Mr. LADNER: There is a weakness in the last proviso in that there is no obligation on the commission to give a reasonable opportunity for the appearance of the person concerned. They have their own authority in that connection. It is presumed, of course, that they would hear the person concerned.

Mr. STEWART (Leeds): It must be presumed that the pension board will act as reasonable men and carry out the spirit of the act.

Mr. CALDWELL: Supposing a woman's pension has been previously cancelled and she can prove that she is not guilty, it is in the discretion of the commission whether they will reinstate her pension or not. If the woman can prove her case, there should be no discretion about restoring her pension.

Mr. BELAND: It is very difficult to go to that extent. The Board of Pension Commissioners would have to examine and weigh the evidence which is brought before them and if they consider that the defence against the accusation brought against the woman is not sufficiently weighty, they may suspend the pension. The second proviso is perhaps superfluous, but I do not think it can work any injustice, nor do I think it is any reflection upon the board.

Mr. MANION: This brings up a question raised in the House last year, and I remember putting myself on record in regard to it. It should be with a great deal of hesitancy that the Board of Pension Commissioners or any board of a like nature should be placed in the position of a morality squad looking into the character of pensioners or any other group of people. Last year the case came up of a man having his pension discontinued because of boot-legging. This case was brought up by the hon. member for Kingston (Mr. Ross). Personally, I think the pension board should act very slowly about judging the character or morals of any pensioner in this country. Unless for a very flagrant breach of the ethics of life, no board should be placed in a position where a crank or a number of cranks on that board could have the right to rule out the pension of somebody or of the dependents of somebody, whose morals we did not look into when we took him overseas. I hope the minister will discourage in every possible way he can the judging of morals of pensioners unless the breach is very flagrant.

Section 11 agreed to.

On section 12—Additional pension to dependents.

Mr. BELAND: This is only to do for the mother of any ex-imperial or ex-allied officer with pre-war Canadian domicile what is done for the mother of the officer who served in the Canadian expeditionary forces.

Section 12 agreed to.

On section 13—New schedules.

Mr. CALDWELL: This is to incorporate permanently the bonus into the pension as was done last year in the act which passed this House but which failed to become law?

Mr. BELAND: Yes.

Mr. LADNER: Are there any changes in the schedules?

Mr. BELAND: No; the schedules are the same as those of last year.

Section 13 agreed to.

On section 14—Term.

Mr. BELAND: This provides for the prolongation of the term of the commissioners other than the chairman. Two commissioners were appointed for three years and two for two years, and their term would expire this year if we did not re-appoint them. The number of appeals before the board is still very large and we shall require all the commissioners we have now.

Section 14 and section 15 agreed to.

On section 16—Appeals.

Mr. CLARK: What is the effect of the amendment?

Mr. BELAND: The amendment is merely to bring this section into conformity with an earlier section. We have amended section 11 of the act, and in lines 17 and 18 we have changed the former clause in some respects to make it clearer. This is to conform with the amendment to that section.

Section 16 agreed to.

On section 17—Operation of certain provisions and review of cases.

Mr. BELAND: This is to provide for the retroactive operation of certain sections of the act.

Section 17 agreed to.

On section 18—Hearing by member of board.

Mr. BELAND: This section is intended merely to make a correction in the French version, in which there was a mistake. It does not affect the English version.

Section 18 agreed to.

Mr. BLACK (Yukon): Is there no provision in the bill whereby the findings of the board in regard to the percentage of disability may be appealed from? I thought that was to be one of the provisions of the bill. The board might find a man's disability to be 50 per cent, and as things stand now he can only put up with that. Could there not be some provision to enable him to appeal on that question?

Mr. BELAND: Last year there was a provision for appeals on assessment but this was not passed by the Senate. At that time I had not the experience which I have since gained. The number of appeals on entitlement is so large at the present time that I do not think it would be wise to provide for any appeal on assessment. The number of appeals would naturally be very large; any man would be open to appeal his appraisal of disability. It would cost him nothing; it would be only a matter of a move on the part of the pensioner to have his assessment made 40 per cent instead of 30, or 30 instead of 20, or 70 instead of 50 as the case might be. I have consulted the members of the Board of Appeal on this point and have asked their opinion regarding the desirability of appeals on assessment, and they have sent me a memorandum in this connection which has confirmed me in the opinion that it would not be wise at present to provide for such appeals. We have 44,000 disability pensioners every one of whom, except those who are 100 per cent disabled, would be eligible for appeal if they chose to take advantage of such a provision. Of necessity therefore the number of appeals would run into tens of thousands. Moreover, the fixing of disability on re-examination would be subject to appeal as well. So that my hon. friend will realize that the Board of Appeal would be so overwhelmed that it would be well nigh impossible for them to consider appeals on assessment for a year and a half or at least a year. The number of entitlement appeals now entered is 4,738; of these, 1,567 have been ruled upon as being not within the board's jurisdiction; 1,060 have been heard, and 2,111 remain still to be dealt with. During the period of January 1, 1925, to March 31, 1925, 1,005 individuals filed appeals with the board. The board works assiduously, hearing on an average 102 cases per month, which I think is rather large in view of the fact that it must hear the representative of the soldier and examine into his documents which generally are voluminous. The board have to weigh all the evidence before they reach a decision. So, at the rate of 102 cases per month it would take them at least one year and ten months to dispose of all those entitlement cases. I am afraid it would clog the wheels of the appeal board.

if we were to allow appeals on assessment. I think the time will come when we will have to allow such appeals, or at least appeals from final awards. We do not have final awards as yet, but I think we should have them. They have them in England and in the United States. These final awards cover what it is a decided pensioner should be paid during the rest of his life whether his disability remains stationary or not. We have what are known as permanent cases, but there is no finality about them, because should the disability increase the amount of pension may be increased after one, two or three years; and should the disability decrease the amount of pension may be reduced. I think it should be in order before very long to provide for final awards. There would be some objection taken by the returned men, but generally speaking the great majority of them would agree that the final award system should be adopted in Canada. If we allowed appeals on assessment, as I explained to the delegation which met me on this subject, we may have as many as 50,000 appeals during one year, and it is the opinion of the board that the provision might lead to frivolous appeals. Of course we would admit that entitlement appeals should be heard first. I am advised that we may expect appeals at the rate of from 50 to 75 per month for an indefinite period. So I cannot see just now that it would be possible to effectively deal with appeals on assessments.

Mr. CALDWELL: Would it not be possible—I think the minister admits that it will be necessary in the future, if not now—to set up a separate tribunal to try appeals on assessment? When he says that every pensioner, except 100 per cent disability cases, would have the right to appeal, I think he has forgotten section 15 of the act that passed this House last session. It placed certain restrictions on the right to appeal on assessment, and is as follows:

15. Subsection one of section eleven of chapter sixty-two of the statutes of 1923, is repealed and the following is substituted therefor:

(1) Upon the evidence and record upon which the Board of Pension Commissioners gave their decision an appeal shall lie in respect of any decision of the said Board of Pension Commissioners, provided that in cases of assessment appeals the appellant shall be required (a) to obtain the consent of an official soldiers' adviser before presenting his appeal; (b) to present certificates of examination from two independent qualified medical practitioners in the form of statutory declarations on approved forms which shall contain an estimate of the percentage of disability, and (c) that the estimated percentage of disability as set out in the certificates provided for shall indicate the appellant's condition to be at least two classes higher than he has been assessed by the Board of Pension Commissioners.

This was threshed out very thoroughly by the committee last session, and we thought that by inserting this restriction we would, to use a common expression, "put them over the sieve"—the trivial ones would be sorted out, and only the deserving cases would come to the attention of the appeal board. There is one other point in connection with the request or an appeal on assessment. It is a point I supported very strongly last session, and I still support it—that if the pension board admit attributability under the present act, and only give a 5 per cent pension, the man is out of court, although he might be entitled to 40 per cent or even more. There have been probably more hardships in respect to this matter than there have been in respect to the absolute cutting off of pensions. The minister would do well to consider it seriously before he shuts the door. He has always been inclined to do justice to returned men in the matter of pension, but I cannot help thinking there should be a right of appeal here, even if it is necessary to set up a separate tribunal to hear appeals on matters of assessment.

Mr. LADNER: A man at some point distant from Ottawa may be found upon medical examination to be entitled to a certain disability, but when the return is made to the central office at Ottawa the decision of the local medical authorities is overruled or a decreased pension is awarded, with resulting injustice to the pensioner. It seems to me that in these cases the pensioner should have the right to appeal to a higher tribunal; he should not be entirely subject to the arbitrary and dictatorial authority of the officials in Ottawa who do not know his case, who have not the knowledge and information they should have to enable them to make a wise decision. The minister would be well advised to consider the right of that class of case to an appeal to the Federal Appeal Board.

Mr. MANION: Last year there was a good deal of discussion in the other House as to the expenditure involved in the pension bill and in the amendments proposed, and in that connection there were many contradictory reports. Has the minister the official figures as to how much the amendments will cost the country?

Mr. BELAND: There are approximate figures covering the most important changes. For instance, the amendment with regard to marriage after the appearance of disability will involve the expenditure of $396,000 annually.

Mr. CALDWELL: I suggest that the amount involved should be given for each amendment. The minister should be pretty sure of the figures, and if he has not got them now I suggest that he have the committee rise in order that he may get them. They may mean the life or death of this bill.

Mr. BELAND: I have requested the Board of Pension Commissioners to supply me with that information in connection with the different amendments. In respect to many of the clauses of the bill they admit their inability to estimate closely the expenditure to be incurred. They say that $83,000 is the approximate amount to be paid out in respect of the number of parent beneficiaries under section 7. As to section 8, with regard to marriage after the appearance of disability, the immediate expenditure involved is $396,000 per annum.

Mr. MANION: These are the figures the minister gave us a moment ago?

Mr. BELAND: Yes. Under section 10, which deals with widowed mothers prospectively dependent, the liability to be incurred by adjusting to the higher rate the pensions now in force is estimated at $700,000 per annum. That is a conservative figure; I have been informed that it may be $800,000. The annual increase in the future is estimated at $48,000. Some financial liability is also involved in other sections, but the board say they are not in a position to estimate exactly what that expenditure will be.

Mr. CALDWELL: They would be relatively small anyway?

Mr. BELAND: Yes. The hon. member (Mr. Manion) made an inquiry last year as to the question of bonus, and I have secured exact figures in this regard. The making of the bonus permanent does not increase the liability, because the bonus is paid now. The present amount of bonus is $7,948,330.

Mr. CALDWELL: What are the total pension payments this year?

Mr. BELAND: They are $34,000,000.

Mr. MANION: According to the figures the minister has given, the total amount involved in the proposed changes is about $1,179,000, plus a few smaller figures which, I suppose, would not amount to very much. I wanted to have these figures because it is important we should have some official indication of what the cost will be. We have dealt this afternoon with a bill of nine pages, and I am sure the minister will agree that that is very good work. I want to emphasize once again the fact that there has been no obstruction or no evidence of any desire to hold up this bill. I am sure the minister agrees with me

Mr. BELAND: I agree with my hon. friend.

Mr. MANION: There has been no disposition to hold up this bill or the other bills. I call attention to this because some unfair statements were made in that connection. I believe most of us have no other desire than to deal with these bills affecting the soldiers in an absolutely fair and non-partisan manner. I say that of the minister as well as of ourselves. I do not think that we should try to use it as a political club at all, and I wanted to be put on record in this matter once again. I am very pleased to know that the minister absolutely agrees with that statement.

Schedule A agreed to.

Mr. GOULD: I wish to introduce something which may be a little foreign to the bill, but if I am in order now—

Mr. CHAIRMAN: It cannot be introduced here. We are now on the schedules.

Mr. BELAND: I understand my hon. friend wants to make a few remarks.

Mr. GOULD: I do not know at what other point I could very well introduce them. I wanted to ask the minister's opinion upon this question: A soldier, a transient passing through a municipality, becomes ill and is taken off the train. He is attended to by a local doctor, who prescribes that he should immediately go to the hospital. The soldier goes to the hospital and is taken care of there, but he dies and is buried. The hospital, of course, desires to know where it is going to get its remuneration from, and it threatens action against the municipality from which this soldier was directed by the local doctor. What is the solution of a problem of that nature? I wish to say that I have a case in point in my own municipality, and I wondered if the minister has ever had a similar case before him, and if provision has been made for cases of that kind. I argue that the hospital authorities should not go without their remuneration, and that the municipality is not liable. This man served overseas, and he was without means. I think some provision should be made to take care of such cases.

Mr. BELAND: I would only say it is a matter of attributability or occurrence during service. If the soldier who is suddenly taken ill and is taken to the hospital suffers from a disease which can be related to his war service, the government bears the whole charge of his treatment, and also of his burial if he is in destitute circumstances. In the other case, I do not know who is responsible, but surely not the government, and I am only concerned about the government at the present time.

Mr. CALDWELL: Would he come under the Last Post fund?

Mr. BELAND: I was just coming to that. If he is in destitute circumstances, the Last Post fund provides for his burial expenses.

Mr. GOULD: May I take it, then, that the government recommends this municipality to take this case up direct with the government?

Mr. BELAND: They may bring in the case at any time.

On schedule B.

Mr. CLARK: I would like to ask a question at this point that I should have asked earlier, with regard to widowed mothers. I have in mind the case of a widowed mother who unquestionably was supported by her son. His whole assigned pay went to the widowed mother. His wife was living at the same time, but she did not get his assigned pay. That man dies and the pension is paid to the widow. Now prior to the introduction of these amendments that widowed mother could not receive a pension except a very small amount, I have forgotten just how much—

Mr. BELAND: $180.

Mr. CLARK: —because of the fact that another pension had been awarded. Is a case like that covered by these amendments? Can that widowed mother who was unquestionably supported by the son receive a pension?

Mr. BELAND: I am sorry to say that is not covered by the present amendments. The act in this regard remains what it was.

Schedule B agreed to.

Bill reported, read the third time and passed.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

TORONTO HARBOUR COMMISSIONERS

The House in committee on Bill No. 42, to amend the Toronto Harbour Commissioners Act, 1911.—Mr. Church—Mr. Gordon in the chair.

Mr. CAHILL: I think the hon. member in charge of the bill should explain what it is about.

Mr. CHURCH: The object of this bill is to amend the original powers of the commission ratified by this parliament in 1911 by adding thereto these three sections. At Sunnyside, in the western part of the city between the Humber river to Sunnyside there has been erected on filled in lands a park and playground for the people of the city of Toronto, solely at the expense of the city. No government money has been spent on this project or playground. The amount involved is a little over three million dollars for the boulevard, driveway reclamation and buildings.

There are two parties to this bill; one is the city council, which supplied the money to the harbour commission on the bonds of the harbour commission, guaranteed by the city; so that it is all civic money involved. The government built a breakwater there and made the expenditure for it themselves. I may say that when the act was passed previous to this the people voted on this whole harbour proposition and approved of it. Fifty per cent of the money was expended for the park and boulevard scheme by the harbour commission and fifty per cent by the city. There are twelve miles of waterfront, and the commission bought out and obtained control of this whole waterfront, to be used for the benefit of the public forever. Half of the whole scheme was industrial and half park.

The sole object of the bill is to validate the expenditures of one unit at Sunnyside. The cost of the park and recreation grounds has been paid by the city. The people as I said, voted on the project and approved of it. This bill was presented to the city council and passed unanimously by that body. The Private Bills committee went into the whole matter and passed the bill unanimously.

Mr. LAPOINTE: According to the law the harbour commissioners are under the supervision and control of the Department of

Marine and Fisheries. Has this bill been submitted to the Department of Marine and Fisheries, and has it been approved of?

Mr. MEIGHEN: The hon. member knows bills are never submitted to the departments. They would be referred at the request, I presume, of the minister of the appropriate department to the appropriate committee. I think that has been done in this case.

Mr. LAPOINTE: My right hon. friend knows all bills concerning harbour commissions are public bills introduced by the Minister of Marine and Fisheries, and I see by the annotation that this is an amendment to chapter 26 of the statutes of 1911, which is a public statute. This is a private bill purporting to amend a public bill. I do not say that there is anything wrong about it, but I think it should at least have been submitted to the department under which all harbour commissions come.

Mr. CHURCH: Might I explain, for the benefit of the minister, that the Department of Marine and Fisheries are consulted only where their work actually is and that is out on the harbour proper, or as affecting navigation. This work is on the shore and it has always belonged to the city. It is all on unimproved land owned by the city. We have filled it in and carried out a nice park scheme. The minister, I think, has been there and has seen the work. The harbour commission was reconstituted in 1911 when the government made an arrangement whereby three commissioners are appointed by the city council and two by the government. The city spends its own money through this harbour board. The Dominion government spends its money outside of the harbour on the local water through the Public Works department. This particular bill is just a validation of what has been done at Sunnyside by the city on its own lands through the harbour commission. The Department of Marine and Fisheries are consulted, and in every case they have given their approval of every bit of the work done in their own field, which is out on the actual waterfront. This is purely a park scheme at Sunnyside west of the exhibition grounds. The land and the money spent all belong to the city. The whole harbour programme was submitted to the various government departments and the whole scheme has been approved from time to time. They are heartily in favour of it. Sunnyside is a great picnic ground and park centre for the people of Toronto. The reason we come here is to validate to let the government know that we are partners with them in this scheme. Although this has not cost the government a single cent, we are here to let the government know what we are and have been doing ourselves on the city end of it.

Mr. CAHILL: I would suggest that the hon. member allow the bill to stand until the Minister of Marine and Fisheries (Mr. Cardin) is in his place. It seems unreasonable that this bill should be pressed forward tonight. It appears to be a matter pertaining to the harbour commission of Toronto and the minister is not present. This comes under the Harbour Commissioners Act. If the bill is all right, there is no doubt the minister would approve it. If it is not all right, it should not be rushed through without notice.

Mr. MEIGHEN: The minister must know what the system is. There is someone in the department whose business it is to watch any legislation, private or otherwise, affecting that department. This applies everywhere. Certainly, the minister, having learned of this bill, would have taken steps to have had objection taken to it before the committee if the department had any objection. It is hardly fair to ask the hon. member to postpone his bill because the minister is not here. It is not his fault that the minister is not here. On its face, the bill does not appear to be one in which the Department of Marine and Fisheries would be concerned, for the reason that it affects such portion of the harbour commission's work as is carried on wholly out of Toronto money and not out of public money at all.

Mr. CAHILL: Is the public money and Toronto money not put into the same fund?

Mr. MEIGHEN: No.

Sir HENRY DRAYTON: I am familiar with this undertaking. This particular phase of the work is something which was entered upon as a civic improvement. Some people in Toronto think—and they are in the majority at the present time—it is better that it should be handled through a commission instead of through the city council, and the city council spends its money in connection with this Sunnyside improvement through the harbour board, the council having confidence in the harbour board. The reason why this bill is brought into this House is very simple. The commissioners have gone ahead as they have, thinking they had every legal right to do it, acting, as they were, as trustees for the city and spending municipal money, and

have done the work. The works are there. The amusements go on, the harbour board collecting the revenues and rentals. The question was raised whether they had any legal right to do this. What we are doing here is merely legalizing what is already done, and we are doing it, as hon. gentlemen will see, in connection with a matter which has absolutely nothing to do with Dominion activities. The harbour board are chosen, not because they are the harbour board, but because they are a body of men in whom the municipality has confidence, and their actions in running this park have absolutely nothing to do with their jurisdiction as a harbour board. But as they are the creation of the Dominion, if there be any question as to their legal powers, this is the proper place to come.

Mr. MURDOCK: My hon. friend might have noticed in a very prominent paper the other day great criticism of the government for the money which had been and is now being expended in assisting to create and maintain an amusement park at Sunnyside for the people of Toronto. My hon. friend may be entirely right in saying that no federal money is being spent on this project, but my judgment has always been that this is a part of the general harbour improvement scheme of the city of Toronto and that a fair proportion of federal money has been expended from the Humber down to the old fort.

Sir HENRY DRAYTON: What paper was that? I should like to have a look at it.

Mr. MURDOCK: My recollection is that it was the Montreal Gazette, or the Standard.

Sir HENRY DRAYTON: That would be the Standard.

Mr. MURDOCK: It is a constant criticism. I am not complaining, but my understanding is—and I think if my hon. friend inquires a little more closely, he will find I am right—that some public money has been spent there in filling up the property.

Sir HENRY DRAYTON: The federal aid has not been sufficient to look after the harbour itself. The city has spent, prior to the present time, more money than the government has, and city moneys are going into the harbour proper which ought to be entirely a government expense. As regards government money, the government contract is not even implemented. As a result of concessions of land and the undertaking of responsibility by the municipalities, there is the government's straight contract that a bridge is to be built to the island, making that island useful. This has not been done. Instead of the government having spent more money in Toronto than Toronto is entitled to for harbour improvements, the fact is that the government has not implemented its promises. The contract still stands, and the fact is that, instead of spending too little money, if anything Toronto has spent far too much.

Mr. MURDOCK: Is it not a fact that there is just one Toronto harbour improvement scheme running from the Humber to Scarborough and including the entire shore line of Toronto, and that the works at Sunnyside are a part of that improvement scheme?

Sir HENRY DRAYTON: If my hon. friend thinks that a merry-go-round is part of a harbour improvement, he is quite right; but nobody except my hon. friend would ever think that a merry-go-round, switch-backs and bathing houses are part of a harbour improvement. This is something which is superadded entirely by the municipality at its own expense. The only reason it is connected with the harbour matter is, as I have already explained, that the harbour board is a body of men doing work in the vicinity whom the city council think, are better able to look after this work than the city itself.

Mr. CHURCH: Since confederation the government has assumed responsibility for the shore protection of the harbour at Toronto, and off Sunnyside erected a breakwater. The city paid the entire cost of the park and filling. The government has spent, since 1867, only $6,000,000 or $7,000,000 on Toronto harbour and the revenue from concessions in this park annually is between $90,000 and $100,000.

Some legal advisers were of opinion that it was not necessary to come to parliament for an amendment such as is here proposed to the Harbour Act of 1911; they thought that there was power enough in the act to enable the commissioners to go on with the work. But some doubt was raised a short time ago and it was thought better to apply for an amendment to clear up any doubt in the matter. The words in the statute of 1911 enabled the commissioners to "hold, develop, maintain and improve" the place and it was thought that in these four words they had the power to go ahead. This bill is simply declaratory; the object is to make the act perfectly clear. The breakwater at Sunnyside was constructed by the government itself, but there was nothing behind the breakwater at all; and so far as the actual amusement park is concerned the newspaper quoted is entirely in error; the government has not contributed a cent to its creation and upkeep.

Sunnyside beach is situated at the extreme west end of the city and extends along the lake shore from the Humber river on the west to Wilson avenue on the east, a distance of one and a half miles. It contains about 120 acres of land all of which has been reclaimed. Through this area runs a boulevard drive fifty feet wide and a lake shore promenade twenty-four feet wide. The bathing pavilion is a concrete structure four hundred feet by one hundred and twelve feet and has accommodation for 7,700 bathers at one time. The amusement resort contains restaurants and refreshment booths, band stands, dodgem, frolic, whip, old mill, Sunnyside racer, aero swing, merry-go-round, shooting gallery, games, guess weighing machines, putting green and baseball diamond. All concessions are under the control of the harbour commissioners, they are leased to concessionaires at a nominal rental plus a percentage of the gross receipts. With the exception of the bathing pavilion, all the concessions are operated by the lessees who have already expended upwards of $500,000 on amusement devices and buildings. Nearly four millions have been spent on park and driveway, filling and boulevard.

Altogether, this is one of the finest amusement parks to be found in any city of the same size on the continent. The people voted on the whole harbour bill, and as I have already said this amendment to the 1911 act is only declaratory legislation; it is merely intended to clear up the intention of the statute of 1911. I hope that there will be no difficulty about passing the bill. The lands were filled in before the breakwater was constructed as a whole. The commissioners get no salary. They were working to get control of the waterfront for the public.

Mr. POWER: Who paid for the ground which is now used for amusements. Was it paid for with the money of the federal government?

Mr. CHURCH: It was the city's money. The government paid for the breakwater.

Mr. POWER: Well, do I understand that the breakwater was paid for with federal money?

An hon. MEMBER: Yes.

Mr. POWER: I understand further that the merry-go-round and the other amusements situated behind the breakwater could not have been put up unless the breakwater had previously been built. If I am not right in that statement I wish to be corrected. Am I wrong?

[Mr. Church.]

Mr. SHEARD: Yes. As this is in my riding perhaps I might be permitted to say a word about it. The government and the city collectively constructed the breakwater and the city did the filling in behind. That is how the thing started. The city then went on filling in and improving the land and they spent a lot of money; the government did not spend any money at all on this. The money was taken out of the pockets of the taxpayers of the city—money that was wasted. Why, even the tops of a farm were brought down to make a top dressing for a Parkdale boulevard and bathing ground, and when they got it finished it was inhabited principally by Jews. The Jews occupied it and even put a sign up, something to this effect, "After the war we gave you Palestine; for Heaven's sake let us have Sunnyside." The city found itself in possession of a large acreage of ground but it had not the power either to lease or to sell it or to establish any permanent improvement. All that this bill contemplates and all it asks is to validate the city in the power to lease this property made by the filling in of the land behind the breakwater, and to establish thereon amusements suitable to a summer resort; and to loan money to any corporation or company that might operate there. That is all there is to it. Not a dollar of government money has gone into the park to which this bill relates. We simply ask that the old act be so amended that the city shall have that power; otherwise the place will remain a grass plot. They cannot get anyone to occupy it because they cannot give a lease long enough to make it worth while for people to construct any merry-go-rounds or amusement buildings that are required to make the thing a going concern. There is no harm whatever in the bill; there is no liability on the part of the government, although there is a considerable liability on the part of the local taxpayers. I ask that the bill be passed. The council have agreed on the matter; and although the original bill which my hon. friend brought down was a very serious one they have modified it now, having come to a satisfactory decision among themselves. I think they have produced a bill which is absolutely innocent and as reasonable as we could hope the present council of the city of Toronto could draw up having regard to the taxpayers. Hon. gentlemen need have no hesitation about passing the bill; and the trepidation of my hon. friend (Mr. Power) is, I was going to say, altogether sectional.

Mr. POWER: I think I am entitled to receive the congratulations of the House on having drawn out my hon. friend (Mr. Sheard) who has made an able, lucid explanation of the manner in which the Toronto city council had arranged to settle any disputes that might have arisen over those which took place at Geneva in the League of Nations. The Toronto city council has, I think, dealt with a question which has been disturbing, one might almost say, the peace of nations for several centuries; and it has dealt with that question well: It has placed the Jews in one of the best parts of Toronto. But I do not think that this answers all the objections which I was about to raise, one of which was that this amusement park could not have been constructed had not the federal government first furnished the funds for a breakwater behind which the city filled in and laid out playgrounds. As to the other objection, I may be mistaken in this portion of my remarks when I say that I understand that the harbour commissioners of Toronto receive a certain remuneration for their services.

Some hon. MEMBERS: No.

Mr. POWER: Do they give their services gratuitously?

Mr. SHEARD: They all do, but I do not know whether the chairman gets anything or not. But he is here; you can ask him.

Mr. POWER: To judge from the work which that hon. gentleman does on behalf of the city of Toronto and Toronto harbour in this House I should think he ought to be handsomely paid. Of course if the commissioners are not paid, my remarks have no bearing on the subject. I was about to object to the harbour commissioners, paid by the federal government, devoting any of their time to collecting money for amusements. But I think my original objection still remains, that the federal government have indirectly, and possibly very directly, contributed largely to a work which, after all, is not in the public interest of the Dominion, that is to say, the placing of a bathing beach for the use of certain well-known and highly respected citizens of Canada residing in the city of Toronto. One of the principal characteristics of those citizens is that they certainly are able to look after themselves financially—usually they take everything in a financial way that is not nailed down, and I do not know just why the other citizens of Canada should be called upon to contribute to their enjoyment.

Mr. HARRIS: Mr. Chairman, in answer to the hon. member for Quebec South (Mr Power), let me say that the whole shore line where this particular breakwater is built was being washed away every season. This work was constructed, in part, by the Dominion government, the estimates being passed in this House in the way that we would vote estimates for work in any other part of the Dominion where the federal government is responsible. Inasmuch as the breakwater was built to protect not only the shore line but also the main line of the old Grand Trunk —now the Canadian National—and the vacant space was there to be filled in, why not put it to some use so that revenue could be derived from it? I do not for one moment think that it is to the credit of the hon. gentleman to cast reflections on honourable men, whether harbour commissioners in the city of Quebec or in the city of Toronto, who many times during each week, year in and year out, give of their services for the benefit of their native towns. If my hon. friend will just glance back over the last ten or twelve years since these harbour commissioners have been giving their services freely for the benefit of their communities—

Mr. POWER: May I ask what reflection I cast on any harbour commissioners?

Mr. HARRIS: If he will bear in mind those harbour commissioners, I think he will agree with me that they are gentlemen of the very highest calibre not only in the city of Quebec but also in the city of Toronto.

Mr. POWER: Mr. Chairman, may I ask—

Mr. HARRIS: Let me say, Mr. Chairman, that at the present time in the city of Toronto the gentlemen of Liberal leanings who are on the harbour commission of that city are, in my opinion, deserving of a great deal of credit not only from the citizens of Toronto but also from the members of the Liberal party who occupy the treasury benches.

Mr. LAPOINTE: Mr. Chairman—

Mr. POWER: Mr. Chairman, I cannot compete with my hon. friend in volume of--

The CHAIRMAN: Order. The Minister of Justice has the floor.

Mr. POWER: I had risen to a point of order, Mr. Chairman, and I appeal to the House.

The CHAIRMAN: Order. The hon. Minister of Justice has the floor at the present time.

Mr. POWER: Mr. Chairman, I appeal to the House, I had risen to a point of order.

The CHAIRMAN: All right, there is a proper way to appeal to the House. The Minister of Justice has the floor.

Mr. POWER: I appeal to the House.

The CHAIRMAN: There is a proper way to appeal to the House. If the hon. member wishes to take that course he may do so. Shall clause 1 carry?

Mr. LAPOINTE: Mr. Chairman, I am sorry if I am responsible for this little storm. I have nothing to say against the principle of the bill, I think the object in view is a good one; but I think it is an unusual course to amend a public bill by way of private legislation. With the understanding that this will not constitute a precedent for the future, I have nothing more to say.

Section agreed to.

On section 2—Playgrounds, Sunnyside.

Mr. CAHILL: Mr. Chairman, what is the meaning of the latter part of this clause with regard to the power of expenditure, "either partly for themselves and partly for the commissioners"? That will not entail any liability on the part of the Dominion as far as their expenditure is concerned?

Sir HENRY DRAYTON: No, it does not form part of that work at all.

Mr. POWER: Mr. Chairman, may I be permitted now to make the remarks which you, in your wisdom or otherwise, decided I could not make a moment ago? I wish to point out to the committee that I had made no reflection whatsoever on the harbour commissioners of Toronto, and therefore the remarks of my hon. friend from East York (Mr. Harris) were entirely uncalled for. I wish also to say that I was on my feet and only desired to interrupt the hon. member for that purpose and for no other.

Mr. DUFF: It seems to me that before this bill was introduced it should have been referred to the Minister of Marine and Fisheries (Mr. Cardin) for consideration.

Mr. RYCKMAN: Mr. Chairman, I may say that the Minister of Marine and Fisheries considered this matter very carefully. A deputation from the city of Toronto waited upon him and were received most courteously, naturally so of course, and they concluded that he thought this request was a very reasonable one.

Section agreed to.

[The Chairman.]

On section 3—Use of lands, amusement areas and so forth.

Mr. MARTELL: Mr. Chairman, do I understand it to be laid down as a principle that no private member can introduce a bill to amend a public statute? It is always done in the legislature of my own province. It does not create any precedent at all.

Mr. MEIGHEN: This is a private bill, not a public bill.

Mr. LAPOINTE: Any private member may introduce a public bill for the purpose, but this is a private bill.

Mr. MARTELL: With all due deference to the hon. Minister of Justice, I submit that a private member may introduce a bill to amend a public statute.

Mr. LAPOINTE: Surely, but he does it by way of a public bill.

Mr. MEIGHEN: I think the hon. member is right; it seems to me this bill should be in public bills and orders. But I do not want to raise the point. I rise to ask where clause 3 is. It is not in the bill here.

The CHAIRMAN: It is in the reprint, which will be found on the file immediately following the original bill.

Section agreed to.

Bill reported, read the third time and passed.

CANADA HIGHWAYS ACT AMENDMENT

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved the second reading of Bill No. 68, to extend the period of The Canada Highways Act.

Motion agreed to, bill read the second time and the House went into committee thereon, Mr. Gordon in the chair.

On section 2—Operation extended.

Sir HENRY DRAYTON: I think my hon. friend was to give us some information as to the work yet to be done.

Mr. GRAHAM: When the resolution was before the House I promised the hon. member for West York that I would give him the figures with regard to work under contract yet to be done in Ontario. The following will give that information:

Project No. 4.—Kingston to Brockville, $16,545.20. Percentage of work done, 84 per cent.

Project No. 5.—Brockville to Prescott, $23,804.90. Percentage of work done, 74 per cent.

Project No. 6.—Prescott to Ottawa, $58,000. Percentage of work done, 68 per cent.

Project No. 33.—Ottawa to Pt. Fortune, $120,000. Percentage of work done, 54 per cent.

This expenditure is now being audited. Forty per cent of these amounts will be payable under the act.

Sir HENRY DRAYTON: I think we got most of the other figures on the previous discussion. The minister can assure the committee that no further government commitments are involved; that all that is done is to extend the time for two years?

Mr. GRAHAM: Yes, that is all. It is hoped that at the expiration of the two years all the provinces will have earned the amounts allotted to them under the Highways Act.

Section agreed to.

Bill reported, read the third time and passed.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

TURTLEFORD

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved the second reading of Bill No. 69, respecting the construction of a line of railway forming part of the Canadian National railways between Turtleford and a point in township 48, range 12, west of the third meridian, in the province of Saskatchewan.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): As this is the first of the branch lines bills of the session, I think it would be appropriate if the minister would give us a review of the work actually accomplished after the passing of the acts of last session, in the west if not elsewhere, and review the claims of this bill with special reference to the objections raised to it which resulted in its defeat last year in the other House.

Mr. GRAHAM: The information which my right hon. friend asks for was laid on the table at the opening of the session.

Mr. MEIGHEN: Yes, I know; the amount done was about $1,650,000 worth all over Canada. But where was it done, and why was it not possible to get more done?

Mr. GRAHAM: It is not possible to get very much work done the first year after an appropriation is made. I have no information to add to what has already been laid on the table; I did not bring it with me because it is on record. I do not remember just what the objection to this bill was in the upper chamber. This was the most strongly pressed of all the bills that were before the House last year. Last year the bill provided that the lines should run from Turtleford to Hafford, but this year the length of the line has been reduced; for the present it will run only to Meeting lake so that consideration may be given to the question of where the junction point in the main line should be when the line is built from Shellbrook.

There is a difference in this bill from last year's. It provides for the utilization of certain funds now in the bank, which were raised under the sale of securities by the Canadian Northern Saskatchewan Railway, and guaranteed by the Saskatchewan government. In order to release these funds, legislation was necessary by the legislature of the province of Saskatchewan. This legislation has now been passed, and the amount to be voted for this line by this House is less the sum to be appropriated out of those funds. My hon. friend from West York (Sir Henry Drayton) asked me the other day for some information regarding the financing. I will read the memorandum so as to make no mistake in the figures:

> Some years ago the Canadian Northern Railway issued £2,817,000 of 4 per cent debenture stock guaranteed by the province of Saskatchewan. This issue was for the purpose of making good a guarantee by the province of Saskatchewan of securities for the building of certain branch lines to an amount of $15,000 per mile. The average sale price was 96.84. Releases have been made from time to time until to-day there is a balance of $1,202,825.24 in cash deposited in the Canadian Bank of Commerce and held in trust by the treasurer of the province of Saskatchewan on account of the Canadian Northern Railway. The bank pay on this balance 4¼ per cent per annum, which is released to the railway for the purpose of meeting the interest on securities; the amount of securities from which the deposit was derived amounts to $1,242,074. The interest received amounts to $51,120.06 per annum. The amount due on this portion of the securities is $49,682.96, leaving a profit to the railway of $1,437.10.
>
> Neither the province nor the railway derive any benefit from the use of the principal, that amount, as before stated, being used by the Bank of Commerce in the usual banking manner.

In other words, formerly the bank interest allowed was, I think, 3 per cent, but at a later date an arrangement was made with the bank by which through a certain process the railway received 4¼ per cent on the balance of the proceeds of the securities, and the difference between the rate of 4 per cent which the securities bear on their face, and the 4¼ per cent on the cash which the railways get, amounts to $1,437.10.

Sir HENRY DRAYTON: Would the minister be kind enough to read to the House the report of the management on the construction of this line?

Mr. GRAHAM: The memorandum is as follows:

Turtleford S.E., Mile 0-67.	Cost.
Grade now ahead of track—23 miles.	
Proposed in 1925—20 miles grade; 30 miles track..	$ 755,000
Proposed in 1926—24 miles grade; 37 miles track; 67 miles ballast..	1,116,000
	$1,871,000
Less trust funds..	801,000
Balance to be voted..	$1,070,000

It is proposed in 1925 to call for tenders for the grading of 44 miles, stipulating that 20 miles would be completed during the season of 1925 and the balance in the next year; to lay 30 miles of track during 1925 at a cost of $755,000 in the year 1925. In 1926 grading would be completed, and it proposed to lay the track and ballast the same and generally complete the line to Mile 67.

The 23 miles of grading now completed was started in 1920 and completed in 1921. Beyond this, no other work has been done on the line.

This 67 miles is part of the Turtleford-Hafford line as submitted and passed by the House of Commons on 27th June, 1923, and 16th May, 1924, and in both cases thrown out by the Senate.

The district through which the line runs is generally rolling, with timber in places of small sized poplar in bluffs with prairie openings. It is largely a mixed farming area, but a considerable portion of the land is susceptible to wheat raising. The land is mostly taken up and there is considerable development, particularly in the vicinity of Meeting lake, or approximately half-way between Turtleford and Hafford.

The justification for this line is that there is a large number of settlers in its vicinity now such a distance from railway facilities that the road haul on their products is so excessive that it is almost prohibitive.

It is estimated that this line will produce on an average 1,400,000 bushels of grain each year, besides 500 cars of freight in and outbound, consisting of live stock, coal, lumber and merchandise. About 32 miles on the average would be saved the farmers in their road haul on the 1,400,000 bushels of grain, which it is expected this district will produce annually, and if this is taken as being worth ¾ cent per bushel per mile hauled, it would make an annual saving of $336,000 to them for haul on their grain alone. There is invested at present $207,200 on the right of way and grade, which is earning nothing. The business obtained from this line will mostly be subject to long haul, and thus contribute considerable business to other lines of the system.

Although to complete the line to Mile 67, it is estimated, will cost $1,871,000 arrangements have now been made with the Provincial government of Saskatchewan to consent to the release of $801,000 of trust funds which had been previously raised for the purpose of construction of lines in the province of Saskatchewan. This makes the amount required to be voted by parliament $1,070,000.

This is one of the lines which had been started previously, 23 miles having been graded in 1920-1921. This bill is not only to complete that line, which is already graded, but to complete the balance of the 67 miles to Meeting lake.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

[Sir Henry Drayton.]

On section 1—Power to construct and complete line described in schedule.

Sir HENRY DRAYTON: I think it would help us all if we were to get some idea from the minister as to really what will be done this year, whether this work will go on this year or what is to happen. Very often we make far better progress by not having too big a programme. The programme
9 p.m. the country had already before it in building branch lines, evidently from the results shown, and I think everybody knows it, was altogether too big a programme. Now, is this work to be gone on with this year? If it is, what other work is to be displaced? How much money is to be spent altogether this year? What commitments are we to look forward to in connection with our branch line construction this year? Generally, cannot we get some business idea of the situation?

Mr. GRAHAM: I will read again to my hon. friend what it is proposed to do on this line.

Sir HENRY DRAYTON: We have had that information on every single project brought down to this House, and if we had carried out what was told the members of this House in 1923, and again in 1924, we would have had completed lines by this time. It is all very well to bring these statements from official sources and say that these things will be done, but we all know they will not. There is a limit to the work the system can look after, and what I wanted was to see if we cannot get some solid, definite idea of what work will be done, and what finance ought to be supplied in connection with the whole branch lines programme.

Mr. GRAHAM: I am bringing these bills down early in order that some branch line construction can be done this year, and the sooner we get them through both Houses—and this is why I am urging so strongly that we make as rapid progress as possible—the greater the amount of work that can be done; but if the bills do not get through till July, then by the time the company gets around to start construction, we probably will interfere with the farmers in their labour requirements. There is a good deal of friction as to the labour for the railways and the labour required on the farms, and if we have to come here every year for every branch line the autumn is soon frittered away without much being done. But if we can get our short programme for this year through in a week or two, the company

would practically have the summer to make a start. Heretofore they have not had a very great length of time to work. The bills, so far as I know at the present time, are all before us, and hon. members can see by looking at the order paper what the programme is and what is intended to be done. I give the House the full information as given to me, as to what the companies expect to do, but they will have to get a fairly early start in order to accomplish it.

Sir HENRY DRAYTON: I should like to know, if the minister is clear about it, what the company thinks about it and what they intend to do. I think it was in 1923 or 1924 that we heard letters read from the president as to the necessity or advisability of the line; and then officials who had to do with these lines were examined, and we found they were absolutely and entirely against them. Instead of wanting to build the lines they advised against them. I refer to the people on the ground. The hon. gentleman will remember the case.

Mr. GRAHAM: I do not remember the case.

Sir HENRY DRAYTON: The Radville case. All you have to do is to turn up the examination of these officials. There are other cases besides that one. There is no question about the facts.

Mr. MEIGHEN: And the Kamloops case.

Mr. GRAHAM: I do not remember it, I am sure.

Sir HENRY DRAYTON: If the minister says that the proper locating engineers have gone over the line, have agreed to it and say that it is going on and that it is proper, I do not want to hold it up. But I do not want—as happened in another case—to find out that the House had acted in error, when we thought we were acting on what the gentlemen in charge of the work considered should be done, but what was found out afterwards to be absolutely wrong.

Mr. GRAHAM: I am not going over that matter again, but I am anxious the contractor should get at the work early. This line has been looked over not once, but twice or three times. This is the third time the Canadian National board has asked that this line be constructed, and I think I have read a fairly succinct and distinct statement why the board thinks it should be constructed.

Mr. MEIGHEN: Who is the real author of the statement my hon. friend read? Is it Sir Henry Thornton, or some other official?

Mr. GRAHAM: It was sent to me by the officials of the Canadian National board, accompanying a copy of the bill itself. I suppose it is from the engineers; it is from prominent officials of the railway, giving the reasons for this construction.

Mr. MEIGHEN: The statement which was read, as far as I could catch it, did not contain any definite, final recommendation. It did not say that the board felt it would be a paying line, and that they were anxious to have it built. Last year this House was placed in a position which was wholly unmerited. We had read to us on the authority of the president a recommendation that this line should be constructed, and that this line and the other line should be built. Then the officers of the president went before committees elsewhere and took stands in no way consistent with the general recommendation which had been made.

Mr. CAHILL: Where was that?

Mr. MEIGHEN: Just a few feet from here. They gave a clear intimation that they did not feel the road should be built.

Mr. GRAHAM: Who?

Sir HENRY DRAYTON: The locating engineers.

Mr. MEIGHEN: Yes, Mr. Macleod and Mr. Ruel also.

Mr. GRAHAM: He is not the manager of the road.

Mr. MEIGHEN: He is pretty close to the president.

Mr. GRAHAM: He knows something about the affairs of the railway.

Mr. MEIGHEN: We appeared before others who were dealing with the question as giving very little attention to the legislation which we passed, because we acted too hastily on a general recommendation. I think the minister would find some interesting evidence if he would read the statements made by officers of the company before a committee of the other House.

Mr. DAVIES: Having the honour of representing the constituency through which the proposed railway will run, if it happens to pass the Senate this year, and knowing the country as intimately as I do, I have no hesitation whatever in saying that that road should be built. I have lived in that part of the

country now for over eighteen years and I know the inhabitants and settlers intimately. They opened up that country between forty and fifty miles from the city of North Battleford away back in 1905, and they were promised when they went into the Rabbit lake country, that if they would only go in there and open up the country, within a year or two they would have railway communication. That country was opened up with a first-class type of settler, Englishmen, Scotchmen, Irishmen, Canadians and Americans very largely. Time after time their hopes of railway communication have been dashed to the ground. Somehow or other the official promises that were given were not kept, and a few of the settlers started to leave the country after building up a decent home to live in. They found out that it was utterly impossible for them, under conditions before the war, to raise farm produce and market it when they had to haul it a distance of anywhere from forty-five to sixty miles. Last winter when I was in the city of North Battleford I saw one man coming in with two loads of wheat from a distance of over sixty-five miles. The wheat was grown in a country the crops of which were better than seventy-five per cent of the crops in northern Saskatchewan. In the year 1912-13, I think it was, the provincial government were so convinced that this was a necessary road that they guaranteed the bonds for some forty miles, and the proceeds of those bonds are applicable to a part of the line provided for in the bill at the present time.

When the war broke out the settlers in that country did not for one moment keep agitating for the railway. Instead of that, practically every young man in that country enlisted, went overseas and fought at the front, and many a schoolhouse in that district to-day has a little brass tablet on the wall placed there in memory of the boys who went to the front and gave all for their country. After the war the question of railway construction again became a paramount one. The Canadian Northern Railway had promised to build into that district, and as I said a moment ago, their bonds had been guaranteed. In the year 1920 the Canadian Pacific Railway applied for a charter to build a road from Cory, near Saskatoon, to Birch lake, practically paralleling the proposed Canadian Northern road the whole way. A strong deputation of gentlemen from that district came down here prepared to support the application of the Canadian Pacific Railway, but the hon. gentleman who represented that constituency at that time, acting I believe under pressure of the government of that day, fought very strenuously against the Canadian Pacific Railway getting the charter. The Hon. Dr. Reid, who was Minister of Railways at that time, told that deputation personally that if the Canadian Pacific Railway did not get their charter the Canadian National Railways would immediately start in to build that road from Turtleford to Hafford, upon the branch line running from North Battleford to Prince Albert. The deputation, after putting up a strenuous fight, went away satisfied that Dr. Reid would carry out his promise and I understand that he did. Contracts were let for, I think, forty miles, but only twenty-three miles of the grade were completed. The reason I understand that more was not done was that labour at that time was very difficult to get, wages were very high and, as the contractor has told me several times, it was a practical impossibility for him to get enough labour to fulfil the whole of his contract. In another chamber last year an hon. gentleman, in seconding the resolution that this bill should be laid over for another year practically said that this work had been given in that country to help out the settlers because they had no work to do. Probably that hon. gentleman was misinformed by someone or another because the contractor told me an entirely different story. During the second session after this government came into power, they brought in a bill covering a number of branch lines and we know the fate that befell that bill. Last year this was brought in as a separate bill and to the astonishment, I think, of hon. members, this bill was again defeated. During the various stages which this bill took both in this House and in the railway committee last year, not one objection or argument was put forward against it. I hope this year it will receive the support of every hon. member in this House and that the Senate will see its way clear to let the bill for this railway go through.

I should like to say a word or two about the country because I know it intimately. The country through which this railway goes is one of the best districts in northwestern Saskatchewan. The twenty-three miles that have already been graded have been graded through the very roughest part of the whole line. We hear a good deal about mixed farming at the present time and this is an ideal district for mixed farming. There is something in that district which is unique in western Canada. Let me give this illustration to show hon. members the type of men and women who are farming there. A man

has gone in there and established a creamery which is fifty miles away from a railway depot. He is making good, and last year at this point, fifty miles away from a railway, he turned out over 100,000 pounds of butter. That shows the type of country this is and the type of men who are settling there. These men and women are well nigh hopeless of getting railway accommodation, and I get letters from them day after day. Last year after the session was over I travelled all through that country, and to the very best of my ability I pleaded with those men and women to stay and try it out for one more year because I believed this year the railway would come to a successful fruition. They have spent in that district over $150,000 on roads, and the roads are good. You can go all through that district with a car and you will not be stuck in mud holes or anything else. The whole district has been organized into school districts. In some parts of it we have a foreign population, and these boys and girls are being brought up and educated to the true ideals of British citizenship. I would plead with hon. members of this House and, from my place here, with hon. members of the Senate at least to give this railway to these men and women who have had the grit and determination to stay in that district. The type of country is such that neither this government nor the provincial government has yet had to give a dollar's worth of relief to those settlers. We do not owe any money in that district for seed grain and relief. Relief has been granted in exceptional cases, but the local municipalities themselves have always successfully financed their own affairs. They have granted their own relief and they have paid for seed grain for their settlers. Once more, I do hope that this bill will have a successful passage through this House and through the Senate. If any people in this country have earned and deserve the right to railway communication, the people in that district certainly have.

Sir HENRY DRAYTON: The last time the bill for this line went through this House, it went through without any discussion at all. It was taken as read. There was no objection except that it ought to be in the estimates. It is a good thing that we should have a little discussion on it now, so that it cannot be said that the House was entirely asleep when it passed this legislation. I have been greatly impressed by what my hon. friend (Mr. Davies) has said. The great thing we want in connection with these branch line bills is to have the lines built where they are really needed, not in places where there are other lines, nor where they are not a crying necessity. As a matter of fact, it is a crime to build a railway where it is not absolutely a crying necessity. My view is that where you have agricultural land as you have it in the west, there comes a point beyond which no one should be asked to haul grain or produce or anything else. This is not any new view. I have always held it. The hon. member has shown—and my recollection bears him out and it is by reason of that recollection that I did not oppose this bill last year—that farmers there are hauling their produce, I think he said, sixty-two miles. I have always felt that any haul in the west involving more than a day is a haul which cannot be looked upon as practical or economic, and I still maintain that view. Here we have a place where the haul is very heavy. Hon. gentlemen to my left say that a ten-mile haul is sufficient. No, we can do with longer hauls than that in the west and the west does not mind that. The people of the west are willing to take their produce greater distances as long as they can do the one thing which is necessary, and that is, make farming pay. To do that they must be able to look after that haul in a day. That I look upon as an absolute minimum of railway accommodation which we should try to give them. These cases of real necessity ought to be looked after, and if we look after too much, we are in peril of not properly looking after them. We should be very sure in connection with every railway project, first, that the line is not a political line, second, that it is a proper construction in the public interest. I see no reason why this bill should not pass.

Section agreed to.

Section 2 agreed to.

On section 3—Certificate of minister as to mileage.

Mr. MEIGHEN: Is this the same wording as was used last year?

Mr. GRAHAM: It is the same thing exactly except for section 2 which provides for the utilization of trust funds in the province of Saskatchewan.

Mr. MEIGHEN: Does it include the amendments which were made by this House and the Senate?

Mr. GRAHAM: This is a copy of the amended bill.

Section agreed to.

Sections 4 to 8 inclusive agreed to.

Mr. GRAHAM: We intend to follow the custom of last year and refer all these bills to the committee on Railways and Canals as if they were the bills of a company and not under government control.

Bill reported.

REGINA-AVONLEA

The House resumed, from May 1, consideration in committee of the following proposed resolution—Hon. Mr. Graham—Mr. Gordon in the chair:

Resolved, (1) That it is expedient to bring in a measure to provide for the construction or completion prior to the thirty-first day of August, 1927, of a line of railway from a point about five miles south of Regina to Avonlea in the province of Saskatchewan, by the Canadian National Railway Company;

(2) That the company may issue notes, notes, bonds and securities in respect of the said construction, and the Governor in Council may authorize the guarantee thereof;

(3) That provision be made for the issue of certificates as to mileage by the minister, but neither the minister in the issuance of such certificates nor the company in the performance of the work of construction and completion or in the issue of its securities shall, unless by consent of parliament, exceed the estimated distance, expenditure and average expenditure per mile by more than fifteen per cent; and if upon final survey it appears to the company that the expenditure involved in the completion thereof will exceed the limits of expenditure estimated the company shall not commence nor proceed with the work without first obtaining the approval of parliament;

(4) That the nature, terms and forms of securities to be issued and guaranteed shall be such as may be approved by the Governor in Council and signed by the Minister of Finance;

(5) That to enable the work of completion of the said line of railway to proceed forthwith, the Governor in Council, pending the issue and disposal of such guaranteed securities, may authorize advances to be made to the company from the consolidated revenue fund, such advances to be reimbursed to His Majesty from the proceeds of the sale or other disposition of such securities;

(6) That the minister shall annually present to parliament a statement of the work and expenditure, advances and amount of advances reimbursed, and all such other information as he shall require or direct.

SCHEDULE

Location from a point about five miles south of Regina to Avonlea, in the province of Saskatchewan.
Mileage already graded—Nil.

Estimates—
Mileage including existing grading, 33.
To be expended, $941,000.
Average expenditure per mile, $28,515.

At a recent sitting of the House this resolution was in committee but no action was taken on it, progress being reported. I understood that a few gentlemen particularly in this corner of the House wished to discuss it and it was thought wise not to go further with the matter then. These bills will all be referred to the committee on Railways and Canals, but perhaps it is just as well to have that discussion now. I have no objection to having the matter considered and that is why it was postponed on the previous occasion.

Mr. GOULD: Who are the promoters of the bill?

Mr. GRAHAM: The Canadian National board made a certain agreement with the city of Regina in regard to some outstanding differences, agreeing to give their reasonable support to the city in the construction of this line. Among other things, a hotel was projected by the Grand Trunk Pacific Railway some years ago in the city of Regina and that hotel was partly constructed. The Canadian National did not wish to go on with the completion of it and, reasonably I might say, the government did not wish to encourage them to carry it out. Certain streets had been closed by the city for the railway, and certain properties had been given; arrangements had been made for the construction of a station, and all that sort of thing. In order to abrogate the whole agreement that had been made between the city and the Grand Trunk Pacific, this new agreement was arrived at as a sort of clearing house of all differences, and the Canadian National recommended this bill in pursuance of their promise to give reasonable support to the wishes of the city for the construction of the line.

Mr. GOULD: The minister is no doubt aware that one of the best hotels in Regina was sold under the hammer since this recommendation was made to him.

Mr. GRAHAM: That is all the more reason why we should not build the hotel.

Mr. McTAGGART: This is a most extraordinary proposal. The only justification for this line of railway seems to be the fact that a certain railway company in the past defaulted in the construction of a hotel. I think that probably the minister knows of some other reason for building this road and I should like to hear it.

Mr. GRAHAM: Now I will give the additional reason; I felt sure that what I said a moment ago was what hon. gentlemen wanted to know first. The statement I made first was in reply to the question as to who was the promoter of the line. The following memorandum explains the question—the clause in regard to the hotel I will not read, having already explained it:

It is proposed in 1925 to call for tenders for grading if possible, to be completed during that year, at an estimated cost of approximately $397,000, including right of way, and so on. In 1926, it is intended to lay the track, ballast the line and generally complete it at an estimated cost of $544,000 for the year.

The line will run from Avonlea to a point on the Regina-Boundary branch, about five miles south of Regina.

The object of the line is to give a direct connection into Regina from the Gravelbourg branch, and also from the territory in the vicinity of Radville. It will also make saving to the railway in hauling grain off the Gravelbourg branch. In fulfilment of an agreement reached with the city of Regina, authority to construct this line is being sought in lieu of cancellation of an obligation contracted by the Grand Trunk Pacific Railway to construct and operate a hotel in the city of Regina.

The saving to the railway for short routing the grain is estimated at $27,000 per year. Not less than $1,500,000 would have been required to finish the proposed hotel in Regina which would have imposed a fixed charge of $75,000 per year; besides it is considered the hotel would have made an operating loss of some $50,000 per year. Against these savings of $152,000 are the fixed charges of the cost of the line of $47,050, the fixed maintenance of way of $29,700, and the annual cost of an interlocker with the Canadian Pacific Railway estimated at $5,000, or, a total of $81,750 per year, showing a net saving of about $70,250 per annum.

There would be something like 80,000 acres of territory, all of good farming land given closer railway connection, thus offering some assistance to farmers on the route.

Mr. GOULD: Has the minister looked over the map carefully to see where the road is running, so that he may give us his own judgment on this branch line?

Mr. BROWN: Mr. Chairman, I am not personally interested in this district at all, but recently I received through the mail a map of it, and I may say that I am heartily in agreement with the principle laid down by the hon. member for West York (Sir Henry Drayton) as one that should govern the building of these lines—that the first consideration should be the placing of farmers within a reasonable distance of their market. As I looked over that map I was forced to the conclusion that there is absolutely no justification for the building of the line when there are so many other places that are very much removed from railway facilities. I know the minister (Mr. Graham) is not giving us reasons that seriously weigh in his own mind why this line should be constructed, and I am confident its construction will not appeal to the members of this House.

Mr. HOPKINS: Mr. Chairman, it so happens that this line passes through the district that I have the honour to represent, so it may not be out of place for me to say a word or two in regard to it. I should like to discuss the railroad situation for one minute if the committee will bear with me. A system of centralization has grown up in Canada. Everything that it is possible to centralize in Montreal, is centralized there; if it slips by Montreal it is stopped at Toronto; if it slips by Toronto it goes to Winnipeg. But I want to say to hon. gentlemen that that great territory between Winnipeg and the Rocky mountains, a thousand miles long and as wide as you like, is represented by men in this corner of the House who do not believe in centralization. We believe in decentralization. Transportation is our great problem in that country, and we want the long hauls for the carload lots and the short hauls for the expensive local freights.

Let me show you what they have done to us in years gone by. Fifteen years ago the Canadian Pacific Railway started a railroad from Weyburn to Lethbridge, a distance of 445 miles. They built the line within 25 miles of Lethbridge—no mean city and the natural distributing point of that country—and then they said, "We have not got any money to go further." About the same time they started a line from Moose Jaw southward that would strike the Lethbridge line at Assiniboia 111 miles west of Weyburn, but when they got within 15 miles they said, "We have got no more money we cannot complete it." The consequence was that for years we had to bring our coal, our lumber and our fruit 800 miles further than would have been necessary had that little gap been built. I say to members of this House, we do not like that kind of thing. A few years ago they started a line from Avonlea to Swift Current—another city of no mean pretensions. They got 122 miles built, and the members of this House have been fighting year after year to get that line extended to Swift Current, but always the answer is, "We have no money." For lack of that line being completed we have to switch all our lumber, all our fruit, all our cement and the hundred and one other things we need around by Avonlea, 150 miles further than would be necessary if they had put in that little kink. And now they ask for a line to go across to Regina, a million dollar line running right through my district, and a number of my constituents send me letters and telegrams saying, "Mr. Hopkins, support the line. We gave you a good vote last time." I will tell those people that we have got too many lines in too many places, and I will also tell them that they have been built because of just such letters being sent as those sent to me. I will tell them that I consider it a crime for me to support that line when there are people in that country drawing their grain for forty and fifty miles. I will tell them that if they put that line across that territory to Regina, that will be another million-dollar white elephant. We have put on six hundred of them in the last five years, and Canada cannot stand any

more. Now, I know that that is not going to get me any votes, but I am going to tell you that it is not necessary that I get votes, it is not necessary that I come back to this House, but it is necessary that some men in this country stand up like men and denounce such projects.

Mr. MORRISON: Mr. Chairman, this proposed line runs across one corner of the constituency which I represent, and I think perhaps I had better say a few words too, for fear I do not get all the votes I should. Now, the minister has not explained to us what legal claim the city of Regina holds against the government to carry out the agreement of the Grand Trunk Pacific with the city. I think the government should show us that we are really legally obligated to the city in this matter. It is claimed that the Grand Trunk Pacific had agreed to build in the city a hotel. Now, the story of how that proposition was put on is, I think, very illuminating. A bunch of real estate men, back in the good old palmy days of 1910, 1911 and 1912, got together and secured an option on a lot of property around where the proposed hotel was to be built. Then they got busy in an effort to have the city of Regina bonus the Grand Trunk Pacific. Some other citizens in Regina who were not in on this scoop also got busy and showed that it was against the law of the province for a municipality to bonus any such project, and they engaged a lawyer to institute proceedings for an injunction. But there were so many influential citizens in on this real estate scoop that they brought pressure to bear on the lawyer to drop the case, and before a legal man could be got from Moose Jaw or Winnipeg to take it up, the legislature passed a special act enabling the city of Regina to bonus the Grand Trunk Pacific. Then these enterprising people got busy, dug a hole up on Albert street and stuck up a framework of steel a mile away from where it should be. That is as far as they proceeded with their hotel. Now, it is just such manipulation and unbusinesslike procedure as that which wrecked the Grand Trunk Pacific and some of our other railways, and if the government is going to proceed along the same course we shall be pulled down too. We have got to come to a stopping place.

There is no real necessity for this hotel, it has been abandoned, but to satisfy some citizens in Regina it is now proposed to build a line from Regina across to Avonlea. There is not a farmer in that district that has to go over twelve miles at the outside to a station, and ten miles catches very nearly all

[Mr. Hopkins.]

of them. The country is all under cultivation. it is well served by railroads to-day, and there is no more necessity for this branch line than there is for the hotel, not a bit. It will take a lot of trade away from Moose Jaw city and land it in Regina, but that would be no benefit to the district. That is not what we are here to look after. The Canadian National Railways have enough burdens to bear without our loading them up with another million-dollar liability. The minister said this line would give service to Radville. I received a letter from the Radville Board of Trade to-day asking me to protest with all my might against this line; Radville does not want it. I have not heard one elector say one word in favour of this proposed line; I did not hear about it at all until I came to Ottawa, and I do not think anybody is asking for it except a few men in the city of Regina. It has been said that where there is no actual necessity for a railway no work should be done, and I heartily agree with that. I would ask the members to do all they can to stop this project right here and now.

Mr. CALDWELL: I am not acquainted with the location of this road or of the necessity for it, but I cannot help thinking it is rather unfair that members who have railroads in their own constituencies should discuss this matter in this way when the member for Regina (Mr. Motherwell) is not in the House. I imagine he is interested in it. I am only making the suggestion to the minister that it might be well for the committee to rise and report progress so that the matter can be taken up again when the member for Regina is in his place.

Mr. MEIGHEN: Is the hon. member not assuming too much? The Minister of Agriculture (Mr. Motherwell) usually claims he is against the rest of the government.

Mr. MACLEAN (York): I am entirely in accord with the statement that has been made in the committee to-night that those districts which are in the greatest need of railway facilities should receive the first attention. If it is true that there are other districts which need branch lines more than this one, why this discrimination? In view of what has been said by several members here to-night in regard to the needs of other districts, would the minister tell us why this district is getting preferred treatment?

Mr. LEWIS: I have had quite a number of telegrams from people in my district in support of this line; naturally they think they could get to Regina much more quickly if it

were built. But I am not in favour of the line; I think the money could be better spent if the construction was at the other end, from Neidpath to Swift Current. It would suit my people very much better.

Some hon. MEMBERS: Oh, oh.

Mr. LEWIS: Hon. members laugh, but I would point out that so far as coal is concerned it travels from Swift Current down to Moose Jaw, to Avonlea, to Gravelbourg and to Neidpath—all the way round that district, a distance of nearly three hundred miles, whereas the district might be served by our Canadian National Railways running into Swift Current, a distance of twenty-five miles. There is a gap between Swift Current and the line which is proposed to be extended. Of course we cannot offer an amendment, but if the government can see fit to use this money for the building of this line, only on the other end, extending it into Swift Current, it would serve the whole of that district and would save the people there thousands of dollars yearly.

Mr. GRAHAM: This is the most remarkable scene I have ever witnessed. I respect the feelings of hon. gentlemen more, perhaps, than they think. This resolution is going to canonize someone. It is the first time in my experience that anybody has objected to a line in his own vicinity. I feel that I do not want to be a party to crowding this thing on them, and in order that we may give it more consideration if necessary, I move that the committee rise and report progress.

Mr. MACLEAN (York): What has the minister to say about this discrimination in the matter of providing branch line facilities?

The CHAIRMAN: The motion is not debatable.

Progress reported.

Mr. SPEAKER: When shall the committee have leave to sit again?

Mr. MEIGHEN: I was going to suggest, Mr. Speaker, that the committee have leave to sit again when the Minister of Agriculture arrives.

Mr. GRAHAM: I would not agree to any specific date, Mr. Speaker.

CANADIAN NATIONAL RAILWAYS

BENGOUGH-WILLOWBUNCH

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee on the following proposed resolution:

Resolved, (1) That it is expedient to bring in a measure to provide for the construction or completion prior to the thirty-first day of August, 1928, of a line of railway between Bengough and a point at or near Willowbunch, in the province of Saskatchewan, by the Canadian National Railway Company (hereinafter called the "National Company") and the Canadian Northern Railway Company (hereinafter called the "Northern Company"), jointly or severally;

(2) That a part of the cost of such construction and completion, as specified approximately in the schedule hereto, shall be provided by the Northern Company from the proceeds of issues of debenture obligations heretofore made, and now standing, subject to certain trusts, to the credit of the Provincial Treasurer of the province of Saskatchewan (hereinafter called "trust funds"), and the balance, also as specified approximately in such schedule, shall be provided by the National Company. To enable such balance to be provided, the National Company may, subject to the provisions of the proposed act, issue notes, obligations, bonds and other securities (hereinafter called "securities"), and the Governor in Council may authorize the guarantee of the principal and interest of such securities. The said companies shall be authorized to take all necessary steps, jointly or severally, to enable the trust funds to be used as herein provided.

(3) That provision be made for the issue of certificates as to mileage by the minister, and neither the minister in the issuance of such certificates, nor the said companies in the performance of the work of construction and completion, nor the National Company in the issue of its securities for the balance of cost after deducting trust funds available shall, unless by consent of parliament, exceed the estimated distance expenditure and average expenditure per mile, and the estimated amount of trust funds available, by more than fifteen per cent, and if upon final survey it appears to the said companies or either of them that the expenditure involved in the completion thereof will exceed the limits of expenditure estimated, the said companies shall not commence nor proceed with the work without first obtaining the approval of parliament;

(4) That the nature, terms and form of securities to be issued and guaranteed in respect of the balance of money by the National Company shall be such as may be approved by the Governor in Council and signed by the Minister of Finance;

(5) That to enable the work of completion of the said line of railway to proceed forthwith, the Governor in Council, pending the issue and disposal of any such guaranteed securities, may authorize advances to be made to the said companies, or either of them, from the consolidated revenue fund, such advances to be reimbursed to His Majesty from the first moneys available therefor;

(6) That the minister shall annually present to parliament a statement of the work and expenditure, advances and amount of advances reimbursed, and all such other information as he shall require or direct.

SCHEDULE.

Location	Mileage already graded	Estimates		
		Mileage including existing grading	To be expended	Average expenditure per mile
From Bengough to a point at or near Willowbunch, in the Province of Saskatchewan	0	27	$ 945,000	$ 35,000
To be provided by the Northern Company from trust funds, as specified in Resolution 2 and pursuant to chapter 2 of the Statutes of Saskatchewan, 1924, approximately	.....	.....	400,000	
To be provided by the National Company as the balance of cost as specified in Resolution 2, approximately	.....	.....	545,000	
			$ 945,000	

Mr. MEIGHEN: Perhaps before we go into committee the Minister might inform the House whether the government is serious about this resolution; or is it only a try out, too?

Mr. GRAHAM: This bill, like others, is a serious recommendation. The conditions of the other line were somewhat peculiar. I did not dream that nobody in the House wanted it. It was recommended in accordance with an agreement made by the Canadian National Railways with the city of Regina which agreement stated that the Canadian National Railway Company would give it reasonable support; and I submit that in recommending it they kept their contract.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Sir HENRY DRAYTON: I wonder if the minister in connection with this line would give us a statement as to railway policy. We had this matter up two years ago and again last year. There was a project very much favoured by the people of the district of extending the line from Bengough west. It was to run west, almost parallel, perhaps branching off a little to the southern boundary, a distance, as I recollect it, of some eighty odd miles, which if constructed would have looked after farmers who are to-day without proper railway connection and at such a distance that they cannot economically haul grain to railhead. I would like if the minister would explain the present construction, which appears to be deflected somewhat to the north and away from the district that really requires it. I am not saying that some people may not be helped here, but I would hope that helping them is not going to defeat the hopes of those to the south, which are of very, very long standing.

[Mr. Graham.]

Mr. GRAHAM: As my hon. friend knows, there was a good deal of discussion in the committee last year over what was called the Radville line, and I think there has been contention over it for a good many years. The original project of the Canadian Northern was to build the branch as outlined in this bill, but last year a change was made to cover a greater amount of territory, the line to run in a direction more southerly, if I remember the map correctly. The question arose in the committee last year that part of this territory might better be supplied by the Canadian Pacific. Now the committee and parliament have been expressing more and more every year the desirability of lessening the overlapping in railway construction by the two lines, and the Canadian Pacific has agreed, I understand, in fact, I have seen a letter to that effect, to construct a line to take care of the large part of the territory the Canadian National Railway was proposing to take care of in its last year's construction.

Sir HENRY DRAYTON: Which construction, Radville or Bengough?

Mr. GRAHAM: Radville.

Sir HENRY DRAYTON: I do not think anyone will look after that.

Mr. GRAHAM: It is in that direction, although I will not say it goes to Radville itself. I will read the memorandum on the Bengough-Willowbunch line:

It is proposed in 1925 to let a contract for the grading of the 27 miles to be completed in that year at an estimated cost of $500,000. In 1926, the track-laying and ballasting will be done and the line generally completed to Willowbunch at an estimated cost for that year of $445,000.

I may say the distance is 27 miles:

This line replaces the Radville S. & W.,—a bill for which was turned down in the Senate last year. During

the discussion on the bill last year, it was suggested that if the Canadian Pacific Railway would build eastward into the Fife Lake territory, the Canadian National Railways would be prepared to withdraw from the territory south and west from Radville. Now the Canadian Pacific Railway is prepared to build into the Fife Lake district, not from the east, but from Assiniboia, with the idea of eventually running east from Fife Lake to cross about the territory proposed to be covered by the Radville S. & W. Line, the Canadian National Railways are undertaking their original proposal in that country,—the extension of their Maryfield Branch from Bengough to Willowbunch.

The justification of this line is the fulfilment of undertakings in the past to construct this line, and also that it will give rail communication to the town of Willowbunch, and shorten the road haul for the farmers in the district south of there.

It is figured the production from the area tributary to the line will be 650,000 bushels of grain on the average per year, besides 170 carloads of freight in and outbound composed of live stock, coal, lumber and merchandise. About ten miles road haul would be saved on the average to the farmers served by this line, and computing this to be worth ¾ cent per bushel per mile on the 650,000 bushels expected from this line, it would mean an annual saving to the farmers of $48,750 for grain haul alone.

Although to build this line, it is estimated will cost $945,000, arrangements have now been made with the Provincial Government of Saskatchewan to consent to the release of $400,000 of trust funds, which had been previously raised for the purpose of construction of lines in the Province of Saskatchewan. This makes the amount to be voted by parliament $545,000.

I think that is about in line with what I said at the beginning. I do not know how it will strike parliament, but it struck me as a very good solution if the Canadian Pacific would look after that territory and eventually lead to practically the same territory as would have been covered by the Canadian National branch in last year's programme. The Canadian Pacific would not build down into that territory if the Canadian National built, so the Canadian National has returned to its original proposal to build from Bengough to Willowbunch, and the Canadian Pacific is to build easterly as indicated.

Mr. McTAGGART: Will the minister say that there is an arrangement at the present time between the Canadian Pacific and the Canadian National with regard to the development of railway facilities in that country? Does he know there is such an understanding?

Mr. GRAHAM: I may say that I read a letter from Mr. Grant Hall outlining just what I have intimated to the House, showing that they propose this year to begin construction.

Sir HENRY DRAYTON: Have they existing statutory powers to construct in that territory?

Mr. McTAGGART: I think before we proceed with this line of railway from Bengough we are entitled to full information with regard to the Radville line. The Radville line a year ago involved an expenditure of $3,800,000 odd of the money of the taxpayers of this country. At the time that proposition was before this House I opposed it on the ground that the line from Radville south and west was not a feasible proposition, and as a result of the opposition offered in this chamber the bill was amended so that the Canadian National management would have authority to build a road either from Radville, Ritchie or Bengough. I submitted then, and I submit now, that the Canadian National Railway, or their board of engineers at all events, knew at that time that the railway should have been built in the first place from Bengough south and west in the district of Fife lake and Wood mountain. They had that information, but for some reason the road was projected from Radville. Following the rejection of the bill by the Senate the Canadian National engineers were sent into that district, and they were surveying the Radville territory as recently as January last, according to the information I have. I believe they went on the ground some time after harvest, in the fall of last year, and made a survey of the Radville line as proposed before this House last year. Now what I want to know and what I think the country is entitled to know, is what was the result of the information which they procured when they made a survey of that line. I do not know if the minister has it in his possession at the present time, but I think the House and the country are entitled to that information. These people through that south country have suffered tremendously for many years because of their inability to secure a railway, and while the district south of Radville does contain an area where the people are a long way from the railway, that area is comparatively small. The difficulty with the Radville line was that it penetrated forty or fifty miles or more of a country which did not warrant the building of a railway. If the line had been built from Bengough, as proposed two years ago in this House, south and west to Fife lake, and then extended to as far as range 7 or 8 or 9, west of the third meridian, there is no other branch of the Canadian National which could serve a better country or one better calculated to develop railway tonnage. That country between what is known as Big Muddy through Fife lake country and clear through to White Mud river, is a country where there has been scarcely a crop failure since the settlers first went in there. I do

10 p.m.

not live there myself, but I know it well. It is better than the district I live in. In 1910 when there was a general crop failure throughout southwestern Saskatchewan, in the region know as Summer Cove there was an average yield of grain running from twenty to thirty bushels to the acre. Mixed farming is carried on throughout the Fife lake and Wood mountain country which is different from the area west of the White Mud river. Would the hon. gentleman tell us what information he has with regard to the report of the engineers whom the National Railway had on the ground last fall and winter?

Mr. GRAHAM: The hon. gentleman knows that these engineers never come to me with reports, unless they are asked for by me. I am not an engineer and do not know anything about the engineering end. I know that the Canadian National board and the Canadian Pacific Railway seemed to arrive at an arrangement which I thought would meet the situation more nearly than any other arrangement which could be made. I would suggest this—and this is why I want to send the bills to committee—that we proceed with the bill and get it to the Railway committee. Then we could notify the Canadian Pacific Railway and the Canadian National as well. They will be glad to come with their engineers and thresh out the whole matter in detail. There is nothing to hide about it, but this committee and myself are a combination that would not be able to thresh out engineering questions, and there are a hundred questions my hon. friend would like to ask the Canadian Pacific officials. I would like some assurance that this other road is going to be built. My suggestion is that we should get this in the form of a bill, as is done in the case of other bills. If it were a Canadian Pacific Railway bill it would be referred to the Railway committee without discussion. I am not objecting to the discussion, but we could have that discussion much better in the Railway committee than anywhere else.

Mr. McTAGGART: I do not know if you get my point. I am not offering any opposition to the bill, and I hope that I may not have to offer such opposition, but I want to get a general statement covering a mistake made last year. How did it come that the Canadian National made the mistake last year with regard to the Radville line.

Mr. GRAHAM: My hon. friend can get that from the committee.

Sir HENRY DRAYTON: I think we got that ourselves from the engineers. My hon. friend will correct me if I am wrong, but as I recollect it, the engineers were called last year in connection with the Radville line, and they said they had always reported against it. They said it could not be built and would be a waste of money.

Mr. GRAHAM: They did not say that in my presence.

Sir HENRY DRAYTON: That is the evidence on oath before the Senate, but they were talking for themselves and not for anybody else.

Mr. McTAGGART: My hon. friend from West York is quite correct. I heard the statement made by the engineering department of the Canadian National, and those witnesses, not only before the Commons committee, but before the Senate committee, intimated that so far as the railway companies were concerned, they had always advocated the construction of the line from Bengough rather than from anywhere else.

Mr. MACLEAN (York): I have listened for nearly two hours this evening to hon. members sidestepping and evading the real issue, and I am more convinced than ever of the absolute necessity of a real railway policy in this country based on the consolidation of the two systems, a real railway service without any local jealousies. Discussions such as we have heard to-night in this House cannot continue. There is no real attempt to deal with the railway question, with parties see-sawing as hon. members are doing to-night. Of course it will be the same thing before the Railway committee, and as I said before there is no other way out but a consolidation of the two railways, a combined management which will have regard to the needs of the country and to a real service, regardless of local claims. We do not want a repetition of this see-sawing between different parties in this House and between this House and the Senate. If such a thing continues for a few years I do not know what the future will be. I was more than pleased with the statement made by an hon. gentleman a few minutes ago about this House being led away from its duty to provide in the first place railway communication to the people who are twenty or thirty miles away from a railway, and giving railway accommodation to people who do not need it, who are not ten miles away from a railway, as is the case in some of the propositions before us to-night.

Sir HENRY DRAYTON: We are only now considering a resolution. The matter will have to come before the House in com-

mittee in connection with a bill, and I have no doubt the minister will come before us with all the information. The information we would really like would be an assurance that no further attempt will be made to throw away money south of Radville in that Big Muddy river district in the manner described, and that instead of having lines built which are more in the nature of political fences than anything else, we will have lines built for the farmer. If the minister comes down and assures the House that there is no more danger of that Radville proposition being attempted to be put through I think the resolution might pass.

Resolution reported read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 74, respecting the construction of a line of railway forming part of the Canadian National Railways between Bengough and a point at or near Willowbunch, in the province of Saskatchewan.

Motion agreed to and bill read the first time.

Mr. GRAHAM: Would the hon. member for Maple Creek (Mr. McTaggart) be satisfied to have the bill go to the Railway committee?

Mr. McTAGGART: Yes.

Mr. GRAHAM moved the second reading of the bill.

Motion agreed to and bill read the second time.

DOMINION LANDS ACT AMENDMENT

Hon. CHARLES STEWART (Argenteuil, Minister of the Interior) moved that the House go into committee to consider the following proposed resolution:

That it is expedient to amend The Dominion Lands Act, chapter 20 of the statutes of 1908, and the acts in amendment thereof, by providing,—

(1) Notwithstanding anything contained in the said act, no person shall be granted entry for lands situate within that part of the provinces of Saskatchewan and Alberta south of the south boundary of township 16 in the Dominion Lands system of survey unless such person submits evidence satisfactory to the Minister of the Interior that he or she is in permanent residence and conducting farming operations upon a farm of not less than eighty acres distant not more than nine miles in a direct line from the parcel for which entry is desired, exclusive of the width of road allowances crossed in the measurement, or that such person is the father, mother, son, daughter, brother or sister of a settler in permanent residence and conducting farming operations as aforesaid;

(2) That notwithstanding anything to the contrary in the said act, the minister may sell school lands required as right of way for any project or for reservoir, church, cemetery or hospital sites, at a price to be fixed by an officer of the department as the actual market value of the land, and upon such terms of payment as the minister may prescribe, provided that the government of the province in which the land is situated expresses its approval of the sale and price in each case;

(3) That where an application is made by the holder of unpatented school lands purchased under the provisions of this act prior to the first day of January, 1923, or by the legal representative, or registered assignee of such holder, the minister may, with the consent of the government of the province in which the lands affected are situate, rescind such contract, or contracts of sale, as to any portion thereof and in such form and area as the minister may prescribe.

Upon such rescission the holder or his legal representative, or registered assignee, shall be held to be indebted to the crown for principal and interest in accordance with the terms and conditions of the original contract, or contracts of sale, in respect only of the area to which such contract, or contracts, have been confined, and the account, or accounts, of the holder, legal representative, or registered assignee, in the books of the department, shall be adjusted accordingly. In such readjustment, any moneys paid on the original contract, or contracts, may, in the discretion of the minister, be applied in satisfaction of the principal and interest owing, or principal accruing under the contract, or contracts, as amended; provided that there shall be no refund of any moneys.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. McTAGGART: I do not think we should let this resolution go through too hastily. I want first to assure the minister that, coming from the district which this resolution directly affects, I have great pleasure in giving it my full support. I know the situation well, and I am glad to see the minister is taking a step to meet the difficult situation which we have there. One suggestion, however, that I have to make in connection with this resolution—and I recommend it to the minister's consideration—is that, instead of having this legislation apply only to lands south of township 16, it should apply to the entire area as far north as the South Saskatchawan river. The situation is the same and the river would be a natural boundary. To make an arbitrary arrangement that there should be a difference with regard to the working out of the Dominion Lands Act as between north and south of township 16, will create a situation whereby many perplexities will be bound to arise. For example, supposing when this measure becomes law, a resident living in township 16 or 17, desires to make entry for a parcel of land in township 15, what will the situation be? Will he have a right to make entry? As the situation with regard to climate and soil in connection with abandoned lands south of the Saskatchewan river is practically the same, I would recommend very earnestly that this legislation be made to apply as far north as the South Saskatchewan river.

Mr. STEWART (Argenteuil): This is a departure from the strict principle that applies to homesteading, inasmuch as we are first giving a preference to applications of residents over those of people living outside of the territory. This has never been done before. Personally I am very anxious to prevent homesteading in those areas, but there are some circumstances in which sons of residents in the locality can advantageously be settled on some of those lands and permitted to carry on agricultural pursuits. I think my hon. friend will agree with me that it will be well to discourage as far as possible the carrying on of agricultural pursuits, because most of the people there have turned their attention almost altogether to ranching. I am speaking of the area where this legislation will apply particularly and I do not want to extend this privilege over too great an area. I quite foresee the difficulty my hon. friend has pointed out, that some one, for example living in the township just north, might be deprived of the privilege, but I would like to see what sort of an onslaught is going to be made on us for opening up some of those lands. I confess I am not friendly to encouraging agriculture in that area, because we know it is the dry area, and we are rather attempting to encourage ranching, a system of agriculture that we know will be successful there. But we think it is a hardship to deprive a young man coming of age of the privilege of a free homestead if it is available and if, in our opinion, after investigation, there is a reasonable chance of success. That is all we are putting this clause in for.

Mr. McTAGGART: I do not want to hold up this bill, or to enter into a long dissertation upon it, but I want at this time to correct a misapprehension on the part of this House and the people of this country regarding that area. An arbitrary ruling was made, I think in 1921, with regard to the regulations of the Dominion Lands Act by setting aside as area A all lands in southern and western Saskatchewan south of township 16. Under that ruling those lands have been blacklisted. That area is known as the blacklist, as area A under the Dominion Lands Act. What are the facts with regard to that area? I live in it myself, in township 12, where a heavier tonnage of agricultural products is raised than in any other area of Saskatchewan. I make that statement without fear of contradiction. It is not true that the country is not fit for agriculture. It is one of the best districts in Saskatchewan or Alberta, but it has a feature which hon. members and the public at large do not understand. I have explained it several times before and I am going to explain it again for the benefit of hon. members. The land in Manitoba and eastern Saskatchewan is uniform. It is a heavy clay soil that is very general. When you get to a few miles west of Weyburn, what is known as the Missouri plateau, you reach a different class of land entirely. You have a class of land which is broken, where you have large areas of first class soil, large areas of medium class soil and large areas of the poorest kind of soil, areas that are fit only for grazing purposes. Consequently you see, Mr. Chairman, the hardship it is on residents of those large good areas to have their land classed and put down as being unfit for agriculture, when that argument applies only to those areas that are sandy and, of course, fit only for grazing.

In regard to the point involved here, I have objected time and again to that arbitrary ruling setting aside the line south of township 16, because for a considerable distance south of the South Saskatchewan river the quality of the soil and the climate are practically the same. There is no justification for making township 16 the dividing line as between one class of these lands and another, and that is one of the reasons why I wish to bring this matter to the attention of the minister. If he is going to give countenance in legislation again to the belief that there is a difference between the land south of 16 and the land to the north he will simply create a blacklist against the land in the south country. I do not know whether the minister is familiar with the country, but I venture to suggest that in that area between what is known as the Cypress hills and Maple Creek, to the town of Assiniboia, which includes a district of approximately 50 or 60 miles wide and covers 100 miles long, there is some of the very best agricultural land in the west; there is no area in all western Canada that has developed more agricultural products in the last twelve years. All that area is south of township 16, and that is the regrettable feature of this proposal. There are many immigrants coming into the country to-day from the United States for the purpose of settling on farm land and when they make inquiries they will be told not to go into that country because it is the dried out section, to use the term which the minister has employed. But it is no such thing. It is true that there are parts of that country that are dried out, but they do not lie mainly south of township 16; as a matter of fact, most of the dried out areas are north of it.

Let me refer to one. Anyone going through on the main line of railway between Swift Current and the Alberta line will pass along a sandy or bad area north of that line, not far from where I live. Again south of the Cypress hills, between them and the American boundary, there is an area that can be described as dried out, where it was a mistake in the first place for people to settle. In fact, close to my own town there is a considerable area that should not have been settled at all. But my point is that to make township 16 the dividing line between what is considered as good land and what is considered the dried out section is simply to leave a blacklist on that country south of township 16, and that is a rank injustice to the people who are trying to make that part of the country profitable.

Mr. STEWART (Argenteuil): I quite agree with my hon. friend (Mr. McTaggart) that some of the finest land in western Canada lies in that area; and I might include the area directly south of Swift Current along the boundary line. There is a portion in southern Alberta, not far from the boundary of the Saskatchewan, which is very fertile. But generally speaking the best of these lands are already homesteads. I believe that the area my hon. friend mentions is almost without exception all given over to homesteads as far west as Assiniboia. Now. I am not suggesting a black list of the territory. What we propose under the amendment, as my hon. friend will realize, is that in some of those areas where we have application for opening up homesteads in what we consider to be lands unfitted for that purpose, such lands should be dealt with in a particular way. We do not want to blacklist any lands; but there are frequently alongside some of these ranches fairly desirable quarter sections suitable for farming purposes and we are simply asking the right to deal with these particular cases and to treat the sons of residents of the locality as preferred settlers. That is all we are doing. Township 16 has of course been fixed upon more or less as an arbitrary boundary, but we are merely experimenting in that regard. To be frank, I am afraid that we shall have a considerable demand for lands where I do not think that settlement should be permitted. However, we are trying this out to see how it will work.

Mr. MEIGHEN: When was the blacklisting done?

Mr. STEWART (Argenteuil): There is no such thing as a blacklisting, but in 1921 it was decided not to permit more homesteading in certain areas.

Mr. MORRISON: Any abuse of the privilege of opening up land south of 16 can be overcome by the inspectors making a proper report to the department. If, in their opinion any land is not fit for farming purposes they can refuse to allow it to be homesteaded. But there are men living there who cannot sell out to-day, and as their boys are coming of age, and they are unable to keep them at home, it is desirable that they should be able to obtain land adjacent to the homestead for their boys. In that case, they do not need to put up buildings, and while the land would not be worth while to an outsider, who would be free to go anywhere he liked, it is certainly of value to those who are resident in the locality and who cannot move. There is not much inducement for the outsider to come in but undoubtedly the resident who is stuck there and cannot sell out can utilize the land adjacent to his farm. The outsider of course can go north where there are lots of good homesteads. This move on the part of the government is a good one, and will, I think, bring a good deal of satisfaction to the residents of that south country.

Mr. COOTE: I want to commend this move which the minister is making and which I think is a very proper one. I believe that the sons of the people who have pioneered that country should have the first choice of any homesteads that are available. I would suggest to the minister however that he is making the area, to which he is applying this scheme, altogether too small. There are many areas in Alberta where the scheme should be put into operation. There are a great many young men coming of age and there are no homesteads available to them unless they go several hundred miles north; and it is rather a hardship, after these old pioneers have gone into that country and established a community, suffering all the hardships which pioneers have to endure, to see the few homesteads that are left picked up by outsiders. I suggest that along the foot hills west of Claresholm there are a number of families who in some cases have one or two sons that are old enough to establish homesteads and who might be given an opportunity to take up these lands. The land along there is nearly all held under lease but a few quarter sections have been released and they do not always go to residents in the vicinity. The scheme which is outlined in this resolution is a splendid one, but I would advise the minister to enlarge the area to which it should apply. I think we have

been altogether too free in disposing of homestead lands to Doukhobors, Galicians and people of other nationalities who it is doubtful would be an asset; more likely they are a liability to the country. It will be only a few years before our young men will be looking for free lands and there will not be any good homesteads left for them within a reasonable distance of the railway. I think the minister should go a good deal further in this bill and apply the scheme to considerable areas in Alberta and Saskatchewan. I think it is only right that what free lands are left there should be reserved for the people who have pioneered that country.

Resolution reported, read the second time and concurred in. Mr. Stewart thereupon moved for leave to introduce Bill No. 75 to amend the Dominion Lands Act.

Motion agreed to and bill read the first time.

GOVERNMENT ANNUITIES ACT 1908 AMENDMENT

Hon. JAMES MURDOCK (Minister of Labour) moved the second reading of Bill No. 71 to amend the Government Annuities Act, 1908.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Limitations as to persons and amounts.

Mr. MANION: Would the minister explain the purpose of this bill?

Mr. MURDOCK: Under the present act the minimum annuity that can be purchased is $50. The proposal is to permit the purchase of a $10 annuity. That is the only change. The reason for the amendment is that a number of employers, it is said, find themselves disposed to purchase outright annuities of $10 each as Christmas presents or as bonuses for employees who have been with them for many years. In fact, for some time the department has had on deposit from one firm a considerable sum of money in anticipation of this amendment being made.

Mr. MANION: What is the purpose of a $10 annuity—is it intended as a Christmas present?

Mr. MURDOCK: It is said that some employers instead of giving their employees bonuses at Christmas time or some other form of present would prefer to purchase outright $10 annuities. Last Friday I placed on Hansard a memorandum of the single cash payment required to be made on the purchase outright of a $10 annuity under which the annuitant would benefit at the age of 65. Suppose the annuitant was 45 years of age, this annuity could be purchased under plan "A" for $40.25; under plan "B" for $25.88, and under the "10-year guarantee" plan for $47.80.

Mr. MANION: What is plan "B"?

Mr. MURDOCK: Under plan "B", in case of death before the annuity begins, there will be no return of any part of the purchase money. A $50 annuity under these three plans would cost $201.25, $129.38 and $238.99 respectively; which is sometimes regarded as a little high.

Section agreed to.

Bill reported, read the third time and passed.

PUBLIC SERVICE REARRANGEMENTS

Hon. ERNEST LAPOINTE (Minister of Justice) moved the second reading of Bill No. 43, to amend the act to authorize rearrangements and transfers of duties in the public service.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Duties and powers of minister and department to be exercised by minister and department to which transfer of duties is made.

Mr. MANION: Would the minister kindly explain the bill?

Mr. LAPOINTE: Under chapter 67 of the Revised Statutes concerning the Department of Agriculture, it is provided that the duties of the minister with regard to certain matters under his control may be transferred to some other department or branch of the civil service, and that the management of any one of those matters so transferred shall go to another minister of the crown, and such minister is substituted with all the powers and duties of the Minister of Agriculture. An act was passed in 1918 to authorize rearrangements and transfers of duties for all departments in the public service. Under this act, the powers, duties and functions of any minister of the crown may be transferred to another minister, or from one department to another, or from one branch of the service to another. Now the commission which is considering the revision of the statutes has suggested this amendment, which will make the

provision in the Department of Agriculture Act general for all departments. The amendment will remove any doubt as to the transfer of such duties. It is merely a formal matter.

Mr. MANION: If the minister wished to simplify the work of his department through the transfer of a particular branch of it to the Department of the Secretary of State, for instance, then this bill would permit that transfer and vest in the Secretary of State the authority over the branch so transferred; is that the idea?

Mr. LAPOINTE: Yes. The power already existed under the act of 1918, but this makes it quite clear that the duties in question are automatically transferred, in the case my hon. friend mentions, to the Secretary of State.

Mr. MANION: Would that be a permanent transfer?

Mr. LAPOINTE: Until the Governor in Council changed it again, if he chose to do so.

Mr. MANION: I received a letter the other day, I have forgotten from whom, protesting very strongly against this measure and implying that there was "a nigger in the woodpile," as the expression is. I do not know where the nigger is myself, and the Minister of Justice does not know either, I hope.

Mr. LAPOINTE: I assure my hon. friend it is entirely a "white" deal.

Mr. MANION: Then we have the assurance of the minister that it is merely to simplify the procedure?

Mr. LAPOINTE: It does not even change the law. It simply makes it clearer and more uniform.

Mr. MANION: Has the transfer of branches from one department to another been very frequent?

Mr. LAPOINTE: No. It was done a good deal during the war, because of the arduous work that some ministers had to do. Of late it has seldom been done.

Mr. MANION: Under this law could a branch be transferred from the outside service to the inside service?

Mr. LAPOINTE: I suppose it could.

Sir HENRY DRAYTON: I think the minister is right in saying that during the war orders in council were passed making transfers of certain rights and duties for the purpose of expediting business. I do not remember of the powers under the 1918 act being exercised in any other way. But how would the employees be affected if a branch outside were brought inside to a department which looked upon the activities of the outside branch as entirely unnecessary? Would the duties of those employees so transferred simply lapse? If so, it would be an opportunity for the appointment of a whole lot of other officials. Has this whole question of employment been considered in this connection?

Mr. LAPOINTE: This bill makes it clear that the only thing that is changed is the control of the branch by one minister instead of another, and its being in one department instead of another. Everything else remains the same. The present act reads as follows:

1. (1) The Governor in Council shall have power,—
(a) to transfer any powers, duties or functions or the control or supervision of any part of the public service from one minister of the crown to any other minister of the crown, or from one department or portion of the public service to any other department or portion of the public service; or,
(b) to amalgamate and combine any two or more departments under one minister of the crown and under one deputy minister.

So that the employees are rather protected by the amendment, because it is made clear that nothing is changed except the head of the department or of the branch. I have pointed out that the change was suggested by the commissioners who are studying the revision of the statutes. The wording is borrowed from the Department of Agriculture Act, chapter 67 of the Revised Statutes, and the provision is made applicable to all departments.

Sir HENRY DRAYTON: The real effect of that section in the act of 1918 would seem to be to make it clear that the minister or the department to whom the branch was transferred would in law have those powers; that the original power is in no way lost by the transfer. But my point was with regard to transfers from the inside to the outside service, or vice versa.

Mr. LAPOINTE: That is not mentioned either in the act as it exists to-day or in this amendment.

Sir HENRY DRAYTON: I am not sure but that it should be mentioned. However, I understand the minister to assure us that any transfer under this bill will not in any way affect the standing of those in the civil service.

Mr. LAPOINTE: I am giving that assurance to my hon. friend.

Sir HENRY DRAYTON: That is quite sufficient for me. I had hoped that there was something else behind the bill—that there was to be a combining of departments to cut down expenses. If my hon. friend would say that was the real reason of it, we would all say, Amen.

Mr. LAPOINTE: It may be used for that purpose.

Section agreed to.

Bill reported.

Mr. SPEAKER: When shall this bill be read a third time?

Mr. MANION: Next sitting of the House.

Mr. LAPOINTE: Why not pass it now and give the Senate something to do?

Mr. MANION: Only because there is one member who is not here at present who might possibly want to ask a question. Otherwise I would have no objection.

MIGRATORY BIRDS CONVENTION ACT AMENDMENT

Hon. CHARLES STEWART (Minister of the Interior) moved the second reading of Bill No. 44, to amend the Migratory Birds Convention Act.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Regulation as to possession of birds.

Sir HENRY DRAYTON: Will the minister explain?

Mr. STEWART (Argenteuil): Certain court decisions have made it appear that the present act and regulations forbid the possession of migratory birds legally taken in open season at any other time than in open season. That is, if one shoots game birds during the open season, and then has them in his possession after the open season closes, he is liable to prosecution. I am curing that by making the regulations conform with those in vogue in the provinces.

Sir HENRY DRAYTON: How is that going to work out? We have no period stated in the bill. I suppose the minister's idea is to bring in regulations providing how many weeks or days.

Mr. STEWART (Argenteuil): My idea is that the regulations will conform with the provisions of the provincial game acts. They vary somewhat in the different provinces, but we will arrange it so that there will be no confusion.

Sir HENRY DRAYTON: If we pass paragraph (aaa) I suppose the regulations, which will be made by the Governor in Council, will provide the period which each province provides by statute.

Mr. STEWART (Argenteuil): Yes.

Sir HENRY DRAYTON: Would the minister explain just how we have concurrent jurisdiction here and the necessity for concurrent legal action?

Mr. STEWART (Argenteuil): This amendment is necessary because of the fact that prosecutions have taken place in the province of Manitoba where the birds shot legally in open season were held until after the close of the season, which was permissible under the provisions of the provincial act, but not permissible under our act. In order that there shall be no confusion in the minds of those responsible in the various provinces, we are providing regulations for the keeping of game the same as those prevailing in the provinces.

Sir HENRY DRAYTON: I confess I am not familiar with the present method of administration of game laws. I have not followed it this last few years, but is there any conflict at all between the local and the Dominion enforcement of law? How is it arranged? It used to be arranged, as I recollect it, by the local authorities looking after the enforcement of the law through their local game keepers and the like, or through local police officers. What do we do about it? Are we now employing a number of men to see that people do not shoot birds out of season?

Mr. STEWART (Argenteuil): Yes, to some extent, but my hon. friend will notice that by the next section we are making an arrangement with Ontario, which is practically the last province, to utilize their game officers in the enforcement of the law. We have very few men, and they are mostly in eastern provinces, very few all told, who are enforcing the Migratory Birds Convention Act. The desire is to utilize the game officials of the provinces.

11 p.m.

Sir HENRY DRAYTON: I would like to ask the Minister of Justice as to what in his view is the underlying jurisdiction in connection with the enforcement of game laws, whether it is provincial or whether it is Dominion.

Mr. LAPOINTE: I will be pleased to look into the question and answer my hon. friend.

I would not venture to give an opinion on it to-night.

Mr. STEWART (Argenteuil): The federal authorities have the responsibility of enforcing the Migratory Birds Act, because it is based upon a treaty with our American neighbours, but our desire is to utilize the provincial officials who are engaged in this work, and the arrangement provided by the next section covers the Ontario officials.

Sir HENRY DRAYTON: I suppose the effect of what my hon. friend says is this, that so far as the Migratory Birds Act, which, of course, is something we have in common with the United States, is concerned, the regulations adopted under it have been made by the government to conform to the different open seasons in the provinces. Am I right in that?

Mr. STEWART (Argenteuil): Yes, practically so. There may be some slight differences. Our regulations may not conform in all cases exactly with the regulations of the provinces as to open season, and so on, but there could be no shooting of migratory birds under the provincial acts because the federal authorities are responsible for the enforcement of the act in its entirety.

Mr. LAPOINTE: Of course, there is a treaty in connection with this matter, and that makes it a matter of federal jurisdiction under the British North America Act. Section 132 of the British North America Act provides:

> The parliament and government of Canada shall have all powers necessary or proper for performing the obligations of Canada or for any province thereof, as part of the British Empire, towards foreign countries arising under treaties between the empire and such foreign countries.

So as there is a treaty, we have the right to deal with it.

Mr. MANION: Did I understand the Minister of the Interior to say that the Dominion government has the right to make regulations as to open season?

Mr. STEWART (Argenteuil): So far as the migratory birds are concerned.

Mr. MANION: But not in regard to others?

Mr. STEWART (Argenteuil): No.

Sir HENRY DRAYTON: What game birds have we got that are not migratory?

Mr. STEWART (Argenteuil): A great number, quail, partridge, prairie chicken, to mention only a few. Over these the provinces have jurisdiction.

Section agreed to.

On section 2—provincial officers to be game officers, except as to moiety of fines.

Sir HENRY DRAYTON: What is the reference to subsection 2 of section 12 which "shall not apply to any such officers"?

Mr. STEWART (Argenteuil): That is so far as payment of moiety of fines is concerned. This section is simply to provide that the Ontario game officers shall be officers for the enforcement of this act.

Mr. ROSS (Kingston): Will the federal department be responsible for any expenses? There have been disputes in the past over expenses.

Mr. STEWART (Argenteuil): Oh yes, we have to be responsible for expenses in connection with the enforcement of the act.

Mr. ROSS (Kingston): Will that apply just from the passing of this amendment or to the past as well? There have been several cases in dispute.

Mr. STEWART (Argenteuil): If my hon. friend refers to Ontario, we have an arrangement for the settlement of past disputes. This arrangement was made when giving authority to these officers to carry out their duties, I cannot give my hon. friend the particular instances, but we have had a full discussion and a full understanding with the department in Ontario.

Section agreed to.

On section 3—No one to buy, sell or possess bird, nest or egg during prohibited time.

Sir HENRY DRAYTON: It looks as if this section were rendered necessary by the previous amendment.

Mr. STEWART (Argenteuil): Yes.

Mr. ROSS (Kingston): Are there not special privileges or license given to certain individuals to have in their possession these eggs and so on?

Mr. STEWART (Argenteuil): Yes, there are certain individuals who are collecting for different purposes, but they must get permission or license. There are certain officers who give these privileges to collectors, and they are always given with the approval of the chief migratory bird officers. The permission comes through the local officials, but the permission is passed upon by the chief officer: In most cases they are persons of some note, and the officers do not grant these licenses indiscriminately. Scientists are given this permission

to collect for museum and university purposes and so on.

Section agreed to.

Bill reported, read the third time and passed.

DAIRY PRODUCE ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved the second reading of Bill No. 72, to amend the Dairy Produce Act.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Regulations.

Sir HENRY DRAYTON: Explain.

Mr. MOTHERWELL: While this bill is not very long, it is very important. The purpose of the bill is to refuse the grading privileges to anybody who persists in the adulteration of either butter or cheese. We have had one case referred back from Great Britain where butter has been found to be adulterated with various oils, and when we bring it home to the culprit, he sometimes pays a fine; but proceeds to repeat the offence, feeling that he can make more money by paying the fine and continuing to commit the offence than to refrain from doing it. The most effective way is to refuse to grade the product of those who are guilty of the offence; then, they cannot export their produce. By that means you protect your butter and your cheese from being adulterated and sent abroad, because these adulterations destroy our market. We are making a practice of doing this at the present time, but it is not quite clear that we have the authority to refuse to grade. Therefore we want to amend the act to make it clear that we have the right to refuse to grade butter or cheese in the case of persistent adulteration. I think the provision will be very effective. If anybody challenged our right now we might have difficulty in proving that we have the right.

Sir HENRY DRAYTON: The hon. minister says one thing and the statute says another. He wants the power to refuse to grade dairy produce in the case of obstinate people who will not comply with his regulations. That limitation is not in the bill. There is no limitation here at all.

Mr. MOTHERWELL: No.

Sir HENRY DRAYTON: The minister is taking the right to refuse to grade anybody's dairy products, and withholding the grading certificates from anybody whenever he pleases. I should have thought, when dealing with a statute in as important a matter as this, the statute should make it clear in what particular kind of cases the department should take that extraordinary power. It seems to me this matter has not been properly considered or drafted. Surely we do not want something on the statute book of Canada that is going to give any minister the right, without the slightest cause being shown, of refusing to grade dairy products and withholding grade certificates. The statute should show why that is being done. It should show that it is to cover the case of people who are not treating their dairy product properly and are hurting the trade. It should not be left in that position when it could be made right in a very few minutes, if anyone would take the time to do it.

Mr. MOTHERWELL: If we specified one reason then we could only refuse to grade for that one reason. There may be other reasons besides adulteration. Take a case in point: Out in the west mold in butter has developed, particularly in unsalted butter. We have made careful examination, and we know that some factories get the mold germ, and unless you look after a case of that kind, it is apt to get worse. Some factories persist in shipping moldy butter, and nothing has brought so much distress to the handlers of Canadian products this year as moldy butter. It is just as bad as adulterated butter; as a matter of fact, it is worse, because it develops so rapidly and permeates, not only the outside but the entire mass. We have had the worst experience this year since we have started to ship unsalted butter. It seems to me the discretion should be wide enough to apply to moldy butter as well as to adulterated butter, and there may be other things as well. I think the department could have no possible object in refusing a grade unless they were satisfied it was doing positive harm. This power we are taking is nothing like the power taken by Australia, where they absolutely refuse to allow any grade to go out except the top grade. They are jealous of their grades of butter. We are not going that far. We simply want to take authority to refuse to grade. In this bill we specify adulteration as an indication of what the bill is intended to cover, but it is not necessarily confined to adulteration. We could think up everything imaginable in this connection. For instance, you might have a persistent offender in the matter of exporting moldy butter, butter in dirty boxes, or butter improperly wrapped in unclean paper. There are a dozen other things one might think of, but one

might forget one thing, and if that were not in the bill, we could not put a stop to it without an amendment. That is one of the reasons why we wish to leave the bill as it is. I think the officials of the department may be trusted not to exercise this provision unless they absolutely have to do so. We are exercising it now without the authority, and we think it is better to have a general authority than to have a specific one applied to one offence.

Sir HENRY DRAYTON: I do not see any reason why it should not be made plain why this should be done. It is not to be done on account of the colour of a man's hair or his eyes; it is to be done because something is wrong with his butter. It is not stated in the bill that it is done because the butter is bad. My point is that it is a question not of saying that you must have good butter—

Mr. MOTHERWELL: No.

Sir HENRY DRAYTON: —but of saying that this departmental action can be used only for the purpose of seeing that people do get good butter. As the bill now stands, what parliament is being invited to do by this government, that always believes so much in democratic ideas and wants to get away from bureaucratic measures but is showing more and more of them than any aggregation we have ever had in this country before, is to give it power to say: We are going to take the right to refuse to grade any farmer's butter we like and we shall not say for what purpose we are going to do that, but for any reason, good, bad or indifferent that appeals to us, we are going to say that that man cannot sell that butter.

Mr. MOTHERWELL: He can sell it locally without a grading certificate.

Sir HENRY DRAYTON: My hon. friend is begging the question entirely. That man cannot under this measure sell his butter in the export market.

Mr. MOTHERWELL: That is right.

Sir HENRY DRAYTON: He is penalized without the slightest thing being said why he should be penalized, without his being told that this is being done in order to assist the production of butter, in order to maintain the standard of Canadian butter, that this is being done because he has moldy butter, rancid butter or anything else. There is nothing of that kind in the bill. Of course, if the government want to legislate in that way, it is for them to say so. It is so easy, if someone would take just a few minutes time, to cover the cases where this action should be taken. Any legislature that takes the trouble to look after the rights of the individual would see that this was done. Why cannot it be done in this instance?

Mr. MOTHERWELL: I will give my hon. friend another instance in regard to which this action should be taken, and that is with regard to cheese. During recent years local factories have followed the practice of shipping cheese almost as soon as it is made to the cold storage plants where it is graded. It is so immature that it is merely a bundle of pressed curd, and it is impossible to do justice to the cheese in that green condition. For instance, supposing a cheese is set somewhere in this neighbourhood and shipped to Montreal a day, or two or three days after it is made, it is just a bundle of curd and it is impossible to do justice to that cheese in the way of grading it when it arrives at Montreal. We want to be able to refuse to grade that cheese for a period at least. Supposing a shipper wants that graded immediately and put right on the steamer. We cannot grade it immediately and do justice to the cheese. It has to mature for at least ten days before any grader can give justice to it. We want to refuse to grade it until, in our judgment, sufficient time has expired that a reasonably proper grade can be given that the cheese will stand up to. We could specify that too, but this would mean that you would have to have a certain number of these things specified and then you might not catch them all. There is no thought of being arbitrary in this matter. After all, the discretion must lie with the officials of the department as to when they will exercise this authority. As I have pointed out before, this is not a harsh measure, unless some person wilfully wants to go and exercise it in some brutal or objectionable way, and such an officer should not be in the department to do that. We have to have the bill in this way or to specify everything imaginable that can occur, and I do not think, on short notice, we could catch them all.

Sir HENRY DRAYTON: I do not want that done. All I want done is to see that this refers to the question of quality. It does not. There is nothing in this bill referring to standard or quality. The minister is quite right in what he says as regards cheese and I entirely agree with him that cheese ought to be kept for a certain length of time before it is graded for export. The country has been hurt by cheese being shipped that is far too green,

and the farmers would be away ahead financially if we had some such proper method of ripening cheese as they have on the continent.

Mr. MOTHERWELL: We have no authority to do that.

Sir HENRY DRAYTON: I want to give the minister authority to do it, but I do not want to give him an omnibus right to do as he pleases with one man and do something different with another.

Mr. MOTHERWELL: We would not do that.

Sir HENRY DRAYTON: I am not at all sure, but what I would like is to be sure that this country's legislation dealing with an important matter of this kind makes it clear that that power—and it is a big and serious power as regards the right of the individual —has to be made use of for a certain purpose, for the purpose of seeing that butter and cheese are being kept up to standard. Nothing of that kind is stated in the bill.

Mr. MOTHERWELL: We do not go that far.

Sir HENRY DRAYTON: My hon. friend, as I recollect his explanation when he introduced this measure, said that he wanted to have these powers in cases of persistent violations of regulations.

Mr. MOTHERWELL: That is right.

Sir HENRY DRAYTON: Why cannot that be stated?

Mr. MOTHERWELL: But there are other things like the question of cheese. We are doing this now and there has not been a single objection to it, but you never know when you are going to run across some cantankerous customer who will object just for the fun of it.

Mr. SPEAKMAN: I find a good deal of strong common sense in what the ex-Minister of Finance (Sir Henry Drayton) says and for some reasons in addition to those which he has specified. I believe also it is rather an unhealthy practice to give too much power to any officials without stating the reasons for which the power is given. I would suggest that it would be a comparatively simple matter to state those reasons succinctly, without going into the various cases. So far as I am aware, there are only two cases why grading certificates should be refused. The first is the unfitness or unsuitability of the product for grading. That would apply to cheese because of its condition. That applies to the product. The other condition would apply to the individual, and that is a man who consistently violates the provisions of the act. That, to my mind, would practically cover the two cases. I have another reason also, and that is the educative value of letting people know why their stuff was not graded. That educative value is something that should be considered. When an act is passed the people should know why; they should know the reason why their stuff is refused the grading certificate. And when that information spreads throughout the country, when the people know that their produce must reach a certain quality and be in a certain condition before the certificate will be granted, there will be a greater impetus to the movement to improve the quality of the goods exported. I think myself that the contention advanced by my hon. friend (Sir Henry Drayton) is a sound one.

Mr. MOTHERWELL: In the drafting of a bill you simply state what you want to do and it is not usual to give any explanation as to why it is done. The reason for the passing of the law soon gets around. Quite frequently when a new act is passed an explanation accompanies it, especially among new settlers But it is not usual to incorporate such explanations in the act itself.

Sir HENRY DRAYTON: I am going to make a suggestion to the minister. I suggest that the section should read:

> For refusing to grade unfit and unsuitable dairy produce and for withholding grading certificates to any person habitually disregarding the regulations under this act—

That covers the two points.

Mr. MOTHERWELL: That would be too wide. We might take the ground that "unsuitable" included second or third grade butter which although it might not be creditable to the country, would still find a market. But we are not debarring any butter that is wholesome or merchantable from going abroad. We have not gone so far, although they do in Australia and New Zealand. What we have in mind is adulteration, which is a distinct offence. The time may come, when we are neck and neck with New Zealand and Australia, when we shall find it necessary to adopt the same practice and to keep our second and third grade produce at home. At present however we are simply applying the regulation to produce in which there is adulteration or mold, both very objectionable. At present mold is not an offence at all; adulteration is. But the moldy butter may be improved by a little more cleanliness on the part of the factory. If some of the

factories that are turning out moldy butter, and are thus prejudicing the entire butter market of Canada, do not take steps to remedy this evil, there should be some way to bring them to time. But this is not even an offence at the present time; it is simply gross carelessness on the part of the makers, to the detriment of shippers generally. As regards green cheese, there is no offence; there is no law providing that cheese shall be a certain age before it is shipped. A good many of the factories have not proper storage facilities; they have no cold storage, and with the temperature at 80 or 90 in the shade in the summer, the conditions are not favourable to proper maturing, as they would be with a temperature around 60.

Mr. SPEAKMAN: I cannot see that anything would be wider than a law giving the officials absolute power to refuse the certificate for any cause. I quite agree that in the case of such produce as the minister has mentioned the certificate should not be granted to enable exportation. But I do not think that any powers could be wider than those conferred in this act, which is as wide as the universe.

Mr. MOTHERWELL: We have to put on these regulations gently.

Sir HENRY DRAYTON: I move that the section be amended by adding after the word "produce" the words "being unfit or unsuitable for export," and after the word "certificate" the words "to any person habitually disregarding the regulations under this act".

Mr. NEILL: I want to point out an objection that has not yet been raised. The minister is taking the power to refuse to grade dairy produce, and it is suggested that it should be limited to unsuitable dairy produce. How is he to know that it is unsuitable until it is graded? It might be perfectly good butter; the man might have had a change of heart after making one or two bad shipments, and after he had got religion, he might send perfectly good shipments. Is his produce to be rejected simply because he may have happened to make some bad shipments in the past? The amendment is no better, because it takes power to refuse to grade dairy produce that is unsuitable. But how is the minister to know that it is unsuitable until it is graded? I think that we might omit the first part of the provision. The shipper cannot know what his produce is rejected for unless it has been graded. The latter part of the clause, it seems to me, would be ample to meet the object of the minister, which is to prevent the export of inferior butter.

Mr. MOTHERWELL: My intention was to refer all these bills to the committee on Agriculture, but this one seemed to be so simple, and the explanation I gave appeared to be so complete, that I thought we could dispose of it without referring it to that committee. But if our experts are to disagree probably we shall get a better decision before the committee on Agriculture.

Progress reported.

Bill referred to the select standing committee on Agriculture and Colonization.

THE MEAT AND CANNED FOODS ACT

On the Order:

Second reading of Bill No. 73 to amend the Meat and Canned Foods Act.—The Minister of Agriculture.

Mr. MEIGHEN: I rise to protest against our going on any later to-night. We were here until one o'clock this morning. The more we expedite business the more we are imposed on.

Mr. MOTHERWELL: This is just a motion for second reading and reference to the Agriculture committee.

Mr. MEIGHEN: If we get that done there will be something else proposed. There should be one or two other members here on this bill.

Mr. MOTHERWELL: Mr. Speaker, I move that this bill be now read the second time and referred to the select standing committee on Agriculture and Colonization.

Mr. MEIGHEN: I object. The government has not the slightest excuse for trying to rush these bills through one after the other at midnight. The bills may go to the committee on Agriculture; we are not all on that committee. This is imposing on good nature. We have put through a very large proportion of this order paper to-day, and we were here until after one this morning. This landsliding of everything to the committee on Agriculture without any discussion here is not the right thing to do, anyway.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion?

Mr. MEIGHEN: No.

Mr. MACKENZIE KING: There being objection, Mr. Speaker, we do not press the motion.

Mr. SPEAKER: Next sitting of the House.

On motion of Mr. Mackenzie King the House adjourned at 11.35 p.m.

Wednesday, May 6, 1925

The House met at three o'clock.

PRINTING OF PARLIAMENT

Mr. DECHENE for Hon. Mr. MARCIL (Bonaventure), presented the second report of the Joint Committee on the Printing of Parliament.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CANADIAN NATIONAL RAILWAYS— MR. JOHN R. FISHER

Mr. JONES:

1. Is John R. Fisher, of Truro, Nova Scotia (retired conductor of the Canadian National Railways), now in the service of the railways?
2. If so, what position does he hold?
3. What are his duties?
4. When was he appointed?
5. What is his salary?
6. Was the position now held by Mr. Fisher created when he was appointed to it?
7. If not, how long has the position been in existence, and who was his immediate predecessor in the position?

Hon. Mr. GRAHAM:

1. Yes; is in the service, but was not retired.
2. Inspector of trains and stations—Atlantic region.
3. To see that passenger cars in service and station buildings are kept in proper condition.
4. January 18, 1924.
5. The management does not consider it in the public interest to disclose information of this character.
6. Yes.
7. See answer to No. 6.

CIVIL SERVICE RECLASSIFICATION

Mr. CHURCH:

1. When will some decision be given by the government or the Civil Service Commission regarding the bonus or reclassification of civil servants?
2. Will such readjustment be made before next pay day, May 15th?
3. Has such bonus been cut off from those of the lower grades awaiting the reclassification of salaries?

[Mr. Meighen.]

Right Hon. Mr. MACKENZIE KING: I might answer this verbally. The government has approved the joint report of the Civil Service Commission and deputy ministers with respect to the reclassification of civil servants, and I assume that the commission will make public, possibly to-morrow, the terms of the reclassification.

CANADIAN NATIONAL RAILWAYS—PRIVATE CARS

Mr. WILSON:

1. How many private cars are in the possession of the Canadian National Railways for the use of officials?
2. How many of these have been secured in the past two and a half years?
3. How many were used to carry officers of the company to Portland on the occasion of the departure of Mr. C. J. Smith for England?
4. Who were the officers who used these cars for this purpose?
5. How many cars were on this same occasion sent around to Halifax, and for what purpose were they so sent?

Hon. Mr. GRAHAM: The hon. gentleman (Mr. Wilson) is now in his place. I have referred to this question on two or three occasions. I would be glad to give my hon. friend the answer to the first two questions, but I think, on mature consideration, he will see the inadvisability of opening the door to the other two questions. If we do, dear knows to what point they may lead. If these questions are answered, some person may rise and ask who were in somebody's car and how much they ate.

Mr. WILSON: The reason why I asked this question and why I think an answer should be given, is because I think it is in the public interest. If there has been an extravagant use of private cars, those who are supporters of public ownership as I have been, have a right to ask these questions.

Mr. GRAHAM: I would not say that my hon. friend is not a supporter of public ownership, but I assure him he is making a mistake if he presses for answers to the last questions. I am ready to give him answers to the first two, and have been since the second or third day after they were asked. These answers are:

1. 64.
2. During the period mentioned one car has been added and six retired.

I think the hon. member, on reflection, will realize, not that there is any difficulty in answering the last questions, but that if we do, we open the door to a series of questions

that will become detrimental to the interest of the railway and be of no interest to the public.

Mr. WILSON: All I can say is that I think it is in the public interest that these questions should be answered.

Mr. SPEAKER: Stand.

Mr. GRAHAM: No, Mr. Speaker. This question has been asked to stand for a week on account of the absence of my hon. friend. I have answered the first two questions and I am prepared to give my hon. friend, personally, answers to the others. He has been misinformed in every detail as to the answers to the others. I will go that far. I do not think he wants to do anything that would be detrimental to public ownership of railways.

Mr. WILSON: If the answers are put on Hansard, I can say whether I have been misinformed or not.

CANADIAN NATIONAL EXPRESS COMPANY—TROIS-PISTOLES

Mr. POULIOT:

What was the total yearly amount of business of the Canadian National Express Company branch at Trois Pistoles, county of Temiscouata, Quebec, during the last two years, respectively?

Hon. Mr. GRAHAM:

Year 1923..	$ 6,315 17
Year 1924..	7,042 52

ONTARIO HYDRO-ELECTRIC POWER COMMISSION POWER EXPORT

Mr. GERVAIS:

1. How long has the Hydro-Electric Power Commission of the province of Ontario been exporting electric power to the United States?
2. What quantity in horse-power or kilowatt hours has been exported within the last five years?
3. Has the commission obtained since January, 1925, a license or licenses, to export electric power; if so, for what quantity?
4. From what part of the province of Ontario, or from what power house is said electric power exported?

Hon. Mr. LOW:

1. Since August 1, 1917, under the name of the Ontario Power Company of Ontario and also since the 1st November, 1922, under the name of the Toronto Power Company. Since April 1, 1924, under the name of the Hydro-Electric Power Commission of Ontario.

2. 2,018,874,350 kilowatt hours.

3. Yes, one license for eighty thousand (80,000) kilowatts and one license for forty-five thousand (45,000) kilowatts of "off-peak or interruptible power."

4. Niagara Falls, Ontario.

WORKMEN'S COMPENSATION—POSTAL SERVANTS

Mr. IRVINE:

1. Does the Act 8-9 George V, chap. 14, chap. 15 as amended, assented to May, 1918, and June, 1919, to provide compensation where employees of His Majesty are killed or injured while performing their duties, apply to postal servants generally?
2. Who are the administrators of the act?
3. What are the benefits, if any, to the service by making application to come under the above act?

Hon. Mr. MURPHY:

1. No. The scope of the Dominion act is determined by the Workmen's Compensation Act for each province.

2. The provincial Workmen's Compensation boards, and in provinces having no board, the Deputy Minister of Railways and Canals.

3. The provision of an established and uniform procedure for dealing with cases coming within the scope of the Compensation Act for the province in which the employee is engaged.

CLARKE STEAMSHIP COMPANY

Mr. BOURASSA:

1. Is the government aware that the Clarke Steamship Company, to which it grants a subsidy, so as to help it to give a regular service to the people of the north shore of the St. Lawrence, has rented two American vessels carrying the American flag and equipped by Americans?
2. If so, is it the intention of the government to put an end to such a situation so injurious to our Canadian sailors?

Hon. Mr. LOW:

1. No. The two steamers referred to, which have been chartered by the Clarke Steamship Company for the north and south shore services, are of British register and will fly the Canadian flag and carry Canadian crews when employed in the subsidized services referred to.

2. Answered by No. 1.

SOLDIERS' CIVIL RE-ESTABLISHMENT—PERMANENT EMPLOYEES

Mr. MANION:

1. Have any employees of the Department of Soldiers' Civil Re-establishment been given permanent status by the minister without reference to the Civil Service Commission?
2. If so, what are the names and salaries of such appointees?
3. Under what authority was such permanent status given?

Hon. Mr. BELAND:

1. No: but certain officers of the department who have been employed for some years in positions of "continuing indeterminate duration" have accordingly been certified by the minister to be "permanent".

2. The following officers have been certified to be permanent:

Name	Salary
Arthur, C. G.	$4,000
Bell, C. A.	4,000
Biggar, Dr. J. L.	4,500
Boyd, G. H.	5,000
Carmichael, Dr. D. A.	4,500
Flexman, E.	5,000
George, W. H.	4,000
Graham, C. C. P.	2,640
Hewitt, Dr. S. R. D.	5,000
Hodgins, G. W. F.	4,020
Johnson, Dr. G. R.	4,800
Meikle, A. U.	3,600
Morrison, G. F.	4,500
Macaulay, Dr. M. A.	4,800
Macfarlane, G. S.	3,240
McIvor, Dr. N. K.	4,800
Oliver, J. P.	4,000
Proctor, Dr. A. P.	4,800
Sloman, H.	2,640
Thomas, Mrs. A. H.	1,680
Tucker, C.	3,240
Wickware, Dr. J. W.	4,800
Williamson, Dr. H. J.	4,500
Wright, A. M.	4,000

3. A "permanent officer, clerk or employee" is defined by the statutes as "a person who is appointed during pleasure to perform the duties of an office or position of continuing indeterminate duration by act of parliament or by order of the Governor in Council in the competent exercise of subsisting executive powers in that behalf, or under and in pursuance of authority in that behalf conferred upon an officer or agent of the crown by act of parliament or by order of the Governor in Council as aforesaid". The Deputy Minister of Justice has advised that the minister is competent to make such appointments under para. (b) of sub-section 2, of section 5, of the Department of Soldiers' Civil Re-establishment Act as amended by chapter 67, 14-15 George V, and the regulations thereunder, (P.C. 114/1818 of the 17th October 1924).

GENEVA LABOUR CONFERENCE—MR. W. L. BEST

Mr. McISAAC:

1. In what capacity did Mr. W. L. Best attend the Labour Conference at Geneva in 1923 or 1924?
2. What amount was paid him for his services?

Hon. Mr. MURDOCK:

1. Mr. W. L. Best was accredited as a technical adviser to the delegate representing the workpeople of Canada at the sixth conference of the International Labour Organization held in Geneva, Switzerland, commencing June 16, 1924, on the recommendation of the Trades and Labour Congress of Canada and in accordance with the provisions of article 389 of the treaties of Peace, which sanction the appointment of a workmen's delegate and of advisers to the workmen's delegate "chosen in agreement with the industrial organizations...which are most representative...of workpeople".

2. Mr. Best received no remuneration for his services.

MR. HENSHAW

Mr. IRVINE:

1. Was Mr. Henshaw Acting Immigration Agent at York, England, in 1923 and 1924?
2. Is he still in the service?
3. Is he a permanent or temporary employee?
4. Was he appointed by the Civil Service Commission after examination?
5. If so, when?
6. If not, how was he appointed?

Hon. Mr. ROBB:

1. Yes.
2. No.
3. Answered by No. 2.
4. No.
5. Answered by No. 4.
6. The transfer of Mr. Henshaw from the Soldier Settlement board was arranged with this department but was not finally approved by the Civil Service Commission.

MISS McDONALD

Mr. IRVINE:

1. Is there a Miss McDonald in the employ of the Immigration department, as Canadian agent at Inverness?
2. Was she chosen by the Civil Service Commission, after examination?
3. If not, how did she receive her appointment?

Hon. Mr. ROBB:

1. Yes.
2. In view of Miss McDonald's special qualifications, her appointment as agent at Inverness was made by the Civil Service Commission without examination.
3. Answered by No. 2.

UNOPPOSED MOTIONS FOR PAPERS

NOVA SCOTIA TEMPERANCE ACT

Mr. DOUCET:

For a copy of all correspondence, statements of investigation, court proceedings, reports, documents and other papers in the possession of the Department of Customs and Excise and the Department of Justice relating to alleged violation of law in regard to intoxicating liquors in or upon any bonded warehouse at Halifax, Nova Scotia, which the Franco-Canadian Import Company is permitted to establish and conduct, or by any person interested or engaged in the business of said import company.

MATANE WHARF

Mr. HANSON:

For a copy of all correspondence passing to and from the Department of Public Works relating to the wharf at Matane, including copies of contracts, if any, or other documents or agreements relating to such wharf.

CRUDE OIL BOUNTIES

Mr. FANSHER:

For a return showing (a) the total amount paid in bounties to producers of crude oil in Canada for each and every year since the passing of legislation providing bounty on crude oil, and (b) the names of persons and companies who received bounty in each of the years that said bounty was paid, together with the amount each person or company received.

CANADIAN NATIONAL RAILWAYS—VICTORIA BRIDGE, MONTREAL

Hon. Mr. MANION (for Hon. Mr. Stevens):

For a copy of a report made during the year 1924, by Mr. H. McLeod, chief consulting engineer of the Canadian National Railways, regarding the possibility of operating street cars over the Victoria bridge, Montreal.

CECIL R. SMITH

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): Since the Supreme court has ruled in the case of Cecil R. Smith, admitted bootlegger, that an income tax cannot be levied on the gains derived from illicit business or from the commission of crime; and since this judgment thereby definitely classes bootlegging as a crime; what action does the government propose to take to recover the illegal gains and punish the criminal?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should be glad if the hon. member would put that question when the Acting Minister of Finance (Mr. Robb) is in his place. He is giving the matter consideration at the present time.

Mr. WOODSWORTH: This would seem to me to be a matter for the Minister of Justice (Mr. Lapointe) and not for the Minister of Finance.

Hon. ERNEST LAPOINTE (Minister of Justice): The matter has not yet been considered; I understand that judgment was delivered yesterday.

CANADIAN NATIONAL RAILWAYS

ANNUAL STATEMENT BY THE MINISTER OF RAILWAYS AND CANALS

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee of Supply.

He said: The discussion of the railway situation is at best dry and somewhat uninteresting, and this year I am inclined to think that it will be even dryer and more uninteresting than ever, for the reason that almost every man who spoke on the budget spoke practically exclusively on the railways for the most part and not on the budget itself. The figures connected with the railways have been discussed on all three, I might say all four, sides of the House and there is comparatively little left for me to say that has not been already said, in some cases perhaps said better than I can say it. However, I shall endeavour to place the situation as fairly as I can before the House.

If I violate the rules of the House in referring to a past debate I hope, Sir, that you will not be too critical of my conduct, because I shall be no greater sinner in doing so than were those who spoke on the budget in infringing on my realm of railways. They really answered my speech before I had a chance to make it, and I am sure that if I deal with some things that have been touched upon in the budget debate concerning the railways hon. gentlemen will forgive me and not call me to order.

One of the difficulties in dealing with the railway situation during a budget debate is quite evident to hon. members in the fact that, unless the very closest scrutiny is made by one competent to make it, the attempt to fit the Canadian National finances into the budget must fail. And it must fail for this reason, that whereas the railway year ends on December 31, the fiscal or government year ends on March 31, so that it is almost impossible, without the closest scrutiny by one fully conversant with the handling and weighing of figures, to fit the one into the other. A common error occurred in relation to some figures that I brought down myself regarding additions to the railway debt during the calendar year. The information I gave was absolutely accurate so far as the public were concerned—$90,000,000; but when that came to be fitted into the fiscal year and made a part of the budget debate to show the financial position of Canada, these figures were altogether meaningless, that is, they did not set forth the right situation. I will give an example. Suppose the Canadian National Railways between January 1 and March 31 borrowed $50,000,000; and suppose that after March 31 they borrowed $50,000,000 more: in the calendar year they would have borrowed $100,000,000 but in the fiscal year only $50,000,000. Consequently when the $100,000,000 is taken in order to size up the situation so far as Canada herself is concerned, the figures are

$50,000,000 astray, inasmuch as the first $50,000,000 related to the previous fiscal year. Now, I gave the sum of $90,000,000 and that was for the calendar year; but several gentlemen made the mistake of trying to fit it into the fiscal year. When this $90,000,000 was clarified it really was reduced to $64,000,000, and that amount could have been reduced further by taking into account figures which I think might well have been considered. I am not making this argument to show that there were any discrepancies but merely to point out to hon. members that they cannot well, unless they are accountants, or unless they have accountants to advise them, fit in the federal finances with the railway finances. I am going to discuss the situation from the standpoint of railway accounting, which is the standard for all railways on the continent of America authorized by the Interstate Commerce Commission of the United States.

Another hon. gentleman asked me a question that looked very simple: How many men per hundred miles are employed on the Canadian Pacific Railway and the Canadian National Railways respectively for the year? The answer to that question indicated that there were a greater number of men on the Canadian National Railways than on the Canadian Pacific Railway, but the figures were meaningless although strictly accurate. The Canadian National Express is part of the Canadian National Railway system, and in the answer given the employees of the Canadian National Express were included, while in the information regarding the Canadian Pacific Railway the employees of the Dominion Express were not considered. If the figures were taken on the same basis there would be very little difference between the two in the number of employees per hundred miles; indeed, my study of the figures would indicate to me that what difference there was would be in favour of the Canadian National Railways. This goes to show the difficulty of applying figures unless you have the entire explanation before you.

Let me point out another reason why answers of this kind may be absolutely meaningless although accurate. One railway in 1923 may have some extraordinary repairs to make on account of conditions that may not exist on the other railway. For instance, one of the things that occur on the Canadian National railways, although not to so great an extent in the east, is the handling of snow. Last year, if I remember correctly, the Canadian National expenditure for handling snow and kindred work was one million dollars less than the year before. One railway may employ a thousand men for this purpose, while the other railway, owing to different conditions throughout its territory, may employ only one hundred men. Then, one railway may have its ballasting done by contract, while the other railway, right beside it, may do this work with its own staff. The railway that ballasts its line by contract does not have one single man on its payroll as these men work for the contractor, while the other line doing its own work may have thousands of men on its payroll. So it is impossible to make any comparisons with these figures unless a full explanation is made concerning them.

Now, Sir, I want to deal with the railway situation, not in a pessimistic way at all, because I say at the outset that the showing made by the Canadian National Railways is, under all the circumstances, phenomenal, and I am prepared to sit down and compare the management of the Canadian National system, with all its intricacies, with the management of any other railway in the world. In dealing with the figures I want to have a kindly word for my friend from Vancouver South (Mr. Ladner). He was wrong in his figures; I am not going to argue with him why, but I am going to show that he was wrong. He mentioned the juggling of figures in the fact that a certain amount—I think it was about fourteen million dollars—had been in the Receiver General's hands, and that a goodly portion of it had gone out. He did not think the money had gone astray, but he thought the accounts were juggled. This is the situation. Certain securities were sold, to the extent, if I remember correctly, of twenty-six million dollars. All the money was not needed at the time. It could have been deposited in the bank or placed in the hands of the Receiver General. The latter course was taken and the money was drawn upon as required. This was really a banking transaction as between the Canadian National and the Receiver General, as it would have been had the money been deposited in a bank. Everything is as plain as it can be made. The Canadian National would not hold this fourteen million dollars and be without the interest when the money was not required immediately. As I say, the money has been drawn upon as required, and now as a fact at the end of the fiscal year I think it has all been drawn out but $3,000,000 odd.

Then my friend made another mistake. He gave $913,913,000 as the guaranteed railway debt. This is not so serious, but it is not correct, and I think he would not like it to go unnoticed. Of that amount, only $652,447,283.77, or roughly two-thirds, is guaranteed.

Now, in the meeting of interest charges of the Canadian National Railways, due the public, the company makes no distinction; the interest is paid whether guaranteed or not, but, as a matter of accuracy, a third of these securities are not guaranteed by the government at all.

Mr. MEIGHEN: That was the amount to January 1 last?

Mr. GRAHAM: He was dealing with the annual report.

Mr. MEIGHEN: The 1st of January.

Mr. GRAHAM: My hon. friend from Vancouver South made this mistake, and I am not surprised because it is included in the larger amount; he adds $8,973,000 to the indebtedness of the railway on account of the Central Vermont. But that amount is already included in the balance sheet. It is true—and I want to make it perfectly clear—that this amount, which really means advances to the Central Vermont, is put down as an asset, an amount payable to the Canadian National Railways, but I am free to say that I should not like to pay one hundred cents on the dollar for that asset. Nevertheless, it appears there as an asset, being the amount advanced to the Central Vermont.

But my hon. friend from Vancouver South makes a graver mistake in the mileage and in his accusation of extravagance on capital expenditure. He makes this statement:

> So that about five thousand miles of railway have been built or acquired since 1922. Why this further investment was made we do not know. It may be perfectly justifiable. Nevertheless it certainly involves tremendous capital expenditures and obligations on the part of Canada.

The right hon. leader of the opposition (Mr. Meighen) will have to explain to him (Mr. Ladner) why this five thousand miles was added. My hon. friend forgot altogether to take in the Grand Trunk in his comparative figures. He took the Canadian National Railways as represented by the Canadian Northern system, the Canadian government lines, and the Grand Trunk Pacific. But in the interval the Grand Trunk was added. In one of his computations he leaves out the Grand Trunk, and in the other case the Central Vermont. I must say I think there was no excuse for that error. As a matter of fact, between 1921 and December 31, 1924, it will be found that instead of a large addition having been made to the mileage, as the hon. member for Vancouver South says, the Canadian National system as now operated has a net mileage 100 miles less than it had four years ago.

I was going to deal with some of the figures used by the right hon. leader of the opposition, but with his permission—and I think I will get it—I will leave these until we go into committee of supply where we can deal with details, and there will probably be some discussion. This much I want to point out, though, in reference to it. My right hon. friend says they reduced the debt one year by —I forget how much; I did not clearly gather from reading his remarks whether he meant that in adding to the debt they also were replacing another debt, or refunding, and they were thus reducing on one side and adding on the other. But if he meant he was reducing the indebtedness of the Canadian National, I cannot see how he works it out.

Mr. MEIGHEN: I certainly did not intend that, and I do not think I said so. I know they did not reduce the debt.

Mr. GRAHAM: It looked like that, but I need not argue it further. There is only one way of reducing debt, that is by paying. The money would have to be secured by borrowing either from the government or the public, and in either way it would be a transfer from one to the other and the debt would still remain.

There is one question I should like to mention here, but I will not deal with it at very great length. I refer to the question of whether the guaranteed bonds of the National were charged to the indebtedness of Canada. I do not think there is any doubt that they have never been so charged. I am not arguing whether they ought to be or not, but we on this side of the House, and myself particularly in connection with the management of the National Railways, have been charged with adopting a new plan, that of not adding to the public debt the amount of the guarantees. That never was done. But my right hon. friend will say, and has said, I think, that during his time, in borrowing, the amount of any guaranteed bonds was not added to the public debt because the money was used for refunding.

Mr. MEIGHEN: Not quite. What I said was this: that the total amount guaranteed was equalled and exceeded by the total amount reduced, both by the guarantees and by the cash advances.

Mr. GRAHAM: That is not the way I understood it; I thought there was a question between us as to the adding to the public debt of the securities guaranteed by the government for the Canadian Northern. I say again it has never been done. If the funds secured by the guaranteeing of Canadian National

bonds were for refunding there is no addition, because the indebtedness would stand as it was. Let me take this just as an example. I am leaving out quite a few figures here but I shall reach my point through the ones I give.

In 1921-22 there were two guarantees of $25,000,000, one on the Grand Trunk account and one on the Canadian Northern account. These were used partly for refunding, but not altogether; and not a dollar of these guaranteed bonds was added to the debt of Canada. The Grand Trunk issue was used for the following purposes:

Operating deficits	$ 1,095,007 50
Interest due public	4,966,175 40
Refunding	11,967,596 18
Betterments	1,177,245 89
Materials and supplies	1,000,000 00
Outstanding liabilities	2,980,156 18
Total	$23,186,181 15

Now, there was an issue of $25,000,000 that year for the Canadian Northern, and it came about in this way: the Canadian Northern, as was usually the case, needed money. The government advanced twenty-six million odd, either through its endorsement at the bank or in some other way.

Mr. BROWN: For what year is the minister giving the figures now?

Mr. GRAHAM: The year 1921-22. The government had advanced the Canadian Northern twenty-six million odd. The government, naturally enough, wanted the amount repaid, so the Canadian Northern with the guarantee of the government floated an issue of $25,000,000 in New York for which they received $26,228,163 which they paid the Receiver General. But that did not reduce the debt a cent; it just removed the amount of indebtedness from the Receiver General to the public. That was not refunding; it was merely paying back to the government money the railway had borrowed, but the Canadian Northern bonds were out to that extent. The reason a larger amount than $25,000,000 was secured through the sale of securities ought to be explained, and it is simple: I take it that it was on account of the rate of exchange at that time. Now, what was this twenty-six million odd used for? The figures are as follows:

Operating deficits	$ 5,000,000 00
Interest due public	8,599,507 80
Refunding	4,730,063 03
Betterments	2,725,784 76
Materials and supplies	5,172,807 44
Total	$26,228,163 03

None of these bonds, though guaranteed by the government, were added to the public debt. I am not arguing whether they should be added or not, but what I want to say, in defence of myself and in defence of the Canadian National Railways, is that no deviation has been made in the matter of adding to the public debt—or, rather, not adding to the public debt—on account of the issue of guaranteed securities of the Canadian National Railways.

I think it is fair to the House to tell them here about the financing of the Canadian National Railways for 1924-25. I do this not because it is connected with the fiscal year; not because I am speaking for the Receiver General, but to point out the conditions that have existed during the past year in regard to the borrowing of the Canadian National system. The Acting Minister of Finance and the president of the Board of Directors of the Canadian National Railways have acted in complete unison in this matter; no borrowings have been made, none have been suggested, without the entire approval being first obtained of the Acting Minister of Finance I am particularly interested because I was really acting for the Finance Minister myself on two occasions and assisted in these borrowings. I want hon. gentlemen to read Hansard of the last two or three days and then make some comparisons, if they wish, in regard to these borrowings. The issues during 1924-25 were as follows:

Canadian National Railway Issues—1924 and 1925

Comparison of cost to Railway, Issue Prices and Market Prices—April 23, 1925

Canadian National Issues:

$20,000,000—
Three Year 4 per cent—dated July 1, 1924
Cost to syndicate .. 4.63 Basis 98.25
Sold to public .. 4.40 Basis 98.875

$18,000,000—
Five Year 4½ per cent—dated February 15, 1925
Cost to syndicate .. 4.70 Basis 99.125
Sold to public .. 4.52 Basis 99.875

$17,000,000—
Ten Year 4½ per cent—dated February 15, 1925
Cost to syndicate .. 4.97 Basis 96.25
Sold to public .. 4.80 Basis 97.63

$26,000,000—
Thirty Year 4½ per cent—dated September 15, 1924
Cost to syndicate .. 4.88 Basis 94
Sold to public .. 4.75 Basis 96

It will be noted, in regard to the issue of $20,000,000 of July 1, that the difference between the cost to the syndicate and the rate to the public was not four points, but the difference between .25 and .87½.

Without any desire to make comparisons, I want to point out that in these loans a very favourable rate was obtained, just as a good rate was obtained by the Acting Minister of Finance in connection with other loans. But let me call further attention to

the fact that the conditions of Canada are not thought in other parts of the world to be very serious, and that view is enhanced by the fact that the Canadian National Railways went into the shrewdest money market in the world last year and sold its securities at a better rate than had been secured for some time.

Then, as to our equipment issue. These are the issues under what is known as the Philadelphia plan. They are not government guaranteed, but the amount due on the equipment is amortized each year; in other words, interest and principal are paid each year. The security is the equipment plus 25 per cent, because parliament gives for this issue 25 per cent of the amount, consequently the lending company has security on 100 per cent while they advance only 75 per cent. I have not the figures in my mind, but as to that issue I have been told, and it has been repeated to me lately, that no railway company before that time or since, up to two months ago, had secured as good a rate for their securities as had the Canadian National Railway for its equipment securities. Now I just want to mention another matter for fear we get away from the one prime object of transportation companies, and that is service to the public. There are two branches of this subject: one is service to the public, and the other is the cost of the service. I say without any fear of contradiction that the railways of Canada give as competent a service to the people of Canada as is received by any other people on this earth. If there is any complaint, the service is too good.

Some hon. MEMBERS: Hear, hear.

Mr. GRAHAM: I hear some "hear, hears." but I am afraid they will be, "there, theres," before I get through; but I like to hear them anyway.

The United States railways are often compared to ours. I am quite prepared, Mr. Speaker, to accept the challenge on behalf of the Canadian railways, including the two great systems, and compare the service they provide with the service provided by any railway company in the United States. It is true that during the war the railway service in the United States was confused, and the endeavour that was made to amalgamate a lot of lines without any real connecting links under a government head only made confusion worse confounded. During the war the Canadian railways gave a service infinitely superior to the service given by the United States.

I want to interject another remark here concerning the Canadian railways and the American railways. I am not saying that the railways across the line are not well managed, though they are no better managed than ours, but they do get higher freight rates than we do in the Dominion of Canada. And when any person talks of going over to the other side of the line to better his condition or of being attached to that country, if he went there the first crack would be about a 30-per cent addition to his freight rates. So far as transportation is concerned, we in Canada are served too well for our population.

Having said that in defence of the service in Canada—and I think no one will take exception to what I have said concerning the service of our two great railways—I want now to deal in a measure with the finances. Take, first, our gross revenue. The gross revenue of the Canadian National railways did decrease; the gross revenue of all railways decreased, and some railways in the United States have gone into bankruptcy during the past few months although their rates were much higher than ours. This stress has been felt in regard to transportation I think all over the world, and we have no cause to feel pessimistic about our own railway because it suffered the same fate as all railways. It is no better and no worse, and I emphasize particularly the last sentence, that it is no worse; on the contrary, it has fared incomparably better than the majority of railways on this continent. Now I will give in the words of the two presidents the reasons for our loss in gross revenue. Mark you, I believe that in the Canadian Pacific and in the Canadian National, in Mr. Beatty and Sir Henry Thornton, we have two presidents that will compare with any other presidents of any other lines in the United States or anywhere else in the world. I believe that, and consequently I am quoting verbatim their reasons for the loss in gross revenue. Sir Henry Thornton says:

Decrease in gross earnings, $17,547,305, or 6.93 per cent. This decrease resulted from adverse business conditions which obtained during the greater part of the year throughout Canada and elsewhere. Traffic during the first three months of the year was in excess of that moved in the same period of 1923, but general business suffered a reduction early in April and the depression continued until the end of the year. Due principally to the relatively small grain crop in western Canada the movement of grain to the lakehead was in much less volume than usual and was considerably below the exceptionally heavy movement which took place in the last three months of 1923, with the result that the impetus to active business which a large grain movement usually engenders was noticeably lacking. The movement was also to some extent affected by the disposition shown to hold grain in the country creating an unusual condition and one which business in general had not anticipated.

My friends from the west do not need that explaining, but we in the east perhaps do not understand that so well. In the beginning of the year 1924, on account of the abundant crop the year before, there was a large quantity of grain held for shipment in the spring of the next year, and during the first three months of 1924 the railways had a very large tonnage of grain from the crop of the year before.

Mr. FORKE: I would like to point out to the minister that grain is supposed to be hauled at less than cost.

Mr. GRAHAM: I am not supposing; I am just giving the figures.

Mr. MEIGHEN: The minister is giving the gross earnings, anyway.

Mr. GRAHAM: As the right hon. gentleman has said, I am speaking of gross earnings, not about what was left. The grain tonnage in the early part of 1924 was far in excess of the grain tonnage in the early part of 1925, and greater even than the tonnage in the early part of 1923. So, as a matter of fact, the size of the crop does affect the railways. It may not affect the producer to such an extent, for this reason: He may have a smaller crop and a bigger price, and therefore come out at the same point so far as his finances are concerned. but with the railway it is different, for the railways cannot charge according to what the farmer gets; it has to charge according to the tonnage that is produced.

Now let me give Mr. Beatty's figures:

Gross earnings less by $13,334,933. The decrease in freight earnings is largely accounted for by the much smaller movement of grain and flour, particularly the former, owing to the smaller crop in western Canada. There was also a substantial decrease in the movement of manufactured artices due to the depression which existed in Canada during the major portion of the year. In the circumstances, your directors feel that the results of the company's operations must be considered as satisfactory.

I agree with Mr. Beatty that the result of the operations on both these railways must under the circumstances be considered as satisfactory. I would like to add a few figures just to show how these two managers trimmed their sails to meet the conditions by reducing the cost of transportation.

The mileage of the Canadian National railways was 21,872, and of the Canadian Pacific railway, 13,784. Just at that point let me say that I am often asked questions in this House making comparisons between the figures for the Canadian Pacific railway and the figures for the Canadian National railway, members seemingly altogether forgetting that the Canadian National mileage is fifty per cent greater than that of the Canadian Pacific; so the figures are not comparable to that extent. The figures for the two railways are as follows:

Canadian National	1924	Canadian Pacific
21,872	System mileage..	13,784
$235,588,182	Gross earnings..	$182,502,156
$ 17,547,305	Decrease in same..	$ 13,334,933
$218,343,931	Working expenses..	$145,274,914
$ 14,360,907	Decrease in same..	$ 13,083,165
$171,045,297	Freight earnings..	$123,505,139
$ 14,195,598	Decrease in same..	$ 10,794,416
52,498,614	Tons freight carried..	28,776,386
4,747,724	Decrease in same..	2,076,608
	Earnings per ton mile	
c.1.01	1924	c.0.98
c.0.99	1923	c.0.93
$ 37,233,998	Passenger earnings..	$ 33,900,667
$ 2,051,319	Decrease in same..	$ 2,415,150
22,707,880	Passengers carried..	14,153,500
975,901	Decrease in same..	496,927
	Earnings per passenger per mile	
c.2.71	1924	c.2.66
c.2.71	1923	c.2.63
$ 3,595,261	Earnings from mails..	$ 3,537,662
$ 52,183	Increase .. ..Decrease	$ 34,709
$ 23,713,624	Miscellaneous earnings	$ 21,558,636
$ 1,352,570	Decrease in same..	$ 90,657
$ 44,039,965	Maintenance W & S..	$ 27,277,388
$ 738,479	Decrease in same..	$ 3,499,035
$ 47,972,444	Maintenance of equipment..	$ 32,640,070
$ 4,203,875	Decrease in same	$ 1,684,769
$110,085,033	Transportation expenses.. ..	$ 66,311,741
$ 10,217,416	Decrease in same..	$ 6,418,830
	Operating ratio	
92.68%	1924	79.60%
91.92%	1923	80.86%

These figures, Mr. Speaker, may be of importance a little later on. As I pointed out in the beginning of my remarks the figures given for one year cannot be depended upon to provide a yard stick for measuring operation or expenditure, even capital expenditure. Hon. gentlemen will notice how these two railways reduced expenditure, the one in one direction and the other in another direction. Perhaps next year, or the year we are now in, these positions may be exactly reversed, and what one would save on equipment the other might save on maintenance of way and structures, and the position be reversed.

Now we will take the situation for this year. The decrease in expenditure by the Canadian National on ways and structures was $738,479. The decrease in expenditure on ways and

structures by the Canadian Pacific was $3,499,035. It was stated a year ago, I do not know whether it was in this House, that the Canadian National that year was starving its maintenance of way, while as a matter of fact it has been expending an enormous amount on its maintenance of way and must of necessity do so. But it will be seen by the figures I have given that notwithstanding that large expenditure on maintenance of way and structures a year ago the Canadian National only reduced this expenditure by $738,479. The Canadian Pacific, acting on just as good a business principle reduced this expenditure by $3,499,035.

Now, in the case of equipment the situation is just reversed. To show that the management of these railways runs along concurrent lines the Canadian National reduced their expenditure for this purpose by $4,203,875, while the Canadian Pacific reduced theirs by $1,684,769, the entire decrease in these two items being $4,942,354 in the case of the Canadian National and $5,184,804 in the case of the Canadian Pacific. As I pointed out a few minutes ago the expenditure for snow shovelling for some years is very large. Last year this decrease in the expenditure on maintenance of way and structures was more than accounted for by the amount saved in snow shovelling, which was something over a million.

Now I want to point out to the House how each dollar is expended on the Canadian National comparing the years 1924 and 1923:

	1924 cents	1923 cents
Maintenance of way and structures	20	19
Maintenance of equipment	22	23
Traffic	03	02
Transportation (rail)	50	52
Miscellaneous operations	01	01
General	04	03
Total	$1 00	$1 00

The above figures will be interesting to hon. gentlemen when they come to compare the other figures that they have as to how every dollar, or the proportion of every dollar, was applied.

Now let me take the operating ratio. We have spent a large amount of money, of course, on the Canadian National, and I will deal with that in a few minutes; but the operating ratio on the Canadian National, which is a pretty safe criterion has been constantly decreasing, though this year there is a very small increase owing to the decrease in traffic while the overhead had to be maintained. That is accounted for, to a great extent, by the very large overhead that cannot be reduced. But, as hon. gentlemen know, the greater the traffic the better the ratio. Let me take a period of three years, beginning in 1920, when these systems were separate entities:

4 p.m.

Operating Ratios

	1920 Per cent	1921 Per cent	1922 Per cent
Grand Trunk	96.17	95.53	87.94
Canadian Northern	124.38	109.37	104.85
Canadian Government	123.46	113.85	106.10
Grand Trunk Pacific	170.34	124.21	123.18

I want to take these figures and apply them to the amalgamated line, the Canadian National Railways, and show the House what I have stated, namely, that, with the exception of this year, owing to conditions which I have explained, from 1920, not only the component parts of these lines that were under the control of the government has the operating ratio bettered, but the operating ratio of the Canadian National as a whole has bettered. In 1922, on the combined system the operating ratio was 98.77; in 1923, it was 91.92, and although the railway was suffering under these conditions in 1924, the operating ratio was 92.68. This showing as regards operation by the Canadian National Railways is not discouraging; it is most encouraging to the people of the Dominion of Canada.

Mr. MEIGHEN: Has the minister the corresponding figures for the Canadian Pacific for the past two years?

Mr. GRAHAM: I think they are in the other statement that I have put on Hansard.

As I pointed out some time ago, not a few members have been confused concerning the different figures given as to the mileage of the railways. These different figures are accounted for by the fact that, besides the steam roads, there are electric roads, United States roads, and properties, practically speaking, outside of the system altogether, for instance, the Central Vermont. There are owned and leased mileages. I have had a study made of the mileage giving full explanations, so that hon. gentlemen will have it on record in Hansard and they will know exactly what the mileage of the system is. I had intended to read the condensation of this mileage study and put it on Hansard, but if hon. gentlemen will allow me I will put it all on Hansard and not weary the House by reading this first statement of figures. The condensation is as follows:

Mileage Study		Miles
System steam mileage	21,872 19	
Controlled by constituent companies, but separately operated:		
Central Vermont	483 47	
Thousand Island railway	6 00	
Total steam		22,361 66
Electric		Miles
Canadian National electric lines:		
Toronto Suburban	58 31	
Niagara, St. Catharines and Toronto	61 84	
	120 15	
Montreal and Southern Counties	53 66	
Oshawa Railway Co.	9 43	
Total electric		183 24
Total—all lines		22,544 90

	1923	1924	Changes
Owned mileage	20,296 12	20,267 60	Dec. 28.52
Leased mileage	1,448 72	1,503 70	Inc. 54 98
Trackage rights	106 05	100 89	Dec. 5 16
	21,850 89	21,872 19	

	1923	1924	Changes
Atlantic region	2,760 06	2,803 83	Inc. 43 75
Central region	7,830 91	7,669 24	Dec. 161 67
Grand Trunk Western lines	991 69	991 69	.....
Western region	10,268 21	10,407 43	Inc. 139 22
	21,850 89	21,872 19	

Net increase in operated mileage .. .. .. 21 30 miles

[The details of mileage increases and decreases are as follows]

CANADIAN NATIONAL RAILWAYS

STATEMENT showing Mileage Increases and Decreases by Divisions and Regions of Owned Lines, Lines under Lease or Contract, and Lines under Trackage Rights

Territory	Owned Lines		Lines under Lease or Contract		Lines under Trackage Rights		Remarks
	Increase	Decrease	Increase	Decrease	Increase	Decrease	
Atlantic Region—							
Halifax Division		16·79					H. & S. W. Ry., Granville Centre to Port Wade rendered inactive.
Halifax Division		60·07					Correction.
New Glasgow Division			60·53				Inverness Ry. and Coal Co. taken over April 1st, 1924.
Island Division	0·66						Miscellaneous adjustments and corrections.
Moncton Division		0·08					Miscellaneous corrections.
Campbellton Division		0·74					Miscellaneous corrections.
Edmundston Division	0·24						Miscellaneous corrections.
	0·90	17·68	60·53				Total net increase Atlantic Reg'n. 43·75 mi.
Central Region—							
Levis Division	0·15						Miscellaneous corrections.
Levis Division		0·32					Correction in mileage of joint trackage, Cadorna to Palais Station (C.P.R.), Quebec.
Saguenay Division		0·23					Miscellaneous corrections.
Cochrane Division		115·34					Transferred to Hornepayne Division.
Cochrane Division		131·95					Transferred to Port Arthur Division, West Region.
Cochrane Division	0·77						Extension to Pagwa Sub. at Nakina.
Montreal Division		25·09					Allenby to Donnacona partly dismantled and partly inactive.
Montreal Division	6·26						Donnacona Cut off put into operation.
Montreal Division		0·25					Miscellaneous corrections, etc.
Montreal Terminals	6·09						Transferred from St. Lawrence Division.
St. Lawrence Division		28·6					Hemmingford to International Bdy, dismantled.
St. Lawrence Division						2·53	Trackage rights on D. & H. Ry. relinquished.
St. Lawrence Division		0·69					Transferred to Montreal Terminals Division.
St. Lawrence Division			0·41				Lines leased from Central Vermont Ry., correction.
St. Lawrence Division				2·17			Central Counties Ry., correction in mileage of Glen Robertson -Hawkesbury line due to part of line at Hawkesbury now being used as siding.
Belleville Division		2·20					Belleville North to Belleville Harbour not now operated as main line, included under sidings in 1924 returns.

CANADIAN NATIONAL RAILWAYS—*Con.*

STATEMENT showing Mileage Increases and Decreases by Divisions and Regions of Owned Lines, Lines under Lease or Contract, and Lines under Trackage Rights—*Con.*

Territory	Owned Lines		Lines under Lease or Contract		Lines under Trackage Rights		Remarks
	Increase	Decrease	Increase	Decrease	Increase	Decrease	
Central Region—Continued							
Ottawa Division			0·21				Trackage at Belleville under agreement with C.P.R. not previously reported.
Ottawa Division			0·01				Golden Lake Wye—correction.
Ottawa Division		0·06					Adjustments.
Hornepayne Division (formerly Nipigon Division)	115·34						Kowkash Subdivision, etc. transferred from Cochrane Division.
Hornepayne Division (formerly Nipigon Division)	1·19						Portion at Foleyet transferred from Capreol Division.
Hornepayne Division (formerly Nipigon Division)		0·02					Adjustments.
Hornepayne Division (formerly Nipigon Division)					0·01		Trackage rights over Algoma Central Railway at Oba not previously reported.
Capreol Division (formerly Nipissing Division)		1·19					Portion at Foleyet transferred to Hornepayne Division.
Capreol Division (formerly Nipissing Division)	1·05	0·25					Addition and corrections—Todmorden to Washago, 0·28 miles, Oriole to Donland, 0·14 miles, Sudbury Junction wye, 0·45 miles, Miscellaneous, 0·18,—Deduction Conn. to T. & N. O. Ry. at North Bay, 0·25 miles.
Capreol Division (formerly Nipissing Div.)				0·75			Portion of Donland-Dovercourt Road Line under agreement with C.P.R. but not operated by Can. Nat. Rys.—included in inactive mileage in 1924 returns.
London Division		2·84					Line from Harrisburg to Alford dismantled.
London Division	0·34						New wye at Lynden Junction.
St. Thomas Division	1·02					1·02	International Bridge Co's tracks transferred from trackage rights to owned line.

Office of Engineer of Standards,
Montreal, Que., April 20th, 1925

An interesting item to which I wish to call the attention of the House is that of insurance. As one can readily understand, the question of insurance in a system the size of the Canadian National Railways is a very important one. Prior to the present management taking hold of the system, there were three methods of insurance. Of course the government railway lines were never insured; the government of Canada always carried that insurance. When I had the honour of being Minister of Railways and Canals before, I instituted what was known as an insurance fund on the Intercolonial railway, with the result that in 1911 there was a tidy balance to the credit of the insurance fund and all the fire losses on the Intercolonial had been taken care of by that fund. This insurance fund was established out of the receipts of the Intercolonial railway. Some lines under the company system were insured, partly, at least by a fund they had themselves. Others paid out very large sums to companies for insurance. After full consultation, having a competent actuary go into the figures, the management of the railway, in conjunction with the Railway department, came to the conclusion that this system provided enough insurance for a whole company in itself, that is a company of moderate size, and that the company with the government behind it not only could afford to carry its own insurance but could save a great deal of money in doing so. It was not left for the Receiver General to provide the moneys and the Dominion of Canada to carry the insurance through the Receiver General, but each year the amount of the premiums that would go to a company are laid aside in the Canadian National for the purpose of insuring the property. There is still some $2,000,000 or a little over of fire insurance carried with other companies. These policies fall due this year and they will all be brought under the Canadian National insurance fund. The result of this, I think, will be very encouraging.

Mr. MACLEAN (York): Then the government has a publicly-owned insurance company?

Mr. GRAHAM: The Canadian National Railway Company is operating it. The annual premiums paid to outside insurance companies in respect to risks placed with these companies amounted to approximately $1,150,000. This was an annual cash outlay. In addition to this, there was charged to operating expenses and credited to insurance reserves, premiums aggregating $130,000 per annum. An examination of the premiums, as I have pointed out, for a period prior to 1923, shows that there was a great profit in the insurance business as regards these railway properties. So the company, as I have explained, decided to adopt what we call self-insurance. The results of this policy have so far been very satisfactory from the standpoint of the National Railways, as may be judged from the fact that the actual losses in the entire railway system in 1923 and 1924 were only $679,050 and $420,250, respectively, whereas the actual cash paid to private companies for part of the risk carried was approximately $1,050,000. At the present time the cash or securities held in the insurance fund by the Canadian National Railways amounts to $4,074,153. This does not include the merchant marine which also has an insurance fund of its own. This will show to hon. gentlemen, I think, the wisdom of that step, and while we are charging in the expenses the amount of premiums each year, as a matter of fact we have that cash in the treasury, or, if not, we have the amount in bonds. In the Canadian Northern the money for insurance was carried as a book-keeping fund; there was no cash in sight; but the amount in the fund of the Canadian National Railway Insurance Department is in government bonds or cash.

Mr. MORRISON: Does the minister refer just to fire insurance?

Mr. GRAHAM: Yes, on the property.

Mr. ARTHURS: To what fund are the expenses of this insurance department charged?

Mr. GRAHAM: I think this is charged as part of the operating expenses. The insurance department is a department of the Canadian National. As a matter of fact, the expenses ought to be paid out of the insurance fund, although I am not sure whether they are or not.

Hon. gentlemen have heard a good deal about the difficulties of transportation companies in all countries in meeting competition brought about by automobiles and busses on account of the improvement of roads. This may seem small at first blush, but it is a very important matter and it has to be dealt with. The question will arise: Should the railway companies of Canada forsake some of their steam lines and operate busses on short hauls, or should they replace their steam roads on little longer hauls with gasoline or electric cars to take the place of the more expensive steam locomotives and regular trains? This is a problem that is being studied by all railways in the country. One can never say that the busses must be banished. One cannot say that hon. gentlemen must not ride in their automobiles, but

must go in the trains. The question is not one of endeavouring to stop the traffic by automobiles or trucks; it is one of reducing the cost of transportation by the railway companies by some other process. Hon. gentlemen will be surprised to hear that the railway companies of Canada last year, in their passenger service alone, were affected to the extent of $24,000,000 by the automobile. The Canadian National system's share of that sum, in Canada, was something over $8,000,000, and if you add about a million and three quarters on our lines in the United States, you will find that the Canadian National system sustained a loss in gross revenue last year of nearly $10,000,000 in passenger service alone on account of the automobile.

Mr. CAMPBELL: How are these figures arrived at?

Mr. GRAHAM: They were prepared by Mr. G. T. Bell, executive assistant to the traffic vice-president of the Canadian National Railways, who has been making a study and a comparison in relation to the traffic done in certain localities. In the milk traffic alone last year, I believe, the Canadian National lost $130,000 worth of business which it had before. Mr. Bell has been making close study of the situation and perhaps it may be just as well for me to read the statement he makes on this point; it will answer my hon. friend's question. I will read the first page of a statement I have here, giving the findings of Mr. Bell, and with the permission of the House I shall place on Hansard the rest of it giving the opinions of executives of other railways. It all goes to show, as I pointed out a moment ago, the necessity of finding some way, not of driving out the busses, for that cannot be done, but of providing something cheaper than the comparatively expensive steam locomotives and trains we have. The first statement is as follows:

Motor Vehicle Competition

Mr. G. T. Bell, executive assistant to the traffic vice-president, Canadian National Railways, estimates that the motor car (passenger cars and trucks) cost the railways of Canada $24,276,651 in 1923, and more than that sum last year, when motor vehicle registrations rose to 639,114 from 566,486 in 1923.

The above loss was in passenger traffic only. The Canadian National's share of this loss was $8,081,477. To this must be added an estimated loss of $1,747,587 on American mileage, making a total estimated loss of $9,829,064 on the passenger revenues of the system.

Mr. Bell in his report also deals with motor truck competition in express freight service. There are six companies in Montreal and seventy-six in Toronto operating motor trucks in general transportation business, for handling freight and express. There are fourteen companies operating from three to five trucks each out of Hamilton.

[Mr. Graham.]

The trucks, owing to lower operating costs, and being able to select the cream of the traffic, make rates about 25 to 35 per cent lower than railway express rates. Their operating costs are mainly in wages and maintenance of equipment, with no expense for use of the highways beyond a merely nominal tax. It is not practicable to give a definite estimate as to loss generally, but on the item of milk alone it is estimated to amount to $125,000 a year. Practically all milk traffic formerly handled on passenger trains up to a distance of thirty miles is now handled by motor trucks.

Mr. Bell reports 214 auto-bus services in territory competitive with Canadian National Railways, with a daily operated mileage of 385,440. Out of a Canadian National Railway mileage of 22,348, auto-busses serve 3,332 miles, or approximately 15 per cent.

During 1924, 1,524,166 United States motor cars entered Canada and 162,475 Canadian cars entered the United States. It is estimated that this represents a loss of $2,900,000 to the Canadian lines of the Canadian National Railways. In Ontario alone, in 1923, 9,523 passenger cars are shown as registered by commercial travellers. These cars are used to cover towns more quickly than can be done by passenger train.

The memorandum I have received giving other opinions I will place on Hansard:

Railways and automobile competition—L. V. Loree, chairman of the board of directors of the Kansas City Southern Railway, had this to say recently concerning automobile competition:

"There are in the United States some 253,000 miles of railroad. Because of the exhaustion of the resources they were built to serve, construction of competing lines of superior character, the destructive effect of automobile competition and other circumstances, there are as a minimum 30,000 miles that should be taken up and abandoned."

The Railway Age, March 14, contains a lengthy article dealing with the effect of automobile traffic on class 1 United States railways for the five years 1920-24, inclusive. From this article, the following extracts are taken:

"The number of passengers carried in 1924 was 24 per cent less, and passengers carried one mile 23 per cent less, than in 1920. Meantime the railways rendered practically the same passenger service as before. They reduced it slightly in 1921, 1922 and 1923, but in 1924 the number of passenger train miles was only about one-half of one per cent less than in 1920 and the number of passenger car miles was actually greater. This resulted in sharp reductions in the average number of passengers per train and per car. The average per train in 1920 was 84 and in 1924 only 65. The average per car in 1920 was almost 20 and in 1924 only about 15.....

"If the railways, with the average rate in effect in 1924, which was 8½ per cent greater than in 1920, had handled as much passenger business as in 1920, their total revenues from it would have been $317,000,000 larger than they were. This exceeds the total cash dividends paid by the class I roads in any year since 1917. It is entirely logical to assume that in the absence of new influences causing an interruption of the growth of passenger business it would have been larger in 1924 than in 1920. Never but once before in the history of American railroads did their passenger business show a decline after the passage of four years, and in that instance the decline was very small.

"What the facts show is that passenger business and earnings have declined greatly, while there has been no corresponding reduction of service, and that in consequence, although there has been no substantial reduction of rates since 1920, earnings per train mile and per car mile have sharply declined. There has been a general reduction in freight rates since 1921 and no general reduction of passenger rates, but in 1921

passenger earnings were 29½ per cent as great as freight earnings while in 1924 they were less than 25 per cent as great.

"It is commonly assumed that the passenger business the railroads have lost to the automobiles has been principally short haul business. It would appear that this has not been true within recent years. The average journey per passenger by rail increased from about 30 miles in 1914 to 38 miles in 1920. This increase in the average journey was no doubt due to the fact that during these years the traffic lost was principally for short distances. Since 1920, however, the average journey has both declined and increased and is now only slightly greater than it was then. It would appear that as hard surface highways have been built all over the country the losses of short distance and long distance business have been about relatively equal. Have the railways been justified, in the face of this loss of business, in maintaining so much passenger service? They have lost business to the automobile largely because it can be used at any time, and on most lines if the railways had reduced their service they would have lost still more business to the automobile. Furthermore, of course, on many lines they have encountered strong opposition from the public and regulating authorities to reductions of service.

"The problem presented to the railways by the loss of passenger business is a very important one, but the solution, if there is one, is not yet in sight. What appears to be most needed now is the more general introduction on lines of thin traffic of means of rendering the service still required which will be less expensive than the local train pulled by a steam locomotive. At present the chances seem better of devising means of handling passenger business more cheaply than of competing successfully with the automobile for it."

Now, I have no comment to offer further than I have made in this respect, that this is a very serious matter that calls for our best consideration. I shall have to ask the leave of the House to put some more statements on Hansard, but before I do so I may observe this. Before the accounting systems of the Canadian National Railways were amalgamated into practically one it was easy to get at the results of the different entities that comprised the whole system. Perhaps this will be the last year that anything of the kind can be done with success, but I have asked to have a statement made showing the results achieved by the entities so that every hon. member of the House can compare operating results of the various corporate entities of the Canadian National system, with the addition of the Central Vermont. The first document includes the results of the Canadian National system operations, wihch hon. members already have in printed form, and to those results have been added the results of the Central Vermont. This latter road had an operating net revenue of $1,082,624. This operating net, by taxes and non-operating charges, such as rentals, was reduced to $229,206, before fixed charges; and as the fixed charges of the Central Vermont were $1,126,269 the result, after fixed charges, was a deficit of $897,062. This must be added to the system deficit of $54,860,419 shown in the report of the Canadian National system in the hands of hon. members, the figure now becoming $55,757,481.

The second statement has to do with the operations of Canadian lines only. These include the Grand Trunk Company of Canada, the former Canadian Northern system, Canadian Government Railways and the Grand Trunk Pacific. Now I will give a few more figures which I think will be encouraging to some hon. gentlemen. The former Canadian Northern, Canadian Government and Grand Trunk Pacific Railways each showed improved operating results, the Canadian Northern and Canadian Government Railway betterments amounting to $1,500,000 each. The Grand Trunk Pacific operations improved to the extent of $329,000. It will be seen that the showing of the Grand Trunk lines in Canada was poor in contrast with the previous year, the deficit after all charges increasing to the extent of almost $6,000,000. This figure does not include any interest properly chargeable to the former Canadian Northern or Grand Trunk Pacific systems on financing by the Canadian National Railway Company, that aspect of the statement having been rectified by necessary adjustments in non-operating income before charges are met.

The third statement has to do with operating results on Canadian National lines in the United States. These, in round figures, were four millions less in 1924 than in 1923, and the operating net revenues $5,480,162, as compared with $8,580,100 the previous year. There is an interesting passage in this statement, considering what we have heard about the wonderful prosperity in the United States:

The chief loss of revenue was on the Grand Trunk Western lines serving the industrial community adjacent to Detroit and Chicago. The Grand Trunk New England lines produced an operating deficit this year of $482,575, compared with $491,702 for 1923.

Taxes and rentals of the Grand Trunk Western lines are very heavy, and it will be observed that the net revenue of $5,480,162 from operation becomes a deficit of $2,818,727 before fixed charges. Including fixed charges, the total deficit on United States operation was $3,721,258.55, an increase of $1,002,178.69.

With the consent of the House I will put these statements on Hansard. They explain themselves.

STATEMENT No. 1

CANADIAN NATIONAL RAILWAYS

(Including Central Vermont)

INCOME ACCOUNT

YEARS ENDING DECEMBER 31ST, 1924 AND 1923

Might I be allowed to point out here, Mr. Speaker, that some confusion has arisen as between the interest on the debt and the accumulation of overhead. Both local papers are very friendly to the Canadian National system, and to government ownership, and they give the management a fair show. But the Citizen in the article I am about to quote makes a mistake concerning the interest due the public. In a recent editorial the Citizen says:

> The people of Canada have to contribute $54,860,419 this year to the private holders of railway bonds, in addition to the whole of the profit that the railway earned.

The deficit was $54,860,419, but in that amount was included $31,271,043 owed to the government.

Mr. MEIGHEN: That is the amount owed to the government, but if you add the amount owed to the public you get away over the $54,000,000.

Mr. GRAHAM: I explained that it came altogether to $69,000,000.

Mr. MEIGHEN: Yes.

Mr. GRAHAM: I am trying to point out the mistake made here. In the Dominion government accounts will be found the entire statement of the amount due both. The situation is this, that instead of $54,000,000 owed to the public in overhead, the amount was $38,361,704. Towards this interest charge the railway provided $12,235,071 from operating revenues. But it supplies more. There is a credit balance of $2,537,310.90 on non-operating account, that is, rentals and various things of that nature. As a matter of fact, the amount of interest owed to the public being $38,-361,704, is reduced by $14,772,327 available from the revenues of the Canadian National itself. The balance, $23,589,377, represents the sum the Canadian National Railway was required to find to complete its interest payments to the public.

Mr. MANION: Would the minister repeat the two figures as to the interest owing by the railway to the government and to the public?

Mr. GRAHAM: The interest owed to the government is $31,271,043, and to the public $38,361,704. Perhaps I am getting on dangerous ground in dealing with this interest, because I am neither an accountant nor a railway man, and I do not pretend to be an expert on figures at all. But, to put it bluntly, one of the difficulties under which we labour is that we are compelled to pay compound interest. I have had several arguments as to the soundness of this, but I will try to explain my position. This one year we have a deficit altogether of interest. We borrow money to pay the principal, including that interest, and we pay interest on the money we borrow. Consequently we are paying interest on the interest of our new borrowings. That is one of the difficulties under which we labour, and I want hon. gentlemen to remember that never was any railway company in the world asked to face such a condition as the Canadian National Railways have been asked to face.

Mr. CAMPBELL: Does the minister not think that the partial remedy would be to write down the capitalization?

Mr. GRAHAM: Oh, I am coming to that. Now, it will be clear to every person, I think, that the very large amounts we have expended year by year were necessary in order to bring this property up to a standard where it might be self-supporting, but the time has arrived when we ought to reduce this capital expenditure as far as possible. It has been reduced year by year. During the four years previous to 1923-24 the average yearly capital expenditure, on investment account, was about $54,000,000. Last year this was reduced to $30,000,000 odd. This year I think I am safe in telling the House that the company is prepared to endeavour to get along with a capital expenditure of $18,900,000. So that we are reducing our capital expenditure to a great extent. It may be asked, why have capital expenditure at all. I reply that so long as you have a railway, you will have capital expenditure. On this system there are millions and millions of dollars worth of trestles that will go to pieces if they are not filled and gradually replaced with permanent structures. All this means capital expenditure, and such expenditure will be required every year, but to reduce it to the minimum ought I think to be the endeavour of the Canadian National Railways and of the Parliament of Canada.

Mr. MEIGHEN: I am not clear on the last figures, the only thing I think I am not clear on. The minister says that last year some $30,000,000 odd was added to capital expenditure. Last year, according to the minister's return and the railway return, about $118,000,000 was added to the National Railways' debt, of which $54,000,000 would be deficit from both sources, which would leave about $64,000,000 in addition. Now, how could there be only $30,000,000 added to the debt when there was that spread of $64,000,000 between the addition to the capital and the deficits?

Mr. GRAHAM: It is a question of bookkeeping. As a matter of fact, these figures are given me to-day as the actual expenditures on capital account last year, not on operation.

Mr. MEIGHEN: What could the balance of $64,000,000 have been?

Mr. GRAHAM: I might explain it this way, the additional capital is not all capital expenditure.

Mr. MEIGHEN: What is it?

Mr. GRAHAM: The deficit is added to the capital.

Mr. MEIGHEN: I know that, but what about the $118,000,000?

[Mr. Graham.]

Mr. GRAHAM: I do not want to go back to explain that again. Ninety million dollars was part of that $118,000,000.

Mr. MEIGHEN: I know that—but perhaps we had better wait until I speak.

Mr. GRAHAM: That would be better. Now, the capital account of the Canadian National Railways is rather a mixed affair. But, for the last three or four years, perhaps before that, we have been reducing the capital expenditure. I want to make it quite clear to hon. gentlemen that the Canadian National management was not handed a railway system; it was handed a conglomeration of various entities all over the Dominion of Canada, many of them having no connection with any other part of the system. The management was told: You take this mass and whip it into some kind of shape so that the various entities will work together. I do not believe any management in the world could have been found to excel the present one in the attempt to bring some kind of order out of the chaos that existed; in linking up the machinery that was handed to them. Do hon. gentlemen know that in this system there are more than one hundred different companies? Criticism has been made of the accounting department of the Canadian National; of the expense of it, and of the tardiness with which the annual report is brought down. But balance sheets have to be made out for eighty-seven different entities before a general balance sheet can be struck off for the Canadian National Railways. It is a marvel to me that they are able to get out a balance sheet at all the same year, because no other company with a railway that is a real railway, the different parts of which are built to work together, has anything of the kind to do. I want to say again that in trying to whip into shape these hundred different companies, keeping separate accounts, as must be done with regard to these entities in the matter of securities—the work done by the Canadian National accounting department is a marvel among railway men in this continent. Let me give you an illustration. Each one of these entities has its own financing. Suppose the Prime Minister represents railway A, and he wants to borrow. Railway B, in the person of the leader of the opposition, endorses the note. He in turn gets the leader of the Progressives to endorse his note. The leader of the Progressives, in turn, gets the whip of the Ginger group to endorse his note. Then, to make the circle complete, the whip of the Ginger group gets the Prime Minister to endorse his note. Now, the financing has not got out of the family, but the financial

transactions have been numerous and the amounts involved are considerable. If more money is wanted for one of these entities, the circle is again completed, but beginning, perhaps, with my hon. friend the leader of the opposition. Now, all these entities and the securities issued, the guarantees given, the relation of one security to the other—which is underlying and which is not—have to be taken into account before we really know what is involved in the whole system. The financing of the Canadian National system is the most intricate thing I have ever tried to study. Hon. gentlemen say we ought to reduce the capitalization. This is my view about the capitalization—

Mr. WOODSWORTH: May I ask, before the minister leaves that point, whether there is any possibility of effecting a thoroughgoing consolidation so that this thing will not continue indefinitely

Mr. GRAHAM: Now, it is not fair for the hon. gentleman to take my speech away.

Mr. MACLEAN (York): Reorganization of the finances is what is needed.

Mr. GRAHAM: As I pointed out a moment ago, reorganization of the finances of this mass is a great task. But until a thorough investigation is made of every security, of the physical value of each line compared with the securities issued on it; of the practicability of each line as a going concern—until that is done, no question of capitalization can be properly considered, because no man in Canada—and I say it advisedly—now understands this system.

Mr. HOCKEN: Z. A. Lash is dead.

Mr. GRAHAM: He understood the Canadian Northern, but he did not understand the Grand Trunk. I am not saying a word in criticism of the financing; it had to be done in that way. But at the present moment, with my concurrence, a thorough investigation is being made of the entire system, the securities on each line, the physical value of each line, and the practicability of its being a going concern, now or in the near future.

Mr. MACLEAN (York): When will they report?

Mr. GRAHAM: When that is done—and the report, I hope, will be on the table of the House at the next session; it will take months to do it. Then the people of Canada and the Parliament of Canada will know exactly what they have and what it is worth. Until that is done we cannot have any reorganization of capitalization, but the moment it is done, I believe, some steps ought to be taken by parliament, in conjunction with the Canadian National, looking to the adoption of an altogether new system of financing in connection with the system.

Under present conditions—and I do not want any person to be disturbed about this—with all this mass of intricacies that nobody has been able to unravel, the Canadian National Railways cannot under any management pay carrying charges if we take into account the amounts advanced by the government. The people of Canada could not stand rates which would be sufficiently high to carry all this under our present arrangement. But there is a note of encouragement: in a portion of these interlocking finances that I have tried to describe by using the leaders in the House as an illustration, there probably is a not inconsiderable amount that can be washed out. If the entities of the Canadian National system owe some of these amounts to each other and not to the public or to the government, intercorporate accounts, if that is the right term, may show that fact; and, as they are all under one system, such obligations could, under proper safeguards, be wiped out; and if any large amounts of that kind be found it will be encouraging to the Canadian National system. Until that is done we will have to go along as we are, but the investigation to which I have referred will enable the people to know what they have and what it is worth. Whether there is amalgamation or co-operation or individual operation this investigation is essential in the first place, so that we can arrive at a definite decision as to what Canadian National ownership means.

It will be seen from the accounts that there is an amount of something over two billion dollars of liabilities of the Canadian National system. But that is hardly a fair statement, though for bookkeeping purposes and in order to show all investments in the National railways in Canada it is essential. From that two billions should at once be taken nearly half a billion that is invested in Canadian government railways, that never paid and never were expected to pay any interest, and which investment is not an indebtedness of the Canadian National Railway system at all. It is true that the Canadian National does not pay interest, but it is nevertheless true that in the statement placed before parliament and the people of Canada, the cost of these government railways is put down as a liability of the Canadian National. To my mind that might well be deducted from the liability of the Canadian National railways.

Mr. MEIGHEN: Is the minister right in that?

Mr. GRAHAM: You will find it in the report.

Mr. MEIGHEN: The cost of the Intercolonial and the Transcontinental?

Mr. GRAHAM: You will find $451,000,000.

Mr. MEIGHEN: As a liability of the Canadian National?

Mr. GRAHAM: It is not an interest-bearing liability, you understand; I tried to make that clear, but it is put down as part of the Canadian National in the two billions.

Mr. MEIGHEN: Oh yes, in the two billions.

Mr. GRAHAM: Let me point out further, every improvement that is made on the Hudson Bay railway, every improvement that is made on the Intercolonial, every improvement that is made on the Prince Edward Island railway or on the Transcontinental, is placed in the estimates of the Canadian National railway; and, although these amounts do not go into the interest-bearing assets, year by year they are added to the capitalized indebtedness of the Canadian National railway. These amounts year by year ought, in the minds of the people at least, to be deducted from the amounts expended by the Canadian National railway.

Let me point out another phase of this question. A company owned line, if it is required by the Board of Railway Commissioners to build a viaduct, for example, has the question of the apportionment of the cost decided by the commission. Under an act passed some years ago—I think I was the author of it myself—the government sets aside a certain sum of money each year, under statute, to be applied to the construction of viaducts throughout the Dominion of Canada, and in that act it is provided that the Board of Railway Commissioners shall apportion the cost, a certain amount to the municipality, a certain amount to the railways, and a certain amount out of this government fund. Now the railways that are under private operation, and these include the company railways of the Canadian National as well, get money out of this fund to assist in the construction of viaducts; a certain contribution is made by the municipalities, and the company pays the balance; but the Canadian National, when it makes an improvement of that kind on the government railways, gets no such aid from any person, but has the cost of that entire improvement charged against the capital account of the Canadian National railway. I say that is another item which we ought to bear in mind when we are discussing the cost of the Canadian National railway.

Now take our United States lines. Hon. gentlemen have spoken in this House—and I am not criticizing them at all—of the expenditure on our United States lines and the service given by them, and some of them have asked that this service be discontinued. Let me point this out to hon. gentlemen: We have several thousand miles of railway in the United States. I pointed out a few moments ago that the duty of service to the community through which a railway runs rests on the railway, because they usually get some compensation for that. A railway company cannot, unless there be good reasons, rob any community of a reasonable service, and when hon. gentlemen opposite tell us that we ought to take up the rails on certain parts of our United States lines, let me point out that these United States lines are under the control of the Interstate Commerce Commission and of various laws and statutes of the United States, and this parliament itself would not have the power to interfere with a reasonable service on those lines or to take up one foot of rail unless the consent of the Interstate Commerce Commission was given. In Canada our own commission regulates these matters largely, but in the United States the Canadian National lines are subject to the Interstate Commerce Commission, and must be so; it would not be right if it were anything else.

Mr. MACLEAN (York): But you could sell them outright.

Mr. GRAHAM: You could sell the stock in them, of course. Just to show you how delicate some of these things are, recently in a certain legislature in one of the states it was charged against the Canadian National that it was spending all the money in Canada, and not spending in the United States the money to which the United States was entitled on account of the mileage there. Of course, there is not any foundation for that statement, but that question was raised, and I heard that without any criticism that legislature, in both houses, passed an act to take over without the consent of the Canadian National or of the Canadian government a certain mileage of the Canadian National railway, which it is stated that state intends to sell to another company. I do not know whether that is so or not, but I am citing that as a matter of public record just to show the delicate questions that sometimes arise in connection with the operation of the Can-

adian National lines in the United States. I want to add this, that on the whole every state in the Union, and the federal government of the United States as well, has given the Canadian National system fair play, and given it just as good an opportunity as if it was one of their own lines.

Now may I be permitted to refer to the question of taxation? That is a live question in the Dominion of Canada with reference to the railways in the various provinces. The company lines, and these are the lines exclusive of the Canadian government lines, pay their taxes now as they did before. The Canadian government lines proper—these are the Intercolonial, the Prince Edward Island, the Hudson Bay and the Transcontinental—being government owned have not paid any taxes. To my mind, while that is constitutional, because you cannot tax the king or his property, I am rather of the opinion that where a government and the people deliberately go into a commercial enterprise they will eventually have to bear some of the responsibility attaching to that commercial enterprise.

Mr. MORRISON: We did not deliberately go into this; we were forced into it.

Mr. GRAHAM: But you are in now.

Mr. MEIGHEN: Is the hon. member for Weyburn (Mr. Morrison) not wrong? We deliberately went into it so far as the Intercolonial and the Transcontinental are concerned.

Mr. CALDWELL: Would the minister be willing to extend that policy to the farms owned under the Soldier Settlement Board?

Mr. GRAHAM: I will consult with my colleague when he comes in as to that, but I have certainly troubles enough already with the railway. As I was pointing out, Mr. Speaker, when the people of Canada go into a great commercial enterprise, whether they are forced into it or go into it, or however it is, I cannot see how they can well escape a portion of the responsibility at least that pertains to that enterprise. Believing that to be the case, I asked the Canadian National management to appoint a committee to consult with the provinces through which these government railways run. Now, mark you, any taxation that is arrived at to be placed on the Canadian National is voluntary by the Canadian National or by the Canadian government, but notwithstanding that, I think there is a moral claim for some taxation. At the present time, government owned land leased to any individual is taxable to this extent, that the tenant of that property can be taxed, although, technically speaking, the property itself is not taxed. That was decided, I think, in the case brought by the city of Montreal some three years ago, when the government of which my right hon. friend (Mr. Meighen) was the head referred the matter to the judicial committee of the Privy Council. It was then decided, if I remember correctly, that the property owned by the crown could not be taxed, but that the tenant of the property could be taxed. Consequently the tenants of various properties along the Lachine canal, for instance, leased by the Department of Railways could be taxed by the city of Montreal. That holds good, of course, all over the Dominion. But there is something further than that. The provincial governments tax company lands unless there be some agreement to the contrary. The municipalities in those provinces tax company lands unless there be an agreement to the contrary. Therefore this committee composed of Mr. Ruel, chief counsel, and Major Bell, one of the directors, has been appointed to confer with the Prime Minister of each province and see if some amicable arrangement can be arrived at by which taxation—I think it ought to be small under the circumstances, the principle being acknowledged—might be imposed by each province, or rather by which a certain amount might be paid to each province and to each municipality in that province. That will cost considerable money, but I believe the governments of the various provinces and the municipalities, under the circumstances will be reasonable, and not expect to receive too large an amount.

Now, Sir, I come to the question of the proposed amalgamation. But before I deal with that question briefly I want to put on record, as I think it is really a splendid showing for the year, these figures—the operating expenses and the operating revenues. During the past year the operating revenues decreased by $17,500,000, and the operating expenses by $14,360,000. The net earnings of the Canadian National, under all the conditions which I have outlined, this year amount to $17,244,251. Now I come to a point where I am not sure that I will agree with anybody. What shall I say about the proposed amalgamation? The hon. member for North Waterloo (Mr. Euler) gave us a most interesting address, as he always does except on the budget.

Some hon. MEMBERS: Oh, oh.

Mr. GRAHAM: The budget proper, I mean. He dealt with this question in a very

masterly way, and his conclusion was that we ought to have an amalgamation. He also gave us the figure of $100,000,000 that might be saved by this amalgamation. I think my hon. friend from South York (Mr. Maclean) did not give us any figures, but he told us he was strongly in favour of amalgamation and that he believed it would be the salvation of the situation.

Mr. MACLEAN (York): He gave a very exact programme of action that might be taken in the matter. He showed what could be done in the way of cutting out duplication and other changes and the enormous economies that would be effected.

Mr. GRAHAM: I guess he did.

Mr. MACLEAN (York): Yes.

Mr. GRAHAM: I must approach this subject in a careful way. To me monopoly is distasteful in any form. I am not sure that amalgamation at the present time is the proper thing. It may be that, in the future, in the maturing of conditions, amalgamation may be necessary; but I am free to admit that I would like to try out to its fullest extent every other method before I submitted to monopoly of any kind in this transportation question. It has been said that the Board of Railway Commissioners could control. True. I believe our Board of Railway Commissioners is an able body of men, and could control, so far as any such body could, the operation and the cost of our transportation companies, or of one company if there were one. But there are so many things that cannot be controlled by a Board of Railway Commissioners or anybody else outside of competition. Without casting any reflection —because that is far from my idea—I will leave it to any man in any part of Canada, or to any hon. member sitting in this House, to answer this question: Is not the Canadian Pacific Company's service to-day immeasurably better than before there were other lines in their territory? Naturally so. I remember visiting a gathering of farmers once in Regina and they were pointing out to me—this was some years ago—the improvement in the service since another line came in.

5 p.m.

Mr. EULER: Would that not also constitute a strong argument why there should be no Canadian Pacific monopoly?

Mr. GRAHAM: I will come to that. I think my hon. friend the member for Vancouver South (Mr. Ladner) wishes to ask a question.

[Mr. Graham.]

Mr. LADNER: I should like to ask if the improvement of the service of the one line has not meant a great amount of increase in capital expenditure in carrying out improvements on the other line, the net result being an increased burden to the people of Canada in railway debt and in taxation?

Mr. GRAHAM: I should not like to admit that. One of the supreme things is service, and we would not have any railways if it were not that we wanted service. Of course if my hon. friend is prepared to take any kind of service he could have a service operated by horses.

Mr. LADNER: Where is the limit?

Mr. GRAHAM: The limit of service is in the hands of parliament so far as the Canadian National system is concerned. I admit that whether it be the Canadian National or the Canadian Pacific there is no place to get the money to pay expenses except out of the pockets of the people.

Mr. MACLEAN (York): That is the whole case.

Mr. GRAHAM: But I was discussing the question of competition and taking this little instance to illustrate my point. I was saying that I was visiting a large gathering of farmers—that was before they were Progressives; they were just farmers in the west then—and the representatives of all the railways were gathered together in caucus with these farmers. The farmers were not hanging on to the railway representatives to find out if they could get cars, but the railway representatives were button-holing the farmers to see what they wanted in the way of cars, on account of competition. Competition is the only thing that will give a man a car when he wants it. You can have all the railway commissions you like and they cannot control that feature of the service. Competition is the only thing that will give you an improvement in the way of attention on the trains when you are travelling; because if there is no competing system, it is human nature to make as much out of you as possible. I am pointing this out to show that monopolies may become absolutely essential; but at the present time I would rather see our people maintain their courage, maintain their belief in the Canadian National system, and find out if we cannot work out some way by which we can have in Canada not amalgamation at the present time but a co-operation that will give the people the desired service and protect them from monopoly.

Mr. EULER: Is the minister endeavouring to convey the idea that a publicly owned monopoly is on all-fours with a privately owned monopoly as regards service?

Mr. GRAHAM: It is on all-twos; it may not be on fours. A monopoly is a monopoly. I am free to admit that if that is the solution and we cannot get around the problem in any other way, I would prefer a publicly owned monopoly to a privately owned one.

Mr. EULER: That is enough, that will do.

Mr. GRAHAM: For this reason, that a publicly owned monopoly can be controlled annually by this parliament in detail to a large extent and the people's views can be represented, while a privately owned monopoly, no matter how safeguarded, would not be safeguarded with the same close criticism.

Mr. EULER: That was my point.

Mr. GRAHAM: Will hon. gentlemen bear with me for just a few minutes longer? The question of co-operation has been discussed between the heads of the railway companies and myself and other members of the government many times. It is not so easy of accomplishment, as it may appear. Co-operation in the eliminating of certain passenger trains would not be difficult, although the president of the Canadian Pacific put this question to me just few days ago: "You say we are running a lot of trains between here and Montreal. So we are, but I tell you these trains pay. Why should I be asked by you or by the government or by parliament to take off a train that is helping to pay dividends to my shareholders? Is that fair to the shareholders?" That is a matter that has to be considered, because, to my mind, we must not do anything, in either amalgamation or forced co-operation, that is going to frighten capital invested in the Dominion of Canada. At the present time—and I might diverge for a moment—we are being unjustly criticized in England on account of conditions existing respecting the acquisition of the Grand Trunk by the government for the Canadian National system. There are two chief complaints. I say that they are both ill-founded. The first complaint is that the preference and common shareholders of the old Grand Trunk were frozen out in the arbitration or in the settlement with the government of Canada, and that the settlement made gives to other holders of securities, not senior to the holdings they have, remuneration year by year, while under the arbitration they get nothing. Our answer to that was that the Grand Trunk was going into bankruptcy and was practically bankrupt. The government of the day had either to let the Grand Trunk go into bankruptcy or to make some arrangement for taking it over. If it had been allowed to go into bankruptcy, that would have been better financially, perhaps, for the people of Canada at the present time, but the amount that would have been received by security holders in the Old Land would have been very much curtailed, if not in a large measure wiped out. The complaint is that in the arrangement made with the late president of the Grand Trunk they were deprived of any recompense for their investment, but it went to other gentlemen who held securities. I say that there is no foundation for complaint as to the arrangement made with the government of Canada at that time. Why? The common stockholders of the Grand Trunk never had any equity in the Grand Trunk. That stock is not any good now and never was any good so far as return is concerned. What were the conditions? I suppose I should not take up time defending my right hon. friend, but I am defending Canada. The government of Canada found the Grand Trunk practically in bankruptcy. They had to decide whether they would let it go into bankruptcy with all that that meant, or try to make some arrangement to rescue it and get it on its feet. I will not argue whether the latter was the right thing to do or not, but that is what was done. The officials of the Grand Trunk agreed to the proposition. Their action was confirmed by the directors of the Grand Trunk and the action of the directors of the Grand Trunk was confirmed by the shareholders of the Grand Trunk who had the votes. Therefore, it is the shareholders, the directors and the then officials of the Grand Trunk who are to blame if any of the rights of any of the investors were given away to the Dominion of Canada.

Another complaint is made, and I think it is wise to refer to it on account of very misleading despatches that are coming over here from certain sources in the Old Land and on account of the attitude of the press of the Old Land that is either ill-informed or has very ill-digested its information. The other complaint that is made is this. The Grand Trunk Pacific 4 per cent perpetual debenture stock was guaranteed conditionally, by the Grand Trunk. That is not all the investment in the Grand Trunk Pacific, because certain bonds were issued that were guaranteed by the Dominion government, and I want to say now to those critics in the Old Land that those bonds are being taken care

of year by year and that the Dominion of Canada has never declined nor even hesitated to honour any of its liabilities. Interest on bonds, whether guaranteed by the Dominion or the provinces is being paid by the Dominion. This Grand Trunk Pacific 4 per cent perpetual debenture stock was not guaranteed by the government but was conditionally guaranteed by the Grand Trunk Railway Company of Canada, the condition being that the Grand Trunk Railway Company of Canada should have net surplus earnings available for the purpose of the interest. The holders of those 4 per cent debentures are endeavouring to make the people believe that in some way when the Canadian government took over the Grand Trunk, they should have merged into a different position, and that the government of Canada is responsible for this Grand Trunk contingent liability. I say to those security holders, not that you are in the same position that you were in before, but that you are in an infinitely better position than you were in before, because the guarantee of the Grand Trunk will mean something in a few years, whereas under the old condition it would not have meant anything, but the guarantee of the Grand Trunk would have passed out so far as any worth was concerned, if that company had been allowed to go into bankruptcy. In discussions with these gentlemen, they based their contention largely on two things, first a speech made by my right hon. friend.

Mr. MEIGHEN: Will my hon. friend permit me a question first? It is the Grand Trunk's liability to the Grand Trunk Pacific which is contingent on the Grand Trunk earnings?

Mr. GRAHAM: Yes.

Mr. MEIGHEN: Do I understand—I think and I hope I do—that the government acknowledges that, whatever undertaking the Grand Trunk gave itself, that must be lived up to?

Mr. GRAHAM: Surely.

Mr. MEIGHEN: It is because the undertaking of the Grand Trunk does not mature for the reason that there are no earnings, that the government does not acknowledge any liability?

Mr. GRAHAM: That is it. In 1923, the earnings of the Grand Trunk did permit the payment of interest on those securities. The government merely took the place of the Grand Trunk, and it is carrying out the obligations of the Grand Trunk Company and will continue to do so.

[Mr. Graham.]

Mr. MEIGHEN: This point comes in. The government acknowledges that whatever liabilities the Grand Trunk is under must be paid. I quite agree that it has paid them, and properly so. The Grand Trunk Pacific is directly liable for the interest but the government does not acknowledge that the liability of the Grand Trunk Pacific must be paid, as it is in liquidation. That is the difference.

Mr. GRAHAM: Yes; Hansard will have it all clear. But I should like to clarify the matter in a sentence: The Canadian government, no matter what party was in power, has never repudiated its undertaking and never will. I want to point out further that although the government has merely assumed the liability of the Grand Trunk railway under conditions existing, the holders of the securities are in an infinitely better position than they would have been had the Grand Trunk been allowed to go into liquidation.

Now as to co-operation. As I pointed out a moment ago, co-operation in the removal of a passenger train here and there will not get us very far in the reduction of expenses although it will help to some extent. It is not gentlemen who live in the cities at the end of a run who will suffer. Let us take Montreal, Winnipeg, Vancouver, Ottawa or Toronto: it is easy enough for gentlemen from these places to say that we could eliminate many of the passenger trains, because these gentlemen can always get the service they want. If you cannot get the Canadian National you can get the Canadian Pacific. If you are in Ottawa and you are unable to get the Canadian National on the main line you can get the Canadian Pacific, and if not the Canadian Pacific you can take the tunnel line or, if you like, you can go on the Canadian Pacific by the North Shore line if you want to go to Montreal. I repeat, therefore, it is not the man in the large city who would stand to suffer; he has not a particle of an idea as to what the removal of trains would mean, for it does not affect him. You could cut the train service in two between these cities and the people travelling between them would still be able to get their trains. But to people living at Vankleek Hill and Alexandria, and other places between these points, any reduction in the train service would be of considerable significance. Those who live at the extremes would be under no sacrifice if the service were reduced to a considerable extent, but the people in the intermediate sections are affected by any curtailment of train service. Notwithstanding this, however, I think there can be a curtailment of service without injuring anyone.

Mr. HOEY: That would apply to through trains that do not stop at local points.

Mr. GRAHAM: Speaking of through trains, hon. gentlemen perhaps forget that in the transcontinental business the Canadian lines are competing not only with each other but with the American lines as well, and it is not so easy a task as it would seem at first sight to take off any trains. I was an agent for an American line many years ago, and it was surprising how many people crossed the river a few miles from here and took the American railway from Ogdensburg to Chicago, if they could get a little better rate, instead of going on the Grand Trunk or on the Canadian Pacific. And this competition is kept up all the time. I think, however, that savings can be effected and I have asked the two presidents on several occasions to discuss the possibility, although I am free to confess at the present moment that we have not got anywhere so far; we have made no advancement. I am going to request them to come together again to consider the whole question whether it is not possible to come to some arrangement of co-operation that would include not only passenger traffic but an exchange of freight on an equality basis that would prevent duplication.

Mr. MACLEAN (York): The minister might ask them to give their opinion as to what savings could be effected by an extensive system of re-routing.

Mr. GRAHAM: That is included in what I have said. During the war a saving was made as a result of co-operation between the companies, working in harmony with the railway board. But we must remember that during the war the people were willing to make any sacrifice that was necessary; they are not so obedient now. However, I am going to ask the railways to see if they cannot devise some plan by which savings can be effected in this respect, because I frankly confess that at the present time I am not in favour of a monopoly on the part of either private or public ownership. If that cannot be done— and this is not a threat at all—I shall consider advisedly the question of asking the railway commission or its chairman to sit in on the job to see if some satisfactory arrangement cannot be arrived at. One hon. gentleman said the other day, quite rightly, that in his opinion if the problem is to be settled it must be by means of a friendly agreement. But if a friendly agreement cannot be reached then I am going to suggest that by some method the Board of Railway Commissioners be allowed to have some say in outlining a plan that would bring about the desired result without injury to either of the railway companies. As I said before, the capital invested in either of the lines must not be impaired in any arrangement that may be made.

Now, I think I have occupied the time of the House at sufficient length, although I should like to speak longer on the question of co-operation. However, let me say a word in regard to immigration—and I am not going to scold at all, because I believe that everyone has a right to his opinion. This is my opinion, that if the Dominion of Canada, with its far-flung territory, can support only 9,000,000 people then the Creator made a mistake when he made Canada. This great country was not thrown into the universe with the expectation that it should support only 9,000,000, while a country no larger in area maintains 120,000,000. Arguments have been advanced against immigration, but I submit in all modesty that if you sift those arguments they are rather parochial; they are confined to the trouble that may arise for me and my wife or for John and his wife, and they do not extend beyond that. If Canada is to be the country we all want it to be, we must increase the population by bringing in outsiders as well as by following the example of the province of Quebec in home production. We cannot go on with eight or nine million people, scattered over this extensive territory, and expect to be prosperous. We have a transportation system that can support many more people. Had not the war arrived with the calamity that overcame the entire world I am confident that we should have had many more millions of people in Canada to-day and the present transportation problem would not be a problem at all so far as financing is concerned. This country is capable of maintaining at least 50,000,000 people. If every man did not want to have a couple of hundred acres more of land than he can farm, and if he had neighbours on that land who would farm it more intensively, there being less land to every man, it would be better for the Dominion. If we had perhaps just a little less industrialism where there is not a demand for the products of the industry, if we devoted our attention to the development of those things that go to make wealth, always keeping up our industrial progress with our agricultural progress, because they should go hand in hand, then this country need have no fear of the future. And again I appeal to hon. gentlemen who express themselves opposed to immigration, and I assure them that, though they may not, I believe their children will

live to realize that their policy was really a broad-minded policy that made for the fullest development of the Dominion. We have an immigration department in the Canadian National Railways, the Canadian Pacific Railway also has an immigration department, and the Dominion government, of course, has an Immigration department. I am not going to discuss now how these ought to work together. Some day when I have time I intend to go into the railway immigration departments and see what it all means. But I submit again that the real solution of the problems of the Dominion, industrially, agriculturally, and so far as transportation is concerned, is the bringing to our shores of citizens who will become dwellers in this country to their profit and to the profit of the Dominion. That, I believe, is the foundation on which the solution of these problems rests.

Mr. GOOD: Mr. Speaker, may I ask the hon. minister what is the use of getting men in here if we cannot keep them?

Mr. GRAHAM: Mr. Speaker, that is just the kind of question to which I was referring. Will my hon. friend allow me to say something to him straight from the shoulder? If my hon. friend would be a leader and not a follower of his people, and if other men like him would be the same, we would not have so much talk about not being able to look after our immigrants. I represent a rural constituency right beside the city of Detroit, and people are going and coming all the time. But I want to say this to my hon. friend and to others that in the development of public opinion a member of parliament has very great responsibilities, and his doctrine becomes the doctrine of 75 per cent of the people. There is no question about that. If men in the House of Commons and in the Senate, if men on the bench and other outstanding leaders, will take it into their heads to say, "We believe in Canada; we are here to stay; the problems of Canada are our problems; the problems of the railways of Canada are our problems; we are able to solve them and are going to solve them,"—if we would all do that and go ahead and put our shoulders to the wheel only to a measurable extent that our forefathers did, there would be no question of the solution of our problems, there would be no question about the future of this Dominion.

Mr. GOOD: Might I put this further question to the minister: Have any members in this quarter of the House deplored immigration, as such? I do not know of any.

[Mr. Graham.]

Mr. GRAHAM: Oh, yes. I do not want to go into the question of immigration, but I believe it is a solution for our difficulties. Not a great many, but a few behind my hon. friend and in other parts of the House have said, "What is the use of having immigrants come to Canada? We cannot live ourselves, so what is the use of bringing other people here?" My hon. friend's own question was pretty much along that line. That means there is nothing for immigrants to do in Canada I am prepared to go a long way and say that if the men who come to Canada, or the men who are already in Canada, will show, even to an approximate degree, the stamina of their fathers and grandfathers, there will be more work and more men working.

Mr. McQUARRIE: May I ask the minister what class or classes of immigrants he would allow to come into Canada that are not allowed entry now?

Mr. GRAHAM: Mr. Speaker, you know these gentlemen here are pretty good representatives of the kind of men I would want to come to Canada. They have done well here, I believe better than they would have done anywhere else. There are numbers of men in this group here who will agree with me that their success is a striking example of what young men coming to this country can do if they want to succeed. Now, Sir, I am about through, and I do not think I can enter into a discussion with my hon. friend from New Westminster (Mr. McQuarrie), but, although I am pretty broad-minded on immigration, I am not strong on oriental immigration—I tell him that; but outside of orientals I would blink a good deal at other qualifications if I knew the men were in good health and willing to go to work.

Mr. JACOBS: Will the minister tell us why he lectures the member for Brant (Mr. Good) and not his own government on this question?

Mr. GRAHAM: When my hon. friend becomes a member of the government he will know more about these lectures. He will know that there are internal and external lectures—the internal are not delivered here.

Now, Mr. Speaker, I have dealt with this question pretty exhaustively, and I have tried to make it clear. I want to say again, there is no need for pessimism about the Canadian National Railways; co-ordination or co-operation ought to be tried out before we talk of amalgamation; and above all, we ought to endeavour to solve this problem by filling up our waste spaces, so that we will have the benefit

of competition without any exorbitant freight or passenger charges.

I want to add a few words in reference to the complaints of the holders of Canadian railway securities living in the Old Land. If I have not made anything else clear, I hope I have made it perfectly plain not only to the members of this House but to the country —because the honour of Canada is very dear to our people—and certainly I want to make it clear to the financial papers and the financial men of Great Britain, that Canada always pays her debts, but she will not be stampeded into a position that there would be no justification whatever to force her into.

Now, Mr. Speaker, I have an announcement that I think will help considerably. Hon. gentlemen will have noticed in the Supplementary Estimates of this year an item of $7,500,000. As I have stated before, the railway year ends on December 31. These estimates are made up about that time. I asked the Canadian National Railway board to give me an estimate so I could put it in the supplementaries before the end of our fiscal year, March 31, covering everything that might be required for that year. I am prepared to tell the House now that they will not be asked to vote that $7,500,000 because it will be withdrawn; we can get along without it.

I have another announcement to make which I think will be encouraging. I have conferred with Major Bell and the officials of the Canadian National Railways, and they have been going over very carefully and fine-combing the estimates brought in by the Canadian National Railways, and then fine-combing them again, in an endeavour to see if we could not get along with a less amount of money this year. Now I have the pleasure of being able to tell parliament that when we are in committee of Supply I will ask one of my colleagues to move that the sum of $60,000,000 be reduced by $10,000,000.

I apologize to the House for having taken up so much time—

Some hon. MEMBERS: Not at all.

Mr. GRAHAM: —but I wanted to make clear the position of the Canadian National Railways so far as I possibly could. In conclusion, I repeat once more that there is no need for undue pessimism on the railway situation, there is no need for pessimism on account of the situation of the Dominion. We are in as good a position, or better, than most of the other countries of the world, and all we want to make this country prosperous and solve our railway problem is to have greater courage ourselves. Let us lead the people along the right lines and show them where they ought to go—not tell them where they ought to go, but lead them in the direction in which we think they ought to go; and, in addition to that, let us bring into the Dominion as many people of the proper kind as we can, for to my mind this to a large extent is the solution of all our difficulties.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, I am not going to enter any complaint at all as to the length of the minister's address. It was much more complete than has been customary, and the House is that much better off as a result. The only thing I regret is that the minister chose Wednesday to commence a debate of three hours of which the first speech would occupy two and a half. However, I am sure arrangements can be made to continue for a reasonable time at a later date.

Mr. MACKENZIE KING: Would my right hon. friend object if we went into Supply and continued the debate to-morrow?

Mr. MEIGHEN: I am prepared to go on until six, but I cannot possibly finish by that time; and hon. members to my left and others are entitled to speak as well.

I wish to pay my compliment to the minister not only for the good temper and spirit which he treated the subject—which is always his characteristic—but as well for the marked fairness with which he treated his political opponents, and especially the late administration. In this relation I join with him emphatically in his definition of the conduct of the late government in respect to the Grand Trunk railway and its shareholders, and in his description of the position this country assumes before those shareholders and the investing public generally. I know of nothing ever advanced against a country or a government more utterly unfounded and absurd than the complaints of Grand Trunk shareholders as respects their treatment in the late negotiation and arbitration between them and the government of Canada. I do not think the blame is attributable wholly to the shareholders themselves—indeed, only in a meagre degree. The fact is that the Grand Trunk Railway directorate, principally by its Grand Trunk Pacific adventure but as well by its inefficient long distance management of the system, had themselves over a series of years wrecked the enterprise; and over those years, while their enterprise was being wrecked by themselves, they did not disclose the full facts to their shareholders, with the result that in the end the shareholders were taken

by surprise and were led by the directorate to believe that the sad fate which had overtaken them was the consequence of harsh treatment by the government of Canada. The minister is entirely right when he says that if we had not opened, at their request, negotiations with the company, the result would have been the bankruptcy of the Grand Trunk. Following that bankruptcy there would necessarily have been liquidation and sale. To avoid this consequence, and as well to show that we were prepared to treat shareholders outside of Canada in precisely the same way as we treated shareholders in Canada, we first of all offered a certain definite amount per year, increasing with the years, distributable among the shareholders by the directorate themselves, as a purchase price of the system. No similar offer was made the shareholders of the Canadian Northern. Over this offer they deliberated for almost a year. They verbally rejected it from the beginning, and finally in definite form rejected it. Had they accepted, it would have meant something to the shareholders who now complain—it would not have meant much, but something. An alternative offer which we made they accepted —an offer of arbitration. And it would be no information to the House to be told that in respect of the phase of the agreement to which the minister has referred—the phase which declared that the moneys we were paying by way of annual outlay to the shareholders should go to the guaranteed stockholders first and that only what should be awarded by the arbitrators should go to the holders of preference or common stock—was naturally dictated by the Grand Trunk directorate itself. It did not matter a whit to us how the money was divided. It did not matter a whit to us whether the guaranteed stockholders were paid in whole or whether a part of the moneys were left over to be paid to the preference stockholders. Naturally the government of Canada was not interested; if the directorate had preferred that only a percentage of the moneys we undertook to pay should go to the guaranteed stockholders, leaving a balance for the holders of preference and common stock, the government would have immediately concurred. In a word, the disposition of the moneys we are paying to the bondholders of the Grand Trunk Railway is a disposition not only concurred in but stipulated by the Grand Trunk directorate themselves. Consequently, to enter complaint about it because, first of all, negotiations to take the road over on an arbitrated basis were entered into by ourselves as an alternative to liquidation, is, to say the least, unfounded; but to complain that the disposition of the moneys that still are being paid is not fair as between themselves is nothing short of absurdity. I think the misconception has largely arisen because of the failure of the shareholders to realize the position their company was in before the negotiations commenced, a position described by their own president as the very end of the resources, the very brink of liquidation itself.

Now, I believe all concur that the shareholders were treated with absolute fairness. I think also all concur that the people of Canada were treated with absolute fairness in that negotiation. I have never heard anyone complain that there was any unfairness either way —that is, anyone who understood what was done. The only reason I mention that is this: not in this debate but in previous debates, calumny has been hurled against the late government because in a previous arbitration, or as a result of it, we paid to the shareholders of the Canadian Northern $10,000,000. In the case of the Canadian Northern precisely the same steps were taken as in the case of the Grand Trunk, and if there was fairness to Canada in the one there was absolute fairness in the other. I know it is true that the member for West York (Sir Henry Drayton), in an investigation conducted by him where the Canadian Northern were not represented, found that in his judgment there was not absolute value in the shares. But he did not conduct a trial; he expressed an opinion, and he recommended besides that though there was not absolute value, in view of the services rendered something should be paid, and paid by annual levy. But because someone, no matter how high he may be in authority, says that another man's property is worth nothing, that is hardly a justification for the state putting its hand upon it and taking it. I never knew of any country on earth since civilization was matured being guilty of conduct of that kind. In addition the fact was that these same shareholders were in negotiation for the sale of those exact shares to a rival company—a negotiation which, because we were animated by the principles advocated by the minister to-day, we stepped in and prevented. Under those circumstances it would have been nothing but confiscation, if not larceny, for the government of Canada by main force to seize the shares and tell the shareholders we would value them; that the owners would have nothing to say about it. And the board which valued them was a board of as high standing as any board that ever sat in Canada, judicial or

otherwise, of just as high standing as the board which decided the value of the shares of the Grand Trunk. I have never heard yet any method suggested that would be fairer to the shareholders or to Canada than the method adopted.

Before I leave this subject I want to make a reference, just as an expression of appreciation, to the hon. member for George Etienne Cartier (Mr. Jacobs) for the frank and manly way in which he answered a question anent this same subject put to him by myself. Standing now some years in advance of the events he freely said that under the circumstances that surrounded the late administration, precipitated upon it by years of railway disasters, we had no course save the course we pursued, to amalgamate all these four systems into one and that we had no way of amalgamating them save under government ownership. There was undoubtedly no other course, no other alternative that presented itself that was thinkable to the people of Canada, and the member for George Etienne Cartier is to be commended because he opposed it along with others at the time, but now freely admits that it was a case of Hobson's choice—there was nothing else in the world for us to do.

May I add, and in this I invite criticism if I am wrong, I judge from several addresses made by the minister in this House that that is the opinion of the minister himself. I think I could go further and say there are, not two or three, but many more hon. gentlemen opposite who will at this date conclude that we took the only course that was open to us. However, this question does not arise now. We are now facing the future, not the past.

The minister in the course of his remarks rather intimated at one stage that the present directorate found the system in a state of chaos. As establishing this state of chaos he gave the House, what is true, that it is composed of very many companies, inter-related in various ways, numbering perhaps nearly one hundred; that separate accounting must take place for each one; that all these are joined one with the other by ownership of stock, by leases by inter-guarantees of obligations; that consequently it is a very complicated system; and that because of those complications the present directorate have been under a handicap and are endeavouring to produce something more simple, something more ordered out of the morass. Now I admit it is complicated, but when I say it is complicated I do not want anyone to think that I admit it is in chaos, or ever was. Complication and chaos are two different things. The complication you cannot avoid.

When the Canadian Northern railway was unified and made a real system in 1914, and when the government of Canada took 40 per cent of its stock, there were in that system I think 39 different companies, and the variety of relationship was vast. Apparently it was very complicated indeed, unnecessarily so; but the fact is it was certainly not unnecessarily complicated, and it was not a truth that the real position of each of those companies and the real relation between them was not fully understood. No investigation was necessary to find out the exact financial standing of any single one of the 39 different companies composing the system, or the relation of any one to any other. The treasurer of the Canadian Northern railway at that time and his staff—I refer to the treasurer in particular because he was a man of eminence in his profession, and indeed marvellously competent—the treasurer could tell you at a few hours' notice the exact position, the assets, the liabilities, the guarantees, the contingencies, and all the rest, of any one of these 39 companies.

Hon. members may wonder why it is that so many of these elements are necessary to make up the composite whole. Well, there are various reasons. In the first place, there are certain of the properties in the United States, in different states of the United States. I refer now to the Canadian Northern; there were only two in the case of that company. There must be separate companies for those properties; the laws demand it. In the next place, not for the sake of complication or difficulty, but for the sake of the very opposite, simplicity of organization, it is found advisable to have a separate express company, a separate baggage company, a separate telegraph company. All these have their stocks pooled and owned by the parent. This is essential; it is the part of wisdom; it is not complication at all. Similarly, there are many properties necessarily held by lease, for 99 years, perhaps 999 years, under separate companies. That proved the easiest way to acquire the property, and it is necessary to keep it a separate company while that exists. It is not a case at all of clumsy or unintelligent management. It is the history of all great corporations, especially railway corporations. The Grand Trunk was in exactly the same position. They had to have several American companies; they had several American properties under lease; they had all the paraphernalia of a railway organization here, and I believe their component elements even outnumbered those of the Canadian Northern.

And the Grand Trunk Pacific, though young in life, had developed quite a system of its own. It owned hotels under one company, one hotel under one company and another hotel under another company, just as the Canadian Government Merchant Marine to-day, even though it is only some five or six years old, has a company for every boat. This is the act of the government itself; it is the act of every marine corporation.

So I say the fact that there are all these elements, with inter-guarantees, while it makes it complicated, it is true, does not by any means make it impossible of being understood. In fact, it can be quite clearly understood by application, by persistence, and is fully understood by those having the actual supervision of the enterprise itself. There was no chaos to unravel; there was a complication to understand. There was a system just in the sense that the Canadian Pacific railway is a system to-day, and I venture to suggest that if the Canadian Pacific railway is analysed at this hour, it will be found no less complicated in this respect than the Canadian National is now. I venture to suggest that the number of elements which compose it, and the relation of those elements the one to the other is just as extensive as that which pertains to our own road.

The minister, as well, made some reference to complication that arises from the distinction of the government fiscal year from the railway year. There may have been some conflict because of ambiguity there: at the same time, there is no need of it. I do not know where the $90,000,000 came in that the minister referred to. I remember the hon. member for St. Lawrence-St. George (Mr. Marler) complained that the hon. member for West York (Sir Henry Drayton) had had the two confused, but I read the speech of the hon. member for West York, and he did not have them confused at all. The hon. member for West York was referring to the railway year in each case, and plainly said so. In dealing with the railway we just have to remember it is the calendar year always; that is a very simple fact.

It is true that we must maintain separate financing for our railway system and for the government of Canada. This is essential; it is obviously essential. The railway system is a great corporation which we own, the government of Canada is something distinct and wholly apart. That there must be separate financing, separate books, a child would never dispute; but all that has ever been complained of is not the keeping of a certain account, it is the faithful presentation of the joint and total result at the end so that the people of Canada will know with accuracy whether in the twelve months we have gone forward or back—that is all that ever was demanded or ever could be justly demanded.

Mr. GRAHAM: Six o'clock.

Mr. MEIGHEN: I will finish another short subject. It has been said by the minister that the same method has been adopted in the bookkeeping, and he rather complains that in the budget debate we dealt with railway subjects. We cannot help it; the railway question must come into the budget debate—that is to say the financial side of the railway problem. The minister presented it. He is right in presenting it; it must always be done, and the budget debate must cover the financial phases of the railway situation. It covered this year our liabilities in respect of guarantees. Complaint was made that if this government has failed in not adding the railway additions to our railway debt the old government had done the same thing. I sought to show that the old government had not done the same for the reason that wherever we had incurred a debt for the railways we had in one way or the other reduced the railway funded debt by a like amount. Now the Minister of Railways presents figures to show that while we reduced the railway funded debt we did not do so by the amount of our guarantees. He states, and states correctly, that the guarantees were $100,000,000. I gave figures to show, and established right from the reports of the railway companies, that the funded debt was reduced by $112,000,000. But the minister says that of that $112,000,000—and his figures agreed with mine save for this one item—the amount $25,000,000 while a reduction of government debt was not a reduction of funded debt. If he is right that $25,000,000 should not be included. Certainly it was money that came right back to the government, but if it was not a reduction of the company's funded debt then it should not be in any way included in the amount by which, I say, the funded debt was reduced. I will look into it. But the minister admits that of that $25,000,000 the sum of $4,730,000 was a reduction of the funded debt. Add that to the figures which I gave and you have $117,000,000. Taking off the $25,000,000 you are only $9,000,000 "shy," and I did not go fully into the funded debt reductions on the Grand Trunk Pacific. But suppose the $5,000,000 was short, and that we had not reduced by $9,000,000 the funded debt, we had not reduced the whole amount that we have guaranteed, the presentation was made by this

government; it could not have been made by us. If there was a failure to reduce by the amount of our guarantees when the budget was presented in 1923, then the present government should have made clear in the spring of 1922 in the budget presentation that in addition to our ordinary debt, there should be superadded some $9,000,000 addition to the railway debt not represented by refunding.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion?

Mr. MEIGHEN: What motion?

Mr. SPEAKER: The motion to go into committee.

Mr. MEIGHEN: We could not adopt that motion at present. I want to speak further on this subject if I may.

Mr. MACKENZIE KING: May I suggest to my right hon. friend that if the motion is adopted he can continue his speech tomorrow. If that is not done he cannot continue until next week.

Mr. MEIGHEN: If I can continue tomorrow that is all I could ask.

Motion agreed to and the House went into committee of Supply, Mr. Gordon in the chair.

Railways and Canals—	
Salaries..	$206,070
Contingencies..	38,000

Progress reported.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, May 7, 1925

The House met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No, 76 from the Senate, for the relief of Laura Grace Davis.—Mr. Jacobs.

Bill No. 77 from the Senate, for the relief of Alice Brouse.—Mr. Duff.

Bill No. 79 from the Senate, for the relief of Robert Lawrence Anderson.—Mr. Duff.

Bill No. 80 from the Senate, for the relief of Pearl Hibbard.—Mr. Stewart (Leeds).

Bill No. 81 from the Senate, for the relief of William John Taylor.—Mr. Hanna.

Bill No. 82 from the Senate, for the relief of Albert Edward Cottrell.—Sir Henry Drayton.

Bill No. 83 from the Senate, for the relief of Florence May Mott.—Mr. Clifford.

Bill No. 84 from the Senate, for the relief of Ellen Mary Harvey.—Mr. Hanna.

Bill No. 85 from the Senate, for the relief of Stella Florence Brickenden.—Mr. Euler.

Bill No. 86 from the Senate, for the relief of Frank Alexander Michel (otherwise known as Frank Alexander Mitchell).—Mr. Euler.

Bill No. 87 from the Senate, for the relief of Thelma Adeline Rose Hands.—Mr. Jacobs.

Bill No. 88 from the Senate, for the relief of Jean Veronica Margaret Wright.—Mr. Garland (Carleton).

Bill No. 89 from the Senate, for the relief of Ruth Darcy Blinn McCrimmon.—Mr. Shaw.

Bill No. 90 from the Senate, for the relief of Thomas George McElligott.—Mr. Hocken.

Bill No. 91 from the Senate, for the relief of Alvin Wesley Richards.—Mr. Stewart (Leeds).

Bill No. 92 from the Senate, for the relief of Cecil Tanner.—Mr. Rankin.

Bill No. 93 from the Senate, for the relief of Ruth Ellen McGowan.—Mr. Shaw.

Bill No. 94 from the Senate, for the relief of Edith Kearsley Smith.—Mr. Boys.

Bill No. 95 from the Senate, for the relief of James Raymond Armstrong.—Mr. Garland (Carleton).

Bill No. 96 from the Senate, for the relief of Josephine Royant.—Mr. Sheard.

Bill No. 97 from the Senate, for the relief of Gertrude Margaret Burkart.—Mr. Ryckman.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

QUEBEC HARBOUR COMMISSION—LAWYERS

Mr. POULIOT:

What were the names of the lawyers of the Quebec Harbour Commission, from 1902 to 1912?

Hon. Mr. CARDIN:

1902—Mr. J. A. Lane.
1903—Mr. J. A. Lane.
1904—Mr. J. A. Lane.
1905—Mr. J. A. Lane.
1906—Mr. J. A. Lane.
1906—Mr. C. E. Dorion.
1907—Mr. C. E. Dorion.
1908—Mr. C. E. Dorion.
1909—Mr. C. E. Dorion.
1910—Hon. L. E. Taschereau and Mr. J. A. Lane (special case).
1911—Mr. C. E. Dorion, until May 15, 1911, when appointed judge of the Superior Court.
1911—From May 15, Messrs. Taschereau, Roy, Cannon, Parent and Fitzpatrick.

1912—Messrs. Taschereau, Roy, Cannon, Parent and Fitzpatrick, until April 29, 1912, when Mr. A. C. Dobell was appointed.

1912—Messrs. I. N. Belleau and Hon. E. J. Flynn acted on special cases in 1912.

CANADIAN NATIONAL RAILWAYS—ST. MALO WORKSHOPS

Mr. POULIOT:

1. What is the name of the person or persons who sold to the government the land on which are located the workshops of the Canadian National Railways, at St. Malo, and what was the sale price?
2. What is (a) the amount and (b) the value of the machinery transferred from the workshops of the Canadian National Railways, at Rivière du Loup, to those of St. Malo?
3. What is the number of employees of the Canadian National Railways who were transferred from Rivière du Loup to St. Malo?
4. Was this transfer optional?

Hon. Mr. GRAHAM:

1.

L'Association des Terrains sans Bruit		$172,761 47
Wilfrid Emonds		1,000 00
Mrs. D. P. Bigaouette		1,000 00
Mrs. C. Langlois		1,000 00
Mrs. M. L. Montmigny		1,000 00
Joseph Bigaouette		1,000 00
L'Companie des Carriers des Beauport	$9,983 90	
Costs for above	434 19	
		10,418 09
		$188,179 56

2. (a) 22 machine tools; 3 sets blacksmiths' outfits. (b) $36,705.

3. Ninety-three.

4. Yes.

ORTHOPAEDIC BUILDINGS AND EQUIPMENT

Mr. BLACK (Halifax):

1. How much have the government Orthopaedic buildings, grounds and equipment, cost to date?
2. How many limbs have been constructed for each amputation case before the patient was able to wear one?
3. How many limbs have been discarded by the soldier amputation cases?
4. How many soldiers who had amputations, are not able to wear the limbs provided?
5. Why is it that civilians can be fitted at Camp Hill, and does the government receive the money paid by said civilians?
6. (a) Is the stock of supplies at Camp Hill checked up at any time, and (b) does the official in charge sell and give supplies to civilians?
7. Could not Canadian makers do the work to greater advantage?
8. Why were Canadian makers not allowed to do this work in the first place?

[Mr. Cardin.]

Hon. Mr. BELAND:

1.

(a) The factory occupies part of the buildings at the Christie Street hospital, Toronto; Unit depots are housed in the most suitable accommodation available for that purpose in departmental centres or hospitals: available statistics do not distinguish between the cost of the buildings as a whole and the parts set aside for the use of orthopaedic and surgical appliances division.

(b) The cost of all materials, labour and overhead charges entering into the manufacture of appliances has been absorbed into the cost of each appliance, concerning which detailed statistics will be found in the sessional papers mentioned in the answer to Question 8.

2. None.

3. The department is not aware that any limbs have been discarded.

4. None: an artificial appliance is never issued to a patient unless it is certified by medical opinion—specialist orthopaedic consultants—that he will be able to wear and make use of it.

5. The department does not deal with individuals other than war disabled ex-service men, but, appliances are supplied in certain cases at the request of other departments of the government and of Provincial Workmen's Compensation Boards, as authorized by order in council P.C. 2311 of the 25th September, 1920. (Published in Sessional Paper No. 14, 1920, page 157).

6.

(a) Yes. (b) No.

7. No.

8. The circumstances which influenced policy in undertaking the manufacture of orthopaedic and opthalmic appliances, and the subsequent developments, are set forth in detail in the annual reports of the department:

Sessional Paper No. 14. 1920, page 26
Sessional Paper No. 14. 1921, page 47
Sessional Paper No. 14a. 1922, page 37
Sessional Paper No. 18. 1923, page 63
Sessional Paper No. 18. 1924, page 27
Sessional Paper No. 18. 1925, page 18

CANADIAN GOVERNMENT MERCHANT MARINE

Mr. ARTHURS:

1. Have any ships formerly belonging to the Canadian Government Merchant Marine been sold?
2. If so, what amount was chargeable against each vessel on books of Canadian Government Merchant Marine: (a) cost; (b) permanent changes or betterments; (c) interest and depreciation; (d) all other charges?
3. What price was received for each vessel sold and who was purchaser?

4. Was the amount chargeable to Canadian Government Merchant Marine reduced by all items in question (2)?

5. If not, why?

Hon. Mr. GRAHAM:

1. Yes.

2. (a) Thomas J. Drummond, $550,339.13; J. A. McKee, $521,514.11; Sheba, $151,099.90; Canadian Miner, $583,467.40; Canadian Sealer, $583,362.66; Canadian Settler, $985,273.34; Canadian Logger, $704,120.54.

(b) None.

(c)

	Interest	Depreciation
Thomas J. Drummond	$ 83,342 31	$ 52,297 25
J. A. McKee	78,977 24	49,558 08
Sheba	31,192 81	19,898 93
Canadian Miner	117,270 42	77,627 07
Canadian Sealer	116,781 12	77,435 29
Canadian Settler	173,064 70	104,680 24
Canadian Logger	85,911 49	63,136 69

(d) No other charges.

3. Thomas J. Drummond, N. M. Paterson & Co., Fort William, Ont., $110,000; J. A. McKee, N. M. Paterson & Co., Fort William, Ont., $110,000; Sheba, Manor Line, London, £17,000; Canadian Miner, W. Hansen, Bergen, £20,000; Canadian Sealer, W. Hansen, Bergen, £20,000; Canadian Logger, Sir Thos. Wilson, Belfast, Ireland, $100,000; Canadian Settler, Capt. Peter Graham, New Glasgow, N.S., $140,000.

The purchaser finding it impossible to meet his payments on the Canadian Settler, the Canadian Government Merchant Marine has re-possessed the steamer.

4. Balance of charges, including interest and depreciation, were cancelled.

5. Answered by No. 4.

CUSTOMS TARIFF—COMBING WOOL ETC.

Mr. MAYBEE:

1. Does item 555 of the customs tariff provide for a duty upon combing wool of two cents per pound, British preference, and three cents per pound under the general tariff?

2. Does item 556 of the customs tariff provide for duty on worsted tops of 10 per cent British preference and 15 per cent under the general tariff?

3. Is the government enforcing the collection of duty on these two items, as provided for by law?

4. Has the government received any complaints that the said duty is not being collected on these two items, 555 and 556, of the customs tariff?

5. Were the said items (555 and 556) included in the customs tariff to encourage the establishment of the manufacture of wool tops in Canada?

6. Since the inclusion of the said items in the customs tariff, has a factory to manufacture wool tops been established in Canada?

7. Was such a factory established in Trenton, Ontario, and is the government aware that over 15,000 Canadian citizens have invested in such a factory?

8. Is the government aware that failure to enforce the collection of the aforementioned duties has resulted in serious loss to the aforementioned factory?

Hon. Mr. COPP:

1. Yes, upon wools of the following description: Leicester, Cotswold, Lincolnshire, Southdown, combing wools, or wools known as lustre wools and other like combing wools, such as are grown in Canada.

2. Yes, when such tops are made from Leicester, Cotswold, Lincolnshire, Southdown, combing wools, or wools known as lustre wools and other like combing wools, such as are grown in Canada.

3. Duty is not collected when the importer certifies on the customs entry that the wool, or tops are such as are not provided for in tariff items 555 or 556. This has been the practice of the departments since 1897.

4. Yes, from the Dominion Combing Mills Ltd., Trenton, Ont.

5. No information.

6. Yes.

7. The government is aware that such a factory is established in Trenton, but there is no information in the records of the Department of Customs and Excise of the number of Canadian citizens who have invested in such factory.

8. Representations to that effect have been received from The Dominion Combing Mills, Limited, of Trenton.

ADJUSTMENT OF WAR ACCOUNTS

Mr. ANDERSON:

1. What amounts have been received from Great Britain on adjustment of war accounts and other indebtedness since January 1st, 1922?

2. What amount has been received each month?

Hon. Mr. GRAHAM:

1. Amount received in cash on account of principal, $69,878,006.62.

2.

April, 1922	$ 5,000,000 00
May, 1922	5,000,000 00
June, 1922	5,000,000 00
July, 1922	5,000,000 00
August, 1922	10,000,000 00
September, 1922	10,000,000 00
October, 1922	5,000,000 00
November, 1922	5,000,000 00
December, 1922	5,000,000 00
March, 1923	7,000,000 00
March, 1924	7,878,006 62

MR. ALFRED GUENET

Mr. BOURASSA:

1. Has Mr. Alfred Guenet, keeper of the Royal Engineers Camp, at Levis, asked to be retired and given in his resignation?

2. If so, what is the name of the person appointed to replace him, and what is his salary?

Hon. Mr. MACDONALD:

1. No. Alfred Guenet did not ask to be retired; but he was retired on account of advanced age (76) in order to have the benefit of the Calder Act.

2. No person has been appointed to replace him. A military foreman of works has been detailed to carry out the caretaker's duties temporarily during the summer, in addition to his foreman duties, without any additional remuneration.

INCOME TAX COLLECTIONS

Mr. SPENCER:

1. What was the total gross amount of federal income tax collected in each of the provinces of Manitoba, Saskatchewan, and Alberta, for the year ending March 31, 1925?

2. What was the cost of collecting same in each province?

3. What was the net collection made in each province?

Hon. Mr. CARDIN:

1.

Manitoba	$3,477,069 32
Saskatchewan	872,928 03
Alberta	1,163,911 16

2.

Manitoba	$ 85,346 58
Saskatchewan	143,932 68
Alberta	95,388 92

3. Answered by No. 1.

QUESTION PASSED AS ORDER FOR RETURN

CROWSNEST PASS AGREEMENT—RATES

Mr. RINFRET:

1. When were the Crowsnest pass agreement rates put back into force?

2. What articles are affected by that agreement?

3. What rates are paid on such articles under said agreement, as compared with the rates paid on the same articles in other parts of the country?

CANADA GRAIN ACT AMENDMENT

Hon. T. A. LOW (Minister of Trade and Commerce) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend and consolidate The Canada Grain Act, chapter 27 of the statutes of 1912, and amending acts, and to make further provisions in respect to the handling and marketing of grain, or incident to the buying, selling and transportation of grain; the grading and weighing of grain; the handling of grain in and out by country elevators and at country points and inspection of such elevators; the operation, management and control of terminal, public and private elevators; the storing, cleaning and binning of grain; the mixing of grain, and the disposition of screenings.

Motion agreed to.

[Mr. Bourassa.]

ALTERNATIVE VOTE

On the Orders of the Day:

Mr. W. C. GOOD (Brant): Mr. Speaker, I want to draw the attention of the Prime Minister to two statements which he made to the House on July 17 last. They will be found in Hansard of that date. Replying to a question by the hon. member for Brandon (Mr. Forke) the Prime Minister said:

Under the circumstances, the government has decided not to proceed further with the bill which is before the House at the present time, but to take it up at an early stage next session of parliament.

The bill referred to is the Alternative Vote Bill, so called. The second statement was made in answer to a question of my own regarding the same matter and reads as follows:

In reply to the first question, I may say that if we are all here when parliament re-assembles, certainly this alternative vote measure will be one of the first to be brought before the House.

Now, Mr. Speaker, it is not very early in the session—

Mr. SPEAKER: Order. Will the hon. gentleman put his question now, please?

Mr. GOOD: I am asking the Prime Minister, if and when the government proposes to re-introduce the bill which was read a first time last year?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government does intend to re-introduce the measure at an early date.

MEMBERS' STENOGRAPHERS

On the Orders of the Day:

Mr. JEAN-FRANCOIS POULIOT (Témiscouata): Mr. Speaker, on Monday I dictated some letters and I got them only to-day. I do not wish to blame the stenographic staff, but I think there should be more stenographers so that the work may be performed expeditiously.

Mr. SPEAKER: Do I understand that the hon. gentleman is complaining about the stenographers?

Mr. POULIOT: No, Mr. Speaker; I am complaining about the delay. When we give work to a stenographer I think that work should be finished before the stenographer is ordered to take work from another member.

Mr. SPEAKER: I would remind the hon. gentleman that many years ago we had no stenographers at all to look after our correspondence. During this parliament at least fifty stenographers are available for the work. Of course, if a stenographer were assigned to

each member it would increase the sessional expenditure very much. However, it is a matter that I shall be glad to bring before the Commission of Internal Economy. I may say that this is the first complaint I have received during the session, because we have an excellent staff.

Mr. POULIOT: I do not wish to blame anyone.

Mr. MACLEAN (York): Mr. Speaker, there are two sets of stenographers: one for the Senate, who are not always busy, and one for the House of Commons, who are generally very busy. If these duplex systems were consolidated, more work could be done without any additional expense.

SOLDIER SETTLEMENT LANDS

On the Orders of the Day:

Mr. L. P. BANCROFT (Selkirk): Mr. Speaker, now that the budget debate is over, I wonder if the government is prepared to make an announcement regarding the revaluation of soldier settlement lands?

Mr. MACKENZIE KING: I am sorry the minister (Mr. Beland) is not in his seat at the moment. When he returns to the House I will bring my hon. friend's question to his attention.

CANADIAN NATIONAL RAILWAYS

DISCUSSION OF ANNUAL STATEMENT OF THE MINISTER OF RAILWAYS AND CANALS

The House in committee of Supply, Mr. Gordon in the chair.

Mr. MEIGHEN: I understood the motion which came yesterday was to be moved to-day. I presume it was a motion for the House to go into committee of Supply, because that motion could not be moved to-day.

Mr. GRAHAM: The only way we seemed to be able to get on with this debate to-day was to get into committee of Supply, in which event the Speaker would leave the chair automatically to-day. Had that procedure not been adopted we should not have been able to proceed to-day.

Civil government—railways and canals—salaries, $206,070; contingencies, $38,000.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): There are one or two other features of the minister's statement of yesterday to which I want to refer. The minister made some very favourable comments on the great success of the government in getting its new railway loans floated at a cheaper rate than those floated in 1919-20. I know the minister well enough to assert with positiveness that he was quite aware that there was not the slightest thing in what he was contending; that it was merely a question of what the value of money was in the world's markets, and that the government were no more responsible for the money rate of 1924 than they were for the price of wheat in 1924; no more responsible than they were for the cattle values of 1922. What is possible in these matters is entirely a matter of market conditions, and if the minister intended to make an argument the only way he could have set about it was to compare the rates this company was able to secure on government guarantee with rates which other governments were able to secure in other parts of the world. Into this he did not launch; consequently I have not overstepped the mark when I say that his words were merely vain. Attempts have been made frequently to make these comparisons. They are very easily made. If hon. members will look at the Hansard report of the budget debate of 1923, and especially at certain accounts of loans presented by the former Minister of Finance, the member for West York (Sir Henry Drayton), they will get all the information they desire to show that the lowest possible interest rate was secured in 1920 and 1921, and that our bonds were sold on an interest basis lower than were those of any other country at the same time.

While I am on the subject I wish to say a word on a matter very much akin to it. Repeated assertions come rather flippantly, I think, from many members of the government and from some hon. members to my left, to the effect that a very stupid and a very gross financial crime was perpetuated when, during the war, tax-free bonds were issued. It is hard for me to conceive of anything more futile or more childish than the attempts of hon. members to declare how much has been lost to Canada by the issue of these tax-free bonds. It would be just as easy to ascertain how much more rainfall we would have had in these ten years had there not been an earthquake in San Francisco. No man knows, or can know, or give an intelligent opinion, whether or not there has been a dollar lost to Canada. One would actually think that a decision to issue the bonds tax free was come to in order to see that people who had money to lend at that time would be in a comfortable position for the rest of their lives; that the treasury was not considered; that the tax-payer was not considered—only the money lender. Well, I do not think any government or any party

is so utterly idiotic as that, and I do not think any hon. member thinks it is; much less that the Minister of Finance of that time, whose record during the war will bear comparison with that of the Finance minister of any other allied country, would have been guilty of conduct so careless or precipitate. Every consideration was weighed on all sides of the argument. We were faced with this condition. The American republic was issuing tax-free bonds, and issued them throughout the war—has been issuing them right up to this day. And these people are referred to by the Minister of Railways (Mr. Graham) as the shrewdest financiers in the world. I do not think he is very far astray; there are just as good, but there are no better. They believe it pays to do that; and the ascending scale of their income tax law is even more precipitate now than ours, for they have lowered their income tax on the lower incomes while those remaining at the high figure are unchanged. I quote one sentence from the annual report of the treasurer of the United States, issued just a few months ago:

> Fully tax exempt securities outstanding in the hands of the public now amount to $13,284,000,000 and are increasing at the rate of one billion dollars a year.

This is the conduct of those men described by the minister as the shrewdest financiers in the world; but this conduct, or exactly the same conduct on our part is referred to by those super-financiers to my left and opposite me as the work of childish knaves. No; the money had to be secured; failure to secure it would have been fatal. Looking back upon the period now from the vantage ground of ten years thence, we may be honestly convinced that the money could have been secured if the bonds had not been tax free. One thing is certain: a higher price would have had to be paid. Whether that higher figure would in the long event have counterbalanced the taxes we now might collect; no man can say. But how is anyone to tell at the opening of a great war, or even a year after, or two, or three, what is to be the burden when the war is over, and what is to be the history of taxation for years thereafter? The best judgment, the judgment exercised by other nations at the same time, was exercised here, and the considerations that moved the financiers of other countries moved the Finance Minister of Canada. Certainly no one could honestly even think—no one could honestly say—that any other consideration affected him at all. Even to-day the United States of America adopt this plan of securing loans. Nobody would suggest that they could not secure them were the bonds not tax free. Certainly they could; their country is abounding with money within all its boundaries. But their judgment is that in this way they can get the loan more cheaply and in the end be in a better position than if they issued them otherwise.

Mr. CAHILL: Will my right hon. friend permit me? Is it not a fact that all the states and municipalities have the right to issue tax-free bonds, and that the national treasury, therefore, could not very well compete with them if they issued taxable bonds? It is just the reverse in Canada.

Mr. MEIGHEN: It is just the reverse. We have to compete against them just as well as the United States federal government, and always had to. Certainly they have the right to do it, but does the hon. member think they would continue to have such right if it was not considered good business?

Mr. CAHILL: Would it not seem impossible for the federal government to compete in the bond market selling bonds against the states and municipalities, which have the right to issue tax-free bonds?

Mr. MEIGHEN: Certainly we are competing with them, and with England too.

Mr. CAHILL: Not in domestic loans.

Mr. MEIGHEN: Of course we are. The rate of money here is influenced by their rate and by their conditions all the time, but it was much closer, far more delicate at that time than it is to-day.

Mr. SPENCER: Is it not a fact that the last loan was liable to taxation and that it was over-subscribed?

Mr. MEIGHEN: Certainly; the money rate had reduced. The last loan was at least subscribed to the full. The last loan issued by the late government was liable to taxation. We felt that conditions had passed when it was necessary to issue a tax-free loan, but we could have got a better price for that loan if we had made it not liable to taxation. But against the difference we would have gained, we would have had to set off what would have been lost in taxes.

Mr. LEWIS: The right hon. gentleman refers to the United States. Did we start the tax-free loans first?

Mr. MEIGHEN: Oh, certainly not. I do not know when they started; I do not know there ever was a time when the United States did not follow the practice of issuing tax-free loans. There may have been.

Those are the circumstances to which I wished to refer, and I have taken the liberty of doing so notwithstanding the fact that it is aside from the main current of the minister's statement.

The Minister of Railways then went into the question of the condition of the system and the results of last year, and expressed the view that the result was wholly satisfactory, and indeed phenomenally so under all the circumstances. Well, the qualifying phrase is, of course, a very useful one—a very sweeping one. I wish I could take as much sunlight from the report as can the Minister of Railways—earnestly I wish I could. I think I would have everything to gain if the result were as good as the Minister of Railways depicts it. I believe he is influenced by the best of motives in so presenting it; but I cannot see, that we can look forward to the future with quite the optimism that the Minister of Railways expresses.

He says that we lost in business some $17,000,000, and that this was atoned for to the extent of some $14,000,000 by economies in operation. I do not hold the National Railway Board responsible in the least degree for the loss of business; that is something for which other conditions are responsible altogether. The minister attributed those conditions to the comparatively small crop in western Canada. Our crop was something below the average, it is true, but the reduction in tonnage which resulted therefrom was only 2,300,000 tons, while total reduction in all tonnage on both systems in Canada was between 9,000,000 and 10,000,000 tons, if not over 10,000,000 tons—it was 8,800,000 I think at the end of October. Now why the difference? Is it due to the relatively small crop in western Canada? We had a large crop in eastern Canada, the largest in our history, and while the western crop was somewhat below the average, the farmer obtained more for it for the purpose of his purchases than he had ever obtained since the days of the war. He was in a better position to buy in so far as crop returns were concerned. Why is it that the other tonnage fell off from three to four times as much as the grain crop? It certainly is not due to the National Railway Board, but I fancy if the minister in the quiet of his closet would ask Sir Henry Thornton why it was, he would find Sir Henry Thornton's explanation pretty much the same as mine; and if he would ask Sir Henry Thornton what the cure should be, I think he would get a remedy not very radically different from my own. The other business of Canada was depleted in masses, and it was depleted from the year 1923 when we undoubtedly had no boom. It was not like 1923 in the United States when they reached the Mount Everest, when they had a tidal wave of prosperity from which you would naturally expect some recession in the following year. No, we were in a period of comparative langour in 1923. But in 1924 we had iron tonnages drop off 57 per cent, and other tonnages drop off in lesser percentages; but down and down they went until the National railways lost some $17,000,000, and the employees of the National railways had to pay the bill. Those employees were out of work, thousands of them as compared with the year before. In that year $7,690,000 less went into their pockets because they were walking the streets. So we cannot take very great comfort from the fact that millions were "saved" out of the pockets of the workmen. And even this kind of "saving" atoned only in part, for the loss in tonnage of $17,000,000.

What, though, is the final result? We are $3,186,000 worse off on operation than the year before. The year before was better than the previous year. That was the first year of the new board; but the improvement was by no means as great as it was the previous year over 1921, and still further was it from being as great as the $20,000,000 improvement of 1921 over 1920. The rate of improvement got less and less until the end of 1923, and then ceased altogether, and now we are, in operation alone, $3,186,000 worse off and in fixed charges some $4,400,000 more. So, for 1924 we are behind 1923 a total sum of $7,619,820.

Where are we going to be this year? The year 1924 saw an addition to the capital debt, according to the minister's own figures—and the minister was very, very delicate in his touch on this subject—of $118,000,000; according to the reports of the company it is somewhat more, but not very substantially more. That $118,000,000, even if it is right, will take $5,000,000 more to pay the interest on it. So next year there must be an improvement in operation of $7,600,000 odd, plus $5,000,000 odd. All that has to be overtaken before we have a chance to move one single inch, one single dollar, towards the balancing of our railway budget. Is it likely to occur? If the process of reckless expenditure of last year goes on this year, it will not.

The serious feature of our whole National railway position is this: It is the continued multiplication of the capital charges of the road. The government of Canada under the statute is responsible for new capital charges.

If, as is stated, and very responsibly stated —the minister will correct me if it is a rumour which is false—great new investments are being made in Montreal for some proposed terminals, or other purposes, investments running into hundreds—yes into millions—

Mr. GRAHAM: Not at all.

Mr. MEIGHEN: Well into hundreds of thousands. If this is true and on the top of these other expenditures, all in a mad race for a limited traffic, then we are not on the road that leads to solvency of this National system. Think of $327,000,000 being added to the debt of that system in three years and three months. I know the debt was added to, and rapidly added to, up to the end of 1921; but we had to restore a dilapidated system; we had to restore one semi-dilapidated; and we had to restore one wholly dilapidated—8,000-odd of freight cars alone had to be built for the Grand Trunk and for the Canadian Northern railways; and we had to put the thousands of miles of road into good working shape. But even then the rate of increase would scarcely equal the rate now after all this upbuilding has been done. In 1922, the last year of Mr. Hanna's board, this expenditure ceased, and only $59,000,000 was added to the capital charges that year. But, with the new board coming in control, $116,000,000 went on the first year, $118,000,000 the year following, and $18,000,000 in the first three months of this year. And where is it going to end? According to the reports of the company the total is $312,000,000; according to the total which I have given the figure should be $327,000,000. There is $14,000,000-odd unaccounted for, and I should like very much to have an explanation of where that fourteen millions comes in. However, assuming that the minister's figures are correct and the report of the company is wrong, even then the rate of increase is appalling, and it must be checked or we cannot see an exit at all. And it must be remembered that this pace has been set in the face of a continually contracting business; been set in the face of a contracting business to such a degree that $17,000,000 is swept off the receipts in one year alone; and it is set in the face of the most obvious fact—that you cannot multiply by advertising, by publicity, by radio and all those features, you cannot multiply, you cannot add a tithe to the business of the country. All you can do is take it from another system; and we have had capital investments in large sums for no other purpose than to help get a larger share from the one system to the other. Is that good business for Canada? Every hon. member knows to-day—at least every hon. member who is prepared to admit, and I think we all are, that the soundness of the Canadian Pacific Railway is vital to the soundness of Canadian finance in general —that we would only be cutting our own throats if we were to impair the essential financial validity of that system. Now, assuming that— we do not need to go any further; and nobody wants to be generous to them, they have done pretty well and we are looking after ourselves not them—assuming that, surely it is not policy to throw the money of this country in millions in a mad race not to get more business into Canada but to get into one system a share of business from the other; the people of Canada to pay for it all.

Mr. GRAHAM: Let me ask my right hon. friend a question. If he had been entrusted with the management of the Canadian National Railways by the people of Canada, would he sit still while another company was endeavouring to get traffic from his line, and not try to hold his own?

Mr. MEIGHEN: I will tell you what I would not do. I certainly would not sit still and have the traffic go; but I would not set the pace by radio installations, and the like of that, which the other company would have to follow.

Mr. GRAHAM: I do not want to interrupt my right hon. friend; I intended to deal with this yesterday. One company uses full page advertisements in the newspapers which runs into money faster than the radio, and it is a question of which is the better policy.

Mr. MEIGHEN: I do not know which company uses full page advertisements.

Mr. GRAHAM: I do.

Mr. MEIGHEN: I know that our company spends a million-odd in advertising as well as the money I have mentioned on radio installations; and while I do not say that the other company is faultless, I do say we have got to find some way of preventing these two roads from competing at the expense of our pockets.

Mr. KENNEDY (Edmonton): In view of the fact that the cost in connection with both roads comes out of the people of Canada is it not essential that we should have as full information about the financing of the Canadian Pacific as we have of the Canadian National?

Mr. MEIGHEN: Oh yes, I think it is; I think we have a perfect right to know,

because the necessities of the company determine the level at which rates must be set. You can go down just so far but you cannot go farther without interfering with the essential soundness of the enterprise, and you do not know what is essential unless you know the condition of its finances.

Now, it has been stated that from these railways we have the best service in the world. I think we have. I think the minister is wholly right when he says that the trouble is our service is too good. Our service to-day is beyond the competence of the people of this country. We to-day are travelling de luxe over this Dominion. I suppose this is one of the glorious fruits of "competition." As a matter of fact it is nothing but a slow process of financial suicide on our part. We are paying for all this, and necessarily so. But there must be some way found by which it shall be made to cease, and we are not going to find it by the path pursued in the last two years, the path of heaping upon our own heads a capitalization beyond our competence to sustain.

Now, the minister says also that we should be very grateful, because while there have been bankruptcies of railroad systems in other countries, including the United States, there have been none here. Well, I do not know that we could take very much satisfaction out of that; I do not think the remark is very appropriate. If the Dominion itself did not stand right under more than half the railway mileage of this country why, of course, there would be bankruptcy. But the fact of the matter is that in the United States of America, while it is true their rates are higher than ours—we do enjoy in my judgment the lowest rates in the world,—in the United States of America, while there have been isolated cases of failure in their two or three hundred systems, the fact of the matter is that on the Wall street market the securities of the American railways have been in an almost continual ascent during the year 1924. Those roads and the traffic conditions of that country have been such that the public has confidence in their being paying ventures. The index that I have just referred to shows that the people of the United States feel that trade conditions generally, upon which traffic conditions ultimately rest, are on a sound basis in that country, a basis that justifies the continuous rise on the part of railroad securities.

What I would suggest to the government is this: Take the action which should have been taken many months ago. Stop these continual capital additions to the cost of the national system. We are now up, exclusive of the Transcontinental and the Intercolonial, to a billion and a half. With those added, and with interest, we are in the two billion class. That is about what we have invested in our system. If we add interest on what we have put into the Transcontinental railway and the Quebec bridge we are away beyond the two billion class. The investment in railroads in Canada is colossal. It is one of the causes of the difficulties which surround us now; and we certainly should not through these years, even for purposes of service and competition, have permitted any directorate to run into the tremendous figures which this directorate has run into in the last two years and a quarter.

On this question of amalgamation I make no comments on the hon. minister's remarks. Certainly this country does not like monopoly, and if there is any way of avoiding it let us avoid it. But we are getting nearer monopoly every year that we permit to continue this process, which has been going on for twenty-seven months and has resulted in the position we find ourselves in now.

Mr. ROBERT FORKE (Brandon): I am sure we all listened with a great deal of pleasure yesterday afternoon while the Minister of Railways (Mr. Graham) made his statement to the House. It was illuminating, and he made his statement in such a way that it was interesting, easily listened to, and easily understood. I desire to express my appreciation of a debate with a little touch of humour in it now and then. It makes things go on a little more pleasantly. I think perhaps the Minister of Railways (Mr. Graham) and the right hon. leader of the opposition (Mr. Meighen) make rather a happy combination, because—taking their speeches in conjunction with each other—if the one is a little too optimistic, the other comes along and brings things down to their proper level.

4 p.m.

In commenting this afternoon, the right hon. leader of the opposition (Mr. Meighen) spoke about the tax-free bonds, and said that it was all right to issue those bonds free of income tax. I know a great deal can be said in excuse of what was being done at that time. These bonds were bought by all classes of the people, though no doubt the great bulk of them were bought up by wealthy people and wealthy corporations. A great many small investors bought bonds at the time they were issued, but the trend of these securities as to ownership affords a pretty accurate gauge of how the common people have been prospering

during the last year or two. Why is it that the bonds have now filtered away from the small investors into the hands of the large investing public? I could tell hon. members about people who bought bonds years ago and who have none now. I am simply making the statement; the House can judge of the truth of it. I think I am perfectly correct in saying that the majority of the tax-free victory bonds are not in the hands of the working people of this country to-day. However, that is past and gone, and there is no use wasting time over the matter.

The railway situation in Canada no doubt is a very serious one, we all realize that fact. But I hope it is not without some ray of brightness, and that in the future it is not going to be altogether hopeless. I have no fault to find with the arguments which have been advanced by the right hon. leader of the opposition. I think it is just as well that hon. members should know all the circumstances and look at the situation from the worst possible side that we can see. I have no doubt that the statement my right hon. friend made, that we are over $7,000,000 worse off this year than last year in the way of profits in the operation of the Canadian National Railways is correct. In regard to the traffic and the loss of business on these railways, there are several different ways of looking at it. I know the right hon. leader of the opposition immediately went along the old track when he began to tell us why the railways were losing business. It was the old story of the closed factories, people out of employment and all that sort of thing. I think there might be another explanation upon which I may say a few words at a later date.

In regard to the management of the Canadian National Railways, I think the people of Canada to-day as a whole, are pretty well satisfied with the management of Sir Henry Thornton. But there are perhaps other factors in which possibly some improvement could be made. I often wonder that we hear so little in this House about the board of management which is supposed to advise Sir Henry Thornton. I do not know exactly what their duties are. I suppose their duties are to act in an advisory capacity. While Sir Henry Thornton may be a great authority in the physical handling of railways, I do not know whether he is a financial wizard or not, or whether he is capable of handling the finances of the railway just in the best possible way. How is he advised? How is he guided in financing the railways? Is the board of management composed of men who are able to give excellent financial advice? I do not know. I am not in a position to go into a criticism of the financial management of the Canadian National Railways; but I apprehend, Mr. Speaker, that perhaps something could be done along that line. I desire to say in passing, that I am not acquainted with the personnel of the board of management. Hon. Edward Brown, of Winnipeg, I imagine, would be a good man in financial matters.

I understand the government is responsible for the capital expenditures on the Canadian National Railways in the final analysis. While we admit and believe that the only possible solution of the problem at the present time is to allow the freest opportunity to the president and the board to conduct the business of the railway, yet, when large capital expenditures are being made, I believe the government is held responsible. I am not just exactly in a position to criticize with any degree of accuracy what is being done in this way, but I agree with the right hon. leader of the opposition that this is not a time to make extensive capital investments unless they are absolutely needed for the successful management and equipment of the railway as a going concern; and I believe that the utmost economy should be practised along that line during a time when we are having such difficulties and such deficits as are occurring in the operation of the railway.

In reference to the Canadian Pacific Railway, I agree with all the hon. members who say that the prosperity of the Canadian Pacific is almost as important to this country as the prosperity of the Canadian National, and we are interested in both. The only trouble is that we have to pay the deficits of the Canadian National Railway, and consequently it comes a little closer home to us than the other railway, which is able to pay its way in the meantime. At the same time it would be a calamity to this country if anything were to happen to the financial standing of the Canadian Pacific Railway; and when we work and speak in the interests of the Canadian National it is not with any degree of hostility to the Canadian Pacific.

In reference to the services that are being rendered, I do not know if there is so very much to be said. They are important in some respects of course, but I do not know that there is very much difference between the first-class car on the railway to-day and a first-class car which has been used in the last twenty years. I think we have a more expensive style of travelling, where the greatest

improvements and great embellishments have been given to modern railway travelling. I know that the trains run on time very much better than they used to. They travel faster, and that costs more money and may have something to do with the increased expenditure. Speaking of the services, I would like to take some members back thirty or forty years—and that is a good long time in the history of the country—and speak for a minute about the service we used to get from the Canadian Pacific Railway in those years. I can remember that when I came to Canada as a young man and first came in touch with some of the Canadian Pacific Railway officials I concluded that the aristocracy of Canada was to be found among the servants in the employ of that railway at that time. This is long ago, and whatever I say can be in no way a reflection on any of the men who occupied positions with the railways at that time. But I remember the time when the ordinary man would approach a railway ticket office with misgivings; he would ask a question and wait a considerable time before the gentleman in charge found it convenient to look up. And when he did look up and the question was asked again he would turn over a number of leaves and after a while vouchsafe a curt answer. If you persevered long enough you might get what information you were after. I do not think I am exaggerating. But what is the case to-day with the Canadian Pacific and the Canadian National Railways? You get the very best attention, the most courteous treatment, and accurate advice, and no one can complain in any degree of the services rendered by the officers of either company. I do not know what has brought about the change but there is no doubt that a remarkable change has taken place in the services rendered by both companies to-day in comparison with the state of affairs that existed in the early years of our history.

As regards advertising, there is a good deal in what the leader of the opposition (Mr. Meighen) has said; you cannot increase the railway traffic of a country by means of advertisements. But what the Minister of Railways (Mr. Graham) said was also true, that one railway could not afford to have the other draw away its business. Now this is one of those cases where a little real co-operation might prevent a good deal of unnecessary expenditure and eliminate the present duplication of services; there should be no working at cross-purposes nor unnecessary competition between these two great railway systems. Within recent days the word "co-operation" has been used a good deal; co-operation is coming to be more desirable than competition to a very large extent in conducting the business of the country. Personally, I believe that something must be done to get rid of competition between these railways; there must be more co-operation in the interests not only of the people at large but, as well, of the railway companies themselves.

The question of amalgamating the two railway systems was discussed a few days ago, and after considerable thought I am inclined to the opinion that it would not be a very good idea. It may be possible at some time in the future; it may become a necessity some day. But when I look at the matter coolly and calmly it seems to me that it would not be very wise to have an amalgamation of the two systems, for I do not think it would be a good idea to have either railway monopolize the business of the country. I believe I mentioned that fact while the hon. member (Mr. Euler) was speaking the other day, when I pointed out that if the Canadian Pacific Railway operated all the railways in Canada we should have that monopoly of which the minister spoke yesterday. In my opinion, if any company owned all the railways in Canada it would simply mean that the country would be in its possession. Consequently I could not for one moment think of the Canadian Pacific Railway operating all the railways of Canada. On the other hand, if all the railways were to come into the possession of the Canadian National Railway Company, and owned by the people of the country, with all the faith I have in human nature, and in the light of all the knowledge I am gaining in these days in political affairs, I could not believe that it would be possible to keep the railways free from political manipulation in some way or other. This is the situation as I see it. It is a fine idea, and it looks splendid at first sight, to have all the railways of the country owned by the Dominion and run in the interests of the people, not exactly for profit but for service, but it is Utopian, and we are not likely to see it materialized. The only thing we can do is to see to it that the two systems are run as profitably and economically as they possibly can be in order to give the best service to the people.

Mr. WOODSWORTH: Might not this argument against the amalgamation of the two roads be applied against the present system in connection with the carrying of our mails, which is practically a monopoly? Might we not as well have a dual system in the postal service?

Mr. FORKE: I think it is possible, but still I cannot admit that the two things are comparable; they are not parallel. I do not see how you can very well compare the management of the post office system with the management of the railways; the difference is so vast that the comparison could not hold at all points.

I do not wish to take up much time discussing railway matters; I am not an expert on the subject and therefore can view the situation only from the point of view of the ordinary man. I do want however to say a few words in regard to immigration; and I know that when I mention immigration I am not exactly in accord with some of those who sit in my part of the House. However, I am thoroughly convinced that we shall not have a solution of the railway problem until there are a great many more people in this country. Sir Henry Thornton may practise all the economy he likes, and he may cut down capital expenditure, and do everything he possibly can to make the system successful, but, I repeat, until we have a larger population we shall not get out of our railway trouble. The leader of the opposition implied that the difficulties in connection with the railways to-day were due to the fact that business had suffered, for the reason I suppose that the factories were not running as they ought to run. While I have nothing to say against the industrial activities of Canada, I am satisfied that so long as we maintain this attitude we shall not solve our problems. I know very well that hon. members to my right, for whom I have every respect, think when I speak in this way that I am taking a sectional point of view; they believe that being a farmer and knowing only about agriculture I am always harping on the one string of making agriculture prosperous in Canada. Let me say, however, that I believe from the bottom of my heart that there is no solution for our problems in this country which is not based on agricultural prosperity. You can build all the factories you like and make an attempt to set business going generally; but unless you secure a prosperous, industrious and numerous population living in the country, the urban industries will not prosper. So that our utmost endeavour at this time should be to find out how we can make agriculture prosperous. And that brings me back to the question of immigration. I for one am utterly opposed to indiscriminate immigration into this country of all sorts of people; it is no use bringing people who are not adaptable to the conditions here. We must see to it that we bring in people who will find some niche into which they can fit when they come here and so find a profitable method of obtaining a living. I realize that the question of immigration is a very difficult one; it is difficult to get the right sort of immigrants from the Old Country at the present time. There is not a large surplus of population in the agricultural districts in the British Isles who are looking towards Canada as a prospective place for settlement; we find that the class of people who are willing and eager to come to Canada are just that industrial class of whom we have too many at the present time. I have a good deal of sympathy with the government in its endeavours to prosecute a successful immigration policy. Perhaps I differ from some hon. members in this House on the question as to what sort of people are desirable. I have no objection to a good many of the Lithuanian people coming into Canada; and in this respect I differ somewhat from many hon. gentlemen in my corner. I have come across a goodly number of Lithuanian people who are perfectly good settlers and who make good farmers; and if they can settle out in the country, not in too large colonies, I am sure that the succeeding generation will prove good and true Canadians. But in the meantime every endeavour should be made to make agriculture prosperous, to get more people to take up agriculture, and by all means to give every encouragement to any industry that is able successfully to operate under conditions such as obtain here at the present time. I repeat, Mr. Chairman, I do hope our people have enough ability and enterprise that they are not going to lie down forever and say they cannot compete against other nations in the manufacture of the goods that we require.

In conclusion, Mr. Chairman, I am sure we all wish prosperity to our Canadian National Railways. The system is a great burden on the people at present, but the Minister of Railways (Mr. Graham) in his speech yesterday gave us some little ray of hope that in the not-too-distant future circumstances are going to be better than they have been in the past.

Mr. HERBERT MARLER (St. Lawrence-St. George): Mr. Chairman, after the very able and eloquent address of the Minister of Railways (Mr. Graham) and the equally eloquent addresses of the two leaders opposite (Mr. Meighen and Mr. Forke), it is hardly necessary for me to discuss in detail the general railway situation. There is, however, one phase which was only briefly touched on by the minister, and also alluded to by the leader of the opposition, and that is the increase

in the debt to the public by the National Railways during recent years.

As hon. members will recollect, in my observations on the budget I spoke as regards that increase, and at that time I made certain assertions and submitted certain figures, all of which are reproduced in the records of this House. In addition, I offered to submit to my right hon. friend who leads the opposition the statements I had so prepared. I made that offer, not with any idea of magnifying my knowledge of the subject then under discussion, nor with the object of directing attention to anything I might know of the railway situation, but simply for the purpose of enabling us, if possible, to arrive at the same conclusion and the same figures, so we could give the public the true and correct situation respecting the increase in the railway debt to the public. The right hon. leader of the opposition did not accept that offer; as a matter of fact he brought down his own figures when addressing the House on the budget. Those figures entirely disagreed with mine. At the time I asked certain questions, which my hon. friends of the Conservative party did not allow me to continue very fully, and finally my right hon. friend wound up with the admonition that I should be more careful and deliberate in my inquiry and show less determination to reinstate myself in the favour of the government. Well, Mr. Chairman, that was not my intention at all in giving those figures. My intention, I repeat, was in order to enable the public to understand just to what extent the railway debt to the public had increased during recent years. That is of the greatest importance, because that increase is reflected in the combined debt of the country, and it is impossible to arrive at the increase in the combined debt without properly arriving at what is the increase in the debt to the public on account of the National Railways.

In his speech on the budget the Prime Minister gave certain figures as regards the increase in the combined debt of the country during the last three years. He stated that that combined debt had increased to the extent of ninety-nine million dollars. His statement was correct in every respect. To some extent it was founded on the figures which I submitted previously in my address on the budget, showing what had been the increase in the railway debt to the public. Now, my right hon. friend who leads the opposition—and I am extremely sorry he is not in his seat this afternoon—while agreeing with certain conclusions which I then submitted to the House, disagreed with others I would remark that so far as he is concerned it is quite impossible for him to agree with one set of those conclusions without agreeing with the other set, because if one set was right the other was right also. However, Mr. Chairman, there are three points which I desire to take up to-day. I shall not be very long in discussing them, but I would like to be very clearly understood what these three particular points are I desire to establish. The first is this:

That the proceeds of the railway bond issues made during the fiscal years 1920, 1921 and 1922 were not all used for refunding, that the portion not so used was not all supplied out of cash from consolidated account, but that the surplus over from the bond issues less refunding from cash during this period was $50,884,485 which was not added to the combined debt of the country. In answer to this the leader of the opposition says that the proceeds of the bond issues, were used for refunding—and any part not so used was paid in cash for refunding—and hence there was no occasion to add any part of the bond issues at all to the public debt.

The second point which I desire to make is this: that during the period comprised in the fiscal years 1923, 1924 and 1925, that is to say, the three following fiscal years, the railway indebtedness to the public increased only to the extent of $102,122,196. In that respect I am not using the revised figures as submitted by the Prime Minister; I will use those later. I am using these figures for the purpose of making those I gave to the leader of the opposition in his speech on the budget agree with these I desire to give to-day. In answer to that assertion, the leader of the opposition states, that the railway indebtedness to the public from December 31, 1921, to March 31, 1925 increased to the extent of $176,796,490.

The third point I desire to make is this: that during the three fiscal years 1923, 1924 and 1925 the combined debt of the country, that is to say, the net consolidated debt plus the increase in the railway debt to the public —I am again using the figures without the revision submitted by the Prime Minister— increased to the extent of $111,473,508 and using the revised figures as submitted by the Prime Minister, during the same period the increase in the combined debt during those three years amounted to $99,000,000. In answer to this the leader of the opposition says that from December 31, 1921 to March 31, 1925, the combined debt increased $262,561,105.

Now, these are the three points that I desire to discuss this afternoon, Mr. Chairman, and these are the three conclusions I desire to arrive at, conclusions which are denied by my right hon. friend who leads the opposition.

Mr. KELLNER: You gave the increase in the combined indebtedness at $111,000,000, and the Prime Minister gave it at $99,000,000. Do you not think that discrepancy should be explained? It is too great to be merely stated. The difference in the figures should be accounted for.

Mr. MARLER: If my hon. friend will look at page 2645 of Hansard he will find that the savings over the budget estimate amounted to $11,643,000. My figure of $111,473,508 was prepared before those figures were submitted by the Prime Minister as revised. If my hon. friend who asks the question will deduct the $11,643,000 from the $111,473,508, he will arrive at the exact figure of $99,830,508.

Now, let me enter upon an explanation of the first of these points. During the three fiscal years ending on the 31st of March, 1920, 1921 and 1922, the railway debt to the public increased to the extent of $50,884,485. The railway debt to the public, and likewise the combined debt which reflects the increase of the railway debt to the public, increases not only to the extent of the guaranteed bonds which may be issued but also to the extent of the unguaranteed bonds which may be issued by the railways and emitted to the public. In other words, the obligations of the railways are our obligations, just as the guaranteed bonds and unguaranteed bonds issued are our obligations—precisely the same in every particular. The right hon. leader of the opposition apparently agreed with me in that particular; I am sorry he is not here to contradict these statements if I am wrong in any respect. But I want to clear up that point, because it is one of considerable importance. To that end I desire to place upon Hansard the opinion expressed by my right hon. friend the leader of the opposition on that particular matter, namely, that the guaranteed and unguaranteed securities of the railways are the debts of the Dominion. This is what he says—I read from page 2625 of Hansard, 1925.

> I have said that our financial affairs now run in two channels; everyone knows what I mean. We make two fronts before the world, first as Canada in its old account and secondly Canada as the National Railways. Each is our possession, the finances of each are our concern, and the debts of each are our responsibility.

Later on, page 2627, he states:

> If we want to know where we are at, we must absolutely include every commitment until the day comes, if it ever does, when we can honestly consider our investments in our railways as active assets.

Later on, page 2627.

> Our endeavour should be to ascertain how much the national railways have gone further into debt.

On the same page, in answer to a question propounded by myself asking if the unguaranteed securities formed part of the railway debt, the right hon. leader of the opposition answered:

> Yes they are to-day part of the debt of the Canadian National Railways.

And further on, page 2628, he stated:

> In taking our total debt into account we have got to take into consideration those securities that were unguaranteed I admit, so there is no actual difference between us at all.

In that respect he was referring to myself. Now, I have read these quotations in order to make it perfectly clear at the commencement of my remarks that not only the guaranteed but the unguaranteed securities must be taken into consideration each year in arriving at the increase in the railway indebtedness to the latter. And I repeat also that that increase in indebtedness is reflected by so much increase in the combined debt of the Dominion of Canada.

The right hon. leader of the opposition, in speaking on the budget, then proceeded to show how the proceeds of certain bond issues —to be exact, bond issues to the extent of $100,000,000—had been used for refunding purposes, and that there was no necessity of adding during his administration any part of the $100,000,000 in question to the combined debt of the country. Now, if hon. members will follow me, my right hon. friend dealt with the securities which had been issued—not the entire securities, but a part of them—during the years, as he stated, 1920 and 1921—As a matter of fact the securities to which he referred were issued in the fiscal years 1921 and 1922—and I am speaking now of fiscal years, not railway years. Those securities amounted to $50,000,000 issued on behalf of the Canadian Northern Railway and $50,000,000 on account of the Grand Trunk Railway, all these issues being guaranteed. The issues consisted of the following:

> 1920-21: Canadian Northern Railway, $25,000,000, 7 per cent, maturing 1940.
>
> Grand Trunk Railway, $25,000,000, 7 per cent, maturing 1940.
>
> 1921-22: Canadian Northern Railway, 6½ per cent, maturing 1946.
>
> Grand Trunk Railway, 6½ per cent, maturing 1946.

The leader of the opposition spoke of these sets of bond issues amounting to $100,000,000

and proceeded to show how that amount had been used for refunding purposes. He gave the amounts refunded as follows:

Grand Trunk

Year	Rate	Term	Due date	Amount
1920.	5½	5-year notes	July 1, 1920	$12,166,666
1921.	6	3-year notes	January 14, 1921	4,866,666
	6	3-year notes	October 1, 1921	14,600,000
Equipment bonds..				719,780

Total redemption on account of Grand Trunk $32,353,112

Then he proceeded to state that the 7 per cent loan of the Canadian Northern had been all used for refunding; that is the case. That loan was as a matter of fact used specifically to repay the following:

Canadian Northern

Three year 5 per cent guaranteed notes, £3,650,000, or $12,934,487.

Ten year 5 per cent Duluth, Rainy Lake and Winnipeg Railway bonds, $2,000,000.

Canadian Bank of Commerce, $9,132,272.

Repayment under War Measures Act, $1,466,044.

Total repayments out of proceeds of 7 per cent 1940 Canadian Northern Loan, $25,532,803.

Then my right hon. friend went on to explain what happened to the next loan, the Canadian Northern $25,000,000, 6½ per cent loan maturing in 1946, and he stated, referring to the railway report of that time, that it was all used for refunding purposes, and he took credit for that $25,000,000 in refunding. Then he went on to state in the same paragraph of his speech:

There were also retired during the year $2,000,000—5 per cent Duluth and Rainy Lake Bonds and £3,650,000 3 year 5 per cent ($18,000,000) Canadian Northern Railway 5 per cent guaranteed notes.

If hon. gentlemen will add those figures they will find they total $102,353,113. In addition to that, the leader of the opposition stated that certain bonds of the Grand Trunk Pacific were paid off, being the five per cent sterling notes of $9,720,000, giving us a final figure of $112,073,113.

Now these refundings require to be analysed. The Grand Trunk refundings, as given by my right hon. friend, amounting to $32,353,112, were refunded in name as so stated, but the amount of cash used for refunding these issues was not $32,000,000 odd, but $28,954,008.

As regards the Canadian Northern seven per cent 1940 loan, I have no comment to offer. That was used for refunding.

As regards the $25,000,000 Canadian Northern loan of 6½ per cent, very little was used for refunding. It was paid on account of advances made during the months of April, May and June, 1921, by the Finance department—being fiscal year 1922. The bond issue was made in July, 1921, and those advances which had been, so to speak—and I use this term for the sake of clarity—temporarily advanced, were simply paid back into the account. There was very little refunding in the $25,000,000 issue for which my right hon. friend takes credit.

Mr. GRAHAM: Just a banking transaction.

Mr. MARLER: For all practical purposes, a banking transaction, nothing more or less. Further than that, my right hon. friend takes credit for the £3,650,000 ($18,000,000) five per cent guaranteed notes and the $2,000,000 Duluth and Rainy River. Now these were repaid out of the previous loan; that is to say, the loan of 1921, not of 1922, and should be deducted.

As a final analysis in so far as the specific securities are concerned, and I emphasize the word "specific" in this instance in order not to mislead any hon. gentlemen in this House, the specific securities referred to in these refunding operations amounted to, not $112,073,113, but to $64,220,114; in other words, of the $112,073,113 specific securities which the right hon. leader of the opposition stated had been refunded, only some $64,000,000 odd were refunded.

But there were other securities refunded; there is no question whatsoever about that, securities which the leader of the opposition did not take into account in refunding operations, securities which apparently he had not considered at the time. I say there were such other refundings and I will give them to the House in a moment. The point I set out to make was this, that the increase in the railway indebtedness to the public during the three years in question amounted to $50,884,485. I want to take that year by year in order to show how I arrive at those figures. I will give my authorities, I will give what refundings have taken place, and I will balance out the figure in each year so there can be no question as to what happened. This is what really happened during the three years in question. There was, I repeat, an increase in the railway indebtedness to the public of nearly $51,000,000. That increase took place as follows, in the following years:

In the year 1920 there was a net addition to the railway debt to the public of..	$18,885,763
In the year 1921 there was a net addition to the railway debt to the public of..	20,617,375
In the year 1922 there was a net addition to the railway debt to the public of..	11,381,347
	$50,884,485

Mr. GRAHAM: That only includes the increase in the debt to the public in those

years? It does not include at all the money advanced by the government on loan to the railways?

Mr. MARLER: It is the increase in the debt to the public only. It has nothing to do with the increase in the consolidated debt so far as the railways are concerned. Now how do I arrive at each of these separate figures in each of these years? It is important to get this idea firmly fixed in one's mind before proceeding. This is how the increase is arrived at. In the first place, there must be determined what bonds were issued in the particular fiscal year in question. The second thing to be determined is what was done with the proceeds of those bonds, so that it can be determined what amount out of the proceeds of those bonds was used for refunding purposes. The third thing to be determined is what was done with the cash advanced from consolidated account to the railways in each year, in order also in this case to determine what amount out of such cash was used for refunding purposes. Now if you take the bonds less the refunding from bonds, less the refunding from cash, you will arrive at the net increase in the railway debt to the public in each of the years in question.

Now I will give figures as regards one of the years. I do not want to weary the House by giving all these figures, but I intend to give the figures for one year only, 1920, in order to show exactly how the other figures are arrived at, and if I may have the permission of the House I will place on Hansard schedules showing exactly how the figures for the other years are arrived at also.

Take the year 1920. The first question to ask is, what bonds were issued? Bonds were issued in that year to the amount of $42,109,026. What happened to the money derived from those bonds? It was used as follows:

Construction and betterments, capital, outstanding liabilities and supplies to the amount of..	$ 9,483,454
Refunding to the amount of..	17,109,026
Discount to the amount of..	516,546
Equipment from bond proceeds..	15,000,000
	$42,109,026

Now what cash was advanced from consolidated account during that year? There was advanced to the railways in cash that year, $55,264,144. What was this cash used for:

Operating deficits and interest due the public	$23,360,893
Construction, betterments, capital, outstanding liabilities and supplies..	25,789,014
Refunding..	6,114,237
	$55,264,144

Now we have to bring these two facts together, as I have stated. There were loans issued to the amount, as follows:

Guaranteed loans..	$17,109,026
Non-guaranteed loans..	25,000,000
Total amount of loans issued..	$42,109,026
Less proceeds of these issues used for refunding..	17,109,026
Balance..	$25,000,000

That left a net addition to the railway debt to the public by way of borrowing of $25,000,000, but there was paid against that net addition out of the consolidated fund for refunding $6,114,237, making a net addition to the railway debt to the public of that year, 1920, of the figures which I have just given $18,885,763.

Mr. KENNEDY (Edmonton): That refers to the fiscal year?

Mr. MARLER: That refers to the fiscal year.

Now, there is one other question which hon. members will ask which should be answered in this connection: What were the specific refundings made? Am I guessing at the refundings or simply taking them in general terms? Has an examination been made to know exactly what was refunded? I say definitely that I will now state—I am still on the year 1920—how the $6,114,237 was used in specific refundings from cash and how the $17,109,026 refunding from proceeds of bonds was used, and these are the particulars:

Refunded from cash

Canadian Northern Railway—	
Loan from the Bank of Commerce, obtained in 1914..	$1,250,000
Miscellaneous London loans..	104,504
Equipment trust notes redeemed..	4,705,000
Sinking fund..	54,733
Total from cash	$6,114,237

From Loans

Canadian Northern—	
Loans from the Bank of Commerce..	$12,000,000
Loans from London bankers (£1,049,800)	5,109,027
Total from loans..	$17,109,027
Total refunding under all heads..	$23,223,264

Now I am not giving hon. members all the figures which I have, they are extremely unpalatable and extremely hard to follow, but simply enough to show that $18,885,763 was added that year to the railway indebtedness to the public. I add it was not added to the combined debt. The same procedure has been used and the same figures have been brought together in each of the succeeding years 1921 and 1922 showing, I repeat, a total of $50,884,485 which was added to the railway

debt of the public and that increase was not added to the combined debt of the Dominion. That is the point I desire to make, Mr. Chairman, and with your permission, instead of reading all these somewhat complicated schedules to the House I will put them on Hansard so that hon. members can follow them themselves.

The schedules (see pages 2947-52) are therefore submitted marked as follows:

Railway 1. Showing bonds issued during each of the fiscal years 1920, 1921, 1922, 1923, 1924, 1925.

Railway 2. Showing disposition of cash and loans issued by or on behalf of Railways.

Railway 3. Showing addition to Railway debt to public caused by borrowing less refundings.

Railway C. Showing identical issues redeemed.

Railway 4. Showing new money issues placed in Railways since 31 March, 1919 less refundings.

Note.—These figures were prepared before the revised figures for fiscal year 1925 submitted by the Prime Minister.

Mr. KENNEDY (Edmonton): Does the hon. gentleman mean that this was additional railway debt but not shown as a debt of the country?

Mr. MARLER: No, that is additional to the railway debt to the public taking into consideration all guaranteed and not guaranteed securities. The claim made by the leader of the opposition was this: That refunding had taken place for the issues which had been put out. My claim was that the proceeds of those issues had not been all used for refunding, and that the part not used for refunding not paid out of the consolidated fund in cash had to be added to the combined debt of the country in exactly the same way as the Prime Minister in his address added all the guaranteed and unguaranteed securities, less the refunding from proceeds of bonds and less the refunding in cash.

Now, the next point I desire to make is this: I stated that during the fiscal years 1923, 1924 and 1925 the present government had increased the railway indebtedness to the public to the extent of $102,122,196. These are the old figures, without taking into consideration the revised figures given by the Prime Minister in his speech on the budget. Those were the figures used by the Prime Minister, less the revised figures which he subsequently obtained. The leader of the opposition states that those figures are not correct. That the debt to the public in so far as the railways are concerned increased not $102,000,000 and some odd thousand dollars but $176.796,490. How does he arrive at that? He takes the debt to the public of the Canadian Northern Railway on 31st December, 1921, the debt to the public of the Grand Trunk Pacific on the same day, and the debt of the Grand Trunk to the public on the same day. He adds these three together and deducts them from the debt to the public of the Canadian National Railways on 31st December, 1924, plus $18,000,000 subsequently issued. Now, hon. gentlemen will at once admit that in order to make any comparison between accounts of any description those accounts must synchronize—that is to say that all the liabilities which are in the later account compared with the former account must be included in the former account, that if you eliminate liabilities in the former account it is utterly impossible to get a comparison of any description. That being understood let me say that I hold in my hand the report of the Canadian National Railways for the railway year ending 31st December, 1924, being the railway report that my right hon. friend quoted from in arriving at his conclusion that there had been an increase of $176,796,490 in the railway debt to the public for the period from 31st December, 1921-31st March, 1925. I would ask hon. members to consider what is in that account. It can be seen at a glance. It is the long term indebtedness of the railway company, which includes the guaranteed debt,—the indebtedness guaranteed by the Dominion, certain indebtedness guaranteed by the provinces, and certain long term securities not guaranteed at all. In addition to that this account includes—and I would ask hon. members to mark this well—certain equipment securities and also certain securities of affiliated companies. Now the same situation must be viewed with the 1921 accounts. You have to take into consideration the long term debt, the equipment securities, and also the securities of the affiliated companies which are reproduced in this particular account, or in other words the balances unpaid which are reproduced in this particular 1924 account. I will call the attention of hon. members particularly to one security mentioned in this account:

Five per cent Canadian Northern income charge debenture stock, $24,137,846.08.

Now the leader of the opposition arrives at his figure of $176,796,490 in the following manner. He took the Grand Trunk Railway account of 31st December, 1921, as taken from the Grand Trunk Railway report of 1921, page 8:

Interest bearing obligations outstanding..	$371,042,194
Less Dominion government (as per page 13) loan and interest..	76,965,322
Balance to the public..	$294,064,872

The Canadian Northern debt as at 31st December, 1921, is taken from the Railway and Canals report for 1921, pages 35 and

36 being: Funded debt including affiliated companies, $302,399,007.

And the Grand Trunk Pacific, as of 31st December, taken from the same source amounting to $157,699,714. If hon. gentlemen will add together these three figures they will see that they come to $755,115,592.

The right hon. gentleman (Mr. Meighen) then proceeds. He adds to the debt in the account Canadian National Railways, of the 31st December, 1924 as $913,913,082, the issue of $18,000,000, issued after the 31st December, which makes the debt he states of the Canadian Nationals, 31 March 1925, $931,913,082. Deducting $755,115,592 from $931,913,082, the figure he arrived at is $176,796,490. These are the figures given by the right hon. leader of the opposition. Let me again make the point clear, that there must be taken into the previous accounts the same classes of securities and liabilities as are incorporated into the last account, because it follows that if any are omitted in the previous account, then the debt as existing on the 31st December, 1921 will be made so much less, and in consequence the increase between that date and the 31st March, 1925 will be made so much greater. In other words, it has been sought to make the debt of the Canadian Northern, plus the Grand Trunk, plus the Grand Trunk Pacific, as small as possible on the 31st December, 1921, so that the increase between that account and this account, namely the account 31 March 1925, will be as large as possible, and he makes it $176,796,490. In order to get at the particular situation each of these accounts must be examined. We first of all will take up the Grand Trunk account, and in all these accounts I am quoting only and solely from the official reports, the reports of the railway companies and of the Department of Railways and Canals. The Grand Trunk report of 1921, page 8, gives the funded debt as given by the leader of the opposition at $371,042,194. From that you have to deduct the amount due the Dominion government exclusive of interest, of $73,702,154, leaving a difference of $297,340,040; but he has omitted from that particular statement as he brings it forward to the House the obligations of affiliated companies. I will place the detail figures on Hansard, if I have the permission of the House to do so. There is omitted from that particular statement the following—

Outstanding obligations of affiliated companies, taken from Railways and Canals report for 1922, page 49. The total figures later came to hand but made no material difference as follows:

Great Western—4%..	10,964,416	
G. T. Junction—5%..	938,960	
Milwaukee Car—4½%..	17,000	
New England Elevator—3¾%.. ..	190,000	
Portland Elevator—4%..	75,000	
Montreal Warehousing—4%.. ..	1,000,000	
Rail River and Coal—5%.. ..	1,546,000

Non-negotiable debt to affiliated companies		1,780,682
G. T. Western—6%—Equipment Notes.. ..		2,891,000
		19,403,058

In other words there was omitted from this particular statement the sum of $19,304,058, which brings the Grand Trunk statement of account as of 31st December, 1921 to the sum of $316,743,098, and not as stated by the right hon. leader of the opposition, $294,064,872.

Now turn to the Canadian Northern and we will adopt the same procedure. The funded debt is given by the hon. leader of the opposition on the 31st December, 1921, as $302,399,007, but there was not included, as there should have been included and added, the five per cent income charge convertible debentures, and further than that the equipment trust obligations shown in this statement, and further the short term loans secured by collateral or mortgage which the Canadian Northern owed. In other words there was omitted from that statement submitted by the leader of the opposition $103,097,826. That is to say, the debt of the Canadian Northern on the 31st December, 1921, was $405,496,933, and not as stated by the leader of the opposition, $302,399,007. These particulars I would also ask to put on Hansard, so that there will be no question about them at all and this is how the Canadian Northern debt to the public appears 31 December, 1921:

5 p.m.

Funded debt..		$302,399,007
Add the following omitted—		
5 per cent income charge convertible debentures. .	$24,999,388	
Equipment trust obligations outstanding..	36,656,000	
Short term loans secured by collateral or by mortgage.	41,442,438	103,097,826
Correct debt to public 31 December, 1921..		$405,496,933

Now we come to the Grand Trunk Pacific statement. That was submitted by the right hon. leader of the opposition at the sum of $158,699,714, and that was taken from the report of the Department of Railways and Canals for the year 1921, page 39. The Grand Trunk Pacific is in a different position from these other companies. Certain liabilities appear in that account which should not appear, and certain other liabilities appear

belonging to the Grand Trunk which should not appear. In other words, what we have to try and arrive at, as of the 31st December, 1921, is the net debt to the public owing by the Grand Trunk Pacific, not the net debt owing by the Grand Trunk Pacific to the Grand Trunk, not the liabilities which on the face of the issues were outstanding of which a large part was held by the Minister of Finance, but the net debt due to the public the whole so as to properly compare with the account of 31st December, 1924. In other words, so that the Grand Trunk Pacific account will synchronize with the Canadian National account of the 31st December, 1924.

In the Grand Trunk account there is an issue $68,040,000 of first mortgage bonds, and although that appears in the account as forming part of the $157,699,714 quoted by the right hon. leader of the opposition, it was not really an owing to the public because a large part, namely, $33,048,000 was held by the Minister of Finance; consequently deducting from the $68,040,000 that $33,048,000 there would be left at that time outstanding of the first mortgage bonds (3%) the sum of $34,992,000 which is the exact amount stated in the Canadian National statement of the 31st December, 1924; and in addition to that there requires to be deducted bonds owned by the Grand Trunk. The Grand Trunk Pacific account therefore is as follows:

Funded debt to public as given by the leader of the opposition (Mr. Meighen).. ..		$157,699,714
Less—1st mortgage 3% bonds held by Minister of Finance.. ..	$33,048,000	
Less owned by Grand Trunk—4% Saskatchewan Bonds..	1,435,644	
4½ Terminal Sterling Bonds..	1,881,792	
5% First Mortgage Sterling Bonds G.T.P. Elevator Co...	1,862,352	38,227,788
Net debt due public 31 December, 1921..		$119,471,926

Now I want to bring the three accounts together in order to determine what is the actual position of the three railways now forming part of the Canadian National as they were on the 31st December, 1921, on which figure is based an increase of $176,796,490 as stated by the right hon. leader of the opposition. As I have stated, the Grand Trunk debt should be $316,743,098; the Canadian Northern debt, $405,496,933; the Grand Trunk Pacific debt $119,471,926, making a total of $841,711,957. That was the debt on the 31st December, 1921 of these three constituent companies due to the public, and the right hon. leader of the opposition stated that that debt at that time was $754,175,593. In other words he under-calculated the sum of the three debts by $87,536,364. Naturally that under-calculation made the increase over the three years and three months—that is to say from the 31st December, 1921 to 31st March, 1924—that much greater.

Now let us prove out that situation just to see if we are right. The debt to the public in the account of the Canadian National as stated is $913,913,082. To that amount requires to be added the $18,000,000 issue made after 31st December, 1924. There also requires to be added a further $6,000,000 not appearing in that account, because the bonds were redeemed before the end of the year although they were replaced later by other bonds. That makes a total debt to the public on March 31, 1925 of $937,913,082. Deduct from that the correct debt, as ascertained, of the three constituent companies of $841,711,957, and it gives an increase on the railway debt to the public of $95,201,135 for the period 31 December 1921 to 31 March 1925—and not $176,796,490 as stated by the leader of the opposition (Mr. Meighen). Now the government admits an increase of the railway debt to the public of $102,122,196, unrevised figures. Therefore it simply means that it has not taken advantage of refundings amounting to $6,921,061. In other words, the government has over-stated the increase in the railway debt to the public during the period 31 December, 1921 to 31 March, 1925, by nearly $7,000,000.

But we can take another way of arriving at the result. Let us take my right hon. friend's increase of $176,796,490. If you deduct the sum of $87,536,364 the amount of his under-calculation, you will arrive at the figure $89,260,026; and if you add the $6,000,000 to which I have referred, as not included in my right hon. friend's statement and which must be included, you will get $95,260,026, or substantially the same figure as I have given. But when all is said, that is an exceedingly tortuous and circuitous way of arriving at this particular figure, and as a matter of fact there was no necessity at all to go back to all these accounts. All that was necessary in order to arrive at precisely the same result and to determine beyond the shadow of a doubt what had been the increase in debt during the last three fiscal years or even from 31 December 1921, was to take the bond issues

to the public from that date being virtually during the fiscal years 1923, 1924 and 1925, and deduct from the face value of those issues the amount used for refunding less also refunding from cash and that would give an increase of $102,122,196. Nothing could be simpler; the matter is perfectly clear. The only way the railway could increase its debt to the public was by borrowing; and if you take the sum total of borrowings, less the sum total of refundings from bonds, and less the sum total of refundings from cash, you will get at what is the correct figure. And there is no other figure you can arrive at. That is precisely how I calculated the increase during the three preceding fiscal years; and with your permission, Mr. Speaker, and the permission of the House I will place on Hansard schedules showing how that increase is arrived at. During the last three fiscal years bonds were issued to the public to the extent of $173,875,000, and there were refundings and reductions in the railway debt to the public from proceeds of bonds or from cash to the extent of $71,752,804, bringing out precisely the figure of $102,122,196. I have all these figures prepared in a statement, but it is a dreary business quoting, and a still more dreary business listening to, statements of this kind. I will simply put them on Hansard in the shape of tables so that the balance may be struck.

Increase 31 Dec., 1921—31 March, 1924..	$102,122,196

NOTE.—

Before revised figures as submitted by the Prime Minister.

This process is precisely the same and with the same particulars in all respects as the increase of $50,884,485 is arrived at for the previous three-year period fiscal years 1920, 1921 and 1922.

[Mr. Marler.]

The third point I desire to make is one I emphasized when the leader of the opposition (Mr. Meighen) was speaking. I stated that the combined debt of the country, that is to say, the increase in the net consolidated debt and the increase in the railway debt to the public, had increased during the three fiscal years 1923, 1924 and 1925 to the extent of $111,473,508, less the revised figures as submitted by the Prime Minister (Mr. Mackenzie King). The leader of the opposition brought forward an entirely different set of figures; he said that the combined debt of the country had increased to the extent of $262,560,105. In that sum was included of course the $176,796,490, which is the increase he claimed in the railway indebtedness but which increase was really $102,122,196—unrevised figures. He claimed also that the increase from December 31, 1921, to March 31, 1922, had amounted to $64,625,860; and his claim in that respect was this, that the new government having taken over on December 29, 1921, was responsible for all expenditures and all increases in the debt after that particular date. All I can say in reply to that is that the idea is preposterous. Who ever heard of new directors coming into a company who cut off as sharp as possible everything that had gone before and started out at once making purely new expenditures? Why on December 31, 1921, when the present government took charge, there were countless contracts and countless obligations that had to be fulfilled, with which they had had absolutely nothing to do with the making of. The estimates which were prepared and brought forward and on which all these contracts were based were prepared and passed by the preceding administration and all had to be met. And more than that, a great deal of the income of the country for the fiscal year 1922, had been paid in by December 31, 1921, and that was all applied to that period. Certain portions of the interest due for the fiscal year ending March 31, 1922, but accuring up to 31 December, 1921, had not come in at all. It is utterly impossible therefore to strike December 31, 1921, as the line of demarcation and to say that the debt at that particular period of the year was such and such an amount, and that at March 31, 1922, it had increased by reason of the operations of this government, in that particular period, to the extent of $64,625,000. The only fair way to take the increase in the debt, the only just and reasonable way, is to take the commencement of the fiscal year 1923, when the present government took charge and entered into their own obligations, plus the obligations of the preceding administration, for which they were responsible

in great part and which they had to carry out. Further than that, my right hon. friend submitted certain other calculations which brought the increase, as he figures it, up to $262,000,000 odd. I have prepared, and with the permission of the House I shall place on Hansard, figures showing exactly what was the increase in the combined debt for the two 3-year periods in question—that is to say, for the 3-year period fiscal years 1920, 1921 and 1922 and for the 3-year period 1923, 1924 and 1925. And as I have stated, the increase in the net consolidated and in the railway debt to the public for the period fiscal years 1923, 1924, 1925, the figures in regard to which I have checked up, balancing them correctly in all respects, comes to a total of $111,473,508 which is the increase in the combined debt. Taking from that the adjustments given by the Prime Minister in his speech, as will be seen at page 2645 of Hansard, of $11,643,000, it makes the net increase in the combined debt for the 3-year period of fiscal years 1923, 1924 and 1925 inclusive the sum of $99,830,508.

These are the three points I desire to bring out, and I have submitted my authorities. These authorities and statements, as I have said, will be placed on Hansard to prove these three points, which are these: That during the first 3-year period covering the fiscal years 1920, 1921 and 1922 the railway indebtedness to the public increased by over $50,000,000, which should have been added to the public debt and which was not so added; that during the succeeding 3-year period the railway indebtedness to the public increased $102,000,000, which was added to the combined debt of the country, and not by $176,000,000; and that the combined debt of the country increased during the last three fiscal years $99,830,508.

Mr. HUGHES: What was the combined increase in the first three-year period?

Mr. MARLER: We must not forget that the war period came in there.

Mr. HUGHES: But apart from that?

Mr. MARLER: Apart from the war expenditure, the increase from expenditure was $307,124,600.

That is all I have to say, Mr. Chairman, on this rather complicated and dry subject, but I wish to get these figures before the House and on Hansard to refute the statements made by my right hon. friend in the course of his speech on the budget a few days ago.

Hansard—p.—2752			11,643,000
Increase in Combined debt—3-years period			$ 99,830,508

Mr. W. F. MACLEAN (South York): Mr. Chairman, I am not going into details of the financial statement which has been submitted by the hon. member for St. Lawrence-St. George (Mr. Marler). I know the debt of Canada to-day is enormous, a large amount of it being due to the war, and also to unnecessary expenditure in railroad building. Faced with that condition, we have to find a way to meet it and to reduce our expenses, if this is possible. The net result, I find, is that we are not meeting the situation, but we are continuing in the carnival of extravagance in connection with railways that was begun some years ago.

Not long ago in this House I took occasion to draw the attention of hon. members and of the country to this mad carnival of extravagance, and while I did not get much of a report in the newspapers, I got a fair report in Hansard. Somehow the discussion I then started has spread all over the country, and to-day there is one question, and one question only, before the public: How can this awful carnival of extravagance be stopped?—how can curtailment be effected which will not injure the transportation service, and so help us to retrieve something from the mistakes that we have made in the past? My proposal was a very simple one, and it fitted in with the proposal made by the government to get control of ocean rates. I had the hardihood—perhaps it was courage—to suggest that the first thing to do in the way of solving this serious condition of railway extravagance was for the government to take over the Canadian Pacific Railway Company, which not only has a good railway system but also a first-class steamship service; and that if these two services were taken over and co-ordinated with the National, we would get a real steamship service which would enable us to control the ocean freight rates, and we could proceed to solve the railway question, which continues to become more and more serious, and which will almost wreck the country if it is not solved. The ex-Prime Minister (Mr. Meighen) to-day said that something must be done or wreck will come to somebody. I say this also, that that excellent railroad, referred to this afternoon by the leader of the opposition, the Canadian Pacific, will eventually be wrecked by the competition that is being forced on it by these demands for unnecessary railway services.

The Minister of Railways admitted practically everything said either by myself or by the member for North Waterloo as to the awful railway extravagance that prevails. The hon. member (Mr. Euler) made some inquiries and was in touch with Sir Henry Thornton when he prepared his argument, in the course of which he said, in effect, that if there was consolidation of these two railway systems, the economies that could be put into operation by reason of the consolidation would effect a saving to the country of $100,000,000 a year. That statement has not been denied. The public of Canada who have to pay this debt and pay the railway charges will hold this parliament responsible—will hold this government, this official opposition, and gentlemen down the line in their capacity as a portion of the opposition responsible—if we do not try to cure this evil.

Now, the minister said that certain proposals had been made to do away with this duplication, and also that certain proposals had been made in regard to a merger of the two railway systems; but virtually he said that it could not quite be done, that nobody wished to stop the fine service that the Canadian Pacific is giving to the country, that that company had to be kept in existence, and he made other statements along that line. But the responsibility is on him to deal with this situation, and not to sidestep the issue—for I take it that what he said amounts to sidestepping. In referring to my proposal, or the proposal of the member for North Waterloo, the minister also said that there was not anything definite to be dealt with. Well, I want to tell him that on March 31 of this year, when I brought up this question, I did present to the House and to the country—and it will be found on page 1771 of Hansard—a definite proposal to stop this awful extravagance, to secure economies, and so bring relief to the country. If anybody cares to turn up that he will find it all on that page. I have this further to say, that while I was brought up as a newspaper man and had a paper at one time, through which I could place my views before the public generally, not a newspaper in this country has published that little statement, which is a proposal to overcome this difficulty.

The main part of my proposal the Minister of Railways sidesteps again. My proposal was this—and he must deal with it, no matter what the cost of these railways was to us if we want to stop this carnival of extravagance, if we want to deal with the question effectively—we must consolidate the railways or we will get deeper and deeper into debt. It has been proposed that the two organizations should co-operate to cut off a train here and a train there. That

will give some relief, but the main relief can come only from consolidation. We must take the two systems and then by co-ordinating them we shall be able to give the best service at the smallest cost, and gradually pull the country out of the hole. But the government is not dealing with that proposal, nobody in this House is dealing with it. And yet the people are demanding that it be dealt with, and it will be the principal question before the electors when the next election is held. I am not going into the details of my proposal any further. The leader of the opposition in the course of his address here this afternoon justified the Canadian Pacific Railway, perhaps very properly so, and he seemed to think it was absolutely essential to the people of Canada that the Canadian Pacific and the Canadian National be kept in this state of most extravagant competition. I say this duplication of services, wherever unnecessary, must cease, and the only way to bring about its cessation is to create public opinion in that direction, and I am confident that that public opinion is now being created and will enforce itself in such a way as to compel some action by parliament.

Let me relate a little experience I had last week in regard to this duplication of services. After the all-night session, having an engagemen in Toronto for that day, I had the alternative of taking a local train from here to Bedell and there connecting with the Canadian, the Canadian Pacific train which arrives from Montreal that morning, and proceeding thence direct to Toronto; or I could go to Cobourg and there transfer to the International, the old Grand Trunk train of the Canadian National. Well, I made that transfer, and what did I see? Before I got to Belleville I had reached the area of competition which is the most lamentable and most shameful thing before the Canadian people to-day. For two hours the trains of these two different lines, trains of the Montreal-Toronto route, were racing each other to see which would get to Toronto first, and they were not as far apart as half way across the floor of this House. There they were, two mad trains rushing to Toronto, neither overloaded with passengers; the passengers looking out the windows, admiring the race and joking about it, and wondering at whose expense it was kept up. That went on until there was a diversion, but the race continued with the trains some distance apart. Now, that kind of race is going on all over the country through the unnecessary duplication of main lines and also on the branch lines system. My hon. friends of the Progressive party say it must continue in regard to the west. Well, if it is to continue they will have to pay the cost, because the people of Canada will no longer submit to paying it. The Minister of Railways and the government and parliament must deal with this situation, otherwise the country will become bankrupt. The hon. member for St. Lawrence-St. George (Mr. Marler) has just pointed out that the debt of Canada, both on account of railways and on account of consolidated debt, is steadily increasing. I do not want to be an alarmist, but something must be done. The minister is getting the figures ready with regard to the amounts owing by the various entities of the Canadian National system. The leader of the opposition said yesterday there were several hundred companies, was it, involved in the old Grand Trunk—

Mr. GRAHAM: More than a hundred in the two companies.

Mr. MACLEAN (York): More than a hundred, and no doubt the same kind of bookkeeping has to be kept on for some time yet to clear the thing up. But we shall not get relief until this extravagance of duplication is stopped, not until then will the country be able to regain its prosperity. The leader of the opposition said here to-day that something would have to be done, otherwise ruin would follow. With the duplication that prevails in the west, not only in the way of transcontinental lines, but in connection with branch lines, and with the constant demand for more branch lines all over the country, all involving a borrowing of additional capital, where is the thing to end? Who is to pay the debt, and what is to become of Canada? First of all, we should have a commission of about three men, trained actuaries, the best men we can get, to ascertain what the debt is in regard to the railways and what the debt is also of the country in connection with the war and other things; but I would clean up the railway question first. I would end all this discussion in parliament and the throwing of charges across the floor of the House as to what the actual amount of the indebtedness is. We know it is away up in the hundreds of millions; it is in the billions and it is growing, while the country is not growing proportionately to that increasing debt. I asked the minister about consolidation yesterday and he said it would take quite some time yet, perhaps two or three years. He is a very busy man, so I would get three of the best men available, put them in a room, give them the books and any clerical assistance they need, and have them get at the real

truth of our commitments in regard to these railways, as well as find out what are the essential railway services that ought to be maintained. As to the consolidation of the railways, I would suggest that once the two great systems are consolidated they should be put in charge of a board of from three to five men made up from the executives that now administer the two railways. The Canadian Pacific have succeeded in making good in connection with their railway, and they should certainly have representation on that commission. I would take care of the interests of the shareholders of the Canadian Pacific in a reasonable way; I would not want to see them wrecked. So we want one special commission to ascertain the debt and devise a scheme for paying it off, and we want equally a commission of from three to five men of recognized ability, men who have had successful experience in connection with the Canadian Pacific and the Canadian National, to make recommendations as to consolidation. I would say to this new commission composed of the best men of the executives of the two railways: Your duty is to examine the railway services of Canada to-day, and find out what is the best way to reconstruct them, and most of all to re-route the traffic. I questioned the minister about that yesterday, and he said that he had some idea of it, but the real solution of the railway problem in Canada to-day is to re-route the services.

Mr. GRAHAM: My hon. friend is attributing to me so many things that I did not say—he has said at least a dozen things I did not say or even hint at—that I cannot be interrupting him all the time to contradict them. I just wanted to ask him, does the scheme he outlines now mean government ownership?

Mr. MACLEAN (York): Absolutely. Government ownership has proven itself. It is the redeeming feature in the world to-day in connection with the problems of the world. I want to tell my hon. friend, and I have said it before in the House, that the greatest experiment in public ownership to-day is the National Reserve Bank system which is providing the reparations of the world in connection with the Great war. Public ownership in Canada has proven itself in the National Railways, and in Ontario, in the Hydro Electric system. We are running our street railways with electric power distributed under public ownership. I see the dangers of public ownership; I admit there are some dangers. I see the danger of political interference, but political interference is nothing compared to this wild carnival of unnecessary over-expenditure in connection with the railways.

I have stated once before that there has to be a consolidation. I have gone further and I have said to-day that there has to be a consolidation of the debt. I have gone still another step to-day, and I have said that a commission of three or five men made up of the members of the executive of the Canadian Pacific and the Canadian National, with the Canadian National having a majority on that commission, should be appointed, and I would put on them the duty of giving the people a fair and reasonable service clear across the continent, but no unnecessary trains, no unnecessary extravagance, no expenditure in advertising, no expenditure in soliciting business, but simply provide a railway service that will do the business of the country and allow us to get out of debt. I see my friend from North Waterloo (Mr. Euler) is listening to me now. He assisted —perhaps he did more than I did—I claim no special credit for it, but between us we have called the attention of the people of Canada to the condition of affairs that exists, and now that the people have been seized of it and want to see something effected we find the government saying that this mad dance must continue—choose your partners and on with the dance. I say, Mr. Speaker, this mad dance must stop, and that a cure must come. I have suggested the cure of ascertaining the debt, I have suggested the cure of consolidation, and I have also suggested to-day that a commission of operation be made up of the executive of the two systems which will find a way to reduce the expenditure, to improve the service, and to help us get on our feet again.

I absolutely disagree with the statement made by the leader of the Progressives that he wants to see the two systems kept in the west. It is all very good to have them if you can pay for them, but can we pay for this unnecessary duplication? I admit what has been stated in the House, that eventually immigration may come to our relief, and may call for more extensive services than we have to-day, but—

Mr. CALDWELL: Is the hon. member sure that he is quoting the leader of the Progressives accurately, that he insisted that the two systems must continue? I do not believe he is.

Mr. MACLEAN (York): I took him to mean that, and I am taking also what I read in the western papers.

Mr. CALDWELL: But you are quoting the leader of the Progressives, not the western papers.

Mr. MACLEAN (York): I said the leader of the opposition said to-day that he wants to see the Canadian Pacific remain where it is in competition with the Canadian National.

Mr. CALDWELL: But that is not the leader of the Progressives.

Mr. MACLEAN (York): Who said that?

Mr. CALDWELL: You are now quoting the leader of the official opposition.

Mr. MACLEAN (York): No, if I may mention the gentleman by name, I am referring to Mr. Forke. He practically said to-day that he wanted the two systems maintained, that they were essential to the development of the west. I say all that the west can call for, and all that this province and the east can call for, is a reasonable service based on consolidation of the two systems and the wiping out of all unnecessary trains and unnecessary equipment, and the adoption probably of the newer equipment that is coming, for to-day nearly everything in railroading is being scrapped. The new equipment will be an electric drive on the railways from electricity generated probably on the streams that run to the Hudson bay, and we have enough water-power on the slope that runs to the Hudson bay to give all the power we want to drive our railways. I may be asked, how would you get that power to our railways? Well, the scientists to-day are finding ways for the transmission of electricity under high tension; they are finding a way of transmitting it almost without wires, perhaps through a beam of some kind. They are working at something of that kind, and there will be a way of cutting down the expenses and improving the service, and of stopping this over-equipment that goes with this over-competition. Look at the equipment of the Canadian Pacific and the Canadian National to-day! Half of it would give a better service than the two of them give to-day, and at half the cost, and with half the number of men. The world is crazy to-day for duplication. We meet it every day in every direction, and we have got to stop it. I have said that unnecessary duplication exists in this parliament. Unnecessary duplication seems to be the craze of the world; there is duplication, duplication everywhere.

Mr. CALDWELL: Of speeches?

Mr. MACLEAN (York): And of speeches. My hon. friend is a good duplicator, but I scorn the allegation.

[Mr. W. F. Maclean.]

Mr. CALDWELL: I do not want to be misunderstood. I thoroughly agree with the hon. member.

Mr. MACLEAN (York): On behalf of the people of Canada I say, stop this railroad extravagance, find out what the debt is and consolidate it at the lowest possible valuation; then call in this commission from the two systems and put the responsibility on them of re-routing the service and of cutting off all unnecessary trains; let them give the country the service it wants, but no more than is necessary. For a time let us get down to the hard pan of the situation, and if we do that, you will see our country go ahead, and immigrants begin to come in here, and later they will be asking for increased railway accommodation. But in the meantime stop the extravagance, find out what the debt is, re-route the systems, and if you do that you will begin to solve the railway problem. But we are not solving it here when we talk about how big the debt is and how it is growing, unless we undertake the responsibility of trying to pay the debt and ascertaining what would be a fair valuation for the roads. If we will do these things we will give some real service to the country, and it would help us to recover from our mistakes of the past. In doing these things we will give some service to the country and we will try to retrieve our mistakes of the past, and certainly there has been a carnival of mistakes in connection with our railroads. If we do this, light will break on the present gloomy outlook, a great improvement will come to the country, and in that way there will be a better condition of affairs generally. Finally, we shall have a public prepared for economy instead of for a continuance of the wild extravagance that has prevailed in the past.

Mr. W. C. GOOD (Brant): I do not know that I would have intervened in the present debate if it had not been for the gentle reprimand given to me yesterday by the Minister of Railways (Mr. Graham). I should like to say, however, in regard to the question of immigration—which he dealt with yesterday and concerning which I asked him a couple of questions—that in my judgment there is no member here who is opposed to immigration. I think every hon. member recognizes that Canada needs population, that our railways need population, and that other things being equal we would be very much better off if we had fifty millions of people in this country. Every one of us wants to see Canada grow—wants to see agriculture grow, manufacturing grow, and indeed

all our industries grow; wants to see a very much larger, happier, and more prosperous population in this country. There is no difference of opinion in regard to that matter at all. The difference of opinion arises wholly in respect to the policy of assisted immigration—if you like, forced immigration, immigration regardless of conditions existing in this country.

Now, as I see it, Mr. Chairman, we have a situation something like this: We are trying to pour water into a leaky pail. We are using tremendous efforts to fill the pail, and the water is running out as fast as we can put it in. I brought to the attention of the House a year or two ago statistics in regard to our immigration policy for the last twenty-five years. I stated the amount of money we had spent during that time in connection with our Immigration department; and the results—the negative or absent results—were also indicated. Now then, is it sensible to keep on pouring water into a leaky pail? I want to stop the leaks, I want to divert some of our attention and some of our money to the stopping of the leaks. I only wish the Minister of Railways was in his seat; I would like to tell him, and tell the House, that if we would put more effort into the stopping of the leaks it would be to better purpose than simply to continue pouring water into a leaky pail.

Now let me specify one or two examples to the government. A number of us in this quarter of the chamber who are sceptical of the benefits to be received from an aggressive immigration policy under present conditions, are very anxious that the government should undertake some worth-while rural credit scheme. But year after year the government declines to act; we cannot get action. I do not know whether we can push it into action this year; we certainly pushed as much as we could last year although without much result. This is something worth while, this is something that will stop one of the leaks in our pail. If we can introduce and establish in this country a rural credit system comparable to the system operating in the United States we shall at least put some of our farmers in this country on a basis equal to that on which the United States agriculturist works. In that way and to that extent we shall equalize conditions as between the two countries. This is one way in which we may stop the leak in the pail and help to retain the population that we have. I do not think there is any use in getting foreigners into this country if they go out as fast as we get them, or if our native population goes out. I agree with the hon. member for George Etienne Cartier (Mr. Jacobs) that the best immigrants we get in this country are those who come by way of the cradle—they are the native born and they are the people that are going out. And why are they going out? The pail is leaking, and we have not made a real effort, not a determined and sustained effort, to stop the leaks. My theory and conviction is that the sensible policy is to get at the leaks first and then we can easily fill the pail. Now I suggest that rural credit legislation would be one way of stopping the leak. A sensible and just system of taxation would be another way of stopping the leak. But we cannot get the government to move in this direction either. I submit arguments and suggestions to the government in respect to the question of taxation. I tell them that the present system of taxation is onerous and unfair to industry, and a burden on the workers in this country; that it is driving the people out of Canada, that it is a bad leak in the pail, and I want them to stop the leak. But they do not move.

I have just mentioned two examples. Here is another example that has been already mentioned by the hon. member for South York (Mr. Maclean), namely, the amalgamation of our two great railway systems. It has been pointed out, and I do not think it has been denied, that thus we can stop a leak to the extent of $100,000,000 a year. That would be worth while surely. Surely that would help to retain our population, and to make immigration expenditures profitable, at all events to prevent their being entirely futile as they are likely to be under present conditions and as they have been in years past.

I must associate myself most definitely with the hon. member who has just spoken, and with the hon. member for North Waterloo (Mr. Euler), in my conviction that the only solution of our railway problem under existing conditions is amalgamation. Some time ago I was a little dubious, I suspended judgment in regard to what might be the proper policy, but to-day I begin to see, and I am coming more and more to the conviction, that this solution will have to come. If it has to come why not sooner rather than later? If we must deal with it some time why not tackle the problem now? Why go on wasting money? Why go on allowing the pail to leak? Why not stop the leak now? I must take issue with the remarks of my hon. friend the member for Brandon (Mr. Forke) who fears that if we have government ownership—I prefer the expression "public owner-

ship"—that if we have public ownership of all the railroads in Canada we shall have political interference and inefficiency. Why have we not got it now? I ask him and the House why it is, if we must have political interference and inefficiency in connection with public ownership of our railways, that we have not got it now? If the argument applies to the whole railway mileage it will apply to half the railway mileage, or a little more than half, that we are now operating under public ownership. I cannot agree with my hon. friend in his fear as to the consequences. I know that the problem of maintaining efficiency is a serious one in connection with all our business; but I see no reason in the world why in a matter of this kind, we cannot get just as faithful service under public ownership as we can under private ownership. I believe, and I honestly believe, that in the very few years that have elapsed since the present management took over the Canadian National Railway system we have developed a very marked degree of efficiency, a degree of efficiency that will compare very favourably indeed with that now obtaining in the Canadian Pacific organization. This is surely a direction in which we can stop one of the leaks, this is one of the ways in which our immigration policy may be made effective and not remain futile as it has been in the past. The Minister of Railways chided me yesterday—as he has chided other members in this quarter of the House—and hon. members opposite have often chided us, with having no faith in our country. I have faith in our country, I want to say that I resent the charge, I deny and repudiate the accusation of having no faith in Canada. Indeed I will say this: if by extending public ownership to cover all railway systems so that we can save $100,000,000 a year I think that I at least in advocating such a policy have more faith in the ability, the loyalty, and the public spirit of Canadians than has the Minister of Railways or my hon. friend the member for Brandon. I wonder if I might recall to the Minister of Railways the definition of faith which is given in the Good Book. Faith is there defined as "the evidence of things not seen" and "the substance of things hoped for."

Mr. GRAHAM: Has the hon. gentleman not got it wrong?

Mr. GOOD: No, I think that is correct.

Mr. GRAHAM: Better take another look. I think you have quoted it wrongly.

Mr. GOOD: I am satisfied that I am correct.

[Mr. W. F. Maclean.]

Mr. GRAHAM: "The substance of things hoped for" and "the evidence of things not seen."

Mr. GOOD: We have not yet in our railway business realized the ideal of economy, the elimination of these tremendous wastes that have already been so well outlined by the hon. member for South York. What we have in our mind's eye is the evidence of things as yet unseen, and surely we have the substance of things hoped for in the picture portrayed by the hon. gentleman who has just spoken; faith is "the evidence of things not seen" and "the substance of things hoped for."

Mr. GRAHAM: Wrong again.

Mr. GOOD: Well here is a splendid example of where it can be fittingly applied, and I suggest that if the hon. Minister of Railways wants to practise faith, he should accept the suggestion already made and tackle the problem now; a problem which surely will have to be tackled in the very near future at all events. I am sorry he was not in his seat when I made my earlier remarks, but I commend them to his serious consideration when he has time to read Hansard.

Mr. GRAHAM: I am afraid my hon. friend will have to revise his scriptural quotations. He is all right in the rest of his literature but wrong in that.

Mr. MACLEAN (York): Who is to be the judge? The Minister of Railways?

Mr. GRAHAM: No, the book from which the hon. member purports to quote.

Mr. SPEAKMAN: The Minister of Railways has read it more recently.

Mr. GRAHAM: No, but perhaps I have a better memory.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. F. S. CAHILL (Pontiac): I will not detain the committee very long as I do not intend to go into the figures that have been discussed by the leader of the opposition (Mr. Meighen) and by the hon. member (Mr. Marler). I have learned in my short experience in this House that every member supplies his own figures on every occasion, and about the only man who is convinced by those figures is himself. The leader of the opposition made the statement that his party had reduced the capital debt of the railways by $100,000,000 in the period be-

tween 1918 and 1921, and he afterwards explained that this was not what he meant; I presume that what he meant was that they had paid off the current liabilities of the Canadian National Railways in that period. It does not matter very much which way you take the figures; they are eventually a liability, and our liabilities in this connection are increasing rapidly enough to suit any of us, and perhaps too rapidly for most of us. However, the showing in the last three years, according to the figures submitted by the hon. member for St. Lawrence-St. George, who I must admit convinced me that his statements were correct, would indicate that the increase in the debt owing to the public was $102,000,000 for the three years from 1921 to 1924. It is a large amount of money, but I notice in looking over the reports of the Canadian Pacific Railway for a similar period that under the heading of capital they had increased their expenditures by something like $38,000,000 or $40,000,000. Of course, as the leader of the opposition pointed out, it is impossible to carry on an undertaking without incurring additional capital charges from time to time. But we are faced with a serious deficit every year amounting to something like $50,000,000, and a necessary capital charge which has amounted in the last five or six years to approximately $100,000,000. The leader of the opposition left to the people of Canada the legacy of the Canadian National Railways, the Grand Trunk Railway and the other roads that are incurring this huge deficit.

The carrying charges of the railways for the past five years have been about equivalent to the carrying charges of expenditures due to the war. The amount is not quite as great, but the rate of interest is a little higher; so that we are saddled not only with the expenditures of the war but also with a liability in connection with our railways which just about doubles that amount, making it necessary for the people to accumulate by way of taxes the sum of between $180,000,000 and $200,000,000 per annum.

There has been considerable talk of amalgamation not only on the part of members in this House but also in the press of the country. Now amalgamation is a beautiful dream if you can convince yourself that $100,000,000 a year is to be saved; but it is only a dream after all, and I believe that the result can be attained in a much better way. Personally I am not so sure that I should prefer a monopoly under public ownership to one under a privately owned concern; I believe one would be just as bad as the other. Indeed, I do not know that it would not be worse to have it under public ownership if we have to have a monopoly. If you put the transportation system of this country in the hands of one man with one board of directors you put at the mercy of that one man the entire commerce of the country; all the commercial interests would be at the mercy of the railway company handling our transportation facilities. And that concern could make the grass grow on the streets of Ottawa. After all, these men are only human and if they had a grievance against any city they would penalize that city. In short, the country would be in an impossible position, and every man would be catering to those who controlled the transportation system. If it were a private system there would be some check on it by parliament, for the private individual could air his grievances through his representative. If on the other hand the system was under the control of parliament the private citizen would have practically no recourse, and you would have the difficulty of people coming to their representatives in parliament and looking for favours all the time. The management under public control could not be better and it might be worse; and altogether it would be an intolerable condition for the country. To put the whole transportation system in the hands of one man would be to have a centralized authority that would be oppressive to the people. Imagine a corporation with the ramifications of the railways of this country, extending all over Canada, employing upwards of 200,000 people, practically ten per cent of the male population. You can understand what condition you would be labouring under—not as my hon. friend fears, that politics would influence the railways, but the railways would control politics, and you would be in a worse position than ever.

Now, I think the same end can be attained under our present machinery. The railway commission should be authorized to deal with the railway services as between the railways, and as well it should be authorized to deal with branch line construction. No railway, branch line or otherwise, through virgin territory will pay for the first two or three years. As soon as a railway company has developed that territory sufficiently to earn dividends on its investment, then you have the other railway company attempting to get in to steal a portion of the business. The country cannot afford that. The railway commission should determine where branch lines should be built, and which railway company should build them. I would not say that

the railway commission should have the last word any more than it has now, but a railway company should have the recommendation of the commission before appearing before parliament for a charter to build a railway through any section of this country. In that way we would avoid the expensive competition that is going on now in railway construction and railway operation. Take, for instance, the train service between here and Montreal. My hon. friend the Minister of Railways and Canals (Mr. Graham) told us yesterday that the president of the Canadian Pacific said it would not be fair to ask his company to eliminate a train that is now paying, and that these trains were paying. That is quite true. And the minister is hoping to get the two presidents together in order to agree on the elimination of unnecessary services! It looks to me on the face of it as a hopeless proposition. Take the two trains between Montreal and Ottawa at 8.30 in the morning, and the two at 3.30 in the afternoon. Do you suppose that either president would agree to taking off one train at 8.30 or another at 3.30? Not at all. They are both profitable trains at the present time; but that business would be almost doubly profitable if handled by one train. If the railway commission were empowered to deal with the matter they might order one of the 3.30 trains of one company running from Montreal to Ottawa, and the corresponding train of the other company running from here to Montreal to be taken off, and in that way eliminate duplication. I think the same principle might be applied to freight traffic. We have the railways, but we are getting too much service for the traffic that is to be moved; that seems to be our great difficulty. The trains should be adjusted to the traffic. If there is sufficient traffic for all the trains now running, well and good, but if not, the superfluous trains should be taken off. Otherwise we shall never overtake our railway deficits. I feel that the minister should follow the suggestion made last night and bring this matter before the railway commission as early as possible. I do not think there is anything to be gained by delay, and I think there would be much saved by inaugurating this policy at an early date.

Some hon. members opposite, many of them of the Progressive group, and some members on this side as well, I think, and some of the Conservative party, are talking of reducing the capital of the Canadian National Railways. Well, at first sight that would seem to be a very simple matter—you merely write off a certain amount of capital. But it is not quite so easy as that. For instance, there are twenty-five million dollars worth of Canadian Northern railway income debentures and about thirty-five million dollars of Grand Trunk Pacific guaranteed bonds, sold on the basis of dividend payments as soon as the respective railways earn dividends on their capitalization. These two issues amount to about sixty million dollars, and on these the Canadian National Railway Company is not called upon to pay any dividend because it is not earning sufficient to pay dividends on the prior securities, that is, the loans of the Dominion government. If you wipe off these loans, and relieve the Canadian National Railways to that extent, as soon as earnings are more than sufficient to pay dividends on the existing securities the surplus will have to be applied to dividend payments on this sixty million dollars. So by the simple process of writing off the Canadian National debt to the Dominion government, you let the railway in for payment of interest on this sixty million dollars, without getting anything back on account of our loans.

Mr. STEWART (Humboldt): Has the hon member considered the seriousness of asking the people of this country who are producing the tonnage for the Canadian National Railways to try to pay freight rates which would provide dividends on a capital that is in no sense reflected in the earning capacity of the road?

Mr. CAHILL: Does my hon. friend think that anybody seriously considers that at present as a basis of rate-making? If there was anything in my hon. friend's argument, would it not be better to say—the Dominion of Canada will reduce their interest charge to the National Railways from 5 to 2 per cent, or something of that kind? Or if you want merely a mark to shoot at, why not say: When you earn fifty million dollars we will reduce the rate. But that has no bearing on rate-making whatever, and is not taken into account by the railway commission. The only objectionable feature about it is that you put before the management an impossible mark to reach if you ask them to overcome the interest on the deficits and on the huge capitalization. I do not think any person seriously hopes that we will ever reach the stage where the Canadian National Railways will be able to pay interest on the loans due to the government.

Now, Mr. Chairman, I have just one other suggestion to make. I think there are at present four committees before which the heads of the railways must appear at call. There is a committee of the other House, there is a committee on National Railways and Shipping, there is the Railway committee, and there is the Ocean Rates committee.

The special committee which was appointed last year, and re-appointed this year, the committee on National Railways and Shipping, is to my mind the proper body to deal with National railway matters, but I think entirely too much time of the officials of the railway is taken up by that committee. That committee represents a meeting of the shareholders of the company, just as the shareholders of the Canadian Pacific Railway company would meet. The officers prepare their report and submit it to the shareholders, and it is either approved or rejected. They do that in a day. It would be perhaps too much to ask the members of parliament or the members of this committee to get through with all the business of the Canadian National in a day, but I think matters should be so arranged that the committee could sit continuously for two or three days in order to go through the reports with regard to the railways. In this way you would save not only Sir Henry Thornton's time, but the time of perhaps twenty-five officials who have to come to these meetings. These men have to drop the work they are doing, come here and await the pleasure of the committee. The committee sits for two hours; perhaps some gentleman in the committee has a speech to make, and most of the time is taken up by that speech. Then the committee say to the railway official, "We will call you tne day after to-morrow." But when that time comes some internal arrangement in parliament has disorganized that arrangement, and the committee says to the official who has again come to Ottawa for the purpose of the meeting, "We do not want you to-day, but we will want you the day after to-morrow or next week." I think the committee should sit continuously from the time it starts until the sittings are completed—morning, afternoon, and night if necessary—so that the work could be got through in two or three days, thus obviating the necessity of the officials coming back here at odd periods with resulting disorganization of the work of their offices, of their inspection trips and everything else for an indefinite period. I also think that the question of the proposed branch lines of the Canadian National might well be referred to that committee, because after all that is the committee that is investigating the operations of the railway for the past year and it would be in just as good a position to determine the necessity or otherwise of these lines as the other committee would be. However, that is only a suggestion which I think would enable the work to be carried out with greater expedition and with less loss of time to the officials of the company, and consequently less financial loss to the people of Canada. But I think the first suggestion to put this thing in the hands of the railway commission and let them deal with it generally would save this country as much money as amalgamation, and would be a very much better proposal for the people of Canada. It would be the best solution, at least for the time being, of the whole problem.

I want to congratulate the Minister of Railways on his very excellent statement on the affairs of the railway for the past year, and I also want to congratulate him on his good luck in having such a fine organization to carry on the work of the huge undertaking we have launched upon in the way of public ownership in this country. I think it is nothing short of marvellous that Sir Henry Thornton has been able to make the showing that he has in so short a time. There is no doubt that the service on the Canadian National has improved beyond the expectation of any man in this House in the last three years. As has well been said by many members of the House, there is only one way they can now make profits from or get traffic, and that is by taking it from the other road; and the more they take from them, the worse off they will be. Unless we can get something in the way of co-operation, we shall be in the position of building up one institution at the expense of the other, both of which the people of Canada must maintain out of their own pockets.

Mr. MURRAY MacLAREN (St. John city and counties of St. John and Albert): Mr. Chairman, the hon. member for Pontiac (Mr. Cahill) has made a suggestion as to the sittings of committees, especially the committee on Railways; he has advised that a change be made in the method of holding the meetings of the committee, especially with a view to saving the time of the officials of the departments concerned. This reminds me of what I learned last year in Australia, namely, that in the case of several committees, committees which take considerable time, meetings were held during the parliamentary recess. Of course, the meetings were arranged to suit the convenience of members, particularly those who lived a long distance from the capital. In any case it seems to me that with the view of allowing members to attend the sessions of parliament and to interfere as little as possible with the work of parliament itself, these committees or certain committees might do their work during the recess. I understand that the plan is found to be a satisfactory one.

I wish to take this opportunity of bringing up one important branch of the subject now under discussion which I believe has not yet been referred to, namely, that of the Canadian National telegraphs and our cable service. It has often been said that trade follows the flag; I believe it is equally true, or perhaps more true, that trade follows the telegraphs and cables. I therefore wish to draw the attention of the House to the actual position of our Canadian National telegraphs and to certain peculiarities which at present exist.

The country is fairly well supplied with telegraphs of the Canadian National system, but up to last year one peculiarity of that system was that it did not extend to the Pacific coast on the one hand or to the Atlantic coast on the other. In the west it stopped somewhere in British Columbia; it did not go to the coast and thus provide direct communication with the cable service. On the Atlantic it stopped at Moncton, where there is naturally no connection with the cable service. Within the last year I understand the government has been able to take over some system so that the telegraph service now does extend to the Pacific coast and there is direct connection or contact with the cable service. That all seems satisfactory and as it should be. Moncton is 198 miles from Halifax, and there is that short break between the coast and the terminus of our Canadian National telegraphs. That, briefly, is the situation with regard to the telegraphs.

Now, about the cables: We know there is a Pacific cable owned jointly by the United Kingdom, Australia, New Zealand and Canada. I believe we have a one-fifth share in that cable. Apparently it is a profitable investment. I have the figures for 1923—I have not the information for last year—but I understand that in that year $350,000 was the fifth share that Canada received from the cable, and that going back eight years from 1923, the Dominion government has received from that cable the sum of $2,500,000.

Now we come to the Atlantic cable system, and I think many members who do not happen to be familiar with it will be surprised at the condition and service of the Atlantic cable system. Up to the year 1910 there were five British-owned cables on the Atlantic. They were then taken over by American interests, and in the year 1914, the year of the war, there was no British cable running across the Atlantic. That, I think, is an important and rather astounding fact. Let me tell the members just what the distribution of the Atlantic cables was in the year 1914. They were seventeen in number; thirteen were American, two were French, and two German. The two German cables during the war were seized. The British took one, the European end of it being led into Penzance, England, and the western end being brought into Halifax. The other German cable was taken over by the Americans and used between the United States and Italy.

Coming to the year 1921, the British government in that year bought a cable, which was called the Direct cable, for which they paid £570,000. That gave them a British-owned cable, and in addition they had the one that was obtained from the Germans. Now here is the present situation of the cable service on the Atlantic. There are nineteen cables: the Western Union has eight; the Commercial has six. These are both American companies, and they own fourteen lines in all. There are two French; two British, one British-owned and the other the one previously owned by Germany; and there is also the other German cable which is still being used by the United States and Italy. Canada has not shared in the expense of any cable across the Atlantic, nor has it any financial interest in any cable.

Now I want to lead up to the point of how it works out on the Atlantic. I am informed that if a member wishes to send a cable to the United Kingdom and he goes to one of the telegraph offices in Ottawa, to the Canadian National telegraph office, for instance, and says, "I wish to send a cablegram to Liverpool," that cable is taken and sent, but how is it sent? It is sent by the Western Union, an American cable service. If you specify that you want that cable sent by the British cable, which is called the Imperial cable, it cannot be sent, and the sender will be so informed, because the Canadian National sends by the Western Union, an American-owned cable.

Mr. GRAHAM: Would my hon. friend let me explain why? The reason why the Canadian National Telegraph Company works with the Western Union is that the other company made a contract to give all its business to the Canadian Pacific Railways, and we would get no return telegraphic traffic in exchange for any despatches the Canadian National might send that way. On the other hand, the Western Union give us a large share of their business, and by using their line we get an income that we could not get by using the other line.

Mr. MacLAREN: I am pleased to have the explanation, even if it be not altogether satisfactory in regard to what I have in mind.

Mr. GRAHAM: It is not to me either. I have tried to get the other arrangement made.

Mr. MacLAREN: I think I can suggest a way in which the minister might accomplish it. But let me point out first that if a member goes to the Canadian Pacific telegraph office here in Ottawa and tenders a telegram, if he does not specify what line he wants it to go over, it is sent over the Commercial line, an American service, but if he specifies that he wishes the cable sent over the Imperial cable, the Canadian Pacific will so send it. Now there is a peculiar position. The Canadian National Telegraphs cannot and does not send cablegrams over the British cable; it transmits them over an American cable, while the Canadian Pacific as a rule sends the cables over the American line, but on request will forward them by the Imperial cable, the British-owned line.

This matter was brought up at the Imperial conference in October, 1922, and I should like to read the Canadian press despatch which was sent to Canada in reference to that matter. It is dated London, October 17, and reads:

Canada has made her position on the Imperial conference cable question clear. At yesterday's sitting of the Economic conference Sir Laming Worthington-Evans, British Postmaster General, criticised some of the Canadian government departments for not using the Imperial cable which is operated between London and Halifax for the British government—

Mr. GRAHAM: That was the Postmaster General, was it not?

Mr. MacLAREN: It is so stated in the despatch. I think the Minister of Railways was present.

Mr. GRAHAM: That is right.

Mr. MacLAREN: It continues:

—its traffic being distributed in Canada over the Canadian Pacific Railway telegraph lines.

Mr. GRAHAM: Solely.

Mr. MacLAREN:

In reply Hon. George P. Graham, Canadian Minister of Railways and Canals, pointed out that the Canadian government was willing and anxious to do everything in its power to assist the Imperial cable, "but" he added, "it must not be forgotten that the Canadian National telegraphs are being operated as a business operation." Continuing Mr. Graham said, "we are prepared to have an interchange of traffic—

Mr. GRAHAM: Hear, hear.

Mr. MacLAREN:

—with the Imperial cable—

Mr. GRAHAM: Hear, hear. That is what I said.

Mr. MacLAREN: I do not quite see why the minister does not get it.

Mr. GRAHAM: I will tell my hon. friend if he will let me, because I remember very well.

Mr. MacLAREN: Shall I finish this statement first?

Mr. GRAHAM: I do not want to interrupt my hon. friend but I understood him to ask me a question.

Mr. MacLAREN:

—but you cannot expect the Canadian National to hand their messages over to the Imperial cable if the National gets no traffic in return. If they are to get traffic for the Imperial cable we should get something for our own National lines in exchange.

Mr. GRAHAM: Hear, hear.

Mr. MacLAREN:

We want reciprocity in traffic.

Mr. GRAHAM: Hear, hear.

Mr. MacLAREN: Now, Mr. Chairman, it may be a very dreadful thing for me to suggest that perhaps the Minister of Railways was asleep at the switch—

Mr. GRAHAM: Not at all.

Mr. MacLAREN: —when he made that remark at the Imperial conference.

Mr. GRAHAM: No. Now if my hon. friend will let me make the remark I was going to make a moment ago.

Mr. MacLAREN: Certainly, although I should like first to say something more.

Mr. GRAHAM: I was talking to the Postmaster General of the British government who made a contract to give all the business to the Canadian Pacific and none to the Canadian National. When the British government declined to allow the Canadian government to be in on it at all, I, as Minister of Railways representing Canada, took the ground that we were willing to make a reciprocal arrangement with the British government, but we were not prepared to give them our telegraph business unless they would give us some of the telegraph business which they control in return.

Mr. MacLAREN: I had not quite finished my statement.

Mr. GRAHAM: I am sorry, I apologize.

Mr. MacLAREN: May I say to the minister that if he had had a more specific knowledge of the conditions he might have succeeded better. Now what does the minister say? He says: We are prepared to have an interchange of traffic with the Imperial cable

Mr. GRAHAM: Hear hear.

Mr. MacLAREN: How can it be done? There is not any possibility of it. As I have pointed out to the House the Canadian National telegraph lines end at Moncton, 198 miles from the Imperial cable at Halifax. I would like the minister to explain—when he assures the Postmaster General in Great Britain that certainly he will do business in exchange—how he is going to do that when there is a gap of 198 miles between the terminus of the telegraphs at Moncton and the cable at Halifax?

Mr. GRAHAM: We send telegrams to Halifax.

Mr. MacLAREN: Not over the Canadian National line.

Mr. GRAHAM: But we send them to Halifax. We could make the connection just in the same way.

Mr. MacLAREN: I do not think that is altogether a satisfactory explanation on the part of the minister. The minister says that if the Imperial cable gets traffic from us we ought to get something for our own National line in exchange. But how can that be done? If the Imperial government sends a cable to Ottawa over the Imperial cable it will come to Halifax, and then it proceeds by some other telegraph line to Ottawa, because the Canadian National Telegraph Company has no connection at Halifax. I think that is quite clear.

Mr. GRAHAM: What about the existing connection?

Mr. MacLAREN: On the other hand if the National Railways want to send a message they can only send it as far as Moncton and from there it must be carried over the line of another company to Halifax.

Mr. GRAHAM: That is often done.

Mr. MacLAREN: With all due deference to the minister, and in saying this I do not think I am doing him an injustice, I think he was not familiar with the actual status of telegraphs and cables as regards the Atlantic coast.

Mr. GRAHAM: I am willing to make a reciprocal arrangement.

Mr. MacLAREN: This criticism seems to have excited the minister somewhat.

Mr. GRAHAM: Not a bit.

Mr. MacLAREN: I quite recognize how very efficient the minister is, in fact we look upon him as an outstanding man in point of efficiency, but in that particular matter it almost seems that he was asleep.—

[Mr. Graham.]

Mr. MACDONALD (Pictou): Homer sometimes nods.

Mr. MacLAREN: I did not say that he nods, I said he was "asleep at the switch" to use a railway term. I cannot help thinking that is the proper characterization to make.

Mr. GRAHAM: Not at all.

Mr. MacLAREN: The Canadian National cannot exchange business with the Imperial cable because it is not connected with it; the Canadian National line does not come within 198 miles of it, and there is that gap to be bridged. Be that as it may, the minister seems to be willing to meet the conditions now even if there was a lack of appreciation on his part of the conditions at the time in London. I would submit to the government and to hon. members that the present condition of our telegraph and cable system is not satisfactory either from a Canadian or from an Empire standpoint. It seems only fair that our country should have some financial interest in a British cable, that is one suggestion I make. The other is that if possible the government should proceed to obtain direct connections from Moncton to Halifax over a telegraph line controlled by the Canadian National Railway. I think it is a matter of common knowledge—and this shows that I am correct in the views I have been putting forward regarding the position taken by the Minister of Railways in London—that negotiations have been going on with the Western Union to attempt to secure a telegraph line, or running rights over such a line, to Halifax. I only wish they may succeed in the undertaking. I hope the government will persevere in securing connection by this means or by accomplishing it in some other way. But it certainly establishes a further point in my argument that as far as Canada was concerned the matter was in a confused state when discussed in London. I propose to say nothing further on this question except this: I hope that in our own interest, and in the interests of the British Empire, the Canadian National telegraph line will be extended to the Atlantic coast, and that we may also secure a certain financial interest in at least one cable. Because I believe that not only would this be a patriotic thing, but it will be in the interest of trade and the general prosperity of us all.

I do not propose to say more than a few words on the subject of the National Railways themselves. Eulogistic remarks have been made regarding the Canadian National Rail-

ways but I feel that I cannot concur in them; I dissent entirely from them. Why do I say this? I do not say it because I am opposed to government ownership. My sympathies lean towards government ownership and I do not criticize the board of directors of the Canadian National Railways on that ground. I base any criticism I have to make on the work of the board of directors not on the policy of government ownership. I think that the board of directors have failed in the task entrusted to them, first on account of the most obvious extravagance and unnecessary expenditure. If you consult the people of the Dominion at large you will not find three out of four who will not agree fully in the statement that the board are expending, especially at this time, absolutely beyond what is necessary and what is proper. That is one very brief criticism I have to make. I cannot concur in this acclaim of approval and applause for the board. I think it is a harmful thing to do. I think it should be brought home to the chairman of the board in the most forcible way that he is not consulting the interests and the pockets of the people of Canada.

Another point I desire to bring up is this. While the Canadian National Railways contime to use Portland, Maine, and New London as two of their ports, and while they continue to export over these rails and through these ports to the detriment of our Canadian ports and rails, it is a bad policy for this country alone. It does not pay. It pays the chairman and the board to make a little higher financial showing, but it does not pay the country. The money is not being spent here, but is being spent in Portland, Maine, and in New London, and so on. It is a bad financial venture, I take it, for the country to do that. In addition to that, it is contrary to the most solemn undertaking of parliament and contrary to the enactment of parliament that such a thing should go on, and therefore if the board continues to violate those enactments, it is the duty of the government to deal with the matter. Now I can assure the minister—and I know he takes a deep and kindly interest in the matter—that we will not have contentment and will not have satisfaction, in a large portion of the country, particularly in the Maritime portion of the country, while this trade going over our own rails is carried on in this manner, to the detriment of our own ports.

Mr. JOHN EVANS (Saskatoon): I should like to say a word on this important question from an agriculturist's point of view particularly. I realize that the railway problem of this country constitutes a national matter of the first importance; but before we make any move in the way of easing the burden of taxation in this respect, I think we should deliberate very carefully, so that we would not make another mistake which perhaps would land us in as bad a position as we have been in heretofore. We have two splendid systems of railway, I think as good as any in the whole world. They traverse territory which is ahead of anything in the world for productivity. I am not one of those who decry this country. I thoroughly believe in Canada and in our ability to meet every problem facing us today; but not just under present conditions. The only limit to production from an agricultural point of view, from one end of Canada to the other at the present time, is the tremendous cost of transporting the produce of the farms to the market; that is, in combination with the high cost of production and the wages—which it is necessary to pay in order to meet the high cost of living. Any move we now make must be with the one object in view, namely of obtaining cheap transportation for the heavy products such as wheat, cattle and so on, to the markets of the world, because these will be our chief exports for many years to come. The prosperity of this country will depend on the ease and the continuance of the transportation of these bulky commodities to the markets of the world.

I believe in amalgamation, and I am quite in accord with the view expressed by the hon. member for South York (Mr. Maclean), and some other hon. members in this House. The railways are a public utility, and must be publicly owned and managed in the interest of the public. I think it is unreasonable to expect that a public utility managed by a private concern will be run in the interests of the people at large. I believe in government ownership, and I am convinced that the time has come, because of the organization and concentration of capital, that public utilities must be owned and operated by the government That situation must be brought about in the interests of economic freedom and justice for all alike. I believe that all railways and all railway subsidiaries, such as express and telegraph services, should be taken over by the government and operated on behalf of the people. Private ownership of these public utilities has proved a dismal failure in the past in this country, from the viewpoint of the people. The present National Railways, when in private hands, was

quite as costly to the workers of this country as it is at present. Amalgamation under private control, would be even worse. The terrible cost of the National Railways, totalling perhaps a billion dollars, is hardly any more than the country has paid for the Canadian Pacific Railway up to date, if we reckon in everything. The land, the money grants and the completed lines handed over to that great corporation, with the tax exemptions, are hardly less than the amount the Canadian National stands the country to-day. But this situation can be overcome yet, even if we have to pay full value to bring the Canadian Pacific Railway under government control. At present the railway situation in Canada constitutes a menace, with half of it in private hands and the other half under government ownership. I think government ownership would be a reasonable thing for an intelligent people. The present situation constitutes a menace both to good government and service alike. We have witnessed the spectacle of this House and the Senate being divided on the matter of branch lines; and the government-owned system has already been put to a disadvantage and will continue at a disadvantage for all time to come if the railways are to remain as at present half publicly owned and half privately owned. By that statement I mean that the people's rights have really been sacrificed by their own representatives for the sake of the privately-owned concern. I could name instances of this, because of the delay in putting the branch lines bill through. The privately-owned concern, the Canadian Pacific Railway, has practically made their extension on the grade of the Canadian National Railway. A serious menace to good government and efficient service alike confronts us and we have to look this matter squarely in the face. The present railway arrangement in this Dominion can never be satisfactory, for there is distrust among the people and intrigue in government circles, which is the natural outcome of a dual system such as we have. The present state of affairs is fraught with dissatisfaction to the people in every way from the standpoint of service, as well as being pregnant with intrigue and corruption in our public life. It was mainly through the influence of the railways that reciprocity with the United States was defeated in 1911; which shows what a hold and influence they have over the popular will of the country.

Looking at the matter from another standpoint, I believe that either the government system must become simply a subsidiary to the privately owned railways, as they desire. to further their schemes of profit and aggrandizement through intrigue, or the privately owned system will be reduced perhaps to a stage of beggary comparable to that of the Grand Trunk Railway, when nothing will be left for us to do but to absorb the whole thing. The immediate problem of the government railways at the present time is to get them to pay their way. The Minister of Railways (Mr. Graham) has mentioned immigration as the one thing in sight to which we may turn for immediate relief. It seems to me that there is no basic industry to which we may look for relief in our financial distress except agriculture. With the exception of the fishing industry, the raw product of which enjoys no protection, agriculture is the only industry that pays its way; and it is doing so without any law-provided privilege. According to the owners of tariff-fed industries, all their finished products are of less value than the labour and material that enter into their makeup. If agriculture were freed from this incubus to-day it could in two or three years' time double its production; it could double its products for export and by 1928 it would I think tax our railways with their present capacity to move our wheat and cattle, our butter, cheese and meat and other products to the markets of the world. High freight rates during the last few years have seriously reduced our export trade. High freight rates have been caused practically by high wages; high wages have been necessary to meet the high cost of living; and the high cost of living is due to protection or the legalized privilege of price-fixing. The high cost of production on the farms has seriously cramped development in all parts of the country and it is unreasonable to expect much improvement in the railways until agriculture is freed from the burden of trade prevention taxes as a fiscal policy.

During the Easter holidays I took a trip to some of my old haunts near Owen Sound and it was borne in upon me that all agricultural development had years ago been arrested. I noticed that the same old heaps of stone that were hastily thrown into the middle of the fields when they were cleared were still there, and no improvement had been made. As a matter of fact, there has been no improvement on the farms of Canada for many years past, and it is disheartening to see the many vacant farm houses and abandoned homesteads which once were occupied by settlers hopeful of founding homes and families. Under present conditions immigration is simply useless and it is fraught with serious consequences by reason of the failures that are bound to ensue with the resulting

drift to the urban centres. I do not want to be misunderstood in this regard; I believe in immigration. But immigration is not the first thing to be attended to: the first thing is to create the conditions that will enable immigrants to make a living on the farms. The Minister of Railways (Mr. Graham) said in his speech yesterday, at page 3029 of Hansard, that if the men who come to Canada and those who are already here will show even to an approximate degree the stamina of our fathers and our grandfathers there will be more work and more men working in the country. Let us see. Our fathers and grandfathers who settled in Ontario came here to establish homes, and they spent all that they had in the attempt. They underwent many hardships in the hope of better times ahead. But as the years went on and the farms became cleared, the farmers found that in the meantime the government had made a bargain with another class of settlers, who founded cities, and who arrogated to themselves a privilege obtained by Red Parlour methods and political intrigue —the right to lay heavy burdens on the farm settler. These burdens have got heavier and heavier as the years have gone, until they are becoming unbearable, so that instead of farm proprietorship increasing, the increase is taking place among the wage-earning class in the cities, an increase out of all proportion to the rest of the population. Our railways as a public utility have been the first to feel this. The want of production is to-day the one reason why our railways are not paying their way. Only the other day I received from the Ministerial Association of Toronto, that good city, a circular letter protesting against immigration and consequent unemployment. The problem is already one of serious proportions in our cities. Now, these are the conditions at present prevailing; our farms are vacant and our lands undeveloped.

The Minister of Railways has said—and I do not think he should have said it—that our young men are losing their stamina as compared with our fathers and grandfathers. I do not think he should have said that of the youth of Canada. I think it is shown to be wrong by the very willingness of our youth in late years to shoulder the burdens of war. I believe that, given a fighting chance to-day, the youth of Canada will redeem the Dominion from this financial crisis. I say again, I believe in immigration as well, but immigration is not the first step to be taken. If the Minister of Railways had applied his words to the war profiteer, to the tariff-fed owners of factories, and to the bounty-bloated steel manufacturers, I think his words would have fitted much better.

There was, however, a very hopeful note struck throughout his presentation of the railway situation, and I believe that during the last three years the Canadian National Railway Company from being a by-word of mismanagement has passed to a position where a feeling of pride is felt by all of us in the knowledge that to-day we have a railway system unexcelled for efficiency. Sir Henry Thornton undoubtedly is doing well in that way. But it is certain that the farming population will yet need further railway facilities to carry their surplus products if they are to be given a fighting chance with other industries. I believe this is the reason why our railways to-day are not making good,—production is being diminished on our farms; and I think the best thing the government can do is to find out how to relieve the conditions that have brought about this diminution and so relieve of the incubus of every other industry in the country that one basic industry which alone can pay its way—agriculture.

Mr. JOHN CARRUTHERS (East Algoma): Mr. Chairman, in the first place I wish the House to understand that I am not wedded to the theory of public ownership, notwithstanding Sir Adam Beck and hydro and all that, but I must confess that in regard to our railway situation we are faced with a condition not a theory. Ever since the union of the Canadian Northern and Grand Trunk under government ownership I have maintained that it is not feasible to conduct two great railway systems in this country in competition one with the other if we wish to be fair to the privately owned company. I am not a recent convert to this idea, for last session I spoke upon this question in the following words:

> Let us look for a moment at the railway situation. In my opinion it is anomalous and cannot continue. The two great transportation systems comprise about thirty-eight thousand miles or more of road, built at a capital expenditure of over two billion dollars. large stretches of both systems running through barren territory which does not contribute any local traffic. In the next twenty years, even allowing for natural growth and development, there will not be traffic enough to pay interest on this immense capitalization. Yet Sir Henry Thornton states that he expects in less than five years to meet all overhead charges on the Canadian National lines, and I think he will be able to do it. If so, it will have to be done at the expense of the Canadian Pacific's business. Let our people be honest with themselves. This is a question of business competition, and as our business men realize more and more that every dollar they pay into the national treasury to meet our railway deficit is that much more added to their freight bills when they ship their goods over the Canadian Pacific Railway, there can be but one result.

Further on I said:

It is self-evident that the people of Canada will never permit the Canadian Pacific to absorb the National lines and thus form a huge monopoly which would own the political soul of this country, so the only alternative is for the government to take over the Canadian Pacific Railway, as it should have done long ago. I have nothing against the Canadian Pacific; I think it has been a splendid institution for this country and I would hate to see anything happen to it, but from the way things are shaping to-day I see nothing but ruin ahead, in time. Contrary to what a great many think, the majority of the stock of the Canadian Pacific Railway Company is not held by Canadians in Canada; in fact, only about 20 per cent of the stock is held in this country, 23 per cent in the United States and the remainder in other countries, chiefly in Great Britain. However, that does not matter. As I say, we do not wish anything to happen to this great institution, and I am therefore strongly of the opinion that the government should take it over in connection with the Canadian National lines. If these two systems were amalgamated they could be operated much more economically and the country would obtain the advantage in the lower freight rates.

That, Mr. Chairman, was my view a year ago. Since then I have travelled out to the Pacific coast on a trip of observation, going out by way of the Canadian National lines and returning by the Canadian Pacific, and I returned more convinced than ever that our railway situation is an impossible one. For that reason, as I say, I think the government would be well advised to carefully consider this situation. It would at once relieve them of two or three very difficult questions that are looming up to-day. One is the reduction of ocean freight rates by means of the Petersen contract. If the Canadian Pacific were taken over immediately, its fleet of 59 ocean and coastal ships would be available and in conjunction with our own merchant marine boats we should be well equipped to control ocean rates. Another difficult question is the equalization of railway rates, which could also be settled in that way. Thus, they could save the country from fifty million to one hundred million dollars a year—fifty million is the lowest and one hundred million the highest estimate I have heard mentioned. I tell the government that the people will not long stand for a continuance of two great railway systems once they realize that by amalgamation huge savings can be made annually.

I wish the Minister of Railways (Mr. Graham) to understand that my concluding suggestion is not to be taken as a joke. I believe $200,000 is to be spent upon the Hudson Bay railway this coming year. I think a portion of that money should be used to equip one of our merchant marine boats for the northern waters, and that we should send it up there to find out by practical demonstration whether or not that route is feasible. I think this is the only way by which this House and the country will be convinced of the commercial practicability of the route. I would also suggest that one or two members from each of the parties in the House might be put on board that ship, and if they ever came back they could speak with authority as to the feasibility of the scheme.

Mr. GRAHAM: Who would make the selection?

Item agreed to.

MARINE AND FISHERIES

Ocean and river service—maintenance and repairs to Dominion steamers and icebreakers, $1,500,000.

Mr. JELLIFF: How much of the vote of last year was spent?

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): $1,468. This vote is for the maintenance and repairs of Dominion steamers and icebreakers. It is to provide for the maintenance and operation of vessels employed in the icebreaking service in the St. Lawrence and the gulf, and provides for the supplying and maintenance of lighthouses, buoys, beacons and similar aids to navigation. We have, all told, twenty-seven vessels engaged in this service, nineteen on the Atlantic and the St. Lawrence; four on inland waters, and four on the Pacific coast. No change has been made in the service, and the appropriation is the same as that of last year.

Mr. MEIGHEN: How is that celebrated icebreaker, the Mikula, getting on now?

Mr. CARDIN: The Mikula has been rendering very good service and has been of very great help in doing away with the ice in the lower St. Lawrence, so that navigation on that account has, I think, been opened a little earlier. A most important work done by these icebreakers is the preventing of floods along the shores of the St. Lawrence. This year we received many requests from residents in those districts asking that icebreakers be put into service as early as possible to prevent floods and consequent damage along the shore.

Mr. MEIGHEN: How much was spent on repairs to the Mikula last year?

Mr. CARDIN: Last fiscal year, $9,188.

Mr. MEIGHEN: How much the year before?

Mr. CARDIN: Unfortunately I have not that information. It was given when the estimates were before the committee last year.

Mr. MEIGHEN: How much has been spent on the boat for repairs since it was secured?

Mr. CARDIN: Unfortunately we have not the information, but if the right hon. gentleman desires it we will get it and furnish it in detail.

Mr. MEIGHEN: I would like to get the repairs year by year. The boat would be pretty much under repair all this time, would it not?

Mr. CARDIN: I do not think so.

Mr. MEIGHEN: How many days did it operate this last fiscal year?

Mr. CARDIN: The boat has been in commission since the 21st November last.

Mr. MEIGHEN: What is meant by that, "in commission"?

Mr. CARDIN: In operation.

Mr. MEIGHEN: Was it cutting ice through the winter?

Mr. CARDIN: Yes, all winter, in the lower St. Lawrence.

Mr. MEIGHEN: It has not been under repair since November?

Mr. CARDIN: No.

Mr. MEIGHEN: There is a surprising dearth of information about this vote. What repairs were made to this boat this year prior to November? The information I get about it is that it is tied up under repairs most of the time, especially when it is needed.

Mr. CARDIN: I am afraid the information is not quite accurate. I can give a list of the amounts which have been paid to the workers. They are as follows:

Machinists	$ 198
Boilermakers	1,310
Carpenters	276
Joiners	197
Caulkers	3,020
Painters	658

We have also paid for grate repairs to the boilers, $1,416. The total is $9,188.

Mr. MEIGHEN: What was the cost of operation last year?

Mr. CARDIN: It was $157,000.

Mr. MEIGHEN: Of the one boat?

Mr. CARDIN: Yes. I can give the details.

Mr. MEIGHEN: That is the cost of operating the one ice-breaker for a year?

Mr. CARDIN: Yes.

Mr. MEIGHEN: It is some figure!

Mr. CARDIN: It is some figure indeed. We paid out in wages, $40,000; board $15,000; fuel, $50,000, deck, engine and steward supplies, $13,500; uniforms for the men, $3,000; hull and engine repairs, $36,000, making a total of $157,000 for the maintenance of this vessel for the whole year.

Mr. MEIGHEN: How does it come that all these amounts for wages, board, engine repairs, and so forth, are in round figures? Is it by contract?

Mr. CARDIN: The figures I gave are not the exact figures, but round numbers.

Mr. MEIGHEN: How many icebreakers have we.

Mr. CARDIN: Three.

Mr. MEIGHEN: What is the cost of the others in operation?

Mr. CARDIN: The cost of operation of the Lady Grey is $88,100.

Mr. MEIGHEN: How much for repairs?

Mr. CARDIN: Repairs, $18,000. It must be remembered that these vessels are doing very hard work; they need to be specially constructed for this work, and they are in need of repairs much more than any other class of vessel which is navigating the St. Lawrence.

Mr. MEIGHEN: What is the cost of operation of the other boat?

Mr. CARDIN: The cost of operation of the Montcalm is $152,000 and the amount spent for repairs, $27,000. This boat is older than the others.

Mr. MEIGHEN: Are those three all we have?

Mr. CARDIN: We have just these three ice breakers.

Mr. MEIGHEN: The total of these figures is only between $400,000 and $500,000. What is the rest of the money spent on?

Mr. CARDIN: We have several other boats upon which we are making expenditures. We have in all, I said before, 27 vessels, but I think it is 26. A certain number are operating on the Atlantic and on the St. Lawrence, four are operating on inland waters, and four on the Pacific coast. These vessels are being used to carry the necessary supplies to the lighthouses, for the maintenance of the buoy service and for other aids to navigation.

Mr. JELLIFF: Are any of them operating in Hudson straits?

Mr. CARDIN: Not yet.

Mr. LUCAS: Where are these three icebreakers operating?

Mr. CARDIN: Two of them are operating in the St. Lawrence, and one is kept at Sydney, during the winter months, breaking ice in the maritime ports and in the gulf.

Mr. CARRUTHERS: Are there any on lake Superior?

Mr. CARDIN: No.

Mr. GOULD: What system of inspection has the department over the repairs that are charged up to these boats?

Mr. CARDIN: We have a staff of inspectors who inspect, in detail, the repairs that are made on all these vessels.

Mr. GOULD: Do the salaries of these men come out of the first item?

Mr. CARDIN: Not those of the inspectors. This work is done by contract awarded after tender.

Mr. COOTE: Has the department bought any new boats this year?

Mr. CARDIN: No.

Mr. KELLNER: What is the idea of breaking the ice on the St. Lawrence, is it to open navigation earlier, or to prevent floods?

Mr. CARDIN: There are two objects in view. One is to open navigation earlier on the St. Lawrence, and the other, and I think the more important, is to prevent the flooding of lands adjoining the river. The ice used to jam not very far from the Quebec bridge, and when this happened the St. Lawrence rose to such an extent as to flood the banks of the river and cause damage to property. Very serious damages have been caused by floods that have originated in this way. I think the experience of the department has vindicated the practice of employing these icebreakers. Since it was inaugurated no serious damage has been caused, whereas formerly much damage was wrought by floods.

Mr. KELLNER: How much earlier do you open navigation?

Mr. CARDIN: About two or three weeks.

Mr. ROSS (Kingston): What duty would the boats be doing in the months of November and December?

Mr. CARDIN: Making sure that the vessels leaving the ports of Montreal and Quebec will get safely to sea notwithstanding the presence of ice in the lower St. Lawrence and in the gulf.

Mr. ROSS (Kingston): At what date does navigation close in Montreal?

Mr. CARDIN: About December 4.

Mr. POWER: In view of the enormous cost of fuel has the department ever considered the advisability of converting some of these icebreakers into oil burning vessels?

Mr. CARDIN: The matter has not been considered. This, I think, is due to the opinion that oil would be a more expensive fuel than coal.

Mr. ARTHURS: Are these vessels equipped with the wireless?

Mr. CARDIN: Yes.

Mr. ARTHURS: The vessels of the department that go out on the Great Lakes are not so equipped. A couple of years ago I called the attention of the then minister to that fact, and last fall we had a disaster to one of the boats belonging to the department which was wrecked on the Georgian bay after all other navigation had closed. These vessels have to be out, long after all the other vessels are necessarily off the lakes in order to take in the buoys. I pointed out to the minister that it was absolutely essential—whether they replaced or refitted the Grenville that was lost on the occasion referred to—that it would be absolutely necessary for the vessel to be equipped with the wireless.

Mr .CARDIN: That is a question which is being considered in the department. We shall probably equip all these vessels, that do not now possess it, with the wireless. A certain number already have the wireless system, and it will likely be extended to the others.

Mr. ARTHURS: The minister promised that two years ago, and I tried to impress upon him the absolute necessity of fitting out each of these boats with wireless on account of the dangerous work in which they are engaged both before and after the navigation season.

Mr. CARDIN: I can assure my hon. friend it will be done.

Mr. MEIGHEN: When?

Mr. CARDIN: This year.

Mr. GOULD: The total amount stated by the minister as having been voted last year and spent was $1,500,000.

Mr. MEIGHEN: The minister said $1,468,000.

Mr. CARDIN: That was 1923-24.

Mr. MEIGHEN: What about last year?

Mr. CARDIN: Unfortunately I have not the figures up to the end of the fiscal year, but up to March 1 last we had spent $1,215,268.

Mr. GOULD: By the amount of the vote this year you anticipate the expenditure will be about the same?

Mr. CARDIN: Practically the same. For a long time past that is practically what the expenditure has been each year.

Mr. MEIGHEN: How much was spent on repairs to the Mikula in 1923-24?

Mr. CARDIN: I gave the total for all the steamers. I have not the figures which my right hon. friend wishes for the Mikula in particular, but I think I could get them for him later on in the evening.

Mr. MEIGHEN: I should like that information right back to the time of the acquirement of the Mikula.

Mr. McMASTER (Translation): I must, Sir, congratulate the minister on his courtesy. He addresses the House in such gentle tones that the Conservatives try to follow suit and are not heard, and even the most exacting Progressive speaks so politely that it is almost impossible to hear him in this part of the House. I respectfully request, while congratulating the minister on his control over the House, that all speak louder, so that the members who take an interest in the proceedings and are seated in the remotest parts of the House, may listen, hear and follow intelligently the debate.

Some hon. MEMBERS: Hear, hear.

Mr. JACOBS: Would the hon. member mind repeating that in French?

Mr. CARDIN (Translation): I do not know if it is because I am familiar with the French language, however, I have no difficulty whatever in hearing the remarks of the hon. member for Brome (Mr. McMaster).

Mr. STEVENS: I should like to ask the minister—I think it would come quite properly under this heading—regarding the disaster, an account of which we read in the papers, in which some nine lives were lost. I understand there was no adequate life saving apparatus at hand, although there is some obsolete equipment in the neighbourhood, and I should like to have a statement from the minister if he has made any investigation of the case to his satisfaction in order to account for both the disaster and the degree to which assistance was rendered or failed to be rendered. It is unfortunate that we should have to look into an accident of this kind after it happens, but it has happened, and every effort should be made to prevent a recurrence of such a thing. Furthermore I think parliament ought to take notice of this sad occurrence when these nine lives, I think that was the number, were lost under most tragic circumstances. I know the efficiency of the department, and I have no doubt the minister has made some investigation, but I think it is due to parliament that some statement should be made respecting this case.

Mr. CARDIN: The observations of the hon. gentleman might properly come under another item, because there is a vote further on which deals with the life saving service. However, I have no objection at all to state that we are making inquiry in order to get all the necessary information in regard to the accident to which my hon. friend has referred. Our information is not complete, so that I am not in a position now to make any statement in regard to it. As soon as we have obtained all the information, I shall be only too pleased to make a complete explanation of the situation to the House.

Mr. STEVENS: I quite appreciate that, and I suggest that this item, 216, "life saving service", including rewards for saving life, should stand until that information is to hand. Would the minister be good enough to make particular inquiries into the matter of the lifeboat or so-called lifeboat. I understand it was an old-fashioned rowboat, and not a power boat, and some nine men had been employed to manage it. I am speaking entirely subject to correction, but I think a very careful investigation should be made of that particular phase of the case, and when the item comes up, and this matter can be properly discussed, the minister will have this information at hand.

Mr. CARDIN: I quite agree that that item shall stand.

Mr. COOTE: How many months in the year would these ice-breakers be in operation?

Mr. CARDIN: They have been in operation since November last, up to the opening of navigation.

Mr. COOTE: The reason I ask that question is that I understood the minister to say that the fuel bill for one of the boats was

$50,000, and I was wondering if he would give the committee some explanation of the item, because I suppose the boat would only be in operation for a few months, and it seems to me that is a very excessive amount to pay for fuel.

Mr. CARDIN: The Lady Grey and the Montcalm are in operation the year round.

Mr. COOTE: This $50,000 was for the Mikula.

Mr. CARDIN: Yes, but this vessel is a very powerful boat and it requires a large amount of money to supply the coal for it. When the season of ice-breaking is closed, this boat is still kept under steam. It is used as a help to navigation when assistance is required in the case of wrecks or other emergencies.

Mr. COOTE: Would the minister tell us where the coal is bought, and what price per ton is paid for it?

Mr. CARDIN: It is bought in the city of Quebec, and the price is $6.90 per ton.

Mr. COOTE: Would that be Nova Scotia coal?

Mr. CARDIN: Yes, Nova Scotia coal.

Item agreed to.

Investigation into wrecks, $6,000.

Mr. BAXTER: Can the minister tell me in this connection if the board which occasionally meets and holds investigations into accidents has power to deal with a certificate of a master granted by the British Board of Trade? I know of one case where the board has professed to suspend such a certificate, and I was rather of the opinion that it was not within the competence of the board to make such a dismissal. I have not fully investigated the subject and would like to know the opinion of the department.

Mr. CARDIN: We have always exercised these powers and we were under the impression that we had the right to do so in so far as they relate to steamships navigated in Canadian waters.

Mr. BAXTER: I know the case I refer to, and I thought it was a very painful one. It occurred just outside St. John harbour. I may say that the ship, the master of which was suspended, was held responsible in damages in the Admiralty Court; so that the fault was imputed in law to that ship. At the same time it was a South American vessel, owned or operated on behalf of the government of Peru, if I am not mistaken. The captain was an Englishman and held a certificate of the British Board of Trade, and the circumstances were such that I did not think the decision was a correct one. However, that was in the judgment of the tribunal. But I doubt the legal power of a Canadian tribunal to deal with a certificate of the British Board of Trade. I assume it would be quite competent to pass the information to the British Board of Trade and request their action. In order to prevent any possible mistakes in the future, would the minister obtain the opinion of the Department of Justice, and have this tribunal instructed as to what their powers are in regard to such matters? I think that would avoid some misconception and perhaps some injustice.

Mr. CARDIN: This question has never been raised before, but I will be only too glad to follow the suggestion of the hon. member.

Item agreed to.

Navigation schools, $7,000.

Mr. BAXTER: These schools are being conducted in Canada now. Will the minister tell me how much is being paid in connection with each school?

Mr. CARDIN: We have seven schools; one at each of the following places, Halifax, Yarmouth, North Sydney, St. John, Quebec, Collingwood, Vancouver and Kingston.

Mr. BAXTER: What is the cost of each school?

Mr. CARDIN: The amounts paid are as follows:

Halifax	$1,860
Yarmouth	1,500
North Sydney	360
Kingston, grant to navigation school in Queen's University	500

In Collingwood Captain Coles is paid as examiner; he is not receiving any salary as teacher. The same applies to Vancouver. We have an equipment comprising stationery, charts, books, nautical instruments and so on, amounting to $620.

Mr. BAXTER: How many certificates have been granted at each of the schools in the past year?

Mr. CARDIN: There were granted at Halifax, 22; at Yarmouth, 3; at St. John, 30; at Quebec, 5; at Kingston, 9, or 69 in all. The attendance was 166.

Mr. DUFF: I want to make a plea for Captain O'Hara, the man in charge of the school at Halifax. While he does not live

in my constituency, my constituents go to him to study in preparation for their examinations. He is an old master mariner, who gives splendid satisfaction. He is a most capable teacher and he receives from the government a salary of only $155 per month. He gave up the sea four or five years ago. During the war he thought he could do something for his country by teaching young men navigation and since then he has been endeavouring to obtain an increase in salary. I can understand that the government is short of money, but I do think that a man like Captain O'Hara, who could earn anywhere from $200 to $300 a month at sea, deserves more than $155 a month at the hands of the government in his capacity as teacher of navigation. I would ask the minister to take his case into careful consideration with a view to increasing his salary.

Item agreed to.

To provide for the temporary relief of distressed seamen, $5,000.

Mr. JELLIFF: How much was spent last year for relief purposes and how many were relieved?

Mr. CARDIN: We paid out $336.

Mr. JELLIFF: That was out of the appropriation of $5,000 last year. What did you do with the balance?

Mr. CARDIN: It went back into the treasury.

Mr. JELLIFF: Do you need the same amount this year?

Mr. CARDIN: We never know how much will be needed because we do not know what number of seamen will be in distress.

Mr. JELLIFF: How many cases did you relieve?

Mr. CARDIN: I have not that information just now.

Mr. GOULD: Does this apply to the seamen on government boats alone?

Mr. CARDIN: It applies to all seamen.

Mr. GOULD: What is the nature of the temporary relief given, and who were the recipients of the $336?

Mr. CARDIN: We provide the means of enabling seamen who are in distress in foreign countries to return to Canada.

Mr. SPENCER: Does that apply to foreign seamen stranded in Canada?

Mr. CARDIN: No. Every country has its own arrangement.

Mr. BAXTER: I think that under the Merchant Shipping Act, wherever it is possible the money is recovered. There are cases however, where the vessel is lost and the owners cannot be got at, where seamen in distress would be in a pitiable condition if it were not for some fund of this kind.

Mr. SUTHERLAND: I notice in the Auditor General's report for the year ending March 31 that there was $2,302 for printing. What is the necessity for so much printing in connection with this item?

Mr. CARDIN: I do not know of any expenses that were incurred in connection with printing; probably there is an error somewhere.

Mr. SUTHERLAND: In the Auditor General's statement with regard to the temporary relief of distressed seamen there appears the sum of $2,988.35, and of this $2,302.51 was for public printing and stationery.

Mr. CARDIN: This money was used to provide seamen with what are known as continuous discharge books. Probably it should come under another item, but it is the explanation of the item which my hon. friend finds in the Auditor General's report.

Mr. SUTHERLAND: Does that appear from year to year?

Mr. CARDIN: These books can be used for a number of years.

Mr. BAXTER: Do I understand that several thousand dollars are used for the printing of forms in connection with the relief of distressed seamen?

Mr. CARDIN: No.

Mr. BAXTER: What are the forms that come under this item?

Mr. DUFF: Mr. Chairman, the books that the minister has referred to are supplied to sailors by shipping masters, and after the trip the master writes in the books that the seamen are properly discharged. I presume these books are used all over Canada, and perhaps if the department had several years' supply printed it would cost this amount of money. These books are a very necessary protection for our seamen.

Mr. BAXTER: There can be no question, Mr. Chairman, of the necessity of the books which the hon. member for Lunenburg speaks of. But those books have no connection with the temporary relief of distressed seamen.

Mr. DUFF: No, they do not come under that item.

Mr. BAXTER: At page O-26 of the Auditor General's report for 1923-24, under "Temporary relief of distressed seamen" I find the following item:

Public Printing and Stationery department, Ottawa: printing, $2,138.19; accounts under $100, miscellaneous, $164.32—total, $2,302.51.

I could understand the $164.32 being paid for these books, but what in the world $2,138.19 would be paid for printing in connection with the temporary relief of distressed seamen I cannot see. No doubt it would be quite proper to furnish the books my hon. friend speaks of, but they should be under some other heading in the accounts.

Mr. DUFF: That is quite right. The cost of these books has no connection at all with the moneys which are paid to distressed seamen. It is quite evident that they are placed in the wrong vote, or were paid for out of money remaining over from the vote.

Mr. BAXTER: I am not suggesting any special iniquity in connection with this, but, on the other hand, I do not think that the matter, though so small as a couple of thousand dollars, is entirely devoid of some seriousness. If a matter of this kind is not discovered in the routine of the Auditor General's department, and is only picked up by a member of the House looking over the report at night, it seems to me the appointment of a new Auditor General has not as yet set everything right in that department. I think the Minister of Marine and Fisheries is relieved of responsibility, but it passes over to the Acting Minister of Finance (Mr. Robb), and we may fairly request him to investigate the Auditor General's department to see why things should be in this condition. It is a very small item compared with the total payments by the Dominion, but one is led to suspect that a similar blunder may just as well occur in regard to the entering of a surplus in some of the other accounts.

Item agreed to.

Removal of obstructions in navigable waters, $5,000.

Mr. BAXTER: How much of this was spent for printing?

Mr. CARDIN: We spent $2,607 last year for the removal of wrecks.

Sir HENRY DRAYTON: Were those wrecks in salt water, fresh water or where? Were there any around Point Pelee?

[Mr. Baxter.]

Mr. CARDIN: There were eleven removals of obstructions from the New Brunswick and Nova Scotia coast, Charlottetown, the Richelieu river, Port Credit, and the west side of Amherst island, Ontario.

Mr. BOYS: Has the minister any record of money spent for the removal of a sunken vessel from the wharf at Big Bay point, lake Simcoe? I think I mentioned this two years ago. So far as I know the wreck is still there. If nothing has been done towards its removal, I would ask the minister to make a note of it. The wreck is certainly a menace to safety, and has been there for some time. I am not sure who the owner was. I think he was asked to attend to it, but did not. It seems to me to be the duty of the department to see that that vessel is removed.

Mr. CARDIN: I shall be only too glad to inquire into the matter and to act in accordance with my hon. friend's suggestion.

Mr. BAXTER: It will be seen from the Auditor General's report that $365.20 was paid for advertising in various papers, which would be quite correct, in connection with the removal of wrecks. But the Public Printing and Stationery department comes in for $238,29, with an additional amount for stationery of $167.86. There are not many wrecks to be removed, and I am not aware that it is necessary to fill in forms when a wreck has occurred. But there is something stranger still. There is an item which reads as follows:

Detailed nature: Construction of lights, $178.82; Maintenance of lights, New Brunswick, $100.42; Prince Edward Island, $212.13.

These amounts are not considerable in themselves, but we seem to have hit to-night upon a practice which is not to be commended, that is, the including under a particular vote of expenditures which do not properly belong to it. I do not suggest that there is anything wrong with the payments themselves, but there is something wrong with a system which permits construction of lights "and maintenance of lights" to be charged up to the removal of obstructions in navigable waters.

Mr. CARDIN: These lights are placed on the wrecks immediately after the wreck has occurred in order to protect navigators. In regard to printing, we have to supply forms in connection with claims, and so on, but these expenditures do not occur every year.

Mr. BAXTER: I do not think the minister can be fully satisfied with his own explanation. I am aware that it is necessary where practicable to indicate the position of a wreck

by attaching lights to it, but that is a very different thing from the construction of lights. This simply means that some bit of a lighthouse has been fixed up, or a wharf light or something of that kind, and because there was not enough money in the proper appropriation to pay for it, the expenditure is put under this head. I suggest that the minister, instead of trying to pass the matter by with an explanation that he himself must feel to be of doubtful quality, should rather admit that the thing is wrong and determine to give instructions to his department that expenditures shall be charged to the proper accounts.

Mr. DUFF: If my hon. friend is serious he must realize, coming from a maritime constituency, that it is necessary to do more than hang a lantern on a wreck. Somebody must be hired to look after the light, especially at night.

Mr. BAXTER: Can my hon. friend by any strategy make "construction of light" out of that?

Mr. DUFF: Precisely, you must construct something on the wreck, perhaps forty feet in the air, so that mariners coming along on other vessels will be able to see the light and keep clear of the wreck. The amount would cover, no doubt, the remuneration of the man who constructs the light as well as of the man who attends it continuously until the wreck is removed.

Mr. SUTHERLAND: Can the minister inform the committee whether there was any expense in connection with the removal of wrecks at Belle River last year?

Item agreed to.

Inspection of live stock shipments, $4,000.

Mr. BAXTER: In 1922-23 the vote for this purpose was $3,000; in 1923-24, $3,500; in 1924-25, $4,000, and this year it is the same. It is well understood that live stock shipping has considerably fallen off, so that there would hardly seem to be occasion for additional inspection. Will the minister give some details of this item, and also let us know whether printing, either by the Department of Public Printing and Stationery or outside of it, figures to any considerable extent?

Mr. CARDIN: We make no inspection of the animals themselves; we inspect only the fittings on the boats. In 1923-24, the shipments of live stock from Montreal were 29,963; in 1924-25, 44,174; from St. John, 1923-24, 6,521, and in 1924-25, 10,953.

Mr. BAXTER: How many inspectors are there, and what were they paid?

Mr. CARDIN: At Montreal, two: Mr. Delorme, $1,380; Mr. O'Grady, $1,380. At St. John, Mr. J. M. Martin, who is a steamboat inspector, received an additional amount of $300 for his inspection work. At Quebec, the work of inspection was done by the port warden who last year received $40 in fees.

Item agreed to.

To continue subsidies for wrecking plants—Quebec and British Columbia, $35,000.

Mr. BAXTER: Will the minister tell us what services were performed last year, giving us the names of the vessels that required assistance, and the amount that was paid?

Mr. CARDIN: The British Columbia company receives the sum of $10,000, and the Quebec plant $25,000. We have contracts with these companies. The Quebec plant gave its services to the following steamers: The British steamers Cornishman and Caledonian, Canadian passenger steamer Saguenay, Canadian Government Merchant Marine steamer Canadian Ranger, British steamers Linkmoor and Cairmona, Canadian passenger steamer Cape Diamond, British steamer Clearpool, Greek steamer Kate and British steamer Maresfield. The Pacific Salvage Company, Limited, was engaged in salvage operations with the following boats; Tatjona, Admiral Rodman, Admiral Peary, Rochelie, Lady Kindersley, Martha Hamsoth, Qualium, Arcata, Ravelli and Cascade.

Mr. DUFF: It is good value for the money.

Item agreed to.

Unforeseen expenses, $5,000.

Mr. SPENCER: What was the amount spent last year?

Mr. CARDIN: Up to the 1st of March last, $2,929.

Mr. BAXTER: How much of that was for printing?

Mr. CARDIN: The expenditure last year for printing the Canadian Port and Harbour Directory was $3,725.

Mr. BAXTER: I thought the total expenditure was given as $2,929. I would like the minister to investigate this branch of the vote. In the previous year out of a total expenditure of a little less than $5,000, $388.17 was spent for printing. This year nearly the whole of the unforeseen expenses were for printing. Now is it quite reasonable for any man to say that the printing of the department is an unforeseen expense? I have always thought that an unforeseen expense was

something that could not reasonably be apprehended or provided for, something that arose in the nature of an emergency.

Mr. ARCHAMBAULT: That is force majeure.

Mr. BAXTER: I do not want to have to think of the printing department in those terms. I thought it was a very substantial block of buildings, well equipped and ready for work, and not by any means unforeseen. Really we ought to have a little better way of dealing with the matter than this. I say again it is not a question of the misapplication of public money, but it certainly is a question of a misconception of the idea of a vote. The responsibility of parliament, and particularly of the minister, is behind the principle that money must be definitely spent for the purposes which parliament has sanctioned, and to call ordinary printing "unforeseen expenses" is really a misuse of the term. I have personally, if not politically, a very great deal of confidence in the minister, and I trust that he will devote his energies to reforming this abuse of the public accounts.

Mr. CARDIN: I am quite free to admit there is much to be said in favour of the contention of the hon. gentleman, but we are simply following certain practices which have been in vogue in the department for a long time, and we are not always in a position to make all the changes we want.

Mr. BAXTER: But we have a new Auditor General to start these reforms.

Mr. CARDIN: I can assure my hon. friend I will do the best I can.

Item agreed to.

Hydrographic and tidal and current surveys, and to provide for the maintenance and repair of hydrographic steamers, $340,000.

Mr. BOYS: What was expended last year?

Mr. CARDIN: Up to the 1st March we spent $238,685.34.

Mr. BOYS: How has that expenditure been distributed?

Mr. CARDIN: In view of the fact that our figures only cover the period up to the 1st March last I could not state what the actual amount under the different headings was. This vote covers salaries, stores, repairs to the boats that are used, and sundries. We operate several boats in this service.

Mr. HANSON: In what waters were these surveys carried on last year?

[Mr. Baxter.]

Mr. CARDIN: On the Pacific coast, on the Atlantic coast, and on the St. Lawrence.

Mr. HANSON: That is very general. I did not suppose you had gone to the Arctic although you may yet go. I should like to know what new waters were charted last year. Is it necessary that these surveys should be kept up year after year? Surely all the coasts of this country have been charted by this time?

Mr. CARDIN: On the Pacific coast the work of this branch of the survey was carried out with the Canadian government steamer, Lillooet, and the houseboat Somass, the Canadian government steamer Restless not being placed in commission.

The early part of the season was occupied in the sweeping of First narrows, Vancouver, after which surveys of the following ten bays, inlets, and harbours were completed:—San Mateo bay, Port Neville, Barnard harbour, Tucker bay, Surf inlet, Laredo channel, Caamano sound, Meyers passage, Cumshewa inlet and Porlier pass. In addition tidal observations were obtained at Porlier pass, Meyers passage and Sandspit, and current observations to determine slack water in Meyers passage were taken during ninety nine days.

On the Atlantic coast the Canadian government steamer Acadia not being placed in commission, the survey operations on the southeast coast of Nova Scotia were carried out with a shore-party. During the summer a survey of Lockeport harbour and approaches was completed, the latter part of the season being occupied in making a survey of Lunenburg harbour and approaches.

For the work of this branch of the survey on the lower St. Lawrence the steamer Cartier was again commissioned, and operations were continued eastward of the southwest part of Anticosti island and along the south shore of the north channel where navigation has much increased since lights were placed on the island. A camp-party carried out operations at Mingan islands from launches.

On the Magdalen islands, the steamer Bayfield not being in commission, the survey work commenced last season was continued with a shore-party. This consisted chiefly in sounding off the west coast of the island, the latter part of the season being occupied in the Restigouche with a view to completing a chart of the locality.

Mr. BAXTER: May I ask if the Cartier is employed in the winter season?

Mr. CARDIN: She is usually employed in the winter season.

Mr. BAXTER: The captain and crew are paid full time are they not?

Mr. CARDIN: The captain is, but the crew is not.

Sir HENRY DRAYTON: We have had a good deal of discussion on these surveys more than once, and there has been a pretty general expression of opinion that we ought to economize in connection with new survey work, except, of course, in places where it is absolutely necessary. This vote is not coming down at all. Apparently we are doing just as much new survey work in this connection as we ever did. Now suppose we set to work and practise economy in this respect, unless it would be too much to ask my hon. friends opposite to attempt to practise some of the principles they preach.

Some hon. MEMBERS: Oh, oh.

Sir HENRY DRAYTON: What is the trouble?

Mr. DUFF: Speak for yourself.

Sir HENRY DRAYTON: Hon. gentlemen do not seem to like the prescriptions which they give on the platform. Supposing we consider the government's statements seriously —and I suppose I am doing them too much honour in suggesting that—and try to make a reduction in some direction. We are keeping this vote up just as it was. This is a matter of new work and I submit that unless it is shown to be essential it should not go on. Just because this work has been going on all this time is no reason why it should continue. We have had nothing to show any special necessity here for continuing. Perhaps the minister could tell me, for example, how much was spent in 1920 on this work?

Mr. CARDIN: I could not say at present what amount was spent in 1920. If I remember rightly, however, we reduced this vote last year by a very substantial amount.

Sir HENRY DRAYTON: Then I am afraid these estimates are wrongly printed because they do not show any reduction. The item is exactly the same.

Mr. CARDIN: Last year we made a very substantial reduction as compared with the vote of the previous year.

Sir HENRY DRAYTON: What was it in 1920?

Mr. NEILL: The trouble with this vote is that it is not big enough. It is all very well for hon. gentlemen who have had their requirements attended to in the past to say that we ought to restrict the vote, but it is urgently needed and it should be bigger than it is, especially on the west coast of Vancouver Island and on the west coast of the mainland of British Columbia where there are large areas that are practically uncharted It may be said that Captain Vancouver did chart those waters in a rough way, but you can imagine the conditions at that time, and while the survey work carried out then was more or less accurate it was done on such a broad scale, so to speak, that it does not in the case of many bays or harbours show the obstructions in them, soundings only being taken at points far apart. And yet there may be to-day pinnacle rocks, and so on, that would be extremely destructive to shipping. I do not know whether the hon. member for York-Sunbury (Mr. Hanson) or the ex-Minister of Finance (Sir Henry Drayton) know it or not, but on the west coast of the Pacific, particularly on the west coast of Vancouver island, industries are developing very rapidly. Sawmills, canneries, salteries and so on are being established. I recall one instance where there was a dry salt herring saltery in operation and they chartered a foreign boat to come in and load there. When the captain came in and looked at this old chart prepared by Captain Vancouver he said "This is not good enough for me, I will not take the risk." So he moved his boat for some miles to where there was a charted harbour. The consequence was the whole cargo had to be lightered over to that harbour, which was a tremendous disadvantage for the owners, and resulted in an added cost of something like $2,000 on that one shipment alone. Another reason why the vote should be increased or at least not reduced—and I could multiply instances—they have this boat called the Lillooet, which is suitable to go out in comparatively rough water. A case may arise in a harbour where a smaller boat can accomplish the work efficiently, but they have no such boat in commission and this big boat has to be brought down at considerable expense and delay a long distance, when a small boat could have done it more cheaply, without interfering with what might be called the main work of the survey boat. I can assure members I am not speaking with any desire to spend money in the district because these men who are employed are departmental men, but it is very urgent and pressing that these waters should be charted when occasion requires. There are two places in my district at this moment urgently requiring the attention of the department, and when I go to the department and make the request, I am told the boat has sufficient

work ahead to keep it going for eighteen months.

Mr. McBRIDE: I fully agree with the remarks of my hon. friend from Comox-Alberni (Mr. Neill) and, speaking from practical experience, I know it is very essential to the welfare of the shipping on the Pacific coast to have this work carried on. Less than two years ago I was going up Jervis inlet. The boat was supposed to be running in thirty fathoms of water and all of a sudden it struck a rock. This place was not charted. When we came back the captain reported it and every chart issued since that time has this rock marked on it. These places must be charted if shipping is to be carried on. Of course it may be all right on the Atlantic, but the Pacific is a new place and they have not done enough of this government work.

Mr. BOYS: In 1923-1924 the item was $360,000, and in 1924-1925 it was reduced to $210,000, and it is increased this year and I suppose in connection with that increase some new work must be under contemplation. Could the minister indicate what the work that warrants that increase is?

Mr. CARDIN: I am informed that in the first instance we had the two items relating practically to the same thing. We had the tidal surveys under a separate item, and this year we have combined the two items under one heading.

Sir HENRY DRAYTON: Well, Mr. Chairman, it is very interesting to learn that there is some reason for the vote. The members from British Columbia give us at least some argument for voting away this money. I wonder if we could get a little bit further and obtain information as to what particular work will be done and where the places are. Perhaps the hon. members from British Columbia will be kind enough to give us the names of the places were they want this work done, what it will cost, and when it will be gone on with. We have a large vote. We have had some assistance given to the minister, and I would like to see that assistance put in such a way that it will mean something and that it will not be made simply an excuse for this vote passing. I have no doubt the hon. members are referring to something specific. I have no doubt they can give us the names of the harbours which require to be helped. I know the west coast pretty well, and I do know there is dangerous navigation on the west coast in lots of places, but I know that we do not want to have money spent on new surveys unless there is some real public necessity for it at these points.

Mr. NEILL: Two places urgently requiring charting at this moment are, a bay south of Reid island and another place on the west arm of Quatsino sound. That work was asked for at least eight months ago, but there is small prospect of getting it done in the immediate future. These are comparatively small items, but the whole west coast of Vancouver island requires charting or re-charting, because it was done in a very superficial way originally; the charting cannot be trusted, and the insurance companies will not permit the boats to go up there. This west coast is growing, new settlements are springing up and they urgently require reliable charts for those waters. This boat, the Lillooet, is carrying on some extensive work in connection with the Queen Charlotte islands in Skeena district, and I am told it is the policy of the department, when they finish that work, which they expect to do in eighteen months, to start work on the west coast of Vancouver island which has been asked for by the Vancouver Chamber of Commerce and Victoria Board of Trade and various other public bodies. The work mentioned by the hon. member for Cariboo, Jervis inlet, is also in my district, and I am familiar with the necessity for the work done there. There was some work done last year in Tucker bay. A passenger steamer went in there last year, struck a rock and suffered to the extent of £20,000 or £30,000 damage, and refused to go in there again till the bay was charted. There is a considerable population on that island, and communication to the mainland was entirely cut off until the bay was charted again by the Lillooet.

Mr. BOYS: I take it for granted that the work contemplated by the vote is all itemized, and I presume the minister can tell us exactly where it is to be performed. No doubt what has just been said is correct, but possibly the places which have been mentioned are not included in the estimates this year.

Mr. CARDIN: In regard to the Pacific coast work, the steamer Lillooet will continue operations off the British Columbia coast, but whether it will be in continuation of last season's operations has not been decided, I am informed.

Mr. BOYS: At what estimated cost will that work be performed?

Mr. CARDIN: The cost will be $103,000. The steamer Restless will not be used as a survey boat, but her survey party will operate

from the shore in sheltered localities, surveying some of the many harbours that require to be charted.

Mr. BOYS: Is that on the Pacific coast?

Mr. CARDIN: Yes. On the Atlantic coast the steamer Acadia will not be used as a survey boat but her survey party will continue to operate from the shore on the southeast coast of Nova Scotia. On the gulf of St. Lawrence the steamer Bayfield will continue out of commission, and her party will operate from the shore in and around Magdalen islands.

Mr. BOYS: Will the minister give the estimated cost of the work?

Mr. CARDIN: In regard to the work on the Atlantic coast, the estimated cost is $28,000 and in the gulf of St. Lawrence, $28,500. In the lower St. Lawrence the steamer Cartier with the aid of an auxiliary shore party will continue her survey work north of Anticosti island and off Gaspe coast, at an approximate cost of $80,000. In reference to the automatic gauges their operation will be continued as heretofore; as to engraving, printing, and so forth, the work of the division will be continued, but on a somewhat enlarged scale necessitated by the increased work. That is the total work proposed to be performed.

Mr. BOYS: I am not sufficiently familiar with this work to know whether or not any of the items the minister referred to would properly come under the heading of Tidal and Current Surveys. I understood the minister to say these two items were combined in the estimates this year, although separated last year.

Mr. CARDIN: What I have enumerated makes a total of $310,000 for the hydrographic survey.

Mr. BOYS: The minister means all combined?

Mr. CARDIN: Yes, the total service.

Mr. HANSON: With reference to the surveys at Lunenburg and Lockeport; how long since the ports on the south shore of Nova Scotia were charted previously? That is an old settled part of the country and I have no doubt that the harbour has been charted on more than one occasion, and very well charted. What is the necessity of a resurvey of these two particular harbours?

Mr. CARDIN: The surveys were made a long time ago in these harbours and it has been found that they were not altogether reliable, several complaints having been received.

Mr. HANSON: The minister cannot tell us when the surveys were made. Were they made because there is so much dredging done all the time to make a harbour out of it? Surely with the number of ships sailing in and out of Lunenburg, the harbour must have been well charted. The answer given by the minister is not convincing.

Mr. DUFF: The money spent in this connection was paid to people from Ottawa; it did not go to anyone in Lunenburg. My hon. friend need not worry that any of my friends are on the job, if that is what is bothering him. If he has read anything about marine matters—because he has no practical experience—he will have found that it is necessary to re-survey harbours every four or five years, for the reason that with the currents moving continually the bottom of the harbour shifts.

Mr. HANSON: And dredging.

Mr. DUFF: Yes, Courtenay bay, for instance. If my hon. friend will read enough on the subject he will find that in the Old Country they spend millions of dollars in surveying around the coast, and this must be done practically every year.

Mr. HANSON: The hon. gentleman is unduly sensitive; I was not suggesting anything

Mr. DUFF: I am not sensitive.

Mr. HANSON: Usually he does not claim any credit for being over-sensitive. I was not making any reference to money spent in his constituency in particular. I did ask for certain information from the minister which I have failed to get so far. If the minister can tell us when the last survey of Lunenburg harbour was made we shall be able to see whether another survey is needed.

Mr. DUFF: You must think the minister is an old man.

Mr. HANSON: If the hon. member will give the minister time to collect himself we shall no doubt get the information.

Mr. CARDIN: These charts are very old. In 1882 an agitation developed for a proper survey of the Canadian shores of the Great Lakes and for an up-to-date chart to replace the one then in use, which had been in existence for some fifty years. I suppose the same thing is largely true of the Maritime provinces. However, I regret that I have no specific information regarding this particular harbour, although, from the information we have, I

think the survey must have been made fifty years or so ago.

Mr. DUFF: I have lived there a very long time and this is the first survey I remember anything about.

Mr. CARDIN: To complete the answer to my hon. friend (Mr. Boys) I shall read the following statement in regard to tidal and current surveys:

The functions of the tidal and current survey is to investigate and determine ocean currents, to record changes and fluctuations in volocity, brought into relation with the tides: the observation of tides, to determine the rise and fall and the exact time thereof; the correlation of tidal streams with the time of the tide, for the determination of slack waters, of mean sea level, of low water datum, of tide levels, and of high water levels. Like the hydrographic survey, this is a distinctly marine service. Its particular function is to insure, as far as possible, the safety of navigation, and in this respect is inseperably connected with other marine activities. Also, like the hydrographic survey, and for the same reasons, its importance can hardly be overestimated.

We propose to spend $30,000 in the surveys.

Mr. BOYS: That information is instructive but it is not quite what I wanted to know. I understood from the minister that the two items were consolidated and that there was a saving in consequence. If I rightly apprehend the information given, the minister expects to spend $330,000 of the $340,000 of item 217, and he has intimated that he expects to spend about $30,000 in connection with tidal and current surveys. If that is so, and this is to be added to the consolidation, there would be a total of $360,000 instead of $340,000.

Mr. CARDIN: No; the amount to be spent in regard to hydrographic surveys is $310,000.

Mr. BOYS: I thought the minister in giving the list a moment ago concluded with the statement that the total was to be $330,000 apart from $30,000.

Mr. CARDIN: No, $310,000. In this connection I desire to state that our department has suffered quite a serious loss lately through the death of Mr. W. J. Stewart, whose funeral took place this afternoon. Mr. Stewart was in charge of this very important branch of the service. He was a man of high qualifications who devoted himself entirely to the service of the country, and I think that his memory deserves some consideration on our part. I think it only proper that I should take this opportunity to extend to his widow and family my most heartfelt condolence. I feel that the department, through his death, has lost one of its best officials; indeed, not only the department but the entire service of Canada will suffer, for he was a man whose efficient services it will be difficult to replace.

Item agreed to.

Radio service, and to provide for the construction and maintenance of wireless stations and the general administration of radio throughout the Dominion, $500,000.

Mr. BOYS: I observe that last year there was an increase of $67,510. Does the minister think that the whole of the present vote is warranted?

Mr. CARDIN: This vote is a very large one, but we must remember that the service is of considerable importance and is developing every day. The radio is becoming more and more essential, particularly in connection with navigation. We spent, up to March 1st past, $347,044. We have a certain amount with which we are going to pay expenses that have been incurred up to the present time. Perhaps it would be well to state in a few words what we propose to do. This proposed appropriation is to provide for the maintenance and repair, throughout the year, of fifty-two government radio-telegraph stations, direction finding stations, and radio beacon stations on the east coast, Great Lakes and Pacific coast of the Dominion, and for the general administration of radio telegraphy, including the licensing and inspection of ship stations, private and commercial land stations, receiving stations, radiotelephone broadcasting stations, the administration of broadcasting and the examination of commercial operators for radio certificates. It also provides for the construction and for the maintenance after construction of three additional stations. The discoveries in radio are very frequent, and we have to follow the progress in order to have the system up to date, and so benefit by these discoveries.

Mr. BOYS: I understand the money is for stations now existing, with the exception of three; if that be so, will the minister say where the three new stations are to be located?

Mr. STORK: While that information is being looked up, Mr. Chairman, I have something to bring to the minister's attention. I trust that a portion of the $500,000 will be used in the construction of a wireless station at Stewart, at the end of the Portland canal. On various occasions I have received most insistent demands from the locality for a wireless service, which demands I endorse with all the energy I possess, for this reason: at the present time Stewart is served by land

wire, and, due to the excessive snowfalls, amounting at times to eighteen and twenty feet, that wire is down sometimes for weeks at a stretch. The Portland district is one of the greatest mining districts in all British Columbia, many valuable and important mines being in operation in the locality, and when the land wire is down the people are compelled to go over to Hyder, an Alaskan town near the international boundary, close to Stewart, and utilize the wireless from there to Seattle. They feel they are entitled to a much better service than they are now getting. I trust therefore that some provision will be made for the installation of an up to date wireless station, and I hope the minister will give the matter consideration in connection with this item.

Mr. CARDIN: Replying to my hon. friend from South Simcoe (Mr. Boys) the new stations will be at Vancouver, Belle Isle and Mary island in British Columbia.

Mr. BOYS: I was correct in my assumption that the other expenditure was for existing stations, and that only three new stations are to be constructed?

Mr. CARDIN: Yes.

Mr. HANSON: How many stations are there on the Atlantic coast, and where are they located?

Mr. CARDIN: We have fifty-one stations, twenty-eight on the east coast, fourteen on the west coast, eight on the Great Lakes and one at Hudson bay.

Mr. HANSON: Does the government own the wireless station at Newcastle, New Brunswick?

Mr. CARDIN: No.

Sir HENRY DRAYTON: Mr. Chairman, we had a discussion, I forget whether it was last session or the session before, as to the advisability of substituting a radio service for some more of the overland telegraph lines that were very expensive to maintain and bringing in no revenue at all. Is that being gone on with at all in connection with this vote, or is it in some other department?

Mr. CARDIN: It is in the Interior department.

Sir HENRY DRAYTON: Perhaps my hon. friend can tell me whether the Interior department has a radio service of its own?

Mr. CARDIN: These stations are operated by the Interior department and the Department of National Defence. There are three of them.

Sir HENRY DRAYTON: Is that to take the place of the former land line, or is it a new venture?

Mr. CARDIN: I do not know.

Sir HENRY DRAYTON: Perhaps it is not fair to ask my hon. friend that. Has the minister thought at all about the consolidation of wireless and radio? We now have services of this kind under the Interior department, Naval Service, Defence, and Railways.

Mr. GRAHAM: You cannot consolidate those.

Sir HENRY DRAYTON: The railways? Well, the others are on a commercial basis, but as the railway radio is almost entirely for ornamental or amusement purposes, with sometimes a little bit of glorification or advertising thrown in, perhaps it would not be fair to suggest that this radio be tied up with the others.

An hon. MEMBER: Clever.

Sir HENRY DRAYTON: Well, my hon. friend is an excellent judge; let him assist me now in seeing whether we cannot save a little money. The Minister of Railways wants the railway end of it kept out. All right; but why could not the other radio services be run together?

Mr. ARCHAMBAULT: How could they be run together?

Sir HENRY DRAYTON: I suppose they could run together just as well as telegraph companies, the consolidation of which we have found to be a good thing. Perhaps my hon. friend thinks they should be still further split up. I understand that these stations now under discussion take commercial messages as well as carry on the work of the department; why could they not look after the business of the other departments as well? Why could we not have less overhead and less cost by having the one set of activities?

Mr. GRAHAM: The Radio department proper was detached from the Department of National Defence two years ago and handed to the Marine department, with the exception of what was required for the purposes of defence, or, perhaps I should say, the purposes of training, particularly in connection with the air service.

Sir HENRY DRAYTON: For the purpose, really, of teaching radio, I suppose.

Mr. GRAHAM: I would not go so far as to say that. It has to do not only with the training of the men in flying, but with

the work of protecting the forests, and so on. We discussed the matter quite fully when we were handling the Radio branch over to the Marine department and it was thought by the officials that that part of it should be retained for that purpose by the Department of Defence.

Sir EUGENE FISET: I may add that these instruments used by the Defence department are portable instruments; they are small, compact sets used for training purposes.

Sir HENRY DRAYTON: I understood from what the minister said that we had three regular stations.

Mr. GRAHAM: The Interior department engaged the radio experts of the Defence department to establish these stations, there having been some question as to who should do it.

Sir HENRY DRAYTON: Then it comes down to this: The Defence department have portable instruments of their own, which would not come under this head at all; and then in addition to the stations we have under this vote, we also have three regular stations which the Defence department have erected for the Department of the Interior. Now, if that is the case, we might have all these stationary things under the one management.

Mr. GRAHAM: I am not arguing that; I was simply making an explanation in the absence of the Minister of Defence.

Sir HENRY DRAYTON: I quite appreciate my hon. friend's point in that respect.

Mr. ROSS (Kingston): I would like to lend my support to the petition of the town of Stewart for some wireless connection. This is a very nice little town away up on the Portland canal, but it is entirely cut off from the rest of the Dominion, being connected only by telegraph line. But the trouble is that the telegraph operators quit work at five or six o'clock and then they have no connection with the outside world, but must depend upon the radio or wireless from Hyder. Close to the town of Stewart there is the big mine known as the Premier, the biggest mine in the world, I believe. These people think it would only be a very little thing for the government to give them connection by wireless, and when I was there this summer they begged me to say a word in their behalf. It is a pitiful position to be in, to have your postal service cut off during a great part of the year, and with only limited telegraph facilities, depending largely on a neighbouring city for outside communication. While I was there I saw message after message brought over from Hyder to Stewart. I do not think they should have to depend on that kind of service. I am sure it is no exaggeration to say that that area will, within a few years, be inhabited by millions of people, and I think the least we can do is to give them a wireless service. Canada is getting all the benefit from that area. The Premier mine has turned out about $7,000,000 in dividends in three years, yet Canada is not even building a road to that area. All the road building has been done by the United States, which has not derived one cent of benefit so far, but which is hoping, of course, to get a share in the future. I would urge upon the minister the necessity of doing something for this area.

Mr. GRAHAM: Perhaps I may be allowed to offer an explanation of the situation, as I discussed it several times with those interested. The Public Works department has the land line, and it is not generally considered satisfactory. Requests have been made for an exchange of the land line for wireless. I may say that the Public Works department and the Marine department are now considering the advisability of making that change, and it is hoped they will be able to come to some arrangement.

Mr. ROSS (Kingston): If the minister will allow me a suggestion, I would not advise the cutting off of the land line because in the mountain area the wireless may fail at some time. I would think you would require the two of them, and I think that your returns in a very few years, in the next ten years say, will justify anything we can do. The land line fails quite often, and the wireless on account of some effect the mountains have would not always be 100 per cent efficient, so I would advise retaining both.

Mr. GRAHAM: That is worth while considering in the negotiations.

Mr. COOTE: I would like to ask the minister a question or two as to the supervision which the department exercises over wireless broadcasting stations. Does the department supervise the broadcasting stations, fix the wave lengths which the stations shall use, and also control the number of nights per week on which any station shall broadcast in order to see that there shall not be too much interference? I confess I know very little about radio myself, but I have had complaints made to me by quite a number of people in the city of Ottawa who have receiving sets, and who say there is no proper control being exercised over the broadcasting stations in Ottawa particularly, and I suppose possibly

conditions here are the same as in any other city. The people seem to feel that each broadcasting station should be restricted to certain nights, and that the department should exercise a little more control over these stations to see that the wave length of one station does not conflict with that of another. Even on very good sets, on four-tube sets, it is impossible almost to receive the programmes from the big broadcasting stations in the United States and other parts of Canada when CNRO is broadcasting, because it practically shuts these programmes out. There seems to be an impression, whether it is correct or not, that the wave lengths or the power which is being used here at Ottawa is not regulated properly, and that there is too much interference with outside stations. I wish the minister would tell us in a few words just what control his department exercises over these broadcasting stations.

Mr. CARDIN: We are exercising all the supervision we can, so far as means for supervision have been discovered. In Ottawa we have only one station broadcasting at any one time. We license each broadcasting station, and we state in the license the day and hour when that station can broadcast. Unfortunately we have to admit that it is absolutely impossible to control all the interference. Radio is a new invention, and certainly it has not reached perfection yet, but science is applying itself to radio problems, and in the meantime we are doing everything we can to prevent interference. In Ottawa, I might say that we have no dual broadcasting at all, there being only one station broadcasting at any one time.

Mr. COOTE: Could the minister tell us what nights the CNRO is allowed to broadcast, and whether there are any nights in the week in which some Ottawa station is not allowed to broadcast?

Mr. CARDIN: CNRO is allowed to broadcast any night, except Sunday and Friday.

Mr. COOTE: Are any of the other stations in Ottawa allowed to broadcast on Sunday and Friday?

Mr. CARDIN: Yes.

Mr. COOTE: Then every night in the week may be taken up by a local station?

Mr. CARDIN: Yes.

Mr. COOTE: If that is done, a person even with a four-tube set would not be able to get any station outside of Ottawa.

Mr. CARDIN: It depends on how near he is to the local station. If he is very near, he cannot get an outside station, but if he is far enough away, he can.

Mr. COOTE: I would like to suggest to the minister, and I think I am only voicing the opinion which has been expressed in many letters which have been written by local radio fans to the newspapers, that at least one night a week the local stations might be asked not to broadcast. There are sometimes some very excellent programmes put on by outside stations which Ottawa people would like to hear, but it would seem that if the local stations wish to take advantage of the privileges they have from the department it will be impossible for the local fans to hear any outside stations unless they have a very expensive set. I would ask the minister to look into this matter. I think he would be meeting the wishes of the majority of the people in Ottawa who have receiving sets if one or two nights a week were kept free so that they could hear outside stations. I would like the minister's opinion on that.

Mr. CARDIN: I am free to say that the suggestion of the hon. member is worth considering, and I have no objection at all to looking into it. We are doing the best we can, but if Monday evening, say, could be set aside so that the radio fans in Ottawa could hear outside stations, there would no doubt be a certain number of people who would prefer Tuesday or some other evening in the week when they could hear a different programme, and it might be difficult to meet the wishes of the public in regard to that. But the suggestion is worth considering.

Mr. COOTE: I admit that, but I would like to impress on the minister that he should arrange for at least, one, and I would think preferably two nights a week on which the local stations would not broadcast.

Can the minister tell us whether it is necessary for the owner of a receiving set to have a license, and if he does not take out a license, is he subject to any penalty? Also how many radio licenses have been issued for receiving sets?

Mr. CARDIN: It is necessary for every owner of a receiving set to take out a license. If he fails to do so, his set can be confiscated and he is liable also to a penalty. We have already taken proceedings against certain individuals refusing to take out a license. Altogether 98,000 licenses have been issued.

Mr. ARCHAMBAULT: Does the hon. member wish to have the names?

Mr. COOTE: No, Mr. Chairman, I do not wish to have the names, but I would like to

ask the minister if he has taken any steps to inform the public that they must take out a license, because some people have told me that they did not know such a license was required.

Mr. CARDIN: We have advertisements in the newspapers and there are notices in all the post offices. We also broadcast the information.

Mr. JELLIFF: What revenue do you get out of it?

Mr. CARDIN: We received from all sources last year the sum of $147,000.

Mr. BAXTER: If I may make a suggestion it seems to me that this regulation business is running just a little bit too far. I have always had the idea that it was well to leave people uncontrolled and uninterfered with by legislation so far as it is possible to do so. In other words to leave something to the free agency of human beings. Now, the ground is being trenched upon daily and almost hourly by legislation.

Mr. GRAHAM: The air too.

Mr. BAXTER: Now with regard to the licensing of mere receiving sets what possible excuse can there be for it except the building up of some more bureaucratic organizations. I grant you that in war-time a receiving set may be a cause of mischief to the country. But in war-time the superior authority steps in and you can then license, you can then control—you can destroy if necessary. But in peace time why torment the ordinary citizen who has a radio set? I would not have one within a mile of the house if I could keep it away; but why torment the ordinary citizen, and compel him to go to some official and get a slip of paper and pay some kind of a fee?

Mr. ARCHAMBAULT: They are not paying any license fee now.

Mr. BAXTER: Do they not have to pay any?

Mr. ARCHAMBAULT: Not at the present moment.

Mr. BAXTER: But they have got to get a license.

Mr. ARCHAMBAULT: We are receiving something from the air.

Mr. BAXTER: I would like to find out what is back of this. What is the idea of requiring the public to do anything of the kind? I would also plead—I hear some hon. members around me talking about that aspect—for a little free use of free air in this country. If you cannot keep the Canadian National out of people's ears I am afraid the Minister of Railways has entirely lost his grip over that institution. Peaceful citizens are complaining that they cannot hear something they want to hear because there is this rather expensive thing that nobody in Canada wants outside of the railway management forced into their ears. I would suggest that the Minister of Railways might take a grip of the matter, if it has not got beyond him, and give some sort of peace on all the nights in the week to the people of Canada. Let those broadcast who want to broadcast, but let the country keep out of this broadcasting business—it is only a waste after all. We are talking about the cutting down of duplication. That is a thing I have advocated since almost the first day I entered the House; but it is no use talking about cutting down the duplication of trains if we are going to have money squandered in something that does not attract any passengers, that is absolutely unnecessary, and that is not carried on by railways that have had a great deal more experience in management than have the board of the Canadian National Railways.

[Mr. Coote.]

Item agreed to.

River St. Lawrence ship channel—maintenance and operating dredging fleet $1,663,000.

Mr. MEIGHEN: We are not going to sit any more to-night.

Mr. GRAHAM: That is you would rather not.

Item stands.

Progress reported.

On motion of Mr. Graham the House adjourned at 11.48 p.m.

Friday, May 8, 1925

The House met at three o'clock.

REPORT

Fourth report of the select standing committee on Miscellaneous Private Bills.—Hon. Mr. McGiverin.

PRIVATE BILLS

FIRST READINGS

Bill No. 78, from the Senate, for the relief of Vera Thelma Gooderham.—Mr. Ryckman.

Bill No. 98, from the Senate, for the relief of Jacob Edward Thuna.—Mr. Garland (Carleton).

Bill No. 99, from the Senate, for the relief of William John Fuller.—Mr. Duff.

Bill No. 100, from the Senate, for the relief of Alfred Augustus Jacques.—Mr. Duff.

Bill No. 101, from the Senate, for the relief of Paul Zizis.—Mr. Hocken.

Bill No. 102, from the Senate, for the relief of Annie May Blunt.—Mr. Hocken.

Bill No. 103, from the Senate, for the relief of Grace Harrington Bloom.—Mr. Hocken.

Bill No. 104, from the Senate, for the relief of Ian Somerled Macdonald.—Mr. Garland (Carleton).

Bill No. 105, from the Senate, for the relief of Arthur Beldon Morrison.—Mr. Church.

Bill No. 106, from the Senate, for the relief of George Edward Sharp.—Mr. Arthurs.

Bill No. 107, from the Senate, for the relief of Marjorie Morton.—Mr. Arthurs.

Bill No. 108, from the Senate, for the relief of William Ernest Hampson.—Mr. Arthurs.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, in view of the reports that the situation in Cape Breton is becoming more acute, is it possible that the government will reconsider its position and interfere on behalf of the people there?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am afraid I cannot do more than say to my hon. friend that the government's position remains just what it has been from the start.

HOME BANK

On the Orders of the Day:

Mr. T. L. CHURCH (North Toronto): I would like to ask the government a question at the request of the Toronto civic authorities, namely, is the government in a position to announce to the House when the legislation on behalf of the Home Bank depositors will be brought down?

Mr. MACKENZIE KING: I cannot tell my hon. friend exactly. It will be brought down shortly.

PUBLIC SERVICE REARRANGEMENTS

Hon. ERNEST LAPOINTE (Minister of Justice) moved the third reading of Bill No. 43, to amend the act to authorize rearrangements and transfers of duties in the public service.

Motion agreed to and bill read the third time and passed.

DAIRY INDUSTRY ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee to consider the following proposed resolution:

Resolved, That it is expedient to amend The Dairy Industry Act, chapter 7 of the statutes of 1914, for the following purposes:—

(a) to make further provision for definitions of Dominion Analyst, illegal dairy product, oleomargarine, package and renovated butter;

(b) to prevent the use of oil as an adulterant in butter, and to prohibit the keeping of foreign fats that might be used for adulterating purposes on the premises of any person engaged in the manufacture or manipulation of butter;

(c) to avoid the necessity of proving that foreign fats have been added to skimmed milk in cases of infraction;

(d) to provide heavier penalties for violation of the act;

(e) to authorize an inspector in addition to obtaining access to premises, to take samples, seize and remove illegal dairy products;

(f) to empower the Governor in Council to make regulations respecting the seizure and confiscation of materials and packages used illegally, and to control the size and dimensions of cheese hoops and cheese and butter boxes; and

(g) to permit of the registered number of any package being accepted as prima facie evidence of the identity of the manufacturer, and that costs of analysis shall, upon conviction, be included in the costs of prosecution.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. MOTHERWELL: I think it will expedite matters if we take up the different subdivisions of the resolution one at a time. First, with regard to paragraph (a): Under the old act we have found it very difficult to get convictions without certain proper definitions. Take for instance, "Dominion analyst"; we have a number of analysts who receive salaries and some who, although duly authorized to act, do not receive salaries, and the ground has been taken that the definition "Dominion analyst" refers only to those who receive salaries. A proper interpretation is necessary. Then, "oleomargarine" has no definition at all. It is necessary to have a definition, because oleo oil is an adulterant and it is a constituent material in the manufacture of oleomargarine.

Mr. MEIGHEN: Is there not a law now forbidding the manufacture and importation of oleomargarine?

Mr. MOTHERWELL: Yes.

Mr. MEIGHEN: Does that law not define what oleomargarine is?

Mr. MOTHERWELL: No; I have looked over it and I find no definition.

Mr. MEIGHEN: It is a remarkable thing.

Mr. MOTHERWELL: It is not in the interpretation clause. Therefore the matter is very indefinite. Then, the term "renovated butter" is another that needs clearer definition, so that we may be able more readily to get convictions in cases of prosecution. "Package" is also defined here. In fact, this paragraph of the resolution deals entirely with the matter of interpretation.

Mr. MEIGHEN: The minister has had renovated butter bills before this House every few months since he has been in that office. Has "renovated butter" never been defined before?

Mr. MOTHERWELL: Yes, but the definition is not sufficiently clear. I think my right hon. friend mistakes years for months, because it is just two years since we had renovated butter legislation. This resolution has been on the order paper for nearly two months; perhaps that is what my right hon. friend means.

Mr. MEIGHEN: Last year was hen year, was it not?

Mr. MOTHERWELL: Well, hens are very important.

Mr. STEWART (Leeds): Can the minister give any information with regard to question 1 on the order paper, which relates to this subject? Is he aware that large quantities of New Zealand cheese are being used in the manufacture of Canadian loaf cheese?

The CHAIRMAN: That is not relevant to this resolution.

Mr. STEWART (Leeds): I submit that when we are dealing with the dairy industry it is not inappropriate to ask the minister if he has any information to give on this subject.

The CHAIRMAN: It is not the subject of this resolution, and it is not relevant.

Mr. STEWART (Leeds): It is a public matter we are dealing with.

The CHAIRMAN: I do not intend to argue it, but I rule that it is not relevant.

Mr. KENNEDY (Glengarry): May we have an explanation of paragraph (c) of the resolution?

Mr. MOTHERWELL: That is not contained in the bill which will follow the resolution if adopted; I do not know how the draftsman got it in. When we come to paragraph (c) I will ask that it be eliminated from the resolution.

The CHAIRMAN: Is it the pleasure of the committee that this resolution be considered paragraph by paragraph? Shall paragraph (a) carry?

Mr. SUTHERLAND: What does "illegal dairy product" cover? I think it should certainly cover cheese which is being ground up and mixed with other ingredients.

Mr. MOTHERWELL: In the bill, which I have before me, the definition is this:

> Illegal dairy product means any dairy product which does not conform to the definition and standard provided by this act and regulations made thereunder, or is contained in a package which contravenes the same.

There is some anxiety about that point, and the reason the question has not been answered is that it concerns several departments, and some of them have not got the answer ready yet. It does include Australian cheese.

Mr. GOULD: I would like to ask the minister if that refers to the article known as kraft cheese.

Mr. MOTHERWELL: Yes, but the chairman has ruled that part of the discussion out.

Paragraph (a) agreed to.

Paragraph (b) agreed to.

On paragraph (c):

Mr. MOTHERWELL: This should not be there. I move that it be struck out.

Motion agreed to.

The CHAIRMAN: This will mean the relettering of the succeeding paragraphs.

On paragraph (d):

Mr. SUTHERLAND: What are the penalties under the act at the present time?

Mr. MOTHERWELL: They run from about fifty to one hundred dollars. We are going to make them pretty stiff. I do not know whether the House will agree with that or not when we come to discuss the penalties in the agricultural committee, but we have found that offenders under this act have found it pays them better to pay the fine and keep on with their adulteration practices. This must stop, and so the fine is being made sufficient to interest the offenders and prevent them from continuing their violations of the law. Some of them run as high as $500, and for a second or third offence, I forget which, a term in gaol. Generally we find the present fines entirely inadequate to

prevent a repetition of the offence, and if we are to maintain the quality particularly of our cheese, and improve the quality of our butter, we must have these offenders so exercised over the consequences of their violations that they will desist from their practices of adulteration.

Mr. SPENCE: What percentage of the people engaged in this work are violating the law? It seems to me the penalties are very heavy now.

Mr. MOTHERWELL: There are not very many, and rarely is it the creamery that offends. It is usually the middleman. Occasionally a creamery or cheese factory offends, but not very often.

Mr. SUTHERLAND: Has the department found that some of these offenders have been repeating their offences after having been fined?

Mr. MOTHERWELL: Yes.

Mr. SUTHERLAND: That is a common practice?

Mr. MOTHERWELL: I am afraid it is too common. The present penalties are not sufficient to deter them.

Mr. SPENCE: I would like to know what is the minister's definition of a middleman in this case.

Mr. MOTHERWELL: Well, the man who is neither the producer nor the consumer.

Paragraph (d) agreed to.

Paragraphs (e) (f) and (g) agreed to.

Resolution reported, read the second time and concurred in. Mr. Motherwell thereupon moved for leave to introduce Bill No. 109 to amend the Dairy Industry Act, 1914.

Mr. SUTHERLAND: Is it the minister's intention to refer this bill to the committee on Agriculture?

Mr. MOTHERWELL: Yes, as soon as the bill receives its second reading.

Motion agreed to and bill read the first and second times times and referred to the committee on Agriculture.

Mr. MEIGHEN: The minister intends to have the bill come before the committee of the Whole?

Mr. MOTHERWELL: Oh, yes.

ST. JOHN AND QUEBEC RAILWAY

CENTREVILLE-ANDOVER BRANCH

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to extend the time within which the Saint John and Quebec Railway Company is to complete the construction and equipment of its line of railway from a point at or near Centreville, in the county of Carleton, to a point at or near Andover, in the County of Victoria, to the thirty-first day of December, 1927, both with respect to the agreement entered into under the authority of section three of The Saint John and Quebec Railway Act, 1916, and also with respect to the subsidy agreement made under the authority of section six of the said Act: Provided that the said extension shall only be granted with respect to the first named agreement after the consent of His Majesty on behalf of the Province of New Brunswick has been obtained.

Mr. BAXTER: I would like to ask—

Mr. SPEAKER: This motion is not debatable. We will go into committee at once, and the hon. gentleman can then put his question.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. BAXTER: I would like to ask whether this is simply a formal extenson to take advantage of some happier financial times, or whether it is the intention of both governments that the work shall be proceeded with. Railway matters are being discussed between them so frequently that it would be indeed very desirable if any policy could be enunciated by which this road would be carried to its originally intended termini, and if arrangements could also be made with the Canadian Pacific by which their line now running through the state of Maine could be diverted, so that all the traffic upon the western side of New Brunswick, as well as the traffic of the Canadian Pacific might be carried by joint operation of this line with its better construction and better grades. So much of this line as has been constructed has been built to conform to the National Transcontinental grade. I do not intend to take up much time in discussing the unfortunate history of the road, the completion of which was prevented by the advent of the war, nor the unfortunate lack of earning power, because the road is not complete, which results every four years in an addition of $1,000,000 to the bonded debt of the little province of New Brunswick. The average deficit is about $250,000 a year. The province is not able to sustain that deficit out of income, and therefore each year it capitalizes it, involving a further heavy obligation; and I am stating the

matter fairly when I say that every four years there is, in round numbers, an addition of $1,000,000 to our bonded debt. I believe that that burden could be lifted from the province if by the joint operation of the Dominion and the local governments this road were carried to completion. It would be a much more vital and intensely more useful part of the government system than the National Transcontinental which was cut "slash-ways" through the province of New Brunswick and is, taking it at the present time, almost idle—in fact, it is scarcely operating at all. This road will run through a splendid country, will serve a number of thriving communities, and I believe it would be a very good opportunity for the minister to demonstrate the principle of joint operation and thereby reduce the expenses of both the great railway systems.

I should like the minister when answering to kindly give me information as to whether there is anything real in the sugestions we have had in New Brunswick that the Canadian National system is about to take over the St. John Valley railway. A return was asked for in this House and it was filed some time ago, but with the exception of the correspondence that took place between the governments about the time of the construction of that railway, and a later memorandum which places the views of the province very clearly indeed—having been sent forward by Premier Foster shortly after his accession to office about eight years ago—there is nothing on file. Statements have been made by public men in New Brunswick that this is a matter for oral negotiation. Now, we in New Brunswick would like to know just what has been said on the subject—how far the oral negotiations have proceeded, what is the outlook for a settlement, and what settlement may be arrived at in this matter which is one of very great interest to the people of the whole province.

Mr. GRAHAM: Mr. Chairman, my hon. friend places an order before me that I am afraid I cannot attempt to fill. I might answer his first question by saying this is just a formal extension of the act confirming agreements made between the two governments.

Mr. BAXTER: Just a formal extension?

Mr. GRAHAM: Just a formal extension for two years. Since the act was passed the time for completion of the road and the earning of the subsidy has been extended. I might explain here that a peculiarity, which only came to my notice a few days ago, occurred two years since. At that time this House passed an extension of the act extending the time for the completion of the line, but it never got over to the Senate at all. We cannot blame the Senate for killing that bill; it never saw it. I only discovered the fact quite recently. The law officers of the crown say this bill will reinstate the line and give it two years extension; it is purely formal. There is no doubt in the world it was originally intended that this particular piece should be constructed; and it is a portion of the line included in the agreement made between the Dominion government and the government of the province of New Brunswick, I think along in 1916, by which the latter government undertook to construct a line and the Intercolonial, as its share, undertook to operate it. The St. John Valley railway is now operated by the Intercolonial, and while the province of New Brunswick has to pay a quarter of a million dollars interest on the cost of construction, it also costs the Dominion government a sum approximating a quarter of a million dollars every year for operation. It is a situation that is serious both from the railway standpoint and from the standpoint of the province of New Brunswick. As to the correspondence and the oral negotiations urging the taking over of the St. John Valley railway, I may say that the government of New Brunswick has urged very strongly that it is the duty of the Dominion government to take over this piece of line. Up to date, so far as I know and I think I would know, the negotiations have not come to a point where the federal government has committed itself to take over the line. It is thought that if the branch lines proposed by the Canadian National, and I believe to be constructed, will in a measure, quite a large measure, increase the traffic on the St. John Valley railway—

Mr. BAXTER: On a small portion.

Mr. GRAHAM: —it will add to that extent to the revenue of the St. John Valley railway—

Mr. BAXTER: If it is any good at all it will help our deficit.

Mr. GRAHAM: It will help the deficits in both cases. I cannot say any more; I think that answers the question of my hon. friend. I have no policy to offer for the future except to say this—that the Canadian National cannot well afford at the present moment to take on any more burdens.

Mr. BAXTER: I might ask the minister this further question: Will he consider some

form of joint adventure, possibly between the province and the Dominion, with the object of extending this line to its originally planned northern terminus, and coupled with that a suggestion, at least to the Canadian Pacific, for joint use of the road, so that all the traffic coming from the port of St. John by the Canadian Pacific as well as by this railway would come entirely through Canadian territory.

Mr. GRAHAM: I did not catch my hon. friend's idea at first. That would be to eliminate that portion that runs through the state of Maine?

Mr. BAXTER: Yes.

Mr. GRAHAM: I shall be glad to take the remarks of my hon. friend and lay them before the presidents of both railways.

Mr. BAXTER: Thank you.

Mr. CALDWELL: There is another feature of this matter that is possibly as important as those advanced, and the reasons advanced are valid and good. There is a strip of territory comprising possibly three hundred square miles north of Centreville that this road would serve that is now not served at all by any railway for at least four months in the year. It is a very serious situation, and possibly I can make plain to the minister and the House just what I mean. That section of New Brunswick lying west of the St. John river, between the St. John river and the American boundary and north of Centreville, is the section I refer to. During about four months of the year the farmers and producers cannot reach the Canadian Pacific without an extremely long haul. There is a bridge spanning the St. John river at Florenceville, and another at Andover. Between these two points the Canadian Pacific railway follows the eastern side of the St. John river. It is a mighty river and there are two months in the fall, when the ice is forming when farmers cannot cross with their teams. That is the time of the year when the farmers need to sell their produce in order to meet the bills coming due about the first of January. But that is the time, between the completion of their fall work and the beginning of the year when it is almost impossible for them to cross the river. The same condition obtains in the spring months when the ice begins to get poor—there is no crossing. It is a mighty river in the spring, and the freshets at that time, and the running logs, aggravate the situation. Possibly it is the middle of May, sometimes the first of June, before it is possible for the ferry boats to cross with teams with full loads. By that time the farmer has got into his spring work, and any potatoes he may have carried over will have deteriorated and not be fit for market. It is a serious situation for that section of the country, which I think is rightly called the garden of the province, so far at least as agriculture is concerned. It is all settled, the farmers having developed a fine agricultural area out of the forest against very adverse conditions. By reason of the fact that the road under discussion has not been completed a large number of the farmers have sold their holdings fairly cheap, being at a disadvantage in marketing their produce.

One of the reasons for the deficit on the St. John and Quebec railway is the fact that this extension of the road has not been built. This means that the traffic that should go over this road must go to the Canadian Pacific Railway at a time of year when it is most inconvenient for the farmers to market their stuff. Some years ago I was on a delegation which waited upon the government of the province of New Brunswick to urge the completion of the northern section of the road from Centreville to Grand Falls, and two arguments against the work were advanced at that time. One was the fact that the cost of construction was too high to warrant it; and the other was that we had no connection with the Maine Central, being more or less held up both for empty cars coming in and by the freight rate of the Canadian Pacific, who had control of that section of the road between Vanceboro and Fredericton and Vanceboro and St. John. It meant that if this connecting link were not built we were merely a collecting agency for freight for the Canadian Pacific. In fact, the Premier of New Brunswick, at that time Hon. W. E. Foster, told us that if we could induce the Dominion government to build the connecting link between the St. John and Quebec road and the Maine Central the province would have no hesitation in completing the northern section of the St. John and Quebec railway with the assistance of the Dominion subsidy. I was a very new member at Ottawa at that time, but I arranged an interview with the then Minister of Railways, Dr. Reid, at which the president of the St. John and Quebec Railway and the president of the Eastern Maine Railway Company, so-called, were also present. They came to an understanding with Dr. Reid that he would bring down a bill the next year to complete this connecting link. The next year, however, when the railway report was submitted to parliament it disclosed an immense railway deficit and Dr. Reid refused to bring

down this promised bill. He declared, and rightly so perhaps, that the deficit was too high to allow him to take up the matter and he did not feel like introducing the bill. The present Minister of Railways (Mr. Graham) has brought down a bill for this purpose on two occasions and has piloted it through this House, I must say with very strong opposition from at least one of the members for St. John, who gave as a reason for opposing the proposition that it would hurt the port of St. John. I have never agreed with this contention, for I do not think that this connecting link would divert any traffic from St. John; I cannot see how it would, because there is no traffic to-day going through the port of St. John that would not still take that route if this link were built. The completion of this section would simply mean that traffic over the Intercolonial railway destined to New England points would go over the Canadian Government railway to Vanceboro instead of over the Canadian Pacific.

I hope there will be no opposition to this bill. I have it on good authority from the powers that be in New Brunswick that they do propose to go ahead with their portion of the undertaking and they sincerely hope that the Dominion government will do its part. I think it is the only logical thing for the government to do. With the road in its present position, losing for the Dominion government a quarter of a million a year and for the provincial government a quarter of a million, it means that in eight years this combined loss would amount to four million dollars, which would be enough to complete the road and turn it into an asset, whereas at the present time it is merely a liability. It is my candid opinion that if the road were completed to Grand Falls to connect with the Transcontinental at that point, and the connecting link from Kingsclear to Vanceboro, or possibly Harvey, and then over the Canadian Pacific Railway from that point, would not only pay operating costs and interest on cost of construction but would also eventually pay the capital cost. I am well convinced of that fact, and living in that immediate vicinity I have a very good idea of the whole situation. I trust, therefore, that the bill providing for this extension will pass.

Resolution reported read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 110 to authorize the extension of time for the completion of the St. John and Quebec Railway between Centreville, in the county of Carleton, and Andover, in the county of Victoria, New Brunswick.

[Mr Caldwell.]

Motion agreed to and bill read the first and second time, considered in committee, reported, read the third time and passed.

LIVE STOCK AND LIVE STOCK PRODUCTS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee to consider the following proposed resolution:

That it is expedient to amend The Live Stock and Live Stock Products Act, chapter 18 of the statutes of 1923, by making provisions,

(a) to facilitate business on the stock yards by providing that all moneys received on account of sales for live stock sold by a commission firm on behalf of the owner thereof shall be deposited in a shipper's live stock commission account instead of a shipper's trust account as at present;

(b) to provide for the licensing of egg buyers, egg collectors and dealers, and exporters of live stock, meat, poultry, eggs and wool;

(c) to amend the power to make regulations as to the manner in which eggs found to be unfit for human consumption shall be valued and disposed of.

Motion agreed to and the House went into committee, Mr. Gordon in the chair:

On paragraph (a):

Mr. MOTHERWELL: Most of the farmer members will recall that prior to two years ago there was a good deal of complaint that, when stockyard buyers went out into the country purchasing animals and giving cheques for them, it was found that in some instances when the cheques went back to the bank, they were not honoured. Usually there was money when the man started out buying, but perhaps the bank found there was some other claim upon the party and it would appropriate the bank account for its own or the other party's use. Consequently an attempt was made two years ago to provide against this contingency by having all moneys used for purchasing cattle deposited to the credit of the buyer in what is called a trust account which could be devoted to that purpose only. This was intended to correct the difficulty complained of, but it was found that it could not be corrected in that way without violating the usual practices in the administration of trust accounts. The legal authorities contend that when an animal is sold to a buyer, the money that can be used for buying that animal cannot be used until the animal is resold by the buyer and the money placed in that trust account. That is impossible and the difficulty has not been remedied. Consequently, instead of the buyer having his money placed in a trust account out of which it seems to be difficult to get it for the purpose desired, the legal authorities advise that it is better to place the money in

a shipper's live stock commission account and then it will effect its purpose. That is the purpose of paragraph (a) of the resolution, and it gets over the difficulty of the trust account which we found was not very much better than the old method. There have been no great complaints under the trust account method, but if the procedure had ever been challenged, it would be found that we were violating the usual procedure under trust accounts. That is the reason why we are making this change.

Mr. GOULD: Does that embrace moneys received from co-operative shipments? Are they deposited in shippers' accounts and then the cheques made out to the individuals who have built up the co-operative shipments?

Mr. MOTHERWELL: I do not think there has been any difficulty in connection with that. We have been trying out this trust account method but we have been violating another phase of the law to do so.

Mr. GOULD: I asked the question because, in the past, individuals to whom co-operative shipments have been sent have deposited the proceeds of the shipments to their private account, and sometimes, as a result, the individuals who built up the co-operative shipment have not received their money.

Mr. MOTHERWELL: This will correct that.

Mr. JELLIFF: Will this be referred to the Agricultural committee also?

Mr. MOTHERWELL: Yes. All these bills will be.

Mr. JELLIFF: I have had one of those cheques such as the minister describes deposited in one of my pigeonholes at home for six or eight years. Many that should have gone to me went to the bank. I hope sufficient protection will be provided by this amendment.

Mr. MacLAREN: Has the minister considered the use of certified cheques? That would seem to me to be a very simple method of securing payment to the owner of the cattle. Such cheques could be paid only to the order of the person who holds the cheque and funds are retained for that purpose.

Mr. MOTHERWELL: In that case every cheque would have to be certified and the man would have to be at the bank to get a certified cheque. That would correct the difficulty only for one particular cheque.

Mr. KELLNER: I do not see where the proposal in this resolution is going to deal with the buyer at all. This refers entirely to the commission man. If a man is going out buying cattle, he would be just as free under this resolution to give a man a worthless cheque as he is now.

Mr. MOTHERWELL: Anybody can give a worthless cheque if he likes to take the risk, but this is to prevent the practice, which was rather common in days past, of a bank taking over and charging up any overdue notes to a man's bank account as is the usual practice. If you give a note to a bank and you do not settle it at maturity, it will be charged up to your account. That might absorb all the balance that was in the account and there would be nothing to honour the cheques that come in. This is to provide a separate account altogether from a man's private account.

4 p.m.

Mr. SALES: A commission account only?

Mr. MOTHERWELL: Yes.

Mr. KELLNER: That is the point. If the man is buying stock, this does not affect him at all. If he is a commission man handling on commission, it would affect him.

Mr. MOTHERWELL: I went all through this two years ago and the hon. member for Macleod (Mr. Coote) was good enough to assist me. We were all in a quandary and I consulted with my hon. friend. I give him credit for suggesting to me what we both thought was good advice, and we tried it out. The lawyers in the House did not seem to be able to offer any solution. My hon. friend was a banker and we worked this method out together, but we ran up against another difficulty and this is to get over it.

Mr. MARTELL: If the minister had consulted the lawyer members in the first place, he would not have run up against this difficulty.

Mr. MOTHERWELL: Perhaps not. Lawyers are useful sometimes.

Mr. COOTE: Since the minister has mentioned my name—

Mr. MOTHERWELL: I am not complaining; I think we both thought it was all right.

Mr. COOTE: I still think the act as it stands now is all right. Possibly it is causing a little trouble for the commission man, putting him to a little extra bother, and that is why they are asking for a change. The act as it stands now, compelling the commission man to deposit the money in a trust account, is making the money of the owner of the cattle

safer than it will be when it is simply carried in a special live stock commission account. Under the act as it stands now, if a commission man used that money for any other purpose, he would be violating a trust. At the same time it prevents the bank charging up any note which the man might owe the bank, to his trust account. The minister is quite correct in stating that this was done formerly, and it was the cause of the present act being passed two years ago. There were certain commission firms in Calgary and Winnipeg that had lost money through the buying and selling of cattle. They were in debt to the bank. When a large shipment of cattle was received by the commission firm it deposited the proceeds of sale in the bank and issued a check to the owner of the cattle, but before the latter could get his cheque cashed the bank had charged up the firm's note. They had really taken the proceeds of the man's cattle to pay the commission firm's debt to the bank—a very unfair and, I think, dishonest practice. The present law absolutely prohibits that practice. So far as I can see, the amendment is being made to meet the wishes of the commission men who are put to some bother through the working of the present act. I wrote the Western Stock Growers' Association for their views on the change proposed by the minister, they did not offer any objection to it, so personally I am not going to object to the bill going to committee. I took this matter up in the first place at the request of that association and did my best to get some law enacted that would protect the shippers of cattle. I believe that as the law stands we have that protection, and the commission men have got along with it for two years. Therefore I think when this resolution goes to the committee on Agriculture the commission men, or whoever are advocating the change, should be required to show why the present act should be changed, for I am sure it is protecting the shippers.

Mr. MOTHERWELL: I can assure the committee, Mr. Chairman, that all these phases will be threshed out and everybody will be given an opportunity before the agricultural committee to discuss the amendments so we may get everything just right. Sometimes in curing one difficulty we create another, and this we want to avoid. There is a little difficulty here, and by having the live stock commissioner and other authorities before the committee we will be able to find where the defect is. I appreciate the assistance my hon. friend from Macleod (Mr. Coote) has rendered so far, and if he will get busy I fancy we can correct the defect in the committee.

Paragraph (a) agreed to.

On paragraph (b):

Mr. MOTHERWELL: Since this was drafted we have consulted the Justice department, and they inform us that the licensing of these people is purely within provincial jurisdiction. Therefore I would ask that this paragraph be eliminated.

Mr. GARLAND (Bow River): Before this paragraph is struck out, Mr. Chairman, may I ask the minister why it would not be possible for the federal government to undertake the licensing of exporters of live stock, meat, poultry, eggs and wool? I can understand that such a provision might be invalid with respect to buyers, but I should think the licensing of exporters would be within the federal jurisdiction.

Mr. MOTHERWELL: This licensing is usually recognized as a provincial prerogative unless the particular business is declared to be for the general benefit of Canada. I know it is for the general benefit of Canada that we should have only good eggs exported, but nevertheless I do not think we can bring this within our jurisdiction. I can assure my hon. friend from Bow River (Mr. Garland) that I was very sorry to learn that we have not this authority, because many men in the egg and other export trades are almost ruining the business by making shipments of bad goods. By a system of licensing we could get after these men. Such a system was in force under the War Measures Act, but you could do many things during the war which you cannot do now.

Mr. CHURCH: Mr. Chairman, the minister is dropping this clause because the Justice department has ruled that it is a matter for provincial and municipal jurisdiction. I think if he will look over the various acts administered by his department he will find that they contain a lot of similar provisions that the Justice department would declare to be illegal and ultra vires of this parliament.

Mr. GARLAND (Bow River): Mr. Chairman, the minister has made it fairly clear that it would be within the provincial jurisdiction to provide for the licensing of egg buyers, egg collectors and dealers; but I submit that the export of any of the commodities specified in paragraph (b), not from province to province, but from the Dominion to another country, is a national business. Therefore I

would suggest that he merely strike out the words "egg buyers, egg collectors and dealers," leaving the licensing to apply to the exporters of live stock, meat, poultry, eggs and wool. This will give the minister an opportunity to protect importing countries against some of our evil-minded exporters, and also to protect producers against the machinations of these people.

Mr. MOTHERWELL: I accept my hon. friend's suggestion, Mr. Chairman. That is my own view. I sent the amendment back to the Justice department, feeling that we had a right to deal with exporters. I have not at hand the opinion of the Justice department but it was to the effect that their view applied to the exporters as well. I should like to discuss it further.

The CHAIRMAN: The paragraph can be amended in the agricultural committee. This merely indicates the principle.

Mr. MOTHERWELL: Yes, leave it the way it is.

Paragraph (b) agreed to.

On paragraph (c).

Mr. CALDWELL: This would look to me like a duplication of services, for we already have this work looked after in the province of New Brunswick by the provincial government.

Mr. MOTHERWELL: There is a very fine line of demarcation, and sometimes you require very powerful X-rays to detect where Dominion jurisdiction stops and provincial begins. Bad eggs have a commercial value for tanning certain kinds of leather, and I think they bring a dollar a case for that purpose. But the tanning business does not absorb them all, and we want to make regulations so that the surplus may be destroyed in an incinerator or in some other way to be prescribed. We find that some unscrupulous persons, taking advantage of the regulations which permit five offgrade eggs to a case, will substitute this number of bad eggs and make a corresponding profit. We want to make as strict regulations as possible to prevent any deliberate attempt to put back into the trade eggs which are bad and designated as unfit for food. It it not an easy matter, but we want all the authority we can get.

Mr. CALDWELL: I am in thorough accord with the taking of this step; it is just a question of what authority should act in the matter. A conference is to be called this summer between the provinces and the Dominion and I doubt whether they can in one conference deal with all the matters that should be taken up. There should be a definition of the lines of jurisdiction and of taxation between the Dominion and the provinces, and one of the things that might well be taken up is the question how far the Dominion goes in matters of this kind and how far the province goes.

Mr. MOTHERWELL: When the act was consolidated two years ago we were aware that we were sailing pretty close to the wind in many places, and in order to avoid the possibility of going over the mark I communicated with all the provinces, suggesting that in the event of the act overriding their powers they pass concurring legislation and obviate the difficulty in that way. Where there is an overlapping of provincial and federal authority and it is thought desirable that the federal authority should have jurisdiction, the provinces so agreeing can delegate the authority to the Dominion. Three provinces, I think, did that with respect to all the phases of this act.

Mr. CALDWELL: Where the provinces agree to co-operate, do they have inspectors of their own for this purpose?

Mr. MOTHERWELL: No, it is federal inspection.

Mr. CALDWELL: We have a Department of Health, and our people in New Brunswick think it is costing us too much. That gives rise to the suggestion that officials of that department could do more work along this line and thus help offset their salaries. That, of course, should not involve any interference with work they should do or responsibility they should assume.

Resolution reported, read the second time and concurred in. Mr. Motherwell thereupon moved for leave to introduce Bill No. 111, to amend the Live Stock and Live Stock Products Act, 1923.

Motion agreed to, and bill read the first and second times and referred to the committee on Agriculture.

SUPPLY

MARINE AND FISHERIES

The House in committee of Supply, Mr. Gordon, in the chair.

Public Works chargeable to capital—Marine department—river St. Lawrence ship channel—maintenance and operating dredging fleet, $1,663,000.

Mr. GARLAND (Bow River): What is the explanation of the very large increase?

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): Perhaps I might as well read the statement with regard to this vote:

This proposed appropriation is for the continuance of operations in connection with the deepening and widening of the St. Lawrence ship channel between Montreal and Father Point, and for the enlargement and acceleration of these operations.

Provision was made in the main estimates for the fiscal year 1924-25 for $613,000 for the maintenance and operation of the fleet then in commission, and in the supplementary estimates an additional amount of $350,000 was voted for the reconditioning of additional vessels which had been laid up for some years, with the view to the enlargement of operations next season.

The amount required to maintain and operate the enlarged fleet next season is estimated at $1,010,000, which includes $200,000 for night operations. Provision is also made for the expenditure of $653,000 in the reconditioning of vessels laid up, additional to those for which provision was made in the supplementary estimates last year, and for the construction of several new vessels.

Previous to the war a large expenditure was made in maintaining, deepening and widening the St. Lawrence ship channel from Montreal to Father Point, but on account of the war a number of the vessels and dredges were laid off and anchored in Sorel harbour, and the greater part of the work was stopped. Since the war we have been taking the work up again little by little. It was first planned to deepen the St. Lawrence ship channel to 30 feet, but about 1910, the programme was changed and it was decided to make it a 35-foot channel. This work has not been started in order particularly to help Montreal or any other port in the province of Quebec, but with the sole object of developing this very important shipping route, known as the St. Lawrence route, and I think it is in the national interest that the work should be undertaken and carried on. Besides, we are receiving and have been receiving for a long time complaints from the shipping companies and the Pilots' Association in regard to the condition of the St. Lawrence, and even when we shall have placed in commission all the dredges which were in operation before the war, it will still take about ten years before the programme of deepening the St. Lawrence to 35 feet is completed. It is most important that we should carry on this dredging. Its importance has been recognized by all previous governments, and large amounts of money have been spent on it. Having taken that into consideration, and in view of the various representations which have been made to my department by the shipping companies and different other interests, I think this government is justified in spending a little larger amount this year than was spent last year, particularly in view of the fact that with the best intentions and even with this enlarged expenditure the programme cannot be completed before ten years.

Mr. GARLAND (Bow River:) Just how is this work being done? Is it being done by sections, gradually spreading over the whole route?

Mr. CARDIN: The work is divided into five sections: (1) from Montreal to Sorel, 45 miles; (2) from Sorel to Batiscan, 36 miles, not including lake St. Peter; (3) lake St. Peter, 20 miles; (4) Batiscan to Quebec, 59 miles; (5) Quebec to Goose Cape, 66 miles.

Mr. GARLAND (Bow River): What I really want to get at is whether the work is being done over the whole route at the same moment.

Mr. CARDIN: Yes.

Mr. GARLAND (Bow River): What special need has arisen for this great depth? Are the boats coming up the St. Lawrence becoming larger all the time?

Mr. CARDIN: Yes, the tendency is always to increase the capacity of the boats. But even for the ordinary shipping, we find it is absolutely necessary to have this dredging carried on, in order that it shall be known to all that the St. Lawrence ship channel is perfectly safe, and that nobody shall have reason to complain about it. We often hear complaints about the insurance rates on cargoes and ships, and I think it is in the interest of the whole of Canada that the St. Lawrence ship channel be put in such a condition that we shall be in a position to ask for a reduction of insurance rates. The greater the depth, the safer the ship travelling along this very important route.

Mr. LADNER: Are there to be more dredges put on, or are the present ones going to do additional work?

Mr. CARDIN: We are putting more dredges into commission. They are not new ones, as they were operated before the war, but were laid up during the period of war. We have had repairs made to a certain number of these dredges which we are now placing in commission, and we intend to maintain double shifts on duty, so that the work will be carried on night and day.

Mr. KNOX: The minister says the larger boats are coming to Quebec, and therefore the necessity for this dredging. Might I ask if the dredging is not continued on up to Montreal?

Mr. CARDIN: Yes.

Mr. KNOX: Is the new system of piloting by means of a cable on the bottom of the channel being used on the St. Lawrence ship channel?

Mr. CARDIN: No.

Mr. GARLAND (Bow River): Of course, I am not specially interested in either Montreal or Quebec. I would not wish any favouritism shown to the one as against the other, but I would like to have the minister explain why he believes it to be in the national interest that these larger boats should be able to come up to Montreal. Why is this additional amount of work necessary? Would it not do if the channel was deepened from Father Point to Quebec, and the boats loaded and unloaded at that port? We find Quebec a good port for our live stock.

Mr. CARDIN: I am quite free to admit that the port of Quebec is a good one, and I say here it needs to be given all the assistance we can give it, but we must also remember the investment that has been made in the port of Montreal, the organizations that are established there, and its great importance as a shipping point. It is necessary to keep Montreal in line with the developments that are going on elsewhere. I might point out here that the dredging is not simply carried on from Quebec to Montreal, but also from Quebec to Goose Cape. Up to two or three years ago the vessels have been using what we call the south channel, passing on the south side of Grosse Isle, but for several years past, the department has been engaged in deepening the channel on the north side of Grosse Isle, and this channel has been found more advantageous by a great number of ships. The shipping companies are anxious now to have this channel completed, and quite a sum of the amount asked for by this item of the estimates is to be expended in deepening what we call the north channel. Although the dredging we are carrying on will no doubt facilitate entry to the port of Quebec, we have also to maintain the whole channel which has been deepened at a very large expenditure in the past, because even in developing the port of Quebec to its full capacity and giving it all the advantages we could, there are still a certain number of vessels that would likely come up to Montreal, on account of its importance as a shipping centre and on account of the commercial establishments that are to be found there.

Mr. LADNER: If this $700,000 was not spent, will the minister take the responsibility of saying that shipping would not get along just as well this year as it did last year? My point is that the discussion during the last few months in parliament and the attitude of the public is in favour of the most rigid economy, and to expend $700,000 on dredging, with our finances as they are, is something which I think will cause a great question mark to arise in the mind of the public throughout Canada unless the minister can give adequate reasons justifying this expenditure. I again ask him, will he say on his responsibility that shipping could not continue for another year without a part of this $700,000 being expended?

Mr. CARDIN: I am quite free to admit that the ships would likely continue to come up to Montreal with the channel as it is at the present time, but we have to take into consideration the numerous complaints that have been made to the department, about the channel not being in the condition it should be in. If the channel is not deep enough, it is just that much more dangerous, and it gives a reason to the insurance companies to still maintain their present high rates in force. The St. Lawrence route is in reality under a handicap in comparison with other routes to American ports, and we are receiving complaints that it is not as safe as these other routes.

Mr. LADNER: May I ask the source of these complaints and whether they are serious in their nature? Are they merely the complaints of people who are always wanting something done?

Mr. CARDIN: These are not complaints from people who merely wish to see money expended. The representatives of the shipping federation at Montreal often come to my office and complain about the situation. The trading organizations in that city have been doing the same thing; and the pilots, who steer the ships from Quebec to Montreal complain very often about existing conditions. Very frequently last year, in the closing days of the season of navigation, vessels left the port of Montreal with only two or three feet of water under their hulls. If this is not an adequate reason for placing the channel in a safe condition, I am at a loss to know what would be a good reason.

Mr. LADNER: Is that the only available channel, or is it possible to take some other route?

Mr. CARDIN: It is the only available channel; there is no other route.

Mr. TOLMIE: What is the ordinary depth of the channel?

Mr. CARDIN: The average, I think, is twenty-nine feet and a fraction.

Mr. TOLMIE: What are you making the depth of the channel now?

Mr. CARDIN: Thirty-five feet. A certain part of the channel has a depth of thirty feet at present, but our programme is to deepen it to thirty-five feet.

Mr. JELLIFF: Is this work being done by government outfits, or is it being carried out by outside parties under contract?

Mr. CARDIN: It is being done by government outfits. All these dredges are the property of the government.

Mr. GOULD: Can the minister tell us what amount of filling-in takes place through the deposit of silt or other material in the channel?

Mr. CARDIN: I am informed that there is only one place where filling-in to any extent has occurred, and that is not very far from Three Rivers.

Mr. BROWN: What period of time will be occupied in deepening the channel to a depth of thirty-five feet?

Mr. CARDIN: With the appropriation we are asking now, and the carrying on of the work in the manner we contemplate, it will take ten years before we reach completion.

Mr. GARLAND (Bow River): With the full amount of $1,600,000 each year?

Mr. CARDIN: Yes.

Mr. GARLAND (Bow River): Does the minister anticipate any increase in the vote? In other words, will the minister give the committee his present estimate of what the total cost of the work will be?

Mr. CARDIN: Well, if it is taken for granted that it will take ten years to complete the work it is only necessary to multiply the present amount by ten.

Mr. GARLAND (Bow River): Can the minister give the committee the cost of the work for the years 1921, 1922 and 1923? While he is looking up the information may I say that I hesitate to think of what is going to happen to the finances of the country by the time we reach Toronto.

Mr. LADNER: Perhaps we will continue to Hudson bay then.

[Mr. Cardin.]

Mr. CARDIN: The appropriation and expenditures have been as follows:

Year	Appropriation	Expenditure
1920-21..	$508,000	$507,211
1921-22..	613,000	567,370
1922-23..	693,000	658,933
1923-24..	629,540	626,372

Mr. GARLAND (Bow River): Frankly I do not think the country is in a position to face an expenditure of this kind. I have no objection to a moderate amount of work being done in deepening the channel a few feet in order to make it safer, but to go down to a depth of thirty-five feet all along the line would seem to me to require further justification than the minister has been able to give us. I should like him to tell us just what the ratio of increase in the draught of boats has been in the last four years, and what the anticipated increase in draught will be in the next ten years, that will justify deepening the channel to thirty-five feet. How much larger does the minister expect vessels using this channel to become?

Mr. CARDIN: Surely my hon. friend does not think I am in a position to say how much larger ocean vessels may become—

Mr. GARLAND (Bow River): But we are spending all this money.

Mr. CARDIN: —in ten years or even in one year; we do not know that. But even with the present capacity of ocean vessels we are receiving complaints that the channel is not sufficiently deep and there is a liability of accidents, of a large vessel being stranded with the result of completely blocking the channel. In what position would the government or the department be placed if, as a result of the channel not being sufficiently wide or sufficiently deep—one of these large vessels leaving Montreal with only two or three feet of water under its hull went considerably out of its course in a channel only five hundred feet wide? In what position would either the government or the department find itself if such an accident happened in consequence of the complaints and representations of shipping companies and other concerns being ignored? We want to avoid such a calamity. We want to make sure that navigation on the St. Lawrence route is made safe, and that neither that route nor our country will be discriminated against because of failure to make navigation as safe as we can make it.

Mr. GARLAND (Bow River): The minister is to be congratulated on the view he takes with which I agree entirely. But that is not the point. The point is, just what

depth and breadth does he consider this channel should have, and the reason therefor?

Mr. CARDIN: Several years ago, I think it was in 1910, it was decided that the depth of the channel should be thirty-five feet. Careful inquiries have been made, the question has been thoroughly discussed with the various interests concerned, and it has been deemed necessary to proceed with the work so that there might be a uniform depth, in the channel, of thirty-five feet, instead of thirty feet. The expenditure, in our opinion, is justified by the importance of the work and the advantages that will accrue not only to the shipping interests, but to the country at large from the deepening of the channel.

Mr. GOULD: The expenditure proposed to be made on this work in the next ten years will amount to $16,630,000. Will this work when completed form part of the international scheme for the improvement of the waterways?

Mr. CARDIN: It will certainly be an essential part of it.

Mr. GOULD: The contemplated width and depth of the channel will be in conformity with the plans contemplated for the improvement of the international waterway?

Mr. CARDIN: Certainly.

Mr. GOULD: This work will be considered as part of the Canadian programme?

Mr. CARDIN: It can be considered as a Canadian contribution.

Mr. GOULD: That is the objective of the department at the present time?

Mr. CARDIN: I am not in a position to say that we are doing this work at the present time as part of our share in the undertaking, but it will be in harmony with the scheme which is contemplated.

Mr. CARMICHAEL: I should like to ask the minister a question for the purpose of getting some information. In the recent past there has been a good deal of controversy between Canada and the United States and between different sections in the United States in regard to the Chicago drainage canal and the lowering of the lake level. According to what I have read, some have gone so far as to state that lake levels have been considerably lowered in the last few years because of the action of the Chicago authorities in draining off the water in lake Michigan. Does this affect the water level of the St. Lawrence? Taking a period of some three of four years back, has the minister any information to give the committee regarding the level of the St. Lawrence?

Mr. CARDIN: There has no doubt been a reduction in the level of the St. Lawrence because of the condition referred to, but it is difficult to determine exactly the extent to which this has taken place. We are, however, under the impression that the level has been affected.

Mr. GARLAND (Bow River): To what extent, approximately?

Mr. CARDIN: It is a matter of inches.

Mr. CARMICHAEL: It seems to me that if it does affect the level of the St. Lawrence to any extent whatever, this should be used as an additional argument by the Canadian authorities against any diversion by the Chicago drainage canal. So far as I have read, I have not seen such an argument advanced up to date, and I think it would be effective.

Mr. BANCROFT: Does the minister think that there is any advantage in spending public money to any greater extent than is productive of good business in the development of a trade route? The figures I have before me show that something like $17,000,000 has been spent in the dredging of the St. Lawrence ship channel up to the present time; and with the $16,000,000 odd which it is intended to spend in the next ten years there will have been put into this channel over $30,000,000, apart from lights, buoys and all other necessaries. I am wondering whether it pays to develop any trade route if it is too costly. Might it not be better for the ships to go as far as Quebec?

Mr. CARDIN: We all agree that the port of Quebec should be developed, and the necessary dredging to facilitate the entry of ships into that port should be done. At the same time we must take care of the St. Lawrence channel from Quebec to Montreal, because there will always be a certain number of vessels going to Montreal, in view of the large commercial and industrial establishments that carry on business there. And the hon. member knows that water transportation is always cheaper than railway hauling, so that the further inland we can go by water, the better it will be for our trade. I am sure that the money expended on the St. Lawrence route has been spent to great advantage, because in the proper sense of the term the St. Lawrence ship channel is a national utility. I do not think, therefore, that it would be wise to stop the work there at the present time.

Mr. BANCROFT: No one will object to maintaining the present channel from Quebec to Montreal, but the question is, shall we save enough in the water transportation over the rail haul to compensate for the cost of deepening and maintaining that waterway?

Mr. CARDIN: We think it will be a great saving; it is the natural course.

Mr. CALDWELL: This discussion is interesting in view of the proposed arrangement between the Dominion and the government of the United States for the deepening of the St. Lawrence waterway to the head of the Great Lakes; and as this question has come up regarding the immense cost of keeping the channel open as far as Montreal, I think the government might well pause before spending any money even for investigating the feasibility of carrying out the scheme for deepening the waterway to the head of the lakes. It is and always has been my opinion that the time has not yet come when that should even be considered. If our present transportation system will not handle the traffic from western and central Canada to the seaboard, then the time may come when this undertaking may be necessary. But I think it is so far ahead of present requirements that not a dollar should be spent even in investigating the project at the present time. I quite agree that it is necessary to keep the ship channel at the proper depth as far as Montreal for the type of vessels that go to that port, but I think, although I am subject to correction in this regard, that the port of Quebec is nearer to Winnipeg by rail than is the port of Montreal. The Transcontinental runs by such a direct route that, according to my information, the mileage is less between Winnipeg and Quebec than between Winnipeg and Montreal. The government might, therefore, well consider the advisability of using the National Transcontinental for the purpose for which we were told it was built. If that were done, moreover, the haul would be shorter from Winnipeg to St. John via Quebec than from Winnipeg to Portland via Montreal. This government proposes to develop the Canadian ports east and west, and this is commendable. And this I think is one of the methods towards that end. The Transcontinental has never been used to capacity, although it has a better grade than any other road in Canada and is capable of hauling larger trains than any of the other roads in the Dominion. The route, I repeat, is shorter to Quebec and if it were adopted it would obviate the necessity of deepening the channel between the harbour of Quebec and the harbour of Montreal to any greater extent than at the present time. This is my firm opinon on this matter, and I thought this an opportune time to express it.

Mr. McCONICA: The complaint, as I understand it, is that they are only bringing in cargoes to about forty per cent capacity and taking out eighty per cent, and I do not see that there is any immediate necessity for deepening this river. And in any case, it strikes me that it might be better to make boats fit the river than to make the river fit the boats.

Mr. CARDIN: The St. Lawrence route is not the main part of their trip. They have to navigate deeper waters than those of the St. Lawrence. The St. Lawrence constitutes only a small portion of their trip and we cannot control the capacity of a boat to be in accordance with the channel of the St Lawrence. We have to accept the boats which are now navigating the oceans.

Mr. KNOX: After this ten-year programme is carried out and all this dredging is done, will it be necessary to continue dredging to maintain the channel to a depth of thirty-five feet?

Mr. CARDIN: No further dredging will be necessary.

Mr. GOULD: How many miles of dredging are involved now?

Mr. CARDIN: On the thirty-five foot programme, there are eighty-one miles requiring dredging.

Mr. MEIGHEN: Has the dredging so far been conducted on the basis of a thirty-five foot channel? That is to say, has it not been conducted on the basis of a thirty-foot channel prior to date?

Mr. CARDIN: No.

Mr. MEIGHEN: There has been no dredging below the thirty feet?

Mr. CARDIN: Yes. On the first division from Montreal to Sorel, twenty miles have been dredged to thirty-five feet.

Mr. MEIGHEN: When was that done?

Mr. CARDIN: This work was started in 1910 and it has been continued since then.

Mr. MEIGHEN: How many miles are dredged to that depth now?

Mr. CARDIN: Forty-five miles.

Mr. CALDWELL: I was very much interested in the point raised by the hon. mem

ber for Kindersley (Mr. Carmichael). It has a very direct bearing on this question of dredging the St. Lawrence channel. What steps have the government taken to check the diversion of water by the Chicago drainage canal, and do they hope to effect any check on that by negotiations that
5 p.m. are now under way, or, if not, do they propose to take any more drastic measures? It is a very serious matter to this country if a foreign power is to be allowed to divert our water and if we must continue to dredge this channel deeper and deeper as time goes on, because I think it is a well known fact that the deeper you go the harder the dredging is. You get down to hard pan which is more difficult to dredge than the ordinary bottom of the river.

Mr. CARDIN: Steps have been taken, not by the Department of Marine and Fisheries, but by the Department of the Interior. The Minister of the Interior has been dealing with this question. The only thing that we did in the Department of Marine and Fisheries was to lend to the Department of the Interior the late Mr. Stewart, who died recently. He was head of the Hydrographic Survey in the Department of Marine and Fisheries and he worked with the Department of the Interior in connection with their dealings with the United States. The Marine department has nothing to do in regard to that.

Mr. CALDWELL: Is it a fact, as has been suggested by the hon. member for Kindersley, that this lessening of the flow has not been put up as part of the case against the diversion of water?

Mr. CARDIN: I should think it has been made a part of the protest because the late Mr. Stewart was quite conversant with all these things.

Mr. CALDWELL: The minister should make a note of that and if it has not been stressed, it should be stressed as the main argument.

Mr. CARDIN: I will certainly make a note of it, but I am quite convinced it has been done.

Mr. BANCROFT: Is all the work in connection with the construction and maintenance of the St. Lawrence ship channel carried on by the Department of Marine and Fisheries, or is there any overlapping by the Department of Public Works?

Mr. CARDIN: This work is carried on by the Department of Marine and Fisheries only.

Mr. CALDWELL: The Department of Public Works does some dredging on the St. Lawrence, it may be in harbours?

Mr. CARDIN: Not in relation to the channel.

Mr. CALDWELL: What is their part of the dredging?

Mr. CARDIN: Deepening the water in front of wharves. They never work in the channel. Their work is always outside of the main channel.

Mr. CALDWELL: It is the dredging of harbours?

Mr. CARDIN: Yes.

Mr. CALDWELL: Do the minister and the government not think this dredging, especially in the one river, should all be done under one department? I can well understand if you were going to Hudson bay, you would have to send some other department you had no use for, so that if they got frozen in during the winter you would not miss them; but as regards dredging rivers like the St. Lawrence, I would strongly urge having this all under one department. This has been urged repeatedly, but no attention seems to be paid to it. Every minister admits that this should be done, but evidently he forgets all about it or there is no co-ordination. I realize possibly as well as anybody the difficulty of co-ordinating under one head work that has become split up into several sections; but the government should very seriously consider at this time co-ordinating this work and cutting out duplication of expenditure. I do not want to steal the theme of the hon. member for South York (Mr. Maclean) as regards cutting out duplication of service, but this is one place where it might very well be put into practice.

Mr. GOULD: What is the estimated cost per mile from the international point of view of constructing the channel?

Mr. CARDIN: The work is estimated, no on a mileage basis, but on a cubic yarc basis.

Mr. BOYS: I understand this is part of a programme commenced in 1910. I observe that the estimate for last year was $613,000 and for the previous year, $613,000. Was the work in those years part of the programme started in 1910? Where was the dredging done and to what extent during those years? What was the average cost per mile?

Mr. CARDIN: During last year dredging was done to the extent of 1,373,420 cubic

yards at an average cost of 66½ cents per cubic yard.

Mr. BOYS: If the minister could put that in miles one would understand it better. Was it thirty feet before, or twenty-eight, or what?

Mr. CARDIN: The average depth is twenty-nine feet and a fraction.

Mr. BOYS: Was that the depth when the programme was instituted in 1910, and the programme involved dredging the channel to a depth of thirty-five feet?

Mr. CARDIN: Yes.

Mr. MEIGHEN: Can the minister tell us how many miles have been dredged in the last three years?

Mr. CARDIN: In 1924, on the thirty-five foot project, we dredged 128 miles at varying depths.

Mr. MEIGHEN: How much the year before?

Mr. CARDIN: We have not the figure for the year before, but I could give the number of yards, if that would be satisfactory.

Mr. MEIGHEN: That would not help.

Mr. BOYS: I do not understand the minister's reference to the "average depth." If the channel was twenty-nine feet, and it has been deepened to thirty-five feet, I presume that simply means it has been made six feet deeper?

Mr. CARDIN: The depth of the channel is not uniform. In certain points it is thirty feet and a little over, and at other points twenty-nine feet, so we have to figure the channel by the minimum depth, and we say its depth, generally speaking, is twenty-nine and a fraction feet.

Mr. BOYS: I gathered from the minister that the programme was to increase the minimum depth to thirty-five feet. Perhaps it would be thirty-six feet in places?

Mr. CARDIN: At the points where it is now only twenty-nine feet, the depth would be increased by six feet, but at other points the present depth varies from thirty to thirty-two and thirty-three feet. In other words, the depth is not absolutely uniform, and we have to judge it by the minimum, which is twenty-nine and a fraction feet at certain points.

Mr. BOYS: What was the programme of 1910?

Mr. CARDIN: It was thirty-five feet for the entire channel.

[Mr. Cardin.]

Mr. MEIGHEN: What is meant by "programme"? Did we contract with anyone to do the dredging?

Mr. CARDIN: No, the government decided to do it.

Mr. MEIGHEN: I see the figure given for last year is $963,000. The main estimate was for $613,000. Was there a supplementary estimate?

Mr. CARDIN: Yes, of $350,000.

Mr. MEIGHEN: Do we supply the dredges to the contractors?

Mr. CARDIN: The dredging is all done under the control of the Marine department. We have a number of dredges which were not used during the war. These have been reconditioned out of the appropriation of $350,000, in the supplementary estimates of last year, and this year we propose to place them in commission with the other dredges which were in operation last year. We also propose to have the work carried on during the night—that is, through the twenty-four hours, as it was done before the war. Even so, according to the information from the officials of the department, it will take ten years to bring to a final execution the programme which was contemplated in 1910, when it was decided to deepen the channel to thirty-five feet.

Mr. BOYS: That is what I wanted to find out. The programme contemplated an increase to that depth from what point to what point?

Mr. CARDIN: All along the channel.

Mr. MEIGHEN: What is in contemplation in respect of the large boat running on the Welland canal is that it will bring our grain down the St. Lawrence to about Prescott, and at that point, for many years to come, even if this work is all done, there will still have to be transhipment into another type of boat. Consequently this work is not a part of the Welland canal scheme at all, it is a new scheme in itself. I am not saying that it is not a good scheme, if we could afford it, but it will not enable us to get any advantage of the Welland canal expenditure. All the Welland canal expenditure will do will be to carry the Great Lakes boats through the canal into lake Ontario and down the St. Lawrence until they reach these canals in the neighbourhood of Prescott. That is the fact, is it not?

Mr. CARDIN: Yes.

Mr. MEIGHEN: Now the question comes, has the time arrived for us to enter upon a

great new scheme, perhaps conceived in 1910, but never yet seriously launched upon, and face a new expenditure, which the minister estimates at $16,000,000 odd, but which, according to the figures he has given now and according to the experience we all have, will total nearer twice that sum before we are through? The government this year introduces an estimate just three times what, until last year, we have been spending, and nearly twice what we spent last year, and if it goes on with its programme this expenditure is going to increase year after year. I wonder what is going to become of the aspirations of many other hon. members if this is proceeded with. In this connection—I mention this because I am not sure that it has been taken account of at its true value—of all this expenditure from the city of Montreal down the river, according to the treaties we have with the United States, they are entitled to equal benefits with ourselves. Naturally we make the expenditure; the river is under our jurisdiction, but they are entitled to the advantage of it equally with ourselves. The weight is upon us and upon us alone. But to the extent that we encourage the northern route referred to by my hon. friend to my left, we alone get the benefit. That route is now constructed. We have gone to that extent, and by the utilization of it, or increased utilization of it, we can use the river we have now at sufficient depth up to the city of Quebec to get an exit for our traffic. The minister says there are boats coming in that want deeper waters and that the government will be in a very bad corner if one of them gets on the bottom or hits hard pan. Are we under obligation to meet the demands of all these steamship companies accordingly as they want to use larger boats? Have we to dredge the St. Lawrence to suit the boats they want to put in service, and if we do not, are we to be in a corner, subject to lawsuit? I do not know what the lawsuit would be. We are looking after ourselves; we are not looking after the steamship companies. Now, suppose we continue as we are, giving them the 30-foot depth as they have it to-day, from Montreal down; the larger boats can go to Quebec and we can provide them with traffic there—would that not be a lot saner than to attempt to make a 35-foot waterway at this time from Montreal to the mouth of the St. Lawrence, in view of the condition the country is in? This is a colossal venture. We are plunging into it at a time when the government says we cannot do this and we cannot do that; we cannot reduce taxes; we cannot do anything because of the state of our finances, due to the reparation trouble in Germany. Has the government thought this thing out in perspective at all? The minister says the insurance rates are higher. It is not more than a month since his colleague told us there was no reason at all for the insurance rates being higher—intimated that it was just a part of the combine's effort to discriminate against Canadian ports. They must have become converted since the debate on the Petersen contract. If the insurance rates are higher, why does the government not take the insurance matter into its own hands? It is doing it on the Canadian National Railways.

Mr. CARDIN: It is a big problem.

Mr. MEIGHEN: It is not half as big a problem as deepening the St. Lawrence five feet from Montreal to Quebec.

Mr. CARDIN: Greater.

Mr. MEIGHEN: A greater problem to insure the boats?

Mr. CARDIN: Yes.

Mr. MEIGHEN: Well, I am afraid the minister's perspective and mine are very different in that respect. There is a certain rate now to Montreal. There is a certain rate to New York—a shorter distance, but the proportion can be worked out. All the government needs to do is to equalize, and if there is loss then the government can bear it. Does the minister suggest that would be greater? We are not under any obligation to carry any kind of boat right up to Montreal. I know we would like to; no one would like to more than I and the time will come, I have no doubt, when we will carry them up, at least so far as they require a channel of 35 feet. But in the meantime rather than launch upon huge new expenditures at this time, let us give insurance to boats that can reasonably go through, and give it at low rates. If others will not do it, let us do it; if the others are ready to do it well, let them. If they are discriminating against us and will not give the insurance let us take the business. In that way we would avoid, at least we would postpone until we were in a more secure financial position, the colossal expenditure we are now launching upon, seemingly without very much circumspection, without very much regard to the pockets of the taxpayers. We are to start out with $700,000 more this year, and a million more than the original estimate of last year, and this is to be increased annually for ten years—the minister will find it will

be for a good many more years than ten. And it is all on a new venture, no part and parcel of that programme upon which we are launched now; not something that is essential to get the benefit of any expenditures already made. I suggest these considerations to the minister. I do not remember any explanation of this programme being adduced when last year's supplementary estimate, so seriously increasing the original estimate, was brought before the House.

Mr. GOULD: I trust that the representations of this committee will be quite as weighty with the minister as the representations he has already cited on behalf of the deepening of the channel. He stated that 98 miles were being considered in the project. The member for Selkirk stated that $17,000,000 had been expended. The minister then said that another ten years would follow with approximately the same amount of the vote for this year, which would mean about $342,000 a mile. That is rather an extravagant programme to enter upon, in view of the present financial state of the country. I would suggest that the activities be confined to the dredging of a few ridges or such small areas as may be in need of attention in the channel, without any attempt to provide a 35-foot channel for the whole 98 miles. I cannot see where the relation between this project and the proposed international waterways project exists. It seems to me that our expenditure in that connection will not be decreased in any particular by this expenditure if in the future we embrace the proposal to engage with the United States in this deep waterways project. There are other places in Canada that require expenditures which have long been denied them. I can cite several places where public expenditures might be made, and even then do no more than justice to the people. I know of places which have not received any attention for the past ten, twelve or fifteen years, though it is much needed. It would appear that sometimes the government's pocket is full and at others, empty. I suggest to the minister that he consider in this connection a proportionate division of the revenues of the country.

Mr. WARD: Is this proposed work to be done entirely between Montreal and Quebec?

Mr. CARDIN: No, there is a very important portion of it to be carried on below Quebec, which will facilitate the entry of large vessels. There are a little over nine miles to be dredged below Quebec.

[Mr. Meighen.]

Mr. MEIGHEN: It would be only a rock here and there, would it not?

Mr. CARDIN: No.

Mr. MEIGHEN: What is the shallowest point below Quebec?

Mr. CARDIN: In the lower channel, 25 feet. In the ordinary channel we have a depth of 30 feet.

Mr. CALDWELL: If there is a channel of 30 feet on one side, does the government propose to abandon it and make another channel on the other side of the island? What advantage is to be gained?

Mr. CARDIN: The south channel is the most difficult to navigate.

Mr. CALDWELL: What is the particular difficulty if the water is deep enough?

Mr. CARDIN: I am informed that there is a swift current in the south traverse.

Mr. BOYS: What is the depth of the channel the Canadian Pacific liners take?

Mr. PARENT: They follow the same route as any other line.

Mr. BOYS: I am confused by this suggestion of two channels. It is the first I ever heard of it.

Mr. PARENT: There have always been two channels in the St. Lawrence, but it has been found for quite a few years that the better one is that on the north shore. There is any amount of water there, and it is a straight channel, while the south channel is a little crooked, and has always a swift current running. An excellent organization like the previous government, and the one before, thought it quite proper to prepare the north channel so it could be used by all lines,—by the Canadian Pacific and any other lines.

Mr. BOYS: What is the necessity for two channels?

Mr. PARENT: You cannot prevent that. The water is there, and you have to take one or the other. If we prepare a better channel, it is left for the companies to use it or not as they see fit.

Mr. BOYS: Is it the intention that the one being used now is to be abandoned, and the north channel deepened and used instead of the other?

Mr. PARENT: I understand that has been the policy of the governments for the last ten years.

Mr. BOYS: I am not criticizing at all; I am just asking for information, because I think this is a matter of sufficient importance to have a clean-cut full statement from the minister so that we may understand what is being contemplated and the necessity for it. I am not sure, but I would have thought that the Canadian Pacific boats would draw more than thirty feet.

Mr. PARENT: I may tell my hon. friend that a good many pilots have taken upon themselves to use the north channel, even without much preparation, for a good many years, and always with great success, to such an extent, in fact, that they have convinced the government it was the better channel to use.

Mr. FORKE: Why was the south channel opened up if the north channel was better?

Mr. PARENT: There is always time to learn.

Mr. FORKE: That is a very poor answer. I view with a good deal of alarm the spending of so much money at the present time. Of course, I admit there is a good deal more to be said for deepening the channel below Quebec out to the gulf, than for deepening it from Quebec to Montreal. But I think the channel between Montreal and Quebec could very well be left alone for a time and the Transcontinental railway be used to Quebec to which the larger ships, of course, could come. Hon. members may smile, but sometimes when we want to pass a vote for a few thousand dollars, we are told that money is so scarce it cannot be done, and then a vote for a million and a half will go through like lightning.

Mr. MEIGHEN: I think the hon. member for Brandon has misinterpreted the smile. I think my hon. friend from Montmorency (Mr. Parent) is smiling in approval.

Mr. BROWN: I think the government might well modify its programme in this respect. You cannot use any channel until it is all the same depth, and I do not see any reason in spending money deepening the channel between Montreal and Quebec if there is a part of the channel below Quebec that is not of sufficient depth to accommodate the ships. None of us here are sailors, but at all events we can understand that a channel with a depth of 35 feet in one part is of no use if you have only a depth of 25 or 30 feet in the other part.

Mr. PARENT: That is only for a small distance.

Mr. BROWN: I would see an eminent reason for deepening the channel below Quebec so that the largest ocean steamers could come up that far, and if that was the immediate programme of the government, for my part I could very heartily endorse it, but until that work is completed below Quebec, it would seem to me folly to spend money deepening the channel above Quebec.

Mr. DECHENE: Perhaps I might explain the situation below Quebec, as it just happens to be near the town of Montmagny. The tide at St. Thomas bank averages from seven to eighteen feet, and when the tide is down the Canadian Pacific Empresses stop at the lower end of the St. Thomas bank and wait there till the tide has risen four or five feet before they can go across. They do not dare to take the channel as it is to-day and go on to Quebec unless the tide is up. Part of this channel runs crosswise to the main current in the river, and there is not enough water when the tide is low to allow these big boats to use the channel. When the tide is up, they have eighteen feet more than they need, and they can proceed easily, but when the tide is low they simply have to wait.

Further down we have what we call the lower traverse, which starts from the south shore and goes pretty nearly to the north. It extends for ten miles and runs right across the current. At times when the channel has not been maintained very wide the boats will strike the side of the channel or a loose rock, and then a wreck happens. That has happened many times in the last few years. The north channel is a straight one, and it will avoid using the lower traverse. The traverse will then take place at the foot of Orleans island, where there is practically no current at all. Of course, the northern channel cannot be used by the big boats until it has depth enough for them to pass, and therefore you have to keep the southern channel open until the northern one is in a condition to be used. I remember well that in the years 1911, 1912 and 1913 and up to the war the dredge of the Department of Marine worked all the summer around Orleans island dredging the northern channel. It has been quite a long business, and unless you keep carrying on we shall always have lots of trouble with that part of the channel at St. Thomas bank in connection with the transatlantic service. I think that is the reason why the department is doing this work, and I endorse the government's action in carrying it on.

Mr. BROWN: It is not a question between using the north and south channel below

Quebec. I would not presume to express an opinion in regard to that matter at all. I would be quite prepared to take the judgment of others who are in a position to express an opinion on that, but I cannot see anything to be gained by spending money deepening the channel to thirty-five feet between Quebec and Montreal when the channel below Quebec is not at present in a condition to accommodate the larger ships that come up. Is that the fact?

Mr. DECHENE: When the tide is up there is sometimes forty and forty-five feet below Quebec, but there is not thirty feet when the tide is low. The ships can always come up when the tide is up.

Mr. BROWN: I do not know what the conditions are, but so long as the channel below Quebec is not in a position to accommodate the larger ships that want to come to Quebec, it seems to me there is nothing to be gained by spending money making a 35-foot channel at any point between Montreal and Quebec.

Mr. DECHENE: It simply means at present a delay of two or three hours for the tide to rise and give enough water for the big ships to come up from St. Thomas bank. It takes three or four hours for the tide to rise high enough for the ships to pass.

Mr. BROWN: Then under the present conditions, making allowance for the tide, the larger ships that want to come to Quebec can come?

Mr. DECHENE: Yes, they come up all the time.

Mr. BROWN: Then what proportion of the money is required to do the work that has to be done below Quebec?

Mr. DECHENE: I cannot say at all. When the tide is low the Canadian Pacific steamships have to drop anchor at the foot of St. Thomas bank and wait for the tide to rise. Sometimes they succeed in reaching the bank itself when the tide is low, but that only happens four or five times during the summer.

Mr. BANCROFT: I suggest to the minister that the work, for this year at least, be all done below Quebec.

Mr. CARDIN: Suppose we should do that, will anyone in this House say that it is not necessary to continue deepening the channel between Quebec and Montreal in order to ensure safe navigation to all large vessels? Will anyone say that, while we are developing the port of Quebec and the navigation facilities below it, the port of Montreal should remain inactive? Will anyone pretend that the numerous vessels which usually make Montreal their port of destination, should desist from doing so?

Mr. HOEY: We will have more money available later on than we have now.

Mr. CARDIN: But we cannot defer until then the deepening of the channel between Quebec and Montreal. We may have a serious accident in the meantime. This is not by any means a new project. The right hon. leader of the opposition seems to argue that we are entering upon a new programme. I can assure my right hon. friend that it is not so.

Mr. FORKE: But the expenditure is increasing.

Mr. CARDIN: In the years 1910, 1911, 1912, 1913, 1914 money was spent by the government then in power on this very project—the deepening of the channel between Quebec and Montreal—and large expenditures were made upon the undertaking. These expenditures were not made merely for the sake of spending money. They were the result of recommendations made by the parties most interested—the shippers, the manufacturers, and the navigation interests of Montreal. I think we are absolutely justified in deepening, widening and straightening this channel, in order to facilitate the navigation of what I may call a national waterway. The work below Quebec has to be done, and facilities must be provided to develop the port of Quebec itself so as to accommodate the large vessels that call there; but we cannot stop there, we must improve the navigation conditions between Quebec and Montreal. We must take care of the traffic which already exists between the two ports, we must make navigation safe for the large vessels now using the channel, and the probability is that in the future their number will increase rather than diminish. The port of Montreal must be developed to take care of the rapidly increasing business which it is attracting, and the ship channel between Quebec and Montreal must be rendered absolutely safe for the ships which navigate it in increasing numbers.

Mr. FORKE: What is the urgency of the situation that we require to spend $700,000 more this year than we did last?

Mr. MEIGHEN: There is an election coming.

Mr. CARDIN: No question of an election enters into this vote. The money is expended by the Department of Marine and Fisheries and the work is being carried out by government vessels under supervision of the department. This project was considered a necessity in 1910, and the conditions have not changed since then. If it was necessary in 1910 to deepen the channel to thirty-five feet, it is far more necessary to-day. I repeat, this is not new work; it is a continuation of work started and carried on by previous administrations.

Mr. MEIGHEN: How much were the votes in those years?

Mr. CARDIN: In 1914-15 the expenditure on this work was $999,762.15. In 1915-16 there was an expenditure of $981,761.64.

Mr. MEIGHEN: Where was that money spent?

Mr. CARDIN: It was spent in carrying on the programme of deepening the channel to thirty-five feet.

Mr. MEIGHEN: There was nothing spent then on deepening to thirty-five feet.

Mr. CARDIN: Yes.

Mr. MEIGHEN: I should like the minister to show where the channel was being deepened then to the depth it is to-day?

Mr. CARDIN: Well, take the case of division No. 1—Montreal to Sorel. The length yet to be dredged to a depth of thirty-five feet is only seven miles; the rest of the work has been done.

Mr. MEIGHEN: The minister said only seven miles had been dredged as yet.

Mr. CARDIN: No, I said the length yet to be dredged to a depth of thirty-five feet is seven miles.

Mr. MEIGHEN: How much has been dredged? The minister put it the other way before?

Mr. CARDIN: Twenty miles.

Mr. BOYS: Twenty miles out of ninety-eight miles is it?

Mr. CARDIN: No, twenty miles. There were twenty-seven miles in all to be dredged.

Mr. BOYS: What was the total distance originally contemplated?

Mr. CARDIN: The total distance of the division from Montreal to Sorel is forty-five miles.

Mr. BOYS: I do not mean this particular division, I mean the total distance for the whole programme?

Mr. CARDIN: The total distance requiring dredging under this programme is ninety-one miles, and forty-five miles have been dredged already to a depth of thirty-five feet. The distance remaining is therefore forty-six miles.

Mr. BOYS: I have not yet got into my head the difference between the north channel and the south channel. Do the liners take the north channel?

Mr. CARDIN: No.

Mr. BOYS: They take the south channel?

Mr. CARDIN: Yes.

Mr. BOYS: I cannot see why there should be two channels at Grosse Ile, that is the point that is puzzling me. Surely we ought to abandon one entirely and improve the other. Such a policy as that would certainly be better. Cannot we have an exact statement from the minister showing just what is contemplated?

Mr. CARDIN: These two channels are parts of the whole channel of the St. Lawrence; they are alongside Gross Ile below Quebec. The channel we have at the present time is south of Grosse Ile; the one we propose to use and to deepen is to the north. At the present time vessels follow the south channel; but as the hon. member for Montmagny has explained, the navigation is not as safe there as it is in the north channel on account of the swift current, and even at times on account of the lesser depth and the sinuosities of the channel. Navigators on the big ships already take the northern route, although the channel is not yet completed to the desired depth and there is an element of risk. But the majority of vessels are using the south channel.

Mr. BOYS: Now I understand the situation. Then it is the intention of the department to abandon the south channel when the new work is completed, is that the idea?

Mr. CARDIN: That will happen, certainly, because the north channel is a better channel than the other—it is a straight channel.

Mr. BROWN: Let us get the figures right as to the stretch of river between Montreal and Quebec. What mileage has been already deepened to a depth of thirty-five feet so as to accommodate vessels of larger draught?

Mr. CARDIN: The total length of the thirty-five foot channel already dredged between Montreal and Quebec is forty-three miles.

Mr. BROWN: Does that take into account the part that does not need dredging?

Mr. CARDIN: No.

Mr. BROWN: It all had to be dredged?

Mr. CARDIN: What I have given is what was dredged.

Mr. BROWN: And what is the total distance?

Mr. CARDIN: The total distance is 160 miles.

Mr. BROWN: That means that 117 miles of work remains to be done.

Mr. CARDIN: No; a certain part of the channel has already been dredged to a depth of thirty-five feet.

Mr. BROWN: That is what I am trying to get at.

Mr. CARDIN: A distance of thirty-five miles is yet to be dredged.

Mr. BROWN: How long will it take?

Mr. CARDIN: It depends on the amount of earth we have to take out, but we hope to complete the whole programme in ten years.

Mr. LEWIS: Will this dredging then come to an end?

Mr. CARDIN: Yes.

Mr. BROWN: We have this situation, then: One hundred and sixty miles of the river between Montreal and Quebec has been dredged; there is a stretch of eighty-two miles which owing to its natural formation does not need dredging; a distance of forty-three miles has been dredged; and there remains to be dredged a stretch of thirty-five miles to make this thirty-five foot waterway.

Mr. CARDIN: Those figures are correct.

Mr. McBRIDE: Have any soundings been taken to ascertain whether rock or hard pan will be encountered in any portion of the river not yet dredged?

Mr. CARDIN: Complete soundings have been made and we know exactly what the character of the river bed is.

Mr. McBRIDE: Is there any rock or hard pan?

Mr. CARDIN: There is rock at certain points.

Mr. McBRIDE: What distance of rock or hard pan would there be to dredge?

[Mr. Brown.]

Mr. CARDIN: There is practically solid rock for a distance of about four or five miles.

Sir HENRY DRAYTON: The hon. member (Mr. Forke) asked one question which seemed to me singularly pertinent, and that was as to the reason for the very large increase this year. I think we all ought to be, if we are not, agreed that Montreal is a very important port and that everything that can reasonably be done to maintain it in its position to look after Canada's business should certainly be done. But there does really seem to be some demand on the minister to let us know why we are practically doubling the vote this year, and I have not heard any satisfactory answer so far. I should have thought that the government would now consider it advisable to spend less money in Montreal seeing that they have proposed, as the type of vessel to engage in a service on which they intend to spend some $13,000,000, ships that will not take anything like a draft of thirty-five feet, nor even of thirty-two feet which is now provided. I should have thought that if the government were serious in the matter of the Petersen contract, instead of wanting to spend more money in Montreal they would be cutting down expenses. It does seem to be entirely illogical for the government on the one hand to advance a policy which calls for practically a doubling of this vote this year, looking to the accommodation of big vessels and the development of big business, and at the same time select and subsidize as proper carriers for the St. Lawrence route a type of ship which would render absolutely unnecessary any further improvement in that port. I wonder whether the department has really considered the policy of the Minister of Trade and Commerce (Mr. Low).

Mr. LOW: What about passenger boats?

Sir HENRY DRAYTON: They are also freight carriers; there is no question about that. But the minister might carry his own question logically a little further; he might recognize the fact that the sea is free and that if we have government subventions on the one side and a free sea on the other, it is just questionable what the result will be on the commerce of Montreal. His question, of course, is capable of very easy determination. If the subvention of $13,000,000 is to be given as a plum to Sir William Petersen, then there is no reason why the other boats should not continue in the traffic. If, on the other hand, it is to be used as a means of forcing down earnings to a lower ratio than those made from New York, then the ordinary

answer as to the freedom of the seas would apply. In that case the minister is not at all careful of the business and prosperity of the port of Montreal. I of course do not know what he really intends doing, whether he intends that this should be a bonus of $13,000,000, or whether it should be something which would be made to cut rates so as to produce a lower rate from Canadian ports than from New York ports, whereby he is going to produce such a state of affairs as will render it more advantageous for boats that can go anywhere to run from New York instead of from Canada.

Mr. MACDONALD (Pictou): The hon. member is a member of the committee considering this question. Is he giving judgment now before hearing all the evidence on the subject?

Sir HENRY DRAYTON: I am asking questions. I am not giving judgment. If my hon. friend had listened to what I said, he would not have interjected that question. I am in search of information, and when this question was put to me by the Minister of Trade and Commerce (Mr. Low), I supposed that he wanted an answer. I am answering it to the best of my ability. I come back to my original question: Have the Department of Trade and Commerce and the Department of Marine and Fisheries consulted together in connection with these apparently different governmental policies? Is this question of a subsidy entirely a matter within the glass-box, self-contained Department of Trade and Commerce, or is it something that the Department of Marine and Fisheries have passed upon or are considering in connection with their expenditures? Obviously, they have never given it any consideration as something justifying an increase in this vote. We have a very large increase here. It may be that the increase is right, but I submit in all sincerity that, at the present time before such increases are allowed, the House should at least get full and definite information as to the necessity of the increase.

At six o'clock the Speaker resumed the chair and the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

SECOND READINGS

Bill No. 76 for the relief of Laura Grace Davis.—Mr. Jacobs.

Bill No. 77 for the relief of Alice Brouse. —Mr. Duff.

Bill No. 79 for the relief of Robert Lawrence Anderson.—Mr. Duff.

Bill No. 80 for the relief of Pearl Hibbard. —Mr. Stewart (Leeds).

Bill No. 81 for the relief of William John Taylor.—Mr. Hanna.

Bill No. 82 for the relief of Albert Edward Cottrell.—Sir Henry Drayton.

Bill No. 83 for the relief of Florence May Mott.—Mr. Clifford.

Bill No. 84 for the relief of Ellen Mary Harvey.—Mr. Hanna.

Bill No. 85 for the relief of Stella Florence Brickenden.—Mr. Euler.

Bill No. 86 for the relief of Frank Alexander Michel (otherwise known as Frank Alexander Mitchell).—Mr. Euler.

Bill No. 87 for the relief of Thelma Adeline Rose Hands.—Mr. Jacobs.

Bill No. 88 for the relief of Jean Veronica Margaret Wright.—Mr. Garland (Carleton).

Bill No. 89 for the relief of Ruth Darcy Blinn McCrimmon.—Mr. Shaw.

Bill No. 90 for the relief of Thomas George McElligott.—Mr. Hocken.

Bill No. 91 for the relief of Alvin Wesley Richards.—Mr. Stewart (Leeds).

Bill No. 92 for the relief of Cecil Tanner. —Mr. Rankin.

Bill No. 93 for the relief of Ruth Ellen McGowan.—Mr. Shaw.

Bill No. 94 for the relief of Edith Kearsley Smith.—Mr. Boys.

Bill No. 95 for the relief of James Raymond Armstrong.—Mr. Garland (Carleton).

Bill No. 96 for the relief of Josephine Royant.—Mr. Sheard.

Bill No. 97 for the relief of Gertrude Margaret Burkart.—Mr. Ryckman.

SUPPLY

MARINE AND FISHERIES

The House in committee of Supply, Mr. Gordon in the chair.

Mr. CARDIN: Mr. Chairman, in view of the observations which have been made by my hon. friends opposite in regard to item 219—River St. Lawrence ship channel—and in view of the absence of a number of the members from the district of Montreal, who are most interested in this item, I suggest that the item stand.

Item stands.

To provide for the maintenance and operation of Sorel shipyard, $154,000.

Mr. BAXTER: Is that the same as last year?

Mr. CARDIN: Yes.

Item agreed to.

Lighthouse and coast service—agencies, rents and contingencies, $226,000.

Mr. LUCAS: Will the minister explain the decrease?

Mr. CARDIN: The decrease of $2,000 is due to a readjustment consequent on the retirement of a number of old employees under the Public Service Retirement Act.

Mr. LUCAS: How much was spent last year?

Mr. CARDIN: Up to January 31, 1925, $170,000. I have not the figures to the end of the fiscal year. This vote relates to the operation and maintenance of marine agencies, including salaries and travelling expenses of agents, accountants, district engineer and subordinate personnel. These agencies are in charge of all the lighthouses and buoys controlled by the department along the St. Lawrence river, the Atlantic coast, the Pacific coast and the Great Lakes. The amount is practically all salaries.

Item agreed to.

Salaries and allowances to lightkeepers, $650,000.

Mr. TOLMIE: What is the average salary paid to a lightkeeper?

Mr. CARDIN: There are lightkeepers receiving $2,880, while the lowest salary is $60, depending upon the importance of the light. Where the larger salaries are paid the lightkeeper has to supply the assistants that he needs and pay them out of his salary.

Mr. TOLMIE: What kind of light is that $60 light?

Mr. CARDIN: It is simply a wharf light, attended by the wharfinger.

Mr. WARD: The minister told us a moment ago that item 221 was for salaries, but this item seems to be for the same purpose.

Mr. CARDIN: In this item we are providing for the salaries of lightkeepers only; the previous item covered the salaries of employees at our different agencies throughout the country. These agencies are taking care of placing and maintaining the necessary aids to navigation, and of the steamers engaged in that work. We have agencies in Nova Scotia, New Brunswick, Prince Edward Island, Quebec, Montreal, Parry Sound, Victoria and Prince Rupert. At all these places we have a staff looking after the supplies that are necessary for the lighthouses, the purchase of buoys, and generally looking after the steamers which are employed in the placing of the buoys and aids to navigation. Item No. 222 covers the salaries of the men who are looking directly after the lights, the lighthouses, and the small lights which are placed on wharves at different places.

Mr. WARD: What percentage of this amount is used between the city of Montreal and the city of Quebec?

Mr. CARDIN: There are all counted, 1,133 lightkeepers. I could not say at the moment how many there are between Montreal and Quebec.

Mr. WARD: Perhaps we could go on with another item and the minister could give me that information later. I would like very much to get it.

Item agreed to.

Maintenance and repairs to lighthouses, $825,000.

Mr. THURSTON: How much was spent last year?

Mr. CARDIN: I have only the figures up to the 31st of January, 1925, when $690,000 had been spent. This amount is practically the same every year.

Item agreed to.

Construction of lights and aids to navigation, including regulation of traffic at such places as may be found necessary, revote, $75,000, $525,000.

Mr. KELLNER: Does not the Department of Public Works do similar work to that carried on under this vote?

Mr. CARDIN: No.

Mr. BAXTER: In 1922-1923 this vote was $400,000; it became $500,000 in 1923-1924, and in 1924-1925 it was up to $525,000, and remains at the same figure this year. Are there any new lights being constructed, and what new lights have been constructed during the past year?

Mr. CARDIN: Every year a certain number of new lighthouses are built. The construction of new lighthouses is made upon the recommendation of the lighthouse board. All requests for the construction of new lighthouses are first submitted to this board, whose approval is necessary before construction is gone on with.

Mr. THURSTON: Who are the members of the lighthouse board?

Mr. CARDIN: The deputy minister, the commissioner of lights, the chief engineer, and

the representatives of the shipping federation and the marine association.

Mr. BRETHEN: What is the $75,000 revote for?

Mr. CARDIN: Last year we asked for a vote of $75,000 towards the purchase of a vessel which was to be used as a lightship. No vessel was purchased last year, and we are asking for the amount to be revoted this year.

Mr. BRETHEN: What is this lightship used for?

Mr. CARDIN: It is used at certain places where it is more convenient and less expensive to use a lightship than to build a lighthouse.

Mr. SPENCER: Who is the commissioner of lights?

Mr. CARDIN: Mr. J. G. MacPhail.

Mr. SPENCER: How is he appointed?

Mr. CARDIN: His appointment comes under the Civil Service Commission. He has been in the service a very long time.

Mr. SPENCER: What are his particular duties?

Mr. CARDIN: He has supervision over the whole lighthouse and buoy services.

Item agreed to.

Marine signal service, $100,000.

Mr. BAXTER: This vote has been about stable in amount. I may be wrong, but if it is the one I think it is—I assume it is the under-water signal service, is it?

Mr. CARDIN: No.

Mr. BAXTER: I was not sure from the title. I am not criticizing the vote in any way, but I think a few moments spent in explaining just what it is would not be amiss, because coming as I do from the maritime part of the country it is sometimes well, I think, that other portions of the country should appreciate the need that exists for such services as this.

Mr. CARDIN: This appropriation is to provide for the maintenance and operation of a marine signal service. These signal stations have been established for the purpose of reporting movements of ships, weather and ice conditions, and dangers to navigation generally. The system extends from St. John, N.B., Halifax, N.S., Cape Race, Newfoundland, Belle Isle, up the gulf and river St. Lawrence and on the Great Lakes up to Sault Ste. Marie.

At these different stations the department keeps a man whose duty it is to make reports to those desirous of getting information as to the precise locality where a ship may be at a particular time and as to navigation conditions in that particular area. For example, if a ship is in the gulf, or near Quebec, there may be persons wishing to know at what hour the vessel will reach port. Information of this sort is given to persons interested in the movements of shipping.

Mr. SPEAKMAN: Is there any such service on the western coast?

Mr. CARDIN: We have a similar system on the Pacific coast but it is carried on by the Harbour Commission of Vancouver. A grant is made to the commission for the work it is performing.

Item agreed to.

Administration of pilotage, $250,000.

Mr. TOLMIE: Will the minister state how the administration of pilotage is carried on on the Pacific coast?

Mr. CARDIN: On the Pacific coast there is free pilotage.

Item agreed to.

Maintenance and repairs to wharves, $10,000.

Mr. BAXTER: What wharves are these?

Mr CARDIN: Under the actual prevailing system, after a wharf has been constructed by the Department of Public Works, it comes under the jurisdiction of the Department of Marine and Fisheries, which appoints the wharfinger and also receives the fees paid to that official. This item is to carry out the repairs which may become necessary during the course of the year. Important repairs of wharves are made by the Department of Public Works; but the present item is to meet the cost of small repairs, the necessity for which may arise during the year, and to keep the wharves and surroundings in proper order.

Item agreed to.

To provide for breaking ice in Thunder bay, lake Superior and other points deemed advisable in the interests of navigation, $30,000.

Mr. THURSTON: How much of this vote was spent last year?

Mr. CARDIN: The entire amount was spent and the work was done under contract.

Mr. BLACK (Huron): In what particular locality was the ice breaking done?

Mr. CARDIN: At Port Arthur and Fort William.

Mr. SIMPSON: Who had the contract for the work done last year?

Mr. CARDIN: The Great Lakes Transportation Company.

Mr. SPEAKMAN: Is the same amount paid out each year regardless of the quantity of ice which forms or the length of the ice breaking season?

Mr. CARDIN: Yes.

Mr. SPEAKMAN: Is it based on the average of the work done during a number of years?

Mr. CARDIN: Yes.

Mr. KELLNER: How much earlier is navigation able to start as a result of this ice breaking?

Mr. CARDIN: With the aid of this system navigation is kept open up to the 19th December. But for this work, navigation would have to close in the first days of that month, the season being thereby prolonged for fifteen or twenty days.

Mr. KELLNER: You could not open navigation any earlier in the spring?

Mr. CARDIN: Yes, ice breaking is done in the spring, and as a result the season of navigation is opened at least a week earlier.

Mr. SPEAKMAN: So that the season of navigation is extended by approximately a month as a result of the use of ice breakers?

Mr. CARDIN: About that.

Mr. SPENCER: Can you extend the season of navigation in the fall by the use of the ice breakers?

Mr. CARDIN: That is the main purpose of the ice breaking, and as a result of this work the season of navigation is lengthened by fifteen or twenty days in the fall.

Item agreed to.

Amount required to pay pensions to pilots—Joseph Lapointe, Barthelemi Lachance, Alphonse Asselin, Elzear Desrosiers, Hubert Raymond, Edmond LaRochelle, L. E. Morin, A. T. Simard, Joseph Plante, Victor Vezina, Raymond Baquet, Alfred LaRochelle, Theophile Corriveau, Alphonse Pouliot, Treffle Delisle, Alfred Gaudreau, F. X. Demaules, Adjutor Baillergeon, Joseph Pouliot, Arthur Baillergeon, John A. Irvine, Camille Bernier, Joseph Eugene Lachance, Elzear Normand, Phileas Lachance, Narcisse Lavoie, L. H. Lapierre, J. T. St. Laurent, J. V. Gourdeau, Samuel Rioux, Joseph LaRochelle, Francois Gaudreau, Arthur Koenig, J. Alphonse Lachance, Raoul Lachance, Joseph O. Lachance, Arcadius Jouvin, $11,100.

Mr. BAXTER: Are all the pilots of Canada now on the same basis in the matter of retiring allowances? I think we have a different system of pilotage in the district of St. John. There is a board there, and yet I understand the department has something to say in the administration of the pilotage. I am under the impression that a different system prevails there from the one obtaining in other parts of Canada. I should like to know if I am right or not?

Mr. CARDIN: The Quebec pilotage district is the only one where the pensions are paid by the government.

Mr. BAXTER: How are they paid in St. John?

Mr. CARDIN: Out of the local revenue. No pensions are paid by the government, to pilots in that locality.

Mr. BAXTER: In some respects there must be a difference in administration at St. John. Does the minister know what it is?

Mr. CARDIN: It is very hard to explain just wherein the difference lies. Possibly the conditions there may be worthy of the consideration of the department.

Mr. BAXTER: I think perhaps in part there may be some reason for the special conditions at St. John. So far as the soil is concerned the harbour at St. John is privately owned, it is owned by the corporation. It is not like the other harbours of Canada which, under the British North America Act, passed under control of the federal authorities. I think that for a time there was some idea that fact gave the pilotage of St. John a sort of immunity from all administration which of course had no basis. It seems to me that the efforts that have been made to unify the pilotage service in Canada ought to apply to the pilotage at St. John. I would rather suggest that in place of the existing system a general Dominion fund for the protection of pilots would be better. I have no objection to what is being done at the port of Quebec; but it would seem to me that it would be better to extend the same system to the rest of Canada and have the government take control of the entire service. At one time, perhaps, that idea would have been reprobated because some of the smaller ports were rather jealous of what they thought was federal interference. But I think it would be well to carry out this suggestion for the benefit of the pilots who are not numerous in any port, and are not well paid; in fact they need all the advantages they can derive to repay them for the training they must undergo and for the very arduous services they perform. I

suggest that the minister consider carefully the possibility of treating all alike and having them dependent for their pensions on a single Dominion fund.

Mr. TOLMIE: The minister might compare for the benefit of the committee the system of pilotage practised on the Pacific coast with that on the St. Lawrence river, and explain why pensions are paid in the St. Lawrence service and not elsewhere.

Mr. CARDIN: There is no pilotage organization in the west; the owners of the vessels may engage the services of anyone they like. On the St. Lawrence, however, and in the Maritime provinces it is compulsory on the captain of a ship to have the services of a pilot. On the Pacific coast, the system is an open one; anybody may qualify as a pilot. The two systems therefore are not comparable.

Mr. TOLMIE: Are the pilots on the Pacific coast paid by fees at the rate of so much per ton, or in what way are they compensated?

Mr. CARDIN: They make their own private arrangements with the owners.

Mr. TOLMIE: How are they satisfied with this system as compared with the old one on the Pacific? Are any complaints received by the department under present arrangements?

Mr. CARDIN: We have received no complaints.

Mr. BROWN: Is it a case of trades unionism on the St. Lawrence?

Mr. CARDIN: I do not think so.

Mr. BROWN: There is evidently an association of pilots.

Mr. CARDIN: Yes.

Mr. BROWN: And the position they take is sanctioned by law?

Mr. CARDIN: Yes.

Mr. BROWN: It is provided, I take it, that only those who belong to the association shall be engaged as pilots.

Mr. CARDIN: Yes; they must go through a special training before they can be admitted to the association.

Mr. TOLMIE: Which system is cheaper to the shipping people?

Mr. CARDIN: I do not know; the department has no means of ascertaining what fees the owners pay to the men in the case of private arrangements. And the arrangements may vary according to circumstances.

Mr. TOLMIE: Does the qualified pilot on the Pacific have to pass a governmental examination, or is he simply required to comply with certain qualifications laid down by some association?

Mr. CARDIN: These men are given a certain amount of training and are examined by officials of the department here before being admitted as pilots. That is the system adopted in the east. So far as the west is concerned, the department has nothing to do with any arrangements that are made.

Mr. LEWIS: Why is the government responsible for the pensions?

Mr. CARDIN: It is difficult to state precisely the difference between the two systems. The department has simply continued the practice that has prevailed all along. The suggestion made by my hon. friend (Mr. Baxter) deserves consideration and I am quite ready to look into the matter.

Mr. LEWIS: What is the amount of the pension?

Mr. CARDIN: Three hundred dollars.

Item agreed to.

Allowance to harbour master at Amherstburg, for supervision of lights and buoys on the St. Clair river, the Detroit river and lake Erie, and other services in connection with the lighthouse service for the season of navigation, 1925, $600.

Mr. BAXTER: Have we had this item before?

Mr. CARDIN: Yes, for quite a number of years.

Item agreed to.

Patrol of the northern waters of Canada, $10,000.

Mr. SPEAKMAN: What is the purpose of the patrol, and, in a general way, what localities are covered?

Mr. CARDIN: This is to provide for a compilation of reports from the Canadian Arctic expedition. Approximately ninety per cent of all reports prepared have been published and it is hoped to complete the whole work, including the binding of the volumes for distribution to libraries and universities, before the end of the fiscal year.

Mr. BANCROFT: Is the same course followed every year in the Arctic patrol, or is a new course mapped out for different waters from year to year?

Mr. CARDIN: This work is practically completed, and the appropriation provides only for the compilation of publications in regard to the Canadian Arctic expedition.

Mr. BANCROFT: I suggest that the minister might adopt a new course this year and have a cruise made of Hudson strait in the summer in order to acquire a little more information regarding the feasibility of that undertaking.

Mr. SPENCER: How much of the vote was spent last year?

Mr. CARDIN: There was spent $9,695.

Mr. SPENCER: I notice that in some cases a re-vote is indicated. As all the money was not spent last year under this item, should there not be some mention of a re-vote?

Mr. CARDIN: There is nothing here in the form of a re-vote; the amount not spent was paid back into the treasury.

Mr. SPEAKMAN: The minister stated that this work of compiling data was almost complete. Does that indicate that this service will shortly be discontinued?

Mr. CARDIN: So far as the department is concerned, yes.

Mr. BAXTER: I did not quite get what the minister said. Is this in connection with fisheries, or is it for survey of currents, or for what purpose?

Mr. CARDIN: The object of the expedition was to get information regarding the general conditions there. The reports are related to a certain extent to fisheries.

Mr. BAXTER: When the minister says "there," what does he mean?

Mr. CARDIN: The Arctic.

Mr. BAXTER: But the work is done.

Mr. CARDIN: Yes.

Mr. BAXTER: I notice that in 1922-23 we were paying $15,000 for this work; in 1923-24 $15,000; in 1924-25 $10,000; and this year again we are asked for $10,000. I have no statistics further back than 1922-23. The minister says that the work is all done and that this is merely to provide for the preparation of reports. When all the amounts are so nearly equal as those I have read, I wonder whether they all relate to the preparation of reports, or what differentiates one item from the other. What relates to work and what to reports? I hope we are not surveying the Arctic ocean. We would like to use $10,000 a little nearer home.

Mr. CARDIN: This is the last year that such an amount is going to be asked for. This vote is asked to compile and complete the reports on the Canadian Arctic expedition.

Mr. BAXTER: What practical good are we going to get out of this that will help a soul in Canada?

Mr. CARDIN: I am informed that scientific people throughout Canada attach very great importance to this publication.

Mr. BAXTER: I sympathize with the minister, because I suppose I am springing on him something, perhaps, that he knows as little about as I do. The scientific people may appreciate it very much, but is there any practical value to science? Is anybody going to take a boat into these regions? Are we locating icebergs? Are we gaining territory of any value?

Mr. CARDIN: The department is not contemplating any expedition this year, but is only desirous of closing the matter and completing the publications that are almost ready at the present time.

Mr. BAXTER: I cannot find the relevant item in the Auditor General's report. I have no doubt it is there, but I do not know under what heading to look for it. I fancy if I could find it, my old friend the Printing Bureau would figure very largely and that somebody was being paid for drawing maps. Very likely I would find that the result of this is all stored away in the archives and that nobody ever bothers about it.

Mr. CARDIN: There are in all ninety of these reports.

Mr. BAXTER: How much did it cost for printing them last year?

Mr. CARDIN: Approximately $3,000 was spent last year for printing.

Mr. BAXTER: What did the other $6,000 or $7,000 go for?

Mr. CARDIN: There is the salary of Hon. J. C. Patterson, formerly Lieutenant Governor of Manitoba, $2,400, and Mr. Johansen.

Mr. BAXTER: Who is Hon. J. C. Patterson?

Mr. CARDIN: He was formerly Minister of Militia.

Mr. GRAHAM: As I am one of the old-timers, I might explain.

Mr. BAXTER: I fancy it does not need any explanation.

Mr. GRAHAM: Hon. J. C. Patterson was formerly Minister of Militia, not in a Liberal government, but in another government.

Item agreed to.

Meteorological service, including magnetic observatory grants of $500 each to Kingston and Montreal observatories, and allowance of $400 to L. F. Gorman, observer at Ottawa, $260,000.

Mr. CARDIN: This amount is the same as last year. It is to provide for the maintenance of the meteorological service of Canada.

Mr. GARLAND (Bow River): Is any other department carrying on meteorological work?

Mr. CARDIN: I do not know of any other department.

Item agreed to.

Steamboat inspection, $119,210.

Mr. CARDIN: This is to provide for the inspection of steamboats in accordance with the provisions of the Canada Shipping Act. Under the provisions of this act the Governor in Council may make regulations for the testing of boilers and construction and working thereof, for the inspection of hulls and equipment of steamboats, also for the inspection of machinery and equipment of steamboats, and for the examination and certification of steamboat engineers. Provision is also made for the appointment of competent inspectors for these purposes.

9 p.m.

Mr. WARD: Do the steamship owners not pay for this inspection themselves?

Mr. CARDIN: They do.

Mr. WARD: Is this large vote refunded to the government?

Mr. CARDIN: The department collects fees for the inspection of steamboats and boilers from the owners of the ships.

Mr. WARD: Is that plus the item that we are considering here?

Mr. CARDIN: The department pays the salaries of the men who are carrying on the work, making these inspections of boilers, hulls and equipment, and collects the fees. These inspectors are departmental employees.

Mr. LEWIS: To whom are the fees paid?

Mr. CARDIN: To the Receiver General.

Mr. GARLAND (Bow River): Does the total amount of fees collected equal the sum mentioned in this item? If not, what is the difference?

Mr. CARDIN: The department has a small balance to its credit at the end of the year.

Mr. GARLAND (Bow River): What was the total amount collected?

Mr. CARDIN: The figures show only the period from the 1st April to the 1st October, during which period the department received $81,741.

Mr. GARLAND (Bow River): What is the idea of not having them made up on the same basis as the estimates? The minister states that $81,000 is the amount collected in fees prior to the 1st October.

Mr. CARDIN: Up to October 1.

Mr. GARLAND (Bow River): How much will be collected between October 1 and March 31?

Mr. CARDIN: I am informed it will be between $40,000 and $50,000.

Mr. McBRIDE: I think the hon. member can rest assured that the government charged the steamboat owners every dollar they could get out of them.

Mr. GARLAND (Bow River): I presume it is a steamboat owner speaking.

Mr. TOLMIE: Mr. Chairman, with regard to the steamship inspectorship at Victoria, British Columbia, this position was filled very ably by a Mr. Cullum for a number of years. He died a short time ago. I understand that just before his death he had in preparation an application for a retiring allowance or pension such as is usually given to government officials, but owing to the fact that he never completed it his widow has been unable to secure the benefits that she would otherwise have been entitled to. This is a very responsible position indeed, and in the course of his work he inspected steamships that were carrying thousands of passengers in and out of British Columbia ports every year. Under the circumstances, I think it is most unfortunate that his very deserving widow and family should suffer as the result of his slight negligence, and I would commend to the attention of the minister the advisability

of taking a charitable view of the matter in order to see if it is not possible to arrange for the widow to receive what her husband would have received had he completed the pension application before his death.

Mr. CARDIN: This question has been discussed between the officers of my department and the Department of Finance. No decision has yet been arrived at, but I can assure my hon. friend that I am very sympathetic to the representations he has made.

Item agreed to.

Civil government—Marine and Fisheries—salaries $484,720, contingencies, $95,000.

Mr. CARDIN: This appropriation is to provide for the salaries of the staff of the department at headquarters, numbering all told 245, being eleven less than last year and thirty-four less than the year before. This item is $12,280 less than last year and $41,120 less than the year before, in spite of the fact that the statutory increases last year amounted to $20,000 and this year to $8,100. These reductions have been accomplished by the abolition of positions as they became vacant or by reversion to minimum salaries.

Mr. GARLAND (Bow River): What are the duties of the director of radio service? I notice he has quite a substantial salary. I presume the position is a very responsible one and the duties onerous. Would the minister outline them?

Mr. CARDIN: The position of the director of radio service is a very important one indeed because he has to shoulder all the responsibilities of the radio branch of the department. As my hon. friend will understand, fresh developments are taking place every day in radio, and, as I stated yesterday, the department is establishing new stations from time to time to look after navigation and commercial matters. The director is an expert.

Mr. GARLAND (Bow River): What are his duties?

Mr. CARDIN: He is the expert adviser of the department; nothing is done in this branch without having been first submitted to him, and he is in charge of the whole service. Men of his experience are not very numerous in this country.

Mr. SPENCER: I notice there is one Dominion wreck commissioner. What are his duties?

Mr. CARDIN: He conducts inquiries into shipping accidents and makes reports thereon to the department.

[Mr. Tolmie.]

Mr. SPENCER: I notice he is paid a pretty good salary. How many times last year was he called on to conduct inquiries into wrecks?

Mr. CARDIN: He is busy practically all the time. The duties of this branch of the service were described yesterday when the House passed an item in regard to the Dominion wreck commissioner.

Mr. SPENCER: How many wrecks took place on the coast of Canada last year?

Mr. CARDIN: In the course of last summer the commissioner held thirty-two inquiries.

Mr. BAXTER: I do not know who hold the positions I am going to refer to, and I make no reflection whatever on the gentlemen who do. But I notice we have one chief naval architect, $5,400; one assistant naval architect, $3,420; two assistant architects, $2,580 each, a total of about $14,000. I was not aware we were building anything like a ship each year, or that we had been doing so for the last two or three years. Lighthouses would hardly seem to come within the scope of the duties of a naval architect. If they were set well out in the water I suppose there would be a general plan and it would not be difficult to have them built by ordinary masons or carpenters. Possibly this is a survival of the time when the department was struggling with the construction of Noah's ark and these men have been kept on the payroll ever since. There may be something really useful for them to do, but I shall be glad to have it explained.

Mr. CARDIN: The chief naval architect is Mr. Duguid. He has to look after any new construction and supervise all repairs.

Mr. BAXTER: I do not mean the repairs. Here are four other gentlemen in the same category; what architectural work is going on?

Mr. CARDIN: The naval architect has to prepare the designs of all repairs when designs are necessary, to look after all new construction, and to supervise the work. Besides he is practically the adviser for all the departments when they have to buy vessels, including the Canadian National Railways.

Mr. BAXTER: What have we built in the last three years in the way of naval architecture, and what has it cost? I am not suggesting that anybody be thrown out of a position, but there cannot be naval architectural work for so many men, and I suggest they might usefully be transferred and take

up other duties. If this were the Department of National Defence I could understand that four men could rebuild the navy in about a year, but it is the Department of Marine and Fisheries; and I was under the impression that boats were bought ready-made and that repairs were generally done by contract. I cannot think that ordinary repairs would require any special drafting by a naval architect, who, I understand, is a man concerned with original construction. The repairs must really be a small matter.

Mr. CARDIN: It is true we have not in recent years done any important construction work. But these employees have been in the service a long time and in past years very important construction work was done in the department. Practically all the dredges used on the St. Lawrence ship channel were built by the Department of Marine and Fisheries and designed by the naval architect.

Mr. BAXTER: The minister is under the impression that I am directing my remarks to the chief naval architect. Not at all. I do not know who they are, but I am referring to four, all told—the chief, the assistant chief, and two assistant naval architects.

Mr. CARDIN: There is only one assistant to the chief naval architect. The others are in the lighthouse branch.

Mr. GARLAND (Bow River): I would ask the minister and the committee to cast their eyes over the following items:

1 Director of radio service,..	$4,500
1 Division superintendent of radio service..	3,480
1 Radio electrical engineer..	2,880
1 Senior radio inspector..	2,700
2 Radio inspectors, one at $2,200 and one at $1,980..	4,200
1 Junior radio electrical engineer..	2,040

Making a total, roughly, of $20,000. Frankly I had no conception that the radio activities of this government had extended so rapidly as to justify an expenditure of this kind. I do not know whether or not the radio is going to be used for election purposes in the next election. I do not know what it is being used for to-day beyond the broadcasting of market reports, time signals, and other matters. There may be some justification for it; I do not want to be over-critical. But $20,000 seems to be an enormous sum of money for this country to be spending on radio in salaries only.

Mr. McBRIDE: From practical experience on the Pacific coast I know that this money is well spent. Anybody who has ever been connected with the steamboat business knows full well the value of the service that is given in this connection. A boat which has not wireless equipment may get into difficulties up north yet some other boat which has the equipment can report to Vancouver so that assistance can be rendered; and if an accident has taken place it can be found out and help given. In that way a vessel can be put in touch with almost any part of the coast whether it has radio connections or not. It is a very important service, and those who have been connected with sea life appreciate it more than I could find words to express.

Mr. GARLAND (Bow River): Now that the acting minister has answered, perhaps the minister would give us some information. I have no doubt that my hon. friend (Mr. McBride) has some intimate knowledge of the matter and I do not in the least dispute his contention; no doubt a great deal of good service has been rendered. But the men mentioned here are not the men who are broadcasting the messages at sea, picking up S.O.S calls and that sort of thing from ships on the Pacific ocean.

Mr. McBRIDE: They are picking them up from the stations.

Mr. WARD: Is it not a fact that all steamships of any consequence carry their own wireless apparatus? Are these government radio stations necessary for the protection of shipping and the like?

Mr. CARDIN: The department must control receiving stations in order to pick up the messages that come from the steamships. It is true these men are not operating the stations owned by the department all over the country, but they have to see to the construction of all our stations, draft all the designs, arrange to get the materials, and supervise the work. Further, they have to see that the stations are kept in proper order and up to date, so far as new developments are concerned. Having regard to the responsibility attached to their work and the importance of this branch of the service, which is increasing every day, I think these men deserve the salaries they receive.

Mr. GARLAND (Bow River): I am not complaining of the salaries, but of the number of officials and superintendents. I think technical men ought to be paid in regard to their ability, but I fail to see the justification for all these officials. The minister might take a leaf out of the book of the Minister of Railways. I do not think the Canadian

National Railway system carries a staff of experts of this size, and they are doing probably just as much broadcasting as this department.

Mr. SPENCER: In how many places are these radio stations installed, and in what parts of Canada?

Mr. CARDIN: The department has 20 stations on the east coast, 9 on the west coast, and 8 on the Great Lakes.

Mr. SPEAKMAN: Have these officials any duties to perform in connection with the supervision or inspection of private radio, in addition to the government service?

Mr. CARDIN: Yes.

Mr. TOLMIE: Would the minister give the location of these nine stations on the Pacific coast?

Mr. CARDIN: Alert Bay, Bull Harbour, Cape Lazo, Dead Tree Point, Digby Island, Estevan, Gonsales Hill, Point Grey and Pachena Point.

Mr. DOUCET (Translation): Would the hon. minister state where the stations on the Atlantic are located?

Mr. CARDIN: Belle Isle, Point Amour, Cape Race, Grindstone Island, Fame Point, Clarke City, Father Point, Grosse Isle, Quebec, Montreal, Cape Sable, Camperdown, Sable Island, North Sydney, Halifax, Heath Point Lightship, Lurcher Lightship.

Mr. TOLMIE: What are the duties of the director of pilotage, and what territory does he cover?

Mr. CARDIN: He has charge of the entire pilotage service in the St. Lawrence and the gulf and on the Atlantic coast, but has nothing to do with pilotage on the west coast.

Mr. WOODSWORTH: Have these inspectors any supervision over the stations maintained by the Canadian National Railways?

Mr. CARDIN: Yes.

Mr. WOODSWORTH: Is there any correlation between the stations of the Canadian National and the stations maintained by the Department of Marine?

Mr. CARDIN: The department supervises the stations of the Canadian National; these are broadcasting stations. This department has no broadcasting stations, simply wireless telegraph stations.

[Mr. E. J. Garland.]

Mr. KENNEDY (Edmonton): Is there a wireless station at Fort Vermilion in the province of Alberta? I had some correspondence with three departments about a year ago regarding this matter. I wrote first to the Minister of the Interior; he referred me to the Minister of Public Works. I wrote to the Minister of Public Works; he referred me to the Department of Marine and Fisheries. I wrote to the Department of Marine and Fisheries, and was referred back to the Northwest Territories branch of the Department of the Interior. This may not be the right time to take this question up, but I would ask the minister if a station has been established at Fort Vermilion, or if it is the intention to do so, or if the department is studying the question at all.

Mr. CARDIN: The Department of Marine and Fisheries has no station at that place. If one has been established there, it may have been by the Department of National Defence or the Department of the Interior.

Mr. KENNEDY (Edmonton): The application in the first place was for a telegraph line, and I understand the suggestion was made that a wireless station connecting up with the wireless station at McMurray and the Yukon would be more efficient and more economical. The people residing at Fort Vermilion were under the impression that a wireless station would be established there, and I just wanted to get a statement from the minister regarding that.

Mr. CARDIN: That is probably under the control of the Interior department.

Mr. KENNEDY (Edmonton): Has the Interior department anything to do with wireless or is it entirely under the control of the Marine department? The point is, if wireless is to be established in preference to a wire line, the Department of Marine and Fisheries, I suppose, is the one that will have to handle it.

Mr. CARDIN: Logically that may be, but I am told the Interior department is operating three stations independent of the ones my department is operating. I admit there is a possibility of amalgamation there.

Mr. SPENCER: Have the radio men who are employed by the Department of Marine and Fisheries anything at all to do with the stations under the jurisdiction of the Department of the Interior?

Mr. CARDIN: No.

Mr. SPENCER: Have any other departments radio stations?

Mr. CARDIN: The Department of National Defence have no station, but they have some radio sets for their own use.

Mr. SPEAKMAN: In that case the supervision of the officers of this department extends only to stations under its immediate control and over privately operated radios, but does not include the radios that may be established by other departments.

Mr. CARDIN: That is right.

Mr. SPEAKMAN: They would be entirely under the supervision of their respective departments?

Mr. CARDIN: They are independent.

Mr. SPENCER: These other departments would have radio experts of their own?

Mr. CARDIN: The Interior department has no radio experts. Very often they depend upon our experts, and the experts of the Department of National Defence.

Mr. SPENCER: I understood the minister to say a minute ago that the Department of National Defence has no experts.

Sir EUGENE FISET: The hon. gentleman is under a misapprehension. The Department of National Defence have a certain number of officers who are trained experts in wireless and radio—telegraphy, and there is in the department a certain number of portable sets that are used for training purposes in camp or elsewhere. But the Department of National Defence have no permanent stations such as the Department of the Interior and the Department of Marine and Fisheries have.

Mr. SPENCER: What I am trying to find out is whether there is any interlocking or overlapping between the different departments?

Sir EUGENE FISET: There is none.

Mr. MILNE: Has the department a system of wireless telegraphing as well as a system of wireless telephoning?

Mr. CARDIN: Yes.

Mr. MILNE: With the same experts?

Mr. CARDIN: Yes.

Mr. WOODSWORTH: What is the work of the superintendent of harbour commissions?

Mr. CARDIN: This officer supervises all the works carried on in the different harbours, and checks the payments made by the commissioners out of advances voted by parliament. The various harbour commissions have to make reports to the Department of Marine and Fisheries, of all the disbursements they have made, and this official checks these expenditures.

Mr. WOODSWORTH: Then as I understand it the harbour commissions of Montreal, Halifax and Vancouver report to him?

Mr. CARDIN: They report to the department, and this officer is charged with the checking of all these reports.

Mr. WOODSWORTH: Does he have anything to do with the estimates of the expenditures of these commissions?

Mr. CARDIN: No.

Mr. WOODSWORTH: Then the work he does is merely clerical?

Mr. CARDIN: He acts more or less as an auditor.

Mr. WOODSWORTH: The accounts come in from the different commissions and he audits these accounts?

Mr. CARDIN: Yes.

Mr. WOODSWORTH: Why is it necessary to have any other than a competent auditor to do this work?

Mr. CARDIN: It is practically an auditor's work he is doing. He audits the accounts and books for the different harbour commissions.

Mr. LUCAS: I notice considerable increase in his salary this year.

Mr. CARDIN: His position has been reclassified by the Civil Service Commission.

Mr. KELLNER: Is this the vote on which the harbour commissions can be discussed?

Mr. CARDIN: No.

Mr. GARLAND (Bow River): Does the gentleman referred to make trips, we will say, to Vancouver, Halifax and Montreal? I should imagine that would be necessary if he is properly auditing the books?

Mr. CARDIN: Yes. His duties take him to those cities.

Mr. GARLAND (Bow River): In other words, this man simply holds the position of auditor. Is that correct?

Mr. CARDIN: Yes.

Mr. GARLAND (Bow River): I was wondering at the glorified name he has. Would it not be just as well to put him down as auditor of the department? If that were done it might hurt his dignity but it would not confuse members of the House.

Mr. CARDIN: The title in question is given to this office under the classification made by the Civil Service Commission.

Mr. GARLAND (Bow River): I really must take exception to the continued practice of ministers of blaming everything on the Civil Service Commission.

Mr. CARDIN: I do not blame the commission; this classification is made in accordance with the law.

Mr. GARLAND (Bow River): May I submit to the minister that before anything is done by the Civil Service Commission in his department he passes upon it?

Mr. CARDIN: I cannot agree with my hon. friend in regard to that.

Mr. GARLAND (Bow River): Well, the minister has the right to do it. Does the minister deny he has that right?

Mr. CARDIN: I contend I have no right to interfere with the decisions of the Civil Service Commission. They are the ones who decide in the end; the decision rests in their hands.

Mr. GARLAND (Bow River): Will the minister suggest for one moment that the Civil Service Commission has ever refused to accept a recommendation of his own?

Mr. CARDIN: I have never had that experience, because I have always respected the desire and the will of the Civil Service Commission.

Mr. COOTE: May I ask the minister whether we will have any other opportunity to discuss the work of the harbour commissions, particularly the Vancouver Harbour Commission, or should the discussion take place under this vote?

Mr. CARDIN: I regret that it cannot be done under these estimates. Usually the work of the harbour commissioners is discussed when they ask for a loan or advance of money from the government.

Mr. COOTE: I understand they are not asking for any grants this year?

Mr. CARDIN: One never knows

Mr. COOTE: There certainly should be opportunity for some discussion in the House this year. I would think we would have a right to have that discussion now but perhaps this is not the proper time. I therefore ask the minister whether we will have some other opportunity for such a discussion as I have indicated?

Mr. CARDIN: I think there will be an opportunity of discussing these matters before the close of this session.

Mr. COOTE: The minister is not very positive. I wonder if he will not give us some assurance?

Mr. CARDIN: I am pretty sure there will be an opportunity for discussion.

Mr. COOTE: It is a very important matter and I think we should have the positive assurance of the minister that opportunity for discussion will be afforded later on. If not, we will attempt to discuss the matter now.

Mr. GRAHAM: Could the discussion not take place on the Grain Act when it comes before the House?

Some hon. MEMBERS: Oh, oh.

Mr. GRAHAM: Yes, that is the point my hon. friend has in view. If I am correct he wants to discuss the conduct of the harbour commission as it affects the handling of grain to a large extent.

Mr. COOTE: Particularly as it affects the handling of grain.

Mr GRAHAM: That would come in I think without question when we are discussing the Grain Act. I think there would be full opportunity then.

Mr. COOTE: I should like to have the assurance of the minister that we would have some opportunity.

Mr. CARDIN: Oh, you will get it.

Mr. SPEAKMAN: Is there any item in the estimates for the payment of salaries to officers of harbour commissions?

Mr. CARDIN: No.

Mr. SPEAKMAN: Are they not paid?

Mr. CARDIN: They are not paid by the government; they are paid out of the revenues of the harbour.

Mr. SPEAKMAN: I was quite aware they were paid indirectly, but I thought they were paid just as inspectors are paid. For instance where fees are charged for a particular service those fees are paid into the account of the Receiver General and the salaries are paid from that fund. In this case salaries are paid out of the revenues of the harbour, are they?

Mr. BANCROFT: The harbour commissioners are like members of parliament are they not?—they pay themselves.

Mr. SPEAKMAN: I may point out there is a difference in that respect. Our indemnities are paid by a vote of the House of Commons and therefore we can discuss our own actions under that vote.

Mr. COOTE: I think it was stated in answer to a question by the hon. member for Vancouver Centre (Mr. Stevens) that the government had an engineer superintending or inspecting building of the new elevator at Vancouver. Under what estimate would that engineer's salary come?

Mr. CARDIN: I am sure the answer given was that the department had no engineer inspecting the work. As a matter of fact there is none.

Mr. COOTE: Then I am under a misapprehension. I thought the answer stated that you had. I should like to ask the minister a question with regard to a bond for $321,000 which was given by the contractor for the completion of two ships at Prince Rupert some years ago and which, up to a year ago had not been paid by the bond company. Has this bond been collected?

Mr. CARDIN: Collection has not been made. Proceedings to collect the amount are still pending in the courts.

Mr. COOTE: Has the government taken action against this company for recovery of the money?

Mr. CARDIN: My department has handed the matter over to the Department of Justice.

Mr. COOTE: How many years has the country been out this money?

Mr. CARDIN: Since about 1918.

Mr. COOTE: Can the minister give us a satisfactory explanation as to why it has not been collected yet?

Mr. CARDIN: The department handed the case over to the Department of Justice a long time ago but so far no decision has been given. The matter is still pending.

Mr. COOTE: When was the matter handed over to the Department of Justice?

Mr. CARDIN: Nearly two years ago.

Mr. COOTE: It seems to me that the department has been very lax in this matter and is certainly open to criticism. Will the minister give his opinion as to whether the money will ever be collected.

Mr. CARDIN: I really hope that the collection will be made; but it is wholly dependent on what the decision shall be.

Mr. COOTE: I presume that the minister's hope is the best we can look for.

Mr. CARDIN: My hope is based on my own conviction, but I do not know what the decision of the Department of Justice will be.

Mr. SPENCER: Did the minister's department ever request the Justice department to hand down its decision, or did it ever remind them of the matter?

Mr. CARDIN: The matter was submitted to the Justice department with a request that proceedings be taken.

Mr. SPENCER: Have you requested a decision?

Mr. CARDIN: I have not the exact details, but I know that the matter was submitted to that department and their decision is still pending.

Mr. COOTE: The Department of Marine and Fisheries cannot disclaim all responsibility even though it has submitted this matter to the Department of Justice. In private concerns, if after two years a lawyer had been unable to report results his clients would not fail to prod him regularly. Is this money collectable or are we to abandon all hope of getting it? I am afraid the department has forgotten about it and that no attempt will ever be made to collect it. If the bond is collectable, why has it not been collected? Was some mistake made in the drawing of the bond so that the money cannot now be collected? The committee is entitled to a frank statement from the minister. I realize that this happened before the present minister came into office, but I think that an explanation is due the committee and the country of the delay there has been in attempting to collect this money. What is the use of paying for a bond if we do not make some real attempt to collect the money when the bond is in default?

Mr. CARDIN: My department has done all that it could. The officers were under the impression that the money could be recovered, and, as I have said, they have placed the matter in the hands of the Justice department and are now awaiting its decision.

Mr. LUCAS: I see that provision is made for an overseer. What are his duties?

Mr. CARDIN: He supervises the operations of all vessels belonging to the department.

Mr. LEWIS: There is a senior inspector of fog alarms. What does he do?

Mr. CARDIN: He has charge of all fog alarms throughout the country. These alarms are very expensive pieces of machinery and he has entire supervision over all of them.

Mr. TOLMIE: What are the duties of the superintendent of masters of seamen?

Mr. CARDIN: He deals with all questions affecting seamen generally; everything related to seamen comes under his jurisdiction and control.

Mr. TOLMIE: What provision is made for life saving off the west coast of Vancouver Island and off the entrance to the straits of Juan de Fuca?

Mr. CARDIN: The department controls a life saving station at Bamfield creek and another one at Clayoquot. The department also directs what is known as a patrol from Bamfield to Pachena. It was understood yesterday that this item would stand at the request of the hon. member for Vancouver Centre (Mr. Stevens).

Mr. TOLMIE: How are those stations manned? What is the nature of the vessels? How many men are there at Clayoquot and Bamfield creek?

Mr. CARDIN: At Bamfield, there are one, a coxswain, one engineer, seven boatmen and one cook. At Clayoquot there are one coxswain, one engineer and eight boatmen.

Mr. TOLMIE: Are any of the vessels of the Canadian navy engaged in this work?

Mr. CARDIN: During the winter time they are operating in conjunction with my department in this work.

Mr. TOLMIE: What is the nature of those vessels?

Mr. CARDIN: They are of the trawler type.

Mr. TOLMIE: About how fast would they steam against a good stiff wind off the Pacific coast, say a forty or fifty knot gale?

Mr. CARDIN: I am not in a position to state.

Mr. TOLMIE: What is the normal speed under the most favourable condition?

Mr. CARDIN: About twelve knots per hour.

[Mr. Lucas.]

Mr. TOLMIE: I thought it was about nine.

Mr. SPEAKMAN: I notice we have in this item a private secretary at $3,360, a secretary to the executive at $1,860 and $600 allowance for secretarial duties in the minister's office. What is the difference between the duties of a private secretary and a secretary to the executive?

Mr. GRAHAM: Under the act a minister can bring his own private secretary with him, but that private secretary, if not a member of the civil service, retires with the minister unless some other minister accepts him. In addition to that, the act provides
10 p.m. that each minister can, without reference to the Civil Service Commission, bring in one called the secretary to the executive and one or two stenographers with, I think, two grades. These are not subject to the Civil Service Commission and they likewise go out with the minister. The duties of private secretaries are well known. In many departments the reason why this was allowed was that one private secretary was not able to cope with the work, and under the act the minister was allowed to bring in another called the secretary to the executive whose duties are any duties that may be provided by the private secretary.

Mr. SPEAKMAN: He is really an assistant to the private secretary.

Mr. GRAHAM: Largely so. The minister can adjust the duties and services of the private secretary and the secretary to the executive in almost any way.

Mr. SPEAKMAN: Although these secretaries appear under the heading of civil government and are paid out of this vote, they are not subject to the Civil Service Commission?

Mr. GRAHAM: No.

Mr. SPEAKMAN: The mere fact that they appear under this vote does not mean that they are under the Civil Service Commission?

Mr. GRAHAM: No.

Mr. TOLMIE: Referring for a moment to our life-saving provisions on the Pacific coast, I am informed that these trawlers, owing to their lack of power, are inadequate for the purpose in the wintertime; that they can steam only about four knots against a gale; that they have been quite powerless in a gale on a lee shore; that they would have great difficulty in lowering boats under bad weather conditions. I would like to call the attention

of the minister to conditions that prevail on the west coast during certain seasons of the year. That particular section of the country has had a number of very serious wrecks in years past, and there has been a great loss of life owing to the fact that no proper provision has been made. In a matter of life and death like this, the government should provide adequate vessels in sufficient numbers to be a real protection.

Mr. SPENCER: I notice in this list there are nine accountants or account clerks, one audit clerk and numerous clerks. What is the difference between these positions? Why are some called account clerks and others audit clerks?

Mr. CARDIN: I can only repeat that these titles are those which are ascribed to the positions by the Civil Service Commission. Very often the difference between the duties is slight.

Mr. SPENCER: I see that the services of one storekeeper have been dispensed with and that no money is allowed for him this year. How has it been possible to do away with this position?

Mr. CARDIN: Readjustment of duties amongst the other employees has rendered possible the abolition of this position. The duties are performed by other employees in the department.

Item agreed to.

Fisheries—salaries and disbursements of fishery officers and guardians, fisheries patrol and fisheries protection service, $880,000.

Mr. DOUCET (Translation): Would the hon. minister inform us if his department has considered a resolution adopted on June 17, last, by the committee of Marine and Fisheries in connection with the lobster fishing season in the straits of Northumberland. This resolution recommends that the lobster fishing season begins August 6 instead of August 16?

Mr. CARDIN (Translation): I cannot offhand give a precise answer to the question of the hon. member; however, if such a resolution exists in the department, I am satisfied that it will receive due consideration.

Mr. GARLAND (Bow River): Mr. Chairman, I understand some discussion has taken place as to the actual merits of fish hatcheries and the stocking of streams. Is an investigation into this matter under way?

Mr. CARDIN: Complaints have been made to the department, but no definite stand has been taken because no specific proposal has been made to displace the present system. The biological board has received instructions to investigate the whole system and report thereon.

Mr. KENNEDY (Edmonton): I noticed an article in the press a short time ago regarding Lesser Slave lake in Alberta, according to which an attempt is being made to save the white fish business there by reducing the annual hatch. Of course this means the curtailment of the industry. Is there any possibility of increasing the number of white fish by artificial means, or is it too expensive?

Mr. CARDIN: Representations have been made to the department, and if I remember correctly the annual catch has been reduced to 650,000 pounds. The department thinks the best means of protecting the fishery is by limiting the catch and enforcing a close season.

Mr. KENNEDY (Edmonton): Is there any possibility of establishing a hatchery or replenishing the supply of fish by any other means than simply limiting the catch?

Mr. CARDIN: In view of the fact that representations have been made to the department that our hatchery system is defective, it is very hard to give an answer before the report of the biological board, which is in charge of the investigation, has been received.

Mr. KENNEDY (Edmonton): Where is the nearest hatchery to Lesser Slave lake?

Mr. CARDIN: The Banff hatchery.

Mr. GARLAND (Bow River): According to a rumour that is going the rounds with respect to the methods adopted by the Fish Culture branch, it would appear that during a certain season a river was stocked with trout, and some time subsequently it was stocked with bass, with the result that most of the trout were devoured. Is there any truth in the rumour?

Mr. CARDIN: The information is that these waters have not been stocked with bass.

Mr. GARLAND (Bow River): Well, were they stocked with some other fish that were not exactly friendly to the trout?

Mr. CARDIN: Nothing of the kind has come to the knowledge of the officers of the department.

Mr. GARLAND (Bow River): I would suggest to the minister that it might be advisable for him to look into the matter. Stories are circulating that that actually took place.

Mr. BANCROFT: If we are discussing fish hatcheries under this item, I would ask the minister if anything has been done to replace the hatchery on the Dauphin river that was burned down?

Mr. CARDIN: No decision has been reached because, having received complaints about the whole hatchery system, the department hesitates to take any further steps until the report of the biological board, which is now conducting an investigation, is at hand. If the system is wrong, of course the department will not undertake the construction of new hatcheries.

Mr. BANCROFT: In that connection, I might say that the people up there think that before the hatchery is rebuilt there should be a conference between the officials of the department, the fishermen and the fish companies as to where the new hatchery should be located, so they may all be satisfied that the best location has been selected. It is generally thought that some other spot on the lake would be much better adapted for a hatchery than the old site.

Mr. CARDIN: I will make a note of the hon. member's recommendation.

Mr. McQUARRIE: What is the personnel of the biological board?

Mr. CALDWELL: While the minister's assistant is looking up that information I have a question to submit. I did not know that the subject of hatcheries came under this vote.

Mr. CARDIN: It does not.

Mr. CALDWELL: Might I ask what progress has been made with respect to changing the location of the Sparkle fish hatchery, so-called, on the Miramichi river? This matter has been under investigation by the department, I understand, and it has been decided that there is not enough water at that point to supply a hatchery. I was informed, I think about six months ago, that a new hatchery was to be established on Simpson's brook, where there is a better water supply.

Mr. CARDIN: I am informed that no decision has yet been reached in regard to this matter.

Mr. CALDWELL: I think I have a letter on my file from the minister, or someone in his department, saying that a decision had been reached, and they were only waiting to secure a suitable site from the provincial government before constructing the hatchery. That was six months ago. We had hoped that the hatchery would have been constructed in time to take care of the hatching of fry this spring.

Mr. CARDIN: I have no recollection of such a letter. The officers who are with me to-night inform me that no definite decision has been reached. However, I will make further inquiries and let my hon. friend know next week.

Mr. CALDWELL: There is another item that does, however, come under this vote—the salaries of temporary guardians who are put on in the summer for fish protection work. I have urged upon the minister before that these salaries should be increased, and as one of the members of this House who believe in economy my suggestion possibly may not seem just in line with my belief. The salaries of these men should be increased. In my province at least, in order to carry on this work they must in some cases camp thirty or forty miles from a settlement, must transport their own food, build their own shelter, furnish their own boat, be ready for duty day and night—and all this at the magnificent rate of $2 or $2.25 a day. I do not think we can expect to get very good service at that rate of pay. The men give better service, no doubt, than they are paid for; at the same time we cannot get the best class of men or expect the best service when the remuneration is inadequate. Has the minister considered the question of increasing the pay of these guardians?

Mr. CARDIN: To increase their pay would mean a very large expenditure, because a considerable number of guardians are spread all over the country. The department is always afraid to come to parliament and ask for increases in the salaries of employees. But I am free to admit that, personally, I take a sympathetic attitude toward the views of the hon. gentleman. I realize that a good many of these guardians are rendering efficient service, are faithfully carrying out the important duties assigned to them, and are deserving of the consideration of the department. This matter is not closed, and I can assure my hon. friend that I am quite ready to look into it. I agree that his remarks are worthy of consideration.

Mr. CALDWELL: How many of these temporary guardians are there? The minister mentions his fear of asking for money to increase the pay to these men, but I notice he is not very bashful about asking us for $16,000,000 to carry on dredging as to the necessity for which we are not all agreed. I do not think that is a valid reason. Those who live in the inland

provinces hardly realize the importance of our fisheries, and this is a branch of the service that must not be allowed to starve for want of efficient men to carry it on.

Mr. CARDIN: The number of guardians is 423.

Mr. CALDWELL: How much would it cost to increase their pay by $1 a day, which would even then be a small wage? What is the average period of service of these temporary guardians?

Mr. CARDIN: From two to four or five months.

Mr. CALDWELL: An average of about ninety days. Possibly some hon. members do not appreciate this feature of it: we have immense fisheries off the coasts of these provinces. The salmon, for instance, do not breed in the salt water but must go well up the fresh water streams to the cold brooks to spawn and thus propagate the species. In some cases poachers fence the river with hen wire fencing so that the fish cannot ascend. The system is to build a cage covered with this wire netting, anchor it in the middle of the stream and run out wire fences each way to the shore so that the fish are caught on the way up; and from these cages they are taken out by the wagon load. This has been done in more than one instance and in more than one river in New Brunswick. If it continues, the fisheries along the coast will be destroyed, because the fish will be unable to get up to the fresh water brooks to spawn. Our fisheries off the coasts of New Brunswick and Nova Scotia are something immense. It would be interesting to hon. members to examine the statistics for the past year. I do not know what the statistics of the department indicate, but it is my impression that the value of the fisheries is decreasing, due to the very things of which I speak. These guardians are required to traverse the streams in this wilderness country at a great distance from civilization, in some cases taking their lives in their hands, because sometimes these poachers are fairly desperate men; there was one murder committed on the north shore of New Brunswick, the victim being a fishery guardian, and I do not think the murderer was ever apprehended. These guardians need to be men of nerve and resourcefulness. They are asked to furnish their own boat and blankets, to carry their own food, to build their own camps, practically to spend day and night in this service—all at the magnificent rate of $2.25 a day. It is not reasonable at all. I do not think I am often heard in this House advocating an increase of pay for anybody, but this is one case where we are not getting the service because we are not giving enough pay; and so long as the pay is so inadequate we cannot expect anything else.

Mr. MICHAUD: Mr. Chairman, citizens in Madawaska county, in New Brunswick have organized a club comprising actually more than 200 members. They requested the hon. Minister of Marine and Fisheries to appoint an inspector for Madawaska county. The minister assured us that the request of the members of the club would receive special consideration. I trust that he will not forget.

As to the salary paid to those fish wardens. I may state that it is too small. Many of them work for $2 or $2.25 a day. I share the views of the hon. member for Victoria and Carleton (Mr. Caldwell) and I trust that they will be better treated in the future. Moreover, I hope that we shall have an extra fish warden appointed to watch over all the rivers of Madawaska county.

Mr. CARDIN: I shall not fail to give my best consideration to the request of the hon. member for Madawaska.

I repeat what I have said in reply to the hon. member for Victoria and Carleton. I am absolutely sympathetic towards the views he has expressed, and I will do the best I can to comply with his request.

Mr. GRAHAM: I do not want to shut anybody off at all, but if we could finish these marine estimates, we could go home. The first item is the really important item, and if we could dispose of it I think we would have done a pretty good week's work.

Mr. BAXTER: I would ask the hon. member to report progress on this item. We have put through a lot of items this afternoon and evening, it is nearly half past ten and I think we might as well let this stand over, because there are a number of questions that can reasonably be asked from all parts of the House on this item.

Mr. ROBICHAUD: This vote involves the whole fisheries in the Dominion of Canada. As has been stated by my hon. friend from Victoria and Carleton, we have in the province of New Brunswick very extensive fisheries. Some varieties of fish will ascend the streams and rivers and spawn, especially some bass and smelt. We have across these rivers, bridges in certain places, and under these bridges there will be a fish passage. The fishermen take advantage of these passages to set traps and fish nets, and obstruct the passage of the fish up the river. I think this should certainly be looked into.

As far as the salaries of the coast guardians are concerned, I believe that the fact that several fishery officials are employed in each of the constituencies has been overlooked by my friend from Victoria and Carleton. In my constituency, besides the coast guardians, we have four overseers of fisheries, whose duty it is to prevent poaching, and to enforce the fishery regulations throughout the constituency. These fishery overseers are being helped by the coast guardians, and I believe we have too many fishery overseers and too few coast guardians. We have in my constituency, as I have just said, four fishery overseers, and each fishery overseer is being helped by the coast guardians. One fishery overseer for the whole constituency would be sufficient. An extra good man should be appointed, and the recommendation of the Department of Marine and Fisheries should be taken into consideration by the Civil Service Commission when any man is to be appointed in connection with the fisheries. Only lately an inspector of fisheries was appointed having jurisdiction over half the province of New Brunswick who was a school teacher. He is a very bright young man, but instead of selecting a man who had thirty or forty years' experience in the fisheries, and some men with this experience have been recommended—I recommended one myself, a very competent man who had spent most of his life in the fisheries of New Brunswick, but the application was not considered by the commission, and the school teacher was appointed in his stead. If this is the way we are going to promote and protect our fisheries in the Maritime provinces, it is about time this government should hand over the fisheries of the Maritime provinces to a joint commission composed of representatives of the three provinces by the sea. The old government before the Civil Service Commission was inaugurated appointed a church minister to take charge of our fisheries in the Maritime provinces, in the person of Warden Fisher of Halifax.

Mr. GRAHAM: He was fishing in the wrong place.

Mr. ROBICHAUD: In so far as the protection of our fisheries is concerned, I reiterate that a man who has had experience in the fisheries should be selected, and a man who can devote his whole time to the fisheries. Unless this be done, and unless our fisheries are duly protected, I say that the Dominion government should hand over the fisheries of the Maritime provinces to the three Maritime provinces. The province of Quebec is handling its own fisheries, and making a real success of it. I do not say that this department is not doing its duty. We have very efficient men at the head of the fisheries of this country. Our director of fisheries and his staff are all very competent men, and they are doing their duty, but they are too far from the scene of action. They cannot cover the ground as they should, and they have not the required number of officials under them working along the different sections of the coast. I truly believe that some remedy can be found for this difficulty. The Minister of Marine and Fisheries should, I believe, send some of his officials down to the Maritime provinces and investigate the whole situation. Our fisheries have been badly depleted, and the quality of the fish produced is perhaps not quite up to the mark.

I am going to ask the Department of Marine and Fisheries—and I am sure the officials of the department and the House will not look on this as an unnatural request—to grant a small sum of money to our farmers' fair in Gloucester county this year. Why? Our fishermen are not producing the class of fish that is required by the different markets of to-day. The markets of fifty years past were not as particular as the markets of to-day. Our markets to-day are demanding an extra good quality of fish, and the curing of fish is an art in itself. We have in my constituency several classes of cured fish, such as the Gaspe cured dried fish, which is a brand two hundred years old. That is produced largely in my own constituency, and the Gaspe cured fish produced in my constituency does not fill the requirements of the market. I believe that we should have a system of education amongst our fishermen, and it is for that reason I intend to ask the department to grant $500 or $1,000 to our farmers' fair, so that we can have a fish stall where the fishermen will exhibit the finest quality of fish they can produce. This exhibit should be under the supervision of an official of the department. I believe a great deal of good could be accomplished in this way.

Mr. GRAHAM: The minister of Marine and Fisheries is getting weary and I think perhaps it will appeal to every hon. gentleman if we allow vote 239, to provide $880,000, for salaries and disbursements in connection with the fisheries patrol and fisheries protection service and vote number 245, to provide $370,000 for fish culture, to stand and pass the smaller items. We can reserve the two larger items referred to, under which every

thing under the sun in relation to fisheries can be discussed, for another day, but if the committee are agreeable we might put through the smaller votes.

Mr. BAXTER: Vote number 242, which provides $95,000 to assist in the conservation and development of deep-sea fisheries and the demand for fish, deals with a large question of policy. I do not know that we will gain any time by postponing matters; they will be discussed just the same.

Mr. GRAHAM: I am trying to make a reasonable compromise.

Mr. BAXTER: We have given you the big end of the compromise all through.

Mr. GRAHAM: Personally, I have been sitting here every night until after midnight and I am just beginning to get accustomed to it. I think we ought to reserve the $880,000 item because some hon. gentlemen who wish to discuss it are not here. My proposition is that we reserve the two large items I mention, put the others through, and then adjourn.

Mr. CALDWELL: If the minister will guarantee that we can discuss any matter that arises in connection with the votes referred to I see no reason why we should not accept his proposal.

Mr. GRAHAM: I do not think there is any question about that. We have been discussing every possible thing under the first item.

Mr. McQUARRIE: Just before that is done let me point out that I asked a question some time ago and I understood the minister was having the matter looked up.

Mr. CARDIN: The members of the Biological Board of Canada are: Dr. A. P. Knight, chairman; Dr. E. E. Prince, secretary-treasurer; Dr. J. P. McMurrich; Mr. John Dybhaven, Mr. Handfield Whitman, Mr. J. J. Cowie, Professor O'Donahoe, Professor C. J. Connolly, Professor P. Cox, Very Rev. Canon V. A. Huard, Professor W. J. McClement, and Dr. A. H. McKay.

Mr. McQUARRIE: Do the members of this board receive any remuneration or any salary?

Mr. CARDIN: They receive no salary.

Mr. McQUARRIE: Has any reorganization taken place in the board? My reason for asking the question is that we were promised last session, I believe, that the board would be reorganized, particularly in so far as the Pacific representation was concerned—that someone would be appointed who would devote his whole time to studying scientific questions in regard to fisheries on the Pacific coast. Up to the present time, as I understand it, representation has been confined to some university professor who during his holidays, would devote a certain time to studying the habits of fish. That, however, was not considered to be a satisfactory method of representation and, if the minister will remember, the Fisheries Commission of 1922 made certain recommendations in that connection. I think we were promised that some better system of representation would be adopted, and that is what I would like to have an explanation about.

Mr. CARDIN: As a matter of fact the act was amended in 1923, in order to increase the membership of the board and to permit the appointment of three additional men. Two of these were to represent industry—one from either coast—and the third was to be from the department. In this way the particular industries concerned and the department were linked together in such a manner it was thought, as would promote the best interests of those industries. The representative chosen for the Atlantic coast was Mr. Handfield Whitman, of Halifax, and for the Pacific coast Mr. John Dybhaven of Prince Rupert. The question of giving British Columbia larger representation on the board is under consideration and will be taken up at the next meeting of the board.

Mr. McQUARRIE: I did not catch the name of the British Columbia representative.

Mr. CARDIN: He is Mr. Dybhaven.

Mr. McQUARRIE: Is he a scientific man?

Mr. CARDIN: He is representing industry, I am informed.

Mr. McQUARRIE: That does not touch the point at all. As I understand it we were to have a scientific man on the coast who would devote his whole time to studying the habits of the fish, the possibility of restoring the run of salmon on the Fraser river and other matters connected with the Pacific coast fisheries. The minister knows how important the matter is particularly in regard to the Fraser river. The minister no doubt is aware that a few years ago we had a run of salmon on the Fraser river which brought in something like 900,000 cases of salmon per year. That run has been depleted so that at the present time it amounts to simply a matter of fifty or sixty thousand cases or so a year. In consequence the loss to the country is enormous. The matter to be looked into and

investigated is whether something can be done to restore the run of sockeye salmon on the Fraser river. Who is going to do that? It is not a matter for some man who is engaged in industry but for a scientific authority; one who will devote all his time to the work, and not a university professor who will simply employ part of his vacation for the purpose. I think the department is derelict if it does not make arrangements to carry out the promise which was given to us. We cannot play with this question. I do not think the minister is anxious to play with it as he must appreciate its importance. In connection with the Fraser river there are various matters that have to be taken into consideration. One of these, of course, is whether or not it is possible to make some arrangement with the fisheries board of the state of Washington. There must be co-operation between the authorities of the state of Washington and our government if anything permanent is to be achieved. I should like to ask the minister also what is the present state of the negotiations with the state of Washington authorities as to the Fraser river. I understand, and no doubt the minister has the necessary particulars, that some negotiations have been carried on, and that a joint committee has been appointed composed of representatives of the state of Washington and of the Canadian Department of Marine and Fisheries. It would be interesting in fact I think it is necessary, to know what is going on in this connection.

Mr. CARDIN: The situation at present is more encouraging than it has ever been before. The negotiations that are being carried on are quite satisfactory and the department is hopeful that the results obtained will be equally gratifying. No definite decision has been reached so far. As regards the employment of an experienced man to look into the question of the restoration of the fisheries on the Fraser river, Dr. Forester is devoting his time to a study of the matter. The biological board, at its next meeting, will consider the question of increasing the number of its members and, if a decision is reached, the request of my hon. friend, to appoint someone with a special knowledge of conditions there, will no doubt be taken into consideration.

Mr. McQUARRIE: What are Dr. Forester's qualifications?

Mr. CARDIN: He is well known as a scientist and has been recommended by the biological board.

Mr. McQUARRIE: Where is he located?

[Mr. McQuarrie.]

Mr. CARDIN: He is attached to the station at Nanaimo, under Dr. Clemens.

Mr. McQUARRIE: That is hardly studying the Fraser river.

Mr. CARDIN: This is his particular work; he is looking particularly into the Fraser river situation.

Mr. McQUARRIE: But the minister says that he is at Nanaimo. What investigation is he carrying on? I am not asking these questions merely for the sake of taking up the time of the committee. The matter is an important one, as the minister must realize.

Mr. CARDIN: I quite understand the importance of the subject. I understand that he has been carrying on an investigation on the Fraser river for quite a while.

Mr. McQUARRIE: Has he been actually on the Fraser river?

Mr. CARDIN: Yes.

Mr. McQUARRIE: Could the minister furnish the committee with any details as to what investigations he has carried on?

Mr. CARDIN: He is supposed to make reports to the biological board, who in turn will report to the department.

Mr. McQUARRIE: When was he appointed?

Mr. CARDIN: Over two years ago.

Mr. McQUARRIE: And has he not made any report yet?

Mr. CARDIN: No report has been made to the department, but possibly he has reported or given information to the biological board. So far the department has received no information from the board.

Mr. McQUARRIE: I submit that the department should be interested in the matter.

Mr. CARDIN: The department is, indeed.

Mr. McQUARRIE: Then I think that the department should ascertain what reports Dr. Forester has made to the board, and we should have the details of them. Surely there is not much object in having a man make investigations unless some action is to be taken or unless we can know what reports he submits.

Mr. CARDIN: These investigations must necessarily cover a long period; he cannot report every few months.

Mr. McQUARRIE: But he has had two years now in which to study the situation. I admit that there are a number of matters

which will need to be investigated. There is for instance the matter of hatcheries, which has been referred to. I do not say that I am in favour of doing away with hatcheries; as a matter of fact, from my study of many years of hatchery methods, I thought that some improvement might be made in connection with the hatcheries of this country. But I have never advocated that the hatchery system should be discontinued, for I do not believe that this would be wise. Then there is the matter of the enemies of the salmon; for instance, the hair seal. This is a subject that must be studied. The hair seal at present destroys more salmon than the fishermen can catch. The fishermen have great difficulties to contend with in bringing in their fish, which are caught in the nets, before the seal can destroy them. There is also the danger from trout, which destroy the salmon spawn. Then there is the question of the restoration of the spawning grounds, thousands of acres of which, in the upper reaches of the Fraser river, have been entirely depleted, being now barren. Are these spawning grounds going to be restored? If you cannot restore them and get the fish to go there and spawn, then of course the run of sock-eye salmon will never be restored. What I want to know is whether this matter is being taken up seriously, or whether it has simply been handed over to Dr. Forester, who is looking into it and will perhaps in the dim and distant future submit some report which will be pigeon-holed. Is this what will happen, or do we intend to get down to business and see whether something practical cannot be accomplished? I must say, I am not satisfied with the information which the minister has given us to-night, and I really think the department should show more interest in the subject.

Mr. NEILL: I may explain that this biological station is not at Nanaimo but at Departure Bay, which is in the district of Comox-Alberni. I visited it last fall, but I am sorry to say that my memory is not sufficiently vivid to enable me to describe exactly what investigation they were carrying out. Dr. Clemens was not there, but I met his assistant, who showed me over the grounds and explained carefully the kind of work he was going in for and the methods employed. I can only say, speaking in a general way, that I was favourably impressed with the economy and the efficiency with which the station was being run, and with the fact that there was being carried on a work of a thoroughly useful character. I am sorry I cannot state the precise work he was engaged on, but the impression left on my mind was that we were getting good value for the money spent on that station.

Item agreed to.

Building fishways and clearing rivers, $30,000.

Mr. BAXTER: I would like this item to stand, because there is something regarding New Brunswick about which I wish to get some information. It depends upon the information I get whether I shall be justified in making any observations in this House or not upon this subject.

Item stands.

To assist in the conservation and development of deepsea fisheries, and the demand for fish, $95,000.

Mr. BAXTER: This is a very large question, and I do not think this is the time of night to enter upon a discussion of it. I know there are some hon. members, in this part of the House at all events, who have expressed an intention of discussing the question of getting better markets for deepsea fish. We might let this item stand.

Item stands.

To provide for investigations into practical and economic problems connected with fisheries, $10,000.

Mr. BAXTER: I would ask that this item stand, because I do not think any of us understand what is intended by it.

Item stands.

Progress reported.

On motion of Mr. Graham the House adjourned at 11 p.m.

Monday, May 11, 1925

The House met at three o'clock.

DEPARTMENT OF IMMIGRATION AND COLONIZATION ACT AMENDMENT

Hon. J. A. ROBB (Minister of Immigration and Colonization) moved for leave to introduce Bill No. 112, to amend the Department of Immigration and Colonization Act.

He said: This is a very short bill. The amendment is necessary as a result of the courts of British Columbia deciding that section 4 of the Immigration and Colonization Act had the effect of transferring to the Minister of Immigration and Colonization the power conferred on the Minister of Justice by section 43 of the Immigration Act.

Sir HENRY DRAYTON: What is the effect of the amendment?

Mr. ROBB: Heretofore if a man was placed in gaol the Minister of Justice could sign for his release, but apparently that power was vested by section 4 in the Minister of Immigration and Colonization. It is by this amendment transferred back to the Minister of Justice.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

IMPORTED CHEESE

Mr. STEWART (Leeds):

1. Is the government aware that Canadian manufacturers (grinders) of loaf cheese make use of New Zealand cheese in the manufacture of their product?
2. Do these manufacturers (grinders) export the product so manufactured labelled as a Canadian product?
3. Are these manufacturers (grinders) entitled to a rebate of duty paid on imported cheese used in the manufacture of their product when such products are exported?
4. What is the amount of rebate of duty, if any, allowed in such cases?
5. When Canadian cheese is used in the manufacture of such products, what grade of such cheese is used?
6. Have any regulations been adopted relating to the manufacture, branding, grade of Canadian cheese to be used, or sale of this class of cheese?
7. Is it the intention of the Minister of Agriculture to make regulations relating to the manufacture, branding, sale and export of this class of cheese?

Hon. Mr. COPP:

1. Yes.
2. No.
3. and 4. Under regulations established by order in council under the provisions of the Customs Act a drawback is allowed of 99 per cent of the duties paid on imported materials used, wrought into, or attached to goods manufactured or produced in Canada, and exported.
5. First grade.
6. No.
7. The matter is under consideration.

TEMISCOUATA PUBLIC BUILDINGS

Mr. POULIOT:

1. What public buildings belonging (a) to the Dominion government; (b) to the Canadian National Railways, in the county of Temiscouata, are insured against fire?
2. For what amount are each of said buildings insured?
3. What is the amount of the yearly premium in each of the above cases?
4. What are the names of the insurance companies in which the said buildings have been insured?
5. What are (a) the names and (b) the address of of the insurance agents who insured the above buildings?
6. What is the date of payment for each of the above insurances?

[Sir Henry Drayton.]

Hon. Mr. COPP:

1. (a) There are no public buildings insured against fire in the county of Temiscouata.

4. All buildings in question are insured in the Company's fund.

5 and 6. Answered by No. 4.

EMIGRATION TO UNITED STATES

Mr. ROSS (Kingston):

1. Has the government any notice that United States will put in force a regulation regarding any quota against emigration of Canadian born to United States?

2. Will such regulation come into force during year 1925?

3. Has the government been in consultation with the government of United States on this question?

4. If so, what are the results of the consultation?

Hon. Mr. ROBB:

1. No.

2. Answered by No. 1.

3. No.

4. Answered by No. 3.

COLONEL H. A. C. MACHIN

Mr. CARRUTHERS:

1. Was Col. H. A. C. Machin employed by the government of the day, during or after the late war, or assigned to perform other duties than those attaching to his military rank? If so, what was the nature of such?

2. Did he receive any remuneration for such services, other than his regular military pay and allowances? If so, at what rate per diem was he paid?

3. Was he also paid in addition anything for travelling or other expenses? If so, what amount?

Hon. Mr. COPP:

1. This officer was on the strength of the Canadian Expeditionary Force from October, 1915 to 31st May, 1919. He returned to Canada on leave in July, 1917, and was struck off strength of the overseas military forces of Canada 1st October, 1917, on being retained in Canada for special duty as a member of the Military Service Council and subsequently as Director of the Military Service branch.

2. This officer was paid the regimental rates authorized for the rank of lieutenant-colonel to February 19, 1918, and from February 19, 1918, to date struck off strength of the Canadian Expeditionary Force, a consolidated rate of pay and allowance of $6,000 per annum.

3. He was allowed $15 per diem to cover living allowance and his actual moving expenses. In 1917-18, living allowance, $2,790; travelling expenses, $39.07; total $2,829.07. In

1918-19, living allowance and travelling expenses, $1,074.75.

CANADIAN NATIONAL RAILWAYS—SALARIES

Sir HENRY DRAYTON:

1. How many officials or officers of the Canadian National system receive salaries or remuneration amounting to $15,000 per year or over?
2. What was the total amount paid by the Canadian National system for salaries or other remuneration amounting in each case to $15,000 per year or more in the year 1924?

Hon. Mr. GRAHAM: Mr. Speaker, this is a peculiar question in that it seeks to have the Canadian National Railways give to the public information which no other railway company gives. It really is asking the railway owned by the government to do something that no other railway company in Canada is asked to do, or does, or, possibly, would do. I may say this, however. The management of the Canadian National Railways are very much averse to giving this information, for the reasons I have suggested. I have urged them to give it in this case, particularly as it relates only to the higher paid officials and does not include the employees in general. With that understanding—that it is not opening the door to a series of questions that will be handing the entire information as to salaries over to the public for use by other companies, information which if given would also give rise to endless jealousies in the staff itself—I am prepared to answer the question. The answer being confined within the limits I have stated, I do not think it will do any appreciable harm.

The answer is as follows:

1. 17.
2. $350,083.33.

CANADIAN NATIONAL RAILWAYS—EQUIPMENT

Sir HENRY DRAYTON:

1. What amount of equipment was purchased by or for the Canadian National system in each of the years 1922, 1923 and 1924?
2. What was the total amount charged for equipment in the system's books at the close of the year 1924?

Hon. Mr. GRAHAM:

1.

1922..	$ 28,737 50
1923..	29,959,452 28
1924..	14,487,162 27

(Including sales tax totalling $1,686,885.22.)

2. $346,896,425.29.

ST. LEONARD SUB-COLLECTOR OF CUSTOMS

Mr. DOUCET:

1. When did the position of sub-collector of Customs and Excise at St. Leonard's Madawaska county, New Brunswick, become vacant?
2. When were applications called by the Civil Service Commission for the filling of this vacancy?
3. How many applications were received?
4. What are the names of the successful applicants?
5. Was an order issued by the commission to one Joseph Desjardines to report for duty and on what date?
6. Was that order withdrawn? If so, on what date and why?
7. When does the Department of Customs and Excise propose appointing a permanent official to that position?

Hon. Mr. COPP:

1. August 31, 1924, through the death of the sub-collector.
2. September 10, 1924.
3. One.
4. Mr. E. J. Roy.
5. Not to this position.
6. Answered by No. 5.
7. E. J. Roy permanently appointed from December 1, 1924.

WAR REPARATIONS

Mr. BLACK (Halifax):

1. What action is being taken to settle claims for reparations?
2. When is it expected that these claims will be paid?

Hon. Mr. COPP:

1. The appointment of a successor to the late Hon. William Pugsley, the commissioner appointed to consider the report upon claims for reparation, is under consideration.
2. On the completion of the report of the Reparation Commissioner the subject will be dealt with.

QUESTIONS PASSED AS ORDERS FOR RETURNS

REVENUE OF CANADA

Mr. ROSS (Simcoe):

1. What was the total revenue of Canada for the years ending 31st March, 1922, 1923, 1924 and 1925, respectively, from the following sources, import duty, excise duties, excise taxes, income war tax, business profits war tax, any other sources?
2. What per cent of the amount received was the cost of collection in each case?

GRAIN ELEVATORS

Hon. Mr. STEVENS:

1. How many grain elevators are owned or operated (a) by Dominion government; (b) harbour commissioners under control of the minister of marine; (c) by the Canadian National Railways; (d) or sublet from any of the above?
2. Where is each elevator located, what is the type of construction, and what is the storage capacity of each?
3. What was the cost of each, exclusive of site?
4. What was the cost of each, including site?
5. What is the number and kind of separator, cleaner and dryer in each?

6. What is the capacity and kind of conveyor system in each elevator, including the number of legs?

7. By what kind of power is each operated, showing maximum demand and connected load of each plant?

8. What amount of grain did each handle during each of the crop years, ending 1922, 1923, 1924 inwards and outwards?

9. Which of the above elevators are operated under the Canada Grain Act, and under what authority are others operated?

10. Which are licensed and bonded by the Board of Grain Commissioners?

11. What is the insurance rate on each (a) building; (b) contents?

12. What are the charges in each and in case of conveyor charges, at what rate in each case?

13. What are the number of receiving pits in each elevator and number of car loading spouts?

14. In which of the above elevators are "car dumps" used, or automatic power, or shovels, and if car dumps are used, what make?

15. Are any of the above elevators in process of construction, or if incomplete, how much still remains to complete?

16. What was the operating revenue and operating expenses, exclusive of interest and sinking fund, on each of the above elevators?

17. In cases where elevators are leased (a) what are the rentals; (b) to whom leased; (c) terms of lease?

18. What are the number of scales in each elevator, showing receiving, shipping, bagging capacity of each?

RAILWAY GRADES

Mr. MORIN:

What are the maximum grades between engine runs from (a) Calgary to Vancouver on the Canadian Pacific Railway; (b) Edmonton to Vancouver on the Canadian National Railways; (c) Fort William to North Bay on the Canadian Pacific Railway; (d) Superior Junction to Cochrane on the Canadian National Railways; (e) North Bay to Montreal on the Canadian Pacific Railway; (f) Cochrane to Quebec on the Canadian National Railways; (g) Farnham to McAdam Junction on the Canadian Pacific Railway; and (h) Levis to McGivney Junction, New Brunswick, on the Canadian National Railways?

UNOPPOSED MOTIONS FOR PAPERS

No. 1 ELEVATOR, VANCOUVER

Hon. Mr. STEVENS:

For a return showing statement made out by Messrs. Wilson and Wilson, in October, 1924, as auditors for Vancouver Harbour Commissioners, covering the operation of No. 1 elevator, for crop year ending July 31, 1924.

QUEBEC RIOTS, 1917

On the motion of Mr. Doucet:

For a copy of the report of Colonel Machin to the Governor in Council respecting the Quebec riots of 1917.

Hon. E. M. MACDONALD (Minister of National Defence): My attention has just been called to-day to this motion. I would like my hon. friend to let the motion stand, as I desire to look into the matter.

Motion stands.

WRANGEL ISLAND

On the motion of Hon. Mr. Manion (for Hon. Mr. Baxter):

For a copy of all reports, memoranda, documents and other papers, in relation to Wrangel island, which are in possession of the Department of External Affairs, and a copy of all correspondence of Canada, and (a) Vilhaljmur Stefannson; (b) the British government and (c) the government of the United States.

Right Hon. W. L. MACKENZIE KING (Prime Minister): It is just possible that the British government or the government of the United States may regard some of the correspondence asked for as confidential, in which event it will have to be so regarded. I think everything else can be brought down.

Mr. DEPUTY SPEAKER: Carried, subject to the limitations mentioned by the Prime Minister.

DOMINION NOTES

On the motion of Mr. Brown (for Mr. Good):

For a return showing: 1. The amount of Dominion Notes advanced under the War Finance Act of 1914 (with amendments), and outstanding at the end of March, June, September and December of each year from 1914 until the present year.

2. The amounts of securities accepted as a basis for the foregoing issues of Dominion notes, given for the same periods.

3. The different classes of securities and the various amounts of each accepted for rediscounting for the same periods.

4. The different institutions (banks) which took advantage of the rediscounting privileges, and to what extent, for the above mentioned periods.

Hon. J. A. ROBB (Acting Minister of Finance): Mr. Speaker, the department offers no objection to giving the information, but in the absence of the mover of the motion (Mr. Good), I think it might stand. I might point out to the House that to furnish this information will require considerable clerical help and involve a good deal of expense, without, so far as I can see, serving any good purpose. I should like to discuss it with my hon. friend, who is strong for economy, before allowing it to pass.

Motion stands.

AUSTRALIAN TREATY

On the Orders of the Day:

Mr. L. J. LADNER (Vancouver South): May I ask the government, in view of the insistent requests from British Columbia, whether they have taken any further steps in connection with the Australian treaty?

Right Hon. W. L. MACKENZIE KING (Prime Minister): There is nothing further to report at this time. The matter is still the subject of negotiation.

Mr. LADNER: Do I understand the Prime Minister to intimate that the negotiations are still open, notwithstanding the intimation of the Prime Minister of Australia that they had been closed?

Mr. MACKENZIE KING: If my hon. friend had been in his seat the other day he would have heard my reply to the intimation which he has just made. I do not view the remarks of the Prime Minister of Australia in the same way that my hon. friend does.

Mr. MEIGHEN: Is it correct that Mr. Ross, who was to go back to recontinue the negotiations, has not yet gone?

Mr. MACKENZIE KING: I think he is expected to leave this week.

CANADIAN NATIONAL RAILWAYS—INJURY TO EMPLOYEE ON DUTY

On the Orders of the Day:

Mr. JEAN-FRANCOIS POULIOT (Temiscouata): Mr. Speaker, may I direct the attention of the House to the fact that owing to the coolness and presence of mind of a trainman and the engineer on an Intercolonial train the other day a very serious accident was averted and the lives of several people saved? But the engineer was very seriously hurt, and I do not think he will be able to work in that capacity in future. Is it the intention of the government to award anything to this man so that he may be able to maintain himself and his family? His name is Mr. Gagnon.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): This matter has not been called to the attention of the government before, but I can assure my hon. friend that it will be given every consideration. I might point out that these matters now always emanate from the Canadian National board in a report, on which the government acts or declines to act.

BUSINESS OF THE HOUSE

RAILWAY FREIGHT RATES

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): It is now about a week and a half since the termination of the budget debate, but the bills representing the government policy as respects important matters are still unintroduced. May I ask particularly with respect to the railway rates question—when may we expect a statement of the government's policy or a bill representing it?

[Mr. Mackenzie King.]

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): It is now under consideration. It is a very important bill. Mistakes have been made before, I am told, even in the drafting of legislation, and the government wants to be sure that no mistakes are made this time. The bill will be introduced in plenty of time this session to give hon. members opportunity for full discussion.

CANADA GRAIN ACT AMENDMENT

Hon. T. A. LOW (Minister of Trade and Commerce) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to amend and consolidate The Canada Grain Act, chapter 27 of the statutes of 1912, and amending Acts, and to make further provisions in respect to the handling and marketing of grain, or incident to the buying, selling and transportation of grain; the grading and weighing of grain; the handling of grain in and out by country elevators and at country points and inspection of such elevators; the operation, management and control of terminal, public and private elevators; the storing, cleaning and binning of grain; the mixing of grain and the disposition of screenings.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. MEIGHEN: Mr. Chairman, this is a most remarkable resolution to precede a bill. The purpose of a resolution which is to precede a bill is to embody the principles of the bill and virtually all the terms, or, if not all the terms of the bill, certainly all the important terms; otherwise the resolution does not serve its purpose at all: it is valueless; it is a waste of time. The rules of the House call for an introductory resolution, but you do not meet the rule by a simple resolution declaring that a certain act should be amended, which is all that this resolution does. It says, "Resolved that it is expedient to amend and consolidate The Canada Grain Act, chapter 27 of the statutes of 1912, and amending acts, and to make further provisions in respect to the handling and marketing of grain." Well, what provisions? I presume it is expedient to do it if the provisions are an improvement, but what is the sense of the House resolving that it is in the public interest to make an amendment of the provisions as to the handling of grain when we do not know what the provisions are? I submit to you as a point of order, Mr. Chairman, that this resolution is not a compliance with the rules of the House.

The CHAIRMAN: If the right hon. gentleman will allow me to quote Bourinot, I find on page 496:

Rule 50 of the House of Commons provides:

"No bill relating to trade or to the alteration of the laws concerning trade, is to be brought into the House, until the proposition shall have been first considered in a committee of the Whole House and agreed unto by the House"

It is quite allowable, however, to introduce bills relating to trade in the Senate, without previously considering the subject in a committee of the Whole.

Then follows the paragraph which I think is pertinent here:

The rule, as generally understood in the Canadian House—and English practice bears it out—simply requires the House to go into committee to consider a general proposition, setting forth the expediency of bringing in a measure on a particular question affecting trade. The object of the rule is to give another stage for consideration of a measure involving commercial interests.

The decisions of the Canadian Speakers are referred to at the bottom of page 496. With all due deference, therefore, to the right hon. gentleman's objection, it would seem to me at least that as long as the proposition is indicated in a general way, disclosing what the intention of the government is, without detailing particulars, that the resolution would fall within that provision.

Mr. MEIGHEN: I quite agree—as long as the purpose is outlined in a general way disclosing what is intended to be done. But can any human being tell what is intended to be done by this resolution even in the most general possible way? You are proposing to amend the act in respect to the handling of grain. Well, amend it how? To provide for what change? You do not need to give the exact terms of the proposed amendments, the details, but this does not tell how you are going to amend the act. It does not give the government's position at all; it may be backwards or forwards, right or left; it may be to strike the whole thing out. The House is given no inkling whatever as to what the nature of the proposed change is, and I submit it is only trifling with the rules of parliament to submit this premonitory resolution anteceding the bill.

Mr. LOW: I can only say in reply to my hon. friend that I submitted the bill to the Law Clerk of the House, and asked him if he would prepare a resolution covering what would be required preceding the introduction of the bill.

Mr. MEIGHEN: Who is the law clerk now?

Mr. LOW: Mr. Troop. I am not an authority on these matters myself, and I must confess that I relied upon the Law Clerk of the House.

Mr. MEIGHEN: Will the minister look at Nos. 20 and 21 on the order paper? He will see there what is intended by such a resolution. Those are quite proper.

Mr. LOW: In this case, Mr. Chairman, I must stand by the resolution as drawn by the law clerk, unless the House decides otherwise. Mr. Chairman, perhaps there has been no legislation brought before this House this session that is of greater importance—

Mr. MEIGHEN: Mr. Chairman, I must ask for a ruling on the point, after argument. I think it is a very serious matter. If this is to be taken as compliance with the rules —simply a resolution saying that it is advisable to amend a certain act,—it does away with all purpose of the rule entirely. It does not serve the object which you, Sir, read just now as an additional precaution before legislation. If we pass this, the House has not taken the slightest precaution by way of a premonitory step anteceding legislation, not the slightest, because we have not the remotest idea what the legislation is. It does not state its principle even in the most vague or general terms; it does not give the House the faintest intimation. The bill that is to follow could be anything on earth and still be in compliance with this resolution if this ruling is to be sustained, and in future there will be no need whatever of having a resolution anteceding a bill, not the slightest; we may just as well abolish the rule, because your ruling, Mr. Chairman, abolishes it, when you rule this to be in order.

Mr. MACDONALD (Pictou): May I point out?—the present resolution does conform to the general principle that the preliminary resolution, which must always be submitted to the House before any money bill or any measure relating to trade and commerce is considered, should contain an intimation of the nature of the measure which is proposed. My right hon. friend contends that the wording of the resolution is altogether too general; but what is done here is to ask for a declaration:

That it is expedient to amend and consolidate the Canada Grain Act, chapter 27 of the statutes of 1912, and amending acts—

So the committee quite apprehends what the purpose of this bill will be when it is introduced. The language of the resolution although general is apt, and the committee could not expect that more definite language could be employed when dealing with the consolidation not only of one act but of a

whole series of acts relating to an important matter. The resolution proceeds:

—and to make further provisions in respect to the handling and marketing of grain, or incident to the buying, selling and transportation of grain; the grading and weighing of grain; the handling of grain in and out by the country elevators and at country points and inspection of such elevators; the operation, management and control of terminal, public and private elevators;—

And so on. This resolution intimates that further provisions, in addition to those which now exist, are to be made in regard to ali these subjects. The object in drafting the preliminary resolution in a certain way is merely for the purpose of informing the House as to the purpose of the subject which it will be asked to consider later on when the bill itself is introduced, supplemented in this as in every case by the explanations of the minister who is responsible for the measure. It does seem to me therefore that the resolution comes within the ruling and the precedents cited by the chairman of the committee from Bourinot, and that the committee ought not to regard the objections of my right hon. friend as being substantial.

Sir HENRY DRAYTON: It seems to me that this matter is capable of very simple determination, and the real manner in which it ought to be determined is as pointed out by you, Mr. Chairman. You have read, and rightly read, from the authority governing such cases, that in connection with matters having to do with trade and commerce and the like opportunity is to be given the House to understand what is proposed to be done. The idea, of course, is perfectly plain. When it is proposed to change the law, before we take the initial step the House is to be informed as to what the nature of the change will be. It is not necessary to submit then the exact sections that have been drafted, but it is necessary—if we are to try and apply the rule as quoted by you, Sir,—that we should at least know in what direction the changes tend. We should at least know, for example, whether grading is to be made easier or stiffer; whether one thing is to be stopped and another thing is to be allowed; we should know in which direction the government seek to go. As to what the Minister of National Defence (Mr. Macdonald) has said, he is quite right in his statement in so far as the mere consolidation of statutes is concerned; but he is infinitely wrong in connection with the only part of his remark that has anything to do with the point at issue. He is correct in what he says about the consolidation of statutes, because it is a very easy thing to know by reference to the statutes what we are doing when we are consolidating. The House, in that case, would have a right to understand that the consolidation to be undertaken was to be fair, just, and honest consolidation of existing provisions. But my hon. friend after making that point clear sought to deal with an entirely different subject in an absolutely different way.

Now, Mr. Chairman, let us see what you have to say as to the reason why we have the preliminary resolution. We have a resolution such as this in order that the House may get an idea as to the direction in which legislation is contemplated and so will have an opportunity of giving or withholding its assent. Now let us take the first thing which is proposed here. We have to make further provision in respect to the handling and marketing of grain. Well, we all know something about the handling and marketing of grain, how that is done; but we do not know what is here proposed to be done in either of these directions. We do not know whether the handling or marketing of grain is to be made easier or more confined; whether new channels are to be sought or not in looking after this very important business. In the name of common sense is there anything in the resolution which tells the House what it is to be asked to do in that connection? We are next told that the buying, selling and transportation of grain is to be provided for. The same remarks apply in absolutely the same way to these questions. We know how grain is transported, there is no question about that, but the government proposes that something shall be done to change that transportation, some further provision is to be made in that connection. What is the nature of the provision? Is it a provision which will throw a further burden—

Mr. FORKE: We will take it by aeroplane afterwards.

Sir HENRY DRAYTON: Possibly—I really would not be surprised at any suggestion the Minister of Trade and Commerce might make in that regard and therefore I say "possibly" but I do not think at the moment that I should say "probably." At any rate the matter of transportation of grain is to be dealt with and a change is to be made. What change is to be made? Who is to be helped? Are the railway companies to be helped by a diminution of their liability, for example, in connection with losses? Is there to be aid granted to the producer. Or is there to be a further warranty in grain transactions? Is there to be a change made in connection with the rates? What is to be done? Again I

ask, in the name of common sense, what is there for the House to pass upon? Then we have this further question; "The grading and weighing of grain." Now, if there is anything in the world we would want to get advanced information on before we pass legislation concerning it, it is the grading and weighting of grain, because it is a most delicate and vexed question. The House and the country should know, in general terms, what is intended to be done, before any legislation is passed; it ought to get the fullest opportunity of knowing what the government's ideas are. That is the purpose of the rule as read by you, Mr. Chairman, and yet that opportunity has not been afforded us. I could go through the whole list of matters proposed to be dealt with, and we are left in absolutely the same position, without the slightest indication as to what is to be done. If the rule has any significance, if we are to have any regard for it, all right; but if the rule is to be treated in the way proposed by the Minister of National Defence let us strike it out altogether because it means absolutely nothing.

Mr. FORKE: I am almost afraid to venture into this discussion when I find so many lawyers who differ in their views. But I am going to use a little common sense in looking at this matter and see what I can make out of it.

Some hon. MEMBERS: Oh, oh.

Mr. FORKE: I meant no insinuation whatever. There may be a very good reason for a rule of this kind and I can well understand the arguments of the right hon. leader of the opposition. At the same time it seems to me that the resolution deals with so many different phases of the subject, there is so much ground covered, there are so many different incidents which have to be considered in drafting the necessary legislation, that it would be impossible to give any definite information on the subject until the whole bill is brought down; and therefore it seems to me we are simply wasting time in this discussion. I think all of us have a pretty general idea as to the intent of this proposed legislation and my hon. friend the ex-Minister of Finance (Sir Henry Drayton) will get the information he seeks if he is just a little patient.

Mr. BAXTER: I can quite appreciate the remarks of the hon. member for Brandon (Mr. Forke), but he must remember that the position he occupies gives him peculiar facilities for knowing in advance the purposes of the government, which are not possessed by members of the group to which I belong. If, of course, we were disposed to accept everything proposed by the other side of the House in the same gentle way that the hon. leader of the Progressives accepts it, we might expect, perhaps, to have sudden and violent division in our own ranks, with a departure of some gentlemen from positions of importance.

Referring to the point of order, my own view is that the rule is rather a burden upon public business; as far as I am concerned, I would rather the rule did not exist. There are some legislatures in Canada that do not resort to it at all. But there ought to be—not for the information of the House, but for the information of the country—distinct notice in advance, so as to permit the country to be apprised of important changes in legislation on any subject that interests a considerable number of the people. That, I take it, was the original object of the rule, and while we have the rule it surely ought to be observed. For my part, I would gladly vote for the repeal of the rule and the substitution of a system which would provide that a bill should be introduced and remain on the table for a certain number of days before any discussion could take place. I think that would save the time of the House and dispense with a lot of unnecessary printing. But the position we are in to-day is that we are asked to pass a resolution which conveys absolutely no meaning. It is not within the spirit of the rule at all events. We are asked to pass that resolution because a minister of the crown has handed over to some other gentleman—and quite properly—the duty of preparing the resolution, though that gentleman has prepared a resolution that is utterly inadequate and out of line with the spirit of the rules. If every time a blunder is made we are asked to accept it we will soon have an end of all rules; and I do not see how the members of this House can very long be expected to conform with alacrity either with the spirit or the letter of the remaining rules of the House, if any one of them is to be put out of service in this somewhat summary fashion. My hon. friend the leader of the Progressives (Mr. Forke), with his easy channel of communication—which reminds one of the subway from the Central station to the Chateau Laurier, an easy and convenient mode of communication—knows, of course, what the words "transportation of grain" in this resolution refer to. I have not that advantage, not having the same intimate relations with members of the government to

enable me to get the information in this way. If I were a Progressive—

Mr. GOULD: You will never be.

Mr. BAXTER: No, thank God! I hope I never will be quite such a spineless political animal; but I hope to be progressive in a real sense, and not progressing along, drawn by a string after a wagon driven by somebody else; that is not my idea of progress or progressiveness. If my hon. friend had not his intimate means of knowledge, and happened to see the phrase "transportation of grain," it might possibly occur to him that under those words there could be concealed an attack upon that charter of liberty so dear to him, the Crowsnest pass agreement. I do not suppose it is being attacked by this bill; but under that language, after a resolution of this charter had been accepted, it would be perfectly proper for the government to deal with the transportation of grain as affected by that particular agreement. Of course my hon. friends know they are in no such danger. If they thought they were, the chief support of the government would be withdrawn at once. They know they are safe, but a day may come when the Tories, whom they do not trust, will be in power in this House,—the day is not so far distant—and I would venture to say that their attitude towards language of this character would immediately assume a degree of suspicion that is entirely absent to-day. We would have none of this complacency.

You have given your ruling, Mr. Chairman, in good faith, but I appeal to you to consider that the important matter involved in that ruling is the utter destruction of anything that the rules stand for.

Mr. LAPOINTE: The bill which is preceded by this resolution will contain from 275 to 300 clauses.

Mr. STEVENS: Not new sections?

Mr. LAPOINTE: No, not new sections, but the bill has to be preceded by the resolution just the same for the old sections as well as for the new ones. Nobody claims or will claim that a resolution preceding such a bill should recite what is contained in those 300 sections.

Mr. MEIGHEN: Nobody said so.

Mr. LAPOINTE: No, nobody said so, but it is the spirit of the objection which has been raised. What is the rule? The rule simply requires the House to go into committee to consider a general proposition setting forth the expediency of bringing in a measure on a particular question. The resolution sets forth the general proposition that it is expedient to consolidate and amend the Grain Act, and states that amendments will be moved purporting to deal with certain phrases which are all mentioned in the resolution. I have been in this House for a great number of years and I venture to say that this resolution is practically the same as all resolutions preceding such bills, and the Law Clerk of the House, who has drafted this resolution has done so according to the practice as he has drafted all other resolutions of such a nature. Surely my hon. friends are ill-advised in singling out the Canada Grain Act for the purpose of setting forth such an objection as they have made.

Mr. MEIGHEN: I do not know what the hon. minister is talking about when he makes such an assertion.

Mr. LAPOINTE: What assertion?

Mr. MEIGHEN: That the law clerk has drafted this resolution in the same form as all others.

Mr. LAPOINTE: When dealing with bills of this nature.

Mr. MEIGHEN: Not at all.

Mr. LAPOINTE: I can find many of them.

Mr. MEIGHEN: I will find some of them right now on the order paper.

Mr. LAPOINTE: You will find others in the same position.

Mr. MEIGHEN: Let the minister look at resolution No. 14, and every resolution that is on the order paper. I never saw one like this, and if there were one it should have been objected to. Look at No. 15, No. 6 and No. 7. I have read them all.

Mr. VIEN: They do not refer to a consolidation.

Mr. MEIGHEN: No certainly not, but what difference does that make? Look at No. 23.

Mr. VIEN: It makes all the difference in the world.

Mr. MEIGHEN: The consolidating is all right. So far as consolidation is concerned nobody is complaining. It is the amendments. I say that sufficient should be stated as to the purpose of the changes to put the House on its guard as to what those changes are to be. If the minister would look at No. 20, or No. 21, or No. 14, he would not say

to me, man to man, for a minute, that all the changes that are to be made, and the purpose of the whole of them, could not be summarized in language one-half the length of resolution No. 17. He could do it himself; fifty members of this House could do it. He does not need to insert all the changes. The statement in regard to consolidation does not need elaborating. He does not need to repeat any of the old sections. What is to be the effect of these changes? There are to be amendments along certain lines. Let the minister name the lines, name the character of the amendments. That may embrace ten or eleven different clauses and the House is then put into possession of the great purpose of these changes. That is all we ask. The resolution as it stands is just making a farce of the rule, and it is a serious responsibility for this House to declare that the rule is complied with. It is all right for my hon. friend to my left (Mr. Forke)—and I know how lightly some hon. members look upon these things—to say: I know what is going to be done; let us get at it. If that sort of thing is to be done, let us do it in an honest way and get rid of the rule. If the rule is to be disregarded, after this all we need to do is to bring in a resolution saying that we intend to amend section so-and-so of chapter so-and-so of such-and-such a year, and if somebody wants to know the nature of the amendments, the minister in charge will say: We will come to that when we bring in the bill. There is a way in which to improve a rule or to get rid of it. If it should be improved let us improve it, or if got rid of, let us get rid of it; but do not let us make a farce of the rules of parliament. I do not quite agree with my hon. friend (Mr. Baxter) to my right that this rule should be got rid of. Its application might possibly be restricted, but once we adopt this ruling we are done, as regards all cases, with a precaution which parliament has historically adopted and which parliament, if it does not intend to get rid of it, should not get rid of by defying it.

Mr. MACDONALD (Pictou): I am really at a loss to understand the state of alarm into which my right hon. friend has worked himself with regard to this question.

Mr. MEIGHEN: It is not alarm; it is common sense.

Mr. MACDONALD (Pictou): We have both been in this House for a number of years, and it might be interesting for the House to ascertain the exact nature of a resolution introduced by my right hon. friend in 1912 when the act which we propose now to amend and consolidate was being dealt with, in order that my right hon. friend may see that the constitution of this country and the usages of parliament have not altogether gone to rack and ruin in the meantime. I would ask the attention of the committee while I read the resolution. When I have read it, I think the committee will agree with me that the resolution as drafted for the Minister of Trade and Commerce (Mr. Low) to-day goes further than this resolution did in 1912: This was the 1912 preliminary resolution.

Mr. FORKE: Introducing the Grain Act?

Mr. MACDONALD (Pictou): Introducing the Manitoba Grain Act:

> Resolved, that it is expedient to consolidate and revise the Manitoba Grain Act, chapter 83 of the Revised Statutes, 1906, and part II of the Inspection and Sale Act, chapter 85 of the Revised Statutes, 1906.

That is what we say here. Then it goes on:

> To establish a Board of Commissioners to administer the grain trade of Canada, and to provide for expenses in connection therewith, and to charge the board with the operation and management of such terminal elevators as may be constructed, leased or acquired by the government of Canada.

That is the whole of the preliminary resolution of 1912. We have gone on and given in a general way, which, as the rule says, is all we are expected to do, the various numerous subjects dealt with, in such a way that every hon. member knows exactly, so far as general language is concerned, the subjects that are to be dealt with by the amendment. I submit that the precedent of 1912, the resolution introduced by that distinguished public man, Hon. Robert Rogers, on this question, paving the way for the act of 1912, might relieve my right hon. friend's mind of any fear of danger of the rule being disregarded in connection with the present resolution.

Mr. MEIGHEN: My hon. friend was rather unfortunate in the example he chose, but he was wise in reading it in a low tone of voice so that very few hon. members understood the full purport of it. Make a resolution of that sort and I am satisfied. There was a Grain Act in existence. The purpose of the new act was to establish a Board of Grain Commissioners and to provide for their duties and support. That was exactly set out in the resolution which the hon. member read. If the minister does the same in this case, I shall be satisfied.

Mr. STEWART (Argenteuil): Was that all?

Mr. MEIGHEN: No, but that was the main purpose of the amendments made. The substance of all that was done was in that resolution.

An hon. MEMBER: What about the terminal elevators?

Mr. MACDONALD (Pictou): That resolution was six lines long and ours is eight.

Mr. MEIGHEN: The elevators were provided for before. There was a grain act before the act of 1912 was passed. In this case no purpose is given.

The CHAIRMAN: A point of order has been raised, that this resolution is not in order because it infringes rule 50 which is as follows:

No bill relating to trade, or the alteration of the laws concerning trade, is to be brought into this House, until the proposition shall have been first considered in a committee of the whole House, and agreed unto by the House.

Bourinot's reference to that is briefly this:

The rule, as generally understood in the Canadian House—and English practice bears it out—simply requires the House to go into committee to consider a general proposition, setting forth the expediency of bringing in a measure on a particular question affecting trade.

The first authority cited by Bourinot is in Hansard of March 24, 1882, when Mr. MacLelan moved that the House resolve itself into committee of the Whole to consider the following resolution:

That it is expedient further to amend and consolidate as amended the act 31 Victoria, chapter 65, and the acts amending it, respecting the inspection of steamboats, and for the greater safety of passengers by them.

Mr. Alexander Mackenzie raised the objection at that time, stating:

The rules require that, on any bill relating to trade or to alter the laws concerning trade, being brought into the House, the proposition must first be submitted in committee of the Whole. This is a simple notice of the minister's intention to bring in some amendments, and I object to it as being entirely out of order.

To this Sir John A. Macdonald said in reply:

The House can pass a resolution, no matter how vague in its terms, declaring that it is expedient to amend the act. The House can ask for a most specific statement unless it is fully satisfied with that made.

Sir John A. Macdonald further states:

That it is expedient to amend and consolidate the acts. A clearer or more specific statement could not be made.

The Speaker thereupon gave a ruling upon the question. He decided:

That the rule, as generally understood and interpreted by late English practice, simply required the House to go into committee to consider a general proposition setting forth the expediency of bringing in a measure on a particular question; and that consequently in his opinion the proposed motion came sufficiently within the meaning of the rule.

That is the first precedent which appears to have been followed according to Bourinot page 496, and while this notice of motion, I must say, is peculiarly brief and limited, I do not think it is beyond the precedent which has already been given in Bourinot and which I have cited to the House, because the intention is to discuss more the expediency of the proposed amendment and not to give the question the close and intimate examination that the committee of the Whole gives to the bill when it is taken up in committee of the Whole. While I do so with some hesitation, I rule that this motion is in order.

Mr. LAPOINTE: In support of your ruling, Mr. Chairman, may I quote a precedent? On the 11th March, 1914, a resolution was moved reading as follows:

Resolved, that it is expedient to consolidate and amend the Canada Shipping Act and the acts in amendment thereof and various laws relating to merchant shipping.

That was under the government of which my right hon. friend was a specially distinguished member.

Mr. LOW: The lawyers of the House having had their innings, I shall proceed to make a few explanatory remarks in connection with the resolution before the committee. Perhaps there is no measure before parliament at the present time that is of greater interest to the agriculturists of this country than the Canada Grain Act. The Canada Grain Act was passed in 1912. It was framed to meet the needs of that particular day and it has been amended from time to time to meet changing conditions. In 1912 there were 2,037 elevators in this country with a capacity of 108,000,000 bushels, and in 1924 there were 4,169 elevators with a capacity of 251,000,000 bushels. In the crop year of 1913-14 the wheat and oat crop amounted to 474,000,000 bushels, and in the year 1923 the oat and wheat crop was 1,040,000,000 bushels. In the fiscal year 1914 the Canada Grain Board was called upon to inspect 264,000,000 bushels of grain and in the year 1923 it was called upon to inspect 462,000,000 bushels.

As I said before, the old act served its purpose and it will be repealed; the bill I shall introduce following the resolution is a revamping of that act, and enacts also a number of recommendations made by the Royal Grain Inquiry Commission. A number of the old sections have been dropped, some have been changed, and some new ones have

been added. It is intended to deal in extenso with several important matters including the mixing of grain. The House is aware that there is a great difference of opinion in regard to that question; there are those who hold the view that mixing should be prohibited altogether, while others believe that the commercial practice of mixing is economically sound. That subject has been dealt with by the commission and a section has been added to the bill which will give force to their recommendation.

The bill also provides for the cleaning and the disposition of screenings under government supervision. This will involve, if adopted, a very heavy expenditure, and when the bill is referred to the committee on Agriculture it will be for that committee to decide just what action they will recommend to the government in this regard. The bill does away with the Grain Survey Board in the western grain inspection division as at present constituted; it provides for another method of appeal. Certain new grades have been established to cover the new varieties of wheat now grown in the western provinces.

4 p.m.

Sir HENRY DRAYTON: What are those new grades?

Mr. LOW: If my hon. friend had been patient he would have had the names in a moment. They are, Amber Durum, Red Durum, and Canadian Western Kota. Provision has been made to cover these new grades. In 1914 an order in council was passed bringing under the Canada Grain Board all eastern port elevators, but that order in council was never rendered effective. The act is now being amended in order to bring under the board the control of weighing in all the eastern port elevators. Another amendment purposes to make the fees now charged uniform with the fees charged by regulation. Formerly the board required dealers to take out a license; now the onus is to be placed on the dealer to apply for that license. An extremely important change is the bringing of all country elevators, for inspection purposes, under the Canada Grain Board. This implements a far-reaching recommendation made by the commission.

The new bill makes it clear that in all cases the owner of the grain shall decide as to the terminal elevator to which the grain is to be shipped. A minor change, but one which is nevertheless of importance to shippers of grain in the west, is the extension of the time for loading a car, during the months of September, October and November, from 24 to 48 hours. The bill provides also that the Board of Grain Commissioners, with the approval of the Governor in Council, may fix the maximum rate that may be charged by the commission merchant.

In view of the judgment that has just been rendered by the Supreme Court of Canada, it has been thought well to embody in the act a declaration to the effect that all elevators shall be considered works for the general advantage of Canada.

The Turgeon report is possibly the most exhaustive analysis of the grain marketing system that has ever been made in Canada. That commission visited every province as well as a number of the grain centres of the United States; and one member of the commission visited the Old Country to make a special study of the grain trade over there.

These are perhaps some of the major changes that will be effected in the present system by the new bill. But, realizing the tremendous importance of the bill, and the fact that probably never before in the history of parliament were there so many members in the House who are technically qualified to deal with such proposals as those that are now to be considered, I am going to suggest to the House that the bill after it has passed its second reading be referred to the committee on Agriculture. The government, in dealing with this question, requested Mr. Justice Turgeon to prepare the bill and they have thought it well to submit to this committee in its entirety the draft as prepared by him. We shall be glad to have any suggestions that occur to hon. members; in fact, if the committee consider that any changes are necessary in the interests of all concerned in the marketing of grain we shall be pleased to have recommendations along any lines suggested. So far as it is possible, it is the intention of the government to act upon any reasonable suggestion that has for its object the improvement of present conditions in the whole grain trade. What we want is a grain act which, as far as is humanly possible, will give a fair and profitable return to the agriculturists of this country for their toil. The bill will come before the committee of the House and ample opportunity will be given to all hon. members to discuss it. I do not think it is necessary for me to say anything further at this stage.

Mr. CAMPBELL: Is it proposed by the government to establish a system of grading of grain according to the milling value?

Mr. LOW: That matter is under consideration. My hon. friend will have an opportunity of presenting his views on the subject to the committee.

Mr. STEVENS: This bill is one of the most important measures before the Parliament of Canada and it deserves our closest study and the most impartial consideration. It applies not only to the producer of grain but to the system of elevators, which really are, in a sense, common carriers; also to the buying, selling and milling of grain. It affects all these interests, and particularly it affects the producer. A revision of the act is due, as I think all will agree. The act as it stands no doubt served a very good purpose, but conditions in Canada with respect to the marketing of grain have outgrown, during the last few years, the provisions of the present law.

While you have ruled, Mr. Chairman, that the introduction of this legislation by resolution comes within the rules of parliament, the method employed does handicap us in discussing the matter at this stage—and I am not saying this in any spirit of criticism. I approach this bill after years of study of the problem, with an open mind and a desire to co-operate with other hon. members in the enactment of legislation that will meet the growing needs of this vast business known as the grain trade. But I say we are handicapped in discussing the matter at this stage. Indeed, I would be willing to let the resolution pass and say not a word except for this: that the bill will go immediately to a committee of which I am not a member—of which, indeed, only a limited number of hon. gentlemen are members; consequently we cannot have much opportunity to discuss the bill until it comes back from that committee. That is one reason why I had hoped that we should have an opportunity at this stage to discuss the general provisions of the legislation. For instance, if the minister had stated that he was going to treat the question of screenings along some general line we could have had a very useful discussion on that phase of it. Then, there is the question of grading. If it were revealed to us at this stage what the government intended to do, a useful discussion might follow which would guide hon. members who are fortunate enough to be on the committee. I would therefore at this stage crave the indulgence of the committee for a few minutes while I very briefly discuss one or two phases of the question. I want the minister and the government to understand that I am not attacking anything, because there is nothing before us to attack. What I say now I offer merely because I shall have no other opportunity of doing so until the bill comes back from the Agriculture committee.

[Mr. Low.]

Take the question of screenings. For the last seven years at least in this House I have contended with all the vigour of which I am capable that the producer of the grain is entitled to the full value of the screenings that are taken out of his grain when it passes through the elevator. With very few exceptions the producer and owner of the grain has not received anything like the full value of his screenings. In other words—and I do not like to use the word "rob" carelessly, but I can find no other to meet the case—he has been systematically robbed of his screenings. I told hon. members of the House in 1919 when we were discussing the Grain Act, at the time the House was sitting in the Museum—and the famous Price, Waterhouse audit of that time disclosed beyond any possibility of cavil that the case was as I stated it—that the farmer was not getting the value of his screenings at all; in fact, in most cases he was not even getting a slip accounting for any of it. It is possible—and I ask the Agriculture committee to consider this, because I shall not have the privilege of being on that committee—to give to the farmer or producer the full value of his screenings. That was demonstrated for one year—and only for one year, I am very sorry to say—in the government elevator at Vancouver. For some unknown reason they have abandoned the system and this year have adopted the method followed in other places, that of recleaning the screenings. Now, suppose a car of grain is brought to a terminal elevator and is put through the cleaning machine. Out of that grain is taken certain refuse, cracked and broken grain, dirt, and so on; or, if it is wheat, there is removed from it oats or other grain seeds. These screenings are the property of the vendor and he ought to get the full benefit of them. The practice is to run the first screenings through the "money making machines," as they are called; extract from them all the valuable feed seeds, and then say to the farmer or the shipper: "Here is a certificate; you can have the remainder,"—which is nothing but refuse screenings and in most cases worthless. In fact, hundreds of thousands of tons of this material have been dumped into the lake or burned up or sold for next to nothing. The original screenings, on the other hand, is a very valuable product. So I say that in this revision of the act steps should be taken to provide that the shipper of the grain shall receive the full value of his screenings.

Then, there is the question of overages. I venture to say that it will be shown by the annual report of the grain commission

for any year during the last ten or twelve years that without a single exception the overages in all the terminal elevators occur in the top grades, No. 1 and No. 2. Now, how is it done? It is well known to a great many I think who have given it study; it is a simple process. In the fixing of the contract grades of grain, there is a margin between the maximum and the minimum of those grades. For instance, we will take No. 1 grade. It is possible to take say two carloads, one near the maximum of No. 1 grade and the other simply No. 2 grade, and to mix those two carloads and still produce at the elevator two carloads of No. 1 grade. That is constantly done; there is no question about it whatever, and the elevator at the end of the year will find itself short of the lower grades, because it will always grade up, and it will find itself over on the upper grades. An examination of the annual weigh-up and of the annual returns of the grain commission upon any terminal elevator will show the correctness of what I am stating. It is almost as regular as the sunrise that the overage will occur in the higher grades, and if there are any shortages, they will be in the lower grades.

Mr. SALES: Does the hon. member include public terminals, as well as private, in that statement?

Mr. STEVENS: Yes, certainly. I am treading on dangerous ground, I know, in the eyes of some, but I want to say this: I think a public terminal elevator—we will use the term "terminal elevator", an elevator that is used for the handling of other people's goods; I am not talking now of the private elevator belonging to a flour mill or something of that kind—I think as a matter of right a terminal elevator should not be allowed to make any overages at all. I argued this in 1919, and I want to say to my hon. friends to my left that had it not been for their representatives who were then in the House—

Mr. KELLNER: We did not have any then.

Mr. STEVENS: Here is one (Mr. Knox) staring me right in the face. You had about nine or ten representatives including your late leader, the hon. member for Marquette (Mr. Crerar) who though, well, somewhat regularly absent is an honoured member of this chamber, also Mr. J. F. Reid, formerly the member for Mackenzie, also Mr. Maharg, Mr. Levi Thomson, and one or two others. I am not saying this in any spirit of recrimination at all; I am merely citing a fact. I took the stand then that there should not be allowed any overages, but these gentlemen took the stand that an overage should be allowed, and the result was that the present act was amended in 1919. Mr. A. K. Maclean, now Mr. Justice Maclean of the Exchequer Court, was Acting Minister of Trade and Commerce at the time, and he accepted the advice of the hon. gentlemen to whom I have referred, and the act was accordingly framed to permit terminal elevators to create an overage of one-quarter of one per cent. That may seem a very small amount, but if a railway company, for instance, were allowed to extract from the cars that pass along its lines one-quarter of one per cent of the grain it hauls, it would have a mighty nice revenue at the end of the year. My argument is this, and I submit it in all earnestness and seriousness, that a terminal elevator is a common carrier, just like a railway; it acts the same as a common carrier; it is the liaison between the railway and the water, and passes the grain from the railway into the ship; it is really a part of the carrying system of grain; I look upon a terminal elevator as a common carrier, with no more right to exact from its earnings a portion of the commodity it handles than has a railway or a steamship.

Mr. SALES: Or to mix it.

Mr. STEVENS: I will come to mixing in a minute. I say they have no right whatever to extract any portion of the goods they are handling in trust for other people.

Mr. KNOX: Is the hon. member not somewhat confused in his references to overages and mixing?

Mr. STEVENS: Not at all; I think I understand this. I do not want to be dogmatic.

Mr. KNOX: I admit the hon. member knows a good deal of the grain trade for a man not interested in the raising of grain.

Mr. STEVENS: That is a nice little touch, but I am interested in the raising of grain as a matter of fact.

Mr. MORRISON: What would the hon. member recommend doing when the elevator has a shortage? One-quarter of one per cent is a pretty small overage, and if you can find sufficient weighmen throughout the country to weigh as closely as that, you would be a pretty able man.

Mr. STEVENS: I will come to that; it is part of the argument. But I want to establish this first: As a matter of right no elevator

has a right to take a portion of the goods it handles, any more than the railway has. Let us lay that down as a principle. Now I come to the point my hon. friend raises. The point he raises is this—and this is the only defence the elevator can offer. The elevator argues: But we sometimes make a shortage. Now I checked up these shortages—I took the Price-Waterhouse report which was put in the possession of the House some years ago,—and I have checked up dozens of others since, and I find that the percentage of shortage is infinitesimal compared with the overage; it is a mere atom, as it were. I say: Give to the elevator a fair rate of remuneration for the service it renders. I think that rate is pretty good now; as a matter of fact, if I recollect correctly, the average earnings of the elevators at the head of the lakes, without overages, was something like thirteen per cent per annum over a period of years, and if you take away the advantages from screenings it was in the neighbourhood of nine per cent, showing that they were making a fair earning without these extra advantages; and some of them made an earning of one hundred per cent on the capital invested when overages were included in their revenue. I say this: Let the elevator have a fair return for the service it renders, for elevating, storing, handling, insuring, and so forth, the grain. But the moment you say to an elevator or to any common carrier that in order to provide against loss it is permissible for them to take a portion of their cargo or their storage, and that is exactly what the elevators have been doing the last two or three years, and we have been encouraging them so to weigh the grain—I will come to the weighmaster's part of this transaction in a moment—that there would be an overage at the end of the year —it was revealed, it is all on record before this House, that some of the elevators actually paid their superintendents a salary plus a percentage of the overage that they created, thus putting a premium upon extracting in some way or other a portion of the grain that did not belong to them—

Mr. FORKE: Was that actually demonstrated?

Mr. STEVENS: Yes, it was actually demonstrated; it is part of the records of this House.

Mr. KELLNER: What records?

Mr. STEVENS: The Price-Waterhouse report to which I have referred. There is no question of it whatever. I have mentioned it time and again in the House, not in the last couple of years, because this subject has been sub judice during that period.

Mr. KENNEDY (Edmonton): I do not think that is correct, that the Price-Waterhouse report was laid on the table.

Mr. STEVENS: It was laid on the table of the House in 1919. I handled it myself, and worked on it myself, a nice leather-bound report of about 125 sheets of foolscap, comprising the most complete report I have ever seen.

Mr. KENNEDY (Edmonton): Was it available to the public?

Mr. STEVENS: Just the same as any other document is available to the public. For instance, any member or the newspapers could see it; anyone who wanted to could see it.

Mr. GARLAND (Bow River): I think it never was printed.

Mr. STEVENS: It was not printed because it was a very voluminous report, and nobody asked for it to be printed. On the occasion referred to I cited these points regarding overages, and I think that in the contemplated revision of the Grain Act care should be taken that this system of encouraging the creation of overages shall be definitely stopped.

Now, there is the question of the country elevator—

Mr. HOEY: Before the hon. member departs from that point, in view of the inevitability of overages would he consider that the fees derived therefrom should be confiscated?

Mr. STEVENS: I would have them turned over to the government—at least I would have them made use of to reduce the cost of handling this trade. That is what I would do with them. I moved a motion in the House six or seven years ago that $15,000,000—which according to a calculation made that year, prior to the passing of the amendment to which I referred, was illegally extracted from the grain growers of this country—should be returned to the treasury of Canada.

Mr. GOULD: Was not such a provision incorporated in the law and disallowed by judgment of the Exchequer court?

Mr. STEVENS: No, I do not think it ever was. As a matter of fact I think the only change in the law made in regard to it was that we legalized the creating of an overage of a quarter of one per cent, and any

amount above that went to the government elevators.

Mr. SALES: Does my hon. friend intend to deal with the question of the weighmasters?

Mr. STEVENS: Yes, but the point I was referring to in connection with the particular matter under discussion was this: The elevators encouraged their superintendents in this practice by paying a premium on the amount of overages they created; and it has been indicated in the report to which I have referred that there is a question whether or not weighmasters have not been tampered with. I am not in a position to make any charge against the weighmasters that they have been tampered with, but the thing was cited in the report and reference was made to it.

Mr. STEWART (Argenteuil): An amendment to the law has cured that practice pretty well, has it not?

Mr. STEVENS: The condition has probably been ameliorated. As a matter of fact I am informed on very good authority—and I think I am pretty well within the realm of accuracy when I say this, because I recall one case in particular—that a new practice was adopted. That was to fill a car with grain, and put about three or four inches of screenings on top and ship it away from a particular elevator as screenings. One car in particular that I recall was misdirected and discovered in that condition, showing that the elevator had more than the quarter of one per cent allowed and was getting rid of it by collusion with another party. However, I am not desirous of emphasizing that point. The point I want to make in the case of both the screenings and the overages is, that in any amendments to the act the right of the original vendor of the goods ought to receive the most care and consideration, and that the elevator should be treated on principle as a common carrier the same as the railways or the steamship companies.

Mr. McTAGGART: I should like to know what the hon. member would suggest with regard to shrinkage. Would he allow the elevator a certain percentage of shrinkage on grain going into store?

Mr. STEVENS: No. I would say to the elevator just as I would say to anybody else who handles goods in trust: It is up to you to handle the goods so that there will be as little shrinkage as possible. As a matter of fact, from experience, the amount of shrinkage is small, and the elevators should cover it just as a railway company covers its shrinkage claims right along.

Mr. SALES: There are thousands of dollars owing.

Mr. STEVENS: Then there is an undoubted right of claim.

Mr. SALES: They never pay them.

Mr. STEVENS: I would not like to say that; I simply say that the duty of preserving the condition of the goods rests upon the elevator, and there are very few cases where there is any great shortage. It is not the business of parliament to provide against shortage. If you did that you might just as well give an unlimited range of overage; it would be just the same only at the other end of the business. I would give them a fair fee for handling the goods and I would hold them responsible.

Now let me refer to the country elevators. One of the weaknesses in the old act is that it makes very little provision for properly controlling country elevators, and I hope that in the new act that point will be suitably provided for. As to the question of inspection and survey board: it is well known that there is a desire on the part of some, and I think it should be given favourable consideration, that when samples are taken for inspection there should also be a sample taken when the car is unloaded for the purpose of checking up when a survey is called for later on, if it should be called for. For instance, many cars are now loaded so close to the roof that it is impossible to get a proper sample from them—it is impracticable, I will put it that way. This condition is a matter of comment and complaint. It is alleged that in the case of many of the cars—in fact the percentage is put as high as forty per cent—it is impossible to get a proper sample for inspection purposes; and in any case there is a good deal of carelessness in this form of inspection. If it was made obligatory to take a sample of the grain as the car was being unloaded—for the purpose of checking in case of an appeal or in case of a reinspection—it would be a good plan. Furthermore there are those who suggest this as well—that there should be a preliminary inspection say at Winnipeg, or at Calgary or Edmonton if the cars are going to the Pacific, as well as a final inspection; a preliminary or interim certificate should be given and then there should be a final inspection at the point of unloading at Fort William or Vancouver.

Mr. BEAUBIEN: When the hon. member advocates treating terminal elevators as com-

mon carriers would he advocate treating country elevators in the same way?

Mr. STEVENS: I am not prepared to say. However, I do think that a careful study should be given to that point. I want it clearly understood that I am not now seeking to lay down in dogmatic fashion any definite proposals. I am merely citing problems that I think ought to be carefully studied.

Mr. BEAUBIEN: There is no doubt that the committee on Agriculture will take a great deal of interest in what the hon. gentleman is saying, and my reason for asking the question is to see whether he could advance some definite proposition.

Mr. STEVENS: Of course the trouble is this: There are so many country elevators—some belonging to flour mills, some belonging to privately owned terminal elevators, and so on. The terminal elevator is supposed to be entirely separate from the country elevator, I say that advisedly, so it would be difficult to fix definitely upon a principle of that kind with regard to country elevators.

Mr. WARNER: Is it not a delicate matter on account of these elevators also buying and shipping grain for other parties and having different kinds of grain in their possession?

Mr. STEVENS: That is exactly what I mean. It is a delicate matter; I do not think the principle could be applied arbitrarily to the country elevator.

Another point in connection with grading and inspection is this. A considerable difference has been noticed in the fixing of the grades by different inspectors. Some method ought to be devised if possible, or the present method so revamped, as to bring about a more uniform system of inspection, of grading, throughout the country. That, I think, is very necessary; I have received recently some very serious complaints regarding this inspection on the westward route in comparison with the eastward. In fact I think it was the mayor of Edmonton who made very serious charges in that line. This act should be of a character that would make impossible, as far as it is humanly possible to do so, any difference in that way.

Mr. SALES: Would the hon. member explain how he would amend the grading to accomplish what he has just described?

Mr. STEVENS: No, I do not claim to be competent to do that. I do claim some knowledge of the Grain Act, and I claim that one can study this business and probably get an intelligent grasp of it; but when it comes down to the technique of actually fixing a grade of wheat, I do not for a moment claim to be qualified to do it, and indeed, I think it is a qualification that perhaps is not held very generally.

Mr. BROWN: Does the hon. member not think that if there had been that difference in inspection as between the two different places, that might almost naturally result from the human element that almost always enters into the matter of the grading of grain, and that no matter what regulations we might make we would be up against that proposition?

Mr. STEVENS: I said that as far as humanly possible we might amend the regulations to be applied as I have suggested; and you cannot go further than that, so long as we are on this terrestrial globe. Then there is the question of marketing, a very wide and important subject. The amendments are supposed to deal with that matter, and it is rather unfortunate that we have not before us some intimation of the general direction that this act is intended to take upon these major subjects. I offer these observations entirely in the dark as to what the act itself contains, but hoping that when the act is brought back to this House these major subjects, and others arising in connection with them shall receive the consideration they merit.

Mr. KNOX: I should like to have the hon. gentleman go a little further. I am sure we are very much interested in his remarks. An observation was made by the minister a few moments ago in regard to cars which had been consigned by producers going through to the elevator to which they are consigned. I should like to have the hon. member deal with that a little further, because it looks to me as if that may have the effect of overcoming the difficulty that is brought about by millers having the right to select and switch cars to other places than those to which they were consigned. I ask the hon. gentleman this question because he is not a member of the committee on Agriculture and we want to have his assistance in this matter.

Mr. STEVENS: I think the hon. member for Prince Albert (Mr. Knox) has invited a little further discussion of this subject, rather than an answer to a definite question. Personally I do not wish to offer any dogmatic opinion, but I do hold very strongly to this principle—and I think if the hon. member will keep a few of the main principles in mind it

will greatly assist; at least I find it does assist in studying this and similar problems—that the owner of the wheat, the man who ships it, in most cases the producer, is the one who should determine the course that that shipment shall follow. If he desires that wheat specifically consigned to a certain elevator, undoubtedly it should find its way to that destination.

Mr. LOW: That is provided for in the bill.

Mr. STEVENS: If the minister had been in the House a little while ago he would recall that I said that whatever observations I made were offered in good faith and in entire ignorance of what was to be enacted by the bill. It should be kept in mind in all this legislation that the two objects of parliament should be first to safeguard the right of the owner of the commodity to the direction of that commodity until he parts with the ownership; and second, that back to the owner shall come the full return for his commodity less the exact cost of handling, such as freight, elevation, insurance and storage.

Mr. HOEY: How would the hon. member work it out in the case of mixing? I do not think he dealt with that.

Mr. STEVENS: I am glad my hon. friend referred to it. Under the present system you give a man a warehouse receipt which gives him, not the ownership of a specific carload of grain, but the ownership of a certificate of a No. 1 grade or No. 2 grade—a contract grade. I hold, and have held for seven or eight years, that it would be distinctly to the advantage of the grower if he would make a sample market a practical issue in this country instead of what it is now, something that is shelved; so that a grower could sell his wheat on sample. For instance last year my friends from Alberta shipped hundreds of carloads of wheat to the coast—I think I am safe in saying that—weighing sixty-six pounds to the bushel. They did not get the advantage of the excess weight or the extra grade. They may have got some slight advantage in some cases, but in the main they did not get the advantage. If they had been able to sell that wheat in Vancouver on a sample market they would have got the full advantage, or at least the full advantage less the ordinary shrinkage. But here is what happened. A man sells a carload of wheat weighing sixty-six pounds to the bushel. It goes in and is mixed with probably some carloads of No. 2 grade. That raises the No. 2 grade to No. 1, and the dealer, not the farmer, gets the advantage. For the shipper to get the full advantage of his high grade, there is only one way that I know of, and that is by selling on sample market. I recall a case in Minneapolis, last winter or a year ago last winter, where a certain producer sold three carloads of wheat. The wheat came into the Minneapolis yards and he called up one or two dealers. One dealer offered him nine cents, I think it was, above the quoted contract price. It was extra fine No. 1, and he thought he should get more. He telephoned to a dealer just outside of Minneapolis, who came in and examined the wheat and gave him nineteen cents premium on it. He got that additional price because he sold on sample. Had he sold that on a contract grade he would have got No. 1 and he would have got what was quoted in the Minneapolis market for it.

Mr. BROWN: Do you think an efficient sample market would be possible, apart from either a milling proposition or such a terminal at Vancouver? For instance, as applied to Vancouver?

Mr. STEVENS: I presume what my hon. friend means is this: Is the sample market possible without recognizing the principle of mixing?

Mr. BROWN: That will enter into it to a degree; but apart from a large milling proposition such for instance, as they have at Minneapolis.

Mr. STEVENS: I think undoubtedly the stimulation of milling in Canada would bring an immense return to the producer in Canada. I do not think there is any doubt about that. I will not say a sample market would do it, but I recognize that it would help. I know I am not voicing the opinion of any large number of the producers of wheat on the prairies to-day, as far as I have been able to learn—and I have watched them closely for some years—they have rather resisted it. But I do believe the establishment of a sample market—and the law at present permits of it—would be of distinct advantage to the producer of wheat, and I think perhaps a concentration upon the establishment of such a market would bring a larger reward than any other single redress or reform in the grain movement.

Mr. EVANS: Does the hon. gentleman think this is applicable, if you take into consideration the transfers the grain has to go through before it reaches the seaboard?

Mr. STEVENS: In the case of the establishment of a sample market, naturally it would have to be established at Fort William

or Winnipeg. With Fort William as one shipping terminal and the Pacific on the other side, you could not preserve samples perhaps of small quantities and ship through the various transfers; my hon. friend is quite right in that. That, however, does not affect the small dealer or producer, the one- or two-car lot man, because then the grain passes into the hands of the big dealer with shipments from Fort William in cargo lots.

Mr. COOTE: I am very much interested in this question of sample markets. I would ask the hon. member how we could possibly have a sample market in our shipments to Vancouver? At the present time the farmer cannot ship his individual car there. He is under the permit system.

Mr. STEVENS: My hon. friend is quite right. I think the permit system ought to have been abolished this year absolutely. I understand it is not officially in existence, but it is in practice. The only way in which you can establish a sample market at the coast is to establish a cash market. That, however, does not alter the desirability of it and the necessity of establishing it. The restrictions regarding shipments to the Pacific coast were brought about by the congestion last year owing to lack of facilities. That does not apply this year because facilities have been added and there is ample elevator capacity there now.

Mr. BALDWIN: The hon. member for Vancouver Centre (Mr. Stevens) touched a point with which I am very conversant. It is a great mistake either to dump screenings or to burn them. Last autumn I bought screenings at $28 per ton. When they arrived I noticed that the feed was heavier than corn and I made a remark that it must have got in it a considerable quantity of sand or other commodity such as is put into phosphate and other things. I purchased some young pigs, and knowing that this feed was too heavy without mixing it with shorts, I mixed it. Those pigs were sold last Monday by myself when I was home for 12½ cents per pound live weight, the buyer taking delivery from my hog houses—so that the House may understand that I know what I am talking about, I was brought up on a farm by a very public-spirited father who had a large number of hogs, sheep, cattle, horses and poultry. Moreover, I was a miller by trade, the only trade that I ever learned. I was a young boy at the time and I kept at that trade until I was twenty-five years old—when the cheque was sent me, I found that the pigs weighed considerably over 200 pounds each. My hog house has a cement floor and cement walls, and the frost never enters it. That screenings should be burned or dumped into the water is a most deplorable mistake and a tremendous loss to this country. Corn costs about $3 per hundred pounds. I notice the ex-Minister of Agriculture (Mr. Tolmie) smiling. I do not doubt that he should. Let me tell the committee that after feeding a ton or two of these screenings—and I have bought and sold a good many tons—if corn had been brought from ten miles away and I had been asked to exchange the screenings for the corn, I should not have made the exchange. This feed was not mixed with milk. It was thinned down with water principally and no vegetables were boiled to go with it; it was simply a mixture of screenings and shorts. I am speaking only in regard to the statement of the hon. member for Vancouver Centre that these screenings were useless and were being dumped into the water or burned. When I was a miller, people used to bring screenings to me, and the unfortunate thing about them was that they were brought in wet and it was hard to grind them down so as to kill the weed seeds. The screenings that I fed to these hogs were very dry and ground fine so that I am sure no foul seeds will be brought into our part of the country by buying these screenings. On the whole, I made a profit of over thirty per cent by feeding these screenings to pigs six weeks old that were bought at $5 a pair. The committee can see the great advantage of keeping those hogs and the enrichment to the soil this spring, with three or four feet of very rich dressing in the hog house to be spread on the land. When I think of boys standing on street corners, smoking cigarettes, looking for a job, with the rich fertile land we have everywhere in this country, these boys could buy these screenings from the west and feed hogs or sheep and make money on the farm. I may say that these screenings seem to act as a tonic and the hogs were kept in a healthy condition. The screenings were much better than corn, because you cannot give corn to small pigs as it is too heavy. The farmers in the west should see to it that no screenings are allowed to be burned or dumped into lakes. Let them ship them east and I will buy a good many carloads and pay a good price. A few years ago I heard an hon. member say in this House that screenings were exported to the United States. It is no wonder agriculturists there can grow hogs and ship them into this country. We should use our own screenings in Canada and fertilize the soil. I was induced to speak because of

the statement of the hon. member for Vancouver Centre. I presumed my knowledge of digging and scratching the soil and of the milling trade was better than that of my hon. friend because he did not seem to think that it was any great waste to burn or to dump these screenings into the lake.

Resolution reported, read the second time and concurred in. Mr. Low thereupon moved for leave to introduce Bill No. 113, respecting grain.

Motion agreed to and bill read the first time.

CANADA TEMPERANCE ACT

Hon. ERNEST LAPOINTE (Minister of Justice) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to amend the Canada Temperance Act to provide that if by the laws of the province intoxicating liquor can lawfully be sold only by or under the authority of the province or the government thereof, said prohibition shall nevertheless remain in force as to all intoxicating liquor not belonging to, nor imported, nor sold by or under the authority of, the province of the government thereof.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. LAPOINTE: In 1919 this parliament enacted an addition to the Canada Temperance Act, constituting part 4 of that statute. Under that enactment it is provided that when the legislative assembly of any province in which there is in force a law prohibiting the sale of intoxicating liquor passes a resolution asking the Governor in Council to issue a proclamation for the holding of a plebiscite on the question whether the people of that province desire to have the importation of liquor into its territory prohibited, the Secretary of State shall take the necessary steps for the holding of that plebiscite. It is further provided that if the people of the province vote in favour of prohibiting the importation of liquor into such province, then an order in council shall be passed giving effect to that expression of the popular will. Thereafter no person shall import liquor into that province. There was however a proviso that this provision should not apply to intoxicating liquors imported for sacramental, medicinal, manufacturing or commercial purposes; nor was it to apply to any intoxicating liquor which, under the laws of the province or territory in which prohibition might be in force, might be lawfully sold therein.

Many provinces took advantage of that law, among them Alberta, Saskatchewan, Manitoba, Ontario and the three Maritime provinces of Nova Scotia, New Brunswick and Prince Edward Island. Everything went all right until the three prairie provinces of Alberta, Saskatchewan and Manitoba amended their law and adopted the principle of government control of the sale of intoxicating liquor under the authority of the province alone. But there was some doubt; certain people claimed that inasmuch as the sale of certain liquors was lawful in those provinces the prohibition of importation could not continue.

Sir HENRY DRAYTON: Was not the situation the same in Quebec?

Mr. LAPOINTE: No; Quebec and British Columbia never came under part 4 of the Canada Temperance Act. The case was debated before the courts in Alberta, the province claiming that apart from the liquor imported by the government for
5 p.m. purposes of sale by the province under the law that had been adopted, all other importation of liquor was still prohibited. Private parties however maintained that the change in the law of the province had the effect of withdrawing the province from the provisions of part 4 of the Canada Temperance Act. The question went as far as the appeal court of Alberta and the majority of the court, three judges against two, held that part 4 of the act still applied to all liquors except those imported direct by the province for sale under the provincial act.

Now the three provincial governments of Alberta, Saskatchewan and Manitoba, in order that there shall be no doubt about the matter and that the whole question may be cleared up, have applied for legislation declaring that, notwithstanding that under the laws of the province intoxicating liquor may lawfully be sold, by or under the authority of the province or the government thereof, the prohibition shall nevertheless remain in force as to intoxicating liquors not belonging to nor imported, nor sold by the province. In other words, what is required is merely a confirmation of the majority decision of the Alberta court. It is in order to remove any doubt in the matter that this legislation is being presented to the House; the object is not to change the law but merely to clarify it.

It has been the policy of this parliament during the last few years to give effect to the will of the provinces in this matter, and the three provinces in question are a unit as to the desirability of this legislation. That is the reason for the present resolution.

Mr. LADNER: Does this affect either British Columbia or Quebec?

Mr. LAPOINTE: No.

Sir HENRY DRAYTON: I suppose that there is a distinction in the case of British Columbia and Quebec in that, as the minister has pointed out, those provinces did not take complete advantage of part 4 of the act, inasmuch as they were never temperance or "dry" areas in the sense that part 4 implies.

Mr. LAPOINTE: They were dry areas to a certain extent but they never availed themselves of the amendment of 1919 which gives the provinces the liberty of asking for a plebiscite to decide the question of prohibiting imports.

Sir HENRY DRAYTON: So that as the resolution stands there is no Dominion prohibition of imports into either Quebec or British Columbia.

Mr. LAPOINTE: I do not think there is; but so far as Quebec is concerned, certain provincial authorities think that under their own law they can prevent importation. I have grave doubts however that this would be held as valid by the courts.

Sir HENRY DRAYTON: I did not mean to raise that point; I simply wanted the situation understood so far as we are concerned. My hon. friend's position, which I think is absolutely right, is that there is no Dominion prohibition against importation into either Quebec or British Columbia. Once upon a time, I may remind the hon. gentleman, he would not have agreed to this legislation; I remember when the previous government was putting similar legislation through the House, certain gentlemen particularly from his own fair province considered it a terrible outrage that we should subordinate the functions of the Dominion to those of the provincial legislatures.

Mr. LAPOINTE: I think my hon. friend has a vicious memory.

Sir HENRY DRAYTON: Unfortunately, a true memory.

Mr. BELAND: Treacherous.

Sir HENRY DRAYTON: No, accurate this time. But I want to congratulate the minister (Mr. Lapointe) on his growth in liberal thought—thought for the wishes and the will of the people, and the desire to give them expression. He is treading in good steps in following the policy of the past government.

Mr. LAPOINTE: I hope my hon. friend will follow me in that respect.

[Mr. Ladner.]

Sir HENRY DRAYTON: I have much pleasure in supporting the resolution.

Mr. STEVENS: I have here the minister's answer to the question of my hon. friend (Mr. Ladner), but unless this resolution is the opposite of the one which we have been considering in regard to the Grain Act, so far as its intention is concerned, then I think the minister is in error. He may not intend it to apply to British Columbia, but as I read it, it means that it shall be illegal to import into any province the laws of which provide that the government shall have control of the sale of liquor. In other words, it is doing what I think the Attorney General of British Columbia asked the minister to do two years ago, in a slightly different way. I am not now expressing an opinion one way or the other as to the advisability of it, but I would like to be assured of the accuracy of my analysis.

Mr. LAPOINTE: My hon. friend will see from the bill that it cannot apply to British Columbia.

Mr. STEVENS: The minister assures us definitely that it does not apply to that province?

Mr. LAPOINTE: No, it does not apply.

Mr. TOLMIE: And that will be made clear in the bill?

Mr. LAPOINTE: Yes. Section 154 of the Canada Temperance Act, which is amended by this legislation, is the section under part 4, which has never applied to British Columbia or Quebec.

Mr. LADNER: Has the government not had a request from the Attorney General of British Columbia in this connection?

Mr. LAPOINTE: Yes, that is under consideration, but it is not dealt with in this bill.

Mr. GOULD: The minister stated that certain provinces, Saskatchewan included, had availed themselves of the provisions of part 4 of the act. Does the department in that event issue licenses to individuals living in the province to manufacture beer?

Mr. LAPOINTE: That does not come under the head of this legislation.

Mr. GOULD: The minister admits that licenses to manufacture beer may be granted to individuals living in provinces which have availed themselves of the provisions of part 4 of the act?

Mr. LAPOINTE: I would not like to answer that immediately. I have not gone into the matter at all, because it is not dealt with or referred to in this legislation.

Mr. GOULD: I have before me statements made by one of the police in a certain western province that such licenses are granted, and the people are questioning whether it should be done when the province has placed itself on record as being opposed to it.

Mr. LAPOINTE: The Canada Temperance Act did not prohibit the manufacture of liquor. It prohibits the import and sale of it within the province.

Mr. GOULD: That is the point I am trying to bring out. If each individual in the province received a license for the manufacture of beer, any provincial measure would be of very little use.

Mr. LAPOINTE: That is quite another question. I think I am doing as much as I can to remedy what my hon. friend has in mind. He will have to apply to somebody else if he wants more.

Mr. BROWN: British Columbia and Quebec would come under the provisions of this act if they at this or any other time took the same action as has been taken in the prairie provinces?

Mr. LAPOINTE: Yes. They would have to hold a plebiscite.

Resolution reported, read the second time and concurred in. Mr. Lapointe thereupon moved for leave to introduce Bill No. 114, to amend the Canada Temperance Act.

Motion agreed to and bill read the first time.

ROYAL CANADIAN MOUNTED POLICE ACT AMENDMENT

PENSIONS

Hon. ERNEST LAPOINTE (Minister of Justice) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to amend the Royal Canadian Mounted Police Act by providing that pensions to officers, their widows, and constables granted prior to the seventh day of July, one thousand nine hundred and nineteen, may be readjusted in accordance with the rates of pay for officers and constables provided by the said act as amended prior to and on the seventh day of July, one thousand nine hundred and nineteen, but no such readjustment shall authorize the increase of any payments for pensions that accrued before the passing of the proposed legislation.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. LAPOINTE: For many years there has been in this parliament a demand for the redress of what was stated to be a very great injustice to old, retired members of the Royal Northwest Mounted Police, these men were the pioneers in this work in the Northwest Territories, and their pension upon retirement was very low and not commensurate with their needs, especially when compared with the present scale of pensions given to officers and constables of the Royal Canadian Mounted Police. Two years ago, and especially last year, I was urged very strongly by almost all members of the House to make this matter a special one and to grant relief to these old men. The present resolution is for that purpose. We propose to give to the old, retired members of the police force an increase of pension equal to that to which they would have been entitled had they retired in 1919 About 90 or 95 men will be affected, and the additional expenditure, which will, of course, decrease as the men disappear, will be $28,-220.12. The present total amount of pension under the old scale is $31,387.18, and the total under the new scale will be $59,607.30. As I said, this is to give effect to the wish of the House.

Mr. BROWN: I think the hon. minister is to be congratulated on having brought in this bill. There is no body of men to whom Canada owes more than the old members of the North West Mounted Police. I do not think we always appreciate the work they did in preserving the good name of Canada. We like to remember that lynch law has never been known in Canada, and perhaps these men of the Royal North West Mounted Police did more than any other body of men to preserve us from the lawlessness which sometimes tends to bring about lynch law. There is none of us who have lived on the prairies for the last forty years or more who have not been acquainted at some time or another with some of these men. I remember speaking with Major Walsh on this matter. He said that such a body of men as he took out in the early days were hard to gather together, a body of men to whom Canada owes a great deal. It is perhaps tardy justice that we are rendering them now, and I for one would like to congratulate the minister on having yielded to the pressure, although I am sure it did not require much pressure, for his sympathies were with the men, and having brought in this measure.

Mr. EVANS: I am very glad the government has at last seen fit to do justice by these old mounted policemen. There are not many

of them left now, and I do know some of them are in very poor circumstances. When some of them get sick I know that others have to support them in the hospitals, and in many cases their comrades have had to put up their funeral expenses. Speaking as one who went out on the prairies some thirty-five years ago, I can testify to the worth of this body of men. Even yet I do not think that justice is being done to them under this bill. I do know that when the rebellion broke out in 1885 these men were placed under Militia orders and served as militia men during the whole of that time. The others who took part in that rebellion were granted, I think, some 240 acres of land each as scrip. I do not suppose the government purposes giving these men that allowance at this time, but I am very glad to see that at all events they are placing them beyond the pale of what must be for many of them real want. I am personally acquainted with many of them, and I have sometimes wondered how they have lived, some of them on less than fifty cents a day. I think the minister is to be commended for at least giving them this justice at this time.

Mr. STEVENS: I am simply going to voice what has already been said as to the desirability of this legislation, and to say that the minister is undoubtedly to be commended for bringing in this legislation at this time.

My hon. friend from Saskatoon (Mr. Evans) has just referred to a matter which is distinct from this particular measure; that is the recognition of the claim of these old members of the force to scrip. What they are asking is not only recognition in the form of granting them scrip, not so much that, but it was obvious some blunder or oversight took place immediately following the rebellion which they feel left a certain reflection upon the force, that they had not been serving within the military forces, whereas all the records I think indicated that they certainly had. They have asked for that scrip for the purpose of definitely settling their due, their right. However, that is a matter that does not come up under this legislation. This legislation is going to do a measure of justice at least to some of the most deserving citizens of Canada, and I personally am very grateful to the minister that he has brought it in during this session, and that we shall now be rendering at least a measure of justice to these very deserving veterans.

The other subject perhaps is one which the minister will bear in his memory and give some further consideration, and perhaps when this section of the grievance, if I might so term it, has been removed, it will allow a purer and a whiter light to play upon their other modest demand, and I hope that at a future day it will result in the same measure of justice being done.

Mr. KNOX: I wish to add my word of congratulation to the minister for at last having brought this legislation before the House. A number of us have been pressing for something of this kind both in the last parliament and in the present one, and it is very, very satisfactory to us to find that this legislation is at last being put through.

As regards the issue of scrip to the mounted police, we are not pressing it at the present time, but I would like to say, as the last speaker did, that we hope the minister will keep that in mind, because I would like to point this out: There are very many mounted policemen who are eligible for scrip to whom the pension will not apply, for the reason that a man has to be in the force for some twenty years before he is eligible for pension, and many of these men have been in a much shorter term that that. Many of them are not getting a pension, and yet they were discriminated against as regards the issue of scrip. I merely state that in passing. I rose to congratulate the minister for bringing down this measure.

Mr. SPEAKMAN: I would like to ask a question for information, and I need not say that in common with the other members of the House who have spoken, particularly those who have been on the prairies a good many years and have come in touch with this fine body of men, that I am glad to see this legislation brought in. I notice that the resolution provides for pensions to "officers, their widows, and constables." That means, I presume, that the widows of officers are pensionable, but not the widows of constables. Is that the interpretation?

Mr. LAPOINTE: Yes, that is the old law.

Mr. SPEAKMAN: So I understood. I just rose to inquire whether the wording expressed the exact intent of the act, or whether it was misleading.

Resolution reported, read the second time and concurred in. Mr. Lapointe thereupon moved for leave to introduce Bill No. 115 to amend the Royal Canadian Mounted Police Act.

Motion agreed to and bill read the first time.

On motion of Mr. Lapointe the bill was read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Readjustment of pensions granted prior to July 7, 1919.

Sir HENRY DRAYTON: Would the minister consent to the word "may" being changed to the word "shall", and let all those who are entitled get the benefit of the provision?

Mr. LAPOINTE: The word "may" is usually employed as my hon. friend knows.

Sir HENRY DRAYTON: Under certain circumstances but not always in connection with matters which involve a judicial interpretation.

Mr. LAPOINTE: I have no objection to making the change; it is a question of taste.

Amendment agreed to.

Section as amended agreed to.

Bill reported, read the third time and passed.

ROOT VEGETABLES ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to amend The Root Vegetables Act, chapter 43 of the statutes of 1922, and to provide,

(a) for a standard grade for onions of a uniform size, the abolition of the grade known as "sample quality" and the substitution of a grade to be known as "ungraded"; and for the definition of peeled onions;

(b) for permitting potatoes, onions, artichokes, beets, carrots, parsnips and turnips to be offered for sale by measure in quantities of one bushel or less instead of by weight, but the weight of the contents thereof shall be proportionate to the weight of the contents of one bushel of such vegetables, as prescribed;

(c) for making an inspection certificate signed by an official inspector prima facie evidence of the grade and condition of the vegetables or packages to which the certificate refers; and

(d) for exempting from the operation of the act certified seed potatoes only, as defined in the regulations under The Destructive Insect and Pest Act.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

On paragraph (a):

Mr. MOTHERWELL: The vegetable growers of Ontario and of British Columbia have got together on this question of a grade for onions. It is not a matter that affects very many members of the House, but it is very important to the people concerned. They have come to a compromise on the subject, and have made the suggestion that this be a fourth grade. This quality does not belong to the top grades; the top grades remain as they are. This will be an onion of lower quality and instead of it being known as a sample quality of Canadian onion —which is a mistaken name when there are so many Canadian onions of better grades—those concerned have decided that it shall be known as "ungraded". Then there is the matter of "peeled" onions. There is no grade called "peeled". Yet if an onion is treated in such a way as to cause a blemish, it is called a peeled onion and cannot go into the higher grades. We are providing for a more satisfactory definition.

Sir HENRY DRAYTON: What has been the difficulty in regard to onions under the grade "sample quality"?

Mr. MOTHERWELL: The difficulty was this: These onions were going forward to Cuba, for example, under the grade of "sample quality" resulting in the impression that this was the highest quality of Canadian onion when there were three higher grades. In that way the reputation of Canadian onions was being injured. It was not the dealers but the producers that were making complaints. As far as British Columbia is concerned it was claimed on behalf of one section that it was orientals who were wanting to regrade these onions and send them forward under the grade "sample quality"; in other parts of Canada there was a desire to maintain the grade. It was thought better that these particular onions should be ungraded rather than go forward as sample Canadian onions. I think that when the bill goes to the committee and representatives of the vegetable growers are heard there will be no difficulty in arriving at a satisfactory conclusion. I saw a note in one of the newspapers indicating that we were going to have a grade called "peeled" onions, as if we were going to legalize such a grade, when, as a matter of fact, they are blemished onions.

Sir HENRY DRAYTON: I think the minister ought to object to the use of the term "blemished." A peeled onion ought not to be a term of reproach.

Mr. MOTHERWELL: What does my hon. friend suggest?

Sir HENRY DRAYTON: I think onions with a blemish ought not to be classed as "peeled"; we all prefer onions peeled.

Mr. MOTHERWELL: Out on the farm we say "cleaned" onions. That is not quite as strong; of course we want to get away from these bucolic titles.

Mr. GRAHAM: The constituency which I represent is very much interested in the onion trade—I think, perhaps, more so than any county in the Dominion. There has been a difference of opinion there; but I think the whole organization in the county is in favour of removing this grade called "sample quality" for the reasons outlined by the minister. They have had several deputations here and I think as a result of a compromise it was decided to substitute "ungraded" for "sample quality."

Paragraph agreed to.

On paragraph (b):

Mr. MOTHERWELL: The House will probably recall that two years ago we introduced for the first time the principle of selling vegetables on the basis of weight rather than measure. A practice had prevailed for years of selling potatoes by the bag. But there is no standard sized bag in Canada and these bags would run all the way from seventy-five to ninety pounds; no one ever knew when he bought a bag exactly what he was going to get. I think in some places it would represent a bushel and a half, ninety pounds, whereas at other places it would only be eighty pounds, and in other places still only seventy-five pounds. We introduced the principle of selling these articles by weight, but it has created a certain amount of disturbance in the local markets, for example the market in Ottawa and elsewhere, where the practice has prevailed on the part of the growers of selling by the measure—that is by the peck or the gallon. Hence we are conceding to them the right to sell anything under a bushel by measure but the weight by measure must bear an exact relation to the weight if sold by the bushel. We will take the case of a peck of potatoes. It must contain fifteen pounds of potatoes when you come to weigh it. Now if the buyer challenges it, and asks "Is this a peck of potatoes?"—the seller says, "Yes, it is a peck of potatoes; it is a peck measure." Then the purchaser will say, "Are there fifteen pounds in it?" and the seller says, "Yes." Then the buyer feels sure he is getting a peck. On the other hand, if there is no weight designation a peck measure might contain very much less than a peck. It depends on how full he packs the container, and how large the potatoes are. I think my hon. friend from Victoria and Carleton (Mr. Caldwell) understands this. In order to give the weight in a measure of vegetables it must be well rounded up, and that of course depends on who is rounding it.

[Mr. Motherwell.]

Mr. CALDWELL: I will admit I do not understand this clause. First the minister says they may sell by measure, and then he says the measure must weigh so much. I do not see the force of that. I think if he said "Sixty pounds shall be a bushel of potatoes," or "A bushel of potatoes shall weigh sixty pounds," it would be sufficient. If the section provided that they should not sell by measure at all, but that they should stick to the old principle of selling by weight, we would be on safe ground. In some cases a person will buy a gallon of potatoes, a four-quart measure; if you get one big potato in it and another potato crossways over it, you have got it rounded up with potatoes, but you have not ten pounds. I am sorry to see the minister departing from the principle established two years ago. I agreed with the former bill, and I thought it was right, but under this measure I think a chance is given to the retailers to evade the law when they are permitted to sell by measure. I believe the minister is affording opportunity for a good deal of trouble, because there is no doubt in a great many cases when the potatoes are measured out it will be found that a peck does not weigh fifteen pounds. It depends on the size of the potatoes. If they are medium size there will be fifteen pounds in a peck measure, but if they are large size there will not be fifteen pounds in the measure. If they are small size there may possibly be more than fifteen pounds.

Mr. MOTHERWELL: I agree with my hon. friend, as I did on the previous occasion, that the weight is the proper standard for selling. There is no recognized size of bag; but in the open market the practice of selling by measure has been established; and while it is easy to establish what we call a principle, when you come to administer that among people who are accustomed to something else and do not see the sense of introducing this weight business, or dispensing with the peck or gallon measure, they do not favour it, because they find it more convenient to bring in a load in bags and measure it out by gallons. However I can see no harm in it. As a matter of fact we allow them to sell potatoes by the peck. They can sell potatoes by the peck, but they must have fifteen pounds of potatoes in the measure.

Mr. CAHILL: Does that apply to peanuts?

Mr. MOTHERWELL: No, they are not classified as vegetables. They do not grow the same way.

Mr. CALDWELL: Does the minister say that peanuts do not grow the same way as potatoes? I would like to correct him on that. I am surprised to find one vegetable that the minister does not know about. The law permits them to sell by measure to weigh so much. I think the minister is confusing the matter by allowing both measure and weight. I do not think the clause has any force. I think if he sticks to sixty pounds to the bushel he is on safe ground. If a grower or dealer sells any part of a bushel the proportionate weight should be maintained; a quarter of a bushel must weigh fifteen pounds. I am not objecting to this clause, but I think there will be confusion.

Mr. MOTHERWELL: If the hon. member is not objecting, then let it go through.

Sir HENRY DRAYTON: I think the confusion pointed out by the hon. member for Victoria and Carleton is very plain and the bill is wrongly entitled. What really we are doing here in this bill is to say that fifteen pounds can be called a peck. We are saying that you can sell fifteen pounds of potatoes in a peck measure so long as the potatoes are packed so as to weigh fifteen pounds. If the resolution were given effect to in the way the minister introduces it, there would be no change in the law, except that we are calling fifteen pounds a peck. But as a matter of fact that will never happen at all. You might as well strike out the provision as to weight and say potatoes can be sold by measure. It is idle to say that anyone buying by measure is going to bother about weighing the goods afterwards.

Mr. CALDWELL: I remember when the Root and Vegetable Act was passed in 1923, I think it was, we abolished the weight of the bag and the weight of the barrel. Did we also abolish the weight of the bushel?

Mr. MOTHERWELL: Oh, no.

Mr. CALDWELL: It is my impression that we did.

Mr. MOTHERWELL: There is a standard bushel but not a standard bag.

Mr. STEVENS: There was a standard bag at one time.

Mr. MOTHERWELL: Not for potatoes that I know of—not all over Canada.

Mr. CALDWELL: If the private conversation going on in the chamber is over, I should like to repeat my question. Was the standard bushel abolished in 1923?

Mr. MOTHERWELL: No.

Mr. CALDWELL: If the standard bushel was not abolished I cannot see much force in the clause. I think we are making for confusion. If we stick to sixty pounds to the bushel we will work it out all right. If the purchaser gets a gallon he gets seven and a half pounds, and if he gets a bushel he gets sixty pounds.

Mr. MOTHERWELL: We are just confirming what we are doing in practice at the present time. The present statutes do not quite confirm the interpretation which we have been putting on the act, and this is to confirm it. I think where an old-established practice has been built up of using a measure, so long as the customer gets what he believes he is buying, it is all right. If you sell by measure without regard to pounds, believe me there is no Irishman in this room who does not know that you can pack the goods in such a way that there will not be a quarter of a bushel in it. There will not be over thirteen pounds in the measure, and that is what we want to avoid.

Paragraph agreed to.

On paragraph (c):

Mr. STEVENS: Are the inspectors under this act a separate group of inspectors for the purpose of administering it?

Mr. MOTHERWELL: This is the Root and Vegetables Act.

Mr. STEVENS: In the minister's department he has roots and vegetables, and also eggs. Would it be the same inspector for the eggs, for instance?

Mr. MOTHERWELL: This is called the Root and Vegetable Act, but the same inspector performs both functions.

Mr. STEVENS: But it does not include eggs?

Mr. MOTHERWELL: Not in the one branch.

Mr. CALDWELL: I think paragraph (c) is worded exactly like an amendment I moved last year that got its first and second reading and never became law.

Mr. MOTHERWELL: I think it covers that.

Mr. CALDWELL: It is absolutely necessary.

Paragraph agreed to.

Paragraph (d) agreed to.

Resolution reported, read the second time and concurred in. Mr. Motherwell thereupon moved for leave to introduce Bill No. 116 to amend the Root Vegetables Act.

Motion agreed to and bill read the first time.

FRUIT ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee to consider the following proposed resolution:

That it is expedient to amend the Fruit Act, chapter 15 of the statutes of 1923, by providing,—

(a) For the abolition of combination grades of apples, crabapples and pears;

(b) That the minister, with the approval of the Governor in Council, may prescribe additional grades for individual kinds of fruit, and prescribe the kinds of fruit to which such grades shall apply; and make such regulations as may be necessary to make effective the proposed provisions, from the date of their publication in the Canada Gazette;

(c) That every person who, by himself or through the agency of another person, packs fruit in closed or open packages intended for sale, or who offers for sale or sells fruit, and quotes or represents such fruit to be of any grade specified in section 3 of the act as amended or regulations made thereunder, shall cause to be shown on the package or on an approved label attached thereto, the grade and other marks required under the act, and in the event of such fruit not complying with the grade mark thus designated, such person shall be guilty of an offence under the provisions of the act.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Sir HENRY DRAYTON: What does this combination grade mean?

Mr. STIRLING: The combination grade, I think, was introduced some years ago at the request of the fruit growers, they believing that it would aid the sale of fruit in the market. It was very soon discovered that it did not have that effect. There was very little demand in the markets for combination grades and the Canadian Horticultural Council therefore asked the minister if he would be good enough to amend the act so as to remove the combination grade.

Resolution reported, read the second time and concurred in. Mr. Motherwell thereupon moved for leave to introduce Bill No. 117 to amend the Fruit Act.

Motion agreed to and bill read the first and second time.

MEAT AND CANNED FOODS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved the second reading of Bill No. 73, to amend the Meat and Canned Foods Act.

[Mr. Caldwell.]

Mr. STEVENS: I think I asked the minister this question the other day and I am going to ask it again to make sure. Does this include canned salmon? The minister was not very certain the other day?

Mr. MOTHERWELL: I have not made any further inquiries. I am practically sure that it does not include canned salmon, because that does not come under my department.

Mr. STEVENS: If it is found that it does, I hope the Fisheries committee, which is very much interested in this, will be notified.

Mr. MOTHERWELL: Yes.

Motion agreed to, bill read the second time and referred to the select standing committee on Agriculture and Colonization.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

DOMINION LANDS ACT AMENDMENT

Hon. CHARLES STEWART (Argenteuil, Minister of the Interior) moved the second reading of Bill No. 75, to amend the Dominion Lands Act.

Mr. MEIGHEN: Has the minister given an explanation?

Mr. STEWART (Argenteuil): Yes. We discussed this matter pretty fully the other day and there was only one clause, relating to the rescission of the school land contracts, that caused any difficulty. I think we can discuss the subject more fully in committee.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

On section 1—Conditions of entry for lands in Saskatchewan and Alberta south of south boundary of township 16.

Mr. MEIGHEN: There was not much discussion of this except on the part of the hon. member to my left (Mr. McTaggart) who took the ground that there should be no line of demarcation, in the way of any sort of invidious distinction between the lands in one section and those in the other. I do not know that I wholly agree with him in this respect, but I do believe that there will be great difficulty in administering this section of the bill if it is passed in this form. The act will then provide that no one shall homestead in this special tract below this line

unless he happens to be some one who is related to some one else who unfortunately has got in there himself. I do not see any principle in it. If it is right to select a certain area and designate it ranch land on which people cannot succeed as farmers, it is no kindness to let them go there; it is an injury. If such is the case, then no exceptions should be made, and people should not be allowed to go in merely because they are relatives of somebody who happens to be there already. The reason for the line of demarcation must be that it is bad not only for the country but for the individual as well to try to homestead the undesirable section. If this is the reason, then you are only frustrating it by allowing some one to homestead this particular portion of land because he happens to be the son of those who are unfortunate enough to be in the district. I have no doubt there are some portions of good land there; maybe there is an odd section or quarter section that can be farmed; and probably those who are there now are on the best of the land. But if there are a few more good sections left, the principle should not be to confine them to the children of those people who are already in the area. What ought to be done is to select whatever land is fit and throw it open in the ordinary way to any one at all. In other words, the division should be drawn on the line of merit of the land and not on the relationship between the persons who happen to apply and others who are resident in the district at the present time. Under the bill as it stands, any one who happens to be related to somebody there can go in and take his fate on some piece of sand or purely ranch land, and the minister will not protect him.

Mr. STEWART (Argenteuil): That is not right.

Mr. MEIGHEN: Where is there any provision to protect him?

Mr. STEWART (Argenteuil): The provision is not in the bill, but the regulation deals with the matter. An examination has first to be made of the homestead.

Mr. MEIGHEN: There is to be an examination before any one is allowed to homestead that land?

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: Where is the provision to that effect?

Mr. STEWART (Argenteuil): It will be in the regulations.

Mr. MEIGHEN: I should think that would be important enough to be embodied in the act.

Mr. STEWART (Argenteuil): My hon. friend understands that it is not well to clutter up the act with regulations.

Mr. MEIGHEN: Not with minor regulations, no; but this is important. In fact, it is far more important to select the land than to decide upon the individual on the basis of relationship.

Mr. STEWART (Argenteuil): My right hon. friend is partly right. The hon. member for Maple Creek stated the other day—and I agreed with him—that the whole of the territory south of township 16 in Alberta and Saskatchewan is not a dry area. From the eastern boundary of Saskatchewan over at least to the town of Assiniboia, which is a considerable distance westward in southern Saskatchewan, there is as good a piece of territory as can be found in the west. In the immediate vicinity of Maple Creek and to the southward there is a very bad strip, and then along the boundary there are some areas of fairly good land. But I do not think we should change the conditions in respect of the taking up by homesteaders of dry, sandy lands with failure a certain result. In the constituency of Medicine Hat there is a piece of territory along the boundary between Montana and Alberta where farming has been carried on with great success, and there has been a considerable demand to increase the homestead area in that vicinity. But there are not many homesteads even in those districts that our homestead inspectors would recommend as suitable for agricultural purposes. In that area, however, there are ranchers who are desirous that their sons shall succeed them in the ranching occupation, and to that end they would like them to be able to get a homestead within nine miles of the parents' residence. It was in order to meet that demand that I consented to recommend the homesteading of a few parcels of land in this limited area. It will be under the supervision of homestead inspectors who will report here to Ottawa before the claim of any applicant is granted. But to make it general would defeat the object that we are now trying to attain, because if a newcomer, unacquainted with the climatic conditions, went in there to engage in agriculture, he would be practically doomed to failure. He cannot make a living in that area on one quarter section in any case. For the reasons I have outlined, therefore, we have decided to try

this out and see if we can satisfy the demand that has been made.

Mr. MEIGHEN: He cannot make a living on the one quarter section, but neither can the other fellow's son.

Mr. STEWART (Argenteuil): Yes, he can, because he is not dependent entirely on the quarter section. Nine times out of ten they have a ranch, a leasehold and a considerable number of cattle; and there is no doubt that the ownership of a quarter section is a good influence upon the younger generation; it makes them feel they have a real stake in the country. I fancy that this will work out all right, but I would not want to extend it to any large area. You would find it difficult to discriminate, as we are doing here, if it were made of general application.

Mr. MEIGHEN: Suppose a man and his family are ranching in a purely ranching country, the father having taken a homestead there because he wanted to have a central point round which his family would gather. Within nine miles there is no homestead available; it is all ranch land, but twenty miles away there is. Now, another fellow is ranching within nine miles of that place twenty miles distant, and the first man's sons cannot get that other homestead. It is not fair.

Mr. STEWART (Argenteuil): That is the general limitation in the act with respect to the son of a farmer.

Mr. MEIGHEN: I thought there was something under which a man within nine miles had some advantage over the rest, but I cannot just recall what it is.

Mr. STEWART (Argenteuil): He did not need, for example, to build a home upon his land.

Mr. MEIGHEN: Certainly; that is reasonable, but that does not justify this. I knew there was a case in point, and I am now reminded of it: A man has a family of boys, and if one of them homesteads within nine miles he is not obliged to build a house, because he can live at home. But then he is not given a preference in the matter of selection of a homestead, over the family of another fellow who is only a few miles away. The one man gets a homestead in a purely ranching country. That is what he ought to do; that is where he ought to go to ranch; but because he went there his family is debarred from going into another district and taking a homestead of good land, while the farmers' sons who happen to be in that district get it. I think the minister will find he will be in hot water over it.

Mr. STEWART (Argenteuil): They are not debarred from going out and getting a homestead anywhere, but for this particular purpose they are.

Mr. MEIGHEN: They are in this particular.

Mr. EVANS: This land was pretty well settled at one time. When the people went away did they leave the land unpatented, or is it not very largely held by private parties now?

Mr. STEWART (Argenteuil): A great deal of it that has been abandoned has never been proved up. I can quite appreciate the suggestion that men who are in there ranching or farming might want a privilege of this kind for their children in order to keep them in the district. A family can run a ranch at much less expense if they do not have to employ hired help. Of course it is as well to have the son in the vicinity, because he does not have to carry out all the improvements that are required to prove up if he goes out on his own account and leaves the locality in which the family reside. In many cases there may not be desirable land within nine miles of the ranch, and it is only where there happens to be land that will pass inspection that this provision will apply. I do not encourage the taking out of such land as homesteads; as a matter of fact, I think it would have been well if that country had been retained purely for the purposes of ranching and had not been given to homesteading at all. I am now speaking of areas that do not lend themselves to agricultural purposes.

Mr. KELLNER: Does the minister think a quarter of that land would be worth taking if the applicant had other lands, say seven or eight miles distant? Would one quarter of it be of any use to him?

Mr. STEWART (Argenteuil): I think in the cases we will recommend it will be, because they will possibly start the nucleus of a new ranch, possibly on a smaller basis. It will permit the working of the area by the family themselves. I think the men who are in the locality and know the situation fairly well believe that this is worth while trying out, and I have myself given it some considerable thought. I want to say frankly that I was very prejudiced about this at first, because I have been doing my level best in these particular areas to get them back into ranching as fast as possible, believing that that is the only occupation to follow in some

of these areas in both provinces; but right within a few townships you will find men who have made a splendid success of farming operations. Though it is patchy, they have been successful and have done as well perhaps as any settlers in the country, but there are other areas, sandy, and of a light nature, where it is a mistake entirely ever to break up the sod, and those are the areas where we are trying to have ranching done, and where inspectional work will be carried on very carefully, with a view to having those unsuitable areas that have been homesteaded turned back into ranching. It is not intended that any very light sandy soil will be permitted to be homesteaded by anybody.

Mr. SPEAKMAN: I think the principle embodied in this bill is rather a good one, and I can quite see the reason for the nine-mile limitation. That is the limitation that is placed in the case of residential duties for the sons of farmers or of other men who own property, because in a ranching country a boy taking a homestead within nine miles of his father's homestead can do ranching work conjointly with his parents, and that is just about the outside distance at which that can be done. As far as I have seeen, going through that country, and I am thankful to say that there is very little of that kind of land in my constituency, the minister is right in assuming that there are scattered homesteads that it would be well worth while taking up when the main occupation to be followed is ranching, and while it would be utterly useless to allow an outsider to come in and expect to make his whole living on that quarter section, it does provide an additional steading for the boy or brother or any relative of the family who is engaged in ranching with his father or brother or other relative. I have had many requests made of me that I should support anything of this nature. I am not supporting it because of the requests, but because I see there is good, sound sense underlying those requests, and with the safeguard that no entry will be permitted on manifestly unsuitable homesteads, I think the provision is a wise one and will be of value in trying to hold the boys of that district in the district, in the occupation which they are used to, and within reach of their father's home.

Mr. MORRISON: I wish to endorse what the hon. member for Red Reer has just said. In my constituency there are quite a number of farmers who have sons to whom this provision will be quite a benefit. Requests have also been made of me from time to time to try and get a provision such as this put through whereby they can have access to those lands. I agree that lots of these lands are not of a quality to warrant a man taking them up and making his home there, but as the father is already farming in that part of the country and well established there, this provision will be a good help in maintaining the family and keeping them working together. While it is not for the benefit of outsiders, it is going to be of real help to many residents in that country.

Mr. EVANS: I believe thoroughly in the principle of the bill, but instead of limiting it to the boundary of township 16, I think the minister would have done well to extend this privilege over the whole of the old dry area as mapped out in the bill of 1906. I think this privilege might well be extended over the whole of that area, because the conditions that are spoken of in reference to this particular area prevail over other large parts of the province, and while there are a number of homesteads that I know of myself, which would never be worth while taking up as homesteads, they might be very useful for grazing purposes to those who are farming within say nine miles. I think this privilege should be extended to cover the whole of that dry area.

Mr. STEWART (Argenteuil): I hope my hon. friend will not raise that upon this occasion, because there is a good deal to be said with respect to the point raised by the right hon. leader of the opposition. It is a very difficult thing to administer special privileges, and this undoubtedly is a special privilege. I make no other claim for it, because we are shutting out outside competition, and that is a rather delicate thing to do. When we get into this thing we may have a controversy over a homestead, for instance. I want to try it out in this particular area first and see how I get along with it, and I would be just a little bit afraid of extending a special privilege of this kind over too wide an area to start with.

Mr. McTAGGART: I desire to endorse the principle of the bill. I think I made that clear the other evening. Permit me to say that I do not ask that this privilege be extended beyond the limit set here in the bill, but I would like to ask the minister if in regard to such parcels of land as come under this act, it will be necessary for these lands to pass inspection by officers of his department.

Mr. STEWART (Argenteuil): Oh yes.

Section agreed to.

On section 2—Sale of school lands for right of way, etc.

Mr. SPENCER: It seems to me this is an excellent clause, and one that will make it possible for certain parts of school lands to be sold which were not possible heretofore. I notice that part of clause 2 says, "notwithstanding anything to the contrary in this act, the minister may sell school lands required as right of way for any project or for reservoir, church, cemetery or hospital sites," and so forth. Would that cover such buildings as community halls which are being built, as the minister knows, in various rural communities?

Mr. STEWART (Argenteuil): Yes, that is one of the purposes for which we have this clause. It is difficult to enumerate all the various purposes for which small plots of school lands might be required from time to time. I think the saving clause is that the consent of the provincial government is required; we did not have that in last year. While I am on my feet, I might explain that last year, as the committee will remember, we struck out the provision enabling the minister to sell right of way. We need that provision rather badly, because there are a number of cases in which railways have crossed school lands, and we are unable to give title. I have them here and could enumerate them; most of them are in Manitoba. I thought it well this year in order to create confidence in the minds of members of the committee, that before we did any of these things we should first secure the consent of the provincial government. I think we have provided enough safeguards to enable us to do all that we wish to do for this purpose. Of course in regard to general sales of school lands the provisions of the law will remain just as they are at present.

Mr. SPENCER: It will be possible for the department to sell a portion, say an acre or two acres, of school lands for a community hall and similar purposes mentioned by the minister?

Mr. STEWART (Argenteuil): Yes.

Mr. CAMPBELL: Is there any possibility of this provision being abused? Is there any possibility of private individuals other than those intended getting hold of portions of land under this section without proper safeguards?

Mr. STEWART (Argenteuil): No.

Section agreed to.

On section 3—Re-adjustment of school lands sales made prior to 1st January, 1923, and provisions as to application of moneys.

[Mr. C. A. Stewart.]

Sir HENRY DRAYTON: I think the minister should really give us a pretty full explanation of what he is going to do under this section. As I read the section it will enable the minister to switch credits practically as he will. It will enable a man who has got a whole lot of lands for speculation to have all his payments put upon one small portion of the property, if the speculation looks bad. It will enable him in other words to tie up a whole lot of land without risk to himself. Then if the speculation is a good one he will get all the benefit, and if it is a bad one the country will carry the burden for him. That is what it amounts to. If it were a case where the man was a bona-fide farmer it would be a different thing, but the section as drawn, as I see it, is in the interest of the land owner and not of the land worker. It is drawn in the interest of the speculator. It means that if a man goes in and buys four sections, for example, having use only for one, and makes a failure in his payments he can turn around and apply the payments made on all four in ease of one, and get his land free from loss; and as if the speculation were successful he would have the entire benefit. In other words we are now promoting real estate speculation.

Mr. BROWN: Does this not refer to deals already entered into and not to future deals?

Sir HENRY DRAYTON: I do not care whether the deals are entered into or whether they are not. The whole northwest is full of deals that have been entered into for speculative purposes. We know that land speculation there is one of the worst things we have had to contend with, and whether the deals be old or whether they be new I do not see why—the speculation having failed—the country should take the full burden of the failure, enabling the man who has failed in his speculation to get paid in respect of portions of land that he was unable to carry.

Mr. STEWART (Argenteuil): I may say that we never give any consideration to an individual who is holding school lands in a speculative way. There have been one or two cases in which some remission has been made and some of the lands cancelled; but this request comes for the purpose of trying to save the investment of a hard working farmer who has bought a section or half section of land and finds himself in the position where he cannot complete his payments. There are hundreds of cases throughout the three prairie provinces in which we find that after making very considerable payments the purchaser owes more money than the original purchase rep-

resented, perhaps, having made probably a payment of only one-third or one-half of the principal in the meantime. Naturally this leads to discouragement and when we are spending a good deal of money to get new settlers into the country such a situation merits attention. I discussed this very fully with the provincial governments, and asked their opinion about the advisability of a departure of this kind, because I look upon the school lands fund as more in the nature of a trust fund, if that could be said, than any other fund in connection with our natural resources. Therefore in every case where we are dealing with the school lands trust fund or with the school lands trust, I have always consulted the provincial government concerned. They are of the opinion that it is a wise provision, that it will tend to encourage and preserve the investment of hard working people; that it will encourage them to go and pay upon the acreage of land that they can work satisfactorily, and thus save the investment they have made in perhaps a larger area when they felt they were in better circumstances. That is all this provision is intended to do.

Coming to the question my hon. friend has raised, namely, that it will encourage speculation, I do not agree with him. Most of the farmers and the land owners in western Canada are looking more for a way to get out of their speculations than to get into any more ventures of the kind at the moment. I have no particular objection to confining this arrangement to only bona-fide farmers living on the land although it will add to the difficulty of administration. I can assure the committee my sympathy does not go out at all to the individual speculator. No matter how sick he may be to-day of his investment he bought that land for speculative purposes; he did not buy the land for farming purposes, but intended to make a profit out of somebody else who would carry on farming. But however, in most cases the speculator has disappeared, and we have cancelled his holdings and confiscated his money. There are, however, a very large number of people whom this arrangement will help very greatly indeed. I have in mind probably a hundred cases at the moment of persons who have made applications that seem to be of a bona fide character. It will be a material advantage to those people to be able to cancel a portion of their purchase and apply the payments they have made on what they propose to retain. I give the committee an assurance that if we carry this out with the consent of the provincial government there cannot be very much chance of illegitimate advantage being taken of it.

Mr. SPENCER: I suppose any lands relinquished under this act will be sold by public auction?

Mr. STEWART (Argenteuil): Oh, yes, under the act they have to be resold by public auction.

Mr. GOULD: I think the legislation contemplated by the section is really good and necessary. I am sure the settlers in western Canada are not now, and never have been, desirous of having speculators in their midst; and any speculation that has taken place in the past in the purchase of school lands I am afraid has caused the settler to pay more in the case of the initial price than was necessary. That is one reason why individuals living upon the land find it more difficult to meet their obligations than they would had the speculator never entered the locality. Legislation of this character is in the interest of the farmer having boys of ten, twelve, fifteen or seventeen years of age. Naturally he is very desirous of increasing his holdings so that his boys may settle in his immediate locality. It is a perfectly legitimate thing for a farmer to go out and purchase land upon which he contemplates settling his sons in the future; but sometimes, owing to circumstances over which he has no control, he is unable to meet the obligations he assumed when he first purchased the lands. The proposed legislation will enable farmers, if they wish, to reduce their holdings, and provide their sons with land in the same area where no homesteads may be available. Consequently we know what is going to become of the boys. I am speaking now of my own experience, because I have myself indulged in a speculation in land to provide for my boys growing up. If I had not succeeded in establishing a little area around my own home, possibly my boys would be gone. As it happens, they are all there now, every one Canadian-born, and they intend to stay there. But they depended upon the old man to make the first start in establishing them in western Canada.

Mr. BROWN: I am one of the very last men in the House to plead the interests of the speculators, but I can see where this or similar legislation is very necessary. I am quite satisfied there are many cases in which men purchased larger amounts of land than they are now able to pay for, and did it in perfect good faith, the result of a failure to pass such legislation as this would inevitably be that these

men would not be able to continue in the position they are in and they would have to leave altogether. While it is quite possible in the active operation of the law there might be an individual here and there who would reap a benefit he should not reap, yet, weighing one consideration against the other, it seems to me there is a greater danger in failing to pass some such legislation than there is in passing it. I think this legislation is very wise and very necessary in spite of the objection the hon. member for West York (Sir Henry Drayton) has raised.

Mr. McTAGGART: Under section 1 would it be necessary for an entrant on land to comply with the homestead regulations in regard to cultivation duties?

Mr. STEWART (Argenteuil): Yes, the same regulations will apply which apply under the general provisions of the act. He can perform his duties at home, but he will have to perform the cultivation duties.

Mr. McTAGGART: And as to the three years?

Mr. STEWART (Argenteuil): He will have to perform these duties during the three years, but he does not require to live on the homestead.

Mr. KELLNER: What would be the use in making him plough up forty acres of sand that is not worth farming at all? Why not allow him to prove it up in some other way?

Mr. STEWART (Argenteuil): I think it would be a mistake for him to get land he could not plough. Every rancher must have land of some sort. Every rancher is cultivating some land sometimes, to carry him through the winter, and it will be a mistake to let anyone have sandy land for the purpose of breaking it up. I would be very much opposed to that. There are lands all over the country that are very acceptable and they can be found in almost every locality. They may be limited in area but they are there.

Mr. MEIGHEN: Referring to section 3, I have discussed this matter with the minister. Ever since it was proposed it has given me some trouble. I regard it as a most important and very dangerous step. I admit its merits. I know there are cases where without it considerable hardship would result, but let us see where we are going to land if this section passes. If a man buys land or buys anything else he is liable on his purchase. If a man buys grain and pays a small margin, ten per cent just as he does on land, it would be a grand thing for him if, having bought a hundred thousand bushels, he afterwards could narrow it down to ten thousand bushels and apply what he had paid to the ten thousand, and pay it up. Speculation then would have no terrors for anybody. He would risk virtually nothing and his chances of profits would be immense. In other words his chances of profit would be ten times his chances of loss. It is exactly the same with school lands, and it is the very same for the actual farmer as for the speculator. If men are to be allowed to buy school lands and afterwards to narrow down their purchase to a quarter section, and apply what they have paid to the quarter section, the element of risk is virtually gone. Take the case of the farmer purchasing. He buys a half section. His neighbour, or many neighbours, bid against him. This man was a little more venturesome than the others and he outbid them. He was taking the risk and he had a perfect right to any profit he might make; but now the minister comes along and relieves that man of his risk—relieves him of his loss. What is going to be the result in the future if this provision becomes law? Why a man making purchase will very readily outbid his neighbours. The speculator, in a word, will have a big advantage over the actual farmer, because the speculator knows that his chances of winning are ten to one over the chances of his losing, or whatever proportion the purchase bore to the quarter section of land, and the chances of the farmer are exactly the same. It seems to me it is a dangerous precedent. If you do it in this case, why not carry it further? Why not carry it into the soldier settlement scheme? Here is a soldier settler; why not relieve him of part of his obligation as well, and apply everything he has paid on a small part of it? He is just as much entitled to it as the school land purchaser. They have only got quarters, it is true, but it is a case of degree. If it is a case of degree, many of them would like to bring it down to forty acres, and have the payment applied on a small part; but if we begin this, where are we going to end? In a word, it is a case of one party to a bargain relieving the other party of his obligation. I know it is the provinces who are mostly concerned. They are the beneficiaries of the school land fund but I do think that they have not very fully considered this matter before giving their consent to the legislation. I know that when I was minister of the department—and in those days the applications would not be anything like the number they are now, in the very much more difficult farming times—

the applications in many instances came from men who found they had got on the wrong side of the the bargain and wanted the government to assume the load instead of themselves. They came almost daily instead of weekly, but we had no power to grant any of their applications and we did not. The minister suggested he had the power. I do not know under what power he could do it. I know there are cases of hardship, but it is sometimes better to stand by a sane and sensible rule than to vary it under special circumstances, creating a precedent that is going to be very serious.

Mr. MORRISON: The conditions in which those farmers largely find themselves are due to a reaction from war conditions. When war was declared the cry went out, "Produce, produce, produce", and the farmers got busy and assumed extra contracts, bought more land, and more equipment, dug right in, and produced beyond their means. Now no readjustment was made in their favour to enable them to successfully and permanently carry on. On the contrary, adjustments were made with the railways. The Crowsnest pass rates were set aside and they were allowed to raise the rates against the farmers who were urged to produce in the national interest. The banks had the laws adjusted to give them greater advantages, in the national interest, presumably, but it was in the banks' interest really. The Riordon people had a readjustment of their affairs, and they settled their tax account by the note route, which was an absolutely new process. Was that not readjustment in the interest of the individual or the company? As regards the manufacturers of Canada, the tariff was raised on farm implements by just seven per cent as a war measure, against those farmers who were urged to produce in the national interest. While we were producing, the other fellow was getting a good slice of it.

Mr. MEIGHEN: Is the hon. member talking by the book in that? If he will look back over the law, he will find that a special exception was made in the case of the farmer and that there was no increase on farm implements at all.

Mr. MORRISON: There was no increase in the tariff on farm implements? Well, there was an increased duty on a number of commodities in the interest of the manufacturers. Many of us, as individuals, found ourselves in this position, that we were obliged in our mutual interest to compromise. It was no use putting a man down and out, when his trouble was largely through no fault of his own, and he had assumed too heavy obligations. There are a number of members in this corner of the House who, I know, compromised with others, rather than put them down and out. This is a very proper step for the government to take. It is not giving any favours: It is a readjustment of conditions that were brought about largely from the reaction after the war, and I heartily commend the government for the step they are taking.

Mr. GOULD: The speculator is not as great a factor in western Canada to-day as he was some years ago. First of all, agriculture is not profitable enough for him to look upon the purchase of land as an investment. Second, provincial legislation has taken hold of the speculator and practically eliminated him from his activities in the west simply because he was a nuisance in the early days and an imposition upon those who were trying to settle on the land. I speak now of our own province. With our wild lands tax the imposition of the telephone tax, and various other forms of good legislation, we have largely eliminated this individual, and I do not think the day is going to come when he will again be a big factor in the purchase of raw lands in western Canada. Consequently, if we are going to look after the few people we have left in that western country at the present time, legislation such as this is necessary. I say the few we have, because they have been diminished in numbers in the last few years largely because of the speculative activities of the past. Personally, I know of thousands and thousands of acres that were abandoned by speculators who came in from the United States, simply because they would not keep up the payments. That is, agriculture was not profitable enough that people resident in certain areas could purchase these lands at the enhanced price, and this fact, together with the taxes that were being levied, such as the telephone tax, wild lands tax and various other taxes of the provincial government, practically obliged those men either to cultivate the land or to abandon it altogether. We approved the legislation in those days because the speculator came in, and I think we would approve it again to-day if we had to review the matter.

Sir HENRY DRAYTON: I should like to meet the views of hon. gentlemen to my left, except the hon. member for Weyburn (Mr. Morrison), because he approaches the question from an entirely different angle, an angle which has nothing to do with the case. I have a great deal of sympathy with what has been

said by the hon. member for Lisgar (Mr. Brown). He agrees as to the menace of the speculator. The hon. member for Assiniboia (Mr. Gould) speaks about thousands of acres which have been held by speculators and which have been abandoned. I think I would be voicing his views if I were to say that under this legislation it would be a great mistake if those speculators could again come in and get a portion of their abandoned land. That would be all wrong. I am entirely in sympathy with what has been said as to the actual settler farmer. This is a clause which already has provisoes. Under this clause one can do exactly what my hon. friend wants and give protection where they think there should be protection. I would add to the clause words similar to these. Hon. gentlemen will observe that the provision winds up:

Provided that there shall be no refund of any moneys.

In order to meet the case advanced, I would add there words:

And provided that no action shall be taken save and in respect of bona fide settlers, and that the said money shall only be applied on lands actually being worked by such settlers.

And I would give them the relief every time.

Mr. STEWART (Argenteuil): I have no objection, but I would not care to accept the amendment of my hon. friend without giving it some consideration. I would much rather ask the committee to rise and report progress in order to give me time to see whether it was going to interfere with the general provision of the clause, because I have learned by some years of experience that hastily thought out amendments sometimes cause a great deal of difficulty in administration.

Sir HENRY DRAYTON: I agree with my hon. friend.

Mr. STEWART (Argenteuil): I have no desire to protect the speculator, but many remedial measures have been undertaken in order to try to get us out of the difficulty we got into in western Canada by overpurchasing lands. To-day they are moving settlers from southern Alberta to northern Alberta and we are spending money right and left. After having given this matter very careful consideration, I am strongly of opinion that we shall keep a great number of people in the country and preserve their investment who otherwise would lose their investment and, perhaps, leave the country altogether.

9 p.m.

Mr. MEIGHEN: What about the case of a farmer who bought, say, a half section or a section, who was not able to pay, who had his land cancelled on him and who is gone? Will he be allowed to come in again?

Mr. STEWART (Argenteuil): We could not revive a cancellation. The land has passed to the position of having been sold by public auction?

Mr. MEIGHEN: Supposing his sale was made at the same time as that of another man who has carried on and who will be allowed to come in, does the minister not think there will be very serious and well founded complaints?

Mr. STEWART (Argenteuil): Undoubtedly there will, but the provision of this clause is that we are to give consideration to each case. We are to deal only with sales that have taken place prior to January, 1923.

Mr. MEIGHEN: But the minister cannot consider a case where it has already been cancelled.

Mr. STEWART (Argenteuil): I quite admit that, but in all cases of this sort you are bound to have difficulties of one kind or another. In thousands of cases in western Canada, like that cited by the hon. member for Weyburn (Mr. Morrison), private individuals, banks and mortgage companies have made all sorts of arrangements in order to keep the settler with a portion of his holdings. This is practically the only case in which we were not authorized in any way to make any arrangement with him, and we are doing this in order to meet that situation. I think my right hon. friend will agree with me that the man who has stuck there, in spite of his difficulties and in spite of discouragement, is worthy of consideration rather than the man who wrote in a couple of years ago stating that he was through, that we could confiscate his payments and that he wanted to relinquish his land. Of course, there is another case that we must not forget, the case where we cancelled the sale on our own account, but that was done very largely because we could get no response and, in many cases, the land had been abandoned for a year or so before we took that action, so that I do not think anyone would suffer any injury.

Mr. CAMPBELL: I quite agree with the principle of the amendment as explained by the minister and I am heartily in sympathy with the amendment but I want to point out that that is liable to be abused. What is a bona fide farmer? A man might go back on raw land, on which, perhaps, he had not resided at all, live on it for one night, and in

that way change himself into a bona fide settler. I think that ought to be very carefully considered; there should be some definite understanding as to what a bona fide farmer is.

Mr. STEWART (Argenteuil): I am simply accepting the general trend of the amendment; I am not committing myself to it because I want time to consider it. The idea of the committee, I take it, is that they only want us to deal with the man who is in possession of the land and is actually farming it, having made an honest attempt to cultivate it, and not any individual who, never having put plough to the land, holds the place in speculation.

Mr. SPENCER: With regard to the payment for school lands, we shall hope that most purchasers will do their very best to make their settlements. But there are a few people who, after they have made one or two payments and taken off a few crops, will try to evade paying the balance. How long will such people be given before cancellation takes place?

Mr. STEWART (Argenteuil): They are of course liable to cancellation on the first default, but if a man is making an honest attempt to cultivate the land and can give good reasons for not being able to meet his payments, we accept interest and part of the principal. Although there are some cases of shirking responsibility, we do not find very many attempts made to deliberately evade payment. If there is any fault to be found with us, it is rather that we write too many threatening letters. Certainly we make a serious endeavour to collect the money, but where there is likely to be hardship as a result of forced collections we seldom if ever take action. Of course, we are apt to be taken advantage of once in a while.

Mr. MEIGHEN: The section will be better with the amendment submitted or with some amendment along that line. I was surprised at the comment of the hon. member (Mr. Morrison); nothing of what he has in mind animates anyone that I know of. Nobody is refusing to do for the farmer what is done for any other person. This money does not belong to the country; all of it belongs to western Canada. The only wish of the committee is therefore to avoid adopting any principle which in its application might operate to the detriment of that fund on which the whole support of the school system in the west depends.

Mr. CARMICHAEL: The leader of the opposition (Mr. Meighen) has prefaced some remarks I should like to make with regard to this fund. I know for a fact that parcels of land are sold to individuals and payments made to the department, but the taxes are allowed to accumulate on those lands for probably eight, ten or twelve years. If the contract is cancelled and the money is still in the hands of the department, what is the attitude of the minister towards the local improvement district, including the schools, the rural telephone companies and other local governing bodies that are short of money and find it difficult to finance? If the department should have on hand money which, as the leader of the opposition says, belongs to western Canada, is it not reasonable that any taxes in arrears should be paid to the local municipalities?

Mr. STEWART (Argenteuil): The hon. member would lead me into dangerous channels if I attempted to discuss that question. Inasmuch as this is a trust fund we would have no authority to pay any of it to any individual or municipality. We must, in carrying out the trust, apply the money in payment to the trust fund itself. Nothing of the kind suggested could therefore be given consideration.

Progress reported.

SUPPLY

TRADE AND COMMERCE

The House in committee of Supply, Mr. Gordon in the chair.

Trade and Commerce—operation and management of elevators, (for salaries, wages, power, fuel, insurance on grain at Port Arthur, registration, inspection and weighing fees, stationery, office rent, travelling auditors' fees, and miscellaneous expenses), $475,000.

Hon. T. A. LOW (Minister of Trade and Commerce): The increase of $55,000 in this item is due to the fact that there is another elevator at Edmonton, while one is being erected at Prince Rupert. There is also one in course of erection at Halifax. These three will consume the extra amount requested, in operating costs and salaries of staff.

Mr. STEVENS: The question has been under consideration for a considerable time, and the minister might now answer it, whether the title has actually passed to the Vancouver Harbour Commissioners of elevator No. 1 at Vancouver.

Mr. LOW: The title has passed.

Mr. EVANS: Will the elevator at Halifax be ready for the handling of grain this com-

ing season? And how much grain has passed through that port during the last two years?

Mr. LOW: We expect to have the elevator completed in time to handle the fall grain passing through the port. I have not before me the information regarding the quantity of grain that has passed through the port during the last two years, but certainly it could not have been very much, seeing that the old elevator was not in repair. We have no figures in connection with that matter, because the elevator was under the management of the Canadian National Railways.

Mr. GARDINER: Will the new elevator be under the control of the Canadian National Railways as well?

Mr. LOW: Yes, but as regards inspection and weighing it will be under the supervision of the Canada Grain Board.

Mr. SPENCER: Was the matter of inspection and weighing, in the case of the old elevator, under the Railways or under the Department of Trade and Commerce?

Mr. LOW: It was under the Canada Grain Board.

Mr. STEVENS: I am a little confused by the minister's answer. Item 360 provides $475,000 for the operation and management of elevators. The minister says that includes the Halifax elevator. Then there is item 362, $575,000, towards the construction of the Halifax elevator. The minister tells us that the new elevator is to be under the control of the National Railways. If these elevators, either old or new, are under the control of the National Railways, why are they included in these votes, and further, why should not the capital cost be included in the accounts of the National Railways?

Mr. LOW: I had the impression that the Halifax elevator when completed would be under the management of the Canadian National Railways, but that is not so; it will be under the management of the Canada Grain Board.

Mr. STEVENS: How about the present elevator at Halifax, which the minister said a moment ago was included in vote 360?

Mr. LOW: We have nothing to do with that. I understand it is under the control of the National Railways.

Mr. STEVENS: Then it is not included in this vote?

Mr. LOW: The old elevator? No.

[Mr. Evans.]

Mr. GOULD: How many elevators are included in it?

Mr. LOW: Seven in all.

Mr. FINN: It had been my hope and desire, and I think it is the hope and desire of the commercial interests of the city of Halifax, that the Halifax elevator, when completed, shall be placed under the management of the railway so far as operation is concerned. I would ask the minister not to tie himself to any policy in that respect until representations are later made to him as to whether it would be more advisable, in the interests of shipments through the port of Halifax, to have the elevator operated under the Canadian National system instead of under the Grain Board.

Mr. CHURCH: What has the minister done since last session in reference to the extension of this elevator policy so far as Ontario is concerned? During the last three sessions this matter has been before the House. Four years ago my hon. friend's predecessor promised a large and influential delegation representing the farmers of central Ontario, the United Farmers of Ontario, the Board of Trade of Toronto, the Toronto Harbour Board and others, that this matter would be given consideration. It was shown that Ontario was being sidetracked in the matter of elevator policy for the benefit of the west; and it is obvious that with the completion of the Welland canal in 1929, as is projected, we shall be millions of bushels behind in elevator capacity. As I said the other night in this House, there are twenty-eight elevators in Buffalo harbour to-day, all thriving, as you will see it stated in literature coming from Buffalo itself, as a result of the foolish policy of the government of Canada in not having an embargo on hard wheat.

If Canada had a proper grain policy, those twenty-eight elevators at Buffalo would have to move to Port Colborne and other points along the lakes. My hon. friend's predecessor promised that a survey of the need in central Ontario of a government terminal elevator would be made and that reports would be secured from the grain commission. The grain commission did find on the evidence that central Ontario was badly in need of elevator facilities to take care of the feed products of that province. My hon. friends of the Progressive party who come from Ontario should better themselves in this matter. The hon. member for Brant, who helped form a Ginger group in this House for the needs

of the west and other Progressives from central Ontario, should see that something is done. Ontario is suffering to-day through lack of elevator capacity. Most of the railway stations have no facilities nor have the flag stations, and the farmer has no place to take his crop in course of shipment. According to a return made to the House, these terminal elevators are very largely located in the west. I have no objection to that; I hope they will get more of them to take care of the grain crop, but there is need of a large central terminal elevator in western and central Ontario to take care of the small farmer and his products. In the memorandum which was presented by the United Farmers of Ontario backed up by boards of trade from Toronto, Hamilton, the Niagara district and other parts of Ontario as well as by representatives of the Ontario government itself, these matters were fully set out and the deputation were promised some action. Sir Thomas White, who was then Minister of Finance, said that a strong case had been made out, and that had it not been for the war the government would grant immediately the request of the deputation. Last year, Mr. Chairman, there was a vote for an elevator at Halifax and another at Edmonton, and the minister said he would visit the Ontario district and look into the strong case for such an elevator in Toronto. We are always glad to see him there. I notice he attended a Liberal meeting in the Toronto district recently, and I am sure if he would consult with the farmers of the district he would find that we are badly in need of an elevator in central Ontario. Some years ago there were seven or eight private elevators in Toronto harbour, but to-day there is not one. The deputation proposed that this elevator should be built in the logical situation, in the city of Toronto. I am not prepared to say where it should be built, but I do say that the government should build this elevator for central and western Ontario on economic grounds. The Farmers' government were not in office in Toronto one month before they were down here taking up this question. Hon. Mr. Manning Doherty, Minister of Agriculture in the Farmers' government in Ontario, representing Premier Drury, and many others were on the deputation. This matter has been before the House for three or four sessions, and I would like to see something better than promises now. True, an elevator has been built at Port Colborne, but that is more for grain east and west. There is need for an elevator in central Ontario to take care of the different classes of products of central and western Ontario. A case has been made out, reports have been made by the grain commission, and I would like the minister to state what the intention of the government is regarding the building of this elevator. Ontario has been overlooked. We have been taxed to construct elevators in Saskatchewan, Alberta and Manitoba, and at Halifax and Prince Rupert, and Ontario has been neglected. The other day we had a continuous wail about the Hudson Bay railway. The government of the province of Ontario has itself had to build a railway similar to the purely provincial Hudson Bay road.

Mr. CAMPBELL: Is the hon. gentleman aware that Ontario is building this railway through its own land? If the western provinces owned their resources, it might be a different question. Ontario in building through its own land is appreciating the value of the land.

Mr. CHURCH: A poor argument. I come back to what I said. The government of the province of Ontario had a policy to build a railway to James bay with federal assistance, but got none. A deputation waited on the Conservative government and applied in vain for a federal subsidy, and they were told it was purely a provincial railway. So also is the Hudson Bay railway. I am not objecting to the western provinces getting a liberal elevator policy, for they may deserve it, and Ontario should support them in that respect, but what I do ask for is equality of treatment, and that the farmers of Ontario be treated commensurate with their needs. The facts are all set out in the memorandum in Hansard which I have read before on two or three occasions, and I shall not read it again to-night. I am pleading for what was promised last session. Ontario is to-day being taxed to build elevators in other parts of the country and gets nothing in return. I want to see equality of treatment in this matter. I would ask the minister what has been done since last session to meet the representations of the deputation and to come to the relief of the long suffering farmers of central and western Ontario who are taxed to-day for building elevators all over the country, and who can get no relief from the present anomalous condition of affairs.

Mr. LOW: This is not a new proposal at all. It was made to my predecessors, and Sir George Foster turned it down. I have no doubt the day will come when Toronto will have an elevator, but my hon. friend will have to wait until the revenues are more buovant than they are to-day. He made some

reference to the great capacity of the elevators at Buffalo. I might point out that the capacity of the elevators at the head of the lakes in the province of Ontario, at Port Arthur and Fort William, is very much greater than the capacity of the elevators at Buffalo. No doubt there are many places that would like to have elevators and where we would like to build them. My hon. friend from Lethbridge would like to have an elevator, but unfortunately the revenues are falling and we have to wait until they are more buoyant than they are to-day.

Mr. EVANS: The minister has already stated that part of this vote will go towards the operation of the new elevator at Halifax. As far as I know, no grain passes through Halifax, and has not for some years, with the exception of some little that the Canadian National have hauled down there, when it was convenient, to ballast some of their boats. Can we get any information as to the amount that passes through that port?

Mr. LOW: This vote includes the cost of the operation of the elevator at Halifax. I have not the figures at the moment as to the quantity of grain passing through that port. As I stated before, the old elevator was not in good condition, but we are hopeful that with the construction of the new elevator a greater quantity of grain will pass through Halifax.

Mr. McTAGGART: Where are the various elevators that come under this item located?

Mr. LOW: At Calgary, Edmonton, Moose Jaw, Saskatoon, Port Arthur, and the new elevators at Halifax and Prince Rupert.

Sir HENRY DRAYTON: What about Port Colborne?

Mr. LOW: That is under Railways and Canals.

Mr. STEVENS: How does the minister account for the increase of $55,000? There cannot be any increased cost in wages, rates and so forth.

Mr. LOW: The Edmonton elevator would take up almost the entire increase.

Item agreed to.

Maintenance and necessary equipment of elevators (including repairs and renewals to plant, machinery, equipment and trackage; and the installation of Carter disc machines and flax cleaning machines, etc.), $60,000.

Mr. STEVENS: Was all of this item spent last year, and how does the minister base the needs for the coming year?

[Mr. Low.]

Mr. LOW: Perhaps I could not do better than read the estimate as presented to the department by the board:

Canadian Government Elevators

Estimated financial requirements: Fiscal year 1925-26:	
Maintenance and necessary equipment of elevators:	
Repairs and renewals to present plant.. ..	$15,000
Repairs and renewals to existing machinery and equipment..	8,000
Supplies and loose equipment..	3,000
Repairs to trackage, Port Arthur ($15,000 renewal of last year's appropriation not expended)..	35,000
Upkeep of elevator trackage..	7,000
Eavestroughing track sheds and cupola, Moose Jaw and Saskatoon (revote)..	1,500
Painting signs, Moose Jaw and Saskatoon (revote)..	1,000
Painting signs, Edmonton..	1,000
Purchase and installation of Carter disc machines and necessary motors, Saskatoon and Moose Jaw..	9,000
Purchase and installation of additional flax cleaning machines and necessary motors, Port Arthur (revote $4,000)..	5,000
Purchase and installation of grinding equipment and necessary motors, Edmonton.. ..	4,500
Construction of fireproof building at Moose Jaw to house inspection staff, millwright, power house repair shop, and possibly elevator office (renewal of 1924-25 appropriation)	10,000
	$100,000

This is an amount much in excess of the vote asked for, but when the estimate was presented to the department we, in a desire for the most rigid economy, reduced it to $60,000.

Mr. STEVENS: These two items total $535,000 covering the operation and maintenance of the government elevators. Am I right in regarding that as the total expenditure?

Mr. LOW: You are adding together items 360 and 361?

Mr. STEVENS: Yes.

Mr. LOW: You are right.

Mr. STEVENS: Can the minister give us what the earnings of the government elevators were last year, so that the committee may be able to form an idea of the value of the business to the country?

Mr. LOW: I have the figures in detail. The statement is quite lengthy, and perhaps I had better hand it to the reporter so that it may appear on Hansard.

Mr. STEVENS: I should like to hear the totals for each elevator?

Mr. LOW: I will give them. They are as follows:

Port Arthur—	
Revenue for 1923-24..	$398,402 07
Expenditure for 1923-24..	151,852 65
Moose Jaw—	
Revenue for 1923-24..	24,210 55
Expenditure for 1923-24..	57,228 28
Saskatoon—	
Revenue for 1923-24..	41,422 95
Expenditure for 1923-24..	62,462 86
Edmonton, up to Jan. 31, 1925—	
Revenue..	9,108 04
Expenditure..	19,804 96
Calgary—	
Revenue for 1923-24..	98,605 58
Expenditure for 1923-24..	71,590 33

Mr. BROWN: Will the minister give the figures totalled in the case of revenue and expenditure?

Mr. LOW: I am sorry I have not the totalled figures at hand.

Mr. STEVENS: May I ask the minister how he harmonizes the expenditure which he gives us here with the enormous amount shown in the estimates? The amount shown here is not as large as that shown in the estimates.

Mr. LOW: That is very true but we cannot pay the expenditures out of the revenue; the revenue goes into the consolidated fund.

Mr. STEVENS: Quite so, I understand that, but the minister is asking in the estimates for much more than he shows is required.

Mr. LOW: Of course we merely make an estimate. We cannot tell what the size of the crop may be, and we may require to put in new cleaning machines and provide for unforeseen expenditures. The larger the crop the larger the expenditure will be and, of course, the greater the revenue also.

Mr. SALES: I think what the hon. member for Vancouver Centre is trying to get is the total receipts and expenditures from these various elevators. I took the figures down as the minister gave them and I find that the revenue amounted to $571,749.19 and the expenditure to $362,939.08, leaving a balance of revenue over expenditure of $208,810.11. Now, Mr. Chairman, the only thing I have to find fault with in connection with this matter is that there is not a proper idea of the actual financial transactions conveyed to the people either in this estimate or in the report of the Auditor General. It appears here as though the operation of these elevators for the farmers and the grain trade was costing Canada three or four hundred thousand dollars, whereas, as a matter of fact, the services are not only paying for themselves but yielding a handsome profit in addition so that the weighing and inspection fees should be reduced. That is what we have asked for time and time again. We do not mind paying for these services, but we do not see why we should contribute hundreds of thousands of dollars to the consolidated revenue year after year, and yet have the idea presented to the House that all these services are being given to the farmer.

Mr. LOW: In each year's return as I have told the hon. member there is no charge for capital expenditure. All the people pay for the elevators that are built from time to time, consequently if there were a charge—an interest charge or a depreciation charge—in this calculation the surplus doubtless would be much smaller. Then in the past crop year, the revenue will likely be much smaller than it was for the previous twelve months when there was such a large crop. Nevertheless the same staff must be maintained and the overhead continues at the same level. We may drop a stenographer here and an inspector there, but on the whole the reductions are not nearly as great as one would imagine. This year we have to be prepared for a possibly larger crop.

Mr. SALES: May I make the appeal that in the Auditor General's report a concise statement should be given showing the expenditures on one side and the revenue on the other, so that we could really understand the actual situation. I have to look in one part of the Auditor General's report for the revenue and in another place for the expenditure, and it is very hard for the members of this House to understand exactly whether this business is paying or not, and much harder for the men in the country. If we could have a statement of that kind, putting the two things together in the Auditor General's report, I think it would be very advantageous.

Mr. CAMPBELL: I understood the minister to say that if there were a charge for capital account the surplus would be much smaller. Surely he does not mean to say that there would still be a surplus; that instead of the government paying for the elevators, the farmers pay for them all and in addition provide a surplus.

Mr. LOW: That would be a matter to be worked out. There is a very large amount invested in the elevators of this country, and the interest on the capital expenditure would probably eat up any surplus that the grain

trade produces. As a matter of fact it is only during the last four or five years there has been any surplus. For a number of years there was not a surplus but a deficit.

Mr. CAMPBELL: These new elevators at Halifax and Prince Rupert are really built by the farmers. The money is paid by the government but charged up to the farmers. I doubt whether very much grain will pass through these elevators, yet the overhead cost must be borne by the farmers.

Mr. STEVENS: I had no intention of raising the question of what Canada was doing for the farmers, and my hon. friend from Saltcoats (Mr. Sales) rather took me up a little rapidly there. I was not speaking with any ulterior motive at all, but now that he has precipitated a discussion, we might as well examine it. The facts are that Moose Jaw in 1923-24 had a revenue of $24,000 and an expenditure of $57,000, a very heavy deficit on bare operation, without any charge for overhead at all; that is for interest on capital. I do not know just what the Moose Jaw elevator cost the country, but it was certainly a very large sum. Then we have Saskatoon with a revenue of $41,000 and an expenditure of $62,000. There again is a very heavy deficit being borne by the consolidated fund, and no charge for interest on the capital expenditure. Edmonton is not a fair comparison because it was the first year in operation, and only a portion of the year is disclosed; there we have a similar case, but we cannot judge by it. In Calgary there is a revenue of $98,000 as against an expenditure of $71,000. In this case we see an indication that it is an investment which is capable of bringing in a fair return. When I say a fair return, I mean paying a part of the interest on the capital charge. When we come to Port Arthur we find that undoubtedly the earnings of the elevator will carry the capital charges—that is the interest on the capital. But that is the only case which gives any evidence of doing so. I am not, nor did I intend until my hon. friend became a little piqued regarding the situation—

Mr. SALES: Not at all.

Mr. STEVENS: I did not intend to criticize this system or policy of placing large terminal elevators, or what we call interior elevators, for the promotion and assisting in the handling of the grain of Canada. I think it is quite proper for parliament to do it, but it is just as well for parliament and my hon. friends to my left to realize that parliament is doing the job, and doing it in a very generous manner I think; and the point which I think the minister or the Board of Grain Commissioners might take into consideration is whether these two great elevators at Moose Jaw and Saskatoon cannot be used to greater capacity, so as to show a smaller loss at least than that which is disclosed in these figures.

Mr. SPENCER: Has my hon. friend the figures for Port Arthur?

Mr. STEVENS: Yes. The earnings at Port Arthur were $398,000 and the disbursements $151,000, showing an earning sufficient to pay a moderate interest on the capital investment. That I think is a very creditable showing.

As to the question of fees, I am very strong in regard to keeping the charges for the handling, not only in these elevators, but in all elevators, as low as it is possible to keep them. Let the charges be kept at the very lowest point. I desire to say to the minister just here—it does not come properly under his department, although it did a short time ago—that at Vancouver this year the harbour commissioners have insured the elevator and other works, entailing an expenditure of over $30,000 in insurance premiums. That must mean an increase in the charges of the port and I deprecate it very much. I think it is wholly unnecessary, because the government does not insure all of these elevators. So that in the case of these elevators which we have before us, and the elevator at Vancouver, which is constructed of reinforced concrete, and fireproof just the same as the others, there is no more need of insurance now than when it was under the Board of Grain Commissioners.

Mr. LOW: Are all the elevators at Vancouver fireproof?

Mr. STEVENS: Yes, all except one, that unfortunate so-called Woodward elevator No. 3, which is being frightfully distorted by some new expensive works that are being added to it at present in a hopeless fashion I believe. Outside of that they are all fireproof and of up-to-date construction. But what I am coming to is this: every effort should be made to keep the charges and fees at the lowest possible point, and I would like the minister to direct the Board of Grain Commissioners to give consideration to the rates charged in Vancouver. They raised them, I think, half a cent during the past year, or perhaps a little more than a year ago. I do not see any need for that increase in the Vancouver elevator fees. The insurance

is an unnecessary expense. It is just simply distributing a little patronage to a long list of hungry insurance agents and nothing else —absolutely no other reason for it—and $30,000 is added to the expenditure of that port and is paid by those who use the port, who ship their cargo out or bring their cargo in. That cargo bears a part of that cost, and $30,000 added last year is an unwarranted and unnecessary extravagance and should not be permitted. I ask the minister to bring this to the attention of the Board of Grain Commissioners, and I suggest that the Board of Grain Commissioners, in fixing the fees, and in approving the rates in that elevator, should disregard that unnecessary extravagance in the port. If the Board of Harbour Commissioners in Vancouver choose to go off on a rampage of extravagance, I suggest that the Board of Grain Commissioners who fix the fees disregard their claim for revenue commensurate with their extravagant expenditure. I bring that point to the attention of the minister. The same principle applies wherever the elevators are run.

Mr. GARDINER: I would like to ask the member for Vancouver Centre (Mr. Stevens) whether he is quite sure that the charges in the Vancouver elevator come under the control of the Board of Grain Commissioners.

Mr. STEVENS: I understand so. The minister can tell us.

Mr. LOW: The Canada Grain Board have nothing to do with it. It comes under the Department of Marine and Fisheries.

Mr. STEVENS: Do I understand the minister to say that the rates charged in the Vancouver elevator are not submitted to the Board of Grain Commissioners and meet with their approval or disapproval the same as rates in other elevators?

Mr. LOW: They do not.

Mr. STEVENS: Then the sooner they are brought under the control of the Board of Grain Commissioners, the better. Does the minister mean to say that they were not under the Board of Grain Commissioners prior to last year?

Mr. LOW: No. They are subject to the Department of Marine and Fisheries.

Mr. STEVENS: The minister may be getting confused, and I do not want to take an advantage of him. I know very well that the Board of Harbour Commissioners, which is under the Marine department, must get the approval of the Marine department for its various acts, but is the charging of elevator fees not submitted to the Board of Grain Commissioners?

Mr. LOW: No.

Mr. STEVENS: They were fixed by the Board of Grain Commissioners prior to a year and a half ago.

Mr. LOW: When the elevator passed to the harbour board, we ceased to have any control.

Mr. STEVENS: Then I think the minister did something that was wholly wrong—

Mr. LOW: I am not the minister who did it.

Mr. STEVENS: —in permitting the control of elevator fees to pass out of the direction of the Board of Grain Commissioners. I do not object particularly to his transferring the elevator to the harbour board; but the Board of Grain Commissioners should have retained control of fixing the fees. Furthermore, I do not care where the elevator is operated, whether it is at Vancouver, Halifax, Montreal or Fort William, the general laws or regulations determining the operation of that elevator ought to be under the Canada Grain Act and the direction of the Board of Grain Commissioners. What is the sense of having a vital part of this tremendous business of handling grain at the very mouth of the funnel controlled by a Board of Harbour Commissioners or private individuals or anyone else, and another part controlled by the Board of Grain Commissioners? When this law is amended—and it is in the minister's hands—he ought to settle definitely the question of handling this grain so that it should come under the control and direction of the law known as the Canada Grain Act and the Board of Grain Commissioners. I ask the minister now, in view of his answer, if he would be good enough to bring this matter to the attention of his colleague, because, after all, we cannot escape responsibility in this parliament for an increase in charges on the handling of grain or any other important matter. There has been an increase in charges in the handling of grain through Vancouver this year. There has been in Vancouver this year an unnecessary, added, expenditure to which I have referred, and I have referred to only one outstanding case. I call the government's attention to this. I do not care whether it is the Minister of Trade and

Commerce or the Minister of the Interior, that has to do with the matter, the Board of Harbour Commissioners at Vancouver should be directed at once to reverse that policy and position.

Mr. SALES: I am very thankful to the hon. member for Vancouver Centre (Mr. Stevens) for supporting the proposition I made to this House last year, in pointing out the revenue that was obtained by the port of Montreal and expressing the wish that at some time all these elevators would come under the control of the grain commission. As I understand the matter, they have no control even at Georgian bay ports. Is that so?

Mr. LOW: We have control over privately owned elevators, not government elevators.

Mr. SALES: At what point?

Mr. LOW: Port McNicoll, Goderich and Tiffin.

Mr. SALES: It has always seemed ridiculous to me that we should have a Board of Grain Commissioners with such stringent powers—at least we tried to make them stringent, but many loop-holes have been found—at the head of the lakes, and then when our grain leaves there, it passes out of their control entirely. They have no say as to what the charges shall be and no inspection at the port of Montreal or the port of Vancouver at the present time.

My hon. friend (Mr. Stevens) referred this afternoon to the operation of a sample market. My opinion is that no man in his senses will come to Port Arthur or Fort William and buy a cargo of grain which has to go through Port McNicoll or some of these other ports, be transferred to a car or a smaller boat in order to go through the Welland canal, and then go through Montreal. He knows what he puts in, but he will not have the slightest idea as to what he is going to get out. Under such conditions a sample market is absolutely impossible. At Vancouver there is a different situation altogether. It is quite possible for a British grain buyer or miller to buy his wheat at Vancouver, load it on his ship and keep it under his finger until it reaches Liverpool, or Bristol, or wherever it is going. That situation does not and cannot exist as regards grain going through the head of the lakes.

As regards the elevators at Moose Jaw and Saskatoon—and if I do not make a mistake in my judgment, Edmonton will show itself pretty much in the same class as time goes on—all the grain that passes through Moose Jaw and Saskatoon must eventually find its way through Port Arthur or at any rate through the terminals at the head of the lakes. Grain going through Edmonton will have to go through Vancouver after it has passed through Edmonton. The situation is simply this. It is only in a time of congestion that these houses are used, or in a season when we have a great deal of rain and much tough grain that needs to be dried, these houses are used to put it into condition and the grain is forwarded. But no farmer, if he has a chance to ship his grain direct to Vancouver, will ship it into Edmonton. If he has a chance to ship it direct to Fort William or Port Arthur, he will not put it into the elevator at Moose Jaw or Saskatoon at an added cost. I do not know that the government were altogether justified in putting up houses as large as those at Saskatoon and Moose Jaw. They are useful in some years, but as long as there are sufficient cars available to ship, I can assure the committee that no farmer will use these, what are called interior terminal elevators. Therefore the comparison between Port Arthur and Moose Jaw or Saskatoon does not prove anything.

10 p.m.

Mr. GOULD: They have served a good purpose.

Mr. SALES: Yes they have, and they will serve a good purpose again when it is a wet year and there is a great deal of tough grain, but it is only under these exceptional circumstances that those houses will be used.

Mr. DUNCAN: There seems to be a lot of talk about these elevators, but if the government would make these people build their own elevators, they would keep out of trouble. In the little city of Owen Sound we are building a million dollar elevator ourselves without asking the government to do anything. I think that is the rule the government should go by,—make them build their own elevators.

Item agreed to.

Halifax elevator, towards construction of, $575,000.

Mr. BLACK (Halifax): Why and on what principle does this item come under the head of Trade and Commerce? It would appear to me as if it were a part of the railway. The railway, in having an elevator, is simply completing its facilities for carrying on its legitimate business.

Mr. LOW: The government is simply continuing the policy that has been followed in regard to elevators at ports like Halifax, Prince Rupert and Vancouver.

Mr. GOULD: What is the estimated capacity of this elevator that is being erected at Halifax?

Mr. LOW: One million bushels.

Mr. GOULD: And what is the estimated cost?

Mr. LOW: It will be $622,500.

Mr. BLACK (Halifax): Is the present elevator at Halifax under the control of the department?

Mr. LOW: No.

Mr. BLACK (Halifax): It is a small one, capable of handling grain, and I believe it is part of the railway equipment.

Mr. LOW: Yes.

Mr. STEVENS: When this elevator passes into the control of the railways, will the department or the minister see that the control of fees is retained in the Board of Grain Commissioners? Will the railways take over the capital charge, as the Vancouver Harbour Commissioners did?

Mr. LOW: The hon. gentleman misunderstood me; I did not intimate that the elevator at Halifax would pass into the control of the railways.

Mr. STEVENS: It will remain under the control of the department?

Mr. LOW: That is the intention.

Mr. GOULD: Was a specification submitted and were tenders called for?

Mr. LOW: Tenders were called for and the contract was awarded to the lowest tenderer.

Mr. SPEAKMAN: How much was spent of last year's $200,000?

Mr. LOW: The amount expended was $19,983.

Mr. SALES: Who is the engineer for the Halifax elevator?

Mr. LOW: The engineers are J. S. Metcalf & Company of Montreal.

Mr. SALES: Again I feel I must protest against the cost of these elevators. One was built some time ago at Vancouver at a cost of ninety cents per bushel capacity at the same time that elevators were being built at the head of the lakes at a cost of twenty-three cents. Now we have in the case of this million bushel elevator a cost of 62½ cents per bushel capacity. I do not understand why there should be this discrepancy; I do not see why an elevator should cost so much more at Vancouver than one at the head of the lakes.

Mr. STEVENS: Does the hon. member refer to No. 1?

Mr. SALES: The one we dealt with in this House two years ago; it was an addition and cost something like ninety cents per bushel.

Mr. STEVENS: Twice as much as the orginal one.

Mr. SALES: Yes; I am pleased to be supported by the hon. member again. I protested at that time and informed the government that elevators were being built then at a cost of twenty-three cents per bushel capacity. In the case of that expensive elevator Metcalf & Company were the engineers. I pointed out to the government on that occasion that a certain gentleman was constructing practically all the elevators in the western country at the head of the lakes and had been employed by the government formerly; and that gentleman I understand was the engineer for the Edmonton elevator. I should like to know what was the cost of the Edmonton elevator per bushel capacity, for the purpose of comparing the figures of one firm with those of the other. There seems to be some extravagance here.

Mr. LOW: The capital cost of the Edmonton elevator is $1,462,601.17 and the capacity is 2,500,000 bushels.

Mr. GOULD: Was there a tender in that case?

Mr. LOW: Yes; the contract was awarded to the lowest tenderer.

Mr. GARDINER: What possibility is there of grain passing through the elevator at Halifax, and have any arrangements been made to give a freight rate that will induce the shipment of grain through that elevator?

Mr. LOW: The fixing of rates by rail is of course a matter for the Canadian National Railways, but I have no doubt, so far as water is concerned, that the elevator will be taken advantage of, as vessels are always glad to get wheat as ballast.

Mr. GARDINER: Personally I have no objection to the building of an elevator at Halifax provided business will go that way, but I think it is a very stupid policy to build an elevator there unless we are assured that grain will go through that port. I think we should have that assurance before passing this item; otherwise the minister should take up the whole question with the railway officials to find out just where he stands.

Mr. FINN: The matter of building the new elevator at Halifax has been gone into very carefully by Sir Henry Thornton and his technical officers in connection with the movement of grain through eastern Canadian national ports in winter. I may say for the information of the hon. member that by the removal of the differential of one cent over St. John, Portland, New York, Philadelphia, New London and Boston, Halifax will in future enjoy the same grain rate as all other Atlantic ports both in the United States and in Canada. The rail haul is somewhat greater, but that absorption must be taken care of by the country as one of the national necessities. There is no man in this country, nor is there an hon. gentleman in this House, who will not admit that we in the Maritime provinces are entitled to have our national ports developed. We do not intend to permit the ports of the United States to be used by our western Canadians when the ports of eastern Canada can be developed and utilized. When the four eastern provinces entered confederation they gave to this country, in their ports, a great national asset which is of advantage to the whole Dominion from the Atlantic to the Pacific. Are we to be told by the newcomers to the west that we are not to share in the grain traffic by its shipment through our national ports in winter, but that of necessity it must go via Buffalo, New York or Portland? Our western friends must remember that we have some rights. I do not believe the solution of our difficulties will be found in separation, whether of a fiscal character or by absolute secession. These words are not in my vocabulary; they are not part of my programme. But I would direct the attention of hon. members to the resolutions that have been passed unanimously by the Nova Scotia legislature and to the platform adopted by the Conservative party in Nova Scotia in connection with the provincial election which is to take place within the next two months. The Conservative party in Nova Scotia state that we must take charge of our fiscal policy, of our fisheries and of our Intercolonial railway, and that if we cannot get a recognition of our rights from the federal authorities, the only alternative is an appeal to the British parliament, which means the withdrawal of Nova Scotia from the federation. The hon. member for Brantford (Mr. Raymond) has said that the only trouble with Canada is that we are not one hundred per cent Canadian. What we want in this country is one hundred per cent Canadians. Last year I ventured the statement in this House that if there was a refusal to send grain through our Canadian ports in winter the government should consider the advisability of imposing an export duty on grain shipped through foreign ports, and in the report of the grain commission I find that very solution recommended to the consideration of the government. An examination of the figures with respect to the business done through the port of Halifax from last November until the end of April will show that there has been an increase of over 100 per cent. More than 165,000 tons of shipping went through in one week, and eight or ten of the biggest liners were landing passengers and freight at Halifax and going on their way. I am told on responsible authority that if we have a terminal elevator at Halifax and if these shipping concerns, such as the Cunard, the White Star-Dominion, and the Donaldson lines, could be assured of basic cargoes of grain at Halifax, they would make that port their western terminus. They would load and unload freight there and save a day going to Portland or New York and a day on the way back, which would enable them to make two more trips during the six months' sailings from the Old Country to Canada. Our Canadian west to-day is practically gridironed with railways which have cost the country two billion dollars, of which the Maritime provinces have paid their proportion. We have only one line of railway in Nova Scotia. We are not enjoying the fruits of the Transcontinental. A short line has been built, the Long Lac section, connecting the Canadian Northern up with the Transcontinental and providing easy grades through to Quebec and one to Moncton, and thence to St. John and Halifax. If that road is utilized there will be no difficulty in sending through the port of Halifax in winter sufficient grain not only to keep this elevator going but to require the services of another as well, or perhaps an enlargement of the elevator, now under construction in accordance with plans drawn under instructions of the hon. Minister of Trade and Commerce. The hon. junior member for Halifax a few moments ago made reference to the old elevator at Halifax. That elevator is a thing of the past. It is a wooden structure and the insurance rate is so high as to make its use by shippers out of the question. The new elevator is situated at the new terminal and is part of the national terminal system inaugurated by the then Prime Minister of Canada, Sir Robert Laird Borden, in connection with the great scheme of ocean port development at Halifax. The elevator is now being constructed. I

do not know whether or not my hon. friends opposite read of what is going on in the east. I had always thought that the wise men came from the east, and after some remarks I have heard to-night I am more confirmed than ever in that opinion. The contract for the Halifax elevator has been let to the Cape Construction Company. The excavation is finished; one hundred and fifty men are at work setting up the forms. The elevator will be completed by October 1, and by November 1, grain shipments will be going through it. Sir Henry Thornton was asked in Halifax by Mr. George S. Campbell, ex-president of the board of trade, and president of the Bank of Nova Scotia, whether or not the elevator would be utilized when completed. I was rather surprised at that question, because when Mr. Campbell was president of the board of trade he was always wanting an elevator built at Halifax, but when it was going to be built then some people did not seem to want it. But the answer of Sir Henry Thornton was that he could give the assurance that when the elevator was built it would be utilized. He said grain would be put through it, and that with the development of the port of Halifax perhaps more than one elevator would be required. Some hon. gentlemen opposite took a trip last year to that city by the sea. I regret that owing to personal reasons I was unable to be with them; my heart was with them anyway. I think they left Halifax feeling that they had been well looked after, well fed and in good spirits. Listening to the remarks of some hon. gentlemen to-night I have come to the conclusion that they are no longer hungry and that the spirit is not moving them, because they said some things in Halifax that made us believe that their efforts in this House would be in the direction of making Halifax a great national port. I would ask hon. members to turn their minds back to the period between 1914 and 1918, and to picture the inner harbour of Halifax, known as Bedford basin, with 135 ships carrying troops, ranging from the size of the Olympic, 46,000 tons, down to ships of 5,000 and 6,000 tons, to say nothing of the utilization of that port as a naval base. And now we are told that we are no longer to participate in the great national port development of this country, and we are to be questioned as a child as to whether or not grain is going to go through an elevator there. We are told the expenditure is useless. Mr. Chairman, if they are not doing anything to widen the breach, they are not doing anything to help better the situation in connection with the development of Canada and her greater nationalization.

My hon. friends talk about the Hudson Bay railway. I have nothing to say about it except this, that the ships will have to go in there through icebergs, and it will then be a question as to what Lloyd's will have to say as to the insurance rates, but if the government of this country, and the late government have obligated themselves to building that road, then I say they are morally bound to continue that effort when the finances of this country will permit. But we are not so situate on the eastern seaboard of this great Dominion, and my only reason for speaking to-night, Mr. Chairman, is that it makes me feel sick at heart when I hear hon. gentlemen opposite speak as they do in reference to port development at the city of Halifax, and when I look across the floor and see my colleague, the hon. junior member for Halifax, who from the very inception of this grain elevator at Halifax, has helped it by damning it with faint praise, I say he has not stood up for the interests of Halifax. He can make a speech in reference to secession while failing to look after the interests of the port, but I would like to say to him that this afternoon I received a postal card, which I have in my pocket—

Mr. McMASTER: An economical correspondent.

Mr. FINN: Economical people come from the east, not from Brome. The card is headed Halifax Ocean Terminals. On the left is marked "Grand Desert," which is a very strong Liberal section as the junior member for Halifax knows. Next comes Chezzetcook; my hon. friend has been there, or if not his emissaries have. Further along is Musquodoboit, and then I see in pencil Finn's elevator, and across the way is Finn's Dartmouth pier, and then there is a steamer going down the harbour, and it is labelled "Bill Black's Canadian (Norwegian) ships (tubs)."

When my hon. friends opposite speak of bringing back Nova Scotians to our land, of bringing back our hardy fishermen to our three-mile limit seas, of bringing back our sailor lads to go on our own ships, I wonder if my hon. friend the junior member for Halifax has any ships under his management flying the English flag or having on board a Nova Scotian as a sailor. Actions speak louder than words, and when I hear hon. gentlemen in this House, and particularly the junior member for Halifax, with his seniority of years, making such statements it too makes me sick at heart, and almost makes me feel that any humble effort on my part in this House is in vain, but it will not be if I can help it.

Mr. SPEAKMAN: Mr. Chairman, after listening to the eloquence of the senior member for Halifax, I am convinced of one thing, that while all wise men come from the east, all men who come from the east are not necessarily wise. The suggestion thrown out by the hon. gentleman that because some members in this corner of the House question the building of this elevator, they are therefore opposed to the use of the port of Halifax, is an erroneous presumption.

Mr. FINN: How can you use it if it is not equipped?

Mr. SPEAKMAN: The question, as has been stated by my colleague from Medicine Hat, is one of transportation. We have made the statement, and I will repeat it, that unless proper transportation adjustments can be made so that grain can be carried to Halifax, the elevator is no good. If these adjustments can be made and the port be profitably used, I think I can speak for all of us in this corner of the House when I say that we are glad to see Canadian ports used. But first and foremost, and all the time, it is a question of transportation.

Mr. COPP: What adjustments does my hon. friend think necessary to be made?

Mr. SPEAKMAN: I will come to that in a moment. When our friend from Halifax points his finger at us and says it is our co-operation that is necessary, he is showing that he is not fully conversant with the conditions governing the transport of grain. In the first place, the men we represent have not the routing of the grain.

Mr. FINN: I meant your co-operation in the House. We will look after the people in the country.

Mr. SPEAKMAN: Precisely. In the second place, as it is a question of transportation, and therefore a matter of governmental policy, it would be much more to the point if the senior member for Halifax would direct his attention to the front benches on his own side of the House, who alone in this House have the right to inaugurate such governmental policy.

I might just say one word more about transportation. It has been a rather remarkable thing to me since I came into this House to hear the members from the Maritime provinces, on the one hand, and on the one subject, stretching forth the hand of co-operation to the shippers and asking them to ship if possible their grain through Maritime ports, and on the other hand, condemning the only agreement we have that would make it possible to ship the great part of the grain eastward at all, because if it were not for the provisions of the Crowsnest pass agreement, which gave us lower rates to the head of the lakes, winter haulage to the eastern ports would be almost impossible, and the great bulk of that grain would be obliged to go over the short haul westward. I have sometimes wondered why they did not have a broader concept of national statesmanship, and a realization that co-operation in transportation matters, which is the crux of the whole situation, must come from both ends. Our low rate on grain east has been the subject of adverse comments in many parts of this House, and particularly by members from the Maritime provinces, and yet were it not for those rates which they condemn as being a special privilege given to the west at the expense of the east, very little of the grain which they anticipate going through the elevator at Halifax would ever go eastward at all during the winter season. We have to keep these things in mind from both ends, and I can assure my hon. friend that if proper arrangements can be made,—and in reply to the Secretary of State, let me say that I am not the man to suggest these arrangements; that is for the government—I am willing to support any reasonable readjustment of transportation costs which will enable us to ship our goods profitably through our own ports. I am willing to support any arrangement to that end, and the Crowsnest pass agreement comes under that head, and if our friends from the Maritime provinces will co-operate with us, and allow us to co-operate with them, to secure the minimum rates both ways to utilize our own ports, we are with them.

Mr. FINN: In reply to my hon. friend's statement regarding the Crowsnest pass agreement, reading the judgment of the Supreme Court of Canada, and reading the judgment of the Chief Railway Commissioner, I gather that the Crowsnest pass rates would be equitable if they applied eastward beyond a point in the province of Quebec, but there they halted, and the Maritime provinces do not enjoy those through rates. It was contended on the part of the Maritimes before the railway commission and before the Supreme Court of Canada that the action of the Canadian Pacific Railway Company in arbitrarily cutting off those rates prevented the Maritime provinces from enjoying the through Crowsnest pass rate eastward the same as westward.

Mr. CAMPBELL: Is it not a fact that from Goderich to Halifax there is a very much lower rate in existence to-day than the Crowsnest pass rate?

Mr. FINN: On what commodity?

Mr. CAMPBELL: On wheat or any grain.

Mr. FINN: It is impossible to have a cheaper rate from Goderich to Halifax because my hon. friends opposite are contending that no grain is or should be going through the latter port.

Mr. CAMPBELL: No hon. gentleman in this section of the House made that contention. The hon. member is reading into the speeches of some hon. members here words that they never uttered.

Mr. FINN: Then I must ask this question: If the rate on grain from Goderich to Halifax is cheaper than the Crowsnest pass rate, why is it that grain has not been going through to St. John and Halifax for shipment abroad?

Mr. CAMPBELL: If grain is not going there that is not the fault of hon. gentlemen in this section of the House. That is the very question the hon. member for Medicine Hat (Mr. Gardiner) asked the minister. Surely that is a proper question. I see nothing sectional in it at all. The hon. member is not in a position to lecture us for being sectional when he, and most of his colleagues from the Maritime provinces, introduces the question of the Hudson Bay railway and damns it not with faint praise but in the most emphatic manner.

Mr. FINN: All I do say is that from the time this question of building an elevator at Halifax was first mooted by myself two years ago, in the dying hours of the session when the morning light was coming through the prism glass, hon. gentlemen opposite—and they were not confined to the Progressive group; some of my hon. friends in the Conservative party who have since seen the light did the same—were taking exception to the building of an elevator at Halifax. They told us that it was impossible to put grain through the port of Halifax, that it was impossible to do anything for that port. We are not sectional in the east.

An hon. MEMBER: No.

Mr. FINN: No we are not. We can only prosper in the east if the west develops. But the central parts of Canada must also develop. If my hon. friends opposite feel that the panacea for all the ills of Canada is free trade, or something approaching it, I do not agree with them. I agree that we must have a national policy, a policy that will take care of the great industrial centres of Canada; but it must be a moderate protection with the object of protecting the market of the manufacturer as against outside competition but not to be added by him to the selling price of the goods manufactured. That is the policy I believe in, and I believe it is the one that will build up this country. I have never objected to the Crowsnest pass agreement. I have always contended that it was a statutory agreement, and such being the case there was a moral obligation on the part of the government, and on the part of the courts and the railway commission, to carry it out. Now that the situation has been cleared up the duty devolves upon parliament to find out what is the best in the interests of the whole of Canada in regard to the equalization of freight rates. I say that the Crowsnest pass agreement is to western Canada what the assurances were, inferentially, and morally to the Maritime provinces when the Intercolonial railway was built, I think we may not be very far apart when the question comes up for discussion and decision. But I would not want any hon. gentleman opposite to think that I have any sectional feeling against the west, because on its great development and on its future the future of Canada as a great nation also depends. But it cannot be a great nation without its eastern and its western gateways; and if you close the eastern gateway and depend upon American ports there may come a time when they may not be open to you and then where will you be? You will be nowhere. I think that is a fair statement to make. I think that was the idea in the minds of the Fathers of Confederation in the building of the Intercolonial railway, the Canadian Pacific, and later in the mind of the Right Hon. Sir Wilfrid Laurier when he had the vision in the building of the Transcontinental railway, in order to connect the Maritime provinces with central Canada, the middle west and far away British Columbia. I should like to say before I sit down that I have no idea of being sectional; and any measure that will bring relief and development, and more contentment, happiness and population to our great western prairies will have my hearty support so long as I have the honour of a seat in this House.

Mr. CAMPBELL: I am glad to have the assurance of the hon. member that there will be no sectional attitude adopted by himself, and I presume the same remark applies to his colleagues, towards some of the great problems awaiting solution in western Canada to-day. There may have been some sectionalism displayed in this quarter of the House, I do not deny it—

Some hon. MEMBERS: No.

Mr. CAMPBELL: —but certainly it is in no way comparable to what we have heard from hon. members from the Maritime provinces. With regard to the Hudson Bay railway, which is vital to us in the west, the project was opposed not only in this chamber but we understand in the Liberal caucus. These things leak out and I have heard that statement. I have heard that we have been assailed in the Liberal caucus—

Mr. GRAHAM: Things that happen in caucus do leak out.

Mr. CAMPBELL: In fact we were told that a year ago the minister had great difficulty in getting a small vote through the caucus. Now the hon. member (Mr. Finn) stated that in his part of the country they had to pay their share of an expenditure of two billions of dollars for constructing railways in the west. We are also paying our part of the loss incurred in operating the Intercolonial railway, but I am not complaining about it.

Mr. FINN: Is that loss in any way comparable with the deficit in the western section of the Canadian National Railway system?

Mr. CAMPBELL: The Intercolonial railway was built for strategical and military purposes; it was never intended to pay, and in all probability never will pay. Under the circumstances I have a good deal of sympathy with my hon. friends from the Maritime provinces when they demand that that system should be taken from the control of the Canadian National Railways and operated directly by the Department of Railways and Canals.

Mr. LOVETT: Digressing just for a moment will the hon. member tell us something about the Progressive caucus?

Mr. CAMPBELL: I think perhaps my hon. friends over there know just about as much as I do about the Progressive caucus, and perhaps a little bit more. There has been some very close contact between the two. Dealing with the problem of the Intercolonial railway we in the west all recognize that a pledge was given in connection with the construction of that line, and there will be no sectionalism displayed in this quarter if the government ever attempts to redeem that pledge. Now, the question raised by the hon. member for Medicine Hat (Mr. Gardiner) was a perfectly proper one. We have a right to know what provision is being made for transportation when a large capital investment for the handling of our grain takes place at Halifax. I would have the hon. member remember this, and I think the minister pretty well bore it out to-night—that most of the interest on this capital investment is paid by the farmers of Canada. It is true that some of the interior elevators are not paying, and I do not think they were ever intended to pay. Interior elevators in the prairie provinces were built primarily to relieve the railway companies through a congested period, they were not built particularly for the farmers at all, and if they are operating at a loss to-day I do not think the farmers should be blamed. Now, let me allude to another question and show why we raise this issue. Canada went to tremendous expense to build a railway from Winnipeg to the city of Quebec. That railway cost an enormous amount of money, and everybody says to-day its construction was a terrible blunder. Well, if the construction of the Transcontinental railway by the Laurier government was a blunder then I say it was a crime not to use it when it was built. That is one of our complaints in the west to-day. And why is that railway not being used? Because the rate over it is prohibitory; it is impossible for us to use that railway at all. And in addition we have expensive elevators and equipment at Quebec that are not being used. Instead of that we are sending 100 million, 150 million or 176 million bushels of grain out through American ports. From the remarks of the senior member for Halifax (Mr. Finn) one would think that the farmers of the west were responsible for that condition. But the fact of this immense volume of grain going out through American channels is one of the things we have been consistently complaining of every year since we have been sitting in this House. We want to see every bushel of it going through Canadian channels, and I look with hope and pleasure to the day when a large volume of it will go through Halifax. We want to see Halifax and the Maritime provinces develop, and I was glad to hear the hon. member admit that the future of the Maritimes, the future of central Canada and of the west, were bound up together. We believe to-day that one of the reasons that the eastern industries are not prospering and that so many thousands are out of work is largely because our farmers in the prairies are not able to purchase; and yet we see in eastern papers, and very often in Maritime papers, the suggestion that if cheap money is loaned to the farmers of the west the eastern people will have to pay for it. We see sectionalism in every corner. If we get money

we expect to put up the securities that will enable us to pay for it.

Mr. POULIOT: Does the hon. gentleman think that if the Hudson Bay railway were completed it would be of very great use for military purposes?

Mr. CAMPBELL: Did the hon. member say for military purposes? If we thought it would be used for those purposes, we would not be pressing for it. We want it for commercial and not for military purposes. We are not looking for war with other countries. I think the question of freight rates is a very vital one when an elevator is to be built, and I desire to urge the Minister of Trade and Commerce to try and induce his colleague the Minister of Railways and Canals to get a rate over the Transcontinental to Quebec, to enable the elevators and the equipment at that point to be utilized.

Mr. BLACK (Halifax): I am sure the committee are quite thankful to the hon. senior member for Halifax (Mr. Finn) for the entertainment which he afforded us this evening. I look upon the elevator at Halifax as a move in the right direction, inasmuch as it indicates a willingness on the part of the management of the railway and the government to create a trade through a Canadian port. For many years Halifax has been clamouring for that through Canadian trade. In the early days, when the board of trade of Halifax worked towards that end, we were cut off by the Grand Trunk system at St. Rosalie; and whilst the Grand Trunk system did provide some grain, which they did not want for their own rails, and gave it to the Intercolonial at St. Rosalie, to be shipped to Halifax, still there was nothing but the grain and heavy traffic that could be obtained from the Grand Trunk, the remainder of the traffic being sent to American ports. Perhaps our western friends are not aware of the fact that grain passing through Winnipeg has to be transported less than two hundred miles greater distance to reach Halifax than to reach the American seaboard.

Mr. CAMPBELL: Does the hon. gentleman mean the grain that passes through the city of Quebec over the Transcontinental by rail to Halifax?

Mr. BLACK (Halifax): Yes, the direct line to the seaboard is less than two hundred miles greater to Halifax than to the American seaboard; and that is not a very serious obstacle in the transportation of grain. Furthermore, if the management of the railway take into consideration this traffic to and fro, I see no reason why the products of the west cannot be taken to the Canadian seaboard, and the products of the east taken back by those same trains. It would be an interchange of traffic which I believe would be not only beneficial to the Maritime provinces but very beneficial to the whole of Canada.

I was very glad indeed to hear my hon. friend and colleague (Mr. Finn) express himself in regard to industry. We on this side of the House believe in protecting our industries, but not by high and unreasonable protection. I protest just now against the protection given to automobiles. It is beyond all reason that you can go across the line and buy a machine for half of what it costs when you have to buy it in Canada. That protection is not as it should be. I believe firmly in a moderate protection. I think that in some cases the manufacturers have taken advantage of protection, and I suggest in such cases a commission or organization of some kind should be established to control that sort of thing, in order to give us the products of our factories at a reasonable price. But if we threw this country open to free trade we would become depopulated and would be nothing. It would almost mean going over to our friends to the south of us. We must have population, and we want to be a thriving people. We must have a prosperous people to feed and clothe, if we would improve our country. We can only get the people by giving work to workmen and establishing factories in every corner of Canada, thus keeping our people at home. I am quite in accord with the remarks of my hon. colleague from Halifax in that respect. That is the policy which I understand is accepted by my friends in this corner of the House.

Mr. GOULD: Could the hon. member tell the committee the ratio of the outgoing and incoming shipping tonnage at the port of Halifax at the present time?

Mr. BLACK (Halifax): I cannot give the exact tonnage, but I can confirm what my colleague stated, that the increase has been very large. The ships, with the exception of a few of the very large liners such as the Mauretania and the Olympic have been calling at Halifax, largely because of the immigration regulations in the United States. The tonnage of ships calling there has been very large, and it has been of very great advantage to the port. Some of the vessels land cargoes and others simply land passengers. The increase of cargo landed at Halifax has been considerable. It was brought out, I think, at the time the delegation was

in Ottawa that nearly one hundred per cent of the imports into Canada were coming in under the preference given to Canadian ports. This of course applies to Montreal and Quebec in summer and to St. John and Halifax in winter.

Mr. GOULD: The reason I asked the question was that if grain were to find its way down to the port of Halifax in larger amount than at the present time, it would naturally make the ratio of outgoing freight greater than the amount coming back. I think some hon. member in this chamber a few days ago commented on the fact that about eighty per cent of the cargo space was taken on boats leaving the port of Montreal going out, and about forty per cent of the space coming back. It was out of all proportion. If we are going to establish a condition like that at Halifax, for instance, outgoing boats there will have to carry the burden of transportation to the ultimate port. The incoming boats will not. Therefore, since the hon. member mentions the matter of tariffs—and I do not think Cobdenism should have been discussed under this particular item to-night —he will not mind if I make the comment that moderate tariffs have killed the industries in the Maritime provinces. On the other hand, if we increase the British preference, the return cargoes into the port of Halifax will help to pay the cost of transportation.

Mr. GARDINER: I must apologize to the House for being responsible for the introduction of a second budget debate. I had thought, after twenty-four days of the budget, we would probably all be willing to forget it. I should like to say a word with regard to some of the remarks that the senior member for Halifax (Mr. Finn) made regarding the question which I put to the minister. Personally, I should be very glad to see the day when most, if not all of our grain, would be going through Canadian ports, but, as has been stated before, the question is one of transportation. I put the question to the minister in order to try to ascertain if there was any possibility of getting our grain through the port of Halifax. If so, I am quite sure I would be only too willing to support such a move. The senior member for Halifax (Mr. Finn) read us quite a lecture. In fact I felt that I had been properly spanked. Under the circumstances, however, I do not feel that I hold any grudge against him, but we must come down to the question of transportation rates, and that is the problem I should like the minister to explain to the House before this vote passes. What is going to be done in the way of transportation rates that will in some measure give grain from western Canada an opportunity of going through the port of Halifax?

Mr. GRAHAM: The only answer I have to make is that it can be routed through Halifax now and it will not cost a farthing more than it does to send it to Portland.

Mr. SPEAKMAN: Will it not cost the National Railways a farthing more?

Mr. GRAHAM: I did not say that.

Mr. SPEAKMAN: I understood the National Railways and Canada were synonymous terms.

Mr. GRAHAM: Yes, but the hon. member who asked the question knew all about that. He was not talking about the National Railways. In fact, there is a kind of penchant to put everything on the Canadian National Railways when you cannot find anything else to put it on. I agree with my hon. friend; he was right there, but nevertheless the rate to Halifax for a bushel of grain from Winnipeg is just as cheap as to Portland, and if hon. members will route it to Halifax, it will be carried.

Mr. SPENCER: Can the minister give any reason why it is not going that way?

Mr. GRAHAM: One reason is, I suppose, that there has not been an elevator.

Mr. EVANS: I have listened to the two members for Halifax and I am not convinced yet as to the need for an elevator at that port, that is for the grain trade of the west. If the port of Halifax needs a grain elevator, the people there should build one, just as the people of Owen Sound are doing. Moreover, I have information that the cost per bushel capacity of the transfer elevator at Owen Sound will not be much over one-fifth of what it is at Halifax. I should like to know from the Minister of Trade and Commerce why it costs so much more at one port than another.

Regarding the statement of the Minister of Railways and Canals that it will not cost any more to carry a bushel of grain to Halifax than it does to Portland, the senior member for Halifax practically gave the case away when he said that he had some promise of the differential being abolished.

Mr. FINN: It is abolished. This is no promise. We have it.

Mr. EVANS: Then the deficit on the Canadian National Railways will be that much greater?

Mr. FINN: What about the Crowsnest pass agreement?

Mr. EVANS: We are already hauling the coal of Nova Scotia into Ontario under a subsidy, and now the grain trade is to be saddled with a subsidy to haul our wheat to Halifax. We are overburdening an already overburdened industry when we are placing any extra cost of this kind that is not needed on the grain trade of western Canada.

Mr. CAMPBELL: Following up the question asked by the hon. member for Battle River (Mr. Spencer), I should like to know how it is that the rail rate to Quebec is just about the same as the rail rate to Halifax. Why can we not get our grain to Halifax at the same mileage rate or something reasonably near it? Perhaps the Minister of Railways and Canals can explain that.

Mr. GRAHAM: That is one of the things that I have been trying to find out for some weeks.

Mr. CAMPBELL: Not years?

Item agreed to.

Prince Rupert elevator, towards construction of, $500,000.

Sir HENRY DRAYTON: What is the cost of this elevator?

Mr. LOW: The contract has not been awarded for the superstructure and we do not know what the exact cost will be. The contract has been awarded for the foundation and excavation at $222,000. Tenders have been called for the superstructure and they are due a week from to-day, the 11th May.

Sir HENRY DRAYTON: Surely the minister can give us an estimate of the cost.

Mr. LOW: It is the practice of the department not to make public the estimate until after the contract has been awarded.

Sir HENRY DRAYTON: Can we look with any assurance upon the estimate here? I do not know whether it is the practice to mislead in these estimates or not. I do not suppose it is. We have here an estimate for $500,000. Is that the whole amount?

Mr. LOW: No, there will be a further amount in the supplementary estimates. We never like to place in the main estimates, when the contract has not been awarded, anything more than we think will be necessary. As a rule we usually place a smaller amount.

Sir HENRY DRAYTON: I would think the committee had a right to get some idea of the expenditure we are being committed to. The minister does not state what the expenditure is. The committee has a right to know the estimated cost of this work before it commences. What is the estimated cost?

Mr. LOW: I have given the hon. member my reason for withholding that until the contract has been awarded. The tenders will be opened a week from to-day. I have no objection to allowing the item to stand over, if my hon. friend so desires, and the tenders will have been opened when the estimate comes up again.

Item stands.

Commercial Intelligence service (including the salaries, travelling expenses, contingencies, and other expenditure of trade commissioners, assistant trade commissioners, junior trade commissioners and commercial agents; the travelling expenses of officials at Ottawa; the salaries of the temporary clerks at Ottawa; and miscellaneous expenses in connection with the development and extension of Canadian trade), $341,750.

Mr. STEVENS: Will the minister, under this item which is a very important one dealing with the whole question of commercial intelligence, be good enough to give to the committee the usual report or explanation of the items dealing with the general condition of trade, the progress being made in the expansion of Canadian trade through the agency of commissioners, and so on? I should like the minister particularly to give us some definite information regarding any progress made in the Fijian trade as well as expansion in our trade with Mexico. The minister will recall that an officer of the department, Mr. Waild, now resident in Mexico city as an officer of the Customs department, made in the autumn of 1921 a very careful investigation of trade conditions between Canada and Mexico. An excellent report was filed with the department and hopes were entertained of taking advantage of the good feeling existing in Mexico towards Canada in trade relations. I have for some years been hopeful that this trade would expand. Then there is the very interesting trip that was undertaken by my hon. friend opposite (Mr. Logan) to the West Indies, the government having had a laudable ambition to extend our trade in that part of the world. These are some specific items. There was also an opening for the expansion of trade to South American points, to the west coast as well as to other sections of that continent. I am sure it would be most interesting and informative to the House if the minister would give some idea of the results accruing during the last year from the services of the commercial intelligence branch.

Mr. LOW: The annual trade returns speak louder than any comment I might make and they show a marked increase in export trade. The hon. member has referred to Fiji; we have no representative there. As regards the expansion of our trade in Mexico and South America, the results are all shown in fair detail in the monthly trade returns of the department. I am sorry I have not a copy with me to-night. With many hon. gentlemen, I agree that there are great possibilities in the West Indies and countries bordering on the Caribbean sea. It is a matter of dollars and cents entirely. We should like to spend more money in the expansion of our service, but unfortunately in these days of economy we cannot spend all that we should like. In reference to the work performed by our trade commissioners, we have received many letters in the department expressing appreciation of the services rendered. I am of the opinion that the money of the country is well spent in these services and I hope the day is not far distant when we shall be able to supplement the vote by a considerable amount. The vote is slightly larger than the amount asked for last year but not as large as I should like it to have been. However, it is as much as our financial condition will permit.

Mr. STEVENS: The committee will appreciate the minister's response to my questions but it has not been fruitful of very much valuable information. I shall have to be more specific and put my questions one by one. First, has the minister any information regarding the extensive negotiations carried on between the government of Canada and the government of Fiji with reference to the development of trade to the Pacific ports of this country? Is there any definite and up to date information on that subject?

Mr. LOW: Some months ago a representative from Fiji visited Ottawa in an endeavour to promote the banana trade, but for some reason he felt he was unable to compete with the United Fruit Company of the United States. The last I heard from him was that he was going over to New York to meet the representatives of that concern. That is the only information we have had in connection with the trade with the island of Fiji.

Mr. STEVENS: That virtually means that nothing has been done. I recall the incident referred to by the minister; the representative of the island was discouraged by his reception in Canada and he then appealed to the United Fruit Company and a representative of the company went to Fiji. That I contend is an evidence of failure on the part of Canada. Now we do not want to get entangled particularly with the United Fruit Company. What the Fijians want is some steamship service between their island and Canada which will enable them to get their products into this country; and they are prepared in return to purchase generously from Canadian manufacturers of the goods they use there. I had a talk with Mr. Holdsworth, of the Canadian-Australian steamship line only a few months ago, when I happened to meet him casually in London, and I discussed the possibility of his line furnishing that service.

Mr. LOW: His ships call at Fiji.

Mr. STEVENS: Yes. The Fijian government suggested that a contract be entered into with the Furness-Withy Company to put on three or four—I think three—ships with suitable cold storage facilities to ply between Fiji and Vancouver. That matter remained in abeyance—I am not criticizing but merely stating facts—through the action of the government, in conjunction with the Canadian National Railways, the idea being that the Canadian Government Merchant Marine might undertake the service. The matter has drifted now for fully a year under these circumstances. I want to impress upon the minister the belief that Canada is losing very valuable trade. Australia has developed a banana and pineapple production, having heretofore obtained their supplies of these commodities from Fiji. So that Fiji is now left without its market for these things and she is now looking to Canada for one. It would be to Canada's advantage to develop that trade and get our tropical fruits, bananas, pineapples and so on, as well as cane sugar and other products, from that island. It would be better to do that than to buy them through the United Fruit Company of the United States. I had hoped, in the interests not only of the Pacific ports but of Canada at large; in the interests of the sale of our manufactured goods, that this trade would be fostered and developed. I do not think it would require very much co-operation on the part of the government of Canada to bring about a decided improvement in these conditions. If a year ago the Canadian Government Merchant Marine had decided not to touch it and Furness-Withy could have been given a free hand, they would have put their ships on and developed that trade. It is deplorable that this trade, not tremendous in extent but certainly very valuable, has been allowed to slip away from us; because that is

virtually what it means if what the minister states now is the case. The situation in Mexico is very much the same. Mexico was very much chagrined in connection with American traders and American trade, and was anxious to extend a good deal of that trade to Canada; it was so stated to our representatives who were sent down there by the government of Canada. Yet nothing has been done to foster that trade. I am sorry the minister has not been able to give us some encouragement in this direction. If, as he states, these are the facts, and nothing has been done, then it does not speak very well for the expansion of Canadian trade. The minister refers to the excess of exports over imports last year. That is all right, but it is not reaching out into those new markets which are close to Canada and which are likely to increase year by year if we foster them and take care of them. The excess of exports referred to by the minister was governed for the most part by the exceptionally large grain crop of 1923.

Mr. LOW: I did not speak of the imports; I referred only to exports.

Mr. STEVENS: It was the increase of exports, and that was largely attributable to the abnormally heavy grain crop of 1923; in fact, the export ran into the midsummer of 1924. All that is very true, but I do deplore the failure to take advantage of this new business which was offered to us. In addition to that, there is the Australian business. Has the minister any information to give us with regard to Australian trade?

Mr. LOW: As to the Australian agreement, that question has been answered almost every day of the last week by the Prime Minister. I have nothing further to add in that respect. With regard to trade with Fiji, it was the opinion of Sir Henry Thornton upon investigation that the business would not warrant the weekly service that was requested.

Mr. MEIGHEN: If I remember correctly, last year the minister passed some strictures on the Civil Service Commission for having a regulation that only university graduates could be appointed trade commissioners. Is the minister of the same view still—that this regulation is wrong?

Mr. LOW: I am of exactly the same opinion as I was at that time—that many good men who are not university graduates would make splendid trade commissioners. But the regulation still stands.

Mr. MEIGHEN: Does the minister say he has not himself approved of that regulation since?

Mr. LOW: The regulation still remains.

Mr. MEIGHEN: It is not a regulation at all. The minister himself submits to the Civil Service Commission the qualifications he requires in an applicant. The reason the matter came up was that one of the many civil service advertisements that go out calling for applications for new positions reached my office, and I read the following:

> Wanted, four junior trade commissioners, male, Department of Trade and Commerce. Salary $1,500 per annum if without business experience. Candidates who have had at least three years' business experience will receive a salary of $1,800 per annum. Qualifications required, graduation from a university of recognized standing on or before the date of examination. . .

There are other qualifications, but this is one essential—and this advertisement is dated March 23 of this year. How does the minister explain having these qualifications insisted on by his own department this year when last year he censured the Civil Service Commission because it had insisted on them?

Mr. LOW: I am simply continuing the rule that was in force when I took over the department. I have not yet decided to change it.

Mr. MEIGHEN: But the minister condemned the rule, and if he condemns it now why does he stay with it? He condemned the rule and condemned the commission; indeed he held them up to ridicule in this House. When I saw this advertisement I made inquiries to find out what was the matter. I knew the minister had endeavoured to make capital against the commission in this parliament for putting up what he called an absurd rule—that nobody but a university graduate could be a trade commissioner; and the information I got was that the minister's own department and his own deputy and the minister himself, had insisted on it. The minister cannot deny that right now.

Mr. LOW: The Civil Service Commission drew that regulation in the first instance; I suppose my right hon. friend knows that.

Mr. MEIGHEN: That has nothing to do with it. I inquired because I recognized that this was wholly at variance with what the minister had said and my information was that it was submitted to the minister's department, and the minister's department themselves insisted on this qualification being inserted. Has the minister not an apology to make to the commission?

Mr. LOW: It is not a question of insisting; it is a question simply of allowing it to remain.

Mr. MEIGHEN: Why does the minister allow it to remain? The minister knows that all he has to do is to recommend an alteration and it goes into effect; he does not need to initial any qualification at all. This is his qualification. Now, if he has changed his mind and finds the commission right, is he not prepared to apologize for what he said a year ago?

Mr. LOW: I have no apology to make to the commission. I am of the same opinion as I was last year, and I shall use practically the same words to express it again: I am of the opinion that many good men who are not university graduates would make splendid trade commissioners. But that regulation was there when I took over the department, and to date, I have not changed it.

Mr. MEIGHEN: The minister cannot put it that way. It is not a matter of simply not changing it; the minister has ratified it himself. The minister has ratified it in his department; so has his deputy. This matter was drawn to my attention by a man who came to my office and complained that because of the war he had not been able to finish his university course, and he wanted to know if this was an ironclad regulation which would prevent his trying the examination. I made inquiry because I had heard the minister say he had no use for this regulation at all—for this qualification. It is not a regulation; it is a qualification.

Mr. LOW: The right hon. gentleman says I have no use for the regulation. I quite agree that a man with some business experience, although he is forty years of age would perhaps make a much better representative than the younger man with the university training.

Mr. MEIGHEN: That is not the point. The qualifications demand a university education, and that is demanded at the instance of the minister. I had occasion to inquire because this man called upon me, and here is the minister himself insisting upon this qualification that last year he ridiculed in order to strike at the commission. That is the position the minister is in now. And not only this qualification but another one, where it was insisted the man should be thirty-five years of age. This was also held up to scorn, and now I see the minister insists upon it himself. What I cannot understand is why the minister does not stand up and say, these are proper qualifications, because these qualifications are his own. What is here in this advertisement is with his own authority, for I had occasion to find out.

Mr. LOW: I suppose my hon. friend knows that the age limit of thirty-five is laid down in the Civil Service Act.

Mr. MEIGHEN: I do not like to dispute a thing too positively until I know, but I do not think it is. Certainly the other qualification is not; that is the minister's own.

Mr. LOW: That is right.

Mr. LOGAN: I am not going to make any extended remarks on this vote to-night, because there will be a vote in the supplementaries, I presume, which we can discuss at greater length. I desire to urge upon the minister that if he has the power to change that regulation in reference to a man being a university graduate and being under the age of thirty-two, I think it is, not thirty-five as the right hon. leader of the opposition stated—

Mr. MEIGHEN: My own impression is the act does not say anything about the age. It is thirty-five in the advertisement.

Mr. LOW: I think it was thirty-two prior to this year.

Mr. MEIGHEN: When was the act changed?

Mr. LOW: The act was not changed at all.

Mr. MEIGHEN: The minister said it was in the act; I thought he was wrong.

Mr. LOGAN: I am glad three years have been added on in the last year. I look upon the regulation that a man shall be a university graduate and not over thirty-five years of age to be a trade commissioner as the height of nonsense. I would rather have a man with experience in business whether he was fifty-five years of age—

Mr. MEIGHEN: The hon. member said he was glad the three years had been added. That makes it worse according to his view. He must be thirty-five now.

Mr. GRAHAM: He cannot be over thirty-five now.

Mr. LOGAN: I think that is the age limit. He cannot be over thirty-five. That is better than thirty-two. I think we had better have this matter cleared up before we take up the supplementary estimates, because the right hon. leader of the opposition says one thing

and there is a statement to the contrary by the minister, and no one seems to be exactly sure about this matter. If the act required the age to be only thirty-two last year, it requires it to be the same age this year, because the act has not been changed since.

Mr. MEIGHEN: I think even the minister will see he is wrong. There is nothing in the act at all of that kind; it is in his own advertisement. I will read it:

Qualifications: Graduation from a university of recognized standing on or before the date of examination; general familiarity with the resources and industries of the Dominion; preferably three years of business experience; prepossessing personality; ability to exercise independent judgment, tact. Candidates must have been residents of Canada for at least fifteen years prior to the date of examination, and preference will be given to those who are not more than thirty-five years of age.

That surely disposes of the contention that there is anything in the act compelling them to be over or under thirty-five years.

Mr. GRAHAM: The act says thirty-five years.

Mr. MEIGHEN: That cannot be. This says preference only will be given.

Mr. GRAHAM: Then we have all been wrong for years past, because I have been telling every applicant that he could not get a position in the civil service if he was over thirty-five.

Mr. MEIGHEN: I fancy that does not apply to this class of position.

Mr. LOW: I must admit the leader of the opposition is usually right but on this occasion he happens to be mistaken. My deputy informs me that the age of thirty-five is the limit placed in the Civil Service Act.

Mr. MEIGHEN: Does that apply to this class of position?

Mr. LOW: Certainly.

Mr. MEIGHEN: Then this advertisement is foolishness. It says preference will be given to those who are under thirty-five, intimating clearly that those over thirty-five may be appointed.

Mr. LOW: The commission drew the advertisement.

Mr. MEIGHEN: They know the act all right.

Mr. LOGAN: If I may continue my remarks, Mr. Chairman, it occurred to me when I heard the leader of the opposition reading that advertisement that a man must be a university graduate and have had three years experience in business, and have a knowledge of Canada, and so forth, he was going to receive a wonderful income for all those qualifications—$1,500 a year. I believe the minister's desires are to get away from that restrictive qualification. The minister himself is a business man, and he knows there are many men in this country forty-five and fifty-five years of age who never saw the inside of a university who would make a much better trade commissioner than any callow youth with all the college medals on the earth pinned on him.

Mr. GRAHAM: Extend the age a little further.

Mr. LOGAN: It requires a man of personality, intelligence, with a knowledge of business, and a knowledge of Canada, not a knowledge of higher mathematics or of the classics.

However as I said before, this matter will be discussed on the supplementary estimates, when I hope it will not be so near midnight as it is now, and when it is discussed I would like to make a few remarks and urge that many changes be made.

I only say to the minister now that I believe if the government will introduce a bill to take the trade commissioners of this country out of the Civil Service Act entirely, the same as is done with the officers of the Taxation department, this House and this country will be behind them. I believe this is one part of the government service where the commission should not make the appointments, because it is more a matter of personality, tact, and business experience than a knowledge of academic subjects that is required. In the trip which I made around the Caribbean sea, I found two trade commissioners, and in looking up the records I find that the total amount paid for all our Commercial Intelligence service to the West Indies and all the land surrounding that sea comes to $4,000 less than the amount paid for the same service at Milan, Italy. It is about the same as is paid in Calcutta. I think, therefore, we must come to the conclusion that we are not overpaying the men who are down in the West Indies. However, these matters can be discussed at greater length on another occasion. I only rise now to state to the minister that I believe if he increased the vote for Commercial Intelligence manyfold this country would be behind him. When you travel throughout all these countries to the south and find in every town, and almost every village, a representative of the great American nation that is out for

trade, whereas you can only find two Canadian trade commissioners in that vast territory you may make up your mind that we do not deserve to get very much of the business originating there. To my mind the matter of our export trade is the great question before Canada to-day, particularly eastern Canada. They talk down in the Maritime provinces about building up industries by protection. Why, we have tried it for fifty years and we have failed. If you do not believe me, ask Mr. McCurdy. If you do not believe that gentleman, ask the junior member for Halifax (Mr. Black) after the speech he has made here to-night. Prosperity in eastern Canada depends upon export trade. However, I am getting drawn into another wide subject and I will not further continue along that line. Let me urge upon the minister that when he brings down his supplementary estimates he will increase the vote for this service, because it is of the most supreme importance. I am afraid the policy we are now carrying on is a good deal of a cheese-paring policy. Economy is a great thing, but a penny-wise and pound-foolish policy is not good for the export trade of this or any other country.

Item agreed to.

Soldiers Civil Re-Establishment—salaries, $21,500.

Mr. MEIGHEN: How late does the minister want to keep the House to-night? He got a lot of business through to-day.

Mr. STEVENS: Is this the first vote to this department?

Mr. BELAND: It is, yes.

Mr. McMASTER: We should get started it seems.

Mr. BELAND: This is a very small item.

The CHAIRMAN: Shall the vote carry.

Mr. MEIGHEN: This is something that has been objected to always, this sliding from the estimates of one department into those of another. The intention of the act is that each department shall be gone into separately so that if necessary a motion referring to it may be made before the estimates are taken up. That cannot be done if the minister slides into his estimates in this way. In saying that I do not intend any special reflection as respecting his department. I think the government ought to be satisfied with the very large amount of business put through to-day, especially in view of the eleven o'clock adjournment.

[Mr. Logan.]

Mr. BELAND: My right hon. friend is aware, that this has been done before.

Mr. MEIGHEN: Always under protest.

Mr. BELAND: In one case an item was considered in the evening for the first time some weeks ago, and we have now reached a much later period of the session. Of course I do not insist at all; if my right hon. friend says that we cannot get this vote to-night we shall have to go into committee some other day.

The CHAIRMAN: Shall I report progress on this resolution?

Mr. MEIGHEN: No, on the previous resolution.

The CHAIRMAN: This item, No. 36, stands.

Mr. MEIGHEN: Not called.

Department of Trade and Commerce—culling timber, annuity for one superannuated culler, $200.

Sir HENRY DRAYTON: I wonder what the idea is in calling this item to-night at this hour? Perhaps it is because the minister thinks that nothing more can be said on his estimates? I do not know whether he is going to make any plea for economy under this item. The minister has been talking about economy, and before closing for the night I am going to give him one or two facts arising out of his estimates. Instead of bringing about economy these estimates represent a substantial increase over the estimates of 1921-22, over the estimates that the government delights in pointing out were such high estimates, such tremendous estimates, estimates representing such tremendous extravagance as to justify the Prime Minister making the remarks that he did. The estimates for this department for 1921-22 amounted to $3,727,333. Now the estimates this year, and we are told there are going to be supplementaries, involve an increase of $214,472. The estimates for 1921-22, included an increase for the purposes of the Dominion census, which amounted to $1,620,000, so that we have in the exercise of this wonderful economy this year in connection with this one department an increase of $1,834,472 over the estimates of 1921-22 which this government have described as extravagant. I would suggest that during the adjournment my hon. friend consider these figures, that he read with some profit and turn to some use the speech of his right hon. leader in connection with the former government, and see if he cannot get down to the level of the former

government's extravagance instead of exceeding it by $1,800,000 odd dollars.

Mr. LOW: My hon. friend suggests that I carry these figures away with me over night. It is quite unnecessary for me to take any time in doing that or in answering him. My hon. friend says that the expenditure in 1921-22 was a million dollars less than in 1923-24. Was that his contention?

Sir HENRY DRAYTON: No, I did not say that at all.

Mr. LOW: Well a million dollars less than some year.

Mr. MEIGHEN: Than this year.

Mr. LOW: All right, than this year.

Sir HENRY DRAYTON: It was $1,800,000 odd having regard to the vote for the census.

Mr. LOW: Yes but not having regard to the building of an elevator at a cost of about a million and a half of dollars. That amount is included in the estimates of last year and this year. Included also are amounts for the Halifax and Prince Rupert elevators.

Mr. MEIGHEN: But the census is called for by the constitution; the Halifax and Prince Rupert elevators are not.

Mr. LOW: No, but the elevators are a necessity as my right hon. friend has said.

Mr. MEIGHEN: A necessity for the government.

Mr. LOW: So I think that if my hon. friend will carry these figures away with him he will come to a different conclusion. If he considers the amounts that have been placed in the estimates this year for the Halifax and Prince Rupert elevators he will find that they exceed the amount placed in the estimates of 1921-22 for the census by from two hundred to three hundred thousand dollars. Last year also there was a vote for an elevator at Edmonton, but no provision was made for elevators in the years my hon. friend speaks of.

Sir HENRY DRAYTON: When I asked my hon. friend to take these figures away I meant it. He is wrong—absolutely entirely and, I am afraid, incurably wrong. He tells us that the expenditure on elevators, one at Halifax and one at Prince Rupert, is greater than the whole amount of the increase in connection with the census—

Mr. McMASTER: I am sure my hon. friend will excuse me if I rise to a point of order, but item 365 has been called, which provides $200 for an annuity for one superannuated culler. Now as I understand the rules of the House the discussion must be directed to the item under consideration and these general remarks about the whole of the items are not, I respectfully and almost affectionately submit, in order.

The CHAIRMAN: I agree with the hon. member for Brome.

Mr. MEIGHEN: I think that when the hon. member for Brome becomes so anxious to get away from the economy issue we ought to yield if possible. I would be willing to let the minister have this $200 and give $200 to the member for Brome rather than sit here all night.

Item agreed to.

Progress reported.

On motion of Mr. Low the House adjourned at 11.45 p.m.

END OF VOLUME III
