House of Commons Debates

OFFICIAL REPORT

Wednesday, April 15, 1925

The House met at three o'clock.

WESTERN FRUIT COMBINE

Hon. JAMES MURDOCK (Minister of Labour): I beg to lay on the table copy of interim report, writings, telegrams and other documents in connection with the recent investigation into the fruit combine in the west, asked for by the right hon. leader of the opposition (Mr. Meighen) on April 6. These documents represent, I believe, all that the mover of the motion desires and include all the documents that the Department of Labour feels free to table at this time.

REPORT

Report of the chief whips who attended the Wembley exhibition.—Hon. Mr. Robb.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

ASIATIC IMMIGRATION INTO CANADA

Mr. McQUARRIE:

1. Has the government or any minister or official thereof, received from the government of the province of British Columbia, the following resolution unanimously passed by the British Columbia legislature on the 17th day of December, 1924, or any resolution to the same effect, namely,—

Therefore be it resolved, that this House go on record as being utterly opposed to the further influx of Orientals into this province, and further, that this House places itself on record as being in favour of the enactment of such amendment to the "Immigration Act of Canada," as is necessary to completely prohibit Asiatic immigration into Canada.

Be it further resolved, that this House is also of the opinion that the field of industrial and commercial activities of all Orientals now in Canada, particularly British Columbia, should be restricted by legislation.

And be it further resolved, that an humble address be presented to His Honour the Lieutenant Governor, praying that he cause a copy of this resolution to be transmitted to the hon. the Secretary of State or other proper official at Ottawa, for presentation to His Excellency the Governor General in Council.

Be it further resolved, that the government of the Dominion of Canada be respectfully requested to grant adherence on the part of Canada to no treaty or binding international obligation in any form whatsoever having the effect of limiting the authority or power of provincial legislatures in respect of the regulation of social and industrial activities within the provinces; and, further that the government of the Dominion of Canada be respectfully requested to forthwith take the action necessary to bring about the denunciation of any and all treaties in so far as the terms and provisions of the same have the effect of depriving the Dominion of Canada of the power of regulation, control and prohibition of Asiatic immigration?

2. By whom was the said resolution received, and what disposition was made thereof?

3. Has the said resolution been considered by the Privy Council, and if so, when?

4. What action has been taken by the government in regard to the said resolution?

5. What reply has been sent to the government of British Columbia in regard thereto?

6. What action does the government propose to take in regard to the view expressed by the said legislature that it is utterly opposed to the further influx of orientals into the province of British Columbia, and in particular, does the government intend to comply with the request of the said legislature for an amendment to the Immigration Act of Canada to completely prohibit Asiatic immigration into Canada?

7. Is it the intention of the government to give effect to the request of the British Columbia legislature to grant adherence on the part of Canada to no treaty or binding international obligation in any form whatsoever having the effect of limiting the authority or power of provincial legislatures in respect to the regulation of social and industrial activities within the provinces, as mentioned in the said resolution?

8. Does the government intend to give effect to the request of the said legislature to forthwith take the action necessary to bring about the denunciation of any and all treaties in so far as the terms and provisions of the same have the effect of depriving the Dominion of Canada of the power of regulation, control and prohibition of Asiatic immigration, as set out in the said resolution?

9. Is it true that existing treaties between Great Britain and Japan prevent the legislature of the province of British Columbia from passing legislation prohibiting the holding or leasing of land by Orientals, and otherwise curtailing the rights and privileges of Orientals in British Columbia? If so, specify such treaties and give particulars of the effect thereof in regard to the matters hereinbefore mentioned.

10. Is the said resolution now in the custody of the Minister of Immigration and Colonization or his deputy?

11. Why did the Deputy Minister of Immigration and Colonization refuse to furnish the member for New Westminster with a copy of said resolution?

Right Hon. Mr. MACKENZIE KING:

1. Yes.

2. The Secretary of State, who transmitted it to the Clerk of Privy Council, for consideration by the cabinet.

3. Yes. Upon its receipt.

4. Its representations are receiving due consideration.

5. The communication was officially acknowledged by the Department of the Secretary of State.

6. Answered by answer to No. 4.

7. The action to be taken with respect to treaties or binding obligations of the character referred to will be determined when the same present themselves for consideration.

8. The government's action with respect to any and all treaties will be decided in the light of all international and other material considerations.

9. In 1911 a treaty of Commerce and Navigation was concluded between the United Kingdom and Japan. In 1913 Canada adhered to this treaty, declaring it to have the force of law in Canada, subject to the provision that "nothing in this treaty shall be deemed to repeal or affect any of the provisions of the Immigration Act." (Japanese Treaty Act, 3-4 George V, chap. 27.)

Article I on this treaty is as follows:

The subject of each of the high contracting parties shall have full liberty to enter, travel, and reside in the territories of the other and conforming themselves to the laws of the country:

(1) Shall, in all that relates to travel and residence, be placed in all respects on the same footing as native subjects; (2) They shall have the right, equally with native subjects, to carry on their commerce and manufacture, and to trade in all kinds of merchandise of lawful commerce, either in person or by agents, singly or in partnerships with foreigners or native subjects; (3) They shall in all that relates to the pursuit of their industries, callings, professions, and educational studies be placed in all respects on the same footing as the subjects or citizens of the most favoured nation; (4) They shall be permitted to own or hire and occupy houses, manufactories, warehouses, shops, and premises which may be necessary for them, and to lease land for residential, commercial, industrial, and other lawful purposes, in the same manner as native subjects; (5) They shall, on condition of reciprocity, be at full liberty to acquire and possess every description of property, movable or immovable, which the laws of the country permit or shall permit the subjects or citizens of any other foreign country to acquire and possess, subject always to the conditions and limitations prescribed in such laws. They may dispose of the same by sale, exchange, gift, marriage, testament, or in any other manner, under the same conditions which are or shall be established with regard to native subjects. They shall also be permitted, on compliance with the laws of the country, freely to export the proceeds of the sale of their property and their goods in general without being subjected as foreigners to other or higher duties than those to which subjects of the country would be liable under similar circumstances; (6) They shall enjoy constant and complete protection and security for their persons and property; shall have free and easy access to the courts of justice and other tribunals in pursuit and defence of their claims and rights; and shall have full liberty, equally with native subjects, to choose and employ lawyers and advocates to represent them before such courts and tribunals; and generally shall have the same rights and privileges as native subjects in all that concerns the administration of justice; (7) They shall not be compelled to pay taxes, fees, charges, or contributions of any kind whatever, other or higher than those which are or may be paid by native subjects or the subjects or citizens of the most favoured nation; (8) And they shall enjoy a perfect equality of treatment with native subjects in all that relates to facilities for warehousing under bond, bounties, and drawbacks.

10. Copy of resolution is now on file in the Department of Immigration and Colonization.

11. The Department of Immigration and Colonization does not, as a rule, give copies of official documents and, if given, it is only when such documents are the sole property of the department which was not the case in this instance, the document having been addressed to the Honourable the Secretary of State for presentation to the Governor General in Council.

[Mr. Mackenzie King.]

VANCOUVER HARBOUR COMMISSION ELEVATORS

Hon. Mr. STEVENS:

1. Is delivery made out of the Vancouver Harbour Commission elevators of any commodity other than by warehouse receipt?

2. Has the Board of Vancouver Harbour Commissioners recently sold 560 tons of screenings?

3. If so, who purchased these screenings on behalf of harbour commissioners, and at what prices?

4. Were the said screenings sold through brokers?

5. What was the commission or brokerage paid by the harbour commission to the said brokers?

6. Were the said screenings handled by one firm of brokers?

7. What was the price received by said brokers for said screenings; and what was the net price received by the harbour commissioners for the said screenings?

8. At the close of the last crop year, was there not a shortage of screenings in the weigh-up of the Vancouver Harbour Commission elevators?

9. If so, how is it that the harbour commissioners are now selling screenings through brokers?

10. Why did the harbour commissioners not sell the said screenings direct after public advertisement?

11. Is it conducive to confidence in public administration of terminal elevators to permit a member of

the harbour commission to hold a large interest in a grain handling firm, doing business with the harbour commissioners?

Hon. Mr. CARDIN:

1. No.
2. The Vancouver Harbour Commissioners have sold 700 tons of screenings.
3. They were purchased by the commissioners direct at $5 per ton.
4. Yes.
5. Twenty-five cents per ton.
6. Yes.
7. (a) $10 per ton. (b) $9.75 per ton.
8. Yes.
9. Ample screenings on hand owned by the commissioners from 1924-25 operations along with warehouse receipts which were purchased 1923-24 operations take care of 1923-24 shortage.
10. Public notice inviting tenders placed in Merchants' Exchange of this city by commissioners' broker for two days after advertisement in paper advising commissioners intended to call for tenders and screenings sold to the highest bidder.
11. It is contrary to the usual practice to return answers to hypothetical questions.

VANCOUVER HARBOUR COMMISSIONERS

Hon. Mr. STEVENS:

1. Having reference to questions answered in Hansard, March 18, page 1261, is the government aware that in addition to the launch Fispa the harbour commission have a second boat known as the Atchinson and there is being built at Erickson Brothers a third?
2. Were tenders called for the construction of the said boat? If so, how many tenders were received, in what papers did the advertisement appear, what was the lowest tender, what is the figure of the present contract for the construction of the said vessel?
3. Was the acquisition of the second and the construction of the third vessel approved of by the government?
4. Out of what appropriation is the cost of the said vessel being paid?
5. Was the government in possession of this information when answering the previous questions on page 1316?

Hon. Mr. CARDIN:

1. The Vancouver Harbour Commission has in commission a boat known as Atkinson and there is being constructed another boat for the use of the commission by Erickson Bros.
2. Tenders were called by public advertisement in the following newspapers: Vancouver Sun; Vancouver Province; Vancouver Star; Journal of Commerce. Five tenders were received, the lowest being $6,156.30 at which figure the contract was let.
3. No.
4. Out of revenue of commission.
5. No.

CANADIAN NATIONAL RAILWAYS—RADIO STATIONS

Mr. SUTHERLAND:

1. What has been the capital cost of the Canadian National Railways radio stations to date?
2. What has been the cost of up-keep to date?
3. What has been the cost of operation to date?
4. What has been the total expenditure and indebtedness incurred in relation to this matter by the Canadian National Railways?

Hon. Mr. GRAHAM:

1. To December 31, 1924, $51,621.63.
2 and 3. To December 31, 1924, $129,670.25.
4. To December 31, 1924, $181,291.88.

CANADIAN NATIONAL RAILWAYS—FREIGHT TONNAGE

Sir HENRY DRAYTON:

What are the respective freight tonnage moved by the Canadian National system on the line running from Yellowhead pass to Vancouver, and the line running from that pass to Prince Rupert in each of the years 1923 and 1924?

Hon. Mr. GRAHAM:

	1923	1924
Tons of revenue freight received at Prince Rupert from points east..	33,052	26,237
Tons of revenue freight received at Vancouver.. ..	336,501	676,942

DEPARTMENT OF NATIONAL DEFENCE

Mr. ARTHURS:

1. What properties belonging to or under control of the Department of National Defence have been sold during the years 1923 and 1924?
2. What amount of property was sold in each case?
3. What amount was received for each property?
4. Were tenders invited for any properties sold?

Hon. Mr. MACDONALD:

1, 2 and 3.—Property—Area and Price—(1) Beamsville, Ont., drill hall site, 0.32, $400. (2) Caledonia, Ont., drill hall site, 0.37, $350. (3) St. Ann's, Ont., drill hall site, 0.14, $120. (4) Summerside, P.E.I., rifle range (part), 5.95, $150. (5) Sydenham hospital site, Kingston, (part), 4.6 ac., $10,000. (6) Oshawa, Ont., drill hall site (part), 240 sq. ft., $420. (7) Quebec, Citadel Glacis (part), 1,035 sq. ft., $1,500. (8) St. John, P.Q., barracks site (part), 2.3 ac., $375. (9) Cartwright Point, Kingston, 60 ac., $750. (10) Lauzon, P.Q., mil. reserve, 0.02 ac. $80.69. (11) Cobourg drill hall site, 0.5 ac., price nil. (12) McGill drill hall site, Mont-

real, 0.41 ac., price nil. (13) Barrie, Ont., drill hall site, 0.06 ac., price nil. (14) Fort Francis, Ont., drill hall site, 0.75 ac., price nil. (15) Springville, Ont., drill hall site, 0.1 ac., price nil. (16) Campbellville, Ont., drill hall site, 0.12 ac., price nil.

4. Yes.

INSPECTION OF GRADES OF WHEAT

Mr. COOTE:

What was the number of bushels of wheat of each grade inspected at each inspection office in the western division, from September 1, 1924, to February 28, 1925?

Hon. Mr. LOW:

Statement—Showing number of bushels of wheat of each grade inspected at each inspection office in the western grain inspection division from September 1, 1924, to February 28, 1925

FERRY SERVICE AT GROSS POINT

Mr. JONES:

1. Did the Department of Public Works send a representative to ascertain whether or not the ferry service between Gross Point, New Brunswick, and the municipality of Mann, in the province of Quebec, met with the approval of the residents interested in this service, especially in the municipality of Mann?

2. Is it not a fact that a request was made that this service should continue until 10.30 at least three nights a week?

3. If so, why was it not considered before the letting or renewal of the contract?

4. What offers were made by Robert Sinclair, Harper, Andrew and Allard, in connection with this service?

5. What are the conditions contained in the contract now in existence between the present incumbent and the department?

6. Is the present incumbent paying anything to the department for this contract?

Hon. Mr. KING (Kootenay):

1. Yes.

2. Yes.

[Mr. E. M. Macdonald.]

3. Matter of extra trips three times a week fully considered and not recommended in view of danger in operating after dark on account of floating logs and improper lighting of landing wharves, but the following clause was inserted in the regulations:—

"During the months of June, July and August, the ferry boat shall make a crossing every twenty minutes and further, shall cross, until 10.30 p.m., Saturday nights, when it is possible to do so, during the said months."

4. R. L. Sinclair.—Willing to pay $400 per annum for privilege on condition that he be allowed three months to secure a suitable boat; also to provide a half hour service on week days up to 9 p.m., (Saturday nights to 10 p.m.) and a Sunday service 8 a.m. to 8 p.m. for four months, with shorter service balance of season. One hour service at noon and 6 p.m.; G. B. Harper.—Offered to pro-

vide a half hourly service from 6 a.m. to 9 p.m., and a later trip several times a week; A. A. Andrew.—No offer made; Capt. Frank Allard.—Willing to pay $300 or $400 for privilege, and provide a half hourly service and run up to 9 p.m. in early spring and mid-summer months.

5. (a) The limits of the ferry shall extend to a distance of three miles above and below the wharf at the town of Campbellton, in New Brunswick, and to a similar distance above and below the usual ferry landing at Gross Point, in the province of Quebec.

(b) Ferry Boat. The licensee shall place on the ferry service and maintain during the period of the license a suitable vessel propelled by steam. Such vessel shall be of sufficient size for the safe conveyance of passengers, and shall be subject to the approval of the Department of Public Works and the licensee must obtain therefor and produce when required a certificate of fitness, safety, and efficiency from the Dominion Board of Steamboat Inspectors.

(c) Number of trips. During the season of navigation the ferry boat shall commence running daily (Sundays excepted) at 6 o'clock a.m. and shall continue to cross from each side every half hour thereafter until 8 o'clock p.m., except for 6 hours during the day at times of least traffic when only one round trip will be required in the hour. During the months of June, July and August, the ferry boat shall make a crossing every twenty minutes, and further, shall cross until 10.30 p.m. Saturday nights, when it is possible to do so, during the said months.

(d) Tariff of charges. The maximum charges for ferrying shall be as follows:

For a two-horse cart or conveyance, with driver, each way, 40 cents.

For one-horse cart or conveyance, with driver, each way, 30 cents.

For one automobile, with driver, each way, 30 cents.

For one horse, each way, 10 cents.

For each head of horned cattle, each way, 10 cents.

For each head of sheep or swine, each way, 5 cents.

For a passenger, 5 cents.

For every hundred pounds of freight, 4 cents.

(e) The license will be renewed for an additional period of five years from the 1st day of May, 1925.

(f) The licensee will be required to give two sureties satisfactory to the Department of Public Works, who shall be held jointly and severally with the principal in the sum of $500 for the full compliance by the licensee with the terms of the license.

(g) The right is reserved to the Department of Public Works of rejecting the ferry boat should it be deemed unsuitable for the service or unsafe to the public or inadequate to meet the public wants. The right is also reserved to the Governor in Council to modify the maximum tariff should it be deemed expedient in the public interest to do so; and the Governor in Council may declare the license forfeited and void whenever it shall be satisfactorily shown that the licensee fails to comply with the conditions thereof.

(h) The licensee of the ferry shall at all times during the continuance of the license carry over and across the ferry without fee, toll or reward, militiamen, soldiers, or sailors, when provided with proper passports or under the charge of their proper officer or officers and it shall be lawful for the said licensee to commute the rate of passenger fees.

(i) A time table as well as a notice of the rates of fares and tolls to be charged for ferriage shall be put up in a conspicuous place near the ferry landing on both sides, and also on board the steam ferry boat employed. In the above provisos and conditions the term "Licensee" shall extend to and include the executors, administrators and assigns of the licensee. This license shall not be assigned or sublet without the consent of the Governor in Council, but in the event of the death of the licensee, shall enure to the benefit of his personal representatives or as he may by will direct.

5. $10 per annum.

VIOLATION OF NOVA SCOTIA TEMPERANCE ACT

Mr. DOUCET:

1. Is the Department of Customs and Excise aware that within a year from date there was a violation of the Nova Scotia Temperance Act on the premises at Halifax, Nova Scotia, of the Franco-Canadian Import Company, which company is permitted by the department to conduct a bonded warehouse for intoxicating liquors in the said city?

2. If so, what steps, if any, have been taken by the department in the matter?

3. Is the Department of Customs and Excise aware that some person interested in the above-mentioned company and its bonded warehouse at Halifax, within a year from date, has been accused of being guilty of violation of the customs and excise laws?

4. If so, have any proceedings against such person been taken, or directions for proceedings issued, and in what stage is the matter?

5. If no proceedings have been directed or commenced, why is the matter not proceeded with?

Hon. Mr. CARDIN:

1. Yes. The violation, however did not take place on the bonded premises of the company.

2. Investigation was directed and all transactions with regard to bonded warehouse were found to be regular.

3. Yes.

4. A solicitor was appointed to represent the crown and prosecute the company if evidence available warranted. Solicitor reported that evidence not sufficient to obtain conviction against company or any agent thereof.

5. Answered by No. 4.

CANADIAN NATIONAL RAILWAYS—FREE TRANSPORTATION

Mr. GARLAND (Bow River):

1. Did the railway commission recently rule that free transportation on the railways of Canada was to be granted to deputy ministers and their families?

2. Do any civil servants and (or) their families enjoy free or reduced fares on the railways of Canada?

Hon Mr. GRAHAM:

1. By general order of the Board of Railway Commissioners for Canada, No. 274, dated 20th November, 1919, the railway companies under the jurisdiction of the board were permitted to issue free transportation to certain officials of the government of Canada—amongst others, deputy ministers of the federal government and those having the rank of deputy ministers. Under date 9th March, 1925, by order No. 36140, the said general order No. 274 was amended, upon the application of the Railway Association of Canada, dated June 12, 1922, by adding at the end of clause (f) of order No. 274 the words—"and the dependent members of their families."

2. Reduced fares on government railways formerly granted to civil servants were abolished some years ago.

The only civil servants who may now receive free transportation are those referred to in answer No. 1 and (a) officers and employees of the Department of Railways and Canals, or their families; (b) ministers' secretaries; (c) certain officials of the Departments of Customs, Immigration and the Post Office, in the discharge of their duties.

STEAMER MURRAY STEWART

Mr. SIMPSON:

1. Is the steamer Murray Stewart still in the service of the Department of Marine and Fisheries?

2. Was this steamer purchased from or named after the Mr. Stewart of Toronto, recently connected with the Home Bank?

3. What was the price paid by the government for this boat?

4. What was the total cost of operating this steamer during 1924, including repairs, supplies, wages of crew, etc.?

5. How many days during the season of navigation in 1924 was she in active service, and how many days was she tied up to the dock at Parry Sound or elsewhere?

6. Has the department found this boat suitable for the work in which she is engaged?

Hon. Mr. CARDIN:

1. Yes.

2. Purchased from James Frederick Martin Stewart.

3. $80,000.

4. $27,208.38.

5. Commissioned April 20, 1924, to September 30, 1924, and from November 25, 1924, to December 23, 1924.

6. Yes.

FRENCH OFFICIAL PUBLICATIONS

Mr. DOUCET:

1. Why was the introduction to the Annual Report on Education in Canada, for 1923, published and distributed by the Statistical bureau, not translated into French?

2. Is it the intention of the government to restrict, in the future, the number of French official publications?

Hon. Mr. LOW:

1. The introduction to the Annual Report on Education for 1923 has been translated into French. A separate edition in French of this report is being issued.

2. No.

QUESTION PASSED AS ORDER FOR RETURN

DORCHESTER PENITENTIARY—SUPPLIES

*Hon. Mr. BAXTER:

1. By what firms or persons were groceries and other provisions supplied to Dorchester penitentiary last year?

2. Were tenders called for these supplies?

3. What were the quantities and prices?

Hon. Mr. LAPOINTE: The answer to this question is a most voluminous one. If my hon. friend insists on having it answered I have no objection. I think the purpose will be served by changing it into an order for return and I will reply immediately. The question asks for all the supplies sold to Dorchester penitentiary.

Mr. MEIGHEN: All right.

PEACE RIVER RAILWAY OUTLET

On the Orders of the Day:

Mr. D. M. KENNEDY (West Edmonton): Has the Minister of Railways received the Peace river transportation report? If not, does he not think it is time to call a conference, or do something else to get somewhere on the question?

Hon. Mr. GRAHAM: The last part of that question is unkind. I expect to have an interview with the heads of the railways to-morrow. It is not a conference as referred to by my hon. friend, or as understood by him, but I have asked the heads of the railways to meet me to-morrow to ascertain what they have to say on the matter.

AUSTRALIAN TREATY

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Is the Acting Minister of Finance (Mr. Robb) able to make any statement to the House with respect to the Australian treaty? If his answer is to be that matters are as they were when he spoke last, will he explain what relation the point in question has to the terms of the treaty itself, and whether in the meantime we might not have laid on the table the actual treaty as already signed, though not ratified. It would be of some advantage to the House for the purpose of study even if we are not allowed to act upon it.

Mr. MACLEAN (York): I received a letter yesterday from a firm there largely interested in the export of paper, and they want to see the proposal go through. If the minister wants to see the letter I will send it to him.

Mr. GRAHAM: We all received such a letter.

Hon. J. A. ROBB (Acting Minister of Finance): I have received a lot of such letters. I have nothing further to add to the statement made a few days ago more than this. I would like to correct my right hon. friend (Mr. Meighen). He knows that there is no such thing as a treaty between the two dominions. The term used is an agreement. There has been no treaty signed as my right hon. friend suggests.

Mr. MEIGHEN: An agreement signed?

Mr. ROBB: No, nor an agreement. I have nothing to add to the statement I made a few days ago.

Mr. MEIGHEN: Why could the agreement not be laid on the table? The minister said there was an agreement.

Mr. ROBB: No, I said there was no agreement signed.

Mr. MEIGHEN: Then it is still in the negotiation stage?

Mr. ROBB: Yes.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, April 14, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. L. W. HUMPHREY (West Kootenay): The reasons for my rising to take part in this debate are based principally upon three grounds: first, to give if possible a true account of present and past conditions in the province of British Columbia with particular reference to my own district; second, to impress upon the government some legislation in which my province and more particularly my constituency are interested, and third, to place before this House my position in regard to the present budget. I wish to base my remarks, few though they may be, on a spirit of confidence. I rise in a spirit of optimism, with the utmost confidence in my province and in this country. I have listened very attentively to practically all the speeches that have been delivered during this debate. I have been greatly impressed by many of them, and I have noticed that the majority have been characterized by a strong infusion of the spirit of pessimism. I have often said to myself in the course of the speeches made during this debate that I am indeed glad, and consider myself fortunate, to live in a district and a province in which, in my opinion, there is not such a wave of pessimism. That is my first purpose in rising to take part in this debate.

Going on further, I might say that most of the speeches that have been made during this debate have referred to either protection or free trade, and the same thing is true of speeches delivered during many of our debates, the contention being that either protection or free trade is the cure for all our troubles and ills in Canada. In fact, I think during this debate we have heard the budget speech which was delivered by the Acting Minister of Finance (Mr. Robb) called nearly everything a budget speech could be called. It is my intention, not to take issue with regard to those remarks, but if possible to put on record in this House my views as to what are the paramount or first issues in this country, or in other words, what I would consider questions of the greatest importance. My position is that I do not consider the tariff question altogether the most important issue in Canada to-day. I know quite well there are in this Dominion people who have made

an interesting and exhaustive study of the tariff question and who maintain that it is the most important. I maintain that the question of decreased taxation, the question of expenditure and questions pertaining to transportation are of greater importance to this country than the tariff question.

I wish to consider the affairs of Canada along the lines of a strictly big business proposition, as I would consider the affairs of a private business, and to urge a decrease, if possible, in the burden of taxation and the adoption of policies that will be in the best interest of the country. I desire to be identified with policies that will work out to the benefit of the country, that will restore public confidence and that will, if possible, overcome some of the serious tales of woe that are continually being broadcasted throughout Canada. If, in any degree, confidence can be restored by some other means than by recognizing the tariff as the paramount issue, I believe it will assist in lessening our taxation burden.

I should like, for a moment, to explain my position in this House. My primary duty has been to labour and to the farmer. I was not elected under the auspices of and I do not owe a duty to any political organization, and this, perhaps, accounts for some of the positions I may be able to take and why I may be able to look at questions from a different angle. Not having a political organization to respond to, but having a primary duty to my supporters, especially to labour and to the farmers, I might be in a different position as regards some of the statements to which I shall refer.

Keeping in mind my first reason for taking part in this debate, I should like for a moment to refer to conditions in British Columbia. Yesterday evening, we listened to a very interesting address delivered by the hon. member for New Westminster (Mr. McQuarrie). At the conclusion of his remarks, he, being a member for British Columbia, referred to the conditions in that province. Having the honour and privilege of representing a constituency in British Columbia, I cannot subscribe to all that he stated last night, and I should like to describe conditions as I find them to-day in my province and more especially in my constituency, keeping in mind the remarks that have been made by previous speakers, particularly the Minster of Public Works (Mr. King) and the hon. member for New Westminster. My statements that I have confidence in this country and that I am filled with a spirit of optimism, are, I believe, based on existing conditions in British Columbia. In my constituency business conditions have not been as good for many years. There is increased activity in mining and in practically every other industry in the province. It is only necessary for anyone to pick up a newspaper from British Columbia to find that these statements are, in the main, correct. This increased activity is prominent, not only in one part of British Columbia, but throughout the entire province.

I am not prepared to say just what is the reason for this period of prosperity, nor do I intend either to give credit to, or to criticize anyone in particular. I say simply that this condition now exists in British Columbia, and if the present government wishes to take any degree of credit in the circumstances I for one have no hesitation in according it. We are taking the conditions to-day as we find them in the province, and after listening to some of the remarks made by the hon. member for New Westminster last evening the House might be inclined to believe that the state of things in British Columbia was just the same as has been described by practically every hon. member to my right. That being the case, I desire in my own small way to give as briefly as possible the situation as I see it. The hon. member for New Westminster, in dealing with the questions affecting the province of British Columbia, referred to the Minister of Public Works (Mr. King, Kootenay) observing that he, like the Minister of Labour (Mr. Murdock), had tried to make conditions in that province appear rosy. I quote from the remarks of the hon. gentleman:

> The Minister of Public Works told us that things were very prosperous, that conditions were good in British Columbia; and he referred particularly to the timber industry, to the fisheries, to the mines. . . .

Further on he said:

> That is all right. I quite agree with the Minister of Public Works that things in British Columbia are, in some respects, getting better. But what has the government got to do with it?

Well, as I have already said, I am not here to defend the government; but I am here to give if possible as true an account of conditions in the province and in that connection to offer probably a word of criticism. The hon. member went on to say:

> The government is not assisting the mining industry; it is not even building a smelter on the Pacific coast which is so badly required; in fact the government is not doing anything at all to assist the mining industry. I say that any prosperity that may have come to the mining industry is not due to anything this government has done.

I am not so much concerned about these statements, nor do I wish to criticize too harshly what the hon. member has seen fit to

say. But as I have the privilege and honour of representing a mining district I think I am in a position to represent mining conditions fairly accurately. So far as I know, my hon. friend, living as he does in the city of New Westminster, has not very many mines in his district; nor are there very many mines within the radius of New Westminster. The district of West Kootenay, on the other hand, is practically a mining centre and its greatest asset is the mining industry. I can therefore say something on the subject, and in my opinion there are many conditions that have gone to place the industry on a better basis. There are many factors to account for the renewed activity in mining; and this being our greatest asset, there is no question in the world but that labour, the farmer, the producer and the consumer alike, must all be interested in what brings about prosperity to the mining industry in that province. And what brings about prosperity in mining in British Columbia brings about prosperity in other parts of the Dominion.

Some criticism has been offered of the action taken by this parliament last year in endorsing the move of the present government in sending representatives over to the exhibition at Wembley. I for one at the time expressed myself as being heartily in accord with the policy. Since then I have been favoured with many interviews with people who have come in contact with the representatives not only from this parliament but as well from our provincial governments, and I gather that our representation at the exhibition has been one means of bringing about a renewed activity in our mining districts. Personally I have always believed that in this country it is well for us not to be at all backward in telling others of our resources, and we should not fail to recognize that in our mining district we have a great asset. The visit of our representatives to Wembley has been responsible for thousands of pounds of foreign capital being invested, in my own district for example. As a result of the information which our representatives were able to give over in England regarding our mining resources, we have been favoured since last summer with visits from people in Great Britain, particularly from England, with authority to invest thousands of pounds of English capital in the district. This has happened within the last year and it has restored confidence among the people; it has opened up our mining resources. And in my opinion it has done much more than this: it has served, if only to a modest degree, to unite the Dominion of Canada closer with Great Britain by interesting the Mother Country in our resources and in this way securing British capital to develop our mining industry. In that way, it seems to me, our representation at Wembley accomplished some good. The capital that has come into the district has been the means of opening up many mines that are of great value; it has opened up resources that were lying idle. Speaking of mining, I believe that in this district we have one of the largest mines in North America; as a matter of fact we have the largest smelter on the North American continent. To corroborate my statement that there has been increased business, with an accompanying wave of optimism, I would refer to a mining and smelting company in the district which is well recognized as the Consolidated Mining & Smelting Company. Only within the last two or three days the company published their annual report; and whether or not this government takes credit for the condition of affairs there, the fact remains that while the present administration has been in power certain legislation has been enacted in regard to mining, and this company is in a very sound financial position, doing a real service to the district.

Mr. McQUARRIE: To what legislation does the hon. gentleman refer?

Mr. HUMPHREY: It will be seen that the hon. member does not live in a mining district or he would not ask that question. He should know that some two years ago this parliament passed legislation providing for a copper bounty, and that is at least one factor that enters into the present situation.

Mr. McQUARRIE: Is that not just continuing the bounty?

Mr. HUMPHREY: No. That goes again to show that the hon. member is not well versed in the mining situation. The government up to 1921 had a very expensive tariff commission travelling the country, and a promise of a bounty on copper was made this company, but it did not materialize until this government came into office, it being granted in 1922. I do not wish in any way to criticize, but I want to place the facts before the House. If there is credit due to anyone may it be given him, and if opposition is to be expressed I am the first to express it, but I was going to state—

Mr. MEIGHEN: Has the hon. member any information as to when the lead and zinc bounties were given, and the results?

Mr. HUMPHREY: Mr. Speaker, at the moment I have not any particular information. I am quite well aware that these bounties were

granted by the previous government, and I am also well aware that they are not in existence to-day, that as soon as the present company and others were in a position to get along without the bounties they automatically ceased.

Mr. MEIGHEN: Will the hon. member not tell some of the results that came from those bounties, though?

Mr. HUMPHREY: I have not the facts at hand to go into all the results. I do not know whether there are any particular results that can be shown to-day. At the time the lead and zinc bounties were in effect I am quite willing to admit that there were good results obtained.

Mr. MEIGHEN: There are yet.

Mr. HUMPHREY: To some extent that has passed. There are no lead and zinc bounties in existence in the province to-day. I am quite willing to concede that they were the means of establishing the lead and zinc industry upon a substantial and sound footing. For example, in 1924 this particular institution sold lead and zinc products to the value of nearly $15,000,000. But the point I would emphasize particularly is that conditions in the mining industry are getting better each year. If this improvement has been brought about in any way by legislation, I am quite willing to concede the fact. May I quote from the annual report of the company published some few days ago? This extract is interesting:

> After taking care of current development, depreciation of plant, depletion of property, and paying interest on bank loans, the net profits were $4,341,014.30, as compared with $2,401,346.71 in 1923, $1,467,528 in 1922, and $570,043 in 1921.

I need scarcely assure the House that this comparison makes it abundantly clear that the industry is not going out of business. I am confident that the mining industry as a whole is improving, and this perhaps contradicts some of the statements of our hon. friends to the right that our industries are going out of business. At any rate the mining industry is not going out of business in British Columbia, and practically every business is improving to some extent.

Mr. McQUARRIE: Does the hon. member refer to the poultry industry?

Mr. HUMPHREY: I am not so much concerned about the poultry industry going out of business. I am aware that certain representations have been made to the government and to hon. members respecting this industry, based on pretty much the same grounds as representations regarding the development of Vancouver. I do not know that I am in a position to go so far with the poultry industry as with some of the other industries. Practically every question interjected in the course of this debate hinges upon protection or free trade; when a question comes from our friends to the right it is based on protection, and therefore I am not so much concerned as I have not considered protection to be a paramount issue of the day.

Following up my remarks regarding conditions in British Columbia, while I hesitate to go beyond my own constituency,—for I feel that the representatives of other ridings in my province are more competent to speak for conditions in their districts,—yet I crave the indulgence of any of my hon. friends in referring to one particular question, I mean the reimbursement of the Home Bank depositors. The city of Fernie suffered severely, the losses of Home Bank depositors exceeding $800,000. Notwithstanding the protracted strike among the miners, and in the face of this heavy loss, the town and district of Fernie, I am informed, is now entering upon a period of better conditions. So far as my information goes the mining industry was never in better shape than it is to-day. But I am given to understand that practically every citizen was directly affected by the Home Bank failure. As I say, there are other members who are perhaps better posted on local conditions, but living in a district adjoining Fernie, and having many close associations with the locality, I feel that I would be shirking my duty if I did not press upon the government the urgent need of legislation to reimburse these depositors. Legislation to this end would help to restore confidence, which is so important not only to the people in the Fernie district but also to those in other districts.

Further substantiating my remarks regarding conditions in my province, particularly in my own district, I may say that 1924 proved the best year for the small-fruit growers that they have enjoyed for a long time. Better returns were obtained from the sale of their fruit, and as the fruit grower is in an improved financial position he has a feeling of renewed confidence which cannot but be helpful. The inquiry into combines with respect to the marketing of fruit, which took place last year, has had a good effect, and we can only hope that the government will follow up the investigation, benefiting, as it does, the fruit growers of British Columbia. The investigation disclosed startling conditions, and I trust the government will enforce any legis-

lation that is necessary in this connection even though the provinces do not consider it wise to take the initiative.

I would be failing in my duty to my constituents did I not also continue to press the government to take some action in the way of legislation respecting Asiatic immigration. I will go so far as to say that the conditions in British Columbia to-day, more particularly in my own district are better than they were four or five years ago; I have received many favourable comments regarding the legislation that was enacted by this parliament imposing restrictions upon Chinese immigration. But I would strongly urge the government to go further, to keep up the good work they have started, by tightening the regulations and by introducing further legislation with respect to Japanese immigration. If the policy already adopted can be continued with respect to the Japanese I am sure it will meet with the grateful approval of the people of British Columbia.

I need not dwell at length upon the necessity of legislation respecting old age pensions, because I notice that the government have a resolution on the order paper looking to some action in this regard. So far as I can see now, their proposals in this respect will receive my whole-hearted support.

I would like to touch for a moment upon one or two questions affecting our returned men; and as these matters also are to some extent covered by legislation of which notice appears on the order paper, it will not be necessary for me to discuss them in detail. But I would like to refer to one of the reports brought down by the special parliamentary committee appointed last year to look into these questions. I have always maintained that the conditions affecting the returned men in Canada were not as they should be, notwithstanding the legislation that has been passed in that connection. A good deal of expense could be eliminated by a reorganization of the different pension boards and medical staffs. I am aware that the report submitted to the House last year was not concurred in; nevertheless I would like to emphasize the fact that that recommendation was adopted by the special committee and reported to the House, and the government are bound at least to take some notice of it. I would like the privilege of putting on Hansard the fifth report of this committee, which was submitted to the House on Tuesday, July 15, 1924. It reads as follows:

> In view of the widespread dissatisfaction amongst returned men and others, and the representations made in regard to the attitude shown by the present Board of Pension Commissioners for Canada, your committee has taken evidence and having considered the matter very carefully, has come to the following conclusions:
>
> That the interests of the returned men will be better safeguarded, and the intent of parliament will be better carried into effect by a more sympathetic interpretation of the Pension Act, and its schedules, and that this can be best carried out by the reorganization of the Board of Pension Commissioners for Canada and the medical services attached thereto.
>
> Your committee therefore recommends to parliament that the government be asked to take the necessary steps to carry this resolution into effect.

That report embodied the sentiments of the returned men generally, and if the government can find it possible to act upon it I am confident that a good deal of expense will be eliminated and much of the dissatisfaction that now prevails throughout the country among the returned men will be overcome. I have had my attention drawn to a resolution adopted by the Nelson branch of the Great War Veterans' Association, and I notice also that this resolution was included in the memorandum presented to the government this year by the Dominion Veterans' Alliance. It reads as follows:

> Whereas November 11th does and always should remain in the memories and hearts of Canadians as the anniversary of a day of rejoicing and supreme thankfulness; and as it is fitting and right that this date be perpetuated for all time to keep alive in the minds of our people the supreme sacrifice made by 60,000 of our comrades who died for their country, it is resolved;
>
> That the Nelson branch of the Great War Veterans' Association go on record as strongly opposed to the anniversary of armistice being observed on any other date than the eleventh of November, which date should be declared a legal holiday by legislation.
>
> Action should therefore be taken to have the existing act of 1921 to read:
>
> "The eleventh day of November, being a day in 1918 in which the Great War was triumphantly concluded by an armistice, shall be a legal holiday and shall be kept and observed as such under the name of Armistice Day."

This resolution is backed up by practically every social organization in my city, and it is the demand of the representatives of the Dominion Veterans' Alliance. It is not necessary for me to go into the matter in detail; I think it is obvious that the government should take some action to recognize the 11th of November as a legal holiday. The practice of combining Armistice Day with Thanksgiving Day, as was done last year, should not, it seems to me, be continued; there is no doubt that when it comes to determining the holiday the preference should be given to the 11th of November. I trust that the government will recognize the value and importance of the resolution.

One of the most important questions that demand our interest to-day, I think, is transportation. It is a question that has been before the public for the past few years, and

no doubt will be more prominently before us during the coming year. There have been many complaints and criticisms during the past few years of the high freight rates, and the argument has been used that freight rates, were high because of the high wages paid to the railway employees. Having been identified in many ways with railway operation and railway construction not only in this country but in the United States, and having had the privilege of studying railway conditions not only in Great Britain but on the continent for the last twenty years, I feel that I can speak with some authority on this question more particularly from the point of view of the railway employee. I believe that an organized propaganda has been carried on to confuse the public mind over this question of high freight rates, and to make it appear that they were due to the wages paid to railway employees. An organized propaganda has been carried on with a view to creating that impression, and I should like to go into that phase of the question for just a moment in view of my position with regard to labour, and because of the fact that I am directly in touch with labour, the railway employees, and the railway question. My only object is to have the true facts placed before this House and before those who have an interest in this question. Many have approached me, with whom I have had discussions of this question, stating that they have been misled into believing that the high freight rates were the direct result of the high wages paid the railway employees. Labour is interested in railway rates only in so far as those rates will conduce to the prosperity of the railway and the prosperity of the country, and they are only asking, and so far as I know have only endeavoured to obtain, recognition of that to which they were justly entitled. I hope and trust that parliament will not in any way endeavour to bring in the wage question when it comes to consider the adjustment of our freight rates. I believe the officers of our different railway companies are quite capable of adjusting the wages of the employees over whom they have control, and in that connection I should like to quote a paragraph from a speech delivered by Sir Henry Thornton:

> Trade unions are here. They cannot be gotten rid of, and it is very much better to work with them than to fight with them. I have had considerable experience with labouring men on both sides of the Atlantic, perhaps more especially in England, and I have never yet had a trade union leader or a trade union play any other way than is fair.

[Mr. Humphrey.]

Further on he says:

> I see no reason why there should be constantly recurring contentions between capital and labour. I believe that labour properly handled will invariably respond.

I believe that is practically the position that labour would take also. It is a well known fact that conditions respecting labour in this country are as good to-day as in any other country of the world, but on account of the misrepresentation, as I would call it, that has been going on, perhaps by members of this House, not directly but indirectly, in reference to wages being the cause of certain conditions, I should like to refer to that matter a little further.

In the month of September last year an application was made to the Railway Commission for a reduction of freight rates. I understand that the hearing has not yet taken place.

4 p.m.

The application was made on the 11th of September, 1924, and in arguing for a reduction in freight rates, the applicants urged that the wages of the employees should be reduced. I believe the company that made the application is a member of the Manufacturers' Association, and I would infer that this was an organized attempt to create in the public mind the impression that the wages of the railway employees were too high. The application was made by the Tudhope Anderson Company, Limited, of Winnipeg, which has a factory in the town of Orillia, Ontario. They applied to the Board of Railway Commissioners:

> —for an order declaring that all existing tariffs of freight rates established and promulgated by the Canadian Pacific Railway Company and by the Canadian National Railway Company and the entire rate structure embodied in and upon which the said tariffs have been promulgated and established are unfair, discriminatory, excessive, and contrary to the provisions of the Railway Act, and that the said rates as established and promulgated constitute an unjust, unfair and unreasonable exaction upon all shippers and consumers of goods throughout Canada, and unfairly exact from shippers and consumers of goods throughout Canada large sums of money which from the point of view of sound public policy and of fair dealing between shippers and consumers of goods throughout Canada on the one hand, and the said railway companies and their employees on the other, should be prohibited and brought to an end.

They further state:

> That the respect in which the said tariffs and the freight rate structure embodied therein and the exactions made under and by virtue thereof are unreasonable, unfair, discriminatory and excessive is by reason of the fact that the said rates contain as a large element an allowance for the wages of the employees of the said railway companies, out of which allowance for wages the said railway companies pay to employees engaged by them in the carriage of goods

and ancillary services, unreasonably high, unfair, extravagant and discriminatory wages, by reason of which the said railway employees are able to maintain and do maintain a high standard of living at the expense of shippers of goods and in particular of producers of cereals, live stock and agricultural and dairy products of all kinds, whose prices for their products are materially reduced by reason of the high freight charges exacted by the said tariffs for the carriage of their products, and the said producers are as a class suffering great hardships and unable to maintain a reasonable standard of living by reason in great measure of the aforesaid unreasonable tariffs.

And Tudhope Anderson Company Limited further state that the said wages paid to the said railway employees are unreasonably high, unfair, extravagant and discriminatory in comparison with the wages of other industrial workers throughout Canada and that by reason of the tolls exacted by the said tariffs the wages of other industrial workers are forced down and lowered and their standard of living is lower than is fair and reasonable.

And Tudhope Anderson Company Limited further state that the said railway employees are receiving grossly high and excessive rates of wages which enable them to live in a state of luxury which is wholly unjustified having regard to the nature of the services rendered by the said employees when such services are compared with the services rendered by other classes of employees throughout Canada who receive wages very much less in amount.

And Tudhope Anderson Company Limited further state that the wages of the said railway employees were advanced during the period of the war and shortly thereafter at a time when the prices of commodities and wages were generally inflated and notwithstanding a general reduction in the rates of wages and prices of commodities, the wages of the employees of the said railway companies are still maintained by the said companies at unfairly high levels and the said railway employees are in fact enjoying real wages much greater in amount than they at any former time have enjoyed, while the real wages received by other workers and the real prices received by producers of commodities are materially lower than the wages and prices which existed at the time the wages of the said railway workers were advanced as aforesaid, which advance is commonly known as the McAdoo Award.

And Tudhope Anderson Company Limited represent that the public interest and the interest of all classes in the community, excepting railway workers, demand and require that freight rates should be reduced by cutting down and lowering the element in the said rates which represents wages paid to the said railway workers, and the said railway companies should be directed and ordered to submit tariffs in which the labour element shall be reduced to bring back the wages of the said railway employees to a parity with the wages of other industrial employees and into fair relationship with the prevailing prices of the commodities carried by the said railway companies.

And Tudhope Anderson Company Limited further state that if it should be represented or made to appear that the unfair rates of wages paid by the said railway companies as aforesaid cannot be reduced by the said companies by reason of the fact that the said railway workers have great bargaining, economic and political power, and by reason of the fact that their refusal to accept lower wages might be enforced by a general interruption of railway traffic throughout Canada, then the said companies should be directed and informed that such portion of the said wages as is found to be excessive and unjust must be borne by them by way of decrease of profits or increase of deficits as the case may be to the end that the proprietors of the roads shall bear the burden of such excess and that they shall not be permitted to impose such excess on the shippers of goods.

I apologize for going to the extent of reading this document, but I want to emphasize the fact that there is a prevailing opinion throughout the country, caused by misrepresentation, that these wages are responsible for the high freights, and therefore I wish to reply in a small measure to these proposals, not in any way substantiating the position of the railway companies, but endeavouring to place the true facts before this House and the public, having in mind the matters that are going to come up within the next year, and if possible to overcome a very strong sentiment and public opinion which is caused by such representations as these people have made. It has always been the practice to blame everything on the railways and the employees when it comes to freight rates, and as that idea is now being used by politicians to serve certain purposes, and more especially by manufacturers as a smoke screen, I am sure that I might have the privilege of replying to some extent to these representations. Perhaps as a representative of labour in some degree, being a labour man myself, I should in a way deal only with the wage end of the question, but I believe that if we are going to enter into the wage question we should also have before us every phase of the railway situation, and find out at first if possible whether the railway employees are obtaining too high wages for their labour, and also ascertain whether the railway companies of Canada are economically and efficiently managed, and from that angle I wish to speak for a moment.

In connection with the question as to whether our railways are efficiently managed, we must confine our comparisons to the United States railways, as the conditions in that country are similar to the conditions on our own roads. But when we take into consideration the fact that Canada has but 221 people to each mile of railway, while the United States has 450, the comparison is hardly fair to the Canadian railways, because under such conditions there is no density of traffic to reduce the average cost of hauling a ton and one might consider that under such conditions we should be satisfied if we could have rates equal to the lowest where cost conditions and wages are about equal. In any event we must compare our roads with some other roads and taking the United States roads for a comparison, I believe the railways in Canada are as efficiently managed and as economically run as those in any country.

It has also been said in these representations by this company and the others interested that railway companies should reduce their expenditures every year and more especially reduce their overhead by reducing the wages of their employees, but by referring to the reports made by the presidents of the Canadian National Railways and the Canadian Pacific Railway Company, we can see that their operating expenses have decreased each year, although their net profits perhaps are not as great. Apart from this, our railways are efficiently managed. Let us compare with the United States roads the number of tons of freight handled per mile and per employee. We find the average number of tons handled by the Canadian Pacific Railway to be 267,836, and by the Canadian National, 195,808. The average for Canada is 231,872 and for the United States 220,000 per employee. So hon. members can see that Canadian roads handle 11,872 tons more a mile for each employee than United States roads do. Going further, an editorial in the Railway Age gives the following figures, and I might state that these figures have been used in other parliaments and for the same purpose, so far as I have been able to learn. I believe they are figures that can be substantiated. The Railway Age states that the average wage paid for 1923 by the Canadian National was $1,421, by the Canadian Pacific, $1,482, and by United States roads, $1,588. The Minister of Railways and Canals (Mr. Graham) in his report states that the average hourly rate of all employees, including the president down to the lowest employee, is 64 cents. If we take the average earnings of railway men in Canada, the United States, Italy, Germany and Switzerland, we find that Canada has the lowest labour cost per ton mile of any country in the world. The statistics are as follows:

Country	Average wage	No. of employees required to move 1 ton 1 mile	Labour cost per ton mile
			Cents
Canada	$648	5	3.24
United States	757	5	3.78
Germany	409	23	9.40
Italy	377	24	9.04
Switzerland	365	31	11.31

I would take it from these figures that the cost in regard to handling freight per ton mile is less in this country than in any other country in the world, if you take into consideration the average wages, the labour cost per ton mile and the number of employees.

As regards the effect of wages of railway employees on freight rates, hon. members will remember that during the war the cost of living increased very rapidly and that wages were increased in an effort to keep up with the increased cost of living. It is significant that living costs increased first, and this is absolute proof that increased wages were not the cause of the increase in the cost of living. Railway wages never overtook the cost of living. The peak was reached in 1920, since when the 200,000 railway employees in Canada have had their wages cut and conditions changed so as to reduce their earnings by approximately $45,000,000 annually. The wages of employees were not increased from 1913 to 1918. Nevertheless the cost of living increased each year, and in 1920-21 there was a cut of something like 15 per cent in the wages of railway employees, amounting yearly to the sum of $45,000,000. This, I think, is the largest voluntary contribution by any class of workers.

I should like to make a further quotation regarding increases that have taken place since 1913 in wages paid in other occupations, as it was stated in the representations made by the Tudhope, Anderson Company that wages paid railway employees were far in excess of those paid to other industrial workers and had increased more. These figures were taken from the Canadian Annual Review for 1923, and using the index number of 100, the year 1913 and the year 1923, the wage increases are as follows:

Occupation	Index 1913	Index 1923
Building trades	100	166.4
Metal trades	100	174.0
Printing trades	100	188.9
Coal mining	100	197.8
Common factory labour	100	181.7
Miscellaneous factory labour	100	196.1
Lumbering	100	170.4
Electric railways	100	186.2
Steam railways	100	157.4
Cost of living, wholesale prices	100	153.0

This shows that wages of railway employees increased only 57.4 per cent, which is the smallest increase for any of those industrial workers from 1913 to 1923, and the cost of living increased about 53 per cent.

Going further in regard to representations made by these different corporations that railway wages are the cause of high freight rates, we find that the different manufacturing industries that are clamouring for a reduction in freight rates and claiming that railway wages are the cause of high freight rates have certain startling figures to produce in regard to the administration of their own businesses. I should like to refer to remarks made by the hon. member for Neepawa (Mr. Milne) in speaking to the budget a year ago. I believe he quoted certain figures showing the cost of making binders in 1913 and 1923, and the

figures that he used were taken from figures submitted by a manufacturer to the special committee appointed to inquire into agricultural conditions. Although the figures are given in regard to binders only, no doubt they can be applied to agricultural implements as a whole. The figures are as follows:

	1913	1922	Increase per cent
Materials	$ 45 55	$ 86 21	89
Wages	25 10	56 77	126
Factory expenses	5 51	26 55	382
Administration	5 10	38 66	658
Freights	23 91	34 69	45
Distribution	29 41	63 15	114
Branch department	29 41	47 31	60
	$163 99	$353 33	116

So that, taking the total in these nine years, the increase on binders would be 116 per cent while freight costs have increased 45 per cent and implement manufacturers' employees' wages 126 per cent. It would therefore be interesting to the people of Canada to have the manufacturers explain how they have come to have an increase of 658 per cent in administration costs. This I think is a fair example which might be applied to a good many other industries; and it shows in my opinion that the cry of high freight rates being caused by high wages is nothing but a smoke screen for them to hide behind in the conduct of their own affairs. It seems to me that the conditions governing the administration and the operation of the railways here are such as cannot be compared with the conditions that obtain on many of the roads of the United States. I would point that out before going further. We have extreme weather here and the conditions in that regard are not experienced across the line; this applies particularly to the use of equipment for the seasonal carrying of grain and other perishable products. The railway reports show that something like $4,000,000 is the expense incurred in snow service on the roads in Canada. These facts are all taken into consideration in the adjustment of wages and I believe that the entire figures will show that the wages paid railway employees on this side are lower than those that are paid in the United States, the roads being equally well operated and managed.

I come now to the last reason for discussing the budget; I must state my position on the motion now before the House, that Mr. Speaker leave the chair, as well as on the amendment that has been introduced by the hon. member for West York (Sir Henry Drayton). That amendment will of course first be voted on; and having declared my views on the questions affecting my own district, and not unmindful of the associations I have held in parliament, but remembering the duty I owe my constituents as well as the country at large, I believe there is only one course open to me. It is my intention to support the budget at this particular time and in doing so I feel that I am carrying out my duty to my constituency and to the country. I do not want to have it inferred, that I am in any way governed by political influences. But I believe that it is in the best interests of the country that the budget should be supported, although I know that some of my friends with whom I associate at the present time do not agree with this view. It must be remembered, however, that conditions in the province from which I come are extremely different from those in other parts of the country; it has been recognized as a concession to myself and other members from British Columbia that we have certain conditions there that do not exist anywhere else. For this and other reasons that I have stated, I shall have no hesitation therefore in giving what support I can to the budget.

Mr. J. H. HARRIS (East York): Confidence, lack of confidence, and restoration of confidence was the keynote of the first portion of the remarks that fell from the lips of my hon. friend from West Kootenay (Mr. Humphrey). My associations in this corner of the House lead me to say there is no one here in the Conservative party who will in any way take second place to my hon. friend so far as having confidence in the country is concerned. But surely the hon. gentleman is not going to confound confidence in the country with confidence in this government. Is this government the country? Is it fair to say that this government to-day is a fair reflection of the country? Has it a mandate from the country to-day?

We all regret the absence of the Minister of Finance (Mr. Fielding); we all regret that stability has disappeared from this government owing to the fact that the right hon. gentleman is not here. We think of the Fielding Liberals; where are they? And we are all wondering perhaps why the ex-Minister of Justice (Sir Lomer Gouin) is not in his place to-day. Where are the Gouin Liberals, and what do they think of this administration? Have the Protectionist Liberals a right to sit in this House behind this administration? And has the administration any mandate from the province of Quebec? I question very much whether it has! If it has a mandate from the province of Quebec I should like to see the ex-Minister of Justice (Sir Lomer Gouin) in his place; I should like to

see him give his endorsation to the policy which hon. gentlemen opposite have enunciated from time to time. No; the hon. member who has just sat down, in saying that anyone who undertakes to citicize this administration is a pessimist, is very far from the mark. In my opinion the hon. member who criticizes is a great optimist. He sees that this country is not going in the right direction and so, optimist that he is, he first offers some criticism to the government and then advances something constructive by way of telling them what they ought to do to bring Canada out of the condition that she is in at the present time. I would ask my hon. friend how he or any Canadian with any degree of intelligence could be other than confident in the country itself—not in this government—when he considers the great possibilities of this Dominion. Look at the Maritime provinces and think of the possibilities that are latent there; look at Quebec with her great resources; and consider for a moment the fact that we have in this country just four per cent of the world's population. And you all know the rest of the story. You all know that Quebec has the world's supply of asbestos; Ontario has the world's supply of nickel; and in the western provinces we have the great granary of the whole empire. The hon. member spoke also about the wonderful things there are in British Columbia. Well, to hear the views of some people, one would think that there was nothing there but a few Japs, a few Chinese and a few saw logs. But the hon. member has told us about the mining industry in that province. And then think of the Okanagan valley with the fruit it produces, and consider the province of Alberta from the mineral point of view with her fifteen per cent of the world's coal supply. Think of all these things and tell us where there is room for pessimism in Canada. There is absolutely none. I do not take second place to any man in this Dominion in my optimistic outlook on the future of Canada; and when I criticize this administration I do not bow to the dictum laid down by this hon. gentleman, nor yet to that laid down by the Acting Minister of Finance (Mr. Robb), that such criticism tends to embarrass the nation's credit. No, sir! I do not for a moment bow to any such opinion.

The balance sheet as brought down by the Acting Minister of Finance is not in my opinion a credit to him; it is not a credit to the great Liberal party; it would not be a credit to any business organization to tell its shareholders—in this case the people of Canada—that it gives an auditor's certificate in verification of the accounts when in fact that certificate is not in the true sense of the term a certificate at all; certainly it is not an auditor's certificate as understood by the man in the street. There is something radically wrong when the government has to put a blanket over its balance sheet in the form of a so-called auditor's certificate in order to restore to the minds of the people confidence in that balance sheet. In my opinion the results of the year's operations ought to flow from the balance sheet in a uniform way so that the average citizen can understand its contents; there should be no necessity for page after page of explanation as to how the balance is arrived at. It is almost an insult to the intelligence of Canadians when the Acting Minister of Finance (Mr. Robb) attempts to show in the second paragraph of his budget speech how the national debt has been reduced. Why should it be necessary to give such explanations? Are we not fifty or sixty years old as a nation? Do not the people know how the national accounts are made up and the balance arrived at? I repeat, there must be something radically wrong when the government resorts to these methods. I like to think of the Minister of Finance (Mr. Fielding) himself reviewing his balance sheet. His budget was an honest, frank expression of where we stood. He did not hesitate to say that there was $31,000,000 added to the national debt, he did not hesitate to put his railway deficit in the place where it belonged. To-day in order to cover up the fact that through trade depression throughout the country we are slipping in revenues, the Acting Minister of Finance finds it necessary to take $50,000,000 in 1923-24 and loaned to the National railways on bonds guaranteed by the government and put this loan in the category of Canadian National Railway finance. As a matter of fact where does it belong? We all know it should be included in the national debt. Then in the face of that to declare that the national debt has been reduced by $35,000,000 is not, in my opinion, an honest, frank statement by the government.

But let me return to the auditor's certificate which, the Acting Minister of Finance told us, has been printed on the balance sheet on page 3 of the Public Accounts for 1923-24. I have no doubt, Sir, that you and every other hon. member have read auditors' certificates from time to time. This certificate says:

> We have examined the balance sheet of the Dominion of Canada as at March 31, 1924, and we certify that the balance sheet conforms to the balance sheets of previous years in not including in the net debt of the Dominion issues of the Canadian

National Railway company and companies included in its system, which carry the guarantee of the Dominion of Canada. Such guaranteed issues are shown year by year as indirect liabilities.

Well, that is not such an auditor's certificate as we find in the annual report of the Canadian National railway system which we received last night. Is any opinion expressed in the auditor's certificate as to the correctness of the national balance sheet? None at all. But appended to the accounts of the National Railways we find a certificate of the sort which we are accustomed to look for at the end of any statement of accounts, and it is in this form:

We certify that, *in our opinion*, the above consolidated balance sheet is properly drawn up so as to exhibit a true and correct view of the affairs of the system, as at the 31st December, 1924, and we further certify that, *in our opinion*, the attached income and profit and loss accounts for the year ended the 31st December, 1924, are correctly stated.

I have another form of auditor's certificate appended to the balance sheet of a large corporation, which I will give the House:

We have examined the statement and it agrees with the books of the company. After due consideration we have *formed an independent opinion* as to the position of the company. With *our independent opinion* so formed, and according to the best of our information and the explanations given to us, we certify that *in our opinion* the statement sets forth fairly and truly the state of the affairs of the company, after providing for contingencies, and that all transactions of the company that have come within our notice have been within the powers of the company.

That is what the people of Canada understand by an auditor's certificate. This so-called auditor's certificate which the Acting Minister of Finance found it necessary to quote in his budget speech is not an opinion as to whether the books are kept properly or not, it is not an opinion as to whether the railway loans should be included in the national debt or should be placed among the capital charges of the Canadian National Railway; it is just a mere statement that the balance sheet is a continuation of former practice. The point I am trying to bring out is that the average man in the street is not going to stop and ask you what kind of auditor's certificate this is. By an auditor's certificate he imagines the Acting Minister of Finance is referring to the sort of certificate which accompanies the balance sheet of any corporation. I can imagine some Liberal spellbinders out on the stump shouting to the people, "Yes, this, financial statement which the Tory press is criticizing we had a couple of chartered accountants go over, and they have put their certificate of approval upon it." In my opinion it is a very poor way indeed of getting over the difficulty the government finds itself in, due to the diminished revenues resulting from the trade depression which we are experiencing from one end of the country to the other. I repeat, it is a poor way to try to hide the fact that we are slipping more and more regarding the public debt.

Let me again say, and I shall continue to repeat it, I have the utmost confidence in Canada, and when I am criticizing the government it must be borne in mind that there is not much connection between the two, and after the bell rings next time there will be no connection at all. Cluttered up within Hansard of March 24 will be found all manner of excuses and explanations by the Acting Minister of Finance as to why such-and-so is done. Why is it necessary to insert this in the budget statement?

The railway company from earnings are not yet able to meet the arrears of interest accumulated on our loans to the company. This government, following the policy of its predecessors, continues to relieve the company from the payment of interest. To do otherwise would require the increasing of our annual provisions in the estimates, thus adding to our debt on the one hand, and, after receiving back from the company the amount so provided in our estimates, crediting it to interest on investments account on the other hand, thus reducing our debt by the very amount by which we increased it.

Why, Mr. Speaker, ever since we took over this railway system has not this been the practice? Why draw a red herring across the trail and say: "This $131,000,000 is a bad debt, but we are so generous to the Canadian National Railways that we want to treat it in this way, because if we received the interest back we would only have to reverse the ledger entry and put it on the other side?" Does any man of intelligence in the Dominion ever expect that that interest is going to be paid back? Are we not clamouring every day for reduced freight rates? My friends from the Maritime provinces, my friends from the prairie provinces, my friends from Ontario and Quebec, each and every one of us, are looking for the day when reduced freight rates will come. Reduced freight rates will be ahead of this proposition which is suggested by the Acting Minister of Finance in his budget speech. It is not fair to the Canadian people to draw a red herring across the trail in respect to the country's accounts. It is time we tried to give them a frank, clear statement to show them exactly where we are, exactly in what direction we are going, exactly what we are doing. If the revenues are slipping, tell them so. They do not mind having the truth; they do not mind a clear statement of the facts.

Canadians are optimists; they have faith in the country. But the cluttering up of the budget with excuses and explanations of this kind will in my opinion do more to shatter the confidence of the people in the national credit that the Acting Minister of Finance speaks about, than all the fair criticism that may be levelled at this government.

I wonder where we will finish up, Mr. Speaker, if we allow the practice followed in this budget speech to continue—the practice of endorsing the bonds of the Canadian National Railways? Fifty millions in 1923-24; forty-six millions in 1924-25—and that is not the end of the story. It is nearly time something definite was done to put the Canadian National on a footing similar to that on which the Canadian Pacific stands, so that we will know exactly where we are. We have the Swayn report of 1916 which gives the value of the Canadian Northern and the Grand Trunk Pacific, and we have the award which was made to the Grand Trunk. Why could these findings not be reviewed in connection with a proper determination of the value of the Canadian National railways? Then set that up as the capital of the company, absorb the rest in the national debt and give the people some idea of where we stand. To continue this practice is not fair either to the management of the Canadian National railways or to the people of Canada. If it was done on any equitable or reasonable basis there might be some sense to it. But read this statement which I ask to have placed on Hansard:

Statement of Loans to Railways for 1922-23, 1923-24 and 1924-25 made in Cash and Guaranteed Bond Issue under Authority of the Appropriation Acts

	1922-23	1923-24	1924-25	Total
Deficit—Operating deficit, interest due public, and rentals of leased lines..	$36,722,181	$20,356,198	$21,343,940	$78,422,319
Redemption of debt—including equipment trust principal payments and sinking funds..	25,275,902	11,469,369	7,007,533	43,752,804
Capital—Investment in road and equipment including acquisition of property..	18,214,940	41,630,933	33,765,527	93,611,400
	$80,213,023	$73,456,500	$62,117,000	$215,786,523
Discount on Government Guaranteed Bond Issues	.....	1,093,500	1,910,000	3,003,500
	$80,213,023	$74,550,000	$64,027,000	$218,790,023
These totals are made up as follows:				
Loans by way of cash charged to the net debt of the Dominion..	$80,213,023	$24,550,000	$18,027,000	$122,790,023
Loans by way of Government Guaranteed bond issues..	.....	50,000,000	46,000,000	96,000,000

Now let me read the footnote which appears in small type beneath this tabulation:

While the estimated loans by way of cash of $18,027,000 for 1924-25 are short of the estimated deficits for this year by $3,316,940, the statement shows that for the three years under review the government loans in cash have not only enabled the railway company to meet all deficits, including fixed charges due the public, but also left the substantial sum of $44,000,000 to be applied to capital requirements.

Three years of operation and yet there is nothing uniform in the method of treating these accounts. The Minister of Finance Mr. Fielding)—we regret he is unable to be here—found it necessary to write off certain capital charges and deficits, to a total of $80,213,023. But this government find it necessary to take a portion of the charges already written off capital and bring it back into the revenues, in an attempt to show the people a balance on the right side of the ledger. That is not giving a fair and frank statement to the people. It is not fair, it is not just; and the sooner we have a government in power that can be held to their responsibility to make a proper statement with regard to the handling of their accounts, the better it will be for Canada and all concerned.

Some very interesting deductions are drawn by the Acting Minister of Finance with regard to trade in this country. "A matter of justifiable pride," are the words the minister has been wont to use. He has a feeling of "justifiable pride," he says—

—when we realize that this year, as a result in part of our policy last year in reducing the burdens of taxation, we will receive from the people $52,837,000 less.

Then, in his summary he says it is a matter of justifiable pride—I do not know whether or not that is the exact term he uses—that our trade balance is so much in our favour. Every Canadian likes to see the trade balance in our favour; in a young country like this it is essential that that should be the case. But first let us analyse this trade balance for a

moment or two. I pointed out last year—page 200 of Hansard—that in respect to what was designated as class 4, wood products, we were exporting raw material to the extent of 64 per cent and finished and partly finished goods to the extent of only 36 per cent; while in class 6, non-ferrous metals, we were exporting 77½ per cent of raw material and 22½ per cent of finished and partly finished goods. That is all right, but unfortunately for Canada we were importing just the converse of that. In class 4, wood products, we were importing 27 per cent of raw material and 73 per cent of finished and partly finished goods, while in class 6, non-ferrous metals, we were importing 13 per cent of raw material and 87 per cent of finished and partly finished goods. Think of the production of our copper, lead and zinc mines in terms of our imports; 87 per cent are finished or partly finished goods—commodities which could be the product by our own industries.

I shall not refer in detail to the figures I gave last year in this connection; but let me touch on some of the figures which the Acting Minister of Finance has given the House with regard to our trade balance. We find the import side decreasing, and at first blush that looks good. We are all glad to see a reduction of the imports into the country. In fact, for the ten months ending January, 1925, there has been a decrease of $93,384,852 in imports, equivalent to 13 per cent. That looks very good for a Liberal government, and it seems to speak well for the results of the reduction of 2 per cent in the customs tariff. But let us analyse this importation; let us examine the imports for home consumption during the period of ten months ending January 31, 1925, in some of the classes which have to do with the raw materials used in a large number of our industries. For the purposes of the comparison I have taken iron and its products; the following indicates the value of the imports of iron and its products, raw material and partly manufactured goods, in the period of ten months referred to by the minister:

	Ten months ending January 31, 1924	Ten months ending January 31, 1925
Free goods.. ..	$ 19,371,013	$ 12,624,694
Dutiable goods.	126,299,548	95,368,389
Total..	$145,670,561	$107,993,083

It will be seen, therefore, that for the ten-month period ending January 31, 1925, there was a reduction of 25.87 per cent in the import of the raw material which very largely goes to supply our industries. If we found a large decrease in the imports of manufactured and partly manufactured products, it would be reasonable to say that industry in Canada was being stabilized and that our own manufacturers were supplying the home market. But the figures show that the imports of raw materials have been reduced in the case of iron 25.87 per cent. For the same ten-month period, textile products, dutiable—manufactured and partly manufactured goods—came into this country in 1924 to the extent of $90,180,970, and in 1925 to practically the same amount, $88,369,654, or a decrease of only 2 per cent, which decrease represented the decreased buying power of the Canadian people. Non-ferrous metals, free and dutiable, for the same ten-month period, came into this country in 1924 to the amount of $35,399,822, and in 1925, to the amount of $33,592,185, a decrease of about 5 per cent in the importation of manufactured and partly manufactured goods, which is again only an index of the decreased purchasing power of the Canadian people and not an index of the trade conditions in Canada,—in other words it does not indicate that trade conditions in Canada have been so good that we have manufactured that extra 6.88 per cent.

In like manner miscellaneous products, free, came into this country in 1924 to the amount of $19,213,347, and in 1925, $19,168,949, practically the same figure, and miscellaneous products, dutiable, imported in 1924 amounted to $22,224,984, and in 1925 to $20,799,641; making total importations of manufactured and partly manufactured miscellaneous products in 1924 of $41,438,331, and in 1925, $39,968,590, or a decrease of 3.53 per cent. In other words, we find a decrease in all kinds of importations close on to 13 per cent, and in the case of iron and iron ores, which are the raw material for a large number of our manufacturing institutions, a decreased importation of close to 26 per cent. The point I bring out here is this: Instead of this decreased importation indicating that our own manufacturing institutions are supplying our demands, we find that in practically every case the decrease in importations is in raw material, and not of manufactured and partly manufactured goods. In any case where there is a decrease in the importation of manufactured and partly manufactured goods it simply emphasizes the fact of the decreased purchasing power of the Canadian people, and the decrease I gave you in the importation of raw material, amounting to 25.87 per cent in the case of iron and its products, gives you some idea, Mr. Speaker, of the stagnation of business, the slackness of trade and dulness of industry which

our plants and industries dependent upon this raw material as their basis are going through at the present time.

Just to emphasize that and to show that I know what I am talking about, I will go to the trouble of putting on record figures showing our importations of iron and its products, which emphasize more and more the point I am trying to make. In 1924 we imported iron and its products, raw iron, pigs, ingots, blooms, scrap, castings, forgings, rolling mills products, tubes, pipes and wire, to the amount of $61,161,820. For the same period in 1925 we imported these products to the amount of only $39,276,023, a decrease in our importation of these basic raw materials for our manufacturing industries of 35.8 per cent. That is an index of the stagnation and slackness of trade and dulness of industry that we find in our manufacturing institutions which depend upon these raw materials for manufacturing into their finished goods.

5 p.m.

All through this debate, Mr. Speaker, I have been amazed at some of the suggestions which have come from the Liberal party with regard to the conditions we find in Canada. But we had something which took the cake, if you will excuse the expression, from the Minister of Labour (Mr. Murdock) last night. He spoke of ream after ream of Tory propaganda. I was just thinking to-day of the ream after ream the Minister of Labour put on Hansard, but whether it will be interesting reading I doubt very much. I want to say a few words with regard to this remarkable result and to the "justifiable pride" which the Acting Minister of Finance finds in the statistics he gave. I think when the people of Canada grasp the true significance of these statistics and learn the actual state of the revenues and expenditures of Canada, instead of having a justifiable pride in the handling of the affairs of this country by this administration they will receive a shock, from which the people will recover, because they have unbounded confidence in the resources of this country, but from which the government themselves, when they appeal to the electorate of Canada, will not recover. The government say—I saw a headline in one of my own Toronto papers the other day that the government have reduced taxation by $52,837,000. Rather interesting, but I will tell you where this reduction came from.

Mr. BENOIT. Louder.

Mr. HARRIS: I was just thinking that when the Prime Minister gets here—I am sorry he is not here now—the whip will crack loud enough and hon. gentlemen opposite will all line up when the vote is taken. It will be loud enough for my hon. friend then. Let me preface what I am going to say about the revenues and expenditures of the country with a remark that I find in the budget speech of last year:

> It was hoped, however, to offset any considerable reduction in the revenue by the most rigid economy in expenditures.

Yes, Mr. Speaker, they have offset it by a deficit of $46,737,000. The revenues shrank by $52,837,000, but the expenditures shrank by only $5,100,000. There you have the most rigid economy which was to offset any reduction in the revenue. What is the cause, Mr. Speaker, of this decrease in revenue of $52,837,000? The Globe newspaper seems to say that the people were saved this amount. Was this reduction due to a reduction in the receipt tax? Was it due to a reduction in the cheque tax? Was it due to a reduction in the income tax? Was it due to a reduction in the sales tax? Have we got penny postage in Canada yet? Is it due to a reduction in the cost of postage? No, Mr. Speaker, I will tell you where we lost a million dollars a week last year. Owing to dull trade and slack industry the clearing house returns shrank last year by $553,000,000 in eastern Canada. Dull trade and slack industry accounts for half a billion dollars less clearing house returns in eastern Canada last year as compared with the year before. That half billion dollars less clearing house returns is the one factor which stands as an index head and shoulders above any other in accounting for the shrinkage of one million dollars a week in the national revenue of Canada.

That, Mr. Speaker, is the predominating factor which is accountable for this situation, and until such time as it is righted, we will not be on the right path. The Acting Minister of Finance (Mr. Robb) intimated that some of the back benchers who are rather timid had better be kind of careful what we are saying about revenues and expenditures of the country, or we are going to embarrass the national credit. One statement in the budget speech to my mind will do more to shatter confidence in the affairs of Canada than all the propaganda from the Atlantic to the Pacific. That statement is found, Mr. Speaker, in the reference to the taking of what in my opinion is a frozen credit of four million and some odd dollars, and adding that unpaid interest to an asset, and then bringing that into the balance sheet; that is not so bad in itself, but to bring into our statement of

national affairs for this year the statement that the results of the past year from government services show a surplus is something which cannot be sustained. If the High Commissioner in London, England, is to be given credit for this rearrangement of four million dollars of an asset, let him have the credit, Mr. Speaker, but do not let the Acting Minister of Finance rise in his seat in this House and say that this is due to government services when we add this four million of unpaid interest to our supposed to be on paper surplus for the year which has just closed. No, Mr. Speaker. If Roumania owed $23,969,720 and Greece in like manner owed $8,000,000 in addition to that unpaid interest of $4,000,162, of course it must be brought in on the books of the country, but do not let the minister rise and take credit for having a surplus, and do not let the Liberal press of the country give the government credit for having a surplus of five million odd, when as a matter of fact it is not a true, frank, honest and clear statement as to where the finances of the country stand at the present time.

There is another subject, Mr. Speaker, which is dear to the heart and mind of everybody who takes an interest in public life, as to which a good deal will be said when the next election takes place, and that is the question of taxation. I was just thinking, reverting to olden times, back to the days before Christ, that we might possibly find in the Good Book, if we could not find it anywhere else, some lead as to what we ought to do in regard to taxation, and what proportion or what percentage taxation should bear to the production.

In the year 1922 Canada with a population of 8,788,483 paid in taxes about $561,460,037. This staggering sum was made up as follows:

Municipal taxes	$178,664,291
Provincial taxes	47,342,405
Dominion taxes	335,453,341
Total	$561,460,037

This enormous sum representing the cost of our present civilization and maintenance of law and order was equivalent to nineteen per cent of the total net production of our Canadian industry, including mining, fishing and agriculture. It was almost half the net agricultural production and exceeded the combined gross production of Canadian forests and mines. It was fifty per cent of the manufacturing production of that year, and I was going to say that consciously or unconsciously, directly or indirectly, every family in Canada is paying a share of this amount because it enters into the cost of living.

I think the sooner we get back to the old system of taxation, ten per cent of production, and get our governmental institutions back to the ten per cent laid down by the tribe of Levi under the Levitican law the better it will be for the people all round. Time and again civilization has been censured for tithing the people over 10 per cent, but I wonder what sort of a censure we are going to receive if we continue to tithe the people, as we did in that year, by taking nineteen per cent of the value of production of the country to maintain law and order and our present civilization. We all realize and recognize that there are factors which must be grappled with. The interest on our debt, for instance, and the question of pensions are matters which we are in honour bound to pay, and which we do not object to paying, and these will be with us for some time.

I should like to put on record how the interest on the public debt has increased in the last two decades. In 1903 it amounted to $11,068,139. In 1903 our pensions were $87,925. Ten years later in 1913, the interest on the debt was $12,605,882, and the pensions were $283,188. In 1923, interest on the debt amounted to $137,892,735, and pensions were $32,985,998.

These moneys must be paid and we must find revenue to pay them. We are in honour bound to find revenue to pay these debts in conjunction with our other liabilities. But when the present government find it necessary to enunciate a policy, which some of their supporters had in mind and which some did not have in mind, of reducing the tariff of this country, which has been reduced by some two per cent of the value of the goods imported, I call their attention to the fact that our importations run in the neighbourhood of $800,000,000, and that every one per cent means a loss in the revenue of $8,000,000, as well as stagnation, uncertainty and a tendency for business interests to become unstable. If the present government had had the good sense to hold on to the position achieved in 1921, the coffers of this country would have been in receipt of $15,687,705 more than they have on hand to-day.

When the government made that reduction they made a move in the wrong direction, and not a move which would tend to allow us to meet the interest on our debt and to pay the obligations which we are in duty bound to pay. But the loss of $15,687,000 as a result of this reduction of about two per cent since the Liberal party came into power is not the matter of most importance.

I was just thinking about the wrecking of industries which followed in the trail of that reduction. That thought ran through my mind when the hon. member for Kent, New Brunswick (Mr. Doucet) rose the other day and told us that the ten per cent reduction in the duty on nitrates, phosphate and potash had not only curtailed the manufacture of these products in Canada and put out of business firms who were manufacturing the products but that it had resulted in an increase in the price, and he gave some figures to show it. I will give some figures to the House to make my record complete in this connection. The average wholesale prices of nitrates, phosphates and potash were as follows:

March 17, 1924:

4-8-4, $40.70; 2-8-10, $38.80; 2-10-2, $34; acid phosphate, 16 per cent, $19; sulph. of N.H. 3 (21 per cent), $68.

March 19, 1925:

$42.77, $2.07 increase—5 per cent; $41.46, $2.66 increase—6.8 per cent; $37.65, $3.65 increase—17 per cent; $25, $6 increase—31 per cent; $80, $12 increase—17.6 per cent.

These figures appear in a pamphlet issued by the Minister of Agriculture (Mr. Motherwell) over his signature, and they show an increase of $2.07 to $12 or an increase of five per cent to 31 per cent in the cost between March 1924 and March 1925, after the government had found it good business as they say to take the ten per cent off these goods coming into the country. The market price for nitrates and phosphates on the north American continent is made in Baltimore. The quotation for nitrates in Baltimore a year ago to-day was $3.50 per unit figured in the terms of ammonia and ten cents per unit figured in the terms of phosphate of lime. The cost to the Canadian farmer has increased by 5 per cent. The market in Baltimore to-day has receded to $3.25 per unit of ammonia found in the ton, and it has stayed at ten cents per unit of phosphate of lime in the same ton. I do not know whether hon. members get the point or not. This means that Canadian industry in this line has simply gone out of business. We are no longer manufacturing all of our consumption of nitrates and phosphates here. The manufacturers of those commodities have gone out of business, and those at headquarters south of the line, realizing this, have raised the price to the Canadian farmer to-day to where it is above what it was prior to this legislation being placed on the statute books of Canada.

If that were the end of the story, I would be satisfied. It is not the end of the story. I like to think of these matters not only in terms of nitrates and phosphates, dollars and cents, but also of human lives. What have these material elements to do with the matter when you put into the equation the livelihood of Canadian people Think of the human element which enters into this question! If you, Sir, could have been with me on January 15 of this year in the city of Hamilton, you would have seen a plant worth $100,000 of any man's money, established there for forty-two years, during three generations, two of which I know, manufacturing nitrates and phosphates. For forty-two years that business had carried on, and if business conditions were in any way stable, the machinery would be worth $100,000. In fact, it could not be replaced for $100,000. I saw a fool bid put on the proposition of $10,000. I see somebody smiling. If you will pardon me a personal reference, I put on the bid myself for the whole thing, lock, stock and barrel. Some days later they said to me: "If you raise the bid to $12,000, you can have the whole thing." Two years ago they used to employ fifty men and to produce from five to ten thousand tons of nitrates and phosphates. That industry had in its service one generation after another, not only of the owners, but of families of workers who found their livelihood there. That industry went out of business because they were not receiving a certain amount of protection. They did receive the 10 per cent until this government found it necessary to take it off. They went out of business because the Milson Works and the Crocker Works, in Buffalo poured into the Niagara peninsula, and the Michigan Carbon Works of Detroit, into Windsor, and western Ontario, ton after ton of nitrates and phosphates at a far lower price than they could be produced at in Canada. When they got the Canadian industry out of business, according to the statement by the Department of Agriculture here, and in spite of the fact that the basic price of these commodities in the big market of Baltimore, which is the controlling market, is lower, they raised the price to the Canadian farmer. I started off to say something about the human element, but in spite of ourselves we get into dollars and cents and nitrates and phosphates. When I heard the Minister of Labour (Mr. Murdock) yesterday reading something about the industries in Hamilton, about the good times that prevailed there, about the steel plant that was running and other plants, whose names I forget, I was thinking about something I read in the Hamilton Spectator and the Toronto Evening Telegram just about that time. I was thinking about a certain man who found

his livelihood within the acre and a half of those premises which I mentioned in Hamilton just now. A certain man had been out of employment since the fall of the year, and when he heard that that place was sold, that his livelihood was gone, he went home broken-hearted. I was thinking about the news item that was in the Toronto Evening Telegram the same week that I made that purchase, stating that this man was found dead in his home. The coroner held an inquest and this suicide lies at whose door? I leave the matter an open question.

That is not the end of the story with regard to humans, and I do not think I will take second place to the hon. member for Southeast Grey (Miss Macphail) in this recital. I am thinking of another case of an able-bodied man who had a wife and four children, who came to me on January 15 and said: "Are you going to dismantle this institution and take out all the machinery?" I said: "Yes, we might." He said: "I would like to get a job, to do something. I have run that press over there for four or five years, and I would like to continue to run it." I said: "I am sorry, I do not know what I can do. I am over staffed with men now." I returned to Ottawa. First, the press was taken out, loaded on a car and sent forty-five miles from the place where it was originally picked up. This man whom I made reference to and who was a citizen of Hamilton saw the bill of lading, found out to whom and where the goods were being shipped and followed that car forty-five miles. When the car was placed on the siding at its destination, he was there before the seals were taken off and he said, "Please let me unload the machinery I ran for the last five years." Finally, he got the job; he unloaded the machinery, and he is still hanging around the doors of that institution where that hydraulic press was unloaded, waiting for them to start operating it, and praying that he be given the job of operating it forty-five miles away from his family. That will give hon. members some idea of business conditions following in the wake of a reduction in the tariff of ten per cent on only one line of industry. In Toronto there is another plant manufacturing nitrates and phosphates which has ceased manufacturing and the home plant in Indiana to-day is pumping the same goods into the Niagara peninsula, the Toronto plant lying idle. The hon. member for South Huron (Mr. Black) knows of the distress another company in the town of Wingham finds itself due to the same fact. That company is practically insolvent to-day.

Coming home on the train, I discussed this question with a prominent Liberal, a member of the Ontario Club. He said: "You politicians are all wrong. What you want to do is to tear down the bars and to let the business men of Canada get in and secure a slice of the American business." That sentiment does not find a place in my heart, and to my mind it does not find a place in the heart of any true Canadian. If that sentiment was running in the breast of that Liberal, a member of the Ontario Club in the city of Toronto, it is no index of the sentiment that runs through the members of the Conservative party with which it has been my pleasure to associate myself. We do not want to tear down the bars and jump into the United States in order to get a slice of their business. We have an idea that Canada has a destiny, and if that destiny can be worked out, we shall continue to have faith in our country. I am sorry the Prime Minister (Mr. Mackenzie King) is not in his place, but the Minister of Labour (Mr. Murdock) is here.

Mr. MURDOCK: Go after him.

Mr. HARRIS: Well, I would hesitate about going after him. However, that hon. gentleman made some reference to a few remarks that fell, or that were supposed to have fallen, from the lips of the Hon. Senator Robertson as to the Prime Minister being at home in the United States before the Easter recess, and I was thinking that I had heard something myself about the same time. I was talking to a Liberal friend and I said, "Suppose we did throw down the bars and we all went in together, what would happen then?" He said in reply, "We have a bright man at the head of affairs in the Dominion to-day, and I do not see any reason why if the United States and Canada were one great republic on the North American continent our kewpie doll Premier Mackenzie King could not be president of the whole country."

Mr. MURDOCK: Does my hon. friend not know that the constitution of the United States will not allow a man to aspire to the presidency who was not born in that country?

Mr. HARRIS: That may be, but I know that if I found within the confines of the good old Conservative party any man who had ambitions along that line I would either see that he was ostracized from the party, or I would once for all dissociate myself from it.

A proposal has been placed before the House looking to the creation of a tariff

board. We have some Liberals in this day and generation, and I was thinking of them when I looked at this resolution which the House is to consider in due course, the object of which is to rectify all the wrongs that at present exist in relation to the tariff, and to restore on the part of our Canadian people who are interested in industry some measure of confidence in the future of the country. The hon. member for West Kootenay (Mr. Humphrey) spoke about restoring confidence in the country, but I really think that what he had in mind was restoring confidence in this government. The government proposes to bring down a resolution looking to the establishment of a tariff board, and it occurred to me that the old Liberal ship of state was sinking so fast that the crew have to grab a plank from the Tory platform and nail it over the hole to stop the vessel from going down altogether.

Mr. MURDOCK: Hard luck.

Mr. HARRIS: Before I get through you will find that it is hard luck. Now, we have heard of tariff boards before. In 1912 a resolution was introduced which afterwards was known as Bill No. 88, and it was brought forward by the Conservative party for the purpose of creating a tariff board. There were great Liberal statesmen in the House of Commons in those days, common ordinary men like ourselves, among whom we find such names as Mr. Marcil, Mr. Kyte, Mr. Murphy, Mr. Robb, Mr. Maclean, Mr. Macdonald, and Mr. Lapointe. These gentlemen have changed from statesmen to the Hon. Mr. So and So. Let me quote a few sentences from speeches made by some of them. At page 2622 of Hansard of February 1912 we find Mr. Maclean, then member for Halifax, reported as follows:

> I am opposed to his bill, because I believe it is a violation of constitutional practice in all British countries; because it directly or indirectly, and perhaps unconsciously, assumes to give a tariff commission powers of legislation.

I only wish I had a vocabulary like that; perhaps I might say something just as good.

> I object to it because it tends to weaken the doctrine of ministerial responsibility as it obtains in all British countries. I object to it because the duties which, under the bill, are assigned to a commission, refer to matters which in all British countries are dealt with directly by the responsible advisers of the crown. I object to the bill, because the purpose sought to be attained by it can be better attained by less expensive and less objectionable methods.

That is the tariff board they will all vote for in a few days.

> I object to it further because it seeks in a manner, in a veiled manner perhaps, to validate by a statute the doctrine of protection in this country.

[Mr. Harris.]

What a catastrophe!

> This is a justification of my argument that any assistance which the responsible minister of the day requires in tariff making, should come from the civil service when we can expect permanency in the appointment and from whom we can expect a longer and more valued experience in all matters in connection with the tariff of this country.

Then at page 2655 the ordinary, common Mr. Kyte of that day, now known as the official whip of the Liberal party, is reported in opposition to the bill; he found it necessary to oppose the proposition. I hesitate to say anything about Sir Wilfrid Laurier for I have a good deal of regard for that Liberal statesman. I have an idea that somewhere in this House over on the government benches there are men who, while perhaps on the hustings they were wont to shout "Vive Laurier!" will take an attitude on the resolution about to be introduced, altogether different from that which the late right hon. gentleman assumed. I wonder how these gentlemen are going to vote in this matter of the tariff board. I wonder if they will read what that man had to say in his time with regard to the proposal. Will they rise in their place and register their vote in favour of it? As I say, I reverence the name of that man, but I may be pardoned for reading a few words of his. At page 2874 of Hansard of 1912 he said:

> There is such a thing as an act and an ulterior motive to that act not to be found within the four corners of the act itself. My hon. friend did not put in his bill that the object which he had in view was to have, not the broad facts as they exist, but simply a commission to prepare for him, and for the government of which he is a member, in favour of the view upon political economy which my hon. friend and his colleagues entertain.

There is a good deal more but I will not put it all on the record; there are a few choice morsels that will serve the purpose better perhaps than the whole. Further he says:

> The more we proceed with this tariff board the more it becomes apparent that we are moving in a vicious circle. . . . To say that under such circumstances the commission should be simply under the jurisdiction of the minister is not in accordance with the conception of the feature of the commission which would give it its greatest usefulness, that is that it should be an independent commission. . . . Such a course is inconceivable. This is the same thing, this should be above all things a parliamentary commission, of course with power to the government to use it when they think it advisable to do so.

Further on Sir Wilfrid Laurier said:

> But no reason has yet been given why this second tribunal should be added to what we have already, or to show that it would be more in accordance with the public interest. Up to the present time we have had a law on the statute book declaring that under certain circumstances an investigation, if it took place, should take place before a judge. Has any reason

been given to show that the public interest would be better served or more justice done to the people at large if such an investigation took place before this commission? Although this is a new jurisdiction, I say it is not an improvement, but rather a deterioration.

I am sorry that the Minister of National Defence (Mr. Macdonald, Pictou) is not in his seat; I rather think he is the same ordinary Mr. Macdonald who expressed himself at that time on the subject. He is now Minister of National Defence. There is a whole page here which is not very complimentary to him if he rises in his place now and votes for the budget. I wish he were here, because I do not like to take advantage of an hon. member. The hon. member for Bonaventure (Mr. Marcil) is here; he voted, but he did not have very much to say. The hon. member for Welland (Mr. German) comes from a part of Ontario that I am very well acquainted with. I wonder how he will vote on this proposition for a tariff board. Will he vote for the budget, or will he vote against it? I do not think he will vote against it—he may vote for his judgeship! The Minister of Trade and Commerce (Mr. Low) intimates that that is a little harsh; if it is, I will withdraw it. The hon. member for Welland—page 3581—said:

I am not in favour of a tariff board.

Bang, right off the bat he so expressed himself—"I am not in favour of a tariff board." I wonder how he will vote. Will he vote for a tariff board? I wonder if he would like to have a pair for that occasion? He continued:

I do not think that the commission should be allowed to hear evidence under oath, or any private conversation, that is not reported to parliament. Let those gentlemen who want to make their private suggestions to the Finance Minister make them, and let the Minister of Finance keep that information secret, as has been done in the past without any statutory provision to compel it to be done. But that this parliament should authorize a commission of gentlemen to inquire into the trade conditions of the country and to take evidence and report on that evidence to the Minister of Finance without making that evidence public, I think it wrong in principle, and will be detrimental to the interest of the country.

I am afraid he will have some qualms of conscience when he rises in his seat. We find the same hon. gentleman saying further on:

The objection to my mind is just this, and the fear is just this—that this commission is to be appointed with a view to increasing the protective tariff.

He objects so much to the protective tariff. I do not think the Minister of Labour (Mr. Murdock) will have much objection to voting for that tariff board, because if I heard him aright yesterday he said that the government had some tariff for revenue principles in mind, so I suppose "tariff for revenue" might be stretched this time to cover something in line with what the hon. member for Welland is objecting to—a protective tariff. Then again at page 5385 the same hon. gentleman (Mr. German) says:

The ministers can shield themselves behind the report of the tariff board who, they can plead, have gone throughout the country and made a full investigation.

Well, that is rather a good idea. It might be a good plea for some of the predicaments that the administration find themselves in. Then again I find the following from the same hon. gentleman:

I am afraid this is what they will do; and there is a very strong feeling in the country that this is what they will do.

I should like to point out that a motion was put to give this matter the six months' hoist. We find in favour of the motion, or practically voting against a tariff board, 52 yeas, among them being Marcil, Kyte, Sir Wilfrid Laurier, Lovell, Murphy, Power, Robb, Pardee, Maclean, Macdonald, Lapointe, Clark (Red Deer), and His Honour the present Speaker; these were enrolled among those opposed to this tariff board. I expect to hear the Liberal statesmen of former days rise in their places and explain why they find themselves able at this time to vote for a tariff board when in 1912 they voted against a similar proposition which was promoted by the party of which I am a member, and which was eventually killed by the Liberal party. And that is not quite all either. The bill was finally killed, and the Liberal chieftain gloried in the fact that it was killed, for at page 6821 we find him saying:

I have something to say in conclusion to my hon. friend—I do not know whether the Senate will agree to the suggestion or not—but if as a consequence of the motion which is now before the House and which I suppose—and it is not a very violent supposition—will be passed by the majority sitting behind the Minister of Finance; if the result of this motion is that the bill is to be killed, I say to my hon. friend that it would not be an unmixed misfortune; on the contrary in my judgment, it would be an unmixed blessing.

I venture the opinion that when the government brought down this proposition they were perhaps hoping against hope that in like manner as a similar proposition was killed in 1912 it might be again killed, as every bit of legislation that has been brought down by this administration has been killed. For instance, the Great Lakes inquiry, the present ocean freight rates inquiry, the wheat pool—all these infants born to the administration, some prematurely and some carried

a little too long, have been strangled at birth. No doubt they expect that this child in like manner will be strangled. Then they can go to the country and say, "Well, we are on both sides of the fence." The hon. member for Brome (Mr. McMaster) can satisfy his conscience by voting for this tariff board, knowing that the proposition is going to be thrown out. The hon. member for George Etienne Cartier (Mr. Jacobs), the hon. member for St. Lawrence-St. George (Mr. Marler) —they can probably square their conscience and go back to their constituents to tell them what great things have been done for the people of Canada by the Liberal party.

Mr. MURDOCK: Do I understand my hon. friend to suggest that his party, then in power with a sufficient majority, were willing to let this bill be killed, that they did not have sufficient courage to go through with it?

Mr. MEIGHEN: We went through with it.

Mr. HARRIS: I was just trying to tell my hon. friend that the bill was killed in the Senate by a Liberal majority.

Mr. MURDOCK: I do not think my hon. friend made that clear.

Mr. HARRIS: I thank my hon. friend for correcting me in that connection. I notice the late Sir Wilfrid Laurier was very careful not to mention that the bill was killed by the Liberal Senate. I overlooked noting that fact. It only shows that he was a very astute politician.

I find in the budget address another matter of vital importance to the Dominion, particularly to Ontario. It may not be of very great magnitude at present, but it will be as it develops. I refer to the duty on the exportation of electric power. Is it good business to export that great asset that we have, particularly power generated in Ontario and in Quebec? The people of Ontario have great confidence in the public ownership enterprise known as the Ontario Hydro-Electric Commission. We have taught our people the many uses of electricity. Everywhere you turn in a home you find a use for it, and its consumption is growing by leaps and bounds. The thought occurs to me that if we allow the tax on the exportation of electrical power, which the government proposes in order to increase the revenue by $400,000, we must consider who in the end is going to pay this tax next year and the year after. It will be paid not by those consumers who have long-term contracts at the present time, but by those in Canada who buy that power from day to day.

And, of the people who are buying it from day to day in Ontario, one hundred thousand are my constituents. They are the people who will have to pay, in my opinion—I shall be glad to have light on the subject if that is not the case. But apart from that, if any move in this direction is to be made, let us stabilize industries in this country and retain that power for their use. If we could only instil into the heart and mind of this government some of the tariff stability which the Minister of Finance stood for in 1922-23, we should be able to get somewhere. Stabilize industry and you will not need any export of power; you will rather have to put an embargo on it to keep it here. I do not like to see my constituents taxed for a portion of this $400,000; I object to it very strenuously! Not only that; it will have the effect of damping their enthusiasm for public ownership enterprise. I have great confidence in the public ownership of the Hydro-Electric Commission; I regard it as one of the greatest achievements of the last two or three decades. How some laughed at Sir Adam Beck when he told the people they would be washing their clothes with machines which would get their power from the white coal of Niagara! How some laughed when he said we would be heating our houses, making toast and doing all the other things we do in this day with the power made available from this source! It is only a matter of one or two decades ago that some thought there was nothing in the proposition. But what have we to-day? Tremendous industries have been built up in connection with the manufacture of all sorts of utensils using power. The possibility of the development of electrical energy in all parts of Canada is such that its magnitude can hardly be conceived. I feel, therefore, that the government is very ill-advised in putting on the statute book such a regulation as this.

I said a little while ago, Mr. Speaker, that not only were we losing our people by allowing tariff to slip a little, but we were also sacrificing some $15,637,000 of revenue. But that is not all; we are about the only nation in the world of any size that has not increased tariff duties within the last four or five years. Even the Irish Free State, in July, 1924, placed duties on boots and shoes, glass bottles and jars, soap and candles, all of which had previously been duty free. The duties on sugar, confectionery and cocoa preparations were also increased.

You know what has happened in Australia, a new tariff was introduced in that country in March, 1920, providing for substantial increases in the rates of duty on practically

every item. The imposition of dumping duties on many lines of merchandise has resulted in a further increase in the rates of duty on such goods. In addition Australia can appraise imports at prices corresponding to the prices of similar Australian products, and where such protection is deemed necessary she gives it.

Have any hon. gentlemen here had experience in shipping goods to Australia? Well, it is an interesting experience. By the time you have filled out the many forms of a protective nature which are required before you can have your goods landed in Australia customs free, you have almost enough documents and paper scrap to equal the value of your goods, that is, if the goods are not over-valued. The Australian Department of Labour imposes restrictions with regard to the labour found in the goods, whether union or otherwise, and so on. The Australian Department of Agriculture imposes regulations with a view to preventing disease from being carried in the packing of the goods, and so on. This is all done not so much to ensure that the goods shall be of the right kind as to give Australia protection against the influx of foreign goods. Let me give a little further information with regard to what has been done in other countries in the matter of tariffs.

British India—In March, 1921, a new tariff was introduced providing for increased rates of duty. In 1922 the rates of duty on many classes of goods were increased from 11 per cent to 15 per cent and the rates of duty on "luxury" goods were increased from 20 per cent to 30 per cent. In 1924 increased rates of duty on most iron and steel products were put into force.

Newfoundland—An increase in the rates of duty on imports into Newfoundland was effected in May, 1921, by the imposition of an import tax of 5 per cent on most classes of imported goods.

South Africa—About which the hon. member for New Westminster (Mr. McQuarrie) spoke so eloquently last night: From time to time the tariff in South Africa has been amended providing for increased duties on various classes of goods. Increases were made in 1919, in 1921, in 1922, and again in 1923—the last increase affecting confectionery, wheat, motor spirit, wrapping paper, boots and shoes and glass bottles.

In like manner British Guiana, British Honduras, Montserrat, Barbados, Dominica, Grenada, Trinidad, East Africa, Malta, Mesopotamia and Ceylon have all adopted new tariffs or increased the general rate and the ad valorem rate. As to Jamaica, in March, 1922, a new tariff was introduced providing for substantial increases in the rates of duty. The general ad valorem rate was increased from 16⅔ per cent to 20 per cent with proportionate increases throughout the remainder of the tariff.

You can readily see that Great Britain and all her overseas dominions and colonies, with the exception of Canada, have found the necessity of increasing the tariff as a ready and certain means of increasing their revenues as well as their existence.

All of the major nations of the world have, in a like manner, adopted from time to time an increased tariff schedule in order to maintain their population, and to stabilize themselves again in world affairs. Nations with depreciated currencies, such as Germany, Austria, and Roumania, are insisting that all customs duties be payable in gold. For instance, Germany: On July 1, 1921, all commercial conventions between Germany and other countries lapsed and from that date all imports were dutiable under the general tariff. This constituted a considerable increase, as Germany by a law passed in July, 1920, extended to imports from any country the benefits of any conventional treatments applicable to imports. Since that date there have been a number of increases in the rates of duty on numerous classes of goods. Some months ago it was reported that a general revision of the German customs tariff was under consideration. In addition to the increases in the rates, there has been a general all-round increase due to the fact that Germany requires that customs duties be payable in gold.

I will also give the House the situation with regard to the tariff in other countries:

Austria—There have been various revisions of the Austrian tariff providing for increased duties. A new tariff is now under consideration which is understood to be highly protective. Austria requires that all customs duties be payable in gold and this has resulted in a very substantial increase in the duties.

France—In July, 1919, France adopted a system of co-efficients of increase—by this system the duty leviable is the ordinary duty multiplied by the co-efficient applicable to the particular item. The maximum co-efficient was originally 3, but has been increased from time to time and is now 10. Also in March, 1921, the import duties under the general tariff were increased from a 100 per cent advance over the minimum tariff to a 300 per cent advance. A new tariff bill, providing for a reorganization of French customs duties, has recently been prepared. It is reported that the bill will provide for

material increases in the duties on many lines of manufactured goods.

Belgium and Luxembourg—In June, 1920, the Belgian tariff rates were materially increased by a system of co-efficients of increase applied to specific duties. A further increase became effective in October, 1920, by the adoption of a new method for valuing goods subject to ad valorem rates. In March, 1921, the rates of the co-efficients were increased and at the same time new and increased rates of duties were established for various items. In 1924 the customs tariff was revised with an upward trend and retaining the system of co-efficients of increase. The revised tariff became effective in November, 1924. The customs law of Belgium provides that the value for duty shall not be less than the normal wholesale price of similar goods on the Belgian market at the time of importation, less the amount of duties under the lowest tariff which such products would pay on import.

Russia—The provincial government at Archangel issued a decree on June 13, 1919, providing for a duty on goods imported into the northern territory. The rates of duty on all but some 30 items of the Russian tariff were increased. The increase in some items was 100 per cent, on others 250 per cent, 500 per cent, 1,000 per cent, and one item 1,500 per cent. On about 19 items entirely new and increased rates of duty were prescribed.

Turkey—The import duties on certain farinaceous preparations have been increased and increased duties on wheat and flour became effective in September, 1924.

In like manner the mid-European countries and the southern European countries such as Bulgaria, Czecho-Slovakia, Roumania, have provided for increased protection and for the payment of customs duty in gold. Italy, Holland, Poland, Norway, Portugal, Spain, Sweden, Denmark and Switzerland have during the last five years created commissions, who are now at work preparing new schedules, all of which are higher than those at present in effect. The same situation applies in the far East.

Japan—In June, 1921, changes were made in the Japanese tariff with increases varying from a slight increase to as much as between three and four times the former rates. In March, 1922, there were further increases and in July, 1924, the so-called "luxury" tariff of 100 per cent was placed on a large number of articles embracing some 125 items of the Japanese tariff.

[Mr. Harris.]

China—A new tariff became effective in August, 1919, with duties based on average values of imported merchandise during the five years, 1912-16. In so far as prices had advanced during the five-year period, the new tariff represented an increase. The tariff was again revised in 1922 on the basis of prices for the six-month period from October, 1921, to March, 1922, with a resulting increase in the duties.

Egypt—In March, 1921, duties were increased on various articles and in July, 1921, an additional duty was placed on a large list of articles.

Persia—A new import tariff was made effective in April, 1920, with increased rates of duty, but, owing to the substitution of ad valorem rates in many cases where the rate had previously been specific, it is impossible to estimate what the average all-round increase amounts to.

Coming back to the western hemisphere, it is not necessary for me to remind the House that Argentina, Brazil, Chili, Peru, Mexico and San Salvador have in like manner all provided for increases in their protective tariffs. One which affects Canada very considerably is Cuba. Hardly a month goes by but someone in Canada finds it difficult to get his goods into Cuba. A special tariff committee of the Cuban House of Representatives is preparing a new customs tariff to be submitted shortly to the House of Representatives. It is understood that the revision is being made along the lines of protection for existing and prospective Cuban industries, and following this principle it is proposed to increase the present import duties on cement, brick, iron and steel castings, screws, nuts, bolts, etc., ink, soap, fertilizers, writing paper, boots and shoes, matches, and so forth. In the riding from which I come I have a concrete example of difficulty in connection with this from a manufacturer of oils, who previous to 1921 found no difficulty in shipping several tank-cars a month to Cuba, but on account of the new customs regulations is unable to reach this market.

It is unnecessary to remind the House of the amount of protection which the United States government find it advisable to give their different lines of industries. Briefly the situation is as follows:

United States—The Emergency tariff of May, 1921, greatly increased the rates of duty on agricultural products. At the same time a stringent "dumping" law became effective. In 1922 the Fordney tariff became effective and provided for much higher rates of duty than those previously in effect. In 1920, the last

year of the Democratic tariff, the average rate of ad valorem duty on dutiable imports was 16.4 per cent while in 1923, the first year of the Fordney tariff, the average rate of ad valorem duty on dutiable imports was 35.1 per cent. The 1922 revenue act of the United States, in addition to providing for "dumping" duties, authorizes the assessment of duty on imported articles on the American selling price of similar competitive articles manufactured or produced in the United States, and this basis of assessment has been made use of where the protection of United States industries required it.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, April 16, 1925

The House met at three o'clock.

AUSTRALIAN TREATY

On the Orders of the Day:

Mr. R. K. ANDERSON (Halton): Is there any truth in the report that the treaty between Canada and Australia has been ratified by the Australian government?

Right Hon. W. L. MACKENZIE KING (Prime Minister): As I understand the so-called treaty between Australia and Canada, there was an understanding reached that the tariff in Australia would be changed in certain particulars and that the tariff in Canada would also be changed in some particulars. I believe the Australian government have taken action in the matter of altering their tariff. We are still negotiating with Australia with respect to such changes as are to be made in the Canadian tariff. Until we have completed these negotiations, it cannot be said that the matter has been finally determined.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE.

The House resumed from Wednesday, April 15, consideration of the motion of Hon. J. A. Robb, (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. J. H. HARRIS (East York): Mr. Speaker, the facts which I gave to the House in my address and the country regarding the policies that are being pursued throughout the whole world have shown to me very clearly that this one country stands alone, a law unto itself, with regard to what policy it should pursue. Like the proverbial Irishman, we are people who find ourselves alone out of step and tell the rest of the civilized world that they are the people who are out of step rather than we.

But industry, facts, figures, dollars, cents, commodities and all those features which go to make up our present civilization are, as I said before, not the most important features. The most important feature is the generation that is going to succeed this one. I have, in front of me in that connection, to emphasize by another means the points that I have already made. The report of the Department of Labour. What does the department say with regard to vocational instruction which is being given to the youth of Canada to-day? We find that vocational instruction affords opportunities to the following groups:

> Young folks and adults who have left school too early and who find that they need more education to succeed in their occupations.
>
> Persons who are ambitious for promotions in their vocations and who find it necessary to become adept in the more difficult processes of their trades, or to become acquainted with the increasingly important volume of technical knowledge related to their trades. Effort must be made to keep pace with the developments of industry. In spite of the tendency towards large volume methods of production, the place of skilled and informed workmen is still secure.

In order to give the people this vocational instruction so that they can take their place in the industries of Canada, we find that not only the cost of vocational education to the people of Canada is of a tremendous magnitude and increasing by leaps and bounds, but the number of people who are attending our technical and vocational schools is growing at a very fast pace as the following table will show:

Attendance in Vocational Schools of Ontario

	1920-21	1921-22	1922-23	1923-24
Number of full-time teachers..	191	212	288.0	379
Number of part-time teachers..	.....	60	49.0	82
Number of full-time pupils on roll..	2,600	5,344	6,958.0	9,153
Average attendance of full-time pupils..	2,123	4,260	5,454.3	.....
Number of part-time pupils on roll..	907	574	988.0	1,319
Aggregate student-hours of part-time pupils..	40,997	37,776	60,972.5	176,673
Number of special pupils on roll..	1,019	1,604	1,456.0	2,347
Aggregate student-hours of special pupils..	223,570	351,214	247,439.5	314,427

You will note from this that the aggregate student-hours have been increased over four times in three years. In a like manner, the number of pupils on the roll have increased.

This vocational education of the youth of Canada is costing us considerable sums of money, which everyone in public life is very glad to vote from year to year. The expenditure for vocational training by municipalities is growing at a tremendous rate, as is shown by the latest summary on expenditures as given by Department of Labour report at page 104:

Summary of Expenditures by Municipalities

	1919	1920	1921	1922
Total expenditures..	$659,072 82	$1,347,905 04	$1,585,086 36	$1,871,614 21
Legislative grants..	140,294 14	511,021 04	670,758 56	638,217 28

This expenditure is an index of the amount of time, effort and money which is being placed at the disposal of the young people of Canada, to train them in the vocation of the industrial life of the country. The passing of estimates in this connection by public men of all stripes is an endorsation of the policy that it is the intention of all parties in Canada to see that we build up, along with other activities, an industrial life in the manufacturing of our raw materials into finished products, in order that we may have a balanced Canadian life. I emphasize this again because, across from my door in my constituency of East York, there is a million-dollar institution known as the Riverdale Technical School, which was opened in September 1923. With regard to this school the report of the Department of Labour states:

> The new Riverdale Branch Technical School, Toronto, opened its doors for the first time in September, 1923. The opportunities for vocational education here offered, with adequate accommodation and equipment, received a most satisfactory response. The number of pupils enrolled during the year was 626 in the day school and 1,800 in the evening school. Any anticipation that the opening of the Riverdale branch would reduce the total enrolment in the Central Technical School was not realized. The enrolment in the Central school remained at approximately the same figures as last year.
>
> The total number of pupils enrolled in the three vocational schools of Toronto—the Central Technical School, the Riverdale Branch Technical School, and the High School of Commerce—for the autumn term of 1923 was 4,755 day pupils and 10,074 evening pupils.

I graduated from a technical school not many years ago and I knew practically every graduate in the Toronto technical school at that time. They could be counted on your fingers then, whereas to-day there are fifteen thousand students in and around the city of Toronto who are being educated to take their place in industry. Now, in view of the facts which I submitted to this honourable assembly yesterday afternoon, I say that in the policy which this government is at present persisting in we are not putting into practice our ideas as to what should be done to educate the youth of the country. Every party, Liberal, Progressive or Conservative, will readily pass estimates for educational purposes. Let us then be honest with ourselves; if we are going to educate the youth of the country to take their place in Canadian industry, we should see to it that industry is maintained in the country in order that when these students graduate from the technical schools they may be able to obtain employment and so remain at home. Around the corner from where I live there are three or four different families, members of which have graduated from this same technical school since 1923. Where are they to-day? I wonder whether the Prime Minister (Mr. Mackenzie King) saw any of them when he was down south before the Easter recess. That is where they are. Honestly, it breaks my heart to see the best of our youth going over to the United States!

Some hon. MEMBERS: Oh, oh.

Mr. HARRIS: Let hon. gentlemen roar if they will, but it is far from being funny. I had the pleasure of having a football team around my neighbourhood last year and we cleaned up the city of Toronto championship within a couple of points and were runners-up for the Ontario championship. A number of those young men are gone. So that it certainly is discouraging to think that so many of these young fellows around the age of twenty-one are leaving the country. Two of our star men and a couple of others are now in the United States, a distinct loss to this country. The very finest and best of our Canadian citizens are finding it necessary to go somewhere else to make a living. Surely this state of affairs must be put an end to!

I gave certain facts yesterday with regard to the diminution in imports, and to reinforce what I said then and to emphasize the necessity for retaining our manufactures in Canada, to provide not only for the employment of the hands of the graduates from our technical schools but also for the employment of their

minds. I should like to place on record in Hansard a brief summary of the information I gave when speaking before on this subject:

Importations for Home Consumption, ten months ending January 31

Manufactured and partly manufactured Products

	1924	1925	Decrease per cent
Fibres textiles products—			
Dutiable	$ 90,180,970	$ 88,369,654	2.0
Non-ferrous metal products—			
Free	10,089,892	9,390,943	
Dutiable	25,309,930	24,201,242	5.11
	35,399,822	33,592,185	
Chemical products—			
Free	9,033,950	8,721,239	
Dutiable	12,495,958	11,326,165	
	21,529,908	20,047,404	6.88
Miscellaneous products—			
Free	19,213,347	19,168,949	
Dutiable	22,224,984	20,799,641	
	41,438,331	39,968,590	3.53
Grand total (all classes)	744,279,406	650,894,554	12.53

Analysis of Iron importations ten months ending January 31

Raw Material

	1924	1925	Decrease per cent
Raw iron	5,407,046	2,314,123	
Pigs, ingots, blooms	2,057,629	1,500,791	
Scrap	536,639	433,310	
Castings, forgings	4,146,449	2,807,541	
Rolling mills products	41,961,509	28,107,918	
Tubes, pipes	3,526,465	2,027,573	
Wire	3,526,084	2,084,767	
	61,161,821	39,276,023	35.8
Partly finished and manufactured products, engines, boilers, farm machinery, hardware, cutlery, tools, vehicles, etc.	84,508,740	68,717,060	18.6
Total	145,670,561	107,993,083	25.87

Percentage of exports and imports in terms of raw material and finished product

	Raw Per cent	Finished and partly finished Per cent
Exports—		
Class 4 Wood products	64	36
Class 6 Non-ferrous metals	77½	22½
Imports—		
Class 4 Wood products	27	73
Class 6 Non-ferrous metals	13	87

Let us take the asbestos industry for example. The hon. member for West York (Sir Henry Drayton) in an able manner demonstrated to us how our policy at the present time is operating to the disadvantage of Canadians. Some 199,000 tons of this commodity are produced at a cost of $37 a ton. Where does it all go to? It has gone to the New England states in the raw condition to supply forty different factories. These factories turn out the finished article, the total value of which comes to something like $70,000,000, and it will be seen what a tremendous loss this country suffers when we compare that huge sum with the $7,500,000 which we get for the raw material. And let us remember that the cost of the finished product consists largely in labour, which is so much lost to this country. Everybody knows that one engineer and one gang boss or foreman can direct the energies of an army of labourers, and so long as we continue in the course we are now following we shall witness emigration of the people of Canada. What is the use of our trying to educate the youth of the country when we make it impossible for them to put that education to use afterwards. I dislike very much encroaching on the time of the House, but the following verses are so apt at the present time that I shall venture to read them. I had almost said that they might have been dedicated to the present Prime Minister. Here they are:

Lament of a Canuck

I am sitting and a thinking of the
days that's gone before,
For I'm leaving this my country and
my heart feels sick and sore;
There's a hundred thousand others,
and their plans are kin to mine,
For they're leaving home and country
to migrate across the line.

Sure, I've tried to stick it longer,
but my bank account is low,
Though I hate to leave the homestead,
still I know I've got to go;
For while politicians sidestep
and declare the times are fine,
I have got to leave my birthplace
and migrate across the line.

I am sorry the Minister of Labour (Mr. Murdock) is not in his seat.

They say our neighbours over there
appreciate our worth,
And welcome sons from Canada,
the richest land on earth.
I'm doing what I think is best,
and I sure don't want to whine,
But conditions here have forced me
to migrate across the line.

I've made my plans to settle
in that land across the way,
And if I like the country,
you can bet your life I'll stay;
But I'll watch your progress over here,
and I hope you'll all do fine,
But me, I'm through with Canada,
I'm bound across the line.

If the present administration wants to be honest with the people of Canada it will certainly go to the country!

This may be my last chance to make a budget speech on behalf of my constituency of East York, and I take the opportunity of expressing the hope that the government will appeal to the country and get a mandate from the people, or let someone else who has got a mandate take charge of affairs. In that riding of 100,000 we are about seventy per cent industrialists; and seventy per cent of that seventy per cent are owners of their own homes; they own their own humble little cottages ranging in value anywhere from $3,000 to $5,000, $6,000 or $7,000. I wish hon. members would try to form some idea of the amount of money that is involved in any one particular riding such as this, not only in the capital of one industry but also in the capital that is invested in the homes of the employees. If hon. gentlemen would take those facts into consideration they would see what even one industry means to any particular community. It is therefore a matter of great magnitude to the people of a manufacturing centre to see their industries are maintained unimpaired, and it can easily be imagined what concern it must occasion these people when they see one manufacturing industry after another close down.

Every day when in Toronto I have occasion to pass down Carlaw avenue on which are situated the Jefferson Glass Works, which have been there since 1913. That establishment used to employ anywhere from three hundred to as high at one time as six hundred men who were engaged in the making of glassware of all kinds. That plant to-day is shut down and it will probably never start again; the industry is demoralized, is out of business altogether, and this simply because the products it manufactured now come from Belgium and to a large degree from the United States. The tariff has been the means of shutting down this particular plant and it means a loss of $500,000 in wages to numbers of people in my constituency. I think just now of one case of hardship that exists not very far from where I live. An employee of Jefferson's with an invalid wife and one daughter who earns $10 a week has been out of work since July last, having been able to obtain only about two weeks' employment in the interval. At my home on Saturday night he said to me, "What can I do, Mr. Harris? I missed the last payment on my house and the next payment falls due on April 15; if I miss that one I am going to lose the home which I have been trying to pay for during the last five or six years." This man could not buy a home earlier in life, having reared a large family of nine children whom he tried to give a fair education. And as I have said, his wife is an invalid. The man is discouraged, he does not know what to do, and he cannot find any other vocation suitable to his abilities in Toronto. He is waiting patiently for another general election in the hope that confidence will be restored in the people of the Dominion. I hesitate, Mr. Speaker, to bring these stories to the attention of the House, because, as the hon. member for West Kootenay (Mr. Humphrey) said, they are liable to shake confidence in the country—if they would shake confidence in the government it would be all right. I repeat, Sir, what I have said a score of times already, I have the utmost confidence in Canada. But with this preface, allow me to state the case of a man who came to my office on "Hogan's alley" this morning. He walked in and said, "You are Mr. Harris?" I answered, "Yes, what can I do for you, my dear fellow?" He replied, "I am one of your constituents and live at 36 Edgewood avenue, not far from where you live. I have walked to Ottawa from the city of Toronto." I exclaimed, "What!" He repeated, "I have walked here from the city of Toronto." He turned up the soles of his shoes, and his socks were showing through. I said, "Heavens! man, you must get another pair of boots." We got together enough money in "Hogan's alley" to give him the price of a pair of boots and a good square meal. I gave him the addresses of half a dozen local firms to whom he might apply on the chance of getting a job. He is an ex-service man with three children. I took down the particulars which he gave me when he called: He has a boy twelve years old, a girl ten years and another boy five years; he went overseas on January 11, 1916, and was discharged January 26, 1919; previous to going overseas he worked in the purchasing department of the Canada Metal Company; that company is very slack and he was unable to get started there again; his wife got a position here—not in the government—at $12 a week; her father-in-law got this position for her last December, and suggested that if things were so dull in Toronto her husband might come here and try to find something to do; rather than borrow the train fare the man walked here. This afternoon while we are sitting in this chamber he is out in West Ottawa calling on different manufacturing institutions in the hope of getting something to do to support his three children. He told me that he made application to the Soldiers'

Aid hostel in Toronto to take his children in until he could find something to do for their support. They replied, "We cannot take in the children temporarily, but if you will turn them over to us permanently we will take them and farm them out to somebody else." Rather than do that he has held on to them and they are at present in a friend's home in Toronto. That man has been walking the streets since last October trying to get work, and except for a few days' snow shovelling he has been unable to get anything to do.

Now, I want to tell my farmer friends something. What benefit to you are all these "industrialists," if you want to call them that? I rather think they are of some benefit to you! The voters' list for East York contains some 47,000 names, it is a pretty big riding, and those voters with their families number about 100,000 people. I have made a rough estimate of what these people consume, and with permission of the House I will place the particulars on Hansard. This is the statement:

Consumption of farm products in East York

Commodity	Quantity	Value
Cereals, flour and breadstuffs.	20,000,000 lbs.	$1,200,000
Meats of all kinds..	8,000,000 lbs.	1,920,000
Butter and cheese..	3,400,000 lbs.	1,360,000
Eggs..	1,360,000 doz.	680,000
Milk..	5,000,000 qts.	550,000
Potato and other vegetables.	5,000,000 bus.	450,000
Other farm produce..	.....	200,000
Canadian fruits..	.....	40,000
		$6,400,000

There you have about six and a half million dollars' worth of farm products. Is not that money of some use to the farmers of the county of York?—or even to our western farmers? I say it is, and I say further that industry should be maintained so that we will have diversified employment for the youth of this country as fast as they are able to take up homes and consume your products.

In my riding, Sir, is a very large township which is producing farm products, and the population of that township is somewhere around 13,000. I want to say one or two words on their behalf, because it may be the last opportunity I shall have in this parliament if the government is honest and goes to the country this fall, and inasmuch as East York is not in the new redistribution. In 1924 we imported vegetables in the following quantities:

Potatoes..	24,867,896 lbs.
Onions..	393,578 lbs.
Cabbage..	273,933 lbs.
Tomatoes..	313,591 bus.

And then again, why should it be necessary to import canned vegetables such as beans, corn and tomatoes to the quantity of 9,270,176 pounds, worth $965,449? If my constituents in East York could get a little of that business added on to what they have already they would be prosperous. Let us face the situation and protect our market gardeners by curtailing as much as possible importations from other countries. In like maner we find large quantities of fresh and prepared fruits being imported which we might just as well produce ourselves. I have prepared a statement of these importations, and with the permission of the House I will place it on Hansard:

Imports of fruits, 1924

Apples..	195,693 bbls.	$ 878,415
Strawberries..	5,014,267 lbs.	740,699
Plums..	140,208 bus.	374,250
Pears..	17,804,789 lbs.	782,464
Peaches..	13,405,896 lbs.	510,710
Grapes..	11,202,740 lbs.	874,941
Cherries..	625,313 lbs.	105,978

Add to these the tremendous importation of prepared and dried fruits which run into about 20,000,000 pounds per year, and it will be readily seen that any move towards preserving the Canadian market for Canadian farm products is of the utmost importance to our people.

The main argument which I am sure every member has in his mind in this connection is, that due to our position being a little farther north we find our market for these commodities supplied by the products of the United States before our domestic products are ready for the market. Let us therefore face the issue fairly, and not penalize the Canadian producer, because he happens to be in a climate which matures his crop a little later than his United States competitor, by allowing the goods of that competitor to come into this country and take the market away from him. Give him sufficient protection for all the goods which he can produce so that he will have the Canadian market to himself.

Regarding the railway problem, there are several other features, Mr. Speaker, which have to do with conditions in Canada at the present time. I had the honour, in my humble way, to bring these facts out before the National Railway and Shipping committee last session. I feel the time has come when we should no longer have Europe covered by soliciting freight agents on behalf of the Canadian National Railways, gathering freight, consisting largely of merchandise, to ship to Canada. We have our trade commissioners in Europe, why cannot some of these men take care of any work which the Canadian National Railways may find it necessary to

have done over there? The policy of establishing a network of soliciting freight agents in Europe is in my opinion absolutely wrong. On page 96 of the Journals of the House of Commons for 1924, volume LXI, containing the evidence taken by the select standing committee on National Railways and Shipping, will be found the following:

Mr. Harris: Sir Henry Thornton, if the policy of the government was to change very considerably, and you found, for instance, that a tariff was put up against goods coming in from Europe—

Mr. Kyte: God forbid.

Mr. Harris:—which made it impracticable for you to even send out soliciting freight agents soliciting freight traffic and express traffic, do you think you would find yourselves, with a large organization in Europe, probably embarrassed to get a financial return from your expenses?

The Witness: If such a situation would come about, if a tariff would be put up which would practically prohibit the movement of freight from Europe to Canada, we would, of course, have to trim our sails to meet the wind, and have to adjust our forces accordingly. * * *

Q. I gather that your sails are trimmed now to gather as much freight as is possible on the Continent?—A. One is always subjected, and rightly so, to whatever policy the Government may pursue.

In other words, where our policy changes from time to time, is it good business for the Canadian National Railways to place this army of soliciting freight agents in Europe? for with a change of policy we would find this large organization with nothing to do. On the same occasion I asked Sir Henry Thornton a question and it will be interesting to the House to hear his reply. I am quoting from page 94 of the same volume:

Q. With regard to the freight traffic from the continent, and the express traffic, have you also reciprocal arrangements with the Cunard and White Star lines? —A. We have a working agreement with both of these lines, with respect to passenger, freight and express traffic.

Q. I assume that the policy of the White Star and Cunard lines, for instance, would also be to push vigorously the gathering of freight in central Europe?

A. Certainly, in co-operation with us, just as we co-operate with them here on this side. We have certain freight solicitors who are on our payroll and who work very largely in connection with the securing of business for both companies.

Now, where does Sir Henry Thornton get a mandate from the people who pay his salary, to gather this freight? Well, he says a little further on, in effect, "I trim my sails in accordance with the policy of the government that is in power". It is not going to be very long, Mr. Speaker, before those sails will have to be trimmed in some other direction, and the sooner that is done the better it will be for the Canadian people.

Our railway problem is a very serious one. The United States, with fourteen times our population, has only six times our railway mileage.

Will the government help the Canadian National Railway system by giving them thousands and thousands of carloads of raw material to handle? Is it profitable to the Canadian National Railway to handle that raw material? The freight rate on class 5 or 6, raw material, from Montreal to Toronto is 20 1-2 cents whereas the rate on the same goods as finished products is 78 1-2 cents; in other words, the rate is four times as high on the finished product. It is obvious, therefore, that it is by carrying the finished product, not the raw material, that the railways will be made to pay. Seventy-five per cent of the revenue which accrues to the Canadian National Railways to-day comes from freight rates on raw material. If we can take such steps as will ensure that seventy-five per cent of the goods carried are manufactured goods we will find the Canadian National Railways getting out of debt.

Look at the geographical position of Canada—our centres of population all lying close to the border line between Canada and the United States. We find that in the Maritimes the centres of population are close to the New England states; in Quebec and Ontario they are close to the central states; in the western provinces they are close to such centres as Chicago, Minneapolis and St. Paul. The chief population centres in British Columbia are also close to the United States. Think of this in relation to our railroad problem. When the United States railroads haul goods to the Canadian border they find our centres of population just over the line, so that they get ninety per cent of the freight haul while our Canadian National lines get about ten per cent of it. As long as this condition continues, and as long as a low tariff encourages it, our railways will sink more and more into the slough of despond into which they have fallen and they will assume more and more the character of a bankrupt institution.

The time has come when we must make an attempt to help the people who are in Canada to-day; to bring about more diversified employment among all our people; to help our railway situation. If we are to do these things we must have trade flow east and west.

A low tariff tends to allow goods to come in from the New England states to the Maritime provinces. A low tariff permits Buffalo to supply the Niagara peninsula. A low tariff permits Detroit to supply western Ontario. A low tariff permits Chicago, Minneapolis and St. Paul to supply western Canada. A low tariff permits Seattle to supply British Columbia. In short, a low tariff in every instance tends to make our situation worse, and

it tends to encourage another would-be poet to put a few more lines in one of our daily papers under the caption of "Business Sense." I quote:

The dollar bill you send down south
Or over to the States,
To get some finery you could buy
Within your own town's gates,
Is not as likely to come back
And meet your sweet caresses,
As if you kept it in your burg
By buying local dresses.

I dedicate this last line to the ladies.

I've heard of men who, wanting shoes,
Just "beat it" to Seattle,
And spend a lot of B. C. dough
Changed into discs that rattle;
Then mighty gay in new shod feet
They hike back here with laughter
And shout, "Seattle's got you beat,
You're only trailing after."

My friends, so long as you support
The States and southern cities,
Yet earn your grub in this old town
While singing hard luck ditties;
How do you think our tradesmen can
Pay taxes, rent and labor,
And help the many unemployed?
"They need your business, neighbour!"

In conclusion let me say that the best thing we can have forthwith is a Dominion election; and, when that Dominion election is over, the party that attains power, whichever it may be, should at once take steps to stabilize the tariff! Somebody says it will be the Progressives. Well, I think if they were on the treasury benches they, too, would find it necessary in the interests of Canada to stabilize the tariff; at least we will hope their attitude would be such as to inspire a little more confidence in governmental institutions than is the case to-day.

I have heard hon. members talk about changing our constitution, and so on. Well, one change in the constitution that I would welcome would be a reduction of the membership of this House by one half as soon as possible.

Some hon. MEMBERS: Hear, hear.

Mr. HARRIS: I am glad some hon. members approve of that. A reduction in the indemnity has also been suggested. On this point let me say just a word, to clear my own skirts, as it were. You can take my indemnity right away if you like. I happen to have a position that keeps me going and I would be glad to serve the people of Canada free of indemnity. But on behalf of some of the hon. members who have no other particular vocation I would say, leave the indemnity where it is and give them twice as much to do. Give them a hundred thousand people to look after, which is the number I am looking after right now in my riding, and reduce the membership of this House by one half and the cost by one-half.

I would suggest also that in revising the rules of the House it should be provided that each hon. member be allowed about twenty pages in Hansard and that every page he uses after the twenty he be obliged to pay for out of his indemnity.

I have started at headquarters to reduce the public expenditure. Let us start next with what some people refer to as a white elephant, the Canadian National Railways—I will not call it that—let us there reduce a few expenditures. In the first place, curtail the expenditure on radio, and eliminate such expenditures as we had within the last year and a half of a quarter of a million dollars on golf courses. As I said before, withdraw our soliciting trade agents from Europe, and if work has to be done on behalf of the Canadian National Railways let it be done by our trade commissioners who are already there; let us not have two organizations throughout Europe. Do everything possible to increase our traffic east and west. Do everything possible to increase the traffic in merchandise and in products that will bear heavy freight charges, and eliminate as much as possible the shipping out of this country of our raw material.

Preserve the Canadian market for Canadian farm products.

Develop Canadian resources and manufacture them into finished products if at all possible; and conserve our hydro-electric power resources for the use of our industries.

Establish preference wherever possible, provided it does not interfere with Canadian workmen.

When it comes to appointing the tariff commission, let me humbly suggest that it be composed of three men, one who has the interests of agriculture at heart, one who has the interests of labour at heart, and one who has the interests of the manufacturing and commercial institutions at heart. Let this body of three get together and work out something for the good of the Canadian people. In other words, take the plank out of the Conservative platform, holus-bolus; do not put little frills here and there, as the government are doing to-day, and attempt to make the people believe that what they are giving them is a little different from what the Conservative party advocates.

With the adoption of a policy of this kind, Mr. Speaker, I feel satisfied that the Canadian people will realize even more than ever that Canada is really worth while.

Let me express a feeling which I experience as I go from one part of the country to another. I was down in the Maritimes not long ago, and down that way we see a lot of people who are known as the McDonalds, the McKinnons, the McLarens, the McLeans, the McCreas and the Camerons, some of whose ancestors I suppose came over on the Hector, some of them no doubt descendants of Wolfe's Highlanders who fought on the plains of Abraham. Very good for their lineage and where they came from, but let me implore these people in the Maritimes to remember that first and foremost to-day they are Canadians!

Coming just a little farther west we find in the province of Quebec the Archambaults, the Belands, the Bouchers, the Bourassas, the Denis', the Lauriers, the Marcils, and the Lemieuxs—French-Canadians they like to call themselves when they are in the province of Quebec, Canadians they were perhaps long before some of the rest of us. But to-day let them forget they are French-Canadians and remember that they too are Canadians!

Going out over the western plains and beyond, we find in British Columbia the descendants of those ex-soldiers of the British Empire who settled in the Okanagan valley, those rugged men in the mines that the hon. member for West Kootenay (Mr. Humphrey) was speaking about. Let these people remember that they too are Canadians!

To my friends from the western provinces let me also say: You have not been Canadians as long perhaps as some of the rest of us, but get in line with us as quick as you can. Do not forget that you have not been very long in this country.

Some hon. MEMBERS: Who.

Mr. HARRIS: I could name them. One of them is smiling at me now as I look them over. You have not been very long in this country, and you have done mighty well since you have been here. It is a pretty good country for you, and we welcome you and are glad to have you. But do not try to tell some of the older inhabitants what we ought to do. Get in line with us and help us to bring this country to the place where she belongs! Line up!

Mr. FORKE: May I ask how long the hon. member has been a Canadian?

Mr. HARRIS: I do not know anything different. I was born within a few yards of where I now live, in the centre of an eighty-six-acre farm, which to-day is peopled within every thirty-foot lot by home-loving people, with paved streets through the whole of it, I have stuck right to the place where I was born, and I hope I shall still remain there. But I know what is running through my hon. friend's mind. He thinks "what were your progenitors?" Like a good many more people in the old province of Ontario, I happen to be a descendant of an Englishman, from Bedfordshire, a man who came over here on a cattle boat and earned his first Canadian dollar right on the same street where he lives now. He has worked hard and has done reasonably well for a man who never went to school. He raised a family of nine children. I would hesitate to say how many grandchildren he has, but it is quite a number. Not only that, when I think of the rest of his lineage, I recall one brother with ten children near my own riding—that is why I get such a large majority. I think of another uncle in Australia, with seventeen children. There is only one other member of the family, and he is out west, and has eleven children. Yes, and when I think of my own immediate family, I can find a lead for me to follow, for the one next to me has seven children, and is still going strong. I have four myself, and I am the youngest man in this house.

Mr. Speaker, when I was interrupted I had said something on behalf of Canada with regard to every province perhaps except that keystone to the whole arch of our Canadian civilization, the province of Ontario—Ontario with the descendants of English, Irish and Scotch stock, with her people who have in their makeup British ideals and traditions—Ontario is ready and always has been ready to march in line with all the other provinces of this Dominion to bring Canada to her destiny. Ontario always has been ready to move forward for the sake of Canada, and if we in Canada can get into our minds that we to-day are a Canadian people, a Canadian race, having in our makeup that ideal which is absolutely necessary, that through the history of civilization for the last eight hundred years or more we have found one dominating factor which has been the greatest agency for good to civilization, and that factor is that the British commonwealth of nations has been able to maintain itself and deal justly with every one she has come in contact with —so long as we remember that we are the Canadian race of people, and if we determine to remain firmly within the ambit of the Britannic commonwealth, realizing that in order to carry forward our ideals, we must maintain our place within the empire, then in my opinion, Mr. Speaker, we shall fulfil our destiny.

Mr. W. J. HAMMELL (Muskoka): Mr. Speaker, in rising to participate in this debate, my purpose is not to dwell on any particular phase forming the subject matter of the financial statement or of the budget resolutions so ably presented to this chamber by the Acting Minister of Finance (Mr. Robb). I propose to again leave the beaten trail, as I did in similar circumstances last year, and crave the indulgence of hon. members for a short discussion of one of the most important branches of our national trade, and one which, unfortunately, has been far too long neglected. I refer, Mr. Speaker, to that great source of actual and potential revenue, the tourist trade. The purpose of my remarks is primarily to bring to the attention of the government and more particularly to the attention of the hon. Minister of the Interior (Mr. Stewart) the urgent necessity and the beneficent effects to be derived from a government policy which would make for the proper exploitation of one of the greatest of our natural resources. In fact, the great value of the invisible exports to be credited to our tourist trade can be classed at the head of the list when we consider our national business from the viewpoint of desirability. Yet this important factor has grown in spite of nearly absolute neglect. I propose to show some of the important reasons why it is most desirable that our federal government should take immediate steps to set in motion the necessary machinery to systematize and develop this great national asset.

On the 7th of May last year, during the budget debate, I endeavoured to show with reliable figures and carefully prepared estimates the undoubted value to the nation of the tourist traffic. I may be permitted to quote one or two passages from those remarks. In giving a comparative table of amounts derived from wealth-producing industries I said, as reported at page 1857 of Hansard for 1924:

> Taking only those industries which are absolutely basic we get this amazing comparison. The figures are for the year 1923, and are as follows:
>
> | | |
> |---|---|
> | Agriculture and agricultural products.. | $407,760,000 |
> | Wood and wood products.. .. .. .. | 228,756,200 |
> | Tourist travel, estimated.. .. .. | 136,000,000 |
> | Animals and animal products.. .. .. | 135,000,000 |
> | Minerals and mineral products.. .. .. | 123,142,653 |
>
> Is it not amazing to find this item of production to which we have paid so little attention with a value higher than that of our animal and animal products or than the wealth produced by our mines?

And again on page 1859 of Hansard, 1924, I read:

> Turning for a minute to the automobile traffic over our borders, we find still more amazing results. In the year 1923 the Customs department recorded entries of 1,936,598 cars. A large number of this total of cars stayed in Canada for a period of twenty-four hours or less; on the other hand, more than 200,000 stayed for a period ranging from two days to one month, and some 3,000 cars stayed from one to six months. Even taking a most conservative estimate of three passengers per car, and an average expenditure of only $20 per car, we obtain a total expenditure from this source alone of $40,000,000. And when we consider the cost of maintenance and upkeep, gasoline, oil, and so forth, for the car and the food and lodgings for the passengers, without even including the large sums spent for souvenirs, entertainments and so forth, we readily realize that this is a most conservative total.

Now, Mr. Speaker, it is pleasant to realize that greater interest in the tourist trade is being taken throughout the country, and since the publicity given to my speech of last session I have received hundreds of letters and newspaper clippings from all parts of Canada. The press have taken up the battle cry and are spreading the good news. Automobile clubs, good roads associations, and many other organizations are lending their efforts to the development of the tourist traffic and interest is constantly increasing. Letters have come to me from all points in Canada and many parts of the United States on this subject. I have here one letter from Halifax and another from Vancouver which I desire to read. The first is from Mr. E. G. Stairs, of Halifax, and reads as follows:

> My Dear Sir,—As one who has made a personal study of the tourist trade and its possibilities by my own travels and investigations across Canada from Halifax, my home here, may I ask you for a copy of Hansard with your May 7, tourist speech.
>
> Many thanks,
>
> E. G. STAIRS,
> Halifax.

The other is from Mr. J. R. Davison, Manager of the Vancouver Publicity Bureau, and reads as follows:

> Dear Sir,—In a Toronto paper of last summer I note a report of a speech made by you in the House of Commons last year in regard to the value of the tourist traffic.
>
> This has a very great deal of excellent information in it and all your points are, I think, well taken. Among other things I note that you pointed out that the tourist travel is of value to the farmers. I am afraid as yet many of them do not realize this but it is a fact that the products of the farm form a great part of what tourists buy when with us. To make this point clearer out here we stressed it at our annual meeting in 1923. I am sending you a copy of the menu which will explain itself.
>
> You may be interested in looking over a plan we have suggested for the Dominion government. This has already been endorsed by the chief publicity organizations west of Quebec, and has received very general editorial support also. We are hopeful that the government will follow our suggestion, and put in operation some comprehensive plan for increasing the revenue from this very valuable traffic.
>
> This year has been the most profitable we have ever had, and we believe that a campaign such as we suggest will bring a great deal of business to all parts of the country.

I would like to hear from you on receipt of this, and trusting that you may be able again to put forward the need of aggressive action by Ottawa.

Yours very truly,

J. R. DAVISON.

Now, the menu card enclosed with this letter deserves special commendation. On one side the heading reads: "This is what we eat," and the dinner menu is given. On the other side appear the words. "This is what the tourists eat."

This page is certainly worth quoting and here are the figures given:

It is estimated that the tourists visiting British Columbia last year consumed foodstuffs to the following amounts:

Cereals, 1,323 bags or 132,300 pounds; bacon and ham, 394,800 pounds; bread at one pound a loaf, 2,100,000 loaves—2,100,000 pounds; jam, 315,000 pounds; coffee, 78,750 pounds; tea, 78,750 pounds; sugar, 279,300 pounds; butter, 180,000 pounds; vegetables. 2,100,000 pounds; potatoes, 42,000 bags or 4,200,000 pounds; fish, 2,100,000 pounds; flour, 630,000 pounds; salt, 31,500 pounds; fat for cooking, 210,000 pounds. Meat: cattle, 3,500 head; hogs, 8,400; sheep, 25,200. Fruit—420,000 pounds: apples, 21,000 boxes; cream, 73,500 gallons; milk, 262,500 gallons; syrup, 4,200 gallons; eggs, 8,400,000.

In reference to the number of sheep consumed this remark is appended:

Hon. E. D. Barlow said there were 50,000 sheep in British Columbia. Tourists ate over half our flock. He will have to count them again.

And I could keep on quoting for hours along the same lines, showing the great economic value of the tourist traffic. Suffice it to say that we are not in any way depleting our reserves when we deliver our goods through the eyes of our tourist friends. When we feed them our farmers profit; when we transport them our railway and steamship companies benefit; in fact every time a tourist moves some part of our economic structure is called into function, and the collective mass of this travel provides a real impetus to trade generally.

Another very important factor that is too easily forgotten is that tourist travel has a secondary influence, often far-reaching in its benefits. It builds up good-will and understanding and it opens the eyes of the visitor to the possibilities of the country. Many a holiday has culminated in an investment or in permanent settlement. It is said that the wonderful industrial development of Shawinigan Falls is traceable to a summer holiday spent in lower Quebec by one of our great capitalists. And if the truth were known it would perhaps be amazing to realize the prominent part played in the development of our country by those who first came here seeking pleasure and rest and who could not fail to realize the immense possibilities of our vast Dominion with its great wealth of natural resources.

That Canada has the required scenic beauties to attract and please the tourists is beyond discussion. There is not a single province that does not possess scenic marvels and points of beauty such as the tourist craves. Right at the door of this capital city lies th wonderful valley of the Gatineau capable of attracting and sustaining the interest of thousands and thousands of tourists. We have from east to west a chain of holiday paradises which are veritable fairylands for the tourists. The Bras d'Or lakes, the Garden of the Gulf, the Land of Evangeline, the magnificent Laurentides, the far-famed Murray bay, the Thousand Islands, the National parks, all are assets beyond value, ready to be exploited for the national benefit. I need no excuse to advertise the beauties of my own district of Muskoka; its myriads of lakes, streams and waterfalls, its countless attractive islands, its beautiful and ever-charming scenery, its healthful and invigorating climate, are yearly the pleasure grounds of increasing thousands. Here, if anywhere, the value of the tourist business is realized and every effort is courageously being made for its development. All in our district take a personal interest and have at heart the conservation of the scenic wonders of this fairlyland on the Georgian bay, and we feel, that the efforts we are making will result in benefits that will be nationally felt. The development has been marked in recent years and the number of visitors is continually increasing. Not only this, but scores and scores are added annually to the number who have already become permanently settled summer residents in the various localities.

The investment in property beautification and conservation has already reached a very large sum and costly additions are made every year. I again refer to my remarks of last year, at page 1858 of Hansard, to show what the tourist traffic means in this locality alone. I said last year:

Taking as a survey, that each of the 155 places referred to, with their accommodation for 10,000 guests, only filled their rooms five times each during the entire season, we have a total of 50,000 guests, which at an average expenditure of only $100 each would mean a total expenditure of $5,000,000. From a very conservative estimate of the value of the investment in that region we find that in cottages, resorts and launches, the total investment in the three sections of Muskoka, Lake of Bays, the Georgian bay, and Muskoka lakes, is well in excess of $20,000,000. And the investment is rapidly increasing from year to year.

On the Muskoka lakes alone we find this remarkable summary of investment, and my authority is

no less a person than the manager of the Muskoka Lakes Navigation Company:

	Summer cottages
Lake Joseph	175
Lake Rosseau	230
Lake Muskoka	490
Total	895

At an estimated average value of only $5,000 this alone represents an investment of $4,500,000.

	Resort cottages
Lake Joseph	12
Lake Rosseau	32
Lake Muskoka	26
Total	70

The estimated total investment of these resorts is conservatively placed at $2,000,000. There are besides a fleet of 22 steamers valued at $367,000 and 390 gasoline launches estimated to be worth $1,000,000. The total investment represented is $7,867,000. In this district alone the numbers of visitors during 1923 is placed at over 30,000, which at the average expenditure of only $100 each would mean a total of $3,000,000.

To handle this traffic, the help engaged on steamers, in the resort houses and in the cottages would represent 3,000 at an average of $7,500 per day for wages alone. The average daily population would be about 7,000 visitors and 3,000 employees, a continuous population of 10,000 per day during the summer months. So that, at an average of $1 per day per person, you would have a total of $10,000 per day for food alone. One could go on endlessly quoting statistics of the importance, from the tourist standpoint, of this locality; and what applies in one part of our country would be more or less general to all those wonderful sections that our country possesses.

That the estimates and statistics just referred to are the most conservative can be better realized from the following passages which I will read from a letter addressed to me a few days ago by Mr. W. J. Moore, general manager of the Huntsville, Lake of Bays and Lake Simcoe Navigation Company Limited. Mr. Moore says, in part:

The owners of the different hotels and resorts in Lake of Bays district catering to the tourist traffic, must have an investment of from one to one and a quarter million dollars in buildings, furnishings, etc. You will understand that it is difficult to give accurate figures of investment in hotel and resort properties, in the absence of figures from the owners, which are difficult to obtain.

My estimate is that at least 10,000 people, including summer cottagers, hotel and boarding house guests, and motorists visited the Lake of Bays territory in the season of 1924. Within such territory there is at least 350 summer cottages, 200 gasoline and small steam launches, also hotel and boarding house accommodation for summer guests to the number of about 2,800. Each year is showing a decided increase in the number of vacationists from the United States.

Concerning tourist traffic during summer season to this section of Ontario and Muskoka, I should certainly like to have been in a position to give you something definite as to the number who visited this territory in the season of 1924, but regret that I can only form an approximate idea, because of the very large number who travel by motor car. A large percentage of the latter traffic do not even patronize the hotels and resorts or boarding houses, but prefer to pitch their tents on camping grounds and then attend to their own cooking, etc. The season 1924 showed a decidedly large increase in the travel by motor car, to Huntsville and points beyond here.

To appreciate properly the remarks which I have just quoted from Mr. Moore's letter, it is necessary to keep in mind that the data which he gives apply only to the Lake of Bays district, which is by far the smallest of the three main sections of Muskoka. The Muskoka lakes and Georgian bay sections are not only greater in extent, but the development there has made greater strides.

Perhaps I may be accused of partiality to Muskoka. In explanation let me say that being in closer touch I have been enabled to obtain more detailed information from my own district. However, the general information which I have and the mass of statistical data in my possession enable me to say that what is true of Muskoka is no less true of scores of other districts. We are truly the inhabitants of a real everyday wonderland, and the apathy which we have shown by our inertia in the development of this vast possible trade is far from creditable to our spirit of advance. That this condition should so long have existed is very difficult of explanation, more so when one considers that in no less than forty different constituencies the problem awaits development for the pleasure of the tourists and to the great benefit of Canada generally.

I now desire to read a few passages from newspaper editorials, and other writings, to show the wakening of interest which is taking place and the demands from the press for the development of this very important natural resource. In these passages hon. members will also note the large value placed on the tourist traffic by independent observers. First I have a quotation from Mr. Frank Waterhouse, President of the Seattle Chamber of Commerce, which shows the tremendous benefits derived from advertisment. Mr. Waterhouse says in the Victoria Times of October 31, 1923:

Three years ago Tacoma's tourist population was 100,000. The expenditure of $65,000 in advocating this traffic brought the total of transient visitors to 350,000 in 1922 and to 500,000 in 1923.

From the Natural Resources Bulletin of the Department of the Interior, I find this passage, which I also read reprinted in an editorial of the Toronto Globe under date of December 20, 1924. The paragraph reads:

There is at least one direction in which Canada appears to enjoy a golden opportunity—the attraction of profitable tourist traffic from abroad. Already the Dominion's income annually from such business

runs into a large item, but there is every sign that we have merely scratched its revenue possibilities.

Under the heading "The value of the Tourist Trade" the London Free Press says—August 29, 1923:

However, there is another aspect of the tourist trade which is even more vital and more important. This is the fact that thousands of Americans from the interior states to whom Canada is a foreign nation and who imagine it is largely trackless forest peopled by bears, moose, Indians and gay voyageurs are having their eyes opened. The constant streams of Americans to Canada will do more than any treaties or acts of congress or parliament to make for good-will between the two countries.

I find the following appreciation, well merited indeed, in the British Columbian of New Westminster, August 13:

In contrast to the failure of the British Columbia government to estimate the wealth that will flow to the province by the capitalizing of its scenery, is the work of the Dominion Parks Service in developing great national park areas, opening them to tourists, and making known their scenic attractiveness throughout the continent. The Dominion, in other words, went into the business of selling scenery for the benefit of all of Canada, and while the commercial side is not alone the mainspring of national park development, hundreds of thousands of dollars have been caused to flow through Canadian channels and especially British Columbia channels of trade by the National Park development.

The following paragraph from the Victoria Times has its own significance:

One of the advantages of the tourist traffic is that while the province of British Columbia has $90,000,000 worth of lumber less than in 1921 it still has the same scenic attractions it had in 1921, although $20,000,000 has been paid for enjoying these by visitors from every part of the world and the province has not been depleted.

The figures given are for the year 1921. A more recent survey of the value of the tourist traffic in British Columbia placed the revenues derived at over $60,000,000 for the year 1924. And let me again say that this large sum was reaped without sacrificing a single stick of timber.

The Financial Post, after completing a survey and review of the tourist traffic, has this to say:

There is perhaps no more profitable industry in Canada than the tourist industry. Like any other industry it shows returns for good sound business backing. It pays for investment in good roads, it pays dividends on capital invested in hotels which give satisfactory service, and it pays in profits to dealers and to merchants, who sell wanted goods at fair prices. And over all, like any other well conducted business, it shows satisfactory returns for money well expended in advertising when the governments, the hotel-keepers and the merchants are prepared to live up to the advertising and send back to their homes satisfied tourists who will multiply the benefits of the benefits of the original expenditure.

The Vancouver Sun adds its approval in the following words—June 19, 1924:

[Mr. Hammell.]

From motor traffic alone on a conservative basis the city of Vancouver benefited to the extent of $12,160,000. When it is remembered that an equal number of tourists came by rail and water, and that according to calculations of the companies which brought them here they spent as great a sum, it means that virtually 25 millions was reaped.

Is this not a business worthy of the greatest encouragement, one that with practical neglect brings in a single year business to the value of twenty-five millions of dollars to a single city? The Border Cities Star published on January 12, 1925, an editorial dealing with the tourist traffic under the very well chosen heading of "Tell the World." They reprinted this editorial and gave it very wide circulation. The heading of the reprint is worthy of note; it says:

By way of explanation:

The attached editorial appeared in the Border Cities Star, Windsor, Ont., on January 12, 1925. It is sent to you in the hope of stimulating a move that is admittedly of great importance to Canada. Bringing the Dominion and its advantages to the notice of other peoples, and particularly in the United States, through the medium of the radio, advertisements in foreign newspapers and magazines, etc., as well as individual effort by Canadians in general, should mean much to our country.

THE BORDER CITIES STAR.

The editorial itself starts as follows:

As The Star pointed out in these columns a few days ago, one of the most important sources of revenue upon which Canada can draw is that of the tourist industry. As noted at that time, an unofficial estimate places the return from this agency last year at approximately $150,000,000, or $25,000,000 more than American investors are said to reap annually from their holdings in this country. Nothing then could be more obvious than the desirability of building up and adding to the size of this extremely valuable avenue of income.

And among other suggestions, all very good indeed, I find in the last paragraph this very good idea for the use of the radio:

The further suggestion has been made that the radio offers one of the most advantageous means of attracting tourists and immigrants. A great government broadcasting station could reach every corner of America. High class musical programmes interspersed with attractive national salemanship in the form of lectures, talks and invitations would undoubtedly bring results. The "stunt" would be more or less original and undoubtedly would attract great attention across the line. "Canadian Nights" on the radio would be looked forward to in millions of American homes and no one would be more interested than the several million former Canadians now residing all the way from Maine to California. For them these "Canadian Nights" would constitute a breath from home and in more than one instance might be the means of bringing repatriation. The Canadian National Railways is doing some excellent broadcasting work, Why not build up this idea and cash in on it?

In a lengthy editorial, condemning the inactivity of the federal government in this field, the Winnipeg Free Press of January 12, 1924, has these two telling paragraphs:

One of the worst cultivated natural resources of this country is its tourist industry. The number who annu-

ally tour part of the land is wildly enumerated in millions, and their aggregated expenditures within the country are supposed to run into hundreds of millions of dollars. Neither estimate can be verified without more specific information, which will not be available till Canada has, like New Zealand a government tourist bureau.

After a general review of the situation and after pointing out what is being done in New Zealand, France, Italy and Switzerland, and after making a number of suggestions, the Winnipeg Free Press editorial referred to ends with this paragraph:

With infinitely more to offer, and with a tremendously rich and willing source from which to draw, Canada, governmentally, ignores its tourist harvest.

It will be seen that interest has become aroused in this new industrial field throughout the confines of our Dominion. In choosing a few quotations from newspaper editorials it has been impossible to give fair play as the time available precludes the possibility of doing justice to the mass of excellent editorial references made on the tourist traffic, its benefits and the methods suggested for its development.

From a business viewpoint one might quote the following as the principal reasons for the development and marketing of our scenic resources:

1. The financial benefit to farmers by the requirement of foodstuffs for the tourists.

2. The impetus to trade, hotels, resorts and business generally through the necessary catering for this large transient population.

3. The large volume of increased business for our various transportation companies.

What can be sounder economically than the development of a natural resource which increases in value by its marketing and in no way suffers the depletion of its original wealth? We empty our mines of their valuable deposits and then hunt for new ground to despoil. The exploitation of our forests has gone on at such a pace that our remaining reserves are yearly becoming more remote. Our commercial fisheries have required stringent control to prevent their disappearance. In a word, is it not true that, perhaps with the exception of agriculture, in every line of industry we destroy to produce? It is not so with our scenic reserves; their development means their conservation, their beautification and their amelioration. The returns which they provide never deplete the shelves of our reserves and we can sell indefinitely without ever replenishing our stock in trade.

The parity of our dollar is attributable to a very large degree, if not entirely, to the revenues derived from our tourist traffic. Hon. members may ask how. The explanation is that we pay with one hand dividends and interest on stock and bond holdings to foreign investors, and we balance our ledger by receiving with the other their contribution in payment of our scenic beauties and amusement facilities.

At a time when we require additional business to provide additional employment we cannot pass up the development of this so desirable business. I am firmly convinced that we can no longer delay the exploitation of this national asset and would humbly suggest that the best means to attain success should follow along these lines:

1. The establishment of a separate government branch specially organized for the development of the tourist traffic, and

2. The expenditure of required moneys to properly expand and cultivate the tourist traffic.

The branch which I suggest should have full powers to co-operate with all other government departments and be prepared to collect and systematize reliable statistics for advertisement and other purposes. It should also, among other things:

(a) Co-operate with all existing tourist bureaus and similar organizations with a view to welding the whole into a formidable advertising and co-operative agency, eliminating duplication of effort, providing required assistance, etc;

(b) Publish timely and well directed advertisements, together with stories, articles and pictures to make our scenic and natural beauties better known;

(c) Undertake the preparation, publication and distribution of pamphlets and other literature for the information of intending tourists;

(d) Organize and maintain an up-to-date, accurate and adequate information bureau for the benefit of all intending tourists;

(e) Work for the betterment of hotel accommodation, scenic roads, camping sites and generally for the provision of all possible facilities for the tourists.

In addition to the work I have just briefly outlined, the government should endeavour by conference and inquiry to bring about an absolute uniformity in all the laws of the different provinces in so far as they affect the tourist. I am sure that the co-operation of the provinces would be willingly forthcoming. Particular attention should be given to motor car regulations, fish and game permits and such general laws and regulations as are likely to meet the tourist in the various

provinces. Customs regulations also should be made as easy and elastic as possible with a view to preventing delays and displeasure. In this connection the utmost care should be taken in the selection of customs officers, so that whilst performing their duties they can also very greatly facilitate and expedite the transaction of needed customs business by the tourist.

I cannot close my remarks, Mr. Speaker, without saying a word of appreciation of the yeoman service rendered to the tourist industry by both the Canadian National Parks branch and the Natural Resources branch of the Department of the Interior. The publicity carried on has been most timely and most instructive and has served to waken the dormant spirit in a number of our people. Let us hope that they will not only carry on but also increase their sphere of action.

I hope I have not bored hon. members and I trust the policy which I advocate will find favour in every corner of this chamber. I cannot think of a single interest which would not be represented in the benefits to be derived from the tourist traffic. We have at our door one hundred and ten millions of people comprising the richest nation in the world, a nation that loves travel and pleasures. Why should we remain inactive when reasonable effort on our part would attract them in scores of thousands? The question of the tourist industry is non-controversial and is of national importance. The farmer, the merchant, the manufacturer—all are interested in its development. Hundreds of reasons can be advanced in support of its exploitation, and I have yet to find a single argument against it. I have devoted a great deal of time, more so in recent years, to the study of this vast national resource, and I have consistently advocated the urgent need for federal action.

In closing, Mr. Speaker, may I say that I know of no better way of developing this country and of increasing our national prosperity than by taking advantage of this golden opportunity of capitalizing our natural scenic beauties and recreational facilities and selling them to the many millions of our American friends to the south of us, who are continually hunting new grounds for their enjoyment.

Mr. WILLIAM BLACK (South Huron): Mr. Speaker, in my few criticisms of the budget I intend to be very brief. I am inclined to think that in this House there is too much criticism of a destructive kind and not enough constructive. Sometimes I fear that members have lost the great visions of our statesmen of the past, the faith that our forefathers had fifty years ago in the destiny of Canada, when I hear certain hon. gentlemen in one breath disparaging their country and in the next breath wondering what is going to happen. The great problems that we have to face to-day are debt, taxation, unemployment, railways, immigration, and probably labour. I feel that we in this corner of the House are in a very happy position in that regard. Speaking for myself, I have supported the government in every measure they have brought down that I thought was in the interests of the Dominion, and when my judgment told me otherwise I voted against the government.

We all realize the tremendous national debt that we have to carry to-day, a debt of two and a half billion dollars, which almost staggers the people. But, Mr. Speaker, when we read in the press of certain politicians all over the country saying, as the leader of the opposition (Mr. Meighen) said at Stratford last October:

> Working men banished—homes boarded up—factories closed—stagnation in business—despair in the hearts of artisans—these are the fruits of the present government—the tariff had closed two thousand factories and had driven 300,000 Canadians across the line.

When we read such doleful statements, we wonder when hon. gentlemen to our right tell us that the reduction in the tariff last year did not reduce the price of farm implements. If that be the case, I should like to ask them, what was all the hulabaloo about from them, or from the manufacturers themselves? Why, Mr. Speaker, hon. members to our right say in one breath that the country is going to pieces on account of the reduction in the tariff, and in the next breath that the farmers will get no benefit on account of that reduction. I may say that at one time I was a free trader. In the late eighties and early nineties I was as strong a free trader as there was in the land. But things have changed in the last forty years, and to-day, although I am a very low tariff man, I do not think I could at this time support free trade.

The hon. member for Fort William and Rainy River (Mr. Manion) has been telling us about the hard times that prevail. Now it seems to me that instead of calling the country down we should do something to build it up. I had to examine the Parliamentary Guide to see when the hon. member for Fort William and Rainy River came to this country, and I found that he was born here in the early eighties. He would be a young man in the nineties, and if he had lived and worked on a farm at that time as I did, he would have little to say about hard times to

day. I heard the hon. member for Dufferin (Mr. Woods) speak about selling pork and fat cattle at $3.50 or $3.60 a hundred. I well remember those days when times were so hard that one scarcely knew where the next dollar was coming from. But conditions are difficult enough to-day on the farms. I come from one of the best counties in Ontario, where last year the harvest was the best we had had in fifty years, probably the best we ever had. But with the high taxes, with heavy overhead expenses and with everything we have to buy commanding top prices, even one good crop will not set the average farmer on his feet. I do think, however, that we are having better times now than we had in the late eighties or early nineties.

In 1911 the farmers of this country had the greatest opportunity that ever presented itself to them when the reciprocity pact was thrown into the political pot. But the pot boiled over and burned sixty-six per cent of the people of this country. And who was to blame? I say it was this ignoramus bunch of eighteen in Toronto—"the noble eighteen" as some people called them—they are the men who are largely to blame for Canada's position to-day. They spread over the country cartoons playing upon race and religion to such an extent that it was a shame and disgrace to this fair Canada of ours.

Hon. members to our right talk about stagnation of business and indulge in other kinds of political propaganda. But I ask them, why have three hundred thousand of our people crossed the border? Why are factories closed, if any are closed? Why is the labourer out of work? Why are the boys leaving the farms? Why have we, in this the most glorious country under the sun, such a tremendous debt? Perhaps I should not go back to the time of the Union government, but I do submit that, in the first place, daylight saving was the greatest curse this country ever saw; the resolution that was put through the House on that subject did more harm and made more lazy men than any other enactment that has ever been put on the statute book. The high financing of the war period was another curse to this country. While the young men of the land were called to the colours, our statesmen heaped one victory loan upon another and saddled the country with a staggering debt. Why did they not tax the men who stayed at home? In 1917 a man came to me and wanted me to go out collecting subscriptions for victory bonds. I refused point blank, and was asked the reason why. I said that if the finance minister of the day did not raise part of the money as he went along instead of heaping one loan upon another, somebody else would have to get the subscriptions. Not only that; look at the amount of money that was raised at that time in tax-free bonds. If I had my way I would call in every dollar of those tax-free bonds to-morrow. Why did they not tax those firms that piled up fortunes while the men at the front were shedding their life blood; at a time, in fact, when we were taxing the men on service to the extent of one hundred per cent?

I have a criticism to offer against the present government for not tackling the civil service problem as I think they should have done. I am sure that if they took the proper steps in this matter they would be backed up to the hilt by the people. If the Civil Service Commission are not carrying out their duty, I would dismiss them. If the fault in any case is with the deputy and not with the commission, then I would dismiss the deputy. Think of the army of men and women in the civil service, nearly thirty-eight thousand, between twelve and thirteen thousand of them in the city of Ottawa, according to the figures for 1922. I think their numbers ought to be cut in two.

One hon. member stated this afternoon that he was in favour of there being fewer members in this House, and I support him in that view. I myself last year was in favour of cutting the number of members down by at least one-third so that we should have not more than one hundred and sixty members after the next election. I would also cut the number of senators down to the extent of two-thirds, if they cannot be cut out altogether—either one or the other. I do not see any use in increasing the number of members in this House. If I might make a suggestion, outside of the leaders of the government and their first two or three lieutenants, thirty minutes is all I would allow any member on the floor of the House.

Mr. PELLETIER: Make it twenty minutes.

Mr. BLACK (Huron): I would be satisfied to make it twenty. I think in that way we could save this country hundreds of thousands of dollars.

With regard to immigration, I think this is probably one of the biggest problems this government has to deal with to-day. I am not one of those who believes that we should not have immigration. I hope, Mr. Speaker, that immigrants will flow into this country by the thousands and tens of thousands every year. If we had twenty-five million people in Canada to-day, which we should have had

if this land had been governed aright, a great many of our present day problems would be solved. The problem of our debt, for instance, would be solved without any trouble, also the National Railways debt. In my own province we could settle thousands of families. There are farms there where houses and barns have been built in years gone by which would cost more to build to-day than you could buy the house, barn and land for; there are thousands of such cases. On some of these farms there is no person living except the father and the mother. The others have left in years gone by for the west, or have gone into something else, and the old people are left there alone. Therefore, I would favour a very strong immigration policy indeed, only let us be careful in picking the immigrants that come to this country.

I am sorry the Acting Minister of Finance (Mr. Robb) is not in his seat, for I have a few suggestions to make to him. I have been an advocate of an export duty on wheat. That is the first thing I would suggest to the minister. I do not know what our western members will think of it, but I do not think an export duty would reduce the price of wheat in Canada one cent. I would put an export duty on our wheat going to the United States of 42 cents a bushel. I advocated that a year ago, as soon as the duty was put on across the line. Some people say they will hit us back in some other line if we do that. Well, that is their business. If they choose to do that, all right; I have nothing against it. But I think such a tax would be the greatest boon to this country at the present time. We farmers in Ontario could double our output in five years if we could get as cheap bran and shorts as we got fifteen years ago. Then they cost ten and twelve dollars a ton, while the average for the past five years has been twenty dollars and twenty-five. I am not speaking of last fall, when I paid thirty dollars for bran, and I do not think you could buy it any cheaper to-day. The great need of Ontario to-day is cheap feed.

I would also put an excise tax on automobiles, or raise the luxury tax by five or ten per cent on all cars costing over $800 or $1,000. I think the man who can buy an automobile that is worth $3,000 could easily pay double or treble the tax he is now paying.

I would also put an excise tax of ten per cent on leather, or else reduce the present tariff by that amount.

I would put a three per cent tax on all watered stock in this country. I have not been able to get any exact figures as to the amount of watered stock, but I will guarantee that such a tax would bring us in the ordinary revenue required in this country.

Mr. BENOIT: Why not ten per cent?

Mr. BLACK (Huron): That is perhaps more than the man is receiving on his stock. I think it should really be five per cent, but one or two with whom I have talked the matter over think that would be too high. I think we would easily derive between fifty and a hundred millions from such a tax.

I would also favour putting a small direct tax on the people of Canada, and lay that money by for a sinking fund to meet our obligations as they come due. Suppose it was a tax of one mill on the dollar. We had such a tax in the county of Huron during the war, and it did not cost the government of this country one dollar to collect it. It is the cost of collection that is the trouble with the income tax and the tariff tax to-day. Some men say it only costs so much to raise the revenue of this country by means of the tariff, but I will guarantee that for every dollar of tariff tax that goes into the treasury of this country, three dollars comes out of the pockets of the people.

Mr. BENOIT: Would this direct tax be a tax on capital?

Mr. BLACK (Huron): No, on the assessed value, one mill on the dollar. I forget what we raised in the county of Huron in those few years that we had the tax. The collector of taxes in the different municipalities could collect that tax, along with the other taxes of the township. It would not cost more than a few dollars to collect. The tax could be collected in the same way in the cities at practically no expense, and could be handed over to the government.

Mr. BENOIT: The tax would be applicable to real estate, I suppose?

Mr. BLACK (Huron): I would assess real estate the same as any other assessable property. I would not assess incomes for this tax.

In regard to our National railways, I would voice the sentiments of some hon. members of this House in favour of a re-valuation of the whole system from beginning to end. If we had to add to the public debt of this country the difference between the present value and the re-valuation, we would be further ahead than we are to-day the way it is. No doubt at the time the Canadian National railway system was taken over, conditions were something like those prevailing

when the returned soldiers got back and bought farms for ten and twelve thousand dollars which to-day are not worth six thousand dollars. If we added the difference in re-valuation to the national debt of this country, we would have to pay interest on it just the same as we do now with regard to the deficits on our National railways.

Railway freight rates to-day are too high; express rates are too high. In our part of the country in the summer time the auto truck is carrying a great deal of the passenger traffic, as well as a great deal of the freight traffic. We are building roads in the province of Ontario, and the auto truck is contributing practically nothing to their upkeep. We are also at the same time building railways, and we have to keep up the roadbed as well. A re-valuation of the National railways to my mind would be a great step towards reducing railway rates at the present time. Some people would say when it is proposed to reduce rates in Canada that they are lower here than they are in the United States. But is it necessary to take such a fact as that into consideration? Personally I am in favour of Canada running her own affairs and letting folks across the international boundary line do the same. The amalgamation of the two great railway systems in Canada has been advocated in order to bring about economy, and the hon. member for North Waterloo (Mr. Euler) has figured out that if this were done a saving of $75,000,000 would be accomplished. The argument is that if all duplication is cut out this enormous saving might be made. I believe that the gentlemen at the head of these two systems, Mr. Beatty and Sir Henry Thornton are two as able men as can be found in the world. I think these two great railway heads should get together and see what can be done in that direction. I am told that there are districts in Canada where the two railways are running parallel and that in some cases there are six, or eight or ten trains running in each direction every day. This must involve an enormous expenditure, and anyone can see what an enormous saving could be made if the duplication of trains, in some instances carrying only half loads, could be put an end to.

In regard to the budget, I was glad to learn the determination of the Acting Minister of Finance to withdraw the dumping clause. I am not going to say at the present time where I stand on the fiscal policy of the government, but if the dumping clause had been allowed to remain I should have had no hesitation whatever as to what course I should pursure. I shall not now indicate what I shall do; I will content myself by saying that I have not yet made up my mind as to which way I shall vote.

Mr. GROTE STIRLING (Yale): Mr. Speaker, I have listened with close attention to expressions of opinion from hon. gentlemen in different quarters of this House, some of which have been extremely long and some remarkably fluent. The ablest of them, perhaps, have been the utterances of hon. members who have the happy knack of saying just exactly what they mean without any redundant words.

I listened specially to the speeches from the government side in the hope that I might at least be able to get a clear understanding of what the fiscal policy of the administration really is. Hitherto I have been unable to grasp it. We hear it frequently described as a tariff for revenue. That appears to me to be exactly the same thing as the fiscal arrangement known as free trade in Great Britain; and yet supporters of the government not infrequently state their objections to being called free traders. When the hon. member for Vancouver Centre (Mr. Stevens) some days ago extracted a promise from the Minister of the Interior (Mr. Stewart) to explain a certain famous phrase which he had used I pricked up my ears for I thought that at last I should have the opportunity of listening to a solemn pronouncement of the fiscal policy of at any rate one member of the government, possibly even the policy of the government itself. Again I was doomed to disappointment for when that hon. minister spoke the following day he announced that free trade would not do for Canada, that if he had ever been a free trader the war had altered that. I am not quite sure that I follow him in that sentence. He went on to say that he did not believe "that adequate protection or high protection that our hon. friends are so fond of demanding."—I must say that I have not yet heard high protection demanded in this House—"is either necessary or in the best interests of the country." He was then asked if he believed in protection at all, and he replied:

5 p.m.

> Not if you define protection as "adequate protection." I believe in a tariff for revenue because I conceive that we cannot change conditions in this country.

I must presume that the hon. gentleman knew what he meant when he spoke those words, but his statement conveys absolutely nothing to me and I do not think it conveys anything to anybody else in this House. The minister was then asked if he believed in "inadequate protection," and his reply then was that there was not such an animal.

Although he was asked three times to explain "the death knell of protection" he failed to do so and contented himself with the statement that he had already explained it.

There is one feature in the budget proposals which will be received with considerable pleasure in the country, and that is the suggested increased duty on slack coal. Nobody can suggest for one moment that that is tariff for revenue. It is absolutely tariff for protection; and one cannot help wondering what has induced the government to move from a tariff-for-revenue policy towards a policy of pronounced protection. I cannot help thinking that the government, faced with an early election, has seen fit to balance up the probabilities of support to be received from the Maritime provinces against the support which it might probably lose in the west by adopting a purely protective suggestion. I think, too, that the government, in considering the circumstances which face it to-day, is not at all sorry to find that the rift in the Progressive lute has at last become audible, and for that reason has decided that there is more to gain in the east than it will lose in the west. So far as this is a genuine attempt to assist a Canadian industry I am wholly for it. My objection to it, however, is that it is merely fiddling with the question. It is doing a little piece to help one industry and leaving others untouched; there is no bold policy for the assistance of Canadian industries in the gesture. In the southern part of the constituency of Yale, in the Similkameen division, there are considerable colliery interests. Those colliery people are not in quite the happy state the hon. member for West Kootenay (Mr. Humphrey) has described the mining interests of his constituency to be. They are faced with very considerable difficulties. They review the situation very frequently. In order to explain their position I want to read a resolution which the Princeton Board of Trade has recently passed. I take it from the Princeton Star of April 2. This is the view that the Princeton colliery interests entertain of the situation:

Whereas the present consumption of coal in Canada is about 38,000,000 tons annually,

And whereas about 54 per cent of this amount is imported from the United States at a cost to the people of Canada annually of about $125,000,000,

And whereas coal equal in quality and in almost inexhaustible quantities exists in Nova Scotia and New Brunswick in the East and Alberta and British Columbia in the west,

And whereas for example a certain class of coal that could readily be furnished by British Columbia mines, enters Vancouver, B.C., from Bellingham in the State of Washington, U.S.A., to the extent of from 3 to 4,000 tons per month duty free,

[Mr. Stirling.]

And whereas all coal from British Columbia passing over a three-quarter inch screen, when entering the State of Washington is required to pay a duty to the United States of 53 cents per ton,

And whereas the bulk of the coal imported from the United States into Canada is consigned to the central districts of Canada, remote from the eastern and western coal fields,

And whereas a substantial duty on United States coal coupled with a subsidized railway freight service from our coal fields, would assist the coal mining industry, and make the use of Canadian coal in the central districts a possibility, giving employment to a very large number of our settlers in actual mining operations alone, and assisting in keeping our coal mines in operation 12 months of the year instead of a few as is generally the case at present,

Therefore be it resolved that the federal government be urged to at once adopt an active national fuel policy to include the levying of a substantial duty on all classes of United States coal and the reduction and adjustment of freight charges on Canadian coal to overcome its geographic handicap.

That illustrates the view which the colliery interests in Yale take of the present situation in the coal industry.

Coal is not the only industry in Canada which would surely be the better for assistance in development. I take it that all of those in this House who so frequently refer to a desirable policy which will enable Canadian industries to supply Canadian needs, will be in favour of such assistance to Canadian industries that they may have a reasonable opportunity of filling Canadian needs. Why should the poultrymen not supply every egg that is required in Canada and then have a considerable quantity for export purposes? In that regard I want to quote a sentence or two from the Summerland Review of March 19. There are many poultry interests throughout the Okanagan valley, the Similkameen valley and Grand Forks district, and this voices the interest of the poultry men:

Poultry farmers who have been interviewed by the poultry husbandry department of the University of British Columbia declare vehemently that unless some measures are taken by the Dominion government to prevent the influx of cheap Chinese and American eggs of the lower grades into Canada, disaster threatens a large number of men who have their capital and experience tied up in the poultry industry in British Columbia. * * *

Recent considerable importations of Chinese and American eggs into Canada disrupted the eastern Canadian market for the British Columbia men in the industry, it is claimed.

While the slump this year came one month later than in 1924, the situation is now more critical, it is asserted, because of the prevailing high feed prices, and is only a manifestation of the general situation existing in Canada since the United States imposed a duty of eight cents a dozen on all eggs going into the country, while the United States eggs enter Canada for three cents a dozen.* * *

The argument is advanced by some at Ottawa that Canadian poultry men do not produce enough eggs to supply the demand in this country. It is pointed out by Prof. E. A. Lloyd, of the poultry husbandry de-

partment of the University of British Columbia, that this is true, and it will always be so if Canadian poultrymen do not receive greater encouragement and support for increased production. The necessary confidence and faith in the industry is lacking and the situation calls for strong united action among the B.C. poultrymen, he says.

I want to read two clauses from that same paper, which were reprinted from the Vancouver Sun, because they bear on the whole situation:

United States, say reports from Washington, will place further tariffs on farm produce.

In brief, the Coolidge administration proposes to give American farmers the same protection for their home market as has been accorded to American manufacturers.

After the home market has been supplied at protected prices, United States proposes to dump her surplus into any foreign country that will allow it.* * *

Before it is everlastingly too late, Canada must wake up to the fact that Canadian markets have got to be protected for Canadian workmen.

This Dominion can be made the dumping ground for English, American or European products only at the expense of Canadian wage-earners. And the price Canada pays for cramping wage-earners is depopulation and stagnation.

Another industry which has been developed and which has attained its present situation under a small measure of protection is the fruit industry. It has sometimes been remarked that the fruit grower—and this remark has been particularly applied to the western fruit grower—is a spineless individual who is always glad to appeal, and even to whine, to some authority, governmental or otherwise, to assist him in his labours. That, I consider, is an utterly erroneous opinion, because I think the fruit farmer has battled, to a great extent successfully, with a very considerable number of difficulties. He has his difficulties in production, in the handling of his crops and in the carrying of his irrigation water, for a very large quantity of fruit in western Canada is grown under irrigation, in the old days under irrigation companies and in the present day under irrigation districts. Perhaps the greatest difficulty of all is in the marketing of his crops. It has been computed that at present some 20,000 people are directly dependent upon the fruit industry in western Canada, some forty to fifty million dollars are invested in that industry and a crop of somewhere around five thousand cars is shipped every year. I think I may safely say that eighty per cent of that crop is produced in the constituency of Yale. Just to the south of that area in Canada which is given up to the growing of fruit is the far larger, similar area through the three western states of America. I have no idea of the population which is dependent upon fruit growing there, but we know that the crop which they produce is some seven times larger than that produced in British Columbia. They have been established far longer; the areas from which they draw their crops are much more dense, connected together much more closely than our valleys in British Columbia, and they are able to handle more easily in their packing houses the larger extent of their crop; some of their earlier varieties come into the market a little earlier than ours; and they have large cities, pretty handily situated, for the consumption of their produce. Besides that, they have the balance of a population of 110,000,000 of a fruit-eating nation to consume their produce. Over and above that, when the crop in the eastern states of America is a large one and distribution begins to overlap that in the west, it is the desire of the western American fruit grower to use the Canadian market as a dumping ground for his fruit. When there is a large crop both east and west in the United States and in British Columbia, the two interests come into contact in the export market in Great Britain, and there again British Columbia boxed apples have to meet the competition of the American export crop which is three to four times the bulk.

In Great Britain, during Mr. Baldwin's previous term of office, the Imperial Economic conference passed several resolutions favouring preferences towards Dominion products. These preferences did not pass the House of Commons; the matter was dropped during the regime of the Labour ministry, and the last general election was not held on this question. Consequently the present administration did not see fit to enact these resolutions when they obtained power. Instead of that the government allocated the sum of £1,000,000 a year to further the interests of Dominion trade, and they appointed the Imperial Economic committee, which was directed to turn its attention chiefly at the present time to meat and fruit. We do not know what portion of that £1,000,000 will be available for assisting Canada, nor do we know what fraction of that portion will be forthcoming for the fruit industry. But Canada is represented on that committee by the Fruit Trade Commissioner. Australia, South Africa and New Zealand also have their representatives, but in each of those cases their government has seen to it that their representative will have the benefit of consultation with several other prominent fruit men from each of these countries. I regret to say that although representations have been made to the government to do the same

for Canada, the government has not seen fit as yet to do it. We know that the Canadian Fruit Trade Commissioner has not been in this country for two or three years and he is not right up to date in the latest progress which the fruit industry has made, especially the boxed fruit industry of western Canada; I know that he feels himself that he would very much like the assistance of an unofficial adviser or two, men who are right up to date in recent fruit history, with whom he could consult in order to form his opinions and place them before the committee.

The most prominent difficulty the fruit grower faces is that of marketing his products, and it is very interesting in this connection to take up the interim report of the commissioner appointed by the government to investigate the alleged combine in the distribution of fruit and vegetables. There are one or two other short extracts that I should like to read in this regard. The question for investigation was—

> Whether by reason of the operations of any combine of middlemen the interests of the public, whether producer, consumer or others, are prejudicially affected.

That was the object of the investigation. Let me read further:

> Of all classes of the population the producer, whether growing wheat, or eking out an existence in raising fruit and vegetables, or otherwise striving to wrest a living from the soil has had a bitter struggle. But among all producers it is doubtful whether any class has had a more grim and discouraging battle for existence than those engaged in fruit farming. Dependent on weather and season, toiling himself with wife and family early and late, compelled at times to employ additional help, obliged to purchase containers for a perishable product, dependent on agents to dispose of his product usually for an unnamed consideration on distant markets, and faced in a northern climate with American competition before his season arrives, the Canadian fruit grower has had to struggle desperately for a bare living. The wonder is that he survived.

I am not aware that the Commissioner who was appointed by the government for this investigation was a fruit man. It is therefore the more interesting to note the view which he took after his investigation of the difficulty facing the fruit growers. A page or two further on there is another short extract:

> The producers of British Columbia may be classified as organized and unorganized; and are known as co-operatives and independents. The co-operative associations, which represent an achievement in organization, have made possible what slight amelioration there has been in the condition of the growers. The independents are enabled in some cases to avoid certain of the overhead to which the co-operatives are subject, but in so doing, they take the benefits created by their fellow growers without contributing to the cost; and in many cases by their unregulated marketing seriously disorganize the market for both parties. Like some fungus they sap the strength of the tree which shelters them.

Another most interesting comment by this independent commissioner is the following:

> The British Columbia producers' goods come into the market after the various crops of the different southern producers have successively appeared. By that time the "cream" has been taken off the market, and consequently the British Columbia producer needs all the assistance he can get. His market moreover is what has been called a "pocket" market. It is limited to the three western provinces, for he is not in the position of being able to dispose of his goods north and south as can the producer on the American Pacific slope.

That view rather comes into conflict with the view I have heard more than once expressed by hon. members to my left, and something of the sort was mentioned not many days ago by the leader of the larger portion of that party (Mr. Forke). He rather gave it as his opinion, though not in so many words, that if British Columbia could not produce fruit and vegetables and market them in competition with the American producer British Columbia had better quit. I am glad to notice that that expression of opinion, and other expressions of opinion that I have heard as I have moved about amongst hon. members to my left, are not quite so destructive and caustic as they used to be, and I welcome the drawing together between British Columbia and the interests of the two provinces to the east.

Mr. FORKE: Three provinces.

Mr. STIRLING: Three provinces. There are many matters in which the interests of British Columbia and the interests of these three prairie provinces are closely intermingled, and certainly there is nothing that the fruit grower in British Columbia desires more than prosperity in these three provinces, as well as an increase in population. Supposing, through unfair action on the part of some government, protection were removed or so reduced as to cause the fruit growing industry in British Columbia to die out—what would be the effect on Canada? Certainly there would be a depletion in that district; the taxes already borne on a certain number of shoulders in Canada would after that have to be borne by fewer shoulders; the wholesalers' trade in the interior of British Columbia would diminish considerably. And I can assure you that in the poor trade years we have recently passed through the wholesalers of Calgary and the coast cities have looked upon that trade of the interior as their most valuable asset. What would be the result? Consumers in western Canada would pay more for their apples. There would be no more dumping of American

fruit in the prairie provinces; there would be no competition to hold down the price that the Americans chose to ask for their fruit, they would ask just exactly what they liked, and the prairie consumer could just take it or leave it.

The report proceeds to explain these wonderful Nash interests which the commissioner was instructed to investigate, how they consist of 45 incorporated companies in Canada, in close affiliation with 84 incorporated companies south of the line. They were by way of being jobbers, and such a combination of jobbers would be a pretty substantial economic unit for any other trade interests to compete against; but it becomes a far more venomous creature to deal with when within that combine of jobbers there is set up a combine of brokers, because those brokers are then able to receive produce, peddle it out to their own friends, their own houses, charge their commissions and, as is shown, in many instances in the report make unfair merchandising profits en route. There was one instance where one manager told another manager that December had been a good month—they had cleared $30,000 in one district office. Imagine that,—$30,000! Supposing that were made up fair broker's commissions, what an enormous quantity of fruit that would mean if it was handled in the one month of December!

I do not want to go further into the report at this stage. I commend its persual to every hon. member. In it he will find light and entertaining reading, he will find once more that fact is a good deal stranger than fiction; and if he takes any interest in the sports page of American newspapers he will be interested in the slang which these brigands use among themselves. But before leaving the report I want to draw attention to the final remark of the commissioner in part one, where he says:

> There is evidence to the effect that the remedy for many of the undoubted evils of the present situation is the formation of a growers' selling agency for sale direct to the various jobbers.

I refer to that because I have heard it stated on more than one occasion that the formation of a Canadian fruit distributors' agency only means doing away with one combine and the substitution of another. That view, I think, is based on misinformation. What the fruit growers propose is that the co-operative associations all over Canada should come together and place their own brokers in the field. I need hardly explain that that does not constitute a combine injurious to the consumer, because between those brokers and the consumer stands the jobber. The desire of the fruit grower is not to make commissions, it is to effect the largest possible distribution of his fruit at such a price as the trade will stand. It is no good his boosting the price, because it will reduce the amount of fruit distributed to the consumer. And I would remind hon. members that the domestic market is of far more value to the British Columbia fruit grower than any of the export markets of the world.

The situation now is, I think that some time ago the hon. Minister of Labour (Mr. Murdock) went fishing; he has just landed his first fish; it is called a combine; now that it is wriggling on the bank; it is seen to be an injurious combine; it is of no use to the producer, it is harmful to the retailer, it is unfit for human consumption. But he has seated himself on the ground beside it and he believes that according to the terms of his license it is necessary for him to wait three months to see whether someone will come along and scotch his fish. In the meantime the fruit grower is desperately anxious lest this fish should flop back into the water, and recommence its depredations up and down the creek.

Mr. MURDOCK: Might I ask the hon. gentleman, is he in a position to give me his opinion, or the opinion of any legal gentleman of his party, that the federal government has, as a result of the passage of the Combines Investigation Act, any authority whatever to take the action that I am sure my hon. friend would like to have taken and that he has a right to expect will be taken—can he give me the opinion of any hon. legal gentleman on his side of the House that we can go and do the thing that he wants done and that should be done?

Mr. STIRLING: Mr. Speaker, unfortunately I have not the Combines Investigation Act before me. I am strongly of the opinion that there is nothing whatever to prevent the federal government from proceeding along this line. But I would suggest that the hon. minister obtain the opinion of two of the legal lights of the ministry. I say the fruit grower is desperately afraid lest this evil thing should again get in his way. It is the more important that action be taken without delay because within the last three days I hear that the Associated Growers of British Columbia have taken the very strong step of forming their own brokerage offices in the three prairie provinces. Now, it is always a strong step to start out in a territory that has been hitherto served by a well established chain of offices. In this case it is a doubly strong step to take because this combine has not yet

been scotched. Whatever action the hon. minister may be considering taking, I appeal to him as strongly as I can in the name of the fruit growers to leave absolutely no stone unturned in stopping any further possibility of nefarious action on the part of these brigands.

Mr. MURDOCK: You may be sure of that so far as this department is concerned—within our rights and authority.

Mr. STIRLING: In this connection I want to read just one of the many resolutions which reach me in the mail daily, because opinion in the west is very much stirred up on the subject of this combine. I am quoting from the Penticton Herald of April 2:

The Penticton Co-operative Growers at their annual meeting passed the following resolution:

Whereas the fruit industry in the province is at the present time in a precarious condition to the extent that it is almost impossible for the grower to recover a living over the cost of production, and

Whereas the cause of this condition has been shown by the Duncan commission to be the result of vicious and unprincipled methods used by the Nash-Mutual interests in selling British Columbia products, and

Whereas Commissioner Duncan in his findings recommended among other things that in future jobber-owned brokerage houses be made illegal,

Therefore be it resolved that the Penticton Co-operative Growers, in annual meeting assembled, request the Dominion government to prosecute the Nash-Mutual interests with the purpose of securing restitution of moneys unlawfully deducted, and that the necessary steps be taken by the government to have the Dominion parliament at its present session enact legislation declaring jobber-brokerage houses to be illegal, and bringing into effect other recommendations made by Commissioner Duncan in the interests of producers.

I want to pass from that to a consideration of the dumping situation. The principle of protecting a country's products from the dumping into it of similar products from another country has been adopted in many parts of the world. Australia has it; New Zealand has it; South Africa has it; the United States has it, in a very violent form. Under the 1922 tariff act of the United States, if it can be shown to the president that importations are being made which may injure an American industry, the president may declare a duty; he may even forbid entry until an investigation has been made. The United States use that dumping clause. We read in the Ottawa Journal of March 28, the following despatch from Washington:

Anti-dumping provisions of the Tariff act were applied to-day by the treasury against the importation of pig iron from the province of Ontario.

They have no compunction about using it. Eighteen years ago—under the 1907 act—Canada adopted the well known anti-dumping clause. That clause has never been repealed nor amended. I want to touch on this matter shortly, because I am quite sure that there is a great deal of misunderstanding throughout the country, and even possibly in the minds of some hon. members of this House, with regard to the anti-dumping situation. The one and only dumping clause in the act respecting the Customs Tariff provided that a duty could be charged amounting to the difference between the actual selling price and the fair market value with this proviso:

Provided that the said special duty shall not exceed fifteen per cent ad valorem in any case.

As the years went on and the western Canada boxed fruit crop increased in size it became quite evident that that clause was being evaded. Furthermore, there were several years when on account of a glut in the American market, their fruit was being sold at slashed prices and when it entered Canada at those same prices, with the fifteen per cent restriction still on the statute book, the anti-dumping provision was perfectly useless. So as a result of representations made by the fruit growers in 1921 the previous administration amended the valuation clause in the Customs act—they did not touch the anti-dumping clause in the Customs Tariff 1907—so as to enable the Minister of Customs to pay attention to the cost of production as well as to the fair market value. That clause was a good one and was made use of in that fruit and vegetable season. A change of administration took place, and the present Minister of Finance (Mr. Fielding) in his budget speech of 1922 declared the government's intention to repeal the amendment to that clause in the Customs act. It was repealed, but owing to the consternation which that action caused among the fruit growers and the representations they made to the government, a couple of months later, the hon. Minister of Customs (Mr. Bureau) proposed an amendment to the Customs act which introduced clause 47A. The gist of 47A is that if dumping is taking place the Minister of Customs may, if he chooses, report the matter to the Governor in Council and the Governor in Council may, if he chooses, authorize the Minister of Customs to value such goods for duty notwithstanding any other provision of the act. That did not entirely satisfy the fruit growers, but it was certainly looked upon as better than nothing. Two years ago the Minister of Customs took a trip through western Canada and I had the pleasure of accompanying him part of the time through the valleys of the interior of British Columbia. He saw the conditions for himself; he appeared to appreciate the situation, and the fruit growers felt

satisfied when he left that he would do what he could to apply a remedy. However, toward the end of last year it began to be whispered about that all was not well with the dumping provision. When I reached Ottawa I placed six questions on the order paper. The first three referred to the amount of money which had been collected in duty, and the second three asked what claims, if any, had been made for rebate, the reasons for those claims, and the amounts. The only answer vouchsafed to me was a partial answer to questions one, two and three; I received no information with respect to the latter part of the question regarding rebate. I do not think that is to be wondered at, now that the Duncan report has come out because there are several paragraphs in that report which show that a rebate of the duty was granted if it was claimed. I want to read a few extracts from it, if I may. To begin with, I give the commissioner's opinion of the situation with regard to the dumping duty. He says:

It is a common trade practice for those whose home market is well organized to "dump" supplies abroad at prices below those obtaining on the home market. The Canadian fruit and vegetable growers, whose crop is later in maturing than that of southern growers, have long suffered from American fruit and vegetables being thrown on the Canadian market in this way. To the American exporter who has already taken a profit before the Canadian supply comes in, every additional dollar received means an addition to profits. The Canadian grower on the other hand, without government protection in the nature of a dumping duty, would be unable to exist in the face of organized American competition.

That is the view of the fruit commissioner after investigating the market conditions. Then he quotes the famous anti-dumping clause from the Customs Tariff 1902 and regulations relating thereto. I notice, however, that he makes no reference whatever to this government's valuation clause in the Customs act, clause 47A. He then proceeds to give instances of evasion of the dumping provisions, and we find that in some cases dumping was actually followed by rebate. Here is a telegram from the Mutual manager at Vancouver to the Nash supervisor:

Customs dumped us on car Walla Walla barb—

That means rhubarb grown in the state of Washington.

—which cost seventy-five cents. Are you paying dump duty? We protested wildly but had to pay.

The reply to that telegram, sent by the Nash supervisor, was as follows:

Bought barb seventy-five here but not hooked to date. Suggest send particulars your claim to A. E. Burns, secretary, Western Canada Fruit Jobbers, Winnipeg, for him to fight.

Then follows a letter from the same gentleman to the Canadian manager of the Nash interests:

Dear Sirs:

....Regarding the dumping duty on barb, I am suggesting to Snow that he forward all particulars of his claim to A. E. Burns, our secretary, Winnipeg, and I am satisfied if there is any chance Burns will be able to get Snow a refund. I wish you would just call Burns up on the phone and mention the fact that Vancouver got hooked on a car and that Snow is forwarding the papers,—

And so on.

Then the commissioner points out that on that date rhubarb was being dumped into Canada at 75 cents, while the Walla Walla market price was $1. The cost of production of the British Columbia rhubarb was 90 cents. He goes on:

It appears from the above that the price of the imported rhubarb was both below the Canadian cost of production and the fair market value as sold for American consumption. In such a case it is considered that it was the duty of the local customs officer at the port of entry to apply the dumping provisions of the Customs Act both at Vancouver and Calgary. It is not known whether the duty was imposed on Carruthers' car at Calgary or remitted on Snow's at Vancouver.

Then follows some correspondence between the Nash supervisor and the Mutual manager in Vancouver, as follows:

Dear Sir,—Mr. Simington advised that Mr. A. E. Burns, our secretary at Winnipeg, will be very pleased to handle your claim for dumping duties imposed on that car of barb, and when you forward him particulars, George, I suggest that you outline that you are exclusive selling agents for the Rhubarb Association, and at the time American barb was purchased there was none available in B.C.

Mr. Burns is a very competent secretary, and I hope that you will write him giving full particulars and asking him to handle your case.

So much for rhubarb. Now let us take a look at apples.

The Nash supervisor for Alberta and British Columbia sent a circular to all the Alberta houses, as follows:

I am advised that in nearly every instance where wholesalers have been compelled to pay dumping duty on apples that Mr. A. E. Burns has applied for refund and obtained it. I do not know of a case in Alberta where it has been applied, but seems to me some houses during last season had it applied on peaches or some other commodities, and I am satisfied if you have not obtained a refund, if you will be good enough to use our secretary, Mr. Burns, sending all particulars to him, requesting him to fight the claim for you, I am sure that he will be successful.

We contribute yearly to our Association, and I believe we have a very competent secretary, and I hope that any house having a claim will give it immediate attention by following instructions suggested above.

Then we have an instance of the dumping having been withdrawn. This is from the

Nash Canadian manager to the Nash supervisor:

Dear Sir,—I think some of our houses are importing American apples, and we are compelled to pay a dumping duty.

I learn from Burns to-day that he has secured a refund of the dumping duty paid by P. Burns & Company and the Macdonald-Crawford.

If there are any sales in your district with our interests, you had better have them submit claims for refund to Burns to handle.

The reply to that was:

Dear Sir,—Any of the Saskatchewan houses who paid dumping duty on American apples placed claim for refund. They have been notified by the local customs appraiser that their claims will be paid.

The commissioner proceeds:

On April 30, 1924, Mr. A. E. Burns of the Western Canada Fruit Jobbers Association, wrote the Customs and Excise Department at Ottawa, demanding remission of Dumping Duty on certain apples bought from the Yakima Fruit Growers' Association, Washington, at 80 cents f.o.b. It will be noted that Mr. Burns states in his letter that "at the time the dumping duty was applied there were no apples in stock." It is not known what is meant by this statement, for the official published figures of the Fruit Branch, Ottawa, show the following quantities of apples in storage at the points and on the dates mentioned:

Then follow the amounts: Added together, 240,000 boxes in Regina and British Columbia at the end of January, 1924; 141,000 boxes at the middle of February, 1924; and 99,000 boxes at the end of February. The commissioner proceeds:

The letter from Mr. Burns is as follows:

The Customs and Excise Department,
Ottawa, Ont.

Attention Mr. Watson

Dear Sirs,—I was in Regina and Moosejaw last week and found that dumping duty had been applied on cars of apples coming into that district on February 13 and 14, some to P. Burns' Co., Ltd., others to Macdonald-Consolidated.

At the time the dumping duty was applied there were no apples in stock. Macdonald-Consolidated stated they were out of this commodity for 12 days. P. Burns & Co. had only one variety and they were splitting them up with the other four jobbers.

The application of dumping duty on shipments in such times is only unadulterated gall on the part of some official who evidently must have known the existing conditions in these two points, and if he had made any inquiries, he would have known that the dump was unjustified.

The above jobbers are asking for a rebate and I would be glad to hear from you at once if you are going to grant same. Otherwise we will have to circularize every member of parliament and bring this unjust application of the dumping duty to a show-down.

I attach a memo from P. Burns & Co. which you might read and let me know if, in your opinion, this assessment was justified.

The commissioner proceeds:

This somewhat hectoring letter of Mr. Burns was replied to by Mr. J. A. Watson, of the Customs department, on May 7, to the effect that the collector of customs at Moosejaw was instructed that he might certify to refund claims of dumping duty paid on importations of apples if entered since the first of February last, and that the collector of customs at Regina would receive like instructions. It is evident that if the customs authorities acted on the assumption that there had been no British Columbia apples available since February 1, 1924, they did so without consultation with the Department of Agriculture, which had accurate information on the situation.

It appears further that early in 1924, Mr. Burns reached an understanding with Mr. T. W. Mouat, special officer, Customs department, Nelson, B.C., that the dumping duty would not be applied after March 1, 1924. What was the information in the possession of Mr. Mouat as to the apple situation at the time does not appear. It is evident that Mr. Mouat's information was not of the best, for on February 29, 1924, Mr. A. E. Burns circularized all members of the Western Canada Fruit Jobbers' Association as follows:

Winnipeg, February 29, 1924.

Re Dumping Duty:

The understanding with Mr. Mouat was that after March 1, the Dumping Act would not be applied The dump has not been applied to Winnipeg cars but from Regina west. Mr. Mouat intimated he was convinced B.C. apples would not stand the haul to Winnipeg, but this is wrong as a few more days' transit would not count.

I am not surprised that the questions I have put on the order paper were not answered, because I can see in every case investigated where the dumping duty was applied a rebate was granted. I cannot help wondering why the duty was rebated. There must have been some reason. After the visit of the Minister of Customs to the fruit growers in British Columbia, it was understood that the government would make use of that clause, a clause they considered better than the clause of the previous administration, and yet something must have been wrong with the clause. I began to wonder whether it was possible that no action under that clause had ever been taken at all, and I made some inquiries, and I found that no order in council relating to Clause 47A had ever been issued. So the situation may perhaps have been this: Certain officials of the Customs department perfectly rightly, collected the dumping duty, but when it became evident that shippers had claimed a rebate of this dumping duty, the government must surely have considered they were not on very safe ground, for if the matter was taken into court, not having the clause in the act behind them, they would be caught napping and would get into very considerable trouble. I cannot help thinking that may have been the reason for the wholesale rebates granted of the dumping duty. It is quite incredible to me that the blame can be laid on the permanent officials of the department; they could not have taken such action as that which I have read from the

report without the instructions of somebody superior to them. When the budget proposals were brought down this session it was proposed by the Acting Minister of Finance to amend the old anti-dumping clause in the Customs Tariff 1907 which has never been touched yet. We do not know the reasons of the Acting Minister of Finance for that suggestion, and I myself was unable to find out what the new wording meant. It came as rather a shock to the House, and a shock to the fruit growers in the west, when six days later the minister announced the withdrawal of the proposed amendment. His explanation for taking that step was rather a curious one. He said:

> In the presentation of the budget I gave notice of a certain resolution to amend the dumping clauses. Since that time I have had further consultation with the officers of the department and have reached the conclusion that the dumping clauses as now incorporated in our act are considered sufficient to properly determine the value for duty purposes. Consequently I take this opportunity of advising hon. members that when we reach the committee stage I shall withdraw that resolution.

Does that really mean that the reason for withdrawing the proposed amendment was that the officials of the Customs department had not previously given their opinion on it, and consequently it was withdrawn? I can hardly believe that was the only reason. I am inclined to think that certain pressure must have been brought to bear upon the government just about that time and, having rather flouted certain interests in the west with regard to the budget proposals, it now thought it advisable to just concede something, and the proposed amendment was therefore dropped.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. STIRLING: Mr. Speaker, when the House rose at six o'clock I had very nearly completed the remarks which I wish to make respecting the fruit industry. There are, however, two things to which I wish to refer. I spoke of the small protection under which the fruit industry had been organized and had carried on to the considerable success which it has attained in British Columbia. I said "small" advisedly, for if you will examine the return which the Minister of Customs and Excise (Mr. Bureau) recently brought down, you will find that the average percentage of duty on all exports, both dutiable and free, which came into Canada, in the last five years amounted to 16.03 per cent. The similar figure for the last five years on apples, which constitute the largest bulk of the fruit produced in British Columbia, is but 12.4 per cent, 20 per cent less than the average duty protecting the industries of Canada when compared with the quantity which is brought in both dutiable and free. That, I consider, at the present time is adequate protection, and I do not think anybody could call it a high protection. I wish also to reiterate what I referred to before, and that is the satisfaction which I feel in recognizing a less harsh view adopted by hon. members on my left towards the fruit industry of British Columbia. They have been proceeding along co-operative lines. So have we. What we desire now is to see a greater measure of co-operation between British Columbia and the three neighbouring provinces. Why do I not hear hon. members on my left requesting the government to take action to clean up these filthy trade habits in the handling of fruit in our domestic market? The interests of the producer and the consumer in this matter are one. Why should I want to receive forty cents a box for my apples and the consumer in the prairie provinces pay three or four dollars a box? That is not to my interest, and I appeal to hon. members to my left to assist in this matter, to help us to clean up this disgraceful state of affairs in the three prairie provinces. I take it that they desire, as all true Canadians do, a movement towards the development of Canada for Canada's sake. That applies to the Canadian-born as it also applies to people like myself who are endeavouring, in however small a way, to do something for the country of their adoption. What we wish is that Canadian industries which are planted in this country should develop and continue and supply the needs of Canada.

I am glad to notice the removal of an anomaly under the sales tax. For several years past nursery stock has been on the exempted list under the sales tax; but by a curious decision by some official of the Department of Customs and Excise, tomato plants were considered to be something on which sales tax should be charged. A tomato plant has no value of itself, it has only a potential value. It is not until it is planted out in the same way that a rose-cutting is planted out that it has any value whatever. I see by the proposals of the Acting Minister of Finance (Mr. Robb) that this anomaly has been removed. But there is another piece of discrimination under the sales tax to which my predecessor drew attention in this House in

his speech on the Address, and that is the discrimination which exists in the printing trade. A printing office which does a business amounting to $10,000 and over has to pay sales tax; those doing a business under $10,000 are exempted. Possibly following upon those remarks, the Acting Minister of Finance last year spoke thus in his speech upon the budget:

> For the better protection of the revenue the sections referring to manufacturers doing business under $10,000 per year will be repealed. Removal of the $10,000 limit in connection with small manufacturing concerns will do away with difficulties in administering the act.

That sounded very good to the printer; but I was asked to look into the matter as there seemed to be some hitch, and on making inquiries in the Department of Customs and Excise, I found that although that regulation came into force on the first July, it appeared to apply to perhaps every industry except printing, for under the authority of section 19 BBB, subsection 6 of the Special War Revenue Act, publishers or job printers, who manufacture or produce job printed matter to the value of less than $10,000 per annum, and who sell the job printing exclusively to users, are exempt from the consumption or sales tax on their sales as from the 1st July, 1924. I do not know why the Acting Minister of Finance spoke as he did and then acted as he did. I do not know what difficulty arose which made it necessary to reinstate this discrimination. But I would suggest to him that he consider the possibility of exempting the larger printing offices up to an amount of business of $10,000. That would remove the discrimination, and in any town where there was a large business and a small business, it would not be possible for the small man to advertise: Come to So-and-So and save sales tax, for both would be on equal footing.

I suppose, if you were to ask pretty nearly every person in Canada what this country needs most to-day, the answer would be: A reduction in taxation. Such reduction can only be brought about by public economy. What does the ordinary sane private man do when he strikes a bad patch? He jots down the necessary expenditures he must meet and then graduates up the scale towards the luxuries, cutting them harshly. Perhaps he allows himself a certain amount of recreation, perhaps he allows himself a car; but he carries out as drastic a cut as he is able to do and yet maintain himself and his family. Why should not a similar state of things exist in national life? I do not think that anybody can suggest that real economies have been effected by this government. For instance, a year ago it was brought to their attention that the Department of Soldiers' Civil Re-establishment had finished its day of usefulness; and how much more is that the case to-day? I want to draw the attention of the House to a few figures I have taken from the Auditor General's report. The expenditures in the Soldiers' Civil Re-establishment department during the following years were:

Year	Amount
1920	$47,198,718
1921	36,272,216
1922	17,818,646
1923	13,375,134
1924	10,230,149

To show my point I shall divide these amounts into the payments to and on behalf of the soldiers in one category and all the other expenditures, including salaries and administrative charges, in the other. I shall leave out the decimals.

Year	To the returned soldiers per cent	Cost of administration per cent
1920	56	44
1921	45	55
1922	39	61
1923	32	68
1924	29	71

I do not suggest for one moment that any single expenditure for the benefit of the returned soldiers or on their behalf should be stopped, but I do suggest that there is no warrant in that for maintaining a department for the benefit of a minister, however debonair he may be, and for the officials under his charge. Nor do I consider that it should be necessary for anyone outside the government to draw attention to so obvious a saving which could be effected by the closing-up of that department and the carrying-on of the work that is left by another department of government.

Before I resume my seat I want to place on record an incident which happened in the by-election campaign in Yale. The incident to which I refer took place in Penticton. We had welcomed in our midst the genial Minister of Public Works (Mr. King, Kootenay); he is always welcome. I presume he was enjoying a well-earned vacation, for I cannot imagine that the duties of his department could have kept him in one portion of one district of one province for so long a time. The Prime Minister (Mr. Mackenzie King) and his retinue had passed down through the constituency of Yale, and one of the ministers with him had spoken on every occasion of the beautiful eyes of the ladies, while the Prime Minister himself delighted several enthusiastic audiences

by his eloquence. He had appealed to the electors in the name of chivalry and decency and fair play to return a government supporter, explaining to them how much easier it would be for such an one to obtain the ear of his ministers. I may say in passing that with one exception I have had no difficulty whatever in obtaining the ear of the right hon. gentleman's ministers, and in that one case it was probably that the particular minister was so extremely busy that I was unable at the times I tried to get in contact with him. My opponent's agent had made his headquarters in the hotel in Penticton and had displayed a very considerable amount of hospitality, which I think had been appreciated. Three or four days before polling, the Liberal organizer in the west—that I think is his title—Mr. Turgeon, called on the president of the Penticton Board of Trade and said something like this: "Mr. Boyle, I want to obtain the support of the Board of Trade of Penticton and I assure you that if Penticton will give a majority for the government candidate I will pledge myself, on behalf of the Liberal party, to the building of a post office in Penticton," Mr. Boyle, who is a Conservative, asked what he could do and Mr. Turgeon replied, "I am not appealing to you as an individual but as President of the Board of Trade. Call your executive together and put my proposition before them." Mr. Boyle called together his executive, who also were all Conservatives, and he solemnly placed this suggestion before them. Penticton was good enough to give me a majority; Penticton did not get a post office. I place this incident on record in duty to the electors of Yale, because messy dirtinesses of this description are repugnant to a very great majority of those electors. Their desire is that the decencies of private life should enter into and dominate the public life of this country.

Mr. G. W. KYTE (Cape Breton South and Richmond): In discussing the subjects suggested by the budget and the speeches made in this debate, I desire to touch briefly upon a reference made to me by the hon. member for East York (Mr. Harris) in his address yesterday afternoon. In speaking of the proposal of the government to form a tariff board the hon. gentleman pointed out that in 1912 the government then in office also had a proposition before parliament to create a tariff board and he added that certain members now in the House of Commons supporting the present government and who were then in opposition had voted against that resolution. He proceeded to charge those members, including myself, with inconsistency if we dared support the proposal of this government. Mr. Speaker, I desire to say that his statement as to my having opposed the proposition of the government in 1912 to establish a tariff board is perfectly correct. I opposed it on the ground that the high protectionist government then in office ought not to be entrusted with the creation of a tariff board. The hon. member for East York could have found the reasons why I and other members sitting on this side of the House voted against that proposition. He would also find that the member for South Wellington (Mr. Guthrie) —who now sits with him—spoke and voted against it for the same reason.

And why did I not have confidence in a tariff board established by the government then in office? Because, only three weeks after that government came into power, by a new interpretation which they arbitrarily placed upon a certain clause in the customs tariff they removed from the free list an article that had been in use by the fishermen of the Maritime provinces for some twelve years and put it in the class of dutiable articles subject to a duty of 25 per cent. I refer to barked marline. In 1898, after the Liberal party came into office, in the course of revising the tariff they placed certain articles upon the free list, included among them being nets, twines, ropes and barked marline. Our fishermen enjoyed that privilege, as I say, from 1898 to 1912 when the new Minister of Customs under the Conservative government, owing to influences being brought to bear by the manufactures of cordage, made this arbitrary ruling a few weeks after he came into office, thus depriving our fishermen of the privilege of buying at a cheaper rate this article which they required in the carrying on of their business.

But, Mr. Speaker, that is not the only case. Rough lumber was also admitted under the free list from 1898 onwards, being enumerated as sawn lumber, while manufactured lumber was in the class of lumber having one side planed or "edged" as it is called. The lumber dealers in western Canada came to Ottawa at about the same time as the manufacturers of cordage came, and they pointed out to the new Minister of Customs that this rough lumber ought not to be admitted free any longer, that while the edges of the boards were not planed they were sawn with so fine a saw as to amount almost to being planed, and therefore should be subjected to a duty of $2 per thousand feet; whereupon that duty was imposed. The purchasers of that class of lumber, I think it was in the province of

Manitoba, took the matter into court. What the decision was I do not know as I was not any longer interested. That, Mr. Speaker, is the reason why I did not feel that I ought to vote for any legislation entrusting the government of that day with the appointment of a tariff board whose interest it would be to see that the tariff was kept up rather than down. Mr. Ames, then the member for St. Antoine, in a speech he delivered at the time, very frankly admitted that the result of the appointment of a tariff board might be that the consumers would be compelled to pay more for certain articles than they were then paying.

Now, the hon. member for Fort William and Rainy River (Mr. Manion) rather ironically referred to the condition of the Liberal party in respect of unanimity. He pointed out that there were grave divisions of opinion in the ranks of the members sitting on this side of the House, that some are free traders, some are high protectionists, and others are moderate tariff men, and that taking them all in all they represented a great medley of opinion. Well, we always find the maximum of unanimity in the minimum of numbers; and inasmuch as the hon. gentleman places so much value upon the virtue of unanimity, he has the consolation of knowing that just in the proportion that the Conservative group in this House continues to decrease in numbers so it will increase in unanimity.

Mr. MEIGHEN: It is the only group that has increased since the last election.

Mr. KYTE: They have increased by retrogression.

Mr. GRAHAM: The percentage was high, too.

Mr. MACKENZIE KING: They did not increase in West Hastings.

Mr. MARTELL: It takes an Irishman to answer an Irishman.

Mr. MEIGHEN: It was not very well done, though.

Mr. KYTE: I think it is very fortunate for the consumers of this country that the proposition for the establishment of a tariff board comes from a Liberal government whose ideal is protection—for we know that some burdens from the shoulders of the taxpayers. Supposing our Conservative friends were in office, and supposing such a proposal were submitted to a caucus of the party whose ideal is protection—for we know that sometime ago the right hon. leader of the opposition (Mr. Meighen) issued a manifesto in which he set forth the desirability of more protection—and supposing further that in his party there was that unanimity of opinion which the member for Fort William and Rainy River boasted of, what chance would there be of any low tariff men being appointed upon the tariff board? The government would be unanimously of the view that protection was the only thing for Canada, the more protection the better, and therefore they would see to it that those in favour of lower tariffs were not appointed. But under present conditions, if it be true, as the hon. gentleman said, that we have free traders in our party, high tariff men, and low tariff men, when the proposition is submitted to a caucus all those views will be expressed and represented, and that caucus will more nearly arrive at a proper conclusion as to what is best for Canada than would a caucus of our hon. friends opposite.

Mr. SUTHERLAND: Might I ask my hon. friend if he is arguing that his government are going to be a party to a low tariff commission rather than a commission that will judge tariff questions on their merits?

Mr. KYTE: I thought I was speaking loud enough for the hon. gentleman to hear me, but apparently my command of language is inadequate to enable him to understand me.

Mr. SUTHERLAND: Am I to infer that it is the intention of the government to appoint a free trade tariff commission to deal with tariff questions?

Mr. KYTE: I am not accountable for what the hon. gentleman understands.

Mr. SUTHERLAND: That is what I understand.

Mr. KYTE: If I were I would have a very much greater job on my hands than I have at the present moment. I did not suggest that the appointments to the tariff board would be dictated by the free traders in the party any more than that it would be dictated by the high protectionists—if there be any. It would be appointed with a view to promoting the best interests of all the people of Canada.

The presentation of the budget, Mr. Speaker, is always a milestone in the financial and business history of this country. The present budget also represents a milestone in the distance that we are getting away from the sad period of 1914 to 1918. The presentation of the budget by the Acting Minister of Finance (Mr. Robb) has been received with great favour all over Canada. A year ago

a great deal of pessimism was expressed by hon. gentlemen immediately opposite, as well as by their press, with regard to the dire fate that was to overtake various manufacturing interests in this country as a result of the fiscal proposals of the government. I do not propose, however, to discuss the budget in its application to the whole of Canada; my observations will be confined more particularly to the condition existing in Nova Scotia, a province of which I am one of the representatives. Things have not been going well in Nova Scotia, I regret to say, for some time.

Mr. SUTHERLAND: Or anywhere else.

Mr. KYTE: Oh, yes; there are places in Ontario where factories are working overtime and on double shifts.

Mr. SUTHERLAND: Where are they?

Mr. KYTE: Unfortunately, however, it is not so in Nova Scotia.

Mr. SPENCE: You ought to live in Ontario and find out.

Mr. KYTE: Thank heaven I am living where I am.

Mr. SPENCE: Well, we are glad you are.

Mr. KYTE: The grievances of Nova Scotia extend as far back as confederation. It is well known to students of the political history of this country that Nova Scotia did not take kindly to the confederation idea. After the leaders of political opinion in the great central provinces of Ontario and Quebec had come to the conclusion that stable government could not be continued under the conditions then existing, it was decided to bring about the union of those two provinces, and subsequently the idea was enlarged to include all the Maritime provinces. Following the conferences at Charlottetown and Quebec, called for the purpose of discussing the union of these provinces, it was decided that the Maritime provinces would be included. A campaign was carried on in Nova Scotia and great promises were made as to the advantages that would accrue to the province if it came into the union. The people of Nova Scotia, however, were not friendly to the idea. In the general election of 1867, which was known as confederation election, only one member was returned from Nova Scotia who was a supporter of confederation, namely, Sir Charles Tupper; every other representative from that province was opposed to it. And confederation has not worked out any better than was anticipated by the people of Nova Scotia at that time.

The second grievance that they have in Nova Scotia is the grievance in respect of the protectionist policy of the Conservative government from 1878 to 1896. The National Policy, which was expected to do great things in the development of manufacturing industries in Canada, had no place in Nova Scotia as regards the fulfilment of the promises that were made. Nova Scotia had its natural market in the United States, a market which has never been supplanted in any of the provinces of the confederation. The products of Nova Scotia are not purchased by the central provinces of Canada, but the people of Nova Scotia are compelled to purchase the manufactured products of Ontario and Quebec. The trade appears to be all going one way; the people of central Canada are sending their manufactured goods to Nova Scotia and are taking nothing but money in return.

Now, let us see how the National Policy worked out during the first ten years that it was in existence. In 1878 the Conservative party came into office on that policy, and the first census that was taken after that, embracing a ten-year period, was in 1891. If protection had worked out so advantageously to the people of Canada; if it had established a large number of factories and increased the amount of employment in those provinces, that would have been shown in the census returns. But so well was it known by the government of the day that the National Policy was a failure in these respects that instructions were sent out to the census enumerators and census commissioners in the various parts of Canada to make every effort to swell the number of manufacturing industries throughout the country. It is known that down in Nova Scotia an aged grandmother, knitting with feeble fingers by the family fireside, was set down in the census returns as a knitting factory. The woman who endeavoured to increase the family budget by taking in sewing was included in the list of proprietors of industrial establishments. A man who burned one kiln of lime for the purposes of fertilizing his own farm was set down as a manufacturer. If the National Policy has been a success, would it have been necessary to resort to this expedient of bringing about an apparent increase in the number of manufacturing establishments?

Down in Nova Scotia before the National Policy came into effect we had a considerable number of industries. In the town of New Glasgow, in the county of Pictou, there was a very prosperous glass factory which had operated for some years. The result of the

National Policy was to bring about the creation of a combine in respect of the manufacture of glass in Canada; this combine purchased the factory in New Glasgow and closed it down, and the doors have never been opened since. Before 1878 there was a large and prosperous business in the county of Pictou known as the Logan Cannery, which had carried on very successfully. It had paid dividends to its shareholders, for whom it proved to be a very profitable investment. But in 1885, five years after the National Policy got into full swing, it had to close its doors. It went into bankruptcy and took down with it in the crash the Pictou Bank, which had been a most useful and valuable financial institution in that part of Nova Scotia. There were, prior to the date which I mention, very prosperous industrial establishments of different kinds throughout Nova Scotia. In nearly every village and hamlet there was a thriving tannery, employing a few men, manufacturing leather which was sold in the markets at a profitable price. Within five or six years, or ten years at most, every one of these tanneries had closed down and no tannery is to be found in the province of Nova Scotia to-day from one end of it to the other. That is how the National Policy operated in the province of Nova Scotia, and it is not to be wondered at that the feeling in favour of protection in that province is not very strong.

Mr. SUTHERLAND: Will my hon. friend explain how the National Policy affected the tanneries? Hides are on the free list; there is no tariff against them.

Mr. KYTE: It created a combine, which squeezed the life blood out of every small tannery in Nova Scotia. Of course the hon. gentleman knows that, but he wants to hear me tell it to the House.

Mr. SUTHERLAND: How could there be a combine under the free trade which the tanneries had in regard to hides?

Mr. KYTE: We did not have free trade; we had high protection at that time. As I stated a few moments ago, they squeezed the life blood out of every tannery and no others have arisen out of the ashes since.

Mr. SUTHERLAND: There is no tariff on hides.

Mr. KYTE: No tariff on hides, but the capital that was invested in the tanneries in those days was lost and no one has since had courage enough to invest his money in another enterprise of that kind, lest the blighting influence of protection should once more overtake them.

Mr. SUTHERLAND: Was it not the need of a tariff that was the cause of all those conditions?

Mr. GRAHAM: But what about leather?

Mr. KYTE: There is only one kind of leather the hon. member for South Oxford (Mr. Sutherland) is interested in, and that is pigskin.

Mr. MEIGHEN: Is the hon. gentleman opposing the protection of coal brought down in this budget?

Mr. KYTE: My right hon. friend will hear from me on coal if he waits for a few moments. That is what I am here for.

Mr. GRAHAM: They are getting nervous, George.

Mr. KYTE: It contributes to the gaiety of the evening. Mr. Speaker, during the time the late government was in office, from 1911 to 1921, they appear to have put the soft pedal on protection. From time to time there were statements made by responsible members of that government to the effect that the time had come for a revision of the tariff, and the suggestion was never made that the revision was to be upwards; it was always to be downwards. Well, in 1920, when the present member for West York (Sir Henry Drayton) was Finance Minister, in the debate upon the budget the right hon. leader of the opposition spoke these words:

> So I say we cannot have any immoderate or high tariff for the reason, first, that it tends to exclude that healthy element of fair conditions, namely, foreign competition.

I think it was the hon. member for West York, speaking on the budget the other day, who deplored the fact that we were getting goods from foreign countries. He said there were $700,000,000 of goods being brought in here from foreign countries that ought to be excluded; but his leader in 1920 says, "You cannot have a high tariff because it tends to exclude that healthy element of fair conditions, namely foreign competition."

Mr. MEIGHEN: Who asks now for a prohibitory tariff?

Mr. KYTE: The hon. member for West York did in his speech on the budget.

Mr. McMASTER: Mr. Speaker, we are losing in this corner of the chamber the benefit of these gems of interjection. If the hon. gentleman would kindly speak louder—

Mr. MEIGHEN: I apologize, for if the hon. member is losing those, he is getting nothing else.

Mr. SPEAKER: I would ask that there be no interruptions without the consent of the hon. gentleman who has the floor.

Mr. KYTE: I shall have to begin this paragraph all over again:

So I say we cannot have any immoderate or high tariff for the reason, first, that it tends to exclude that healthy element of fair conditions, namely, foreign competition. Secondly, we have in Canada a territory of wide extent. We have a portion of Canada newer than the other portion, a more predominatingly agricultural country, newer to manufacturers and agricultural development, and consequently the advantages of tariff do not accrue as yet.

The right hon. gentleman having regard to the election that was coming on kept his eye upon the prairie west. He went on:

Upon account of these two reasons we must always have in this country nothing more than a moderate tariff under any conditions whatsoever. That will be the purpose of the revision under the principles clearly set out and enumerated by the Minister of Finance to which we adhere. On that policy I appeal to hon. gentlemen who have something great or small at stake in this Dominion, yes, I appeal to citizens, men and women, who have nothing of this world's goods at stake, whose only concern is the well being of their native land.

Not a word about high protection there, but just a moderate tariff. The hon. member for West York, then Minister of Finance, spoke as follows:

Our policy calls for a thorough revision of the tariff with a view to the adoption of such reasonable measures as are necessary to assist in providing adequate revenue, to stabilize legitimate industries and to encourage the establishment of new industries essential to the proper economic development of the nation, to develop to the fullest extent our natural resources, to specially promote and increase trade with the Mother Country and sister dominions, to prevent the abuse of the tariff for the exploitation of the consumer. As a means of raising revenue the tariff should be so adjusted as to place the chief burden on those best able to bear it. Articles of luxury should be heavily taxed through the imposition of customs and excise rates.

Real Liberal doctrine, which he forgot after.

Sir HENRY DRAYTON: Oh no.

Mr. KYTE: He went on:

Food commodities and other necessaries of life, not produced or manufactured in Canada, should, if taxed at all, bear, only such imposts as are necessary for revenue purposes.

Tariff for revenue, you will observe:

Those produced in Canada should be subjected to such customs duties only as may be necessary in the general national interest to be determined after strict investigation from time to time.

Well, on the 5th of June, 1919, Sir Thomas White, then Minister of Finance, speaking on the budget, made a promise of a general revision of the tariff, and a statement citing this promise was issued by the government on December 15, and quoted with approval by the member for West York in the speech just referred to. Then in the speech placed in the hands of His Excellency at the opening of parliament on the 14th of February, 1921, this paragraph is to be found:

My advisers are convinced of the necessity for revision of the customs tariff. In order to secure the most complete information a committee has conducted an extensive and thorough inquiry, and has secured the views of all parties and interests in every province. The hearings necessary for this purpose have now been completed, and the conclusions founded thereon will be submitted to you in due course.

Well, Mr. Speaker, I looked very carefully for the changes in the tariff which were brought down by the hon. gentleman at the same session in which that speech was read by His Excellency the Governor General, and these are the changes that I find:

Changes implementing the trade pact with the West India islands, which had been ratified by both Houses and assented to.

Changes with a view to securing a more efficient carrying out of the provisions of the dumping provisions.

A further change having regard to the valuation of goods imported from foreign countries whose currencies have greatly depreciated.

Mr. Speaker, after their boasted intention to revise the tariff, and after the expense of a tariff commission going throughout this country, the hon. member for West York, like another valiant general of whom we read in history, simply marched his army up the hill and marched them down again. The Tariff Commission of the late government in 1920 was an experiment in what is known as belling the tariff cat. The up-to-date version of a well-known household fable would run somewhat as follows: The race of hard working, industrious mice had suffered much from the depredations of the tariff cat. The cat would move secretly. It would pounce upon them and carry off their sustenance unawares. It wasn't fair. The mice resolved to consider their case. They called a meeting of the cabinet, they complained of their lot, and they abused the cat. Something had to be done; but what? Then a young mouse thought of a plan, "Let us reduce the tariff, or in other words, tie a bell on the cat. The bell will ring. It will give warning of the cat's approach. This will enable us to escape." All the mice squeaked "Hurrah!" But one mouse that had grown old during many years of nesting and dozing in the

various departments of the government objected. He asked this question, "Which of us will tie the bell on the cat?" That was a poser. The council meeting broke up. They all ran away, and nothing was done.

We hear a good deal about the business failures that resulted from the Robb tariff of 1924—that is, we hear a good deal from our Conservative friends. We do not hear very much from any person else. We do not hear anything from the financial magnates of this country charging the Robb budget with having resulted in any such disaster. I have a particular knowledge of one manufacturing concern in eastern Nova Scotia and it might be well, perhaps, for me to give a little of it to this House. There is a fertilizer plant situated in the province of Nova Scotia which enjoyed, up to a year ago, a duty of 5 per cent. When the Robb budget was before parliament in 1924, the general manager of that plant came to me and said "If this tariff goes into force and the 5 per cent protection which we have enjoyed is to be taken away, we will be obliged to close our plant." "But," I said "your plant was closed two years ago. Surely you do not claim that the closing of your plant two years ago is the result of the Robb budget which is only now before the House of Commons." He said, "It is true we closed our plant two years ago in order to get rid of our surplus products." I asked him why it was they had such a large quantity of surplus products on hand. He said "We had to compete with fertilizer manufactured in Belgium and shipped to this country." I asked him if it were possible that fertilizer could be manufactured in Belgium, shipped across the Atlantic ocean, put upon cars and distributed in eastern Canada at a rate cheaper than they could manufacture it in the province of Nova Scotia. "Well," he said, "you know it is this way. When we decided to establish our plant in Nova Scotia the British Empire Steel Corporation were manufacturing their steel by the open hearth process, the slag which is produced by that process being higher in phosphoric content than the other. After we had established our plant a few years the British Empire Steel Corporation changed their mode of manufacture from the open hearth to the Bessemer process. The result was that their slag did not have the necessary quantity of phosphoric acid in it, and it was necessary to import that element from the United States to supply the deficiency." I said "Quite possibly you failed to supply enough of the deficiency, and your fertilizer has not been as successful as it otherwise might be." I then asked him "If you had known that the British Empire Steel Corporation intended to change its method of manufacturing from the open hearth furnace to the Bessemer would you have established your plant there?" He said "No, we would not have established our plant there because it would not have paid us to do so." Then I said "You have made a mistake, you have made a wrong guess, and you want the farmers of the Maritime provinces to pay for your mistake by an increased tariff to supply the profits in respect to the investment which you have made." As a general principle I am not opposed to a reasonable duty but when the tariff is employed—

Mr. MARTELL: I ask my hon. friend this question, not for the purpose of interrupting but in order to get information: When the duty was taken off fertilizer was it not also removed from certain materials that enter into the manufacture of fertilizer? In my constituency there is one of the biggest fertilizer plants in Nova Scotia, and at the time of the proposed tariff change they feared all sorts of dire effects; but these effects have not come to pass. My hon. friend is right, the Robb budget of 1924 was in the interest of the farmers and consumers and that cannot be denied.

Mr. KYTE: That is perfectly true and I wish to add this statement: In addition to the fertilizer plant which that concern has in Nova Scotia it established a plant in the town of Welland, in the province of Ontario, a few years ago and within the last three weeks I was told that they have already booked more orders for the sale of their fertilizer in the present year than they booked in the whole of last year, showing that the Robb budget has not in any way affected their undertaking except, if anything, to increase the sales.

As I said a moment ago I do not object to a tariff which—

Mr. MEIGHEN: Would the hon. gentleman give the name of the concern he spoke of?

Mr. KYTE: I have no objection in the world. The Cross Fertilizer Company is the name it goes by in Nova Scotia, and I presume it is known by that name in Ontario. I have the statement of a gentleman who told me that they had already placed more orders this year than were placed in 1924. I was proceeding to say that on general principles I am not opposed to a certain amount of protection—

Mr. SUTHERLAND: On coal.

Mr. KYTE: If the gentleman is getting cold I will warm him up before long. I was proceeding to say when the interruption of my hon. friend from South Oxford came across the floor, that I am in favour of a moderate tariff; that I believe in free trade as a beautiful and picturesque theory but that in point of realization I have it bracketed with the millennium. I stated a moment ago that our friends opposite always endeavour to make it appear that any dulness in trade, or what they call hard times, is due entirely to the tariff. I have here a statement which was issued by the Royal Bank of Canada on January 8, 1925, and from it I read the following:

> While the year 1924 was in general one of poor business for Canada it cannot be regarded as an entirely unsatisfactory period in our business history since the foundation for a real and substantial improvement in Canadian trade was laid during the twelve months in question. The development referred to took place in the wheat market. This is the commodity which has been responsible for business depression in Canada for years past.

Our friends opposite say that the business depression is due to the Robb tariff but the Royal Bank says it is due to the price of wheat. The statement also declares:

> Most of our other leading natural industries have not been in at all a bad position. While the demand for lumber fell off during 1924, it could not be said that the lumber trade was in a state of acute depression.

I wonder, Mr. Speaker, which authority the people of Canada will be more likely to accept; the authority of great financial institutions like the Royal Bank of Canada which says our depression was due entirely to the price of wheat, or the authority of hon. friends opposite who are out of office and trying to get in.

Mr. HARRIS: Give the people a chance.

Mr. MEIGHEN: Will the hon. gentleman permit me?

Mr. KYTE: I will with pleasure.

Mr. MEIGHEN: No part of the report the hon. gentleman read said anything of the kind.

Mr. KYTE: Said anything of what?

Mr. MEIGHEN: That the depression was entirely due to the price of wheat. Let the hon. gentleman read the report through.

Mr. KYTE: I will read it again:

> This is the commodity which has been responsible for business depression in Canada for years past.

What does my right hon. friend object to?

Mr. MEIGHEN: What I say is that the Royal Bank report made no such statement as that the depression in Canada was wholly due to the price of wheat; it said quite the contrary.

Mr. JACOBS: The hon. gentleman read the report.

Mr. MEIGHEN: I have read the report and I know what it says.

Mr. KYTE: My right hon. friend is at his old tricks, and I am not unaccustomed to them either. Wherever we take up financial papers, wherever we read interviews by men who are authorities in finance we get from them the same impression: that
9 p.m. times are getting better, that money is easier, that prosperity is again coming back to Canada—that prosperity which fled from Canada during the time the right hon. gentleman and his friends were in office. The right hon. gentleman's proclamation in favour of more protection is a very courageous action on his part in view of the fact that high protection never yet won a victory in the Dominion of Canada. In 1878 Sir John A. Macdonald was very careful to say that his policy was not to increase but merely to readjust the tariff. He made that statement in the House of Commons and he repeated it during the election of 1878. In 1882, they had so little confidence in the value of the National Policy as a winner in an election that they resorted to a gerrymander of seats throughout Canada, and this contributed more than anything else to the success of their party in that election. In 1887, they still had the National Policy doing business; but it was not developing as a vote getter, so they passed the Revising Barristers' Act in 1885 which placed the revision of the electoral lists throughout Canada in the hands of their own political friends, and this gave them a tremendous advantage over the opposition party throughout the whole of this Dominion. In the election of 1891 there was no issue of protection. The issue was whether we should have reciprocity or commercial union, backed up by waving the flag with the motto "A British subject I was born and a British subject I will die." There was not much protection there, and notwithstanding that the majorities which the Conservatives won in the general elections of 1878 and 1886 dwindled with every succeeding election, so that in 1891 they were reduced to a paltry majority of twenty and in 1896 they went out of office. Therefore, I say that my right hon. friend is very courageous if he thinks that a policy of protection is going to

carry in Canada to-day when it never succeeded in winning an election before. Our friends opposed reciprocity which was the only salvation for eastern Canada and for western Canada. They stated that it was most unpatriotic to have our freight going north and south instead of east and west. We must ship our goods through Canadian ports to England! We must not sell to the Yankees! But what did they do themselves? They were not in power very long when, by order in council, they put into operation piecemeal the leading provisions of the reciprocity pact. On the 16th April, 1917, by an order in council, they put wheat, wheat flour and semolina upon the free list.

Mr. SPENCE: That was in war time.

Mr. KYTE: Yes, and they remained upon the free list until the Republican party wiped out their end of the reciprocity, and then it failed.

Wheat, wheat flour, potatoes, when imported from a country which does not impose a customs duty on like products grown or manufactured in Canada, were made free by act of parliament on the 6th June, 1919. They were very anxious that there should be no shipping of our products to the United States in 1911; but in 1917, 1918 and 1919, as the election approached, with an eye to the western farmer and the Progressive movement in the west, they thought it would not be a bad thing after all to do a little in the way of reciprocity for them.

I come to the question of the coal duties, and it might be well, by way of preliminary, to give a short summary of the history of coal duties in this country. In 1879, an act was passed imposing a duty of fifty cents per ton on coal of all kinds, regardless of price or quality. A year later the duty on bituminous coal was raised to sixty cents per ton. In 1887 anthracite coal was made free, the duty on bituminous coal remaining as before at sixty cents per ton. In 1894 the customs tariff was consolidated and it contained the following items:

Coal, bituminous, 60 cents per ton; coal dust n.e.s., 20 per cent ad valorem; coal, anthracite and anthracite dust, free.

In 1897 the tariff was revised and the schedule relating to coal was as follows:

Coal, bituminous, such as will pass through a half-inch screen, 20 per cent ad valorem but not to exceed 13 cents per ton; coal, bituminous, round and run of mine and coal, n.e.s., 53 cents per ton; coal, anthracite and anthracite dust, free.

In the session of 1906-07 the tariff was again revised giving effect to the following rates:

[Mr. Kyte.]

Coal, anthracite and anthracite dust and coke, free; coal, bituminous, such as will pass through a three-quarter inch screen, 10 cents preferential, 12 cents intermediate, 14 cents general; coal, bituminous, round and run of mine and coal n.e.s., 35 cents preferential, 45 cents intermediate, 53 cents general.

In 1923 lignite was included in item 586 and made free of duty. That is the history of the changes in the tariff on coal prior to the present time. Hon. members will observe that the duty upon slack coal was made fourteen cents per ton whereas the duty upon round coal was reduced from sixty to fifty-three cents per ton.

The duties have remained in that position up to the present time. I was a member of and I accompanied a delegation from Nova Scotia which appeared before the government in the month of December last asking for an increase in the duty on slack coal. I have been assailed on many sides on account of this, and even my gallant and genial friend the hon. member for Kingston (Mr. Ross) shied a pebble at my emaciated person during the debate on the Address. I have nothing to apologize for with respect to my attitude upon that question. When the duty upon round coal was fixed at fifty-three cents and the duty upon slack coal was fixed at fourteen cents a ton, there was no demand for slack coal. It was a waste product for the coal operators. In recent years, owing to changes in the system of using coal, in the manufacture of boilers and in the grates, slack coal is now used more largely in some instances than run-of-mine coal. Is there, therefore, any justification for maintaining a duty of fifty-three cents per ton upon round coal and having a duty of fourteen cents per ton upon another class of coal which is equally valuable for industrial purposes? You might as well, with respect to the tariff on boots and shoes, have a tariff of twenty-five per cent upon boots and a tariff of five per cent upon shoes. Any hon. gentleman would appreciate how absurd that would be, but it is no more absurd than the idea of maintaining different duties upon these two classes of coal. I desire also to point out to the House that slack coal is not used for domestic purposes. It is used entirely for industrial purposes. The present tariff changes reduce the duty upon round coal to the domestic consumer at the same time that they increase the duty upon slack coal for the person who requires it for indusrial purposes. When the hon. member for Brome (Mr. McMaster) was speaking upon the budget, he referred to his adherence to a policy of free trade, but he said that he was willing to run a coach and four through his economic theories if by so doing he was relieving distress and unemployment in the coal districts of

Nova Scotia. That is a very commendable utterance for the hon. gentleman to make, because I know how dear to his heart is the theory of free trade which he has espoused in season and out of season in this House. But let me assure him that the increase in the duty on slack coal from fourteen to fifty cents a ton will do the very thing that he feels ought to be done in the interest of the coal miners of Nova Scotia. It will mean an additional sale of 500,000 tons of coal by the coal operators of Nova Scotia, and it would provide employment for the miners of the province to that extent.

There is another consideration to which I desire to call attention. In the past the coal miners were paid the same price for taking out a ton of slack coal as for a ton of round coal, and it costs as much to carry on the operations in connection with the slack coal as it does in the case of round coal. If a ton of slack coal is to be moved on the railways the freight is just as much as it is for the carriage of round coal. Should this tariff go into effect and the coal companies of Nova Scotia have an additional market of 500,000 tons for their soft coal, it will mean in all probability that the price of round coal to the domestic consumer will be reduced. Up to the present time the cost of mining the slack coal, for which there is no market, is charged up against the round coal, so that the profits on the sale of round coal are very much less than they would be if the slack coal were sold at the rate which it is hoped will prevail.

Before leaving this subject I want to say something with reference to the actual amount in the way of ad valorem duty which is represented by this increase on slack coal from 14 cents to 50 cents a ton. The average value for duty of slack coal imported into Canada in the year 1923 was $3.63 a ton, and a duty of 50 cents a ton on that in that year would have been at the rate of 13.77 per cent ad valorem. While the Minister of Agriculture (Mr. Motherwell) was speaking on the budget a couple of weeks ago the hon. member for Springfield (Mr. Hoey) interjected a remark to the effect that the proposed duty was equal to 50 per cent on slack coal. The hon. member had in mind of course the selling price of coal at the mine, which is about $1 a ton, and in that view of the matter his statement would be correct. But that is not the price on which the tariff is calculated; it is calculated on the average value of slack coal consumed in the United States. And in the year 1923 that value was, as I have said, $3.63 a ton, so that a duty of 50 cents a ton would have been at the rate of 13.77 per cent ad valorem.

Sir HENRY DRAYTON: Will the hon. member give the House the source of those figures; the figures I have show a different result as to the cost of slack coal in the United States?

Mr. KYTE: I got them from the Department of Trade and Commerce and made the calculation myself.

Sir HENRY DRAYTON: Perhaps the hon. gentleman would not mind giving them to Hansard.

Mr. KYTE: I am giving them to Hansard now.

Sir HENRY DRAYTON: The hon. member is giving just the results.

Mr. KYTE: That is all I have; I do not propose to carry around with me the whole contents of the statistical branch of the Department of Trade and Commerce. I got the figures and made my own calculation, and that is what I presume the hon. member would do himself.

Sir HENRY DRAYTON: Perhaps my hon. friend would give us at least the bases of his calculation; that is all.

Mr. KYTE: I am giving the figures I have worked out and if the hon. member can controvert them he is at liberty to do so. In the year 1924 the average value for duty was $2.34 and a duty of 50 cents a ton would have worked out at the rate of 21.36 per cent. But as against this it should be noted that in the same years if the duty on run of mine had been only 50 cents a ton the relative ad valorem rates would have been 12.75 per cent and 16.77 per cent respectively. The whole trend of argument in favour of the adjustment of the duty on slack coal is to show that slack coal is now practically taking the place of run of mine for many purposes, and for that reason it should not be admitted at a lower duty, either specific or ad valorem than run of mine. From this point of view the protective effect of a 50 cent duty would be about from 12 to 15 per cent ad valorem. Another point that should not be lost sight of is this, that it costs just as much to produce and transport to market slack coal as it does the other kind. The Nova Scotia miner gets exactly the same amount, whether his output consists of slack coal or of mixed coal. In some places this is not the case and the miner does not get anything for the slack coal he produces. For the protection of the miner in Canada the advance in the duty on slack coal is imperative.

In the course of an excellent speech on the budget the other evening the hon. member for Brome (Mr. McMaster) asked whether it would not be better for the coal industry of Nova Scotia to have reciprocity in coal with the United States and seek in the New England states a market for our coal. Of course, in order to have reciprocity in coal with the United States all we have to do is to take off the duty on the United States coal. These are the reasons I would suggest as making it quite impossible for the Nova Scotia coal operator to sell his coal in the New England market at the present time: The coal trade of Boston and New England has in recent years been revolutionized by important developments in the mining and transportation of coal. The conditions which formerly existed have entirely changed and the ability of the Nova Scotia collieries to find a market there has steadily decreased. Developments have been general but are most marked in the West Virginia coal-fields whose products reach the seaboard at about the same distance from Boston as Louisburg. By the construction and equipment of railways, steamers, loading and discharging plants and other transportation facilities of the most modern and economical type, at an enormous cost, the West Virginia mines have gained a strong hold on the New England market. These developments still continue and the cost of production and transportation may be further lessened. The consolidation of the New England railways has also affected the situation. Their enormous trade of 5,000,000 tons a year all goes into American channels, and so far as the supply of coal by rail is concerned, their influence cannot but be entirely in favour of American coal. There can be no assurance of permanence in any arrangements for reciprocity which would be dependent on the attitude of congress and might change at every presidential election. Lack of permanence would affect the installation of facilities for handling coal, without which the Nova Scotia collieries could not hope to enter the New England market. Wharves, discharging plants and railway connections would involve a heavy investment of capital, which would be imprudent under a terminable arrangement, even if other conditions justified it. It must be expected that American competitors would join with the railways and others to hold the home market: such an alliance would be more effective now than at any time in the history of the trade. The mere removal of the duty would not place us on equal terms with the United States. Our product would have to compete in a foreign market, with everyone who could be moved by patriotic local or interested motives against us. The cost of mining in the United States as compared with that in Nova Scotia is much lower; their standard of living in Nova Scotia is higher and the provisions for their safety and comfort are far beyond what is customary in the United States. The mining laws of Nova Scotia are as advanced in this respect as those of any country in the world, and it costs the coal companies of the province very much more money to operate their mines owing to this higher cost than it does in the United States. These are the reasons why it is not possible for us to put our coal in the New England market at the present time. As I pointed out a moment ago, any reciprocity arrangement would be only temporary because it might be abrogated at any presidential election, and if the coal companies were to establish proper landing facilities for their coal in the New England cities it would involve an enormous expenditure for that development, which expenditure would be lost as soon as the reciprocity arrangement was terminated.

Now, Sir, I have no desire to say anything further upon that subject. I intended to point out that high protection does not suit Nova Scotia; as a matter of fact there is a very decided and unanimous revolt in the province against any high tariff. In the days of Sir John A. Macdonald, his policy and the policy for which the Conservative party stood all over Canada was epitomized in the magical letters, N.P.; they were the symbol, crest and slogan of the predecessors of hon. gentlemen opposite. But in one important province at least at the present time N.P. stands for "No party." Down in Nova Scotia, in preparation for the provincial election which is now imminent, the local Conservatives have disassociated themselves entirely from the right hon. leader of the opposition (Mr. Meighen), they have thrown the traditional policies of the Conservative party overboard into the swirling current as so much useless and dangerous dunnage in their frantic effort to reach the snug harbour of office. Their battle cry is "The no party forever!"

Having disposed of the tariff in so far as I have had time to deal with it, I purpose discussing one other subject before I resume my seat. A few days ago when the hon. member for Fort William and Rainy River (Mr. Manion) spoke on the budget he went out of his way to make an attack on the hon. member for Last Mountain (Mr. Johnston) on his appointment as a commissioner

to the Wembley exhibition. The hon. member denounced this expenditure of money as being "most disgraceful." He said that the member for Last Mountain had profited by the vote, and that he had no doubt whatever that that gentleman had engineered the whole thing. Now, I desire to say that the hon. member for Fort William and Rainy River was absolutely unfair; there was not the slightest justification for his insinuation. As a matter of fact I was the first of the party whips who knew anything about the proposal of the government to send a commission to Wembley. I knew of it for about three weeks before I communicated the information, and at the same time as I communicated it to the hon. member for Last Mountain, the Progressive whip, I also communicated it to the hon. member for South Simcoe (Mr. Boys), the Conservative whip. The hon. member for Last Mountain, as of course everyone knows, had nothing whatever to do with the "engineering" of the vote, and it only shows how reckless the hon. member for Fort William and Rainy River was when he made the statement. As to the hon. member for Last Mountain being influenced by his appointment as a commissioner to the Wembley exhibition, if an hon. member of this House deserts the political party which he has supported all his life when he finds it in opposition and joins the party in power, it is perfectly proper to inquire what motives may have operated in bringing about the change. But that is not the case of the hon. member for Last Mountain, however it may be of others. He was nominated and elected in 1917 as a supporter of the Union government, and he gave loyal support to that government until the war was over. Then what did he do? He deserted the patronage and the fleshpots of the Union government and took his seat with the opposition, and there he has remained ever since. In 1921 he was nominated and elected as a member of the very large and influential political group from western Canada, and he has maintained a position of independence towards the government, in that respect being in the same position with his leader and with the whole group of Progressive members. I repeat, there is no justification for insinuating that the member for Last Mountain was influenced by his appointment. But the hon. member for Fort William and Rainy River, speaking in the debate on the Address, used similar language, he said, "I regard that vote as the most disgraceful expenditure that was ever made in the history of Canada, and I have said so upon the stump." It is apparent that the hon. member is making that an issue in the country. Well, Mr. Speaker, there is no person who knows as well as the hon. member himself the size of the issue that best befits him. In former years I knew several well-intentioned and highly respected members of the House, since passed away, who for some reason or other could never rise above the consideration of the number of saucers that were broken and replaced at Rideau Hall. We seem destined to have that class of politician with us always. The hon. member for Fort William and Rainy River is making this expenditure an issue, it is to be the piece de resistance of the Conservative party in the next election campaign. Well, that is different from the issues that we had a few years ago with regard to wasteful expenditure of money. Is it not an astonishing fact that while we are now in the fourth session of this parliament our friends opposite, including the hon. member for Fort William and Rainy River, although they actually believe this is the last session and that we are going to have an election, yet they have never called the Public Accounts committee once to investigate any expenditure of this government? Did such a thing ever happen before? Never. Just after a new government had got well seated in office, when the first report of the Auditor General showing the expenditure of money under it was submitted to parliament, a meeting of the Public Accounts committee was had, members of the opposition called for papers, these were presented to the committee, and day after day investigations were held for the purpose or in the hope of establishing some wrongful payment on the part of the government. Our friends opposite have abdicated that function as members of the opposition. And they are justified in doing so, because they very well know that there has been no wrongful expenditure by this government. This being so, they are seizing upon the expenditure of $4,200, paid to the commissioners to the Wembley exhibition, as the great scandal of the administration! In other words, the hon. gentleman from Fort William and Rainy River finds fault because the three whips, being members of parliament, were given, as he says, a free trip to England. Is that the first time that members of parliament were given a free trip across? Why, between 1912 and 1921 members of the government and members of parliament supporting the government crossed and recrossed the ocean at the public expense with the continuous rapidity of a shuttle through a loom.

There can be only two grounds for criticizing this expenditure: first that the expenditure was out of proportion to the value of the services rendered, and second, that there is no precedent in our political history for appointing members to go on a mission of that kind. Well, let us examine into both of these.

In 1911, when the government of Sir Wilfrid Laurier was in office, it was decided to send a parliamentary delegation over to England. That delegation consisted of eighteen members, five Conservative members from the House of Commons, and, I believe, two Conservative senators, making seven, and the remainder consisting of Liberal members and Liberal senators. No official invitation came from England for a delegation to go over, such as came to the right hon. Prime Minister (Mr. Mackenzie King) with regard to the sending of a delegation to Wembley last year. There was merely an invitation of a committee of the members of the British House of Commons suggesting that it would be desirable that a delegation be sent over to England. Both political leaders agreed that it was the proper thing to do. A vote was passed through the House of Commons to defray the expenses. Each member was allowed the sum of $1,000, and as Sir Wilfrid Laurier, Sir Frederick Borden and Mr. Brodeur, the Minister of Marine and Fisheries, had been invited to attend the Imperial conference, they also accompanied the delegation, and an amount of $2,000 to defray the expenses of each was also voted on that occasion. We all know that the value of the dollar in 1911 was very much greater than the value of the dollar in 1924, and I say that $1,000 voted to each member of the delegation to which I refer in 1911 was greater in value than the $1,400 voted to pay the expenses of the delegates to Wembley last year.

But, Mr. Speaker, there were other members of parliament who went over to England. Let us come down to a later period in our history. There have been, as I stated a moment ago, various excursions over to England and Europe on the part of our Conservative friends within recent years. I have here a list of some of the excursions and the amount of money which they cost to the people of Canada. In 1920 the member for South Wellington (Mr. Guthrie) took a trip to England, and his expenses charged up to the government amounted to $9,400. Think of it; three commissioners appointed by this government to go to Wembley last year were given the paltry allowance of $1,400 each; the member for South Wellington goes to England in 1920, and the cost to the country is over $9,000. What does the hon. member for Fort William and Rainy River (Mr. Manion) think of that expenditure of $9,400 on the part of his former colleague in the government?

Sir HENRY DRAYTON: Perhaps, Mr. Speaker, the hon. gentleman would not mind telling us what business the member for South Wellington went over on, how long he was there, and by how many people he was accompanied?

Mr. KYTE: I do not think anybody knows what business he was on.

Sir HENRY DRAYTON: Mr. Speaker, I am sure—

Mr. KYTE: I do not care what business he was on, he could not eat up $9,400 properly on any such trip.

Sir HENRY DRAYTON: I am sure the entire absence in this case of my hon. friend's usual fairness does not alter the facts. It is well known what the business was.

Mr. KYTE: Assuming he was on public business, I may point out that Sir Wilfrid Laurier went over there on public business in 1911—to attend the Imperial conference, in fact—and his trip cost the country $2,000. Even if we recognize the greater value of money in 1911 by doubling that amount and calling it $4,000, the member for South Wellington is still $5,400 ahead of Sir Wilfrid Laurier in the matter of expenses.

But while the member for South Wellington was the master spendthrift, there appear to have been other prodigals who were a good second. The Hon. P. E. Blondin, a member of the Senate, went over in 1920, to attend, I understand, a postal convention in Madrid. I may say in passing that it is rather unusual for the Postmaster General to attend a convention of that kind; it is generally left to his officials. There was a postal convention in Stockholm last year, but the present Postmaster General (Mr. Murphy) did not attend; he sent his officials there and they alone charged their expenses to the country. Well, when Mr. Blondin went over in 1920 he took with him Mr. Lelievre, not as secretary but as "special attaché"; also one departmental officer. Their business kept them there five weeks, and the cost to the country was $9,319.09, of which Mr. Blondin "blew in" $5,800 himself. I stated a moment ago that there was a postal convention in Berne last year. The Postmaster General himself did not go, but four departmental officers went. They were there three months and a half, and alto-

gether they spent $10,092, just about the same as Senator Blondin paid for his own expenses and those of his attaché and one departmental officer for five weeks.

I have a list of others who travelled over to England at the expense of the country, but I refrain from giving them.

Some hon. MEMBERS: Give us the list.

Mr. KYTE: No, I refrain from giving them; there may be reasons why these gentlemen incurred the expenses which they did. But I wish to call attention to another item I find here with respect to the member for South Wellington. He went to England in 1920 and he spent $9,400; he stayed home in 1921 and it cost the country $4,000 besides his salary.

I have discussed the matter from the point of view of comparisons. How does the expenditure of $4,200 for three members of this parliament to go to England and back compare with the expenditure of $9,400 for the member for South Wellington, and $5,800 by Senator Blondin? I think I have established the case on the ground of comparison. But I have another defence to make, on the ground of precedent. It is not the first time a government has appointed representatives of the House of Commons as honorary commissioners to attend an exhibition. Perhaps the hon. member for Fort William and Rainy River thought there was no precedent and that is why he felt the expenditure was unjustified; I have no doubt that had he known what he will know before I sit down he would never have made the charges that he did in this connection.

In 1893 there was an exhibition in the city of Chicago, known as the Chicago World's Fair. In the session of 1893 a proposal was made by the then government to appoint two honorary commissioners, one from the House of Commons and one from the Senate, to be sent to Chicago, in addition, of course, to the other officials and representatives of Canada and of the government who were there. The question came up as to what would be a reasonable amount to pay these commissioners, and Sir Richard Cartwright, that sturdy champion of economy in public expenditure said, "In a matter of this kind we will not carp at any reasonable expenditure." How different from the attitude of hon. gentlemen to-day who are not notorious for their own economy in respect of public expenditure. Well, Sir, there was one gentleman appointed from the House of Commons, Mr. George R. R. Cockburn M.P. representing one of the Toronto constituencies. He was appointed as an honorary commissioner.

Mr. ARCHAMBAULT: Was he a friend of the government?

Mr. KYTE: He was a supporter of the government. I have not been able to find the name of the senator who was appointed. He was a Conservative senator, but I have not had time to investigate his record and the extent of his expenditure. One would imagine that it would not have cost very much for a member to have travelled from Toronto to the city of Chicago, particularly when he had a pass to the international boundary, and having regard to the fact that the cost of living in 1893 did not approach the cost of living in 1924. In view of these circumstances one would imagine that one commissioner would not have cost the country very much, but what did he cost the country? Mr. George R. R. Cockburn cost the country $4,425. The whole three of us, the member for Last Mountain (Mr. Johnston), the member for Beauharnois (Mr. Papineau), and myself went to England and we paid our transportation, water and rail, we stayed there six weeks, and we were paid $1,400. The late Mr. Cockburn goes to Chicago, he has little or no transportation to pay, less than $100 would have paid it, the cost of living then was very much less, and he gets away with $4,425. Let us see how the account was made up. I have here an itemized statement of the account. If you have tears, prepare to shed them now.

There is $1,104 he does not account for at all by way of voucher. He simply puts it in as a lump sum. Then the vouchers come in:

G. R. R. Cockburn, Esq.,
To Hotel Cadillac, Dr.

Detroit, Mich., 11th September, 1893.

1½ days at $11	$16 50
Bar	2 25
Livery	3 00
Cab	2 70
Cleaning shoes	20
	$24 65

Mr. G. R. R. Cockburn, Dr.,
The Virginia Hotel, Chicago.

2nd November, 1893.

To Cash paid cabman	50
Newstand	10
	60

Apparently he did not read newspapers when he was in Toronto.

Mr. G. R. R. Cockburn, Dr.,
The Virginia Hotel, Chicago.

2nd November, 1893.

To Board, 4½ days	$72 00
Extra meals, wines and liquors	2 90
Laundry	3 75
Livery	75
	$79 40

Mr. G. R. R. Cockburn, Dr.,
The Virginia Hotel, Chicago.

28th October, 1893.

To Telegram..	$ 1 62
Shoes blacked..	60
C.O.D...	30
	$ 2 52

Mr. G. R. R. Cockburn, Dr.,
The Virginia Hotel, Chicago.

28th October, 1893.

To Board for 1 week..	$112 00
Extra meals, wines and liquors ((including $5.80 for lunches for Pavilion)..	33 20
Laundry..	5 91
Livery..	13 00
	$164 11

Mr. G. R. R. Cockburn, Dr.,
The Virginia Hotel, Chicago.

21st October, 1893.

To Shoes blacked..	$ 0 50
Cash paid for cab..	2 00
Drugs, 50 cents and 50 cents; telegrams. 55 cents..	1 55
	4 05
Drugs..	1 00
	$ 3 05

I suppose if the hon. member for Fort William and Rainy River (Mr. Manion) were in my place, with that kindly humour of his he would probably suggest that the drugs were required for the morning after. To continue:

Mr. G. R. R. Cockburn, Dr.
The Virginia Hotel, Chicago.

21st October, 1893.

To Board from 10-14 to 10-21, 7 days at $16..	$112 00
Extra meals, wines and liquors..	5 80
Laundry..	5 50
Livery..	16 50

This makes in all a total of $4,425. Now, as I said a moment ago, having regard to the difference in the value of money to-day as compared with 1893, that expenditure would represent to-day a cost to the country of $9,000, and I have not yet learned of the Conservative senator who accompanied Mr. Cockburn as joint-commissioner to Chicago. In looking up Hansard I discovered that in 1894 an hon. member of the House asked a question of the government as to the number of persons sent by the government to Chicago in connection with the World's Fair, their wages, and the total expenditure of each. The minister of the day asked to have the question changed into an order for return, which suggests that the list must have been a particularly tidy one. So in 1894 an order for this return was passed by the House early in the session. It was not brought down, and the request was repeated at least ten times during the session. Each time the minister in charge said "We are having it attended to, it will be brought down shortly". It was not brought down in 1894. In the session of 1895 the member renewed his request for the return, and the minister made the same reply "We will have it attended to at once and it will be brought down." It was not brought down, and although the same member asked for it a dozen times in that session his request was not complied with. In 1896 the request was renewed. The minister said "I am having it attended to, it will be brought down in a few days." It was not brought down. The request was renewed a dozen times, but the government went out of office, and the return has not been brought down yet. I am sure, Mr. Speaker, it would be a very interesting document if it is along the lines of Mr. Cockburn's expense account. However, I am going to get that return if I have to employ the services of a Pinkerton detective. I want to have it for the next time the hon. member for Fort William and Rainy River (Mr. Manion) turns handsprings and somersaults in anger over the disgraceful expenditure, as he calls it, of $1,400 each for three Canadian commissioners at the Wembley exhibition.

Mr. A. B. HUNT (Compton): Mr. Speaker, in rising to offer a few remarks on the budget, I congratulate the government upon the fine showing it has made in presenting a financial statement disclosing a surplus of about $2,000,000 instead of a deficit. I also wish to congratulate the Acting Minister of Finance upon the able manner in which he delivered the budget.

I would not have spoken in this debate had it not been for the Petersen contract which the government has brought before the House for consideration. I feel that it is the duty of every member to assist the government in every way to break the steamship combine which now exists. There is no question but that a combine does exist; it is admitted by both sides of the House. This combine is asking exorbitant prices for shipping cattle and various commodities from Montreal to Liverpool. It is killing the trade of our country, ruining our farmers in every section of Canada, and discriminating against us by giving better freight rates to the United States, to the great detriment of the Canadian people. The combine at one time carried flour from the port of New York at three cents per hundredweight less than from the port of Montreal, although the latter port is 500 miles nearer the overseas market. I

understand however, that since an investigation was commenced by the government they have changed their rate and are now carrying flour from Montreal at the same price.

It is not a new question. The subject has been before every government for the last fifteen years but no administration had the courage to undertake to break this combine, until the present government took the matter in hand. Now that it has done so every assistance should be given it in the great work it has undertaken. There
10 p.m. is no doubt it will be a great fight, and for that reason, I want to offer my undivided support to the government. The government has to choose between two alternatives. Either it must give the combine full control over Canada and thus ruin the farmers who represent 65 per cent of the population of Canada, or force the combine to carry freight at a reasonable price. When reciprocity was defeated, it proved disastrous to Canada and brought about the ruin of many farmers in the province of Quebec, because congress promptly enacted the Fordney tariff which prohibited the export of our cattle into the United States, our natural market. Previous to that all the cattle along the border could be driven across the line thus saving the payment of railway freight rates. Only a few of the farmers, however, were able to continue after the Fordney tariff came into effect. They were forced to abandon farming and take up lumbering, many having a little pulpwood on the rear of their farms which enabled them to live. But even the few who survived would be placed in peril if the recommendation to place an embargo on pulpwood were carried out. The effect would be to compel the farmer to sell his wood at a lower price thus repeating the situation created when the reciprocity arrangement was defeated. The farmers were then obliged to take a smaller price for their cattle, an amount hardly sufficient to pay for the shipment of the stock to Montreal, the only market they had. At the same time that market, which could not even consume the available eastern supply was flooded with cattle from the west.

The hon. member for Portage la Prairie (Mr. Leader) in his speech on the Petersen contract gave a comparative statement of the price paid for cattle in the United States markets and that paid in Canada, and revealing the exorbitant amount asked by the combine for overseas shipment. This statement has already been placed on Hansard, but feeling that those prices are of vital importance in connection with this controversy and that they cannot be quoted too often I will quote the hon. member's remarks on that particular point. He said:

I have secured some figures from the Bureau of Statistics relating to the cost of shipment of our cattle to the United States markets. The cost of transporting a one-thousand pound steer from Calgary to St. Paul is $7.05, and to Chicago $9.20, as against a cost of $45 per head to Liverpool; from Winnipeg to St. Paul the cost of transporting a thousand pound steer is $4.20, and to Chicago $5.85, as against $42 per head to Liverpool; or a saving in favour of the American markets of approximately $36 per steer. The following quotations from the Chicago and the Winnipeg markets, taken from the agricultural papers of February 5 will no doubt be interesting to the committee:

Comparative prices on Feb. 5, 1924, also of the different markets:

	Winnipeg	Chicago	Difference
Choice steers	$ 6 75	$12 50	$ 5 75
Prime butcher's steer	6 00	10 50	4 50
Common butcher's steers ..	4 00	9 00	5 00

	Winnipeg	Chicago	Difference
Choice feeder steers.. .. .	$ 4 75	$ 8 00	$ 3 25
Choice stockers	3 75	7 25	3 50
Butcher cows	4 00	7 50	3 50
Butcher heifers	5 00	10 50	5 50
Choice calves	8 00	14 75	6 75

The Montreal market would be about the same as Winnipeg, but it would cost about $5 extra for transportation to the above market and from Montreal to Liverpool about $20 to $25. If the combine is broken, they are bound to carry them for $10 to $15 each.

I also quote this from the statements of the hon. member for Springfield (Mr. Hoey):

About three weeks ago I was present at the annual convention of the Illinois Agricultural Association held at Champaign-Urbans where there were present about 800 delegates and 400 visitors. I was there for two days and I embraced the opportunity extended to me to interview as many of the delegates as possible, all of whom are representative farmers from that state, in an attempt to find out from them their attitude as regards the entry of Canadian cattle, that is feeder cattle to the middle west. I did not meet a single delegate who was not in favour of reducing or abolishing the duty. You may say that these men were not frank with me in view of the fact that I had gone down there on their invitation as a Canadian visitor. But in my judgment they were frank with me, because the same delegates who told me that they were in favour of the abolition of the duty on cattle also informed me that they were in favour of an immediate increase in the duty on Canadian butter. If I mistake not, that convention appointed a delegation to go from there to Washington with a demand that the duty on Canadian butter entering the United States be immediately increased. I make this statement in the hope that the minister and officials of his department are fully aware of the sentiment existing in the middle west at present with regard to the entry of our cattle into the United States. There is nothing at all selfish in the attitude of those people towards us; they are demanding our cattle to-day because

they believe they can make money on the finishing. If the agriculturists are in favour of allowing our cattle in free, surely the consumers in the United States cannot possibly be opposed to their entry. I think we might in this way obtain reciprocity piecemeal. There is a demand in western Canada, as the minister knows—

That is the Minister of Agriculture (Mr. Motherwell).

—for the entry of Wisconsin dairy cattle free, and I have often wondered whether he could not with some hope of success enter into negotiations with the powers that be at Washington and come to some agreement whereby they would allow our cattle to enter the United States free if we gave them some concession in return.

Now if the government can do anything towards getting reciprocity with the United States, I am sure the farmers will not vote against it as they did before. It was on account of the misrepresentations that were placed before the country at that time, the cry of annexation, waving the old flag, the navy, and other foolish statements, disseminated by the press and the moneyed interests among the manufacturers and the combines, that they were able to defeat reciprocity. If there is any talk of annexation at the present time, the Conservative party are to blame for it by defeating reciprocity, as that was the starting point of that cry.

The farmers in my section of the country are the best farmers in Canada They are not begging or asking for something for nothing; but they are asking for a square deal, and that they are determined to have in some way. They are not going to be held up by the great combines of this country. As I said before, if they cannot get justice, there will be no farmers, and every one will have to raise his own potatoes. Why should a farmer work fifteen hours a day, and many of them for their board? I venture to say that our farmers are not as well off as they were in 1911, the year that reciprocity was defeated The combines worked it well; the farmers listened to the high tariff cry at that time, and it has placed them in the unfortunate position in which they find themselves to-day. You will not catch them in the same trap again. The Montreal Star has been looked upon as a guide for the farmers of our country; but since the "whisper of death" and other similar statements appeared in that paper, they have lost interest in the paper, and it is high time they should because that paper is not the friend of the farmer, as he knows to-day. We in Quebec have a good farming country and the best governed province in the Dominion of Canada, and I think the other provinces are doing well by falling in line and copying our laws.

[Mr. Hunt.]

Now just a word about the tariff. We cannot get along without a tariff, but a tariff for revenue only. We have such a debt placed on this country that it is the only way we can pay off that debt. High tariff brings no results. It was said that if we reduced the tariff on the manufacture of farm machinery in 1924 it would ruin the manufacturers; but it has proven just the reverse and the year 1924 under the new tariff was the best year they have had for years. Machinery has been reduced and the manufacturers are now selling it in all parts of the world. It was selling at far too high a price in the past and that was the reason for their not selling more. Take for instance, a mowing machine that costs about $30 to make, selling for $150, a manure spreader, costing about $65 or $75 and selling for $245, and this machine used only about two weeks in the year; a sowing machine that every farmer has to have, costing about $18, selling for $85 on time and $79.20 for cash. I know of some young men starting on farms on the above prices, as that was what they had to pay, and it cost them about $1,000 to start, when $500 should have been sufficient. That is the kind of thing that is keeping our farmers back—too much difference between the cost price and the selling price. I know whereof I speak as I manufactured wagons, sleighs and other farm machinery for over twenty years, and a wagon which I sold for $50 and $60, and making a profit at that, is now selling at $125 to $160. There is no reason for such a difference in price. If it costs more to sell an article than it costs to make it, there is no common sense in selling. There are too many middlemen in the way.

I would strongly recommend that the government appoint a commission of experts on the tariff question, as there are many changes that, I think, could take place without hurting the manufacturers in any way. It is far from my intention to injure them, rather would I help them and help the country at the same time.

There is a large veneering plant in my section of the country, situated at the town of Scotstown. They are shipping their products to all parts of the world. They are asking no favours from the government; all they want is a fair deal and they are not getting it at the present time. They are shipping now to the United States, paying a duty of 20 per cent, while similar manufacturers on the other side of the line can ship into Canada without paying any duty. This is not fair to our manufacturers. What our people want is to have the discrimination removed

so as to give them a chance to ship under the same conditions as the United States, or, in other words, to have the duty raised on our side so as to make the fight a fair one. I have already taken this matter up with the Customs department with no results up to the present time. They are investigating in order to ascertain the objections before acting. I find the furniture factories and piano manufacturers are objecting to the duty being put on, and I venture to say that there are many cases of this kind. The tariff is one of the most vital questions with which we have to deal and it cannot be studied too carefully. For that reason, I would have a commission of experts appointed to study that question and to do nothing else. The tariff must not be made a political football as it is too serious a question. There is much talk now in the opposition ranks about the old National Policy. That policy would be just as far out of date now as the old stores of fifty years ago, selling the same goods as they had in their stores at that date, and I do not think there is any more chance of its restoration than there is of the old stores selling to-day the goods they had half a century ago.

Mr. N. H. McTAGGART (Maple Creek): Mr. Speaker, I should not desire to prolong this debate were it not for the fact that I find myself very much out of accord with the budget proposals of the government which are before us at the present time. To my mind, the present budget constitutes a definite challenge to the low tariff forces in the country that the protective principle has been definitely adopted by this government as the keynote of its tariff policy. The budget which is before us is the fourth which this government have brought down since they have come into office, and it is interesting to note what changes have been made during the last three years along the line of reductions in the tariff. In the first session of this parliament we were told that, this government being new in office, no changes in the tariff could be contemplated until after a thorough study of the schedules should be made. In the second session, beyond a few minor reductions in the tariff, we were informed that uncertainty with regard to the tariff was not good for business and that henceforth the policy of the government was to be along the line of tariff stability.

The third session there were fairly substantial reductions in the tariff, chiefly on agricultural implements, but the most notable feature of the third budget was the pronouncement accompanying it that the government policy contemplated a general reduction of tariffs all along the line. The budget which we have before us, and the fourth of this parliament, would seem to indicate a change of policy on the part of the government; for instead of further reductions in the tariff the present budget proposes a number of increases. The net result of three years of a tariff for revenue government is that the tariff is considerably higher at the present time than it was in 1921. I have a statement before me of the average ad valorem rate of duty on dutiable and total imports for the fiscal years 1920 to 1924 inclusive which shows that the average tariff for the last five years was as follows:

Fiscal years	Average ad valorem rate of duty on Dutiable imports per cent	Total imports per cent
1920	22.5	14.7
1921	20.6	14.1
1922	24.5	16.2
1923	24.9	16.7
1924	22.9	15.1

It may be said that those figures do not accurately reflect the true situation as regards the tariff, as the figures are compiled on the basis of averages, but at any rate these figures undoubtedly indicate the general trend of the tariff has been upward during the last three years. As a matter of fact, Mr. Speaker, I submit that the tariff schedules do not reveal the actual protection afforded by the tariff because of the operation of the special or Anti-dumping Duty Act. To my mind the special or Anti-dumping Duty Act may properly be regarded as the most wicked piece of legislation on the statute books to-day, and it is significant that this government have made no attempt to restrict its power, but have sought rather to enlarge its operation. This special act has been invoked 4,888 times during the past two years, according to a return tabled in this House a few days ago; so it is quite evident the large part it plays in the protection game as played in this country.

Now then, Mr. Speaker, if the facts are as I have stated and the amount of protection afforded by the tariff is really greater to-day than it was in 1921, we are confronted by a most remarkable situation. In the first place, there is the fact that approximately 115 members supporting the government were elected on a platform the chief planks of which emphasized the desirability of reduced tariffs. But that is not all; for in addition to the 115 there were another sixty members elected to this House who were more or less pledged to work for a reduction of tariff. This makes a total of perhaps 160 or

170 members who comprise what we should call the low tariff forces in this House, out of a total membership of 235; and notwithstanding this preponderance of low tariff views the tariff continues to grow higher and higher in every way. This very extraordinary situation has been the subject of considerable thought on my part, Mr. Speaker, and prompted me to an analysis of my own vote on previous budgets. I find that on two occasions in the life of this parliament I voted confidence in the government's promise to reduce tariffs; but if appearances be not too deceiving I am prepared to admit that perhaps I may have been flimflammed.

In all seriousness, I should like to ask: if this parliament, made up as it is of a membership three quarters of which may be expected to favour lower tariffs, can make no more progress along this line than we have done during the last three years, what is the future? Not very bright, I should say, and not very encouraging to those who seek to remove part at least of the burden resting on the exploited classes as a result of the protective tariff. This year a crown sheet is being placed in the protectionist armour of the tariff in the shape of a tariff commission, so it is abundantly apparent that this government is definitely wedded to the principle of protection. Members to the right have been making a lot of noise over the fact that a number of industries have closed their doors, and seem wholly unconscious of the fact that with increased protection there must follow decreased purchasing power and consequently more closed factories.

Then again, Mr. Speaker, members on the right tell us we should have more consideration for our own workmen than those abroad, and the way they ask us to show that consideration is by bringing the workmen from abroad to our shores. After all, what interest has the beneficiary from protection in unemployment except a desire perhaps to have reserves to draw upon to meet his needs? But the question of unemployment and closed factories in their relation to the tariff is a subject which has been worn almost threadbare during this debate, so I do not propose to dwell upon it except to say that all the wordy bickering in the world will not alter the basic fact that in Canada when agriculture is not prosperous Canada cannot be prosperous.

Reverting to the Ways and Means resolutions of the budget, Mr. Speaker, allow me to voice very strong objection to the amendment to the Special War Revenue Act 1915 defining the meaning of the word cheque:

> That "cheque" shall be further defined to include any document or writing, not drawn upon or addressed to a bank, in exchange for which a bank makes payment of a sum of money, except a coupon and a document used solely for the purpose of settling or clearing any account between banks, and that such a cheque shall be liable to the stamp tax imposed on cheques by the said act.

If this amendment be accepted by parliament it will mean that all coupons including cream checks and grain checks will be liable to the tax. In the case of grain checks the objection may not be as great, taking into account the need for revenue and the further fact that grain checks, or tickets as they are sometimes called, are usually for considerable amounts. But in the case of cream tickets, which are usually for small amounts, I feel that the government would be well advised to provide for their exemption on amounts under ten dollars. If the tax be allowed to stand it is bound to have the effect of checking and discouraging the system of mixed farming which has been making fairly satisfactory progress in the prairie provinces during the last few years.

I come now to the financial statement presented by the Acting Minister of Finance (Mr. Robb) and I want to admit at the start that I did not understand it on the day of its presentation and I am in grave doubt as to whether I understand it to-day although I have studied it some and have listened to many able reviews by the financial experts in this House.

It would seem to my simple mind that the national book-keeping should be done in such form that it might be readily understood at least by the members of this House, but the impression which I have gathered from this debate is that many of those who have spoken find themselves in the same position as I am in with regard to the national finance. To put it shortly, Mr. Speaker, we don't know where we're at. In order to show the difference of opinion among the members of this House on this question, might I read just a few excerpts from speeches delivered during this debate. I find, in the speech of the Acting Minister of Finance, at page 1470 of Hansard, the following:

> This amount is available to be applied on account of our loans to the Canadian National Railways of $18,027,000; to Canadian Government Merchant Marine of $900,000; and to the Quebec Harbour Commission of $600,000, all of which, while being assets, but for the present considered as non-active, are to be added, thereby making an increase of debt during the year of about $13,703,838.

Later on the hon. member for West York (Sir Henry Drayton) who is himself an expert on questions of finance, made the following statement on page 1479 of Hansard:

> Is it necessary for a reasonable man to go further than to point out that this company itself admits

an increase in the current year of $118,000,000, when we affirm that that debt is our debt? Who owns the company? Surely, the country. Who is responsible for it? The country. Who has to finance it? The country. Who pays the money? Again, the country.

Again on page 1568 we find the hon. member making the following statement:

I apologize, Mr. Speaker, for taking up the time of the House at such length, but my task is pretty well finished. I have already spokeu on the question of our debt, and I have pointed out the additions to it, as I see them. Again I point out that the addition of $100,000,000 is the only thing which can be deduced from my hon. friend's own figures and from the return of endorsements, if we are to be honest, unless we say, "We are not responsible for the railways, we are not responsible for our endorsations."

And the hon. member for Vancouver Centre (Mr. Stevens) at page 1656 of Hansard has this to say:

To the extent of over $600,000,000 the National Railway loans should be shown as part of the net debt of this country. They are not so shown, and we are not treating them as a part of our national obligations.

Again we find the hon. Minister of the Interior (Mr. Stewart) making the following statement at page 1676:

I do not make that claim. What I say is that in order to pay the total indebtedness of the railways, we require to raise annually $62,000,000 odd of interest. That must be raised either by the railways or by the country.

It will be noted from these more or less conflicting statements that no two of them are in agreement as to the state of the country's finances. So despairing of securing the information desired inside this House, I turned to the columns of the financial press and this, in part, is what I find in the Financial Times of March 27th:

Mr. Robb himself, after demonstrating that there was a surplus of something like two million dollars, went on to admit that, taking into account other special outlays, the public debt had been increased by thirteen million dollars. Unfortunately, it is much worse than that. It is, in truth, at least seven times worse than that.

And further on in the same article appears the following:

The true position, therefore, is that Canada's liabilities for the year have been heightened by the $13,000,000 that Mr. Robb admits, plus $81,000,000 guaranteed for the railways, plus what the railways borrowed on their own account. In other words, Canada owes far more than 100 millions above what she did one year ago.

Now I submit, Mr. Speaker, that the financial journals of this country should be able to interpret the financial statement if anyone in the country could, but it is very evident that the Times has been unable to do so with any degree of accuracy. I think the fact has been established, however, that the nation's obligations are heavier to-day than a year ago by an amount anywhere between sixty and one hundred and thirty millions of dollars, but no hint of this somewhat alarming situation is revealed in the budget. The significance of this situation should be of deep interest to the general public, but it may be that the general public will be too busy rejoicing over the 52 millions saved in taxes, as announced in the screaming head-lines in the party press, to get down to sober reflection on the unsatisfactory state of the nation's balance-sheet. It may be that the government are not wholly to blame for the unsatisfactory state of the country's finances, but at any rate it would seem to me that they are to blame for their failure to reveal what the true situation is at the present time.

But what of the future Mr. Speaker? How much longer may we expect that even the most capable of finance ministers shall be able to cope successfully with the problem of an unbalanced budget? And I wonder how many cunning new tax schemes may be added to the already overburdened consumer ere the breaking point is reached? We are all familiar with the tax on imports with its resultant restriction of trade; but this year another method of restricting trade is being thrust forward as a panacea for some of our economic ills: Not satisfied with a tax on imports to make the cost of goods higher to the consumer, we now propose to place a tax on exports so that the goods which the producer has to sell may be placed under a further handicap in the markets of the world. The present budget contemplates an export tax on power, and this I do not propose to criticize as I am not familiar with the question, but I am interested in the suggested tax on wheat. To my mind such a tax would have the effect of seriously restricting the market for Canadian wheat, with a consequent depression of prices, and would not accomplish the prevention of mixing in transit as carried on at the present time.

The trouble with nearly all of the tax schemes which are so popular with the government of the day is that in the final analysis they are carried almost wholly by the farmers and working classes, and those classes of our people are now carrying almost the maximum load which they are able to bear. But however unpopular with the masses of the people the imposition of taxes may be we must have a large annual revenue to take care of the expenses of government as well as our obligations to the bond-holding classes who grew fat during the war period. Why close our eyes

to the fact that during the war period the government's failure to adequately tax the profits derived as a result of the war had the effect of transferring to the bond-holding classes almost complete ownership and control of the implements of production? Might it not be appropriate at this time to ask how much longer the Minister of Finance can afford to ignore our billion dollars of tax-free bonds as a possible avenue of taxation? Is it not about time that we in Canada woke up to the fact that the bond-holding classes are not paying their proportionate share of the tax burden of the country? I think I recognize the difficulty which is sure to be encountered if an attempt were made to institute a levy on the tax-free bonds, but I submit, Mr. Speaker, that in these days of B.N.A. uncertainties it is doubtful if the government possessed the right to make those bonds tax-free.

At any rate Mr. Speaker, for my part, I feel quite convinced that our finance minister, or his successor, whoever he may be, must of necessity adopt one of three alternatives in his search for the necessary revenue to conduct the affairs of the country: he must increase the load on the consumer and take chances; impose some form of capital levy and take no chances; or failing this, he may be forced to the historic expedient of despairing finance ministers and inflate the currency. Now I hope, Mr. Speaker, no one will rise to accuse me of belonging to that antiquated school of thought which sees in inflation of the currency the solution of all our economic ills. I am in favour of a stabilized currency and the uniform price-level, but at the same time I am not unconscious of the fact that under present arrangements the control of the currency reposes mainly in the hands of the Minister of Finance, and I am just a bit frightened that some day he may be reduced to that attitude of despair of meeting the country's obligations, which may prompt him to resort to methods which he would be the first to decry to-day. I appreciate the ridicule which such a suggestion is sure to meet in this House at this time, but I should like to point out that inflation of the currency is becoming quite a popular topic among many of our people to-day.

We have heard not a little in this House during the last two years in regard to the control of credit, and I have noted with satisfaction that the minister has consistently refused to be impressed, but it would indeed be a cold and cheerless irony if the minister were at last compelled to adopt the expedient which he has frowned upon so diligently.

[Mr. McTaggart.]

We all recognize the fact that inflation is simply a tax on the creditor or bondholding classes in any country, but surely such an alternative would not need to be resorted to in Canada, with all its unfortunate consequences, if the bondholders could be made to see the fairness and justice of a modified form of capital levy.

We have heard something in this House about the prosperity at present enjoyed by France, and this so-called prosperity has been ascribed to the system of protection in vogue there. Well, Mr. Speaker, I submit that if France has protection it can hardly be on a very extensive scale, for she has not protected her currency and she does not propose to protect her bondholders. The Bank of France, with the approval of the government, recently inflated the currency to the extent of two billion francs, and only a few days ago the government of France met with defeat in their attempt to impose the capital levy.

I hold in my hand a copy of a despatch from a Paris newspaper to the Toronto Globe, part of which reads as follows:

> We must know if henceforth the bank note of the Bank of France is worthy of public confidence, it declares. If we can no longer believe in the loyalty, sincerity and honesty of the statements of the Bank of France, how can we trust its bank note? This is the first time in our history that the government has put into circulation illegal money, and the first time the Bank of France hid this crime by fraudulent statements. If such acts remain unpunished the credit of the Bank of France is finished.

Now, Mr. Speaker, my point is this: The situation in France is somewhat similar to the situation in Canada, in that both countries are enveloped in debt; and the Finance Minister in France was driven to the expedient of inflating the currency in a heroic effort to present a balanced budget. In Canada we have not yet reached the point where such drastic expedients may be necessary, but let us hope that our Finance Minister may scrutinize closely the urgency and wisdom of a moderate tax on capital. I should like to leave these thoughts with the Finance Minister and to express the hope that he may not discard them as being the meaningless mouthings of a calamity howler. I am not afraid of the future so far as Canada is concerned, if we can only cut out the political clap-trap and get down to the business of placing the country on its feet. But to stand complacently aboard a sinking ship and shout "calamity howler!" at the forces who are manning the pumps is not the kind of philosophy which should be popular at this time.

I realize that members to my right may not sympathize with the suggestions I have made, for they have a standard medicine for all our economic ills. With them it is protection and still more protection, regardless of the fact that protection decreases the purchasing power and that a decreased purchasing power puts an effectual brake on national development.

I should now like to turn to some of those things which are of intimate concern to the farmers in my own province. I do not propose to talk about crops or freight rates, for they have been ably dealt with by others, but I would like to suggest to the Minister of Justice (Mr. Lapointe) that he speed up the amendments to the Bankruptcy Act placing farmers on an equal basis with others in relation to the act. About a year ago we heard the minister say that he saw no reason why farmers should not have the benefit of the Bankruptcy Act on an equality with other classes of business, but at the present time it is next to impossible for a farmer to have his affairs adjusted in bankruptcy unless he has very substantial assets.

In this connection I might point out that there are many thousands of farmers on the prairies who can never be reached by any scheme of rural credits until they have an opportunity of cleaning up the slate of past misfortunes and mistakes. I hope therefore that the Minister of Justice will bestir himself in the bringing down of legislation at an early day which will place farmers on an equal basis with others in regard to the Bankruptcy Act.

Before closing, Mr. Speaker, I should like to refer to a question which should be of particular interest to the Minister of the Interior (Mr. Stewart)—I am sorry he is not in his seat. It is the question of administration of Dominion lands within the pre-emption area in Saskatchewan and Alberta. The situation with regard to those lands is becoming more and more unsatisfactory as time passes, and in saying this I do not desire to create the impression that the departmental officials are not doing their utmost to cope with the situation. But what I do say is this: During the last few years there have arisen a number of difficult problems concerning unproved Dominion lands which cannot be properly studied except at close range. Take, for instance, the question of cancellation of the outstanding obligations on pre-emptions and purchased homesteads, a proceeding, by the way, which I have recommended many times to the respectful consideration of this House. This important question, although vital to large areas in Saskatchewan and Alberta, has awakened but little interest in the department other than perhaps a mild curiosity. I venture to say, Mr. Speaker, that almost every municipal council in the area blacklisted by the department several years ago finds itself at its wit's end from time to time in trying to cope with the pre-emption and abandoned land question.

There are many other questions just as important as the one I have just mentioned, but I do not desire to detain the House longer now. I want to make a suggestion to the Minister of the Interior, however; that a board of survey be delegated to study at close range the lands in question in the pre-emption area. This board should include officials of the minister's own department as well as a resident of the district affected. In this way the expense attached to the investigation could be kept within reasonable limits. If this suggestion does not meet with the approval of the minister, perhaps he may find some other way to meet the situation. I hope he will keep in mind, however, that it is a long way from Ottawa to the third meridian—so far, indeed, that folks out there find it less irksome, sometimes, to throw up the sponge than register repeated appeals for a better understanding of their situation.

In conclusion, Mr. Speaker, allow me to suggest to the minister that the next time he visits the prairies he devote a few days to the study of the lands question in the pre-emption area and its relation to the exodus of many of our people to another clime.

On motion of Mr. McKay the debate was adjourned.

On motion of Mr. Graham the House adjourned at 10.45 p.m.

Friday, April 17, 1925

The House met at three o'clock.

REPORT

Second report of the select standing committee on Miscellaneous Private Bills.—Hon. Mr. McGiverin.

PRIVILEGE—MR. BELAND

On the Orders of the Day:

Hon. H. S. BELAND (Minister of Health): I rise to a question of privilege, or at least

to give the House a personal explanation. Last Sunday I happened to be in the city of Quebec and at the moment the train was about to leave I was met by a newspaper man whom I know very well. He asked me a few questions to which I replied. I do not expect, Mr. Speaker, that any utterances of mine will disturb to any very considerable extent the political world of Canada, but it is only reasonable to assume that an answer given to a newspaper man by a member of the government should be reported accurately. To my great surprise, yesterday and the day before, I read in certain newspapers that I had announced in the city of Quebec that a general election was going to take place next autumn and particularly in the month of October. How this came to be reported I am absolutely unable to suggest. However, I referred to the newspaper whose representative had met me and read the interview which he had had with me and I found I had been faithfully reported. But it was the very opposite of what the other newspapers made me say. In order to make this perfectly clear I shall quote about two lines from the Quebec newspaper that published the interview. That newspaper is L'Evenement and the interview in question appears in the issue of Monday, the 13th instant. I shall first read it in French and then translate it faithfully into English. The reporter amongst other questions, put the following:

"Pas nécessaire de vous demander de quel côté le vent souffle (en politique) dans votre comté?

Mais il n'y a pas d'élections générales à brève échéance en vue! Personnellement, je n'en vois pas!"

S'empressa de nous dire le ministre de la Santé.

Translated, that would read:

"It is not necessary," said the reporter, "to ask you from what side the wind blows politically in your riding."

My answer was:

But there is no general election shortly to take place. Personally I see no sign of it.

In spite of that I have read in a number of newspapers that I had made the statement that an election would take place in the month of October.

Mr. MEIGHEN: What city did this take place in?

Mr. BELAND: The good old city of Quebec.

PEACE RIVER RAILWAY OUTLET

On the Orders of the Day:

Mr. D. M. KENNEDY (West Edmonton): I wonder whether the Minister of Railways can tell us to-day anything more about the Peace river transportation question. I understand he has had an interview with the heads of the railways, and he could possibly tell us whether any recommendation has been made or whether it is impossible to come to an agreement.

Hon. GEORGE P. GRAHAM (Minister of Railways): If my hon. friend asks me whether I have learned anything, I can only say that I am learning every day something about Peace river. Yesterday I learned a good deal, and among other things both railway heads told me that the solution of the Peace river problem was one of the most difficult that either of them had ever come across in all his experience. Further than that I think I have nothing to say at present.

ST. LAWRENCE WATERWAY

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): I want to call the attention of the Prime Minister (Mr. Mackenzie King) to a passage in a letter which I have received referring to his department. It is from one of the officials of the Great Lakes and St. Lawrence Tidewater Association and I shall ask for information on the basis of this paragraph:

Some weeks ago our state department despatched to your government what seemed to close the correspondence concerning the reference of the St. Lawrence project to the International Board of Engineers. In that note, the Secretary of State deferred to Canada's wishes in the matter of the time it should be made public. It was thought, however, that it would be immediately given to the press.

Has the Prime Minister any information to give to the House in regard to the progress being made?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The department is in correspondence with Washington at the moment as to the simultaneous publication of the information in both countries. I expect this will be in another day or two.

SOLDIER SETTLEMENT LANDS

On the Orders of the Day:

Mr. E. J. GARLAND (Bow River): May I ask if the government's consideration of the question of revaluation of soldiers' land, stock and equipment has yet borne fruit?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think the matter is under consideration by the Minister of Immigration and Colonization, which department is concerned with matters pertaining to

soldiers' land settlement. I understand the Minister has something that he intends to present to the House shortly. I think perhaps he had better speak for himself when he is in his seat.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, April 16, consideration of the motion of Hon. J. A. Robb, (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. H. E. SPENCER (Battle River): Mr. Speaker, in rising to take part in this debate I wish, along with other members who have spoken before me, to express my regret at the Minister of Finance (Mr. Fielding) not being able to take his seat owing to ill-health. I intend to criticize the budget that is before us, but in doing so I do not wish to align myself with any hon. member who has implied anything against the personal integrity of the Acting Minister of Finance (Mr. Robb) whom I hold in the greatest personal esteem. I do, however, criticize the drawing up of his budget statement, in that I do not think it is a correct one, I do not think it is a fair statement to place before the people. I refer particularly to what I might call the financial gymnastics which the Acting Minister of Finance has gone through with respect to the interest owing on the loans to Roumania and Greece. This interest has not been paid, but at the same time it is treated as an asset and, what is more, added to the so-called surplus, making that surplus $5,823,162. I prefer the more logical arguments of the ex-Minister of Finance (Sir Henry Drayton), which go to prove that instead of having a surplus we have a deficit of no less than $16,204,000.

There is another important side to this question, and that is, it is very misleading to the public, because if the people think there is a surplus they will naturally expect a reduction in taxation. In view of the fact that we have no surplus but a deficit, this reduction is something that cannot very well be brought about. Furthermore, however small a deficit it may be, it is a very difficult task indeed to reduce taxation under our present system. It is difficult because some of our greatest liabilities are brought about by so-called "uncontrollable expenditures." But what are these uncontrollable expenditures? Mainly they are interest on our national debt, and we are to-day paying in interest on that debt as much as it cost to run this country some eleven years ago. It is only fair that the public should know the exact state of our finances, and whoever is in charge of the finance department of the country should not hesitate to put the figures before the public and let them judge for themselves the impossibility of reducing taxation to any large extent.

Now, what is the extent of our national debt? I am going to give some figures with regard to our federal, provincial and municipal debts, taken from the Canada Gazette of December 31, 1924, and from the Canada Year Book for 1923. These are the figures:

Gross debt, Dominion..		$2,940,099,008 35
Securities guaranteed by Dominion:		
As to capital..	$423,161,713.83	
As to interest only.. .	167,349,218.72	
		590,510,932 55
		$3,530,609,940 90
Funded and floating debt of provinces, including guaranteed securities, but excluding sinking funds..		697,785,627 00
Funded and floating debt of municipalities of 1,000 to 10,000..		706,644,567 00
Total..		$4,935,040,134 90

Taking our population at nine million, this means that we have a per capita debt of $548, or an average debt of $2,740 for a family of five, the interest on which has to be paid annually by way of taxation.

I have in my hand a copy of the speech made by the hon. member for Laprairie and Napierville (Mr. Lanctot) in this debate, in which he says:

> There is still $931,000,000 due to these gentlemen, on bonds which will mature in 1931, 1935 and in 1937. They still have about ten years of tax exemption, they who forced the government to pass conscription; but these people must prove their gratitude towards us. Why does the House, to-day, not ask, unanimously, the Minister of Finance, to borrow the necessary money to pay these people? I do not wish them to lose a cent on the capital they have lent us, but what I do want, is to pay them off. These gentlemen are responsible, to-day, for a loss of $18,400,000 in the income tax, that we could collect, and nearly $9,000,000 of interest that we should have less to pay.

I wish to compliment the hon. member for bringing these facts before the House. But I would go further than he does, I would recommend that we refund the total of our war debt of over two billion dollars. By refunding it with cheaper capital subject to taxation, we could in all probability save the country upwards of $100,000,000.

Mr. MEIGHEN: How does the hon. member arrive at the figure as to what the taxable income would be from those bonds?

Mr. SPENCER: At the present time I understand we have outstanding more than $931,000,000 of non-taxable bonds. I take it the hon. member for Laprairie and Napierville estimated on that a tax of only 2 per cent, but I think he would have been quite safe had he allowed more than that.

Mr. MEIGHEN: How would you arrive at that?

Mr. SPENCER: These are not my figures; they are the hon. member's.

Mr. MEIGHEN: No matter whose they are, it is the purest kind of guess. In fact, it is a guess in the dark, and the worst kind of one at that.

Mr. SPENCER: I can only say this: in respect to the larger incomes on which income tax is applied at present he would be well within the mark. According to the figures the hon. member has given here, $18,000,000 would be saved on the extra wealth which at the present time we do not tax.

Mr. MEIGHEN: First of all, there is no saying where these incomes are. In the next place, if they were not non-taxable, they would be somewhere else altogether and perhaps there would be no income from them at all by way of tax. They would not be where they are if they were taxable.

Mr. SPENCER: I have drawn the attention of the House to the fact that our largest liability is the interest on our national debt. We have had no indication from the Acting Minister of Finance that we can get round this so-called uncontrollable expenditure. There are, however, men in various parts of the world, considered as good economists, who claim there is a way of getting round it, and I would like to deal with this aspect of the matter for a few moments.

We all know that bonds are raised backed by our national assets. The Acting Minister of Finance told us a year ago that there was nothing more or less behind the bonds that were being issued than the assets of Canada. We have, therefore, been making use of our national credit not directly but through a middle agency, and in that connection we are paying a high rate of interest. We have four ways of raising revenue: first, through taxation; second, through treasury bills; third, through bonds; and fourth, by issuing direct. In the first place, during the war we did not raise anything like enough revenue by direct taxation, considering the huge profits that were being made. We all recognize that there was inflation in this country during the war years, which rapidly increased as the war progressed. This inflation was largely brought about because of the very considerable amount of money and credit brought into operation without the necessary taxation being imposed on the people. In fact, I understand that during that time only about six per cent of our revenue was made up of direct taxation. Had we had taxation in proper proportion to the amount of money and credit that was being distributed, we would not have had the inflation that occurred during those years.

The second way of raising money, as I have just mentioned, is by means of treasury bills, —the government of the day giving treasury bills to the private banks. Last year, in June, we had borrowed from the private banks of this country a little over $91,000,000 and we were paying no less than 5¼ per cent on those treasury bills. Under the Finance Act of 1914 the banks had the opportunity of bringing those bills back to the treasury board and having Dominion notes advanced against them at one-quarter of one per cent less than the government were paying the bank—that is, at 5 per cent. This matter was taken up in the banking committee at the time; it was afterwards spoken of in the House, and I am very glad to see that the amount outstanding at that time has since been paid off.

The third way of raising money—that is, by way of bonds—is a general one. Some people think that we can go on raising money by bonds to an unlimited extent. That is not the case. There are two conditions under which a country is prevented from issuing further bonds; one is when it cannot provide security for the bonds it wants to issue; and the other is when the people cannot stand any heavier taxation to meet the interest on bonds already issued. Canada is not likely to come under the first category for a long time, on account of her huge potential wealth; but we are liable to come into the second category a good deal sooner than many people imagine.

I would say that there are three classes of nations, in the matter of budget adjustments. First, there are those which raise by way of revenue just as much as they pay out; second, there are those which turn to the issuance of bonds to balance their budget; and third, there are those which turn to paper currency and issue bills without any safeguard from inflation. Canada is in the second of these classes, because for years she has been issuing bonds to meet her deficits.

We had inflation during the war and that inflation gradually increased over a period of

six years. We did not fear it so much, because it developed gradually. When those who were in control decided upon deflation, they did not take six years to do it, as they should have done; but deflated in one year as much as it had taken six years to inflate, with the result that industry suffered tremendously; and the industry that has suffered possibly more than any other is that of agriculture. The assets of that industry were not only halved, but sometimes dropped to a third, and the debts against it incidentally increased to an equal extent.

With regard to the criticism made by many to-day in connection with government's employing private institutions, to make use of their own credit, I would like to quote from Mr. Thoresby, an authority on financial questions in England. He says:

> The gem, however, of all our national financial stupidities is that in 1694, during the reign of William and Mary, we borrowed from the Bank of England £1,200,000 at 8 per cent (subsequently reduced) and in due course, by the operation of compound interest, the amount rose to £14,686,000. Then, over a series of years, one-fourth of this amount was repaid so that by 1860 Great Britain owed the Bank of England £11,015,000.
>
> And to-day, sixty-four years afterwards, we still owe the Bank of England £11,015,000, and every year we pay interest upon this amount. And yet through this same bank we distribute nearly £300,000,000 of currency in the form of treasury notes free of interest.

Some people think that the so-called borrowing by the government from the banks is a draw on the banks; and that they have a perfect right to charge—as they have been charging—interest at the rate of 5½ per cent. I would just like to draw the attention of the House to what Dr. Adam Shortt said in connection with this matter when addressing the University of Manitoba in 1919. He gave the following information:

> Thus a credit of $5,000,000 granted to the government is merely an entry in the bank's books, and when drawn upon by the government in favour of munition industries, transportation companies, and supply purveyors of all kinds, much of it may not leave the books of the individual bank involving nothing more than debit and credit entries in its ledgers. Even when the parties to whom the credits are transferred, keep their accounts with different banks the interchange of such credits between the banks through the clearing house practically offset each other in the long run. Thus a credit of even $5,000,000 on government account makes little or no drain on the individual bank, and none at all on the general circle of banks, unless it comes to a matter of foreign exchange.

Professor Soddy, of Oxford University, outlined the situation in the following words; and he is supported by Right Hon. Reginald McKenna and by Major C. H. Douglas of London, England:

> Another and most important fact to be emphasized is that virtually all the money in the hands (or banking accounts) of the community originally came into existence in the form of loans from the banking system. It can come from nowhere else, nor otherwise than as loans. This fact, which reverses all the old concepts of loans as money taken out of pre-existing deposits, is demonstrated fully in Major Douglas' works, and, in fact, has since been endorsed by Mr. McKenna, the chairman of the Midland bank. The order of procedure is as follows:
>
> (1) Money is printed or written into existence by the bank;
>
> (2) It enters circulations as a loan to somebody;
>
> (3) It is then spent, and then becomes a "deposit" in the name of the receiver.

As loans are repaid, of course, an equal amount of deposits is cancelled. I agree with the statement that Major Douglas made when giving evidence before the Banking committee in 1923 on the basis and function of credit. He then made the statement, which has been confirmed by many other eminent men, that a government should lend and not borrow.

I would like to say just a word with regard to the railway situation. It is, of course, one of the very serious problems we have got to face in this country. I cannot but feel very much in sympathy with the sentiments expressed by the hon. member for South York (Mr. Maclean), the hon. member for North Waterloo (Mr. Euler) and others who have advocated that we do what we can to bring the two great railway systems eventually under one management. If this was done, and the unnecessary waste and overlapping done away with, it is estimated that a saving of from $50,000,000 to $75,000,000 would be effected.

Turning to another subject, I again wish to register my protest against the continued concentration of the control of credit in this country. Some twenty years age we had thirty-four banking institutions or corporations; to-day we have twelve. Of these twelve banks, ten of the head offices are situated in the cities of Montreal and Toronto. This in itself, in my opinion, is a very serious situation. The concentration of the control of credit will naturally have a tendency to concentrate the control and development of industry, and in all probability the serious situation that has arisen in the maritime provinces, with their lack of trade and their emigration problem, is very largely brought about because they have no head offices of these banking institutions there, and their financial deals have to be directed from the central provinces. The situation in western Canada, is very similar and in my opinion has been brought about by the same cause.

Furthermore, with this concentration of the control of credit, we also have a mad rush for

competition, not in cutting interest rates, but in getting offices in the various cities, with the result that in many ways we are overburdened with branch banks. I have before me a comparison of the number of banks in Canada and the United States, taken from the Rand-McNally Directory for the year 1921. They report that there were then the following banks doing business in the United States:

National Banks..	8,191
State Banks and Trust Companies.. ..	22,413
Private Banks..	1,207
	31,811

or 289 per million of population.

According to the Canadian Bankers' Association publication, there are in Canada 4,850 banks and branches, or 539 per million of population. Some places, I might say, have too many banking facilities, while others have none at all. I have here a list of various towns which have a number of branch banks. This is taken from a statement that was prepared some time ago by a Canadian banker. Leaving aside the many places with one or two banks, or even as many as nine banks, I find that:

5 towns have 10 branches; 5 towns have 11 branches; 2 towns have 12 branches; 3 towns have 13 branches; 2 towns have 14 branches; 1 town has 17 branches; 1 town has 18 branches; 1 town has 23 branches; 2 towns have 24 branches; 1 town has 26 branches; 1 town has 39 branches; 1 town has 43 branches; 1 town has 45 branches; 1 town has 55 branches; 1 town has 82 branches; 1 town has 87 branches; 1 town has 220 branches.

I wonder what the people of Canada would think if the government in carrying on its administration of the postal business of this country imposed upon the people in these various towns post offices to the same number. There is no doubt in my mind that there would be tremendous criticism of such a way of doing business. When this question was up before the House the other day, the Acting Minister of Finance (Mr. Robb), who, I am sorry, is not in his seat, referred to the fact that a certain member on this side of the House had requested him to intervene to keep a certain branch bank open. I wish to say that I was the member referred to, and in the request I made I certainly have nothing to hide. The bank in question was serving a very good farming community, settled within a radius of thirty miles one way, and forty miles the other. The bank had done very well, but for some reason it had thought of closing its doors, I suppose to cut down overhead, and it was going to leave that well-settled district absolutely without banking facilities at all. Any district of that size, in my opinion, has a right to demand banking facilities. I say "demand," because we have given the present banks a very privileged monopoly and, under the Bank Act, we prevent banks of smaller capital being established in many of these places where they would start if they had the chance.

There is another subject I wish to bring before the House which, I am sorry to say, has not been mentioned sufficiently up to the present time, and never has been mentioned as far as I know by any of the government officials. It is with reference to the effect of science and invention on industry; also, of course, the speeding up of industry, by which we are turning out such vast quantities of goods in a given time compared to what we were a few years ago. We often hear preached to us, through the Speech from the Throne and many speeches on the floor of the House, the need of greater production. That is an old cry in my opinion which we might just as well forget all about, because the problem is not one of greater production, it is one of under consumption. We have an under-consumption which is brought about by a lack of purchasing power. We have on the one hand lots of goods; we have the power to produce a much larger quantity of goods than we are using at the present time. On the other hand we have numbers of willing workers. There are thousands of them at the present time out of work, who want to work and produce more goods. We have between those the problem of finance controlled privately. It should be controlled publicly through this House; but I have not seen much control given to it up to the present time. Through the system of finance not functioning as it should, we find to-day that we have not been able to purchase the goods that have been made, and consequently a large number of our people are idle.

A good deal of thought has been given of late years to this problem of purchasing power. Nations have not been able to sell as they wished to do in their own country because of this lack of purchasing power. They are, therefore, trying to sell their surplus products abroad. All countries are trying to do the same thing, with the result that an economic warfare is being carried on which will undoubtedly result in disaster if the system cannot be changed. In respect to this I should like to quote from Mr. W. H. Wakinshaw, M.A., formerly of Exeter College, Oxford:

The final result is that there is not left for the goods created, the simultaneous extra purchasing power

of money necessary to distribute them to the home public. Hence they must be exported, and we have accordingly the struggle for foreign markets and the fight to tap the purchasing power of other nations. This is, essentially, the key to the commercial rivalry of the great industrial nations which, unless its real causes are attacked and remedied, will inevitably again lead to world war—and possibly the extinction of western civilization as we know it.

As I have already said I regret that the Acting Minister of Finance—realizing, as he must do, the very serious problem this is—did not mention it in his budget speech. We know full well that the purchasing power of the people is equal only to the pay-roll of the people—nothing more and nothing less—and to support me in this statement I am going to quote from the speech of Mr. Babson, delivered before the Ottawa Board of Trade in 1922. On that occasion he said:

The purchasing power of the people is ultimately determined by the total payroll of the people. No matter what one's attitude is on questions of labour and capital, in the final analysis it must be realized that the spending power, the purchasing power of the nation or a community is merely the sum total of the payroll of that nation or community.

The increase, of course, of machinery efficiency means a decrease in labour work, and a decrease in labour work means that more people will be obliged to walk the streets; and the more people who are obliged to walk the streets the more will have to be paid out in doles to keep that army alive, and the more that is done the more it will reduce the purchasing power of those people who are employed. To give the House some idea of how science is gradually transferring the work from man's shoulders to that of machines I should like to quote the following:

The cotton industry in Lancashire working one week could supply the total requirements of England for a whole year. In United States of America in place of the old-fashioned sock-making machines in use thirty years ago, which employed one operator on six machines, producing 432 socks per day, they now employ full automatics, one operator attends twenty-five machines, and produces 3,600 socks per day. A modern steam navvy does the work of 200 men. A brick laying machine sold by Arrol and Co., now in use in Glasgow, operated by three men, lays 1,200-1,500 bricks per hour. A Wade Mechanical Woodman enables one man to do the work of thirty men. It can get through a three-foot tree in four minutes. At a certain rolling mill in Sheffield 1¾-inch billets can be produced (without reheating) at the rate of 100 tons per hour. The labour consists of four men.

Referring to this same problem I should like to quote from Lord Moulton in the Observer of June 22, 1919:

The scientist has this to say to the world to-day. If you insist on going to war again, the power which I shall give you will only enable you more effectively to destroy the world. But if you will remain at peace and accept the help I have to offer, it will lead you to such wealth as you have not imagined.

There is a very interesting booklet out, which I understand is in the Parliamentary Library, entitled "The Inversion of Science" by Professor Soddy. In this pamphlet Professor Soddy shows that, instead of science making humanity free as it was intended to, it will eventually enslave it, if we do not know enough to make proper use of science. We have quantities of statements from very good men along this line. I should like to quote from Mr. Arthur Kitson. I may say that he is an engineering manufacturer and authority on financial questions and economics, and president of the British Banking Reform League. In referring to this problem he says:

It is quite certain that the need for labour must become less and less with the growth of inventions and the increase in industrial efficiency. Indeed the real problem we have to solve is not so much that of finding constant employment for our people as our supplying them with life's necessities and comforts out of the abundance of goods created. Even to-day the labour of less than 10 per cent of the population will readily suffice to maintain the entire inhabitants of this country in a high state of comfort. Suppose discoveries and inventions during the next half-century result in the displacement of all manual labour by machinery, must the bulk of the world's inhabitants then perish?

Another authority, Sir Charles Sykes, a Yorkshire manufacturer, referring to this question says:

The problem of unemployment or its cause is not due to a defective system of production, but to a defective system of distribution.

I desire to bring another subject before the House which will call for more of our attention as time goes on, and I think should receive more of our attention at the present day. I refer to the concentration of wealth. The system as we have it tends rapidly to create large fortunes rather than to distribute wealth. I have some very interesting statistics here obtained from the Canada Year Book which I should like to quote. The first reference will be found at page 155 as follows:

Number of families enumerated in Census 1921..	1,901,227
Deduct number paying income tax (p. 808)..	281,182
Number of families not paying income tax—less than $2,000 and exemptions, being 85.2 per cent..	1,620,045
Number of males over 20 years of age, 1921 (p. 157)..	2,603,217
Deduct income taxpayers (p. 808)..	281,182
Married and single males over 20 years without sufficient income to pay income tax, under $2,000 and $1,000 exemption (89.199 per cent), or a total of..	2,322,035

Instances of inability of wage and salary class to live and have surplus to bequeath at death.

Average yearly earnings of wage earners in manufacturing industries (p. 434) were as follows:

Year	Number	Average yearly wage
1919..	594,118	$ 941
1920..	596,052	1,103
1921..	440,364	1,002

You will notice there that the average yearly wage has gone down from 1920 to 1921. Then the table continues:

Average yearly salary to federal civil servants of Canada. (See Malcolm Report, page 1043.)

Year	Number	Average yearly salary
1918-1919..	43,492	$ 960
1919-1920..	50,307	1,043
1920-1921..	41,641	1,399

And I draw the attention of the House to the fact that, in spite of the fact that the salaries have gone up, the minimum standard of living allowance for average family required by the Department of Labour of Canada is $1,605—see pages 431 and 433, Labour Gazette, 1924,—which is $206 higher than the highest being paid.

I have another very interesting table on the wealth of Canada and its distribution, taken from the Canada Year Book at page 807, as follows:

Total population, 8,788,483.			
Total estimated national wealth (1920)		$22,483,841,122.	
Per capita wealth, $2,588.			
Total value of production (1920)	$5,000,000,000		
Less depreciation	500,000,000	$4,500,000,000	page 219
Number of families 1921.. ..		1,901,227	page 155
Average income per family..		2,366	

Now I come to a very interesting table which I find at page 808 of the Canada Year Book, 1922-23. This is a table showing the distribution of the rewards and profits of labour and enterprise under the prevailing economic and financial system in Canada for the year 1923:

Distribution (Income tax basis)

No. of income taxpayers	Percentage of all income taxpayers	Amount of income taxes paid	Percentage of all income taxes paid
380	.14	$ 8,212,112	25.77
801	.28	3,810,107	11.96
1,181	.42	12,022,219	37.73
20,464	7.28	11,814,387	37.07
21,645	7.70	23,836,606	74.80
259,537	92.30	8,030,762	25.20
281,182	100.00	31,867,368	100.00

Or, making another comparison, we find that .14 per cent of the taxpayers are able to pay just as much in income tax as 92.30 per cent—at least they pay a little bit more. We all realize that where there is great wealth it is often accompanied by intense poverty. You cannot have a great accumulation of wealth on the one hand without a loss of income on the other. Following up this argument I would like to place the following before the House: Those people who have more income than they know what to do with, after spending what they wish on the necessities and luxuries of life, and who want to find some place to put it, usually do one of two things: they may put it into capital investments, or they may invest it in interest bearing bonds or securities. In the first instance it simply tends eventually to create more goods to be put upon an already glutted market—and in this connection I would point out that men starve not for want of goods but because of a glut—in the second case, the interest that has to be paid on the securities when they come due, taxes the people to an equal extent, and takes from the purchasing power of the masses a like amount. It may be argued that this interest again goes into purchasing power; but it goes into the purchasing power of those who have already sufficient with which to obtain the necessities and the luxuries of life. And so the vicious circle goes on. As we often hear, money gets money, and we find, not only in the United States but in Canada as well, that the list of millionaires and wealthy people is gradually increasing, at the same time that a greater proportion of the masses must struggle to make both ends meet. I was interested to notice when the Acting Minister of Finance (Mr. Robb) delivered his budget speech to the House that, in spite of the fact that this has been one of the worst years for unemployment, incomes have been large enough amongst that class to which I have referred, to enable the minister to raise an extra amount this year over the year before, by income tax, of $2,350,000.

I want to put in a plea to the Minister of Justice (Mr. Lapointe) to bring down legislation at an early date to make the necessary changes in the Bankruptcy Act so that the farmers can make use of it. As the minister well knows, the act at the present time needs sundry changes, and I believe he is sympathetic in the matter. Let me call his attention to the fact that these changes are absolutely necessary if we are to put a stop to the emigration from certain parts of Canada, and particularly of the west, from the farms. There are a large number of people who are in very bad need of such legislation, and the only way they can escape from their debts at the present time is to leave the country. They are first class settlers who know their business, and we cannot do better

than to make it possible for them to use the Bankruptcy Act and clean their financial slate as it were, and so start over again with a clean sheet in Canada. This would be a good thing not only for the men themselves but for the country as a whole. For those who do not need to avail themselves of the Bankruptcy Act but who need much better financial facilities than they have at the present time, I would put in a plea to the Acting Minister of Finance (Mr. Robb) to do what he can at this session to provide a system of rural credits, both long and intermediate—long on the amortization plan and intermediate from one to three years. The present system of financing the farmer is, as we all know, very costly indeed to agriculture. With an industry that has a turnover practically only once a year, to give credit to the extent of three to four months, and at rates of interest running from eight to ten per cent, is unjustifiable. I want also to put in a plea with the Minister of Railway (Mr. Graham) in the hope that we may get some relief in the matter of freight rates in this country; and especially would I appeal to him, through his officers or through the railway commission, to do away with the mountain rate where we have no mountain grade, I refer particularly to the Canadian National Railways going to British Columbia from Alberta.

There are two other subjects I want to touch upon before I close. I have not so far referred to one of the most serious happenings of the day, namely, the situation of the miners in Cape Breton. I have in my hand however a clipping from the Maritime Labour Herald from which I shall quote in part and comment upon. It reads:

Standing The Gaff

Outlining the titanic struggle that confronts the Nova Scotia coal miners in the struggles with the British Empire Steel Corporation, the national committee of the Trade Union Educational League has called on all workers to come to their support in a statement issued as follows:

Statement by the National Committee, Trade Union Educational League,—

* * * *

Besco is brutally frank in its purpose and confident of the result. Vice-President McLurg of Besco says: "They can't stand the gaff. We hold the cards. Let them stay out two months or six months, it matters not. Eventually they will come to us." Here is capitalism stark naked. We hold your jobs, we have systematically starved you, your wives and children are hungry, you will come to us at our terms, says the beast Besco.

This is a challenge to the working class of North America. The British Empire Steel Corporation dangles the chains of slavery before the miners of Nova Scotia and taunts them. You will be willing to don these chains again, says this huge octopus, whether in "two or six months, it matters not." We have the militia and all the repressive forces of the state while you have only empty stomachs.

I admit that these are very harsh words, but they would not be written unless there was a cause, and when such words are written and published in the press it cannot be denied that we have more or less of a crisis on our hands. It has often occurred to me that one of the first functions of government is to see that there are as few people as possible in the country who have nothing to lose. We have in Cape Breton a very large number of miners who at the present time have practically nothing to lose; and when men get in that state there is sometimes very little check on what they will do. The man who has something to lose, an interest of some sort, even a home, however humble, is not going to bring down destruction upon his locality if he can possibly help it, because he realizes he has something to lose. If we are not careful we shall gradually drift into that position where there will be a very large number—a seriously large number—of people in this country who have nothing to lose, and that will be one of the most serious positions we can possibly get into. I wish therefore to draw the government's attention to this very serious situation, and I sincerely hope that in spite of the fact that they have withheld their hand up to the present time, because they do not wish to interfere with provincial autonomy, I hope, I say, they will see that things do not drift so far that drastic action may be thought to be necessary by those who are suffering.

With regard to my vote on this budget, I am reminded that the government of the day got into power on a platform very similar to the one on which I was elected, a programme drawn up in 1919, and which they seem to have forgotten entirely. The first two years they were in power they seemed to have that same lapse of memory, but in 1924, owing probably to the fact that they realized it might mean their defeat if they did not do something, some small tariff reductions were made. I believe the reductions of duty on agricultural implements amounted to the infinitesimal sum of about 83 cents per half section. This year, however—goodness knows why!—they have taken a backward step, whether because they are influenced by certain interests that we do not see and probably do not understand; I do not know, but certainly some interests are at work, and the government have gone back entirely on their pledges of 1919, in fact they have given us a budget such as we might expect from the Conservative party rather than from those calling themselves Liberals. I shall therefore be compelled to vote against the budget.

In closing my remarks, Mr. Speaker, I cannot do better than quote some very apt words by Mr. Lloyd Roberts, embodying a passage taken from a book written by the Prime Minister:

The Idle Poor

We hear a great deal of "those who labour and are heavy laden," but their lot is an enviable one as compared with those who do not labour and are heavy laden. Their number is legion and ever increasing. The time-worn policy of passing by on the other side draws to a close. The very foundation of our social structure rocks beneath us. Thanks to centuries of progress, we can no longer, like the barons of mediaeval Europe, eat, drink and be merry while the people perish. The Prime Minister has said as much: "Let us be assured of this: the unrest in the world of industry to-day is no ephemeral and transitory affair; no mere aftermath of the hideous convulsion which has shaken existing society to its very foundations. It is the voice of a grief-stricken humanity crying for justice in the relations of industry. . . . The truth is mightier than the sword, and in conference and co-operation between all the parties in interest, not in the coercion of the others by any one lies the only hope of an ultimate solution."

Mr. AIME BOUCHER (Yamaska) (Translation): Allow me, Mr. Speaker, to take advantage of the opportunity, which the budget as brought down by the hon. Acting Minister of Finance for the approval of the House affords, to express my personal views and what I believe also to be the views of the electors I represent, on the general aspect of the country's affairs, and, in particular, on the needs of the county of Yamaska.

I am not a pessimist, nor am I downhearted. I have too much faith in the almost unlimited resources of our country, I have too much faith in the youth and manhood of the Canadian people not to open up wide my heart to the hope of seeing Canada in a near future soar very high in its flight towards development and progress and rise step by step to the rank of a great nation. It is useless, however, to have any illusion on present conditions. It is better to face things as they are. Vainly would we try to grasp it, prosperity is not yet within our reach.

We have come through a terrible ordeal. Fanatical politicians demanded of Canada an effort far above its strength. The excessive participation in the most monstrous war of all times struck it in the full swing of its development. It returned shell-shocked, crippled, bearing in its side a wound slow in healing. Yet, we were on this free soil of America in a privileged position. I ask you, Sir, now that the passions have subsided, have we not to regret having gone so far, having given in to feelings that were not prompted by the true interests and natural aspirations of the Canadian fatherland.

[Mr. Spencer.]

What was the outcome of throwing ourselves blindly into such a conflict? Glory? Mr. Speaker, it is a very wretched consolation. No! We have gained nothing, absolutely nothing! Unless it is experience dearly paid for, and from which the Canadian people must make the best of it to direct its future policy.

Would it not be more than time to exclusively look after our own affairs? Has not the time come to drop the League of Nations and cease drawing ourselves up on tip-toes to make believe that Canada is a nation that demands that her voice be heard in the concert of European nations and play a part which would appear ridiculous if it was not so candid and child like? The country's greatest need, is rest, tranquillity, it must remain aside, to recuperate in peace its loss of strength, to make the best of its geographical and strategic position and quietly wait for time to close its sores and heal its wounds.

To remove all danger of being drawn into participating in future wars which might be foreign to us and to sweep away all pretext of being bound in honour and held down to it by skilful diplomacy, it is my opinion, Sir, that Canada should withdraw from the League of Nations, that it should drop sending delegates to all conferences, whether it be to Geneva or elsewhere, that it should cancel the treaties which are not of a purely commercial nature, and that it remain quietly at home to develop its industries, improve its inheritance, repair its losses and seek to conquer a prosperity which is still in the dim future.

After all, the great neighbouring republic is of some account in this world. It is, today, the richest state, I might perhaps add the most powerful. At the end of this century, the United States will probably have 300,000,000 of a population. What nation on the earth will be able to compare itself with the United States of America? They give us a fine example, full of wisdom, which it would be to our benefit to emulate. Whether we wish it or not, we are a satellite in the orbit of the American sun and we cannot escape from the law of gravity. The Canadian frontier is not in Flanders nor is it in the Dardanelles, as it was once claimed; the Canadian frontier is in America and he who thinks the contrary may be an excellent citizen as regards other things, but he is not a true Canadian, he has neither the soul nor the spirit.

Among the problems which Canada, at present, has to solve, we must place in the foremost rank, I think, the problem of transportation. It is an exceedingly delicate question

which is the greatest impediment to immigration, of which Canada is so much in need and affecting especially our most important industry, I mean agriculture.

I have often heard the views expressed in the House, that there are too many railways in Canada, and this contention has spread so much that to-day it bears the character of an axiom. I may seem presuming, however, I cannot subscribe to such a statement. If we make exception for that part of the Canadian Northern from Winnipeg to Sudbury, I do not think that Canada has one single unnecessary mile. We are sometimes wrong in reproaching the promoters of these splendid railways which connect the Atlantic to the Pacific. They were Empire builders endowed with a far-reaching insight. If the flow of immigrants had not suddenly stopped, owing to the war in 1914. I believe that all these railways would now be on a paying basis.

Mr. BIRD: Mr. Speaker, I rise to a point of order. I doubt whether there is a quorum present in the chamber.

Mr. SPEAKER: I will ask the Clerk to take the names whilst I will make a count of the members.

On the count being made, eighteen members were declared to be present.

Mr. SPEAKER: There is no quorum.

And some members having entered the chamber:

Mr. SPEAKER: I will make a further count of the members.

And on the count being made, more than twenty members were declared to be present.

Mr. SPEAKER: A quorum being restored, the sitting will proceed. I am very sorry to notice that the House of Commons is very often without a quorum. I am sure, if the country knew that seats in the House were deserted in that way, there would be some agitation in the matter. According to Rule 24, every member is bound to attend the service of the House.

Mr. BOYS: Did the Clerk of the House make a correct count in the first instance, or was the result announced erroneous?

Mr. SPEAKER: I made a count from the chair and there were but seventeen members present, when there should be at least twenty. In my judgment the time has come to increase the quorum of the House from twenty to fifty.

Some hon. MEMBERS: Hear, hear.

Mr. BOUCHER (Translation): It would probably cost the country three times more to build, to-day, the National Transcontinental and the Grand Trunk Pacific. Moreover, have we even taken into account the greater value given to the country by these railways ever since they have been in operation? If we consider only, the country back of the Laurentian mountains, in the northern part of Quebec, between the city of Quebec and the borders of Ontario, an immense wild and unknown territory has been opened up and will, in the future, rival that of the valley of the St. Lawrence. Activity and life have sprung up where solitude reigned, about thirty parishes have been settled. The forest gives way to the farm. Mills have utilized the water-powers. The mines give up their wealth. Millions of dollars in capital have been invested, and I think, I can say without fear of being contradicted that, in those parts alone, the surplus value acquired by the country, equals, nay exceeds the cost of construction of the railways from ocean to ocean.

Once more do I state, Mr. Speaker, we have not too many railways, however, we lack one essential thing to give them more value, what certain economists designate, under a too realistic language perhaps, human capital; we have not sufficient population. This is an entirely different proposition. It is, therefore, a question of increasing the population of the country, and with that aim in view begin an active policy of immigration, selected as much as possible among the most healthy and assimilable classes, however, at all costs we must without further delay draw to our country a large immigration whose flow will help to solve our greatest difficulties.

If we wish to settle the immigrant on the land and make it sufficiently attractive for him to remain there, we must devote all our energies to making farming a flourishing and prosperous proposition. And to attain that end, the first condition, I think, required is to obtain for the farmer fair freight rates for the transportation of his products. The whole problem rests there.

Transportation, at reduced rates for the products of the farm, from their place of production to their point of distribution, would do away with the principal impediment to the return of agricultural prosperity. Immigration of a farming class will flow in the country when farming prospects are sufficiently enticing. I think, Sir, to rebuild the edifice of our national prosperity, we must do so starting from the ground up; we must first re-establish agriculture, bring back to the farming industry prosperity which it lacks and give to

the toiler of the soil the purchasing power which he no longer possesses.

The high freight rates weigh more heavily on the farming community than on all other classes, and, I think, that this is self-evident.

When the manufacturer ships a case of merchandise, the freight is charged to the wholesale merchant, who in his turn charges it to the retailer, and the latter does not forget to charge it to the consumer. The freight cost for the manufacturer, the wholesale merchant and retailer is of no consequence, since the consumer in the end pays. Such is not the case with the farmer. The price of his products is fixed at the distributing point, allowance having been made for the cost of transportation, so that the farmer finds himself in this particular situation: As consumer he pays the freight on the articles he purchases, and as producer he pays the freight on the goods he sells. This is certainly a burden which weighs too heavily on the farmer and interferes with his prosperity.

Last year, Sir, I claimed for the farming industry the same measure of protection as that which is given to the other industries in Canada.

It is not necessary, it is not even desired that such a protection be based on a customs tariff; I have no confidence in a high tariff to help agriculture in a country like ours that exports to the markets of the world the greatest part of its farm products. There are other means of giving it an equivalent protection; and why should not one of these means be to give him better freight rates, special freight rates for farm products?

One might object that our National Railways are not in a position to reduce their freight rates, that their yearly deficits are already a sufficient burden to carry. There still remains this other objection: that it is not a fair proposition to carry on, with the state's funds, a ruinous competition against the Canadian Pacific which has so much contributed to the development of this country. I do not think, Sir, that the state can legitimately ruin any private enterprise, however, it might make the community pay for the deficit brought on by the reduction of rates, and thereby, the farming industry would receive some protection which it claims and is in need of. However, Sir, it is easy to find a practical way of solving this problem, and should the Canadian Pacific be the only stumbling block, I think, the time has come for the government to take over the control of all railways in this country.

The moment the state is owner of 22,000 miles of railway it is just as well for it to purchase all railways, so as to do away with all competition and duplication of service, establish uniformity of rates and give full satisfaction to all parts of the country.

I am not one of those who think that our railways are leading us to bankruptcy. No doubt, we are under heavy losses each year, but such will not always be the case. Suffice it that our population increases by 5,000,000—if only we exert ourselves in taking efficient means, this increase will not be long forthcoming—our National Railways will be our best asset in Canada.

The motion of the hon. member for South York (Mr. Maclean) may seem bold, colossal, extravagant, however, I think it is worth being seriously considered, weighed and studied.

I wish, Mr. Speaker, to give my full support to the government's policy in regard to ocean freight rates. I approve such a measure, not that I am certain of its success, but because it shows some initiative, good will, a brave attempt to obtain a result which everybody desires.

Allow me, Sir, to dwell a few moments on the question of transportation in that part of the south shore of the St. Lawrence, between St. Lambert and Levis, and more particularly in the county of Yamaska, which I have the honour to represent.

It is one of the oldest parts opened to settlement on the American continent. If it is not one of the most flourishing, it is certainly one of the most beautiful and fertile regions.

The census of 1681 shows that at the mouth of the St. Francis river, there were thirty-seven families established there, forming a nucleus of settlement which, little my little, spread, pushing back the forest, establishing parishes and forming what is to-day the county of Yamaska. Most of the families mentioned in the census of 1681 have left descendants scattered in all the parishes of the county spreading over the neighbouring counties of Drummond, Richelieu, Nicolet and others. For the last 250 years, this population has generously paid taxes of all kinds and nature to the state, and which amounts to an enormous figure, yet it is hardly only for the last 25 years that a railway crosses the county of Yamaska. The south shore of the St. Lawrence is served by a railway called the Quebec, Montreal and Southern, starting at St. Lambert and terminating at St. Philomène, in the county of Lotbinière. Let us now consider the services given by this company.

Between Montreal and St. Cyrille de Wendover, by the Canadian National, there is a distance of 70 miles.

Between Montreal and Pierreville, by the Quebec, Montreal and Southern, the distance is 68 miles.

I have made up a schedule of rates charged by these two railways to ship from St. Cyrille de Wendover to Montreal, by the Canadian National; and from Pierreville to Montreal, by the Quebec, Montreal and Southern and it is as follows:

	Canadian National, St. Cyrille	The Quebec Montreal and Southern, Pierreville
Cheese per 100 lbs. in less than carload lots..	0.36½	0.34
Hay (carload lots) 40,000 lbs..	$58	$72
Live stock (carload lots) 20,000 lbs..	$29	$44
Wheat per 100 lbs. in less than carload lots..	0.19½	0.27

And here are the rates from Montreal to Pierreville and St. Cyrille de Wendover:

Anthracite coal, in carload lots, 60,000 lbs..	$45	(No fixed rate)
Soft coal..	$45	$96
Flour (carload lots, 50,000 lbs.).	$50	$65
Dry goods, per 100 lbs. in less than carload lots..	0.47	0.57

Which shows that for carrying the same goods over a distance shorter by two miles the Quebec, Montreal and Southern rates are 30 per cent higher than the Canadian National rates.

On only one item are the rates cheaper by 0.02½ per 100 lbs, and that is on cheese: the exception is explained by the fact that between Pierreville and Montreal a navigation company makes a specialty of carrying cheese.

I am speaking, Sir, of an agricultural district which is inferior to none in the country. However, the population of Yamaska county has not increased within the last 20 years; and that is equally true of Richelieu. Sorel, so happily situated at the confluence of the Richelieu with the St. Lawrence, knew prosperous times in days gone by; to-day, without its shipbuilding plants, it would be nothing more than a big village. What important industry has been established at Sorel during the last twenty years? The reason is that our railway facilities are not satisfactory. Has not the time come for the government to take over the Quebec, Montreal and Southern railroad from St. Lambert and operate the line as far as Lévis; and wouldn't such expropriation be in the interests of the railway company itself since it cannot operate et a profit while maintaining a satisfactory service?

This problem must interest the hon. Minister of Marine and Fisheries (Mr. Cardin) whose devotion to the interests of the citizens of Richelieu country and of Sorel in particular is well known.

Is it not of equal interest to the hon. member for Chambly and Verchères (Mr. Archambault) whose constituents, it seems to me, must be quite dissatisfied with the present state of things?

The subject is perhaps more removed from the interests of the hon. member, for Lotbinière (Mr. Vien), but I am convinced that several parishes in his county would welcome this plan.

As regards my hon. friend from Nicolet (Mr. Descoteaux), I feel sure he will do all in his power to obtain for his constituents in the southern part of the county the railway they are entitled to.

This question is of vital importance to all the southern region of the St. Lawrence. When the government operates a system comprising 22,000 miles of railway, running in part through districts as yet sparsely settled, it is only right that this same government should not leave the old counties, where colonization was cradled in this country, to get along as best they can under a burden of excessive freight rates.

This question has caused some agitation in my county. The farmers of Baie du Febvre, 167 in number, adopted the following resolution on the subject:

> Whereas, owing to the present prices of farm products, the farmers find it impossible to pay the existing high freight rates.
>
> It is hereby moved and carried unanimously that the proper authorities be requested to grant a special rate for the rail transportation of agricultural products.

I believe this parliament is the proper authority in the matter and it is with the greatest pleasure that I give my fullest support to this request of the worthy citizens of Baie du Febvre.

I realize that the problem is very difficult, that its solution cannot be brought about in one day; but I hope and trust that the government will not fail to recognize how very legitimate this request really is and that the petition will be granted.

It seems to me, Mr. Speaker, that I would fail in accomplishing my full duty if I did not, once more, call upon the government this year to keep all expenses down to what is strictly necessary, to practise the most rigid economy in the administration of public affairs;—economy is as much a necessity for governments as for individuals if we are ever to extricate ourselves from our present difficulties. There is no gainsaying that in this country, within recent years, we have all become, from the highest to the lowest, more

or less extravagant. It is economic heresy to suppose that even useless spending is a boon to business. That may hold true for a while, but unavoidably the day must come when poverty and distress result from extravagance.

To reduce the cost of living we must first of all bring about a reduction in wages. It is useless to ask the workingman to accept a cut in his wages if here in Ottawa, in this House, we do not set him an example. For my part, I refuse to ask anybody else to undergo a sacrifice that I am not willing to make myself. I believe that the public interest demands a decrease in the indemnity of members of parliament as also in the salaries of civil servants. I do not feel disposed to move this decrease myself, but if the government were to bring down a measure of this kind I would gladly support it.

Another conviction of mine is that law costs are far too high in my province. Things have reached a point where it is ruinous to apply to the courts: the costs are too heavy.

I have raised my voice in this House to protest against the evils arising out of the Bankruptcy Act; Sir Lomer Gouin, then Minister of Justice introduced certain important amendments to the Act, which at the present time is entirely satisfactory. All abuses of the kind have disappeared; in my own district since these amendments were brought into force, not one single farmer has failed.

But we are at the mercy of another evil: shunning Scylla we have fallen into Charybdis. To-day we are groaning under the burden of legal costs.

I am not saying this merely for the pleasure of criticizing; I have witnessed some extremely painful scenes. I have reached the conclusion, shared by the majority of businessmen, that most of the time it is impossible to obtain payment of a debt through the courts, without forcing the debtor into insolvency and losing one's money in the process.

Undeniably one of the essentials of prosperity in a country is to have courts of law that are within the means of each and every citizen, rich and poor alike, and that do not operate to the exclusive advantage, so to speak, of a professional class and of court officers as is now the case in the province of Quebec. I hope my voice will reach that eminently distinguished gentleman who presides to-day over the destinies of my province, who solved in such a practical and ingenious way the difficult liquor problem and who, a short while back, rendered his province one of the greatest services that any province ever had from its prime minister when he snatched the Banque Nationale from the jaws of financial disaster—two acts that could only come from a statesman of foresight and courage, and when I use the word courage I am fully aware that it is not surpassed in beauty by any word in any language. I would like to say to him that there is something else to be accomplished, one more reform that requires foresight and courage and that is the reform of our courts of law, decentralization, simplification of proceedings and the reduction of legal charges which are burdensome and oppressive to the people.

It is with all due modesty, Mr. Speaker, that I have made these few remarks. They may not be couched in an agreeable form; all I ask is that they at least be recognized as candid and sincere.

I may be called an idealist; but that will not offend me and I do not intend to look for excuses, since I am convinced that every true Liberal is more or less of an idealist; for the idea, generous and fruitful, is the mother of that creative action which ensures a happier future.

Mr. T. L. CHURCH (North Toronto): Mr. Speaker, at the outset may I humbly express what I believe is the joy of every loyal citizen of Canada, that His Gracious Majesty King George V. has come through his recent illness, and with God's grace I trust he may long be spared to rule over a loyal and grateful people. King George and his gracious queen occupy a unique place in the affections of the people of the empire. Like his illustrious father, no monarch in modern history has realized more than he the constraining call of duty or the glory of loyalty, duty, courage and self-sacrifice for his people; and I suggest that on his return to England at the end of this month, a loyal address of congratulation be passed by both Houses of Parliament of Canada to him on his recovery.

His illustrious son, His Royal Highness the Prince of Wales, Britain's greatest ambassador, has set out on another trip of seven months' laborious work and self-sacrifice for the good of the empire. He will be the most travelled ruler since the days of the great Roman Emperor, Hadrian. I trust that he will have a pleasant voyage, and that he will continue to do work for the unity and consolidation of the empire, and of the overseas dominions, and that he may be long spared to go from strength to strength for our empire. This is the fond wish of every loyal Canadian citizen.

Coming from an industrial district in which there is much unemployment, I deem it my duty to-day to bring before the House the

question of additional protection for the industries of the country, and to urge that what Canada needs at the present time is a proper Safeguarding of Industries Act. The subject of protection is many-sided and should be brought up to date to meet the changed conditions that have taken place since the inception of this great fiscal public boon in 1878. I support it, not for its own sake, but because it is essential for Canada's sake. No one needs to apologize for what protection has done for Canada. I support it for principle's sake, and on the grounds of patrictism.

Canada must choose between protection and free trade, and the difference between them is as wide as the poles. Protection is not and should not be thought of solely as a manufacturers or bankers' question, or that it exists for the sole benefit of manufacturers. Protection is a great economic question of principle and of patriotism, and of life and death to Canadians. The big interests, who seek to grab all the benefits of protection for themselves, are its worst friends, and do the great movement little good. It should not be a manufacturers' question; or a banking question; or a grain growers' question; or a combine question; or a monopoly question at all. Protection should be brought up to date to meet changed conditions, and extended. Protection will make for a better Canada, and a happier and more contented people, with work plentiful; it will make Canada a country fit for heroes who have fought for Canada to live and die in, instead of being driven to join the exodus.

I am tired of those who, for their own selfish ends, sometimes seek to apologize for protection as a question of expediency. If protection is solely a question of a manufacturer's or banker's profits, it is sure to die. As an honest protectionist, the great question of protection is one which I support, not for the manufacturers' or bankers' sake, but for Canada's sake. It is with me a question of both patriotism and principle, for the building up of a united Canada; and the principle should be extended and maintained so as to extend, conserve, build up, develop, and preserve all the provinces of Canada from coast to coast. I propose later to show how protection, adequate protection, should be developed and built up by additions and conservation, to further develop each of the provinces according to its needs, resources and economic development, and the psychology of protection as applied to Canada.

Some forty-seven years have now passed since the dead hero of protection in this country, Sir John Alexander Macdonald, first placed on the statute books of this country the old National Policy, and Canada can say of Sir John Macdonald as Rudyard Kipling said of the great John Bunyan: "The wisdom that he taught us is proven prophecy." If ye seek Sir John Macdonald's monument, look around you to-day in Canada and see the industrial nation we have, and the still mightier nation we might have had, had the National Policy been brought up to date, instead of being apologized for as an expedient. The exodus would end right away were his principles carried out and extended. I believe in protection for the good it will do the people of this country and the average man. It is a great national ideal, which I support for national, and not sectional reasons; for the greatest good to the greatest number, and not for the sake of any individuals, private plunder or selfish ends.

5 p.m.

The whole of the world to-day is turning and veering around to protection. Even free trade England is in a curious, circuitous way, in its amended Safeguarding of Industries Act—as set out in the famous white paper—coming around to indirect, and soon direct, protection.

Politics is defined as the science of government. Political economy is one of the latest born of the sciences, and has been built up on axioms worthy of credit.

The free trade professors have had their day and have about gone. They have lived on the dead text books of the past, and their days are numbered, although some of them still remain in Canadian universities. There are some here who talk one way and vote another. They will talk of the dead, but not vote with the dead, lest they become dead politically themselves.

If Canada is to be a great nation within the empire, to be prosperous she must prosecute and develop various branches of industry and supply the people's real wants mainly by the labour of her own hands. Last year, in the budget debate, on May 5, I examined the principle of protection, and the psychology of protection, past, present and future, in all countries and in history, and dealt with the development of England, France, Germany and the United States. I gave the history of protection in those lands in detail; and I showed that as an axiom and rule of political economy, it has been universal among these nations, and that it is the law of self-preservation and the survival of the fittest for nations in an industrial and national way. In Canada protection is, further, a social

and economic necessity. I also showed last year that free trade makes nations poor, and gave as illustrations Germany and the United States as they were in 1840, agricultural countries, undeveloped industrially.

We may take it as an axiom in comparing free trade and protection that the nation which is eminently agricultural and grain-exporting, which depends mainly or principally on other nations for its regular supplies of manufactured fabrics, has been comparatively a poor nation, and ultimately becomes a dependent nation. I do not say that this is the instant result of exchanging the rude staples of agriculture for the more delicate fabrics of art; but I maintain that it is the inevitable tendency. The agricultural nation falls in debt, becomes impoverished, and ultimately subject. I believe that the policy of protection should be brought up to date, and I agree with one of the protectionist papers in Quebec, Le Soleil, which says:

> To be worthy of the name, protection as a policy ought to be applied to the interests and well-being of society as a whole and not to the interests of the few. It ought to embrace all the professions, and all who fall within the categories of commerce, wholesale and retail; of all workers, whether they are engaged in stores or offices; of all women and children for whom the necessities of life are procured—provisions and clothing. In a word, protection ought to be for all classes of society. This provides a problem which cannot be solved in modifications of the tariffs of one kind and another, however important they may be.

I support such a policy as defined by Le Soleil not for the manufacturers' sake but for Canada's sake, and to ensure the greatest good to the greatest number. We learn from history of the fallacy of free trade from the failure of the prophecies in the early forties of Cobden and Bright that the whole world would follow England's example. I should like to quote for the benefit of the genial member for Brome (Mr. McMaster), whom I do not see here to-day, how those prophecies were fulfilled in the case of the United States and Germany. We might also show the fulfilment of that prophecy in the rising tariff walls of every country but our own. We might show the comparative positions of British, German, French and American industries, when free trade was adopted by England and protection by the other three countries I have named. Then Germany was the poorest country in Europe, content, or forced to export such raw materials as corn and timber in exchange for the manufactures of industrial England. We might show the Prussian peasant of that time, as contemporary travellers describe him, dressed in rags, breaking the clods with a wooden mallet because he was too poor to buy an iron plough. We might also quote the pathetic and almost despairing description of the German economist List, who described England about 1840 as:

> Supreme in every branch of manufacture, as a world's metropolis which supplies all nations with manufactured goods, a treasure house of all great capital, a banking establishment for all nations, which controls the circulating medium of the whole world, and by loans and the receipt of interest on them makes all the peoples of the earth her tributaries. In vain did the Germans humble themselves to the position of hewers of wood and drawers of water to the Britons; the latter treated them worse than a subject people.

Then we should see the United States at that same time, in 1840, invaded every year by an army of British commercial travellers. We should then have a picture of a comparative situation of the three countries at the outbreak of the war, Germany producing twice as much steel and iron as England, the United States with an even vaster production, the two countries towering in their industrial strength above the nation which had once supplied both with everything they required except food and timber. These comparative diagrams might be accompanied by others to show how national power was a reflection of industrial power, and how free trade England which, as a protected country, had once ruled the world, was compelled to invoke the aid of one great protected country, the United States, to assist her in repelling the attack of another. We might have a very pretty model of England in 1840 as the workshop of the world, and another in 1924 under free trade as the workhouse of the world with a dole system as the fountain. We might have a beautiful and moving reproduction of a labour exchange with the clerk handing out, not work, but doles to a queue of about a million and a quarter people. We might have exhibits of crumbling factories, rusting machinery and cold furnaces. The National Union of Manchester could contribute some very interesting statistics, the result of a questionnaire which they sent recently to their members. It seems that 567 manufacturers who replied, estimated that with adequate protection they alone could employ over 100,000 extra hands. We had a typical annual free trade speech the other day from the hon. member for Brome with copious extracts from the dead economists of the last century upon whom the hon. gentleman leaned very heavily for his guidance. The hon. gentleman gave a somewhat similar speech in a great protectionist centre, Toronto, recently on free trade where he spoke at Hart House to university students. While he

did so over 30,000 men were out of work there because of the unstable tariff we have in Canada. Hundreds of these men were sleeping in charitable quarters—in the House of Industry and in police stations. The hon. gentleman says that he will not vote against the budget because it would put the government out. As I say, he talks one way and votes another. For example in 1923 he crossed the floor and joined hon. gentlemen to my left. In 1924, however, when a redistribution bill was passed which might or might not have wiped out his seat, he returned to the government benches. The hon. gentleman need not fear that one vote will defeat the government because as long as any of the Progressives are here the administration will not be defeated. The hon. member, therefore, need not worry on that account. During his speech on the budget the hon. member for Brome spoke of the farmers in his constituency sending cream down to Boston. Judging from the experience of the past the farmers of Brome will only be able to supply cream to Boston so long as they do not interfere with the plans of the agricultural bloc in the United States. Just as soon as there is any interference with those plans, however, that bloc will put up the tariff wall on the lines I have suggested and exclude the farmers of Brome from the Boston market.

I regret very much the neglect of His Majesty's government to deal in the budget with the pressing needs of the unemployed, and I deplore the government's failure to devise and pursue a national policy to develop our resources, to diminish unemployment, and to restore the trade and commerce of Canada both at home and abroad to its old state of prosperity.

I regret also the negative policy of the government and its decision not to place an adequate dumping clause on the statute books of this country, leaving thousands of Canadians in want as a result of the lack of a proper tariff policy thus forcing industries to close and compelling many of our workers to join the exodus to the United States. I regret also any effort to come to the help to both capital anl labour by adopting such a dumping regulation as will be adequate and effective in the best interests of the country.

More than five-sixths of the budget is ancient and not modern history. A surplus in these days of high finance is not so much a matter of "cash on hand" as it is a matter of "heads I win, tails you lose"—it is a matter of statistics and figures. We are back to the old days of Ontario politics of a generation ago when, instead of such questions as the Ontario Temperance Act and Church Union, the great issue was whether the province had a surplus or not. I remember debating this question in an election in Middlesex county against the late Hon. George W. Ross, the then Premier of Ontario. At that time he called me "a doubting Thomas" and told me to come up to the parliament buildings after the election, when he would take me into the treasury vaults and show me the surplus in cash. I was there one day some time afterwards and asked him to carry out this promise. "Oh," he said, "never mind that now, Tom, here is a cigar." However, a short time after there was a change of government and Sir James P. Whitney became Premier. He made a survey of the assets and liabilities of the province and gave an honest budget that the people could understand. The late Sir James P. Whitney was honest enough to be bold and bold enough to be honest. With his accession to office there came an end of mythical surpluses. Henceforward under his administration a reliable and honest survey and statement of the assets and liabilities of the province was made by the government including that of all government commissions as well.

The Dominion government in its budget statement ignores the money advanced in cash to the Canadian National railways and the bonds guaranteed which are direct liabilities. So it figures out a surplus although $118,000,000 has been added to the capital of the Canadian National system during the past year directly and indirectly. Even if this was for the payment of interest it is nevertheless a debt. Frozen assets of some four millions of Roumanian loans in interest are included though not actually received, and we are not yet balancing our budget. The revenues are 52 millions less, and 13 millions more is spent, and only an estimate is given for the twelfth month's revenue at 35 millions, although one-twelfth of the gross would be nearer 29 or 30 millions. Net operating loans, plus cash advances and loans by the government, meet the fixed charges on the Canadian National Railway system's obligations, and a resort is made to direct taxation for 54 millions of a deficit. What the country wants is a little more of a railway policy that will lessen the deficit to be met by the taxpayer and a revaluation that would consolidate and write off a lot of frozen assets and of liabilities charged to public ownership which private ownership created in our railway situation, and give public ownership a chance.

I regret the present budget contains no relief to the business man. The sales tax retains all the features of annoyance, injury, loss and dissatisfaction to the business men.

As to the exodus to the United States, no effort is made in the budget to check this, nor will the incoming settler find anything in actual conditions to help him to stay in the country. The unemployed ask for bread and get a stone, namely a declaration that the federal government has nothing to do with unemployment and for the unemployed to see the provinces and municipalities. The industries of the country that were hoping for a safeguarding of industries act must still face the influx of products from foreign countries which have the advantage of cheaper labour with longer hours of work, depreciated currency and exchange and greater mass production. What we want in this country, Mr. Speaker, is a policy to check the exodus. The government should survey the whole field of public affairs, and analyse the causes of discontent, and upon the result of that analysis base their proposal for reform. This method of procedure would be in the interest of the country, and is what the Conservative party would do were they in office, and is in accordance with Conservative tradition, which has always exercised its beneficent influence for nearly two generations before the word "Progressive" was coined. Both Liberals and Progressives, no doubt, claim they have also looked into the troubles of the time, and are suggesting remedies. They are, though, of a negative value. There is this, at least, to be said of the Conservative party, however; they have preached the same doctrine of protection for all Canada in every province, and are a consistent party. They have been ready to risk unpopularity and to court the keenest opposition on the part of their political opponent in order to do what they believed the public interest required. All that the Conservative party can do is to rely on the educating of the democracy of the country. The central idea of Conservative policy is simple enough. It is that the present and future prosperity of this country depends absolutely on the adequate development of a protective national policy, a right development of our resources, and upon the right development of the British Empire. Domestic policy, trade policy, international policy, and defence policy, alike must be shaped to that end. If the fact of inter-imperial dependence be ignored, every experiment in reform is no more than sewing patches upon an old garment. No sooner is one rent mended than another appears. Some day it may well be that the dream may come true of an empire whose ways are the great waterways of the world, and in which men shall move for their industry, for their homes, from end to end with as little concern as to-day they move on the other side of the line—from the state of New York to that of California. It needs but little reflection to show how, if such conditions existed to-day here and in England, and in our empire, a mass of difficulties would be solved. These ideals have long been the ideals of Conservatism. It is equally true to say that they belong to no other party in the state.

In my opinion the National Policy should be brought up to date and be a new national policy for every province. There should be also a scheme of combined insurance to include unemployment, sickness, provision for old age and disability, by way of pensions. The question of housing should also be carefully investigated. Even more important is the question of the food supply, and bread and its price. An impartial inquiry should be held into the whole matter of housing and rents, and action should be taken in accordance with the results of such an investigation. There are indeed few hardships which the poorer classes resent more deeply than high rents, the scarcity, the high prices and quality of their daily food. There should be adequate regulation of the necessities of life, instead of allowing all kinds of trusts to live unrestricted and cross the border into Canada unregulated. We want further a national policy for marketing our wheat, coal and other basic products; the development of our water powers; a new national policy for coal, for oil reserves, minerals, for all of our resources, and further development all along the line; a national policy not only for capital but also for labour without any dependence on the United States, or being tributary thereto; and a law to prevent the bringing in what might be termed "Yankees bulls" into Canada, either in capital or labour. The American millionaire who seizes our resources and finds Canada a happy hunting ground should find a national policy to take care of his greed, besides a national policy for capital, a national policy for our labour unions free of American domination and dictation. Canada should be for the Canadians first, last and all the time.

The Conservative party in Canada is nevertheless the real hope of the future, and sooner or later the people will awaken to that fact. Much political capital has been made in the past by shallow and thoughtless agitators in denouncing the "Big business interests", but

the country realizes more and more that the big business interests they have so often heard denounced are as much the backbone of the country as are its agricultural interests, and the two are so interwoven in their business relationship that when you cripple the one you cripple the other. The Conservative party is the constructive, the progressive, the farseeing and cohesive party. It stands for unity, for home protection, for home development, for home staying and for Canada.

They are sending deputations to Ottawa all the time from the west and from the Maritime provinces complaining of their grievances and asking for special representation on committees, and even in this House there has been formed a Ginger group to look after the affairs of one province. It seems to me that it is about time central Canada, Ontario and Quebec, the two largest tax-paying provinces in the Dominion, got together and looked after their own interests. I would say to my hon. friend from Brant (Mr. Good), the whip of the Ginger group, that instead of talking so much about the troubles of the west and the Maritime provinces he ought to organize a Ginger group to represent Ontario. In my opinion the west and the Maritime provinces are very well off compared with Ontario. For example, the budget itself is a clear case of discrimination against Ontario. On bituminous slack coal the duty is raised from 14 to 50 cents per ton, which means less competition for Nova Scotia coal. And that coal is not used in Ontario anyway. So that Ontario will pay about a million dollars more annually for its steam coal imported from the United States. Thus Liberal Nova Scotia is enabled to sell, and Liberal Quebec is able to buy, Canadian coal at better prices, while Tory Ontario is getting none of the advantage and must bear all of the extra cost.

Another example of discrimination against Ontario is found in the reduction of the duty on well-drilling machinery from 27½ to 15 per cent. Such machinery is made in Ontario and is used in the western provinces most extensively. This means that western residents can now import drilling machinery more cheaply from the United States than they can purchase it from Ontario, owing to the long railway haul to the west. Thus again Ontario is the goat of the new changes in the budget. Ontario, with one-third of the national population, pays two-thirds of the new imposts. Ontario gets nothing but must pay, and pay. The same is true of the tax on the export of power.

The question of unemployment is being made a football of. It is no one's business, apparently; it does not concern the government of our country. Unemployment in Toronto is very acute at the present time. Here is a daily account from the Toronto press of the situation there:

> Thousands of hungry fed. Work of Reveille Mission. Over 300 given free meal last evening—many families helped—jobs for unemployed.
>
> Following out its regular Saturday and Wednesday schedule, the Reveille Mission last evening fed 327 men, women and children.

The article goes on to say:

> Accommodation both as to meals and beds, Pastor Paul Charbonneau announced, will be continued if funds are available till the end of the month. . . . "Conditions among you men are still so bad," he said, "that I feel I must go on helping you to the end of the month if the generosity of the Toronto public makes it possible."

There is the following paragraph from the press on the same subject:

> Appeals for Odd Jobs for the Unemployed
>
> Pastor Charbonneau of Reveille Mission, 383 Queen street west, is appealing for work of any kind for the unemployed. The pastor will be pleased if anyone who has an odd job will kindly communicate with him at the Mission or telephone Adelaide 2570.
>
> The Mission is still feeding the unemployed, and opened its doors on Wednesday night to a crowd of 318 men, women and children.

Unemployment is caused by the failure of this country to develop its natural resources and to protect native industry adequately. The question of unemployment is primarily a matter for the Parliament of Canada to aid in solving. But the government, the nation, the provinces, the municipalities and the church should unite in arriving at a solution, and the Canadian people should consecrate their best intelligence, their intellect, conscience and heart in a nation-wide united effort to solve this difficult problem. We are told that unemployment is not a federal matter, but that it is for the provinces and municipalities to deal with. I should like to ask the government to give an expression of opinion regarding the following cable despatch, which is reported in the press. How is this if the Federal government have nothing to do with unemployment?

> Canada Guarantees Employment For all
> Col. Amery Refers to Immigrants Under Empire Settlement Act
>
> Canadian Press Cable.
>
> London, March 9.—In the House of Commons to-night, L. C. Amery, Secretary for the Colonies, assured Sir C. Kinloch-Cooke, Conservative for East Cardiff, that the Canadian government had guaranteed employment to all persons emigrating to the Dominion under the Empire Settlement Act.
>
> The member for East Cardiff had drawn the attention of the Colonial Secretary to the opinion of the United Farmers of Alberta, expressed in a resolution,

that no more people in Great Britain should be encouraged to emigrate to Canada until conditions in the Dominion changed for the better.

As I said before, unemployment in this country is due to the fact that we have failed to develop our own natural resources and to conserve our own raw material. We are exporting in the raw and crude state to the United States various materials that we could manufacture at home. Take for example the case of asbestos; we are sending out $6,000,000 worth of raw asbestos taken from the bowels of the earth in Quebec, and that material when manufactured in the United States yields a return of some $75,000,000. We are exporting mica, nickel, pulpwood, power and coal. If we manufactured or utilized these articles in this country, it would provide work for tens of thousands of men. Canada supplies 85 per cent of the mica of the world, and 95 per cent to the United States. In 1924 Canada sold 112,000 tons of mica to the United States in the mill fibre state, only one degree removed from the crude. For that we received $5,546,000. When that was manufactured in the United States, it realized $70,000,000 worth of the finer products of asbestos, and another $10,000,000 worth of rough asbestos. Had we developed our own mica, $80,000,000 would have been distributed among Canadians.

Canada controls the world's supply of nickel. We need fear no competition in this particular article. We should develop nickel in our own country and help provide employment here. Canada's great nickel deposits give the United States all its supply and the world 85 per cent of its supply. Canada is limping along on a low tariff while the United States grows prosperous on a high tariff, three times as high as ours. The United States controls seventy-five per cent of the silk business of the world and seventy-five per cent of the rubber manufacturing, and yet not an ounce of rubber or silk raw materials is produced in that country. A proper protective tariff would induce growth and expansion here as nothing else in the world could.

No one knows better than the grain growers in the west what need there is for some change in our system. Their grain is being taken across the line to Buffalo where there are now twenty-eight elevators, and it is being milled there, mixed with American wheat and exported overseas, while the identity of Canada's fine hard wheat is destroyed. All the employment that is furnished by those twenty-eight elevators in Buffalo would give work to 15,000 men at Port Colborne and other lake Ontario points, if a duty and embargo were placed up to 45 per cent on wheat, having it milled in Canada and exported entirely through Canadian channels. I am glad that we are getting some converts in this regard, one hon. member to my left having advocated this policy.

We are certainly not developing our natural resources in this country as we should, for if we manufactured our mica and utilized our power and our coal in this country we could provide work for tens of thousands of men. Last year Canada sold 4,350,000 cords of pulpwood to the United States, receiving $13,000,000 for it, while this raw pulpwood was converted in the United States into a value of $67,000,000. We sent one-third as cordwood, one-third as pulp, and one-third as paper. We are also sending $100,000,000 every year to the mine owners in Pennsylvania. We could use $56,000,000 of that sum to provide work and wages in the Maritime provinces, in Alberta and in central Canada. And do not forget that Canada on the other side of the account buys back the manufactured products of these raw mineral materials which are manufactured in other countries. Do not forget that copper, as a raw material, is being exported in bulk and is being manufactured in the United States into articles worth millions of dollars. For example, I know a large firm in Toronto which last Christmas purchased 30,000 radio machines made in New York, Boston and Providence, and the best parts of these sets were manufactured from Canadian copper. Last year Great Britain purchased about 145,000 tons of copper, and Germany took three times that amount.

With reference to unemployment, many of the clergy have interested themselves in the subject, and I am glad to see that, following the example of the Anglican, Presbyterian and Catholic churches, the Methodist church has now applied itself to the problem. On April 6 last a special committee of the Toronto Methodist Ministers' Association on Relief and Unemployment made the following report:

Your committee, after careful enquiry and conference, respectfully submits concrete proposals, designed to help in solving the problems of relief and unemployment.

Your committee is conscious that results will depend upon the birth and cultivation of a public conscience, which shall demand that standard of living in which no worthy citizen or his or her dependents shall suffer from hunger or cold by the operation of economic or other conditions beyond his or their control. To secure this conscience demands tact, tenacity and widespread use of the pulpit, the press, the platform, and every other form of advocacy.

Your committee believes that this association must employ its strength and zeal with determination to obtain the defined objectives.

Unemployment is an unsolved but solvable problem. It results generally from the operation of forces beyond the direct control of the wage-earner, and constitutes a menace and challenge to every citizen.

Your committee believes unemployment contributes to the moral, mental and physical deterioration of our citizens, and involves immense annual economic losses. It permits thousands of children to exist cold, neglected, under-nourished, and exposed to the most serious afflictions affecting the human race; it robs womanhood and manhood of character, their sense of self-respect, and shadows their life out-look with shame and despair; it demoralizes unfolding youth, begets beggars and vagrants; it is so far reaching in its effect upon society that generations unborn will reap the awful harvest which follows inevitably in its wake.

Your committee believes the burden of responsibility to be a joint one resting upon all citizens and in particular embracing the federal, provincial and civic administrations. It would appear that the federal government has not been impressed by the serious and accumulative consequences of unemployment upon the citizens of the Dominion and we express the earnest desire that such representations shall abound through the voice of the church and associated public welfare agencies as shall impress the federal authorities of the gravity of the situation and secure an early and serious effort on the part of the federal authorities to meet by practical measures their responsibility to the people.

In particular your committee would urge action designed to eliminate the suffering resultant from the bringing into our country of immigrants who are inadequately informed concerning the conditions they are called to meet in Canada.

1. No one should be left cold or hungry.

2. These who are unable to work and are in need should be provided for adequately.

3. Work should be found or made for all able-bodied workers who, without it, would be in need of the necessities of life.

4. Those able to work and unwilling should be subjected to corrective discipline.

5. Reasonable means should be adopted to increase the earning power of those relatively inefficient.

While your committee recognizes that it is not primarily the function of this association to formulate a detailed plan for the elimination of unemployment, we feel that it will be of some advantage to bring the matter to the attention of the public in such a form as will show that a solving of this grave evil is possible. We believe it to be the plain duty of the church to protest against all conditions that menace the health, the morals and spiritual life of the people. Of such conditions unemployment is one that calls for immediate remedy.

On pages 1428, 1437 and 1797 of the current Hansard, the statement will be found that there were 20,000,000 unemployed in the United States, and as the debate is set out there I am not going to enter into a discussion with the Minister of Labour (Mr. Murdock), because I am willing to admit that Hansard speaks for itself. But I took the trouble, Mr. Speaker, to write the Secretary of Labour in the Coolidge cabinet, the Hon. James J. Davis, whom I met some time ago, and with whom I have no doubt the Minister of Labour is well acquainted. I received a reply from Mr. Ethelbert Stewart, Commissioner of Labour Statistics, Washington, who in the course of his letter states:

I would say that one-tenth of the figure mentioned —20,000,000—would be more nearly a true statement.

He enclosed a copy of last month's report on Employment in Selected Industries, which contains a fuller statement of what the statistics really mean. I find from that report that employment in manufacturing industries in the United States increased 1.6 per cent in February as compared with January, while the aggregate earnings of employees increased 6.6 per cent and per capita earnings increased 4.9 per cent. These considerable gains in February indicate a decidedly increased momentum in the upward trend of employment and employees' earnings which has been in evidence since August, 1924, and which suffered a slight setback in January owing to the regularly existing conditions of that season of inventories and repairs. These unweighted figures are presented by the United States Department of Labour through the Bureau of Labour Statistics, and are based on reports from 8,755 establishments in 52 industries, covering 2,765,058 employees whose total earnings during one week in February were $76,334,726. The same establishments in January reported 2,722,124 employees and total payrolls of $69,115,408. Each of the nine geographic divisions shows increases in February, both in employment and in payroll totals, the increases in employment ranging from 2.5 per cent in the south Atlantic states to 0.3 per cent in the mountain states, and the increases in payroll totals ranging from 12 per cent in the east north central states to 1.2 per cent in the New England states.

Mr. MURDOCK: Does my hon. friend know that the manufacturing employment figure in Canada increased ten points between January and March?

Mr. CHURCH: Mr. Speaker, the Minister of Labour does not know what he is talking about, and if the information he gives now is just as reliable as the 20,000,000 figure which he relied on when addressing the House, I think it will be well for the minister to look over this report, which I shall be glad to hand to him. It is only fair to say that the Department of Labour in the United States has no machinery for showing how many men are out of work, but they divide the country intc certain sections, the mountain, central and southern, and they have their own investigators. Probably the minister was not in his seat when I gave the figures mentioned in the report on Employment in Selected Industries

in the United States and, I repeat, I shall be glad to hand him this pamphlet so he may go over it himself. The report contains an interesting comparison of employment in identical establishments during one week each in January and February, 1925.

In respect to food and kindred products there were 1,039 establishments, and the number on the payroll in January, 1925, was 191,217 and in February, 1925, 190,250, while the amount of payroll in January, 1925, was $4,782,473 and in February, 1925, $4,712,871. In textiles and their products, there were 1,686 establishments; the number on the payroll in January, 1925, was 559,972 and in February, 1925, 571,906, while the payroll in January, 1925, amounted to $11,231,816 and in February, 1925, $11,630,400. It will be noted that there is an increase both in the number and the amount of the payroll. Similar increases are shown in respect to iron and steel and their products, lumber and its products, leather and its products, paper and printing, chemical and allied products, stone, clay and glass products, and others.

Then there is a table making a recapitulation of these statistics by geographic divisions—New England, middle Atlantic, east, north, central, and so on. The total number of establishments is given as 8,755; the number on the payroll in January, 1925, was 2,722,124 and in February, 1925, 2,765,058, and the amount of the payroll in January, 1925, was $69,115,408 and in February, 1925, $73,664,326.

Another table in this pamphlet makes a comparison of employment in identical establishments during one week each in February, 1924, and February, 1925. It shows that in food and kindred products the number of establishments was 798; the number on the payroll in February, 1924, was 177,467 and in February, 1925, 168,545.

Then, there is a paragraph with regard to per capita earnings. It says:

> Per capita earnings increased in February, 1925, as compared with January in 35 of the 52 industries here considered and decreased in the remaining 17 industries. The one outstanding increase was 30.4 per cent in the automobile industry. Comparing per capita earnings in February, 1925, with those in February, 1924, increases are shown in 27 industries and decreases in 24 industries, while the per capita earnings in the brick industry were unchanged. The rubber boot and shoe industry shows an increase of 5.9 per cent.

So that the conditions over there are improving. Then there is a paragraph with regard to time and capacity operation, which I quote:

> Reports in percentage terms from 6,550 establishments in February show increases of one per cent each in the average per cent of full-time operation and the average per cent of full capacity operation as compared with January. The establishments in operation in February were employing an average of 83 per cent of a full normal force of employees instead of 82 per cent as in January, and these employees were working an average of 93 per cent of full-time instead of only 92 per cent as in January.
>
> Two per cent of the reporting establishments were idle, 70 per cent were operating on a full-time schedule, and 29 per cent on a part-time schedule, while 43 per cent of the establishments had a full normal force of employees and 55 per cent were operating with a reduced force.
>
> Over 2,000,000 employees are represented in the following table, and of these over 1,400,000 were working on a full-time schedule and nearly 600,000 were working on a part-time schedule.

Then follows a table to schedules which shows the full and part time and full and part capacity operation in manufacturing establishments in February, 1925. There is also a paragraph with regard to the index numbers of employment and of payroll totals for February, 1925, for each of the fifty-two industries surveyed by the Bureau of Labour Statistics, together with general indexes for the combined twelve groups of industries dealt with. I quote:

> The general index of employment for February, 1925, is 91.6 and the general index of payroll totals is 95.1. These numbers represent an increase of 8 per cent in employment and an increase of 17.7 per cent in payroll totals since July, 1924, when the employment index was 84.8 and the payroll total index was 80.8, this being the lowest point reached in employment since May, 1922, and the lowest point reached in payroll totals since August, 1922.

Now, Mr. Speaker, the Toronto district is the home of: (a) industrial concerns and industries of all kinds; (b) market gardens; (c) mixed farming. The conditions in that district are not what they should be. What is wanted is added and adequate protection and safeguards. And there should be a root-and-branch reorganization, by revision of the tariff upward, to provide a safeguard from both fair and unfair competition. Protection, which seemingly was adequate before the war, is now inadequate. The reasons why it is inadequate can be found in the unfair competition abroad, in the lower wages, longer hours for labour, depreciated currency, excessive taxation. All these unusual conditions now enter into the problems which face us, conditions which were not experienced by the framers of the tariff of the past.

Farmers and market gardeners in this district want to retain the home market which is now being taken away from them by unfair competition. That market used to be a steady market, not one which was here to-day and gone to-morrow; and the prices were correspondingly good. What I advocate is revision of the tariff and the safeguarding of the industries of this district, as well as those of

the rest of Canada, by equality of treatment. A general tariff law is wanted all over Canada. The farmer and the market gardener will get the benefit of this revision in the conservation of the home market they have held for years through the maintenance of the industries at their door, in the nearby cities and towns, in a healthy and prosperous condition, and the exclusion of foreign agricultural products from our home markets. I sympathize with the demand of these farmers to keep out those early fruits and vegetables the business in connection with which now goes to the American competitor; because we have in the Niagara and lake Ontario district the finest of fruit and vegetable farms.

As I pointed out at some length two sessions ago, protection is wanted for the wool growers and manufacturers of Canada. The present tariff in this respect is not only out of date; it is a relic of the past. It is an absurdity to try to compete with outside countries when you consider how cheap labour is in continental Europe. Because of the conditions to which I refer, hundreds of industries are closed and others are operating only part time. There are no orders and therefore there is no work. Our Toronto industries are undersold, undermined, economically put out of business. Tariff tinkering is a dangerous business; it has proved so for Ontario and for Canada. Some employers of labour are not to blame; they have tried to take the patriotic course and to continue, but they have had to close up. There is no use denouncing them. The net result of this undermining of industry is a condition of unemployment—men out of work; no pay envelope at the end of the week. The time has gone by to denounce the employers and the so-called big interests, whose interests are really identical with those of agriculture and labour. Protection of our industries is the remedy. The farmer will benefit by the preservation of his home market. Protection is the only weapon the workers can use if the country is to be conserved for future generations of workers and toilers, as was done in the United States in the early days of its history.

What is the opposite to the policy which I advocate? Free trade, unemployment, depression, closed factories; the exodus of our people, empty houses; suffering on the part of the workers' families, the members of which are underpaid and under-clothed. And all this for the want of a national policy, for the want of an adequate utilization of our abundant natural resources which would make for better times and more employment, for happy and contented industrial workers in agriculture and in industry. Protection will again bring us prosperity. Every Canadian can help by purchasing Canadian goods. Every article of clothing—shoes, hat, collar, tie, suit or dress; domestic food, fruit, vegetables—all these things can be bought in Canada. By purchasing only goods which are made in Canada we can protect our industry, our agriculture and our labour; in other words, we can pursue a policy of Canada for Canadians.

If the 1,700 textile factories now in Canada, which employ 90,000 men and women, were wiped out, and the $300,000,000 worth of goods now made in Canada were imported from abroad, five out of every hundred people in Canada would find the source of their maintenance gone. On the other hand, if the textile industry were safeguarded and the bulk of the $128,000,000 worth of textile goods now imported were made in Canada, it would employ about 40,000 additional workers in the mills, who, together with their dependents and those who would be needed to supply their requirements for maintenance, habitation, health, recreation and transportation, would add over 220,000 souls to our population in the rural mill towns.

It is beginning to be realized that it is not because the mills abroad are better equipped, or because the workers and technical men abroad are more skilled or more clever than Canadians, or because a better quality of goods can be produced abroad that the woollen and knitting mills in Canada need protection; for none of these things are true. It is because our main competition comes from Great Britain and the continent, where the workers accept lower wages, exist on a lower standard of comfort, and can dump the products of their cheap labour on the Canadian market.

The increase in the imports of woollen and worsted cloth from Great Britain in 1921 was 13,095,400 square yards, whereas in 1924 they had increased to 30,154,200 yards, and the effects of the reductions in duties on goods from Switzerland, Belgium and Italy in 1924, and the removal of the safeguard against German goods in the same year, have not yet been fully felt.

There was an article in a Toronto evening paper the other day headed "Put out of Business." This expression is used by Mr. Frank Welsh of Toronto, who is president of the Textile Manufacturing Company, and president and general manager of the Dover-

court Twine Mills, Limited, both of Toronto. The latter business, after being in existence forty-five years, and with trade extending from coast to coast, was forced to assign about a year ago, and under the direction of Mr. Welsh an effort is now being made to again build the business up. Mr. Welsh, commenting on the reasons for the failure said:

> The reasons were not far to seek. The firm had manufactured tennis nets for one thing. We found we could buy in England tennis netting at a price that would enable us to sell at about 25 per cent under the cost of Canadian production. Consequently I do not think there is a tennis net being made in Canada to-day.

He further says:

> Canadians must adopt a national attitude on this tariff question. Objection is made to increasing our rate of customs against the entry of foreign or outside goods, with the statement that the tariff merely makes manufacturers wealthy because they are greedy as a class. Let us take it for granted that they are greedy; the fact then remains that, as United States protective tariff is three times as high as our tariff, they must be three times as greedy over there. What is the result? The United States is the most prosperous nation in the world. She has the most millionaires of any country in the world, a great many of whom have risen from the ranks. Her working classes work the shortest hour and get the most money. Their standard of living is the highest of any industrial community in the world. Every year, for the past hundred years, she has added a million people per year on the average, to her population. This is the answer to those who pretend a high protective tariff is a curse.
>
> Let Canada accept this protection in order to get some of the great blessings that have accrued to the other country.

We heard from the Minister of Agriculture (Mr. Motherwell) the other night about reciprocity, which is so near and dear to his heart. In view of the business depression and stagnation in this country, all I can say is that if such a policy of free trade and reciprocity is adopted by the people of the country, it means that we will go back to where we were in 1878. Industries will be ruined; people will be out of work and the times will be ten times worse than they are now. I may say further to the Canadian Council of Agriculture that free trade and reciprocity with the United States would make a Lazarus out of a country that Sir Wilfrid Laurier professed to have made a nation. That proposal would exhibit the Canada of Queenston Heights, or St. Julian, of Vimy Ridge, or Passchendale, of Amiens and many other fields of glory, as a beggar for the poor favour of reciprocity and free trade Canada cannot prosper on the growth and export of wheat alone. This was shown in the case of the United States. Protection was the path of glory to prosperity for the United States.

[Mr. Church.]

Geography has taught Canada one lesson, never to leave itself dependent on a neighbour for its fiscal policy, especially where that neighbour is one of the most prosperous, wealthy and highly protected countries in the world; I refer to the United States. Industrial dependence on the United States is no policy for a free Canada. Protection means good wages for our workmen, and our own markets for our own products, and our own work for our own workmen. Free trade means poor wages.

When the very pedestal on which Canada's industrial prosperity rests is being attacked, Canadians who believe in protection as a national ideal and public patriotism, should bestir themselves for the country's sake.

The low cost wheat is an important factor in price fixing. An agricultural country that buys abroad is heading for the poor house, as in the end agriculture must pay for products bought in Europe. The point to be determined is: Could we obtain them abroad cheaper, all tariffs being abrogated, than under an efficient system of protection? In other words, now—Canadian goods kill off native and struggling industries. The war has shown that free trade offers Canada nothing but a dump for European products; and the way German goods are being dumped in Canada proves this, until we get a more fair and up-to-date dumping clause.

Foreign manufacturers know that self-interest will dictate their policy to compete against and utterly overthrow a young rival of a native industry. The foreigner will cut to undersell the native young rival, and when he has him beaten, will again mark up his price.

Protection is the only road to profit for the farmer of Canada. No big, great basic national industry like agriculture can live without protection; alien goods are high priced goods. Free trade never built up the United States and will never build up Canada either. Protection enables farmers to exchange raw agricultural products for industrial products. The growth of the United States since 1840 shows that great sacrifices were made by the vested interests, long established, to break down a young and penniless rival. It is so in a thousand instances, and is so even to-day, especially in so large an effort as the supplying of a great and new nation with manufactured goods. These foreign interests will, as long as they encounter Canadian rivalry, supply our grain-growing country with manufactured goods, and if let alone, would in time under free trade wreck our native industries first, for our farmers want "to buy

where they can buy cheapest." This is the first commandment of free trade. But these foreign trade prices would not last a year after a Canadian factory was silenced. Then the foreign manufacturer would again think of his profits and immediately raise his price and obtain a monopoly.

Now what basic effect will this foreign purchase of manufactures have on the price of Canada's agricultural staples as a result of aforesaid? This example given of free trade will be a foe to the farmers, for the price at which the farmers' surplus crop can be sold governs the price of the whole crop, the question being whether the foreign or native manufacturer will supply the most manufactured goods in exchange for the least grain of Canada. President Coolidge and his cabinet agree with that view. Mr. Hoover, the Secretary of Commerce in the United States cabinet, has for a long time been telling United States farmers that their troubles will be at an end if they will so regulate production that there will be no exportable surplus of any staple commodity. This surplus, he says sold abroad, governs prices in the home market. If there were no excess, prices could be raised by the device of the tariff. He urges the growing of less wheat and more flaxseed and other products which can be absorbed by the home market.

The United States imports about 25,000,000 pounds of butter annually, and there is a movement to raise the present tariff of eight cents a pound with the object of shutting out Canadian, Danish, New Zealand and Argentine butter. Mr. Hoover admits that the duty of 42 cents a bushel has no effect on domestic prices, and that the wheat grower's only way of profiting by the tariff is to curtail his output. Last year the wheat area of the United States was cut down by four million acres, but the crop was larger than in 1923 because of favourable weather—contrary to Canada's experience. The high price of wheat has resulted in an increased sowing to winter wheat, though the recent slump may decide many growers of spring wheat to take Mr. Hoover's advice. What chance, then, has Canada to sell its agricultural products or any other products to the United States satisfactorily?

As the whole question of protection has been scoffed at and scouted in this debate, I think it is most desirable that some defence of it should be made.

Protection means cheap industrial products, made by our own workmen. The history of the United States shows that free trade retarded the growth in early days of that nation's young life, as it will do, if allowed in Canada. Free trade is no builder up of nations. This has been shown the world over. Germany is an example of this. England had protection for over three centuries before 1860. Protection saved America, a young agricultural country, and its great expansion from 1840 is due entirely to protection. It was a bitter lesson the United States learned in its effort to try and grow and thrive under free trade. For native goods in the long run are always cheaper than foreign goods.

The price of grain at any point where it is readily and largely produced is governed by its nearness to, or remoteness from, the market to which its surplus tends; and the least favourable is the market in which any portion of it must be sold. The key to success in Canada is to build up a home market. Let Canada's goods be manufactured in her midst, thus affording a ready market for her grain and agricultural products, and prices will rise by an irresistible law to the best average in the world. In comparison, under free trade, the farmer, with his workshops in Europe, might buy a trifle cheaper, but such free trade in the long run will prove a dead loss to the farmer for though he might make a trivial saving by buying where he can buy the cheapest, he will lose heavily on his grain, for the price will be fixed by the distance, or rates, for his surplus grain. Protection in the end will mean lower priced goods, while free trade will doom an agricultural country. For the law which dooms an agricultural country to inevitable and ruinous disadvantage in exchanging its staples for manufactures, involves it in perpetual and increasing debt and dependence.

It is not that agricultural countries are more extravagant, or less industrious, than those in which manufactories, or commerce, preponderate. It is only because there is an inevitable disadvantage to agriculture in the very nature of all distant exchanges. Its products are far more perishable than any other. They cannot so well await a future demand; but in their excessive bulk and density is the great evil.

Canada started like the United States as an agricultural country, and the early lessons the United States learned should be an example to Canada to learn by experience, and shun free trade in the day of Canada's youth. Free trade proved itself the foe of the United States. The history of the United States is a strong argument for Canada following in her footsteps, and maintaining protection. What will become of Canada if she follows a natural tendency in every comparatively new country to become and con-

tinue to be an exporter of grain and other rude staples, and an importer of manufactures? History shows that this proposition is illustrated and confirmed by universal experience and rests on obvious laws. The new country has abundant and fertile soil, and produces grain with remarkable facility, also other raw materials and most rude and bulky articles.

Labour is there in demand, being required to clear, to open up and build, to open roads, and the labourers are comparatively few; while in older countries labour is abundant and cheap, as also are capital, machinery, and all the means of the cheap production of manufactured fabrics. In the absence of any counteracting policy, the new country will import, and continue to import, largely of the fabrics of old countries, and to pay for them, so far as she may, with her agricultural staples. The history of the United States from 1842 to 1890, when they had no tariff and scarcely any paper money, proves that, whatever may be the currency or the internal conditions of a new country, it will continue to draw its chief supplies from the old, large or small, according to its measure of ability to pay for or obtain credit for them; but still putting duties on imports out of the question, it will continue to buy its manufactures abroad, whether in prosperity or adversity, inflation or depression. It is injurious to a new country thus to continue dependent for its supplies of clothing and manufactured fabrics on the old.

The ruling price of grain, as of any manufacture, in a region where it is considerably exported will be its price at the point to which it is exported, less the cost of such transportation. The average price of wheat throughout the world is something less than one dollar per bushel, higher where the consumption largely exceeds the adjacent production, lower where the production largely exceeds the immediate consumption. I put out of view in this statement the inequalities created by tariffs, as I choose at this point to argue the question on the basis of free trade which is of course, most favourable to my opponents.

All agriculture is no basis for the life of a nation. Protection must shelter the birth of every big industry, and it must be nursed in its struggling years and nurtured. Why not learn from history? Why build up alien countries instead of our own? For foreign factories are no friends of our native farmers. As a nation we should buy at home. These truths which the United States adopted early can alone save Canada in 1925, as protection gives bread to the worker in exchange for work, whereas free trade is an obstacle to a nation's growth. The aim and object we seek in protection is not to make our country a manufacturer for other nations, but for herself, not to make her the baker and brewer and tailor of other people, but of her own household. If I understand at all the first rudiments of national economy, it is best for each and all nations that each should mainly fabricate for itself, freely purchasing of others all such staples as its own soil or climate proves ungenial.

It is best for every nation to make at home all those articles of its own consumption that can just as well, that is, with nearly or quite as little labour—be made there as anywhere else. I say it is not wise, it is not well to send to the United States for various manufactured goods, to France for boots, to Germany for hose, to England for knives and forks, and so on; because the real cost of them could be less—even though the nominal price should be slightly more—if we made them in our own country, while the facility of paying for them would be much greater.

I may say I do not object to the importation of choice articles to operate as specimens and incentives to our own artisans to improve the quality and finish of their workmanship—where the home competition does not avail to bring the process to its perfection as it often will. In such cases, the rich and luxurious will usually be the buyers of these choice articles, and can afford to pay a good duty. There are gentlemen of "extra polish" as our dapper Minister of Agriculture might call them, in our cities and villages who think no coat good enough for them which is not woven in an English loom, no boot adequately transparent which has not been fashioned in by a Parisian master and that scorn 4.4 per cent beer for a bottle of sparkling Burgundy.

Since the government must have revenue and the Canadian artisan should have protection I am glad it is so fixed that these gentlemen shall contribute handsomely to the farmer and gratify their aspirations with the least possible detriment to the latter. This principle should be extended to include early fruit and vegetables and protect the Canadian farmer and market gardener from the unfair competition of United States early fruit and vetgetables.

Further, free trade kills industry, destroys a young rival, then puts up prices, and the United States imports are a deadly menace to Canada in 1925. High tariffs saved the United States. The whole prosperity of that

country was built up by high tariffs. These are the facts from the fiscal history of that country. England's imports never menaced in 1844 the native industries of the United States the way American imports are menacing the native industries in Canada in 1925.

The free trade assumption is always false that manufactures are eternally and especially in want of protection, while agriculture and commerce need none. The assumption is false in any sense; our commerce and navigation cannot live without protection, never did live. It is the interest of the whole country which demands that that portion of its industry which is most exposed to ruinous foreign rivalry should be cherished and sustained. The wheat grower, the grazier, is protected now by ocean and land, by the fact that no foreign article can be introduced to rival his except at a cost for transportation of some thirty to one hundred per cent on its value; while our manufactures can be inundated by foreign competition at a cost of some two to ten per cent. It is the grain grower, the cattle raiser, who is protected by a duty on foreign manufactures quite as much as the spinner or shoemaker. He who talks of manufactures and nothing else being protected, might just as sensibly complain that we fortify Halifax and Quebec, but not London or Ottawa.

The United States draws the life blood of Canada in 1925 the way Britain was in economic history charged with drawing the life blood of Portugal in 1844, industrially. Our low tariff is a boon and aid to the United States. Canada suffers at the hands of the United States, the latter taking advantage of our low tariff. Canada is the happy hunting ground of the American millionaire, who is getting the title deeds of our timber, forests, pulpwood and mines.

Do we know that the manufacturers of the United States first shot up under the stringent protection of the embargo and war, that they withered and crumbled under the comparative free trade of the few succeeding years, that they were revived and extended by the tariffs of 1824 and 1828? Do we not know that Germany, crippled by British policy which inundated her with goods yet excluded her grain and timber was driven, years since to the establishment of her "Zoll-verein" or tariff-union a measure of careful and stringent protection, under which manufacturers have grown up and flourished through all her many states? She has adhered steadily, firmly, to her protective policy, while we have faltered and oscillated, and what is the result? She has created and established her manufactures, and in doing so has vastly increased her wealth and augmented the reward of her industry. Her public sentiment, as expressed through its thousand channels, is almost unanimous in favour of the protective policy.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. CHURCH: Mr. Speaker, when the House rose at six o'clock I had been showing what protection had done for the United States, how it had built up that country, and the lesson given to Canada of the desirability of protection for all classes of industry in this Dominion. One of the things that protection does is to impose a tax on luxury—it taxes those who are well able to pay. The whole free trade policy is, in my opinion, a policy of greed beyond any greed ever dreamed of in the creed of protectionists. The whole country is to be taxed to build the Hudson Bay railway that is to carry wheat to a part where the wheat will be exchanged for goods. The goods made by producers who do not pay a cent in taxes for the railways are to be consumed by a population that does not spend, and does not want to spend, a cent in wages to their own countrymen. How are these countrymen to help pay for the Hudson Bay railway and all other railways if free trade conditions are to isolate the industries of the west from the general economic life of the country? A great number of the farmers in the west are misrepresented in this parliament. The farmers of Ontario have always shown themselves patriots on the battlefield and protectionists in the polling booth. Free trade theories have already encumbered the wheat grower with conditions that take $25,000,000 a year from him. Free trade conditions must be supplanted by protectionist principles in the shipment of grain, in the solution of the insurance problem and, if necessary, in the excise and export duties, or the wheat growing industry will be ruined.

Canada is able to offer two possible answers to a United States tariff increased to 42 cents per bushel on Canadian wheat. Answer No. 1 should be written in regulations that will prevent the Canadian milling combines and grain exchanges from wolfing the Canadian wheat grower out of his crop at low prices. Answer No. 2 should be written in a tariff of export duties that will make it impossible for United States millers to import a pound of Canadian wheat. Exclusion of Canadian wheat

from the United States market must mean the exclusion of United States flour from every export market. Flour ground out of American wheat cannot compete in the export markets of the world with flour ground out of Canadian wheat. Let the United States increase the American duty on Canadian wheat. A higher United States duty on Canadian wheat will compel the American millers to seek, and vainly seek, an export market for the inferior flour they are able to feed to their own people.

There never was a time in the industrial history of Canada when the business men of the country, and the producing power, stood in need of more sympathetic consideration at the hands of the financial administration of the government than to-day. The crushing burdens and taxes on industry to-day constitute a colossal handicap for business men in a period when every nerve is being strained to strengthen stability and ensure expansion of production on economical lines in view now of the absence of revival of international trade. The sales tax, for example, is a crushing blow to industry. It was originally 3 per cent, was raised to 6 per cent, and was afterwards reduced to 5 per cent; the overhead of the industrialist is staggering. As every person knows in keeping pace with the times, with the continued development, it is absolutely essential for progressive manufacturing concerns to be equipped with up-to-date plant and machinery. The march in machinery is unceasing. The lifetime of equipment in factory and machine shop to-day is very much shorter than in the past, and the scrapping of existing machinery and plant in favour of more modern methods is a problem that has always to be faced if Canadian industries are to maintain, and in some cases regain, their traditional pre-eminence. On these grounds there should be a reduction in the sales tax and income tax, and a more liberal allowance should be made for depreciation on account of wear and tear of machinery, to say nothing of allowance for expansion. I do not see how modern industry can be up-to-date in a way that the economic situation compels them to be unless it is relieved to some extent of its present burdens. A policy of safeguarding industries is badly needed in Canada and something should be done to provide immediate relief to industry by reduced taxes and also to protect our native industries now withering under foreign competition and the dumping in Canada of foreign manufactured goods.

A manufacturer asked me a question the other day. He said "How can I continue to keep my plant open under existing conditions?" He gave me the following argument. "The law at present gives me no encouragement. If I locate in Canada I am shut out from other countries by hostile tariffs and even in my home market I am given no preference. They tax my plant, my income and my excess profits; but if I am wise enough to locate in the United States, Germany, or elsewhere, and employ foreign labour, I will have the foreign market with tariff protection and free excess to Canadian markets on an equality with Canadian citizens." When foreign workmen are thus paid is it remarkable that unemployment exists in Canada? Is it not reasonable that Canadian workmen should have a preference in the markets of their own country?

I was sorry to see the withdrawal of the dumping clause. When that was announced there was great applause from hon. members to my left. No doubt it was a surrender to their free trade policy. They wanted the concession but when it was granted it was a sorry day for Canadian industries. I advocate a policy of endeavouring to make our farmers more prosperous, the bringing of more people into the country and especially endeavour to get back the splendid type of Canadian who have gone to the States, and an expansion of our home market. On account of the withdrawal of the dumping clause I think conditions in Canada will be more disturbed than ever. We have the statement given by the American Secretary of Labour in which he compares the exodus in 1921, 1922, 1923 and 1924 and shows an average in 1921 of 4,410 per month, or a total for the year of 52,929. In 1922 the monthly average was 5,190, or a total of 62,289. In 1923 the average was 15,165 per month, or a total of 181,973. In 1924 the monthly average was 13,255, or a total of 159,063. We have to allow for the immigrants that come back, but that is a small number.

With regard to the dumping clause, I was very much surprised to see what happened, and I may say that the civilians and soldiers in the industries are very much affected by this. Under the trade policy in vogue in Germany, German goods come in here, and it is a great menace to Canadian industries. I have a letter here from a lady in Toronto, which I will read to the House. It reads as follows:

> Enclosed you will find a package of rusty needles, purchased by me from a returned soldier, deaf and unable to find employment. You will notice they were made in Germany. Is it not the irony of fate that Canada has been given a government who would make it possible for our returned men who fought for us, to peddle German rubbish from door to door in order to keep body and soul together?

And the lady enclosed a package of needles made in Germany. I have seen these things on the streets myself. The departmental stores are full of cheap German goods. At Christmas-time it is impossible for the small storekeepers to compete with them. In the cities of Toronto, Hamilton, Brantford, Winnipeg, Vancouver and Halifax the small toy maker cannot compete with these German goods. The manufacturers cannot compete to-day because trash such as this package of needles I have in my hand are dumped in our cities and towns because there is no dumping clause to protect them. Coming from a soldiers' city which sent many thousands of soldiers to the war I protest against this practice. I believe what the Acting Minister of Finance says, I further believe that there are men in the government who are trying to carry on the affairs of the country to the best of their ability, and I sympathize with them in their work. I was very sorry to see them withdraw this dumping clause, because such an action was not fair to the farmers. We have thousands of farmers residing in the vicinity of the city of Toronto. If we refer to the teaching staff of the city of Toronto, I say that two-thirds of them come from the country, and Toronto has been built up by the farming community. Many farmers' sons in the different cities and towns, who have served as soldiers, have been driven out of employment on account of German goods being dumped in the market. Here is another item I wish to give to the House:

A Slap From Germany

Busy Factories There

Germany taking every advantage of King government's policy—our factories closing

Whilst Canadian factories are closed up tight and others only working part time, Germany is flaunting her prosperous conditions in the face of our war heroes, who are in bread lines and securing relief from the House of Industry to keep home and family alive and together. Through the mail arrives a booklet, English edition, but issued for 98 different countries, on "The Export Market," The centre part of the coloured cover is occupied by a ship representing world-wide commerce, whilst beneath is a photo of a large factory, and the words underneath "800 employees." The irony of the thing is that over the corner of the busy factory is a white dove of peace inset in a black circle.

Under the present King government's policy German goods are allowed to be dumped on the Canadian market in unequal competition, and whilst Canada is suffering a terrible depression Germany is waxing audacious and winning our markets, and putting our men out of employment and sending them across to the United States.

And the same with the shoe industry. Germany is dumping her goods here in Canada and selling them, and the shoe factories have been closed up.

Referring to the income tax, I was sorry that the Acting Minister of Finance did not see fit to exempt incomes up to five thousand dollars, because after all these men are paying the bulk of taxation, and the city of Toronto alone pays about twelve million dollars. It is always possible to get the little men with the fixed income, but you cannot get the big men. In the United States they go after the big men, because they have a policy over there of publishing all incomes, and the educational campaign which has been carried on in the United States has had a good effect. As we have nearly a billion dollars worth of bonds on which no income tax is paid, I think we should adopt some policy to bring that money back into circulation, so that it could go back into the industries. The income tax in Canada is much heavier than it is in the States. In Canada there was no reduction in the rate of income tax in 1924 as compared with 1922, but receipts from the tax have decreased 31 per cent. In England there was a reduction of 25 per cent in the normal rate of taxation in 1924 as compared with 1922, and yet the decrease in receipts has been only 28 per cent.

I may say that President Coolidge stated that a larger amount of money could be collected from large incomes at a moderate rate than at a high rate. When the rate is too high large incomes disappear, leaving all the burden of taxes on the wage earners and people of small means.

Right Hon. S. M. Bruce, Prime Minister of Australia has said:

I think all students of economics are agreed that nothing curtails development, hampers trade and industry and reduces the standard of living of the people more than crippling taxation. In comparison with other countries of the world our taxation is not excessive, but having regard to our particular circumstances it is having a disastrous effect. We are a young country, with illimitable natural resources, but no great accumulated wealth. A burden which could lightly be borne by an old country, with its great capital resources, is one which might strangle the future development of a young nation.

Now Canada's income tax compared with that of the United States is pretty nearly six to one. In the case of a man with an income of $3,000, in Canada he pays $40 and in the United States he only pays $7.50. A man with an income of $4,000 in Canada pays $80, and in the United States only $22.50. A man with an income of $5,000 in Canada pays $126, and in the United States $37.50. A man with an income of $6,000 in Canada pays $178.50, and in the States $57.50. A man with an income of $10,000 in Canada pays $619.50, and in the United States $207.50. A man with an

income of $20,000 in Canada pays $2,089.50, and in the United States $1,017.50. The small man is actually paying the burden of taxation. As I have explained, in the United States they have adopted a policy of publishing the incomes monthly in a bulletin, and it has had a good effect, and made the big men pay up. Some men tried to evade the payment of the tax, but the Income department has gone after the big men and the profiteers as well as the small men.

Then the Post Office Department in Canada is a very fine public utility. We have a fine Postmaster General, and I am sorry we have not seen more of him in the House on account of his not being in very good health. He is a very fine man and is giving us a good administration, particularly in the city of Toronto. People talk of the deficit on the Canadian National Railways. While there is life there is hope. They had deficits in the Post Office Department from 1867 to 1899 when surpluses began. At that time we had a very fine Postmaster General Sir William Mulock, who was succeeded by yourself, Mr. Speaker, one of the best administrators we had in the department. He continued his good work. The penny postage was brought into effect and the men were given better hours and better working conditions. I am sorry, however, that the Post Office Department did not go back to the two-cent letters and one-cent drop letters. I believe we had a report yesterday that it is going to cost three and a half millions. A bonus has been given by the Post Office Department to the newspapers of Canada that costs two and a half millions. If the government can grant favours like that why can they not reduce the postage for the benefit of the poor man? I believe we have a faithful civil service, and many men in the public service render excellent service. In some departments we have very high-class men. I have had a good deal to do with the civil service myself and as a municipal officer I have come in contact to a considerable extent with the officials of the Customs department. I therefore know something of the work that civil servants do and I firmly believe that they are a hardworking class; they certainly earn their salaries. There may be some overstaffing here and there, but what private corporation is there which has not been overstaffed after a war? I want to see the lot of the civil servants improved. I do not approve of what the Unionist government did in appointing the Civil Service Commission; I think this was a mistake. Personally I have always favoured the patronage system and it seems to me that the civil service commission to-day is a relic of what existed in the old Family Compact days. I am always for the patronage system.

I am sorry that the budget makes no provision for reducing the cost of the average working man's breakfast table; rather, it taxes the things which the working man is most in need of. There is some concession, it is true, in the matter of grapefruit, but the average man finds it next to impossible to obtain the necessaries of life, let alone grapefruit. Now, we have a Combines Investigation Act; and in the Criminal Code also section 492 provides for prosecution to restrain trusts, combines, and so on. It must not be forgotten, however, that when that section was passed there were no interlocking directorates nor were there any lawyers' and gentleman's agreements such as exist to-day. There were no mergers, and legislation in restraint of combines was then in its infancy. Now, however, we have all sorts of lawyers' and gentleman's agreements between different corporations and we have interlocking directorates of one kind and another; all of which shows the necessity for a modern law to meet this situation. I would advocate in this country something similar to the Sherman anti-trust law which is in force in the United States and under which trusts and combines are effectively prosecuted. Only the other day a bread trust across the border paid the penalty under this law. Combines flourish throughout Canada like the green bay tree and there is nothing to stop them; there is no really effective law either federal or provincial to bring them to book. And every bill of indictment that has been brought under section 492 of the code has failed. The people of this country are demanding that these trusts and combines shall be restrained, and certainly there should be no combines controlling the sale of such vital necessities as bread and milk and so on; nor should we tolerate a condition of affairs which works to the detriment of our infant population, as the various health reports show. The price of bread having advanced rapidly in England as a result of the rise of the price of wheat, the House of Commons passed a resolution calling upon the president of the board of trade, who is a member of the cabinet, to account for it. And in Paris vigorous steps are being taken to put an end to the exploitation of the people in the sale of foodstuffs. The following press despatch, which speaks for itself, is interesting in this connection:

A reduction of one sou in the price of bread, effective April 21, was ordered by the Bread and Flour Commission to-day. This is the third reduction within a month, bringing the price to one franc fifty centimes per kilogram (2.20 pounds). The drop is due to the recent fall in the Canadian and United States wheat markets.

It seems to me that nothing will be done here unless there is a change of policy in the administration of our public affairs. Why, there is a bread combine in Canada to-day which is spreading its activities into every province, and by and by the small men throughout the country will be driven to the wall. This is being done right now in the city of Toronto. There is a large merger in Canada and something must be done to curtail its activities. When the price of wheat and bread went up the bakers increased their prices, but there was no corresponding reduction in the price of bread when the price of wheat dropped fifty cents a bushel. The same thing is true of biscuits. This commodity has increased by three cents since the war. I am strongly in favour therefore of some legislation similar to the Sherman anti-trust law of the United States; this I think would be an effective means of meeting the combines. We have a high sales tax and a high income tax and the price of bread is beyond reason. We have combines in bread, oil, gasoline, and we have bankers' combines, American millionaires' combines, a grain growers' combine, a coal combine, an elevator combine, and combines in transportation and manufacturing.

We have had an interesting debate on the coal situation and what has been done is quite apparent. I have advocated for four years a national policy in regard to our coal supplies. I believe there should be an embargo on coal, for there ought to be a national coal supply. I believe in a bonus system, but the system which the Minister of the Interior (Mr. Stewart, Argenteuil) is putting into effect is not satisfactory inasmuch as it helps one province at the expense of another. The high industrial cost is due to fuel and transportation, which react on each other in an important degree; fuel reacts on the cost of transportation while transportation charges in turn affect the cost of fuel. There is no doubt that the coal miner's occupation is a perilous one and it should be well paid. But wages today are 100 per cent above the pre-war rate.

I am surprised at the condition that exists in the United States to-day in connection with the labour unions, and the situation is pretty much the same in Canada. Someone must do something in this country such as the Right Hon. Stanley Baldwin did in the Old Country to bring capital and labour together. On August 22, 1924, Mr. John L. Lewis, president of the United Mine Workers, wrote to Mr. Stone in regard to the failure of his company to put in force the Jacksonville scale, adopted last spring. Mr. Stone is head of a large organization in the United States and he describes the conditions there. He says that one contract was lost for supplying Boston and Maine with their entire coal supply, which could have been secured if Lewis had allowed the men to remain at work. He adds that agitation is now becoming a regular profession. Labour is as bad as capital over there. The organization has a contract to carry coal but they will not carry out the contract because they cannot secure the rates they want. I predict that next summer and fall there will be a large strike here like that we had in 1922 and we may be starved out next winter of coal if something is not done. I sympathize to some extent with the conditions in the Maritime provinces but it seems to me that we in Canada are heading for a state of affairs similar to that in the United States. I am therefore for a national policy for capital and labour alike. The people of this country are friendly to labour and we have a federal labour department as well as provincial departments to look after their interests. There should be a fair day's pay in the mines for a fair day's work; but it is coming to this in Canada, that for the protection of the nation everyone in connection with the mines, from the president down, should be licensed by the country and should not be under the control of any labour organization from the United States.

Canada is in need of an economic revival. She needs a revivalist. It is not creditable to our system of government that the state of affairs in Nova Scotia should be allowed to continue. I sympathize with the men in the mines, and I sympathize with the mine owners, who are handicapped by high transportation rates, an unsteady market and American competition. I do not attempt to blame one side or the other, the trouble is largely industrial, and, I repeat, I am very sorry for both parties to the dispute. The government could spend $30,000 to fight the hydro municipalities of Ontario right up to the Privy Council, and they certainly ought to be ready to do something to get the parties together in Cape Breton. Never mind who owns the mines, never mind the British North America Act; this is an emergency and should be dealt with as such. If such a dispute had happened in England, what would have been done? Right to-day, the darkest of England's

industrial troubles, when she is losing her shipbuilding orders to Germany, she is fortunate in having so resourceful a leader and patriot as Stanley Baldwin, who is heading a national awakening in England in and out of the House for industrial peace. He is rendering a service to the whole industrial world. He does not stand aloof and rely on technicalities. He boldly goes out and faces and solves the problems confronting the country. Unfortunately, that is not the way our statesmen act. He is winning over the hearts and minds of all men of all parties, of the whole civilized world, for speaking out in open meeting of the real crisis in industrial affairs and the need of a united effort to solve these industrial troubles to the mutual benefit of all concerned. The public of England are sitting up and realizing the economic condition, and Stanley Baldwin has won the heart of both capital and labour in an endeavour to get them together. He has personality, he has the human touch, he has sincerity,—these qualities have appealed to the imagination of the British people of all classes and parties, and in my opinion he will rank with Pitt as a leader of men. "Capital and labour," he says, "must come together in a bigger spirit, and pull together the way they did to win the war, with a united strength, if there is any hope of England weathering the storm and securing a more prosperous state of trade and commerce, thus making things better for all classes." Now, he has done all this in a month by close and incessant study, by social vision, by the conciliating spirit and temper, by the human touch, by the persuasive means and methods of a real democrat—a plain Englishman. He is to storm-tossed industrial England a revivalist, the like of whom has not been seen since the days of Pitt. The other night the hon. member for Springfield (Mr. Hoey) was looking for such a revivalist in Canada, one to lead us out of the present industrial wilderness. I should like him to listen to this appeal of Stanley Baldwin.

> I never sought the office; I never planned or schemed in my life. I had but one idea, an idea which I had inherited. It was an idea, so far as one can give service, to give service for the people of this country.
>
> My father lived in that belief all his life, and beyond him members of my family, in an obviously more restricted way, practised the same thing. It is a tradition. All my life I believed from my heart the words of Browning, that all service ranks the same with God, and it makes very little difference whether a man is driving a train or sweeping the streets or being Prime Minister, if he only brings to that service everything he has in him and performs it for the sake of mankind.

Hon. members will notice the human touch in this address. Is it any wonder he is getting

capital and labour together? He does not hold back and rely on technicalities. How long would it take him to solve our Nova Scotia problem or any of our other industrial problems, or to give us a safeguarding of industries act? I do not think it would take him very long. In my opinion what Canada needs is a safeguarding of industries act. My hon. friend from Springfield said there was no Safeguarding of Industries Act. Well, here in my hand is the celebrated white paper of only three pages—not like one of our bills of several pages. There it is, the Baldwin government's Safeguarding of Industries Act introduced on January 25. A committee is appointed by the board of trade, and this committee decides whether or not an industry shall be safeguarded. It has now reached the stage where it is a direct protectionist measure, and a large number of industries are getting relief. Where an industry complains of the severity of competition, for the purpose of the inquiry such competition is not to be deemed to be unfair unless it arises from one or more of the following causes:

> (a) Depreciation of currency, operating so as to create an export bounty.
>
> (b) Subsidies, bounties, or other artificial advantages.
>
> (c) Inferior conditions of employment of labour, whether as respects remuneration or hours of employment, or otherwise, obtaining amongst the persons employed in the production of the imported goods in question as compared with those obtaining amongst persons employed in the production of similar goods in the United Kingdom.

In my opinion the Conservative party in England would have been much wiser if they had followed protection consistently and whole-heartedly both in agriculture and in industry. The British Board of Trade approved of a set of rules by which industries may be safeguarded. The duties imposed are for a limited period. The New York Times in commenting on this measure said:

> Every company appealing for customs duty to "safeguard" its interests must show that it is doing business in an efficient and economic manner. It must also prove that a tariff benefit to its own industry would not hurt some other. It would have to produce facts and figures demonstrating that foreign competition with it is "unfair." Then after all these impertinent questions had been answered, it might get a bill through parliament imposing a duty "for a limited period," that period being definitely prescribed. As a crowning insult, from the strictly protectionist point of view, it is stipulated that no one having to do with any of these investigations for the Board of Trade shall be a "person" whose interest may be materially affected by any action which may be taken.

I do not know what they would do across the border if they had such a protective measure as that. During this debate I have heard members from both sides of the House talking about consistency in respect of free trade and protection. I do not know what

that virtue has got to do with the question. Whatever is the right way of settling the problem, I say to the government: Never mind the tariff, never mind who is blamed for it, the times and conditions have changed and if we really are to improve the condition of the country we must evolve adequate measures for the purpose, regardless of consistency.

What is the case for a safeguarding of industries act? The case is found in the figures of the number of unemployed, the number who have joined the exodus to the United States, and the number of factories closed. You cannot feed the army of the unemployed on the present tariff or on the hope of a revival of trade, whether that revival is coming or not; nor can you do it with what is afforded by the negative side of this budget. The unemployed must live from day to day, from month to month and from year to year; they need money at the end of each week to pay their rent, fuel and clothing bills and to feed their wives and children. I say you cannot feed the unemployed on the free trade fallacies of the past or on the British North America Act. Unemployment, as I have said, is caused by the failure to bring the National Policy up to date, to bring about the development of our resources and to take care of our raw material. The lack of protection has destroyed the home market for the farmers of Ontario. The farmers of Ontario in June, 1923, voted solidly for protection; they have always done it.

A report of the Trade and Commerce Department shows that $150,000,000 worth of fruit, vegetables and other farm products which could have been produced in Canada were imported during the year ending March 31, 1924. Our tariff is to blame for this condition. Compare the duties imposed by this country with those imposed by the United States on similar products, as indicated by the following table:

U.S. Customs Duty—	Can. Customs Duty—
42 cents per bushel, Wheat,	12 cents per bushel.
15 cents per bushel, Corn,	Free.
$2.04 per bbl., Wheat Flour,	50 cents per bbl.
$4 per ton, Hay,	$2 per ton.
35 per cent, Fruits,	25 per cent.
50 cents per 100 lbs., Potatoes,	35 cents per 100 lbs.
8 cents lb., Butter,	4 cents lb.
5 cents lb., Cheese,	3 cents lb.
8 cents doz., Eggs,	3 cents doz.
40 per cent, Cattle,	25 per cent.
100 per cent, Woollens,	27½ per cent.
55 per cent, Silk Fabrics,	15 per cent.
75 per cent, Art. Silk Fab.,	15 per cent.
75 per cent, Woollen Cloth,	27½ per cent.
75 per cent, Woollen Hose,	25 per cent.
33⅓ per cent, Hats,	22½ per cent.
75 per cent, Blankets,	22½ per cent.

We imported a large number of agricultural products from the United States, including the following:

Butter, over 1,000,000 pounds.
Cheese, 900,000 pounds.
Eggs, 5,000,000 dozen.
Fruits, $25,500,000.
Corn, 9,000,000 bushels.
Hides and skins, 49,000,000 pounds.
Lard and its compounds, 8,000,000 pounds.
Bacon and hams, 3,000,000 pounds.
Fresh pork, 10,000,000 pounds.
Pork in brine, 5,500,000 pounds.
Seeds, $3,000,000.
Vegetables, $6,000,000.
Raw wool, 15,500,000 pounds.

All of these ought to be produced in Canada. The value of the fruit imported is indicated by the following:

Fresh fruits..	$18,253,447
Dried fruits..	6,095,388
Fruits otherwise prepared..	1,936,938
Total..	$27,285,773

Nearly all these domestic fruits should be grown in Canada, and protection should be given to the farmer in Ontario and other parts of Canada. The figures which I have given indicate some of the agricultural products that we ought to produce in our own country. We should increase our tariff duties until they are on a par with those of the United States. We can copy them in this respect with beneficial results.

A thought occurs to me in connection with the tables which I have just read: Our navy of fishing boats has been called a "tin-pot navy" and, some may say, well may it be. But it is nothing to Canada's tariff, which is only a tin-pot tariff. The government should explore every possible avenue for the protection of our industries and for their extension and improvement.

Let us look elsewhere for lessons in this respect. Take the case of England: One third of her population, living now under free trade, is on the verge of starvation, and even here in Canada two or three hundred thousand have gone to the United States, including almost 100,000 of the Canadian Expeditionary Force. Does that not indicate that the time is ripe for a safeguarding act? The industries of the country cannot be nurtured or maintained without adequate protection. They cannot be helped by free trade, which is the "mildewed straw of the last century," as a well known authority once called it. Canada should safeguard employment by helping industries where the need for such action is palpable.

Under adequate protection I believe we could solve the unemployment problem by the development of the resources of the

country. Free trade produces low wages. For example, agricultural labourers in England are paid an average of $5 to $6 a week, and there is not a profession, trade, calling or industry in that country from John O'Groat's to Land's End in which the average wage is not just as low under free trade as that paid to the agricultural workers.

In England they are veering around to protection, although they have as yet gone only a little part of the way, in what has become known as the Safeguarding of Industries Act. I would ask hon. members to my left: Has England, under free trade, solved the unemployment question, the housing question, the low wage question, the question of hours of labour? No, it has not. Has England, under free trade, been able to abolish the poor law? Has it made the worker rich? Has it improved the lot of the skilled or the unskilled workman? No, it has not. Has it made old age pensions or doles unnecessary? Has it eliminated sweated goods from the market? Has it made employment more secure, or checked dumping? The answer is in all cases in the negative.

Unemployment is the most crucial problem in Canada to-day. But the government are unwilling to meet it; they fall back on the British North America Act and pass the matter over to the provinces and municipalities. The government would fight it without weapons, but if we are going to battle along as we have been doing we shall have graver unemployment in the future; it will be with us to the end of time. The only way I can see to fight it is by developing our own resources and safeguarding our industries, directly and indirectly; by going the whole distance instead of a quarter of it as was done in England.

Abnormal conditions are still with us. Let us apply the principle of a national policy in order to restore conditions to what they should be, and, under such a safeguarding act as I suggest, prevent that unfair competition which arises where goods from foreign countries are offered for sale in Canada at prices materially below those at which similar goods can be profitably produced in Canada.

Will any hon. gentleman on my left say that one single labour organization in the United States would ever pass a unanimous resolution condemning the high American protective tariff; or that one single labour organization in America would ask for the reduction of the tariff of the United States? The American labour movement is all solidly protectionist, as is also what hon. gentlemen to my left would call the "American capitalist." During the past quarter of a century, in spite of the high tariff in that country, not one single state has asked for modification of existing duties, and the whole tendency of tariffs everywhere has been upward. Ever since the war even France has carefully considered how to foster foreign industry so as to put British goods off the market, and where this can be done, up goes the French tariff every time.

The more I look into this question and consider the policy the government adopted with regard to the dumping clause to meet the wishes of hon. gentlemen to my left, the more I compare the Progressive party with the government, the more clearly I see that the only difference between them is the difference between Tweedledum and Tweedledee.

Mr. Shaw, the president of the Canadian Manufacturers' Association, gave evidence at the unemployment conference held in Ottawa last September regarding the depressed condition of industry. He pointed out that 1,351 industries had been closed down, and he enumerated them. I do not know whether his figures are right or not, but that is the evidence he gave, and it is in the Labour department.

The coal industry in the Old Country is going to follow the steel industry, which is in a very depressed condition at the present time. The plight of this industry is causing a good deal of anxiety in the Old Country, and if there is no improvement it will soon be a case of going to Germany, not Newcastle, for coal. The high wages, short hours, and increased cost of production in England have given Germany the advantage. The German miner works longer hours and for less wages than the English miner, and he is taking the English market away from him. An order has gone from England only recently to the Hamburg yards for five motor ships. If England loses the coal and steel trade to Germany, what will happen? England will gradually dwindle industrially, and also from a defence standpoint. These industries are essential to the safety of England and the empire, for a country cannot defend itself without iron and steel. If Germany wins the supremacy in the coal and steel trade that Great Britain now enjoys, when they come to take our gold, for instance, how can we defend ourselves? The iron and steel industry is essential to the very life and existence of a nation.

In my opinion, Mr. Speaker, the group system of government in this country has seen

its day. Criticize the old party system, if you like. It has its advantages, and its disadvantages. It sometimes leads men to stand by the party always, rather than for the good of the country; it leads men to extremes in some cases, and to forget the very basic principles for which political parties were formed. But when you criticize the party system and its defects, do not forget its virtues, for it has many. The mother of parliaments has given the empire the good government it has to-day, an example that has been copied all over the world. The group system is a different system. It has been tried in the Old Country and found wanting. The group system over there was destroyed last January by a most decisive verdict. The group system has been destroyed in the United States, as the Coolidge election shows. In June, 1923, in the province of Ontario, the Farmers' government was swept from office, after it had denounced manufacturers as thieves and robbers and preached blue ruin for four years in and out of season. So, Mr. Speaker, I say that the hope of labour lies within the old party system. The so-called Labour party in this House is composed of the hon. member for East Calgary (Mr. Irvine) and the hon. member for Centre Winnipeg (Mr. Woodsworth), but calling themselves the Labour party does not make them the Labour party. I do not know whether they represent even the labouring classes in Winnipeg and Calgary, let alone the labouring people in this country from coast to coast. Certainly they do not represent the workers of Toronto, for we have nine members representing them. I believe that the party system is the best system, and I firmly believe that the hope of labour is within the two old political parties. I quote from the Morning Post of London:

> The best labour can do is to get back to the two old political parties where they belong.

In the province of Ontario labour got the best results from the two old political parties. Sir Oliver Mowat was not unfriendly to labour. He was a wise and sensible prime minister. His successor, Sir James Whitney, and Sir William Meredith gave the working classes the Workmen's Compensation Act, and the Hydro-electric movement. The morning Post says that the American workmen have renounced the idea of maintaining a Labour party separate from the two great political parties in the United States. That idea was always opposed by the late Mr. Gompers, the powerful and astute American labour leader, who preferred to sway the balance between Republicans and Democrats with the votes of his fellows. As a matter of political tactics the principle of Mr. Gompers is obviously much more effective than the British plan of creating a separate party, and it has the further great advantage of economy. The Morning Post shows that the American unions have succeeded in obtaining higher wages and better conditions than the unions in Great Britain, despite all their political operations, and says that the results of political action on the part of British trades unions are depleted funds, a loss of some fifty millions sterling, and a permanent army of unemployed. So I believe, Mr. Speaker, that labour will get the best results inside the two old parties.

I wish to refer briefly to the railway question. I have always been a supporter of public ownership. It is not public ownership that is responsible for the railway situation to-day; it is private ownership that is responsible. Public ownership did not build the Grand Trunk railway, or the Grand Trunk Pacific or the Canadian Northern. These roads were all built by private corporations, with useless duplication and great waste. These private corporations were assisted by subsidies, cash and land grants of every kind, and they were supported by some of the very newspapers which to-day are denouncing the National railways, which on the whole have presented not a bad statement for the year. Public ownership has not been a failure in Canada. The most shining example of a successful ownership undertaking is the Hydro-Electric Power Commission of Ontario, a system which has cost $241,000,000. Every contract was built ahead of time. It has reduced the cost of domestic lighting one-fourth, and of commercial lighting one-fifth. The rates are the lowest on the continent bar none. This movement has saved the taxpayers of Toronto $28,000,000. It allows for depreciation, and is earning interest and sinking fund.

9 p.m.

With regard to the railway situation I sympathize with the Minister of Railways (Mr. Graham), who I believe is one of the most popular as well as the most efficient ministers of railways that we have ever had. I am opposed to cutting out trains, passenger and freight, on certain units, if that is going to result in handing over more and more of the Canadian National business to the Canadian Pacific railway. I believe in giving the National railways a chance. Sir Henry Thornton—you are almost guilty of contempt of court if you mention his name—made a fatal mistake in not letting the Hydro radials, the people's own railway, alone. They would

have been feeders for the Canadian National railways.

The Canadian National Railways should have worked with the municipalities and they would have got the cream of the business. The government talked about giving the National system a free hand. Why, parliament has practically effaced itself in the matter of the railway estimates. The Canadian National Railways had a deficit in 1924 of $54,860,419, which is just $3,162,744 more than in 1923. On the other hand the Post Office Department had a deficit for twenty-four years down to 1899. It has had a surplus ever since except, perhaps, when war conditions prevailed. As to the Canadian National Railways the net, before fixed charges, showed an improvement of $1,270,687, but fixed charges increased by $4,433,423 swallowed the increase in the net and made the deficit $3,162,744 greater than in 1923. The report of the Canadian National Railways shows that in spite of the decrease in gross earnings of $17,547,305, due to a smaller crop and general business conditions throughout the country, the company was successful in earning a net operating profit of $17,244,251, or $3,186,397 less than in the preceding year and therefore maintained "to a very considerable degree the rate of improvement during 1923 which was a phenomenal year in many respects from a transportation point of view." The operating expenses of the system were reduced by $14,360,907 to offset the reduction in gross receipts. This reduction could have been carried further, according to Sir Henry Thornton, if the management had considered it advisable to pay less attention to maintenance of way and structures. An effort should be made in 1925 to reduce these estimates further in the interest of economy and efficiency and not be satisfied with a scale of expenditure which is too elaborate compared with that under private ownership.

In looking over the report of the Canadian National I was very much struck with its similarity to the report of the Canadian Pacific. The Canadian National Railways reports a decrease in operating revenues of $17,547,305 or 6.93 per cent. We have been told by the Minister of Labour (Mr. Murdock) that everything is lovely in the Dominion. We are told, however, by the president of the Canadian National of the adverse business conditions which obtained during the greater part of the year throughout Canada and elsewhere. We are told: "Traffic during the first three months of the year was in excess of that moved in the same period of 1923, but general business suffered a reduction early in April and the depression continued until the end of the year." The report of the Canadian Pacific contains this statement:

> The working expenses for the year, including all taxes, amount to 79.60 per cent of the gross earnings, and the net earnings to 20.40 per cent, as compared with 80.86 per cent and 19.14 per cent respectively in 1923.
>
> The gross earnings for the year were less by $13,334,933 than those of the previous year, freight earnings alone decreasing $10,794,416. Working expenses, however, decreased $13,083,165, resulting in net earnings, before deducting fixed charges, of $37,227,241, or a decrease under the previous year of $251,768. The decrease in freight earnings is largely accounted for by the much smaller movement of grain and flour, particularly the former, owing to the smaller crop in western Canada. There was also a substantial decrease in the movement of manufactured articles due to the depression which existed in Canada during the major portion of the year.

The time has come to get a sane railway rate policy free of government and legislative control, with equality of treatment and rates fixed from an economic and not from a political standpoint. Agricultural products are carried, as I said in the debate on coal, on a preferential tariff basis, and the grain growers of the west have also favourable rates at less than cost, and other classes of products must pay increased rates in order to extend this boon to the agricultural industry. There should be a revision of rates. Our railways should be run from a commercial point of view and there should be a reclassification. However, as the taxpayers of the country will have to meet the deficit on the system by the payment of taxes the effects of reclassification will not be very marked. Let me point out that there is a lot of waste land belonging to the railway in cities and towns of this country that could be sold and economies effected. There is duplication and waste in many directions which could be prevented. The hon. member for South York (Mr. Maclean) and the hon. member for North Waterloo (Mr. Euler) have recommended the cutting out of this duplication to which I would be sympathetic if it did not divert business from the Canadian National Railways to the Canadian Pacific Railway. No doubt the Canadian Pacific would approve of any plan likely to have that effect. There is no railroad on the North American continent under private ownership. that is spending capital in the way that the National Railways are. Certainly the Baltimore and Ohio, the New York Central, and the Pennsylvania Railways are not doing it; they are not spending money on betterments either. There is no use throwing bouquets at the management in view of the great deficit on the Canadian National, the stagger-

ing burden of taxation which is crushing the country, and the depression in business which exists throughout the Dominion. Let the National Railways cut out the expenditure on golf courses, on hotels—of which there is quite an epidemic—radio outfits, and branch lines. The Senate is to be commended for having prevented the construction of a number of branch lines. Had not the Senate intervened, there would have been more of a deficit from Canadian National branch line building and this would have added to the debt and fixed charges. The Senate in preventing these additions prevented a situation which would have necessitated a worse statement for the present year. We were told nearly three years ago that the new arrangement entered into would put the system on a paying basis. Two years have gone by and we are into the third year and the deficit on the National system is three millions more than it was last year. The overhead charges are going up by leaps and bounds, there was an increase of four and a half millions this year alone on this account, and $118,000,000 has been added to capital since last year. Even if this is an addition to the annual fixed charges it is still on the debit side of the account. After making allowance for a small crop, depressed business, and reduced freight and passenger earnings there is a falling off of seventeen millions in revenue notwithstanding that a cut of fourteen millions has been made in expenses. The system is going deeper and deeper into difficulty. It is said that the staff of the system is loyal. This is small consolation to the man who has to pay for the railway deficit in the form of taxation. Why would not the staff be loyal? That is what they are employed for. The Canadian National radio is working overtime reporting speeches of the president, vice-president and other officials. It is small comfort in view of the unemployment situation to learn that the Canadian National Railways has expended $124,290 on a golf course at Jasper, Alberta—with $4,895 additional for grass seed—and another $94,631 on a golf course at Minaki, north of Kenora; and that it is also expending fabulous sums on radios and other frills and fads. No doubt also a fine new extension of contract to Sir Henry Thornton will be shortly forthcoming at a salary of $100,000 instead of $50,000. I imagine that this will also be a case of "wait and see".

I am very much surprised at the attack which has been made by this government on the Hydro Electric movement in the province of Ontario through the tax on the export of power. The export tax on electric power is a direct tax on Ontario's great municipal ownership enterprise. The Provincial Hydro Commission is bound by long term contracts which it did not execute, but which were obligations assumed when the private corporations generating electric power were taken over by the Ontario Commission. These contracts with American consumers cannot easily be cancelled. If the export duty could be passed on to the consumer all would be well. But it is impossible to cancel these contracts. That electric power should not be exported is justifiable but the action of the Dominion government is not designed to preserve power for Canadian factories, its purpose is to augment the federal revenue. The net effect of the export duty is to impose directly an unwarranted burden on local consumers in Canada. Instead of equalizing the cost of power by taxing the American exporter who is now getting power generated in Ontario away below less than cost, it increases the difference between the price paid by the Toronto manufacturer and his factory competitor in New York state, who is now getting power generated in Ontario away below less than cost. It increases the difference between the price paid by the Toronto manufacturer and his factory competitor in New York state. Two hundred thousand dollars of the four hundred thousand dollars which the government will net from this tax will be collected, not from the foreign consumer but from the municipalities in central and western Ontario. No tax could be more unfair and unwarranted in its direct effect. It is hardly possible that the government were fully aware of the unfair discrimination when the export duty was imposed. Strong representations are being made to the government by the Ontario Hydro Electric Municipalities Association to relieve this province from an intolerable burden. I may say that three hundred and forty municipalities of Ontario have been assessed for $200,000 of this $400,000 estimated in Ontario alone, and they say the people of the province of Ontario and the farmers of the province of Ontario have paid fabulous sums on this account. This movement started away back in 1905. I want to say to the farmers in and out of this House that the farmers gave to Sir Adam Beck—who may not be here with us much longer and whose illness we all regret. I trust he may get better and be long spared when he is so needed—the chief stewardship of $160,000,000 invested in Hydro-Electric on behalf of 2,200,000 shares in Hydro properties. The results that Sir Adam Beck achieved by his stewardship of hydro are set down in the following statement:

1. Every dollar of the $160,000,000 Hydro investment is earning interest and sinking fund.

2. Hydro investment saved Ontario from a coal famine that would have bankrupted the province in war time.

2. Hydro investment saved 2,200,000 shareholders over $75,000,000 in reduced coal, light and power bills.

4. Hydro investment saved Ontario over $100,000,000 on coal prices which would have gone to $30 per ton in war time but for the Hydro investment that gave Ontario the equivalent of 3,000,000 tons of United States coal per annum.

I doubt very much whether the act is legal, and I hope, as in the case of the Industrial Disputes Act, that the matter will be taken to the Privy council because the Hydro Conservatives of Ontario are the protectionist party. They supply the protectionist principles of public ownership, and if any gentleman doubts that public ownership is a protectionist principle I reply, as I did last year, that public ownership is protectionist in the true sense of utilizing the public resources of the country for the benefit of the people of the country. Protection as applied by the Hydro Conservatives of Ontario has fought the battle of the masses as against the classes, of the people against their oppressors; I mean what the Hydro Conservatives have done for the sections of Ontario that get their power from public ownership; I mean what the Hydro Conservatives of Ontario were prevented from doing for the gold mining country that is forced to get its power from private ownership. The Hydro Conservatives of Ontario supported Adam Beck in his effort to electrify the Timiskaming and Northern Ontario railway after Sir James Whitney's great victory in 1905. The Hydro Conservatives wanted to protect the mining industry with a supply of power at cost. The Hydro Conservatives believed with Sir Adam Beck that the Temiskaming and Northern Ontario railway should be electrified, and that that railway should serve as a trunk power line. From that trunk line, power could be carried to every camp opened up in the mineralized zone. I say that I doubt very much whether that act is legal. I asked some questions in regard to it, and I am sorry to say they are not answered. I doubt if anybody will answer them, and we are not allowed to put them on the order paper. It has been charged that the Conservative party was in league with the big interests. The Conservative party started the Hydro Electric movement, and I say it is doubtful whether the tax which has been imposed is legal. In regard to the legality of the tax I asked some questions, and I said:

Will the Acting Minister of Finance secure an opinion from the Department of Justice as to whether:

[Mr. Church.]

(1) The export tax on power based on an order-in-Council and on R.S.C. 6 Edward VII c. 16, which seeks to give power to impose export duty not to exceed 10 cents per annum per horsepower on power exported, is intra vires of the Parliament of Canada or not, inasmuch as the power taxed is generated from works or undertakings which are wholly within the province, and have not as yet been declared to be works or undertakings for the general advantage of Canada.

(2) That the said tax is retroactive and taxes contracts made which are wholly within the province, and that the said tax is indirect and an infringement of property and civil rights in the province and is outside the scope of subjects by section 91 of the British North America Act exclusively assigned to a federal authority;

(3) And that the international waters used to generate the direct current exported is from the surplus waters after the rights of navigation under federal control have been satisfied, and is of the surplus waters from the bed of the river, and the banks and rapids of the Niagara river wholly belonging to the province;

(4) And that such a tax could only be imposed by the province under section 92; and further that such a tax is to be levied on the export licensee who is wholly within the province, and whose long term contracts cannot be made the subject of retroactive federal taxation on many grounds;

(5) And that the said tax is ultra vires on the aforesaid and other grounds, and on the ground that the indirect method of assuring the said tax from the municipalities is an invasion of provincial and municipal rights under section 92 and is not specific against the exporter who uses and gets the benefit of the exported direct current;

(6) What machinery is, or has been, provided to collect said tax and from whom will it be collected and when, and how will, in default in payment, a collection be made and by whom?

(7) Will the minister consult with the Justice department as to whether such an indirect tax is legal, and if it can be collected from the municipalities using hydro power on a long term contract to which they have no privity, and for which they receive no consideration?

(8) Can said tax be collected without the express consent of the parliament of Canada as is proposed here based only on R.S.C. 6 Edward VII C. 16 above, and without further legislative enactment?

I believe those are good, legal grounds under which that legislation could be set aside in the Privy Council. The contest will take place in Ontario, in defence of public ownership, and in defence of $250,000,000 of the people's money. In the interests of the industries of the province the tax will have to be set aside. The Industrial Disputes Act was contested, it was declared to be ultra vires, and they spent $45,000 or $50,000 in the contest as to its validity. This tax should be contested and $100,000 should be spent on the contest if necessary.

I want to read the following despatch, which will show fairly well the situation in regard to the export of Canadian power to the United States and how it will aid a great super power trust over there and injure the Hydro in Ontario by forever holding the power exported.

Rearrangement of capital and securities of the electric power companies whose names follow, comprises the first leg of a super power merger that will extend from Niagara Falls, perhaps to San Francisco, and its component heads will endeavour to bleed Canada of several million horse power of electric energy to feed the leviathan:

Niagara Falls, N.Y., Power Company.

Canadian Niagara Power Company, Niagara Falls, Ontario.

Niagara, Lockport & Ontario Power Company.

Buffalo General Electric Company.

To make this giant caterpillar function properly, it is required that some 4,000,000 h.p. of Canadian origin be tapped, not only because that much added energy from the Ottawa and St. Lawrence sources is needed, but also if the Mellon-Harriman-Dupont interests who are planting the chain of fortresses now can get a foothold on the Ottawa, and are able to export power to United States, the Ontario Hydro Electric Power Commission will be blanketed and confined to the area in which it now gives service. The Northern Ontario pulp and mining areas will be isolated from the commission.

The companies named are preparing for the merger which, when consummated, will form the first unit of the super power merger. Buffalo General Electric Company, which serves light and power to Buffalo area at double Hydro rates, is getting ready to expand its capital to give one new share for each five now held by shareholders.

BOOSTING THE STOCK

Buffalo General Electric Company has $25,000,000 of capital, all common stock. This will be enlarged. Niagara Falls Power Company has assets of $81,000,000 including sole ownership of Canadian Niagara Power Company, the latter located at Niagara Falls, Ontario, with $3,000,000 capital, and which exports 50,000 h.p. of Canadian origin to Niagara Falls Power Company. Thence, the latter company sells power to Buffalo General Electric Company. In addition, the concerns mentioned are already tied to Niagara, Lockport and Ontario Power Company, which is a $35,000,000 corporation owning a 450-mile right of way from the Niagara river into Syracuse. So that the first unit has capital of $141,000,000 now which will be later expanded. Niagara & Lockport Company serves 2,000,000 people in 17 counties in central and western New York. Niagara Falls Power Company owns one-third of Niagara & Lockport Company, which pushes the juice generated on both sides of the falls as far as Syracuse and the rest of Niagara & Lockport Company is owned by the Aluminum Company, dominated by Mr. Mellon, Secretary of the U.S. Treasury. By interchange of power contracts, the monopoly then gets into Pennsylvania, and through the Adirondack region by means of Adirondack Power & Light Corporation, which is owned by the General Electric Company. Another tentacle is added by means of New York Utilities Company, which controls power generation and service from Syracuse to Massena, on the St. Lawrence river. Also there is connection with New England States.

All through the fields mentioned, which contain about half the population of the United States, there have been mergers of the smaller units, in preparation for a final merger into a great holding company, or at least into control of the most powerful power bankers of the United States. This includes the Harrimans, the Duponts, the Mellon group, General Electric and others, who with their subsidiaries and affiliations are dealing in 17,000,000 h.p. of electric energy. Tracing this power caterpillar, with its hundreds of subsidiary legs, from Niagara Falls to Massena, on the St. Lawrence, brings the matter to the point where Canada is directly interested, and may be most adversely affected. Well informed power men say that because Dr. MacDougall of Montreal aided Mackenzie King in the St. Antoine election, that the doctor has been promised the lease of Carillon rapid on the Ottawa, and if he gets the same, the Harriman interests will be standing ready to finance the development of that generation of power, estimated at 400,000 h.p. If the Carillon lease is given out, and if satisfactory terms of power export with the Dominion government can be stabilized, then the Mellon-Harriman-Dupont group can look forward to tapping Canada to this extent:

400,000 h.p. from Carillon rapid to be exported to United States to feed the super merger.

1,000,000 h.p. from the international area of upper St. Lawrence, to be also exported.

2,000,000 h.p. in Quebec powers to be picked up and harnessed for export to the United States.

If the Canadian end of the coup goes through, and the Americans become entrenched on the Ottawa, they will turn a valve that will throw millions of h.p. of Canadian energy across the line, following our pulp-wood, nickel, copper and other raw materials. Of the income from power sales, 7 per cent is derived from the power sale, and 93 per cent is contained in the value of what the power produces. So in all export of power, Canada gets 7 and the other fellow gets 93.

The super power merger indicated does not immediately and directly threaten the Ontario Hydro Electric Power Commission. But, if United States interests dig themselves in on the Ottawa river banks, they will block the route of Hydro from extension into the northern Ontario mining, pulp and settlement areas.

In connection with this matter it is interesting to note that the recent promulgation of the Ottawa government, in the charge of $2 per h.p. for all power exported from Canada, is already creeping into the rates charged by the Buffalo General Electric Company. That corporation has already notified customers that the consumer must pay, although how they will translate the charge into increasing a monthly electric light bill rendered in terms of so many kilowatts is difficult to determine, because such charge must be almost negligible.

That is the condition of affairs which the Hydro Electric movement in Ontario will have to fight. The Hydro system has cost some $241,000,000 and it has paid its way. There is to-day a scarcity of power in the province of Ontario and the people of Brockville, Ottawa, Peterborough, Hamilton, the Niagara district and the people of western Ontario generally are clamouring for supplies, as some of our Progressives of Ontario know. I do not see why the government should have singled out public ownership for taxation in this way. Is not the government friendly to the Hydro Electric system that it should tax it in this way without giving it a chance to answer in its own defence?

I want to say a word now with regard to the grain question. Last year I urged an export duty on hard wheat to aid in having our best grain, now going through the United States, shipped from Canada instead. I have made a year's study of this question since and have consulted experts and millers; and I have

examined the bulk of government reports on the subject. I have also taken the trouble of visiting the mixing centres in Buffalo and other parts, and I do not blame the farmers of the west for organizing to destroy the gigantic trust which to-day has the man who grows grain at such a disadvantage. I regret that lack of time will not enable me to go fully into this question, but the report which has been submitted by the commission that investigated this question is interesting in its way. We had a commission comprising a judge and two university professors looking into this subject, and I want to say that if you want to have anything impractical you have only to get university professors to report upon it. Instead of a commission of business men who know something about the matter, the government spent $200,000 on a commission consisting of a judge and two professors. I read the following from the report of the commission:

At the present time, the duty on Canadian wheat—entering the United States—is 42 cents per bushel. On wheat flour, semolina, crushed or cracked wheat, and similar wheat products, the duty is $1.04 per hundred ponuds. These duties are practically prohibitive, in their effect. They prevent Canadian wheat or wheat products having access to the American domestic market. On the other hand, under the provisions governing milling in bond and drawbacks, it is quite possible for the American millers to obtain Canadian wheat virtually free of duty to grind for export. Considerable quantities of Canadian wheat are ground in American mills and exported abroad under these conditions. This American flour ground in American mills, but the product of Canadian wheat, enters into competition with the output of the Canadian flour mills. The benefits of manufacture are lost to Canada, while at the same time, the general benefits of reciprocal free trade in wheat and wheat flour do not exist. It was suggested to us that in view of these conditions, an export duty should be levied at the same rate as in the American tariff, upon Canadian wheat and wheat products entering the United States. The American tariff having already closed effectively the domestic market to the Canadian farmers, the result of such a levy would be to eliminate the export of American flour ground from Canadian wheat, and to transfer this market to the Canadian millers. While, as a general thing, export duties are to be deprecated, the exceptional situation that arises in this instance might warrant such an import.

As I have said, during the recess I visited these mixing places, and I am one of the most surprised men in Canada that such a condition of affairs should be allowed to exist for one moment. I think that an export duty should be levied to prevent Canadian wheat from going into the United States. At present the port of Buffalo is being built up by means of Canadian wheat going there; our wheat is mixed in the United States and then shipped overseas from that country with the American certificate. There are twenty-eight elevators in Buffalo to-day, every one of which should be in Canada, and if we had an embargo not one of these elevators would remain across the line. Buffalo to-day is taking the place of Minneapolis, so much so that the millers are building elevators. I was in conversation with a Mr. Barnes, a great transportation and elevator man, and he is spending millions of dollars in this connection. I was surprised to find in a pamphlet issued in Buffalo a statement to the effect that at the present time Ontario is being drained "to make a greater Buffalo." The House will note that statement, which is significant. Now then, the sky line has been rattling some since the embargo was proposed. This is the background of the huge structure. I may say that the Washington tariff buttress against Canadian wheat and flour is a most ingenious scheme, as I pointed out, to prevent these products competing with agriculture and milling on this side of the line, while at the same time encouraging Canadians to ship as much of their grain and flour for export through the states as possible, permitting Buffalo elevators and similar warehouses in New York, Baltimore and Philadelphia to exact a rich toll from the traffic, as well as the transportation companies to levy the maximum charges for their service.

As I explained in my plea for protection of Canada's vast grain and mill traffic against foreign aggression, Buffalo boasts in every piece of literature placed before the public of the value of this Canadian business as a factor in contributing to the development of the port, and painful as this may be to the pride of Canadian people, Buffalo is guilty of no exaggeration in this boast. Buffalo publishes annually through its publicity bureau a text book of growth, industrial strength and reasons why big factories should be located here. In this volume of 224 pages there are innumerable references to what the port gets from Canada—how Ontario is being drained to make a greater Buffalo. Note this gem under the caption of "Centre of economic assembly," page 89, in the issue of March 21, 1924:

The second feature of Buffalo's market territory is the fact that Buffalo is strategically located with regard to the control of the Canadian trade. In fact, of all the American industrial centres Buffalo can claim this advantage as peculiarly her own. Canadian markets for American manufacturers is a certainty.

At this time, in spite of an unfavourable tariff, 67 per cent of Canadian purchases are made in the United States. During 1923 imports to Canada from the United States increased from $501,445,464 to $615,205,580. Three-quarters of Canada's industrial population lies within Buffalo's market territory. In fact Buffalo can be said to be the gateway to Canada. The greater Canada becomes the greater will be Buffalo's advantage as the distributing centre for the markets of Canada.

I asked an officer of one of the largest flour milling companies in Buffalo what would happen in his city if the proposal became law to have Canada put an export duty on grain and flour entering the States equal to the import duty on those products imposed by Washington. He looked serious, and replied, "I don't like to contemplate such a thing. I am afraid it would not only deal Buffalo mills and elevators a serious blow, but would be felt in these industries all over the United States. Our customs laws, of course, are for the protection of American farmers, but they are framed to permit Canadian grain and flour for export passing through the States in bond with the least possible delay. Of course, American mills must have a very considerable percentage of Canadian hard wheat to blend with United States soft wheat to manufacture the best grades of flour. This is specially necessary for the export flour trade of the United States. Our flour could not compete in the world markets where the best grain is purchased, otherwise with the Canadian article. Then, too, where our flour is shipped through the torrid zone, the soft varieties will not stand the hot, humid atmosphere with which it comes in contact. That is the reason Washington exempts Canadian grain, milled here in bond, from the operation of the 45-cent duty. If our mills could not have this trade equality with Canadian flour, I am afraid some of them would have to establish plants on the Canadian side to take care of a considerable portion of their export trade."

For 1923 the United States total flour export was 14,882,000, a monthly average of 1,248,000 barrels, 149,000 barrels less than Canadian mills exported in the month of March, 1924, and the United States monthly average for 1924 does not show the proportionate increase as recorded by the Canadian trade. Buffalo has eight great mills with a total daily capacity of 61,000 barrels, while in Canada there are a total of 1,333 mills with a combined daily capacity of 128,225 barrels though 163 of the largest account for 110,000 barrels of this daily capacity for the Dominion.

What relation to the tremendous growth of Buffalo's flour milling has the suspicion that something is wrong here in the handling of Canadian grain in bond en route to the world markets, and the flour ground in bond here from Canadian wheat? Our royal grain commission went into this matter, but no definite proof of the evil was secured, although the suspicion was very strong. Here is the way Canadian grain gets into a bonded warehouse, and the way it gets out. A vessel arrives from the Canadian lake head with grain; a customs officer is notified before it is unloaded; if it is going through in bond to the United States seaboard, after the customs officer examines the bill of lading he sees it unloaded into a bonded warehouse. The grain is in possession of the warehouse company until it is ready to continue to the seaboard. Then one of Smith's deputies is present as the grain is transferred to a freight car or Erie canal barge, or perhaps it is moving out via Montreal. The seals are broken only by a United States customs officer as it passes into the floating elevator or into the vessels at the seaboard. If one of the Buffalo mills receives a cargo to be ground into flour in bond to be shipped out of the country, a customs officer watches the transaction and sees that the quantity of flour, corresponding to the bonded grain handled, is moved on to the seaboard, and this in turn is still under the control of the United States customs until loaded into the ocean vessels. The United States government is not interested in determining the quantity of soft wheat flour "blended" with the Canadian hard wheat bonded flour, but only is seeking to prevent any of the flour from the Canadian bonded grain remaining in the United States unless the 45 cents a bushel duty has been paid.

But there have been repeated and persistent complaints from the buyers in the United Kingdom that somewhere between the time the Dominion government inspection at the head of the Canadian lakes is made and the arrival in Liverpool soft wheat is frequently mixed with these consignments. One notable case is still pending in the courts involving a claim of $35,000, the difference between the grade called for by the Dominion government certificate and what the buyers claimed was the quality of the shipment when it reached them. This cargo was sent via Baltimore and has been the subject of repeated United States investigations but if there was "bootlegging" the responsibility has not yet been determined. But the toll levied on the Canadian grain passing through the Buffaio elevators is but a fraction of the cash extracted from these products of the Canadian farmer by Amercian interests before it passes out of their hands.

You will find that the Erie barge canal is spending millions of dollars to take care of this export Canadian trade, and undoubtedly there is a big profit made by the elevators. For each bushel capacity an elevator costs from $1.50 to $2.50 per unit. This would

approximate a total cost of $50,000,000 for those handling bonded wheat in that port. Their revenue returns are based upon one cent a bushel for the grain elevated, and this represents five days' free storage with one-fourth cent charge for each seven days thereafter. For 1924 Buffalo received 152,676,218 bushels of Canadian grain. If all this paid the cent storage it would represent for these bonded elevators that cost $50,000,000 a total revenue of $1,526,762. Toledo is offering Toronto people flour milled from Canadian wheat at a price below that quoted by Canadian millers, and contracts have been made by the Toledo millers. I have particulars of these, and I intend to produce them when the Grain Act is before the House.

Grain bootlegging is very profitable. If it is done in the States here is the possible process and the profit. The duty is 45 cents a bushel, but this is not paid on the grain going through in bond. Say a hundred thousand bushel shipment of No. 1 is sent down the lakes, covered by the Dominion government certificate, loaded in a bonded elevator here or at any other port on this side, for every bushel removed and kept in the United States the saving of this 45 cent duty is gained by the fraud. For each bushel so removed, however, a bushel of United States grain must be substituted. The substituted grain might cost $1 a bushel, while that removed might cost $1.50. There is another profit of 50 cents. The bootleggers have thus an article worth, for domestic purposes, 95 cents more than it has cost them. The dilution of a hundred thousand bushel shipment of Canadian hard wheat with ten thousand bushels of United States inferior grain would not be noticed by the average United States elevator employee, even if he were looking for substitutions. Few ordinary elevator employees are graders; that is a particular science of the trade. The Canadian certificate covers the shipment. It goes through with its inferior substitute, but when it reaches the other side expert graders at once detect the difference. Then comes the adjustment, but too many alien agencies have handled the shipment in its transmission in bond to ever enable the source of the fraud to be discovered.

Obviously, with the Canadian flour under present conditions actually increasing the volume of sales in those markets over those of the United States millers, it is not difficult to understand how rapidly these foreign markets would be absolutely dominated by Dominion products if the United States millers did not have the privilege of grinding Canadian flour in bond for their export trade, coupled with the questionable advantage of the United States providing the highway through which so much Canadian grain must pass to foreign countries. Remove both these advantages enjoyed by the United States millers and the Canadian flour would have no competition worth mentioning in these thirty-three foreign markets. That is one of the possible effects of the policy I propose. All Canadian wheat milled in bond in the United States goes out to the world, of course, as Canadian flour, yet the Dominion authorities have no control over this produce from the moment it passes into the United States, though it is covered to the very point of consumption with the Dominion of Canada's certificate of quality. The state of New York is now building a huge elevator at Oswego to take care of the Canadian grain passing there from the lake boats from lake Erie, through the Welland canal. At Gowanas bay, Brooklyn, there is just now nearing completion a New York state-owned million and a half bushel elevator. Toledo has been extensively engaged in the milling of Canadian wheat taken into the United States in bond. The mixing of Canadian hard wheat and United States soft grain is very largely carried out at New York as well as at Baltimore and Philadelphia. However, when a cargo of Canadian grain, sent there in bond, is to be mixed with a percentage of American grain, the Canadian government certificate no longer protects the shipment. The Canadian certificate is cancelled and a new one is issued under the authority of the New York port authorities and grain exchange. This cargo then goes out to the world bearing what is known to the trade as a "seaboard certificate" and the mixture is stated to be of "Canadian origin." It is supposed to state definitely the percentage of the mixture in its relation to "Manitoba origin." This juggling of Canadian grain, of course, goes on without any representative of Canadian farmers or the Canadian government being present. Those interested in the process are Americans and their activities are based upon profit only. They have no concern about the quality of Canadian grades. Who knows the difference between this New York or Baltimore mixture covered by a "seaboard certificate" of Manitoba origin, and the product which has the Dominion government certificate of original inspection quality? A fleet of floating barges is made available in the harbour, say, at New York, and when the grain gets there it is mixed on the barges and there is no Canadian certificate. An embargo would stop all this. The new elevator

at Gowanas bay, Brooklyn, now nearing completion, is designed to enable the barges from the Erie state canal and grain trains from Buffalo to unload their cargoes of Canadian bonded grain expeditiously. The largest ocean liners can take on their Canadian grain at this elevator without loss of time. This new equipment will largely reduce the cost of transferring the Canadian grain from cars and barges to the floating tank elevators in the harbour, which in turn float the grain out to the ocean liners. This is a saving of time and money that will mean much in the way of holding this Canadian made traffic in an alien port.

Millions of dollars have been robbed from the farmers of the west in connection with this grain business. Since confederation we have had thirteen grain investigations, and you might as well toss all their reports into the waste paper basket for all the good they are as regards protecting the poor Canadian farmer. The farmer has my sympathy, hard worked as he is, taxed as he is, and with the intolerable conditions that he has to face. The ex-Minister of Trade and Commerce is a hard worked minister and he has been doing good work in this connection, but I would like to see him go into the matter, as well as the Minister of Railways, with a view to doing something to relieve the situation. They have the Canadian National railways and the Canadian merchant marine; let them take steps to have this Canadian grain go through Canadian channels and thus take care of some of the deficits on the Canadian National railways. If the milled grain alone could be taken care of, the $56,000,000 deficit of the Canadian National Railways would be wiped out in a year, and the elevators at present operating at Buffalo would have to come over to Canada. I have discussed this matter with experts in the United States. I met a gentleman in New York, a friend of Mr. Barnes, and he told me that many of the buyers in the British market are insisting that this Canadian wheat shall go via Vancouver or Montreal; they are trying to have it go over Canadian routes in order to put a stop to the bootlegging which has been going on at Buffalo, Toledo and New York at the expense of the poor Canadian farmer.

Mr. HAROLD PUTNAM (Colchester): Mr. Speaker, it was not my pleasure nor my leisure to hear the whole of the speech of the hon. member for North Toronto (Mr. Church). That hon. gentleman has a generosity which inspires good faith on the part of his friends. He told me in good faith that he should be concluded at a few minutes after eight o'clock, a statement which I accepted in good faith, and in the quality of that good faith there was an absolute and unrestricted reciprocity.

As I say, I did not hear the whole of that speech. The hon. gentleman never disappoints us with a speech in the factor of quantity. I have no doubt that he said a great deal that was instructive and a great deal that was logical, but it was my bad fortune, in the parts of his speech that I heard, to gather only those remarks which were uninstructive and very illogical. For instance, during the afternoon, while I was in for a few moments, he was telling us in positive and academic and unqualified terms that a high tariff was an absolute cure for unemployment. I could not help remembering that those who constitute the official opposition have warned us very unctuously not to allow any more labour to come into Canada. It is a strange coincidence that this high tariff which they idolize and which they say will fully take care of the unemployment, will hunt down the last unemployed person in Canada and set him to work at a fair living wage according to his station and degree in life, but that in the desideratum for more immigration we must not let any more labourers in, however respectable they are in the country from which they come. Against such they would put up the bars of protection sky high. But it just so happens that they could not take care of one man more of the unemployed, though exactly able to take care of all present unemployed in Canada by the simple device of high protection.

May I, at this belated stage, join with those members who, irrespective of the part of the House in which they sit, have expressed their lament that the power of sickness still detains the right hon. Finance Minister of this country (Mr. Fielding)? Those of us who have taken the opportunity of calling upon him at his home during this session are delighted to report that his health is visibly better than it was twelve months ago. I am sure that the House and the country will wish that he may regain that health which was his, notwitstanding the comparative advancement of his years; that health which was his when he applied himself to every complex problem of his wonderfully patriotic career, reserving no force of that master mind, forgetting nothing in the line of his duty except his oft earned holiday.

I am interested, Mr. Speaker, in the tactics and the attitude of the official opposition during this debate—and it may perhaps not be egotism on my part to point out in this connection that so far as actual presence in this chamber is concerned their numbers are very

few. As I understand the matter, in times past and normally any full dress debate upon the question of the tariff is reserved until the time when the budget is brought down. But in this present session we find amongst the notices of motion one from no less distinguished a member than the right hon. leader of the opposition (Mr. Meighen), praising to the vault of heaven the doctrine of protection, which by all rules of the game in the past was reserved for the introduction of the budget.

We also find that the right hon. leader of the opposition was a little bit impatient to deliver his broadside on the beauties of protection before the normal announcement of the budget, and he accepted with absolutely bad grace the fact that the day of the budget appeared before he could deliver his paeans of praise over the blessings of protection and his condemnation of any government, and in the concrete this government, if it refused to apply immediately that particular elixir to our national life. We on this side of the House are sometimes accused by those immediately opposite on the ground that the Liberal handbook, which was used here and there throughout Canada by some in compassing the defeat of the late administration, was too rosy in its promises. Well, I tell you, Mr. Speaker, that that book was one hundred miles to the leeward in moderation and modesty and in paucity of promises compared with the innocent little notice of motion put on the order paper by the right hon. leader of the opposition.

Now, why was it that there was this change of tactics? Why was it that, contrary to the history of this parliament, the amendment to the budget moved by the opposition made no mention whatever of the subject of the tariff? Well, we may in the liberty of this free country at least surmise reasons. Possibly the right hon. leader of the opposition had heard that Napoleon made it an almost irrefragible rule that he would attack the enemy rather than wait for the natural time of battle. I may be permitted to suggest another speculative reason. Possibly the keen and speculative eyes of the right hon. gentleman turned towards his left and saw the Progressives there in pretty good numbers, those who not so long ago the right hon. gentleman had named the "dilapidated annex," those same Progressives who in a comparatively brief space of time exemplified the rapidity with which retribution may follow the sin of trying to place an undeserved nickname, for in a very short time they had come back to this House with a following thirty per cent

greater in numbers than the following behind the right hon. gentleman in this selfsame House. I can fancy the right hon. leader of the opposition asking himself the question: Incorrigible as those Progressives are on the question of the tariff, is it possible that they could be wooed on the dissociated question of the alleged extravagance of this particular government? These were the tactics carried on, and I submit, Mr. Speaker, that reason dictates that the purpose is not unsearchable. By this motion there was to be a discussion of the tariff ahead of the budget, and later discussion of an amendment to the budget which makes no mention whatsoever of the normal factor of the tariff.

There are naval critics who say that in the battle of Jutland the Germans pursued tactics which for a little while at least rather took the British by surprise, and that was the device of concentrating their fire upon one British ship and sinking it before picking out another British ship for destruction from their massed fire. Naval critics actually say that those tactics not only took the British by surprise in the early stages of the battle, but that to some extent they were successful. It does seem to me that there is some homely parallel here, and that the Conservatives thought, "If we can single out the tariff by this notice of motion and get it in operation, fire well upon the tariff by that particular means, concentrate the Tory fire upon the tariff, we may have the good luck that in the low visibility of the close of a private members' day we may sink the tariff doctrine with our big guns before the Liberals and Progressives may rush up to answer the fire." I think the intention next was to concentrate the Tory fires upon the alleged horrible extravagance of this governernment in the hope that the unsophisticated and bewildered Progressives, at that stage of the battle, and in the gathering darkness, might be trapped into the expedient of joining their fire with that of their high protectionist enemies the Tories and sinking the Liberal government, only awakening in the dawn to discover in the better visibility of another day that they had united their fire with their worst tariff enemies in sinking their best allies.

Mr. Speaker, during the Great war the allies did not all admire one another as to their characteristics and customs and nationality, and perhaps even their courage, but they all did sensibly say that they would forget these minor differences while the mad war dog of Europe was still unmuzzled. There is no

10 p.m.

doubt that these two traps were set. There is no doubt that the first one did not go off; there is no doubt that the second one is in plain view, and I would very respectfully appeal to my Progressive brethren to have nothing whatever to do with springing the second trap. Otherwise they might find as their allies the high protectionists of this country who have made millionaires, and who see potential millionaires still in the hatching, at the expense of the great consuming people, the great general masses of the people of Canada.

I suppose most of us, Mr. Speaker, or perhaps all of us, are here as the result of a contest, and I hope we all had common sense enough to know the uncertainty of an electoral contest. No public man of any intellectual size ever assumed that an election was certain, and I suppose that humanly we all felt a little glow of pride, though it may have been only temporary, that we had, if I might use a semi-vulgar expression, beaten the other fellow. I hope we had a sympathetic feeling. I hope we realized, and tenderly realized, that that which meant for us the sunlight of victory meant for the other man the shadowy side of the mountain of defeat. I will go a step further. I dare say that we have sometimes had that searching of conscience, if we are frank, which has asked of us: After all, were our tenets, were our propaganada and our policy sufficiently better than that of the other man, and sufficiently feasible of accomplishment, to have made it fair to defeat him, to have made it ethically worth while. Now Sir, if I am right, or even if I am not right in that particular speculation, I happen to be in this House the one man whose conscience should not experience the first symptom of rebellion for having defeated my particular opponent in the contest of 1921, because, Sir, within about three short years after that rather memorable campaign he himself openly and most publicly, and without the first shadow or sign of equivocation, told the world at large that he had suffered a complete recantation of all those policies and propaganda with which he had once tried to defeat myself and the Liberal party in Colchester county. He was no less a personage than the ex-Minister of Public Works (Mr. McCurdy) in the cabinet led then by the present right hon. leader of the opposition. Now the publicity to which he resorted was spectacular. He published a pamphlet which he called A New Confession of Faith and therein he gave his complete and his absolute recantation. I remember Mr. Speaker, that in the campaign he was also a pamphleteer, and he sowed my county knee-deep with pamphlets protesting that high protection was the one hope and remedy not only for the Maritime provinces but for every area of this wide country of ours. In each case he had the front page adorned with his own picture. It may have been Apollo-like in its beauty, but I think that whether or not we all agree that the hue of political genius was upon his cheek, everybody will agree that those two pictures were exactly alike in having on his cheek the glow of good health and self-satisfaction, the picture on the pamphlet when he was opposing a lower tariff and the picture on the pamphlet when he made his confession that he was in utter and basic error in doing so. And whether there was depicted there the hue, as I say, of political genius, there was depicted the hue of the most rosy good health and self-satisfaction. Sir, in great contrast with that is the device of the patent medicine man who gives two pictures, one "before" and one "after" taking the remedy—the one "before" taking showing a man emaciated in body, shrunken in features and perhaps shrunken in conscience in the view that his latter end is rapidly approaching; and then, "after", we have the rosy cheek and the air of self-satisfaction, a complete and absolute contrast between that and the first picture. But I congratulate that mentality which belongs to the ex-Minister of Public Works. I congratulate him upon the ethical standard which evidently belongs to him so that he can swallow a dose of high protection and a dose of low protection and in each case show no possible sign that the contrasted medicine had made any perceptible difference whatsoever—in fact I think it was precisely the same photograph that was used for the two occasions.

I am inclined to congratulate the right hon. leader of the opposition—against whom personally I would find it impossible even on a limited acquaintance to wish any personal harm—I am inclined to congratulate him that he was defeated before the McCurdy conscience asserted itself and denounced the high protection which its owner had formerly preached. That hon. gentleman and I were brought up on two respective farms about a mile apart, and with apologies to the Liberals of ward 1 in the city of Halifax before whom I used this metaphor a few weeks ago when I had the honour of addressing them, I am going to use a certain illustration again. The ex-minister of Public Works and my humble self have both known the phenomenon of a hen having duck eggs placed under her at setting time. In her innocence she sets there about one week longer than the normal time.

It is true she hatches out a brood over whom she presumes she will have leadership; but it is equally true that as soon as the ducklings see a pond of water she realizes that her own leadership instantly ceases to function. The horrible, stupid, tragical part of it in the case of the ex-Minister of Public Works was that in denouncing high protection as a cure for the ills of the Maritime provinces he conceived that he was a leader of thought. He had done so great a deed as to defeat no less a great imperialist no less a great Canadian than the distinguished Minister of Finance of this country in 1911. He then assumed, perhaps very rightly so on paper, that he had hatched protectionist chickens with which he would still be able to tramp over the dry lands of Ontario. There was a war election in 1917 and perhaps for that reason the hon. gentleman thought that his brooding process had again bred protectionist chickens. But there came the election of 1921 and thereafter in the silence of his deliberations the ex-Minister of Public Works realized that he had been setting on the wrong eggs and this time instead of hatching protectionist chickens he had hatched real, web-footed, Maritime ducklings, and when they rushed into their native element the sea, he followed them to the edge of Halifax harbour waving after them his latest pamphlet and thereby trying to imitate the honest quack of a mother duck. Were I inclined to indulge in the Latin tongue to which some hon. members are prone, I should say of him sic transit gloria McCurdy. I would also say in Latin for the benefit of the right hon. leader of the opposition: "So perish every traitor." It was no discovery on the part of the ex-Minister of Public Works that we in the Maritimes have been somewhat surfeited with the medicine of high protection.

In regard to the present budget—and let me say here that I wish to congratulate the Acting Minister of Finance upon the budget that he has produced—some hon. members have seen fit to praise its diction, its clarity, and its preciseness and arrangement. It does seem to me that ought to be taken for granted for I for one would be astonished if there has been a budget since confederation as to which that preliminary and that mere literary compliment is not entirely due. I for one would be astonished if it were so. But coming to the substance of the budget, it seems to me it exhibits the qualities of carefulness, and if you like of caution, and at a time when these qualities should be at a very high premium. Because, Mr. Speaker, this is a time when we do realize as never before the differences in the economic conditions, the differences in the physical conditions, of the various provinces and the various areas which we call Canada—this far flung country. It seems to me that we realize as never before the great length, I might almost reverently say the discouragingly great length, of the country from east to west and from west to east back again; and perhaps we realize as never before that the average settled width of the country from north to south, using the word "settled" in any reasonably strong sense, is comparatively a very narrow width, and when we realize that our immigration has been checked by the war, and realize the frightful results of the war and realize also that immediately to our south there is a great country, a highly civilized country, which happens to have climatic conditions much milder than our own and which is a perpetual temptation for emigration of our people down to that country, we do come to this conclusion, that much as we desire more population, much as it is well nigh imperative in the problems we have, and particularly in our ambitious railway problems, there is no immediate prospect—and we might as well look the facts in the face—that in the very near or immediate future we shall have any material addition to our sparse population—sparse I say reverently—in comparison with our very vast area. And while I believe the low tariff people are much in the majority in this country, there is that high tariff school supported by powerful interests, which really makes two schools of thought, as to whether the tariff should be very much raised, or whether it should be greatly lowered, and therefore under all these perplexing conditions the very outline of which I have attempted merely to mention, and in presence of that double school of economic thought, I commend the acting minister, for his prudence, in bringing down a budget which in the main confessedly so closely resembles the budget of a year ago, which I believe won the approval of the vast majority of the people of Canada.

I am sorry that the hon. member for Fort William and Rainy River (Mr. Manion) is not in his seat, although possibly he has been so sufficiently bandied about within the last few days that it is not rendered necessary for any other hon. members on this side of the House to say anything in regard to the hon. member. But I have been amused at his reading of English history, when he in effect makes the sweeping assertion that protection made England and that free trade is ruining

England. I wonder if he has ever heard of the Napoleonic wars, because wars of that magnitude and the war of the great magnitude which we have experienced since that time, have dislocated all the normal and ordinary rules of business. During the Napoleonic wars the industrial situation was such on the continent of Europe, that those people who gave their energies in a death struggle very fully demonstrated that fact, and in spite of protection England saw wonderful prosperity then. Now there was the aftermath of the war. There was the readjustment which in some measure we are having, and it is a simple matter of history that England then saw terrible depression in her industries though high protection still obtained. I wonder if the hon. member for Fort William and Rainy River ever heard of the hungry forties, and I wonder if he realized, as would be my reading of it, that the industrial position of England became so desperate that Premier Sir Robert Peel took the action that he did with regard to the corn laws as an experiment. I am sorry the hon. member is not here, because I should be only too happy to discuss with him our respective interpretations of English history respecting the whole question at that time of protection and free trade.

I was interested in the contention and argument last evening of my hon. friend from Cape Breton South and Richmond (Mr. Kyte) to the effect that even in this young country high protection as such and properly divorced from controlling side issues had never won a single victory. At the expense of repeating some of his statements, and possibly with the hope of developing a little of what he stated, I wish to review very briefly the elections which have been referred to. Starting with 1878 we had the frank, the implicit, and the unequivocable promise of Sir John A. Macdonald himself that protection would only be used temporarily for those infant industries, and as a lever and a club to bring about reciprocity itself. Then we come to the election of 1883 and at that time hon. gentlemen know the industries were enjoying something of an artificial stimulus under protection, but even at that time stood the promise of Sir John A. Macdonald, which is still a clear matter of political history, that this high tariff was only a temporary expedient and that before long we would have reciprocity. Then when we come to 1887, the industries were a little older. I think the hon. member for Cape Breton pointed out that at that time we were confronted with the Revising Barristers' Act, a deliberate attempt, as those of us who are older in this House know, to defeat the free and voluntary will of the people. But apart from that, there had been the Riel rebellion in the Northwest, and all sorts of racial and religious and provincial side issues were dragged into the contest, and I think it is only fair to say that in 1887 there was no fair and separate pronouncement upon the question of protection as such. Coming to the year 1891—and I personally well remember that election—it was purely an appeal to loyalty. It was a waving of the old, old flag. It was an unctious statement of Sir John A. Macdonald in his old age: "a British subject I was born; a British subject I will die," and it sufficiently swept the heather against the economic principle of a commercial union with the United States if that were obtainable.

Coming to 1896 my hon. friends were defeated, much as they tried to hold to the front this doctrine of high protection. Then in the general election of 1911 there was a tragedy. Again the Canadian people allowed themselves to be fooled by the misappropriated cry of loyalty. In 1917 we had the War Time Elections Act and my hon. friends were successful on the canvass of prejudice. Coming to the elections of 1921, I am going to give the right hon. leader of the opposition credit for trying—and I believe he succeeded—to conduct that election upon the sole and the dissociated question of protection as such. There was no question about the right hon. gentleman's position in regard to high and "adequate" protection. He had announced his policy many months before and continued to announce it right along. There was no subterfuge and no statement that this protection was for infant industries. He had finally and fully abandoned the position Sir John Macdonald took in that respect. Week by week during that election—and I was carefully following newspaper reports of his speeches and of his tours, little expecting that I should be in the fray—I noticed that protection was to be the sole issue in the election of 1921, and he told us—and I direct the attention of hon. gentlemen directly opposite to this—that there was no danger that the public should be misled by side issues at that time. It was insisted that the high tariff of protection on the one hand, or the low tariff on the other, which was promulgated by our friends the Progressives, and largely by the Liberals as well, was the issue and the only major issue; and he told us that preliminary to that we should have an ample campaign of education. He staked his word as it were that there would be no

side issue, no minor issue, that there would be no red herring drawn across the trail this time; in 1921 we were to have a clear cut issue and decision on the question of protection as such. And I think that question was voted upon; I am absolutely of the belief that this was by far the major issue in the last campaign. With what result? With this result, that those who favoured the low tariff propaganda literally swept the country and left behind the followers of the right hon. gentleman's party, with numbers which were a record for their historic paucity.

When I go to Nova Scotia, which has been greatly in the limelight, I need not depend upon any alleged new found doctrine of my late opponent, the ex-Minister of Public Works in the last government. There is no doubt that Nova Scotia, in a proper sense of the word, is still all right. I do not know that we ever expect to be a great numerical people with teeming industries and millions of people in that little province, where our geographic position is modest and where, to be frank, we are just a little out of the way as compared with Canada as a whole. But we are not pessimists as regards the future of Nova Scotia. We, all of us, believe, as does the ex-Minister of Public Works in the late administration, that high protection after a long and more than a fair trial has done harm and harm only to the Maritime provinces. I picked up the Morning Chronicle the other day, and while it is true it is a Liberal organ, it so intelligently summarizes some figures from the census returns that I shall take the liberty of reading a portion of the article setting them forth. After showing that protection and the element of railway rates have been against us, the editorial goes on to say:

> In spite of all this, if the growth in population of New Brunswick and Nova Scotia since confederation in 1867, be compared with that of Quebec and Ontario, it will be found that Nova Scotia and New Brunswick have increased respectively by 58.74 and 53.9 per cent, while Ontario and Quebec have only increased by 110.13 and 112.42 per cent respectively. This is no startling difference when the huge free grants of extra territory which the two larger provinces have received—still at our expense—are taken into consideration along with the operations of high "protection" entirely in their favour and to our most serious disadvantage and loss. Ontario has never gained an additional representative in parliament through increase of population since confederation. She came within an ace of suffering the loss of one by the last census. Nova Scotia did gain one extra member, by the first census after confederation, that of 1871. Her losses, since then, began under and have kept pace with the "National Policy" of high protection for the advancement of central Canada.
>
> To show how that policy has affected Ontario as well as Nova Scotia, a few facts will suffice. These facts will show, at the same time, that tariff "protection" is for the exclusive benefit of cities and towns at the expense of rural communities. In brief, then, the facts are that 35 counties of Ontario lost 78,000 in population between 1911 and 1921. Thirty-five counties are, all but one, twice the number of counties in Nova Scotia. Yet in those ten years Nova Scotia's eighteen counties made an increase of nearly 25,000 population. The thirty-five Ontario counties made very considerable progress towards becoming a "Withered Arm," because they were unduly and improperly taxed for the upbuilding of the cities and towns of that province. Nova Scotia was blighted by the same means, but held back of the "withering" stage.
>
> Nova Scotia was an old settled country at confederation. In the preceding 120 years she had gained a population of only 330,000. She has increased this by 200,000 in the fifty odd years since confederation. The prairie provinces, relatively, are now where Nova Scotia was at confederation. Their days of rapid growth are as definitely over as are ours. The next twenty years will tell where the "Withered Arm," if it exists, will have to be looked for.

That is more concisely put than I could state it, and it expresses the effect of the operation of protection so clearly that I have taken the liberty of reading it to the House.

Our friends of the official opposition are prone to twit us with the commercial treaties we have sought afar, such notably as the French and Italian treaties as well as the suggested Australian treaty, and they have declared that these treaties do not amount to very much, being hardly worth the time, the effort and the ambition which this government has spent upon them. All I can say to that is that it does not lie in the mouths of these hon. gentlemen to make any such criticism, because in 1911 there was the golden opportunity, to defeat which they immediately lined up their followers, by the means they employed. If we had then achieved the reciprocity which was offered us by the United States, and as we thought honourably offered by Canada in return, we should not have needed to send our missionaries over the earth to search out infinitely inferior trade treaties. We missed an opportunity which possibly may never occur again; and, if I am not using slang, it makes me a little bit tired and decidedly impatient to sit here and listen to the official Tories twitting us about the trade treaties which we are trying to secure in lieu of that master treaty which we could have had with the United States. I say that it does not come well from hon. gentlemen to suggest that these treaties are not of so much importance.

I do not know precisely the attitude of the Conservative opposition towards our coal duty which we recently raised as respects slack coal. I do know, however, though I am not in a coal county, that 50 cents a ton on slack coal is a lesser ad valorem duty to-day than 14 cents was formerly. As I understand it,

slack coal is in its initial stage a waste, something comparable to the sawdust which the lumberman encounters in getting his lumber sawn. If that sawdust comprised about 50 per cent, instead of a very small proportion, of the actual lumber, the comparison would be almost complete. The fact is that with the American slack coal coming in, this by-product of the coal industry in Canada was well nigh a waste to our coal operators. But by putting the duty up to 50 cents on slack coal we think the coal operators of Nova Scotia will be able to ship about half a million more tons of slack coal into the market and sell it at a small profit.

Do not tell any Nova Scotian that that change is going to raise the price of round coal, because it is not. It will be far more apt to have the effect of slightly reducing the price, inasmuch as by getting a better price for what otherwise would be his waste product the mine operator will produce coal on the whole cheaper than he did before. I am willing to admit that it is somewhat of a reversal of the trend towards a lower tariff. But we have to recognize this fact, as it was succinctly stated to me this afternoon by a very bright member of the press gallery—that confederation to be held together seeks resort after resort to artificial means. I admit that on economic grounds the raising of the tariff upon slack coal is something of an artificial means. I had no patience with my good friend from Brome (Mr. McMaster) when he said that we were not entitled to this assistance, and that if Nova Scotia coal could not be placed in New England at a living profit we should let the mines go down. If we go back to the time of confederation—and surely nobody will discount the promises of leading Canadians at that time—we were told and openly encouraged to believe that our coal mines were a part of the great contemplated Canadian partnership assets, and that the coal of Nova Scotia would be burned in the grates of Ontario. The hon. member for Brome cannot tell us now, with any semblance of justice, fair play or equity, that it just depends on whether it is a strictly economic transaction, and that if we cannot mine our coal under the conditions of profit we have to go out of business, we have to throw that pride of asset out of the reckoning of confederation as a whole.

I have another view on this coal question, Mr. Speaker, which I think probably has not been touched in the economic aspect. During the Great war the coal fields of Sydney helped at one stroke materially to bring victory to the Allies. The armed minions of the British navy saw to it that the warships, the troop ships and the freight ships were assembled at Sydney, carefully guarded and bunkered, so that we were dependent on no nation outside the British Empire to get our supplies and men overseas, and to keep open the arteries of commerce, which was a tremendous and spectacular undertaking. We are not so far advanced towards universal peace that we have any proof that Armageddon may not come again. During the last war the government put an embargo against the export of Canadian coal, showing that we would take no chances in the winning of that tremendous struggle, and that we appreciated the strategic position of Sydney with its coal fields nearer to the pivotal points of the world than those of any other part of Canada. Therefore for that reason I say we should never allow these coal mines to be dismantled. There can be no economic profit for the British government to keep great stores of ammunitions, but it is a preservation against the storm. Our coal fields at Sydney, in Cape Breton and in Nova Scotia generally are directly in that category, and I say that if all other economic reasons for this duty were absolutely unsound, we should preserve these coal mines in working order against any such horrible and unexpected contingency as that which we passed through only a few years ago. The people who know this business tell me that you cannot drop a coal mine like a pitch fork and take it up again when you please; you have to keep it open, you have to keep it running practically to capacity to be able to draw upon it in case of emergency.

I have alluded to the position of my opponent the ex-Minister of Public Works in the late government. When I read that pamphlet of his I found he said that if we cannot get rid of this high fence of protection we in the Maritime provinces might as well cut the painter so far as the Canadian connection is concerned. I have a personal friend in this House in the hon. member for Springfield (Mr. Hoey). He said something a little along the same lines, and the Tory press from one end of the country to the other proceeded to denounce him as a traitor to confederation and a dangerous demagogue, and I cannot remember the variety of anathema which they poured out against him. It is wonderful that the ex-Minister of Public Works in the late government so well escaped the adverse criticism that fell to the lot of the hon. member for Springfield. I would say of the latter gentleman that a better Canadian, a more intelligent or more fearless member, one who understands the spirit of our constitution better, one who is

more widely read and a more thorough all-round Britisher, does not in my humble opinion sit in this parliament. And I only want to say that if these denunciations are to be continued, he has the company of a gentleman very recently a minister in the government led by my right hon. friend. But I think the statements of these two hon. gentlemen are capable of a reasonable interpretation. The hon. member for Springfield does not make the stupid mistake in that regard of thinking that he is a leader of public opinion, although his ability is widely recognized. My late opponent, the ex-Minister of Public Works in the late government, does evidently profess to think that his conversion made of him a leader of thought. The hon. member for Springfield did not come out with any flamboyant pamphlet with his portrait on the first page. What those two hon. gentlemen said was in effect simply this: There is a way to have even-handed justice dealt out to the various sections of this Dominion, there is a way to do it before it is too late, and if you could imagine a state of affairs wherein we could not do it, why what is the good of maintaining confederation at all? You might as well tell me that if I put up at an hotel and said to my host, "If you don't give me fair accommodation here I will not stay," it would not be other than a simple and firm invitation to the host to treat me fairly. It would be intended to bring results and would succeed. And we in the Maritime provinces, with our friends in the west, do feel that under the scheme of confederation we have not yet got anything like even-handed justice, and that the chief factor against that justice which we seek is the bane of this high protection, which the hon. member for North Toronto (Mr. Church) was extolling with his last utterance to-night when he left By-town for Hog-town.

Now, if we take the $344,000,000 representing the revenue of this country, I think it will be enlightening to tens of thousands of hard-shelled Tories and high protectionists to find that only 31 per cent of that revenue, or less than one-third, is made up from customs duties. I approached an otherwise intelligent man in the last Dominion election to vote against the forces of high protection, but I could not persuade him that high protection was not the be-all and the end-all of our national existence; he seemed to think that protection was the one idol which was our salvation and our sure and only means of revenue. I am sure that when I see him again and tell him, "Why, my good man, less than one-third of the money that is necessary to carry on the country is obtained from that idol of protection of yours," he will begin to see that there are other and more open and manly ways of raising the revenue than by this subterranean method of the tariff. There is a sales tax and there is an income tax. I admit that taxation in any form is never welcome, and these two forms of taxation are no exception. But they have at least this virtue, that they are collected in the daylight, whereas this 31 per cent coming from customs duties is collected in the dark. I hope that the government will diminish more and more the percentage that comes from the customs tariff.

Our Progressive friends have been subjected to tactics which do no credit either to their intelligence or to their astuteness. I would not assume to dictate to them, but I would ask them, in the presence of those who have been responsible for the tactics to which I have alluded, to be very careful about giving their imprimatur to the high protectionist tactics involved in the innocent notice of motion that I have mentioned, and the budget amendment which contains no reference to tariff. These are tactics which, I submit, are divested of every element of candour and good faith.

As to my statement that the hon. member for Springfield (Mr. Hoey) said nothing more un-Canadian than my opponent in the last election, the ex-Minister of Public Works under the late government, I wish to say that the hon. member said nothing more un-Canadian—it was not un-Canadian at all—than Mayor Murphy of Halifax said the other day when the Maritime delegation came here to press for their rights and to supplement the efforts of the Maritime province members in this parliament. Most hon. members heard what he properly said.

In conclusion, I merely wish to congratulate the Acting Minister of Finance upon the fact that his budget is commanding the support of the hon. member for West Calgary (Mr. Shaw). The hon. member is the leader of a non-negligible group in this House, and last session he voted for an amendment which condemned the government for not proceeding more rapidly toward the goal of a very low tariff. I think therein we have some indication that the public at large appreciate with the rate of geometric progression the difficulties which the government has to face and realize that after all we are making steady progress toward better financial conditions through the destruction of the idol of super-high protection.

Mr. A. L. HODGINS (East Middlesex): Mr. Speaker, I have listened with a great deal of pleasure to the hon. member for Colchester (Mr. Putnam), and so far as the Progressives are concerned I do not think they can find much fault with his speech. I have listened attentively to the different speeches which have been made during this debate, and I find myself largely in accord with one hon. member who spoke last night and who said that after listening to all the speeches that have been made and after reading a good many of the criticisms in the press he was still at a loss to know just what the financial condition of the country was. However, of one thing we may be sure, and that is that we are still in debt. If the debt is not piled up in one way it is another; if it is not increased in connection with ordinary expenditure we have it added to by the outlay in connection with our national railroads. If our governments would devote as much energy to the reduction of expenditure as they do to the levying of taxation, I think we could make our budgets balance a great deal better than we do. We can only balance our budget, it seems to me, either by reducing expenditure or by increasing taxation; and I think hon. members will agree with me when I say that the people to-day are taxed almost to the limit.

When I first heard the budget speech of this year I did not think there was much in it to find fault with, but when I read it over a little more carefully and gave a little more consideration to it, I found there was more in it than I thought there was. But I am glad to say that the most objectionable feature of the budget has been withdrawn, namely, the clause regarding the dumping duty. There are other objectionable features in the budget and they might well be withdrawn without making the budget unacceptable. But I regard the budget as more objectionable for the things it does not contain than for the things it does contain.

Regarding the stamp tax, I cannot say that I am very much against the idea of placing such a tax on any form of paper which amounts to the same thing as a cheque. It is a system of direct taxation, and although I believe it will hit the farming class more than any other section of the people—because ultimately the farmers have to pay a great part of the taxes anyway—it is all right to have fair direct taxation. To that part of the budget, therefore, I would not object very seriously.

With regard to the tariff board I shall not say very much, because the hour is getting late and I am going to cut my remarks very short. I do not believe a tariff board is necessary at all. We surely have machinery enough in the departments at Ottawa to furnish any information that may be required in order that the government may establish a tariff that is necessary to carry on the business of this country. I agree with the hon. member for Springfield (Mr. Hoey) that this board will be a smoke screen behind which the government will get in the matter of tariff. A tariff commission is something that was advocated by the late government, and now it is advocated by the present government. I hope that if the Progressives occupy the government benches they will never advocate anything of this description.

In listening to the debates in this House I have been wondering whether there is any central part of this Dominion. We have heard a good deal about the east and a good deal about the west; but after listening to the hon. member for East York (Mr. Harris) last night, I came to the conclusion that there was a central part of Canada and that it could be heard from coast to coast. But in Ontario we have a province that we can well be proud of. It might be inferred from many of the speeches that are heard in this House that Ontario as a whole was in favour of high tariffs; that the people of the province could not subsist without high tariff protection. But I want to say here and now that over forty per cent of the people of Ontario live in the rural districts, and from the representation in this House at present it can readily be seen that a large percentage of the people of Ontario are not very high protectionists.

I happen to come from what we think is one of the best districts in Ontario. I am situated down in that southwestern corner which is highly industrialized and which has some of the best farming lands in the Dominion of Canada. Yet in that western peninsula of Ontario, which comprises fourteen counties and contains 13,550 square miles, we produce 26 per cent of the manufactured goods, 45 per cent of the field crops, and 49 per cent of the live stock of the province. Then when we consider that this same province produces about 50 per cent of the manufactured goods, 23 per cent of the field crops, and 32 per cent of the live stock of Canada, we can realize that this portion of our country at least is no mean portion of Canada. Yet even in this well favoured portion of Canada, what are our conditions? We find that there are there over 100,000 acres of good, tillable land lying idle or in pasture, and some 235,000 acres offered for sale. In this same portion, in the

year 1919, there was a survey made by the officials of the Agricultural College, Guelph, of over thirty farms in the immediate vicinity of the city of London, and what is the condition on those farms? This survey showed that on these thirty farms the average labour income was $778. There was an average taken as respects size, from 150 to 200 acres, and this $778 is the labour income not only for the farmer himself but for the whole family, and on a great many of our Ontario farms, as well as on other farms I believe throughout the country, the housewife earns I think fully as much as the man himself.

The hon. member for South York (Mr. Maclean) a few evenings ago brought up the question of placing a high protective duty on early fruits and vegetables. This is a matter which I happen to know a little about, being situated in a district where this business is carried on quite extensively. London has a population of some 60,000 people. For its size, it is a city whose market cannot be beaten I think by any place in this Dominion. Around that city there are a number of market gardeners, and they have been doing very well I believe, so well that instead of having a zone of market gardens around the city of London for only one or two miles, that zone has been extended until produce now comes into the city from as high as fifty miles away. The automobile, sir, I think is more a cause of the hardships of the market gardeners than any low tariff business we have in this country to-day. I will admit, however, that there are some early fruits and vegetables coming in from the United States, but if we were to put a high duty on these products coming in, what would be the outcome? As soon as the duty goes on, the price goes up, and that means the consumer has to pay just that much more. Then what is the result? The one who purchases those articles, no matter whether he is a workman, a capitalist or anybody else, has to have more money in order that he can keep up his standard of living. His cost of living goes up, and if he happens to be an employee he asks his employer for more money, and his employer under present conditions has to give him an increase. Then the employer in turn has to get more for the goods he produces in order that he can afford to pay his employee. Then the tax is passed on from one to the other until finally it falls on the shoulders of someone who cannot pass it on, and in the great majority of cases that is the man who produces the goods on the soil, the farmer. I would like to quote in this connection the opinion of one who I think knows more about this subject than I do, and that is a man who was invited by the Ontario Vegetable Growers' Association to address them at their convention held last winter in the King Edward Hotel, Toronto, a man by the name of Mr. Norwood. He came from the United States, but what connection he has with the vegetable business I personally do not know. The Ontario Vegetable Growers' Association, however, I presume thought well to invite him, and therefore I think his word should go as a quotation. He says:

> You are labouring under a false impression when you think that these southern fruit and vegetables are produced by cheap labour. Cheap labour is all used for cotton production in the south. The Japanese at one time threatened the truck interests in California, but with the passing of recent anti-oriental legislation growing is again in the hands of intelligent white men.

The report goes on:

> Mr. Norwood claimed that the northern states had been harder hit than Canada by the competition of the south, but in many cases they were meeting this invasion successfully by improved marketing. He intimated that Ontario growers would be rather ahead to pay less attention to tariff matters and concentrate on modern selling methods. He used the Milwaukee situation as an example. The growers in that section are less favoured than those in Ontario in the matter of climate and soil, yet to-day they are holding their own local markets against all comers.

We have listened to some speeches in this House, Mr. Speaker, which would lead us to believe that Canada was going, I might say, almost to the bow-wows. But in looking over the growth of Canada during the past number of years I was amazed at the growth that has taken place in this Canada of ours in spite of the hard luck stories which we hear. The increase in the last twenty years is in population 65 per cent; in trade 407 per cent; field crop production 400 per cent; railway tariff receipts 525 per cent; exports of agricultural products, 1,300 per cent; exports of wood and wood products, three times as great; wheat crop, seven times as great; mineral production, 117 per cent increase; manufactured goods 70,000 per cent increase, which I think is pretty good; capital in manufacturing, 70 per cent increase. Canada's trade per capita is the greatest of any country in the world except New Zealand. Our export trade per capita in 1924 was $112.60; that of the United States, $40; Great Britain, $80. Our imports per capita were $96.22.

We have continually heard about the ruination of business, the unemployed and the empty dinner pail, but, Sir, I believe that we could furnish work for thousands of people on the farms of this country to-day if we were able to pay them sufficient wages to compete with those paid in other walks of life. I have prepared here a short table which is largely taken

11 p.m.

from the Labour Gazette published by this government. I have checked this report over so far as I could from my own knowledge of affairs in this country, and I find it correct so far as I know. I find that the wages paid to employees in different walks of life in Canada are as follows, and except for agriculture, which takes in a day of from ten to twelve hours, the other occupations are figured on a nine-hour day:

	Per day
Agriculture	$ 2 00
Mining	4 00
Railways	4 50
Lumbering	3 60
Miscellaneous factory	5 40
Boot and shoe	4 50
Rubber	4 50
Furniture	4 00
Carriage	3 75
Pulp and paper	3 75
Meat packing	4 50
Brick layers	9 00
Carpenters	8 00
Electrical workers	7 20
Painters	6 25
Plasterers	11 25
Plumbers	8 00
Stone cutters	9 00
Labourers	4 50
Blacksmiths	5 00
Boiler makers	6 25
Machinists	5 40
Moulders	5 40
Sheet metal workers	6 25

You will notice that the farm labourers, the men who are hired on the farm are only paid one-half the amount that men in other occupations receive.

An hon. MEMBER: What are the farm labourers paid?

Mr. HODGINS: Two dollars a day. That includes board also. Now, as I said a moment ago, I believe we could furnish work on the farm for thousands of people in this country. But I believe there are some who are placed in circumstances and environment from which they cannot escape. There are I think such cases in the Maritime provinces at the present time. With those cases I sympathize, but it seems to me from what I can find out about the Nova Scotia situation that it is economically impossible to work those mines at the present time. Coal can be produced in United States mines at a price so much cheaper than the coal from the mines in Nova Scotia that I do not see how it is possible to profitably operate the latter.

A lot of reasons have been given in this House for the existence of hard times, depression in business and similar conditions. I think one of the main reasons why we have hard times in Canada to-day is the financial system which we have, or rather the working out of that system. Indeed it affects our business to a greater extent than any tariff policy that could be adopted, and it is time the existing system should be remodelled. If that is not done we should have an entirely new system. I suggest that we try out the system of co-operative banks with a federal reserve bank over it. All our bankers, I believe, are good straightforward and honest men. I think they are trying to do their duty but they are too slow and conservative to keep up with the business of the country. The damage to our business is largely done even before the bankers wake up and realize their responsibility and the condition that matters are in. If they would become leaders in their respective communities instead of being satisfied with being trailers it would make a wonderful difference in our business life. While speaking about the banking business of the country I should like to follow the example of the hon. member for West Kootenay (Mr. Humphrey) and remind the government that there are a great many people scattered throughout Canada who would like it to bring in a measure for the relief of the depositors of the Home Bank. In view of the report of the special committee appointed last session to investigate the matter I cannot see how the present government can get away from its responsibility, and I sincerely hope that it will not try to do so.

Now I should like for a moment or two to speak about a business that has been much discussed in this House at one time or another, and that is the woollen industry of Canada. A few days ago the hon. member for Dufferin (Mr. Woods) made a statement regarding the woollen industry carried on in a mill in his constituency. A day or two afterwards the statement was contradicted in part at least, by the hon. member for Vancouver Centre (Mr. Stevens). I do not know anything about that particular industry, but I do know something about other industries that are conducted along the same line. I picked up a clipping from the Toronto Globe a short time ago; it is very brief and I will read it to the House. It says:

> The Milton Worsted Yarn and Spinning Mills Company has a flourishing industry here. It employs 150 hands and for a long time has operated day and night—one shift from 7 a.m. to 5 p.m. and the other from 7 p.m. to 6 a.m.

That does not look very much like going out of business. A short time ago I had occasion to visit a little town situated not very far from Ottawa where there are four woollen mills in full operation. They are not only running full time but are making money in doing so. Sometimes gloomy statements

in regard to industrial conditions are made by hon. members to my right, and afterwards we find out that the conditions are altogether different from what they were represented to be. So I think that the talk of hard times, so far as manufacturing is concerned, is largely bunk. It is only a short time since I had a conversation with one of the leading citizens in the city of London who is carrying on a large manufacturing business there. That same man is crying out at the present time for high protection. He is a man of about fifty years of age and he told me in conversation that he started in as a young man with practically nothing except his own head and hands and to-day he is worth $80,000. Now it is not too bad when men who are carrying on business are making money as fast as that man is, and I could cite you other cases of the kind. These men should not be asking for high protection to-day at the expense of somebody else in view of the success which has awarded their efforts and the privileges they enjoy.

There is another matter to which I would like to direct the attention of the House for a moment or two and that is the railroad situation in this country. I understand the subject will be introduced here later on, and so I shall only apend a very few moments in discussing it. We all know our railway indebtedness is piling up year after year, and we as Canadian citizens must put forth every effort in order that the existing situation may be remedied. The hon. member for North Waterloo (Mr. Euler) stated the other day that by cutting out duplication in railway services on the part of the Canadian Pacific and the Canadian National Railways a saving of about $75,000,000 might be effected. I do not know whether the statement is absolutely true or not but I have a good deal of confidence in the opinion of the hon. gentleman on this question because he has given it considerable study, but even if the saving were only one-half the amount stated it would be well worth considering. Furthermore, our freight rates, as everybody knows, have got into a tangled state at the present time, and the government, parliament and the railway commission, and other authorities are trying to unravel the snarl The west thinks it is imposed on, the east is sure that it is suffering from an imposition, and Ontario has the idea that she is paying for the deficit at both ends. Even in Ontario there is discrimination between different points in the same neighbourhood, and these things cannot continue.

I should like to say a word in regard to egg inspection throughout this country. I want to say that I am very much in favour of egg inspection—the most rigid inspection in the case of importations and exportations of eggs. I was very pleased to hear the statement of one of the hon. members for British Columbia the other day that on account of the inspection of eggs importations from the United States had been reduced—I think some six millions dozens in two years. It was gratifying to hear that, but I say that the inspection of eggs in our domestic trade is a nuisance to the farmers, to the storekeepers and to those buying the eggs in the cities. I think the difficulty could be overcome in some way. Our storekeepers or our ordinary grocers are absolutely refusing to have anything to do with eggs on account of the inspection they have to go through, and if provision could be made that the names of the owners of the eggs should be placed on the wagons or crates, so that the people would know from whom they were buying, it would save a lot of inconvenience among the farmers as well as the purchasers of the goods.

There is another matter on which I would like to express an opinion. I have several items before me but I will omit them. The matter to which I wish to refer is regarding co-operative buying and selling. I think, Sir, that the system of distribution that has been established in this country is one of the most expensive systems that it is possible for the mind of man to think of. In a great many cases it costs more to place our goods on the market than it does to manufacture them. We have the profits of the retailers averaging anywhere from 30 to 300 per cent. Then we have the profits of the wholesalers on top of that, and on top of that again we have one jobber, and may be in some cases two or three; and by the time the goods get to the consumer they are sold at about two or three times the price at which they left the manufacturers' hands. I think our costly system of distribution has more to do with the high cost of living than even the profits the manufacturers are getting. I would say that the best way for our manufacturers to overcome foreign competition is to put up an article which is just as good or a little better than the imported article. I believe the people of Canada to-day want to buy Canadian made articles if they can get them just as good. It is our duty I think to buy Canadian goods, to build up our home industries where possible, and I think we all as loyal Canadians will do our utmost in this regard. In closing, I should like to quote a few words from a gentleman who is well known in this House. I refer to Mr. Tom Moore. I do not always

agree with everything he says, but this struck me as so good that I will repeat it in the House:

> Have toleration for the view of others, even when they are most antagonistic; give to every man his just say, seek for points of contact instead of points of disagreement. If these simple things were adopted in letter and spirit by the employers and employees of this country, unrest would vanish, the work of confederation would be complete, and we would not have nine separate provinces politically allied, but a Canada, unified, happy and industrially content.

This is a fine idea to hold forth, and if we could only imbibe the same spirit in the different sections of Canada, and between the different occupations as well as between the employees and the employer, I think it would bode well for the future.

Mr. GEORGES BOUCHARD (Kamouraska): Mr. Speaker, in rising to speak on the budget, and after having heard the volume of oratory already devoted to this subject, I cannot refrain from thinking of the pregnant words of two deputies, in the French parliament, at the first post-war session. One of them said:

> In this time of reconstruction, let us stop talking and really get down to work! . . . .

And the other:

> Spade work is far more valuable than speeches!

These words, Mr. Speaker, may appear paradoxical when applied to this House, where speech making is an essential of the proceedings. The idea I want to convey, however, is that instead of indulging in empty talk which has no relation to present conditions, we should confine ourselves to constructive discussion. This then will be my objective in the remarks that I am about to make.

It is an axiomatic statement that agriculture is, and will be for many years to come, the basic industry in Canada. Consequently, it is my intention to speak primarily from the standpoint of those who are directly engaged in this important industry; and my outstanding reasons for adopting this attitude are first and foremost the fact that I represent a constituency which from its earliest history has been and still is essentially agricultural.

In addition, records show that in 1680 the founder of my family on Canadian soil, was established as a farmer in Rivière-Ouelle, where the best farms of the district are still to be found, and from that date until to-day, there has been an uninterrupted succession of his descendants who by the sweat of their brow have formed and developed other districts in this and surrounding counties. As a matter of fact, my father and brother are at present working a farm which was opened up by one of my forefathers, and which is only a short distance from the spot where my Norman ancestors first settled.

Furthermore, in my earliest childhood, it was one of my greatest pleasures to follow my father as he turned the long furrows of sweet smelling earth; and in later years during my youth, it was my duty to participate in all the activities of the farm.

Impelled by the inherited love of the soil and inspired by this first hand contact with it, I then spent several years studying the principles of scientific agriculture in various countries. May I mention incidentally, for the information of my Scottish friends, that among the most pleasant memories of that period of my life, are those of the time spent working for a full season on a farm in bonnie Scotland, near Kilmarnock. It may be safer to add however that these memories have no connection whatever with the product for which this part of Scotland is world famous.

The past ten years spent in my professional capacity working side by side, hand in hand with the farmers and their sons, who are specially trained in the agricultural college of my district, have given me a further insight into and have familiarized me with the needs of our farming communities.

Representing as I do an agricultural constituency, being rooted into the Canadian soil through my pioneer ancestors and ten generations of settlers and farmers, having personally experienced both the theory and practice of farming, you readily understand, Mr. Speaker, it is not only my right, but also my natural inclination and duty to deal with the agricultural aspect of this budget and of other pieces of legislation. May I add, that being a descendant from those hardy pioneers who wrested their living from the land by the strength of their arms, and who did not measure their prosperity by the difference between their income and their expenditure, but rather by the pleasure of home life and the contentment which follow an arduous task well accomplished, I cannot subscribe to or condone the spirit of pessimism which has found its expression in many of the speeches emanating from certain quarters of this House. We must remember that pessimism is the worst of all pests; and had it not been for the undying optimism, the unquenchable hope and the undaunted courage of those who made this country, in the face of difficulties far greater than exist to-day, Canada would never have reached her present stage of development.

My sympathy for the farmers would make me the last one in this House, Mr. Speaker,

to find in the precedent of past sacrifices a ground for future privations on the part of the agricultural class. The farmer being a vital factor in our basic industry is entitled to the fullest possible consideration by the government. On the other hand, actual conditions must be taken into account, and I do not favour any Utopian scheme which has no practical basis and which can only serve to break down the courage by giving false hope to a credulous people. No one can deny that Canada, in common with other countries, is now passing through a crisis due in part to post-war deflation of value, but also in part to the extravagances, excesses and want of forethought of the previous government. If the statesmen of that time had been far-sighted enough to provide means for the part payment of war expenditures out of the surplus profits derived through war-time industrial activities, many of our ills would have been partly cured automatically, and this government would not have inherited such a heavy burden and a hard task.

Whatever may be the causes of these difficulties in our national life, or of those abnormal conditions, we must bear in mind, in any discussion looking towards improvement that each class of the community must bear its portion of the inevitable sacrifices imposed during the reconstruction period. I do not believe that any universal panacea, even a tariff policy, can be found that will instantaneously remove all our evils. Not being one of those mountebanks who believe in an all-embracing cure for every ill, I would rather deal with some special feature of existing and possible legislation which has been or may be a valuable factor in the improvement of our agricultural conditions.

Rather than dealing specifically with the budget of this year, which so far as the interest of the farmer is concerned is practically identical with that of last year, I will simply state that, in my opinion, it marks a further step in the right direction, and tends to relieve the farmers of some burdens which have been pressing very heavily upon them.

The taking off of the sales tax on agricultural implements and the reduction of the import duty on them, has resulted in substantial savings for those farmers who are compelled to purchase one or other of these implements nearly every year. I would like however to touch lightly upon certain features of the agricultural situation which would appear to merit special attention at this time.

Let us consider for a few minutes the situation with regard to horse breeding in Canada. As you are all aware, the first horse brought into Quebec in 1647 was to be presented to the governor, M. Montmagny, and the importation of horses continued until 1660, when, on account of the prominence given to horses to the detriment of the raising of cattle, the Intendant, Raudot, had to issue an order to the effect that the increasing of the number of horses was not to be continued. You are all aware also that the first Clydesdale was introduced in 1840, the first Percheron in 1855, the first Suffolk in 1868, the first Shire in 1883 and the first Belgian in 1902. Since that time, the horse breeding industry developed to such an extent that the great championship at the Chicago International Exhibition last year, was awarded to a Canadian breeder and the Clydesdales from Saskatchewan were awarded all the stallion championships.

During the war and also in the immediate post-war period, the great demand was for quick transportation, irrespective of cost. It was not only necessary to produce but to produce rapidly at any cost and also to put the products on the market at the earliest possible moment. As a consequence, the horse, both for work purposes and as a means of transportation, was largely displaced by tractors and auto trucks. This condition of affairs continued until the replacement of these tractors became necessary, when many farmers and others began to realize that the capital investment and overhead expense were disproportionate to the result obtained as compared with the use of horses. Those who have weighed the evidence in this connection have come to the conclusion that in many cases home grown living motors, whose fuel consists of hay and oats rather than gasoline, is the more economical. This has been accentuated by the fact that the price of horses has decreased more rapidly than that of motors and tractors. Unfortunately, in the meantime, and before the changing conditions were fully realized, not only was the breeding of horses neglected but the colts were underfed to such an extent as to prevent their full development. At the present moment, judging from the information which I have obtained from the west and also by the results of an auction sale of pure bred Percherons at St. Anne de la Pocatiere, where the raising of this breed was initiated some ten years ago, that corner has now been turned, so far as this industry is concerned, and there is every prospect of it flourishing again in the future. Just here, may I quote an article from a local paper indicating how quickly these horses were sold.

The auction of registered Percheron horses, which took place on Wednesday, was a fair success. Notwithstanding the rain and the bad condition of the roads, the crowd was quite a large one and the bidding was lively enough and even at times very contested.

Fourteen picked animals were sold at prices varying from $350 to $800. These horses thus distributed in the various parts of the province will greatly help in improving the breeding of the Percheron horse. Another practical result of this auction sale will be to advertise throughout the province what an excellent centre for breeding of Percherons there exists at Ste. Anne de la Pocatière and in its vicinity, and thus encourage the breeders of that district to further rear good horses for breeding purposes, thanks to the assurance they have of being able to sell their animals at profitable prices.

As in the case of all agricultural organizations, it was the Revs. Messrs. J. Bois and M. Godbout who saw to all the details of this first sale, we must therefore congratulate them on their success.

The farmers in each province are waking up to the situation and are asking for further co-operation from the government. Might I ask the hon. Minister of Agriculture (Mr. Motherwell), who is always ready to meet our farmers half way in anything that pertains to real progress, to give special attention to this phase of the live stock industry? In particular, I would respectfully call his attention to the difficulties experienced in the application of the law regarding the bonusing of pure bred stallions. The act may be quite satisfactory to the west, where the farms for the most part are large and where breeding is conducted on a large scale, but in the east we are confronted with many difficulties in its application. Some of these difficulties are outlined in letters which I have received from several horse breeding associations, and which I will send to the hon. minister for his information. I feel sure that he will take up this question with his departmental officers and the horse breeders with a view to arranging for some modification that will meet the requirements of the whole Dominion, and so further this increasingly important industry for the benefit of the farmers at large. I am specially confident of this because of the efficiency with which a very similar situation was dealt with regarding another branch of agriculture. If I refer now to the sheep industry it is not so much because of its comparative importance, but rather because its development furnishes the most striking example of the results which may be obtained through a sane departmental policy, combined with an efficient co-operation between federal and provincial agencies. Notwithstanding the fact that for many years the agricultural societies in the province of Quebec had been working for the improvement of this industry by a bonusing system, the farmers did not avail themselves of the opportunities offered, and as a consequence until very recently this line of agricultural activity was almost stagnant in many parts of the province. What step was then taken to remedy this? Both the federal and provincial departments of agriculture appointed sheep promoters who, working hand in hand, were able to convince the farmer of the value of our federal bonusing system. Rome was not built in a day, nor were these conditions entirely changed within a year. Within a few years, however, a marked improvement was noticeable, and to-day sheep bred and raised by the farmers in these same districts are realizing the highest prices on the Boston, Toronto and Montreal markets. In a report based on an investigation made by the representative of the Market Intelligence Service at Montreal, who has drawn a comparison between the type and quality of commercial lambs, raised in Quebec and marketed at Montreal during the years 1919 and 1924, I find the following:

In 1919 the average weight of all lambs marketed was 67.3 pounds, and 38 per cent were graded as good, 62 per cent as common. In 1924 the average weight was 73 pounds, and the grading 62 per cent good and 38 per cent common, the reverse of the figures for 1919. Basing the increased average weight per lamb of these better quality lambs on prevailing market values, the improvement represents a money value of $250,000.

These facts are further verified by the signatures of all the commission firms and packers operating on the Montreal market to the report submitted by the representative of the Markets Intelligence Division. The improved quality of commercial lambs raised in Quebec has promoted the development of a market in Boston where the lambs of this province are at the top of the market,—I think most of these lambs come from the youthful county of Beauce—in spite of an existing tariff of $2 per head. During 1924 upwards of 40 carloads of lambs were shipped direct from lamb shows and sales to be disposed of on the Toronto market, where they topped the market in competition with all other lambs. Firms securing these lambs have stated in a letter to the Hon. J. E. Caron, provincial Minister of Agriculture, quoted in his report for 1924, to the effect that they would be pleased to secure all lambs to be marketed at lamb shows and sales in Quebec during 1925. I can confirm these results by personal experience in my own constituency, where last summer at the sheep sales I saw lambs sold for an average price of over $8, as compared with a price of only $3 for common lambs sold through ordinary dealers. There were many steps which contributed to this result, among them being the choice of the most suitable breeds, the introduction of pure bred rams, the proper

care of the lambs, dipping and so on, preparation for the market, organization of sheep shows, the sales by auction and the co-operative shipment to outside markets in carload lots. All these steps meant arduous work for those engaged therein, but the result has more than justified the policy pursued. The same improvement has taken place in the swine industry, but time does not permit me to deal with it.

Closely related to the sheep industry is the wool business, which present conditions make particularly attractive, there being a world-wide shortage of wool, and last year's clip having been sold at a good price. There is a great potential market open for Canadian wool, not only in the United States but also in the Orient. An agency which has already done much to further this industry is the Canadian Co-operative Wool Growers' Association. During the seven years of its existence this association, working in conjunction with the department in its grading service, has proven itself to be one of the most helpful channels by which our farmers can dispose of their wool. This is shown by the fact that in that time it has handled over 25,000,000 pounds of Canadian wool. This has been beneficial not only to the farmers who obtained a better price, but also to the manufacturers who were provided with a better quality and a more uniform raw material. In addition this association has carried on a campaign to increase the use of home-grown wool, and to further the sale of clothing made therefrom. As an aid in reducing the cost of living, may I suggest, Mr. Speaker, that we all encourage this industry by wearing suits made out of the wool of our sheep and shirts made from the flax of our fields? Are not those clothes just as good as the imported ones? And they are Canadian! Furthermore, this society is founded upon the basic principles of real agricultural co-operation, which have been tried out and found successful in every country where the co-operative movement has proved to be a benefit.

I would like to deal very briefly with another branch of agriculture which this government has fostered and promoted most effectually, namely, poultry farming, in which I am particularly interested, as president of the Quebec Provincial Poultry Association.

It may be said without fear of successful contradiction that with regard to certain phases of this increasingly important industry, Canada leads the whole world. To enumerate briefly some of these, I may mention that Canada is the only country in the world which has perfected a system for the registration of poultry on a production basis; which has organized a national standardized series of egg laying contests; which has a federal plan for record of performance, and whose legislation regarding the grading of eggs is so effective. Until comparatively recent years strictly fresh eggs were not to be had in the winter, and hens which laid two hundred eggs in a year were considered phenomenal. To-day, however, due largely to the efficient work accomplished by the Department of Agriculture, the majority of the farmers produce new-laid eggs in the winter and two hundred egg hens are no longer rare. As an indication of this improvement, may I quote a few figures gathered from the reports of the Canadian national egg laying contests? In the contest year 1919-20 the average production of the 1,610 birds entered was only 122 eggs, and of this number of birds only 48, or three per cent, laid over 200 eggs. Last year, however, the average production of the 3,610 birds was 169 eggs, an increase of over 39 per cent, and the number of birds laying 200 eggs or over was 1,060, an increase of 31 per cent. In the contest conducted in my own constituency last year, 23 birds laid over 200 eggs as compared with none which reached that mark in 1919-20.

A concrete example of the increased production in country districts was furnished recently by the provincial district agricultural representative for the Abitibi, which, as you know, is a newly settled region. Last year the number of eggs produced exceeded that of the preceding year by over 29,000 dozen, or a value of over $13,000. This represents almost one dollar per head of the total population. The district representative states that this progress is due entirely to the work accomplished by the federal government through the experimental farms.

I am informed by one of the Canadian delegates that during the World's Poultry Congress held in Spain last year, the Canadian birds, despite the trip of nearly 6,000 miles—some of them came from British Columbia,—were more vigorous than those from any other country, and were the centre of interest for all the visitors. This was partly responsible for the securing of the next world's Poultry Congress for Canada in 1927.

The registration of poultry inaugurated by this government assures the purchasers of registered male birds an authentic pedigree of at least two generations of high producing hens. The result has been the opening up of an immense foreign market, and as one prominent poultryman in the United States stated

recently, the eyes of the poultrymen of the world are turned toward Canada for future breeding stock. The keeping of a record of performance for poultry has increased egg production to a wonderful extent, and the government regulations regarding the grading of eggs assures to the consumer the quality for which he pays, and to the farmer a just price for the quality which he produces.

This furnishes another concrete example of the practical measures adopted by this government to improve agricultural conditions.

Now let us consider, Mr. Speaker, the production of maple sugar, an industry that is typically Canadian and is largely localized in the provinces of Ontario and Quebec. I think that Quebec itself supplies about 85 per cent of the total amount produced in Canada. New Brunswick and Nova Scotia are also interested in this industry. According to the statistics, over 20,000 people in this present season are busy making maple sugar and syrup. The value of the total production in 1920 was $8,000,000; in 1921, $5,000,000; in 1922, $5,000,000. Our experts are of the opinion that if properly developed this industry might double its production. Up to the present time we have been handicapped by many fraudulent products which appear on the market to the great disadvantage of the consumer and have the effect of discouraging the producer of genuine maple sugar and syrup. Let me quote in this connection a clipping from the Ottawa Evening Citizen of March 16, 1925:

> On many farms, however, the sugar bush is a thing of the past. The many substitutes for maple syrup and its higher production costs have materially reduced the revenue derived from this source, while the high prices prevailing for hard maple for firewood have been a temptation too strong to resist, and many of the sugar bushes have been cut down.

The hon. Minister of Health (Mr. Beland) is quite aware of the difficulties with which our sugar makers are confronted. Coming himself from the district of Beauce, where so much sugar is produced, he must have heard very many complaints. If my recollection is correct, he was one of the most interested about ten years ago in working on legislation to protect the producer. The last bill was drafted in 1920 and took effect on July 1 of the same year, but it still leaves the door open to fraud. The producers and manufacturers of genuine maple products, seeing that our export market was in great danger on account of the many adulterations, attempted to have matters improved. Hon. J. Caron, Minister of Agriculture in the province of Quebec, who is always deeply interested in anything that affects the farmers, requested an officer of his department, Mr. Vaillancourt, to join a delegation which was going to Ottawa to discuss these matters with the hon. Minister of Health. This delegation, which I had the honour to introduce to the hon. Minister of Health, was composed of five prominent men in the maple sugar industry and of my parliamentary colleagues in the districts interested in this industry. Our petition was fully considered and discussed by the hon. minister and his officers, and we were promised some improvement. Might I ask the hon. minister, while he is in his seat, if any amendments to the present law will be introduced to require the producer of sugar to put a label on his product indicating its purity and place of origin.

Mr. BELAND: Does my hon. friend desire an answer immediately?

Mr. BOUCHARD: If it were possible.

Mr. BELAND: I did not want to interrupt my hon. friend in his highly interesting, instructive, polished and informative address, but I have no objection at all to giving him a reply.

Let me tell him and the House that the government agrees entirely with his plea that the maple sugar industry should be further protected from adulteration. There is no doubt that new regulations should be enforced to prevent unscrupulous producers from ruining this important market, and since my hon. friend has asked me the question, I might say that it is the intention shortly to enforce measures providing for the labelling of all maple sugar so that in case of adulteration it will be possible to trace those guilty of fraud. I realize, as my hon. friend has said, that it is most important that we should protect the honest producer against the condemnable methods that have been adopted especially in the last two or three years.

Mr. BOUCHARD: Mr. Speaker, I think all the sugar makers will be delighted when they read the important statement that has just been made by the hon. Minister of Health.

May I just say a few words on another very important question? It is a recognized fact to-day that it is almost impossible, under ordinary conditions, and particularly with land that has been cropped for successive years, to obtain a satisfactory yield without the use of fertilizers. I am ready to admit that the old-fashioned fertilizer, farm manure, has no equal, but in many instances this cannot be obtained in sufficient quantities; consequently, commercial fertilizers are begin-

ning to play an important part in the development of agriculture here in Canada, as they have already done in the older countries of Europe.

What was the situation with regard to this question when this government came into power? A multitude of agents were flooding the country with commercial fertilizers, of which the farmers had not sufficient guarantee as to the quality or the price. As a result, after a few experiments with these fertilizers, the farmers in many cases became skeptical as to the value of this method of fertilization. Let me outline what was then done to relieve this situation.

During the session of 1922, the administration of the act dealing with these fertilizers was transferred from the Department of Health to the Department of Agriculture, and it was my privilege, during the first week that I sat in this House, in May, 1922, to assist in the preparation of a new act which covered this subject, so as to make it more effective for the protection of the farmers. Judging by information received from time to time, I think I am safe in stating that in the three years which have elapsed this new law has proved of immeasurable benefit to our farming population. This is acknowledged by the foremost agricultural authorities on this continent and this legislation is looked upon as a model of its kind.

Furthermore, conditions were improved by the removal of the sales tax and later on of the import duties on these commercial fertilizers and this was another step deeply appreciated by the farmers. In order to further the interests of the farmers who are remote from commercial centres and who are not well informed regarding current prices, in 1923, the department began to publish a periodical, the Market Review, which contains current market quotations for seed grain, animal feed and commercial fertilizers, together with a summary of local market prices. This review is available for a very nominal subscription. Any farmer who does not subscribe directly for it can always obtain the information contained therein through his local farmers' organization.

This most valuable legislation, combined with the spirit of co-operation, which is being manifested by the farmers in this connection, makes it possible for them to obtain a product of which the quality is assured at a most reasonable and fair price. As an example, we may take basic slag from Belgium, containing the minimum of 16 per cent of available phosphoric acid, which according to the last market report can now be bought for $18, which is about half the price of ten years ago.

Our Canadian farmers are particularly appreciative of the fact that the inspection labels for all fertilizers sold in the province of Quebec are bi-lingual, which enables them to read the analysis in their own language.

There is another feature of agriculture which is extremely important, and which must on no account be overlooked. I refer to investigational and experimental work connected therewith. To some minds these words, investigation, research, and experiment, seem to be bugbears. It is an undoubted fact, however, that modern agriculture is an art, a science, an industry. Such being the case, it is essential that its practice should be based upon principles that can only be laid down as a result of investigational and experimental work. It is to be expected that expenditure of public money for this purpose might be misunderstood and criticized by those who are not in a position to appreciate its importance. I am always thunderstruck, however, when I see this critical attitude finding expression in this House and often among members representing districts which directly or indirectly benefit by this type of work. If, then, agriculture is essentially an experimental science, and no one will deny this, it requires men with scientific training and the provision of adequate facilities to conduct the necessary experimentation to establish the basis of this science. As a matter of fact, the most prosperous agricultural countries in the world are those which have devoted most attention to this type of work. A concrete example among thousands which might be quoted is furnished by the research which resulted in the discovery of basic slag, which to-day may be aptly described as the bread of the land not only in Europe, but also all over the world. Before its utilization for fertilizing purposes this was merely a by-product of the steel industry, which had absolutely no economic value. The objection is often made that owing to the need of economy in difficult times this work should be curtailed. These, however, are the very times when it should be extended in order to increase the total production and decrease the cost thereof. Research work which is admitted to be the basic factor in manufacturing industries should equally be applied to agriculture. This principle is even truer of agriculture by reason of the fact that instead of being centralized with capital at their disposition to conduct their own experiments the farmers are scattered throughout the

country and have not always the facilities for so doing.

Our federal system of experimental farms is the admiration of agriculturists the world over, not only by reason of its extent but also because of the opportunity which it affords for undertaking uniform and standardized work.

The contention is often made that these experimental farms are not self supporting and consequently, do not pay. In immediate returns it is true that they do not pay and that they will never pay so long as they function as they should do. Experimental work is, by its very nature, too costly to be self-supporting. Who can calculate, however, to take only one example among hundreds, the billions of dollars by which western Canada has been enriched through the discovery of marquis wheat; a discovery which involved many years of patient, scientific research and experimentation. Similar work, at present, on the way, indicates that in the very near future, other varieties such as garnet wheat, and so forth, will be produced and will prove to be of even more economic importance.

If time permitted I could cite equally striking facts concerning practically every branch of agriculture, including animal husbandry, horticulture, field husbandry, poultry, bee-keeping and tobacco growing. I know by personal experience that the farmers of my district are very grateful to their former and never forgotten member, the present honourable Minister of Justice, for the part he played in securing the establishment of the experimental farm at Ste. Anne de la Pocatiere, and which has contributed very effectively to solve many of our acute problems and to generally help agriculture in lower Quebec. For these reasons, I trust that the hon. Minister of Agriculture, notwithstanding the need of real economy, will recognize that a curtailment of this work would be really false economy and would be most detrimental to the interest of the farmers.

We often hear the statement made, that on the south side of the border, the farmers are far more prosperous than here. I have no intention of denying the prosperity of the United States but I feel I am safe in saying that very few, if any, farmers from eastern Canada have crossed the line to establish themselves on the land. Moreover if one may judge by reports, farming conditions over there are not by any means rosy. I have here a despatch from Chicago dated last year which indicates this.

I have only attempted, Mr. Speaker, to express briefly certain of the outstanding activities of this government in relationship to agriculture but the instances I have quoted show plainly that the present administration has at heart the best welfare of farmers. To my mind the solution of the problem with which our agriculture is now faced will be largely found in increasing the productive capacity of the land, now under cultivation, and at the same time in decreasing the cost of production. Steps toward this end have already been taken by the reduction of the duties and removal of the sales taxes on agricultural implements, and so on, and by the dissemination of information regarding up-to-date and more successful methods of cultivation, based on practical experience.

We must endeavour, still further, to improve the quality of our products. It is too often said that the market is overloaded without taking into account the quality of the surplus stock. As the old proverb says "there is always room at the top," which, applied in this instance means there is ever a good market for produce of high quality. In this connection the various grading services are contributing wonderfully to the improvement of the quality: which results in a better price for the producer.

As I have already pointed out co-operative marketing will also do much to improve present conditions and will be of a decided benefit both to the producer and the consumer. In order to realize the best possible returns, the farmer, in common with those engaged in other lines of commerce, must market his goods at the most favourable time and in the most efficient way. He is substantially aided in this respect by the market report services of the Department of Trade and Commerce, the Live Stock branch, Seed branch and the International Institute of Agriculture.

In view of the fact that the government attaches such importance to the question of transportation costs, I sincerely believe that in this connection the interests of the farmers will be protected to the greatest possible extent.

I cannot emphasize too strongly that agricultural activity is the foundation of national wealth, that in recent years the wheat of western Canada, whose waving golden grain glorifies twenty-five million acres of our fertile land, was the big factor, which in the balance of international trade, maintained the stability of our Canadian dollar and placed it on a par with the best money of the world, and that the agricultural class is the bulwark of the family as well as the best guardian of the health of the nation. Consequently in the name of economic solidarity, professional

men, industrial workers, labourers and tradesmen must inevitably realize the necessity of an agricultural policy most helpful to the farmers, and should associate themselves with all measures, which will have for effect the increasing of farm revenue.

It has been insinuated that the policy of this government will result in killing many of our Canadian industries. Despite these spurious and preposterous affirmations of an opposition, inspired rather by a partisan resentment than by a genuine desire for national welfare, this government will never let the fires of our factories die out. On the contrary those fires have been stirred up and fanned into flames as is shown by the following statements. I quote from Le Devoir of April 11, 1925:

Les affaires. . . sans lunettes bleues

De la page financière de la Gazette, hier:—Improvement in wholesale trade—Considerable activity in the retail trade—Collections slowly improving—. Dans une autre colonne: Trade conditions show betterment—Halifax: Wholesale trade continues satisfactory. Retailers generally report slight improvement.—St. John: Both wholesale and retail trade up to expectation. Collections satisfactory.— Montréal: (Tous les genres de commerce vont assez bien). Collections generally fair—Winnipeg: Splendid weather has stimulated retail sales in all lines of seasonable goods. . . Wholesale business steady. Collections fair.—Calgary: Business generally is showing a slight improvement. Collections fair.—Vancouver: No material change in wholesale and retail trade generally, but prospects brighter for the future.

Ce n'est pas dans le ton des jérémiades de M. Meighen, de ses "orateurs" et de ses organes. Mais il y a des chances pour que cela soit plus vrai. En tout cas, c'est à retenir pour le jour où le parti des "affaires" criera famine et réclamera plus de "protection".

This government has no intention either to stifle, by the imposition of a ruinous tariff, the rising in the rosy dawn, of those columns of pale blue smoke from the hearth of the log house of the settler, from the thatched roofed homestead of the remote farmer and the cabin of the hardy fisherman or lumberman. These significant columns of smoke will continue to ascend to the sky as an incense to the glory and ability of our statesmen and as an indication of that prosperity which will assure for this Canada a foremost position among all the nations of the world.

The ship of state guided by the capable hands of the hon. Prime Minister, helped by the energies and efforts of all classes of the community, will successfully weather the storm and emerge triumphant from the tempestuous seas into which the poor helmsmanship of the preceding government had plunged her. The administration of the country which was suffering from a chronic disease, that would never have been cured under the care of our predecessors, was operated upon by the clever scalpel of an outraged public opinion. The Dominion is now convalescent and fresh air, not hot air, good care, sympathetic help and the co-operation of the people will effect a complete cure. The people themselves, however, must see to it that no relapse occurs, or to use a Biblical quotation—the last state will be worse than the first.

[Mr. Bouchard.]

Let us then go forward with that unquenchable courage which animated our pioneer ancestors. May we not find inspiration in the eloquent words of an outstanding figure in our national life, His Excellency the Governor General, who said in a recent speech:

Are there not moments when we may see some things, here and now, which want constructive helping, which want doing, which want developing, to make this Dominion what we hope to see it?

Are there not times when apathy, pessimism, materialism, and cynicism, require fighting? Then seems to be the time to attack, to pursue, and to rally. Attack all that interferes with the development of your country, attack this pessimism and materialism, pursue your objective to the end, and rally again. Yes, rally French and English, rally east and west, rally you men and you women from the historic Maritimes, rally to the one ideal of country first, and be ready again. Then can you say in a paraphrase of the words of the dying William Pitt "In the war Canada helped herself by her energy, she must now help the world by her example."

On motion of Mr. Archambault, the debate was adjourned.

On motion of Mr. Graham the House adjourned at 12.15 a.m. (Saturday).

Monday, April 20, 1925

The House met at three o'clock.

PUBLIC SERVICE REARRANGEMENTS

Hon. ERNEST LAPOINTE (Minister of Justice) moved for leave to introduce Bill No. 43, to amend the act to authorize rearrangements and transfers of duties in the public service.

He said: This bill, Mr. Speaker, will not involve any change in the existing law. It is suggested by the commissioners for the revision of the statutes in order to make the present law clearer. The purpose of the measure is to give power to the Governor in Council to transfer a branch of a department to another department and at the same time to transfer the duties of the officers of that branch to the other minister.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CANADIAN NATIONAL RAILWAYS—DEBT

Sir HENRY DRAYTON:

1. What additions were made to the funded and unfunded debt of the Canadian National Railways and affiliated companies, exclusive of the obligations of lines in the United States and of separately operated properties during each of the years 1921, 1922 and 1923?

2. What was the total amount required for interest on funded and unfunded debt of the Canadian National Railways and affiliated companies, exclusive of the obligations of lines in the United States and of separately operated companies during each of the years 1921, 1922 and 1923?

Hon. Mr. GRAHAM:

1. 1921—

Debt to public..		$ 10,549,767 98
Debt to government, including interest		122,642,486 83
		$133,192,254 81

1922—

Debt to public (decrease)..		$ 26,032,305 07
Debt to government, including interest		85,654,123 70
		$ 59,621,818 63

1923—

Debt to public..		$ 18,855,412 04
Debt to government, including interest		97,437,273 96
		$116,292,686 96

2. Year 1921—

Interest due public..	$33,530,140 26	
Interest due government..	20,966,781 99	
		$54,496,922 25
The interest on unfunded debt was.. ..		878,224 30

Year 1922—

Interest due public..	$33,723,850 40	
Interest due government..	24,912,875 88	
		58,636,726 28
The interest on unfunded debt was.. ..		111,063 61

Year 1923—

Interest due public..	$34,126,065 80	
Interest due government..	30,157,943 67	
		64,284,009 47
The interest on unfunded debt was.. ..		126,725 98

Sir HENRY DRAYTON:

1. What additions were made to the funded and unfunded debt of the Canadian National Railways and affiliated companies during each of the years 1921, 1922 and 1923?

2. What was the total amount required for interest on funded and unfunded debt of the Canadian National Railways and affiliated companies during each of the years 1921, 1922 and 1923?

Hon. Mr. GRAHAM:

1. 1921—

Debt to public..		$ 10,278,767 98
Debt to government (including interest)		122,642,486 83
		$132,921,254 81

1922—

Debt to public (decrease)..		$ 26,326,305 07
Debt to government (including interest)		85,654,123 70
		$ 59,327,818 63

1923—

Debt to public..		$ 18,595,912 04
Debt to government (including interest)		97,437,273 96
		$116,033,186 00

2. Year 1921—

Interest due public..	$34,476,014 02	
Interest due government..	20,966,781 99	
		$56,442,796 01
The interest on unfunded debt was.. ..		1,106,176 56

Year 1922—

Interest due public..	$34,652,324 38	
Interest due government..	24,912,875 88	
		59,565 200 26

		65,199,323 95
The interest on unfunded debt was.. ..		239,536 07

SADDLE LAKE INDIAN RESERVE

Mr. KELLNER:

1. Was a portion of the Saddle Lake Indian reserve reclaimed by the Crown?

2. If so, how long did it remain in the possession of the Crown?

3. Is the title for said lands vested in the Soldier Settlement Board?

4. If so, by what authority was this land reclaimed from the Indians?

5. By what authority was it transferred to the Soldier Settlement Board?

6. What was the consideration paid to the Indians?

7. What was the selling price to the Soldier Settlement Board?

Hon. Mr. STEWART:

1. Yes, about 18,000 acres recently surrendered by the band.

2. Surrender not yet approved by order in council.

3. Transfer not yet completed.

4. By statutory powers provided in Indian Act.

5. Surrender was granted by the Indians in order that the area so released might be sold to the Soldier Settlement Board of Canada.

6. Indians have received a per capita cash payment of $100. Balance will be placed to credit of band funds.

7. $10 per acre cash.

CANADIAN NATIONAL RAILWAYS—EQUIPMENT

Mr. MacLAREN:

How many steel passenger cars have been added to the equipment of the Canadian National Railways during the years ending March 31st, 1923, 1924 and 1925?

Hon. Mr. GRAHAM:

1923, nil; 1924, 154; 1925, 65. Total, 219.

PARLIAMENT BUILDING TOWER—CARILLON

Mr. WILSON:

1. How many tenders were received by the Department of Public Works for the installing of a carillon in the tower of this building?

2. What were the names of the firms who tendered and the amount of their respective tenders?
3. Has the contract been awarded?
4. If so, to what firm and at what price?
5. Will the government table a copy of all tenders in connection with the said contract entered into for the installation of the above-mentioned carillon?

Hon. Mr. KING:

1. Four.
2.

Gillett & Johnston

5. Yes.

HUDSON BAY RAILWAY

Mr. SPENCER:

1. Referring to answer question No. 21, replied to the 8th of April, 1925: On what railways was the $8,084 spent?
2. What were the reasons for continuing construction on the Hudson Bay Railway during the war?

Hon. Mr. GRAHAM: Mr. Speaker, I think this question had better be dropped. It is a new question placed on the order paper, and it is evident that the hon. gentleman is endeavouring to ascertain some information about mileage, but he has expressed the figures in dollars. I think he understands the situation. I would suggest that either the question stand until he can amend it, or that it be dropped and a new question placed on the order paper.

Mr. SPENCER: Mr. Speaker, I am in touch with the department in regard to this matter, and I will drop the question for the time being.

Mr. DEPUTY SPEAKER: Dropped:

LIVE STOCK MARKET REPORT

Mr. MERCIER:

1. Does the Live Stock Market Report, issued weekly by the Live Stock Branch of the Department of Agriculture, appear in English only?
2. Is not this report expected to reach both English and French readers and publications?
3. Should it not be sent out in both languages?
4. Will the Minister of Agriculture undertake to have this report issued in both English and French?

Hon. Mr. MOTHERWELL: Mr. Speaker, replying to the four inquiries embraced in this question, I desire to answer Yes to them all.

QUESTION PASSED AS ORDER FOR RETURN

DRUMHELLER, ROSEDALE AND WAYNE COAL FIELDS

Mr. GARLAND (Bow River):

1. How many coal leases have been granted in the Drumheller, Rosedale and Wayne Fields?
2. What was the total area of each original lease?
3. To whom were these leases granted?
4. How many leases have been subsequently subleased?
5. What was the area of each section subleased?
6. Who is the present lessee?
7. What was the amount of arrears of rentals or royalties at the time of abandonment of the original leases, or of subleasing?
8. How many of the abandoned leases have been again leased?

UNOPPOSED MOTIONS FOR PAPERS

VANCOUVER OLD POST OFFICE

Mr. BLACK (Yukon):

For a copy of all correspondence and communications between the government, any member or official of the Government, and any persons, during the past three years, concerning the disposal of the government property situate on the southwest corner of Granville and Pender Streets, Vancouver, known as the old post office property.

NIPISSING CENTRAL—ROUYN EXTENSION

Mr. ARTHURS (for Mr. McQuarrie):

For a copy of all correspondence and other documents passing between the executive officers of the Canadian National Railways and the Temiskaming and Northern Ontario Railway Commission or any of its officers, and between the Canadian National

Railways and the Government of Canada or any of the ministers thereof, and between any of the above-mentioned and the Government of the Province of Quebec or any of the ministers or officials thereof, regarding the proposed extension of the Timiskaming and Northern Ontario Railway subsidiary (the Nipissing Central) into Rouyn.

Hon. Mr. GRAHAM: Mr. Speaker, I do not know whether the hon. gentleman is in his seat or not. This motion refers to what, according to press reports, is the subject of correspondence between the government of Ontario and the government of Quebec at the present time. Of course, it would be futile for us to pass a resolution asking this government to produce correspondence which may have taken place between those two provincial governments. There may be some correspondence between the Canadian National Railways and either or both of those governments, of that I am not sure; but even if that were the case, it would be very indelicate at the present moment to make public the correspondence, owing to the difference of opinion that exists between the two provincial governments. If my hon. friend will allow the motion to stand I will make some study of it and see what it entails.

Mr. MEIGHEN: Mr. Speaker, I think the minister has wrongly interpreted the resolution. I have just run over it while he was speaking, and I do not think it includes any correspondence between the two provincial governments. If it does, it is obvious that such a request could not be complied with.

Mr. GRAHAM: Let me read the fifth line to my right hon. friend:

—or any of the ministers thereof, and between any of the above-mentioned and the government of the province of Quebec.—

"Above mentioned" I imagine would include all the parties enumerated.

Mr. MEIGHEN: That does not include the government of the province of Ontario.

Mr. GRAHAM: Yes.

Mr. MEIGHEN: Oh, no.

Mr. DEPUTY SPEAKER: In the absence of the mover of the resolution the order will stand.

Motion stands.

ST. LAWRENCE WATERWAY

Mr. ARCHAMBAULT:

For a copy of all correspondence, of whatever nature it may be, exchanged between the Government of Canada and that of the United States or between any official of said governments either through the Departments or Commissioners from June 1, 1924, up to this present date, in connection with the St. Lawrence Waterway Scheme, the diversion of the waters of Lake Michigan for the Chicago Drainage Canal and the diversion of the waters of Niagara Falls.

Hon. Mr. GRAHAM: Mr. Speaker, it would be better, I imagine, if this motion were withdrawn. If not, I would ask that it stand, for the reason that nearly all the correspondence between the government of the United States and the government of Canada was placed on the table some time ago. That correspondence included the St. Lawrence waterway and the Chicago drainage canal. The balance of the communications cannot be published until such time as has been agreed upon between the two governments. We hope in a very few days to place this correspondence on the table by consent of the United States government.

Mr. ARCHAMBAULT: Let the motion stand for a while.

Motion stands.

ACCREDITED HERD SYSTEM

On the Orders of the Day:

Mr. J. L. STANSELL (East Elgin): Mr. Speaker, I should like to ask the Minister of Agriculture (Mr. Motherwell) concerning a complaint I have received from a breeder of pure-bred live stock whose herd is under the accredited herd system of the government. His complaint briefly is as follows: An officer of the department has stated to this breeder that in future no herds will be accepted for accreditation unless the herd sire is two years of age or over; also, that herds already fully accredited will be dealt with in the same manner. If the statement by the officer is correct, I should like to know why such a ruling has been made.

Hon. W. R. MOTHERWELL (Minister of Agriculture): Mr. Speaker, the complaint referred to had not been brought to my attention. I shall be pleased to look into the matter and give my hon. friend an answer later.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Friday, April 17, consideration of the motion of Hon. J A. Robb, (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. JOSEPH ARCHAMBAULT (Chambly and Vercheres): Mr. Speaker, may I be permitted, before discussing the budget proper, to make one observation regarding the Special War Revenue Act? I wish to call the attention of hon. members to section 20 which gives a prior lien to the government over other securities. The last paragraph of section 20 of the Special War Revenue Act, 1915, as amended, provides that the liability to the crown shall constitute a first charge on the assets of such person, firm or corporation, and shall rank for payment in priority to all other claims of whatsoever kind heretofore or hereafter arising save and except only the judicial costs, fees and lawful expenses of an assignee or other public officer charged with the administration or distribution of such assets.

In my opinion, Sir, this legislation is absolutely unjust to lenders in good faith on security. The practical difficulty of the existing law is that the creditor has no means of ascertaining whether the person to whom he lends his money is a debtor to the government. It is possible for the hypothecated immovable to become the asset of someone who is heavily indebted to the government, and if the property is brought to sheriff's sale the government will have a prior claim for whatever might be due to them. To illustrate, let me mention a case in point. If a man lends $3,000 on a property on first mortgage, the value of the property being $4,000, and it is ascertained beforehand that the borrower is not indebted to the government, nobody can prevent this borrower from selling the property to another who is indebted to the government. The property is sold later on; the government has a prior claim and get, say, $3,000 due to them before the lender in good faith can get his money. I submit, Sir, that this section should be repealed, or provision made by which a government lien shall not prejudice the rights of creditors who have registered their claim previous to the property becoming the asset of the debtor. This would afford a means by which the creditor could protect himself.

I may add that this prior claim of the government does not exist in England. The creditor there who lends his money on property on which he takes a first mortgage ranks, if the property is sold, before the government in the matter of taxes, and so on. I hope that the Acting Minister of Finance (Mr. Robb) will take note of this observation and remove this legislation, which in my opinion is most unjust and unfair to a creditor in good faith.

Now, Sir, I wish to congratulate the Acting Minister of Finance on the excellent budget that he has presented to the House this year. I believe that in view of the difficult circumstances created by the late administration, the budget is a very good one. The Acting Minister of Finance has succeeded in balancing the budget and by keen business ability he has refunded maturing obligations and saved the country over $2,000,000 of interest a year. Our congratulations are due also to the High Commissioner for Canada in London, Mr. Larkin, in respect to the arrangements he has made regarding the loans to Greece and Roumania. He has some new securities on the revenues of these countries, especially on the wheat export, which will entitle us to hope that the taxpayers of Canada will be reimbursed some of the moneys that the late administration saw fit to scatter amongst its friends.

The best reason why, in my opinion, this budget is a sound and reasonable one is that it has failed to please the extreme wings of this House. It does not please the high protectionist and it also does not please the free trader. There is an old Latin saying, "in medio stat virtus." This budget reminds, me, Sir, of the attitude of Sir Wilfrid Laurier on racial and religious questions. The Tories of Ontario used to say that Sir Wilfrid wanted French and Catholic domination, and at the same time the Tories of Quebec were stating that Sir Wilfrid was betraying his race and religion. Well, Sir, the principle that Sir Wilfrid Laurier did follow should apply to the fiscal policy, and I can see in this budget the embodiment of that principle. Our geographical situation is such that it is impossible to please everybody, and unless we make a firm determination to adopt a policy of give and take, a policy of conciliation, it will mean the disruption of confederation.

I wish to congratulate the government on the proposal they have made with respect to a tariff board. I believe that a tariff board will go a long way towards curing the ailments which beset us. I am not in favour of any iron-clad policy on tariff; I do not believe it will get us anywhere to say that we are high protectionists or to say that we are free traders. Every industry must be studied from the point of view of the interests of the consumer as well as those of the producer, and the duties should be increased or decreased accordingly. In my opinion certain duties should be increased and others should be decreased. I was in favour of the reciprocity pact in 1911 with regard to agricultural products; I am still in favour of that policy, but I believe that until we get reciprocity in agricultural products with the United States we

should raise our tariff on those agricultural products to a point where it will be on a level with the high tariff of the United States on similar products.

Mr. KENNEDY (Edmonton): Will the hon. member permit a question? Would he also be in favour of reducing the duties on products coming into Canada where the United States duty is lower than ours, as in the case of boots and shoes, for instance?

Mr. ARCHAMBAULT: Not on boots and shoes, but on agricultural products, absolutely. In my opinion free trade and high protection are not real policies. Free trade is a pious dream; high protection is a fit of hunger. I may add that everyone who has been studying the present evolution of fiscal matters must have noticed that the apostles of either extreme policy are becoming more scarce in this country. I call attention to our friends the Progressives. They came to this House, most of them, free traders, but I am sure that after having taken part in the affairs of this country, after having come in contact with all the diverse interests of this wide Dominion, they are not so strong on the policy of free trade to-day.

Mr. GOULD: I rise to my feet just to challenge the statement the hon. gentleman has made that the majority of the Progressives came here as free traders.

Mr. ARCHAMBAULT: That is a very fair challenge, but it does not prevent me from holding the opinion that if the hon. members of the Progressive party were ever returned to power, they would not dare to apply a free trade policy to this country. I may say the same thing about high protection. A few days ago we heard a very excellent speech by the hon. member for Colchester (Mr. Putnam), in which he gave the House the opinion of a man who was a minister in the late administration, and who at that time endorsed the policy of protection, but who only a few months ago said that protection was not the proper policy for this country. I refer to Hon. Mr. McCurdy. And Mr. McCurdy's statement is such an interesting one that the House will permit me, although the hon. member for Colchester has already read it, to read it again. In a message to the press on the 5th of September last Mr. McCurdy said:

> And first let me speak of the so-called "national" policy, or system for protection, under and by virtue of which it is certainly true that the manufacturers of Ontario and Quebec have fattened and grown rich, even although they are now passing through a lean period. But in what measure has this system of protection to industries alone helped us? It compels Canadians, east and west, to buy the manufactured goods of Ontario and Quebec, but it still permits them to use American ports of entry and export for their goods, if so be they can wring a further profit thereby.

There, Sir, you have the opinion of a gentleman who formed a part of the late administration, who was supposed to endorse the policy of protection, but who is now coming out against that policy. This goes to show, Mr. Speaker, that the extremists on both sides are becoming more scarce in this country, and it is all for the benefit of the people.

If you look at the criticism of hon. members of the official opposition regarding this budget, you find that for the first time probably in the history of the Conservative party, their adherence to the policy of protection is not embodied in their amendment to the budget. What do you find in this amendment? You find that they contend that we should have more economy in this country. You find that they contend also that we should have less taxation. I will refer later on to the increase in taxation and to economy, but I may say in passing that it is exhilarating to listen to their regrets and to notice the crocodile tears of the opposition regarding economy. There was only one instance pointed out by any member on the other side regarding economy. I challenge you, Mr. Speaker, to scan the speeches of the hon. members and find any real direct criticism, except in one instance, and this was given by the hon. member for Fort William and Rainy River (Mr. Manion) when he criticized the expenditure of the delegation to Wembley, and it was a pity to see the hon. gentleman the other night sitting in silence like a chastised child when the hon. member for Cape Breton South and Richmond (Mr. Kyte) burst his bubble.

Sir, it is true that the duty of the opposition is to criticize. I admit that right away. But the opposition, if it has any desire to be useful to the country, if it has any desire to regain power, must also give to the House and the country valuable and constructive suggestions. There are no constructive suggestions in the amendment; there were no valuable suggestions in the speeches made by the hon. members of the opposition. In my opinion the amendment is simply a crazy-quilt of platitudes to cover the soreness and disappointment of the hon. members of the opposition. Reduction of taxation—who in this country does not wish to see taxation reduced? Economy—where is the hon. member who does not wish economy in the administration of affairs in this country? No, I repeat, Sir,

this amendment was made in a moment of disappointment and soreness by hon. gentlemen opposite, because the backbone of their political campaign has been broken by this budget. You will remember the criticisms which were offered last year. They were of two kinds: first, that the industries affected by the tariff would have to close their doors, and that there would be an adverse balance of trade against this country. The second criticism was, not that they were so much alarmed about the actual reductions then made, but they believed—indeed they were sure—that these small reductions on a few industries would surely lead to a general reduction this year. I heard these criticisms during the election of St. Antoine; I have heard them even on my radio since the election; I heard them when the leader of the opposition (Mr. Meighen) was tendered a banquet jointly with Armand Lavergne of Montreal. When we told these hon. gentlemen that the agricultural implement industries affected, like the Massey-Harris Company, and the International Harvester Company, were satisfied with the reduction of duties then made, they said: "Wait until next year. If you vote for the Liberal candidate in St. Antoine, you are giving the present government a mandate to go on, and to bring down more general reductions." I may admit at the present moment, Mr Speaker, that they were partly justified by some—may I say, inconsiderate?—remarks of some of the members of the government. At the same time, that was the backbone of their policy, that was the backbone of their campaign: They were not afraid so much of the actual reductions, but they were telling the people that the government was going to make a general reduction in the tariff and that the industries of Canada would be crippled. What happened to those prophecies? The industries affected have made a better showing this year than they did before. The balance of trade, too, is in our favour. In 1924 we had a balance of exports over imports of $165,000,000; and in the first ten months of the year just closed we had a balance of export trade of $263,000,000. Therefore, those two prophecies have gone to the wastepaper basket. The third one has gone the same way. There are no wholesale reductions in the tariff this year.

So I was right, Mr. Speaker, when I stated that this budget has broken the backbone of the Conservative campaign. But they are not so easily daunted. Their backbone being broken they are sore, very sore indeed, naturally they have sought new devices and new alliances to try and fool the people once more. I do not know very much about the campaign they are making in other provinces, but I know what is happening in the province of Quebec. Sir, we are offered in our province the most extraordinary spectacle and the most diverting entertainment for chasing the blues that we ever had. It is called "The great Conservative push" it reminds one of that little German putsch from Bavaria last year headed by the ponderous General Ludendorff followed by the Crown Prince to restore monarchy, which putsch with its combination of burlesque and slapstick comedy made the whole world rock with laughter. This great Conservative "putsch" came as far as Hull yesterday. The General Ludendorff of the "putsch" is the rotund Mr. Monty, who was a minister in the late cabinet but who could not find one Conservative constituency in Quebec that would elect him. The Krontzprintz of the party is none other than the celebrated Armand Lavergne, who has been hypnotized by the newly-discovered alluring charms and irresistible vamping powers of the right hon. leader of the opposition. They brought with them for protection the secretary of the Montreal Police Probe, Mr. J. H. Michaud; and occasionally the oratory of the party is elevated to the high planes of Gladstonian eloquence by Hon. C. C. Ballantyne who has been nick-named in Montreal "Can't Come Back". Most of the publicity of that campaign is conducted in French in the official paper of the Tory organization called La Minerve. If the House will listen to me a few moments I think it would be greatly instructive to read just a few of the gems of this campaign; and after I have read them I am sure that hon. members will feel that I have not exaggerated in describing this new Conservative "putsch". Now, in the paper referred to on April 11, an account appeared of a lecture given in Montreal by a gentleman named Bousquet. Hon. Mr. Monty made a speech at that lecture which is headed in La Minerve "Sensational declaration of Hon. Mr. Monty". Listen to this—Mr. Monty is speaking:

> In a great burst of eloquent words which made a great impression on his audience Mr. Monty violently denounced the secret pledge taken by the Liberal government with the English government to provide work for all the English immigrants, which means that if work is as scarce as it is now the Canadian worker will lose his job and be replaced by a "bloke".

Listen to this one from La Minerve of 28th March, 1925, which is headed "Crime of High Treason." I translate:

> When a Prime Minister of a country delivers, willingly or unwillingly, this country to the foreigner, and does that solely to remain in power it is called

by all the nations of the world a crime of high treason. Now the Hon. William Lyon Mackenzie King is endeavouring to commit this crime; and if we do not take care, before five years all the provinces of the west from the west frontier of Ontario to the Rocky mountains will be annexed to the United States. Since three years the American citizens are invading the western provinces every year. It is by forty-five thousand and fifty thousand that they arrive annually to take hold of our land.

Listen to this gem:

If our information is exact, and everything leads us to believe it is, Sir Lomer Gouin, backed by high personages like Mr. Holt, Mr. Beatty and others, is going to Europe simply to warn the King himself of what is going on here and prevent England from seeing one of the brightest gems of the British Crown being separated from the Crown.

Now, here is another published on February 28, 1925.

The Postmaster General is one of our compatriots, the Hon. Jacques Bureau. He constitutes, with the Hon. Mr. Lapointe, a galaxy of our national glories. He is always fighting for the defence of our rights. Since two or three years there has been a campaign in favour of bi-lingual stamps. Mr. Bureau is Postmaster General and there are no bi-lingual stamps. I leave the electors to draw the conclusion.

Mr. MACDONALD (Pictou): Who says this?

Mr. ARCHAMBAULT: It appears in La Minerve, the official organ of the Conservative party in Montreal; it is signed "Jacques Durand," and formed part of this campaign. There is something more serious about it, Mr. Speaker. I thought we were through with racial appeals in this country. Mr. Armand Lavergne is following Mr. Monty in this campaign, and he came to Ottawa or to Hull yesterday. I am surprised that the right hon. leader of the opposition (Mr. Meighen) did not bring him with him to the meeting which he attended on Saturday in Ontario. Mr. Armand Lavergne made a speech which is reported in the Montreal Star of 26th March. This is the statement attributed to Mr. Armand Lavergne:

Brands Gouin coward.

The speaker labelled Sir Lomer as a "coward" and as "the Knight of the British Empire who represents you," and who had "run from the fight and was now in Europe."

Laurier was to blame for the imperialism which induced conscription in allowing Canadians to fight Empire wars in the Boer insurrection of 1897.

"The present government has not only failed in its duty to the French language, but has proved a traitor to it," he concluded, citing the example of the immigration laws which oblige a Frenchman, when entering Canada, to read and sign, in English only, the declaration and proof of his educational requirements, "in a country where both French and English are official".

Mr. Desrochers was accompanying Mr. Monty making the same kind of speeches, and one of his speeches can be found in the Gazette of April 16. Mr. Lavergne yesterday made the same kind of an appeal, and this class of appeal I think should disappear from the political hustings of this country forever. I have no comment to make upon this kind of campaign. This new alliance will no doubt rejoice the heart of an ex-minister of the late cabinet who stated that Armand Lavergne had a callous heart and blackened blood in his veins.

Sir, may I come now to one of the features of the criticisms of the hon. member for Fort William and Rainy River (Mr. Manion). All those who listened to his speech must admit that the hon. member did not offer any valuable or special or direct criticism, except that regarding the Wembley exposition. He has not brought forward any constructive policy. At page 1783 of Hansard he is reported as saying:

Dealing with the budget from the standpoint of the ordinary observer I submit that this budget, in which there is a complete absence of any remedies for our present discontents, is like a train of fifteen cars carrying one passenger.

I will paraphrase what the hon. gentleman said and put it in this way: Dealing with the criticism of the budget from the standpoint of the ordinary observer. I submit that this criticism and especially the speech of the hon. member for Fort William and Rainy River, in which there is a complete absence of remedies for our present discontents, is like a train of fifteen cars carrying one passenger, disappointment, but raising a great amount of dust and wind.

Sir, it is real entertainment of the best kind to listen to the hon. member for Fort William and Rainy River criticizing the policy of Sir Wilfrid Laurier and of the late administration regarding the railways and regarding the fiscal policy. If my memory serves me right, it was in 1912 and 1913 that the hon. member for Fort William and Rainy River, through the influence of Sir Wilfrid Laurier, was chosen, not as the Union candidate, but as the Liberal candidate in his constituency, and it was only later on that he accepted the candidature of the Union government. Why, Sir, in 1912 and 1913 and previously, when he was advocating the policies of Sir Wilfrid Laurier, he must have advocated even the policy of Sir Wilfrid on railway questions and on fiscal policy; and it is most amusing to see him now coming to this House and villifying what he praised before.

The official opposition offered no constructive criticism. They said that conditions in the country were bad. I have no doubt that the conditions are not as good as we hoped they

would be, but I should think when we look at the countries that have taken part in the war, we will find that, outside of the United States, we are faring just as well as any other country.

An hon. MEMBER: Much better.

Mr. ARCHAMBAULT: Much better. The hon. Minister of Labour (Mr. Murdock) gave us a very instructive speech on the industrial conditions of this country compared with the United States. I will not take up the time of the House discussing this question, but I may be allowed just to point out to hon. members a few items that will show that this country is faring just as well as the United States, and that these bad conditions do not exist in this country at the present time, as the hon. member would lead us to believe. A despatch of December 24, by the Associated Press stated that:

In the city of New York alone there are 300,000 unemployed.

A despatch from the Associated Press also stated that:

In the New England textiles there was misery and unemployment and these factories were closing. In Fall River the production of the textile factories was reduced to 25 per cent.

Now, Sir, I have a few headlines here to show that the industries of this country are not in such bad shape. Referring to the Gazette of April 10, you will notice that the deposits in the banks have risen to eleven millions and a quarter. You will notice that the bank clearings are up nine and ten per cent.

I will read some of these headlines:

Canadian Milling Companies have been very liberal with disbursements to shareholders.
Ogilvie Flour to split stock three for one.

I quote this from the Gazette of April 10:

Fair business in iron and steel.

From the Gazette of April 13:

Fewer failures in first quarter. Best showing in Canada for such period since 1921.

The Paton Manufacturing Company is reported in the Gazette of April 15, as follows:

Lately prices were at a peak which has only been exceeded by the prices which prevailed in the two boom years of 1919-1920.

These people manufacture woollens and clothing.

During the past twelve months changes and additions to the plant at Sherbrooke have increased the capacity by 25 per cent. Even with this additional output the plant is working at capacity.

I quote this from the Gazette of April 10:

Quebec building trades situation is better.

I could go on and on quoting:

[Mr. Archambault.]

Better year for Massey-Harris Company. Better year for the International Harvester. Cotton mills are reported active.

This is an extract from the Gazette of April 18 which is most interesting. It deals with the shoe industry:

Wholesale business has been more or less interrupted by the Easter holidays. Manufacturing in some lines is active. Quite a change has come over certain lines in the manufacture of boots and shoes, especially in ladies' wear, orders have been so good that it has compelled some of our manufacturers to not only work to full capacity during the daytime, but also bring their operators back for night duty.

Mr. HANSON: If the statement contained in that newspaper paragraph is correct, how does the hon. member account for the fact that Ames, Holden & McCready for the first time in their history have passed their bond interest?

Mr. ARCHAMBAULT: Does the hon. member know how much watered stock there is in the Ames, Holden Company?

Mr. HANSON: What about their bonds?

Mr. ARCHAMBAULT: Here is another report in the Gazette of April 17:

Better showing by Fairbanks-Morse Company.

This is also from the Gazette of April 17:

Canadian and United States newsprint production higher for March. Mills of Dominion set up new record when they produced 126,267 tons.

I come to a new industry which is established in my constituency, manufacturing paper machinery. It is a new industry called the Charles Walmsley and Company, of Canada:

The plant is now busier than ever before. Work is proceeding nearly twenty-four hours a day, and sufficient orders are now on hand to keep the plant going at the present rate for the next eight or nine months.

I have in my hand a very interesting report in regard to the woollen industry. Hon. members have heard woollen mill manufacturers complain about the tariff, stating that the preference at the present time is forcing them to close. This is the report of the Regent Knitting Company, of Montreal:

The company was incorporated in 1913. It operates large worsted spinning, dyeing and knitting mills at St Jerome, county Terrebonne—

The county of my friend (Mr. Prevost).

—and a silk knitting mill in Montreal. It employs from 500 to 700 hands the year round. Its goods are selling all over Canada and in Newfoundland, New Zealand and South Africa.

Let us look at the financial statement of that company. In 1913, the sales were $174,000. In 1923, the sales amounted to $1,816,-

000. In 1913, the net earnings were $18,559. In 1923, they amounted to $138,849, and for the first six months in 1924, to $88,960. The reserve in 1913 was $6,700. It is now $379,-103. This is a company which is paying a very reasonable dividend, which is doing a good business, but in which there is no "whisper of death." I know the manager of that company. He has faith in Canadian brain and brawn and he thinks Canadians are able to compete with any foreigner. That is the right spirit.

It is true that our debt is now $2,417,000,000. It is true that our expenditure is now up to $342,000,000, and that our surplus is not very large. But we must remember that in 1921 the interest on our debt was $135,000,000; that it is now $130,000,000, and that the interest on our debt is one of our greatest charges. I intend now to demonstrate, if the House will grant me a few more moments, that a great part of that debt, and therefore the interest that we are paying on it, are due to the blunders and maladministration of

4 p.m. the government from 1911 to 1921. Leaving aside, for the purpose of discussion, the railway muddle into which we have been plunged; leaving aside the enormous amount of money lost through war scandals, such as the famous horse deals the paper boots, the shovel with the hole in it, the bandages dear to an hon. member who is still sitting in this House, the field glasses, the hay, the shell contracts, the McBride submarine—leaving aside also the loans to Greece and Roumania of $31,000,000 not included in the debt, all the proceeds of which were scattered amongst companies in which friends of the government, amongst them members of parliament, had a great interest—

Sir HENRY DRAYTON: Oh, oh.

Mr. ARCHAMBAULT: If my hon. friend who grins wishes, I will repeat. Leaving aside all those things and many others, I venture to state that, through the blunders and maladministration of the late government from 1911 to 1921, our debt has been increased by $493,566,-654. Were it not for these blunders and this maladmistration, we would be paying $25,-912,248 less in interest this year, $2,159,354 less per month, $498,427 less weekly, or $70,965 less daily every day including Sundays. I proceed to prove my contention.

I say, first, that through unnecessary war expenditure the national debt has been increased by the sum of $247,313,394. As my first witness, Mr. Speaker, I rely on a man of great reputation, a man who brought honour to his name and glory to his country during the war, a man who was in the best possible position to speak with authority—Sir Arthur Currie. On September 11 last, speaking before the Citizens' Research Institute of Canada, he made a speech which startled the country, and which was never challenged. I had put on the order paper a resolution asking for an inquiry regarding these statements, but unfortunately my good friends the Progressives so clogged the order paper before they departed last session that it was impossible for my resolution to be reached.

Mr. BEAUBIEN: You mean the Ginger group.

Mr. ARCHAMBAULT: It may have been they; I accept your apology. I have here the speech made by Sir Arthur Currie on that occasion, which will be found on page 133 of the official proceedings of the convention of the Citizens' Research Institute of Canada, 1924 and the part to which I particularly refer is this:

> If there is one thing more than another that has been responsible for the increase in our national debt and in our taxation, it is the expenditure due to the war. I do not know all about the expenditures of the war, but it is my opinion that it cost hundreds of millions of dollars more than it should have cost, or would have cost, if expert advice had always been available, and if such as was available had been listened to. I do not think I am exaggerating when I say that there were at least 100,000 men enlisted for the Canadian Expeditionary Force who never saw service in France, and who made no contribution to Canada's effort in the war. All these men were paid, fed, clothed, equipped, trained, cared for when sick, and transported. Many of them are still being cared for by the government, being in receipt of pensions or hospital treatment. I do not think it is an exaggeration to say that the average cost of these 100,000 men was $1,500 each, that had they not been enlisted $150,-000,000 would have been saved. Furthermore, expert advice before the war and in the early months of the war condemned the Ross rifle. These experts said it was no good, and it was no good, yet strong pressure was exerted on Canadian units to continue its use, and even after it had been discarded by the first division other units were armed with it and forced to use it. Expert advice had condemned the harness supplied to Canadian troops as being unsuitable for use in war theatres, yet succeeding units were given this unsuitable harness as part of their equipment. Expert advice had condemned the Oliver equipment, yet Canadian units were supplied with it. There were other things also with which the Canadian troops were supplied which were scrapped in England before the units proceeded to France. I mention these facts to illustrate the cost of neglecting to have available and to use expert advice.

Now, Sir Arthur Currie was the commander in chief of the Canadian army. If there is one man in the world who was in a position to judge these things, and who is now in a position to tell the country that these expenditures were made through the blunders of the late administration, Sir Arthur Currie is that man.

Mr. MEIGHEN: Will the hon. gentleman permit a question?

Mr. ARCHAMBAULT: Certainly.

Mr. MEIGHEN: Is he aware that Sir Arthur Currie has denied those statements?

Mr. ARCHAMBAULT: I am very glad of my right hon. friend's interruption; I am ready for it. Sir Arthur Currie has never denied what is reported in the proceedings of the convention of the Citizens' Research Institute of Canada as his speech made on that occasion. What I have read is from the stenographic report of those proceedings. What he has denied is that he had tried to give a false impression about the conduct of the men at the front. The first papers to publish reports of that meeting were the Montreal Star and the Montreal Gazette, and the Star stated that Sir Arthur Currie was casting a reflection on the men themselves. That is what Sir Arthur Currie denied. He did not deny anything else, and I defy my right hon. friend to prove that he did.

Mr. MEIGHEN: Will the hon. gentleman permit me? Will he be good enough to move in this House his resolution for an investigation? If he will, I assure him that I will support him.

Mr. ARCHAMBAULT: I will be delighted to do so; but I may say to my right hon. friend that although I have very much respect for him, on a question of this kind I would rather take the word of Sir Arthur Currie.

Mr. MEIGHEN: Even as to an investigation?

Mr. ROSS (Kingston): May I ask the hon. gentleman a question by way of information? In what year was the Ross rifle first manufactured?

Mr. ARCHAMBAULT: That is a very amusing question, and I do not see what bearing it has on Sir Arthur Currie's statement. I pity the reasoning of my hon. friend if, because some other people made a mistake in manufacturing the Ross rifle, he nevertheless would put those rifles into the hands of our brave soldiers in the field.

Mr. MEIGHEN: Is my hon. friend aware that the Ross rifle was abandoned the first hour that any other rifle could be secured?

Mr. ARCHAMBAULT: I am aware of one thing—

Mr. MEIGHEN: Is he aware of that?

Mr. ARCHAMBAULT: I will answer my hon. friend if he will possess his soul in patience for a moment or two. I am aware of this—and I think I have here an answer to my right hon. friend—I am aware of a speech by Sir Wilfrid Laurier regarding the Ross rifle, and for making it at the time he was called disloyal. What he said will be found at page 3487 of Hansard of July 17, 1917.

All these things which we have to take into consideration when we are asked to vote upon the resolution now before us. But, there is still far worse than that. We would count our losses small if they were only losses in money, but there have been losses in blood for which this government cannot escape responsibility—losses in blood which should not have taken place, and for which I charge the government of the day, and I think I shall prove my statement by what has occurred, and what is on the table of the House already. When our troops crossed over they were equipped with the Ross rifle. Everybody knows that from the time the Ross rifle was first manufactured it was subject to very serious attacks. It was a matter for experts. Some experts condemned the rifle, others approved highly of it. Amongst those who approved of it highly was the hon. member for Victoria and Haliburton (Sir Sam Hughes) who was afterwards chosen to be Minister of Militia in the government by my right hon. friend. To his credit it must be said he was always loyal, and spoke with a seriousness which characterized him. He defended his opinion, and stated over and over again that the rifle was serviceable, and one of the best weapons and perhaps the best weapon of the kind. He was a member of the Militia Council which helped it from Mark I to Mark II and from Mark II to Mark III. When war was declared, our soldiers went to the front equipped with the Ross rifle.

It must be said, and everybody knows it, unfortunately, that in most of the engagements in 1915 the Ross rifle did not give satisfaction,—

This speech was made in 1917.

—and that it jammed in the hands of those who held it. The truth was known to the government; in fact, reports were made by experts and others, who said that, at the most critical time of the battle of St. Julien, when the Germans were coming and when they had to be repelled, the rifle jammed and our soldiers were unable to use it. They could not advance because their weapons were useless; they would not retire, but with tears of rage and grief in their eyes they threw down their rifles in the mud and took the Lee-Enfields that their comrades could dispose of.

It seems to me that that is an answer to my right hon. friend.

Mr. MEIGHEN: An answer?

Mr. ARCHAMBAULT: An answer—that in 1917 Sir Wilfrid Laurier accused the government of leaving the Ross rifle in the hands of the troops. He said that the government knew in 1915 that the Ross rifle was not fit for them.

Mr. MEIGHEN: The hon. gentleman has either missed the point or he does not speak his own mind when he says he has an answer. I quite admit that the language was used by Sir Wilfrid Laurier and I would be astonished

if any human being would describe it as disloyal. I quite admit that many others used the same language. But what I asked the hon. member was this: Is he aware that, no matter what the rifle was like, we had to use it until we could get another to replace it, and that immediately we could get another to replace it we did not use it another hour?

Mr. ARCHAMBAULT: Well, I will refer again to what Sir Arthur Currie says—and I think this answer should be satisfactory to my right hon. friend.

Mr. MEIGHEN: I heard that. Give him a chance to establish it. I will be there.

Mr. ARCHAMBAULT: Is my right hon. friend prepared to say that what Sir Arthur Currie has stated is untrue? Let him come out in the open and say it.

Mr. MEIGHEN: So far as it was an attack on the rifle, I do not pretend to be a judge. But if it was a criticism of supplying the men with the rifle when we had no other to supply them with and could not get any other, then it was unfair and unfounded.

Mr. ARCHAMBAULT: That is a very fine splitting of hairs.

Mr. LAPOINTE: Will my hon. friend permit me a question? Does he not remember—we were both members of parliament at the time—that the Minister of Militia and Defence in my right hon. friend's cabinet, sitting with him, was defending the rifle at that very time?

Mr. MEIGHEN: Certainly, and many others defended it. But the government got rid of it as soon as possible.

Mr. LAPOINTE: The minister responsible was in favour of the rifle.

Mr. ARCHAMBAULT: I knew very well that this criticism would get under the skin of my hon. friends, but I am prepared to go along just the same.

Mr. MEIGHEN: Get your committee, and get it quick.

Mr. CLARK: Is my hon. friend aware that the Ross rifle was retained in many of the Canadian units for their expert riflemen—for their scouts and snipers—in preference to the Lee-Enfield, and that that was done to the end of the war?

Mr. LAPOINTE: When there was no danger.

Mr. CLARK: My hon. frend says there was no danger—in No Man's Land, for the scouts and snipers!

Mr. ARCHAMBAULT: How can my hon. friend harmonize his last statement, that the Ross riflle was retained, with the assertion of the leader of the opposition that it was discarded as soon as it could be got rid of?

Mr. MEIGHEN: The statements are absolutely in harmony, and the hon. gentleman knows it. What the hon. member (Mr. Clark) says is that for scouts, snipers, specially trained men, they proved useful, but for the body of troops not specially trained in handling the rifle they were not. The hon. gentleman appears now to know a great deal about it; I wish he had had something to do with it.

Mr. ARCHAMBAULT: Does the hon. member suggest that the rifle was retained for the use of cadets?

An hon. MEMBER: Boy Scouts.

Mr. ARCHAMBAULT: Boy Scouts—well, that will serve my purpose just the same.

Mr. CLARK: My hon. friend—

Some hon. MEMBERS: Order.

Mr. CLARK: The hon. member has asked a question, and I propose, with the permission of the Chair, to answer it.

Mr. ARCHAMBAULT: With my permission, please. And I give it to my hon. friend readily.

Mr. CLARK: I said that the rifle was retained for the scouts. The Minister of Justice (Mr. Lapointe) apparently thought that "scouts" meant Boy Scouts, but I may explain that the scouts and snipers were the men who did the sniping and were in the most exposed spots, and that rifle was retained for them to the end of the war. That rifle was of particular value for expert riflemen.

Mr. ARCHAMBAULT: With all due respect to my hon. friend—I am not an expert in rifles, and I am very glad I am not—I take the word of Sir Arthur Currie in preference to his.

Mr. CLARK: Wherein does my word conflict with that of Sir Arthur Currie?

Mr. ARCHAMBAULT: It is easy to show that. This is what Sir Arthur Currie says:

> Furthermore, expert advice before the war and in the early months of the war condemned the Ross rifle. These experts said it was no good, and it was no good, yet strong pressure was exerted on Canadian units to continue its use, and even after it had been discarded by the first division other units were armed with it, and forced to use it.

Mr. MEIGHEN: Will the hon. gentleman tell us what else we could have used, how we could have got another rifle?

Mr. LAPOINTE: Let Sir Arthur Currie tell us.

Mr. ARCHAMBAULT: Ask Sir Arthur Currie about it.

Mr. MEIGHEN: Have your committee and we will ask him, I will assure you of that. The Minister of Justice is not a bit more anxious for the committee than you are.

Mr. ARCHAMBAULT: If my hon. friend will allow me to proceed, I have been very indulgent—,

Mr. CLARK: Just before my hon. friend proceeds I would like to point out for his information that it was under Sir Arthur Currie and by his express permission, that the Ross rifle was retained for the scouts and snipers in all infantry regiments that wanted to retain it.

Mr. ARCHAMBAULT: Now, does the hon. member deny the statement that Sir Arthur Currie has made in that respect?

Mr. CLARK: Not at all; we are talking about two different things. Sir Arthur Currie is referring to the rifle for its general purpose as a service arm, but not for the purpose of the training of troops, and not for the purpose of an expert rifleman.

Mr. ARCHAMBAULT: I am also referring to what Sir Arthur Currie refers to. All the discussion has been useless if my hon. friend does not refer to the same thing as I do. As I said before, through the blunders of the last administration, the country lost, according to Sir Arthur Currie's statement, the sum of $247,313,394, and I will tell the House how. Sir Arthur Currie clearly states that the sending of unnecessary men cost $150,000,000. I have now the cost of the Oliver equipment, which is mentioned by Sir Arthur Currie. This equipment cost the country $639,000. I have also the cost of the Ross rifle, which cost $9,577,120. I have the cost of the harness, which is $4,000,000, making a total of $164,216,120. Now if you take the interest from 1919 to 1925 at an average of 5.25 per cent, which has been the average interest on our debt, you have to add to this sum $83,097,274, making a total of unnecessary expenditure during the war of $247,313,394. The figures regarding the Ross rifle were given in a return brought down to the House in April, 1917. Up to that time 342,000 Ross rifles had been supplied at a cost of $25 for the earlier lots, and $28 for those produced since December, 1912. The total cost would be between a minimum of $8,551,000 and a maximum of $9,577,000. I have the same basis for calculation with respect to the Oliver equipment, which was given in a return brought down to the House on February 6, 1917. I find that about 97,000 sets of Oliver equipment were purchased in the fall of 1914 at an average price of $7 per set, and if my hon. friend will take the time to figure that out he will find that it amounts to something like $679,000.

Mr. ROSS (Kingston): Before the hon member passes from the Ross rifle I would like to ask a question. When the investigation was held as to the defects of the Ross rifle, who was Minister of Militia, and what government was in power when that rifle was forced upon them?

Mr. ARCHAMBAULT: I do not suppose I need answer that question. The second item which I contend increased the debt, through the blunders and maladministration of the late government, was the expenditure on the merchant marine.

Mr. MEIGHEN: Does the hon. member know or has he any information as to how many months it would take to re-equip a factory to produce another type of rifle?

Mr. ARCHAMBAULT: Does the hon. member know himself?

Mr. MEIGHEN: I do. It would take twelve months, according to the best experts we had. The hon. gentleman, I suppose, argues that our men should have gone without rifles for the twelve months. I suggest he ask the hon. member for Rimouski (Sir Eugene Fiset) something about this.

Mr. ARCHAMBAULT: As I said before, I take the word of the Commander-in-Chief of the Canadian army, who is now Chancellor of McGill University, and if my right hon. friend is ready to make the statement that Sir Arthur Currie did not tell the truth, let him say so, and not run round about it.

Mr. MEIGHEN: Just have us before a committee. Move the resolution, instead of keeping it where it is.

Mr. ARCHAMBAULT: I did not move my resolution for the same reason my right hon. friend did not bring on his resolution on the tariff.

Mr. MEIGHEN: I will promise to bring mine up. Will the hon. member promise to bring his?

Mr. ARCHAMBAULT: Well, we will bring them both together. Before passing to the other item of the merchant marine, I would like to make just one remark regarding this war expenditure.

Mr. MEIGHEN: Is it the fact the hon. member has dropped his resolution from the order paper?

Mr. ARCHAMBAULT: Yes.

Mr. MEIGHEN: Oh, I see. I have not dropped mine.

Mr. ARCHAMBAULT: My hon. friend has been long enough in the House to know that if I had not dropped my resolution, I could not have brought this matter up in the budget debate.

Mr. MEIGHEN: Bringing it up in the budget debate does not get a committee.

Mr. ARCHAMBAULT: It may get a committee.

Mr. MEIGHEN: Go on with it.

Mr. ARCHAMBAULT: It was my desire to bring this matter before the House, and I first sent in my resolution on the 29th of November last, but as I said before, hon. members of the Progressive party had cluttered up the order paper with motions before leaving—to please my hon. friend who interrupted me a few moments ago, I will say it was the members of the Ginger group. Therefore, as I was desirous of bringing this matter before the House I had no other course than to drop my resolution, and to speak on this matter on the budget. Before leaving this matter I may say that similar statements to those of Sir Arthur Currie were made before—regarding the men, regarding the Oliver equipment, and regarding the Ross rifle. The statements were made in this House in 1917 by other gentlemen who are not here in this House, and we were accused of disloyalty for making these statements. I wish to bring to the attention of hon. gentlemen an editorial in the Montreal Gazette on the statement of Sir Arthur Currie, and I say without the slightest fear of contradiction that if in 1917 we had made speeches containing what is contained in the Montreal Gazette editorial of September 12, 1924, we would have been called disloyal by the members of the late administration. Here is the editorial:

> The country is bound to be shocked and aroused by the startling charges of waste of effort and waste of money directed against our war governments by Sir Arthur Currie, our war general, last night.
>
> Sir Arthur charged, first, that, "100,000 men were enlisted and sent to England who were of no use to us in the field."
>
> This, it will be kept in mind, is the considered judgment of the man who commanded our armies in the field, and who thus knew exactly and by direct contact what men were of use and what men were not. His testimony is expert and practical testimony of unequalled weight. Yet he tells us soberly, six years after the war is over, that our authorities sent him 100,000 men who were of no use to the fighting forces in the field.
>
> It is not too much to say that so grave and far-reaching a charge simply stuns. Sir Arthur calculates that each useless man cost the country $1,500. He is in a position to give us exact information on that subject. His estimate ought to be accurate. So we find no comfort in any hope that he may be wrong as we add up the astounding total and discover that this single category of blunders cost this nation $150,000,000.

But listen to this, and this is the part to which I referred a moment ago when I said that if we had uttered the statements mentioned in this article in 1917 we would have been called disloyal by the same group that ran the war.

> Nor is this the whole story.

This is the Gazette speaking.

> The withdrawal of 100,000 men from productive activity in Canada during whatever time they were in uniform, must have been of immense loss to the Dominion. Wartime industry was pressing every possible man into employment. Thousands who were rejected as unfit for the actual fighting, were gladly allowed to "do their bit" in the munition factories. Women were employed.
>
> What a boon it would have been to have had the services at home of these 100,000 men who were fit enough to pass the examination and so must have been better than the unfit who did man the factories? Yet these men were taken away from useful employment, clothed, drilled and fed at the expense of the country, shipped to England at our cost and maintained there unproductively—a charge on the scanty food supplies of wartime Great Britain—and all because, as Sir Arthur says, expert advice was not taken or accepted. It was a terrible price to pay for ignoring the disinterested experts.

Here is the editorial of the Gazette.

Mr. MEIGHEN: May I say to the hon. gentleman that not a man was sent without the authority of expert advice. If any were sent who were not qualified it was because the experts were wrong.

Mr. ARCHAMBAULT: Does the right hon. leader of the opposition deny the truth of the statements coming from Sir Arthur Currie?

Mr. MEIGHEN: I deny that.

Mr. ARCHAMBAULT: I am very glad to get this opinion.

Mr. MEIGHEN: Get us a committee.

Mr. ARCHAMBAULT: Hon. gentlemen opposite will find that the same criticism was made by Sir Wilfrid Laurier in the House of Commons on July 24, 1917, reported at page 3725 of Hansard of that year but I will not

take up the time of the House by reading the remarks of that lamented statesman. The same criticism was made about the Oliver equipment.

Mr. CLARK: Were these men medically examined before they were sent overseas?

Mr. ARCHAMBAULT: Yes, I think they were.

Mr. CLARK: Who examined them?

Mr. ARCHAMBAULT: The doctors paid by the government.

Mr. MEIGHEN: Who were they?

Mr. ARCHAMBAULT: Now, Mr. Speaker, let me—

Mr. MEIGHEN: Will the hon. gentleman say they were not recommended by the hon. member for Rimouski, (Sir Eugene Fiset)?

Mr. ARCHAMBAULT: The hon. member for Rimouski is pretty well able to defend himself.

Mr. MEIGHEN: He recommended the method of appointment.

Mr. ARCHAMBAULT: Now let me quote a statement of Sir Wilfrid Laurier on the Oliver equipment in the House of Commons in 1917, to be found at page 23 of Hansard of that year:

> Sir, everybody within the sound of my voice is aware that persistent rumours have been coming from England, by everyone who has come back from there during the last two years, that the equipment which the Canadian troops took with them to England, and which was purchased in Canada, had to be scrapped as soon as our troops reached England, and cast aside as of no value whatever.

This was the warning given by Sir Wilfrid Laurier in 1917, as he gave warning about the men sent over, and as he gave warning about the Ross rifle. These warnings, in my opinion, constitute a vindication of the memory of that great statesman, and a tribute to his far-seeing judgment and his policy.

Before I was assailed by the riot from the other side I was coming to my conclusion regarding Sir Arthur Currie's statement, and mentioning to the House that through unnecessary war expenditure and not having followed the advice of the expert, the late government increased the debt of the country by $247,313,394.

My next item is the expenditure on the Canadian Government Merchant Marine—and I shall only mention the figures. I will not recall to the House the sad incident when the ship of the ex-Minister of Marine and Fisheries, Mr. Ballantyne, sank in Montreal during the last election. The expenditure on the merchant marine, the useless merchant marine, was $80,000,000. The interest from 1920 to 1925, at an average of 5.25 per cent, was $28,758,858, making a total of $108,758,858.

The third item is the loss of revenue on account of tax-free bonds. Taking the statement for 1925 as a basis and taking into consideration the redemption of such bonds, the loss in revenue in relation to these tax-free bonds for 1920-21 to 1924-25 would be $110,420,452. The interest on losses from year to year at an average of 5¼ per cent would be $13,265,783, making a total of loss to the country by the issuance of these tax-free bonds of $123,686,235.

Mr. STEVENS: Will the hon. gentleman tell us how he arrives at the sum of the total loss of revenue on account of tax-free bonds? Will be elucidate that?

Mr. LAPOINTE: We might have a committee.

Mr. MEIGHEN: He does not want any committee. He wants only to get something on Hansard for campaign literature.

Mr. ARCHAMBAULT: In answer to that question, I say that the total of these figures was prepared by experts of the Finance department.

Mr. MEIGHEN: By whom?

Mr. ARCHAMBAULT: I have the detail of the figures here and I will be very glad to put them on Hansard.

Mr. MEIGHEN: Give them now.

Mr. STEVENS: This is not any captious criticism on my part. There is a very important point, if the hon. gentleman will permit me to ask the question. I cannot see how the hon. member can arrive at his figures at all. There are thousands of persons holding tax-free bonds. If a tax-free bond were changed into a taxable bond, it does not follow that that bond would pay income tax. We would have to find out by whom these bonds were held, before we could arrive at any figures.

Mr. ARCHAMBAULT: I am not prepared to enter into a discussion as to how the department arrives at these figures. Let me answer my hon. friend's question now.

Mr. MEIGHEN: Will the hon. member give me the name of any human being—

Mr. ARCHAMBAULT: I do not have to take orders from the right hon. leader of the opposition.

Mr. MEIGHEN: I am not giving orders. I am asking questions.

Mr. ARCHAMBAULT: These are the figures prepared by the official of the Finance department.

Mr. MEIGHEN: By whom?

Mr. ARCHAMBAULT: I do not need to name anybody. Will my hon. friend deny that this is an approximate statement of the loss?

Mr. MEIGHEN: I say it is obvious nonsense.

Mr. ARCHAMBAULT: Well, it will be for my hon. friend, who is going to speak tomorrow, I understand, to give us his views on this question.

Mr. GRAHAM: We can understand why my hon. friend does not like the opinions of the experts.

Mr. MEIGHEN: I would like their names, before I would admit that they are experts.

Mr. ARCHAMBAULT: I come now to another matter which probably will not be so controversial. Another loss which the country has sustained on account of the blunders of the late administration was the $10,000,000 paid to the Canadian Northern Railway shareholders for worthless stock, according to reports of my hon. friend the ex-Minister of Finance (Sir Henry Drayton). Is it not a fact that the hon. gentleman in making his report stated that the common stock of this company was actually worthless? And still the late administration paid ten million dollars for this worthless stock. The interest on that sum from 1919, capitalized every year at the average rate of interest of five and a quarter per cent, amounts to $3,808,167, making a total of $13,808,167. Now, Sir, if we add those sums, $247,313,394, $108,758,858, $123,686,235 and $13,808,167, we arrive at a total increase in the debt of the country through the blunders and maladministration of the late government, of $493,566,654, and I say that the total debt of Canada before the war was $335,000,000. The annual interest charged which we are paying this year on that sum, calculated at an average of five and a quarter per cent, amounts to $25,912,248, practically double the interest we were paying in 1914.

Mr. MEIGHEN: Has the hon. member calculated the cost of the Transcontinental and the Grand Trunk Pacific with interest since construction?

Mr. ARCHAMBAULT: No, if my hon. friend had been listening to me—

Mr. MEIGHEN: It would be twice or three times that.

Mr. ARCHAMBAULT: —he would have noticed that before speaking of these expenditures I prefaced my remarks by saying, "Leaving aside the railway muddles into which the late administration has plunged us, I will now give the figures". It ill behooves a party responsible for these errors to talk about economy. You may say those are things of the past. That may be true. The deeds of the past are the soundest criterion for the elector when an election comes. He has to look upon the record of the past administration when in office. We have the same men and the same spirit, and if the electors of this country are willing to bring them back to power it would mean the same disaster.

Before concluding, may I point out something even more valuable than sound administration, something that this government has attained, the great task which was accomplished, I am pleased to say, with the help and co-operation of the Progressive party. During the tenure of office of the late administration some of the provinces were not represented in the government, and hon. members have read in the Tory press the bitter attacks which have been made in a religious, racial and sectional spirit.

Mr. MEIGHEN: Never in the world.

Mr. ARCHAMBAULT: I remember them myself, and the hon. member I am sure will not ask me to quote some of these attacks. I did so a few years ago, when my hon. friend for West Toronto (Mr. Hocken) questioned me one day, and it is such an obvious fact that it does not require any answer. During the time of the late administration, from 1911 to 1921, especially in 1917, as everyone knows, bitter attacks were made by Tory members of parliament and by the Tory press in regard to sectional, racial and religious questions. Sir, when the Liberals came into power the country, from the Atlantic to the Pacific, was ripped and torn by those attacks. The first goal toward which the Prime Minister concentrated his efforts—and I say this in commendation of his action—was the restoration of harmony and unity that was necessary to the welfare of the country. It was no easy task, Mr. Speaker. Resentment and hatred were rampant in the country. Sores purposely inflicted by the late administration were still open and bleeding. Nobody can deny that. A deep chasm between the different races, religions and sections of this country could not be easily bridged. But the Prime Minister (Mr. Mackenzie King)

following in the footsteps of one who had devoted his whole life to bringing about unity and harmony in this country, set himself to this task, and I may say that he has succeeded. I appeal to you, Mr. Speaker; I appeal to the members of this House: Is it not a fact that since this government has been in power, you have not heard attacks of this nature in this House? I said a moment ago that this was due not only to the Prime Minister, but to the help of the Progressive party; and the reason why the Tories are not making that kind of attack any more is that they know very well that the Progressives on that side would not stand for it. How different is this parliament from the old parliament! How different is the press of the country—

Mr. MEIGHEN: Can the hon. gentleman not favour us with just one instance? It would not take him long to quote just one. Perhaps he would also find its counterpart from someone over there.

Mr. ARCHAMBAULT: I know my right hon. friend is using his own devices in trying to stop me in the middle of a sentence. I accept that with many others. I was saying that this parliament was different from the old parliament before 1921. I was stating also that the press of the country was different, and that we did not hear any more of these attacks except perhaps a revival of them by some of the Conservatives of Montreal, which attacks can be found in the speeches to which I referred a moment ago. But I am convinced that the Canadian people, who have suffered so much on account of these controversies of the past, which have hampered and retarded the progress of this country, will not very readily entrust their future in the hands of the sowers of disruption and strife, but will allow one who has given the best of his energy, the best of his patriotism, to heal what seems to be incurable, to cement what seems to be uncementable, to finish his work and to bury forever the last remnants of disunion and discord.

Mr. R. B. HANSON (York-Sunbury): Mr. Speaker, in rising to make a few remarks on the budget, I may, perhaps, be pardoned if I do not follow the hon. member for Chambly and Verchères (Mr. Archambault) into all the highways and byways of political discussion through which he has led the House this afternoon. While I listened to the hon. gentleman's discourse, and especially the latter part of it, I could not help thinking there must be some truth in the newspaper rumour to which currency has been given in the past few days, that the hon. member for Chambly and Verchères is a candidate for cabinet honours and that he is to-day endeavouring to win the place to which he aspires. I do not think it is very profitable to hon. gentlemen in this House or to the country at large that, at this late date, so many years after the close of the bloody conflict, we should be rehashing old stories such as that about the Ross rifle and kindred subjects which made up the substance of my hon. friend's effort this afternoon. The speech made by the hon. gentleman was made with a very deep design; he was engaged in making campaign thunder in his province, and he made it for that purpose alone. I would like to ask the hon. gentleman and other hon. gentlemen opposite: Who was it that loaded the Ross rifle on the people of this country? Who was it that armed the Canadian militia with the Ross rifle, and who was it that made it impossible that any other rifle should be in the hands of Canadian soldiers when they went to battle?

5 p.m.

Some hon. MEMBERS: The Tories.

Mr. HANSON: The best answer can come from the hon. member for Rimouski (Sir Eugène Fiset) who, at that time and for long years afterwards, continued to be the departmental head of the Militia department. He and everybody else in Canada know that the Ross rifle, whether for good or for ill, was loaded on to this country by the late Sir Frederick Borden and the Liberal government. It is not on record that the hon. member for Rimouski, some time Minister of Militia and Defence in this country, ever raised his voice in protest against the Ross rifle.

Sir EUGENE FISET: Never minister.

Mr. HANSON: Deputy minister—I beg the hon. gentleman's pardon—perhaps soon to be minister, if I may put it in that way.

There are in the speech of the hon. member for Chambly and Verchères one or two matters on which comment might be made with some profit. First, I desire to refer for a moment to his references to the hon. member for Fort William and Rainy River (Mr. Manion). One would suppose, to hear the hon. gentleman's criticism of that hon. member, that it was a crime for anyone to change his political allegiance or opinion. Many a first-class citizen who, prior to 1917, was of the Liberal persuasion, in that year and in succeeding years changed his political allegiance from the Liberal party to the Conservative party, for good reasons, never to return to the Liberal party again. Many a

man in a high walk of life in this country, for good cause shown, changed his political allegiance at that time, just as the hon. member for Fort William and Rainy River did, and not like other gentlemen, some of whom are members of this House to-day, who changed their political allegiance for the time being just because it suited their purpose to do so, and who, when the time came, skulked back into the ranks of the Liberal party.

Before launching into his eulogy of the government and his attack on the late administration, the hon. member announced to the House and the country his position with reference to the placing of a prior lien ahead of other secured liens under the Special War Revenue Act. I agree entirely as to the injustice of that legislation, and I support what the hon. member has to say about it, but I want to tell the House and the country that the hon. gentleman himself voted for that legislation, and it ill becomes him now at this late date to take this position. If he is right to-day, he was wrong when he voted for that legislation and recreant to his duty.

Mr. ARCHAMBAULT: I do not wish to interrupt my hon. friend, but I am sure he does not want to mislead the House. He is wrong in saying that I voted for that special resolution.

Mr. HANSON: Was not that resolution crystallized into law as a result of the passing of the budget last session? It came into force on April 1 this year. Did not the hon. gentleman vote for that budget? I have no recollection of this special resolution, but I know he supported the government which put that special provision on the statute book, and he still continues to support it.

Mr. ARCHAMBAULT: Yes, and I am criticizing the government for it. Can I be more frank than that?

Mr. HANSON: It is a little bit late, I suggest, on the part of the hon. member. He supported the government that put this special resolution on the statute book, and if rumour be true he is a candidate for a position in that government at the present time.

Mr. ARCHAMBAULT: No, no, the rumour is not true.

Mr. HANSON: I am not worrying very much.

Mr. MEIGHEN: The bench would be safer.

Mr. MANION: Yes, far safer.

Mr. ARCHAMBAULT: It is just hearsay.

Mr. HANSON: Before criticizing the budget, Mr. Speaker, I should like to refer for a moment or two to some remarks made last week in the course of this debate by the hon. member for Cape Breton South and Richmond (Mr. Kyte). That, too, was an election campaign speech. Stung by the just criticism of the hon. member for Fort William and Rainy River, he went back into history thirty years to bring before this House what is commonly called the tu quoque argument. He did so quite effectively from his own point of view. But let me point out to the House and to the country that the trip to Wembley was a joy-ride pure and simple, indulged in by the chief whip of the Liberal party and his coadjutor and the chief whip of the Progressive group; while the trips to England referred to by the hon. member for Cape Breton South and Richmond of the ex-Minister of Militia and Defence (Mr. Guthrie) and the ex-Postmaster General (Mr. Blondin) were made on official business, and on official business only. What would the country think if members on this side of the House were to go to the last report of the Auditor General and dig up the expenses of the Prime Minister to the last Imperial conference?

Mr. MACKENZIE KING: I wish the hon. member would do that.

Mr. HANSON: I have no desire to do it. We do not wish the Prime Minister of this country to go to the Imperial conference unless he goes "right" in the parlance of the street.

Mr. MACKENZIE KING: I would ask my hon. friend to do that.

Mr. HANSON: I am not suggesting that we do that sort of thing. But to do so would be quite on a par with what his own chief whip did with respect to the hon. member for South Wellington, who as Minister of Militia went to the Old Country in 1921—and who by the way is not here to defend himself and explain his trip. But what the country is interested in, and what it remembers at this particular time, is that $4,200 of the people's money was spent by this government to give a joy-ride to three members of this House, and the country resents such expenditure. No newspaper either supporting the government or opposed to it has, so far as I am aware, defended that expenditure. It is simply not defensible. Those members went over to the Wembley exhibition on a joy-ride pure and simple, not on any official business.

I should like to extend to the Acting Minister of Finance (Mr. Robb) my congratulations on the manner of the presentation of his budget. Since coming into this House as a new member in the session of 1922 I have received at his hands nothing but the most courteous treatment, and I think it is only fair that I should so state on this occasion. As a member from the Maritime provinces, I should also like to join in the kindly references which have been made to the right hon. Minister of Finance (Mr. Fielding). Those of us who come from the Maritimes, where we are few in number, have a feeling of distinct pride in the fact that the Maritime provinces have since confederation given to this country no less than three prime ministers and no less than three finance ministers, all men of exceptional merit and standing. That is an achievement of which in the short history of this young nation I think any small community may well be proud. Not the least among these distinguished men is the right hon. Minister of Finance whom I have the privilege and pleasure of referring to now. While we do not agree with him politically, while we think that many of the policies which he has enunciated and carried out in the past have been defective, yet we all recognize the fact that he has been a great public servant, and now when he is perhaps in the shadow of his lifetime I desire, as a Maritime province member, to accord him this mead of praise and appreciation.

While I can congratulate the Acting Minister of Finance on the manner of his budget speech, I regret that from the standpoint of the country it is not possible for me to offer him my congratulations on the matter of it. His budget has been criticized in various places and in various ways. Our friends on my immediate left are wont to call it a stand pat budget. It does not please them. I have searched in my mind for an apt term to apply to this budget, and I am of opinion that I can characterize it in no more fitting way than as a juggler's budget. When I was still a youth and before I took any great interest in public affairs, I well recollect how astounded I was at reading the reports of the budget speeches delivered in this House from 1896 to 1911 by the right hon. Minister of Finance. Knowing as I did that the Liberal party was pledged against the principle of high protection and to the policy of low tariff or free trade, I was puzzled to understand how it was possible that through all those years that party could with any show of consistency, with any show of political decency and honour, pursue the course which they did through fifteen long years. Having come into this House, however, and having watched the government and its supporters, I can understand the riddle. This party from first to last on the tariff question has adopted the tactics of the juggler; on the one hand, it has sought to appease one element of public opinion by preaching free trade or low tariff wherever it thought it would be to their advantage to do so, and on the other, cheek by jowl, to extend to the manufacturers secret information that they had no cause to fear the Liberal party, with respect to high protection. Having listened to last year's budget and to this year's budget, last year's having been a gesture towards free trade, and this year's a gesture towards a stand pat policy, I now understand that it is the policy of this government, led by the Prime Minister, to adopt the same attitude that characterized the Liberal party during the many years when they were in office previous to 1911. You can fool some of the people some of the time; you can fool all the people part of the time, but you cannot fool all the people all the time, and the people of this country who believe in a tariff policy are beginning to find out just what the Liberal party stand for.

I think I can see the fine Italian hand of the Prime Minister in this budget. Last year we had a budget which in its material effects was a forward step in the direction of low tariff or free trade; so much so was it that it pleased a large majority of gentlemen immediately to my left and caused a considerable number of high protectionists in the Liberal party across the way to vote against it. It was of such a character that it caused the Minister of the Interior (Mr. Stewart) who sits for the county of Argenteuil in the protectionist province of Quebec, to characterize it as the "death knell of protection" and to call down upon his humble head the execrations of many of his most ardent supporters in that county—in fact, to bring forth a demand for his resignation. The Minister of the Interior is still proclaiming that this government is a free trade or low tariff government. But he is doing it now at very low breath after having listened to this budget speech, and without any very great degree of sincerity or of conviction that as a result of this budget and what it foreshadows there will be any very material change in the tariff of this country.

Hon. gentlemen who sit to my left have by moving an amendment expressed disapproval of this budget, and if they represent public opinion in the communities from which they come they will stand by the wouldbe resolu-

tion of the hon. member for Brandon (Mr. Forke) and will vote against the budget to a man. But I venture to say, having observed some of these hon. gentlemen now for nearly four sessions; having observed the gestures that have been made to them from time to time from across this chamber; having observed the alacrity with which some of them come to the rescue of the government whenever there is any probability of its being defeated, or the alacrity with which some of them side-step any vote when there is a chance that they might put the government in danger—I venture to say that when the vote on the budget is called there will be an element ready to save once more the skin of the government. I do not understand why some hon. gentlemen camouflage themselves any longer—we all know who they are in this chamber. I do not know why they cannot be as honest as the member from Muskoka (Mr. Hammel) and the member for Prescott (Mr. Binette and cross the floor of the House where they belong. That at all events would be political decency.

Mr. ELLIOTT (Dundas): Must we ask the hon. gentleman what we should do?

Mr. HANSON: The hon. gentleman will not have much to say about it, so far as I can see, after the next election down in the county of Dundas.

Mr. ELLIOTT (Dundas): We have heard prophecies from the hon. member before.

Mr. HANSON: Well, I never posed as much of a prophet, but everybody knows where hon. gentlemen in this part of the chamber stand on questions of principle. We do not preach one thing and practise another.

I have been curious to understand, Mr. Speaker, just what were the underlying reasons that induced the Acting Minister of Finance to drop his proposal with respect to the dumping clause. Was it because of the fierce opposition to that proposal which arose in the Canadian west, as offered by their representatives here, or was it because it was one of those ill-conceived and ill-digested proposals that the government has brought down on more than one occasion? Perhaps we will know a little later just what the reason was that that child was stifled before it was actually born. There is one thing it will do, however: It will give some hon. gentlemen to my left an excuse, or an opportunity, we will say, to support the budget. I venture to say that at least a dozen of them will support it; probably more than that, and this will serve as an excuse for doing so.

The most disconcerting phase of this budget, to my mind, is that in none of the proposals is there any relief for the tax-ridden people of this country. If there is one thing that is agitating the public mind at the present time more than another it is the burden of federal taxation—yes, and of provincial and municipal taxtion—which the people are labouring under. Unless there be some relief in this direction, especially with reference to the income tax, there will be an emigration of capital from Canada. This country lies for 3,000 miles along the border of the United States and anybody who has studied the fundamentals of taxation or of political economy knows that a country situated such as ours is should not have appreciably higher taxation than its neighbours to the south. Just so long as there is a marked disparity between the income tax in Canada and the income tax in the United States, just so long will there be an efflux from Canada to the south, where the taxation is lower. If hon. gentlemen have any doubt about it, let them obtain from any trust company the calculations as to the difference between the income taxation in Canada and that in the United States. Let me give a concrete illustration. I have in mind a gentleman living in New Brunswick who for years spent his winters in Florida. Recently he came to the conclusion that because of the decrease, or the promise of decrease, in taxation in the United States it would be much better for him to become a permanent resident of the state of Florida than to remain in New Brunswick, and he proposes taking up his domicile in that state. First of all, he would pay less income tax; secondly, there is no inheritance tax in the state of Florida; the President of the United States has in his public utterances stated that the federal authority should discontinue the collection of inheritance taxes and should leave that matter to the states alone. Does anybody in Canada believe that that will not have a marked effect upon the efflux of capital from Canada to the United States?

Just let me pause to consider what the effect will be. If the disparity is great enough the result is almost sure to be to the disadvantage of this country. Therefore I say the government should begin, and begin at once, to give some consideration to this question of income tax disparity, and to put our taxation on a level, or nearly so, with that of the neighbouring republic.

Furthermore, there has been no reduction in this country in other vexatious imposts placed upon the backs of the taxpayers by the present government. It is true that after

the sales tax was raised to 6 per cent, the government discovered that a great mistake had been made because of the pyramiding of that taxation and the increased cost of living, and the sales tax was reduced in a certain degree last session, but it is still not back to the level where people expect it to be placed. Neither has there been any reduction in the other direct taxation imposts made by this government since it came into power.

Mr. ROBB: Will my hon. friend allow me to just remind him that last year we removed the sales tax altogether from the implements of production, that we reduced it 2½ per cent on boots and shoes, and we added a long list of articles that are free of sales tax altogether.

Mr. HANSON: I am quite aware of that. I have already made reference to the fact that the government, having regard to its hasty and ill-digested resolutions of 1923, at the first opportunity took a step to redress the grievance that had been thus created, and no one knows that this grievance was created by the budget of 1923 better than the Acting Minister of Finance. But I want to tell the hon. gentleman that he has not gone far enough yet, that the people of this country are demanding further decreases in taxation.

Mr. ROBB: We will give it to them in time.

Mr. HANSON: I am not so sure that the hon. gentleman will; I do not think he will be in power to give it to them after another election. There is no question that a thing that is agitating the business men of this country to-day is the absolutely heavy cost of doing business, and the sales tax is one of the greatest items in that cost. Now I do not object to a reasonable sales tax, but a sales tax that can be pyramided as this tax has been pyramided in the past has become a burden to the people, and whether they have reason to do so or not, they are crying out against it. That is the topic of conversation one hears all over. If one goes to a directors' meeting or a meeting of shareholders; if one discusses business matters before a board of trade in this country, he will be met by the query: When is the government of this country going to start to reduce taxation?

Mr. EULER: May I ask a question, purely for information? It is possible the reply may come in due course. If the taxation is reduced as my hon. friend suggests, and I for one would like to see it also, what other means of raising the revenue would he adopt?

Mr. HANSON: I had it in mind to answer the very question which the hon. gentleman (Mr. Euler) has asked. It is true that in order to balance the budget of this country you must have revenue. It is also true, indeed, axiomatic, that there are two ways of balancing a budget; one is by way of taxation to meet the expenditure, and the other is by cutting down the expenditure. Now we have not had much evidence on the part of this government of any attempt to cut down the expenditure.

Mr. ROBB: Oh yes, we have.

Mr. HANSON: Very little. It is true that business conditions in this country have been so bad during the past twelve months that there was a loss in revenue of $52,000,000, but that was not altogether on account of the reduction in the sales tax. That was due to the loss in business turnover in this country, and if the hon. gentleman does not believe it, let him go to any clearing house, to any of the banks or the wholesale firms, and they will every one of them report to him, at least in my part of the country, that there has been a diminution in the volume of business done during the past twelve months, and that is the reason why the revenue has dropped, especially that part of it affected by the sales tax.

The hon. member for North Waterloo (Mr. Euler) asked a very fair question, and I was proceeding to answer him. There is only one proper remedy for the balancing of a budget in this country at this stage of its existence, and that is to pare expenditure, and pare it to the bone—not to increase taxes. The people of Canada are taxed now to the limit, beyond the limit, beyond anything they ever dreamed they would have to pay; and the proper remedy in my judgment, and one which I think will appeal to the ordinary taxpayer, is that there shall be a paring of governmental expenditure not only in the federal arena, but in the provincial and municipal areas as well, and a paring to the bone. Such things as a Scribe hotel purchase should never be tolerated for one moment. The money for that purpose was found by the taxpayers, either by way of cash advanced to the Canadian National Railways or by way of bond guarantee by the people of this country. The building of a quarter of a million dollar golf course by the Canadian National Railways is a piece of extravagance

that the people are not going to put up with. The spending of another quarter of a million dollars by Sir Henry Thornton and his co-adjutors on the installation of radio along the lines of the National Railways is another piece of extravagance.

Mr. GRAHAM: I am afraid my hon. friend is a little high in the figures he is quoting.

Mr. HANSON: I venture the assertion that when we get the full facts out, and when the stations that are now in course of construction are completed, the capital expenditure on radio by the National Railways will exceed $250,000.

Mr. GRAHAM: That is prophetic.

Mr. HANSON: I want to ask the Minister of Railways (Mr. Graham) what justification there is for spending $80,000 for a radio station in the city of Moncton, when the people living along a branch line in my constituency cannot get a shelter built to house them from the wintry blasts of January, and that would cost about $150. In some instances they cannot get fuel along the line of the National Railways to heat the shelters already built. Many a time I had complaints about that particular matter, that in certain shelters put up to house the people while they are waiting for their trains, there has not been fuel to heat and warm them from the chills of winter. And yet Sir Henry Thornton, if I am credibly informed, spent $80,000 for a radio station at Moncton alone, and the capital expenditure on radio throughout the system will be at least a quarter of a million dollars. I want to say frankly that in my humble opinion the people resent that kind of expenditure when they do not get adequate service on many of the branch lines, and when they have to put up with a tri-weekly service in many places where always before this government came into power they had at least a daily service, and when some communities have to put up with a jitney service which before had a steam railway service. I want to say further, that if we could get the information which I have asked for in more respects than one with regard to the Canadian National Railway, you would see that while employees in the humbler walks of life on that railway have been reduced from passenger conductors to freight conductors, from freight conductors to brakemen, and from brakemen to newsboys, and so on down the line, the permanent officials, heads of departments and managers of regions have been paid the highest wages in the history of the country. I happen to know, although I cannot get the information in parliament, that the general manager at Moncton to-day receives more money than ever was paid under the old Intercolonial management. I want to say very frankly and fully to the House, and I should like this criticism to go to the country, that while we were willing, and while the country was willing, to give Sir Henry Thornton a fair trial in the operation of the National railways, the country is getting about fed up with the way in which the system is being operated. Local freight rates on the Intercolonial are so high that you cannot begin to move commodities from one station to the other. Ask the hon. Minister of National Defence (Mr. Macdonald) what the local freight rates are on coal in his county? Why, the freight rate on the movement of coal from one community to the other in certain parts of the Maritime provinces comes to more than the value of the coal, and the people of those provinces are just about fed up with the management of the National railways.

Now, I want to say this; I do not think it is possible, notwithstanding what the hon. Secretary of State (Mr. Copp) said prior to the last Dominion election, to put the old Canadian government railways back into their former status; indeed I do not think it is desirable. I am glad the Minister of Railways is in his place and hears what I have to say on the subject: Having regard to our geographical position, having regard to the fact that in the eastern part of Canada the population is sparse and production is not, perhaps, as high as it might be, having regard to the fact that because of adverse tariffs and the loss of other markets, having regard to the fact that we are prevented, under present conditions, from doing business with other parts of the country, the Maritime provinces have got to have preferential treatment in reference to freight rates. It will not do to say that there shall be equality of freight rates. You cannot work that out successfully in this country. Geography is against us, water competition is against us; and the only solution of the difficulties of the Maritime provinces in connection with Interprovincial trade is to give those provinces preferential treatment. You can talk about the problem from now until doomsday and this will be the only solution of it. Years ago we had preferentials; years ago the manufacturing establishments in my city were able to compete with competitors in the province of Quebec, and otherwise, and shipped their products from coast to coast. To-day those establishments are handicapped because

those preferentials have been abolished, and in catering to the Canadian trade they are not able to meet the competition that now exists.

Mr. EULER: Would the hon. member suggest that freight rates should be controlled or fixed by the government rather than by the railway commission?

Mr. HANSON: No I would not, but if you will go down to the railway commission—

Mr. MEIGHEN: What about the Crowsnest pass arrangement?

Mr. HANSON: Yes, before I answer the hon. gentleman directly I will say this: We had an exhibition in 1922 in this House over the government's control of freight rates. This government by its right-about-face—if I may so characterize it—when it made certain gentlemen who are now amongst its members swallow themselves in a special committee and when it re-imposed upon the country the Crowsnest pass rates on wheat and wheat products, struck a blow at the best interests of the Maritime provinces, because the producers there were deprived of a 25 per cent decrease in the freight rate on coal, a most important commodity produced in that community. For nearly four years now the Maritime province people have been labouring under the handicap which was imposed by the special class-legislation introduced and put through by the government of the day on that occasion. No, I do not think that the government should fix freight rates but I do say this: No matter how good theoretically the policy of equalization of freight rates may be it is not physically possible to apply it to the extreme east or extreme west; it certainly is not possible to have equality of freight rates for the Maritime provinces. I therefore venture the assertion that there will be no satisfaction in the Maritime provinces, there will be no contentment, there will be no revival of business or of interprovincial trade between the Maritime provinces and the rest of Canada, until the freight rate structure is so adjusted that there shall be preferential treatment for that part of the country.

Mr. PUTNAM: When was there any interprovincial trade there?

Mr. HANSON: The hon. gentleman may have been asleep like Rip Van Winkle, but I should like to invite him over to my city and I will show him a factory in which the best boots and shoes in Canada are made, a factory which has been in operation since 1894, and has been a credit to the city of Fredericton. Let me tell the hon. gentleman in some years 75 per cent of the output of that factory has been shipped to western Canada and the Pacific coast. Let him stay a day longer and I will show him another factory in which the first canvas-covered cedar canoe was built in Canada. This has developed into an industry that at its height employs one hundred of the best skilled mechanics in the province of New Brunswick, and whose entire output is sold west of Montreal with the exception of a few odd orders in our own community.

Mr. GRAHAM: Neither of these factories is shut up is it?

Mr. HANSON: No, I will tell the hon. gentleman about that, I am glad he reminded me. I will just say to him that the Hartt Boot and Shoe factory of which we are very proud has been in operation not more than three-fourths of the time, and mostly one-half of the time since this government came into office; and that only by the very best of personal management, only by scouring this country from one end of it to the other for orders, are they able to keep going that much. I want to tell the hon. gentleman further that the cotton mill located within three miles of our city, employing about 800 hands, has not been running full time in any single year or any single month since this government came into power; that to-day it is running two-thirds of the time, or possibly three-fourths, and it has not been in operation full time for any single year since 1921. I want to tell him further that that cotton mill was built up under the National Policy by one of the old pioneers of this country, a gentleman who had vision enough to see that the country would not always be the dwelling place for hewers of wood and drawers of water, and while he might have put his money into Canadian Pacific stock or invested it in government bonds, he preferred to build up an industry in his own community which would employ Canadian labour, which would in turn buy the products of Canadian farmers; and the community in which I live—if you will pardon my referring to a matter which is in its nature personal—is a direct exemplification of the benefits of a moderate protective policy. It is about half industrial and about half agricultural. The industrials of my community consume everything that the farmers of the community raise save and except an excess in the case of potatoes and a few other commodities. For instance, take the little town of Marysville which I have in my mind's eye at the present time. No doubt the minister

knows it. The Secretary of State is very familiar with it. It is a town of slightly less than three thousand people. Its sole industry is one of the mills of the Canadian Coloured Cottons Limited, which took over the mill from the Gibson Company some years ago. That industry employs about eight hundred skilled mechanics and supports the entire community. The community consume all the agricultural products of the beautiful Nashwaak valley and the surrounding country. The industry pays large sums of money in wages in that community, and if the industry is shut down for one day a week the effect on the well-being of the entire community is felt.

Mr. PUTNAM: Does the hon. member contend that the shipment of Maritime freight up to central Canada is substantially less today than it was when his friends went out of power?

Mr. HANSON: No, but I say that cost of shipment would have been twenty or twenty-five per cent less if it had not been for the action of this government in 1922 in regard to the rates on basic commodities such as coal, iron and so on, when Mr. Beatty, of the Canadian Pacific, before the special committee, made certain proposals in regard to reductions which we hoped to get for the Maritime provinces, but which we did not get because the government sold out to the Progressives in order to obtain their support during that session—

Some hon. MEMBERS: Order, order.

Mr. HANSON: I think that is parliamentary. If it is not I will take it back.

Mr. MEIGHEN: My hon. friend can make it stronger.

Mr. HANSON: I do not intend to be unparliamentary.

Mr. STEWART (Argenteuil): I want my hon. friend to be fair in his reference to the matter of coal. He is aware that the rates from Nova Scotia, or from the Maritimes westward on coal, are cheaper than the rates in the United States, or cheaper than the rates in western Canada. I am speaking of through rates. The hon. member said that a much higher rate on coal was charged, but as a matter of fact the rate is cheaper from the Maritimes westward into Quebec and to other western points than it is in western Canada for the eastern movement or the United States movement.

Mr. HANSON: My hon. friend is aware that for certain portions of the movement of coal from the Maritime provinces there is water competition, I see the minister shakes his head. Let him go down to the railway commission and consult a little fellow, five foot tall, who weighs about a hundred pounds, and he will tell him more about railway rates and differentials than the whole group of members of the government will ever know.

Mr. STEWART (Argenteuil): Members of the government may be very dense, but that is not the point. The hon. member made the statement that rates were higher. I am calling his attention to the fact that they are lower than American rates, and they are lower than western rates on western movement eastward.

Mr. HANSON: That may be all true. I do not know whether it is true. I am willing to take the minister's word for it, but the point I am making is that if it had not been for the action of this government in 1922, when under the lash of the party whip, certain supporters of the government sitting opposite voted against the proposals made by the railway companies themselves, there would have been substantial reduction in all freight rates, and special reductions on basic commodities, and the Maritime provinces would have reaped the benefit of that during all these years, but we did not get any reduction.

Mr. STEWART (Argenteuil): That is the statement of my hon. friend.

Mr. HANSON: I can demonstrate it, and I do not think it is very much controverted. I have not the data before me at the present time, but I think I have it on my file.

Mr. STEWART (Argenteuil): I am content with my hon. friend's statement.

Mr. HANSON: We had the statement of the president of the Canadian Pacific Railway —and I know that Mr. Lanigan in his evidence before that committee amplified it very fully and the same statement was made by Mr. Hanna, then president of the Canadian National, that if the government would leave the hands of the railway commission free, if they would further suspend the Crowsnest pass agreement, and especially in relation to wheat and wheat products, all over Canada we would get a general reduction in freight rates and a special reduction in basic commodities. But the government of the day, I say for political reasons, sold out the eastern provinces, sold out British Columbia, Ontario and Quebec and the Maritimes, and restored the Crowsnest pass rates with respect to wheat and wheat products. The result was that the Maritime provinces especially were

handed a stone, and they do not forget that in the Maritime provinces. Believe me that when you touch the pocket of the shipper, and he becomes satisfied that preferential treatment has been given to other communities at his expense, he will remember it when the ballots are cast on election day. That is just one reason why neither my hon. friend the Minister of National Defence, nor my hon. friend the Secretary of State, is very anxious that the bell for election day shall be tolled. I wonder how my genial friend the Minister of National Defence will go back to Pictou county for re-election, and point to the increased duty on slack coal and say to them, "This is what I got you in place of what I promised you previous to the last election". The steel works at New Glasgow are still closed, Mr. Speaker. The best of the machinery has been moved to Sydney. The Nova Scotia Steel plant as a steel producing proposition in the country of Pictou is non est.

Mr. MACDONALD (Pictou): My hon. friend's information in regard to the steel industry in Pictou being non est is very inaccurate. The steel works at Trenton are working every day.

Mr. HANSON: I refer my hon. friend to a public letter issued by Mr. Thomas Cantley, late general manager of the Nova Scotia Steel Company, published in a Halifax paper just a few weeks ago in reference to the state of the steel industry in the county of Pictou The Secretary of State will not go back to Moncton and repeat the speech he made there in 1921, the day before my right hon. friend the leader of the opposition arrived in that city. I refer to the speech where he spoke of what he would do with respect to the Intercolonial railway.

Mr. MEIGHEN: Hear, hear.

Mr. COPP: I will be there.

Mr. HANSON: The minister says he will be there; I doubt very much if he will be there.

An hon. MEMBER: How about my hon. friend from York-Sunbury?

Mr. HANSON: Do not worry about me. I will look after my own business.

The hon. member for Waterloo (Mr. Euler) asked a very fair question. You cannot balance the budget in this country except by two methods; one is by increased taxation, the other by curtailing expenditure. This government has tried increased taxation with disastrous effect.

I should like to see—and I say this in no partisan spirit—what would be the effect if we could establish here a Geddes commission. I desire to say this in fairness to hon. gentlemen in front of me, especially to ministers of spending departments. Perhaps it is very difficult to keep expenditure down. But it ought not to be difficult in this year of 1925 to cut out the pork barrel in this country. We have not had it for the last session or two, but we did have it in all its glory in 1923.

An hon. MEMBER: What is a pork barrel?

Mr. HANSON: An hon. gentlemen asks: What is a pork barrel? He is not very well versed in political history—

Mr. POWER: Not that kind.

Mr. HANSON: —if he wants to know what a pork barrel is; if he really wants that information, let him examine the supplementary estimates of 1923, or for that matter, the main estimates of 1923, for Nova Scotia, and he will quickly come to a realization of what I mean by a pork barrel in Canada.

Mr. ROBICHAUD: Did the hon. member have them in York-Sunbury as well?

Mr. HANSON: We never had them in York-Sunbury as far as I know, but Shippigan has never been out of the estimates within the memory of living man. Probably it is right that some attention should be given to Shippigan. I was there once in my life and I know something of the conditions under which the fishermen there live. I am not objecting to that; but I am objecting that in this year of 1925, after we have gone through such a terrible struggle as the late war, after our national finances have got into the condition in which they are, after the difficulties we have all had in retrenching, it should not be possible that any government, I do not care what government or what political stripe they bear, should resort to a policy of constituency bribery, because that is what this amounts to. We had an illustration from the hon. member for Yale (Mr. Stirling).

Mr. GRAHAM: Is my hon. friend closing his remarks? If not, he ought to call it six o'clock. It is now after six o'clock.

Mr. HANSON: I am willing to call it six o'clock. I have not half finished yet.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. HANSON: When we adjourned for dinner, Mr. Speaker, I was endeavouring to enlighten some of my hon. friends to my left as to what was meant by the expression "pork barrel." I hope I made myself clear to them, and that it will not be necessary for me to advert to it at any greater length, except to reaffirm what I said in closing, that in my humble opinion any government which resorts to such political tactics in the present condition of the national finances deserves the severest disapprobation of the electorate. I do not care what political party may endeavour to take advantage of that practice, it is not the right and proper thing to do at any time, and particularly to-day when the country is in such a critical financial condition.

Now, the hon. member for Brandon (Mr. Forke) in the course of his remarks on the budget made a statement, which I do not think ought to go unchallenged, with respect to the income tax collections being an index of prosperity. Even though the hon. gentleman were right in his premises, I do not think he was at all justified in the conclusions which he reached. His words were:

> It may be that the wealth of the country is getting into fewer hands, that there is more wealth and also more poverty in Canada—that may be the explanation of the increased revenue from income tax. If that is true the fact is to be deplored; we do not want that condition in Canada. . . . However, I should like at some time to get an explanation from the Acting Minister of Finance as to what he thinks is the reason that more income tax is being paid in Canada under present conditions than was paid in previous years.

The official figures do not bear out in any degree the premises laid down by the hon. member; they show that there has not been an increase in the income tax collections during the last three fiscal years. I have before me a short table showing just what they were. In the fiscal year 1922-23 there was received from income tax collections $59,711,538, and from business profits taxes—the levy for which, as everybody knows, ceased after the accounting period ending December 31, 1920—there was received $13,031,461; for the fiscal year 1923-24 there was received from income tax collections $54,204,027, and on business profits taxes account, $4,752,680; while for the fiscal year 1924-25 there was received from income tax collections $56,550,000 and business profits taxes account, $2,400,000. In other words, three years ago there was collected from these two sources—and it must be borne in mind that it is all derived from income—the sum of $72,743,000, two years ago $58,956,000, and last year, $58,950,000. This all goes to show not only that the hon. gentleman was wrong in his premises, but that he was also wrong in his conclusions; and I desire to reaffirm what I said before dinner, that if the income tax rate is kept at its present standard there will be a diminution of the revenue received from this source, because those who live on income from money invested in securities will be inclined to go where the income taxation is lighter, especially when it is so easy to cross the line and avoid the heavier burden here, which has been done to my own personal knowledge in a number of cases.

In the last two budgets, Mr. Speaker, we have heard a great deal about Canada having balanced her budget. Canada has not yet balanced her budget, notwithstanding the loud professions made by the Acting Minister of Finance and those who sit around him. Last year loud professions were made that this had been done to the extent of a surplus of $35,000,000. Now, surpluses are made up in various ways. Anyone who has a knowledge of accounting, or who has anything to do with large business organizations, knows that surpluses are very largely matters of bookkeeping; and it is because of the method of bookkeeping adopted by the government that they were able to show what I consider was a fictitious surplus of $35,000,000 last year, and of $1,800,000 this year. It will not do to say to the country that "we simply followed the practice of our predecessors in office." The present government may or may not have done that; I do not know. We are led to believe they have done it, by reason of the certificate which has been given to the government balance sheet by the chartered accountants employed by the government for that purpose; that is to say, that the balance sheet was made up in the same manner as it had been made up in previous years. I presume that is a correct statement of what the gentlemen found. But that does not tell the story that the country desires to know at this time. It is desirable, other things being equal, that the budget should be balanced; I think we ought all to strive after that. But the government ought not, in honesty to themselves and in honesty to the country, to say they have balanced the budget as long as they have to pay out such enormous sums every year to the Canadian National Railways,—in cash, very largely, when they have it; otherwise, by way of guaranteed loans. These advances immediately become a non-active asset, a liability, as it were, of one of your own subsidiary companies. Those who have had to do with large corporations which

own subsidiary enterprises will readily understand that no banking house, no bond house, seeking to put forward an issue of bonds in connection with any large commercial project takes into serious account as an asset the liabilities owed by a subsidiary to the parent company. They ignore those; they do not take them into consideration. So it is not fair to the people of this country whether it was the practice of five years ago or of four years ago or of last year alone, to say that we have balanced our budget when as a matter of fact that statement is millions off the mark. This sort of thing may deceive the man who does not know, the man who is not a student of current Canadian politics, but it does not deceive anyone who gives intelligent study to the problem. It may be that having regard to the manner in which the books of the government and of the country are kept, technically the minister is correct when he brought forth an alleged surplus last year and an alleged surplus this year. But practically from the standpoint of debtor and creditor, from the standpoint of the taxpayer, it is not a correct practice and the sooner we get down to actualities the better it will be not only for the people but for the government themselves. Let us face the position frankly.

Adverting again for a moment to the question propounded to me by the hon. member for North Waterloo (Mr. Euler)—what suggestion have I to make in connection with the balancing of the budget—I thought that question a fair one, and it was one to be anticipated. My suggestion to the government is this: Having talked with individual members of the government regarding this very problem I realize that it is much easier to talk about cutting down expenditure than it is actually to do it. I would assume, without having any inside information on the subject, that the government of Canada is in the same position that the government of England found themselves in immediately after the war. As regards the question of curbing public expenditure they found themselves in the hands of a bureaucracy made up of the higher elements in the civil service in that country. Heads of departments, with probably the best intention in the world, will tell you that this and that sort of thing cannot be done. With the desire to magnify the importance of this or that branch or department they will say: "You cannot reduce my staff; you cannot lower the expenditure in this branch—it simply cannot be done." Unless the minister has a great deal of courage and a great deal of industry and perseverence, he will find in many cases, when he attempts to reduce expenditure in this way, that he is simply knocking his head against a stone wall, because of the very bureaucracy that does exist in governmental circles, especially among heads of departments. The country does expect, in good faith, that the cost of running the country so far as controllable expenditure is concerned shall be cut down, and it ought to be the duty of those on the treasury benches to make an honest effort to do it. I think they realize the importance of it just as much as anybody else, and I also imagine that in many instances they find themselves almost impotent. I recommend, therefore, that if ministers find themselves in that position they forthwith appoint a commission such as was appointed in England immediately after the war. I wish we had appointed three years ago in this country a counterpart of the Geddes Commission, which, if all its recommendations had been followed, would have saved the taxpayers of England £100,000,000 a year, and which did save a very substantial sum to the downtrodden taxpayers of England in so far as it was put into effect. And it can be done in Canada. It can be done with regard to the inside civil service.

Now, I am not one of those who want to throw stones at the civil service as such. I want to bear testimonoy to the fact that in my dealings with individual members of the civil service I have found, and expect to find, a very intelligent set of men. One criticism I would make—and it may seem inconsistent with what I have already said—is this, that in the case of skilled men, technical men, the salaries paid are altogether too low and we are losing some of the best men in the public service by reason of that fact. Let me give one single illustration. During the past few years the forests of our province have been ravaged by insects and damage estimated at as high as $40,000,000 has been done. The government appointed an official to examine and investigate the conditions, and he did his work thoroughly and well at the princely salary, I am told, of $2,700 a year. He was a college graduate who had made a specialty of entomology. That gentleman has lately received leave of absence from this government in order that he may proceed to the Fiji islands and there study the insect which is doing great damage to the cocoanut tree; and the colonial government of those islands deem the work so important that they have given him a salary of $7,500 per annum with all his expenses there and back. I do not say that we should pay our civil servants on such a lavish scale as that, but in order to hold men

of his calibre it will be necessary to pay higher salaries to technical and scientific men else we shall lose them to those who will pay larger salaries. But while that is true; while I plead here and now on behalf of the scientific men in the employ of the government, my observation has taught me that governmental departments in the inside service are over-manned. There might be a very considerable reduction as regards numbers, and if it is necessary I suggest that higher salaries be paid to induce those to stay who are really rendering useful service. In fact, the government might begin this practice themselves. We have, I believe, as large, if not the largest, personnel in the government of the day that the country has ever had, aside possibly from war time; I do not speak with any degree of authority because I have not looked up the data. I should like to know why it is not possible to abolish the portfolio of Labour in this country, especially having regard to the fact that the Privy Council has declared the Lemieux Act ultra vires, and that the raison d'etre for its establishment has now come to an end. It is true there are certain branches of government which are operated under the Department of Labour which it is necessary to carry on, but there is no reason in the world why these should not be transferred to other departments. The same is true of the Department of Soldiers' Civil Re-establishment. It was never considered when that department was established that it would become a permanent portfolio, but history shows that once a department is established, it is never abolished. We had some very illuminating figures with regard to this department the other night.

Mr. POWER: Might I interrupt the hon. gentleman to ask if he is not a little bit inconsistent? He promoted no less than two members of the House to cabinet positions this afternoon.

Mr. HANSON: I thought I had promoted only one, and I did that more or less in the way of good-natured banter. After the speech we have listened to from the hon. member this afternoon, I must say that my remarks are to be treated strictly as a joke.

We had some very illuminating figures a few nights ago with respect to the cost of operation of the Department of Soldiers' Civil Re-establishment. It was shown that 71 per cent of the entire amount voted by this parliament is used up in the administrative expenses of that department, and the balance ultimately reaches the soldier, the one who is intended to be benefited. That is a state of affairs that is little less than scandalous. It is a state of affairs which will not appeal to the soldier vote of this country.

I would also abolish the portfolio, or semi-portfolio, of Solicitor General. Can anybody tell me any useful purpose that the Solicitor General of this country performs? If so, I would like to hear it. It is not obvious to the ordinary member of parliament or to the general taxpayer of this country.

Mr. ARCHAMBAULT: It is not a new position.

Mr. HANSON: No, it is not a new position, and I am not blaming any particular government for it. It has been used as a matter of patronage among all governments, so far as I understand, since its establishment.

Mr. ARCHAMBAULT: If my memory serves me right, the leader of the opposition (Mr. Meighen) has occupied that position.

Mr. HANSON: And I have no doubt he did it well, as he does everything else well. While he was there I have no doubt that he was a very useful official because he is that type of man who could never lie idle and draw his salary without earning it.

Then I would, and perhaps first of all, abolish the portfolio of Secretary of State, not because that portfolio is held by the hon. member for Westmorland (Mr. Copp) at all, for he and I are personally the very best of friends, but I believe that the position is neither useful nor ornamental. I think the government could very well be cut down to the extent of these four portfolios.

But I would not stop there. I think the number of members in this House should be cut down. The time will come when, if this country grows as it ought to grow, and if we preserve the same ratio as laid down in the British North America Act, we shall have 500 members in this House. We have always been over-governed in Canada, and the cost of government federal, provincial and municipal, is per capita away beyond what it is in any other Anglo-Saxon country that I know of and away beyond the means of this country. I know it is easy enough to say that. Members have to run elections, and they have to go to great expense to run elections. It costs a considerable amount of money to live in Ottawa. A paternal government takes in income tax about 10 per cent of the $4,000 indemnity members receive, and after the four or five months' time the members put in in this House they will have a residuum if they live as they ought to live in Ottawa, of about $1,600. Nevertheless, I for one am willing to

slice off $1,000 of the indemnity if we could have any guarantee that the length of the sessions would be cut down.

Mr. MICHAUD: And you would never come back.

Mr. HANSON: I do not expect the hon. gentleman to vote for cutting down the indemnity, because he has no other visible means of support, so far as I know.

Then in addition, under the present conditions that obtain in this country, there should be a stop once for all to the practice of the guaranteeing of bonds for purposes which are not strictly of federal concern. I do not intend to go into details in regard to this, but I would just like to say this, at the risk of being misunderstood, misinterpreted and misquoted: I do not see what federal responsibility this country had for the guaranteeing of bonds for a new bridge across the St. Lawrence at Montreal.

Mr. ARCHAMBAULT: Go the limit.

Mr. HANSON: It is an accomplished fact now, and it not much use to talk about it, for the country is committed to the expenditure. I do not for one moment say that that bridge is not necessary: I do not know enough about the local situation to know whether it is or not, but I did try in vain for twenty minutes last year to extract from the Minister of Railways some logical reason why this expenditure should be one of federal concern, and I failed to get it. Now it is not because it is Montreal that I am saying this. I would make the same remark if it was about Tory Toronto; I will make the same remark about the erection of grain elevators at Prince Rupert and Halifax.

Mr. ARCHAMBAULT: Is the hon. member aware that the province of Quebec and the city of Montreal are each guaranteeing one-third of the bonds?

Mr. HANSON: I do not see any reason myself why they should not do it all, and that suggestion was made last year by the leader of the opposition.

Mr. ARCHAMBAULT: It was in the bill.

Mr. HANSON: My memory does not serve me as to what was in the bill, but I never could see why that was a matter of federal responsibility. I do not wish to be understood as saying that the work was not an important work or a work that was not required, though I have some doubts about it. I think it will be a detriment to property of the government already existing, but it may be that with the increase of traffic, especially tourist traffic, as has been stated on the floor of this House, that a new bridge is necessary; but if so, I do submit that that is in no sense a federal responsibility, and that is the point I am making.

Mr. ARCHAMBAULT: Is the hon. member opposed to the federal government giving any aid towards the construction of that bridge?

Mr. HANSON: For the benefit of the hon. gentleman I will say this: We are committed to the principle now, and it is not much use to kick against the pricks.

Mr. ARCHAMBAULT: That does not answer my question.

Mr. HANSON: That is the answer I give to the hon. gentleman. I know the hon. gentleman wants to go down to Montreal next week or at the next election and say that the Tory party was against the bridge across the St. Lawrence. That is exactly what he desires, but he is not going to get me into that trap.

Some twenty-five years ago I went to school in the city of Halifax and they had a grain elevator there then, but I never heard of a tramp steamer or even a liner taking a cargo of grain out of that elevator, although it may be so. At the same time the people of Halifax have an aspiration for that port to be a grain shipping port. It may achieve that aspiration and if it does that elevator will be of some use. But I must say, and I speak for myself alone, that I have very grave doubts about it just as I have in the case of Prince Rupert. But a grain elevator at Vancouver, or at Montreal, or at St. John is a very different proposition. We all know that grain is one of the most liquid of commodities, and a difference of one-sixteenth of a cent a bushel in the carrying charges will lead grain to the nearest ocean port. That is the difficulty we are faced with in the Maritime provinces in our endeavour to build up national winter ports, but this is a difficulty which I feel sure will be overcome if we are able to enlist the sympathy and support not only of the railway, the common carriers of the country, but of the grain shippers as well.

There is another matter I should like to advert to in connection with this question of a balanced budget and a reduction of expenditure, and it is this: I should like to know how many motor vehicles there are in this city belonging to the government, that are used by heads of departments and other officers of the public service? It seems to

me that you cannot cross one of the public streets of this city without stumbling in front of a car that is owned by the Canadian government. This thing may have been justified in war-time—

Mr. FOURNIER: Are you afraid of them?

Mr. HANSON: I try to get out of their way.

Mr. ARCHAMBAULT: You can side-step pretty good.

Mr. HANSON: I want to say that the people of the country are beginning to learn about this extravagant practice of members of the government, heads of departments, and chief officers of the public service having cars bought and placed at their disposal. No commercial house in Canada would think of going to the extent that the government has gone in this matter. I know how easy it is for a practice like this to grow up. One cabinet minister has as much right to a private motor car as another; one deputy minister has as much right to a private motor car as another. You have only to go into the civic arena to understand how this practice grows overnight. Anybody who has had any municipal experience knows that permanent heads of departments, the moment they get into office, will begin to slip on to the corporation the cost of services that should be borne out of their private income. Why, only last week in the city council in this city the statement was made that Ottawa was paying $6,000 a year to the Bell Telephone Company of Canada for private telephones for civic employees. Some of these no doubt are justified but I venture to say, without having any personal knowledge of the circumstances, that the great majority of them are unjustified. I know that in my own city the same practice has grown up. So much for that. You cannot balance your budget in this country by a process of increased taxation. It must be done by a process of saving not at the bunghole but at the tap.

Some hon. MEMBERS: Oh, oh.

Mr. SPEAKER: Order.

Mr. HANSON: I do not know what the hilarity is about nor do I care.

I desire now to say a word or two briefly with respect to the creation of the tariff board. I do not understand that any result of magnitude will come from the creation of this board. At the same time if it is to be used in an advisory capacity, if the board is not to become a bureaucracy and take the place of the elected representative of the people upon whom the responsibility properly devolves I have not great opposition to it. It is true that in 1912 the government of Sir Robert Borden proposed to establish just such a board as, I understand, is now proposed by the Acting Minister of Finance. It is also true that the Acting Minister of Finance, and those who surround him and now have seats in this chamber, voted against the creation of that board and against the principle involved. That is perfectly characteristic of the Liberal party as all history shows. But from the standpoint of the present government the creation of this tariff board will serve two purposes which are highly desirable from the government's point of view. First, it will delegate responsibility to other than the elected representatives of the people, and it will be an excuse for continued refusal on the part of the government to face squarely the most momentous issue of the day—what is to be the fiscal policy of this country. In other words it will give the government further opportunity to say to the electors "We have created a tariff board which will advise us as to what we should do with respect to the fiscal policy." On the other hand it will be a delegation of authority and a lapse from the principle of responsible government, which procedure the government has invariably followed since it came into power. To go back to the period of 1922 when the freight rates question became acute in Canada. Had we had responsible government, as understood under British institutions, in this country the government of the day would have had a policy on the question. But what did it do? It delegated to a committee of this House the powers that the government itself should have assumed, and it is doing the same thing with respect to the ocean-lake freight rates question. This brings me to a very brief consideration.

Mr. ARCHAMBAULT: What is the ocean-lake freights question?

Mr. HANSON: The ocean freight rates question? You will hear something more about it a little later on.

Mr. ARCHAMBAULT: My hon. friend said "ocean-lake freights question"; that is why I did not catch his remark.

Mr. HANSON: The government took up the lake freight rates question and what was the result? It had to take into its own arms again and suppress its own baby. The history of the last two years will tell us that. The same thing has happened to the Petersen contract: It has been put into the discard, and the gov-

ernment's responsibilities have been delegated to a committee presided over by the genial member for Brome (Mr. McMaster) to devise ways and means for a policy that the government itself should devise.

This brings me—and I shall be very brief—to a consideration of what should be the future fiscal policy of this country; and I want to lay it down as axiomatic having regard to our geographical position—lying as we do to the north for three thousand miles of the most highly protected country in the world; having regard to the fact that all Anglo-Saxon nations in the world—save and except the Mother Country itself if she can be called an exception—have adopted and are maintaining in its integrity the fiscal policy of protection—not that possibly it is the best fiscal policy in the world, not because some of us regard free trade, in the classic language of the hon member for Chambly-Vercheres as a pious dream—we are forced by necessity, we are forced by the very force of circumstances themselves to adopt a protective policy. What are those circumstances in brief? Over there across the line you have the most highly industrialized nation on earth; over there across the line you have labour organized in its highest form; over there as a result you have the highest wages, the highest current wages, paid. I grant that under a system of protection you have high wages.

Mr. McMASTER: Oh, no.

Mr. HANSON: Well, I never heard of low wages in a protected country unless the currency of that country had depreciated or the land had been devastated by war. At all events in the United States the results have been as I have described. The United States maintains a system of high protection, a system of standard unionized wages, and Canada by sheer force of necessity, by sheer force of circumstances, is obliged to meet her with the same weapon. It will not do, to pull down your tariff walls so long as you are confronted with that condition. What would happen? Let me illustrate. Down in the Maritime provinces and in that portion of the province of Quebec which lies contiguous to the American border we are side by side with the states of Maine, New Hampshire and Vermont. For the most part these states are not manufacturing and are not industrial. They are engaged in agriculture, lumbering and the like. New England is highly industrialized. The states of Maine, New Hampshire and Vermont have been the hinterland always, since I can remember and for years before, for the industrial centres of New England. If you pull down the tariff wall and allow the free entry of American goods into Canada and allow our raw material to go out, the Maritime provinces and that part of Quebec which lies contiguous to the American states will simply become the hinterland of industrial New England. We have had gestures made and the people of this country are uncertain as to the future. The boot and shoe manufacturers are very uncertain. The textile manufacturers, especially those in the cotton industry, are very uncertain of the future. Permit me to say that the boot and shoe industry of this country is no combine. There is the keenest kind of competition in the boot and shoe manufacturing industry, and very largely and from the very beginning it has been a case of the survival of the fittest. But if the duty is taken off boots and shoes, as may reasonably be contemplated if the government give way to the arguments of some hon. gentlemen on my left, and if the duty is taken off cotton and cotton textiles, what will happen to the four cotton mills now running in the province of New Brunswick? I will tell you. Just so long as they can stagger under the swamping of the local market by the American manufacturers, they will stagger. When they are wiped out the American manufacturer will have the market to himself, up will go the prices, we will pay the piper, and we will have to pay higher prices for textiles than previously.

Mr. ARCHAMBAULT: I should like to know if the hon. gentleman is aware that during the year 1918 or 1919 some of the textile companies in this country made as high as 330 per cent on the capital invested? That fact was brought out before the High Cost of Living committee.

Mr. HANSON: The hon. member is referring to war times. I am speaking of normal times. You will never see a condition like that again.

Mr. MEIGHEN: Textiles are lower here than in the United States.

Mr. HANSON: I know that in the New England states they manufacture a million yards of textiles to every yard we manufacture in Canada. Their overhead is so much less, and their raw material so much nearer that we can not successfully compete. My hon. friends to my left and all free traders in the House will say "Then you should not be allowed to compete". I am not in favour of that line of reasoning. I believe that we should endeavour to build up an industrial

life in this country, even though it may not be, to use a well-worn phrase in this House, indigenous to the country itself. I see no reason why boots and shoes for Canadians should not be made in my city and in the cities of Montreal and Quebec. I see no reason why we should not manufacture the cotton textiles that we use in this country, and give employment to Canadian workmen who will be able to maintain happy homes. But let the reverse take place and what will happen? You will immediately see the emigration of our skilled mechanics across the line. They will not go back to the farms, even if they came from them, and we will be hewers of wood and drawers of water.

Mr. ARCHAMBAULT: Will not my hon. friend admit that at present the cotton industry is bad in the United States, bad in England and bad all over the world?

Mr. HANSON: My hon. friend may be an authority on the cotton industry. I am not. All I know is that in my community the cotton industry is working from hand to mouth, and the men have been employed three and four days a week since this government came into power. I think the tariff on cotton should be raised a little so as to keep out the surplus of cotton goods manufactured outside of the country, and have the goods manufactured at home. You cannot build up a diversified nation if you are all going to be miners, farmers or fishermen. You will never have a home market that is worth a bawbee for the farmers if you do not have some industrial life in the country, and, as far as industries that are native to the country are concerned, I say that unless we take some steps to preserve our own raw material we will not have it very much longer. If the newsprint mills, the pulp mills and paper mills continue to grow as they have grown in this country, and if the ravages of the forests by insect pests and fire continue as in the past, then that great industry in Canada will indeed be a short-lived one, and we had better look out for the future. This country does not need a high tariff. I am not in favour of a tariff which would absolutely keep out all sorts of imports, but I am in favour of such an adequate tariff as would allow our manufacturers to compete in our home market. That is what we want; if we are able to do a little more and take in some export trade, so much the better, and I think we should attempt to do it. However, it is not possible in certain lines. As far as my constituency is concerned, it has never yet—and it is half agricultural—voted in favour of low tariff, and I do not think it is going to begin now.

Mr. MARTELL: Was there not a Mr Gibson elected in that riding in the days of the Laurier regime?

Mr. HANSON: Yes, Mr. Gibson was elected. He was a very estimable gentleman, but it was only a fluke and the people corrected the error at the very first opportunity. I want to tell the hon. gentleman that it was that gentleman's father who started the cotton industry in that constituency, and he did it under a protective tariff. They always were protected, but they had a railway to sell to the government in 1900 and they sold it to the government in 1904, and it is to-day part of the system of the Canadian National Railways. In 1896 the same gentleman was a Conservative. His father brought Sir George Foster to York as a Conservative candidate.

Mr. MARTELL: Was the man who defeated Sir George Foster—

Mr. HANSON: No, Sir George Foster never was defeated in York, and you could not defeat him in a thousand years.

Mr. MARTELL: He ran away from York.

Mr. HANSON: No, he did not run away.

Mr. MARTELL: He went to St. John.

Mr. HANSON: He went to St. John because of ill-advice from his friends to defeat Mr. Blair and could not do it. If he had remained in York, he would have been elected by two thousand majority as any Conservative would be in that riding. Having regard to the budgets we have listened to for the last four years, I ask what is the policy of the government with regard to this fiscal question? I can only say that, so far as the protective system is concerned, it seems to be a policy at times of attrition. They have never yet given to the working people or even the farmers of this country a definite lead as to the goal towards which they are aiming. I leave it to the judgment of hon. members to my left. The attitude of the government towards the fiscal question is exactly the same as the attitude of Sir Wilfrid Laurier during all the years he was in power. When in opposition he preached free trade and low tariff, and when in power, he had the good sense for the most part to leave the tariff alone. He did what was right from the standpoint of the Canadian people, but in my judgment it was not decent politics.

Mr. POWER: Did I understand my hon. friend to say that the policy followed by the present government was the policy of Sir Wilfrid Laurier, as he said, to preach free trade when in opposition and when in power to leave the tariff alone?

Mr. HANSON: I did not say that. I said that the policy of the present government with respect to the tariff seemed to me to be a policy of attrition. The hon. gentleman is a soldier and he knows what I mean by that term.

Mr. POWER: I do, but the hon. member said that the policy of the present government was like that of Sir Wilfrid Laurier.

Mr. HANSON: No, my hon. friend misunderstood me. It is amusing for people to listen to some of the things we heard this afternoon from the hon. member from Chambly and Vercheres (Mr. Archambault) as to the prosperity of Canada. Everybody knows that we have gone through the greatest period of depression the country has ever seen and we are still in the throes of it. In my community, in my province, prior to last year, we thought we had got by without any great degree of distress; but during the year 1924 we had the most disastrous period in our whole history and this has been because of the uncertainty as to the future fiscal policy of this country. Without labouring this question any more, let me say that, notwithstanding what was said to the contrary by the hon. member for Colchester (Mr. Putnam) the other evening, on every great occasion when the fiscal question was laid squarely before the Canadian people in 1878, in 1891, and again in 1911, without being clouded by any other side issue, the Canadian people never once failed to register their views on this most important subject, and I do not believe they will fail the next time if this issue goes to them in an unclouded manner and they understand what the issue is. I have, however, no faith that the government will face the issue fairly and squarely. We shall have a repetition of the Prime Minister's tour of September and October, 1921, in which, when he went into an agricultural community, he preached the Liberal doctrine and platform of 1919, and when he went into an industrial community, he and his friends told the manufacturers, as my opponent told the manufacturers in my community just prior to the last election: You need not have—

Mr. MURDOCK: The Prime Minister and two or three other hon. gentlemen on this side of the House have challenged you and some of your Tory friends to present any instance of that preaching.

[Mr. Hanson.]

Mr. SPEAKER: If an interruption is allowed and if any hon. member is putting a question to the hon. member who has the floor, he must address him in the third person through the Chair.

Mr. MURDOCK: I would like to ask if the hon. gentleman, now having made that statement, can produce one concrete instance where the Prime Minister preached one doctrine in a rural constituency and another in any other place.

Mr. HANSON: So far as my recollection goes—and I have not the data here, of course, as the minister knew when he asked the question—in every single speech the Prime Minister made during that campaign he preached a doctrine intended to suit the local conditions and not otherwise.

Mr. MURDOCK: The hon. gentleman's recollection has been found very faulty in other matters.

Mr. HANSON: Maybe that is true, but that is my recollection of that, and I know in St. John and other industrial centres in the Maritime provinces—

Mr. MURDOCK: Just a part of the bluff of the Tory party.

Mr. HANSON: —and in other parts of Canada the Prime Minister and his friends let it be known to the manufacturers that they need not have very much to fear from his fiscal policy. Let the issue be put fairly and squarely before the Canadian people, unclouded by other issues, and I have no doubt what the verdict will be.

Mr. GRAHAM: Do not wave the flag, for example.

Mr. MURDOCK: Cut out your four-flushing and we will take a chance.

Mr. HANSON: The hon. member is very brave with the large group behind him.

Mr. MURDOCK: Now, as always.

Mr. HANSON: I am glad to hear this from the minister's own lips. We would not have known it if he had not told us himself.

With respect to the duty on coal, members from the Maritime provinces know that this is but a feeble step in the right direction. It is not by any means what is necessary to put the coal industry of the Maritime provinces on its feet, nor to enable the coal producers of the Maritime provinces to regain the markets lost to them during the war. But

such a step as it is, it is welcome. There is something more that the government could do with regard to this matter. I do not think the question is wholly one of the tariff and I am not speaking now in any partisan sense. The question of the tariff is important. That, no doubt, has been borne in on the minds of the government by the Nova Scotia delegation, or the government would not have acted. In fact, it took a coal strike and starvation in Nova Scotia to make this government act before any measure of relief was granted to the coal producers there. But the real relief for the mining industries in the Maritime provinces is a substantial increase in the duty on bituminous coal plus a very substantial reduction in railway freight rates.

9 p.m.

Mr. ARCHAMBAULT: Is that coal used for domestic purposes?

Mr. HANSON: That coal is heating the hon. gentleman just now. At least, it was used until recently, and I presume it is still used for the purpose of heating this very building.

Mr. ARCHAMBAULT: Increase the duty and increase the price.

Mr. HANSON: I suggest to the government that they use every influence they possess with the railway companies in this country to have them decrease the freight rates on coal from the Maritime provinces to the central provinces.

Mr. CARROLL: Does the hon. member not know that the very fact that this building is being heated by coal from the Minto mines is due to the fact that the Canadian Pacific gave a special rate on that coal from New Brunswick to Ottawa?

Mr. HANSON: I believe the hon. gentleman is correct. All of this goes to show that if proper representations are made to the railway companies, the freight rate on coal can be materially reduced.

Mr. MARTELL: Who are the proper parties to make the representations? I am not criticizing my hon. friend. I am from the Maritime provinces the same as he is. Why did his own party, during the years they were in power, not bring about the millennium which he is now advocating? Is it not a fact that he is advocating this to-day for the purpose of hitting one of the ablest men in the Maritime provinces, Mr. Armstrong, who has to go to the country during the present year?

Mr. HANSON: It will not be necessary for me to hit Mr. Armstrong. The people of Nova Scotia are going to do that.

Mr. MARTELL: May I say to my hon. friend—?

Mr. SPEAKER: I would ask hon. members to observe the amenities of debate. The hon. member is very courteous and fair, and I do not think it is right that he should be interrupted so often.

Mr. MARTELL: I beg your pardon, Mr Speaker, I should have addressed the hon member through yourself. I do not think he imagines I am in any way directing carping criticism at him. We are good personal friends, and all I was going to say to him—

Mr. SPEAKER: Order.

Mr. HANSON: Mr. Speaker, I have no objection to the hon. member for Hants asking a question, but I should like him to put one question at a time, not half a dozen at once. With respect to the duty on coal, I had not the Nova Scotia situation in my mind when I was speaking of it; I was making a constructive suggestion in the interests of the coal producers of the Maritime provinces.

At first blush it seemed to me that the minister's proposed export tax on power was a new avenue for revenue that the country might very well adopt, and I was rather favourably disposed towards it. If we were sending power out of the country for the first time, if power companies in New Brunswick, Quebec and Ontario were not tied up by long term contracts; in other words, if it could be assured that the levy would be passed along to the consumer in the United States, by whom it should properly be borne, then I say it would be a very good source of revenue. If it could be considered from that standpoint alone, then I would tell the minister that his tax is not high enough, and that he could very easily make it considerably higher. Perhaps I ought not to speak dogmatically about this, not having full information before me. But let me tell the minister that nearly all of these hydro electric developments which have been initiated by private capital had to tie up to long term cheap contracts with consumers in the United States along the border. I have in mind the New Brunswick Power Company, which develops hydro electric power just within the border between New Brunswick and Maine. This company was organized and its bonds were sold to the public both in New Brunswick

and in Maine. Before it could get a dollar from the investing public it had to show that it had made contracts lasting the lifetime of the bonds and producing sufficient revenue not only to pay carrying charges but also operating expenses. Is it quite fair to companies so situated—and I have no interest in this particular company—to have their export power taxed?

Mr. ROBB: Mr. Speaker, if my hon. friend will allow me before he proceeds with his argument? I suppose he knows that under the export act we have no right to give a license for more than one year?

Mr. HANSON: I am well aware that the licenses are granted only from year to year, but I would ask the minister by way of information: Has any company which before the passage of that act exported power ever been refused a license since? The answer is obvious: it never has been, and never will be refused. The fact is that once that power has gone out of the country you cannot discontinue its export; the cry of vested rights would be raised, and no one knows it better than the hon. minister himself. It would not be quite fair either to any industry built up and developed as the result of getting that power. Therefore I say to him, this tax, which at first blush I must confess appealed to me, does not in the circumstances bear scrutiny, and especially in Ontario, where there is government ownership of hydro electric power, and in New Brunswick, where it appears we are about to have such government ownership. Any export tax imposed on those companies must ultimately be borne by the domestic consumer, and it is one more millstone around his neck. I sincerely hope that the minister will consider this problem from every angle. If he finds that the imposition of an export tax would be in the best interests of the country, and could be collected from the foreign consumer, then God speed him; but if he finds that such a tax would come out of the pockets of the domestic consumer by way of increased rates, then I tell the minister Canadians will execrate his proposal. It all depends on where the incidence of the tax will fall.

Now, no home-loving, patriotic Canadian is fond of dwelling upon the exodus of our people across the border. I say very frankly that whenever I hear that a good citizen of my county is leaving for the States it makes my heart sick and I do everything I can to dissuade him. I do not want to make political capital out of this deplorable loss, but we might as well face the situation fearlessly. We may differ as to the causes, we may differ as to the effects, but I do not think there will be any point of dispute between us as to the undesirability of this state of affairs. That it has been going on continually during the last two or three years is undeniable, and to such an extent as to give grave concern to any public-spirited man in the Dominion. When I was home during the Easter vacation I took the trouble to obtain from the American Vice Consul in my city a statement of the number of people who had left Fredericton and vicinity since the United States new immigration law went into effect, and these are the figures since July 1, 1924:

In the month of July	63 visés
In the month of August	76 visés
In the month of September..	171 visés
In the month of October..	121 visés
In the month of November	94 visés
In the month of December..	73 visés
Totol	598 visés

Mr. ARCHAMBAULT: Is that since my hon friend was elected?

Mr. HANSON: Oh, yes, during the past year since the fiscal policy of the government has begun to produce its baneful effects.

In the month of January, 1925..	48 visés
In the month of February, 1925..	61 visés
In the month of March, 1925..	138 visés
Total	247 visés

That gives a total of 845 for that comparatively small community for the period from July 1924 to March 1925—nine months. This is sufficient to give pause to any man who has the interest of his country at heart. On Thursday, April 9, the American Vice Consul told me that he had for that day alone applications for 15 visés. I want members of the government to understand that in that part of New Brunswick the trek to the United States is on in full force. We need not discuss the situation. We must admit that we are losing some of our best young blood, for it is the young men who are going across the line. I wish I could see some evidence of their return, but we do not see it in our province. Now, it is up to the government to do something,—whether it be free trade, low tariff, adequate tariff or high protection, it is up to the government as the guardians of this country to put into effect such constructive legislation as will tend to stop this drain on the very vital resources of the Dominion.

I had intended to say something about the national debt, but a great deal has already been said on the subject and I am not going to weary the House with any further references to it.

I have already referred to the question of surplus. I would like to say in conclusion that the budget contains none of those things for which Canada has ample reason to look —although I must say no one expected very much from the present government. The agricultural population has not received any lead from the government in this budget. The industrial population has not received any lead or any hope for the future. The manufacturers of this country must still face an influx of products from countries which have the advantage of cheap labour, depreciated currency, or greater mass production. No hope from this government—then let us have an end, Mr. Speaker, of vacillation and of trimming to suit every wind that blows. Let us in the parlance of the street, have a showdown. Let the issue be clearcut. Let no cross currents of sectionalism or racialism, such as were prominent this afternoon, be injected into the struggle, but let us nail our colours to the masthead and signal for close action. Then when the smoke and mists have been dispelled it will be found that this young nation will have taken a fresh start on the highway to prosperity, a start already too long delayed.

Mr. J. W. KING (North Huron): Mr. Speaker, probably it is a fortunate circumstance that the Progressive party have their turn to speak once in a while. I desire, Sir, at the outset to compliment the Acting Minister of Finance (Mr. Robb) on the very compact, concise and lucid manner in which he presented this budget—not that I agree with him in all respects, but this is simply a friendly word of commendation. It is most regrettable that the Minister of Finance (Mr. Fielding) has been unable to be with us during the present session. The people of Canada owe him a deep debt of gratitude for his unswerving loyalty to the country and of appreciation for the ability which has characterized his service.

Before entering upon a discussion of the budget itself I wish to try to show to the House that although it has been said on many occasions that the United States is the most highly protected country in the world, if we examine the facts we will find that it is not such a highly protected country after all. Such assertions, Mr. Speaker, as this—that the United States is the most highly protected country—entirely disregard the facts and anyone who makes them must be unwilling to limit himself to what he believes to be the truth. If those who put forth these claims ever looked to the facts they would be ashamed to advance such fallacious contentions. The United States collected, in round figures, $566,136,864 during the year 1923 through customs taxes, as against 118 millions in Canada for the same year. It is obvious that the division of this total amongst the population of 110 millions to the south of us produces an average of $5.04 per capita, whilst the Canadian average on a population of 9 millions is about $14.55 per head, a difference of $9.51 per head against Canada. At the Canadian rate the customs revenue of the United States would amount to $1,457,000,000, while the Canadians customs revenue on the American rate would only be $32,000,000. Our customs tariff imposes a burden four times greater than the American tariff, yet it is claimed that our neighbours are more highly protected.

For my part I would be satisfied for the time being if the government consented to remove that part of the customs burden which is in excess of that of the United States. That would still leave us, as my hon. friends to the right are prone to claim we should be, a highly protected country.

Mr. MEIGHEN: Will the hon. gentleman permit a question? Does he regard Great Britain as a free trade country?

Mr. KING (Huron): I do, comparatively.

Mr. MEIGHEN: Can he give us the per capita customs tax in Great Britain?

Mr. KING (Huron): No, I do not think I can at the moment.

Mr. MEIGHEN: I will tell him it would be about four times ours. Would that not rather destroy his argument?

Mr. KING (Huron): I do not think it would. I have the highest appreciation of my right hon. friend's clear intellect and keen debating power; at the same time, I do not see how he can get away from my argument. What does this additional burden mean to the head of a family of five? In the United States he pays $20.20 to the customs gate; in Canada he pays $77.75, a difference of about $50. Low tariff is the essential requirement for the progress of our nation. No purely protective tariff or preference can result in anything but the imposition of unnecessary burdens on the people. Tariffs are a hindrance to natural trade, a hindrance to natural development. They achieve everything, Sir, except the results they are intended to produce. How are we to estimate the burden carried by a nation if we do not estimate the amount of the burden carried by each individual? If the amount carried by each individual is greater in Canada than it is in

the United States, where will the young men of Canada be apt to go? To the United States, of course—we understand that perfectly well. I was talking only last evening to a man in this city who is in the bond business. He said: "I find I can do far better in the United States than I can in Canada. If I stay in Canada, my sons and my grandsons and my great grandsons will be loaded down with heavy taxation; the burden will never go off their shoulders. But in the United States such is not the case." Can we not remedy the conditions in Canada? I say to this government and to all future governments: Try to reduce the load of taxation; try to economize in every possible way and before many years we may be put on an even basis with the United States.

I claim that regardless of the fallacious contentions that have been made, a low tariff policy would not throw us politically into the arms of the United States. Notwithstanding the attempted arguments to show that protection was and is the safeguard of our national independence, I say, Sir, that if any policy will tend to loosen the bonds of our national unity it is the policy of protection such as we have at present—a policy that creates discontent, a policy that prevents the Canadian citizen from enjoying the decent living conditions to which he is entitled. Who can deny, however, that on the other hand a policy of low tariff which will result in contentment, which will permit sane and rapid developments, a policy which will enable progress along the channels given to us by our natural conditions, will in itself bring about a more strongly welded union; will form a democracy that no storm can shatter; will build up a country which we will be proud to live in and make us zealous of our institutions and our independence.

What Canada needs to-day is reciprocity with the United States. As I have just said, political unrest results from economic discontent, and if this were removed the talk of secession and annexation would then fall on deaf ears. The sentiments which hold Canada to the British Empire would be proof against every attack if our economic conditions were rectified.

I propose to try to show in my humble way that if this government and future governments will do their best not to enter into a commercial or tariff war with the United States, we are on the eve of better trade relations with that country. We have the word of President Coolidge himself that the United States is just on the eve of being a great importing nation of agricultural products. We also have the word of a great many financial experts in the United States.

On account of the large credits, loans and investments made abroad by the United States, it becomes certain that the nations to whom these loans were made will have to pay for them by exports to the United States. One plan calls for a progressive "liberalization" of the tariff policy of the United States not necessarily immediately, but very soon as a necessary adjustment to permit that country to make the larger importations of foreign goods required by her new position as a creditor nation.

I am going to quote the views of certain financial gentlemen in the United States. First is a statement by Francis H. Sisson, vice-president of the Guaranty Trust Company, to the effect that the tariff had been a "foreign element" in the natural working of economic laws, and part of the normal adjustment would be a lowering of it.

George E. Roberts, vice-president of the National City Bank, and formerly United States Comptroller of the Currency, speaking on this point, said:

> A difficulty as regards the receipt of interest payments may in the future arise unless our high tariff is changed. I do not think that this will make any great difference in the next two or three years or so, but the tariff is essentially an anomaly in our foreign trade, and our business men will have to adjust themselves to the necessity of competing more with foreign products and get into lines in which they can do so most advantageously. But these changes, I believe, will come about naturally through the pressure of circumstances.

Prof. Eugene E. Agger, of Columbia University, said:

> A liberalization of the tariff is certain to come about as a result of the increase of foreign investments The change might come through the rise of foreign tariffs until they more or less neutralize ours, but I think it is more likely to come through a change of feeling here.
>
> The situation is, of course, that the consumers of goods are not organized and so cannot readily make themselves felt when the tariff provisions are being made; but I think that the producers themselves, who can make themselves felt readily, will more and more seek to lower the rate on manufactured goods so that foreign countries can pay for them by selling their products here.
>
> The farmers and the cotton producers and some other interests are already beginning to seek a reduction in the tariff, because they are discovering that their most logical line of attack, to return to their former relation to the manufacturers, is not to support a measure like the McNary-Haugen bill to raise their prices, but rather to bring down the prices of manufactured goods.
>
> The tariff, of course, has got into general talk to such an extent that it is being credited for more than it is worth. There are so many other factors in manufacturing that, in many cases, there is not much more justification for a high tariff on goods coming into this country than there is for a similar tariff between various parts of the country. And the change in our position from debtor nation to creditor, will help to

make this fact appreciated, and will bring a demand for more moderate rates.

Dr. Benjamin M. Anderson, Jr., of the Chase National Bank, provided some of the Chase economic bulletins, in which he has expressed his views. In one of these he pointed out the changed economic conditions which make a moderate tariff policy vitally important to-day, and explained that:

> Exports must be paid for by imports, and that a country which wishes to sell abroad must also be willing to buy in foreign countries if foreign trade is not to result in credit congestion and reaction.
>
> The change will make for a permanently balanced industrial situation, far more satisfactory and far more dependable than the temporary unstable equilibria on which we have built temporary periods of activity since the Armistice. We need not fear Europe's revival or seek to defer it by placing tariff walls in the way.
>
> The position of the farmer has been injured rather than helped by the general tariff policy. It has not enabled him, for the most part, to get more for what he had to sell. On the contrary, by lessening Europe's purchasing power in the American markets, it has lessened the ability of his foreign customer to buy. and thus made his prices lower than they would have been.

The whole trouble to-day, Mr. Speaker, is the lack of purchasing power in the agricultural districts of this country, and no one knows that better than the Massey-Harris Company of Toronto, and Mr. Bradshaw; no one knows it better than the heads of the manufacturing concerns. I know conditions among the farmers. I know that the farmers are economizing in every way possible. I know they are making binders, ploughs and mowers that should have been in the fence corner long ago, do the work to-day. They are using all their implements in that fashion, fixing them up, because they have not the purchasing power; they simply cannot buy. I am not a pessimist, and the farmers of the county of Huron whom I have the honour to represent are not pessimists. They are not decrying Canada, but they are looking for better times to come, and they are looking for these better times to come by a reduction of the tariff along certain lines. I wish to point out to the Acting Minister of Finance that they are looking for a reduction of the tariff on automobiles, textiles, woollens, boots and shoes. They are not looking for reductions on very many lines; I myself do not believe in a complete upturn of the tariff almost every year. We should have a revision of the tariff at certain periods, every five or six or seven or ten years. as the case may be, for our manufacturers must have a chance. They must know that the tariff is not going to be interfered with for a certain number of years. I think probably that state of affairs can be brought about, but at the present time the tariff is not down to where it ought to be.

Just recently an Alberta farmer sent to the Citizen a copy of a statement of a sale of stock, showing that he had received $54.44 for seven head of cattle—which is less than $8 per head. The stock ranged in weight from 580 pounds to 1,240 pounds, and they were high grade cattle, not scrub stuff. On the back of the statement the farmer wrote, "Why settlers leave the farm after being on same for twenty years."

The prosperity of Canadian industry is very largely dependent upon the purchasing power of the farmers. They must either earn sufficient money to buy goods at the present level of Canadian prices, or the level of prices must be reduced to come within the range of the farmer's income under deflation.

The tariff is maintained to prevent the farmer buying at reduced prices, but the tariff is no protection against the reduction of wheat and cattle prices. It is doubtful whether tariff reductions would restore the purchasing power of the Canadian farmers without depriving an equal number of workers in the protected industries of purchasing power. I wish to read, with the permission of the House a short article from the Listening Post:

> So the farmers of Canada, and the townspeople who are dependent on them for their livelihood, see the prices of the varied goods which modern industrial economy compels them to buy enhanced by tariff duties. They see indications that the profits of those who own the factories are also enhanced. They see the products of these factories sold abroad, when competition compels, at lower prices than they themselves can buy them. And they smart under a sense of injustice. Forced to accept for their own products prices fixed by competition in the open markets of the world, they are compelled to buy for their own needs at prices increased by deliberate legislative action. Naturally and inevitably they are driven to ask why this injustice should continue? To ask how long they can hope to compete in the free world markets if their costs of living and production are artificially raised? To sell in the cheapest market and to buy in the dearest is an inversion of that condition which is clearly the self-interest of everyone to enjoy. Who can expect that the Western farmers should meekly and uncomplainingly accept such a sacrifice of their obvious interest?

Now, Sir, in connection with what I said with respect to the United States I wish to put on Hansard the following schedule showing the prices of cattle at Toronto, Winnipeg and Chicago:

	Toronto	Winnipeg	Chicago
Choice steers..	$8 25	$6 75	$12 50
Prime butchers' steers..	8 00	6 00	10 50
Common butchers' steers..	7 00	4 00	9 00
Choice feeder steers ..	7 00	4 75	8 00
Butchers' cows..	5 80	4 00	7 50
Butchers' heifers	7 50	5 00	10 50
Choice calves..	11 00	8 00	14 75

Is it any wonder that the farmers of Canada are casting longing eyes on the markets in the country to the south? They see perfectly well that the market there is really their natural market. If the Canadian government would see to it that no tariff war takes place between the two countries, and if the relations between Canada and the United States are conducted in a spirit of brotherly kindness, the day is not far distant when we shall have access to that market.

Now, Sir, I want to make a brief reference to Great Britain. What country in the world has made such a rapid recovery from the ravages of the Great war as Great Britain has done? Free trade has proven the economic salvation of that wonderful land. This, Mr. Speaker, is so well recognized that all parties in England to-day unite in supporting a motion before the British parliament providing for the repeal of the Safeguarding of Industries Act.

Honourable members to my right are prone to accuse those who sit in this section of the House of representing a class. But, Mr. Speaker, even should this assertion be true is it not still a greater truth in so far as these hon. gentlemen themselves are concerned? We at least can say that the workers in our cities will benefit as well as the farmers from a low tariff policy. In their case it is the height of folly to attempt to maintain that even the manufacturers, whose friends they claim to be, will derive any benefits of a permanent nature from the high protection they advocate. I ask honourable members whether the child of the poor family raised under "catch-as-catch-can" conditions, or the petted and protected spoiled only child of the rich man, can best sail the troubled seas of our everyday world. We may represent a class, Mr. Speaker, but if we do, it is the far larger class, the class that needs representation most urgently and the class which, up to the present, has had the least of it. These utterances from hon. gentlemen to my right have no foundation in fact. They only misrepresent the conditions which they endeavour to portray. The sooner the manufacturer and his representative come down to the earth of the farmer and of the working man, the sooner will we, in this parliament, be able to bring about conditions satisfactory to all and detrimental to none. Yes, Sir, the manufacturer has a right to representation, but who will deny the same right to the farmer and to the worker? Why must the farmer grow the bread required for the sustenance of the manufacturer? Why must the labourer sweat and slave to provide him with dividends? Why again should our natural development be hindered so as to nurture the manufacturers' growth? No, Mr. Speaker, we can never expect better conditions to prevail, so long as we maintain conditions that do not evenly distribute the load of our national obligations.

It has often been stated in this House, and more frequently by honourable members to my right, that the prices of farm produce are regulated by world conditions over which no individual country has control. Let us apply the same principle to our manufacturers, and allow the prices for the articles which they produce to be guided by the world supply and demand of the commodities they offer for sale. I submit, Mr. Speaker, that a condition which is fair for one section of our population is also fair for the other sections. One must be intentionally blind to all conditions of fairness and have swallowed his principles of British fair play to advocate in this democratic Dominion one set of standards for our manufacturers and another for our farmers and working classes.

I admit that the United States are living at present under a protective system, but I have no hesitation in predicting that this condition will not long endure in that country. You may be sure, Mr. Speaker, that the farmers in the country to the south will not much longer endure a policy which has been so detrimental to their welfare. Yes, I repeat, the tariff has done for the American farmer just the reverse of what he expected from it. He asked to be protected against Canadian wheat and he obtained, some time ago a protection of thirty cents a bushel. At that time the price of wheat on the Chicago market was six cents per bushel higher than the price prevailing at Winnipeg. He was not satisfied with that and obtained, more recently, from the United States government an additional protection of 12 cents, bringing the total to 42 cents a bushel. What has been the result? What did the United States farmer gain by this protection? Well, this is it. With no protection the Chicago price was at an advance of six cents over the Winnipeg one. With a protection of 42 cents a bushel against Canadian wheat, the advantage in price at Chicago has dropped to-day to two cents below Winnipeg. What a wonderful protective achievement.

I have admitted, Mr. Speaker that the United States is at present living under a protective tariff, but I take the most emphatic stand against the claims advanced that it is the most highly protected country in the world. When we take into consideration that

almost 58 per cent of the total imports of the United States are admitted free of duty; and we find that in the year 1924 the average rate of duty on dutiable imports into Canada was 22.85 per cent, and into the United States 35.51 per cent, and also in the same year in regard to the average rate of duty on total imports, the rate in Canada was 15.13 per cent and in the United States 15.33 per cent, we at once come to the conclusion that the United States has a small amount of goods under higher protective duty than Canada.

Yes, Mr. Speaker, low tariff is the essential requirement for the progress of our nation. No purely protective tariff or preference can result in anything but the imposition of unnecessary burdens upon the people. Tariffs are a hindrance to natural trade. They are a hindrance to natural development and they achieve everything except the results which they are intended to produce.

Who wants Imperial preference? Surely not the people of the British Isles. Why should they desire any measure which will increase their cost of living? Do we want Imperial preference? Not unless our British sentiments are limited by the benefits that would accrue to us from a partial closing of the Old Land markets to other nations, to the detriment of Britishers; not unless our attachment to British institutions is so weak as to wish our lot to be made better by the imposition of burdens on our brothers.

Previous to the Imperial conference two years ago, a meeting of members of all parties in England, was held in the House of Commons to formulate a policy of defence against the demands which it appeared certain would be made for Imperial preference. I quote a few of the remarks made by Mr. Asquith on that occasion. He said:

> From the beginning of the controversy begun twenty years ago the issue raised by the call for Imperial preference was the taxation of food. Mr. Joseph Chamberlain at the very outset confessed that any preference given to the colonies or the outlying parts of the empire was of no use, economically or sentimentally, unless as an essential part of it you put a tax on the importation of food into this country.
>
> There has been no change in the essential, fundamental and unalterable economic conditions. Imperial preference without taxation of food is a fraud and a sham.
>
> If that issue is raised again—and it will be raised and must be raised by some of the proposals to be laid before the forthcoming Imperial economic conference—and if some of these proposals materialize, the issue ought to be put fairly and squarely before the public, I have not the slightest doubt if that is done the verdict will be just as it was in 1906.

And the matter was placed before the British public, Mr. Speaker, and their verdict was just as emphatic as in 1906. Can we blame them? Why should they increase their cost of living? Mr. Asquith is right in maintaining that any idea of Imperial preference must necessarily mean the taxation of food and it is just as true of any tariff measure. I, for one, am unalterably opposed to any policy that will force the people of the British Isles to remember our ingratitude at their breakfast tables.

Speaking at Vancouver the late President Warren G. Harding said:

> The best citizen is the man who is a good neighbour and the best neighbour is the man whom we are friendly enough with to go and borrow a couple of eggs from.

This, Sir, may sound to you as an obvious truth. The regrettable part is that though we feel those sentiments of neighbourly friendliness we appear at the same time to be very unwilling to adopt the practice of the true brotherhood which they teach. What can be thought of brothers who hamper their own relations by the detrimental tariff walls which exist between the two great nations of this North American continent. I say to the people of Canada and to those of the United States that friendly relations and the feeling of brotherhood will only grow in proportion to the ease with which they can carry on both their commercial and diplomatic relations. The brotherhood of our two countries will indeed only be one of true Christianity when we can deal amongst ourselves between our respective countries as we or they are dealing to-day between our own cities.

The tariff must be looked at as absolutely vicious and the more you look at all its intricacies the more you realize that it never did and never can accomplish the purpose for which it was adopted. Tariffs the world over, in no matter what form they occur, have always been unfair as between different industries. They have always caused trouble and friction between nations. They always engender commercial rivalry and sooner or later they have ended in strained relations between nations, in many cases culminating in disastrous struggles in diplomacy, eventually ending in open war and the consequent destruction of humanity. What can any one advance in support of a policy that leads to such an end?

I was especially pleased, Mr. Speaker, that this government cut their moorings during the session of 1924 and made a distinct cleavage between the proponents of low tariff and the advocates of high protection. At

the same time, Mr. Speaker, I am very much disappointed that they did not in the least degree continue the lead then given. If confirmation is required, I need only read the statement made by the Prime Minister himself whilst addressing some remarks to the hon. member for St. Lawrence and St. George (Mr. Marler). In the course of that debate the Prime Minister said:

> The die is now cast. From this time forward, Mr. Speaker, we have the two natural alignments in this House, high and low tariff advocates.

Now, I am disappointed that the government did not at least lower the duties on such articles as automobiles, rubber and a few other things.

The manufacturers of our urban centres had better realize immediately that the population of our rural communities have finally set out with a determination to make a finish fight, a winning one, you may be sure, in order to equalize the conditions which have so long been discriminatory to our farming people. Previous to this parliament, the interests, the requirements and the needs of the rural centres received at best but scant consideration. Perhaps it was their fault. Very few men in previous parliaments had the full knowledge of farm conditions, due to the fact that in a great number of cases the representatives were the products of urban centres. This lack of representation as compared with the over representation of the manufacturing interests, resulted in the conditions which are to be found to-day when the farmer finds himself at such a disadvantage that it is just possible, by real hard work, to eke out a meagre living. On the other hand the agriculturists of this country do not wish to create unrest and dissatisfaction in any section of our population. They are the most stable part of our people. They certainly do not desire radicalism in any form. They are out to teach our manufacturers that they can progress better on their own supports and that the high tariff protection they have been accustomed to has not and never will give them strength. The farming population are not looking for favours. They are as willing as ever to bear their just share of our national burden. They are only asking that the hole be bored in the centre of the evener so that each section will have an even draught. They have now rebelled and certainly will not continue the slavery imposed upon them by drilling, always further from the centre, the hole that determines the respective pull required of the members of our national team.

No, Mr. Speaker, a high tariff policy is deterimental to the sound, sane and effective development of any country. No results of a permanent nature can obtain under such artificial conditions. We had better be without industries, if to possess them we must compel their growth within the protective walls of a hothouse. I am convinced that the diagnosis of our manufacturing industries was erroneous, since the treatment prescribed has proven ineffective. With the experience of the mistake made it is our bounden duty to rectify the error by changing the medicine. What better proof have we of this than the oft repeated plea of industry that it cannot stand on its own feet. The manufacturer is like the spoiled child of an over indulgent parent. I admit that this young man, might suffer by too radical a change in treatment. We must, however, gradually reduce the doses and finally omit altogether the support which he has too long received and imbue him with that spirit of confidence in himself that will enable him to depend solely on his manhood for success.

Now, Mr. Speaker, the Progressive party is a modest, retiring party, and we have been subjected to political thrusts, some of them not very clean, from all sides of the House—even from our own side; but I desire to affirm right here, that not only will the Progressive party come back after the next election, but will come back more than a mere remnant—more than a sad remnant. The Progressive party is here to do business and will do business in this House after all the present members, I was going to say, had passed into oblivion, but I do not say that because I know there are a great many hon. members of this House whose names will go down in the annals of Canadian history. I say the Progressive party will be doing business in this House long after all the present members have passed from this earthly stage of existence. The Progressive party has its roots in the soil and they will not be very easily eradicated.

An hon. MEMBER: No weeds.

Mr. KING (Huron): No, no weeds. We hear a great deal to-day to our right and across the floor about an election, the possibilities of an election and the readiness of the Liberal party for an election; but I believe the Progressive party is as well prepared to-day for an election as any other party in this House.

Mr. E. W. ROBINSON (Kings, N.S.): Mr. Speaker, I wish to state at the outset that it is my purpose to support the budget proposals as brought down by the Acting Minister of Finance (Mr. Robb) and, in as brief a manner as possible, to give a few reasons for doing so. A short time ago we had a speech

on the budget from the leader of the Progressive group (Mr. Forke), and I remember that he stated that he deprecated the fact that the financial statement had not been given to us in such a form that the ordinary person could readily unerstand it. I quite agree with him and I too would wish that the financial statement had been made to this House in such a manner that the ordinary person who was not a financial expert could easily understand it. We find the government classifying as assets items which the opposition classify as liabilities. As long as our financial experts disagree, how can those of us who have not an expert financial knowledge, draw a conclusion from the financial statement as presented to us? I have gone back in history a little and I find that this is not by any means a new condition of things. If you will read the history of parliaments, you will find that every government endeavours to make the best showing it can. Every government attempts to keep alive a feeling of contentment in the minds of the people, while it seems to be the duty of the opposition, if possible, to break down that financial statement and to preach discontent. Therefore, I am not at all surprised when this debate follows the regular order. I am ready, however, to accept the statement of the Acting Minister of Finance concerning our surplus, for this reason. Last year we were face to face with the same conditions that we are facing to-day. The Acting Minister of Finance at that time claimed that we had a surplus of some $34,000,000. This was strenuously denied by the opposition, and yet during the year we are told that the government made a payment of about $34,000,000 on the national debt. They must have had this sum in order to be able to pay it, and I am therefore ready to accept the statement of the Acting Minister of Finance that we have, at this time, a surplus of $1,800,000.

The equalization, if I may call it such, of the duties on coal also meets with my approval, for this reason. I am not going into the details of the history of the duties on coal. It is sufficient to say that there were two duties on slack coal, one of 14 cents and the other of 53 cents a ton. As usual, it was the manufacturer who had the advantage of the 14 cent rate while the householder paid 53 cents a ton. If there is to be a duty on coal, there should be no special privileges to any class; all classes should pay the same duty, and for that reason, I do not look on the change in the duties on coal as an increase. It is an increase to the manufacturer from 14 cents to 50 cents a ton, but to the householder it is a decrease from 53 to 50 cents a ton. I come from a county in Nova Scotia that is non-producing as regards coal. We are users of coal and I believe the householders in my county will be pleased when they know that the duty that they have to pay on coal has been reduced from 53 to 50 cents a ton.

Another item proposed by the Acting Minister of Finance that appeals to me is a tariff commission. If by this tariff commission is meant a travelling commission to go around the country and then come back and give its opinions, I for one would not see much in it. We have had this kind
10 p.m. of thing in days gone by. But if by this tariff commission is meant a number of experts who will collect facts and give us the means of forming our own opinion, I am in favour of it. I was surprised the other night when the hon. member for Springfield (Mr. Hoey) said that if we had such a tariff commission, it would fasten on the country forever the system of protection. I do not believe it would, and I for one would say that if a knowledge of the facts will fasten on us the system of protection, I do not see how we can get away from it. As I take it, it will be the duty of this commission to collect facts and to submit them to members of this House so that we can form our judgment on them, and not as the hon. member for York-Sunbury (Mr. Hanson) said a short time ago, to take the responsibility in their hands nor to assume to themselves the right to fix rates. Is this not needed? I for one would say that it is, and for this reason. Sitting in this House I have heard somebody advocate an increased rate of duty, giving reasons for his opinion, and to me it seemed to be all right, while some other hon. member would take the same industry and show that it was already too highly protected. What are the facts in such cases? Let us have the facts and then we shall be able to form our opinion.

I should like to mention, in passing, a budget proposal that appeals to me, and that is the reduction of the duty on engines used by fishermen. This will be a benefit to the fishermen on both the Atlantic and the Pacific.

A great deal of discussion has taken place in this House regarding trade and business depression. Everybody will admit that we have been passing through a period of serious depression. A little knowledge of history will teach us that during any war there is a period of great business activity and this is always followed by a reaction. It cannot be cured by legislation. Any country that has engaged in

a long drawn out war must pay the penalty. The longer that country is at war the heavier the penalty it must pay. We were in the war from start to finish, and we have to face the depression that naturally follows in its wake.

I wish to speak for a minute or two on conditions in the Maritime provinces, because I am more familiar with conditions there than with those in other parts of the Dominion. We have had a serious depression, but I would point out that to a great extent this is a post-war condition. Let us take Nova Scotia, for example. During the war Halifax was a world port; all the ships of the seven seas found there a haven; the population of the city grew by leaps and bounds; all goods that could be sold were sold there; there was an abundant demand for labour; and even the explosion, although so disastrous, was not altogether an evil, for it brought into the city a great many labourers to reconstruct the devastated buildings. Now with the close of the war the city goes back to normal. Could anything else be expected? It had inflated its population by 15,000 or 20,000. That surplus of necessity must go somewhere else, and a great deal of the exodus from Nova Scotia is accounted for by the abnormal conditions that existed in Halifax during the war. In Nova Scotia another cause of financial depression is due to the trade policy under which we have suffered more or less for the past forty years, because much as protection may be a benefit to other provinces—and I do not deny that it is a benefit to the central provinces—there is no question but that it has been very injurious to the Maritime provinces. We have seen all our industries either closed out or else compelled to move to the central provinces. There has been also a movement of capital. I do not say that legislation could change it, I do not say but that it is the natural result, for capital tends to flow to large industrial centres, and so far as I can see there is no way to prevent it. Four of our largest chartered banks had their origin in the Maritime provinces, but their headquarters are not there to-day. So I say from our geographical position the trade policy that may be beneficial to the rest of Canada is injurious to us, and it has been one of the causes that has produced depression in the Maritime provinces. When hon members stand up in this House and say that such depression can be cured by some act of this parliament, I for one do not see how it can be done. Again, we used to have low transportation rates, but when the Intercolonial railway became a part of the Canadian National system our rates were substantially increased, with the result that we are now almost isolated from the rest of Canada. The Fordney tariff struck us very hard, especially in the fishing industry, and for two or three years at least the fishing industry was disorganized. But I do not wish to paint too dark a picture. Let me speak of Nova Scotia, of what we have done there. In the statistics for 1924 I find that our field crops were valued at nearly $17,000,000; we had dairy products worth nearly $10,000,000; fruit and vegetables to the value of something over $7,000,000; poultry and eggs worth nearly $1,700,000; our fisheries yielded a revenue of $8,750,000; our minerals yielded a revenue of $24,900,000, and up to date we have shipped to England 1,900,000 barrels of apples: so the outlook for Nova Scotia is not altogether dark. But we have some needs, and it is of these I wish to speak for a few minutes.

The first and great need of the Maritime provinces, as I see it, is lower freight rates. Something should be done in order that we may be placed on an equality with the rest of the Dominion in this respect. That these freight rates are hard on the Maritime provinces has been shown conclusively by the member for Kings, P.E.I. (Mr. Hughes) and the member for Northumberland (Mr. Snowball). We are suffering from the bad effects of unjust freight rates. Now, this is the cure proposed by some people. They say that the Maritime provinces should be given a freight rate lower than actual cost, and that the rest of the Dominion should be taxed to make up the difference. I do not believe that that is the general wish of the Maritime provinces, nor do I believe that it would produce the result that is looked for. As I understand it, we in the Maritimes do not ask for charity—not at this stage at least; all we want is justice. But there are two items in the Maritime provinces that might well receive a freight rate lower than actual cost, and this reduction would work a benefit to the entire Dominion; those two items are coal and fish. Certainly the people of Ontario and Quebec need our coal; therefore if it were brought from Nova Scotia and New Brunswick at a very low rate it would benefit us, and it would benefit also Ontario and Quebec. The same would be true concerning fish. But would this be true with respect to other things? Take farm products, for example. Suppose we in the Maratime provinces received a rate lower than cost in order to ship our farm products into the central provinces, see what the result would be. I have heard hon. members of the opposition say that in Ontario at least they do not want competition

in farm products; indeed they tell us that they wish farm products from the United States shut out from Ontario and Quebec, for they want to supply the home market themselves. They do not want competition. We have heard that over and over again in the House. They advocate a tariff against United States farm products. Would they be willing to have competition from the Maritime provinces in farm products? Would they be willing that we should send up our butter, our eggs, our poultry, our bacon? And not only send those commodities here, but that a portion of the expense be paid by the central provinces to the extent to which the freight rates were lower than cost? It does not seem to me reasonable. And if we had the revival in industry that has been talked of down in the Maritime provinces, and we began to ship manufactured goods into the central provinces, would the manufacturers there, who already say that they do not wish for any competition, would they, I say, welcome competition from the Maritime provinces, especially if they had to bear a portion of the freight rates on the goods? It seems to me, Sir, that it would be unreasonable to expect any such welcome.

What we need in the Maritime provinces is wider markets. We have developed a market in England and in some of the countries on the continent, and we have a market in the West Indies that I believe could be developed to a very considerable degree. Of course, it goes without saying that, whether it be true for the rest of Canada or not, reciprocity would have been a panacea for the Maritimes. However, if we had wider markets, if we had better shipping facilities, including cold storage, frost proof warehouses, improved docking, and if we had lower freight rates, it seems to me that all these things would tend to cure the present depression in the Maritime provinces.

Now for a few minutes I wish to refer, Mr. Speaker, to something that, so far as I know, has not been dealt with except by the hon. member for Muskoka (Mr. Hammell) who spoke a few nights ago on the tourist trade. I believe we overlook the importance of this trade. If I understand it rightly, it is the third item of revenue. From agriculture we had a revenue in 1924 of $407,000,000; from wood and wood products, $229,000,000; from the tourist trade, $150,000,000; from mine and mine products, $125,000,000; from animals and animal products, $135,000,000. Here is a trade question upon which, it seems to me, all parties in the House might agree. Here is an infant industry that I do not think anybody would oppose encouraging. The encouragement of the tourist trade is an attempt to capitalize our scenery, our climate, and our points of historic interest. The tourist trade does not interfere with any existing industries, nor does it in any way deplete our natural resources. It is well known to members of this House what other countries have done in connection with the tourist trade. Switzerland has capitalized the Alps; France has capitalized her art museums and her galleries, Italy her blue sky, and Greece her historic ruins. Therefore, it seems to me that we should try in some way to capitalize our scenery, our points of historic interest—and we have them, Mr. Speaker. I need not point out the beauties of British Columbia, the attractions of the Great Lakes or the river St. Lawrence, the historic interest that attaches to the province of Quebec. I would like, however, to say a few words about the Maritime provinces and their relation to the tourist trade, or the relation of the tourist trade to them.

In the first place, the scenery throughout the Maritime provinces all belongs in the same category. There are not in this respect, three provinces; there is one province. We have no mighty mountains; we have no great rivers. Everything is on a small scale. Geologically speaking, the Maritime provinces are the oldest parts of the continent of America; nature has been at work there the longest time, and she has smoothed out the rough places. There are no irregularities; we have harmony—harmony of river, hill and valley. We have a climate that is not equalled anywhere else in North America. The thermometer rarely goes below zero in winter or above eighty in summer; while cities of central Canada and the United States are sweltering in heat, we in the Maritime provinces are enjoying the cool breezes of the Atlantic.

But I wish to emphasize particularly our points of historic interest. We in the Maritime provinces have a number of important points of historic interest. The provinces of Nova Scotia and New Brunswick were anciently the French province of Acadie. The first settlement that was made in Canada was made at Annapolis, or Port Royal, in 1604. The French settled at various places throughout Nova Scotia and New Brunswick and whenever a war took place between England and France those points of settlement by the French were objects of attack. The result was that they were taken by the English and were handed back by treaty. Annapolis was taken four different times by the English and then returned to

the French. In 1713 the province of Nova Scotia was ceded to England, but almost immediately war broke out, because the French claimed that they had ceded but the peninsula of Nova Scotia while the English claimed they had been given the entire province of Acadie. The result was that the French built a fort at Beausejour, and at Louisburg, in Cape Breton, and war went on. In 1763, of course, the entire country passed into the hands of England, but between the years 1713 and 1763 there were great historic events in Nova Scotia. Fort Beausejour was taken; Louisburg was taken twice. It was in that period that Halifax was settled by the English and the expulsion of the Acadians took place. I could go on for some time pointing out the historic interest of Nova Scotia, but it is not necessary.

I might mention that as far as Canada is concerned we are the land of first things. The first road in Canada was built at Port Royal in 1605. The first Roman Catholic church in Canada was established in 1608. The first Protestant church in Canada was built at Halifax in 1749. The first newspaper published in Canada was published in Halifax in 1751. The first representative assembly chosen in Canada met at Halifax in 1758. The first college or institution of higher learning was founded at Windsor, Nova Scotia, in 1788. It is a fact that we shipped or had apples for sale in Nova Scotia in 1663, and coal was exported from Cape Breton in 1743. I could continue, Mr. Speaker, for some time giving a list of points of historic interest in the province of Nova Scotia.

I wish to point out briefly what we have done in connection with the tourist business. In Nova Scotia last year we had 100,000 tourists and the revenue from that source was $7,000,000. We have good roads. We have tourists' associations; we have boards of trade devoting their activities to promoting tourist trade. We distributed last year 500,000 copies of a guide book to the province. Good work was also done in New Brunswick. They had about 100,000 tourists and they estimated their revenue at $5,000,000. In order to show their interest in the tourist business I may say that the membership in the New Brunswick Tourist Association rose in one year from 800 to 1,400. Prince Edward Island also had 36,000 tourists last year and a revenue of $750,000 from that source. In Prince Edward Island the number of automobiles coming in, not owned on the island, was 800 in 1923 and 1,400 in 1924. I mention these facts simply to show that we in the Maritime provinces are alive to the importance of the tourist trade.

[Mr. Robinson.]

But there are things that we in the province cannot do. There is a limit to what we can do in the encouragement of the tourist trade, and it is right here that the federal government have an opportunity to do something for us if they will. There are two branches of the federal government which are connected directly or indirectly with the tourist trade; first, the National Parks branch, and second, the Natural Resources branch. The National Parks branch has charge of the national parks, of which we have ten, I believe, three in British Columbia, three in the prairie provinces, and four in Ontario. We in the Maritime provinces have no objection to those parks being there; we understand that that is probably the natural place for them. But the National Parks branch have also under their control historic sites and the marking of those historic sites by means of suitable monuments. What we would like in the Maritime provinces is this: That the National Parks branch take charge of the grounds at Fort Beausejour, for example; that they take charge of the grounds at Louisburg, and preserve them. They have already taken charge of a small area at Annapolis Royal. This is work that can only be done by the federal government, and we do not wish to duplicate in the provinces the departments that already exist at Ottawa. So it seems to me that there is work here for the National Parks branch. That department is doing good work up to the measure of their financial possibilities. We in this country, it seems to me, are lax in some respects, and one of these is the encouragement of such branches as the National Parks branch. We could have in New Brunswick a small national park, and we could have another in Nova Scotia, to add to our points of interest. In New Brunswick they have points of great scenic interest, such as the St. John valley, the valley of the Restigouche and the Miramichi. But what we require is simply that the federal government take hold of this thing when we have carried it as far as we can. In Nova Scotia we have the Wentworth valley, the Annapolis valley and the Bras d'Or lakes—points of scenic interest. At some of these points a small national park could be located. The Natural Resources branch also in its work comes in contact directly and indirectly with the tourist trade. They examine into the natural resources of the country, follow out the waterways, outline canoe paths or trails, if you can call them such, and make maps. This is something that the provinces could hardly be expected to do. They should not be expected to duplicate the work that is being done or that

can be better done here at Ottawa. What we ask is that the federal government co-ordinate the work of these branches, that they be given financial assistance so that they will be able to carry on the work, and that we should have here at Ottawa a tourist publicity bureau for the entire Dominion of Canada.

So far as the Maritime provinces are concerned, if we could get fair freight rates, increased marketing facilities, cold storage, and frost-proof warehouses, if we had wider markets and an increasing tourist trade, I believe that we would not suffer a great while in the province of Nova Scotia, at all events, under the present business depression.

Mr. J. L. STANSELL (East Elgin): Mr. Speaker, I feel somewhat at a disadvantage at this late hour in endeavouring to offer a few remarks on the subject before the House. I do, however, wish to put before the House and the country my own personal views on this subject.

As far as the budget itself is concerned, there has been no criticism thus far so strong as that which has come from hon. members on the government side of the House. About thirty members supporting the government have already spoken, and almost without exception they have devoted themselves to every subject under the sun except the budget itself. The careful way in which they have avoided that subject is, I repeat, Mr. Speaker, the strongest condemnation that can be offered.

With the remarks of the speaker who has just preceded me (Mr. Robinson), I am very much in sympathy. I believe he has touched on a vital subject. I believe we possess in the natural resources of this Dominion, in our wonderful scenery and climate, a potential asset that can be developed and capitalized to a wonderful extent. However, while I sympathize very much with what the hon. member has just said, he like most of the other members on the government side has avoided nearly everything in the way of a reference to the budget itself.

We were treated this afternoon to a very long and eloquent address, which was also very much apart from the essentials of the budget. I had hoped, Mr. Speaker, that the wounds and sufferings of the war would not of necessity be drawn into this debate. The hon. member closed his address with a very eloquent appeal for national unity, for the elimination of all sectional strife and racial ill-feeling. His very eloquent appeal for unity followed an address which was nothing if not an attempt to incite that very division he deplored. We were told something about the Ross rifle. The speaker himself claimed to know very little about this rifle. He also, I believe, kept as far away from the actual use of it as possible, and he criticized strongly the men who shouldered that weapon and fought their country's battles in the bloodiest war of all history, carrying the weapons supplied to them, imposed on them, if you please, by the party of which he is a distinguished member. I have wondered, Mr. Speaker, how long in the constituency of the hon. member it will be necessary to manufacture campaign material of this type. Are there no great issues of the day that can be discussed? Is there nothing before us to-day on which an election can be won or lost that we have to revive the sores incidental to that fearful conflict? While it is very nice to discuss national unity and the elimination of all ill feeling, it seems to me it would be well to begin now to put in practice those high principles.

Since the beginning of this debate, compliments of various kinds have been handed to members of the cabinet and supporters of the government. I believe the Prime Minister himself can be complimented on the fact that he holds the record for a marathon performance in this fourteenth parliament, in delivering a speech over four hours in length. His record has been nearly approached by other hon. members. I think this habit of making lengthy speeches is growing to too great an extent. The speeches might very well be condensed. The work of the House would be expedited, and the country itself would be very much better served by shorter and more practical speeches, by a little more hard work and a little less talk.

The Minister of the Interior (Mr. Stewart) has been complimented on his sunny countenance and his transparent honesty.

The Minister of Labour (Mr. Murdock) must be complimented on the amount of figures he has been able to put upon Hansard, but I wonder, Mr. Speaker, whether the workmen of this country are not sufficiently intelligent to know whether they have a job or not. I wonder if industry in this country is not sufficiently intelligent to know whether it is working full time or not. I wonder whether all of us are not sufficiently intelligent to know whether we have money in our pockets and are prosperous or not. I do not intend to go into this in any further detail, because most of us know what the conditions of the country are. I think it is hardly

necessary for the Minister of Labour to supply page after page of statistics and figures to convince people of what they know already as to the conditions of to-day.

But to the Acting Minister of Finance (Mr. Robb) I think I can pay the most sincere compliment upon the brief way in which he delivered his budget statement. I can compliment him also on his ability in the art of juggling and sleight of hand. Perhaps this was necessary. An election cannot be so very far away, not more than about a year at the outside, and no doubt the government felt it was absolutely necessary to make a good showing and provide a surplus and, if possible, a reduction of debt. Therefore the minister accomplished, or set about to accomplish an impossibility, and the way in which that was attempted was certainly a credit to his ability. We have in this budget speech a statement of the country's finances, where figures are distributed through column after column with a sort of editorial comment. Looking at them one cannot but wonder at the deftness with which that distribution has been accomplished. Is it not time, Mr. Speaker, that a financial statement dealing with the affairs of the country should be presented in such a simple and practical way that the average man can understand just what the situation is? I ask you, would any company, any bank, or any organization dealing with the public that submits an annual statement, present the statement in the form in which this is given to us? There can only be one reason for a statement of this kind, it is intended to cover up the actual facts, to hide from the general public what the true situation is. I will not say this is the first time this has ever been attempted; I do not propose to outline what anyone has done in former times. It is sufficient for me to deal with the facts as they are to-day; and I believe that the public of Canada, the electors who take an interest in the welfare of the country, are entitled to a simpler and plainer statement of the existing financial condition than they are getting. I believe, Sir, in the fair-mindedness of the public. I believe that the people of this country are willing to accept a plain statement of the facts, that they are willing to do their fair share in any way in which they may be called upon to remedy the condition that exists; and a first essential towards enlisting their sympathy and support is to give them a frank and open statement of the actual financial conditions of the country.

When changes were made in last year's budget an estimate was given that this would bring a reduction in revenue of about $24,000,000. We are told in this year's statement that that reduction was more than double; that the actual reduction or falling off in revenue was $52,800,000. In the face of a decrease in revenue of $52,800,000, coupled with a greatly increased expenditure, the Acting Minister of Finance, if we accept his statement, is actually able to show that he has a very substantial surplus. This, I repeat, is a feat that very few would attempt and very few would succeed in accomplishing. I call attention to a statement made when this estimate was presented, in which it was predicted that there would be a reduction of $24,000,000. I quote the significant words which follow:

> It is confidently expected that this reduction will give such impetus to trade that it will result in greater development of prosperity to all the provinces of Canada.

Now if prosperity is to come to any part of Canada, much less to all the provinces, I submit it must come in another form than this. The actual result is more than twice the amount the minister estimated. Therefore prosperity must be twice as great as he expected it to be. What a blessing, Mr. Speaker, it would be to this country, and to all the provinces if based on that assumption the revenue had disappeared entirely. Certainly if the loss of $24,000,000 would bring prosperity, and by doubling that loss we would have even greater prosperity, then on the same assumption had we lost all our revenue we certainly would have reached the millennium. I mention this to show the fallacy of the deductions drawn by the Acting Minister of Finance in his statement.

Now, here is the statement by the hon. minister condensed. I use his own figures entirely, because we must remember that the budget having been brought down early this session it was necessary to estimate some of the receipts and expenditures. I presume that no one is in a better position to estimate those amounts than the minister himself. I also presume that his canny Scotch caution would not allow him to exceed the expenditures very much or to reduce very much the revenues in his estimates. I therefore accept his figures in which he estimates the actual receipts at a total of $344,000,000. Against these the expenditures are estimated at $342,177,000, leaving a surplus of $1,823,000. As I said this is a somewhat complicated statement and in order to get at the facts it is necessary, if we take the minister's own figures, to do considerable figuring to arrive at what we believe the true condition of affairs to be. I have spent some time working

on these figures, and I intend to submit what I think is the true and proper statement of the financial affairs of this country based on the figures supplied by the minister himself. We have an actual revenue of $308,994,207.71. It is estimated by the minister that there is yet to be received $35,005,792.29, which makes $344,000,000 of total receipts. The expenditures, actual and estimated—and again I take the minister's own figures—are as follows:

Expenditures Actual and Estimated—	
Ordinary	$319,700,000
Capital	18,077,000
Special	4,400,000
Canadian National Railways	18,027,000
Total	$360,204,000

You will notice, Mr. Speaker, that I am not separating these amounts. It is true they are separated by the minister for purposes of his own; but I submit that the National Railways are owned by the people of Canada and any money advanced on their account is owed by the people and must be paid. Therefore in order to make this statement perfectly clear I am adding the amount of cash advanced to the railways, making a total expenditure of $360,204,000. Instead of there being a surplus there is an actual deficit of $16,204,000 and I submit, Mr. Speaker, this is the correct statement.

Now let us see what the railway financing is. It will be remembered that parliament authorized $56,527,000 for railway expenditure. This not being enough, a further supplementary estimate of $7,500,000 was approved, making a total of $64,027,000 divided as follows: Cash, $18,027,000; guaranteed bonds, $46,000,000. In addition to that there fell due Canadian Northern securities amounting to $17,000,000 which were re-financed and for that reason are not counted. I merely mention this to show the amount of money required to finance our National Railway system. There was a further flotation issued by the railway itself of $9,375,000. This was for equipment and I presume the equipment was worth the money paid for it. I understand this loan was made by the railway system itself and was not specially guaranteed. We will therefore leave that out of consideration, because we take it for granted that the equipment was worth the money.

Then there was another special loan for the Toronto terminals, and branch lines, amounting to $18,000,000. This was guaranteed by the government. So that our total railway requirements for the year just past amounted to $108,402,000. I mention this because there is a certain degree of pride on the part of the Canadian people in a railway that they own and operate; but we must remember what that railway is costing the people, and when we hear people glibly talk about the reduction of freight rates and all such things as that. without taking into consideration that this will of necessity make that railway a greater white elephant on our hands than it is at present, it is well for us to pause and consider that we have spent during the year $108,402,000 on railway account. I will deduct from that securities that were re-financed on account of the Canadian Northern Railway, and also deduct the amount the railways issued for their own equipment. That leaves a balance of actual debt from the operation of the railways of $82,027,000. I will now give the figures supplied by the Acting Minister of Finance (Mr. Robb) on the increase of national debt. He figures the addition to the public debt as follows:

Cash to Canadian National Railways	$18,027,000
Canadian Government Merchant Marine	900,000
Quebec Harbour Commission	600,000

That is an increase of $19,527,000, but he deducts from this a surplus which he showed in the first statement of $1,823,000. That will leave $17,704,000. But now he deducts something else; that is, an amount of $4,000.162, which is obtained in the following way. The governments of Greece and Roumania owe the Dominion and have owed the Dominion for some time a large sum of money which they have not repaid, nor have they paid interest on the money. The government have arranged for a funding of this amount of interest: that is, they have taken the amount of interest, of which not one dollar has been paid, and added it to the original amount, and then claimed this $4,000,162 was a surplus. It is just the same as though I held a mortgage on a man's farm so large that he was unable to pay a dollar of principal and had not paid any interest for some years, and I go to him and take a new mortgage, covering both principal and interest, and add the interest to the principal, and then say, "I have profited to the extent of the amount of interest added to the mortgage." If there is such a thing, Mr. Speaker, as unsound financing, this is an outstanding illustration. There may be something received in future years. We hope so, but no method of bookkeeping should show cash received before any cash has been received.

Reference is made in the budget to the fact that we now have added securities. I want to call attention to the fact that we had the security of the debtor, nations themselves before this, and we have not anything more than that now. You will notice

by this statement of figuring a fictitious surplus of $1,823,000 is added to another surplus of which we have never received a dollar, amounting to $4,000,162. Therefore, according to the statement of the minister the net increase in the national debt will only amount to $13,703,838. I propose now, to show what the actual increase of the national debt is. placing the statement on Hansard and then explaining how it is arrived at:

Statement of National debt

Net debt March 31, 1924..	$2,417,783,174 88
Addition on railway account..	82,027,000 00
Deficit..	16,204,000 00
Total addition for year..	$ 98,231,000 00

Again taking the minister's figures we are told that on March 31, 1924 the net public debt was $2,417,783,274.88; add on railway account, 1924-25, the sum of $82,027,000. It was pointed out by the minister that there was some difference between the cash advanced by the railways and the guaranteed bonds, but I must confess I am unable to understand where the difference is. In the one case we borrow the money on our own security and hand it over to the railways to the amount of $18,027,000. That is counted as a debt. In the other case we ask the railways to issue bonds for $46,000,000 and we guarantee them and they get the money. There is absolutely no difference. We, the people, are the railway. We own the railway. In the one case we have our own note, and in the other case we endorse the note of the railway and raise the money absolutely on the credit of the country. So that I say on railway account the debt is increased by $82,027,000. It cannot be disputed The people of Canada are just as much liable for that amount as they are for any other amount they have advanced. The railways have not repaid any money loaned them and are not likely to. There is no difference whether you advance money to a harbour commission, to other public works or to the railway, because they are all owned by Canada and the debt incurred is money spent or money advanced by the people of Canada. There is no escape from it. Here is the situation: they add to the debt $82,027,000. In addition there is a deficit, as I have shown, of $16,204,000, making a total addition to the debt for the past year of $98,231,000. That, Mr. Speaker, is a true financial statement of the affairs of this country and one which cannot be disputed.

It has been pointed out also by the minister that at the beginning of the year there were cash assets of over $43,000,000, and in order to be accurate, I will read his statement to the House.

> May I, before leaving this question of debt reduction, direct the attention of the House to the balance sheet of the Public Accounts at the close of the financial year 1923-24, page 2, where will be found among our assets an amount of $43,612,756.16, cash left in our hands after the closing of our accounts for that year; and I submit the question: Is not the actual possession of so much cash conclusive evidence that we ended that year with excellent results?

That is accounted for however by the fact that they borrowed the money and had not yet spent it. If that is a sound argument there should be a similar amount of cash on hand at the present time, but there is no reference in the minister's statement of any such amount of cash now.

Another matter to which I call attention is the statement made last year of the prosperity that would follow the reduction of taxation. You may look from one end of the statement to the other in this year's budget and will not find any such promise of the year that is to come. This is ample proof that the financial statement might even be worse than I have outlined, but the figures I have given are those taken from the minister's own report and I submit they are correct.

A great deal has been said about the policy of the government. I do not want to be unduly harsh and I am going to state frankly that I do not think all the unemployment and all the difficulties with which we are faced are due to the government, but I do think that they did their very best to bring about this condition. They have not done a great deal in the past four years, but in my humble judgment everything that has been done has been wrong, and I will attempt to prove that that is so. I do not claim for one moment that the immediate adoption of a Conservative policy or the proper application of adequate protection will at once restore prosperity, but I believe it will materially assist in that direction, and the sooner those policies are applied the sooner the remedy will come.

A discussion of policies present and prospective brings us to that old somewhat threadbare subject, the tariff, protection versus free trade. Undoubtedly many beautiful arguments can be submitted by those who sincerely believe in free trade. Many of those arguments are founded on a study of the theories of Cobden, Bright, Henry George and others. I should like to point out that this whole thing is based on a theory intended to apply to conditions that never existed in this world and in my judgment will not exist within a generation at least, if ever. The benefits of such a policy as free trade could be real only to the extent to which all

nations adopted the same policy. This theory of free trade, however beautiful it may be, is absolutely worthless and impracticable as applied to conditions as they exist to-day. I am quite sure there are only a very few members in this House who really and honestly believe in their hearts that free trade is the proper thing for Canada. Fortunately, they are very few, and to such I can only offer sympathy because I am convinced that there is no practical method by which free trade can be applied with beneficial results to the Dominion of Canada at the present time. We are faced with conditions and facts, not with theories.

Briefly, what are conditions in Canada to-day? We have taken our share in a war that, in magnitude, in expenditure of men and money, in its fearful results, has never before been equalled in the world. It is folly to think that Canada or any of the allies, or, indeed, any nation even most remotely connected with the war, can go through such a period without tremendous commercial disturbances. During the period of the war, business was stimulated to a wonderful degree, advanced and enlarged, spending habits were contracted, the people were spending and reducing their own buying power, so that at the close of the conflict a reaction was inevitable. The only thing that could or should have occurred was a realization of the results that must come from such a conflict and the proper application of remedies which, although they might not be entirely curative, would at least have been preventive. Many nations of the world, amongst others the United States, realizing that, used the only weapon which they had to work with—a protective tariff. Sixty-five nations have increased their tariff since the war with the direct object of trying to conserve and protect their own resources to supply within themselves the limited buying power of their people. Canada, through a mistaken policy, is perhaps the one outstanding nation which took the opposite course, with the result that most of us know. I said a short time ago that the only thing that this government has done has been a mistaken act. The little that it has done has been in the wrong direction. While I never was a believer in high protection, I am convinced that from the standpoint of the farmer, labouring man, manufacturer or anyone else in this Dominion, we should at once, faced with that condition, have revised our tariff and made it so as to fit conditions as they were.

This is the condition that faces us. Our buying power is reduced. The buying power of all the nations of the world is reduced. They are buying only the things they must, of necessity, buy. There can be only one result.

11 p.m.

We must curtail our expenditure, reduce many of our activities and live, as far as possible, within ourselves. Surely, when buying power is low, when men are out of jobs, it is not a practical policy to go to a foreign nation and buy goods that we could produce ourselves. I do not propose to deal with the tariff as it affects a particular individual or class. I contend that whatever policy we put into force should be one for the general benefit of Canada.

In addition to conditions which I have described, we have a system of national railways besides the great railway system of the Canadian Pacific. These, with their branch lines, form three great lines, running east and west across this country. That is, the money of the people of Canada is invested in railway lines running east and west. With the enormous debt that that entails, there are created fixed charges which must be met by the people of the Dominion and the only way in which those fixed charges can be reduced and the railway deficits removed is to keep those railways busy. We have a tremendous national debt which, as I have shown, amounts to about $2,500,000,000, which also involves an enormous fixed charge in the way of interest. The only method by which that can be carried by the people of this Dominion without an undue burden is to enlarge and invigorate our commercial interests in Canada, to increase the volume of business that is done. Any other system is bound to be ruinous. With conditions such as these, with our money invested in railways and with our tremendous national debt, both of which entail enormous fixed charges against us, the only way in which we can get out of such a situation is to reduce overhead so that we can carry the burden without its resting too heavily upon us. To do this we must have increased population and employment for our people, and our farmers and employees in our factories must be producing sufficient to carry the load.

Another reason why a protective tariff is absolutely essential to the Dominion is this. For 3,000 miles we are alongside a neighbour upon which, whether we like it or not, we are dependent for certain conditions. A certain scale of wages is in effect over there, for example, the McAdoo award in regard to wages of railway employees, and whether we

like it or not we are forced to accept the same scale of wages in Canada. If not, if wages are lower on any particular line in Canada than they are on the corresponding line in the United States, it is very easy for our workers to walk across the border, and with the conditions that we have had during the last few years that is just what has happened, to the great detriment of this country, We deliberately adopted the policy which encouraged greater importations from the United States, with the result that our workmen have had to go over there to get a job. This is axiomatic, I think, and incontrovertible: whereever the nation sends its money, there its sons and daughters are bound to go. This is inevitable. If our money goes to the United States or to any other country to build up industries there, your sons and daughters must go there to get work. There is no escape from it. It may not be pleasant, but it is true nevertheless. As an illustration, I might mention something that was made a great deal of some years ago when the Farmers' party first had its rise, although I do not hear so much about it to-day, and I rather think the idea has been exploded—a great deal was said about the depopulation of the farms and the rural people drifting into the large urban centres. Years ago when there was a far greater proportion of our population in the country, a great many of our farmers were obliged to meet their requirements by their own handiwork, and what they failed in so supplying they obtained from the corner store, their money being spent at home as far as possible. To-day how many farm houses will you go into throughout Ontario and Quebec where you will not find Eaton's or Simpson's catalogue in a prominent place? The people are sending their money to Toronto and the other big centres to furnish their requirements. I am not finding fault with this but again my axiom applies: If your money goes to any of these large centres, your sons and daughters must go there to get their living and in an even greater degree, the same holds true when we send our money to a foreign country.

Now, as I said, we are dependent on the United States, in that whatever fiscal system they adopt we are forced in self defence to adopt something similar, otherwise ruin stares us in the face. Now, does anyone think that, forced as we are to pay wages on the same scale that obtains in the United States, we can manufacture goods to compete with the cheap labour of Europe? We cannot do so. With our high overhead, therefore, we need protection from cheap foreign labour to hold our own. Now, as I said, the government in my judgment adopted an entirely wrong policy at a most critical time in the history of Canada. When the national sickness was acute they neglected their patient at the very time when a stimulant should have been administered they resorted to bleeding. Why, Mr. Speaker, my hon. friends from the west and also some of their party from Ontario—I believe they are entirely sincere—conceived the idea that because something was wrong with the body politic it must be the tariff, and that therefore it should be done away with. They demanded free trade, and because their platform coincided almost word for word with the one adopted by the Liberal party before they came into power, in order to secure sufficient votes to continue in office the government went a little way —and I think against their better judgment— in the reduction of the tariff. This has resulted in the closing down of factories, unemployment, emigration to the United States, and a loss of revenue to the tune of $52,800,000. I should like to know whether one man or one class has received any benefit from that policy. I know the whip of the Progressive party (Mr. Johnston) said that the agricultural people had. That is a business which I know a great deal about for I was raised on the farm and have farmed all my life, consequently I am familiar with the purchase of agricultural implements and of all other things necessary to equip a farm. I remember that about twenty-five years ago when the duty on agricultural implements was 20 per cent we had the cheapest implements in the history of the country. I do not say that the tariff was the only reason for their cheapness. My point is that the application of a customs tariff does not always increase the price to the consumer of the article protected, and I think it is very easy for hon. members to prove that to their own satisfaction. When a high duty was imposed on our cattle by the United States tariff, where did the complaint come from? It came from our western farmers who desired to ship their cattle across the line, and they complained that they were shut out from the American market. It was true; we were the ones that suffered, not the consumers in the United States. Now we had a most substantial reduction in the tariff on agricultural implements. What was the result? In order to enable the implement makers to break even they were given their raw material practically free of duty, with the result that the factories that supplied that raw material are to-day out of business or working half time. The result to them has been disastrous. Now, who benefited? Figures have been given, and no one disputed them, that the price of

agricultural implements, save for the reduction of the sales tax—and even then the full amount was not given—has not been decreased.

Mr. McKAY: Mr. Speaker, I should like to ask the hon. member if he has read the report of an agricultural commission appointed by the Ontario government in 1924 on the prices of agricultural implements?

Mr. STANSELL: I have not the report before me.

Mr. McKAY: My hon. friend will find—

Mr. STANSELL: What is your question?

Mr. McKAY: The Massey-Harris Company made a report to this commission that on twelve farm implements there has been a reduction of $57.55, and the Cockshutt Plow Company report that on fourteen agricultural implements there has been a reduction of $295.75. My hon. friend can have the report. It was published a few days ago.

Mr. STANSELL: I have not read the report as the hon. member gives it, and without knowing anything about it I am unable to answer his question. But the very best statement I have heard on the point was that made by the whip of the Progressive party, that one implement, a binder, had been reduced by $15.

Mr. McKAY: There is information on all agricultural implements.

Mr. STANSELL: That reduction represents just exactly the sales tax and no more, and in the case, just cited, of twelve implements with reduction of $57 the same is true. I am not speaking of the removal of the sales tax. I say that the reduced price of farm implements due to the reduction of the tariff has not materialized, and therefore the farmer has not benefited. But even if it had materialized, there is another article of manufacture which in my family represents a substantial expenditure, that is boots and shoes. Some hon. members desired a reduced tariff on boots and shoes; they did not get it; there was a reduction of the sales tax I believe. There is a very high duty on boots and shoes compared to implements, but what I am concerned about is the actual price paid by the purchaser of these goods when he goes to the retail store. I have found by actual experience that I am buying boots and shoes at a greater proportionate reduction now than I am buying agricultural implements at, and yet the customs tariff has not been reduced. I find by a study of Eaton's spring catalogues for 1924 and 1925— and I think most hon. members will agree that this is pretty good authority—I find that on about half a dozen lines, such as shoes for men, boots for lumbermen and labouring men, and ladies' shoes, there is a reduction in the prices I am paying of from 11 to 16 per cent, and the same holds true in the retail stores. So that substantially the consumer has enjoyed a greater advantage in the reduction of the price of boots and shoes, on which there was no reduction of tariff, than he has received in respect of agricultural implements, on which the tariff is nearly all taken away. In addition to that, as I have said, manufacturers of raw material have suffered very seriously.

Another thing we have heard a great deal about is fertilizer, concerning which figures were given the other night. It had been shown that there was a widespread demand that fertilizer be placed on the free list, and when action was taken in response to that demand the result was that most of the factories ceased operation, and if I wished to buy fertilizer this year I would pay more for it than I did a year ago. Again I say, who got any benefit? The country lost $52,000,000 in revenue; the labourer lost his job; the capital invested in industry was either greatly depreciated or lost and no one got any substantial benefit.

Some statements were made to-night by the hon. member for North Huron (Mr. King), to which I wish at this stage to make reference. I give the hon. gentleman credit for presenting figures that were correct; I have no reason to dispute them. I also give him credit for being absolutely sincere in the deductions he drew from those figures. But in my judgment, and I am sure in the judgment of this House, he was entirely wrong in his conclusions. The figures had reference to the comparative protection in Canada and the United States, and he showed that Canada was very much more highly protected than the United States because Canada collected more per capita in customs taxation than the United States did. Well, the facts are so clear that I am surprised that the hon. member did not understand the situation. I will try to point out what the real condition is. In many lines of goods the United States tariff is twice or three times as high as ours, so high that it is almost prohibitive and outside goods are largely shut out; therefore the people of the United States buy home manufactured goods. If that is a desirable condition, then I say let us try the same thing in Canada.

Mr. HODGINS: How do they collect such a large amount of duty if the goods are shut out?

Mr. STANSELL: Goods are not entirely shut out because they certainly collect quite a lot, but if their tariff was higher they would collect less. The fact remains that they collect less than we do per capita because they have their tariff so high that it shuts out very many lines. I do not say it shuts out everything, but it keeps out so much that they are not paying as much as we are per capita in customs duties. Our tariff is so low that we are being encouraged to buy from foreign countries. The result is that in the last ten years we have had an unfavourable trade balance with the United States amounting to about $2,000,000,000. I know it is a favourite argument of hon. gentlemen to my left—and they are perfectly sincere—that if you sell you must buy; that there must be international trade. That is true, but it does not mean that you must buy things that you can produce at home. If a farmer operated on such a system as that there would only be one place for him and that is the poor house. Let me point out that you can buy a bank balance; you can buy life insurance; you can buy a competence for old age, just as you can buy potatoes, eggs, butter and other things of that kind. It is the part of wisdom for every farmer to sell those things that he can produce and sell at a profit and to buy only those things that he cannot advantageously produce himself, and, as far as possible, to secure for himself some of the comforts in the way of insurance, a competency for old age or a bank balance.

What have we been doing in respect to our trade with the United States? We have had an adverse balance of $2,000,000,000 in ten years; what have we done to offset that? We have gone over there and borrowed money. Had we not followed that system of borrowing money our dollar would be very much below par to-day. The borrowing carried out by the Minister of Finance on the New York market did much to stabilize the value of the dollar, but it does not justify our purchasing in the United States goods that we could produce at home, nor does it justify an adverse trade balance with the United States from year to year. So long as we do that we are encouraging the United States to take a mortgage on Canada's future to the extent to which we allow that adverse trade balance to accrue.

I know that to some the word "protection" has a disagreeable sound. But protection is a very good thing when it is applied to insurance against fire; it is a very good thing as applied to the home. It costs something, but we think we should have it. National protection is just as vital to the nation as home protection is to the home, and the quicker we Canadians realize this and institute a proper national policy, the better it will be for us. We do not believe that adequate protection can do everything; there are many other factors that must be taken into consideration. But we must view all these questions in a national way. We must practise some real national unity instead of just talking about it; and one of the first essentials is so to protect ourselves that so far as possible we can supply our own labourers with a job and not force them to go to the United States to get the employment they should get here.

Somebody will ask me right away, how can protection be of any benefit to the farmer? Well, I am advocating it, and I am a farmer; I think it is of some benefit. I will admit for the sake of argument that it may not appeal quite so much to the western farmers as it does to the farmers of Ontario. But should Canada's immigration increase, her population be augmented and her factories start to operate at full time as the result of the application of sound policies, I will trust the farmers of Ontario and of Canada as a whole to get their share of that prosperity. Anyone who thinks that the general enhanced prosperity will be of no benefit to the farmer is sadly mistaken. When the men have employment, when the factories are running full time; when development has taken place in our mines and our other resources, a buying power is created; a market is opened up for milk, cheese, butter, eggs, wheat and everything the farmer produces, and there will be no doubt about whether such a condition will benefit the farmer.

I am sorry the hon. member for North Huron (Mr. King) was not in his seat when I was answering his argument about customs duties in Canada and the United States. At the risk of repetition I should just like to make the point again. He said that protection was higher in Canada than in the United States because less was collected in the United States by way of customs duties than in Canada.

Mr. KING (Huron): I stated that it cost more per capita in Canada for protection than it did in the United States.

Mr. STANSELL: Yes, there is no misunderstanding. The reason for that is this: We have not nearly so high a rate of protection or of customs duties as they have, and the result is we are continually buying from foreign countries. But with the Americans

the rate in many cases is so high that with the exception of goods which they simply must have, they produce their requirements within their own country, and do not import. Therefore the rate of customs duties is not so high per capita because in many cases the tariff is almost prohibitive. If ours was equally as high, the result would be the same. If that is a happy result, we can obtain it in the same way that they do.

Mr. HALBERT: The hon. member said a few minutes ago that if the farmers bought away from home what they could produce at home for themselves, they would soon land in the poorhouse. Now is it not a fact that over ninety per cent of the farmers to-day are buying their butter instead of making it at home, because they can get it cheaper? It works the same way with implements or anything else.

Mr. STANSELL: That does not at all conflict with the statement I made. I said that the farmer who deliberately adopts the policy of buying to the amount of what he sells, could buy other things such as life insurance and provide for his old age. I said that it was better to produce a little more at home than to follow the mistaken policy that you must purchase an equal amount with what you sell. As to the question of butter, I am not quite prepared to accept my hon. friend's statement as correct. In fact, a great many of us manufacture our own butter because we like it made at home; we think it just a little better than we can get anywhere else. I do not think it would do any harm if a great many more of the farmers followed that policy.

There is one other remark made by the hon. member for North Huron (Mr. King) to which I wish to call attention, and that is with regard to some cattle, some five or seven I forget the exact number, which had been marketed, he said, and brought only $57. The farmer claimed that that showed something was wrong. Something certainly is, and I will tell you what it is. I am going to take an illustration from the Farmers Advocate, which I am sure all my Progressive friends will consider a reliable journal. It refers to conditions in Alberta, which will be much more fair for the purposes of argument than if I cited an Ontario case. It says that a farmer marketed twenty-five steers on the St. Boniface or Winnipeg market and received $3,522 for them. Now with conditions as bad as we have been told about, these steers brought about $133 each. They brought $7.35 per hundred pounds on the Winnipeg market. If they had been sold on the Toronto market they would have brought $475 more, or nearly $4,000, and that in spite of the conditions which we are told are so bad.

Mr. BRETHEN: What would their value be on the Chicago market at the price quoted by the hon. member for North Huron (Mr. King)?

Mr. STANSELL: I do not know. I am only answering the exact statement that was made. I am not prepared at the moment to look up the Chicago quotations.

Mr. BRETHEN: A few moments ago the hon. member made the statement that the American consumer did not suffer any by the high tariff against Canada. Now the hon. member for North Huron quoted figures showing that on the Toronto market cattle had been sold for $8; on the Winnipeg market for $6, and on the Chicago market for $12 per hundred. Does the hon. member say that the United States consumer did not suffer by the difference?

Mr. STANSELL: I would have to know whether they were exactly the same class of cattle sold in each case. I was simply taking the statement made by the hon. member for North Huron as to the unsatisfactory returns cattle raisers were receiving. He said that five or seven cattle, I forget the exact number, had been sold for $57. I am pointing out that at the very same time another farmer sold 25 cattle for $3,500, and that he could have obtained nearly $4,000 for those 25 cattle on the Toronto market. The reason is that one man shipped first-class cattle, and the other did not. The man who shipped first-class cattle, in spite of the fact that conditions are not as good as we would like to see them, received a good return. The other man shipped half a dozen cattle and got about $10 apiece for them. I never saw the cattle in question, but they could not have been fit for market or they would have brought more money. There is one lesson to be drawn from this. Just as our manufacturers, if they want to get a good price, must produce good goods, so the farmers, if they want to get a good price for their cattle or their butter or any other of their products, must produce a good article. While prices are not as high as I would like to see them, I believe that the farmer has passed the worst turn, and that things are bound to improve a little bit from the farmer's standpoint. Conditions are not so bad after all when we find prices like this being paid. This is not a specially prepared case, but is just an ordinary statement referring to Alberta cattle shipped and sold on the St. Boniface market.

Therefore the one thing necessary is for us to adopt a policy of Canada first. Surely it is our duty to look after our own nation, rather than look after the American nation or any other nation in the world, and until we do, Canada will not have the prosperity that she is entitled to and that she needs. I do not admit for one moment that an increase of customs tariff must mean an increase in the price. What we do want is a job for our workmen and lower costs, but we shall never get that happy result if we always send to some other country for the things we might very well produce at home. Let us as members of this House and as citizens of this great country, with the resources we hear so much about, forget some of the little things and get busy on a national policy, practise national economy, and work for national unity.

I sympathize very much with the aims of hon. members to my left, and I was glad to hear the prophecy of the hon. member to whom I have just referred as to the length of time the Progressive party will live. I hope it will live a great length of time, and that its present leader will lead it providing he adopts a sound fiscal policy, for I believe he is sincere. Undoubtedly the hon. member for Brandon honestly desires the welfare of all Canada but he is on the wrong track, the policies he would like to put in force are mistaken ones; and I would urge him and his followers to consider seriously this question in the light of national necessities, and see if there is not something else that the Dominion of Canada wants at the present time rather than a reduction of the tariff. I have a high opinion of the party to my left and of their leader, but they are mistaken in their policies, I firmly believe. They are riding on a political New York Central and are travelling in a circle. Let them all get on the Canadian National line and get somewhere.

Mr. R. M. GENDRON (Wright) (Translation): Mr. Speaker, it is with pleasure that I rise to briefly comment upon the budget which is, at present, being discussed in the House. I wish at the outset to congratulate the hon. Acting Minister of Finance (Mr. Robb). Let me assure him that the budget which he brought down has the hearty approval of the people of my county, and it is very favourably looked upon by the farmers and consumers, as well as by the lumbermen, for it shows hardly no change from the budget of last year.

I do not intend, Sir, to thresh out the whole subject in hand. I shall limit myself to questions which particularly affect the county I represent; I shall speak of the Gatineau valley, that beautiful part of my district which is almost all comprised in the county of Wright.

The Gatineau river district is rich in natural resources as yet undeveloped. I think it is proper to point out to the House the number and value of its water powers, which could, if they were developed, produce electric power in abundance and feed a number of mills as well as supply power within quite a large radius, including the city of Ottawa. Its shores are covered with forests, rich in pulpwood and lumber of which it is difficult to give an estimate. Unfortunately capital is needed to take advantage of this natural wealth and properly open up this beautiful valley. If our water powers were exploited, to establish pulp mills, for instance, we could manufacture on the spot our pulpwood, convert it into pulp or paper, instead of exporting the raw material to the United States as it is done to-day, we could thus create a number of industrial centres, where the farmer could market with profit his farm products, as well as his pulpwood.

Allow me, Sir, to dwell a few moments on our immigration problem. It is a question of the utmost importance to Canada. I wish to draw the attention of the hon. Minister of Immigration (Mr.Robb) to the fact that there exists on the Gatineau river a locality which would lend itself admirably to the establishment of settlers; I mean Maniwaki. There is in that part of the country an Indian reserve of considerable extent, containing excellent lands upon which live about sixty Indian families. This reserve should be thrown open to settlers, not only to Indians, but also to Canadians, both French and English, who would take advantage of such a measure to settle in that locality. I point this out so as to convince the hon. Minister of Immigration that a great number of Canadians returning from the United States could settle in my county and thereby increase the population as well as the revenues—this would be of great import to my region. As my hon. friend, the member for Muskoka (Mr. Hammell) stated last session, also this session, we have in the Gatineau valley, a very attractive resort for tourists who are fond of hunting and fishing, also for those who love the forest, these parts are very healthy; the greatest impediment to the travelling tourist comes from the country roads, or what is known as the Ottawa road, which is entirely unfit for automobiles. I trust that with the Dominion

government's help, acting in concert with the local government and the municipalities, we shall soon have good roads—a very urgent need for that part of the country.

Mr. Speaker, it is a pressing matter that the government should build a post office in the village of Maniwaki, where I reside; it is an important question which should be given immediate consideration. This village is now divided into two parts, and to accommodate the public, we must have a post office in the centre of the village. I have already placed this request before the Minister of Public Works (Mr. King), and the matter was laid aside for the present, as a measure of economy. I quite realize that we should practise economy to a certain extent, but we must not neglect legitimate and necessary needs. My request is reasonable and justified and I trust that it will be granted as soon as possible.

Mr. Speaker, I wish to make a few remarks upon a question which I hope will be given some consideration. The northern part of the Gatineau valley comprises a few townships, and an unsurveyed track of land; in the proximity of said townships, there exists an ideal spot for a national park. Game is plentiful; we find the moose, the deer and all fur animals in great numbers. The beautiful lakes which adorn this territory are filled with fish, and as the city of Ottawa will one day become a large centre, I trust that my hopes will materialize and the erection of a national park in this region will bring forth to the Gatineau valley, the cities of Ottawa and Hull and their surroundings, a considerable revenue accruing from the United States tourists.

I wish to express my views on a most important matter which concerns my county, the question of the pulpwood embargo. I see no need, at present, to adopt this measure. The settlers who happen to have a few cords of pulpwood should have the right of selling it wherever they think fit, and at the best price possible. The notion we have about the country being denuded of pulpwood within a few years, is a false one. What constitutes the real problem, are the forest fires which destroy, each year, far more wood than what is sold. I would suggest to the government that they help the provinces to prevent and fight the forest fires, and that they lay aside the question of embargo, or the levy of duties on the exportation of pulpwood. I have a full knowledge of this question as I have been in the business all my life. Let us protect our forests against fire, let us use precautions when chopping down the trees, and we shall have wood for a long time to come; future generations will benefit from it just like the present generation.

Mr. J. J. THURSTON (Victoria, Ont.): Mr. Speaker, I am sorry that I am unable to make any comment on the speech of the hon. gentleman (Mr. Gendron) who has just preceded me. I would be in a better position to do so in two or three days' time when I had the translation before me.

As the House is enjoying what might be termed its semi-annual talk-fest, and feeling that I have in the last three years established the record of one who would rather see a little action and a few results than the placing of a jumble of words on our records, I may be permitted to occupy a few minutes of the time of the House in offering one or two suggestions that, possibly, may be of some worth, although I have my doubts as to whether they will be adopted very readily by the House. I am convinced after spending three sessions in this chamber that if a messenger were sent down from the realms above with a message of advice to this House, if it were found out that he was a Liberal we could be assured the Conservatives would oppose anything he would suggest; if he were a Conservative the Liberals would readily oppose anything he might bring forward; and if he were a Progressive which would be almost sure to be the case, he would be certain to be opposed by both the old parties. In spite of that I am going to take up a few minutes in submitting my views.

Theoretically, we are debating at this time the amendment to the budget proposed by the ex-Minister of Finance (Sir Henry Drayton), although I think it will be generally agreed that practically all the discussion so far has been on the budget itself. I propose to vote against the adoption of the present budget, not so much on account of the budget itself as of the proposal to establish a tariff board which has been advanced by the Acting Minister of Finance (Mr. Robb). I do not think it is necessary for me to repeat the reasons that have been given by other hon. members as to why the establishment of such a board should be opposed excepting to say this: Until we first agree in the House and in the country as to what the fiscal policy of Canada should be we are making a move in the dark in establishing that board. The board should first be instructed as to what action we want it to take, or what goal we wish it to head for.

I also propose to oppose the amendment of the ex-Minister of Finance. I can hardly give reasons why I should oppose it any

more than I could give reasons why I should support it, beyond stating that there is absolutely nothing to it—it is a mere jumble of words. This year's budget to my mind, after learning what I have been able to learn of the history of the Liberal party, is in no sense a credit to a Liberal government. To my mind it is a protectionist budget, and there are very few changes in it. The reason for some of those changes I do not know, unless they were included in order to take up space. One item in the budget imposes a tax of six cents on gas, but on looking up the trade returns I have not been able to find that we import any. I do not know, therefore, what this item was inserted for unless it was to make the budget look a little larger.

Last year when I made a few remarks on the budget I predicted that Liberals throughout the Dominion—those who had for years back been Liberals and knew why they were or thought they knew,—would be delighted with it; that their hopes which had been deadened—and you could not blame them for feeling that way—would be revived, and that they were justified in thinking, at least, that a true Liberal party had come into being. I submit that I was correct in making that prophecy; and the visits of the Prime Minister to points throughout the Dominion during the recess must have shown to him that the people appreciated a budget which was Liberal in character However, I predict now that the present budget is going to have a very strong tendency towards killing the revived hopes of the old Liberals, and that there will be a falling off of Liberal stock throughout the Dominion, particularly in the province of Ontario. The falling off in Liberal stock will be something similar to the falling off in Conservative stock owing to the action of the present Prime Minister (Mr. Ferguson), in promising at one time to enact certain legislation and then turning right-about-face and enacting legislation altogether contrary to the express wish of the people after spending upwards of a million dollars to find out what that wish was. I think I would be quite justified in predicting to-day that if the Ferguson-Nickle aggregation made an appeal to the province of Ontario for re-election it would be defeated. This action of the present government in killing by this budget the revived hopes of the Liberal party throughout Canada is going to have a very harmful effect on the country. It is going to increase the lack of confidence which the electors are beginning to feel in general in our governments. This is most regrettable. That lack of confidence, particularly in the two old parties, is very great, and we cannot well afford to do anything that will increase it, because we come to a very dangerous position if we ever reach the stage where the people themselves have no confidence in any government, and that is where we are rapidly travelling by playing fast and loose with our promises to the electors.

I propose to make a few remarks in connection with the amendment offered by the ex-Minister of Finance. As I said it is nothing more or less than a jumble of words. It is a joke really, and I do not know why the Conservative party, which has claimed for years to have been protectionist, and to have believed in protection and higher protection all the time, should neglect to state their belief at the present time, and I take the amendment introduced by the ex-Minister of Finance as expressing the thought of the Conservative party. They formulate their objections by saying that they do not agree with the financial statement. The hon. member for Vancouver Centre (Mr. Stevens) when he was speaking gave the House the inference that it was quite customary for governments previous to elections to bring in what might be termed padded statements to the House, or to give padded financial statements to the country. Then again the Minister of the Interior (Mr. Stewart, Argenteuil) presented a statement as coming from the officials of the department who have prepared every financial statement for years, and said that the statement this year contained conclusions arrived at by the same method as all previous statements. I suggest, Mr. Speaker, that until such time as the official opposition give proof that the Minister of the Interior was wrong in his statement, they have absolutely no justification at all in opposing the present budget.

In spite of the fact that the official opposition neglected stating in the amendment their belief in protection, I think we are justified in coming to the conclusion, from the remarks of the different hon. members of that group who have spoken, that they still believe in protection. I am not going to debate the rights and wrongs of protection and free trade, and so on, but I think the time has arrived when the House and the people of the Dominion as a whole might rightly ask themselves the question, what is meant by protection? I am satisfied if the House and the country as a whole once paused to consider just what was meant by protection, and came to the conclusion that they would be forced to come to, they would forever refuse to have anything to do

with it. I should like to ask first why do certain individuals or individual companies appeal to the government from time to time for protection? From what do they wish to be protected? Is it on account of our rather severe winters, or because we have cold winds, that they want us to erect a windbreak to shelter them? Is that the protection they desire, or just what is it? I submit that after studying the tariff policy or the tariff schedule which we have at the present time one is convinced that what is really meant by protection, or an appeal for protection, is nothing else than a request for financial assistance that an individual or a firm makes. If that is the case, if it is financial assistance that some individual or corporation is asking from the government, where does the government get this financial assistance or bonus the companies want? The reply can only be, "from the pockets of the taxpayers of the country." If the people throughout the Dominion would for a few moments consider what is meant by protection and what the result of it is they would forever turn down the protective policy as a fiscal policy for our Dominion. I would also suggest that it would be only fair and honest for those who believe in protection and use it as their platform, to state clearly to the public that they propose to levy taxes on all the people for the sake of giving assistance to some individuals. If they will do that at the next election—and I hardly think they will—I will be glad to meet them in any constituency—I do not care whether it is in the heart of Montreal or Toronto—and debate the question. I would be particularly pleased to meet them in my own constituency, and I would face the electors at any time to discuss the question as to whether we should increase the taxation on all of them for the benefit of a few, who possibly did not live in the constituency at all.

I dislike prolonging this discussion, which I might say is not a debate, but simply a talk-fest. However, if I were permitted to enter again into the realms of prophecy, I would predict that the adoption of a protectionist policy at this time by the Liberal government, and the failure of the old Conservative party to mention their protectionist principles in the amendment, simply mean that within twenty to twenty-five years from now there will be no such thing as a Conservative party in existence. The Liberals, through the actions of the present government, are rapidly winning the goodwill of the protectionist interests throughout the country. The Progressives, through their determined and continued action are rapidly winning the support of the low tariff or tariff for revenue people throughout the country, so that twenty years from now the Liberals will be the only protectionist party in the Dominion, and the Progressives the only party in this House or in the country advocating a tariff for revenue only or free trade. My reason for coming to this conclusion is that the protectionist organizations throughout Canada, which are beyond question composed of very shrewd people, are already seeing the folly of having their forces divided, and they are naturally going to abandon the weaker party. That, I think, is conceded by everyone throughout the Dominion to-day to be the Conservative party.

Some hon. MEMBERS: Oh, oh.

Mr. THURSTON: It is conceded that the weaker party of the two protectionist parties is the Conservative party on account of the extremely distasteful record of the last administration. That was established by the Canadian people at the last general election. Therefore, the protectionist organizations are going to give their assistance to the Liberal party, and that will cause the dissappearance of the Conservative party altogether.

Some hon. MEMBERS: Oh, oh.

Mr. THURSTON: I am glad that my prediction seems to be received in such a favourable frame of mind by so many hon. members. There is in the amendment moved by the ex-Minister of Finance (Sir Henry Drayton) nothing in connection with protection and very little else. There was given to the House one thought which I claim is worthy of some consideration. This thought was not stressed very strongly by the ex-Minister of Finance in his remarks, but when I was talking to him afterwards he told me that it was really his main reason for speaking. It was: With our present system and scale of managing our country's finances, where is Canada going? That is a question that every Canadian citizen from the Atlantic to the Pacific to-day is justified in asking himself. I have thought of it at different times in the last few years, and I want to give to the House just a few figures, to let the House consider for a few moments what they mean and then to ask themselves: Where is Canada going? The figures are as follows:

Year	Population of Canada	National debt
1870..	3,454,000	$115,993,706
1880..	4,215,000	194,634,441
1890..	4,793,000	286,112,295
1900..	5,322,000	346,206,980
1910..	6,917,000	470,633,046
1915..	7,862,078	700,473,814
1922..	8,966,834	2,902,347,137

These figures are taken from the Canada Year Book of 1922-23. They show that from the year 1870 to the year 1915 our population increased by 4,480,078, but our national debt increased by $584,480,108. That is before the debt of the war was added on to our national debt. I would ask hon. members and the country at large: Taking this record from 1870 to 1915, where is Canada going? We must admit that at our present scale of managing our country's finances, we are rapidly, yes too rapidly, heading for national bankruptcy. It has been stated to me by different Canadians, by some members of parliament, particularly of the two old parties, that what we need in this House is a good strong government of either of the two old parties; that we have not a strong enough government at the present time, and so on. I would submit that the record which I have just read is nothing other than the record of the two old parties and admittedly strong parties in the past. Therefore, when either of them, in this House or on public platforms throughout the country, criticize the other on account of our low population and our great national debt, we can fittingly ask them why they did not do something when they were in office to remedy conditions. Both of them, to my mind, have failed.

If we, in considering the statistics that I have just given, are in any way, shape or form Canadians, we must ask ourselves: Why is the present situation in Canada such as it is? In doing so, the first thing we must ask ourselves is: Who are the Canadian people? If we look back as to who our forefathers were, is it right that we should make such a failure in managing our country's business, our public affairs as we have done? If we stop to ask ourselves who we

12 m. Canadian people are, we must admit that in making the failure that we have made, we have proven ourselves false to the trust that our ancestors placed in us in giving us the heritage that they did to manage, also false to our children and children's children that are to follow after us. When we ask ourselves who the Canadian people are, we must admit that if we were true to those old ancestors, we would have made a success of it instead of a failure. Our forefathers came from the British Isles and France, the leading countries of the world at the time. It was well known that none but the strongest need attempt the trip, for it took from ten to twenty weeks to cross the Atlantic in those days. We also know that the physically strong class of citizens are generally the strongest mentally, whatever nationality they belong to. Along with this hardy type we have a climate that has a tendency to develop the very best traits of any race. When we consider these facts we are puzzled to know just why it is that in the past we have made a failure in the handling of our public affairs. I would offer this suggestion for the consideration of our people, that the reason for this failure is that we have never tried to manage our public affairs; on the contrary; we have devoted practically all our energies to advance the interests of either one party or the other to the neglect of the national interests. I am going to give a few illustrations in support of this suggestion which I think will prove to the House and to the country wherein we have made these blunders. It has been customary in our financing to float a loan either in the foreign or domestic money market for, we will say, a hundred million dollars, repayable in ten, twenty or thirty years, as the case may be, but with absolutely no provision to meet that repayment when it becomes due; on the contrary, later on we simply borrow another hundred million dollars to refund the former loan. So long as we continue that practice we are bound to get more and more in debt. I do not know why we follow that improvident practice, for it is absolutely contrary to the practice followed by private individuals in managing their own affairs. For instance, a farmer will borrow $5,000, and there is incorporated in the mortgage the option of paying off a certain amount of the principal periodically so that at the end of the mortgage term he has not only paid his interest but the principal as well. If he did not do this he would in a very short time be at the point of bankruptcy. Therefore I would suggest that if Canada continues floating loans without making provision for their repayment at maturity, we are bound to become more and more involved financially.

Another thought I would express is this. In the past it has been frequently the practice to build public works that were not absolutely necessary but were undertaken in the interests of whichever party happened to be in office. Let me give a few illustrations. About two years ago the present government brought down an estimate for the erection of an elevator at Halifax. I think it was pretty generally felt at the time that the elevator was not needed, for we were not utilizing all the local elevator space that was then available. But there was to be a by-election down there, and I think everyone was firmly convinced that this vote was for the purpose of helping to elect a supporter of the government. I do not think we need concern ourselves very much whether the vote accom-

plished the purpose which the government had in view but the very fact that the vote was passed increased our debt by that amount.

Mr. MACDONALD (Pictou): Will my hon. friend permit a question? Does he believe that our national ports should not be equipped with decent facilities?

Mr. THURSTON: I have no objection at all to their being equipped with, I think the minister said, decent facilities; but I do object to their being cluttered up with too many "decent facilities."

Mr. MACDONALD (Pictou): Does my hon. friend not know that Sir Henry Thornton recommended that this elevator should be constructed? And Sir Henry ought to know.

Mr. THURSTON: I am not aware that Sir Henry Thornton recommended it, but I think the charges made in the House at the time by the official opposition that the vote was put forward for election purposes was not very successfully refuted by the government.

Mr. MACDONALD (Pictou): My hon. friend cannot escape in that way What does he say to the proposition: If Sir Henry Thornton did recommend this elevator, is it not self-evident that it was necessary?

Mr. THURSTON: I am not worrying whether Sir Henry Thornton recommended it or not. Has that elevator space been used?

Mr. MACDONALD (Pictou): The elevator is in course of construction.

Mr. THURSTON: Is the present elevator space all utilized now?

Mr. MACDONALD (Pictou): The present elevator space does not reach the terminals which were constructed there some years ago, and it was absolutely necessary to build this elevator.

Sir HENRY DRAYTON: Is that a speech?

Mr. MACDONALD (Pictou): I am answering a question.

Sir HENRY DRAYTON: It is incorrectly answered.

Mr. MACDONALD (Pictou): Do not worry. I have not made very many speeches.

Mr. THURSTON: In spite of what the minister states, I think it was generally felt in the House and in the country that that vote was not altogether necessary. But I am going to leave that vote. It does not matter for the moment whether the elevator was necessary or not, but it cannot be denied that the national debt was increased by the amount of that vote. I think it was also clearly established during this parliament that a few years ago the late administration sponsored a vote for the building of a dry dock at Victoria, British Columbia. I think the public generally at that time knew that a dry dock should not be built at Victoria, that if any were needed on the coast it should be built on the mainland.

Mr. DICKIE: No dry dock has been built at Victoria.

Mr. THURSTON: Would the hon. member tell me whether any money was spent on the building of a dry dock or the purchase of a site for one? I think the records will show that a vote was passed for the building of a dry dock on Vancouver island. In spite of what the hon. member says, it was believed by the whole country and by this House that the main purpose of that vote was to assist the government in electing its supporter in the by-election which was then about to take place. We know this has been the practice for years past. What was the Grand Trunk Pacific but a political football? The Trent valley canal was another, the Hudson Bay railway was another, the Lindsay arsenal was another. We have had scores of such cases throughout the country.

Mr. GRAHAM: Would you like us to shut up the Trent canal?

Mr. THURSTON: It cannot be shut up. The point I am making is this: that ever since confederation there have been schemes such as I have mentioned—votes passed in this House involving the expenditure of huge sums, nothing more or less than for political purposes, but with resulting increases in our national debt. I do not blame parliament for doing it; I do not blame the government of the day, but I do blame the Canadian people for falling for these bribes. The Canadian people are or should be recognized as shrewd, cautious and careful, yet they have accepted these bribes every time. Why do they do it? Why are they bribed in this way? The only conclusion we can come to is that the Canadian people have been schooled to think that the money that is in the public treasury does not cost anything; that it belongs to someone other than themselves. I do not know whether they think it came out of the air, but the feeling seems to be that if they can get the government to spend money they need have no concern about how it is going to be paid back. It is the duty of every elected representative of the people, I care not whether in the federal parliament, in provincial legislatures or in municipal councils, to emphasize

this point to his constituents; to impress upon them the fact that every dollar that is taken out of the public treasury must be replaced by the people themselves. If the citizens at large knew that and felt it, there would be a great deal less expenditure by all our governments from the municipal councils up. I am satisfied, Mr. Speaker, that it will be years before we accomplish this, but the idea will, I am sure, be encouraged by members of parliament and will be dwelt upon at the next general election.

We had the remarks of the Minister of Agriculture (Mr. Motherwell) the other night in connection with the Hudson Bay railway. He was very careful to leave himself several tracks to get out on when he gets on the different platforms throughout the western constituencies.

Mr. MOTHERWELL: What was the matter with the statement I made?

Mr. THURSTON: Nothing at all—that is the trouble. In the constituency of Victoria, Ont., it is being stated by my opponents just now that I was the means of closing up the Lindsay arsenal when as a matter of fact it was closed a year before I was elected. I did not know I was so influential. They are stating also that if the Conservative government is elected the Lindsay arsenal will be run as an arsenal again, full blast. I would like to ask the ex-Minister of Finance (Sir Henry Drayton) whether he would not be willing to make the statement officially and give these people some authority for it. Will he not say that the Quebec arsenal will be closed and the Lindsay arsenal opened? I never favoured the operation of the Lindsay arsenal as such and I never will. In the first place, we do not need it at all. In the next place, if it is to be run as an arsenal to comply with the British North America Act it will require another half million dollars to rebuild it. It is not built to comply with the British North America Act; and the clauses in that act are the only reason for our having an arsenal at all in Canada. The Quebec arsenal was built to comply with those requirements; the Lindsay arsenal is not. I am not so much concerned by the fact that some of the politicians of the county of Victoria are circulating these reports; what bothers me is the fact that the people are listening to them. There is something wrong when that is the case. If we are to be the people we should be, it is our duty to see that anything of that nature is straightened out and the people educated to the fact that these things cannot be done without a considerable expenditure of money.

In conclusion, let me say that if we are to be true Canadians we must change our system of financing and adopt what is commonly referred to as the sinking fund system of floating our loans. When we float a loan, let us provide at the time, for its payment when it becomes due so that we shall not be continually piling up debt, a procedure which is unfair to those who are to come after us. Further, let us impress the people with the fact that public moneys cannot be spent without the imposition of taxation to make them up again.

On motion of Mr. White the debate was adjourned.

On motion of Mr. Graham the House adjourned at 12.30 a.m. (Tuesday).

Tuesday, April 21, 1925

The House met at three o'clock.

OCEAN SHIPPING RATES

Mr. S. W. JACOBS (George Etienne Cartier): I beg to lay on the table of the House a petition from the Montreal Dairy Produce Association in opposition to the Petersen shipping subsidy.

PRIVILEGE—MR. JOHNSTON

On the Orders of the Day:

Mr. J. FRED JOHNSTON (Last Mountain): Mr. Speaker, I rise to a question of privilege. I wish to draw attention to an article appearing in the Financial Post of April 17, which reads as follows:

> Ottawa had an interesting incident recently. The wheat market was nervous in keeping with the position of the King government just at that time. Just a few days before its defeat was saved by the casting vote of the speaker. Another important division was at hand. A preliminary count by the whips showed 30 Progressives missing. Their presence was needed to save the government. Some one volunteered the information that they were down town at a brokerage office watching the wheat market, in which they were said to be heavily interested. The name of the house they were at was not known, but its location was. An auto was hastily commandeered and a bareheaded member went after them. He rudely disturbed their mental deliberations of whether wheat would go back to $2 or not, by a summons to the house and returned to Parliament Hill with a dozen farmer-members hanging on the side of the car. The government was saved.

Some hon. MEMBERS: Oh, oh.

Mr. JOHNSTON: I do not wonder that hon. members laugh. On behalf of the Pro-

gressive members of this House I wish categorically and emphatically to deny the statements contained in this article, the intent of which, I am sure everyone will agree, is mischievous. The statements are both misleading and untrue and the conclusions or inferences are foundationless and false. I cannot but express surprise that a paper such as the Financial Post should lend its columns to the publication of such an article.

PRIVILEGE—MR. MANION

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): Mr. Speaker, I also rise to a question of privilege. So many false statements have been made about me in this debate that I am going to correct one of them in the hope that in the future, when hon. gentlemen are criticizing me, they will stick somewhere near the truth. In the speech of the hon. member for Chambly and Vercheres (Mr. Archambault) yesterday, he made this statement, according to Hansard—page 2201.

> If my memory serves me right it was in 1912 and 1913 that the hon. member for Fort William and Rainy River, through the influence of Sir Wilfrid Laurier, was chosen, not as the Union candidate, but as the Liberal candidate in his constituency.

The hon. member showed the same ignorance of my affairs in that statement that he showed on every other topic he discussed yesterday. That statement, Sir, is false in every line and detail of it. Sir Wilfrid Laurier had nothing whatever to do with my nomination, in any shape, manner or form. I was nominated at that time by the same Liberal party in Fort William which in 1917 united with the Conservative party to elect me in opposition to Sir Wilfrid Laurier. In fact, I was nominated, not in 1912-1913, as the hon. member states, I was nominated in 1915 when I was serving with General Castelnau's army, part of the French forces, in a humble position—serving that gallant France which my hon. friend is always so willing to claim as the home of his ancestors but which he was not quite so willing to serve when she was fighting for her very soul.

Mr. ARCHAMBAULT: Will my hon. friend allow me a question? Is it not a fact that he was first chosen as a straight Liberal candidate at that time, not a Unionist candidate?

Mr. MANION: If I am permitted to answer, Mr. Speaker, that has nothing whatever to do with the question.

Some hon. MEMBERS: Oh, oh.

Mr. MANION: The point is that I was chosen by the Liberals, not, as my hon. friend stated, by the influence of Sir Wilfrid Laurier or anybody else; I needed no influence; perhaps he does.

Mr. THOMAS VIEN (Lotbiniere): I rise to a point of order, Mr. Speaker. The hon. member for Fort William and Rainy River (Mr. Manion) in rising to a question of privilege cannot cast an aspersion on any hon. member of this House. He stated that the hon. member for Chambly and Verchères (Mr. Archambault) was not ready to defend France, the home of his ancestors. I say that that is not a matter of privilege and if my hon. friend would like to open the discussion when we are free to meet him on this ground, we shall be quite willing to meet him. Therefore I request, Mr. Speaker—

Some hon. MEMBERS: Order.

Mr. VIEN: I am talking now on the point of order. I move, Mr. Speaker—

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order.

Mr. VIEN: I am speaking to the point of order. I contend now, Mr. Speaker—

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order. Let the hon. gentleman state his point of order.

Mr. VIEN: I contend that the hon. member is not in order in casting a reflection upon another hon. member of this House, and that that part of his remarks should be expunged from Hansard.

Mr. MANION: The hon. member for Chambly and Vercheres cast reflections upon my character in his statement, which was false not only in that but in every other assertion he made about me.

Some hon. MEMBERS: Order.

Mr. VIEN: Mr. Speaker—

Mr. ARCHAMBAULT: You admitted I was right.

Mr. SPEAKER: I would ask hon. members on both sides to refrain from using such strong expressions as "false statements." The hon. member for Fort William and Rainy River (Mr. Manion) rose to a question of privilege. He stated the question at issue and he should have stopped at that point and should not have gone into further matters. I hope that the House will proceed to the business and let this old issue of 1915 and 1917 remain in the background.

Mr. VIEN: Mr. Speaker, on that point of order—

Some hon. MEMBERS: Order.

An hon. MEMBER: The Speaker has ruled.

Mr. VIEN: The Speaker has not ruled on the point of order I raised.

Some hon. MEMBERS: Order.

Mr. SPEAKER: I understand that the hon. member raises another point of order. He should be allowed to state it.

Mr. VIEN: The point of order I raised, Mr. Speaker, is that that part of the remarks of the hon. member for Fort William and Rainy River to which I have referred should be expunged from Hansard.

Mr. MANION: May I speak to the point of order? If the false statement of my hon. friend, with respect to me is expunged from the record—

Some hon. MEMBERS: Order.

Mr. MANION: What is wrong with my saying that the statement was false? It was false, and I repeat it. There is nothing wrong about that.

Mr. VIEN: It is not that part of my hon. friend's remarks that I am asking to be expunged. The question is whether or not part of the statement made by the hon. member for Fort William and Rainy River should be struck from Hansard.

Mr. SPEAKER: I think a notice of motion would have to be given before that could be done.

Mr. LAPOINTE: It is just as well to leave it there, Sir.

Mr. SPEAKER: I would again appeal to hon. gentlemen on both sides of the House to refrain from bringing up such acrimonious questions. The House is in a good temper now, and I do not see why it should be again disturbed.

AUSTRALIAN TREATY

On the Orders of the Day:

Hon. H. H. STEVENS (Vancouver Centre): Mr. Speaker, I would ask the Acting Minister of Finance (Mr. Robb) or the Prime Minister (Mr. Mackenzie King)—I don't know to whom I should address my remarks—as to when some definite statement will be made in regard to the Australian treaty or trade agreement. I base my inquiry upon a telegram which unfortunately I have not under my hand at the moment but which I received yesterday. It points out that the trade between Canada and Australia is seriously affected by the anticipation of changes in the tariff, which prevents the conclusion of contracts for delivery of goods and so forth. This uncertainty is interfering with trade and is becoming serious. I wish the Acting Minister of Finance or the Prime Minister could give the House a definite statement on the matter.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, my hon. friend knows that it is difficult to intimate exactly when negotiations will be concluded. I mentioned the other day, in reply either to himself or some other member, that we were still negotiating with the Australian government with respect to changes to be made in the Canadian tariff. The Australian government have made such changes in their tariff as will meet the situation as far as we and they are concerned. There is no signed agreement; there is an understanding that on condition of certain changes being made in the Australian tariff and in our tariff the exchange of goods between the two countries will be subject to the rates so arranged. But until we have reached a point that appears to the government satisfactory with respect to the changes in our tariff we cannot announce a final agreement.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I should like to ask if the Prime Minister has observed a despatch from Australia which appeared in the press about three days ago, and in which the Australian Prime Minister was reported to have stated that Australia had passed the agreement, or whatever it may be called, and that he knew of no reason why there was delay on the part of Canada in completing the arrangement. I did not call attention to the despatch at the time, but it seemed to me inconsistent with the information given the House. Does the Prime Minister think the report was wrong?

Mr. MACKENZIE KING: I think I saw the report to which my right hon. friend refers, but I do not think he is accurate in saying that the Prime Minister of Australia stated he knew of no reason why there should be delay on the part of Canada. What he did say was that so far as Australia was concerned they had changed their tariff. But he must know we are negotiating with his government because cables are passing between

us. I think probably what he meant, if he used the expression, was that from his point of view he rather hoped we would accept the agreements as understood made by his government.

HANSARD—MEMBERS' EMENDATIONS

On the Orders of the Day:

Mr. JOSEPH ARCHAMBAULT (Chambly and Verchères): Mr. Speaker, I wish to draw your attention to something which appears in Hansard of yesterday, and which in my opinion is a breach of the rules and calls for an explanation. I would call your attention to page 2206, where at the bottom will be found the following:

Mr. Meighen: Will the hon. gentleman tell us what else we could have used, how we could have got another rifle?

Mr. Lapointe: Let Sir Arthur Currie tell us.

Mr. Archambault: Ask Sir Arthur Currie about it.

Mr. Meighen: Have your committee and we will ask him, I will assure you of that. The Minister of Justice is not a bit more anxious for the committee than you are.

Sir, I have read the notes of the reporter and I find that the words "The Minister of Justice" were not mentioned. His notes read as follows:

Mr. Meighen: Have your committee and we will ask him, I will assure you of that. He is not a bit more anxious for the committee than you are.

Meaning, not the Minister of Justice but Sir Arthur Currie. I am further informed, Sir, that after the notes had been transcribed they were sent to the leader of the opposition (Mr. Meighen), and that he erased the word "he" and substituted the words "The Minister of Justice."

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, what the hon. member says is quite correct; his inference is quite wrong. The words I used were exactly the words as reported, "He is not a bit more anxious," and so on. The Minister of Justice (Mr. Lapointe) had just interjected a remark, and it was to him I referred. My emendation made clear my meaning. I made no reference to Sir Arthur Currie. However, I am not wanting to intimate that Sir Arthur Currie wishes to have an investigation even now, and if it will please the hon. member I will express right now what I did not intend to say then: I do not think Sir Arthur Currie wants an investigation.

Mr. ARCHAMBAULT: Does the right hon. leader of the opposition admit that he erased the word "he" and substituted the words, "The Minister of Justice?"

Mr. MEIGHEN: Yes; and I may say I observed that the hon. member (Mr. Archambault) had himself made similar emendations of his speech, and quite properly so.

Mr. ARCHAMBAULT: I should like the leader of the opposition to point them out.

Mr. MEIGHEN: I saw them.

Mr. ARCHAMBAULT: But the word "he" clearly referred to Sir Arthur Currie. I will read the transcript again:

Mr. Lapointe: Let Sir Arthur Currie tell us.

Mr. Archambault: Ask Sir Arthur Currie about it.

Mr. Meighen: Have your committee and we will ask him, I will assure you of that. He is not a bit more anxious for the committee than you are.

Evidently referring to Sir Arthur Currie.

Mr. MEIGHEN: Read what went before.

Mr. ARCHAMBAULT: We know why it was amended.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I may say that my right hon. friend did not speak to me and was not referring to me, and he knows it very well.

Mr. MEIGHEN: I protest against the Minister of Justice—

Some hon. MEMBERS: Order.

Mr. MEIGHEN: I think I am the authority on what I said and what I meant, not the hon. member.

Mr. LAPOINTE: I say—

Some hon. MEMBERS: Order.

Mr. MEIGHEN: I do not know what the hon. member is so keen and anxious about.

Mr. LAPOINTE: I am keen for the truth.

Mr. MEIGHEN: I do not think he is a bit more anxious than is the Minister of Justice.

Mr. THOMAS VIEN (Lotbiniere): Speaking on the point of order, Sir, I think that so long as the right hon. leader of the opposition admits that he said "he" the report should mean "he" and nothing else. He erased the word "he" and put in the words, "The Minister of Justice" instead.

Some hon. MEMBERS: Order.

Mr. VIEN: I think that Hansard should be corrected, and that the report should be "he" and nothing else.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I was so struck by the remark of my right hon. friend (Mr. Meighen) yesterday that at the time

he made it I wrote down his words and I have them here on the order paper of yesterday.

Mr. MEIGHEN: Maybe we can cure the whole thing—

Some hon. MEMBERS: Order.

Mr. MEIGHEN: There is nothing to debate.

Some hon. MEMBERS: Order.

Mr. MEIGHEN: What are we troubling about?

Mr. MACKENZIE KING: Both the Minister of Justice (Mr. Lapointe) and myself commented at the time upon the nature of the reflection cast upon Sir Arthur Currie, There can be no possible doubt at all as to what the right hon. gentleman intended by the remark when it was made.

Mr. MEIGHEN: I stand by it.

Mr. ARCHAMBAULT: May I be permitted, Mr. Speaker, to ask for your ruling? The leader of the opposition admits that he never said the words, "The Minister of Justice."

Mr. MEIGHEN: Hear, hear.

Mr. ARCHAMBAULT: He admits that he said the word "he." I submit that he cannot change that word and substitute the words, "The Minister of Justice," and that therefore the word "he" should be reinstated.

Mr. MEIGHEN: Mr. Speaker, it is a rule that what a member intends to say he can make clear in his words. The pronoun "he" may have several references. I say this because I intended that reference to be to the Minister of Justice, who had just before interjected a remark, and not because I wish in any way to get out from under any reference to Sir Arthur Currie. To show that, I have told the hon. member (Mr. Archambault) that I say now what I did not say then, that I do not think even Sir Arthur Currie wants an investigation. I appeal to the government to have an investigation. I will be there whoever else is.

Mr. LAPOINTE: It may be corrected in Hansard to-morrow.

Mr. SPEAKER: I should not like to say that I am between the devil and the deep sea. I believe in the sincerity of the assertions of hon. gentlemen on both sides of the House, and I think the explanation which will appear in Hansard to-morrow will be clear to everybody.

[Mr. Mackenzie King.]

Mr. ARCHAMBAULT: That serves my purpose.

DAYLIGHT SAVING

On the Orders of the Day:

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): I wish to ask what the intention of the government is regarding the hours to be observed in this House, bearing in mind the fact that daylight saving time will come into force in Ottawa on 3rd May?

Right Hon. W. L. MACKENZIE KING (Prime Minister): It has been customary, I think and has been found most convenient for all concerned, for parliament to follow the hours observed by the city. That is the intention.

INQUIRIES FOR RETURNS

VALUE OF FARM PRODUCTS

On the Orders of the Day:

Mr. J. L. STANSELL (East Elgin): I should like to call the attention of the government to the fact that on April 7, 1924, a question standing in my name, asking for certain information about agricultural products in Canada, was passed as an order for return. I do not think I can be accused of impatience if I ask when I may expect to receive that information?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend has noticed, no doubt, that the Minister of Agriculture is not in his seat at the moment, but I will direct his attention to the inquiry. I may say that from the way in which questions similar to that raised by my hon. friend have come it looks to me as though hon. members were singling out for their inquiries days when the particular minister concerned happens to be a little late in coming into the House.

SOLDIER SETTLERS—MANITOBA

On the Orders of the Day:

Mr. L. P. BANCROFT (Selkirk): I had a question on the order paper which was passed as an order for return on March 2, but the return has not yet been brought down. The question asked for certain information regarding the position of soldier settlers in Manitoba. I should like to have the information as soon as possible if there is any chance of getting it before legislation in regard to this matter is discussed.

Hon. J. A. ROBB (Minister of Immigration): Does the question refer to the Soldier Settlement Board?

Mr. BANCROFT: Yes.

Mr. ROBB: It is just possible they may have had to send to Manitoba to get certain information. I will ask the department in regard to it.

WESTERN FRUIT COMBINE

On the Orders of the Day:

Mr. L. J. LADNER (Vancouver South): May I ask the government if they are taking any steps with respect to the prosecution of the alleged fruit combine dealt with in the Duncan report?

Hon. JAMES MURDOCK (Minister of Labour): We have no report to make on that subject further than that given to the House a few days ago.

NATURALIZATION OF WOMEN

On the Orders of the Day:

Mr. J. L. BROWN (Lisgar): The Prime Minister will remember that a few days ago I asked a question in regard to a debate which took place in the British House of Commons relative to the naturalization of women. The official reports have come to hand since, and I find what would seem to be a discrepancy between the cable despatch and the official reports. I should like to know if the government has received any further communication from the British government in regard to that matter?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am not aware of any further communication from the British government. The government has the official report to which my hon. friend refers and, as I mentioned to him when replying to his former question, the Department of the Secretary of State and the Department of Justice are looking into the matter. No doubt they will observe the discrepancy to which he has referred.

SADDLE LAKE INDIAN RESERVE

On the Orders of the Day:

Mr. D. F. KELLNER (East Edmonton): I had some questions on the order paper which were answered yesterday, and since I got the information I am more bewildered than I was before. The first question I asked was:

Was a portion of the Saddle Lake Indian reserve reclaimed by the Crown?

The answer was:

Yes, about 18,000 acres recently surrendered by the band.

The next question was:

If so, how long did it remain in the possession of the Crown?

The answer to that was:

Surrender not yet approved by order in council.

This was absolutely contrary to the answer given to the first question. The third question was:

Is the title for said lands vested in the Soldier Settlement Board?

To this, reply was made:

Transfer not yet completed.

The fourth question read:

If so, by what authority was this land reclaimed from the Indians?

To that question, I received the reply:

By statutory powers provided in Indian Act.

My fifth question was:

By what authority was it transferred to the Soldier Settlement Board?

The answer given was:

Surrender was granted by the Indians in order that the area so released might be sold to the Soldier Settlement Board of Canada.

I submit, Mr. Speaker, that there is no authority contained in that answer for transferring it to the Soldier Settlement Board. The sixth question was:

What was the consideration paid to the Indians?

The answer was:

Indians have received a per capital cash payment of $100. Balance will be placed to credit of band funds.

This would seem to indicate that the land had actually been taken over by the Crown, which was refuted in a previous answer. The final question was:

What was the selling price to the Soldier Settlement Board?

To this, reply was made:

Ten dollars per acre cash.

So the statement is made that the land has been reclaimed, that it has not been reclaimed; that it has been sold, and that it has not been sold. Therefore I am more or less in the dark with regard to the actual facts.

Hon. CHARLES STEWART (Argenteuil, Superintendent General of Indian Affairs): If my hon. friend is desirous of getting details which we are not in the habit of putting into answers to questions we will be very glad to furnish him with full information. As a matter of fact this is an arrangement which is going through; there has been no settlement.

As is usual, the Indians vote upon a matter of this kind. They did so, and part of the arrangement was that they were to receive $10 per acre, and that there was to be an initial payment of $100. As my hon. friend knows, in any land deal there is considerable detail to be gone into before it is completed, and this arrangement is not complete yet. I think my hon. friend is confusing to some extent the crown with the Soldier Settlement Board. He will find the authority for the purchase in the Soldier Settlement Act, and, as indicated in the answer, he will find in the Indian Act the authority for the sale of the land. The usual procedure has been followed in the case of the sale of Indian lands either to a private individual or to some body of individuals. In this case it is to the Soldier Settlement Board. If my hon. friend will go to the department he will be given full information with respect to the whole matter.

Mr. KELLNER: I may tell the minister that I have made innumerable applications to the department to get the information and so far have been unable to obtain it.

Mr. STEWART (Argenteuil): I shall be very glad to see that my hon. friend does get the information. If what he states is the case, I have no knowledge of it.

REDUCTION OF SALARY

On the Orders of the Day:

Mr. W. J. WARD (Dauphin): I desire to ask the minister whether a certain salary has been reduced from $4,600 to $3,300? If so whether there is precedent for such a reduction, whether an order in council has been passed authorizing it, and whether the minister would remedy the matter by bringing in a supplementary—

Mr. SPEAKER: Order. I would ask the hon. gentleman to kindly give notice of his question. Members of the government are not bound to answer questions on the spur of the moment; notice must be put on the order paper. Of late the practice has grown up of asking questions before the orders of the day are called and it is degenerating into an abuse. Notice should be given in all such cases, otherwise we may witness a repetition of to-day's proceedings when nearly an hour was spent in petty warfare. I may remind the House also that a special committee is at present engaged in considering the revision of the rules, and that changes may be looked for with respect to the manner of putting these questions in order to shorten the amount of time which they consume.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Monday, April 20, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the propoed amendment thereto of Sir Henry Drayton.

Mr. J. F. WHITE (London): Mr. Speaker, in the further consideration of the financial statement which was presented to the House this year it seems unnecessary to quote many figures. Already figures have been quoted at great length, and various hon. members have drawn different conclusions from their reading of the budget speech. To my mind there is nothing in that speech to indicate the hope that the government is taking serious steps to remedy the unemployment situation, to encourage immigration, to reduce expenditures or the public debt, or to reduce the income tax so as to equal the levy in the United States;—this in the face of the fact that nearly all the countries of the world are reducing debt and taxation. I think the Acting Minister of Finance (Mr. Robb) in presenting the budget showed too much anxiety to declare a surplus. In his claim of five million odd surplus he included a four million dollar item of so-called revenue from Greek and Roumanian loans. He states that he has not received the cash but simply a virtual promise to pay. He had that assurance before. He says, "Our creditors give, as additional security certain of the revenues of these countries as guarantee." Do Greece and Roumania give Canada the right of entry? Or do they give the government the right to place an official in their customs houses charged with the duty of collecting the assured amounts? I do not see that they do. The matter stands just where it did before. The governments of these countries are responsible only in the same degree as before, and in my opinion will honour the obligation because it is an obligation and not because of any material change of record during the past year. These interest arrears can be credited to revenue account only when paid, and have no place in the calculation of a surplus. The additional interest accrued may be an asset, but it is certainly not an item of revenue for the year. As we stand to-day it would seem that if cash loans to the

railways and to the merchant marine are considered—and they should be considered—we have a deficit of sixteen or seventeen millions, and if government-guaranteed loans to the railways are considered—and in the present condition of the National Railways I do not know of any reason why they should not be considered—we have a deficit of some sixty-four millions more, making something like a total of a hundred millions deficit for this year. I would refer the Acting Minister of Finance (Mr. Robb) to the speech of the Minister of Finance (Mr. Fielding) in this House in 1923, when he explained the position clearly. He was not afraid to refer to the facts of the railway situation, and he was not afraid of the word "deficit," nor was he afraid finally to make a frank statement to the House as to what the deficit was, after expenses were considered, including the railway and the merchant marine situation.

Mr. EULER: Would my hon. friend seriously say that guarantees made by the government to the management of the National Railways for the purpose of re-equipping or making capital expenditure on these railways should be included in the deficit?

Mr. WHITE: The country owes it and has to pay it just the same.

Mr. EULER: Not at all.

Mr. WHITE: I think it is to be regretted that the government did not produce a financial statement which could be understood by the people. Many members of this House, with all their advantages of securing information, have expressed their confusion and dissatisfaction with the statements which are partial and very much beclouded in their form of presentation. If the members of this House cannot arrive at a fair estimate of the position of the country how can the people who have not the advantage of a knowledge of the facts arrive at any fair statement of where we stand? We might take, for example, a departmental store or a business house having many departments. In the head office bookkeeping each department is charged with expenditure and credited with revenue derived from that department. Would it be reasonable for a great business house or firm, in making up its annual report and budget, to disregard one department which has not been a source of revenue but rather a cause of loss? A statement of that kind placed before a board of directors would not be a correct one, and would hardly be looked on as an honest statement of the year's business. That is the position in which Canada finds herself to-day. The budget is delivered, a surplus is claimed without taking into consideration the Department of Railways. The claim of surplus or otherwise should be based on the entire business of the year, so that the Canadian people can understand the situation. If the National railways had overnight a year ago reached a position where they not only could take care of operating expenses but also received enough for fixed charges and a surplus besides, I wonder what the Finance Minister would do regarding that surplus. I think it would not be necessary to argue as to the propriety of including the result in the national statement.

This year there are to be some changes in the tariff, in spite of the fact that the Prime Minister announced in Toronto that there would be no tinkering in regard to the tariff this year, but that he would wait and see how last year's changes worked out. In 1924 there were thirty-seven changes in the tariff schedule, this year up to date there are sixteen, and the Prime Minister has announced that there may be other changes when the trade agreement with Australia is under consideration.

I have referred on other occasions in this House to the situation so far as the iron and steel industry is concerned, and half of the items changed in the tariff schedule this year affect that industry adversely. The principal items in the budget which affect it are: the increased duties on coal, which I will refer to later; the replacing of certain products on the free list; and the changing back of the item of rolling mill rolls which was put on the free list last year to the former duty of 27½ per cent;—during recess this last-named change was made by order in council; the concession, I understand, was made to the iron and steel industry on account of the reduction in duty on its products made last year. If the industry needed that help last September or October, it surely needs it now, and yet the minister says that it has since been represented to the government that these rolls are made in Canada. On that account it is proposed to repeal this order in council and place the rolls back at the former rate of duty. The rolls are manufactured in Canada, but there is no Canadian concern making a specialty of that line of work, and the Canadian roll is inferior to that of American manufacture, not because the Canadian manufacturers are not as skilful as the American manufacturers, but because there is not sufficient market in this country to develop the business and to warrant a foundry making a specialty of that class of work and nothing else. It was represented

to the government that rolls were manufactured in Canada, and therefore it was necessary to place them back in the 27½ per cent schedule. It surely was possible for the government in 1924 when they put so much of iron and steel on the free list, to find out that pig iron and bar iron and steel were made in Canada. Therefore why should rolls be placed back in the dutiable list and the pig-iron and bars provided for in last year's budget remain on the free list? In addition to that, by the present budget farm and logging sleighs are placed in tariff item 591. That automatically puts the iron and steel bars used in their construction on the free list, and the Acting Minister of Finance knows now that such goods are made in Canada. There is no other line of business in Canada which has been persecuted to such an extent as the iron and steel business has in the last few years. In the items in the customs tariff to-day, dealing with iron and steel, there are seventeen on the free list. Fourteen of them are subject to 99 per cent drawback; three others in varying amounts from 30 to 80 per cent drawback, which means that practically 32 items are on the free list, and there are only 18 items on which duty is levied. Taking into consideration the British preference and the dumping clause, there is an average duty of less than seven per cent on iron and steel rolling mill products which are on the dutiable list. By the changes in the tariff this year the industry is taxed 27½ per cent on its rolls and 23 to 40 per cent on its coal, and there also exists in other items, duties on machinery and supplies, 25 per cent to 30 per cent, and sales tax of 5 per cent on all materials excluding fuel. How can the government expect that industry or any other industry to flourish under such circumstances? In the eleven months ended February 28 of this year, we imported of iron and its products, $118,000,000 worth, $100,000,000 worth of which came from the United States, and our exports to the United States were a little less than $4,500,000. I would call attention of the House to an Associated Press despatch in the Globe of March 28 in reference to the exportation of pig iron from Ontario to the United States. The despatch reads:

> Washington, March 27.—Anti dumping provisions of the Tariff Act were applied to-day by the treasury against the importation of pig iron from the province of Ontario.
>
> While there was no official explanation of the action, it was understood that investigations preceding the order had shown that Ontario manufacturers were able to sell in territory contiguous to the Great Lakes on the south, at lower prices because of the cheaper transportation by water. Domestic producers serving the same region, it was stated, must meet that competition after paying freight charges by rail which added materially to the cost to purchasers.

It seems that Uncle Sam's idea of "balance of trade" is to prevent any importation of manufactured goods into the United States and to send out as much as possible to Canadian users, even to the extent, as in the steel business, of $100,000,000 per annum without allowing a ton to go into the United States, if it can possibly be excluded.

That is only one instance in which the government of the United States has acted in the same way. I can cite another of a firm with head office in Toronto, making special building brick, who were recently developing a good trade in the American lake coast cities. The matter was brought to the attention of the American treasury, the tariff was adjusted and increased; so that the exportation of brick from Ontario ceased immediately.

On the tariff the government has surely boxed the compass. When the Liberal party took office in the fall of 1921, the possibility, or the probability, of the adoption of the Liberal platform was the cause of a great deal of speculation. The sessions of 1922 and 1923 saw some small downward changes in the tariff and some compensating changes in the sales tax. A duty was imposed on artificial silk and bounties were provided on the production of copper bars and on binder twine manufactured from hemp grown in Canada. Thus encouragement was held out to three different lines of industry. In 1924, the abolition of the sales tax and the reduction in the duty of agricultural implements and on the materials entering therein, were the features. No encouragement for manufacturers was voiced in the budget speech delivered in that year by the Acting Minister of Finance (Mr. Robb). This year the minister proceeds on another tack. On the one hand he increases the duty on slack coal in an endeavour to encourage coal mining, particularly in Nova Scotia, I imagine, and on the other, he gives the iron and steel industry further discouragement and dismay. This is done by the increased duty on coal, the addition of more iron and steel products to the free list, and the withdrawal of the concession made last year regarding the duty on rolls used in the industry. That is the government's record. There is also the government's record with reference to the five per cent feature in the dumping clause. This was suspended in the early days of the 1924 session, and a few weeks afterwards, according to the words of the Minister of Customs and

Excise (Mr. Bureau), "the government had decided to suspend the suspension." In this year's budget, another feeble effort is made to amend the same clause, followed by an announcement a few days later by the Acting Minister of Finance that, "after further consultation with officers of the department, it had been decided that the amending resolution would be withdrawn." In that respect the matter stands in about the same condition as the question in regard to land which the hon. member for East Edmonton (Mr. Kellner) was complaining about a few minutes ago.

The increased duty on slack coal affects not only the iron and steel industry, but many other lines of industry in Quebec and Ontario. This change in the duty on coal was made without any compensating changes being made in other tariff items to offset increased costs of manufacture in other lines of industry. I contend that this matter should have received a comprehensive study before any items were changed, as by changes being made in a few schedules, other items are thrown out of balance and the net result may be the relief of one hardship, only to increase it in another place or in some other line of industry.

Referring to the question of coal particularly, I have no desire to criticize an increase in the duty on slack coal, if the minister, after careful and exhaustive inquiry, satisfies himself and this House that it is necessary for the development of Canadian industry and the well-being of the Canadian people. The average price of bituminous coal, that is, run of mine and lump, at United States mines is to-day about $2.15 a ton. The duty on this coal is reduced 3 cents a ton and stands to-day at 50 cents. This duty reduced to percentage terms on the value of coal is 23¾ per cent. Slack coal is worth to-day from 90 cents to $1.60 per ton at the mines or an average of $1.25 per ton. The 50 cents per ton duty now levied is a duty of 40 per cent. The hon. member for Cape Breton South and Richmond (Mr. Kyte) undertook to prove to this House a few evenings ago that that duty was about 13.77 per cent. He chose to go back to the year 1923 for his value of coal, and he took the duty of 1925 and arrived at those figures. If he wanted to make a really nice showing, favourable to his argument, he might have gone back two or three years more and taken the figures when coal was selling at $16 or $18 a ton. That would have made a very low duty; but Canadian users are face to face with the fact that they have to pay a duty of 50 cents a ton on slack coal which is worth $1.25 a ton, and no amount of figuring will get away from the fact that that duty is 40 per cent.

Some hon. members of both the Progressive and Liberal parties are wont to rail at the Conservative party as the party of protection, and some even say the party of high protection, but I never heard even the most enthusiastic Conservative advocate a duty of 40 per cent on coal. What party is it which now assumes the role of high protectionists? It is the Liberal party, the party which was to inaugurate a revision downward in the tariff, as the legend runs: "In order to diminish the very high cost of living which presses so severely on the great masses of the consuming public of Canada." Yes, they are lightening the burden by collecting, according to the minister's own estimate, just $1,000,000 more in customs duties in the coming year.

What is to be gained by this increase of duty? As regards the mines in Nova Scotia, and possibly Alberta, I think the gain is problematical in view of the reported move by the United States railroads to lower freight rates 36 cents a ton to points at which United States slack coal and Nova Scotia coal compete. If the railroad rates are lowered sufficiently to take care of the 36-cent increase in duty, the additional amount of Canadian coal sold will be small. As the business is now conducted, if freights are reduced, the coal will cost about the same at competitive points in the Montreal district, and it will cost users of slack coal further east in Quebec and the Maritimes and further west in Ontario, 36 cents per ton more as there will be no incentive to American railroads to lower freight costs, particularly to Ontario points. By the changes in coal duties, the Minister has placed a levy of 50 cents on an importation worth on an average $1.25, and the same duty on another importation of a value of $2.15. If it was absolutely necessary to make changes in the coal duties, in my view it would have been more just to discontinue the specific duties and levy an equitable ad valorem rate.

There is another item in the tariff changes dealing with bituminous coal, calculated to stimulate the production of coke by the use of by-product coke ovens. This item provides for 99 per cent drawback of duty under certain conditions, the idea being, I presume, to make coke in order to have that commodity take the place of anthracite coal. That will be of some benefit in so far as it promotes Canadian industry, and the employment of Canadians in the establishment of coking plants, and in the work of producing a material which will make us in some degree more independent of the American anthracite producer.

Inasmuch as central Canada, on account of its geographical position, is the area in which fuel is such an important item, it follows that in the event of these coke ovens being established in the central part of the country, as is proposed, Nova Scotia and Alberta coal will not be used for the purpose of producing coke. The only effect of this measure will be to transfer our purchases of coal from the anthracite mines of the United States to the bituminous coal mines of the same country, and will not help the Canadian coal mining industry in the slightest degree. Last year the government expended $200,000, voted in this House, in extending the selling radius of coal mined in the Maritime provinces, and many hon. gentlemen from that section have spoken in commendation of that expenditure. In my judgment, if the government had left the duties as they were, and would forget such things as, for example, the lop-sided Petersen contract, and apply the $1,340,000 per year to develop internal trade, Canada would make some progress. A lasting market in many lines would be developed, and more of our people would be employed at home.

If the government has in mind any policy for the development of the industries of Canada, it is time to get busy and apply it. It should end this attitude of drifting, swayed about by the voice that is the loudest or the friend who is most persistent, and should apply some definite, considered policy calculated to encourage confidence and the investment of capital, and the full-time operation of our industries. Only by some such policy can we provide work for our people. If the present habit of importing more and more manufactured goods; yes, and farm products, which we use at home, is persisted in, it will spell disaster to this Dominion.

4 p.m.

We cannot all be farmers, miners or loggers, nor will the country exist as an entity if we dwindle to the one activity of exporting raw materials. No nation which neglected its all-round development ever became great or did any great service for humanity. If our people are provided with the opportunity to work, they will make good. They are making good in the United States, and they are welcomed in that country because of their sterling qualities. There is need for people to fill our country. There is far greater need for a multiplication and a widening of opportunities for our native-born sons and daughters.

As to immigration, this country has spent in the last three years $1,000,000 more than was spent in the previous three years, and has not been able to retain our population at the figure of three years ago. What earthly use is it to spend millions each year trying to attract immigrants when our own people and some of the newcomers are going out faster than the immigrants are coming in? Besides the figures which have been quoted from time to time, I offer as further proof of this to the House the record of the imports and exports of settlers' effects in the eleven months ending February 28, 1925, and in the same period for previous years. This table is given in the Report of the Trade of Canada, and shows that in the last three years there has been a net loss in settlers' effects of over $7,000,000. In the last eleven months ending February 28 the loss was $1,504,000.

Some claim that our people are coming back. Doubtless a few are coming back, but compared with the constant stream which is leaving, those who are coming back are pitifully small in numbers. I believe that the government can do something, which will not cost anything, to encourage the return of former Canadians. In the act passed in 1919 to amend and consolidate the Naturalization Acts, the clause favouring the repatriation of former Canadians was left out. On March 31 last the Secretary of State (Mr. Copp), in reply to a question of the member from Provencher (Mr. Beaubien) stated that the present intention is not to bring down any amendments to the Naturalization Acts this session. I would call the attention of the government to the fact that at present the returning native-born Canadian who has become a naturalized citizen of any other country does not get a very warm welcome.

In the old act, three months' residence only was required to entitle a former Canadian to have his citizenship restored; but under the present act he is treated like any alien who may request citizenship. He has to endure the indignity of waiting for five years on the same level as any foreigner who knows nothing of our language, our customs, our history or our manner of living. If he marries a Canadian wife she is disfranchised by the marriage. He cannot vote, nor can he hold office during that time, and I think a returning native-born Canadian should not be asked to endure such humiliation. In case he has become a citizen of the United States, his plight is even worse than that. According to the naturalization law of the United States, when a naturalized citizen of that country returns to the land of his birth, he ceases to be a United States citizen after the expiration of two years. Now, consider the position he is in after two years have expired. He has to wait three years more

before he can be restored to Canadian citizenship. During that time he is a man without a country; he cannot secure a passport to travel in other countries; he is not under the protection of any flag and has no country he can call his own.

This state of affairs will act as a deterrent to any former Canadian who has changed his allegiance and who has any idea of returning to the land of his birth, and we should lose no time in making it easy and pleasant for him to return. We should hang out the "Welcome" sign to him by restoring the three months' residence clause, or at least naming some term of residence much shorter than the provisions of the present act.

The city council of my constituency, London, Ontario, has had this matter under consideration and has passed the following resolution. In the first two paragraphs the conditions I have described are cited, and the resolution itself reads:

> Therefore, we, the Council of the Corporation of the City of London, Ontario, do hereby resolve that the naturalization laws of Canada should be amended so as to provide for the repatriation of former Canadians after a brief residence in Canada, and that copies of this resolution be sent to the Hon. Mackenzie King, Prime Minister, the Secretary of State for Canada, and to J. F. White, Esq., M.P., for London.

On March 31, the Progressive whip, the member for Last Mountain (Mr. Johnston) referred in his speech to the prices of agricultural implements, giving prices ruling in a certain place in the west during the seasons of 1921 to 1925, and sought to prove that certain statements which were contained in a publication of the Conservative party were incorrect. The statement he referred to was taken from remarks made by me on February 13 in the debate on the Address. At that time I was contending that the present government had not reduced the price of agricultural implements, and took as a basis the price which came into effect December 1, 1921, just a few days before the general election and about a month before the present government took office. Some hon. gentlemen may inquire whether this reduced price list was issued with the idea of influencing the election result. I do not think so, for the reason that since 1915, and perhaps before that, it had been customary in the implement trade to issue a price list about December 1 of each year, to govern the sales of the next few months, and the makers did not depart from the usual practice in 1921. As I said, I took the prices existent when the government took office, and showed that to-day the farmer pays for a given list of eight different implements, commonly used, $22.50 more than in December, 1921.

The prices I quoted were for the season of 1922 for Ontario delivery at Hamilton, London and Ottawa, and I stated these particulars, giving the name of the company issuing the price lists. Any comparison of such things must start from a common basis or the so-called comparison is useless. The member for Last Mountain, instead of taking prices that governed after December 1, 1921, chose to go back one year previous and cited prices which governed in the season of 1921, which, by the way, were the highest during the war or the after-the-war period, and were fixed in 1920. The hon. gentleman did not give the name of his authority nor the name of the maker of the implements, nor information as to whether they were American or Canadian made goods; nor did he give the location more definitely than western Canada. He made some reference to higher prices intervening between the dates I gave, but in his desire to defend the government, he neglected to mention the increase due to the doubling of the sales tax in 1922 or 1923.

I reaffirm my statement of February 13, Mr. Speaker, that this government has not reduced the price of agricultural implements to the farmer. In other words, the farmer pays more to-day for the great volume of his implements than when the government assumed office. To-day I do not take my own figures for proof; I take those of the member for Last Mountain, which we will assume are correct, although the prices on one of these implements seem very badly out of proportion with the other three. According to his statement the four implements cited by him sold in December, 1921, at $594. The price he gives for 1925 is $607, which means that the farmer pays $13 more to-day than he did when this government took office in December, 1921.

The hon. gentleman also said in his speech that he mentioned these prices in order to explode the old theory of the protectionists that any reduction in the customs duty does not reach the consumer. Now, I am going to try to show him that this explosive may be something of a dud. I am going to show that the farmer did not receive the full benefit of the abolition of the sales tax and the reduction of duty which took place under the budget of last year. The sales tax of 6 per cent was removed and the duties reduced on these implements by a percentage varying from 4 to 7½ per cent on April 11 last, but the consumer did not get the entire benefit last season of even the 6 per cent sales tax reduction, as the list price of April 11,

1924, will show; and it was not until December, 1924, that any further reductions in prices were made.

I am going to ask the Prime Minister (Mr. Mackenzie King) to help me to prove this contention. In his speech on the Address on February 9, to show what great things had been done for the farmers, he gave what he called a representative list of implements which had been sold in Ontario before the budget of 1924 for the sum of $953.50 and, after the date of the budget, for $905.50. If the farmer had received the full benefit of the reductions of last year's budget, he would have been called upon to pay just $859.55; actually paid $905.50. That is to say, he did not receive the advantage due on account of the reductions of sales tax and duty, by $45.45. The Prime Minister also referred to a slightly larger list sold in the Regina territory before the budget of 1924 for the sum of $1,358 and after the date of the budget for $1,291. In the second instance, if the farmer had received the full benefit of the reduction, the price would have been $1,224.18. In other words, on the western list he did not receive the advantage due on account of the reduction of sales tax and tariff, by $66.82. In fact, in both these cases cited by the Prime Minister the farmer received just about one-half the advantage of the reduction in sales tax and duty. If the hon. member for Last Mountain (Mr. Johnston) will make close inquiry he may find that there was a reduction on implements in the United States last year which was largely the compelling reason for the change in prices in December, 1924.

I am not criticizing the manufacturers of agricultural implements in respect to the conduct of their business. Their balance sheets for the last few years would indicate that they are in need of all they are receiving. So far as this budget is concerned, I am criticizing the action of the government in exposing the manufacturers and the workmen of this country to ruinous outside competition.

Another matter referred to in the budget speech of the Acting Minister of Finance was that of an export duty on electric energy. He announced that an order in council had been passed levying an export duty on electric energy which, according to his estimate, will produce a revenue of $400,000 per year. The matter of the principle of power exportation has been pretty fairly discussed, and I need not go into it at any very great length. In my own city the consumption has increased by leaps and bounds. Out of a population of about 63,000 the Hydro-Electric system is supported by 17,500 consumers, 4,200 of whom have electric stoves. Although the city contracted with the commission originally for 3,000 horse-power, the demand to-day is for around 17,000 or 18,000 horse-power and is still increasing. This is typical of the demand wherever electric current is available at low rates, and the prediction is made by hydro engineers that there will be a severe power shortage in two years' time.

I look on the exportation of power as the exportation of another of our raw materials, and I am opposed to a further enlargement of our exports of unmanufactured goods. If we could export it in the form of manufactured goods made from the application of this power, or if we used it to manufacture many of the goods we now import, I think it would be of infinitely greater benefit to Canada.

As to the exportation now going on, for the year ending March 31, 1924, there were ten companies exporting current, six of whom exported less than 9,000 horse-power from various parts of the country. There is an exportation of about 65,000 horse-power from the Cedar Rapids plant of the Montreal Light, Heat and Power Company; I have no information about the contracts under which this exportation is made. The balance of our exports, about 140,000 horse-power, are from the Niagara district.

In the year ending March 31, 1924, there was exported by the Canadian Niagara Power Company some 53,000 horse-power; by the Toronto Power Company some 34,000 horse-power; and by the Ontario Power Company some 52,000 horse-power. The last two mentioned are Ontario Hydro Commission activities. It has been announced in the press that the contract which the Canadian Niagara Power Company has with the United States consumers provides that any duties imposed by the government shall be paid by the consumer. If that is the case it definitely fixes the payment on the United States consumer. Now, the contract of the Toronto Power Company also has the same clause fixing the duty on the consumer, and I am informed that this contract was for a five-year period, expiring on October 25 of this year.

The contract in the name of the Ontario Power Company is for exportation to the Niagara-Lockport Company and was signed in 1903, three years before the passing of the act to regulate the exportation of electric power.

The contract originally called for the exportation of 60,000 horse-power, and under certain options might not expire until the year 2010. When the Hydro-Electric Commission of Ontario purchased the Ontario Power Company in 1917 the terms of the contract with the Niagara Lockport Company were changed, so that the present contract expires in 1950.

The Dominion charter granted the Ontario Power Company in 1887 gives the Power Company the right to export power to the United States and makes no mention of the addition of a tax by the government. I am informed that the contract with the American company does not provide for the payment of any taxes. This long term contract is for power at an extremely low rate and will mean probably a loss to the Hydro Commission of Ontario. On the basis of last year's exportation of 52,000 horse-power, the export duty would amount to $101,400 per year. If they export the full 60,000 horse-power of the contract the duty will amount to $117,000 per year. Now if the Hydro-Electric Commission is taxed to this amount, and is unable to collect from the American consumer, who pays the tax? It will be charged to the Niagara system of the commission's activities, and that charge will have to be met by those who are using current from that system. The reports of the commission show that 54 per cent of their revenue is derived from the sale of energy for commercial light and power and the balance of 46 per cent comes from the use by public utilities and domestic services, the domestic services being about two-thirds of the 46 per cent. Thus in the final analysis so far as this $117,000 per year is concerned the people of Ontario who are using Niagara energy will pay the tax.

This is only another practical illustration of the way the government is reducing the "very high cost of living which presses so severely on the people." Now I make these suggestions to the government; that the order in council be amended to provide that, if, in the case of an export contract, existing prior to the passing of the order in council, the duty cannot be collected from the American consumer, that contract shall be exempted from the duty. That the government revoke all export licenses as the existing contracts expire. While I am strongly in favour of curtailing export, if, under special circumstances it is deemed wise to issue any further licenses, I suggest they be for short terms only.

Considering the budget as a whole, if we judge by the contradictory opinions expressed by the members of the Liberal party, it is evident that the government is unable to advance a policy which meets the needs of the country, whether on account of these internal divergencies of view of the party or the fear of defeat in the House, I am unable to determine; but it seems to me that there is a worse fate than defeat in the House, and that is a loss of the confidence of the people. I believe the government by its vacillations has forfeited the confidence of the Canadian people and deserves the censure of this House.

Mr. W. G. RAYMOND (Brantford): Mr. Speaker, I have listened with a good deal of interest to all that has been said in this debate, but I must say that I find myself unable to agree with all of it; because I think the compass has been pretty well boxed, the wind has blown from nearly every direction, and therefore it would be impossible to agree with all that has been said. I might preface my remarks with the words of the old sailor who, when he was in danger, said, "Oh, Lord, I aint one of them chaps as is always bothering you, I don't often do it, I aint ever done it before, and if you listen to me this once it may be some time before I do it again." This debate, as I say, has been very varied, it has led us all over the country and treated of different periods of our history. I have endeavoured to take a calm, judicial and impartial view of the debate, and on the whole I think that the Acting Minister of Finance (Mr. Robb) is to be congratulated on the budget which he has presented to the House and to the country. I remember very well some three months ago when our newspapers were full of rumours of the large deficit that might be expected. It was said that the customs revenue and the income tax had fallen off, and before the House met it was considered almost inevitable that the Acting Minister of Finance would have to provide for a large deficit. However, we had the satisfaction of hearing him announce a surplus—a surplus of $2,000,000 considered in one way, and of some $4,000,000 or $5,000,000 considered in another way.

I am one of those, Mr. Speaker, who thinks that on the whole the budget is a fair presentation of the country's position. I say so for various reasons: First, as far as I can exercise my judgment on it; second, because I have a high degree of confidence in the honesty and integrity of the Acting Minister of Finance, whose record both in his public and in his private life is such that it will put to shame some of those members who have seen fit in this House to cast aspersions upon him; another reason that leads me to the con-

clusion that is now firmly in my mind is the argument of the hon. member for West York (Sir Henry Drayton). He is an authority in this House on matters of finance, he is the ex-Minister of Finance, and consequently I listened to his argument with a great deal of attention. But there was one aspect of the debate that I thought deplorable; I could not apply any other word to it. The honour and dignity of this House, Mr. Speaker, is something which we all should do our best to preserve, and in view of the fact that it was hon. gentlemen opposite who constituted themselves the guardians of our honour and dignity, those hon. gentlemen have to my mind somewhat grievously trespassed upon it this session. I mean, for instance, that when the hon. member for West York (Sir Henry Drayton) in referring to the Acting Minister of Finance, said that the system of bookkeeping he had employed to arrive at the conclusion he did in his budget was such as men were "doing time"—I believe that was his expression—for having used. Now, I think such expressions are to be deplored. I thought that this particular expression would have constituted a breach of the rules of this House, but I suppose it was taken as many another word from that hon. member is taken, as a joke, a friendly utterance, for he is fond of making jocular remarks. But I think this remark was too serious almost to be taken jocularly. Besides, when statements are made in this House they are not made to the limited circle that listen to them here. An instance of that happened just the other day, Mr. Speaker, when the hon. member for Fort William and Rainy River (Mr. Manion) found himself reported in the Chicago Tribune as having been in this House almost a champion of annexation and as having stated that one-third of our population were in favour of annexation. He was surprised himself when he saw the report. Now, supposing some member of a foreign country, or the representative of a foreign newspaper, were in the gallery at that time and heard the ex-Minister of Finance state that for methods of bookkeeping the same as were used by the Acting Minister of Finance people were "doing time," would not he be warranted in going back to his own country and saying that when he was in the legislature of Canada he heard a man of experience, a man of repute, rise and state that its membership was composed of men who were no better than felons and convicts? I speak with all respect and all earnestness and I say that I deplore such an act. I think it is to be regretted, and I should like to see the hon. member for West York (Sir Henry Drayton) withdraw those words. I do not know whether he said them in earnest, or as a bit of a joke as he does sometimes. But when the hon. member for Vancouver Centre (Mr. Stevens) hurled such a frightful phrase across the floor as "moral obloquy" I felt certain, Mr. Speaker, it was more or less harmless because nobody has ever seen the words herded together in just that shape before, and most of the House had a doubt as to whether the hon. member himself was really aware of the meaning of the words he was using, because we know that "obloquy" if it is taken in the sense of "abuse, detraction and disparagement" does not belong to the side of the House on which the Acting Minister of Finance is sitting; it belongs to the far corner of the House to your left Mr. Speaker. That is where "abuse, detraction and disparagement," which are given in the dictionary as the meaning of the dreadful word which the hon. member for Vancouver Centre used, come from; that is the corner of the House where such expressions emanate; that is the corner of the House where the three more prominent members I have referred to sit as the premier scholars in the school of scolds. They have copied—with a degree of fidelity which would be admirable if it were for a better purpose—the manner of their great teacher, but they have been unable to appropriate or imitate his attainments or his talents.

Now, I wish to show you, Mr. Speaker, and show the House, how it is that the hon. member for West York has induced me to think that this may be a very good and very sound budget. As I say, I take that view partly from my own examination of the figures, and partly also because of the high reputation of the hon. gentleman; but now I wish to confine myself more particularly to the slant that was given to my mind by the arguments of the hon. member for West York when the statement was made that the surplus did not exist, and when he attempted to prove that not only did the surplus not exist but that many of the items that were referred to could not possibly be applied to the account. He went on to add certain other items to the liabilities until he proved, entirely to his own satisfaction, that instead of a surplus there existed a deficit of some $110,000,000. I followed that argument with much interest because, as I say, he is a gentleman of very high financial repute; he not only knows all about railways and shipping but he also knows all about finance, and some of his ardent admirers say that he even understands law—of course, to

a certain extent. But, Mr. Speaker, when, as I say, a gentleman of that high repute and that knowledge, and in whose judgment I have so much confidence, proved absolutely that there was a deficit of $110,000,000 I had, of course, to conclude that those were not the words of a mere—shall I say?—hon. member, not the words of a politician, but the words of a great statesman, the words of one to whom had been entrusted the financial management of this country, one who had been entrusted with its financial management just prior to the accession of the present government, mark you. He proved there was a deficit of $110,000,000 instead of their being a surplus of $2,000,000. That was the effect of his argument. And then we had the interesting spectacle of the way in which the statesman would remedy the deficit of $110,000,000. In order to meet that deficit what does he suggest? They say, Mr. Speaker, that "actions speak louder than words." Now, the hon. member's action was embodied in his amendment in which he says that the taxes should be still further reduced. What effect would that have? According to his amendment he would meet the deficit of $110,000,000, which he says exists, by still further reducing the sales tax, the stamp tax, the income tax, and other taxes by which revenue has been raised for a number of years back. Well, I could not imagine any spectacle much more ridiculous offered by a gentleman who claimed to have balanced the affairs of this country than in him to rise in this House and prove that there is a much greater deficit than the Acting Minister of Finance says, and yet to be so satisfied that it does not exist that he is willing to vote for a further reduction of taxes; whereas if he knew that a deficit of $110,000,000 existed the taxes would have to be increased in order to meet it. I say I cannot imagine a much more ludicrous spectacle unless the proposition was advanced as another of those little jokes which we have from my hon. friend from time to time and which we are always glad to have because there is not a merrier sound in this House than the laugh of the hon. gentleman.

Following up the argument contained in the hon. member's speech, in addition to discovering a deficit of $110,000,000 and evincing a desire to still further reduce the taxes of the country, what does the hon. member propose further? He proposed in the course of his speech to keep out of this country some $700,000,000—I think that was the amount—on raw materials, and so forth, which are imported into the country and upon which duty is paid, thus proposing to take away another $100,000,000 from our revenue. That was his proposition—that the tariff should be raised to keep those raw materials out. That is to say no tariff would be derived from their importation, and another $100,000,000, or in that vicinity, would be added to the existing deficit of $110,000,000. That is the way in which my hon. friend would meet deficits. Is it any wonder that when the affairs of this country were in the hands of a gentleman whose mathematics would lead him in this peculiar direction, that when he left office we should find a huge debt of $2,500,000,000 upon this country? To me it is not in the least surprising. But it was somewhat surprising when the hon. member for London (Mr. White) followed in the same strain. These gentlemen must understand that if the deficit they speak of really exists it is impossible to carry out the amendment for which, I expect, the hon. member for London and others will vote—to still further reduce the taxes. On the other hand if we have such a deficit the thing necessary for us to do, it seems to me, is to raise enough taxes. We know that should be the course to meet such a deficit if it really existed, and the hon. member for West York knows it also. But the hon. member probably does not think it really does exist because, as I say, his remarks were simply uttered in that very pleasant spirit of jocularity which we all enjoy and which amuses us so much.

Now, with regard to the tariff itself there are just one or two items that I wish to allude to because they affect my own constituency. It is rather difficult to touch the tariff, Mr. Speaker, without affecting the constituency of Brantford because, as I stated before in this House, and which is known to most members, its manufactures go all over Canada from the Atlantic to the Pacific. When a reduction was made in the duty on the articles manufactured there last year I was in hopes nothing more would be touched; I was in hopes that we would stand pat upon the budget—although that does not seem to please hon. gentlemen straight across the chamber; I hoped that the tariff would remain with some degree of steadiness for a few years until such changes as had been brought in by the budget of last year might have had a chance to work and enable us to see whether they would be a benefit. However, a further reduction is made this year on farm wagons and farm sleighs. The duty has been reduced, I think, from some-

thing like 25 per cent to something like 10 per cent. This reduction affects another Brantford industry—because not only did the wagons of the Adams Wagon Works carry the food of our gallant soldiers over the blood-soaked fields of France and Flanders, but they are used on farms in our own country in a peaceful way in a territory extending from the Atlantic to the Pacific. Now this further reduction was made.

Was there one word of appreciation for the further reduction from the members of the Progressive party? If there was I failed to hear it. I heard most of what was said. I heard them complain that the budget did not suit them. They did not point out that this particular item did not suit them, and they did not point out that this item was adjusted for their benefit and in their interest. The thought that is in my mind at the present time, that was in my mind last year was this—and I am quite in earnest when I say it, and I hope that no offence will be taken for I intend none—that whatever reductions are made in the budget, whatever changes are made for the benefit of the Progressives, they will never be satisfied, they will ask for more, and will not wait to see how the changes made last year benefit them. But there comes this insistent demand for further reductions every session, and it reminds me of the story of the bear and the boy with the candy. The bear will eat the candy as long as the boy has the candy and will give it to him; then when the candy is gone the bear will eat the boy. That is the attitude of the Progressive party on the tariff, and I regret to say it. I do not wish to offend any member of that party, but I would like to see them come to a more reasonable attitude upon this question. Of course there are some questions which we naturally view from different angles. They are consumers and users of these goods that are made so largely in the city I represent, but it is their uncompromising attitude I complain of. They never seem satisfied. As I have stated, I have not heard one word uttered from that corner of the House complimenting the government or the Acting Minister of Finance on this very change in respect to the duty on wagons which was made for their benefit. That is a large and important industry in Brantford, and will be affected very seriously by the change. The firms in the western states that make wagons which go to the northwest are situated much closer to the people of the prairie provinces than we are—a good many hundred miles. Their freight rates are less, and consequently it will be very difficult for the manufacturer in Brantford to compete with the American wagon makers and keep their trade. Yet it is known that there is no better article of that class manufactured anywhere in Canada. It can only be put out of the market by a lower price, with the advantage in the freight rates that American manufacturers will have. These wagons are largely made in the vicinity of Minneapolis and that would make it very difficult for the Adams Wagon Works for instance to continue to compete against them.

This brings me to another point which I desire to touch briefly, which is not directly referred to in the budget, and I regret that it has not been mentioned. I think it should have been mentioned in some way. I refer to the Crowsnest pass agreement which has created discrepancies and discriminations against many points throughout the whole of Canada, but I venture to say that no point has suffered more on account of the inequalities in the freight rates than the city of Brantford. Our complaint is not simply that the discrimination was put into effect by the Canadian Pacific Railway, because that is not the main railway serving the city. It is one of them, but not the principal one. Our complaint is that the Canadian National Railway should have granted a rate to the city of Hamilton which is discriminatory against the city of Brantford, and rival manufactories are located in the city of Hamilton. In order to give hon. members some idea of the enormous difference that this makes on some classes of agricultural implements that are shipped to the northwest, Brantford has to pay a rate of $1.28 per hundred, while the same goods are carried at the rate of 96 cents a hundred from Hamilton, and these goods are carried, not by a rival railway, but by our own Canadian National. That discrimination against the city of Brantford has been put into effect by the Canadian National Railways. Of course the excuse is that when the Crowsnest pass agreement came into effect and the Canadian Pacific Railway gave reduced rates from Hamilton, the Canadian National had to grant a reduced rate to meet it. Whatever excuse may be offered by the Canadian National Railways or by its officials, the feeling naturally will exist, and it will rankle in the hearts of shippers by railway in Brantford that this discrimination is made against them by the Canadian National Railways. The feeling in our district was growing greatly in favour of the Canadian National, and there was a desire to ship goods by that road. The railway had come into favour and was found to be giving

good service. People were satisfied with it and became proud of it. But there is a strong feeling there to-day, and they want to know why should the Canadian National Railways, discriminate against them when they are shipping their most important product to the west. Why should they have to pay $1.28 per hundred, when the same goods could be shipped from the city of Hamilton at 96 cents per hundred? In the case of the shipment of some agricultural implements it makes a difference of more than one hundred dollars a car. I think this state of affairs should be rectified, and the Minister of Railways should do something to provide a remedy.

Mr. LADNER: How would the hon. member rectify the situation?

Mr. RAYMOND: I do not quite understand. How would the hon. member expect me to rectify it, unless I had the power to do so?

Mr. LADNER: On the assumption that the Canadian National Railways would accept the suggestion of the hon. member who knows the situation and the difficulty, what would be the hon. member's suggestion?

Mr. RAYMOND: That the Canadian National Railways should never discriminate against a city that has ever been one of its very best customers, and that it should give no better rate to Hamilton or any other place than it gives to Brantford. That is a fair answer.

Mr. LADNER: Do I understand the hon. member to suggest that the Canadian National should reduce the rates from Brantford to the same level as the rates from Hamilton.

Mr. RAYMOND: I am not so much concerned as to what they do with regard to Hamilton as with reference to Brantford, and if they would reduce the rates from Brantford down to the rates charged from Hamilton I would be satisfied.

Mr. LADNER: Are they not obliged to reduce the rates from Hamilton?

Mr. RAYMOND: Why?

Mr. LADNER: Because the Canadian Pacific have been obliged to reduce the rates from Hamilton to the Crowsnest rates.

Mr. RAYMOND: That is a question. They did reduce them. I do not know whether they were obliged to reduce them.

Mr. LADNER: Was there not an order of the Supreme Court of Canada?

Mr. RAYMOND: I do not know. My hon. friend is a lawyer and knows all about it but I am happily ignorant on that point.

Mr. LADNER: I am trying—

Some hon. MEMBERS: Order, order.

Mr. LADNER: I am trying, Mr. Speaker, to get from the hon. member a statement of the facts which are important, because we in the west are much concerned in this proposition. Is it not a fact that if the reduction were made in the case of Brantford to the rates under the Crowsnest pass agreement, a similar reduction would have to be extended to every other city in Canada. Is that not the reason why they cannot make the reduction?

Mr. RAYMOND: I will answer my hon. friend's question at a little greater length and explain the argument from the Brantford point of view. I am speaking now from my own knowledge of it, because I happened to be there when the first connection was put through which gave us any communication at all with the Canadian Pacific Railway, or which gave Hamilton any connection with the Canadian Pacific Railway, so far as my knowledge will carry me. The point I wish to make has not been developed at all. The Toronto, Hamilton and Buffalo railway was built from Toronto to Hamilton, I think, about 1895, at all events before the Crownest pass rates came in. I say that it is through the Toronto, Hamilton and Buffalo Railway that the Canadian Pacific Railway came to have any connection with the city of Hamilton. They had running rights at this time which they had arranged for with the Grand Trunk between Hamilton and Toronto. They never built a line from Toronto to Hamilton, but obtained running rights over the then Grand Trunk from Toronto to Hamilton. The city of Brantford withheld the bonus from the Toronto, Hamilton and Buffalo Railway because they had not carried out the agreement which had been made to build a line from Toronto to Hamilton. That is the connection between the city of Hamilton and the Toronto, Hamilton and Buffalo Railway as I see it. If that is the connection then the city of Brantford is just as much entitled to the Crowsnest rates as ever the city of Hamilton was. Another contention I make is that whatever the Canadian Pacific Railway have done, if the Canadian Pacific Railway gave an unjust rate from Hamilton to the detriment and disparagement of Brantford and the business there, I do not think it is any excuse for the Canadian National Railways,

our own national railway, to give a rate that discriminates against that city. If the Canadian National gave the rate in Brantford, the Canadian Pacific would have to come down and give the same rate, as now the Canadian National say that they have to give this rate in Hamilton because the Canadian Pacific gave it. I do not know that it is worth while to go into this at any greater length, but it seems to me it is very plain that Brantford is being discriminated against. Section 55 of the Railway Act states that there shall be no discrimination; but in violation of that section our own railroad has given this discrimination against Brantford that some of our cars have to pay $100 more in freight than cars going from Hamilton, and on many other goods the difference is something like 34 per cent more if sent from Brantford than if sent from Hamilton, because the difference is between 96 cents and $1.28. I should like to see this rectified. It was promised in the Speech from the Throne that transportation would take up the attention of the government during this session, and it has been promised by the Minister of Railways and Canals (Mr. Graham), who I know is a man who always keeps his promises, that this will be rectified. But months are going by and this is the time of year when vast quantities of agricultural implements are being shipped out. It will soon be the time of year when tons and tons of binder twine will be shipped out, and all these goods have to pay this excessive rate, which I claim is unjust. It is, therefore, the duty of the government and the Canadian National Railways to rectify this and to see that the disparagement against Brantford is done away with.

I was a little disappointed in the amendment that was moved by the hon. member for Brandon, the leader of the Progressive party (Mr. Forke). Perhaps I had allowed my hope to rise a little too easily. When. last year, certain changes were made in the duties on agricultural implements, reducing them, I would say, to an irreducible minimum, I had hoped that these hon. gentlemen would be satisfied. But they were not, and that resolution showed that they were not.

An hon. MEMBER: Hear, hear.

Mr. RAYMOND: An hon. member says, "hear, hear". I quite understand that there are hon. gentlemen over there who will never be satisfied until all the duty is taken off, and I do not know what they will then ask from the government. Their share of the taxes largely consists in the paltry duty they pay on what they use. I should not like to think they pay it grudgingly; I should like to think they pay it cheerfully and with a good heart, because in the amendment that the hon. member for Brandon desired to move, he took the ground that he regretted that the protective principle still existed in the tariff, that is, the extraordinarily high protection of 10 per cent upon ploughs and the extraordinarily high protection of 6 per cent upon binders. I do not know any other country in the world where there is less duty on these goods where any is charged. The hon. member said in his resolution—I will not quote the words of it at length—that they believed rather in the revenue principle than in the protective principle in a tariff. If one wished to collect any revenue, what amount would one impose in duty less than 10 per cent or 6 per cent or the paltry amounts charged on these implements? I cannot conceive it; but I make this suggestion to the Acting Minister of Finance and for anyone who is interested in the finances of this country. If these hon. gentlemen opposite are sincere—and I do not like to suggest that they are not; it is only that they do not thoroughly understand the matter—in their desire for a revenue tariff, that is what I have always wanted and we are quite in accord. Then I understand why it was that the hon. member for East York (Mr. Harris) referred to some hon. members in this House as "Go-on Liberals." That is, according to my understanding, Progressive Liberals. I must be one of those because I believe also in a revenue tariff, but I believe that revenue tariff should be put on a regular and sound basis. More than that, if that was adopted on everything, if it was agreed that there should be a certain minimum tariff of say 10 per cent on the imports of this country, I would suggest that when the tariff was reduced to that, it should be considered that it was reduced to the irreducible minimum and that there would be no further reductions. That would be my idea of a minimum tariff. My idea would be to impose that tax on all goods coming into this country unless there was some special reason why a tax ought not to be imposed or unless there was some special reason why a higher tax should be imposed in certain cases.

The hon. member for Brandon said that he regretted the government had not done more to reduce the cost of living. He should have been a little more concrete and definite. How would he proceed to reduce the cost of living? Let us take the items on the cost of living sheet and see which of them are the highest at the present time. You will find such items as butter, milk, cheese, poultry, eggs, meat, bread, all the products of the farm,

are at a higher rate than they usually are on the cost of living sheet. Are those the articles he wants reduced? I do not think he wishes to see any of them reduced. When we know that the few articles of clothes and tea or whatever else we use are not as high, it would have been more interesting, more pointed, if the hon. member had told us on what articles he wanted the tariff reduced in the hope of making the cost of living less.

Mr. GOOD: What about automobiles?

Mr. RAYMOND: I do not know that in the cost of living automobiles can be considered unless one had to live like a gentleman on a western prairie farm. I do not consider an automobile is an actual necessity of existence, because it is on the articles that are considered necessary for existence that this table is based every year, as I understand the matter.

Let me continue my serious suggestion and it is this. The hon. member for Victoria, Ont. (Mr. Thurston), I think, last night suggested that until we reduced the interest on our national debt, we could not hope very much to reduce the annual expenses of this country. We are met every year with a large uncontrollable expenditure, which varies a little, but which runs somewhere about $135,000,000 that we have to pay on our debt. Unless a direct and definite effort is made to reduce that debt it never will be reduced; it will stay about where it is. It is never going to come down until the attention of the people and the government is deliberately set towards reducing it. Do you think it will be reduced, when we have a deficit of $110,000,000, by still further reducing the taxes or by taking away the customs duties on $700,000,000 worth of goods that are imported, as was suggested by the hon. member for West York. (Sir Henry Drayton). That will not reduce the national debt. I should think it was due to his belief in such a course that when he left office he left us with the enormous debt of $2,500,000,000 or whatever it was in his time. The finances of this country should be considered in a serious and direct systematic way. Some system should be evolved as was suggested by the hon. member for Victoria, Ont., whereby we should have something in the nature of a sinking fund or something that would be applied every year towards the reduction of the debt. It need not necessarily be segregated away in a sinking fund, but some definite portion of the revenue of this country should every year be devoted towards the reduction of the national debt. Until that is done, it will never be reduced, and until we reduce our uncontrollable expenses, it will be absolutely impossible for us to get along with less taxation. Therefore, I think that system either of a sinking fund or of apportioning a certain part of the revenue towards the reduction of this vast debt of ours should be put into effect. We could reduce the annual charge on interest and lighten definitely and satisfactorily the burdens of our people. If hon. gentlemen opposite believe, as they say they do, in a revenue tariff, would it not be a good plan to combine the principle of the sinking fund for the reduction of the national debt with the idea of a tariff for revenue?

Mr. HODGINS: The hon. member was speaking a few moments ago about the tariff on wagons. For my own information, I wonder what the tariff was on wagons last year.

Mr. RAYMOND: Twenty-five per cent.

Mr. HOEY: There has been no change in the schedule at all.

Mr. RAYMOND: I think the hon. member asked what the tariff was last year.

Mr. HOEY: It was the same last year as it is now; there has been no reduction at all in farm items.

Mr. HODGINS: If I remember rightly, there was one item struck out of the tariff schedule last year. They were all put under the rates of five, ten and ten, but this year that item is in again and the tariff on it has been increased.

Mr. RAYMOND: I understood there was a reduction on farm wagons and sleds; that was the information I got from one company who evidently are under a misapprehension. I hope the hon. gentleman's interpretation of the schedule is correct, because I know that the company do not want to represent the position as it is not. Coming back to the question I was discussing a moment ago, of some gradual, systematic reduction of the national debt, hon. gentlemen opposite claim to be in favour of a revenue tariff, and I say that our revenue will be obtained through the medium of a tariff as long as most of us are alive; and so long as that is the case the main point for us is to see that it is fairly, reasonably, equitably and consistently collected. I think myself that by combining these two ideas, of a reduction of the national debt, whether in the form of a sinking fund or not, with a revenue tariff, we should obtain satisfactory results; if a certain part of

the customs tariff were devoted every year to the reduction of the national debt you would get a proper system by which the tariff would be stabilized.

Mr. EVANS: Is the hon. gentleman in favour of a revenue tariff entirely, or does he look for incidental protection along with it?

Mr. RAYMOND: It would be impossible to have a revenue tariff without giving incidental protection. If for the sake of collecting a revenue we levied a duty of 10 per cent on any particular article, naturally there would be a certain amount of advantage in the way of protection to the implement affected. So that you could hardly separate a certain amount of protection from a revenue tariff. It used to be called "revenue tariff with incidental protection," but I believe the phrase is a little old now. That was the tariff used more particularly prior to 1911 and
5 p.m. it was fairly successful in Canada, if you will remember. I do not think we have reason to regret that part of our financial history; there was a period of years during which that tariff was in force and I think the business of the country flourished fairly well then. I do not mean to say that this was because of the tariff, but business flourished while that tariff was in existence. To make it a rule that a certain part of the customs tariff should go to the reduction of the national debt would have the effect of stabilizing the tariff, and I feel that it would be quite acceptable to my hon. Progressive friends if they looked at the matter as I do. It would have the advantage of gradually reducing the debt, and further it would be a means of collecting the money indirectly. I know that some people do not like the term "indirect taxation" and for that reason they object to a tariff. But there will always be some necessity for indirect taxes. And one difference, not the only one of course, between a direct tax, such as the income tax, and an indirect tax by way of a tariff, is that if a man is economically inclined, if he wishes to live, or if being poor he is bound to live, with the greatest amount of frugality, he can avoid using such articles as the duty is collected upon. But if from his salary there is a direct levy in the way of an income tax he cannot practise such economy, and this has a tendency to destroy thrift and frugality. If there were a duty, as we have a duty, on certain articles, those who wished to avoid expense in connection with them could do so by refraining from buying those things. If there were a duty on tea and they did not wish to use tea, or if a tariff were imposed against tobacco and they wanted to economize in that direction, they could refrain from the use of these commodities. I throw that out seriously as a suggestion; I think that a certain amount of the tariff might be used every year towards the reduction of the national debt; and as our hon. friends opposite believe in a revenue tariff I hope they will give the idea fair consideration. If they do so I think they will agree with me.

Let me say a word now in reference to what has been said regarding the proposed board of tariff commissioners. I think that the hon. member who referred to the matter last night, the hon. member for Victoria (Mr. Thurston) I believe, cited a strong objection to it, and that was a reason, he said, why we would vote against the budget. I wondered when he said that if he were aware that this board of tariff commissioners will be practically no more than an advisory board of experts to the government. Neither this government nor any other government, nor this nor any other parliament, will ever place in the hands of any commission the power to increase or decrease the tariff as it might see fit, for that would be contrary to the whole theory and genius of our constitution. That of course is not the case in the United States; there the tariff board may put the duties up or down as they please. That could not be done in this country, inasmuch as it must rest with parliament to decide what the changes either upward or downward shall be in the duties. If the hon. member, as his remarks implied, was under some misapprehension in this regard, thinking that the matter would be left in the hands of the tariff commission to raise or lower the duties, and if that was what he objected to, I think he need have no fear, because the tariff commission is intended to be merely an extension of the present board that assists the government with advice from outside men who are experts in this matter or who have had business experience in the various questions that come under consideration. Full information upon all these subjects could be laid before the government, and in this way it would come from a free and unbiased source, from the hands of those who are neither prejudiced nor interested. The proper placing of the tariff is a very delicate matter indeed, and those who have spoken in this House, the hon. member for Vancouver Centre (Mr. Stevens) and the hon. member for Fort William and Rainy River (Mr. Manion), besides several others on the opposite side who followed in the same course, have suggested a reciprocal tariff, a retaliatory tariff similar to that in the United

States. Well, such a tariff would not suit us at all; why should we want to imitate the United States? Surely to God we are a country of our own and do not need to copy any other. What we want is a tariff best suited to the needs of Canada, and we should frame such a tariff as the Canadian people themselves want. There are Canadian people who would not like such a tariff as is in force in the United States. Suppose for example we had a tariff on woollens, such as there is in the United States, so high that no woollens could be imported from Europe, from Great Britain or anywhere else. Are there not people who would object to that in this country? Yet that is the condition of the tariff in the United States. And would our shoe manufacturers agree to a schedule that levied no duty at all on shoes? But there is no duty on this article in the American tariff. Again, take agricultural implements; agricultural implements in the American tariff are free, and some hon. gentlemen opposite will agree with me that they never want to see these things free in this country. Certainly the city I come from, the constituency I have the honour to represent, would never think it fair, in view of the distance they have to send their goods, to say nothing of some of the disadvantages under which they have to make them, that they should all come in free. But I do not think we could ever expect to have a tariff that would be similar to the United States tariff or the tariff of any other country; we want to have a tariff of our own that is suited to our own needs. Now, I did not intend to say much about the tariff, but somehow the debates on the budget generally seem to take that angle, and I have ventured to make these few remarks on the subject.

There is another matter to which I should like to refer before I resume my seat. We hear a great many arguments with reference to what would happen to this country if an extremely high tariff, a thoroughly protective tariff, was adopted. As I say, the manufacturers in the city of Brantford are naturally not free traders, and I do not think anyone in this House would accuse me of being a free trader either. But while they are not free traders I do not know that they want a tariff that would, so to speak, reach the sky, the kind of tariff that some people have suggested, as high as Haman's gallows. There is a motion on the order paper in the name of the right hon. leader of the opposition (Mr. Meighen); I believe it came out in the newspapers even before it appeared on the order paper. It has been referred to in this debate, and if I am not out of order I should like to refer to it for a moment. He first adverts to the depression that prevails in the country and attributes it to the tariff conditions as they at present exist; then he goes on to state in very glowing terms—it is a beautifully written motion—what benefits would accrue to the country if those conditions were removed. Now, on the very first premise we do not agree with the right hon. gentleman. I do not agree that all the misfortunes of this country, all the depression of business, all the unemployment that exists, come from the tariff. These conditions are found to an even greater extent, as was shown here by the hon. Minister of Labour (Mr. Murdock), or at least to as great an extent, in the United States, which is regarded as a highly protected country. When the conditions exist there as they exist here, surely we cannot accept the suggestion that our troubles can be laid at the door of the tariff. I can remember thirty years ago when from 1893 to 1898 we had just as hard times, just as much unemployment, as we have now, though we were then under the old National Policy, which was passed in 1879 and continued from that year until 1897, I believe. There were just as many people out of work, just as many idle factories between 1893 and 1897 as there are to-day, so that I do not think the cause is correctly stated in my right hon. friend's motion.

Now, the results that are supposed to accrue from this imaginary policy—and the policy, mark you, is indicated only in the most general way—are extremely attractive; in fact, alluring—busy factories, happy homes, and all the rest of it. Holding the views that I do with regard to tariff, and coming from an industrial centre, Mr. Speaker, I should look at that suggestion, and I am sure every manufacturer in the city of Brantford would do the same, with a great deal of caution. They would be reminded of those words of Scripture: "Surely in vain the net is spread in the sight of any bird." Because they remember that the author of that resolution was the one who in 1910 was the first to moot the reduction on agricultural implements and ploughs. They remember that the right hon. leader of the opposition was the one who in 1919 in one fell swoop wiped the duty off farm tractors, of which some $20,000,000 were imported in two years, as a consequence of which the two factories making these articles in Brantford were put out of existence. They remember that he was the author of that; they have not forgotten it, and when they look at that notice of motion they wonder if he will do anything like that again.

Then, again, they remember that at the time the right hon. gentleman made these reductions the duty on ploughs was 22½ per cent and the duty on binders was 17½ per cent. If he wants to get their confidence, let him say to them: I moved to reduce the duty on ploughs from 22½ to 17½ per cent; if you put me back in power I will restore it. Will he say that? Will the right hon. member for Grenville, the leader of the opposition, pledge himself that if he is put back in power he will restore the duty on ploughs and the duty on binders? He should do that if he wants to get the support of those manufacturers. Will he even say that he will put it back to 17½ per cent, where it was when he left office? He is to speak in this debate; let him say openly and plainly what he will do; let him promise, if he will, to do that, or say that he will not do it. If he will do it I am sure he will be more likely to get the support of those manufacturers than he will if they can remember him only as the man who reduced the duty, as the man who came to them in 1921, when they had between three and four thousand men walking the streets, and made beautiful speeches about the value of protection. So they naturally are inclined to take with a grain of salt the protestations contained in this resolution until they are made much more definite than they are now as set out on the order paper. And when they see the alluring picture that my right hon. friend has drawn they cannot but say to themselves, "Surely in vain the net is spread in the sight of any bird."

Mr. SUTHERLAND: Will the hon. member permit a question?

Mr. RAYMOND: Certainly.

Mr. SUTHERLAND: Did not the people of Brantford at the last election vote in favour of the Liberal policy to remove the duty entirely on agricultural implements?

Mr. RAYMOND: I never knew that it was the policy of the Liberal party to remove the duty entirely, but they voted for me and it was not my policy.

Now, as I was going to say, Mr. Speaker, this is a serious question. To speak of the National Policy is but using vague terms; there is nothing definite about it. Let some definite statement be made as to what will be done before any such motion as is proposed by the leader of the opposition can be accepted by those who do not believe in free trade or do not believe in too low a tariff. I say they certainly will never believe in it until they see it more clearly set forth; and why should they? When I came to this House—and this is my fourth session—I was entirely ignorant of all public questions; I came here with a kind of ingenuous guilelessness which caused me to believe that what men said they meant. Now, as I have said, you know, Mr. Speaker, that no one would take me for a free trader; in fact, I have some protectionist proclivities in my cranium. At the first session the tariff as brought down in the budget was not exactly a protectionist tariff or a free-trade tariff. An amendment was moved by the so-called protectionists, the effect of which was that the King government had not carried out its pledges given in 1919. Anyone reading the amendment would say that hon. gentlemen opposite wished to see those pledges carried out. Now, I did not wish to see them carried out, I am free to say. At the next session an amendment to the budget was moved, I think, by the hon. member for Brandon (Mr. Forke) the respected leader of the Progressive party. All those gentlemen who had brought in this motion with reference to the pledges of the platform of 1919 turned in and voted with the Progressive party. Again last year, I cannot remember the exact form of the amendment, but it was not anything at all that would lead definitely to a protective policy. I stand open to correction if it was. Then take the amendment now before us. It avoids the question absolutely, and it merely speaks for a still further reduction of taxes in order to reduce the deficit of $110,000,000! That is the ridiculous position at the present time—a further reduction of taxes without any reference to protection or to anything else! While this may seem like a joke, to me it is a most serious question. It will stand forever on the records of this House, and cool-brained men will look it over and they will say, "Here was an ex-minister of the crown, one of the greatest financial minds in the country, who when, according to his own statement, there was a deficit of $110,000,000, proposed to remedy it by a still further reduction of taxes!" That will stand as long as the records of this House are preserved. There is nothing in this amendment. If the right hon. leader of the opposition were in earnest on this protective policy, and if he wished to get the support of manufacturers, I would expect to see him more definite. The first session I came to this

House I expected them to nail their protectionist colours to the mast and fight and die for them. But those colours are nowhere to be seen. We cannot tell how much is meant, or how little is meant, by this amendment. If they mean a reduction of the sales tax and so forth, if that is the important thing in their mind, how are we to get at their attitude on the tariff? That such a state of uncertainty should exist is not by any accident; it is by design, Sir. The right hon. gentleman knows well the feeling in this country. He has agents from the Atlantic to the Pacific who keep him posted, and he knows just as well as I do that if he came before the country with a policy of high protection he would find that six of the provinces would not send him a single supporter any more than they did in 1921; he would find that in the Maritime provinces, he would find that in the prairie provinces; he would get no supporters there; and he would find that he would not increase his following in Ontario, in Quebec or in British Columbia. He knows this, and that is why, I say, he avoids the question. If I am wrong—which I may be, because I am not infallible—if I am wrong he will have an opportunity to lay before this House definitely in the form of pledges the policy which he intends to pursue. But to carry that policy into effect, if it were ever in the power of any government to do so, I say most solemnly that I believe it would shatter confederation to its original fragments. That is not what we want to see. We want to see the provinces each like a separate little nation, all happy and bound together in the great nationhood of Canada. That is what we have aspirations for. We want Canada to accomplish something in this world. It seems to me that Canada stands for something. There is a kind of genius in the spirit of this country that is illustrated in its history and in the Act of Confederation—it is, Sir, the spirit of conciliation. Before confederation there were warring provinces that were almost at each other's throats, and there was no possible hope of agreement. But first came the spirit of conciliation, then the spirit of compromise, then the spirit of co-operation, and finally confederation. Let us preserve that confederation so established. On the other hand, if, as some say, there is danger of its being wrecked and ruined now, if, as they say, one-third of our population seek annexation, or if there are those at either end of the Dominion who do not believe in confederation, let us set to work at the task anew, let us start a new policy of compromise and co-operation, let us get this country into the proper state to be a united country. And we must do that if we want to have it become a successful country.

When I say the spirit of conciliation seems indigenous to the country, I think in all its history is no event we have more reason to be proud of than this, that it was on the soil of Canada that the warring English and French were united through the spirit of conciliation, of compromise, that spirit of conciliation and compromise eventuating in confederation, that while still in Europe, with only the narrow channel dividing them, English and French were fighting and killing one another, they were becoming united in this country for the sake of confederation. That is the proud part of our history, because the two races were united here long before the thunders of Trafalgar and Waterloo had died away. That is the spirit we need to-day, the spirit of conciliation, the spirit of compromise, and then the spirit of co-operation, if we wish to solidify and consolidate confederation. And in thinking how this might be brought about; it seems to me that if there is one man whose early history, whose long devotion to public duty in the service of humanity, whose whole life has led him to consider this question, I think he sits at times in this House—I do not know whether he is here or not now—his works as they have been laid before the world in the treatment of capital and labour, the two most difficult things in our social economy to unify, show that he did more to unite them than any other man in any country,—a man of whom it was said recently in Ottawa by a citizen of the neighbouring republic, "The greatest difficulties we have settled in the United States were settled on the basis of a charter provided for by your Prime Minister, W. L. Mackenzie King." And I say that spirit of conciliation has been the study of the Prime Minister's life. If that spirit is to be carried out, if these rifts, which some say exist in confederation, are to be closed, if there is any hope of keeping together the provinces and having them united in a happy and progressive country, I certainly believe that the Prime Minister is the man, who in the spirit he has displayed throughout his life is most likely to be effective in bringing about that great national undertaking.

Mr. JOHN MORRISON (Weyburn): Mr. Speaker, there is a great deal of criticism of the government on this budget, and I realize it is much easier to be critical than to be correct, especially when one is serving the public. I am disappointed at the tardiness of the government in not making more tariff

reductions this year. Hon. members to my right are chronic fault-finders; of course, it is impossible for a government to please them. It seems to be the duty of an official opposition to find fault, whether things are right or not. They will always cry, "Wolf! Wolf!" when nothing is wrong, and the public have learned to recognize that, and consequently pay very little attention to their criticism. They have been tried and found wanting. They ask the people to hustle these inconsistent Liberals out of office and to put them in; but they have nothing new to offer, nothing constructive. They still talk about the alleged virtues and sing the praises of protection, and attribute to the protective system any prosperity that we have attained in Canada. I submit that we have succeeded so far in spite of the protection afforded to the manufacturers which has borne heavily upon the rest of the people. The customs tariff is to the manufacturers and Conservative politicians a cure-all patent medicine. They claim it will raise our revenues by the duties collected on incoming goods. Yet they want it mule-high, bull-strong and pig-tight so as to stop all goods coming in. They decry free trade as ruinous, but they would go to the other extreme and have "no trade or truck with the Yankees"—Canada's best customers. That was their cry in 1911 when agriculture in Canada and all allied industries received a body blow from which this country has not recovered to this day. I submit, Mr. Speaker, that we suffered a greater monetary loss through the defeat of reciprocity in 1911 than we did from the Great war.

I think the government should have taken the duties off automobiles and auto trucks this session, removed the duties on cotton goods, and lowered the duties on many of the necessities of life. I should like to buy a new car this year. Would the Finance Minister advise me to buy a Canadian-made car or an imported car?

Mr. CAMPBELL: Buy an imported car and turn the duty into the treasury.

Mr. MORRISON: If I buy an imported car the price I pay is the actual market value, plus duty, and I turn a few hundred dollars into the federal treasury. Would that not be a more patriotic thing to do than to buy a car from a Canadian multi-millionaire and turn the tax into his private coffer? I find the idea spreading considerably in the west that if we cannot get the tariff duties lowered in any other way we shall have to start a propaganda in favour of buying imported goods in preference to the home made, thereby helping the Finance Minister to balance his budget.

The United States have put a tariff of 42 cents against Canadian wheat for home consumption, but they admit it free of duty when used in milling for export purposes. Our wheat is required to be blended with the United States wheat for home consumption. That makes it expensive for the American consumer, and it is also a hardship on the Canadian producer. A restriction of this character injures both parties. Would the matter be improved any by Canada putting an export duty on wheat, thereby curtailing the ability of the American millers to compete with Canadian flour in the world's market? Would it not be a much better plan for Canada to send an ambassador or a high commissioner to Washington, accompanied by a competent staff, in order to keep American public men properly informed as to Canadian conditions instead of trying to fight them? I believe that if we had had an ambassador or a good Canadian representative, at Washington the Fordney tariff would never have been imposed against us. If we had had such a representative at Washington the Chicago drainage canal would never have come into use, and our interests and the interests of shipping on the Great Lakes, both Canadian and American, would have been protected. Figures have been submitted to the House showing that millions of dollars annually are lost through the lowering of the levels of the Great Lakes. A great deal of this loss is passed on to Canadian manufacturers and Canadian farmers; as a matter of fact we all have to share it. Had we had a representative at Washington to present our case properly this loss might have been averted. It is much better statesmanship to make provision in advance and prevent a possible injury from being done than it is to try and devise a cure after the event has happened. The United States has been our best customer and Great Britain second. Our trade with the United States last year was over $900,000,000. Yet some people say we should have no truck or trade with that country.

The budget, I think, should be clarified by the Acting Minister of Finance. The estimates of ordinary expenditure for the fiscal year ending March 31, 1925, amounted to $381,949,379.67. If we deduct the appropriations for railways, amounting to $56,000,000, it would leave $325,949,379.67. Now on page 32 of the Canadian National railway report we find that the amount of $8,491,553.57 was loaned to the system by the government. The

estimates for the last fiscal year as they passed the House amounted to $329,086,395.97. The Finance Minister estimated the expenditure for the same period on February 28, 1925, as $319,700,000, the amount saved or unexpended would be $9,386,305.97. The latter amount is an apparent saving on the year's expenditure, but the Acting Minister of Finance gives no explanation of the manner in which so large an amount has been saved or unexpended, and takes no credit for what is, if actually achieved, a remarkable performance. If this amount had not been saved or unexpended, instead of a surplus of $1,820,000 there would have been a deficit of $7,500,000.

Now, Mr. Speaker, let me ask: How can Canada properly balance her budget? To this question I reply: By increasing production per capita; by increasing her population; by decreasing public expenditure; by getting nearer sound business methods for conducting the public business. I have obtained figures from the Bureau of Statistics as to yields of wheat in nine European countries and find that the average yield per acre for five years, from 1917 to 1921 inclusive, for the countries mentioned is as follows:

	Bushels per acre
Germany	26.4
Austria	15.4
Belgium	35.6
Bulgaria	13.4
Denmark	43.9
France	19.9
England and Wales	31.2
Norway	24.6
Czechoslovakia	20.8

This is an average of 25.8 bushels per acre. In those same years the average in Canada was 12.8, just half the yield per acre of these European countries. The average acreage in Canada in this period was 18,546,000 acres. At thirteen bushels extra per acre, this would mean 241,098,000 bushels. Other grains would double this total of increased wealth. Acreage can and I think would be doubled if inducements for profitable farming were held out in Canada. I would like our protectionist friends to consider what such production of wealth from agriculture would mean to industries generally. Suppose that they merely get their share of it, in the open competitive market, would it not be better for them to take a smaller margin of profit on a maximum output and keep their factories running to capacity? Would that pay our railroads to operate to maximum capacity? Would it not be better for our financial institutions and for all the people generally rather than that restrictions should be put on the basic industries so that there is no inducement for people to work at these industries. The basic industries of the country have to be on a properly sound basis before real stable conditions can be obtained for the dependent industries. It would be also better for labour. There would be much work in the country. Our protectionist friends are very solicitous for the poor working man, especially coming near election time; but if we had a maximum production and smaller profits, with a maximum turnover, there would be no idleness in the country. These poor yields of Canadian farms are not because the soil is poor or because Canadians are poor farmers, but there is a real cause for that low yield and I consider it is the excessive cost of farming in Canada. It is often impossible to farm profitably. Lumber and building materials generally, farm materials and farm supplies of all kinds are much too costly. It is a physical impossibility for men to carry the burden of somebody else and do their best in business. The same thing applies to industry. If an industry is burdened it cannot do its best. Every time an unfair burden is imposed on a man you decrease his productive ability and the same thing applies to an industry.

At a meeting of the Brantford Board of Trade, held on March 14, 1911, the following resolution, proposed by Mr. Harry Cockshutt, at present Lieutenant Governor of Ontario, was adopted:

> Resolved,—Our (1) material, (2) national and (3) empire interests will be best served by keeping entirely free of reciprocity entanglements with the United States at the present time. Carried 53 to 49.

About two years after this I was in Minneapolis and I saw the Cockshutt implements there selling in competition with American implements. I was in a wholesale implement warehouse, and I asked the manager how those implements compared in the amount of sales with the American implements and he said, "Oh they get their share of the trade" I was surprised to learn that the prices of Cockshutt implements in Minneapolis were very much lower than they were in Winnipeg. Unfortunately I did not take down the figures and cannot quote them, but they were very much cheaper in Minneapolis than in Winnipeg. It shows that when the Canadian manufacturer wants to compete with the American he can do so. Some people think that the Canadian manufacturer pays the duty on his implements going across the line, that he is handicapped and prevented from getting into the American market. There is

no handicap whatever. But the American is handicapped by the tariff in getting into our market. The Canadian manufacturer has that one hundred and ten million American market on the same terms as he has the Canadian market. He has the drop on the American manufacturer to that extent. The Brantford people are really high protectionists. I do not know why they send a gentleman down here posing as a Liberal. The hon. member who has just resumed his seat (Mr. Raymond) was finding fault with the Conservatives for their indefiniteness in their statements about the tariff. I do not agree with my Conservative friends about their customs tariff, but I must say that they come out and say where they are at. They state what they believe with regard to the tariff and our Liberal friends are disappointing the country. They have a good policy. They have one policy to preach at election time, to get into power. They appeal to the public on a low tariff policy, and when they get here it would take a magnifying glass to find out the difference between a Liberal and a Conservative when it comes to the tariff. It cannot be done. It is all popycock. About three weeks ago Lieutenant Governor Cockshutt toured western Canada as an emissary for the high protectionists. He handed out a lot of fine stuff about a "get together spirit" between the east and west, just what the hon. member for Brantford (Mr. Raymond) shot across the floor of the House a little while ago. He says "Let us get together, in a spirit of conciliation and good will"; but back in 1911 he did all in his power to take our natural markets from us. He has the same spirit yet, though he is a Conservative, exactly as the hon. member for Brantford is a good Liberal—no difference at all. I want to tell my hon. friend how we can have a good spirit of unity without going out west and waving the flag. That trip out west was only an admission that down in their hearts they realized that something is really wrong. The right way to overcome all this illfeeling which is growing, and this difference between east and west, between urban and rural, is just to give the common fellow a square deal, and there would be no need for flag-waving. The common people get no favours, and they should no longer be imposed upon. They are not satisfied to sit still and be imposed upon.

With reference to the tariff board which my hon. friend talks about, to advise the government as to what duties should be put on the different implements, I ask, has any manufacturer gone to any government, Liberal or Conservative, asking that duties be imposed on competitors, where the government have replied, "All right, sir, put all your cards on the table and we will look into the matter?" Did hon. members ever hear of that? I never saw it. It is time they got someone to inform them. I do not believe a tariff board in the hands of such gentlemen would be anything more than something to hide behind. Certainly they will put on the board men who believe in a protective system, and they will get the report from these men and say, "Here is what is recommended to us." They will make them the goat, and we will be the burden-bearers as usual.

A lot of this inability to compete with outsiders is due to difficulties of the home-made variety. For instance, not long ago I cut a clipping from a Montreal paper with reference to the Montreal Light, Heat and Power Company having watered stock. They watered the stock in that company four times the amount they actually put in, and then they charged rates to pay dividends of seven per cent all these years. Here is the dope that the Montreal manufacturers swallowed. Their employees were charged four times the rate for their light bill, and it made living in Montreal very expensive. Whenever a new company started to supply heat, power and light, the old ring would get after it and give a good inducement to it to come into the combine. This was done until they got a combine capitalized at something like $164,000,000. This was over capitalization all tacked on to the cost of the product of the factory, because it makes living expenses higher and the companies accordingly have to pay higher wages. Then they keep their competitors out with a tariff wall and they say: Charge it to the farmers of the west; they are making money; they can pay it. A few years ago when a Toronto manufacturer was trying to shake me on this tariff question, I asked him: "Why do you not even sell us your goods for the same price plus extra freight charges, at which you sell them to the Ontario and Quebec farmers?" He said: "Look here, Morrison, you know the way business is done—all that the traffic will stand. You fellows are making more money and you can afford to pay more than the Ontario farmers can. We have got you farmers down where we want you and we are going to make you pay. If the position was reversed, you would do the same." After talking about two hours, he got impatient, finding that he could not get away with his guff, and so he spoke out the truth.

Employers who enjoy special privileges either by protection, or bonus, can give a better inducement to labour than the farmer can, but they do so only at the demand of the labour unions. Their bonus is the farmer's burden,

as we cannot compete in the labour market. The result is that Canada's output per acre of farm products is only one-half of what it would otherwise be.

Canada needs more workmen to work and develop her basic industries, and care should be exercised in getting immigrants. Better inducements will have to be given in order to keep people on the land. To start immigrants farming the first year they are in Canada is a serious mistake, because such a practice results in their losing their money. Then, of course, the country is knocked, and efforts at immigration abroad are undone. A man should be in this country for at least one season and acquire some experience, before he invests his little bit of money. It should be an easy matter to compel every immigrant to have in his possession as a part of his passport, a document in his own language, furnished by this government, setting out clearly Canadian conditions, and the Canadian immigration law. This would do away altogether with the old cry of deception which so many immigrants put up when they lose their harvest earnings in a poker game. People coming to us from the British Isles are particularly faulty in this regard. This could easily be set right if some one seriously minded was interested.

Experience on Canadian farms is necessary, for one year at least, and settlers should be established or domiciled within already improved municipal areas, which now have railroad, roads, schools, churches and post offices, It is folly to put them away back too far from these conveniences. Conditions would be too bad for them and many of them would become dissatisfied. It is unnecessary to provide more public utilities to take care of the increased population until those municipalities which have those conveniences and have to pay for them are better settled. Conditions have changed much for pioneers within the past twenty-five years.

We need an agricultural credits' system as is recommended by Dr. Tory in his report. On page 12 of Dr. Tory's report, he states:

> I have discussed the problem with many business men in the east and in the west, men who know the difficulties associated with the building up of successful enterprises and I have not met one who would say that he believed that any business—farming or other,—which did not have the advantage of a protected market, or of patent rights, which in some measure gave a monopoly, could continue to prosper, paying 8 per cent or 10 per cent for capital, and a like amount for current borrowings. With this opinion my own judgment is in complete accord.

Capital and labour must learn to co-operate and fairly to recognize their interdependence. Western Canada needs more of both, working harmoniously. Wasteful competition of our two big railway systems must cease. We can no longer pay rates to maintain public-utility corporations overlapping and duplicating services. Our banks, retail coal companies, retail lumber-yard companies, newspaper publishing companies, and others, are all meeting the new conditions by getting together, one firm closing in one town, their rival closing in another town. They have been forced to co-operate or perish. Let our railways do likewise, and cut down their unnecessary overhead costs, instead of moving heaven and earth to get higher rates. This country cannot prosper under higher rates. I have been enumerating some of the industries that have closed some of their branch offices, and I would submit that some of these institutions are amongst the 2,000 that have closed their doors in the last few years. I believe there will be a few more that will close on the same basis, but business is improving with it all.

Those of us who have to pay freight charges, largely both ways, are very much interested in getting better rates. We have to pay the freight on our purchases of implements, twine, lumber and coal, and again we have to pay the freight on our live stock and grain going out. We are intensely interested in seeing efficiency in railway management.

I am going to mention a matter that is not altogether federal, but something will have to be done to remedy the situation. Last fall a taxation conference was held at Ottawa and the Dominion and provincial governments sent representatives. The object of the conference was to define more clearly the respective spheres of taxation, and to eliminate all unnecessary duplication. I do not know what measure of success attended their efforts, or whether they accomplished anything to benefit the heavily taxed citizen. I am about to cite a case in dispute between the provinces of Saskatchewan and British Columbia and this case is typical of many others. A farmer from Saskatchewan moved to British Columbia where he died three years later. He had sold three farms on agreements of sale. The British Columbia government collected succession duties on those agreement-of-sale contracts, and to-day the Saskatchewan government is trying to collect succession duty on the same agreements of sale. I am not accusing the Saskatchewan government nor excusing the British Columbia government. I know all the parties concerned, and I know it is very hard on the widow and

the children to have to pay the succession duty twice. Succession duties on bequests outside of a province come doubly high at any time, but to have to pay them twice is very unfair. The federal government should call another taxation conference as soon as possible at which all the provinces should be represented. As regards any matters on which they cannot agree, let them decide at this conference that they will split the difference fifty-fifty until they get from the Privy Council a decision on the matter. I spoke to our Minister of Justice (Mr. Lapointe) who, I know, is not responsible in any measure. He told me that he could no nothing and he advised me that they could take the matter to the Privy Council. What a privilege! The widowed mother would have a fat chance to take her case to the Privy Council. She would have no chance at all. She will have to pay the duty twice if those men will not compromise and go fifty-fifty on this tax. I do not think that the governments of these provinces should be allowed to demand the tax a second time; that is getting down pretty near to what we might call tyranny.

On page 4690 of Hansard, volume V, 1924, the following question by the hon. member for Brant (Mr. Good), together with the reply by the Prime Minister (Mr. Mackenzie King), is reported:

On the Orders of the Day:

Mr. W. C. Good (Brant): Would the Prime Minister give the House an assurance that the Alternative Vote bill, which had already received its first reading, will receive consideration early next session, and further that there will be no election, as far as he can guarantee that, between now and then?

Mr. Mackenzie King: In reply to the first question, I may say that if we are all here when parliament re-assembles, certainly this alternative vote measure will be one of the first to be brought before the House.

I wish the Prime Minister were in his seat to tell us why this matter has not been brought before the House. It is very necessary if he intends to bring it down that he should move quickly, if he does not want to put all the blame, in the event of its being deferred, upon the poor old Senate. The Senate has its own burdens to bear. I think the Prime Minister should have lived up to his promise and brought down this legislation.

On page 1475 of Hansard of the present year the Acting Minister of Finance (Mr. Robb) in introducing his budget gave notice of the following resolution with regard to the Special War Revenue Act.

Resolved, That it is expedient to introduce a measure to amend The Special War Revenue Act, 1915, and to provide:—

1. That "cheque" shall be further defined to include any document or writing, not drawn upon or addressed to a bank, in exchange for which a bank makes payment of a sum of money, except a coupon and a document used solely for the purpose of settling or clearing any account between banks, and that such a cheque shall be liable to the stamp tax imposed on cheques by the said act.

That I contend is singling out a certain class of people in the country for another extra burden—I refer especially to the creameries. We farmers know that when a man sends his can to the creamery he gets a receipt or ticket, and according to this proposed legislation he will be taxed on a dollar or two dollars receipt. We would not object if everybody were treated alike and if this provision read, "'Cheque' shall be further defined to include any document for $10 or over." We do object, however, to being singled out for a tax like this, especially in view of the fact that the Acting Minister of Finance took care to retain the good will of those gentlemen who are fortunate enough to have the pleasure of clipping coupons, which are exempt from taxation. That is rubbing it in with a vengeance, and the government cannot expect Progressives, who are largely representatives of farmers, to stand for additional burdens. It is not a square deal; all should be treated alike. Why exempt the rich man and tax the farmer engaged in the dairy business?

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. MORRISON: Mr. Speaker, when the House rose at six o'clock I had practically finished speaking. There is one other matter to which I wish to refer, and that is the case of the Home Bank depositors. When the Prime Minister toured western Canada last fall he was interviewed by committees of the Home Bank depositors for a statement as to what the government intended to do for them. He promised them that the government would bring down a bill this session for the relief of the Home Bank depositors, but he warned them that the Senate had the last say, as they did in the case of the branch lines bill of the 1924 session. Since the Prime Minister and the government realize this, I would urge upon them the necessity for immediate action in bringing down a bill for the relief of these depositors. The distress that has followed the failure of the Home Bank is widespread, and the government will certainly share the blame if the measure of relief that is proposed is not brought down in plenty of time to enable the Senate to deal with it.

Mr. AIME DECHENE (Montmagny) (Translation): Mr. Speaker, the discussion on the budget resolution and its amendment by the hon. members who preceded me in this debate, only tend to show, first, that no one gives a thought to the Tory amendment, and secondly that, for the greater part, the attitude taken by the government in the present circumstances is justifiable and is the only reasonable one.

In fact, the Tory amendment has been entirely lost sight of. Very few of the hon. Conservative members themselves have ever taken the trouble of discussing it. The public has a right to wonder if this amendment were moved in good faith to expound a programme and the policy of a party, or if it were not simply a means of obstruction, by which they tried to prevent the Progressive party from introducing an amendment themselves, which might have had for effect—although one may question the fact—to throw into the discussion new ideas which might lead to a policy productive of results and aiming to create useful developments in our trade and administration. The Tory amendment had as a result the setting aside of the one moved by the Progressive party and to prevent, to some extent, any move which might bring on a discussion capable of producing effective measures for the welfare of the country. It is not astonishing therefore, that the Conservative amendment was entirely ignored, and that even the press of the country paid no attention to it; the amendment was given a public funeral, as it well deserved.

Mr. McMASTER: Hear, hear!

Mr. DECHENE (Translation): The discussion brought out the general tendency, in various parts of the country, to ask for favours and want special treatment, because one happens to live at a distance from large cities, or reside far away from the populated centres, because of lakes, mountains, and so on, in fact, every reason has been invoked to prove that each section of the country must receive special treatment.

A number of hon. members have spoken at length about the remedy for their local problems. Those from the west can only see what is of interest to the great prairies, without ever thinking that in the eastern provinces, in Ontario and Quebec, there might also exist very difficult problems to solve among the various social classes. Indeed, if it is important to find new markets for the western wheat, if it is also important to find markets for the Maritime provinces, it is equally important to consider for a moment the problems which the central provinces, Ontario and Quebec have to deal with. This aspect of the question is too often forgotten. Everyone preaches for his own town and few seem to realize the fact that there is but one Canada, and not two.

Mr. McMASTER: Hear, hear!

Mr. DECHENE (Translation): The policy followed by the present government, purports to do away with this sectionalism and unite all parts of the country into one great whole, to which all citizens will be proud to belong. With the success that the present government policy meets, we can hope in a nearby future, to see in our country more citizens proud of calling themselves Canadians, instead of calling themselves, English, Scotch, Irish or claim to be of any other nationality. To desire a united Canada, is to want to be a Canadian citizen who will be proud of his title of Canadian first. We must congratulate the government for striving to create a policy which makes for the unity of the whole country and which tends to infuse in all citizens a pride in their citizenship.

We have, unfortunately, noticed, in the course of the present session, that this tendency to sectionalism has gained a certain leader of a party. Have we not to regret to note such a feeling expressed in a resolution moved in this House, at the beginning of the session, by the right hon. leader of the opposition (Mr. Meighen)? In fact, if we consider the last paragraph of this resolution which, as it seems, aims at setting forth the policy of the Conservative party and checking in advance the effect of the budget brought down by the government, this is what we read:

> That to enable the products of the western and Maritime provinces to reach more readily the markets so developed the special transportation burdens borne by those provinces should be shared by the whole Dominion either by contribution to long haul freight costs or by assistance in some other form.

Mr. McMASTER (Translation): This is sectionalism!

Mr. DECHENE (Translation): It is, therefore, fomenting disunion, which seems to have always been the principal aim of the Conservative party: Divide to govern.

Mr. McMASTER: Hear, hear!

Mr. DECHENE (Translation): However, I think that in the present circumstances, the Conservative party has been ill advised, and that the citizens of this country will greatly disapprove of this appeal to sectionalism, to narrow-mindedness, so as to try to get into power.

Indeed, what will the people of Quebec and Ontario think, when they hear that the Conservative party has in its platform, such a clause which endeavours to shift on to their shoulders the burden due to the remoteness of markets from the western and Maritime provinces? I do not think the farmers, the town's people or the manufacturers are willing to shoulder the whole burden of taxation—whether it be for railways or anything else—which results from the outlying position of the provinces occupying the four corners of this country. The plain statement of this policy, Sir, makes us realize the danger that exists in fostering this narrow-mindedness, this sectionalism, a danger not only to individuals but a very great one to the country itself.

Another point that the debate has brought out clearly, is the stand taken by a great number of citizens who expect the government to do everything, without any effort on their part and without their trying to obtain the best results possible with the means actually at their disposal. If we have a problem to solve or a difficulty to meet, immediately we come to the government, and the latter must find a solution to the problem. It often happens, I might even say it is always the case, that the best solution to a local problem is the one that a member himself, private, concerns or corporations can bring about, when they wish to take the trouble of utilizing the means at their disposal.

Mr. McMASTER: Hear, hear!

Mr. DECHENE (Translation): I shall, in a short while, give you a striking example of what can be accomplished by the initiative of a person or corporate body along those lines, however, for the moment my thoughts are concentrated on what is considered to be a more serious problem. Last year, if I am not mistaken, the government was criticized for a lack of consistency in the tariff. Our Conservative opponents were the most bitter in these attacks. This year, because the budget changes are not as numerous as last year we hear quite a different cry: too much stability in the budget, too much stability in the tariff! How are we to please these gentlemen? If the government inaugurates a new policy, one hears: You should not touch this and that! If we get practical results, these gentlemen tell us: You should make changes here and there! It is difficult to find a solution which will be agreeable to them, and their own resolution is a proof that they have not found one, except by carrying on obstruction. Some one whispers to me that we should ignore them. I think the country did well to ignore them. At the last by-elections, the country was called upon to judge between the government's policy and that of obstruction, and, I think, I can say with my hon. friend that these gentlemen have been ignored not only by the House but by the public as a whole.

Mr. McMASTER: Hear, hear!

Mr. DECHENE (Translation): More than once, in the course of this debate, we have heard certain members demand new markets for our products. It is the proper time to examine what the present government has done to obtain more favourable openings for Canadian products. If we review the legislation already enacted, if we look into the treaties negotiated under the present regime, we may designate this government as: the government of trade conventions.

We notice in that sphere considerable activity. Indeed, never have there been as many trade conventions directly negotiated between Canada and other countries, as by the present government. These various conventions have brought us important business. That is a worthy achievement for which we must give thanks especially to the hon. gentlemen who negotiated the treaties. As a result, have we not noticed that our exports have increased in a most extraordinary way? If we consider one kind of products only, we are aware, for instance, that our exports of farm products amount to more than $500,000,000 which is equivalent to more than half our total export trade of $1,070,611,616.

In fact, in 1922, we exported farm products to the amount of $532,820,457.

In 1923—a year after the present government came to power—our exports of said products amounted to $553,069,240, that is already an increase of $21,000,000.

In 1924, we continued our ascending march; our exports amounted to $598,729,385, in farm products alone, that is more than half of the total exports of this country. The result of this large exportation of our farm products has been of a twofold nature: first it brought considerable revenue to the country and, secondly it has stabilized prices in this country. Indeed, if our exports had not been greater than what they were during the last years of the Conservative government, I think that the price of farm products in this country would have been so low that most of the farmers would have been forced to abandon their farms; however, under the present administration, thanks to the trade conventions signed with various countries, we have noticed a great improvement. The

farmers throughout the country must be pleased with the results obtained in so short a time.

One of the tariff measures most criticized was the preference which Canada gives to the products imported from Great Britain. Often, when something goes wrong in a city, we hear: Oh! this is caused by the British preference. In the course of the budget discussion, which has been going on for nearly a month, very few speakers seem to have gone to the trouble of informing us as to what the British preference has cost us and what are its benefits. The British preference applies not only to Great Britain and Ireland, but it applies also to all the various colonies or dominions which make up the empire, when these dominions grant us a preferential tariff of a likewise nature. Our best client for farm products is, without any doubt, England herself. In fact, out of the $598,729,385 of agricultural products exported during the year 1924, our exports to England amounted to $337,813,146; this means that more than half of our exports to England consists of the products or by-products of the farm. This seems to be quite an excellent reason in favour of the preferential system; however, there is also the reverse side of the medal to look at: What do we import? That is especially what is considered ruinous for our country. If we stop a moment to consider the total products imported from England, we notice what others have observed before us, what Benjamin B. Wallace, of the United States Tariff Commission, has himself stated in the annals of the American Academy of the political and Social Sciences. This gentleman, who devotes his time to economic questions, tells us—I may state broadly—that the British preference granted in 1896 did not prevent the decrease of Great Britain's share of trade in the products which she exported to Canada. This is not a Canadian, or an Englishman, but an American who is struck by the fact that this preference did not prevent Great Britain losing ground and witnessing the decrease of her percentage in products exported to Canada. And he gives the following list: in 1883, our imports from Great Britain amounted to 42.3 per cent of the total imports; in 1893, the decrease had already begun to be felt and these imports amounted to only 35.5 per cent; in 1903, the downward trend continued, these imports amounting only to 25.2 per cent of the total imports; in 1914, we notice the same downward trend 21.3 per cent; in 1923, the English share of trade had still decreased and the British imports amounted to only 17.6 per cent of our total imports; in 1924, after the tariff changes so much criticized, we still notice that the figures have again fallen, and that the imports which come from England amount to only 17.02 per cent of our total imports. According to the statistics of this American gentleman, I think that the British preference has not been so unfavourable to us as one wants us to believe.

However, our imports from the United States have followed an absolutely different course, they have always been on the increase and the percentage of American goods compared with that of goods imported from other countries indicates a continuous increase, and this notwithstanding that there exists no preferential tariff in favour of the United States. We quite often hear—we have heard it in the House on a number of occasions—members quote instances of industries being ruined by this British preference.

I shall myself give, as briefly as possible, examples of the conditions of some of these industries, and I think that the instances I shall quote to the House will suffice to prove that one tries to throw the blame on the Imperial preference for all the evils which we suffer, from wherever they may come from.

For instance, one often hears of the boot and shoe industry. The statistics in regard to this industry afford us a very striking example. For an industry "ruined", it seems to enjoy a most marked activity. From 1921 to 1923 inclusively, the number of boot and shoe factories in Canada has increased from 177 to 186. The value of the output of these factories increased from $44,665,381, in 1921, to $45,596,012, in 1923. The 1924 figures have not yet been compiled.

There is, therefore, an increase of nearly a million dollars in the output of boots and shoes in this country for the said period. The absurdity of the assertion that this industry is ruined owing to an unfair competition by the manufacturers of Great Britain, due to the preferential tariff is clearly seen by comparing the imports of boots and shoes from Great Britain and the domestic output. Although the imports of Great Britain have increased somewhat owing to a higher preference, the total is not sufficient to seriously hurt the Canadian manufacturers. With a domestic output amounting to $45,596,012, in 1923, the British imports were only $604,472.

The increase in 1924 only brought up this figure to a little more than one million dollars, to be exact $1,018,082, or again one forty-fifth of the Canadian production.

On the other hand to counteract this increase, we have a decrease in the imports of boots and shoes coming from the United States. The decrease, in 1924, amounted to $121,465 compared with the imports of 1923. The net increase of foreign competition, amounts to $292,091, this is therefore far inferior to one per cent of the total domestic expenditure and gives a smaller percentage in increase than the home production. I therefore, think that these figures are sufficient proof to us that it is not the British preference which causes trouble to the manufacturers of this country. They can hold their own against foreign competition in other countries where they sell their goods; I therefore see no reason why they cannot face British competition in our own country.

Another industry that we often hear about and which is occasionally pointed to as ruined, is the woollen industry.

In 1924, Canada purchased nearly $2,000,000 less of wool and woollen goods, than in 1923. As it is stated that British preference has the effect of ruining the Canadian woollen industry, it is interesting to note that in regard to the wool bought from the United Kingdom, there has been a decrease of nearly $2,500,000 in 1924, compared with 1923. The figures are as follows: in 1923, the imports of wool from England amounted to $35,520,730; in 1924, the figures are $33,163,186. During the same period there has also been a decrease of $556,778 in the purchase of woollen goods coming from the United States.

The woollen industry in Canada has not been the only one to suffer in the world crisis of woollen and cotton goods. I shall call as a witness Mr. Pierce, President of the American Woollen Company. The latter in submitting the yearly report of said company, stated that the depression in the trade of American woollen goods, in 1924, had been the worst since the year of the Civil war. The loss of $11,970,000 sustained last year, by that company is the greatest deficit which it has ever had to register.

I think that the statement of Mr. Pierce clearly indicates that the woollen industry was still in a worse state in the United States than it was in Canada, and that it is not the British preference, nor even the general tariff which is the cause of the depression which we may have had to suffer from in this country. however, if there was quite a marked depression, in 1921-22, in 1922-23, we notice already an improvement. In fact, there were, in 1922, 137 woollen mills, at present there are 141; the capital invested in this industry increased from $37,102,382, in 1922, to $43,148,218, in 1923, that is an increase of over $6,000,000. The output which amounted to 29,062,751 pounds, in 1922, had increased to 33,472,087 pounds, in 1923, that is an increase of 11,000,000 pounds. For an industry which is being ruined, really I think it is very fortunate. There are many people who would like to be ruined in that way.

The cotton industry also suffered considerably, and the opponents of British preference delighted in spreading that it was due to that "bugaboo" and that English and American cotton goods were ruining us, especially the English cotton goods.

During the year 1923, the imports to Canada of cotton goods decreased nearly $4,000,000—$3,849,689 to be exact. The imports from the United Kingdom, under the British preference amounted to $538,100 less than in 1923. This is only another proof that conditions are improving in our home industry, and that there is an increase in the purchase of raw cotton for our Canadian mills. For the following three years the imports are these: In 1922, $22,455,546; in 1923, $30,780,915, and in 1924, $25,576,764.

In a word, the cotton industry has always been improving in this country, and I do not think that there is cause to consider as serious the cry of alarm spread by the manufacturers who always seek more protection, without considering the true facts. The exact cause of the closing of cotton mills in this country, has not been the lack of markets, but is due to the bad cotton crops in the United States and to the high prices reached by the raw cotton in the countries where it is grown. These gentlemen seem to have reaped handsome profits. Their mills resumed work early in 1924; and I do not think they can claim that, if the business was not what they expected it to be, it is again due to the British preference. One of the general results of the British preference has been to serve as a lever or to stabilize prices in this country. Not only should the interests of manufacturers be considered, but also those of the consumer, of the masses.

Mr. McMASTER (Translation): Hear, hear! It is the first word spoken on behalf of the consumer.

Mr. DECHENE (Translation): I hear the hon. member for Brome (Mr. McMaster) saying that it is the first word spoken on behalf of the consumers in the course of this debate. I thank him very much for the compliment, I fear, however, that is not quite exact, because, in the course of his splendid speech, he has given us proof that, he, him-

self, takes an interest also in the consumer, and with success.

It is flattering to be able to point out to tourists, in a city, twenty, thirty, forty or fifty homes of millionaires and add: These are the owners of the large mills of this country, the masters of the working classes, that live there, they are responsible for the good and bad times; we must not forget, on the other hand, that apart from the millionaire, there is the people, the consumer. The millionaire does not make the wealth of a country. It is not because there are in the United States 125 millionaires possessing to themselves, one-tenth of the total wealth of the country, that the American Republic is wealthy! No, it is because the wealth is distributed among the masses. The manufacturer has no vested right to exact a living from the consumer; the industry is established to supply the consumer, generally, what he needs. It is the consumer who is the mainspring of all prosperity, of all national wealth in a country. It is, therefore important that the government should endeavour, as much as possible, to supply the consumer, the middle class of a country, the means of living comfortably, even with a certain ease. without for all that ruining the manufacturer. What makes the manufacturer prosperous, Sir, is the wealth of his client; the client of the manufacturer, is the consumer. You find the proof of this truth in the daily incidents of our Canadian national life. If in the west, the crops are bad, if prices are down, the client the consumer in the west is not rich, he buys little and he becomes a poor client for the manufacturer; however, let a good crop turn up, let the time come, when the financial conditions of that part of the country improve, immediately our fellow citizens of the west become buyers, become good clients and the manufacturer immediately benefits thereby. I think that the government is wise to give the greatest encouragement possible to the development of trade, especially to that of the farm products, so that the town people may get these products with the greatest facility possible, while allowing to the country people, the farmers, a fair profit which will permit them to better their lot and become good clients for the manufacturers.

I see, Sir, that I am enlarging somewhat on the subject. I shall try and be as brief as possible. I stated, at the outset of my remarks, that among our population, there existed too great a tendency, in certain parts of the country, at least, to expect everything from the government, and not to rely sufficiently on one's personal initiative or one's judiciously concentrated effort to obtain excellent results, and I shall give a more striking instance of what can be done by the concentrated effort of a few to obtain a beneficial result for the masses. You will recall, Sir, that from the very first days of March, a group of members were striving to improve the lot of the rural classes, which constitute the greater part of their electors. The members who thus united were those of lower Quebec. They chose a chairman and, under the direction of the latter they immediately settled down to the task of obtaining results which they thought would be beneficial to their electors. Briefly, this was the problem: The southern part of Quebec has to put up with the same isolation as that of the northeastern part of New Brunswick. These gentlemen met so as to consider if it was possible to improve the conditions of their people and to better the means of shipping the potato crop which they produce in large quantities in that region. The market seemed closed to them. They live in the most remote eastern parts of the country. There existed a large market in the west which they had to reach at all cost, and this is the letter which these members sent to the chairman of the railway commission.

OTTAWA, March 4 1925.

DEAR SIR,—As Chairman of the deputation that visited you this morning, I beg to express our feeling of extreme gratitude for the kindly hearing and courtesy you have shown to our delegation to-day.

This deputation was composed of the following members of parliament: Messrs. Pius Michaud (Restigouche-Madawaska); J. G. Robichaud (Gloucester); W. B. Snowball (Northumberland, N.B.); Aimé Déchêne (Montmagny); J. F. Fafard (L'Islet); F. J. Pelletier (Matane); George Bouchard (Kamouraska); J. F. Pouliot (Témiscouta); Sir Eugent Fiset (Rimouski).

The main object of our deputation was to expose to your Lordship the awkward and extraordinary situation in which we, the representatives of the lower part of the province of Quebec and the upper parts of New Brunswick, are placed. Geographically speaking, we are situated at the tail-end of the western market and at the head of the eastern market. Apparently, we are like orphans, who do not belong to the respective provinces in which our counties are situated, and that is the main reason why we decided to approach your commission directly on behalf of our own population.

The main points that we discussed with your Lordship were: freight rates on potatoes, freight rates on lumber and express rates on fish; but the most pressing part of our problems at the present time are the freight rates on potatoes. Our population faces not only ruin and disaster, but on account of the extraordinary crop that was grown this year in the counties above mentioned (between 15,000,000 to 19,000,000 bushels of potatoes) the farmers, on account of the exorbitant rates that are being charged by the Canadian National Railway for the transportation of this product, which is the basis of the economic life of our population, are

threatened to have on their hands, not only the whole of their crop, but will be compelled, if matters are allowed to go on the way they are at the present time, to stop further production and cultivation of this main staple of life.

With regard to lumber: in all the counties that were represented at this interview are operating some of the largest lumber companies in Canada; and if you add to this the fact that on account of our system of colonization, the farmers are compelled by the different provinces to cut and sell part of the timber on the lots as allotted by each province in order to build their homes and have enough cash to maintain their families before the land can possibly be placed under cultivation, you will realize how important it is, not only for the lumber companies, but for the local population.

With regard to the fish industry: express rates that are being charged are not only high, but have never been adjusted (and on some of the branch lines are absolutely prohibitive). Notwithtsanding the bonuses that our fishermen get from the federal government, the fishing industry is threatened with absolute disaster if those express rates are not adjusted by your commission.

Our main object in approaching your commission was to avoid the discussion before the special committee of the House or before the committee of the Whole, the question of transportation of these special commodities, which pertain entirely and absolutely to your commission. We feel and believe that in approaching the properly constituted tribunals of this country, we will arrive at a more material result than trying to raise a fuss on the floor of the House, where such things should not be discussed, except as a last resort.

We therefore hope, Sir, that you will take into consideration our requests, and that immediate steps will be taken by your commission to remedy this state of affairs.

Once more, please accept, in the name of all of us, the expression of our deep feeling of gratitude for your kindness.

Yours very truly,

EUGENE FISET.

This was a concerted movement on the part of a few members of parliament to obtain, through existing channels recognition of what to them were just and equitable claims. They did not come before parliament asking for this and that, they had recourse to established ways and means. The results are outlined in the very letter that Sir Eugene Fiset received from Mr. H. A. McKeown, chairman of the Railway Board of Canada:

Board of Railway Commissioners for Canada

OTTAWA, March 5, 1925.

MY DEAR SIR,—Thanks for your kind favour of yesterday afternoon. It was a great pleasure for me to meet yourself and the other members of the deputation. If you and they are convinced that the board is anxious to do everything possible in assisting the business of the country, we have made some headway to a better understanding, which surely will be profitable all around.

I specially call the attention of the House to this last sentence as quoted above:

I am extremely pleased to be able to say that progress has been made in meeting the wishes of your delegation concerning the matter which presses most heavily upon the people whom they represent:—

I refer to the potato situation.

[Mr. Dechene.]

As you were advised yesterday, the potato growers of the interior part of New Brunswick had already approached the Canadian Pacific Railway Company with a view of securing a substantial reduction in rates to the west. There is, I understand a fairly good market in western Canada, which, however, is being attacked by United States potato growers, and the reduction secured by the New Brunswick delegation satisfies those gentlemen that they can now do business in the west at a profit and overcome the American competition.

Now of course, the reduction thus secured by them did not benefit your people at all, but after your deputation left, I took the matter up immediately over the long distance telephone, and found that the Canadian National Railway Company was considering a reduction to meet Canadian Pacific Railway competition, but it had not been determined upon, and at any rate, it was not intended to apply outside of the Maritime provinces. While such reduction by the Canadian National Railway would be pleasing to Mr. Michaud, Mr. Robichaud and Mr. Snowball, it would leave our good friends in Montmagny, L'Islet, Matane, Kamouraska, Temiscouata, and your own constituency, Rimouski, out in the cold. Nothing was settled last night, but after consultation with our Chief Traffic Officer, I took it up again this morning with the Canadian National Railway officials in Montreal, and am extremely pleased to be able to say that on further consideration, and in view of its importance to the parties interested, and in consequence of the strong representations made by yourself, Mr. Dechene, Mr. Fafard, Mr. Pelletier, Mr. Bouchard, and Mr. Pouliot, they have been able to secure for their constituents exactly the same favourable rates which the St. John River potato growers obtained, and which are low enough to enable the New Brunswick men to do business in the west successfully.

The new tariff will be out on the 9th of this month. It will be in force for 90 days. Following the ratio of Canadian Pacific Railway reductions, there will be on the Canadian National Railway a rate of 52½ cents per 100 pounds from Montmagny, L'Islet, Kamouraska and Temiscouata west of Rivière du Loup, from points in these counties to Armstrong, Ontario, on the Canadian National Railway. The same proportional rate carries from Maritime province points on the Canadian Pacific railway to Fort William and Port Arthur. Beyond these points to destination, a fairly low commodity rate prevails, varying according to distance.

East of Rivière du Loup, the railways have made three groups. The first being known as the Halifax group with a rate of 57½ cents; Restigouche, Madawaska, Gloucester and Northumberland are included in this group. Next is a Prince Edward Island group with a rate of 57½ and 58½ cents. Finally comes the St. John group which has a rate of 55½ cents. This is the figure which affects the St. John River potato growers and which is satisfactory to them.

From this you will see that your people are getting an advantage corresponding to that which the others enjoy, and I feel like congratulating the constituencies concerned, upon the wide-awake interest which their representatives have shown in this particular.

For Mr. Robichaud and Mr. Pelletier, there still remains the question of the two independent or semi-independent railways in their constituencies, which complicates the situation for them. They will both understand, I think, that this will have to be dealt with independently, and I can assure them that the matter of freight rates on independent lines is being given close scrutiny. Any unfairness in that respect will be dealt with upon application.

You might be good enough also to say to the members of the delegation that, as regards the question of rates affecting lumber and the fish industry, in both these matters the board will try and meet the situation. We will have to have some more particulars concerning them and, as far as lumber is concerned, it will probably be involved in a general consideration of rates. But the fish business is more pressing, and if the members immediately interested will take it up with me more in detail, I assure you they will receive a sympathetic hearing.

I hope the above makes the situation clear. I am writing hurriedly as I want to go east this afternoon to attend Mr. Pugsley's funeral, and details were only completed as to territory and rates at noon to-day, and I must also advise Mr. McLean of Prince Edward Island.

If I may add a word of suggestion to your people it would be that they get into the western market without delay—if I know anything of my own people down in New Brunswick, I am assured that they are not letting any grass grow under their feet in disposing of their product.

Looking forward with pleasure to seeing you and your colleagues again at an early date, and assuring you of the board's desire to be of the utmost assistance in traffic matters,

I beg to remain,

Very sincerely yours,

H. A. McKEOWN.

Sir EUGÈNE FISET, K.B., C.M.G., M.P.,
House of Commons, Ottawa.

This letter shows quite clearly, Mr. Speaker, that the united efforts of a few hon. members together with a few private citizens who believe in making use of the established administrative machinery of the country to obtain what they consider right and just, are decidedly useful, are in fact, the very best way to go about obtaining redress in this country. The action of this group of members was generally applauded throughout the counties concerned and the hon. Minister of Agriculture of the province of Quebec, apprized of the matter, immediately wrote the following letter to the hon. member for Rimouski (Sir Eugene Fiset):

(Translation)

QUEBEC, March 9, 1925.

Sir EUGENE FISET, M.P.,
House of Commons,
Ottawa.

MY DEAR SIR EUGENE,—The hon. Prime Minister has transmitted to me your letter and the accompanying documents relating to a reduction in freight rates on the Canadian National railways to the advantage of the potato growers of the lower St. Lawrence.

I had previously had the pleasure of reading the announcement in the newspapers. It will be broadcast throughout the country and we shall endeavour to ensure to our farmers the benefit of the great advantage granted them. I thank you on their behalf as also all the hon. members of the district who were instrumental in your success.

I beg to remain,

Sincerely yours,

J. E. CARON.

Already the well-directed initiative of a few individuals had obtained results and seemed to promise more. The spokesman that we had tacitly accepted, with the support of the delegates who had accompanied him in the interview with the chairman of the railway board, continued to work and to obtain results. And here are the results obtained through the activities of a group of M.P.'s. in answer to our repeated requests the railway board, seeing the possibility of developing considerable traffic between the extreme eastern and extreme western points of the country, furnished 300 ready-lined cars at a charge of $5 each. Previously every potato shipper was obliged to bring his own boards and have his own lining laid, and when the cars reached the large centres the wood used was either lost or became the property of the railroad. Besides the lining was not properly laid and the results were very far from ideal. Hence the railway, foreseeing the possible development of a sufficiently extensive trade decided to furnish 300 ready-lined cars.

Another result obtained by the group was this: The man who shipped a carload of potatoes from an eastern point, say from northern New Brunswick to a point further west had to pay the freight charges in advance, and they sometimes amounted to a considerable figure. Since the crop is not sold at that time, in the fall or during the winter money is scarce and the farmer is sometimes hard put to it to prepay the freight charges on his shipment of potatoes from Rimouski, say, to Montreal, Prescott, Toronto or some other western point. The system was unfavourable to the farmer. Once the matter was put before him, the president of the Canadian National, Sir Henry Thornton, understood the situation that the rules as then in force imposed on our farmers and decided that when the payment of the freight charges on a carload of potatoes from an eastern to a western point was guaranteed by the parish priest, or the mayor, or some prominent citizen of the neighbourhood the agents of the Canadian National would have orders to forward the car immediately without demanding prepayment of such charges. This new ruling is very advantageous to the shippers since it enables them to sell their potatoes and pay shipping expenses from the proceeds of the sale, instead of paying the money in advance out of their own pocket, which very often they could not afford to do.

This proves absolutely, to my mind, that when a few citizens get together to obtain certain results, their efforts are well rewarded, indeed I may say exceptionally well rewarded. My illustration, which has taken some time, makes all this absolutely clear. We did not rely entirely on a providential govern-

ment; we do not consider that the government must look after all the inhabitants of the country as a father watches over his children, and that we must run to the government with each and every one of our needs. We took advantage of the existing machinery, the ways and means which were open to us, and thanks to our efforts the farmers of southern Quebec are in a much better position to-day; and I believe the farmers of northern New Brunswick will welcome the advantages they have gained through the efforts of these representatives.

Before concluding, Mr. Speaker, I would like to say a word on another subject more or less allied to the one I have just discussed. The other day we had the extreme pleasure of listening to the hon. member for Cumberland (Mr. Logan) who told us of the possibilities of developing trade relations between the West Indies and Canada. We were happy to learn that among the islands in the gulf of Mexico are several provinces where the language in use is French, and that these people are desirous of trading with us, particularly with the French province of Quebec.

I hope, Sir, that a group of energetic citizens will take action on the knowledge imparted to us by my hon. friend from Cumberland and that by sending to these islands trade commissioners who speak French fluently, all concerned will very greatly benefit. We might even ask the Quebec provincial government to assist in promoting our trade relations with the people of these islands, thereby creating a new market for our products. We must not stop at requesting the government to find markets for us; once we have them we should make good use of them. I believe that no effort should be spared to bring about trade relations with these countries. If we, citizens of this country, wish to take advantage of our knowledge, and of our geographical situation and, if necessary, be represented officially in these parts by the Quebec government and the Dominion government, we can gain possession of a special export market. But to that end private initiative must contribute side by side with the government. The government discovers the markets and makes them known to the public. The public itself must see to it that they are made use of.

One word more, Mr. Speaker, before resuming my seat. We are often told that our Canadians are going away to the States; some claim that we should increase immigration, and before we can turn around somebody else is clamouring for a let-up in immigration. The present situation is easily understood. We are in need of immigrants. I do not dispute that; but, as the hon. member for Rimouski (Sir Eugene Fiset) pointed out, every immigrant admitted to our shores should undergo both a moral and physical examination, and be classified according to results. It seems to me that if we go about the matter in this way, if we are as watchful against moral defects as against physical, we will be well rewarded. The flow of immigrants may decrease temporarily in the beginning; but once prospective immigrants of the desirable class learn that we are particular about whom we let into Canada they will be all the more delighted to settle in this country; hence in the end the results will be most gratifying.

Again we often hear it said that our French Canadians are leaving Canada and going to live in the United States. Others tell us that they are returning. It is perhaps rather difficult for the general public to find out just what is the real state of things. I wish to quote a few figures on this subject. I have here a report showing the number of Canadians who returned from the United States, after an absence of six months or longer, during the eleven months ended February 28, 1925.

Report of returned Canadians from the United States, after an absence of six months or longer, during the eleven months ended February 28, 1925.

	Canadian-born citizens	British subjects who had acquired Canadian domicile	Naturalized Canadian citizens	Totals
April..	3,608	289	190	4,087
May..	4,170	505	261	4,936
June..	3,962	447	311	4,720
July..	4,426	405	296	5,127
August. . .	4,023	552	416	4,991
September. .	2,952	434	239	3,625
October.. . .	2,844	394	242	3,480
November. .	2,614	357	215	3,186
December. .	2,618	353	194	3,165
January. . .	1,395	199	121	1,715
February. .	1,641	239	132	2,012
Totals.. ..	34,253	4,174	2,617	41,044

I also have a statement of Canadians who went to the United States and returned within six months, each of whom paid the head tax of $8 on his admission to the adjoining republic, which amount was refunded when he returned to Canada.

The statement is as follows:

During	1923	1924
January	2,839	3,614
February	2,927	2,839
March	3,473	5,503
April	3,749	5,813
May	4,418	5,888
June	4,384	5,030
July	3,397	3,803
August	3,376	3,272
September	2,626	2,218
October	3,150	1,610
November	3,843	1,693
December	5,250	2,033
Total	43,432	43,316

These very interesting statistics show that during the period under review more Canadian citizens came back to the country than went out of it. I feel that the hon. Minister of Immigration (Mr. Robb) and the other hon. ministers concerned should be commended for the magnificent results obtained. I have not the figures giving the number of Canadian citizens who returned to the country during other periods, but I am convinced that a similar reckoning in their case would astonish us by the number of French-Canadians who, having left Canada towards the end of the Tory administration, have come back to us since the Liberals are in power. Judging that Canada is still the best country to live in they have come back to us, and are still coming, in large numbers.

This should breed unbounded confidence in our own country, in our forest resources which are second to none in the world, in the mineral wealth of Ontario and New Brunswick, in the agricultural resources of the west which are nowhere surpassed; and British Columbia itself is an earthly paradise, a land of plenty, superior even to California. When we turn our eyes to the map of our country, when we realize of what stern stuff our fellow-countrymen are made, we may well be proud to call ourselves Canadians; and if we can develop this sentiment, if we can teach all our citizens the true worth of this Canada of ours, under a government that casts no longing look behind but, eyes front, advances courageously to meet the future, we may hope for the early return of the prosperity we knew from 1900 to 1911 and before time has gone much further in his flight, the glorious sun of the days of Laurier will once more shine on our country.

Mr. W. F. MACLEAN (South York): Mr. Speaker, in the year 1891 I appeared as a candidate for this House of Commons to represent the then old-time constituency of East York. I ran there as one who believed in the National Policy, as a disciple of Sir John A. Macdonald, and I have supported that policy all my life. I ran in that constituency as a rather young man against a very important opponent, Hon. Alexander Mackenzie, who had recently been Prime Minister. He had lost his seat in western Ontario. He carried East York and defeated me by a majority of 26. Within a year he died, and in 1892 I was elected to this House as the representative of that constituency. Ever since I have been in this House, and I have carried on pretty well the views I then held in regard to what I considered to be the proper tariff policy for this country. I came by my belief in the National Policy through my father, who was the first man in this country to organize the Manufacturers' Association, to develop what he called our "home industries," following somewhat the policy that had been adopted in the United States. It took a long while to build up industry there. They thought they were a sugar, cotton and corn growing country, but after a while the United States became the greatest manufacturing country in the world, largely because they adopted the policy of encouraging home industries. But in Canada it was rather hard work to get them going, and men like Isaac Buchanan—we do not hear much about him now—a Scotchman who had an idea that protection would be a good thing for this country, George Stephen, who afterwards became one of the founders of the Canadian Pacific Railway, and others who believed absolutely in the encouragement of home industries preached their faith. I might say that George Stephen was one of the first members of the Manufacturers' Association. I happen to know where a little book is that contains the names of those early members. Then John A. came along and took up the National Policy proposition, perhaps as a political manoeuvre—I will not say; I do not think so—but he was a strong believer so far as I ever knew in trying to do for Canada what the United States had already accomplished, to build up home industries and so give work to the people in manufacturing as well as in farming.

When I first came into this House in 1892 my constituency of East York had not a population of 25,000 people. It was made up of what is now called Greater Toronto, a rim of suburbs peopled by market gardeners, butchers, hog raisers and dairymen—a very ordinary lot of people. What has happened since? That once despised constituency of less than 25,000 people will be represented in the next House by eight members, who will speak for over 400,000 people To prove what I say I am going to name the constituencies that have come out of that hive Of all the mother constituencies in this country East York is

the greatest. Out of that constituency the new House will have a member from South York with a population of 50,000. To-day I represent 120,000 people in this House, that being the population of only a portion of my original constituency. Next to South York there will be Toronto-Scarborough, another riding of over 60,000; then East Toronto, which I represented when it was called St. Matthew's ward—over the Don with only a few people living there but to-day it has a population of 60,000; then comes Northeast Toronto, which I represent to-day and where I hope my friend from North Toronto (Mr. Church) will go, but they say he is looking in some other direction; that, too, is a great constituency. Then comes Northwest Toronto, which I represented for many years when it was in my original riding and was known as Toronto Junction, but which now comprises a great part of the city of Toronto; then I go over to Toronto-High Park, which I at one time represented in this parliament, another large constituency; then I come to that portion of West York which I represent to-day. Under the adjustment that was made some time ago I am turning over probably some seventy polling subdivisions there that I represent in this House to-day. And lastly, and as the eighth of the lot, the township of Markham and her sister township, Vaughan, in West York go to North York taking with them the seed of the National Policy. That is eight constituencies that swarmed off from the original riding of East York that I represented. And I imagine that the feeling among that 400,000 people will be largely to maintain the policy which created the industries which support them, and which created and developed the great industries in many other parts of this country. Now you may call that part of the district suburban, it was only common township territory originally. What has happened to make this great change which resulted in one constituency growing into eight? It was the creation of a great many industries in Toronto and the establishment of those 400,000 people who believe in the National Policy. They believe in it for the reason—although my hon. friends the Progressives may object to it—that it builds up home industries. The Progressives say, and they are in favour of something in contra-distinction to the National Policy, that they do not want that in the west. Now I say and I challenge hon. members from the west to dispute it, that this is the view of the people in that part of Canada, namely—that the people of Winnipeg want their city to become a Toronto, and the people of Edmonton also want their city to become a Toronto; and even the Progressives themselves, who profess a policy different from the National Policy adopted, do not believe in raising their families to become mere farmers. There is no farmer in the ranks of the Progressives that does not hope to see his sons have the opportunity to get into business, to get into industries, to get into mining, and all these other occupations. What they want in the west, and this is what I wish to tell my hon. friends—

Mr. BROWN: I should like to correct the hon. gentleman on that point.

Mr. MACLEAN (York): My hon. friend will have lots of opportunity to correct me. I will stand any amount of correction and I hope he will carry out his intention. I am sure he must want to see diversity of employment in this country. I have not seen a farmer from the west who does not want to see the same thing. You may ask "How is Toronto interested in that?" Well, I will tell you. This great community, now to be represented in the coming parliament by eight members, has a population, with enormous industries built up in that old East York, who believe in the National Policy, and who believe in diversity of employment. And the thing that makes a country is diversity of employment, and that is what the issue in this coming election is to be. It is to be whether we are to have diversity of employment, or whether we are to have the development merely of one or two industries in this country and, in the main, agriculture.

I want to say something more about the people who make up that population of 400,000 to which I have referred. The bulk of them live in the East York that I have described. There are thousands and thousands of men and women who live there—not in the city of Toronto but still in old East York—men and women who are on the payroll of industries located in the city of Toronto. These people have grown up and have raised their families there and they want to see this industrial growth and development kept up. They do not want to lose their houses; they want to see employment continued, and I may say that unemployment is the problem before this House and the country to-day. We have got to deal with it; it is a problem which exists all over the world to-day. It prevails in England. So bad is that problem in England that Mr. Baldwin, and some other prominent men there, are preaching something in the direction of the state financing work and helping to provide wages for the

unemployed. Do not let my Progressive friends down the line run away with the idea that unemployment exists only in protectionist countries. Unemployment is worse in England than in many countries where they do not have free trade; and I may say that it was free trade that first gave England diversity of employment. Perhaps, that raises an objection to my argument; but nevertheless the fact is that any country that wants to hold its own in the world to-day must not depend on one source of employment. There must be diversity of employment, there must be opportunity for every family. Every country now is up against this struggle for existence that is prevalent, and if there is to be diversity of employment it must be based on a policy of its own. In times of stress, and after the great war through which we have passed, the impelling principle is to keep your own work for your own people; keep your own markets for your own products and do not surrender them to other people. Germany is ready to raid our markets. She raided and fought us in war, and now she is going to raid our industries. France feels the same way. The United States have got ahead, and I think would like to have possession of our markets.

On that line I want to tell the House another thing that happened. I went to a meeting last Saturday where they organized the new riding of South York and these questions came up. The most popular sentiment expressed there that day—and the audience consisted of the men and women who will make up the new South York, and who are living in that great community of 400,000 people—the sentiment that was expressed there, the sentiment that was applauded and was the predominant sentiment, was in regard to reciprocity of tariffs as between Canada and the United States. If they propose to bar us out and to take our markets, and if Germany purposes to invade our markets with a great cut in her prices, then we have to give treatment for treatment or we will be wiped out. There is a great new struggle going on now in the world between countries just to hold their own. It is a fight for existence; and the thought that is growing more and more among our people—it is growing in the minds of the 400,000 people who make up greater Toronto; the idea that impels them and comes home to every family; to the father who is employed, to the son and daughter who may be employed in these various industries or in other businesses—is how are we to keep our wages? More and more this demand is being made on the part of labour. You hear it all over our country, you hear it in Montreal, you hear it in other parts of Canada, you even here it in the west. What we must do in this House, if we are to maintain the position of our country—I do not say that we have to go into an absurd system of protection—is to keep the work for our own people, and we will have to fight to do it. Our friends from the west want rather to reduce the little protection we have, and we have some protection. The issue I have described will be the fight in this coming election whenever it does come.

The members from the west will have to fight that very same question in their country. The people in the west have no intention of remaining a purely agricultural community. Towns there want to grow. You are building up universities there. The farmers are sending their sons to the universities, and they will want the universities to be followed by scientific schools and to send their sons to those schools; they will want to see the possibility of their having different employments. You cannot raise sons and make them all farmers. That is the mistaken belief which my hon. friends down the line hold. You must have diversity of employment in order to provide occupation for all of your family. My hon. friends to my left may find fault with the position I take, but I have been rather sympathetic with a great many of the things they advocate. I am entirely sympathetic with them in regard to their request for better ocean rates. I am sympathetic with what I have heard to-day in reference to reduced railway rates in this country, and the way to reduce those railway rates is to have an economic management of our railways and stop the awful competition. I am going to refer to that matter a little later on. We should also develop our waterways.

Mr. COOTE: In regard to the establishment of industries in the west, does my hon. friend think we will be able to establish industries in the west without some protection from the competition of these large factories in Toronto?

Mr. MACLEAN (York): That is a fair question and I answer that I think so. I read in the Free Press of Winnipeg the other day, the statement that new industries were coming in and the people out there were glad to welcome them. The farmers are developing new industries. They have gone into the business of butter and dairying, and have made great advances in the live stock industry. They will have abattoirs and everything in that line. They are going to vary their occupations and their industries and build up

their country, as Ontario, Quebec and the Maritime provinces have built up their country. In other words, you are going to see a revival of the idea that in order to build up a country you must have diversity of occupation and give encouragement to your own industries. If you like to give your industries away to other countries, you may do so, and your people will go away. However, I do not think that is the sentiment of the west. It is not the sentiment of British Columbia, or of the Maritime provinces. It is certainly not the sentiment of Quebec that they desire to see their industries go. Yet you would almost think that Quebec was ready to let her industries go. But that is not the popular view, and I am quite sure the province of Quebec will be heard from on this question before the next election is over.

I will tell the House now about the industries in my own comparatively small riding. Hon. members will ask, what are they made up of? Market gardeners started there years ago. There is a big market gardening industry in that district. I have lived among these market gardeners; they are constituents of mine. The industry does not look to be very much, but it gives homes to hundreds of them in that county. The next interest there is probably the berry and fruit industry. The fruit industry has developed largely. Next is the florist industry, developed by men who have greenhouses, glass houses and who do a great trade in flowers. The business has attained large proportions. It is a source of income and thousands of them are being supported by it. Hon. members talk about the export of poultry from the west. They ought to see the poultry and eggs that are raised in that small community now called South York, formerly called East York. It is an immense industry. They have also other associated interests of that kind, and all these people have an absolutely vital interest in remaining as they are in that district and having a chance to make their living, and they will only be able to make a living now if these home markets which they have at present are kept for them. I pointed out to the hon. leader of the Progressives (Mr. Forke) the other day that one difficulty these men in South York labour under is the seasonal advantage our competitors in the United States have, because their season over there is much earlier than ours and there are large importations from the States which are bought by the rich people of Toronto. Other towns of Ontario are in the same position. But that market is liable to be raided, and is raided as a matter of fact, by the competition of the United States. I think those people are entitled to some kind of protection. They are asking for it and I am putting in a plea that those industries ought to be protected and kept there. They have a right to have their interests advocated in this House.

The hon. member for Brantford (Mr. Raymond) this afternoon said a great deal about compromise and co-operation. Well, there must be some kind of co-operation between the east and the west, and some day it will come. Some day the most pronounced protectionist in this country will come from the west and he will be in favour of great big interests and local interests being built up by some kind of national policy for protection, to keep a lot of work for our own people and a lot of our own products for our own market. What would I suggest? I am not speaking for one moment for the manufacturing interests. The manufacturers themselves have not many great friends in this country now. They are doing most of the talking themselves. They think of nothing but themselves, and some of them are very selfish. A great many of them made enormous profits in the recent war. Now they are enjoying games of golf and riding in great big cars, and people are making a clamour about them. I am saying nothing about this. Let them look out for themselves, but I speak for those on the pay-rolls of the industries of this country.

We have heard something about export duties, and we have those duties in this country. The government has placed an export duty on power. I listened this afternoon to the hon. member for London (Mr. White) who opposed it, or rather said it should not be brought into force until the present contracts ran out. That may or may not be true, but Canada to-day has enormous water powers, especially in the region of Hudson bay, and north of the western provinces. I believe all those water powers can be harnessed, and by means of long distance and high transmission, perhaps by wireless transmission, there will be great abundance of power development in that country which may be a great source of revenue to Canada and to all the provinces. There are other things we can accomplish by an export duty. Do you believe I would let one pound of nickel go out of this country to go to Mond's smelters in England or to the International Nickel Company in the United States? There is not a pound of nickel ore in any place but Canada, and I would not let a pound go out without being absolutely refined in Canada;

and yet through Sir Alfred Mond and the International Nickel Company—and they are the only people who got the ore—Germany got all the nickel she wanted during the war, and she got it from the nickel ore in Canada. I have made that statement before, and have been condemned for it, but I say it again, and I appeal to the people of Canada through their representatives at Ottawa, to place a duty on the export, not only of power, if they are in favour of it, but on nickel, in order that it may be refined and made into metal in this country.

I would also put an export duty on pulpwood going out of Canada, which would help our revenues. The settler will say, "I have only one market for my pulpwood and it is the export market." That may be true, but let his own province establish a pulp mill to grind his pulp, and in that way we will have the business in our own country. We command the bulk of the pulpwood business of the world, and we can get the whole of the business, on account of the class of pulpwood we have in Canada. We have to take care of that pulpwood and I think we will take care of it. As long as we have it we can get a great revenue from it, and an export duty placed on pulpwood will help pay the taxes and debts of the country.

I am going to leave the tariff question with this brief statement of my views. I happen to come from that little constituency which has grown from 25,000 people to 400,000 people and that has the greatest collection of industries of any portion of Canada. That constituency is growing; the people are growing with it, and they have as much right to claim fair treatment as the people of any other portion of this country. When these conflicting claims arise, there is only one way, as was said by the hon. member for Brantford this afternoon, by which they can be settled. There must be some compromise, some adjustment, made and some patriotic view taken that we want to help our own people and our own industries in a time of trial such as this.

I am going to pass from that to discuss for just a moment the banking conditions of this country. I am an absolute believer in Canada adopting, as far as it can be adapted to this country, the national reserve bank system of the United States. I have already said in this House that the greatest public ownership proposition in the world to-day is the national reserve bank system of the United States. It is absolutely owned by the people of the United States and billions of gold owned by the people of that country are behind it. They have also their own coinage systems, and the whole credit of the United States is behind the national reserve bank system. The way in which the United States is now and has been able for some years to encourage the farming industry and to expand it, is by providing a credit system for the farmers with absolute security and guarantee. That is done through this national reserve bank system. That system has been an immense success in the United States, and we in this country, and especially the people in the west, want a similar banking system. The Canadian banks, however, are opposed to this, for what reason I do not know. They should not have any objection to doing what has been so successful in the United States. The United States is going to do the reparation work of the world in the way of financing; she is doing it now for France and Germany; she has helped England immensely; she is ready to do this for all the world, through the fact that she has this splendid system of banking backed by the whole credit of that country. Our banks oppose the establishment of a similar institution in Canada and they say: Oh, we might get the system of banking they have in the United States and some money might be lost. Let me tell the banks of this country what I would like to see because of the failure of our banks to take advantage of the creation of a national reserve bank system in Canada. I would like to see fifty bankers from the little towns and villages throughout the whole of the United States come to Canada and ask for charters for small national banks to develop here. If our bankers saw such an influx into this country of the same system of banking as they have in the United States, backed by the national credit, there would be a wonderful improvement in our financing. Branch bank business, as far as we know it, is not a success. It is ending more and more in mergers. I wish the Acting Minister of Finance (Mr. Robb) were here to-night so that I could tell him what is going on. Within five or six years, at the rate at which mergers are taking place, we shall have not more than five or six banks in this country. Let me enlighten the House and the country about three very surprising morgues that are maintained in Canada. A morgue is a place where dead things are kept. What do hon. members think these three great, big morgues contain? One, I think, is in Toronto and perhaps two are in Montreal. They are the storehouses of the banks' safes that have been discarded be-

cause of the bank mergers that have taken place in Canada. Hundreds of agencies were closed, for instance, the Merchants Bank and the Molson's Bank, and in Montreal there were others besides these. There have been numerous mergers in Ontario. Now, owing to these bank mergers, there are nearly 20,000 of these safes stored in this country, and the banks do not know what to do with them. They are afraid to show them and they keep them hidden. That is a result of the bank mergers. But the bank mergers have not finished, and I am going to make this prediction that as soon as this parliament is over, there will be three great mergers in Toronto. They are all arranged now so far as I can gather, and they will go on. Let there be big banks if there must; but let there be little banks as well, and let the little banks have the same advantage of the national credit as they have in the United States and as the big banks have in this country. The big banks may say that I am making an attack on them. I am not. I want the big banks to make more money than they are making now. All I am asking is that they will give more service. If we have something like that in this country, many things will take place that will help to bring about a recovery in business conditions.

I should like to refer for a moment to the question of the revision of our constitution and of making our courts supreme. I heard an hon. member from the west speak this afternoon about a grievance that existed there in regard to tax duties on agreements of sale whereby an innocent family, that owned property in one province and that had gone to live in another, found that both provinces claimed the tax and they had to pay the tax in the two places. The provinces said to them: You pay the tax in the meantime and go to the Privy Council in England to have the matter settled. We shall never be a country until we interpret our own laws in our own country by our own courts. That is a question on which all the Canadian people can unite. The greatest court in the world to-day is the Supreme Court of the United States and it was built up by American lawyers. They have become great jurists and they have a splendid system of law in that country. The crowning glory of the United States is probably its own Supreme court and the integrity of that court and many other courts over there. Canada will never be able to hold up her head alongside of the United States until she has at least as good a banking system and as good a final court system as they have there, instead of being, as we are, minors, wards, and having to go to the Old Country in order to have our laws interpreted. The people in the Old Country are quite willing that we should interpret our own laws and to allow us to make our own constitution. Speaking of these constitutional questions, I say that much headway was made in this parliament this session when the motion of an hon. member from the west in favour of Senate reform was accepted, went through and was recognized in Great Britain. Results will come from it in a very short time, and you will see Canada having a much better position amongst the nations of the world than she has to-day.

Mr. STEWART (Leeds): Are the people of the United States entirely satisfied with their courts and the decisions of them? Is there not a great deal of agitation there for a change?

Mr. MACLEAN (York): I do not think so. But the Supreme Court of the United States settled the question of slavery after the war; the action of Abraham Lincoln was upheld by the decision of the court. But even if there are disputes there, so are there disputes here, and it is for us to make the system perfect as far as possible. Personally I will trust Canadian judges any day for the final decision, and especially the Supreme Court when we have strengthened it. And to my mind Canadian lawyers are absolutely the best men to interpret the laws of Canada.

There is only one other question I desire to speak to and that is the question as to the demand for a merger of our railway systems in this country. Things cannot go on as they have done in the past. We have been rolling up a huge snowball of liabilities in connection with our National Railways, and the Canadian Pacific has also been meeting tremendous expenditures. Unless we do something to put a stop to the enormous waste which is taking place in connection with the Canadian National Railways, I cannot see anything ahead but disaster; and the only solution, as I have said before, lies in a merger of the Canadian Pacific Railway and the Canadian National system. This I know is objected to by a good many newspapers, particularly in Montreal, where probably a chain of journals are opposed to it. It does seem to me however that the country is behind the proposal for the consolidation of the two railway systems as the only means of eliminating unnecessary competition and putting an end to wasteful and extravagant expenditures. If these two roads were consolidated to-morrow,

I would venture the prediction that the joint income, as a result of the savings that would be effected, would meet the liability in regard to dividends in connection with Canadian Pacific, and the merger would in my opinion prove entirely successful. We should then have a railway system that would really pay its way, instead of operating a huge company, not altogether to the advantage of the shareholders in the case of the Canadian Pacific, and not to the benefit of the public in the case of the National system. The shareholders of the Canadian Pacific can no more stand competition than can those of any other railway system. I am sure the shareholders of this railway are not quite certain as to whether their 10 per cent dividend can last under this competition. As to the proposal itself, it was not even considered by some of the newspapers, not even by the Montreal Star. It was however intimated that it would be desirable to cut out the unnecessary competition, and some of the press have been shouting in that respect. But they do not want to see any merger brought about. Now, competition will not be eliminated in any other way; there must be an absolute merging of the two lines if the full benefits of the elimination of competition are to be enjoyed.

10 p.m.

Talking about the merging of railways, I might refer the House to what is going on in the United States. Hundreds of railways in that country were exploited to a marvellous degree by the men who controlled them, and the United States government has issued an order to the Interstate Commerce Commission to the effect that they compel all railways in that country to be merged into probably seven or eight systems. This will mean the wiping out of millions and millions of securities that were put out by those who have exploited these roads; and the Interstate Commerce Commission has further ordered that all these railroads, when they are merged, shall operate and take profits on a valuation made by expert actuaries on the actual values in the roads and not the capital issued. The same thing will come in this country unless we stop the rivalry that now exists between the two systems here. All that need be done is for the two roads to get together and take care of all the securities that are out; this would eliminate the waste that is now incurred through unnecessary competition. Just imagine two great headquarters in Montreal with two managing staffs, hundreds of offices and hundreds of men, where half the staffs, half the men and half the chief officers might serve equally well. This would mean an enormous saving.

Mr. HARRIS: Would the same theory apply to the merging of the banking institutions?

Mr. MACLEAN (York): No, it would not; does the hon. member want to have the banks merged into one? Be that as it may, a merger of the railways in this country would solve our difficulties.

I might mention what has been done by the Northwestern Railway Company in England. That concern has issued a statement to the effect that its expenses must be reduced owing to competition. And they have not been extravagant either. What happened in England has happened in Canada as well, and it is this: the automobile and the motor truck have taken away a good deal of the local business of our railways. Take for instance the city of Toronto. If a man buys a carload of manufactured goods he simply gives his order over the telephone; a motor truck will take a load of from three to five tons from Kitchener and deliver it in Toronto six hours after, unloading it there, and there will be no cartage nor railway freight. The automobile business has therefore seriously affected the profits of our railways. And the railways are menaced from another quarter in this country: the United States and Canada intend developing the St. Lawrence waterway, and that will cut into the profits of the railway systems. Still more are the railways threatened in their high class business, such as express and passenger services, by the aeroplane, which within three years will be all over America. The Canadian Pacific Railway, then, ought to pray God every night to be taken over by the Canadian National system so that its shareholders might be assured for some time to come of the dividends or a portion of the dividends they now receive. Instead of these railways fighting for business they should get together to stop the over-competition that now exists. I will close by reading an extract from an editorial I have received in the mail. This editorial is reprinted from the Border Cities Star, published in Essex, which is represented in this House at the present time by the Minister of Railways (Mr. Graham), and by the successor of a former member of this House, the late Hon. Mr. Kennedy. It is under the caption, "Duplications,' and I quote from it the following:

> Mr. W. F. Maclean, M.P., has been commended for calling attention to expensive duplication of certain services at Ottawa. Mr. Maclean deserves commendation for he has placed his finger upon a condition that is almost criminal in its extravagance. Let us hope that he keeps on complaining and that his protests may not fall upon deaf ears forever.

Mr. Maclean is also interested in eliminating another form of duplicated service—that of railways. He desires the Canadian National to take over the Canadian Pacific so that great economies may be secured and the whole Dominion transportation problem straightened out. An ambitious thought, this, but one that is not likely to be worked out for the very good reason that the Canadian Pacific Railway is not anxious to be taken over and the business interests of the country are not keen on publicly-owned railroads anyway. Mr. Maclean may find it necessary to turn his argument around, that is to advocate the taking over of the Canadian National by the Canadian Pacific.

I want to tell you why I oppose that proposal. The Canadian National is owned by the people of Canada; the Canadian Pacific is owned about one-third in Canada, one-third in the United States and one-third in Great Britain. The control of that railway could be bought any day by English capitalists who went after it, or by the New York Central or the Pennsylvania system of the United States. They could buy the Canadian Pacific tomorrow—and they may be after it; but they could not buy the Canadian National railways because they are owned by the people of this country. So I resent this doctrine propounded in the Border Cities Star. Yet this western writer admits the whole case when he says:

That there is an urgent need for the building of additional branch lines in the west is known to everyone familiar with that part of Canada. At the same time, there is a natural hesitancy to pass appropriations for such work for the simple reason that our present railway bills are so high. With amalgamation of the two great national systems, the saving of millions in expenses annually, and the lifting of the load that now reposes on the shoulders of the people, there would be money, opportunity and desire to proceed with those vital branch extensions.

The Border Cities Star favours the consolidation of the roads, but under the Canadian Pacific. I am against that; I am in favour of the consolidation of the roads under the Canadian National, which is owned by the people and which has sixty or seventy per cent of the railway strategy of Canada. I mean this: the old Grand Trunk was the greatest railroad system ever built on this continent. It got all the strategy at Montreal. It got all the strategy along lake Ontario, of the city of Toronto, of the Niagara district, of the Detroit river, to say nothing of a great many other portions of Ontario. The Canadian National has the strategical advantage in respect to the passes through the Rocky mountains and in the matter of grades. The Canadian Pacific has been made a great road by the contribution of the people of Canada, but we do not own it. I say we do own the Canadian National, and we must take care of it. When we consider the reduction in business and the increased competition involved in the waterway routes of the St. Lawrence we have got to get down to the cold-blooded business of doing something to merge these roads and eliminate unnecessary competition.

The farmers of the west see that things are improving for them; the prospects are that conditions will be better in that part of the country. Nobody wants to see the west go ahead more than I do. Some people say the representatives of the west are a class here, but what are we in the east but a class? They have as much right to be here and to state their cases as we have. From what some people say you would almost think they were bolsheviks, intruders; but the farmers of the west are Canadian citizens who elect their members to parliament and they have as much right to express their opinion here as anybody else Personally I speak here for 120,000 people whom I represent, many of whom are engaged in industries in my riding; who believe in diversity of employment and who want to see work provided for their own people. They believe, as I do, that extravagance of all kinds should cease. I want the Acting Minister of Finance to say to-day whether he approves of the unnecessary expenditure involved in the duplex system we have in this House, to which I referred on a previous occasion—two systems of post offices, two systems of messengers, and all the rest of it. Here is where economy could be practised, and the country demands it. When we begin to work it out in our own House then we can work it out in the country. Let us put an end to this unnecessary competition between the railways and thus make things better both for the railways themselves and for the country. Let us still have some respect for the principles that underlie that old, much denounced idea of a National Policy in this country for the encouragement of home industry, for the providing of employment for our own working people, for the maintaining of a home market for our own products. Speaking particularly for the people whom I represent in this House, I say to-day that we do not want to see that National Policy abolished at this time, after the Great war and after the great losses in life and in money that our country has sustained.

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, after the somewhat lengthy discussion which has already taken place it is perhaps not necessary for me to say very much with regard to the details of the budget. We are told that there is no deficit; yet on the other hand we must con-

fess that we have decreasing revenues and increasing obligations. Just how long this state of affairs can continue is a matter that surely ought to call for the most serious consideration from this House. I submit that increased revenues can in the long run be secured only on the basis of general prosperity. To-day without doubt we have low wages, unemployed workers, idle factories, and discouraged farmers. Under these circumstances how can we hope for any immediate change in the situation in the near future? And in this respect I am not thinking particularly of one party or the other; I think both parties are in the grip of the larger economic forces over which politicians have very little control indeed.

We hear a great deal about the necessity for greater economy, but I would urge that this economy is not to be gained simply by petty retrenchment, although this may be desirable. Certainly it is not to be gained by any reduction in the necessary services which the country is rendering. In all fairness to the government, I think it should be recognized that the greater part of the budget is uncontrollable, that is, it consists of fixed charges, very largely interest charges. On the other hand, it does seem to me as if the government should very frankly face the enormous debt and should take steps, as I think was suggested by the hon. member for Brantford (Mr. Raymond) this afternoon, to deal with this war debt. I do not know that I agree with his suggestion of a sinking fund; it seems to me that this would not be adequate to meet the needs of the country; but I do believe we will not get very far towards alleviating our taxation until we tackle the war debt. Earlier in the session I called attention to the fact that if we add together the federal, provincial and municipal expenditures on the basis of nine million people, we have an annual expenditure of $89 per head. I do not think that at the present moment we have nine million of a population. So that, roughly speaking, we have a per capita expenditure of $100. Think what that means to an ordinary family of five—$500 per annum! As to the war debt, if we add together the federal, provincial and municipal debt we get a per capita debt of $547—an enormous load for our people to carry. It should also be remembered that the debt is owed to a considerable extent to people resident in Canada, which means that a comparatively small group who hold the debt are able to levy tribute of some one hundred million dollars a year on the rest of the Canadian people. That is, that amount is being paid to Canadian bondholders; and over half that amount is in untaxable bonds. As long as that condition of affairs continues we are bound to have very heavy taxation. Sometimes I have wondered just what would happen if we adopted the old Mosaic law and every fifty years instituted a year of jubilee under which all slaves and debtors would go free. I am not very sure that a very large proportion of our population would suffer very much if we had such a jubilee. I do know that it would be a wonderful relief to industry if these enormous overhead charges could be rolled off.

Now I pass to a consideration of our National railways, for we all recognize that they are the source of a very considerable part of the deficits which come to us from year to year, whether those deficits are formally recognized by the government or not. I take it that we are undoubtedly committed to the principle of government ownership; there is no going backward, we must go forward. Sometimes the impression is given that we are in difficulties over the Canadian National because of the very high wages paid to labour. Let me say that in 1920 there were 185,177 employees receiving $290,510,518. I am speaking now of railway employees as a whole. In 1921 the railway employees of Canada, numbering 167,627, were receiving $247,756,138; in 1922, 165,635 railway employees were receiving $233,294,040; in 1923, 178,052 employees were receiving $253,320,005; in 1924, 159,030 employees were receiving $231,517,862. I might say that the latter figures are hardly complete; they are the latest available but include only the operating departments. Now, the higher salaries account for a considerable portion of the expenditures on wages and salaries. The salaries of the general officers amount to a little less than five million dollars a year. In 1923 the general office superintendence class numbered only 20,828. I would point out that although there has been a bigger volume of trade, this increased business has been handled at less expense. I note in the Canadian National Railways operating expenses that, although there was an increase in the salaries and expenses of the general officers from 1892, when it was $693,271.03, to 1923, when it amounted to $947,576.89, the payroll of the operating departments was cut by $7,714,263. Thus, although the higher officials have increased the expense in connection with the whole operation, wages have been steadily cut notwithstanding the larger volume of business handled.

There is another point to which I should like to draw attention; it has come up again and again in this House, and so far no action has been taken towards remedying the unsatisfactory condition. That is the over-capitalization of our railways, and I want to speak especially as to how this affects wages, or may react on wages. In this respect I think I cannot do better than read a few paragraphs from an article which appeared in the February number of the Canadian Railroad Employees' Monthly:

The fifty-eight railways in Canada operate a total mileage of 54,580 (including sidings and yardage) and have a total capitalization, according to government statistics, of $3,264,000,000 or nearly $60,000 per mile. The C.P.R. with a total mileage of 19,103 has a capitalization of $623,960,000, or about $32,800 per mile. The C.N.R. with a total mileage of 26,751 has a capitalization of $2,207,000,000, or $84,500 per mile. The capitalization of the Canadian National system is made up as follows:

Canadian Northern..	$ 872,492,000
Grand Trunk..	599,226,000
Grand Trunk Pacific..	265,639,000
Government Railway..	447,643,526

Last year the C.N.R. operated on the average 20,419 running miles of road and the C.P.R. 13,878 miles. On the basis of miles operated (not including sidings and yardage) the capitalization was:

C.N.R...	$ 109,000 per mile
C.P.R...	44,500 per mile

According to figures given by the Canada Year Book, published by the government, the capital liabilities of the various units composing the Canadian National system, on the basis of the mileage operated in December, 1922, were:

Government Railway.. ..	$ 105,000 per mile
Canadian Northern..	46,000 per mile
Grand Trunk..	102,000 per mile
Grand Trunk Pacific..	80,200 per mile

The former private railways were presented with vast areas of land and enormous subsidies. The Dominion government made land grants to railways of 31,684,000 acres, and the provincial governments 15,200,000 acres—a total of 46,886,000 acres. A part of the public domain nearly equal to the area of the three Maritime provinces was thus turned over to railway promoters and their political friends. More than half of this great area was presented to the C.P.R. and its subsidiaries, that company on most of its main lines being permitted to make selections of the land likely to prove the most valuable. When the Grand Trunk Pacific was projected the policy of making large land grants was discontinued, and that road only obtained 11,800 acres from the Dominion government.

In addition the Dominion, provincial, and municipal governments gave cash subsidies to the private railways to the amount of $230,000,000 and guaranteed railway bonds to the tune of $442,000,000. Of these bonds $370,000,000 are still outstanding, and mostly form a liability against the national system. The high capitalization of the Canadian government railways (which includes the old Intercolonial, the Transcontinental and the Hudson Bay railways) is partly explainable by the fact that they did not receive cash subsidies or land grants. Again, successive deficits have been added to their capital liabilities.

To the old I.C.R. capital account, too, was charged the construction of important harbour works at St. John and Halifax, whereas the C.P.R. and Grand Trunk have had the benefit of fine port facilities at Montreal with little capital outlay in that connection. If the government roads had been credited with subsidies and land grants equivalent to those given other roads, their capitalization would have presented a different figure.

The old Intercolonial itself only represents a capital investment of $120,220,000 according to the public accounts of Canada for 1923 (schedule F. to balance sheet). But in the great railway building age the politicians in the east as well as the west got charters and subsidies to build small branch lines to open up forest areas or mining districts. Then when these lines had served the purpose of stripping the more acceptable and valuable timber areas, they, in many cases, managed to persuade the government to buy the line and add it to the government system. There was much log-rolling in those days. And thus in the construction of the government system its capitalization was augmented by practices, legal enough perhaps, but hardly justifiable from a moral point of view. The railway history of Canada is replete with stories of railway promoters amassing snug fortunes, for which they rendered no adequate service to the country.

It is scarcely fair—

And this is the point I should like to press in this connection and the reason for reading these figures—

—that the burdens of the sins of the politicians and the promoters should be visited upon the railway workers to the third and fourth generations.

The article goes on to point out that according to the public accounts for 1923 in the national balance sheet there are the following assets:

Government railways..	$423,000,000
Railway accounts (old loans)..	88,000,000
Railway non-active loans..	558,000,000

The billion dollars which the government counts as assets, are liabilities of the C.N.R.

Included in this we have guaranteed bonds to the amount of $296,000,000, and debenture stock (outstanding in 1923) amounting to $216,000,000. The article proceeds:

The sum of these accounts is $1,581,000,000, and that is the sum on which the C.N.R. is expected to pay interest,—a matter of nearly $75,000,000 per year.

Mr. GRAHAM: I should like to ask the hon. member a question. Does he read from that paper that the amount which the government railways cost is charged against the Canadian National Railway system in their overhead?

Mr. WOODSWORTH: I think that is the—

Mr. GRAHAM: I mean the government owned railways.

Mr. WOODSWORTH: I think that is the sense of the article.

Mr. CAMPBELL: It does not say so; it simply refers to the capitalization. The statement is not very explicit.

Mr. GRAHAM: I should imagine it just referred to the capitalization. It does not go so far as to say that the Canadian National annual overhead is debited with the interest on this capitalization so far as the Canadian government railways are concerned.

Mr. WOODSWORTH: The statement is not explicit; I am not quite sure as to that. I am quoting this as an authority on the subject of over-capitalization. The statement concludes with this paragraph:

> The sum of these accounts is $1,581,000,000, and that is the sum on which the Canadian National Railway is expected to pay interest, a matter of nearly $75,000,000 per year. That sum is $300,000,000 greater than the capital valuation of all the railways in Canada would be if they represented the same proportion of the national wealth as the United States railways do of the national wealth of the republic.

I will not go into this question in detail; it simply suggests a line of reasoning which I am glad to say, is very frequently met with across this country; and I am very sure that if the government could see its way to write off some of this over-capitalization as simply bad debts we would be in a very much better position to carry forward our national lines to success.

There is just one other point I should like to mention in connection with the railway situation, and in doing so to take my place beside the hon. member for South York (Mr. Maclean) who has been a veteran advocate of public ownership. In the first session of this parliament I can remember advocating the unification of our two-company system. At that time the whole idea was regarded as absolutely impracticable, and apparently there was no use in urging it upon the House. I am glad to think in the last four years we have come a few steps nearer that very desirable development; and this year when the hon. member for North Waterloo (Mr. Euler) came to the support of the hon. member for South York, I am sure that we all felt that perhaps the time might not be so remote as some of us imagined, when this unification would take place, and place us in a fair way towards the solution of one of the most important problems which confront us in Canada to-day.

With regard to the question of free trade and protection, the discussion of which has occupied so much time up to the present, I might say that the labour movement does not regard this as by any means a fundamental issue. Later in the discussion I should like to deal with some aspects of this question a little more fully, but at this time perhaps I might be permitted to comment very briefly upon a few of the arguments which have been advanced. A year ago we found the government making a great deal of the fact that it was granting certain reductions on agricultural implements. We have had from the opposition a great deal of criticism and the supposed adverse effects of these reductions have been pointed out. I think one hon. member has already referred to some statistics as to what these reductions really amount to. I hope that some of the Progressive members will take this matter up more fully. I shall content myself at this stage with calling attention to the bare facts of the case. On imports of all dutiable agricultural implements valued at $3,156,986, April 1 to October 31, 1924, there was a reduction of 4.7 per cent or an actual reduction of duty paid by the farmers of the whole of Canada of $148,378. Dividing that amount by the acres in field crops we find that the saving to the farmer amounted to only 83 cents per half section.

Mr. McMASTER: Would it not be fair to surmise that the reduction of duty would tend to lower the price of the home-produced article by an equivalent amount?

Mr. WOODSWORTH: Possibly it would.

An hon. MEMBER: It did not.

Mr. WOODSWORTH: The question was, would it tend to do it? I do not know that we have any evidence that it has done it, but even if it did, 83 cents is such an inconsiderable amount for a half section, I do not think we can believe it has accomplished a great deal in actually relieving the situation which faces the farmers of this country. As far as western Canada is concerned, the figures are very much the same as those for Canada as a whole.

On the imports of all dutiable agricultural implements entered for consumption in the provinces of Manitoba, Saskatchewan, and Alberta, April 1 to October 31, 1924, the reduction of the duty as compared with 1923 was an average of 4.5 per cent, or a reduction in duty paid of $98,099.

Mr. McMASTER: Has the hon. member any figures to show what amount the importations bore to the same production?

Mr. WOODSWORTH: I have not.

Mr. McMASTER: Does it not strike the hon. gentleman, with his acumen and spirit of fairness, that these are very unfair figures?

Mr. WOODSWORTH: I should be very glad to have the unfairness pointed out, but

I really cannot see that the reduction has involved a tremendous saving to the farmer.

Mr. McMASTER: If the home production, let us say, is twenty times the importation, then the figures should be multiplied by twenty.

Mr. WOODSWORTH: Yes, that is quite true. I have not the figures. I think it is perhaps for some of the hon. members who advocate this policy to show what these figures actually are. I recognize that these figures only point out one aspect, and if they can be offset, they may show a very considerably increased amount of savings, but we have not had that evidence before us.

Mr. BOUCHARD: Does the hon. gentleman think the comparison between the western farmers and the eastern farmers is just as to the proportional cost of agricultural implements per acre? Do not the eastern farmers require to use more machinery and therefore to incur a larger expenditure per acre?

Mr. WOODSWORTH: The first figures which I gave apply to the whole of Canada, and the second set of figures applies merely to the western provinces. There is not a great variation in proportion between the two. I have the actual figures before me as to the amount in both cases. Although I do not offer this as absolutely conclusive proof, it seems to me it gives an indication of the very small amount of relief which was afforded to the western farmers or to the farmers throughout the whole of Canada. I am inclined to think that perhaps the confession of the hon. member for Maple Creek (Mr. McTaggart) was a very honest one and well based. He said the other day:

> I find that on two occasions in the life of this parliament I voted confidence in the government's promise to reduce the tariffs, but if appearances be not too deceiving, I am prepared to admit that perhaps I may have been flim-flammed.

I take it that the actual operation of the reductions quite justifies the opposition of some of us last year to the government's budget.

Mr. CAMPBELL: Were these figures just for the cultivated land? In that case the saving to the half-section farmer would be considerably less than 83 cents, because the average farm has not 320 acres of cultivated land on it.

Mr. WOODSWORTH: These figures were for the acres in field crops.

The hon. member for West York (Sir Henry Drayton) the financial critic of the opposition, made quite a bid for labour support in his speech advocating protection. In the course of his speech he stated that prices of manufactured products to consumers embody labour costs equal to 60 per cent, and in some cases 80 per cent of such prices. The inference would seem to be that under protection high enough Canada would manufacture $700,000,000 worth of goods now imported, and pay labour 60 to 80 per cent of that amount.

Now, according to the Bureau of Statistics for 1922, at the point of production the gross value of Canada's manufactured products was $2,439,000,000. The combined salaries and wages amounted to $497,800,000. The ratio of salaries and wages at factory valuation was therefore 20.2 per cent; the factory value of a hundred dollars, plus wholesaler and retailer and transportation, would make the consumer's price anything above $130. Assume the average consumer's price is $140, which would be very conservative, then the factory labour cost would be $140 divided by 20.2 or 14.3 per cent, instead of 60 or 80 per cent. I might call attention to the fact that in many industries labour costs form a very much smaller proportion than this. In the flour mills they represent something like 3 per cent of the consumers' flour prices. If we cut out salaries, the average wage labour costs of all manufactured products would be about 11 per cent of the consumer's price. Of course, labour costs are embodied in raw material, but the producer of raw materials in Canada would have the same wage bill whether the raw materials are manufactured in Canada or elsewhere. Similarly, consumer's prices embody wage bills of transportation companies and merchants; but from the wage point of view, whether they handle Canadian or foreign manufactured articles is immaterial. The statements of the hon. member for West York refer only to factory labour costs. I would say that, in view of these considerations, decidedly they are not convincing. Further than that, the hon. member for West York rather gave us the impression that our salvation economically would be along the lines of following France. It is most unfortunate for him that the recent developments in France took place so very soon after his speech was made. I think I cannot do better than quote from an editorial which appeared in the issue of the Grain Growers' Guide of April 15:

> Fairness to France demands recognition of the vast outlay she has had to make for the restoration of the devastated districts, but if comparisons of national welfare are to be made it is also necessary to recognize that the outlay has been by way of currency inflation, and to such an extent that the franc has depreciated

74 per cent. The financial position of the country now is such that the government of M. Herriot is staking its life on a financial proposal involving the issue of two billions of currency, and a forced loan of 100,000,000,000 francs for 10 years at 2 or 3 per cent. The currency issue is necessary to meet issues of the Bank of France in excess of those already authorized by law, and it is stated that these unauthorized issues of the bank have been concealed from the people.

On her foreign debt France is paying neither interest nor principal, and it is very questionable whether the French war debts will ever be redeemed. France, as Sir George Paish stated in his recent speech in Winnipeg, is on the verge of bankruptcy, and if the inflation continues it will mean the complete wiping out of the internal debt. Protection has nothing whatever to do with the condition in France; if anything it is making a bad situation much worse.

I take it that we should be very careful in making comparisons between two countries that differ so very widely in their general economic development as do France and Canada.

I should like to pass to a statement made by the hon. member for Vancouver Centre (Mr. Stevens) with regard to protective duties in Canada and the United States. The hon. member in referring to the tariff of the United States spoke of:

A 4,000 mile boundary and a tariff three times as high as ours.

I have before me a very carefully prepared table which, with the consent of the House, I should like to place on Hansard. The table is as follows:

Comparison of Average Rate of Tariff Duties Canada and United States

Duty collected per capita

		Duty	Population	Canada	U.S.A
1921	(g)	$179,667,683	8,788,483	$20.44	.....
1921	(a)	308,025,102	107,833,284	.....	$2.86
1924	(h)	135,134,894	9,226,740	14.65	.....
1924	(b)	545,012,115	112,078,611	.....	4.86

Average rate of duty on dutiable imports

	Duty		Imports	Per cent	Per cent
1921	$179,667,683	(i)	847,561,406	21.20	....
1921	308,025,102	(c)	1,517,000,000	....	20.30
1924	135,134,894	(j)	591,299,094	22.85	....
1924	545,012,115	(d)	1,535,000,000	....	35.51

Average rate of duty on total imports

1921	179,667,683	(k)	1,240,158,882	14.49	....
1921	308,025,102	(e)	3,654,000,000	....	8.43
1924	135,134,894	(l)	893,366,867	15.13	....
1924	545,012,115	(f)	3,554,138,268	....	15.33

Explanatory notes:—

U.S.A. For items (a) and (b) see annual report of U.S. Secretary of the Treasury 1923-24 p. 391.

For items (c), (d), (e) and (f), see U.S. Trade Information Bulletin No. 276 p. 2.

Canada. For items (g) and (h) see Canada Year Book 1924, p. 455.

For items (i), (j), (k) and (l), see Canada Year Book, 1924, p. 452.

It would seem that, in view of these figures —and the authorities are given in the table which hon. members can study at their leisure —the statement of the hon. member for Vancouver Centre about the United States tariff being three times as high as ours hardly seems to be warranted.

May I refer also very briefly to a statement made by the Minister of Labour (Mr. Murdock) in reply to a line of reasoning which the other day had been put forward by my colleague, the hon. member for East Calgary (Mr. Irvine). The minister accused him of the rankest kind of heresy from the standpoint of labour in suggesting that combines are not necessarily evil.

Mr. MURDOCK: May I correct my hon. friend? I said no such thing. I have always held the opposite view. Would the hon. gentleman kindly quote me correctly.

Mr. WOODSWORTH: I think I am quoting correctly when I state that the Minister of Labour criticized my colleague and accused him of the rankest kind of heresy because my colleague made the statement that combines are not necessarily evil.

Mr. MURDOCK: Would the hon. member please go a little further?

Mr. WOODSWORTH: That was the statement I made a moment ago.

Mr. MURDOCK: That is not correct.

Mr. WOODSWORTH: That is my reading of Hansard.

Mr. MURDOCK: If my hon. friend will turn to page 1998 of Hansard he will find what I said. I criticized the hon. member for East Calgary for saying that "combines cannot be broken, and even if they could be broken, it would be very bad business." I said that was rank heresy so far as I understood the claims of organized labour.

Mr. WOODSWORTH: That is what I am trying to say. That is the statement I wish to discuss. Let me say this much in defence, if necessary, and explanation of the position taken by my colleague. He had said that combines are the natural outcome of the processes which had been going on for the last century. He had been showing that we had long since passed beyond the stage of unrestricted competition, unrestricted free trade. He showed that in that sense combines really represented progress; that they were inevitable. He says further:

I have been suggesting, not the breaking of a combine but the control of a definite monopoly in Canada.

And he went on further to say in another place:

The control of a world combine is only possible by a world force.

All I should like to call attention to is that the words against which the criticism was levelled, if taken by themselves, might readily be regarded as making my colleague justify combines as they exist, and might suggest that he would leave them alone with all their evils, whereas he was simply showing that we cannot do away with combines but that we should control them. That is altogether a different matter. I wanted to make it clear to the House that this is what my colleague and I stand for.

The Minister of Labour also took issue with the member for East Calgary regarding a particular case of an immigrant who came to this country and who was out of work. A letter was read in the House from the immigrant. The Minister of Labour (Mr. Murdock) took the trouble to make an investigation and read a somewhat lengthy statement according to which this immigrant was a very unworthy character. I may say that the statements made in the memorandum submitted by the Minister of Labour have been definitely denied by the man in question but I have no way of determining whose statement is correct, that of the Minister of Labour or that of the immigrant. But it does not in the slightest degree matter, for the purposes of the argument which my colleague was making, which was simply this, that the government had evidently brought out people who were not satisfactorily located on the land. That was the argument, and this particular case was merely incidental. I call attention to the matter in passing.

Now a few remarks with regard to the question of free trade and protection. I think the hon. member for West York was quite correct when he pointed out that there no longer existed in this country the conditions which would seem to afford ground for the belief that free trade as such would offer a solution to our modern problems. The conditions have absolutely changed since the old days when there was unrestricted free trade between individuals. We are living to-day in the age of trusts and combines of various kinds and as a matter of fact we have no longer the kind of free trade that existed in the days when this fiscal doctrine became popular through the Manchester school of economics. In Great Britain protection was the policy of the land-owners who wished to keep out agricultural products and other raw materials which were produced in England. This became the political gospel of the Conservative party, which was the party of the land-owners. Free trade on the other hand was the political gospel of the trading and manufacturing classes of Great Britain and became the recognized policy of the Liberal party, which was very largely the party of the traders and manufacturers. We are often accused these days of advocating something new in suggesting group representation in parliament. The two old historical parties originally represented distinct groups in England, one the group of landed proprietors and the other the group of traders and manufacturers. In Canada the situation has been quite different; protection in Canada has been the policy of the Canadian Manufacturers' Association and of whatever party happens to be in power, while free trade has been to a considerable extent the policy of the agriculturists. To-day there is really no such thing as individual competition. We may still have the competition of rival groups, those groups are sometimes located in a single country, sometimes in different countries, in which case the rivalry tends to become an international dispute. We see on all sides the emergence of these huge trusts, and this development entirely alters the situation and should alter our attitude towards the whole problem. I remember a very interesting treatment of the question of the tariff from the standpoint of the restriction of production. I read a paragraph from a little pamphlet On the Nature and Uses of Sabotage by Professor Thorstein Veblen:

The great standing illustration of sabotage administered by the government is the protective tariff, of course. It protects certain special interests by obstructing competition from beyond the frontier. This is the main use of a national boundary. The effect of the tariff is to keep the supply of goods down and thereby keep the price up, and so to bring reasonably satisfactory dividends to those special interests which deal in the protected articles of trade, at the cost of the underlying community. A protective tariff is a typical conspiracy in restraint of trade. It brings a relatively small, though absolutely large, run of free income to the special interests which benefit by it, at a relatively, and absolutely, large cost to the underlying community, and so it gives rise to a body of vested rights and intangible assets belonging to these special interests.

I suggest that the economic developments of recent years are rendering the older political divisions obsolete. These great industrial, commercial and financial concerns reach across our international boundaries and we can no longer carry on the affairs of any one country as if we were or could be self-contained in our business activities. Let me put it this way: Capital is international; why therefore should we attempt to make industry and commerce national? I should like to have that question answered by some hon. gentleman. Let

11 p.m.

me emphasize it. Capital itself has become international, and capital is recognized as the great driving force, superior to either the commercial power or the industrial power of to-day. Capital is international; why should we attempt to make industry or commerce national? To do so is to attempt the impossible. The labour solution lies neither in the direction of free trade, which under present conditions is not possible, nor in the direction of protection, which so far has meant the protection of industry and not the protection of the worker. I can conceive of there being developed an altogether new kind of protection, a protection not of industries but of standards of living. That would place the matter on a different basis. In our labour unions we frequently make use of the union label which placed on goods guarantees that they have been produced under fair and reasonable conditions with regard to hours, working conditions, and wages. I would suggest that we might apply that principle in the larger field and insist that all goods should be produced under standards of living that measure up to a certain level. For that reason we in the labour movement are interested in the maintenance of the standards in Europe. We are interested in raising the standards in the Orient. If we are to have goods imported from Germany or other parts of Europe where their standards have been forced down since the war we will inevitably have our standards here forced down, and in some way we should be protected from goods of that character. If we are to have huge quantities of goods shipped in from the Orient where their standards have never been as high as our standards, we will meet with difficulties; we will be ousted in this country. It is no solution simply to say, "exclude the orientals;" we need to go further and see that the standards in the Orient are raised. The British Labour party has been dealing with this matter in recent weeks.

Mr. LADNER: May I ask how the goods in this country are to be protected, if cheap German or other goods are not wanted here?

Mr. WOODSWORTH: I was just coming to that point. The British Labour party has been facing that in the importation of large quantities of German goods in recent times. A good deal of pressure has been brought to bear from the Conservative section of the British parliament. On March 17, for example, in the British House a Conservative resolution was presented declaring that free import of goods produced under sweated conditions was inconsistent with the principles of British trade unionism. Now, that argument, presented by a Conservative, was answered from the Labour standpoint. I have not been able yet to read that copy of the Hansard, but a similar position was taken a little earlier. On February 16 a debate took place in the House on a motion submitted by Mr. Ramsay MacDonald declaring that the policy of the government with regard to the safeguarding of industries and the methods by which it was proposed to carry this policy into effect must lead to a system of general tariffs which would not enlarge the volume of trade and safeguard the interests of workers as regards employment, wages and conditions. In the course of that debate Mr. MacDonald asked:

> Would not the government instead of trying to put up a wall against "sweated" goods that experience showed could never be fully effective, take steps to eliminate "sweated" goods altogether, so that they would not be available either for home or for foreign consumption?
>
> In the International Labour Office—

Mr. MacDonald said:

> —they had an instrument for co-ordinating labour conditions in all industrial countries, but he would be very much surprised if the Conservative government and the Conservative party had recently "lifted a little finger to increase the authority of the International Labour Office in order to raise the status of labour throughout Europe."

Undoubtedly we should extend and strengthen the conventions of the Washington conference following the principles laid down by the Versailles treaty, and should insist that we should not have dumped on us goods that came to us from countries which maintain a low standard of living, and refuse to ratify those conventions. I may say that the only practical objection to this policy lies in the fact that Canada herself has not ratified most of those Washington conventions.

Mr. LADNER: Does the hon. member think it possible to figure out what countries have the low standards of living to which he refers? Can you make a general rule applicable to any nation like France or Germany, or does not the cost of living enter into it as well?

Mr. WOODSWORTH: Of course, but if we had the eight-hour day, for example, as a world condition; if we had proper conditions of work applying the world over; if certain minimum requirements were insisted upon all along the line, I would say that if our boasted superiority means anything we should be able to compete with the people of other countries. If not, we shall go down and I am sure we shall deserve it.

Mr. LADNER: Is there any nation which has these conditions to which my hon. friend refers—the eight-hour day and so on?

Mr. WOODSWORTH: A number of nations have already ratified those conventions. If the hon. gentleman cares to read the document from which I am quoting—Industrial and Labour Information as published at Geneva by the International Labour Office, he will find a record of the ratifications made by the various nations. It is very gratifying to find how many of them have been ratified, but it is not very creditable to Canada that so few of them have been ratified by Canada. Our practical difficulty in urging this policy might very well be that other nations that have already ratified these conventions might boycott our goods because they are produced under sweated conditions.

Mr. SHAW: May I ask the hon. member a question? Talking about the subject of protection with relation to working conditions generally, is it not true that some years ago the low-paid workmen of India, who had a very low standard of living, asked for protection in order to keep out English manufactured goods, made by workmen at higher wages and with a very much higher standard of living?

Mr. McMASTER: And working the eight-hour day.

Mr. SHAW: Yes.

Mr. WOODSWORTH: I believe that is so, and I have every confidence that if the conditions of labour are what they should be, this will prove to be of immense advantage to the industry. It has been clearly demonstrated, I think, that from the standpoint of output the eight-hour day is better than the ten or twelve-hour day; that reasonable standards of living and working conditions are at least as effective as the slave-driving that sometimes has been prevalent in our factories. Decent treatment of the workers is surely good business. I throw this out. I simply call attention to this constructive suggestion which has come to us from the British labour movement as it seems to me to be quite practicable. It may be necessary for us in this country to adopt some measure of protection for the workers—protection, I say, not of the industry in order that it may profit by special privileges, but protection against goods that may be manufactured under low grade conditions and by sweated labour.

Just in passing I would say that one of the worst features of the present Dawes plan is that it would seem definitely to lower the conditions of the German workers, reducing them to a position very little short of industrial serfdom. If that takes place we may rest assured that the condition will be reflected here in Canada, as we shall have to come into competition with goods manufactured under those conditions.

Mr. McMASTER: But in the long run, would the hon. member not think that goods produced under wholesome conditions would be produced cheaper than under unwholesome conditions?

Mr. WOODSWORTH: I think so, because in the long run the general intelligence of the people would more than counteract any supposed advantage resulting from the production under unwholesome conditions. It is just a question of time.

Mr. GOOD: Why, then, should we need to protect ourselves against these poorly paid workmen?

Mr. WOODSWORTH: Well, there is the immediate effect, and this might become a permanent condition if there is an almost unending supply of cheap labour. Men will become prematurely worn out between thirty and forty years of age and allow fresh workers to take their place. Thus an abundant supply of workers might carry on by mere brute force. I do not believe that ultimately people of lower standards are going to ride over us, but in the meantime I say it may be necessary to afford protection for our workers. As a matter of fact, nearly all our professions, as well as our labour unions, are built up on the principle of protection. My friend from Brome (Mr. McMaster) belongs to one of the most highly protected unions in Canada—the lawyers' union. I am quite confident that he and his fellow practitioners would be well able to hold their place with the whole world in interpreting the law, certainly with those of us who are mere laymen and still the lawyers think it is necessary to maintain certain standards to protect their profession.

Mr. McMASTER: To protect the public against irresponsible practitioners.

Mr. WOODSWORTH: The medical profession in the same way say, "We need to protect the public."

Mr. CHISHOLM: What about preachers?

Mr. WOODSWORTH: I presume preachers would be in the same class, and as far as I know school teachers are also. Theoretically, undoubtedly in the long run, innate intelligence—shall I say?—and the general intel-

lectual level of the country will tell. But I think we are all agreed that a certain measure of protection might possibly be necessary to meet special conditions. I should like to say to my hon. friend from Brome, who has put forward this question, that we have passed—absolutely passed—the stage when free trade can be offered as a solution, because the conditions which lay behind the doctrine of free trade have long since been passed by in the development of industry.

Mr. COOTE: Can the hon. member suggest any way by which we can protect the wheat producers of this country against the cheap labour of India, one of the competing countries against us in the export markets of the world?

Mr. WOODSWORTH: This is the very problem I have in view when I urge that we must face the fact of world competition. In my judgment we must advocate, as the only ultimate solution, the raising of the standards even of the so-called backward races. It will take some time. For a while we may retain our lead because of superior advantages in the country itself, superior educational facilities, and so on, but sooner or later we shall have to face the fact that the world is a unit and that no part can retain a low standard without its adversely affecting the other parts.

With regard to the motion now before the House, Mr. Speaker, we shall be inclined to support the amendment, because we believe that in one respect at least this very carefully drawn amendment, which does not go very far—

Mr. McMASTER: And is quite self-contradictory.

Mr. WOODSWORTH: It may be in some respects, but at least it does call attention to one of the evils, the sales tax, and in a general way it advocates economy, which is a good thing, only as I have said we ought to go much further than these petty economies to which reference is often made. It may be difficult for us to decide how to vote on the amendment but we shall vote without any hesitation against the budget, because it does not offer any solution whatever to problems which face us to-day. Now I should like to pass to another topic altogether, that is—

Mr. BIRD: Before the hon. gentleman leaves his theory of protection, he will understand that any policy which could be adopted by this House would have to be a general policy, it would have to cover the wheat producer as well as the working man. Could he define just a little more clearly how his theory would apply to the wheat producer, as the hon. member for Macleod (Mr. Coote) tried to elicit, because it is important?

Mr. WOODSWORTH: I do not think I have anything further to add to what I have already said. I was simply suggesting this as a principle that we might attempt to work out. If there are countries producing wheat where the standards are very low, we might refuse to trade with those countries.

Mr. McMASTER: They would not be shipping wheat in here.

Mr. WOODSWORTH: But we are shipping things to them, and we could use a certain amount of pressure, because if we want to ship wheat out we must get something else back in return. We must constantly remember that every export must be balanced by an import, and I take it that even the threat to boycott any country because of its low standards will have a very material effect in enabling that country to raise its standards. I am just giving the general principle. I know it opens a large field, and I have no idea of being dogmatic; I am merely suggesting a possible line of advance.

Mr. HUGHES: Will the hon. gentleman permit me a question? He says that we ship large quantities of things to these low priced, sweated labour countries that are producing goods under conditions adverse to labour. How can we ship goods to those countries under such conditions when we have much higher priced labour here, higher standards of living, and all the things that go with that? I am asking for information.

Mr. WOODSWORTH: I think the hon. gentleman will recognize that very frequently the goods we ship to those countries are of a different character from those produced there, and the fact that we can send in such goods is owing to our efficiency in production.

Mr. HUGHES: Exactly; then what have we to fear?

Mr. WOODSWORTH: I simply repeat what I have said before, that temporarily we may have to fear them because of their great mass of human labour and their low standards under which labour can be simply poured into their productive machine without any thought as to the effect on the labour itself. We had that exemplified in the old days in the Panama canal zone, where they simply poured labour in without any sanitary conditions whatever, and men died by the thousands and tens of thousands. I might point out however that

it was not until the sanitary conditions of the zone were improved that they were able to put the canal through.

Mr. HUGHES: That was a different thing entirely.

Mr. CANNON: Can you export sanitary conditions?

Mr. WOODSWORTH: No, but I think we might insist on sanitary conditions. I am sure the hon. gentleman will remember that such provisions are already included as part of the Peace treaty itself.

Mr. CAMPBELL: Might I point out that the raising of the standard of living of the farmers of India, for instance, and the raising of their general standard of intelligence as well, would mean that they would be producing with more efficient machinery than they are using to-day. They are threshing their grain by driving their oxen over it; we thresh it by very efficient machinery. Consequently we are able to produce wheat cheaper and compete with them on the export markets of the world.

Mr. McMASTER: And they probably garner their wheat with a sickle.

Mr. WOODSWORTH: A large question is raised there, Mr. Speaker, which I think it would not be wise to enter upon at present. I am one of those who believes that the present system of production cannot be indefinitely prolonged, and that the only solution is to alter the motive that lies behind—the motive of profit—and to substitute the method of co-operation for that of competition. But I am sure hon. gentlemen do not want me to go into that question to-night.

Now I propose to pass to the discussion of the coal situation, but I see it is already very late, nearly half past eleven, and I should like very much, if the House would permit me, Mr. Speaker, to adjourn the debate.

Mr. LAPOINTE: I am afraid that if we adjourn at such an early hour we shall not be able to close the debate for another two months. I believe the understanding was to sit a little later to-night.

Mr. WOODSWORTH: I shall take nearly an hour yet in discussing the Nova Scotia situation. I should therefore like to move the adjournment of the debate if there is no objection.

Mr. DEPUTY SPEAKER: It has been moved by Mr. Woodsworth seconded by Mr. Shaw that the debate be now adjourned. Is it the pleasure of the House to adopt the motion?

Motion negatived.

[Mr. Woodsworth.]

Mr. WOODSWORTH: The budget proposes to increase the duty on slack coal. I feel that I cannot allow this opportunity to pass without referring to a matter which is in the minds of a great many of us at the present time, the situation in Cape Breton. May I again call the attention of the House to the history of this company which is again asking for special favours. According to Poor and Moody's Manual Consolidated 1922, at the merger of the British Empire Steel Corporation the total issues of component companies were:

Common..	$ 63,000,000
Preferred..	19,000,000
	$ 82,000,000

At the merger the old issues were increased and transmuted thus

Common..	$ 24,000,000	
Preferred..	77,000,000	$ 101,000,000
		$ 19,000,000

There was thus an actual stock watering by the merger of $19,000,000. Also note that $63,000,000 common was reduced to $24,000,000 and $19,000,000 preferred was increased to $77,000,000. Thus water is turned into wine. A fact finding commission would disclose whether the preferred or common stock represents any equity behind the funded debt or whether all such issues went to promoters, exploiters, legislators, and bondholders as bonus.

Mr. McMASTER: Have you got the funded debt?

Mr. WOODSWORTH: Let me call attention to this: the Annual Financial Review —Canadian—of June, 1923, has evidence that the Nova Scotia legislature authorized Besco to issue $500,000,000 in capital stock. I find on page 181 of this Review with regard to the reduction of capital:

> That the president moved as a special resolution of the shareholders of the corporation:
> "That the capital of the company be reduced from $500,000,000 to $250,000,000,"

In this connection I might read the following quotation from an editorial in the Ottawa Citizen of July 29, 1924:

> There has been issued in addition to the foregoing $101,750,000 and so far as evidence appears in this regard, this amount appears to have been entirely in the nature of a bonus distribution to the bondholders and the parties promoting the merger.

Now, the miners themselves have been trying to express their view with regard to this proposed bonus, and in view of the history of the corporation I should like to present the miners' own view in this connec-

tion. I find in the Labour Herald of March 7, this statement:

McLurg was asked: "If the miners accept a reduction in their wages, will the company reduce the selling price of coal to the consumer?" His reply was "No, we require the money for our bondholders and shareholders."

According to that statement even although the miners were forced ultimately to accept a reduction in wages it will not mean one cent of benefit to the consumers but simply an added profit to the company on distribution to the bondholders. The article continues:

Their annual statement shows that they paid out in dividends for the five year periods ending 1921 on preferred shares $5,350,000, and on common shares $7,786,376.12. They also laid away in reserve funds $9,500,000. Since then they got from the Dominion government $4,500,000 for a plate mill they erected. They own both the mill and the money now.

In the last issue of the Canadian Railway Employees' Monthly is an article by Mr. J. B. McLachlan, the editor of the Glace Bay Herald from which I take the following statement:

Besco was organized in the year 1920, for the primary purpose of eliminating all duplication of production costs then existing because of independent coal companies operating in the same areas. Besco has either cut down that cost, or it has not. The miners claim it has. It is a matter of record that the separate companies that existed before the merger did compete successfully in the Montreal market for two generations—and if the old companies with their greater overhead costs could do that, then Besco can do better under the more favourable conditions of the combine. Here is what Col. Thomas Cantley said on this point the other day when speaking of the ability of the old Nova Scotia Steel and Coal Company to compete in the open markets previous to the Besco merger:

"From 1884 until December 31st, 1920, a period of 36 years, the Scotia Company earnings were $33,307,-329.96 and as stated above, in only one year, 1897, was there any loss in operation and in that year the amount was trifling, being less than $5,000. The total dividends paid during the company's operations were $7,452,758.32—the balance of earnings being put back into the property."

Besco did cut out all duplication of production costs, and to-day is in a far better position than the old Nova Scotia companies to market coal in Montreal against all comers.

Then what is behind all this idleness and hunger? Are these just the results of a common industrial depression felt more or less everywhere? The game that Besco is playing is to secure a cut wage rate so that Besco can get cheaper coal for its steel works, its steamers, its ore mines, its lumber mills and for its boilers at its coal mines. The second phase of the game is to secure a higher tariff so that every other user of coal on the Atlantic sea-board from Sydney to Montreal shall pay more for their coal, and the idleness and hunger are the weapons being used to hold up the government and the country and the miners.

Mr. McMASTER: Who writes this?

Mr. WOODSWORTH: Mr. J. B. McLachlan in the last number of the Canadian Railroad Employees' Monthly. In substantiation of this statement that the present merger ought to be able to enter the Montreal market, Mr. McLachlan quotes from another statement, found on pages seven and eight of the annual statement of the Dominion Steel Corporation and constituent companies for the year ending March 31, 1921, as follows:

"In this connection," said Mr. Wolvin "I wish to call the attention of the holders of preferred shares to the fact that the statement for the fiscal year shows that dividends on your shares for the three companies named were earned five times over. I need not, of course, emphasize the fact that business is most unsatisfactory at present, and in view of this it is all the more gratifying to be able to say that for the first quarter of the current fiscal year ending June 30, the Dominion Steel Corporation after providing for depreciation, sinking fund, and bond interest, has earned at the rate of over three times the amount required for payment of the combined dividends on its preference shares, and on the preferred shares of its constituent companies."

The miners charge that Besco has deliberately refused to sell coal in the Montreal market during the past year, and has, and is, using the idleness and hunger of the miners as a means to cut the wages of producers and increase prices to consumers of coal. The miners in their misery are nothing more than pawns being used by Besco to force the hands of the government and the country. A ten per cent cut in the miners wages would net Besco annually an additional one and a half million dollars, an increased tariff will result in millions more for Besco out of the buyers of coal. By cheaper coal for its own concerns Besco would net at least another half million.

Nor do Besco's tariff delegations to Ottawa end with a mere tariff revision upwards. Here are some of the things that Besco also wants, before it can give the country and the miners any assurance that idleness and starvation shall end in Cape Breton: that the government subsidize coal converted into coke to take the place of anthracite; that the government increase the subvention on coal hauled on the railway, the subvention to apply to sea-borne coal also; and that greater protection be given Canadian steel and steel products. In a word, Besco is holding up the country and trying to put across the biggest blackmailing scheme that this country has ever seen.

It is not merely the miners and the east who are protesting against the situation and asking that this government should do something. I should like to read a few paragraphs from an editorial in the Winnipeg Evening Tribune of March 28, which discusses the proposed duty under the caption, "An incomplete solution." The editorial reads:

It is stated that the proposed increase in duty on American slack coal from 14 cents to 50 cents a ton offers a solution to the troubles of the Nova Scotia mining industry.

The article goes on:

Even if the proposed wage cut is not enforced and the present wage scale is continued, it will not compensate the miners for irregularities of employment, and even with more regular employment their condition would be none too good. Wages of coal miners in Nova Scotia are substantially lower than in

Alberta, for instance, as the following figures of daily wages published recently by the Department of Labour clearly show:

	Alberta	Nova Scotia
Contract miners (average).. ..	$8 33	$7 25
Hand miners..	7 02	4 60
Labourers underground..	6 03	3 65

No reasonably permanent solution of the industrial unrest in Nova Scotia can be hoped for until the workers, the lower paid ones especially, receive both higher wage rates and more regular employment.

Canadian public opinion will not be satisfied to let the present situation be smoothed over by the mere granting of a higher duty on imported coal. The British Empire Steel Corporation can hardly be said to enjoy the respect of the people of Canada. Proof is needed that the duty is really necessary.

I would like to impress this on my hon. friends on the other side:

Proof is needed that the duty is really necessary. It has been charged by the miners that the wages have been kept down in order that dividends might be paid on watered stock. If the increased duty is really necessary to enable Canadian coal operators to compete in Canada with American producers, the country has the right to know who is to benefit by that increased duty. Such facts can only be satisfactorily ascertained by a factfinding commission.

If the Dominion government has the legal right to impose a duty in the interests of a Nova Scotia industry it has an equal moral right to first institute a complete investigation as to whether that duty is necessary.

Mr. MACDONALD (Pictou): What does my hon. friend say to the request made by Premier Greenfield of Alberta to this government that this duty shall be put upon slack coal? What has he to say also to Premier Greenfield's position when he protests against the duty on round coal being reduced

Mr. WOODSWORTH: I hope before the evening is over, or the morning rather, if we must go on, to come to the matter of the Alberta coal situation. In the meantime perhaps it is sufficient for me to state that I am not at all responsible for the statements of Premier Greenfield.

An hon. MEMBER: Doubtful if he himself is responsible.

Mr. WOODSWORTH: I could not say if he is or not, but the Alberta members can look after that matter. This editorial concludes:

If the federal government is weak enough to impose the duty without investigation on the mere say-so of the Nova Scotia steel and coal combine as a solution of the present industrial unrest, it is establishing a dangerous precedent for the solution of other industrial disputes by the same means.

I do not think we are taking an unreasonable attitude in asking that before any such concession as is proposed in the budget is granted the coal company, there should be, as this editorial points out, a fact-finding commission. I am quite aware that the government may say that it has no power, but I should like to read a paragraph here from a letter by the Minister of Labour sent recently to the International Association of Machinists, Montreal. The Minister of Labour states:

I assume that you would expect, as a prime consideration of dealing with the Nova Scotia dispute that an investigation would be held to fix responsibility, and you should know that the federal government has no authority to go into Nova Scotia and summons one single individual before it to give evidence and to produce books, so that any attempt made by the federal government to carry on an investigation would be a simple farce, as the president and others connected with the British Empire Steel Corporation could simply decline to co-operate and to appear when summonsed or to produce books and documents.

This is an extraordinary statement from a minister of the crown.

Mr. MURDOCK: Does my hon. friend say that it is not a correct statement.

Mr. WOODSWORTH: I presume that the minister stands by his statement.

Mr. MURDOCK: No, not necessarily. It does not matter whether—

Mr. WOODSWORTH: I presume he stands by his statement.

Mr. MURDOCK: Of course, but does the hon. gentleman suggest that that is not a correct statement, and that the federal government can go into Nova Scotia?

Mr. WOODSWORTH: Most decidedly I do, Mr. Speaker.

Mr. GARLAND (Bow River): Hear, hear.

Mr. MURDOCK: Could the hon. member get any legal gentleman of note in the country to sustain that view?

Mr. WOODSWORTH: This is a very novel doctrine. As a matter of fact throughout the history of Canada we have had commissions making investigations in every part of this country in connection with all sorts of questions. We have had royal commissions making investigations into the pulpwood question—a travelling commission investigating pulpwood.

Mr. MACDONALD (Pictou): But these investigations have been made in regard to subjects where this parliament could follow up the recommendations of the commission by legislation. Does the hon. gentleman not know that only two months ago the Privy Council held that this parliament had no power to provide for investigations in regard to labour disputes, and that they held that the Industrial Disputes Investigations Act was ultra vires.

Mr. WOODSWORTH: I am sure the Minister of National Defence will hardly press that point of view. Surely the decision of the Privy Council simply held ultra vires the Industrial Disputes Investigations Act. It did not touch other matters of this kind whatever.

Mr. MURDOCK: I do not believe my hon. friend would make that statement if he would read the decision of the Privy Council carefully. The Privy Council decided that this federal government had no right to send a board or to authorize a board to go into the domain of the provincial government, summon one individual before that board and compel him to give evidence.

Mr. WOODSWORTH: Under the Industrial Disputes Act with a view to settling certain disputes?

Mr. MURDOCK: Under any regulation.

Mr. GARLAND (Bow River): What about the Combines Act?

Mr. WOODSWORTH: Yes, what about the Combines Act? Have we any right to summon witnesses here under it?

Mr. MURDOCK: I am glad my hon. friend raises that question, because that is exactly what we are trying to find out now. With the decisions before us I fear that we have no authoritty.

Mr. McMASTER: Then we had better get the authority.

Mr. WOODSWORTH: I quite agree with the hon. member for Brome that we had better get it, or if we cannot, we had better go out of business as a federal government. It seems to me the height of absurdity for responsible ministers of the crown to assert in this House that we have no right to inquire into conditions pertaining to the welfare of citizens in any province of this country. Does the Minister of Labour mean to say that under present conditions we could not make an inquiry such as was made a few years ago into the cost of living? Is that an impossibility? Does he mean to say that we cannot make an inquiry into present conditions on the Great Lakes in the way of combines?

Mr. MURDOCK: The Privy Council decided in the Board of Commerce case that this federal government had no authority to make those inquiries into the cost of living. My hon. friend should read up the legal decisions in order to understand the position we are in. I wish his view was correct and that we could do some of the things he wants. But we are confronted with a reality, not a theory that the hon. member is talking about.

Mr. STEVENS: This parliament, by a committee, did conduct an inquiry into the cost of living.

Mr. MURDOCK: Exactly, but my hon. friend will recall that after that was inquired into, when a somewhat similar matter was taken to the Privy Council the Privy Council decided that this federal government had no right to invade the "property and civil rights" jurisdiction of the provinces.

Mr. STEVENS: The Privy Council never decided anything of the kind.

Mr. MURDOCK: The record speaks for itself.

Mr. STEVENS: Not so far as this parliamentary inquiry is concerned.

Mr. GRAHAM: Perhaps the hon member for Centre Winnipeg will proceed.

Mr. WOODSWORTH: There are just two observations which I should like to make at this point. If conditions are really as they have been stated by members of the government, that is an excellent reason why we should abolish any appeal to the Privy Council. Further than that, I do not know of any greater service that I could render to the people of Canada to-night than to place before the public at large the attitude of the government in a crisis of this kind. I am quite willing to let the strictly legal aspects take care of themselves. The other day I came across a clipping with regard to the situation in Europe. This is an article by Rothay Reynolds in the Montreal Standard quoting from the great industrialist Herr Arnold Rechberg, the oil magnate. He said of conditions over there:

> The captains of the coal and iron industries are more absolute masters of Germany than was William II.

I think we can almost say that of the captains of the coal and steel industry in Canada if the contentions of ministers of the crown are correct. I should like to ask: After all, who are these people that are holding up the country? We have talked about the responsibility of the government here and I think it has responsibility. We have talked about the responsibility of the government of Nova Scotia and I think it has responsibility. But I would say that the first responsibility lies immediately with the directors of this corporation. Who are they that thus defy the whole of the people of Canada? It is of interest that the people of

Canada should know this. Who are the directors of the British Empire Steel Corporation? They are:

R. M. Wolvin, President, Montreal, Que.; Major General Sir Newton J. Moore, K.C.M.G., Vice-President, London, Eng.; J. E. McLurg, Vice-President, Sydney, N.S.; Hon. C. P. Beaubien (Senator), Montreal, Que.; Sir Trevor Dawson, Bart., London, Eng.; Hector MacInnes, K.C., Halifax, N.S.; W. D. Ross, Toronto, Ont.; J. F. M. Stewart, Toronto, Ont.; Galen L. Stone, Boston, Mass.; J. P. Middlesboro, Glasgow, Scot.; Right Hon. Lord Invernairn, Glasgow, Scot.; F. W. Ross, Quebec, Que.; Geo. F. Downs, New York, N.Y.; Hon. J. P. B. Casgrain (Senator), Montreal, Que; R. F. Hoyt, New York, N.Y.; Lorne Webster (Senator), Montreal, Que.

I would note here that three of these directors are residents of Great Britain; three are residents of the United States; only two live in the province of Nova Scotia. One of these is the company's attorney and, according to the papers, one of the men implicated in the bribery of the ex-premier of Newfoundland. Three of these men are senators, distinctly responsible at this crisis. I would say that all except the vice-president, Mr. McLurg, are absentee landlords. What is the spirit of McLurg, the vice-president? We have read his words:

They cannot stand the gaff. We hold the cards. Let them stay out for six months. It matters not, eventually they will come to us.

Here we have capitalism stark-naked and unashamed! That statement of McLurg's in future years, I have no doubt, will be placed side by side with that other characteristic statement of Mr. Paton, who was more truthful than some of the other captains of industry when he declared that "These mills were not built for the glory of God, but for the profits of the shareholders." These men hold in their power the destinies of large numbers of our fellow Canadians. This morning the relief authorities in the city of Ottawa received a telegram which states that to-day there are in Nova Scotia 27,200 individuals absolutely dependent upon the public for relief.

Mr. MACDONALD (Pictou): Might I remind my hon. friend that Mr. Lewis, head of the United Mine Workers of America, has stated that that organization is financing the strikers?

Mr. WOODSWORTH: Whatever may be true of the future finances that may come from the United Mine Workers, I think we must accept the word of the relief agents who are absolutely disinterested and who only this morning sent this telegram to Ottawa:

Red Cross nurses report serious malnutrition. Local relief committee $11,000 in debt with the situation growing worse.

[Mr. Woodsworth.]

We cannot as a House pass by such a situation as that. Surely we have responsibility. The responsibility may rest primarily upon this board of directors whom I have named. There may be responsibility upon the labour organization over in the United States to come to the help of their comrades in Canada. But this federal government cannot escape the responsibility of taking action at this time. We have in our hands certain powers that, I think, will be admitted even by members of the government. We are proposing to grant still further concessions to this company at the very time that this outrage is being perpetrated. The least this government can do is absolutely to refuse further concessions until we have some settlement of this dispute along right lines.

Mr. PUTNAM: Does the hon. member suppose that the change in the coal duties is responsible for the present strike?

Mr. WOODSWORTH: I do not suggest that but I do suggest that we have no right to make any change in the duty favourable to the corporation until the corporation safeguards the interests of its employees.

Mr. MACDONALD (Pictou): Is the hon. member not aware that there are a large number of independent coal companies in Nova Scotia outside the British Empire Steel Corporation? In my county there are three other companies operating.

Mr. WOODSWORTH: I am quite aware that there are some other companies, mostly very small concerns, as the minister knows very well.

Mr. MACDONALD (Pictou): In the county of Cumberland there is the Maritime Coal Company, a very large concern, which has its own independent line of railway; and along the line of that railway there are at least four or five other companies operating successfully.

Mr. WOODSWORTH: I wish to pass now for a short time to another field. Sometimes Nova Scotia members ask us why we confine our investigations to the eastern coal fields and have little to say with regard to the west. I have tried on several occasions to call the attention of the House to the situation prevailing in Nova Scotia because it is more acute than the conditions obtaining elsewhere. But the situation in Alberta has recently been developing at so alarming a rate that I feel, even although the hour is late, since apparently it is not the wish that the matter should be carried over till to-morrow, that I should deal as briefly as I may with the larger aspect of the

situation as it affects the province of Alberta. First of all may I say to my farmer friends that perhaps they have not quite realized the importance of the coal industry in Canada; they have hardly realized how essential it is that this whole question of the development of our coal measures should be settled on some permanent basis. May I then quote a few statistics with regard to the general importance of the coal industry. In the first place, I should like to give the words of Mr. C. V. Corless with regard to agricultural areas. He says:

> Adding together all these areas, suitable in surface, soil, and climate for profitable cultivation, including the cultivable valleys in the highlands, we find a total of rather less than 15 per cent of the area of Canada suitable for profitable agriculture. This leaves 85 per cent, of which the principal or only permanent basic industry is or will be mining. But fully one-third of even this agricultural part of Canada is known to be enormously rich in minerals.

Here now is a statement of the figures given by Dr. Dowling in the report of the Twelfth International Geological Congress. Referring to this, Mr. Corless says:

> From the latter striking report, which is the best estimate yet made, I cull these startling figures for Canada's estimated total coal reserves.

Unit, one billion tons.	
Maritime provinces (chiefly Nova Scotia).. ..	10
Prairie provinces (chiefly Alberta)..	1,132
British Columbia..	76
Yukon Territory..	5
North West Territory (Mackenzie river basin, north of Alberta)..	5
Arctic islands..	6
Total..	1,234

> This inconceivably large figure, 1,234 billions of tons roughly 35,000 times Canada's present total annual consumption, baffles the imagination. It is nearly sixty per cent greater than the total estimated reserves of the whole of Europe; nearly equal to those estimated for the whole of Asia; and one-sixth of those of the entire world.

I would urge that we should not continue to allow this vast natural inheritance of ours to be developed in any haphazard, wasteful, uneconomic way as we have done up to the present time, and that altogether aside from the unsatisfactory relations that have so far existed between operators and employees. Many of you will recall the fact that a few years ago Great Britain made a serious investigation into the production of coal in that country, and we have the report of Mr. Justice Sankey which declared that—

> Even upon the evidence already given the present system of ownership and working stands condemned and some other system must be substituted for it, either nationalization or a method of unification by national purchase or by joint control.

When we hear so much about private ownership and vested interests it is well for us to read some of the evidence submitted before that very important commission. The replies given to the labour men, Mr. Smillie, Mr. Hodges and Sir Leo Money, are worth being pondered by the people in this country, where we have thought that vested interests have not secured so strong a foothold.

Now with regard to the Canadian situation, some of our mines are privately owned while others are under the control of various provinces, and others again are in the control of the Dominion. Among these the chief field is in Alberta, and so I have a perfect right, I should take it, to bring this question before the federal House, inasmuch as the House has jurisdiction in the province of Alberta, at the present time, seeing that it controls the natural resources of that province. Now let me sketch very briefly the condition that prevails out there in the industry itself. I hold in my hand a list of the names of individuals and corporations who are recorded as the owners of coal mining rights acquired from the crown under the provisions of the coal mining regulations in the province of Alberta, and these individuals and corporations number 802. I have here also a list containing the names and addresses of individuals and corporations operating coal mining areas in the province of Alberta, numbering in the year 1923—the last figures available—353. We in the west hear a good deal of over-development, but I do not know of any figures that could be more eloquent than this 353 as to coal development in Alberta.

12 m.

Regarding the general position of the industry I quote from a memorandum prepared by the Coal Mining Lands branch of the Department of the Interior:

> Coal mining rights were disposed of by sale up to the year 1907, and after that year by lease only. By an order in council dated the 9th May, 1907, the form of final title was changed from patent to lease Royalty at the prescribed rate is collected on all coal mined from lands acquired from the crown under the regulations since the 6th April, 1901, but no royalty is collected on the output of mines acquired prior to that date, and no returns of the operations of such mines are furnished the department, so that no information respecting the output of mines which were not acquired subject to the payment of royalty is obtained.
>
> The output of coal mined from lands in the province of Alberta, acquired under lease from the crown during the calendar year 1924, was 1,694,172 tons, and the total output of coal during the same period from lands acquired by purchase under the regulations was 710,899 tons, making a total output of coal subject to the payment of royalty during the year 1924 of 2,405,071 These figures, however, do not include the quantity of coal mined from the 28,000 acres of coal mining lands

sold by the department prior to the 6th April, 1901, the date upon which the royalty provision of the regulations came into force, nor do they include the output of coal from school lands. As the operators of the above area of about 28,000 acres are not required to furnish returns or pay royalty the quantity mined from such lands is included only in the total output of coal from the province.

The total output of coal mined in the province of Alberta, as supplied by the Dominion Bureau of Statistics, is:—

Year	Tons
1920 the quantity mined was	6,907,765
1921 " " " "	5,909,217
1922 " " " "	5,990,911
1923 " " " "	6,848,538
1924 " " " "	5,175,226

The total quantity of coal mined in the province of Alberta during the calendar year 1924, according to the figures which have been furnished this department, was 5,175,226 tons, and the quantity of coal mined in the said province during the year, subject to the payment of royalty, was 2,405,071 tons. Therefore, the quantity of coal mined during that period from privately-owned lands was 2,770,155 tons, which latter quantity also includes coal mined from lands acquired by purchase from the crown under the regulations, prior to the 6th April, 1901, as well as coal mined from school lands.

According to the coal mining regulations, the payment of royalty at the rate of five cents per ton is required, as well as an annual rental at the rate of one dollar an acre. Coal mining lands were disposed of under sale up to the year 1907, at the rate of ten dollars an acre for the surface and mining rights, and seven dollars an acre for the mining rights only, subject to the payment of royalty at the rate of seven cents a ton.

Let me read further a few salient facts taken from a pamphlet called "Coal Statistics for Canada," the data given in which have been collected by the Dominion Bureau of Statistics. The capital value employed in coal mines in 1923 was made up as follows:

Buildings	$44,408,155
Supplies	1,214,629
Cash and bills receivable	6,020,628
	$51,643,412

Mr. McMASTER: That is in Alberta?

Mr. WOODSWORTH: Alberta, yes. I quote:

Value of output, 1923	$28,018,303
Wages, 1923	16,749,909
Number of wage earners, 1923	9,917

Here, may I call the attention of hon. members to this statement: the wage earners' average per 227 day year, 1923, was $741. A great many wild statements are being made as to the enormous wages which are being earned by coal miners. We have here official statistics to show that in 1923 the miners worked only 227 days and that the average wage was $741. According to information furnished me by the chief inspector of mines for the province of Alberta on March 16, 1925, in 1923 the miners worked only 209.95 days and in 1924 only 190.21 days, which, would seem to show that the figures submitted by the Bureau of Statistics are high on this point, and that would correspondingly reduce the average wage paid annually to the workers. Salaries in 1923 amounted to $1,618,042. The number of salaried employees was only 675. Again may I pause for a moment to note the very large number of highly paid officials in these mines, as you will see by working out their average salaries as compared with the average salaries of the employees.

Mr. SHAW: What does it amount to?

Mr. WOODSWORTH: I have not worked out the average, but I would note this: that during 1923 there were 140 fewer salaried employees but there was an increase of pay of $132,519. Now, let me finish this statement:

Miscellaneous operating expenses	$6,692,295
Total output of bituminous and lignite short tons, 1923	6,854,397

I would also like to call attention to the fact that of the quantity of coal produced 73 per cent was consumed and 27 per cent was lost. The detail of the 27 per cent lost is as follows:

	Per cent
(a) Through absenteeism	1.2
(b) Lack of orders	18.4
(c) Car shortage	3.2
(d) Mine disabilities	0.7
(e) Other causes	3.5
	27.0

Just in passing may I also note—the term "short tons" calls it to my mind—that there is a common practice for the operators to pay the men on the basis of what is known as the long ton or English ton and to sell the goods on the basis of the short ton or American ton—again a very unfair thing Surely if we have standards of any kind in this country which must be adhered to, we ought to have a standard of measurement in regard to coal.

We have at the present time in the province of Alberta a commission sitting on this whole question of the operation of the coal mines in that province. Their findings, of course, are not yet available, and failing these I would like to quote a few sentences from a report with regard to the coal mining industry of the province of Alberta made as early as 1919, which indicates pretty much the difficulties that confront the miners in that area. It says:

Many mines only operate one-half of the year or less. If more continuous operation is obtained, the result will be a reduction in the price of coal to the consumer and steadier employment to the workman.

Again:

Provisions for making working agreements, the settling of disputes and such matters that employer and employee deal with, are not satisfactory.

Again:

At many mines the living and housing conditions, and matters pertaining to health and sanitation, are not in a satisfactory condition.

Again:

In some camps the educational facilities are inadequate.

Again:

Much capital expenditure has been lost on account of failure to obtain reliable information about properties and marketing conditions before operations are commenced; and also owing to lack of sufficient capital being provided to carry on operations to a successful issue.

Again:

A considerable loss of market has been sustained owing to: cessations of work; shortage of railway cars; misrepresentation as to size and quality of coal.

Still again:

Your commissioners are of the opinion that considerable saving would be attained if owners would establish some central purchasing agency, thereby standardizing equipment; also that a considerable saving would be attained if the power used were obtained from central power plants located in the various fields. The carrying out of these suggestions, in the opinion of your commissioners, would decrease the cost price of coal, and would not only be a saving to the consumer, but, in addition, would tend to increase the market. As this province has within its borders the largest known coal resources in the world, the conservation of this heritage should be zealously guarded. Your commissioners therefore recommend that you obtain authority from the federal government for the same commission to be given full powers for the safeguarding of this national asset.

So much for the industry. Now let me turn for a few moments to what the miners think about their present situation. I should gladly have brought this matter to the attention of the House at an earlier date, but owing to our rules of order it has been impossible to do so, and I have felt that I could not pass the first opportunity of giving to the House and to the country some little idea of the almost desperate situation that prevails among the miners in Alberta. As early as March 2 of this year I received the following telegram:

Members and families destitue—credit cut off—many not worked since March 19, 1924—remainder only a few days during eleven months. The agreement consummated October 18, yet operators attempting further reductions and open shop conditions. Want to know if federal government will make some effort to solve this problem.

I have been sent a large number of the actual pay sheets of the company. A study of these sheets—which I shall not take the trouble to read to the House—clearly shows that the stories which have been told about exorbitant wages being paid are absolutely fairy tales. It may be true that in a few instances contract miners under very favourable conditions earned large wages, but they are unemployed for a very considerable portion of the year. Then my correspondent said on March 12:

This company—the Hillcrest Collieries Limited—in ordinary times employ about four hundred men, with an abundance of petty bosses, including three general managers, also a managing director. Its financial yearly report showed enormous profits in 1924.

Again let me read a communication which I received from Nordegg on February 23:

The unemployed situation in District 18 is very bad. In Nordegg alone 150 men are unemployed and 400 men on two days a week. Poverty and suffering through lack of clothes and food in this cold region is much in evidence.

A few days ago I had this further communication from the same district and from the same writer, and I would ask the House to pay careful consideration to it:

There are within this province ten thousand unemployed, and the miners of Alberta who are working are not earning enough to keep themselves owing to the company keeping the pay for strike rent; there is much poverty and destitution, and no help from anywhere; women and children starving; and the coal operators taking advantage of the situation and violating the agreement arrived at between District 18 and the Western Canada Coal Operators Association.

Listen to this:

We have exhausted all methods within the law of the country. We have adopted Murdock's method of going "to the foot of the throne." Nothing has been overlooked to try and get some food and clothes in full accord with the law, but every time we have been met with the same answer of No. Now for the last time we are asking the government, through you, to bring in some measures whereby the people of this country can eat. We do not want to take the law into our own hands, but the women and children have to be fed. Therefore on behalf of the five hundred organized workers of Nordegg, and in the interests of the starving people of Alberta, I ask you to try and get something for our fellow beings. The whole situation is more serious than is realized by the King government and the opposition in the House.

We have been told, Mr. Speaker, by the Minister of Labour and by the government that Nova Scotia owns the coal mines of the province; we have been told that Nova Scotia receives royalties on every ton of coal taken from those mines; we have been told that Nova Scotia leases the coal mines to the British Empire Steel Corporation. I want to point out that in Alberta it is the Dominion government that leases the coal mines, it is the Dominion government that receives the royalties, and I should like to ask the Minister of Labour—I am sorry he is not in his seat—what excuse he is going to find now for inaction?

Mr. IRVINE: The British North America Act.

Mr. WOODSWORTH: I do not think the British North America Act applies in this case. Surely, since the natural resources of the province of Alberta are still retained by the Dominion government, and the Dominion government is receiving the royalties, the Dominion government has the right to act in this regard.

One or two quotations only from the miners' standpoint, and I am done. I want to emphasize that to-night I am trying to place before this House what has not frequently been placed before it, that is, the position of the actual working miners in Canada. The secretary of the United Mine Workers of America makes this statement on March 30:

You will find enclosed herewith miner's family budget of prices compiled from information received from various mining camps in District No. 18, which you will readily see is far in excess of the earnings of the miners in this district. The average number of days worked in District No. 18 for the past three years have been 125. Contract miner's average rate, according to the Labour Gazette from the Department of Labour, Ottawa, was $9.08 per shift, making a total for 125 days of $1,135. All day wage labour average earnings, inside and outside the mine, are $6.89, making a total for 125 days of $1,040. On October 10, 1924, the miners suffered a reduction of 12½ per cent, which by combining the average earnings of contract miners and day wage rates together, would show the average earnings of the miners throughout District No. 18 at $958.

The family budget issued by the Department of Labour is taken from five cities in the province of Alberta, namely, Calgary, Edmonton, Lethbridge, Medicine Hat and Drumheller. The average is $21.09 per week for a family of five, making a total for 52 weeks of $1,082.12. This budget does not include clothing and sundries, so it is evident that the budget issued by the Department of Labour is far below the one I am enclosing, which was taken from the cost of these items in the camps in District No. 18, and according to that budget we have a total, including clothing and other items, of $1,865.51.

Now with regard to the proposed alterations in the duties I think it is only fair to read the statement of the United Mine Workers of Alberta. The Minister of National Defence asked me a question a little while ago and I should like in reply to him to give the statement of the miners in Alberta:

You will also find enclosed statement of cost of coal transportation from the mines at Pocahontas, West Virginia to Winnipeg and also from Youghiegheny, Pennsylvania, to Winnipeg which averages at $7 per ton, and we are informed by the Secretary of the Western Canada Coal Operators' Association that this coal is being sold at less than the cost of transportation to the consumers at Winnipeg. It is evident to me that this coal is being placed on the market at Winnipeg at this price for the purpose of keeping coal mined in Canada from getting the market in Winnipeg and east of that city. The freight rates from Crowsnest pass to Winnipeg are $5.20 and the price of coal f.o.b. at the mine is $4.50 making a total of $9.70 per ton sold in Winnipeg, so you will readily see that it is impossible for the Operators of District No. 18 to compete against the American coal now being shipped into Winnipeg.

I have one other communication from the miners with regard to this same matter of duty:

The officers and members of District 18 United Mine Workers of America strongly protest against the action of the federal government in revising the duty on bituminous lump coal from the United States to Canada due to the fact that this will cause a further increase in unemployment throughout the mines of District 18.

Now, Mr. Speaker, one more quotation this time from the president of the United Mine Workers of Alberta. It says:

The Miners' Executive of District No. 18 recognize that the coal industry in the west is in a serious state of over-development. This situation has been admitted by the Minister of Labour and also conceded by all those familiar with the affairs of the coal mining industry but in spite of this deplorable condition new corporations are continually developing and opening up coal mines in western Canada. In spite of our appeals to the authorities to take action in the matter this wildcat development still continues with the final and inevitable result of more slack time and unemployment for the miners already settled around the industry. Government action to prevent the further exploiting of the natural resources of the west should be taken without delay if serious developments in the future are to be avoided. The miners are of the opinion that some tribunal should be appointed by the Dominion government and that said tribunal should have the authority to investigate the records and the books with a view of ascertaining the profits of all coal companies in this district. We believe said tribunal should have power to look into every phase of the industry with a view of preventing the further exploitation of the coal fields by various coal operating firms. In fact it appears to the miners that the only complete solution to the difficulty would be a practicable plan of nationalization of the coal mines, said mines to be operated under the direction of practical mining men.

I have pointed out, Mr. Speaker, some of the evils of the existing system of production. We have very heavy overhead expenses; we have numerous officials; we have watered stock; and side by side we have inefficiency. There must of necessity be inefficiency in small scale mining. Anyone who has visited the mines of the west will know that when you have a very small area with a dozen or twenty mines trying to carry on operations you must have inefficiency; in some way they should be organized. We have over-development and let me remind you that it is the Dominion government that is responsible for the granting of these leases to these various companies; and above all we have what is of importance to the workers, and of great importance I should think to the country at large, unemployment. At this late hour, I do not propose to attempt to point out the solu-

tion. I had hoped that if I could have reached this subject earlier in the session I would have been able to discuss at some length a resolution which I had on the order paper to the following effect:

That, in the opinion of this House, measures should be taken to regain for the use of the people the coal mines which are now being exploited in the interests of private corporations rather than for the needs of the public.

I would simply leave that resolution with the House, suggesting that it is along those lines and along those lines only that we can hope for the solution of these urgent problems which are pressing upon us at the present time.

On motion of Mr. Marler the debate was adjourned.

PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 30, to correct a clerical error in chapter 166 of the statutes of 1924, intituled: "An Act for the relief of James Henry Kirkwood."—Mr. Anderson.

Bill No. 33, respecting "The Restigouche Log Driving and Boom Company."—Mr. Michaud.

On motion of Mr. Lapointe the House adjourned at 12.35 a.m. (Wednesday).

Wednesday, April 22, 1925

The House met at three o'clock.

REPORTS OF COMMITTEES

RAILWAYS AND SHIPPING

Mr. W. D. EULER (North Waterloo) presented the first report of the select standing committee on Railways and Shipping owned, operated and controlled by the government, as follows:

Your committee recommend that their minutes of proceedings and evidence be printed from day to day for the use of the members of the committee, and that rule 74 be suspended in relation thereto.

He said: I move that the report be concurred in.

Mr. MEIGHEN: The motion is only to print the proceedings?

Mr. EULER: That is all.

Mr. MEIGHEN: It is not a request of the committee for permission to sit while the House is in session?

Mr. EULER: No.

Motion agreed to.

RAILWAYS, CANALS AND TELEGRAPH LINES

Third report of the select standing committee on Railways, Canals and Telegraph Lines.—Mr. Cahill.

BANKING AND COMMERCE COMMITTEE

Mr. VIEN presented the second report of the select standing committee on Banking and Commerce, as follows:

Votre comité a étudié le bill n° 35, loi concernant la Compagnie d'Assurance Mutuelle du Canada sur la Vie, et il a été convenu d'en faire rapport sans modification.

Mr. HOCKEN: Mr. Speaker, I did not understand the report. Will the clerk translate it?

The report was read in English, as follows:

Your committee have considered Bill No. 35, respecting the Mutual Life Insurance Company of Canada, and have agreed to report the same without amendment.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

TAX REMISSIONS

Sir HENRY DRAYTON:

What, if any, remissions or reductions of income taxes or excess business profits taxes have been made by order in council during the fiscal year last past?

Hon. Mr. CARDIN (for the Minister of Customs):

Name	Amount
Wellesley Hospital Limited..	$ 2,482.10
William Davies Company, Limited..	£36,312
Edward Gurney Estate..	$ 3,397.27
Edward H. Gurney..	777.33
Frank Stafford..	1,867.15

The remission to William Davies Company, Limited was paid to the government of the United Kingdom—vide paragraph (c) of section 3 of chapter 11 of the acts of 1916.

HARRIS WHARF, VICTORIA COUNTY, N.S.

Mr. DOUCET:

1. What work was done on new Harris wharf, Victoria County, Nova Scotia, during the calendar year 1923-24?
2. Was the work done by contract or day labour?
3. If by contract, who was the contractor, what was the contract price and were tenders called for?
4. What were the names of each tenderer and the amount of each tender?
5. If the work was done by day labour, how many persons were employed, what were their names, what was the rate of wages paid, the number of days each person worked and the number of horses employed?
6. What amount was paid for the different classes of material, to whom and at what price?

Hon. Mr. KING (Kootenay):

1. A crib work block and span wharf 136 feet in length with an approach 100 feet in length, and a warehouse 12 by 16 feet was

constructed at New Harris, Victoria County, N.S., during the years 1924-25.

2. Done by contract.

3. (a) D. A. Cameron.

(b) Contract price based on unit price at approximately $6,820.03. Amount of final estimate $5,834.11.

(c) Yes.

4. D. A. Cameron.. .. .. $6,820.03
Thomas D. Morrison.. .. .. 7,259.51
Kenneth D. McKay.. .. .. 7,547.32
Musgrave & Sons Limited.. 8,350.00

5. Answered by No. 2.

6. (a) Material supplied by department and taken over by contractor at cost price:

D. G. Kirk & Son. Ltd.

1343 lin. ft. creosoted logs at 75c $1,007.25
850 " " " " at 85c 722.50
6,567 Ft. B.M. " timber at $95. M. 623.86

St. John Iron Works.

3,922 lbs. iron and wire spikes.. .. $196.10

(b) Material supplied by contractor,—no information.

CANADA-AUSTRALIA TRADE RELATIONS

Mr. MacLAREN:

During the present time, while negotiations with Australia for better trade arrangements are proceeding, why is the Canadian Trade Commissioner to that country being retained in Ottawa?

Hon. Mr. LOW: As Mr. D. H. Ross, the Australian Trade Commissioner was on leave in Canada, on the regular leave granted all Trade Commissioners, he was sent on the special trade inquiry to the West Indies. Not only was he the only trade commissioner available at that time for this special service, but he was particularly experienced and well qualified to handle negotiations of this kind. Mr. Ross is remaining in Ottawa at present completing arrangements for the conference which will be held here in June. The office in Australia in the meantime is being very efficiently handled by Mr. Ross's assistant, who has been in the employ of the department for several years, and whom Mr. Ross himself endorses as being competent to handle the Australian end of any questions which may arise during his absence. Mr. Ross will return to Australia as soon as the arrangements for the West Indian conference have been completed.

PELAGIC SEALING TREATY

Hon. Mr. TOLMIE:

1. How many years has the Pelagic Sealing Treaty, signed at Washington July 7, 1911, yet to run?

2. Under what conditions can it be terminated?

3. What territory does the treaty cover?

4. Has there been any marked increase in the seal herds since the treaty went into effect?

5. If so, what are the figures?

6. How much revenue has been derived from this source by the government of Canada since the treaty was signed?

7. For what purpose has this revenue been used?

8. Is it the intention of the government to ask for the termination of this treaty?

Hon. Mr. CARDIN:

1. Term is indefinite.

2. By twelve months' written notice given by one or more of the parties thereto to all of the others at any time after December 15, 1925.

3. The portion of the North Pacific Ocean north of the 30th parallel of north latitude, Behring sea, Kamchatka sea, Okhotsk sea and Japan sea.

4. Yes.

5. On the United States Seal islands—the Pribilof islands—the seal census of 1912 showed that there were 215,738 seals there. In 1924 the number was 697,158. Similar data is not available for the Russian and Japanese islands.

6. $694,548.16.

7. $60,663.75 thereof was used to pay amounts awarded to claimants found to be damnified by the treaty. The balance went into consolidated revenue.

8. The matter has for some time been engaging the attention of the Minister of Marine and Fisheries.

CUSTOMS REVENUE FOR 1925

Mr. McCREA:

1. What was the total revenue of Canada for the year ending March 31, 1925, from all sources under the control of the Customs department?

2. Does this include every source of cash contributions?

3. If not, what are the other sources of cash contributions?

4. How much of this revenue is contributed by each of the nine provinces, giving each source of revenue separately?

Hon. Mr. CARDIN (for the Minister of Customs):

1. $305,945,251.35.

2. Yes.

3. Answered by No. 2.

ASSINIBOIA—TELEGRAPH OFFICE

Mr. HOPKINS:

1. Does this government operate a telegraph office in the town of Assiniboia in the province of Saskatchewan?

2. If so, what is the yearly expenditure, and what are the yearly receipts?

Hon. Mr. KING (Kootenay):

1. Yes.

2. Fiscal year 1923-1924: (a) $1,644; (b) $41.58.

YUKON BUFFALO HERD

Mr. BLACK (Yukon):

1. Is it a fact that the government, on the request and recommendation of Mr. Robert Lowe of Yukon, is about to transport to Yukon and establish there a herd of buffalo or bison; and when will such action be taken?

2. If so, how many of such animals are to be sent to Yukon?

3. In what part of the territory will such herd be established?

4. Are they to be kept in corrals or allowed to roam at large?

5. Will keepers be employed to take care of them, if so, how many?

6. Has this undertaking the approval of the gentleman said by the government to be now engaged in framing policy for administration along lines that will protect natives and conserve wild life?

7. What is the object of such proposed undertaking?

8. What is the estimated approximate cost of such undertaking?

Hon. Mr. STEWART (Argenteuil):

1. No.

2 to 8. Answered by No. 1.

MR. L. M. FORTIER

Mr. BLACK (Halifax):

1. Was Mr. L. M. Fortier representing the government when taking over Fort Anne park as per terms of minutes?

2. Was he authorized by the government to close the road around the ramparts, built by the citizens for one-way vehicular traffic?

3. If so, on what date was this ruling made, and what is the ruling?

4. Was any investigation promised by Mr. Harkin?

5. If so, on what date was it held and who were present?

Hon. Mr. STEWART (Argenteuil):

1. Mr. Fortier was appointed Honorary Superintendent of the park in April, 1917. The park was established by order in council, dated the 24th January, 1917. Mr. Fortier was not acting as a representative of the Department of the Interior at the time of the establishment of the park.

2. The road around the ramparts has not been closed to one-way horse drawn vehicles. It has not been thrown open under the parks regulations for motor traffic. The parks regulations in regard to the use of motor vehicles provide as follows:

> A motor vehicle shall be permitted to enter any park only via such roads and to be driven on such roads and streets throughout a park as the minister shall have designated or shall from time to time designate.

Mr. Fortier, as departmental representative, is responsible for seeing that the parks regulations are enforced in the park. No specific instructions were issued in connection with prohibiting the use of this road by motor vehicles.

3. Answered by No. 2.

4. When a protest was received against not allowing this road to be used by motor vehicles, the informant was advised that the matter was being thoroughly looked into by the department.

5. The department has been gathering information and if it is considered necessary to have an official of head office investigate on

the ground, such investigation will be ordered.

QUESTIONS PASSED AS ORDERS FOR RETURNS

COST OF PUBLIC PRINTING

Mr. SUTHERLAND:

1. What is the total amount spent by the present government since coming into office for public printing, aside from that done by the Printing Bureau?
2. What are the names of the firms or individuals awarded this printing, what amount of work was done by each, and at what price each year since the coming into power of the present government?

GOVERNMENT WHARF AT LOCKEPORT

Mr. JONES:

1. Did the government acquire by purchase or otherwise since 1921, a wharf property at Lockeport, Nova Scotia?
2. When was it acquired and from whom?
3. What was the price of the property?
4. Have any repairs or additions been made to the property since it was acquired?
5. If so, when were the same made, and what was the cost thereof?

Hon. Mr. KING (Kootenay): I notice that under "Notices of Motion for Production of Papers" this same information is being asked for in the form of an order for return. I would ask that the question be dropped.

Mr. MEIGHEN: I do not think the hon. member (Mr. Jones) is here. Do I understand the minister to say that this information is being asked for in an order for return?

Mr. KING (Kootenay): Yes.

Mr. MEIGHEN: Why not make this an order for return and combine the two?

Mr. SPEAKER: Passed as an order for return?

Mr. KING (Kootenay): Yes.

Mr. JONES moved:

For a copy of all reports, estimates, statements, specifications, offers, accounts, vouchers, correspondence and other papers relating to the government wharf at Lockeport, Nova Scotia, and repairs and additions thereto since the year 1921.

Mr. MEIGHEN: This is the motion, I presume, to which the Minister of Public Works (Mr. King) referred. I can see no reason for not answering the question.

Mr. KING (Kootenay): I think all the information will be contained in the return.

Mr. MEIGHEN: Yes, but it should be on Hansard, as the hon. member (Mr. Jones) asks for it, unless it is too long.

Mr. KING (Kootenay): It is not too long, but why have two returns?

[Mr. C. A. Stewart.]

Mr. MEIGHEN: What I mean is this: Unless the answer is too long there is no reason why the question should not be answered. It does not appear that it would be too long. I presume the hon. member wants it on Hansard. He has never spoken to me about it.

Mr. KING (Kootenay): It is the same information that is being asked for in both cases. I do not see why there should be two requests for the same information. If the hon. member wants the information in an order for a return, that is all right, if he wishes an answer to the question, all right; but why bring down two answers covering the same thing?

Mr. MEIGHEN: The production of papers does not answer the question.

Mr. SPEAKER: Carried.

Motion agreed to.

LOANS TO ROUMANIA AND GREECE

Hon. Mr. MANION (for Hon. Mr. Stevens)

For a copy of all correspondence and documents passing between the governments of Roumania and Greece and the government of Canada, or the High Commissioner, or any other person representing Canada, regarding the adjustment of outstanding debts between said governments and the Dominion of Canada.

Hon. Mr. ROBB: My hon. friend who has moved this resolution is not in his seat. I would suggest that this might stand until his return. It seems to me that, as it is worded, it is not exactly what he intended. This government is not in a position to bring down correspondence between the governments of Roumania and Greece.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): That is not the intention.

Mr. ROBB: I think the motion might stand until my hon. friend returns.

Mr. MEIGHEN: I think I may take the responsibility of saying that is not the intention. It means between the governments of Roumania and Greece on the one hand, and the government of Canada and the High Commissioner on the other.

Mr. ROBB: Perhaps it might be allowed to stand.

Mr. MEIGHEN: The hon. member is up in one of the committees of the House. There is no reason why we should not pass the motion with that understanding.

Right Hon. W. L. MACKENZIE KING (Prime Minister): It will take a little time to get the return because the High Commissioner has to be communicated with. However, there is no reason why the motion should not pass as amended.

Motion as amended agreed to.

INSPECTOR OF PENITENTIARIES

Mr. DOUCET (for Mr. Black, Halifax):

For a copy of all correspondence, reports, documents, telegrams, or memoranda, passing between the Department of Justice and any other departments of the government, or ministers, or any other parties whatsoever, within the past six months, relating to the appointment of Inspector of Penitentiaries, and especially relating to the refusal to accept for such appointment Colonel Eric W. MacDonald of Halifax.

Motion agreed to.

CAMP BORDEN

On the Orders of the Day:

Mr. W. A. BOYS (South Simcoe): I should like to call the attention of the government and the Department of National Defence to despatches that appeared in the Toronto Telegram, one being dated Ottawa, April 20, and the other Kingston, April 20, as follows:

The question of removing the air force from Camp Borden to Mohawk Camps at Deseronto has been under consideration by the Defence department, but it was stated there to-day that the scheme is only tentative and in "embryo." The present quarters at Borden are considered to be too much off route, while the buildings, originally erected by the Royal Air Force, are out of repair.

The despatch from Kingston of the same date reads as follows:

Charles Hanna, M.P., Belleville, is planning so that Camp Borden will be removed to Mohawk Camp, said to be a much more desirable location. According to many interested in Camp Borden, there are drawbacks for aviation work contemplated by the government. Camp Mohawk is said to be ideal for the work. Camp Mohawk also provides for the development of hydroplanes, which is said to be one of the reasons for moving Camp Borden.

I should like to ask the government whether or not the matter has been under consideration, and if any decision has been reached in that regard what is the nature of that decision. I should like an answer to the question from the government or from the Minister of National Defence.

Hon. E. M. MACDONALD, Pictou (Minister of National Defence): In the Votes and Proceedings my hon. friend will find a question covering the matter of which he has spoken.

Mr. MEIGHEN: A question?

Mr. MACDONALD (Picton). This question will appear in the orders of the day tomorrow. The matter has been under the consideration of the department but no decision has been reached.

VALUE OF FARM PRODUCTS

On the Orders of the Day:

Hon. A. B. COPP (Secretary of State): Yesterday my hon. friend from East Elgin (Mr. Stansell) drew the attention of the government to a return which he had moved for last session but which he said had not been brought down. I may say to my hon. friend that on looking over the Votes and Proceedings of last year I find that the return he was inquiring about was laid on the table on May 19, 1924.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, April 21, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. HERBERT MARLER (St. Lawrence-St. George): Mr. Speaker, while there are very many matters which arise in this House from day to day upon which it is very difficult indeed, almost impossible, to agree, it does seem to me that there is one upon which we should be on common ground, and that is the explanations which we as members of the House of Commons give to this House and consequently to the public in relation to the financial statement submitted by the Minister of Finance in his budget speech. Those explanations, Mr. Speaker, should be of such a nature as to enable the public to fully grasp the contents of that financial statement—the entries, its purport and its effect. Of course I am very well aware that criticism of a justifiable nature is advantageous, that kind of criticism cannot be denied; but criticism which is founded on inaccuracy or which is brought forward purely for partisan reasons has two results: First, the public mind is very much confused; and in the second place, it casts suspicion upon the acts of those officers of the crown who are responsible for the preparation and the presentation of the statement in question. Now you will agree, Sir, and I think all hon. members will agree, that to have any suspicion cast on the officers

of the crown as regards the preparation and the presentation of the statement in question cannot be advantageous either to the public or to this Dominion as a whole.

In the course of this debate, Mr. Speaker, certain assertions have been made which are most unfortunate in their inaccuracies. In other cases the facts have been distorted purely for partisan reasons. As a result the public mind is confused. To-day, to the extent of my ability it will be my effort to remove certain of these inaccuracies, to give a fair explanation as regards this financial statement, and what it means and what it purports to be, and also, to the extent of my ability, likewise to give some explanation of the conditions of the finances of this country.

I will first take up the statement which has been submitted by the Acting Minister of Finance. I will review it, and examine it also, with a certain degree of care. I will attempt to give to the entries which therein appear their proper application; and I will also attempt to show the relations, the reflection and effect, which our railway indebtedness have on the financial statements which have been submitted from time to time to this House and consequently to this country. Now, this is the statement which the Acting Minister of Finance submits as the financial statement for the year ending March 31, 1925, and he states that the revenue for the year amounts to $344,000,000. Then he deals with the expenditure and divides the expenditure under two separate headings; the first dealing with the ordinary business of the country, and the second dealing with the business of the country which is not considered to be ordinary business, namely, the railway advances. Likewise the first part of the statement is subdivided under three headings: Ordinary expenditure, capital expenditure and special expenditure. As I have stated the revenue for the year is $344,000,000. Part one deals with the expenditure of the ordinary business of the Dominion:

Ordinary expenditure..	$ 319,700,000
Balance over ordinary expenditure..	24,300,000
Capital expenditure..	18,077,000
Balance over..	6,223,000
Special expenditure..	4,400,000
Balance over (after providing for the ordinary business of the country).. ..	1,823,000

Which balances out with the revenue of $344,000,000. Part 2. We then come to that part of the business of the country which is not ordinary business, and in that category the Acting Minister of Finance states that he has made railway and other advances—almost entirely railway advances as a matter of fact—to the extent of $19,527,000. As against that he applies the balance over, after dealing with the ordinary affairs of the country, of $1,823,000, and an increase in value of certain assets of $4,000,162, making a total amount to apply as against the railway advances of $5,823,162, and he brings down as an increase in the consolidated debt during the year the sum of $13,703,838. I would like to make clear what that statement purports to be. It purports to be a statement relating to the consolidated debt and the consolidated revenue of the country, and brings down as a result the net increase of the consolidated debt alone. It has not, nor is it intended to have, any connection with the railway indebtedness of the country. That is an entirely separate and distinct matter and has to be taken into consideration separately, although it is true it reflects to some extent upon the consolidated fund of the country because the two are to some extent related. But this statement is clearly a statement as regards the consolidated fund of the country alone. That being the case, certain criticisms which have been made in this House with regard to this statement seem to me to be most uncalled for. I intend as a matter of fact to read certain of those criticisms and put them on Hansard, because I will take them up for what they are worth as I proceed with my remarks, and I will show that this statement which has been submitted by the Acting Minister of Finance (Mr. Robb)—and I will treat with that later on in the course of my remarks—is prepared and is submitted and in precisely and exactly the same way as previous statements have been prepared and submitted to this House from year to year. The first statement which I desire to comment upon is that of the hon. member for Vancouver Centre (Mr. Stevens), and I am extremely sorry that the hon. member is not in his seat this afternoon. I sent him notice that I proposed to quote his remarks to-day. I will read to the House the criticisms to which I take exception, because they are very germane to the remarks I propose to make. At page 1653 of Hansard of March 30, my hon. friend used these words, referring to this statement:

> As a matter of fact, it was a presentation that was hopeless in its confusion and baffling in its inaccuracies.

This budget I cannot conceive as being other than deliberately designed to deceive the people as to the correct condition of affairs. It is a subtle expedient designed to shield a guilty and moribund government from the just indignation of an awakening public opinion.

Mr. MEIGHEN: Hear, hear.

Mr. MARLER: My hon. friend says "hear, hear," and hon. members behind him cheer. Are my hon. friends proud of a statement like that coming from a former minister of the crown casting aspersions on the manner in which statements of this nature are prepared? Will my hon. friend say "hear, hear"? Is he proud of that statement?

Mr. MEIGHEN: I am proud of its accuracy.

Mr. MARLER: So that my hon. friend says that that statement is accurate, and that the statement submitted by the Acting Minister of Finance is inaccurate.

Mr. MEIGHEN: Hear, hear.

Mr. MARLER: And that it is not based on statements previously made. Will my hon. friend say that?

Mr. MEIGHEN: My hon. friend had better make his speech. I say the language of the ex-Minister of Trade and Commerce (Mr. Stevens) is absolutely true. I suggest that the hon. member quote the leader of the Progressive party to the same effect.

Mr. MARLER: I am not quoting him at all.

Mr. FORKE: As a matter of correction, I think if the right hon. leader of the opposition takes the trouble to re-read my speech, he will find it entirely coincides with the remarks made by the hon. member who has just spoken.

Mr. MEIGHEN: I will quote some of it.

Mr. MARLER: My right hon. friend (Mr. Meighen) agrees word for word, letter for letter and dot for dot with the ex-Minister of Trade and Commerce in what he says, the sentiments he expressed, and everything contained in the particular criticism which he presents to this House and places before the country, when he says that the Acting Minister of Finance submits a confused statement, and that the officers of the crown bring forward statements that are not correct—a splendid statement to be proud of and to put forward, when the government applies for the next internal loan. It is something to be proud of, especially coming from an ex-minister of the crown. It is not an ordinary member of parliament, mark you, Mr. Speaker, but an ex-minister of the crown who makes the statement that it is baffling in its inaccuracies and intended to deceive the public. My right hon. friend says that he subscribes word for word and letter for letter to that statement.

We will now proceed to another criticism offered by another ex-minister of the crown, the hon. member for Fort William and Rainy River (Mr. Manion), whom it is always a delight to hear speak in this House, and who expressed himself in no uncertain terms with regard to the statement in the budget and the subsequent explanations which were given of the budget, and we may put them both together in order to be fair. It is a great delight to hear my hon. friend speak, but on this occasion he must have thought he was speaking in some place where he would not be heard and where his voice would not go all over Canada, where any aspersions cast on a minister of the crown would not be cast on the government officials of the country, because these are the words he used:

Or are we to have a conspiracy of silence, or perhaps what is worse, a tissue of half truths, in dealing with the financial condition of our country? I am reminded of a remark made by Napoleon when he was referring to a German diplomat: he said. "That man lies too much. It is necessary to lie sometimes, but not all the time."

Well, Sir, if these hon. gentlemen, ex-ministers of the crown, take any glory out of a statement of this description, I certainly do not. If hon. members opposite take delight in making statements of that kind and sending them across the country they are welcome to whatever pleasure they derive from such a proceeding but if they think they are rendering their party or the country any service they are, in my opinion, very much mistaken. Aspersions of that nature cast on officers of the crown and members of the government concerning financial statements—not as regards questions of policy, not as regards what has taken place or what is put into such financial statements, but ascribing to their authors the deliberate intention to baffle and deceive—are highly improper and no member of the House is justified in resorting to such criticism unless he is sure that his statements are accurate. As a matter of fact the statements which have been made are not accurate in any particular. I do not wish hon. members to take my word in regard to the accuracy or inaccuracy of the statement I make in the House to-day.

Before dealing at greater length with these criticisms which ex-ministers of the crown have made in the House and in the country, I will remind hon. gentlemen that in the last six years we have had four different finance

ministers in Canada, and we have had seven separate budget speeches. In the year 1919 Sir Thomas White made the budget speech. In the years 1920 and 1921 my hon. friend from West York (Sir Henry Drayton) was Minister of Finance and made the budget speeches. In the years 1922 and 1923 my right hon. friend from Shelbourne and Queens (Mr. Fielding) who, unfortunately through illness is not in the House to-day, was Minister of Finance, and to-day we have the hon. member for Chateauguay-Huntingdon (Mr. Robb) as Acting Finance Minister. He has made two budget speeches, namely in the years 1924 and 1925. Now, Sir, laying these facts before you, simply recalling these facts to your mind, as I do recall them, you would imagine, and very properly so, that these seven budget speeches would likely be brought down in some different form, You would be absolutely justified in thinking that four ministers of finance having made budget speeches, they would have at least brought down budget speeches in four different forms. But you will be astonished to know that those seven budget speeches, as regards financial statistics, are in almost identical form, with this exception, that the speeches made by the Right Hon. Mr. Fielding, if I may refer to him by name, and by the present Acting Minister of Finance (Mr. Robb) are more ample in their information than those previously made in this House. If hon. members will bear with me for a moment, I will emphasize this point a little further, because it is of some importance as it has been said that this financial statement as submitted to this House is in a different form from the form previously used. Further than that—and, this is the point I desire to make at the present time—this financial statement, being divided into two parts, first of all taking the ordinary business of the country, and, second, the other business of the country, treats our distribution of revenue in precisely the same way as these other ministers of finance have treated it from time to time. With the intention and view of showing that that statement is correct, I want to take up Sir Thomas White's speech of the 5th June, 1919, and I am quoting from Hansard, page 3143. I will read a very short paragraph of this speech. Sir Thomas White goes on to say:

> Now, Mr. Speaker, having dealt with the financial and commercial position of the Dominion, I now proceed to the consideration of the important problem of our estimated expenditure for the present fiscal year 1919-20 and the fiscal proposals which the government has to make in connection therewith.
>
> It will be advantageous in assisting us to reach a conclusion with respect to these matters if I first briefly review the result of the last fiscal year which ended on March 31, 1919.

This is the point that I wish to call to the particular attention of hon. members:

> During that year the expenditure of the Dominion upon account of the ordinary services of the government amounted to $240,000,000. The outlay upon capital account aggregated $22,000,000.

Hon. members will please note the peculiar and extreme similarity between the manner in which this statement is presented and the manner in which the statement I am reading was presented. He continues:

> If we follow the practice which has been hitherto adopted in treating as surplus the amount of revenue received in excess of the ordinary expenditure, it will appear that for the past fiscal year the government had a surplus of $70,000,000, which was devoted to war expenditure. If, on the other hand, we first appropriated our revenue to the payment of both ordinary and capital expenditure, the surplus which was used for war expenditure was $48,000,000.

Let hon. members not misunderstand me. Sir Thomas White in this speech did not claim a surplus over all expenditures. That is not the point at all. He said: We had so much revenue. We first applied that to ordinary account and then to capital account, and then we had a balance left over. The Acting Minister of Finance says in almost the same words exactly the same thing. He says: From my revenue I have provided for so much ordinary expenditure and for so much capital expenditure, and he adds certain expenditures which Sir Thomas White, in those days, very properly did not add because, war being in progress, those expenditures were very large. In the disbursements for that year to which Sir Thomas White referred, there were some $60,000,000 of expenses on account of the railways, it is quite true, and I do not desire to mislead the House in any way. Advances to railways in those days were put in active investments and did not appear in the yearly expenses of the country. But in the next year, 1920, that amount of $60,000,000 which, in 1919, was treated as an active investment, was written down by the Minister of Finance in those days, the hon member for West York (Sir Henry Drayton) as an inactive investment. Was that a baffling thing to do? Did Sir Thomas White intend to deceive the country by his action? He acted in good faith; but if anything would baffle a person reading those speeches, finding one year the $60,000,000 had been paid out in railway advances and the next year written down, it is far more baffling than in the present statement which fully and distinctly says what the railway advances were. Let us take up further the speech of the hon. member for West York in 1920, and I regret

he is not present to hear what I have to say. He made an admirable and excellent speech; true, full of figures, true, sometimes difficult to analyse, far more difficult to analyse than the simple statement which is in effect before us to-day. I am not decrying my hon. friend the member for West York. Had I been in the House, I would not have said, as the hon. member for Vancouver Centre says:

> It is a subtle expedient designed to shield a guilty and moribund government. . . . This budget I cannot conceive as being other than deliberately designed to deceive the people as to the correct condition of affairs.

I would not have used those terms at all. What I say is that in quoting the speech of the hon. member for West York who at that time was Minister of Finance, hon. members will find again exactly the same division between ordinary expenditure and expenditure of another nature entirely. I read in this case from page 2483 of the Revised Hansard of 1920 where he says:

> The revenue for the fiscal year ended 31st March last—

That is the 31st March, 1920.

> —will, when the accounts are finally closed reach approximately $388,000,000. This is the largest revenue that the country has ever collected.

This is where he talks about the distribution and hon. gentlemen should mark these words:

> With a total revenue of $388,000,000 and an ordinary expenditure of $349,000,000, it will be seen that during the fiscal year 1919-20 the government, after meeting all ordinary expenditures, including an increased amount for interest account and pensions over the previous year totalling nearly $39,000,000, has a surplus of approximately $39,000,000 over ordinary expenditure, to apply to capital expenditure.

Do hon. gentlemen notice the extreme similarity in these statements? The hon. member for West York in his budget statement says: I have so much revenue. I am going to apply it in a certain way, and after applying it to ordinary expenditures, I have a surplus. Here again he did not intend to mislead the House about the ordinary expenditure, neither did the Acting Minister of Finance But the point is this. The ordinary affairs of the country are separated, and rightly so, from the railway business of the country which is segregated and put into an entirely different account, so that as regards our ordinary expenditure we can always make a reasonable and fair comparison and say: There is our ordinary business on that side and there is our railway business on that side which has to be treated in an entirely different way. That segregation and classification to those who go into the railway business and study these complicated systems of accounting, will be found the correct way to treat the financial affairs of the country and also to treat its presentation to parliament and to the people of Canada each year.

I will take up the further speech of the hon. member for West York as I want to make this matter abundantly clear to hon. members in view of the remark made by the hon. member for Vancouver Centre that this statement was intended to deceive the people of Canada. In the year 1921 my hon. friend from West York delivered, as Minister of Finance, a speech from which I shall quote briefly at the present time. At page 3117 of Hansard of that year he said:

> The revenues for the year exceed the ordinary expenses of the country, including all pensions and all current war charges, by $69,400,000 and exceed the sum total of the ordinary expenses, together with the regular charges to capital and war, by $12,298,000.

There is not a word said there about railway advances; the railway advances are not taken into consideration in this particular segregation and classification of accounts. And I think the hon. member was quite right in not taking them into consideration in that way. But I would ask hon. gentlemen opposite to read through the speeches I have read and note the practice there followed; let them read through one of the speeches of Sir Thomas White. The leader of the opposition (Mr. Meighen) smiles.

Mr. MEIGHEN: I beg pardon; I was not listening to the hon. member, I was reading a letter.

Mr. MARLER: I regret my right hon. friend is not interested in this matter; he should be.

Mr. MEIGHEN: I cannot do two things at once.

Mr. MARLER: He is standing up for assertions made on that side which are false.

Mr. MEIGHEN: Will the hon. gentleman permit me. I said that the hon. member for Brandon (Mr. Forke) had made statements to the same effect as those made by the hon. member for Vancouver Centre (Mr. Stevens). I have since turned up the reference, and if the hon. gentleman will permit me I will read the exact words of the hon. member for Brandon and let them speak for themselves. At page 1579 of Hansard of the present year the hon. member for Brandon is reported as follows:

> I also want to say, Mr. Speaker, that the financial statement given to the House does not reflect exactly and faithfully the conditions of the country at the

present time, nor our financial standing either. First, I wish to say a few words in regard to the different methods of book-keeping that are practised by successive governments. Let me explain that in discussing this matter I speak as a plain man who has no knowledge of accounting; but it does seem to me that there should be no difficulty in the government making up the accounts in such a way that at the end of the year, the ordinary man, the man in the street, who after all represents the great majority of the people of this country, should be able to form some idea, a correct idea, as to the national finances.

Mr. MARLER: Quite so. The hon. member for Brandon was quite right, that he had not the actual knowledge of accounts which the hon. member for Vancouver Centre possesses; that hon. member is an accountant, and he had no business making the statement he made. What my right hon. friend says is not apropos. But I was not referring to the hon. member for Brandon but to the hon. member for Vancouver Centre.

Mr. FORKE: It would be only fair for the leader of the opposition to read the next paragraph as well.

Mr. MEIGHEN: I have no objection to reading any paragraph, but it is not divided into paragraphs.

Mr. FORKE: Continue the quotation.

Mr. MEIGHEN: Let the hon. gentleman read it himself.

Mr. FORKE: I do not know but what the House might benefit by re-reading that speech.

Mr. GOOD: Does not my hon. friend think it would have been better to have included that item of $19,000,000 with the other railway items in the railway account special?

Mr. MARLER: The advances for the railways have always been treated in a separate account. Before the year 1920 the hon. member will not find any railway advances in the public accounts; the first year we find them so treated is 1920. Right along the hon. member will find the accounts segregated under ordinary account, capital account and special account; and there was a further division made later on of railway advances. In Sir Thomas White's time the railway advances were treated as an active asset and did not appear at all; but later on the hon. member for West York wrote the assets down. It is true that when he did so he was careful not to take into consideration the $55,000,000 expended in the year 1920; he wrote down the $284,000,000, not taking into consideration that $55,000,000 was represented in that year's expenditure.

To come back to the question of the segregation of accounts, what I say is that it would be better to have the railway accounts an entirely separate matter, so that on one side of the sheet one could see the ordinary business of the country, and on the other side the figures in connection with our railway business. I will explain that point later on if the hon. gentleman will excuse my not dwelling on it just at present.

Mr. GOOD: This $19,000,000 item should be included in the railway account proper.

Mr. MARLER: My hon. friend is a little confused in that respect. He must realize that money is expended on the railways in two ways: first, out of the consolidated fund. And whatever has been expended out of the consolidated fund has been invariably charged to the net debt since the year 1920. Before that, Sir Thomas White had not charged them to the consolidated debt; they were held as an active asset and so were not taken into consideration in the computation of the net debt. But my hon. friend must also bear in mind that money is raised for the railways by way of bond issues guaranteed by the Dominion. The railway account to which I refer should contain not only the amount paid out of the consolidated fund, made by way of a cross entry into that account, but also the net amount by which the indebtedness to the public is increased by reason of the bond issues. That is the form in which the railway account should be set out, and if the hon. member will wait a few moments I shall explain it later and shall be glad to answer then any questions he may ask.

I have discussed one speech of Sir Thomas White and two of those delivered by the hon. member for West York; and those speeches, so far as financial statistics are concerned, are in form practically identical with the budget speech submitted at the present time. And if hon. gentlemen will take the trouble to consult the speeches made later by the present Minister of Finance (Mr. Fielding) in the years 1922 and 1923 they will find there also identically the same form made use of; they will find the Minister of Finance saying, "Now let us turn to the railway advances of the country and deal with them." In other words, he deals first with the ordinary business of the country and then he takes up the railway business, although I admit that his speeches are more ample and give more information than previous speeches. Let me ask hon. members across the floor, do they think that these statements made by the hon. member for Vancouver Centre and by the hon. member for Fort William and Rainy River as reported in Hansard are fair? Does the

hon. member for Fort William and Rainy River persist in saying that there has been a conspiracy of silence?

Mr. MANION: May I answer the hon. member?

Mr. MARLER: I wish the hon. member would; I am waiting for an answer.

Mr. MANION: I did not discuss the speeches of other ministers of finance at all but merely referred to the fact that there was no surplus whereas the present acting minister had claimed one. As a matter of fact, I may tell the hon. gentleman that I have never read a whole lot of the financial speeches to which he has referred to-day; what I discussed was altogether the question whether there was a surplus at all and I claimed, as I still claim, that the Acting Minister of Finance should have disclosed a deficit instead of claiming as he did that there was a surplus.

Mr. MARLER: My hon. friend was not speaking of a surplus. If the hon. gentleman has not read the speeches to which I have referred he has no business to say that there is now a conspiracy of silence; if he applies those words to the present budget, and if the hon. member for Vancouver Centre speaks of it in the way he has done, these hon. gentlemen must apply the same terms to the speeches I have discussed as delivered by Sir Thomas White and the hon. member for West York.

Mr. MANION: I was speaking of a conspiracy of silence in regard to the actual deficit that should have been disclosed.

Mr. MARLER: My hon. friend is hedging.

Mr. MANION: Not at all.

Mr. MARLER: As a matter of fact the Acting Minister of Finance did not claim a surplus over all expenditures, as the hon. member will see if he has read the present budget speech.

Mr. MANION: He claimed a surplus of $2,000,000.

Mr. MARLER: He claimed a surplus of $1,823,000 on ordinary expenditure. Now let me take any one of these speeches at random; let us see what surpluses hon. gentlemen opposite have claimed. This is from the budget speech of the hon. member for West York in 1920:

> We had a surplus of approximately $39,000,000 over ordinary expenditure.

Does my hon. friend say that the ex-Minister of Finance was telling lies when he said that?

Mr. MANION: I was not discussing the member for West York; I was discussing the present Acting Minister of Finance (Mr. Robb).

Mr. MARLER: I intend to clear this matter up on the floor of the House now. If my hon. friend from Fort William and Rainy River—and I may include also my hon. friend from Vancouver Centre—used those terms of the Acting Minister of Finance, those same terms are directly applicable to the hon. member for West York and to Sir Thomas White. Now, let my hon. friend apply those words to the two ex-ministers of finance, or withdraw them against the present Acting Minister of Finance.

Mr. MANION: My hon. friend had better apply the words to whomever he wishes. I applied them to the man I chose to apply them to.

Mr. MARLER: My hon. friend is now losing his temper; he finds himself in a hole. He was talking of things he knew absolutely nothing about. He did not take the trouble to read the previous budget speeches, he admits that from the floor of this House.

Mr. MANION: I listened to them.

Mr. MARLER: And yet he says that the present budget speech is "baffling," not knowing what the speech of a minister of finance should be like at all.

Mr. MANION: If my hon. friend would permit me? He is becoming a little extravagant in his language. I have been in this House for eight years listening to budget speeches, and I ought to know something about them.

Mr. MARLER: My hon. friend just admitted that he knows nothing about them at all.

Mr. MANION: Nothing of the sort.

Mr. MARLER: My hon. friend is a college man, he studied logic, and he ought to understand that if one speech is deceitful, another speech in the same form must be deceitful also. It is a mere matter of reasoning. My hon. friend was speaking of the surplus and he said of the Acting Minister of Finance, applying it indirectly to him:

> I am reminded of a remark made by Napoleon when he was referring to a German diplomat: He said, "That man lies too much. It is necessary to lie sometimes, but not all the time."

Fine words from my hon. friend! Yet on it he hinges his argument as to the surplus of $1,823,000. There was an excess of revenue over ordinary expenditure to that extent, but the Acting Minister of Finance did not claim a surplus over all expenditure. He did claim a surplus made up precisely and in exactly the same manner as Sir Thomas White and the member for West York made up their surpluses in their three budget speeches.

Now, Mr. Speaker, we will examine this subject a little further. We will pass these random speeches that my hon. friend from Fort William and Rainy River has not read, and that I believe the hon. member for Vancouver Centre has not read either, although he made up some extraordinary figures which later on I will speak about. We will take the second part of the speech, that relating to the railway advances, I will ask hon. members opposite, if they have any interest in this subject to get out the speech of this year of the Acting Minister of Finance and read the statement which is made there and compare it with the statements made in the two speeches of Mr. Fielding. They will find that the railway loans are all particularly mentioned in all those speeches, not the application. Do not misunderstand me. I am speaking of the deceit which my hon. friend spoke of, this baffling speech which does not place before the country all the facts regarding the national finances. My claim is that the speeches as they are contain a full disclosure of all matters relating to the consolidated debt and of all bond issues which were made, whether guaranteed or not in so far as the railway advances were concerned.

4 p.m.

Mr. FORKE: Mr. Speaker, does not the hon. gentleman think it was a little difficult to find what the railway deficits would be from a perusal of the speech of the Acting Minister of Finance? I could not find it until I got the annual report of the Canadian National Railways; then I could see where the railway deficit came in.

Mr. MARLER: My hon. friend is perfectly right in saying that it is one of the most difficult things in the world to find out the reflected influence by way of bonds and refunding and the manner in which that reflects on the consolidated debt. There is no doubt about that at all. I admit the difficulty in that respect. But let me point this out to my hon. friend from Brandon, that the statement in the budget speech is not a railway statement at all, it does not deal with the railway accounts. It simply says that these are the obligations which the Dominion of Canada has undertaken during the fiscal year ending March 31, 1925; and owing to the fact that certain indirect obligations were issued that year on account of the railways, it details them there at that time. But to find out what application and what reflection they have with regard to the railway accounts, one has to look to the railway accounts themselves. But let me repeat to my hon. friend from Brandon, that the budget speech is not a railway speech at all, it is simply a speech relating to the consolidated debt and to the obligations of the country particularly of the then current year.

Mr. GRAHAM: And therefore for different years.

Mr. MARLER: Entirely. I will explain that later, I think to the satisfaction of my hon. friend. I observe what the Acting Minister of Finance says as regards our railway advances and indirect obligations. In his speech he made the situation perfectly clear. He stated that the cash advances to the railways amounted to $18,027,000, but in addition to that he says that we have issued during the year certain guaranteed and certain unguaranteed securities, of which securities so issued we have used a certain amount for refunding purposes, that is, to pay off obligations, not increasing the railway debt, and the balance we have emitted to the public with our guarantee. Now, I am not taking up at the present moment the application of the money which was used in so far as these guarantees or the proceeds of these loans are concerned; I will come to that later on; I am taking up this fact, and this fact only—and I want to impress this on hon. members—whether there was a full disclosure made of all the obligations of the Dominion in that budget speech, which is denied by my hon. friends of Fort William and Rainy River and Vancouver Centre. I say that disclosure was made there.

Mr. BOYS: Will my hon. friend tell us, after his profound study of the situation, what the true status is, taking under review the surplus of revenue over expenditure and with it the deficit on the National railways? In other words, if he has no objection I should like to get that information very much in a nutshell what is the true position of Canada, taking into consideration those two features, and, doing so, what is the deficit?

Mr. MARLER: Certainly, I will be only too glad to tell that to my hon. friend later, if he will pardon my going on with the continuity of my remarks.

Mr. BOYS: My hon. friend has asked some questions here of two members of this party who unfortunately at the present time are engaged in the performance of other and important work in the Ocean Rates committee. I feel quite confident that if they were here they would ask him to be courteous enough, even at the risk of interfering with the continuity of his speech, just to give us in dollars and cents—something I have no doubt he can do in a moment or two—what is the deficit, taking into consideration the surplus of $1,800,000 referred to and the deficits in connection with the National railways?

Mr. MARLER: I am extremely sorry to appear to be discourteous to my hon. friend, but I do not wish to break into the continuity of this story which I am attempting to tell in a perfectly clear way. Let my hon. friend have patience.

Mr. BOYS: I am full of it.

Mr. MARLER: I am first of all dealing with the question of disclosure.

Mr. BOYS: If my hon. friend will permit me this once I will not trouble him any more. I think I have asked him an important question, and that is what he has been dealing with. If he will give me an answer now I shall be very glad to have it; if not, I must content myself without the information.

Mr. MARLER: I am extremely sorry, but my hon. friend's anticipation will be so delightful for the next ten or fifteen minutes that he really will not be sorry that I am not able to oblige him at once.

Mr. BOYS: I have a committee to go to.

Mr. MARLER: I am extremely sorry, but if the hon. member will wait—

Mr. BOYS: Kindly give it now.

Mr. MARLER: I intend to tell this story in my own words and in my own time. I intend to take these matters up as I go along, and I intend to the extent of my ability to give a fair, honest and decent presentation, not the sort of presentation and criticism which came from the opposite side of the House.

Mr. MOTHERWELL: Nail them to the barn door.

Mr. MARLER: I was speaking, when the interruption came, on the point of disclosures in these various budget speeches. I had stated that the present Acting Minister of Finance as well as Mr. Fielding had disclosed in their respective budget speeches a full statement of the railway bond issues which took place year by year, whether those issues had been guaranteed or not by the Dominion. Now I want to ask hon. gentlemen opposite this, in view particularly of the following statement which also comes from my hon. friend from Vancouver Centre later on in his address—Hansard, page 1663.

> It does not disclose the full extent of the nation's obligations and commitments; nor does it correctly interpret the revenue accounts of the country.

Another accusation! Now let us look again to the budget speeches of my hon. friend from West York, and ask ourselves, did he disclose one of these railway guarantees in his speeches? Did he come forward and say, as my hon. friend the Acting Minister of Finance has said that in the year 1925 we emitted to the public three-year 4 per cent guaranteed notes to the extent of $20,000,000 and thirty-year 4½ per cent guaranteed notes to the extent of $26,000,000? Did the hon. member for West York ever show that? He said not one single solitary word about any loans, guaranteed or not, which were made by the railways in either of his budget speeches. But you will say: None were issued at that time, consequently there was no necessity of mentioning them. You will be surprised to hear that in the year 1920 there were issues to the extent of $42,109,026; you will also be surprised to hear that in the year 1921 there were issues of $77,000,000; but not one word appears about those particular issues in either of the budget speeches of the hon. member for West York.

Let us keep out of our minds for the time being the application of this particular indebtedness. I am speaking of the disclosures, of this alleged illusory statement which my hon. friend the Acting Minister of Finance has put forward, and which has been received with such severe recriminatory remarks by hon. gentlemen opposite. I repeat again, the statement of the Acting Minister of Finance is a full disclosure of what took place regarding the consolidated fund and the railway bond issues for the year.

Mr. LADNER: I happen to have checked some of these figures myself.

Mr. MARLER: I am glad to hear someone has checked them.

Mr. LADNER: The hon. gentleman is full of fire and brimstone at the moment. There are two sides to the question.

Mr. MARLER: I am simply talking common sense.

Mr. LADNER: Will the hon. member not agree on the question of disclosure that the real point of difference is this? In 1925, $10,000,000 was advanced in cash by the government to the railway, and not $17,000,000 as the Acting Minister of Finance has said, because $7,000,000 of that $17,000,000 was interest, as you will find by checking the figures. Ten million dollars was advanced then. In 1924, $23,000,000 was advanced in cash, making a corresponding less amount of guarantees. In 1923 the advance was $77,000,000. So the real point of that is this, that the government changed its practice. Whereas formerly they advanced cash to the railway they owned, now they advance practically no cash but pursue the policy of indirect guarantees, thereby enabling them to present a statement which appears to show a fine balance sheet, but which as a matter of fact obligates us in exactly the same way as if we had advanced the cash.

Mr. MARLER: I understand what my hon. friend is trying to get at. I am not discussing the question of method, but the question of disclosure.

Mr. SPEAKER: I wish to remind hon. members on both sides of the House that while a question may be put with the permission of the member who has the floor, a question which becomes a speech in itself cannot be allowed. There is a rule of debate in this House that an hon. member may speak only once, and if his question or interruption lasts too long he may be prevented from addressing the House when he comes to speak for himself.

Mr. MARLER: I quite understand the point my hon. friend is trying to bring out. That also will be taken up fully in the course of my remarks. My hon. friend need not be disappointed, I am not trying to sidestep this question at all as to the effect of the railway bond issues on the debt of the country. My hon. friend will find me speaking quite openly when I come to that question.

Mr. STANSELL: I understood the hon. gentleman to say that for the past seven years practically the same course had been pursued in the delivery of the budget statements. Was the same plan followed last year? Is not my memory correct when I say that the hon. member disagreed very strongly with the budget of last year?

Mr. MARLER: I am not talking of questions of policy at all. I am talking of what the budget speech discloses. My hon. friend taunts me, and perhaps correctly so, with what I stated last year. Then I approached the matter in a decent and a gentlemanly way, unlike the manner in which hon. gentlemen opposite have approached it this year. I did not make any such statements of castigation as they have made in this debate, but I gave my opinion, and if I may refer to the Prime Minister I think he said that I gave what my opinion was in an honest and a fair way; I think those were his words. But it is not a question of policy I am discussing now. I am discussing now the ordinary general form of the budget speech, and I say that this budget speech is in substantially the same form, except indeed that the Acting Minister of Finance and Mr. Fielding were more ample in their disclosures than the previous administration.

Hon. gentlemen will remember that I stated that after taking into consideration part 1 and part 2 accounts, there was a net increase in the consolidated debt during the year of $13,703,838. Here again I must take issue with my hon. friend for Vancouver Centre. I regret extremely he is not in his seat today in order to hear what I have to say in this regard because it is a matter of considerable importance. He discussed the condition of the debt on page 1655 of Hansard, and he discussed it in very extraordinary and very positive terms. He begged the House, he begged every hon. gentleman in the House to listen to his words detailing, as he did—I have the quotation before me—the debt on a certain date, March 31, 1922, which was substantially the date when the previous administration went out and that on the 31st of March, 1925, it was another amount, showing an increase in the debt of virtually $9,000,000. My hon. friend from Vancouver Centre went on to say: Your figures are all wrong; there is something wrong here; $300,000,000 has disappeared; what have you done with it? Show it up. It is quite true, he said of the Acting Minister of Finance, you have an honest face and an honest appearance but your accounts are dishonest. He says to the Deputy Minister of Finance "We know that you are not a thief but your accounts are most extraordinary; there is $300,000,000 gone somewhere and we cannot find it". He says to the officials of the Department of Finance "We know you are not tricksters but your accounts show by my figures that there is $300,000,000 lost. Where is that $300,000,000? Where has it gone?"

I can say to my hon. friend from Vancouver Centre that if he makes up his accounts in the same way that he made up that computation, he is in danger of losing not only 300

millions but 300 billions of dollars because the calculations which he has made are absolutely wrong. They are founded on wrong premises; they do not even show knowledge of the facts as he states them. What does my hon. friend do? He takes the net debt on the 31st March, 1922, and the net debt on the 31st March, 1925, and he says there is an increase in the debt of $9,000,000. But he says, and hon. gentlemen will mark this well, that those on this side of the House have stated in the various budget speeches that on 23rd May, 1922, there was a surplus of $33,000,000, on May 11, 1923, a surplus of $61,000,000, on April 10, 1924, a surplus of $67,000,000, and on March 24, 1925, a surplus of $24,000,000, that you add all these together and there is $187,000,000 that has to be accounted for. But more than that the Imperial government paid to this government an amount of $122,000,000, so there is $309,000,000 which should be deducted. In other words the debt shows an increase of $9,000,000. Deduct the $9,000,000 from the $309,000,000, and you have a net deficit not accounted for of $300,000,000. That is my hon. friend's way of reasoning, Mr. Speaker, and it is reasoned out very carefully. It is not a question of simply casting up these figures of my hon. friend from Vancouver Centre; he has it all down here in black and white. He has sent the statement all over the country with respect to this side of the House "Just what have you done with that $300,000,000?" He says to the tax paying public in Canada "There is something wrong here. There is $300,000,000 that should be applied to the national debt and your taxes reduced." That is his reasoning. Well, it is an extremely simple thing to show where this reasoning is wrong and I cannot understand how my hon. friend from Vancouver Centre fell into the difficulties and the errors in calculation which he did. In the first place he talks about the surplus of May, 1922, of $33,000,000. That is not applicable to the three years he has under review at all. That is applicable to the previous three-year period; it did not fall into 1922 at all. Take his other three surpluses. He has forgotten to deduct the capital expenditure and the special expenditure. That does not account, it is quite true, for the $122,000,000, but he forgot that that was an active investment and never had been taken into consideration in the calculation of the net consolidated debt at all. In other words it was merely a cross-entry in the books. In order to correct my hon. friend the member for Vancouver Centre and put this record on Hansard, let me give these figures:

Surplus in 1923 over ordinary expenditure..	$ 62,321,168
Surplus in 1924 over ordinary expenditure..	72,024,493
Surplus in 1925 over ordinary expenditure..	24,300,000
Total..	$158,645,661
Less capital special and cash advances in the years 1923, 1924 and 1925 of..	$171,092,403
Resulting debit..	$ 12,446,742
Less net increase in assets..	3,095,432
Making net increase in debt..	$ 9,351,310

Which balances in all respects, dollar for dollar, letter for letter, with the public accounts as submitted. Recalling the statement of the hon. member for Fort William and Rainy River and looking at this statement of a $300,000,000 loss I was wondering, can we not apply his words "what kind of gold brick financing, what kind of political shell game is the Acting Minister of Finance trying to put over the country" to his friend who sits to his left when he submits a statement that there is a $300,000,000 deficiency. My hon. friend is silent.

Mr. MANION: I might say to my hon. friend that we are not holding court here. One might think he was defending a criminal from the way he is acting.

Mr. MARLER: I am not defending a criminal, that is precisely the point. I am saying that my hon. friend accuses people of being criminals and they are not criminals.

Mr. MANION: I was drawing the conclusion from my hon. friend's attitude that they were.

Mr. MARLER: That is the peculiar attitude of my hon. friends over there. I do not know the reason for it but it is probably disappointment.

Mr. MANION: Might it be that hope has made my hon. friend change his attitude?

Mr. MARLER: I think my hon. friends over there will some day reach the age when disappointment gives place to humour and anger to tolerance. Now taking up the question of the increase in the consolidated debt, I might give these figures to hon. gentlemen opposite—and perhaps they are very unpalatable indeed—but I want to show the increase in the net consolidated debt with the increase in the railway indebtedness owing to the emission of bonds. Then bringing the two together I wish to compare the three-year period of 1920, 1921 and 1922 with

the three-year period of 1923, 1924 and 1925. That is what I want to arrive at; that is what I want to put frankly and clearly before the House. I am not trying to hide anything, not trying to deceive anybody. I intend going into a comparison of the guaranteed and of the unguaranteed railway issues and making a comparison of the three years. I think that is the question that my hon. friend from Brandon wants answered. As a step to enable me to do that I first of all have to arrive at what is the increase in the net consolidated debt over a certain period. I want to be abundantly fair to my hon. friends opposite in making this comparison. I want to arrive at the point so that they cannot say that I have made this comparison not giving them credit for demobilization expenditures, not giving them credit for assets which have been written down although they were advances made in cash in the past. I want to give them credit for all that and I want to arrive at the result for the second three-year period by means of expenditure other than demobilization, other than the writing down of these decreases. That is the point I want to arrive at, and I want to be absolutely fair to everybody in that respect. Now these are the figures:

Net consolidated debt March 31, 1919..	$1,574,531,032
Net consolidated debt March 31, 1922..	2,422,135,801
Increase in three years..	$ 847,604,769
Increase due to demobilization..	$ 343,249,099
Due to transfer of assets from active to non-active list..	228,115,555
Due to expenditures other than demobilization..	256,240,115
Total..	$ 847,604,769

That is the figure I would like hon. gentlemen to bear in mind—the figure regarding expenditure of 256,000,000 odd dollars.

Now take the comparison for the next three year period, that is to say the period for the years 1923, 1924 and 1925:

Net consolidated debt, April 1, 1922.. ..	$2,422,135,801
Net consolidated debt, March 31, 1925.. .	2,431,487,113
Total..	$ 9,351,312
Increase in three year period, which increase is due to:	
Demobilization to extent of..	$ 5,385,842
Transfer of assets from active list..	904,730
Expenditures other than demobilization..	3,060,740
Total..	$ 9,351,312

I would like my hon. friends to bear in mind these figures, so that the reflection of the railway indebtedness can be joined up and tied up with this.

[Mr. Marler.]

The amount of increase owing to expenditure then of the first year period was $256,-240,115 and the increase due to expenditure outside of demobilization during the second period was $3,060,740.

Now I will continue, so that this question as regards the railways may be brought properly into consideration. I think it is only right, before discussing this question, to take into consideration the fact that this debate has centred to great extent around the question as to whether the railway bond issues, less refunding, should figure in the net consoliated debt. There is something to be said for that, and there is a great deal to be said against it. In the first place, our railway business is an entirely separate business. It is operated by a board of directors quite distinct and quite independent. That board of directors report to the president. He reports to the Minister of Railways (Mr. Graham) and the Minister of Railways is the connecting link between the railways and the people of this country. As we all know the railways have been an extremely expensive matter to finance each year. They come year after year to parliament for a certain amount. These amounts have been advanced either in the way of cash advances, in which case they have appeared in the net consolidated debt, or in the way of loans, mostly guaranteed, but sometimes not guaranteed by the Dominion, in which case they have not appeared in the net consolidated debt. Hon. gentlemen opposite have taken this stand—and there is something in the stand which they take—that the amount of money which is indirectly guaranteed should appear in the debt of the country. I do not think it should appear in the net consolidated debt, but I think it should be in a separate account. In other words we should have on one side of the sheet our ordinary business and on the other side of the sheet our railway business; so that adding the two together we would know each year exactly what the additions to the consolidated debt and to the railway debt of the country are, the two together making our combined debt. Once that is started it is not a difficult thing to do, because we have the entries relating to our ordinary account, which are quite simple, and we can ascertain from the railway report of last year the amount of the bond issue outstanding to the public. All one has to do is to add to the bond issues the amount issued each year and deduct the refunding. The result in total will show what the increase in the railway debt is for that year. As against that railway debt we have

the railways, of course, for what they are worth. That is something we cannot tell, but we will know by the accounting system what our combined debt will be, and we will have our railway debt on the one side and our consolidated debt on the other side. That would be an extremely simple way of placing the matter before the public. That would show exactly by dividing them as they should be divided,—and I think as they are correctly divided—our railway business entirely separate and apart from our ordinary business of government, which is an entirely different thing.

Mr. LADNER: Just on that point, would my hon. friend show the extent to which cash should be advanced to the railways each year, so that the comparison with respect to cash and guarantee could be made from year to year, or would he have all railway financing by guarantee?

Mr. MARLER: It does not make any difference in the least whether cash is advanced out of the consolidated fund or borrowed. In one case it is borrowed on our direct promise to pay, and in the other case it is borrowed on the promise of the railways to pay and that promise made marketable by reason of our guarantee. There is no difference whether it appears in the consolidated debt or the railway debt. One thing is the same as the other. But if my hon. friend wants more direct answer, I would say that I would very much prefer to see our railways finance themselves and borrow money for their requirements, with the possible exception of paying deficits out of the consolidated revenue, and let them borrow for any other requirements on their own account, with our guarantee of course. That would segregate them and keep them separate, and we would know where we stood each year.

Mr. LEWIS: The hon. member will admit that it is still the public debt of the Dominion?

Mr. MARLER: I am not denying it. There is not the slightest question that the railway indebtedness, whether guaranteed or not, is our debt. I do not think there is any way of getting away from it. We have the assets of the railways behind us. The point my hon. friend is suggesting is as to whether or not unguaranteed securities should be considered. I think guaranteed and unguaranteed securities are in the same category. They are all our debts, because we have standing after the securities a large amount of money, about $800,000,000, before which ranks our guaranteed securities and also other prior lien securities.

Mr. LEWIS: Would you add the deficit of the Canadian National Railways to the ordinary expenses of the country—not the guaranteed loans but the operating deficit and so on?

Mr. MARLER: I want to make this matter clear in the minds of hon. members. Now let us in the meantime forget all about railway accounts. It is not the operating deficits necessarily; it is cash paid out, and it may be paid out for anything at all. It may be operating deficit or refunding, or a number of things, but I think the idea I have suggested is to keep the account for the ordinary service of the country entirely separate, and any cash paid out of that account for the railways would be put on the other side of the account.

I wish to take up another matter. Around this debate has been centred a great deal the question as to whether these guarantees should be included in the net consolidated debt and that debt correspondingly increased each year, and a great many statements have been made—some extremely extravagant statements—as to the increase each year of the railway indebtedness. I am sorry my hon. friend from West York is not in his seat because I am sure he would discuss the matter with me in his usual courteous and kindly way. The hon. member said the railway indebtedness of the year had increased to the extent of $118,000,000. I do not want to accuse him of saying what he did not intend to say, but I have read his speech with a good deal of care, and I have tried to convince myself that he did not mean what appears in the report of his speech, because it seemed to me from reading his speech that he meant to say that during the fiscal year the railway indebtedness increased by $118,000,000, and he threw back at the Acting Minister of Finance the statement that he had said it had only increased by the bond issues by about $80,000,000. He asked where is the discrepancy and what is accountable for it?

Mr. EULER: He took that all back this morning in committee.

Mr. MARLER: Did he? In any event, I think the best thing to do is to put the correction on Hansard, and I do so in the most courteous way, because I think the hon. member for West York simply fell there into an unintentional error. This all arose out of a question which he asked on the 16th March last. He asked:

> What additions were made to the funded and unfunded debt of the Canadian National Railways and affiliated companies. . . . during the calendar year 1924?

The answer given by the Minister of Railways and Canals was as follows:

Mr. Graham:

To the debt to the public..	$ 90,814,026 00
To the debt to the government (including interest)..	28,085,159 35
Total..	$118,899,186 35

That answer, as given by the Minister of Railways and Canals, is correct in all respects. The error into which the hon. member for West York fell was this: He asked for the calendar year and not the fiscal year. The calendar year is the railway year. The fiscal year starts, as everybody knows, on the first April and terminates on the 31st March. Consequently, to get the increase in the railway fiscal year, you have to deduct entries prior to the first April and to add entries after the 31st December. That will give the increase in the railway debt. I have all these figures written out and if I may have permission, I will place them on Hansard so as to avoid reading a number of figures to hon. gentlemen. If we take the figures furnished by the Department of Railways and Canals, deduct the last bond issue of $50,000,000 which was emitted on the 1st February, 1924, not in the fiscal year 1925, and add the bonds issued after the 31st December, 1924, we shall arrive at precisely the same figure which the Acting Minister of Finance gives in his address. There is not one dollar of difference. It all balances exactly and correctly. With your permission, Sir, I will place this statement on Hansard so that the actual figures will be there in order to controvert this statement of the hon. member.

The entries to which I refer are as follows:

Total indebtedness as above quoted was..	$118,899,186	
Deduct debt to government in which is included part of the $18,027,000 charged in Financial statement for fiscal year 1925—the balance being interest charged but not paid..	28,085,159	
		$90,814,027
Balance being debt to public as stated in the answer. This is represented by the following bonds issued during the railway year 1924:		
5 per cent 30 year issued 1 Feby. 1924..	50,000,000	
4 per cent 3 year notes issued 1 July, 1924..	20,000,000	
4½ per cent 30 year bonds issued 15 Sept., 1924.. ..	26,000,000	
4½ per cent Equipment Trust H. issued 1 July, 1924.. ..	9,375,000	
Canadian Realties Co. Mortgages..	951,000	
Total..	106,326,000	
Less retirements during railway year 1924..	15,511,973	
Balance net increase in debt to public as per the answer		90,814,026

[Mr. Marler.]

To make this conform to the fiscal year 1925 the following is necessary:

Bonds and mortgages issued during railway year 1924 as above..		$106,326,000
Less issue of 1 February 1924 (being in fiscal year 1924)..	$50,000,000	
Less Canadian National Realties Mortgages..	951,000	
		50,951,000
Balance..		55,375,000
Add bonds issued after 31 December 1924:		
4½ per cent 10 year issued February 1925..	17,000,000	
4½ per cent 5 year issued February 1925..	18,000,000	
		35,000,000
Total..		90,375,000
Less refundings during fiscal year 1925..		24,007,533
Leaving net increase in railway indebtedness to the public for fiscal year 1925 of..		66,367,467

Mr. GRAHAM: Does the great difficulty not arise in attempting to take the figures of one year and apply them to the situation in another? It raises confusion, and in discussing railway accounting it is absolutely impossible to apply it to our fiscal year without misleading somebody.

Mr. MARLER: I thank the Minister of Railways and Canals for the information. He is absolutely correct in what he says. So difficult, indeed, is it to apply railway finances to our fiscal year without an enormous amount of study, I was almost intending to suggest that the fiscal year and the railway year be made exactly the same so that we would know where we stood. It is a great mistake, with a tremendous business expending tens and hundreds of millions of dollars per annum, not to know where the money is going without having to sit down for many a long night, week after week studying these matters in order to put them before the House intelligently. If the government would consider changing the railway year to correspond with the fiscal year, hon. members would be saved a great deal of time.

Mr. GRAHAM: We have to keep the calendar year.

Mr. MARLER: The Minister of Railways and Canals makes a suggestion which I hesitated to make, but which is a very good one. We have all our taxation periods ending on the 31st December now. Our income tax and sales tax comes up as of the 31st December. Practically all companies throughout the country are making their year the calendar year. To compare our statistics with company statistics, or to make any comparisons at all, is almost an impossibility.

If we had them all in the calendar year—railway year, fiscal year, company year, taxation year, that would save trouble to everybody and be far clearer.

Mr. CALDWELL: Would that not also make it possible for us to have the Auditor General's report more up to date than it is at the present time?

Mr. MARLER: I would be very glad to answer that question, but I cannot. I have not very much more to say and I come now to that part of my remarks which, perhaps, is surrounded with more difficulty than anything else. That is the allocation and reflection of the railway bond issues emitted every year on the net consolidated debt of this country. I have spoken about what the various budget speeches disclosed and did not disclose, and it is not necessary to labour that point any more at the present time. I have made it clear, I think, to all hon. members that as regards the hon. member for Shelburne and Queens (Mr. Fielding) and the present Acting Minister of Finance (Mr. Robb), whatever bonds were emitted were at least set out in the budget statement year after year. That is not the point in question. The point in question is this, as to how much of those bonds emitted year after year, have to be added, using that argument, to the net consolidated debt or, if you put it in another way, to the combined debt of the country. In other words, hon. gentlemen have complained that in a certain year we paid out a great deal of money in cash on account of the railways and we charged that in the net consolidated account. Consequently, the deficit was very large. Now, they say, you come along and say to us: We do not intend to pay out cash, but we intend to finance by way of bonds. Consequently your net deficit is very much less or you may have a surplus as the case may be. There is a good deal in that argument and it has to be fairly faced. The question of policy is one which does not make any difference one way or the other in the financial arrangements. Whether the railways are financed by way of cash or by way of bonds, it matters not, all the obligations of the railways are our debts and have to be taken into consideration in some way or another. If $20,000,000 is issued, guaranteed or unguaranteed, in any particular year, that is reflected in the debt of the country, perhaps not for bookkeeping purposes in the consolidated debt, but in the combined debt of the country. We owe that money and we have to pay it. Of course, as against it, we have the assets, if any, purchased by the funds or proceeds of those particular bonds. Therefore, in the last analysis it does not make any difference whether we pay cash or issue bonds, for practical purposes we have to take into consideration the net result which is obtained.

Mr. LADNER: Would it not be fair to the public of Canada if the budget had disclosed that very phase of the question to which the hon. member refers That is the point I raised a moment ago, about the $10,000,000 cash advance last year and $97,000,000 in 1922. The public cannot understand it.

Mr. MARLER: My hon. friend does not get the point at all. It does not make the slightest bit of difference how the thing is financed. The budget speech could not disclose this aspect in any possible way. The budget year is entirely different from the railway year, and it is utterly impossible for the Minister of Finance to put in his budget speech the railway speech. They are two entirely different things. My hon. friend does not grasp the significance of the situation.

Mr. LADNER: The hon. gentleman likes to carry a superior demeanour in this House.

Mr. MARLER: Not at all.

Mr. LADNER: I do not propose to accept it even though I am a back-bencher. What I wish to ask the hon. gentleman is this: Would it be too much trouble for the Acting Minister of Finance, in a word or two, to have noted the fact that the cash advance this year is small compared with those of other years, so that the public would know that, although the obligation was still there, it was in a different form? It is not very much, but it is important.

Mr. MARLER: I do not think it would have caused the Acting Minister of Finance the slightest pain to say that. As a matter of fact he said it in so many words; he said, "I have advanced the railways $18,077,000 and I have issued bonds to such and such an extent of which $17,000,000 has been used for refunding purposes." It is all there. But what information does that give to the public, my hon. friend asks. The public will not sit down and study the public accounts; they cannot be expected to. That is the point I make with the government to-day, and I say that if we have a statement such as I have described we shall know exactly where we stand. But the government is not trying in the slightest degree to conceal what has been done from year to year; it says frankly, "This year $18,000,000 has been spent in cash and there has been so much

in bonds, and last year there was so much in cash and we issued so many bonds." That is all perfectly clear to my hon. friend, I hope.

Mr. EULER: I hesitate to interrupt, but it is on a point on which there seems to be considerable confusion and difference of opinion as well. I grant at once that when the government guarantees bonds or makes advances in cash to the National railways the debt is increased; there can be no doubt about that. But if that guarantee of bonds or advance in cash to the extent of twenty, thirty or fifty millions is used for capital expenditures, for which there is an asset in the railways, will the hon. member say, as hon. gentlemen opposite contend, that this has a direct influence on the deficit? It adds to the debt, but does it increase the deficit? I say not.

Mr. MARLER: It is not an easy question to answer. I say that it does increase the deficit. The sum of $25,000,000, let us say, is advanced in cash and $25,000,000 in assets acquired, and my hon. friend says that whereas on one side of the ledger you have a debit and on the other side a credit, the one offsets the other and there is a wash-out and consequently no increase. That would be quite correct if that asset were active. But it is not an active asset.

Mr. EULER: Why is it not?

Mr. MARLER: How can my hon. friend say that $50,000,000 which we have advanced this year is good, and $50,000,000 which was advanced so many years back is bad? We have $800,000,000 advanced to the railways and that $800,000,000 is good or it is bad. But my hon. friend cannot say that because $25,000,000, which is advanced this year is used for a particular extension, he will therefore chop that off and consider it as good and say consequently that there is a corresponding credit entry.

Mr. EULER: When an ordinary business, such as a manufacturing concern, makes an increase in its plant and equipment, will the hon. gentleman say that the management regard that increase as a loss? Because a deficit is a loss in the strict interpretation of the word. If you increase your assets you do not incur a loss; you increase your liabilities, it is true, but you have a corresponding asset. If you build a branch line you incur a debt but you have an asset against that debt.

[Mr. Marler.]

Mr. MARLER: You have nothing at all except an inactive asset. If a business concern adds to its assets it does so only in the hope that the addition will earn money.

Mr. EULER: And that is what the railways are doing.

Mr. MARLER: I know that my hon. friend, who favours public ownership, is extremely hard to convince.

Mr. EULER: That is the difficulty with you; you are opposed to it.

Mr. MARLER: I am not opposed to it at all, but I want to see the expenditures of the country lessened and I want to face the situation quite honestly.

Mr. EULER: So do I.

Mr. MARLER: I am sure my hon. friend wants to do that.

Mr. MEIGHEN: Will the hon. member permit me?

Mr. MARLER: In a moment. What I say is that the assets of the railways must be considered as non-active assets in our combined debt until it is shown just what they are worth. The assets are there and we do not know what their value is, and we must treat them in the consolidated debt as inactive.

Mr. EULER: If the hon. member says that the $800,000,000 consists of inactive assets, he will see that some of that may be a loss; perhaps the whole of it might be a loss. But why segregate any portion of it? On the basis of that argument you might destroy the whole investment of the railways.

Mr. MARLER: I am not segregating anything, but the hon. member is; he is segregating a particular expenditure. The hon. member says that if you build a branch line for $25,000,000 that particular branch line is an asset. I say, let us take the whole thing together.

Mr. EULER: What is the purpose of building a branch line if it is not an asset?

Mr. MARLER: The hon. member wants me to say, as I am ready to say if it will be any solace to him, that the building of a branch line will add something to the dead asset behind it. But I say that we should treat the whole of the railways as a dead asset until it becomes a paying concern. There is no doubt about that.

Mr. MEIGHEN: Is it not a fact that in all budget presentations for some years back the deficit, as finally disclosed, has meant a deficit over capital as well as over ordinary expenditure, and therefore an increase in the debt?

Mr. MARLER: Is my right hon. friend speaking about deficits in the consolidated fund?

Mr. MEIGHEN: No. But is it not a fact that, as finally disclosed in all budget presentations for some years back, for at least seven years, the deficit has always represented the deficit over capital as well as over ordinary expenditure, and therefore has been a real increase in the debt? The hon. member will find that this was the case in 1923, in 1922, in 1921 and 1920.

Mr. MARLER: My right hon. friend is mistaken. There is no deficit whatsoever declared in either Sir Thomas White's budget speech or the two budget speeches of the hon. member for West York.

Mr. MEIGHEN: My hon. friend misunderstood me.

Mr. MARLER: Will my right hon. friend be patient a moment? The accounts were not finally completed at all, and the fault which my right hon. friend and those around him find is that in 1923 the Minister of Finance (Mr. Fielding) showed a deficit of $31,000,000, whereas, they say, in the present budget speech the same method is not followed. But I am pointing out now that neither in Sir Thomas White's budget speech nor in those of the hon. member for West York was the method adopted in any way different from the present method.

Mr. MEIGHEN: The hon. member misunderstands me, as I know he will see in a moment. This year the acting minister has a claimed surplus of $1,800,000.

Mr. MARLER: Not at all.

Mr. MEIGHEN: I used the word "claimed," and I should be as indignant as the hon. member if that adjective were not used in connection with the present surplus. He will see that in the budget speech that surplus is claimed.

Mr. MARLER: My right hon. friend has been reading a book while I have been speaking, and that is why he does not understand the point.

Mr. MEIGHEN: Well, I can read a little and still catch up. A surplus of $1,800,000 is claimed over capital as well as over ordinary expenditure. Is it not also a fact, I ask, that the $35,000,000 of a surplus claimed last year was over capital as well as over ordinary expenditure? And it is equally true that the $31,000,000 of an admitted deficit of the year before took into account capital as well as ordinary expenditures over the revenue. It is true of all three years; in fact, this feature is common to all budget speeches for seven years back.

Mr. MARLER: Not at all.

Mr. MEIGHEN: Will the hon. member admit that it is true of the last three?

Mr. MARLER: No, I will not admit that.

Mr. MEIGHEN: The hon. member is wrong.

Mr. MARLER: I am not wrong, I am taking the budget speech as it is written.

Mr. MEIGHEN: Let the hon. member ask the Minister of Finance and he will see.

Mr. MARLER: This year no surplus is claimed over all expenditures; it is on ordinary account only. And in precisely the same way as was the surplus claimed in the two speeches of the hon. member for West York and in Sir Thomas White's speech; there is no difference. I thought I explained this to the right hon. gentleman an hour and a half ago.

Mr. MEIGHEN: Let the hon. gentleman ask the Minister of Railways and he will find that I am right.

Mr. MARLER: I will not ask the Minister of Railways anything.

Mr. MEIGHEN: Why does the hon. member not try to be right? He is wrong.

Mr. MARLER: I beg your pardon, I am not wrong. The surplus of $1,800,000 this year is figured out in precisely the same way as was the so-called surplus in the speeches of Sir Thomas White and the hon. member for West York. There is no difference at all.

Mr. MANION: May I ask the hon. member a question? What does he think of the $4,000,000 of arrears of interest added as an extra surplus? He has not dealt with that yet.

Mr. MARLER: Certainly, I did not intend to speak on that because there is a precedent—exactly the same thing was done under the regime of my right hon. friend. The question of amount is neither here nor there. In 1920 an asset called the Southern Alberta Land Company was written down as non-

active, in the following year it was written up as active.

Mr. MEIGHEN: But—

Mr. MARLER: Let my right hon. friend be patient. I have the floor at the present time. It may be extremely unpleasant for him to hear these things, but I cannot help that. I repeat, it is not a question of amount at all. It is precisely on all fours with what the member for West York did in 1920. I am not discussing whether the $4,000,000 is there or not; that is a question for the Department of Finance to concern itself with. As in any business, we have to take a valuation based on what the officers of the department say. If they value the asset at so much, and say the value is there, I for one would take their word. But I am talking of the principle involved. I did not mention it before because I did not want to hurt the feelings of my right hon. friend. I repeat, precisely the same thing was done in the case of the Southern Alberta Land Company, and if he looks at the accounts for 1920 he will find that the member for West York wrote that asset down and the next year he wrote the same asset up. The company is now insolvent or next door to it.

Mr. MANION: Does the Acting Minister of Finance in this statement not distinctly say that the $4,000,000 is available for meeting these other cash payments that he made?

Mr. MARLER: Not at all.

Mr. MANION: He does. I can quote his words.

Mr. MARLER: The Acting Minister of Finance does nothing of the kind.

Mr. MANION: I can quote his words.

Mr. MARLER: How can he do anything of the kind? He brings down a surplus of $1,823,000, and he says that we have advanced the railways $19,000,000. He is applying the amount of the increased asset against that. He simply deducts the $4,000,000 odd from the net debt, he does not speak of it as cash at all. It is a perfectly proper book-keeping entry in all respects. It has been done before, every year you will find the active assets written up. I will give my hon. friend a few examples. In 1921 there was written up $315,655, in 1922, $138,847, and in 1923, a small amount. These sums I admit are not as large but the principle is the same. But Mr. Speaker, I have almost forgotten what I was going to speak of next. And nearly everybody else has forgotten, I expect.

[Mr. Marler.]

Mr. MANION: My hon. friend said that the Acting Minister of Finance did not claim that the $4,000,000 was available. Would he mind my reading the words of the Acting Minister of Finance?

Mr. MARLER: Yes, if he will read the whole of the account.

Mr. MANION: I will read the paragraph. I may possibly be wrong, but I think not. The Acting Minister of Finance said:

To this must be added the sum of $4,000,162 previously referred to, making a total of $5,823,162 as a reduction in dealing with our net debt, on account of government services proper.

This is the part I direct particular attention to:

This amount is available to be applied on account of our loans to the Canadian National Railways of $18,027,000—

And so on. How is it available?

Mr. MARLER: Go ahead, read further.

Mr. MANION: All right.

—to Canadian Government Merchant Marine of $900,000; and to the Quebec Harbour Commission of $600,000, all of which, while being assets, but for the present considered as non-active, are to be added, thereby making an increase of debt during the year of about $13,703,838.

Mr. MARLER: Certainly.

Mr. MANION: He says the amount is "available." Where is the $4,000,000 arrears of interest available? "Available" in Greece and Roumania perhaps.

Mr. MARLER: The Acting Minister of Finance never suggested directly or indirectly that he had $4,000,000 cash paid in.

Mr. MANION: How could it be available otherwise?

Mr. MARLER: Does not my hon. friend understand book-keeping entries? There was a similar instance in connection with the Southern Alberta Land Company.

Mr. MEIGHEN: It was not added to the surplus.

Mr. MARLER: It was deducted from the deficit.

Mr. MEIGHEN: It was taken into the debt account but not into the surplus account.

Mr. MARLER: My right hon. friend is quite mistaken. It was taken into the debt account in 1920 and written up in 1921. There is no question whatsoever about it.

Mr. MEIGHEN: That is different from the surplus.

Mr. MARLER: My right hon. friend will not see the point; of course it is very unfortunate and a very unpleasant point for him to see.

Mr. EULER: I apologize for interrupting my hon. friend, but may I put to him one more question? I think I understood him to say that because of the fact that the railways at the present time are losing money, moneys on capital expenditure, or guarantees for that purpose, must be considered as part of the deficit. If I am correct in my understanding, I should like to ask him this question: If the railways should suddenly become profitable, would he then do the reverse thing and take all these cumulative capital expenditures, which might run into $100,000,000, and credit that one year with a surplus of that amount?

5 p.m.

Mr. MARLER: By all means; that is the very point in question.

Mr. EULER: It is quite absurd.

Mr. MARLER: Not at all, it is an ordinary business transaction. If you have an asset dead you call it dead; but if it starts to earn money you write it up.

Mr. EULER: Would you say that if you have a manufacturing business, for example, worth $100,000, and it does not pay one year, that it is worth nothing, and if the next year it begins to pay that then you have $100,000 surplus? It is the same thing exactly.

Mr. MARLER: My hon. friend takes an extreme point when he gets on this particular question.

Mr. EULER: I am afraid it is mutual.

Mr. GRAHAM: Governments do not take stock of their assets; private concerns do.

Mr. MARLER: Mr. Speaker, the question I was discussing a few moments ago was this; as to whether the bond issues emitted on account of the railways should be added to the net consolidated debt each year or not. I debated that point at some little length. I showed that the disclosures had been made in the various speeches of the Acting Minister of Finance and his predecessors in office. Now, the whole question is this: They were not mentioned in previous speeches, they were not mentioned in the speeches of the member for West York at all, but my right hon. friend who leads the opposition takes this stand—and I admit there is a great deal in it—that you do not need to add these bonds so emitted to your debt at all, providing they are all for refunding, or if only part is for refunding and the balance not so used for refunding is paid out of the consolidated fund, then again you do not need to add it to the national debt. Let me give the House a concrete example of that, because it is a somewhat complicated calculation. The position taken by my right hon. friend is this: If in any given year we have guaranteed bonds, say $20,000,000, issued on account of the railways, if that $20,000,000 is all used for refunding, then there is no increase in the national debt, it is simply a cross entry. If $10,000,000 is used for refunding, the other $10,000,000 need not be added to the national debt, provided it is taken out of the consolidated fund and cash advances used for refunding purposes. That is all quite clear. But following out his argument, it would be this: If all that $20,000,000 was not used for refunding, or if there was an insufficient amount to make up the difference between the two, then that would have to be charged to the national debt. I think I have made that position perfectly clear as I understand my right hon. friend.

Mr. MEIGHEN: I think so.

Mr. MARLER: Now we have to get down to a final analysis of this matter. We have to see how these bond issues are reflected in the combined debt, as I call it, of the country in any given year, or in the consolidated net debt. In other words, how in any given year has the debt increased? Before doing that I want to say that the principle enunciated by my right hon. friend has never been carried out. It was not carried out by his government, absolutely not.

Mr. MEIGHEN: I think it was.

Mr. MARLER: I am sorry to contradict my right hon. friend. I have taken the figures with great care, I have had them compared by the Railway department, and they went to the Finance department and were there checked, and the amount in bond issues that my right hon. friend put out, less the refunding balance, was never added to the net consolidated debt.

Mr. MEIGHEN: There was no balance.

Mr. MARLER: My right hon. friend is quite wrong. I am giving him the figures absolutely.

Mr. MEIGHEN: I got them from the Railway department too.

Mr. MARLER: More than that, if my hon. friend so desires, after this sitting is over I will send him the schedules of account.

In other words, I want to be perfectly open with my hon. friend, because in accordance with his argument, in the year 1920 bonds were issued for railway purposes to the extent of $42,109,026.

Mr. MEIGHEN: Subdivide it. There was $50,000,000, $25,000,000, $25,000,000 and another $11,000,000.

Mr. MARLER: Does my hon. friend want them subdivided?

Mr. MEIGHEN: Yes.

Mr. MARLER: I will subdivide them for my hon. friend if he desires that, but I do not see any particular reason for doing so; it will only cloud the issue. I think we had better leave it at the whole amount, as it will be easier for hon. members to understand; I will subdivide it if my hon. friend desires that. But that was the actual amount issued in the year 1920, $42,109,026.

Mr. MEIGHEN: I think there was more than that.

Mr. MARLER: I am not taking into consideration the Grand Trunk acquisition bonds, because they were paid really for acquisition purposes. I am taking the emission of bonds as they are ordinarily issued at the present time, so as to make a perfectly fair comparison.

Mr. MEIGHEN: I think there was more than that.

Mr. MARLER: I do not think so. I think that was the full amount. It balances out, and the figures have been checked by the two departments, and they have found them correct. Therefore, according to my right hon. friend's reasoning, if that is not to be included in the public debt it would have to be used for refunding, or the part of it not used for refunding would have to be paid out of consolidated fund in cash.

Mr. MEIGHEN: This is what I contended before and would again, not exactly as the hon. member says: That any excess of guarantee over the total amount of reduction of funded debt, whether the funded debt was reduced out of the proceeds of the guarantee or otherwise, as long as there was any excess guarantee over the amount of reduction of funded debt, however attained, that is the real addition to the national debt.

Mr. MARLER: I take issue with my right hon. friend in his use of the word guarantee. Time and again he has used the words "all bonds issued". I am taking into consideration every bond issued for railway purposes whether guaranteed or not.

Mr. MEIGHEN: I did not.

Mr. MARLER: My hon. friend has done so time and again.

Mr. MEIGHEN: But not for the purpose of—

Mr. MARLER: I am doing it for this very purpose, in order to be absolutely fair to my hon. friend and to this side of the House also. I am taking all the bonds in. Why not?

Mr. MEIGHEN: It is a different comparison.

Mr. MARLER: It is not different at all. What is the objection to doing so? They are all our debts.

Mr. MEIGHEN: In a sense, yes.

Mr. MARLER: Whether guaranteed or not guaranteed, they are all our debts, so why not take all the bonds into consideration, then deduct refunding and see what the balance is, and whether that balance has been paid out of consolidated fund or not.

Mr. MEIGHEN: The hon. gentleman—

Mr. MARLER: Perhaps I should continue my argument.

Mr. MEIGHEN: The hon. gentleman should not invite questions and then get cross with me if I put them.

Mr. MARLER: I am not cross. I have never been in a better temper in my life. The only thing about my hon. friend is that he always attributes his own demeanour to everybody else.

Mr. MEIGHEN: The hon. gentleman invites interruptions, but he does not take them well.

Mr. MARLER: I have had nothing but interruptions, and the afternoon will be gone in a few moments if we do not hurry up.

In 1920 bonds were issued for railway purposes to the amount of $42,109,026, and from the proceeds there was used for refunding, $17,109,026, leaving a balance not used for refunding of $25,000,000. Now in accordance with the argument of my right hon. friend that $25,000,000 should have been paid out of the cash charged into the consolidated debt and used for refunding purposes. As a matter of fact, not $25,000,000 was taken from consolidated fund for refunding, but $6,114,237, leaving a balance from the bond issues not used

for refunding of $18,885,763, which in accordance with the reasoning of my right hon. friend should have been added to the deficit of that year, but it was not added.

Mr. MEIGHEN: The hon. gentleman has missed my point.

Mr. MARLER: I do not see how it is possible to have missed it. My right hon. friend has missed my point; I think he has deliberately missed it.

Mr. MEIGHEN: I see your point exactly, but if you will not let me explain, go ahead.

Mr. MARLER: My hon. friend can reply to this when he speaks in the debate. The whole debate from that side of the House has centred around this very point. I have spoken to this point, and my right hon. friend can make an explanation in his speech on the budget if he thinks it worth while. In the meantime, if he so desires, I will furnish him with my figures so that he can study them out for himself. I am satisfied that my figures are right, and that the assertion that has been frequently made from that side of the House that we should add all our guarantees to the consolidated debt is a practice that was not followed in past years. The assertion has been made, not once but time and again, that everything not used for refunding had been added to the national debt. That is not the case at all. It has never taken place. It has never been done in any budget statement at all in this country.

If we take the year 1921, precisely the same thing happened. Bonds were issued that year to the extent of $77,000,000. There was used for refunding $48,943,961, leaving a balance not used for refunding of $28,056,039. Again that amount of $28,056,039 should have been paid out of the cash charged into the consolidated debt for refunding purposes, according to the reasoning of hon. gentlemen opposite. But there was no $28,000,000 paid out that year, but only $7,438,664, leaving $20,617,375 which, according to my hon. friend's reasoning, should have been added to the deficit of that year; but it was not added. Now the point I want to make is this and I come back to the point I have made before, that the financial statement as submitted by the Acting Minister of Finance is made up in exactly and precisely the same form as previous statements, not only in form but also in substance, and the guaranteed bond issues—do not misunderstand me; I am not saying they should not be added to the debt, but they never have been added so far in estimating the surplus or the deficit. That is the position. I think what we want to get down to in the last analysis, in reply to my hon. friend from Brandon (Mr. Forke), and it is a question that has taken a considerable amount of consideration to figure out perfectly correctly, is this: What is the amount by which we have increased our combined debt, that is our net consolidated and our railway debt, during certain periods by way of expenditure? I think that is the point my hon. friend wants to get at. To get at that you have to take the consolidated debt expenditure, and you have to take the railway bond issues, less refunding from proceeds of bonds, and less refunding from cash on consolidated account. Now this is the situation, and I am comparing it with such three-year periods taken exactly along the same lines. I am charging against each period all the bonds issued, guaranteed, or unguaranteed, giving credit for all the refundings taken from bonds or taken from cash, and this is the result for the two three-year periods:

1st period—fiscal years ending 31st March, 1920, 1921 and 1922		
Increase in net consolidated debt owing to expenditures other than demobilization and after allowing for increase by reason of transfer of active assets to non-active list..	$ 256,884,485	
Increase in railway indebtedness to the public during same period after allowing for all refunding operations.	50,884,485	
Total increase net consolidated and railway..		$ 307,124,600

That is taking and using exactly, specifically, word for word the argument which was used on the other side of the House as regards this railway expenditure. Then I take the next period which I have made up in exactly the same way without deviating a single hair's breadth from the manner in which the previous statement was made up. That is to say for the three-year period ending 31st March, 1925—and I may say incidentally that I have looked at this matter from an accountant's standpoint, from the viewpoint of the man interested in public affairs so as to place the truth before this country and this House—comparing the expenditure which has taken place in the last three years with the actual expenditure in the three previous years this is what I find:

Increase in net consolidated debt owing to expenditure other than demobilization.. ..	$ 3,060,740
Increase in railway indebtedness for the same period..	102,122,196
Increase, net consolidated and railway.. ..	105,182,936

Or $201,931,664 less than the previous three-year period. Now there is a fair and honest statement which can go before the country, a statement showing every question taken up, a statement showing all the ordinary expenditure, all the railway expenditure, made up on exactly and precisely the same lines as hon. gentlemen opposite themselves have made it without the slightest deviation; and it shows identically and absolutely an excess in expenditure for the three years under the administration of hon. gentlemen opposite of $201,000,000 over our expenditure for a like three-year period.

Now, Mr. Speaker, I am sorry to be speaking at such length—

Some hon. MEMBERS: Go on.

Mr. MARLER: While I am on the question of the railway may I say one word regarding it. I also have a table here giving the increase in the combined debt of the country which with the permission of the House I will place on Hansard so that hon. gentlemen may read it. The statement is as follows:

First period, fiscal years ending 31 March, 1920, 1921 and 1922		
Increase as follows—in net consolidated debt		
Demobilization expenditure..	$ 363,249,099	
Transfer of assets from active to non-active list (nearly entirely advances to railways previously made in cash and before 1920 treated as active investments).. ..	228,115,555	
Expenditures other than demobilization..	256,240,115	
Total increase in net consolidated..	847,604,769	
Increase in railway indebtedness to the public over same period..	50,884,485	
Total increase in period in "combined debt"..	898,489,254	$ 898,489,254
Second period fiscal years ending 31 March, 1923, 1924, and 1925.		
Increases as follows in net consolidated debt		
Demobilization expenditure..	5,385,842	
Transfer of assets from active to non-active list.. ..	904,730	
Expenditure other than demobilization..	3,060,740	
Total increase in net consilidated..	9,351,312	
Increase in railway indebtedness to public..	102,132,196	
Total increase in period in "combined debt"..	111,473,508	111,473,508
Total increase in six year period in "combined debt".		$1,009,962,762

As regards the railways I am sorry in any way to hurt the feelings of my hon. friend from Waterloo (Mr. Euler)—

Mr. EULER: Have no fear.

Mr. MARLER: —and others who support public ownership. I hope that my hon. friend from Laprairie and Napierville (Mr. Lanctot) will approve of what I am going to say.

Mr. LANCTOT: I am quite satisfied.

Mr. MARLER: I want hon. gentlemen here, and I want the country, to understand if I can the enormous amount of new money placed each year in the railways. It is not a fair proposition when we reach the railway accounts or reach the budget accounts that we should take two accounts and say that adding these two together there has been a vast sum of money spent because the refundings have not been taken into consideration. The actual effect of refundings is an extremely difficult thing to get at, so difficult that very few will even venture upon the computation. The figures which I am giving represent the new money, taking into consideration everything, but not the interest due to the government, spent upon the railways for the six years in question:

Year	Expenditure in new money
1920..	$106,823,987
1921..	144,237,643
1922..	105,658,469
1923..	59,683,705
1924..	85,050,703
1925..	84,394,467
Total..	$585,848,974

I do not know what hon. gentlemen think of expenditures to that extent. I do not know how long they think the country can keep up an expenditure on our railways of something averaging almost $100,000,000 per year. It seems to me that we cannot stand that pace very long.

Mr. EULER: Will the hon. gentleman permit me—

Mr. MARLER: Just one moment if you please. It seems to me we cannot stand that pace very long. What I want to make quite clear to hon. gentlemen in this House is this—and I speak not for all but for a certain part of the city of Montreal—that city does not want new expenditures made there on railways. No matter how uncomfortable they are at present, they would much rather put up with the discomfort than have vast amounts of money spent in terminals or anything else in that city. I want to make that perfectly clear to the government, if I

can do so in that respect, with all due consideration. My hon. friend from North Waterloo wanted to ask a question.

Mr. EULER: My question was this: Does the hon. member not consider it fair to take into consideration the fact that when the roads were taken over by the government they were in a deplorable condition; they had not sufficient rolling-stock, they were not properly equipped to do business as a railway system. But now they are so equipped you may expect in the future not to have any of the great capital expenditures that you have had in the last four or five years?

Some hon. MEMBERS: Hear, hear.

Mr. MARLER: The public ownership of railways is evidently received with great favour in this House. If we spend $100,000,000 a year for the National railways we are going to find ourselves railroaded out of existence. In 1920 we spent $106,000,000, in 1921, $144,000,000, and in 1922, $105,000,000. Would not my hon. friend from North Waterloo imagine that after all these expenditures the National railways ought to be in proper shape, if they are ever going to get into that condition at all?

Mr. EULER: Will the hon. member answer my question?

Mr. MARLER: The hon. gentleman asked me if it is likely these expenditures will go on. They have gone on; I have given proof of them. In 1924 we spent $85,000,000 and in 1925 we spent $84,000,000.

Mr. EULER: We have heard that before.

Mr. MARLER: We really cannot go on spending money like water on our railways.

Mr. FORKE: May I ask a question?

Mr. MACLEAN (York): Would the hon. gentleman allow me—

Mr. LANCTOT: One at a time please.

Mr. FORKE: I wonder if those people in Montreal, would be of opinion that not another dollar should be spent on railway building if they lived twenty miles from a railroad?

Mr. MARLER: My hon. friend is quite mistaken with respect to our attitude as regards railway expenditure. We are not complaining of the expenditure made to help people out in the west.

Mr. FORKE: I thought you meant all capital expenditure.

Mr. MARLER: No, that is not the idea at all. What we complain of is the palatial trains, the number of trains running between Montreal and Toronto, between Montreal and Ottawa, and between Montreal and Quebec. We complain of the installation of radio systems at Ottawa, Moncton, and Victoria—all such expenditures as that. Unless we economize in the expenditure on our railways, and on everything else, we cannot reduce the taxation.

Mr. FORKE: I agree.

Mr. MARLER: We realize that the west must have railway accommodation.

Mr. CANNON: Would my hon. friend cut out the Canadian National trains or the Canadian Pacific trains?

Mr. MARLER: The Montreal people want to cut out trains equally on both lines.

Mr. CANNON: And leave the Canadian Pacific in possession of the field.

Mr. MARLER: Not at all. Let me tell my hon. friend that if we had the Shaughnessy plan the country would be better off to-day.

Mr. CANNON: Not at all.

Mr. MARLER: Yes, much better.

Mr. MACLEAN (York): May I ask a question now. I read in a local paper that Sir Henry Thornton, in reply to a question, declared that the suggestion that the deficit on the National railways was due to public ownership was nonsense. My hon. friend (Mr. Marler) who made a very good statement here this afternoon is trying to blame the condition of affairs on public ownership and not on the real conditions.

Mr. MARLER: I do not desire to-day to weary the House any longer by entering into a controversy about the railways. I intend to discuss the railway situation when we come to the consideration of railway estimates. I merely took the opportunity of pointing out to this House and placing on Hansard a statement of the amount of money which we have spent, which is directly connected with the financial affairs of this country and comes under the scope of the remarks I have made to-day. That is, the amount of new money we have placed in railways year by year, and if my hon. friend from South York and my hon. friend from North Waterloo can get any comfort out of it, they are welcome to all the comfort imaginable, because I can get none.

Mr. MACLEAN (York): And we are taking it.

Mr. MARLER: My hon. friend can take all the comfort he likes out of it. I do not get any comfort out of it, because the 30th April is coming along and my income tax will go into the railway deficit.

Even taking into consideration railway expenditure, we have to take into account to some extent other expenditure also and we have to try if we can,—and I think we can—to practise the virtue indicated by that hated word "economy",—hated by every politician from one end of the country to the other—and if possible to do without luxuries, so that taxation can be reduced, because that is after all the only way we can reduce it.

In my remarks to-day I have attempted to give a clear exposition of the financial position in reference to the statement submitted by the Acting Minister of Finance, and to controvert statements from another quarter of the House by members who have been ministers of the crown, and which I think they should not have made.

Mr. A. E. ROSS (Kingston): I am sure that hon. members of this House and the ordinary people of the country will be delighted with the clear exposition of the financial statement as set forth in the budget. If I were to describe this, I would say that we have to-day listened to a second budget speech. That has not been unusual since this government has come into power. We have had on nearly every occasion two or three budget speeches. The hon. member for St. Lawrence-St. George (Mr. Marler) started out this afternoon to make the situation perfectly clear, and he ended up with as much criticism of the statement of the Acting Minister of Finance as ever came from this side of the House. Now, Sir, if we ordinary people have been delighted this afternoon with the differences of opinion as expressed by these giants of finance, principally on the other side of the House, I am in greater confusion that I ever was as to the situation. Two simple questions were submitted to the hon. member to-day, neither one of which he answered. But we had all the assurances in the world that these questions would be answered. One was a simple question, what is the actual deficit to-day—the actual deficit or surplus whichever you like to call it? That question has not been answered. It may be that my poor mental capacity has not been able to grasp it, but I would be very much surprised if any hon. gentleman in this House has been able to say from the speech of the hon. member for St. Lawrence-St. George what it really is.

Mr. MARLER: I gave that deficit for the three-year period.

Mr. ROSS (Kingston): What was the answer?

Mr. BOYS: What was the answer? I was not here and would like to get it.

Mr. MARLER: I think my hon. friend had better proceed with his speech. The answer is in Hansard.

Mr. ROSS (Kingston): I am willing to have it answered now.

Mr. MARLER: I gave my hon. friend the figures for the three-year period. The increase in the debt for the three-year period was a hundred and five million some odd thousand.

Mr. BOYS: That is not the question.

Mr. ROSS (Kingston): Permit me to say that each time the hon. member speaks he makes confusion worse confounded. We ask him for the deficit of this year, a very simple question. Now he is giving it to us in three-year periods. In other words any hon. member who wishes to know the financial position of the country must take the budget back for years. Why should he stop at three years, four years or five? Why not go back to ten? This is the position in which we ordinary members are placed to-day. We cannot get the deficit for this year. Unfortunately my hon. friend has left the chamber, and I will ask him on some other occasion what the deficit or surplus, whatever he calls it really is, and I will reserve further remarks on this particular point until he is in the chamber.

The budget debate, despised as it is in the press and in the country, brings to us a flood of valuable information from different parts of Canada which we appreciate and which we derive not so much from listening to the speeches as from reading in Hansard the opinions of the different members of the House. It has a peculiar influence on some members. In the case of some members it produces a spirit of prophecy. This mantle was thrown over the shoulders of the hon. member for Victoria, Ont. (Mr. Thurston) the other night. Under the influence of this debate he predicted the absolute dissolution of the party in this section of the House known as the Conservative party. According to his prediction in twenty-five years this party was to

be absolutely dissolved. I do not know his reason for such a prediction, but it looks to me more like the whistling of a boy going through the woods, or some dark place, to keep up his courage, or perhaps a funeral had just passed by a short time before and he had to make a noise to divert his thoughts. The hon. member for Victoria had heard of a funeral which had passed some time before. That funeral was the passing of a party to which he claims allegiance in Ontario, known as the Farmers' party. The funeral was a big surprise and occurred in spite of predictions which had been made in regard to the party concerned. In 1920 that party in the Ontario legislature numbered some 45 members, and the Conservative party numbered 25. Predictions were very plentiful in the legislature,—and I heard them at the time, being a member of the legislature,—that the old political parties had now come to the point where they were going to be dissolved and disappear. But unfortunately for those predictions, when the local election of 1923 came about, the party making those predictions was reduced to a baker's dozen, whereas the Conservative party now numbers some seventy-seven members. The hon. gentleman was likely whistling to keep up his courage, because he had, I suppose, looked up the figures in regard to his constituency. For the legislature that constituency is divided into north and south ridings and I would like to show the dissolution which took place after the election of 1923. In 1920 in North Victoria the Rev. Edgar Watson, Progressive member, received 3,348 votes; Robert Mercer Mason, Conservative, 2,430 votes, a majority for the former of 918. In 1923 the Rev. Edgar Watson received 2,353 votes and James Raglan Mark, Conservative, 2,711 votes, or a majority changed over in these two elections in favour of the Conservatives of some 1,270 votes. If we look at the southern part of his constituency, we find that in 1920 Fred George Sandy received 2,542 votes. John W. Wood, Conservative, received 1,103 votes, or a Progressive majority of 1,349. In 1923 Robert J. Patterson, Conservative polled 3,880 votes, Frederick G. Sandy, 3,354 votes and L. V. O'Connor, Liberal, 1,865 votes, leaving a Conservative majority of 526. This was the way in which the Conservative party dissolved, died, disappeared, following predictions such as we have heard here by local members in the legislature. The Conservative party will enjoy a dissolution of that kind, and if the predictions and prophecies continue and produce the same results, we have no complaint with regard to the future.

The budget debate in addition produces some gymnasts. In the last three years we have been amused at the speed with which some members of this House can jump from one part of the House to the other according as the budget pleases them. It has also produced courage in some members. The leader of the party to the left (Mr. Forke) has become very courageous this year. In fact, he says that he has now nailed his colours to the mast. Unfortunately, we who have watched the different budget debates are amused by this great display of courage. One has only to read the statements made by the hon. gentleman in the past, and there are a number to which I would like to draw the attention of hon. members and ask where these colours will be hoisted. It looks to me as though he was sailing in a vessel in which he could change the colours quite often. In fact, it is very often a vessel with a camouflaged colour, so that one does not know what kind of a vessel it really is. He said:

> As regards reduction of taxation we are ready to say amen to it. We will not in any way quarrel with the carrying out of such reductions. Now we are patiently waiting to see what they have done to cut down the expenses of carrying on the business of the country.

Having nailed his colours there, he immediately proceeded to support the government which put upon the people of this country an increase of 100 per cent in the sales tax. Again, speaking of the growing cost of government, he said:

> The country demands economy, but I do hope that the economy effected will be a wise economy.

Having hoisted the colours again, he immediately proceeded to support the government in an increase in the cost of civil government of $265,000, an increase in the Immigration department of this country of $680,000, an increase in the Public Works capital expenditure of $1,100,000. Again he nailed his colours to the mast in saying:

> We expected the estimates would be cut down very considerably.

And again:

> I think it is a mistake that so many supplementary estimates should be brought down in the dying days of the session.

On each of those occasions the hon. member voted for the government on the very policy for which he condemned them. Therefore, this year when he announces that he has nailed his colours to the mast, we are patiently waiting to see how soon this colour

will be taken down and transferred to some other part.

Coming to the financial report as submitted by the minister, like many members of this House, I have for weeks and weeks studied this report in order to get some idea where we stand. I do not wish to go any further than to get an idea of our actual condition year by year. It is not a matter of importance to me what they did ten, twenty, or even six years ago. It is of great importance if we can understand what we, as members, are doing in this House from year to year. It is important if we can grasp just the ordinary figures as given to us. While we are not greatly interested whether we have a great or a small surplus, every hon. member is anxious to know whether ordinary expenditure from year to year does at any time equal or surpass ordinary revenue. As an ordinary member of this House I took the figures as given by the Acting Minister of Finance (Mr. Robb). He gives us the statement that we have derived revenue amounting to $244,000,000; that we have expended $342,177,000, leaving what he calls his actual surplus of $1,823,000.

This is the point where we enter into discussion and we try to ask questions as to whether or not we have this surplus. We have listened to the hon. member who has just concluded and I must say that even now he has not made clear to me whether there is a surplus or whether there is a deficit of some $16,000,000. And why do I say $16,000,000? I give that figure for this reason: having adopted their new policy of giving cash out of the fund, the government gave to the National Railways some $18,000,000, and if that is a cash grant out of our revenues, what other conclusion can we come to than that we have a deficit of $16,000,000? If it is not regarded in that way, then, according to the acting minister, it should go into our debt. But if it is derived from the revenues and taken out of the fund, the minister should explain what the actual cash is; and we as ordinary members cannot figure it in any other way than to apply that to the expenditure of $342,000,000, which would leave a deficit of $16,204,000. The hon. member has laboured all afternoon and has not made that one point clear; and the bone of contention is as to how we shall account for that $18,000,000 given to the railways. If it is taken out of the fund it should surely go as ordinary expenditure and so make a deficit of $16,000,000. The next point in the statement refers to the public debt.

[Mr. A. E. Ross.]

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, April 23, 1925

The House met at three o'clock.

COPYRIGHT ACT AMENDMENT

Mr. W. G. RAYMOND (Brantford) presented the second report of the special committee appointed to consider and report upon Bill No. 2, to amend and make operative certain provisions of the Copyright Act, recommending that the committee be given leave to sit while the House is in session.

CANADIAN GOVERNMENT MERCHANT MARINE

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I lay on the table copies of the sixth annual report of the Canadian Government Merchant Marine. These copies are in English. Copies in French will be brought down in a few days.

REPORT

Correspondence between the government of the United States and the government of Canada in reference to the St. Lawrence Waterway.—Hon. Mr. Graham.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PINHORN RECEIPTS AND EXPENSES

Mr. GARDINER:

1. What were the receipts from the customs port or quarantine station of Pinhorn, Alberta, for the fiscal years of 1920, 1921, 1922, 1923 and 1924?

2. What were the expenses for the same port for the same years?

Hon. Mr. COPP:

Department of Agriculture.

1. 1920-21, $2.00; 1921-22, $6.50; 1922-23, $12.75; 1923-24, $20.00; 1924-25, $7.75.

2. 1920-21,

D. Coristine, veterinary inspector, salary, arrears, bonus and expenses	$3,752 20
Coal for quarantine station	43 75
Total	$3,795 95

1921-22:

D. Coristine, veterinary inspector, salary, bonus and expenses	$3,106 15
Coal for quarantine station	156 00
Total	3,262 15

1922-23:

H. J. Elliott, veterinary inspector, salary, bonus and expenses.. ..	$3,314 15
Repairs to quarantine station.. ..	374 00
Ploughing fireguard..	36 00
Coal for quarantine station..	132 00
Total..	$3,856 15

1923-24:

H. J. Elliott, veterinary inspector, salary, bonus and expenses.. ..	$2,573 99
Repairs to quarantine station.. ..	93 00
Ploughing fireguard..	36 00
Coal for quarantine station.. . ..	138 50
Total..	$2,841 49

1924-25:

H. J. Elliott, veterinary inspector, salary and expenses..	$2,603 18
Repairs to quarantine station.. ..	133 36
Ploughing fireguard..	30 00
Total..	$2,766 54

In connection with the above figures, inspection fees are only collected on commercial entries of animals, while those imported as pure-breds or settlers' effects receive free inspection and test, if required. The location of Pinhorn is such that commerical entries of live stock may be considered negligible.

The veterinary inspector stationed at that point does not, of course, confine his duties to the inspection or test of animals entering Canada, but is used in connection with mange work or such other work as may be required, which has been of very considerable magnitude in some of the years covered by the above figures.

Department of Customs and Excise.

1 and 2:

	Receipts	Expenses
1919-20..	$ 390 00	$ 1,712 82
1920-21..	45 00	1,308 75
1921-22..	130 70	1,362 50
1922-23..	232 80	1,497 60
1923-24..	1,422 51	961 50

EXPERIMENTAL FARM, OTTAWA

Mr. STIRLING:

1. Has the Government sufficient land for experimental farm work at Ottawa?

2. Is any land available for such purpose conveniently situated to the present farm?

3. Does the government contemplate buying any more land in the near future in connection with the development of experimental farm work at this point?

4. If so, where and when, and at what price?

Hon. Mr. MOTHERWELL:

1. No.
2. Yes.
3. The matter is under consideration.
4. Answered by No. 3.

CAMP BORDEN

Mr. CHURCH:

1. Is it the intention of the government (or has any promise been given) to remove the Royal Canadian Air Force aviation camp from Camp Borden to Camp Mohawk at Deseronto?

2. If so, what is the reason for the change and the cost of such removal?

3. Were other sites centrally located and owned by the government, such as Long Branch, considered?

4. If any change has been decided on, on what grounds was the removal deemed necessary and what officer of the department recommended it?

Hon. Mr. MACDONALD:

1, 2, 3 and 4. The matter is under consideration.

EXPORT OF ELECTRICAL POWER

Sir HENRY DRAYTON:

1. Under the regulations of the government will the tax on the export of electrical power be placed on the exporter or will such export be made illegal unless paid by the importer?

2. In case the tax is placed on the exporter is any provision made to cover the case of power exported under firm long term contracts or will the municipalities bound by said contracts be obliged to pay the said tax?

Hon. Mr. LOW:

1. The exporter will pay the tax.
2. No.

CANADIAN NATIONAL RAILWAYS —RETIRING GRATUITIES

On the Orders of the Day:

Mr. W. J. WARD (Dauphin): Mr. Speaker, in the session of 1923 I brought up the question of certain gratuities given to retiring officials of the Grand Trunk railway. As will be seen by reference to page 1667, volume 2, of Hansard of that year, the question was asked as to whether or not certain officials would be called upon to return the amount awarded them. The Minister of Railways (Mr. Graham) announced, and his statement will be found at page 1668 of the same volume, that the officials in question were going to refund the gratuities they had received. I should like to know whether the officials in question have made such refund, and if so when?

Mr. SPEAKER: I think the hon. gentleman had better give notice of his question, it is rather involved and could not be answered

offhand. The hon. gentleman will therefore give notice as required by the rules of the House.

Mr. WARD: I did give notice to the Minister of Railways (Mr. Graham) that I intended to ask this question.

Mr. GRAHAM: I can answer it, Mr. Speaker, if you like.

Mr. SPEAKER: I think we should adhere to the rules of the House, and it is in the interest of proper procedure that notice should be given of such questions. This question can be placed on the order paper.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Wednesday, April 22, consideration of the motion of Hon. J A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. A. E. ROSS (Kingston): When the House rose at six o'clock yesterday I was proceeding to narrate the difficulties of the ordinary member in his attempt to grasp the financial situation as presented in the budget speech of this year. The second budget speech, as delivered by the apparently second Acting Minister of Finance, (Mr. Marler) has left us in a position of great confusion. We got as far as the statement that the ordinary revenue of the country was $344,000,000 and the ordinary expenditure $342,000,000, leaving a supposed balance or surplus of $1,823,000 odd. But we ordinary members were nonplussed by this grant of cash of $18,027,000 to the Canadian National Railways. If we take that as ordinary expenditure, no matter where it has been obtained, we have a deficit of $16,204,000; but if we accept the conclusion as arrived at by the hon. member for St. Lawrence-St. George (Mr. Marler), and with which we in this section of the House agree, namely that all assistance to the railways, whether cash, guaranteed loan or unguaranteed loan, is to be taken as a debt of this country and should be so marked and should be included in our obligations, then we can without any further discussion and without any evasion say that our additions for the year to the national debt comprise the following items:

[Mr. Speaker.]

Cash to Canadian National Railways.. ..	$ 18,027,000
Last year's vote to the Canadian National Railways..	56,527,000
Further estimates to be voted this year..	7,500,000
Vote for branch terminals..	18,000,000
Total..	$100,054,000

From this amount we subtract the apparent surplus of $1,823,000, leaving a debt net or deficit of this country of $98,231,000. No one can deny any one of these figures, and I would like hon. gentlemen to note that I have omitted from this list the following items:

Amount of refunding debt..	$17,000,000
Amount to the Canadian Government Merchant Marine..	900,000
To the Quebec Harbour Commissioners..	600,000
	$18,500,000

And as we cannot obtain information as to whether these two amounts are for a certainty included in any other figures given by the minister, we will take it for granted and give the government the benefit of the doubt and leave them out. Therefore we come to this conclusion: that at the very least the additions of this year to the debt upon our country is $98,231,000. I know, Mr. Speaker, that other hon. members will find items in the budget that they will say should be added to it, but as an ordinary member I am taking figures that cannot be disputed. And, taking this minimum amount, can this government or any member of it say that we have a balanced budget? The statement has been made, and no doubt will be made in the future that the budget has been balanced; but in the face of this statement which I have submitted, and any manipulation of the figures by a minister of the crown or by an official of the crown to prove a balanced budget, how can we describe such a statement except by saying that it is untrue and misleading? Some members may use stronger language and in doing so may incur the displeasure of the hon. member for St. Lawrence-St. George (Mr. Marler), who, in dealing with this budget has climbed up the back stairs of the band wagon and is attempting to play the big drum; but so far as we are concerned we will continue to make our affirmation in whatever language we like to use that the budget is not balanced. And in the last few years no Minister of Finance has claimed a balanced budget. Our public debt is mounting by leaps and bounds under this government having this year increased by the large sum of $98,231,000.

Now, sir, let us look at it from another angle—I am not making this statement as a chartered accountant but just as an ordinary member of the House. From time to time

statements are made that our debt has been reduced so many dollars. For a number of years this government has been declaring at the end of each year that there has been a surplus. These statements are made with the intention of leading ordinary members of the House and the public to believe that the debt of the country is being gradually reduced. The financial statement, however, as it is put before us from time to time—

Mr. MARLER: The hon. member used the word "surplus" a moment ago. Hon. members will find precisely the same word used, and exactly the same terms and the same application, in the speeches of Sir Thomas White and of the hon. member for West York (Sir Henry Drayton). Was there an intention on the part of those ministers to mislead the public also?

Mr. ROSS (Kingston): The statement was made by the hon. member—who is one day agreeing with the government and the next day disagreeing, and now that he sees signs of an election he has climbed on the band wagon—that similar declarations were made by former finance ministers. I merely wish to say that the former ministers never made the statement he has made. The hon. member for Shelburne and Queens (Mr. Fielding) did not make the statement that he balanced the budget.

Mr. MARLER: I am not referring to the member for Shelburne and Queens, but to Sir Thomas White and the member for West York (Sir Henry Drayton). Has my hon. friend read their speeches? If he has he will find that what I say is exactly true.

Mr. ROSS (Kingston): Last night I asked my hon friend a simple question and he rushed out of the chamber with his papers. In the years 1922, 1923, 1924 and 1925 there were surpluses as follows:

1922	$34,391,000
1923	62,321,000
1924	72,000,000
1925	1,823,000

Making altogether surpluses of a hundred and seventy million and some odd thousands. Ordinary people like ourselves would naturally think the public debt would be reduced by that amount of money, but instead of that there was an increase each year except one, as follows:

	Increase	Decrease
1922	$ 81,000,000	
1923	31,000,000	
1924		$35,000,000
1925	13,000,000	
	$125,000,000	$35,000,000
Net increase	$90,000,000	

The statement made yesterday by the hon. member for St. Lawrence-St. George would no doubt explain much of this. But the simple statement that there is a surplus or that the public debt is decreasing is not of much use to us. We can only take the statements year by year and ascertain whether during that period we have added any amount to the net public debt or not. This budget, like former budgets, also shows a constantly increasing burden on the middle and poor classes of this country. Let me draw the attention of this House to two or three items. The income tax brought in the following amounts:

1921	$46,000,000
1922	78,000,000
1923	59,000,000
1924	54,000,000

You will notice a decrease each year in the income tax collections. The business profits tax brought in the following amounts:

1921	$40,000,000
1922	22,000,000
1923	13,000,000
1924	4,000,000

In addition to these taxes, which show a gradual decrease, we have the sales tax, cheque tax, transportation tax and so on. From these there was derived:

1922	$ 73,000,000
1923	106,000,000
1924	120,000,000

I claim, therefore, that this budget shows a constant increase in the burden upon the poor people and the middle class, and a corresponding decrease in the burden upon the incomes and business profits of the rich.

An hon. member said the other day that he had been "flimflammed" by the budget. It is rather late at this time to learn this lesson, but it is better late than never. Yes, we and the country have been flimflammed by the statements of this government. I should like to call the attention of the House to two or three of those statements. It has been claimed by this government that taxes are decreasing. Just as I have shown in my statement about the sales tax, cheque tax and transportation tax, I want to show how the taxes have been "decreasing" upon the people of this country. To a question for items in regard to the sales tax, and the amount of money collected from it each year the following answer was given:

1920-21	$ 38,000,000
1921-22	61,000,000
1922-23	91,000,000
1923-24	100,000,000

In 1923-24, when the government had increased the sales tax by one hundred per

cent, there was collected from the people, through their ordinary purchases, $100,000,000. When this tax was reduced in 1924-25, the amount collected was still $62,000,000. There is no great showing there of this direct tax upon the people being reduced.

Another claim made by the government is that they are practising a certain amount of economy. The position puts one in mind of whittlers round the country stores who are armed with a jack-knife and a stick, do nothing but whittle and accumulate about them a lot of shavings, with nothing manufactured, nothing achieved, nothing gained. The government has been whittling at economy for quite a number of years, and I should like to draw the attention of the House to certain results of the efforts of this combination of whittlers across the way. They whittled at the Civil Service, cutting out some little bumps, while they allowed others to grow larger. Under this operation the Auditor General's department increased by $17,000 a year by the addition of one employee. They whittled at the Department of National Defence, cutting out eight clerks, six stenographers and seven file clerks, but they added five clerk typists and three senior stenographers. They whittled out an inspector of harness and saddlery and added one inspector of leather products. They whittled out one inspector of cloth and one inspector of clothing, and they added two inspectors of textile products. They whittled out one packer and one helper and they added two office appliance operators. They whittled out one messenger clerk and they added two office boys. They whittled down pensions by $60,000, but they increased the expense of the Pension board by $13,000. They whittled at the combines stick, and they have not reduced a single combine, although they have spent $50,000 in the whittling. They whittled at the Public Works expenditure, and while they were whittling the cost of the Scribe hotel mounted from $2,000,000 to $3,000,000. This has been the style of economy they have practised in spite of their declaration as to what they were going to do according to their great plan marked out in 1919. I would like to read that. The statement begins:

Whereas, on the 31st March, last—

That is 1919—

—according to the statement of the Minister of Finance, the net public debt was $1,584,000,000, or, roughly, $220 for every man, woman and child in the Dominion, involving an annual interest charge of about $115,000,000; . . . .

And whereas, national disaster will overtake this country should the present method of financing the country's affairs be continued. . . .

[Mr. A. E. Ross.]

Be it and it is hereby resolved that the serious nature of the country's financial situation calls for the profoundest consideration of all patriotic citizens, and the exercise of the severest economy by the government; that increase of revenue must be sought from an equitable and effective imposition and collection of graduated taxes, on business profits and income, applicable to all incomes above reasonable exemptions.

I have given the House an example of the "economy" practised by this government in regard to the income and business profits taxes showing that these have been constantly decreasing while the direct tax upon the ordinary people has been increasing.

I should like also to refer to the question of an export tax on power. I think it can be taken for granted that the people of Ontario, at least the part known as eastern Ontario, are strongly opposed to this idea, for the following reasons. We are now faced with the impossibility of increasing our amount of power. This sale of power to the Americans will certainly further increase the lack of power to us on this side of the line and will also set up competition for the price of power unless something is done by the government. For these reasons eastern Ontario is strongly opposed to this export tax. That part of the province is crying to-day for power; and, as I said in a former address, power means a great deal in the economic life of the people of this province: it means a lessening in the purchase of coal. We feel therefore that our source of power which is at our door, on the St. Lawrence, should be available to us. We cannot afford to wait for the result of this great scheme which is mentioned to-day in the press: I refer to the investigation into the canalization of the St. Lawrence. It would take a number of years to produce power under that scheme, and Ontario requires power to-day. Our supply will be at an end in 1926 and this export tax will certainly lessen the amount available to us.

There is another point indirectly connected with the budget to which I shall now refer, and that is the criticism which has been levelled at the Canadian Government Merchant Marine. I would point out that all that has been said to the detriment of our merchant marine is practically tantamount to a criticism of the shipbuilding powers and capacity of this country; it is absolutely a criticism of the men and the corporations that have been engaged in the business of building ships in Canada. I do not think that either this government or any other government or its followers can afford to indulge in criticism of this kind. I have here a little book from which I obtain my facts in regard to the

marine situation, and I learn that in 1883 Canada held third place in tonnage amongst the nations of the world; her tonnage then was 1,311,000. In 1907 she had slipped back to seventh place with a tonnage of 657,000, a decrease of 654,000 tons. In 1907, Mr. A. G. Baillie published this little book to which I have referred, showing that there was then a tonnage of 1,069,000 of foreign vessels in Canada, not one under the British flag, employing 20,000 foreign seamen and thus debarring from work that number of Canadians. In 1916 Canada had gone back still further, occupying the sixteenth place. In 1915 there were 200,000,000 bushels of Canadian wheat for shipment but not one Canadian ship to carry that product: Canada was a grocery man without a delivery wagon, thousands of customers calling for his supplies. In 1917 Premier Lloyd George cut out transportation of everything except war materials and the necessities of life, and millions of barrels of apples, besides lumber, pit props, and so forth, remained in Canada without any chance of being delivered, thus causing a great loss to the people of this country. Canada had farmed out her shipping to the foreigner and so lost millions of dollars. Sixty per cent of Canada's wheat crop in 1917 was shipped through foreign ports and the farmers paid in excess freight alone to foreign ships some $120,000,000, or $45,000,000 more than was spent in the building of the merchant marine. The situation in British Columbia in 1915 was critical. Australia was calling for apples and potatoes but there were no ships available, while India was demanding railway ties, of which one cargo had been shipped on a foreign boat, other orders which had been given having to go by the board because there were no ships to carry them. Not one British Columbia built ship, it is said in this book, was in the foreign trade. And the situation on the Atlantic was about as bad in 1916. Captain Alexander J. Fraser, of Rexton, New Brunswick, found forty-two ships loading lumber on the Miramichi river, not one of them flying the British flag; they were all Scandinavian with the exception of two which were Russian. Thirty were wooden vessels which paid for themselves in one voyage. So that our merchant marine was built under very critical conditions; the ships were perhaps rather small inasmuch as the war had proven that the loss of large liners and steamers made serious inroads into the world's tonnage, so that it would be more economical to construct smaller vessels. These were the facts during the war, although of course the post-war conditions were different. Now, these Canadian vessels, which have been subject to too much criticism, are not so poor in quality as the critics across the way try to make out. They were built by Canadians at a time when the demand for vessels of that size was greatest, and as this matter indirectly touches the budget I would point out to the House that the criticism which has been directed at our merchant marine is really a criticism of the shipbuilding industry of Canada, which we should encourage rather than injure in any way.

There are some other matters which I should like to touch upon, such as, for instance: the defence of our Pacific coast; the culture of our fisheries; assistance to develop our ores in this country; the wastage of our natural resources; and the effect of the coal tax. But I am going to leave these points for a future occasion. I want now to sum up certain features of the present situation in Canada; and before proceeding I will observe that it has been sufficiently established that the government in the present budget have demonstrated that instead of reducing they have increased the debt as well as the taxation of the country. I do not want the House to go away with the impression that the government have not accomplished something; there are certainly things which they have accomplished and which I shall enumerate without going too much into details. The government have brought down a "balanced budget" at the expense of a tremendous skyscraping public debt; they have established a harbour at Belle River without ships; they have established an elevator at Prince Rupert without grain; they have established an immigration office in Paris without immigrants; and they have succeeded in deporting more good red-blooded Canadians than have left the country in any other era, with all its factors, in all our history. The result of their efforts has been so great along these lines that even one of their celebrated commissions joined in the exodus until it was called home by the Acting Minister of Finance (Mr. Robb); I mean the pulpwood commission. The government have succeeded, too, in providing jobs for the best political hacks that have stood by them in past years; and to give them credit, they have accomplished one of the best things in the Department of Agriculture, they have procured a balanced ration for the hen.

Now, Sir, in view of this list of accomplishments the Prime Minister (Mr. Mackenzie King) has now decided to throw down the gauntlet and call on the fray. He has sent his colour sergeant to hoist the colours,

to raise the standard, and the hon. member for Chambly and Vercheres (M. Archambault) has unfurled the flag. The fight is not to be on these matters of paramount interest to Canadians, but again it is to be waged upon the graves in Flanders and upon the sorrows and the mistakes of the Great war. In other words, the great federal fight is now to be waged on the Ross rifle. I should like to say, by way of answer to a question which I put to the hon. member, and which he did not answer, that the adoption of this rifle cannot be laid at the door of the Conservative government. It was developed following the disadvantages which the British and Canadian troops laboured under in South Africa, through their rifles being outdistanced by the celebrated Mauser rifle with its better sighting. As a private in that war I know whereof I speak. The Ross rifle was assembled in Quebec, and it was adopted in 1906 on the recommendation of the then Minister of Militia in the Liberal government, Sir Frederick Borden. To show how for a few years the improvement of that rifle was secured practically through the influence of Conservative members of this House, I may say that in 1906 and 1907 the Northwest Mounted Police were armed with it, one thousand rifles having been sent out to them. But in a very short time they discarded the Ross rifle and returned to the Winchester and the Lee-Enfield. The Ross rifle was adopted in 1906 by general order No. 104. Complaints were made during that year by the Conservative members of the House as to its defects, and as a result an investigation was held at which witnesses from all parts of Canada were examined. One of those witnesses was the deputy minister of the department, Colonel Fiset. His evidence was that he knew nothing about it. But as director general of the medical services he must have known that year after year from various camps complaints were made about that rifle.

Sir EUGENE FISET: Will my hon. friend permit me? He knows very well that when the contract for the Ross rifle was entered into, it was on the recommendation of the Small Arms committee, which was presided over by the late General Sir Sam Hughes. The recommendations of that committee always went directly either to the minister or to the cabinet. Therefore it is not surprising that the deputy minister did not know anything about the Ross rifle.

Mr. ROSS (Kingston): Mr. Speaker, I quite expected that this explanation would be made. The Ross rifle was adopted in 1906, and the Small Arms committee was not organized until a year or two later. That very point was raised in the debate at the time. I quite agree that the then Colonel Sam Hughes had a lot to do with it. But he was not Minister of Militia at that time, he was not even deputy minister.

Sir EUGENE FISET: I did not say so.

Mr. ROSS (Kingston): May I correct the hon. gentleman? The adoption of the Ross rifle was not on the recommendation of the Small Arms committee, it was on the recommendation of a committee of experts appointed by the minister. Am I right?

Sir EUGENE FISET: Yes. I beg the hon. gentleman's pardon. But the hon. gentleman mentioned that the recommendation came from the then Minister of Militia. I said the rifle was adopted on the recommendation of the Small Arms committee.

Mr. ROSS (Kingston): Which did not exist then.

Sir EUGENE FISET: But I say that when the contract for the Ross rifle was entered into it was as stated by my hon. friend on the recommendation of a special committee, presided over by Colonel Sam Hughes.

Mr. ROSS (Kingston): I leave it to the House to decide. There is a difference between a Small Arms committee and a committee of experts, for which the minister is absolutely and entirely responsible. Now, before this Small Arms committee was formed an investigation was held on the complaints that came from members of the Northwest Mounted Police and the militia. To show how this rifle was foisted upon the militia, it is significant that during that investigation men who were in charge of the camps and districts attended and were prepared to give evidence as to the defects of the rifle, but in the committee room they found the Minister of Militia facing them, and they decided that if they were to hold their positions they had better keep their information in their pockets; which they did. But a sergeant of the Northwest Mounted Police was brave enough to bear the brunt. In spite of a lot of brow-beating he stuck to his opinion as to the defects of the rifle. Thereupon the investigation was called off, with the intimation that it would be renewed in the Public Accounts committee the next year, but nothing more was ever heard of it. Then came the formation of the Small Arms committee, and the rifle having been improved in the meantime, in 1909 our men were able to take first

place at Bisley. From that time on no further complaints were heard until the change of government came, when it was found that a contract had been entered into by the former Minister of Militia with the Ross Rifle Company for delivery of many thousands of these rifles. Eighteen thousand were delivered in 1908, another thirty-eight thousand in 1909, and they were being delivered a thousand at a time right up to the outbreak of the Great war. Now, I think it was a great mistake for the hon. member for Chambly and Vercheres (Mr. Archambault) to blame the loss of our men at the front upon the defects of the Ross rifle. The adoption of the Ross rifle was an effort on Canada's part to develop a national small arms weapon, an attempt to have a rifle possessing long range and splendid sighting. But when the Great war came that rifle was found to be of no use in the trenches. It was too long, it was a straight-pull rifle, and it had not undergone sufficient tests to prove whether or not it would jam. Unfortunately under actual war conditions it did jam, and no doubt lives were lost. But undoubtedly the earlier defects of the rifle had been pointed out by the Conservatives, and its improvement was due to the Conservatives, and if it had not been for their action our first division would likely have gone to France armed with the old Mark 1—and God knows what the disaster would have been in that event.

So that, if disasters followed the use of the Ross rifle, the improvement of it was the result of the continued complaints and demands for investigation. Even in 1908 there was a demand in the House of Commons for an investigation, which was refused by the then minister. It is too bad that these things have to be brought up. I am not speaking harshly of anybody; I know that accidents occurred and mistakes were made in the war. During that first fight of St. Julien the men were not experienced not only with the rifle but with other equipment they took very little care. On the plains of Salisbury we had to fit them out three times at the very least. We repeatedly drew their attention to the necessity of going out and keeping their water bottles full. All these things were forgotten by the men until the disaster came upon them, but from that day on there was an improvement in this respect, and the men benefited by their experience. If any party is to be blamed for the Ross rifle you might just as well blame them for the want of preparation in combating the gas, for which we were never prepared.

The second great point in this campaign over which the flag has been unfurled, in the fight that is to be waged, is that 100,000 unfit men reached England. I do not care to discuss that. As the late Deputy Minister of the Department of National Defence (Sir Eugene Fiset) knows well, it was all due to a want of proper medical examination. But in spite of that I would point out that unfit men reached France and gave sufficient service there as unfit men to offset the $150,000,000 which was lost by the unfit men in England. I would say this, in answer to it all: If this is to be the slogan of the fight, then it is to be remembered that these men at least reached England, and that some of them reached France.

To pass on quickly, I want to say that the Prime Minister (Mr. Mackenzie King) and this government have had a great heritage passed into their hands in the way of the mines, the forests and the other natural resources of this country. So far their policy has been one of dissipation, both in men and in natural resources. The natural resources are flowing in streams from the shores and the borders of this country. Our sons and daughters are passing in great numbers over our boundaries, and your graphs and figures and budgets are not preventing their exodus. Within the borders of our country the condition of our people is largely unheeded by this government. The present condition in one section particularly is a blot on our national life. Appeals have been made to this House, in the House and out of it, but they have not stirred the Prime Minister. Let me read to you his pledge and that of his party in this respect and ask whether this, another of the great pledges, is being fulfilled:

> Therefore this gathering of Liberals in convention assembled pledges itself to a vigorous prosecution of the measures best calculated to conserve the life and improve the physical standard of our Canadian citizenship.

Mr. Speaker, in view of the appeals being made to this House and of the condition of the people in one section of the country—I refer to Cape Breton—I ask, is that pledge being fulfilled? Is the attention being given to the conserving of the life of our people in that part of the country which is pledged by the government in this undertaking? The excuse has been put up that this is a provincial matter. It is not so much a provincial matter; in a former address I pointed out that health was a Dominion matter and that federal relief had not been confined to large or small cases; that it had been varied in its

application. During the history of this country we have provided large amounts by way of relief for different purposes. In 1880 this country sent over to the relief of distressed Ireland, $100,000. In 1899 this parliament sent to the West India sufferers, $25,000. In 1902 this parliament sent to relieve the sufferers in connection with the volcanic disaster in the West Indies, $50,000. In 1906 the San Francisco earthquake and fire disaster was the occasion of a gift of $100,000 from this country. In 1907 and 1908 the sufferers through the earthquake in Jamaica received $50,000 from Canada. In 1909, $100,000 was contributed to the relief of sufferers from an earthquake in Italy. In 1915 the sum of $25,000 was granted by parliament in connection with the Newfoundland sealing disasters. In 1921 typhoid conditions in Europe were relieved by this parliament through a contribution of $200,000. Following the disaster at Halifax the Conservative government, or Union government, whatever you like to call it, brought down a vote of $25,000,000 for the sufferers there. In 1918 those affected by the disasters at New Waterford and Stellarton were assisted by the Union government to the extent of $25,000, $10,000 going to New Waterford and $15,000 to Stellarton. Yet in the face of this condition the present appeal for relief falls upon stony hearts so far as this House is concerned, and we see our people suffer.

I am not going to say whether this condition is due to one cause or to another, but from the reports brought here and the appeals made it is evident that children

4 p.m.

are suffering, that they are ill fed and poorly clad, and the result must be to bring about neurasthenic and tubercular conditions. The plight of the women is also a serious one. Looking at the children they have brought into the world and seeing them suffer for want of food must produce among them a neurotic or neurasthenic condition from which they may suffer for years to come. Amongst the men, if this strike condition continues, there will develop a spirit of spite, hatred and malice, followed, perhaps, by murder and arson. All these things are a blot upon our national life and should not be allowed to continue. Grant that it is an industrial conflict; then, Sir, I would point out that we have at the head of this government a man who is by experience most capable of dealing with just such a situation, according to his own words. I have here a pamphlet published by himself containing a speech which he delivered in parliament outlining his services in connection with the adjustment of relations between workers and employers in war industries. Now, Sir, a man who has had that experience should be best able to cope with a comparatively small matter of adjustment such as that which now demands attention in Cape Breton. In this pamphlet he is given the credit of solving the problems connected with the industrial civil war then taking place in the industries of the Colorado Fuel and Iron Company. He was thanked by the Colorado Fuel and Iron Company for his services on that occasion. He settled the difficulties in connection with the Bethlehem Steel Company plant, according to this statement, and he adjusted the differences between the Standard Oil Company and its workers in Indiana, when the men received an increase of 11.11 per cent in wages and a six-day week. Here, Sir, is a little David who went out against these industrial giants of another country and settled all these problems. Yet a festering sore exists in our own Dominion and nobody has the courage to come and settle it.

I might refer to other conditions. The exodus is an old story in this House. The existence of the exodus is denied yet it is still going on. I read to-day in the paper that twenty-five men a day are leaving Cape Breton, and I have here another item which speaks of greater numbers leaving. I do not know the man who is at the head of the latter movement but I want to say that many of the men in Cape Breton are war veterans and they have my sympathy. The clipping that I have refers to a Glace Bay war veteran, A. R. MacDonald, who up to 1914, when he returned home to join the Canadian Expeditionary force, spent several years in the Argentine. He is one of the movers of this scheme, open to returned men only, under which it is proposed to take a colony of about one thousand men from Cape Breton to the Argentine. Mr. MacDonald is quoted as saying: "Under the government we now have in Canada, the chances are that this number"—he is speaking of the 100,000 ex-service men who have been expatriated to the United States—"will be augmented considerably this year." He adds that if suitable arrangements can be made with the Argentine government a thousand veterans will be moved from the Glace Bay district. I have also received this morning another communication which contradicts the claim that conditions are satisfactory in Canada. There was an election in West Hastings. I am waiting for the cheers from hon. gentlemen opposite.

Mr. CASGRAIN: We won it.

Mr. ROSS: Yes, and here is the result. This is a letter which was sent out this morning, I think other members of the House received a copy:

Dominion Combing Mills Limited, Trenton

DEAR SIR.—

1. Are you aware of the fact that the action of the Department of Customs in not enforcing the Customs Act is equivalent to discrimination against our firm?

2. Items 555 and 556 of customs tariff are not being enforced.

3. The Commissioner of Customs and his staff are aware of this and admit the facts.

4. This duty was placed on the statute to encourage someone to establish a key industry.

5. After investigating the matter and being assured there was a duty on wool tops, we established the finest combing mill in the world at Trenton, Ontario, capable of taking care of the entire requirements of all the worsted spinners in Canada.

6. Over 15,000 citizens of Canada are financially interested in the success of this company and all the wool growers in Canada, and numerous other industries, will profit by its success.

7. The failure of the government to enforce and collect the duty as called for, means a loss of over half a million dollars a year in revenue, on wool and wool tops, and a severe hardship to the shareholders in this company.

8. The officials of the department claim that they cannot enforce this duty without instructions from the Finance Minister.

9. As one of the law makers of this country, will you please call the attention of the Finance Minister to the unfairness to us in this matter, and use your best influence to have the law properly administered.

I predict that as a result of this situation this large industry, one of the finest that we have in Canada will soon pass into history like many other of our woollen mills.

In conclusion I wish to say that the present budget, like the former three which have been brought down under the present administration, demonstrates that this government has failed in its promises of economy, reduction of the public debt, and reduction of government costs. It has failed in its efforts to lower the cost of living, to break combines, to give employment to the people. In the discussion on the unemployment situation which has taken place the government have admitted that our only hope is in the provinces; that their own hands are tied and that they are as helpless as a new born babe; that the words of the Prime Minister and the Minister of Labour are as sounding brass and a tinkling cymbal. It is apparent that the Prime Minister and his sleeping partners can no longer inspire enthusiasm and hope in the hearts of the people, many of whom have migrated to fields of greater hopes whilst many more are still going. This condition will continue until the country awakens to new life under a new policy and a new leader—a new leader who will introduce a policy which shall protect, and in protecting upbuild again and develop the shattered industries of Canada, including our great primary industry of agriculture.

Mr. S. W. JACOBS (George Etienne Cartier): Mr. Speaker I had some doubt in my mind for a considerable time as to whether the Ross rifle really was a good weapon or whether it was not, but after the feeble attack made by the gallant general from Kingston I have come to believe that in attack the Ross rifle is a very feeble thing indeed. Nothing new of any kind or character was introduced by the hon. member today except a lot of glittering generalities in which everyone indulges who has really not very much to say of a concrete nature against the government. As for myself, Mr. Speaker, I think that if I were to attack the government I perhaps could do better than the hon. gentleman.

Mr. HOCKEN: Go to it.

Mr. BOYS: Begin at once.

Mr. MEIGHEN: Follow your judgment and go right at it.

Mr. JACOBS: I am afraid that if I were to start anything of that kind it would make me somewhat unpopular on this side of the House, and I am always mindful of the story of Balaam who was sent to curse and remained to bless. In any event I think it is quite wise for me to remain within the lines. I want to say, Mr. Speaker, that if I have obtained any share of the good will of my colleagues in this House, and I hope I have, I think it is due to the fact that I address the House as infrequently as I can. I find that the man who speaks the oftenest here is most unpopular. I also find that the hon. gentlemen who are always talking about economy are the gentlemen who are the least economical in the matter of time when addressing this chamber. It has been calculated that it costs the country $18,000 per day when the House is in session. This, I believe, is the nineteenth day upon which we have been debating this motion. That would mean that we have involved the people of Canada up-to-date in a cost of over $300,000 and I do not think it is worth it.

Some hon. MEMBERS: Hear, hear.

Mr. ARCHAMBAULT: And my hon. friend is proceeding to add to the cost this afternoon.

Mr. JACOBS: No, my contribution to the cost will not amount to very many dollars, but I can assure my hon. friend that if he objects I will be willing to turn the amount back into the treasury.

The tariff is brought up every year and discussed ad infinitum. I have been in this House for over eight years. I have listened to the various discussions upon the tariff, and so far they have left me cold. I do not believe that any one member in this House during the past fifty years has changed his vote as the result of the debate on this question of the tariff. If he changed his vote it was for some reason other than the tariff; the tariff was given as the reason for it. The tariff has been attacked on the one side for its inadequacy and on the other for its iniquity. But we have the tariff with us, and we shall always have it. It is impossible for this country to get on without a tariff. I think every hon. gentleman will admit that. If we have a tariff it should be in my humble opinion one that will protect us against other countries. What is the use of a tariff that will not protect? We may as well have no tariff at all. It is only natural that I should express views of this kind, coming from the district from which I come. It is possible that if I lived in a western province I would hold vastly different views from those which I hold now. It is a matter of atmosphere, geography and votes. Votes, after all, are the most important thing. So that when I hear people talking patriotically about the tariff it makes me smile. It is purely, as I said before, a question of geography and nothing else. After all, what does tariff tinkering amount to at the present time? We have got beyond the point of appealing on the question of the tariff. Suppose we raised the tariff on this item or on that item two and a half per cent, or lowered it two and a half per cent, do hon. members think that will affect the country? I say that it will not. We have reached the condition of affairs now that the financial condition of the country and the success of our country are not going to depend upon the question of the tariff, but on other and more important questions. The railway question, for instance, is the most important matter in the country. We had some figures from the hon. member for St. Lawrence-St. George (Mr. Marler)—and I am sure no person will controvert those figures—to show that this country has paid out to the National Railways in one form or another within the last five years between five and six hundred millions of dollars. How long are we going to be able to continue? If we are going to permit this condition to continue it spells ruin for the country. There is only one solution of this whole question, and that is, instead of having two lines in this country, one-half nationalized and one-half privately owned, we should have one line owned by one or the other, either the government or the privately-owned company. Now the privately-owned company is the Canadian Pacific. I think every hon. gentleman here will admit that the Canadian Pacific has made a success of the running of its lines. It is the most successful and the best managed railway company in the world. And in competition with that we have the Dominion of Canada also running a railway line. The duty of the government of Canada is to govern the country. The duty of a railway company is to run the railway. Now will any person suggest that the Dominion of Canada can run a railway company better than the Canadian Pacific?

Mr. EULER: It may be quite possible.

Mr. JACOBS: Will the hon. gentleman tell me what kind of success other governments who are quite as acute and able as our government have had in the running of railways? What governments have been successful in running railways? Take the case of Australia. It is said that in that country they have the worst served railway in the world.

Mr. EULER: Paying its way.

Mr. JACOBS: It is paying its way, but what kind of a way is it? It is a poor railway. I met a gentleman from Australia, who had travelled round the world, and he stated that never in his experience had he seen such a condition in regard to railways as he saw in Australia.

Mr. EULER: Would the hon. gentleman tell us what he said about the service on the Canadian National Railways?

Mr. JACOBS: I do not know what he said about that, but I do not think any person can object to the service on the Canadian National. It is first-class in every respect. There is nothing better in the world than the service on the Canadian National? And why? Because the Dominion of Canada is at the back of it to pay the piper, without any regard at all for economy. When they need money they say, "Send seven million" or "Give us ten million," or "Give us fifteen million," and like Moses when he struck the rock, the water gushes forth.

Mr. GOULD: I should like to interject the remark that last week a gentleman who had just returned from Australia was in my office,

and stated that the service given there was very good, and that shower baths were provided on the trains in Australia.

Mr. JACOBS: Very good. That shows they have a little water in their stock. For the last two or three days the newspapers have been filled with a surprising bit of information, a discovery made by Sir Henry Thornton, that if the two lines were amalgamated, the combined lines would pay the fixed charges of these two railways. That is quite an important piece of information. It is the first bit of good news we have received from the Canadian National's head for some time. That information was given us in 1921 by Lord Shaughnessy. He told us exactly the same thing as Sir Henry Thornton told us a day or two ago. The Shaughnessy plan, hon. members will remember, was a scheme whereby the Canadian Pacific would take over the Canadian National Railways, eliminate duplication and overlapping, co-ordinate the two lines, and have them run as one; and he proposed that, in consideration of that, their fixed charges would be assumed and a dividend in perpetuity would be paid to the stockholders of the Canadian Pacific. That did not seem to be an unreasonable thing. If they turn over their line they want something in return for it, and that seems only reasonable. What are the figures? As I calculate them, about $35,000,000 per annum is the amount which this government would be asked to guarantee. Now in consideration of that sum, they would take over the Canadian National lines. Lord Shaughnessy in effect proposed that if by some arrangement with the Canadian Pacific Railway certain assets, not being strictly railway property, could be segregated, and the railway property added to the government system, the system would comprise 31,000 miles of railway with a considerable number of parallel lines unimportant or useless. The consideration to be given the shareholders of the Canadian Pacific Railway Company in exchange for the properties above defined would be in the nature of an undertaking by the government of Canada to pay to the shareholders in perpetuity, a fixed annual dividend on the share capital, to be supplemented by a further payment when the whole property was yielding a specified return. The extraneous assets of the Canadian Pacific Railway would be transferred to and be administered by trustees or by a subsidiary company with another board of directors, so that the directors of the railway company would be interested only in the administration of the trust placed in their hands by the people of Canada. There would be no motive for selfishness, if such a thing were possible in the circumstances. The income on their shares being fixed and unchangeable, excepting as above provided, the Canadian Pacific Railway shareholders could receive no advantage from preferential treatment given to any particular portion of the railway system. The directorate would have every incentive for wise, prudent and business-like administration.

These were the broad principles of the plan. As to details, the political management was ruled out as impossible and ruinous and the proposal made that the existing Canadian Pacific Railway management be utilized under the terms of a contract approaching perpetuity in its duration, to administer and operate the whole property for account of the Canadian people. Under the consolidation, and taking 1920 figures as a basis, the gross earnings would be $342,283,000 and the operating expenses $345,973,000; to the latter would have to be added the annual fixed charges of the whole system, the guaranteed dividend on Canadian Pacific Railway preference and common stock, and incidentals; the resulting total deficit would be about $80,000,000. Against this Lord Shaughnessy added a possible saving of $56,000,000 by bringing the combined average of operating costs to the Canadian Pacific level, a saving of about $12,000,000 by reducing these costs four per cent or five per cent more, in years less expensive than 1920 which he thought possible, with the balance easily wiped out by improved conditions of national settlement and development.

Mr. MEIGHEN: What is the hon. gentleman reading from?

Mr. JACOBS: From the Castell Hopkins Canadian Annual Review.

Mr. HUGHES: Did Lord Shaughnessy not stipulate that the best-paying portions of the Canadian Pacific would still belong to that corporation, and that the revenue derived from them would be in addition to the guaranteed revenue of the government of Canada?

Mr. JACOBS: He did stipulate that the property which was not particularly railway property would be segregated and taken out, and that they would turn over merely the railway proper.

Mr. EULER: I am asking for information only because I have forgotten to some extent the particulars of Lord Shaughnessy's suggestions. Would the hon. member tell us what Lord Shaughnessy had to offer by way

of return for the large sum that the Dominion has given or lent to the railway?

Mr. JACOBS: What he had to offer was efficient management and elimination of competition. Surely that is an important matter.

Mr. EULER: Who would continue to pay the interest on the heavy investment?

Mr. JACOBS: The same parties that are continuing to pay it now, until such time as the line may be made to pay. Surely my hon. friend would not expect Lord Shaughnessy to put his hand into his blue jeans and pay the $100,000,000 a year of deficit.

Mr. EULER: Does the hon. member recall that Sir Henry Thornton yesterday, in committee, stated that under his plan of merging, the Dominion of Canada would be paid interest on the moneys that have been advanced; that is, the savings that could be effected would be sufficient to pay interest on all the fixed charges including the indebtedness of the railway to the Dominion of Canada? Lord Shaughnessy does not promise that.

Mr. JACOBS: Of course, Sir Henry Thornton so far has been a splendid promiser. I should like to point this out first, that we cannot in this House discuss what took place in committee yesterday inasmuch as the matter is not before the House. As regards what Sir Henry Thornton is capable of doing, I do not wish to disparage in any way his ability because I have a very high opinion of his ability as a railwayman.

Mr. SPEAKER: The hon. gentleman has just stated what I had in mind, that no discussion is permissible of proceedings before a committee which has not yet reported to the House. I supposed the hon. gentleman referred to what appeared in the papers of yesterday, and that is quite a different matter.

Mr. JACOBS: I was particular to do that, but the chairman of the committee (Mr. Euler) probably thought he was a law unto himself and could transgress the rules. What I said was this, that anything that the Canadian National Railways under government ownership can do for us, the Canadian Pacific can certainly do. They have been in the business for forty years. Their business is to run railways. They have made a success of their railways. In our case, as I have already intimated, we cannot run railways because we are too busy governing the country. That is our business, and I doubt whether we have succeeded in it. This Dominion cannot be a maid-of-all-work. We must restrict our energies to what we are sent here to do and nothing else. I do not know whether hon. members realize the feeling of uneasiness throughout the whole of Canada with regard to this railway situation. We feel that our money is being thrown into a bottomless pit; that every dollar we put into this railway we shall never get back; that we are simply preparing these railways, fitting them up, bringing them up to the mark in the hope that some day we shall be able to turn them over to some individual or company who can run them.

Mr. EULER: Not at all.

Mr. JACOBS: We shall never be able to get a cent of our money back. I do not agree with the hon. member for North Waterloo (Mr. Euler). I rather agree with the hon. member for Laprairie and Napierville (Mr. Lanctot) who said last year that he would sell the railways for a dollar —and has now reduced the sum to fifty cents —to anybody who would take them over and not ask us for another cent.

Mr. MacLEAN (Prince): Does the hon. member suggest a combination of the two lines and a government subsidy with control of rates?

Mr. JACOBS: My suggestion is that the lines should be amalgamated in order that we might never hear the word "subsidy" again; that we should close the door on it, lock the door and throw away the key. I wonder whether hon. gentlemen realize that about 34 cents of every dollar which we collect by any form of taxation from the people of this country goes to the upkeep of the Canadian National railways. Do hon. gentlemen realize that the $50,000,000 which we collect from the income tax pays about 40 per cent of our loss on the Canadian National Railways? How long is it possible for us to go on and pay in that way? There must be a limit to it at some time. There seems to be nothing at the present moment except promises that at some time in the dim and misty future we shall be blessed by having a line which will not cost us anything further in the way of outlay to run. But I am not the optimist that the hon. member for North Waterloo is. I believe that as long as we have this line, it will be a white elephant on our hands; that it is going to bleed us white, and that if we do not take care as to the future, the time may come when there will be a question of repudiation of the debt on this line as well as the debt of Canada to others.

Mr. PRITCHARD: I have been trying to find out, listening to this debate, what are

the total liabilities of the Canadian National Railways on which we are paying interest. Can the hon. member tell us what they are?

Mr. JACOBS: I have no idea. I am afraid to look up to find out. I am frightened to know what the figure is. The hon. gentleman as well as others perhaps ought to be satisfied to know that it is a very large sum and not to know the real facts.

Mr. GOOD: How would the hon. member view the proposal to amalgamate the two lines and put the Canadian Pacific organization in charge just as the Canadian National organization under Sir Henry Thornton is in charge now? Would he expect that they would get out of debt and put the railway on a good foundation?

Mr. JACOBS: What I am trying to argue is that when we eliminate competition, we shall be in a much better position than we are now. We have duplication, overlapping, want of co-operation. Sir Henry Thornton said the other day: "I spent $1,100,000 last year and I intend to continue advertising because I think it is a good thing for my company to do." If we had one line of railway, there would be no necessity for advertising. People would have to take that line or walk. That is only one instance. We would be cutting out all these lines running in a parallel direction from one city to another. I have in mind Ottawa where we have nine railway trains every day taking down a handful of people to Montreal. It is criminal to do a thing of that kind, and all through this country you find the same condition prevailing. It is absurd that we should have our line in competition with another line, and the result is that neither of them can be made to pay. The Canadian Pacific last year barely met their dividend charges. I think they had about $100,000 over, and a large portion of that was taken from proceeds which were earned not out of the line proper.

Mr. GOOD: Does the hon. member argue that the Canadian Pacific organization is much more efficient than the Canadian National organization?

Mr. JACOBS: I am not prepared to say that they are more efficient, but I am prepared to say that we want only one efficient road rather than two inefficient roads. This country has a population of eight or nine million people, becoming less every day, as I shall be able to show before I conclude. We have not room in this country for practically three transcontinental lines. The United States, with their population of 115,000,000 have not one transcontinental line; there is not one uninterrupted line from coast to coast in that country. In Canada on the other hand we had at one time three transcontinental railways. Now, we have room for one, and my proposition is that one of these lines, the Canadian Pacific, should take over the other lines in Canada under some such plan as has been outlined by Lord Shaughnessy. I do not say that we should at once fall in with that scheme, but it is a basis for negotiations. We might be able to work out something, however, if we adopted that plan, that might be better for the people of the country and for the Canadian Pacific Railway as well.

Mr. MEIGHEN: Is it not a fact that there is now, or ought to be at least, less wasteful competition and overlapping than when, instead of the Canadian National Railways, we had three competing systems?

Mr. JACOBS: We had three competing systems apart from the Canadian Pacific and there was a lot of waste. But how did that waste occur? No one knows better than my right hon. friend.

Mr. MEIGHEN: I know.

Mr. JACOBS: We had Mackenzie and Mann every year in the lobbies, and they got away with $25,000,000 on one occasion and $45,000,000 on another; many millions of dollars did they draw from the coffers of this country in order to run these wasteful lines. That is what happened; but thank God that is all a matter of the past; let us hope that we shall have no more of that. Sir William Mackenzie has gone to his reward and the haunts of Sir Donald Mann know him no more. I think that perhaps the people of this country have learned a great many things since the war, and they have learned many things since taking over these lines. They have found that these lines were not run for the profit of the country nor for the profit of the stockholders of Mackenzie and Mann, but for the profit of half a dozen buccaneers who made away with all this money and left us holding the bag.

Mr. MEIGHEN: Then the hon. gentleman agrees that the amalgamation of the three systems was a good thing?

Mr. JACOBS: Yes, the amalgamation of the three would be a good thing.

Mr. MEIGHEN: "Was" a good thing.

Mr. JACOBS: There was no amalgamation of the three.

Mr. MEIGHEN: Yes,—the Canadian Northern, the Grand Trunk and the Grand Trunk Pacific.

Mr. JACOBS: I am willing to admit that that was the only alternative we had; we could only amalgamate them.

Mr. MEIGHEN: Hear, hear.

Mr. JACOBS: I do not think the right hon. gentleman had any option; with him it was a case of Hobson's choice.

Mr. ARCHAMBAULT: What about a traffic arrangement with the Canadian National and the Grand Trunk at the time of the question of the purchase of the Grand Trunk?

Mr. JACOBS: I don't get that.

Mr. ARCHAMBAULT: I mean, what about a traffic arrangement as another alternative?

Mr. JACOBS: Now?

Mr. ARCHAMBAULT: No, I am talking about the time the question was discussed of acquiring the Grand Trunk railway. What does the hon. gentleman think, as another alternative at that time, of a traffic arrangement between the Grand Trunk and the Canadian National Railways? That alternative was proposed in this House.

Mr. JACOBS: I do not think it would have come to anything, because eventually these lines would have had to be taken over and be amalgamated, as they were. I may say frankly that at the time it was done I was rather violently opposed to it, but I have come to believe that there was nothing else for the country to do than to take them over. And now there is nothing else to be done than to give these lines over to the Canadian Pacific.

Mr. ARCHAMBAULT: Give them?

Mr. JACOBS: Turn them over under the Shaughnessy plan or some similar arrangement.

Mr. EULER: The hon. gentleman has made a strong criticism of the "buccaneers" of the railway world in years gone by. Is that not a criticism of private ownership, under which these things occurred?

Mr. JACOBS: Surely my hon. friend does not suggest that every private person is a buccaneer.

Mr. EULER: I did not say anything about buccaneers; it was the hon. member himself who used that term.

Mr. JACOBS: I am referring to certain gentlemen in particular whose names I have no wish to mention, although they are not in this House, who got away with all this money and left the lines on our hands.

Mr. EULER: Under private ownership.

Mr. JACOBS: Private ownership is one thing and buccaneer ownership another. Now, as I said before, we have a population of eight or nine millions to support these two lines, and it will be admitted by everyone, I think, that we do not want two lines in this country. There are gentlemen in this House, in fact I think the same is true of all hon. members, who want only one line; there is not a person who wants two. The question however is, who will run them? Should it be the Canadian government or the Canadian Pacific Railway Company? In this connection I am reminded of one of the Bab Ballads, about the cook and the mate of a ship who were both stranded on an island and who after a time found it necessary to resort to cannibalism. The mate said something like this, "You ought to let me eat you, seeing that I am more in authority than yourself." But the cook did not see it in that light; he said, "'I would be glad to accommodate you, but I am a cook and can prepare meals much better than you can. Why should you want to cook me when you are not a cook?" That is the position to-day in regard to the Canadian Pacific Railway and the Canadian National system; the Canadian Pacific knows how to run railways; they are the cooks, whereas the others are merely mates and nothing else.

As to the suggestion that the Canadian Pacific Railway should be taken over by the Canadian National Railways, I do not think that those who make a proposal of this kind have thought of what the additional cost would be, and that is something that appals me. I am sure there is not a public man in this country who would think of taking over the Canadian Pacific Railway, with everything that that implies, and incorporating it with, I was going to say, a corpse, —at any rate, with something that would be a corpse if we withdrew from it the support which we give it from day to day.

Mr. GOOD: Why not put the excellent Canadian Pacific Railway organization in charge of the combined railways? Why

should not the country amalgamate the two systems, taking over the Canadian Pacific with its excellent organization, and, if that organization is much better than that of the Canadian National, giving it control?

Mr. JACOBS: I would object to that because the ultimate power would be in the hands of my hon. friend from Brant (Mr. Good), of my hon. friend from Lisgar (Mr. Brown), of myself and other members of parliament. And we do not want railways. That is my reason for wanting the Canadian National turned over to a company which would be under no obligations to the government and would not look to the government for support. You give a man a crutch or a stick and he will lean upon it for support until after a while he will not be able to walk straight. We want all the lines brought under an efficient management such as we find in the Canadian Pacific Railway, the best managed railway in the world. I am sure we could make a success of the combination. What has been shown is that under an amalgamation of the two lines there would be no loss. The deficit of the Canadian National Railway system last year was $57,000,000 and the addition to the funded and unfunded debt was $119,000,000. Can we sit quietly by and allow this sort of thing to go on, when we are told by the heads of the railways that all that is necessary to eliminate loss is an amalgamation of the two systems? That is a question I put to hon. gentlemen.

Mr. GOOD: Was not the proposed guarantee of the minimum of ten per cent, which the Canadian Pacific wanted, a crutch?

Mr. JACOBS: No. Three per cent of that ten per cent comes from the land department of the Canadian Pacific Railway; and then there is the ocean service, which would not go in. What they want is a guarantee of the dividends which they have been able to pay their stockholders for the last twenty-five years. And that is reasonable. They are earning the dividends now and have been earning them for years. Why should they make any arrangement that would endanger these dividends to their stockholders, giving them nothing in return? They want to have those dividends turned into bonds and to have a guarantee of $35,000,000 a year, a paltry sum having regard to the very vast amounts which we have been paying out since taking over the Canadian National Railways. And they say that when this is done the lines will be amalgamated and they will be able to show by figures that there will be no loss to the country, while the fixed charges will be met from year to year.

Mr. FORKE: All this is very interesting and we are getting information, but I want to ask the hon. gentleman a question. If all the railways in the country were run by a private corporation, would he still be in favour of having the railway commission fix the rates? Otherwise, would not the country be entirely at the mercy of the company?

Mr. JACOBS: The line would be controlled by the railway commission, who would fix rates, indicate what branch lines were to be built, and so on, as they do at the present time. The railway company would be the creature of the railway commission. There is no suggestion at all that the railway commission should be abolished. Such a suggestion would not work. I grant you that if this vast monopoly were to begin to function without some regulative body such as the railway commission, it would be a disastrous thing for the country.

Mr. CANNON: If that be so, what happens to government interference that my hon. friend was criticizing?

Mr. JACOBS: This is not government interference.

Mr. CANNON: All the railway commission's decisions are subject to revision by the government.

Mr. JACOBS: After all, public opinion counts for something.

Mr. CANNON: It does here also.

Mr. JACOBS: There may have been some little sporadic criticism of the railway commission from my friends on the opposite side, but it was well-intentioned criticism, and I do not think they ever questioned the honesty or integrity of the commission.

Mr. MEIGHEN: Has the hon. gentleman looked up the recent life history of the Minister of Agriculture?

Mr. JACOBS: I am afraid my right hon. friend was taking the Minister of Agriculture seriously on that occasion. I think it may be gathered from the remarks I have made this afternoon that I am not quite in favour of public ownership of railways. I wish to make that clear to the House. I have always been opposed to public ownership when private ownership can be made to apply, because I believe in the efficiency of private ownership. I believe that private ownership has been able to accomplish almost everything that has been accomplished so far in this world, and that

public ownership, or the interference by governments and by governing bodies generally, has always been a brake and detriment to progress. I am talking generally. In any event I throw out these suggestions for what they are worth. I feel that the temper of the people is in favour of some change in our railway policy, and that the sooner we do something along these lines the better it will be for the government and for the country. Our people will not stand very much more of this tinkering with our railway system. It is a running sore, it is something which must be cured. We have to do something, and at once; and my suggestion, I hope, is a fair solution of the problem. I have yet to hear from any public man in Canada that the taking over of the Canadian Pacific line by the Canadian National, running as it is, is going to meet with the approval of this country. To me it is just like taking a healthy child who has never been sick and putting him to bed with a sick child suffering from a contagious disease. That is exactly parallel to what would be done if we put the Canadian Pacific Railway in with the Canadian National Railways.

Mr. MacLEAN (Prince): Do you think you would have had those advances from the Canadian Pacific Railway a few years ago, before the Canadian National Railways made the showing they have made under the present management?

Mr. JACOBS: Do you mean advances looking to an arrangement?

Mr. MacLEAN (Prince): Yes.

Mr. MEIGHEN: That is when they did come.

Mr. JACOBS: They were not suffering at that time, because they were making hay while the sun was shining—they were dealing with cripples at that time. But to-day it has become a very serious matter for the Canadian Pacific Railway. They feel they are pitted against the government of Canada, and it is a fight to the death. Everyone knows what the result will be.

Now, as I said before, we have a population of less than 9,000,000, and there is a general complaint throughout the country that we are losing our people at an alarming rate. It is true. Last year, according to the returns of the United States Bureau—our own government does not keep any returns,—we lost to that country 159,000 of our population; that is people who paid their head tax and went through in the ordinary way. They were credited to Canada,—if I may so term it. What kind of people go from this country to the United States now under the quota law? Our native-born; only those are taken in. What becomes of the foreign-born in Canada? They go in by the underground route.

Mr. FORKE: They do not go.

Mr. JACOBS: They all stay here?

Mr. FORKE: Out west, anyway, they stay.

Mr. JACOBS: I am surprised to hear that. I thought they migrated to the United States in about equal proportions. The fact that a man is foreign-born does not make very much difference if he wants to go to the United States. At any rate, we will say a certain number of them went. Perhaps they are so satisfied in the region of Brandon that they do not leave for the United States. That is not the experience down my way. I know the United States immigration office is besieged from morning to night by people who are trying to obtain the necessary permission to enter that country. At a rough computation I would say about a hundred thousand of those people went to the United States. How many immigrants did we bring into Canada last year? We brought 140,000. What kind of people came in? Half British born and half foreign born. Now, as I said before, the vast majority of the people who went to the United States are Canadian-born —a much better class, I grant you, than the foreign-born. Why is it that these people have gone in such numbers to the United States? I know my right hon. friend the leader of the opposition will say that it is because of the lack of tariff in this country. I do not know how far that is true, but I think my right hon. friend is magnifying the number of people who went to the United States because of poor tariff conditions here. Our people who crossed the line did so because there is no quota law preventing their entry into the United States. Are hon. members aware that the government of the United States has put into effect a quota law which prevents more than 2 per cent of any nationality entering that country, based on the number of that nationality who came there before 1890?

Mr. FORKE: I may be wrong, but does not that quota law prevent not only foreign-born but British-born going to the United States?

Mr. JACOBS: It prevents English-born no more than foreign-born; 2 per cent of any nationality are allowed entrance. It makes no difference if the immigrants are

descended from the angel Gabriel; they cannot enter the United States if more than 2 per cent of them have already come in during that year. What happens? We have the United States declaring by law that the only people who can enter their country in unlimited numbers as against the rest of the world are the Canadian-born. What does that mean, Mr. Speaker? It means that Canada is being drained of her native-born to satisfy the demands of the United States. It is only a question of a very short time, unless diplomatic representations are made to the United States, before every native-born Canadian will be walking the streets of Chicago, Detroit, Boston or other American city, and we may see a specimen in our museum stuffed and properly mounted to show what a native-born Canadian was once like.

Mr. MEIGHEN: Will the hon. gentleman permit me? Irrespective of any quota law restrictions, what is his explanation of why our Canadian-born should want to go to the United States?

Mr. JACOBS: Well, it is the law of gravitation, I suppose; the greater attracts the lesser.

Mr. MEIGHEN: They did not a while ago.

Mr. JACOBS: There never was such an exodus to the United States as there has been since the quota law was put into operation. So you have cause and effect side by side. Never before did they have such a law in the United States, and never before did we have so many Canadians migrating to that country. So it seems to me clear that this policy on the part of the United States is designed to drain this country of the best element that we have, and after a while Canada will be as bare of our native-born as Jacques Cartier found her in 1534.

Mr. MANION: Would not my hon. friend admit that if the larger proportion of those who are going to the United States could get work in Canada they would remain here?

Mr. JACOBS: They may and they may not. The spirit of adventure is strong in the young Anglo-Saxon. He likes to go abroad, to seek for adventure. He wants to know what the world is like before he settles down. And then distant hills look green: he thinks Detroit is a paradise, that Chicago is the door leading to paradise, and so on. Everything looks well to him until he arrives, and then he finds that things are not quite as he would like them to be, but he has cut the painter and he cannot go back. The point I am trying to make is this: This policy on the part of the United States is designed for the purpose of drawing from this country the best element we have. Why not allow naturalized foreign-born Canadians to go into the United States? Surely in every respect they are as good as the others. Suppose a man happens to have been born in Germany, or born in England, or born, if you will, in Scotland—and I think the hon. member for Brandon (Mr. Forke) will admit that you cannot get a higher type than the Scotch; and I am almost inclined to agree with him, that Scotchman or that German or that Englishman, under the present regulation, will have to be put on the quota provided for by the United States with regard to the country from which he came; he cannot go in as a native-born Canadian. Of course that keeps out all the other foreign-born Canadians, and as I have suggested, it is only a question of time when we will have only foreign-born in this country.

Mr. COOTE: May I ask a question? If Canada were to put on a quota law to reduce the number of foreign immigrants coming into this country, might not some of those native-born Canadians be inclined then to stay at home?

Mr. JACOBS: Would my hon. friend like to make the experiment?

Mr. COOTE: I would not object at all, I would be very much in favour of it.

Mr. JACOBS: I think my hon. friend will agree that these experiments in the matter of immigration are dangerous. They are not practical; they are not natural; they come to nothing. If you want immigration into this country, open the doors and let the people come in, but do not say, we do not want this man because his hair is red, or we do not want this man because his teeth are long—let them come in and let them work out their own destiny in this country. To pursue a different policy is a mistake, in my opinion. In the United States they have this quota law because, they say, "We have already too many people in our country. We have 115,000,000 and we do not want any more. We want to digest those we have; we want to make men out of them; we want to give them an opportunity to acquaint themselves with and adopt American ideals before we bring in any more."

Mr. COOTE: If that is the case, why does not the United States apply the quota law against us?

Mr. JACOBS: Because they want our few Canadian born citizens in their country—they want them. I suppose one of the reasons may be that we have such a large frontier, consisting of practically 4,000 miles, and it is almost impossible to keep them out—but that would apply to the foreign born as well. I am not in the secrets of the statesmen of the United States, but the fact remains that they will permit Canadian born citizens to go into their country without let or hindrance and with regard to others they are permitting only 2 per cent to go in. These are the bald facts.

Mr. MEIGHEN: May I ask the hon. member a question? If it is the attraction really of large population or the lure of distance that draws our people to the United States, why is it that they do not go to England?

Mr. JACOBS: Our people?

Mr. MEIGHEN: Yes.

Mr. ARCHAMBAULT: That is a far-fetched argument.

Mr. JACOBS: Well, I do not know why they do not go to England. Perhaps the fact that they would have to walk 3,000 miles across the Atlantic might have something to do with it—that may be one of the reasons. Perhaps we could send them on the right hon. gentleman's merchant marine or the Petersen ships.

Now what I desired to point out was that this law was designed to withdraw from this country the best element of our population. The United States are making a distinction between different types of British citizens in Canada. They pay no attention to the fact that a man who is a British citizen has his naturalization certificate. They say that is of no account with them; they treat that certificate as a scrap of paper. I would like to draw to the attention of the House something that happened in the United States in 1912. There was a treaty between the United States and Russia up to that time passed in 1832, under which the United States traded freely with Russia, and generally the two countries were on terms of international intimacy. A short time prior to 1912 the Russian government enacted a law which provided that people of Jewish persuasion, although holders of American naturalization certificates, would not be permitted to enter Russia. There was one exception—they allowed bankers to come in. Unless they were bankers they could not come in. President Taft took the matter up diplomatically at the time with the Russian government, pointing out that American citizens must all be treated alike, regardless of race or creed. The Russian government at that time and up to the revolution were the most reactionary in the world, and they refused to accept the views of President Taft. Accordingly the treaty was denounced, the President of the United States refusing to agree to any proposal under which a distinction would be made between different classes of American citizens. But now, in the year of grace, 1925, another rules in his place, and we have discrimination made with regard to Canada in the matter of race, in the matter of nationality, by the declaration that if you are not a Canadian-born citizen, whether you have a British naturalization certificate or not, you cannot go into that country. Well, I say that is a matter which ought to be treated diplomatically between this country and the United States. We ought to deal with the United States in the same way that they deal with us. We ought to make them recognize that they have duties as a great state to perform towards other states. We cannot very well object to their allowing our native born to go into their country, but we ought to say: If you are taking them in, you must take them all in or none.

5. p.m.

Mr. CANNON: Would that not increase the number of Canadians going to the United States?

Mr. JACOBS: It would—that is rather obvious. But the point of my argument is that if you increase the number going to the United States you probably would get fewer Canadian born to go, and they might be prepared over there to accept the number two article, that is, the foreign born. The result might be to leave a few of the Canadian born in this country; because I should hesitate to think that if I wanted to see a real Canadian I would have to go outside of Canada to see him.

Mr. STEWART (Leeds): May I ask the hon. member a question? Could he tell the House when the United States adopted this quota law?

Mr. JACOBS: There were two laws adopted. One was adopted some time during the war, fixing the quota at 3 per cent and the year as 1910. After that it was found not to work effectively enough. In July, 1924, it was reduced to 2 per cent.

Mr. MEIGHEN: The first was not applicable to Canada at all.

Mr. JACOBS: No, the first was not applicable to Canada at all.

Now, how have we dealt with the question of bringing people into the country in order to make good the loss which is constantly taking place by this migration? I am not a medical man and if I am wrong in my theory there are some hon. members who will check me up, but when patients suffer from hemorrhages the doctor prescribes some blood-producing food in order to make good the loss induced by the hemorrhage. I think my hon. friend from Fort William and Rainy River (Mr. Manion) remembers enough medicine to say whether that is true or not.

Mr. MANION: My hon. friend is almost as good a doctor as he is a lawyer.

Mr. JACOBS: I thank my hon. friend for the compliment. Now, how do we deal with the situation? We have certain rules, certain regulations, certain orders in council, with regard to the entry of immigrants into this country. There are three classes of people who can come into this country to-day and I will tell you what they are. One is the farmer class. There is no protection for the poor farmer; anyone can come in and enter into competition with him.

Some hon. MEMBERS: Shame.

Mr. JACOBS: It is a shame. The next class is the farm labourer; and the third class is the female domestic servant. Eliminating for the moment the farmer—even with all his faults we love him still; everyone likes the farmer, he works while we sleep—we now have two classes—farm hand and female domestic—the man servant and the maid servant; those are the only strangers that are permitted within our gates. We brought in 48,000 maid servants last year at the time when we were losing to the United States 200,000 Canadian-born, who could employ them. Why did we bring in 48,000 maid servants?

Mr. WARNER: Does the hon. member pretend to tell us that those people going to the United States were all able to employ other immigrants coming into this country?

Mr. JACOBS: Well, I shall have to look up the statistics on that question because I have not got the information. Now, why was there such a strong demand for domestic help and for farm hands last year in the country? I do not know that there was any particularly strong demand for them except that these two classes of labour are not unionized; the walking delegate, the president of the Trades and Labour Council, and the workers' associations are not interested in these classes of labour. So these two classes were permitted to come freely into the country.

Mr. EULER: Will the hon. gentleman permit me a question which is in the interest of accuracy? He states there are only three classes allowed to come in—the farmer, the farm labourer and the female domestic servant?

Mr. JACOBS: Yes.

Mr. EULER: Is it not a fact that, so far as the British Isles are concerned, there are no restrictions of any kind with regard to occupation?

Mr. JACOBS: Yes, that is true; but I was talking of Europe generally. A change was made last year with regard to people from the British Isles; they come in without that restriction. The streets of London—Trafalgar Square and the embankment—can be emptied into the Dominion and nothing will be said because those immigrants are British citizens —"civis Britannicus sum". But no other class can come in except under the restrictions I have stated. Not one person from the continent of Europe can enter without a permit unless he comes under one of the three classes mentioned. Now, why should we adopt the same attitude with regard to immigration that the United States has adopted? They say, "We have too many people in this country, we do not want any more." Surely we cannot urge that. The United States is suffering, if I may use another medical expression, from high blood pressure; we are suffering from pernicious anaemia. And yet we are taking the same medicine that they take. I made a calculation a few days ago in regard to what I thought would be a reasonable number of people who could be permitted to come into the country by this form of immigration, and I thought that about five per cent would be a reasonable number per annum—that is to say one hundred people in this country ought to be able to absorb five people. I know of instances in the past where we have been easily able to absorb five per cent.

Mr. CANNON: You grant quite a big appetite to anaemic people.

Mr. JACOBS: We have got to feed anaemic people with rich red food; and I

think five per cent is what they can absorb without getting dyspepsia. Five per cent is not an unreasonable number. Now, five per cent of the population we have here is 450,000 people a year. We got in last year 140,000 of the classes that I have referred to.

Mr. MEIGHEN: The year before last somewhat less.

Mr. JACOBS: Yes, I think somewhat less. Surely there must be something wrong in this system that the government has adopted. Why is it we are not permitted to have the open door in the matter of immigration into this country? I would think that was exactly what the railroads would want in order to make them pay. Perhaps I would not have advocated this drastic scheme for the amalgamation of the two lines under private ownership if we were getting people in who could support two or three lines. Sir Henry Thornton, speaking in Montreal the other day as president of the Canadian National Railways, said: "I would permit to come into this country every healthy Caucasian". And he added: "I believe that is what this country needs in order to make it prosperous." My right hon. friend the leader of the opposition (Mr. Meighen) is on record as having said that when his party comes into power he would permit every healthy white person to enter Canada without let or hindrance. That seems to be the view of public men throughout this land—to allow every person to come in here and work out his own destiny.

Mr. MEIGHEN: I have looked up the statement to which my hon. friend referred and there was a qualification as to being capable of carrying on a useful occupation in Canada.

Mr. JACOBS: Yes, I would assume that. The government said: We are over-industrialized; we want more farmers, we want less industrials. Whether it is because they expect continued support from our farmer friends in the future or not I cannot say. The fact remains, however, that they are rather favourable to the entry of farmers, and they set their face strongly against any movement to the cities. Now, last year when I was speaking on this very question I made the point—at least I strove to—that if you bring in a large number of people of one class, and you bring in none of another class, the tendency will be for a levelling-up in due course; that is to say if you send people on the farm and you find that there is a lack or dearth of people in the cities the attraction to the city by means of larger wages will denude the farms exactly in the same way as before those people came. You must have people in the cities to attend to the wants of the industrial class, and you must have people on the farms to attend to the needs of the agricultural class. But this lop-sided policy will never be a success. Immigration must proceed in natural channels and as soon as you begin to adopt artificial schemes and artificial tricks to accomplish this or that you are interfering with nature and bound to come a cropper. For the last seven or eight years in this House I have delivered my annual on the question of immigration, and as I have said before, I have been a voice crying in the wilderness. There is no one to give me support on this question in this Chamber. I am in a class by myself. I have promised my support to any party in this House or any party outside of the House who wants to get in, who will give their adhesion to a policy of this kind, and so far no one has come forward. The only member who at all approaches my view in this respect is my right hon. friend the leader of the opposition. I do not know whether it is a case of:

> The devil was sick, the devil a monk would be;
> The devil was well, the devil a monk was he.

The fact remains that when he was in power for a number of years nothing was done. The present rules and orders in council and regulations are those which were put into effect during his regime.

Mr. MEIGHEN: We were bringing our soldiers back, and we had to absorb our soldiers then.

Mr. JACOBS: I am glad my hon. friend has some pretext, but the bald fact remains that he was in power and could have done something in the matter of stimulating immigration, but did nothing. Now he is prepared to do something. Whatever man hath will he give for his political life. I am rather dubious of these death-bed repentances, although I have very little choice. I know that the party in power at the present time are not prepared to do anything, although I give them my support. I have threatened and urged and gone almost beyond the limits of endurance, but so far nothing has been done, and, so far as I can see, nothing is going to be done. Now what am I to do under the circumstances?

Mr. MEIGHEN: Come across.

Mr. ARCHAMBAULT: Keep going.

Mr. JACOBS: I have held out the olive branch to the hon. leader of the Progressive

party, (Mr. Forke). I am willing to follow him. I am willing to follow the Labour party, small though it be.

Mr. LAPOINTE: Or the Ginger group.

Mr. JACOBS: Yes, the Ginger group. I am willing even to take ginger.

Mr. WARNER: Go out and buy a farm.

Mr. JACOBS: So far nothing has been done. I warn my hon. friends on this side of the House that an election is impending, that there are large numbers of people in this country who think as I do on this question and they are going to give their support to the party who will promise the open door in the matter of immigration. As for me, I have always given my support, such as it was, to the party now in power, but this matter of immigration is one which transcends politics, political affiliations and party friendships. I always will while in this House advocate the open door in the matter of immigration, because I feel it is in the interests of the country that we should have a proper immigration policy. It is detrimental to the country to have the policy which is now in vogue, which has been handed down to us as a heritage from the right hon. leader of the opposition—a sort of Trojan horse. We have gone along and have not examined into it to see what it was. In view of the serious condition in which the country finds itself in regard to the railway problem, in view of the appalling debt which we have on our shoulders, in view of the emigration to the States, surely the government ought to get together to see if something cannot be done in order to stimulate immigration. Something should be done by those who are leading this country.

Mr. ARTHURS: My hon. friend says he is in favour of the open door. Does he mean exactly what he says?

Mr. JACOBS: I am in favour of the open door as expressed by the right hon. leader of the gentleman who has just spoken. I am in favour of allowing into the country every healthy white person who is able to make a living. Why should not such a man be allowed to come into the country? He is going to help pay our debts, and surely he is about the most welcome person we can get just now.

Mr. ARTHURS: Is the policy of the present government along that line?

Mr. JACOBS: The policy of the present government on immigration is like the wisdom of God, it surpasseth all understanding. Sir Henry Thornton in his annual report thought this matter of immigration very important. The policy of the government puts Sir Henry Thornton in a very awkward and anomalous position at the present moment. He is asked to run the railway and make it pay, and yet the door is closed to people who would come in and make it pay. He is asked, as my ancestors in Egypt were asked, to make bricks without straw, and he cannot do it. He has always been at variance with the government on this question. We have on the board of the Canadian National Railway, Mr. Tom Moore, president of Trades and Labour Councils, who has declared himself in favour of the policy, if I may call it such, which the government has now in force. He is against bringing into the country people who might compete with the people who pay their annual dues for his upkeep. The government, evidently feeling that he was a man after their own heart, promptly made him a director of the Canadian National Railways. Now he is advocating on his side keeping out all immigrants because they are inimical to the interests of organized labour of this country. On the other hand, we find Sir Henry Thornton makes the following statement:

> From time to time, and particularly during the past two years, reference has been made on various occasions to the need for immigration. The whole future of Canada and of the railway systems in Canada depends upon increased population and upon the increased traffic which would result therefrom. As compared with what might be done in order to bring about the desired result, the efforts made in the past might be termed somewhat spasmodic and unorganized. If there is to be real success the matter will have to be handled otherwise in the future. The Dominion as a whole, the provinces individually, the railways and all other business organizations are, each of them, interested. The problem is of sufficient magnitude and importance to justify in its solution the employment of the most capable and energetic minds in the Dominion. The investment of money on a larger scale than in the past will also be required.

I call particular attention to the final paragraph which says:

> The matter might be entrusted to a permanent commission constituted somewhat on the lines of the Board of Railway Commissioners, except that more commissioners would doubtless have to be appointed; and this Immigration Commission would have to be authorized to make expenditures under a general programme approved by parliament.

He says this matter is so important that a commission ought to be appointed to deal with the entire question, to make the expenditures and study the whole matter. He would favour a commission similar to the railway commission. At the present moment we have not even a standing committee in the House to deal with immigration. We have a standing committee to deal with onions and cabbages, and a standing commit-

tee to deal with fish, but when it comes to human beings, a matter in which every person in the country is interested, and with which the whole future of the country is concerned, we have nobody to whom we can refer any question at all. Surely this matter is of sufficient importance to provoke at least some interesting discussion in this House. For nineteen days, ever since this debate started, I have waited in vain to hear some public man rise in this chamber and advocate some kind of immigration policy. But nothing has been done, and feeling that nothing would be said during the entire debate, I felt it my duty to rise and make these remarks, some of which, to a certain extent, are distasteful to me to make.

Mr. COOTE: Would the hon. member be good enough to tell the House whether he has any work in Canada for the 450,000 people whom he thinks we could profitably bring in each year?

Mr. JACOBS: Work was found for the hon. member for Macleod when he came, was there not?

Mr. COOTE: I had the honour to be born in this country.

Mr. JACOBS: Work was found for the hon. member when he was born.

Mr. COOTE: I had to go out and look for a job.

Mr. JACOBS: The 450,000 people who should come in will be glad to go out and look for work too. This country has not been scratched yet with regard to its resources. We have the greatest natural resources in the world. We have power which, when developed, will produce, according to statistics, 41,000,000 horse-power. I notice my right hon. friend (Mr. Meighen) is a little surprised at the figure. I have the figures and I will go so far as to say that there is 41,200,000 horse-power waiting to be developed. We have the greatest mines in the world. We have a country larger than the United States. At the present time we have three human beings to every two square miles of territory, and yet my hon. friend says there would not be work found for 450,000 people.

Mr. SPENCER: If we have such great possibilities of work, why cannot we put the 60,000 unemployed at work now?

Mr. JACOBS: I will tell my hon. friend why. I do not know who those 60,000 people are, but I will venture to tell my hon. friend that most of those people are from the British Isles, gentlemen who largely do not want work. I do not say that is true of all of them, but it is true of a very large number. The hon. gentleman probably remembers the story of two Englishmen on the streets of Toronto. They were walking down Yonge street and one said to the other: "See how happy everybody looks in this city." The other said: "Why should they not be happy? Do we not own them?" That is the view the Englishman has of Canada. He will not work himself; he wants the other fellow to do the work. The men who work in this country are the men who come from the continent of Europe and not those who come from the streets of Glasgow, Liverpool and London. They are victims of the dole. They have never done any work or wanted to do it. They are wastrels, useless, and they never should be permitted to come into this country. I am speaking, of course, of a certain type. The House will not, for a moment, think I am making an attack on the British people. I say this is true of a certain type. If you will analyse each and every one of these cases, you will find that many had an opportunity to go to work, but would not go. We see them in our country and in other places. Every man who comes to this country and who is ready and willing to work, can find work to do. That is why those people who come from continental Europe, ignorant of our language and of our customs, are able to find work. They are willing to put their hands to anything. That is why they are a better element in the community than those whose only qualification is that they can talk English and think they own this country.

Mr. SPEAKMAN: Does my hon. friend contend that the same rule applies to the Canadian-born who, as the hon. member said, were leaving Canada in large numbers and who, as he himself stated, were a better class of citizens than the foreigners we might bring in

Mr. JACOBS: I do not know whether my hon. friend was here when I said that those Canadian-born people are attracted by larger wages in the United States and by the lure of the gas light, the moving picture houses and everything that is implied in a large city in the United States. Many of them go off the farms. I venture to say that, perhaps, 50 per cent of those people who have gone to the United States have gone off the farms in order to improve their condition in that country, not because they could not get a living

here. I will not believe work cannot be got in Canada, a country of 3,000,000 square miles, larger than the United States, and with 9,000,000 people. It is absurd to think people cannot get work here. In Montreal I think one man in a thousand was out of work during the winter which has just passed. That is a negligible quantity. There is plenty of work for people to do.

Mr. MEIGHEN: Does the hon. member mean to say that only five or six or seven hundred people were out of work in Montreal?

Mr. JACOBS: At most, only one person out of one thousand people was out of work in Montreal at any one time.

Mr. MEIGHEN: Where did the hon. gentleman get those figures?

Mr. JACOBS: I got them from a source which, perhaps, the right hon. gentleman will not think accurate, the Montreal Star. I am afraid I have already taken up too much of the time of this House and there is nothing more that I wish to say. I did not expect to speak for more than fifteen or twenty minutes, but it is only because I had something to say that I rose to speak, strange to say. I trust, however, my views, such as they are, will be taken into the serious consideration of the gentlemen who now form the government of Canada. I wish to make no threats, to utter no warnings; but I cannot give my support to any party in this House that is not prepared to accept my policy as outlined to-day with regard to immigration, and I am prepared to give my support to any party in this House that is ready to adopt this policy.

Mr. PRITCHARD: I do not know, but I am pretty nearly a convert to my hon. friend's idea of immigration. I would like him to answer one question in connection with it before I decide to embark on the idea. How is he going to overcome the difficulty that arises when the cities have a fixed price for carrying out the services of their people and when, in all the rural districts of this country, we have to compete for labour and whatever our products will bring? How are you going to hold people in this vast area of country where we have unorganized labour, when the cities are holding out inducements of big pay and short hours? Can the hon. member suggest how to overcome that difficulty?

Mr. JACOBS: I am afraid I have not clearly understood my hon. friend. Would he mind repeating his question?

Mr. PRITCHARD: Organized labour and the government are fixing remuneration in the cities with big pay and short hours for the people who work there. In the rural districts where we have not organized labour, even the government refuses to pay to people working there the same remuneration it pays to people in the cities. How are you going to prevent immigrants from going where they can get short hours and big pay?

Mr. JACOBS: How are you going to prevent a farmer from selling his farm, or a hired man from going to the city? They are going there now to take the place of others. The high wages are an attraction to them.

Mr. FORKE: That is what the hon. member said. How are you going to stop that?

Mr. JACOBS: My theory was to allow the people to go wherever they want to go. If they want to go on the farms, let them go there; if they want to go to the cities, let them go there. If they find they cannot make a living in the cities, they will wander on to the farms. If they find they are not fitted for farming, they will go elsewhere. We have a continent to fill up. Surely it offers possibilities to every person who comes in. The man who is not a success as a farmer may become a member of parliament.

Mr. McDONALD (Timiskaming): What does this new party stand for? Does it want an overflow of population into this country for no other reason, as it seems to me, than to have a surplus of labour with a view to cutting down wages? And will that party be called the Jacobs party?

Mr. JACOBS: The original Jacob had only twelve sons and he went to Egypt and was a success there.

Mr. O. R. GOULD (Assiniboia): I wish to join with hon. gentlemen and with the Acting Minister of Finance (Mr. Robb) in expressing my regret at the absence through illness of the Minister of Finance (Mr. Fielding). And I think that one new note may be introduced at this time when I say that I extend to you, Mr. Speaker, my sympathy in that the House has so long refrained from allowing you to resolve it into committee of Ways and Means. Largely that fault must be laid at the door of the government. During the past week they have been revivified and have now decided to enter into the full spirit of debate. Considerable difference is evident now in the demeanour of the House and in its activities compared with what was apparent earlier in the session when we were advised, very nearly twice a day by the Prime Minister (Mr. Mackenzie King), that we

should do all we could to expedite the business of parliament.

I wish first of all to offer a remark or two with regard to the address delivered yesterday afternoon by the hon. member for St. Lawrence-St. George (Mr. Marler). That very, very dry address was delivered ostensibly for the purpose, or at least for the intended purpose, of clarifying the budget speech of the Acting Minister of Finance, and the hon. member this year appears in a different role from the one he played last year. Last year he was critical of the government and denounced them roundly because they did not make a clear exposition of the financial condition of Canada. I have here the volume of Hansard containing the remarks of the hon. gentleman at that time, and perhaps it would show better than anything else the changed attitude of the hon. gentleman if I read a few extracts from that speech of his. As I say, he was critical of the government last year; yesterday he appeared in the role of an apologist for them. He seemed to labour a point yesterday. And, in passing, let me say that I hope the fortunes of war will never permit him to have an opportunity of placing figures before this parliament in an official capacity for the House to digest, for his explanation yesterday was more confounded, it was ten times more complicated, when he got through, than was the original state of affairs which he undertook to elucidate. It seems to me that the hon. gentleman might have saved a good deal of time and might have explained the situation fully by stating that the executive of the government, who usually prepare the budget speech, have brought down this year a form of statement similar to that which has been followed in connection with the last seven budget speeches to which he referred, as submitted by the four preceding ministers of finance of Canada. That would have been an ample explanation of his point and it would have obviated a speech of two and a half hours. Let me now refer the House to page 1571 of Hansard of last year containing the remarks of the hon. gentleman at that time:

> As a matter of fact, to give the people the idea that the day of abounding surpluses has arrived is merely to encourage spending and a lack of economy, and I therefore ask, Sir, with all due respect, if we do give the people that idea, is it the right idea to put forward? Why should we not, as a matter of fact, take the people entirely into our confidence? Why should we not exhibit to them a simple statement of our financial affairs in language which they can all understand?

Further down the page the hon. member is reported thus:

> [Mr. Gould.]
>
> I know that a certain part of the railway debt is at present merged in the consolidated debt; other parts are not so merged. But it does not matter under what account the parts not so merged are taken, the parts, wherever they may be, constitute the total debt of the Dominion of Canada. In other words, we cannot increase our railway debt, without increasing our total debt.

That is the attitude which the critics of the government this year have universally taken; it is the same attitude which the hon. member for St. Lawrence-St. George took last year in his speech on the budget. This year the hon. gentleman has altered his position. There is another extract from the hon. gentleman's speech to which I may refer the House:

> This government, as I have stated before and can only repeat to-day, has had to bear great expenditures, partly due to the war and partly due to causes over which they have absolutely no control. But what I venture to ask,—and I do it with all respect—is: Why try to place before the public a difficult system of accounting which the public itself cannot be expected to understand? Why not place before the public the actual condition of receipts and expenditures as they may occur from year to year, taking the public into our confidence as questions arise, and asking the public to assist us in governing this country which is so exceedingly difficult to govern?

If hon. gentlemen wish to follow Hansard of last year further they will find in the hon. gentleman's speech a substantial endorsation of the comment I have made, that whereas he appeared as a critic of the government at that time he now comes forward as an apologist in their behalf.

I must say that I have never approached the task of making a speech on the budget in this House with so little cheer or with so little of what one might call vim as I do this year. And this is due to the fact that the budget on this occasion necessitates vain repetition; all the scoldings of the past must be reiterated and all the advice which hon. members have tendered the government from time to time must be offered again. It becomes discouraging therefore when individual members of parliament who have received what they regard as matured advice from their constituents find this advice discarded by the government, more particularly when gentlemen who repose in the seats of power were elected to office on the strength of the very things which their critics now advocate. I wish to refer to the visit which the Prime Minister (Mr. Mackenzie King) and his party made to western Canada last fall. I took the pleasurable opportunity of attending one of his meetings, although I had to drive the car a hundred miles either way to be present, seeing that our railway facilities are not adequate enough to enable us to take ad-

vantage of such occasions. We might hope for better facilities in western Canada, for at such times we have to suffer inconveniences, driving our cars hundreds of miles, to do honour to the Prime Minister of Canada. The burden of the right hon. gentleman's plea was that the people of the west had made a mistake in not having sent to Ottawa representatives who could sit in the party caucus and thereby make known to the government what their wants were. The Prime Minister does not understand the spirit of the western people. There was very little applause when he made that statement, and it was urged continuously.

The people of the west are not to be caught with that sort of bait. The government know full well that after considerable discussion those pepole had prepared a platform which they considered a new national policy for the Dominion of Canada. That was known as the platform of the Canadian Council of Agriculture, a council which did represent people from all parts of Canada. Later on the title was changed to "The Farmers' Platform." That was a change to which I have never subscribed, and it has given much opportunity for critics of the new national policy, as we designed it to be, to misrepresent our movement as a class movement. Now I want to draw attention to this fact to prove that the people do not need to have their representatives in a government caucus or any other party caucus to make known what they are asking for, because in 1916 our platform was published, and in 1917 we find that the party now in power made another unsuccessful attempt at the polls, and then it was that they appeared to suddenly realize that a national convention was necessary. It was held in this city in 1919, and a platform was evolved which bears many close resemblances to the platform of the Canadian Council of Agriculture. Evidently someone was aware either of what the people required or that another platform had been built which would appeal to the country. I have heard, and hon. gentlemen here have heard it declared a thousand times, that there is similarity in the two platforms, that there is no reason why the Progressive party should be distinct and apart from the Liberal party. Well, in so far as their platforms go I admit that they have much in common. But while I admit that, I have also to draw the attention of the House and the country to the fact that we were the originators of the very meritorious platform of the Canadian Council of Agriculture.

That is my first proof that the people do not need to be represented in a party caucus to make known their wishes. My second proof is this, and I might be allowed to illustrate it. We of western Canada look upon the party politics of the Maritime provinces almost as if it was a disease. I believe that no more bitter political fights have ever been waged in Canada than those which have characterized elections in the Maritime provinces. Even since this parliament was brought into being we have heard many times about the "solid sixteen" from Nova Scotia, and we know something of the partisan spirit that distinguishes the politics of the Maritimes. I do not say that harshly, but the fact that the "solid sixteen" have sat in the party caucuses continuously and the fact that we have heard louder murmurings from the Maritimes during the past two or three years than from any other part of Canada shows the futility of the party caucus to satisfy the wants of the people. If representation in a party caucus is a means whereby remedies may be initiated, why do we hear these constant murmurings from the Maritime provinces? I have thought that hon. members from the Maritime provinces, as representing the needs and rights of their constituents, have so much in common with the representatives of the people of western Canada, that if they would stand in their places and openly denounce and vote against the administration which they now support, their constituents in the Maritimes would rally to their support. And I am not speaking now of any one particular party; my remarks are applicable to the two old parties. I am sure the people down there would back up any of their representatives who would take that course. It is my opinion that the people of the Maritime provinces and the people of the west have so much in common that, combined, we could make industrial Canada sit up and take notice.

I give it again, Sir, as my opinion that industrial Canada has been the cause of three-fourths of the political and economic unrest in the Dominion since 1874. We are paying a huge price—we always have—for the erection and the continuation of industrial Canada. We are asked to continue it now. If we had the condition which I have pictured, we would have factories going to the coal areas of Nova Scotia and of Alberta. Instead of that, under our present policy we subsidize the coal barons—and tax ourselves—to take coal to the industrial area, and in turn that industrial area manufactures products upon which we protect them and again fine our-

selves. In a word, under our present policy we levy a double fine upon the people. As I said before, we should force these factories to locate in our coal fields rather than penalize ourselves by subsidizing them to bring coal to the industrial area. By so doing they would have a growing market in western Canada for agricultural implements, and we would save freight both on coal and on implements. This is applicable to the Maritime provinces, it is likewise applicable to western Canada. Perhaps our condition at the present time is a judgment upon us because of our blind partisan attitude in the past.

I wish to refer to the hon. member for Brome (Mr. McMaster), not in any unkind spirit at all, and I regret that he is not in his seat. There is a personal something that binds the hon. member for Brome and the member for Assiniboia (Mr. Gould) in a tie for friendship. It commenced in 1919, when he, accompanied by another hon. member, visited the electoral district of Assiniboia, and took an active part in a certain by-election. It was at that time that I made the hon. gentleman's acquaintance. Fresh from the convention halls of the city of Ottawa, where the Liberal platform of 1919 was framed and adopted, he proclaimed to the people the following: Here is our new platform, here is the Liberal party's pledge to put this platform into execution, all you need do is to entrust to them the reins of office, and I pledge my word that that platform will be put into effect; you do not need any other representative than a Liberal. Well, the reply of the people of Assiniboia was that they had been deceived before, and they did not propose to be deceived again. I would ask the hon. member for Brome, who was right? In the course of a very able address delivered by the hon. member some few nights ago, he laid down the policies which he thought Canada should follow. I am in accord with him very near to the limit, but when he added that he could not oppose the budget because he feared the government would be defeated, I felt I must part company with him.

We have contended, Sir, many, many times —and we would not make the contention if we did not have ample justification for it— that there is not the difference, really, of the snap of the fingers between the two old political parties of this country, the Liberals and the Conservatives. This view is confirmed in the policies of both parties—not as enunciated but as practised. A proposal which is before the House and the country to-day is another illustration of the similarity of our two old friends—I refer to the proposed tariff board. I can quite believe that if this becomes an issue they will quarrel and squabble over it for weeks in this House as to who shall constitute that tariff board, but the main principle of the board is already in the minds of the government as it is also in the minds of the official opposition. The right hon. leader of the opposition (Mr. Meighen) has his resolution on the order paper, and he proclaims that this tariff board is going to be erected to look into the evils that beset us. Before I make a few remarks upon that, I want to refer to a conclusion I reached after reading an article in the Financial Post of April 17 in which the experiences are given of a gentleman named Mr. Belding, who had been delegated by certain newspapers in the province of New Brunswick to go to western Canada and declare unto them the difficulties under which the Maritimes were labouring. As he expressed it himself, he went forth proclaiming the policies of the Maritimes and the things that would benefit them, but he came back making a different kind of speech. Summing up, he stated that he thought the solution for the economic difficulties under which Canada was labouring might be found if the country were divided into four zones and each of these zones sent representatives to a conference and there, through compromise and otherwise, an endeavour were made to reach a solution that would be acceptable to all parts of the country. That, in my opinion, would be much better than a tariff board; it would help to solve the problem. I do not wholly agree with Mr. Belding's conclusions. He says that the various zones should be represented by delegates from the boards of trade of all the zones referred to. I wondered as I read the article whether he knew that there was an industry in Canada called agriculture, which represents at least fifty-two per cent of the population and seventy-five per cent of the created wealth of the country. I wondered why he should confine it to boards of trade; his urban mind seemed to think there was nothing else in Canada but boards of trade. Agriculture has large organizations representative of that phase of our national life, organizations that are paying attention as best they can to the economic difficulties of Canada. I do not condemn the principle that Mr. Belding has advanced, but I do want him to appreciate the fact that agriculture will not stand aside and allow boards of trade to dictate a policy for the Dominion of Canada.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. GOULD: Mr. Speaker, when the House rose at six o'clock I had made the assertion that there was scarcely any difference between the practised policies of the two old parties, and I had drawn forth another proof to add to the many we already have in support of that assertion. I had referred to the proposed tariff board which, in name at least is endorsed by both the government and the official opposition. However, I shall say something upon that point a little later and refer in the meantime to the panacea advertised as likely to effect improvement by the Conservatives when in opposition. Although I have criticized the pre-election cries of the Liberal party I shall endeavour to show, in like manner, that we should not give too much credit to the pre-election pledges or promises of the Conservatives. It is rather humorous, Sir, when one recollects the many things that have been promised and stated by our Conservative friends. Even at the present time they contend that we need a high tariff, they are the proponents of a high tariff policy, the only policy, in their estimation, that is good for the Dominion. And yet—and that is the point I wish to emphasize—the propaganda they used during the 1921 election, when they were conducting a campaign in the agricultural areas, was of a different character. I have as my authority the hand-book of the National Liberal-Conservative party at that time, and it shows that although a high tariff party, they actually endeavoured to obtain credit and support for having reduced the tariff to a greater extent than the Liberals. I have the figures cited in that hand-book and propose to read them. According to that publication tariff reductions—on the strength of which a propaganda was conducted by the Conservative party for popular support—were made in 1919, as follows, the reductions applying particularly to agricultural implements:

On cultivators, harrows, horse rakes, seed drills, manure spreaders, weeders and complete parts thereof, duty reduced from 27½ to 15 per cent.

On ploughs and complete parts thereof, windmills and complete parts thereof, portable engines, traction engines for farm purposes, horse-powers, threshing machines, separators and appliances thereof, duty reduced from 27½ to 17½ per cent.

On hay loaders, potato diggers, fodder or feed cutters, grain crushers, fanning mills, hay tedders, farm or field rollers, post-hole diggers, snaths and farm wagons, duty reduced from 32½ per cent to 20 per cent.

It is therefore true that we might charge the Conservatives with doing exactly the opposite to what they promised to do. In the light of this evidence, and remembering the persistent cry that our Conservative friends have raised throughout Canada that factories had been closed owing to the picayune—I call it picayune—or paltry reductions made in the duty upon agricultural implements last year, are we not justified in saying that the Conservative party are just as responsible as the Liberals for closed factories and unemployment? Is not such a cry, if there is any justification for that cry, just as well grounded in the case of the Conservatives as it is in the case of the Liberals? I have quoted the facts and figures from their own campaign book, and when the Conservatives charge that factories have been closed, I ask them to remember that according to their own claim they lowered the duties on agricultural implements to a greater extent than did the Liberals.

Mr. ARTHURS: Is that true?

Mr. GOULD: I have read statements from the National Liberal-Conservative hand-book of 1921, and I do not think the hon. gentleman will repudiate that authority.

Mr. ARTHURS: As a matter of fact, did we not make a reduction?

Mr. GOULD: This book states so, and the argument I am trying to make is that when our Conservative friends charge our Liberal friends with being the cause of the closing down of the factories and the men being out of work as a result of the paltry reductions of last year, why did they not say, "We reduced the tariff to a greater extent and consequently we must also have closed the factories and put men out of work"?

Mr. MANION: The charge was not so much in regard to reduction as in regard to the instability that these reductions brought about.

Mr. GOULD: In reply to my hon. friend from Fort William and Rainy River (Mr. Manion) I would say that if the paltry tariff reductions the government made in the tariff brought about such disastrous results, then the Conservatives should have brought about a more serious condition, because they made greater tariff reductions, although they claimed to be a high tariff party.

Mr. ARTHURS: My hon. friend is wrong so far as I or this party are concerned. We never advertised that we were going to introduce a high tariff at all.

Mr. GOULD: Well, that is all right. I will accept the statement of the hon. gentleman, if that is satisfactory. But the people of Canada believed that my hon. friends ad-

vertised it in that way, and I think if hon. members will read the propaganda which follows in the same Liberal-Conservative handbook, they will see that it is advocated there, when they are appealing to the different classes of people, particularly in the urban centres.

I wish to refer to the resolution which the right hon. leader of the opposition (Mr. Meighen) has placed upon the order paper, which he has not had an opportunity to debate. There hon. members will find the argument for a consistent and even a higher tariff. The inference is given that the tariff has to be raised to give more work and more employment for the workman. We want to have a policy in this country, whether it is a Liberal or Conservative policy, that the people can depend upon. If you elect one party which profess a lower tariff, let them carry out that policy and give a lower tariff.

Mr. MANION: I do not remember the handbook my hon. friend speaks of, but I presume what the Conservative party were setting forth at that time was what they had done for the farming community in this country, and were not advocating a lower tariff. They were pointing out that they had made cuts in agricultural implements which should satisfy the farmer, but they got very little support from the farmers of the prairie provinces.

Mr. GOULD: In reply to my hon. friend again, I was not endeavouring to prove the merits of the high or the low tariff at the present time. I was trying to prove the inconsistencies of the two old political parties in this country, and also endeavouring to prove that there is such a similarity in practice that the people do not need to take their assertions very seriously.

Now there are two points brought forth in the proposed resolution of the right hon. leader of the opposition, and the first one is that the farmer is to be at last included in the principle of protection. Always in the past those who talked protection aimed at the farmer as a victim. At the present time, since the farmer has risen to his feet and protests because he has been made in the past the victim, this sop is held out to him in the hope that it will beguile him further. Let me assure hon. members that he is not going to be beguiled, because he realizes that there is only a certain amount of wealth created and although it is said to be distributed equally, he knows that those who have been the recipients of special favours will continue to receive the benefit and the farmer will get the small share in the end.

The second point is this, that the resolution proposes that a commission shall find out and report back to the government whenever abuse is made of the taxes. That is very enlightening, because we had all been given to understand—and I am sure the speeches that have been made in this chamber will bear me out in that statement—that it never was considered that those industries that had been the recipients of special privileges ever took advantage of that fact or did a wrong thing. If the right hon. leader of the opposition were in his place I should like to ask him wherein and when he found that any of these industries had taken advantage of the tariff. That is information we have had ever since we have been purchasing implements, and yet the right hon. leader of the opposition, the champion of higher protection in this country, has just proclaimed to the world that at last he has found out that some of these industries have been taking advantage of the tariff. It is very enlightening indeed.

Now, Sir, I give it as my opinion that if a tariff commission were appointed to look into the merits of the case, I would only support it on the understanding—and it is a theory which I have advanced at least half a dozen times in this chamber—that the commission should be empowered to go in and ascertain the merits of the institution which asks for protection. That is to say, a commission should be delegated or empowered to go to these organizations who think they have a right to have this special privilege, who have accepted it in the past, who have been guilty of malpractices as the right hon. leader of the opposition states in his resolution, and investigate these concerns. That is the first and the only thing I would delegate to them and they should be asked to bring in a report to this House. I should want to know how the physical value of their plants compared with the fictitious values which we have been led to believe they possess. At least, if the values were fictitious we would find it out. They would report to the House and we could apply a scientific adjustment to the statements made in the report and find out how they stood. We have had our doubts in the past and made representations, and yet no government in Canada from the time protection was first imposed has had the courage to appoint a commission and send that commission to the industries to ascertain from them the reasons why they asked for this protection. It has been very interesting, Mr. Speaker, from time to time to hear the gratuitous advice that has been tendered by the proponents of high protection,

yea, even to the Mother Country. Hon. gentlemen can bear me out in this, that sometimes it has almost reached the point where they would ridicule the fiscal policy of the Mother Country. With that in view, I made a clipping from a paper, and I want our Conservative friends to pay particular attention to this, because these words come from the mouth of a member of the British House of Commons. The report is headed, "The path of protection," it is applicable to my argument, it expresses exactly my views and the views of scores of thousands of the workers of Canada and it is just as applicable to the people of Canada as to any country in the world where the principle of protection is in force. These remarks were made by Captain Wedgewood Benn, D.S.O., Liberal in the British House of Commons:

The Path of Protection

Captain Wedgwood Benn, D.S.O., Liberal, in British House of Commons:

I am speaking about the lobbies of this House, and I am referring to the change that has come over our political campaigns in connection with this sort of debate and this sort of duty. We are constantly being pressed by people who come here not for grievances to be redressed, not for some public interest to be attended to, but because they want something done which will put money in their pockets. Men who in the old days thought of nothing but their customers and pleasing their customers think now of nothing but wheedling members of Parliament and nobbling Ministers. People, who in the old days thought that the secret of success was to give better value for money, say to-day, "If we can get a tariff, better value is of no account." Their object is not to promote the public interest but to manipulate divisions in the House of Commons.

That is a complete change, and a very evil feature. I cannot summarize this point better than in the words of a Tory of Tories, the Noble Lord who sits for the University of Oxford (Lord Hugh Cecil), who said: "Protection will lead to the corruption of our public life as it has led to the corruption of the life of other countries The purity of our public life is the lifeblood of Europe. If Conservatives go in for Protection, I will have nothing to do with such an apostate party. If they determine to travel down the path of dishonor and Imperial ruin, I will wash my hands clean of so great a crime.

That is the condemnation. That is the answer to hon. members who may think it their right or duty to challenge the fiscal policy of Great Britain.

A tariff has the same effect as a depreciated currency. That is to say, if you impose a 10 per cent tariff tax, the purchasing power of the individual is decreased by that 10 per cent. If you impose a 20 per cent tariff tax, the purchasing power of the individual is decreased exactly one-fifth. If you impose a 25 per cent tariff tax, the purchasing power of the individual is decreased one-quarter. We have had a condition similar to that in Canada, and it means one-quarter less purchasing power or one-quarter less need for the beneficiary to exert himself. Let me illustrate and this may be used in reply to the charges of our hon. friends that men are out of work. About twelve years ago—and I use my own case as an illustration,—I purchased a Massey-Harris five-foot mower for the sum of $65, giving my note for it. It was a good machine and I still have it working on my farm. Last year when I went home I required another mower, and I went to the Hassey-Harris agent and said: "I want another five-foot mower. What is the price?" He told me it was $112. I said: "But I have just returned from Ottawa and we had a cut in the tariff on these mowers this year". He said: "I will look that up". In the tariff and the sales tax the reduction was $5 and I paid him $107 cash for the mower, taking it home. I had saved $5, but I turned around and said: "Now I want a scrub scythe", and I got it for $5. Did the worker have any less work to do because I bought two implements with the same money, or would he have had less had I just purchased one? That is by way of illustration.

I propose now to direct the attention of the House to the practical views which reveal themselves in the budget. The first thing which stands out so that he who reads may understand, is the fact that we have a national debt of $2,431,487,112.88. In conversation with a gentleman to-day I was using the figure of 9,700,000 as the population of Canada. He said: "Man, you are away out. I would not mind betting, if it could be proved, that the population of Canada is not more than 7,000,000 to-day." The item, however, was made up as of March 31, 1924, of $2,417,783,274.88, to which is added in 1924, according to the statement of the Acting Minister of Finance (Mr. Robb), a deficit of $13,703,838, making the total which I gave before. Taking the population at 9,700,000 souls, we find that makes a per capita debt of $2,506.70. I have an object in giving those figures, and that is to bring home to the people of Canada, if I possibly can, the exact position by which the are surrounded, the burden that they have upon their shoulders. Possibly, this will be an incentive to the people to pay more attention to the affairs of state and to see that real cause shall be shown before any individual shall come back to this House. An average family of five would be assuming a burden of federal debt of $12,533.50; or a family of nine, that is seven children and the two parents—and I know a home not far from mine where there are nine—would be assuming a burden of federal debt of

$22,560.30. These are practical figures that the layman can understand. The charge cannot be placed against them that was made across the floor of this House in regard to the budget.

Mr. ARTHURS: Does the hon. gentleman seriously contend that, on the basis of these figures, the per capita is $2,000?

Mr. GOULD: Yes, $2,506.70 per capita.

Mr. MANION: It is just ten times too much.

Mr. GOULD: This is the capitalization.

Mr. BENOIT: Divide it by ten.

Mr. MANION: I hope my hon. friend is closer to the truth in the remarks he made about the Conservative party.

Mr. GOULD: In regard to the statements I made as to the Conservative party, I do not wish Hansard to print the whole proof I have in my hand. It would be rather condemnatory, but it would be the truth.

Mr. PUTNAM: What is the date of their platform?

Mr. GOULD: Volume No. 2, published by the National Liberal-Conservative party, publicity committee, October 1921, the last election.

Mr. ARTHURS: The hon. member has not answered my question. Does he seriously say that the federal debt is $2,000 per capita?

Mr. GOULD: I would not say now and I do not think I could compute it right here as I stand. My leader tells me that it amounts to about $250. I have a zero added, I think. I want to point out, however, that no matter what it is, the burden is big, and my idea in bringing the matter forward is to show to the people what burden they are carrying. Further, I show to them that they have this burden placed upon them not by the party we call the Progressive party of Canada, but by the Liberal or the Conservative party, or by both, who to-day extend their chests, and say: Here, people, you are in the slough of despond, but look upon us as your saviour and accept our policies.

Mr. MACDONALD (Pictou): Does my hon. friend know that three-quarters of that debt was due to the war?

Mr. GOULD: Yes.

Mr. MACDONALD (Pictou): Then, why blame it on our political party?

Mr. GOULD: I am aware of that and I will prove later that a great proportion of it was due to expenditures on railways which were built thirty years ahead of their time. That is the maladministration to which I refer and it is all included in the national debt. It is absolutely useless to allow the present administration to attempt to solve the problem or to relieve us of the condition which they were in part responsible for bringing upon us. The average taxpayer, reading from the figures of the Acting Minister of Finance, will also see that there is a Canadian railway debt of $582,000,000. That is a debt that is due to this country, including unpaid interest amounting to $130,000,000, and plus loans in 1924 of $118,000,000, making a total of $830,000,000.

Mr. MACDONALD (Pictou): The hon. member does not mean to say that this government inaugurated the policy of consolidating the three systems? The Liberal party opposed that policy in 1917.

Mr. GOULD: I am not saying that, nor have I made any reference to that point. But you cannot determine and attribute the extent of blame for which the two political parties are respectively responsible.

Mr. MACDONALD (Pictou): But my hon. friend said it was all due to this government.

Mr. GOULD: No, I say that the Acting Minister of Finance brought down figures to show that there was a deficit of $830,000,000; that is to say, we have a total amount involved in connection with the Canadian National Railways of over $2,000,000,000. But while we have lines of steel and the rolling stock of subsidiary concerns to offset that, the government in my opinion brings down a statement showing a total slippage in earnings of $830,000,000.

Mr. HOCKEN: Does the hon. gentleman think that it was a mistaken policy to take over and consolidate these railways?

Mr. GOULD: No, not at all. Indeed, as far back as 1910 and 1911 the whole cry in western Canada was that such a consolidation was bound to come about because the people of the west were strongly condemning the principles that had obtained in connection with our railway policies in Canada up to that time. Hon. gentlemen in this House will bear me out that the firm opinion in western Canada at that time was that the principle of national ownership of our railways would inevitably be recognized and adopted for the reason that the method that

had been pursued by the political parties had so far been disadvantageous to the country. Now that the hon. gentleman has put that question to me I want to assure him that I do not for a moment attack the principle of government ownership of our railways. I will say however that this principle has not been really tried in Canada; and that statement might be advanced by way of reply to the hon. member who spoke this afternoon (Mr. Jacobs). That hon. gentlemen condemns the principle of national ownership, but I repeat that it has never been fairly tried in this country, and I honestly believe that if it were given a reasonable test on an equal basis with the Canadian Pacific Railway it would prove that the Canadian National railway system could be just as successfully operated. As a matter of fact, it seems to me that to-day, with the heavy extra burden which the Canadian National Railways must carry, they are making a wonderful showing and are compelling the Canadian Pacific to do better than perhaps they would otherwise do.

How we are to save Canada in the present crisis is perhaps a difficult question to settle. The present government is trying to save it by scrapping its 1919 platform, while our Conservative friends propose to put the country on its feet by making the cost of living higher than it is at the present time.

Mr. HOCKEN: We propose to make employment more general.

Mr. GOULD: I think the hon. gentleman must have been out of his seat when I gave figures to prove that the Conservative party had reduced the duty on agricultural implements to a greater extent than the Liberal party had done, so that the cry of closed factories was more applicable as against our Conservative friends than as against the Liberals. Now, there is another thought that occurs to me in connection with our railways, and that is that every dollar of their capitalization can be shown on paper. Such is not the case with the Canadian Pacific Railway. When making comparisons we must bear in mind that in cash, in dollars and cents, the capitalization of our National Railways can all be set down in black and white; on the other hand, there cannot be shown on paper everything that the Canadian Pacific Railway has received. For instance, the lands given to the Canadian Pacific were acquired by that company at a dollar an acre, and they say that this land to-day is worth fifteen, eighteen, twenty-five and thirty dollars, these enchanced values being attributable to the activities of the men who had gone in and settled on the land along the lines of the railway. These men were pioneer settlers, and hon. gentlemen must remember that they had to assess themselves municipally to build roads past the vacant sections of land which the Canadian Pacific Railway held out of use. These vacant sections were between the farms and the school, the church and the town generally and they were the breeding place of everything injurious to agriculture. And besides that they were exempt from taxation. Our Conservative friends must not forget that they are responsible for granting the charter to the Canadian Pacific Railway, and while I do not blame them for doing that I think at the same time that more consideration should have been given the people. If you take into consideration the amount which the people who settled around these vacant lands of the railway were obliged to assess themselves municipally to make improvements and the loss to the agriculturist because of the destructive pests these vacant lands harbored you will find that all that the Canadian Pacific Railway received, indirectly as well as directly, does not appear on paper, and if all these things were shown on paper in the case of the Canadian Pacific, even the present capitalization of the Canadian National would sink into insignificance in comparison.

Last year in the vote on the budget the government received a majority of 112. If the hon. member for West Calgary (Mr. Shaw) were in his seat I would ask him to predict the majority on this occasion. The hon. member is the only prophet I know of in this House and I am sure that if he knew he would tell me; had he known I was going to speak he might have assembled his snakes and toads, with the curl of smoke, and told me beforehand what the majority might be. However, if I might venture a prediction on my own account, I would suggest that the majority this year will be much less; let us say that it will be approximately one-fifth of what it was last year. And even if the government secures one-fifth of the majority it got last year I argue that this will represent a decline in prestige to that extent owing to failure to implement its pledges. This government was elected on a platform similar to that of the Canadian Council of Agriculture which preceded it by three years. I do not want that point missed. The group opposite, elected on a platform similar to that of the Canadian Council of Agriculture, added to the members on this side who support the same policy, represent three-fourths of the membership of the House of Commons,

and that I contend would fairly reflect the opinion of the people of Canada, particularly concerning tariff matters. But although the government came into office on the strength of those pledges, they have now taken fright at the hue and cry of industrial Canada; because of some picayune reductions on implements last year fear has driven the administration into retreat. They are poor champions of their policy if they allow an industrial area in Canada, representing only approximately one-fourth of the elected members of the House of Commons, to scare them into the position which we find them holding to-day. They are absolutely afraid to step out and carry out any of the planks of their platform.

Now, Sir, I want to refer to one or two things which appear in the budget, and particularly to the tax that is proposed on a certain document which, though not a cheque, yet represents a man's ability to go to the bank and get money. Representations have been made to the government from the floor that an enormity is being practised upon the individual who ships cream. Let me illustrate. A man who is established in the dairy business with a herd of twenty or thirty cows will get quite a large cheque for the cream that he ships to the factory, and the two cent stamp does not matter very much to him; but the poor individual who is starting in the dairy business, the soldier settler, if you will, who is possessed of only two or three or four cows, gets maybe a two and a half dollar cheque for his five-gallon can of cream, which it has taken him some time to fill; he will be obliged by this proposed legislation to pay two cents upon every cheque he receives. I say that in this regard you are taxing the poorest man, and the proposal is not equitable, it is not just, and no government should attempt to place it on the statute books, no matter what the financial needs of the country may be. I think, with other hon. members, that $10 should be the minimum cheque upon which stamp duty should be paid. I might carry the story further, I might refer members to the Turgeon report, which states positively and conclusively something which we who grow wheat knew, that the individual who is forced to sell his wheat upon the street pays the greatest price for the marketing of his product. He has to pay this two cent stamp duty on a very small cheque, whereas the more fortunate individual who ships his wheat in bulk receives his money back by express. That is where the greater part of the profits are made, at the expense of the poor individual. By last year's budget the man who can least afford to pay has to bear this two cent stamp duty on every small cheque. I have seen a man unfortunate enough to have to take in a load of tough, damp grain for which he received a paltry sum of money. But unhappily the man who is hardest hit is up against this two cent stamp tax oftener than the man whose transactions are on a much larger scale. I think if the government knew the condition of affairs they would not endeavour to impose such a tax.

Now Mr. Speaker, I have before me a programme which I believe should be upon the statute books to-day, and I am confident that the majority of these proposals which I am about to read would have been enacted had the people reposed confidence in the Progressive party in 1921. We have urged the present administration to incorporate in our statute books the majority of these measures which I shall now enumerate. Had we been entrusted with power we would have enacted into law the following measures:

1. The redemption of all untaxed war bonds that remain in Canada and the imposition of a tax upon them.

2. A Dominion system of long term credits for agriculturists, whereby they might have an opportunity by a system of amortization to pay off their debts. This is something due our agriculturists, and they will not be satisfied until such a measure is enacted. The government were aware of the conditions which called for such legislation at the time they took office, and surely they have had a sufficient interval within which to inaugurate such a policy.

3. A commission to ascertain the actual position of those industries which ask for protection or high tariff, and also to ascertain how many of them are indigenous to Canada. I think the establishment of such a commission is long overdue.

4. Writing down the over-capitalization of the Canadian National Railways so as to put the system on a fair basis to compete with its rival.

5. Settlement of the natural resources question. I think we can safely say that we would have honestly attempted to bring that about.

6. The principle of proportional representation. The government promised to bring down a bill for this purpose, but they are very lax in redeeming their promise.

7. Revaluation of soldier settlement land and other soldier assets and placing them on a normal basis. This is due our soldier settlers, indeed overdue, but the government

are lax in their duty, and make no attempt to do anything that might cause them to go down to posterity with a good name, which after all is the thing to be desired.

8. Completion of the Hudson Bay railway.

9. Enactment of a law that 7 per cent be the maximum interest chargeable by our banks, and the imposition of severe penalties for infractions of the law. This is another piece of legislation which the government should have enacted; certainly we would have placed such a law on the statute books.

10. Revival of the wheat board in 1922. Yes, this was very dear to the mind of the westerner, and it does not affect anybody else.

11. Amendment of the Bankruptcy Act to make it applicable to the agriculturist, thereby giving him a chance to start again. That is another thing due the agriculturist that this government should have enacted long ago; but no, they sit idly by and are loath to do anything.

12. Suspension of the coastal laws thereby controlling lake freight rates. That is something we would certainly have done.

13. Withdrawal of the Canadian Government Merchant Marine from the North Atlantic conference, and the use of the ships to bring down the north Atlantic freight rates.

14. Removal of the tariff and sales tax from the necessities of life, and the imposition of a luxury tax sufficient to make up the difference.

15. Here is another original suggestion. What would hon. members think about a tax on golf courses? I would tax all except municipal golf courses. We have our millionaires with their luxurious golf clubs and extensive grounds untaxed, while hon. members in our legislatures say that the child who goes out to purchase a 25 cent movie ticket should pay a tax.

Mr. ST. PERE: Would my hon. friend tax professional hockey?

Mr. GOULD: That is a matter for the provinces to decide. My proposals have to do with federal legislation.

16. This is a proposal which would not bring in any revenue, but I think it would have a salutary effect. There should be kept a record of members' attendances at meetings of the House and of committees, which should be published annually, so that the public might know what their representatives were doing.

Mr. LANCTOT: And reduce their indemnity if they did not attend?

Mr. GOULD: I would reduce the indemnities of members living within a few hundred miles of Ottawa. I have occupied more time than I intended, Mr. Speaker, but it will not have been wholly wasted if the government will see the wisdom of taking steps immediately to translate some of my suggestions into law and thus give the people of Canada good reason to rejoice.

Mr. E. C. ST. PERE (Hochelaga) (translation): Mr. Speaker, "Give me a good policy and I shall give you good finances." We must admit that this parliament should not give to these words of Baron Louis too great a scope, for, in these practical times, we must conclude that good financing can be shown, even though the balance sheet shows only a small margin to the good. Agreeing with the great Gladstone, I would like to see that the yearly budget of all our governments be not too large. This would encourage our administrators in being more economical in expenditures and consequently, the country would be better governed.

I am not, Sir, a follower of the doubting apostle. I have faith in the honour, ability and in the science of those who the government appoint to the administration of public affairs, especially in those employees of our administration who have been called upon to fill the so responsible position of making up our budgets and, in particular, of compiling its very interesting statistics which we call our yearly financial report.

Mr. Speaker, I have always made it a point to be sufficiently truthful as to not lie to myself, and to contend that, at present, our country enjoys unparalleled prosperity, would be to misrepresent the facts. On the other hand neither am I a pessimist and I shall be content, together with all the practical people of this country, to point out that our public debt is very large, and I consider it a duty to endeavour, with all those who think of the future, to find measures so as to face the situation; without looking very far back to discover the causes which have brought on these conditions, causes which everybody knows, and that I do not think proper to remind the public of too often. What is or rather what are the causes of our troubles? We are no worse off, in Canada, than the people in other foreign countries. All these countries, Sir, have suffered from this great cataclysm which is called the Great war. In all those countries we find, to-day, a revival of energy, an overflow of patriotism to face the present situation, and I cannot see why, here, in Canada, we, with this youthful country filled with hopes, should fall back and confine ourselves to a narrow pessimism and think that in our beautiful country we have

lost all hope. I shall not say misery, Sir, but a critical situation as regards finances, puts us on the same plane with all other countries. I do not know if some think proper, in view of the rumour of a near by general election, to carry on a campaign as the one which is actually taking place throughout Canada. If we listen to our political opponents, one thing alone could save us: a high protective tariff; one thing alone could do away with unemployment in our country—and it exists, Sir, it is a well known fact—it would only be necessary to return to a high protective tariff. And to give more weight to this doctrine, the exponents of the high protective tariff quote as an example the Fordney-McCumber tariff which, they say, brought back prosperity to the United States, has done away with unemployment in all the large cities of the United States, and should convince us that we must adopt, without further delay, a similar measure.

Allow me, Sir, to quote as a counter-opinion of this doctrine, not the opinion of a Canadian or of an American who is mixed up in the political conflict of the United States, but the opinion of a disinterested man, of a distinguished economist, Mr. William O. Scroggs, who stated, when the discussion of the Fordney-McCumber tariff was taking place, in a large New York newspaper. You will see, Sir, how much the Fordney-McCumber tariff, which is always quoted as an example, brought back prosperity to the American workman and how much it helped to his support. I shall read the English text so as to keep close to his thoughts and especially to the lucid explanations that it contains; it is as follows:

The new tariff bill, the New York Evening Post (Ind.) has said, "makes the free breakfast-table a mockery," and in this paper Mr. William O. Scroggs, the economist, recently recounted "the short and simple but somewhat intimate annals of a morning hour in the life of a plain middle-class American consumer," to "see how the tariff penetrates into the inner temple of his existence." To quote from this story as amended by Mr. Scroggs to fit the final form of the Senate bill:

"His day begins when he is aroused by an alarm clock, and the new tariff bill raises the duty on this article 67 per cent. His first act is to throw off the bed-covering, on which the duty has been increased 60 per cent. He jumps from his bed, on which the duty is advanced 133 per cent, and dons a summer bath-robe, with the duty up 60 per cent, and slippers, with the duty increased 33 per cent.

"He walks over a Brussels carpet (duty up 100 per cent) to close the window, the duty on the pane of which has been raised 33 per cent, and adjusts the shade (duty up 20 per cent) and curtains (up 50 per-cent). Then he enters the bathroom, stands before a mirror, on which the duty has been raised 100 per cent, sets out his shaving-stick, subject to an increase in duty of 67 per cent, his shaving-brush (duty up 30 per cent), and razor (up 100 per cent), and begins his tonsorial operations. This over, he devotes his attention to the bathtub, on which the duty has been raised 100 per cent. Towels (with the duty up 60 per cent), soap (up 67 per cent), tooth-brush and hair-brush (up 30 per cent each, and comb (up 67 per cent) are next in demand.

"As our consumer dresses, it may be noted that the new bill increases the duty 60 per cent on his underwear, 33 per cent on his hose, 15 per cent on his shirt and collar, 20 per cent or more on his necktie, and 60 per cent on his suit of clothes.

"Our consumer decides to discard his waistcoat and transfers fountain-pen (up 100 per cent), penknife (up 200 per cent), and lead pencil (up 80 per cent), from waist-coat to coat-pockets, picks a fresh linen handkerchief (up 30 per cent) from the dresser (up 133 per cent), polishes his eyeglasses (up 15 per cent), and after giving his clothes a touch with a brush (up 57 per cent), is ready for breakfast.

"At the breakfast-table our consumer spreads a napkin (duty up 15 per cent) on his knees, and turns on the current for his electric toaster, on which the duty has been advanced 160 per cent. He drinks water from a glass, on which the duty is 45 per cent higher, and begins his breakfast with an apple (duty up 200 per cent) baked with sugar (duty up 84 per cent) in an aluminum dish (up 150 per cent) on a cast-iron stove (duty up 100 per cent).

"The duty is also advanced 27 per cent on his chinaware, 20 per cent on his table silverware, 200 per cent on his oatmeal, and 225 per cent on his butter. The cream for his coffee has been removed from the free list and subjected to a duty of 22½ cents a gallon, and his eggs also have been taken from the free list and made dutiable at 8 cents per dozen. The salt for his eggs likewise comes off the free list, and so does his bacon and the flour that goes into his bread. Even the duty on the salt-shaker gets a boost of 45 per cent.

"The only things on his table that have not been subjected to a higher tariff duty are his coffee and his drinking-water."

Mr. ARTHURS: What country is the hon. gentleman quoting from?

Mr. St. PERE (Translation): The United States.

I am wondering, Sir, if such a tariff would contribute to the welfare of the Canadian working class?

Now, Sir, allow me to read a statement embodied in the platform of the English Labour party, at the last general elections. I think that the Canadian workman cannot entirely separate his platform from that of the English Labour party, a platform much less radical, but which has always leaned towards obtaining about the same results. This is what the manifesto proclaimed at the last general election in Great Britain:

Tariffs are not a remedy to unemployment. They constitute an obstacle to the free trade of products and services, upon which rests civilization. They keep up the spirit of mercantilism, of materialism and egotism. They poison the life of nations. They are responsible for corruption in political life. They encourage trusts and monopolies. They impoverish the people. They engender inequality in the distribution of the world's wealth—the result of the work of hands and brains.

Ramsay MacDonald, answering one day Mr. Baldwin, said:

Unemployment among the protected industries is at least as great as it is, on the average, among the other industries. The latest percentage available of unemployed workmen in all the industries insured, shows 10.7. It is 11.4 in clock-works; 11.6 in hardware; 17.4 in glass-works, notwithstanding the existence of a protective tariff. "Indeed, protectionism is but a diversion. There are at present 85,000 unemployed people in the building trade; 39,000 in the mines; 38,000 in the hotel business; 78,000 among the distributing agencies; 116,000 among the cotton mill hands. Protectionism can do absolutely nothing for them.

Now, sir, in the course of last session as a representative of the great metropolis, I naturally received from time to time letters urging me to be favourable to a higher protective tariff on cotton goods. They described how the British preference was the cause of unemployment in the large cotton mills of my division, and it was argued that such a state did not exist in the United States I want to read again the English text of an article which appeared in the New York World, last year, fully explaining the situation. I hope that my good workmen of Hochelaga will not miss the opportunity of reading this article to further satisfy themselves, that the British preference has not been the source of all their ills. This industry which was claimed to be so prosperous in the United States, had its great share of unemployed, to the extent that during last year people were prone to designate the cities of Manchester, of Fall River, and so forth, cities of the dead. This is what the New York World had to say on the subject:

"The cotton-mill owners have been caught in an economic vise which they fear will crush the industry, and with it the workers, unless they can lower production costs or increase production without increasing costs. The textile unions figure if the mill-owners adopt either expedient the mill-workers will be sacrificed. There are signs that they expect another industrial struggle in New England.

"There have been two heavy wage reductions in the New England mills since the war, one, in December, 1920, having been 22½ per cent. A subsequent 12½ per cent advance brought the figures up somewhat, but the unions have not been able to restore the levels prevailing before the 1920 cut.

"Briefly, the conditions which threaten new strikes over wages and working hours began to take shape with the rapid expansion of the cotton textile industry, which reached high impetus during the war. The point has been reached where the mills produce normally more than the country can consume.

"Export conditions have aggravated the situation. They are what the mill-owners call "rotten". The British market, which one was the principal export outlet for American cotton textiles, is now practically nil.

"Still other depressing factors have been a year-to-year shrinkage of the cotton surplus and the depredations of the boll-weevil. These have brought about a prodigious increase in the cost of raw material, with a corresponding increase in the cost of finished goods, which in turn, the mill-owners say, has caused wholesalers, jobbers and manufacturers literally to 'back away.' The whole cotton industry, in North and South alike, has been hard hit. Raw material costs are very high. Markets are very dull. So the New England textile mills for the most part are running about half time. That is the situation the mill-owners confront. To the mill-workers, union officials say it is even more menacing."

I must assure you, Sir, that the electors of my county, employed in that industry, had not to complain of a worse situation.

Here is a statement that appeared in a recent edition of the Detroit Free Press:

"What ails the cotton-manufacturing business at bottom is not competition from abroad, but plain high prices. It has been noted repeatedly by reliable judges that the cotton-goods market is one which languishes or revives almost solely by virtue of changes in price. When prices are within reason, the industry thrives; when they are excessive, curtailment in consumption is practically automatic. The industry is already protected, of course, to an astonishing degree. In fact, rates on such items as cotton blankets, cheap ginghams, cotton socks and cotton thread are so lofty as to be preposterous.

"High prices being the cause of stagnancy in the domestic industry, the remedy would appear to be some effort toward a more reasonable price for cotton. If high prices are the one big reason for depression, it is the height of absurdity to suppose that consumption may be encouraged by lifting them still higher."

Mr. Speaker, time and again the great dailies of our large Canadian cities have voiced the complaints of the boot and shoe manufacturers against the tariff. I felt the need of getting to the bottom of the matter myself and after communicating with representatives of the boards of trade of Lynn and Brockton, large boot and shoe manufacturing centres in the United States, I came to the conclusion that this industry is no more prosperous beyond the border than it is in Canada. I say that, though I am not familiar with this industry; but our own manufacturers have put forth certain claims, and I myself bear witness to the good faith—I will even say to the moderation—with which, at a convention of the boot and shoe manufacturers of the province of Quebec, held in the city of Montreal, one of the members of the organization, discussed this question. Notable among his utterances was this: that the fault does not lie entirely with the British preference, but that if certain of our Canadian flag-wavers who are always to the fore were ready to do as much when it came to having their footwear made in Canada instead of going to England for it our Canadian boot and shoe manufacturers would surely be able to give more employment to their men than they can at the present time.

We have also heard, Sir, quite a lot about emigration. Certain speech makers would have us believe that our present tariff is the primary, the active, the sole cause why our people are going away to the United States. Such is not the case. I am speaking more particularly of what is taking place in my own province. Certain French Canadians have a habit of migrating periodically to the United States and returning some time later. Those who are acquainted with the French-Canadian centres of New England will understand me when I say that I wonder if these people are as happy in the land of Uncle Sam as they were at home here in Canada. I have visited personally the "Little Canadas" of a number of New England cities and I make bold to declare that the French Canadians of our great cities, that all the workmen of our great cities, are far better off than those in the United States.

Mr. ARCHAMBAULT: Hear, hear.

Mr. ST. PERE: Last fall I had the good fortune to listen to a sermon, in the church of St. Louis de France, Montreal, preached by his Lordship, the venerable Bishop Hallé, of Hearst. He requested the congregation of that magnificent parish to carry his words to the province of Quebec, and to say to all French Canadians: "By all means stay where you are! What I am telling you now,—said the venerable prelate—is the opinion of a great many French Canadian parish priests in New England; they have said to me: "Urge French Canadians to remain in the province of Quebec. There they are at home and they are far, far happier indeed than they can ever hope to be under the Stars and Stripes".

And since we must speak of immigration let us deal with that question.

I do not hold with the hon. member for George Etienne Cartier (Mr. Jacobs) that we should adopt the policy of the "Open Door".

Mr. ARCHAMBAULT: Hear, hear.

Mr. ST. PERE: The hon. member told us this afternoon that the United States and Canada were each afflicted with a great evil, though of a different character in each case, and he proposed to apply the same remedy to both. I am wondering if the open door, the policy upheld by my hon friend from George Etienne Cartier for eradicating this supposed Canadian evil, would really be the remedy we need. Apparently our population is too small; we are told that we should increase our population so as to ensure the profitable operation of the Canadian National Railways. I maintain, Sir, that if there be something wrong with Canada we should be very careful not to take an overdose of the medicine in attempting to right matters.

I am very close to my constituents; I meet them every day,—and the workmen of our large cities are not only French Canadians; some are English too and Irish,—and they say to me: "Mr. St. Père, try and get the government not to open the door too wide to immigration; we, who belong to this country, we who are Canadian-born, have first right to a living in Canada, and these foreigners come here and take our jobs away from us".

I congratulate the government for closing the door a little, and to go one step further, until prosperity returns somewhat to the Canadian soil, I would be in favour of having this door closed a little more.

Let us now examine our National Railways. We have, in this House, a great number of theorists. We should have a great many practical men. I look upon this enterprise—however national it may be—as very detrimental and, mark you, I do not sanction by that a merger of the National Railways with the Canadian Pacific Railway so as to create a monopoly in Canada, but what I advocate, what the business men of my electoral division request, what the workmen call for, what those who possess moderate means ask, what those who, for the greater part, pay the income tax ask, is that these large expenditures be diminished. My views on this subject agree with those of the hon. member for St. Lawrence-St. George (Mr. Marler). It is all very well, under the plea of attracting traffic, to spend money on radio, and so on, however, these large outlays, this additional burden that the country is called upon to carry, where do they come from, if not from the pockets of the taxpayers of this country? And, notwithstanding all the arguments the theorists may bring to bear on this subject, notwithstanding all that may be said by those who see in this national enterprise a good business transaction, a patriotic thing, there is not a man in this House who can convince me that it is to the advantage of Canada to keep up an enterprise which threatens us with deficits for twenty-five years to come, whatever may be the figure of our population. And moreover why delude ourselves with false hopes? Will Canada, ten years hence, have 10,000,000 more of population than it has to-day? Whatever the case may be, I state that an enterprise which threatens us with a yearly deficit of $50,000,000 for fifteen years to come, is not a desirable one, and that the sooner we improve our situation, the better the population of this country will be satisfied.

Some hon. MEMBERS: Hear, hear.

Mr. St. PERE (Translation): Now, Sir, coming to immigration. I am not an extreme opponent of immigration; however I must state that this immigration should be closely watched. It is all very well, after a thorough physical inspection of the candidates, to bring into this country handsome specimens, statues of Tanagra, if you like, however there is one thing that we must closely watch: it is the mentality of those who come to us.

We have listened, this year, to various views aired in this House; we have heard the claims of those—including even a lady member—who wished at any price to amend the British North America Act; we have listened to some asking us to pay a pension to all the gunmen and burglars who ransack our homes, and we were forced to listen to long winded speeches on resolutions devoid of all practical sense. And, we afterward ask why the sessions are so long, and why the cost is so great! There is one suggestion which I might make to the government—and, on this subject, I must beg your indulgence if I take advantage of the privilege afforded, at present, to the members of the House, of making a long speech. I hope that in the near future, I shall see myself obliged, and this with pleasure, to cut short my remarks so that they may be summed up in a half hour speech, the practical side will perhaps be the gainer, and the country will benefit greatly from the economy which this will allow us to carry out.

Mr. Speaker, after the remarks I have just made, this House will, perhaps, want to know what are my views on the tariff. I think my views are those of a practical man; I have matured my views, Sir, after consulting the grey hair business men of my electoral division; I considered myself too young to come to a definite opinion on the subject. Here are my views on the tariff: I would put the maximum tax on the unnecessary things; this would be on a downward scale until it reached things necessary, and it would stop at the necessities of life.

I would go one step further; I am not the Finance Minister, however, if I were, perhaps, I would be bold enough to make the following suggestion: I would submit for the approval of the House, a proviso to be placed in the tariff, a flexible proviso, as the one which, at present, regulates the American tariff. Those who reside in the neighbourhood of the great Canadian Metropolis, I might mention those from all parts of the province of Quebec, and also my colleagues from the rural constituencies, would support me on this question. I mean the early fruit and vegetables which come to us in the spring from the American gardens. I do not wish to deprive anyone, for I am against every kind of prohibition, of alcohol as well as of races, however, we must not forget that all farm products come from the United States in the spring; again do I state, I do not wish to deprive anyone of the pleasure of eating to his heart's content these products, by advocating a very high tariff, however, the moment that the same Canadian products are placed on our markets, I think it would be a sound policy so as to help both our market gardeners and farmers, to raise somewhat the tariff on American products.

Mr. ARCHAMBAULT (Translation): Would the hon. member allow me a question? Would he be in favour of raising the Canadian tariff to the level of the American tariff on said products?

Mr. St. PERE (Translation): Quite so.

It is rumoured, Sir, that if a vote were taken, at present, throughout the country, because of the stagnation in business—for I told you, Sir, at the outset of my speech, that I was an optimist—a great number of Canadians would vote to annex Canada to the United States. I do not know where such Canadians come from, however, I take advantage of this occasion to assert—and past history is there to prove it—that if this project received a favourable vote, the majority favouring annexation of Canada to the United States would certainly not come from the beautiful province of Quebec. From an historical viewpoint we are Conservatives. Let the Americans come here and bring their capital, they will be received with open arms; if they wish to carry on their work peacefully, they are again welcome; but never will the fond hopes held, in the past, by the hon. Senator Cabot Lodge of Massachusetts materialize, he stated to one of the most prominent French-Canadians in the United States, that within twenty-five years Canada would form part of the United States and that the first to pass over to the Stars and Stripes would be the French Canadians of the province of Quebec. I think, Sir, that the hon. Senator Cabot Lodge had formed a wrong opinion of us, for if there is a people who want Canada to remain Canada, if there is a people who have at heart the love of their country and especially a faith in its future; if there is a people, I say, filled with such sentiments and desirous of seeing them survive, this people is surely that of the province

of Quebec. We are blessed, Sir, with a government system without its equal in the world, and the task of all good citizens, and especially of the public man, is to adapt it to the needs of the day by modernizing practices somewhat grown old and established for an entirely different economic and social status. In accordance with this principle, it is not a new list of reforms which it is necessary to offer parties, but a technique capable of bringing about reforms. Political strife, not only necessary, but fruitful in the future, will have no other function than to eliminate the negative—unattainable—the positive constituting itself in the general consensus.

My wishes to the opposition are that it remain—as Lamartine thought it at one time—the party of hopes; but what I still more desire is that the policy of our government be the science, the policy of all that may help to make national life healthier, more intense and more stable.

Mr. JAMES ARTHURS (Parry Sound): Mr. Speaker, I do not know whether I should be congratulated or commiserated on the fact that I have been unable to follow the hon. member (Mr. St. Pere) who immediately preceded me, in the most excellent political speech he has just delivered. Fortunately I am able to read the beautiful language in which he spoke, although I could not follow his spoken discourse; therefore he will pardon me if I do not attempt to deal with his arguments in the few remarks that I am about to make.

The gentleman who preceded him was the hon. member for Assiniboia (Mr. Gould) to my immediate left. While I have no desire to say very much about the remarks of the hon. member for Assiniboia, I would like to call attention to one or two things. In the first place he condemned the party of which I am a humble member in that during their regime they reduced the duty on agricultural implements; in other words they were the only party within his political knowledge who carried out the pledges they gave. Not only in this House but in the west, in the country from which my hon. friends or most of them, come, on platform after platform they have referred to the fact that my leader when in opposition proposed to lower the duty on agricultural implements, and the present member for Assiniboia tries to condemn the leader of the opposition (Mr. Meighen) because he was the only man who fulfilled the pledges he had made. But the hon. gentleman went further: he said that the farmer had no protection. I would like to point out that while the protection for the farmer, especially in the province of Ontario, is entirely inadequate, there has been protection, and that protection is entirely owing to the party to which I have the honour to belong.

He said further—and I am going to get through with his remarks as quickly as possible—that a 10 per cent duty meant a 10 per cent decrease in the purchasing power of the individual and a 20 per cent duty meant a 20 per cent decrease in the purchasing power of the individual. Why not follow that along; why not say that if we did as they have done in the United States, place a duty of 100 per cent on many articles, the result would be no purchasing power at all? The thing is absolute nonsense on the face of it.

During the course of his remarks—I called attention to it at the time—the hon. member for Assiniboia was wrong in his figures. He said the debt per capita in Canada was something over $2,000 when as a matter of fact it is less than $300. It shows how accurate the hon. member was in the majority of his statements.

Now, I am the eightieth speaker, Sir, in this momentous debate; seventy-nine have preceded me, and I think the government side have taken their share in the debate. Hon. gentlemen opposite have referred to members of this party as pessimists. I listened very carefully to the remarks of my hon. friends, when I was in the House; the speeches of the others I have read very carefully, and I have yet to find a man either on the government side or on my left, or in this party, who is entirely satisfied with conditions as they are to-day. I have not heard one man say that he was satisfied with the budget as brought down—not one. The Prime Minister (Mr. Mackenzie King) in his address quoted more than copiously from extracts in an attempt to show that the United States were just as badly off as we were, but that does not make us any better, nor does it make the United States any worse. The greater part of the speech of the Prime Minister, however, was directed along that line.

We have another minister, the Minister of Labour (Mr. Murdock). During his maiden address on the tariff he spent the greater part of his time in showing up what he called Conservative propaganda and in taking short extracts out of various papers—I think the longest was about three lines—to show that certain factories were going ahead, that some were going to open up, and that sort of thing. Well, I would like the Minister of Labour—

because it particularly applies to his department—to go to one of our industrial towns, I do not care which one; he can take his choice of Hamilton, Brantford, my own home town of Parry Sound—and ask the man on the street what the actual conditions are. Let him ask almost any of the men in the factories down in our country who are working from two, three to four days a week, who have homes of their own, who are not able to migrate to the United States for various personal and business reasons. These are the men to ask, and I am sure that if either the Prime Minister or the Minister of Labour goes to the trouble of making such an inquiry of the men in the real industrial centres in Quebec or Ontario, I do not care which, he will find out the facts.

The present tariff, Mr. Speaker, is the result of what the Prime Minister has designated as a "pause." Last session he said that the government intended to pause—shall I say, in its downward path?—in its path, anyway, and that for the present there would be no material changes in the tariff. Well, if the policy suggested by the government is right, why not let us go ahead with it and do something to create a better situation than prevails at the present time? If the policy is wrong why does not the government resign, why does it not go to the country and let the people say whether that policy is a right or wrong one for Canada at the present time?

Now, Mr. Speaker, there are three principal questions, as I look at it, in this country that ought to be settled The first one is the question of population. This has been evidenced by the remarks of probably the best thinking minds and the best financiers in the country. We have had remarks on this subject from men like Sir Henry Thornton, and Mr. Beatty, and from the heads of all our banking institutions, from men who are closely in touch with the financial situation in Canada to-day, and they are unanimous in claiming that the principal problem before the country is to get sufficient population to support the burden that we must carry now and in the succeeding years. The second question is the tariff question on which I intend to speak later. The third question is that of freight rates. These, I believe, are the three principal difficulties which confront Canada at the present time.

First, Sir, let me take up the question of population or immigration. Last year speaking in this House I made a reference to the emigration from Canada to the United States, which at that time I thought was very serious, and I stated that 182,000 of our people had gone to the adjoining republic during 1923 The Prime Minister replied in these words.

My hon. friend, I presume, knows—

I ask the House to mark those words.

—that the figures he is quoting from the returns of the United States Immigration bureau are not regarded even by the United States government as in any way corresponding to the true situation; that the census of the United States, for example, is entirely different from the showing made by the immigration statistics.

I pointed out at that time that the figures which I quoted represented the exact number who had paid the head tax upon entering the United States. I have no doubt at all that hon. gentlemen opposite did not believe the figures I then gave, but I should like to establish their accuracy now by quoting an even better authority. As reported at page 2014 of Hansard of this year the Minister of Labour quoted these figures regarding the emigration from Canada to the United States for the year 1923—the year for which I gave figures that were disputed by the Prime Minister:

Immigrant aliens admitted to the United States from Canada during 1923, 182,369.

Or 369 more than I claimed a year ago.

Number of admissions during the year 1924, 159,098.

The minister gave the figures for 1924 as 159,098. Personally I am satisfied that as many Canadians left this country for the United States in 1924 as did in 1923, and this exodus is still continuing. It is quite true that the government claim that a certain number of those people are returning; but on that point I want to quote another authority—a gentleman whom I am sure every member of this House knows well and regards with the deepest respect. This gentleman is Mr. C. G. MacNeil, of the Great War Veterans' Association, whose figures are as follows:

During the year ending July 1, 1924, 200,690 persons with Canadian domicile gained admittance to the United States upon announcing intentions of permanent residence in that country. This official tabulation does not include those who left Canada for a temporary stay in the United States, but who eventually remained.

In this connection I should like to remark that the Minister of Labour stated that many of these people are returning to Canada again and gave figures showing that in 1923, 43,432 returned and in 1924 the number was 43,316. He stated that these figures represented Canadians who had paid the $8 head tax and had obtained a refund on their return to Canada. I am quite sure that the minister, if he thinks the matter over in a sober manner and after due reflection, will not repeat that statement in public, because the figures as furnished by

the American authorities of those who have actually returned and received a refund of head tax, during the five months beginning with April 1924 are respectively 265, 215, 259, 199 and 190. That is a vastly different story, because those figures constitute less than one-fifth of the number claimed by the Minister of Labour. I have other extracts here on the subject but I have no desire to take up time by reading them. I think I can prove conclusively to the satisfaction of any fair-minded man, either by the statistics of the United States or of Canada that we have lost during the last three years 500,000 population.

Mr. SINCLAIR (Queens): Oh no.

Mr. ARTHURS: There is no question about it. My hon. friend shakes his head but I ask him if Canadians have not gone to the United States from his own town. I am sure he will not deny it. There is not a member in this House who will say that his constituency has not lost people who have gone to the United States in the last three years. They consist of the very best class of the young active men that we have in this country. Those Canadians who are leaving for the United States comprise many of our skilled workmen; they include young men who have been educated, to a great extent, by the different provinces of the Dominion, and have gone to the United States because they cannot find suitable occupation in Canada.

Mr. SINCLAIR (Queens): Would my hon friend give the official figures of the estimate of the loss of population obtained from the Bureau of Statistics?

Mr. ARTHURS: I have already given the figures for 1923. They were disputed by the Prime Minister when I gave them to the House last year but this session they have been verified by the Minister of Labour.

Mr. SINCLAIR (Queens): What figures does my hon. friend refer to.

Mr. ARTHURS: The figures of those who emigrated to the United States and declared their intention to remain there.

Mr. SINCLAIR (Queens): I asked my hon. friend to give an official estimate of the population he said we had lost during the last three years. The Bureau of Statistics makes such estimates, and it is open to my hon. friend to obtain the figures.

[Mr. Arthurs.]

Mr. ARTHURS: My hon. friend is entirely mistaken. I did not say we had lost population; I said we had lost good Canadian citizens which is vastly different.

Mr. SINCLAIR (Queens): "Population" was the word my hon. friend used.

Mr. ARTHURS: Well we have lost to the United States, in my opinion, 500,000 people in the last three years. I do not care whether the government is expending one dollar or twenty dollars to bring Doukhobors here; I would sooner see Canadians remain in their own country.

Mr. FORRESTER: I should like to ask my hon. friend how it is the cities and towns in Ontario and Quebec have a greater population than they had three years ago according to the municipal returns?

Mr. ARTHURS: That may be quite true. The unemployed, even in my hon. friend's constituency I have no doubt, flock to the cities. That is the answer.

Mr. FORRESTER: You are making misstatements.

Some hon. MEMBERS: Order.

Mr. ARTHURS: I am quite sure the answer that I gave was a reasonable one. The trend of the population has been to the United States for many years, as my hon. friend knows, but in hard times unemployment is rife. Every member in this House, whether on this side or the other, knows that the general tendency is to go to the city and look for relief; and undoubtedly that is the case in the particular instance referred to. I was going to point out, if I could, in a feeble way, what this really meant to Canada. There can be no question that the figures that I have given—and if necessary I will read reports from American authorities which present much larger figures than the ones I am giving—prove that we have lost, largely from Quebec and Ontario but also from the eastern provinces, five hundred thousand young, active men who have gone to the United States. If we take their earning power at only one thousand dollars a year, which is a very low estimate—

Mr. SINCLAIR (Queens): Does the hon. member mean that we have lost that number, that the population of Canada has decreased to that extent?

Mr. ARTHURS: I have answered that. I do not care a cent what the statistics show, but during three years we have lost five

hundred thousand people to the United States, and the Department of Immigration of the government of which my hon. friend is a member cannot show one-half of that immigration during the same time that remained in Canada.

Mr. SINCLAIR (Queens): The population has increased, as shown by the statistical department, and has been as great during the last three years as at any time during the last decade. Their estimates have been twice verified by the census returns.

Mr. ARTHURS: That will not be the case this year. My hon. friend cannot get away from the proposition I put up. We are losing people to the United States. The facts are incontrovertible.

Mr. SINCLAIR (Queens): They are coming back.

Mr. ARTHURS: They do not come back. I made a very low estimate when I said that the earning power of each man was one thousand dollars.

Mr. MERCIER: Does my hon. friend think if a man could earn one thousand dollars he would go to the States? Would he not stay in this country?

Mr. ARTHURS: That may be true, but if we had work for them here, they would earn that amount of money in Canada and spend it here. That is the point I am making. My hon. friend will admit that one thousand dollars a year is not too much for a young man to earn.

Mr. MERCIER: No.

Mr. ARTHURS: My estimate then is fair.

Mr. MERCIER: If they could earn that amount of money in this country they would not leave. I do not say that they are leaving however.

Mr. ARTHURS: The very fact that they cannot earn money is the reason they leave Will my hon. friend say that for a skilled workman a thousand dollars a year is an unfair salary?

Mr. MERCIER: No, I would not say that.

Mr. ARTHURS: I am saying that it is a fair salary and I am using that figure. If we have been losing five hundred thousand men in the last three years, we have been losing five hundred million dollars of business in this country. If these young men could get work in Canada, what would they do with their money? They would spend it in Canada. They would have to be housed and clothed and they would require the ordinary necessaries of life. We are losing as long as these men remain out of Canada, one thousand dollars per man, and this amounts to many millions per year. I am going to prove that when I come to the tariff, and to show what we have lost by the figures of the government themselves.

Mr. PRITCHARD: How does the hon. member explain that the compensation board of the province of Ontario have paid out in wages for the year 1924 over $9,000,000 more than was paid out in 1921?

Mr. ARTHURS: I do not think the compensation board has anything to do with it. It just happened there were more men injured than before.

Mr. PRITCHARD: The report states that it has been paid out in wages.

Mr. ARTHURS: The compensation board pays no wages.

Mr. PRITCHARD: No, but the industries paid $9,000,000 more than they paid in 1921.

Mr. ARTHURS: That does not make any difference. The hon. gentleman knows, if he comes from Ontario,—and I do not know his constituency—that factories are closing all around and there are many men out of work all over Ontario on that account. The argument that they paid out more in wages does not signify anything. The other fellows have gone away; that is what I am trying to prove at the present time and the statement of my hon. friend is beside the question. I should like any hon. member who disputes the facts I have given to go to any manufacturing town in Ontario, Quebec, Halifax or any of the eastern provinces, and ascertain the situation. We do not require to be told about it. We all know what it is. I was going to give a few figures in contrast to the five hundred thousand we have lost in the last three years. The present government has more than doubled the expense of the Immigration department of this country in the last few years. I will quote from the Department of Immigration and Colonization of this government, sessional paper No. 13, page 7, and there can be no question about that authority. The statistics are:

1922	89,999
1923	72,887
1924	148,000

In 1923, when we lost 180,000 to the United States, our total immigration was 72,887, and

last year, when we lost 159,000, we got from Europe 148,500.

What is the answer to that? Does the government deliberately desire to have this country populated with men who are flexible in their ideas and exchange our Canadians for them? Or are they trying to keep Canada for Canadians? These are the figures and that is the situation. That is the reason why we are contending that the whole thing is a farce, so far as this government is concerned. The Speech from the Throne left out one other item which would only go to prove the argument I am advancing. Two or three years ago we had a very strenuous situation regarding housing in Canada, and it became so serious that the government was prepared to put up $20,000,000 for a scheme to assist in this regard. Since this government came into power, and especially during the last few years, we have not heard one word about the housing scheme—absolutely nothing. Do hon. members know why? The people have left Canada and they do not require the houses. If we go to the city of Toronto or the city of Hamilton or other large places we can rent houses for a third of the amount asked a few years ago, and have no difficulty in getting houses. That is one thing the government seem to pride themselves on. That is the situation so far as Ontario is concerned.

Mr. MERCIER: In Montreal they are building all the time.

Mr. ARTHURS: You have a large industrial situation there and conditions are different. However, this year Ontario may improve in that respect.

Mr. ARCHAMBAULT: That is an improvement.

Mr. ARTHURS: Some people think so.

Mr. FORRESTER: How many new houses have been built in Ontario cities in the last three years?

Mr. ARTHURS: Building permits in Toronto alone were 7 per cent less than they were the year before.

Mr. FORRESTER: Every city has had an increase in building permits in the last three years.

Mr. ARTHURS: Except in Montreal there was no increase last year.

Mr. ARCHAMBAULT: In Montreal the construction has been increased.

Mr. ARTHURS: I said so—27 per cent increase in Montreal, 7 per cent decrease in Toronto and all other cities.

[Mr. Arthurs.]

Mr. FORRESTER: How does the hon. member reconcile that with his statement now?

Some hon. MEMBERS: Go on.

Mr. ARTHURS: The hon. member for George Etienne Cartier (Mr. Jacobs) this afternoon made a very pertinent remark, which described the situation as regards the government side most aptly. He said the tariff was a matter of geography. It is absolutely so as regards the government and that has always been the case. During the last election the tariff was simply a matter of geography. The government had just as many policies as there were different sections in the Dominion of Canada, and I believe they still intend to pursue that policy. There is one difference that stands out in the minds of both my hon. friends opposite and my hon. friends to my left—they have no doubt at all as to the fiscal policy of this small party to their right. We do not change our politics according to geography. We have the same policy from the Atlantic to the Pacific.

Mr. ARCHAMBAULT: Does my hon. friend believe in an iron-clad policy on the tariff?

Mr. ARTHURS: I do not care what kind of a policy it is so long as it is a policy, but my hon. friends have no policy and they never had one.

Mr. RINFRET: Will my hon. friend admit their geography is shrinking?

Mr. ARTHURS: Temporarily, although it is not decreasing at all.

Mr. RINFRET: Shrinking, I said, getting smaller.

Mr. ARTHURS: The question as regards the tariff is: Whom does it benefit? I know my hon. friends to my immediate left will say that the tariff is maintained for the purpose of benefiting the capitalists. They will all agree to that. I see a lot of them nodding their heads.

Mr. CALDWELL: About five per cent of the population.

Mr. ARTHURS: As a matter of fact, the man who benefits most from the tariff is not the manufacturer, but the working man and the farmer.

Some hon. MEMBERS: No.

An hon. MEMBER: Let us laugh.

Mr. ARTHURS: I shall endeavour to prove that.

Mr. LEWIS: Not the farmers of the west.

Mr. ARTHURS: The farmers of the west will one day, we hope, be as prosperous as the farmers of the east and the farmer of the east to-day is not asking for and does not want free trade. The farmer of the east is in exactly the same position as the farmer in the United States. What is the man who lives opposite to us across the Montana border asking for? Free trade? Not at all. He wants protection of the highest possible kind and he is getting it.

Mr. LEWIS: He sees his mistake now, does he not?

Mr. ARTHURS: He is demanding more. The principal object in all protection is to preserve the home market and to give the working man in any country an equal chance with the working man with whom he has to compete. There can be no question at all that even in free trade countries they have a tariff, or safeguarding-of-industries laws, or some other means by which to protect their workmen against those countries which have a lower standard of living or depreciated currency. There is no exception in the world.

Mr. EVANS: Will the hon. gentleman state, under the Safeguarding of Industries Act, how much the manufacturers are benefited, or if it gives them a price-fixing power at all?

Mr. ARTHURS: The hon. gentleman may be akin to his friend the hon. member for Springfield (Mr. Hoey). The other evening when the hon. member for Springfield was addressing the House, I asked him about the Safeguarding of Industries Act in Great Britain. I knew that the act had been abrogated by the late government. I knew and he knew, or he should have known, that a similar and much more stringent measure is being put on the statute books at the present time. He knew and I knew that there is no question that the British are prepared not only to protect themselves and their industries against countries having debased currencies or lower or worse living conditions, but to declare that against all nations, and this in effect makes an absolutely protective tariff. There is no difference in the world, no matter what you call it. Hon. gentlemen are quite as well aware of that fact as I am.

Mr. EVANS: Answer my question.

Mr. ARTHURS: I have answered it, I think. I should like to give a few illustrations of what the British and we are up against. I hold in my hand a statement of current wages in Germany under date of September 1, of last year. While they are given in marks, I will reduce them to dollars and cents. Any hon. gentleman is at liberty to do his own arithmetic if he wants to, but my arithmetic is more accurate than that of an hon. member who preceded me this evening. In Germany, skilled mechanics in the building trades are absolutely at the top of the list, higher than those engaged in chemical, leather, metal, paper or textile industries. In the building industry they receive .66 gold marks as hourly wage, or a weekly wage of 35.64 gold marks. This, at the ordinary basis of 23.82, brings the weekly wages of the most highly paid German mechanic, that is, in the building trades, to the magnificent sum of $8.40 a week, and he is working nine and ten hours a day. I do not care what stand any other hon. gentleman may take in this House; I do not care whether it is the stand my party takes or not; I am absolutely opposed to allowing goods manufactured under those conditions to come into competition with those manufactured by our workmen in Canada. I do not think I will take the time to read the whole list, but I can assure the House that I am quoting now the highest priced mechanic under date of September 1, 1924.

Mr. ARCHAMBAULT: From what paper is the hon. member reading?

Mr. ARTHURS: From a paper issued by the American Department of Labour. I forget the name just at the moment, but I will give it to the hon. gentleman in the morning. Let us take labour conditions in England, and I am quoting now from the official organ of the government, the Statistical Review. That must be right:

Wages per week

Industry	In Great Britain	In Canada
Pulp and paper (average)..	$13 20	$24 17
Shipbuilding—		
(average)..	11.70	21.00
Building Trades—		
Plumbers..	16.50	55.00
Plasterers..	16.20	55.00
Bricklayers..	15.90	44.00
Carpenters..	15.85	39.60
Labourers..	11.65	20.00
Steel—		
(a) Iron Moulders	13.95	35.00
(b) Labourers..	10.25	18.00
(c) Machinists..	13.60	28.00

	Canada	Germ'ny	Engl'nd
Bricklayer..	100	28	45
Moulder..	100	30	51
Labourer..	100	40	60
All occupations..	100	41	55

These figures are taken from the statistical report submitted by the present government, and the point I make is that it is absolute

nonsense for any country, where living conditions are as they are in Canada and as we hope they will continue to be, to try to compete, with labour at these prices, under any free trade policy or anything approaching free trade. I do not think that our working men should be asked to labour under these conditions, and as a matter of fact I shall never advocate anything of the kind. Although there has been so much debate here on the budget, there is little difference of opinion regarding the tariff except as between hon. gentlemen to my left and the rest of the House. Hon. gentlemen to my left themselves say that the gentlemen immediately opposite, the party in power, are as strongly protectionist as we Conservatives are, and I have not the slightest doubt that I could look into the eyes of many hon. gentlemen opposite me, especially when the House is rather better attended than it is to-night, who are stronger for protection along certain lines than I am myself. For after all we are not a party of high protectionists; we stand for reasonable protection. So that hon. gentlemen opposite belong to exactly the same school as ourselves; they follow the same course as we do and the only real honest opposition to the tariff comes from hon. gentlemen to my left.

Mr. LEWIS: Why do you not sit together then?

Mr. ARTHURS: There is a difference: we are absolutely candid in our stand.

Mr. LEWIS: The other is camouflage?

Mr. ELLIOTT (Dundas): Why are you opposing a protectionist budget?

Mr. ARTHURS: Do you call this a protectionist budget?

Mr. ELLIOTT (Dundas): What is it?

Mr. ARTHURS: It is nothing at all; it is merely a standing pat.

Mr. ELLIOTT (Dundas): Would you raise the tariff if you were in power?

Mr. ARTHURS: Certainly, on some things I would make a fair increase. The hon. gentleman should remember that a few moments ago one of his leaders rebuked my leader because he reduced the tariff in certain directions. All we want is a fair tariff.

Mr. ELLIOTT (Dundas): Will the hon. gentleman explain what he means by "fair."

Mr. ARTHURS: Life is too short. Now, we have no quarrel with western Canada; rather the reverse. So long as I can remember, the province of Ontario at least has always had the deepest concern for and interest in the welfare of the western provinces. And I can remember the time when many hon. gentlemen sitting to my left, one of whom is laughing at the present time, were not in this country at all. I remember when that hon. gentleman himself was not here, and it does seem to me, because these gentlemen have certain fiscal views, that that is no reason why they should try to instil into the minds of a certain number of people in the west that eastern Canada is opposed to that part of the country. There is no reason why they should try to give those people the impression that Ontario is a country composed of capitalists and monopolists; for all that sort of thing is absolutely untrue. In the great province of Ontario there are more farmers than there are anywhere else in the Dominion; there are more farmers in that province than in the three western provinces combined. I am sure there is a greater output of agricultural products in Ontario as regards variety than in those provinces. Hon. gentlemen to my left have their own views, and while we are perfectly willing to do anything possible to aid the west, either in the way of freight rates or by the amelioration of conditions, we do not believe, certainly I do not believe, that hon. gentlemen should come asking this or any other government for concessions which would operate adversely to the majority of the population of eastern Canada. I say that frankly. I think that the average man in Ontario, whether farmer or manufacturer or labourer, is a protectionist on principle, and the men in the west should have some sympathy for their viewpoint, which is just as honest as the free traders'.

Mr. LEWIS: Will the hon. gentleman not admit that the protection now in eastern Canada is a concession from the west?

Mr. ARTHURS: We had the tariff before the hon. gentleman came to Canada.

Mr. LEWIS: That may be, but that is no reason why you should have it forever.

Mr. ARTHURS: The hon. gentleman and his friends came to Canada knowing what the policy of the country was; they took up life in the western part of the country knowing the conditions under which they would have to work. And they made their money there.

Mr. LEWIS: But protection is not a law of the Medes and Persians.

Mr. ARTHURS: There is not much use arguing with a man who has made up his mind. I would point out that while hon. gentlemen to my left, collectively,—

Miss MACPHAIL: I would call the hon. gentleman's attention to the fact that all hon. members who sit to his left are not gentlemen.

Mr. ARTHURS: I tender my most humble apologies to the hon. member for having overlooked her presence.

Mr. EVANS: Will the hon. member admit that the tariff is a concession?

Mr. ARTHURS: No; it is not a concession, it is a necessity, an absolute necessity. I venture to suggest, Mr. Speaker, that if you could get a secret vote in the House tomorrow you would not find five hon. members opposed to the tariff. They are all of the same mind with us; they know that it is an absolute necessity, whether they advocate it or not.

Mr. LEWIS: A tariff for revenue.

Mr. ARTHURS: Hon. gentlemen are not opposed to the tariff at all.

Mr. EVANS: Will the hon. member explain what the tariff is? Is it not a tax that someone must pay?

Mr. ARTHURS: I must protest; I have to get through some time to-night. I would point out to my hon. friends opposite and to hon. gentlemen particularly to my left, that while they are talking free trade their friends to the immediate south of us in the United States have been clamouring for protection in the most eloquent terms. And they have succeeded in getting it; indeed, they not only have protection now but they are asking for more. Why, President Coolidge in his message a few weeks ago virtually promised an increase in protection for farm products over there. Let me give a brief comparative statement in regard to the respective duties in the United States and Canada on certain articles:

	United States	Canada
Wheat	42 cents per bushel	12 cents per bushel
Corn	15 cents per bushel	Free
Wheat flour	$2.04 per barrel	.50 per barrel
Hay	$4.00 per ton	$2.00 per ton
Fruits	35 per cent	25 per cent
Potatoes	50 cents per 100 pounds	35 cents per 100 pounds
Butter	8 cents per pound	4 cents per pound
Cheese	5 cents per pound	3 cents per pound.
Eggs	8 cents per dozen	3 cents per dozen
Cattle	40 per cent	25 per cent

I have a list of manufactured articles which hon. gentlemen might like to have enumerated. For instance, the average American tariff on woollens is 100 per cent, on silk fabrics 55 per cent, and on artificial silk 75 per cent. The duties on silk are particularly significant in view of the admission by one of my hon. friends to the left that we should perhaps protect those industries which are indigenous or natural to the country. I would point out that to-day the United States is the greatest silk manufacturing country in the world, and they do not grow any raw silk; the same thing applies to other of their industries.

Mr. LEWIS: My hon. friend said that the United States farmers are asking for protection, and he quoted the duty of 42 cents a bushel on wheat. Will he explain why it is that United States wheat is 8 cents a bushel cheaper in the United States market than Canadian wheat in Canada?—which shows it is absolutely impossible to protect the farmers' commodity.

Mr. ARTHURS: Has my hon. friend never told his constituents that the duty raises the price of the article protected? He has repeated that five or six times in the House to-night. Here is a case where they have a duty on wheat and the price is lower.

Mr. LEWIS: If that is true, what is the value of a tariff as far as the farmer is concerned? The tariff only raises the price so far as industries are concerned.

Mr. ARTHURS: As a matter of fact i has nothing to do with it, especially in this case.

Mr. LEWIS: If that is so, why are you arguing for protection in order to give our people work?

Mr. ARTHURS: That has nothing to do with it. Further I would point this out, that while the United States are protecting themselves against the farmers of Canada, they are our principal competitors in many of the markets of the world. I may take Great Britain as an instance. In 1923 the United States shipped 31,461,744 cwt. of wheat, while Canada shipped only 28,486,785 cwt. In the matter of flour the situation was somewhat better, we shipped more than did the United States. In the matter of barley last year alone—the year before was worse—the Americans shipped 5,500,000 cwt., and we shipped only 2,900,000 cwt. Then take bacon, last year our neighbours shipped over seven million pounds sterling worth to Great Britain against our five million, while the year be-

fore the figures were eleven million pounds sterling and three million respectively. I am quoting round figures. In spite of the fact that they are preserving their home market for themselves. they are using their surplus production to compete with us in the only open market we have in the world according to my hon. friends to my left. I might show the effect which the Fordney tariff had on the export of our products to the United States, but it is not a very pleasant task. It was most remarkable. For instance, in 1921 we shipped 1,009,019 pounds of mutton to the United States, last year the figure had dropped to a mere 11,000 pounds. In 1921 we shipped $12,500,000 worth of cattle, last year only $1,100,000 worth. It shows how effectively the American market is being protected against the products of our farmers, and the figures I have already given demonstrate to what an extent their American rivals are competing in the world's markets. They have a double advantage, they have their home market, and in addition they beat us in the markets of the world.

Now let me deal with the reductions in the tariff that were made at the instance of my hon. friends to the left, because I have no doubt that the tariff reductions on agricultural implements were put forward by the government without a good deal of pressure from my hon. friends.

Mr. MACDONALD (Pictou): Not at all.

Mr. ARTHURS: Well, we will say inducement.

Mr. MACDONALD (Pictou): Nor inducement either.

Mr. ARTHURS: Well, moral suasion. At any rate, reductions were made.

Mr. LEWIS: We will accept the responsibility.

Mr. ARTHURS: This was the result, and I am quoting now the hon. member for Saskatoon (Mr. Evans) who, at page 105 of Hansard, said:

> In spite of the much-vaunted cut in the tariff last year, the cost of living to-day in the Dominion is quite as high or higher than it was before the paltry change was made. Goods are just as dear for the workers, the cost of production on the farms is just as high.

Surely I am quoting from good authority. Then I must refer to a certain list put upon Hansard last year by my hon. friend from London (Mr. White), which in itself was very valuable. I might point out that although various members have differed with him more or less, they all agree that the price of agricultural machinery to-day, in spite of the one or two cuts made by the government, is just as high as it was when they took office, as a matter of fact probably higher.

Some hon. MEMBERS: No, no.

Mr. ARTHURS: Come and prove it. The figures mentioned by the hon. member for London have never been questioned. He pointed out that the abolition of the sales tax more than compensated for any single reduction that had since been made. Hon. gentlemen will have an opportunity of trying to prove that these figures are not correct. But they know that they cannot disprove them, they know that his arguments are not to be controverted, and that the only thing that saved the farmers in the west was not the reduction in duty, but the removal of the sales tax—and as a matter of fact they did not get the full benefit of that. But what was the result?

Mr. EVANS: Nobody got it.

Mr. ARTHURS: The only person who got any benefit was the manufacturer of agricultural implements. The hon. member for London said that while the buyer of agricultural machinery had received a less tariff reduction than the sales tax amounted to, on the other hand the manufacturer got more for his implements, because he had the sales tax to come and go on, and besides that he was granted certain concessions in the drawback of duty on the goods which went into the manufacture of these various implements.

Mr. LEWIS: How does the hon. gentleman account for the closing of the factories that he has been speaking of for the last hour?

Mr. ARTHURS: I am coming to that. I have personal knowledge of such cases.

Mr. LEWIS: If the manufacturer got more for his goods why should he close his factory?

Mr. ARTHURS: I have very intimate knowledge of factories being closed. But the fact remains that what reductions were made were at the expense of the great iron and steel industry of Canada. I do not use the word "great" in the ordinary sense. It was a growing industry, an industry of which we were all proud, and which by all the laws of nature should be a success in Canada, for we have the greatest iron mines in the world, we have unlimited coal resources, we have the men, we have the machinery, but as a matter of fact we are gradually drifting to the position where almost every dollar's worth of our iron is being imported from the United States. I

can give a case in point. My home town happened to have the good fortune to possess a smelter. That has been closed. Do you know where the machinery has gone, Mr. Speaker? It was bought by Henry Ford and shipped to the United States.

Mr. LEWIS: We had better get Mr. Ford to run the country, I think.

Mr. ARTHURS: He appears to be getting along fairly well. As a matter of fact the condition is as I have stated it, not only in my home town but in many other towns where the iron industry predominates.

During his speech in this debate the Prime Minister quoted copiously from the Iron Age in order to bolster up the argument that things are not as good in the United States as they might be. I want to quote from the Iron Age, too; I want to give some figures from that publication for the benefit of my hon. friends to my left. They show the number of men employed and the wages paid in the furnaces and steel mills in Canada for the years 1920 and 1924, as follows:

	1920	1924
Men employed in furnaces and mills..	11,874	5,886
In secondary industries..	101,887	69,485
Wages paid—furnaces and mills	$22,824,520	$7,825,286
In secondary industries..	$125,680,417	$83,806,802

I do not say that these results are altogether attributable to the reduction in duties made by this government; I do not mean to go that far, because I want to be fair. But the uncertainty facing these people in the matter of duties has led to the laying off of hundreds and thousands of men in the industries affected; and there is no question about the fact that this is one industry which should remain in Canada. I would point out also—and I quote further from the Iron Age—that during the years 1923 and 1924 the production of pig iron in Canada decreased 52 per cent, which goes to prove what I said before. It is also shown that during 1921, thirty plants engaged in the iron and steel industries or their subsidiaries failed; in 1922, seventy-seven; in 1923, eighty-three, and so on. That shows the extent to which this industry has been affected.

I am now going to quote from an authority that will be accepted, I am sure, by the Minister of National Defence (Mr. Macdonald); I refer to Premier Armstrong of Nova Scotia. In fact, I suppose it is hardly necessary for the minister to listen to it, as he is no doubt familiar with what the Premier of Nova Scotia has said in this respect. The solution Mr. Armstrong offered when he came to Ottawa to interview the Prime Minister was this: First, a revision of the customs tariff upon iron and steel and their products, in which consideration should be given to the difficulties now hampering the steel works of Nova Scotia, and so on; lower ad valorem duties on semi-finished steel; the cutting out of numerous exemptions, and so on. He points out that in his own province the number employed in 1920 in the iron and steel industry was 13,874, while in 1922 it had fallen to 5,000, showing how hard the industry was hit in that province.

Mr. MACDONALD (Pictou): Will the hon. member permit me? It is only fair in making that comparison to say that in 1919-20 the steel industries of Nova Scotia had been working at full capacity owing to the demand for products required during the war.

Mr. ARTHURS: The war had been over two years then.

Mr. MACDONALD (Pictou): But that was immediately following the war—a conjunction of circumstances.

Mr. ARTHURS: That may be true, but the hon. gentleman will not dispute the fact that there has been depression, nor will he deny that the figures I gave are, in the main, correct; that there is unemployment and that these industries are suffering in his own province.

Mr. MACDONALD (Pictou): As a matter of fact, in the city of Sydney today the industry is working full time.

Mr. ARTHURS: Just one—the blast furnace only.

Mr. MACDONALD (Pictou): Oh, no.

Mr. ARTHURS: I have the figures. Now let me give another illustration of the effect of the want of proper protection or adequate duties.

Mr. BIRD: Before the hon. member passes from that, would he permit a question? He has been dealing with the possibility of protecting the farmer. Suppose it be possible to get the wheat farmer to accept a tariff of 40 cents a bushel on wheat. would he agree that the farmer should fix his price so as to take advantage of the tariff?

Mr. ARTHURS: I am quite willing to accept the hon. gentleman's first suggestion. I have no doubt that outside of the wheat farmer every farmer in Canada would jump at protection. So far as the wheat farmer

is concerned, I think there ought to be an embargo against wheat going to the United States, so long as they keep the duty on it; I would support that with both hands. We should not let their milling industry get the benefit of our wheat without the payment of duty—because it goes in there free for milling purposes. We should take advantage of the circumstances under which we live. I am going to take that matter up a little later on another question; I want to hurry through. The hon. gentleman will excuse me; I am certainly in favour of doing anything possible to increase the prosperity of our farmers, whether in the west or in the east. Personally I honestly believe that a protective tariff is the best course to pursue.

Mr. BIRD: Well, granting it be so, I am just a little concerned about the application of it. We will leave the wheat farmer out of it. Take the cattle producer; we will suppose there is a high protection on cattle, sufficient to allow the farmer to make cost plus. Would the hon. gentleman be willing to have the cattle growers of this country fix prices so as to take advantage of the tariff?

Mr. ARTHURS: If the farmer gets a duty on his cattle and can fix a price, why not the manufacturer?

Mr. BIRD: That is what the manufacturer does now. I want to know if the hon. gentleman will agree to have the farmer do it.

Mr. ARTHURS: Oh, life is too short; I must get through. I will discuss that at any time with my hon. friend; I am not afraid of the argument, but I have certain remarks I want to put on Hansard and the hour is getting late.

I want to point out another result of plain, ordinary tariff tinkering. I am well acquainted in the city of Hamilton, and a couple of years ago I saw a splendid manufacturing establishment going up there, built by Libby-Owens for the manufacture of window glass, the only plant of its kind in Canada. These people have been manufacturing for about twenty years in the United States, protected by a high duty. I can remember when as a hardware man I bought my first American glass, twenty years ago, imported into Canada in competition with Belgium. Well, the factory was started at a cost of $2,500,000. The duty was 12½ per cent, and I am sure no hon. member would say that was excessive. The duty was reduced by the Belgian treaty to 11½ per cent. But on account of the present position of the Belgian currency and the fact that this government gave no protection to compensate for its depreciation, the duty on this article actually became less than 3 per cent, and the result is that this factory, employing eight or nine hundred men, is closed and the $2,500,000 invested is lying idle.

Mr. EVANS: Is there not a duty as high as 35 per cent on plate glass?

Mr. ARTHURS: I am referring to ordinary window glass, not plate glass. The hon gentleman should study the tariff. Ordinarily the duty is 11½ per cent; he can verify it himself. My hon. friend can verify that later, but the fact is that this factory is closed. It used last year, or the last year of its operation 59,000 tons of good Canadian material, and it exported or shipped from its factory 18,000 tons of product, a total of 77,000 tons. The same factory used 3,000,000 feet of lumber in making cases and I forget how many thousand tons of straw and other materials were used for packing purposes. Taking only the item of freight, it represents a very large amount. When you have 77,000 tons of material it represents, practically, one hundred train loads of thirty-eight cars; my hon. friend can figure out for himself what that means. Who suffered by that and who gained? There is not a gentleman in this House who can say that he got his window glass at a rate one-quarter of a cent cheaper last year than before. But here are 800 men out of work, and 77,000 tons of material, the handling of which is lost to Canada. There is a greatly reduced demand for our lumber, for our straw, and other commodities, as a result of the closing up of this factory, and who benefits?

Mr. EVANS: Will the hon. gentleman say why this factory went out of business when it was enjoying 11 per cent protection?

Mr. ARTHURS: The hon. gentleman will permit me to correct him; I said nothing of the kind. What I said was there was 11 per cent protection nominally, but on account of the depreciation in Belgium and the competition from that country it amounted to less than 3 per cent. But even if the factory enjoyed 11 per cent protection and yet was obliged to shut down who benefits? The hon. gentleman does not get his glass one cent cheaper.

Mr. EVANS: Why did the factory shut down, 11 per cent protection is quite an advantage?

Mr. ARTHURS: Does the hon. gentleman know, or has he given a thought to, the actual conditions? Has he ever thought of the fact that the Oliver Plough Company are moving to the United States; they are no longer going to manufacture their implements in Canada?

Mr. EVANS: The hon. gentleman has treated my question with contempt. I happen to know why the Libby-Owens factory cannot compete with the rest of the glass makers.

Mr. ARTHURS: I am not treating the matter with contempt, quite the reverse. I am giving these results with regret, I am only too sorry to see the damage inflicted upon the industries in this country. There is no question about what the results are; the facts speak for themselves. This particular factory is closed, and the price of glass has not been decreased to the Canadian consumer. That is no advantage to this country; nobody in Canada has benefited, it is the Germans and the Belgians who have derived all the profit. If the hon. gentleman wants to legislate for the Belgians let him go ahead; I certainly will not follow him along that line.

Now let me consider for a short time the question of the home market. Eighty-five to ninety per cent of all the products of Canada are consumed in this country. According to American authorities from 97 to 98 per cent of the products of the United States are consumed at home. I am giving figures as quoted by the Economist which I think are fairly correct. In this House a short time ago the hon. gentleman who leads the Progressive party spoke somewhat slightingly of the home market. To what extent are the actions of the hon. gentleman and his followers tending to neglect of the home market? How much are they tending, rather, to cause Canada to send more and more of her goods to foreign countries in the hope of finding a market at all. I want to ask in view of the fact that the United States to-day is the richest country in the world—there can be no doubt about that—and her foreign trade is only two or three per cent of her total trade did the United States make her wealth at home or abroad? There can be no question of what the answer to that question must be. The United States is making money out of her home market; it is true she is lending money to foreign countries and sending whatever surplus products she may have to the foreign market, but she is making the bulk of her wealth at home; and the sooner we follow the example of the United States the better it will be for us.

Great Britain has taken care to protect herself against cheap labour. I hold in my hand the proposals of the government regarding the legislation which is to take the place of the Safeguarding of Industries Act. Under the proposed legislation it is possible to impose—and it is probable it will be enacted—a stronger protectionist tariff than Canada has had for many years. As a matter of fact under the Safeguarding of Industries Act they had duties as high as 50 or 60 per cent and those in a so-called free trade country. I should also like to call the attention of my Progressive friends to the fact that there is no country to-day, I think, with a lower tariff than Canada has at the present time. To be correct, almost every civilized country in the world is greatly increasing its tariff. The Irish Free State is putting higher duties on various articles than they ever had before. British India first increased her tariff from 11 to 15 per cent, and on some goods there is an increase in duty from 20 to 30 per cent. No later than last year an increased rate of duty on most iron and steel products was put into force. Australia has increased its tariff four times since the war. To-day it has not only a high tariff but it has brought into force a dumping clause. In addition it can appraise imports at prices corresponding to prices of similar Australian products. In other words the manufacturing selling price in Australia is taken as the dutiable value in that country.

Mr. LEWIS: Is Australia's dumping clause worse than the dumping clause in force in Canada at the present time?

Mr. ARTHURS: We have no dumping clause unfortunately.

Mr. LEWIS: We have not?

Mr. ARTHURS: No dumping clause worth anything.

Mr. LEWIS: Let my hon. friend ask the customs officials.

Mr. ARTHURS: We should have one fifteen times as strong; what we want is a real dumping clause. Look at the way in which the United States applies its dumping clause. Because of the lower freights at which the smelter at the Soo can deliver to Cleveland and other points on the Great Lakes the United States applied its dumping clause against Canada. Just imagine that in comparison with the kind of dumping clause we have.

Mr. STEWART (Humboldt): Does my hon. friend think that a dumping clause fifteen times as strong as it is at the present

time would be in accordance with the moderate tariff he has been telling us he advocates?

Mr. ARTHURS: I would prohibit dumping altogether; I would have no half-measures. In Newfoundland there has been a general increase of 5 per cent on practically all imported goods. In South Africa increases of duty were made in 1919, 1921, 1922 and 1923, applicable to almost every line of commerce. In British Guiana the ad valorem duty was increased by one-third in 1920. From time to time the rates have been further increased. In 1921 a surtax of from 15 to 30 per cent was imposed; and in 1922 the surtax was increased by another 15 per cent to 25 per cent.

Mr. STEWART (Humboldt): Do I understand the hon. gentleman to mean that he would prohibit the entry of all goods into the Canadian market that would enter into competition with our own manufactures?

Mr. ARTHURS: No, I am not talking of that at all. There is something wrong with the hon. member's thinking apparatus. We were talking about a dumping clause—not anything else. In British Honduras there was an increase of 33⅓ per cent.

Mr. STEWART (Humboldt): I suppose, as he refuses to explain when invited to do so, it would be useless to ask the hon. member what he understands by a dumping clause.

Mr. ARTHURS: I have here a list of all the countries in Europe, South America and the British Empire, and in every case there has been a decided increase in duties since the war, some of them most remarkable, running as high as 500 or 1,000 per cent. I am not going over them, but I have them here and any hon. member can look at them if he wishes.

I have a few words to say with regard to the freight situation, and I desire to point out, particularly to my hon. friends to my left, that the one great trouble with almost all Canadian conditions to-day is not the fact that we have too much or too little tariff, but that we have too high freight rates. Without regard to the condition of our tariff at all, we are paying annually to the railways approximately $500,000,000 a year. We paid last year in customs $120,000,000; or in other words we are paying four times as much in freight rates as we paid out under the total customs tariff. A reduction of five per cent on our freight rates, which would not be excessive, would be equal to a twenty per cent reduction in our tariff, which would give our friends to my left fourteen per cent bonus on their agricultural implements coming into Canada. This shows how serious the situation is, and while I do not pretend to be a freight expert, or to have a trained mind along the lines of freight or transportation charges, I cannot for the life of me see why a carload of wheat going to Fort William, to be ground for the use of the people in Fort William, should be charged two or three times as much freight as if that carload came to Fort William, was ground in transit and sent to another country. Those are the conditions. We have them in Ontario. We have got to pay a far greater rate on freight which is sent us than is paid on freight which goes right past our door to a point much further away. I pointed out last year that whereas the Canadian National Railways had fixed a rate of $9 a ton from Drumheller to Toronto or points in Ontario, or an average of $450 per carload, they were drawing crockery from Vancouver to Halifax for $360 a car, a vastly more costly article to transport, a thousand miles longer haul; still they were asking $90 less freight on it than was being paid on coal. I cannot see any justification for that and that is why I say that one of the great problems facing Canada to-day is the freight tariff. We should have some reasonable means of applying a remedy. I can see no reason for the present condition.

One other subject which I do not think has been touched upon so far is the question of pulpwood. Most hon. members have handled it with gloves, or left it alone. We have had during the last couple of years,—and would have had for five or six years more if we had not called them back—a pulpwood commission in Canada inquiring into the question of pulpwood. Eventually the government had to recall them after they started on a world's tour. The cost of that commission was something like seventy-five or eighty thousand dollars. We have their report which is absolutely non-committal. We find that propaganda is being circulated through Canada at the present time both for and against an embargo on pulpwood. The average man I think does not understand the situation. If he did, he would oppose an embargo. I think I understand the situation and I am opposed to an embargo for several reasons, but more particularly because, especially in the provinces of Ontario and Manitoba,—and I believe all the western provinces—we have two classes of pulpwood. We have the ordinary spruce pulpwood and we have a poplar which is increasing in quantity all the time, especially in this province, for which we have little or no

market in Canada at the present time. I think somewhere between ten and twenty thousand tons of poplar are used in this province. For that reason, if for no other, I would be opposed to an embargo. However, I am in favour of an export duty. I do not care whether my views are altogether in accord with the views of my associates around me or not, but I state quite frankly and freely that I am opposed to the export of raw material where it is possible to manufacture it in Canada. I am opposed to the export of asbestos in its raw state, because we control the world's market. I am opposed to the export of unrefined copper or nickel because, in a similar manner, we should be able to control the world's output and the world's price, and the labour and the profit should be conserved for our own people. In an exactly similar manner I would advocate that this government place an export duty upon pulpwood, starting, say, at fifty cents a cord, increasing the duty to a dollar the second year, a dollar and a half the next year and proceeding in that way. The result would be that the settler or owner would not suffer, but would rather benefit, because the Americans would endeavour to get the pulpwood at the lowest possible price, knowing the duty would be increased the next year. The result would be that on our present export of 1,400,000 cords per year we would have an income of $700,000, which could be used for the general purposes of Canada or for the purpose of preserving our forests both from fire and from the destroying influence of insects, which are perhaps worse than fire. Therefore I think it would be advisable that the government should carefully consider the proposition of placing an export duty on pulpwood. I am in favour, as I said before, of reserving to our own country the other assets which we have.

Mr. CARRUTHERS: Suppose you raised the export duty high enough, would it not amount to the same thing as placing an embargo on pulpwood?

Mr. ARTHURS: My proposition would be not to put it so high as to have that effect. The price of pulpwood is a variable one. The Minister of Soldiers' Civil Re-establishment (Mr. Beland) told me the other day that in the Eastern Townships they were obtaining, I think, $14 and $16 a cord for their ordinary spruce pulpwood. I speak subject to correction but I am quite satisfied there are parts of Ontario, equally accessible to the Ontario markets, where the price would be probably $10 a cord; so that, as a matter of fact, the addition of fifty cents or a dollar a cord would have very little effect on the export trade. We would have the benefit of the revenue, and there would be the possible inducement to bring the mills from the United States to Canada, if conditions were suitable.

Mr. BROWN: The hon. member spoke about raising the price from year to year, say from fifty cents to a dollar. I think I got him aright. He said that the Americans, knowing that that price would be raised, would come in and buy. The statement was made to me the other day that the Americans, anticipating an embargo, had already overbought, and that, for that reason, the price of pulpwood was lower to-day. Is that the case?

Mr. ARTHURS: From my experience I would say that such a condition is impossible. Export pulpwood as we have it in this province, because it belongs to the owner is a commodity which is produced largely by the farmer in the winter time, with the assistance, possibly, of a few extra hands, and the quantity available in the winter is more or less limited. It is limited by the quantity of help he can secure and weather conditions. If the snow is deep, very little pulpwood can be got out. If conditions are unfavourable, none is got out. Therefore, I do not think any action of our American friends in that regard could have any effect. That is my experience.

Mr. CARRUTHERS: Does this pulpwood not deteriorate very rapidly? I am told that it does and that they would not be able to secure a price if they kept it for any length of time, as it would not be of much value in making pulp and paper.

Mr. ARTHURS: It does not deteriorate at all if it is piled. If you go to one of these pulp mills, you will see where they have immense quantities piled for eight or ten years. Of course, it is peeled. If the bark is left on, it will deteriorate. As regards deterioration in the hands of the farmer, he is never that much ahead. Farmers are largely small operators; they have a few cords here and there; but in the aggregate this amounts to many millions of cords. A farmer is quite able to take care of his own quantity.

Mr. BROWN: At whose expense would the export tax be collected?

Mr. ARTHURS: That is up to the government.

Mr. BROWN: It would mean that the settler producing that pulpwood would receive that much less.

Mr. ARTHURS: I said at the beginning that I did not think so. I think the anxiety of the American or other person to get the pulpwood would be equivalent to a small increase of fifty cents a cord, and I believe it will be a dollar in a year.

I want to say just a few parting words. What we require to-day is some policy that will build up Canada. Any policy that will do this will largely solve our difficulties, especially those difficulties in connection with debt and taxation. I have some notes on taxation, but I will postpone inflicting them upon the House until a later date. What we need in Canada is a larger population, people who will build up homes, who will be happy, who will have fair wages and constant and steady employment. If a man has employment, what does he do with his wages? He spends them, and his purchases help to keep others at work and make conditions better all round. He must be fed, clothed and housed, and so must his family. He pays taxes to the municipality and to this government, thus making the burden lighter for others. But without employment he must either migrate or become a liability to the community.

This party of which I am a humble member is not composed of pessimists. We believe in Canada, but we believe in Canada for Canadians. We welcome immigrants, provided that they are ready to become good Canadians. We believe in and are proud of our natural resources, but we also believe these resources can never be developed nor the prosperity of this country restored under the policy of the present government.

Mr. H. E. LAVIGUEUR (Quebec County) (Translation): Mr. Speaker, the hon. member who has just taken his seat, told us, at the outset of his speech, that he was the eightieth to speak on the subject which is, at present, submitted to the House—the budget. The hon. member further added that he saw absolutely nothing of any value in this budget; that it is insignificant, and means nothing. I suppose that the hon. member for Parry Sound (Mr. Arthurs) came to that conclusion after listening to the numerous speeches which were delivered on the subject. Since the budget has provoked such a protracted discussion, it is a reason not to get alarmed, and we can assert, on that score, that the present government's policy, is one of progress, prosperity and especially a policy which in no way can harm the interests of the country as a whole.

Last year, Sir, some people complained that the few changes made to the tariff would bring ruin to the country and the closing of a great number of our industries. The people of this country can bear witness that nothing of the kind happened. The House itself rejoiced in noticing that the budget voted last year was truly in the interest of the Canadian people. The industries which we feared might have to suffer by these slight changes, have increased their production instead of decreasing it, and the people of this country benefited by it.

Mr. Speaker, the member for Parry Sound held the government responsible for the exodus of Canadians to the United States; he contended that for the last three years more than 500,000 Canadians have left the country to go and settle in the United States. He should have told the House what was the cause of such an exodus instead of holding the present government responsible for such a state of things. Moreover, the hon. member knows fully well that, during the difficult period of the war—from 1914 to 1918—we were busy, owing to the decision of the Tory government, who at that time was at the helm of the affairs of the country, sending our last man overseas and spending our last dollar to win the war. But, alas! what a contrast between the attitude we took and that of the Americans! While we were sending over our soldiers to fight in the ranks of the allies, our good friends, the Americans were piling up millions. Certainly, the enticement was great for Canadians who could not take part in the war, and, when our industries were at a standstill owing to the manufacturing of ammunition or otherwise, our Canadians, I say, were drawn towards the United States by the enormous salaries paid in that country where they took advantage of the war to accumulate millions by supplying the allies with all the material they needed. Is not, Mr. Speaker, the Tory government somewhat responsible for the exodus of our people to the United States during that period. Unfortunately, this state of affairs continued after the war, owing to the sad plight in which the Tory government had placed our country. What has been happening within the last few years is but the aftermath of what took place under the Tory administration. The hon. member for Parry Sound has, moreover, stated that the population of this country had not increased; he is mistaken, for it has increased, and, with the excellent immigrants that we are

drawing to this country, and especially with the sound policy of the hon. Minister of Immigration, we can hope for a greater increase in our population, which will help to carry the burden left to us by the late government.

I had no intention, Sir, to take part in this debate. I had imagined, like the hon. member for Parry Sound (Mr. Arthurs), that the time already allotted to the discussion of the budget had been more than sufficient to enlighten the House and the whole population of Canada. Nevertheless, I deem it my duty to congratulate the hon. Acting Minister of Finance (Mr. Robb) on the budget he has submitted to the House. This budget will certainly receive the approval of the House and of all the good Canadians, the thinking public, for it is the best that could be brought down under the circumstances, knowing the difficult situation in which the country is at present. I wanted, especially, as the hon. member for Quebec South (Mr. Power) has done, to recall to the House the pledges of the government towards a certain part of the Quebec district, and more particularly towards the city of Quebec. I wish to speak of the Quebec harbour and of certain urgent work which is absolutely necessary for the government to carry out without further delay.

First, I want to mention some development work to be undertaken in the harbour of Quebec. This subject is not a new one, it has been discussed in the House for a number of years past; myself, I had occasion at each session, for the last nine or ten years, to claim, together with my colleagues from Quebec, the rights of the city of Quebec on this subject.

Together with all the other members of the district and the city of Quebec, I was sorry to see that the government found it impossible, last year, owing to uncontrollable circumstances, to grant to the city of Quebec the same subsidies—large, it is true—as those that were granted to other cities, in particular to the Port of Vancouver, towards the building of the bridge on the South shore, at Montreal, for which $7,000,000 was voted, and towards the building of the Toronto viaduct, for which the House voted $18,000,000. And since, a short while ago, $7,000,000 were voted for the breast-works of the walls at Toronto, so as to build beautiful promenades and allow our fellow-citizens of the Queen city of Ontario to enjoy their walks.

I did not criticize the amounts voted for all these works, as parliament voted them after matured deliberations, because these outlays were urgent to carry out developments in certain localities. However, Quebec has certain legitimate claims, Quebec has a right that her claims should be considered, and that is why I again rise, this evening, as I have done, at each session, to demand fair-play, the same fair-play for the province of Quebec which has contributed its large share to the advent of this government and has been able to maintain it in power during the last four years, thus allowing the country to be governed in the beneficial manner it has been under the able leadership of our devoted chief, the worthy successor of Sir Wilfrid Laurier, the right hon. Prime Minister (Mr. Mackenzie King). And, if the province of Quebec has given its sincere support to the present government it is because that province, indignant at the way it had been treated by the Tory government, from 1911 to 1921, wished to avenge itself against the Tory government by sending to sit by the side of the Prime Minister, sixty-five members representing sixty-five counties of said province.

The province of Quebec, Sir, asks for no favour; I repeat this each session. The city of Quebec simply requests the government to fulfil the pledges contracted towards the city and harbour of Quebec; pledges recognized by the governments which have followed one another for the last fifteen or twenty years, and acknowledged by the solemn word of one of the Prime Ministers of the government which preceded the present one; I mean Sir Robert Borden, ex-Prime Minister of Canada, who, on various occasions, acknowledged the rights and claims of the city of Quebec and even promised to award the contracts. Not only had we moral pledges, on the part of the government, but there was more than that: there existed notarial agreements between the Dominion government and the city of Quebec. These agreements were not carried out by the late government, notwithstanding the promises made, and notwithstanding that it had recognized its legal obligation. The present government, Sir, has also pledged itself, as its predecessor, to fulfil the legitimate claims of the city of Quebec.

I wish to recall to the House the speech which was delivered, on October 22, 1913, at the Chateau Frontenac, in Quebec, by the Right Hon. Sir Robert Borden, and in which he told the citizens of Quebec that the Dominion government acknowledged their claims and would carry out the necessary work for the development of the Quebec harbour, as promised and in compliance with the existing agreements. Sir Robert Borden stated, at the time, that the development of the Quebec harbour was not a local affair, but that it was in the interest of the whole country that millions be spent for the development of our

harbour. If you will allow me, Sir, I shall quote a few excerpts from Sir Robert Borden's speech, which were included in a speech I delivered here, on September 15, 1919. Here is what Sir Robert Borden has to say in regard to the work to be carried out in the Quebec harbour:

I shall give the English text which I have here and which faithfully reports the words and phrases which Sir Robert Borden used on that occasion:

Mr. Mayor and Gentlemen:

Will you permit me in the first place to express my grateful appreciation and warm acknowledgment of the kindness and hospitality of my fellow-citizens of this city in tendering me this banquet and in extending to me so cordial a welcome and reception. Whether we worship at the same altar, whether we are affiliated with one political party or the other, we are all united by a proud confidence in the resources of our country, in the possibilities of their development, in the freedom of our institutions and in the greatness of Canada's destiny.

Welcome an Inspiration.

Your welcome is of itself an inspiration but apart from that one cannot fail to be inspired by the memories of the past when visiting this city. Here, more than three hundred years ago were laid the foundations of the Canada of to-day. If even in later years and since the birth of this Dominion it required faith and courage to persevere in this task transmitted to us by the founders of Confederation, how shall we estimate the faith, the courage and the strong purpose of those who consecrated their energies and their lives to reclaiming for the cause of Christianity and civilization what was then a vast wilderness in this western world. May the soul and purpose of our nation ever be strengthened by the memory of the ideals which inspired the pioneers of Canada when first they undertook the task which is now committed to our keeping.

Quebec is thus unique among Canadian cities, in the associations and traditions to which I have alluded. But apart from these, when one considers its majestic situation, at the portal of the greatest inland waterway of the world, its commanding position at the head of the gulf of St. Lawrence which lies like a great land-locked ocean almost at your feet, the vast territory largely undeveloped which lies tributary to this city, and the unbounded opportunities for the development of industry and of commerce which are thus afforded, one realizes the immense importance that this harbour should be so developed and equipped as to enable it to compete on at least even terms with any port on this continent for a legitimate share of the world commerce flowing to and from our shores.

Whatever differences may exist between the policies of political parties in Canada, I am sure they will be found united in the view that the great national ports of this country should be adequately equipped for the purpose which I have stated. It is in this view that I desire to set forth to you to-night the works which the government deem necessary and which they have already undertaken for the proper equipment and development of this harbour.

Must look well ahead

In approaching a question, one realizes that we must build not for to-day or to-morrow or for ten years hence, and that no proposals can be regarded as adequate unless they are so comprehensive in their character as to permit of proper extension to meet the necessities of the large future. We can estimate to some extent the probable development within a few years; but one would need a prophetic vision to foresee the enormous increase in our commerce and the equipment necessary to cope with it during the lifetime of even a single individual. Considering the resources of this country, still on the eve of development and the population flowing in marvellous streams to our shores, one may conjecture that the bright eyes of children to-day at play in your streets may still be undimmed when this Dominion shall have surpassed in population the British Islands, or that favoured land from which came the ancestors of more than two million Canadians. . . .

Must obtain western traffic

Having regard to the probable enormous development of western traffic to this city and its wonderful possibility by reason of the situation which I have described, and seeing also the necessity of providing adequately for future development, the government thought it desirable to possess an extensive waterfront on the St. Lawrence. With this view we have acquired three miles of the best waterfront in Quebec extending from Sillery to Cap Diamond; and portions of the waterfront from the Cap Diamond to the Champlain market have also been secured. This magnificent waterfront will give to the government and to the Harbour Commission the opportunity of almost unlimited development of port and terminal facilities; and I hope you will agree that in thus looking forward to the possibilities of the future the government have taken no unwise course. In adopting this policy, we feel that we are acting not in the interests of Quebec alone but in the interest of all Canada, for Canada, as a whole is concerned in the provision of modern and effective facilities necessary for the outflow and inflow of commerce at all great ports.

Whenever necessary we can also arrange for connection of the tracks between the Champlain market station and Louise Basin for the transfer of freight which can largely be carried on at night without disturbance or inconvenience to the business activities of the city. While the great union station which the government is to occupy jointly with the Canadian Pacific Railway will subserve the principal requirements of traffic, it is also desirable that there should be a station at the Champlain market for the convenience of that portion of the population in the immediate vicinity. The plans for this station are now in course of preparation and the work will be commenced at a very early date and will be carried to completion with no unnecessary delay. . .

Harbour Commission Work

Let me now advert to the work which has been carried on by the new Harbour Commission since its appointment less than a year ago. Two English engineers of eminence familiar with the problems of harbour development were instructed to draw up a general scheme for future as well as for immediate development. The plan which they proposed was most carefully considered by the commission which consulted with the railway companies, the steamship lines, captains of steamers, pilots and other competent persons and eventually concluded that the recommendations of these engineers should be carried out. Plans have accordingly been prepared in accordance therewith and the work is now under construction. The bulk-head wall on the St. Charles' side is in course of construction. . .

Ministers favour Quebec

Holding strong opinions as to the necessity of adequate equipment for our ports, I have taken a warm personal interest in the proposals for the equipment and development of Quebec. I need not assure you that Mr. Pelletier has been indefatigable

in his efforts to reach a satisfactory conclusion in these matters. Let me add that Mr. Cochrane, Mr. Rogers and Mr. Hazen have given sympathetic consideration and careful attention to every reasonable suggestion for the effective carrying-out of our proposals. The works which I have described will involve the expenditure of very large sums, but the national purposes which are to be served amply justify that expenditure.

You may see, sir, that the claims of the city of Quebec were acknowledged not only by the present government, but also by the late government, in 1916.

Mr. MEIGHEN: Hear, hear!

Mr. LAVIGUEUR (Translation): Now, Sir, the late government discontinued the work begun at Quebec; war broke out; they invoked the plea of war, and the work on the Quebec harbour was stopped.

Last year we were told, when we requested that the promises and pledges of the Dominion government towards the city of Quebec, be carried out, that the request of the Quebec Harbour Commission had been submitted a little too late to be taken into consideration. I regret this delay in starting the work on a permament basis. An amount of $500,000 has been placed at the disposal of the Quebec Harbour Commission and the preliminary work has begun. Considerable work was carried out last autumn, and now we request the government to fulfil the pledges made by the late government who neither carried out its promises nor its pledges, and who not even recognized its notarial agreements with the city of Quebec. We, therefore, ask the present government to act and to act immediately; to be just towards the city of Quebec. We, the members of the Quebec district, rely upon the good will of the government, and we hope to obtain justice—of which we have no doubt—and that the necessary amount will be voted to carry on the work. Since we have voted $10,000,000 for the Port of Vancouver and $25,000,000 or $30,000,000 for the Toronto viaduct, we trust that the amount of $10,000,000 requested by the Quebec Harbour Commission, will be granted to us. We expect that from the present government. For my part, Sir, on the plea of being a strong supporter of the government, I trust my hopes will not be in vain, and I rely upon the government to be just towards the city of Quebec.

Apart from the claims which I mentioned a few minutes ago, the city of Quebec has others. It subscribed to the government, for the construction of the Transcontinental, amounts nowhere else exceeded in Canada. Besides, the city of Quebec has transferred, as a free gift, a property valued at the time at $2,000,000, for the building of the Union station; and, for the Quebec harbour works it practically gave away—for the small sum of $60,000—land estimated at more than $3,000,000. Again, the city of Quebec has subscribed $650,000 for the construction of the Lake St. John railroad and Canadian Northern. The city of Quebec has done more to promote the building of railroads and the development of its harbour than any other city in Canada.

People will say—and it seems to me, Mr. Speaker, that I have already heard this objection voiced—that the Quebec Harbour Commission is indebted towards the government and does not meet the interest charges. Well, if the Quebec Harbour Commission has not always met the interest charges, Quebec has furnished its port for the landing of immigrants, and if every immigrant landing at Quebec had only contributed the small amount of fifty cents, I believe that would have been fully sufficient to meet the interest coming due by the harbour commission. And besides, the amounts subscribed by the city of Quebec more than fully meet the interest charges past due which the Quebec Harbour Commission may still be owing.

But, Mr. Speaker, every dollar spent in the harbour of Quebec, contrary to the practice followed elsewhere, has been charged to the account of the Quebec Harbour Commission. If the millions squandered to maintain an open channel along the St. Lawrence between Quebec and Montreal were taken into account, as well as the amount of work carried out in the port of Montreal, or in other ports, by the Department of Public Works, and which have never been charged up against these various boards, it would become apparent that much more has been done in other ports than in Quebec. As I have just stated, every time a dollar has been spent in Quebec harbour, it has been charged up against the commission, which has not been the case in other places.

Well, to-day, we are relying on our ministers, we are relying on our government, we are relying on the House, so that fair treatment be meted out to Quebec and a grant of $10,000,000 at least, be made to enable the harbour commission to carry out its development plan and develop the port, in the interest of the city of Quebec, of the province, and as it was so ably put by Sir Robert Borden, in the interest of the country at large.

Mr. CANNON (Translation): Will the hon. gentleman allow me a question? At the beginning of his remarks, the hon. gentleman has quoted a speech made by Sir Robert Borden, when Prime Minister of Canada. Were the pledges made by its Prime Minister at Quebec fulfilled by the government of Sir Robert Borden?

Mr. LAVIGUEUR (Translation): The pledges given by the government of Sir Robert Borden were never fulfilled by the government of the day, neither were they fulfilled by the succeeding government presided over by the right hon. leader of the opposition (Mr. Meighen). Notwithstanding the protests and repeated demands of the whole representation of Quebec, our claims were always ignored. And to-day we appeal to the present government to fulfil the obligations incurred by the former government, of which they have acknowledged the principle and concerning which they have pledged themselves.

I would like, Mr. Speaker, to call the attention of the House to a request for a grant to bring relief to the population of the island of Orleans which is part of the constituency of Montmorency for the provincial legislature, and which I have the honour to represent in this House. The island of Orleans is a most beautiful spot, only four or five miles distant from the city of Quebec. At certain times of the year, the six agricultural parishes of this island are completely severed from the mainland. Repeatedly we appealed to the government to obtain relief for the people of the island of Orleans and, for a few years, we have been given free use by the hon. Minister of Marine and Fisheries (Mr. Cardin), of a boat plying between Quebec and the island of Orleans, at certain seasons. The people inhabiting the island have organized a company, to ensure communications, previous to the building of that splendid bridge which the former Tory administration had positively pledged itself to build. Sir Rodolphe Forget, then member of the county, had promised a splendid bridge between the island of Orleans and the Côte de Beaupré. I have already mentioned this pledge agreed upon by the former government and I have insisted that it should be kept, but as I understand the conditions of the country are such as to prevent the fulfilment, at present, of this pledge, undertaken by the former government towards the people of that island. We, therefore, request from the present government, the hon. Acting Minister of Finance (Mr. Robb) to kindly grant a subsidy to a company of enterprising citizens of the island of Orleans, who have formed a company, subscribed the necessary capital and have awarded a contract for the building of a boat that will carry on a regular service, winter and summer, between the island of Orleans and the mainland, this will have for effect to relieve in the future the Marine department from the necessity of placing a boat at the disposal of those people at certain periods of the year. I requested from the hon. Minister of Trade and Commerce (Mr. Low) a yearly subsidy of $3,000, so as to help this company and allow it to give a useful service, and I do hope that the hon. Minister of Trade and Commerce, who is always well disposed when it is a question of just and reasonable requests, will not refuse these people such a small subsidy and will follow the good example given by the provincial government which has granted this company a subsidy of $4,000 per year, during twenty-five years, so as to help them to build a boat for that service. I, therefore, rely upon the government to grant this subsidy to the directors of this new company of the island of Orleans.

Allow me, Sir, to remind the House that, last year, a subsidy of $10,000 was voted for repairs to be made to the breast-works of the walls of St. Gregoire de Montmorency. This amount was spent and we ask now that there be included in the supplementary estimates, an additional sum necessary to complete the work, pursuant to the report sent to the department by the district engineers. I shall avail myself of the presence of the hon. Minister of Defence (Mr. Macdonald) to advise him to dispose of the Valcartier camp which served for mobilization of contingents sent to Europe, during the war. This land was purchased by the government who expropriated a number of Valcartier families, and these, to-day, wish to buy back their lands. The expropriations carried out by the government were responsible for the scattering of the sixty-five families. We, therefore have now sixty-five good farmers with their families who are ready to return to the land. There is no better work to be performed than to encourage our fellow citizens of Quebec, or of any other province, to remain on the land and continue to farm it. I would therefore, suggest to the hon. Minister of Defence (Mr. Macdonald) to kindly give his attention to this request and allow those farmers who were expropriated to take back possession of their lands in consideration of a price, if not small, at least reasonable.

I should like also, Sir to strongly support the steps already taken by the hon. member for Lotbinière (Mr. Vien) and the other

members of the Quebec district, in regard to the completion of the Quebec bridge. I mean the building of a vehicle thoroughfare on the bridge. It has always been understood, and the citizens of Quebec have always looked at it in that light, that the Quebec bridge would be completed, since the government took charge of it. When a company, composed of enterprising citizens of Quebec, was formed to build this bridge, it was a question at the time, not only to build a bridge upon which ten or fifteen trains would circulate per day, but to build at the same time a thoroughfare for vehicles and pedestrians. We are told that the estimated cost of a vehicle roadway on the Quebec bridge would be about $500,000. I think that the government should have no hesitation in making such an outlay to complete this bridge, which is one of the marvels of this world, and which, once completed, would be a further attraction for the numerous tourists who visit Quebec. I know beforehand that the provincial government, as usual, would be disposed to do their share, if necessary, also the interested municipalities. I, therefore, ask the government to kindly give consideration to such a request, together with the others I made, and to well receive this claim, which has already been so ably put forth by the hon. member for Lotbinière and the other members of the Quebec district.

I wish to add a few words in regard to the Gaspé railway, which the government was often requested to take over. The province of Quebec has even made an official request to that effect. As we succeeded in finding millions for the improvement of railways in other parts, we should be able to find means to do justice to the good people of Gaspé, and Bonaventure by allowing the management of the National Railways to take over the Gaspé railway. I cannot too strongly support the requests of the hon. member for Gaspé, the distinguished Speaker of this House, and the hon. member for Bonaventure (Mr Marcil) who very much wish to have this question settled.

Mr. Speaker, before closing my remarks, I make a last appeal to the government who is morally pledged to carry out the development and improvement of the Quebec harbour. I am glad to see that the present government wish to honour their obligations. We are told that the depositors of the Home Bank will be indemnified, that this is a moral obligation on the part of the government. I, therefore, hope, Sir, that if the government wish to honour the pledge agreed upon to develop the Quebec harbour, the ministers representing the province of Quebec, will soon give us the good news that an amount of $10,000,000 has been placed at the disposal of the Quebec Harbour Commission. I feel certain that the people of that province will be thankful for it, and I can further assure the government that the electoral divisions of the Quebec district will do their duty, as they did in 1917 and 1921, by sending to Ottawa, to support the new government of Mackenzie King, after the next general elections, all the members of the district of Quebec.

Mr. C. WALLACE STEWART (Humboldt): I cannot refrain from making a comment on the hour of the night at which I rise to take part in the debate, but I understand that the whips have been totalling up the pages of Hansard that have already been covered in this discussion and have come to the conclusion that the time has arrived when we must make an effort to conclude our remarks within a reasonable length of time. I would not go so far as to say that I resent having to speak at this hour, but I do feel that it is rather unfortunate, from my own standpoint, that I should be the first upon whom the blow should fall and that I should be obliged to place before the House so late in the night the remarks I desire to make. I may assure you, Mr. Speaker, that it may be quite late when we get through to-night if I am required to complete the statements which I wish to make.

Just in passing, while I am speaking of the lengthy remarks that have been made, I would point out that there are now, as I believe, over 650 pages of Hansard covered by this budget debate, of which half may be credited to the members on the opposite side of the House while two-thirds of the remainder may be credited to the party who sit to my right. An hon. member says discredited; I would not say that. But those in this part of the House are not to blame for unduly prolonging the debate. We have taken our turn, it is true, but we have not been unduly long in the remarks we have made to the House; we have tried to place our viewpoint concisely before hon. members and I shall endeavour to do the same to-night.

I do not want to approach a discussion of the budget proposals in any attitude of mere carping criticism; I propose to discuss the budget itself and the amendment that has been submitted by the official opposition, and I shall deal with both in the same temper. I trust I am in a position to accept the advice of Lord Bacon, who declared:

> Read, not to contradict and to confute, nor to believe and take for granted, but to weigh and consider.

It is in that frame of mind that I would approach both the motion and the proposed amendment. Now, I was elected a member of this House independent of any party, and I stand to-night independent of any party shackles, free of any prejudice that may be the influence of any party affiliations. Since coming into this House I have been able to view the proposals put forward by the government from a wholly non-partisan standpoint. I have no objection to anyone referring to those who sit in this corner as a party, so far as our organization here is concerned. But if the word is used in its full and recognized significance, as it is applied to the two old political parties, I repudiate its application to us.

Mr. STANSELL: Does the hon. member contend that we on this side are in any different position?

Mr. STEWART (Humboldt): Perhaps I have not made myself clear, but I shall endeavour to do so. After having listened to the volume of debate to which I have already referred, coming from members of the party who sit to my right, I cannot but draw the conclusion that at least their party affiliation has had something to do with the unanimous attitude in which they have approached and criticized budget proposals. I might say the same thing with regard to the majority of those government supporters who have spoken at considerable length in behalf of the policies enunciated in this year's budget; I believe that in a great many cases their party affiliation has had a direct influence upon the statements they have made. From statements that have been made by some of the same gentlemen in this House—and statements which perhaps have been more frequently made outside—I have been led to believe in the past that those gentlemen advocated a policy somewhat different from that which is outlined in the budget proposals that we are now considering.

I was sent here by my constituents as an independent and with a free hand. As I have translated their mandate, it was that I should view, as Bacon has advised, the proposals put forward regardless of where they came from, not with any thought that because of their source I must oppose them or, on the other hand, that I must support them, but to view them wholly on their merits, and to support them if their merits seemed to justify them in my judgment. I am approaching this budget, I say, in that attitude, and having fully considered it, I find that it is not in accord with the mandate I received from my electors. I want to be fair, I want to give the government credit for those policies which I think are wise, but having weighed the whole, I must frankly confess at the outset of my remarks that I do not view the major proposals, particularly the fiscal and the taxation policy, with favour. The first two budgets that were presented to this House during the life of this parliament I opposed for similar reasons. The budget of last year I supported, and I make no apology for having done so, although, I have been criticized in some quarters for my action. I make no apology, I say, for having supported that budget. And I do not hesitate to state further that if the government had this year made similar proposals, even going no further than those of last year, I would have supported them again. I am well aware that the government are labouring under certain difficulties in the raising of revenue, and that in their field of taxation they are somewhat limited, owing to the fact that they have to encroach upon every sphere of taxation and that they have to raise revenue wherever revenue can be obtained. But because I was sent here with a definite mandate to obtain, if possible, tariff reductions and more forms of direct taxation, I cannot agree to the proposals along those lines that appear in the budget.

I have tried not to form this judgment from a mere casual consideration of this year's proposals, but to sum up the results of the government's policies during its three years of office. In so far as the tariff reductions are concerned, I am very much disappointed when I see the result of that summing up. I have not very much faith in averages in regard to tariffs, but when we take the gross customs duties that have been collected and compare them with our total imports year by year, it at least indicates the direction in which we are heading, and I am going to ask the forbearance of the House for a few moments while I place some figures on Hansard. I ask, Mr. Speaker, that I be permitted to read only the initial figures, indicating millions or hundreds of thousands as the case may be, and that I be allowed to place on Hansard the full figures. This statement has to do with the customs duties levied and collected and the imports during the years that can properly be taken as indicating the results of the policies of this government. I start with the fiscal year 1922-23, during which our total imports were 802 millions plus, and our gross customs revenues were 133 millions plus. Out of that figure, though, there was returned in drawbacks $15,000,000, leaving a net of $118,000,000. The percentage of the total imports on the free list was 33 plus per cent.

Mr. McMASTER: Free or dutiable?

Mr. STEWART (Humboldt): The percentage of total imports on the free list was 33 plus per cent. The net customs revenues of the year represent (A) of the total imports 14.7 per cent, and (B) of the dutiable imports 21.9 per cent. The next year, 1923-24, our total imports were 893 millions plus, the gross customs revenues 135 millions plus, the drawbacks 13 millions plus, the net customs revenues 121 millions, the percentage of the total imports on the free list 34 minus per cent. I am making a note of this percentage of imports on the free list for a purpose, and you will notice that it is not materially different from the year previous—33 plus the year before, 34 minus this year, or less than half of one per cent difference. The net customs revenues of the year represent (A) of the total imports 13.6 per cent, and (B) of the dutiable imports 24.5 per cent—a slight decrease in the item in which I am particularly concerned that is, the percentage of dutiable imports. In the year 1924-25, that is the current year with which we are now concerned, the total imports are 650 millions plus, the gross customs revenues—the items comparing with those which I have given for the other two years have not been available to me. The net customs revenue, as estimated by the department, was 108 millions, although I noticed by a return placed on Hansard yesterday, in answer to a question, that it exceeds the estimate, being 120 millions; but I have not changed my percentages, having used the lesser figure of 108 million dollars. The net customs revenues represent (A) of the total imports a percentage of 16.6 per cent, but if the figure that has been supplied by the government is correct that will be considerably larger.

The statement is as follows:

Statement of total import trade and customs revenues

1922-23. total imports..	$802,579,244
Gross customs revenues..	133,803,587
Returned dates and drawbacks..	15,747,118
Net customs revenues..	118,056,469
Percentage of total imports on free list.	33 per cent
Net customs revenues represent of (a) total imports..	14.7 per cent
of (b) dutiable imports..	21.9 per cent
1923-24, total imports..	$893,366,867
Gross customs revenues..	135,103,672
Returned duties and drawbacks..	13,602,874
Net customs revenues..	121,500,798
Percentage of total imports on free list.	34.7 per cent
Net customs revenues represent of (a) total imports..	13.6 per cent
of (b) dutiable imports..	20.5 per cent
1924-25, total imports..	$650,894,554
Gross customs revenues and drawbacks.	(Not available)
Net customs revenues (Est)..	$108,200,000
Percentage of total imports on free list..	(Not available)
Net customs revenues represent of (a) total imports..	16.6 per cent

So I point out that from these figures I am led to believe that the fiscal policy of the government is not materially reducing the customs tariff. I am not going to place further statistics on record, but I make the statement that my observations have led me to believe that this is not only true in a general sense, it is also true in a particular sense, that the items in which we are especially interested in having placed either on a lower basis or on the free list have not been materially altered. I would refer to the statement made by the hon. member for Centre Winnipeg (Mr. Woodsworth) when he spoke a few days ago. He referred to the fact that last year the reduction of duties on agricultural implements, according to certain figures that he had worked out, would not amount to more than 83 cents on a half section farm. His figures, perhaps, could be manipulated so that the reduction would show even less than that, or I have no doubt they could be arranged to show something more. At any rate, they are near enough to accuracy to indicate that the reductions of last year have not made a very great difference to the cost to the consumer of those implements upon which the duties were reduced.

Mr. McMASTER: Before the hon. member proceeds further along this line, should he not give credit for the reduction which would almost inevitably take place in the price of the home-produced machinery as well?

Mr. STEWART (Humboldt): Yes, I am perfectly willing to do that. I think it was the hon. member for Brome (Mr. McMaster) who directed the attention of the hon. member for Centre Winnipeg (Mr. Woodsworth), to that; and I think it is quite true. If we are to inquire into the actual cash reduction that has been made, we shall, of course, have to take the total of our home consumption, compare it with our imports, and multiply it out. It would increase to a considerable extent the amount that has been realized. I think it was the hon. member for Assiniboia (Mr. Gould) who said earlier this evening that in the purchase of implements for his farming operations he had benefited by the reduction to the extent of $5. It has been said that those who have purchased heavily in that kind of machinery have realized to a larger extent than that, but at best the average has not been high. However, as I said a little while ago, I have no apologies to make, no regrets to express, for having supported the government in the attempt they made in this direction last year, and if they

had given some indication that they were headed this year in the same direction and that they proposed to make similar reductions on those articles that are the necessities of life or that are the implements used in our primary production, I would have supported them again this year. But because that feature of their policy is conspicuous by its absence, not alone in the budget proposals but in the speeches that have been made by the supporters of the government, I take the stand that I cannot support the proposals that are made this year.

Mr. MACDONALD (Pictou): Will my hon. friend permit me? Does he know that the revenues of this country declined $52,000,000 this past year, and does he realize the difficulty of getting revenue?

Mr. STEWART (Humboldt): Yes, the hon. gentleman is quite right, and that is why I took the trouble to put all these figures on record rather than the averages. Some hon. members in this debate have quoted averages alone, and averages do not, of course, correctly represent the situation unless one takes into consideration the fact that the imports have been reduced. I made the statement that for 1924-25 our imports have been reduced from $893,000,000 to $650,000,000, but when I take the customs revenues that have been acquired from those imports I find that the percentage is about the same.

Mr. MACDONALD (Pictou): What method does my hon. friend propose whereby the falling revenues can be sustained?

Mr. STEWART (Humboldt): I think it was two years ago, Mr. Speaker, that in speaking to the budget I dwelt at some length on certain taxation proposals that I advocated. I have referred to them already this evening under the general heading of more direct taxation. The hon. gentleman, I think, fully understands what I mean by that. My chief objection to the tariff policy of this government, or of any government for that matter—my chief objection to the raising of revenue through tariff is that it is an indirect form of taxation. Of course I could go much further than that. The hon. member for Brome would call my attention to the fact that the tariff tax is not reflected wholly in the revenues of the country but that it is a much larger item than that; being an indirect tax it is misused to the extent that we pay many dollars out, perhaps, for every dollar that finds its way into the revenues. Direct methods of taxation are what I advocate. I do not propose at this time to go into the matter in detail or to specify any particular system, any more than to assure the hon. member who is representing the government to-night that any system of direct taxation that has the least principle of fairness on its face, I will support, rather than—

Mr. MACDONALD (Pictou): It is pretty hard to find new avenues, in Canada.

Mr. STEWART (Humboldt): It may be hard to find new avenues. In fact I think I have already mentioned that I realize the government have already explored perhaps almost every field. But I think they have not fully covered every field; it may be possible for them to go further. And I will support them when they go further in imposing direct taxation, provided that they reduce our indirect taxes through the customs duties at the same time.

Mr. McMASTER: If the hon. member will permit a question, is it not also true that a number of our duties are so high that they yield little or no revenue because all goods of foreign production are kept out?

Mr. STEWART (Humboldt): I wholly agree with the line of thought that is inferred in the statement made by the hon. member for Brome, and I thank him for bringing that to the attention of the House so concisely.

I want to make a further statement with regard to the attitude of the government supporters in this House and the press supporting the government throughout the country. I cannot say I recall having heard a member of the government use the term "concession" with regard to present tariff proposals, but they have made statements that leave a similar inference. I have been surprised at the number of times the expression "tariff concession" has been used in the press, particularly in editorial comments, during the last few months. It seems to me a most peculiar thing, if I understand the meaning of the term "concession," that the attitude or the policy of the government when it is towards the lowering of customs duties should be termed by the press as a "tariff concession." If there is any such thing as a tariff concession it is when a special interest is given the protection of a tariff, not when the general industries of the country are relieved of the burden of taxation through the tariff. I say I reproach the supporters of the government who have left that inference—and there are several of them who have—and I further express my surprise that the press which supports this government should use that term "tariff concessions" with regard to the policies of a government which was elected

on a platform promising that there would be tariff reduction.

Turning to the financial statement of the Acting Minister of Finance, I do not propose to go to the extremes that hon. members to my left have gone. I do not consider the financial statement baffling, nor do I think it is iniquitous. I have certain proposals I wish to make—certain suggestions, perhaps it would be better to say. The government have probably taken the matter of psychology into consideration—not particularly this government—because it has been shown to us, I think, in a way that cannot be refuted, that the form of accounting and the form of this budget itself are not materially different from those applicable to the budgets which have been presented by a goodly number of finance ministers in the past. But I do believe that finance ministers, in making up their statement of accounting, are apt to take into consideration the psychology of the people. They probably look for the political effect on the mind and the thought of the people, and for that reason the form of the financial statement has been such as to draw forth severe criticism from some hon. members of this House. I say that I do not criticize the present Acting Minister of Finance, or any of his predecessors in particular. I think there has been a general tendency—which is not discreditable to the present government; the provincial governments, and probably the governments of all countries do the same—to present the financial statement in the best possible light. I would suggest, however, that our present financial statement is not wholly adequate to the needs of the country at the present time. Without disputing the figures that are placed before us, without claiming that improper inferences have been drawn from the figures submitted to us, I do submit that further details could be given to us that would make the financial situation of Canada more intelligible to the average citizen. We have had presented to us a budget which shows a surplus; at the same time figures have been brought forward showing that when our major liability, that is our railroads, is taken into consideration, that surplus disappears into thin air and is replaced by a deficit. Those figures do not appear plainly in the financial statement offered to us by the Acting Minister of Finance; and my suggestion is that although that statement may well compare with other statements given in the past the fact that it is similar to budgets brought down five or six, or even ten years ago is perhaps nothing to its credit, and I believe it could be improved upon to some extent. The leader of our group stated that he was not an accountant but only a plain business man. I too claim no particular right to be advising the Minister of Finance as to how he should do his accounting; but as a plain man I do state that I think the budget figures could be given to us in a more comprehensive form than they have been given. The fact that we have at the same time a surplus and a deficit is confusing to some minds to say the least. The fact that there has been a falling off in revenue due to a reduction in the total imports into the country might be more plainly set out in the financial statement.

Before passing too far away from the matter of the tariff proposals I want to touch on the announcement of the Acting Minister of Finance that the government intends to appoint a tariff commission. I listened with very great interest to reasons given by the hon. member for Cape Breton South and Richmond (Mr. Kyte) as to why he supported the present proposal although he had opposed it on a previous occasion. He told us that when the Conservative party were in power —they being in his estimation a high tariff government—he considered it his duty to oppose their recommendation for a tariff commission at that time. I wonder if he realized that when he was making that candid statement he was furnishing arguments against the creation of a tariff commission to those sitting here who hold views similar to those I have expressed to-night—reasons why we could not favour such a proposal at this time. If we were convinced that the present government favours lower tariff than did the government in office at the time my hon. friend refers to, his argument might have some effect. But the contrary being the case, his argument as to why we could not support a tariff commission a number of years ago still holds good in so far as I am concerned and I think the same may be said for a number of my colleagues. I cannot refrain from repeating certain arguments that were used in the debate of 1912 because I think they very well state the case against the proposed tariff commission; and the fact that they were advanced by a gentleman who until recently was a member of the party now sitting on the government benches should lend some weight to them. The Hon. Mr. Maclean, then member for Halifax, speaking in this House in February, 1912—and his statement will be found at page 2642 of Hansard of that year—made the following declaration:

I am opposed to this bill, because I believe it is a violation of constitutional practice in all British countries; because it directly or indirectly, and perhaps unconsciously, assumes to give a tariff commission powers of legislation.

That is his first objection, and it appears to me to be one of the strongest that I can urge.

Mr. MACDONALD (Pictou): My hon. friend is arguing about something that does not exist. It is not the proposal of this government to set up a tariff commission similar to the one proposed by the government in 1911-12. It is only proposed that certain officials, with probably an additional member representing the interests to which my hon. friend would be especially devoted, may be employed for the purpose of preparing data. We do not propose to create any tariff board that is going to prepare a tariff, such as the government of that day proposed.

Mr. STEWART (Humboldt): I think it most unfortunate that a full and clear explanation with respect to the proposed tariff commission was not made at the time of the announcement that a tariff commission would be appointed. I think it also unfortunate that—

Mr. MACDONALD (Pictou): I want to say to my hon. friend that nothing was said by the Acting Minister of Finance that warrants his assertion that we propose to create any such board as the Borden government contemplated.

Mr. STEWART (Humboldt): Then it is highly unfortunate that the present government should have announced a commission of such a character and with the same name, regardless of whether it is proposed to confer upon it the same wide power. If that is not the intention I am very glad to have the correction of the hon. minister. At the same time the principle that underlies both propositions is the subject of attack in the few further sentences I propose to read:

I object to it because it tends to weaken the doctrine of ministerial responsibility as it obtains in all British countries. I object to it because the duties which, under the bill, are assigned to a commission, refer to matters which in all British countries are dealt with directly by the responsible advisers of the crown.

Mr. MACDONALD (Pictou): My hon. friend again misapprehends the situation. There was nothing said by the Acting Minister of Finance that would indicate by any manner of means that this ministry sought to absolve itself of responsibility and place it upon any board. We are simply providing for an arrangement under which data might be gathered. No power is to be given to any organization to raise or lower the tariff, and Mr. Maclean's argument referred to a board that was to be entrusted with that power.

Mr. STEWART (Humboldt): The minister's explanation may have a material effect on my criticism of the proposed tariff commission as I understand it; but there is one further statement that perhaps will satisfy the hon. gentleman that I have a just ground of objection to the proposed commission. Here is one statement at least that is applicable to the present proposal whether the statement made by the minister be accepted or not.

I object to the bill, because the purpose sought to be attained by it can be better attained by less expensive and less objectionable methods.

I object to it further because it seeks in a manner, in a veiled manner perhaps, to validate by a statute the doctrine of protection in this country.

The last statement, I think, applies to the proposed commission as well as to any other commission of that character that might be formed. It seeks to give a definite understanding to the people that the present government wishes or desires to perpetuate the tariff; it tends to create an impression in the public mind that the present government are seeking information and will obtain that information not from all sources but from certain prejudiced sources.

Mr. MACDONALD (Pictou): My hon. friend is entirely wrong. Why should anything of that kind occur?

Mr. STEWART (Humboldt): Permit me to give an illustration of what the people are thinking. We have in this country a railway commission. I have heard that commission criticized at various times by people, who are much interested in the rulings it makes, because they are the people who eventually have to pay, and the criticism that is levelled against the railway commission is that they are by their position enabled to secure one side of the story very readily and easily. The railways may come to them with a claim, it is placed before them in a plausible manner, and it looks to them to be wise to adopt or to admit the plea of the railway; but those people scattered all over the country who have to foot the bill, find it very difficult indeed to concentrate their information on the matter and bring it to the attention of the railway commission. They have a way of bringing it to the attention of the government in this House, because 235 members have been sent here for that purpose, but these people have no easy way of presenting their concentrated information before the railway commission: And I claim that we will have

the same objection and the same suspicion regarding this commission. Although the hon. gentleman says I am altogether too suspicious, I tell him I only represent the people and I assure him they will be suspicious of any commission which is set up, where those who are seeking tariff protection can go to the commission and give information to them, while those who are footing the bill all over the country find it difficult to approach that commission.

Mr. MACDONALD (Pictou): The hon. member wants to be fair, but he is certainly under a misapprehension. The criticisms he suggests with regard to the railway commission may have some basis by reason of the fact that the representatives of the people do not have the same opportunity of discussing questions before that body before the orders are given in the same way that they have of discussing matters in this House. But I want to have it distinctly understood there is no proposal by this government to get rid of ministerial responsibility for one moment; and in the case of this board which it is proposed to create, the government of the day will be absolutely responsible for anything that is proposed to this House and my hon. friend can discuss the matter in the House, just as he can now. It is entirely different from the railway commission and the analogy he draws is not applicable.

Mr. STEWART (Humboldt): In so far as the rulings of the Board of Railway Commissioners are concerned, we have the privilege of discussing them in this House sometimes long after they have been made and when the evil effects have gone so far as to be beyond recall. I know the minister will say I am too suspicious; but the fear which I have at the present time with regard to the tariff commission which it is proposed shall act in an advisory capacity towards the government is that it will have acted in a similar manner to the railway commission, or that the advice of the commission will have been acted upon by the government before we are in a position to take action, and the position will be the same as it is with regard to the railway commission.

Mr. MACDONALD (Pictou): I desire to point out that any board acting under the government of the day would only be obtaining data for the information of the government, and that such a board would have no legislative or regulative power with regard to the tariff whatever; but the government would submit a budget just as they are submitting one now, and every hon. member would have a right to discuss it before it became law, which is an entirely different position to that of the railway commission.

Mr. STEWART (Humboldt): There is that difference I am free to admit. If it has no legislative power—and I accept the word of the hon. gentleman representing the government that they do not propose to give it legislative power—it has that advantage, and we would have an opportunity to discuss, at least to some extent, their proposals.

Mr. MACDONALD (Pictou): Just the same as hon. members can discuss proposals of the government now.

Mr. STEWART (Humboldt): No, not to the same extent as we have now, because the business of that commission would be to secure information with regard to the tariff, and we know, as I have already said, how easy it is for certain concentrated interests, corporations, for example, to bring their viewpoint to bear and to make it bear very forcibly on the commission, while it is so very difficult for the great mass of the people to present their viewpoint.

Mr. MACDONALD (Pictou): I am sorry my hon. friend thinks the government should bring down a budget without having any information before presenting it. That is the logical result of my hon. friend's argument.

Mr. STEWART (Humboldt): No, I do not think they should bring it down without information at all, but if the hon. member is seriously contending that the tariff commission is absolutely for nothing but information alone, I am going to read to him again the statement that was made by the hon. member for Halifax back in 1912. He said:

> I object to the bill because the purpose sought to be attained by it can be better attained by less expensive and less objectionable methods.

Passing from that proposal of the Acting Minister of Finance I take up another of his taxation proposals. That is the amendment to the War Revenue Act, and by that amendment he proposes to alter the effect of a certain clause in the act. That clause provides that all papers addressed to a bank on which money is paid shall bear stamps. By mutual consent I presume certain of those papers have been exempted up to the present time, but it is now proposed that these papers shall bear a tax stamp, and it is to this matter I particularly wish to refer. I believe that it has been mutually agreed to exempt certain papers. The papers referred to are issued in payment

for grain, known as grain tickets, and in payment of cream, known as cream or milk tickets—

Mr. McMASTER: Are they cashing them at the bank?

Mr. STEWART (Humboldt): They are. I do not wish to camouflage the situation in the least. I want to say frankly that in my estimation they are cheques. They are honoured by the bank and payment is made. Although in the past the government apparently has looked upon them as something other than cheques, it is now proposed to look upon them as cheques, and place the tax upon them the same as is placed upon cheques. Well they are receipts but they are also cheques, and I would prefer if the government treated them as cheques, and if the government is going to tax them, then tax them just the same as other cheques. But I will make my protest because I do not think that tax should be levied. I would admit it is asking for a special exemption to be made, but let me point out, Mr. Speaker, that in the application of this War Revenue Act and this particular clause of it which provides for placing stamps upon cheques, an exemption has already been made to which I and many other members took exception, that all cheques for sums over $2,500 should be exempt from taxation. One dollar tax is the limit. I regret very much that the acting minister is not here in order that I might address myself to him primarily. If there were not an exemption in that act, I would hesitate to ask him to make a special exemption in favour of these gentlemen, although it might be necessary to do so. They are primary producers and producers on a small scale. Those who are benefiting under this clause have benefited under it for a special reason which I shall refer to. But because there is an exception already made, because it is not wholly justified, and because I took exception to it before, I am going to ask for a further exemption to be granted, and to ask that the cheque for produce from the primary producer, when issued for sums under ten dollars, should be exempt from taxation.

I regret almost as much that the Minister of Agriculture (Mr. Motherwell) is not in his seat. I should like to point out to him certain things which, it seems to me, he must have overlooked in connection with this tax, or he would have devoted a little less time to the Hudson bay and a little to this when he made his speech a few days ago. Over a number of years in western Canada our best farmers—and many of them have been in our legislatures, some of them members of the government, and the Minister of Agriculture has been one of them—have been endeavouring to induce those who are engaged in the dairy industry to produce a better quality of cream, in such a manner to raise the quality of their product, a product which has to be exported, and thus by raising the quality of their produce, to bring to themselves a greater remuneration than they could possibly hope to receive for a lower quality product. It is probably not necessary for me to do this, but I am going to give a little of the reason why this was one of the methods used to induce producers of cream to produce cream of a high quality. Of course, there are other factors that enter into the quality of cream than its delivery to the creamery, but one of the chief factors that has to do with the quality of cream is the time at which it reaches the butter maker after it has been taken from the milk. Gentlemen of eastern Canada, perhaps, do not realize to the full extent the handicap that farmers in the west labour under as regards distances. I have recollections of creameries and cheese factories that are dotted over certain parts of Ontario and that I knew years ago when I lived here, and I know none of the patrons of those industries had to take their milk or cream any great distance to the factory. But in western Canada, that is a handicap. It is always difficult to get a sufficient quantity of cream within reasonable distance of a factory so that it can be delivered there while it is in a fair state of freshness. Years ago it was recognized that the fact that cream was being held too long on the farms was tending to lessen its quality. Therefore, this idea was put forward of making it possible that payments should be made every time the dairy farmer delivered his can of cream. That was carried out, and that is the policy that is followed in practically all the creameries of western Canada to-day in order to induce the dairy farmer to bring in his cream. It was realized that the dairy farmer producing cream was, in many cases, producing it because he needed a little ready cash as time went on. It was not his main industry, only a side line, and one of the inducements for him to bring in his cream was to give him a ticket which he could cash for his cream can every time he brought it in. I am going to quote what an owner and operator of a creamery said to me just a few months before I came to Ottawa. This bears directly on the matter, although at that time he had no idea there was to be any such move as this to put a tax on the

tickets he was issuing. He stated that in the last two or three years there had been more improvement in the quality as well as the quantity of the cream that was delivered to him than in the previous fifteen years he had been operating the creamery. One of the things that tended towards that was that he induced his patrons to bring their cream to him, if not every day, only a few days old, and the cream being brought to him while it was in a proper state of freshness, produced the proper quality of butter, the result being that he was able to pay a higher price for the cream and obtain a higher price for his product. Those tickets have been free of the two cent tax, but it is now proposed that they shall bear it. This is going to be a financial burden upon the dairy farmer, although the dairy farmer is not able to pay any further tax. The government have admitted in the past that our primary producers are worthy of special consideration, but in this instance they are overlooking that. It is estimated and, I think, very accurately, that this will place a burden of $100,000 by way of taxation on the cream producers of the three western provinces. These tickets that are issued for cream are almost invariably for sums less than $5. Very rarely they run over $5.

Mr. McMASTER: Is it necessary to issue them every time the cream is brought in?

Mr. STEWART (Humboldt): I have tried to point out that that method was adopted as an inducement. In many cases at the present time it would not be necessary, but our industry is still in its infant stages.

Mr. McMASTER: I hope the hon. member is not going to use the infant industry argument that is used so often. I do not like to hear that from the west.

Mr. STEWART (Humboldt): It may be worn out as regards the west, but I have noticed that it is a splendid argument to use in this House and, perhaps, I may be permitted to use it just as others have done.

Mr. DECHENE: It is one form of protection.

Mr. STEWART (Humboldt): This is not a form of protection.

Mr. DECHENE: To help an industry in its infancy?

Mr. STEWART (Humboldt): No, I am placing this on purely a business and what I consider a fair basis. I have said there are already exemptions. A man who does his business by issuing cheques of $2,000 or over, has the benefit of an exemption. There may be good reasons for this although I question it. If that gentleman has this privilege, why not give to the man who does his business in these small amounts, some similar exemption? On a transaction of $2,500, the business man, wheat farmer or anybody who does business in items of that size pays one dollar of a tax, but on cream tickets the tax on $2,500 would at a very conservative estimate amount to $10. Is there any fairness or justice in that? Is that asking for protection or for fair play? The hon. member for Brome says: Why should these tickets have to be issued in such small amounts?

Mr. McMASTER: It does not look businesslike.

Mr. STEWART (Humboldt): I have already attempted to show to the hon. gentleman that there is a reason for this. When the results are as good as they have been in the western provinces, this is surely good business. This has been the best kind of business for western Canada. It has built up our dairy business there from practically nothing until it takes second place to none in the Dominion as regards quality, and we are growing in the quantity of the butter that we export. It is just with regard to the quality that the emphasis has to be placed on the system that is used. It might seem that I am unduly stressing this particular point, but I think I am not. I said that I was sorry the Minister of Agriculture was not with us. If he were, I am sure he would think back to the years when he himself took an active part in establishing, perhaps, the very system that is in vogue now, because he laid a good deal of the foundation of our dairy industry in Saskatchewan and he would realize that at one fell swoop here the government is wiping away one method that was very efficient in bringing about the desired results. I am going to ask the Acting Minister of Finance to reconsider this. I hope, although he is out of reach of my words, Hansard will be brought to his attention and he may be asked to reconsider the imposition of this tax, not because of the amount of it, that is insignificant so far as our revenues are concerned, but it is a very considerable amount to place upon those who—and again I venture to bring upon myself the censure of the hon. member for Brome—to place upon those who are still engaged in what I may term an "infant industry;" many of them are just beginning to start into dairying in the west.

I do not know what the temper of the House is, Mr. Speaker—

Mr. McMASTER: Go on.

Mr. STEWART (Humboldt): Hon. gentlemen who are sitting around me are, I know, doing so to give me courage that I may carry on; I know hon. gentlemen opposite are growing very tired; and as I have a number of comments to make yet, and it is now almost one o'clock, I would ask that I be allowed to adjourn the debate.

Mr. MACDONALD (Pictou): Mr. Speaker, it was understood between the whips that the debate would go on until one o'clock, but I think we are sufficiently close to the hour that if my hon. friend cannot finish within that time I would offer no objection to his adjourning the debate.

Motion agreed to and debate adjourned.

On motion of Mr. Macdonald (Pictou) the House adjourned at 12.55 a.m. (Friday).

Friday, April 24, 1925

The House met at three o'clock.

YUKON QUARTZ MINING

Mr. PIUS MICHAUD (Restigouche and Madawaska) presented the first report of the select standing committee on Mines, Minerals and Waterways, reporting with amendments Bill No. 6, to amend the Yukon Quartz Mining Act.

MIGRATORY BIRDS CONVENTION

Hon. CHARLES STEWART (Minister of the Interior) moved for leave to introduce Bill No. 44, to amend the Migratory Birds Convention Act.

He said: This bill makes only three minor amendments to the act. The first, an amendment to section 4, makes provision for regulations which can be made conformable to the regulations of the province with reference to a person having game in his possession in the closed season. The necessity for this has arisen on account of a case which was taken to the court of appeal in Manitoba, where the party having the game in his possession, which would have been legal under the provincial law, was prosecuted. We are amending the act so as to make it conform with the provincial law. Section 2, amending section 5, permits us to have the game and fishery officers of the Ontario government act as game wardens for the enforcement of the Migratory Birds Convention Act. The amendment to section 6 is for the purpose of bringing into effect the amendment to section 4. There is no radical change in the act, just minor amendments for the purpose of making the act uniform in practice with that of the province.

Motion agreed to and bill read the first time.

PRIVILEGE—MR. MURDOCK

On the Orders of the Day:

Hon. JAMES MURDOCK (Minister of Labour): I arise to a question of privilege. Hansard at page 2384 records the hon. member for Parry Sound (Mr. Arthurs) last night as having made certain statements referring to myself to which I think it only fair to make brief reference. The hon. gentleman was discussing the very much debated question of Canadians going to the United States and Canadians returning, and he had been reading a statement alleged to have been made by Mr. MacNeil of the Great War Veterans. On page 2385 of Hansard he proceeds to say:

> In this connection I should like to remark that the Minister of Labour stated that many of these people are returning to Canada again and gave figures showing that in 1923, 43,432 returned and in 1924 the number was 43,316. He stated that these figures represented Canadians who had paid the $8 head tax and had obtained a refund on their return to Canada. I am quite sure that the minister, if he thinks the matter over in a sober manner and after due reflection, will not repeat that statement in public, because the figures as furnished by the American authorities of those who have actually returned and received a refund of head tax, during the five months beginning with April 1924 are respectively 265, 215, 259, 199 and 190. That is a vastly different story, because those figures constitute less than one-fiftieth of the number claimed by the Minister of Labour. I have other extracts on the subject, but I have no desire to take up time by reading them.

On February 9th, in this House, a considerable discussion along the same lines took place and that evening I sent a night lettergram as follows:

> Ottawa, February 9th, 1925.

Mr. MEIGHEN: I rise to a point of order. The hon. minister is evidently about to adduce—in fact he is already in process of adducing—an argument which would be an integral part of a debate. At this point the Orders of the Day cannot be availed of for that purpose. It is clear, even from the quotation which the hon. member has made, that there could be no matter of personal privilege involved at all.

Mr. MURDOCK: This is a question of personal privilege. It is intimated that the statements I gave to the House were false.

I propose, and I think it only consistent to show they were true.

Some hon. MEMBERS: Order, order.

Mr. SPEAKER: The hon. gentleman is speaking to a point of order—

Mr. MURDOCK: I am just going to give the original document received from the Secretary of Labour of the United States indicating whether my statements are false or true.

Mr. SPEAKER: If it is a question of privilege and affecting the honour of the hon. gentleman, he can only speak to that point and correct the statement made by the hon. member on the ground that he was misquoted or that he was practically described as a gentleman who did not speak the truth. If that is the point raised by the hon. gentleman it is certainly a question of privilege. The hon. gentleman should not however make a long speech. He should simply indicate how the statement made by the hon. member from Parry Sound (Mr. Arthurs) was not according to the facts and one affecting his honour.

Mr. MEIGHEN: I want to make myself clear on this point. What I contend is this: The mere fact that one member has disputed the correctness of another member's statement is not an aspersion on his honour at all.

Mr. MURDOCK: There is more than that involved in this, as I will show before I get through.

Mr. MEIGHEN: The hon. gentleman said that that was precisely what was involved. It is not an aspersion on his honour, and is no foundation for a question of privilege.

Mr. ARTHURS: I had no desire to impeach the hon. gentleman's honour. I was quoting from figures and statements made by a gentleman whose name I gave, and the fact that the hon. member's figures and my figures did not agree, so far as I can see, is no reflection either upon the minister or myself. This is a matter which constantly occurs in the House, and I do not see any reason why the hon. member should proceed to make a speech.

Mr. MURDOCK: The hon. member said:

> I am quite sure that the minister, if he thinks the matter over in a sober manner and after due reflection, will not repeat that statement in public.

I propose to repeat it.

Mr. SPEAKER: It happens every day that hon. members on one side will make statements that they consider true, and hon. members on the other side will controvert those statements when they consider they are incorrect. This does not constitute a question of privilege unless the honour of an hon. gentleman is impugned. Impeaching the honour of an hon. member would give rise to a question of privilege; but in the present instance, from what I can gather, the hon. member from Parry Sound (Mr. Arthurs), had no intention at all to impugn the honour of the hon. gentleman, and I cannot detect a question of privilege.

Mr. MURDOCK: I desire to conform to the wish of the House, but I claim that the hon. gentleman in his speech in substance called me a liar. That is exactly what it amounts to, and this is a question of personal privilege to show who is misrepresenting.

Mr. SPEAKER: Order. If an hon. gentleman makes a statement denying what another gentleman has said, provided it is done in a gentlemanly way, it should not be considered as impugning his honour. I have been told on many occasions that I did not know what I was talking about, or that the statement I had made was not true. The other day an hon. gentleman said that a statement made by another hon. gentleman was false. I thought that was rather harsh, and I said that such statements should not be made in the House as between gentlemen. But, in the present instance, I do not see that the honour of the Minister of Labour has been impugned. Therefore I do not consider there is a question of privilege involved.

Mr. MURDOCK: May I say another word?

Mr. SPEAKER: Yes.

Mr. MURDOCK: Is it not a question of privilege for me to show the authority for my statements in order to show if they were false?

Mr. STEVENS: Order. It is ruled upon.

Mr. MURDOCK: Do I understand that I may proceed?

Mr. SPEAKER: The hon. member may speak. I want to hear what he has to say.

Mr. MURDOCK: I placed certain figures—

Mr. STEVENS: I rise to a point of order.

Mr. SPEAKER: The figures that are controverted in the present instance have already been put in a regular way upon Hansard by the Minister of Labour. The other figures were put upon Hansard last night by the hon. member for Parry Sound (Mr. Arthurs). These two conflicting statements about the

number of Canadians emigrating to or coming from the United States do not constitute the shadow of a question of honour as between two hon. gentlemen, and therefore, in my humble judgment, I rule that there is no question of privilege in that. The hon. gentleman is simply enlarging his rights to take part in the debate, by replying at this stage. As the hon. gentleman (Mr. Murdock) has already spoken once, he must await another opportunity to reply.

Mr. MURDOCK: I did place certain figures on Hansard, but I did not give the letters of transmissions with which those figures were received.

Mr. STEVENS: I rise to a point of order.

The SPEAKER: The ruling of the Chair must be obeyed. Of course, the hon. gentleman may appeal from my ruling.

PEACE RIVER RAILWAY OUTLET

On the Orders of the Day:

Mr. D. M. KENNEDY (West Edmonton): Does the Minister of Railways and Canals consider calling a conference regarding the Peace River railway transportation question within the next few days, or soon?

Mr. STEVENS: We are all very anxious to know.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): My experience with conferences is not such as to encourage me to have very many. The matter is not being lost sight of at all, and discussions are taking place, but I would not dignify them by the name of conferences.

Mr. KENNEDY (Edmonton): Does that mean "no" to the question? It is hardly an answer.

Mr. GRAHAM: I am sorry that my hon. friend asks me so many questions about this. I must be allowed to select my own answers.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, April 23, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. C. WALLACE STEWART (Humboldt): Mr. Speaker, before this debate was adjourned last night or, perhaps, more accurately, early to-day, I had attempted to place candidly and frankly before the House certain reasons why I objected to the budget proposals this year. I had made the statement that it was because the fiscal and taxation policies reflected through those budget proposals were not in accord with any that I could support that I must oppose this budget. I had also made certain objections to the tariff commission that is proposed. I had also offered a suggestion as to an enlargement that might possibly be made of our annual financial statement that would make the financial condition of this country plainer to the average man. I had, in conclusion, last evening touched upon one of the taxation proposals or an amendment to a taxation proposal that is contained in the budget, namely, the enlargement of the application of the stamp tax on cheques to include certain papers which, prior to the present, have been exempted.

I had pointed out to the Acting Minister of Finance (Mr. Robb) in his absence—and I am glad to note to-day he is in his seat and I hope he will give some attention to the statements which I made last night—that it was not a matter of asking for something that was not already recognized in the act. The act recognizes that exemptions are to be allowed; it always has recognized that. I tried to point out to him that it was bringing an unfortunate injustice to bear upon certain primary producers if he insisted that this tax be made to cover particularly those tickets or papers which have been issued and used in securing payment for cream, in the western provinces. I trust the minister will give some attention to the arguments that have been adduced. I am quite certain that before this debate is concluded other members who are just as interested as I am in the dairy farmers of this country, will place before the minister, if not similar arguments, at least arguments just as valid and strong as those I have attempted to give.

Now, Sir, proceeding, I want to touch briefly upon the amendment that has been submitted to the budget proposals of the Acting Minister of Finance. I said last night that I had attempted to approach the consideration of the budget this year without undue partisan feeling, without any shackles of party affiliations to bind me, and that I had come to my conclusions by duly considering the budget proposals before us. I said that I had attempted to approach the amendment in the same way. After having considered the amendment in that way, it seems

to me that I can state my attitude towards it perhaps by likening it to certain theatrical scenery that is very commonly used at the present time on almost every stage in this country. We have often seen before us on the stage a beautiful piece of scenery; and without any lifting of the curtain, by a playing of lights from the back upon the screen, that beautiful picture entirely disappears and another view takes its place. It is all a matter of how and where the lights are manipulated; the curtain itself remains stationary, and the scene changes as varying lights are thrown upon the screen. Now, so far as the amendment is concerned I must say that to a member in my position it bears some likeness to this changing scenery; I think there is a simile between the two. There are certain things in the amendment that appeal to me, but after all the lights of this debate have been played upon it for the length of time we have now discussed these proposals, I am bound to say that the original beauty of the picture it presented has disappeared. By means largely of the lights played upon it, not from directly opposite sides but by gentlemen behind the scenes, we see now in place of the flowers of lower taxation which we beheld before, huge and barren rocks in the form of additional tariff burdens. It is hardly necessary for me after making that comment to say that I am in no better position to support the amendment than to support the budget.

I want to turn now to two or three matters which I consider of urgent importance, and first of all I shall touch upon one which has been for some time, and certainly at the moment is paramount in the minds not only of hon. members of this House but of intelligent citizens throughout the country; I refer to our railways and the whole problem of transportation. I do not intend to go at any great length into this question but I have one concrete suggestion which I desire to bring to the attention of the House. To my mind the problem of finding some solution for the difficulties in regard to our National railways as well as of the whole question of railway transportation costs generally is a matter of primary importance and should receive the consideration of parliament before anything else. As we are all aware, our National railways are carrying on under the handicap of an immense debt; and in view of the overhead charges which they have to face, the present prospects give absolutely no hope of our being able to meet the situation by means of the earning power of the railways. A year ago when the report of the committee considering nationally owned railways and shipping was presented to the House it was advocated—I myself advocated it in the debate—that the capitalization of the Canadian National Railways should be reduced. And that is a matter to which I wish to direct the attention of the House just now. Various proposals might be made for the reducing of this capitalization and I shall submit one or two. It has been suggested recently in this House, and there have been comments in the press to the same purpose, that the proper solution would be found in the nationalization of the great competing line of the National system, that is to say, the Canadian Pacific Railway, and the union of the two systems into one great whole. I am in accord with those who look to this proposal as something that will eventually materialize, but at the same time I want to consider just now the situation as it actually is; I want to consider what the question is that we have to deal with immediately. I would point out that even if we contemplated such an undertaking there would still be a necessity for re-valuing the Canadian National railways, and I would suggest reducing the capitalization of the Canadian National system at the present time by at least the current balance sheet deficit, which is a matter of some $344,000,000. That would then place the Canadian National Railways in the position of having equal assets and liabilities, at least in so far as the accounts and paper figures are concerned. We might go further than that, we might cancel the whole of that item termed "loans from the Dominion of Canada and interest thereon," amounting to over $598,000,000. Or we might go even further still; personally, I would go so far as to suggest the cancellation of that portion of the overhead which falls within the Dominion of Canada account. If hon. members will take the annual statement of the Canadian National Railways and turn to the balance sheet they will find items under the heading "Dominion of Canada account" totalling some $1,142,000,000. I would wipe that out. Perhaps some hon. gentlemen who have not given this matter as careful study as they might would think we were reducing the capitalization too low, but I would point out that this would then leave a balance of liabilities in connection with the Canadian National railways of $1,271,000,000, after having reduced the total by nearly half. It would place the railways in this advantageous position, that their assets would then exceed their liabilities by $803,000,000, and the capital investment remaining therein, in the way of

a bonded debt to the public, would be $913,913,000, which would be interest-bearing. That would be the actual capitalization on which the system would still have to pay interest. Let me compare that with the capitalization of the Canadian Pacific Railway. According to a statement recently issued by that company, including their capital stock as part of the capitalization, together with their debentures, mortgages and bonds, all of which bear interest, the total capitalization on which they are paying interest amounts to a little more than $670,000,000.

Mr. GOOD: Does that include dividends on the stock, and additional interest on bonds?

Mr. STEWART (Humboldt): It includes the capital stock; that is the capital on which they pay dividends. Now, the earnings last year of the Canadian Pacific Railway were over $47,000,000, while the earnings during the same period of the Canadian National Railways were a little over $21,000,000. If the element of competition were eliminated, and we got rid of all duplication of service, and if the capitalization of the Canadian National Railways were reduced by the amount I have suggested, it will be seen that, even leaving out of consideration any advantages that might accrue to the railways as a result of being under one management and co-operating instead of working in competition with each other, the joint concern would then be in a position, by reason of their earning capacity as reflected in the statement recently placed before us, to pay on the total capitalization interest at the rate of 4.3 per cent. That, it is true, would not be sufficient to cover the total interest indebtedness and overhead charges which the railways have to meet at the present time. It is a fact that both the Canadian Pacific Railway and the Canadian National Railways have bonds bearing interest as low as 3 per cent; but unfortunately the Canadian National Railways in particular have a very considerable amount of bonded indebtedness at 6 and 7 per cent. So that a larger earning than they have at present would be necessary. It will be seen however that I have not taken into consideration the important element of improvement which would accrue from the amalgamation of the two systems. I am in no position to know what could be saved by deleting duplication or by the lack of competition, and I am quite certain that that would enter very largely into these figures—I would not even venture to estimate to what extent but I am certain that it would very largely affect these figures—and that the railways would then be in a position to pay interest on all the indebtedness that would remain, and perhaps they would also be able to make a return to the treasury, if such were desired.

But before I leave the point I want to give this reason why the capitalization of the Canadian National Railways should be reduced. A great deal of money has been sunk in the Canadian National Railways which at present is not reflected in their earning power. There are causes for that which I do not propose to discuss, but the facts are that that money, having been spent, is now lost so far as its earning power is concerned, and the only way in which we can say who should pay the interest upon it is to trace where the money has gone. It is very difficult to tell where this money went to, particularly that invested in some of the government railways and in some of the Canadian Northern lines built a number of years ago. But at any rate it found its way into channels of trade, the labouring people secured some benefit at the time, and no doubt business also secured some benefit through this money being put in circulation, and those parts of our people secured at least as much, if not more, benefit from the money thus expended than did the primary producers on the land, in the forests and in the mines, who by supplying the bulk of the freight for our railways are conferring a greater benefit than they can ever in future hope to obtain from the expenditure of that money. Therefore I submit, Sir, it is only right that as a nation we should now and for all time take over the capitalization that we cannot realize upon and place it with our national debt, making the interest charges upon it a national charge, not to be placed against those who are attempting to produce and are supplying freight to our National railways. That is my reason for saying that this is the first step that should be taken, regardless of what other steps we may take afterwards.

Now, I want to touch upon one other matter that I consider to be urgently in need of attention in this House by way of legislation. I refer to long-term credits. I do not propose to enter into a long argument on this, I simply want to call the attention of the government to the report of their commissioner, Dr. Tory, and to a certain plan outlined in his report. I am well aware of the fact that long-term credits are not in very good standing in this country. I do not seriously criticize the government for having hesitated before embarking on any scheme; I think they have been well advised to secure all the information possible

on this matter. Our provincial governments have for varying reasons found that the schemes they have tried have not been wholly successful. But according to the report of Dr. Tory, and other evidence which I propose to submit, certain schemes of long-term credits have been successful. Dr. Tory refers to the third plan, known as the American plan. He says:

A third and certainly feasible plan would be to adopt outright the principle of the American Farm Loan Board, and establish land banks distributed suitably over the country. The details of this plan will be found from page 40 onward in the report of last year.

Then he goes on to tell the advantages of that plan. Now I propose to read some evidence as to the effectiveness of this plan. I have in my hand an editorial taken from the Buffalo Express of April 14, 1925. Similar comments appeared, to my own knowledge, in other American newspapers about that time, made on the report of Mr. R. A. Cooper, Federal Farm Loans Commissioner, which I presume was submitted at about the date this editorial appeared:

The federal farm-loan system has been in operation eight years, and the losses sustained by the banks in loaning to farmers reflect the ability and willingness of the borrowers to fulfil their contracts and the judgment of the commissioners in making the loans.

Foreclosures of mortgages by the federal farm-loan system in eight years total three-tenths of one per cent, says Commissoner Cooper. These losses on real estate total only one day's net profits of the government loaning institutions. Yet the loans amounted to $1,535,198,933, divided among 403,906 farmers. The farm-loan land banks found it necessary to institute foreclosure proceedings in 4,701 instances, but the number of farms acquired is only 1,271. The joint-stock land banks have acquired only 125 farms. Thus over 400,000 mortgages continue in good standing or have been paid off.

I submit, Mr. Speaker, that with such evidence as this before them the government are not justified in further delaying a scheme which is so urgently needed to assist our farmers at the present time.

It has been already pointed out in this House that there is need for the enlargement of the application of the Bankruptcy Act. I am in agreement with that opinion. Some of our farmers—and I am not going to pause now to place the blame—are in such circumstances that no long-term credit system could help them; it would not be safe, it would not be good business to lend them money. But I would suggest that those men having been once bitten will be twice shy, and that if they were released from the financial entanglements in which they find themselves they would be a greater asset to us than any new immigrants that we might bring in to fill their places—that if they could be placed in a position where they could start afresh under such a scheme as has been suggested here then they would be an asset and not a liability to the country.

Another matter which I think is urgently in need of attention, Mr. Speaker, is the desirability of amendments to the Grain Act, and I simply want to call this to the notice of the government. The Minister of Trade and Commerce, as I recollect, a few days ago stated that he considered it would be wiser to leave these amendments over for a year's consideration. I submit, Sir, that for one reason it would not be wise to defer action until next session. I can understand the attitude of those who say that this is an important matter and should receive serious consideration, and if it were not for this one thing that I am about to point out I think I would be inclined to agree with the minister. But in the last year we in western Canada have adopted a new system of marketing our grain, the pooling system, and because the present act does not protect our pools, was not in fact drawn to meet their requirements, I submit that we have before us the necessity of at least providing such amendments as would cover the case of these wheat pools in the conduct of their business for another year.

In conclusion, Mr. Speaker, there is one other matter that I want to touch upon, and it is worthy of much more intensive consideration than I propose to give to it this afternoon—I mean immigration. I do not intend to treat this as a hypothetical question or one that can be considered apart from the everyday circumstances in which we find ourselves. If the policies of the government were different, I think we might regard this question in a different way, but we are trying to carry on, and until we can change the present policies we must cut our cloth accordingly. I am not one of those, although I admit conditions are not favourable to immigrants, who would say that we should wholly exclude them; but I would very largely limit the scope of immigration at the present time. I am wholly in accord with those who say that it is unwise to spend large sums of money in an attempt to entice immigrants to this country. I shall not go into the matter of our loss of population—that has a direct bearing upon it. But after all, I submit that very largely it hinges upon the policies that this government has adopted, and until those policies are changed, as I have said before, we must trim our sails to suit the passing breeze. There are certain

people who can come to this country even under the present unfavourable conditions. Let me give an instance. The constituency that I represent here is very cosmopolitan in its population. In one part about eighty per cent are of Scandinavian extraction. Another quite extensive corner of the constituency is to a very considerable extent Icelandic. Another section of it is peopled largely by those of German extraction; another French, another Ruthenian. So you can understand that I speak with first-hand knowledge of the peoples that are coming to this country. Referring particularly to the Scandinavian peoples, and including with them the Icelanders, I consider that those who come here from those countries should be welcomed and that we should put nothing in the way of their entry into Canada. I had occasion to discuss one of the sources of our Scandinavian immigration with the manager of certain newspapers that circulate among our Scandinavian population in western Canada and also have a certain circulation in Norway and Sweden; I refer to the two papers, Norrona, and Svenska Canada—Tidningen, or the Swedish Canadian News. I did not know just what was the nature of the advertising these papers were carrying, because I do not read or speak either the Norwegian or the Swedish language. I had seen so many advertisements scattered by this government, and some by previous governments, that were misleading, that painted in far too bright colours the possibilities of this country, that I took occasion to direct the attention of the manager and owner of these publications to the fact. I did not directly accuse him of doing the same thing, but I pointed out that I considered it most unwise that newspapers or any other form of advertising in this country should picture too brightly the possibilities of Canada for intending immigrants. He told me that such was not the case with his paper and that he would place the evidence in my hands. I have here a letter from the editor of these papers and I wish to place on record a few of the statements made therein. He says he is enclosing some extracts to prove his statement about the attitude taken by these publications, and that he believes those extracts to be typical. This is from the editor and the writer of most of the articles that are of an advertising nature so far as immigration is concerned:

> I, for myself, and on behalf of the other writers for those two papers, absolutely protest against the accusation that we have been painting Canada in too rosy colors. We have only been telling facts, and besides, we have time and again warned the wrong kind of people to come. We have told our readers that they must work hard in order to succeed, as is shown—

And he refers to certain extracts. He says further:

> We want the man with the real pioneer spirit who is eager to tackle a hard job and who knows beforehand that he has to endure many hardships before he can succeed. That has been the spirit both of our special articles and of our editorials.

From the results that I have observed from this kind of advertising, Mr. Speaker, I am bound to say that these people are coming here knowing that they have a difficult task to assume, and they are assuming it in the spirit of our early pioneers. I would urge the government, then, to continue that feature of their immigration programme; no obstacle should be put in the way of the entry of such people into this country.

Before I take my seat I want to say to this government that I cannot support an immigration scheme much wider in its scope that that—that is, of simply allowing those to come here who can see possibilities greater than they are at present enjoying, knowing the full circumstances of the case. I am of the opinion, however, that it would be possible so to change the policies of our government, particularly in regard to taxation, that this country would be much more enticing to those in foreign lands. I would say further that the change in policy that I advocate is certainly not along the lines of that which has been advocated so unanimously and so strenuously by those to our immediate right in this House. I am in agreement with those who have stated that our native population is great; that the building up of our country depends upon the building up of our population. It is therefore because I cannot agree with the present fiscal policies or taxation proposals of this government, and because I think the sooner the people have an opportunity of voicing their opinions upon these matters the better it will be for all concerned, that I am opposing the present budget, knowing full well, as I do, what that opposition means.

Mr. J. F. FAFARD (L'Islet) (Translation): Mr. Speaker, we have been listening, for the last few weeks, to so much talk about protection that, last night I dreamt of protection. I saw in a dark shaded spot, I might even say infernal, a crowd that I recognized as having seen sitting on your left, Sir. Somewhat astonished, I hastened to inquire what brought them to that place, and they answered, grinding their teeth: "The people found us out, and punished us.".

Mr. FOURNIER (Translation): Did the hon. member also meet Progressives there?

Mr. FAFARD (Translation): My hon. friend inquires whether I met any Progressives there: I can say that I did not see any in the flames, but I came across some on the road, who seemed to be very shaky, and told me that I was the only one, being a Liberal, that could save them.

Mr. Speaker, we often hear about economy. We like, on this side of the House, to hear about economy, because it is a virtue we practise. However, I can assure you that I do not like to take my cue, on economy, from our opponents who sit on the opposite side of the House. I wish to be fair towards my opponents and set aside the years of the war: the policy of unlimited participation which they had adopted, obliged them to spend enormous sums, and I quite understand that during the year that followed the war, they had to make great outlays owing to demobilization; however, if you look up the year 1920, two years after the war, you will perceive that these gentlemen had a deficit of $674,000,000. These figures are so exorbitant that the people, as a whole, and even the financiers cannot conceive its enormity. $674,000,000, Sir, this means $56,000,000 per month, more than $13,000,000 per week and nearly $2,000,000 per day! And the same gentlemen wish to teach us economy, when the budget shows a surplus of nearly $2,000,000!

Our debt, Sir, is enormous, this we cannot deny, and we realize it, when we find that the interest we have to meet each year on Canada's debt is equal to the total debt of pre-war days, and is even larger. It would be criminal, with our present population, to tax the people in order to make them pay this debt. Such a policy would bring ruin to our country. It would overburden the people with taxation, paralyze trade, ruin our industries and prevent the development of our natural resources. The most suitable policy is the one followed by the present government, which consists in fostering the development of our natural resources.

Notwithstanding the enormity of our debt, Sir, I am glad to note that we can compare advantageously with other nations of this world. Canada's debt per capita, is $268; New Zealand, $792; England, $791; France, $540 and Australia, $359. And our situation would still be better, if our political opponents, when in power, had followed the example of England and the United States, and had taxed during the conflict, the war profiteers, instead of exempting them by means of the Victory bonds, from paying taxes during and after the war.

I think, Sir, that we have too many pessimists who make use of their brains and talents to try and show that business is bad and that we are on the verge of bankruptcy, people that are ready to sacrifice the country to satisfy their political ambition. If you compare our obligations with the extent of our wealth, you will perceive that, after all, they are not so enormous. Without taking into acount the wealth of our forests, mines, fisheries and water powers, we notice that the mortgage which burdens Canada to-day, amounts to only $1.00 per acre of land; and, if we include our natural resources which I have just mentioned, we note that the mortgage amounts to only two or three cents per acre. The ex-Minister of Finance (Sir Henry Drayton), in the course of this debate, told us that the Americans had invested in this country a capital of $2,500,000,000, which means that, the American capital alone, invested in Canada is sufficient to redeem the whole debt of this country. We must neither forget that our forest wealth amounts to $3,000,000,000; that is the latter alone is greater than Canada's total obligations. This is certainly not an example of a country on the verge of bankruptcy.

If we wish to follow in the path of prosperity, we must face the future with confidence. When the explorer, in his travels, crosses the forest, he is guided by the Polar star, so should true Canadians be guided by the star of patriotism.

Mr. FOURNIER: Hear, hear!

Mr. FAFARD (Translation): Mr. Speaker, free trade and high protection were threshed out. I shall never become a free trader as long as the United States keep up the present tariff wall against us. I can neither side with those high protectionists who wish to concentrate the country's wealth amongst a group of persons, instead of spreading it amongst the masses. I think there should be a readjustment of the tariff on articles of first necessity, so as to help the masses and thereby keep our people in this country.

Our opponents, faithful advocates of the large interests, proclaimed everywhere that lowering the tariff has brought on a great number of failures. Yet, if you look up the report regarding trade failures in Canada you will note that in 1914, when these gentlemen were in power, there were 2,898 failures. Moreover, in 1915, when the country enjoyed a fictitious prosperity, brought on by the war,

there were in Canada 2,661 failures. Let us now return to the Liberal administration, whose lowering of the tariff is supposed to have ruined the country; we find that in 1923, there were 448 failures less than in 1922. Even after the budget of 1924, which was expected to ruin the country, we remark 1,221 failures less than in 1922. These figures taken from the statistics of Canada, cannot be disputed. The right hon. leader of the opposition (Mr. Meighen), last summer, travelled through the country stating everywhere that 2,000 industries had become bankrupts. Nevertheless, in the city of Ottawa, last autumn, at the meeting of the Canadian Manufacturers Association, one of its most distinguished members stated, that not 2,000, but 1,331 industries had closed their doors. And one bit of news that the leader of the opposition took care to hide from the people, was that 934 new factories had opened their doors.

Some hon. MEMBERS: Hear, hear!

Mr. FAFARD (Translation): It was equally stated that the boot and shoe industry was ruined. From 1921 to 1923, the number of factories increased from 177 to 186 and the value of their output also increased by $1,000,000. Everywhere it was said that this industry suffered greatly from the preferential tariff granted to Great Britain; and yet, the Canadian output amounted to $45,596,012 in 1923, and the imports from Great Britain amounted to only $604,472.

I think, Sir, that the leader of the opposition will find it difficult to convince the people that he is sincere, even when he speaks of high protective tariff. If he was in earnest, nothing could have prevented him in 1911, from raising the tariff. It was in the course of the year 1911, that reciprocity was defeated in Canada. If, Sir, the farmers, at present, find it hard to trade with their neighbours to the south, the culprits are those who were responsible for the defeat of reciprocity. The Liberal party has always been the friend of the farmer. We may thank the Liberal party for having lowered the tariff on farm implements and on all instruments of production which are used in the development of our natural resources.

Tariff increase on potatoes was discussed among certain groups, and in particular, Sir, by the opposition. I am aware that the policy aimed at is not so much to increase the tariff on potatoes as to increase it on farm implements; it means simply that they want to allow a few cents more per 100 lbs. of potatoes and charge the farmer from thirty to forty dollars more, when selling him some farm implement needed. I have the honour to represent a county which is almost exclusively devoted to farming, and I am willing to do my utmost to help the farmer, as I think he is most deserving. Money is scarce in the rural districts, the crops were not very good and the products give but a small return; the farmer is somewhat depressed, as he must do the work alone, owing to the impossibility of finding farmhands. I would even say that sometimes he does not receive fair play. When public works are undertaken in towns, prices are fixed beforehand and we pay practically twice what is paid for the same work when undertaken in a rural district. I have often wondered what could be the remedy for such a situation. Some have said: Raise the tariff to the level of that of the United States. Well, Sir, I have more confidence than that, in my country. The United States have a population of 115,000,000 people; they regulate their tariff according to the needs of their country, and, I think, that Canada, with her 9,000,000 inhabitants, has a right to put up a tariff which suits the Canadians. It is quite clear that, if you increase the tariff on potatoes, butter and other products, the American products will not reach our markets; however, would this be the right remedy? In my opinion, this would only tend to lower transportation rates.

I spent the Easter holidays in my county. Potatoes are sold 25 cents per bushel, that is in round figures 37 cents per 100 lbs. Is there any thinking person, in this House, who will maintain that the Americans can take 100 lbs. of potatoes to the borders, pay 35 cents of a duty on these 100 lbs. and sell them on our markets, especially if we reckon that their freight rates are 15 per cent higher than ours. Surely one cannot conceive the idea that the Americans who are so highly praised in this House, will come to our markets and sell potatoes which will bring them but 2 cents per 100 lbs.

Butter was mentioned. I happened to receive yesterday, the report of the Dairy branch for February, 1925. The question is, would it be wise to raise the tariff on butter? This would be absolutely absurd for, I see by the statistical report that the United States have exported to Canada 50 lbs of butter only. This is a proof that our tariff is high enough. However, I have been told that a number of carloads of potatoes have been sold in the west. It may be that in this case a higher tariff should be sought. In my opinion, however, it is an absolutely wrong principle and I would prefer, instead of raising the tariff, that we reduce the freight rates,

which amounts to the same thing and allows us to be consistent with ourselves. There is something else which we must bear in mind, it is our exportation of potatoes. We export eight times more—that is 3,000,000 bushels more—than we import. Potatoes, reputed to come from the United States do not compete much with ours. Sweet potatoes, for instance, come from the United States, but offer no competition to ours, as we grow very few. At this time of the year we have new potatoes which come from Florida. One cannot contend that they compete with ours, because they are a luxury bought only by wealthy people.

There was also question of raising the tariff on eggs. I notice, Sir, that these requests always come from the Conservative side. We may say that since the present government has been returned to power, the importation of Chinese eggs has practically stopped; not on account of the tariff, but through classification, and our imports from the United States have decreased by 6,727,000 dozens.

I think, Mr. Speaker, that the Liberal party's policy has been advantageous to the farmer. I equally believe that the people are not sufficiently enlightened as to the meaning of the word protection. One generally looks upon protection as a measure to protect us, when, as a rule it is a measure to exploit the people. There exists an easy way to do away with protection or at least to diminish it in a perceptible manner, it would be to oblige industries or manufacturers who benefit by protection to indicate on their vouchers the Canadian price and also the amount they benefit by protection. We have been led to believe, in our province, that a high protective tariff was necessary to develop our industries; that the latter would give work to farmers' sons and, moreover, create markets for every farmer. Well, Sir, when we consider our farm products, I do not think that in this present century, the industries can absorb all these products. Take, for instance, our wheat, I think we could feed a population of 80 to 90 million people.

We are also told that the United States had prospered under protection. I am not one of those who put a great deal of faith in the prosperity of the United States, and especially in the prosperity of the American farmer. Are you aware, Sir, that in Canada 98 per cent of the farmers own their land, while in the United States, a country, where prosperity seems to reign, 40 per cent of the farmers are but tenants. As to bankruptcies, they have been far more numerous in the United States than in Canada. Moreover, to give you further proof of what protection has been unable to accomplish, to help the farmer, will you allow me to quote a few lines from the speech delivered in this House, on April 6, 1925, by the hon. member for Brome (Mr. McMaster):

> The figures which I have before me purport to show that the gross cost to the farmers of the protective principle is $426,000,000; that, in other words, what they have to buy has been artificially increased in price to the extent of $426,000,000; that the price of what they have to sell has been artificially increased to the extent of $125,000,000, and that, therefore, the net cost to agriculture is $301,000,000.

I think, Sir, that these figures prove clearly that the Americans do not enjoy the prosperity that we believe they do. And I find one of the best proofs of my assertion, in an article which was lately published in the Montreal Gazette, informing us that the Americans are purchasing lands in the west, and are doing so on a large scale.

Moreover, the United States are not such protectionists as some hon. members imagine, for 58 per cent of their imports enter the country free of duty.

What has really made the United States prosperous, is that during the first years of the war, in 1914, 1915 and 1916, when this government was spending hundreds and hundreds of millions, the Americans were amassing profits, derived from the war, amounting to hundreds of millions of dollars. What also contributed to the prosperity of that country is, that the Americans taxed the people during the war, and especially the war profiteers. For my part, I am in favour of moderate protection, because the results already obtained in this country point out that it is the best policy to be adopted. If we look back to the period between 1907 and 1911, we note that those years were the most prosperous ones in the history of our country. It is from 1907 to 1911 that the immigrants came into this country by hundreds of thousands, and it is during those years that we witnessed our trade increase by over a billion dollars.

I stated, just now, that the farmer from the province of Quebec needs help, and I might suggest, with that aim in view, to lower the freight rates on farm products I must further add that loans are hard to obtain in the rural districts. The farmer who has money to loan out, prefers buying municipal bonds, and there are also certain industrial bonds which are sold in the country by swindlers who should be in gaol instead of being allowed to roam free. It has often been stated, I am willing to admit it, that the farming industry was the largest industry

in the country, however, what has always happened up to this day, is that this large agricultural industry sees, each year, its money flow towards the cities to develop the industries of our Canadian centres, and even, sometimes, American industries. I would therefore suggest that a bill be brought down by which banks, in our rural districts, would be obliged to place 80 per cent of their deposits within a given radius. Let us suppose, for instance, that the banks in the county of l'Islet, were allowed to make loans in the county of Montmagny and Kamouraska, and only forward 20 per cent of their deposits to cities.

With such an understanding, the farmer could easily obtain a loan from the banks at 6 per cent, for banks never lose money with the farmer. Our banks could also help the local industries which are often more firmly established than are those in the cities. With such an arrangement we could develop the country in a normal way throughout its various parts.

Moreover, the agricultural industry needs foreign markets. For this latter reason, I wish to associate myself with the hon. members who represent the city of Quebec, in requesting the government to develop the Quebec harbour. Although I hail from a rural district and reside at some distance from Quebec, I think that the development of the Quebec harbour should not be left to local initiative only, but should become a national task. This is why I associate myself with the Quebec members in their request.

The present week, Sir, has been set aside as the week of forest protection. I must frankly admit that I was somewhat disappointed in not hearing it mentioned in this House. It strikes me that the protection which is given to our forests, is of the utmost importance, for the Dominion and provincial government draw from them revenues amounting to $12,000,000 yearly. I think that the Dominion government does not shoulder its fair share for the protection of our forests. We spend vast sums of money in the Canadian west to destroy insects which might harm the crops, and we do not spend anything for our forests which constitute a ripe harvest ready to reap. I must insist on the government doing more, because it would be performing a truly national work. Moreover, everybody is interested in the protection of our forests. The latter give employment to 95,000 people and are equally of interest to our financiers, since $600,000,000 are invested in the industries that are being operated. The conservation of our forests is also a vital question to our farmers, for it has been shown that the forest helps to regulate the weather, and should the forests disappear from the Canadian soil we certainly would have to suffer from droughts which affect other countries.

The Quebec government certainly deserves praise for the efforts made to preserve our forests. What is especially needed is an educational campaign, and I might suggest that the Dominion and the provincial governments encourage reforesting in all the provinces of Canada. A bounty should be granted to companies and even to private individuals, for the replanting of trees. We possess large tracks of sand or sandy loams which are entirely untilled, giving no returns to the farmer, and upon which we could advantageously plant coniferous trees, even pines, and so forth. I feel sure, if the people understood that companies and private individuals carry on tree replanting because they derive profits, one would be more scrupulous in his lumbering operations.

Mr. Speaker, I wish to congratulate Sir Henry Thornton for having had the courtesy of presenting, this year, his report in the two official languages of this country. Sir Henry Thornton was able to win the affection of the Canadian people. However, I am sorry to have, to-day, to draw the attention of the House to certain matters which in no way reflect on the president of our National Railways, but which especially refer to some of his officials. I thought the House would be the proper authority to come to in order to obtain redress. I carried on quite a correspondence on the subject, without ever obtaining any results.

I am certainly, Sir, in favour of excluding our National Railways from politics, however, on the other hand, one must not make use of politics to ruin politicians in their own counties. For instance, in the county of L'Islet, if I am to believe a number of foremen of our railways, one must secure a letter of recommendation to obtain work as a daily labourer on the railway. To support my statement, I shall read a letter which I received from one foreman:

St. Francis, June 17, 1922.

Mr. J. Fernand Fafard, M.P.,
L'Islet.

Dear Sir,—I have a man with me who has been working with the "gang" for a number of years, would you be kind enough to send him a letter of recommendation and to address it to St. Aubert.

The man's name is Mr. Cyprien Bard, St. Aubert, county of L'Islet.

The officials requested a recommendation.

René Coulombe.
Foreman.

So far as I am concerned, I have always been against, since 1921, forcing appointments of labourers on the railways; I simply made it a point to send to the proper authorities a list containing about thirty names, asking them to choose those they wanted, and they chose, in most cases, political friends.

I shall read another letter which I received, to show how recommendations are considered by these gentlemen.

It is dated August 8, 1922:

St. Aubert, August 8, 1922.

Dear Sir,—I went to the expense of going to Levis with the letter of recommendation you sent me, and I presented it to Mr. Patrick Lavery, he did not even go to the trouble of reading it. Mr. Joseph Francoeur was present when I gave him this letter.

I can well understand, Sir, that there can be no blame attached to the president or to certain other officials, if such things happen. Moreover, in our division of the Intercolonial Railway, it often happens, it is notorious that Conservative propaganda is being carried on by the railway employees. I might call upon my hon. friend from Kamouraska (Mr. Bouchard) to bear witness; I have not spoken to him about the matter, however, I remember that, at the time of his election, the thing happened in the parish of St. Pacome; a parish which generally gives a Liberal majority; the officials of the railway who are rabid Conservatives, try to discredit the Liberal candidates at election time. I would suggest to Sir Henry Thornton that he appoint another chief official for that division of the Intercolonial Railway, and I should want him to be a French Canadian, for the population is 100 per cent French Canadian. I am very sorry to have been obliged to draw the attention of the House to this matter.

Now, Sir, with your permission, I wish to make a few remarks with reference to immigration. I am certainly in favour of immigration, but of a healthy and industrious kind. At present, we are asking the British government, if I am not mistaken, to send us immigrants in order to place them on farms. It often happens that these immigrants only remain a few months on the farm and then trek to cities, thus increasing the congestion. I would like to suggest a way which may, perhaps, result in preventing this state of things. I think, if the British government paid the expenses of these immigrants who we desire as farmers, and Canada, on the other hand, agreed to reimburse, not half the expenses, but the whole amount, say at the end of two years, providing these immigrants remain on the land and have performed a certain amount of work.

Immigration presents a difficult problem in this country, for the very reason that we have a number of politicians who think that they have nothing better to do than to roam about the country crying out that Canada is bankrupt. I stated that immigration is a difficult problem, because Canada is not advertised under its true light. If you travel on the Canadian Pacific boats, if you go into our cities, if you even cross over to England, you notice everywhere that the people of Canada are shown up as Indians, cowboys, representations of dog races, oxen harnessed to the yoke and fields filled with stumps are shown. I contend, Sir, that all this is detrimental to Canada and of a nature to harm her.

As to the literature which the government distributes, what is it? It is certainly not what it should be. We find, for instance, magnificent things in this literature, such as the Rocky mountains. No doubt, the Rocky mountains are beautiful; however, this is not what should be shown to people in earnest who wish to come to Canada and establish themselves on farms. We have far more interesting things to show them; for instance, in the west we have splendid farms, excellent industries, water-powers to develop; all these would be more interesting to men of a serious mind and would be of a nature to bring us a better class of immigrants. Moreover, I do not think it is necessary to drag immigration into this country, although I welcome it, for it helps to decrease our debt and reduce our National Railways' deficits. As for us, belonging to the province of Quebec, we believe that the best immigration agent is the Canadian mother. Yes, the Canadian mother with us, is the best agent for the increase of our population in an absolutely normal way. I must, however, add that this agent of immigration—which is considered the best—has not often enough been rewarded. Nevertheless, we hailing from the province of Quebec, have the merit of holding our own. We have not had the same advantages as the west which was populated by people from overseas. We, French Canadians, state that we are in favour of immigration, and that we have no fear of being absorbed, as some have thought. The Frenchmen have enough blood left in their veins, and as long as there exists a Canadian mother, we shall know how to protect our rights.

In closing my remarks, Sir, allow me to state that the great problem, in Canada, is not that of production, for the latter, in proportion to our population, is higher than that of any other country in the world. The great

problem is to find a market for our products, and to reach such an aim, I think we should have a great number of trade agents in foreign countries.

I am proud of the party to which I have the honour to belong, and I am equally proud of the leader who guides its destinies. The Right Hon. Mackenzie King has drawn the attention of the whole world owing to his firm and energetic attitude on international questions. Our policy is that of Laurier: Protect the interests of the masses rather than those of groups. The farmer, the fisherman, the lumberman and the workman have been protected against the trusts and we have applied ourselves to distribute the wealth among all the classes of society rather than amongst a group of speculators.

In this country, Sir, there exist two great races that have an equal right to be proud of their ancestors. The province of Quebec has been tolerant; the province of Quebec, I state, has given an example of tolerance. In our province, which is for the most part French and Catholic, the provincial government never grants a subsidy of one or two million dollars to a French and Catholic university without, on the same day, granting the same amount to an English and Protestant university, notwithstanding that Protestants are in a small minority. We have, Sir, been too tolerant compared with the generosity of others towards us; however, I do not lose hope; I appeal to the good common sense and to British fair play. We have each our defects, we also have our good side, and we have each our characteristics. It is exactly this difference in the two races which should stimulate friendly intercourse and emulation in business pursuits, of a nature to further the development of our great country.

Mr. L. J. LADNER (Vancouver South): Mr. Speaker, on Wednesday we had occasion to listen to the hon. member for St. Lawrence-St. George (Mr. Marler) deliver an exhaustive study made with considerable ability, though marred a little by an air of superiority, as though he were lecturing children. The hon. gentleman dealt with the budget and primarily with the criticisms which were levelled from this part of the House against certain features of the budget, the point of the criticisms being that the budget was confused and also that it contained inaccuracies. The hon. member for St. Lawrence-St. George stated:

> The Acting Minister of Finance states that he has made railway and other advances—almost entirely railway advances, as a matter of fact—to the extent of $19,527,000.
>
> [Mr. Fafard.]

The hon. gentleman castigated in rather severe terms the hon. member for Vancouver Centre (Mr. Stevens) and the hon. member for Fort William and Rainy River (Mr. Manion) for the remarks which they had made with respect to the budget. It is my intention during the first portion of my remarks to direct a little attention to the fact that the hon. member for St. Lawrence-St. George himself brought confusion into the debate and himself was inaccurate in the statements he made. As a matter of fact, Mr. Speaker, the figures $19,527,000 are not found anywhere in the budget speech. They are made up, as I have calculated subsequently, of items, partly railway, partly advances to the harbour commissioners of Quebec, and partly of other advances which are not connected with the railway services. The item which was disclosed in the budget as being advanced to the Canadian National Railways was an item of $18,027,000. The indication in the budget all through, in fact the statement there, is that these were advances made or to be made. I have taken occasion to inquire from the accounting department of the Canadian National Railways, from the Department of Railways and Canals, and the Department of Finance here, with respect to this item, and I find that as a matter of fact only $10,000,000 of it has been advanced by the government to the railways, and the remaining sum which was provided for temporarily has not been advanced, and will not now be advanced. In fact, the remaining $8,027,000 has been cancelled and the item eliminated from the budget. These facts were, or should have been, known to the hon. member for St. Lawrence-St. George at the time he made his remarks, because it appeared clear to me that he obtained much of his information from the same source from which I have gathered mine, and I found the information in the ordinary course of business in carrying out my duties as a member.

There is another confusion in the budget of still greater importance. The statement is made that the total of our net debt as of the 31st of March, 1924, namely, $2,417,000,000, included the total amount of approximately $582,000,000 of railway indebtedness as up to that date. Now, Mr. Speaker, as a matter of fact that is an inaccuracy of a very grave kind. The clear statement is there that the railway indebtedness is $582,000,000, whereas, as a matter of fact, the railway indebtedness at that time was approximately $690,550,000. I submit

that the Acting Minister of Finance (Mr. Robb) in bringing down his budget should have shown the full indebtedness of the railways to the government. If the railways should suddenly find themselves in the position of saying to the government, "Here is a cheque for your money. How much do we owe?" that surely is the railway indebtedness, and that sum is not $582,000,000, but $690,550,000. Part of the debt arises owing to the fact that $130,000,000 is for accrued interest. But even taking away the $130,000,000 for accrued interest even an accountant can hardly work out the balance of principal at $582,000,000. I do not make that statement on my own authority; I have the authority of officials of the accounting department of the Canadian National Railways and the Department of Railways and Canals, and I have also discussed the matter with the Department of Finance, who maintain that certain entries made should not be made, and that the system of bookkeeping is different in the one case from the other. I believe our criticism is perfectly correct. Why should there be confusion in such an important matter, involving millions upon millions of the public expenditure? It should be so clear that one should be able to go to the Canadian National Railways or to the Department of Railways and Canals, or to the Department of Finance, and obtain exactly the same figures, because the money in any case must be there and must be accounted for in some way or another. So that I think the charge made in this part of the House that the budget is inaccurate is perfectly true. The reports and information from the departments will prove that fact. I have found in the course of my inquiries that not only was the ordinary accountant unable to solve the difficulty, but even experts in the accountants' department of the Canadian National Railways found it impossible to reconcile a number of figures given in the budget speech, as well as in the Canadian National report, and had to have the assistance of other experts to ascertain the facts. If people who are in the accounting department are not able to decide the standing and the position of the country with relation to railways, how much more difficult must it be for the average business man or the citizen at large in the community to understand the situation? The hon. member for St. Lawrence-St. George (Mr. Marler) also made this statement:

> It does not make any difference in the least whether cash is advanced out of the consolidated fund or borrowed.
>
> There is no difference whether it appears in the consolidated debt or the railway debt.

I maintain that there is a very great difference so far as the financing of the government is concerned. I have checked up in the Department of Finance and the Public Accounts the advances made to the railways and find the following:

Year ending 31st March—	
1921	$109,000,000
1922	97,000,000
1923	77,000,000
1924	23,000,000
1925	10,000,000

—not $18,000,000 as disclosed in the budget, but $10,000,000, because that $18,000,000 has not been advanced, but has been cancelled. I think the hon. member for St. Lawrence-St. George could have presented his argument in ten minutes if he had confined it to the real point of criticism raised in this portion of the House. The criticism is, not that the government have changed the accounts or even changed in some way the form of bookkeeping, but they have changed the policy of financing. While under the regime of the actual Minister of Finance (Mr. Fielding), the cash advanced by the government to the railways was $97,000,000, the government now advances only $10,000,000, though the deficits of the railway are practically the same as they were in 1922; that is, they average over $100,000,000 a year. How is the difference made up? It is made up by the government endorsing the securities or guaranteeing the bonds of the railway, and considering that as a contingent liability. The government financing is thus made a simple matter. They advance in 1925, $10,000,000 and endorse to the extent of $81,000,000, I believe. The budget is inaccurate and has caused confusion in the public mind. The criticism we make is simply that the public reading the budget speech are not able to determine the course of the country's affairs, in relation to the railways. The plain fact is that, regardless of the method of financing, the debt of the Canadian National Railways is increased each year. The figures are interesting as well as instructive. They are as follows:

Year ending 31st December—	Increase of debt
1921	$133,000,000
1922	59,000,000
1923	116,000,000
1924	118,000,000
Total	$427,000,000

This is an average of over $106,000,000 a year, and the situation apparently is not growing better. A peculiar feature of the situation—and this will be found in the Canadian National Railways report of 1924—is that the sum of $20,000,000 was loaned by the Canadian National Railways to the govern-

ment. I am not making any error in that statement. That sum was loaned by the railway to the government which on its part is constantly loaning large sums of money year in and year out. Why was that done? I have not been able to find out, nor does the budget disclose the method by which it was done, or what has happened to the money We know that, as of 31st December, 1924, the railway had on hand $14,259,000. The railway in its annual report regarded this as a refunding, the government regards it as a temporary loan; so that as between the statement of the government and the statement of the railway there is no reconciliation. What occurred is this: between 31st December 1924 and 31st March of this year, the budget coming down the 24th March or before the end of the fiscal year, the balance of this $14,000,000 which was loaned by the railway to the government is being returned in certain sums not disclosed in the budget, and the public are unable to find out why or how it was being done. In other words you can almost fairly apply the statement that the accounts were being juggled or that there was a juggling. I do not go as far as that. I think the accounts have been properly kept and all accounted for. I do not think anything happened to the money. But there is not a frank and clear disclosure in the budget in regard to this item, and it is a most important one. Consider the loans made by the government to the railway. I find that in 1921 these amounted to $460,000,000. In 1922 the loans were $542,000,000, an increase of $87,781,000. In 1923 they amounted to $666,000,000, and that includes principal and interest, being an increase of $124,000,000. In 1924 they amounted to $690,555,000. These are staggering figures and the people should be allowed to know the facts that they disclose, and those facts are not made clear in the budget. In my judgment they should have appeared in the budget, to set forth the relationship of the railway to the country's affairs and show exactly how we are getting along. But of still more astounding importance are the direct and indirect obligations of the railway, which are as follows:

1922	$823,000,000
1924	913,913,000

If you calculate the standing of the government so far as these railways are concerned, you will find that as at the end of the year 1924 they have advanced cash in the sum of $690,555,000 and guaranteed $913,913,000. The other figures are:

Canadian Government Railways, other than the Canadian National system	$451,712,000
Central Vermont	8,973,000

Making a total investment of $2,065,153,000 part cash and part direct and indirect obligations.

I bring these figures to the attention of the House in order that hon. members may realize the tremendous undertaking we have on hand and the need of adopting constructive methods in order to remedy the situation.

The Canadian National system is composed of 89 different corporate bodies. We have now 22,055 miles of railway. In 1921, we had 17,338 miles; in 1922, 17,224, and in 1923, 22,040. So that about five thousand miles of railway have been built or acquired since 1922. Why this further investment has been made, we do not know. It may be perfectly justifiable. Nevertheless it certainly involves tremendous capital expenditures and obligations on the part of Canada. The operating income of the Canadian National system shows the following results at the end of each year:

Year	Net profit	Loss
1921		$16,092,000
1922	$1,227,000	
1923	16,273,000	
1924	12,235,000	

My purpose in bringing this to the attention of the House is to lay the foundation for some suggestions which, in my humble opinion, should be carried out by this country, instead of following a policy of drift. Some action must be taken by the government. I do not think it can be left to voluntary action on the part of the Canadian Pacific or the Canadian National. I do not think a merger in the sense of consolidation of the properties as regards ownership or management under one directing head will be acceptable to the people of Canada. Because, satisfactory as it may be at the present time, it is bound in the end to result in some sort of monopolistic relationship to the people, and we would have those troubles which a single monopoly or combine brings, or if it does not bring them, the people think it brings evil results. For these reasons, with a loss—or rather an additional investment—of $100,000,000 a year on the part of the Canadian National system, I believe we should eliminate wasteful competition, useless duplications such as terminals and things of that kind, unnecessary expenditures, palatial steel cars, Scribe hotel and a number of other expenditures which we know about. We should eliminate maintenance work on unnecessary duplicating lines. We should endeavour to bring about between these two systems co-operation in services, in running rights for freight over the shortest and cheapest route, in matters of tracks, tunnels, buildings, bridges, stations, especially in the Union station. I have

taken the trouble to check over the latest time-tables issued by the two systems with the idea of finding out duplications in services which actually exist on the main lines. I am told by officials of both these companies that it is the duplication on the main trunk lines which brings about the expense and that everything depends upon that; that the branch lines are made to fit in with the main trunk lines. If you check up the time-table between Montreal and Toronto, you will find there are ten trains going each way every day. Three trains leave Montreal for Toronto in the morning within twenty minutes of each other. Five trains leave Montreal for Toronto each day in the evening within the space of one hour. That is useless competition. Each train has a separate engine, a separate baggage car, a separate day coach and separate other cars. If you travel on them you will find them often empty. The idea of this burden of expense, these deficits which are being shouldered by the people as a result of this fruitless and senseless competition where five palatial trains, well equipped, leave Montreal for Toronto within the space of one hour, is appalling to the taxpayers of this country and should bring responsibility upon the government to act and not to leave the matter to volition or initiative on the part of the railways.

Most hon. members know of the service between Montreal and Ottawa. There are thirteen trains a day going from Ottawa to Montreal and ten trains a day returning. Three of those trains to Montreal leave in the morning within ten minutes of each other, and they are not transcontinental trains—these leave earlier. Five trains leave Ottawa—and they are semi-local trains on short runs—in the afternoon within two hours of each other. So that, from Ottawa to Montreal you have five trains leaving within two hours, and from Montreal to Toronto you have five trains leaving within one hour, every day. I am told by men who know that these cost hundreds of thousands of dollars. This is useless, senseless, fruitless competition and extravagance, and it should be rectified in some way. I have taken occasion to speak to some of the railway officials whom I know personally and to present these bald facts to them. I have stated: "Why not save the expense?" One side will say: "We did not start it; the other fellow did and we have to keep up with him." If you ask the other fellow, he will say the same thing. Therefore, I maintain that the responsibility for action must rest with the government—and it cannot be a merger of the two systems—to compel co-operation as regards their management and services to the people of Canada so that the expense involved will be less than it is to-day. Between Vancouver and the east there are four transcontinental trains a day all the year round and five transcontinental trains during the spring, summer and fall. I am told by high officials of both these companies that the expense of each of these transcontinental trains is $9,000,000 a year. Hon. members who may travel on these trains will see that, perhaps, there will be four or five people on these through trains. This is evidence of the fact which we have had discussed in the press extensively lately as regards statements made by the heads of both systems that economy can be effected. It seems unfortunate that these economies are not effected, because the people are paying, they are providing the taxes to meet the $100,000,000 a year deficit. I say again that the responsibility rests with the government for lack of action, lack of initiative and aggressiveness, to take hold of an appalling situation such as that and to endeavour by some means to cure it.

5 p.m.

On this point I want to say a few words in connection with the Canadian Government Merchant Marine. An hon. member opposite levelled a good deal of criticism against our merchant marine. There is a deficit, but I am glad to say that the deficit does not arise in the west. I have taken the trouble to collect some data in this regard, and I find that the twenty-one boats operating out of Vancouver produce a profit. There were fifteen vessels of 8,000 tons; two of 4,400 tons, and four of 3,900 tons. For the past six years every ship, with one exception, has sailed from Vancouver to a foreign port fully loaded, that is, loaded beneath deck and on the deck. In the single exception the boat had a full load under deck, but it did not have anything on deck. The lumber trade in British Columbia has greatly benefited by the presence of these boats; they have been a most important factor in opening up new markets for western Canada, markets which we did not have before, such as New Zealand, Australia and around through the Panama canal to eastern Canada and the eastern states. They have also been an important factor in forcing other shipping companies to provide boat services at places in British Columbia where formerly we did not have any service and the business was sent to the states of Washington and Oregon. It was the Canadian Government Merchant Marine

that opened up the business in the Bristol channel in England and at Belfast, Ireland. These vessels go to Japan and China carrying large quantities of lumber, wheat and other products. The management is very active. I know of one instance where they stepped in and took from our friends to the south in the states of Washington and Oregon an order for 35,000,000 feet of ties, an order which is renewed every year. They took that away from the states and provided it for the mills of British Columbia when those mills were very badly in need of business.

Now, with the deficits of the railway; with the increase in the national debt; with the absence of real economy on the part of the government; with the depression in business generally; with the emigration from the country of thousands of people; and with the closing of our factories, there is one natural and necessary result, and it is expressed in the word "taxation." And taxation in Canada has not only reached but has passed the point where it can be left longer untouched without extremely disastrous results to the country. A little book by a man named MacFarlane, under the title "Taxation of Industrial Organizations in Canada" makes a statement which I think is pertinent to the present situation:

> Canadian industrial organizations are rapidly becoming so tax-handicapped in their cost of production budget, that not only are they estopped from forecasting lower prices to the consumer, but they must submissively anticipate their own possible elimination from world market competition. . . .
>
> To illustrate, a well-known manufacturing industry with branches throughout Canada has, in recent years, been obliged to be fully conversant with, and to fulfil the requirements of. three Dominion tax measures (the incidence of Business Profits Tax Act being still in existence), ten provincial corporation taxation acts (Nova Scotia having two), and some twenty municipal realty and business taxes; a total of thirty-three widely differentiated enactments, and all continually in a state of legislative flux.

So that in all they pay over thirty different taxes. The load is altogether too heavy and something must be done in the matter. I observed in the Ottawa Journal, of date April 17, 1925, an editorial in which it was estimated that a Canadian living in Ottawa must pay to the Dominion government $38, to the provincial government $13, to the schools and municipalities $30, or a total of $81, which for a family of five amounts to $405. But there are other levies besides the income tax that must be paid. Let me submit the following comparative statement of taxes paid in British Columbia to the federal government, and taxes paid in the state of Washington. This statement was prepared by the Associated Property Owners of Vancouver:

Net income	Dominion of Canada		State of Washington
$5,000	Brit. Col.	$ 95	
	Federal	126	
		$221	$50
$7,000	Brit. Col.	$210	
	Federal	283	
		$493	$100

Taking the income tax alone in each of the two countries, without considering any other taxes, I find from the Canadian tax returns, report No. 27, the following comparison:

Income	Canadian	United States
$3,000	$ 40	$ 7 50
$5,000	126	37 50
$10,000	619 50	207 50

In other words, our tax ranges all the way from three to six times as much as the American rate, and these taxes are having a disastrous effect on business. They are driving capital from the country and are forcing our young men and women to go elsewhere; they are creating despondency among business men and generally are tending to a most unsatisfactory conditon of things. I have here an extract from a report of the shareholders of the Consolidated Mining and Smelting Company of Canada in which I find a statement that is extremely indicative of conditions at the present time. I quote from the report:

> You will notice the large sum $790,120.42 necessarily reserved for Federal and Provincial taxes under the existing exorbitant basis of taxation. This amount is many times what it would have been on the same revenue in pre-war days on the basis of taxation then in effect.
>
> Government operations and projects continue to more than exhaust all the revenue that the people can provide under most excessive taxation. In addition to every government undertaking costing a great deal more than if constructed by an individual or a private corporation, its subsequent operation is rarely profitable, so that usually not only must the interest on the cost be provided for by fresh taxation, but also maintenance and pay roll must come largely from that source. Private enterprise being subject to ever increasing taxation in order to meet additional government requirements, there is no real incentive to engage in the industrial or other development of the country—and therefore no substantial progress is being made. Furthermore with the United States reducing its tax rate and its public debt, and Canada making neither reduction, the exodus to the United States is not difficult to understand.
>
> For the time being your company is fortunately able to withstand the heavy tribute levied by the governments, but if more private enterprises are not established to share the burden or if other existing private enterprises perish—the load may well become too heavy to be borne.

We find prominent men in the country, such as Mr. Beatty of the Canadian Pacific Railway, coming to the same conclusions, all pointing unquestionably to the fact that unless the problem of taxation is taken in hand and

[Mr. Ladner.]

controlled by a proper system of economy on the part of the government, so that capital may be enabled to remain in the country, protected against expropriation, we are going to suffer from a deadlock in this direction. And when we have no capital we shall cease to have any industrial development; nor will there be any hope of our people returning to the country. Our taxes are mounting while the national debt increases year after year. Last year the government tried to avoid an appearance of this by manipulating their railway accounts; but the plain fact is that our debt is accumulating, and our railway deficit has been some $106,000,000 a year for the past four years. And, with less business to provide a revenue for the roads, with factories closing in large numbers, the situation is indeed serious. According to the Minister of Labour (Mr. Murdock) the number of factories closed last year totalled 1,300 while the leader of the opposition (Mr. Meighen) puts it at 2,200. In any case unemployment is prevalent throughout the country, and our people are going to the United States at the rate of 200,000 a year.

Mr. MURDOCK: The hon. member will find no figures nor statement of mine showing that the number was only 1,300.

Mr. LADNER: Perhaps it was more than that; I may have made a mistake.

Mr. MURDOCK: The figures are all in Hansard and speak for themselves, and I would suggest that the hon. member quote facts and not fancies.

Mr. LADNER: I suggest that the minister take some of that advice to himself. I never heard a more absurd contention than the Minister of Labour made when he compared business failures in 1914-15, war years, with business failures in 1923-24; and when I asked him whether he thought it was possible to make a comparison under those extreme conditions he said that the periods represented respectively a typical Tory rule and a typical Liberal rule. When arguments are founded on such a basis they are too absurd for consideration.

Mr. MURDOCK: The hon. gentleman will have much difficulty in showing, either in unrevised or in revised Hansard, any such statement on my part. All I ask of him is to quote the facts. All that the Minister of Labour undertook to do was to submit the figures for what they might be worth; he simply said that there were more failures in 1914 than in 1924, and hon. gentlemen could draw their own conclusions from that as to what the causes might be. The minister made no such statement as the hon. member a few moments ago accused him of having made.

Mr. LADNER: If I understood the minister rightly, the purpose of his figures was to show some relationship between the failures and the party that was in power at the time.

Mr. MURDOCK: Not at all.

Mr. LADNER: What other purpose was there in submitting the figures?

Mr. MURDOCK: To show a comparison between the two periods that hon. gentlemen opposite have been referring to so frequently with respect to failures.

Mr. LADNER: But after showing the comparison what results do you have? It is perfectly clear. I asked the Minister of Labour the reasonableness of making such a comparison, because it occurred to me to be unsound, and I do not always find him so illogical. I think I am perfectly right in my contention. Now, with the conditions I have mentioned and business depression, there is another thing the Minister of Labour sought to prove by a line of figures reaching from here to Mars, some of them bearing no relation whatever to what he was dealing with. He sought to prove that business was good in this country. Well, you have only to ask any business man whether business is good, and he will tell you it is not.

Mr. MURDOCK: Mr. Speaker, the hon. gentleman is again making a statement which is not true, although probably he does not know it. He can produce no statement of mine in Hansard undertaking to prove that business was good in this country. The only thing I did undertake to disprove was the line of misrepresentation from our friends opposite which indicated that business was so much worse in Canada than in the United States.

Mr. LADNER: I listened to the address of the minister carefully, and from the way the figures were read it was apparent that his purpose was to endeavour to convince us that business was good in this country; that is, that the policy of the government was sound and conditions were going to get better right along. That was the idea behind his figures. I put it to the minister, as well as to any other member of the government, that he ask any banker, any business man, any farmer or any workman, if business is good in Canada. All our people know that business is not good in Canada. Of course, there is some reason for this.

Mr. MURDOCK: Comparative figures show that business was better in Canada for at least three months last year than it was in the United States.

Mr. LADNER: The trouble with the hon. minister is that he brings in support of his argument figures that do not prove anything. He endeavoured to make a comparison between failures in 1914-15 and in 1922-23. I do not see how any man dispassionately arguing the merits of the case can contend that it is fair to make such a comparison, when we know that every large and small financial institution the world over was shaken to its foundations on the outbreak of war, particularly by the tremendous drive of the Germans into France, and naturally those businesses which were dependent upon credit were subject to the contraction of credit which the banking institutions necessarily put into effect, and that was the determining factor of those failures; they had nothing to do with government policies any more than the moon had.

Mr. MURDOCK: Does my hon. friend say that the two thousand eight hundred odd failures in 1914 were the result of the outbreak of the war?

Mr. LADNER: I would not say every single failure.

Mr. MURDOCK: Most of them?

Mr. LADNER: Many failures took place as the result of the outbreak of war.

Mr. MURDOCK: Do you know that any of them so failed?

Mr. LADNER: Yes, I know of people who failed under those conditions. Now, I have endeavoured to point out our difficulties and obligations with respect to the railways, our serious situation with respect to business, and our extremely serious situation with respect to taxation which is driving capital out of this country. Now I propose to submit this proposition. The government is lacking in virility and courage in attempting to solve those difficulties, in fact it is taking no steps whatever to that end. I suggest that the policy which has been laid down by the Conservative party, through the resolution of which the right hon. leader of the opposition (Mr. Meighen) has given notice will relieve the situation. It is the revival, of course, of the old question of protection of our industries; it is an old question, but it is livelier to-day than it ever was in the past. I see one hon. gentleman to my left smiling, but I am going to give him some facts to ponder over, and I shall be interested to hear how he will reply to them. First let me put on record what this policy is. The right hon. leader of the opposition in his resolution says:

That, to meet the situation which has resulted from a strengthening in late years of the protective system the world over particularly in the United States; to give new life to industry and productive enterprise; to preserve and enlarge the Canadian market for Canadian farm products; to stimulate the development of Canadian resources by the Canadian people and thus create employment for our workers; to increase the traffic of our railways by which alone an all-round reduction of freight rates can be secured; and, as well, to provide added revenue and thus bring about a reduction of internal taxation, this Dominion requires an immediate revision of the Canadian tariff on a definitely and consistently protective basis.

That such revision should apply to natural products, such as farm produce, fish and coal, with no less thoroughness than to manufactured goods.

That to the same ends steps should be taken to conserve for Canadian development our essential and irreplaceable resources in material and power.

That while every effort should be directed toward the establishment of a system of preference for preference within the empire, no preference should be given at the expense of the Canadian workers, and all preferences should be conditional on the use of Canadian ports.

That a tariff commission should be appointed representative of the three great classes of Canadian industry, agriculture, manufacturing and labour and entrusted with the duty of studying Canadian tariff problems in their every bearing and of making from time to time such recommendations to the government as it deems in the general public interest, with the reasons therefor, and with power also, where it finds unfair advantage is being taken of protective duties, of making recommendations to be given effect by the government for removing or reducing tariff schedules or imposing special excise taxes upon products in respect of which such advantage is taken, and that its reports, findings, recommendations and reasons therefor be given to the public.

That to enable the products of Western and Maritime provinces to reach more readily the markets so developed, the special transportation burdens borne by those provinces should be shared by the whole Dominion, either by contribution to long haul freight costs, or by assistance in some other form.

We on this side of the House are thoroughly convinced of the soundness of that remedy.

Mr. GOOD: Would there not be a very great addition to taxation—the taxation that he laments so much—if this policy were applied?

Mr. LADNER: That is the fallacy and delusion of my friends to the left. The incidence of taxation is not necessarily upon the protected country. Is taxation higher in the United States? No. And why not? Because they have built a protective barrier around their industries that gives stability to investment of capital, that enables every manufacturer to start out in business on an equal footing with his competitor, knowing

full well the situation he has to meet, knowing that he is not going to be confronted with the products of cheap labour from China or Japan, or from the highly industrialized countries of Europe. And the competition within the domestic area of that protective system reduces prices to the minimum. These conditions naturally give increased wages to the workingman, better returns to the businessman, and prosperity to all, so that the people have the money to pay their taxes, and these taxes are a lighter burden on their shoulders than are the taxes of their competitors who do not enjoy such prosperity. I have learned from a gentleman who has just returned from one of the southern States with a population of some three and a half million that recently the governor was lamenting the fact that they had a debt of $69,000,000. There is an actual demonstration of the happiness and prosperity of the people south of the line.

Mr. WARNER: Have not they a population of 112,000,000 to trade freely with instead of our few millions?

Mr. LADNER: Quite so. The hon. member has put his finger right on the point, but perhaps he misses the further point as to how they got those 112,000,000 people. How did they get them? Why is your son or other relative or friend leaving Canada and going down there? Why do they flock into the United States from Europe in their thousands? It is because since 1828 the United States have had an average ad valorem duty around 41 per cent, and with small fluctuations up and down they have maintained that duty, and thereby they have given stability to their business concerns and have provided prosperity for the farmers as well. That is why the United States have been able to attract such a large population. As a result, wages are higher. And will any hon. gentleman say that the cost of living there is higher than in Canada? Statistical data shows the wages in the United States are not only higher, but the cost of living is lower, so there is a bigger margin for a man to save. Naturally, therefore, people flock to that country, and there is no necessity to advertise for immigrants. Similarly, if you discovered a gold mine up north you would not need to ask people to go there, you would find they would rush in by the thousand.

Mr. WARNER: Is it not a fact that the per capita tariff in Canada is about three times as high as that of the United States? Why does that not bring people to our country?

Mr. LADNER: The explanation is that our people are importing a lot of goods while the United States have their own industries, which manufacture and sell to their own people in the course of profitable business. I cannot understand why in this country, having regard to the national interest, we cannot have a protective system such as is followed in the other sixty-five nations of the world. Why can we not take a lesson from France, which is enjoying a great measure of prosperity and has increased its tariff?

An hon. MEMBER: What?

Mr. LADNER: Yes, that is correct. I have relationships with France that enable me to know. In the United States conditions in some parts are not, perhaps as good as they were. But all these countries have increased their protective duties and have made themselves self-sustaining nations. The incidence of taxation does not always fall on the importer; sometimes it falls on the outsider.

Mr. HOEY: Would my hon. friend say that the per capita war costs of the United States compared with those of other nations have anything to do with their present prosperity?

Mr. LADNER: Undoubtedly the United States benefited by the war and gained considerably in actual wealth as a result. But wealth does not in itself make for prosperity; there have to be active business conditions in the community, and these depend upon the supply and demand, upon conditions which will enable business to proceed as it should. They may have all the gold in Christendom and yet not be prosperous. They must have trade. I have in mind just now an order passed by President Coolidge the other day with regard to something that was being imported into the United States from Ontario. It was found that it could be produced cheaper in Canada and the industry had not been protected in the United States, and so the barrier was immediately put up in order that the United States might protect their own industry. For one hundred and twenty-five years, we have been seeking to develop this country, with agents in Europe and elsewhere trying to get people here; we have been bringing them in on one side and letting them out on the other. But the United States is prosperous so that we may take a lesson from them as well as many from other countries in this respect.

Mr. PUTNAM: May I ask a question? Will the hon. member cite a protective tariff from the hand of man as a greater agency in

drawing population to the United States than geography and climate from the hand of Providence?

Mr. LADNER: Well, Russia has 253,000,000 people. There is no doubt that the climatic conditions of the United States may in themselves attract some people. But my idea is that the man in Canada or in Europe hears from his friends that he can earn more money in the United States. He has never been there; he has never been in the middle states and been frozen up—he does not know how unpleasant it is there, perhaps. So he says he is going where he can get work without difficulty, and that is the determining factor with most of the people who leave this country. Indeed, it is the determining factor with those who come to Canada—they come beacuse they think they can better their position.

Mr. GOOD: My hon. friend is arguing that prosperity in the United States is due to the protective tariff and the duties. Would he not be equally logical in arguing that it is due to the large volume of their internal trade, or to a dozen other causes that might be stated?

Mr. LADNER: I do not see how Canada differs from the United States in that respect. We have internal trade. We have the "freedom" without the trade. There is no argument about that. The real prosperity in the United States is due to the fact that capital feels safe in its investment there; every man who invests his money in business knows exactly the competitive conditions with which he is faced. He knows that he is not going to have unfair competition. He knows that Japanese and Chinese goods, made by labour that is paid ten cents a day, are not going to be dumped into the United States in competition with him, because he has the protection. So there is stability in that country; trade is regulated; there is an ability to export in large quantities and to capture markets where people have not the good sense or the strength of mind to put up barriers similar to those erected by the United States.

Mr. GOOD: Does not my hon. friend recognize that as between Canada and its geographical conditions, its population, and so on, and the United States, the differences are tremendous?

Mr. LADNER: My contention is that people have gone to the United States because they can better themselves, and they can better themselves because they can find jobs that pay. That is why they have gone there. As to geographical conditions, they are not so dissimilar. If they have cotton in the United States, we have timber in Canada. But the difference is this: they manufacture very largely their cotton in their own country, or have done of late years, while we send our pulpwood and other natural resources to them to be manufactured and to give employment to their people; whereupon they send the manufactured article to Canada for consumption.

Mr. ROBINSON: Suppose that an intending settler in Canada or in the United States were to listen to my hon. friend's speech, which country would he settle in?

Mr. LADNER: Well, he would probably have a desire to contribute his good judgment to oust the Liberal government in this country and thus bring nearer the possibility of his remaining within its borders.

Now, Mr. Speaker, if my arguments are sound at all, why is there this tendency towards low tariffs? My submission is that it is entirely because of the Progressive party, and very largely their views from a purely economic point of view are sound. They say: We produce wheat in our country; we sell in the markets of the world and we buy in a protected market; therefore if we can eliminate the protective duties we may get our goods cheaper and have a bigger margin of profit or be able to sell more wheat in the markets of the world. That is a hard argument to answer from the economic point of view. If the country is to remain entirely agricultural in its character, the argument is a good one. But let us consider for a moment what element in value exercises this dominating influence upon Canada's fiscal policy. I have made a calculation from information furnished by the Bureau of Statistics, and I find that in 1924 the gross agricultural production of Canada was valued at $1,453,000,000. We are dealing, you will note, only with the one activity of agriculture. The value of wheat and wheat flour exported was $327,000,000, or 22 per cent of the total agricultural production. So that this 22 per cent, representing the views of the prairie provinces through the Progressive party in this parliament, are dominating the government and the fiscal policy of this country. There is our trouble.

Mr. FORKE: You will have to remove the Progressives; that is the only thing to do.

Mr. LADNER: No, they are too good fellows to remove. But my contention is that—

Mr. WARNER: May I ask a question right there?

Mr. LADNER: Does the hon. member disagree with me on this point?

Mr. WARNER: Would the hon. member put a duty on wheat in order to benefit the farmers of Canada?

Mr. LADNER: No, I would not. Personally I do not know much about duties, nor, I think, do other hon. members know very much about them. These are things that should first be decided by people who do know, by a scientific board that will adjust our fiscal policy for the development of this country, and not for the development of any other country.

Mr. GARDINER: The hon. member has stated that wheat and wheat products exported amount to $300,000,000, or 22 per cent. Will he tell us what the total agricultural exportation was, including animal and animal products?

Mr. LADNER: I have not the total agricultural exportation, as I did not think it of importance for this reason: the markets of the United States for our major products have been largely cut off, and our products are now going to the Old Country and other countries where they have low tariffs and do not send back to us similar goods. This has relationship more with the United States.

In Canada we have manufacturing business to a very large extent. We have our minerals, and the business and industries incidental to them. We have our great forest products, lumber, pulp and paper. We have our shipping interests, and our fisheries, to which there is also a manufacturing end. We have our trade by exporters and importers. We have financial houses, and we have other activities of a diversified character in which our people are engaged. Now my point is this: I do not think it is sound or in the interests of this country that 22 per cent of one industry should control the fiscal policy of the entire country affecting all these other industries.

Mr. GARDINER: Will the hon. member take the pains to look into the question of the total exports of Canada? If he does, he will find that agriculture is responsible for more than half the total exports of this country. Will he then say that agriculture dominates, though representing only 22 per cent?

Mr. LADNER: I did not look into those figures.

Mr. GARDINER: Why don't you?

Mr. LADNER: I did not have the benefit of the advice of the hon. member at the time. If I had had the benefit of his wisdom before, I might have got those figures.

Mr. GARDINER: I will get them for you.

Mr. LADNER: But it does not make a particle of difference. As a matter of fact, I believe there is some confusion as to just what is included in the figures of agricultural exports; I am only speaking from memory. But even if half our exports were agricultural products, he would still have to consider that we have a large number of other industries, mines and manufacturing establishments in this country which desire protection, and my point is that those who uphold this idea of low tariffs should not dominate the fiscal policy of this country where we are trying to develop a self-sustaining nation.

Mr. MILLAR: In 1923, of the 400,000,000 bushels of wheat produced, what percentage was exported?

Mr. LADNER: I have the figures here from the Bureau of Statistics. I thought I had them handy. I have a letter from the chief statistician giving that data, but cannot lay my hands on it at the moment.

Mr. HOEY: We could only consume six bushels per head; that would be 54,000,000 bushels. So we must have exported all the rest.

Mr. LADNER: My data comes from the Bureau of Statistics and is checked with the trade reports. I am certain my data is accurate because I have taken particular care with it, and I worked out the same data last year, and have compared this year with last, and I am certain the figures are correct. I want to repeat, for the benefit of hon. gentlemen to my left, with whom I have the most agreeable personal relationships, but with whom I disagree in the most decided manner on the fiscal policy that is best for this country, that the fiscal policy of Canada is to-day being determined by a small proportion of the agricultural interests, in total disregard of the manufacturing interest and all the other economic activities throughout the country. I say that is not sound, and although political expediency may justify and maintain that policy in force to-day, time and experience and the force of public opinion will eliminate it because, if persisted in, it will ruin the country.

Mr. SPEAKMAN: The hon. member has stated that a very small proportion of the country is endeavouring to dominate, and is dominating, the fiscal policy of the country to the detriment of the majority. Might I ask what proportion of the people of the country voted in 1921 for a much lower tariff than we have at the present time?

Mr. LADNER: Sometimes the public are not informed of all the facts. Sometimes they hear so many stories, even from the lips of the Prime Minister of Canada, and if he were here he would ask me to show line and page, that they really do not know where they are at, and it depends largely upon the individuality of the man when they make their election. But the fact is that to-day they are feeling in their pockets, and in their business and in their affairs the effect of the policy which is prevailing in this country, and they are going to change it sooner or later just as they changed it in 1878.

Mr. COOTE: Is the hon. member really serious in stating that it is his belief that the west is dominating the economic policy of the country?

Mr. LADNER: Absolutely. I do not think there is much question about that, and I do not think the hon. gentleman thinks there is much question about it. If it had not been for the Progressive party and their influence upon the government, the government would have had a higher tariff than we have now, but in that case the Progressive party would not have voted for the budget last year, just as they are voting against the budget this year because the tariff is not coming down. The government is between the devil and the deep sea. They promised one thing in 1919, and several members promised many things, and the Progressives say that they have practically the same platform as the Liberals, and the inevitable result is that the government are losing the confidence of the people.

Mr. MILLAR: Which is the devil?

Mr. LADNER: I do not like to be personal.

Mr. PRITCHARD: I asked this question of the speaker yesterday, and I notice they have not got it in Hansard as I meant it, but whether that is my mistake or somebody else's, I am not going to say. The hon. member is trying to argue that by the government yielding to the Progressives we are in a much worse shape, particularly our industries, than we were in 1921 when the Conservative government was in power. If that is the case, how is it that the report of the Compensation Board for the province of Ontario shows that the industries of the province of Ontario paid out in wages in 1924, $9,000,000 more than they paid out in 1921? In the face of that report, does the hon. member argue that we are in worse shape now than we were then?

Mr. LADNER: I cannot vouch for the accuracy of the report. I prefer to judge by studies I have made of statistical data, and by what I have learned through coming in contact with people doing business in the country. It is fallacious to say that because you have paid out more wages in one year than another, therefore all these things follow; they do not necessarily follow at all. There are a hundred and one factors to be taken into account. The actual fact is, and the hon. member knows it, that we are overburdened with taxation in Canada to-day, and business is not good. Even the Minister of Labour will admit that.

Mr. PRITCHARD: The working men have the proof in their pockets, at all events, that they have $9,000,000 more to-day than they had in 1921.

Mr. LADNER: Nobody is more pleased to hear that than I am, but does the hon. gentleman seriously suggest that business in Canada is good?

Mr. PRITCHARD: It is better than it was.

Mr. LADNER: That is always the government's answer. Year after year they always say, it is better than it was. It is like a frog climbing up a well one foot at a time and slipping back two.

Mr. MURDOCK: Would my hon. friend indicate some country or countries in the world that are comparatively speaking better off than Canada?

Mr. LADNER: Yes, France.

Some hon. MEMBERS: Oh, oh.

Mr. CARRUTHERS: Capital levy.

Mr. LADNER: I had occasion to make careful inquiries in order to get accurate information. The industrial conditions and the condition of the farmers in France are better than in Canada. It may be temporary, but the conditions in France and in the United States are better than the conditions in Canada. People go from Canada to the States.

Mr. GOOD: Is my hon. friend not speaking only of the employment situation in France?

Mr. LADNER: No, I am speaking of business conditions, exports, employment and wages. You can hardly hire people there, the demand for labour is so great.

Mr. CARRUTHERS: It is being done on borrowed money.

Mr. LADNER: Lots of people run their businesses in that way. Some of our Progressive friends have said that they were running farms on borrowed money but they were still happy.

Mr. CARRUTHERS: Is the value of the French franc and our dollar to be taken into consideration?

Mr. LADNER: The determining factor in the situation is the workman. He is working all day, comes home at night, has his food and clothing and something to put in the bank and it does not matter how you work out the value of the franc.

Hon. members were asking about duties a moment ago and I have a word to say about that question. I had an inquiry made in the Bureau of Statistics as to the ad valorem rates of customs duty on dutiable goods imported into Canada as compared with the United States respectively for the fiscal years 1870, 1880, 1890, 1901, 1911, 1923 and 1924. Now I think we can learn from the experience of others. The figures are as follows:

Customs duties on dutiable imports—	Canada Per cent	United States Per cent
1870..	20.9	47.08
1880..	26.1	43.48
1890..	31	41.41
1901..	27.5	49.64
1911..	25.9	41.22
1923..	24.9	36.07
1924..	22.7	35.63

So that during the last fifty-five years the customs duties on dutiable goods entering the United States as compared with Canada have been from 50 per cent to 235 per cent higher than those in Canada. Yet when you go there to live, pay taxes, and buy your food and clothing, you pay less taxes, pay less for your food and clothing, you have more employment and are better able to save and put a little money in the bank. What further proof does any reasonable man want than that of the soundness of the policy?

Mr. WARNER: What does the hon. gentleman mean when he says that he pays more taxes here than in the United States?

Mr. LADNER: If my hon. friend had been here a few moments ago he would have heard the figures I gave at that time.

Mr. WARNER: My hon. friend had reference simply to the tariff taxes.

Mr. LADNER: No, I have reference to all taxes, the burden on the people. If the hon. gentleman wishes to take the income tax, I tell him it is from two to six times as much in Canada as in the United States.

Mr. WARNER: Will my hon. friend permit me to make a statement?

Mr. LADNER: If it is not too long, go ahead.

Mr. WARNER: I have lived over there and I know personally that my taxes were a good deal higher than they were when I came to Canada. At the present time they are higher all the way through in the United States than they are here. I know that because I have lived in both places, and I am acquainted over there now just as well as the hon. gentleman.

Mr. LADNER: Perhaps it is some years since my hon. friend lived there. I have my information on good authority, not guess-work. It is vouched for by people who know the facts from accurate data.

Mr. GOOD: Before my hon. friend proceeds, would he not think it much fairer to make the comparison with rates on total imports, rather than on dutiable imports?

Mr. LADNER: No, I would not, because in figuring out the customs duty, the thing which concerns us—that is if the incidence of taxation falls upon the consumer in the country to which it is consigned—is the amount you pay on the dutiable goods.

Mr. GOOD: In the case of a nation which admitted 95 per cent of the goods free and levied a duty of 100 per cent on the balance of 5 per cent importation, would it be fair to compare that with a nation which has a flat rate of 10 per cent on all imports? Does the hon. gentleman not see that in one case they paid a tax of 100 per cent duty and in the other case they paid only 10 per cent? Does the hon. gentleman not see the point?

Mr. LADNER: Yes, but you can work these things out in different ways. I have worked it out according to the manner in which the authorities work it out when they want to get at the true facts of the case. I have been told the proper way to figure it out is the method I have adopted, and I do not think there can be much argument about it.

Mr. GARDINER: Is there a higher duty collected per capita in the United States than in Canada?

Mr. LADNER: I have not the information on that point.

Mr. GARDINER: My hon. friend lacks a lot of information he should have.

Mr. LADNER: The hon. gentleman lacks a good deal of information too, or he would not be advocating the idea he is now propounding. It is very easy to ask about an isolated case which particularly appeals to the questioner, but I do not pretend to be a walking encyclopaedia.

Mr. HOEY: Can the hon. gentleman tell us how much higher the duties were under the Conservative government than under the Liberal government?

Mr. LADNER: I am not talking about party politics. I say the Conservative party never did impose a protective tariff in this country, and they would have been better off if they had done so.

Mr. HOEY: Why did they not do so?

Mr. LADNER: I suppose they were trying to be friends with the Progressives, and this government will come to the same disastrous end if they maintain that unholy alliance.

In submitting the proposals which I have presented and the ideas which I have advanced, I have done so not merely because it is in the interests of Canada, but because in British Columbia it is of very special and great importance. British Columbia is the third largest manufacturing province in Canada. We have 2,407 industries, employing 28,700 employees, in which there is invested $210,000,000, producing last year $163,000,000. That is the business of manufacturing. Then we have the business of mining, the total results of which last year amounted to $49,000,000. Our greatest industry is lumbering and pulp. We have invested $190,000,000 in sawmills, pulp, paper and logging. The export trade after eight years has increased from 43,000,000 feet to 500,000,000 feet. There are 40,000 people employed in the lumbering business and allied interests, with a total payroll of $50,000,000 a year. We are not lacking in agricultural activities. We produce $61,000,000 in agriculture and in shipping $23,000,000. Our shipping business is developing. We have forty-two regular steamship lines running out of the city of Vancouver.

These facts disclose diversified interests. British Columbia is a miniature Canada, and the people who live and who are engaged in business in British Columbia know full well if the province is to develop just as Canada is to develop, we must as far as possible manufacture the raw products in this country instead of exporting them to other countries to build up their cities and towns and to provide work for their workmen. We are confronted daily with that situation. A large quantity of our raw material goes across to the state of Washington where our minerals are put into smelters and our logs into the lumber industry. But the provincial government, realizing the advantages to be derived from stopping undue export of our raw materials, have imposed restrictions upon the export of logs, so that the American investor has seen fit to bring his manufacturing business into British Columbia and to do his business there. In British Columbia, as I have said, we have a miniature Canada; we have diversified interests. We want to provide business or employment for different people, for the farmer, the miner, the fishermen and people of that kind.

Let me say a word about the Australian treaty. It is difficult to know why the government has not taken a more decided and active interest in the Australian treaty. We are especially interested in British Columbia because we expect to benefit by it, chiefly as regards the salmon industry. The Canadian Manufacturers' Association, canned salmon section, sent this telegram to myself and no doubt to other members from British Columbia. It is in these words and they are significant:

> Failure of government to ratify Australian treaty owing to opposition on part certain members parliament to proposed increased duty on dried fruits—

It seems to me I know where that comes from.

> —from other than Australian sources will have effect on British Columbia salmon canners of depriving them of very substantial market for their product in Australia. That market heretofore supplied principally by American canners and opposition to proposed treaty if successful will react exactly in manner hoped for by American interests in enabling them continue dominate Australian market as they did in New Zealand prior to our securing preference there. Trust you will use best efforts with opponents' treaty in House in interest securing largely increased market for Canadian salmon which would inevitably follow treaty adoption.

Mr. KING (Kootenay): Is it not a fact that my hon. friend's leader (Mr. Meighen) publicly opposed the treaty with Australia in a campaign in British Columbia last fall?

Mr. LADNER: I have never heard of such a thing. The probability is that he questioned the delay of the government to act. The government have failed in initiative. If they do not want the treaty, they should say: No, we do not want the treaty, and then men carrying on business with Australia would know

what to do and make their contracts accordingly. It is the old question of vacillation, lack of action. They are in the balance. They know who their masters are and they stand there in fearful delay that is prejudicial to the interests of this country.

Mr. MILLAR: Does the hon. member favour the treaty?

Mr. LADNER: Yes. I favour any trade treaty that is reasonably worked out as good for the country.

Mr. COOTE: Does the hon. member really think it fair that the people of Canada should be asked to pay more for raisins just to benefit the salmon canners of British Columbia?

Mr. LADNER: That is the same old fallacy and delusion as regards free trade. It all comes down to this: If you put a tariff on, you pay extra money. The incidence of taxation does not always follow that. The amount of money the hon. member would pay for the currants he would eat would be disproportionate entirely to the benefit we would receive through increased production in canned salmon. Of course, it is a difference of opinion.

I wanted to say a few words on the oriental question, but my time is limited. We have had advocated in the country and here with the government certain measures with respect to restricting the activities of Chinese and Japanese in British Columbia. I realize, in speaking on a matter of this kind, it is a delicate question and requires mature judgment to work out the best method of safeguarding the interests of Canada. In my judgment we should not allow orientals to come into British Columbia. We do not want them in British Columbia. They cannot be assimilated into the economic activities nor into the social life of our country. They are not inferior, but they are incompatible in temperament. As regards those Chinese and Japanese who are in British Columbia now, my judgment is that it is difficult to control by legislation their economic activities. If you restrict the number who are allowed to have fishing licenses for salt herring or some other fish, you eliminate four or five hundred Japanese out of that industry. They must live and they have the right to freedom in this country to engage in something. They will exercise that by going into some other industry. They have gone into the business of growing berries, and now the Berry Growers' communicate with us—and I have some communications from them—saying that it is not right that Japanese and Chinese should work in competition with the berry growers, and they think they should be taken out of this industry by legislation. So if the government pursues a policy of legislating the kind of business in which these people shall not engage, they will go into some other kind of business. They will go into farming. If they are legislated out of farming, they will work at something else. In other words, acts of parliament to control economic activities of that kind are futile as against the economic laws. When people are in our country with limitations of reason and judgment and after certain exemptions are given to special cases, it is consistent with the dignity of Canada and the interests of our relationship as a nation with the other great nations with which we expect to establish trade and commerce, that we should be careful in passing legislation of that kind. It is not effective. It assists, let us say, fishermen by taking a certain number of orientals from that industry, but it hurts another group of men engaged in another business. I have not quite finished and I would rather conclude my remarks after eight o'clock.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 39, respecting Joliette and Northern Railway Company.—Mr. Denis (Joliette).

Bill No. 40, respecting The Ottawa Electric Railway Company.—Mr. Chevrier.

MARCONI WIRELESS TELEGRAPH COMPANY OF CANADA

The House in committee on Bill No. 21, respecting the Marconi Wireless Telegraph Company of Canada.—Mr. Casgrain—Mr. Gordon in the chair.

On section 4—Power to carry on telephonic communication.

Mr. GRAHAM: Does the amendment in connection with this section provide for control of telephone tolls by the Board of Railway Commissioners?

Mr. BOYS: That is dealt with.

Section agreed to.

Bill reported, read the third time and passed.

THE MUTUAL LIFE ASSURANCE COMPANY OF CANADA

The House in committee on Bill No. 35, respecting The Mutual Life Assurance Company of Canada—Mr. Mewburn.—Mr. Gordon in the chair.

On section 1—Board of directors.

Mr. McBRIDE: I move to amend this section as follows:

That the following words be inserted after the word "law" in line 22, on the first page of the bill: provided that such by-law shall be confirmed by the regular annual meeting of the members of the company.

I can see no reason why this amendment should not be approved of by this committee.

Mr. MEWBURN: I do not wish to take advantage of any technicality but I do not think that the amendment is in order, under the rules of the House, one day's notice not having been given. However, I do not press the point. I cannot see the force of the amendment. This concern is entirely a mutual company having no share capital. At the last annual meeting of the company a resolution was passed unanimously by the policy-holders to the following effect:

That the board of directors of the company be and they are hereby authorized to apply to the parliament of Canada on behalf of the company for an act to amend the act of incorporation of the company so as to empower the board of directors from time to time by by-law passed and approved of by the votes of two-thirds of the members present or represented by proxy at a special general meeting duly called for considering the by-law—

And so on. We are not asking for any additional rights or powers or favours not accorded to a stock company under the Companies Act or under the Insurance Act. The Insurance Act provides that the directors of the companies empowered thereunder shall have power to pass certain by-laws giving them very full power, and the wording is almost identical with this. This is the way the clause reads:

The directors may from time to time repeal, amend or re-enact any such by-laws—

And such action confined at a general meeting—not the annual meeting—of the company, it is provided, shall have full force and effect, and so forth. All we ask here is that the directors may pass a by-law determining that the number of directors shall not be less than twelve and not more than twenty-two. The wording is identical with the terms of the Insurance Act to-day:

The number of directors shall be determined from time to time by by-law passed and approved of by the votes of two-thirds of the members present or represented by proxy at a special general meeting of the members duly called for considering the by-law.

If the directors pass that by-law, as it is within their rights to do, it must be confirmed by a special general meeting called for that purpose, and it would not be acted upon until the annual meeting, when the directors, whatever number was decided upon, would be elected, and the policyholders would govern themselves accordingly. I may say that the request has come from the policyholders themselves. This is a very large company operating all over Canada, and the policyholders have asked that the number of directors be increased in order that representation may be given to the west and to the Maritime provinces. I cannot see the force of the hon. member's amendment in the way of safeguarding any interests that are not already completely safeguarded. As I say, this clause is taken from the general Insurance Act. The bill was submitted to Mr. Finlayson for approval, and was also approved by the Banking and Commerce committee. I cannot see any objection to it.

Mr. GRAHAM: There are no shareholders at all?

Mr. MEWBURN: No. Under the Insurance Act of 1917 mutual companies were not dealt with,—why I am not prepared to say. That act provided for policyholder directors as well as shareholder directors. But this is a mutual company with no shareholders at all.

Mr. McBRIDE: Mr. Chairman I would first like to state that this section was carried in committee on division and that I did give notice of this amendment, but somehow or other it was overlooked and was not printed in the Votes and Proceedings. I cannot see why anyone should object to the amendment. It simply provides that such by-law shall be confirmed by the regular annual meeting, of which all the members of the company have been notified. When a special general meeting or a special meeting is called it is merely advertised in some of the local papers. I wonder how many people here or anywhere else read such advertisements? I do not think anybody does; indeed, very few have time. I do not say that they would do so, but in the absence of this proviso a few directors could get together and appoint other directors and have a monopoly in the management of the company, and if it was a paying proposition they might appoint their friends and relatives to easy jobs. I am not sent here to look after

the insurance companies, I am sent here to look after the working people of my constituency, and I think it is only right that I should take exception to this clause. I do not see why any directors should object to their actions being reviewed by the annual meeting and there approved of, or rejected. That is all I ask by this amendment. The directors can pass all the by-laws they want to, but when there is a general annual meeting I think all those by-laws should be subject to the approval of that meeting. Why should the directors object to such approval if they want to act fair and square with the policyholders? If they are working in the interests of the company, what have they to object to in the annual meeting passing on their actions? Why should they attempt to do something which they know the annual meeting will not approve of? I cannot see any reason for opposition to this amendment. As to Mr. Finlayson of the Insurance department having approved the bill, I took it up with him and he said he saw no reason why this amendment should not be inserted as a safeguard.

Mr. BOYS: Does my hon. friend contend that the directors are to be appointed at the special meeting of the company?

Mr. McBRIDE: As far as I am concerned, you can appoint directors at whatever time you like, so long as their appointment has to be approved of at the annual meeting.

Mr. BOYS: My friend misunderstands me. I gathered from his remarks that he was of opinion that if this clause carried the company would be able at a special meeting not only to fix the number of directors but to appoint them. If that is his view I think he is in error. All that can be done at that meeting is to decide the number of directors, and at the annual meeting their election takes place.

Mr. McBRIDE: All I ask, Mr. Chairman, is that whatever they do be subject to the vote of the annual meeting.

Mr. BOYS: That is the way it is now.

Mr. McBRIDE: That is the purpose of the amendment that I asked to be inserted, and that is what the hon. member for East Hamilton (Mr. Mewburn) is objecting to. I think I am only asking for what is right and proper. We have had samples of these insurance companies. I remember an insurance company in Vancouver which went under, and a very close friend of mine lost thousands of dollars. The company failed because a few of the directors secured control and appointed their friends to various positions at fancy salaries. Then the Bank of Vancouver became defunct under somewhat similar conditions, and the most recent example is the Home Bank. We cannot be too careful in erecting every possible safeguard against a repetition of such failures.

Mr. STEVENS: Mr. Chairman, I quite agree with my hon. friend (Mr. McBride) that we ought to be very careful to see that the interests of policyholders or shareholders are properly and adequately protected. It should be borne in mind that there are no shareholders in this company, only policyholders. The annual meeting is called, at which the general business of the company is transacted. One of the most important functions at that annual meeting is the election of directors. Let us get the background clearly before us. I think we are all agreed that we want legislation passed that is uniform and, as far as possible, free from beclouding clauses that might be capable of various interpretations. Consequently parliament in its wisdom passed what we know as the general Insurance Act of 1917. That act is supposed to be in the very best possible form. Like the Bank Act, it is revised periodically, and, as many hon. members will recall, it was revised very carefully a year or two ago.

I want to draw this to the attention of the committee. This company, which in years gone by was not under the general Insurance Act, is by this bill brought under it; that is, the company willingly places itself under the act, so that all the regular provisions of that act apply to it. In this case the original charter provided for the appointment of a certain number of directors, the maximum being twelve. Now it is desired to fix the minimum at twelve and the maximum at twenty-one, bringing it into harmony with the general Insurance Act. And it does something further. This company—and I say this not for the purpose of advertising the company because I happen to be a policyholder—this company is one of Canada's most outstanding insurance companies, and it is one of the best managed. It wants to come into harmony with the general Insurance Act and, furthermore, it wants to make its directorate more representative. I understand that the policyholders of my own province have expressed a desire to have a director on the board, and I think a similar desire has been expressed by policyholders in the province of Quebec, where it is desired to have two directors, one English speaking and the other French speaking. This is desired in order

to make the board completely representative of the whole Dominion. The clause under discussion provides particularly for the fixing of the number of directors at a special general meeting. The general Insurance Act, and nearly all if not all the provincial companies acts, provide that special general meetings shall be called for special purposes. That is, it is considered to the advantage of the shareholder to provide that for certain purposes special general meetings shall be held, rather than to crowd all the business into a single annual meeting.

Mr. GRAHAM: Does not the act provide that the business of the special meeting shall be mentioned in the notice?

Mr. STEVENS: Yes. The advantage of a special general meeting is that you can transact only such business as is designated in the notice by which it is called; consequently notice must be given. The question arises about the adequacy of the notice. What my hon. friend has said about people not reading the newspapers applies to all other matters as well as to this. The only thing we can do is to provide a reasonable safeguard, so that we call for notice in certain newspapers—adequate notice; reasonable notice.

Mr. NEILL: Is there not personal notification to each shareholder or policyholder in the case of the annual general meeting?

Mr. STEVENS: The notice for the annual meeting is sent out with the notice regarding the due date of the renewal premium. We have renewal notices going out during the entire year, starting, we will say, the day after the annual meeting and continuing right up to the time of the next annual meeting. If it was found desirable say in November to call a special general meeting to change the number of directors, and the annual meeting was in March, all the policyholders who had been notified before November by the process I have mentioned would have to be notified again in writing, at heavy expense; otherwise they would not have notice of the special meeting or of the business to be transacted thereat. So here is what occurs: Notice is given through the press; the special general meeting is held; the number of directors is fixed. It may be asked, what safeguard of their interests have the policyholders? That, indeed, is the question my hon. friend very properly puts. I submit they have this safeguard: At the general meeting which will follow later, the election of directors takes place. If it is found at that general meeting that during the year the directors have done what my hon. friend suggests they might do, then the policyholders have the opportunity of turning out the whole board and electing a new set of directors. The directors of that year, committing any faults, must face the policyholders or the shareholders at the annual meeting; they have no possibility of escape.

Mr. HODGINS: Is it not the case that only a few retire each year? The policyholders cannot turn all the directors out at once, can they?

Mr. STEVENS: One-third retire each year. I submit, first, that the bill, after its consideration in the Banking and Commerce committee, is considered to be in harmony with the act. Secondly, the Superintendent of Insurance was asked in regard to the matter. I do not think his name should be dragged in as a final authority, but he is called upon to safeguard the technique of our legislation and advise whether it is entirely satisfactory; and the bill has his approval. The bill places the company entirely under the Insurance Act, and the shareholders, or the policyholders in this case, are protected through the election of directors at the annual meeting. I submit that the bill should pass as it came from the committee, unless there is some very strong reason to the contrary.

Mr. ROBB: I may say on behalf of the department that we regard the bill as it now stands as affording every precaution on behalf of the policyholders, so that my hon. friend is quite right in that respect. But I would also like to say on behalf of the department that we cannot see any objection to the amendment of the hon. member for Cariboo.

Mr. NEILL: The hon. member (Mr. Stevens) drew our attention to the fact that this bill brings the company under the Insurance Act. Section 5 tells us that. Someone else stated that the Insurance Act was a very carefully thought out act, made applicable after long experience with all insurance companies. This company is prepared to put itself under that act, but like a great many of these companies they are not satisfied to be under the general act; they want a little more for their money than anybody else gets. The same thing occurs in reference to the Railway Act. I do not know whether we have a model federal Railway Act, but I know in British Columbia we have a strictly drawn up, carefully agreed upon railway act, applicable to every condition; yet practically every railway company that asks for a charter wants to get more

privileges than the general act affords. This company is not satisfied with coming under the general Insurance Act as practically all others do; they want more special privileges; they want to get what other companies cannot obtain. Something has been said about notice. There is no doubt that a newspaper notice has not the same effect as a direct personal notice to every policyholder or shareholder, which is the method adopted in the case of the annual general meeting. The hon. member (Mr. Boys) pointed out that this by-law only allows the company to determine the number of directors—in other words to increase it; and he says no harm can be done because while they may so determine the number of directors they cannot appoint them until the next annual meeting. Well, what is the use of changing the number of directors in say, July if, as the hon. member says—and I presume he speaks with knowledge—they cannot be actually appointed until the next annual general meeting in January?

Mr. BOYS: I have not studied this bill at all; I am not a member of the committee; I have no interest whatever in the company in question. I was prompted to say what I did because of the remarks of the hon. member for Cariboo. I was of the opinion from what he said that he thought the effect of this amendment would be to permit the election of directors at the special general meeting. He thought the meeting might not be well attended and that a few directors might get together and appoint friends of their own. I merely rose to make sure that that was his view and to correct him if it was wrong. I believe it is wrong, and I want to try to show that I am right in that contention. Let us consider the section for a moment; and I shall confine myself to the section under consideration. It says:

> The property, business and affairs of the company shall be managed by a board of twelve, fifteen, eighteen or twenty-one directors. The number of directors shall be determined from time to time by by-law passed and approved of by the votes of two-thirds of the members present or represented by proxy at a special general meeting of the members duly called for considering the by-law.

Now that is what they may do and that is all they can do. It must be manifest, I think, to every member of this House that they cannot at that meeting elect their directors. They merely determine what the number shall be. Now let us read the next few lines:

> The company may, by the said by-law, provide that the directors or any of them, shall be elected for one, two or three years, and that a certain proportion not less than one-third, shall retire annually.

That is the former provision, as members will see by looking at the marginal note, where they will find the very same provision. So there is no change in that respect. Now we come to the main feature, and this is what I would ask my friend from Cariboo (Mr. McBride) to look carefully at. I think he will at once see he is in error:

> At each annual meeting there shall be elected a board as determined by by-law aforesaid, but in no case shall such board consist of more than twenty-one nor less than twelve directors, all of whom shall be eligible for re-election.

I admit that the point that was raised subsequently is a different proposition. It may be said that if that be so, and you cannot elect until the general meeting, why not wait till then. But is it not desirable that they should know before the annual meeting the number of directors to be elected? It seems to me that if I were a member of the company, I would like to know when I was attending the annual meeting whether or not we were to elect twenty-one, eighteen or fifteen directors, and to know what the provision of the by-law was. I cannot see the slightest harm when you have control, because, as has been mentioned, if there was the slightest effort upon the part of a group at the special meeting to control, they could not do so. At the most they could fix at the special general meeting the number to be elected, and when the annual meeting took place, the shareholders attending there would be in control of the situation.

Now if the company themselves want this legislation, and they do, as has been shown by the member for East Hamilton, I cannot see why we of the House of Commons, particularly those of us who have no concern with the company, should in any way try to interfere with the desires of those who are the members of the company and whose money is in the company.

Mr. CARMICHAEL: I was one of the members of the committee when this bill was up, and I recall this same point being raised in the Banking and Commerce committee. To my mind, the whole issue seems to rest on the advertising that is done. In regard to the passing of the by-law, provision is made that it may be passed at the special general meeting. Now the advertising for that meeting, according to subsection 2, has to be in one or more newspapers published in the city of Toronto, and in such other places as the directors think necessary, at least one month before the hold-

ing of such meeting. That is the extent of the advertising necessary for a special general meeting, and at such special general meeting a by-law may be passed for changing the number of directors in the company.

The annual general meeting is advertised in a different way. In the case of annual meetings the directors "cause such notice to be printed and sent out to the policyholders." That is, the policyholder gets a notice of the annual meeting, and the proviso of the amendment is that the by-law as passed at the special meeting shall be confirmed at the annual meeting. Like the Acting Minister of Finance, I cannot see that there is anything really harmful or vicious with the proposed amendment. If the by-law may be passed at the special general meeting and there are only a few there, is it not simply a safeguard that it should come up again at the annual meeting, and if it is proper and in order be confirmed by the larger or annual meeting?

Mr. STEVENS: Let me point out to the committee this, that if this amendment carries, you do not correct the situation at all. You still insist that they call a special meeting, and you simply provide that the annual meeting shall confirm what the special meeting does. You do not escape the special meeting. The change is made at the special meeting just the same.

Let me point out also what the general Insurance Act now contains, to show that this is not inconsistent with it; in fact, it provides a further safeguard. The general clause provides:

> Directors may, from time to time, repeal, amend, or re-enact any such by-law: Provided that every such by-law, repeal, amendment or re-enactment, be confirmed at the annual meeting.

Now my point is that this particular clause as it has come from the Banking and Commerce committee is preferable in the interests of the shareholder to the clause in the general act; that is, it tightens it up a little, it improves it. If the amendment carries, you simply encumber the legislation with unnecessary provisions because you call the special general meeting in any case.

Mr. NEILL: What are the provisions in the general act regarding notice calling a special meeting?

Mr. STEVENS: No notice at all. The point I was making is that the directors may pass the by-law—

Mr. NEILL: What are the conditions for calling that special meeting? When it is a meeting called under the Insurance Act an individual notice has to be sent to the policy holder.

Mr. STEVENS: I cannot lay my hand on the clause at the moment.

Mr. NEIL: That I understand is in the Insurance Act, and that is the difference between a meeting called under the Insurance Act and a meeting called under this section of this bill.

Mr. McBRIDE: Not one of those who are opposing this amendment has attempted to say it is not right or proper. They are simply beclouding the issue, getting around it, and doing a whole lot of talking and taking up the time of the House. They know the amendment is right, and if they say what they know to be right, they would say so in my opinion. I do not know that I will take up further time. They certainly cannot convince me it is not right. Our Acting Minister of Finance says that he sees nothing wrong with it, and Mr. Finlayson, who is well paid by the taxpayers of this country, also thinks it fit and proper. He sees nothing wrong with it. Why, then, should we not carry it?

Amendment agreed to; Yeas, 54; Nays, 28.

Section as amended agreed to.

Sections 2, 3, 4 and 5 agreed to.

Bill reported, read the third time and passed.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. LADNER: When the House took recess at six o'clock I had been discussing some questions of protection and had not concluded my remarks, when my friends asked some questions, being interested in the subject, or rather perhaps I should say they were not interested in it. I had intended to give as an example of the unreasonableness of the relative protective tariffs or the relative tariffs in Canada and in the United States in regard to the commodity of eggs. Our American friends in the state of Washington informed us that their chief market for eggs was the city of New York and the city of Vancouver. With their co-operative system they were able to send their

eggs into Vancouver against a duty of three cents a dozen, but when my friends in British Columbia desired to return the compliment by sending eggs to the state of Washington they were met with a duty of eight cents a dozen. We have a large quantity of eggs coming in from China. The hon. Minister of Agriculture (Mr. Motherwell) is supposed to have a Marking Act, or something by which he can restrict or limit that importation, but we find that he does not do so. Either his regulations are at fault or his free trade theories prevail. Nevertheless Chinese eggs are coming in and are a source of considerable comment and objection, on account of the unfair treatment of the people of our province.

I think perhaps the best example of the government's efforts to make fruitless the effectiveness of the law is disclosed in the Duncan report. The anti-dumping law was applied, and legitimately so, at the request of the producers of fruit. The duty was paid, and when everything had died down, so far as public disclosure was concerned, at the request of the combine the government calmly paid back, consistent with its free trade ideas, the anti-dumping duty, and the suppliers of fruit kept on sending it in, knowing perfectly well that they were dealing with the department in a manner that would enable them to escape payment of duty all the time by this questionable method. The facts are disclosed in the Duncan report. There has been no action. I have noticed that one of these very provinces decided that they would not take action so far as the Duncan report was concerned and stated that it was the responsibility of the federal government. No doubt the government will make their decision shortly.

Mr. MURDOCK: Will my hon. friend say which province he refers to?

Mr. LADNER: I think it was Manitoba. It appeared in a newspaper a day or two ago.

Mr. MURDOCK: We have no advice to that effect.

Mr. LADNER: I am afraid the government will dilly-dally along, no action will be taken, and the trusts, combines and mergers will prevail, notwithstanding the good commencement in their restrictions. It seems to me that the practices as disclosed in the Duncan report are so reprehensible, so much in defiance of the law and against the will of parliament, that the government should and ought to act expeditiously in this matter and if the province does not intend to take action, the federal government should do so.

I wanted to say a few words on an important question affecting our province, namely the question of freight rates. Not seeing the Prime Minister in his seat at this moment, I believe that our friend, Mr. John Oliver is rapping at his door to gain entrance for consideration of this question, and as the Premier of British Columbia does not smoke and the right hon. leader of the government will not be able to give him a cigar, I am wondering what he will give him on this occasion. The freight rates question has been standing a long time. The government was going to bring down a great announcement, embodying the principle of some kind of Magna Charta, for the benefit of downtrodden Canada. But it has not come. They were going to remedy this freight rates question. The Supreme Court of Canada followed the law and made a decision which has caused confusion and distress in many places throughout Canada, so that business concerns are unable to make their plans and injustices are being practised from one end of the country to the other. I take it that freight rates have four main purposes, and I am quoting from a pamphlet of a Mr. Payne which seems to summarize the matter effectively: First, in the aggregate results, to provide for operating expenses; second, to earn fixed charges on outstanding liabilities; third, to yield a fair and reasonable return on capital investment, and fourth, to leave a credit balance for the purpose of needed additions and betterments. I think that will appeal to the reasonable good judgment of every hon. member; but we are not going to obtain those purposes by political freight rates or by cases of political expediency or political alliances by building up such an instrument of turmoil as the Crowsnest pass agreement, so far as it is applicable to-day. Every day we read in communications from the west and also from Ontario objections by boards of trade and other public bodies of all kinds. Yet we find no action on the part of the government. The House has been sitting for several months and very little has been done on this most important question. In fact, so far as I can see, very little has been accomplished in regard to any other question. We are just drifting along; we shall soon be in the hot weather and be running home, not knowing what we have done or why we have done it. It is interesting to note that, compared with other countries, freight rates in Canada, calculated on a basis of earnings per ton-mile

of railways, are lower than in any other country. They are as follows:

	cent
Canada	.987
United States	1.125
Sweden	3.830
Norway	4.411
New South Wales	3.202
South Australia	3.105
Great Britain	2.943
Brazil	6.010

I give these in detail because I want the record on Hansard. Therefore, if we are going to accomplish the four-fold purposes that I mentioned a moment ago and maintain rates which are already low and retain our system in a position that it will not only meet the fixed charges but warrant confidence on the part of the investing public, something must be done at the present time to grapple with the situation. We from British Columbia, believe; in fact, we know that for many years there has been an unfairness in the treatment of that province in respect to freight rates on many of our important articles. We have had a partial remedy. We have had the mountain scale of rates reduced by one-half, and this clearly indicates that the principle of the mountain scale of rates is wrong. We say that the balance should be eliminated. There are other injustices, inequalities, which should be remedied, and for my part I would not like to see parliament make political freight rates for either British Columbia or any other part of Canada. You can make freight rates only by the advice and judgment of people competent to determine the question, and those people are the institution created by the late Laurier government, the Board of Railway Commissioners. I think it would be a great mistake if parliament attempted to deal with this question and to have brought to bear upon members of parliament as well as the government political influence which will be calculated only to bring about results suited to the interests of some particular section because it has political control. It will be a disaster for the country if we are faced with a situation of that kind.

Mr. KELLNER: Was it not the railway commission which established the mountain scale of which the hon. member complains, and was the railway commission not under the chairmanship of the present hon. member for West York (Sir Henry Drayton) at that time?

Mr. LADNER: I do not think it was the railway commission that established the mountain scale of rates. My recollection is that this was done under the old system when the railways fixed the rates. They thought it cost them more to build in the mountains. Now that we have the Canadian National, we find the mountain route is not more hilly than the prairies. The hon. member is mistaken in his statement. As regards the chairman of the board, I have no doubt the hon. member for West York who was then chairman of the board, carried out his duties with the same conscientious judgment and decision as he does in this House.

Mr. KELLNER: Will the hon. member tell us just what experience or reason he has for thinking the present chairman of the Board of Railway Commissioners is an authority on freight rates? Has he ever had any experience in regard to freight rates?

Mr. LADNER: I am not here passing judgment on the personnel of the board. In this chamber we can discuss better the principles of these things and policies rather than individuals. If there is not a good chairman on the board, the government is here to rectify the situation. That is the duty of no one else. I suggest to the hon. member that I doubt very much whether he or any of his friends, faced with the responsibility, would place upon parliament the determination of the freight rates question in this country. I think they would prefer some tribunal qualified by experience in the matter to determine such a complicated question. I hope the government will at some time speak, because there is a patient and long-waiting public in British Columbia seeking to find out exactly the policy of the government on this freight rates question. The government is no doubt in a difficulty. They are no doubt face to face with their masters, and the Crowsnest pass agreement is one of the big things which my friends to the left would like to hold and carry back to the prairies and, without doubt, seek to get some political advantage out of in a contest. I speak quite sincerely when I say I hope and believe individual members looking to the interest of Canada as a whole will have the breadth of mind and altruism of spirit that they will be disposed to leave a question of that kind outside of the realm of politics and entirely within the realm of a body capable of dealing with it. Certainly parliament is not such a body.

9 p.m.

Before sitting down, I should like to draw to the attention of the government the fact that the amendments to the Pension Act are still not brought down. I should like to remind the Prime Minister (Mr. Mackenzie King), if he were here, of that challenging and defiant speech which he made on the

last day of parliament, when parliament was about to prorogue and nobody could answer him, as regards what he was going to do with the Senate as they had done such grievous injury to the soldiers of Canada, when in fact, by the deliberate intention of the government, I believe, the government deferred bringing that measure down in the House and placing it before the Senate so that the latter could have no time to discuss and pass it. This session of parliament is passing on. We assembled on the 5th February; two months and a half have gone by, and the measure is still within the confidence of the Minister of Soldiers' Civil Re-establishment (Mr. Béland). Communications have come to me and, no doubt, similar ones have come to other hon. members from soldier bodies throughout Canada asking what is going to happen and saying: Do you calculate the Senate is going to interfere with the legislation? But the government refrains from taking steps so that they could place this legislation before the Senate and enable the Senate to consider it and so that they could charge them with the full responsibility of their act. I hope the government will make more haste this year than they did last, not leave it until the last days of the session and then blame everyone in the country but themselves for the fact that the legislation is defeated.

In this connection I want to say a word on a matter I have not heard discussed in the House and which sooner or later is bound to engage the attention of parliament, and that is the question of providing for those ex-service men who through the technicalities of the law are denied a pension but who gave their services overseas and whose health in so doing was impaired. The time will come when that class of men and others in their old age will have to be considered by parliament and the people of Canada; we shall have to take into consideration those of our returned men who having given their services overseas now find themselves in a helpless and destitute condition, unable to provide for themselves. At that time it will be necessary in my judgment, and indeed it will be the duty of the people of Canada, to make provision for these men. I have advocated this before and I advocate it again to-night; and I trust that the government in considering legislation looking to this end will see fit to bring in some measure that will adequately take care of this class of our citizens. Finally, I would express the hope that the government will before long not only bring down those measures to which I have referred and in which the provinces are interested and are waiting for some decisive action, but that they will show some decision in dealing with the many questions before parliament. I hope we shall have no more alliances between the government and our friends to the left, that the government will no longer show those hon. gentlemen undue deference, but rather that they will bring to the House legislation calculated for the welfare of the people of Canada.

Mr. E. R. E. CHEVRIER (Ottawa): I shall not endeavour to follow my hon. friend in all his meanderings through the labyrinth of figures which he has given to the House on the budget. My hon. and learned friend is a distinguished lawyer, and I could very well and easily juggle with the figures in the way he has done. But I am satisfied that no matter how he manipulates them he is bound to come to the same conclusion as the Acting Minister of Finance (Mr. Robb) has reached. One thing though that did surprise me, knowing the hon. gentleman as I know him, was that, genial companion as he is, he should put on the cloak of pessimism and treat this country in the way he did. He made the statement that for some time past there has been a steady flow of Canadians into the United States. I have not taken the time to check him up in every detail, but I do know that the last report shows that 35,152 Canadians came back from the United States in the period of eight months ending November 30 last. There is no steady flow of emigration from Canada into the United States. The hon. gentleman has said that one of the reasons why some of the European population did go there was that they were attracted by the news that came from that country. But it is equally true that some of our Canadians were attracted by the same news; although once they got there and spent a few months in the country they found it advisable to come back. For after all, as they found, there is no place like Canada to live in.

Mr. LADNER: If 35,000 have come back will the hon member tell us how many have gone over?

Mr. CHEVRIER: The balance is increasing on our side every day. The hon. gentleman will not dispute the statement that within the last few months they have been coming back at an enormous rate, and I for one know that in the city of Ottawa, where there was a scarcity of skilled mechanics two years ago, there are now more skilled mechanics than we can employ. The men

are coming back continuously. I shall not go any further with the remarks of my hon. friend. Before proceeding I should like to say how happy I am to join with all the other speakers who have preceded me in extending to the Acting Minister of Finance (Mr. Robb) my congratulations on the budget he has brought down.

I shall speak only on one or two outstanding features of the budget, for as I agree with what the minister has said it would be useless to labour it at any great length or to repeat what has already been brought to the attention of the House. The most conspicuous fact brought out in the budget is the improvement which it shows over last year, while last year was the first fiscal year in a very considerable period when the budget had been balanced. And not only is the budget balanced this year, but we have a surplus of $1,800,000. In making that statement the Acting Minister of Finance rightly said that the people of Canada should feel justifiably proud of this result, and I believe myself that the Canadian people, irrespective of political allegiance, will be particularly glad to know that our finances are being stabilized and improved. I feel quite confident therefore that when again we go before the people they will place their confidence in those who in a very short term of years have brought about such an improvement in the financial condition of this country.

There is another feature that strikes us in all this avalanche of figures. Notwithstanding the fact that the taxes have been reduced by some $50,000,000 odd the national debt has been decreased by $36,000,000. That is an achievement of which the Canadian nation should be proud; only in a few instances has it happened that the national debt has been reduced.

One matter of outstanding importance which I shall touch upon is the magnificent showing of the Canadian National Railways. I am sure the people of Canada look with pride on our National Railways and that they are grateful to the administration for the splendid manner in which the system has been operated. I am not one of those who believes in state ownership; but when we found ourselves in the position we were in with our railways, and when the policy of the government was announced and advocated and the government decided to give the railways a fair and honest trial, I made up my mind to do them equal justice myself. I am not yet convinced however that it is a good scheme; yet we have been loyal in our endeavour to help out the National Railways. And in that we have been seconded by a very capable board of administration. I am confident therefore that if we continue that trust and loyalty in the Canadian National railway system; if we continue that administration; and if that administration continues to manage the system as it has managed it in the past, very soon the railways will be on a sound financial basis and probably the Canadian government will not be called upon to assist them.

I desire now to turn to something more parochial: the budget serves that purpose in a number of instances. I might not have referred to it but a number of previous speakers have spoken about the Civil Service Commission. I am not going to speak at any length on that subject because my views upon it are quite clear; I have expressed them on a number of occasions. And they are particularly laid down in the report of the civil service inquiry of 1923 of which there are over 1,150 pages. Unfortunately, I am responsible for practically half of that volume. I have laid down there what I thought to be the true state of affairs. I say that the Civil Service Commission is attempting to administer an impossible law. I believe that those who inspired that law did not realize at the time the consequences that would flow therefrom. I cannot conceive that anyone imbued with an elementary idea of efficiency, of assuring promotions according to merit, in all cases, at all times and at the least expense, would put on the statute books a law of that character.

There are many aspects of it. It is a cast iron law, there is no flexibility about it. The deputy ministers are deprived of a large amount of their authority and are rendered practically powerless. I cannot blame those who are now endeavouring to administer the act; but I do blame those who placed it on the statute book; I do blame those who, when any honest endeavour is made to correct and improve the act, for some partisan purpose oppose every amendment; I do blame those who, moved by some sanctimonious sentiment, consider the Civil Service Act as a holy of holies, against which no hand should be raised, not even with the view of improving it. The moment we say that we want to improve that law they reply, "Thou shalt not touch it." It is something like old King Tut's grave, that if you place an unholy hand upon it you shall die. And in a number of instances the Civil Service Act has proved to be a King Tut's grave to the ambitions of a large number of civil servants.

The Civil Service Commission may be viewed from another angle, and that is with regard to the present salary revision. I say that 98 per cent of the civil servants earn every cent of their salary, just as much as

98 per cent of the employees of any large corporation fully earn their salaries. I say without fear of contradiction, for I know whereof of speak, that the service is not underworked, nor is it overmanned, but I say also without fear of contradiction that the service is underpaid. I know a certain number of gentlemen here will not agree with me, but had they lived in the city of Ottawa all their lives, had they themselves been employed, as I have, as civil servants, had most of their relatives and friends been employed in the civil service, had they felt what the civil servants are feeling to-day, and what I felt then, they would not make the statements they are making derogatory of civil servants. The salary revision must be settled once for all, and it can only be settled when those who are charged with the administration of public affairs give it an honest and fair study. When they give to the Civil Service Commission and to the civil service that study which they merit, then those unwarranted attacks will cease, and those who came to scoff will remain to pray. They will say then just what the leading statesmen of Great Britain say about the civil service there; and the civil service of Britain is no better and no worse than the civil service of Canada. The British civil service is doing its work loyally for the country—just as much as the civil service of Canada is doing its work loyally by the country. The statesmen of Great Britain treat their civil service with the respect which it deserves; and the civil service of Canada is entitled to the same consideration. Now, what do the British statesmen say? I take this from the Ottawa Journal of April 2, 1925:

The annual dinner of the British civil service recently took place in London and was as usual a brilliant affair. It was honoured with the presence of royalty and of the most illustrious personages of the realm. In the long list of distinguished guests were the Prince of Wales, the Prime Minister, the Speaker of the House of Commons, the Chancellor of Exchequer, the Foreign Secretary, the Lord Chief Justice, the Chief of the Imperial General Staff, and so on.

The Prince of Wales warmly eulogized the British civil service, and proceeded to say:

"It is difficult, if not impossible, for anybody to express in words the extent of the debt which this country owes to succeeding generations of civil servants, who, as government followed government, have never failed to serve with unquestioned loyalty and efficiency."

What difference is there between that and the loyalty and efficiency of the civil service of Canada?

In proposing the toast of "His Majesty's Civil Service," Premier Baldwin, after referring to the ephemeral life of governments and the permanency of the civil service, stated:

"It is a great pleasure for me to be present once more at your dinner and to be allowed the privilege of paying my tribute to the British civil service—the finest service of its kind in the world."

Had he seen the Canadian civil service he would have said, "One of two of the finest."

Amongst other things, Mr. Winston Churchill, Chancellor of the Exchequer, said:

"The British civil service upon the whole, and amongst many others, is the strongest and most enduring bulwark of the power and integrity of the British people."

Addressing himself to the civil service, Mr. Austen Chamberlain, Foreign Secretary, said:

"We remain to all eternity your grateful debtors."

And the Journal adds:

Such is the attitude of British statesmen towards the civil service. Very different is that of Canadian politicians towards our own civil service, which is the object of their constant attacks.

There is another paramount defect in the civil service law, in that the Civil Service Commission in their discussion of this salary revision are advised by their own officers, 95 per cent of whom have never had any practical experience in the working out of civil government, most of them having been taken into the Civil Service Commission without any practical knowledge of department work. Whatever knowledge they have acquired has been since they joined the staff of the commission. They are the ones that are charged with the reorganization, with the recommendations, with the determination of the accuracy of the reports. They are passing upon the qualifications of men and women, particularly of men, who have been in the civil service for thirty or thirty-five years, while these officials have been in their present positions probably no longer than since 1919. True, the deputy ministers, it may be said, are acting also for the civil servants and for the government. But theirs is a dual responsibility, and this brings me to what I consider to be a paramount defect,—that the civil servants themselves are not represented in these deliberations that concern themselves most. I advocated the amendment of the act—it will be found in this report—to overcome this defect, but I am prepared to say that hon. gentlemen across to my left and to my right would immediately vote against such a resolution if I moved it here. I say that in all these deliberations the civil servants should be represented. I have advocated the introduction of something like Whitley councils. When I was in London I had a lengthy interview with the Speaker of the House of Commons, the Hon. Mr. Whitley, who inaugurated these councils, and I am corresponding with him. The main defect of our system is that in these deliberations everything is cut and dried and the civil servants

themselves, the very people who are most vitally interested, are never consulted. Some hon. gentlemen may say that it is hard to please a considerable number in so large a service. Why, if say sixty thousand people in any large industrial concern were not taken into the confidence of the employer there would be much less harmony, very much more discord, than there is at present in the ranks of the civil service.

This salary revision question is a difficult one. I have given it considerable attention. I do not know what the recommendation will be of the Civil Service Commission. They may have made a recommendation to council or they may not; I do not know; but I have my own views on the subject and I will give them for what they are worth. I have consulted a large number of civil servants; I have conferred with heads of organizations; I have digested all the evidence and have come to my own conclusions. In doing so I have had in mind the principle of equal pay for equal work. I have not disregarded the status of married civil servants, in other words, those who are considered eligible for household bonus. But I do believe there should be no discrimination; the range of salaries should be increased for all. I find, however, that it would cost a considerable amount of money to provide what I thought would be a fair salary range and I have been obliged to dwindle it down. Of course my remarks may not influence the Civil Service Commission at all, but at all events I think they are justifiable. I do not believe any one should start in the civil service at less than $900. The next class should be $900 to $1,200; the third class, $1,200 to $1,500; the next class, $1,500 to $1,860; and the next $1,860 to $2,340—doing away with the bonus. Everyone in that case would receive not what I consider an adequate compensation for the work which is being done, but at all events something that would be commensurate with the loyalty of the services.

There is a third point upon which I wish to touch; and I quote now from one of the memoranda that was submitted to me in this matter. Referring to the superannuation law, it says:

> Although it is recognized as a very generous measure, providing as it does a competent allowance for the maintenance of the retired civil servant and an allowance more or less generous to dependents, it is yet susceptible of improvement.
>
> It could scarcely be supposed that an act could be framed that would at once make equitable provisions for all the intricate cases existing in the service, and it is reasonable to suppose that the government is prepared to receive requests that amendments should be made to the act.

And it was on that understanding last year that I gave it the study and attention that I did. I shall not go into the suggested amendments at length, but will just refer to a few of them. For instance, the retiring age is a very important feature; the authorities agree that about sixty-five should be the age of retirement, and superannuation should be at the option of the employee at any age after sixty. The act as it stands now makes it seventy-five, and the result is that avenues of promotion are blocked to a number of civil servants. But a very obnoxious amendment —and I do not use that word with any disrespect—was added to the bill last year; it is one of the most drastic changes in the act. The House passed the bill without any amendment but in the Senate the four per cent provision was made applicable to the arrears of contributions. With the permission of the House I would like to read just one letter, which is typical of many others but which puts the whole thing in a nutshell. I quote:

> Under the present conditions we have the option of surrendering one half of our length of service, instead of paying the accumulated arrears of the five per cent abatement, plus four per cent simple interest on the same. This surrender of one half the unpaid years of service of course very materially reduces the chances of ultimately obtaining full pension, unless the employee is fortunate enough to be of an age which enables him to serve on long enough to complete the required thirty-five years for full pension, or seventy per cent of his salary.

May I interject here that I honestly believe that when that amendment was introduced no one who took part in the discussion had the slightest conception of the difficulty it was going to create, of the hardship it was going to bring about, of the impairment it was going to cause in a law designed to retire those who had reached the retiring age. I quote further from this letter:

> However, when a man reaches the age of sixty years this is almost an impossibility, because the retiring age is set for sixty-five, and in exceptional cases for the age of seventy.

Now, here is the case. This civil servant says:

> In my own case I have put in forty years of service, during the first thirty-five of which I paid no five per cent abatement of any kind—was not permitted to do so; but for the last five years I have paid this five per cent of my salary. The accumulated unpaid abatements together with the four per cent interest thereon amount, in my case, to about $6,000, which of course makes it out of the question for me to pay, and consequently I have to take the option of the surrender of one-half of my unpaid service. This as above stated, is thirty-five years, so that I would have to surrender seventeen and a half years, leaving me with a similar length of service, together with the five years that I have paid; so that after forty years' service I am only credited with twenty-two and a half years on which my pension can be computed, and I have to take chances on being able to carry on for a few years

longer to try to attain as long a period of service for pension as possible; and as I am now in my sixty-first year the chances of obtaining the full thirty-five years of service for pension are almost impossible, as I could not serve for twelve and a half years longer even if I should be in condition to do so, as I should have passed the limit of seventy years of age.

Sir EUGENE FISET: Did that official not have the option of retiring under the Calder Act?

Mr. CHEVRIER: Yes, but as the distinguished hon. member is well aware, he was not entitled under that act to superannuation and the benefits attaching to it. He could have retired under the Calder Act, which was a generous measure, but that act had no superannuation features.

Sir EUGENE FISET: You mean, for his family?

Mr. CHEVRIER: Yes. When I say, superannuation, I refer to all the features that go with superannuation. Under the Calder Act the civil servant was not given superannuation; but superannuation means that he gets a certain amount every month and that after his death his wife benefits to the extent of one-half of what he had been getting. Under the Calder Act he got simply a lump sum.

Sir EUGENE FISET: Oh, no.

Mr. CHEVRIER: I beg pardon, I am wrong; the Calder Act was based upon the length of service, in relation to which a certain amount was given.

Sir EUGENE FISET: The only difference between the Calder Act and the recent Superannuation Act is that the former did not provide for the family.

Mr. CHEVRIER: Yes, we are agreed on that. But the Superannuation Act does so provide, so that there is an immediate benefit, and that is the reason why we struggled so hard to get a superannuation law to replace the Calder Act—because there were superannuation features for the dependents after the death of the employee which were not given by the Calder Act.

Sir EUGENE FISET: May I ask, as a matter of information, how that four per cent provision would affect the man who retires, not under extraordinary circumstances such as have been mentioned by my hon. friend, but in the ordinary case where a man has completed about forty years' service?

Mr. CHEVRIER: It does not apply to the Calder Act. Nobody wants to take the Calder Act, or very few do, if they can take superannuation under the other measure, but they will be driven to taking the Calder Act if they have to pay such exorbitant amounts to come under the new superannuation law.

Mr. CALDWELL: Is it not a fact that the Calder Act is now repealed?

Mr. CHEVRIER: They have until the 19th of July, I think it is, to elect between the two.

Mr. CALDWELL: I thought the Calder Act expired in November last.

Mr. CHEVRIER: I am just going to ask that it be extended.

Mr. CALDWELL: I think we will see that you do not extend it.

Mr. CHEVRIER: I am awfully sorry that my hon. friend should take an anticipatory view. Probably if I had given expression to some feelings, I might have said considering the success I have had in past attempts to modify the law, my proposition to extend it would have ended in King Tut's grave.

Mr. MILLAR: In the case of a civil servant who has retired and is receiving a pension, and who afterwards takes a remunerative position, does the pension cease or continue?

Mr. CHEVRIER: He cannot take another position in the service.

Mr. MILLAR: Outside the service.

Mr. CHEVRIER: Oh yes, he can go outside and endeavour to earn his living. It was a bargain that after he had served thirty-five years, he would be entitled to full pension, and that if he had served less than thirty-five years but more than ten, he would be entitled to retire for ill-health or on other grounds stipulated in the law. That is the bargain that was made, and once the civil servant has done his part of the bargain, and once the government has complied with the terms of its side of the bargain, the civil servant may do as he pleases. He may go out and work and endeavour to increase his income, and his pension is not touched. I think that is only equitable.

Mr. MILLAR: If he retires on account of ill-health does that also apply?

Mr. CHEVRIER: I do not know whether he would be well enough to work. He might write a book, he might become an author or a member of parliament, and there is nothing wrong in that. He has served his country for a certain period and is entitled after he has served the time stipulated to receive his

pension. We are not the masters of to-morrow. A man may be ill to-day and unfit for service, and be well again to-morrow. So I see nothing wrong in that provision.

I will just mention another head—I will not discuss it—and that is with regard to unmarried contributors in particular, but of all in general. I would suggest that contributions should be returnable without interest to the contributor, his dependents or estate as the case may be, without limitation, at any time that he may quit the service. That is, this superannuation measure was brought in for one purpose, and that was to help in the elimination of those who had reached a certain age and could not give the full benefit of their activities in the same proportion that their remuneration came to them. But in order to achieve that, we must not make it so difficult that they will refuse to take advantage of the terms. On the other hand, if we give them a superannuation measure and make it so stringent that people will be deterred from coming into the service because they know it is going to cost them too much, then we are more or less biting off our nose to spite our face, because the law will not work. In a number of cases, if this provision is allowed to remain, people who would feel like making the civil service their career will be deterred from doing so because they will argue: If I serve for nine years, and then for some reason have to get out, I shall lose all the money which I have paid in.

Now to come to the kind interruption of my hon. friend who asked whether the act had come into force.

Mr. SHAW: Before the hon. gentleman takes up that phase, would he permit an inquiry? I understood him to say that he had had a conversation with Hon. Mr. Whitley on the operation of the Whitley councils in England. but I did not gather from what Hon. Mr. Whitley had said, whether he was satisfied with the application of the Whitley council to the civil service, or whether he was dissatisfied.

Mr. CHEVRIER: When I was in England, I was there in no official capacity whatsoever, and I had, of course, no official status when I discussed this matter with Hon. Mr. Whitley. I was simply looking for information. He did not seem to think there would be any difficulty in the way of applying the Whitley council scheme, or probably some modification of it; he seemed to think that would be quite feasible, though not, probably, in the form of the Whitley councils as they are known in England in their application to commercial life.

Mr. SHAW: They have it already in the service, have they not?

Mr. CHEVRIER: Yes, but of course, Hon. Mr. Whitley, gracious as he was, was not going to say to me: Undoubtedly you can apply that to your service in Canada. But I gathered from his remarks that he saw nothing that would militate against it. Considering the present state of this new superannuation measure and the difficulties that go with it, I think the government would be well advised if they considered extending the time beyond the 19th of July next within which the civil service may elect to come under the act. If the government was to give some assurance that some of the amendments I have suggested would be considered this session, then probably the time would not require to be extended, and a larger number of the civil service would take advantage of the superannuation measure.

Mr. Speaker, I have said a few things about the budget; I have said something about what I consider very important to my own constituency. May I now be allowed to say just a few words on what the hon. member for New Westminster (Mr. McQuarrie) the other night said was a great privilege, and that was our visit to South Africa. I shall not be as lengthy as he was, not that I could not say as much, but because he has in a very able manner graphically described all that took place. I want to treat it from a different angle, and I do not propose to follow him up the meanderings of the Zambesi and along. May I in this connection say a word or two with reference to the Empire Parliamentary Association, the guests of whom we were on that wonderful trip. I take this from one of the reports of the Gentleman Usher of the Black Rod, who, as everybody knows, is the secretary of the Empire Parliamentary Association. Let me say that there is a vast difference between the Inter-parliamentary Union, and the Empire Parliamentary Association. I am now speaking of the Empire Parliamentary Association:

> The organization is upon strictly non-party lines.
>
> There is a branch in each parliament of the empire, for the purpose of providing introductions and hospitality to every self-governing country of the empire for members visiting from other such countries, and also for providing for travelling facilities, special information, parliamentary privileges, meetings among members of parliament for the discussion of matters of mutual interest, and general machinery enabling parliamentarians both to hold more constant intercourse by

visiting other portions of the empire with a minimum of expense, and also to obtain the maximum of useful information they might require to collect in the time at their disposal.

It was the South African branch of the Empire Parliamentary Association that organized this trip. I want to say just a few words as to our arrival in Durban. Hon. Senator Boyer, who represents the Vaudreuil or Soulanges district in the Senate delivered a speech at Durban, and presented to the city of Durban a photograph of the monument which is now to be seen in Montreal, of Sir Benjamin Durban, who founded Durban, and who died in Montreal. South Africa is a wonderful country. I do not want to go over the itinerary of the trip, as I said a moment ago, as that was so well done by the hon. member for New Westminster the other evening. However, I cannot resist the temptation of saying one word as to the things which struck me most forcibly.

As one looks back on South Africa he cannot forget the spell of the Karoo or the majestic grandeur of the Drakensberg, with the rapturous beauty of the valley of the Thousand Hills; nor shall I attempt any description of the fascination of the Kalahari, the tranquil placidity of the Zambesi, flowing so calmly through the enchanting borders of luxuriant vegetation, nor the appealing and awe-inspiring spectacle of Victoria falls; nor shall I make any attempt to express to you the deep fascination of a night on the veldt, beneath the incomparable star-studded heaven, with the eternal breeze wafting over the veldt; that never-to-be-forgotten, peculiar odour of the dried, parched, sun-burned clay, drinking the dew under the silvery beams of a moon, the like of which I am sorry to say I have not seen in Canada. Nor shall I attempt to picture the wonderful variety of flowers that bloom in myriads, twenty-four hours after the refreshing rain; and no one could describe the exquisite variety and beauty of birds that people the forests of Knysna, of Southern Rhodesia and other portions of that enchanted land. Those memories one may cherish, but they are beyond description.

But what struck me most was the fortitude of the people of South Africa. South Africa is not an easy country in which to settle and those men and women who did settle there had to pay a great price, but when they do pay that price the reward that South Africa brings is well worth fighting for. I think I owe a debt of gratitude to the Canadians who settled in South Africa, and they have not been mentioned. At Pretoria I met Mr. Pearson, who for twelve years was an employee of the Royal Canadian Mint at Ottawa, and who is now Deputy Master of the Mint at Pretoria. At Salisbury we met Mr. Cleveland and his wife, who settled in Africa some thirty years ago. Mr. Cleveland came from British Columbia and his wife from the Maritime provinces. They are now the owners of immense tracts of land, comprising fourteen large farms. Curiously enough, his son was in the employ of this government in the pension board and is now practising medicine in Vancouver. I also met Sir Charles Coghlin, who is now Prime Minister of Southern Rhodesia, and he told me how happy he was at seeing the Canadian delegation, and particularly of meeting those he knew so well, the hon. Speaker of this House and hon. members, and he gave us details of that wonderful occasion in 1910 at the inauguration of the South African Union, when our distinguished Speaker of the House, representing Canada, delivered a wonderful oration. I met a number of people in South Africa who well remember that memorable day. We also met General Smuts at Rustenberg, who spent the whole of one day and an evening with us on the train. In the geological museum at Pretoria I was pleased to see quite a number of exhibits of Canadian minerals, and particularly a wonderful sample of mica from the Wallingford mines at Perkins Mills, just a few miles from here in the Gatineau valley.

As I said before, we were sixty-three days on South African soil. The British delegates, the Australian delegates, the New Zealand delegates and the Canadian delegates, with the South African delegates lived together either in close intimacy on the train or in the hotels, but particularly in the large centres, very much closer to the South African people. We were in close intimacy with the delegates and people of South Africa in that we shared their family life, slept under their roof, ate at the same table, and had a number of conferences with them, and discussed the many difficulties which confronted the administration of South Africa. In that way we really entered into their mode of thinking, we understood more readily their ideals, their ambitions and their desires. We came into close contact with their problems and difficulties, and appreciated in a better way the struggle which is theirs for continued advancement of their country, but above all, we were in a better position to appreciate the kindness, the warmth of feeling, and the generous hospitality of these people. We have learned to appreciate, to esteem and to love them. We

have found in them British subjects imbued with the same ideals and desires as ourselves. We did not live under the roof of people of British origin only, but in a number of instances we were billeted with native Dutch people of South Africa; there we found the rivalry for generous hospitality and kindness of heart, and we learned to appreciate and to love them also, because we have found them to be true and loyal. We have found them to be people whose sole desire and ambition now is to make great their heritage and to forget the strife and differences of the past. We have been able to study quite vividly the problems and the difficulties that confront these British brethren in that portion of the world, particularly the question of the blacks; and if we can in any way help them, after they have found the solution—because the finding of the solution rests with them—I think it is one of our duties to help them.

They are divided in South Africa amongst political parties but they are all striving in the one direction and I do not place great stock in the reports that come to us in regard to them. They are divided into the Nationalist party, the Labour party and the South African party. Often the three parties are represented in the one family, and yet they labour with the greatest harmony. Might I instance that by saying that the venerable and highly esteemed Senator Reitz, who took part in a commando during the war of 1900, is to-day the most loyal supporter of the British crown. He is a Nationalist; his son, Colonel Denis Reitz fought against the British in the Boer war. He was a member of the Smuts administration, holding a position in the cabinet, and covered himself with glory during the Great war, and when in France he rose to the rank of colonel. He represented the South African party, and ex-President Reitz, who has had ten sons and one daughter, finds in his family that there are Nationalists, South Africans and members of the Labour party, and yet they live in the greatest harmony. Therefore I do not despair of the future of South Africa when I hear them say that South Africa may secede or break away. What I do say is that South Africa, just as much as Canada, should be left alone to work out her own destiny in the way she feels she is called upon to work it out; provided just as in the case of Canada, that if at any time the administration of her own affairs is going to interfere with the general working of the administration of the empire, it is time to call a halt. But when South Africa has decided to work out her own salvation along similar lines I think she should be left to do so.

[Mr. Chevrier.]

I think the policies that go with this development should be so conceived, so drafted, so expressed, as to continue to assure to each of the component parts, its entire freedom of activity within its own sphere; but at the same time to bind all of the component parts of the empire together under the continued protection of the British flag. There is a lesson that we can derive from this trip to South Africa, and I resent the assertion that the South Africans may secede from the British crown. I cannot conceive such a thing. When I find that the spirit of Cecil Rhodes is still alive in South Africa, that his monuments have not yet been weathered by time; when I find that one year ago Southern Rhodesia was celebrating the first anniversary of the introduction of responsible government into that colony, when the dying words of Botha are still ringing in the ears of the South African people, when they have the living expressions of Smuts and when they have after all Hertzog who is a remarkable man, I cannot conceive that South Africa is on the verge of breaking away from the empire.

I want to refer to a few words that the Acting Minister of Finance (Mr. Robb) gave expression to in his delivery of the budget, to lead me to another series of thoughts:

> We Canadians are in the process of becoming, in the not far distant future, a greater nation. We are in the growing period. We must practise economy, but must make such provision for the development of our country and of our transportation facilities as will be necessary to meet our growing needs.

Those words are laden with the expression of a great responsibility. I fully agree with the expression of them and for years I have believed in that way. But there may be a question as to just what stage of national development we have reached. Some are pleased to say that we have reached the stage of full-fledged nationhood; others say that we are a growing nation, and others say that we are not yet a nation. I believe that we are a growing nation and that we must, therefore, accept all the duties, obligations and responsibilities that come with that stage of national development at which we have arrived. For that purpose and in conformity with those wants, I am one of those who believes that no sacrifice of money, no sacrifice of expenditure, is too great in that respect. I believe the people of Canada will not shirk the spending of any money that is spent consistently with the keeping up of our national status. There are some who say that we have not yet reached the stage of a nation. I say that we have left the infancy stage; that we have outgrown the period of

youth and that we are advancing towards maturity of age. For that purpose, if one may speak in a lighter vein, Canada must now assume the dress, the garb that suits her age. In speaking of that, one might say that the proper dress for Canada should be one that would be in accord with the modern, present day custom of being long enough to cover the subject, but short enough to be interesting. We have been entertained royally in South Africa, and it would be most distasteful and out of the way for me in any way to endeavour to find out what this has cost South Africa. I mean that once you have been entertained by a host who has spared nothing to make you comfortable, you feel that at some later date you would like to do something in return, and it is rather difficult for one to sit down with a paper and pencil and figure out what it has cost your host to entertain you. I would not dare mention that, were it not for the fact that there seems to be in this House a certain sentiment that money has been lavishly spent and thrown about on a certain occasion, for example, when we sent our Canadian delegates to Wembley. I am quite at liberty to talk on this subject because it did not cost Canada a single cent for this South African trip. Therefore, when the estimates come around, I shall not have any pangs of conscience, feeling that somebody has to vote to pay those expenses. What has it cost South Africa? We were the guests of the South African branch of the Empire Parliamentary Association. Once we landed on the shores of South Africa, the South African government who own the railways there took us in, and for sixty-three days we had a special train at our disposal. I have no official figures; I did not ask for them; but after a simple computation amongst the members of the delegation, we have arrived at a very conservative figure, and we feel that it must have cost at least £1,400 sterling per delegate on that train alone. That would mean something like $240,000 for the train alone. Add on to that the expenses of entertainment and the expenses of the citizens themselves in the expenditure to which they were put while we were billeted with them, and then you will find that the whole of this trip must have cost at least $340,000 or $350,000. I would not take upon myself to extend to any one of my colleagues out there an invitation at some time to come to Canada, when I find that after having profitably invested $2,000,000 at Wembley, yet we shirk and begrudge $4,000 to send four delegates, members of parliament, to see the results achieved there, to get into closer contact with the empire and to discuss matters and come back and speak of what has taken place at Wembley.

The Wembley exhibition! I heard talk of the Wembley exhibition at Durban, Johannesburg and Cape Town by people who had been there. I heard of it in Paris and London, and the consensus of opinion all over was that Canada had achieved a wonderful success. Great credit is due and great credit over there is given to our Canadians who conceived the display of the material, the creation of these wonderful buildings and the disposition of the exhibits. There has been nothing but words of praise all through England, all through France, and I am sure the results to be derived from that exhibition will not take long to be felt. I believe it is a great pity that, in Canada, let us call it by its name, partisanship and bigotry play such a large part in our political life and reduce the level of a life which would otherwise be free from such meanness.

I understand there is a custom that on the day preceding that wonderful event of the Press Gallery dinner which always takes place on a Saturday night, the House should adjourn at ten o'clock. I have some remarks to make of a different nature from those I have made and if, as I understand, the intention is to adjourn at ten o'clock, I would move that the debate be adjourned.

Motion agreed to and debate adjourned.

On motion of Mr. Graham, the House adjourned at 10 p.m.

Monday, April 27, 1925

The House met at three o'clock.

COPYRIGHT ACT AMENDMENT

Mr. W. G. RAYMOND (Brantford) moved:

That the second report presented by the special committee appointed to consider and report upon Bill No. 2, to amend and make operative certain provisions of the Copyright Act, be concurred in.

He said: The sole provision of this report is that the committee might be allowed to sit while the House is in session. We have found it almost impossible to get a quorum otherwise.

Motion agreed to.

OPIUM AND NARCOTIC DRUG ACT, 1923, AMENDMENT

Hon. H. S. BELAND (Minister of Health) moved for leave to introduce Bill No. 46, to amend the Opium and Narcotic Drug Act, 1923.

He said: A number of amendments have been made necessary by the experience gained in the enforcement of the Opium and Narcotic Drug Act. An amendment is provided in the bill, in view of the fact that the courts have held that, under the law as it stands, a physician, who might have graduated in a foreign country, but who was never licensed to practise medicine in Canada, could legally sign a narcotic order. Another amendment provides authority to proceed by indictment against a physician who is a large trafficker. That was not provided for under the act as it stands. Another amendment authorizes procedure against a medical man who traffics in narcotic drugs under the pretence of practising medicine. There is also an amendment which provides for the confiscation of motor cars and other vehicles when used for the purpose of transporting narcotic drugs or any such purposes. There are other amendments of a minor nature which can be explained later.

Motion agreed to and bill read the first time.

PRIVATE BILL

FIRST READING

Bill No. 45, from the Senate, for the relief of Jessie Louise Cowan.—Mr. Duff.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

BANKING AND COMMERCE COMMITTEE

Mr. COOTE:

What was the total amount paid to witnesses who appeared before the Select Standing Committee on Banking and Commerce during the session of 1923?

Hon. Mr. GRAHAM:

$1,543.35.

MILITARY STATISTICS

Mr. ROSS (Kingston):

1. How many officers, how many non-commissioned officers, and how many privates have been discharged from the permanent force of Canada owing to reduction of the force, during the years 1923 and 1924?

2. How many of each class above have been pensioned for the same reason?

3. How many of each class have been enlisted since the reduction?

4. How many new permanent men have been employed by the department during the years 1923, 1924 and 1925 in the cities of (a) Ottawa; (b) Kingston; (c) Toronto; (d) London?

Hon. Mr. MACDONALD (Pictou):

1. Officers, 34; Warrant Officers, 5; N.C. Officers, 29; Privates, 75.

2. Officers, 23; Warrant Officers, 2; N.C. Officers, 4; Privates, Nil.

3. Officers, 21*; Privates, 922**.

4. Ottawa, 76; Kingston, 287; Toronto, 195; London, 64.

* Includes 6 officers being paid by Department of Interior and 4 by the Canadian Air Force.

** (a) To replace soldiers who took their discharge at their own request, consequent upon the changes made in the Pension Act on 30th June, 1923, approximately.. 52

(b) To replace W.O's, N.C.O's and men who took their discharge owing to the reduction in the pay and allowances on the 1st August, 1924, approximately.. 470

(c) To replace discharges, deaths, and other casualties which average 15 to 25 monthly and which for two years amounts to approximately.. 400

Total.. 922

ALIEN LABOUR ACT

Mr. CHURCH:

1. Is the Alien Labour Act being applied to prevent the bringing in of aliens to do casual work in Canada during the summer months?

2. If not, why not?

Hon. Mr. MURDOCK:

1 and 2. The Alien Labour Act, Chapter 97 of the Revised Statutes of Canada, does not provide that it shall be administered by any department of the government. Section 5 of the act provides that, with the consent of the attorney-general of the province in which the prosecution is had or of a judge of a superior county court, fines provided by the act may be recovered on a summary conviction, and such proceedings may be taken by any person desiring the enforcement of the act.

CANADIAN COAL—MARKET EXTENSION

Mr. CHURCH:

1. How was the $200,000 voted in 1924 by parliament to bonus coal, expended and distributed?

2. What amount of said vote was spent to bonus: (a) Alberta coal; (b) Nova Scotia coal?

Hon. Mr. STEWART (Argenteuil):

1. The disbursements from the sum of $200,000 voted by parliament in 1924 to assist the extension of the market for Canadian coal (Vote No. 483) were made under regulations authorized by order in council of September 3, 1924 (P.C. 1537), a copy of which is subjoined. Under these regulations the disbursements were as follows:—

(a) Amounts paid Canadian Pacific Railway Co.	$ 657.63
(b) Amounts paid Canadian National Railways	10,393.44
Total expended..	$11,051.07

2. (a) Alberta coal—None.
(b) Nova Scotia coal—$11,051.07.

P.C. 1537

Certified copy of a minute of a meeting of the committee of the Privy Council, approved by the Deputy of His Excellency the Governor General on the 3rd September, 1924

The committee of the Privy Council have had before them a report, dated 2nd September, 1924, from the Minister of Mines, representing that parliament has voted a sum of $200,000 to provide

for assistance in transportation of Canadian coal to central Canada by payments to railway companies under regulations to be approved by the Governor in Council.

The minister recommends that he be authorized to direct the payment out of this sum for the purpose of assisting in the transportation of coal mined in eastern Canada and brought by vessel to Quebec, Montreal or other St. Lawrence ports, and thence transhipped by railways operated subject to the Railway Act of 1919 to stations in the provinces of Quebec and Ontario to which through rates are published and filed with the Board of Railway Commissioners for Canada, of one-fifth of a cent per ton per mile from the port of transhipment to destination from time to time in the case of each shipment thereof to the railway or railways transporting said coal.

The minister also recommends that he be authorized to direct the payment out of the said vote for the purposes of assisting in the transportation of bituminous coal mined in eastern Canada and transported wholly by rail on railways subject to the Railway Act of 1919 to stations in the provinces of Quebec and Ontario west of Riviere du Loup of one-fifth of a cent per ton per mile from the place of shipment to point of destination from time to time, in the case of each shipment thereof, to the railway or railways transporting said coal.

The total amount to be paid on a single shipment of coal under the above authorization shall not exceed the sum of fifty cents per net ton, nor are payments to be made on shipments of coal to points, where in the opinion of the Minister of Mines, Canadian coal is not in competition with American coal.

The minister also recommends that he be authorized to direct payments out of the said vote on coal used for domestic and industrial purposes but not for use on railway locomotives.

The minister further recommends that he be authorized to arrange with the railway companies for a reduction on the published rate in regard to the rates to be charged by said companies for the transportation of such coal with the view to enabling such coal to be supplied to the people of Canada at as low a rate per ton per mile as is possible, and that payments from the said vote may be made only in the event of such reduction being secured.

That if at any time the sum to be expended in subsidies under the above regulations on behalf of eastern Canadian coal would appear to amount to more than $150,000, he be authorized to discontinue such payments, and that all payments under the above authorization shall be made at the discretion of the Minister of Mines.

The committee concur in the foregoing recommendations and submit the same for approval.

E. J. LEMAIRE,
Clerk of the Privy Council.

The Honourable
The Minister of Mines.

CANADIAN NATIONAL RAILWAYS—PRIVATE CARS

Mr. WILSON:

1. How many private cars are in the possession of the Canadian National Railways for the use of officials?
2. How many of these have been secured in the past two and a half years?
3. How many were used to carry officers of the company to Portland on the occasion of the departure of Mr. C. J. Smith for England?
4. Who were the officers who used these cars for this purpose?
5. How many cars were on this same occasion sent around to Halifax, and for what purpose were they so sent?

Hon. Mr. GRAHAM: Questions Nos. 1 and 2 are perfectly legitimate inquiries. It strikes me if the hon. gentleman will give the matter further consideration, he will see that questions Nos. 3, 4 and 5 serve no public interest. If we have to get answers to all questions of this kind, dear knows where it will lead to.

Question stands.

TARIFF ON SUGAR

Mr. McTAGGART:

1. What was the general customs tariff rate on sugar on December 1, 1924?
2. What was the British preferential tariff rate on sugar on December 1, 1924?
3. Has any change been made in the British preferential rate on sugar since December 1, 1924?
4. If so, when was such change made and what was the nature of the change?

Hon. Mr. CARDIN:

Tariff Items		General tariff	British preferential tariff
134.	All sugar above number sixteen Dutch standard in colour, and all refined sugars of whatever kinds, grades or standards, not covered by tariff item No. 135, when not exceeding eighty-eight degrees of polarization per one hundred pounds..	$1.50	83 cents
	When exceeding eighty-eight degrees but not exceeding eighty-nine degrees, per one hundred pounds..	1.53	85 cents
	When exceeding eighty-nine degrees but not exceeding ninety degrees, per one hundred pounds..	1.55	87 cents
	When exceeding ninety degrees but not exceeding ninety-one degrees, per one hundred pounds..	1.58	89 cents
	When exceeding ninety-one degrees but not exceeding ninety-two degrees, per one hundred pounds..	1.62	91 cents
	When exceeding ninety-two degrees but not exceeding ninety-three degrees, per one hundred pounds..	1.65	93 cents
	When exceeding ninety-three degrees but not exceeding ninety-four degrees, per one hundred pounds..	1.68	95 cents
	When exceeding ninety-four degrees but not exceeding ninety-five degrees, per one hundred pounds..	1.70	97 cents
	When exceeding ninety-five degrees but not exceeding ninety-six degrees, per one hundred pounds..	1.74	99 cents
	When exceeding ninety-six degrees but not exceeding ninety-seven degrees, per one hundred pounds..	1.77	$1.01

Tariff Items		General tariff	British preferential tariff
	When exceeding ninety-seven degrees but not exceeding ninety-eight degrees, per one hundred pounds..	1.80	1.03
	When exceeding ninety-eight degrees but not exceeding ninety-nine degrees, per one hundred pounds..	1.89	1.09
	When exceeding ninety-nine degrees, per one hundred pounds..	1.89	1.09
	Provided that refined sugar shall be entitled to entry under the British Preferential Tariff upon evidence satisfactory to the Minister of Customs and Excise, that such refined sugar has been manufactured wholly from raw sugar produced in the British Colonies and Possessions and not otherwise.		
	Provided further that sugar imported under this item shall not be subject to special duty in excess of three-fourths of one cent per pound.		
135.	Sugar above number sixteen Dutch standard in colour when imported by a recognized sugar refiner, for refining purposes only, under regulations by the Minister of Customs and Excise; and sugar, n.o.p., not above number sixteen Dutch standard in colour, sugar drainings or pumpings drained in transit, melado or concentrated melado, tank bottoms, sugar concrete, and molasses testing over fifty-six degrees and not exceeding seventy-six degrees, when not exceeding seventy-six degrees of polarization, per one hundred pounds..	81.08 cents	35.00 cents
	When exceeding seventy-six degrees but not exceeding seventy-seven degrees, per one hundred pounds..	83.116 cents	35.50 cents
	When exceeding seventy-seven degrees but not exceeding seventy-eight degrees, per one hundred pounds..	85.152 cents	36.00 cents
	When exceeding seventy-eight degrees but not exceeding seventy-nine degrees, per one hundred pounds..	87.188 cents	36.50 cents
	When exceeding seventy-nine degrees but not exceeding eighty degrees, per one hundred pounds..	89.224 cents	37.00 cents
	When exceeding eighty degrees but not exceeding eighty-one degrees, per one hundred pounds..	91.260 cents	37.50 cents
	When exceeding eighty-one degrees but not exceeding eighty-two degrees, per one hundred pounds..	93.296 cents	38.00 cents
	When exceeding eighty-two degrees but not exceeding eighty-three degrees, per one hundred pounds..	95.332 cents	38.50 cents
	When exceeding eighty-three degrees but not exceeding eighty-four degrees, per one hundred pounds..	97.560 cents	39.00 cents
	When exceeding eighty-four degrees but not exceeding eighty-five degrees, per one hundred pounds..	99.788 cents	39.50 cents
	When exceeding eighty-five degrees but not exceeding eighty-six degrees, per one hundred pounds..	$1.02016	40.00 cents
	When exceeding eighty-six degrees but not exceeding eighty-seven degrees, per one hundred pounds..	$1.04244	40.50 cents
	When exceeding eighty-seven degrees but not exceeding eighty-eight degrees, per one hundred pounds..	$1.06664	41.00 cents
	When exceeding eighty-eight degrees but not exceeding eighty-nine degrees, per one hundred pounds..	$1.09084	41.50 cents
	When exceeding eighty-nine degrees, but not exceeding ninety degrees, per one hundred pounds..	$1.11888	42.00 cents
	When exceeding ninety degrees but not exceeding ninety-one degrees, per one hundred pounds..	$1.14692	42.50 cents
	When exceeding ninety-one degrees but not exceeding ninety-two degrees, per one hundred pounds..	$1.17496	43.00 cents.
	When exceeding ninety-two degrees but not exceeding ninety-three degrees, per one hundred pounds..	$1.20300	43.50 cents
	When exceeding ninety-three degrees but not exceeding ninety-four degrees, per one hundred pounds..	$1.23104	44.00 cents
	When exceeding ninety-four degrees but not exceeding ninety-five degrees, per one hundred pounds..	$1.25908	44.50 cents
	When exceeding ninety-five degrees but not exceeding ninety-six degrees, per one hundred pounds..	$1.28712	45.00 cents
	When exceeding ninety-six degrees but not exceeding ninety-seven degrees, per one hundred pounds..	$1.31516	45.50 cents
