the time occupied by the different members of the different parties of this House I think it is only due to members of the Progressive party that I should give the figures and place them on Hansard. The Liberal speakers up to last night numbered 46. They used 838 columns of Hansard, or an average of 18.2 to the speaker. The Conservative speakers numbered 26, using 629 columns, or an average of 24.1. The Progressives, of which party I have the honour to be the whip contributed 25 speakers, who used 382 columns of Hansard, or an average of 15.2. The Independents, which number 13, and one member I believe who is not connected with the 13, contributed 7 speakers, using 175 columns of Hansard, with an average of 25 columns. I think it is only due to the members for whom I have the honour to act that I should give this statement to the House.

Mr. ROBERT GARDINER (Medicine Hat): I recognize the fact that this debate has been continued to an extensive length, but notwithstanding that fact, Mr. Speaker, and the fact that it is almost breakfast time, I still feel it is my duty to make some remarks upon the budget, even at this early hour of the morning. So far as I am personally concerned, I am very greatly disappointed at the budget. After the government last year made some slight reductions I had hoped personally that they would continue along those lines and that this year we would get some substantial reductions that would be really worth while; but unfortunately the government have not seen fit to give us any reductions worth mentioning. Since this House met in session this year I believe the Prime Minister has made the statement that the reductions made last year have been a great success, but he has also made the statement that notwithstanding the fact that he recognized that those reductions were a great success, we must still pause to see how much this success really amounts to. One would naturally think that when a person or a government had been successful in any line of endeavour they would continue upon that line and reach a greater success, but that does not seem to be a propensity of this particular government, and under those circumstances naturally we feel very much disappointed. I quite recognize the fact, Sir, that the protectionists in Canada are very active in pressing their demands. They can readily mobilize, they can get the ear of the government very quickly and press their demands to an ultimate conclusion. But there is one point to which I should like to draw the attention of our protectionist friends, and that is this: That while they claim they are entitled to the home market and claim also that because of the fact they are entitled to the home market they should receive such a protection as would ensure that home market for them; yet I have never heard any of the protectionists make any suggestion to put into effect a policy that while they control the prices, they would see to it that they do not take undue advantage of the protection Canada affords them. We also find our protectionist friends telling us that protection will provide employment and good wages for our workmen. This seems to be a somewhat ridiculous claim, because if you will look the world over you will find that in some of the highest protection countries in the world they have the greatest unemployment, and furthermore, if we ever go to free trade England, we find they have unemployment there, and consequently it does not seem that the question of protection or free trade is a great factor in providing employment for the people of the various countries. There is one point that always appeals to me when I hear our protectionist friends discussing the question of adequate protection, and that is this: That in my judgment pro-

tection has absolutely failed to protect the purchasing power of the people in Canada. And in my judgment I believe also that the question of the purchasing power of the people of Canada is a bigger factor to-day than the question of protection or free trade is. At the present time naturally we pay some attention to the question of the purchasing power and the distribution of that purchasing power, and I am satisfied that our industries will never meet with the success that they should until this problem is solved. We find also our protectionist friends pointing to the United States and telling us what a great success protection has been in that country. They maintain that conditions in the United States at the present time have been brought about by the extraordinarily high protection that the United States affords to its manufacturers, and when the Speech from the Throne was being discussed on February 10, 1925, the hon. member for Vancouver Centre (Mr. Stevens), in referring to the United States, made the following statement:

> And with a 4,000-mile boundary and a tariff three times as high as ours.

In the first place the hon. gentleman's imagination runs away with him when he mentions the boundary line between Canada and the United States, but when he mentions the question of the tariff being three times higher in the United States than in Canada his imagination goes out of bounds altogether, and I propose to give to the House to-night the actual figures in that regard. I desire to give the House and to place on Hansard a comparative statement, in so far as the United States of America and Canada are concerned. The first item that I want to bring before the House is the duty collected in both of these countries. In Canada in the year 1921 there was collected a total duty of $179,667,683. The population at that time was 8,788,483. That meant a per capita duty collected in Canada for that year of $20.44. In the United States for the same year the per capita duty collected was only $2.86. In the year 1924 the per capita duty collected in Canada was $14.65 and in the United States only $4.86.

I have another table here which is very important and interesting and which deals with the average rate of duty on dutiable imports. In the year 1921, the average rate of duty on dutiable imports was 21.20 per cent in Canada and 20.30 per cent in the United States. Therefore, hon. members will notice that the average rate of duty collected on dutiable imports in that particular year was greater in Canada than in the United States. When we come to the year 1924, we find conditions somewhat changed, but this is applicable only to last year's business. In 1924, the average rate of duty collected in Canada was 22.85 per cent and in the United States it rose to 35.51 per cent. Another point with regard to these duties as between Canada and the United States and which we must recognize, because it is very important, is the average rate of duty on total imports. That includes the free, of course, as well as the dutiable imports. In 1921, the average rate of duty on the total imports into Canada was 14.49 per cent, and on the total imports into the United States it was only 8.43 per cent. In 1924, the average rate of duty on total imports into Canada had risen to 15.13 per cent, and on total imports into the United States it had risen to 15.33 per cent. That means to say that the average rate of duty collected in the United States last year was only .20 per cent higher than the average rate of duty collected in Canada. That, of course, leads us to believe that, while on certain imports going into the United States, the rate of duty is much higher than the duty on goods going into Canada, the United States has a much larger free list than we have in Canada, and the tax payers of the United States are, to all intents and purposes, not paying much higher import duties on the average imports into that country than we are doing in Canada. Therefore, when our protectionist friends point to the United States as an example of prosperity, we must believe there is some other factor connected with their prosperity that is not within the scope of the protective tariff. I will place this list on Hansard and hon. members will find at the bottom explanatory notices which will give the references for the various items. The list is as follows:

COMPARISON OF AVERAGE RATE OF TARIFF DUTIES CANADA AND UNITED-STATES

—		Duty	Population	Canada	U.S.A.
		$		$	$
Duty collected per capita					
1921	(g)	179,667,683	8,788,483	20.44	
1921	(a)	308,025,102	107,833,284	.....	2.86
1924	(h)	135,134,894	9,226,740	14.65	
1924	(b)	545,012,115	112,078,611	.....	4.86
		Duty	Imports	p.c.	p.c.
Average rate of duty on dutiable imports					
1921		$179,667,683	(i) 847,561,406	21·20	
1921		308,025,102	(c) 1,517,000,000	.....	20·30
1924		135,134,894	(j) 591,299,094	22·85

Mr. WHITE: Can the hon, member give the House the per capita imports for Canada and the United States for the same years?

Mr. GARDINER: I was coming to that next. The hon. member for Vancouver South (Mr. Ladner), when speaking in this House a few days ago, purported to give certain figures with regard to imports and exports. I called his attention at that time to the fact that, in my judgment, they were incomplete and did not disclose the actual situation. I, therefore, went into the matter and I have this information to give to the House. This deals with the per capita imports and exports of the United States and Canada. Last year the exports from the United States amounted to $40 per capita, that is, taking the population at 112,000,000. The imports into the United States amounted to $32 per capita. Therefore, we see that the United States last year exported more than they imported to the extent of $8 per capita. Last year the exports from Canada amounted to $118 per capita, that is figuring a population of 9,000,000, and the imports into Canada amounted to $88. Let us take the percentage of imports to exports in the United States and Canada. We find that in the United States they imported 80 per cent of their exports, or in other words, they imported four-fifths of the volume of their exports. In Canada the percentage of imports to exports is 75 per cent. That is to say that the Canadian people imported less per capita on a percentage basis than did the people of the United States. Consequently, we must come to the conclusion that it is not high protection that is making the United States prosperous. The reference to these figures will be found in the Commercial Intelligence Journal of March 14, 1925, and for Canada in the Department of Customs and Excise.

Many members in the House, in discussing the budget during this session, have suggested the possibility of imposing an export duty on certain raw materials leaving Canada. They have maintained that it is essential that we should manufacture practically all our raw material in this country if possible and they have pointed to the United States as an example of a country that is manufacturing to all intents and purposes its raw material and exporting the surplus of the manufactured product. I am going to quote again from the Commercial Intelligence Journal of March 14, 1925. This deals in groups with the exports of the United States

for the year 1924. The first item we have amongst these export figures is:—

Article	Amount	Percentage of total exports to United States
Crude materials for use in manufacturing	$1,326,285,567	29.49
Foodstuffs in crude condition and food animals	302,135,202	8.72
Foodstuffs partly or wholly manufactured	575,036,612	12.76
Manufactures for further use in manufacturing, that is to say, goods only partly manufactured	610,553,785	13.58
Manufactures ready for consumption	1,588,183,340	35.30
Miscellaneous	6,555,533	.15

This shows conclusively that the argument put up by our protectionist friends, that we should manufacture all the raw material we can produce in Canada, does not hold in the great protectionist country to the south of us, where as a matter of fact the manufactured goods ready for consumption amount to only 35.30 per cent of the total exports. I think therefore that we should pause to consider whether we should put an export duty on certain raw materials, or to impose an embargo as the case may be, in view of the fact that a large percentage of all the exports of various countries go out in the form of raw materials, and this for the reason that the people who purchased raw materials demand them and will procure them no matter from what source.

Mr. DICKIE: How much raw material, of the kind with which our argument was concerned, is shipped out of the United States, such as wood and wood products? And the hon. member must remember that this is not a yearly crop.

Mr. GARDINER: I have not the figures in regard to that item; the statement just gives all crude materials.

Mr. DICKIE: These particular materials are not an annual crop.

Mr. GARDINER: The Acting Minister of Finance (Mr. Robb) brought down an amendment to the Dumping Act. As already stated in the House on more than one occasion, the minister proposes to withdraw this amendment and allow the act to stand as it is at the present time. While personally I believe in the greatest freedom of trade that we can possibly get in this country, I am just as satisfied of the fact that so long as this Dumping Act remains on the statutes it will be idle for the people to think that they are getting any reductions even when such reductions have ostensibly been made. So long as the department has the opportunity of enforcing the Dumping Act just as they see fit then I am satisfied that any reductions that are made in the duties will be of very little avail.

5 a.m.

I am not of course in the confidence of the Acting Minister of Finance and consequently I do not know what reason he would have for withdrawing the amendment to the Dumping Act. Possibly some pressure may have been brought to bear upon him; but whatever the reason may be I feel satisfied that he is doing the right thing in withdrawing it and I should be still further satisfied if the Dumping Act were put in such shape that it could not be applied by the officers of the department as they saw fit or to suit their particular mood.

The government proposes to establish a tariff board, or rather to employ certain men in the departments to go into the whole question as to whether it is desirable to raise or lower the tariff as the case may be, as circumstances warrant. There is just one point I want to raise in this connection and that is this: if these employees of the different departments are merely to keep the information to themselves or give it only to the Minister of Finance or the government, then the tariff board will be of very little use to the people of the country. I maintain that so long as there are employees of this description in the service of the people, and so long as they are paid to perform a certain duty, which in this case would be the securing of information, the members of this House should be just as much entitled to that information as any member of the government; and I shall never be satisfied, if we are to get justice in this regard, unless the information is forthcoming from time to time. It is quite true of course that the protective tariff is very advantageous to the manufacturing industries of Canada. But how does it affect the agricultural industry, which after all is a highly important one? Many hon. members seem to forget the importance of that particular industry, and we must therefore examine the situation to see how protection affects the farmer. It may be true that in some few cases of no great importance the farmer may derive some benefit from certain protective duties. But I am satisfied that in the long run the Canadian farmer has to bear the brunt of the protective system, which can be so manipulated that eventually the burden will rest upon the shoulders of the agricultural community. They are the ones who have to bear the largest portion of the protective tariff.

I have said that agriculture is a very important industry in this country and I am going to quote a few figures from the De-

partment of Customs and Excise, being a summary of the Canadian trade for the twelve months ending March 1925. The total exports from Canada last year amounted to $1,069,067,353, while the export of agricultural products totalled $606,330,292, the exports of all other products being $452,737,061. In other words, the agricultural exports of Canada last year were in excess of all other exports to the extent of $143,593,231. So that the percentage of agricultural exports, in relation to the total exports from this country last year, was 56 per cent. Of course, some of these agricultural exports were partly manufactured, and that added to their value. Nevertheless we must recognize that those products have their origin on the farms of Canada, and just so long as agriculture is responsible for the exportation of such a large volume of commodities in comparison with all other commodities produced in Canada, then it is only fair that agriculture should be given due consideration. But when we come to consider the tariff duties in force in this country I can say very emphatically that agriculture has never been given the consideration it should have received.

I wish to refer for a few moments to the conditions of western agriculture, because that is primarily what I am interested in. I think it can be stated that, taking it by and large, the farmers of western Canada are producing at a loss. Just what the extent of that loss may be it is very hard to determine. I am aware, of course, that in certain favoured districts during the last year where they had the good fortune to have heavy grain crops, some of the farmers—and the phenomenal rise in the price of grain was also an important factor —did very well. But we cannot deal with isolated localities; we must deal with average conditions, and I believe we are justified in saying that on the average the grain crops of Canada last year were produced at a loss.

So far as the constituency I have the honour to represent is concerned, I would like to direct attention to the conditions in that part of the province. True, they have similar conditions in other parts of the province. This land was thrown open for settlement about 1908 or 1909. It was advertised to the world as land fit for settlement, capable of producing good crops, grain, fodder and so forth. While it is true that the first few years we were in there the conditions were fairly good, in recent years the land has not been as good for agricultural purposes as we anticipated, and as we were led to believe. Before this land was thrown open for settlement I understand that the officers of the Department of the Interior used all the persuasive powers they could exert upon the minister to advise him against the opening up of this section of country on the ground that it was not first-class agricultural land. Remembering the fact, therefore, that the minister opened up this land against the advice of the officers of his department, we must hold the government responsible for the mess that that part of the country is in. I have travelled through practically the whole of my constituency during the last two years, and I can assure you that I have seen some heartrending scenes. For instance, last fall I was on a trip and I went down to see some people with whom I was fairly well acquainted. I found that they had left the district for good. This couple came from the United States after reading the advertisements sent out by the Department of Immigration. They have buildings on that place to-day that I will guarantee could not be built in these times for less than $20,000, and the investment they made in that property represented their entire saving of a lifetime. They are now an old couple, and last fall they left that district and the man went out to find a job. That is one of the isolated cases, and it is but representative of thousands of similar cases in that part of the country. The question that arises now is, what is the government going to do about it? The federal government cannot escape the responsibility, having invited those people there. Not only is there a large capital investment in the farms themselves, but there is a tremendous investment in the towns and villages, so much so that the people in business there have been in the same unfortunate position as the farmer that is to say, they have lost everything they put into their business. I sincerely trust that the government will give some consideration to this question, because it affects a very large portion of the south-eastern corner of southern Alberta as well as a portion of Saskatchewan. In justice to the people who are still there and desire to make a living there, the government should endeavour to find out what this land is suitable for and by what method those who are in that country can attain some measure of success. I am satisfied that the land is good for something, but the people have not the means for carrying on experiments to find out what it is fitted for. I trust the government will lose no time in looking into the matter.

Mr. LEWIS: What is the rainfall in that district?

Mr. GARDINER: It varies from eleven inches up to twenty. Of course it is sometimes less than eleven inches.

Now, the farmers of the west have been advised to go into mixed farming. The country I represent could go into mixed farming because fodder corn can be grown there without any difficulty. But very few of the people know anything about the growing of corn, and if the government could give some lead in that respect, I am satisfied we could work out a system of agriculture that would be satisfactory in that district, and produce a tremendous volume of agricultural products. But when we attempt to go into mixed farming, when we attempt to milk cows for the cream and butter we can get, the government comes along and puts a tax on the tickets we use in that connection. During the last few days I have had more telegrams in regard to that matter than I have been able to read. The eastern farmer can deliver his own milk or cream to the factory, but in western Canada the factories are few and far between, and sometimes we have to ship our cream very long distances by express. That entails heavy expenditure to the farmer who is selling the cream, but on top of the express rates the government imposes this tax to which I have referred. I suggest that the government should give this matter also their attention and see if some remedy can be effected.

In my judgment the farmers of Canada are faced with many problems which are just as important as the tariff problems. I am satisfied of this fact, that while we might get substantial reductions in the tariff, which would be appreciated, at the same time those reductions would hardly begin to solve the problems that we farmers have to meet. If you take price levels say just prior to the war and compare them with price levels today, you will find that in so far as manufactured goods and services are concerned, the prices of manufactured goods to-day are much much higher than the prices of agricultural products, and this has been the case for quite a few years. I feel that until such a time arrives as we can get price levels more equalized than they are to-day, agriculture is going to have a very strenuous time in Canada, and just so long as agriculture is having a strenuous time, industry in Canada may also expect to have a strenuous time.

The position the farmer is in is something like this. When the farmer has worked hard and produced some agricultural product, when that product is ready for the market he looks for a buyer. When he finds someone who is willing to buy his product, what is the question that he asks the buyer? It is this: What is the price you will pay me for this product? If the farmer sells his product and gets the money for it, he no doubt goes to the general merchant to buy something that is required for the farm or the home, as the case may be, and when he sees what he requires in the store, what is the question that the farmer asks the storekeeper? It is this: What is the price? So that the farmer is in the unfortunate position that both when he sells and when he buys he has to ask that same question, what is the price? And just so long as the farmers are content to stay in that position, agriculture will never be prosperous. It is impossible for it to be prosperous under those circumstances. I will guarantee there is no business in Canada except farming that could exist for twelve months if it was placed in that same position the farmer is in of having to ask both when he buys and when he sells, what is the price?

That brings us, of course, to the problem, what are the farmers going to do under these circumstances? We have attempted in western Canada to do something to deal with this particular question. We have organized our co-operative selling organizations for the purpose of the better marketing of the products of the farm. True, we have not them organized as extensively as we would like, but we are proceeding very satisfactorily, and I am hoping to see the day when these co-operative selling organizations will have in them every farmer in western Canada, in fact, every farmer in the whole Dominion. When that day arrives, Mr. Speaker, we can expect something worth while to happen, because when the farmer gets into that position where he will be selling co-operatively, instead of individually he will be in a very different position from what he has ever been in before in the history of this country or of any other country in the world, for he will be in the position of having something to say as to the price of the commodity he has to sell. He will also have something to say as to the price he will pay for the commodities he has to buy. We will then be in a position to say to our manufacturing friends: Now we will exchange the products of the farm for the products of the factory on the basis of the units of labour contained in the various commodities, and on no other basis at all. I am satisfied of this fact, that to-day when the farmers of Canada exchange the products of the farm for the products of the factory they are giving at least five to six units of labour in exchange for manufactured products that probably contain only two and a half to three units of labour, and just so long as the farmers remain in that unfortunate position

those who have exploited them in the past, and who are to-day exploiting them, will continue to do so until the farmer in self-defence joins the co-operative selling organizations and does his selling co-operatively instead of individually. In my humble judgment there are greater possibilities so far as agriculture is concerned in these co-operative selling agencies than in almost any other thing I know of, and I am trusting and hoping to live to see the day when that idea will be brought to full fruition, because Mr. Speaker, I expect to enjoy a good laugh at the expense of our manufacturing friends, who have been exploiting us so handsomely and for so long.

I would like to give the House a little information with regard to the price of agricultural products, and to show to the House if I possibly can why it is that the purchasing power of the farmer to-day is to all intents and purposes gone, and why it is that industry also of course is beginning to feel the pinch as severely as it does at the present time. In the year 1918 the total value of agricultural products amounted to $1,881,718,000; in 1919, $2,109,291,000; in 1920, $2,011,201,000; 1921—and here you will note a tremendous drop from the previous year—$1,383,958,000; 1922, $1,389,289,000; 1923, $1,350,096,000; 1924, $1,453,368,000. Now if you examine those figures very closely you will find that the purchasing power of the farmer in 1924 as compared with the year 1920 dropped about $700,000,000, and when you find the purchasing power of any class in this country drop to the extent of $700,000,000 you can readily understand that all the other industries in Canada are going to feel the effect of that drop. That is the trouble that we find our farmers are up against to-day, and just so long as they lack purchasing power, just so long may we expect the privileged interest of Canada to come knocking at the doors of the government asking for higher protection in order that they may be able to get a little more profit if they possibly can. But that in itself is no solution. It will not solve the problems that we have to meet, and we will have to meet those problems in a different way and in a way that will be more equitable to all. We have heard a good deal of discussion since the budget was brought down as to just what is the national debt of Canada. It is very hard to find out just what that debt is. The experts that we have heard in this House all had different figures; and when we find that experts disagree we can hardly expect the ordinary member of parliament to be able to determine what the actual debt of Canada is at the present time. But the point I wish to make this morning is that we have a great national debt, growing a little it is true all the time. What are we doing to try and meet that national debt? No provision is being made at all for the liquidation of the national debt. We are making no provision for any sinking fund that I am aware of, nor in any other manner whatsoever, to meet the great burden that we have now upon our shoulders. I am satisfied of this fact, however, that the people of Canada are expecting this government, or some government, to start and look into this question of trying to meet our national debt and doing so at the very earliest opportunity.

The hon. member for Portage la Prairie (Mr. Leader) when he spoke earlier in this sitting gave some figures with regard to the cost of certain departments of the government of this country. I have here a rather extended statement which shows the comparative costs of parliaments and the cost of government generally in Canada. Let me say here, Mr. Speaker, that I am in no hurry and if any other member of the House wishes to speak I will be glad to wait for him.

Mr. SPEAKER: Order, order.

Mr. GARDINER: We will take the cost of the federal government to begin with. There is paid $384,000 in indemnity to the senators, and $950,000 in indemnity to the members of this House, or a total of $1,334,000, as taken from the estimates of 1925. In addition to that we have nine lieutenant-governors, and their salaries cost this country $91,000 per annum. That figure is also taken from the estimates of 1925. The total cost of the various legislatures—and I only have the figures for 1921—amounts to $2,749,339. Take all these figures that I have mentioned and add them together, and we have a total cost of $4,083,339, or a cost per million of the population, taking the population at nine millions, of $453,704 33. Now let us look at Great Britain where we have the Mother of Parliaments. Great Britain has a population of 45,000,000. Its parliament comprises 615 members. The indemnity of members in Great Britain is £400. Reduced to dollars and cents the total indemnity in Great Britain amounts to $1,197,202, or a cost per million of population of $26,604.45 as against $453,704.33 in Canada. Those figures are well worth the consideration of any hon. member of this House.

Now let us see what the cost of government is in Canada. This is the federal expenditure for 1922-23. The total expenditure, less capi-

tal, was $424,645,217, in the provinces $130,887,303. In the municipalities, that is to say municipalities containing a population of 1,000 and upwards, the total cost of municipal government amounted to $247,255,345. Taking all these different forms of government we have in this country it cost the Canadian people for these legislatures $802,787,865. If we take our population again at nine millions we find it cost $89 per capita for government in Canada, or $445 for the average family of five. That is what it costs us for the various forms of government that we have in this country.

Now let us take a comparison of the cost of federal cabinets. We will again assume that the population of Canada is nine millions. First we have a governor general who receives a salary of $50,000; we have 18 cabinet ministers, one receiving $19,000 and 17 receiving $14,000, a total cost of $257,000. Adding these two items together we find that our federal cabinet costs us $307,000. The cost per million of the population is $34,111. That is for the federal cabinet alone. Now let us take the United States. The president receives $75,000, and there are twelve cabinet ministers at $12,000. The amount paid to the twelve is $144,000 or a total of $219,000, as against an expenditure in Canada of $307,000. The cost per million in the United States is only $1,991, as against $34,111 in Canada.

Now let us take our other services, say for instance our deputy ministers and other employees in the government services enjoying the rank of deputy minister. In Canada we have 22 deputy ministers and their salaries involve a total cost of $173,500. We have also 14 employees in the government service that have to all intents and purposes the rank of deputy minister. They cost Canada another $104,000. If we add these two items we find that our deputy ministers and those holding the rank of deputy cost Canada $277,500. Now let us look at the United States. They have deputy ministers there, or men in the employ of the government having the same rank as our deputy ministers, to the number of twenty-one. They may be enumerated as follows:

Department of Agriculture	1
Department of Commerce	1
Department of Interior	2
Department of Labour	2
Department of State	4
Navy department	1
Treasury department	4
War department	1
Post Office department	4
Justice department	1

The cost of these employees in the United States, 21 at $7,500, equals $157,000. Let us see the comparative statement between the United States and Canada for these officers of similar rank. Canada has 36, costing $277,500, or $30,833 per million of population. The United States of America has only 21, costing $157,500, or $1,432 per million of population. Now those figures are very important and are something that this House should give attention to. We have in Canada a very sparsely populated territory, and we cannot afford to carry all these high-paid officials, and while it is true that probably the saving might not be very much, yet at the same time it would be appreciated by the people of Canada and would be an incentive for the people to go ahead and do the best under the circumstances.

From time to time we hear a good deal of talk about secession from confederation in Canada. This is presumed to be heard in the Maritime provinces and also in the western provinces. Let me make my position very clear. I would be very loath indeed to see confederation broken up, and I would go a long way to try and retain it. But there is a point of view which must not be lost sight of, and it is this: That people generally speaking will only stand so much injustice, and when the pressure of injustice becomes too strong they will naturally resent it and take what means they have in hand to get away from that injustice. In so far as I am personally concerned, I have heard more talk about secession in the cities and towns of western Canada than I have in the rural districts. Now I think this is very unfortunate, but I would just like to place before the House the view that some of these people have placed before me, and they put it in this way: They say, "Suppose these nine provinces in Canada had no confederation at all, the provinces having full jurisdiction over their own affairs." And they go further and say, "Suppose the provinces of, say, Ontario and Quebec, came to the other seven provinces and said, 'Here, let us have a confederation of these provinces and let us turn them into a Dominion.' These other seven provinces would naturally say 'All right, but under what terms do you propose to create this Dominion?'" Now, Mr. Speaker, suppose these two provinces that I have already mentioned were to say, "These are our terms," and if they mentioned terms similar to those in existence at the present time, what do you suppose the other seven provinces would say to the two provinces? Do you presume for one moment that, say, the Maritime provinces and the three prairie provinces would accept the conditions that we have imposed on us to-day and enter confederation on that basis? Why, the idea is simply ridiculous. If,

therefore, they would not enter confederation on the present basis, how can Canada expect to maintain confederation unless those disabilities are removed? I have stated already that I would like to see confederation kept intact, but with a full responsibility of what I say, I am just as satisfied, Mr. Speaker as that I am standing here this morning, that unless a little more serious consideration is given to the various needs of the several provinces of the different parts of Canada I am very much afraid for confederation.

We find our protectionist friends, as I have stated before, appealing to the government for higher duties. I do not think that higher duties would be of very much benefit to the industries of this country because of the fact that during recent times we have had a new factor entering into the whole situation, and that new factor that we are up against is this: That industry in Canada to-day is controlled by finance, and the captains of industry are not to-day free to develop their industries as they would like to, and just so long as parliament is willing to allow industries of all descriptions, including agriculture, to remain under the throttling influence of finance, I am satisfied that neither industry nor agriculture will prosper. It is an impossibility. Now in what position do we find ourselves to-day in regard to the financial situation? First of all, let me say that parliament, either in its wisdom or otherwise, has turned over to private individuals for their own private profit the function of printing and putting into circulation money; and money in the final analysis should be used only as a medium of exchange. That is the prime function of money, but because of the supineness of governments in the past we find that the financiers of Canada, as of the world over, are not only using money as a medium of exchange, or putting into circulation as a medium of exchange, but they also have turned it into a commodity, and because of the fact that they have turned it into a commodity and find a greater profit in buying and selling money as a commodity than they do using it purely as a medium of exchange, the circulating function of money has been made subservient to the commodity nature that the financies have incorporated into money. In the final analysis, the basis of the real credit of Canada rests upon the ability of the Canadian people to produce and deliver goods. That being the real basis of credit, and being also the real basis upon which our money comes into circulation, naturally those who are responsible for the creation of the real credit of Canada are in an almost hopeless condition when they desire to use some of the circulating medium for the purpose of their business. I do not see any hope that the government will ever seriously tackle this situation. I do not think they will. But I am satisfied of this fact, that it will be tackled in a serious way in the very near future, not alone by those who are engaged in agriculture, but by those who are engaged in industry, that is if they want the industries to survive. When our industrialists in Canada realize the position they are in at the present time because of the fact that our Canadian financiers control the circulating medium, and when they recognize how closely that control is identified with their success, I am satisfied that both industrialists and agriculturists will demand that we nationalize the money system in Canada. I am not going to say any more about that to-night because I believe I have taken up my allotted time.

I want, however, before I conclude, to pass a few remarks with regard to the attitude of the Prime Minister (Mr. Mackenzie King) to-night. When he was speaking this evening, he adopted what, in my opinion, is a very peculiar attitude. In fact, if the rules would allow me, I would say that the Prime Minister adopted a very childish attitude, but if the rules of the House will not allow me to say that, I will not say it. The Prime Minister to-night thought it was quite within his privilege to lecture the Progressive members in this House and those who sit close by them. When I was nominated to contest the seat that I now have the honour to represent, there was a very distinct understanding as to my attitude in this House, and that distinct understanding was that I should not be guilty of engaging in political bargaining. The attitude of the people who sent me here is this, that I am to consider the measures that come before the House and to use my judgment regarding those measures. If I feel those measures are in the interest of Canada as a whole they expect me to support them; but if I feel that any measure that comes before the House is not in the interest of Canada as a whole, they expect me to oppose it. I do not propose to depart from that principle. Therefore, if the government requires my support at the present time, I shall be only too glad to give that support when I deem that the measure is one in the interest of Canada as a whole. That is the only basis upon which they can ever receive my support. It ill-becomes the Prime Minister of this country to suggest even the possibility of political bargaining, and I was very sorry to hear him make the statement that he did to-night.

Mr. MACKENZIE KING: What was the suggestion?

Mr. GARDINER: The suggestion was, to all intents and purposes, as I understood it, that if the Progressive party in this part of the chamber desired certain legislation to be brought before the House this session, they had better behave themselves and be careful.

Mr. MACKENZIE KING: There was absolutely nothing of the kind. My hon. friend is putting a false interpretation entirely upon what I said. I was trying to treat hon gentlemen opposite with a degree of courtesy. I had been asked to state to some hon. gentlemen on the other side what legislation would be brought down and I tried to give an honest frank, straight-forward statement as far as I was able. There was no bargaining or thought of bargaining.

Mr. GARDINER: I am very glad to hear the Prime Minister's explanation. If that was his intention, I shall be happy to withdraw my remarks. If at any time I should misinterpret any member of this House and the misinterpretation is called to my attention I will be pleased to withdraw. I assure the House I do not want to do any hon. member an injustice, but I interpreted the Prime Minister's remarks in the manner in which I described them. I am glad, however, to hear his explanation. I think it will soon be breakfast time, I do not propose to take up the time of the House any longer.

I should like to say a word with regard to the amendment moved by the Conservative party. I do not propose to support that amendment, on the principle that, while they ask for lower taxation, by way of a reduction in the sales tax, I, like my hon. friend the member for West Edmonton, (Mr. Kennedy) think any reduction in taxes should be made in the tariff instead of in the sales tax. That is the reason why I cannot support that amendment. As regards the budget, I regret very much that I cannot support it. Had the government, as I stated earlier in my address, proceeded with reductions in the tariff along the lines that they did last year, I would have been only too glad to support the budget; but in view of the fact that they have stopped short in their good mission, I propose to apply the principle that I outlined before. I am going to vote for or against it on its merits, and this budget, in my judgment, having no merit, therefore I cannot support it.

Mr. W. C. GOOD (Brant): Mr. Speaker, I am not responsible for being compelled to speak at this hour or not at all. The Prime Minister (Mr. Mackenzie King) talks of delay and obstruction, and gently intimates to us that we ought to keep quiet. The Minister of Labour (Mr. Murdock) can speak for three hours; the Minister of Agriculture (Mr. Motherwell) can speak for three hours—perhaps it was more—and many other members of this House can speak for two, three or four hours; but now it is intimated that we must not delay or "obstruct." Well, I can assure the Prime Minister (Mr. Mackenzie King) that, speaking for myself, I have not consumed much of the time of the House this session and I do not propose on the present occasion meekly to extinguish myself. I consider I have a duty to perform, an unpleasant one I grant you, but I do not shrink from the task. I have something to say and I intend to take what time is necessary to say it. That, I think, is a sufficient apology for my participation in the debate on the present occasion.

I would not attempt to speak at this hour if I did not at least try to break new ground; I have no use for repetitions of what has been said over and over again. I therefore propose this morning to deal in the main with the topic which I shall now announce: I shall try to examine why it is that the ordinary free trade argument appeals so little to our citizens while the protectionist argument appeals so strongly to them. I think that is a study worth while; I have not heard it discussed in the House and I intend to consider it on the present occasion. However, before entering upon that examination I should like to draw the attention of the House briefly to some remarks made by the hon. member for West York (Sir Henry Drayton), the ex-Minister of Finance, on March 26. He said:

> Let us see how much Canada helped the United States in the period of railway exploitation. In the period ending in 1913, the United States enjoyed the comfortable, favourable trade world balance of $4,564,000,000 odd and Canada accounted for no less than $1,303,000,000 odd of that enormous sum. Just think of it!—out of a favourable trade balance of $4,564,462,410 Canada accounts for $1,306,950,513.

I submit that the ex-Minister of Finance ought to have left a clearer impression on the minds of hon. gentlemen in regard to the whole question of trade balances with which he dealt at such length. I am not going to clear up the confusion he left in that regard, but I shall bring to the attention of the House a document which does in a measure clarify the matter: I refer to the second volume of the report submitted by the commission that investigated the subject of the high cost of living, which report was published in 1915. This volume was compiled or prepared by our present Dominion statistician, Mr. R. H. Coats, and I think it is a wonderful tribute to that gentleman's knowl-

edge and industry and insight. I only wish that the ex-Minister of Finance (Sir Henry Drayton) were in his seat, because I would like to direct his attention and the attention of the House to a section of this report, beginning at page 887, entitled "General Economic Conditions in Canada 1900-13." It is a fairly exhaustive examination of Canada's trade and industry during that period. I call special attention to the summary on page 906. First, we have the exports, amounting to $4,031,400,000. Then we have deductions from the exports; and I hope that hon. members who talk so glibly about favourable and unfavourable balances of trade, and

6 a.m. who apparently have such a lack of information on the whole question of trade, will listen to this and note the deductions which must be made in this case from the sum total of the co-called exports, as follows:

Interest	$1,488,000,000
Remittances to friends	150,000,000
Tourist expenditures	150,000,000
Emigrant expenditures	245,000,000
Insurance payments	117,000,000
Freight	60,000,000
Call money outside Canada ..	35,000,000
Total	$2,245,000,000

Deducting that from the total exports, we have net exports, of $1,786,400,000. Now we come to the imports, which we find total $5,359,700,000. And the following are the deductions that must be made from the imports:

Receipts from immigration..	$ 650,000,000
Tourists in Canada..	140,000,000
Remittances to friends..	50,000,000
Insurance payments to Canada.. ..	20,000,000
Total..	$ 860,000,000

Making these deductions our net imports are found to be $4,499,700,000. Now, the balance of imports over exports, which is ordinarily described as the net unfavourable balance of trade during that period is $2,713,300,000. And that represents Canada's borrowing during that time.

I have some further evidence which I should like to bring to the attention of the House, particularly to the attention of the ex-Minister of Finance, who ought to know, and who I think does know, enough about these subjects to give the House an intelligible and accurate presentation of the case. I refer to a book which has been recently published dealing with this particular period in the history of Canada and which is entitled:

"Canada's Balance of International Indebtedness 1900-1913: An inductive Study in the Theory of International Trade," by Jacob Viner, Cambridge; Harvard University Press.

Professor Viner I understand has made an exhaustive study of this particular period in Canada's history and has written the already mentioned book on the subject. I have here a review by our Dominion Statistician of this book, and I should like to quote a few sentences from this review in order to draw the attention of hon. members to what I think is a very desirable attitude towards problems of this sort, an attitude which I regret to say I have seen very little of in this House.

Mr. McBRIDE: Mr. Speaker, I would like a ruling on this point. Surely it is against the rules of the House for an hon. member to stand up and read speeches.

Mr. DEPUTY SPEAKER: I understood the hon. member to say he was giving a citation or quotation.

Some hon. MEMBERS: No.

An hon. MEMBER: He is reading his speech.

Mr. DEPUTY SPEAKER: If the hon. member is reading his speech, he has no right to do so.

Mr. GOOD: I think the hon. member for Cariboo (Mr. McBride) and all other hon. members of the House understand that I am making a quotation from a book review. I suggest that it would expedite the proceedings if there was a minimum of interruption.

Mr. PARENT: I suggest that at this hour of the morning the hon. member have leave to put the whole report in Hansard without reading it.

Mr. GOOD: If we had the facility which members of the House of Representatives have in the United States we should be able to save the time of the House and yet place ourselves on record. I understand, however, that that is not permitted here, so I proceed as follows:

In the final analysis Professor Viner places the importations of capital into Canada during the period 1900-1913 at 2,506 millions, as against 2,713 millions of the earlier estimate—

Mr. Coats is here referring to an estimate which he himself made in the volume that I have already mentioned.

—and his statement is probably as accurate as it can be brought without an excessive amount of further research.

Mr. PARENT: What page is the hon. member quoting from?

Mr. GOOD: Page 537 of the quarterly publication of the American Statistical Association, December, 1924.

Mr. PARENT: How many more pages have you to read?

Mr. GOOD: I am going to proceed, Mr. Speaker:

In part II, Professor Viner treats of the adjustment of the general price level and of the currency and banking systems of Canada to the above-mentioned heavy importations of capital. In other words, he shows how the capital represented in the adverse trade balance entered Canada in the form of goods. It is in this section that he has especially broken new ground, and if his treatment is still short of finality, he has organized materials and outlined a method that will be permanently valuable. His chapters on Canadian exchange and gold movements and on the operations of the Canadian banks in the adjustment of the trade balance are a clear exposition of a process that is popularly but little understood even in Canada, especially in its theoretic aspect. The gold movement into and from Canada is a matter wholly of banking and currency, the cash reserves of the banks and the government reserves against Dominion notes being its leading index.

Now, what I wanted to do in this connection was to direct the attention of the ex-Minister of Finance, who unfortunately is not here, and the attention of members of the House, to what I regard as the proper way of approaching the discussion of problems of this sort. In this connection I should like to again express my appreciation of the valuable services of our Dominion Statistician. It seems to me there is very little disposition in several quarters to make use of the experts we have or to secure experts in the departments where none are now available; and I shall refer to one particular matter in this connection shortly.

In concluding my reference to this question of international trade, and having specially in mind the attitude of and the arguments advanced by the ex-Minister of Finance, I should like to quote the following from Sir George Paish which I find in an extract from the Western Producer, Saskatoon, of April 2, of this year:—

"People have not yet realized,"said Sir George Paish, the noted financier, speaking in Winnipeg lately, "that the object of selling is not to get money or gold which are valueless, except as a medium of exchange with which to buy goods. We sell in order to buy, and for no other reason.

"Canada, along with the other nations of the world, must realize that she cannot sell the agricultural and dairy products, which she is so well equipped to produce, if she is not prepared to buy the goods of other nations. If she does not accept these goods, she must do what the United States has done, and in doing has almost ruined the world That is, to refuse to buy the goods of other nations, accepting only gold in payment. The United States has that gold, and now finds that it can not use it."

Mr. MACDONALD (Pictou): Mr. Speaker, I rise to a point of order. My hon. friend is reading material that he has already put on record in the committee on Banking and Commerce. I can hardly understand why he should do that at this hour of the morning unless it is purely for obstruction purposes.

Mr. GOOD: Mr. Speaker, I am astonished at the statement of the Minister of National Defence (Mr. Macdonald, Pictou). It is absolutely erroneous. I have not referred to or read any of these extracts in any committee of this House either this year or any other year, and I am not obstructing the business of the House. I know the minister is indifferent to the argument I am presenting, but I am presenting it not to him but to the people of Canada, and I exercise my right in so doing.

Mr. MACDONALD (Pictou): Does my hon. friend expect the House to listen to him at this hour?

Mr. SPEAKER: Order. I do not see that the hon. member who has the floor is obstructing the debate, and I would point out that no hon. member has the right to state that another hon. member is obstructing the business of the House. I think the hon. member for Brant (Mr. Good) is proceeding on right lines.

Though it is early in the morning, the hon. gentleman has had no chance to address the House before. He is entitled to address the House, provided he does it regularly.

Mr. MACDONALD (Pictou): He has had five weeks' chance.

Mr. GOOD: I would like to know who is obstructing just now. Mr. Speaker, I think that the problems confronting the Canadian people at the present time are very serious indeed, and after being here four years I must confess to a sense of deep disappointment at the method of approach to our serious problems. I want to say a word or two in that connection before I deal with the main topic of my remarks.

I am tempted, Mr. Speaker, to refer to an incident that occurred in my own experience when I was younger than I am now, and which I think illustrates the situation very well. I beg to assure you that the incident I shall narrate is absolutely authentic and accurate. There was in our neighbourhood when I was a young man an old man who used to do odd jobs around the countryside, and he frequently worked for my father, particularly in the fall of the year. I remember on one occasion we had a cow in the stable that was ailing somewhat, and I took the old man in to seek his advice. I thought perhaps he might give some suggestion as to what ought to be done for the cow. As soon as he had seen the animal he stated with the utmost assurance that he knew the

disease very well. It was "hollow horn and wolf in the tail." I am not inventing the story; it is an actual fact. He said, "I can cure it. Get me some pepper and salt." I got him some pepper and salt, and he mixed them together, and then taking out his jackknife cut a slit in the skin of the tail, and opening the skin up a little inserted the pepper and salt, and then closed up the wound. He told me with the utmost assurance and with the utmost confidence and sincerity that that was the cure for that particular disease, and that I need not worry about the outcome. Well now, Mr. Speaker, I must confess to the feeling that we are dealing with an ailing Canadian economic life pretty much as the old man dealt with that cow, and I suggest the propriety of altering our attitude of mind and our methods towards a number of these problems that are vexing and worrying us, and which, unless we solve them, are going to bring us to catastrophe. In particular, I want to say that I deplore the party spirit and party politics as I see them exhibited in this House. So far as the consumption of time goes, so far as futility and aimless effort goes, I attribute a great deal to what may disgust the House and may disgust the country to the prevalence of partisanship. I am told that the House now is better than it used to be; I do not know as to that but I do think and I want to submit now that if we could cast our party affiliations to the winds and get down to study questions on their merits and vote on them on their merits, regardless of who makes the suggestions, regardless of what is the attitude of this party or of that, we would be nearer a solution of our difficulties than we are at the present time. Here we have a party in power,—so-called "in power"—facing an election in the near future, and a party in opposition facing an election. So far as I am concerned I confess to a disbelief in the whole theory of partisan government. That is my growing conviction from observation in this House. I may be all wrong. I am not going into the question of constitutional methods now. I may deal with that question in the future, but not now; but I do think there is a vast amount of useless party warfare—though perhaps interesting, entertaining—across the floor of this House, because we have one party in power and one in opposition, and the opposition wants to get into office, and the government wants to stay in. Now I submit in all seriousness, that there is the strongest possible temptation to subordinate the national welfare to the welfare of parties and of individuals under this system. I need only point to the applause which greets a clever attack, daring thrusts, shrewd defence. It is easy enough to arouse the fighting spirit; everybody knows that. It is often inevitable. But I submit, it is rarely helpful in connection with matters of this sort. We develop a good deal of hysteria in connection with our public life, and particularly in connection with our party discussions, and I want to refer to a sample of it. I presume the members on the government side will applaud this, because it has to do with the official opposition. Here is a statement which was made by the right hon. leader of the opposition—I wish he were here at the moment—published in the campaign literature of the Conservative party during the campaign of 1921:

> If this Government should be defeated—and whatever you think to-day, you will not have much fear of its defeat if you wait three, four, or six or ten months from now—if this Government should go down, I say here that the party that would be in office would be dominated by the men who, inspired by class consciousness, driven by agitation, led astray by distance from the real facts, have swallowed this principle of free trade. They would be in the ascendancy, along with those who are ready to take hold of free trade, or Sovietism, or semi-Sovietism, or Redism, or anything else, in order to hurl down any Government in power. That is the class who would dominate the Administration if the present Government were defeated, and every single element of that class is a wrecker and a puller-down, and could never do anything to take us forward or upward.

If the right hon. gentleman were here, I would ask him now if he is not ashamed of making a statement of that sort in a public campaign. I cite it now as a sample of the hysteria, the folly, to which we are led in our party warfare, and as one of the reasons why I dislike and disapprove of the whole idea that seems to underlie what many people pride themselves on describing as the British constitutional method of responsible government.

Our problems are not to be solved by these methods, and I am afraid the seriousness of the situation will soon begin to force upon us a more co-operative spirit. There must be more dispassionate study, more open-mindedness, greater absence of partisanship. The problems awaiting solution are not to be solved by slamming one another, but by grappling with error, overcoming ignorance and striving to know the truth. There is a saying in the Good Book "Ye shall know the truth and the truth shall make you free." What is Liberalism if it is not an exaltation of freedom? And freedon of the proper kind certainly depends upon liberation from error and ignorance. I believe in Liberalism and I call myself a Liberal, but that does not mean that I necessarily adhere to or vote for the so-called Liberal party which is often illiberal in its attitude towards public questions.

I have already referred to the very admirable study of the question of international trade in this volume under my hand and I have suggested that we ought to make a greater use of experts in the study of our economic problems. There is a disposition to scoff at academic persons. I take it—if I may refer again to the story which I told a few minutes ago—that the old man mentioned probably prided himself that he had never read anything. He would be ashamed, I fancy, to be caught reading a book. He was a "practical" man, a very "practical" man—a man who prided himself on his practicalness—and I find in this House, I think, if I may make a personal reference without giving offence, that the Acting Minister of Finance prides himself on being a "practical" man. The old man who doctored the cow had some experience. He was an old man and had lived a long time, while I was a young man; therefore he ought to have known more than I did. I do not like to find a minister of the crown, making reflections upon people who have given a lifetime of study to matters which perhaps the hon. minister has not had time to study; I do not blame him for not understanding some of these things. I have in mind a certain statement made by the Acting Minister of Finance not so long ago, and I submit to the House it is an attitude of mind that no minister of the crown ought to find satisfaction in expressing. As a matter of fact the academic man, while he may be wrong, has a pretty good chance of being right. He is removed from the warping influence of financial interest as a rule far more than most of us, far more than politicians, and far more than business men. Why should we scoff at economists as theorists? I will read the following from "The Mind in the Making," a book by Professor James Harvey Robinson of New York:—

> On the 28th of October, 1831, three hundred and fifty years after Galileo had noticed the isochronous vibrations of the lamps, creative thought and its currency had so far increased that Faraday was wondering what would happen if he mounted a disk of copper between the poles of a horseshoe magnet.

This is a reference to what led Galileo to study the solar system.

An hon. MEMBER: Why not read the whole library.

Mr. SPEAKER: I would ask hon. gentlemen not to interrupt the hon. member. He is a fair debater and he is entitled to a fair hearing from the House.

Mr. GOOD: Let me continue reading:

> As the disk revolved an electric current was produced. This would doubtless have seemed the idlest kind of an experiment to the staunch businessmen of the time—

[Mr. Good.]

Mark you, Mr. Speaker and hon. gentlemen, this is applicable to the situation in this House.

> This would doubtless have seemed the idlest kind of an experiment to the staunch businessmen of the time, who, it happened, were just then denouncing the child-labour bills in their anxiety to avail themselves to the full of the results of earlier idle curiosity. But should the dynamos and motors which have come into being as the outcome of Faraday's experiment be stopped this evening, the business man of to-day, agitated over labour troubles, might, as he trudged home past lines of "dead" cars, through dark streets to an unlighted house, engage in a little creative thought of his own and perceive that he and his labourers would have no modern factories and mines to quarrel about had it not been for the strange practical effects of the idle curiosity of scientists, inventors, and engineers.

An hon. MEMBER: That is interesting.

Mr. GOOD: Yes, and if my hon. friend will take it to heart it ought to be more than interesting, it ought to be edifying. Now, Mr. Speaker, I submitted on a previous occasion in this House that our Department of Finance, one of the most important departments in the public service, one that is concerned with the whole problem of taxation and the problem of securing and expending revenue—particularly securing revenue—having charge of all the financial operations of this government, is without a single expert, without a single man who has anything but a mere routine knowledge of this whole question. The Acting Minister of Finance is too busy, he has not had the opportunity of acquiring the knowledge. I am not blaming him for his admitted ignorance on many of these matters that he ought to know about, or somebody in the department ought to know about.

Mr. MARLER: May I interrupt? Is my hon. friend taking the Acting Minister of Finance to task for ignorance of financial matters? Does he say the officers of the Department of Finance have no knowledge of financial affairs? It is rather a broad statement.

Mr. GOOD: I am quoting the remarks of the Acting Minister of Finance (Mr. Robb) in a previous debate. The hon. member can refer to it if he likes.

Mr. MARLER: What debate is it?

Mr. GOOD: It is the debate on the motion of the hon. member for Centre Winnipeg (Mr. Woodsworth.) Last year I had some hope—and I refer now to the question of the proposed tariff board—that the government might have in contemplation the creation of some commission or committee to study not tariff schedules, which are superficial things, but the

whole question of the incidence of taxation. That is a matter I dealt with at some length myself in my address on the budget last year. I have not heard anybody refer to it, either in commendation or otherwise, but I was hoping last year that we might see the inauguration of some sensible method of approach to these problems, and that our partisan discussion in this House year after year, for years and years, consuming days and weeks and months of time might be avoided. But I am charged now with obstruction. I say that these partisan methods we have been following have the effect of obstructing the business of the House and the business of the country.

I refer to this particular matter, because I was hoping—and I think it was in the mind of the Prime Minister at all events—that we might get something really worth while out of the study of methods of taxation. Apparently that has gone to the wind, and we have now a proposal to create a board which, so far as I can make out, will have nothing to do but to study tariff schedules and their effects. I submit this—and I do it very briefly as I did last year—that the more important question is to decide upon right principles of taxation. What is a just system of taxation and what is an unjust system of taxation? That is a very important question. We do not study it here. To some extent, perhaps, we discuss it in this House, but here is a proposal brought down last year and again brought down this year by the government for the creation of a tariff board. If I felt that that board was going to be properly constituted, and would devote itself not merely to the study of tariff schedules but rather to the principles of taxation and the kind of taxation that would be best from the standpoint of justice and economy, I would support the proposal warmly. If any such proposal can be brought down to the House I will support it, but I am not going to support the proposal to create a board merely to look over tariff schedules and make recommendations or give advice to the department in that connection. I tell you, Mr. Speaker, that this government and other governments unfortunately do not consult men who are relatively free from influence by special interests. Whom do they consult, or who comes to make representations to the government in connection with tariff matters? Special interests—those who are benefited I think all this must be changed. I had more to say on this point but I am going to cut some of my remarks short, which I know will be appreciated by hon. members and give some satisfaction to those present.

Mr. MACDONALD (Pictou): Does my hon. friend think the government should consult him in regard to these matters before they are brought down?

Mr. GOOD: If I may answer the question of the Minister of National Defence, I say that I think I have given more study, at least more independent study uninfluenced by reason of any financial interests, than many of the business men who come here to make requests of the government.

Mr. MACDONALD (Pictou): My hon. friend has read a lot to tell us what the books say; but he does not give us his own opinion.

Mr. GOOD: I have my opinions and have expressed them frankly on the floor of the House, and intend to do so as long as I am here.

The next matter I want to present is a summary, or a concise statement, of the protectionist philosophy. I remarked at the outset that I proposed to deal mainly with the question as to why the free trade argument had gained so little support and why the protection argument had gained so much support, and I think that ought to be of some interest to my Conservative friends. I am going to make this statement as brief as I can, and I have therefore written out my remarks in the main, so that I can be concise. I am going to state what I regard as the essential philosophy of the free trade versus protection controversy.

I think in the first place we should earnestly answer the question, should legislation be in the interests of the people generally or be in the interests of the minority of the people? If in the interests of the people generally, which is best for society, abundance or scarcity?

I am quite prepared from the standpoint of theology, morals and so on, to say that hardship and misery and pain and trouble may sometimes be a wholesome chastener, but I submit on the whole we agree—and there will be very little dispute in regard to my statement, that the aim of a sound national policy should be to secure abundance rather than scarcity: that is to say, a maximum of useful commodities, and services. Do I find anybody disputing that statement? And yet is not the policy of scarcity widely preached? We have our Conservative friends constantly declaiming against dumping, which gives us cheap goods. They talk about inundating this country with the products of cheap labour. Abundance is decried. There is talk about over-production on every hand. On every hand we find a direct or indirect criticism of

the philosophy of abundance. Why this enigma?

Consider the individual man in modern society. He grows richer in proportion to the return for his labours, this depending largely on the price he can get for his services or the product of his labours.

And on what does price depend? Very largely upon scarcity. Therefore we conclude that in the case of an individual producer, scarcity enriches him, provided of course that this scarcity does not equally affect his own labour products. Applying the same reasoning successively to all producers, we construct the theory of scarcity and proceed to apply it by raising prices artificially through tariffs and so forth.

We may argue in like fashion as to abundance. When any product is plentiful, it sells at a lower price, and therefore the producer gets less. If all producers are in the same situation, they all lose. Therefore, it is abundance that ruins society.

Now, what is wrong with the argument? Simply this: It ignores the fact that man is consumer as well as producer, and the foregoing reasoning considers him only in the latter role.

As a producer, a man may become richer by reason of scarcity. He may take advantage of other people's needs. But as a consumer he benefits by abundance, because then he buys things cheaper. By extending this reasoning to all consumers, we arrive at the theory of plenty.

If, therefore, we consider the selfish interest of men as producers, we arrive at one conclusion: whereas, if we consider their interests as consumers, we arrive at the opposite conclusion. And this is natural, because as sellers we have an interest in dearness, and therefore in scarcity. But, as buyers, our interest is in cheapness and abundance.

Now, on which theory, that of abundance or that of scarcity, should public policy be based? I should like sincerely to submit this to my Conservative friends. The question is not an idle or a fantastic one. It is a burning one which confronts or ought to confront every finance minister when he is preparing his budget proposals. Nor can it be airily dismissed or lightly answered. Let us examine this matter and try to answer the question.

If a man consumed all he produced; if he did not exchange the products of his labours for the products of the labour of others, there could be only one answer: Abundance would be advantageous. It would be perceived at once that labour is a means, not an end, and that anything that would save labour would conduce to progress and prosperity. Take the case of any farmer working for himself on his own farm. What an absurd thing it would be for him to argue in favour of or follow any policy that would lead to scarcity. Every labour saving device he could apply, anything by which he could economize, would certainly be to his advantage. But, with the division of labour, with exchange, with diversification of employment, the situation becomes complicated. In relation to any particular commodity, two interests are created and these are directly opposed to each other.

Take the case of any producer. His immediate selfish interest lies in having the fewest possible producers in his line, and the greatest possible number of consumers. Supply limited, demand great, and up goes the price. But the immediate interest of the consumer is that supply may be increased relatively to demand, so that prices may fall. Now, as producers, our desires tempt us, and our opportunities enable us, to be anti-social. For example, as farmers we may be interested in and financially benefited by crop failures as long as they do not affect our crops. We may be financially benefited by war as long as it does not affect our farms. We may profit by the sinking of vessels, as occurred during the war, so long as our crops are not involved. If we are carpenters, masons or builders, we may be benefited financially from devastating fires or earthquakes. As lawyers we may be benefited financially by the growth of quarrels and litigation. I quote a sentence from the old French writer, Montaigne, in this connection. He said:

> The shopkeeper thrives only by the irregularities of youth; the farmer by the high price of corn; the architect by the destruction of houses, the officers of justice by lawsuits and quarrels.

Producers are, of course, social in so far as they are efficient workers. For example, if a farmer grows crops above the average because of his superior intelligence or industry, and thereby receives a greater reward for his labour, his personal welfare coincides with that of society generally; but in so far as he gains by price enhancement, he does so at others' expense, and is therefore in this regard anti-social. The fact is that, as producers, some of our activities are social and some anti-social.

But when we come to consider the immediate interest of the consumer, we find that it is in perfect harmony with the general interest. As consumers, our interests are practically identical. We all want food, clothing,

housing, and many other necessaries and comforts. Though we may be divided into a hundred different occupations as producers, we all spend what money we earn through these occupations pretty much in the same way. As consumers, we desire to see the markets well supplied. We welcome good crops and labour-saving machinery. We rejoice in rapid and easy means of transportation and communication. We may indeed as consumers push our desires to an absurd length, without having them become antagonistic to the public welfare. Were we able to obtain necessaries and comforts of life as freely and as easily as the air we breathe, there would be nothing therein incompatible with the general interest, since all consumers would be equally benefited.

Public policy ought therefore to be based on the interests of people as consumers, rather than upon their interests as producers.

The Prime Minister went up and down this country not long ago, I think in 1921, claiming that he was going to protect the consumers. I submit to him and to the government, and particularly to the Conservative party that the interest of the consumer should be the basis of public policy. May I state again?—Public policy ought to be based on the interests of people as consumers, rather than upon their interests as producers. Only thus can it serve the general welfare and conform to the motto: "The greatest good to the greatest number." The protectionist, therefore, lands in this dilemma: Protective tariffs produce scarcity, or they do not. If they do, then general injury is inflicted. If they do not, then supply is not restricted and the producer does not gain. They are either harmful or useless. I am prepared to admit that there are conditions—and I shall refer to them later—under which this argument does not apply, or applies only to a limited extent. I had intended to read to the House in this connection an extract from a book which I referred to last session entitled Fallacies of Protection, by Frederic Bastiat, a Frenchman who wrote in the forties of last century.

An hon. MEMBER: Put it in Hansard.

Mr. GOOD: I should be pleased if I could obtain the permission of the House to put on Hansard a certain quotation from this book, but I presume that would be out of order. I quoted part of it last year and I intend to quote the whole of it this year.

An hon. MEMBER: Not the whole book.

Mr. GOOD: The whole of this particular section. I should like to have this printed in Hansard, but I cannot insist upon it. It may be out of order. I shall be compelled to read it or to drop it.

Some hon. MEMBERS: Read it.

Some hon. MEMBERS: Drop it.

Mr. GOOD: I get requests from one side to read it and from the other side, to drop it. I am going to read it as it is early yet.

Mr. LOGAN: Put it on Hansard.

Mr. GOOD: I would if I could.

Mr. LOGAN: Nobody is objecting.

Mr. GOOD: May I put it on Hansard without reading it?

Mr. SPEAKER: By unanimous consent.

Mr. McBRIDE: Do I understand that the hon. member is going to put the whole book on Hansard?

Mr. GOOD: Just one little section as my hon. friend can see.

Mr. SPEAKER: I understand that, by unanimous consent, the hon. gentleman can place this extract on Hansard.

Mr. GOOD: I am desirous of saving all the time of the House that I can without destroying the force of my argument. The extract is as follows:

Chapter VII.—Petition of the Manufacturers of Candles, Wax-Lights, Lamps, Candlesticks, Street Lamps, Snuffers, Extinguishers, and of the Producers of Oil, Tallow, Resin, Alcohol, and, Generally, of Everything Connected with Lighting.

To Messieurs the Members of the Chamber of Deputies.

Gentlemen,—You are on the right road. You reject abstract theories, and have little consideration for cheapness and plenty. Your chief care is the interest of the producer. You desire to protect him from foreign competition, and reserve the national market for national industry.

We are about to offer you an admirable opportunity of applying your—what shall we call it?—your theory? No; nothing is more deceptive than theory—your doctrine? your system? your principle? But you dislike doctrines, you abhor systems, and as for principles you deny that there are any in social economy. We shall say, then, your practice—your practice without theory and without principle.

We are suffering from the intolerable competition of a foreign rival, placed, it would seem, in a condition so far superior to ours for the production of light that he absolutely inundates our national market with it at a price fabulously reduced. The moment he shows himself our trade leaves us—all consumers apply to him; and a branch of native industry, having countless ramifications, is all at once rendered completely stagnant. This rival, who is no other than the sun, wages war to the knife against us, and we suspect that he has been raised up by perfidious Albion (good policy as times go); inasmuch as he displays towards that haughty island a circumspection with which he dispenses in our case.

What we pray for is, that it may please you to pass a law ordering the shutting up of all windows, skylights, dormer-windows, outside and inside shutters,

curtains, blinds, bull's-eyes; in a word, of all openings, holes, chinks, clefts, and fissures, by or through which the light of the sun has been in use to enter houses, to the prejudice of the meritorious manufactures with which we flatter ourselves we have accommodated our country—a country which, in gratitude, ought not to abandon us now to a strife so unequal.

We trust, gentlemen, that you will not regard this our request as a satire, or refuse it without at least previously hearing the reasons which we have to urge in its support.

And, first, if you shut up as much as possible all access to natural light, and create a demand for artificial light, which of our French manufactures will not be encouraged by it?

If more tallow is consumed, then there must be more oxen and sheep; and, consequently, we shall behold the multiplication of meadows, meat, wood, hides, and, above all, manure, which is the basis and foundation of all agricultural wealth.

If more oil is consumed, then we shall have an extended cultivation of the poppy, of the olive, and of rape. These rich and exhausting plants will come at the right time to enable us to avail ourselves of the increased fertility which the rearing of additional cattle will impart to our lands.

Our heaths will be covered with resinous trees. Numerous swarms of bees will, on the mountains, gather perfumed treasures, now wasting their fragrance on the desert air, like the flowers from which they emanate. No branch of agriculture but will then exhibit a cheering development.

The same remark applies to navigation. Thousands of vessels will proceed to the whale fishery; and in a short time we shall possess a navy capable of maintaining the honour of France, and gratifying the patriotic aspirations of your petitioners, the undersigned candle-makers and others.

But what shall we say of the manufacture of articles de Paris? Henceforth you will behold gildings, bronzes, crystals, in candlesticks, in lamps, in lustres, in candelabra, shining forth, in spacious warerooms, compared with which those of the present day can be regarded but as mere shops.

No poor resinier from his heights on the seacoast, no coal miner from the depth of his sable gallery, but will rejoice in higher wages and increased prosperity.

Only have the goodness to reflect gentlemen, and you will be convinced that there is, perhaps, no Frenchman, from the wealthy coalmaster to the humblest vendor of lucifer matches, whose lot will not be ameliorated by the success of this our petition.

We foresee your objections, gentlemen, but we know that you can oppose to us none but such as you have picked up from the effete works of the partisans of free trade. We defy you to utter a single word against us which will not instantly rebound against yourselves and your entire policy.

You will tell us that, if we gain by the protection which we seek, the country will lose by it, because the consumer must bear the loss.

We answer:

You have ceased to have any right to invoke the interest of the consumer; for, whenever his interest is found opposed to that of the producer, you sacrifice the former. You have done so for the purpose of encouraging labour and increasing employment. For the same reason you should do so again.

You have yourselves obviated this objection. When you are told that the consumer is interested in the free importation of iron, coal, corn, textile fabrics—yes, you reply, but the producer is interested in their exclusion. Well, be it so; if consumers are interested in the free admission of natural light, the producers of artificial light are equally interested in its prohibition.

But, again, you may say that the producer and consumer are identical. If the manufacturer gain by protection, he will make the agriculturist also a gainer; and if agriculture prosper, it will open a vent to manufacturers. Very well; if you confer upon us the monopoly of furnishing light during the day, first of all we shall purchase quantities of tallow, coals, oils, resinous substances, wax, alcohol—besides silver, iron, bronze, crystal—to carry on our manufactures; and then we, and those who furnish us with such commodities, having become rich will consume a great deal, and impart prosperity to all the other branches of our national industry.

If you urge that the light of the sun is a gratuitous gift of nature, and that to reject such gifts is to reject wealth itself under pretence of encouraging the means of acquiring it, we would caution you against giving a death-blow to your own policy. Remember that hitherto you have always repelled foreign products, because they approximate more nearly than home products to the character of gratuitous gifts. To comply with the exactions of other monopolists, you have only half a motive; and to repulse us simply because we stand on a stronger vantage-ground than others would be to adopt the equation $+ \times + = -$; in other words, it would be to heap absurdity upon absurdity.

Nature and human labour co-operate in various proportions (depending on countries and climates) in the production of commodities. The part which nature executes is always gratuitous; it is the part executed by human labour which constitutes value and is paid for.

If a Lisbon orange sells for half the price of a Paris orange, it is because natural, and consequently gratuitous, heat does for the one what artificial, and therefore expensive, heat must do for the other.

When an orange comes to us from Portugal, we may conclude that it is furnished in part gratuitously, in part for an onerous consideration; in other words, it comes to us at half-price as compared with those of Paris.

Now, it is precisely the gratuitous half (pardon the word) which we contend should be excluded. You say, How can national labour sustain competition with foreign labour, when the former has all the work to do, and the latter only does one-half, the sun supplying the remainder? But if this half, being gratuitous, determines you to exclude competition, how should the whole, being gratuitous, induce you to admit competition? If you were consistent, you would, while excluding as hurtful to native industry what is half gratuitous, exclude a fortiori and with double zeal, that which is altogether gratuitous.

Once more, when products such as coal, iron, corn, or textile fabrics are sent us from abroad, and we can acquire them with less labour than if we made them ourselves, the difference is a free gift conferred upon us. The gift is more or less considerable in proportion as the difference is more or less great. It amounts to a quarter, a half, or three-quarters of the value of the product, when the foreigner only asks us for three-fourths, a half, or a quarter of the price we should otherwise pay. It is as perfect and complete as it can be, when the donor (like the sun in furnishing us with light) asks us for nothing. The question, and we ask it formally, is this: Do you desire for our country the benefit of gratuitous consumption, or the pretended advantages of onerous production? Make your choice, but be logical; for as long as you exclude, as you do, coal, iron, corn, foreign fabrics, in proportion as their price approximates to zero, what inconsistency it would be to admit the light of the sun, the price of which is already at zero during the entire day!

I have also a very short quotation dealing with the same subject that I should like to quote from a very interesting book by a Belgian named Henri Lambert, who was quite conspicuous during the war. The title of the book is Pax Economica. It is a study of the relationship between international trade and international peace, and I think that is an important subject. I quote the following short extract from this book; page 37:

To deny the benefits of international exchange—and consequently of free exchange—is, in fact, to deny the advantages of division of labour and the increase in productiveness resulting therefrom. It is, therefore, to deny that which is evident. A country which determines to be self-supporting must resign itself to an inferior productivity and standard of wealth. If such a country continues to prosper, it will be by reason of natural advantages, because of high intelligence and labour energy of its inhabitants; because of interior free exchange, and despite its efforts to be self-sustaining.

Now I pass on to the next section of my argument. If the protectionist philosophy and argument are so completely discredited, how comes it that protection has had and continues to have such a strong hold on the world? That is an interesting question and one of paramount importance and I propose to submit for the consideration of hon. members some reasons why, despite the logical discrediting of the protective philosophy, it yet has such a hold upon people generally. The motion my right hon. friend the leader of the opposition (Mr. Meighen) has on the order paper declares what is an obvious fact, that the protective system is widely extended and is very popular. I do not deny that. I want to examine why, in the face of so many good reasons against it, it is so popular. The causes of this condition I shall enumerate. In the first place, the benefits of protection are localized and concentrated while the losses are widely diffused. On this point I desire to read one paragraph from Henry George's book Protection or Free Trade which I commend to the House:

Those who are specially interested in protective tariffs find it easy to believe that protection is of general benefit. The directness of their interest makes them active in spreading their views, and having control of large means—for the protected industries are those in which large capitals are engaged—and being ready on occasion, as a matter of business, to spend money in propagating their doctrines, they exert great influence upon the organs of public opinion. Free trade, on the contrary, offers no special advantage to any particular interest, and in the present state of social morality benefits or injuries which men share in common with their fellows are not felt so intensely as those which affect them specially.

I commend that to my Conservative friends as a very cogent and clear statement of an obvious fact. Let me give an example to illustrate the point further. Suppose we consider the tariff on boots and shoes, in which the Minister of Justice (Mr. Lapointe) is so much interested, or at least in which he is stated to be so interested. Suppose that through a tariff on these articles a certain manufacturer stands to gain $25,000 a year; and suppose that by virtue of the same tariff the consumers of boots and shoes stand to lose $50,000 a year. Divided among 200,000 consumers that would represent a loss of 25 cents each. Now, the individual consumer would likely say that this was a trifle about which he would not worry. The consumers are unorganized and a loss of 25 cents each probably would not occasion any great concern among them. But $25,000 a year to one man is a considerable sum and he would naturally fight for it; he would contribute to party campaign funds and so get his quid pro quo. That is an illustration of the truth that has been so well stated by Henry George in the extract I have read.

7 a.m.

I should like also to submit a very interesting editorial from the Montreal Witness which appeared a few years ago, during the 1921 election campaign, I think.

WHERE IS THE CONSUMER?

It is related that once, in the long departed golden age of the world, it was agreed among mankind that they should all shout at the same moment. It was thought that thus the sound might reach the moon, and provoke some response from the inhabitants of that sphere. The time for the universal shout arrived, the moment when the tremendous clamor should burst forth. What happened? Nothing! A woman in Norway and a boy in Spain were the only two who opened their mouths. All the rest were listening.

Something of this kind has overtaken the consuming multitude in Canada as regards the sittings of the Tariff Commission. The manufacturers are there. They sit in a row outside the rail—lumber, cloth, boots, pickles, glass, reapers, cement—waiting their turn. As one sits down the next jumps to his feet. But where are the millions whose daily toil is burdened to provide the prosperity these gentlemen cherish so devoutly?

Can no labourer be pried loose from his spade for an hour or so to tell the commission that these well-fed producers are all riding on his shoulders? His hat, his boots, his braces, his socks, his overalls, the spade he wields, the material and furniture of his narrow apartment, are just so many pipe-lines from his lean purse to their fat pocket books. He cannot enter a store but they accompany him. No purchase of his is so small but they take part of the money he lays down. And they attend the session of the Tariff Commission to complain that if the labourer did not support them they would starve to death.

Alas, the consumer is so numerous that he is anonymous. Unorganized, scattered, hard-worked, with no funds wherewith to buy legal brains and literary skill, he perseveres at his digging. And so the country is delivered from the havoc and devastation of a lowered tariff and the gentlemen manufacturers are saved from starving to death.

Let me now submit again this consideration, that public policies on tariff matters should be based on the interests of consumers and not on the interests of producers; that is the only basis on which we can reconcile the interests of all the people as citizens.

My second reason is this: that the protectionist appeal is directed to local or personal selfish interests. This to some extent overlaps on the preceding reason, but I should like to direct the attention of the House in that connection to the obvious fact that very often producers get an exaggerated notion of the benefits of protection. For instance, it is not the total nominal protection which ought to interest any producer, from his own selfish point of view; it is the net protection. Indeed the ex-Minister of Finance (Sir Henry Drayton) in his address some time ago pointed out to the House that certain brass manufacturers had a protection of 10 per cent while they had to pay an extra price, owing to a tariff of 15 per cent on their raw materials, and he justly claimed that their net protection had vanished. Our protectionist friends are going to go around the country making campaign promises of this, that and the other thing to each individual community. The appeal will be an appeal to the selfish interests of the particular community or industry, and they are going to forget or ignore the fact, as their listeners will forget or ignore the fact, that protection given in one locality will nullify the protection given in another. I seriously commend that to the consideration of my hon. friends. If I take any part in the campaign I shall call the attention of the electors to the fallacy of that argument, and I can point to the ex-Minister of Finance himself as elucidating that principle, in his address. Take it in connection with the manufacture of tin plate and of tin cans, a very important industry in this country in connection with fruit growing. If my Conservative friends are going to offer protection to the manufacturer of tin cans, say, to the extent of 30 per cent, and the same to the manufacturer of tin plate, what will happen to the first offer? It will be pretty well in the nature of a gold brick, I take it.

We have heard for many years that famous phrase, "Adequate protection to all Canadian industries." One of the first political meetings I attended was addressed by Sir Robert Borden, and that was his stock phrase, his catchword on that occasion. It is a very plausible, a very attractive slogan, but what is there in it when you come to analyze it coldly and dispassionately? What would it really be like if we had "adequate protection" for all Canadian industry, if the farmers were protected from exploitation by the manufacturers just as much as the manufacturers were protected from exploitation by other manufacturers either inside or outside the country? What benefit would "adequate protection" confer, if it were possible, which it is not? Would it be worth while? I do not see that it would, or that it would confer any benefit upon any industry. I have had in my mind for many years this picture of "adequate protection to all Canadian industry": I picture a ring of snakes each swallowing the other by the tail at the same rate. We must postulate that each snake starts at the tail of the one in front and swallows at the same rate so that none has any advantage over the other. What is going to happen? Will hon. members use their imagination? Then they will see a stoppage in the process at some time or other. That is just about what adequate protection to all Canadian industry would be like if it were possible. But it is not possible. I appeal to my Conservative friends, can they protect local industry; can they protect the farmer, the wheat grower when he exports the great bulk of his products? Can they protect half the industries of Canada? Let them start out to apply this plausible catchword, this attractive policy, to Canadian industry, and what is going to be the result? Simply that the fellows that can pull the wires best are going to get the plums. The leader of the opposition when he comes to debate his motion is going to claim that he can protect the farmer, can protect everybody; but I say he cannot do it, and if he could do it, it would be useless to all concerned.

Now, my third reason is as follows: Protection develops into economic militarism. I want to submit to the House in that connection a concise expression of opinion from an English economist, J. A. Hobson, in his book, Democracy After the War. I quote:

> The explanation lies in the opposition between the interests of certain classes within each nation and the welfare of the nation as a whole, and in the ability of these classes to impose their class interests upon the statecraft of their country. Protection is a bad policy for a nation. It diminishes its total output of wealth, distributes it unfairly, imposes a secret, onerous and wasteful method of taxation, breeds political corruption, establishes monopolies and provokes illwill and quarrels with other nations. But it is a good policy for capitalists in certain well organized industries, who, by their political pressure can frame a tariff that enables them to raise their prices and increase their profits at the expense of the weaker industries, and the consuming public. A part of the illicit profits which it yields can be applied to maintaining and enforcing the political pull and to spreading propaganda representing protection as a sound national and imperial policy. The ill-will which tariffs beget in surrounding nations and the reprisals they evoke go to feet the delusion that trade is fundamentally a form of competition, not of co-operation, and that nations are hostile competitors. The diplomatic and sometimes the military conflicts which ensue from tariff wars confirm this delusion. So protection passes from the position of an unscrupulous scheme of class plunder into that of a patriotic public policy. Finally, giving favouring circumstances, it can be rivetted upon the state as a political and military necessity, for states which

stop the natural courses of trade with neighbours, cripple their development, "steal" their markets, and otherwise inflict economic injuries, live in fear lest the injured interests in these neighbour states may be strong enough to coerce their governments into forcible intervention.

Let me recall in that connection the economic rivalry between Great Britain and Germany prior to the Great war, and the consequence of it. The Germans wanted "a place in the sun"; and what has this nation, and what have other nations sacrificed? I submit, Mr. Speaker, that the protectionist idea, fructifying in that way was largely responsible for that awful world catastrophe. I proceed:

Given a group of powerful states, each controlled in its fiscal and its foreign policy by strong business interests, it is easy to perceive that a generally dangerous situation emerges. Each state, considering the possibility of invasion on the part of a foreign power or group of powers, must look not merely to its forcible but to its economic defences. So a *national economy* of industrial, agricultural and commercial self-sufficiency assumes the guise of a vital policy, and permanent protection is established as its chief instrument. Under these conditions protection becomes an essential feature of national defence, an economic militarism.

I submit to the House, and to the Conservative party in particular, that there is the goal towards which they are heading—international warfare and world catastrophe. They are heading the wrong way, I think their motives are sincere; I am not questioning the sincerity of protectionists at all, many of them are my personal friends, but I say their philosophy is wrong and is heading the world for disaster. Now I come to the main and last point of my argument.

Some hon. MEMBERS: Hear, hear.

Mr. GOOD: I am afraid it will be longer than some of my hon. friends would wish, but I will get through it as quickly as I can. The chief reason why protection has such a hold upon the modern world is that the doctrine of free trade as currently conceived, preached, and applied is hopelessly inadequate to meet the actual needs of present-day society. I will go that far with my Conservative friends, and I will go that far in criticism of some of my friends on the other side of the House, that their current conception of free trade is hopelessly inadequate and hopelessly unable to meet the needs of the present day. I think that the protectionists are making an honest effort in a misguided, ill-advised way to meet an actual need. Let me elaborate that thought.

An hon. MEMBER: Here is another book.

Mr. GOOD: Yes, Mr. Speaker, I shall have to refer to books. Books are my friends, and I would like to feel they are the friends of everyone who wishes to widen his acquaintance in the worlds of place and time.

Mr. LOVETT: Will my hon. friend tell me when he intends to break that new ground?

Mr. GOOD: I am breaking new ground now if my hon. friend could only see it.

An hon. MEMBER: Break it with the Brantford plough.

Mr. GOOD: I am of the opinion, Mr. Speaker, that I might conclude my argument more quickly if I were allowed to quote from this book, which expresses the point more clearly, more emphatically, and more concisely than I could express it. I shall quote from Henry George's book on Protection or Free Trade. The following is from his chapter on The Inadequacy of the Free Trade Arguments:

Free traders usually attribute the persistence of the belief in protection to popular ignorance, played upon by special interests. But this explanation will hardly satisfy an unbiased mind. Vitality inheres in truth, not in error. Though accepted error has always the strength of habit and authority, and the battle against it must always be hard at first, yet the tendency of discussion in which error is confronted with truth is to make the truth steadily clearer. That a theory which seems wholly false holds its ground in popular belief despite wide and long discussion, should prompt its opponents to inquire whether their arguments have really gone to the roots of popular belief, and whether this belief does not derive support from truths they have not considered, or from errors not yet exposed, which still pass for truths—rather than to attribute its vitality to popular incapacity to recognize truth.

I shall hereafter show that the protective idea does indeed derive support from doctrines that have been actively taught and zealously defended by the very economists who have assailed it (who, so to speak, have been vigorously defending protection with the right hand while raining blows upon it with the left), and from habits of thought which the opponents no less than the advocates of protection have failed to call in question. But what I now wish to point out is the inadequacy of the arguments which free traders usually rely on to convince workingmen that the abolition of protection is for their interest.

I had intended to quote somewhat more at length from this chapter, but I will abbreviate the argument.

An hon. MEMBER: Go ahead.

Mr. GOOD: Mr. Speaker, one is tempted to lengthen out the discussion owing to these constant interruptions. I will, however, abbreviate by pointing out that the ordinary free trade argument has reference only to the tendency of free trade. Free trade logically is perfectly sound. It ought to produce certain results; it has a tendency to produce certain results, but there may be things in the road. A stone has a tendency to fall to

the ground but I may hold it up with my hand. And Henry George points out that under certain conditions the natural tendency of free trade is frustrated. Let me read this paragraph from the concluding part of this chapter. He has spoken of the way in which the belief in protection has survived despite all these demolitions. He goes on:

> This may also be inferred from what protectionists themselves say. Beaten in arguments, the protectionist usually falls back upon some declaration which implies that the real grounds of his belief have been untouched——

My hon. friends in the Conservative party, of course, occupy that position:

> —and which generally takes the form of an assertion that though free trade may be true in theory it fails in practice. In such form the assertion is untenable. A theory is but an explanation of the relation of facts, and nothing can be true in theory that is not true in practice. But free traders really beg the question when they answer by merely pointing this out. The real question is, whether the reasoning on which free traders rely takes into account all existing conditions? What the protectionist means, or at least the perception that he appeals to, when he talks in this way of the difference between theory and fact, is, that the free trade theory does not take into account all existing facts. And this is true.
>
> As the tariff question is presented, there are indeed, under existing social conditions, two sides to the shield, so that men who look only at one side, closing their eyes to the other, may continue, with equal confidence, to hold opposite opinion.
>
> And that the distinction between them may, with not entire inaptness, be described as that of exclusively regarding theory and that of exclusively regarding facts, we shall see when we have developed a theory which will embrace all the facts, and which will explain not only why it is that honest men have so diametrically differed on the question of protection vs. free trade, but why the advocates of neither policy have been inclined to press on to that point where honest differences may be reconciled.

Now let me pause to make comment. For years we have had a classic and annual display in this House between protectionists on the one side and those who claim to be leaning towards free trade on the other. Is it not possible that, as both sides are honest, both sides are sincere, both sides are trying to do something for the benefit of the country, yet that one side is looking on one side of the shield as Henry George points out and the other side looking at the other side of the shield. And is it not possible that if they could just turn around and both sides see both sides of the shield there might be a reconciliation? Now, Mr. Speaker, I know the disposition of the House to object to my continuing argument at this hour, but I stated at the outset that I was not responsible for being forced into this position. I do think it is a misfortune that honest men in different parts of this chamber who want to do something for the benefit of Canada should differ so radically on a question of this kind, and I want to submit that in this little book, if hon. members will read it and study it and meditate on it, there is a possibility of finding reconciliation, a possibility of remedying the unemployment difficulty that my hon. friends in the Conservative party are harping so much upon, without applying the remedy they think to be the only remedy. Now, I desire to close as quickly as possible. I read the following final paragraph in the next chapter on The Real Weakness of Free Trade.

[Mr. Good.]

> Trade is a labour-saving method of production, and the effect of tariff restrictions upon trade is unquestionably to diminish productive power. Yet, important as may be the effects of protection in diminishing the production of wealth, they are far less important than the waste of productive forces which is commonly attributed to the very excess of productive power. The existence of protective tariffs will not suffice to explain that paralysis of industrial forces which in all departments of industry seem to arise from an excess of productive power, over the demand for consumption, and which is everywhere leading to combinations to restrain production. And considering this, can we feel quite sure that the effect of abolishing protection would be more than temporarily to increase the production of wealth?

May I submit this again to my protectionist friends. I think, in a measure, that their point of view is right in contending that under certain conditions it is far better to put up with the economic loss involved in tariff protection than to put up with the economic loss involved in unemployment. I think that is a fair statement of the case. I sympathize with their objective if there is no other way of remedying the tragic unemployment that we have—if there is this excess of productive power going to waste all the time, men who want to work standing idle because they cannot get jobs; if there is no other way of remedying that situation then, at least, as a palliative or as an emergency measure, I do not know but that I would support something in the way of state action to stimulate business activity. But I would like to submit to them most humbly but most emphatically that theirs is the wrong way to solve the problem, and I do hope that they will turn their attention to a solution of the problem that will not involve the absurdities and the waste that are involved in protective tariffs.

Let me read the following paragraph from the next chapter on The Real Strength of Protection:

> The truth is, that the fallacies of protection draw their real strength from a great fact, which is to them as the earth was to the fabled Antaeus, so that they are beaten down only to spring up again.

How many times have my hon. friends to my right been beaten in argument but spring up again and maintain their position!

This fact is one which neither side in the controversy endeavours to explain—which free traders quietly ignore and protectionists quietly utilize; but which is of all social facts most obvious and important to the working classes—the fact that as soon, at least, as a certain stage of social development is reached, there are more labourers seeking employment than can find it—a surplus which at recurring periods of industrial depression becomes very large. Thus the opportunity of work comes to be regarded as a privilege, and work itself to be deemed in common thought a good.

Here, and not in the laboured arguments which its advocates make, or in the power of the special interests which it enlists, lies the real strength of protection. Beneath all the mental habits I have spoken of as disposing men to accept the fallacies of protection lies one still more important—the habit ingrained in thought and speech in looking upon work as a boon.

Protection, as we have seen, operates to reduce the power of a community to obtain wealth—to lessen the result which a given amount of exertion can secure. It "makes more work."

Let me commend this to my Conservative friends—"it makes more work."

—in the sense in which Pharaoh made more work for the Hebrew brick-makers when he refused them straw; in the sense in which the spilling of grease over her floor makes more work for the housewife, or the rain that wets his hay makes more work for the farmer.

Yet, when we prove this, what have we proved to men whose greatest anxiety is to get work; whose idea of good times is that of times when work is plentiful?

A rain that wets his hay is to the farmer clearly an injury; but is it an injury to the labourer who gets by reason of it a day's work and a day's pay that otherwise he would not have got?

The spilling of grease upon her kitchen floor may be a bad thing for the housewife; but to the scrubbing woman who is thereby enabled to earn a needed half dollar it may be a godsend.

Or if the labourers on Pharaoh's public works had been like the labourers on modern public works, anxious only that the job might last, and if outside of them had been a mass of less fortunate labourers, pressing, struggling, begging for employment in the brick-yards—would the edict that, by reducing the productiveness of labour, made more work have really been unpopular?

The point I make should be obvious, and I think it is a point which if perceived and followed up should result in a reconciliation of these opposing schools of thought that have been battling one another across this chamber for so many years. Therein lies the solution of the problem that bothers the protectionist. Why, what have we heard in this House during hours and days of discussion on unemployment and the deplorable condition of business? The protectionist sees only one remedy—to make work. Well, perhaps under certain conditions it is better than no remedy at all but I say let us get the better remedy, let us get the remedy that will go to the root of the problem and remove the source of the evil. I am going to suggest later on what that remedy is. But let me now read the following:

Protectionism viewed in itself is absurd. But it is no more absurd than many other popular beliefs. Professor W. G. Sumner of Yale College, a fair representative of the so-called free traders who have been vainly trying to weaken the hold of protectionism in the United States without disturbing its root, essayed, before the United States Tariff Commission in 1882, to bring protectionism to a reductio ad absurdum by declaring that the protectionist theory involved such propositions as these: that a big standing army would tend to raise wages by withdrawing men from competition in the labour market; that paupers in almshouses and convicts in prisons ought for the same reason to be maintained without labour.

There we come to the same question we were discussing some time ago in connection with our penitentiaries, and I had some correspondence, as other members had, with regard to the impropriety of putting free labour out of a job by giving employment to prison labour. The quotation continues:—

That it is better for the labouring class that rich people should live in idleness than that they should work.

How frequently has that fallacy been preached in this country? I heard it everywhere in my youth—the laudation of the rich men—if they would only spend their money, do no work themselves but give work to poor people who are out of a job, what a good thing it would be! The quotation continues:—

Trades unions should prevent their members from lessening the supply of work by doing too much; and that the destruction of property in riots must be a good thing for the labouring class, by increasing the work to be done.

But whoever will listen to the ordinary talk of men and read the daily newspapers, will find that, so far from such notions seeming absurd to the common mind, they are accustomed ideas. Is it not true that the good times during the war are widely attributed to the "employment furnished by government" in calling so many men into the army, and to the brisk demand for commodities caused by their unproductive consumption and by actual destruction? Is it not true that all over the United States the working classes are protesting against the employment of convicts in this, that or the other way, and would much rather have them kept in idleness than have them "take work from honest men"? Is it not true that the rich man who "gives employment" to others by his lavish waste is universally regarded as a better friend to the workers than the rich man who "takes work from those who need it" by doing it himself?

In themselves these notions may be what the Professor declares them, "miserable fallacies which sin against common sense," but they arise from the recognition of actual facts. Take the most preposterous of them. The burning down of a city is indeed a lessening of the aggregate wealth. But is the waste involved in the burning down of a city any more real than the waste involved in the standing idle of men who would gladly be at work in building up a city? Where every one who needed to work could find opportunity, there it would indeed be clear that the maintenance in idleness of convicts, paupers or rich men must lessen the rewards of workers; but where hundreds of thousands must endure privation because of their inability to find work, the

doing of work by those who can support themselves, or will be supported without it, seems like taking the opportunity to work from those who most need or most deserve it. Such "miserable fallacies" must continue to sway men's minds until some satisfactory explanation is afforded of the facts that make the "leave to toil" a boon. To attempt, as do "free traders" of Professor Sumner's class, to eradicate protectionist ideas while ignoring these facts, is utterly hopeless. What they take for a seedling that may be pulled up with a vigorous effort, is in reality the shoot of a tree whose spreading roots reach to the bedrock of society. A political economy that will recognize no deeper social wrong than the framing of tariffs on a protective instead of on a revenue basis, and that, with such trivial exceptions, is but a justification of "things as they are," is repellent to the instincts of the masses. To tell working men, as Professor Sumner does, that "trades unionism and protectionism are falsehoods," is simply to dispose them to protectionism, for whatever may be said of protection they well know that trades unions have raised wages in many vocations, and that they are the only things that have yet given the working classes any power of resisting a strain of competition that, unchecked, must force them to the maximum of toil for the minimum of pay.

Now Mr. Speaker, may I try to briefly express the thought in my own mind, the problem, and the paradox that faces us, and the reason for all this battling in this Chamber for years and years—which I suppose, will continue: That the free trade argument as expounded refers only to freedom of exchange. Now exchange is part of the productive process, but it is only part, and if we do not have freedom in the other parts of the productive process, if we do not have freedom to produce, of what use is freedom to exchange? The free trade argument as ordinarily preached and expounded, as I say, refers only to a part of the productive process. It does not refer to the fundamental and initial stage in the process, and this is one of the important economic discoveries of the last fifty years, not yet appreciated by most of our people. I want to submit to the House that in the wider and better and fuller conception of free trade, the freedom to produce as well as to exchange, the freedom that applies to all the stages and parts of the productive process, we have a solution to unemployment, and we have a reconciliation of opposing schools of thought. I therefore submit to this House and to this country that it is worth while to make an effort to study rather than to battle. Let me repeat: I said before that our problems were to be solved by study and research and not by partisan recriminations and battling. I believe there is a reconciliation and I believe we can find it. I believe if we have a proper attitude of mind that we can measurably attain it.

Mr. Speaker, on account of the noise in the Chamber, it is difficult for me to make myself heard.

[Mr. Good.]

Mr. SPEAKER: Order, order.

Mr. GOOD: There is a persistent protest against the prolongation of the debate, for which I disclaim all responsibility. I am ready to adjourn the debate any time. I think I can sum up the argument of Henry George thus—

Mr. SPEAKER: The rules of the House are made for the protection, not so much of the majority as of the minority. The majority can always protect itself. I appeal to hon. members of the majority in that they may some day have to invoke the rules in order to protect their rights.

Mr. CAHILL: Is there not a well known rule against reading speeches in this House?

Mr. SPEAKER: Yes, there is a rule against reading speeches, extracts, newspapers, books, but this is what May says on the subject:

Members are not allowed to read books, newspapers or letters in their places. This rule, however, must be understood with some limitations; for although it is still irregular to read newspapers, any books and letters may be referred to by members preparing to speak, but ought not to be read for amusement or for business unconnected with the debate.

In the present instance, I have followed very closely the speech delivered by the hon. member, and I say that he is quoting extracts which are connected with the debate.

Mr. CAHILL: I should like to make the suggestion that the government might buy this book of Henry George and distribute it to the members. They would save time.

Mr. GOOD: Such remarks ill-become a member of this House. I want to read, in conclusion, a very clear statement of the point of view that I have been trying to impress upon the House. With that I end my argument, save to say a word or two about my vote on the motion before the House. This is from page 286 of Henry George's Protection or Free Trade.

Let us turn again to the tariff question.

The mere abolition of protection—the mere substitution of a revenue tariff for a protective tariff—is such a lame and timorous application of the free-trade principle that it is a misnomer to speak of it as free trade. A revenue tariff is only a somewhat milder restriction on trade than a protective tariff.

Free trade, in its true meaning, requires not merely the abolition of protection but the sweeping away of all tariffs—the abolition of all restrictions (save those imposed in the interests of public health or morals), on the bringing of things into a country or the carrying of things out of a country.

But free trade cannot logically stop with the abolition of custom-houses. It applies as well to domestic as to foreign trade, and in its true sense requires the abolition of all internal taxes—

Will hon. members note this?

—that fall on buying, selling, transporting or exchanging, on the making of any transaction or the carrying on of any business, save of course where the motive of the tax is public safety, health or morals.

Thus, the adoption of true free trade involves the abolition of all indirect taxation of whatever kind, and the resort to direct taxation for all public revenues.

But this is not all. Trade, as we have seen, is a mode of production, and the freeing of trade is beneficial because it is a freeing of production. For the same reason, therefore, that we ought not to tax anyone for adding to the wealth of a country by bringing valuable things into it, we ought not to tax any one for adding to the wealth of a country by producing within that country valuable things.

I pause there for a moment. We ought not to place a tax upon production inside the country. What are the government doing in that respect? If they will take the taxes off industry in this country, they will solve the problem of unemployment for my Conservative friends. What have the hon. member for St. Lawrence-St. George and other hon. members been declaiming about and objecting to? The taxation of industry. True free trade will not permit the imposition of a tax upon industry. Henry George continues:

Thus the principle of free trade requires that we should not merely abolish all indirect taxes, but that we should abolish as well all direct taxes on things that are the product of labour; that we should, in short, give full play to the natural stimulus to production—the possession and enjoyment of things produced—by imposing no tax whatever upon the production, accumulation or possession of wealth (i.e., things produced by labour), leaving every one free to make, exchange, give, spend or bequeath.

I do not know that I would go quite as far as that as regards death duties. But there is the solution of this perennial controversy. There is the solution of the problem that hon. gentlemen have been wrestling with for weeks and for months as regards the condition of industry. I stated last year in this debate—and it has had no recognition—that in my judgment taxes on industry, on consumption, were unjustifiable. I instanced last year two kinds of taxes that were theoretically defensible. First, there is the income tax and I gave my reasons for it, including in that tax the inheritance tax. And second, there is the tax on land values. I commend to hon. members the considerations that I advanced last year in this respect. I contend now that, as regards taxation and fiscal matters, we are operating in the wrong direction. I object to indirect taxation. I object to direct taxation of many kinds that are now imposed. I object to the taxation of industry. There are other kinds of taxation that are justifiable. As I remarked earlier in my speech, I was hoping that the government would have appointed a committee to inquire into this matter so that we might make some real advance and would not be threshing over old straw year after year; so that we might get down to basic principles.

Mr. McBRIDE: Is it not the case that this government appointed a committee on Banking and Commerce and that the hon. member has taken up the time of that committee from beginning to end?

Mr. GOOD: I do not think I need answer that question. I have just a word or two to state in conclusion. Regarding the amendment, I do not feel myself able to support it. I have no particular objection to it. I think it is futile. I do not see that it merits support. I was inclined to refuse to vote on the amendment at all, but if I vote on it, I shall oppose it on account of its futility.

As regards the budget proposals of the government, I cannot support them, for two main reasons: first because I think the government was elected on a very distinct understanding, and I do not think they have been true to that—I am not judging their motives, nor am I constituting myself a judge as to their consciences. I was much interested in the remarks of the Minister of Justice (Mr. Lapointe), as to the propriety of what he calls a middle course in the conflict of opinion. But I do not find myself able to support the government, because practically all gentlemen on the government side as well as those in this corner were elected on virtually the same platform, a platform which the government does not show any inclination to carry out, except to a very limited degree. I supported the budget last year because I thought it was to some extent a realization of that platform; I cannot support the budget this year because in my opinion it is merely marking time. Another reason for my inability to support the present budget is the fact that I see no vision, no outlook in the government's fiscal policies but rather a disposition to pursue the old lines that are discredited. Now I am finished, Mr. Speaker, and I must thank many hon. members of the House for the patience they have shown in listening to my somewhat lengthy remarks.

8 a.m.

Mr. W. J. WARD (Dauphin): I had an address of an hour and a half prepared, and if I thought for one moment that the rank and file of hon. members were responsible for the silly and stupid practice of taking the budget vote on either a Tuesday or a Thursday, I should be inclined to detain the House even at this inopportune hour. I say with all due respect to the House that I regard this practice as one having its roots in pure and unadulterated selfishness on the part of the members from Quebec and Ontario. I think

it would have been only fair if those hon. members who have enjoyed week-end vacations at home and at their businesses throughout the entire session had extended to members from the more remote sections of the country, who are forced to remain here continuously during the whole course of the session, the courtesy of taking the vote at a more favourable time. Personally, I have not lost a day so far; I have remained here over every week-end. I repeat, therefore, that it would have been but fair for those hon. gentlemen to have extended to us some measure of consideration and to have so arranged matters that the vote might be taken on Friday instead of Thursday. I would not for a moment think at this hour of the morning of inflicting myself either on Hansard or on the House, and I shall therefore refrain from saying what I had intended to say in discussing the budget. I say it is entirely unfair that such a situation should be possible and I hope that the committee now considering a revision of the rules will see to it that, for example, after the session has progressed to a certain extent, Wednesday nights shall be used to expedite the business of the House. We do not sit on that night, and we might have taken advantage of it to further the discussion of the budget; or, as I have suggested, the vote might have been taken on Friday night. I trust that these matters will be considered by the committee now revising the rules.

The House divided on the amendment (Sir Henry Drayton) which was negatived on the following division:—

PAIRS

(The list of pairs is furnished by the Chief Whips.)

Messrs:

Fielding,	Guthrie,
Bureau,	Bristol,
McMaster,	Baxter,
Shaw,	Woodsworth,
Power,	Mewburn.

Mr. SHAW: Mr. Speaker, I was paired with the hon. member for Centre Winnipeg (Mr. Woodsworth). Had I voted I would have voted against the amendment.

Mr. R. J. WOODS (Dufferin): Mr. Speaker, I spoke on the amendment on March 27, and I desire to say a word or two now in explanation of the position I took at that time. I stated then that a manufacturing industry in the county I represent was at that time working in day and night shifts. That statement was challenged by the hon. member for Vancouver Centre (Mr. Stevens) on the following Monday by the reading of two telegrams, I being absent from the House. Now, if I made any statements that were not absolutely correct I assure hon. members of this House that I did so inadvertently. My authority for making the statement was this: Before the House opened I spent a day in the town of Orangeville where the manufacturing establishment in question is located. I am well acquainted in Orangeville and I know something of the conditions in connection with this institution. I heard the statement made that day that the Dods Knitting Company was operating night and day. That night I passed the company's plant and as the building was all lighted up took that as evidence of the fact that it was operating at night. After the House opened and I listened to hon. gentlemen in this House talking about the industries being driven out of business through the reduction in the customs tariff, about the middle of February, I wrote to a leading citizen and business man in the town of Orangeville, an ex-mayor of that town, and I received a letter from him in answer to my question whether the Dods Knitting Company was operating in the day only or day and night shifts. He stated that the Dods Knitting Company was then operating in day and night shifts and had been for some time. After making my speech on the amendment I immediately took the train to spend the week-end at home. As I have stated, in my absence on Monday the hon. member for Vancouver Centre made his speech on the amendment, and he read telegrams to the House after quoting my statement, and said he thought it strange and sought more definite information. The telegrams that the hon. gentleman read were as follows:

> Dods Knitting authorize me to inform you plant has not been operating night and day; that they are being forced to go on part time immediately. He is wiring explaining more fully.

And the following:

> Dods Knitting Company are not working day and night and are arranging to close to part time.

When I returned to the House on Monday night and was informed by my friends of what had taken place I was surprised, and I took advantage of the first opportunity to go to the hon. gentleman's room in the building and speak to him on the subject. I asked him if he would permit me to see those telegrams. He stated they had been received by a gentleman in Ottawa who might not like his name brought before the public, but he assured me that the first one I have just read was from the Manufacturers' Association of Toronto.

Mr. STEVENS: No, my hon. friend is mistaken. I said it was from the Knitting Association or the Woollen Mills' Association.

Mr. WOODS: The Knitting Association? Then I was mistaken in my understanding of what the hon. member said. Anyway, the second one was direct from the Dods Knitting Company. I then wired to a gentleman I know well, a man of undisputed integrity, and ex-mayor of the town of Orangeville. I asked him if the Dods Knitting Company was then operating day and night shifts, or day shifts, and he replied in this telegram, which I shall read:

> Dods mill still running day shift. Closed night shift about month ago.

Then in order to have a full statement of the facts, I wired to another business man in the town of Orangeville, a man of unquestionable character and integrity, and also an ex-mayor of the town of Orangeville. From him I received the following telegram:

> Dods Knitting Company running full time days with full staff. No night shift now.

Now, Mr. Speaker, the facts are these: While my statement in words was not absolutely correct when I made the statement in the House, yet it was correct in the spirit, and the fact is that the Dods Kintting Mill was running day and night shifts, and at the time I got these wires was running day shifts full time and full staff. I am very

grateful to the House for allowing me the opportunity to make this explanation, and I leave it to hon. members and to the country to judge of the merits or demerits of the arguments that I presented in regard to the prosperity of that company.

The House divided on the main motion (Mr. Robb) which was agreed to on the following division:

Bill No. 67, from the Senate, for the relief of Helen Marie Pritchard.—Mr. Garland (Carleton).

CANADA-UNITED STATES TREATY

BOUNDARY DEMARCATION

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

Resolved, by the House of Commons,—That it is expedient that Parliament do approve of the Treaty between His Majesty, in respect of the Dominion of Canada, and the United States of America, for the further demarcation of the international boundary between Canada and the United States, laid upon the table of the House on Thursday, the 26th of February, 1925, which was signed at Washington on the twenty-fourth day of February, one thousand nine hundred and twenty-five, and which was signed on behalf of His Majesty in respect of Canada by the plenipotentiary therein named, and that this House do approve of the same.

He said: Mr. Speaker, hon. members of the House will observe that following this resolution on the order paper there is a resolution asking the approval of parliament of the Convention and Protocol between His Majesty, in respect of the Dominion of Canada, and the United States of America, for regulating the level of the Lake of the Woods. It might be well were I to take advantage of the opportunity on the first of these resolutions to say a word as to the use of the word "treaty", in the case of the one resolution, and the words "convention" and "protocol" in the case of the other.

International agreements take on a great diversity of forms, for example: Treaty, convention, acte final, declaration, agreement, protocol, exchange of notes, and so on. Of these, the treaty and the convention are the more formal, and are used for more important matters. In British practice, treaties and conventions are made between heads of states, while agreements, may be made between governments without the issue of full powers.

As between "treaty" and "convention", the distinction is not definite. They do not differ as regards their structure. The terms are frequently used interchangeably, but as a rule a treaty is considered a more formal document than a convention; it is always used in making peace, and it is generally used in agreements as to boundaries. The agreement of 1908, between His Britannic Majesty and the United States, as to the Canadian boundary line, was styled a "treaty", and so is the document now under consideration —Boundary Demarcation Treaty—the Lake of the Woods agreement has been styled a "convention".

It also makes use of the word "protocol." Protocol is a term used in different senses; it may mean a preliminary agreement to be embodied in a convention or treaty later, or an agreement on certain temporary or supplemental measures to be taken to carry out the intent of the main agreement. It is in the latter sense that it is used in the Lake of the Woods agreement: The protocol here provides for engineering reports on plans, representation on a temporary damages tribunal, and so on.

Coming now to the resolution which is before the House, as is indicated it asks the approval of this House in the first instance to the treaty between His Majesty in respect of Canada and the United States of America for the further demarcation of the international boundary between Canada and the United States. A copy of this treaty was laid on the table of the House on Thursday, 26th February, 1925. The negotiation and signature of this treaty has been in accordance with the practice which was laid down at the Imperial conference of 1923, and which has been followed with respect to other recent international agreements between the United States and Canada which have been before this parliament during the last year or two. The Halibut convention, the convention for the suppression of smuggling operations along the border and the convention for the extradition of traffickers in narcotics, were other international agreements that have been

approved by this House and by the Senate. The latter two are about to be ratified. This treaty respecting the demarcation of the international boundary was signed at Washington, as I have mentioned, on 24th February, of the present year. It was signed on behalf of His Majesty in respect of Canada by the Hon. Mr. Lapointe, Minister of Justice, who received full powers from His Majesty to sign in his name on behalf of Canada. It was signed on behalf of the United States government by Secretary Hughes. This treaty was ratified by the Senate of the United States on March 12. After its approval by both houses of this parliament ratification in the name of the king will be sought and obtained and when ratifications are exchanged the treaty will then become binding upon the two countries.

The purpose of the treaty is to readjust the boundary line between Canada and the United States in three respects, and to provide for a continuance of the commission appointed under the treaty of 1908 to mark the boundary in certain areas. With respect to the readjustment of the boundary the details, I think, can be given in a few words:

First of all, article (1) of the treaty relates to the boundary line along the Lake of the Woods and the northwest angle. The boundary line from the mouth of the Pigeon river to the northwest point of the Lake of the Woods, as defined in article (5) of the treaty of 1908, intersects at five points the boundary line from the northwest point of the Lake of the Woods to the Rocky mountains as provided in article (6) of that treaty, and leaves two small areas of two and a half acres of United States waters entirely surrounded by Canadian waters. It is proposed to make the southernmost intersection the meeting-point of the two boundary sections, instead of the northwestern point taken in the treaty of 1908, thus leaving the water area in question a part of Canadian territory. It takes certain waters that at the present time are practically surrounded by United States waters, and brings them into Canadian territory.

Article (2) of the treaty relates to the boundary line from Lake of the Woods to the Rocky mountains. This line is defined in the boundary treaty of 1908 as consisting of a series of curved lines joining adjacent monuments, each following the curvature of the forty-ninth parallel. It has been found that such a curve, though small, not exceeding four inches in the one and one-third miles between monuments, is not as practicable a boundary as the straight line which has been adopted in all other sections of the international boundary. The treaty therefore provides for straight lines between monuments. This involves a cession of some twenty-two acres of land all told to the United States.

The third article relates to the boundary line at Passamaquoddy bay and Grand Manan channel, New Brunswick and Maine. It is found by surveys that the terminus of the line in Grand Manan channel, laid down in the treaty of 1908, is less than three miles distant from the shore lines of Grand Manan island and of the state of Maine, and leaves a small zone of waters of controvertible jurisdiction between this terminus and the high seas. It is therefore provided that this line should be extended 2,383 metres further through the middle of Grand Manan channel to the high seas.

The second part of the treaty relates to the continuance of the work of the boundary commission to be found in article (5). The original work assigned the commission, consisting of one Canadian and one United States commissioner, in marking the boundary, is nearing completion. It is, however, desirable to provide for its continuance, in order to inspect and keep in repair or relocate the monuments and buoys and keep open the boundary vistas. The boundary line between the United States with Alaska, and Canada is 5,520 miles, and is marked by 7,734 monuments; approximately 1,070 miles are timbered areas through which a twenty-foot vista has been cut. Experience shows that boundary monuments deteriorate and vistas are closed by growth unless inspection is continued. By article (6), the provision for the continuance of the commission may be terminated by twelve months' notice, any time after six years.

As to expenditure, there would be no outlay for salaries on Canada's part, as the office of boundary commissioner has been merged with that of the Director General of Surveys, and the other staff will be provided by the Topographical or Geodetic surveys. Any outlay woud be for actual work done in the field in repairing or relocating monuments, and might run from $2,000 to $10,000 in any year.

These, Mr. Speaker, are the essential features of the treaty which the House is asked to approve. Needless to say the matter has been the subject of very careful negotiation more particularly between the Minister and officers of the Department of the Interior of Canada and the Secretary of State and offi-

cers of the corresponding department of the United States, and it brings to a final conclusion or removes finally from the arena of future possible discussion some minor points that are of real significance with respect to the international boundary and which if left unsettled might come to create confusion or discussion in the future, but which if settled in the manner here proposed cannot do other than help to further the good relations which so happily exist between the American republic and our own country.

Motion agreed to.

Mr. MACKENZIE KING moved:

That a message be sent to the Senate informing their Honours that this House has adopted the above resolution and requesting that their Honours will unite with this House in approving the above mentioned treaty, and that the clerk will carry the said message to the Senate.

Motion agreed to.

CANADA-UNITED STATES CONVENTION

LAKE OF THE WOODS AND RAINY LAKE LEVELS

Right Hon. W. L. MACKENZIE KING (Prime Minister, Secretary of State for External Affairs) moved:

Resolved, by the House of Commons,—That it is expedient that Parliament do approve of the Convention and Protocol between His Majesty, in respect of the Dominion of Canada, and the United States of America, for regulating the level of the Lake of the Woods, and of identical letters of reference submitting to the International Joint Commission certain questions as to the regulation of the levels of Rainy Lake and other upper waters, laid upon the table of the House on Thursday, the 26th of February, 1925, which was signed at Washington on the twenty-fourth day of February, one thousand nine hundred and twenty-five, and which was signed on behalf of His Majesty in respect of Canada by the plenipotentiary therein named, and that this House do approve of the same.

He said: This convention provides a settlement of negotiations which have been under way since 1912, when the two countries, the United States and our own referred the question of the regulation of the level and outflow from the lake of the Woods to the International Joint Commission. The commission reported in 1917; Canada accepted the recommendations in 1919; the state of Minnesota objected; a conference was held in Ottawa in 1922; further negotiations were carried on at Washington in 1923, and the present convention was drafted. The Canadian government accepted it, but the United States took no action, mainly due to local Minnesota opposition, until February, 1925, when the Secretary of State stated that this government was prepared to accept.

This treaty was ratified by the United States Senate, March 14, of the present year.

The purpose of the convention is to raise the level of the lake of the Woods and maintain it at as uniform a level as possible, mainly in order to increase the power development on the Winnipeg river, flowing out of the lake of the Woods. The dams and other control works, and the enlargement of the outlet from the lake, are being carried on at the instance of the Canadian government, under the recent Norman dam agreement effected by the Minister of the Interior, and to which Ontario and Manitoba have consented. It is, however, necessary to secure the consent of the United States, as these developments may involve flooding of the low lands on the south United States shores.

The convention provides, briefly:

i. For the establishment of a Canadian Lake of the Woods control board and also an international board of two engineers, to regulate the level of the lake when it rises or falls below certain levels, with appeal if necessary to the International Joint Commission.

ii. Enlargement of the outlets, by the Dominion.

iii. Assumption by the United States of liability for flooding United States lands, up to certain level of lake, and for certain protective works and alterations.

iv. Agreement by Canada to pay the United States in consideration of these undertakings $275,000, and half of any additional sum expended within five years, two-thirds of these amounts to be assessed on the power companies benefited.

v. No diversion of water to any other watershed except by agreement.

Accompanying the convention is a protocol, providing:

i. Submission of Canadian outlets plans to the international board of control.

ii. Submission of United States protective works to the international board of control.

iii. Representation of Canada on tribunal to assess land damages.

iv. One member of Canadian board to be also a Canadian member of the international board.

At the same time it is proposed to refer to the International Joint Commission, by identical letters of reference, certain questions as to the possibility of regulating the levels of Rainy lake (following into lake of the Woods) and other upper waters, the cost, the proper apportionment of the cost, and the nature and extent of interests benefited by

the present developments on Rainy lake and Kettle falls.

This Mr. Speaker is a pretty complete summary of the convention and the protocol. As hon. members are well aware, this matter also has been the subject of very careful examination and consideration by Canadian ministers of the crown and by officers of the Department of the Interior and members of the administration and corresponding departments of the United States, and the government believes that in the agreement that has been reached a further advance has been made in carrying out the original purpose of the establishment of the International Joint Commission, under which the sources of possible differences between ourselves and the United States are removed by resort to reason, rather than by any thought of an appeal to force. The treaty marks one further step along the path of international peace and goodwill of which we on this continent have given so happy an example to the rest of the world.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): The previous treaty did not appear to be of such importance as to require very prolonged consideration on the part of the House, but this treaty is of real significance. I do not now feel as familiar with the subject as I once was, but the treaty in question is a result of a submission which was made nine or ten years ago to the International Joint Commission of certain differences which had arisen and problems that were on the horizon with respect to the lake of the Woods and adjacent territory, the inlet and the outlet. Canada's case was very thoroughly presented before that tribunal, as was the American case, and a finding was made in which the Canadian commissioners concurred and the American commissioners as well. But a very strange incident occurred with the American commissioners. While concurring, all or some of them submitted as well a sort of subsidiary report, and the concurrence with the majority or the unanimous report was subject to whatever results might flow from the submission of these subsidiary recommendations. Anyway, the consequence was that the United States did not approve of the finding of the international board, and thus there has been a delay extending over all these years. What I would like to be clear on, first of all, is as to what concessions have been made, if any, to the United States, in order to induce them to concur in the treaty. That is to say, what is there embodied in this treaty that is in the nature of a concession, a change from the original terms of the finding of the international board. In view also of the rather involved character of the arrangement now come to, embodied in this convention and in the protocol which subjoins it, it does seem to me the House owes it to the importance of the subject to go into committee of the Whole, so that we can get more detailed information. Possibly it would be better—although on this I do not insist—to go into committee of the Whole at another date, when such information as we can get now can be studied with the treaty itself, and we probably can make more rapid progress. The consequences of the treaty are very great, or rather the importance of hon. members understanding its terms is quite considerable. The great power interests which depend on the outflow of the lake of the Woods will in future rest their rights on the terms of the treaty and, as well, on its fairness will depend in considerable degree the presence or absence of friction between the two countries in years to come.

Mr. MACKENZIE KING: The request, or the suggestion rather, my right hon. friend has made, that the House go into committee of the Whole on this resolution will require the unanimous consent of the House, if we are to conform to the rules covering the consideration of the resolution as it appears on the order paper. I may say, speaking for the government, we have no objection whatever to adopting the course my right hon. friend has proposed. Indeed, I think it is a wise suggestion, and has much to commend it, and I shall be very happy if the House will agree to permit the resolution to be considered in committee of the Whole. If unanimous consent is given we can so arrange. I understand, if we adopt the suggestion, another resolution will have to be drawn.

Mr. SPEAKER: It can only be done by unanimous consent. Is it the wish of the House that the Prime Minister shall have leave to withdraw the present resolution?

Motion agreed to.

Mr. SPEAKER: Is it the pleasure of the House that this resolution be taken up on Monday next?

Motion agreed to.

OLD AGE PENSIONS

Hon. JAMES MURDOCK (Minister of Labour) moved:

That it is expedient that the final report of the special committee of the House of Commons which was ap-

pointed at the last session to make an inquiry into an old age pension system for Canada, be referred to a special committee of the House for examination and report with reference to the correspondence which has occurred since last session with the several provincial governments arising from the proposal of the special committee for co-operative action between the federal and provincial authorities on the subject of old age pensions.

Hon. H. H. STEVENS (Vancouver Centre): I am not rising at all to question the desirability of this motion. I wish, however, to ask the minister a question and to direct his attention to one or two matters. In the first place, I notice that this is a motion to refer the report made in the previous session to a special committee of this House. Is it the intention that such special committee this year shall prepare and suggest to the House legislation necessary to give effect to the substance of the report, and is it the intention of the government to bring in such legislation this year?

Mr. MURDOCK: That would appear to be a matter for later consideration when the report of the committee has been received. The proposal of the special committee last year, which proposal was adopted by this House, was for co-operative action between the federal government and the various provincial governments on an old age pension plan, and the federal government was to take the matter up with the provincial governments. That has been done. If my hon. friend will look at Hansard of March 2, 1925, he will find a brief outline of the answers received from the various provinces, or I can read them to him now, if he would like to have them on Hansard again.

Mr. STEVENS: I should be glad if the minister would do so.

Mr. MURDOCK: These questions were asked and answered on March 2, 1925:

1. Has the government communicated with the provincial governments in connection with the old age pension scheme, which was recommended to the House in a report brought down July 1, 1924?

The answer given was: Yes. The second question was:

2. If so, what was the result of these communications?

The answer given was:

2. British Columbia. A resolution was adopted by the legislature approving of the principle of old age pensions and advising the enactment of legislation by the Dominion government to bring the same into effect; the government of British Columbia also expressed the opinion that the matter of old age pensions was one entirely in the sphere of the federal parliament.

Alberta. Consideration promised.

Saskatchewan. The reply of the provincial government spoke of the difficulty of adopting any suitable scheme of old age pensions by provincial enactment alone, and referred to the differences in climate between the various provinces as rendering a joint scheme between the Dominion and the provinces difficult of attainment. The opinion of the provincial government was that an old age pension scheme for Canada could best be adopted by the federal authorities alone.

Manitoba. Promised consideration.

Ontario. Promised consideration.

Nova Scotia. Promised consideration.

Quebec. The provincial government intimated in its reply its inability to comply with the proposals of the Old Age Pensions committee.

New Brunswick. No reply has been received as yet.

The third question was:

If not, has the government decided to do anything during the present session as suggested by the report?

The answer given was:

The matter is under consideration.

Now the proposal is to submit this question to a special committee, having regard to the attitude of the provincial governments as it is before us, for further consideration and report to the House.

Mr. STEVENS: I hope the minister will not misunderstand me. I am not for one moment seeking to raise this matter for the purpose of questioning the desirability of the resolution. I am asking this question because of my intense interest in the subject—

Mr. SPEAKER: By leave of the House.

Mr. STEVENS: I am asking a question. In view of the fact that these answers reveal —what shall I say?—an intention on the part of some provinces, at least, not to do anything at all which would make it possible for provinces who were willing, to act, and in view of the fact that some of the provinces state that this is the duty of the federal government, indicating, therefore, their lack of inclination to co-operate, would it not be better for the federal government to take full responsibility in the matter and to bring in the legislation this session?

Mr. MURDOCK: That, I think, would be a proper question to determine after a special committee had considered the question again in the light of changed conditions. Last year a special committee indicated—and its report was adopted by this House—that the question was one to be dealt with jointly between the Dominion and the provincial governments. Now, it would seem proper to ask a special committee and, I would hope, the same special committee, to deal with the situation having regard to the changed circumstances.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, the special committee business, in my judgment, has

been overdone in this parliament many times over. We have special committees sitting on this, that and the other thing all the time. The standing committees are also sitting, with the consequence that it is very hard to get attendance in parliament. Parliament is getting a reputation throughout the country for non-attention to its duties, when, as a matter of fact, hon. members are spending, and I fear, in many cases for which they are not responsible, wasting time on special committees. This is a case where it is very difficult to see what the purpose of a special committee can be. If a special committee has any function, it would be to conduct certain inquiries, to get information, to ascertain facts, so as to enable a recommendation to be made as to policy. What inquiries are to be conducted here? What information is to be secured? What facts are unknown? I know of none. According to the minister's statement, at all events, they are all known. What is to be referred to to the committee is this: Certain letters indicating the attitude of the provincial governments. Those are in the possession of the government. The old report of last session is to be referred. That is also in the possession of the government. In a word, to enable the government to determine its course, everything is before it. But the government says: Instead of our determining our course, we shall just have a special committee come and think this thing out and take it off our shoulders. It will not be off the shoulders of the government at all ultimately, and all that a committee can do is to delay the matter. The committee can succeed in delaying progress but what else they can succeed in doing passes my comprehension. Here is the attitude of the British Columbia government, here is the attitude of the governments of Ontario, Quebec, Nova Scotia, New Brunswick; here is the fact that some other government has no attitude at all: all that will go before the special committee. And what will the special committee do? One member may think one thing and some other member may think another thing, but there is nothing to find out; there is no fact undisclosed, or at least there is not suggested to be any. In a word, the government after it has the report will be just where it is to-day.

Mr. MURDOCK: Does the hon. member realize that there are only three provinces that have stated their position in the matter?

Mr. MEIGHEN: Well now, that is more interesting still. The committee will have the findings of three provinces, and I presume having that information they will say—well, really, one does not know what on earth the committee could say. Two of these provinces declare it is federal business while one says otherwise, apparently. Where will the committee be at all? I presume that after the committee submits its report, if it can ever frame a report to mean anything, then the matter will stand until next session and we shall have a couple more provinces declaring themselves, in consequence of which another committee will be appointed; and so on until all the provinces have indicated their views. Now, is it not sheer humbug? For the life of me I do not see what else it is. And besides, it is occupying the time of hon. members of this House to absolutely no purpose when already we are so surfeited with committees that we can scarcely get an attendance in the House.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am afraid I cannot agree with my right hon. friend (Mr. Meighen) in the view he takes. If there was any advantage at all in having a committee of the House originally to deal with the matter, surely there is an advantage in continuing the same committee when it is now possible to obtain the information which it was found impossible to get at the time the committee made the previous inquiry. As hon. members of the House know, this matter of old age pensions has up to the present been considered one in which the provinces as well as the federal government are interested. It is all important that before any action is taken by the federal administration we should understand very fully and finally the attitude that the several provinces will take on this particular question. As the Minister of Labour (Mr. Murdock) has mentioned, some of the provinces have not given any adequate expression of their view, or any expression at all. I should imagine that the committee would now feel that they would desire to have appear before them some official representative of each of these particular provinces who will be in a position to state the view which that province takes on these matters, and also that it would be an advantage to the committee possibly to bring representatives of all the provinces if need be.

Sir HENRY DRAYTON: My right hon. friend suggests that the committee could enforce the views of a province through the machinery of the committee. Under what power could that be done?

Mr. MACKENZIE KING: My hon. friend has the idea of force in mind. The whole purpose of the committee however is rather to adopt the opposite method of "sweet reasonableness" instead of attempting to get the information by force. It is not to be assumed that the provinces have not replied because of some desire to ignore the importance of the question, or that those that have replied in the way they have done may not be very glad to reconsider the position they have taken if they get further light as to the attitude of other provinces. The matter is one in regard to which much better headway could be made by means of conference and joint discussions than by correspondence between the different governments. All hon. members who have had any experience in the matter of correspondence between different departments of the federal government and the provincial governments are aware that such negotiations are apt to be of a most formal and limited character. The government is really desirous of getting if possible co-operation between the federal and the provincial authorities, believing that the matter is one which, if it is to be worked out satisfactorily, will demand such joint effort. And it has been with that end in view that the Minister of Labour has felt, with the information he can now place at the disposal of the committee, that he would like to have the same committee re-convene and discuss the subject in the light of this wider information. I think it is entirely in the interests of the subject to which the resolution relates that this course should be adopted.

Mr. WILLIAM IRVINE (East Calgary): I am very much disappointed with the procedure which the government intends to follow in respect of old age pensions. I had looked forward to seeing this question settled in some way at this session. Last year the committee appointed to deal with the matter went into the consideration of old age pensions fairly thoroughly, securing all the information that was available, and the recommendation that the provinces be consulted was not of first importance. The recommendation of the committee last year was that legislation providing for old age pensions was desirable; the suggestion that the provinces should be consulted and that some measure of responsibility should rest upon them in the matter of old age pension legislation appeared to me at that time as perhaps only a way of retarding developments. And subsequent events have proved that. I do not know what the intention of the government really is in regard to this legislation, but if the intention is to shelve the question for another year this is the best way I could conceive of doing it; and at the same time it would enable the government to report progress to the public outside. But indeed there will be no progress, and the report, if there is one, will be all that we shall have. As the leader of the opposition (Mr. Meighen) has clearly pointed out, the only thing that this committee can do under the resolution is to read over what the Minister of Labour has just read, to the effect that some provincial governments are not considering the matter at all, believing that it is entirely one for federal action, while others are prepared to consider it further. When we have gone over that information the only thing that can be done will be to re-recommend what was recommended last year.

Mr. MURDOCK: I think my hon. friend was on the special committee last year. Did the committee not decide that if an old age pension scheme was to be adopted it should be under a joint arrangement with the provinces?

Mr. IRVINE: I have just mentioned that this was part of the recommendation of the committee. But surely the Minister of Labour does not conclude from that that since some of the provinces are not prepared to follow that suggestion Canada should forever be without an old age pension scheme. We might go on making inquiries of this kind for the next fifty years and still find some of the provinces unwilling to take action. Apparently therefore it would be the duty of the federal government to make some move now since the responsibility is ultimately a federal one. My purpose in rising is to urge the federal government to take that responsibility now. If this resolution were to instruct the committee to draft the necessary bill, I could understand how some progress might be made; I presume, however, that that would be the prerogative of the government itself. I would suggest that instead of the government letting this matter go to the committee for another few weeks of fruitless consideration, it should bring in legislation as soon as possible providing for old age pensions. If this matter goes to a committee now, and is considered for two or three weeks or more, no matter what the composition of that committee is and no matter how favourable a report it might make, it is not likely that we will have any legislation this session.

Mr. MURDOCK: If the federal government did what my hon. friend suggests, would that not be acting contrary to the report of the special committee appointed last year as adopted by this House?

Mr. IRVINE: I do not think so, Mr. Speaker. The committee merely recommended this interprovincial inquiry as part of their suggestion to the government. The committee felt, I think, or if it did not it surely ought to have felt, that some of the provincial governments might not entertain the idea.

Mr. MURDOCK: If that is his view my hon. friend should read the report of his own committee last year.

Mr. IRVINE: I have read the report, Mr. Speaker, I had something to do with the discussion which took place on it, and I think I am familiar with it. I am not speaking for the minds of the individual members of that committee, but surely when that committee suggested that there should be co-operation between the provinces and the Dominion in the drafting of this legislation and joint responsibility for carrying it out, that committee did not conclude that if one or two or more of the provinces refused to take any action there would be no old age pension legislation. If the committee had entertained that opinion, I think it would have voiced it, and I do not think that the Minister of Labour or anybody else had a right to assume that that was the committee's view.

Sir HENRY DRAYTON: Mr. Speaker, the answer my right hon. friend the Prime Minister (Mr. Mackenzie King) gave me is quite correct, and I only put the question in view of the previous statement made by him, which was to the effect that this committee could bring before it the officials of those provinces that as yet had not declared their position. My right hon. friend's explanation of course shows that that could not be done. This being so, the first part of his reasoning fails. But he gives another reason, which may be entirely correct, that this matter is to be approached in a spirit of "sweet reasonableness." I suppose that is the only way it can be approached. There is no question in the world that when the Dominion government goes to the provincial governments seeking to get them interested in some joint venture, the best way to obtain results is by the exercise of the spirit of "sweet reasonableness," and I entirely agree with my right hon. friend that if he is to accomplish anything it must be by the exercise of this spirit. But that provokes a very interesting question, Mr. Speaker,—whether the government is bereft of this spirit of "sweet reasonableness." Is it quite sure that the provincial governments would be more likely to co-operate when so approached by the Dominion government than if they were met in that same spirit of "sweet reasonableness" by a special committee? I do not like the suggestion that the government is bereft of that spirit of "sweet reasonableness," that it is absolutely necessary to erect a committee at this stage of the session for the purpose of functioning in that spirit which the government lacks. Now, how much better it would be if we could just have a little bit of frankness one with the other. We all know that if this report is referred to a special committee the chances are very, very slim that anything can be done with it this session. What objection is there to the government in this particular case announcing its policy, and submitting that policy to the committee, with instructions to lick it into shape? Then something might be done. Of course, in that case it would not be possible for the government to play both sides against the middle; they would have to say something, and they would have to stand upon it. But, after all, is not this question really serious enough, vital enough and human enough to be dealt with one way or the other and not played with? There is just another thing I would point out. I think we have a special committee on which labour is specially represented in one of the standing committees now provided for by the Minister of Labour.

4 p.m.

Mr. MURDOCK: The committee on International and Industrial Relations.

Sir HENRY DRAYTON: Yes. I take it that that committee is not very much overworked with international matters at the present moment; if it is, my hon. friend will correct me. I would remind the hon. minister that we now have so many committees meeting that it is not at all unusual to have five functioning on the same day. I know that so far as I myself am concerned, usually I am supposed to be present at four different committees every single day, and the heavy work there takes up practically all my time, so that I have not been able to be in the House for a considerable period now owing to my attendance on those special committees. I think the government might well consider whether this special committee business is not really getting a little bit played out. Either

that, or else the members will be played out if on the one hand they are going to try to do their duty in this chamber and at the same time be in attendance at three, four and sometimes five committees when the House is in session.

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, it is perhaps noteworthy that every hon. gentleman who has spoken this afternoon urging the government to plunge immediately into a policy of old age pensions, without assistance from the provinces—which would of course involve an enormous expenditure—were a few hours ago condemning the government for not reducing expenditures.

Mr. MEIGHEN: Who have urged that?

Mr. NEILL: That I gathered was the general tenor of everyone who spoke.

Mr. MEIGHEN: Can you name one?

Mr. NEILL: A few hours ago they voted for an amendment to the budget condemning the government for not reducing expenditures. Now, so far as the committee is concerned, I do not think it would be wise to remove the duties which were imposed on the committee appointed last year and place them in the hands of another committee, because the gentlemen who composed the committee last year are naturally cognizant of the subject, and I think they were all very keenly interested in it and could be relied on to take an active interest again, in spite of the numerous other committees that demand their attention. The hon. member for Vancouver Centre (Mr. Stevens) took a point which I think he was mistaken in, that inasmuch as one province at least has refused to have anything to do with the joint scheme, therefore it was impossible to go further. But the report of the committee of last year specifically recommended that the bill, if introduced, should be of such a character that it would be open to any province to co-operate should it choose to do so, much in the same way, I imagine, as in the case of the legislation regarding grants for good roads of which certain provinces took advantage, and others did not.

Mr. STEVENS: May I ask a question?—and this is not asked with any desire to embarrass; I am quite serious. Assume, we will say, that six provinces adopted it and three refused—already three have indicated that it should be done by the federal authorities—and legislation was passed in those six provinces on the matter; would there not be a tendency for the indigent aged to drift into those provinces that had provision for an old age pension from the provinces where the old age pension provisions did not exist? Take Alberta and British Columbia, for instance; if one had an old age pension scheme, and the other had not, would not the aged in the province without the provision have a tendency to drift into the other province with the old age pension scheme, and thus saddle that province with unfair and undue burdens?

Mr. NEILL: There might be a danger of that kind, but I think it could be largely avoidable. The same objection has been raised in connection with the Mothers' Pension Act, but that objection has been met by suitable regulations. I do not think the inducements offered by any old age pension scheme, such as we could afford to provide, would be of such a character as to lead people to drift very far, but it could be easily regulated by requiring a certain number of years' residence in the particular province before qualifying for the pension. I was only explaining the matter to the hon. member, because I know he was not a member of the committee, and I wanted to point out that we are not precluded from going on with the legislation this year because one or more provinces have refused to have anything to do with it. The recommendation of the committee was of an optional character.

With regard to the remarks of the right hon. leader of the opposition (Mr. Meighen) that there was no more knowledge to be acquired by the committee, it might well be, if it was found on a consideration of the reports that have been made, and others yet to be obtained from the different provinces, that united action was absolutely impossible or practically so, that it would be necessary to seek to formulate some other scheme. I saw in the press yesterday, for instance, that the British government are starting out with a new insurance system of a very extensive nature and of a contributory character—I do not think that would be adaptable to our conditions here, yet in default of being able to devise a scheme along the lines the committee recommended, it might be that we would have to consider something of that character. The committee would be able to obtain that information, and its report might be of some value to the government in formulating its policy.

Motion agreed to.

Mr. MACKENZIE KING: If the House would give unanimous consent we might appoint the committee now, just naming the same committee as was appointed last year. I think there is a general agreement that if any committee is to be considered, it should be the same committee.

Mr. MEIGHEN: Very well.

Mr. MACKENZIE KING: With the unanimous consent of the House I move:

That a special committee be appointed to make an inquiry into an old age pension system for Canada, with power to send for persons, papers and records and to report from time to time, and that the said committee do consist of the following named members, namely, Messrs. Fontaine, Irvine, Logan, McConica, Munro, Neill, Preston, Raymond, Robichaud, Sexsmith, Spence and St. Père.

Mr. MEIGHEN: Could there not be further words to this effect?—"and that there be referred to such committee for examination and report the correspondence which has occurred since the last session between the several provincial governments."

Mr. MACKENZIE KING: Yes, I thank my hon. friend for the suggestion. I move to amend the motion accordingly.

Motion as amended agreed to.

DOMINION LANDS ACT AMENDMENT

Hon. CHARLES STEWART (Minister of the Interior) moved that the House go into committee at the next sitting to consider the following proposed resolution:

Resolved, that it is expedient to amend The Dominion Lands Act, chapter 20 of the statutes of 1908, and the acts in amendment thereof, by providing,—

(1) That notwithstanding anything contained in the said act, no person shall be granted entry for lands situate within that part of the provinces of Saskatchewan and Alberta south of the south boundary of township 16 in the Dominion lands system of survey unless such person submits evidence satisfactory to the Minister of the Interior that he or she is in permanent residence and conducting farming operations upon a farm of not less than eighty acres distant not more than nine miles in a direct line from the parcel for which entry is desired, exclusive of the width of road allowances crossed in the measurement, or that such person is the father, mother, son, daughter, brother or sister of a settler in permanent residence and conducting farming operations as aforesaid;

(2) That notwithstanding anything to the contrary in the said act, the minister may sell school lands required as right of way for any project or for reservoir, church, cemetery or hospital sites, at a price to be fixed by an officer of the department as the actual market value of the land, and upon such terms of payment as the minister may prescribe, provided that the government of the province in which the land is situated expresses its approval of the sale and price in each case;

(3) That where an application is made by the holder of unpatented school lands purchased under the provisions of this act prior to the first day of January, 1923, or by the legal representative, or registered assignee of such holder, the minister may, with the consent of the government of the province in which the lands affected are situate, rescind such contract, or contracts of sale, as to any portion thereof and in such form and area as the minister may prescribe.

Upon such rescission the holder or his legal representative, or registered assignee, shall be held to be indebted to the crown for principal and interest in accordance with the terms and conditions of the original contract, or contracts of sale, in respect only of the area to which such contract, or contracts, have been confined, and the account, or accounts, of the holder, legal representative, or registered assignee, in the books of the department, shall be adjusted accordingly. In such readjustment, any moneys paid on the original contract, or contracts, may, in the discretion of the minister, be applied in satisfaction of the principal and interest owing, or principal accruing under the contract, or contracts, as amended; provided that there shall be no refund of any moneys.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Mr. MEIGHEN: It would help the discussion when we get into committee if the minister would at this stage tell the precise intent of each of these clauses. I think I understand them fairly well, but I am sure many hon. members will not.

Mr. STEWART (Argenteuil): With reference to clause 1, as hon. gentlemen know, we have a regulation that prohibits the homesteading of land south of township 16 in the provinces of Alberta and Saskatchewan.

Mr. MEIGHEN: For how long?

Mr. STEWART (Argenteuil): I cannot give my hon. friend the exact date.

Mr. MEIGHEN: About when did it go into effect?

Mr. STEWART (Argenteuil): I think about two years ago. That area of land which is known generally as the dry belt should not be turned over to agriculturists, it should be retained as far as possible for grazing purposes. But it is desirable that the relatives of residents should be given the privilege of homesteading available land keeping in mind the provision of the Dominion Lands Act that it shall be within nine miles of the home of the parents or relative. We are having a good deal of pressure brought upon us to open up these areas. I do not wish to do so because I think it is costing the country a considerable amount of money to move people out of these localities. Opening up these areas should only be done with the utmost care and only in cases where there appears to be real necessity to meet the demands of relatives or children of parents who are in the locality. For that reason I am asking in section 1 of the amendment the privilege of granting to the persons mentioned the right to take homesteads in that area.

Then, with reference to the second amendment the amendment to the School Lands Act, hon. gentlemen will remember that last

year objection was taken to this when the minister was asking for power to sell right of way and reserve sites for the purposes mentioned here—church, cemetery, or hospital. As hon. members will know, under the provisions of the law school lands, if sold, are to be sold at public auction, and any one who has had any experience in the department knows that from time to time school lands are required, sometimes for a gravel pit and frequently for a right of way on a railway crossing. In these cases some doubt has arisen as to what would be a reasonable price for the land. In order to make it clear that these transactions shall meet with the approval of the provincial authorities, I have inserted a provision in this section this year that this consent of the provincial authorities must be obtained for the sale of school lands of this character.

Mr. MEIGHEN: Could the minister say what the privilege has been before this? The minister has not been powerless to sell land for some of these purposes previously without auction?

Mr. STEWART (Argenteuil): That is quite true, but last year when I sought to extend that provision my right hon. friend himself took some exception—

Mr. MEIGHEN: Yes.

Mr. STEWART (Argenteuil): —and I have now inserted the proviso that the provincial authorities shall be satisfied with the sale—that the matter shall be referred to them and their approval obtained.

Mr. MEIGHEN: I am not clear as to what the difference will be between the present law and the law as now proposed.

Mr. STEWART (Argenteuil): I do not happen to have the section before me but I will get it for my right hon. friend when the matter comes up again. The third section is new, and I may say for the information of the House that I have consulted the provincial governments with respect to this change in the law as it affects the sale of school lands, and have their consent to what I think will be a very great advantage to the holders of school lands who are in arrears. Hon. gentlemen know, particularly those who come from the western provinces, that at auction sales of school lands held on former occasions, very many purchasers purchased more land than they actually required, and they found themselves considerably embarrassed. Indeed almost daily there are cancellations of school lands going through our office, which means of course that any moneys that were paid in by the purchasers of the school lands are forfeited. I made a proposition to the provincial governments who were interested that I might have the authority to cancel a portion of the sale and apply the payment on the purchase price on the portion retained by the purchaser, thereby saving him from the loss of his money and giving him an opportunity to pay up for the balance of the holding. This very frequently happens in the case of the sales of half sections and greater amounts. It is not proposed that we split the quarter section in two, but that we shall be able to cancel the sale of a half section and apply such moneys as have been paid in on the purchase price on the quarter section that he will endeavour to retain and pay for.

Mr. MEIGHEN: A very serious step.

Mr. STEWART (Argenteuil): I do not agree with my right hon. friend. I think that, rather than cancel the sale in its entirety or confiscate the money paid in by the purchaser, it is a much more reasonable thing to allow him to retain one-half of his purchase, with no change so far as the contract is concerned, simply applying such moneys as he has paid in on the purchase of a quarter section rather than a half section, the other portion reverting to the crown.

Mr. GARLAND (Bow River): In regard to paragraph 2, does not the paragraph simply provide for an addition to the present regulation for the sale of school lands, or can you under this regulation sell school lands for any other purpose than that provided for in the regulation?

Mr. STEWART (Argenteuil): No.

Mr. GARLAND (Bow River): Supposing someone wanted to buy school lands in that district for farming purposes what would be the process?

Mr. STEWART (Argenteuil): We could not sell them to him. They are sold under a regulation which is now in existence which means that the consent of the provincial government must be obtained before the lands are put up, and they must be sold by public auction.

Mr. SPEAKER: I suppose that unanimous consent should be given for questions to be asked at this stage of the proceeding. All these questions can be brought up in committee of the Whole.

Motion agreed to.

CANADA HIGHWAYS ACT AMENDMENT

Hon. GEORGE P. GRAHAM moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to provide that the time within which the various provinces of Canada may earn and be paid the sums allotted to the said provinces under the provisions of the Canada Highways Act, chapter 54 of the Statutes of 1919, as extended by chapter 4 of the Statutes of 1923, be extended for a further period of two years.

He said: I may say that this resolution merely extends the operation of the Highways Act for two years to allow those provinces which have not already done so to earn the amount of money voted to them under the act.

Sir HENRY DRAYTON: Will my hon. friend state what the provinces are and how much money they can get?

Mr. GRAHAM: I will tell my hon. friend when we get into committee.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: In reply to the hon. member for West York (Sir Henry Drayton), the provinces that have earned the full amount of their appropriation are, New Brunswick, Nova Scotia and British Columbia. In Ontario $300,000 has been held back to ensure completion. The following provinces require additional road making seasons to earn the full amount: Saskatchewan, three years; Manitoba, two years; Prince Edward Island, two years; Alberta, three years. Quebec is to complete her work this year.

Sir HENRY DRAYTON: How much money is being paid in each province, and how much money will be paid under the extended period which has been provided for?

Mr. GRAHAM: To get at that properly, I give first the amounts appropriated. The allocation of the $20,000,000 is as follows:

Alberta	$1,477,810
British Columbia	1,251,955
Manitoba	1,602,265
Nova Scotia	1,468,720
New Brunswick	1,163,845
Ontario	5,877,275
Prince Edward Island	603,455
Quebec	4,748,420
Saskatchewan	1,806,255

I give now the expenditures as against the amounts appropriated: There has been $16,784,825.82 paid. Of the remaining $3,215,174.18 there is $869,187.25 in the course of audit and preparation for payment, leaving a balance of $2,345,086.93 yet to be earned.

Sir HENRY DRAYTON: What is the trouble in connection with those unascertained amounts? Do I understand there is an arbitration or a settlement which has been arrived at?

Mr. GRAHAM: No, they are auditing. An agreement has been prepared for each province. Perhaps it would be interesting to read it. It is as follows:

Alberta had its general plan, under the Canada Highways Act, approved by the Minister of Railways and Canals on May 11, 1920. No expenditure was made, however, under this plan and, after a change in government, a highways commission was appointed for the purpose of considering the whole question of the roads to be improved by the provincial government under the Canada Highways Act. This commission recommended some additions and slight changes in the original plan, and in March 1924 asked for the approval of an amending plan; this was approved by the Minister of Railways and Canals in April, 1924. Active work has been carried on by the province during the past season. Under the act Alberta is entitled to $1,477,810. Up to date the province has earned $274,292.11 and has been paid $210,585.93; the balance is now being adjusted for payment.

Sir HENRY DRAYTON: This will give Alberta how many more years in which to earn the balance?

Mr. GRAHAM: It will give her this year and two years more. The act does not expire until April, 1926, but they must know this year when making their plans for next year that the arrangement has been extended. The agreement continues:

Saskatchewan's appropriation under the act is $1,806,255. To date this province has earned $1,495,594.68, of which $1,434,484.11 has been paid and the balance is being adjusted for payment.

Sir HENRY DRAYTON: A comparatively small sum.

Mr. GRAHAM: Yes, they can work theirs out in three years. The agreement continues:

Manitoba's allotment is $1,602,265. Of this amount $1,222,149.79 has been earned, although a part of it ($68,209.39) is yet to be adjusted for payment. Manitoba's earning of subsidy averages about $200,000, so that about two further seasons will be required to work out its balance of about $380,000.

Ontario's appropriation is $5,877,275, and this province has practically earned the whole of its appropriation although some money (about $300,000) is being held over for the completion of two or three specific contracts. It is expected that these contracts will not be finished in less than two road-making seasons.

Quebec's appropriation is $4,748,420, under the act. This province still has about $100,000 to earn. This balance will be taken up this season.

Prince Edward Island's appropriation is $603,455. To date this province has earned $554,387.45, of which $408,273.69 has been paid. I consider that it will take two working seasons for Prince Edward Island to work out the balance of its allotment as it is considering the importation of gravel from the mainland.

New Brunswick, Nova Scotia and British Columbia have earned the full amount of their appropriation under the Canada Highways Act.

Sir HENRY DRAYTON: Before we leave this, can my hon. friend tell me how much money is still held over that has already been earned? How much money was earned under last year's contract which has not been finally paid?

Mr. GRAHAM: There would be $300,000 due Ontario under the specific contracts which have been entered into; that is not under audit.

Sir HENRY DRAYTON: That is not earned yet?

Mr. GRAHAM: No, it will not be earned for a couple of years. I will get those figures.

Mr. McTAGGART: Would the minister tell us the situation in Saskatchewan and Alberta with regard to new projects coming under the agreement between the provincial and Dominion governments? Will it be possible for, say, the province of Saskatchewan to bring further new projects under agreement between the provincial and the Dominion governments?

Mr. GRAHAM: Out of $1,806,255 they have earned already $1,495,594.68, which would leave a little over $300,000. I imagine there would be some new projects, but I could not say positively until I compare the applications that have already been made by Saskatchewan for approval.

Mr. McTAGGART: The thought in my mind was that possibly new projects could not come under the agreement. The act has been extended for two years only.

Mr. GRAHAM: Any projects that do not exceed the amount appropriated for Saskatchewan can be considered, but anything outside of the present appropriations in the way of new projects could not be considered, because there is no money for it. In other words, if the projects already approved of for Saskatchewan, or the bulk of those approved of, reaches the limit of the appropriations for that province, they could not get anything further. But my own opinion is that the projects they have now before the department will not reach the full amount of their appropriation.

Mr. CALDWELL: Could the minister tell us how the allocation is arrived at? Was it per capita of the population, or per mile of road in the different provinces?

Mr. GRAHAM: I will read this from the act:

For the purpose of constructing and improving highways in Canada the Governor in Council may authorize the payment out of the Consolidated Revenue Fund of Canada of the sum of twenty million dollars during the period of five years from the first day of April, 1919.

Subject to the conditions hereinafter mentioned, such sum shall be allotted and paid as follows:—

(a) Eighty thousand dollars shall be paid each year to the government of each province.

(b) The remainder of such sum shall be allotted and paid to the governments of the respective provinces in proportion to the populations of the said provinces respectively, as determined by the latest federal census of each province.

Mr. DOUCET: Whilst the province of New Brunswick has earned its full quota, will the minister say if they have been paid the full amount so earned?

Mr. GRAHAM: I have no reason to think they have not been paid. The provinces generally put in their application for the money as soon as it is earned, and then they have only the routine of the auditing and inspection by the engineers. As soon as that is done, the money is handed over.

Mr. CALDWELL: Are there any instructions under the act as to what road that shall be paid on, or does the province decide the system of roads? Must it be paid on provincial highways, or can the provinces allocate it to any roads they like within their own province?

Mr. GRAHAM: Without going over the act, I think the province make certain allocations, and the federal government's power is to approve the class of road on which they will give 40 per cent. I think the federal authority has not interfered in any way with the allocation of roads by the province.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce bill No. 68, to extend the period of the Canada Highways Act.

Motion agreed to and bill read the first time.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

SUNNYBRAE-GUYSBOROUGH

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee at the next sitting to consider a resolution providing for the construction of a line of railway, Canadian National Railway from Sunnybrae to Guysborough, N.S.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Sir HENRY DRAYTON: I should like to ask my hon. friend whether there are any new additions or whether the proposition will be as it was last year?

Mr. GRAHAM: I think it is in the same identical terms as last year.

Motion agreed to.

TURTLEFORD

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

(1) That it is expedient to bring in a measure to provide for the construction or completion prior to the thirty-first day of August, 1928, of a line of railway between Turtleford and a point in township 48, range 12 West of the Third Meridian, in the province of Saskatchewan, by the Canadian National Railway Company (hereinafter called the "National Company" and the Canadian Northern Railway Company (hereinafter called the "Northern Company"), jointly or severally;

(2) That a part of the cost of such construction and completion, as specified approximately in the schedule hereto, shall be provided by the Northern Company from the proceeds of issues of debenture obligations heretofore made, and now standing subject to certain trusts, to the credit of the Provincial Treasurer of the province of Saskatchewan (hereinafter called "trust funds"), and the balance, also as specified approximately in such schedule, shall be provided by the National Company. To enable such balance to be provided, the National Company may, subject to the provisions of the proposed Act, issue notes, obligations, bonds and other securities (hereinafter called "securities"), and the Governor in Council may authorize the guarantee of the principal and interest of such securities. The said companies shall be authorized to take all necessary steps, jointly or severally, to enable the trust funds to be used as herein provided.

(3) That provision be made for the issue of certificates as to mileage by the minister, and neither the minister in the issuance of such certificates, nor the said companies in the performance of the work of construction and completion, or the National Company in the issue of its securities for the balance of cost after deducting trust funds available shall, unless by consent of parliament, exceed the estimated distance expenditure and average expenditure per mile, and the estimated amount of trust funds available, by more than fifteen per cent, and if upon final survey it appears to the said companies or either of them that the expenditure involved in the completion thereof will exceed the limits of expenditure estimated, the said companies shall not commence nor proceed with the works without first obtaining the approval of parliament;

(4) That the nature, terms and form of securities to be issued and guaranteed in respect of the balance of money by the National Company shall be such as may be approved by the Governor in Council and signed by the Minister of Finance;

(5) That to enable the work of completion of the said line of railway to proceed forthwith, the Governor in Council, pending the issue and disposal of any such guaranteed securities, may authorize advances to be made to the said companies, or either of them, from the Consolidated Revenue Fund, such advances to be reimbursed to His Majesty from the first moneys available therefor;

(6) That the minister shall annually present to parliament a statement of the work and expenditure, advances and amount of advances reimbursed, and all such other information as he shall require or direct.

SCHEDULE

Location.	Mileage already graded.	Estimates		
		Mileage including existing grading.	To be expended.	Average expenditure per mile.
From Turtleford easterly and southerly to a point in Township 48, Range 12, West of the 3rd Meridian in the Province of Saskatchewan	23	67	$ 1,871,000	$ 27,925
To be provided by the Northern Company from trust funds, as specified in Resolution 2 and pursuant to chapter 2 of the Statutes of Saskatchewan, 1924, approximately	.....	.....	801,000	
To be provided by the National Company as the balance of cost as specified in Resolution 2, approximately	.....	.....	1,070,000	
			$ 1,871,000	

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: Hon. members will remember that last year a bill was brought in for the construction of this line to a certain point. The bill passed the House of Commons and our Railway committee, but it did not pass the upper House. It was for a line of railway running a longer distance than the present resolution calls for. I may say that I intend to send all these bills to the Railway committee for full discussion, but I

think it is fair to explain that the Saskatchewan government issued certain securities for the construction of lines in that province, and by recent legislation they have made it possible to release these securities to apply to the construction of this line and another one that I have before me, the Bengough-Willowbunch branch. This bill is the same as the bill of last year except as to distance, and as to this point that I have now suggested, that we can utilize the money provided by the Saskatchewan government and held in trust for the construction of certain lines. Perhaps it would be wise, so that I may not make any error, if I read the memorandum which the solicitor of the Canadian National Railways has placed in my hand:

This bill is a little different from those of last year, in that it provides for the utilization of trust funds in the hands of the provincial treasurer of the province of Saskatchewan to the extent of $801,000. The total cost of the line, as shown in the schedule, is $1,871,000, which leaves a balance of cost to be raised by the Canadian National Railway Company of $1,070,000.

We have not carried the branch line this year as far as Hafford, for the reason that after discussing the matter with Premier Dunning and Mr. Hungerford it was suggested that the main purpose was to get some part of the line constructed in the present year, and the present mileage—67 miles—carries the line as far as what is known as Meeting lake.

Sir HENRY DRAYTON: What point did the bill of last year stop at?

Mr. GRAHAM: Quite a distance beyond Meeting lake.

Sir HENRY DRAYTON: No work was done on the bill of last year?

Mr. GRAHAM: It did not become law.

There has been under discussion for a great number of years the building of a line from Shellbrook across to Meeting lake, and the scheme of the present branch line bill is to enable the line to be built as far as the junction point where the Shellbrook line would meet, if the Shellbrook line is ever built. The portion between Meeting lake and Hafford has not been abandoned. We will come back with that proposition later on. In the meantime, Mr. Hungerford wishes to have this lower part of the line between Meeting lake and Hafford reconsidered for the purpose of determining just where the junction point with the main line should be. He thinks that instead of going directly south to Hafford it should bend more to the west, since his view is that grain from this district will probably move by the Alberta gateway instead of via Fort William.

This bill does not differ very materially from the standard bills of last year. The principal difference is that it is made abundantly clear in this bill that the National company can only issue securities for the balance of cost after deducting the trust funds, and it is provided that the two companies, the Canadian Northern and the Canadian National, are authorized to take all necessary steps, jointly or severally, to enable the trust funds to be used as herein provided. It will be appreciated that the trust funds belong to the Canadian Northern system, that is, they were obtained by the issue of securities of the Canadian Northern Saskatchewan and the Canadian Northern.

The line, of course, is to be built as a Canadian Northern line in order to enable the trust funds to be applied thereto.

Sir HENRY DRAYTON: I suppose there is not much doubt as to the position of the trust funds. If I remember rightly, under the old Canadian Northern Saskatchewan system which was operating on the provincial charter, there were at one time numerous railway proposals some of which—I think I am fair in saying, all—were floated by government guarantees.

Mr. GRAHAM: I think so.

Sir HENRY DRAYTON: I do not know of any that build themselves; I think the money all came from the people.

Mr. GRAHAM: From one government or the other.

Sir HENRY DRAYTON: My hon. friend might tell us what line this particular guarantee was for in the first instance.

Mr. GRAHAM: I cannot give that at the moment; I have the information at the office.

Sir HENRY DRAYTON: We can get that later on. But under the arrangement entered into the guarantees were all based on the bonds of the system, endorsed by the province and placed in the hands of the trustee to be earned by the railway as construction took place. So that the present proposition is that instead of doing our own financing we should take advantage of provincial financing already done—

Mr. GRAHAM: Yes, that is part of it.

Sir HENRY DRAYTON:—to the extent stated by the minister. We realize of course that the addition at once becomes a part of the capital charges of the system.

Mr. GRAHAM: Surely.

Sir HENRY DRAYTON: What is the exact difference, if any, between operating under the provincial guarantee and operating under that of the Dominion?

Mr. GRAHAM: Does my hon. friend mean from the point of view of interest?

Sir HENRY DRAYTON: There is more than that involved in it. Some of these guarantees have certain conditions attached as to obligation and the like. Some of them make a special provision for interest, perhaps more or less provincial as against Dominion. The House should know, before embarking on the

principle of building Dominion lines under provincial guarantees, just what the conditions are, because this railway will now be the property of the country, and the people ought to know not only what interest charges will be involved but also what the original terms were under which the securities were given. I would suggest that it would be very much better if we did not start complicating the accounting of a system, already very complex, by bringing in this question of old provincial guarantees. Under the agreement between the province and the local railway, I would assume that the interest has been running on these bonds, from the time the money was raised.

Mr. GRAHAM: That would be reasonable, of course.

Sir HENRY DRAYTON: And who is paying that interest at the present time?

Mr. GRAHAM: As I understand it, these bonds are practically carrying themselves, although I am not sure about that; it is information I should have to get. Perhaps I could get it from the provincial legislation, in which I imagine all these things would be dealt with. And in the preparation of this bill I should think that it would be necessary to have all these details. My hon. friend suggests a point I had not thought of seriously, that there might be some conditions in the old guarantee outside of interest altogether, which would make it embarrassing or expensive,—or onerous, to put it mildly,—for the Canadian National Railways to operate the road, which would not be the case if the railways borrowed their own money directly. I shall try to get this point cleared up before we go much further.

Mr. CALDWELL: Is there not usually a provision in legislation dealing with matters of this kind that the interest shall be paid out of the proceeds of the bond issue while the work is under construction? I know that this is so in the case of the harbour commissions and other matters of that nature, but I do not know whether it applies to the railways.

Mr. GRAHAM: We issue the bonds and sell them and we put the proceeds in the hands of the Receiver General at a certain rate of interest. We could put them in the bank if necessary but the usual method in the federal financing of undertakings of this kind is to put the proceeds of the bonds in the hands of the Receiver General and draw a certain rate of interest.

Sir HENRY DRAYTON: The point made by the hon. member (Mr. Caldwell) is right, but I do not know that it applies to our railways. What he is referring to is a provision usually found in all trust instruments. Under trust instruments the trustee has the right to pay interest during a certain fixed period which is supposed to represent a reasonable time within which construction should take place before operation begins. In connection with the government roads we have no trustee and on that account we save certain costs. The moneys instead of being placed in the hands of a trustee are placed with the Receiver General who allocates them at the request of the company, as from time to time it is necessary; and he allocates them either as for interest or as for principal. As I recollect, there is an item of $56,000 in this year's accounts for interest on the cost of these branch lines under construction. I am not quite sure, it may be for something else; but the principle is the same. I should just like to ask my hon. friend to further consider this question in the light of his own statement. He says he thinks these bonds are carrying themselves.

Mr. GRAHAM: Approximately, I think.

Sir HENRY DRAYTON: If so, no one is losing any money. If we have no money lying idle as the result of these provincial obligations, surely it would be much better for us to keep all our activities in our own hands, instead of building a branch line here or a branch line there guaranteed by the province. It does seem to me to be the most absurd turning of things upside down to have the Dominion—because it is the Dominion—building branch lines with the guarantee of the province. I do not know what some people will think of it, but probably the Acting Minister of Finance (Mr. Robb) would consider it as rather an absurd proposition, and that in the interest of the country's credit abroad it was an exceedingly bad precedent to adopt. It does not look very well for the Dominion to be putting itself in this position, that so far as the outside world is concerned —which understands nothing about the real situation—the Dominion is driven to carry on its financial operations in connection with its railways, in part, not with the gifts—because she would have the right to take those —but with the guarantee of the province, which in turn the Dominion becomes liable for and has to pay interest on.

Mr. GRAHAM: I think quite a few of that kind were taken over with the system.

Sir HENRY DRAYTON: That is a very different thing. That building was done by

the railway company; we were legatees, and we took it with all its burdens.

Mr. GRAHAM: Yes.

Sir HENRY DRAYTON: But here we are putting ourselves in that position. Frankly, I think that some thought should be given to the adoption of that principle, just from the aspect of the country's finances and its credit.

Mr. GRAHAM: I am not in a position to discuss that point intelligently until I have before me all the details in reference to the legislation of the province of Saskatchewan. For two years that province has been very anxious to have this money utilized for the construction of railway lines, as the provincial government had guaranteed these bonds for construction, and it does not look unreasonable, if that money can be utilized for the purpose of building lines within the province, even if those lines will be under the Canadian National, that the money should be used. What will the province do with that money? It can be used only for the purpose of constructing railway lines within the province.

5 p.m.

Sir HENRY DRAYTON: I am going to refer my hon. friend to his own remark not more than ten minutes ago, that those bonds were carrying themselves.

Mr. GRAHAM: I said I thought so.

Sir HENRY DRAYTON: If that is so, the province is now using that money.

Mr. GRAHAM: I will ascertain that. But I do not see how the province can eventually use this money for any purpose but railway construction. They have the securities. If they are using them it must be only for temporary purposes until such time as they can be applied to railway construction. The whole question at issue, to my mind, is whether it is good financing for the Dominion.

Sir HENRY DRAYTON: That is right.

Mr. GRAHAM: The legislature of Saskatchewan has, I believe, without any opposition, passed legislation making it possible to have the Canadian National Railways use the money raised on these securities for the purposes outlined in this resolution. Just what the further complications might be I do not know.

Sir HENRY DRAYTON: I think my hon. friend will find that this is the situation, but I hope he will make sure: First, that he has got a trustee; secondly, the trustee has control of this money; thirdly, the trustee, during the period which must elaspe before the moneys are applied to this railway construction, has the right to place them in any safe guaranteed investment which the province approves of; fourthly, that the province today, in all likelihood, is using its own moneys, which is a perfectly proper thing for it to do. in connection with its own financing.

Mr. GRAHAM: Would they be allowed, without legislation, to use the money for any purpose except railway construction?

Sir HENRY DRAYTON: Not for any capital purpose. My hon. friend will find that usually there is a reasonable provision inserted, which with a certain amount of judgment by the trustee in some cases, of course, plus the consent of the guarantor, allows the money to be deposited in different ways. Why, my hon. friend has no difficulty in using money here; it just goes into the Receiver General's funds. There is no difficulty about it. I should think the position would be the same in Saskatchewan.

Mr. CALDWELL: Mr. Chairman, in my opinion, the point raised by the hon. member for West York (Sir Henry Drayton) resolves itself into this: Can the federal government secure this money from the province as cheaply as it can from some other source? With regard to the money being used otherwise, I think the hon. member is absolutely right. I know the province of New Brunswick some years ago issued bonds for a certain railway, and these bonds were deposited with a trust company. When we wanted the money to build the road we found the trust company had invested it in a South American railway, and we were unable to proceed with our construction because the investment was not liquid, and I do not know that we have got all the money back yet. The trust company was also financially embarrassed, and was not able to dig up the money for us from some other source.

Mr. GRAHAM: Will it cost the Canadian National Railways more to issue its own bonds?

Mr. CALDWELL: But eventually it means the government and the people.

Sir HENRY DRAYTON: That is the point.

Mr. CALDWELL: Will the minister find out?

Mr. GRAHAM: I will find out all about it before we get in committee on the bill.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 69, respecting the construction of a line of railway forming part of the Canadian National Railways between Turtleford and a point in Township 48, Range 12, West of the Third Meridian, in the province of Saskatchewan.

Sir HENRY DRAYTON: I would ask my hon. friend to give us the information he has promised before this bill goes into committee.

Mr. GRAHAM: Yes.

Motion agreed to and bill read the first time.

REGINA—AVONLEA

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved (1) That it is expedient to bring in a measure to provide for the construction or completion prior to the thirty-first day of August, 1927, of a line of railway from a point about five miles south of Regina to Avonlea in the province of Saskatchewan, by the Canadian National Railway Company;

(2) That the company may issue notes, bonds and securities in respect of the said construction, and the Governor in Council may authorize the guarantee thereof;

(3) That provision be made for the issue of certificates as to mileage by the minister, but neither the minister in the issuance of such certificates nor the company in the performance of the work of construction and completion or in the issue of its securities shall, unless by consent of parliament, exceed the estimated distance, expenditure and average expenditure per mile by more than fifteen per cent; and if upon final survey it appears to the company that the expenditure involved in the completion thereof will exceed the limits of expenditure estimated, the company shall not commence nor proceed with the work without first obtaining the approval of parliament;

(4) That the nature, terms and forms of securities to be issued and guaranteed shall be such as may be approved by the Governor in Council and signed by the Minister of Finance;

(5) That to enable the work of completion of the said line of railway to proceed forthwith, the Governor in Council, pending the issue and disposal of such guaranteed securities, may authorize advances to be made to the company from the consolidated revenue fund, such advances to be reimbursed to His Majesty from the proceeds of the sale or other disposition of such securities;

(6) That the minister shall annually present to parliament a statement of the work and expenditure, advances and amount of advances reimbursed, and all such other information as he shall require or direct.

SCHEDULE.

Location.	Mileage already graded.	Estimates.		
		Mileage including existing grading.	To be expended.	Average expenditure per mile.
From a point about five miles south of Regina to Avonlea, in the province of Saskatchewan.....	0	33	$ 941,000	$ 28,51

Sir HENRY DRAYTON: I think the minister had better not go on with this resolution now. It is highly contentious.

Mr. GRAHAM: I know it is.

Sir HENRY DRAYTON: I know that a great many of the representatives from the west desire to be present during the whole time the resolution is being considered, and many of them are not here.

Mr. GRAHAM: I want to make some advance with this proposal so that it may be taken up by the Railway committee. I am not as well informed on this bill as I am on some others. However, I know it is very contentious, and I should like it to be put through the necessary stages so that it might be sent to the Railway committee. There are people who wish to be heard with respect to the proposal, and I thought we might advance it and get it before the committee so that it might be fully investigated there. If my hon. friend will allow the measure to be advanced the necessary stages there will be every possible opportunity for discussion. I know that there are members on both sides who wish to discuss the bill when the proper stage has been reached. I may say that the resolution provides for the construction of a line of railway from Avonlea to a point about five miles from Regina. I know it will be a contentious bill in its present form, but we cannot discuss it at the present stage, and I am anxious, as rapidly as possible, to reach the stage where it may be discussed.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: This is the situation. As a matter of fact the Grand Trunk Pacific Railway Company had entered into an agreement with the city of Regina to do certain things. I

think there are four companies included in this agreement—the Grand Trunk Pacific, Branch Lines Company, the Grand Trunk Pacific Development Company, the Grand Trunk Pacific Railway, and the Canadian National Railway. They are really a quartette in one, but these different entities have signed an agreement with the city of Regina. The Grand Trunk Pacific Railway Company had agreed, either by itself or through one of these other companies, to do certain things in the city of Regina, one of which was the construction of a hotel. The parties met after a good deal of negotiation and came to an arrangement by which Regina relieved the railway company of several things, and the railway company relieved Regina of several items under a former agreement. One of the former was the relief of the railway from the portion of the agreement which provided for the construction of a hotel under one of the paragraphs in the agreement which pertains to the construction of this line, as a quid pro quo in part for the concessions that were to be given by the city. The Canadian National Railway Company agrees to give reasonable support to any movement on the part of the city or of the province of Saskatchewan for the construction of a connecting line of railway from the city of Regina to Avonlea in the province of Saskatchewan. I have a memorandum here, which points out that this proposed line is thirty miles in length, and some details as to the traffic that would come to it. But the chief point that we have to discuss, I think, is whether this line should be constructed at the present time. I will read that clause again so that hon. members will know what effect that agreement would have on the construction of the line.

Sir HENRY DRAYTON: Perhaps it would be fair to everybody if the agreement were placed on Hansard, provided it is not too long.

Mr. GRAHAM: I would be content to put the entire agreement on Hansard. The essential point is that the Canadian National Railways have agreed to give reasonable support. The reasonable support they have construed into recommending that the line be constructed. I would like to get the bill before the Railway committee if I could, because I know there would be people there who would wish to discuss it. Perhaps the city of Regina might want to be represented and the Canadian National also, and there are members from different sections who feel strongly in regard to this road. I will be glad to place it on Hansard, so that hon. members will have a copy of the agreement when we come to discuss it in committee.

Sir HENRY DRAYTON: I quite agree that we should have full discussion and that the matter should be ventilated. I would suggest that by consent the agreement now go into Hansard. The minister might in the meantime move that the committee rise and report progress with the understanding that he can move the House into committee on Monday. But in the meantime every hon. gentleman will have a chance of reading the agreement and understanding it.

Mr. GRAHAM: I am not pressing the point, because I know it is contentious. There are hon. members on both sides who would rather have it go to the Railway committee where they can thresh out the details with all the cross-firing that will take place. But I am not bound in any way and I have an open mind on the matter.

Mr. JELLIFF: I think it is just as well to follow the course suggested by the hon. member for West York. A number of western members are opposed to going on with this road. The member for Moose Jaw (Mr. Hopkins) is one of them, and there are strong protests from the city of Moose Jaw, the board of trade and other organizations. I think the agreement had better go on Hansard, and that the matter should be left over until another day.

Mr. GRAHAM: Are these gentlemen who are opposed to the measure not here.

Mr. JELLIFF: No.

Mr. KNOX: We have been trying to get them, but it is impossible to locate them. I think it would be better to follow the suggestion that the agreement should go on Hansard.

The agreement referred to is as follows:

Memorandum of agreement, made in quadruplicate, this day of A.D. 1925;
Among:
The Grand Trunk Pacific Branch Lines Company,
(hereinafter called "the Branch Lines Co.")
of the first part,
The Grand Trunk Pacific Development Co., Limited,
(hereinafter called "the Development Company")
of the second part,
The Grand Trunk Pacific Railway Company,
(hereinafter called "the Pacific Company")
of the third part,
The Canadian National Railway Company,
(hereinafter called "the National Company")
of the fourth part;
and
The city of Regina,
(hereinafter called "the city")
of the fifth part.

Whereas by an agreement in writing, dated the 30th day of November, 1910, and made between the Branch Lines Company of the first part and the city of the second part, the city covenanted with the Branch Lines Company inter alia to grant to the Branch Lines Company certain right of way through the city and certain other lands in the city; and to close certain Streets for the use of the Branch Lines Company, all as shown on the plan referred to in said agreement; and the Branch Lines Company covenanted with the city inter alia to erect a passenger station on blocks 453, 454, and 455, at the corner of 16th Avenue and Albert street, or on some part thereof, adequate in all respects to meet the requirements of traffic at Regina, and affording ample accommodations, and also to erect and maintain a first-class hotel with all modern appointments in the vicinity of the said passenger station;

And whereas by another agreement dated the 18th day of October, 1912, entered into between the Branch Lines Company of the first part and the city of the second part, the Branch Lines Company covenanted to erect and have completed by 1st November, 1914, a hotel of an area of 160 square and not less than seven storeys in height with provision for 225 guest rooms, the whole to cost in respect of construction and equipment approximately one million ($1,000,000) dollars; and the city covenanted with the Branch Lines Company to lease to the Branch Lines Company for a term of ninety-nine years from 1st November, 1912, at a rental of $25.00 per annum for the purposes of the aforesaid hotel a parcel of land containing 1.43 acres in section 18, township 17, range 19, west of the second meridian, and also to grant to the Branch Lines Company certain exemption from taxation in respect of the said parcel of land and the buildings to be erected thereon, all as more particularly specified in said last mentioned agreement.

And whereas in pursuance of the said last mentioned agreement the city did lease to the Branch Lines Company by a lease dated the 16th day of September, 1912, the said parcel of land containing 1.43 acres for a term of 99 years from 1st November, 1912, at a rental of $25.00 per annum, subject to the condition inter alia that the Branch Lines Company, or any other company owned or controlled by the Branch Lines Company, would erect a hotel of the character provided for in said agreement of 18th October, 1912;

And whereas the Branch Lines Company assigned the said lease and all its right therein and thereunder to the Development Company, and the Development Company is now the registered owner of the said leasehold;

And whereas the making and execution of the said agreement of 18th October, 1912, and of the said lease were authorized by by-law of the city council number 675.

And whereas the said agreements of 30th November, 1910, 18th October, 1912, the said lease of 16th September, 1912, and said by-law number 675 were all ratified, confirmed and validated by act of the legislature of Saskatchewan, being chapter 65 of the statutes 1912-13;

And whereas by another agreement in writing entered into between the Branch Lines Company and the city, dated the 3rd day of October, 1913, certain portions of Argyle and McTavish streets closed by the city in pursuance of the said agreement of 30th November, 1910, were re-opened by the city, which agreement was ratified, confirmed and validated by act of legislature of Saskatchewan, being chapter 88 of the statutes of Saskatchewan, 1913;

And whereas by resolution of the council of the city, dated on or about the 3rd day of July, 1911, the city agreed, on the application of the Branch Lines Company, to close certain other streets and lanes in the city, namely: 15th Avenue, north of block 49 in the C.P.R. annex. Edward street, west of lots 16, 17, 18, 19, 20, block 47, in the C.P.R. annex. The lane east of lots 11, 12, 13, 14, 15, block 46, and lots 16, 17, 18, 19, 20, block 47. The lane through block 48, and the lanes through block 50 all in the C.P.R. annex.

And whereas the said last mentioned streets and lanes though physically closed have never been legally closed in accordance with the City Act;

And whereas by another resolution of the council of the city dated on or about the 3rd day of July, 1911, the city on request of the Branch Lines Company, agreed to close a portion of the 17th avenue in the city where the same was crossed by the Branch Lines Company's railway as shown on the plan referred to in the said resolution, in lieu of a portion of 18th avenue where crossed by the Branch Lines Company's railway (which latter portion of the city had, by said agreement of the 30th November, 1910, agreed to close) and to leave open the said portion of 18th avenue where the same was crossed by the Branch Lines Company's railway.

And whereas in pursuance of the said agreements and lease the Development Company commenced the erection of an hotel on the said parcel of land containing 1.43 acres and continued said work until the outbreak of the European war when the work was suspended.

And whereas the construction of said hotel has never been resumed and the said hotel is still in an unfinished state

And whereas the management and operation of the Pacific Company, the Branch Lines Company, and the Development Company, is now co-ordinated with the management of the National Company;

And whereas for financial and economic reasons the National Company, the Branch Lines Company, and the Development Company, deem it inadvisable to carry out certain of the undertakings entered into by the Branch Lines Company and the Development Company under the said agreements and lease hereinbefore recited.

Now therefore this agreement witnesseth as follows:

The city agrees:

1. To release, as it hereby releases, the Branch Lines Company of its obligations under the said agreement of November 30th, 1910, (a) to erect and maintain a station in the city of Regina, either at the corner of 16th street and Albert street or elsewhere, (b) to erect and maintain a hotel in the city of Regina; and/or (c) to erect and maintain railway terminal facilities other than those already constructed.

2. To release as it hereby releases the Branch Lines Company and/or the Development Company from the obligations of them or either of them under the said lease to erect an hotel in the city of Regina, either on the said parcel of land containing 1.43 acres or elsewhere.

3. To co-operate in every reasonable manner with the National Company, the Pacific Company and the Branch Lines Company in the extension of the Canadian National Railway system in the city of Regina and in the development of its traffic.

4. To forthwith grant and convey to the Branch Lines Company in accordance with the said agreement of 30th November, 1910, the right of way and lands particularly described in clause 3 (a) of the said agreement.

5. To join with the Branch Lines Company, the Development Company, and the National Company in an application to the legislature of the province of Saskatchewan for an act ratifying, confirming and validating this agreement and declaring to be legally closed the following streets and lanes—15th avenue, north of block 49, in the C.P.R. annex.

Edward street, west of lots 16, 17, 18, 19, 20 block 47 in the C.P.R. annex.

The lanes east of lots 11, 12, 13, 14, 15, block 46, and lots 16, 17, 18, 19, 20 block 47.

The lane through block 48, and the lanes through block 50, all in the C.P.R. annex.

And that portion of 17th avenue where the said 17th avenue is crossed by the Branch Lines Company's railway.

This agreement is subject in all respects to such act of the legislature being obtained ratifying, confirming and validating this agreement and declaring said streets and lanes to be legally closed.

The Branch Lines Company and the Development Company agree:

6. To surrender to the city free of all encumbrances all the right, title, and interest of them or either of them under the said lease of 16th September, 1912, and the said agreement of 18th October, 1912, in and to the said parcel of land containing 1.43 acres and in and to the buildings and erections on the said parcel and the appurtenances thereof, and to execute such other surrender of said lease as may be requisite.

7. To sell, assign, transfer and set over to the city the unerected steel and any other building materials presently stored on the said hotel site as set out in the inventory hereto attached.

The National Company, the Pacific Company and the Branch Lines Company agree:

8. Forthwith to enter into and prosecute negotiation with the Canadian Pacific Railway Company and in the event of the failure of such negotiations to make application to the Board of Railway Commissioners for Canada with a view to securing the right to operate into and out of the present Canadian Pacific Railway Company's station in the city of Regina, all the passenger trains of the Pacific Company and the Branch Lines Company, running into or out of the city and (upon securing such right) to thereafter run such passenger trains into and out of the Canadian Pacific Railway Company's station.

9. Forthwith to enter into and prosecute negotiations with the Canadian Pacific Railway Company and, in the event of failure of such negotiations, to make application to the Board of Railway Commissioners for Canada with a view to the establishment of the said Canadian Pacific Railway Company's station as a union station for the accommodation of the traffic of the Canadian National Railways and the Canadian Pacific Railway with suitable terminal facilities to take care of the passenger and general traffic (other than freight) of the Canadian National Railways System.

10. To join with the city in an application to the legislature of the province of Saskatchewan for the purposes specified in clause 5 hereof.

The Branch Lines Company Agrees:

11. That upon the acquisition of the rights referred to in paragraph 8 and 9 hereof (and subject to the approval of the Board of Railway Commissioners for Canada and the Lieutenant Governor in Council) it will discontinue the use of its right-of-way in blocks 447 to 455 in the city of Regina, also its station in block 455, and will take up all its tracks in said blocks and quit-claim to the city all these portions of streets and lanes in or abutting on said blocks which were closed for the purpose of the Branch Lines Company's railway in pursuance of the said agreement of 30th November, 1910.

The National Company Agrees:

12. Subject to parliamentary control to adopt as part of its policy for the development of its railway system in Saskatchewan the making of the city of Regina its principal railway centre for the southern part of the province and to give reasonable support to any movement on the part of the city or of the province of Saskatchewan for the construction of a connecting line of railway from the city of Regina to Avonlea in the province of Saskatchewan.

It is Mutually Agreed:

13. That except in so far as same is hereby modified the said agreement of 30th November, 1910, is hereby ratified and confirmed.

In witness whereof the Branch Lines Company, the Development Company, the Pacific Company, and the National Company, have caused to be hereunto affixed their respective corporate seals under the hands of their respective proper officers; and the city has hereto affixed its corporate seal under the hands of its mayor and city clerk, the day and year first above written.

Signed, sealed and delivered in the presence of:

Approved,
Sgd. Geo. P. Graham,
Minister of Railways and Canals.
Receiver

This is Exhibit "A" referred to in the affidavit of E. J. Hungerford. Sworn before me this 26th day of January, 1925.

Sgd. Douglas B. Smith,
Commissioner, Superior Court,
District of Montreal.

Mr. MEIGHEN: Perhaps the minister would tell us when the government's mind reopened on the subject after deciding to reintroduce the legislation. The minister said his mind was open in regard to this bill. I should like to know when the government's mind re-opened, after deciding to reintroduce this legislation.

Mr. GRAHAM: This government always has an open mind. It is one of the good characteristics of this government.

Mr. MEIGHEN: Open at both ends.

Mr. GRAHAM: I have some correspondence, and I wanted to hear the members interested in the matter without any restrictions.

If the members are not here I would not for a moment think of proceeding with it.

Progress reported.

PENSION ACT AMENDMENT

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-establishment) moved:

Resolved, that it is expedient to amend the Pension Act, and the amending acts, and to provide,—

(1) For pension to be awarded for total disability at the time of discharge to an ex-member of the forces suffering from venereal disease who saw service in a theatre of actual war;

(2) For extending the period during which the dependents of a man in receipt of a pension—classes 1 to 5—may be pensioned after his death;

(3) For a definite pension irreducible for two years in cases of pulmonary tuberculosis;

(4) For what the final payment shall be in cases of disability between five and fourteen per cent, and what conditions may affect such final payments;

(5) For amending section 27 of the act to make provision for payment not provided for in the existing statute;

(6) For conditions under which pension may be continued to dependent parents;

(7) For the awarding or refusal of a pension to a widow of a pensioner taking into consideration his condition at the time of marriage, and under what conditions pensions may be paid to prospective widowed mothers;

(8) For non-cancellation of pension for immoral conduct until after an opportunity for defence has been given, and for reinstatement of cancelled pensions in certain cases;

(9) For increased pensions to mothers whose husbands are physically helpless or in a dependent condition;

(10) For the amendment of the schedules to the act in such a manner as to make pension equal to the actual rate plus bonus, and to make an equitable division of childrens' pensions;

(11) For the reappointment of retiring members of the Federal Appeal Board and the continuation of three as a quorum.

Mr. ARTHURS: Would the minister in charge indicate what changes, if any, there are in the proposed bill from the bill of last year?

Mr. BELAND: In a general way the bill founded on this resolution contains the provisions of last year's bill, with a few other provisions of a minor character which will be more readily understood when the bill is distributed. As probably it will be more convenient for hon. members to discuss every clause of the bill in committee of the Whole after the second reading, I might perhaps suggest that we adopt this resolution immediately and that the bill be read a first time and be put down on the order paper for second reading, so that at the next sitting of the House, that is next week, we might be in a position to discuss the bill because hon. members will then have had time to see the different clauses.

Mr. ARTHURS: The point I was trying to raise was not what changes there were in the proposed bill from the old act, but what differences there were, if any, between the proposed bill and the bill of last year. If the minister will come prepared to do that at a later stage, I am quite agreeable to allowing the resolution to pass and the bill to be introduced.

Mr. MANION: I am perfectly agreeable also with my hon. friend from Parry Sound (Mr. Arthurs) and the other members to facilitate matters and allow the resolution to go through so that we can get into committee on the bill at the earliest possible moment. I would like to go on record, however, as saying once for all, in contradiction of any statements that may be made—which statements were made in fact—that we were in some way holding up this bill, that at no stage of the procedure have hon. members of this party done anything to hold up this legislation. We have not had, and we have not now, any desire except to facilitate the passing of this legislation, and send it on to the Senate as quickly as possible, so that there can be no holding of it up. There was no desire at any time on our part to obstruct. We did deal at some length with some questions, because they were important, but with no desire whatever to obstruct. At this time also it is our absolute desire to assist the minister in every way in getting the bill into committee.

Resolution reported, read the second time and concurred in. Mr. Beland thereupon moved for leave to introduce Bill No. 70 to amend the Pension Act.

Motion agreed to and bill read the first and second times.

Mr. BELAND: We are ready to go into committee now.

Mr. ARTHURS: At the next sitting of the House.

Mr. MANION: Just because we have not seen this bill at all until this very minute.

CANTEEN FUNDS

Hon. H. S. BELAND (Minister of Soldiers Civil Re-establishment) moved the second reading of Bill No. 32, respecting the disposal of the Canteen Funds.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 3—Central Board of Trustees.

Mr. MANION: I would ask the minister to make a statement in connection with this

clause, which we have discussed at some length.

Mr. BELAND: It was understood that we would amend clause 3 in order to cover an amendment which I promised my hon. friend from the Yukon (Mr. Black) we would be ready to make in connection with the share of the Yukon territory. If it is at all desirable, and I think it is, to make provision for a special share for the Yukon, we will have to amend clause 3 to provide for the creation of a board of trustees for the Yukon territory. Hon. gentlemen will remember that the bill provides for the appointment of a board of trustees for the provinces, and it was originally intended that the province of British Columbia would include the Yukon territory. By understanding we have altered the original proposition, and we intend to have the Yukon share as a province. For that purpose it will be necessary to amend clause 3 so that it will read about as follows, and if hon. gentlemen will follow clause 3 as it appears in the bill they see what additional words are inserted:

There shall be appointed by the Governor in Council a central board of trustees consisting of three members who shall serve without remuneration for the period of three years and shall be eligible for reappointment, and there shall also be appointed by the Governor in Council a board of trustees for the Yukon territory consisting of three members who shall serve without remuneration for the period of three years and shall be eligible for reappointment.

This simply makes applicable to the Yukon territory the provision for the central board of trustees. I therefore move in amendment to clause 3, Mr. Chairman, that the following words be added after the word "reappointment:"

—and there shall also be appointed by the Governor in Council a board of trustees for the Yukon territory consisting of three members who shall serve without remuneration for the period of three years and shall be eligible for reappointment.

Mr. BLACK (Yukon): It seems to me that it would be more appropriate to provide for the Yukon board under section 4 which relates to the appointment of provincial boards. The Yukon board corresponds to a provincial board, and provincial boards are provided for by section 4.

Mr. BELAND: In the Yukon there is no provincial government which we could vest with the power of appointing this board. That is the only reason why the appointment is left to the Governor in Council. When there is a provincial government it comes under the general provision for provincial appointments.

Mr. MANION: As to the central board of trustees—I am not questioning the Yukon provision at all—I remember that when we were discussing the matter before, the proposition was put forward that the appointment be made in a certain manner and we on this side put ourselves on record regarding it. It was suggested that Sir Arthur Currie should be one member of the central board of trustees, that a second trustee should be appointed by the different oragnizations of war veterans in the country, the third to be chosen by these two or in some other acceptable manner. I remember hoping at the time that the minister might have worked out some scheme along these lines for the bill itself. Has the minister made any progress in that direction?

Mr. BELAND: I have taken some steps in regard to the suggestions made by hon. gentlemen opposite to ascertain whether it would be agreeable to Sir Arthur Currie to serve on the board, for instance as chairman, and I am pleased to convey the statement to the House that Sir Arthur Currie expressed his readiness to serve in that capacity. In the course of conversation he naturally inquired who the other members of the board would be, and I intimated to him my intention of selecting one of the other trustees from a recommendation made by all the veterans' associations. I made it plain to him that such a man would not be appointed as second trustee until he, Sir Arthur Currie, was satisfied that all the soldiers' organizations were duly represented in effecting the nomination. As to the third member of the board the idea was to select one from the governing body of either the Canadian Red Cross or the Patriotic Fund.

Mr. MANION: Speaking for myself I wish to say that this arrangement is not altogether in agreement with what we had suggested, but it is so eminently fair that I do not think anybody can raise any objection to it.

Amendment agreed to.

Section as amended agreed to.

Section 4 agreed to.

On section 5—Majority to be ex-members of forces.

Mr. BELAND: I think we should amend this section somewhat, but as to that I am in the judgment of hon. members of the House. The amendment I would suggest is this: It has been brought to my attention that this clause provides for the appointment of a majority of ex-members of the forces, and that the canteen fund is a fund that was got together by men who served overseas only. I do not think I am mistaken in that; it is an overseas men's fund, and it was suggested to

me—I do not remember by whom—that instead of "ex-members of the forces" we should say "ex-members of the forces who have seen service overseas." If it is agreeable I would move that these words be added to clause 5: "who have seen service overseas."

Mr. CALDWELL: Are you going far enough in proposing to make that amendment? For instance, we had certain officers who only went to England and did not revert to the ranks and go to the front as privates as a great many of the officers did. I think possibly if the minister is going to make this amendment he should make it go all the way and apply it to men who had seen active service in the theatre of war. I do not think there is very much difference between the officer who served in Canada and the officer who went to England and stayed there. In fact I think the officer who stayed in Canada possibly performed the most onerous service here drilling men and was possibly more or less misunderstood, while the man who only went as far as England got a certain amount of glory out of it, that the officer who stayed in Canada did not get. I think that if the minister is going to make such an amendment he should make it go all the way.

Mr. BELAND: I might explain to my hon. friend that there is a difference, and a vital difference between a man who has served in a theatre of actual war like France, and the man who has served in England only. But—and I speak subject to correction—the canteen funds were collected from men who were overseas regardless of whether they served in France or in England. My hon. friend perhaps will agree with me that it would be somewhat unfair to exclude from the possibility of being appointed to this board those who served in England.

Mr. CALDWELL: I am not insisting on the point. I realize possibly that a large part of the fund was accumulated in England.

Mr. MANION: I remember that on a previous occasion amendments were moved from this side to secure a change, but it seemed to be the desire of the minister for the clause to remain as he had it.

Amendment agreed to.

Section as amended agreed to.

On section 6—Allotment of funds.

Mr. BELAND: In this connection the member for the Yukon (Mr. Black) suggested that the provision for the allotments in paragraph (e) of this clause should be altered in order to provide for a special share for the Yukon. It will therefore be necessary to amend paragraph (e). The amendment I have is couched in the following words:

(e) The residue shall be divided into ten different allotments in the proportion indicated by the following percentages:

The word "allotment" is put in in place of "provincial allotments" because the Yukon is not a province. That is the only reason for making the change; it does not make any difference so far as the provinces are concerned; it is a general and a generic term. As amended the section will read:

The residue shall be divided into ten different allotments in the proportion indicated by the following percentages:

	Per cent
Alberta	7.752
British Columbia and the Yukon	10.944
Manitoba	10.654
New Brunswick	4.072
Nova Scotia	5.549
Ontario	41.237
Prince Edward Island	.731
Quebec	11.622
Saskatchewan	7.162
Yukon Territory	.269

And on appointment as hereinafter provided of a provincial board of trustees, or of a board of trustees for the Yukon territory, the provincial or Yukon allotment shall immediately be paid to such board.

The latter part of this section is altered or modified just to meet the case of the Yukon territory. I have already explained how the Yukon territory share was arrived at. It is a generous allotment, but not too generous, and I think it should be accepted by hon. members.

Mr. LADNER: May I suggest to the minister that after the word "percentages" he should add the words "for the provinces or territories herein specified." The minister will note that when he takes out nine additional allotments he does not relate the allotments to the jurisdiction. He simply divides them up without specifically relating them to some province or jurisdiction.

Mr. BELAND: There is no objection to that amendment, but I do not think it is necessary.

Mr. LADNER: The schedule of the agreement sets out the distribution, but the clause which is operative in distributing the fund is the first three lines, and that does not relate to any jurisdiction or province. I suggest that after the word "percentages" these words be added: "For the provinces or territories herein specified."

Mr. BLACK (Yukon): Would the minister tell us how the percentages are made

up in the case of the Yukon and British Columbia? As I make the calculation, on the basis used by the Ralston commission, on whose figures I believe the calculation is made, the percentage will work out, when you separate the Yukon allotment from that of British Columbia, as follows:

British Columbia 10.710, Yukon .503, instead of the figures given by the minister of 10.944 British Columbia and .269 for the Yukon. The calculation is based as I understand it on the percentage of enlistments, that is, as the enlistments 51,430 from British Columbia are to the enlistments for the Yukon, 2,327, so is the whole amount of 11,213 for British Columbia and Yukon combined to be allocated. And that works out at .503 for the Yukon, instead of the amount which the minister gives, which is not more than half.

Mr. BELAND: I appreciate the desire of my hon. friend to increase the allowance to the Yukon. I may tell him that I was actuated by a desire to make the Yukon share as large as possible, but the percentages were arrived at in every province by taking the enlistments, discharges and the pensioners. In the case of the Yukon we have no figures of discharges, apparently no discharges have taken place in the Yukon. And so I was face to face with this situation: How could we arrive at a reasonable average for the Yukon? As the Yukon was together with British Columbia in the first instance, I thought that if we applied to the Yukon the same proportion betwen enlistments and discharges as exists in British Columbia proper it would be eminently fair, and I asked one of the officials to work it out. He has worked it out, and it comes to the percentage I have given, that is, .269. That will give the Yukon $6,321. We must bear in mind that the population of the Yukon has decreased considerably. In 1911 the population of the Yukon was 8,512 and in 1921 it had been reduced to 4,156. It is only reasonable to presume that the population of the Yukon today is less than it was in 1918 and 1919 when the discharges took place. The number of the pensioners in the Yukon territory is only nine. I doubt if there is a very large number of returned men in the Yukon, and if my hon. friend will accept the advice I received from officials who have looked into the question carefully he will be satisfied that the share of the Yukon, everything considered, is larger in proportion than that of British Columbia. I do not begrudge it, and I do not think hon. members from British Columbia begrudge it. We are very generous in this regard. I think the percentages have been arrived at in a very logical and reasonable manner.

Mr. LADNER: The minister has stated that the proportion allotted to the Yukon is already larger than that given to British Columbia. My question is, how much larger is it proportionately?

Mr. BELAND: There are no figures of discharges available for the Yukon; so that if you take zero as the number of discharges, it reduces immensely the average of the Yukon by probably two or three thousand dollars.

Mr. BLACK (Yukon): The minister said on previous occasions when the matter was being discussed as regards taking the figures of the Ralston report, that the calculation is based on enlistments, that is the enlistments in British Columbia as against the enlistments in the Yukon. If that is the basis it does not work out to the result the minister has given.

Mr. BELAND: Does it not?

Mr. BLACK (Yukon): No, the enlistments as given for British Columbia are 51,430 and for the Yukon 2,327. I take these from the department's figures. The Yukon and British Columbia combined get a percentage of 11.213 but in the proportion of 51,430 to the 2,327, it works out at 10.710 for British Columbia and .530 for the Yukon, making the total of 11.213. I am certain my calculations are correct as I have worked them out on that basis a number of times. I would like an opportunity of checking up with the minister's officials—if he will allow that—these calculations before this section goes through.

Mr. BELAND: The figures of the Ralston report have been altered somewhat because, at that time, the figures for discharges were not complete. Since then they have been adjusted by the Department of National Defence under the Hollerith system. The figures upon which these percentages have been based have been supplied to us by the Department of National Defence, and they are considered to be absolutely accurate.

Mr. LADNER: Is it not some kind of composite figure of enlistments, discharges and pensioners that is worked out?

Mr. BELAND: Yes. These are the figures that have been supplied to me, and I have no reason to believe they are not accurate. In British Columbia the total enlistments were 51,438. Is that right?

Mr. BLACK (Yukon): I have 51,430.

Mr. BELAND: I have eight more than my hon. friend. The figure for discharges is 32,621. Do we agree there?

Mr. BLACK (Yukon): I did not understand that discharges were being taken into consideration in the calculation, as there were no discharges in the Yukon.

Mr. BELAND: They are being taken into consideration. In order to arrive at an equitable average for the Yukon, we had to apply some figures of discharges. How could we arrive at a figure of discharges? We arrived at it by applying to the Yukon the same proportion as existed in British Columbia proper between enlistments and discharges. Applying this proportion to the Yukon, though there were no discharges there, we find that there should have taken place in the Yukon 1,244 discharges.

Mr. CLARK: Is the minister crediting the Yukon with discharges that should have taken place there?

Mr. BELAND: Yes, based on the same ratio as in British Columbia.

Mr. CLARK: Under those circumstances, the percentage given to the Yukon is certainly fair.

Mr. BELAND: Not only fair, but generous.

Mr. CLARK: I have no objection to the matter being reviewed by the department, but if so, I think British Columbia members should be given full information and an opportunity of being consulted.

Mr. BLACK (Yukon): British Columbia is getting the credit of practically all the discharges, because the Yukon men for the most part took their discharges in British Columbia, and British Columbia is being credited with discharges of men who did not come from British Columbia at all.

Mr. BELAND: I realize that.

Mr. MANION: Clause 6 covers all the sub-clauses. I want once more to put on record my opinion, that of the hon. member for Parry Sound (Mr. Arthurs), the hon. member for Burrard (Mr. Clark), I think the hon. member for the Yukon (Mr. Black) and several others, that this $100,000 item should not have been taken from the canteen fund at all. But some adjustment bureau is necessary, and that adjustment bureau really should be paid for by the people of Canada generally. We are not, however, intending to fight the matter, but we wish to reiterate our attitude that this $100,000 should have been left with the remainder of the canteen fund to be distributed with the canteen fund as a whole.

Mr. BELAND: I am not a fanatic on the subject either, but it is introduced in the bill because it was so recommended by the Ralston commission.

Mr. BLACK (Yukon): I would not wish to delay the legislation at all, but if it can be done without such a result, I would like an opportunity of checking up the Yukon item before this clause of the bill finally goes through.

Mr. BELAND: We will hold it for the third reading.

Section 6 as amended agreed to.

On section 8—Regulations.

Mr. BELAND: It will be necessary to amend this clause in order to fit in with the rest of the bill as regards the Yukon territory. If hon. gentlemen will follow me, I will read clause 8 and they will note where the additional words are put in:

> The Governor in Council may make such regulations as may be deemed necessary for the guidance and direction of the Central Board of Trustees and for the guidance and direction of the board of trustees for the Yukon territory, and the Lieutenant Governor in Council of any province may make such regulations as may be deemed necessary for the guidance and direction of the provincial board of trustees of his province, provided that the duties of the provincial board of trustees and the board of trustees for the Yukon territory shall be to receive and hold the provincial allotment or the Yukon allotment, as the case may be, and to ascertain by such method as may appear to them most feasible, the wishes of those most interested and residing in the province, or in the Yukon territory, concerning the disposition of such allotment, and following this, to determine the object to which the allotment should be devoted, and, as far as may be necessary, to administer the same for such object or to provide for such administration by others and to do such other things as may be indicated in the order in council appointing them.

It is the same section with the additional words which have reference to the Yukon territory.

Mr. LADNER: The section is not altogether clear as to what the Governor in Council does. It says:

> The Governor in Council may make such regulations as may be deemed necessary for the guidance and direction of the central board of trustees.

Why would the Governor in Council make any regulations at all beyond putting the money into the hands of Sir Arthur Currie and his associates, the trustees? They would be the parties to make the regulations as to its distribution, after investigation, or in the case of a province, the trustees of the province, having received the money under the conditions of trust should be the ones who

should make the regulations. This section as it stands gives wide-open authority to both the Governor in Council and the Lieutenant Governor in Council to make unlimited regulations. In fact, they may even prescribe the way in which the money shall be expended. The whole idea of having this independent board is to detach the expenditure of this money from governmental control or influence.

Mr. BELAND: I think it is customary to provide such a clause in every bill, that the governor in council shall make the regulations. It is not the desire of the government, nor do I think they would have the power, to direct what the board of trustees should do in the distribution of the money. The nature of the work to be undertaken with the money in their hands would be entirely for the board of trustees to decide, but the regulations will set a certain procedure to be followed, which I take it would not in any degree interfere with their free action.

Mr. LADNER: As I understand it, the purpose of these regulations is to prescribe in a more or less routine manner the method by which the money shall be placed in the hands of the trustees. I take it that the regulations will not control either the destiny or the expenditure of the money but that this will be left to the board of trustees in the discharge of their duties under the act.

Mr. ARTHURS: When this matter was up before, I stated that I was strongly in favour of the act as it stands and that I thought there should be as few restrictions as possible of the actions of the board of trustees. As I said then, and as I repeat now, we have had great difficulty in this House in deciding how to dispose of these funds which have been a trust with the government for some years. I would point out however that when these regulations are mentioned absolutely nothing is said about the amount of $100,000 for the adjustment board; no regulations are prescribed governing the manner in which that money should be spent. As an hon. member has said, we object strongly to that section, and I personally think it is a mistake that any portion of the money should be used for the purpose provided; it should be a general charge on Canada.

Section agreed to.

On section 9—Expenses charged to allotment.

Mr. BELAND: It will be necessary to make a slight amendment to this clause. The section as amended should read:

The expenses incurred by the central board of trustees, and the board of trustees for the Yukon territory, and any provincial board of trustees in connection with the said trust shall be a charge on the allotment.

Mr. ROSS (Kingston): Wherein does section 9 differ from sub-section (b) of section 6?

Mr. BELAND: It differs inasmuch as it adds the Yukon territory.

Mr. LADNER: The change made in section 8 is I presume to meet the new idea with regard to the Yukon?

Mr. BELAND: That is the only change.

Amendment agreed to.

Section as amended agreed to.

On section 10—Vacancies.

Mr. BELAND: I move that section 10 be amended to read as follows:

Any vacancy in the membership of the central board of trustees, or of the board of trustees for the Yukon territory, due to death or resignation, may be filled by the Governor in Council, and any vacancy similarly caused in the membership of a provincial board of trustees may be filled by the Lieutenant Governor in Council.

Amendment agreed to.

Section as amended agreed to.

On section 11—General principles of allotment.

Mr. BELAND: I move to amend the first paragraph of this section to read:

Without limiting the powers hereby conferred on the Governor in Council or on the Lieutenant Governors in Council, the following general principles shall govern any distribution or apportionment of the amounts allotted to the board of trustees for the Yukon territory or to the said provincial boards of trustees.

Amendment agreed to.

Section as amended agreed to.

On section 12—Reports to minister.

Mr. BELAND: I move to amend this section to read:

A report shall be made as of the 31st day of March in each year to the Minister of Soldiers' Civil Re-establishment by the central board of trustees, by the board of trustees for the Yukon territory, by the provincial boards of trustees, and by any other bodies or organizations to whom allotment has been made, setting forth the work accomplished during the preceding twelve months, the amount expended and the balance on hand.

"Other bodies or organizations" probably includes the Red Cross in the United States to which a certain allotment is made by the bill.

Bill reported.

GOVERNMENT ANNUITIES ACT 1908 AMENDMENT

Hon. JAMES MURDOCK (Minister of Labour) moved:

That it is expedient to amend The Government Annuities Act, 1908, to provide that an annuity shall not be granted or issued for an amount less than ten dollars a year.

He said: At present, Mr. Speaker, the minimum government annuity that can be purchased is $50. The proposal is to permit the purchase of a government annuity of $10, one of the important reasons being that we find a number of employers throughout the country would like the opportunity of purchasing, for an old and valued employee maybe as a Christmas present, a straight $10 annuity, but $50 they consider a little too large. Preparatory to such an amendment as this, we have had on deposit for quite a while from one concern alone a sum of money for the purchase of these smaller annuities, and we think it will enlarge the usefulness of the Annuities Act to make this amendment.

Mr. MEIGHEN: There seems to be no objection to the amendment, except that it will doubtless add substantially to the clerical work.

Mr. MURDOCK: I am told that it will not. I have before me a brief statement of the single cash payment required to be made on plan "A", "B" or "10-year guaranteed" which I think would be of interest to hon. members.

Sir HENRY DRAYTON: I would suggest that the minister place the statement on Hansard.

Mr. MURDOCK: It shows the cost of a $10 or a $50 annuity under the various plans.

Mr. MEIGHEN: What is the interest basis?

Mr. MURDOCK: Four per cent. I will place this memorandum on Hansard if there is no objection:

Memorandum of the single cash payment required to be made on plan "A", "B", or "10-year guaranteed" by a man of 21, 26, 35 or 45 to secure at 65 an annuity of $10 or $50.

	$10			$50		
Age	"A"	"B"	"10-year Guar."	"A"	"B"	"10-year Guar."
21	$15 70	$ 8 25	$18 65	$78 51	$ 41 25	$ 93 24
26	19 10	10 38	22 69	95 52	51 89	113 43
35	27 19	15 83	32 29	135 96	79 14	161 45
45	40 25	25 88	47 80	201 25	129 38	238 99

Under plan "A", in event of death before 65, the purchase money with 4 per cent compound interest will all be returned to the purchaser or his legal representatives. After 65, annuity ceases with the last payment received by the annuitant prior to his death.

Under plan "B", in case of death before the annuity begins, there will be no return of any part of the purchase money.

Under the "10-year guaranteed plan", in event of death before 65 the purchase money with 4 per cent compound interest will be returned. If the annuitant lives to be 65 the annuity will be paid in any event for 10 years, and will be continued as long thereafter as he may live.

Resolution reported, read the second time and concurred in. Mr. Murdock thereupon moved for leave to introduce Bill No. 71 to amend the Government Annuities Act, 1908.

Motion agreed to and bill read the first time.

Mr. SPEAKER: It is six o'clock. Shall we adjourn?

Mr. MEIGHEN: I hope the government does not propose to ask members to come back to-night. We may come back physically, but we would hardly come back with our faculties.

6 p.m.

Mr. MACKENZIE KING: Mr. Speaker, there are a few resolutions on the order paper that we wish to deal with.

[Mr. Beland.]

Mr. MEIGHEN: Why not go ahead for a little while now?

Mr. MACKENZIE KING: That is a good suggestion, Mr. Speaker, if the House approves.

Mr. SPEAKER: By unanimous consent, we will go ahead for a little while.

PUBLICATION OF THE STATUTES

Hon. JAMES MURDOCK (Minister of Labour) moved the second reading of Bill No. 41 respecting the publication of the statutes.

Mr. MEIGHEN: The minister may have explained this bill before, but I could not have been here. What is the nature of the bill?

Mr. MURDOCK: I am told by the King's Printer and others having to do with the publication of the statutes that in a number of particulars the present act is obsolete and unworkable and has not in some particulars been observed in accordance with the actual text for a number of years.

Mr. MEIGHEN: Could the minister give an example?

Mr. MURDOCK: For instance—

Mr. MEIGHEN: The Wheat Board Act would be an example, would it not?

Mr. MURDOCK: No. This bill of course would not have to do with that measure.

Mr. MEIGHEN: I meant an example of a statute that never had worked and was unworkable now.

Mr. MURDOCK: No, I think a little later we may be able to show that that act has worked to some extent. But we are not dealing with that now.

Sir HENRY DRAYTON: The minister is optimistic to-day.

Mr. MEIGHEN: That act is dead now.

Mr. MURDOCK: For example, section 7 of the act is said to be out of date, and it is proposed to insert these words:

The clerk of the parliaments shall also furnish certified copies of the acts hereinbefore mentioned to any department of the public service of Canada or of any province or territory within Canada, or to any person applying therefor.

Then in section 10, which provides for the printing and binding of the statutes, the underlined words "part" and "parts" replace the words "volume" and "volumes", and the word "and" replaces the word "or". For many years the practice has been to bind only one volume but occasion may arise when it will be necessary to have a second volume bound and the change has been made accordingly.

Motion agreed to and the House went into committee, Mr. Marcil (Bonaventure) in the chair.

Sections 1 to 6 inclusive agreed to.

On section 7—Certified copies of acts to be furnished on application.

Sir HENRY DRAYTON: There is a change in this section that might be explained.

Mr. MURDOCK: That is the change I referred to a short time ago. It is desired to make clear to whom the clerk of the parliaments should furnish certified copies of any of the acts mentioned in the bill.

Section agreed to.

On section 8—Certificate to be inserted at the foot of every copy of acts required to be certified.

Sir HENRY DRAYTON: There is no change in this, I think?

Mr. MURDOCK: No.

Section agreed to.

On section 9—Certified copy of every statute to be furnished to the King's Printer.

Sir HENRY DRAYTON: There is a change in this.

Mr. MURDOCK: There is a slight change. The words "part" and "parts" are inserted for the "volume" and "volumes".

Sir HENRY DRAYTON: That is section 10.

Mr. MURDOCK: Subsection 2 of section 10.

Section agreed to.

On section 10—Acts to be printed in two separate parts, what each shall contain.

Mr. MEIGHEN: What is the effect of the change in section 10?

Mr. MURDOCK: This provides that the two parts referred to in subsection 1 shall be bound together in one volume unless it is impracticable or inconvenient so to do; in such case the King's Printer may authorize the same to be bound in two or more volumes. It simply gives the reasonable latitude that has already been allowed.

Sir HENRY DRAYTON: That is the practice now?

Mr. MURDOCK: Yes.

Section agreed to.

On section 11—How statutes shall be printed and bound.

Sir HENRY DRAYTON: Are we changing the type at all?

Mr. MURDOCK: As hon. gentlemen will see by the marginal note, the amendment discards obsolete printer's phraseology and substitutes modern trade terms. The reference to binding conforms to the practice of the past few years. The quantity to be bound in half-calf will be specified by the Governor General in Council, the joint committee on Printing having taken no action upon these lines for many years.

Sir HENRY DRAYTON: Would the minister tell us whether in changing from old terminology to modern terminology we are going to change the character of our printing? I apprehend not, but I want to know from the minister.

Mr. MURDOCK: Not at all. We are simply legalizing by the act what is now being done and has been done for years.

Mr. MEIGHEN: Was not the act more thorough as it was originally?

Mr. MURDOCK: No. It is thought that this is more concise and more nearly in accord with existing practice.

Mr. MEIGHEN: This act seems to be for the purpose of legalizing violations of the law which have taken place for years.

Mr. MURDOCK: The right hon. gentleman may be right.

Section agreed to.

Sections 12, 13 and 14 agreed to.

On section 15—Payments to be made by a promoter.

Mr. MEIGHEN: Who fixes the charges for the statutes?

Mr. MURDOCK: The Clerk of the House.

Mr. MEIGHEN: The House of Commons?

Mr. MURDOCK: The House in which the legislation is introduced.

Mr. MEIGHEN: No, I mean for the revised statutes.

Mr. MURDOCK: Those will be fixed by the committee on Printing and Stationery I think, and approved by the Governor in Council.

Mr. MEIGHEN: Does the statute fix, and if so in what section, who are entitled to the statutes free? If the statute does not fix it, who has authority to do so?

Mr. MURDOCK: I am not just clear about that. I am of the opinion that it is fixed under another regulation.

Sir HENRY DRAYTON: As I recollect it, the statute does not cover the question of cost at all. As we have it to-day the question of cost, I think, has to be fixed at the time the private bill is submitted. I think that is correct; I do not think it is in the statute anyway. I suppose the change here transfers the authority to fix the amount to be paid for private legislation from the King's Printer to the Clerk of the House, who is in custody of the legislation. Am I right?

Mr. MURDOCK: Yes.

Mr. MEIGHEN: What is the practice now as to the distribution of the statutes year by year, and as revised? There are certain parties who get them free and others who cannot. How is that regulated?

[Mr. Murdock.]

Mr. MURDOCK: By the committee on Printing and Stationery. There is also, I believe, a regulation prescribing to whom the King's Printer shall issue the statutes free and whom he shall charge.

Mr. MEIGHEN: Then, as a matter of fact, the list of those entitled to free distribution of the statutes is under the control of the joint committee on Printing?

Mr. MURDOCK: No, I would not say that. The regulations governing the King's Printer determine who is entitled to free distribution.

Mr. LAPOINTE: I think the Revised Statutes Act mentions certain classes of persons to whom the statutes are free, members of parliament, for instance—

Mr. MEIGHEN: That is what I thought.

Mr. MURDOCK: Clause 16 only provides for the publication of the statutes. It does not deal with the question that my right hon. friend has raised.

Sir HENRY DRAYTON: I hesitate to take issue with my hon. friend the Minister of Justice upon a purely legal point with which he is very familiar, or with the minister in charge, but if we look at section 10, it will be seen exactly who is entitled to distribution, and it will also be seen that the whole matter is in the hands of the Governor in Council, not the King's Printer. The Governor in Council has the responsibility thrown upon him under this legislation.

Mr. MEIGHEN: Yes, that is covered by section 10. Those entitled are members of the two houses of parliament, "who shall each be entitled to receive such number of copies as is, from time to time, directed by the Governor in Council." I fancy everybody should have the same right. I do not know that the Governor in Council should have the right to give one member a dozen copies and another member none. Then also such public departments, administrative bodies and officers throughout Canada as the Governor in Council from time to time directs may receive free copies. That is quite right, but I think (3) (a) should be changed so as to give every member the right to one set of statutes.

Mr. MURDOCK: I understand that is the regulation now, and this does not change that in any way. Each person entitled to one copy of the statutes now would still under the paragraph my right hon. friend cites be entitled to receive one copy.

Mr. MEIGHEN: What I mean is it should not be put under the Governor in Council,

it should be statutory, one copy for each member.

Mr. LAPOINTE: Of course the order in council applies to all the members and not to any special number of them.

Sir HENRY DRAYTON: I really thought my hon. friends were so afraid of this order in council regulation and that sort of thing that they would like to get rid of it if they could. I merely point out that the Minister of Labour is not quite correct when he says this is the present practice, because if he looks at the note on the opposite page of his own bill he will find this provision:

> The members of the two Houses of parliament respectively, who shall each be entitled to receive such number of copies as is, from time to time, directed by joint resolution of the said Houses, or in default of such resolution, as is directed by the Governor in Council.

That is how the matter has been dealt with before.

Mr. MURDOCK: I think my hon. friend will find that this government, since taking office, has made no change in the regulations governing this matter.

Section agreed to.

On section 16—Cost of printing.

Mr. CLARK: What progress is being made with the revision of the statutes?

Mr. LAPOINTE: That is a question which should be addressed to me, although it has nothing to do with this bill. However, the revision is progressing favourably.

Mr. MEIGHEN: Favourably for the commissioners or for the country?

Mr. LAPOINTE: For the country, I hope.

Mr. CLARK: Can the minister say on what date approximately they are likely to be published?

Mr. LAPOINTE: I cannot say definitely now, but I hope to be able to give an approximate date before the end of the session.

Mr. MEIGHEN: Will the minister say whether the work that was done—very intensive and I think very thorough work—by Mr. O'Connor has been cast aside or has it been utilized?

Mr. LAPOINTE: It has not been.

Mr. MEIGHEN: Why?

Mr. LAPOINTE: For certain reasons. One of them is that we would have to pay to get the material from Mr. O'Connor.

Mr. MEIGHEN: It would be far better to pay for the material than to get it all done over again.

Mr. LAPOINTE: That is not the opinion of the officers of the department.

Section agreed to.

Section 17 agreed to.

Bill reported, read the third time and passed.

WAR CHARITIES ACT

Hon. A. B. COPP (Secretary of State) moved the second reading of Bill No. 47, to repeal the War Charities Act.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Act repealed.

Mr. MEIGHEN: In introducing this bill the minister explained that the act was intended for war-time only, or rather for the time usually embraced in that term, and that its usefulness had now been extinguished by time. The purpose of the law was, as I recall it, to keep some supervision over the creation and operation of various charities which were making insistent appeals to the public under the pressure of war influences, and imposing in very considerable degree upon the public. The act provided for registration of those societies, for returns from time to time of what they were doing, and generally protected the public against unnecessary and perhaps dishonest appeals. The minister explained that there was now only a small portion of these societies in existence which sprang up in that period, and of that small portion a great part was composed of the I.O.D.E.'s—Imperial Order of Daughters of the Empire. I quite agree that, as respects that association, at the present day there would be no need of supervision, but there might be need as to others. Perhaps the minister would tell us how many others there are, what they are, and about what the extent of their operations is.

Mr. COPP: My hon. friend is right in regard to the purposes of the act. It was intended during the war to keep a supervision over the operations of these various charities and to prevent them making appeals for charitable purposes and perhaps defrauding and imposing upon the public. During the time the war was on there were 846 charitable associations registered in the department for

this work. Since the close of the war 631 have been removed from the register, leaving outstanding 175. Of these outstanding 143 are chapters of the Imperial Order of the Daughters of the Empire. Thirty-two others are outstanding.

Mr. MEIGHEN: What are they?

Mr. COPP: I have not the names of the organizations. Officials of the department tell me that there is very little being done in any of the organizations except the Daughters of the Empire, and that there will be no need to continue the supervision provided for by the act. The act imposes considerable work on these organizations. They have to make returns to the department every six months of the money they collect and what they do with it. It was thought it was no longer necessary to continue it in force. It is imposing a burden upon the associations.

Mr. MEIGHEN: I can see the wisdom of relieving the Daughters of the Empire of an unnecessary obligation, but I should like to know what the other charities are before taking the hand of control off them altogether. There is no doubt at all that some years ago there was a great deal of imposition on the public—and there would be yet if there were not supervision—by these various charitable organizations. A large section of the public and unfortunately the very best section of the public, is very readily imposed upon; and, without question, the control which was exercised protected many people against possible fraud and certainly imposition approaching fraud. It may be quite true that very little is done now, but is it not likely that that is due to the fact that the supervision and control is there, and consequently people do not try to continue in that line? Would it not be better to pass legislation enabling the Governor in Council to relieve the Daughters of the Empire from the obligation, and at the same time maintain the power of control in the way in which it at present exists? I do not see any need of repealing the whole act.

Mr. COPP: There is no particular need of repealing the whole act, if the House thinks it better to have the control of these few other organizations outstanding. I have not the names of the organizations, but I shall be glad to get them for my right hon. friend on the third reading, if that is satisfactory, or if he so desires, I have no objection to letting the bill stand.

Mr. MEIGHEN: We might rise, report progress and ask leave to sit again, for this reason. If the minister brings the list of these organizations, it might appear that the wise course would be to give the Governor in Council power to relieve from making report such organizations as he decides. I know that would enable the Governor in Council to repeal the act; but if the list were before the House, the House might see fit to leave the control as respects all and sundry and especially as respects new creations, because without question there would have been many more of these organizations over the 800 if it had not been for the check placed upon them by the statute.

Mr. STEVENS: I am just reminded that to-day or yesterday in the mail I received a circular—and this is a typical illustration of the point to which my right hon. leader is referring—of some institution or association in Toronto appealing for funds for the relief of starving children in Armenia. What struck me when I received this circular was this. I suppose the most notorious impositions and frauds have been perpetrated upon the people of Canada by persons purporting to be sponsors for the relief of Armenians. I do not know of any part of the world in connection with which more fraud has been perpetrated in the name of charity. Of course in some cases, perhaps many, the objects are very meritorious and deserving. I wonder if the minister has received a similar circular, and if this is one of the charities that is now under control or license or whatever the form is. I wonder further whether any officer has actually investigated these people—they may be first class; I know nothing of them—to see whether they are truly meritorious. As I have already intimated, a frightful amount of fraud has been perpetrated on the people of Canada by spurious institutions purporting to be working on behalf of suffering humanity in some part of the world.

Mr. COPP: A copy of this circular may have come to the department, but I have not received one. I have no desire to press this legislation. My object is merely to get what would be best for all the charitable organizations that are doing work in this country and to protect as far as possible all the people who are giving to charity. The suggestion made by my right hon. friend might be a very reasonable one, to consider changing the act to such an extent that the Governor in Council could relieve certain organizations from giving reports. My right hon. friend desires to get some information with regard to some 32 organizations. In the meantime we can report progress.

Sir HENRY DRAYTON: I should like to make a suggestion in connection with the Daughters of the Empire. The position of my hon. friend, I understand, is that the reason this bill is brought forward is that the Imperial Order of the Daughters of the Empire have many different organizations, and it is a hardship upon them and an expense to them to be compelled to make these reports.

Mr. COPP: One hundred and forty-three.

Sir HENRY DRAYTON: Of course we know this is a very meritorious institution. The act itself defines war charities, mentioning "any fund, institution or association, other than a church or the Salvation Army." It starts out with some exceptions, and perhaps there are some later on. What I would suggest to my hon. friend is that he could well amend his bill and do what he wants to do in respect of helping the Daughters of the Empire by inserting after the word "army" in the second line of paragraph (b) of section 2, the words: "The Imperial Order of the Daughters of the Empire". This would exempt them from the provisions of the act.

Progress reported.

DAIRY PRODUCE ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee to consider the following proposed resolution:

That it is expedient to amend the Dairy Produce Act, chapter 28 of the statutes of 1921, by providing that the Governor in Council shall have power to make regulations for refusing to grade dairy produce and for withholding grade certificates.

Mr. MEIGHEN: I really do not know whether this is very contentious or not, but coming as it does from the Minister of Agriculture, the presumption is that it is.

Mr. MOTHERWELL: I do not think it will be contentious.

Mr. MEIGHEN: The present moment is not a good time for precipitating this in the House. I presume all the minister wants is to get it to the committee.

Mr. MOTHERWELL: I have discussed it on the estimates before and the ex-Minister of Agriculture (Mr. Tolmie) is quite agreeable to it.

Mr. MEIGHEN: If the minister will give the House the assurance that the hon. member for Victoria City approves it?

Mr. MOTHERWELL: Yes, and I will give the further assurance that I will refer all these bills to the committee on Agriculture so that they will come back to the House.

Motion agreed to and the House went into committee, Mr. Gordon in the chair:

Mr. MOTHERWELL: This is merely to legalize what we are doing already, where a creamery individual persists in breaking the law, that is in adulterating either butter or cheese. Reports have come back from Great Britain that a few of our exports of butter and cheese have been adulterated. It sometimes pays the offender better to pay the fine than to stop the adulteration, and we want authority to refuse to grade these articles because we find that is very effective. We are doing this now, but somebody may challenge our right and we want to have that right.

Mr. MEIGHEN: Does the minister assure us that the hon. member for South Oxford (Mr. Sutherland) is in favour of this legislation too?

Mr. MOTHERWELL: I think he is. He is a good dairyman.

Resolution reported, read the second time and concurred in. Mr. Motherwell, thereupon moved for leave to introduce Bill No. 72, to amend the Dairy Produce Act.

Motion agreed to and bill read the first time.

THE MEAT AND CANNED FOODS ACT, 1907, AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee to consider the following proposed resolution:

That it is expedient to amend The Meat and Canned Foods Act, chapter 27, of the statutes of 1907, by providing,—

(a) That, for the purposes of the act, canned foods shall include foods that have been preheated, cooked, preserved, condensed, evaporated, dehydrated, dried or otherwise processed or prepared for food, and are placed in any closed can, bottle, package or container;

(b) That all canned fruit or vegetables or products thereof, or any food or food products which may be named by the Governor in Council, shall be offered for sale only in such cans or other containers as the Governor in Council may by regulations prescribe, and such cans or containers must contain the quality, quantity or weight prescribed by the regulations.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. MEIGHEN: I think we have rushed through about as much business as we are justified in passing to-day. I do not like to take too much responsibility in this regard. Can the minister say that he has discussed this matter with the hon. member (Mr. Tolmie)?

Mr. MOTHERWELL: No, I did not discuss it with him but he is quite familiar with the act. This is not a new law; it was administered by his department. The amendment merely proposes to change the basis of the can from so many cubic inches to a specific weight.

Mr. MEIGHEN: It is impossible for one not recently connected with agriculture— and my very close connection with it ceased a little while ago—to measure the real importance of a resolution of this kind. Probably there are hon. members who can, but there are some hon. gentlemen who ought to be here when such a resolution is being considered and who are not now present.

Mr. MOTHERWELL: I may tell the hon. gentleman that I intend to ask that all these bills shall go to the Agricultural committee after the second reading. Thereafter they will come back here and go through committee of the Whole.

Mr. MEIGHEN: I shall be prepared to let this resolution have the second reading but I hope that the government will not ask us to pass any other measures to-day.

Mr. STEVENS: Does the reference to canned foods in this resolution include canned salmon or canned fish generally?

Mr. MOTHERWELL: No, that comes under the Minister of Health.

Mr. STEVENS: Will the minister make sure of that?

Mr. MOTHERWELL: I will.

Resolution reported, read the second time and concurred in. Mr. Motherwell thereupon moved for leave to introduce Bill No. 73 to amend the Meat and Canned Foods Act, 1907.

Motion agreed to and bill read the first time.

On motion of Mr. Mackenzie King the House adjourned at 6.50 p.m.

Monday, May 4, 1925

The House met at three o'clock.

MICHAEL O'LEARY V. C.

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): Mr. Speaker, I should like to draw the attention of the Minister of Justice to the case of Michael O'Leary, who won the Victoria Cross at the front and who is, I understand, in gaol in the United States without trial, on some charge, not a very serious one, I believe. I understand that some of the municipalities along the Niagara frontier, or in that neighbourhood, have sent letters asking the Minister of Justice to do anything he can to have the trial expedited. I draw the attention of the Minister of Justice to the matter and ask him, if possible, to do anything he can on behalf of this poor fellow to see that he gets a speedy and fair trial.

Hon. ERNEST LAPOINTE (Minister of Justice): I will make it my duty to inquire into the circumstances attending the case with a view, if possible, to meeting my hon. friend's wishes.

DEATH OF MR. A. B. HUNT, M.P.

On the Orders of the Day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Hon. members of the House will have learned with feelings of sorrow and great regret of the death at eight o'clock this morning, at the Ottawa Civic Hospital, of one of our number, Mr. Aylmer Byron Hunt, member for the constituency of Compton in the province of Quebec. During the last year or two Mr. Hunt has been in ill-health, having had to undergo several operations. He has, however, been regularly in attendance throughout the present session and was in his seat in parliament as recently as ten days ago, at which time he went to the hospital in order to undergo another operation. His impaired strength and vitality were unequal to the tax which the operation placed upon them, and I am informed, he died this morning from its effects.

Mr. Hunt was in his sixty-first year. In point of service he was one of the oldest representatives in the Commons. He entered parliament over twenty years ago, having been first returned as the member for Compton in the general elections of 1904. He continued to represent that constituency in all subsequent parliaments, save the one following the general elections of 1911, when he met defeat by a slender majority. At the last general election he was returned by a majority of something like 4,000.

Mr. Hunt was closely identified with the farming and commercial interests of the county he represented in parliament. Like many another hon. member of this House, he, in his younger years, took an active interest in municipal affairs, and was honoured by being elected mayor of the town of Bury in which he was born, and subsequently by being chosen warden of the county. In 1900, following in the steps

of his father who in the year preceding had represented the county of Compton in the Provincial Legislature of Quebec, he contested the riding in the Liberal interests. Though unsuccessful in this contest his popularity was such that he was chosen as the Liberal candidate in the federal elections of 1904, when, as mentioned, he was first returned to this parliament.

Just how significant was the part played by Mr. Hunt in the politics of the Eastern Townships and how considerable the measure of public confidence he enjoyed, may be gauged from the circumstance that it was in the general elections of 1904 that the county of Compton for the first time since the days of Confederation changed its representation from Conservative to Liberal; also by the fact that the majorities obtained by Mr. Hunt in the elections of 1919 and 1921 were the largest federal majorities ever given in the history of the county.

Mr. Hunt possessed the characteristics and qualities which inspire confidence and trust, qualities which in public life add to the number of a man's friends and leave him without enemies when his day's work is done. He was quiet and reserved in demeanour, genuinely sympathetic and public-spirited, loyal and steadfast in all the relationships of life. In these many relationships he will be greatly missed. Especially will his loss be felt by hon. members on this side and in the country by the Liberal party to whose principles he was so true, and of which he was so devoted a supporter. We in the House of Commons, who knew him best will greatly miss his kindly and cheerful personality. Our sympathy will go out at this time to the constituency which Mr. Hunt represented, in the loss of their member, and especially to Mrs. Hunt and to her sons and daughters in the overwhelming bereavement they have so suddenly sustained. I know that I express the common sentiment and desire of all here assembled in requesting, Mr. Speaker, that you convey to Mrs. Hunt and to the members of her family the heartfelt sympathy of all hon. members of this House.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Once again parliament is called on by the intervention of death to lament the loss of one of our members, and to pay to his memory a tribute of honour and respect. As the Prime Minister has said, Mr. Hunt was one of the oldest of our number in point of service in this House. He devoted most of his life to the public service, but throughout that period maintained an attitude of quiet reserve and unobtrusiveness which made him not so well known among all the members of the House as otherwise would have been his fortune. With us on this side he mingled little, but was known to all as a devoted friend of his country, as a cheerful, good companion, and a faithful public servant. He did all that man could do within his means and capacity. He served his country ably. He took part in very many business activities, and was connected with much that was of advantage to his people, and served in every way with fidelity and with ability. His family is large and in that manner also he leaves behind him an inheritance for his country, the value of which we all appreciate. I am sure that hon. members on this side of the House for whom I speak desire permission to join in this tribute of respect to his memory, and we ask also to be allowed to unite with hon. members opposite in the message which you, Mr. Speaker, are requested to send to his widow and his family.

Mr. ROBERT FORKE (Brandon): On behalf of the hon. members who sit in this part of the House, I should like to say that it was with deep sorrow and regret that we learned this morning of the death of Mr. Hunt. Though, as has already been stated, he did not take a prominent part in the debates of this House, yet I am sure he was respected by every hon. member. Manifestly he has been appreciated and respected by his constituents as shown by the long term during which he represented them in this chamber. He has served them honourably and well. I can only ask that our sympathy be expressed to those near and dear to him for the great loss which they have sustained in the death of husband and father.

Mr. DEPUTY SPEAKER: As requested by the leaders of all parties in this House, I shall forward to the widow and relatives of the late Mr. Hunt tributes of sympathy which have been expressed for them in their bereavement.

PRIVATE BILLS

SECOND READINGS

Bill No. 48, for the relief of George Thomas Grigor.—Mr. Martell.

Bill No. 49, for the relief of Ethel May Sherriff.—Mr. Church.

Bill No. 50, for the relief of Max Arno Frind.—Mr. Hocken.

Bill No. 51, for the relief of Elizabeth Burns.—Mr. Garland (Carleton).

Bill No. 52, for the relief of Fred Herdman Ogden.—Mr. Church.

Bill No. 53, for the relief of Marion Gooderham Smith.—Mr. Hocken.

Bill No. 54, for the relief of Edith Mary Wiles.—Mr. Garland (Carleton).

Bill No. 55, for the relief of Annie Kate Winch.—Mr. Hanson.

Bill No. 56, for the relief of Florence Kate Coutts.—Mr. Ryckman.

Bill No. 57, for the relief of George Kerr Jess.—Mr. Hanson.

Bill No. 58, for the relief of Thomas Almer Shields.—Mr. Euler.

Bill No. 59, for the relief of Roderick James Ellis.—Mr. Boys.

Bill No. 60, for the relief of Florence Mann.—Mr. Sheard.

Bill No. 61, for the relief of Samuel John Pegg, junior.—Mr. Preston.

Bill No. 62, for the relief of Harry Hambleton.—Mr. Sheard.

Bill No. 63, for the relief of Izzie Klinmentz (otherwise known as Izzie Climans).—Mr. Jacobs.

Bill No. 64, for the relief of John Hutchison Durnan.—Mr. Sheard.

Bill No. 65, for the relief of Richard James Wright.—Mr. Garland (Carleton).

Bill No. 66, for the relief of Mary Ellen Ayre.—Mr. Boys.

Bill No. 67, for the relief of Helen Marie Pritchard.—Mr. Garland (Carleton).

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PAYMENTS TO EXPRESS COMPANIES

Mr. WARD:

What was the amount paid, respectively, to the Canadian National Express Company and the Dominion Express Company by the following Departments, in 1924: (a) Trade and Commerce; (b) Customs and Excise; (c) Printing Bureau?

Hon. Mr. COPP:

Department of Trade and Commerce

	Canadian National Express	Dominion Express
Civil government contingencies	$ 5 78	$ 1 00
Commercial Intelligence service	231 87	23 69
Canada Grain Act, including Dominion government elevators	1,067 52	597 11
Petroleum bounties administration	3 15	
Motion Picture bureau	221 67	46 98
Weights and Measures.	451 10	653 28
Electricity and Gas..	607 71	215 20
Bureau of Statistics..	175 56	24 40
Total	$2,764 36	$1,561 66

Department of Customs and Excise

(b) Canadian National Express.. $13,667 84
Dominion Express Co... .. .. 7,773 26

Department of Printing Bureau

For the calendar year ending December 31, 1924: the department paid to the Canadian National Express Company the amount of, $13,304.21; and to the Dominion Express Company the amount of, $4,639.91.

HORSE BREEDING

Mr. BOUCHARD:

1. What amount has been spent in each province as federal assistance to horse breeding, under the breeding law?

2. Does the special railway freight rate apply to the western shippers on the transportation of horses to the east?

Hon. Mr. COPP:

1.

STATEMENT showing amounts paid by the Dominion Stock Branch, Department of Agriculture, Ottawa to Horse Breeders' Clubs under the Federal Assistance to Horse Breeding Policy since the Inception of the Policy, 1915

It will be noted that, throughout the statement, the amounts shown as having been paid to clubs are in connection with clubs organized for that year

2. The Canadian National railway officials advise that there are special freight rates from western to eastern Canada on horses in carloads, which apply for either breeding or general purposes.

CANADIAN NATIONAL RAILWAYS—PRIVATE CARS

Mr. WILSON:

1. How many private cars are in the possession of the Canadian National Railways for the use of officials?
2. How many of these have been secured in the past two and a half years?
3. How many were used to carry officers of the company to Portland on the occasion of the departure of Mr. C. J. Smith for England?
4. Who were the officers who used these cars for this purpose?
5. How many cars were on this same occasion sent around to Halifax and for what purpose were they so sent?

Hon. Mr. GRAHAM: The hon. member is not in his seat again and I suppose we had better let this question stand. I am prepared to answer the part of the question that I think ought to be answered.

MR. A. PETTIGREW

Mr. POULIOT:

1. Did Mr. A. Pettigrew, counsel for returned soldiers, at Quebec, do any active service with the Canadian Expeditionary Forces, from August, 1914, to November, 1918?
2. If so, (a) with what battalion; (b) what was his number; (c) in what battles did he take part?
3. Did he not receive his exemption from military service during the war?
4. If so, for what reason?
5. Since the war, did he join the Canadian navy?
6. If so, (a) on what date; (b) what is his rank; (c) what is his pay; (d) is he also acting as recruiting officer; (e) is he receiving a salary for said service?
7. On whose recommendation was he appointed counsel for returned soldiers, at Quebec?

Hon. Mr. COPP:

1. No.
2. Answered by No. 1.
3. A Mr. Achille Pettigrew of Quebec was exempted.
4. He was placed by the medical board in class "E."
5. Yes.
6. (a) 31st March, 1923.
   (b) Acting Lieutenant.
   (c) Officers of the R.C.N.V.R. serve without remuneration except whilst attending two weeks' annual drill when they are paid at R.C.N. rates of pay.
   (d) No.
   (e) Answered by (d).
7. All soldiers' advisers, including Mr. Pettigrew, were selected by veterans' organizations whose nominations were communicated to the government by the Dominion Veterans' Alliance.

CANADIAN NATIONAL RAILWAYS—ANSWER DELAYED

Mr. POULIOT:

1. What is the name of the person or persons who sold to the government the land on which are located the workshops of the Canadian National Railways, at St. Malo, and what was the sale price?
2. What is (a) the amount and (b) the value of the machinery transferred from the workshops of the Canadian National Railways, at Rivière du Loup, to those of St. Malo?
3. What is the number of employees of the Canadian National Railways who were transferred from Rivière du Loup to St. Malo?
4. Was this transfer optional?

Mr. POULIOT:

What was the total yearly amount of business of the Canadian National Express Company branch at Trois Pistoles, county of Temiscouata, Quebec, during the last two years, respectively?

Hon. Mr. GRAHAM: One of the difficulties of getting information rapidly now from officers of the Canadian National Railways is that we have so many of the officers here attending committees. I had a letter from one of them this morning stating that it would be impossible to get these answers until they were relieved here.

ROYAL CANADIAN MINT

Mr. BLACK (Yukon):

1. Why is the Royal Canadian Mint idle?
2. Why is no Canadian silver coin being minted at the Canadian mint?
3. Why is the large amount of United States silver coin now in circulation in Canada not shipped out of the country and replaced by Canadian silver coin?
4. When was the last Canadian silver coin minted in Canada?
5. Is there any advantage to Canada in having Canadian silver coin in use and circulation in Canada instead of United States coin?

Hon. Mr. ROBB:

1 and 2. The operations of the mint are dependent upon the circulation requirements of the country. Owing to the large amount of silver minted during the war and demobilization period to meet the then current and anticipated demands, there has been a sufficient supply available since 1922-23 to meet all requirements. Consequently, no silver coin has been minted since 1923, but the mint has been engaged on bronze and nickel coinage and the refining of gold.

3. Trade returns for the last year show that $957,684 of silver coin was shipped out of Canada to the United States.

4. 1923.

5. There is a profit to the government in the issue of silver coinage.

CANADIAN NATIONAL RAILWAYS—STATISTICS

Mr. MORIN:

What were during the year 1924 on the Canadian National Railways: (a) The number of tons of freight

carried; (b) The number of tons carried one mile; (c) The earnings per ton mile from freight traffic; (d) The number of passengers carried; (e) The number of passengers carried one mile, and (f) The earnings per passenger per mile?

Hon. Mr. GRAHAM:

(a) Revenue freight, 52,498,614 tons.
(b) 16,932,406,010.
(c) 1.010 cents.
(d) Revenue passengers 22,707,880.
(e) 1,372,335,263.
(f) 2.713 cents.

GRAND TRUNK RAILWAY—GRATUITIES TO OFFICIALS

Mr. WARD:

1. Have the officials of the Grand Trunk railway returned the gratuities given them by the former management in accordance with a statement made in this House by the Minister of Railways in 1923?
2. If so, when?

Hon. Mr. GRAHAM: I can answer this question orally.

1. They have not.

2. No. 2 is answered by No. 1. A commision was appointed to investigate all the gratuities etcetera of the old Grand Trunk. That commission found that all these payments had been legally made and that the company had a perfect right to make them. It intimated, if I remember correctly—and I think I do—that in the opinion of the commission it would not be in the interest of the railway operation itself to insist that these moneys be refunded.

Mr. MEIGHEN: Is that the opinion of the government?

Mr. GRAHAM: I have not said that.

WEMBLEY EXHIBITION

Mr. DOUCET:

1. Was any person sent by the government to act as hostess at the Wembley exhibition?
2. If so, who is the person, and what is her place of residence?
3. For what length of time was she on duty?
4. What is the amount paid and to be paid to her (a) for services, (b) for travel and living expenses, (c) for other outlay?

Hon. Mr. ROBB:

1. No.

2, 3 and 4. Answered by No. 1.

CIVIL SERVICE SUPERANNUATION

Mr. McQUARRIE:

1. Is the Minister of Finance aware that the effect of subsection (a) of section 5 of the Superannuation Act of 1924, is to confiscate the contribution of a civil servant who should voluntarily retire before having ten years' service?
2. What is the justification for this policy of confiscation?
3. What becomes of the contribution of the civil servant so confiscated?

[Mr. Morin.]

Hon. Mr. ROBB:

1. The minister is aware that under the Superannuation Act, 1924, no benefit is payable in the event of the voluntary retirement of a civil servant having less than ten years' service.

2. This feature of the act is not properly described as confiscation. The principle involved has been contained in both previous Superannuation Acts.

3. The contributions of civil servants so retiring remain a part of the superannuation fund.

INTERNATIONAL LABOUR BUREAU—GENEVA

Mr. BLACK (Yukon):

1. Did the Minister of Labour advertise in Canadian newspapers that the position of Assistant Legal Adviser in the International Labour Bureau, Geneva, was vacant and that applications would be received from Canadians?
2. If so, how many applications from Canadians were received?
3. Has any appointment to this vacancy been made?
4. If so, what is the date of such appointment and the name of the person appointed?

Hon. Mr. MURDOCK:

1. Announcement was made in the Canadian press on January 19, 1925, that the position of Assistant Legal Adviser in the International Labour Office, Geneva, was vacant through the retirement of Mr. Corbett, of Montreal, and that applications would be received from Canadians. The Minister of Labour was asked to nominate a qualified person to act with Mr. Corbett in preparing a report on the candidates' qualifications for transmittal to the International Labour Office, with whom the final choice would lie. Professor Jean Desy, of Montreal, was nominated for this purpose by the Minister of Labour, and the report of Messrs, Corbett and Desy was submitted to Geneva towards the end of March.

2. Twenty-three.

3. Yes.

4. The Minister of Labour was advised from Geneva on April 24 that Mr. Norman MacKenzie, one of the applicants from Canada and who is at present studying at Cambridge University, England, has been appointed.

SPRAY LAKES POWER SCHEME

Hon. Mr. STEVENS:

1. During the past year, have any further negotiations been held regarding the Spray lakes power scheme? If so, with whom?
2. Has the government under consideration any proposals for the transfer of the National parks to the governments of the various provinces where located? If so, by whom have such representations been made?

3. Have any engineers representing (a) the Department of the Interior, or any Dominion governmental department; (b) any provincial government; (c) any private corporations or persons, made any surveys or investigations of the Spray lakes power scheme during the past year?

4. If so, who are the said engineers or persons?

Hon. Mr. STEWART (Argenteuil):

1. The government of the province of Alberta has made certain inquiries but has not filed formal application.

2. No, but it is to be expected that the matter of the administration of national parks in the province of Alberta will receive consideration when the details of the transfer of the natural resources to that province are being discussed.

3. (a) No. (b) It is understood that engineers of the Ontario Hydro-Electric Power Commission have made a report on the project to the Alberta government. (c) It is understood that engineers of the Montreal Engineering Company under an arrangement made with the government of the province of Alberta have carried on field investigations during the past year.

4. Answered by No. (c) above.

QUESTION PASSED AS ORDER FOR RETURN

PEACE RIVER BLOCK

Hon. Mr. STEVENS:

1. Does the Dominion government own a block of territory in British Columbia known as the Peace River block? If so, what is the total area?

2. What were the considerations given to British Columbia in return for the surrender of the said area to the Dominion government?

3. Has any of the land in the said Peace River block within the boundaries of the province of British Columbia been sold or leased? If so, (a) how much; (b) in how many separate parcels; (c) what is the total amount received from the sale price of the property or in return for lease, or in rentals, if leased?

UNOPPOSED MOTION FOR PAPERS

NOVA SCOTIA TEMPERANCE ACT

Mr. DOUCET:

For a copy of all correspondence, statements of investigation, court proceedings, reports, documents and other papers in the possession of the Department of Customs and Excise and the Department of Justice relating to alleged violation of law in regard to intoxicating liquors in or upon any bonded warehouse at Halifax, Nova Scotia, which the Franco-Canadian Import Company is permitted to establish and conduct, or by any person interested or engaged in the business of said import company.

Hon. Mr. LAPOINTE (Minister of Justice): In the absence of the Acting Minister of Customs and Excise (Mr. Cardin), I would ask that this resolution stand.

HUDSON BAY RAILWAY

MOTION BY MR. KNOX FOR RECOGNITION OF PRIORITY

Mr. ANDREW KNOX (Prince Albert) moved:

That, in the opinion of this House, it is expedient that more effective consideration and recognition be given to the resolution adopted by parliament on March 12, 1923, recognizing the priority of the Hudson Bay railway, with reference to other transportation projects started subsequently.

He said: This matter has been before the House on a number of occasions, and in bringing it forward again I wish to assure you, Mr. Speaker, that those of us who are interested in the Hudson Bay railway will offer no apology for discussing the subject. We who are pressing for the completion of the Hudson Bay railway believe implicitly in the feasibility and in the future success of that project and in that conviction we have no need to feel apologetic. We represent hundreds of thousands of people in the west who to-day are equally confident of the feasibility and the successful operation of this railway; and they believe in it as a possible outlet for their produce and as an inlet for their purchases. These people believe that it would overcome the great handicap under which the west is to-day suffering by reason of high transportation costs. The people whom I represent and among whom I have lived for the last thirty-odd years have great faith in the outcome of the undertaking. Some of these people have entered Canada by this route, while others have worked on the railway as well as on the terminals, so that they are intimately associated with the whole thing and know whereof they speak. And it is because of this intimate knowledge of the Hudson bay proposition that they believe so firmly in its ultimate success if the work is carried to completion.

The people of the west, however, believe in the justice of completing the Hudson Bay railway; and more than that, they believe in the righteousness of it, if I may put it that way: many of them believe that the Hudson bay was placed as it is by an all-wise Creator for the purpose of serving as an outlet for the great agricultural plateau of the middle west. The people in that part of the country are of the opinion that it would do more towards bettering conditions in the west if this railway were completed, than any other transportation project could accomplish. The result of all this is that those who inhabit the three prairie provinces are practically a unit in their request for the im-

mediate completion of the Hudson Bay railway; and requests come from organizations representing every phase of western activity —from our legislatures down through our farmers' organizations, our labour bodies and our boards of trade. I have here a copy of a resolution passed by the United Farmers of Alberta which I shall read to the House. It has been suggested on former occasions that the province of Alberta was not very strong in its attitude towards the railway; but the following resolution would not be passed by the organization to which I have referred—which certainly represents the thought of Alberta—if the province did not favour the completion of the road. The resolution reads:

Resolved that we go on record as being strongly in favour of the early completion of the Hudson Bay railway.

This was adopted in January last. The thought has occurred to me that it is rather a strange situation that the people of the prairie provinces, living in close proximity to the Hudson Bay railway and having every reason to know something about the matter, should be almost unanimously in favour of its completion, while people living at a remote distance who naturally, one would think, would not be expected to know so much about it, are very largely opposed to the undertaking. I have in mind the section of the east particularly centering around Montreal. We in the west feel that this opposition is not justified; we look on Hudson bay as our natural outlet, and we feel that we have contributed to the expenses of this project up to the present time, besides possibly having something left over from the sale of some of the western lands.

As to the history of the Hudson Bay railway undertaking itself, I shall be very brief. This matter has been a source of agitation on the part of the west for the last forty years or more. The railway was first begun by the government of Sir Wilfrid Laurier in 1910 and the work was carried on by the government of Sir Robert Borden, closing down in 1918 without any apparent reason, after there had been spent on the railway and the terminals some $21,000,000. The total length of the line is 424 miles, and this has all been graded; the steel has been laid on 332 miles, all the bridges having been built. It will be seen from this that only a distance of 92 miles remains to be laid with steel, and it is hard to understand why this stretch has not been completed after the construction has got to that stage.

A number of hon. gentlemen sitting around me have made personal trips of inspection to the bay and no doubt they will tell the House what they have found on these trips. I have not personally visited the locality, although I hope to do so some time in the future. But those who have made the trip report that the work already done is still standing up well and is in good condition. Since these trips were made it has been reported through the press that as the result of a very severe storm that swept over Hudson bay a good deal of damage was done; and I have been informed by people who think they ought to know that sections of the bridging laid over to the artificial island in the harbour have been carried away. In consequence of this information I made a point of consulting the chief engineer, Mr. McLachlan, this morning; I asked him what the reports showed in regard to this alleged damage, and he assured me that the bridge is standing there in perfect condition, no damage having been done, except for the fact that much of the gravel which had been placed on the piers when work ceased, has been swept away. He tells me too that some of the barges and dredges were swept from their moorings. The House will of course readily understand that as there was no protection from the storm it was only to be expected that to this limited extent some injury would be caused by so severe a storm. Some of these barges were carried across the estuary and stranded on the other side; but the engineer assures me that no great damage has been done, the work still standing secure. This information was very reassuring after the reports that had gone out through the press, as it is just possible that some one may see fit during the debate to-day to mention this storm. I had an opportunity of discussing the storm with an officer of the Hudson's Bay Company who is in charge of a post in the northwest extremity of the bay. He assured me that it was of extreme severity. In fact he said that the oldest Eskimos had no remembrance of anything like it ever having happened before. Port Nelson having in its present unprotected condition come through that severe storm without any serious damage to the uncompleted works there, I do not think we have much to fear on this head. It is significant that this storm happened in November, which is one of the months when opponents of the scheme tell us the bay and port are frozen solid. I think we now have sufficient proof to the contrary.

On March 12, 1923, Mr. Speaker, I moved the following resolution:

That in the opinion of this House, the government of Canada give further consideration to the report of the Senate committee on the Hudson Bay railway with a view to safeguarding the investment of public moneys made in the construction of that portion of the work completed to date, and that the government recognize the priority of this undertaking with reference to other transportation projects started subsequent to the Hudson Bay railway.

I would point out that after considerable discussion this resolution was adopted by the House. Although so adopted, and therefore representing the decision of this House two years ago, it is significant that no effort has yet been made to give this transportation project priority over other transportation projects started subsequently. Some work was done in the summers of 1923 and 1924 to rehabilitate the portion of the road over which trains run. An estimate of $350,000 was voted in 1924; another $300,000 had been voted in 1923, but only some $60,000 odd was spent in that year. So that altogether during those two years only about $413,000 was spent in an effort to rehabilitate that portion of the road over which trains are run. During that time the money spent, for instance, on the Welland canal, has run into millions of dollars. I might say that the Welland canal was started subsequent to the Hudson Bay project. In 1923 a vote of $11,800,000 and in 1924 a further vote of $11,000,000 was passed for the prosecution of work on this canal, making a total for those two years of $22,800,000 as compared with the $413,000 spent on the Hudson Bay project. This year I find in the estimates an item of $15,000,000 for the Welland canal. As yet we have no intimation of what supplementary estimate will be brought down for the Hudson Bay railway, but if it is to have any priority over the Welland canal project, this estimate should surely be for a sum sufficient to complete the work. I would impress on the House that the resolution passed in 1923 has not been observed by the government; certainly no priority has been given to the Hudson Bay railway.

Is it any wonder that there is a feeling of distrust, suspicion and disappointment in the prairie provinces on this matter? We in the west are suffering more or less by the discrimination—if I might use that term—against us in respect of the customs tariff, and it is bearing heavily upon us. But when it comes to a refusal by a certain portion of eastern Canada to permit the completion of a project, the funds for which were raised by the sale of western lands, then, Mr. Speaker, we certainly feel like crying "How long, O Lord, how long!" This project was supported and endorsed by both the old political parties, parliament has sanctioned it time and again, settlers have gone into that country on the distinct understanding that the Hudson Bay railway would be completed, and those already there have extended their operations and investments on the strength of the repeated promises that the line would be built through to the bay. Evidently these people had greater faith in the governments of that time than they could be expected to have in the government of to-day.

It has been said that the Hudson Bay railway is the child of the hon. Minister of Railways (Mr. Graham). Undoubtedly he turned the first sod, thus giving the project his blessing and, I have no doubt, his sympathy. I do not think that to-day down in his heart he has changed one particle, but it is impossible for him to carry the project through without the support of his colleagues in the cabinet, which evidently he has not got. As I said a few days ago when speaking on the budget, at one time we had great expectations of assistance from the hon. Minister of Agriculture (Mr. Motherwell). While speaking on this subject in the West during the recess he certainly gave us to understand that he was an out and out supporter of the completion of the railway, and the west was looking forward to something being done this session through the efforts that he was likely to put forth to assist us in getting the project completed. But we got a rude shock a few days ago when, in his speech on the budget, he showed that he had changed his attitude somewhat, because instead of urging the immediate completion of the road he advocated a further investigation as to which was the better terminal. Port Nelson or Fort Churchill. As I said at the time, it looked to me very much like drawing a red herring across the trail—in other words, another excuse for further delay.

Now, Sir, if the government wish to retain, or possibly I should use the word obtain, the respect and confidence of the west, my suggestion and advice to them would be to consider what we are up against in regard to the customs tariff, and also what we are up against in regard to our transportation problems. Apparently the government could not see their way to give us any consideration when framing their budget, but they still have another opportunity to partially set themselves right with the west, and my proposal is that to this end they take half of the $15,000,000 which appears in the estimates for the Welland canal and apply the money to the Hudson Bay project, for this amount would be far

more than sufficient to bring it to the stage where it could function successfully. By so doing they would help allay the present distrust of our people in the west and forever end this annual controversy.

I have here a copy of a letter which I would like to read to the House. It is from Mr. O. D. Hill, of Melfort, Saskatchewan, in my constituency, who made a trip up to the bay last summer. I should have referred to this letter earlier in my remarks, but I will put it in now, as it gives an idea of what the condition of the road is. He says:

I was out to Port Nelson this summer in company with Colonel James of Regina, and both of us came back far more enthused over the project than ever. I am sending you, under separate cover, some pictures taken of the road. We were agreeably surprised with the condition of the roadbed. And I make this statement without fear of contradiction, having been over every transcontinental road in Canada and over some in the United States, that there isn't a natural roadbed in North America that can compare with that of the Hudson Bay railroad.

There are stretches of this road running for miles and miles in a straight line where there is very little dump at all, the land being so level that there is only ballast underneath the rails. Some of the pictures that I am enclosing will corroborate this. When you consider this and the fact that the heaviest gradient is only four-tenths of one per cent, that there are no long fills, or long cuts, it would make you think that Providence had provided this natural way to the sea. Any gradients are in favor of the out-going traffic, which will be the heavier for a long time. There is nothing on the road which would approach my conception of a muskeg. The road for the whole way is on solid ground. There is no place where there is any mud or water coming up through the ties. The longest dump is at Armstrong lake and it is wonderful the state of preservation that this is in.

The road from Le Pas to Mile 214 has had a considerable amount of work done on it this summer. One of the pictures which I am enclosing shows this, where the ties are taken up and put out on the side cut, and is as good as any branch line in the west.

The road from 214 to 332, which is the second crossing of the Nelson, it is estimated by a competent man, can be rehabilitated for half a million dollars. It is only natural to think that this portion of the road, which has had nothing done on it for eight or nine years, should be considerably damaged by the elements, but this has nothing to do with the roadbed.

From 332 through to Port Nelson the dump is all complete and whilst we only saw both ends of it, we have spoken to men who have gone over the whole dump and they claim that it is just as good on the average over the whole grade as at the ends and we should say from this that there is very little which has to be done with the dump before the steel could be laid on it.

I am safe in saying that any loyal, reasonable unprejudiced citizen of Canada, come from where he may, taking the trip over the road to the bay as I did, could not help but become an enthusiastic supporter of the project.

I have no wish to speak at any great length on this matter, because it has been put before the House so often that to do so would be to repeat what has already been said. My object is to draw to the attention of the House and particularly of the government, the fact that they have

4 p.m.

not carried out the wishes of parliament as indicated by the adoption of that resolution on March 12, 1923, in regard to giving the Hudson Bay railway priority over other transportation projects started subsequently. I ask the government to give us some reasonable assurance that steps will be taken to carry the expressed wishes of parliament into effect.

Mr. R. A. HOEY (Springfield): Mr. Speaker, I want, if I may, to congratulate the hon. member for Prince Albert (Mr. Knox) upon having again introduced a resolution dealing specifically with the Hudson Bay railway project, with due insistence upon its priority as a national undertaking. I cannot hope to add to the information already available on this subject, information which is very complete and easily accessible. It is not my desire unduly to prolong the debate, but in view of the fact that I visited Port Nelson last autumn, it occurred to me that it might be interesting and not wholly unprofitable if I were to convey to the House in a few sentences the impressions made upon my mind by what I saw and experienced in the northland.

The party of which I was a member left the Pas on the 28th of August last. We went north actuated by—shall I say?—a two-fold desire. The first was a desire to determine for ourselves the actual condition of the roadbed already constructed. There were those who contended that the road was in an excellent state of preservation, and there were others—pessimists of course—who informed us prior to our departure that the roadbed had long since disappeared into the muskegs; that only the tops of the telegraph poles were visible, and that even they were covered with snow for at least eleven months out of twelve. We wanted to determine for ourselves just what the actual conditions were. In the second place we wanted to determine, so far as amateurs could determine, what the facilities were at Port Nelson for the loading and unloading of cargoes. We decided to travel the 332 miles from the Pas to Kettle rapids by open gas car, in order that our inspection might be intimate, thorough, and satisfactory in every sense. It enabled Premier Bracken, who is a scientific agriculturist, to make soil tests on the way up and also to interview the many settlers and to inspect their gardens, in which we found vegetables and grains growing abundantly.

With respect to the condition of the road, I think I can make this statement without fear of contradiction that the first 100 miles is in my judgment in as good condition at the moment as any branch line in the Dominion of Canada over which I have travelled. The territory itself is monotonously level and prairie-like. At Herb lake, 12 miles west of mile 81, there is a village, which we visited, of about 300 people who have gone in there awaiting the completion of the road, but who in the meantime are doing all they possibly can to develop the country. From mile 100 to mile 214 the roadbed was in process of reconstruction at the time of our visit. Old ties were being replaced with new ones; rails were being straightened; gravel trains were travelling to and fro supplying ballast; so that by this time the road up to mile 214 is in splendid condition for heavy traffic. From mile 214 to mile 332, where the road crosses the Nelson river for the second time, it is not in an ideal condition, and one could hardly expect it would be. We encountered, however, only one washout. Hon. members will realize the condition of that part of the road when I tell them that we travelled over it in an open gas car at a rate of 30 miles an hour without any mishap and without any serious inconvenience.

We went from Kettle rapids to Port Nelson by canoe. One could not but be profoundly impressed by the turbulent and swift-flowing waters of the Nelson river. The Nelson river is one of the great rivers of the world; it drains more territory than any other river of which we have any knowledge anywhere, and is capable of developing three million horsepower of electrical energy. It took us exactly two days to make the trip from Kettle rapids to Flamborough Head. There we left our canoes and waited the outgoing tide that was to take us down to Port Nelson harbour itself. While at Flamborough Head we could not resist the temptation—although it was the first week in September—in view of the absence of ice and snow, to bathe in the tide water, remaining in about thirty minutes and enjoying a very refreshing swim.

Mr. GRAHAM: Only an Irishman would enjoy that.

Mr. HOEY: There were, unfortunately or fortunately, three of us, two native born Canadians and one Irishman. It is difficult for me to convey to the House the sensations that passed through me as I stood in that northern tide water. I could not help but think of the words written across the front entrance to this building:

> The wholesome sea is at her gates,
> Her gates both east and west.

Standing there I asked myself, why was this northern sea, with its stories of heroism, perhaps the most wholesome of them all—why was it overlooked, nay forgotten? And standing there I suggested to my associates that the words be changed to read something like this:

> The wholesome sea is at her gates,
> North, east and west this giant state.

That may not be good poetry, but it expressed to me on that occasion a great soul-stirring—shall I say? ennobling—truth. We drifted down from Flamborough Head to Port Nelson itself on the outgoing tide, and the first impression made upon my mind was profoundly disappointing. It is not a harbour, it is rather a roadstead. It is V-shaped, narrow to the south and wide toward the north. It is exposed to the northern storms; and I was of the opinion when I gazed upon it at first that no steamer could lie side by side at the artificial island without being seriously disturbed by the violence of the storms. The artificial island which is constructed there—at least the half-mile which is constructed—is about five hundred feet wide, and it is connected with the shore by a bridge of seventeen spans of two hundred feet each, or approximately so, with the cribwork. We walked over that and inspected the island. Then one of my associates pointed to two ships, two derelicts, the appearance and presence of which changed my opinion somewhat—one about two miles south of the artificial island, or approximately so, and the other about two miles north. Both, I understand, were beached about the year 1913, and these ships to-day are just as symmetrical, both as upright and in almost as good a state of preservation, as if they were wrecked yesterday; and I expressed the belief that if those ships had been beached, say, on the Antrim coast, or some other coast I had previously visited during my brief career, they would have been smashed into matchwood in less than three months. The fact of importance is that the violence of any storm there has long since spent itself before it reaches the harbour of Nelson at all, so that ships lying parallel with the artificial island and in harmony with the current are perfectly safe. In this connection I want to read just a brief excerpt from the evidence given by Mr. McLachlan before the Senate committee:

A ship in going from deep water to Hudson bay must weather any storms that may come during her stay at Port Nelson while tied to the wharf, but the 20 miles of relatively shallow water from deep water to the port cause the deep sea rolls or waves to be broken up, and while serious so far as small light vessels were concerned, would not affect a large vessel.

Now you may ask: What did you see at Port Nelson apart from the artificial island and the bridge? I think I could answer that question more intelligently if I were asked what did I not see? Because I saw almost everything except people; there are very few people there. I have heard during the last few days that the reason why the Minister of Agriculture did not make the complete trip on the occasion of his visit that they could not assure him there would be an audience at Port Nelson when he arrived there before which he could display his undoubted oratorical powers. They have at Port Nelson a dry dock two hundred feet long and forty-six feet wide. They have there also almost everything necessary for the maintenance of an up-to-date construction camp. They have a wireless station there which has been dismantled, but the equipment of which is in a splendid state of repair. They have six or seven sea-going tugs. They have a Mounted Police station, and I was given to understand that the complete townsite, which is rather an attractive one, is owned wholly and exclusively by the Dominion government, so that whatever may be said for or against Port Nelson no private monopoly has got a foothold there so far. The people of western Canada—I wish this were given publicity —are not asking to-day for the construction of the Hudson Bay railway. That railway is already constructed, not in part but in its entirety, from Hudson Bay junction to tide water at Port Nelson. To ask then for the construction of the Hudson Bay railway, in view of the fact that it is already constructed, would be meaningless and absurd.

Mr. MEIGHEN: Does the hon. member mean that the rails are laid all the way?

Mr. HOEY: No, I will explain that. What they are asking for is that rails and ties be placed on the ninety-two miles from Kettle rapids to the bay which part of the road is already graded. Now we did not walk on our way back the ninety-two miles from the port to Kettle rapids; the distance was too great. But we did walk five or six miles in an attempt to determine just what condition the grade was in, and we found it in almost perfect shape, some members of the party expressing the belief that it was in as good shape as during the first month of its construction. There are no more bridges to be constructed. There was one small bridge over the Limestone river, I understand, a wooden structure, which has fallen into a state of dilapidation. This would have to be repaired. But the great bridges, one over the Saskatchewan at Le Pas, one over the Nelson, at the Manitou rapids, one over the Nelson again at Kettle rapids, have all been constructed and are in a splendid state of preservation. You ask what would be my recommendation. My recommendation with respect to the Hudson Bay railway would be simply this: that the government undertake to lay the rails from Kettle rapids to the bay almost immediately. The rails for 332 miles are 80-pound rails. I think it might be possible to have those rails on the Canadian National roads which are not in operation—if there are such—removed and placed there. Surely that could be done without involving any considerable expense. You ask what would be my recommendation in respect to the harbour. I would not at the present time spend any considerable sum at Port Nelson. I would put down the ties and rails and I would say to the owners of the tramp steamers, "Here is an almost unlimited amount of cargo provided you can prove that the navigation of the straits is commercially feasible;" and I would allow the expenditures on Port Nelson to be determined by the amount of trade developed there during the next three or four or ten years. If no trade develops no expenditure will be necessary. I cannot see any reason in the world, in view of the new channel that has been discovered, why tramp steamers could not come in now and unload grain at the artificial island, provided elevators are erected there, and I understand one company has promised, and guaranteed in fact, that they are prepared to go ahead with the erection of an elevator there provided the government lays down the steel to the port itself.

Mr. MANION: Just for information, would the hon. gentleman be willing to tell us what company is willing to build the elevator there?

Mr. HOEY: Yes, the Patterson Company.

Mr. MANION: The N. M. Patterson Company of Fort William?

Mr. GRAHAM: That was stated before the deputation.

Mr. HOEY: In conversation with some of the people at Port Nelson I learned that their attitude towards us when we asked about the frozen nature of the territory was strikingly

similar to what our attitude would be if one went down to Kansas City, and were approached there by a resident of that city and asked if it would be safe for a woman to visit the city of Winnipeg in November, or if it would be too cold for her to remain in that city during that period of the year. The questions with respect to the frozen territory and the dreadful storms that attack it are so absurd that the people refuse to answer them and simply smile. They remind us of something that we are too prone to forget, and that is that all the charges directed against that north country were years ago directed against the prairie provinces. I want to read a statement which should be of considerable interest to the hon. member for Vancouver Centre (Mr. Stevens) and others who come from British Columbia. It was published in London Truth, in 1881, several years before I was born, and re-published in the Manitoba Free Press June 27, 1924. It reads:

The Canadian Dominion Bubble

The article reprinted below appeared under the above heading in the issue of London "Truth", September 1, 1881.

A careful perusal of it is recommended to the various "knockers" of the Hudson bay route resident in Montreal, Toronto, Ottawa and elsewhere—not to overlook a few right here in Winnipeg.

Forty years from now their lugubrious predictions about the northern route will read as curiously as this extract of the year 1881 from "Truth", which was then one of the most influential weeklies published in London. The article from "Truth follows:—

"The Canadian Pacific Railroad Company" has begun, I see, to launch its bonds. "A group of Montreal and New York bankers" has undertaken to "float" ten million dollars' worth of the Company's land grant bonds, and the Bank of Montreal, with its usual courage, has taken one-fourth of the entire loan. This announcement looks as if the Canadians were going to raise the necessary capital on the other side of the water, but I have a shrewd suspicion that they have no real intention of doing anything of the kind. The New Yorkers are keen enough gamblers, and reckless enough at times, I admit, and yet it is impossible to believe that they are such fools as to put their money into this mad project. I would as soon credit them with a willingness to subscribe hard cash in support of a scheme for the utilization of icebergs. The Canadian Pacific Railway will run, if it be ever finished, through a country frost-bound for seven or eight months of the year, and will connect with the eastern part of the Dominion a province which embraces about as forbidding country as any on the face of the earth. British Columbians, they say, have forced on the execution of this part of the contract under which they became incorporated with the Dominion, and believe that prosperity will come to them when the line is made. This is a delusion on their part. British Columbia is a barren, cold mountainous country, that is not worth keeping. It would never have been inhabited at all, unless by trappers of the Hudson's Bay Company, had the "gold fever" not taken a party of mining adventurers there; and ever since that fever died down the place has been going from bad to worse, Fifty railways would not galvanise it into prosperity.

Nevertheless the Canadian government has fairly launched into this project, and I have no doubt the English public will soon be asked to further it with their cash. The parade of selling bonds in New York and Montreal is the new way of doing business that "syndicates", "bankers", and loan contractors have adopted in order that it may seem that they have faith in the schemes they father. I doubt if ten million dollars of ready cash could be found in all Canada for this or any other work of utility at a pinch;—

Sir HENRY DRAYTON: Will the hon. gentleman tell us who is the author of that interesting document, whether it was the late Hon. Sir Richard Cartwright, or the late Hon. Edward Blake. It sounds so familiar.

Mr. HOEY: The article is a reprint. It appeared in London Truth September 1, 1881.

Sir HENRY DRAYTON: Who is the correspondent? How did it come there?

Mr. HOEY: It is an excerpt taken from London Truth. The name of the correspondent is not given. I am quoting it from a reprint in the Manitoba Free Press. The article continues:

—but the Canadians are not such idiots as to part with one dollar of their own if they can borrow their neighbours'. The Canadians spend money and we provide it. That has been the arrangement hitherto, and it has worked splendidly—for the Canadians—too well for them to try any other plan with a scheme like the Pacific railway, which they must know is never likely to yield a single red cent of interest on the money that may be sunk in it. A friend of mine told me—and he knew what he was talking about—that he did not believe the much-touted Manitoba settlement would hold out many years. The people who have gone there cannot stand the coldness of the winters. Men and cattle are frozen to death in numbers that would rather astonish the intending settler if he knew; and those that are not killed outright are often maimed for life by frost-bites. Its street nuisances kill the people with malaria, or drive them mad with plagues of insects; and to keep themselves alive during the long winter they have to imitate the habits of the Esquimo. Those who want to know what it is like should read the not-yet-forgotten books of Colonel Butler. His "Great Lone Land" is the land of which the Canadian Pacific Railway Company has as yet five-and-twenty million acres to sell, and it is through a death-dealing region of this kind that "The new railway is to run."

Might I add to that a statement taken from Stefansson's book, the Northward Course of Empire:

On the basis of reliable testimony which fills a hugh volume, the British committee concluded in substance that the climate of southern Manitoba and the Saskatchewan is unsuitable for colonization by average Europeans and that in such a country no people will live permanently except fur traders because they are eccentric, missionaries because they are self-sacrificing, and Indians because they do not know any better. But since then there has grown up in the country which was the very centre of all the testimony the city of Winnipeg, with its 300,000 inhabitants, the third largest city in Canada, the Chicago of the Canadian west, and growing as rapidly and substantially as any city in Canada.

In January of last year I visited the Prince Albert district, which is one of the most prosperous districts in Saskatchewan. The hon. member for Prince Albert (Mr. Knox) and myself drove by automobile from his place, which is about eight miles east of the town, into the town every day during the month of January, without any serious inconvenience, and indeed, without any inconvenience at all. Yet, what was said, indeed, what was written from the very site of Prince Albert a few years ago by Sir William Butler? He said:

> Those who, in summer or autumn visit the great prairie of the Saskatchewan can form but a faint idea of its winter fierceness and utter desolation. They are prone to paint the scene as wanting only the settler's hut, the yoke of oxen, the wagon, to become at once the paradise of the husbandman. They little know of what they speak. Should they really wish to form a true conception of life in these solitudes, let them go out towards the close of November—

November, mind you.

> —into the treeless waste; then, midst fierce storm and biting cold, and snowdrift so dense that earth and heaven seem wrapped together in indistinguishable chaos, they will witness a sight as different from their summer ideal as a mid-Atlantic mid-winter storm varies from a tranquil moonlight on the Aegean sea.

Mr. Lonsdale Green, of Chicago, writing to Stefansson, comments on Sir William Butler's report as follows:

> Butler was a good writer and the above is a good description, but there is quite a large city right at the place where the above was written and as Sir William died only eleven years ago, he lived to see it.

I look upon the completion of the Hudson Bay railroad, the laying down of ninety-two miles of steel, as the challenge of the northland, that has been misunderstood and vilified by ignorant persons, for due recognition and for an opportunity to make a contribution which it is capable of making to the cause of Canadian development and unity. I look upon the Hudson Bay railway as the challenge of those restless northern tide-waters to the restless and adventurous spirits of this country, to the resourcefulness and enterprise of the Canadian people. If the Hudson Bay railway was being launched to-day, I say frankly that I do not think I could without hesitation endorse it in view of our financial condition. But in view of the fact that this railway is four-fifths completed, why not, by the expenditure of a little more money, make the greatest experiment that has ever been attempted in the history of this country? Speaking for the people of western Canada with whom I am more or less intimately associated, I say that the people of the west are prepared to leave this project in abeyance, provided that the people of Canada are prepared to leave in abeyance or to set aside other public works for a term of, say five or six years. But the people of western Canada, in their present temper, are not prepared to leave this project in abeyance while we are spending hundreds of thousands of dollars a year on golf courses, while we are making provision for the construction of a second bridge across the St. Lawrence at the city of Montreal. The people of western Canada are not prepared to leave this project in abeyance in view of its history and the promises made, while we continue to spend millions of dollars annually on the Welland canal.

Mr. DECHENE: How many millions were voted by this parliament in the last two years to build railroads in Canada?

Mr. HOEY: I have not the figures at my disposal.

Mr. DECHENE: It is over $22,000,000, and that is more than was spent in eastern Canada for anything the hon. member might mention.

Mr. HOEY: I do not know if they would be relevant, if I did have them at my disposal.

Mr. DECHENE: It is western Canada's share.

Mr. HOEY: There are in this chamber still a few men in whom I have confidence, despite the somewhat demoralizing experiences through which we have passed during the last few days. One of the few men in whom I have still a considerable measure of faith is the Minister of Railways and Canals (Mr. Graham). He turned the first sod on the Hudson Bay railway. What could be more appropriate than that he should drive the last spike? Surely that is a consummation devoutly to be wished. I look forward to his pronouncement on this occasion with considerable confidence. Taking all the facts into consideration and in view of the small expenditure that we are demanding, I hope he will be able on this occasion to make a statement that will encourage the people who have been fighting for the completion of this railway very persistently and, I think, consistently since the work was abandoned.

Mr. W. J. WARD (Dauphin): Mr. Speaker, we are again discussing this hardy perennial, the Hudson Bay railway. I rise to make a few remarks on this subject, because I believe it is the greatest economic and fundamental issue facing western Canada. I believe further it is an issue into which the whole future of the confederation of Canada is woven. I think

it was the hon. member for Fort William and Rainy River (Mr. Manion) who referred some time ago in this House to an address delivered by the hon. member for Springfield (Mr. Hoey) in the city of Brandon. He made some reference to secession. He also referred to another gentleman who had stated that in certain sections of this country, if a plebescite were taken, it would be discovered that two-thirds of the population would vote for secession. He went on to picture what a horrible thing that would be. I wondered at the time if the hon. member for Fort William and Rainy River realized to what extent the party to which he belongs is responsible for that very condition. And I say with a great deal of regret that that is absolutely true. There are whole constituencies in western Canada where, if a plebiscite were taken to-morrow, I am convinced that sixty or seventy per cent of the people would vote for secession. That is a most serious state of affairs if we intend to perpetuate the present confederation. But in order to inform ourselves fully as to the cause, the fundamental cause, of this state of mind of the people we must go back at least to the reciprocity pact of 1911.

I believe it was the hon. member for Dufferin (Mr. Woods) who referred to a certain caucus he had attended prior to the election of 1911, wherein he told us that the Conservative party of that day had hoisted the British flag to the top of the mast. I want to say to him and to the House that this is exactly what they did not do; probably at no time in the history of the British Empire was that grand old flag of liberty trailed through the filth and mire of the Canadian political slough to a greater extent than in the election of 1911. They pulled the British flag down and wrapped it around Sir Robert Borden; and all the little Bordenites went up and down this country with that flag wrapped about them, declaring that we should have no truck or trade with the Yankees. And so they defeated reciprocity. Then coming down a little further we reach the year 1917; and I would direct this very pointedly to the attention of the ex-Prime Minister (Mr. Meighen) and his party. They again are very largely responsible for the economic condition which prevails in western Canada as a result of the cessation of the work on the Hudson Bay railway when it was almost completed. Furthermore, I venture to say that not one quarter of one per cent of the people of eastern Canada knew that the work on the Hudson Bay railway had been carried to the stage it had reached; nor do they know, that all the material was on the ground for its completion, at the time that work was stopped and that the grade had all been built. Those men who now appear to be so solicitous of the economic welfare of Canada—we find them in the cities along the St. Lawrence and around the Great Lakes—were the men who sold the government the material that went into the Hudson Bay railway. They were quite satisfied that the project was all right so long as they were getting orders from the government; but the very day that they had sold the government the last contract, then the project was no longer feasible and the work ceased on the road. I am convinced of the truth of this.

I think the late government owes an explanation to the people of the country why work was stopped on the Hudson Bay railway in 1917. I think the western members at that time, I care not to what party they belong, whether to the Progressive party, the Liberal party or the Conservative party, all acquiesced, and therefore they all owe an explanation to the people of western Canada for allowing the work to be stopped. If one is curious enough to examine Hansard of 1921 he will find a discussion on the Hudson Bay railway, in which the government explained how lack of money and inability to obtain supplies and labour were responsible for discontinuing the work, sandwiched in between two sections of a debate on the Canadian merchant marine, on a vote of $8,000,000 for the building of vessels on which $64,000,000 had already been expended, most of it subsequent to the war. These vessels were built at a cost of $194 per ton, patently an impossible price if the ships were expected to earn dividends; and the defence of the expenditure, which was boldly made on the floor of the House, was that this outlay was necessary to cope with unemployment in and about Montreal. The government's remedy of strict economy was apparently designed purely for local application; and certainly the west got a good stiff dose of it.

I wonder sometimes if eastern members and easterners generally appreciate the extent to which the solvency of western Canada is dependent to-day upon the completion of the Husdon Bay railway. One of the largest business men in the city of Winnipeg, a man who has been in business in Winnipeg for thirty years and who is rated in Bradstreets at over $3,000,000, said to me only a short time ago, "Ward, in my business it is no longer a question of prosperity or of making dividends; it is a question of its solvency. And unless you complete the Hudson Bay

railway within a very reasonable time I fear the effect of present conditions on my business.', I believe that can truthfully be said of two-thirds of the business men of western Canada.

Now, all we ask is a fair show; we are not asking for any special privilege. I have here a statement which I have prepared and which I think probably will be of interest to the House as well as to eastern Canada. In it I have attempted to show that not one dollar of the cost of the Hudson Bay railway has been assessed against the people of eastern Canada; nor will it be necessary to assess one dollar for its completion. I think this outstanding fact is lost sight of by the jealous champions of "economy." who are anxious to see the whole scheme relegated to the limbo of past and forgotten undertakings, that as far back as 1882 the Land Act provided that the cost of the Hudson Bay railway should be defrayed by grants of public land in the northwest, and that in 1908 when the government had decided to build the railway to the bay the Dominion Lands Act was amended by Hon. Mr. Oliver, with the consent of parliament, to provide that the cost of the undertaking should be met by proceeds from the sale of pre-emptions and purchased homesteads in certain western areas particularly interested in the completion of the route. And while it is true that the amendments to the act did not specifically provide the earmarkings of the fund for this purpose, yet Mr. Oliver made it plain that the object was to create a new source of revenue which would not add anything to the eastern burden of taxation, nor constitute any additional drain on the treasury. Mr. Oliver, speaking in the House of Commons on June 23, 1908, said, as reported in Hansard at page 11,152:

> There is I believe sufficient to achieve the purpose we have in view and not sufficient to warrant the anticipation of injury which seemed to lie heavy on the minds of some of our friends this time last year. At the same time we propose to relieve the mortgage, so to speak, which to-day lies against the 6,500,000 acres of land of the northwest in respect of the Hudson Bay railway. As long as that provision remains in the statute books, it is a notice by parliament to the world that, in the estimation of parliament, it is a proper policy to grant 6,500,000 acres of land in order to construct a railway from the Saskatchewan to the Hudson bay. That is not in accord with the policy of this government nor is it in accord with its administration, but by passing this bill, we relieve ourselves of any claims, past or present or future, against that 6,500,000 acres. The difference between the proposal in this bill and the provision in the Lands Act is this:
>
> That if the provisions of the Lands Act regarding a grant to the Hudson Bay railway were implemented under the practice that formerly prevailed, whatever company should build that road would have the right to select 6,500,000 acres wherever they might see fit throughout the Northwest Territories and upon the completion of the road this land would become their absolute property, to be held by them until they could secure such prices as they might see fit to exact.
>
> It was under this policy that 32,000,000 acres which have been alienated were held and a large part of it is being held to-day, a burden which has to be carried by the settlers of the west—

I hope the House will notice this:

> —who will ultimately have to buy the land and dig the price out of it by their toil, enterprise and saving. Instead of taking that course we propose to allow the purchase by actual settlers, on settlement conditions of, say, 5,000,000 acres of land, realizing thereby out of a fixed and moderate price per acre sufficient money to meet the requirements of the government in respect of the Hudson Bay railway. Under the system that prevails of land grants to railways which we are displacing by this bill, the enhancement in values by reason of the settlement and improvement of the country enures to the benefit of the settlers. This is radically different to the Lands Act as it stands. There is no money which a settler who builds up a home on the prairie can make out of his land which he does not earn, and who, I ask, is better entitled to the enhanced value of the land by reason of settlement than the man whose settlement gave enhanced value? It is because the settler will have the benefit of the enhancement in value of the land that I ask the approval of the House to this bill.

The House did approve the bill, Mr. R. L. Borden, then leader of the opposition, however, remarking:

> And, if not an acre of land is sold in ten years, I trust, and am led to believe, the Hudson Bay railway project will still go on in the meantime and without delay.

It is to be noted, Mr. Speaker, that the proposal of Mr. Oliver made it necessary for actual homesteaders or bona fide settlers to provide the revenue required for the project. Homesteaders in the area through which the railway would run could pre-empt an extra 160 acres of land for $3 an acre; in other words, those who contributed to the fund were those most directly interested in the Hudson Bay railway enterprise. Mr. Oliver estimated the cost of the 500 miles of road at, roughly, $15,000,000, and in this he made a wonderfully accurate calculation, for we find on examination of the records that a little over $14,000,000 has already been expended, and according to the evidence given by Deputy Minister Bell—and I hope the House will get this very clearly—in 1919 $1,000,000 would have completed the road. I think it is an awful indictment, an indictment that will stand against the government of that day for all time to come, that they did not go ahead at that time and complete the road. It will be seen that the proceeds from the sale of these lands amounted to about $28,000,000, or sufficient, even at this date, to complete the road and put the whole enterprise in first class shape, and in addition provide for the construction of some grain elevators.

I am tempted at this point, Mr. Speaker, to remind the House how much more careful and accurate was Mr. Oliver in his estimate than were some of his predecessors. In 1895, and again in the general election of 1896, Sir Wilfrid Laurier and his colleagues stumped Ontario in the interests of the National Transcontinental railway, informing the people that that enterprise would cost not more than $13,000,000. Years later, when the people of Canada were compelled to take over this same railway, which in the meantime had passed from political propaganda into an actual railway, it cost them the great sum of $357,000,000.

Under the act of 1908 the following sales of pre-emptions and purchased homesteads were made—and here is proof of what we have always contended, that there has never been any assessment whatever upon eastern Canada for the construction of this railway:

Saskatchewan:	Acres		Acres
Pre-emptions.. ..	4,371,200	Homesteads.. ..	776,320
Alberta:			
Pre-emptions.. ..	2,573,600	Homesteads.. ..	329,600

In other words, a total of 8,050,720 acres of land was dealt with. It would be found by anyone who cares to look up the records that a great deal more land than the actual amount set apart by Mr. Oliver was sold. He valued the pre-empted lands at $15,290,059, and the homestead lands at $3,269,102; but as a matter of fact, as I say, they sold a great deal more than that. On the basis of Mr. Oliver's estimate the pre-emptions alone would have amounted to $20,834,000, or a little more than has been expended on the railway and harbour up to date.

Mr. McMASTER: The hon. member has cited a most illuminating epistle in the course of his interesting observations, but I do not know whether he gave the author.

Mr. WARD: I was quoting from a speech delivered by Hon. Frank Oliver. At the time he presented his bill to the House he was Minister of the Interior in the Laurier government.

Mr. GRAHAM: That was a good government.

Mr. FORKE: They have been living on their reputation ever since.

Mr. WARD: Now, Sir, the hon. member for Springfield (Mr. Hoey) referred to the possibilities of the two ports. I think I told the House last session that I had visited Port Nelson myself, and while perfectly ignorant of what is required to constitute a harbour, yet I do claim to have some horse sense. On that occasion we could see no particular obstacle in the way of making Port Nelson a safe harbour. In my own constituency there is a little lake twenty to twenty-five miles long by ten miles wide, and almost every day in the summer you will observe a much heavier sea there than any that prevailed in the harbour during the week we were at Port Nelson. I would say that at no time would a large canoe not have been quite safe in the harbour during that period, and that it was probably the most dangerous of the year, from the 17th to the 23rd of September.

A criticism that has recently been directed against the Hudson Bay project is that the grain movement of western Canada would not coincide with the period of safe navigation of the Hudson strait. That probably is to a certain degree true, but not any more so than it is true in respect to the period of navigation of the Great Lakes. For example, there were only 48,000,000 buhels of grain shipped from the head of the lakes last year before the close of navigation. I would say that, roughly speaking, the export of grain from western Canada that will have to pass through the ports of Fort William and Port Arthur will probably be 200,000,000 or 250,000,000 bushels. So it will be seen that as it is, only a very small percentage of the grain passes out through those ports before navigation closes. It has been estimated by shipping experts that if a farmer living in the district of Saskatoon were to bill two cars of grain, on the same date to Liverpool, one via Hudson bay and the other via Montreal, the car billed via Port Nelson might very well be in Europe—in Liverpool, if you like—ground into flour and baked into bread before the other car had reached Montreal. It takes an average of one month between the time a car of grain is billed at the local elevator and the time it is discharged from an elevator in Montreal to an ocean-going liner, and it is estimated that grain can be delivered in any port in Europe via Hudson bay in less than a month from the time it is shipped out. It would be of infinite value to western Canada if we could deliver our grain on the European market two weeks earlier than we are doing at present. I have been told by some of the older millers of Canada that the mills all over the world are short of Canadian hard wheat from April right through until our hard wheat starts moving to the market. The reason why there is a premium on Canadian hard wheat at that period of the year, is because of the competition for the securing of that hard wheat to mix with the softer wheats

that are obtained from the more southern countries during the winter months. So that if the Hudson bay route will give us an advantage of two weeks; if we can deliver our grain in the markets of the world two weeks earlier via that route than we can via Montreal, that is a benefit which would be incalculable.

My own impression after having visited the bay is that the opinion held by many men that the route would not be safe for navigation for more than three months in the year is entirely preposterous. I was at Port Nelson about the 20th of September. The hon. member for Springfield (Mr. Hoey) has told the House what the weather was like when he was there. I do not remember what he said the date was, but when I was there the weather was just as warm, I am sure, as it would be on the Niagara peninsula at that time of the year. During our entire trip, which extended into October, I kept a record of the mean temperature, and when I got back home and summed it all up I was amazed to find that it averaged, day and night, 55 degrees farenheit. I venture to say that it is doubtful whether in any other part of Canada the temperature at that time of the year would be as high as it was on the shore of Hudson bay. I cannot believe for a minute that with the weather such as it was at Port Nelson, there would be huge ice floes and so on 400 miles up the bay, or at Hudson straits, and that the whole thing might be frozen up. Nor do I think that the Almighty placed a great inland sea in the heart of the American continent without a purpose, and I believe that purpose was to serve the great western country.

Only a few days ago I had an interview with the chief of the Geological Survey here in Ottawa and I asked him what he knew about the iron ore of the Belcher islands. The Survey branch have sent men to those islands to study the quantity, quality and
5 p.m. value of that iron ore, and he tells me that it is by all odds the most extensive and valuable deposit in Canada. The ore averages about 45 per cent high grade iron, which is as high as anything else we have in Canada. In extent we have nothing else to compare with it.

Now, Mr. Speaker, I could go on for another hour in dealing with this matter, but surely enough has been said. We have shown that the Hudson Bay railway has not cost eastern Canada one red cent. It is purely a western project, But while it is a western project, I claim that it is also a national project. We have frequently been asked why western Canada did not build the Hudson Bay railway itself and not be calling upon the federal parliament to deal with the matter. Well, in reply to that I would say that when the west is given a reasonable deal in connection with the control of her natural resources; when British Columbia assumes the responsibility of the development and maintenance of Vancouver harbour; when Prince Rupert harbour and dry docks are maintained by the province of British Columbia, and when Ontario does likewise for the port of Toronto and also takes over all liabilities in connection with the Welland canal and the Trent canal; when the province of Quebec charges itself with the task of maintaining and developing the St. Lawrence route, the port of Montreal, and a score of other national undertakings in that province; when it is agreed that the Canadian cost of developing the St. Lawrence waterways from Montreal to Toronto is to be met by the provinces of Ontario and Quebec; when these things are done it will be high time for eastern Canada to expect the west to develop that great national undertaking, the Hudson bay route. But I venture to say that none of these things will be done. The west is paying more than her fair share of the development of these enterprises, and for that reason the east is not likely to adopt any other policy than the present one.

I have mentioned in this connection the Welland ship canal, and I wish to make just a reference to that undertaking. I stated a year ago, Mr. Speaker, and I want to repeat it now, that neither the Minister of Railways (Mr. Graham) nor anyone else in Canada can prove—and I challenge them to do so—that the Welland ship canal is worth fifteen cents to the public of this country. The Welland ship canal will never reduce the carrying charges of grain by one-thirtieth of one per cent,—and I want this to be on record. Nor will it ever reduce the carrying charges of goods into western Canada. The Welland ship canal will benefit no one except the lake carrying companies, and probably the cities of Toronto, Port Arthur and Fort William Immediately the Welland ship canal is completed, if it is of any value, what will we find? We will have the Port Colborne elevators scrapped; they will become a pile of concrete. We will have the members from Toronto down here demanding another $20,000,000 for the building of grain elevators at Toronto, and we will go on paying exactly the same that we are paying to-day in carrying charges. I was astonished when I saw in the estimates this year another $15,000,000 for what to me

is a most unjustifiable expenditure. The only other expenditure made during the last thirty years in Canada that compares with it at all, to my mind, is the expenditure on the government merchant marine. The minister might very well have foregone the expenditure on the Welland ship canal for this year and spent a little of this money on the Hudson Bay railway. Of course, that may be his intention in any case.

The government is being urged to inaugurate an aggressive immigration policy. With this I am largely in agreement, as I believe the future of this country depends in a very large degree upon our ability to attract, retain and maintain settlers in this country. But that can only be done, Sir, by the adoption of policies that will make it reasonably possible for people to succeed when they come here. The one great stride that could be made in that direction would be to complete the Hudson bay route at once and thus with one stroke reduce the cost of living in the three prairie provinces by anywhere from $100,000,000 to $200,000,000. The Minister of National Defence (Mr. Macdonald) smiles. I may tell him that I delivered an address at a certain town in Saskatchewan a year ago during the course of which I made that same statement. Shortly afterwards I received a letter from the Toronto Saturday Night stating that a reporter who had been at the meeting had reported me as having made that statement, and it appeared to them so preposterous that the editor hesitated to publish it without first communicating with me.

I took the Canada Year Book, and in reply gave figures absolutely proving my statement. I worked out a rather comprehensive statement showing that $175,000,000 per year is being lost through the non-completion of the road and sent it to the Toronto Saturday Night and requested them to publish it but, of course, needless to say, they never did publish it. It can be proven absolutely that western Canada has been losing for many years a sum ranging anywhere from one hundred to two hundred millions of dollars through the non-completion of the Hudson Bay railway. Take the grain trade alone, and it costs western Canada on the average $82,000,000 per year—or has done since 1920—to transport our grain crop from the head of the lakes to tide water, to say nothing about all the other exports and imports from or into western Canada. And it must also be remembered that the head of the lakes is one hundred and thirty miles farther from the average railway station in western Canada than is Port Nelson. So upon the basis of the present railway freight rates you could add another $15,000,000 to the figures mentioned, which brings the cost of transporting our grain from the head of the lakes to tide water, to practically $100,000,000. That charge would undoubtedly be saved if the grain was carried out via Hudson bay. I do not contend for one minute, I am not so foolish as to entertain the view, that we could in one year, or ten years, or probably in twenty years, develop the Hudson bay route to the extent that would enable this large percentage of our grain to be carried out by the Hudson bay route. But that route would certainly be a leveller in the matter of rates and it would remove the need for some magna charta such as the Crowsnest pass rates in the west. Western Canada can never relinquish its claim and its hold upon the Crowsnest rates, it matters not what the consequences may be without some proper equivalent. Out there we are marooned in the heart of a great continent, fifteen hundred to two thousand miles from tide water. We have not the advantages of water competition such as you have in eastern Canada, and there is no limit to which western Canada will not go to retain the Crowsnest pass rates —at least until we get the Hudson bay route in operation and it has proven a success. The opening of this great national route to the north would bring the average settler of western Canada anywhere from one thousand to twelve hundred miles closer to the markets of the world; and it would remedy the situation which the government is now facing of establishing a new freight rate structure such as will be acceptable to western Canada and all parts of the country.

We hear a great deal about the feasibility of the route, and in that connection some very extravagant statements have been made. I think the Minister of Railways himself made the statement last year that it would cost approximately $20,000,000 to complete the road. I am very largely in agreement with the views of the late W. A. Bowden, chief engineer of the Department of Railways and Canals, who, when giving evidence before the Senate committee, said:

> The feasibility of the route might well be determined by the operation for a few years of vessels by the government. I think twelve vessels; six to be owned by the government which might have 50 per cent extra for ice strengthening, and six ordinary tramp steamers would be chartered. This would be the basis on the experiment.

In my opinion that would be a very excellent experiment to make. I would be entirely opposed however, to any huge ex-

penditure upon the road until its feasibility has been absolutely determined. Personally, I cannot think for one moment that there is anything wrong with that route. I know a man very well—have known him for some twenty years—who spent twelve years in the employ of the Hudson's Bay Company as a mariner on one of their boats. He stated to me most emphatically, and he is a man in whose integrity I have every confidence, that he traversed Hudson straits for nine months of a given year in an old sailing boat, and that there is no reason in the world, if proper aids to navigation are provided, why the straits cannot be navigated the whole year round. In fact, he said, there is no difficulty whatever in that particular district. The only difficulty exists at the mouth, or at the east end, of the straits where the icebergs coming down from the coast of Baffin-Land may at times impede navigation. But he claims there is no particular danger in the navigation of those waters, in fact he maintains there is much greater danger off the straits of Belle Isle and the straits of Northumberland for shipping passing between the Atlantic coast and Europe—that the dangers are very much greater in these waters, than in the case of a vessel going by Hudson strait.

I do not think I will weary the House much longer except to make a reference to the Prime Minister's trip through the west last year. If I remember aright, speaking in the city of Saskatoon—and let it be remembered that the district of Saskatoon is right at the mouth, as it were, of the opening to Hudson bay; a district where the people are one hundred per cent in favour of this project—the Prime Minister said that while he favoured the road he could not promise that it would be carried on until the finances of the country could stand the expenditure. Well, I have studied the records and I find out of last year's estimates $41,000,000 was for works that were not as necessary, or could not be classed in the same category at all, as the Hudson Bay railway. Imagine the Prime Minister therefore going up into the district of Saskatoon, or other points in western Canada, and talking that way after parliament had voted between five and six millions of dollars to build a municipal bridge across the St. Lawrence at Montreal, a bridge for which parliament had no more right to vote money than it had for a bridge across the Red river at Winnipeg. But the supporters of that project said "Oh, but we will pay the interest". If it were merely a question of paying interest I would be perfectly justified in asking for the construction of a bridge in my own constituency. Neither was there any justification, in comparison with the needs of the Hudson Bay route, of parliament undertaking an expenditure of twenty or thirty millions—of which $7,000,000 was voted last year—for the construction of a viaduct in the city of Toronto; nor for the votes of millions of dollars on the Welland canal last year, nor for the large appropriations voted at the same time for the ports of Montreal, Quebec, Halifax, Vancouver and Prince Rupert. I venture to say that, notwithstanding the large expenditure for these projects none of them can be regarded as at all in the same category as the Hudson Bay railway.

Mr. CAHILL: If the government does not undertake the development of the ports of the country how would those ports be developed to the extent necessary to take care of the shipment of grain or cattle from western Canada, or the rest of the import or export trade? If the government did not provide for this expenditure who would undertake the work?

Mr. WARD: I am not complaining of the development of the ports in question. But what I do say is that these works are not so necessary or so pressing as the Hudson Bay railway which stands in a class by itself. As to the need of the latter enterprise I can take my hon. friend to my own district where eighty-six families left one section, a section of about eight miles square, last year owing to the lack of needed transportation facilities. We hear hon. gentlemen to my right talking about the troubles that our Canadian manufacturers are having, and how they are becoming insolvent and that sort of thing. They do not know what they are talking about. Premier Bracken made the statement a little less than a year ago that he believed 90 per cent of the farmers of Manitoba were hopelessly insolvent, and I do not think he is far out. When you consider that it costs an average of 63 per cent of the value of production in western Canada to ship to tidewater, you will understand why they are insolvent. That is what is the matter with the manufacturing and the mercantile business at the present time. The farmer has no purchasing power. He cannot pay out 63 per cent of the value of this product and have any money left to purchase material.

I would like to make a final reference to the Minister of Agriculture (Mr. Motherwell) and to that famous speech on the budget that he delivered the other day. I would call it a herring speech. I visited the market the next day after he had spoken, I wanted to

buy some fish. I went to a fish vendor and he had nothing but suckers, and he wanted fifteen cents a pound for them. I complained about the price, and he said, "Yes, it is high, but the Minister of Agriculture has cornered all the red herring and it affects the price all along the line". I am not in agreement with some hon. members who have spoken before me in congratulating the minister on his conversion to the Hudson Bay project. I am quite sure that if the electors of the constituency of Regina had known that the minister was not a convert to the Hudson Bay railway and to the port of Nelson proposition he would not be occupying a seat in this House to-day, and I venture to say that unless he is a convert to the Hudson bay route and the port of Nelson he will not occupy a seat in the next parliament. I am not given to prophesying, but I think that is a prophecy very easily made. I hope we will not go away from this parliament disappointed this year. In common with the hon. member for Springfield (Mr. Hoey), I have a very great regard for the Minister of Railways (Mr. Graham), and I believe he is absolutely sincere when he tells us that he is desirous of seeing the road completed. I believe he would like to see it completed and I think he would like to drive the last spike in the road himself, and would like to drive it this year. If he has the interests of confederation at heart, and if the Prime Minister (Mr. Mackenzie King) has the interests of confederation at heart and wishes to see it continued, I would suggest to him that he also be a convert to the immediate completion of the road. I hope that we will have the pleasure of seeing a very substantial estimate in the supplementaries for the Hudson Bay railway this year.

Mr. W. J. LOVIE (Macdonald): In the second week of January, 1925, at the annual banquet of the Shorthorn Breeders' Convention in the city of Brandon, in the after-dinner speeches, the ball was set rolling by Dean McKillican of the Manitoba Agricultural College, and the line of the shorthorn dairy cattle breeding was taken up, and following that line there was a discussion as to the export of cattle to the British market. Naturally the question came up as to how the expensive rail haul between the prairie provinces and Montreal could be eliminated, and along with that the depreciation in weight of live stock when carried on the railways, which was very great. No one seemed to be able to answer the question until it came to my turn, and I was pretty nearly the last speaker. Present at the meeting were Mr. Atcheson, representing the Canadian Pacific Railway, and Mr. Watson representing the Canadian National, and when I mentioned the feasibility of the Hudson Bay railway as a means of transporting cattle to the ocean ports with about five or six hundred miles of rail haul, the gentlemen from the railways deprecated the proposition, threw cold water on it, and said that the Hudson bay was ice-bound and consequently would not be feasible for such a purpose. But the men who were raising the cattle—and there was a large number of them at the banquet—immediately started to cheer; that is what they had been waiting for, and that is what they are waiting for to-day. If the stock raising interests of western Canada are ever going to amount to anything some means must be found of eliminating the long rail haul between the stockyards in St. Boniface and tidewater, and the shortest route for the transportation of cattle is by a railway to Hudson bay. It is a well known fact that cattle lose weight rapidly when carried on the railways, but when they are transported in vessels on the ocean they are just as apt to gain weight as to lose it. They will certainly hold their own. We want to develop the British market, just as we want to develop all available markets, so that Great Britain will take an unlimited quantity of high class cattle. They do not want anything else but high class cattle, and Canadians have not yet been educated along the line of raising a class of cattle fit for export. The American market will take all the cattle of inferior grades at a price. If we raised high class cattle we would certainly be able to find a market for them.

In reference to the statement that Hudson bay is ice-bound, I might say after listening to the debates which have been held in this House, I am convinced that such is not the case. I quote now from Hansard of June 29, 1923, and I find the following opinion expressed:

> As far as I can see it with the icebound bay—

That is in reference to Hudson bay. And now in contradiction of that let me quote here, a speech by John A. Campbell, Commissioner of Northern Manitoba, a man who has travelled all over the country and who knows. He says:

> Hudson Bay
>
> This is a vast inland sea; a body of salt water eight hundred miles long by five hundred miles wide. It does not freeze over.

I have here, reproduced from the Manitoba Free Press of June 14, 1924, a photograph taken of Port Nelson on January 24, 1919—midwinter. It shows open water in the bay on that date. So that must certainly dispel the idea that Hudson bay is a frozen body

of water. It is a vast inland sea eight hundred miles long and five hundred miles wide.

Mr. Campbell stated further:

> The water is deep, and there are no obstructing rocks or islands and practically no icebergs to interfere with navigation. There are no special obstacles to be overcome by navigators, and all reports go to show that this immense body of water can be as readily and easily navigated as almost any other.

The hon. member for Springfield (Mr. Hoey) in his address this afternoon, mentioned the fact that people were apt to form erroneous opinions of western Canada, and that brought to my mind an incident that happened to myself personally about twenty-two years ago on board ship on the Atlantic when I was accosted by a gentleman whose home was in the city of Milwaukee. He said, "I hear you come from Manitoba?" I said "Yes." He said, "I would like to find out what the country is like. I have some friends who are talking of going to that country. Is it possible for a woman to live there and is the climate such that people can live there during the winter?" I said: "I have been twenty years in Manitoba and I have a wife and my two eldest youngsters with me. I will let you see them so that you can see whether they can live through the winter." He confessed that he was very much surprised. He had heard that the country was not fit for white people to live in. Some people have the same idea regarding the Hudson bay country. When the Hudson Bay railway is completed to tidewater, the hardy British sailors are going to bring their steamers in there and take out cargoes of grain. They are going to prove that that port was placed by the Almighty in the heart of the American continent, not for nothing, but to be the gateway of the great granary of the empire, and also for the grain of North and South Dakota and probably the eastern half of Montana. That is the nearest point to seaboard they can have.

As regards shipping wheat from there, we must always remember that there is no part of the country where wheat is grown as a commercial proposition that is further from the seaboard than the prairie provinces are from the Atlantic seaboard. That makes it harder for the people of the prairie provinces to produce wheat at a profit. We are looking forward to the utilization of the port of Nelson as the means of having our grain reach the seaboard with as short a rail haul as possible.

Mr. C. WALLACE STEWART (Humboldt): Mr. Speaker, this is the fourth time that I have risen in this House to speak on this subject, and I do not propose at this time to repeat the arguments that I have presented in the sessions immediately preceding. I along with my colleagues here have attempted to place before the members of this House almost innumerable arguments why this project should be taken up and proceeded with in its proper order. I recall that I have myself attempted to point out the advantages of this road and particularly its directness to the European market. The hon. member for Macdonald (Mr. Lovie) has just pointed out its advantage to the stock raiser and grain grower. Last year, I think it was, I placed on Hansard certain figures which, on later consideration, I found to be very conservative as to the quantity of grain that was immediately tributary to the line leading in the direction of and almost to Hudson bay. I have also placed on Hansard reports of various men whose opinions are worth while and deserving of consideration as to the feasibility of this route. I do not think there are many arguments that have not been canvassed and presented.

I want, however, at this time to call the attention of the House again to the very moderate language of the resolution which we are debating this afternoon. The hon. member for Prince Albert (Mr. Knox) is asking the House simply to reaffirm a decision which it made some two years ago when it was decided that the Hudson Bay railway should be proceeded with in the proper sequence of public works that are under way. All that we are asking, at the present time is that the House should decide that this work of great national importance should be proceeded with in its proper sequence. I agree heartily with the statement made by the hon. member for Springfield (Mr. Hoey) as to what would be proper and acceptable in the way of furthering this scheme. The people of western Canada are demanding in no uncertain tones, that it must be proceeded with, but it is unnecessary, I think, for me to say that the people of western Canada are not unreasonable, that they realize that neither this government nor any other government can or should expend huge amounts of public money at one time, and that time the present. But they demand that this work shall be continued, and that a reasonable share—may I so put it—of the money that is expended on public works should be expended on that project which is dear to them and which is apparently, in their estimation, going to be of great value to them. If the laying of the steel on the grade that is already there were continued, no complaint, no grumbling would come from the people of western Can-

ada as to a lack of money being spent on the port.

The development of our ports, as has already been pointed out, is an expensive matter, and a matter that, not only because of the expense but because of the use of our ports, is pre-eminently a national affair. It is not something that can be done in a day. It is very easy for us, viewing the ports of our country and the state of comparative completeness to which some of them have attained, to say that they are entirely satisfactory, and then, pointing to a port such as Nelson which, in the barrenness and openness of the very beginning of the work, there, does not compare very favourably with a port such as Montreal, or Halifax or Vancouver, to say that it is altogether impossible that the port of Nelson should ever compare with those ports. But any person who would make such a statement is not giving due consideration to the history of the ports of this country.

I want for a few moments this afternoon to direct the attention of the House to the development of one of our great water routes which has at least two very important ports upon it. That is the St. Lawrence route with the ports of Quebec and Montreal served by it. I do not want anything that I may say to be taken as casting any reflection upon the wisdom of the expenditure, nor to make any statement as to the amount that was spent having been too great. I point out simply that it cost many millions of dollars and it took may years to develop that route to the comparatively perfect stage in which we find it to-day. That route was used, I suppose, nearly three hundred years ago as a route for commerce, and because for the life-time of this generation it has been looked upon as a safe route, we have, I think, as Canadians, almost forgotten that at one time the St. Lawrence river route was not considered a safe highway for the larger boats of commerce and that it was never expected it would develop into a highway for the trading vessels of the world. For two hundred years that route was used by the smaller vessels and used even by them with great danger and loss. During those very same years the Hudson Bay route was in use with less loss than the St. Lawrence route. At the time of confederation no great sums of money had been expended in developing the St. Lawrence waterway up to the port of Montreal. It was considered a highly perilous highway for large vessels to take, and reports that were made to parliament shortly after confederation bore out that statement. I have a few notes as to some of the figures that were given. The report I have in my hand is one made to the Minister of Navigation in the year 1867 by the Quebec Board of Trade, and I want to quote just a few words from that report:

> The most urgent and important requirement is the removal of the lighthouse (with its miserable light) from the centre of Red island, and the substitution of a lightship at the east end of the Red islaad reef, with a steam whistle for thick weather. The report upon the wreck of the Ellen in 1866 (when the whole crew perished) will show that at present the reef extends fully two and one-half miles southeast of the lighthouse and that in foggy weather a ship is ashore before the island light can be seen. During the present season—

That is 1867.

> —no less than five ships have struck upon this island.

The report goes on to demand another lightship, declaring that there was sufficient proof of the necessity for it. This proof, it says, is to be found in the fact that in 1864 four vessels were lost at that particular point. In the year 1869 a total of 600 vessels used the ports of Quebec and Montreal and of these twenty-six were wrecked either on the inward voyage or on the outward course. Compare that with the figures in relation to Hudson bay. The Hudson's Bay Company made use of the bay as well as of Port Nelson for a matter of some two hundred years, and in that two hundred years, with 750 sailings, only two vessels were lost. A judicious expenditure of money over a considerable number of years has brought the St. Lawrence route up to a state of development in which we no longer consider it dangerous. As a matter of fact, I do not recall having heard of a vessel being wrecked on that route, in quite a number of years, from any other cause than collision. All the dangers have been removed and the route has been developed to a state of perfection by the expenditure of very considerable sums of money which, if they were totalled up to the present time, including the cost of maintenance from year to year, would be far in excess of $100,000,000. The capital expenditure alone is now something over $90,000,000 over that 200 miles. Perhaps hon. gentlemen may think this comparison has little to do with the route into Port Nelson, but I hold that it has. It has been by means of modern navigation aids that the St. Lawrence has been made a safe highway for the largest vessels that travel the Atlantic ocean, and the same aid applied to Hudson bay would place it in a fairly favourable position to compete with the St. Lawrence route.

It has been brought to our attention at various times, and recently by the Minister of Agriculture (Mr. Motherwell), that there

are certain mud flats at the mouth of the Nelson river and that it will probably be a quite expensive matter to make a thoroughly satisfactory channel through those mud flats to the open bay. But I think that if we accept that statement seriously we are overlooking the fact that there is through these mud flats at the present time a channel which gives a sufficient draught of water for ordinary sized vessels; in fact, it gives the same draught of water to-day as there was on the St. Lawrence for fifteen years after confederation.

Mr. McMASTER: What is the depth of water in the channel?

Mr. STEWART (Humboldt): About seventeen feet; no, an hon. member corrects me and says it is nineteen. And I believe that is correct. But that of course is at low tide; the tide at that point would add another four or five feet. On the St. Lawrence route to-day there is a draught of thirty feet, but we must not forget that this has been made possible by considerable dredging in lake St. Peter; and it has cost in that particular area alone, I am told, something like $15,000,000 to achieve this result. Nor was this condition brought about without many disappointments; it was only after many starts had been made and the work had been abandoned and resumed that the route as it is to-day became possible. Now there is a highway through the flats of that lake 450 feet in width and thirty feet deep, all the result of work done during the last fifty years.

If, as has been suggested this afternoon, the present government would undertake to lay the steel on the graded roadway to the port of Nelson and make even sufficient provision there for tramp steamers to find their way in, I for one, having advocated or pleaded, if you like, for the completion of the route, would consider that a satisfactory step to begin with, and I should be willing to leave it to possible developments, in the way of navigation and in the traffic that would be available, to prove whether the port were worthy of further consideration and whether, in the case of that port as with other ports that we have developed, we should continue steadily to expend money to improve it and make it safer and more convenient than it is at the present time.

I contend that we need to-day men who have something of a forward vision. Too many of us are looking back over the past; we see what has been accomplished and when we contemplate the things that lie ahead of us awaiting development we are fearful. Had the men who undertook to develop the port of Montreal or the port of Quebec, or for that matter any great port in Canada, looked at the matter with the fear and trembling which some hon. gentlemen profess to have in regard to the port of Nelson, we should have had no Maritime connections at the present time; we should have been isolated. We want forward-looking statesmen who are willing to take a chance on the future just as our forefathers took chances on a country which was held up to them as rocky and ice-bound but which they made productive, a country which is now clamouring for greater outlets than it has.

Mr. ANDREW McMASTER (Brome): I feel I am going to introduce a jarring note into these paeans of praise in favour of the continuation and the finishing of the Hudson Bay railway. What I should like to impress on members of the House, if I could do so, is a feeling of responsibility in regard to the financial condition in which this country finds itself. The last speaker, Mr. Stewart (Humboldt), with his glowing periods of appeal to us to look forward and to take broad views and be hopeful, really needs some corrective, and I propose in all humility and modesty to apply that corrective in the few brief minutes that remain before six o'clock.

One thing I want to know about the Hudson bay route, before we spend more money on it, is this: How many months of open navigation have they there year by year? How many months of open navigation have they, not in the bay itself, which is open the year round, but in the body of water leading into the bay known as Hudson strait? How many months is the strait safe for navigation? I should be glad to think that this was a good route: I have never in this House shown myself either parochial or provincial. There are some who think that those who come from Montreal are against this route because they come from Montreal. I am not really affected by that supposition in any shape or manner; but I want to know how many months of open, safe navigation there are through Hudson strait. I am told that it is not open for more than six weeks or at most three months. If that is true, is it wise—

Mr. CAMPBELL: Who told you that?

Mr. McMASTER: I have been told that by every person with whom I have discussed this question and who is familiar with the situation. One of my informants is a man who comes from Prince Edward Island—in itself a recommendation for respectability and

truthfulness. He took a ship up to Hudson bay. He let me examine the ship's log. He started from Halifax some time in early July. and it took him one whole month getting through the ice in the straits.

Mr. KNOX: Was he not taking a dredge that was not supposed to be a seagoing ship at all?

Mr. McMASTER: No, he was taking one of the government steamers, and he had on board lighting appliances to be set up in different portions of the straits. He was running a perfectly well-found steamer.

Mr. HUGHES: An ice-breaker?

Mr. McMASTER: No, I do not think so. At any rate, it was a steamer perfectly suited to navigation anywhere, not a dredge. This man allowed me to look at the ship's log. I traced her course on the map day by day, and I found it took him about four weeks to get through Hudson straits. Then it was all plain sailing and it took him only two days to get across from the top of Hudson bay down to Port Nelson. I believe from the best information I can get that you cannot count on more than three months open water at the outside.

Mr. STEWART (Humboldt): Had the navigator to whom the hon. member refers any knowledge of the ice field in which he was tangled, were there any navigation aids to assist him through the channel?

Mr. McMASTER: He was a perfectly competent mariner. No, there were no navigation aids; his duty was to set up such aids. But I do not care how good your lighthouses may be, if there is any ice you are bound to have difficulty in getting through. Is it wise to spend a great deal of money for the sake of opening up a channel which can be used at the outside only for about three months of every year? I doubt if it is.

Mr. KNOX: I do not want to delay the hon. gentleman, but I think we should have the mystery of this long-delayed trip cleared up. I presume the mariner to whom he refers was Captain Read?

Mr. McMASTER: Yes.

Mr. KNOX: He was in that "million dollar mystery dredge" which has been often referred to, and he had a very slow trip in. I wonder if that was the boat?

Mr. McMASTER: No, it was not that boat. I forget its name.

Mr. DUFF: Was it the Minto?

Mr. McMASTER: Yes.

Mr. HUGHES: That is one of the best ice-breaking boats we have.

Mr. McMASTER: We get confirmation from a gentleman from the island that the Minto is one of our best ice-breakers.

Mr. BEAUBIEN: Will the hon. member contend that Sir Wilfrid Laurier, the present Minister of Railways (Mr. Graham) and others who were connected with the Liberal government at that time went into the project blindfolded?

Mr. DUFF: Pretty nearly.

Mr. McMASTER: I will answer the question in this way. Unfortunately for the taxpayers of Canada the Hudson Bay railway has been a political football, kicked by both of the old parties for the last fifty years, and it is now being kicked by the Progressive party.

Mr. WARD: Is not that true of most of our transportation projects?

Mr. McMASTER: I am sorry to say that I think this project has been viewed rather in a partisan way than in a common sense, practical way.

Mr. BIRD: What date did the captain of the Minto clear the straits on his way out?

Mr. McMASTER: I cannot tell my hon. friend. He started from Halifax early in July, if I remember the entry in the log.

Mr. DUFF: Do you want to read the log again? I have it right here.

Mr. McMASTER: I have a copy of the log. He left, from Halifax, I think, about the first of July, and he was a month getting through the straits.

Mr. BIRD: When did he come back?

Mr. McMASTER: Quicker than he went—I think some time in September.

Mr. BIRD: Then how could he tell navigation was only open for three months?

Mr. McMASTER: The point I make is, that I do not think anyone has ever pretended that there is more than three months of open navigation through the straits.

Some hon. MEMBERS: Oh, no.

Mr. DUFF: There is not three days.

Mr. McMASTER: After all, those who know about the length of navigation through the straits are largely people from our Maritime provinces. Through their sealing and fishing business they are more conversant with

conditions in the north Atlantic than are people in the prairie provinces, no matter how well informed the latter may be as to their local conditions. My first point is this, that you have a short period of navigation. My second point is, that you have a dangerous period of navigation. I have never had any apostle of this Hudson Bay railway tell me what the insurance rates are going to be. For years and years the St. Lawrence route has been prejudicially affected, in fact it is to-day, by high insurance rates compared with similar rates from the United States Atlantic ports.

Mr. STEWART (Humboldt): The St. Lawrence route is doing very well, though, is it not?

Mr. McMASTER: Yes, it is doing better, and we have spent millions and millions of dollars in bringing it to its present standard. When I consider what the probable insurance rates would be on boats going through the Hudson straits, as far as I can judge the situation I am afraid that those rates would be so expensive as to render the route impracticable.

Now, what businesses will be helped by the completion and operation of the Hudson Bay railway? The grain business will not be helped. You will not have any ships sailing out of Hudson bay ports after the middle of October. How much of your grain are you going to get down to Hudson bay ports before the middle of October? You will get mighty few bushels, and if you send your grain down there it will have to remain in storage until the spring. And spring does not open up there as it does on the St. Lawrence, in the last days of April.

Mr. KNOX: Does the hon. member know what time of the year our grain first reaches Montreal?

Mr. McMASTER: No.

Mr. KNOX: An engineer says it reaches there in the latter part of August.

Mr. McMASTER: I presume it would. I imagine your early grain would be down in Montreal ten days or two weeks after it is reaped. Some of it will go out through that port, some through Buffalo, and some through Boston; there are lots of débouchés, as we say in French, a lot of outlets; but if your grain is marooned up in Hudson bay it will not get out until next spring. Now as to cattle. Certainly it would give a splendid route for cattle, if you can count with any degree of certitude on having a speedy trip; but if you cannot, supposing a cattle boat that had taken on provisions for a two weeks' voyage was tied up for six or eight weeks, you would have to slay your cattle in order that they should not starve to death.

Mr. FORKE: That is, supposing.

Mr. McMASTER: Yes; but I am asking you to consider merely the eventualities that may happen by reason of climatic conditions over which you have no control, and which you must face. Now, the west wants better railway accommodation. Quite true; and it should have it as soon as practicable and possible. But is it wise to spend more money upon a project with the tremendous and certain disadvantages of the Hudson bay route, when the great outlet of the grain from the westward plains is not eastward but westward? What you need is better railway accommodation to bring a lot of your grain to the Pacific ports and not to Atlantic ports at all. That is what you really need.

Now, there is the question of this port, Port Nelson. What I am told is this: The Nelson river is a tremendous river; it runs through a lot of arable land and brings down every year an immense amount of silt. Although it is quite true that the current scours a certain channel at Port Nelson, that channel is more or less a narrow one and if you are going to have a large port there you will have to spend millions upon millions of dollars on it and you will have to spend hundreds of thousands of dollars year by year to keep it dredged out. I was told while I was in the west the winter before last that the proper port was Fort Churchill. I was told that at Fort Churchill there was a good natural harbour and that it was not exposed to the disadvantage of being filled up with silt.

Now, this project may come in due time, Mr. Speaker, but I would ask you, and through you the members of the House, not to regard this matter as a matter of faith and doctrine. This has become an obsession on the part of some hon. members of this House; they seem to regard it as a matter which must be accepted as a cardinal principle of western Christian belief. It should not be regarded in that fashion. It is true governments may have committed themselves to it. It is true a certain contract may have been entered into. If it is thought wise to carry out that contract equitably it should be done; if not an adjustment of accounts should take place. But some of us have the idea that it is going to help us, in spite of the evidence placed

before us, we should support a proposal which those best informed regard as a very doubtful desirability, or if not doubtful desirability, certainly doubtful practicability. With the finances of the country in the shape they are in, I want to see economy all along the line. I do not ask hon. members to give up the Hudson Bay railway idea without being prepared to advocate the giving up of many propositions nearer home. My voice as long as it is to be heard in this House will be heard for economy all along the line, and I do not think the present project is one which will appeal to the economic sentiment and feeling which I would like to see mobilized in the entire country, a feeling in favour of eliminating every expense we can get along without.

At six oclock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. L. P. BANCROFT (Selkirk): Mr. Speaker, when the House rose at six o'clock the hon. member for Brome (Mr. McMaster) was speaking against the resolution which is under discussion at the present time. He raised several objections to the completion of the Hudson Bay railway, one being that no ships could pass out of Port Nelson after October, and because of that it would be of no use for handling the crop of that year. I am afraid the hon. member is not very familiar with the methods used in moving the crops of western Canada or he would not have made that statement. The knowledge of all the people in eastern Canada in regard to the handling of the crop is not so limited as that of the hon. member, but I will quote in reply to his statement from a paper read by Frederick William Cowie, B.Sc., M.E.I.C., before the Montreal branch of the Engineering Institute of Canada on April 19, 1923. Dealing with this very objection which my hon. friend mentioned he said:

> What about the argument that "relatively short period of safe navigation does not coincide with the period of crop movement"? The writer has seen time and time again, new crop from the Canadian west, at Montreal elevators, from August 20 to 25. This grain could be at Nelson a full week earlier.

That leaves considerable time, Mr. Speaker, to get the grain loaded and out when it can be in Nelson a week earlier than August 20 or 25. He goes on to say:

> Neither the Hudson bay route nor the St. Lawrence route provides an ideal season of navigation, but there is a great similarity, the critical period of each being September, October, and part of November.

Then the hon. member raised objection to the port of Nelson, saying that on account of the silt which was carried down from the prairie country bars formed in the channel, and it was not a very good harbour for that reason—the channel, he said, was very narrow. In reply to that I want to read an extract from the evidence of Mr. McLachlan, the engineer, regarding the channel at Nelson. Engineer McLachlan in a sworn statement before the Senate committee in 1920, said:

> This new channel is a natural channel without any dredging. The depth is 20 feet at low tide, 33.7 at high tide and about 40 feet at spring tide. The width of the channel at the narrowest point is 1,200 feet.

Then my hon. friend passes on to the straits. He said he could support the whole project if the straits were only navigable for any length of time during the year. Well, in connection with that we have the evidence of Mr. J. W. Tyrell who spent considerable time on the strait making observations. He says:

> We had an observation point 400 feet above the sea, and I had a telescope built into a cairn on top of that cliff, and I used to go up every day to look at the conditions through the telescope. I could see a long distance, clean out to the middle of the straits. The ice was almost constantly on the move as in the tidal current, the maximum of which was eight miles an hour.
>
> Outside of two months there were open leads all the time. They were the months of January and February, I think. My belief is that the straits are navigable for about five months in the year, figuring on aids to navigation—July, August, September, October, and November. I think the ice at the eastern and western extremity of the straits would not interfere particularly during those five months.

I need not go into the history of the work done in connection with the Hudson Bay railway. That has been gone over many times in this House, and I do not think it is necessary to take up more time by repeating it. From the year 1910 until 1918 work was carried on continuously on this railroad and at the harbour of Port Nelson. During that time 332 miles of road were completed and laid with eighty pound steel rails, mile long sidings were constructed at various short intervals along the way to facilitate the handling of grain, and three immense steel bridges built. I think these structures are amongst the largest of the steel bridges that have been built in western Canada. Now, the government were going on laying steel until 1918 when the work was mysteriously stopped. The general impression in western Canada is that powerful interests who feared the competition of this route brought pressure to bear upon the government, with the result that the work was stopped and the whole project abandoned. This went so far that an order was actually issued to tear up the rails. From

the beginning of this process right up to the present time a campaign of false and misleading statements has been carried on in many of the leading papers in eastern Canada. The only excuse that was ever offered for abandoning this work was the excuse of economy—economy in national expenditures. Having embarked upon this policy of national economy in 1918 we should have made some very substantial savings in the seven years that have passed since then. We abandoned the Hudson bay project which offered the greatest economic possibility of any of the public works under construction at that time, and we saved $2,000,000 by so doing. This policy of economy was apparently confined to the Hudson Bay railway. If you peruse the records of this House you will find that since 1918 we have spent over $97,000,000 on eight public undertakings in this country, none of which offers the economic possibilities of the Hudson bay route. During the period from and including 1918, including also the estimates before the House for 1925, the expenditures on the following eight undertakings were as follows:

New Welland ship canal (approximately).	$48,797,000
Trent canal..	2,733,000
Victoria dry dock..	9,000,000
Quebec harbour..	2,400,000
Montreal harbour..	11,110,000
Vancouver harbour..	9,595,000
Toronto harbour..	6,972,000
St. John harbour..	6,712,000
Total..	$97,319,000

The Trent canal project I believe offers little in the way of economic possibilities. As to the Quebec harbour it is reported there is going to be a substantial grant this year.

Mr. GRAHAM: Would it not be fair to say now that several of these harbours to which my hon. friend has referred pay interest on the money? These advances are only loans to the harbour under the act and if they pay interest every year it does not cost the country a cent for carrying charges.

Mr. BANCROFT: I know of only one that is paying interest. I have not heard of any other than the Montreal harbour.

Mr. GRAHAM: What about Vancouver harbour?

Mr. BANCROFT: If the minister says Vancouver harbour is paying interest I will accept his statement.

Mr. GRAHAM: I think I am correct in saying that.

Mr. BANCROFT: I think the Hudson bay project would pay interest on the investment too. I say further that if I did not think so I would not be here advocating it. Now in addition to these large expenditures that are being carried on at this time, we must not forget that a great deal of money has been spent to make this St. Lawrence ship channel more navigable than it is at the present time.

I have before me an article which appeared in the Winnipeg Free Press headed:

When millions did not count.

That article says in part:

When the ocean greyhounds of to-day pause in their race across the Atlantic, and pick up at Father point, a pilot to steer them through the St. Lawrence to Quebec and thence to Montreal, the passengers forget the dangers which lurk beneath the blue waters in the glorious prospect of the shores.

If they stopped to consider they would realize that their pathway has been made safe because of scores of millions of dollars which have been expended in the erection of lighthouses, the placing of buoys, and the dredging out of dangerous reefs and shoals. Figuratively their ship is sailing smoothly on a river of gold.

Later on this article says:

The capital expenditure on this route as disclosed in the official reports of the Department of Marine and Fisheries at Ottawa, may be tabulated as follows:

Dredging..	$16,326,206
Montreal harbour..	36,330,000
Quebec harbour..	11,990,995
Aids (such as buoys and lights)	4,147,113
Radio, wireless and similar equipment..	1,000,000
Total..	$69,794,914

These figures do not include the current year when an additional $5,000,000 was voted for the Montreal harbour.

That was last year.

Neither do the figures contain the vast total of the upkeep charges which this year total more than $700,000 and last year more than $800,000. The Quebec harbour this year requires $500,000 which parliament has given. At the very least these figures would swell the total to $90,000,000.

Then the article proceeds to give some figures in regard to the route which my hon. friend from Humboldt (Mr. Stewart) referred to this afternoon, and among other things it tells how the difficulties were overcome to make it the great waterway that it is to-day. It says:

Judicious expenditure of money, however, has brought about a vast change in the navigability of the river until to-day it is rarely the case that ships are injured from any cause other than collision.

From Quebec to Montreal by river is a little better than 180 miles, and the dogged determination shown by the federal government and the harbour commission of Montreal in carving out of the river a passage which would enable the city to become an ocean port, has never been excelled in the history of Canada. To give a detailed account of the struggle of those years would require too much space, but there were many failures, many partial successes before the final triumph. Lake St. Peter presented the greatest obstacle with its

mud flats. Here the work of years was abandoned and a fresh start made, not once but several times.

In the end, however, nature yielded and to-day the great liners steam along a highway—not many times wider than Portage avenue—which has been made by man. When it is considered that there is more than 100 miles of dredged channel and that throughout all that distance the passage must be marked out carefully and gone over each year with dredges, then the magnitude of the achievement may be realized.

I quote that to show that while there are difficulties to overcome in the Hudson bay route, we have difficulties to overcome in the St. Lawrence route and our information is that it will not take nearly as much expenditure to make the Hudson bay route feasible as has been spent on the St. Lawrence route. The people in western Canada are unanimously behind this project; but the friends of the Hudson bay route do not all live in western Canada. I have in my hand a copy of the Scientific American of June, 1923, and on the front page of that journal I find an article headed:

Hudson's Bay, the "Neglected Sea", by John T. Rowland.

And he tells us how he cruised the straits in a 30-foot auxiliary yawl in the summer of 1913, and he says the only difficulty he found was in taking the bearing of the ship, because the magnetic points of the compass would not work, on account of being so close to the magnetic pole, but he goes on to say that this has been overcome.

But this difficulty has since been almost magically removed by the perfection of the gyro-compass. A ship equipped with one of these can dispense with the old-fashioned magnetic instrument entirely and steer across Hudson's bay as readily as across the Atlantic ocean.

In addition to this we have a gentleman in Montreal who is very much in favour of the route, and I am sure hon. members will be surprised to hear that. I refer to Mr. F. W. Cowie, who is engineer of the Montreal Harbour Commission.

Mr. DUFF: That is the gentleman who laid out the Halifax terminals.

Mr. BANCROFT: He picked out a good harbour, then.

Mr. DUFF: Yes, he did that all right, but he made a mess of it.

Mr. BANCROFT: It was a good harbour before he started.

Mr. DUFF: Yes.

Mr. BANCROFT: He says in this paper read before the Montreal Institute of Engineers:

The writer dares greatly in "risking a fall" with the editor-in-chief of the Gazette, of Montreal, who so fittingly voices, and even leads commercial opinion in the east.

After no superficial study, however, the writer dares the statement, that the Hudson's bay route offers much more than "a gambler's chance of success". He has personally experienced every phase in connection with St. Lawrence river navigation, its failures and its successes.

The late Sir John Kennedy, past president of this institute, in no casual school, taught the writer that while one cannot force the mighty St. Lawrence one may make terms with it. And where in the world such prodigious difficulties, where such successes, as in the making of the artificial harbour at Montreal?

There is only one St. Lawrence, and Canada may thank God for it. It can have no enduring rival, but is it wise and sufficient that it be relied upon alone? Those who know, will accept, that no one may be more, or even equally loyal to the St. Lawrence route, than the writer, who has given his best towards its success, in the last thirty-seven continuous years, and based on mature experience, he is of the opinion that the Hudson's bay route, under accepted limitations, offers a prize, in favour of production, worthy of fuller investigation and a better attempt to demonstrate it.

Further on in his paper he says:

The Hudson's bay route is now over three hundred years old and for over two hundred and fifty years a company of hard-headed merchants, operating for gain, with distinct success; year after year, sent one or more ships to Hudson's bay, and the records of loss are very few.

Then later on he dealt with its relation to the time problem, which I read a few minutes ago, showing that the period during which Hudson bay is open and the straits are known to be navigable is a period that fits in very nicely with the crop movement of western Canada.

The people of western Canada are practically a unit in their demands that this railway be completed. It is not only the hon. members who have the honour of representing western Canada in this House who are demanding it, but I think all three provincial legislatures have passed unanimous resolutions, supported by all parties, demanding the completion of this road. In addition to this the farmers' organizations of the three provinces have endorsed the project and want to see it completed immediately. Furthermore, I think every board of trade in the three prairie provinces has passed resolutions to the same effect. I have no doubt the Prime Minister and the Minister of Railways and Canals have had many resolutions sent to them along this line. These people have some excuse for sending these resolutions to the government because, just prior to the election of 1921, the people of that district made it their business to find out where the leaders of the different parties stood in the matter. The secretary of the Pas Board of

Trade wrote to the Prime Minister and he replied in December, 1920, as follows:

> With respect to the particular project of the Hudson Bay railway, such expression as there has been on behalf of the party was given in parliament at the time the project was inaugurated.

I would interpret that to mean that because the Liberal party had started this project in 1910, they were going to go through with what they started.

In November, 1921, they wrote to the leader of the opposition (Mr. Meighen), and this was his reply regarding the completion of the Hudson Bay railway:

> I have several times stated the policy of the government towards the Hudson Bay railway. I regard its completion as essential, and not only that but am most anxious that the least possible delay be allowed before its completion is finally undertaken.

The hon. member for Marquette (Mr. Crerar) was at that time leading the party to which I belong. They wrote to him also, and these were his views on the matter:

> Expressing my own personal view, I have no hesitation in stating this road should be completed to the bay at the earliest possible moment, and I hold the further belief that eventually it will become one of the great trade routes of the world.

In view of the unanimous demand from western Canada for the completion of this road, in view of the vast expenditures that have been carried on in other parts of the country since this project has been abandoned, and in view of the fact that the Prime Minister practically pledged himself to it before the last election and that the Minister of Railways and Canals turned the first sod and has been a strong supporter of the project, we should have this resolution accepted tonight and the work gone on with as speedily as possible.

Mr. J. J. HUGHES (Kings, P.E.I.): Mr. Speaker, I wish to assure my hon. friends from western Canada that I have not the slightest antipathy or ill will towards that part of the country or to the hon. gentlemen who come from there. If there is anything practicable that this country can do that will benefit the western provinces, they are entitled to consideration along that line. They have their difficulties, many of them. We have our difficulties also, and we can sympathize with them. If I thought this project was feasible or practicable, I certainly would be pleased to support it. But viewing it as I do and considering it to be, commercially speaking, impracticable, having regard to my duty as a member of this House, I shall have to vote against it. I will give my reasons for doing so. Captain Read's name was mentioned this afternoon by the hon. member for Brome (Mr. McMaster), and I do not know that I would have mentioned his name if it were not for that fact. Captain Read is, I think, the most experienced man in ice navigation in the Dominion of Canada at the present time. He has certainly no ill will towards the western provinces. He is not influenced by any unworthy considerations whatever. He has been in Hudson bay and Hudson strait for two years and, I think, three, placing aids to navigation in those waters. He was a ship owner and he is a master mariner. He sailed the seas with his father who was also a ship owner and a master mariner. During the war he took at least two ice-breaking ships through the White sea to Archangel and delivered them faithfully. He has been for years operating an ice-breaking steamer in the strait of Northumberland. He knows all about winter navigation in the strait of Northumberland and the gulf of St. Lawrence. Therefore, I think his views are entitled to some consideration and he has given his views, stating his reasons for them. In the ship's log he gives the dates and actual conditions that he found in those waters during the time he was there, and anybody reading those records will come to the conclusion that the proposition is an impracticable one.

I listened this afternoon to the hon. member for Springfield (Mr. Hoey), who always makes a nice address and is careful of his words. He is a responsible man; anything he says is worthy of consideration; but while commending this project, he actually condemned it. I think he said there were two vessels, there were some vessels at all events, that had been beached some years ago in or near the harbour at Port Nelson and that they were still intact. They had not been broken up by the action of the sea, the waves and the wind. Why? He gave the answer himself, that the sea broke some fifteen or twenty miles—he did not say this—off the mouth of the Nelson river. The force of the waves was broken on the sand bars before they could reach the harbour at the mouth of the river. Any man who knows anything about navigation will say that that condemns Port Nelson as a harbour.

Mr. BANCROFT: Has the hon. member read engineer McLachlan's report given before the committee stating that there was a permanent channel there in which sand bars never formed?

Mr. HUGHES: I will come to that. There is nothing that a master mariner or mariner so much dreads as approaching a low coast where sand bars reach a considerable distance out into the sea.

Mr. BANCROFT: They get into St. John harbour pretty well.

Mr. HUGHES: My hon. friend is quite mistaken. It is the tide he is speaking about and that is quite a different thing.

Mr. BANCROFT: It is a tidal harbour and there are mud flats.

Mr. HUGHES: It is a tidal harbour, but there are no sand bars there. I will tell my hon. friend where there is a sand bar. There is a sand bar about three-quarters of a mile wide at the mouth of the Mersey river leading to Liverpool. I have the distance in yards and I think it is about 1,200 yards. I have this from men who have sailed in and out of Liverpool for years, and it can be verified. They say that it requires three of the most powerful sand-suction dredges in the British Empire to keep that channel open, and they are working twenty-four hours a day, 365 days in the year.

Mr. BANCROFT: Does the hon. member think that they made a mistake in developing that port?

Mr. HUGHES: My gracious, what a foolish question! If the hon. member will have patience I am sure he will see the point of my argument. There are other dredges kept in reserve which can be brought into service if one of these regular dredges becomes disabled or is being repaired. The immense shipping on that river passing in and out of Liverpool, and the tremendous tonnage involved, is justification for this enormous expenditure. Now, the sand formation at the mouth of the Nelson river, between the river and the sea, is very similar to the formation at the mouth of the Mersey.

Mr. CAMPBELL: Is this crossing the channel or outside the channel?

Mr. HUGHES: Wait a moment and you will see. The channel shifts.

An hon. MEMBER: No.

Mr. HUGHES: Well, so it is stated by navigators who have been in those waters.

Mr. CAMPBELL: I can show the hon. gentleman a couple of charts prepared by different engineers which might convince him that he is wrong.

Mr. HUGHES: The formation at the mouth of the Nelson is similar to the formation at the mouth of the Mersey. There is a little more clay and there are more pebbles in the sand at the mouth of the Nelson, and that is an advantage; but at the same time it is a sand formation, and wherever there are sand bars out in the open sea the channel shifts. That is the case in every part of the known world. Now, that is the situation. If it takes three dredges working twenty-four hours a day and 365 days in the year to keep open the channel leading into the Mersey, a width of three-quarters of a mile, how many dredges would it take to keep the channel clear at the mouth of the Nelson river?

The Hudson Bay railway and navigation of Hudson strait and Hudson bay are different things, although they are linked up with each other. At least in some respects they may be considered separately. About a year ago, I think, a delegation came here from Manitoba, possibly from Winnipeg; and I was anxious, as I have been anxious for years, to get all the information I could upon this question. The delegation desired to meet the members of parliament in the Railway committee room and I made it a point to be present because I expected some information from the men who came from that part of the country and who had studied the question. But I was sadly disappointed.

Mr. CAMPBELL: The delegation assumed that the government had all the information.

Mr. HUGHES: I do not know that any delegation comes here that is not prepared to give to the government and to parliament all the information it can.

Mr. CAMPBELL: Surely the government had the information before it ventured on the project.

Mr. HUGHES: For that matter, I have a good deal of information on the subject and I presume there are other members who have more than I have. And my information is in accordance with what I am stating tonight. I attended that meeting with an open mind, for I wanted to hear everything I could on the subject. But as I say, I was disappointed. Some members of the delegation quoted poetry, and all spoke eloquently; but without reflecting on any of those gentlemen, I do not think they submitted an argument. Premier Bracken, I must say, seemed to realize that it would be advisable at least to present some argument; and he did. In the course of his remarks I put this question: "If the navigation of Hudson strait and Hudson bay were shown to be impracticable from a commercial standpoint, would you still advocate the completion of the Hudson Bay railway to Port Nelson?" He hesitated; but although I cannot give his answer in his own words I think I can give the substance

of it without doing him any injustice. He finally stated that if it could be shown, although he did not think it could be shown, that the navigation of Hudson strait and Hudson bay was impracticable from a commercial standpoint he would hesitate, for the time being at least, to recommend the extension of the railway.

Mr. CAMPBELL: And that is the attitude of every hon. gentleman in this section of the House.

Mr. HUGHES: I am glad to hear that. But I think I shall be able to show my hon. friend that the navigation of Hudson strait and Hudson bay is impracticable and I shall quote authorities who are not prejudiced, the men whose business it was to look into this question, having been sent into these waters for the express purpose. I shall quote from the log of the Neptune, and in the first place I want to point out what kind of ship the Neptune was:

> The Neptune, the largest and most powerful ship of the Newfoundland sealing fleet, was chartered as the most suitable vessel for the cruiser work. The Neptune is a stout wooden ship, built entirely of British oak, sheathed with "iron-bark" and greenheart. Although built in 1873, she is quite sound throughout, and of amazing strength. Her sides are formed of an outer sheathing of four inches of greenheart, on top of four inches of oak, covering heavy oak timbers, with an inside lining of three inches; the space between the inner and outer skins and the timbers is solidly filled with rock-salt, so that the sides of the ship are practically eighteen inches thick in all parts where a contact with the ice is expected. The bow is further reinforced by a heavy sheathing of iron plates, and inside it is backed with deadwood, giving it a thickness of eight feet.

Surely that ship could withstand great pressure from the ice; she was well fitted to test the navigation of these waters. Now, we all know that the Hudson's Bay Company's vessels navigated these waters, if not for two hundred years, at any rate for a very great period of time. But let us remember that these were sailing ships, stout wooden vessels, converted frigates; and time was of no great consequence to them. If they made one or two voyages in the year, indeed if they made one, they did well; they would bring a cargo of supplies and take home a cargo of furs. The drift of the ice in Hudson strait is eastward, and if these ships were going home late in the season and they got into the ice they could afford to wait and let the ice take them into the Atlantic ocean. That is an entirely different proposition from the operation of steel ships, tramp vessels, carrying grain and cattle through these waters. As has been mentioned by the hon. member for Brome (Mr. McMaster), the cattle would have to arrive in

reasonable time, and the ships that would engage in this trade would necessarily have to make regular sailings. Time therefore would be of importance to them. I will come to that later. But I wanted to make this reference to the ships of the Hudson's Bay Company that navigated these waters. Conditions to-day are absolutely different. Now we will continue with the cruise of the Neptune. The hon. member for Brome (Mr. McMaster) stated that under the most favourable conditions three months in the year would be the outside limit during which these waters could be navigated. I think he was very optimistic, in fact according to the log of this ship he was incorrect even in giving that limited period, although hon. members opposite say that navigation could be successfully carried on for a much longer time. I might say that neither Hudson bay nor Hudson straits ever freeze over; I agree at once wth hon. gentlemen opposite who have made that statement. But the waters are full of floating ice every month of the year; and it is heavy northern ice, different altogether from the ice that is found in the gulf of St. Lawrence, the Northumberland straits or the river St. Lawrence. Here is what the log of the Neptune says in regard to Hudson bay, on September 13, the best month in the year for navigating these waters,—

Mr. FORKE: What year?

Mr. HUGHES: In 1903 and 1904. This was in 1903; he was going in:

> Squalls of snow delayed us until the afternoon of September 13, when we steamed westward along the north side of Digges islands. A bear was seen climbing over the cliffs and a boat was lowered in chase, but animal escaped. In the evening, the course was changed to northward, up Fox channel. At daylight the next morning ice was met with some ten miles from Leyson point. Steaming slowly through it, Seahorse point, on Southampton island, was reached at noon, and a landing was made with the launch.

There was ice there; that is the western end of Hudson straits.

Mr. KNOX: If my hon. friend will pardon me, this point was discussed last session, and it was then pointed out that Southampton island is not on the course to Hudson bay, it lies to the north.

Mr. HUGHES: I know where it lies.

Mr. KNOX: She was not coming into Nelson if she was going by Southampton island to the north.

Mr. HUGHES: We will go on.

> On October 10 a heavy gale blew from the westward, accompanied by frequent, thick snow squalls.

The anchor was raised at daylight on the morning following, when, keeping well to the southward of the shoals beyond the mouth of the inlet, we arrived safely at Fullerton at dusk that evening.

He wintered in Fullerton harbour and came out next summer, 1904. He says:

The anchor was hoisted and the moorings to the ice cast off at two o'clock on the morning of July 18, when the Neptune proceeded to break her way out of Fullerton harbour, after having been nine months there fast frozen in the ice.

Mr. CAMPBELL: Was he going in to Port Nelson, or going further north?

Mr. HUGHES: He was examining these waters to ascertain whether navigation was commercially practicable.

Mr. CAMPBELL: If he was going further north he could not have been making for Port Nelson.

Mr. HUGHES: Is my hon. friend acquainted with the geography of that part of the country? If he is, he will know where Port Fullerton is situated; if not, I will tell him. Port Fullerton is on the northwest side of Hudson bay.

Mr. CAMPBELL: But the point is—

Mr. HUGHES: If my hon. friend will have a little patience.

Mr. CAMPBELL: I do not wish to interrupt my hon. friend, but the Neptune could not have been in the track of vessels going to Port Nelson.

Mr. HUGHES: Going to Port Nelson vessels must pass through Hudson strait. Is that established?

Mr. CAMPBELL: Yes.

Mr. HUGHES: Very well.

Mr. WARD: But not up Fox channel.

Mr. HUGHES: Now, they came out of Fullerton harbour and they were in Hudson bay:

Beyond cape Prefontaine the ice became more plentiful—

They were steaming south now.

—and many large pans were met with. The ice had the appearance of being lately broken up, and owing to its smooth unrafted condition we judged it came from Fisher strait, rather than from Fox channel to the northward. During the night this ice forced the ship southward into the channel between Coats—

You know where that is.

—and Mansfield, so that the western shore of the latter was reached some twenty-five miles to the south of its northern end.

Open leads in the ice were found—

You get open leads in the ice.

—from three to five miles from that island, and no difficulty was experienced in gaining its north end. This island of limestone is somewhat higher than Coats and Southampton, rising inland in low broad terraces to an elevation of upwards of a hundred feet. Small patches of snow were seen under banks and along the faces of the terraces, but elsewhere the green colour showed that considerable vegetation covered the greater part of its surface. Similar lanes of water, between large cakes of ice, afforded an easy passage from Mansfield to Digges islands.

Digges island is at the entrance to Hudson strait. Now, this is on July 21:

A great amount of ice was seen to the southward, apparently completely filling the channel between Mansfield and the mainland.

Mr. BIRD: What kind of ice was it?

Mr. HUGHES: Hard, northern ice.

To the northward some open water occurred, but the patches became smaller and smaller as Digges was approached, and finally ceased to the eastward of these islands, the southern part of the western end of Hudson strait being completely filled with ice.

The southern part of the western end of Hudson strait being completely filled with ice on July 21, 1904.

Mr. LEWIS: Was the evidence which the hon. member is reading in the possession of the government between 1908 and 1910?

Mr. HUGHES: What in the world has that to do with the navigation of the straits?

Mr. LEWIS: If they were in possession of the evidence at that time why did they spend $14,000,000 and promise to complete the project?

Mr. HUGHES: I am not apoligizing for the government of either party; I am quoting evidence which in my opinion proves that this project is commercially impracticable.

Mr. MORRISON: Why didn't they give this evidence at the proper time and so prevent this huge blunder? You were a member of the House at the time the alleged mistake was made. Do you not think you are a little bit late now?

Mr. HUGHES: Will my hon. friend ask somebody else?

Mr. SPEAKER: Order. Members in addressing the House must speak through the Chair.

Mr. HUGHES: I am reminded by my hon. friend here—

Mr. CAMPBELL: Mr. Speaker, might I be permitted another question? I do not want to unduly interrupt the hon. member, but I should like to know whether the ice he refers to completely blocked the straits.

He says it was over on one side. Did it necessarily interfere with the passage to the west of the straits?

Mr. HUGHES: My hon. friend could not have been paying attention to me when I was reading this log. I am reminded by my hon. friend here (Mr. Duff) that even if a blunder was made—and I admit that—that would be no good reason why we should continue spending money in making the blunder still greater. I put that to my hon. friends opposite. I am sure they will not say that it is a good reason. I will read the sentence again:

To the northward some open water occurred, but the patches became smaller and smaller as Digges was approached, and finally ceased to the eastward of these islands, the southern part of the western end—

Now, that is the direct course for ships going into Port Nelson or coming out.

—the southern part of the western end of Hudson strait being completely filled with ice.

A strong southerly wind had been blowing all day, and it was hoped it had loosened the ice along the southern shore of the strait. The ship was taken under the land, but without success, so that after butting through the slowly closing ice all night, we were finally tightly beset in the early morning, about three miles from the eastern Digges island.

The 21st was foggy, with snow flurries in the morning and showers in the afternoon; the ice remained tight about the ship all day, and she drifted eastward with the ice, passing Cape Wolstenholme, and in the evening being about five miles to the east of Erik cove. At that time considerable open water could be seen about five miles from the ship to the eastward, with a few narrow lanes in the rear, and other small openings to the northward, where the dark sky showed considerable open water beyond our view. Persistent ramming—

Listen to this:

Persistent ramming forced the ship through about five miles of ice on the morning of the 22nd, when she was again tightly beset until the evening, at that time being about twenty-five miles to the eastward of Cape Wolstenholme, this distance having been made by the drift of the ice.

Those who are acquainted with ice navigation know that ramming ice is very trying work for a ship. Indeed, a ship must be of more than ordinary construction in order to do it at all. The ship has to back off from the ice, put on a full head of steam and ram the ice in order to make an impression upon it. No ordinary ship could think of doing that; no ship that was not specially and powerfully constructed could think of doing it. And yet these were the conditions under which this vessel tried to get through on the 22nd of July. Now, here are the conditions on September 8:

The weather throughout the morning had been bad, a strong northwest breeze bringing down frequent heavy blinding showers of snow. These showers became almost continuous, and towards noon only momentary glimpses of the land were to be obtained at long intervals. The tides here are very swift, and when the sky cleared a strong ice-glint was to be seen ahead. It was considered dangerous to attempt to enter the ice in such weather, with the unknown Mill islands directly in the course; we therefore turned back to pass south of Nottingham island. This decision proved wise, for next day the whole mouth of Fox channel was found completely filled with heavy ice drifted south from the northern parts of that channel. The condition of the Neptune's stem did not warrant any contact with the ice that could possibly be avoided.

The ship had been injured in the meantime, due to the efforts that were being made to get through the ice. I quote further:

On the 13th, having rounded Salisbury and Nottingham during the night, ice was met with at nine in the morning, twenty-five miles to the westward of the last-mentioned island. The course was changed to south of west to skirt the edge of this great pack, and as it continued unbroken to the westward, the idea of passing through Fisher strait was abandoned, and the course was laid to the southward of Coats island. The passage was encumbered by ice until dark, when the ship lay-to awaiting daylight.

Could ordinary ships navigate in these waters under those conditions? I have only to ask the question. I quote further:

The homeward voyage from Fullerton to Port Burwell was made in fine weather and the only incident requiring mention—

Sometimes you can get in and out, and sometimes you cannot.

—was that the ice from Fox channel had advanced southward and westward nearly twenty miles since we last saw it. This necessitated our keeping close to Mansfield island.

And so on. I need not read any more. It should be unnecessary to submit any further evidence.

Mr. BIRD: Would my hon. friend mind reading the paragraph on page 39?

Mr. HUGHES: Yes, I will read any part of it. This is from page 39:

The following summary of the condition and extent of the ice met with on the passage from Fullerton to Port Burwell may prove of interest and value. The northwestern part of Hudson bay was quite free of ice, and none to obstruct navigation was found in Fisher and Evans straits. Large quantities of ice were encountered between the mouth of Evans strait and Digges at the western end of Hudson strait, but without serious trouble safe passages were found through it, and there is no doubt that an ordinary unprotected iron steamship would have passed through it at that time without trouble or danger.

No ordinary iron ship would have passed through on the other occasion to which I referred; in fact, there was great difficulty in making progress at all. I quote further from the same paragraph:

This ice was evidently the product of the past winter, consisting chiefly, as has been mentioned, of large flat sheets that had only a short time previously broke in from the original position, for there were no signs that it had been subjected to pressure or to the action of a swell

There is the difference: it was ice that had come off the shoals—ice that has not been rafted or packed.

An hon. MEMBER: Last year's ice.

Mr. HUGHES: Last year's ice. I quote further:

> The edges of these large cakes had not been crushed, and many soft thin spots were seen which would disappear with the slightest pressure or swell. Along with the predominating flat ice was a considerable amount of rafted ice of the same character, and also of portions apparently subjected to pressure during the past winter. All the ice was comparatively light and thin, which led to the belief that it had come out of Fisher strait, and from the southward up the channel between Mansfield and the eastern mainland, the meeting of these streams producing the blockade at the western end of Hudson strait. Owing to its thinness and rotten character, the greater part of this ice would melt a few days after we passed it.

Now, there are the conditions. A ship might get in; a ship might get out.

Mr. HUDSON: Was this a report made to the government of that day?

Mr. HUGHES: Yes—this is the log of the ship.

Mr. HUDSON: Was it a report made to the government of the day for the purpose of enabling them to decide whether or not this railway project should be proceeded with?

Mr. HUGHES: Very probably. Surely these men made reports to the government when they came back. They did not report it to me, but I should be surprised if they did not report officially to the government. Now, under these conditions, under conditions which have been described by a man who was qualified to judge, I ask again, is there any man who can honestly say that it would be wise to spend money on an experiment of this kind?

Mr. GOULD: Since the hon. member asks the question, I would call his attention to the fact that the Prime Minister (Mr. Mackenzie King) did say so last fall in western Canada.

Mr. HUGHES: Well, I am very much surprised. Now, if we were fifty millions of people; if the other parts of Canada were all settled and had all the railway accommodation they needed; if the population was overflowing into that part of the country at Hudson bay, it might be a reasonable thing to take up this proposal and extend this line to Hudson bay. Perhaps minerals might be found there; some parts of it may be useful for agriculture. I understand that pulpwood suitable for paper making purposes may be found along these rivers. Perhaps in time these northern districts may be opened up, and it may be advisable, necessary and proper to build railways into them. But under the present circumstances, in view of existing conditions, with our finances standing as they do at present, and settled parts of the country requiring railway accommodation, would reasonable men undertake such a proposition? I do not think so. Will it do our western friends any good to get money expended on a project that is not practicable? No, it will injure them because if the whole country is injured they must necessarily bear their share of the burden. That is the way it looks to me. I cannot see anything in this project particularly at the present time. It would be proper if anything could possibly be done to meet the views of our western friends, but I think they should be disabused of the mistaken notions that they entertain in this regard at the present time. They are intelligent men, they have given evidence, I believe, of their honesty of purpose, and of their desire to do what is right, not only for their own district but for the country as a whole. Therefore I am loath to doubt their sincerity in this matter, but I repeat the statement which was made by the hon. member for Brome (Mr. McMaster) this afternoon—I think this question has been a political question rather than a commercial question in the past and I hope that my hon. friends from the west will not make a political question of it now.

Mr. WARD: Would my hon. friend object to the project if the western people undertook to carry it through to a successful conclusion, and the other portions of Canada were in no wise taxed in connection with it?

Mr. HUGHES: Is anybody holding the western people back from going on with this undertaking? I would think it was the worst kind of tyranny and coercion to prevent the western provinces from not only building this railway but constructing the terminals at Port Nelson and the ships needed to carry on the service.

Mr. CAMPBELL: Is my hon. friend aware that the money has been provided already?

Mr. HUGHES: If it has, is it in the treasury of Canada?

Mr. CAMPBELL: A considerable portion of it.

Mr. HUGHES: I was forgetting to answer the question of an hon. member who asked me if I had read Mr. McLachlan's report. I have read the most of it, I think, and if I remember correctly he said that it was almost

impossible to construct a harbour at Port Nelson, at all events extremely difficult. But difficult as that may be it is not so difficult as the navigation of Hudson straits, and it is not so difficult as keeping a channel open through the roadstead which the hon. member for Springfield (Mr. Hoey) referred to—not so difficult as keeping open a channel sufficiently deep to enable ocean going ships to arrive at Port Nelson.

Mr. KNOX: Does the hon. member think that both the old parties went into this project blindly without making an investigation?

Mr. HUGHES: What is the use of asking me a question of that kind?

Mr. KNOX: I should like to have my hon. friend's opinion on it.

Mr. HUGHES: My hon. friend himself is as capable of offering an opinion on it as I am. But if, with the information that we have, we know the project to be impracticable what must we think of the party advocating it? In speaking on this question last year I offered a suggestion. I do not know whether it is practicable or not, but it almost meets the views of my hon. friend (Mr. Ward) who asked if I would be opposed to the building of this railway and the construction of terminals at Port Nelson if the people of western Canada would provide the money. I replied to the hon. member at the time, certainly not. But so far as I have spoken to authorities on this subject they have declared that there is a natural harbour—a very good harbour, although not very large—in Hudson bay with deep water right up into the port itself, which requires no dredging. To enlarge that harbour would require dredging but as it stands no dredging is necessary—I refer to Fort Churchill. All the captains and commanders who have been up in that part of the country, to whom I have spoken, have stated that if this project is undertaken at all Fort Churchill should be the terminus. However I am not an authority on this question, and I give the statement to show that these men are not entirely opposed to the project. If it were at all practicable just imagine what a benefit it would be to our country. Just imagine what a benefit it would be if the central part of Canada could be brought as near to Liverpool as Montreal now is. It would give our country depth as well as length. We could hardly visualize the advantages which would result to Canada from it; no thoughtful person, no intelligent man, would be opposed to it—everybody would support the proposition.

[Mr. Hughes.]

Mr. FORKE: You always say "if it were practicable." What would you be prepared to do under the present circumstances—just go on in this way saying it would be a fine thing if it were practicable?

Mr. HUGHES: I have read reports on the project and they nearly all agree. The opinions of ship captains that I have obtained —three men at least and very independent in their views—also agree.

Mr. FORKE: You have seen the charts I suppose?

Mr. DUFF: The charts do not show the ice.

Mr. FORKE: Has my hon. friend seen the charts? They have in the department charts prepared by the different ships that have made the trip, and the time they have taken and the points where they encountered ice are noted. I suppose my hon. friend has studied all these charts?

Mr. HUGHES: No I have not, but I have carefully digested what I have read.

Mr. FORKE: I think my hon. friend ought to study those charts before he attempts to speak in such an authoritative way.

Mr. HUGHES: I must tell my hon. friend that while I do not profess to know very much about the science of navigation I know a little, and I must inform him that the charts do not show the ice at all.

Mr. FORKE: I think the hon. member has probably misunderstood me. These charts showing the journey through the straits are marked in red lines. They disclose how many miles the ship made each day, where it saw ice, and how long it was delayed. They are quite intelligible; it does not require any seamanship to comprehend those charts when you see them.

Mr. HUGHES: Now, I wish to follow up the idea alluded to by my hon. friend (Mr. Ward), and I have a suggestion to offer which may prove a solution of the problem. Hon. gentlemen from western Canada are enthusiastic on this matter, and they feel very strongly about it, there is no question about that. They think it is quite practicable, in fact I go so far as to say they feel sure that it is. Now, there is a good deal of money in the States in the hands of people who are anxious to invest it in any paying enterprise. I would also infer from the remarks of my hon. friend (Mr. Campbell) that there is some money in western Canada, perhaps a considerable amount, that could be invested in this enterprise.

I would make this proposal: That the government invite tenders from shipping companies, people who might be in a position to tender, offering all the railway north of the Pas, all the work that is done at Port Nelson free, asking them what bonus they would take to finish the railway, build the elevators, complete the terminals, construct the ships and carry grain and cattle to Europe. Ask them what subsidy they would take per bushel of grain or per head of cattle delivered in Europe, offer to continue the contract for fifty years and thus find out what offers they would get from people in western Canada, from the shipping interests of the world, and from persons who are willing to invest their money in such an enterprise.

Mr. CAMPBELL: A grain company has offered I understand to build a terminal elevator just as soon as the railway is completed.

Mr. HUGHES: If that company are not financially strong enough to carry out the whole enterprise, perhaps they could induce other people to associate with them and carry out the undertaking including the building of the elevator. Then the government could get an idea from the tenders they would receive, if they did receive any, what the shipping men of Great Britain, of the United States and of Germany thought of it. I heard the statement—perhaps I read it in a newspaper—that if we did not hurry and construct the railway and carry out the project the Germans would do it. Well, I would "let George do it".

Mr. GRAHAM: That is what they want.

Mr. HUGHES: We suffered so much from the Germans in the late war that I would not object to letting them try this project, and they might find it more difficult than carrying on a war in Europe. However, I place this proposition before the western men. I observe the hon. member for Springfield (Mr. Hoey) shakes his head. He does not think much of it.

Mr. McCONICA: Has the hon. member any specific authority to make that offer?

Mr. HUGHES: I think I explained that I was merely throwing out the suggestion, and of course I am not in a position to go any further. It might be a test—I do not know whether it would or not—as to what the shipping interests of the world thought of the scheme.

These are my reasons, Mr. Speaker, for considering that it would be unwise at the present time for the government to spend any more money on this scheme. We cannot afford it and in my opinion it would be no benefit to the east, west, middle or any other part of Canada. It would simply be throwing away more money after the large amount which has been spent already. I will therefore have to vote against the resolution.

Mr. JOHN EVANS (Saskatoon): In common with my hon. friend from Kings P.E.I., (Mr. Hughes) I do not pose as an authority on this question, but I think some of my arguments will be quite as logicial as the contentions which the hon. member has presented. In fact my hon. friend made one statement which is completely at variance with the opinions of some of the engineers who have studied this question. One of the Tyrrell brothers lived on both sides of the straits for some years. The member for Kings, P.E.I. said the ice always travelled eastward. One of the Tyrrell brothers says the two currents are maintained continuously through the straits, one going out and the other coming in, and all navigators, for the last 200 years have known that; therefore they take one going out and the other coming in, whether they have ice or not, and they are sure to keep going.

But of all the mistakes we have made regarding the trade and commerce of this country, I think there is none more glaringly outstanding than our policy in regard to a provision for the moving of our products to the markets of the world. In the construction of the three transcontinental railways which we have built, we should have turned our attention earlier to the proposition of finding a port as near as possible to the district where our products are grown. The Hudson Bay ports present a solution of our transportation problem, but now that we have the three transcontinental railways built it is not reasonable that agriculture in western Canada should be hampered by the great deficit on our National Railways and to keep the other railways solvent all these years. This project has been advocated by politicians ever since confederation. Leading statesmen such as Sir Wilfrid Laurier and Sir John A Macdonald advocated it many years ago; in fact, many of our politicians of late years have expressed themselves in favour of the proposal being proceeded with as a national undertaking. In a discussion of the bill of 1908, in which the Hon. Frank Oliver sought to provide for the cost of the undertaking by the sale of pre-emptions in the arid portions of the province. Sir Robert Borden, leader of the opposition at that time, declared himself in the following manner:

If not an acre of this land is sold in the next ten years I trust and am led to believe that the Hudson Bay railway project will go on in the meantime and without delay.

I take that from the Winnipeg Free Press of January 13, 1923. Surely it cannot be forgotten by those who so vigorously opposed the completion of this road, that the cost of the whole undertaking has been provided for out of the sale of pre-emptions in that part of Canada most interested in the project. This seems to have been lost sight of by all those great champions of economy in eastern Canada. Seemingly they would prefer that all of the work and materials already used should be abandoned in the future, than that the trifling sum needed to lay the steel on the remaining portion of the grade which is completed should be spent. The Dominion Lands Act was amended by parliament at the instance of Hon. Frank Oliver in 1908, with the consent of parliament, to provide that the cost of the undertaking should be defrayed from the proceeds gained by pre-empted and purchased homesteads in the central portions of the three prairie provinces. Mr. Oliver made it plain that his purpose was to create a new source of revenue which while not adding to existing taxation burdens or constituting any additional drain on the treasury would defray the expenses of the new government railway undertaking, and at the same time encourage at a moderate cost to the settlers the settlement of these areas in the three prairie provinces, and some 28,000,000 acres in these areas were set aside for this purpose. The fact remains that these lands in the portion of Canada most interested have been sold for this purpose. It may be argued that these lands belonged to the Dominion. They did not. The lands disposed of for this purpose belonged to those provinces. If the Dominion had anything to do with them, they were simply held in trust by the Dominion, and in this case the injustice becomes all the greater.

Under the circumstances, I cannot look on it in any other light than as an act of usurpation on the part of the Dominion government. Here again, the absurdity of our present system and the danger to confederation are plainly seen. Quebec and Ontario do not want to see the Hudson Bay railway completed, and as long as these two provinces dominate the House of Commons and the Senate, they deem it safe to override the rights of the people in other parts of the country. But even admitting that no breach of the constitution has been committed, the injustice to that part of Canada which furnishes by its industry, 60 to 70 per cent of the national income yearly, becomes an outstanding and glaring exhibition of selfishness on the part of the eastern portion of the Dominion.

Under the Land Act of 1882, it was provided that a grant of land of 6,800 acres per mile would be given to any private company that would build the Hudson Bay railway to the Saskatchewan river. From there on to Churchill or Nelson a grant of 12,800 acres per mile was offered. The act of 1908 regarding the sale of pre-emptions relieved the country of the provisions of the act of 1882. It is an accepted principle in both private and public business that if you do not pay anything, you do not say anything. Yet eastern Canada, without a dollar invested in the Hudson Bay railway is making all the protest against its construction. The settlers have purchased these pre-emptions, and the whole of the population in that area were encouraged to stay and build up the country on the assurance of the construction of that road. Any individual who buys land and pays cash therefor, if he fails to get delivery, has recourse to the courts. I ask: Has the west any recourse in this matter? I wish to say right here that those three provinces do not intend to remain as a vassal state to eastern Canada or to continue in political servitude forever. The government of Canada have already sold $26,000,000 worth of these lands. They have received nearly $20,000,000 in cash and the balance will eventually be paid to the Dominion treasury. Surely, in the face of these facts the government cannot longer ignore the call of the west.

That there is a deficit on the present government railways cannot be used as an argument in refusing a road to the natural outlet of so large a section of this Dominion as the prairie provinces represent. The west expects to bear its full share of the taxes of this country. Unless the government will recognize the right of that part of Canada, serious complications are bound to ensue.

To me the argument of the Minister of Agriculture (Mr. Motherwell) has every appearance of being dictated by the interests of Montreal and other eastern cities. In fact, the whole Hudson Bay railway project is no longer a question of its feasibility, as regards either the navigability of Hudson strait or the revenue producing possibilities of the road itself to the bay, supposing that the strait is open only for a very short period. The project since 1918 has become a part of the great injustice practised on other parts of Canada by this tariff-fed, artificially created, industrial area between Montreal and Windsor. I would like to ask: Does the Minister of

Agriculture or any of the directors of industry or finance—and I will include politics as well —of eastern Canada believe that the people of Manitoba, Saskatchewan and Alberta can be so gullible as to accept the statement that the whole project is now to be held up because someone says that in his opinion, Churchill would make the best outlet? If that engineer, McLachlan, is sure now that Nelson cannot be made a harbour, why did he work for years at Nelson and not tell us so then, but delay his opinion until the demand from the west had become imperative? If the work was stopped in 1918 because Nelson was found to be impracticable as a harbour, why have both Liberal and Conservative governments chosen to lie down under the difficulty without trying to find an outlet in some other place?

If, as the excuse has been given, Canada cannot afford the money necessary to complete the project, why, may I ask, is the Welland canal being proceeded with? That is a project that will entail a cost of, perhaps, $100,000,000 before it is completed. The Minister of Railways and Canals has told us in this House that the Welland canal is being constructed for the sake of the west. If that is so, one-half of the yearly appropriation to the Welland canal would suffice to complete the Hudson Bay railway and terminals, and it would offset the necessity of spending $100,000,000. Surely it would be worth the trial, seeing that the Hudson Bay railway is so near completion. Besides that, let me point out the fallacy of such an argument in the fact that the Welland canal is being constructed on such a scale that it cannot be used to its capacity until another $100,000,000 is spent on locks and canals both east and west of that undertaking. Yet we are told that the country cannot afford to complete the Hudson Bay railway. I repeat: The whole question is one of class privilege. They say in the east too that the bay and strait are not and never will be navigable, and the hon. member for Kings, P.E.I., (Mr. Hughes) has been very brave to-night in throwing out a challenge to us to undertake this scheme ourselves or to invite some other company to construct the road.

Mr. HUGHES: It was the hon. member for Mackenzie (Mr. Campbell) who told me that the west would finance it themselves.

Mr. EVANS: I was just wondering what use the Hudson Bay railway would be to the farmers of western Canada without some control of the Canadian National system as it stands. To that let me reply that if the government will lay the ninety miles of steel needed and will construct wharves sufficient to facilitate the loading and unloading of boats on the Nelson, they can easily test the feasibility of this project by making Port Nelson a free trade port. We could have one free trade port for Canada, and if that were done I think the question would be settled within two years as to whether the straits are navigable or not. This surely will appeal to the hon. member for Kings (Mr. Hughes) and the hon. member for Brome (Mr. McMaster) as well. If the straits are not navigable, then the privileged interests of Montreal and Toronto surely cannot object to making Port Nelson a free trade port. But I am convinced that unless this business is taken in some way out of reach of the directors of politics in eastern Canada the whole project will still be in danger even after the completion of the line and the terminals. Some of my statements may sound rather harsh, but speaking as one who has watched the shuttlecock game of all governments that have been in power since the prairies have been developed agriculturally I wish to serve notice that any party who wishes again to gain the confidence of western Canada and restore the respect in which the politics of any country should be esteemed must now drop any two-faced argument in favour of class privilege and treat western Canada not as a vassal of Ontario and Quebec but as an integral part of the Dominion.

Mr. M. N. CAMPBELL (Mackenzie): I have no intention of making a long address covering the whole ground that has been gone over before in regard to the necessity for completing the Hudson Bay railway or of its feasibility. This latter has been proved years ago. I will rather confine myself to-night to a rebuttal of the arguments that have been advanced by the opponents of the scheme. An hon. member on the Liberal benches referred to railways built in western Canada and he interjected a question in the course of the address of the hon. member for Springfield (Mr. Hoey). The implication of the question was that this government was spending a large amount of money on railway construction in western Canada. That is perhaps true, but not to the extent implied by the question. Last year we voted $27,000,000 for railway construction work in western Canada, and $21,000,000 in eastern Canada; and I think that when we take into consideration the fact that western Canada is relatively undeveloped in comparison with

eastern Canada, the east is getting its full share of railways. And in any case, when we ask ourselves the question why these railways are being built, we must admit that they are certainly no bonus to western Canada inasmuch as we must expect to pay for them. We are assessed to pay for these railways so that they cannot possibly be considered as a bonus to us, as some of the public works and canals built in eastern Canada. The freight that will be handled over these railways must pay the cost. And if we need more railways than we should in western Canada, it is because of past blunders on the part of previous federal governments in surveying enormous areas of land and opening up country that should not have been opened up, at least in this generation. We have sufficient surveyed land in the west to-day to accommodate 50,000,000 people. At the instance, I presume, even of land speculators, great tracts were opened up; a vast area of land was thrown open in the interests of the railway companies and land grafters. Settlers went into these lands, sent there often by the government; and in fact, when land is surveyed, that is practically an invitation to settlers to occupy it. That is the situation in western Canada to-day. But when we come to other expenditures, such as public works, which I might almost be safe in saying are a direct gift to the provinces in which they are constructed, seeing that nothing has to be paid back on account of them, as is the case with the railways, we find that from 1913 to 1923 inclusive there was spent in public works in Ontario and Quebec the sum of $98,916,000; and during the same period the same department spent only some $10,465,000 in the three prairie provinces. When these figures are fairly considered it will be seen what an undue proportion was spent in eastern Canada, while we in the west must pay our share of it.

I was rather pleased this summer when I noticed that the Minister of Agriculture (Mr. Motherwell) had become a convert to the Hudson bay route. I had been somewhat disappointed that session after session we should get no support from the minister, and it was rather pleasing to think that he had come to the support of the project. But when he spoke on the budget some time ago I found that he indirectly opposed the Hudson bay route, so that I was rather premature in congratulating him. The minister uses as an indirect means of opposing it his opposition to the port of Nelson, and he tells us that a terrible blunder was made when Nelson was chosen instead of Fort Churchill. In that connection the Laurier government sent a competent engineer, Mr. R. D. Fryde, to Port Nelson, and another equally competent man, Mr. W. J. Cleaver, to Fort Churchill. When the reports of both were handed in to the Deputy Minister of Railways, Mr. Butler, who was himself an experienced engineer of recognized ability, he decided in favour of Nelson. When the Borden government came into power they somewhat doubted the wisdom of the decision and they made a new investigation; engineers were sent over the ground again, and after the reports were received, Hon. Frank Cochrane also decided in favour of Port Nelson. Going over these reports and summing up the arguments for and against the two ports, I believe that any fair-minded observer must come to the conclusion that after all the decision in favour of Nelson was a wise one. Churchill is often described as a natural harbour, and undoubtedly it is. It is a land-locked harbour, but it is land-locked to this extent, that when the ice breaks up in the spring it is a month or six weeks longer getting out to the ocean than it is in the case of Nelson. As a matter of fact, in the spring when the ice breaks loose in the Nelson river every bit of it is gone long before the ice disappears in Churchill. And Churchill is a very small harbour; at the present time it could not accommodate more than four ocean liners, and it would take a tremendous amount of dredging at an enormous expense to enlarge it. One of the engineers points out that the dredging would be an almost impossible task owing to the fact that there are tremendous boulders that could hardly be handled at all by ordinary machinery. I think therefore that a wise decision was made when Port Nelson was chosen. I conclude therefore that the Minister of Agriculture has not given this matter intelligent study; and in opposing Nelson he is indirectly opposing the whole proposition. Now, Fort Churchill is open only for a very short time during the year. While some claim that Nelson could almost be made a winter port, Mr. Tyrrell, an engineer who did a great deal of work for the government there, points out that with a light ice-breaker ships can go in and out of Port Nelson at any period of the year. Recently I was talking to a partner of J. D. McArthur, the contractor who had a great deal to do with building the railway and the works around Port Nelson. He had spent two years there, and he told me that there never was a time during those two winters when he would dare walk a horse across the channel of the river at the dock, and that an ordinarily heavy vessel would

have very little difficulty at any time in forcing her way through the ice.

Now, the hon. member for Brome (Mr. McMaster) this afternoon raised some arguments about the depth of the channel leading into Port Nelson. I have a chart here, which engineer J. W. Tyrrell very kindly sent me, drawn by himself as the result of a great deal of labour. It shows the depth every few feet from the artificial island out to the mouth of the river. At the dock the water is thirty feet deep, it averages that depth for a considerable distance, in fact that is the minimum depth until we come to what is called the "hump." It appears there is a hardpan ridge just below the dock, and over that ridge there is only twenty feet of water. Immediately after that ridge is crossed, we come into what is called the "deep hole," where ships can ride at anchor in perfect safety in any kind of weather, according to the reports of some of these navigators and engineers. I find that in this portion called the "deep hole," the water is sixty feet deep. After that it becomes shallower until at the mouth of the river the depth is only 26 feet, but beyond it keeps getting deeper and deeper until it runs to 54 feet at the extreme mouth of the river.

I think it was also the hon. member for Brome as well as the hon. member for Kings (Mr. Hughes) who raised the question of silt or mud that would have to be continually dredged to keep the channel open. Anyone looking at the charts drawn by engineer McLachlan and engineer Tyrrell, and reading their reports, will be convinced that this is a pure fallacy. At the beginning there was a great deal of discussion as to how the deposit of mud could be overcome, because the original plan was to build a dock at the edge of the river, between that dock and the channel there would be a mud flat, and the washing of the water would continually fill up the channel with silt. The engineers overcame that by building an artificial island right out to the very edge of the channel. So that objection no longer holds good. Engineer Tyrrell tells me in a letter which I have received from him that the whole channel from the dock to the mouth of the river is hardpan, and he adds that owing to the speed of the current it is absolutely impossible for any silt or sand to be deposited in that channel.

Mr. McMASTER: How wide is that channel?

Mr. CAMPBELL: At the dock it is 3,000 feet, a little more than half a mile, and it keeps broadening out until at the mouth it is several miles wide. He points out that the mean velocity of the river at the dock is eight knots per hour, and when the tide is going out it is ten and a quarter knots per hour, and that with such a speed, combined with the great volume of water, it is absolutely impossible for any silt or sand to become deposited in that channel. Therefore I think we ought to be convinced that the engineers at that time used good judgment in choosing Port Nelson instead of Fort Churchill. In this particular regard I should like to quote from an editorial in the Saskatoon Daily Star. I might point out that this is not a Conservative paper, it is not a Progressive paper, but it is a very consistent supporter of the Liberal party, and particularly of the Minister of Agriculture (Mr. Motherwell). Yet this is what it says in its issue of April 9:

> "Motherwell for Churchill terminus." So reads the most discouraging and irritating headline that has appeared in a western newspaper for many months.

After some further observations the article continues:

> Thus spoke Mr. Motherwell in the House of Commons in April, 1925. The same gentleman told a different story in September, 1924. He was then in Saskatchewan and had just returned from a trip to Port Nelson. Speaking at Prince Albert, he said:
>
> "Twenty millions have been spent on the road, and it would take about $5,000,000 to complete it to Port Nelson. It is the logical thing to go on."

Further on it quotes the minister as saying:

> "It will take over a year to put the road in shape from The Pas to Kettle rapids, a distance of 332 miles. After that we will be ready to tackle the last 92 miles into Port Nelson. The time limit for completion will depend upon how our budget balances during the next session."

Then the article proceeds:

> Not a word about Fort Churchill did Mr. Motherwell utter. His remarks in September, 1924, did not indicate that the place even existed. But in April, 1925, Mr. Motherwell wonders why Port Nelson was ever chosen as the terminus. Fort Churchill is the only logical choice. At any rate, the point is at least doubtful and ought to be cleared up before construction continues.

There are some further observations, not very flattering to the Minister of Agriculture, particularly when coming from a Liberal newspaper, but I will not weary the House by reading them.

Now, Engineer Cowie, who was an employee of the Montreal Harbour Commission, has already been quoted this afternoon. He has been quoted by the press as saying that there was not a single obstacle in the development of the Hudson bay route that had not already been overcome in the St. Lawrence route. That is the word of an engineer of recognized ability living in Montreal. It raised

such a storm in that city that demands were made by some local newspapers for his professional head in a charger. So you can see what an engineer has to contend with in any part of eastern Canada, particularly in the city of Montreal when he dares speak the truth about such projects. I must admit that in the province of Ontario the prejudice is not so strong.

The Prime Minister—I am sorry the right hon. gentleman is not in the House, for I feel rather guilty in making these remarks in his absence—the Prime Minister in his tour of western Canada last summer spoke very hopefully of the Hudson Bay railway. He did not raise any of these objections that his colleagues are raising now. He rather gave the people the impression that he was quite in favour of it. He pointed out that the government intended to build the Hudson Bay railway just so soon as financial conditions would permit, and that when the government brought down its financial programme it took the members of its own party into its inner councils and discussed this and other matters with them. He added: When these things are being discussed where are our Progressive friends? Why, they are secreted off in a room by themselves. He added that the moral was plain, and he wound up by saying, "I ask you to think this matter over between now and the next general election". Now, what was the implication of the Prime Minister's remarks? Was it not a direct invitation to the people of western Canada to support the Liberal party and elect Liberal members, whereupon they would have a chance to secure the Hudson Bay railway? I do not like to use the word bribe, but his invitation to the people of western Canada looks very much like it. I may say to his colleagues that there are a number of hon. gentlemen in this section of the House who would probably like to attend their caucus, and I think some of us here would be glad to see them do so, for the quicker they go there the quicker we here will know where we stand. But perhaps their constituents may have something to say about that.

The hon. member for Kings, P.E.I., (Mr. Hughes)—and I would just like his attention for a moment; I do not want to criticize his remarks when he is not listening—made the statement that the Hudson strait was full of very heavy ice every month in the year. Now I hardly think the hon. gentleman was serious when he said that; perhaps it was a slip of the tongue, because he dealt with the question in a very fair manner. But if, he says, the straits are full of heavy ice every month in the year, a ship could never go in there at all; yet ships are going in and passing through there every season.

Mr. HUGHES: That is the report of the commander of the Neptune. The report will bear that out.

Mr. CAMPBELL: I understood it to be the hon. member's own opinion. If I misunderstood him, I beg his pardon for it. Now, I may say that an engineer, Mr. J. W. Tyrrell, was employed by the Laurier government to go up to the straits and to investigate the situation thoroughly from the standpoint of their navigability. He moored his vessel inside the strait; according to his report, he took up a position in a rocky cavern 400 feet above the level of the sea and he spent the whole winter there. In his report, which is a very comprehensive and illuminating one —and I would commend it to the attention of the hon. member for Kings, P.E.I. and also to the hon. member for Brome because I think the hon. member for Brome made the statement that the straits were not navigable for more than three weeks in the year—

Mr. McMASTER: Three months.

Mr. CAMPBELL: Three weeks, I think, is what the hon. member said.

Mr. McMASTER: No, no, pardon me; I never said anything of the sort. What I did say was that the straits were, on the outside, not navigable for more than three months of the year.

Mr. CAMPBELL: I think the hon. member said three weeks first; probably he qualified it later on.

Mr. McMASTER: I said six weeks to three months. I try to be careful about what I say.

An hon. MEMBER: The member for Lunenburg said three days.

Mr. DUFF: Hear, hear. Quite right, and I can prove it. I will do so before I get through.

Mr. CAMPBELL: This engineer, J. W. Tyrrell, stated that there was no time during the whole winter that the ice was not constantly on the move, and that there were open spaces through which a vessel could pass in all except two months of the year January and February. Again with regard to Nelson, Mr. R. D. Fryde states in his report—I have the quotation here—that with a light ice-breaker Nelson could easily be kept open all winter. So I think it is unnecessary to discuss the question of feasibility or otherwise of the project. The whole question before us is whether

the government intend to build the railway or not. That is the whole question, and I am going to be frank and say I am quite convinced, after being four years in this House, that the government has firmly made up its mind it is not going to build it, but if it can keep the project dangling before the eyes of the people of western Canada for another generation or two and thereby get a few votes, it is going to try to do so. I think the proper and commendable thing for the government to do is to come out plainly, state its position and relieve the Minister of Agriculture (Mr. Motherwell) of some responsibility, and some embarrassment—and say just whether or not it ever intends to build this railway.

10 p.m.

Mr. T. H. McCONICA (Battleford): Mr. Speaker, I have no disposition to delay the House or to prolong this discussion. I wish however, to associate myself with those who have favoured the construction of the Hudson Bay railway. I make no pretence to personal knowledge as to its feasibility, but the people I represent are intensely interested in the building of the Hudson Bay railway. They have been taught to believe that the project is feasible; moreover, they cannot comprehend how the government should have spent $20,000,000 on a thing that is absolutely impracticable during the whole of the year except for three days, as one hon. gentleman, I think, suggested. Now, western Canada, the part of it from which I come at least, will never be satisfied until this road is completed. They will never understand where the business sense of the government is that spends $20,000,000 and then walks off and leaves the whole thing to fall into ruin and decay. It seems to me it would be the practical thing, the reasonable thing, for the government to take some substantial step this year toward the completion of the road.

Mr. THOMAS SALES (Saltcoats): Mr. Speaker, I had no intention of taking any part in this debate until I heard some of the comments made by the hon. member for Kings, P.E.I. (Mr. Hughes). He quoted a report to show that on the 21st of July there was ice—strong, solid, northern ice—and also in September. A year ago last summer I crossed the ocean to the Old Country. It was not through the Hudson bay; it was through the St. Lawrence; we counted thirty-seven big icebergs that we could see with the naked eye—thirty-seven in one day; and I assure you they made the atmosphere pretty cold. I have no doubt that they were big, solid, northern ice.

Mr. BANCROFT: What time of year was that?

Mr. SALES: We sailed from Montreal about the middle of July. So that ice at that time of year is evidently not confined to Hudson bay. A year ago the member for Lunenburg (Mr. Duff)—or was it two years ago?—had a number of photographs that he passed round in this House to show what the conditions were in the Hudson bay. If I had taken all the photographs of snow and ice and frost and all the things that have happened in Saskatchewan during the time I have been farming there, I could prove without doubt that it is not a fit place to live in, much less to grow anything in. We have had seasons when we never started work until the middle of May; hon. gentlemen sitting around me know that.

Mr. DUFF: When did you have the next snow after that? Did you have snow all summer?

Mr. SALES: Every month, in one year.

Mr. DUFF: All the time?

Mr. SALES: I will tell the hon. gentleman as I go along. On the 15th of June, 1915, when the wheat was about a foot high, it was frozen down to the ground, but we had a good crop. I am not like some hon. members in this House who talk of the blackest things they can think about and forget the good ones. We had a really good crop in that year, in spite of the frost. We had a frost in July, and still we had a crop. We had frost in August—that is a common occurrence; and we had snow in September. I have seen good snowstorms in September, time after time—and, as an hon. member reminds me, some of the wheat was standing uncut at the time. We have had our crops frozen time after time. We have had snow in October that did not go away until the following srping. What do all these things prove? Nothing. In spite of them all we can live in Saskatchewan; we can grow big crops in Saskatchewan of the finest stuff ever grown in the world. These things do not prove anything any more than the arguments of the hon. member for Kings, P.E.I., prove about the Hudson bay, in my opinion. If I wore the same kind of spectacles that the hon. member for Kings, P.E.I., wears, so that everything looked blue or black, I could prove that the part of Saskatchewan from which I come is not a fit place to live in.

It is certain that, as the hon. member for Battleford (Mr. McConica) says, this question will not die down with our people until the

road is built to tidewater and a fair trial given to the route. This railway will be built if the people have to build it themselves. I was at the great Farmers' Convention held in my province last January. A number of farmers were discussing this question of the Hudson Bay railway and its completion, and they asked me what I thought about it. I said "Do not fool yourselves. In my opinion it will never be built as long as the east controls the situation." One man said "Do you believe that?" I said, "I do." Then he said, "We will have to do this then. During the war we raised a lot of money for what we called a patriotic acre fund. We each gave one acre of wheat to that fund and we sent forward train loads of flour. Now, what would be the matter with doing the same thing in order to finish the Hudson Bay railroad?" I said, "You will get it built a good deal quicker if you do that than if you wait for the east to build it for you, in my opinion." I pointed out to them that one-half of one per cent—they are used to that being taken as shrinkage when they ship grain through the elevators—on a crop of 300,000,000 bushels at $1 a bushel would give $1,500,000 and at $1.50 a bushel would give $2,500,000, to say nothing of barley, oats, cattle, hogs, butter, and eggs, all of which would be shipped by this route if it proved feasible. I want to say to this House that if our people get hold of an idea like that they will surely bring it to a successful conclusion. May I appeal to our friends in the east. The Prime Minister made an appeal to us the other day to be fair to the rest of Canada. May we not appeal to gentlemen all over the rest of Canada to be fair to the west. Why not go a little further? Having spent so much money, having so much material lying idle at tide water as we hear time and again, having enough rails lying in the sidings to practically finish the road, without spending much more money for material, why not go a little further and reach tide water and prove whether this route is feasible or not? If it is not we will have to forget it. I would also like to say this to the members of the House: The idea is prevalent among many people in the west that if our friends who oppose this road so strenuously were absolutely sure that it would be a failure it would have been built years ago. But they really are afraid it will prove a success. That is why they are so determined to stop the road from reaching tide water so long as they possibly can. Now that idea is being held in the west, and the prevalence of ideas of this kind among the people there does not make for good feeling and unity in a country like this. Therefore I hope hon. members will give this project their serious consideration and support.

[Mr. Sales.]

Hon. W. R. MOTHERWELL (Minister of Agriculture): Mr. Speaker, let me at the very outset say that I am of the opinion that this great national project has gone altogether too far, and the national honour is entirely too much at stake, to even suggest that we repudiate the undertaking at this particular stage. If, when British Columbia entered confederation under a promise to be connected with the rest of Canada by a great transcontinental railway, Canada had repudiated the obligation what would that province have thought of it? At the time the Maritimes entered confederation the promise was made that the Intercolonial railway would be constructed. If Canada had defaulted then what would the Maritimes have thought of that failure on Canada's part to live up to its promise? And so with the present undertaking begun by a Liberal government, and carried out later by a Conservative government, and the leader of every party in Canada pledged to it, is it an enterprise that we should now talk of abandoning when 80 per cent of the road is constructed? It seems to me that would be an amazing proposal?

Now then a word or two, because I have a few more things to say, with respect to one or two members on the Progressive side. I think I am just as strong an advocate of the Hudson Bay railway as they are, and I am just as strong an opponent of Port Nelson as anybody on this side can be. They think such an attitude is contradictory; they cannot conceive of a person having different views regarding the same project without being inspired with the desire of deliberately blocking it. What would my hon. friends have said of the difference of opinion among the authorities at the time of the construction of the Canadian Pacific railway when that line was built?—some being in favour of the Pine river pass and some in favour of the Kicking Horse pass. As a matter of fact it was switched from one to the other after the road was begun. But what would have been said at the time if one side was charged by the other with blocking the enterprise because they differed as to a certain pass through which the line should run? What would have been thought of some of the great leaders in the world war because they differed as to the tactics to be employed in the field if such a view as that prevailed? Why the great generals would have been charging each other with un-

fairness and disloyalty to the common cause. Men who have exactly the same objective but think that a different course should be taken can surely disagree as to the procedure. It is not the way to get results to upbraid each other because one man differs from another as to the procedure to be employed. I think there are only two hon. members on the Progressive side who have adopted such an attitude, and I want to thank all the rest for not following their example. I did not hear what the hon. member for Dauphin (Mr. Ward) said but as he is a decent sort I am going to assume that he did not say what the other two hon. members to whom I have referred did. The hon. member for Mackenzie (Mr. Campbell) and the hon. member for Saskatoon (Mr. Evans) acting true to form, threw out suggestions that my motives were not sincere. Well, I do not know how much I am going to be hurt by that sort of insinuation. At all events I am going to take the risk of any hurt that may come to me and let it go at that. I cannot, however, refrain from remarking that any member who is always suspecting and impugning the motives of others had better be careful that he is not guilty of the very thing he is charging others with.

As to the quotation from the Saskatoon Star it is substantially correct. When I was up in that country last season, that is in 1924, I ventured as far as Kettle rapids but regretted very much, as I explained the other day in the budget debate, that I could not get further. I gave the reason why. That should have been a sufficient explanation. Everywhere I went I heard from the trapper, the miner, the engineer, and they were all amazed at Port Nelson being selected. It set me thinking but not sufficiently to make me change my mind regarding the choice of Nelson. I thought it was natural perversity on the part of some people when the government was giving them a certain thing to want something else—we see that sometimes. I still tried to believe in Nelson because I wanted to believe in that harbour; I knew that we would waste a lot of money if the line was not completed to Nelson; and desiring to believe in Nelson I came back. I may have made a mistake in saying anything. On my return I noticed that the other gentlemen who came back from the bay, the most of them from Manitoba, did not say very much. Still it was difficult to return through the northern part of the province of Saskatchewan without giving some impressions of your trip north, and I gave them. At that stage of the game I had not sufficient information to warrant me in throwing any doubt upon the feasibility of Port Nelson. On returning I came down the St. Lawrence, and upon reaching Ottawa I proceeded to look into the matter further. I gave the evidence which confirmed the opinion I was beginning to form, and nobody has challenged that evidence. Even the hon. gentlemen who have imputed motives to me have nothing to say against it. If that is the case then their case is very weak indeed. The evidence upon which I based my opinion was taken from the records of those who were supposed to know the facts, navigators and mariners such as Captain Bernier and others. I perhaps made the mistake of the medical man who arrived at his diagnosis after only half an examination; then after the second half of the examination found the diagnosis had to be changed.

Mr. KNOX: Does the minister mean to say that the governments who started the work at Nelson and afterwards carried it on there did not have before them the same evidence to which he alludes?

Mr. MOTHERWELL: I do not know what evidence they had; I can only be responsible for my own conclusion. I am old enough in this world to know that the same evidence will cause different people to arrive at absolutely opposite conclusions.

Now let me just state some of the reasons for the opinion at which I have arrived. I do not like reading but nevertheless in a case like this we have to give our authorities. Here is what Captain Anderson said, according to the report of the Senate committee, and there are some other authorities whose opinions I should like to have placed on Hansard. I am going to give them now because I did not give them the other day. I know Captain Anderson very well. I live in the same house with him and have for the last three years. I have had many conversations with him. He says:

> The shores at Port Nelson are all low with a thick growth of small trees. The inner part of the harbour is very shallow from Seal islands to Rock creek, where the port is 3½ miles wide. The bottom is very uneven, with huge boulders that uncover at low water.
>
> Mr. Stewart, also, in his report of March 31, 1911, gives one or two instances where vessels were unable to discharge at Nelson in view of the heavy seas. In one case a vessel for forty-eight hours had to steam full speed ahead with both anchors down with a heavy sea breaking on board. After remaining in the vicinity for ten days the vessel had to proceed to Churchill to discharge her Nelson cargo.

I take the ground, Mr. Speaker, that if we make a mistake and go to the wrong harbour,

it is all off for this generation. We will have difficulty enough in getting to the right harbour without making a blunder and going to the wrong harbour. That is the reason why I want to make quite sure that there is a better harbour than Port Nelson, and I believe there is.

Now I refer to the evidence of Mr. D. W. McLachlan, to be found at page 26 of the report of the Senate committee. We have heard of this gentleman before. It is said that he has changed his views. However, that is permissible. Here is what he says in his report, speaking of Churchill:

> In making the port I would have had a picnic at Churchill as compared with the difficulties which we have had at Nelson from the engineering point of view.

He speaks of it as a picnic. I quote from each authority. This is from Mr. McLachlan, and here is what he says about the dredging:

> The amount of dredging we have done at Nelson is inconsiderable compared with what we have to do. The equipment we had at Nelson was not at all suitable for the work we had to do. For years, even since the war broke out, we have had the greatest possible need for a couple of dipper dredges and the government would not buy them. They said the war is over and we do not want to incur additional expense at present. The result is that we have been fiddling with the matter of dredging and we have not made any real attempt. I say the cost at Nelson would be two and a half times greater than anywhere else for anything done in the way of dredging. We cannot tell what it would cost, and what it has cost is no criterion of what it will cost.

Mr. DUFF: That means it would cost more.

Mr. MOTHERWELL: Yes. Nobody can tell what it will cost. What it has cost in the past is no criterion of what it will cost, because of the shifting nature of the channel. I do not think Mr. McLachlan has changed his views in that regard.

That is as far as I go with Mr. McLachlan. Now we have a Hudson bay explorer and navigator by the name of Freakley. At page 38 he says:

> Nelson is not a natural harbour but an open roadstead.

Hon. gentlemen from the Maritime provinces might tell me what that means. Captain Freakley continues:

> The vessel lies in the river about one and a quarter miles from the shore and the freight is lightered to the land.
>
> One is a natural harbour and the other is artificial.

We have had some experience in building artificial harbours in this country. We have some harbours. Great mistakes have been perpetrated apparently on account of mistaken advice by engineers. I have every respect for engineers, but have more respect for navigators. I refer to that famous pier in Halifax. I do not think there is a finer harbour in the world than Halifax, and yet a great blunder was committed in regard to the construction of a certain pier. We have another such harbour—I almost hesitate to refer to it—the outer harbour at Victoria—just a parallel to the one at Halifax, and all kinds of money thrown away on it. It was done precipitately and in a hurry. Are we going to repeat all this performance in the face of the statements I have quoted?

Mr. KNOX: Does the minister say this has been done in a hurry?

Mr. MOTHERWELL: Yes, so far as Nelson harbour is concerned, as I will show very soon.

Mr. KNOX: This matter has been pending since 1910..

Mr. MOTHERWELL: I refer to the switching through there and the various steps that have been taken. I say if these other illustrations which I have given are bad, this is ten times worse as a harbour proposition. Now what are some of the requisites of a harbour? Hon. members will pardon me if I make some mistakes in this matter, because I have lived inland all my life and have not had an opportunity of scenting the salt sea breezes very much, but from what I have read, I think we should have enough land and enough water to build a harbour. Now have we enough of either? In the case of Nelson we would have to build away out into the water, over half a mile, erect an artificial island for a harbour and put elevators on it. We are asked to build a harbour, with all the other risks involved. We must deliberately take the risk of not having enough land to start with, and certainly not enough water. The water there is shallow and low, and then we have all those sand bars to contend with. Surely it does not take a mariner to understand that you must have abundance of both these essential requisites, water and land, to build a harbour. What does a harbour mean? Does it not mean a sheltered place for ships at anchor? Where is the shelter here? Leave the other requisites out of consideration and where is the shelter? Then there is a shortage of land. We would have to build an artificial island. It could be done; it has been done and it can be done again, if you like to put money into it, but how about the question of water? Shipping is only an indifferent proposition if you have not the water. In addition to the water you require a place to shelter the shipping. Where is the shelter here? Does anybody pretend

there is any natural shelter? Is it a land-locked harbour? Does it resemble Prince Rupert, one of the finest harbours? Is it surrounded by any conditions to make it a land-locked harbour or anything of that kind? I do not see anything on the maps or nobody has shown me anything to indicate that it is a natural harbour. There is nothing there to constitute a shelter any more than the morning mist could be said to provide a shelter. The most important requisite for a harbour is shelter, where ships are anchored, not only to discharge their cargo, but for the purpose of getting out of the storm. I do not know where there is any place to get out of a storm at Nelson. I have been on the prairie nearly all my life, and I think I see myself hunching up against the storm, with nothing to shelter me beyond what they have at Nelson. I would not be comfortable for the night.

Then again, while we are short of land at Nelson, short of water and short of shelter, we are long on dredging. I have given you all these facts; now need I go any further into it? Just think of it, with the Nelson pouring down its waters and sludge for the last century, and it will continue to do so for centuries to come, pouring out water and sludge and meeting the tides from the ocean. There is a place there—shall we call it the dead centre? There is bound to be an enormous quantity of precipitation there. Our own judgment will tell those of us who know anything in particular about the Saskatchewan river that that channel will be shifting, perhaps not every year, but almost every year. In face of that, if you want to make a job for dredges—and anybody who ever saw government dredges at work knows that it takes very little to keep them going sometimes; they go pretty slowly to my mind, at all events—there you have it from now until the crack of doom. I do not see how you are going to get away from that, and yet hon. members upbraid me for mentioning these things. If we make the mistake of not going to this natural port, the project is all off in our life-time. I want to see it while I live and I do not want to take a step that will lead in the wrong direction. We shall have to take risks, but there is no need to take the ghastly risk associated with Port Nelson. If anyone wishes to criticize me, let him criticize me on these facts and not on my alleged motives. I think I have as much right to be credited with being sincere as anyone else in this, and I do not see why this should be otherwise. My whole life has been spent in the west and I expect to spend the balance of it there after I get through here.

Mr. LADNER: What are those alleged motives?

Mr. MOTHERWELL: It is not worth while repeating them. I just referred to them a little while ago. It is pretty hard to put the X-ray on any hon. gentleman and to tell what his motives are, and I do not care to repeat them. I will tell my hon. friend afterwards. Let me go further. This is what Captain Bernier says regarding Churchill:

> I should prefer Fort Churchill, because a ship can come in and she is in a harbour. In Nelson, you have to anchor away out; before you get a chance to come in you have to contend with all that danger. Suppose you dredge there and next spring is an exceptionally fine spring and there is a heavy thaw. Your channel is filled up with sand and the channel is somewhere else. The work that you have done is lost. At Churchill you have a big body of water. Of course, some dredging would have to be done. It is land-locked. There (indicating Fort Churchill on the map) is the work of nature, and when a man has to work against nature there is no money in it.

We have evidence as regards artificial harbours, but as Captain Bernier says in his evidence before the Royal Grain Commission, Canada is too poor to keep up a port like that. Does any lover of the Hudson bay project wish deliberately to shut his eyes and blunder into Nelson with these incontrovertible facts before him? I do not agree with all that the hon. member for Kings, P.E.I., (Mr. Hughes) or the hon. member for Brome (Mr. McMaster) say, but the sticker, especially with the hon. member for Kings, was Nelson. He knows what a harbour is; he lives by the sea, and he took some of the statements of hon. gentlemen opposite to prove that Nelson, in his estimation is, on that evidence, no good. Consequently, the great difficulty, in my opinion, in persuading eastern Canada that we should go ahead with this project is the impossibility of Nelson as a practical harbour. What is the use of going there if we are going to run into a lane with no gate at the end of it? I do not agree at all with the deductions of the hon. member for Brome. He took the ground that he did not think the Hudson bay would be open for more than three months at the most. He suggested from six weeks to three months. Captain Bernier takes the ground that it will be open for four months, and he has given in evidence that if you have radio, with all possible aids to navigation and with 10 per cent, if you like, added to the cost of construction of the ships by having proper plating, there is no doubt the time will be extended to four and one-half months. The statement has been made in the eastern press, not with any desire to mislead, but simply because they do not know anything about the matter,

that you cannot get the grain out the same year it is grown. That is the very year you will get it out. If they took the ground that it is not practicable to store grain there because you might have to wait until July of the next year, there might be some justification for that. But if you will investigate when our wheat starts to move from Montreal, you will find that it is about the 1st September or the last day of August. Our wheat will be moving from Port Nelson or Fort Churchill, whichever port is constructed, as soon as it will be moving from Fort William and ten days before it will be moving from Montreal as it has a thousand miles further to go to get to Montreal. Consequently, the movement of the grain that is grown the same year will start from either Port Nelson or Fort Churchill, whichever one is finally chosen, ten days before the grain will start across the Atlantic from Montreal. How much longer is Montreal open in the fall than either of those harbours? The most that is suggested is about a month and ten days. Some suggest that it is not safe to operate Hudson strait later than the 1st November. Captain Bernier, in his evidence, said the middle of November, and if we take the latter date, it will be closed about twenty-five days earlier than Montreal will be closed. If you deduct from that the ten days, that leaves fifteen days, so that you have only about fifteen days longer to transport our wheat from Montreal than from Hudson bay in the same year in which the wheat is grown.

On the other hand, I do not look forward to its being as good a storage place for grain over winter as the grain storage such as we have at Fort William. There is no doubt that some grain will have to be kept in storage there until the following July or the first of August, and that is where the long storage and interest charges will come in. But if we can get a quantity of our wheat out in the same year as it is grown, that is going to help the peak load when the grain is rushing to Buffalo, Montreal and Vancouver. That is the time when this outlet will be most required, and not in the spring of the year. The other routes can easily take care of the wheat in the spring of the year; but if we go on developing as we may and should develop, we should produce sufficient cargoes to keep the Hudson bay route going at full capacity, without taking away a bushel from Montreal, or Buffalo or Vancouver. Every railway that I have seen developed in the west during the last forty years has invariably produced its own tonnage. It caused so much additional development that before the road or outlet was completed, enough additional settlement and development had taken place to produce freight for the new outlet and the new line. That has been our experience with the Canadian Pacific, Grand Trunk, Canadian Northern and all the other lines that have been built in that country. They have produced their own freight. I do not know to what extent the suggestion of the hon. member for Saltcoats (Mr. Sales) is warranted, that it is the fear that this route will be a success that is actuating some people in opposition to it. Let me say to all such that the way to develop all our ports is to develop the country tributary to them. The great bulk of the grain, in my opinion, for many years will come down eastern routes, either by Buffalo, or by the Welland canal when it is completed. because there is no doubt, in that event, the attraction will be more and more for Montreal. But before that is brought about, a great deal more storage accommodation must be provided at Montreal, or Port Colborne, or Brockville, or Prescott, or wherever the transfer is at the present time. There is twice as much grain elevator storage at Buffalo as there is at Montreal.

So far as the right time in the matter is concerned—that is the substance of the resolution—I have nothing to say. As to when the road should be built, I do not know what the Minister of Railways (Mr. Graham) will have to say on that point, but naturally he wil speak for the government. I am merely dealing with the practicability of the route, leaving the matter of time, which is the essence of the resolution, to the Minister of Railways. You will remember that this great project was first undertaken by the Liberal government under Sir Wilfrid Laurier, who was reported as saying that while there might be some question about the practicability of the Hudson bay route it was the price we had to pay for a united Canada. And has not many a thing been done towards that great end? The price of united Canada was paid in the building of the Canadian Pacific railway, which had just as much an element of doubt as to its future success as exists in relation to the Hudson Bay railway to-day. Did you ever hear of any great project that has been undertaken at any time, whether it be the Suez canal, the Panama canal, the Canadian Pacific railway or any other great enterprise, in regard to which there were not many people who were in honest doubt concerning its success? And so it is with this.

I am not going to upbraid my Liberal friends from the east for holding different views, although what they get is naturally coloured a little with eastern sentiment. Some of them have pretty sound views on marine matters generally, and if they take the evidence in regard to Nelson they are only coming to the same conclusions which I, a western man, have reached so far as that particular port is concerned. I understand that a deputation is on its way to Ottawa now, and in the main I think they are doing useful educational work in the furtherance of the project. But I would advise them not to be quarrelling with everybody if they want to get anywhere. When they find some of their friends holding different views from their own as to the way to attain the object in view they must not be inclined to quarrel. I say without any equivocation that to go to the wrong port at this stage would be fatal. There is no reason why there should be any delay about making a further investigation. There is more than a year's work ahead before we can reconstruct the work to Kettle rapids. There is a tremendous amount of construction work to be done also along the way not only on the road itself but on the telegraph line from mile 214 to Kettle rapids, a distance of 116 miles, and that must be done concurrently with the reconstruction that takes place. If it is desired, a further investigation can be made as to the respective merits of Churchill and Nelson, and if that investigation confirms Nelson then there is nothing for it but to go there.

But have we no additional information recently at all? Well, I remember hearing of the storm that took place a short while ago and I thought at the time that it was only propaganda; for I had been just as suspicious as any hon. member on the Progressive side regarding every move in connection with this undertaking, and when I saw that news despatch in the papers across the country I thought to myself that it was more propaganda. But I did the report injustice because there was a serious storm; and while I will not go into any of the details—there was nothing harowing about the information to hand in March—I know that some of the more recent reports are rather disconcerting. At any rate there was a storm and the dredges and ships mustered in that so-called harbour were torn from their moorings. I do not know where they went but they are being rounded up now anyway. Is that a harbour? I thought a harbour was a sheltered place for shipping, but of course Nelson is not yet finished; there has been only some $6,000,000 spent on it so far. But I am told that all the evidence goes to show that Churchill is better in a state of nature than Nelson is now or can be.

There is another feature about the matter which we might well ponder, and that is that the present undertaking at Nelson, that is to say, the building of a trestle away out to the artificial island, is not the first step that has been taken; the first step was to construct a lock inland and draw the water into it. A large sum of money was spent towards that end, but it was found that it would be better to build this trestle outstream than to try to get the water into this dock. So that there has been a change of views in this regard; they can now see some way of getting out to the channel. But for the life of me I do not know how they are going to keep the channel in its place.

I will not dwell on this point, but I do want to urge this question. Is it not a matter of national honour at this stage to push forward with the reconstruction work to Kettle rapids having regard to what has already been done? As the hon. member for Kings indicated it would mean a tremendous lot to us if we could get to Churchill—and that is where we shall get—and it proves successful. You cannot describe what it will mean to the west. Is it worth while trying? Is it any greater risk trying that than there has been in connection with any other great project? I do not believe it is; and with the road 80 per cent built it would be a huge blunder to turn back. "No man having put his hand to the plough and looking back is fit for the kingdom." That is what this would amount to, figuratively speaking at all events.

I have not said anything about aids to navigation. I have crossed the Atlantic only once but I have seen icebergs, and if the pilot had been so inclined we might have butted into them at any time, for there are scores of them in the north Atlantic. But does that say that we could not cross the Atlantic? We have heard of the Titanic going down, but surely they did not go deliberately head-on into an iceberg. And because the Titanic went down is that any argument in condemnation of the Atlantic? Not at all. With the marvels that have been attained through the radio, and with all the various fog signals and lighthouses that exist to-day, navigation is fairly safe. Look at the equipment on the St. Lawrence. I was at Prescott this winter where I saw a large building devoted to the manufacture of equipment used along the St. Lawrence route, and it was wonderful. So that there is no comparison between what can be accomplished to-day, even in dangerous

seas, with what was done a few years ago. The man at the wheel and the pilot are constantly within earshot of the voice of danger, and by means of modern equipment they know just where the ice is; and they are not going to butt their heads deliberately against any iceberg, or run carelessly into any other danger.

In conclusion, my suggestion is this: We must reconstruct the road as rapidly as possible to Kettle rapids, because no road will ever stand still; if it is not constantly repaired it will rot. And certainly this road will not remain as it was six years ago; it is in process of disintegration continually. If we only spend a few thousand dollars every year on it we might do that for a century and get nowhere, because the work will be deteriorating as rapidly as we can repair it. We should therefore at least go as far as Kettle rapids, our resources permitting, making it possible to connect with mile 214; and we should see to the reconstruction of the telegraph lines which are pretty well dilapidated, as well as to the restoration of the road, which has been heaved up by the action of the frost where the water accumulates. Well, this is being done. There is no occasion for delay, as my hon. friends from Saskatoon and Mackenzie suggested. If it is desired that further money shall be secured for that purpose, concurrently with reconstruction of the road to Kettle rapids the investigation could be undertaken. It has often occurred to me, Mr. Speaker, why what I am going to suggest has never been done. Would it not have been the logical thing—I do not want to upbraid those who have preceded me, but it seems to me, as every farmer knows, that there is nothing like trying your plough or your binder in the field under field conditions before passing judgment on it—would it not have been the logical thing, and comparatively easy, to load up one or two Atlantic liners, or as large boats as could in safety navigate these comparatively unknown waters, with wheat, take the cargo up the Labrador coast, through the straits and, if you like, on to Fort Churchill, and, further, if you like, see how close you could get to Port Nelson, and then see how long it would take to reach Liverpool? Would that be a foolish thing to do? I cannot think so. Please do not rise up in holy indignation at the thought of something being done to make a little surer than it is to-day whether we were right in going to Port Nelson. Surely this is a case where "safety first" should to some extent determine our further action, where we should look carefully before we leap, in order that we do not jeopardize the whole enterprise by a mistaken step at this time, particularly when this investigational work can be undertaken concurrently with the construction of the last 116 miles of the road.

[Mr. Motherwell.]

Mr. J. L. BROWN (Lisgar): Mr. Speaker, when I listened to the speech of the hon. Minister of Agriculture (Mr. Motherwell) on the budget, in which he threw doubt upon Port Nelson as the proper terminus of the Hudson Bay railway, I experienced a great deal of disappointment, particularly as I had just returned from a very largely attended meeting at Winnipeg called under the auspicies of the On-to-the-Bay Association. Any person who attended that meeting would certainly be impressed by the strength of feeling that prevails in the city of Winnipeg in favour of the Hudson Bay railway. I repeat, I was disappointed when I listened to the Minister of Agriculture, because at that meeting Port Nelson was spoken of with great commendation and in no uncertain terms, as I judged, by men who were in a position to speak with knowledge and authority on the subject of which port should be the terminus. I did not attribute any such motives to the hon. minister as some have seen fit to do; I had no thought of attributing to him any ulterior motives whatever. Indeed, I felt that probably he was speaking his own sincere convictions in the matter. None the less, I did feel that he was making a mistake at the time, and I think he will not accuse me of being unfair, of charging against him anything I should not charge, when I intimate that he might have made a mistake in throwing doubts upon the selection of Port Nelson as the terminus of this railway.

Mr. MOTHERWELL: I might have made a political mistake, I agree. I often do that.

Mr. BROWN: I am not speaking of a political mistake, but a mistake from the standpoint of securing completion of the road at the earliest possible date. I think it was a mistake, not that I would be disposed to criticize very severely the comparisons that have been made between Port Nelson and Fort Churchill in their natural state. Indeed, for many years I was disposed to think, as the hon. minister has expressed it, that Fort Churchill was by all odds the most suitable port in its natural state. However, we have to consider the question now, not with those ports as they were twenty years ago, but in their present state; and in view of the fact that a large development has taken place at Port Nelson, that steel has been laid within ninety odd miles of that port that the grade

is constructed for the remainder of the way, and that a comparatively small amount of money would be sufficient to lay the rails and perhaps subject the road to an actual test, it did seem to me that the minister was making a mistake in introducing at this particular time the question of the relative merits of Fort Churchill and Port Nelson. From charts I saw exhibited at Winnipeg a few weeks ago, I judge it would require the construction of a good many extra miles of railway to reach Fort Churchill. I am not certain at what point the branch-off to Fort Churchill would leave the existing grade, but I think probably it would mean the construction of at least another 150 miles of new line.

Mr. MOTHERWELL: About 100 miles.

Mr. BROWN: It was shown also that the line would need to be constructed over a high ridge, involving a heavy grade to reach the top of the watershed, of course running down after that point into Fort Churchill; whereas the existing grade runs along the side of the Nelson river and is down grade all the way. For these reasons I felt it was a mistake on the part of the minister to introduce at this particular time doubts regarding the feasibility of Port Nelson as the terminus. After I came back from my Easter holidays I began to hear the people were imputing motives to the minister, but it had never occurred to me that there were any other motives than simply his desire to express his own personal convictions in the matter; but, as I say, I did feel that he had made a blunder in introducing these doubts at the present time.

I believe that a comparatively small amount of money will suffice to lay rails on the existing grades, and with the development that has already taken place at Port Nelson the road could be put into a position where a test could be made, and so demonstrate beyond any manner of doubt whether it could become a commercial proposition or not. I think we cannot urge too strongly the desirability of doing this for the sake of allaying the feeling of unrest and irritation that prevails in the western provinces. There is no question that that feeling does prevail there, and undoubtedly there has been some reason for it. The prairie provinces consider —and I think myself they have a right to consider—that they have been regarded by the east as proper subjects of exploitation. We have been deprived of our natural resources; we have been regarded as the milch cow of the Dominion; the manufacturers of the east have considered us their legitimate market, which they must hold to the exclusion of all other competitors; the fruit growers of British Columbia have also considered us their natural market; and so from both sides we have been treated as though we were legitimate subjects of exploitation, and naturally we have become somewhat restive about it.

As has been well said, we are marooned in the centre of the continent, and the question of freight rates is to us one of prime importance—of infinitely more importance to us than it is to others living in any other section of the Dominion, for, remember, we must pay the rates. The conditions are such that the price we receive for our produce is the price on the world market minus the freight rates, and the price we pay for the goods we buy is the price plus the freight rates. So that when Mr. J. L. Payne in his pamphlet recently published made a comparison between the rates we were paying on our wheat and the rates that were being paid on goods shipped to the west, he was altogether aside from the mark. We pay the rates under any circumstances; the price is minus freight rates when we sell our produce and is plus freight rates when we have anything to buy. So that the matter of freight rates is to us infinitely more important than it is to those situated in any other part of the Dominion. It would be worth while to build this road if only to allay that feeling of irritation. It pains me, Mr. Speaker, even to hear the word "secession". As a native born Canadian my whole nature revolts from the idea I think it is absolutely impracticable; I think those who suggest it have not taken into consideration at all what it would mean or what would be necessary to accomplish it; I think they are thoughtless in expressing sentiments in favour of such a step. Nevertheless such sentiments are expressed, although for my part I should do everything in my power to oppose any movement in that direction. But is it not well that the people of Canada should begin to get down to solid thinking and see just what are the causes of that feeling? Why does that feeling exist in the west? For the most part it is justified, because we have been exploited on the one hand and we are denied what is our right in seeking this short outlet to the sea. It may be wrong; we may be wrong, but it would be worth the expenditure of that money, it would be worth all it would cost to build the road, to allay that feeling of irritation and bring about a better sentiment in all parts of Canada so far as the attitude of different sections toward each other is concerned.

I have very little to say in regard to the feasibility of the route, or the navigability of Hudson bay and straits. There is such an immense amount of conflicting evidence in the matter that it seems to me almost presumption for any man, unless he is a skilled navigator, to stand up in this House and express positive opinions one way or the other. But I believe that with a comparatively small expenditure the line can be put in such shape as to give the route a practical test that will settle the matter for all time.

There are some things, however, that we cannot help thinking about in forming opinions on the subject. The hon. member for Victoria City (Mr. Tolmie), dealing with the question of national defence, referred to the fact that we needed to be defended upon the Pacific coast and upon the Atlantic coast and suggested that there was no fear of our being attacked from the north. But there is a little incident in Canadian history that throws some light on this matter. The fact is that at one time Canada was attacked from the north. At one time the British authorities considered it necessary to build a great fort, Fort Prince of Wales, at Fort Churchill. Why did the British build a fort there? Because they were afraid their then enemies, now friends, the people who come from the province of Quebec, would attack them in that northern country at a point which was then considered vulnerable. That they were wise in their decision was proved when the French did attack Fort Prince of Wales, and the fort is now in ruins. It has always seemed to me that the British authorities of that day would never have thought of building a fort as Fort Prince of Wales did they not think there was a possibility of the enemy coming in through Hudson straits. If that could be done under the conditions that prevailed during the eighteenth century it is not beyond the bounds of possibility that it might be done in the twentieth.

11. p.m.

We can sometimes judge of the worthiness of a cause by the enemies who array themselves against it. Man is known not only by the company he keeps but sometimes by the character of his enemies. Who are opposed to this route? Well, we find that the opposition is centered very largely around the city of Montreal. There are certain straws which show which way the wind blows, and they indicate that such interests as the Hudson's Bay Company, the Bank of Montreal, the Canadian Pacific Railway Company and the Montreal Harbour Commissioners are opposed to the opening up of the Hudson bay route. Indeed I think there is good ground for believing that it is the fear on the part of these interests that the route would ultimately be successful that actuates their opposition to it. I do not impute that to the hon. member for Brome (Mr. McMaster); I know he entered his protest. But the hon. member for Brome knows that these considerations do at times influence the opposition to or the advocacy of any particular interest or enterprise. The fact that this route is opposed by these interests would seem to indicate the possibility that the road is perfectly feasible.

There was a time when Montreal opposed the opening of the prairie country. One needs only to read the history of the northwest and of the Selkirk settlers to find out what intense opposition was offered to Lord Selkirk's scheme owing to the fact that Montreal interests wanted to keep that great land as a fur trading land and therefore to exclude settlers. If these principles governed the keen commercial men of Montreal a hundred years ago, we may perhaps be excused for thinking that the same considerations enter into their opposition to this scheme to-day.

Mr. McMASTER: That applies, I suppose, to the hon. member for Kings, P.E.I.?

Mr. BROWN: I have great respect for the member for Kings, P.E.I.; I think he would be entirely unprejudiced in the matter. The hon. member for Kings, P.E.I. and the hon. member for Brome are two members on the opposite side for whom I have high esteem; we stand very close together in opinion in regard to a great many matters.

I wish, Mr. Speaker, to associate myself very heartily with those who support this project. I know it is a project that is very dear to the hearts of the people of the west; in fact, I have no hesitation in saying that to them it is almost a matter of religious faith. Besides, there are abundant reasons for believing that the road is commercially feasible and that in time the straits will be navigated and the Hudson bay route will become one of the great trade routes of the world.

Mr. HARRY LEADER (Portage la Prairie): Mr. Speaker, during the four years that I have been in this House we have had an annual discussion relative to the completion of the Hudson Bay railway. As I have not yet spoken on the subject I may be excused for offering a few remarks on this occasion. My views as a western man might be misunderstood did I not place myself on record in regard to this very important question. Did I not take that course my silence on this matter might be construed to mean that I

am not in favour of this project. May I say that the people who sent me here are whole heartedly behind the completion of this enterprise. I want to state further that they are in the main, if not unanimously, agreed that this line should be completed to the bay. I am not going to argue or discuss the feasibility of the project; I think it has now got beyond the realm of argument. That was, or should have been settled years ago; what the people now want is less talk and more action. If the feasibility of this project has not been settled, then a great crime was committed against the taxpayers of this country in squandering millions of dollars of the people's money. But I believe the enterprise is feasible, I believe the money so far expended was well spent; and I believe that the $2,000,000 that will be required to complete the line to the bay should be spent because it will be in the interest of real economy to carry this line to its destination.

The hon. member for Brome (Mr. McMaster) said this afternoon, that this project has been a political football kicked by the Liberals and by the Conservatives for the last forty years.

Mr. McMASTER: And now by the Progressives.

Mr. LEADER: And now by the Progressives. Well, I want to tell the hon. member for Brome that we, the members of the Progressive party are not using this enterprise in order to make of it a political football. I want to tell my hon. friend that the people who sent me here are unitedly behind the project and—whether they are Liberals, or Conservatives, or Progressives—are united in their demands for the completion of the road. Members rise up and talk about a united Canadian people. I ask hon. members how can they expect to have a united people if one section of the country is denied justice. We in the west believe that we are entitled to the immediate completion of this railway. I do not intend to occupy any longer time. I should like to resume my seat so that I may listen to the hon. member for Lunenburg while he tells us of his experience in keeping Hudson strait open for three days.

Mr. WILLIAM DUFF (Lunenburg): I cannot resist the invitation of my hon. friend from Portage la Prairie (Mr. Leader), especially in view of the fact that he is so strong an advocate of economy. But although he talked about economy a few nights ago I notice that to-night he is on another tack. To use a seafaring phrase, the other night he was trying to sail close to the wind. To-night he is under full sail on a quartering wind, and I am very much afraid that unless he heaves his ship to he will get on the rocks talking as he does about economy and at the same time advocating the completion of the Hudson Bay railway.

I agree with one thing the hon. member for Portage la Prairie said. That was that for four years he has sat here and listened to much discussion on the Hudson Bay scheme. It seems to me that remark is of sufficient importance to justify us in coming to the conclusion that it is not good business for this House of 235 members to spend a whole day each year in discussing a project that not one hon. gentleman knows anything about. I make that statement in all seriouness. We have had both sides of this question. We have had hon. members on the Progressive side say that the scheme is feasible, that it is practicable, that we should go ahead and complete the railway to Hudson bay; that we should build wharves and piers at Port Nelson and do dredging there; and that following that steamers should come into the port and take out their wheat and their cattle. We have also heard from the Minister of Agriculture, who is a strong advocate of the Hudson bay scheme except that he differs in this particular from hon. gentlemen of the Progressive party—he feels it would not be wise to go on with the project until we find out whether Port Nelson is a feasible port or not. The Minister of Agriculture I think came to the conclusion fairly well, and proved it by the evidence which he read, that it would be a great mistake to go further and spend any more money on Port Nelson at the present time until we find out whether it is a proper port or not. On the other hand we have had hon. gentlemen from this side, the hon. member for Brome (Mr. McMaster) and the hon. member for Kings (Mr. Hughes) get up and oppose the scheme.

I do not think I need express my views because they are very well known. I have no personal knowledge of Hudson bay itself, but I have been as far north as Cape Chidley which is at the entrance to Hudson strait, and with the limited knowledge at my command and from what I have heard from men who have been at Hudson bay—working on the dredges, going in there on steamers which carried in supplies—with what I have heard from Captain Read who was on the Minto, and Captain Bartlett who was on the Bellaventure, and from other seafaring men, I have come to the conclusion that we should not spend one dollar more until we find out whether this scheme is feasible or not. Let

me say to my hon. friends from the west that if I was convinced for one moment that the scheme was feasible, that proper wharves and piers could be built at Port Nelson, and steamers could get into Hudson bay for not three days in each year but one day in each year—and they cannot do it at the present time—if I were convinced that steamers could get in there to a degree of safety at any time of the year, I would be inclined to vote in favour of the scheme. But from my knowledge I am convinced that there is not one day in the year—let alone three days, or six weeks, or three months—as the hon. member for Brome has said when there is not ice in Hudson strait, and there is danger to every steamer which tries to get in or tries to get out. Notwithstanding the advice of the hon. member for Lisgar (Mr. Brown), who says that unless we complete this scheme there will be practically secession or something else in the western country, I ask is it wise to spend one dollar further until we come to some conclusion as to whether the scheme is feasible or not? The hon. member for Lisgar hinted to-night that eastern interests are opposed to the scheme.

Mr. BROWN: So they are.

Mr. DUFF: Will my hon. friend tell me of one person in the east who would be opposed to the scheme if it were feasible—will he tell me one?

Mr. BROWN: "If the scheme is feasible." It is all right to put that in.

Mr. DUFF: My hon. friend said there were people in the east opposed to the scheme if it were feasible but has he named one person who comes within that category.

Mr. McMASTER: Who are afraid it would succeed.

Mr. DUFF: Yes. Would my hon. friend name one person?

Mr. BROWN: I named them.

Mr. DUFF: Who are they?

Mr. BROWN: Montreal interests.

Mr. DUFF: There are 700,000 people in Montreal. Can you name one individual in Montreal who states that if this road were feasible he would oppose it or name anybody else in the country. No, he cannot, and my hon. friend had to be brought to a round turn by the hon. member for Kings (Mr. Hughes). Personally I am not opposed to the scheme if it is feasible; I should be glad to see wheat move from Hudson bay if it were at all possible.

Mr. BROWN: Is the hon. gentleman so innocent as to suppose that anybody would stand up and say "We believe this scheme is feasible and we oppose it?"

Mr. DUFF: My hon. friend stood up and made the charge to which I have referred. He has said some things to-night which I do not agree with and which I do not think were very well said.

An hon. MEMBER: Church union.

Mr. DUFF: That was one thing, yes. I do not say that my hon. friend said it. I noticed this afternoon in the discussion that some hon. members compared the Hudson bay route with the port of Montreal, and said the Hudson bay route was just as feasible as the St. Lawrence route.

An hon. MEMBER: Hear, hear.

Mr. DUFF: Someone, I think it was the hon. member for Saskatoon (Mr. Evans) said "hear, hear," thus endorsing the idea that the Hudson bay route is as feasible as the St. Lawrence route. I say there is ice in Hudson strait every day in the year, and there is ice in the St. Lawrence only for four months in the year. How therefore can anybody say there is any comparison between the Hudson bay route and the St. Lawrence route?

Mr. WARD: How does the hon. gentleman know these things?

Mr. EVANS: The hon. gentleman said a little while ago that he did not know.

Mr. DUFF: I did not say any such thing. I said from the evidence I had received, and from my own experience as far as Cape Chidley, where on a great many occasions you cannot see an inch of water, I did not think the scheme was feasible. I do know from all the reports we have received—and nobody will deny this—that in the Hudson straits there is ice every day in the year and everybody knows that there is ice in the St. Lawrence river four months of the year only. People also know that at a certain time of the year a notice is sent out that the St. Lawrence is closed, and no steamer or sailing vessel will make an attempt to go up or down the river. The same thing applies to the Great Lakes. There is no comparison between the waterways on the Great Lakes and the Hudson bay, because at a certain time of the year the Great Lakes freeze over, but on the 1st December or thereabouts notice is posted by the Marine

department that navigation is closed till the spring and the aids to navigation are taken up. There is the difference. For eight or nine months of the year the Great Lakes are open for traffic from Fort William down to the east. Can the same be said of Port Nelson or Fort Churchill? No, it cannot. For not one day in the year are the Hudson straits free of ice or navigation safe. I do not want to press this matter too far, but I have before me the log of a ship covering the whole voyage from the time the ship went out till she came in, and that convinces me conclusively that this scheme is not feasible, and that we must have further proof before we spend the money of the people of this country. I have photographs which show that one ship was jammed in the ice for six weeks. The steamship Discovery was jammed in the ice off cape Chidley, the entrance to Hudson straits, from July 24 to September 5, 1918. During those six weeks she never moved, and anybody looking at that steamer could not say that she was not a properly constructed boat that should be able to go through any amount of ice. This picture is signed by Captain Reid, commander. Yet hon. members want us to spend twenty or forty million dollars to finish the Hudson Bay route without first having a proper investigation and survey. I have other pictures taken by Captain Read, who was referred to by the hon. member for Kings, P.E.I. (Mr. Hughes) and they will show conclusively the position at different times of the year. Here is a picture taken on August 17, 1915, showing the Minto with the ice up to her upper decks. She was jammed in the ice. Another picture showing Big island light which shows the whole Hudson straits as far as the eye can see full of drift ice. And yet they say we should spend all this money without further investigation.

I am not going to speak longer because there is sufficient evidence offered from both sides for that matter. One side says the proposition is feasible and the other says it is not. We must get down to business in this matter. I can quite appreciate that the hon. member for Prince Albert (Mr. Knox) is perfectly serious and would like to see something done and believes that something should be done. On the other hand some of us, not from Montreal, Quebec or Ontario, but from others parts of the country, who have no reason for opposing the project on the ground of feasibility are anxious to find out whether the route is feasible or not. What am I going to say about it? I do not know whether the government would approve of my proposition or not, but it is certainly up to the government, after listening to the story four years—and we will listen to it four years more and perhaps longer—to try and do something to satisfy the people of the west who are in favour of the scheme and who know very little about it. What is my suggestion? My first suggestion—and perhaps it is too late in the session to adopt it—would be to let the matter go to a special committee to investigate, to call evidence and to bring before it the men who have been up there and know the conditions. The session it seems to me is too far advanced for that. The other proposition is that the government should appoint a commission of practical men who understand navigation and men who understand the building of works in places like Port Nelson, and between the prorogation of parliament this session and next session, let the commission go up there, spend the summer, and get all the information they can on the ground, stay there until perhaps next July, obtain evidence from men who have been going up there in steamers for the last fifteen or twenty years, come back and make a full report to parliament. Then I think we will be able to decide whether the road should be finished to Port Nelson or Fort Churchill, and whether it would be feasible for the steamers to go in and out of the straits.

Mr. BEAUBIEN: If that commission were appointed to go up there and investigate, how would they get through the ice?

Mr. DUFF: That is a silly question to ask. Let me tell my hon. friend from Provencher that there is no trouble getting into Hudson bay if people have no other business. In other words, if you want to start to-day, you can take the train to North Sydney, take one of my little sailing vessels, go over to Newfoundland, go along the Labrador coast wait for a chance to get into the straits, and go up to Port Nelson. You will arrive there between now and the first of September or October, and if you want to stay all winter you will likely get back in time for prorogation of the 1926 parliament. But that is not the point. If you expect steamers to go in and take your grain and cattle away, before they go in they must be convinced that they can go in with safety and come out with safety. They must be convinced they can get in there in ten days and not spend six months or a year.

Mr. T. W. BIRD (Nelson): I have listened with great interest to the speeches on the other side of the House against this project. I have been somewhat surprised at the method of argument pursued. I will not for a moment impute any lack of sincerity on

the part of the hon. gentlemen who have spoken. I believe them to be sincere, but after all, Mr. Speaker, sincerity is not such an exceedingly all-inclusive virtue after all. I was especially surprised, at the hon. member for Brome (Mr. McMaster). I recognize him as one of the first-rank lawyers of our country, but I was somewhat taken aback at his very unlawyerlike method of argument. He certainly shattered all the rules in regard to adducing evidence, to prove that the period of navigation was short. I think it was Captain Read who took a trip in there in July. Now I fail to understand how he is going to prove anything in regard to the length of navigation, by quoting the case of a man who went in there and came out without saying when he went in or when he came out. I am exceedingly surprised at the hon. gentleman presenting a lame argument of that kind, because it proves nothing at all in regard to the length of navigation.

Mr. McMASTER: I said he took four weeks to go in.

Mr. BIRD: I am concerned as to when he came out.

An hon. MEMBER: Did he ever get out?

Mr. BIRD: If he did not get out, there is no way of telling how long the period of navigation is at all.

Mr. McMASTER: May I ask a serious question? Does the hon. member think a route would be feasible where in the summer time it took four weeks to go to Port Nelson?

Mr. BIRD: I will be able to answer the hon. gentleman intelligently if he will give me the dates.

Mr. DUFF: Does the hon. gentleman want the dates?

Mr. BIRD: I want the dates and the data. I will ask the hon. member for Brome for the dates, and the hon. member for Lunenburg for the data.

Mr. DUFF: I have the dates that Captain Read went in and came out. If the hon. member is serious, I will give them to him. I have the log.

Mr. BIRD: I am not particular about the log.

Mr. DUFF: I thought not.

Mr. BIRD: On this question there are too many logs in this House.

Mr. DUFF: There is some log-rolling too.

Mr. BIRD: When it is not logs, it is icebergs. I accord to the hon. member for Brome that he is sincere in his opposition to this project, but I would commend to him a little more serious investigation of the facts of the situation. I felt from his speech that he had made no such investigation at all. The same is true of the hon. member for Kings, P.E.I. (Mr. Hughes). I also admire that hon. gentleman's straightforwardness on almost every topic he is interested in. I think he is equally sincere in this, but his whole argument was based upon absolutely vague and indefinite quotations. As regards the very author, Mr. Low, from whom he quoted, no one would gather from the hon. member's speech that Mr. Low was an ardent supporter of the Hudson bay route, and yet that is what Mr. Low is after his experiences there. He is a practical man. He went through the strait one summer and he came out the next. His faith in the Hudson bay route was in no sense weakened by his experiences. Indeed, it was strengthened, and from the last chapter of his book one gathers that he was an ardent supporter of the Hudson bay route and a believer also in its commercial value.

The hon. member for Lunenburg (Mr. Duff) falls into the same class exactly as the other hon. members to whom I have referred. He may think we people who dwell on the prairies know little about matters of the sea. Probably he is right; but after all what anyone knows about the sea does not amount to very much. After listening to speeches against this project this evening, one would think that before anybody has a right to express an opinion regarding the Hudson bay route, one must smell of tar and wear baggy trousers or have smelt of tar and have worn baggy trousers. I do not agree with that at all. It is very interesting to listen to these practical men. A sea yarn is probably one of the most interesting species of fiction there is, and no doubt the hon. member for Lunenburg can hold his own in that respect. He has not been as near to the Hudson bay as I have, so why set himself up as being superior to the rest of us?

Mr. DUFF: I went by water and my hon. friend went by land. There is the difference.

Mr. BIRD: It does not matter how one goes.

Mr. DUFF: It does. If you go by water, you get seasick.

Mr. BIRD: The hon. member never saw the bay.

Mr. DUFF: I beg the hon. member's pardon. I saw the Hudson strait and cape Chidley.

Mr. BIRD: That is not the bay. That is 500 miles from the bay.

Mr. DUFF: But that is where the ice is. You have to get through there before you get to the bay.

Mr. BIRD: I am afraid the hon. gentleman's imagination sees ice all the time, and it has a kind of refrigerating effect upon him. I challenge anybody who listened to the hon. gentleman's speech to-night to indicate wherein his claim to superior knowledge is above that of the rest of us.

Mr. DUFF: I did not claim that.

Mr. BIRD: I do not think it is equal to ours, because we have spent more time in delving out the facts, as is evident by his speech.

Coming to the Minister of Agriculture (Mr. Motherwell) I am glad to find that since the last time he addressed the House on this subject he has been investigating further. The minister is one of those gentlemen—and there are a good many of them—who form their opinions first and collect their evidence afterward. That is a hazardous procedure, because the evidence is so varied and contradictory that it is often hard to sustain one's first position. The hon. gentleman the other day quoted evidence to show that Port Nelson was not a port because it silted up and needed constant dredging; that you could not build there because the foundation was sand and so on. To-day, after having investigated the matter further, he quotes other evidence which proves exactly the opposite.

Mr. MOTHERWELL: Oh!

Mr. BIRD: Well, he quoted Captain Bernier the last time he spoke; indeed, he quoted him again, and Captain Bernier on his oath says that the channel at Nelson silts up and for that reason it is of no use as a port. That was practically all the evidence the hon. gentleman had the last time he spoke and it is about forty years old. To-day he quotes such men as McLachlan, men of technical training. Mr. McLachlan is a man who has lived at the port for three or four years, who has had it under his observation. The minister quotes McLachlan, and McLachlan says that Port Nelson never silts up, has not silted up for the last one hundred years or more and probably will not silt up for the next one hundred years; that the bed of the river is hard pan, that is, that it is scoured clean constantly by the swift current, and that at high tide it has a depth of 33.7 feet right up to within two and one-half miles of the island. I challenge any hon. gentlemen here to show me anywhere, with one or two exceptions, any important port that has started out with such a reputation as Port Nelson has at the present time. Some hon. gentleman over here quoted Liverpool, and I was somewhat amused to hear an hon. gentleman compare Liverpool with Port Nelson. There is nothing similar; there is nothing parallel. There was not any water at Liverpool at any time except at high tide. The port of Liverpool was dug out of sand dunes in the fifteenth century. One of the original movers in that great enterprise said that in making Liverpool a port, they had made a silk purse out of a sow's ear. You have no sow's ear at Port Nelson; you have a proposition that is scarcely equalled anywhere else in the world. You have a clean, straight channel leading right up to your docks, within two and a half miles at any rate. As regards dredging all these exaggerated statements about dredging are not true. The government figures themselves prove that.

Mr. HUGHES: I did not speak of the port of Liverpool. I spoke of the mouth of the Mersey river that leads to Liverpool.

Mr. BIRD: It is the same.

Mr. HUGHES: No. The sand bar at the mouth of the Mersey is three-quarters of a mile wide. It is a sand bar and a shifting channel. That has nothing at all to do with the port that is up the river.

Mr. BIRD: I have seen it all many times and I know what it is, but the contention of the hon. gentleman makes his position all the worse. Liverpool not only had to dig the docks out of the dunes but the channel also had to be dug out; and more than that, it has to be kept dredged all the time. You would never have that proposition at Nelson, where you would have a yard or two of mud and stone to remove for a distance of two and a half miles. That done, and you have your port at Nelson.

I do not know how to sum up this rather curious medley of opposition we have had to-day. If that is all the opposition we have in parliament why is there longer any hesitation about going ahead with the project? I was reminded to-night of a somewhat striking legend which perhaps hits off the situation. Once upon a time, so the story runs, Satan was very much concerned about a revival that was proceeding and to which he wanted to put a stop. He knew of no method by which

this could be done but as it happened he had some assistants: there were a big devil, two medium sized devils and a little devil. The big devil came up to him in his perplexity and said that he could manage the affair; he would tell the people that there was no God and that would settle the whole thing. But this did not appeal to Satan, who said that the people would never believe it. Thereupon the two medium sized devils suggested that they could put an end to the meeting by telling the people that there was no such place as hell. But again Satan objected; he was quite sure that the people would not believe this either. At last the little devil came forward with this solution. He said, "I will tell them that all these things are true but I will tell them further that they need not worry because there is plenty of time." I do not like to be personal, but it seems to me that the hon. member for Brome (Mr. McMaster) has played the role of the big devil in this particular matter we are now discussing, and I am sure that no one will believe him in his opposition to the project. We have also had the medium sized devils whom nobody will believe either. And we have had the little devil in the person of the Minister of Agriculture (Mr. Motherwell). What he says is more insinuating, it is more subtle; unlike the hon. member for Brome and the other two members on the opposite side who have opposed the proposition, the Minister of Agriculture believes in it, but he says "there's lots of time." I think that is the most dangerous attitude that can be taken on this subject especially by a minister of the crown.

I do not intend to detain the House much longer, because during the last four years all the details of the subject have been gone over; and I venture to say that the arguments that have been put up from this side of the House have met with no considerable degree of effective opposition. There has been no serious attempt at refutation, and we have done our best during that time to put the facts before the public. Our efforts have not always been appreciated, although we have been moderate; at least many of us have tried to be moderate and to present the facts just as we have found them. I do not think we have made much impression however, and I am sorry; the assurances we have been able to elicit, so far have been so vague and indefinite as almost to make us think that they meant nothing at all. In the words of a famous children's classic, it is jam yesterday and jam to-morrow but never jam to-day. We seem to be led on, but somehow our advocacy appears to be futile. The hon. member for Brome could not charge us with making this a political football for we have not done so. We have tried to be fair to the government, and indeed we have been deferential to a degree that has caused us sometimes to be misunderstood by our own people. In every way we could we have tried to let the government declare itself; we have not browbeaten them or tried to place them in any awkward position. I know that last year the Minister of Railways (Mr. Graham), who is otherwise a good-tempered individual, seemed to get just a little impatient with us and he imagined that we were trying to drive him into a corner. That was not the case; we had no such intention.

Mr. GRAHAM: He did not go into the corner; there is a little Jack Horner over there that did.

Mr. BIRD: I do not under-estimate the minister's ability to take care of himself, but I want to tell him and the House that however much he thought we in this corner had been pushed from the outside we had no intention then nor have we any intention now of being so pushed. I think that the time for being pushed from the outside is pretty well past for this group, and in the last four years we who have been advocating the completion of the Hudson Bay railway have shown, I think, that we are not the kind who are easily pushed from any quarter. We sometimes rather feel anxious to let somebody start to do the pushing. I do not think that the Minister of Railways really meant what he implied last session; in a moment of impatience he thought we were overstepping the bounds and were actually trying to play politics with him. But as hon. members have said, this is not a matter of politics. Most of us are solid with our constituents in this respect; we believe what we do because we live where we do.

Now, it would be very interesting if one had time to review the history of this matter; it is a very illuminating history and it does not do a great deal of credit to this parliament. Away back in the days of the last century this parliament was unanimous in conceiving the Hudson Bay railway to be a national project; There is no question about that. And it made generous grants in land in order to confirm that belief. Not only that; it sent out very expensive expeditions that cost the country considerable sums of money. The reason in those times why the Hudson Bay railway passed into abeyance was due to the unlooked-for development in western Canada. In the nineties of last century when these immense wheat fields were being brought un-

der cultivation men's minds were occupied with the problems that attended that development. They ceased for the time being to think about the Hudson Bay railway, but in a few years the matter emerged again when the west began to fill up and when those fields began to expand; then again the Hudson Bay railway came to the front and by 1906 it was a vital issue in this House, accepted by all parties. There is no doubt about it. At that time the Liberals were committed to it up to the hilt, and so were our Conservative friends. The Liberals, coming back to power in 1908, immediately began to make some feint at implementing their pre-election pledges. In 1907, I think it was, the matter was broached in this House by western members, and in 1908 a full dress debate took place thereon similar to the one we had in 1923. As I say, some effort was made by the government to carry out their promises, but then as now they were slow. There might have been justifying reasons for the delay, but you know as well as I do that the government was in power for three or four years and there were no promises implemented. The first sod was turned; but after all what is the first sod?

Mr. GRAHAM: Mr. Speaker, my hon. friend, above all men, should be an example to the rest of us for veracity. During the time he says nothing was done the contract was let for the first section of the railway to J. D. McArthur and signed by myself. The contract for the bridge at The Pas, if I am not mistaken, was let and considerable construction took place. If that is not implementing promises, I do not know what is.

Mr. BIRD: If the hon. minister will have patience and not concern himself with my veracity, I will come to that point.

Mr. GRAHAM: I do not want you to go wrong, but you will unless you crawl back on the right road.

Mr. BIRD: I do not think I have given the minister any cause for anxiety regarding my veracity.

Mr. GRAHAM: Yes, the hon. gentleman made a statement which I say is absolutely incorrect.

Mr. BIRD: The hon. minister is too impatient.

Mr. GRAHAM: Not at all.

Mr. BIRD: Yes, he has taken the words out of my mouth. I am not accustomed to having my veracity questioned, even on the floor of parliament.

Mr. GRAHAM: The hon. gentleman must expect to have it questioned if he goes wrong.

Mr. BIRD: I have been very careful in this investigation not to do any injustice to the Liberal party, and I prefaced my remarks by saying that, so far as I knew, there might be justifying reasons for the delay.

Mr. GRAHAM: But a little later—

Some hon. MEMBERS: Order.

Mr. BIRD: And I added that at the end of that parliament very little had been accomplished.

Mr. GRAHAM: That is not what you said. You said that nothing had been done to implement the promises.

Mr. BIRD: I did not say so.

Mr. GRAHAM: Yes, you did.

Mr. BIRD: Then I stand corrected, for it was furthest from my mind to say what was not absolutely truthful.

Mr. GRAHAM: It is all straightened out now.

Mr. BIRD: I was simply trying to show that during those three years the Liberal government did not succeed in advancing very far in the implementing of their promises, and I think that is an historical fact. In 1911 they were superseded by our friends to the right. Now, again, I want to do no injustice to the Conservative party. That party, for some reason or other, showed signs of greater activity than did the Liberals.

Mr. GRAHAM: They stopped the work.

Mr. BIRD: I am coming to that part of it.

Mr. GRAHAM: They stopped it the moment they came into office.

Some hon. MEMBERS: Order.

Mr. BIRD: Yes, I understand the Conservatives stopped the work for one year in order, with the usual suspicion between the two parties, to make the investigation all over again. I think that is the essence of the effete two-party system—they cannot trust each other sufficiently to carry on the work of the country in continuity. There was a lapse of one year for that reason. It may have been a purely political reason, or it may have been a business reason, but there was that hiatus of one year. But after that the Conservatives made up for lost time by proceeding with the work with great

rapidity, and anyone looking at the records can see that for the next three or four years they certainly wasted no time in trying to redeem their promises. But in 1918 the work did come to a stop, and here again I am not imputing any motives. I am not sure which party was to blame, but I think they were both to blame for the work stopping. Governments may not be consciously influenced by forces outside themselves, but I think it is well understood that their actions are apt to be the reflection of the latest influence brought to bear. At that time there was a very concerted opposition to the Hudson Bay railway rising in the country, and the reasons given for ceasing work were, I think, somewhat insincere. I use that word because the charge is general. But there is this evidence to show that it was insincere, because in 1918, I think it was, the then Minister of Railways said that the government had ceased work for want of ties. The next year the plea was that branch lines required prior consideration. Yet again, in the following year another excuse was found—the finances of the country were in such shape that it was not advisable to go on with the Hudson Bay railway.

Now, I believe that during this period the opposition to the Hudson Bay railway which had blossomed out in the last few years was just beginning to make headway, and to make its influence felt upon this House. It may not have been consciously so, but there is no doubt in my mind, connecting cause and effect, that the propaganda then going on in the country found its reflection inside this chamber. Why, the editorials and the specially inspired articles to which this country has been treated in the last half dozen years were bound to have their influence upon the political mind. And those articles, from whatever source they came, I believe, have had a paralyzing influence not only upon this government but upon its predecessor. There is no other way of explaining the present attitude of the Conservative and Liberal parties towards this project. Their attitude is altogether inconsistent with what they have professed in bygone years. There must have been some intervening cause, there must have been some influence working upon their minds. It has been this flood of newspaper articles, this deluge of editorials from inspired sources. And I want to say, Mr. Speaker, that if ever there was an act of sabotage committed in this country it was on that occasion. These people did not dynamite the Hudson Bay railway, but they might just as well have done so. When workmen leave blast furnaces and mines to take care of themselves, that is sabotage. When a newspaper campaign paralyzes the nerves of government, causing a twenty million dollar proposition to moulder in the wilderness, that is but sabotage too, and that is what has happened in recent years.

Since 1918 the Hudson Bay railway would have passed into entire oblivion had it not been for the Farmers' organizations of the west. They have never forgotten it. At every annual convention each local has kept this thing before the public mind, and during the last parliament those organizations found what was perhaps a lone voice in this parliament in my predecessor. I must accord to him considerable merit for the manner in which he voiced the opinion of the west in that respect during the last parliament—a voice crying in the wilderness; for so far as I can see he had a very unresponsive parliament to meet.

Now, in 1921 this was an issue in the election. The record of the Liberal party and of the Conservative party was a factor in that election, as we who took part in it very well know. If one thing is more responsible than another for the obliteration of the old parties, especially in the northern parts of the provinces of the west, it is this one question; there is no doubt about that from one's memory of the last election. That being the case, naturally we from the west, especially those of us from Saskatchewan and Manitoba, saw to it that the feeling of the people in this respect was immediately voiced in the House. We raised it the first session in the committee on railway estimates. We had every courtesy from the Minister of Railways at that time. But in replying to us the minister showed that he had given the matter no consideration, and the indications were that the government as a whole had given less consideration to it. But at that time we were not unreasonable; we were willing to wait and see, because we felt that the government, coming into power when they did, had a situation on their hands which perhaps justified their paying little attention even to the Hudson Bay railway. Now, in the following year we broached the matter again. This time we had a real debate, and the mass of evidence accumulated on Hansard has never been equalled in this House in its convincingness and its completeness. The Minister of Railways that year—the present minister—in reply pleaded the financial condition of the country and would not promise the immediate completion of the railway;

nor did he outline any scheme for its completion. But he did promise that he would complete the first 312 miles—that is, restore it; and for that purpose he placed in the estimates an amount of $350,000. We were frankly disappointed, as the House will remember; but we were helpless and we had to await the pleasure of the government.

But I am travelling ahead of my story. In the previous winter an incident occurred which had a tremendous influence upon opinion in the prairie provinces. That was the order which went out from the department to tear up the steel along the Hudson Bay line. The order was carried out to the extent of sending gangs away up the line at immense expense to perform that task. The effect on public opinion was such that the government was compelled to rescind the order. At that time Sir Henry Thornton came on the scene and I think he was responsible for advising the government not to proceed; at any rate that is how the public took it. As I say, that incident aroused public opinion in the west and caused more interest to be taken in the Hudson Bay railway in the session of 1923 than in any other. The minister responded to the extent of placing in the estimates the amount I have mentioned. That would have been satisfactory to some extent if the money had been expended that year. But I travelled over the whole length of the line in the fall of 1923, and all I saw was a few scattered gangs of men, not more than a hundred, perhaps, in all, laying a few ties here and there; and that is all that was done that year. I understand that considerably more work was done last fall. I may say I travelled over a hundred miles of the line last fall and I can add my testimony to that of the hon. member for Springfield (Mr. Hoey), that the line for that one hundred miles is in pretty good shape. But what does it amount to? What does this putting in ties and dumping gravel here and there amount to? It is not completing the Hudson Bay railway. It is putting the Hudson Bay railway into such condition that the Canadian National can operate it for a few hundred miles, but that is not completing the line. These ties are being renewed on the most perishable part of the railway and in a year or two they will again have to be replaced at the same cost. I do not think it can be honestly said that the government have even attempted to carry out their promise of the session of 1923, because if they had been in earnest they would by this time have had the line completed up to mile 312 and we would have had various indications, by the disposition of material and so on, that the project was continuing. That is the least we could have expected, and I hope the minister will have some satisfactory explanation to make of the delay.

12 m.

To-night we are again endeavouring to solicit from the government some statement as to its policy. We are not unreasonable in our expectation. The Prime Minister (Mr. Mackenzie King) in his tour of the west made a certain reference to the Hudson Bay railway. The Minister of Railways, in speaking last year, made a reference that has a bearing upon the utterances of the Prime Minister in the west last year. The Minister of Railways said that so long as the House was constituted as it is there could be very little hope for the Hudson Bay railway. That utterance of his was enigmatic to me at the time and has been ever since, because what does it mean—"if this House continues to be constituted as it is at the present time?" It can only mean one of two things. The minister may have meant that there might be some opposition as between parties in this House; that one part would block another in its attempt to complete the Hudson Bay railway. But after the declarations we have had from all parts of the House it is inconceivable that any party should attempt to block any effort to complete the Hudson Bay line. And so the minister must have meant that the cause lay within his own party, that there was some obstacle within the Liberal ranks. Now, I am not adopting any superior attitude in a party sense, because I realize that there are obstacles right in this party so far as that goes. But that is what the minister evidently meant, that there was a disposition in the Liberal party to divide on this question. Now if there is any declaration of the minister that will cause division in his party I think it is highly to be recommended. We on this side find that it is a very healthy thing. When a divisive influence passes over this party we seem to emerge from it happier, and better, and stronger than ever; and I think on a great many things it would be healthy for the Liberal party to have an honest difference of opinion, to come out and say openly that they do differ. Because so long as they will not say it it is impossible for the public to see where they stand on any particular question. Now, where does the Liberal party stand in regard to the Hudson Bay railway? Who knows, who can tell? Nobody. It has never been uttered, never been said; and anything that has taken place in this debate so far does not make it any easier to tell where the Liberals stand. There is some paralyzing

influence within the ranks of the Liberal party which makes it impossible to proceed with this venture. The Prime Minister himself when in the west re-echoed that same view. The Prime Minister indicated in his speeches that to press the Hudson Bay railway at the present time might create a situation that might militate against that railway. That is arguing in a sort of circle. It really means: If you press the Hudson Bay railroad at the present time you will disrupt the Liberal party, and if you disrupt the Liberal party you will militate against the Hudson Bay railroad. You can see it is arguing in a circle and it comes around to the same thing. And I want to tell the House that is exactly the impression that the Premier's utterance left upon the west. They may not have said it in so many words but the west felt that the Prime Minister in saying what he did was saying nothing at all because they understood him to say: If you press the Hudson Bay railroad you are going to disrupt the party, and if you disrupt the party you are going to hurt the Hudson Bay railroad. I could have wished that the Prime Minister in his western tour could have said something that could have drawn the heart of the west—not to him, because that is not the thing we are wishing for, but had drawn the heart of the west more closely to the east as we hoped, but I think the Prime Minister failed in that sense. His tour throughout the west no doubt created immense interest. I had the pleasure of listening to one of his speeches, but it failed in the essential thing—in bringing any warmth into the western heart towards the east of Canada. The Prime Minister no doubt would have wished to do that but it is not an easy thing to do, unless there is a policy that contains some degree of definiteness that the average citizen can understand, that he can figure out, that he can meditate on and get some degree of hope out of.

Now I know that the old plea of economy will be put forward.

Mr. PUTNAM: Will the hon. gentleman permit a question? Is his argument founded on the assumption that the navigability of Hudson strait is proved, or that it is still a matter for fair controversy?

Mr. BIRD: I believe that the navigability of Hudson strait is absolutely proved, and that no amount of investigation will get you one degree further in the direction of proving or disproving it; I believe all the relevant facts are known.

Mr. PUTNAM: What is the length of the season each year?

[Mr. Bird.]

Mr. BIRD: That is indefinite, but I think four and a half months is a very good average for the moderate mind to accept. I was proceeding to say that the plea of economy is one we are constantly up against in this chamber.

Mr. CARRUTHERS: In the last two lines of the resolution it says "recognizing the priority of the Hudson Bay railway with reference to other transportation projects started subsequently." Does that mean that the branch lines now under way will not be finished and that no more will be constructed until the Hudson Bay railway is completed?

Mr. BIRD: No, I would not read all that into the resolution. I think the resolution is merely a Knoxian method of saying it is a very desirable thing to go forward with the completion of the Hudson Bay railway at once.

Now, coming back again to the question of economy, I noticed in the debate on the Speech from the Throne and also in the debate on the budget, that members of the opposition proved, and I think almost conclusively, that we had reached rock bottom, that it is difficult to economize in such a way as to make any appreciable difference in our national debt at the present time. The hon. member for St. Lawrence-St. George (Mr. Marler) in his speech on the Address went to a lot of trouble to show that we had reached rock bottom, and I think the Prime Minister also enunciated the same view in his speech on the budget. If that is the case where do we stand in regard to the Hudson Bay railway? The plea of economy seems to be no longer relevant, because if we have reached rock bottom the average member must see that for the next twenty years there is going to be no appreciable change in our financial condition, nor for the next forty years; and does the government propose to postpone the Hudson Bay railway indefinitely? It seems to me that if we have reached rock bottom the only sane thing to do is to build the Hudson Bay railway immediately, because if our financial condition cannot improve for the next twenty years it would be folly to wait; with every year that passes the Hudson Bay railroad depreciates at least a million dollars—at least it has done so for the last few years. So I think the plea of economy is entirely irrelevant to the argument. Knowing that, we all realize—I think even the Conservative opposition, believes—that we have pretty nearly reached hardpan in connection with our national expenditures.

Now, Mr. Speaker, I have endeavoured in as moderate a manner as I could, and without

retracing the old ground, to bring this matter before the government once more. As to the tendency to asperity which has been pointed out to me I hope it will be abundantly pardoned because it is not in my nature to descend in these arguments to such low methods as that would seem to indicate. I have great admiration for the hon. gentleman's personality but I hope that he will not let us go home to-night without making clear beyond peradventure what the government intends to do in the next two or three years or so with regard to the Hudson Bay railway, if the government are to be so fortunate as to remain in power during that time.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): This is a subject which has not only been debated for the last four years, but for the last forty years, and I will just make a running comment on a few of the things that have been said.

In the first place, I desire to say that the debate on the whole has been very fair indeed, and the mover of this resolution set a good example to all his brethren. He talked to his resolution, and he did not insinuate that any of us were controlled by infernal powers. It is late in the night now, and I know I will be pardoned for telling a story. I seldom tell one in the House, but when I heard some hon. gentleman, not following the lead of the mover of the resolution, attributing motives to us villains whom providence has placed in the eastern part of the country, and to others, I could not help but think of this story. It was about a horse-trader and he had a deal on. Professional horse traders usually have one on, but he was asked to come in and kind of oversee a trade without being apparently interested. So that he was standing in the stall of the barn, and the chap that came in, wishing to trade his horse, commenced to feel round the spavin joints of the horse in the barn, and he felt down to where there might possibly be a ringbone on the horse. Not satisfied with investigating the hind legs, he went to the front legs and looked for splints. The adviser called up the man that owned the horse and said, "Do not trade horses with that fellow", and added, "Any man that looks at another fellow's horse for ringbones, spavins and splints,—sure his horse has got some of them." It always struck me that the man who is imputing motives to others—well, he could spend some moments in what we call introspection. There is a weakness somewhere in a man who thinks all his fellowmen must be wrong because they do not think as he does.

Now I did speak rather sharply to my young friend from Nelson (Mr. Bird). Hon. gentlemen will realize that if it had been some other hon. gentleman who was not accustomed to the effect of words and had not such a perfect understanding of what a word meant in a sentence, I would not have come out so boldly, but when I was accused of playing with the Hudson bay matter after the election of 1908, between that and 1911, I resented it very much, because the opposition of that day told me I went too fast in letting this contract. In fact I went so fast in letting the contract that when they got in power they held it up. They thought there must be some campaign fund or something of that kind in it. I thought I went very rapidly. Then in addition to that I had some trouble in letting the contract for the bridge in his constituency, that he walks over quite likely now, and I was told that I rushed that too rapidly. I would suggest to my hon. friend, as an old man to a young man, in a case of that kind, always be sure; it is better than being sorry afterwards. Then some hon. member, I think my hon. friend from Lisgar (Mr. Brown) referred to some talk about secession, and stated that some other gentlemen were talking about freight rates and secession. Where were they going to secede?

Mr. BROWN: I want to make it abundantly clear that I think the whole proposition in regard to secession is wrong.

Mr. GRAHAM: I understand that, and I want to exculpate my hon. friend from Lisgar. But I am talking about the other fellow. He was going to secede from Canada, and where was he going? I want to tell him that if he secedes from Canada to the United States he will pay great deal higher freight rates than he pays in Canada, and that is an important point according to my hon. friend from Lisgar. I want to tell all those who talk about seceding that they will pay 30 to 40 per cent more freight rates if they go away from Canada than they have to pay in this country.

I am aware that some of the speeches which have been made will make votes for the hon. members who spoke. I feel confident of that, but I submit with all modesty that these speeches will not make friends for the Hudson bay project. I thought it was a mistake last year to move a vote of want of confidence in the government and press it to a conclusion. I think so still, and I think that made it harder for them to get friends—I say frankly—in the Liberal party for the Hudson bay project than if that resolution had not been moved and pressed to a conclusion.

That is a matter of history. Hon. gentlemen can do as they like.

Now to come to the project itself. My hon. friend the Minister of Agriculture (Mr. Motherwell) is going to move us on to Churchill. I will state the reasons for taking the port of Nelson. We base all our action, every bit of it I might say, on information brought to us by engineers of the department who were sent to investigate, added to information that they gave us in connection with those who had had sea-faring experience. I will admit this: That I think the necessity of the construction of a much longer line of railway to Churchill may have had considerable influence in the selection of Nelson. But just at the time the selection was under discussion, or practically had been made, the government changed, much to the detriment of the country, and my successor was neither satisfied with the contract nor with the port of Nelson; so he stopped the contract, and stated he would see whether there was anythink wrong with it. Then he made a trip to Nelson himself, and came back enthusiastic about that being the proper port. I refer to the late Mr. Cochrane. I do not pretend to be practical myself, and I simply based my selection on the information given by the engineers at that time. This was confirmed by my successor in office, Mr. Cochrane; but, as I said before it is possible the shorter mileage of railway construction might have had something to do with the selection of Nelson.

As regards the Hudson strait, I do not know anything about the strait, and I think if I were to go around the House I would have a good deal of company. We have formed ideas from what we read. The information that I gleaned from the reports I read and reports that were given to me was, if I remember correctly, that the season was as short as six weeks and that it ran to four months. But in all this I suppose there is not much information which my hon. friends are looking for. The resolution itself does not call for any real information. I have some notes here but I do not propose to elaborate them, because hon. members want to get through with this debate as rapidly as possible. I want to read the resolution of 1923. This is not the vote of want of confidence; this is the resolution of 1923, which reads:

That, in the opinion of this House, the government of Canada give further consideration to the report of the Senate committee on the Hudson Bay railway with a view to safeguarding the investment of public moneys made in the construction of that portion of the work completed to date.

[Mr. Graham.]

Down to that point every hon. gentleman who has spoken to-day admits that we have made good—and that is nearly all of the 1923 resolution—that we have protected the investment made in the portion already constructed and put into operating condition the line as it exists up to mile 214. That has been done. The hon. member for Springfield (Mr. Hoey) says that that is in good condition. There is 118 miles that is not in extraordinary good condition, although he went over it at thirty miles an hour. I think from what I know of the road, he should have been arrested for speeding. Before I get through, I will show hon. members that we propose at least to carry out at once the resolution up to the point I have named and, in fact, that is nearly done now.

One thing that I cannot understand is how hon. gentlemen object to the Welland canal expenditure. If it is not to aid in the carrying of grain from the west, it is not for anything; it might as well never have been constructed. It is not for the products of the east. Let me point this out to hon. gentlemen again. Although hon. members take a different view now, when I was in the west in 1910, one part of the west wanted the Hudson Bay railway and the other part of the west, with every deputation, without a single exception, asked for the deepening of the Welland canal. I remember when I was leaving one point with Sir Wilfrid Laurier we were told: Now, the next place you stop at, the deputation will ask you to build the Hudson Bay railway; they are not so much interested in the Welland canal. When hon. gentlemen criticize the late government and this one with the deepening of the Welland canal, they are criticizing an action which was founded primarily upon the request of the western people and I am speaking of what I know.

Mr. KNOX: Would the minister say that there has been as much pressure for the Welland canal as there has been for the Hudson Bay project?

Mr. GRAHAM: At that time before either one of them was begun, there was far more pressure for the Welland canal than for the Hudsoy bay project. I say so advisedly.

Mr. EVANS: May I respectfully ask what bodies in the west pressed for the Welland canal?

Mr. GRAHAM: That is a good many years ago, but they were live bodies, or at least they talked in that way. They were just as strong for the Welland canal as

another portion was for the Hudson bay project and they had organizations pressing. As a matter of practical construction, the new Welland canal project—and it is not a new project; it is as old as the hills—was begun by the government of Sir Robert Borden, although under the Laurier government we had made some surveys, got together considerable data and made test pits and that kind of thing. But the Laurier administration would have done exactly as their predecessors did in deepening the Welland canal. As I said a moment ago, if the Welland canal project was not to aid in cheapening freight rates on the western crop, there was no sense in deepening that canal under any consideration. The United States government have recognized that, because they have proceeded to deepen their canal, what we call the American Sault. The Canadian canal is not deepened, but the larger locks and the greater depth on the American side has been used by our Canadian ships of larger draught, while the Canadian canal serves the smaller Canadian ships of lighter draught and American ships of lighter draught, there being no canal dues on either side. Whatever may be thought now, I was just as conscious and so was the Laurier administration and, I believe, our successors that in starting the Welland canal improvement, we were doing something to aid the western farmer to market his crop at a cheaper rate of freight. I believe that will be the result, notwithstanding criticism, because while vessels can be loaded and come right down drawing up to 21, 22, 23 feet, as the canal will accommodate vessels of larger draught than that, surely with one lightening further down the line with larger vessels taking the big load, you can get to the seaboard much more quickly than at the present time. The government has to-day a large elevator at Port Colborne, and through that elevator even with the present depth of the Welland canal, go millions and millions of bushels of western wheat. If western wheat is not going to be benefited by going through the Welland canal, it was a mistake to build it at all. Both governments, that of Sir Wilfrid Laurier and the government succeeding it, believed—and I believe their views were founded upon accurate information—that the deepening of the Welland canal would enable the western farmer to get his wheat to market at a cheaper rate of freight than he is now paying. These things should be thought out together. I am not scolding at all. With that viewpoint, no objection should be taken to the Welland canal, and it should have no influence one way or the other on the Hudson bay project.

As regards the Hudson Bay project, it is too late for the Liberal party or for myself to say that it is a phantom. As has been pointed out, both of the old parties have been committed to the Hudson bay project, and as has been said, the time must come, and must come before very long, in my humble judgment, when somebody will finish the Hudson Bay railway. I think I am safe in going this far in making this statement. Even if doubts exist as to the practicability of carrying wheat at a reasonable rate, there would not be a very great risk in finishing this line and using it for a colonization line and for whatever traffic might accrue from a port on the ocean at that point. I am not saying that the other would not be practicable.

In discussing this question years ago it will be found, if the records are looked up, that I rather laid stress on the value it would be to the live stock breeder and to the dairy interests of the west, to whom a voyage on the ocean does not make much difference; because the colder the surroundings and the cooler the atmosphere, so long as it is not overdone, the better it is for both cattle and dairy products. I look to the west, and I do not have to look very long because it is rapidly materializing, as possibly the dairy centre of Canada; the dairymen of western Canada are making strides on us in Ontario and Quebec and in the Maritime provinces as well. And these products, it seems to me, would be more sure of successful transportation in this way than perhaps wheat would be.

Now as to what we are doing at the present time. My hon. friend from Prince Albert (Mr. Knox) asked in last year's resolution that we complete the repair of the property so as to protect our investment there. Last year, the first year, we expended quite a large amount of money, although not nearly so much as was voted, and the reason was that parliament sat late, so that there was no opportunity to proceed until we could get at least an initial vote. And the farmers do not like railway construction to interfere, either in the matter of wages or in the employment of men, with the work they are carrying on. So that a comparatively small amount was expended. But the fact was that the Parliament of Canada had approved of the expenditure of money in order to put this line into proper operating shape to the extent that is now constructed. The next year, in consultation with the railway authorities, I asked them to go on as though a vote had been given; because I felt sure that parliament would grant another vote; and this year, in the Canadian National expenditures, we have

if I remember rightly a vote of $180,000 or $200,000 to complete the repairs to that last section of the Hudson Bay railway to which my hon. friend has referred. But hon. gentlemen, who are great friends of public ownership, must remember that under the new arrangement every dollar expended on the National Railways; it is not charged to the Hudson Bay will be charged to the Canadian consolidated revenue of Canada but against the Canadian National, and on that money the Canadian National must pay interest. We must therefore go no more rapidly in these things than can be defended from the point of view of the Canadian National Railways as well as from the standpoint of the people of Canada.

Mr. HOEY: That would be a good argument for the completion of the road at an early date, to make the railways a paying proposition.

Mr. GRAHAM: If it were to be a paying proposition it would be a good argument, but I am not so sure. However, I am not saying that it would not be.

Mr. WARD: Will the Toronto viaduct be a paying proposition?

Mr. GRAHAM: My hon. friend has altogether a misconception of the Toronto viaduct situation. That was a bargain between the railways, before there was a Canadian National Railways, and the city of Toronto; an agreement was signed and carried to the Judicial Committee of the Privy Council where it was confirmed. The burden therefore was on the Grand Trunk Railway, and the agreement could have been enforced. The government of Canada might have been, and in fact was being, sued for the performance of that contract. Under those circumstances there was no alternative but to clean up the Toronto situation, and it was cleaned up at a saving of several millions of dollars. That situation was altogether different from this. Now, I have talked long enough. I have said what we propose to do this year, and any further announcement that is necessary can be made later. But at the present time we have in the Canadian National estimates the amount charged for the completion of repairs to the last section that has been referred to.

Hon. gentlemen have heard my remarks in regard to the Welland canal. I do not admit for a minute that the Welland canal was started after the Hudson Bay railway. The Welland canal is an old scheme which it was intended should be enlarged when the time came that both countries could enlarge their channels. With that explanation I see no difficulty at all in accepting the motion of my hon. friend. I do not think he would want us to say that we should not operate any branch lines; that is not the intention. The intention of my hon. friend is to impress upon the House and the country the necessity of keeping in mind the Hudson Bay railway project and not having it side-tracked by everything that comes along.

Mr. KNOX: I consider the Welland ship canal as a transportation project to have been started subsequent to the Hudson Bay railway.

Mr. GRAHAM: I do not agree with that, because the Welland ship canal has been in existence a great many years; it was there before my time. Its constant improvement is a matter for the benefit of navigation, just as the constant improvement of the river St. Lawrence is necessary in the interests of navigation.

Mr. KNOX: Is not this an entirely new canal?

Mr. GRAHAM: It is a portion of the old one, but it is really like replacing your old house with a new one. You may not put up the new one on precisely the same land but it is a continuation of your residence. With that explanation, Mr. Speaker, I see no objection to the House accepting the resolution of my hon. friend.

Mr. HOEY: Having put the line in a state of good repair to mile 332, if the government is in power will the minister give an assurance that it will then undertake the completion of the road?

Mr. GRAHAM: If the hon. member will say that he will help to keep the government in power I might give that assurance. But that might be considered bribery. However, that is only a bit of pleasantry between the hon. gentleman and myself.

Mr. MEIGHEN: Would that improve the merits of the Hudson Bay railway?

Mr. GRAHAM: It would fulfil the other contract, which would be necessary. However, I hope the government will be in power and that we shall be able to discuss this question again.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I do not need to speak at any length; in fact I am not certain that words are at all necessary. I have no difficulty whatever in agreeing with the Minister of Railways (Mr. Graham) in his reference to the Welland canal. That the Welland ship canal has been from its inception an ad-

vantage to western Canada goes without saying; in fact, I cannot understand the mentality of anyone who would dispute that assertion. And if the canal with its low draught is of advantage, having been built mainly for the purpose of improving the exit of western production, surely it follows that an improved canal improves the conditions of that export trade. It is too often the case that after expenditures are undertaken and are fairly well on to completion their merits fade in the sight of those who were very strong in their behalf previous to their inception. However, the merits of the Welland canal are really not in dispute here.

Some two years ago when this issue was before the House I spoke upon it. I have taken the opportunity of reading over what I said then and, as well, what many others in the House contributed to that debate. From my words at that time I have no divergence now; I have no reason to change them at all. Since that occasion it has been my privilege to visit western Canada, and at the point which of all points would perhaps be the strongest in its insistence upon the immediate completion of the road I spoke, and, whether with acceptability or not, I certainly spoke with entire frankness on this question; and from the statement which I made in Melfort last fall I also have no divergence to urge at the present time.

The question as to the resolution itself affords no difficulty in view of the action of the government. I do not think—I know I made it very plain in what I said before—that essential branch line construction can be said to be new enterprises at all out of keeping with the resolution which then passed if given priority to the completion of this road, nor do I think that the going on with the Welland canal—which of course in its original inception was decades before the Hudson Bay railway, and which in its present new form was commenced long before the resolution passed—much of the expenditure on which would have been largely lost had construction not been gone on with in the meantime, is in any way a violation of the resolution.

Now, I have been very much interested in the speeches made by one or two hon. members to my left, particularly that of the hon. member for Springfield (Mr. Hoey). I believe in the completion of the road, I believe in it for the reasons given two years ago, among others, because its completion is in the nature of a contractual obligation entered into with settlers who have not only gone in there on the promise of this country, given in the only way that a country can promise anything, but who, having gone in, have made further investments and commitments on the faith of the pledges which they have accepted. The question is merely a question as to when, in justice to Canada's position, that road can be gone on with. I do not believe in any indefinite postponement, and if I could accept—I certainly accept the sincerity of the hon. member for Springfield—if I felt that the idea which he advances was a practical one, I would be prepared to support the carrying out of his request earlier than I otherwise would. If, as he says, a fair trial of the export possibilities of this line could be secured by the completion of it to the bridge at Port Nelson, utilizing that bridge over the artificial island—if that is all that would be essential to give it such a trial as would determine whether or not it was going to be of real use as an export channel—then as far as I am concerned I would be prepared to go pretty far and start pretty early to see that that was done. But I would not want to see this expenditure made, even if the idea of the hon. member for Springfield was right, if afterwards there was no way of utilizing the line and testing the practicability of navigating the straits. I think the government would be well advised to canvass the possibilities of this idea, for, if it is practicable, it seems to me a way would be found for meeting the very urgent demands of western Canada in this respect earlier than otherwise could be done.

I do not listen with very much sympathy to arguments advanced, based on the assumption that in eastern Canada there is an ingrained hostility to this line, merely because it will afford another means of exporting western products without bringing those products through the cities of the east. I have never encountered that prejudice; in fact I have encountered quite the opposite. If I judge eastern Canadian sentiment aright, that sentiment is wholly sympathetic with the Hudson Bay railway once it is demonstrated that the road is really going to be a sound proposition, is really going to be what western Canada hopes it will be—a cheaper outlet for western grain. I know there is a lot of misgiving—and I am afraid the misgiving has increased rather than diminished in recent times—as to whether the anticipations of the west would be realized when the road is completed. It is on account of this misgiving that a considerable body of public opinion is opposed, not at all because of fear that the road would be a success after construction. It is of no value to this country, it does not contribute to unity and good feeling in the least degree, to be attributing, first from one section and then from another, an

antagonism on the part of the majority in the centre to either extremity. If I may be allowed to express my own humble opinion, formed after a considerable number of years of public life, it is this, that a very generous sentiment pervades both the province of Quebec and the province of Ontario as respects the demands of western Canada. Therefore I feel all the more justified in saying that in my opinion there would not be call for very great delay if this House could be convinced, upon proper investigation by those best qualified to undertake it, that a real test of the enterprise could be secured by merely the further investment suggested by the hon. member for Springfield; then I believe the House would be prepared for an early realization of his hopes.

With this addition, not modification, I reaffirm what I stated in the debate two years ago and to the public since.

Motion (Mr. Knox) agreed to.

On motion of Mr. Mackenzie King the House adjourned at 12.50 a.m. (Tuesday).

Tuesday, May 5, 1925

The House met at three o'clock.

BUSINESS OF THE HOUSE

MONDAY SITTINGS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That on Monday, the 11th of May, instant, and every Monday thereafter to the end of the session, Government notices of motions and Government orders shall have precedence over all business except questions by members and notices of motions for the production of papers.

Motion agreed to.

ST. JOHN AND QUEBEC RAILWAY

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee at the next sitting of the House to consider the following proposed resolution:

Resolved, that it is expedient to extend the time within which the Saint John and Quebec railway company is to complete the construction and equipment of its line of railway from a point at or near Centreville, in the county of Carleton, to a point at or near Andover, in the county of Victoria, to the thirty-first day of December, 1927, both with respect to the agreement entered into under the authority of section three of The Saint John and Quebec Railway Act, 1916, and also with respect to the subsidy agreement made under the authority of section six of the said act: provided that the said extension shall only be granted with respect to the first named agreement after the consent of His Majesty on behalf of the province of New Brunswick has been obtained.

[Mr. Graham.]

He said: His Excellency the Governor General having been made acquainted with the subject matter of this resolution recommends it to the favourable consideration of the House.

POINT PELEE DROWNING DISASTER

On the Orders of the Day:

Mr. T. L. CHURCH (North Toronto): I desire to direct the attention of the Minister of Marine and Fisheries (Mr. Cardin) to the drowning of nine Canadian sailors at point Pelee on lake Erie in a great storm, when their sand ship turned over, as reported in the Toronto Globe, May 4. From that report I take the following:

When your correspondent questioned the life-saving crew at point Pelee life-saving station they stated that their life-saving facilities are utterly inadequate, there being no lookout station, no good binoculars, and a condemned rowboat for the lifeboat, any rescue work being done and taken care of for the most part by the Flossie G., a gas fishing launch.

Will the government order a thorough inquiry into this disaster, the loss of life, and the lack or any proper or adequate life-saving facilities or up-to-date station at this point, and other inland ports on the Great Lakes?

Mr. CARDIN: I shall be very glad indeed to cause inquiries to be made into this disaster and the means to prevent such loss of life in future. I will take all necessary means to cope with the situation.

GRAIN ACT AMENDMENT

On the Orders of the Day:

Mr. O. R. GOULD (Assiniboia): Will the Minister of Trade and Commerce (Mr. Low) inform us whether he has considered the advisability of giving to the Agriculture committee the proposed amendments to the Grain Act, so that they might consider them in the meantime?

Hon. T. A. LOW (Minister of Trade and Commerce): I have just instructed the clerk to give notice of the resolution.

CANTEEN FUNDS BILL

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-establishment) moved the third reading of Bill No. 32, respecting the disposal of the Canteen Funds.

Motion agreed to and bill read the third time and passed.

CANADA—UNITED STATES CONVENTION

LAKE OF THE WOODS AND RAINY LAKE LEVELS

Right Hon. W. L. MACKENZIE KING (Prime Minister, Secretary of State for Ex-

ternal Affairs) moved that the House go into committee to consider the following proposed resolution:

Resolved, by the House of Commons,—That it is expedient that Parliament do approve of the Convention and Protocol between His Majesty, in respect of the Dominion of Canada, and the United States of America, for regulating the level of the Lake of the Woods, and of identical letters of reference submitting to the International Joint Commission certain questions as to the regulation of the levels of Rainy Lake and other upper waters, laid upon the table of the House on Thursday, the 26th of February, 1925, which was signed at Washington on the twenty-fourth day of February, one thousand nine hundred and twenty-five, and which was signed on behalf of His Majesty in respect of Canada by the plenipotentiary therein named, and that this House do approve of the same.

Motion agreed to, and the House went into committee thereon, Mr. Gordon in the chair.

Mr. MEIGHEN: I made some comments on this matter the other day when it was first introduced. I would like the government to explain what alterations have been made; why the protocol at the end; and generally what has been the cause of the many years of delay that have occurred, holding the matter unsettled until this time.

Mr. STEWART (Argenteuil): The matter is settled on the identical lines proposed by an order in council passed by the government of my right hon. friend (Mr. Meighen) in 1921. The delay since that date was largely occasioned by the action of the state of Minnesota, who were raising objections of one kind and another, principally urging the objection that it would be well to include Rainy lake and the upper lake levels, and that matter might be settled. We have contended, I think in line with the action of the former government, that the lake of the Woods question be settled first and that, as is provided before in the treaty, the matter of the upper lake levels be a matter of inquiry before the commission. Some attempt was made at one time to ask us to bind ourselves to accept the finding of the commission. My right hon. friend will notice that that has not been done. It is identical, without a change in any particular, so far as I am aware, with the arrangement that was proposed for the consummation of a treaty under the order in council of 1921. The delay was occasioned, as I stated before, by the action of representatives of the state of Minnesota, but they finally agreed to the treaty as it was presented, and it was ratified by congress. It remains for our ratification to put it into effect.

Mr. MEIGHEN: I understand, then, that Governor Preus' contentions have been abandoned in so far as they conflict with the original lines of settlement?

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: I also understand that the question of the upper lakes remains just where it always was, a subject for submission to the International Joint Commission without any commitment at all whether we accept or whether they accept. If I remember correctly, Governor Preus and Mr. Backus both were insistent upon the land owners affected in the lower lake regions sharing in some of the damages which would result from the upper lake control. This is one of the contentions, then, that have been abandoned by Governor Preus and the state of Minnesota?

Mr. STEWART (Argenteuil): Governor Preus never pressed that point with us. What he did press with respect to damage was that there should be an arrangement as regards damage in the upper lakes. The difficulty was that he was trying to get a commitment of the governments to compensation for such damages as might accrue in the upper lakes after the finding of the commission. I am not sure whether that contention was put forward prior to 1922 or not, but the whole difficulty was the question of the upper lakes and the damages resulting there. My right hon. friend will remember that Mr. Backus was very heavily interested in the upper lakes as regards his own property, and it was really the question of the upper lakes which delayed the whole thing. We would not agree, stating that we stood on the former ground; that we would not accept in advance the finding of the commission, but that we would let the matter go before the commission and abide by the result of that commission and the decision arrived at by the government.

Mr. MEIGHEN: There is really nothing at variance with the original finding of the royal commission and the order in council authorizing the execution of the treaty in pursuance thereof?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: I congratulate the government on adhering loyally to the wise lines laid down by their predecessors in this case.

Resolution reported.

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That a message be sent to the Senate informing their Honours that this House has adopted the above resolu-

tion and requesting that their Honours will unite with this House in approving the above mentioned convention and protocol, and that the clerk will carry the said message to the Senate.

Motion agreed to.

PENSION ACT AMENDMENT

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-establishment) moved that the House go into committee on Bill No. 70, to amend the Pension Act.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

On section 1—Disabilities in respect of which pensions claimed.

Mr. CLARK: I think the minister was asked whether this new clause is the same as the clause which was introduced in the bill of last year?

Mr. BELAND: This is a new provision. The reason for it is to make the clause clearer. In some cases the disability which is pensionable makes its appearance one, two or three years after discharge, although it can be related to an injury or a disease that was incurred during service. The change is made in order to make it clearer that if the injury or disease was incurred during service, the disability which is related to it, though it might make its appearance long after discharge, would be pensionable. If my hon. friend will read the amendment—

Mr. CLARK: I have read it. I will be glad if the minister will give us an example of how the pension can be different under the new clause from what it was under the old. I cannot see how the new clause is capable of any different interpretation.

Mr. BELAND: It has been so claimed by the Board of Pension Commissioners, that if a strict interpretation of the clause is adhered to, some cases may arise in which the pension will not be awarded, whilst with the present amendment it will be perfectly clear that the injury or disease resulting in disability will make the disability pensionable when they are related to each other. I think myself the clause is clearer as it reads now. It will do away with any possibility of doubt, and that is the only object they have in view.

Mr. ARTHURS: If the minister would point out to the committee the different changes between the present bill and the bill of last year, that would facilitate matters.

Mr. BELAND: My intention was to do that, and I shall be glad to comply with my hon. frend's request, as the several clauses are called. The most important clauses were submitted to the House last year.

Mr. ROSS (Kingston): Has the minister any idea of the number of cases in which pensions have been refused through a strict interpretation of the act?

Mr. BELAND: I have no particular case in mind at the present time, but had I given any thought to that question I might have been able to cite some instances in which such a situation might arise. If my hon. friend would apply his acumen to the clause as it is now amended and to the section as it previously stood he would see that in the present case the language is clearer and that there is no possibility of misinterpretation. Disability might make its appearance two or three years after discharge and be related to service overseas although such disability was not apparent at the date of discharge. As the clause now reads it provides that if the injury or disease resulting in disability was incurred during military service then the disability is pensionable. That suggestion was made by the board to render the section clearer. Though they agreed that they had not interpreted it differently so far, they pointed out that the strict interpretation of the act as it stood before might lead in some cases to the refusal of pension when the disability had made its appearance long after discharge.

Mr. CHURCH: The amendment to section 1 does not go far enough; there are a large number of cases which it does not cover at all. Hundreds of men to-day, as the minister no doubt knows, are not one hundred per cent efficient, and this inefficiency is beyond any question traceable to service overseas. A great many men after their return worked a month or even a year or two and then found themselves disabled so far as any efficiency for civil pursuits was concerned, and under section 1 as now amended a large number of these cases will be barred out. Indeed, there are men whose disability arose from their war service who were not taken care of under the section as it originally stood and who even now will be left out of consideration. There should be a much more liberal interpretation of the intention of the clause. I know of a soldier who died in Winnipeg a short time ago to whom a pension had been refused, although he had served four years in the war, and his people had not enough money to bring him home for burial in Toronto in my own constituency. This man's sickness developed after the war, but there was no doubt whatever

that it was due to his service overseas. Such men are dying in thousands; every month there are hundreds of deaths occurring among those returned men who have been denied proper consideration through an illiberal interpretation of the act. The estimates for this department are five million less than a year ago. These men will not live forever; and I think that the time has come now for more generous treatment of our veterans. These men are getting up in years and they are unable to work 365 days in the year; and they have their families to keep. There are some of our Canadians as well, men who were brought up in this country, who went overseas early in the war, in their anxiety to get into active service, and joined the British forces, and now they are unable to get any pension, either from the British government or from the government of Canada and do not come under any existing legislation.

Mr. POWER: Did I understand the hon. gentleman to say that there were Canadians by birth who enlisted in the British forces and who did not get any pension?

Mr. CHURCH: Yes, I have in mind at the moment particularly the case of Colonel Young, of Kingston, who is well known to the hon. gentleman, I have no doubt. That soldier went and enlisted in the British forces, and when he applied for a pension he could not get it. Those of our veterans who are unable to get any consideration when in distress are now obliged to apply to the cities for relief. There occurs to my mind at the moment one case, a soldier named Taylor, in which I had some correspondence with the minister: a pension was refused this man who lives in the riding of my hon. friend from South Toronto (Mr. Sheard). He has been writing to the board for months without any satisfaction and was receiving assistance through the city. The authorities claim that his sickness was not due to service overseas. With all due respect to the minister, I do think that there should be some broad rule to cover all these cases. When application is made to the minister he says he can do nothing that is not laid down by the act; and after a lot of time is spent in correspondence with the board they take the same attitude. The result is that the city has to come to the relief of these men. The amendment to the act, I repeat, does not go far enough.

Mr. MEIGHEN: Can the minister tell us who drafted the clause as it stands? Was it drafted in the Justice department?

Mr. BELAND: I think it was submitted by the secretary of the board.

Mr. MEIGHEN: I prefer the drafting in the old clause; it is simpler and at the same time more perspicuous. I am doubtful as to the wisdom of leaving out the words "attributable to." According to the present wording of the clause, the pension is payable if the injury or disease or aggravation thereof resulting in disability "was incurred during such military service." The old wording was less circuitous, and the words "attributable to" were used. It seems to me that the disability might be attributable to military service although it was not actually incurred during such service; I do not know whether it is or not, but that is just possible. I would suggest that we make it read "attributable to or incurred during such military service."

Mr. BELAND: I see the point. My intention was to move that we strike out in certain clauses the words "attributable to", which appear in some other sections. The idea is to carry out what has been designated by the soldiers generally as the insurance principle. The moment disability is incurred during military service by a man who was in a theatre of war, it is equivalent to disability attributable to military service. The word "incurred" covers everything. When the disability is "incurred" during military service, it may or may not be "attributable to" service, but it is covered by the word "incurred". It is a much more comprehensive word and the words "attributable to" are quite unnecessary, the word "incurred" covering everything.

Mr. MANION: As the section was worded last year, to the ordinary reader it would appear to have a wider interpretation than in its present form. Is there any narrowing of the application of this provision by leaving out the words "attributable to"?

Mr. BELAND: I have no objection to inserting the words "attributable to", but they are entirely superfluous in the opinion of the pension board.

Mr. MANION: To the ordinary reader there would appear to be very many unnecessary words and phrases in our legislation, and I do not think the minister need trouble himself on the score of the words "attributable to" being superfluous. They might just as well be reinstated.

Mr. BELAND: Yes.

Mr. CLARK: Mr. Chairman, it seems to me that if there is any possibility of the

interpretation of the section being narrowed the words "attributable to" should be left in. Certainly the phrase "attributable to or incurred" during military service would from the legal point of view, broaden the interpretation, and therefore the retention of the words "attributable to" cannot do any harm. If the section is passed in its present form, a strict interpretation might exclude a pension for any injury which did not appear until years after a man's discharge. Therefore I think if the minister has no objection—and he says he has none—these words might well be reinstated.

Mr. CALDWELL: Mr. Chairman, I can see where the section might be restricted or it might be enlarged. For instance, under the old act I believe if a man suffered a disability while on leave it was not "attributable to" service; under this section it would be. On the other hand, if tuberculosis appeared one or two years after discharge, the cause of it might be very readily traced back to his military service, and in this case the omission of the words might have a restrictive effect on the interpretation of the clause. Personally I should like to see the words "attributable to" put in again, for that reason. I do not think it will work any hardship to anyone. There was a time when the clause read "attributable to his military service as such." I always objected to the last two words. They were struck out on one occasion, later they were reinstated, and then later still they were again struck out. I think those words "as such" did work mischief. To my mind the words "attributable to" should be retained for the reasons I have already stated.

Mr. BLACK (Yukon): It seems to me that the omission of the words "attributable to" of necessity narrows the application of the section. A man might be gassed on service, apparently recover, and be discharged as uninjured, but later on, as the hon. member for Victoria and Carleton (Mr. Caldwell) said, tuberculosis might appear. That is a disability "attributable to" the injury "incurred" on service. The injury "incurred" on service is the gassing, it is not the tuberculosis; but the tuberculosis is the disability "attributable to" the injury, the gassing, incurred on service. So I do not think you can leave out the words "attributable to" without narrowing the application of the section.

Mr. BELAND: Of course, I respect my hon. friend's opinion. In the example he has just given the disability is due to tuberculosis, caused by an injury or disease which was incurred during military service.

Mr. BLACK (Yukon): But it was not "incurred."

Mr. BELAND: I should like to have just one case indicated where the words "attributable to" would be necessary or useful. I do not think a single case can be cited. However, as I have said, I have no objection to leaving the words in. In the case cited by my hon. friend, the disability makes its appearance, let us say, two years after service. It is the disability which is pensionable, not the injury or the disease. Now, was that disability caused by an injury or disease which was "incurred" during service? It can be not "attributable to" service.

Mr. MANION: The word "caused" is not in the clause.

Mr. BELAND: Resulting from.

Mr. CALDWELL: Have there not been many cases of men who have been discharged as A No. 1 and who later made application for pension because their disability developed later and was attributable to service, but was not apparent on discharge? I think if we pass this clause as it stands those men would be absolutely cut out. I think the minister himself knows a number of such cases.

Mr. BELAND: There are undoubtedly a number of cases in which the disability made its appearance long after discharge, but this disability was found to be resulting from an injury—

Mr. CALDWELL: "Attributable to"; and those words have been stressed repeatedly by the pension board.

Mr. BELAND: My hon. friend, if I may say so, does not remember exactly what has taken place. It is not the disability attributable to military service that is considered, it is the injury of disease resulting in disability. Now the disability makes its appearance, we will say, years after discharge, and is found to be the result of injury or disease which was incurred during service. This word "incurred" makes the clause a good deal wider than the words "attributable to," because the man may have incurred that injury or disease whilst he was absolutely outside the ranks, he might have been on leave, he might have been playing football or baseball and suffered an accident. Well, his injury would not be considered as "attributable to" military service, but it certainly would be considered as having been "incurred" during military service.

So I submit the word "incurred" is a good deal wider than "attributable to," and of necessity comprises the latter.

Mr. CALDWELL: If the clause is made to read, "was attributable to or incurred during such military service" it would have a much wider interpretation.

Mr. HARRIS: If this clause passes in its present form, with the words "incurred during such military service," the scope of the act will be considerably narrowed. I have in mind the case of a man who came back from overseas and was passed as physically fit, sound in every way; but after being on his farm for a year he had to take hospital treatment, and last year he was nine months out of the twelve in hospital. He certainly is not physically fit now, but if the clause remains as it is I do not suppose there would be any possibility of his receiving consideration. I suggest that both phrases should be included.

Mr. MANION: The question is whether the two phrases or only one should be included. Certainly the two would be stronger than the one. Since the minister indicates that it would not make any difference from his standpoint, I suggest that the words "attributable to or" be included.

Mr. BELAND: In order to meet the wishes of hon. members I would move that after the word "was" on line 16 the words "attributable to or" be inserted, so that it will read:

—when the injury or disease or aggravation thereof resulting in disability or death in respect of which the application for pension is made was attributable to or incurred during such military service.

Personally I do not see that it enlarges the provision in any way, but I am willing to have it in.

Amendment agreed to and section as amended agreed to.

On section 2—Improper conduct.

Mr. BELAND: This provision was in the bill of last year. The first part of section 2 is merely a reproduction of the act as it is to-day. The only new provision is paragraph (c). It provides that in the case of any venereal disease contracted prior to service and aggravated during service in a theatre of actual war, pension shall be awarded for the whole disability, but there shall be no increase of pension afterwards.

Mr. POWER: If the disease is contracted on service and causes death, is there any pension to the dependents?

Mr. BELAND: No.

Mr. POWER: I do not see why we should make the distinction. You give pension to the man while living if he contracts this disease on service, but you do not give it to the poor unfortunates he leaves behind if he dies.

Mr. CALDWELL: Is this clause not identical with the clause in the bill that passed this House last year?

Mr. BELAND: I think so.

Mr. ROSS (Kingston): From the minister's first remarks in regard to clause 1, it would seem that the pension commissioners were experiencing some qualms of conscience and were willing to widen out the provisions of the act, but now we find that on the contrary they are trying to contract. In paragraph (a) it is provided that the commission "may", when the applicant is in a dependent condition, award such pension. It seems to me the word "shall" should be used, to make it imperative. With regard to what the hon. member (Mr. Power) has just said, there is a distinction between the two classes. In one case the man has been treated and is supposed to be cured, but service brings back the trouble; in the other he incurs the disease during service.

Mr. POWER: I do not quite understand that.

Mr. BELAND: Paragraphs (a) and (b) are not new; they have been on the statute book for a number of years. As to the new paragraph (c), it is broader than the old one; it uses the word "shall"—imperative.

Section agreed to.

On section 3—Children of pensioner classes 1-5.

Mr. BELAND: This clause was in the bill of last year. It is to extend the provision of the former act under which pensions are awarded to the children of pensioners in classes one to five when the pensioners die of a disability or disease which is not pensionable or which is not their war disability. Let me give an example: A man who is pensioned 100 per cent on account of amputations is killed by lightning. In ordinary circumstances, in classes one to five, his dependents would not be pensionable, but in this case the dependents would be pensionable. In other words, the death is not related to service at all, but as he is a high-disability pensioner we make a provision in the law that his dependents shall be pensionable. That provision existed for five years in the original

act passed in 1919. In 1924, this House provided for an extension of that provision for five years, but that provision was defeated last year in the Senate. We are re-introducing it this year.

Mr. CLARK: This section applies only to high disability pensions, 80 to 100 per cent?

Mr. BELAND: Yes.

Mr. CLARK: There are many cases where women have had the care of a husband for a period of five years, the care becoming greater all the time, and if a man dies at any time after the period of five years, whether his death was due to contagious disease or any other disease not attributable to service, if his death occurred only one day after, the widow would not get a pension; but under this section she would?

Mr. BELAND: That is right.

Section agreed to.

On section 4—Pension in accord with extent of disability.

Mr. BELAND: This is a new section. The first part is the same as has been provided in clause 25 of the Pension Act almost from its origin, but we make an exception for tuberculous cases. The awarding of the pension has been left in all cases to the Board of Pension Commissioners, and in exercising that discretion they have based themselves upon a certain table of disabilities, but here we are providing specifically for a certain class of pensioners, that is, the tuberculous pensioners. It will be seen that subsection (3) provides:

> Pensions for disability resulting from pulmonary tuberculosis, when during the treatment of a member of the forces the presence of tubercle bacilli has been discovered in the sputum or it has been proved that the disease is moderately advanced and clinically active, shall be awarded and continued as follows:—

Then it gives, first, the case of the man who saw service in a theatre of actual war and who incurred tuberculosis there. He is to be pensioned for two years at 100 per cent without any possible reduction. Then there is another class of tuberculosis pensioners, those who contracted the disease during service, but who did not see service in a theatre of actual war.

Mr. CALDWELL: Just at that point, does not subsection 3 (b) of section 4 apply only to aggravation in the case of those who did not see service in a theatre of actual war?

Mr. BELAND: No, it applies to all.

[Mr. Béland.]

Mr. CALDWELL: It does not say so. Would the minister read subsection 3 (b)?

Mr. MANION: May I suggest, Mr. Chairman, though I do not like to put you to any extra work, that in view of the complicated nature of the clauses, it would make it much more simple if they were read in advance.

The CHAIRMAN: Has each member an underlined copy of the bill?

Mr. MANION: Yes, but one cannot read the clause and follow the minister's explanation at the same time.

The CHAIRMAN: I will read section 4, taking it up subsection by subsection.

Mr. BELAND: I think it will be sufficient, Mr. Chairman, if you start at the underlined sections, which are new.

Subsections 1 and 2 of section 4 agreed to.

On subsection 3 (a)—Pensions for pulmonary tuberculosis.

Mr. CLARK: Is there any change from the present law in this section except that the pension shall be continued without reduction for a period of two years?

Mr. BELAND: There is no such provision in the act to-day.

Mr. CLARK: But pensions are awarded in such cases under the law as it stands to-day.

Mr. BELAND: No, there is no such law to-day. This is a new clause. I may say, however, that it is the practice.

Mr. MANION: This makes it statutory.

Mr. BELAND: Yes.

Mr. CLARK: Under what authority can the Board of Pension Commissioners award pensions in such cases unless there is some authority for it in the Pension Act?

Mr. BELAND: Well, it is very seldom we hear complaints of the generosity of the pension board.

Mr. CLARK: No, I am only suggesting—

Mr. BELAND: I quite understand my hon. friend; I was just joking for the moment. The board has in practice awarded a pension of 100 per cent to tuberculosis cases which were moderately active in the case of those who saw service in France or England, and pension has been awarded in such cases for

a period of two years without reduction. If I mistake not that was a recommendation of a former parliamentary committee, but whether of last year or of the year before I am not certain. As my hon. friend is aware, this class of cases has been discussed many times in parliamentary committees, and the recommendation at one time or another was made that tuberculosis cases should be pensioned at 100 per cent for two years without reduction. That has been the practice of the board, and this will make it statutory.

4 p.m.

Mr. CLARK: As I understand it, there is a provision in the old act for awarding pensions to the class of cases mentioned in this section, but the change that this section brings into effect is that the pension shall be continued now by statutory authority without reduction for a period of two years?

Mr. BELAND: Yes.

Mr. CALDWELL: I have got the bearing of the subsection I referred to since the chairman has read the section. It provides that the man who saw service in a theatre of actual war shall be paid 100 per cent pension for tuberculosis if there was no aggravation, while the man who did not see service in a theatre of actual war, though he gets a pension of 100 per cent if the tuberculosis was incurred even during the other part of his service, gets only 90 per cent if there was no aggravation that might have been caused through service.

Mr. BELAND: That is right.

Mr. CALDWELL: There are two wise provisions here which were not in the old act. One is that the pension shall continue at the full rate, 100 or 90 per cent as the case may be, for two years. The other very wise provision is that the pension shall not be reduced by more than twenty per cent at any one time, and that these reductions shall not be nearer to each other than six months, which means that the pension will not be cut off all at once, but, that the man will have a gradual chance to re-establish himself.

Subsection 3 (a) agreed to.

On subsection 3 (b).

Mr. CLARK: Is not this case covered by the preceding subsection 3 (a)? This reads, "In the case of a member of the forces who did not serve in a theatre of actual war whose disease was aggravated during military service—

Mr. CALDWELL: There is nothing for aggravation, just attributable to or incurred during service. Would the minister explain the meaning of that last clause; that the provisions of this subsection shall not apply if the disease manifested itself within a period of three months after enlistment?

Mr. BELAND: It leaves it in the discretion of the board, in a case where the disease made its appearance during the first three months after enlistment, to decide the amount of the pension. In such a case in all probability the disease would be pre-existing. Of course he may be pensioned 100 per cent for all we know. If the disease develops within three months, he may be awarded a pension of only 50 or 70 or 80 per cent, at the board's discretion.

Mr. CALDWELL: If he contracts a disease within three months after enlistment he may be pensioned only for aggravation?

Mr. BELAND: That is right, if he had not served in a theatre of actual war.

Mr. CALDWELL: I do not know that I would like to agree to that.

Mr. BELAND: The board would consider the case, and if the disease develops during service he would be pensioned in any case.

Mr. CALDWELL: I have no great objection.

Subsection 3 (b) agreed to.

Subsection (4)—When no deduction from pension. Agreed to.

Section 4 agreed to.

On section 5, subsection (3) (a)—Final payment in cases of disability between 5 and 9 and 10 and 14 per cent.

Mr. CALDWELL: In case the pensioner takes the final payment, later becomes stranded, and is in need of medical attention, of course, if his disability is increased, he is entitled to a reconsideration by the board and a readjustment of his pension. But if his disability is not increased, is he entitled to free treatment at any military hospital?

Mr. BELAND: Yes, if he requires treatment.

Mr. CALDWELL: Even if his disability is not increased?

Mr. BELAND: Yes.

Paragraph (a) agreed to.

On section 5, subsection (3) (b)—Pension after award of final payment.

Mr. MANION: The latter clause of this paragraph reads:

Provided that the deductions from future payments of pension shall not exceed fifty per cent of the pension payable.

Ultimately he wipes out the final payment, but temporarily they cannot take more than fifty per cent of the pension off.

Mr. BELAND: That is right.

Mr. CALDWELL: Under the old act they simply withheld payment until the initial payment had been absorbed?

Mr. BELAND: Yes.

Mr. ROSS (Kingston): I think it is a petty thing to make a provision that the disability must be increased by five per cent. I do not know how any medical man can say in such cases what five per cent means. I think those words should be stricken out, and the section should simply say "if the disability be increased." A man has a great deal of difficulty in getting back at all. In fact, I am not altogether in favour of this provision in regard to final payment. I think if a man has a disability at any time he should be paid, even if it is two per cent, and he should not come under any provision as to final payment, because he has too much trouble getting back. He has to go to some medical officer and get him to say that he is in a worse condition than when he was given the final payment. The man who examined him at that time perhaps cannot be found. If a man has a disability he should be paid and kept on; there has been too much cutting off. For instance, a man is asked to undergo an operation, and he has to take the operation. If he does not take it he has to get out. I do not say that those are the words, but that is the effect of it.

Mr. CALDWELL: Just for information, is there ever an instance where the pensioner must take final payment whether he elects to take it or not? I never was in favour of the final payment, I do not think it works well for the pensioner. I do not think he should be compelled to take the final payment.

Mr. ROSS (Kingston): No, but suppose he is in this position: That there is a suggestion whispered in his ear that if he does not take it he will have to get out and get nothing, and therefore he takes it. I do not consider it is just. I pass over the other matter, but coming down to the five per cent increase, I do not see how any person can figure it out. The five per cent should be struck out, simply leaving the word "increase." He has a hard enough time to get there at all. I have known cases where they have to chase around the country and give a doctor a fee to have the case reconsidered.

Mr. CALDWELL: I usually find myself in general agreement with the hon. member for Kingston, and I feel he is an authority on these matters, but I must disagree in regard to the five per cent. However, I may be wrong. If this five per cent is cut out and the pension board says to a man, "Your disability is only seven or eight per cent and it does not amount to much," he may get nothing. I think five per cent is about the smallest percentage. If the five per cent provision is cut out I think it would be difficult to work out. I should like to have the view of the hon. member for Kingston on this. I think it is a safeguard to the pensioner, because, if his disability is increased five per cent, the board must consider his case; but if we cut out the five per cent, his disability may increase six or seven per cent, and they may not take him on.

Mr. ROSS (Kingston): I make this suggestion: If we leave the word "increase" only in the section, they would get a pension under this section. If it is two per cent, or five per cent, or ten per cent, there is no pension.

Mr. BELAND: I see the point. Perhaps my hon. friend from Victoria and Carleton (Mr. Caldwell) is not apprised of the point made by the hon. member for Kingston (Mr. Ross). It is true that the appraisal of disability goes by 5 per cent, and the phrase "5 per cent" there is perhaps also superfluous. If we said, for instance:

If subsequent to the award of a final payment it is found that the disability of the member of the forces has increased he shall be restored to pension. . .

That means, as it reads, "by 5 per cent or over." There is no objection at all to making this amendment by striking out the words "by 5 per cent or over," and I move that the clause be amended accordingly.

Amendment agreed to.

Paragraph (b) as amended agreed to.

On section 5, subsection (3) (c)—Final payment offered but election to continue on pension.

Mr. BELAND: This is simply a gift we make to a man who has no disability.

Mr. MANION: But it is a gift in the sense that he has been offered the gift previously.

Mr. BELAND: He has been offered, not a gift, but compensation for a certain disability. He has refused to take the compensation and he has elected to remain on pension. As the months or years go by, this disability disappears entirely and his pension should disappear accordingly. Then, in accordance with the subsection, he may claim the amount that was offered to him at the time that he was still under the disability.

Mr. CALDWELL: I think there was a definite reason for inserting this clause. This was discussed in committee on previous occasions. I know there was a feeling amongst returned men—I am not saying that they were right—who had been offered a final payment and did not accept it, that their pension had been arbitrarily cut off and that it should not have been cut off. This is to prevent anything of that kind. The fact is that it will not amount to very much in money because these payments are small. These final payments are made only for small disabilities.

Mr. BELAND: But there are still a large number of pensioners between 5 and 15 per cent, there are as many as 4,000 still on pension.

Mr. CALDWELL: But many of them will not take final payment. Many of them will be continued for years.

Mr. BELAND: They are now being continued.

Paragraph (c) agreed to.

Section 5 agreed to.

On section 6— Wear and tear of clothing on account of amputation.

Mr. BELAND: I am sure this clause will not lend itself to any objection. It is a new clause for the purpose of carrying out a request that has been made for a long time by amputation cases, that they should have an allowance for wear and tear of clothing. It is putting into the statute the recommendation of the parliamentary committee to provide for an allowance of $54 per annum for leg amputation cases and $22 per annum for arm amputation cases.

Section agreed to.

On section 7—Annual allowance for maintenance of parents.

Mr. BELAND: This is clear in itself.

Section 7 agreed to.

On section 8—Conditions under which pension shall be paid to widows; subsection (1) (a).

Mr. CALDWELL: Would the minister please illustrate what kind of case this would apply to?

Mr. BELAND: Here is the law as it stands to-day and has existed since 1919. It provides that:

> No pension shall be paid to the widow of a pensioner unless she was living with him or was maintained by him or was in the opinion of the commission entitled to be maintained by him at the time of his death and for a reasonable time previously thereto.

Mr. LADNER: In a case of excusable separation or one in which a court of law would pronounce judicial separation, would the opinion of the commission be entirely in their discretion?

Mr. BELAND: This would cover such a case of separation, but in those cases the widow herself must not be responsible at all in the eyes of the law for having lived away from her husband.

Mr. LADNER: Supposing a judicial tribunal had found in favour of the woman for a judicial separation, would the commission have the superior authority to determine otherwise?

Mr. BELAND: I do not think they would exercise that authority.

Mr. LADNER: I have read through this section and the amendment. This sub-clause apparently puts complete autocratic power and discretion into the hands of the commission. I am not going to take up the time of the committee in discussing difficulties and complaints that we have had in the past. This clause is going to have far-reaching effects, and I think it would be better, in the interest of the pensioners, if, in those cases where there can be no difference of opinion, for instance, the case I cited of a judicial separation, the commission should follow the findings of fact. I realize that at this stage it is difficult to make any fundamental changes, but from my individual judgment, based on experience, I raise the objection that it is not wise to place such complete authority in the hands of the commission, by which they may make a finding contrary to the rules of judicial tribunals on questions largely of fact and law such as separation, and so on.

Mr. BLACK (Yukon): Is it the intention now to reconsider cases in which a pension is being paid but in which further payments are being withheld if in the opinion of the

commission the widow was indiscreet, or something of that sort?

Mr. BELAND: Section 33 of the Pension Act as it stands to-day might throw some light on the question which has been raised by my hon. friend (Mr. Ladner). Subsection (4) of section 33 reads:

(4) A woman who has been divorced or legally separated from a member of the forces who has died shall not be entitled to a pension unless she was awarded alimony or an alimentary allowance, in which case she shall be entitled if she is in a dependent condition to the equivalent of the widow's pension or to the equivalent of the alimony or alimentary allowance which was awarded her, whichever is the smaller in amount.

Would that provision meet the case suggested by my hon. friend?

Mr. LADNER: But that provision is repealed by the present section.

Mr. BELAND: No, that subsection is not repealed.

Mr. LADNER: I have not the act before me so that I cannot tell.

Paragraph (a) agreed to.

On section 8, subsection (1) (b).

Mr. BELAND: Some of the subdivisions of this subsection are quite involved and I might perhaps just briefly explain them. Paragraph (i) provides that if the marriage has taken place within one year after discharge, then the widow is pensionable in all cases, if the death is the result of the pensionable disability. Paragraph (ii) provides that if the marriage takes place after the coming into force of this act and the man secures from the Board of Pension Commissioners a certificate that the disability from which he suffers is not likely to result in death, then should he die from that disability the widow is pensionable.

Mr. MANION: Can he ever get such a certificate?

Mr. BELAND: He might. If I had lost a little finger and got a pension, I might go to the board and ask for a certificate that this disability was not likely to result in my death, and they would issue the certificate. But blood poisoning might develop later through an accident of some kind to that finger and I might die, and in that case my widow would be pensionable.

Mr. CALDWELL: But that is an extremely unlikely case. Take the case of an amputated leg.

Mr. BELAND: In that case I would not issue a certificate.

Mr. CALDWELL: The minister does not think that it would be possible for a man with an amputated leg to obtain a certificate that such disability might not result in death?

Mr. BELAND: I would not give such a certificate.

Mr. CALDWELL: So that we may see what value if any there is in the clause, the minister might suggest some case in which the certificate would be given.

Mr. BELAND: Paragraph (iii), I think, covers the point. It provides that in the case of a member of the forces who has married between a period of one year after his discharge and before the coming into force of this act, and who has obtained a certificate showing that any pensionable injury or disease from which he is suffering at the time of marriage would not result in death, the pension shall be allowed the widow.

Mr. CALDWELL: The paragraph says "who has obtained" the certificate. I take it that these words would preclude the possibility of his going to the commission after the coming into force of the act. Would it not mean that he must have secured the certificate before the passing of this legislation?

Mr. BELAND: I do not think so; he may obtain it at any time.

Sub-paragraphs (i), (ii) and (iii) agreed to.

Mr. BELAND: Sub-paragraph (iv) relates to the man who has married between the period of one year after his discharge and the coming into force of this act and who has died of a pensionable disability. That is what we call the "prudent marriage" clause. If it may have been presumed at the time of marriage that no symptoms existed which a reasonably prudent man, making reasonable inquiries, would have known of, and if he could not have known of the existence and the potential seriousness of the injury or disease which ultimately resulted in death, then the pension shall be paid to the widow. This is going one step further.

Mr. LADNER: I have in mind the concrete case of a certain Mrs. McSweyn who married a man with a pensionable disability. At the time of the marriage he had pernicious anaemia although they did not know about it. They lived on for a time and he died. Would she be entitled to a pension under the clause? They made no inquiries, for the simple reason that they suspected nothing; no prudent person is expected to inquire concerning something about which he has no suspicion at all.

The "prudent" clause therefore does not come into operation in this case. But would the clause cover his case, due to service?

Mr. BELAND: I think it would, if any prudent man made reasonable inquiries.

Mr. LADNER: Would that mean going before a doctor prior to the marriage ceremony and having a complete examination on all phases of health?

Mr. BELAND: No, I do not think it would go as far as that. There is nothing in this clause which would entail the calling in of a medical man.

Mr. LADNER: I put these questions because I know they are pertinent to many cases, and I thought the minister was basing the legislation on the experience and advice of the board.

Mr. CALDWELL: On whom will the burden of proof rest? For instance, would the man's medical history sheet with the medical board be taken into account at the time of marriage to decide whether his injury would be liable to cause death? Or would it be up to the widow to prove that his injury was not apparent at the time of marriage? Just what would be the procedure?

Mr. BELAND: Of course, if we referred to the man's own medical documentation it is likely that the pension would be refused. My impression is that the burden of proof, if you choose to call it so, should rest on the widow or her relatives or friends.

Mr. CALDWELL: What would be taken as proof?

Mr. BELAND: The widow would make a claim for a pension—

Mr. CALDWELL: Personally I do not think this provision is of any value, I do not think anyone would ever get a pension under it.

Mr. BELAND: I did not draft this clause, and it is going a long distance, I must say.

Mr. CALDWELL: Theoretically, it is.

Mr. BELAND: Yes. I presume the widow in such a case would file a claim for a pension, she would say under which clause she was claiming, and I suppose it would be for the board to examine all the papers in the man's case, and it would be a matter of correspondence between the widow and the board. Presumably she would have to establish that at the time of her marriage anyone who knew her husband and who made reasonable inquiries could not be aware of a disability which was likely to result in death.

Mr. BOYS: Will the minister state the meaning of this clause? I have read it, reread it and read it yet again, and the more often I read it the more confused I become. It seems to me with its involved language, its first proviso and its second proviso, it is impossible to reach any understandable construction of it. I presume it comes from some definite source, and no doubt the minister has a marginal note which in a few plain and distinct words will illustrate what this is intended to cover. I have really done my best, reading it over and over again, to figure out what relief it is intended to afford, but having done so I cannot reach any conclusion.

Mr. BELAND: I am no lawyer, and if my hon. friend finds it difficult to extricate himself from the maze of this subsection, I must confess that my chances are getting slimmer and slimmer every moment. But here is the recommendation of the parliamentary committee which dealt with this phase of the Pension Act last session:

> That a pension shall be paid in the case of a member of the forces who has married between the period of one year after his discharge and the coming into force of this act, and who has died of a pensionable disability prior to the coming into force of this act when the marriage took place at a time when no symptoms existed from which a reasonably prudent man, making reasonable inquiries, would have known of the existence and the potential seriousness of the injury or disease which ultimately resulted in death.

That is word for word as we have it here. This clause may be absolutely clear in one particular case, where a woman married a man without knowing at all that he was war-disabled, and thought that for all ordinary purposes of life he was 100 per cent fit. She may be in a position to establish that to the satisfaction of the board because other people who knew him thought the same, in which event she might be lucky enough to secure a pension.

Sub-paragraph (iv) agreed to.

On section 8, subsection (1) (c).

Mr. BELAND: The paragraph we have just dealt with covered the case of a man who died before the act came into force; this covers the case of a man who died afterwards. He is married between a date one year after his discharge and the date of the coming into force of this act, and he fails to secure a certificate from the board. On his death his widow is welcome to claim a pension on the ground that when she married him he did not, in the eyes of the

ordinary observer, appear to suffer from any disability which was likely to result in death.

Mr. CALDWELL: The previous paragraph applies to the widow of the man who may have died just previous to the coming into force of this act, and this paragraph applies to the widow of the man who dies after the passing of the act. Is there any sense in them?

Mr. POWER: Does anybody understand what it means?

Mr. BELAND: Mr. Chairman, I understand what it means, but I must point out how enormous are the difficulties in giving effect to the meaning of these paragraphs.

Mr. POWER: Does the minister guarantee that the Board of Pension Commissioners will understand what this legislation means?

Mr. BELAND: They have not been consulted, but I presume they will understand it.

Subsection 1 (c) agreed to.

Section 8 agreed to.

On section 9—Widow of pensioner classes 1 to 5.

Mr. BELAND: This is similar to clause 3. We have these two clauses in order to amend the corresponding clauses in the Pension Act.

Mr. LADNER: In last year's act there was a compassionate allowance in meritorious cases; is that provision in the bill of this year?

Mr. BELAND: It has been in the act since last year.

Mr. LADNER: But the bill was not passed last year, was it?

Mr. BELAND: Yes, it was passed with amendments.

Section agreed to.

On section 10—Pension to widowed mother prospectively dependent.

Mr. BELAND: This is the second very important clause of the bill. As I explained last year, the amount involved if this clause is adopted will be very large—probably $700,000 immediately, and an annual increase of about $50,000.

Mr. LADNER: Will the minister explain the principle of the provision? The amount of money involved is a secondary consideration if it has merit in other respects.

[Mr. Béland.]

Mr. BELAND: Under the act a widowed mother who is a widowed mother at the time of the soldier's death is pensionable as an ordinary widow, with a few limitations. That is, she may have an income up to $240 per year; she may have a house of her own; she may derive, say, $2,000 from a business or occupation, but these things are not taken into account; she receives a pension as a widow of $720 a year. If she has sons or daughters who may be considered as able to contribute to her support, there may be deducted from the pension $10 a month for each child contributing. This has been the provision of the act since 1919.

Mr. CALDWELL: Was there not an amendment to the act to provide that the $10 a month for each child should be deducted from the pension whether the children actually contributed to her support or not?

Mr. BELAND: Yes.

Mr. CALDWELL: That is the law as it now stands?

Mr. BELAND: Yes.

Mr. CALDWELL: Was it in the law in the first place?

Mr. BELAND: No. Now, the prospective dependent widowed mother is one who becomes a dependent widowed mother after the death of the pensioner. If the mother is a widow at the time of the pensioner's death, she comes automatically within the widowed mother's class. If after the man dies of a pensionable disability the mother becomes a dependent widow she is pensionable, under the present law, at the discretion of the board according to her need. If she has an income of $240, it is taken into account; if she earns a substantial income from her occupation, that is taken into account. And, of course, if she has sons and daughters who contribute to her support, that is also considered.

Mr. CALDWELL: And if she earns small wages, is that not also taken into account?

Mr. BELAND: Yes. I am referring to the case of a widowed mother who does not come within the class of widowed mothers provided by the act. Now, if this amendment is adopted, all those mothers that are widowed to-day that are not in the widowed mother class will come automatically into that class, and the financial liability involved in the increase of their pension will be as I have stated.

Mr. LADNER: Is it the purport of the amendment that those coming under this class will not have their earnings or income taken into consideration when the pension is fixed?

Mr. BELAND: That is it. Private income to the extent of $240 per annum will not be considered.

Mr. CALDWELL: But if they are not in a dependent condition they do not get any pension?

Mr. BELAND: No.

Mr. CALDWELL: If they are earning enough to make a living they do not get any pension; none of them do. I never could see any reason why a distinction was made between these classes of widowed mothers, and the reason there will be a large initial payment now is because those coming under this class have been held out of pension although they were not able to make a living for themselves.

Mr. BELAND: The original idea of this widowed mothers clause was to provide for the widowed mother whose son and only means of support went to the front and was killed. Parliament said, these widowed mothers will be considered, with a few limitations, as widows, and their income will not be taken into account in the payment of pension. Now, take the case of a soldier whose father and mother were not dependent upon him. He went to the front, came back disabled and was made a pensioner. He does not contribute toward the support of his mother or of his father; he dies of his pensionable disability; later the father dies and the widow becomes more or less dependent. She has an income of say $240, she has a house of her own, and a good position. If she is of the class of the widowed mother, she will get a pension of $720 a year under this new clause. Under the act of to-day, the board examines whether or not she is in need, and if she is in need they will award a pension to the maximum of 100 per cent. As a matter of fact, a number of these mothers to-day who were not widowed at the time of the man's death receive a full pension because they are in absolutely destitute circumstances, and in the opinion of the board had the man lived he would have contributed substantially to their support—they take that into consideration to-day and come to the help of the woman to the extent of her need. I presented this clause last year, and I want it to pass again now, or I would not have introduced it. But I want the House to know exactly the conditions. It means that this woman will fall automatically into the widowed mother's class and that she will be pensioned as a widowed mother, with the limitations I have stated before, and this will immediately increase the pension bill by $700,000.

Mr. CLARK: Is that $700,000 odd annually.

Mr. BELAND: Yes.

Mr. CLARK: That is not for arrears?

Mr. BELAND: No, to adjust to-day.

Mr. CLARK: That takes into consideration arrears?

Mr. BELAND: It will be paid every year, as long as they live.

Mr. MANION: How much next year, for instance, or two years from now?

Mr. BELAND: Next year it will be the same amount, plus about $50,000.

Mr. CLARK: It is $700,000 odd this year, and next year it will be nearly $800,000.

Mr. BELAND: It will be $700,000, plus an annual increase of $50,000 or thereabouts.

Mr. LADNER: The minister in explaining this clause referred to the case of a widow having a good earning capacity,—perhaps $2,000 a year; she will receive a full pension under this section. But is this clause not framed to include a number of widows who perhaps do not receive remuneration for service? Has the minister the information as to how many widows are not able to earn their living, and who are really meritorious cases, as against the hypothetical case he gives, which is not quite so meritorious. How many meritorious cases would there be in this class?

Mr. BELAND: I am not in a position to say exactly, but there is a large number of mothers who are widows to-day and who are pensioned according to their need only, a sufficiently large number to mean an increase of $700,000 if their present pensions are made equal to that of widowed mothers.

Mr. LADNER: Then why is the legislation placed before the House if it has not real merit behind it?

Mr. BELAND: It is the recommendation of the parliamentary committee.

Mr. LADNER: But for what reason is this change made?

Mr. BELAND: My hon. friend was a member of the committee himself; I did not belong to it last year.

Mr. LADNER: I was not on that committee.

Mr. BOYS: I can quite understand the pension being increased to the extent of the maintenance she had been receiving, but it is difficult to realize why it should be increased more than that. If the soldier had lived, and had been maintaining his mother to the extent of four or five hundred dollars, and then he dies, the mother is deprived of that amount, and one can well understand why the country might in that case provide a pension to the extent of the maintenance she had been receiving. But where a mother had been receiving maintenance to the extent of one or two hundred dollars, we will say, and the soldier dies, that is the extent of her deprivation, and then under this clause all of a sudden a pension very much larger than the amount she had been receiving from the soldier is given her, and just at the moment I do not see why that should be done, although I am entirely sympathetic to legislation of this kind. Perhaps the minister would explain why it is that her position should be so much better financially by reason of the death of her son.

Mr. ARTHURS: One reason why this clause was passed by the committee was to take care of cases where there was a young man going to school. Not only was he not supporting his parents, but they were supporting him, giving him an education. He gets killed over there, and subsequent to his death the father dies, and by force of circumstance or otherwise the widow becomes dependent.

Mr. BOYS: I do not think this applies to cases of that kind at all, because the closing words of the section are, "and who in the opinion of the commission would have been wholly or to a substantial extent maintained by a member of the forces had he not died." The case my hon. friend mentions is a case where the soldier was contributing no maintenance at all, but this clause applies to cases where in the opinion of the commission there had been maintenance either wholly or to a substantial extent by the soldier.

Mr. POWER: Had he lived he would have supported his widowed mother. His mother, so to speak, invested a certain sum of money in his education in the hope that he would look after her in later years.

May I say with respect to this prospective widowed mother, that for several years after coming into this House I invariably had one or two resolutions on the order paper with reference to this very important question, and year after year the widowed mother's condition was somewhat improved. Under the first act, 1918, I think, the widowed mother had to show her dependent condition, and her pension was reduced if she was earning any money at all. We had the spectacle of elderly ladies being obliged to go out and work as scrubwomen, and if they earned ten or twelve or fifteen dollars a month at that. that amount was deducted from the pension awarded them by the government. Then later on, widowed mothers who applied for pension on the ground that they were dependent were told: You have so many children; go look to your children for support. It was left to the discretion of the board as to what the children were to contribute, and finally, after considerable discussion, parliament decided that each child should be assessed $10, I think it was. Later on, the widowed mother was told: You have a house. But, it very often occurs that a person has a house but has hardly the means to buy food with which to keep body and soul together within that house. And so another improvement was made. And so on, and so forth. Then the distinction was made between earnings and income. I remember on one occasion when this matter was debated, Mr. Nickle, the present Attorney General of Ontario, said that we were drawing a very fine distinction between earnings and income. He said: "Take the case of a widowed mother who owns a house and decides to rent rooms. If she rents rooms and calls the place a boarding house, and cleans up the rooms a bit, that might be called earnings, but if she simply rents the rooms, and perhaps lives elsewhere, that would be income." He said it was a mighty fine distinction to draw. I thought so myself at the time, and then for two years in succession I brought a resolution before the House asking that widowed mothers generally be treated as ordinary widows and be given a pension of right, just as the ordinary widow would. It is quite true that in some cases widowed mothers who have incomes might obtain a pension that perhaps the country should not give to them. But we would save ourselves an awful lot of trouble, and save the Board of Pension Commissioners a lot of trouble investigating into all the circumstances, and we would also save a lot of trouble to very many meritorious cases, if we simply accepted the broad principle that the widowed mother of a soldier killed at the front was entitled to a pension of right, and let it go at that. That resolution was carried

5 p.m.

in the House two years in succession, but never translated into legislation.

Mr. BOYS: I frankly say that I did not appreciate the prospective feature of this section.

Section agreed to.

On section 11—Defence against cancellation of pension: re-instatement of pension.

Mr. BELAND: This is a new section, never introduced in the House before. Hon. gentlemen will readily grasp the meaning of it. The clause in the act to-day reads as follows:

The pension of any female pensioner who is found to be a common prostitute, or who openly lives with any man in the relationship of man and wife without being married to him shall be suspended, discontinued or cancelled.

Some cases of hardship have been brought to my attention, one in particular from the western provinces, of which there was some mention in the House last year. This is to provide that a pension shall not be cancelled or discontinued without an opportunity being given to a pensioner to present to the commission her side of the case.

Mr. POWER: Suppose a case in which the pensioner finds that the commission has not given her a proper opportunity to explain, has she an appeal?

Mr. BELAND: No, she would not have an appeal.

Mr. POWER: In this case we do not state how the commission is to advise the pensioner that the pension is to be cancelled. We simply say that the pensioner will obtain some kind of a hearing. We do not instruct the commission as to what kind of a hearing or what notice is to be given. We are not very much better off than we were before. The commission will simply say , "Yes, we wrote a letter saying we were going to cut off the pension and ten days after we cut off the pension".

Mr. BELAND: I think the hon. member is taking an extreme view of the situation. Up to the present time a number of pensions have been cancelled in the case of widows, presumably on account of immoral conduct on the part of the pensioner, presumably without opportunity being afforded to show that the information which had been furnished to the board was erroneous.

Mr. POWER: Does the minister seriously tell me that the Board of Pension Commissioners would deliberately cancel the pension of a woman on any such grounds as those, without previously giving her a hearing? If the board have done that in the past, they should have been fired long ago.

Mr. CALDWELL: It has been done.

Mr. POWER: They have no business to do it. It is a most serious thing, and they should have made it their business to make a thorough investigation into the matter.

Mr. LADNER: I suggest to the minister that the mere right of appearing before the commission is not really a protection to the persons concerned, unless they have also the right of appeal; because I have seen cases where the commission have made up their minds; you may submit a great deal of evidence, but frequently they do not show much of a disposition to change their minds. Considering the fact that it is the whole pension and is of serious consequence to the appellant, what objection would there be to allowing an appeal to the appeal board in a case of that kind?

Mr. BELAND: I think one step at a time is sufficient. This is a step in the right direction. Since the Pension Act was passed in 1919, it has been substantially amended in the years 1920, 1921, 1922, 1923, 1924 and again this year. I think we have advanced in this direction as far as we should go. The representations which have been made to me go only to the extent of providing that the widow who is to be deprived of her pension on account of immoral conduct should be offered an opportunity of presenting her case before the pension is cancelled. No claim has been made for any further amendment. I understand my hon. friend's suggestion is that an appeal should be provided in these cases, but no appeal is provided for such cases at all now. I do not say that it will not come in another session, but I suggest that we take this step this year and see how it works.

Mr. ROSS (Kingston): Is there any arrangement made in regard to the children of the pensioner?

Mr. BEAUBIEN: It places the widow in the same position as she was before, except that her pension will not be cut off until an appeal has been made.

Mr. BELAND: That is correct—until her defence is presented to the board.

Mr. CALDWELL: I hardly think that latter statement is correct. This act simply gives her an opportunity to present a case, but if she refuses to present any defence, her pension might be cut off. Is there any time

limit given in which she may present her case?

Mr. BELAND: I do not think so.

Mr. CALDWELL: I think there should be a time limit.

Mr. POWER: It is very hard to make a time limit.

Mr. CALDWELL: I think a number of occurrences under the Pension Act have demonstrated to us the inadvisability of giving absolute discretion to the pension board in all these matters, and in this case there should be a time limit—six or twelve months, or whatever time the committee think necessary.

Mr. LADNER: She is given an opportunity.

Mr. POWER: If we provide a time limit the commissioners would immediately seize on that time limit, and if she came in a few minutes late she would be out of court.

Mr. CALDWELL: The board writes her a letter, and if she does not come back with her statement, it is left to the pension board to say that she should have come back in two or three weeks.

Mr. POWER: She can go to see a good member of parliament, like my hon. friend from Victoria and Carleton (Mr. Caldwell).

Mr. ROSS (Kingston): I ask the minister what arrangement the board had made in the case of children of the woman who loses her pension?

Mr. BELAND: I do not think the children would be affected by it.

Mr. POWER: The children always get it.

Mr. BELAND: If the pension is paid on account of the children, the guardian will take care of the children.

Mr. ROSS (Kingston): Then they should come under the law of the province.

Mr. BELAND: No, there is a provision in the Pension Act for those cases.

Mr. CALDWELL: The point I raise in regard to the time limit I think is well taken I would like to see the amendment made effective. I think possibly we should go a step further than what has been the practice of the board. This amendment never should have been necessary. It is a very severe indictment of the practice of the pension board that it should be necessary for this parliament to pass an amendment of this kind, because under British law a person is presumed to be innocent until he is proved guilty; he should always be given an opportunity to put up a defence. The apparent need for this amendment is the direct statement that this has not been the case in times past; I should, therefore, like to see some definite time given to these people to put in a defence.

Mr. BELAND: In line 7 there are the words "may direct." We might add:

And a delay of three months for such purpose shall be deemed to be reasonable.

Mr. CALDWELL: I do not think that is long enough, as it might be difficult for a woman to assemble her evidence in three months. It would be possible for her to enter a defence in that time, if that is what is meant, and then if her case were not proven at the end of three months, I presume her pension would be cut off while her case was under consideration.

Mr. BOYS: I would favour a much shorter period than three months. If there were a case at all where a woman would want to be prompt in her defence, it would be one where an accusation of this kind was made against her. It stands to reason that if a notice of this kind were sent to her accusing her of such conduct and intimating that her pension was going to be cut off, two weeks or a month at the outside would be ample time for her to notify the commission that she wanted to be heard. The clause does not say that she must get in her defence within any reasonable time; it states simply that she must be given an opportunity. I remember bringing to the attention of the minister a case in my town where a woman had had her pension actually cut off without any notice, and without an interview or investigation from her standpoint. Later on when the facts were gone into, the charges which had been made against her by somebody unfriendly to her were found to be without foundation and she was reinstated. It is contrary, as my hon. friend, (Mr. Caldwell) says, to British justice that a person should be deemed to be guilty of conduct of this kind without a hearing. I understand this clause provides that before she can be deprived of her pension she must be given notice. The only thing I would suggest, if that were necessary, would be that the notice should be sent by registered letter to the address where she is receiving her pension cheques from month to month. But I think that can be left to the commission and they will no doubt send the notice there. If the woman is receiving her cheques regularly, she will get the notice. In such a case she should act promptly and one month should be ample time

in which to file her defence. If she is not sufficiently interested in her pension and in defending her reputation to file her defence within a month, I would never blame the pension board for cutting her off.

Mr. ROBINSON: I would think this is right the way it stands. I was on the committee, and the way it stands, that the pension cannot be cancelled until she has entered a defence, would be in her favour.

Mr. BOYS: It says: "until an opportunity has been given."

Mr. ROBINSON: Yes. She has to be given an opportunity. Why limit her to a month, or any time? The cancellation cannot be made until she has had that opportunity.

Mr. MANION: Has the minister any information as to the number of women who have had their pensions cut off without a hearing prior to the present time. Are there any such?

Mr. BELAND: I think only two cases were brought to my attention.

Mr. MANION: Under this provision no such injustice will be done to a woman as to cut her pension off without a hearing?

Mr. BELAND: No.

Mr. BLACK (Yukon): The cases in which this clause would be brought into play must be very exceptional and the cases in which the pension board would cancel pensions would be very flagrant. With the amendment as now offered, the improvement is so great that no time limit is necessary. The amendment as it stands now might very properly be left with the pension board, and parliament at a later session may amend it if it is found to be abused.

Mr. STEWART (Leeds): The last provision states that any pension which has been suspended, discontinued or cancelled, may be reinstated. If there is anything in the nature of a hardship or if a widow thinks she has not had proper opportunity, that provision gives her a chance to have her pension reinstated. I think it is better without putting in any time limit at all.
